It has also been already said that a praefectura was so called from the circumstance of a praefectus J. D. being sent there from Rome. Those towns in Italy were called praefecturae, says Festus, "In ${ }_{q}$ quibus et jus dicebatur et nundinae agebantur, et erat quaedam earum respublica, neque tamen magistratus suos habebant; in quas legibus praefecti mittebantur quotannis, qui jus dicerent." Thus a praefectura had a respublica, but no magistratus. Festus then makes two divisions of praefecturae. To the first division were sent four praefecti chosen at Rome (populi suffragio) ; and he enumerates ten places in Campania to which these quattuorviri were sent, and among them Cumae and Acerra, which were municipia; and Volturnum, Liternum, and Puteoli, which were Roman colonies established after the second Punic war. The second division of praefecturae comprised those places to which the praetor urbanus sent a praefectus every year, namely, Fundi, Formiae, Caere, Venafrum, Allifae, Privernum, Anagnia, Frusino, Reate, Saturnia, Nursia, Arpinum, aliaque complura. Only one of them, Saturnia, was a colony of Roman citizens (Liv. xxxix. 55) ; the rest are municipia. It is the conclusion of Zumpt that all the municipia of the older period, that is, up to the time when the complete civitas was given to the Latini and the socii, were praefecturae, and that some of the colonies of Roman citizens were also praefecturae. Now as the praefectus was appointed for the purpose of administering justice (juri dicundo), and was annually sent from Rome, it appears that this was one among the many ad̀mirable parts of the Roman polity for maintaining harmony in the whole political system by a uniformity of law and procedure. The name praefectura continued after the year в.c. 90 ; but it seems that, in some places at least, this functionary ceased to be sent from Rome, and various praefecturae acquired the privilege of having magistratus
of their own choosing, as in the case of Puteoli, B. c. $63 . \quad$ (Cic. De Leg. Agr. ii. 31.) The first class or kind of praefecti, the quattuorviri, who were sent into Campania, was abolished by Augustus, in conformity with the general tenor of his policy, b.c. 13. After the passing of the Julia Lex de Civitate, the cities of the socii which received the Roman civitas, still retained their internal constitution; but, with respect to Rome, were all included under the name of municipia: thus Tibur and Praeneste, which were Latinae civitates, then became Roman municipia. On the other hand, Bononia and Luca which were originally Latinae coloniae, also becams Roman municipia in consequence of receiving the Roman civitas, though they retained their old colonial constitution and the name of colonia. Thus Cicero (in Pis. c. 23) could with propriety call Placentia a muncicipium, though in its origin it was a Latin colonia; and in the oration Pro Sext. (c. 14) he enumerates municipia, coloniae, and praefecturae, as the three kinds of towns or communities under which were comprehended all the towne of Italy. The testimony of the Heracleotic tablet is to the like effect; for it speaks of municipia, coloniae, and praefecturac as the three kinds of places which had a magistratus of some kind, to which enumeration it adds fora and conciliabula, as comprehending all the kinds of places in which bodies of Roman citizens dwelt.

It thus appears that the name municipium, which originally had the meanings already given, acquired a narrower import after b.c. 90 , and in this narrower import signified the civitates sociorum and coloniae Latinae, which then became complete members of the Roman state. Thus there was then really no difference between these municipia and the coloniae, except in their historical origin, and in their original internal constitution. The Roman law prevailed in both.

The following recapitulation may be useful : 一 The old Roman colonies (civium Romanorum) were placed in conquered towns; and the colonists continued to be Roman citizens. These colonies were near Rome (Liv. i. 11, 27, 56, ii. 21, 39), and few in number. Probably some of the old Latinac coloniae were established by the Romans in conjunction with other Latin states (Antium). After the conquest of Latium, Latinae coloniae were established by the Romans in various parts of Italy. These colonies should be distinguished from the colonies civium Romanorum, inasmuch as they are sometimes called coloniae populi Romani, though they were not coloniae civium Romanorum. (Liv. xxvii. 9, xxix. 15.) Roman citizens who chose to join such colonies, gave up their civic rights for the more solid advantage of a grant of land.

When Latin colonies began to be established, few Roman colonies were founded until after the close of the second Punic war (в.c. 201), and these few were chiefly maritime colonies (Anxur, \&c.). These Latin colonies were subject to and part of the Roman state; but they had not the civitas : they had no political bond among themselves; but they had the administration of their internal affairs. The colonies of the Gracchi were Roman colonies ; hut their object, like that of subsequent Agrarian laws, was merely to provide for the poorer citizens: the old Roman and the Latin colonies had for their object the extension and conservation of the Roman empire in Italy. Afrer
the passing of the Lex Julia, which gave the civitas to the socii and the Latin colonies, the object of establishing Roman and Latin colonies ceased ; and military colonies were thenceforward settled in Italy, and, under the emperors, in the provinces. (Plin. Nut. Hist. iii. 4.) These military colonies had the civitas, such as it then was; but their internal organisation might be various.

[G. L.]
COLO'RES. The Greeks and Romans had s. very extensive acquaintance with colours as pigments. Book vii. of Vitruvius and several chapters of books xxxiii. xxxiv. and xxxv. of Pliny's Natural History, contain mucl interesting matter upon their nature and composition ; and these works, together with what is contained in hook v. of Dioscorides, and some remarks in Theophrastus (De Lapidibus), constitute the whole of our information of any importance upon the subject of ancient pigments. From these sources, through the experiments and observations of Sir Humphry Dary (Phil. Trans. of the Royal Society, 1815) on some remains of ancient colours and paintings in the baths of Titus and of Livia, and in other ruins of antiquity, we are enabled to collect a tolerably satisfactory account of the colouring materials employed by the Greek and Roman painters.

The painting of the Greeks is very generally considered to bave been inferior to their sculpture; this partially arises from very imperfect information, and a very erroneous notion respecting the resources of the Greek painters in colouring. The error originated apparently with Pliny himself, who says (xxxv. 32), "Quatuor colorihns solis immortalia illa opera fecere, ex albis Melino, ex silaceis Attico, ex rubris Sinopide Pontica, ex nigris atramento, Apelles, Echion, Melanthius, Necomachus, clarissimi pictores;" and (xxxv. 36), "Legentes meminerint omnia ea quatuor coloribus facta." This mistake, as Sir H. Davy has supposed, may have arisen from an imperfect recollection of a passage in Cicero (Brutus, c. 18), which, however, directly contradicts the statement of Pliny:-"In pictura Zeuxim et Polygnotum, et Timanthem, et eorum, qui non sunt usi plusquam quattuor colorihns, formas et lineamenta laudamus: at in Echione, Nicomacho, Protogene, Apelle jam perfecta sunt omnia." Here Cicero extols the design and drawing of Polygnotus, Zeuxis, and Timanthes, and those who used but four colours; and observes in contradistinction, that in Echion, Nicomachus, Protogenes, and Apelles, all things were perfect. But the remark of Pliny, that Apelles, Echion, Melantbius, and Nicomachus used but four colours, including both hlack and white
to the exclusion of all blue (unless we understand by " ex nigris atramento " black and indipo), is evidently an error, independent of its contradiction to Cicero; and the conclusion drawn hy some from it and the remark of Cicero, that the early Greek painters were acquainted with but four pigments, is equally without foundation. Pliny himself speaks of two other colours, hesides the four in question, which were used hy the earliest painters; the testa-trita (xxxy. 5) and cinnabaris or vermilion, which he calls also minium (xxxiii. 36). He mentions also (xxxy. 21) the Eretrian earth used by Nicomachns, and the elephantinum, or ivoryblack, used by Apelles (xxxv. 25), thas contra. dicting himself when he asserted that Apelles and Nicomachus used but four colonrs. The sbove tradition, and the simplex color of Quintilian (Oral Instit. xii. 10), are our only authorities for defining any limits to the use of colours by the early Greeks, as applied to painting, but we have no authority whatever for smpposiug that they were limited in any remarkahle way in their acquaintance with them. That the painters of the earliest period had not such abundant resources in this department of art as those of the later, is quite consistent with experience, and does not require demonstration; but to suppose that they were confined to four pigments is quite a gratuitous supposition, and is opposed to both reason and evidence, [Pictura.]

Sir H. Davy also analysed the colours of the so-called "Aldohrandini marriage", all the reds and yellows of which he discovered to be ochres; the blues and greens, to be oxides of copper; the blacks all carbonaceous; the browns, mixtures of ochres and black, and some containing oxide of manganese; the whites were all carbonstes of lime.

The reds discovered in an earthen vase containing a variety of colours, were, red oxids of lead (minium), and two iron ochres of different tinta, $s$ dull red, and a purplish red nearly of the same tint as prussiate of copper ; they were all mixed with chalk or carhonate of lime. The yellows were pure ochres with carbonate of lime, and ochre mixed with minium and carbonate of lime. The hlues were oxides of copper with carbonste of lime. Sir H. Davy discovered a frit made by means of soda and coloured with oxide of copper, approaching ultramarine in tint, which he surposed to be the frit of Alexandria; its composition, he says, was perfect - "that of emhodying the colour in a composition resembling stone, so as to prevent the escape of elastic matter from it, or the decomposing action of the elements; this is s species of artificial lapis lazuli, the colouring mstter of which is nsturally inherent in a hard siliceous stone."

Of greens there were many shades, all, however, either carbonate or oxide of copper, mixed with carhonste of lime. The browns consisted of ochres calcined, and oxides of iron and of manganese, snd compounds of ochres and hlacks. Sir H. Dary conld not ascertain whether the lake which he discovered was of animal or of vegetable origin; if of animal, he supposed that it was very probably the Tyrian or marine purple. He discovered also 8 colour which he supposed to be hlack wad, or hydrated hinoxide of manganese; alao s hlack colour composed of chalk, mixed with the ink of the sepia officinalis or cnttle-fish. The trangparent
blug glass of the sncients he found to he stained with exide of cobalt, and the purple with oxide of manganese.

The following list, compiled from the different sources of our informstion concerning the pigments known to the sncients, will serve to convey an idea of the great resources of the Greek and Romsn painters in this department of their art; and which, in the opinion of Sir H. Davy, were fully equal to the resources of the great Italian painters in the sixteenth century:-
Red. The ancient reds were very numerous. Kı $\nu \mathrm{d}$ '́fapt, $\mu i \lambda \tau o s$, cinnabaris, cinnabar, vermilien, bisolphoret of mercury, called alse by Pliny and Vitruvius minium.

The кıpyd́6apt 'I $\nu \delta$ เк $\delta \nu$, cinnabaris Indica, mentioned by Pliny and Dioscorides, was what is rulgarly called dragon's-blood, the resin obtained from various species of the calamus palm.

Mintos seems to have had various significations ; it was used for cimabaris, minium, red lead, and rubrica, red ochre. There were various kinds of rubricae, the Csppadocian, the Egyptian, the Spanish, and the Lemnian; all were, however, red iron oxides, of which the best were the Lemnian, from the isle of Lemnos, and the Csppsdocian, called by the Romans rubrica Sinopica, by the Greeks $\sum 1 \nu \omega \pi i s$, from Sinope in Paphlagonia, whence it was first brought. There was also an African rubrics called cicerculum.
Minium, red oxide of lead, red lead, was called by the Romans cerussa usta, and, sccording to Vitruvius, sandaracha; by the Greeks, $\mu$ í $\lambda \tau 0 s$, and, according to Dioscorides (v. 122), $\sigma a \nu \delta a \rho \alpha \kappa \eta$. Pliny tells us that it was discovered through the accidental calcination of some cerussa (white lead) by s fire in ths Peiraeens, and was first used as a pigment hy Nicias of Athens, about 330 в. c.

The Roman sandarscha seems to have had various significations, and it is evidently used differently by the Greek and Roman writers. Pliny speaks of different shades of sandaracha, the pale or massicot (yellow oxide of lead), and a mixture of the pale with minium; it apparently also signified realgar or the red sulphuret of arsenic: there was also a compound colour of equal parts of sandaracha and rubrica calcined, called sandyx, $\sigma$ ávoug. Sir H. Davy supposed this colour to approsch our crimson in tint; in painting it was frequently glazed with purple to give it additional lustre.

Pliny speaks of s dark ochre from the isle of Syros, which he calls Syricum ; but he says also that it was made by mixing sandyx with rubrica Sinopica.

Yellow. Yellow ochre, hydrated peroxide of iren, the sil of ths Romans, the $\ddot{\ddot{\omega}} \mathrm{\chi} \mathrm{\rho a}$ of the Greeks, formed the base of many other yellows mixed with various colours and carhonate of lime. Ochre was procured from different parts; the Attic was considered the best; it was first used in painting, according to Pliny, by Polygnotus and Micon, at Athens, shout 460 в. c.
'Aрбєvutob, auripigmentum, orpiment (yellow sulphuret of arsenic), was also an important yellow; but it has not been discovered in any of the sncient paintings. The sandaracha has been already mentioned.

Grebn. Chrysocolla, $\chi$ рибठкодлa, which splears to have been green carbonate of copper or malachite (green verditer), was the green most sp-
proved of by the ancients; its tint depended upon the quantity of carbonate of lime mixed with it.

Pliny mentions vsrious kinds of verdigris (diacetate of coppar), aerugo, ids, iठs $\chi$ a $\lambda \kappa 0 \hat{u}$, cypria aerugo, snd aeruca, and a particular preparation of verdigris called seolecia. Sir H. Davy supposes the ancients to have used also acetate of copper (distilled verdigris) as a pigment. Besides the above were several green earths, all cupreous oxides: Theodotion ( $\Theta$ eo $\delta \delta \tau t 0 \nu$ ), so called from being found upon the estate of Theodotius, ncar Smyrna; Appianum; and the creta viridis, common green earth of Verona.

Blue. The ancient blues were also very numerous; the principal of these was caerulcum, кúayos, azure, a species of verditer or blue carbonate of copper, of which there were many varieties. It was generally mixed with carbonate of lime. Vitruvius and Pliny speak of the Alexandrian, the Cyprian, and the Scythian ; the Alexandrian was the most valued, as approaching nearest to ultramarine. It was made also at Pozzuoli by a certain Vestorius, who had learnt the method of its preparation in Egypt; this was distinguished by the name of coelon. There was also a washed caeruleum called lomentum, snd an inferior description of this called tritum.
It appears that ultramarine (lapis lazuli) was known to the ancients under the name of Armenium, 'Apú́viov, from Armenia, whence it wss procured. Sulphuret of sodium is the colouring principle of lapis lazuli, according to M. Gmelin of Tübingen.

Indigo, Indioum, ${ }^{\prime} I \nu \delta u c \delta \nu$, was well known to the ancients.

Cobalt. The ancient name for this mineral is not known ; hot it has been supposed to be the $\chi \propto \lambda \kappa$ ós of Theophrastus, which he mentions was used for staining glass. No cohalt, however, has been discovered in any of the remains of ancient painting.

Purple. The ancients had also several kinds of purple, purpurissum, ostrum, hysginum, and various compound colours. The most valuable of these was the purpurissum, prepared by mixing the creta argentaria with the purple secretion of the murex ( $\pi ⿰ 丿 ㇄$

Hysginum, Ü $\sigma \gamma \iota \nu 0 \nu$ ( $\quad$ ( $\sigma \gamma \eta$, wead?), according to Vitruvius, is a colour between scarlet and purple.

The Roman ostrum was a compound of red ochre and blue oxide of copper.

Vitruvius mentions a purple which was obtsined by cooling the ochra usta with wine vinegar.

Rubiae radia, madder-root.
Brown. Ochra usta, burnt ochre. The browns were ochres calcined, oxides of iren and of manganese, snd compounds of echres and blacks.

Black, atramentum, $\mu \dot{\epsilon} \lambda a \nu$. The ancient blacks were mostly carbonaceous. The best for the purposes of painting were elephantinum, ${ }^{\boldsymbol{\epsilon}} \boldsymbol{\lambda} \in$. $\phi \alpha{ }^{\prime} \tau \tau \nu 0 \nu$, ivory-black ; and tryginum, $\tau \rho u^{\prime} \gamma \iota \nu 0 \nu$, vine-black, made of burnt vine twigs. The former was used by Apelles, the latter by Polygnotus and Micon.

The atramentum Indicum, mentioned by Pliny and Vitruvius, was probably the Chinese Indian ink. The blacks from sepia, and the black woad, have been already mentioned.

Whitr. The ordinary Greek white was melinum, $\mu \eta \lambda 1 d s$, an earth from the isle of Melos; for fresco psinting the best was the African paraetonium,
$\pi \alpha \rho a i \tau \delta \nu i o \nu$, so called from the place of its origin on the coast of Africa, not far from Egypt. There was also a white earth of Eretria, and the annularian white, creta anularia or anulare, made from the glass composition worn in the rings of the poor.
Carbonate of lead or white lead, cerussa, $\psi \mu u$ ú $\theta t 0 p$, was apparently not much nsed by the ancient painters ; it was nowhere found amongst the Roman ruins.

Sir H. Davy is of opinion that the azure, the red and yellow ochres, and the blacks, have not undergone any change of colour whatever in the ancient fresco paintings; bnt that many of the greens, which are now carbonate of copper, were originally laid on in a state of acetate.

Pliny divides the colours into colores floridi and colores austeri (xxxy. 12) ; the colores floridi were those which, in his time, were anpplied by the employer to the painter, on account of their expense, and to secure their being genuine; they were minium, Armenium, cinnabaris, chrysocolla, Indicum, and purpurissum ; the rest were the ansteri.

Both Pliny (xxxv. 12) and Vitruvius (vii. 7) class the colours into natural and artificial ; the natural are those obtained immediately from the earth, which, according to Pliny, ate Sinopis, rubrica, paraetonium, melinum, Eretria, and auripigmentum; to these Vitruvius adds ochra, sandaracha, minium (vermilion), and chrysecolla, being of metallic origin. The others are called artificial, on account of requiring some particular preparation to render them fit for use.

To the above list of colours, more names might still be added ; but being for the most part merely compounds or modifications of those already mentioned, they wauld only take up space without giving us any additional insight into the resources of the ancient painters; those which we have already enumerated are sufficient to form an infinite variety of colour, and conclusively prove that the ancient painters, if they had not more, had at least equal resources in this most essential branch of painting with the artists of our own times.
[R. N. W.]
COLOSSUS (коגобनठs). The origin of this word is not known, the suggestions of the grammarians being either ridiculous, or imperfect in point of etymology. (Etym. Mag. p. 526. 16 ; Festus, s. v.) It is, bowever, very ancient, probably of Ionic extraction, and rarely occurs in the Attic writers. (Blomf. Gloss. ad Aesch. Agam. 406.) It is used both by the Greeks and Romans to signify a statue larger than life (Hesych. s. v.; Aesch. Agam. 406 ; Schol. ad Juv. Sat. viii. 230), and thence a person of extraordinary stature is termed colosseros (Suet. Calig. 35) ; and the architectural ornaments in the upper members of lofty buildings, which require to be of large dimensions in consequence of their remoteness, are termed colossicotera (колоббıќт $\epsilon \rho \alpha$, Vitruv. iii. 3, compare Id. x. 4). Statues of this kind, simply colossal, but not enormously large, were too common amongst the Greeks to excite observation merely from their size, and are, therefore, rarely referred to as such; the word being more freqnently applied to designate those figures of gigantic dimensions (moles statuarum, turribus pares, Plin. H. N. xxxiv. 7. s. 18) which were first execnted in Egypt, and afterwards in Greece and Italy.

Among the colossal statues of Greece, the mont celebrated, according to Pliny, was the bronse colossus at Rhodes by Chares of Lindus, a pupil of Lysippus. (See Dict. of G. and R. Biog. art. Chares.) Pliny mentions anather Greek colossus of Apollo, the work of Calamis, which cost 500 talents, and was twenty cubits high, in the city of Apollonia, whence it was transferred to the capitol by M. Lucullus ; and also those of Jupiter and Hercules, at Tarentum, by Lysippus. (Dict. of G. and R. Biog. art. Lysippus.) To the list of Pliny must be added the more important colossal statues of Pbeidias, the most beautiful of which were his chryselephantine statues of Zeus, at Olympia, and of Athena, in the Parthenon at Athens; the largest was his bronze status of Athena Promachus, on the Acropolis.

Amongst the works of this description made expressly by or for the Romans, those most frequently allnded to are the following:-1. A statue of Jupiter upon the capitol, made by order of Sp. Carvilius, from the armour of the Samnites, which was so large that it could be seen from the Alban mount. (Plin. l.c.) 2. A bronze statue of Apollo at the Palatine library (Plin. l.c.), to which the branze head now preserved in the capitol prabahly belonged. 3. A bronze statue of Augustus, in the forum, which bore his name. (Mart. Epp. viii. 44. 7.) 4. The colossus of Nera, which was executed by Zenodorus in marble, and therefore quoted by Pliny in proof that the art of casting metal was then last. Its height was 110 ar 120 feet. (Plin, l. c. ; Suet. Nera, 31.) It was originally placed in the vestihule of the domus aurea (Mart. Spect. ii. 1, Ep. i. 71.7 ; Dion Cass. Lxvi. 15) at the bettom of the Via Sacra, where the basement upen which it stood is still to be seen, and from it the contiguous amphitbeatre is supposed to have gained the name of "Calosseum." Having suffered in the fire which destroyed the golden house, it was repaired by Vespasian, and by him converted into a statue of the sun. (Hieronym. in Hab. c. 3; Suet. Vesp. 18 ; Plin. $l$. c. ; compare Lamprid. Commod. 17 ; Dion Cass. kxxii. 15.) Twentyfour elephants were emplayed by Hadrian to remove it, when he was about to build the temple of Rome, (Spart. Hadr. 19.) 5. An equestrian statue of Domitian, of bronze gilt, which was placed in the centre of the forum. (Stat. Sylv. i. 1. 1 ; Mart. Ep. i. 71. 6.)
[A. R.]
COLUM ( $\eta \theta \mu o ́ s)$, a strainer or colander, was used for straining wine, milk olive-oil, and other

## COLUMNA.

liquids. Thus we find it employed in the making of olive-oil to receive the juice of the berry when pressed out by the prelum. Such cola were made of hair, broom or rushea (Virg. Georg. ii. 242; Colum. R.R. xii. 19). Those that were used as articles of luxury for straining wine were frequently made of some metal, such as hronze or silver (Athen. p. 470, d.) Various specimens of cola have been found at Pompeii. The preceding woodcut shows the plan and profile of one which is of silver (Mus. Borb. vol. viii. 14. fig. 4, 5).

The Romans filled the strainer with ice or snow (cola nivaria) in order to cool and dilute the wine at the same time that it was cleared. [Nix.] [J. Y.]

COLUMBA'RIUM, literally a dove-cote or pigeon-house, is used to express a variety of objects, all of which however derive their name from their resemblance to a dove-cote.

1. A sepulchral chamber. [Funus.]
2. In a machine used to raise water for the purpose of irrigation, as described by Vitruvins (x. 9), the vents through which the water was conveyed into the receiving trough, were termed Columbaria. This will be understood by referring to the woodcut at p. 100. [Antlia.] The difference between that representation and the machine now under consideration, consisted in the following points:The wheel of the latter is a solid one (tympa$n u m$ ), instead of radiated (rota) ; and was worked as a treadmill, by men who stood upon platforms projecting from the flat sides, instead of being turned hy a stream. Between the intervals of each platform a series of grooves or channels (columbaria) were formed in the sides of the tympanum, through which the water taken up by a number of scoops placed on the outer margin of the wheel, like the jars in the cut referred to, was conducted into a wooden trough below (labrum ligneum suppositum, Vitruv. l. c.).
3. The cavities which receive the extreme ends of the heams upon which a roof is supported (tignorum cubilia), and which are represented by triglyphs in the Doric order, were termed Columbaria by the Roman architects; that is, whilst they remained empty, and until filled up by the head of the heam. The corresponding Greek term was $\dot{0} \pi a!$ (from $\dot{0} \pi h, a$ hole), and hence the space hetween two such cavities, that is, in the complete building, between two triglyphs, was called $\mu \in \tau \AA \pi \eta$, a metope. (Vitruv. ị. 2 ; Marquez, Dell) Ordine Dorico, vii. 37.)
[A. R.]
COLUMEN, which is the same word as culmen, is used in architecture, either generally for the roof of a building, or particularly for a beam in the highest part of the slope of a roof. By this description Vitruvius seems to mean either the col-lar-beum, or the king-post, but more probably the latter, as he derives columna from columen (Vitruv. iv. 2. § 1. Schn. ; Festus).
[P.S.]
 бкаs' $\sigma \tau \dot{\lambda} \lambda о s, \operatorname{dim} . \sigma \tau v \lambda(s, \sigma \tau u \lambda i ́ \sigma \kappa о s)$, a pillar or column.

The use of the trunks of trees placed upright for supporting buildinge unquestionably led to the adoption of similar supports wrought in stone. Among the agricultural Greeks of Asia Minor, whose modes of life appear to have suffered little change for more than two thousand years, Sir C. Fellowes observed an exact conformity of style and arrangement between the wooden huts now occupiad by the peasantry of one of which be has
given a sketch (Journal, p. 234 ; see woodcut), and the splendid tombs and temples, which were hewn out of the rock, and constructed at the expense of the most wealthy of the ancient inhabitants. We have also direct testimonies to prove that the ancients made use of wooden columns in their edifices. Pausanias (vi. 24. § 7) describes a very ancient monument in the market-place at Elis, consisting of a roof supported by pillars of

oak. A temple of Juno at Metapontum was supported by pillars made from the trunks of vines. (Plin. H. N. xxiv. 1.) In the Egyptian architecture, many of the greatest stone columns are manifest imitations of the trunk of the palm. (Herod. ii. 169.)

As the tree required to be based upon a flat square stone, and to have a stone or tile of similat form fixed on its summit to preserve it from decay, so the column was made with a square base, and was covered with an abacus. [Abacus.] Hence the principal parts of which every column consists are three, the base, the shaft, and the capital.

In the Doric, which is the oldest style of Greek architecture, we must consider all the columns in the same row as having one common base (podium) whereas in the Ionic and Corinthian each column has a separate base, called $\sigma \pi \epsilon i ̂ \rho \alpha$. [Spira.] Ths capitals of these two latter orders show, on comparison with the Doric, a greater degree of complexity and a much richer style of ornament; and the character of lightness and elegance is further obtained in them by their more slender shaft, its height heing much greater in proportion to its thickness. Of all these circumstances some idea may be formed by the inspection of the three accompanying specimens of pillars selected from

82
each of the principal orders of ancient architecture. The first is from a column of the Parthenon at Athens, the capital of which is shown on a larger scale at p. l. The second is from the temple of Bacchus at Teos, the capital of which is introduced at p. 144. The third is from the remains of the temple of Jupiter at Labranda.

In all the orders the shaft (scapus) tapers from the bottom towards the top, thns imitating the natural form of the trunk of a tree, and at the sanie time conforming to a general law in regard to the attainment of strength and solidity in all upright bodies. The shaft was, however, made with a slight swelling in the middle, which was called the entasis. It was, moreover, almost universally, and from the earliest times, channelled or fluted, i. e. the outside was striped with incisions parallel to the axis. (Vitruv. iv. 4.) These incisions, called striae, were always worked with extreme regularity. The section of them by a plane parallel to the base was, in the Ionic and Corinthian orders, a semicircle; in the Doric, it was an are much less than a semicircle. Their number was 20 in the columns of the Parthenon, above represented; in other instances, 24, 28, or 32.

The capital was commonly wrought out of one block of stone, the shaft consisting of several cylindrical pieces fitted to one another. When the column was erected, its component parts were urmly joined together, not by mortar or cement, out by iron cramps fixed in the direction of the axis. The annezed woodcut is copied from an engraving in Swinburne's Tour in the Two Sicilies (vol. ii. p. 301 ), and represents a Doric column, which has been thrown prostrate in such a manner as to show the capital lying separate, and the five drums of the shaft, each four feet long, with the holes for the iron cramps by which they were united together.

Columns of an astonishing size were nevertheless erected, in which the shaft was one piece of stone. For this purpose it was hewn in the quarry into the requisite form (Virg. Aen. i. 428), and was then rolled over the ground, or moved by the aid of various mechanical contrivances, and by immense labour, to the spot where it was to be set up. The mausoleum of the Emperor Hadrian, a circular building of such dimensions that it serves as the fortress of modern Rome, was surrounded by forty-eight lofty and most beautiful Corinthian pillars, the shaft of each pillar being a single piecs of marble. About the time of Constantine, some of these were taken to support the interior of a church dedicated to St. Paul, which a few years ago was destroyed by fire. The interest attached to the working and erection of these noble colnmns, the undivided shafts of which consisted of the most valuable and splendid materials, led mu-
nificent individuals to employ their wealth in presenting them to public structures. Thus Croesus contributed the greater part of the pillars to the temple at Ephesus. (Herod. i. 92.) In the ruins at Labranda, now called Jackly, in Caria, tahlets in front of the columns record the names of the donors, as is shown in the specimen of them ahove exhibited.

Columns were used in the interior of buildings, to sustain the beams which supported the ceiling. As hoth the beams and the entire ceiling were often of stone or marble, which could not be obtained in pieces of so great a length as wood, the columns were in such circumstances frequent in propertion, not being more than about ten or twelve feet apart. The opisthodomos of the Parthenon of Athens, as appears from traces in the remaining ruins, had four columns to support the ceiling. $A$ common arrangement, especially in buildings of an oblong form, was to have two rows of columns parallel to the two sides, the distance from each side to the next row of columns being less than the distance between the rows themselves. This construction was adopted not only in temples, bnt in palaces (olicot). The great hall of the pslacs of Ulysses in Ithaca, that of the king of the Phaeacians, and that of the palace of Hercules at Thebes (Eurip. Herc. Fur. 975-1013), are supposed to have been thus constructed, the seats of honour both for the master and mistress, and for the more distinguished of their guests, being at the foot of certain pillars. (Od. vi. 307, viii. 66. 473 , xxiii. 90 .) In these regal halls of the Homeric era, we are also led to imagins the pillars decorated with arms. When Telemachus enters his father's hall, he places his spear against a column, and "within the polished spear-holder," by which we must nuderstand one of the striae or channels of the shaft. (Od. i. 127-129, xvii, 29; Virg. Aen. xii. 92.) Around the hase of the columns, near the entrance, all the warriors of the family were accustomed to incline their spears; and from the upper part of the same they suspendsd their bows and quivers on nails or hooks. (Hom. Hymn. in Ap. 8.) The minstrel's lyre hung upan its peg from another column nearer the top of the room. (Od. viii. 67 ; Pind. Ol. i. 17.) The columns of the hall were also made subservient to less agreeable uses. Criminals were tied to them in order to he scourged, or otherwise tormented. (Soph. Ajax, 108 ; Lobeck ad loo. ; Diog. Laërt. viii. 21 ; Hesiod, Theog. 521.) According to the description in the Odyssey, the besms of the hall of Ulysses were of silver-fir ; in such a case, the apartment might be very spacious without being overcrowded with columns. (Od. xix. 38, xxii. 176, 193.)

Rows of columns were often employed within s building, to enclose a space open to the sky. Beams supporting ceilings passed from above the columns to the adjoining walls, so as to form covered passages or ambulatories ( $\sigma$ toal): Such a circuit of columns was called a peristyle ( $\pi \in p l-$ $\sigma \tau \nu \lambda 0 \nu$ ), and the Roman atrium was built upon this plan. The largest and most splendid temples enclosed an open space like an atrium, which was accomplished by placing one peristyle npon another. In such cases, the lower rows of columins being Doric, the upper were sometimes Ionic or Corinthian, the lighter being properly based upon ths heavier. (Paus. viii. 45. § 4.) A temple so con-
structed was called hypaethral (V̈тaitpos). [TempLUM.]

But it was on the exterior of public huildings, and especially of temples, that columns were displayed in the most heautiful combinations, either surrounding the building entirely, or arranged in porticoes on one or more of its fronts. (For the various arrangements of columns see Templum.) Their original and proper use was, of course, to support the roof of the building; and, amidst all the elaborations of architectural design, this object was still kept in view. The natural arrangement in such a case is obvious. A continnous beam (or series of beams) would he laid on the tops of a row of columns. On this beam would rest the ends of the cross-heams; which would he tied together by another continuous piece, parallel to the first ; and above this, if the columns were at one end of the building, would rise the pitch of the roof. Now in the actual parts of an architectural order, we see the exact counterpart of these arrangements. On the summit of the row of columns rests the architrave, i. e. chief beam (em $\pi \sigma \tau v \lambda 10 \nu$, epistylium: above this is the frieze ( $¢$ woфópos, (wфopos, zophorus), in which the most ancient order, namely the Doric, shows, in its triglyphs, what were originally the ends of the cross-beams: in the other orders these ends are generally concealed, and the frieze forms a flat surface, which is frequently ornamented by figures in relief, whence its Greek name. Ahove the frieze projects the cornice ( $\kappa 0 \rho \omega \nu /$ ls, coronis, or corona), forming a handsome finish to the entablatwe (for so these three members taken together are called), and also, on the sides of the building, serving to unite the ends of the rafters of the roof. The triangular grole-end of the roof, above the entablature, is called the pediment. [Fastigium.] The detailed description of the varions portions of the column aud entablature, in each of the orders, will be best understood by reference to the following wood-cuts, which are taken from Mauch's Grieatischen und Römischen Bau-Ordnungen.
I. The Doric Order is characterized by the shsence of a base, the thickness and rapid diminution of the shaft, and the simplicity of the capital, which consists of a deep abacus, supported by a rery flat oval moulding, called echinus, beneath which are from three to five steps or channels ( ${ }^{(j \mu d \nu \tau e s, ~ a n n u l i) . ~ I n s t e a d ~ o f ~ t h e ~ h y p o t r a c h e c l i u m ~}$ (a sort of neck which unites the shaft to the capital in the other orders) there is merely a small portion of the shaft cut off by one or more narrow channels. In the entahlature, the architrave is in one surface, and quite plain : the frieze is ornamented by triglyphs (so called from the three flat hands into which they are divided by the intervening channels), one of which is found over each column, and one over each intercolumniation, exrept that the triglyph over a corner column is placed, not over the centre of the column, but at the extremity of the architrave, - a decisive proof, as Vitruvins remarks, that the triglyphs do not represent windows. The metopes between the triglyphs were ornamented with sculptures in high relief. The cornice is flat, and projects far, and on its under side are cut several sete of drops, called mutules (mutuli), one over each triglyph and each metope, the surfaces of which follow the slope of the roof, and which are said by Vitruvius to represent the ends of the rafters of the roof. In the
most ancient examples of the order the columns are very short in proportion to their greatest thickness. In the temple at Corinth, which is supposed to be the oldest of all, the height of the columns is only 7? modules (i.e. semi-diameters), and in the great temple at Paestum only 8 modules; but greater lightness was afterwards given to the order, so that, in the Parthenon, which is the best example, the height of the columns is 12 modules. The following profile is from the temple of Apollo Epicurius at Phigaleia, built by the same architect as the Parthenon. For a comparison of the other chief examples, see the work of Mauch.

The Roman architects made considerable variations in the order, the details of which are shown in the engraving on the following page, from an example at Albano near Rome. In the later examples of the Roman Doric, a base is given to the column.
II. The Ionic Order is as moch distinguished by simple gracefulness as the Doric by majestic strength. The column is much more slender than the Doric, having, in the earliest known example, namely, the temple of Artemis at Ephesus, a height of 16 modules, which was afterwards increased to 18. The shaft rests upon a hase, which was either the elaborate Ionic or the Attic [Spira; Atticurges]. The capital either springs directly from the shaft, or there is a hypotrachelium, separated from the shaft by an astragal moulding

## COLUMNA.

cornice between the architrave and the frieze, and all three members of the entablature are more or less ornamented with mouldings. The finest apecimens of the order in its most simple form ars those in the temple of the Ilissus, and the temple of Athena Polias at Priene; the latter is usually considered the best example of all. The portico of the temple of Athena Polias, adjoining to the Erechtheium, at Athens, displays a greater profusion of ornament, but is equally pure in its outlines. It is shown in the preceding engraving.

The use of the Ionic Order presented one important difficulty. In the side view of the capital, the volntes did not show their beantiful spiral curl, but only a roll, bound together by astragals; so that, where the order had to he carried round a corner, it was necessary that the capital of the corner column should present two faces. This was accomplished by giving the outer volute an inclination of $45^{\circ}$ to the surfaces, and sculpturing the spiral on each of its sides, as shown in the following engraving; in which the upper figure shows an elevation, viewed from the inner side, and the lower figure a plan, of a corner capital of the Ionic Order.

The Romans, with the usual infelicity of imitators, frequently made all the capitals with corner volntes. Their volutes also are usually stiff and meagre, and the order, as a whole, remarkably inferior to the Grecian examples. For a collection of specimens of the order, see the plates of Mauch.
III. The Corinthian Order is atill more slender than the Ionic, and is especially characterised by its heautiful capital, which is said to have been suggested to the mind of the celebrated sculptor Callimachus by the sight of a basket, covered by a tile, and overgrown by the leaves of an acanthus, on which it had accidentally been placed. The lowest member of the capital, answering to the hypotrachelium, is a sort of calyx. (calathus), from

## COLUMNA.

COLUMNA.
which spring generally two rows of acanthus leaves, surmounted at each corner by a small volute, the spaces between the volutes being occupied by flowers, masks, or arabesques, or by another pair of volutes intertwining with each other. In the earlier examples, however, there is frequently only one row of acanthus leaves; and in the so-called Tower of the Winds the volutes are wanting, and the capital consists only of an ustragal, a single row of acanthus leaves, and a row of tongue-shaped leaves. In all the examples, except the last-mentioned, the abacus, instead of being square, as in the other orders, is hollowed at the edges, and the middle of each edge is ornamented with a flower. The ornaments of the capital were sometimes cast in bronze. The order seems to have been invented about the time of the Peloponnesian War; but it did not come into general use till some time afterwards. The earliest known example of its use throughout a building is in the choragic monument of Lysicrates, which was built in B.c. 335 (see Dict. of Biog. art. Lysicrates), and from which the following engraving is taken.

To these three orders the Roman architects added two others, which have, however, no claim to be considered as distinct orders. The Tuscan is only known to us by the description of Vitruvius, as no ancient example of it has been preserved. It was evidently nothing more than a modification of the Roman Doric, stripped of its ornaments. The Roman or Composite Order is only a sort of mongrel of the Corinthian and Ionic; the general character being Corinthian, except that the upper part of the capital is formed of an Ionic capital with angular volutes: and hoth capital and entablature are overloaded with ornaments. The engraving is from the triumphal arch of Titus, which is considered the best example.

For further details respecting the orders and their supposed history, see the 3 d and 4th hooks of Vitruvius, the work of Mauch, and Stieglitz's Archäologie der Baukunst.

It only remains to mention some other uses of columns, besides their ordinary employment for supporting buildings either within or without.

Columns in long rows were used to convey water in aqneducts (Crates, ap. Athen. vi. 94), and single pillars were fixed in harbours for mooring ships. (Od. xxii. 466.) Some of these are found yet standing.

Single columns were also erected to commemorate persons or events. Among these, some of the most remarkable were the columnae rastratae, called by that name because three ship-beaks proceeded from each side of them, and designed to record successful engagements at sca (Virg. Georg. iii. 29 ; Servius, ad loc.). The most important and celebrated of those which yet remain, is one erected in honour of the consal C. Duillius, on occasion of his victory over the Carthaginian fleet, B.C. 261 (see the annexed woodent). It was originally placed in the forum (Plin. $H . N$. xxxiv. 11 ), and is now preserved in the muscum of the

capitol. The inscription upon it, in great part effaced, is written in obsolcte Latin, similar to that of the Twelve Tahles. (Quinctil. i. 7.) When statues werc raised to ennohle victors at the Olympic and other games, or to commemorate persens who had ohtained any high distinction, the tribute of public homage was rendered still more notorions and decisive by fixing their statnes upon pillars. They thus appeared, as Pliny observes (H. N. xxxiv. 12), to he raised above other mortals.

But columns were much more commonly used to commemorate the dead. For this purpose they varied in size, from the plain marble pillar hearing a simple Greek inscription (Leon. Tarent. in Br. Anal. i. 239) to those lofty and elaborate columns which are now among the most wonderful and instructive monuments of ancient Rome. The column on the right hand in the last woodent exhibits that which the senate crected to the honour of the Emperor Trajan, and crowaed with bis colossal statue in bronze. In the pedestal is a door which leads to a spiral staircase for ascending to the summit. Light is admitted to this staircase through numerous apertures. A spiral bas-relief is folded ronnd the pillar, which represents the emperor's victories over the Dacians, and is one of the most valuable authorities for archaeological inquiries. Including the statue, the height of this monument, in which the ashes of the emperor were deposited, was not less than 130 feet. A similar column, erected to the memory of the Emperor Marens Aurelins, remains at Rome, and is commonly known by the appellation of the Antonine column. This sort of column was called cochlis or columna cochlis. [Cochlıs.] After the death of Julius Caesar, the people erected to his memory a column of solid marhle, 20 feet high, in the forum, with the inscription parenti Patriag. (Suet. Jul. 85.) Columns still exist at Rome, at Constantinople, and in Egypt, which were erected to other emperors.
[P.S.]
COLUMNA'RIUM, a tax imposed in the time of Julius Caesar upon the pillars that supperted a house. (Cic. ad Att. xiii. 6.) It was probably im-
posed by the lex sumtuaria of Julius Caesar, and was intended to check the passion for the bailding of palaces, which then prevailed at Rome. The Ostiarium was a similar tax. [Ostiarium.]

The columnarium levied by Metellus Scipio in Syria in B. c. 49-48, was a tax of a similar kind, hut had nothing to do with the tax to which Cicero alludes in the passage quoted ahove. This colunnarium was simply an illegal means of extorting money from the provincials. (Caes. B. C. iii. 32.)

## COLUS, a distaff. [FUsus.]

COMA ( $\kappa \delta \mu \eta$, кoupó), the hair. I. Greex. In the earliest times the Greeks wore their hair long, and thns they are constantly called in Homer $\kappa \alpha р \eta к о \mu \delta \omega \nu \tau \in s$ 'A $\chi$ aıol. This ancient practice was preserved by the Spartans for many centuries. The Spartan boys always had their hair cut quite
 soon as they reached the age of puberty ( $\tilde{\epsilon}^{\prime} \phi \eta$ Soi), they let it grow long. They prided themselves upon their hair, calling it the cheapest of ornaments ( $\tau \hat{\omega} \nu \kappa \delta ́ \sigma \mu \omega \nu$ á $\delta a \pi a \nu \omega ́ \tau \alpha \tau 0 s$ ), and hefore going to battle they combed and dressed it with especial care, in which act Leonidas and his followers were discovered by the Persian spy before the battle of Thermopylae (Herod vii. 208, 209). It seems that both Spartan men and women tied their hair in a knot over the crown of the head (comp. Aristoph. Lys. 1316, кора̂у $\pi \alpha \rho-$ a $\mu \pi$ ย́к $\delta \delta \delta$, with Hor. Carm. ii. 11, in comptum Lacenae more comas religata nodum: Müller, Dor. iv. 3. §1). At a later time the Spartans ahandoned this ancient custom, and wore their hair short, and hence some writers erroneously attribute this practice to an earlier period. (Paus. vii. 14. § 2 ; Philostr. Vit. Apoll. iii. 15. p. 106, ed. Olear.; Plnt. Alc. 23.)

The custom of the Athenians was different. They wore their hair long in childhood, and cut it off when they reached the age of puberty. The cntting off of the hair, which was always done when a hoy became an Ě $\phi \eta \eta_{0}$, was a solemn act, attended with religions ceremonies. A lihation was first offered to Hercules, which was called oiviotýpia or oivia⿱宀thpia (Hesych. and Phot. s. v.) ; and the hair after being cut off was dedicated to some deity, usually a river god. (Aeschyl. Choëph. 6 ; Paus. i. 37. § 2.) It was a very ancient practice to repair to Delphi to perform this ceremony, and Thesens is said to have done so. (Plnt. Thes. 5; Theophr. Char. 21.) The ephebi are always represented on works of art with their hair quite short, in which manner it was also worn by the Athletae (Lucian, Dial. Mer. 5). But when the Athenians passed into the age of manhood, they again let their hair grow. In ancient times at Athens the hair was rolled up into a kind of knot on the crown of the head ; and fastened with golden clasps in the shape of grasshoppers. This fashion of wearing the hair, which was called $\kappa \rho \omega 6\langle\lambda o s$, had gone out just hefore the time of Thucydides (i. 6) ; and what succeeded it in the male sex we do not know for certain. The Athenian females also wore their hair in the same fashion, which was in their case called rópu $\mu 60$, and an example of which is given in the following figure of a female taken from Millingea (Peintures Antiques, plate 40). The word Corymbium is used in a similar sense by Petronius (c. 110).

On vases, however, we most frequently find the heads of females covered with a kind of band or a coif of net-work. Of these coiffures one was called $\sigma \phi \in \nu \delta \delta \nu \eta$, which was a broad band across the forehead, sometimes made of metal, and sometimes of leather, adorned with gold: to this the name of $\sigma \tau \lambda \epsilon \gamma \gamma i$ is was also given, and it appears to have been much the same as the $\chi_{\mu} \mu \nu \xi \xi$ (Pollux, vii. 179 ; Böttiger, Vasengemälde, iii. p. 225 ; AMPY ). But the most common kind of head-dress for females was called by the general name of кєкрט́$\phi a \lambda o s$, and this was divided into the three species
 pa $\lambda$ os, in its narrower sense, was a canl or coif of net-work, corresponding to the Latin reticulum. It was worn during the day as well as the night, and has continned in use from the most ancient times to the present day. It is mentioned by Homer ( 1. xxii. 469), and is still worn in Italy and Spain. These hair-nets were frequently made of gold-threads (Juv. ii. 96 ; Petron. 67), sometimes

COMA.
329
of silk (Salmas. Exero. ad Solin. p. 392), or the Elean byssua (Paus. vii. 21. §7), and probably of other materials, which are not mentioned by ancient writers. The persons who made these nets were called кєкриффлотлдко! (Pollux, vii. 179). Females with this kind of head-dress frequently occur in paintings found at Pompeii, from one of which the preceding cut is taken, representing a woman wearing a Coa Vestis. [CoA Vestis.] (Museo Borbon. vol. viii. p. 5.)
The бdikкos and the $\mu$ itpoa were, on the contrary, made of close materials. The od́rkos covered the head entirely like a sack or bag; it was made of various materials, such as silk, byssus, and wool. (Comp. Aristoph. Thesm. 257.) Sometimes, at least among the Romans, a bladder was used to answer the same purpose. (Mart. viii. 33. 19.) The $\mu i \tau \rho a$ was a broad band of cloth of different colours, which was wound round the hair, and was worn in various ways. It was originally an Eastern head-dress, and may, therefore, be compared to the modern turban. It is sometimes spoken of as characteristic of the Phrygians. (Herod. i. 195, vii. 62 ; Virg. Aen. ix. 616, 617 ; Juv. iii. 66.) It was, however, also worn by the Greeks, and Yolygnotus is said to have been the first who painted Greek women with mitrae (Plin. H. N. xxxv. 9. 8. 35). The Roman calantica or calvatica is said by Servius (ad Virg. Aen. ix. 616) to have been the same as the mitra, but in a passage in the Digest (34. tit. 2. s. $25 . \S 10$ ) they are mentioned as if they were distinct. In the annexed cut, taken from Millin (Peintures de Vases Antiques, vol. ii. pl. 43), the female on the right hand wears a odikкos and that on the left a $\mu i \tau \rho a$.

With respect to the colour of the hair, black was the most frequent, but blonde ( $\xi a \nu \theta \eta \boldsymbol{\eta} \kappa \delta \mu \eta$ ) was the most prized. In Homer, Achilles, Ulysses, and other heroes are represented with blonde hair (Il. i. 197, Od. xiii. 399, \&c.) At a later time it seems to have been not unfrequent to dye hair, so as to make it either black or blonde, and this was done by men as well as by women, especially when the hair was growing gray. (Pollux, ii. 35 ; Aelian, $V$. H. vii. 20 ; Athen. xii. p. 542, d. ; Lucian, Amor. 40.)

Roman. Besides the generic coma we also find the following words signifying the hair: ca-
pillus, caesarzes, crines, cincinnus, and cirrus, the two last words being used to signify curled hair. In early times the Romans wore their hair long, as was represented in the oldest statues in the age of Varro (De Re Rust. ii. 11. § 10), and hence the Romans of the Augustan age designated their ancestors intonsi ( 0 v. Fast. ii. 30) and capillati (Juv. vi. 30). But after the introduction of harbers into Italy ahout B. c. 300, it became the practice to wear their hair short. The women too originally dressed their hair with great simplicity, but in the Augustan period a variety of different head-dresses came into fashion, many of which are descrihed by Ovid (de Art. Am. iii. 136, \&c.). Sometimes these head-dresses were raised to a great height by rows of false curls (Juv. Sat. vi. 502). The dressing of the hair of a Roman lady at this period was a most important affair. So much attention did the Roman ladies devote to it, that they kept slaves especially for this purpose, called ornatrices, and had them instructed by a master in the art (Ov. de Art. Am. iii. 239 ; Suet. Claud. 40 ; Dig. 32. tit. l. s. 65). Most of the Greek head-dresses mentioned above were also worn by the Roman ladies; hut the mitrae appear to have been confined to prostitutes (Juv. iii. 66). One of the simplest modes of wearing the hair was allowing it to fall down in tresses hehind, and only confining it by a hand encircling the head [Vitia]. Another favourite plan was platting the hair, and then fastening it behind with a large pin, as is shown in the figure on p. 14.

Blonde hair was as much prized by the Romans as by the Greeks, and bence the Roman ladies used a kind of composition or wash to make it appear this colour (spuma caustica, Mart. xiv. 26 ; Plin. H. N. xxviii. 12. s. 51 ).

False hair or wigs (фєขákฑ, $\pi \eta \nu i к \eta$, galerus) were worn hoth by Greeks and Romans. (See e. g. Juv. vi. 120.) Among hoth people likewise in ancient times the hair was cut close in mourning [Funus]; and among both the slaves had their hair cut close as a mark of servitude. (Aristoph. Aves, 911 ; Plaut. Amph. i. 1. 306 ; Becker, Charicles, vol. ii. p. 380, \&c. ; Böttiger, Sabina, vol. i. p. 138, \&c.)

COMES, first signified a mere attendant or companion, distinguished from socius, which always implied some hond of union hetween the persons mentioned. Hence arose several technical senses of the word, the connection of which may be easily traced.

It was applied to the attendants on magistrates, in which sense it is used by Suetonins (Jul. Caes. 42). In Horace's time (Epist. i. 8. 2) it was customary for young men of family to go out as contubernales to governors of provinces and commanders-inchief, under whose eye they learnt the arts of war and pesce. This seems to have led the way for the introduction of the comites at home, the maintenance of whom was, in Horace's opinion (Sat. i. 6. 101), one of the miseries of wealth. Hence a person in the suite of the emperor was termed comes. As all power was supposed to flow from the imperisl will, the term was easily transferred to the various offices in the palace and in the provinces (comites palatini, provinciales). About the time of Constantine it became a regular honorary title, including various grades, answering to the comites ordinis primi, secundi, tertii. The power of these officers, especially the provincial, varied with time and place;
some presided over a particular department, with a limited anthority, as we should term them, com. missioners; others were invested with all the powers of the ancient proconsuls and practers.

The names of the following officers explain themselves:-Comes Orientis (of whom there seem to have been two, one the superior of the other), comes Aegypti, comes Britanniae, comes Africae, comes rei militaris, comes portuum, comes stahuli, comes domesticorum equitum, comes clibanarius, comes linteae vestis or vestiarii (master of the robes). In fact the emperor had as many comites as he had duties: thus, comes consistorii, the emperor's privy-councillor; comes largitionum privstarum, an officer who managed the emperor's private revenue, as the comes largitionum sacrarum did the public exchequer. The latter office united in a great measure the functions of the aedile and quaestor. The four comites commerciorum, to whom the government granted the exclusive privilege of trading in silk with barbarians, were under his control. An account, however, of the duties and functions of the comites of the later empire does not fall within the scope of the present work.
[B. J.]
COMISSA'TIO (from $\kappa \hat{\omega} \mu \circ s$, Varr. De Ling. Lat. vii. 89, ed. Miiller), the name of a drinking entertainment, which took place after the coena, from which, however, it must be distinguished. Thus Demetrius says to his guests, after they had taken their coena in his own house, "Quin comissatum ad fratren imus?" (Liv. xl. 7); and when Habinnas comes to Trimalchio's house after taking his coena elsewhere, it is said that "Comissator intravit" (Petron. 65). It appears to have been the custom to partake of some food at the comissatio (Suet. Vitell. 13), but usually only as a kind of relish to the wine.

The comissatio was frequently prolonged to a late hour at night (Suet. Tit. 7); whence the verh comissari means "to revel" (Hor. Carm. iv. 1. 11), and the substantive comissator a "reveller" or "dehauchee." Hence Cicero (Ad Att. i. 16) calls the supporters of Catiline's conspiracy comissatores conjurationis. (Becker, Gallus, vol. ї. p. 235.)

COMITIA. This word is formed from co, cum, or con, and ire, and therefore comitium is a place of meeting, and comitia the meeting itself, or the assembled people. In the Roman constitution the comitia were the ordinary and legal meetings or assemblies of the people, and distinct from the conciones and concilia; or, according to the still more strict definition of Messals ( $a p$. Gell. xiii. 15), comitia were those assemblies convened by s magistrate for the purpose of putting anty subject to their vote. This definition does not indeed comprehend all kinds of comitia, since in the comitia calata no subjects were put to the vote of the people, certain things being only announced to them, or they being only witnesses to certain solemn acts, but with this single exception the definition is satisfactory. The Greek writers on Roman sffsirs call the comitia ai dp $\alpha a t p \in \sigma i a t$, đd

All the powers of government were divided st Rome between the senste, the magistrates, and the people in their assemblies. Properly speaking, the people alone (the populus) was the real sovereign by whom the power was delegated to the magistrates and the senate; and the magistrates in particular could not perform any public
act, unless they were authorised by the senate and people. The sovereign people or populus, however, was not the same at all times. In the earliest times of Rome the populus consisted of the patricians (or patres) only, the plebs and the clients forming no part of the populus, but being without the pale of the state. The original populus was divided into thirty curiae, and the assembly of these curiae, or the comitia curriata, therefore, were the only assembly in which the populus was represented. A kind of amalgamation of the patricians and the plehs afterwards appeared in the comitia of the centuries, instituted by king Servius Tullius, and henceforth the term populus was applied to the united patricians and pleheians assemhled in the comitia centuriata. But Servius had also made a local division of the whole Roman territory into thirty tribes, which held their meetings in assemblies called comitia tributa, which, in the course of time, acquired the character of national assemblies, so that the people thus assembled were likewise designated by the term populus. We shall examine in order the nature, power, and business of each of these different comitia
I. Comitia calata. These and the comitia curiata were the only assemblies that met and were recognized at Rome previous to the time of Servius Tullius, and inasmuch as the populus of which they consisted was the same as the populus in the comitia curiata, they might also be called comitia curiata, but they differed in their objects, in the persons presiding at them, and in the place of meeting. The comitia calata were held under the presidency of the college of pontiffs (Gellius, xv. 27), who also convened them. They derived their name calata (from calare, i. e. vocare) from the circumstance that the attendants or servants of the pontiffs, who were probably employed in calling them together, were termed calatores. (Serv. ad Virg. Georg. i. 268.) Their place of meeting was prohably always on the Capitol in front of the curia Calabra, which seems to have heen an official huilding of the pontiffs, and to have been destined for this purpose. (Paul. Diac. p. 49, ed. Müller ; Varro, De Ling. Lat. v. 1. p. 24.) With regard to the functions of the comitia calata, all writers are agreed that the people assembled acted merely a passive part, that they met only for the purpose of hearing what was announced, and of being witneases to the actions there performed. One of the thinge which were made known to the people in these comitia, was that on the calends of every month it was proclaimed on what day of the new month the nones fell, and perhaps also the ides as well as the nature of the other days, namely, whether they were fasti or nefasti, comitiales, feriae, \&cc., because all these things were known in the early times to the pontiffs exclusively. (Liv. ix. 46 ; Macrob. Sat. i. 15 ; Serv. $a d$ Aen. viï. 654 ; Varro, De Ling. Lat. vi, 4.) Another function of the comitia calata was the inauguration of the flamines, and after the hanishment of the kings, also that of the rex sacrorum. (Gellius, l.c.) A third business which was transacted in them was the testamenti factio, or the making of a will. The object of this was probably to prevent, after the death of the testator, any dispute concerning his will, to which the whole assembly of the populus had been a witness; and it is not improbable that, as the art of writing was not sufficiently known in those times, it was thought a matter of importance
to have the whole populus as a witness to such an act, which perhaps consisted in an oral declaration. The populus thus did not vote upon the validity or invalidity of a will, but solely acted the part of a witness. (Gellius, xv. 27; Theophil. ii. 19.) Assemblies for the express purpose of making the populus witness to a will were in the earliest times held twice in every year (Gaius, ii. § 101); but this custom afterwards fell into desuetude. (Gaius, ii. § 103.) A fourth business transacted in the comitia calata was the detestatio sacrorum, which was in all probability an act connected with the testamenti factio, that is, a solemon declaration, by which the heir was enjoined to undertake the sacra privata of the testator along with the reception of his property. (Gellius, xv. 27, comp. vi. 12.) It has already been observed that originally only the members of the curiae formed the comitia calata, so that they were the same as the comitia curiata. in this respect; but from the words of Gellius (corum autem alia esse curiata, alia centuriata), it is clear that after the time of Servius Tullius, there must have been two kinds of comitia calata, the one convened according to curiae by a lictor, and the other according to centuries by a cornicen. As regards the bnsiness of the latter, we have no information whatever, though it is not impossible, that in them all announcements respecting the calendar were made by the pontiffs, as this was a matter of interest to the whole people, and not to the populus alone (Macroh. and Serv. ll. cc.) ; and it may further be, that in the calata centuriata the testamenta of pleheians were laid hefore the assembled people; as in the calata curiata, they were laid hefore the assembled curies.
II. Comitia curiata (éккえ $\quad \sigma \boldsymbol{i} \alpha \quad$ фратрiкض or $\phi a \tau \rho(\alpha \kappa$ 方) were of far greater importance than the comitia calata, inasmuch as the populus here was not present in a mere passive capacity, but had to decide by its votes as to whether a measure brought before it was to be adopted or rejected. As the populus was at first only the body of real citizens, that is, the patricians, or those contained in the curiae, none but members of the curiae, that is, patricians, had a right to take part in these assemblies. It is a disputed point, as to whether the clients of the patricians had a right to vote in the comitia curiata; but it is highly probahle that, when they appeared in them, they could not act any other part than that of listeners and spectators. They were convened, in the kingly period, by the king himself, or by his trihunus celerum, and in the king's absence by the praefectus urbi. (Liv. i. 59.) After the death of a king the comitia were held hy the interrex. In the republican period, the president was always one of the high patrician magistrates, viz. a consul, praetor or dictator. (Cic. De Leg. Agr. ii. 11, 12 ; Liv. ix. 38.) They were called together by lictors or heralds. (Gellius, xч. 27; Dionys. ii. 7.). The votes were given hy curiae, each curia having one collective vote ; but within a curia each citizen belonging to it had an independent vote, and the majority of the members of a curia determined the vote of the whole curia. (Gell. l. c. ; Liv. i. 43 ; Dionys. ii. 14, iv. 20, 84 , v. 6.) Now as the curiae were thirty in number, it was impossible to obtain a simple majority, which must always have consisted of 16 curiae. How matters were decided in case of 15 curiae voting for and 15 against a measure, is quite nn-
certain; and the fact that tbe awkward number 30 was chosen or retained for the assembly can be accounted for only by the fact that the number three and its multiples had a certain sacred import in all matters connected with the constitution. The order in which the curiae voted, was oot fixed by any regulation, but it appears that the one which gave its vote first, and was called principium, was determined by lot. (Liv. ix. 38.) Further particulars regarding the method of voting, however, are not known. The president in the comitia curiata was always the persoo that had convoked them, that is, in the kingly period, either the kiag himself, or the person that acted as his vicegerent, and the meeting was always held in the comitium.

As regards the powers and functions of the comitia curiata, it must first of all be borne in mind, that in the early times no comitia, of whatever kind they were, had the right to originate any measure, to introduce amendments, or to discuss the merits and demerits of any subject that was brought before them. All they could do was to accept or reject any measure which was brought before them, so that all proposals were in fact nothing but rogationes (populus rogatur), which the people passed by the formula uti rogas, or rejected by the formula antiquo. Whatever was thus decreed became law for the king and senate no less than for the people. Tbe main points upon which the populns had to decide, were the election of the magistrates, including the king himself, the passing of laws, peace and war, the capital punishmeat of Roman citizens (Dionys. ii. 14, iv. 20, ix. 41), and, lastly, upon certain affairs of the curiae and gentes. In the kingly period, the only magistrate in whose person all the powers of the republican officers were conceatrated, was the king bimself. All the other officers were appointed by him, with the exception of the quaestores, who were elected by the people (Ulpian, Dig. ii. 13; but comp. Tac. Ann. xi. 22; Quaestor). With regard to the election of the king, the assembly, as in all other matters, was limited to the persons proposed by the senate through the president in the assembly, that is, when the senate had passed a decree respecting the election, the ioterreges determined upon the candidates, from among whom he was to be chosen, and theo proposed them to the curiae. (Dionys. iv. 34, 40, 80, ii. 58, 60, iii. 36 ; Liv. i. 17 ; Cic. De Re Publ. ii. 13 ; comp. Interrex and Rex.) The priestly officers, such as the Curiones, Flamines Curiales, were likewise either elected by the curiae, or at least inaugurated by them (Dionys. ii. 22; Gell. l. c.), until in later times, b. c. 104, the Domitian law transferred the whole appointment of the priestly colleges to the comitia of the tribes. Legislative proposals were laid before the curiae by the king or the senate, and they might either pass them as laws or reject them. Such laws belonging to the kingly period were the so-called leges regiae; their number cannot have been great, as custom and religion had hallowed and firmly established the principal rules of conduct without tbere being any necessity for formal legal enactments. The right of finally deciding upon the life of Roman citizens (judicia de capite civis Romani) is said to have been given to the populus by king Tullus Hostilius (Liv. i. 26, viii. 33 ; Dionys. iii. 22) ; and previous to the constitution of Servius Tullius this privilege was of course confined to the patriciars, for whom it was
nothing else but the right of appealing from the sentence of the king or judge to the assembly of their peers. When Valerius Publicola renewed this law, it must have been extended to the plebeians also. The fourth right of the assembly of the populus was that of deciding upon war and peace, but this decision again could only be made when it was proposed by the king. With regard to the declaration of war there is no doubt (Liv. i. 32 ; Gellius, xvi. 4 ; Dionys. viii. 91, ix. 69) ; but there is no instance on record of the populus ever having had any thing to do with the conclusion of treaties of peace; no trace of it occurs till long after the establishment of the republic, so that we may fairly presume that in early times the coaclusion of peace was left to the king (or the consuls) and the senate, and tbat Dionysius, as in many other instances, transferred a later custom to the early times. Besides these great functions the curiae had unquestionably many others relating to their own internal administration; and among them we may mention, that no new members could be admitted into a curia, either by the cooptatio of strangers or by the adlectio of plebeians, withont the coosent of the assembly of the curies; and that no arrogatio could take place without the concurrence of the assembled curiae under the presidency of the pontiffs. The consent of the curiae in such cases is expressed by the term lex curiata. (Gellins, v. 19 ; Tac. Hist. i. 15.) It must further be remarked, that when a magistrate (such as the king) proposed to the assembly had been elected, the populus held a second meeting, in which he was formally inducted in his new office. This formality was called lex curiata de imperio, whereby the magistrate received his imperium, together with the right of holding the comitia. (Liv. v. 52; Dion Cass. xxxix. 19, xli. 43 ; Cic. De Leg. Agr. ii. 12.) It was not till a magistrate had thus been solemnly installed, that be was a magistratus optima lege or optimo jure, that is, in the full possession of all the rights and privileges of his office.

Down to the time of Servius Tullius, the comitia curiata were the only popular assemblies of Rome, and remained of course in the undiminished possession of the rights above described ; but the constitution of that king brought about a great change, by bis transferring the principal rights which had hitherto been enjoyed by the curiae to this new national assembly or the comitia centuriata. The power of electing the magistrates, the decision upon war, the passing of laws and jurisdiction in cases of appeal to the body of the Roman people, were thus transferred to the comitia of the centuries. But while the patricians were obliged to share their rights with the plebeians, they reserved for themselves the very important right of sanctioning or rejecting any measure which had been passed by the centuries. Even independent of their right finally to decide upon these questions, they seem, for a time at least, to have exercised a considerable power in several departments of the government: thus, the abolition of royalty and the establishment of the republic are said to have been decreed by the curiae (Dionys. iv. 75, 84) ; in like manner they decided upon the property of the last king (Dionys. v. 6), and upon the rewards to be given to those who had given information respecting the conspiracy ( v .57 ). The sanction of decrees passed by the centuries is often expressed by patres auctores fiunt, and down to the time of the

Pubilian law no decree of the centuries or tribes could become law without this sanction. It need hardly be remarked that the curiae, as long as they existed, retained the exercise of such rights as affected the welfare of their own corporations and the religious rites connected with them. We subjoin a list of the powers and functions which the curiae continued to exercise down to the end of the republic.

1. They conferred the imperium and the right of taking the auspices upon magistrates after their election; this was done by the lex curiata de imperio. This right however must, in the course of time, have become a mere matter of form, and in the time of Cicero (ad Att. iv. 18, ad Fam. ziii. 1), persons even might form the plan of gaining over three augurs to declare that they had been present in the comitia of the curiae, at which the imperium had been conferred, although in reality no such comitia had taken place at all. This fact warrants the conclusion that at that time few persons, if any, noticed such comitia or the granting of the imperium in them. (Comp. Cic. ad Fam. i. 9, ad Q. Fratr. iii. 2.) 2. The inauguration of certain priests, such as the Flamines and the Rex Sacrorum, though this took place in those comitia of the curiae, which were called calata. The curio maximus was in all probability consecrated, if not elected, in the comitia curiata. (Liv. xxvii. 8.) 3. The internal affairs of the curiae themselves and of the families connected with them; but most of them came only before the comitia calata. (See above.) The real comitia curiata began to be a mere formality as early as the time of the Punic wars, and the ancient division into curiae, as it gradually lost its importance, fell into oblivion ; the place of the patricians was filled by the nobiles or optimates, and the comitia of the former became a mere empty show (Cic. De Leg. Agr. ii. 12), and, instead of the thirty curiae themselves giving their votes, the ceremony was performed by thirty lictors. The patrician comitia calata were continued much longer, especially for the purpose of arrogutiones, which under the empire again became a matter of some consequence. [ADOPTIO.]
III. Comitia centuriata (ív doxitis èk$\kappa \lambda \eta \sigma i a)$. The object of the legislation of Servius Tullius was to unite the different elements of which the Roman people consisted, into one
great political body, in which power and influence were to be determined hy property and age. For this purpose, he divided, in his census, the whole body of Roman citizens into six property classes, and 193 centuriae ( $\lambda \sigma \times 01$ ) or votes, from which the assemblies in which the people gave their votes were called comitia centuriata. [Census.] By this means, Servius brought ahout an amalgamation of timocracy and aristocracy ; and the poor citizens, though they met their wealthier brethren on a footing of equality, yet were unable to exercise any great influence upon publio affairs, for the wealthier classes voted first, and if they agreed among themselves, they formed a majority before the poorer classes would be called upon to vote at all. In order to render these general observations more intelligible, it is necessary to give some account of the census which Servius instituted, and of the manner in which the votes were distributed among the several divisions of the people. The whole people was conceived as an army (exercitus, or, according to the more ancient term, classis), and was therefore divided into two parts: the cavalry (equites), and infantry (pedites), though it is not hy any means necessary to suppose that the people assembled in arms. The infantry was divided into fire classes, or, as Dionysius has it, into six classes, for he regards the whole body of people, whose property did not come up to the census of the fifth class, as a sixth. The class to which a citizen belonged, determined the tributum, or war tax, he had to pay, as well as the kind of service he had to perform in the army and the armour in which he had to serve. But for the purpose of voting in the comitia, each class was subdivided into a number of centuries (centuriae, prohably because each was conceived to contain 100 men , though the centuries may have greatly differed in the number of men they contained), one half of which consisted of the seniores, and the other of the juniores. Each century, further, was counted as one vote, so that a class had as many votes as it contained centuries. In like manner, the equites were divided into a number of centuries or votes. The two principal authorities on these subdivisions are, Livy (i. 43), and Dionysius (iv. $16, \& c$. , vii. 59), and the annexed table will show the census as well as the number of centuries oy votes assigned to each class, and the order in which they voted.

## Accarding to Livy.

I. Classis. Census: 100,000 asses.

40 centuriae seniorum.
40 centuriae juniorum.
2 centuriae fabrum.
II. Classis. Census: 75,000 asses.

10 centuriae seniorum.
10 centuriae juniorum.
III. Classis. Census: 50,000 asses.

10 centuriae seniorum.
10 centuriae juniorum.
IV. Classis. Census: 25,000 asses.

10 centuriae seniorum.
10 centuriae juniorum.

## According to Dionysius.

J. Classis. Census: 100 minae.

40 centuriae seniorum.
40 centuriae juniorum.
II. Classis. Census: 75 minae.

10 centuriae seniorum.
10 centuriae juniorum.
2 centuriae fabrum (one voting with the seniores and the other with the juniores).
III. Classis. Census: 50 minae.

10 centuriae seniorum.
10 centuriae juniorum.
IV. Classis, Census: 25 minae.

10 centuriae seniorum.
10 centuriae juniorum.
2 centuriae cornicinum and tubicinum (one voting with the seniores, and the other with the juniores).

According to Livy.
V. Classis. Census: 11,000 asses.

15 centuriae seniorum.
15 centuriae juniorum.
3 centuriae accensorum, cornicinum, tubicinum.
1 centuria capite censorum.

## According to Dionysins.

V. Cxassis. Census: $12 \frac{1}{2}$ minas.

15 centuriae seniorum.
15 centuriae juniorum.
VI. Classis. Census: below $12 \frac{1}{2}$ minae.

1 centuria capite censorum

According to both Dionysius and Livy, the equites voted in eighteen centuries before the seniores of the first class; and hence, there were according to Livy, altogether 194, and, according to Dionysins, 193 centuries or votes. Livy's even number of 194 centuries would have rendered it impossible to obtain an absolute majority in the comitia; and it has been assumed, that he made a mistake in the three centuriae accensorum, cornicinum, tubicinum, which he adds to the fifth class. Dionysius seems to have represented the matter in its right light, and is also born out by Cicero (De Re Publ.ii. 22), who describes ninety-six as the minority; but in other respects, Cicero is irreconcileable, both with Livy and Dionysius: s difficulty which will probably never be solved satisfactorily, as the text is corrupt. The other discrepancies between Livy and Dionysius are not of great importance. They consist in the places assigned to the two centuriae fabrum, the two of the cornicines and tubicines, and in the census of the fifth class. With regard to the last point, Dionysius is at any rate more consistent in his gradation, and in so far deserves to be preferred to Livy. As for the places assigned to the four centuries, it is impossible to determine whether Livy or Dionysius is right; and we can only say, that Cicero agrees with neither of them, sassigning, as he does, only one century of the fabri tignarii to the first class.

In this manner all Roman citizens, whether patricians or plebeians, who had property to a certain amount, were privileged to take part snd vote in the centuriata comitia, and none were excluded except slaves, peregrini, women and the aerarii. The juniores were all men from the age of seventeen to that of forty-six, and the seniores, all men from the age of forty-six upwards. The order of voting was arranged in such a manner, that if the eighteen centuries of the equites and the eighty centuries of the first class were agreed upon a measure, the question was decided at once, there being no need for calling upon the other classes to vote. Hence, although all Roman citizens appeared in these comitia on a footing of equality, yet by far the greater power was thrown into the hands of the wealthy.

As regards the functions of the comitia centuriata, it must be observed in general, that all the business which had before belonged to the comitia curiata, was trausferred by Servius to the comitia centariata, that is, they received the right of electing the higher magistrates, of making laws and of deciding upon war, and afterwards also of concluding peace with foreign nations.
(a.) The election of magistrates. After the presiding magistrate had consulted with the senate about the candidates who had offered themselves, he put them to the vote. The magistrates that were elected by the centuries are the consuls (whence the assembly is called comitia consularia, Liv. i. 60, x. 11), the praetors (hence, comitia praetoria, Liv. vii. 1, x. 22), the military tribunes with consular power (Liv. v. 52), the censors (Liv.
vii. 22, xl. 45), and the decemvirs. (Liv. iii. 33, 35.) There are also instances of proconsuls being elected by the centuries, but this happened only in extraordinary cases. (Liv. xxxiii. 30, xxxiv. 18.)
(b.) Legislation. The legislative power of the centuries at first consisted in their passing or rejecting a measure which was brought before them by the presiding magistrate in the form of a senatus consultum, so that the assembly had no right of originating any legislative measure, but voted only upon such ss were brought before them as resolutions of the senate. When a proposal was passed by the centuries it became law (lex). The first law passed by the centuries of which we have any reco:d, was the lex Valeria de provocatione (Cic. De Re Publ. ii. 31), and the laws of the twelve tables were sanctioned by the centuries.
(c.) The decision upon war, on the ground of s senatus consultum, likewise belonged to the centuries and is often mentioned. It is generally believed that they had also to decide upon the conclusion of peace and treaties, but it has been satisfactorily proved by Rubino (Ueber Röm. Staatsverf. p. $259, \& c$. .) that in the early part of the republic, and perhaps down to the peace of Csudium, this was not the case, but that peace was concluded by a mere senatus consultum, and without any cooperation of the people.
(d.) The highest judicial power. The comitia centuriata were in the first place the highest court of appeal (Dion Cass. xxxix. 27, \&cc.; comp. Appellatio), and in the second, they had to try sll offences committed against the state; hence, sll cases of perduellio and majestas, and no case involving the life of a Roman citizen could be decided by any other court. (Cic. p. Seat. 30, 34, De Re Publ. ii, 36, De Leg. iii. 4 ; Polyb. vi. 4, 14.) This last right was revived or introduced by the Valerian law (Plut. Publ. 11), and Spurius Cassius wss condemned by the comitia of the centuries. There is no reason for believing that the laws of the twelve tables increased the power of the centuries in this respect; and Servius Tullius seems, in consistency with his principles, to have heen obliged to constitute his national assembly st the same time as the high court of justice.

All the powers which we have here mentioned as possessed by the centuries, had to be sanctioned, when exercised, by the curies, and through this sanction alone they became valid and hinding. The election of a magistrate, or the passing of a law, though it was made on the ground of a senatus consultum, yet required the sanction of the curies. But, in the course of time, the assembly shook off this power of the curiae, which became merely s formality, and, in the end, the curiae were obliged to give their sanction beforehand to whatever the centuries might determine. This was effected by the Publilian law, in b.c. 337. (Liv. viii. 12.) As thus the centuries gradually became powerful enough to dispense with the sanction of the curiae, so they also acquired the right of discussing and deciding upon matters which were not brought be
fore them in the form of a senatus consultum ; that is, toey acquired the power of originating measures. In reference to the election of magistrates, the conitia originally were not allowed to elect any other except those who were proposed by the president, whe himself was entirely guided by the resolution of the senate; but in the course of time, the people asserted their right so far as to oblige the president to propose any candidate that might offer himself, without the previous sanction of the senate. This change took place about b. c. 482. In legislative measures a senatus consultum was indispensable, and this senatus consultum was brought before the people by the consul or the menator who had originated the measure, after it had previously been exhibited in public for soventeen days, to give the people an opportunity of becoming acquainted with the nature of the proposed law. (Appian, de Bell. Civ. i. 59 ; Cic. p. Seat. 51, in Pison. 15.) Whether the comitia required a senatus consultum in cases where they acted as the supreme court of justice, is uncertain, at least we have no example of a senatus consultum in such a case on record.

The comitia centuriata could be held only on dies comitiales or fasti, on which it was lawful to transact business with people, and the number of such days in every year was about 190 (Varro, De L. L. vi. 29; Fest. s. v. Comitiales dies; Macrob. Sat. i. 16); but on dies nefasti (that is, dies festi, feriati; comp. Dies), and, at first, also on the nundinae, no comitia could be held, until in B. c. 287 the Hortensian law ordained that the nundinae should be regarded as dies fasti (Macrob. Sat. i. 16), so that henceforth comitia might be held on the nundines, though it was done rarely. (Cic. ad Att. i. 14.) Comitia for the purpose of passing laws could not even be held on all dies fasti. (Cic. De prov. Cons. 19.) The comitia for elections took place every year at a certain period, though it depended upon the senate and the consuls, as to whether they wished the elections to take place earlier or later than usual. (Cic. p. Mil. 9, ad Fam. viii. 4, p. Muren. 25.)
The place where the centuries met, was the Campus Martius (Cic. ad Q. Frat. ii. 2 ; Dionys. iv. 84, vii. 59), which contained the septa for the voters, a tabernaculum for the president, and the villa publica for the augurs. (Cic. p. Rab. Perd. 4 ; Gellius, xiv. 7 ; Varro, De Ling. Lat. vi. 87.) The president at the comitia was the same magistrate who convoked them, and this right was a privilege of the consuls, and, in their absence, of the praetors. (Cic. ad Fam. x. 12.) An interrex and dictator also, or his representative, the magister equitum, might likewise convene and preside at the comitia. (Liv. viii. 23, xxy. 2 ; Cic. De Leg. ii. 4.) At the beginning of the republic, the praefectus urbi held the comitia for the election of the first consuls (Liv. i. 60); and the censors assembled the people only on account of the census and the lustrum. (Varro, De L. L. vi. 86.) In cases when the assemoly was constituted as a court of justice, inferior magistrates, after having obtained the permission of the consuls, might likewise preside. (Liv. xxvi. 3.) One of the main duties devolving upon the president, and which he had to perform before holding the comitia, was to consult the auspices. (Auspicari.) For this purpose, the magistrate accompanied by an augur went out of the city early in the morning, and chose a taber-
naculum or templum. There the augur began his observations, and gave his opinion either that the comitia might be held, or that they must be deferred till another day. This declaration was given to the magistrate ; and when the auspices were favourable, the people were called together, which was done by three successive and distinct acts: the first was quite a general invitation to come to the assembly (inlicium, Varro, De L. L. vi. 94, comp. 86, 88). At the same time when this invitation was proclaimed circum moeros or de moeris, a horn was blown, which being the more audible signal, is mentioned by some writers alone, and without the inlicium. (Gellius, xv. 27 ; Varr, De L. L. v. 91.) When upon this signal, the people assembled in irregular masses, there followed the second call by the accensus, or the call ad concionem or conventionem; that is, to a regular assembly, and the crowd then separated, grouping themselves according to their classes and ages. (Varro, De L. L. vi. 88.) Hereupon the consul appeared, ordering the people to come ad comitia centuriata; and led the whole exercitus - for, in these comitia, the Roman people are always conceived as an exercitus - out of the city, to the Campus Martius. (Varro, l. c.; Liv. xxxix. 15.) It was customary from the earliest times for an armed force to occupy the Janiculum, when the people were assembled in the Campus Martius, for the purpose of protecting the city against any sudden attack of the neighbouring people; and on the Janiculum, a vexillum was hoisted during the whole time that the assembly lasted. This custom continued to be ohserved even at the time when Rome had no longer any thing to fear from the neighbouring tribes. (Liv. l. c.; Gell. xv. 27 ; Macroh. Sat. i. 16 ; Dion Cass. xxxvii. 27, \&c.; Serv. ad Aen. viii. 1.) When the people were thus regularly assembled, the business was commenced with a solemn sacrifice, and a prayer of the president, who then took his seat on his tribunal. (Dionys. vii. 59, x. 32 ; Liv. xxxi. 7, xxxix. 15 ; Cic. p. Muren. 1 ; Liv. xxvi. 2.) The president then opened the business by laying before the people the subject for the decision, upon which they had been convened, and concluded his exposition with the words: velitis, jubeatis Quirites, e. g. bellum indici, or ut M. Tullio aqua igni interdictum sit, or whatever the subject might be. This formula was the standing one in all comitia, and the whole exposition of the president was called rogatio (Liv. iv. 5, vi. 40 , xxi. 17, xxii. 10, xxx. 43 ; Cic. De Finn. ii. 16, in Pison. 29, p. Dom. 17, 30 ; Gell. v. 19.) When the comitia were assembled for the purpose of an election, the presiding magistrate had to read out the names of the candidates, and might exercise his influence by recommending the one whom he thought most fit for the office in question. (Liv. x. 22, xxii. 35.) He was, however, not obliged to announce the names of all the candidates that offered themselves; as, for example, if a candidate had not attained the legitimate age, or when he sued for one office without having been invested with those through which he had to pass previously, or if there was any other legal obstacle ; nay, the president might declare, that if a person, to whom he had any such objection, should yet be elected, he would not recognise hin election as valid. (Liv. iii. 2l, xxiv. 7 ; Val. Max. iii. 8. § 3.) If the assembly had been convened for the purpose of passing a legislative measure, the president usually recommended the proposal, or

## COMIT1A.

he might grant to others, if they desired it, permission to spesk abont the measure, either in its favour or against it. (Concionem dare, Liv. iii. 7l, xxxi. 6, \&cc., xlii. 34 ; Appian, De B.C. i. 11 ; Dion Cass. xxxviii. 4 ; Quintil, ii. 4. § 3.) In this case, however, it was customary for private persons to speak before any magistrate, and the orators, until the time of Gracchns, while speaking turned their face towards the comitiom and the senate house. (Dion Cass. xxxix. 35 ; Cic. Lael. 25 ; Plut. C. Graccl. 5, Tib. Gracch. 14.) When the comitia acted as a court of justice, the president stated the crime, proposed the punishment to be inflicted upon the offender, and then allowed others to speak either in defence of the sccused or against him.

When the subject brought before the sssembly was sufficiently discussed, the president called upon the people to prepare for voting by the words: ite in suffragium, bene juvantibus diis. (Liv. xxxi. 7.) He then passed the stream Petronia, and went to the septa. If the number of citizens present at the assembly was thought too small, the decision might be deferred till another day, but this was rarely done, and a question was usually put to the vote, if each century was but represented by a few citizens. (Liv. vii. 18 ; Cic. p.Sext. 51, de Leg. Agr. 3i. 9 ; Plut. Tib. Graceh. 16 ; Dion Cass. xxxix, 30.) Respecting the manner in which the votes were given in the earliest times, opinions are divided: some think that they were given viva voce, and otbers hy means of calculi, or in hoth ways, though it seems to be more prohshle that calculi were used. The leges tabellariae introduced a change in this respect, ordaining that the votes should be given in writing. [Leges tabellariae.] But previous to the leges tabellariae, the rogatores, who subsequently collected the written votes, stood at the entrance of the septa, and asked every citizen for his vote, which was taken down, and used to determine the vote of each century. (Dionys. vii. 64.) In legislative assemhlies, the voter, probahly from the earliest times, signified his disapproval hy the word antiquo, and his approval by uti rogas. (Liv. vi. 38, x. 8, xxx. 43, xxxi. 8, xxxiii. 25 ; Cic. de Leg. ii. 10.) At elections, the name of the successful candidste was mentioned to the rogator, who had to mark the favourable votes by dots which he made by the side of the name: hence puncta ferre, to be successful. (Liv. x. 13, 22, xxix. 22.) The custom of voting at elections by tablets with the name of the candidates written on them, was introduced in B. c. 139, by the lex Gabinia tabellaria (Cic. De Leg. iii. 16) ; two years later L. Cassius introduced the same custom, in cases of the comitia acting as a court of justice (Cic. Brut. 27), and, afterwards, it was established also in legislative assemblies, and in cases where the comitia tried persons for perduellio. [Legers tabellariae.] The two tablets which were given to each person for the purpose of voting on legislative measures, were marked the one with U and the other with A (uti rogas and antiquo. Cic. ad Att. i. 14). At elections, the citizens obtained blank tablets, that they might write upon them the name of the candidate for whom they voted. (Cic. Phil. xi. 8 ; Plut. C. Gracch. 5, Cat. Min. 46 ; Plin. Epist. iv. 25.) In judicial assemblies, every citizen received two tablets marked A (absolvo)
and $\mathbf{C}$ (condemno), and there was, perhaps, a third tablet containing the letters N. L. (ron liquet), but this is an uncertain point. There were in the Campus Martius septa or inclosures (whether they existed from the earliest times is unknown), into which one class of citizens was admitted after another for the purpose of voting. The first thst entered, were the eighteen centuries of the equites, then followed the first class and so on. It very rarely happened that the lowest class was called upon to vote, as there was no necessity for it, unless the first class did not sgree with the equites. (Dionys. iv. 20, vii. 59, viii. 82, x. 17 ; Liv. i. 43.) After the time when the comitia of the centuries became amalgamated with those of the tribes, previous to eacb assembly, a large spsce near the villa publica was surrounded with an enclosure, and divided into compartments for the several tribes. The whole of this enclosure was called ovile, septa, carceres, or cancelli; and in later times a stone building, containing the whole people, was erected; it was divided into compartments for the classes as well as the trihes snd centuries; the access to these compsitments was formed by narrow passages called pontes or ponticuli. On entering, the citizens received their tahlets (Cic. ad Att. i. 14, de Leg. iii. 17, in Pis. 15, p. Planc. 6); and when they had consulted within the enclosures, they passed out of them again by a pons or ponticulus, at which they threw their vote into a chest (cista) which was wstched hy rogatores. Hereupon the rogatores collected the tahlets, and gave them to the diribitores, who clsssified and counted the votes, and then handed them over to the custodes, who sgain checked them off hy points marked on a tablet. (Comp. Cic. in Pis. 15 - " vos rogatores, vos diribitores, vos custodes tabellarum.'") The order in which the centuries voted, was determined in the Servian constitution, in the manner described above; but after the union of the centuries and tribes, the order was determined hy lot ; and this was a matter of no slight importance, since it frequently hsppened that the vote of the first determined the manner in which subsequent ones voted. The voting, of course, was continued, until the majority was ascertained. In the case of elections, the successful candidate was proclaimed twice, - first, by the praeco, and then by the president, and without this renuntiatio the election was not valid. After all the business was done, the president pronounced a prayer (Cic. p. Planc. 6, p. Muren. 1), and dismissed the assembly with the word discedite.

Cases sre frequently mentioned in which the proceedings of the assembly were disturbed, so that it was necessary to defer the business till another day. This accurred-1. when it was discovered that the anspices had been unfavourahle, or when the gods manifested their displeasure by rain, thunder, or lightning; 2. when a tribune interceded (Liv. xlv. 21 ; Dionys. vi. 89 ; Cic. in Vat. 2) ; 3. when the sun set before the business was over, for it was a principle that the auspices were valid only for one day from sunrise to sunset (Varro, De L. L. vii. 51 ; Dion Cass. xxxix. 65 ; Liv. x. 22, xli. 17 ; Dionys. ix. 41) ; 4. when 8 morbus comitialis occurred, i. e. when one of the assembled citizens was seized with an epileptic fit (Dion Cass. xlvi. 33 ; Gellins, xix. 2; Macrob. Sat. ii. 8) ; 5. when the vexillum was taken away from the Janiculum, this being a signal which all
citizens had to obey (Liv. xxxix. 15 ; Dion Cass. xxxvii. 27 ; Macroh. Sat. i. 16) ; 6. when any tumalt or insurrection broke out in the city, as happened now and then during the latter period of the republic. (Cic. p. Sext. 36.) In all these cases, the assembly had to continue its business on some other day, sometimes on the next. The only exception seems to have been in the case of the election of the censors, for if both could not be elected on the same day, it was necessary to hegin the election afresh, and if one had been elected, his election was not valid. (Liv, ix. 34.)
 These assemblies likewise were called intoexistence by the constitution of Servius Tullius, who divided the Roman territory into thirty local tribes. As these divisions were originally a purely topographical arrangement, they were of little or no importance to the state; but in the course of time, these local divisions were formed into a political union, and the assemblies of the tribes became most formidahle rivals of those of the centuries. The decision upon the question as to what portion of the Rnman population had the right to take part in the comitia tributa, depends upon the question, as to whether the trihes were instituted as a local organisation of the whole people (patricians and plebeians), or whether they were intended for the plebeians only. Most modern writers have adopted the opinion of Niebuhr, that the patricians were not considered as members of the trihes, and that ac. cordingly, they had no right to take part in their assemblies, until the time of the decemviral legislation. The question is not one that can be proved with satisfactory evidence; but at any rate no sufficient argument has yet been brought forward to upset Niebuhr's view, for the fact of patricians and their clients being present at the place of meeting (Liv. ii. 56), for the purpose of disturbing the comitia trihuta and preventing their coming to a decision, does not prove that they possessed the right of voting. After the time of the decemvirate, the patricians had the right of voting in the assemblies of the tribes, which were then also convened hy the higher magistrates. (Liv. iii. 71; comp. Tribus.)

The assemhlies of the tribes had originally only a local power ; they were intended to collect the tributum, and to furnish the contingents for the army (Dionys. iv. 14, \&c.); they may further have discussed the internal affairs of each tribe, such as the making or keeping up of roads, wells, and the like. But their influence gradually increased, for the commonalty being more numerous than the patricians, and being in a state of growth and development, and guided by active and energetic tribunes, the internal administration of the tribes gradually assumed the character of an administration of the internal affairs of the republic, while the comitia of the centuries were more calculated to represent the state in its relations to foreign countries. As the commonalty grew in sitength, it made greater claims; each victory gave it fresh courage, and thus the comitia tributa gradually acquired the following powers :-

1. The election of the inferior magistrates, whose office it was to protect the commonalty or to superintend the affairs of the tribes. The Pubilian law in в. c. 471 , secured to the comitia tributa the right of electing the tribunes of the plebs. (Liv. ii. $\mathbf{5 6}$; Dionys. ix. 49.) In like mamner, the aediles
were elected by them, though the curule aediles were elected at a different time from the plebeian aediles and under the presidency of a consul. (Gell. xiii. 15, vi. 9 ; Cic. p. Planc. 4, 20, 22, ad Att. iv. 3, ad Fam. viii. 4; Liv. ix, 46, xxv. 2.) At a still later time, the quaestors and trihunes of the soldiers, who had before been appointed hy the consuls, were appointed in the assemblies of the tribes. (Cic. ad Fam. vii. 30, in Vat. 5 ; Liv. iv. 54 , vii. 5 , ix. 30 ; Sall. Jug. 63.) The proconsuls to be sent into the provinces, and the prolongation of the imperium for a magistrate who was already in a province, were likewise points which were determined by the tribes in later times. (Liv. viii, 23,26 , ix. 42 , x. 22 , xxvii. 22 , xxix. 13 , xxx. 27, xxxi. 50.) The inferior magistrates elected hy the trihes are:- the triumviri capitales, triumviri monetales, the curatores viarum, decemviri litibus judicandis, tribuni aerarii, magistri vicorum et pagorum, praefecti annonae, duumviri navales, quinqueviri muris turribuaque reficiendis, triumviri coloniae deducendae, triumviri, quatuorviri, \&c., mensarii, and lastly, after the Domitian law, B. c. 104, also the members of colleges of priests. The pontifex maximus had heen elected by the people from an earlier time. (Liv. xxv. 5 ; Cic. de Leg. Agr. ii. 7.)
2. The legislative pover of the comitia trihuta was at first very insignificant, for all they could do was to pass resolutions and make regulations concerning the local affairs of the tribes, but they did not in any way affect the state as a whole. But after a time when the tribes hegan to he the real representatives of the people, matters affecting the whole people also were brought before them by the tribunes, which, framed as resolutions, were laid before the senate, where they might either be sanctioned or rejected. This practice of the trihuta comitia gradually acquired for them the right of taking the initiative in any measure, or the right of originating measures, until in B. c. 449 this right was recognised and sanctioned by a law of L. Valerius Publicola and M. Horatius Barbatus. (Liv. iii. 55, 67; Dionys. xi. 45.) This law gave to the decrees passed by the tribes the power of a real lex, hinding upon the whole people, provided they obtained the sanction of the senate and the populus, that is, the people assembled in the comitia curiata or in the comitia centuriata. (Dionys. x. 4, 32.) At first the tribes acted with considerable moderation and modesty, discussing only those subjects which affected their own order or individual plebeians, such as the amnesty after the secession, plebeian magistrates, usury and the like. In B. c. 339, the Publilian law enacted $u t$ plebiscita omnes Quirites tenerent. (Liv. viii. 12.) This law was either a re-enactment of the one passed in B. c. 449 , or contained a more detailed specification of the cases in which plehiscita should be binding upon the whole nation, or, lastly, it made their validity independent of the sanction of other comitia, so that nothing would be required except the assent of the senate. In B. c. 287 , the Hortensian law was passed, which seems to have heen only a revival and a confirmation of the two preceding laws, for it was framed in almost the same terms (Plin. H.N. xvi. 10; GeII. xy. 27 ; Gaius, i. 3) ; but it may also be, that the Hortensian law made the plebiscita independent of the sanction of the senate, so that henceforth the comitia tributa were quite independent in their
legislative character. Senatus consulta preceding a plebiscitum, it is true, occur after this time in many instances, but it does not follow that for this reason a senatus consultum was necessary for every plebiscitum (Dionys. ix. 41), for we must distinguish hetween those plebiscita which affected the rights of the people, and those which touched upon the administration of the republic; the former of these are constantly mentioned without a senatus consultum, but the latter never. [Plebiscitum.]
3. The judicial power of the comitia tributa was much more limited than that of the comitia centuriata, inasmuch as they could take cognizance only of offences against the majesty of the people, while all crimes committed against the state were brought before the centuries. Even patricians, when they had offended against the commonalty or its members, were tried and fined by the tribes. This again constitutes a difference between the judicial power of the centuries and that of the tribes, for the former could inflict capital punishment, but the latter only fines. There are, indeed, cases in which the tribes might appear to have sentenced persons to exile; but such exile is not the result of a real verdict, but only a measure taken against those who during the trial went into voluntary exile, which might then be made a necessary exile, by the interdictio aquae et ignis being added. (Liv. xxv. 3, xxvi. 3; Cic. Orat. p. Dom. $16, \& c$.) When the tribes acquired this right is uncertain, for that it was not originally possessed by them, is clear from the expressions used by our authorities. The offences for which persons were summoned before the tribes, were bad conduct of a magistrate in the performance of his duties, neglect of duty, ill management of a war, emhezzlement of the public money, and a variety of offences of private individuals, such as disturbance of the public peace, usury, adultery, and the like. The comitia tributa also acted as courts of appeal, e. g. when a person protested against a fine imposed hy a magistrate. (Dionys. vii. 17 ; Cic. De Leg. iii. 3; Liv. xl. 42 ; Zonar. vii. 17.) The persons who acted as accusers in the comitia tributa were the tribunes and aediles.

With regard to the time at which these comitia were or could he convened, the same regulations were ohserved as at the comitia centuriata. They might assemble either within or without the city, but not further from it than 1000 paces, because the power of the tribunes did not extend further. For elections the Campus Martius was usually chosen (Cic. ad Att. iv. 3, ad Fam. vii. 30; Plut. C. Gracch. 3), but sometimes also the form, the Capitol, or the Circus Flaminius. (Cic. ad Att. i. 16; Liv. xxxiii. 10, xxvii 21.) The presidents were commonly the tribunes who were supported by the sediles, and no matter could be hrought before the tribes without the knowledge and consent of the tribunes (Liv. xxvii. 22, xxx. 41 ; Cic. de Leg. Agr. ii. 8) ; even the aediles could not bring a proposal before them without the permission of the tribunes. (Grell. iv. 4 ; Dionys. vi. 90.) One of them was chosen either by lot or by common agreement to act as president (Liv. ii. 56, iii. 64, iv. 57, v. 17) ; but his colleagues usually had to sign the proposal which he brought before the commonalty. (Cic. p. Sext. 33, de Leg. Agr. ii. 9.) As the comitia tributa, however, more and more sssumed the character of national assemblies, the
higher magistrates also sometimes acted as presidents, though perhaps not without previously obtaining the permission of the tribunes. There are only a few instances of higher magistrates presiding in the comitia tributa when assembled for purposes of legislation (Plin. H.N. xvi. 15 ; Cic. p. Balb. 24 ; Dion Cass. xxxviii. 6, xxxix. 65 ; Appian, De Bell. Civ. iii. 7, 27) ; but the consuls and praetors often appear as presidents at the elections of tribunes, aediles, and quaestors (Liv. iii. 55, 64 ; Dionys. ix. 41, 43, 49 ; Appian, De Bell. Civ. i 14 ; Cic. p. Planc. 20, ad Att. iv. 3, in Vat. 5, ad Fam. vii. 30) ; as well as when the comitia tributa were assembled as a court of jnstice. (Liv. xxy. 4; Appian, De Bell. Civ. i. 31; Dion Cass. xxviii. 17.)

The preparations for the comitia tributa were less formal and solemn than for those of the certuries. In the case of elections, the candidates had to give in their names, and the president communicated them to the people. (Liv. iii. 64; Appian, De Bell. Civ. i. 14.) When a legislative measure was to he brought before the assembly, a tribune (the proposer of the bill was called rogator, and the others adscriptores) made the people scquainted with it in conciones, and that on the three preceding nundines. The same was the case when the people were to meet as a court of justice. The auspicia were not consulted for the comitia of the tribes, but the spectio alone was sufficient, and the tribunes had the right of obnuntiatio. The convening of these assemblies was likewise less solemn than that of the centuries, for the tribune who bsd been chosen to preside either at an election or hrought forward a rogation, simply invited the citizens by his viatores, who were also sent into different parts of the country to invite the people living at a distance. (Appian, De Bell. Civ. i. 29.) At the meeting itself, he sat on the tribunal supported hy his colleagues (Liv. xxv. 3; Dion Cass. xxxix. 65), and laid before the people his bill, the name of the candidate, or made them acquainted with the nature of the offence on which they had to pass sentence, concluding with the words velitis, jubeatis Quirites. The bill was never read by the tribune himself, but by a praeco, and then began the debates, in which persons might either oppose or recommend the measure, though private persons had to ask the tribunes for permission to speak. When the discussion was over the president called upon the people ite in suffragium, as at the comitia centuriata. They then formed themselves into their tribes, which, like the centuries, ascertained thair own votes in enclosures (septa). Which of the 35 tribes was to give its rote first, was detemined by lot, and that tribe was called praerogativa or principium (the others were termed jure vocatae). The vote of the first trihe was given by some person of distinction whose name was mentioned in the plebiscitum, if it was of a legislative nature. The manner of collecting the votes was, on the whole, the same as in the comitia centuriata. The aunouncing of the result of the votes was the renuntiatio. If it so happened that two candidates had the same number of votes, the question was decided by drawing lots. The circumstances which might cause the meeting to break up and defer its business till another day, are the same as those which put an end to the comitia centuriata. If, however, the people were assembled as a court, the breaking up of the assembly was to the accrued equivalent to an acquittal (Cic. p. Dom. 17). If
after the comitia the augurs declared that some formality had been neglected, the decree of the assembly thereby became void, and persons who had been elected to an office were obliged to withdraw.
V. The comitia centuriata mixed with the comitia tributa. - The Servian constitution was retained unaltered so long as no great change took place in the republic, bnt when the coinage and the standard of property had become altered, when the constitution of the army had been placed on a different footing, and above all, when the plebeians began to he recognized as a great and essential element in the Roman state, it must have been found inconvenient to leave to the equites and the first class so great a preponderance in the comitia of the centaries, and it became necessary to secure more power and influence to the democratic element which had grown in strength and was still growing. It may have heen the intention to combine the comitia centuriata and tributa in such a manner as to make only one assembly of them, but this was not done. A change however took place, though no writer mentions either the time when it was made nor in what it consisted, so that we are left to form our opinion from incidental allusions. First, as to the time of the change. Frond Livy (i. 43) and Dionysius (iv. 21) it would appear that the change did not take place till after the completion of the 35 tribes, i.e after в. c. 241. Some modern writers, therefore, refer the change to the censorship of C. Flaminius, B. c. 220, who is said to have made the constitution more democratic ; while Niebuhr and others date the change from the censorship of Q. Fabius and P. Decius, B. c. 304. But there is evidence that it must he assigned to even an earlier date than this, for the (tribus) praerogativa is mentioned as early as в.c. 396 in the election of the consular tribunes (Liv. v. 18), where the pure comitia tributa cannot be meant, and a centuria praerogativa is a thing unknown.
The question about the manner in which the combination of the two kinds of comitia was effected, has been the sulbject of even much more discussion and doubt than that about the time when it was brought about. The most probable of the numerous opinions which have been advanced on this subject is that of O. Pantagathus (Fulv. Ursimus, ad Liv. i. 43), which has been very elahorately worked out by Göttling. (Gesech. d. Rom. Stactsverf. pp. 380, \&c., 506, \&c.) Pantagathus believes that the citizens of each tribe were divided into five property classes, each consisting of seniores and joniores, so that each of the 35 tribes contained ten centuries, and all the tribes together 350 centuries, a number which corresponds with that of the days of a Roman lunar year. According to this new arrangement, the five ancient classes, divided into seniores and juniores, continued to exist as before (Liv. xilii. 16; Cic. Phil. ii. 33, p. Flace. 7, de Re Publ. iv. 2, Academ. ii. 33 ; Sall. Jug. 86), but henceforth they were most closely united with the tribes, whereas before the tribes had been mere local divisions and entirely independent of property. The union now effected was that the classes became subdivisions of the tribes, and that accordingly centuries occur hoth in the classes and in the tribes. (Cic. $p$. Planc. 20, de Leg. Agr. ii. 2.) Each tribe contained ten centuries, two of the first class (one of the seniores and one of the juniores), two of the
second (likewise seniores and juniores), two of the third, two of the fourth, and two of the fifth class. The equites were likewise divided according to tribes and centuries (Dionys. vi. 13, vii. 72), and they seem to have voted with the first class, and to have been in fact included in it, so as to be called centuries of the first class. (Cic. Phil. ii. 33, Liv. xliii. 16; Aurel. Vict. de Vir. Illustr. 57; Val. Max. vi. 5. § 3.) The centuries of the cornicines, tubicines and fabri, which are no longer mentioned, probahly ceased to exist as distinct centuries. (Comp. Cic. de Re Publ. ì. 22.) Respecting the manner in which the votes were given, there are two opinions: according to the first, a whole tribe was chosen by lot to give its vote ( 10 centuries) first, and according to the second, one century of the first class, having been determined by lot. If we adopt the former opinion, the votes of the ten centuries contained in a tribe would have been given one after another, and the majority, six, wonld have constituted the result or vote of the tribe. Now as 18 out of the 35 tribes constituted a majority, it is evident that 108 centuries might have constituted a majority against the remaining 242. This is an absurdity of which we cannot conceive the Romans to have been guilty. The voting by tribes, therefore, cannot be conceived as rational, except in those cases in which the ten centuries of every tribe were unanimous; this may have been the case very often, and when it was so, the tribus praerogativa was certainly the tribe chosen by lot to give its unanimous vote first. But if there was any difference of opinion among the centuries making up a tribe, the true majority could only be ascertained by choosing by lot one of the 70 centuriae of the first class to give its rote first, or rather it was decided by lot from which tribe the two centuries of the first class were to be taken to give their vote first. (Hence the plural praerogativae, Pseud. Ascon. ad Cic. in Verr. p. 139; Liv. x. 20.) The tribe, moreover, to which those centuries belonged which voted first, was itself likewise called tribus praerogativa. Of the two centuries, again, that of seniores gave its vote before the jumiores, and in the documents both were called by the name of their tribe, as Galeria juniorum (Liv. xxvii. 6, i. e. the juniores of the first class in the tribus Galeria), Aniensis juniorum (Liv. xxiv. 7), Veturia juniorum (Liv. xxvi. 22; comp. Cic. p. Planc. 20, Phil. ii. 33, De Div. ii. 35). As socn as the praerogativa had voted, the renuntiatio took place, and the remaining centuries then deliberated whether they should vote the same way or not. When this was done all the centuries of the first tribe proceeded to vote at once (Dionys. iv. 21), for there would not have been time for the 350 centuries to vote one after another, as was done by the 193 centuries in the comitia centuriata. (Cic. p. Planc. 20, in Verr. v. 15, p. Red. in Senat. 11, ad Quir. 7; Liv. x. 9, 22, xxiv. 7, xxyi. 22, xxpii. 24 ; Suet. Caes. 19.)

These comitia of the centuries combined with the tribes, were far more democratical than the comitia of the centuries; they continued to be held, and preserved their power along with the comitia tributa, even after the latter had acquired their supreme importance in the republic. During the time of the moral and political corruption of the Romans, the latter appear to have heen chiefly attended by the populace, which was guided by the tribunes, and the wealthier and more respect-

## COMMISSORIA LEX.

ahle citizens had little influence in them. When the libertini and all the Italians ere incorporated in the old thirty-five tribes, and when the political corruption had reached its height, no trace of the sedate and moderate character was left by which the comitia trihuta had been distinguished in former times. (Sall. Cat. 37 ; Suet. Caes. 41 ; Cic. ad Att. i. 16.) Violence and bribery became the order of the day, and the needy multitude lent willing ears to any instigations coming from wealthy bribers and tribunes who were mere demagogues. Sulla for a time did away with these odious proceedings ; since, according to some, he abolished the comitia tributa altogether, or, according to others, deprived them of the right of electing the sacerdotes, and of all their legislative and judicial powers. (Cic. in Verr. i. 13, 15, de Legg. iii. 9 ; Liv. Epit. 89 ; Appian, de Bell. Civ. i. 59, 98 ; comp. Tribunus.) But the constitution, such as it had existed before Sulla, was restored soon after his death by Pompey and others, with the exception of the jurisdiction, which was for ever taken from the people by the legislation of Sulla. The people suffered another loss in the dictatorship of J . Caesar, who decided upod peace and war himself in connection with the senate. (Dion Cass. xlii. 20.) He had also the whole of the legislation in his hands, through his influence with the magistrates and the tribunes. The people thus retained nothing but the election of magistrates ; but even this power was much limited, as Caesar had the right to appoint half of the magistrates himself, with the exception of the consuls (Snet. Caes. 41 ; Cic. Philip. vii. 6; Dion Cass. xliii. 51), and, as in addition to this, he recommended to the people those candidates whom he wished to be elected: and who would have opposed his wish? (Dion Cass. xliii. 47 ; Appian, de Bell. Civ. ii. 18.) After the death of Caesar the comitia continued to be held, but were always more or less the obedient instruments in the hands of the rulers, whose unlimited powers were even recognised and sanctioned by them. (Appian, de Bell. Civ. iv. 7 ; Dion Cass. xlvi. 55, xlvii. 2.) Under Augustus the comitia still sanctioned new laws and elected magistrates, but their whole proceedings were a mere farce, for they could not venture to elect any other persons than those recommended by the emperor. (Suet. Aug. $40, \& c$. ; Dion Cass. liii. 2, 21, 1v. 34, lvi. 40.) Tiberins deprived the people even of this shadow of their former power, and conferred the power of election upon the senate. (Tacit. Annal. i. 15, 81, ii. 36, 51 ; Vell. Pat. ii. 126.) When the elections were made by the senate the result was announced to the people assembled as comitia cen. turiata or tributa. (Dion Cass. Iviii. 20.) Legislation was taken away from the comitia entirely, and was completely in the hands of the senate and the emperor. Caligula placed the comitia again upon the same footing on which they had been in the time of Angustus (Dion Cass. lix. 9; Suet. Cal. 16) ; hut this regulation was soon abandoned, and every thing was left as it had been arranged by Tiberius. (Dion Cass. lix. 20.) From this time the comitia may be said to have ceased to exist, as all the sovereign power formerly possessed by the people was conferred upon the emperor by the lex regia. [Lex Regia.] The people only assembled in the Campus Martius for the purpose of receiving information as to who had been elected
or appointed as its magistrates, until at last even this announcement (renuntiatio) appears to have ceased.

COMITIA'LIS DIES. [DIEs.]
COMI'TIUM. [FORUM.]
COMMEA'TUS, a furlough, or leave of absence from the army for a certain time. (Tacit. $A n n$. xy. 10 ; Liv. iii. 46.)

## COMMENTARIENSIS. [Commentarius.] <br> COMMENTA'RIUS, or COMMENTA ${ }^{\prime}$ -

RIUM, meant a book of memoirs or memorandumbook, whence the expression Caesaris Commentarii (" Hinc Caesar libros de bellis a se gestis commentarios inscripsit, quod nudi essent.omni ornatu orationis, tanquam veste detracto," Cic. Brutus, c. 75). Hence it is used for a lawyer's brief, the notes of a speech, \&c. (Sed. Controv. lib. iii. Proëm.)

In the imperial period the word commentariensis occurs in the sense of a notary or clerk of the Fiscus (40. tit. 14. 8. 45), and also of a keeper of a prison (Walter, Geschichte des Römischen Rechts, $\$ \S 818,819,2 \mathrm{~d}$ ed.) A military officer so called is mentioned ly Asconius (in Ver. iii. 28), who probably had similar duties. The word is also employed in the sense of a notary or secretary of any sort. Most of the religious colleges had books called commentarii, as commentarii augurum, pontificum.
[B. J.]

## COMME'RCIUM. [Civitas.]

COMMISSO'RIA LEX is the term applied to a clause often inserted in conditions of sale, by which a vendor reserved to himself the privilege of rescinding the sale, if the purchaser did not pay his purchase-money at the time agreed on. The lex commissoria did not make the transaction s conditional purchase; for in that case, if the property were damaged or destroyed, the loss would be the loss of the vendor, inasmuch as the purchaser, by non-payment of the money at the time agreed on, would fail to perform the condition, but it was an absolute sale, suhject to he rescinded at the sole pleasure of the rendor, if the money was not paid at the time agreed on ; and consequently if after this agreement the property was lost or destroyed before the day agreed on for payment, the loss fell on the purchaser. If the vendor intended to take advantage of the lex commissoria, it was necessary that he should declare his intention as soon as the condition was broken. If he received or claimed any part of the purchase money after the day agreed upon, he thereby waived the advantage of the lex commissoria. It was usual to insert in the commissoria lex an agreement that if the vendor had to sell the property again, the first purchaser should make up any deficiency in the price, that is, the differeace between the mount for which it was first sold, and the less amount which it produced at the second sale. [Pignus.] (Dig. 18, tit. 3 ; Thibaut, System, \&c. 88548, 9th ed.)
G. L.]

COMMI'SSUM. One sense of this word is that of "forfeited," which apparently is derived from that sense of the verb commiltere, which is "to commit a crime," or "to do something wrong." Asconius says, that those things are commissa which are either done or omitted to he done by a heres against the will of a testator, and make him subject to a penalty or forfeiture ; thus, commissa hereditas would he an inheritance forfeited for some act of commission or omission. Cicero (Ad Fam. xiii. 56) speaks of an hypothecated thing hecoming commissa ; that is, becoming the absolute property of the creditor for default of payment. A thing so forfeited was said in commissum incidere or cadere. Commissum was also applied to a thing in respect of which the vectigal was not paid, or a proper return made to the publicani. A thing thus forfeited (vectigulium nomine) ceased to be the property of the owner, and was forfeited, under the empire, to the fiscus. (Dig. 39. tit. 4 ; Suet. Calig. c. 41.)
COMMI'XTIO. [Confusio.]
COMMODA'TUM is one of those obligationes which are contracted re. He who lends to another a thing, for a defnite time, to he used for a definite purpose, without any pay or reward, is called hy modern writers commodans; the person who receives the thing is called commodatarius; and the contractis called commodatum. The genuine Roman name for the lender is commodator (Dig. 13. tit. 6. s. 7), and the borrower (commodatarius) is "is qui rem commodatam accepit." It is distinguished from motuum in this, that the thing lent is not one of those things quae pondere, numero, mensurave constant, as wine, corn, \&c.; and the thing commodata does not become the property of the receiver, who is therefore bound to restore the same thing. Tie lender retains both the ownership of the thing and the possession. It differs from locatio et conductio in this, that the use of the thing is gratuitous. The commodatarius is liable to the actio commodati, if he does not restore the thing ; and he is hound to make good all injury which befalls the thing while it is in his possession, provided it be such injury as a careful person could have prevented, or provided it be an injury which the thing has sustained in being used contrary to the conditions or purpose of the lending. If a thing was lent to two persons, each was severally liable for the whole (in solidum). In some cases the commodatarius had an actio contraria against the commodans, who was liable for any injury sustained by the commodatarins through his dolns, or culpa ; as, for instance, if he knowingly lent him bad vessels, and the wine or oil of the commodatarius was thereby lost or injured. The actio commodati was one of those in which there were two formulae, in jus and in factum. (Gains, iv. 47 ; Dig. 13. tit. 6 ; Instit. iii. 14. § 2; Thibaut, System, \&c. § $477, \& \mathrm{c}$. 9th ed.
[G. L.]
COMMU'NI DIVIDU'NDO, A'CTIO, is one of those actiones which have been called mixtae, from the circumstance of their being partly in rem and partly in personam; and duplicia judicia, from the circumstance of both plaintiff and defendant being equally interested in the matter of the suit (Gaius, iv. 160), though the person who instituted the legal proceedings was properly the actor. It is suid in the institutions of Justinian, of the three accions for a division, "mixtam causam obtinere videntur, tam in rem quam in personam ". (Inst. 4.
tit. 6. § 20). They were, however, properly per. sonal actions (Dig. 10. tit. I. s. 1), but distinguished from other personal actions by this, that in these actions disputed ownership conld also be determined. (Savigny, System, \&c. vol. v. p. 36.) This action was maintaimahle between those who were owners in common of a corporeal thing, which accordingly was called res communis ; and it was maintainable whether they were owners (domini), or had merely a right to the publiciana actio in rem; and whether they were socii, as in some cases of a joint purchase, or not socii, as in the case of a thing bequeathed to them (legata) by a testament; but the action could not he maintained for the division of an hereditas. In this action an account might he taken of any injury done to the common property, or anything expended on it, or any profit received from it, by any of the joint owners. Any corporeal thing, as a piece of land, or a slave, might he the subject of this action.

It seems that division was not generally effected by a sale ; but if there were several things, the judex would adjudicate (adjudicare) them severally (Gaius, iv. 42) to the several persons, and order (condemnare) the party who had the more valuable thing or things to pay a sum of money to the other by way of equality of partition. It follows from this that the things must have beem valued ; and it appears that a sale might be made, for the judex was bound to make partition in the way that was most to the advantage of the joint owners, and in the way in which they agreed that partition should he made ; and it appears that the joint owners might bid for the thing, which was common property, before the judex. If the thing was one and indivisible, it was adjndicated to one of the parties, and he was ordered to pay a fixed sum of money to the other or others of the parties. This action, so far as it applies to land, and that of familiae erciscundae, bear some resemblance to the now abolished English writ of partition, and to the bill in equity for partition. (Dig. 10. tit. 3 ; Cod. 3. tit. 37 ; Cic. Ad Fam. vii. 12; Bracton, fol. 443.)
[G. L.]
COMOE'DIA ( $\kappa \omega \mu \varphi \delta i \alpha$ ), comedy. 1. Grebk. The early stages of the history of comedy are involved in great indistinctness, as they never formed the subject of much inquiry even when information was extant. This was the case even among the Athenians, and to a still larger extent among the Dorians. The ancient Greeks seldom showed much aptitude for antiquarian research, and for a long time comedy was scaxcely thought deserving of attention (Aristot. Pöel. 5), for, thongh springing out of the Dionysiac festivals, it had not that predominantly religious character which tragedy had.

That comedy took its rise at the vintage festivals of Dionysus is certain. It originated, as Aristotle says (Pöet. 4), with those who led off
 $\lambda t \kappa \alpha \dot{\alpha}$ ) of the band of revellers ( $\kappa \hat{\omega} \mu \mathrm{\mu})$, who at the vintage festivals of Dionysus gave expression to the feelings of exuberant joy and merriment which were regarded as appropriate to the occasion, by parading about, partly on foot, partly in wagons, with the symbol of the productive powers of nature, singing a wild, jovial song in honour of Dionysus and his companions. These songs were commonly interspersed with, or followed by petu-

witticisms with which the revellers assailed the bystanders (see the description of the phallophori at Sicyon in Athen. xiv. p. 622), just as the chorus in the Frogs of Aristophanes, after their song to Iacchus, begin ridiculing Archedemus ( 417, \&ce.). This origin of comedy is indicated by the name $\kappa ш \mu \psi \delta i a$, which undoubtediy means "the song of the $\kappa \bar{\omega} \mu 0 \mathrm{os}$." This appears hoth from the testimony of Aristotle that it arose out of the phallic songs and from Demosthenes (c. Meid. p. 517), where we find mentioned together $\delta \kappa \bar{\omega} u o s ~ \kappa a l$ oi $\kappa \omega \mu \varphi-$ Sol. (Comp. Müller, Hist. of Gr. Lit. vol. ii. p. 4, Dor. iv. 7. § 1 ; Bode, Geseh. der Hellen. Dichth. vol. ii. part 2. p. 4, \&c.. ; Kanngiesser, die alte Komische Bühne zu Athen, p. 32.) Other derivations of the name were however given even in antiquity. The Megarians, conceiving it to be comnected with the word $\kappa \dot{\omega} \mu \eta$, and to mean "vil-lage-song," appealed to the name as an evidence of the superiority of their claim to be considered as the originators of comedy over that of the Athenians (Arist. Pöet. 3). This derivation was also adopted by several of the old grammarians (see Tzetzes, in Cramer's Aneed. Gr. vol. iii. pp. 335, 337 ; Anonym. $\pi \in \rho l$ к $\omega \mu$ цбlas in Meineke, IIist. Crit. Comic. Graec. Pp. 535, 538, 558, and in Bekker's Anecd. Gr. p. 747, where a very absurd account of the origin of comedy is given), and has the sanction of Bentley, W. Schneider, and even Bernhardy (Grundriss d. Griech. Lit. vol. ii. p. 892).

It was among tha Dorians that comedy first assumed any thing of a regular shape. The Megarians, both in the mother country and in Sicily, claimed to be considered as its originators (Arist. Pöet. 3), and so far as the comedy of Athens is concerned, the claim of the former appears well founded. They were always noted for their coarse humour (Aristoph. Vesp. 57, with the schol. ; Anthol. Pal. xi. 440 ; Suidas, s. v. $\gamma^{\prime} \lambda \omega s$; Bode, vol. ii. pt. 2. p. 27), and their democratical constitution, which was established at an early period, favoured the development of comedy in the proper sense of the word. In the aristocratical states the mimetic impulse, as connected with the laughable or absurd, was obliged to content itself with a less unrestrained mode of manifestation. The Lacedaemonians, who had a great fondness for minetic and orchestic amusements, had their $\delta_{\text {Etк }} \lambda_{i}$ ккт $\tau$, whose exhibitions appear to have been burlesques of characters of common life. The favourite personages were the fruit-stealer and the foreign quack, for the representation of which they had a peculiar mimetic dance. (Pollhux, iv. § 105 ; Athen. xiv. p. 621 ; Plut. Ages. 21. p. 607, d, Apophth. Lac. p. 212, \&cc. ; Schol. ad Apollon. i. 746 ; Müller, Dor. iv. 6. § 9 ; Bernhardy, l. c. p. 894.) Analogous to the $\overline{\delta \epsilon}$ ) $\lambda_{i \kappa k T a l}$ (Hesych. s.v.). Among the forerumners of comedy must he mentioned the Phallophori and Ithyphalli at Sicyon. It was here, where at an early period the dithyramb also was dramatised, that the $\kappa \omega \hat{\omega} \mu 0 s$ first assumed a more dramatic form, and Dionysus was even said to have invented comedy at Sicyon (Anthol. Pal. xi. 32). The Phallophori had no masks, but covered their faces with chaplets of wild thyme, acanthus, ivy, and violets, and threw skins round them. After singing a hymn to Dionysus, they flouted and jeered at any one of the bystanders whom they selected. The Ithyphalli wore masks represent-
ing drunken persons, and were equipped in other respects in a manner which, if not very decent, was appropriate to the part they had to sustain. (Athen. l. c.) It was the iambic improvisations of the exarchi of such choruses which gave rise to the later comedy. Antheas of Lindus is spoken of as a poet who composed pieces for such comuses of phallus-bearers, which were called comedies (Athen. x. p. 445). Such pieces have been styled lyrical comedies by many scholars (as Böckh, Corp. Inscript. No. 1584, note ; and Müller, Hist. of the Lit. of Greece, vol ii. p. 5), to distinguish them from the comedy proper. Lobeck and Hermann however stoutly deny that there was any such thing as lyrical tragedy or comedy distinct from dramatical tragedy and comedy, and yet not the same with dithyrambs or phallic songs, and affirm that the tragedies and comedies which we hear of before the rise of the regular drama were only a species of dithyramb and phallic song. (Hermann, de Tragoedia Comoediague Lyrica, in Opusc. vol. vii. p. 211, 8cc.) The dispute is more about names than about things; and there seems no great objection to applying the term lyrical tragedy or comedy to pieces intended to he performed by choruses, without any actors distinct from the chorus, and having a more dramatic cast than other purely lyrical songs. This, apparently, was the point to which comedy attained among the Megarians before Susarion introduced it into Attica. It arose out of the union of the iambic lampoon with the phallic songs of the comus, just as tragedy arose out of the union of rhapsodical recitations with the dithyramb.

Among the Athenians the first attempts st comedy, according to the almost unanimous sccounts of antiquity, were made at Icaria by Snsarion, a native of Tripodiscus in Megara. (Schol. ad Dionys. Thrac. in Bekker's Anecd. Gr. p. 748; Aspasius, Ad Aristot. Eth. Nic. iv. 2. 20. fol. 53, B.) Icaria was the oldest seat of the worship of Dionysus in Attica (Athen. ii. p. 40), and comus processions must undoubtedly have been known there long before the time of Susarion. Iambistic raillery was also an amusement already known in the festivals of Bacchus and Demeter (Müller, Hist. of Lit. of Gr. vol. i. p. 132; Hesychius, s. v. $\Gamma \in \phi v \rho \iota \sigma \tau a l$; Suidas, $s . v . \gamma \in \phi v-$ $\rho\left(\oint_{\omega \nu}\right.$; Schol. Arist. Acharn. 708). From the jests and banterings directed by the Bacchic comus, as it paraded about, sgainst the bystanders, or any others whom they selected, arose ths proverb $\tau \grave{\alpha}{ }^{\epsilon} \xi \xi$ a $\mu$ a ${ }^{2}$ ns (Schol. Arist. Equix. 544, Nub. 296 ; Suidas, s. v.; Ulpianus ad Demosth. de Cor. p. 268, ed. Reiske; Bode, l. c. p. 22; Photius, Lex. s. v. $\left.\tau \grave{\alpha} \epsilon^{\epsilon} \kappa \tau \hat{\omega} \nu \dot{\alpha} \dot{\alpha} \mu a \xi \bar{\xi} \nu\right)$. This amusement continued customary not only at the rural Dionysia, but at the Anthesteria, on the second day of the festival [Dionysis]. It was in the third year of the 50th Olympiad (B. c. 578 ), that Susarion introduced at Icaria comedy in thst stage of development to which it had attained among the Megarians (Mar. Par. ep. 40. in Böckh's Corpus Inseript. vol. ii. p. 301 ). It is not however easy to decide in what his improvements consisted. Of course there were no actors beside the chorus or comus; whatever there was of drama nust have been performed by the latter. The introduction of an actor separste from ths chorus, was an improvement not yet made in ths drama. According to one grammarisn, Susarion was
the first to give to the iambistic performances of the comus a regular metrical form (Schol. ad Dionys. Thrac. ap. Bekker, Anecd. Gr. p. 748 ; Meineke, l.c. p. 549). He no doubt substituted for the more ancient improvisations of the chorus and its leader premeditated compositions, though still of the same general kind; for, as Aristotle says (Poet. c. 5), Crates was the first who $\hat{f}_{\rho} \xi \in \mathcal{E}$, ¿.фє́ $\mu \in \nu 0 s$ тท̂s ía $\lambda \delta$ ous $\# \mu \dot{\prime}$ Oovs. There would seem also to have been some kind of poetical contest, for we learn that the prize for the successful poet was a basket of figs and a jar of wine (Marm. Par. l.c. ; Bentley, Dissert. on the Ep. of Phal. vol. i. p. 259, ed. Dyce). It was also the practice of those who took part in the comus to smear their faces with wine-lees, either to prevent their features from being recognised, or to give themselves a more grotesque appearance. Hence comedy came to be called tрvүчסia, or lee-song. Others connected the name with the circumstance of a jar of new wine ( $\tau \rho v \xi$ ) being the prize for the successful poet. (Athen. ii. p. 40 ; Anon. ap. Meineke, l. c. p. 535 ; Aristoph. Acharn. l. 473, \&cc. ; Fragm. ap. Athen. xii. p. 551 ; Acharn. 851, 603, Vesp. 650,1534 ; Schol. ad Arist. Acharn. 397, 498 ; Schol. ad Plat. de Rep. iui. p. 928, ed. Bait. et Orell. ; Bentley, Dissert. on the Ep. of Phal. vol. i. p. 341, \&c. ed. Dyce; Bode, l. c. p. 22.) There can be but little question that Susarion's pieces were merely intended for the amusement of the how, and were not committed to writing (Bentley, l. c. p. 250, \&c. ; Anonym. de Com. ap. Meineke, l. c. p. $540 ;$ Bode, l. c.). The comedy of Susation doubtless partook of that petulant, coarse, and unrestrained personality for which the Megarian comedy was noted. For entertainments of such a character the Athenians were not yet prepared. They required the freedom of a democracy. Accordingly, comedy was discouraged, and for eighty years after the time of Susarion we hear nothing of it in Attica.

It was, however, in Sicily, that comedy was earliest hrought to something like perfection. The Greeks in Sicily always exhibited a lively temperament, and the gift of working up any occurrence into a spirited, fluent dialogue. (Cic. Verr. iv. 43, Divin. in Caecil. 9, Orat. ij. 54; Quintil. vi. 3. § 41.) This faculty finding its stimulus in the excitement produced by the political contests, which were so frequent in the different cities, and the opportunity for its exercise in the numerous agrarian festivals connected with the worship of Demeter and Bacchus, it was natural that comedy should early take its rise among them. Yet before the time of the Persian wars, we only hear of iambic compositions, and of a single poet, Aristoxenus. The performers were called aùrokds visatores (Athen. xiv. p. 622. ; Etym. Magn. s. e. aìroка58. ; Eustath. ced Il. xi. p. 884.45; Hesych. s. v. ; Aristot. Rhet. iii. 7. § 1 ; Bode, l. c. p. 8, \&rc.), and, subsequently, la $\alpha 60$. Their entertainments heing of a choral character were, doubtless, accompanied by mnsic and dancing. Athenaeus (xiv. p. 629) mentions a dance called the ia $\mu 6 \iota \kappa$ 而, which he ranks with the $\kappa \delta \rho \delta \alpha \xi$ and $\sigma i k i \nu \nu t s$. Afterwards, the comic element was developed partly into travesties of religious legends, partly into delineations of character and manners; the former in the comedy of Epicharmus, Phormis, and Deinolnchus; the latter in the mimes of Sophron
and Xenarchus. Epicharmus is very commonly called the inventor of comedy by the grammarians and others (Theocr. Epig. 17; Suịdas s. v. ${ }^{3} E \pi i \chi \alpha \rho \mu o s ;$ Solinus, 5, 13); this, however, is true only of that more artistical shape which he gave to it. (Bernhardy, l.c. p. 900.) In his efforts he appears to have been associated with Phormis, a somewhat older contemporary. The Megarians in Sicily claimed the honour of the invention of comedy, on account of his having lived in Megara before he went to Syracuse. (Dictionary of Biog. and Myth. art. Epioharmus.) According to Aristotle (Poet. 5) Epicharmus and Phormis were the first who began $\mu \dot{\theta} \theta$ ous $\pi 0 \in \epsilon \hat{\imath} \nu$; which Bemhardy (l. c. p. 898) understands to mean that they were the first to introduce regular plots. The subjects of his plays were mostly mythological, i. e. were parodies or travesties of mythological stories. (Müller, Dorians, book iv. c. 7.) Whether in the representation there was a chorus as well as actors is not clear, though it has been assumed (Grysar, de Dor. Com. p. 200, \&c.) that he and Phormis were the earliest comic poets whose works reached posterity in a written form. (Bentley, l. c. p. 451.) But the comedy of Epichammus was of brief duration. We hear of no successors to him except his son or disciple Deinolochus.

In Attica, the first comic poet of any importance whom we hear of after Susarion is Chionides, who is said to have brought out plays in B.c. 488 (Suidas s. v. $\mathrm{X} t \omega \nu i \delta \eta s$ ). Evetes, Euxenides, and Myllus were probably contemporaries of Chionides; he was followed by Magnes and Ecphantides. Their compositions, however, seem to have been little but the reproduction of the old Megaric farce of Susarion, differing, no doubt, in form, by the introduction of an actor or actors, separate from the chorus, in imitation of the improvements that had been made in tragedy. (Bode, l. c. p. 29-36.) That branch of the Attic drama which was called the old comedy, begins properly with Cratinus, who was to comedy very much what Aeschylus was to tragedy. Under the vigorous and liberal administration of Pericles comedy found free scope, and rapidly reached its perfection. Cratinus is said to have been the first who introduced three actors in a comedy. (Anonym. de Com. ap. Meineke, p. 540.) But Crates is spoken of as the first
 Poet. 5), i. e. raised comedy from being a mere lampooning of individuals, and gave it a character of universality, in which subjects drawn from reality, or stories of his own invention received a free, poetic treatment, the characters introduced being rather generalisations than particular individuals. (See Aristotle's distinction between rà $\kappa \alpha \theta^{\prime}$ Éraotov and $\tau \grave{\alpha} \kappa \alpha \theta \delta \lambda o v, P o e t .9$.) In what is known of his pieces no traces appear of anything of a personal or political kind. He was the first who introduced into his pieces the character of a drunken man. (Anonym. de Com. ap. Meineke, p.536.) Though Crates was a younger contem. porary of Cratinus, and at first an actor in his pieces, yet, except perhaps his earlier plays, the comedies of Cratinus were an improvement upon those of Crates, as they united with the universality of the latter the pungent personal satire and earnest political purpose wbich characterised the old comedy (Bernhardy, l.c. pp. 942, 946.) Crates and his imitator Pherecrates seem in the character of their pieces to have had more affinity with the middle
than with the old comedy. The latter has been described as the comedy of caricature, and such indeed it was, but it was also a great deal more. As it appeared in the hands of its great masters Cratinus, Hermippus, Eupolis, and especially Aristophanes, its main characteristic was that it was throughout political. Everything that bore upon the political or social interests of the Athenians furnished materials for it. It assailed everything that threatened liberty, religion, and the old established principles of social morality and taste, and tended to detract from the true nobleness of the Greek character. It performed the functions of a public censorship. (Hor. Serm. i. 4. l, \&c.; Isocrat. de Pace, p. 161 ; Dion Chrysost. vol. ii. p. 4, ed. Rsk. ; Cic. de Rep. iv. 10.) Though merely personal satire, having no higher object than the sport of the moment, was by no means excluded, yet commonly it is on political or general grounds that individuals are brought forward and satirised. A groundwork of reality usually lay at the basis of the most imaginative forms which its wild licence adopted. All kinds of phantastic impersonations and mythological beings were mixed up with those of real life. With such unbounded stores of materials for the subject and form of comedies, complicated plots were of course unnecessary, and were not adopted. Though the old comedy could only subsist under a democracy, it deserves to be remarked that its poets were usually opposed to that democracy and its leaders. Some of the bitterest assailants even of Pericles were to be found among the comic poets.

In the year b.c.440, a law was passed $\tau 0 \hat{u} \mu \eta$ $\kappa \omega \mu \nLeftarrow \delta \epsilon i v$ (Schol. Arist. Acharn. 67), which remained in force for three years, when it was repealed. Some (e.g. Clinton, F.H. s. a.) understand the law to have been a prohibition of comedy altogether, others (Meineke, l. e. p. 40 ; Bernhardy, p. 943) a prohibition against bringing forward individuals in their proper historical personality and under their own name, in order to ridicule them ( $\mu \grave{\eta} \kappa \omega \mu \varphi \delta \in \hat{\imath} \nu \dot{\partial} \nu \rho \mu a \sigma \tau \ell$ ). To the same period probably belongs the law that no Areopagite should write comedies. (Plut. de Glor. Ath. p. 348, c.) About в. c. 415 , apparently at the instigation of Alcibiades, the law of 440 , or at all events a law
 motion of one Syracosius (Schol. Arist. Aves, 1297). But the law only remained in force for a short time (Meineke, p. 41). The nature of the political events in the ensuing period would of itself act as a check upon the licence of the comic poets. A man named Antimachus got a law like that of Syracosins passed, but the date of it is not known. (Schol. Arist. Ackarn. 1149.) With the overthrow of the democracy in 411, comedy would of course be silenced, but on the restoration of the democracy, comedy again revived. It was doubtless again restrained by the thirty tyrants. During the latter part of the Peloponnesian war also it became a matter of difficulty to get choregi ; and hindrances were sometimes thrown in the way of the comic poets by those who had been attacked by them. (Schol. Arist. Ran. 153.) Agyrrhius, though when is not known, got the pay of the poets lessened. (Schol. Arist. Eccl. 102.) The old Attic comedy lasted from Ol. 80 to Ol. 94 (в. с. 458-404). From Cratinus to Theopompus there were forty-one poets, fourteen of whom preceded Aristophaues. The number of pieces attributed to
them amounted altogether to 365 . (Anon. de Com. ap. Meineke, p. 535 ; Bode, l. c. p. 108.) An excellent and compendious account of these poets is given by Bernhardy. (Grundriss der Griech. Lit. vol. ii. p. 945-954.) A more extended account will be found in Meineke (Hist. Crit. Comic. Graec. forming vol. i. of his Fragm. Com. Graec.), and in Bode (Gesch. der Hellen. Dichtk. vol. iii. pt. ii. p. 108, \&c. \&c.). The reader is also referred to the articles Crates, Cratinus, Pherecrates, Hermippus, Eupolis and Aristophanes in the Dictionary of Greekand Roman Biography and Mythology. (Comp. Rötscher, Aristophanes und sein Zeitalter; and Schlegel's Lectures on Dramatic Art and Literature.) The later pieces of Aristophanes helong to the Middle rather than to the Old Comedy. The old Megaric comedy, which was improved by Maeson, by the introduction of standing characters (Athen. xiv. p. 659 , a.) continued for some time to subsist by the side of the more artistically developed Attic comedy, as did the ancient Iambistic entertainments both in Syracuse and in the Dorian states of Greece. (Arist. Poet. 4 ; Bode, l. c. p. 28.)

It was not usual for comic poets to bring forward more than one or two comedies at a time; and there was a regulation according to which a poet could not bring forward comedies before he was of a certain age, which is variously stated at thirty or forty years. (Aristoph. Nub. 530, with the scholiast.) To decide on the merits of the comedies exhibited, five judges were appointed, which was half the number of those who adjudged the prizs for tragedy. (Schol. ad Arist. Av. 445 ; Hesych. s. v. $\pi \in \nu \tau \in \kappa \rho \iota \tau \alpha l$.

The chorus in a comedy consisted of twentyfour. [Chorus.]

The dance of the chorus was the $\kappa 0$ ofoak, the movements of which were capricious and licentious, consisting partly in a reeling to and fro, in imitation of a drunken man, and in various unseemly and immodest gestures. For a citizen to dance the $\kappa \delta \rho \delta a \xi$ sober and without a mask, was looked upon as the height of shamelessness. ('Theophrast. Charact. 6.) The choreutae were attired in the most indecent manner. (Schol. ad Arist. Nub. 537.) Aristophanes, however, and probably other comic poets also, frequently dispensed with the $\kappa \delta \rho \delta a \xi$. (Arist. Nub. 537, \&c. 553, \&cc.; Schneider, das Attische Theaterwesen, p. 229, \&cc.) Comedies have choric songs, but no $\sigma \tau \alpha \sigma \mu \mu$, or songs between acts. The most important of the choral parts was the Parabasis, when the actors having left the stage, the chorus, which was ordinarily divided into four rows, containing six each (Pollux, iv. 108 ; Schol. ad Arist. Pac. 733), and was turned towards the stage, turned round, and advancing towards the spectators delivered an address to them in the name of the poet, either on public topics of general interest, or on matters which concerned the poet personally, criticising his rivals and calling attention to his merits; the address baving nothing whatever to do with the action of the play. (Schol, ad Arist. Nub. 518, Pac. 733, Equit. 505.) The grammarians speak of it as being divided into the following portions:-1. A short introduction (the $\kappa о \mu \mu \alpha ́ \tau<0 \nu)$; 2. The $\pi \alpha \rho \alpha \alpha^{\prime} 6 a \sigma t s$ in the narrower sense of the word, or $\dot{\alpha} \nu \alpha \alpha^{2} \pi a t \sigma \tau a s_{9}$ which was the principal part ; and usually consisted of a system of anapaestic or trochaic tetrameters, in which case it was the practice for it to close with what was called the $\mu \alpha \kappa \rho \delta \nu$ or $\pi \nu \hat{i} \gamma o s$, a number of short
verses, which the speaker had to utter in a breath, and hy which he was to appear to he choked; 3 .
 $\sigma \tau \rho \circ \phi \eta$, answering to the $\sigma \tau \rho \circ \phi \phi ; 6$. The d $\mu \tau-$
 and antistrophe were sung by half choruses, and were probably accompanied by dancing, being the only parts of the parabasis that were so accompanied. (Bode l.c. p. 273.) The rhema and epirrhema were uttered by single choreutae. The parabasis, however, did not always contain all these parts complete. The origin of the parabasis is not quite clear. Possibly in the earlier stages of camedy, the poet went with the comns procession, and in the course of its performance addressed a speech in his own person to the spectators. (Etym. Magn. p. 528 ; Pollux, iv. 111 ; Schol. ad Arist. $\mathrm{Nub} .518,1113$, Pac. 733 ; Hypothes. ad Arist. Nub. ; Hernann, Elem. Dact. Metr. iii. 21, p. 720, \&c.; Kanngiesser, Alte Kom. Bühne, p. 356, \&c.; Kolster, de Parabasi.) The parabasis was not universally introduced : three plays of Aristophanes, the Ecclesiazusae, Lysistrata, and Plutus have none.

As the old Attic comedy was the offspring of the political and social vigour and freedom of the age during which it flourished, it naturally decined and ceased with the decline and overthrow of the freedom and vigour which were necessary for its development. It was replaced by a comedy of a somewhat different style, which was known as the Middle comedy, the age of which lasted from the end of the Peloponnesian war to the overthrow of liberty by Philip of Macedon. (Ol. 94 -110.) During this period, the Athenian state had the form, but none of the spirit of its earlier democratical constitution, and the energy and public spirit of earlier years had departed. The comedy of this period accordingly found its materials in satirizing classes of people instead of individuals, in criticising the systems and merits of philosophers and literary men, and in parodies of the compositions of living and earlier poets, and travesties of mythological subjects. It formed a transition from the old to the new comedy, and approximated to the latter in the greater attention to the construction of plots which seem frequently to have been founded on amorous intrigues (Bode, p. 396), and in the absence of that wild grotesqueness which marked the old comedy. As regards its external form, the plays of the middle comedy, generally speaking, bad neither parabasis nor chorus. (Platonius, de Differ. Com. ap. Meineke, p. 532.) The absence of the chorus was occasioned, partly by the change in the spirit of comedy itself, partly by the increasing difficulty of finding persons capable of undertaking the duties of choregus. As the change in comedy itself was gradual, so it is most likely that the alterations in form were brought about hy degrees. At first showing the want of proper musical and orchestic training, the chorus was at last dropped altogether. Some of the fragments of pieces of the middle comedy which have reached ns are of a lyrical kind, indicating the presence of a chorus. The poets of this school of comedy seem to have heen extraordinarily prolific. Athenaens (viii. p. 336,d.) says, that he had read above 800 dramas of the middje comedy. Only a few fragmenta are now extant. Meineke (Hist. Crit. Com. Gr. р. 303) gives a list of thirty-nine poets of the middle comedy. The most celebrated
were Antiphanes and Alexis. (Bode, l.c. p. 393, \&c. ; Bernhardy, p. 1000, \&c.)
The new comedy was a further development of the last mentioned kind. It answered as nearly as may be to the modern comedy of manners or character. Dropping for the most part personal allusions, caricature, ridicule, and parody, which, in a more general form than in the old comedy, had maintained their ground in the middle comedy, the poets of the new comedy made it their business to reprodnce in a generalized form a picture of the every-day life of those by whom they were surrounded. Hence the grammarian Aristophanes
 $\pi \delta \tau \epsilon \rho о \nu$ à $\pi є \mu \mu$ йбато (Meineke, praef. Men. $\mathbf{p}$. 33). The new comedy might be described in the words of Cicero (de Rep. ir. 11), as "imitationem vitae, specnlnm consuetudinis, imaginem veritatis." The frequent introduction of sententious maxims was a point of resemblance with the later tragic poets. There were varions standing characters which found a place in most plays, such as we find in the plays of Plautus and Terence, the leno perjurus, amator fervidus, serverlus callidus, amica illudens, sodalis opitalator, miles proeliator, parasitus edax, parentes tenaces, meretrices procaces. (Appnl. Flor. 16 ; Ovid, Amor. i. 15, 17.) In the new comedy there was no chorus, and the dramas were commonly introduced by prologues, spoken by allegorical personages, such as ${ }^{\text {" }} E \lambda \epsilon \gamma \chi$ os, $\Phi \delta \mathcal{S}_{0} s$, ${ }^{\prime}$ Ahp. The new comedy flourished from about B. c. 340 to B. c. 260 . The poets of the new comedy amounted to 64 in number. The most distinguished was Menander. Next to him in merit came Philemon, Diphilus, Philippides, Posidippus, and Apollodorus of Carystus. (Bernhardy, p. 1008, \&cc. ; Meineke, l. c. p. 435, \&c.)
Respecting the masks used in comedy the reader is referred to the article Persona. The ordinary costume was the $\epsilon \xi \omega \mu i s$, which for old men was unfulled. Peasants carried a knapsack, a cudgel, and a akin of some kind ( $\delta i \phi \theta \in \rho a)$. Young men had a purple tunic ; parasites a black or grey one, with a comb and a box of ointment. Courtezans had a coloured tunic, and a variegated cloak over it, with a wand in their hand. Slaves wore a small variegated cloak oper their turic; cooks an unfulled double mantle; old women a yellow or hlue dress ; priestesses and maidens a white one; heiresses a white dress with a fringe; bawds and the mothers of hetaerae had a purple band round the head; panderers a dyed tunic, with a variegated cloak and a straight staff, called $\chi_{\text {d }} \epsilon \sigma \kappa o s$. (Pollux, iv. 118, \&c., vii. 47; Etymol. Magn. p. 349. 43 ; A. Gell. vii. 12.) The authorities, however, on these points are not very full, and not quite accordant.
2. Roman. - The accounts of the early stages of comic poetry among the Romans are scanty, and leave many points unexplained, bit they are probably trustworthy as far as they go. Little is known on the subject but what Livy tells us (vii. 4). According to hia account in the year в. c. 363 , on the occasion of a severe pestilence, among other ceremonies for averting the anger of the deities scenic entertainments were introduced from Etruria, where it would seem they were a familiar amusement. Tuscan players (ludiones), who were fetched from Etruria, exbibited a sort of pantomimic dance to the music of a flute, withont any song accompanying their dance, and without regular dramatic
gesticulation. The amusement became popular, and was imitated by the young Romans, who (though how soon is not stated) improved upon the original entertainment by uniting with it extemporaneous mutual raillery, composed in a rude irregular measure, a species of diversion which had been long known among the Romans at their agrarian festivals under the name of Fescennina [Fescennins]. They regulated their dances so as to express the sense of the words. Those who had an aptitude for this sort of representation set themselves to improve its form, supplanting the old Fescennine verses by more regular compositions, which however had not as yet any thing like dramatic unity or a regular plot, but from the miscellaneous nature of the subjects introduced were called saturae [SATURA]. Those who took part in these exhibitions were calied listriones, hister being the Etruscan word which answered to the Latin ludio [Histrio]. It was 123 years after the first introduction of these scenic performances before the improvement was introduced of having a regular plot. This advance was made by Livius Andronicus, a native of Magna Graecia, in b. c. 240. His pieces, which were both tragedies and comedies, were merely adaptations of Greek dramas. His popularity increasing, a building on the A ventine hill was assigned to him for his use, which served partly as a theatre, partly as a residence for a troop of players, for whom Livius wrote his pieces. The representation of regular plays of this sort was now left to those who were histriones by profession, and who were very commonly either foreigners or slaves; the free-born youth of Rome confined their own scenic performances to the older, irregular farces, which long maintained their ground, and were subsequently called exodia, being, as Livy says, conserta fabellis potissimum Atellunis. [Exodia; Satura.] Livius, as was common at that time, was himself an actor in his own pieces. His Latin adaptations of Greek plays, thongh they had no chorus, were interspersed with monodies, which were more lyrical in their metrical form, and more impassioned in their tone than the ordinary dialogue parts. In the musical recitation of these Livius seems to have been very successfu, and was frequently encored. The exertion being too much for his voice, he introduced the practice in these monodies, or cantica, of placing a slave beside the flote player to recite or chaunt the words, while he himself went through the appropriate gesticulation. This became the usual practice from that time, so that in the cantica the histriones did nothing but gesticulate, the only parts where they used their voice heing the dialogues (divertia). Livy's account has been absurdly misunderstood as implying that the introduction of this slave to chaunt the cantica led to the use of dialogue in the Roman dramas, as though there had been no dialogue before ; in which case, as there was certainly no chorua, Livius must have adapted Greek dramas so as to admit of being represented in a series of monologues, a supposition which is confuted by its own absurdity. It is perfectly clear that the plays of Livius were an improvement on the old scenic saturae, which consisted of dialogue, and that the improvernent was simply that of adapting the dialogue to a regular plot. Hermann (Dissert. de Cant. in Fab. scenic. Opusc. vol. i. p. 290, \&c.) has sufficiently shown that the cantica were not mere mnsical interludes accompanied by dancing or ges-
ticulation, introduced between the acts, but the monodial parts of the plays themselves; though (as is clear from Plantus, Pseud. i. 5. 160) there were cases in which the flute-player filled up the intervals between acts with masic, as in the $\delta$ ouvi$\lambda t o \nu$ in the Greek theatre. But there is nothing to show that such musical interludes were accompanied with gesticulation by any actor ; and it is not merely without but against all authority to call such interludes cantica. Hermann has also shown that it is quite a mistake to suppose that the leading actors only gesticulated in the cantica, and took no part in the ordinary dialogue. The cantica were only monodies put into the mouth of one or other of the dramatis personae. There is a use ful treatise on this subject by G. A. B. Wolff ( $d_{s}$ Canticis in Romanorum Fabulis scenicis), in which the author has endeavoured to point out which are the cantica in the remaining plays of Plautus and Terence.
The first imitator of the dramatic works of Livius Andronicus was Cn. Naevius, a native of Campania. He composed both tragedies and comedies. which were either translations or imitations of those of Greek writers. In comedy his models seem to have been the writers of the old comedy. (Dict. of Grr. and Rom. Biog. and Myth. art. Nacvius.) The most distinguished successors of Naevius were Plautus (Ibid. art. Plautus), who chiefly imitated Epicharmus, and Terence (Ihid. art. Tarentius), whose materials were drawn chiefly from Menander, Diphilus, Philemon, and Apollodorus. The comedy of the Romans was throughout but an imitation of that of the Greeks, and chiefiy of the new comedy. Where the characters were ustensibly Greek, and the scene laid in Athens or some other Greek town, the comedies wers termed palliatac. All the comedies of Terence and Plautus belong to this class. When the story and characters were Roman, the plays were called togatae. But the fabulae togatae were in fact littlo else than Greek comedies clothed in a Latin dress. (As Horace says: "dicitur Afrani toga convenisse Menandro." E'pist. ii. 1.57.) They took their name because the costume was the toga. The togatae were divided into two classes, the trabeatae and tabernariae, according as the subject was taken from high or from low life (Enanthius, de Fabula). In the comediae palliatae, the costume of the ordinary actors was the Greek pallium. Ths plays which bore the name of praetextatae, were not so much tragedies as historical plays. It is a mistake to represent them as comedies. There was a species of tragi-comedy, named from the poet who introduced that style Rlinthonica. A tragedy the argument of which was Greek was termed crepidata. The mimes are sometimes classed with the Latin comedies. (Hermann, do Fabula togata. Opusc. vol. v. p. 254, \&c.) Respecting them, the reader is referred to the article Mimus. The mimes differed fron the comedies in little more than the predominance of the mimic representation over the dialogue, which was only interspersed in various parts of the representation.

Latin comedies had no chorus, any more than the dramas of the new comedy, of which they were for the most part imitations. Like them, too, they were introduced by a prologue, which answered some of the purposes of the parabasis of the old comedy, so far as bespeaking the good will of the spectators, and defending the poet against
his rivals and enemies. It also commumicated so much information as was necessary to understand the story of the play. The prologue was commonly spoken by one of the players, or, perhaps, by the manager of the troop. Occasionally the speaker of it assumed a separate mask and costume, for the occasion (Plaut. Poen. prol. 126 ; Terent. Prol. ii. 1). Sometimes the prologue is spoken by one of the dramatis personae (Plaut. Amph.; Mil. Glor.; Merc.), or by some supernatural or personified being, as the Lar familiaris in the $A u$ lularia of Plautus, Arcturus in the Rudens, Auxilium in the Cistellaria, Luxuria and Inopia in the Trinummus. (Baden, won dem Prologe in Röm. Lustsp. in Jahn's Archiv. i. 3. p. 441, \&c. ; Bekker, de com. Roman. Fabulis, p. 89, \&c. ; Wolff, de Prologis Plautinis.) The rest of the piece consisted (as Diomedes says, iii. p. 489) of diverbium and canticum. This division, however, must not be taken too stringently, as it was not every monologue which was a canticum. The composition of the music, which is spoken of in the didascaliae, appears to have had reference to these cantica. Respecting the use of masks, see the article Persons. When they were first introduced, is a disputed point (Wolff. de Canticis, p. 22, \&c.; Hölscher, de Personarum Usu in Ludis scen. ap. Rom.; Stieve, de Rei scenicae ap. Rom. Origine.) The characters introduced were much the same as in the new comedy, and their costume was not very different. Donatus gives the following account of it: " comicis senibus candidus vestis inducitur, quod is antiquissimus fuisse memoratur, adolescentibus discolor attribuitur. Servi comici amictu exiguo conteguntur paupertatis antiquae gratia, vel quo expeditiores agant. Parasiti cum intortis palliis veniunt. Laeto vestitus candidus, aerumnoso obsoletus, purpureus diviti, pauperi phoeniceus datur. Militi chlamys purpurea, puellae habitus peregrinus inducitur, leno pallio varii coloris utitur, meretrici oh avaritiam luteum datur."

A word remains to be said on the Atellanae fabulae. These were not of Roman, hut of Italian origin, and were not introduced among the Romans till the latter came into contact with the Campanians. These pieces took their name from the town of Atella in Campania. From being always composed in the Oscan dialect, they were also called ludi Osci, or ludicrum Oscum. At first, and amongst the Oscans, they appear to have been rude, improvisatory farces, without dramatic connection, but full of raillery and satire. So far they resembled the earlier scenic entertainments of the Romans. But the Oscan farces had not the dancing or gesticulation which formed a chief part of the latter, and those who took part in them personated characters representing varions classes of the country people, like the Maschere of the modern Italians. These had regular names; there was Maccus, a sort of clown or fool ; Buecones, i. e. babblers; Pappus; Simus or Simius, the baboon. The Greek origin of some of these names would seem to indicate that the Greek settlers in Italy had some influence in the development of this species of amusement. The Atellanae fabulae were distinguished from the mimes by the absence of low buffoonery. They were marked hy a refined humour. (Cic. ad Fam. ix. 16 ; Val. Max. ii. 1.) They were commonly divided into five acts. (Macrob. Saturn. iii.) Reepecting the exodia, see the article Exomium.

The Oscan dialect was preserved, even when they were introduced at Rome. (Strabo, v. p. 356, a.) Though at first improvisatory, after the regular drama acquired a more artistic character, the Atellanae came to be written. Lucius Pomponius of Bononia and Q. Novius are mentioned as writers of them. Regular histriones were not allowed to perform in them. They were acted by free-born Romans, who were not subjected to any civil degradation for appearing in them. In later times, they degenerated, and became more like the mimes, and were acted by histriones; but by that time they had fallen into considerable neglect. (C. E. Schober, über die Atellanen, Lips. 1825 ; Weyer, uiber d. Atell. Mannheim 1826 ; Neukirch, de Fabula togata, pp. 20, 51, \&c. ; Bähr, Gesch. der Röm. Litteratur.)
[C.P.M.]
COMPENSA/TIO is defined by Modestinus to he debiti et crediti inter se contributio. Compensatio, as the etymology of the word shows (pend-o), is the act of making things equivalent. A person who was sued, might answer his creditor's demand, who was also his debtor, by an offer of compensatio (si paratus est compensare) ; which in effect was an offer to pay the difference, if any, which should appear on taking the account. The ohject of the compensatio was to prevent unnecessary suits and payments, by ascertaining to which party a balance was due. Originally compensatio only took place in bonae fidei judiciis, and ex eadem causa; but by a rescript of M. Aurelius there could be compensatio in stricti juris judiciis, and ex dispari causa. When a person made a demand in right of another, as a tutor in right of his pupillus, the debtor could not have compensatio in respect of a debt due to him from the tutor on his own account. A fidejussor (surety) who was called upon to pay his principal's debt, might have compensatio, either in respect of a debt due by the claimant to himself or to his principal. It was a rule of Roman law that there could be no compensatio where the demand could be answered by an exceptio peremptoria; for the compensatio admitted the demand, subject to the proper deduction, whereas the object of the exceptio was to state something in bar of the demand. Set-off in English law, and compensation in Scotch law, correspond to compensatio. (Dig. 16. tit. 2; Thibaut, System, \&c. $\S 606,9$ th ed. contains the chief rules as to compensatio.)
[G. L.]

## COMPERENDINA/TIO. [JunEx.]

## COMPETI'TOR. [Ambitus.]

## CO'MPITA. [Compitalia.]

COMPITA'LIA, also called LUDI COMPITALI'CII, a festival celebrated once a year in honour of the lares compitales, to whom sacrifices were offered at the places where two or more ways met (compita, Varro, De Ling. Lat. vi. 25, ed. Müller ; Festus, s. v.). This festival is said by some writers to have been instituted by Tarquinius Priscus in consequence of the miracle attending the birth of Servius Tullius, who was supposed to be the son of a lar familiaris. (Plin. $H . N$. xxxvi. 70.). Dionysius (iv. 14) ascribes its origin to Servius Tullius, and describes the festival as it was celebrated in his time. He relates that the sacrifices consisted of honey-cakes ( $\pi$ é $\lambda a \nu 0 t$ ), which were presented by the inhabitants of each honse, and that the persons, who assisted as ministering servants at the festival, were not free-men, but slaves, because the lares took pleasure in the ser-
vice of elaves: he further adds that the compitalia were celebrated a few days after the Saturnalia with great splendour, and that the slaves on this occasion had full liberty given them to do what they pleased. We further learn from Macrobius (Saturn. i.7) that the celebration of the compitalia was restored by Tarquinius Superbus, who sacrificed boys to Mania, the mother of the lares; but this practice was changed after the expulsion of the Tarquins, and garlic and poppies offered in their stead.

The persons, who presided over the festival were the Magistri vici, who were on that occasion allowed to wear the praetexta (Ascon. ad Cic. in Pis. p. 7, ed. Orelli). Public games were added at some time during the republican period to this festival, but they were suppressed by command of the senate in b. c. 68 ; and it was one of the charges brought forward by Cicero against L. Piso that he allowed them to be celebrated in his consulship, в. c. 58 (Cic. in Pis. 4 ; Ascon. l. c.) But that the festival itself still continued to be observed, though the games were abolished, is evident from Cicero (ad Att. iii. 3). During the civil wars the festival fell into disuse, and was accordingly restored by the emperor Augustus. (Suet. Aug. 31 ; comp. Ov. Fast. v. 128-148.) As Augustus was now the pater patriae, the worship of the old lares was discontinued, and the lares of the emperor consequently became the lares of the state. Hence, the Scholiast on Horace ( $\alpha d$ Sat. ii. 3. 281), tells us that Augustus set up lares or penates at places where two or more ways met, and instituted for the purpose of attending to their worship an order of priests, who were taken from the Likertini, and were called Augustales. These Augustales are entirely different from the Augustales, who were appointed to attend to the worship of Augustus after his decease, as has been well shown by A.W. Zumpt in his essay on the subject. (De Augustalibus, \&c., Berol. 1846.) [Augustales.]

The compitalia belonged to the feriae conceptivae, that is, festivals which were celebrated on days appointed annually by the magistrates or priests. The exact day on which this festival was celebrated, appears to have varied, though it was always in the winter. Dionysius relates (iv. 14), as we have already said, that it was celebrated a few days after the Saturnalia, and Cicero (in Pison. 4) that it fell on the Kalends of January ; but in one of his letters to Atticus (vii. 7) he speaks of it as falling on the fourth before the nones of January. The exact words, with which the festival was announced, are preserved by Macrobius (Saturn. i. 4) and Aulus Gellius (x. 24).

COMPLU/VIUM. [DомUs.]
COMPROMISSUM. [Junex ; Recepta Actio.]

COMUS ( $\kappa \omega ̂ \mu o s$ ). [Chorus; Comoznia.]
CONCHA ( $\kappa \delta \gamma \chi \eta$ ), a Greek and Roman liquid measure, of which there were two sizes. The smaller was half the cyathus ( $=0412$ of a pint English) ; the larger, which was the same as the oxybaphum, was three times the former $(=\cdot 1238$ of a pint). (Hussey, pp. 207, 209 ; Wurm, p. 129.)
[P.S.]
CONCILIA'BULUM. [CoLoniA, p. 318 , a.] CONCILIA'RII. [Assessor.]
CONCI'LIUM generally has the same meaning as conventus or conventio, but the technical import of concilium in the Roman constitution was an
assembly of a portion of the people (Gell. xy. 27), as distinct from the general assemblies or comitia (Fest. p. 50 ; Cic. De Leg. ii. 1, p. Red. in Sen. 5.) Accordingly, as the comitia tributa embraced only a portion of the Roman people, viz. the plebeians, these comitia are often designated hy the term concilia plebis. (Liv. vii. 5, xxviii. 53, xxxix. 15.) Upon the same principle, it might be supposed that the comitia curiata might be called concilia, and Niebuhr (Hist. of Rome, i. p. 425) believes that the concilia populi which are mentioned now and then, actually were the comitia curiata; but there is no evidence of those patrician assemblies, which in the early times certainly never looked upon themselves as a mere part of the nation, having ever been called by that name. In fact, all the passages in which concilia populi occur, clearly show that none other but the comitia tributa are meant. (Liv. i. 36, ii. 7, 60 , iii. 13, 16, 64, 71, xxx. 24, xxxviii. 53, xxxix. 15, xliii. 16 , Cic. in Vat. 7.) As concilium, however, has the meaning of an assembly in general, we cannot wonder that sometimes it is used in a loose way to designate the comitia of the centuries (Liv. ii, 28) or any concio. (Liv. ji. 7, 28, v. 43 ; Gell. xviii. 7; comp. Becker, Handl. der Rom. Alterth. vol. ii. part i. p. 359, note 693.)

We must here notice a peculiar sense in which concilium is used by Latin writers to denote the assemblies or meetings of confederate towns or nations, at which either their deputies alone or any of the citizens met who had time and inclination, and thus formed a representative assembly. (Liv. i. 50.) Such an assembly or diet is commonly designated as commune concilium or тд коเvбv, e. g. Achaeorum, Aetolorum, Boeotorum, Macedoniue, and the like. (Liv. xxxvi. 3l, xxxviii. 34, xlii. 43 , xlv. 18 ; Gell. ii. 6.) Of the same kind were the diets of the Latins in the grove of Ferentina (Liv. i. 51, vi. 33, vii. 25, viii. 3), the meetings of the Etruscans near the temple of Voltumna (Liv. iv. 23, 25, 61, v. 17, vi. 2), of the Hernicans in the circus of Anagnia (ix. 42), of the Aequians and Samnites (iii. 2, iv. 25, ․ 12).
[L. S.]
$\mathrm{CO}^{\prime} \mathrm{NCIO}$ or $\mathrm{CO}^{\prime} \mathrm{NTIO}$, a contraction for conventio, that is, a meeting, or a conventus. (Festus, p. 66, ed. Müller.) In the technical sense, however, a concio was an assembly of the people at Rome convened by a magistrate for the purpose of making the people acquainted with measures which were to be brought before the next comitia, and of working upon them either to support or oppose the measure. But no question of any kind could bo decided by a concio, and this constitutes the difference between conciones and comitia. (Gell. xiii. 14 ; Cic. p. Seaxt. 50, 53; Liv. xxxix. 15.) Still conciones were also convened for other purposes, e.g. of persuading the people to take part in a war (Dionys. vi. 28), or of bringing complaints against a party in the repnblic. (Dionys. ix. 25 ; Plut. C. Gracch. 3.) Meetings of this kind naturally were of very frequent occurrence at Rome. The earliest that is mentioned, is one held immediately after the death of Romulus by Julius Proculus in the Campus Martius (Liv. i. 16 ; Plut. Rom. 27 ); the first, after the expulsion of the kings, was held by Brutus. (Liv. ii. 2 ; Dionys. v. 10, \&c.) Every magistrate had the right to convene conciones, but it was most frequently exercised by the consuls and tribunes, and the latter more especially ex-
ercised a great influence over the people in and through these conciones. A magistrate who was higher in rank than the one who had convened a concio, had the right to order the people to disperse, if he disapproved of the object (avocare, Gell. xiii. 14) ; and such a command and the vehemence of the haranguing tribunes rendered conciones often very tumultuons and riotous, especially during the latter period of the republic. The convening magistrate either addressed the people himeelf, or he introduced other persons to whom he gave permission to speak, for no private person was allowed to speak without this permission, and the people had nothing to do but to listen. (Dionys. v. 11 ; Liv. iii. 71 , xlii. 34 ; Cic. $a d$ Att. iv. 2.) The place where such meetings were held, does not seem to have been fixed, for we find them in the forum, the Capitol, the Campus Martius, and the Circus Flaminius. (Cic. p. Sext. 14, ad Att. i. 1.) It should be remarked, that the term concio is also used to designate the speeches and harangues addressed to the people in an assembly (Liv. xxiv. 22, xxvii. 13 ; Cic. in Vat. 1), and that in a loose mode of speaking, concio denotes any assembly of the people. (Cic. p. Flacc. 7; comp. the Lexica.)
[L.S.]
CONCUBI'NA (таллакh, таллакis). 1 Gaeri.-The $\pi a \lambda \lambda a \kappa \eta$, or $\pi a \lambda \lambda a k i s$, occupied at Athens a kind of middle rank between the wife and the harlot ( $\dot{\text { évaipa). The distinction between }}$ the $\dot{\varepsilon} \tau a i p a, \pi \alpha \lambda \lambda \alpha \kappa \hat{\eta}$, and legal wife, is accurately described by Demosthenes (c. Neaer. p. 1386), $\boldsymbol{\text { das }}$

 speaks of the $\pi \alpha \lambda \lambda \alpha \kappa h$ of Philoneos as following him to the sacrifice, and also waiting upon him and his guest at table. (Antiph. Acc. de Venef. pp. 613, 614 ; comp. Becker, Charikles, vol. ii. p. 438.) If her person were violated by force, the same penalty was exigible from the ravisher as if the offence had been committed upon an Attic matron; and a man surprised by the quasi-husband in the act of criminal intercourse with his $\pi a \lambda \lambda a \kappa n$, might be slain hy him on the spot, as in the parallel case (Lys. De Caede Eratostll. p. 95). [Adulterium.] It does not, however, appear very clearly from what political classes concubines were chiefly selected, as cohabitation with a foreign ( $\xi \in \notin \eta$ ) woman was strictly forbidden by law (Demosth. c. Neaer. p. 1350 ), and the provisions made by the state for virgins of Attic families must in most cases have prevented their sinking to this condition. Sometimes certainly, where there were several destitute female orphans, this might take place, as the next of kin was not obliged to provide for more than one ; and we may also conceive the same to have taken place with respect to the daughters of families so poor as to be unable to supply a dowry. (Demosth. c. Neaer. p. 1384 ; Plaut. Trinummus, iii. 2. 63.) The dowry, in fact, seems to have been a decisive criterion as to whether the connection between a male and female Athenian, in a state of cohabitation, amounted to a marriage : if no dowry had heen given, the child of such union would be illegitimate ; if, on the contrary, a dowry had been given, or a proper instrument executed in acknowledgment of its receipt, the female was fully entitled to all conjugal rights. (Petit. Leg. Att. p. 548, and authors there quoted.) It does
not appear that the slave that was taken to her master's bed acquired any political rights in consequence; the concubine mentioned hy Antiphon is treated as a slave by her master, and after his death undergoes a servile punishment (Id. p. 615). [Hetaira.]
[J. S. M.]
2. Roman. According to an old definition, an unnarried woman who cohahited with a man was originally called pellex, but afterwards by the more decent appellation of concubina. (Massurius, $a p$. Paul. Dig. 50. tit. 16. s. 144.) This remark has apparently reference to the Lex Julia et Papia Poppaea, by which the concubinatus received a legal character. This legal concubinatus consisted in the permanent cohabitation of an unmarried man with an unmarried woman. It therefore differed from adulterium, stuprum, and incestus, which were legal offences ; and from contubernium, which was the cohabitation of a free man with a slave, or the cohabitation of a male and female slave, between whom there could be no Roman marriage. Before the passing of the Lex. Jul. et P. P., the name of concuhina would have applied to a woman who cohabited with a married man, who had not divorced his first wife (Cic. De Orat. i. 40); but this was not the state of legal concubinage which was afterwards established. The offence of stuprum was avoided in the case of the cohabitation of a free man and an ingenua by this permissive concubinage; but it would seem to be a necessary inference that there should be some formal declaration of the intention of the parties, in order that there might be no stuprum. (Dig. 48. tit.5. s. 34.) Heineccius (Syntag. $\Delta p$. lib. i. 39) denies that an ingenua could be a concubina, and asserts that those only could be concubinae who could not he uxores; but this appears to be a mistake (Dig. 25. tit. 7. s. 3), or perhaps it may be said that there was a legal doubt on this subject (Id. s. 1); Aurelian prohibited the taking of ingenuae as concubinae. (Vopiscus, Aurelian. 49.) A constitution of Constantine (Cod. v. tit. 27. s. 5) treats of ingenuae concubinae.

This concubinage was not a marriage, nor were the children of such marriage, who were sometimes called liberi naturales, in the power of their father, and consequently they followed the condition of the mother. There is an inscription in Fabretti (p. 337) to the memory of Paullianus by Aemilia Prima "concubina ejus et heres," which seems to show that the term concubina was not a name that a woman was ashamed of. Under the Christian emperors concubinage was not favoured, hut it still existed, as we see from the legislation of Justinian.

This legal concubinage resembled the morganatic marriage (ad morganaticam), in which neither the wife enjoys the rank of the hushand, nor the children the rights of children by a legal marriage. (Lib. Feud. ii. 29.) Among the Romane, widowers who had already children, and did not wish to contract another legal marriage, took a concubina, as we see in the case of Vespasian (Suet. Vesp. 3), Antoninus Pius, and M. Aurelius (Jul. Cap. Vit. Ant. c. 8 ; Aurel. c. 29 ; Dig. 25. tit. 7 ; Cod. v. tit. 26; Paulus, Recept. Sentent. ii. tit. 19, 20 ; Nov. 18, c. 5; 89. c. 12.)
[G. L.]
CONDEMNA'TIO. [Actio; Judex.]
CONDICTIO. [Actio.]
CONDITO RIUM. [FUNUs.]
CONDU'CTIO. [Locatio.]
CONFARREA'tio. [Matrimonium.]

CONFESSO'RIA ACTIO. If a man has a servitus [Servitus], and the exercise of his right is impeded by any person, he can maintain it by an actio in rem, which is a servitutis vindicatio. Accordingly, when a man claims a jus utendi, fruendi, eundi, agendi, \&c., the actio is called confessoria de usufructu, \&c. If the owner of a thing was interrupted in his exclusive enjoyment of it by a person claiming or attempting to exercise a servitus in it, his claim or ground of action was negative, "jus illi non esse ire, agere," \&c., whence the action was called negativa or negatoria in rem actio.

The confessoria actio and the negativa, which was founded on a negative servitus, are discussed under Servitus.

In the negatoria in rem, which must he distinguished from the negative actio founded on a negative servitus, the plaintiff claimed restitution of the thing, as, for instance, when the defendant had usurped the nsus fructus; or removal of the cause of complaint; also damages for injury done, and security (cautio) against future acts of the like kind. (Gaius, iv. 3 ; Dig. 8. tit. 5 ; Brissonins, De Formulis; Puchta, Cursus, \&c. vol. ii. pp. 563, 771.) [G. L.]

CONFU/SIO properly signifies the mixing of liquids, or the fusing of metals into one mass. If things of the same or of different kind were confused, either by the consent of hoth owners or by accident, the compound was the property of hoth. If the confusio was caused by one, without the consent of the other, the compound was only joint property in case the things were of the same kind: but if the things were different, so that the compound was a new thing, this was a case of what, by modern writers, is called specification, which the Roman writers expressed by the term novam speciem facere, as if a man made mulsum out of his own wine and his neighbour's honey. In such a case the person who caused the coufusio became the owner of the compound, but he was hound to make good to the other the value of his property.

Commixtio is used by modern writers to signify the mixture of solid things which belonged to different owners; but Commixtio and Confusio are used by the Roman writers to express the union of things either solid or fluid (Dig. 41. tit. 1. s. 7. $\S 8 ; 6$. tit. I. s. 3. § 2. s. 5.). Still, Commixtio is most generally applied to mixture of solids. If the mixture takes place with mutual consent, the compound is common property; if by chance, or by the act of one, each retains his former property, and may separate it from the mass. If separation is impossible, as if two heaps of corn are mixed, each owner is entitled to a part, according to the proportion of his separate property to the whole mass. It is a case of commixtio when a man's money is paid, without his knowledge and consent, and the money, when paid, is so mixed with other money of the receiver that it cannot be recognised; otherwise, it remains the property of the person to whom it belonged. (Dig. 46. tit. 3. s. 78.)

Specification (which is not a Roman word) took place when a man made a new thing (nova species) either out of his own and his neighbour's material, or out of his neighhour's only. In the former case such man acquired the ownership of the thing. In the latter case, if the thing could be brought back to the rough material (which is obviously possible in very few cases), it still belonged to the original owner, but the specificator had a right to retain the thing till he was paid the value of his labour,
if he had acted hona fide. If the new species conld not be brought back to its original form, the specificator in all cases became the owner, if ha designed to make the new thing for himself; if he had acted bona fide he was liable to the owner of the stuff for its value only; if mala fide, he was liable as a thief. The cases put by Gaius (ii. 29) are those of a man making wine of another man's grapes, oil of his olives, a ship or bench of his timber, and so on. Some jurists (Sabinus and Cassius) were of opinion that the ownership of the thing was not changed by such lahour heing hestowed on it ; the opposite school were of opinion that the new thing belonged to him who had bestowed his labour on it, but they admitted that the original owner had a legal remedy for the ralue of his property.

Two things, the property of two persons, might hecome so united as not to be separable without injury to one or hoth; in this case the owner of the principal thing became the owner of the accessory. Thus, in the case of a man building on another man's ground, the building belonged to the owner of the ground (superficies solo cedit); or in the case of a tree planted, or seed sown on another man's ground, the rule was the same, when the tree or seed had taken root. If a man wrote, even in letters of gold, on auother man's parchment or paper, the whole belonged to the owner of the parchment or paper ; in the case of a picture painted on another man's canvass, the canvass hecame the property of the owner of the picture. (Gaius, ii. 73, \&c.) If a piece of land was torn a way by a stream (arulsio) from one man's land and attached to another's land, it became the property of the latter when it was firmly attached to it. This is a different case from that of Alluvio. But in all these cases the losing party was entitled to compensation, with some exceptions as to cases of mala fides.

Confusio occurs in the case of rights also. If the right and the duty of an obligatio become united in one person, there is a confusio hy which the obligatio is extinguished (Dig. 46. tit. 3. s. 75). If he who has pledged a thing becomes the heres of the pledgee, the rights and dnties of two persons are united (confunduntur) in one. If a man who has a praedial servitus in another man's land, becomes the owner of the servient land, the servitus ceases: servitutes praediorum confunduntur, si idem utriusque praedii dominus esse coeperit. (Dig. 8. tit. 6. s. ].)

The rules of Roman law on this subject are stated by Brinkman, Instit. Jur. Rom. § 398, \&cc.; Mackeldey, Lehrbuch, \&c. §§ 246, 251, \&c. 12th ed.; Inst. 2. tit. 1 ; Gaius, ii. 70, Rosshirt, Grundlinien, \&c. § 62.
[G. L.]
CONGIA'RIUM (scil. vas, from congius), a vessel containing a congius. [Congius.]

In the early times of the Roman repuhlic, the congius was the nsual measure of oil or wine which was, on certain occasions, distribnted among the people (Liv. xxv. 2) ; and thns congiarium, as Qứmtilian (vi. 3. § 52) says, hecame a name for liheral donations to the people, in general, whether consisting of oil, wine, corn, or money, or other things (Plin. H.N. xiv. 14, 17, xxxi. 7, 41; Suet. Aug. 41, Tib. 20, Ner. 7 ; Plin. Paneg. 25 ; Tacit. Ann. xii. 41, xiii. 31 ; Liv. xxxvii. 57), while donations made to the soldiers were called donativa, though they were sometimes also termed congiarin
(Cic. ad Att. xvi. 8 ; Curt. vi. 2). Congiarium was, moreover, occasionally used simply to desig. nate a present or a pension given by a person of high rank, or a prince, to his friends ; and Fabius Maximus called the presents which Augustus nuade to his friends, on account of their smallness, heminaria, instead of congiaria, because hemina was only the twelfth part of a congius. (Quintil. l.c.; compare Cic. ad Fam. viii. 1 ; Seneca, De Brevit. Vit., De Ben. ii. 16 ; Suet. Vesp. 18, Caes. 27.) [L. S.]
$\mathrm{CO}^{\prime}$ NGIUS, a Roman liquid measure, which contained six sextarii (Rhem. Faun. v. 72), or the eighth part of the amphora, that is, not quite six pints. It was equal to the larger chous of the Greeks. [Chous.]

There is a congius in existence, called the congius of Vespasian, or the Farnese congius, bearing an inscription, which states that it was made in the year 75 A. D., according to the standard measure in the capitol, and that it contained, by weight, ten pounds. (Imp. Caes. vi. T. Caes. Aug. F. iiii. Cos. Mensurae exactue in Capitolio, P. x. ; see also Festus, s. v. Publica Pondera.) This congius is one of the means by which the attempt has been made to fix the weight of the Roman pound. [Libra.]

Cato tells us that he was wont to give each of his slaves a congius of wine at the Saturnalia and Compitalia. (De R. R.c. 57.) Pliny relates, among other examples of hard drinking ( $H$. N. xiv. 22. s. 28), that Novellins Torquatus Mediolanensis obtained a cognomen (tricongius, a nine-hottle-man) by drinking three congii of wine at once.

A congius is represented in Fabretti (Inseript. p. 536 ).
[P.S.]

## CONNU/BIUM. [Matrimonivm.]

CONOPE/UM ( $\kappa \omega \nu \omega \pi \in \hat{i} \nu \nu$ ), a gnat or mus-quito-curtain, i. e. a covering made to be expanded over beds and couches to keep away gnats and other flying insects, so called from $\kappa \omega \dot{\nu \omega \omega} \psi$, a gnat.
The gnat-curtains mentioned by Horace (Epod. ix. 16) were probably of linen, but of the texture of gauze. The use of them is still common in Italy, Greece, and other countries surrounding the Mediterranean. Conopeum is the origin of the English word canopy. (See Judith, x. 21, xiii. 9, xvi. 19 ; Juv. vi. 80 ; Varr. De Re Rust. ii. 10. §8.)
[J. Y.]
CONQUISITO'RES, persons employed to go ahout the country and impress soldiers, when there was a difficulty in completing a levy. (Liv. xxi. 11 ; Cic. pro Mil. 25 ; Hirt, B. Alex. 2.) Sometimes commissioners were appointed by a decree of the senate for the purpose of making a conquisitio. (Liv. xxv. 5.)
[R. W.]
CONSANGUI/NEI. [Cognati.]
CONSCRIPTI. [SENATUS.]
CONSECRA'TIO. [APotheosis ; InAUquratio.]

CONSENSUS. [Obligationes.]
CONSILIA'RII. [Conventus.]
CONSI'LIUM. [Convenntus.]
CONSTITU'TA PECU'NIA. [Pecunia.]
CONSTITUTIO'NES. "Constitutio principis," says Gaius (i. 5), "is that which the imperator has constituted by decretum, edictum, or epistola; nor has it ever been doubted that such constitutio has the force of law, inasmuch as by law the imperator receives the imperium." Hence such laws were often called principales constitutiones. The word constitutio is used in the Digest
(4. tit. 2. s. 9. §3) to signify an interlocutory of the praetor.

An imperial constitutio in its widest sense might mean everything by which the head of the state declared his pleasure, either in a matter of legislation, administration, or jurisdiction. A decretum was a judgment in a matter in dispute between two parties which came before him, either in the way of appeal or in the first instance. Edicta, so called from their analogy to the old edict (Gaius, i. 93), edictales leges, generales leges, leges perpetuae, \&c. were laws binding on all the emperor's subjects. Under the general head of rescripta (Gaius, i. 72, 73, \&c.) were contained epistolae, subscriptiones, and annotationes (Gaius, i. 94, 96, 104), which were the answers of the emperor to those who consulted him either as public functionaries or individuals. (Plin. Ep.x. 2.) The epistola, as the name implies, was in the form of a letter : subscriptiones and annotationes were short answers to questions propounded to the emperor, and written at the foot or margin of the paper which contained the questions. In the time of Tiberius, the word rescriptum had hardly obtained the legal signification of the time of Gaius. (Tacit. Ann. vi. 9.) It is evident that decreta and rescripta could not from their nature have the force of leges generales, but inasmuch as these determinations in particular cases might be of general application, they might gradually obtain the force of law.

Under the early emperors, at least in the time of Angustus, many leges were enacted, and in his time, and that of his successors, to about the time of Hadrian, we find mention of numerous senatusconsulta. In fact the emperor, in whom the supreme power was vested from the time of Augustus, exercised his power through the medium of a senatus-consultum, which he introduced by an oratio or libellus, and the senatus-consultum was said to be made " imperatore auctore." Probably, about the time of Hadrian, senatus-consulta became less common, and finally imperial constitutiones became the common form in which a law was made.

At a later period, in the Institutes, it is declared that whatever the imperator determined (constituit) by epistola, or decided judicially (cognoscens decrevit), or declared by edict, was law; with this limitation, that those constitutions were not laws which in their nature were limited to special cases.

Under the general head of constitutiones we also read of mandata, or instructions by the Caesar to his officers.
Many of these constitutions are preserved in their original form in the extant codes. [Conex Theodosianus, \&c.]
[G. L.]
CONSUA'LIA, a festival, with games, celebrated by the Romans, according to Festus, Ovid (Fast. iii. 199), and others, in honowr of Consus, the god of secret deliberations, or, according to Livy (i. 9), of Neptunus Equestris. Plutarch (Quaest. Rom. 45), Dionysius of Halicarnassus (ii. 31), and the Pseudo A sconius, however (ad Cic. in Verr. p. 142. ed. Orelli), say that Neptunus Equestris and Consus were only different names for one and the same deity. It was solemnised every year in the circus, by the symbolical ceremony of uncovering an altar dedicated to the god, which was buried in the earth. For Romulus, who was considered as
the founder of the festival, was said to have discovered an altar in the earth on that spot. (Compare Niebubr, Hist. Rom. vol. i. notes 629 and 630.) The solemnity took place on the 21st of August with horse and chariot races, and libations were poured into the flames which consumed the sacrifices. During these festive games, horses and mules were not allowed to do any work, and were adorned with garlands of flowers. It was at their first celebration that, according to the ancient legend, the Sabine maidens were carried off (Varro, De Ling. Lat. vi. 20 ; Dionys. i. 2 ; Cic. De Rep. ii. 7.) Virgil (Aen. viii. 636), in speaking of the rape of the Sabines, describes it as having occurred during the celebration of the Circensian games, which can only be accounted for by supposing that the great Circensian games, in subsequent times, superseded the ancient Consualia; and that thus the poet substituted games of his own time for ancient ones - a favourite practice with Virgil ; or that he only meant to say the rape took place at the well-known festival in the circus (the Consualia), without thinking of the ludi Circenses, properly so called.
[L. S.]
CONSUL (Ënaros), the highest repuhlican nagistrate at Rome. The name is probably composed of con and sul which contains the same root as salio; so that consules are those who "go together," just as exul is "one who goes out," and praesul, is "one who goes before."
There was a tradition that King Servius, after regulating the constitution of the state, intended to abolish the kingly power, and substitute for it the annual magistracy of the consulship; and whatever we may think of the tradition, the person who devised it must have had a deep insight into the nature of the Roman state and its institutions ; and the fact that on the abolition of royalty, it was instituted forthwith, seems, at any rate, to show that it had heen thought of before. Thus much is also certain, that the consulship was nota Latin institution, for in Latium the kingly power was succeeded by the dictatorship, a magistracy invested with the same power as that of a king, except that it lasted only for a time.
The consulship which was established as a republican magistracy at Rome immediately after the abolition of royalty, showed its republican character in the circumstance that its power was divided between two individuals (imperium duplex), and that it was only of one year's duration (annurem). This principle was, on the whole, observed throughout the republican period; and the only exceptions are, that sometimes a dictator was appointed instead of two consuls, and that, in a few instances, when one of the consuls had died, the other remained in office alone, either because the remaining portion of the year was too short, or from religious scruples (Dionys. v. 57 ; Dion Cass. xxxv. 4), for otherwise the rule was, that if either of the consuls died in the year of his office, or abdicated before its expiration, the other was obliged to convene the comitia for the purpose of electing a successor (subrogare or sufficere collegam.) It is only during the disturbances in the last century of the republic, that a Cima maintained himself as sole consul for nearly a whole year (Appian, De Bell. Civ. i. 78 ; Vell. Pat. ii. 24 ; Liv. Epit. 83) ; and that Pompey was appointed sole consul, in order to prevent his becoming dietator. (Ascon. ad Oic. p Mil. p. 37; Liv. Epit. 107; Appian, De

Bell. Civ. ii. 23, 25.) Nay, in those trouhled times, it even came to pass that Cinna and Marins, without any election at all, usurped the power of the consulship.

In the carliest times, the title of the chief magistrates was not consules but praetores; characterising them as the commanders of the armies of the republic, or as the officers who stand at the head of the state. Traces of this title occur in ancient legal and ecclesiastical documents (Liv. vii. 3; Plin. H. N. viii. 3 ; Fest. p. 161), and also in the names praetorium (the consul's tent), and porta prcetoria in the Roman camp. (Paul. Diac. p. 123 ; Pseudo-Ascon. ad Cic. in Verr. i. 14.) Sometimes also they are designated by the title judices, though it perhaps never was their official title, but was given them only in their capacity of judges. (Varro, De L. L. vi. 9 ; Liv. iii. 55.) The name consules was introduced for the highest magistrates in в. c. 305 (Zonar. vii. 19), and henceforth remained the established title until the final overthrow of the Roman empire. Upon the estahlishment of the republic, after the banishment of Tarquin, all the powers which had belonged to the king, were transfeired to the consuls, except that which had constiruted the king high priest of the state; for this was kept distinct and transferred to a priestly dignitary, called the rex sacrorum, or rex sacrificulus.
As regards the election of the consuls, it invariably took place in the comitia centuriata, under the presidency of a consul or a dictator; and in their absence, by an interrex. The consuls thus elected at the beginning of a year, were styled consules ordinarii, to distinguish them from the suffecti, or such as were elected in the place of those who had died or abdicated, though the privileges and powers of the latter were in no way inferior to those of the former. (Liv. xxiv. 7, \&c.; comp. zli. 18.) At the time when the consulship was superseded by the institution of the tribuni militares consulari potestate, the latter, of course, presided at elections, as the consuls did before and after, and must in general be regarded as the representatives of the consuls in every respect. It was, however, a rule that the magistrate presiding at an election should not be elected himself, though s few exceptions to this rule are recorded. (Liv. iii. 35 , vii. 24 , xxiv. 9 , xxvii. 6.) The day of the election which was made known by an edict, three nundines beforehand (Liv. iii. 35, iv. 6, xlii. 28), naturally depended upon the day on which the magistrates entered upon their office. The latter, however, was not the same at all times, but was often changed. In general it was observed as a rule, that the magistrates should enter upon their office on the kalendae or idus, unless particular circumstances rendered it impossible;" but the months themselves varied at different times, and there are no less than eight or nine months in which the consuls are known to have entered upon their functions, and in many of these cases we know the reasons for which the change was made. The real cause appears to have been that the consuls, like other magistrates, were elected for a whole year ; and if before the close of that year the magistracy became vacant either by death or abdication, their successors, of course, undertook their office on an irregular day, whicl then remained the dies solennis, until another event of a similar kind rendered another change necessary. The first consulk, a6
far as we know, entered upon their office on the ides of September. (Dionys. r. l; Liv. vii. 3.) The first change seems to have been brought about ty the secession of the plehs, в. c. 493 , when the consuls entered on the kalends of September. (Dionys. vi. 49.) In b. c. 479 , the day was thrown a whole month backward; for of the consuls of the preceding year one had fallen in battle, and the other ahdicated two months before the end of his year; hence the new consnls entered on the kalends of Sextilis. (Dionys. ix. 13 ; Liv. iii. 6.) This day remained until в.c. 451 , when the consuls abdicated to make room for the decemvirs, who entered upon their office on the ides of May. The same day remained fur the two following years (Dionys. x. 56 ; Zonar. vii. 18 ; Fast. Cap.) ; hut when the decemvirate was abolished, another day must have become the dies solennis, but which it was is unknown, until in B. c. 443, we find that it was the ides of December. (Dionys. xi. 63.) This change had been occasioned hy the tribumi militares who had been elected the year before, and had been compelled to abdicate. (Liv. iv. 7 ; Dionys. xi. 62.)

Henceforth the ides of December remained for a long time the dies solennis. (Liv. iv. 37, v. 9, 11.) In н. c. 401 , the military trihunes, in consequence of the defeat at Veii, abdicated, and their successors entered upon their office on the kalends of Octoher. In B. c. 391, the consuls entered upon their office on the kalends of Quintilis. (Liv. v. 32 ; comp. 31, vii. 25, viii. 20.) From this time no further change is mentioned, though several events are recorded which must have been accompanied by an alteration of the dies solennis, until in b. c. 217 , we learn that the consuls entered upon their office on the ides of March, which custom remained unaltered for many years (Liv. xxii. 1, xxiii. 30 , xxvi. 1, 26, xliv. 19), until in B. c. 154 it was decreed that in future the magistrates should enter upon their office on the lst of January, a regulation which hegan to be observed the year after, and remained in force down to the end of the republic. (Liv. Epit. 47 ; Fast. Praenest.) The changes in the time at which the consuls entered upon their office at different times, may therefore be given in the following tabular view :-

```
From b. c. 509 to 493 on the Ides of September.
    - - 493-479 - Kalends of September.
    - - 479-451 - Kalends of Sextilis.
    - - 451-449 - Ides of May.
    - - 449 - 443 or 400 Ides of December.
    - - 400 - prohahly till 397, Kalends of Octoher.
    - - 397 - 329 (perhaps 327), Kalends of Quintilis.
    - - 327 - 223 unknown.
    - - 223-153 Ides of March.
    - - 153 - till the end, the Kalends of January.
```

The day on which the consuls entered on their office determined the day of the election, though there was no fixed rule, and in the earliest times the elections probahly took place very shortly hefore the close of the official year, and the same was occasionally the case during the latter period of the republic. (Liv. xxxviii. 42, xlii. 28, xliii. 11.) But when the first of January was fixed upon as the day for entering upon the office, the consular comitia were usually held in July or even earlier, at least before the Kalends of Sextilis. (Cic. ad Att. i. 16 ; ad Fam. viii. 4.) But even during that period the day of election depended in a great measure upon the discretion of the senate and consuls, who often delayed it. (Cic. ad Att. ii. 20, iv. 16, p. Leg. Man. 1.)
Down to the year R.c. 366, the consulship was accessible to none hit patricians, hut in that year L. Sextius was the first pleheian consul in consequence of the law of C. Licinius. (Liv. vi. 42, vii. 1.) The patricians however, notwithstanding the law, repeatedly contrived to keep the plebeians out (Liv. vii. 17, 18, 19, 22, 24, 28), until in B. c. 342 the insurrection of the army of Capna was followed, among other important consequences, hy the firm establishment of the pleheian consulship; and it is even said that at that time a plebiscitum was passed, enacting that hoth consuls might be plebeians. (Liv. vii. 42.) Attempts on the part of the patricians to exclude the plebeians, occur as late as the year b. c. 297 (Liv. x. 15 ; Cic. Brut. 14) but they did not succeed, and it remained a principle of the Roman constitution that hoth consuls should not be patricians. (Liv. xxvii. 34, zxxix. 42.) The candidates usually were divided into two sets, the one desirous to ohtain the patrician, and the other to obtain the plebeian
place in the consulship (in unum looum petebant, Liv. xxxv. 10). But as in the course of time the patricians were thrown into the shade by the rising power of the nobiles, it came to pass that hoth consuls were pleheians. In b.c. 215 , the augurs indeed opposed the election of two plebeians (Liv. xxiii. 31) ; hut not long after, in B. c. 172, the fact of hoth consuls being plebeians actually occurred, and after this it was often repeated, the ancient distinction between patricians and plebeians falling completely into oblivion.

The consulship was throughout the republie regarded as the highest office and the greatest honour that could be conferred upon a man (Cic. p. Planc. 25 ; Paul. Diac. p. 136 ; Dionys. iv. 76), for the dictatorship, though it had a majus imperium, was not a regular magistracy; and the censorship, though conferred only upon consulars, was yet far inferior to the consulship in power and influence. It was not till the end of the republic, and especially in the time of $\mathbf{J}$. Caesar, that the consulship lost its former dignity ; for in order to honour his friends, he cansed them to be elected, sometimes for a few months, and sometimes even for a few honrs. (Sueton. Caes. 76, 80, Nero, 15 ; Dion Cass. xliii. 46 ; Macrob. Sat. ii. 3.)

The power of the consuls was at first equal to that of the kings into whose place they stepped, with the exception of the priestly power of the rex sacrorum, which was detached from it. Even after the Valerian laws and the institution of the tribuneship, the consuls who alone were invested with the executive, retained the most extensive powers in all departments of the govemment. Bit in the gradual development of the constitntion, some important functions were detached from the consulship and assigned to new officers. This was the case first
with the census, in B. c. 443 , an office which at first was confined to holding the census and registering the citizens according to their different classes, but afterwards acquired very extensive powers. [Censor.] The second function that was in this manner taken from the consuls, was their judicial power, which was transferred in B. c. 366, to a distinct magistracy under the title of the praetorship [Praetor]; and henceforth the consuls appeared as judges only in extraordinary cases of a cruninal nature, when they were called upon by a senatus consultum. (Cic. Brut. 32 ; Liv. xxxix. 17, \&c., xli. 9.) But, notwithstanding these curtailings, the consulship still continued to be regarded as the representative of regal power. (Polyb. vi. 11 ; Cic. De Leg. iii. 3.)

In regard to the nature of the power of the consuls, we must in the outset divide it into two parts, inasmuch as they were the highest civil authority, and at the same time the supreme commanders of the armies. So long as they were in the city of Rome, they were at the head of the government and the administration, and all the other magistrates, with the exception of the tribunes of the people, were subordinate to them. They convened the senate, and as presidents conducted the business ; they had to carry into effect the decrees of the senate, and sometimes on urgent emergencies they might even act on their own authority and responsibility. They were the medium through which foreign affairs were brought before the senate; all despatches and reports were placed in their hands, before they were laid before the senate ; by them foreign ambassadors were introduced into the senate, and they alone carried on the negotiations between the senate and foreign states. They also convened the assembly of the people and presided in it; and thus conducted the elections, put legislative measures to the vote, and had to carry the decrees of the people into effect. (Polyb. vi 12; Comitia; Senatus.) The whole of the internal machinery of the republic was, in fact, under their superintendence, and in order to give weight to their executive power, they had the right of summoning and arresting the obstreperous (vocatio and prensio, Cic. in Vat. 9, p. Dom. 41), which was limited only by the right of appeal from their judgment (provocatio) ; and their right of inflicting punishment might be exercised even against inferior magistrates.

The outward signs of their power, and at the same time the means by which they exercised it, were twelve lictors with the fasces, without whom the consul never appeared in public (Liv. xxv. 17, xxvii. 27 ; Val. Max. i. 1. § 9 ; comp. Liv. vi. 34, xxxix. 12), and who preceded him in a line one behind another. (Liv. xxiv. 44 ; Val. Max. ii. 2. §4.) In the city, however, the axes did not appear in the fasces; a regulation said to have been introduced by Volerius Publicola (Dionys. v. 2, 19, 75, z. 59), and which is intimately connected with the right of appeal from a consul's sentence, whence it did not apply to the dictator nor to the decemvirs. Now as the provocatio could take place only within the city and a thousand paces in circumference, it must he supposed that the axes did not appear in the fasces within the same limits, an opinion which is not contradicted by the fact that the consuls on returning from war appeared with the axes in their fasces in the Campus Martius, at the very gates of Rome;
for they had the imperium militare, which ceased as soon as they had entered the city.

But the powers of the consuls were fur more extensive in their capacity of supreme commanders of the armies, when they were without the precincts of the city, and were invested with the full imperium. When the levying of an army was decreed by the senate, the consuls conducted the levy, and, at first, had the appointment of all the subiordinate officers - a right which subsequently they shared with the people; and the soldiers had to take their oath of allegiance to the consuls. They also determined the contingent to be furnished by the allies; and in the province assigned to them they had the unlimited administration, not only of all military affairs, hut of every thing else, even over life and death, excepting only the conclusion of peace and treaties. (Polyb. vi. 12; compare Exercitus.) The treasury was, indeed, under the control of the senate; hut in regard to the expenses for war, the consuls do not appear to have heen bound down to the sums granted by that body, but to have availed themselves of the public money as circumstances required ; the quaestors, however, kept a strict account of the expenditure (Polyb. vi. 12, 13, 15 ; Liv. xliv. 16). But when in times of need money was to be taken from the aerarium sanctius, of which the keys seem to have been in the exclusive possession of the consuls, they had to be authorised by a senatus consultum. (Liv. xxvii. 10.) In the early times, the consuls had the power to dispose of the booty in any way they pleased; sometimes they distributed the whole or a part of it among the soldiers, and sometimes they sold it, and deposited the produce in the public treasury, which in later times became the usual practice.

Abuse of the consular power was prevented, first of all, by each of the consuls being dependent on his colleague who was invested with equal rights; for, if we except the provinces abrosd where each was permitted to act with unlimited power, the two consuls could do nothing unleas both were unanimous (Dionys. x. 17 ; Appian, De Bell. Civ. $\mathrm{ii}, 11$ ), and against the sentence of one consul an appeal might be hrought hefore his colleague ; nay, one consul might of his own accord put his veto on the proceedings of the other. (Liv. ii. 18, 27, iii. 34 ; Dionys. v. 9 ; Cic. De Leg. iii. 4.) But in order to avoid every unnecessary dispute or rivalry, arrangements had been made from the first, that the real functions of the office should be performed only by one of them every alternate month (Dionys. ix. 43) ; and the one who was in the actual exercise of the consular power for the month, was preceded by the twelve lictors, whence he is commonly described by the words penes quem fasces erant. (Liv. viii. 12, ix. 8.) In the early times, his colleague was then not accompanied by the lictors at all, or he was preceded by an accensus, and the lictors followed after him. (Cic. De Rb Publ. ï. 31 ; Liv.ii. l, iii. 33 ; comp. Dionys. y. 2, x. 24.) As regards the later times, it is certain that the consul, when he did not perform the functions of the office, was followed by the twelve lictors (Suet. Caes. 20); when this custom arose is uncertain, and we only know that, in the time of Polyhius, the dictator had twenty-four lictors. It is commonly believed, that the consul who for the month being performed the functions of the office, was designated as the consul major; but the sn-
cients themselves were doubtful as to whether the term applied to the one who had the fasces, or to the one who had been elected first (Fest. p. 161); and there seems to be good reason for believing that the word major had reference only to the age of the consul, so that the elder of the two was called consul major. (Liv. xxxvii. 47 ; Cic. De Re Publ. ii. 31; Val. Max. iv. 1. § ${ }^{\prime} 1$; Plut Publ. 12 ; Dionys. vi. 57.) Owing to the respect paid to the elder, he presided at the meeting of the senate which was held immediately after the election. (Lav. ix. 8 ; Gellius, ii. 15.) Another point which acted as a check upon the exercise of the consular power, was the certainty that after the expiration of their office they might be called to account for the manner in which they had conducted themselves in their official capacity. Many cases are on record, in which after their abdication they were accused and condemned not only for illegal or unconstitutional acts, but also for misfortunes in war, which were ascribed either to their carelessness or want of ability. (Liv. ii. 41, 52, 54, 61, iii. 31 , xxii. 40.49 , xxvi. 2,3 , xxvii. 34 ; Cic. De Nat. Deor. ii. 3 ; Val. Max. viii. 1. §4.) The ever increasing arrogance and power of the tribunes did not stop here, and we not unfrequently find that consuls, even during the time of their office, were not only threatened with punisbment and imprisonment, but were actually subjected to them. (Liv. iv. 26, v. 9, xlii. 21, Epit. 48, 55 ; Cic. De Leg. iij. 9 , in Vat. 9 ; Val. Max. ix. 5. § 2 ; Dion Cass. xxxvii. 50, xxxviii. 6, xxxix. 39.) Sometimes the people themselves opposed the consuls in the exercise of their power. (Liv. ii. 55 , 59.) Lastly, the consuls were dependent upon the senate. [Sknatus.] There occurred, however, times when the power of the consuls thus limited by republican institutions was thought inadequate to save the republic from perils into which she was thrown by circumstances; and on such occasions a senatus consultum viderent or darent operam consules, ne quid respublica detrimenti caperet, conferred upon them full dictatorial power not restrained either by the senate, the people, or the tribunes. In the early times, such senatus consulta are rarely mentioned, as it was customary to appoint a dictator on such emergencies; but when the dictatorship had fallen into disuse, the senate by the above mentioned formula invested the consuls, for the time, with dictatorial power. [Dictator.]

On entering upon their office, the consule, and afterwards the praetors also, agreed among one aoother as to the business which each had to look after, so that every one had his distinct sphere of action, which was termed his provincia. The ordinary way in which the provinces were assigned to each, was hy lot (sortiri provincias), unless the colleagues agreed among themselves, without any such means of decision (comparare inter se provincias, Liv. xxiv. 10, xxx. 1, xxxii. 8 ; Cic. ad Fam. i. 9). The decision by lot was resorted to for no other reason than because the two consuls had equal rights, and not, as some believe, because it was therehy intended to leave the decision to the gods. If it was thought that one of the consuls was eminently qualified for a particular province, either on account of his experience or personal character, it frequently happened, that a commission was given to him extra sortem or extra ordinem, i. e. by the senate and without any drawing of
lots. (Liv. iii. 2, viii. 16, xxxvii. 1 ; Cic. ad Att. is 19 ; comp. Liv. xxxv. 20, xli. 8.) In the earliest times, it seems to have been the custon for only one of the consuls to march out at the head of the army, and for the other to remain at Rome for the protection of the city, and to carry on the administration of the civic affairs, unless, indeed, wars were carried on in two different quarters which rendered it necessary for both consuls to take the field. (Dionys. vi. 24, 91 ; comp. Liv. iii. 4,22 , vii. 38.) Nay, we find that even when Rome had to contend with one formidable enemy, the two consuls marched out together (Liv. ii. 44, iii. 8,66 , viii. $6, \& c$.) ; but the forces were equally divided between them, in such a manner that each had the command of two legions, and had the supreme command on every alternate day. (Polyb. iii. 107 , 110 , vi. 26 ; Liv. iv. 46 , xxii. 27,41 , xxviii. 9 ; comp. iii. 70 .)

When the Roman dominion extended beyond the natural boundaries of Italy, the two consuls were not enough to undertake the administration of the provinces, and praetors were appointed to undertake the command in some, while the more important ones were reserved for the consuls. Hence a distinction was made between provinciae consulares and praetoriae. (Liv, xli. 8.) [Provincia.] It remained with the senate to determine into which provinces consuls were to be sent, and into which praetors, and this was done either before the magistrates actually entered upon their office (Liv. xxi. 17), or after it, and on the proposal of the consuls. (Liv. xxv. l, xxvi. 28, xxvii. 7, \&c.) Upon this, the magistrates either agreed among themselves as to which province each was to undertake, or they drew lots, first, of course, the consuls, and after them the praetors. One of the laws of C. Gracchus, however, introduced the regulation, that every year the senate, previous to the consular elections, should determine upon the two consular provinces, in order to avoid partiality, it being yet unknown who were to be the consuls. It had been customary from the eariest times for the consuls to enter their province in the year of their consulship, either at the very beginning or afterwards; hut in the latter period of the republic, the ordinary practice of the consuls was to remain at Rome during the year of their office, and to go into their province in the year following as proconsuls, until at length in в.c. 53 , a senatus consultum, and the year after a law of Pompey enacted that a consul or praetor should not go into any province till five years after the expiration of their office. (Dion Cass. xl. 46, 56.) When a consul was once in his province, his imperium was limited to it, and to exercise the same in any other province was, at all times, considered illegal. (Liv. x. 37 , xxix. 19 , xxxi. 48 , xliii. 1.) In some few cases, this rule was overlooked for the good of the republic. (Liv. xxvii. 43, xxix. 7.) On the other hand, a consul was not allowed to quit his province before he had accomplished the purpose for which he had been sent into it, or before the arrival of his successor, unless, indeed, he obtained the special permission of the senate. (Liv. xxxyii. 47.) Other functions also were sometimes divided between the consuls by lot, if they could not agree, for example, which of them was to preside at the consular elections or those of the censors (Liv. xxiv. 10 , xxxv. 6,20 , xxxix. 32 , xli. 6 ), which of them was to dedicate a temple (Liv. ii. 8, 27), ot
nominate a dictator. (Liv. iv. 26.) So long as the consuls had to hold the census, they, undoubtedly, drew lots, which of them conderet lustrum, and even when they went out on a common expedition, they seem to have determined by lot in what direction each should exert his activity. (Liv. xli. 18.)

The entering of a consul upon his office was connected with great solemnities: before daybreak each consulted the auspices for himself, which in the early times was, undoubtedly, a matter of great importance, though, at a later period, we know it to have been a mere formality. (Dionys. ii. 4, 6.) It must, however, he observed, that whatever the mature of the auspices were, the entering upon the office was never either rendered impossible or delayed thereby, whence we must suppose that the object merely was to obtain favourable signs from the gods, and as it were to place under the protection of the gods the office on which the magistrate entered. After the auspices were consulted, the consul returned home, put on the toga praetexta (Liv. xxi. 63; Ov. ex Pont. iv. 4. 25, Fast. i. 81), and received the salutatio of his friends and the senators. (Dion Cass. lviii. 5 ; Ov. ex Pont. iv. 4. 27, \&c.) Accompanied by these and a host of curious spectators, the consul clad in his official robes, proceeded to the temple of Jupiter in the Capitol, where a solemn sacrifice of white bulls was offered to the god. It seems that in this procession, the sella curulis, as an emblem of his office, was carried before the consul. (Ov. l. c. iv. 4. 29, \&c., 9, 17, \&c.; Liv. xxi. 63 ; Cic. De Leg. Agr. ii. 34.) After this, a meeting of the senate took place, at which the elder of the two consuls made his report concerning the republic, beginning with matters referring to religion, and then passing on to other affairs (referre ad senatum de rebus dinnis et humanis, Liv. vi. 1, ix. 8, xxxvii. 1 ; Cic. ad Quir. post Red. 5.) One of the first among the religious things which the consuls had to attend to, was the fixing of the feriae Latinae, and it was not till they had performed the solemn sacrifice on the Alban mount, that they could go into their provinces. (Liv. xxi. 63, xxii. 1, xxv. 12, xlii. 10.) The other affairs upon which the consuls had to report to the senate had reference to the distribution of the provinces, and many other matters connectedwith the administration, which often were of the highest importance. After these reports, the meeting of the senate broke up, and the members accompanied the consuls to their homes (Ov. ex Pont. iv. 4. 41), and this being done, the consuls were installed in their office, in which they had to exert themselves for the good of their country.

Respecting the various offices which at different times were temporary substitutes for the consulship, such as the dictatorship, the decemvirate, and the office of the tribuni militares consulari potestate, the reader is referred to the separate articles. Towards the end of the republic, the consulship lost its power and importance. Caesar, in his dictatorship, gave it the first severe blow, for he himself took the office of consul along with that of dictator, or he arhitrarily caused persons to be elected, who in their actions were entirely dependent upon his will. He himself was elected at first for five years, then for ten, and at length for life. (Sueton Caes. 76, 80 ; Dion Cass. xlii. 20, x]iii. 1, 46, 49 ; Appian, De Bell. Civ. ii. 106.)

In the reign of Augustus, the consular power was a mere shadow of what it had been before, and the consuls who were elected, did not retain their office for a full year, but had usually to abdicate after a few months. (Dion Cass. xlviii. 35, xiii. 46 ; Lucan, v. 399.) These irregularities increased to such an extent, that in the reign of Commodus there were no less than twenty-five consuls in one year. (Lamprid. Commod. 6 ; Dion Cass. Ixxii. 12.) In the republican time, the year had received its name from the consuls, and in all public documents their names were entered to mark the year ; but from the time that there were more than two in one year, only those that entered upon their office at the beginning of the year were regarded as consules ordinarii, and gave their names to the year, though the suffecti were likewise entered in the Fasti. (Sueton. Domit. 2, Galb. 6, Vitell. 2 ; Senec. De Tra. iii. 31 ; Plin. Panegr. 38 ; Lamprid. Al. Sev. 28.) The consules ordinarii ranked higher than those who were elected afterwards. The election from the time of Tiberius was in the hands of the senate, who, of course, elected only those that were recommended by the emperor ; those who were elected were then announced (renuntiare) to the people assembled in what was called comitia. (Dion Cass. Iviii. 20 ; Plin. Paneg. 77 ; Tac. Ann. iv. 68.) In the last centuries of the empire, it was customary to create honorary consuls (consules honorarii) who were chosen hy the senate and sanctioned by the emperor (Cassiod. i. 10 ; Justin. Nov. lxx. 80. c. 1), and consules suffecti were then scarcely heard of at all, for Constantine restored the old custom of appointing only two consuls, one for Constantinople, and the other for Rome, who were to act as supreme judges (under the cmperor) for a whole year, and besides these two there were no others except honorary consuls and consulares. Although the dignity of these honorary consuls as well as of the consules ordinarii and suffecti was merely nominal, still it was regarded as the highest in the empire, and was sought after by noble and wealthy persons with the greatest cagerness, notwithstanding the great expenses connected with the office on account of the public entertainments which a newly appointed consul had to give to his friends and the people. (Lydus, De Magistr. ii. 8 ; Liban. Orat. 8 ; Symmach. ii. 64, iv. 8, x. 44 ; Sidon. Apollin. Epist. ii. 3 ; Cassiod. ii. 2, vi. 1 ; Procop. De Bell. Pers. i. 25.) Sometimes the emperors themselves assumed the consulship or conferred it upon imperial princes. The last consul of Rome was Decimus Theodorus Paulinus, A. D. 536, and at Constantinople Flavius Basilius Junior, in A. D. 541. After that time, the emperors of the East took the title of consul for themselves, until in the end it fell quite into oblivion.

The official functions of the consuls under the empire were as follows:-1. They presided in the senate, though, of course, never without the sanction of the emperor; 2. They administered justice, partly extra ordinem (Tac. Ann. iv. 19, xiii. 4; Gell. xiii. 24), and partly in ordinary cases, such as manumissions or the appointment of guardians (Am-
 Claud. 23 ; Plin. H. N. ix. 13) ; 3. The letting of the public revenues, a duty which had formerly been performed by the censors ( Ov . ex Pont. iv. D . 19); 4. The conducting of the games in the Circus and of public solemnities in honour of the emperors,
for which they had to defray the expenses out of their own means. (Sueton. Nero, 4 ; Juven. xi. 193, \&cc. ; Cassiod. l. c., and iii. 39, т. 42, vi. 10.) Some emperors indeed granted the money necessary for such purposes and endeavoured to check the growing extravagance of the consuls, but these regulations were all of a transitory nature. (Lamprid. Al. Sever. 43 ; Vopisc. Aurel. 12 ; Justin. Nov. 105.) Compare besides the various works on Roman history, K. D. Hüllmann, Röm. Grumdverfassung, p. 125, \&c. ; K. W. Göttling, Geseh. der Röm. Staatsverf. p. 269, \&c., and above all, Becker, Handbuch der Röm. Alterth. vol. ii. part ii. pp. 87 -126.
[L. S.]
CONSULA'RIS, throughout the time of the Roman republic signifies a person who has heen invested with the consulship ; but under the empire it became a mere title for the higher class of officers, who thereby obtained permission to have the insignia of a consul, without ever having actually been consuls. Hence the title was almost equivalent to that of an " honorary consul" (consul honorarius; Cod. Theod. vi. tit. 19. s. 1, vi. tit. 2. s.2). The title was given especially to generals, as formerly persons after their consulship had nsually undertaken the command of an army in the provinces, and in many instances they were the same as the legati principis or the magistri militum. (Veget. ii. 9 ; Dig. 3. tit. 2. s. 2.) It was further a common custom established even by the first emperors to give to governors of imperial provinces the title of consularis, irrespective of their ever having been consuls. (Suet. Aug. 33, Tib. 33, Domit. 6; Tac. Agric. 8, 14, 40.) Consularis thus gradually became the established title for those entrusted with the adnninistration of imperial provinces. The emperor Hadrian divided Italy into four regions, and over each he placed an officer who likewise bore the title of consularis, and was entrusted with the administration of justice in his district, whence he is frequently called Juridicus (Spartian. Hadr. 22, with the note of Salmas.). At Constantinople the title was given to the superintendents of the aquaeducts (consulares aquarum), who had to see that all public and private places were properly supplied with water, and who seem to have been analogous to the curatores aquarum of Rome. They are frequently mentioned in inscriptions, and also in the Codex of Justinian and Theodosius.
[L. S.]

## CONTRACTUS. [Obligationgs.] <br> CONTROVE'RSIA. [Junex.]

CONTUBERNA ${ }^{\prime}$ LES ( $\left.\sigma \dot{\sigma} \sigma \pi \eta \nu o\right)^{\text {) }}$. This word, in its original meaning, signified men who served in the same army and lived in the same tent. It is derived from taberna (afterwards tabernaculum), which, according to Festus, was the original name for a military tent, as it was made of boards (tabulae). Each tent was occupied by ten soldiers (contubernales), with a subordinate officer at their head, who was called decanus, and in later times caput contubernii. (Veget. De Re Mil. ii. 8. 13 ; compare Cic. Pro Ligar. 7 ; Hirt. Bell. Alex. 16 ; Drakenborch, $A d$ Liv. v. 2.)

Young Romans of illustrious families used to accompany a distinguished general on his expeditions, or to his province, for the purpose of gaining under his superintendence a practical training in the art of war, or in the administration of public affairs, and were, like soldiers living in the same tent, called his contubernales. (Cic. Pro Coel. 30,

Pro Planc. 11; Suet. Caes. 42; Tacit. Agr. 5; Frontin. Strateg. iv. 1.11 ; Plutarch. Pomp. 3.)
In a still wider sense, the name contubernales was applied to persons connected by ties of intimate friendship and living under the same roof (Cic. Ad Fam. ix. 2 ; Plin. Epist. ii. 13) ; and hence when a free man and a slave, or two slaves, who were not allowed to contract a legal marriage, lived together as hushand and wife, they were called contubernales; and their connection, as well as their place of residence, contubernium. (Colum. xii. 1. 3, i. 8 ; Petron. Sat. 96; Tacit. Hist. i. 43, iii. 74.) Cicero (Ad Att. xiii. 28) calls Caesar the contubernalis of Quirinus, thereby alluding to the fact that Caesar had allowed his own statue to he erected in the temple of Quirinus (comp. $A d$ Att. xii. 45, and Suet. Cxes. 76).

CONTUBE'RNIUM. [Contubernales; Concubina.]

CONTUS ( $\kappa \circ \nu \tau o ́ s$, from $\kappa \in \nu \tau \epsilon \in$, I prick or pierce), was, as Nonius (xviii. 24) expresses it, a long and strong wooden pole or stake, with a pointed iron at the one end. (Virg. Aen. v. 208.) It was used for various purposes, but chiefly as a punt-pole by sailors, who, in shallow water, thrust it into the ground, and thus pushed on the boat. (Hom. Od. ix. 287 ; Virg. l. c. and vi. 302.) It also served as a means to sound the depth of the water. (Festus, s. v. Perconetatio, p. 214, ed. Müller ; Donat. ad Terent. Hec. i. 2. 2.) At a later period, when the Romans became acquainted with the huge lances or pikes of some of the northern barbarians, the word contus was applied to that kind of weapon (Virg. Aen. ix. 510 ; Tacit. Hist. i. 44, iii. 27; Lamprid. Commod. 13) ; and the long pikes peculiar to the Sarmatians were always designated by this name. (Tacit. Hist. i. 79, Annal. vi. 35 ; Stat. Achil. ii. 416 ; Valer. Flac. vi. 162, and others.)
[L.S.]
CONVENI'RE IN MANUM. [MATRImonium.]

CONVENTIO ${ }^{\prime}$ NES. [Obligationes.]
CONVENTUS ( $\sigma \dot{\nu} \mathrm{vo} \mathrm{\delta os}, ~ \sigma v \nu o v \sigma i ́ a$, or $\sigma v \nu a$. $\gamma \omega \gamma^{\prime}$ ) is properly a name which may be given to any assembly of neen who meet for a certain purpose. (Paul. Diac. p. 42, ed. Müller.) But when the Romans had reduced foreign countries into the form of provinces, the word conventus assumed a more definite meaning, and was applied to the meetings of the provincials in certain places appointed by the praetor or proconsul for the purpose of administering justice. (Cic. in Verr. ii. 20, 24, 30, iv. 29, 48; Cic. ad Fam. xv. 4 ; Horat. Sat. i. 7. 22 ; Caes. Bell. Civ. ii. 21 ; Hirt. Bell. Afr. 97.) In order to facilitate the administration of justice, a province was divided into a number of districts or circuits, each of which was likewise called conventus, forum, or jurisdictio. (Cic. in Verr. ii. 8,66 ; Plin. Ep. x. 5 ; Plin. H. N. iii. 1, iv. 22, v. 29.) Roman citizens living in a province were likewise under the jurisdiction of the proconsul, and accordingly all that had to settle any business at a conventus had to make their appearance there. The towns which had the Jus Italicum, had magistrates of their own with a jurisdictio, from whom there was no doubt an appen! to the proconsul. At certain times of the year, fixed by the proconsul, the people assembled in the chief town of the district. To hold a conventus was expressed by conventus agere, peragere,

CORBIS.
(Caes. Bell. Gall. i. 54, v. 1, viii. 46 ; Act. Apost. xix. 38.) At such a conventus litigant parties applied to the proconsul, who selected a number of judges from the conventus, generally front among the Romans residing in the province, to try their causes. (Cic. in Verr. ii. 13, \&c. ; Niebuhr, Hist. Rom. vol. iii. p. 732.) The proconsul himself presided at the trials, and pronounced the sentence according to the views of the judges, who were his assessors (consilium or consiliarie). As the proconsul had to carry on all official proceedings in the Latin language (Val. Max. ii. 2. 2), he was always attended by an interpreter. (Cic. in Verr. iii. 37, ad Fam. xiii. 54.) These conventus appear to have been generally held after the proconsul had settled the military affairs of the province; at least when Caesar was proconsul of Gaul be made it a regular practice to hold the conventus after his armies had retired to their winter-quarters. In the time of the emperors certain towns in each province were appointed as the seats of standing courts, so that the conventus were superseded. (Cod. Just. i. tit. 40. s. 6.) The term conventus is lastly applied to certain bodies of Roman citizens living in a province, forming a sort of corporation, and representing the Roman people in their district or town; and it was from among these that proconsuls generally took their assistants. Such corporations are repeatedly mentioned, as, for example, at Syracuse (Cic. in Verr. ii. 13, 29, iii. 13, iv. 25, 31, v. 36, \&c.), Capua (Caes. De Bell. Civ. i. 14 ; Cic. p. Seat. 4), Salona (Caes. De Bell. Civ. iii. 9), Puteoli (Cic. in Vat. 5), and Corduha (Caes. De Bell. Civ. ii. 19 ; comp. Provincla.)
[L. S.]

## CONVI'VIUM. [Symposium.]

Coopta'RE. [Collegium.]
CO'PHINUS ( $\kappa \delta \phi \not \boldsymbol{L}^{\prime} \nu o s$, Engl. coffin), a large kind of wicker basket, made of willow branches. (Moer. Att. and Hesyeh. s. v. "A $\bar{\rho} \dot{\prime} \chi o s$.$) From$ Aristopbanes (Av. 1223) it would seem that it was used by the Greeks as a basket or cage for birds. The Romans used it for agricultural purposes, and Columella (xi. 3. p. 460 , ed. Bip.) in describing a method of procuring early cucumbers, says, that they should be sown in well manured soil, kept in a cophinus, so that in this case we have to consider it as a kind of portable hot-bed. Juvenal (Sat. iii. 14, and vi. 542), when speaking of the Jews, uses the expression cophinus et foenum (a truss of hay), figuratively to designate their high degree of poverty. [Corbis.] [L.S.]

CORBIS, dim. CO'RBULA, CORBICULA, a basket of very peculiar form and common use anong the Romans, both for agricultural and other purposes. It was made of osiers twisted together, and was of a conical or pyramidal shape. (Var. I.L. v. 139, ed. Müller ; Isidor. Orig. xx. 9 ; Cic. pro Sest. 38 ; Ov. Met. xiv. 643; Plaut. Aul. ii. 7. 4 ; Suet. Ner. 19.) A basket answering precisely to this description, both in form and material, is still to be seen in everyday use among the Campanian peasantry, which is called in the language of the country " la corbella," a representation of which is introduced in the lower portion of the annexed woodcut. The hook attached to it by a string is for the purpose of suspending it to a branch of the tree into which the man climbs to pick his oranges, lemons, olives, or figs. The upper portion of the woodcut (Antichità di Ergolano, tom. iii. 'Av. 29) represents a Roman farm,
in which a farming man, in the shape of a dwarfish satyr, is seen with a pole ( $\mathfrak{a} \sigma(\lambda \lambda \alpha)$ across his shoulder, to each end of which is suspended a basket resembling in every respect the Campanian corbella; all which coincidences of name, form, and description leave no doubt as to the identity of the term with the object represented. [A. R.]

CORBI/TAE, merchantmen of the larger class, so called because they hung out a corbis at the mast-head for a sign. (Festus; Nonius, s. v.) They were also termed onerariae; and hence Plautus, in order to designate the voracious appetites of some women, says, "Corhitam cibi comesse possunt" (Cas. iv. 1. 20). They were noted for their beavy huild and sluggish sailing (Lucil. ap. Non.s.v.Corbitae; Plaut. Poen. iii. 1.4), and carried passengers as well as merchandise, answering to the large "felucea" of the present day. Cicero proposed to take a passage in one of those vessels, which he opposes to the smarter class of packets (actuariola, ad Att. xvi. 6).

## CORDAX ( $\delta \delta \rho \delta a \xi$ ). [Chorus, 280, a.]

CORNI'CINES. [AENEATORES.]
CORNICULA'RII. [Exercitus.]
CORNU. [Exercitus.]
CORNU, a wind instrument, anciently made of horn, but afterwards of hrass. (Varr. L.L.L.v.117, ed. Müller.) According to Athenaeus (iv. p. 184, a.) it was an invention of the Etruscans. Like ths tuba, it differed from the tibia in being a larger and nore powerful instrument, and from the tuba itself, in heing curved nearly in the shape of a C , with a cross-piece to steady the instrument for the convenience of the perforner. In Greek it is called $\sigma \tau \rho o \gamma \gamma \dot{\chi} \lambda \eta \sigma \dot{\alpha} \lambda \pi t \gamma \xi$. It bad no stopples or plugs to adjust the scale to any particular mode (Burney's Hist. of Music, vol. i. p. 518) ; the entire series of notes was produced without keys or holes, by the modification of the breath and the lips at the mouthpiece. Probably, from the description given of it in the poets, it was, like our own born, an octave lower than the trumpet. The classivum, which originally meant a signal, rather than the musical instrument which gave ths signal, was usually sounded with the cornu.
> " Sonuit reflexo classicum cornu, Lituusque adunco stridulos cantus Elisit aere."
(Sen. Oed. 734,)

From which lines we learn the distinction between the cornu and lituus, as from Ovid (Metam. i. 98) we learn that hetween the tuba and cornu -
" Non tuba directi, non aeris comua flexi."
The following woodeut, taken from Bartholini ( De Tibiis, p. 403), illustrates the above account. [B.J.]

COROLLA. [Corona.]
CORO'NA ( $\sigma \tau \epsilon^{\prime} \phi a \nu 0 s$ ), a crown, that is, a circular ornament of metal, leaves, or flowers, worn by the ancients round the head or neck, and used as a festive as well as funeral decoration, and as a reward of talent, military, or naval prowess, and civil worth. It includes the synonymes of the species, for which it is often used absolutely,
 garland or wreath.

Judging from Homer's silence, it does not appear to have heen adopted amongst the Greeks of the heroic ages as a reward of merit, nor as a festive decoration ; for it is not mentioned amongst the luxuries of the delicate Phaeacians, nor of the suitors. But a golden crown decorates the head of Vemus in the hymn to that goddess ( 1 and 7).
Its first introduction as an honorary reward is attributable to the athletic games, in some of which it was hestowed as a prize upon the victor (Plin. H. N. xv. 39 ; Pindar. Olymp. iv. 36), from whence it was adopted in the Roman circus. It was the only one contended for by the Spartans in their gymnastic contests, and was worm by them when going to battle.
The Romans refined apon the practice of the Greeks, and invented a great variety of crowns formed of different materials, each with a separate appellation and appropriated to a particular purpose. We proceed to enumerate these and their properties, including in the same detail an account of the corresponding ones, where any, in Greece.
I. Corona Obsidionalis. Among the honorary crowns bestowed by the Romans for military achievements, the most difficult of attainment, and the one which conferred the highest honour, was the corona obsidionalis, presented by a beleaguered army after its liberation to the general who broke up the siege. It was made of grass, or weeds and wild flowers (Plin. H.N. xxii. 7), thence called corona graminea (Plin. II.N. xxii. 4), and graminea obsidionalis (Liv. vii. 37), gathered from the spot on which the beleaguered army had been enclosed (Plin. l. c. ; Aul. Gell. v. 6 ; Festus, s. v. Obsidionalis) ; in allusion to a custom of the early ages, in which the vanquished party in a contest of strength or agility plucked a handful of grass from the meadow where the struggle took place, and gave it to his opponent as a token of victory.
(Aul. Gell. v. 6 ; Plin. H. N. xxii. 4 ; Festus, s. v. Obsidionalis; Serv. ad Virg. Aen. viii. 128.) A list of the few Romans who gained this honour is given by Pliny ( $H$. N. xxii. 4, 5). A representation of the corona graminea is introduced in the annexed woodcut. (Guichard, De Antiquis Triumphis, p. 268 ; compare Hardouin, ad Plin. H. N. x. 68).

II. Corona Civica, the second in honour and importance (Plin. H. N. xvi. 3), was presented to the soldier who had preserved the life of a Roman citizen in battle (Aul. Gell. v. 6), and therefore aceompanied with the inscription $O b$ civem servatum (Senec. Clem. i. 26). It was originally made of the ilex, afterwards of the aesculus, and finally of the quercus (Plin. H. N. xvi. b), three different sorts of oak, the reason for which choice is explained by Plutarch (Quaest. Rom. p. 151, ed. Reisk.). It is represented in the next woodent.

As the possession of this crown was so high an honour, its attainment was restricted by very severe regulations (Plin. H.N. xvi. 5), so that the following combinations must have been satisfied before a clain was allowed :-To have preserved the life of a Roman citizen in battle, slain his opponent, and maintained the ground on which the action tools place. The testimony of a third party was not admissible; the person rescued must himself proclaim the fact. which increased the difficulty of attainment, as the Roman soldier was commonly unwilling to acknowledge his obligatiou to the prowess of a comrade, and to show
him that deference which he would be compelled to pay to his preserver if the claim were established. (Cic. Pro Planc. 30.) Originally, therefore, the corona civica was presented by the rescued soldier (Aul. Gell. v. 6 ; Polyb. vi. 37), after the claim had been thoroughly investigated by the tribune who compelled a reluctant party to come forward and give his evidence (Polyb. l. c.) ; but under the empire, when the prince was the fountain from whence all honours emanated, the civic crown was no longer received from the hands of the person whose preservation it rewarded, but from the prince himself, or his delegate. (Tacit. Ann. xv. 12 ; compare iii. 2.)
The preservation of the life of an ally, even though he were a king, would not confer a sufficient title for the civic crown. When once obtained, it might always be worn. The soldier who had acquired it, had a place reserved next to the senate at all the public spectacles ; and they, as well as the rest of the company, rose up upon his entrance. He was freed from all public burthens, as were also his father, and his paterial grandfather ; and the person who owed his life to him was bound, ever after, to cherish his preserver as a parent, and afford him all such offices as were due from a son to his father. (Polyb. vi. 37 ; Cic. Pro Planc. 30 ; Plin. H.N. xvi. 5 ; Aul. Gell. v. 6.)

A few of the principal persons who gained this reward, are enumerated in the following passages: - Plin. H. N. vii. 29, xvi. 5 ; Liv. vi. 20 ; x. 46. L. Gellins Publicola proposed to confer it upon Cicero for having detected and crushed the conspiracy of Catiline (Aul. Gell. v. 6) ; and among the honours bestowed upon Augustus by the senate, it was decreed that a civic crown should be suspended from the top of his house (Dion Cass. liii. 16 ; Val. Max. ii. 8. fin. ; Ovid. Fast. i. 614, iv. 953, Trist. iii. 1. 6 ; Senec. Clem. i. 26 ; Suet. Calig. 19, compare Claud. 17, Tib. 26) ; hence a crown of oak leaves, with the inscription ob cives servatos, is frequently seen on the reverse of the Augustan medals, as also on those of Galba, Vitellius, Vespasian, Trajan, \&c., showing that they likewise assumed to themselves a similar honour.
iII. Corona Navalis or Rostrata, called also Classica. (Vell. Pat.ii. 81.) It is difficult to determine whether these were two distinct crowns, or only two denominations for the same one. Virgil (Aen. viii. 684) unites both terms in one sentence, "Tempora navali fulgent rostrata corona." But it seems prohable that the former, besides being a generic term. was inferior in dignity to the latter, and given to the sailor who first boarded an enemy's ship (Plin. H.N. xvi. 3) ; whereas the latter was given to a commander who destroyed the whole fleet, or gained any very signal victory. M. Agrippa is said to have been the first person who received the honour of a naval crown, which was conferred upon him on his conquest of Sex. Pompcius in B.c. 36 ; though, according to other authorities, M. Varro was the first who ohtained it from Pompeius Magnus. (Comp. Vell. Pat. l. c. ; Liv. Epit. 129 ; Dion Cass. xlix. 14 ; Aul. Gell. v. 6; Senec. De Ben. iii. 32; Festus, s. v. Navalis Corona; Plin. H.N. viii. 31, xvi. 4 ; Suet. Claud. 17.) At all events, they were both made of gold ; and one at least (rostrata) decorated with the beaks of ships like the rostra in the forum (Plin. xvi. 4), as seen in a medal of Agrippa; the other (navalis), with a representation

## CORONA.

of the entire bow, as shown in the subjoined wood cut. (Guichard. De Antiq. Triumph. p. 267.)

The Athenians likewise bestowed golden crowns for naval services ; sometimes upon the person who got his trireme first equipped, and at others upon the captain who had his vessel in the best ordec. (Dem. De Coron. Praef. Nav. pp. 278, 279. ed. Schaeffer.)
IV. Corona Muralis. The first man who scaled the wall of a besieged city was presented by his commander with a mural crown. (Aul. Gell. v. 6.4 ; Liv. xxvi. 48.) It was made of gold, and decorated with turrets (muri pinnis, Aul. Gell. l. c.), as represented in the next woodcut (Guichard De Antiq. Triumph. p. 265); and being one of the highest orders of military decorations, was nok a warded to a claimant until after a strict investigation. (Liv. l. c. ; compare Suet. Aug. 25.)

Cybele is always represented with this crown upon her head (Lucret. ii. 607, 610; Ovid. Fast. iv. 219 ; compare Virg. Aen. x. 253, vi. 786); hut in the woodcnt annexed (Caylus, Recueil d'Antiq. vol. v. pl. 3) the form of the crown is vcry remarkable, for it includes the whole toweras well as the turrets, thus affording a curious specimen of the ancient style of fortification.

V. Corona Castrensis or Vallaris. The first soldier who surmounted the vallum, and forced an entrance into the enemy's camp, was, in like mamer, presented with a golden crown, called corona castrensis or vallaris (Aul. Gell. v. 6 ; compare Val. Max. 1. 3. §6), which was ormb
corona.
CORONA.
mented with the palisades (valli) used in forming an entrenchment, as represented in the annexed woodcut. (Guichard. De Antiq. Triumph. p. 266.)

VI. Corona Triumphalis. There were three sorts of triumphal crowns, the first of which was worn round the head of the commander during his triumph. It was made with laurel or bay leaves (Aul, Gell. v. 6 ; Ovid. Pont. ii. 2. 81 ; Tibull. i. 7.7), which plant is frequently met with on the ancient coins, both with the berries and withont them. It was the latter kind, according to Pliny (H.N. xv. 39), which was used in the triumph, as is shown in the annexed woodcut, from a medal which commemorates the Parthian triumph of Ventidius, the lieutenant of Antony. Being the most honourable of the three, it was termed laurea insignis (Liv. vii. 13) and insignis corona triumphthes.

The second one was of gold, often enriched with iewels, which heing too large and massive to be worn, was held over the head of the general during his triumph, by a public officer (serves publicus, Juv. Sat. x. 41). This crown, as well as the former one, was presented to the victorious general by his army.

The third kind, likewise of gold and great value, was sent as presents from the provinces to the commander, as soon as a triumph had been decreed to hini (Plut. Aemil. Paul. 34), and therefore they were also termed provinciales. (Tertull. De Coron. Mil. c. 13.) In the early ages of the republic, these were gratuitous presents, but subsequently they were exacted as a tribute under the name of aurum coronarium, to which none were entitled but those to whom a triumph had been decreed. The custom of presenting golden crowns from the provinces to victorious generals was likewise in use among the Greeks, for they were profusely lavished upon Alexander after his conquest of Dareius (Athen. xii. p. 539, a) ; and the Romans probably borrowed the custom from the Greeks. [Aurum Coronarium.]
VII. Corona Ovalis was another crown of less estimation, appropriated solely to commanders. It was given to those who merely deserved an ovation,
which happened when the war was not duly declared, or was carried on against a very inferior force, or with persons not considered by the laws of nations as lawful enemies, such as slaves and pirates ; or when the victory was obtained without danger, difficulty, or bloodshed (Aul. Gell. v. 6 ; Festus, s.v. Ovalis Corona) ; on which account it was made of myrtle, the shrub sacred to Venus, "Quod non Martius, sed quasi Veneris quidam triumphus foret." (Aul. Gell. l.c. ; Plut. Marcell. 22 ; compare Plin. $H . N . x v .39$; Dionys. v. 47.) The myrtle crown is shown in the woodeut annexed, from a medal of Augustus Caesar,

ViII. Corona Oleagina. This was likewiso an honorary wreath, made of the olive leaf, and conferred upon the soldiers as well as their commanders. A ccording to Gellius (v. 6), it was given to any person or persons through whose instrumentality a triumph had been obtained, but when they were not personally present in the action. It is represented in the next woodeut, from a medal of Lepidus, and was conferred both 'by Augustus and the senate upon the soldiery on several occasions. (Dion Cass. xlix. 14, xlvi. 40.)

Golden crowns, without any particular designation, were frequently presented out of compliment by one individual to another, and by a general to a soldier who bad in any way distinguished himself. (Liv. vii. 10,37 , x. 44 , xxx. 15 .)

The Greeks in general made but little use of crowns as rewards of valour in the earlier and better periods of their history, except as prizes in the athletic contests; but previous to the time of Alexander, crowns of gold were profusely distributed among the Athenians at least, for every trifling feat, whether civil, naval, or miiitary (Aesch. c. Ctesiph.; Dem. De Coron. pussin), which, though lavished without mucl discrimination as far as regards the character of the receiving
parties, were still subjected to certain legal restrictions in respect of the tirae, place, and mode in which they were conferred. They could not be presented but in the public assemblies, and with the consent, that is by suffrage, of the people, or by the senators in their council, or by the tribes to their own members, or by the $\delta \eta \mu \delta \tau \alpha a$ to members of their own $\delta \bar{\eta} \mu o s$. According to the statement of Aeschines, the people could not lawfully present crowns in any place except in their assembly, nor the senators except in the senatehonse ; nor, according to the same authority, in the theatre, which is, however, denied by Demosthenes ; nor at the public games, and if any crier there proclaimed the crowns he was subject to àrıuia. Neither could any person holding an office receive a crown whilst he was $\dot{u} \pi \epsilon^{\dot{v}} \dot{\theta} v \nu o s$, that is, before he had passed his accounts. But crowns were sometimes presented by foreign cities to particular citizens, which were termed $\sigma \tau \epsilon \phi \dot{a} v o t$ $\xi \in \nu \iota \kappa 0$ l, coronae hospitales. This, however, conld not be done until the ambassadors from those cities lad obtained permission from the people, and the party for whom the honour was intended had undergone a public investigation, in which the whole course of his life was submitted to a strict inquiry. (Aesch. Dem. U. cc.)

We now proceed to the second class of crowns, which were emblematical and not honorary, at least to the person who wore them, and the adoption of which was not regulated by law, but custom. Of these there were also several kinds.
I. Corona Sacerdotalis, so called by Ammianms Marcellinus (xxix. 5. § 6). It was worn by the priests (sacerdotes), with the exception of the pontifex Maximns and his minister (camillus), as well as the bystanders, when officiating at the sacrifice. It does not appear to have been confined to any one material, but was sometimes made of olive (see the preceding woodcut ; Stat. Theb. iii. 466), sometimes of gold (Prudent. Пєpi इтé申. x. 1011 ; Tertull. De Idol. 18), and sometimes of the ears of corn, then termed corona spicea, which kind was the most ancient one amongst the Romans (Piin. H. N. xviii. 2), and was consecrated to Ceres (Hor. Carm. Sec. 30 ; Tibull. ii. I. 4, i. 1. 15), before whose temples it was customarily suspended. (Tibull i. 1. 16 ; compare Apul. Met. vi. p. 110. Varior.) It was likewise regarded as an emblem of peace (Tibull. i. 10. 67), in which character it appears in the subjoined medal, which commemorates the conclusion of the civil war between Antony and D. Albinus Brutus.

II. Corona Funelitis and Sepulchralis. The Greeks first set the example of crowning the dead with chaplets of leaves and flowers (Eur. Phoon. 1647 ; Schol. ad loc.), which was initated liy the Romans. It was also provided by a law of the Twelve Tables, that any person who had
acquired a crown might have it placed upou his head when carried ont in the funeral procession. (Cic. De Leg. ii. 24 ; Plin. H. N. xxi. 5.) Garlands of flowers were also placed upon the bier, or scattered from the windows under which the procession passed (Plin. H.N. xxi.7; Dionys. xi. 39), or entwined abont the cinerary urn (Plut. Marcell. 30, Demetr. 53), or as a decoration to the tomb (Plin. H. N. xxi. 3 ; Ovid. Trist. iii. 2.82 ; Tibull. ii. 4. 48). In Greece these crowns were commonly made of parsley ( $\sigma$ éntvov). (Suidas, s.v.; Plut. Timol. 26.)
iII. Corona Convivialis. The use of chaplets at festive entertainments sprung likewise from Greece, and owe their origin to the practice of tying a woollen fillet tight round the head, for the purpose of mitigating the effects of intoxication, (Comp. Plant. Amph. iii. 4. 16.) But as lusury increased they were made of various flowers or shrubs, such as were supposed to prevent intoxication; of roses (which were the choicest), violets, myrtle, ivy, philyra, and even parsley. (Har. Carm. ii. 7. 24, et alibi.) The Romans were not allowed to wear these crowns in public, "in usu promiscno," which was contrary to the practice of the Greeks, and those who attempted to do so were punished with imprisonment. (Plin. H.N. xxi. 6; compare Hor. Sat. ii. 3. 256 ; Val. Max. vi. 9. ext. 1.)
IV. Corona Nuptialis. The bridal wreath ( $\sigma \tau \in ́ \phi o s$ रa $\mu \eta^{\prime} \lambda เ o \nu$, Bion. Idyll. i. 88) was also ol Greek origin, anong whom it was made of flowers plucked by the bride herself, and not bought, which was of ill omen. Among the Romans it was made of verbena, also gathered by the bride herself, and worn under the fammeum (FestuE, s.v. Corolla) with which the bride was always enveloped. (Catull. lxi. 6. 8 ; Cic. De Orat. iii. 58.) The bridegroom also wore a chaplet. (Plant. Cos. iv. 1. 9.) The doors of his lionse were likewise decorated with garlands (Catull. lxiv. 294; Juv. Sat. vi. 51,227 ), and also the bridal couch.
V. Corona Natalitia, the chaplet suspendel over the door of the vestibule, both in the housea of Athens and Rome, in whicla a child was ban. (Juv. Sat. ix. 85 ; Menrsius, Attic. Lect. iv. 10.) At Athens, when the infant was male, the crown was made of olive; when female, of wool (Hesych. s. v. ETÉфavos) ; at Rome it was of laurel, ivy, or parsley (Bartholin. De Puerp. p. 127).

Besides the crowns enumerated, there were a few others of specific denominations, which received their names either from the materials of which, or the manner in which, they were composed. These were -
I. Corona Longa (Cic. De Leg. 24; Ovid, Fast. iv. 738), commonly thought to resemble what we call festoons, and as such seem to have been chiefly used to decorate tombs, curule chairs, triumphal care, honses, \&c. But the word must have had a more precise meaning, and was probably called longa from its greater size, and meant a circular string of anything, like the "rosary" used by the lower orders in Catholic countries to reckon up their prayers, which in Italy is still called la corona, doubtless tracing its origin to the corona longa of their beathen ancestors, to which description it answers exactly.
II. Corona Etr usca, a golden crowi made to imitate the crown of oak leaves, studded with gems, and decorated with ribbons (lemnist) or
ties of gold. (Plin. H. N. xxi. 4, xxxiii. 4.) Any srown fastened with these ribbons, whether real or artificially represented, was also termed corona lemniscata, a specimen of which is given by Caylus (Recueil d'Antiq. vol. v. pl. 57. No. 3).
III. Corona Pactilis (Plin. H. N. xxi. 8), probably the same as the corona plectilis of Plautus (Bacch. i. 1. 3i), corona torta (Propert. iii. 20. 18, ed. Kuinoel), plexa (Aul. Gell. xviii. 2), and as
 the Greeks. It was made of flowers, shruos, grass, ivy, wool, or any flexible material twisted together.
IV. Corona Sutilis, the crown used by the Salii at their festival. It was made in the first instance of any kind of flowers sowed tagether, instead of being wreathed with their leaves and stalks; but subsequently it was confined to the rose only, the chaicest leaves of which were selected from the whole flower, and sowed together by a skilful hand, so as to form an elegant chaplet. (Plin. H. N. xxi. 8.)
V. Corona Tonsa or Tonsilis (Virg. Aen. v. 556) was made of leaves only, of the olive or laurel for instance (Serv. ad Vikg. Georg. iii. 21), and so called in distinction to nexilis and others, in which the whole branch was inserted.

V1. Corona Radiata (Stat. Theb. i. 28) was the one given to the gods and deified heroes, and assumed by some of the emperors, as a token of their divinity. 1t may be seen on the coins of Trajan, Caligula, M. Aurelius, Valerius Probus, Theodosius, \&c., and is given in the woodent annexed, from a medal of M . Antonius.

VII. The crown of vine leaves ( pampinea) was appropriated to Bacchus (Hor. Carm. iii. 25. 20, iv. ©. 33), and considered a symbol of ripeness appreaching to decay; whence the Roman knight, when he saw Claudius with such a crown upon his head, augured that he would not survive the autumn. (Tacit. Ann. xi. 4; compare Artemidor. j. 79.)
[A. R.]
CORO'NIS (коршл's), the cornice of an entahlature, is properly a Greek word signifying anything carved (Schol. ad Aristoph. Plut. 253 ; Hesych. s.v.). It is alse used by Latin writers, hut the genuine Latin word for a cornice is corona or coronin. (Vitrıv. v. 2, 3.)
[P. S.]
CORPORA'TI. CORPORA'TIO. [COLlegium.]

## CORPUS. [Collegium.]

CORPUS JURIS CIV1'LIS. The three great campilations of Justinian, the lnstitutos, the Pandect or Digest, and the Code, together with the Nevellae, form one body of law, and were considered as such by the glassatores, who divided it into five
volumina. The Digest was distributed inte three volumina, under the respective names of Digestum Vetus, Infortiatum, and Digestum Navum. The fourth volume contained the first nine hooks of the Codex Repetitae Praelectionis. The fifth volume contained the Institutes, the Liber Authenticorum or Novellae, and the three last books of the Codex. The division into five volumina appears in the oldest editions ; but the usual arrangement now is, the Institutes, Digest, the Code, and Novellae. The name Corpus Juris Civilis was net given to this collection by Justinian, ner by any of the glossateres. Savigny asserts that the name was used in the twelfth century : at any rate, it became common from the date of the edition of $D$. Gothefredus, 1604.

Most editions of the Corpus also contain the following matter:-Thirteen edicts of Justinian, five constitutions of Justin the younger, several constitutions of Tiberius the younger, a series of constitutions of Justinian, Justiu, and Tiberius; 113 Novellae of Leo, a constitution of Zeno, and a number of constitutions of different emperors, under the name of Baбıגıtai $\Delta t a \tau d \xi \in t s$ or Imperatoriae Constitutiones; the Canones Sanctorum et venerandorum Apestolorum, Libri Feudarum, a constitution of the emperor Frederick II., two of the emperor Henry VII. called Extravagantes, and a Liber de pace Constantiae. Some editions also contain the fragments of the Twelve Tables, of the praetorian edict, \&c.

The Raman law, as received in Europe, consists only of the Corpus Juris, that is, the three compilations of Justinian and the Novellae which were issued after these compilations; and further, this Carpus Juris is only received within the limits and in the form which was given te it in the schoel of Bologna. Accordingly, all the Ante-Justinian law is now excluded from all practical application; alsn, the Greek texts in the Digest, in the place of which the translations received at Bologna are substituted; and further, the few unimportant restorations in the Digest, and the more important restorations in the Codex. Of the three collections of Novellae, that only is received which is called Authenticum, and in the abbreviated form which was given to it at Bologna, called the Vulgata.

But, on the other hand, there are received the additions made to the Codex in Bologna by tho reception of the Authentica of the Emperors Frederick I. and II., and the still more numerous Authentica of Imerius. The application of the matter comprised within these limits of the Corpus Juris has not been determined by the school of Bologna, but by the operation of other principles, such as the customary law of different European countries and the development of law. Various titles of the Corpus Juris have little or no application in modern times; for instance, that part of the Roman law which concerns constitutional forms and administration. (Savigny, System des Heut. Romischen Rechts, vol. i. p. 66.)

Some editions of the Corpus Juris are published witb the glossae, and some without. The latest edition with the glossae is that of J. Febius, Lugd. 1627 , six vols. folio. Of the editions without the glossae, the most important are-that of Russardus, Lugd. 1560-61, folio, which was several times reprinted ; Contius, Lugd. 1571 and 1581, 15 vels. 12 mo ; Lud. Charondae, Antw. ap. Christ. Plantin, 1575 , folio ; Dionys. Gothofredi, Lugd. 158.3, 4 to.
of which there are various editions，one of the best by Sim．Van Leeuwen，Amst．1663，folio ；G．Chr． Gehaueri，cura G．Aug．Spangenherg，Goetting． 1776 $-1797,2$ vols． 4 to；Schrader， 1 vol．4to，Berlin， 1832，of which only the Institutes are yet puhlished．

For further information on the editions of the Corpus Juris and its several portions，see Böcking， Institutionen，p．78，\＆c．，and Mackeldey，Lehrbuch， $\& c . \S 97, a, 12$ th ed．
［G．L．］
CO＇RREUS．［Obligationes．］
CORTI＇NA．1．In its primary sense，a large circular vessel for containing liquids，and used in dyeing wool（Plin．H．N．ix．62），and receiving oil when it first flows from the press．（Cat．De Re Rust．66．）2．A vase in which water was carried round the cirens during the games（Plaut． Poen．v．5．12），for the use of the horses，drivers， or attendants．See the cut on P．284，in which two of the children thrown down by the horses are furnished with a vessel of this kind．3．The table or hollow slab，supported by a tripod，upon which the priestess at Delphi sat to deliver her responses； and hence the word is used for the oracle itself． （Virg．Aen．vi．347．）The Romans made tables of marble or bronze after the pattern of the Delphian tripod，which they used as we do our sideboards， for the purpose of displaying their plate at an entertainment，or the valuables contained in their temples，as is still done in Catholic countries upon the altars．These were termed cortinae Delphicae， or Delphicae simply．（Plin．H．N．xxxiv．8；Schol． ad Hor．Sat．i．6． 116 ；Mart．xii．66．7；Suet． Aug．52．）4．From the conical form of the vessel which contains the first notion of the word，it came also to signify the vaulted part of a theatre over the stage（magni cortina theatri，Sever．in Aetn．294），such as is in the Odeium of Pericles， the shape of which we are expressly told was made to imitate the tent of Xerxes（Paus．i． 20. § 3；Plut．Pericl．13）；and thence metaphorically for anything which hore the appearance of a dorne， as the vault of heaven（Ennius，ap．Var．De Ling． Lat．viii．48，ed．Müller）；or of a circle，as a group of listeners surrounding any object of at－ traction（Tacit．De Orat．19．）
［A．R．］
CORYBANTES（ $\kappa 0 \rho u ́ 6 a \nu \tau \epsilon s$ ）．The history and explanation of the deities bearing this name， in the early mythology of Greece，cannot be given in this place，as it wonld lead us to enter into his－ torical and mythological questions beyond the limits of this Dictionary．The Corybantes，of whom we have to speak here，were the ministers or priests of Rhea or Cybele，the great mother of the gods， who was worshipped in Phrygia．In their solemn festivals they displayed the most extravagant fury in their dances in armow，as well as in the ac－ companying music of flutes，cymbals and drums． （Strab．x．p．470．）Hence кopu6avt $\sigma \mu \delta \delta^{\prime}$ was the name given to an imaginary disease，in which per－ sons felt as if some great noise was rattling in their ears．（Plato，Crito，p．54．d．，with Stallbaum＇s note．）
［L．S．］
CORYBA＇NTICA（коривantıк⿱亠䒑日），a festival and mysteries celebrated at Cnossus in Crete，in conumemoration of one Corybas（Strab．x．p．470．）， who，in common with the Curetes，brought up Zeus and concealed him from his father Cronos in that island．Other accounts say that the Corybantes， nine in number，independent of the Curetes，saved and educated Zeus；a third legend（Cic．De Nat． Deor．iii．23）states that Corybas was the father

## COSMETAE．

of the Cretan Apollo who disputed the sovereignty of the island with Zeus．But to which of thess traditions the festival of the Corybantica owed its origin is uncertain，although the first，which was current in Crete itself，seems to be best entitled to the honour．All we know of the Corybantica is，that the person to be initiated was seated on a throne，and that those who initiated him formed a circle and danced around him．This part of the solemnity was called Nof עu $\sigma \mu$ ós．（Plato，Euthydem．p．277，d．；Dion Chry－ sost．Orat．xii．p． 387 ；Proclus，Theol．Plat． vi．13．）
［L．S．］
CORYMBUS．CORY＇MBIUM．［Coma．］
CORVUS，a sort of crane，used by C．Duilius against the Carthaginian fleet in the battle fought off Mylae，in Sicily（b．c．260）．The Romans，we are told，being unused to the sea，saw that their only chance of victory was by bringing a sea－light to resemble one on land．For this purpose they invented a machine，of which Polybius（i．22）has left a minute，although not very perspicuous，de－ scription．In the fore part of the ship a round pole was fixed perpendicularly，twenty－four feet in height and about nine inches in diameter；at the top of this was a pivot，upon which a ladder was set，thirty－six feet in length and four in breadth． The ladder was guarded by cross－beams，fastened to the upright pole by a ring of wood，which turned with the pivot above．Along the ladder a rope was passed，one end of which took hold of the corvus by means of a ring．The corvus itself was a strong piece of iron，with a spike at the end， which was raised or lowered by drawing in or letting out the rope．When an enemy＇s ship drew near，the machine was turned outwarda，by means of the pivot，in the direction of the assail－ ant．Another part of the machine which Polybius has not clearly described is a breastwork，let down （as it would seem）from the ladder，and serving as a bridge，on which to board the enemy＇s vessel． （Compare Curtius，iv．2．4．）By means of these cranes the Carthaginian ships were either broken or closely locked with the Roman，and Duilius gained a complete victory．

The word corvus is also applied to various kinds of grappling－hooks，such as the corvus demolitor， mentioned by Vitruvius（x．19）for pulling down walls，or the terrible engine spoken of by Tacitus （Hist．iv．30），which being fixed on the walls of s fortified place，and suddenly let down，carried off one of the besieging party，and then by a turn of the machine put him down within the walls．The word is used by Celsus for a scalpel．It is hardly necessary to remark that all these meanings have their origin in the supposed resemblance of the various instruments to the beak of a raven．［B．J．］

CORY＇TOS．［ARcus，p．126，a．］
COSME＇TAE，a class of slaves among the Ro－ mans，whose duty it was to dress and adorm ladies． （Juv．Sat．vi．476．）Some writers on antiquities， and among them Böttiger in his Sabina（i．22） have supposed that the cosmetae were female slaves，but the psssage of Juvenal is alone suffi－ cient to refute this opinion；for it was not cus－ tomary for fcmale slaves to take off their turics when a punishment was to be inflicted upon them． There was，indeed，a class of female slaves who were employed for the same purposes as the cos－ metae；but they were called cosmetriau，a name which Naevius chose as the title for one of his
comedies. (See Heindorf, ad Horat. Sat. i. |to any fixed code of laws. They are also said to
2. 98.)
[L. S.]
COSME/TES ( $\kappa 0 \sigma \mu \eta \tau h s$ ), an officer in the Athenian Gymnasia in the time of the Romans. [Grmnasium.]
COSMI ( $\kappa \delta \sigma \mu 01$ ), the chief magistrates of Crete. It is proposed under this head to give a hrief account of the Cretan constitution.
The social and political institutions of Crete were so completely Dorian in character, and so sinnilar to the Spartan, that it was a disputed point amongst the ancients whether the Spartan constitution had its origin there, or the Cretan was transferred from Laconia to Crete. The historian Ephorus (ap. Strab. x. p. 482) expressly states that the Spartan institutions had their origin in Crete, hat were perfected and completed in Sparta; so that there is good reason for the assertion of Müller (Dorians, iii. l. §8), " that the constitution founded on the principles of the Doric race, was there first moulded into a consistent shape, hut even in a more simple and antiquated form than in Sparta at a subsequent period." Thus much, at any rate, we know for certain, that there were various Dorian cities in the island, the political arrangements of which so closely resembled each other, that one form of government was ascribed to all. (Thirlwall, Hist. Greece, vol. i. p. 284.) In the earliest ages of which we have historical information, this was an aristocracy consisting of three component bodies, the Cosmi, the Gerusia ( $\gamma \in \rho 0 \mathrm{u}$ ota), and the Ecclesia (encr $\eta \boldsymbol{\eta}(\dot{\alpha})$. The cosmi were ten in number, and are by Aristotle ( $P$ ol. ii. 7), Ephorus (ap. Strab. l. c.), and Cicero (de Rep. ii. 33) compared to the ephors of Sparta. Müller, however (iii. 8. § 1) compares them with the Spartan kings, and supposes them to have succeeded to the functions of the kingly office; which Aristotle (prohably alluding to the age of Minos) tells us was at one time established in Crete. These cosmi were ten in number, and chosen not from the hody of the people, but from certain $\gamma^{\epsilon} \dot{\varphi} \eta$ or houses, whicb were probably of more pure Doric or Achaian descent than their neighbours. The first of them in rank was called Protocosmus, and gave his name to the year. They commanded in war, and also condncted the business of the state with the representatives and ambassadors of other cities. With respect to the domestic government of the state, they appear to have exercised a joint authority with the members of the gerusia, as they are said to have consulted with them on the most important matters. (Ephor. l. c.) In the times suhsequent to the age of Alexander, they also performed certain duties which hore a resemblance to the introduction of the lawsoits into court, by the Athenian magistrates. (Müller, l.c.) Their period of office was a year; hut any of them during that time might resign, and was also liable to deposition hy bis colleagues. In some cases, too, they might he indicted for neglect of their duties. On the whole, we may conclude that they formed the executive and chief power in most of the cities of Crete.
The Gerusia, or council of elders, called by the Cretans Boule, consisted, according to Aristotle (Poliit. ii. 7), of thirty members who had formerly heen cosmi, and were in other respects approved of
 retained their office for life, and are said to have decided in all matters that came hefore them, according to their own judgment, and not agreeably
have been irresponsible, which, however, bardly implies that they were independent of the "unwritten law " of custom and usage, or uninfluenced by any fixed principles. (Thirlwall, Hist. Greece, vol. i. p. 186.) On important occasions, as we have before remarked, they were $\xi \dot{\cup} \mu\}$ Gov $o t$, or councillors of the cosmi.

The democratic element of the E'colesia was almost powerless in the constitution; its privileges, too, seem to have been merely a matter of form ; for, as Aristotle ohserves, it exercised no function of government, except ratifying the decrees of the
 prohable that it was only summoned to give its sanction to these decrees; and though this may appear to imply the power of withholding assent, still the force of hahit and castom would prevent such an alternative being attenpted, or, perhaps, even thought of. (Thirlwall, vol. i. p. 286; Göttling, Excursus ad Aristot. ii. 7.)
From these ohservations, it is clear that the Cretan constitution was formerly a Dorian aristocracy, which, in the age of Aristotle, had degenerated to what he calls a $\delta v v a \sigma \tau \epsilon i a$, i. e. a government vested in a few privileged fanilies. These quarrelled one amongst the other, and raised factions or parties, in which the demns joined, so that the constitution was frequently broken up, and a tempotary monarchy, or rather anarchy, established on its ruins. The cosmi were, in fact, often deposed by the most powerful citizens, when the latter wished to impede the course of justice against themselves ( $\mu \grave{\eta}$ סoûvai $\delta i \not \kappa a s$ ), and an ăкобнía then ensued, without any legal magis. trates at the head of the state.

In the time of Polybius, the power of the aristocracy had been completely overthrown; for he tells us that the election of the magistrates was annual, and determined by democratical principles. (Polyb. vi. 44.) In other respects also, he points out a difference between the institutions of Crete and those of Lycurgus at Sparta, to which they had leen compared by other writers.

Müller observes that the cosmi were, so far as we know, the chief magistrates in all the cities of Crete, and that the constitution of these cities was in all essential points the same-a proof that their political institutions were determined by the principles of the governing, i.e. the Doric race.
The social relations of the Cretans seem to have been almost identical with those of the Spartans.
The inhalitants of the Dorian part of the island were divided into three classes, the freemen, the perioeci or $\dot{v} \pi \dot{\eta} k 00$, and the slares. The second class was as old as the time of Minos, and was undoubtedly composed of the descendants of the conquered population ; they lived in the rural districts, round the $\pi$ ú $\lambda \epsilon t$ of the conquerors; and, though personally free, yet exercised none of the privileges or influence of citizens, either in the administration and enactment of the laws, or the use of heary arms. They occupied certain lands, for which they paid a yearly tribute or rent, supposed, from a statement in Athenaens (iv. p. 143), to have been an Aeginetic stater.*

[^25]The slaves were divided into two classes, the public hondsmen ( $\dot{\eta}$ кoıvोो $\delta o v \lambda \in i \alpha$ ), and the slaves of individuals. The former were called the $\mu \nu \hat{\omega} \alpha$,

 named from the cultivation of the lots of land, or $\dot{\alpha} \phi \alpha \mu i a l$, assigned to private citizens, and were therefore agricultural bondsmen (ai $\kappa \alpha \tau^{\prime}{ }^{\alpha} \gamma \gamma \rho o \nu^{\prime}$, Athen. vi. p. 263). The $\mu \nu 0$ ia was distinguished, by more precise writers, both from the perioeci and the aphamiotae ; so that it has been concluded that every state in Crete possessed a public domsin, cultivated hy the mnotae, just as the private allotments were by the bondsmen of the individual proprietors. The word $\mu \nu \mathrm{ol}$, as Thirlwall has remarked, is more prohably connected with $\delta \mu \hat{\omega} s$ than Minos.
The origin of the class called $\mu \nu 0$ la, and the $\kappa \lambda \alpha \rho \hat{\omega} \tau \alpha$, , was prohably twofold; for the analogy of other cases would lead us to suppose that they consisted partly of the slaves of the conquered freemen of the country, and partly of such freemen as rose against the conquerors, and were hy them reduced to bondage. But besides these, there was also a class of household servants employed in menial labours, and called xpuó́vทтot: they were, as their name denotes, purchased, snd imported from foreign countries.
[R. W.]
COTHURNUS ( $\kappa 6 \theta_{0} \rho \nu o s$ ), a hoot. Its essential distinction was its height; it rose above the middle of the leg, so as to surround the calf (alte suras vincire cothurno, Virg. Aen. i. 337), and sometimes it reached as high as the knees. (Millin, Vases Ant. vol. i. pl. 20 and 72.) It was worn principally by horsemen, hunters, and by men of rank and authority. The ancient marbles, representing these different characters, show that the cothurnus was often ornamented in a very tasteful and elahorate manner. The hoots of the ancients were laced in front, and it was the object in so doing to make them fit the leg as closely as possible. It is evident from the various representations of the cothurnus in ancient statues, that its sole was commonly of the ordinary thickness. But it was sometimes made much thicker than usual, probahly by the insertion of slices of cork. (Serv. in Virg. Ecl. Ul. cc.) The ohject was to add to the apparent stature of the wearer ; and this was done either in the case of women who were not so tall as they wished to appear (Juv. Sat. vi. 507), or of the actors in Athenian tragedy, who assumed the cothurnus as a grand and dignified species of cal.

ceamentum, and had the soles made unusually thick, as one of the methods adopted in order to magnify their whole appearance. (Virg. Ecl. viii. 10 ; Hor. Sat. i. 5. 64 ; Ars Pöet. 280.) Hence tragedy in general was called cothurnus. (Or. Trist. ii. 1. 393 ; Juv. vi. 633 , xv. 29.)

As the cothurnus was commonly worn in hunting, it is represented both by poets and statusries as part of the costume of Diana. It was also attributed to Bacchus (Vell. Pat. ii. 82), and to Mercury (Hamilton's Vases, vol. iii. pl. 8). The preceding woodent shows two cothurni from statues in the Museo Pio-Clementino (vol. ii. pl 15, and vol. iii. pl. 38).
[J. Y.]
 social game which was introduced from Sicily into Greece (Athen. xv. p. 666), where it became one of the favourite amusements of young people after their repasts. The simplest way in which it originally was played was this:- One of the company threw out of a goblet a certain quantity of pure wine, at a certain distance, into a metal basin, endeavouring to perform this exploit in such s manner as not to spill any of the wine. While he was doing this, he either thought of or pronounced the name of his mistress (Etymol. Mag. s. u. Kotrabi( $\omega$ ), and from the more or less full and pure sound with which the wine struck against the metal basin, the lover drew his conclusions respecting the attachment of the object of his love. Ths sound, as well as the wine by which it was produced, were called $\lambda a ́ \tau \alpha \xi$ or $\kappa \delta \dot{\tau} \tau \alpha 6 o s: ~ t h e ~ m e t a l ~$ basin had various names, either коттd́stoy, or кот$\tau a E \epsilon \hat{i} \nu$, or $\lambda a \tau a \gamma \epsilon \hat{i} 0 \nu$, or $\chi \alpha \lambda^{\lambda} \kappa \epsilon!0 \nu$, or $\lambda \epsilon \epsilon d \nu \eta$, or $\boldsymbol{\pi} \kappa \dot{\alpha} \phi \eta$. (Pollux, vi. 109; Etymol. Mag. l. c.; Athen. xv. p. 667. sub fin.) The action of throwing the wine, and sometimes the goblet itself, was called $\dot{\alpha} \gamma \kappa \dot{u} \lambda \eta$, because the persons engaged in the game turned round the right hand with great dexterity, on which they prided themselves. Hence Aeschylus spoke of кóтtabat $\dot{\alpha} \gamma \kappa \nu \lambda \eta \tau 0$. (Athen. xv. p. 667.) Thus the cottabus, in its simplest form, was nothing but one of the many methods by which lovers tried to discover whether their love was returned or not. But this eimple amusement gradually assumed a variety of different characters, and became, in some instances, a regular contest, with prizes for the victor. One of the most celehrated modes in which it was carried on is described by Athenaeus (l.c.) and in the Etymol. Mag., and was called $\delta_{i}{ }^{2} \dot{3} \xi v \in \alpha \dot{\alpha} \phi \omega \nu$. A basin was filled with water, with small empty howls swim. ming uponit. Into these the young men, one after another, threw the remnant of the wine from their goblets, and he who had the good fortune to drown most of the howls ohtained the prize ( $\kappa 0 \tau \tau d 6 t a y$ ), consisting either of simple cakes, sweet-meats, or sesame-cakes.

A third and more complicated form of the cottahus is thus described by Suidas (s. v. Koтт $\alpha \in l(\omega)$. - A iong piece of wood being erected on tha ground, another was placed upon it in an horizontal direction, with two dishes hanging down from each end; underneath each dish a vessel full of water was placed, in each of which stood s gilt hrazen statue, called $\mu$ áv $\eta s$. Every one who took part in the game stood at a distance, holding s cup full of wine, which he endeavoured to throw into one of the dishes, in order that, struck down by the weight, it might knock against the head of the statue which was concealed under the water. He
who spilled least of the wine gained the victory, and thereby knew that he was loved by his mistress. (See Schol. ad Lucian. Leaiph. 3. vol. ii. p. 325.)

A fourth kind of cottabus, which was called
 tasov), is described by Pollux (vi. 109), the Scholiast on Aristophanes (Pax, 1172), and Athenaeus (xr. p. 667). The so-called $\mu$ d́vŋs was placed upon a pillar similar to a candelabrum, and the dish hanging over it must, by means of wine projected from the goblet, be thrown upon it, and thence fall into a basin filled with water, which from'this fall gave forth a sound; and he who produced the strongest was the victor, and received prizes, consisting of eggs, cakes, and sweetmeats.
This brief description of four various forms of the cottabus may be sufficient to show the general character of this game ; and it is only necessary to sdd, that the chief object to be accomplished in sll the various modifications of the cottabus was to throw the wine out of the goblet in such a manner that it should remain together and nothing be spilled, and that it should produce the purest and strongest possible sound in the place where it was thrown. In Sicily, the popularity of this game was so great, that houses were built for the especial purpose of playing the cottabus in them. Those readers who wish to become fully acquainted witb all the various forms of this game, may consult Athenaeus (xv. p. 666, \&c.), the Greek Lexicographers, and, above all, Groddeck (Ueber den Kottabos der Griechen, in his Antiquarische Versuche, i. Sammiung, 1800 , pp. 163-238), who has collected and described nine different forms in which it was played. Becker (Charikles, i. p. 476, \&c.) is of opinion that all of them were but modifications of two principal forms. (Compare also Fr . Jacobs, Ueber den Kottabos in Wieland's Attisches Museum, iii. 1. pp. 475-496.)
[L. S.]
CO'TYLA (коти́入 $\eta$ ) was a measure of capacity among the Romans and Greeks: by the former it was also called hemina; by the latter, $\tau$ pus $\lambda$ iop and $\dot{\eta} \mu i \nu \alpha$ or $\dot{\eta} \mu \mu \mu \nu \alpha$. It was the half of the sextarius or $\xi \dot{\xi} \sigma \tau \eta S$, and contained 6 cysthi, or nearly half a pint English.

This measure was used by physicians with a graduated scale marked on it, like our own chemical measures, for measuring out given weights of fluids, especially oil. A vessel of horn, of a cubic or cylindrical shape, of the capacity of a cotyla, was divided into twelve equal parts by lines cnt on its side. The whole vessel was called litra, and each of the parts an ounce (uncia). This measure held nine ounces (by weight) of oil, so that the ratio of the weight of the oil to the number of ounces it occupied in the measure would be $9: 12$ or 3 : 4. (Galenus, De Compos. Medicam. per Genera, iii. 3 , i. 16,17 , iv. 14 , v. 3,6, vi. 6,8 ; Wurm, De Pond. Mens. \&c. ; Hussey, On Ancient Weights, \&cc.)
[P.S.]
COTY'TTIA or COTTYTES ( $\kappa 0 \tau u ́ \tau \tau \iota a$, , $\kappa \dot{\sigma} \tau-$ тutss), a festival which was originally celebrated by the Edonians of Thrace, in honour of a goddess called Cotys or Cotytto. (Strab. x. p. 470 ; Eupolis, apud Hesych. s. v. ; Suidas.) It was held at night, snd, according to Strabo, resembled the festivals of the Cabeiri and the Phrygian Cybele. But the worship of Cotys, together with the festival of the Cotytia, was adopted by several Greek states, chiefy those which were induced by their com-
mercial interest to maintain friendly relations witl Thrace. Among these Corinth is expressly mentioned by Suidas, and Strabo (x. p. 471) seems to suggest that the worship of Cotys was adopted by the Athenians, who, as he observes, were as hospitable to foreign gods as they were to foreigners in general. (Compare Juven. Sat. ii. 92.) The priests of the goddess were formerly supposed to have borne the name of baptae; but Buttmann has shown that this opinion is utterly groundless. Her festivals were notorious among the ancients for the dissolute manner and the debancheries with which they were celebrated. (Suidas, s. v. Kóqus ; Horat. Epod. xvii. 56 ; Theocrit. vi. 40.) Another festival of the same name was celebrated in Sicily (Plut. Proverb.), where boughs hung with cakes and fruit were carried about, which any person had a right to pluck off if he chose; but we have no mention that this festival was polluted with any of the licentious practices which disgraced those of Thrace and Greece, unless we refer the allusion made by Theocritus to the Cotyttia, to the Sicilian festival. (Compare Buttmann's essay, Ueber die Kotyttia und die Baptae, in his Mythologus, vol. ii. p. 159; Lobeck, Aglaoph. pp. 627, 1007, \&c.)

COVINA'RII. [Covinus.]
COVI'NUS (Celtic, kowain), a kind of car, the spokes of which were armed with long sickles, and which was used as a seythe-chariot chiefly by the ancient Belgians and Britons. (Mela, iii. 6; Lucan, i. 426 ; Silins, xvii. 422.) The Romans designated, by the name of covinus, a kind of travelling carriage, which seems to have been covered on all sides with the exception of the front. It had no seat for a driver, but was condncted by the traveller himself, who sat inside. (Mart. Epig. ii. 24.) There must have been a great similarity between the Belgian scythe-chariot and the Roman travelling carriage, as the name of the one was transferred to the other, and we may justly conclude that the Belgian car was likewise covered on all sides, except the front, and that it was occupied by one man, the covinarius only, who was, by the structure of his car, sufficiently protected. The covinarii (the word occurs only in Tacitus) seem to have constituted a regular and distinct part of a British army. (Tacit. Agr. 35 and 36, with M. J. H. Becker's note ; Bötticher's Lexicon Tacit. s. v.; Becker, Gallus, vol. i. p. 222 ; compare the article Essanum.)
[L. S.]
CRATER (крат $\dagger \rho:$ Ionic, $\kappa \rho \eta \tau \eta \rho$ : Lat. crater or cratera; from $\kappa є \rho a \dot{\nu} \nu \nu \mu$, I mix), a vessel in which the wine, according to the custom of the ancients, who very seldom drank it pure, was mised with water, and from which the cnps were filled. In the Homeric age the mixture was always made in the dining-room by heralds or young men (койpot : see Il. iii. p. 269, Od. vii. 182, xxi. 271). The use of the vessel is sufficiently clear from the expressions so frequent in the poems of

 crater); кр $\quad \uparrow \bar{\eta} \rho a \quad \sigma \tau \eta \sigma a \sigma \theta \alpha . l$ (cratera statuere, to place the filled crater near the table); крทтñpas
 hrim, see Buttmann, Lexil. i. 15). The crater in the Homeric age was generally of silver ( $O d$. ix. $203, \mathrm{x} .356$ ), sometimes with a gold edge ( 0 d. iv. 616), and sometimes all gold or gilt. (Il. xxiii. 219.) It stood upon a tripod, and its ordinary
place in the $\mu$ '́ $\gamma a p o \nu$ was in the most honourable part of the room, at the farthest end from the entrance, and near the seat of the most distinguished among the guests. (Od. xxi. 145, xxii. 333 , compared with 341.) The size of the crater seems to have varied according to the number of guests; for where their number is increased, a larger crater is asked for. (Il. ix. 202.) It would seem, at least at a later period (for in the Homeric poems we find no traces of the custom), that three craters were filled at every feast after the tables were removed. They must, of course, have varied in size according to the number of guests. According to Suidas (s. v. K $\rho \alpha \pi \not \subset \rho$ ) the first was dedicated to Hermes, the second to Charisius, and the third to Zens Soter ; but others called them by different names; thus the first, or, according to others, the last, was also designated the $\kappa \rho a r \eta p$ ajra日ov̂ $\delta a i-$ uovos, the crater of the good genins (Suidss s. v.
 \&c.; Aristoph. Vesp. 507, Pax, 300), кратोग íरıtías and $\mu \in \tau \alpha \nu \iota \pi \tau \rho i ' s$ or $\mu \in \tau d \dot{d} i \pi \tau \rho o \nu$, because it was the crater from which the cups were filled after the washing of the hands. (Athen. xv. p. 629, f. \&c.)

Craters were among the first things on the embellishment of which the ancient artists exercised their skill. Homer (Il. xxiii. 741, \&c.) mentions, among the prizes proposed by Achilles, a beantifully wrought silver crater, the work of the ingenions Sidonians, which, by the elegance of its workmanship, excelled all others on the whole earth In the reigu of Croesus, king of Lydia, the Lacedaemonians sent to that king a brazen crater, the border of which was all over arnamented with figures ( $\zeta \omega \delta / \alpha$ ), and which was of such an enormous size that it contained 300 amphorae. (Herod. i. 70.) Croesns himself dedicated to the Delphic god two huge craters, which the Delphians helieved to he the work of Theodorus of Samos, and Herodotus (i. 51) was induced by the beauty of their workmanship to think the same. It was about Ol. 35 , that the Samians dedicated six talents (the tenth of the profits made by Colaeus on his voyage to Tartessus) to Hera, in the shape of an immense brazen crater, the border of which was adorned with projecting heads of griffins. This crater, which Herodotus (iv. 152) calls Argive (from which we must infer that the Argive artists were celebrated for their craters), was supported by three colossal brazen statnes, seven cnbits long, with their knees clased together.
The number of craters dedicated in temples seems everywhere to have been very great. Livins Andronicus, in his Eqnus Trojanus, represented Agamemnon returning from Troy with no less than 3000 craters (Cic. ad Fam. vii. 1), and Cicero (in Verr. iv. 58) says that Verres carried away from Syracuse the most beautiful brazen craters, which most probably belonged to the various temples of that city. But craters were not only dedicated to the gods as anathemata, but were used on various solemn occasions in their service. Thus we read in Theocritus ( v .53 , compare Virgil, Eclog. v. 67) :-"I shall offer to the Muses a crater full of fresh milk and sweet olive-oil." In sacrifices the libstion was alwsys taken from s crater (Demosth. De Fals. Legat. p. 431, c. Lept. p. 505, c. Mid. p. 531, c. Macart. p. 1072 ; compare Bekk. Anecdot. p. 274. 4), and sailors before they set out on their journey used to take the libation with
cups from a crater, and pour it into the sea (Thucyd. vi. 32 ; Diodor. iii. 3 ; Arrian, Anab. vi. 3 ; Virg. Aen. v. 765.) The nsme crater was also sometines used as synonymons with Girdíov, situla, a psil in which water was fetched. (Naev. apud Non. xv. 36 ; Hesych. s. v. Kparîpes.)

The Romans nsed their crater or cratera for the same purposes for which it was used in Greece; but the most elegant specimens were, like most other works of art, made by Greeks. (Virg. Aen. i. 727 , iii. 525 ; Ovid, Fast. v. 522 ; Hor. Carm. iii. 18. 7.)
[L. S.]
CRATES ( $\tau$ dopros), a hurdle, used by the ancients for several purposes. First, in war, especially in assaulting a city or camp, they were plsced before or over the head of the soldier to shield off the enemy's missiles. (Amm. Marc. xxi. 12.) From the plutei, which were employed in the same way, they differed only in being without the covering of rsw hides. A lighter kind was thrown down to make a bridge over fosses, for examples of which see Caesar, B. G. vii. 81, 86. By the besieged (Veget. iv. 6) they were used joined together so as to form what Vegetius calls a metella, and filled with stones: these were then poised between two of the battlements; and as the storming party approached upon the ladders, overturned on their heads.

A capital punishment was called by this name, whence the phrase sub crate necari. The criminsl was thrown into a pit or well, and hurdles lsid upon him, aver which stones were sfterwards heaped. (Liv. i. 51, iv. 50 ; Tacit. German. 12.)

Crates called ficariae were used by the country people npon which to dry figs, grapes, \&c., in the rays of the sun. (Colum. xii. 15, 16.) These, as Columella informs us, were made of sedge or straw, and also emplayed as a sort of matting to screen the fruit from the westher. Virgil (Georg. i. 94) recommends the use of hurdles in agriculture to level the ground after it has been turned up with the heary rake (rastrum). Any texture of rods or twigs seems to have been called hy the general name crates.
[B.J.]
CRE'PIDA ( $\kappa \rho \eta \pi i s$ ), a slipper. Slippers were worn with the pallium, not with the toga, and were properly characteristic of the Greeks, though adopted from them hy the Romans. Hence Suetonius says of the Emperor Tiberius (c. 13), Deposito patrio haluitu redegit se ad pallium et crepidus. As the cothurnns was assumed by tragedians, because it was adapted to be part of s grand and stately attire, the actors of comedy, on the other hand, wore crepidae and other cheap and common coverings for the feet. [Baxea; Soccus.] Also whereas the ancients had their more finished boots and shoes made right and left, their slippers, on the other hand, were made to fit both feet indifferently. [Isid. Orig. ix. 34.)
[J. Y.]

## CREPITA'CULUM. [SISTRUM.]

## CRE'TIO HEREDITA'TIS. [Heres.]

CRIMEN. Though this word occurs so frequently, it is not easy to fix its meaning. Crimen is often equivalent to accusatio (кatท $\frac{1}{}$ pla); but it frequently means an act which is legally punishable. In this latter sense there seems to be no exact definition of it by the Roman jurists. According to some modern writers, crimina are either public or private; but we have atill to determine the notions of public and private. There was s want of precise terminology as to what, in common
language, are called criminal offences among the Romans; and this defect appears in other systems of jurisprudence. Crimen has been also defined by modern writers to be that which is capitalis, as murder, \&c.; delictum, that which is a private injury (privata noxa); a distinction founded apparently on Dig. 21. tit. 1. s. 17. \& 15.
Delicts (delicta) were maleficia, wrongful acts (Dig. 47. tit. I. s. 3), and the foundation of one class of obligationes : these delicts, as enumerated by Gaius (iii. 182), are furtum, rapina, damnum, injuriae; they gave a right of action to the individual injured, and intitled him to compensation. These delicts were sometimes called crimina (crimen furti, Gaius, iii. 197). Crimen therefore is sometimes applied to that class of delicta called privata (Dig. 47. tit. 1. De Privatis Delictis); and accordingly crimen may be viewed as a genns, of which the delicta enmmerated by Gaius are a species. But crimen and delictum are sometimes nsed as synonymous. (Dig. 48. tit. 19. s. 1.) In one passage (Dig. 48. tit. 19. s. 5) we read of majora delicta (a term implying that these are minora delicta), which expression is conpled with the expression omnia crimina in such a way that the inference of crimen containing delictum is, so far as concerns this passage, necessary; for the omnia crimina comprehend (in this passage) more than the delicta majora.
Some judicia publica were capitalia, and some were not. (Dig. 48. tit. 1. s. 2.) Jndicia, which concerned crimina, were not, for that reason only, publica. There were, therefore, crimina which were not tried in judicia publica. This is consistent with what is stated above as to those crimina (delicta) which were the subject of actions. Those crimina only were the subject of judicia publica, which were made su by special laws ; such as the Julia de adulteriis, Cornelia de sicariis et veneficis, Pompeia de parricidiis, Julia peculatuns, Cornelia de testamentis, Julia de vi privata, Julia de vi publica, Julia de ambitu, Julia repetundarum, Julia de annona. (Dig. 48. tit. 1. s. 1.) So far as Cicero (De Orat. ii. 25) enumerates causae criminum, they were causae publici judicii; hut he adds (ii. 31), "criminum est multitudo infinita." Again, infamia was not the consequence of every crimen, but only of those crimina which were "puhlici judicii." A condemnation, therefore, for a crimen, not publici judicii, was not followed by infamia, unless the crimen laid the foundation of an actio, in which, even in the case of a privatum judicium, the condemnation was followed by infamia ; as furtum, rapina, injuriae. (Dig. 48. tit. 1. s. 7.)
Most modern writers on Roman law have considered delicta as the general term, which they have subdivided into delicta publica and privata. The division of delicta into publica and privata had partly its origin in the opinion generally entertained of the nature of the delict; but the legal distinction must be derived from a consideration of the form of obtaining redress for, or punishing, the wrong. Those delicta which were punishable according to special leges, senatus-consulta, and constitutiones, and were prosecuted in jndicia publica by an accusatio publica, were more especially called crimina ; and the penalties, in case of conviction, were loss of life, of freedom, of civitas, and the consequent infamia, and sometimes pecuniary penalties also. Those delicta not provided for as above mentioned, were prosecuted by action, and were the
subjects of judicia privata, in which pecuniary compensation was awarded to the injured party. At a later period we find a class of crimina extraordinaria (Dig. 47. tit. 11), which are somewhat vaguely defined. They are offences which in the earlier law would have been the foundation of actions, but were assimilated, as to their punishment, to crimina publici judicii. This new class of crimina (new as to the form of judicial proceedings) must have arisen from a growing opinion of the propriety of not limiting punishment, in certain cases, to compensation to the party injured. The person who inquired judicially extra ordinem, might affix what punishment he pleased, within reasonable limits. (Dig. 48. tit. 19. s. 13.) Thus, if a person intended to prosecute his action, which was founded on maleficium (delict), for pecuniary compensation, he followed the jus ordinarium ; hut if he wished to punish the offender otherwise (extra ordinem ejns rei poenam exerceri (e?) velit), then he took criminal proceedings, "subscripsit in crimen." (Dig. 47. tit. 1. 8. 3.)

The forty-seventh book of the Digest treats first of delicta privata properly so called (Tit. 1-10), and then of extraordinaria crimina. The fortyeighth book treats of crimina, and the first title is De Publicis Judiciis. Compensation might be demanded by the heredes of the injured person, and of the beredes of the wrong-doer; but the heredes of the wrong-doer were not liable to a penal action (poenalis actio, Dig. 47. tit. 1. s. 1). Compensation could be sued for by the party injured: a penalty, which was not a direct benefit to the injured party, was sued for by the state, or by those to whom the power of prosecution was given, as in the case of the lex Julia de adulteris, \&cc. In the case of delicta publica, the intention of the doer was the main thing to be considered: the act, if done, was not for that reason only punished; nor if it remained incomplete, was it for that reason only unpunished. In the case of delicta prirata, the injury, if done, was always compensated, even if it was merely culpa.
[G.L.]
CRINIS.
CRISTA.
[Gomatea.]
 applied by the Greeks to any person who did not judge of a thing like a $\delta \omega \kappa \sigma \sigma \tau \dot{\eta} s$, according to positive laws, but according to his own sense of justice and equity. (Herod. iii. 160; Demosth. Olynth. i. p. 17, c. Mid. p. 520.) But at Athens a number of критai was chosen by ballot from a number of selected candidates at every celebration of the Dionysia, and were called oi крitai, кaт éfox $\quad$ y. Their office was to judge of the merit of the different choruses and dramatic poems, and to award the prizes to the victors. (Isocr. Trapez. p. 365, c. with Coraes', note.) Their number is
 to bave been five for comedies, and G. Hermann has supposed, with great probability, that there were on the whole ten $\kappa \rho i \tau \alpha i$, five for comedy, and the same number for tragedy, one being taken from every tribe. The expression in Aristophanes (Av. 421 ), עıкầ $\pi \hat{a} \sigma t$ toîs kpıtaîs, signifies to gain the victory by the unanimons consent of the five judges. For the complete literature of this subject, see K. F. Hermann's Manual of the Pol. Ant. of Grcece, § 149. n. 13.
[L. S.]
CRO'BYLUS. [Coma.]
CROCO'TA (sc. vostis; крокштঠ̀ sc. í íátoy
 chiefly worn by women on solemn occasions, and in Greece especially, at the festival of the Dionysia. (Aristoph. Ran. 46, with the Schol. Lysistr. 44 ; Pollux, iv. 18. 117.) It was also worn by the priest of Cybele (Apul. Met. 8 and 11 ; Virg. Aen. ix. 614), and sometimes by men of effeminate character. (Aristoph. Thesmoph. 253 ; Suidas, s. v.; Plaut. and Naevius, ap. Nonium, xiv. 8. and xvi. 4; Cic. Harusp. Resp. 21.) It is evident from the passage of Virgil, that its name was derived from crocus, one of the favourite colours of the Greek ladies, as we still see in the pictures discovered at Herculaneum and Pompeii. The circumstance that dresses of this colour were in Latin commonly called vestes crocatae or croceae, has induced some writers on antiquities to suppose that crocota was derived from крок自 (woof or weft), or крокis (a flake of wool or cotton on the surface of the cloth), so that it would be a soft and woolly kind of dress. (Salmas. ad Capitolin. Pertinac. 8. t. 1. p. 547, and ad Tertull. De Pall. p. 329.) But the passages above referred to are sufficient to refute this opinion, and the name crocota was, like many others, adopted by the Romans from the Greeks. (Compare Becker's Charikles, vol. ii. p. 351, \&c.)
[L. S.]
CRO'NIA ( $\kappa \rho \delta \nu i a$ ), a festival celebrated at Athens in honour of Cronos, whose worship was said to have been introduced into Attica by Cecrops. He had a temple in common with Rhea. (Paus. i. 18. § 7 ; comp. vi. 20. § 1.) The festival was held on the twelfth of the month of Hecatombaeon (Demosth e. Timoor. p. 708 ; Plut. Thes. 12 ; Etym. M. s. v.), which, at an early period of the history of Attica, bore the name of $\mu \not \eta \nu K \rho o \nu i \omega \nu$. (Athen. xiii. p. 581.)

The Rhodians also celebrated a festival in honour of Cronos - perhaps the Phoenician Moloch - to whom human sacrifices, generally consisting of criminals, were offered. The festival was held on the sixteenth of Metageitnion. (Porphyr. De Abstinent. ii. 54.)

Greek writers, when speaking of the Roman Saturnalia, apply to them the name Kpovia, which in the early times seem to have really resembled them in their excessive merriment. (See Athen. xiv. p. 639 ; Appian, Samn. $10 . \S 5$; Buttmann, Mythol. vol. ii. p. 52, \&c.)
[L.S.]
CRO'TALUM ( $\kappa \rho \delta \tau a \lambda o \nu$ ), a kind of cymbal, erroneously supposed by some writers to be the same with the sistrum. [Sistrum.] The mistakes of learned men on this point are refuted at length by Lampe (De Cymb. Vet. i. 4, 5, 6). From Suidas and the Scholiast on Aristopbanes (Nubes, 260 ), it appears to have been a split reed or cane, which clattered when shaken with the hand. According to Eustathius (1.. xi. 160), it was made of thell and brass, as well as of wood. Clemens. Alexandrinus further says that it was an invention of the Sicilians.

Women who played on the crotalum were termed crotalistrice. Sucb was Virgil's Copa (2),

> " Crispum sub crotalo docta movere latus."

The line alludes to the dance with crotala (similar to castanets), for which we have the additional testimony of Macrobius (Sat. ii. 10). The annexed woodcut, taken from the drawing of an ancient marble in Spon’s Miscellanea (sec. i. art. vi. fig.
43), represents one of these crotalistriae perform ing.

The word крó $\boldsymbol{\tau} \alpha \lambda_{0} \nu$ is often applied, by an easy metaphor, to a noisy talkative person. (Aristoph. Nub. 448 ; Eurip. Cycl. 104.)
[B. J.]

## CRUSTA. [Caelatura; Chaysendeta;

## Emblemata.]

CRUX ( $\sigma \tau a v \rho \delta s, \sigma \kappa \delta \lambda o \psi$ ), an instrument of capital punishment, used by several ancient nations, especially the Romans and Carthaginians. The words $\sigma \tau a v p 0 \omega$ and $\sigma \kappa 0 \lambda o \pi i \xi \omega$ are also applied to Persian and Egyptian punisbments, but Casauhon (Exer. Antibaron. xvi. 77) doubts. whether they describe the Roman method of crucifixion. From Seneca (Cons. ad Marc. xx., Epist. xiv. 1) we learn the latter to have been of two kinds, the less usual sort being rather impalement than what we should describe by the word crucifixion, as the criminal was transixed by a pole, which passed throngh the back and spine and came out at the mouth.
The cross was of several kinds; one in the shape of an X, called crux Andreana, because tradition reports St. Andrew to have suffered upon it; another was formed like a $T$, as we learn from Lucian (Judic. Vocal. xii.), who makes it the suhject of a charge against the letter.
The third, and most common sort, was made of two pieces of wood crossed, so as to make four right angles. It was on this, according to the unanimous testimony of the fathers who sought to confirm it by Scripture itself (Lips. De Oruce, i. 9), that our Saviour suffered. The punishment, as is well known, was chiefly inflicted on slaves, and the worst kind of malefactors. (Juv. vi. 219 ; Hor. Sat. i. 3. 82.) The manner of it was as follows: - The criminal, after sentence pronounced, carried his cross to the place of execution; a custom mentioned by Plutarch (De Tard. Dei Vind. ëraãas
 Artemidorus (Oneir. ii. 61), as well as in the Gospels. From Livy (xxxiii. 36) and Valerius Maximus (i. 7), scourging appears to have formed a part of this, as of other capital punishments among the Romans. The scourging of our $\mathrm{S}_{8}$ viour, however, is not to be regarded in this light, for, as Grotius and Hlammond have observed, it was inflicted before sentence was pronounced. (St. Luke, xxiii. 16 ; St. John, xix. 1. 6.) The criminal was next stripped of his clothes and nailed or bound to the cross. The latter was the more painful method, as the sufferer was left to die of hunger. Instances are recorded of persons who surpived nine days. It was usual to leave the body on the cross after death. The breaking of the legs of the thieves, mentioned in the Gospelg,

CRYPTEIA.
CRYPTEIA.
was accidental ; because by the Jewish law, it is expressly remarked, the bodies could not remain on the cross during the Sabbath-day. (Lipsius, De Cruce; Casaubon, Exer. Antibaron. xri. 77.)
[B. J.]
CRYPTA (from $\kappa$ cúrtetel $^{2}$, to conceal), a crypt. Amongst the Romans, any long narrow vault, whether wholly or partially below the level of the earth, is expressed by this term ; such as a sewer (crypta Suburae, Juv. Sat.v. 106) [Cloaca]; the carceres of the circus [Cincus, p. 285]; or a magazine for the reception of agricultural produce. (Vitruv. vi. 8 ; comp. Varro, R.R. i. 57.)

The specific senses of the word are:-

1. A covered portico or arcade; called more definitely crypto-porticus, because it was not supported by open columns like the ordinary portico, but closed at the sides, with windows only for the admission of light and air. (Plin. Epist. ii. 15, v. 6, vii. 21 ; Sidon. Epist. ii. 2.) These were frequented during summer for their coolness. A portico of this kind, almost entire, is still remaining in the suburban villa of Arrius Diomedes at Pompeii. [Porticus.]
Some theatres, if not all, had a similar portico attached to them for the convenience of the performers, who there rehearsed their parts. (Suet. Cal. 58 ; compare Dion Cass. lix. 20 ; Joseph. Antiq. xix. 1. § 14.) One of these is mentioned by P. Victor (Regio ix.) as the crypta Balbi, attached to the theatre built by Cornelius Balbus at the instigation of Augustus (Suet. Aug. 29 ; Dion Cass. liv. 25), which is supposed to be the ruin now seen in the Via di S. Maria di Cacaberis, between the church of that name and the S. Maria di Pianto.
2. A grotto, particularly one open at both extremities, forming what in modern language is denominated a "tunnel," like the grotto of Pausilippo, well known to every visitant of Naples. This is a tuinel excavated in the tufo rock, about 20 feet high, and 1800 long, forming the direct communication between Naples and Pozzuoli (Puteoli), called by the Romans crypta Neapolitana, and described by Seneca (Epist. 57) and Strabo
 Petron. Frag. xiii.).

A subterranean vault used for any secret worship, but more particularly for the licentious rites consecrated to Priapus, was also called crypta. (Petron. Sat. xvi. 3 ; compare xvii. 8.)
3. When the practice of consuming the body by fire was relinquished [Funus], and a number of bodies were consigned to one place of burial, as the catacombs for instance, this cemmon tomb was called crypta. (Salmas. Exercit. Plinian. p. 850 ; Aring. Rom. Subterr. i. 1. § 9 ; Prudent. ח $\in \rho \ell$ $\Sigma \tau \epsilon \in$. xi. 153.) One of these, the crypta Nepotiana, which was in the vicus Patricius, under the Esquiline (Festus, s. v. Septimontium), was used by the early Christians, during the times of their persecution, as a place of secret worship, as well as of interment, and contains many interesting inscriptions. (Nardini, Rom. Antic., iv. 3; Maitland, The Clurel in the Catacombs.) [A. R.]

CRYPTEIA (крunteía, also called критria or крилт ), was, according to Aristotle (ap. Plut. Lyc. 28), an institution introduced at Sparta by the legislation of Lycurgus. Its cbaracter was so cruel ond atrocious, that Plutarch only with great reluctance submitted to the authority of Aristotle
in ascribing its introduction to the Spartan lawgiver. The description which he gives of it is this:-The ephors, at intervals, selected from among the young Spartans, those who appeared to be best qualified for the task, and sent them in various directions all over the country, provided with daggers and their necessary food. During the daytime, these young men concealed themselves; but at night they broke forth into the high-roads, and massacred those of the helots whom they met, or whom they thought proper. Sometimes also they ranged over the fields (in the daytime) and despatched the strongest and best of the helots. This account agrees with that of Heracleides of Pontus (c. 2), who speaks of the practice as one that was still carried on in his own time, though he describes its introduction by Lycurgus only as a report.
The crypteia has generally been considered either as a kind of military training of the Spartan youths, in which, as in other cases, the lives of the helots were unscrupulously sacrificed ; or as a means of lessening the numbers and weakening the power of the slaves. But Müller (Dorians, iii. 3 . §4), who is anxious to soften the notions generally current respecting the relations between the helots and their masters, supposes that Plutarch and Heracleides represent the institution of the crypteia "as a war which the ephors themselves, on entering upon their yearly office, proclaimed against the helots." Heracleides, however, does not mention this proclamation at all ; and Plutarch, who mentions it on the authority of Aristotle, does not represent it as identical with the crypteia. Müller also supposes that, according to the received opinion, this chase of the slaves took place regularly every year ; and showing at once the absurdity of such an annual proclamation of war and massacre among the slaves, he rejects what he calls the common opinion altogether as involved in inextricable difficulties, and has recourse to Plato to solve the preblem. But Thirlwall (Hist. Greece, vol. i. p. 311) much more judiciously considers that this proclamation of war is not altogether groundless, but only a misrepresentation of something else, and that its real character was most probably connected with the crypteia. Now, if we suppose that the thing here misrepresented and exaggerated into a proclamation of war, was some promise which the ephors on entering upon their office were ohliged to make, for instance, to protect the state against any danger that might arise from too great an increase of the numbers and power of the helots - a promise which might very easily he distorted into a proclamation of war-there is nothing contrary to the spirit of the legislation of Lycurgus ; and such an institution, by no means surprising in a slave-holding state like Sparta, where the number of free citizens was comparatively very sunall, would have conferred upon the ephors the legal authority occasionally to send out a number of young Spartans in chase of the helots. (Isocr. Panath. p. 271, b.) That on certain occasions, when the state had reason to fear the overwhelming number of slaves, thousands were massacred with the sanction of the public authorities, is a well-known fact. (Thucyd. iv. 80.) It is, however, probable enough that such a system may at first have been carried on with some degree of moderation ; but after attempts had been made by the slaves to emancipate themselves and put

## CUDO.

their masters to death, as was the case during and after the earthquake in Laconia, it assumed the barharous and atrocious character which we have described above. (Compare Plut. Lyc. 28, sub fin.) If the crypteia had taken place annually, and at a fixed time, we should, indeed, have reason, with Muller, to wonder why the helots, who in many districts lived entirely alone, and were united by despair for the sake of common protection, did not every year kindle a most bloody and determined war throughont the whole of Laconia; but Plutarch, the only anthority on which this supposition can rest, does not say that the crypteia took place every year, but $\delta$ ca $\chi \rho o ́ \nu o u$, i.e. "at intervals," or occasionally. (Hermann, ad Viger. p. 856.) The difficulties which Mïller finds in what he calls the common account of the erypteia, are thus, in our opinion, removed, and it is no longer necessary to seek their solution in the description given by Plato (De Leg. i. p. 633, vi. p. 763), who proposed for his Cretan colony a similar institution under the name of crypteia. From the known partiality of Plato for Spartan institutions, and his inclination to represent them in a favourable light, it will be admitted that, on a subject like this, his evidence will be of little weight. And when he adopted the name crypteia for his institution, it by no means follows that he intended to make it in every respect similar to that of Sparta ; a partial resemblance was sufficient to transfer the name of the Spartan institution to that which he proposed to establish ; and it is sufficiently clear, from his own words, that his attention was more particularly directed to the advantages which young soldiers might derive from such hardships as the критroi had to undergo. But even Plato's colony would not have heen of a very humane character, as his kpuntol were to go out in arms and make free use of the slaves.
[L. S.]
CRYPTOPO'RTICUS. [CRypta.]
CUBICULA'RII, were slaves who had the care of the sleeping and dwelling rooms. Faithful slaves were always selected for this office, as they had, to a certain extent, the care of their master's person. When Julius Caesar was taken by the pirates, he dismissed all his other slaves and attendants, only retaining with him a physician and two cubicularii. (Suet. Caes. 4) It was the duty of the cubicularii to introduce visiters to their master (Cic. ad Att. vi. 2. §5, in Verr. iii. 4); for which purpose they appear to have usually remained in an ante-room (Suet. Tib. 21, Dom. 16). Under the later emperors, the cubicularii belonging to the palace were called praepositisacro cubiculo, and were persons of high rank. (Cod. 12, tit. 5.)

CUBI'CULUM, nsually means a sleeping and dwelling room in a Roman house [Domus], but is also applied to the pavilion or tent in which the Roman emperors were accustomed to witness the public games. (Suet. Ner. I2; Plin. Paneg. 51.) It appears to have been so called, because the emperors were accustomed to recline in the cubicula, instead of sitting, as was anciently the practice, in a sella curnlis. (Ernesti, ad Suet.l.c.)

CU'BITCUS ( $\pi \hat{\eta} \chi \cup s$ ), a measure of lengthused by the Greeks, Romans, and other nations, was originally the length of the human arm from the elbow to the wrist, or to the tip of the forefing r ; the latter was its signification among the Greeks and Romans. It was equal to a foot and a half; and therefore the Roman cubit was a little less, and
the Greek cubit a little more, than a foot and a half English. The cubit was divided by the Greeks into 2 spans ( $\sigma \pi t \theta a \mu a i$ ), 6 hand-breadths ( $\pi \alpha \lambda \alpha t \sigma \tau \alpha i$ ), and 24 finger breadths ( $\delta$ ќк $\kappa \tau \lambda 0 t$ ), and by the Romans into $1 \frac{1}{2}$ feet, 6 breadths (palmi), and 24 thumb-breadths (pollices). (Wurm, De Pond. Mens. \&c.; Hussey, On Ancient Weights, \&c., see the Tables.) Respecting the Egyptian and other cubits, see Böckh, Mcorol. Untersuch. p. 211.
[P.S.]
CUBC'S, a vessel, the sides of which were formed by six equal squares (includmg the top), each square having each of its sides a foot long. The solid contents of the cube were equal to the amphora. (Rliem. Fann. De Pond, \&c. v. 5962 ; Metretes). In Greek кov̄os is the equivalent of the Latin Tessera.
[P.S.]
CUCULLUS, a cowl. As the cowl was intended to be used in the open air, and to be drawn over the head to protect it from the injuries of the weather, instead of a hat or eap, it was attached only to garments of the coarsest kind. Its form is seen attached to the dress of the shepherd in the annexed woodcut, which is taken from a gem in the Florentine cabinet, and represents a Roman shepherd looking at the she-wolf with Romulus and Remus. The cucullus was also nsed by per-

sons in the higher circles of society, when they wished to go abroad without heing known. (Juv. vi. 330.) The use of the cowl, and also of the cape [Birnus], which served the same purpose, was allowed to slaves by a law in the Codex Theodosianus. (Vossius, Etym. Ling. Lat. s. v. Birrus.) Cowls were imported into Italy from Saintes in France (Santonico cucullo, Juv. viii. I45; Schol. in loc.), and from the country of the Bardaei in Illyria. (Jul. Cap. Pcrtinax, 8.) Those from the latter Iocality were probably of a peculiar fashion, which gave origin to the term Bardoeucullus Liburrici cuculli are mentioned by Martial (xiy. 139.)
[J. Y.]
CUDO or CUDON, a sknll-cap, made of leather or of the rough shaggy fur of any wild animal (Sil. Ital. viii. 495, xvi. 59), such as were wora by the velites of the Roman armies (Polyb. vi. 20), and apparently synonymous with galerus (Virg. Acn. vii. 688) or galerioulus. (Frontin. Strategem. iv. 7. §29.) In the sculptures on the Colunin of Trajan, some of the Roman soldiers are represented with the skin of a wild beast drawn over the head, in such a manner that the face appears between the upper and lower jaws of the animal, while the rest of the skin falls down behind over the back and shoulders, as described hy Virgil (Aen. vii. 666). This, however, was an extra defence (Polyb. l. c.), and must not be taken for the credo, which was the cap itself; that is, a particular

CULPA.
kind of galea. [G+lexa.] The following representation of a cudo is tiken from Choul's Custramen. des Anciens hormins, 1581.
[A. R.]

CULCITA. [Lectus.]
CU'LEUS, or CU'LLEUS, a Roman measure, which was used for estimating the produce of vineyards. It was the largest liquid measure used by the Romans, containing 20 amphorae, or 160 congii, that is, almost 119 gallons. (Rhem. Fana. De Pond. \&c. v. 86, 87 ; Plin. H. N. xiv. 4 ; Varro, R. R. i. 2. § 7; Colam. iii. 3.)
[P. S.]
CU'LEUS or CU'LLEUS, a sack used in the punishment of particides.. [Lex Cornelia de Sicarins.]
CULI'NA. [Domus.]
CULPA. The general notion of dolus malus may be couveniently explained under this head.

Culpa in its most general juristical sense of any illegal act of commission or omission comprehends dolus malus. But the special meaning of culpa is distinct from that of dolus malus. Dolus malus is thus defined by Labeo (Dig. 4. tit. 3. s. 1) :"Dolus malus est omnis calliditas, fallacia, macbinatio ad circumveniendum, fallendum, decipiendum alterum adhibita." Dolus malus, therefore, has reference to the evil design with which an act is accomplished to the injury of another; or it may be the evil design with which an act is omitted that ought to be done. The definition of Aquilius, a learned jurist, the friend of Cicero and his colleague in the praetorship (de Off: iii. 14), labours under the defect of the definition of Servius, which is criticised by Labeo. (Dig. 4. tit. 8. s. 1.) This seems to be the Aquilius who, by tbe edict, gave the action of dolus malus in all cases of dolus malus where there was no legislative provision, and there was in justa causa. (Cic. de Nat. Deor. iii. 30.)

It is sometimes considered that culpa in the special seuse may be either an act of commission or omission; and that an act may fall short of dolus, as not coming within the above definition, hut it may approach very near to dolus, and so become culpa dolo proxima. But the characteristic of culpa appears to be omission. It is true that the damuum which is necessary to constitute culpa is often the consequence of some act; but the act derives its culpose character rather from something that is omitted than from what is done.

Culpa then being characterised by an act of omission (negligentia), or omissio diligentiae, the question always is, how far is the person charged with culpa bound to look after the interest of auother, or to use diligentia. There is no such general obligation, but there is such olligation in particular cases. Culpa is sometimes divided into lata, levis, and levissima. Lata culpa" est nimia

CULTER.
negligentia, id est, non intelligere quod omnes intelligunt." (Dig. 50. tit. 16. s. 213.) If then one man injured the property of another by gross carelessness, he was always hound to make good the damage (damnuni praestare). Such culpa was not dolus, because there was not intention or design, hut it was as bad in its consequences to the person charged with it.

Levis culpa is negligence of a smaller degree. He who is answerable for levis culpa, is answerable for injury caused to the property of another by some omission, which a carefill person conld have prevented. For instance, in the case of a thing lent [Commodatum], a man must take at least as much care of it as a careful man does of his own property. There is never any culpa, if the person charged with it has done all that the most careful person could do to prevent loss or damage. Levissima culpa came within the meaning of the term culpa in the lex Aquilia; that is, any injury that happened to one man's property through the conduct of another, for want of such care as the most careful person would take, was a culpa, and therefore punishable. But the expressiou levissima culpa is said to occur only once in the Digest (Dig. 9. tit. 2. s. 44).

In the passage of Horace (Sat. ii. 2. 123.)
"Post hoc ludus erat culpa potare magistra,"
Bentley has the absurd emendation of "cuppa." The general meaning of culpa in the Roman writers is well explained by Hasse (p.8). Tbere is great difficulty in stating the Roman doctrine of dolus and culpa, and modern jurists are by no means agreed on this matter. The chief essay on this subject is the elassical work of Hasse " Die Culpa des Römischen Rechts, second edition by Betbmann-Hollweg, 1838. Hasse's view is hriefly explained in a note by Rosshirt, to his edition of Mackeldey's Lehrbuch, $\S 342$ (12th ed.); but it requires a careful study of his work to comprehend Hasse's doctrine fully, and to appreciate the great merits of this excellent essay. What is stated in this short article is necessarily incomplete, and may be in some respects incorrect.
[G. L.]
CULTER (probably from cello, percello; dim cultellus, Engl. coulter; in sonthern Germany, das kolter; French, couteau; Greek, $\mu a ́ \chi \alpha ı \rho a, ~ \kappa о \pi i s, ~$ or $\sigma$ oaris), a knife with only one edge, which formed a straight line. The blade was pointed and its back curved. It was used for a variety of purposes; but chiefly for killiug animals either in the slaughter-honse, or in hunting, or at the altars of the gods. (Liv. iii. 48 ; Scribonius, Compos. Med. 13 ; Suet. Aug. 9 ; Plant. Rud. i. 2. 45 ; Virg. Georg. iii. 492 ; Ovid. Fast. i. 321.) Hence the expressions-bovem ad cultrum emere, "to bny an ox for the purpose of slaughtering it" (Varro, De Re Rust. ii. 5) ; me sub cultro linquit, " he leaves me in a state like that of a victim dragged to the altar" (Hor. Sat. i. 9. 74) ; se ad cultrum locare, " to become a bestiarius" (Seneca, Ep. 87). From some of the passages above referred to, it would appear that the culter was carried in a kind of sheath. The priest who couducted a sacrifice never killed the victim himself; but one of his ministri, appointed for that purpose, who was called either by the general name minister, or the more specific popa or cultrarius. (Suet. Calig. 32.) A tomb-stone of a cultrarius is still extant, and upon it two cultri are represented (Gruter, Inscript. vol.
ii. p. 640 . No. 11), which are copied in the annexed woodent.

The name culter was also applied to razors (Cic. De Off. ii. 7 ; Plin. vii. 59 ; Petron. Sat. 108), and kitchen knives (Varro, ap. Non. iii. 32). That in these cases the culter was different from those above represented, and most probably smaller, is certain ; since whenever it was used for shaving or domestic purposes, it was always distinguished from the common culter by some epithet, as culter tonsorius, culter coquinaris. Fruit knives were also called cultri ; but they were of a smaller kind (eultelli), and made of bone or ivory (Colum. xii. 14, 45 ; Plin. xii. 25 ; Scribon. c. 83). Colnmella, who gives (iv. 25) a very minute description of a falk vinitoria, a knife for pruning vines, says that the part of the blade nearest to the handle was called culter on account of its similarity to an ordinary culter, the edge of that part forming a straight line. This culter according to him was used when a branch was to be cut off which required a hard pressure of the hand on the knife. The name culter, which was also applied to the sharp and pointed irom of the plough (Plin. $H . N$. xviii. 18. 48), is still extant in English, in the form coulter, to designate the same thing. [Aratrum.]
The expression in cultrum or in caltro collocatus (Vitruv. x. 10, 14) signifies placed in a perpendicular position.
[L. S.]
CULTRA'RIUS. [Culter.]
cu'Neus. [Exencitus; Theatnum.]
CUNI'CULUS (imbzoдos). A mine or passage underground was so called from its resemblance to the burrowing of a rabbit. Thus Martial (xiii. 60) says,
"Guudet in effossis habitare cumiculus antris, Monstravit tacitas hostibus ille vias."

Fidenae and Veii are said to have been taken by mines, which opened, one of them into the citadel, the other into the temple of Juno. (Liv. iv. 22, v. 19.) Niebuhr (IIist. Ron. vol. ii. p. 483) observes that there is hardly any authentic instance of a town being taken in the manner related of $V$ eii, and supposes that the legend arose out of a tradition that Veii was taken by means of a mine, by which a part of the wall was overthrown.
[R. W.]
CUPA, a wine-vat, a vessel very much like the
dolizun, and used for the same purpose, namely, to receive the fresh must, and to contain it during the process of fermentation. The inferior wines were drawn for drinking from the cupa, without being bottled in amphorae, and hence the term vinum de cupa (Varr. ap. Non. ii. 1I3; Dig. 18. tit. 6. s. 1. § 4). The phrase in Horace (Sat. ii. 2. 123), cupa potare magistra, if correct, would mean, to make the wine vessel the sole magister bibendi; Bentley adopts oupa in this passage, as another form of copa, a hostess, a word connected with caupo: this word occurs in Snetonius (Ner. 27), and one of Virgil's minor poems was entitled Copa or Cupa. (Charis. i. p. 47, Putsch.) In the passage of Horace, however, the reading cupa is only conjectural : the MSS. give culpa, out of which a good sense can be made. (See the notes of Heindorf, Orelli, and Dïntzer.)

The cupa was either made of earthenware, like the dolium, or of wood, and covered with pitch. In the latter case, pine-wood was preferred (Plin. $H$. N. xvi. 10. s. 18). It was used for other purposes, such as preserved fruits and corn, forming rafts, and containing combustibles in war, and even for a sarcophagus. (See the passages cited by Forcellini, s. v.) [Comp. Dolium; VI. num.]
[P. S.]

## CURA. [Curator.] <br> CURATE'LA. [CURATor.] <br> CURA"TIO. [Curator.]

CURA'TOR. Up to the time of pulbertas, every Roman citizen, as a general rule, was incapable of doing any legal act, or entering into any contract which might be injurious to him. The time when pubertas was attained, was a matter of dispute ; some fixed it at the commencement of the age of procreation, and some at the age of fourteen. (Gaius, i. 169.) In all transactions by the impubes, it was necessary for the auctoritas of the tutor to be interposed. [Auctoritas; Tutor.] With the age of puberty, the youth attained the capacity of contracting marriage and becoming a paterfamilias: he was liable to military service, and entitled to vote in the comitia; and consistently with this, he was freed from the control of a tutor. Females who had attained the age of puberty became subject to another kind of tutela. [TuTELA.]

With the attainment of the age of puberty by a Roman youth, every legal capacity was acquired which depended on age only, with the exception of the capacity for public offices, and there was no rule about age, even as to public offices, before the passing of the lex Villia. [Aediles.] It was, however, a matter of necessity to give some legal protection to young persons who, owing to their tander age, were liable to he overreached; and consistently with the development of Roman jurisprudence, this object was effected without interfering with the old principle of full legal capacity being attrined with the age of puberty. This was accomplished by the lex Plaetoria (the true name of the lex, as Saviguy has shown), the date of which is not known, though it is certain that the law existed when Plautus wrote (Pseudolus, i. 3. 69). This law cstablished a distinction of age, which was of great practical importance, by forming the citizens into two classes, those above and those below twenty-five years of age (minores viginti quinque annis), whence a person under the lastmrationed age was sometimes simply called minor. The ohjnct of the lex was to protect persons under
twenty-five years of age against all fraud (dolus). The person who was guilty of such a fraud was liable to a judicium publicum (Cic. De Nat. Deor. iii. 30), though the offence was such as in the case of a person of full age would only have been matter of action. The punishment fixed by the lex Plaetoria was probably a pecmniary penalty, and the consequential puoushment ol infamia or loss of political rights. The minor who had been fraudulently led to make a disadvantageous contract, might protect himself against an action by a plea of the lex Plaetoria (exceptio legis Plaetoriae). The lex also appears to have further provided that any person who dealt with a minor might avoid all risk of the consequences of the Plaetorialex, if the minor was aided and assisted in such dealing by a curator named or chosen for the occasion. But the entator did not act like a tutor : it can hardly be supposed that his consent was even necessary to the contract ; for the minor had full legal capacity to act, and the business of the curator was merely to prevent his being defrauded or surprised.

The praetorian edict carried still further the principle of the lex Plactoria, by protecting minors generally against positive acts of their own, in all cases in which the conseqnences might be injurious to them. This was done by the "in integrum restitutio:" the praetor set aside transactions of this description, not only on the ground of fraud, but on a consideration of all the circumstances of the case. But it was necessary for the minor to make application to the practor, either during his minority, or within one year after attaining his majority, if he claimed the restitutio; a limitation probably founded on the lex Plactoria. The provisions of this lex were thus superseded or rendered unnecessary by the jurisdiction of the praetor, and accordingly we find very few traces of the Plaetorian law in the Roman jurists.

Ulpian and his contemporaries speak of adolescentes, under twenty-five years of age, being under the general direction and advice of curatores, as a notorious principle of law at that time. (Dig. 4. tit. 4 ; De Minoribus xxy Annis.) The establishment of this general rule is attributed by Capitolinus (M. Anton. c. 10) to the emperor M. Aurelius in a passage which has given rise to much discussion. Savigny's explanation is as follows:- Up to the time of Marcus Aurelius there were only three cases or kinds of curatela: 1. That which was founded on the lex Plaetoria, by which a minor who wished to enter into a contract with another, asked the praetor for a curator, stating the ground or occasion of the petition (reddita causa). One object of the application was, to save the other contracting party from all risk of judicial proceedings in consequence of dealing with a minor. Another object was, the benefit of the applicant (the minor); for no prudent person would deal with him, except with the legal security of the curator. (Plaut. Pscudolus, i. 3. 69. "Lex me perdit quinavicenaria: metuunt credere omnes.") 2. The curatela, which was given in the case of a man wasting his substance, who was called "prodigus." 3. And that in the case of a man being of unsound mind, "demens," "furiosus." In both the last-mentioned cases provision was made either by the law or by the practor. Curatores who were determined by the law of the Twelve Tablrs, were called legitimi ; those who were named by the practor, were called honorarii. A furiosus and prodigus, whatever
night he their age, were placed under the cura of their agnati by the law of the Twelve Tables. When there was no legal provision for the appointment of a curator, the praetor named one. Curatores appointed by a consul, praetor, or governor of a province (praeses), were not generally required to give security fer their proper condnct, having been chosen as fit persons for the office. What the lex Plactoria required for particular transactions, the emperor Aurelius made a general rule, and all minors, without exception, and without any special grounds or reasons (non redditis causis), were required to have curatores.

The following is the result of Savigny's investigations into the curatela of minors after the constitution of M. Aurelius. The subject is one of considerable difficulty, but it is treated with the most consummate skill, the result of complete knowledge, and unrivalled critical sagacity. The minor only received a general curator when he made applicatien to the practor for that purpose: he had the right of proposing a person as cirrator, but the praetor might reject the person proposed. The apparent contradiction between the rule which required all minors to have a curator, and the fact that the minor received a general curator only when he applied for one, is explained by Savigny in his essay (p. 272, \&c.). The curator, on being appointed, had, without the concurrence of the minor, as complete power over the minor's property as the tutor had up to the age of puberty. He could sue in respect of the minor's property, get in debts, and dispose of property like a tntor. But it was only the property which the praetor intrusted to him that he managed, and not the acquisitions of the minor subsequent to his appointment ; and herein he differed from a tutor who had the care of all the property of the pupillus. If it was intended that the curator should have the care of that which the minor acquired, after the curator's appointment, by will or otherwise, a special application for this purpose was necessary. Thus, as to the property which was placed under the care of the curator, both as regards alienation and the getting in of debts, the minor was on the same footing as the prodigus: his acts in relation to such matters, without the curator, were void. But the legal capacity of the minor to contract debts was not affected by the appointment of a curator; and he might be sued on his contract either during his minority or after. Nor was there any inconsistency in this: the minor could not spend his actual property, for the preservation of his property during minority was the object of the curator's appointment. But the minor would have been deprived of all legal capacity for doing any act if he could not have become liable on his contract. The contract was not in its nature immediately injurious, and when the time came for enforcing it against the minor, he had the general protection of the restitutio. If the minor wished to be adrogated [Anopxio], it was necessary to have tho consent of the curator. It is not stated in the extant authorities what was the form of proceeding when it was necessury to dispose of any property of the minor by the inancipatio or in jure cessio; but it may be safcly assumed that the minor acted (for he alone could act on such an occasion) and the curator gave his consent, whicl, in the case supposed, would be aunlogous to the auctoritas of the tutor. But it would differ from the anctoritis,
in not being, like the auctoritas, necessary to the completion of the legal act, but merely necessary to remove all legal oljections to it when completêd.

The cura of spendthrifts and persons of unsound mind, as already observed, owed its origin to the laws of the Twelve Tables. The technical word for a person of unsound mind in the Twelve Tables is furiosus, which is equivalent to demens; and both words are distinguished from insazus. Though furor implies violence in conduct, and dementic only mental imbecility, there was no legal difference between the two terms, so far as concerned the cura. Insania is merely weakness of understanding (stultitia constantia, id est, sanitate vacans, Cic. Tuse. Quaest. iii. 5), and it was not provided for by the laws of the Twelve Tables. In later times, the praetor appointed a curator for all persons whose infirmities required it. This law of the Twelve Tables did not apply to a pupillus or pupilla. If, therefore, a pupillus was of unsound mind, the tutor was bis curator. If an agnatus was the curator of a furiosus, he had the power of alienating the property of the furiosus. (Gaius, ii. 64.) The prodigus only received a curator upon application being made to a magistratus, and a sentence of interdiction being pronounced against him ( $e i$ bonis interdictum est. Compare Cic. De Senec. c. 7). The form of the interdictio was thus: - "Quando tibi bona paterna avitaque nequitia tua disperdis, liberosque tuos ad egestatem perducis, ob cam rem tibi ea re commercioque interdico." The cura of the prodigus continued till the interdict was dissolved. It might be inferred from the form of the interdict, that it was limited to the case of persons who had children; but perhaps this was not so. (Dig. 27. tit. 10 ; Cod. 5. tit. 70 ; Inst. i. tit. 23.)

It will appear from what has been said, that, whatever similarity there may be between a tutor and a curator, an essential distinction lies in this, that the curator was specially the guardian of property, though in the case of a furiosus he must also have been the guardian of the person. A curator must, of course, be legally qualified for his functions, and be was bound, when appointed, to accept the duty, unless he had some legal exemption (excusatio). The curator was also bound to account at the end of the curatela, and was liable to an action for misconduct.

The word cura has also other legal applications: -1. Cura bonorum, in the case of the goods of a debtor, which are secured for the benefit of his creditors. 2. Cura bonorum et ventris, in the case of a woman being preguant at the death of her husband. 3. Cura hereditatis, in case of a dispute as to who is the heres of a person, when his supposed child is under age. 4. Cura hereditatis jacentis, in the case of a property, when the heres had not yet declared whether or not he would accept the inheritance. 5. Cura bonorum absentis, in the case of property of an absent person who had appointed no manager of it.
This view of the curatela of minors is from an essay hy Savigny, who has handled the whole matter in a way equally admirable, both for the scientific precision of the method and the force and perspicuity of the language. (Von dem Schutz der Minderä̈hrigen, Zeitschrift. vol. x.; Savigny, Fom Beruf, \&c. p. 102 ; Gaius, i. 107 ; Ulp. Fray. xii. ; Dirksen, Uebersicht, \&c. Tub. v. Frag. 7 ; Mac-
keldey, Lehrtuch des heutigen Römischen Rechts, $\S 581,8 \mathrm{cc}$. (12th ed.) ; Thibaut, System des Pan-dekten-Rechts, § 786, \&c. 9th ed. \&c.) [G. L.]

CURATO'RES, were public officers of various kinds under the Roman cmpire, several of whom were first established by Augustus. (Suet. Aug. 37.) The most important of them were as follow: -

1. Curatones Alvei et Riparum, who had the charge of the navigation of the Tiber. The duties of their office may be gathered from Ulpian (Dig. 43. tit. 15). It was reckoned vely honourable, and the persons who filled it received afterwards the title of comites.
2. Curatores Annonae, who purchased com and oil for the state, and sold it again at a small price among the poorer citizens. They were also called curatores emendi frumenti et olei, and $\sigma t \tau \hat{\omega} \nu a t$ and ė̉at $\hat{\omega} \nu a t$. (Dig. 50. tit. 5. s. 18. §5.) Their office belonged to the personalia munera; that is, it did not require any expenditure of a person's private property: but the curatores reccived from the state a sufficient sum of money to purchase the required amount. (Dig. 50. tit. 8. s. 9. § 5.)
3. Curatores Aquarum. [Aquae DucTUS.]
4. Curatores Kalendari, who had the care in municipal towns of the kalendaria; that is, the books which contained the names of the persons to whom public money, which was not wanted for the ordinary expenses of the town, was lent on interest. The office belonged to the personalia тилети. (Dig. 50. tit. 4. s. 18. § 2; tit. 8. s. 9. § 7; Heinecc. Antiq. Rom. iii. 15. § 4.) These officers are mentioned in inscriptions found in municipal towns. (Orelli, Inscrip. No. 3940, 4491.)
5. Curatones Ludorum, who bad the care of the public games. Persons of rank appear to have been usually appointed to this office. (Tacit. Ann. xi. 35, xiii. 22 ; Suet. Cal. 27.) In inscriptions, they are usually called curatores muneris gladiatorii, \&c.
G. Curatores Operum Publicorum, who had the care of all public buildings, such as the theatres, baths, aquaeducts, \&c., and agreed with the contractors for all necessary repairs to them. Their duties under the republic were discharged by the aediles and censors. [Censones.] They are frequently mentioned in inscriptions. (Orelli, Inscrip. No. 24, 1506,2273 .)
6. Curatores Regionum, who had the care of the fourteen districts into which Rome was divided, and whose duty it was to prevent all disorder and extortion in their respective districts. This office was first instituted by Augustus. (Suet. Aug. 30.) There were usually two officers of this kind for each district; Alexander Severus, however, appears to have appointed only one for each; but these were persons of consulsr rank, who were to have jurisdiction in conjunction with the praefectus urbi. (Lamprid. Alex. Sev. 33.) We arc told that M. Antoninus, among other regulations, gave special directions that the curatores regionum should either punish, or bring before the praefectus urbi for punishment, all persons who exacted from the inbabitants more than the legal taxes. (Jul. Capitol. M. Anton. 12.)
7. Curatores Reipublicae, also called Logistaf, who administered the landed property of municipia. (Dig. 50. tit. 8. s. 9. § 2 ; 2. tit. 14
s. 37.) תpian wrote a scparate work, De Officio Curatomis Reipublicac.
8. Curatores Viarum. [Vlae.]

CU $^{\prime}$ RIA, sigaifes both a division of the Roman people and the place of assembly for such a division. Various etymologies of the word have been proposed, hat none seems to be so plansible as that which connects it with the Sabine word quiris or curis (whence the surname of Juno Curitis among the Sabines).

Each of the three ancient Romulian tribes, the Ramnes, Tities, and Luceres, was subdivided into 10 curiae, so that the whole body of the popalus or the patricians were divided into 30 curiae. (Liv. i. 13 ; Dionys. ii. 7, 23 ; Plut. Rom. 19.) The plebeians had no connection whatever with the curiac, and the clients of the patricians were members of the curiae only in a passive sense. (Fest. p. 285, ed. Müller ; comp. Patricis, Gens.) All the members of the different gentes belonging to one curia were called, in respect of one another, curiales. The division into curiae was of great political importance in the earliest times of Rome, for the curiae alone contained those that were real citizens, and their assembly alone was the legitimate representative of the whole people [Comitia curiata], from whom all other powers emanated. The semators and equites were of course chosen from among them ; but their importance was especially manifest in the religious affairs of the state. Each curia as a corporation had its peculiar sacra (Fest. pp. 174, 245; Paul. Diac. p. 49, ed. Muiller), and besides the gods of the state, they worshipped other divinities and with peculiar rites and ceremonies. For such religious purposes each curia had its own place of worship, called curia, which at first may have contained nothing but an altar, afterwards a sacellum, and finally a building in which the curiales assembled for the purpose of discussing political, financial, religions and other matters. (Paul. Diac. pp. 62, 64 ; Dionys. ii. 50.) The religious affairs of each curia were taken care of by a priest, curio, who was assisted by another called curialis Flanen. (Panl. Diac. pp. 49, 64 ; Varro, De L. L. v. 83, vi. 46 ; Dionys. ii. 21 ; comp. Cuhio.) The 30 curiae had each its distinct name, which are said to have been derived from the names of the Sabine women who had been carried off by the Romans, though it is evident that some derived their names from certain districts or from ancient eponymous heroes. Few of these names only are known, such as curia Titia, Faucia, Calabra, Foriensis, Rapta, Veliensis, Tifata. (Paul. Diac. pp. 49, 366 ; Fest. p. 174 ; Liv. i. 13 ; Dionys. ii. 47 ; Cic. De Re Pudl. ii. 8.) The political importance of the curiac saak in proportion as that of the plebeians and afterwards of the nobilitas rose; but they still contimued the religious observances of their corporation, until in the end these also lost their importance and almost fell into oblivion. (Ov. Fast. ii. $527,8 \mathrm{c}$.)

Curia is also used to designate the place in which the senate held its meetings, such as curia Hostilia, curia Julia, curia Marcelli, curia Pompeii, curia Octaviae, and from this there gradually arose the custom of calling the senate itself in the Italian towns curia, but never the senate of Rome. The official residence of the Salii, which was dedicated to Marr, was likewise styled curia. (Cic. de Div. i. 17; Dionys. xiv. 5 ; Plut. Camill. 32 ; comp.

Becker, Handb. der Röm. Alterth. vol. ii. part i. p. 31, 8ce.)
[L.S.]
CU'RIA ( $\beta a v \lambda \epsilon u \tau \eta p t a \nu, \gamma \in \rho o u \sigma i a$ ), in architecture. The buileling in which the highest council of the state met, in a Greek or Latin city, is described by Vitruvius as being adjacent to the agora or forun. Its form was quadrangular; either square or oblong. If square, its height was one and a half times its length : if oblong, the height was half the sum of the leugth and breadth. Thus, a senate honse $f 0$ feet square would be 60 feet high: and one 60 feet by 40 would be 50 feet high : which are somewhat remarkable proportions. Half way up cach wall there was a projecting shelf or cornice to prevent the voice being lost in the height of the building. Vitruvius says nothing of columas in the curria, but we know that in some Greek senate lonses, as in that at Phocis, there were rows of columns down each side, very near the wall (Paus. viii. 32, x. 5), and this also was the case at Pornpeii. A sort of religious character was conceived to belong to the senate house; and there were often statues of the gods placed in it. (Paus. l.c.) Respecting the three curiae at Rome, the Hostilia, the Julia, and the Pompeiana, see Dict. of Gr. and Rom. Geog. art. Roma. (Vitruv. v. 2; Stieglitz, Arcliäol. d. Baukunst, vol. iii. p. 21 ; Hirt, Lehre d. Gebäude, pp. 186-188). [P. S.]

CUR1A'TA COMI'TIA. [Comitia.]
CU'RIO, the person who stood at the head of a curia, and had to manage its affairs, especially those of a religious nature (Dinnys. ii. 7, 65; Varo, De L. L. v. I5, 32, vi. 6): in their administration he was assisted by another pricst, called flamen curialis. (Paul. Diac. p. 64 ; Dionys. ii. 21,64.) As there were thirty curiae, the number of curiones was likewise thirty, and they formed a college of priests, which was headed by one of them bearing the title of curio maximus. (Paul, Diac. p. 126 ; Liv. xxvii. 8.) He was clected in the comitia curiata, and had autbority over the curiae as well as over the curiones. It need hardly be obscrved, that the office of curio conld not be held by any one except a patrician; at a comparatively late time we indecd find now and then a plebeian invested with the office of cncio maximus (Liv. xxvii. 8, xxxiii. 42), but this only shows how much the ancient institution of the curiae had then lost of its original meaning and importance ; and at the time when the plebeians had gained access to priestly dignities, the office of curio seems to have heen looked upon in the light of any other priestly dignity, and to have been conferred uponk pleheians no less than upon patricians. [L. S.]

CU'RIUS ( $\kappa \dot{\prime}$ рtos), signifies generally the person that was responsible for the welfare of such members of a family as the law presumed to be incapable of protecting themselves ; as, for instance, minors and slaves, and women of all ages. Fathers, therefore, and guardians, husbands, the nearest male relatives of women, and masters of families, would all bear this title in respect of the vicarious functions exercised by them in behalf of the respective objects of their care. The qualifications of all these, in respect of which they can be combined in one class, designated by the term curius, were the male sex, years of discrotion, freedom, and when citizens a sufficient share of the franchise (èmıтıpia) to enable them to appear in the law courts as plaintiff's or defendants in behalf of their several charges; in the case of the curius being a

## CURRUS.

resident alien, the deficiency of franchise would be supplied by his Athenian patron ( $\pi \rho \circ \sigma \tau \alpha \dot{\alpha} \tau \eta s$ ). The duties to be performed, and in defanlt of their performance, the penalties incwred by guardians, and the proceedings as to their appointment, are mentioned under their more usual title [Epitropus].

The business of those who were more especially designated curii in the Attic laws, was to protect the interests of women, whether spiasters or widows, or persons separated from their husbauds. If a citizen died intestate, leaving an orphan daughter, the son, or the father, of the deceased was bound to supply her with a sufficient dowry, and give her in marriage ; and take care both for his own sake and that of his ward, that the husband made a proper settlement in return for what his bride brought him in the way of dower (a $\quad$ тотi $\mu \eta \mu a$, Harpocr.). In the event of the death of the husbund or of a divorce, it becamc the duty of the curius that had hetrothed her, to receive her back and recover the dowry, or at all events alimony from the husband or his representatives. If the father of the woman had died intestate, without leaving such relations as above-mentioned surviving, these duties devolved upon the next of kin, who had also the option of marrying her himself, and taking her fortune with her, whether it were great or small. (Bunsen, De J. H. Ath. p. 46.) If the fortune was small, and he was unvilling to marry her, he was obliged to make up its deficiencies according to a regulation of Solon (Dem. $\therefore$ Macart. p. 1068) ; if it were large be might, it ippears, sometimes even take her away from a ushand to whom she had been married, in the ifetime and with the consent of her father.
There were various laws for the pretection of emale orphans against the neglect or cruelty of heir kinsmen; as one of Solon's (Diod. xii. 3. 298), wherehy they could compel their kinsmen o endow or marry them ; and mother which after heir marriage enabled any Athenian to bring an ution как $\dot{\sigma} \sigma \epsilon \omega s$, to protect them against the ruelty of their husbands (Petit. Leg. Att. p. 543); nd the archon was specially entrusted with official sower to interfere in their hehalf upon all occasions. Dem. c. Macart. p. 1076.) [Kakosis.] [J. S.M.]
CURRUS ( $\alpha \rho \mu \alpha$ ), a chariot, a car. These erms appear to have denoted those two-wheeled ehicles for the carriage of persons, which were pen overhead, thus differing from the carpentum, nd closed in front, in which they differed from he cisium. The most essential articles in the onstruction of the currus were:-

1. The antyx (ávru $)$, or rim; and it is accordagly seen in all the chariots which are represented ither in this article or at pp. 101,238. [Antyx.]
 838, imitated by Virgil, fuginus axis, Gcorg. iii. 72), and sometimes also of ilex, ash, or elm. Plin. H. N. xvi. 84.) The axle was firmly fixed nder the hody of the chariot, which, in reference 3 this circumstance, was called $\dot{v} \pi \epsilon \rho \tau \epsilon \rho i \alpha$, and hich was often made of wicker-work, inclosed y the ăvtug (llom. Il. xxiii. 335, 436 ; Hes. inat. 306).
2. The wheels (кúк $\lambda \alpha$, т $\rho \circ \chi 0$, rotac) revolred pon the axle as in modern carriages; and they iere prevented from coming off ly the inscrtion of
 xle (akpa $\xi_{0} i \alpha$ ). The parts of the wheel were as
follows:- (a) The nave, called $\pi \lambda$ h $\mu \nu \eta$ (Hom. Il. v. 广26, xxiii. 339 ; Hes. Scut. 309), $\chi$ otvethis, modiolus (Plin. H. N. ix. 3). The two last terms are founded on the resemblance of the nave to a modius or bushel. (b) The spokes, $\kappa \nu \hat{\eta} \mu a t$ (literally, the legs), radii. The number of spokes of course differed in different wheels. On one occasion we read of eight (ỏкт áк $\nu \eta \mu$ на, Il. v. 723). (c) The felly, Itus (Hom. Il. v. 724). This was commonly made of some flexible and elastic wood, such as poplar ( $l$. iv. 482-486), or the wild fig, which was also used for the rim of the chariot; heat was applied to assist in producing the requisite curvature. ( $I l . x x i .37$, 38, compured with Theocrit. xxv. 247-251.) The felly was, however, composed of separate pieces, called arcs ( $\alpha \psi i ̂ \delta e s$, Hes. Op. et Dies, 426). Hesiod (l. c.) evidently intended to recommend that a wheel should consist of four pieces. (d) The tire, є́ríбшт 0 , canthus. Homer (Il. v. 725) descrihes the chariot of Hera as having a tire of bronze upoa a golden felly, thus placing the harder metal in a position to resist friction, and to protect the softer.
3. The pole ( $\dot{\rho} \nu \mu \delta s_{,}$temo). It was firmly fixed at its lower extremity to the axle; and at the other end ( $\dot{\alpha} \kappa \rho \circ \dot{\rho} \rho \dot{u} \mu+0 \nu$ ) the pole was attached to the yoke either by a pin ( $\left.{ }_{\epsilon}^{\epsilon} \mu \mathcal{E}_{0} \lambda_{0} s\right)$, as shown in the chariot engraved below, or by the use of ropes and bands [Jugum].

All the parts now enumerated are seen in an ancient chariot preserved in the Vatican, a representation of which is given in the annexed woodcut.

Carriages with two or even three poles were used loy the Lydians. (Aeschyl. Pcrs. 47.) The Greeks and Romans, on the other hand, appear never to have used more than one pole and one yoke, and the currus thus constructed was commonly drawn by two horses, which were attached to it by their necks, and therefore called $\delta i(u y)=s$ ใ $\pi \pi 0$ (Hom. Il. v. 195, x. 473), avywpls (Xea. Hell. i. 2. § 1), "gemini jugales" (Virg. Sen. vii. 280), "equi bijuges " (Georg. iii. 91). If a third horse was added, as was not unfrequently the case, it was fastened by traces. It may have beea ioteaded to take the place of either of the yoke horses
 The horse so attached was called $\pi \alpha \rho$ piopos. Giazrot (Wägcn und Fahrwerkc, vol. i. p. 342) has pub-

CURRUS
lished two drawings of chariots with three horses, from Etruscan vases in the collection at Vienna. The imzos $\pi$ ap fopos is placed on the right of the two yoke horses. (See woodcut.) We also observe traces passing between the two övovyes, and proceeding from the front of the chariot on each side of the middle horse. These probably assisted in attaching the third, or extra horse.

The Latin name for a chariot and pair was bigue. When a third horse was added, it was
called triga ; and by the same analogy a chariot and four was called quadrigae; in Greek. $\tau \epsilon \tau \rho a 0-$ pía or té $ө \rho i \pi t \pi o s$.

The horses were commonly harnessed in a quadriga alter the manner already represented, the two strongest horses being placed under the yoke, and the two others fastened on each side by means of ropes. This is implicd in the nse of the opin
 rius, for a horse so attached. (Isid. Orig. xviii. 35.) The two exterior horses were further distinguished from one another as the right and the left trace-horse. In the splendid triumph of Augustus after the battle of Actium, the trace-horses of his car were ridden by two of his young relations. Tiberius rode, as Suetonins relates (Tib. 6.) sinisteriore funali equo, and Marcellus dexteriore funali equo. As the works of ancient art, especially fictile vases, abound in representations of quadrigae, numerous instances may he observed, in which the two
 pòs, Schol. in Aristoph. Nub. 122) are yoked together as in the bigae; and, as the two lateral onas bave collars ( $\lambda \hat{\epsilon} \pi \alpha \delta \%$ ) equally with the yokehorses, we may presume that from the top of these

proceeded the ropes which were tied to the rim of the car, and by which the trace-horses assisted to draw it. The first figure in the annexed woodeut is the chariot of Aurora, as painted on a vase found at Canosa. (Gerhard, iiber Lichtgottheiten, pl. iii. fig. 1.) The reins of the two middle horses pass through rings at the extremities of the yoke. All the particulars which have been mentioned are still more distinctly seen in the second figure, taken from a terra-cotta at Viemna. (Ginzrot, vol. ii. $\mathrm{pp} .107,108$.) It represents a chariot overthrown in passing the goal at the circus. The charioteer having fallen backwards, the pole and yoke are thrown upwards into the air ; the two trace-horses have fallen on their knees, and the two yokehorees are prancing on their hind legs.

If we may rely on the cvidence of numerous works of art, the curus was sometimes drawn by four horses without either yoke or pole ; for we see two of them diverging to the right hand and two to the left, as in the cameo in the royal collection of Berlin, which exhibits Apollo surrounded by the signs of the zodiac. If the ancients really drove the quadrigac thus harnessed, we can only suppose the charioteer to have checked its speed by pulling up the horses, and leaning with his whule body backwards, so as to make the bottom of the car at its hindermost border scrape the ground, an act
and an attitude which seem not unfrequently to he intended in antique representations.
The currus, like the cisium, was adapted to carry two persons, and on this account was called in Greek סl申pos. One of the two was of course the driver. He was called $\dot{\eta} v i o x o s$, because he held the reins, and his companion $\pi \alpha \rho \alpha u$ \&d $\tau n s$, from going by his side or near him. Though in all respects superior, the $\pi \alpha \rho \alpha,{ }^{\circ} \dot{\alpha} \pi \eta s$ was often obliged to place himself belind the $\dot{\eta}$ vioxos. He is so represented in the bigae at p. 101, and in the 1liad (xix. 397) Achilles himself stands hehind his charioteer, Automedon. On the other hand, a personage of the highest rank may drive his own carriage, and then an inferior may be his $\pi \alpha p a \| \alpha \dot{\prime} \eta s$, as when Nestor conveys Machaon ( $\pi \alpha^{\alpha} \beta^{3} \delta \dot{\epsilon} \dot{M} M \alpha \chi \alpha \omega \nu$ Baive, IL. xi. 512, 517), and Hera, holding the reins and whip, conveys Athena, who is in full armour (v. 720-775). In such cases a kindness, or even a compliment, was conferred by the driver upon him whom he conveyed, as when Dionysins, tyrant of Sicily, "himself holding the reins
 18.)

Chariots were frequently employed on the field of battle not only by the Asintic nations, but alson by the Greeks in the heroic age. The dooct $\hat{\eta} \in S_{\text {, }}$ i. e. the nobility, or men of rank, who were com-
plete suits of armour, all took their chariots with them, aod in in engagement placed themselves in front. In the Homeric battles we find that the horseman, who for the purpose of using his weapons, and in consequence of the weight of his armour, is under the necessity of taking the place of tapai6át $\quad$ s (see above the woodcut of the triga), often assails or challenges a distant foe from the chariot ; but that, when he encounters his adversary in close combat, they both dismonnt, '" springing from their chariots to the ground," and leaving them to
 xvii. 480-483; Hes. Scut. /I're. 370-379.) As soon as the hero lad finished the trial of his strength with his opponent, he returned to his chariot, one of the chief uses of which was to rescue him from danger. These chariots, as represented on bas-rehiefs and fictile vases, were exceedingly light, the body often consisting of little besides a rim fastened to the bottom and to the axle. Thus we find Diomed, in his nocturnal visit to the enemy's camp, deliberating whether to draw away the splendid chariot of Rhesus by the pole, or to carry it off on his shoulder. (II.x. 503-505).

In later times the chariots were chiefly employed in the public games. Their form was the same, except that they were more elegantly decorated. Chariots were not much used by the Romans. The most splendid kind were the quadrigae, in which the Roman gencrals and emperors rode when they triumphed. The body of the triumphal car was cylindrical, as we often see it represented on medals. It was enriched with gold (aureo curru, Flor. i. 5 ; Hor. Epod. ix. 22) and ivory (Ov. Trist. iv. 2. 63, Pont. iii. 4. 35). The utmost skill of the painter and the sculptor was employed to enhance its beauty and splendour. More particularly the extremities of the axle, of the pole, and of the yoke, were highly wrought in the form of animals' heads. Wreaths of laure] were sometimes hung round it (currum laurigerum, Claudian, De Laud. Stit. iii. 20, Tert. Cons. Honor. 130), and were also fixed to the heads of the four snow-white horses. (Mart. vii. 7.) The car was elevated so that he who triumphed might he the most conspicnous person in the procession, and for the same reason he was obliged to stand crect (in curru stuntis elurno, Ovid, l. c.). The triumphal car had in general no pole, the horses being led by men who were stationed at their heads.

Chariots executed in terra cotta (quadrigac fictiles, Plin. H.N. xxviii. 4), in bronze, or in
narble, an example of which last is shown in the preceding woodcut from ans ancient chariot in the Vatican, were among the most beautiful ernaments of temples and other public edifices No pains were spared in their decoration; and Pliny informs us (H. N. xxxiv. 19) that some of the most eminent artists were employed upon them. In numerous instances they were designed to perpetuate the fame of those who had conquered in the chariot-race. (Paus. vi. 10.) As the emblem of victory, the quadriga was sometimes adopted by the Romams to grace the triumphal arch by leeing placed on its summit; and even in the private houses of great families, chariots were displayed as the indications of rank, or the memorials of conquest and of triumph. (Juv. viii. 3.)
[J. Y.]
$\mathrm{CURSO}^{\prime}$ RES, slaves, whose duty it was to rum before the carriage of their masters, for the same purpose as our outriders. They were not used during the times of the repuhlic, but appear to have first come into fashion in the middle of the first century of the Christian aera. The slaves employed for this purpose appear to have fequently been Numidians. (Senec. Ep. 87, 126 ; Marc. iii. 47, xii. 24 ; Petron. 28.) The word cursures was also applied to all slaves, whom their masters employed in carrying letters, messages, \&c. (Suet. Ncr. 49, Tit. 9 ; Tacit. Agric. 43.)

CURSUS. [Circus.] CURU/LIS SELLA. [Sella Cunulis.] CUSTO DES. [Comitia, p. 336, h.] CUSTO'DES, CUSTO'DIAE. [Castra, p. 250, b.]

## CUSTOS URBIS. [Praefretus Urbi.]

CY'ATHUS (кv́a日os), is one of the numerous words, containing the element $\kappa v$, and signifying something hollow: it is applied, for example, to the hollow of the hand. Its general meaning is a cup of any kind; and it constantly occurs as the name of a sort of drinking yessel used by the Romans, who borrowed it from the Greeks (Varro, De Ling. Lat. v. 124, ed. Müller) ; but whether it designates the cup out of which the wine was drunk, or the small ladle by means of which it was transferred from the mixing-bowl (kpartip) into the drinking-cup, is a disputed point. Orelli asserts that it is never used in the latter sense, and that the ladle was called $e^{2} \pi i \chi u \sigma t s$, or trulla rincerice (Ad Horat. Carn. iii. 8. 13). But the passages in which the word occurs bear out the opinion of Becker, that the ladle was called cy-

## CYMBALUM.

athus. (See the Lexicons of Scott and Liddell, Seiler and Jacobitz, and Facciolati ; Becker, Charikles, vol. i. p. 463.) Two of these cyathi are represented in the preceding woodcut, from the Museo Borbonico, vol. iv. pl. 12. They were usually of bronze or silver. The cyathus is referred to as a measure of the quantity of wine which a person drank. (Hor. Carm. iii. 8. 13, 19. 12.) A slave was appointed to supply the drink-ing-cups of the banqueters by means of the cyatlus. (Hor. Carm. i. 29.8 ; Suet. Caes. 49 ; Juv. Sat. ix. 46.)

Another sense in which the word occurs is, in surgery, for a cup for cupping (Aristoph. Ly/s. 444, Pax, 542 ; Aristot. Probl. ix. 9).

The cyathus was a definite measure, with both the Greeks and the Romans, containing one-twelfth of the sextarius. It was the uncia, considered with reference to the seatarius as the unit; hence we have sextans used for a vessel containing the sixth of the sextarius, or two cyathi, quadrans for one containing three cyathi, triens for four cyathi, quincunx for five cyathi, \&c. (Wurm. De Ponderibus, Mensuris, \&c.; Hussey On Ancient Weights, \&c.)
[P. S.]
CYCLAS (кvк入д́s), a circular robe worn by women, to the bottom of which a border was affixed, inlaid with gold. (Prop. iv. 7. 40.) Alexander Severus, in his other attempts to restrain the luxury of his age, ordained that women should possess only one cyclas each, and that it should not he adorned with more than six unciae of gold. (Lamp. Alex. Sev. 41.) The cyclas appears to have been usually made of some thin material (tenui in cyclade, Juv. vi. 259). It is related, among otber instances of Caligula's effeminacy, that he sometimes went into public in a garment of this description. (Suet. Cal. 52.)

CYCLOPEIA. [Anchitectura].
CYMA ( $\kappa \nu \mu \alpha$ ), in architecture, an ogee, a wavesbaped moulding, consisting of two curves, the one concave and the other convex. There were two forms, the cyma recta, which was concave above, and convex below, thus, 3 , and the cyma reversa, which was convex above and concave below, thus, ]. The diminutive cymatiom or cumatiunz (кขидtiov) is also used, and is indeed the more common name. The original form of the cymutium, was, however, a simple hollow (the cavetto) thus 7 . This was called the cymutium Doricum, and the other the cymatium Leslicum. (Aesch. Fr. 70, ed. Dindorf.; Böckh. Corp. Inser. vol. i. p. 284 ; Vitruv. iii. 3. s. 5. § 7, Schn. iv. 6. § 2-6; Gruter, Inscr. p. ccvii ; Müller, Arclü̈ol.d. Kunst, § 274 ; Mauch, Gr. und Röm. Bauord. pp. 6, 7: for examples, see the profiles on p. 326.
[P.S.]

## CYMA'TXUM. [Сума.]

CYMBA ( $\kappa \dot{\prime} \mu \bar{\beta} \eta$ ) is derived from $\kappa \dot{\mu} \mu \cos$, a hollow, and is employed to signify any small kind of boat used on lakes, rivers, \&c. (Cic. De Off: iii. 14 ; Aen. vi. 303.) It appears to have been much the same as the $\dot{\alpha} \kappa \alpha$ trov and scopha.

CY'MBALUM ( $\kappa$ ú $\mu \mathrm{B} \alpha \lambda_{0} \nu$ ), a musical instrument, in the sbape of two half globes, which were held one in each hand hy the performer, and played hy being struck against each other. The word is originally Greek, being derived from кú $\mu$ bos, a hallow, with which the Latin cymba, cymbium, \&c. seem to be connected. Several kinds of cymlals are found on ancient monuments, and on the ether hand a great many namcs have been preserved by
the grammarians and lexicographers; but the descriptions of the latter are so vague, that it is impossible to identify one with the other. A large class of cymbals was termed крои́ $\mu \boldsymbol{\tau} a$, which, if they were really distinct from the kpóvàa, as Spohn and Lampe suppose, cannot now be exactly described. [Crotalum.] The annexed drawing of a cpov̂ $\mu \alpha$ is taken from an ancient marble, and inserted on the authority of Spohn (Miscell. sec.]. art. 6. fig. 44).

The крє́ $\mu \varepsilon \alpha \lambda \alpha$ mentioned in the Homeric hymn to Apollo (161-164), were of this kind, played on by a chorus of Delians. The scabilla or крои$\pi$ félia were also on the same principle, only played with the foot, and inserted in the shoe of the performer ; they were used by flute-players, perhaps to beat time to their music. (Pollux, x. 33.) Other kinds of cymbals were, the $\pi \lambda \alpha \tau \alpha \gamma$, an invention of Archytas, mentioned by Aristotle
 which, from the description of Julius Pollnx and Hesychins ( $s . v$. ), appears to have been a child's rattle: ${ }^{\circ} \xi \dot{\delta} \delta a \phi \alpha$, the two parts of which Suidas tells us (s. v.) were made of different mateterials for the sake of variety of sound: котún $\alpha$, mentioned in the fragments of Aeschylns, with several otbers, noted by Lampe in his work $D$ e. Cymbalis, but perhaps without sufficient authority. The cymbal was usually made in the form of two half globes, either running off towards a point so as to be grasped by the whole hand, or with a

handle. It was commonly of bronze, but sometimes of baser material, to which Aristophanes altudes (Ranae, 1305). The preceding woodcut
of a cymbalistria is taken from an ancient marble, and given on the authority of Lampe.
The cymbal was a very ancient instrument, being used in the worship of Cybele, Bacchns, Juno, and all the earlier deities of the Grecian and Roman mythology. It probahly came from the East, from whence, through the Phoenicians, it was conveyed to Spain (compare Martial's Baetica Crumata). Among the Jews it appears (from 2 Chron. v. 12, 13; Nehem. xii. 27) to have been an instrument in common use. At Rome we first hear of it in Livy's account of the Bacchic orgies, which were introduced from Etruia. (xxxix. 9.)
For sistrum, which some have referred to the class of cymbala, see Sistrum.

## D.

DACTY LIOTHE'CA ( $\delta \alpha к \tau \cup \lambda เ 0 \theta$ йки), acase or box where rings were kept. (Mart. xi. 59.) The name was also applied to a cabinet or collection of jewels. We learn from Pliny (H. N. xxxvii. 5), that Scaurus, the step-son of Sulla, was the first person at Rome who had a collection of this kind, and that his was the only one till Pompey brought to Rome the collection of Mithridates, which he placed in the capitol.
DA'CTYLUS ( $\delta \alpha \kappa \tau u \lambda o s), ~ a ~ G r e e k ~ m e a s u r e, ~$ answering to the Roman digitus, each siguifying a finger-breadth, and being the sixteenth part of a foot. [Pes.] (See the Tables.) [P.S.]

DADU'CHUS. [Eleusinia.]
DAE'DALA or DAEDALEIA ( $\delta a i \delta \alpha \lambda a, \delta a t-$ $\delta \alpha^{\prime} \lambda \in(a)$, were names used by the Greeks to signify those early works of art which were ascribed to the age of Daedalns, and especially the ancient wooden statues, ornamented with gilding and bright colours and real drapery, which were the earliest known forms of the images of the gods, after the mere blocks of wood or stone, which were at first used for symbols of them. (See Dict. of G'reek and Roman Biog., art. Daedalus, vol. i. p. 928.)
[P.S.]
DAE'DALA ( $\delta \alpha$ i $\delta a \lambda a)$, a festival, celebrated in Boeotia in honour of Hera, surnamed Nv $\mu \phi \epsilon \nu о \mu \epsilon ́ \nu \eta$ or $T \in \lambda \in i a$ (Pans. ix. 2. § 5). Its origin and mode of celebration are thus described by Pausanias (ix. $3 . \$ 1, \& c.):-$ Hera was once angry with Zens, and withdrew herself to Enboea. Zens not being able to persinade her to return, went to Cithaeron, who then governed Plataene, and who was said to he unequalled in wisdom. He advised Zens to get a wooden statre, to dress and place it upon a chariot, and to say that it was Plataea, the daughter of Asopna, whom he was going to marry. Zens followed the advice of Cithaeron, and no sooner liad Hera heard of her husband's projected marriage than she returned. But when, on approaching the chariot and dragging off the coverings, she saw the wooden statne, she was pleased with the device, and heeame reconciled to Zeus. In remembrance of this reconciliation the Plataeans solemnised the festival of the daedala, which owes its name to $\Delta a_{i} \delta a \lambda a$, the name by which, in ancient times, statues were designated. (See preceding article.) Pausaniaa was told that the festival was held every geventh year, hut he ljelieves that it took
place at shortor intervals, though he was unable to discover the exact time.

This festival was celebrated by the Plateanns alone, and wes called the lesser Daedala ( $\Delta$ aibana $\mu$ нк $\rho a^{\prime}$ ), and was celebrated in the following manner: - In the neighbourhood of Alalcomene was the greatest oak-forest of Boeotia, and in it a number of oak trunks. Into this forest the Plataeans went, and exposed pieces of cooked mest to the ravens, attentively watching upon which tres any of the hirds, after taking a piece of the meat, would settle; and the trees on which any of the ravens settled, were cut down and worked into daedala, i.e. ronghly bewn statues,
The great Daedala ( $\Delta$ aiba ${ }^{2} \alpha \mu \in \gamma \dot{d} \lambda \alpha$ ), in the celebration of which the Plataeans were joined by the other Boeotians, took place every sixtieth year; because at one time when the Plateeana were ahsent from their country, the festival had not hean celebrated for a period of sixty years. At esch of the lesser Daedala fourteen statuea were made in the manner described ahove, and distributed hy lot among the towns of Plataeae, Coroneia, Thespiae, Tanagra, Chaeroneia, Orchomenos, Lehadeia, and Thebes; the smaller towns took one statue in common. The Boeotians assembled on the banks of the Asopus; here a statue of Hera was adorned and raised on a chariot, and a young hride led the procession. The Boeotians then decided by lot in what order they were to form the procession, and drove their chariots away from the river and up mount Cithaeron, on the summit of which an altar was erected of square pieces of wood, fitted together like stones. This altar was covered with a quantity of dry wood, and the towns, persona of rank, and other wealthy individuals, offered ench a heifer to Hera, and a bull to Zeus, with plenty of wine and incense, and at the aame time placed the daedala upon the altar. For those who did not possess sufficient means, it was customary to offer small sheep, hut all their offerings were burnt in the same manner as those of the wealthier persons. The fire consumed both offerings and altar, and the immense flame thus kindled was seen far and wide.
The account of the origin of the daedsla given by Pansanias agrees in the main pointa with the story related by Plutarch (apud Euseb. De Praeparat. Evang. iii. p. 83, and Fraym. p. 759, \&c, ed. Wyttenb.), who wrote a work on the Plstaean daedala ; the only difference is that Plutarch represents Zeus as receiving his advics to deceivs Hera from Alalcomenes; and that he calls the wooden statue by which the goddess was to be deceived Daedala, instead of Plataea. Platarch also adds some remarks respecting the meaning of the festival, and thinks that the dispute between Zeus and Hera had reference to the physical revolutions to which Boeotia, at a very remote period, had been subject, and their reconciliation to the restoration of order in the elements. (See Creuzer, Symbot. und Mythol. ii. p. 580, and Miiller's $O$ rclom. p. 216, \&c. 2d edit.) [L. S.]
DAMARE'TION ( $\Delta a \mu a \rho \in ́ \tau \epsilon i o v$ Xfúviov), a Sicilian coin, respecting which there is much dispute. Diodorus tells us (xi. 26) that after Gelon's great victory over the Carthaginians at Himera, his wife Damarete prevailed upon hinn to grant them moderate terms of peace; and that the Cartha. ginians, as a token of their gratitude, presented Damarete with a golden crown of one hundred

## DAMNUM INFECTUM.

DAMNUM INJURIA DATUM. 383
talents' weight ; upon receiving which, she struck the coin, which was called, after her, $\delta \alpha \mu \alpha \rho$ éveiov, and which contained ten Attic drachmae, and was called by the Sicilians $\pi \in \nu \tau \eta \kappa о \nu \tau \alpha ́ \lambda ı \tau \rho o \nu$, from its weight. (Comp. Schol. ad Pind. Ol. ii. 1.) The story is told somewhat differently by other writers, namely, that Damarete and the ladies of the court gave up their ornaments to be coined into money, in order to supply Gelon's necessities during the war. (Pollux, ix. 85 ; Hesych. s. v. $\Delta \eta \mu \alpha \rho_{\text {E- }}$ rov.) In an epigram ascribed to Simonides, who was probably living at the court of Gelon at this very time (Schol ad Pind. Pyth. i. 155 ; Anth. Pal. vi. 214 ; No. 196, Schneidewin), it is said that Gelon and his brothers dedicated to the Pythian Apollo, after their victory over the barbarians, a tripod $\Delta a \rho \in \tau i o u$ र $\quad$ puбov, where there can be no douht that Bentley is right in reading $\Delta \alpha \mu \alpha p \in T i o v$, but it is not equally certain whether the last two lines of the epigram are not altogether spurious. (Comp. Schneidewin, ad loc., and Böckh, Metrol. Untersuch. p. 304.) At all events, the passage is an indication of the uniform tradition respecting this "Damaretian gold ;" the exact history of which is of very little consequence compared with the identification of the coinage to which the statements refer. From all the discussion of this point by Eckhel, Müller, Hussey, Böckh, and others, the most probable conclusion seems to he that the coin was of gold and not of silver (although coins of equal value were at some time or other struck in silver also), and that the statements which give its weight as fifty Sicilian litras, or ten Attic drachmae, are to be understood, not literally of its weight, but of its value, as estimated by those weights of silver: in short, it was a gold coin, equal in value to fifty litrae or ten Attic drachmae of silver; that is, a half stater. (Eckhel, Doct. Num. Vet. vol. i. p. 250 ; Hussey, On Ancient Weights, p. 57. \&c.; Böckh, Metrologische Untersuchungen, p. 304, \&c.)
[P.S.]
DAMIURGI. [Demiurgi.]
DAMNUM. Damnum signifies generally any loss or damage which a person has sustained in his property (damnum datum, factum), or damage which he has reason to fear (damaum infectum). (Dig. 39. tit. 2. s. 2.) Dammum actually done is generally called damoum simply. The liability to make good a loss is praestare damoum.
The causes of damage are either chance, accident (casus), or the free acts or omissions of reasonahle human beings. (Dig. 9. tit. 2. s. 5. § 2.) If the damnum is caused by the just exercise of a right, it is indirect. In any other case it is direct or injuria datum; and when it is injuria datum, there may be neither dolus nor culpa, or there may be either one or the other.
The obligation to make compensation for damage arises either from dolus malus, culpa, and mora, which in fact is included in culpa, and out of contracts. A man is not loound to make compensation for indirect loss or damage (Dig. 39. tit. 2. s. $26 ; 47$. tit. 9. s. $3 . \S 7$ ); nor for direct damage, if neither dolus nor culpa can be imputed to him, as if he he mad. (Dig. 9. tit. 2. s. 5. § $2,30 . \S 3$; Thibaut, System, \&c., 9 th ed. § 163.) As to damage done by an animal, see Pacerries. [G.L.]
DAMNUM INFECTUM, is damage (damnum) not done, hut apprehended. (Dig. 39. tit. 2. s. 2.) The practor's edict provided for such cases. If the building of one man threatened damage to
another in consequence of its dilapidated state, the owner of the dilapidated property might be required to repair it or to give security against any damage that might be caused by the state of his building. The security (cantio) was demanded by an actio in factum, in all cases where the security could be required. Every person who was in possession of the property that was threatened, whether as owner or in any other right (but not a bonae fidei possessor), could claim this cantio. (Dig. 39. tit. 2. s. 5. § 2 ; 13. $\S 5,18 ; 13 . \S 4,9$.) The owner of the ruinous property or any person who had a right therein, and a honae fidei possessor, might be required to give this cautio, which might be given by a simple promise or by giving sureties. The complainant lad to swear that he did not require the cantio calumana cansa (Dig. 39. tit. 2. s. 7 ; idQVe, non . K. к. se facere, ivraverit. Tab. Vel. c. xx.)

If the defendant wrongfully refused to give the security, the complainant was empowered to enter upon the property which threatened the damage, and apparently for the purpose of protecting himself against it ; if this produced no result, the defendant was ejected, and the complainant was allowed to take possession of the property, and the defendant lost all his rights to it.

If a ruinous house (aedes ruinosae) fell and damaged a neighbour before any cautio had been given, all the right that the damaged person had was to retain the materials that had fallen on his land (Dig. 39. tit. 2. ss. 6, 7. $\S \S 2,8$ ) ; but it seems that the owner of the ruinous house could, if he liked, pack up the materials and carry them off. (Cic. Top. 4, In Verr. i. 56 ; Inst. 4. tit. 5 ; Thihaut, System, \&c. § 274, \&c. 9th ed.) [G. L.]

DAMNUM INJURIA DATUM. The most usual form of procceding in cases of Damnum injuria datum was by the Lex Aquilia (Dig. 9. tit. 2), which repealed all previous legislation on the subjeet. This Lex Aquilia was a plehiscitum, which was proposed by Aquilins, a tribunus plebis. If the owner of the damaged thing sued, there might be two cases. The damage might be done by cor poreal contact of the wrongdoer (corpore), or by something which he directed, and done to another thing (corpus), so as to impair its value or destroy it; and in this case there was the directa actio Legis Aquilize. The first chapter provided that if a man killed (injuria, that is, dolo aut culpa, Gaius,jiii. 211) a slave or quadruped (quae pecudum numero sit) which helonged to another, he was bound to pay the highest value that the slave or animal had within the year preceding the unlawful act. If the wrongdoer wilfully denied the fact of the damage, he was liable to make compensation to double the value. The third chapter provided for the case of a slave or quadruped (quae pecudum, \&c.) being danıaged, or any thing else being damaged or destroyed. In this case he had to pay the highest value that the thing had within the thirty days preceding the unlawful act. If the damage was done to a thing (corpus), hut not by a corpus, there was an actio utilis Legis Aquiliae, which is also an actio in factum or on the case. Such a case would occur when, for instance, a man should purposely drive his neighbour's heast into a river and it should perish there. (Dig. 9. tit. 2. s. 7. § 3, 9.)

If the thing was not damaged, but the owner was damaged, there might be an actio in factum ; as, for instance, if a man out of compassion loosed

## DARICUS.

another man's slave who was bound and so gave him the opportunity of escaping. A man who was not owner, might have an actio utilis legis Aquiliae or in factum, if he had an interest in the thing, as a fructuarius, usuarius, a bonae fidei posuessor, or a person who had received a thing as a pledge.

If a man's slave was killed, the owner might sue for damages under the Lex Aquilia, and prosecute for a capital offence.
(Cic. Pro Roscio Comoedo, c. 11 ; Gaius, iii. $210, \& \mathrm{c}$. ; Inst. 4. tit. 3 ; Thibaut, System, \&c., 9th ed. §551, \&c. ; Rein, Das Römische Privatrecht.)
[G. L.]
DAMOSIA ( $\left.\delta \alpha \mu \sigma \sigma^{\prime} \alpha\right)$, the escort or suite of the Spartan kings in time of war. It consisted of his tent-comrades ( $\sigma v \sigma \kappa \eta \nu 0 t$ ), to whom the polemarchs, Pythians, and three of the equals ( $8 \mu \mathrm{\mu}+0$ ) also belonged (Xen. Rep. Lac. xiii. 1); of the prophets, surgeons, flute-players, volunteers in the army (Xen. Rep. Lac. xiii. 7), Olympian conquerors (Plut. Lyc. 22), public servants, \&c. The two ephors, who attended the king on military expeditions, also formed part of the damosia. (Müller, Dorians, iii. 12. §5.)

DANACE ( $\delta a \nu \alpha ́ \kappa \eta$ ), the name of a foreign coin, according to Hesychius (s.v.) worth a little more than an obolos. According to some writers, it was a Persian coin. (Pollux, ix. 82, and Hemster. ad loc.) This name was also given to the obolos, which was placed in the mouth of the dead to pay the ferryman in Hades (Hesych. s. v. ; Lucian, De Luctu, c. 10, Mort. Dial. i. 3, xi. 4, xxii. 1.) At the opening of a grave at Same in Cephallenia, a coin was fowd between the teeth of the corpse. (Stackelberg, Die Gräber der Hellenen, p. 42; Becker, Charikles, vol. ii. p. 170.)

DANEISMA ( $\delta \alpha ́ \nu \in \sigma \mu a)$. [Fenus.]
DAPHNEPHO'RIA ( $\delta a \phi \nu \eta \phi о \rho i ́ a)$, a festival celebrated every ninth year at Thebes in honour of Apollo, surnamed Ismenius or Galaxius. Its name was derived from the laurel branches ( $\delta$ d́ $\phi \nu$ val) which were carried by those who took part in its celebration. A full account of the festival is given by Proclus (Chrestomath, p. 1]). At one time all the Aeolians of Arne and the adjacent districts, at the command of an oracle, laid siege to Thebes, which was at the same time attacked by the Pelasgians, and ravaged the neighbouring country. But when the day came on which both parties had to celebrate a festival of Apollo, a truce was concluded, and on the day of the festival they went with laurel-boughs to the temple of the god. But Polematas, the general of the Bocotians, had a vision in which he saw a young man who presented to him a complete suit of armour, and who made him vow to institute a festival, to be celebrated every ninth year, in honour of Apollo, at which the Thebans, with laurel-boughs in their hands, were to go to his temple. When, on the third day after this vision, both partics again were engaged in close combat, Polematas gained the victory. He now fulfilled his promise, and walked himself to the temple of Apollo in the manner prescribed by the being he had seen in his rision. And ever since that time, continnes Proclus, this custom has been strictly obscrved. Respecting the mode of celebration, he adds:-At the daphnephoria they adorn a piece of olive wood with garlands of laurel and various flowers; on the top of it a brazen globe is placed, from which amaller
ones are suspended ; purple garlands, smaller than those at the top, are attached to the middle part of the wood, and the lowest part is covered with a crocus-coloured envelope. By the glohe on the top they indicate the sum, which is identical with Apollo; the globe immediately below the first, represents the moon; and the smaller suspending glohes are symbols of the stars. The number of garlands heing 365 , indicates the course of the ycar. At the head of the procession walked a yonth, whose father and mother must be living. This youth was, according to Pausanias (ix. 10 . §4), chosen priest of Apollo every year, and called $\delta a \phi \nu \eta \phi 0$ oos: he was always of a handsome figure and strong, and taken from the most distinguished families of Thebes. Immediately before this youthful priest walked his nearest kinsman, who hore the adorned piece of olive-wood, which was called $\kappa \omega \pi \omega$. The priest followed; bearing in his hand a laurel-branch, with dishevelled and floating hair, wearing a golden crown on his head, a magnificent robe which reached down to his feet ( $\pi$ oঠ $\eta p \eta s$ ), and a kind of shoes called 'Iфıкр́́riঠes, from the general, Iphicrates, who had first introduced them. Behind the priest there followed a choir of maidens with boughs in their hands and singing hymns. In this manner the procession went to the temple of Apollo Ismenius or Galaxins. It would seem from Pausanias that all the hoys of the town wore laurel garlands on this occasion, and that it was customary for the sons of wealthy parents to dedicate to the god brazen tripods, a considerable number of which were seen in the temple by Pausanias himself. Among them was one which was said to have been dedicated by Amphitryon, at the time when Heracles was daphnephorus. This last circumstance shows that the daphnephoria, whatever changes may have been subsequently introduced, was a very ancient festival.

There was a great similarity between this festival and a solemn rite observed by the Delphians, who sent every ninth year a sacred boy to Tempe. This boy went on the sacred road (Plut. Quaest. Gr. 12), and retumed home as laurel-bearer ( $\delta a \phi$ $\nu_{\eta \text { фópos) amidst the joyful songs of choruses of }}$ maidens. This solemnity, was observed in commemoration of the purification of Apollo at the altar in Tempe, whither he had fled after killing the Python, and was held in the month of Thargelion (probably on the seventh day). It is a very probable conjecture of Miuller (Dor. ii. 8. §4) that the Boeotian daphnephoria took place in the same month and on the same day on which the Delphian boy broke the purifying laurel-boughs in Tempe.

The Athenians seern likewise to have celebrated a festival of the same nature, but the only mention we have of it is in Proclus (ap. Photium, p. 987), who says that the Athenians honoured the seventh day as sacred to Apollo, that they carried laurelboughs and adorned the hasket ( $\kappa \alpha y \in o \nu$, see Cansrнoros) with garlands, and sang hymns to the god. Respecting the astronomical character of the daplnephoria see Müller, Orchom. p. 215 , 2d edit. ; and Crenzer, Symbol. und Mythol. ii. p. 160 .
[L. S.]
DARI'CUS ( $\delta a \rho \in \pi \delta \delta s$ ), or, to give the name in full, $\sigma \tau a \tau \eta \rho \delta a p \in ц \kappa \delta s$, the stater of Dareins (Thue. viii. 28), was a gold coin of Persia, stamped on one side with the figure of an archer crowned and kneeling upon one knee, and on the other with a

DARICUS.
sort of quadrata incusa or deep cleft. We know from Herodotus (iv. 166) that Dareius, the son of Hystaspes, reformed the Persian currency, and stamped gold of the purest standard; and it is generally believed that the daricus was so called from him. Harpocration, however, says (s. v.) that the name was older than this Dareins, and taken from an earlier king. Gesenius (Hebr. Lexicon) supposes the name to be derived from an ancient Persian word signifying king, or royal palace, or the bow of the king, in allusion to the figure stamped upon it. The best authors, however, think that there is no sufficient ground for supposing either the name or the coin to be older than Dareins, the son of Hystaspes. (Böckh, Metrol. Untersuch. p. 129 ; Grote, History of Gurece, vol. iv. p. 320.)
This coin had a very extensive circulation, not only in the Persian empire, but also in Greece. The pay given by Cyrus to the soldiers of Clearchus was a daricus a month (Xen. Anab. i. 3. § 21) ; and the same pay was offered to the same troops by Thimbrion, a Lacedaemonian general (1lid. vii. 6. §1). In the later books of the Old Testament, the daricus is supposed to be mentioned
 mon (j) 27, ii. 69 ; Nehem. vii. 70, 72.)

All ancient authorities agree in stating that the daricus was the precise equivalent of the Lydian and Attic stater; that is, it was equal in weight to two Attic drachmae. (Harpocr.; Lex. Seg.; Suid.; Schol. ad Aristoph. Eccl. 598.) This, according to the ordinary ratio of gold to silver, 10:1, would make its value equal to twenty silver drachmae ; which agrees with the statement of Xenophon (Anab. i. 7. § 18 ; comp. Arrian. Anab. iv. 18).

Five darics made a mina of silver, and 300 darics a talent. Xenophon also mentions half darics ( $\eta \mu \mathrm{j} \alpha \mathrm{pei} k o u s, A n a b$. i. 3. §21.)

The value of the daricus in our money, computed from the drachma, is $16 \mathrm{~s} .3 d$. ; but if reckoned by comparison with our gold money, it is worth much more. The darics in the British Museum weigh 128.4 grains and 128.6 grains, respectively. Hussey (Ancient Weights, \&c. vii. 3) calculates the daricus as containing on an average about 123.7 grains of pure gold, and therefore equal in value to $\frac{123 \cdot 7}{115 \cdot 12}$ of a sovereign, or about 12 . 1 s. $10 \mathrm{~d} .1 \cdot 76$ farthings.

Very few darics bave come down to us; their scarcity may he accounted for by the fact, that after the conquest of Persia, they were melted down and recoined under the type of Alexander.

There were also silver darics, bearing the same device as the gold, namely, the figure of an archer. (Plut. Cim. 10 ; Aelian. V. H. i. 22.) Their weights vary from 224 to 230 grains: those of the latter weight must have been struck, as was not very unusual in old coinages, somewhat above the true weight ; they seem to have been didrachms of the Babylonian or Egyptian standard.

In allusion to the device of an archer, the darics were often called $\tau \delta \xi=\tau a 1$, and it is related of Agesilaus, that, when recalled to Greece, he said that the Persian king had driven him out of Asia by means of 30,000 bowmen, referring to the sum

DECASMUS.
which wes entrusted to Timocrates the Rhodian to bribe the demagognes of Thebes and Athens to make his presence necessary at home. (Plut. Ages. 15, Artax. 20, Lacon. Apophth. p. 181.) Aryandes, who was appointed governor of Egypt by Cambyses, is supposed to have been the first who struck these silver coins, in imitation of the gold coinage of Dareius Hystaspis. (Herod. iv. 166.)

GOLD DARIC. BRITISH MUSEUM. ACTUAL SIZE

SILVER DARIC. BRITISH MUSEUM. ACTUAL GIZE

## DE/BITOR. [Obligationes.]

DECADU'CHI ( $\delta \in \kappa \alpha \delta 0 \hat{\chi} \chi 01$ ), the members of a council of Ten, who succeeded the Thirty in the supreme power at Athens, в.c. 403. (Harpocrat s. v.) They were chosen from the ten tribes, ona from each (Xen. Hell. ii. 4. §§ 23, 74); hut, though opposed to the Thirty, they sent ambassadors to Sparta to ask for assistance against Thrasybulus and the exiles. They remained masters of Athens till the party of Thrasyhulus obtained possession of the city and the democracy was restored. (Lys. c. Eratosth. p. 420 ; Wachsmuth, Hellen. Alterthumsk. vol. i. p. 646, 2 d ed.)

DECA'RCHIA or DECADA'RCHIA ( $\delta$ кнарरía, $\delta \in \kappa \alpha \delta a p \chi l a)$, was a supreme council esta. blished in many of the Grecian cities by the Lacedaemonians, who intrusted to it the whole government of the state under the direction of a Spartan harmost. It always consisted of the leading members of the aristocratical party. (Harpocrat, s. v. ; Schneider, ad Aristot. Pol. ii. 146, 147.) This form of government appears to have been first established by Lysander at Ephesus. (Plut. Lys. 5 ; Wachsmuth, Hellen. Alterthumsk. vol. i. p. $517,2 \mathrm{~d}$ ed.)

DECASMUS ( $\delta \in \kappa \alpha \sigma \mu$ ós), bribery. There were two actions for bribery at Athens: one, called $\delta \in \kappa \alpha \sigma \mu 0 \hat{v} \gamma \rho a \notin \dot{\eta}$, lay against the person who gave the bribe ; and the other, called $\delta$ owow or $\delta \omega \rho \circ \delta o \kappa l a s ~ \gamma p a \phi n$, against the person who received it. (Pollux, viii. 42.) These actions appiied to the bribery of citizens in the public as-
 Aesch. c. Timarch. p. 12), of the Heliaca or any of the courts of justice, of the Bount, and of the public adrocates ( $\sigma v \nu \eta \gamma \delta \rho o l$, Dem. c. Steph. ii. p. 1137. 1). Demosthenes (De Falsa Leg. p. 343), indeed, says that orators were forbidden by the law, not merely to abstain from receiving gifts for the injury of the state, but even to receive any present at all.

## DECEMVIRI.

According to Aristotle (apud Harpoerat. s.v. $\zeta_{\epsilon \kappa \alpha}(\omega \nu)$, Anytus was the first person at Atbens who bribed the judges; and we learn from Plutarch (Coriol. c. 14) that he did so, when he was charged of having been guilty of treachery at Pylos, at tbe end of the Peloponnesian war. Other writers say that Melitus was the first person who bribed the jndges. (Petit. Leg. Att. p. 427, and Duker's note.)

Actions for bribery were under the jurisdiction of the thesmothetae. (Dem. c. Steph. l.c.) The punishment on conviction of the defendant was death, or payment of ten times the value of the gift received, to which the court might add an additional punishment ( $\pi \rho \circ \sigma \tau i \mu \eta \mu \alpha$ ). Tbus Demosthenes was sentenced to a fine of 50 talents by an action for bribery, and also thrown into prison. (Böckh, Publ. Econ. of Athens, p. 384, 2d ed.; Meier, Att. Process, p. 352.)

DECASTY/LOS. [TEMPLUM.]
DECATE ( $\delta$ eró $\tau \eta$ ). [Decumae.]
DECE'MPEDA, a pole ten feet long, nsed by the agrimensores in measuring land. (Cic. Pro Mil. 27 ; Hor. Carm. ii. 15. 14 ; Cic. Philipp. xiv. 4.) Thus we find that the agrimensores were sometimes called decempedatores (Cic. Philipp. xiï. 18). The decempeda was in fact the standard land-measure. [Actus; Agrimensones.]

DECEM PRIMI. [SENATUS.]
DECE'MVIRI, the Ten Men, the name of various magistrates and functionaries at Rome.

1. Decemviri Legibus Scribendis, were ten persons, who were appointed to draw up a code of laws, and to whom the whole government of the state was entrusted. As early as B. c. 462 , a law was proposed by C. Terentilius Arsa, tbat commissioners shonld be appointed for drawing up a body of laws; bnt this was violently opposed hy the patricians (Liv. iii. 9) ; and it was not till after a struggle of nine years that the patricians consented to send three persons to Greece, to collect such information respecting the laws and constitutions of the Greek states as might be useful to the Romans. (Liv. iii. 31.) They were absent a year ; and on their return, after considerable dispute between the patricians and plebeians, ten commissioners of the patrician order were appointed with the title of "decemviri legibus scribendis," to whom the revision of the laws was committed. All the other magistrates were obliged to abdicate, and no exception was made even in favour of the tribunes; for there is no reason to suppose, as Niebubr has done, that the tribunesbip was not given up till the second decemvirate (Cic. de Rep. ii. 36 ; Liv. iii. 32 ; Dionys. x. 56). They were thus entrusted with supreme power in the state.

The decemviri entered upon their office at the beginning of в. c. 451. They consisted of App. Clandius and T. Genucius Augurinns, the new consuls, of the praefectus urbi, and of the two quaestores parricidii as Niebuhr conjectures, and of five others chosen by the centuries. They discharged the duties of their office with diligence, and dispensed justice with impartiality. Each administered the government day by day in succession as during an interregnum; and the fasces were only carried bofore the one who presided for the day. (Liv. iii. 33.) They drew up a body of laws, distributed into ten sections; which, after being approved of by the senate and the comitia, were
engraven on tables of metal, and set up in the comitium.

On the expiration of their year of office, all parties were so well satisfied with the nanner in which they had discharged their dnties, that it was resolved to continue tbe same form of government for another year; more especially as some of the decemvirs said that their work was not finished. Ten new decemvirs were accordingly elected, of whom Appius Clandius alone belonged to the former body (Liv. iii. 35 ; Dionys. x. 53) ; and of his nine new colleagues, Niebuhr thinks that five were plebeians. These magistrates framed several new laws, which were approved of by the centuries, and engraven on two additional tables. They acted, however, in a most tyramnical manner. Each was attended by twelve lictors, who carried not the rods only, but the axe, the emblem of sovereignty. They made common cause with the patrician party, and committed all kinds of outrages upon the persons and property of the plebeians and their families. When their year of office expired they refused to resign or to appoint successors. Niebnhr, however, considers it certain that they were appointed for a longer period than a year; since otherwise they would not have heen required to resign their office, but interreges would at the expiration of the year bave stepped into their place. This, however, does not seem conclusive ; since the decemvirs were at the time in possession of the whole power of the state, and would have prevented any attempt of the kind. At length, the unjust decision of App. Claudius, in the case of Virginia, which led her father to kill her with his own hands to save her from prostitution, occasioned an insurrection of the people. The decemvirs were in consequence obliged to resign their office, B. c. 449 ; after whicb the usual magistracies were re-established. (Niebubr, Hist. of Rome, vol. ii. pp. 309-356; Arnold, Hist. of Rome, vol. i. pp. 250-313; Becker, Römisch. Altertluïn. vol. ii. part ii. pp. I26-136.)

The ten tables of the former, and the two tables of the latter decemvirs, together form the laws of the Twelve Tables, of which an account is given in a separate article. [Lex Duonecim Tab.]
2. Decemviri Litibus or Stlitibus Junicanbis, were magistrates forming a court of justice, which took cognizance of civil cases. From Pomponius (de Orig. Jur. Dig. i. tit. 2. s. 2. § 29) it would appear that they were not instituted till the year в.c. 292 , the time when the triumviri capitales were first appointed. Livy (iii. 55) however mentions decemvirs as a plebeian magistracy very soon after the legislation of the Twelve Tables; and while Niebuhr (Hist. of Rome, vol. ii. p. 324, \&c.) refers these decemvirs to the decemviral magistrates, who had shortly before been abolished, and thes ahides by the account of Pomponius, Göttling (Gesch. der Röm. Staatse. p. 24], \&c.) believes that the decemvirs of Livy are the decemviri litibus judicandis, and refers their institution, together with that of the centumviri, to Servins Tullius. [Centumviri.] But the bistory as well as the peculiar jurisdiction of this court during the time of the republic are involved in inextricable abscurity. In the time of Cicero it still existed, and the proceedings in it took place in the ancient form of the sacramentum. (Cic. pro Caecin. 33, pro Dom. 29.) Augustus transferred to these decemvirs the presidency in the courts of
the centumviri. (Suet. Aug. 36 ; Dion Cass. liv. 26.) During the empire, this court had jurisdiction in capital matters, which is expressly stated in regard to the decemvirs.
3. Decraviri Sacris Faciundis, sometimes called simply Decrmpiri Sacrorum, were the members of an ecclesiastical collegium, and were elacted for life. Their chief duty was to take care of the Sihylline books, and to inspect them on all important occasions, by command of the senate. (Liv. vii. 27, xxi. 62, xxxi. 12.) Virgil (Aen. vi. 73) alludes to them in his address to the Sibyl —" Lectos sacraho viros."
Under the kings the care of the Sibylline books was committed to two men (duumviri) of high rank (Dionys, iv. 62), one of whom, called Atilius or Tullins, was punished by Tarquinius, for being unfaithful to his trust, by being sewed up in a sack aod cast into the sea. (Dionys, l. c. ; Val. Max. i. 1. \& 13.) On the expulsion of the kings, the care of these books was entrusted to the noblest of the patricians, who were exempted from all military and civil duties. Their number was increased about the year 367 в. с. to ten, of whom five were chosen from the patricians and five from the plebeians. (Liv. vi. 37, 42.) Subsequently their number was still further increased to fifteen (quindecemviri) ; but at what time is uncertain. As, however, there were decemviri in B.c. 82, when the capitol was burnt (Dionys. l.c.), and we read of quindecemviri in the time of Cicero (ad Fam. viii. 4), it appears probable that their number was increased from ten to fifteen by Sulla, especially as we know that he increased the numbers of several of the other ecclesiastical corporations. Julius Caesar added one more to their number (Dion Cass. xlii. 5l) ; but this precedent was not followed, as the collegium appears to have consisted afterwards of only fifteen.

It was also the duty of the decemviri and quinqueviri to celebrate the games of Apollo (Liv. x. 8), and the secular games. (Tac. Ann. xi. 11 ; Hor. Carm. Saec. 70.) They were, in fact, considered priests of Apollo, whence each of them had in bis house a bronze tripod dedicated to that deity. (Serv. ad Virg. Aen. iii. 332.)
4. Decemviri Agris Dividundis, were sometimes appointed for distributing the public land among the citizens. (Liv. xxxi. 4, xlii. 4.)

DECENNA'LIA or DECE'NNIA, a festival celehrated with games every ten years by the Roman emperors. This festival owed its origin to the fact that Augnstus refused the supreme power when offered to him for his life, and would only consent to accept it for ten years, and when these expired, for another period of ten years, and so on to the end of his life. The memory of this comedy, as Gibhon has happily called it, was preserved to the last ages of the empire by the festival of the Decennatia, which was solemnised by subsequent emperors every tenth year of their reign, although they had received the imperium for life, and not for the limited period of ten years. (Dion Cass. liii. 16, liv. 12, lviii. 24, lxxvi. 1 ; Trebell. Poll. Salonin. 3, Gallien. 7.)

DECIMA'T1O, was the selection, by lot, of every tenth man for punishment, when any number of soldiers in the Roman army had been guilty of any crime. The remainder usually had barley allowed to them instead of wheat. (Polyb. vi. 38 ; Cic. Cluent. 46.) This punishment does not appear to have heen often inflicted in the early times of
the republic; but is frequently mentioned in the civil wars, and under the empire. It is said to have been rovived by Crassus, after being discontinued for a long time. (Plut. Crass. 10.) For instances of this punishment, see Liv. ii. 59 ; Suet. Aug. 24, Galla, 12; Tacit. Hist. i. 37 ; Dion Cass. xli. 35, xlix. 27, 38.

Sometimes only the twenticth man was punished (vicesimatio), or the hundreth (centesimatio, Capitol. Macrin. 12).

DECIMATRUS. [QuINQuATRUS.]
DECRETTUM, seems to mean that which is determined in a particular case after examination or consideration. It is sometimes applied to a determination of the consuls, and sometimes to a determination of the senate. A decretum of the senate would seem to differ from a senatus-consultum, in the way ahove indicated: it was limited to the special occasion and circumstances, and this would be true whether the decretum was of a judicial or a legislative character. But this distinction in the use of the two words, as applied to an act of the senate, was perhaps not always ohserved. Cicero (ad Fam. xiii. 56) opposes edictum to decretum ; between which there is, in this passage, apparently the same analogy as between a consultum and decretum of the senate. A decretum, as one of the parts or kinds of constitutio, was a judicial decision in a case before the sovereign, when it was carried to the auditorium principis by way of appeal. Paulus wrote a work in six books on these Imperiales Sententiae. Gaius (iv. 140), when he is speaking of interdicta, says that they are properly called decreta, "cum (praetor aut proconsul) fieri aliquid jubet," and interdicta when he forbids. A judex is said "condemnare," not "decernere," a word which, in judicial proceedings, is appropriate to a magistratus who has jurisdictio.
[G. L.]
DE'CUMAE (sc. partes), the tithes paid to the state by the occupiers of the ager publicus [Ager Publicus]: hence the Publicani are also called Decumani from their farming these tithes. [Publicani.]

A similar system likewise existed in Greece. Peisistratus, for instance, imposed a tax of a tenth on the lands of the Athenians, which the Peisistratidae lowered to a twentieth. (Thuc. vi. 54.) The same principle was also applied to religious purposes: thus Xenophon subjected the occupiers
 purchased near Scillus, to a payment of tithes in support of a temple of Artemis, the goddess to whom the purchase-money was dedicated; the Delian Apollo also received tenths from the Cyclades. (Xen. Anab. 丈. 3. § 11 ; Callim. Hymn. Del. 272, Spanheim.) That many such charges originated in conquest, or something similar, may he inferred from the statement of Herodotus (vii. 132), that at the time of the Persian war the confederate Greeks made a vow, by which all the states who had surrendered themselves to the enemy, were subjected to the payment of tithes for the use of the god at Delphi.

The tenth (тд̀ èrióéкатоу) of confiscated property was also somnctimes applicd to similar objects. (Xen. Hell. i. 7. § 11.) The tithes of the public lands belonging to Athens were farmed out as at Rome to contractors, called $\delta \in \kappa a \tau \omega \nu a u$ : the term $\delta_{\epsilon \kappa \alpha \pi \eta \lambda o ́ \gamma o u ~ w a s ~ a p p l i e d ~ t o ~ t h e ~ c o l l e c t o r s ; ~}^{\text {; }}$ but the callings were, as we might suppose, often

## DELATOR.

united in the same person. The title $\delta$ eкateutal is applied to both. A $\delta \in \kappa \alpha \sigma \eta$ or tenth of a different kind was the arbitrary exaction imposed by the Athenians (B. c. 410) on the cargoes of all ahips sailing into or out of the Pontus. They lost it by the battle of Aegospotami (в. с. 405) ; but it was re-established by Thrasybulus about B. c. 39I. This tithe was also let out to farm. (Demosth. c. Lep. p. 475 ; Xen. Hell. iv. 8. § 27, 31.) The tithe-house for the receipt of this duty was called $\delta \in \kappa a \tau \epsilon u \tau \eta p t a \nu$ : to sail by necessity to it, $\pi a \rho a \gamma \omega-$ रrá̧ıv. (Böckh, Publ. Econ. of Athens, p. 325, \&c. . 2nd ed.)
[R. W.]
DECUMA'NI. [Decumat.]
DECUNCIS, another name for the dextans. [As, p. 140, b.]

DECU'RIA. [Evercitus.]
DECU'RIAE JUDICUM. [JUnEx.]
DECURIO'NES. [Colonia; Exercitus.]
DECU'RRERE. [Funus.]
DECUSSIS. [As, p. 140, b.]
DEDICA'TIO. [Inauguratio.]
DEDITI'CII, are one of the three classes of libertini. The lex Aelia Sentia provided that, if a slave was put in bonds by his master as a punishment, or branded, or put to the torture for an offence and convicted, or delivered up to fight with wild beasts, or sent into a ludus (gladiatorius), or put in confinement (custodia), and then manumitted either by his then owner, or by another owner, he merely acquired the status of a peregrinns dediticins, and had not even the privileges of a Latinus. The peregrini dediticii were those who, in former times, had taken up arms against the Roman people, and being conquered, had surrendered themselves. They were, in fact, a people who were absolutely subdued, and yiclded unconditionally to the conquerors, and, of course, had no other relation to Rome than that of subjects. The form of deditio occurs in Livy (i. 37).

The dediticii existed as a class of persons who were neither slaves, nor cives, nor Latini, at least as late as the time of Ulpian. Their civil condition, as is stated above, was formed by analogy to the condition of a conquered people, who did not individually lose their freedom, but as a community lost all political existence. In the case of the Volsci, Livy inclines to the opinion that the four thousand who were sold, were slaves, and not dediti. (Gaius, i. 13, \&c. ; Ulpianus, Frag. tit. I. s. 11.) [G. L.]

DEDI'TIO. [DEDITICIL.]
DEDUCTO'RES. [Ambitus.]
DEFENSO'RES. [Provincia.]
DE'FRUTUM. [Vinum.]
DEICELISTAE ( $\delta \in \iota \kappa \in \lambda t \sigma \tau a i)$. [Comoedia.]
DEIGMA ( $\delta \in$ irpuc), a particular place in the Peiraeeus, as well as in the harbours of other states, where merchants exposed samples of their goods for sale. (Harpocrat. s. v. ; Pollux, ix. 34; Aristoph. Equit. 974 ; Dem. c. Lacr. p. 932. 20 ; Theophr. Char. 23.) The samples themselves were also called deigmata. (Plnt. Demosth. 23 ; Böckh, Publ. Econ. of Athens, p. 58, 2nd. ed.)

DEJECTUM EFFUSUM. [Dejecti Effusive Actio.]

DEJECTI EFFUSIVE ACTIO. If any person threw or poured out anything from a place or upper chamber (caenaculum) upon a road which was frequented by passedgers, or on a place where people used to stand, and thereby caused any damage, the praetor's edict gave the injured
person an actio in duplum. The action was against the occupier. If several persons inhabited a caenaculum, and any injury was done to another by a thing being thrown or poured out of it. he had a right of action against any of them, if the doer was uncertain. The damages recoverable were to double the amount of the damage, except in the case of a liber, when they were fifty aurei, if he was killed; and any person might sue for the money within a year, but the right of action was given in preference to a person "cujus interest," or to affines or cognati. If a man was only in jured in his person, the damages were "quantum ob eam rem aeqnum judici videbitur enm cum quo agatur condemnari," which included the expences of a medical attendant, loss of time, and loss of a man's earnings during the time of his cure, or loss of future earnings by reason of his having heen rendered incapable of making such earnings. If injury was caused by a thing being thrown from a ship, there was an actio utilis; for the words of the edict are, "Unde in eum locum quo volgo iter fiat vel in quo consistatur, dejectum," \&c.

The edict applied to things which were suspended over a public place and which by their fall might injure people. It allowed any person to bring an action for the recovery of ten aurei against any person who disregarded this rule of the edict. If a thing so suspended, fell down and injured any person, there was an actio against him who placed it there.

As many of the houses in Rome were lofty, and inhabited to the top by the poor (Cic. Agr. ii. 35 ; Hor. Ep. i. l. 91 ; Juv. Sat. x. 17), and probably as there were very imperfect means for carrying off rubbish and other accumulations, it was necessary to provide against accidents which might happen by such things being thrown through the window. According to Labeo's opinion, the edict only applied to the daytime, and not to the night, which, however, was the more dangerous time for a passer-by. (Dig. 9. tit. 3; Dig. 44. tit. 7. s. 5. §5 ; Inst. 4. tit. 5 ; Juv. Sat. iii. 268, \&c.; Thibaut, System, \&c. § 566,9 th ed.) [G. L.]

DEILIAS GRAPHE' ( $\delta \in \iota \lambda l a s ~ \gamma \rho a \phi \dot{\eta})$, the name of a suit instituted against soldiers who had been guilty of cowardice. (Aesch. c. Ctesiph, p. 566 ; Lys. c. Alcib. pp. 520,525 .) The presidency of the court belonged to the strategi, and the court was composed of soldiers who had served in the campaign. (Lys. c. Alcib. p. 521.) The punishment on conviction appears to have been átula. Compare Astrateias Ginaphe.

DEIPNON ( $\delta$ eituvov). [Coena.]
DELA'TOR, an informer. The delatores, under the emperors, were a class of men who gained their livelihood by informing against their fellow-citizens. (Suet. Tib. 61, Dom. 12 ; Tacit. Ann. iv. 30, vi. 47.) They constantly brought forward false charges to gratify the avarice or jealousy of the different emperors, and were consequently paid according to the importance of the information which they gave. In some cases, however, the law specified the sums which were to be given to informers. Thus, when a murder had been committed in a family, and any of the slaves belonging to it had run away before the quaestio, whoever apprehended such slaves received, for each slave whom he apprehended, a reward of five aurei from the property of the deceased, or clse from the state, if the sum could
ot he raised from the property of the deceased. Dig. 29. tit. 5. s. 25.) In the senatus consultimn noted by Frontinus (De Aquaeduct.), the informer eceived half of the penalty in which the person vas fined who transgressed the decree of the senate. There seems also to have been a fixed sum given o informers by the lex Papia, since we are toid hat Nero reduced it to a fourth. (Suet. Ner. 10.)
The number of informers, however, increased so apidly under the early emperors, and occasioned o much mischief in society, that many of them vere frequently banished, and punished in other vays, by various emperors. (Suet. Tit. 8, Dom. I; Mart. i. 4 ; Plin. Paneg. 34 ; Brissonius, Ant. jelect. iii. 17.)

## DELECTUS. [Exercitus.]

DE'LIA ( $\delta \dot{\eta} \lambda(a)$, the name of festivals and ames celebrated at the great panegyris in the sland of Delos, the centre of an amplictyony, to vhich the Cyclades and the neighbouring lonians in the coasts helonged. (Hom, Hymn. in Apoll. 47, \&c.) This amphictyony seems originally to ave been instituted simply for the purpose of reigious worship in the common sanctuary of Apollo, he Nit $\partial s \pi a \tau p \hat{\varphi} o s$ of the Ionians, who was believed 0 have been born at Delos. The Delia, as apjears from the Hymn on Apollo (compare Thncyd. ii. 104 ; Pollux, ix. 61), had existed from very arly times, and were celebrated every fifth year Pollux, viii. 104), and as Böckh supposes, with reat probability, on the sixth and seventh days of Chargelion, the birthdays of Apollo and Artemis. The members of the ainphictyony assembled on hese occasions ( $\epsilon^{\epsilon} \theta \in \omega \dot{\omega} \rho o u v$ ) in Delos, in long garnents, with their wiwes and children, to worship he god with gymnastic and musical contests, horuses, and dances. That the Athemians took lart in these solemnities at a very early period, s evidont from the Deliastae (afterwards called $t \in \omega \rho o i$ ) mentioned in the laws of Solon (Athen. vi. 1. 234); the sacred vessel ( (Itewpis), moreover, which they sent to Delos every year, was said to ie the same which Theseus had sent after his reurn from Crete. (See the commentators on Plato, Trito, p. 43, c.) The Delians, during the celebraion of these solemnities, performed the office of ooks for those who visited their island, whence

In the course of time the celebration of this ncient panegyris in Delos had ceased, and it was lot revived until Ol. 88. 3, when the Athenians, Ifter having purified the island in the winter of hat year, restored the ancient solemnities, and idded horse-races which had never before taken lace at the Delia. (Thucyd. l.c.) After this reitoration, Athens being at the head of the Ionian :onfederacy took the most prominent part in the elebration of the Delia; and though the islanders, n cormmon with Athens, provided the choruses and rictims, the leader ( $\dot{a} \rho \chi \chi^{\prime \theta} \in \epsilon^{\omega} \rho \rho s$ ), who conducted he whole solemnity, was an Athenian (Plut. Nic. 3; Wolf. Intrad. ad Demosth. Lept. p. xs.), and he Athenians had the superintendence of the comnon sanctuary. [Amphictrons.]
From these solemnities, belonging to the great Delian panegyris, we must distinguish the lesser Delia, which were celebrated every year, probably $m$ the 6th of Thargelion. The Athenians on this ocasion sent the sacred vessel ( I єwpis), which the riest of Apollo adorned with lawel branches, to

who sailed to the island, Itewool; and before they set sail a solemn sacrifice was offered in the Delion, at Marathon, in order to obtain a happy voyage. (Mïller, Dor. ii. 2. §14.) During the absence of the vessel, which on one occasion lasted 30 days (Plat. Phacdon, p. 58 ; Xen. Memorab. iv. 8. §2), the city of Athens was purified, and no criminal was allowed to be execnted. The lesser Delia were said to have been instituted by Thesens, though in some legends they are mentioned at a much earlier period, and Plutarch (Thes. 23) re-lates that the ancient vessel used by the founder himself, though often repaired, was preserved and nsed by the Athenians down to the time of Demetrius Phalereus. (Böckh, Publ. Econ. of Ath. p. 214, \&c. 2d edit. ; Thirlwall, Hist. of Greece, vol. iii. p. 217.)
[L. S.]
DELICTUM. [CRIMEN.]
DELPHI'NIA ( $\delta \in \lambda \phi i v i a$ ), a festival of the same expiatory character as the Apollonia, which was celebrated in various towns of Greece, in honour of Apollo, surnamed Dephinius, who was
 The name of the god, as well as that of his fes. tival, must be derived from the belief of the ancients that in the beginning of the month of Munychion (probably identical with the Aeginetan Delphinius) Apollo came through the defile of Parnassus to Delphi, and began the battle with Delphyne. As he thus assumed the character of a wrathful god, it was thought necessary to appease him, and the Delphinia, accordingly, were celebrated at Athens, as well as at other places where his worship had been adopted, on the 6th of Munychion. At Athens seven hoys and girls carried olive-branches, bound with white wool (called the iкєт $\quad$ рía), into the Delplininm. (Plut. Thes. I8.)

The Delphinia of Aegina are mentioned by the scholiast on Pindar (Pyth. viii. 88), and from his remark on another passage (Olymp. vii. 151 ), it is clear that they were celebrated with contests. (Compare Diog. Laërt. Vit. That. c. 7 ; Müller, Dor. ii. 8. §4.) Concerning the celebration of the Delphinia in other places nothing is known ; but we have reason to suppose that the rites observed at Athens and in Aegina were common to all festivals of the same name. See Müller, Aeginet. p. 152.
[L. S.]
DELPHIS ( $\delta \in \lambda \phi i s$ ), an instrument of naval warfare. It consisted of a large mass of iron or lead suspended on a beam, which projected from the mast of the ship like a yard-arm. It was used to sink, or make a hole in, an enemy's vessel, by being dropped upon it when alongside. (Aristoph. Equit. 759 ; Thnc. vii. 41 ; Schol. ad loc.; Hesych. s.v.) There seems no necessity for supposing that it was made in the shape of a dolphin. Bars of iron used for ballast are at the present day called "pigs," though they bear no resemblance to that animal. Probahly the $\delta \in \lambda \phi i v \in s$ were hoisted aloft only when going into action. We may also conjecture that they were fitted, not so much to the swift ( $\tau a \chi \in \hat{i} a n$ ) triremes, as to the military transports ( $\sigma \tau \rho a \tau \iota \omega \tau \iota \delta \epsilon s, \delta \pi \lambda \iota \tau \dot{\alpha} \gamma \omega \gamma \sigma \iota$ ), for the sailing of the former would be much impeded by so large a weight of metal. At any rate, those that Thucydides speaks of were not on the triremes, but on the $\delta \lambda \pi d \delta \in s$.

## DELUBRUM. [Templum.]

IUEMARCHI ( $\delta \dot{\prime} \mu \mu \rho \chi \circ\llcorner$ ), the chief magistrates of the demi ( $\delta \bar{\eta} u(1)$ in Attica, and said to have

## DEMOCRATIA.

been first appointed by Cleisthenes. Their duties were various and important. Thus, they convened meetings of the demus, and took the votes upon all questions ander consideration; they had the
 in which the members of the demus were enrolled; and they made and kept a register of the landed estates ( $\chi \omega$ pia $)$ in their districts, whether belonging to individuals or the body corporate; so that whenever an ci $\sigma \phi o p$ á, or extraordinary propertytax was imposed, they must have been of great service in assessing and collecting the quota of each estate. Moneys dne to the demus for rent, \&c. wore collected by them (Dem. c. Eub. p. 1318), and it may safely be allowed that they were employed to enforce payment of various debts and dnes claimed by the state. For this purpose they seem to have had the power of distraining, to which allusion is made hy Aristophanes ( $N u b .37$ ). In the daties which have been enumerated, they supplanted the naucrari ( $\nu$ аи́крарои) of the old constitution ; their functions, however, were not confined to daties of this class, for they also acted as police magistrates: thus, in conjunction with the
 assisted in preserving peace and order, and were required to hary, or cause to be buried, any dead hodies found in their district: for neglect of this duty they were liable to a fine of 1000 drachmae. (Dem. c. Macar. 1069.22r) Lastly, they seem to have furnished to the proper anthorities a list of the members of the township who were fit to serve in war (кata入ójous é éotñ $\sigma a \nu \tau o$, Demosth. c. Polyo. p. 1208; Harpocr. s. v. ; Poll. viii. 118 ; K. F. Hermann, Griech. Stantsalterth. § 111 ; Böckh, Public Econ. of Athens, pp. 157, 512; Schömann, De Comitios, p. 376, \&c.). Demarchi was the pame given by Greek writers to the Roman tribunes of the plebs.
[R. W.]
DEMENS. [Curator.]
DEMENSUM. [Servus.]
DEME'NTIA. [Curator.]
DEMEJTRIA ( $\delta \eta \mu \eta \tau p i a$ ), an annual festival which the Athenians, in 307 в. c., institnted in honour of Demetrius Poliorcetes, who, together with his father Antigonus, were consecrated under the title of saviour gods. It was celebrated every year in the month of Munychion, the name of which, as well as that of the day on which the festival was held, was changed into Demetrion and Demetrias. A priest ministered at their altars, and condncted the solemn procession, and the sacrifices and games with which the festival was celebrated. (Diodor. Sic. xx. 46 ; Plnt. Demctr. 10, 46.) To honour the new god still more, the Athenians at the same time changed the name of the festival of the Dionysia into that of Demetria, as the young prince was fond of hearing bimself compared to Dionysus. The demetria mentioned by Athenacus (xii. p. 536) are probably the Dionysia. Respecting the other extravagant fiatteries which the Athenians huaped upon Demetrins and Antigonns, see Athen. vi. . . 252; Herm. Polit. Ant. of Greece, § $175 . \mathrm{n}$. 6,7, and 8; and Thirlwall, Hist. of Greece, vol. vii. p. 331.
[L. S.]

## DEMINU'TIO CAPITIS. [Caput.]

DEMIOPRA'TA ( $\delta \eta \mu \iota \dot{\prime} \pi \rho a \tau a$, sc. $\pi \rho \alpha ́ \gamma \mu \alpha \tau a$ or $\kappa \tau \eta \mu \alpha \tau \alpha$, was property confiscited at Athens and sold by public anction. The confiscation of property was one of the most common sources of revenue in many of the Grecian states; and Aris-
tophanes ( $V^{\text {osp }}$. 559, with Schol.) mentions the $\delta \eta \mu$ об́тр $\alpha \tau \alpha$ as a separate branch of the public revenue at Athens. An account of such property was presented to the people in the first assembly of every prytaneia (Pollux, viii. 95) ; and lists of it were posted upon tablets of stone in differeat places, as was the case at Eleusis, with the catalogue of the articles which accrued to the temple of Demeter and Persephone, from persons who had committed any offence against these deities. (Pollux, x. 97.) Many nonuments of this kind were collected by Greek antiquarians, of which an account is given by Böckh (Publ. Econ. of Athens, pp. 197, 392, 2 d edit.) and Meier (De Bonis Damnatorum, p. $160, \&$ c.).

DEMIURGI ( $\delta \eta \mu \mathrm{l} 0 \mathrm{o} \boldsymbol{\gamma} \mathrm{ol}^{\prime}$ ). These magistrates, whose title is expressive of their doing the service of the people, are by some grammarians stated to have been peculiar to Dorian states; hnt, perhaps, on no anthority, except the form $\delta$ a $\mu$ ouppol. Miller (Dorians, vol. ii. p. 145) observes, on the contrary, that "they were not uncommon in the Peloponnesns, but they do not occur often ia the Dorian states." They existed among the Eleians and Mantineians, with whom they seem to have been the chief executive magistracy (oi $\delta \eta \mu$ uovpol
 of demiurgi in the Achaean league, who probably ranked next to the strategi. [Achaicum Fordus, p. 5, b.] Officers named Epidemiurgi, or upper demiurgi, were sent by the Corinthians to manage the government of their colony at Potidaea. (Thuc. i. 56.)
[R. W.]

## DE'MIUS ( $\delta \dot{\eta} \mu \mathrm{L} o s)$. [Tormentum.]

 constitution in which the sovereign political power is in the hands of the demns, or commonalty. In the article Aristocratia the reader will find noticed the rise and nature of the distinction between the politically privileged class of nobles and the commonalty, a class personally free, though without any constitntionally recognized political power. It was this commonalty which was properly termed the demus ( $\delta \bar{\eta} \mu o s$ ). The natural and inevitable effect of the progress of society being to diminish, and finally do away with, those distinctions between the two classes, on which the original difference in point of political power was founded, when the demns, by their increasing numbers, wealth, and intelligence, had raised themselves to a level, or nearly so, in real power and importance with the originally privileged class, now degenerated into an oligarchy, a struggle was sure to ensue, in which the demus, unless overborne by extrancons influences, was certain to gain the mastery. The sovereign power of the demus being thus established, the government was termed a democracy. There might, however, be two modifications of the victory of the commonalty. If the struggle between the classes had been protracted and fierce, the oligarchs were conmonly expelled. This was frequently the case in the smaller states. If the victory of the commonalty was achieved more by the force of moral power than by intestine warfare and force of arms, throngh the gradual concessions of "the few," the result (as at Athens) was simply the entire obliteration of the original distinctions. This form of the constitntion was still, in the most literal sense of the term, a democracy; for as wealth and birth no longer formed the title to political power, though
the weslthy and noble still remnined citizens of the commonwealth, the supreme power was to all intents and purposes in the hands of the class formerly constituting the demus, by virtue of their heing the more numerous. (Aristot. Pol. iv. 4, p. 122, ed. Göttling.) When the two classes were thus equalised, the termı demus itself was frequently used to denote the entire body of free citizens - "the many," in contrast with "the few."

It is obvious that, consistently with the maintenance of the fundramental principle of the supreme power being in the hands of the demus, various modifications of the constitution in detail might exist, and different views might be held as to what was the perfect type of a democracy, and what was an imperfect, or a diseased form of it. Aristotle (Pol. iv. 3) points out that a democracy cannot be defined by the mere consideration of numbers. For if the wealthy were the more numerous and possessed the supreme power, this would not he a democracy. A democracy is rather, when every free citizen is a member of the sovereign body
 This definition he expresses in a more accurate

 lt would still be a democracy if a certain amount of property were requisite for filling the puhlic offices, provided the amount were not large. ( $P_{0 l}$. iv. 4. p. 122, ed. Göttl.) A Politciac itself is one species of democracy (Pol. iv. 3. p. 117), jemocracy, in the full sense of the word, heing a sort of $\pi \alpha \rho e^{\prime} \kappa 6 a \sigma t s$ of $i$. But for a perfect and pure democracy it was necessary that no free citizen should be debarred on account of his inferiority in rank or wealth from aspiring to any office, or exercising any political function, and that each citizen should be allowed to follow that mode of life which he chose. (Arist. Pol. iv. 4, vi. 1.) In a passage of Herodotus (iii. 80), where we probably have the ideas of the writer himself, the characteristics of a democracy are specified to be1. equality of legal rights (iбovo $\mu \eta$ ) ; 2. the appointment of magistrates by lot ; 3. the accountahility of all magistrates and officers; 4. the reference of all public matters to the decision of the community at large. Aristotle also (Rhet. i. 8.

 oi à $\pi \delta \quad \tau \iota \mu \eta \mu d \tau \omega \nu$. In another passage ( $P o l$. vi. 1 ), after mentioning the essential principles on which a democracy is based, he goes on to say: "The follawing points are characteristic of a democracy ; that all magistrates should he chosen out of the whole hody of citizens; that all should rule each, and each in turn rule all ; that either all magistracies, or those not requiring experience and professional knowledge, should be assigned by lot ; that there should be no property qualification, or bat a very small one, for filling any magistracy; that the same man should not fill the same office twice, or shonld fill offices but few times, and but few offices, except in the case of military commands; that all, or as many as possible of the magistracies, should he of hrief duration ; that al citizens should be qualified to serve as dicasts ; that the supreme power in everything should reside in the public assembly, and that no magistrate should be entrusted with irresponsible power except in very small matters. (Comp. Plat. Resp. viii. pp. 558, 562,

563, Leg. iii. p. 690. c. vi. p. 757 , e.) Aristotle (Pol. iv. 3, 4, 5 , vi. 1, 2) describes the warious modifications which a democracy may assume. It is somewhat curious that neither in practice nor in theory did the representative stem attract any attertion among the Greeks.

That diseased form of a democracy, in which from the practice of giving pay to the poorer citizens for their attendance in the public assembly, and from other causes, the predominant party in the state came to be in fact the lowest class of the citizens (a state of things in which the democracy in many respects resembled a tyranny: see Arist. Pol. iv. 4) was by later writers (Polyb. vi. 4, 57; Plut. de Monarcil. c. 3) termed an Ochlocracy (ò ${ }^{2}$ лократía - the dominion of the mob); but the term is not found in Aristotle. (Wachsmuth, Hellenische Alterthumsk. c. 7, 8 ; K. F. Hermann, Lehrbuch der Griech. Staatsaltertliumer, §§ 52, 66-72; Thirlwall, History of Grecce, vol. i. c. 10.)
[C. P. M.]
DEMONSTRA'TIO. [Actio.]
DEMOPOIETOS ( $\delta \eta \mu$ птоinTos), the name given to a foreiguer who was admitted to the rights of citizenship at Athens by a decree of the people, on account of services rendered to the state. Such citizens were, however, excluded from the phratriae, and conld not hold the offices of either archon or priest (Dem. c. Neaer. p. 1376), bit were registered in a phyle and deme. [Civitas, Greek, p. 288, b.]

DEMO'SII ( $\delta \eta \mu \sigma \sigma t 06$ ), public slaves at Athens, who were purchased hy the state. Some of them filled subordinate places in the assembly and courts of justice, and were also employed as heralds, checking clerks, \&c. They were usually called $\delta \eta \mu \dot{\sigma}$ to oiké $\tau \alpha$, and, as we learn from Ulpian (ad Dem. Olynth. ii. p. 15), were taught at the expense of the state to qualify them for the discharge of such duties as have been mentioned. (Hemsterh. ad Polluc. ix. 10 ; Manssac. ad Harpocrat. s. v. $\delta \eta \mu \sigma_{0}$ os ; Petitus, Leg. Att. p. 342 .) As these public slaves did not belong to any one individual, they appear to have possessed certain legal rights which private slaves had not. (Meier, Att. Process, pp. 401, 560; Aeschin. c. Timarch. pp. 79,85 .)

Another class of public alaves formed the city guard ; it was their duty to preserve order in the public assembly, and to remove any person whom the Prytaneis might order. (Schneider, Ad Xen. Mem. iii. 6. § 1 ; Plato, Protag. p. 319, and Heindorf's note ; Aristoph. Acharn. 54, with the commentators.) They are generally called bowmen ( $\tau 0 \xi \bar{j} \tau \alpha u$ ); or from the native country of the majority, Scythians ( Ycútat); and also Speusinians, from the name of the person who first established the force. (Pollux, viii. 131, 132 ; Photius, s. $v$. ro $\bar{j} \sigma \sigma a$. .) There were also among them many Thracians and other barbarians. They originally lived in tents in the market-place, and afterwards upon the Areiopagus. Their officers had the name of toxarchs ( $\tau 0 \dot{\xi} \alpha \rho \chi 01$ ). 'Their number was at first 300 , purchased soon after the battle of Salamis, but was afterwards increased to 1200. (Aeschin. Mepl Парат $\rho \in \sigma \epsilon$. p. 335 ; Andoc. De Pac. p. 93 ; Böckh, Publ. Econ. of Athens, pp. 207, 208, 2d edit.)
DEMUS. The word $\delta \bar{\eta} \mu$ as originally indicated a district or tract of land, and is hy som derived from $\delta \dot{\delta} \omega$, as if it signified an "onclosure marked
off from the waste," just as our word town comes, according to Horne Tooke, from the Saxon verb "tynan," to enclose. (Arnold, ad Thue. vol. i. Appendix, iii.) It seems, however, more simple to connect it with the Doric $\delta \hat{a}$ for $\gamma \hat{\alpha}$. In this meaning of a country district, inhabited and under cultivation, $\delta \hat{\eta} \mu \omega s$ is contrasted with $\pi \delta \bar{\lambda} u s$ : thus we have $\dot{\alpha} \nu \delta \rho \omega \bar{\omega} \nu \delta \eta \mu \dot{\partial} \nu \tau \in \pi \delta \lambda \iota \nu \tau \in$ (Hes. Op. et Dies, 527 ); but the transition from a locality to its occupiers is easy and natural, and hence in the earlier Greek poets we find $\delta \hat{\eta} \mu o s$ applied to the outlying country population, who tilled the lands of the chieftains or inhabitants of the city; so that $\delta \hat{\eta} \mu o s$ and $\pi 0 \lambda i \not \tau \alpha l$ came to be opposed to each other, the former denoting the subject peasantry, the latter, the nobles in the chief towns.

The Demi (oi $\delta \hat{\eta} \mu \mathrm{ot}$ ) in Attica were subdivisions of the tribes, corresponding to our townships or hundreds. Their institution is ascribed to Theseus; but we know nothing about them before the age of Cleisthenes, who broke up the four tribes of the old constitution, and substituted in their place ten local tribes ( $\phi \cup \lambda \alpha i \operatorname{\tau } \boldsymbol{\pi} \iota \kappa \alpha i$ ), each named after some Attic hero. (Herod. v. 66,69.) These were subdivided each into ten demi or country parishes, possessing each its principal town; and in some one of these demi were enrolled all the Athenian citizens resident in Attica, with the exception, perhaps, of those who were natives of Athens itself. (Thirlwall, Hist. of Greece, vol. ii. p. 74.) These subdivisions corresponded in some degree to the vanepapiat of the old tribes, and were, according to Herodotus, one hundred in number; but as the Attic demi amounted in the time of Strabo (ix. p. 396, c.) to 174 , doubts have been raised about this statement. Niebuhr has inferred from it that the tribes of Cleisthenes did not originally include the whole population of Attica, and "that some of the additional 74 must have been cantons, which had previously been left in a state of dependence; by far the chief part, however, were houses ( $\gamma \in \mathcal{\nu} \eta$ ) of the old aristocracy," which were included in the four Ionian tribes, but, according to Niebuhr, were not incorporated in the ten tribes of the "rural commonalty," till after the time of Cleisthenes. This inference, however, seems very questionable; for the number of the demi might increase from a variety of causes, such as the growth of the popuJation, the creation of new tribes, and the division of the larger into smaller demi ; to say nothing of the inprobability of the co-existence of two different orders of tribes. "Another fact, more difficult to account for, is the transposition by which demes of the same tribe were found at opposite extremities of the country." (Thirlwall, l.c., and app. i. vol.ii.) The names of the different demes were taken, some from the chief towns in them, as Marathon, Eleusis, and Acharnae; some from the names of houses or clans, such as the Daedalidae, Boutadae, \&c. The largest of all was the demus of Acharnac, which in the time of the Peloponnesian war, was so extensive as to supply a force of no less than three thonsand heavy-armed men. (Comp. Thuc. ii. 191.)

In explanation of their constitution and relation to the state in general, we may observe, that they formed independent corporations, and hed each their several magistrates, landed and other property, with a common treasury. They had likewise their respective convocations convend by the Demarchi ( $\delta$ guap 00 ), in which was transacted
the public business of the demus, such as the leas. ing of its estates, the elections of officers, the revision of the registers or lists of Demotae ( ( $\eta \mu$ ótal), and the admission of new members. [Demarchi.] Moreover, each demus appears to have kept what
 Demotae who were entitled to vote at the general assemblies of the whole people. In a financial point of view, they supplanted the old "naucraries " of the four tribes, each demus being required to furnish to the state a certain quota of money, and contingent of troops, whenever necessary. Independent of these bonds of union, each demus seems to have had its peculiar temples, and religions worship ( $\delta \eta \mu o \tau \iota \kappa \alpha^{\alpha}$ ícpó, Pans. i. 31 : Pollux, viii. 108), the officiating priests in which were chosen by the Demotae (Dem. c. Eubul. p. 1313); so that both in a civil and religious point of viev, the demi appear as minor communities, whose magistrates, moreover, were obliged to submit to a Sonц $\mu a \sigma$ 位, in the same way as the public officers of the whole state. But besides the magistrates, such as demarchs and treasurers ( $\tau \alpha \mu l a i$ ), elected by each parish, we also read of judges, who were called $\delta \iota \kappa a \sigma \tau a l$ кatà $\delta \dot{\eta} \mu$ ovs: the number of these officers, originally thirty, was afterwards increased to forty, and it appears that they made circuits through the different districts, to administer justice in all cases where the matter in dispute was not more than ten drachmoe in value, more important questions being reserved for the סıaır $\eta \tau a l$. (Hudtwalcker, p. 37.)

On the first institution of the demi, Cleisthenes increased the strength of the $\delta \hat{\eta} \mu o s$, or commonalty, by making many new citizens, amongst whom are said to have been included not only strangers and resident foreigners, but also slaves. (Arist. Pol. iii. 1.)* Now admission into a demus was necessary, before any individual could enter upon his full rights and privileges as an Attic citizen; and though in the first instance, every one was enrolled in the register of the demus in which his property and residence lay, this relation did not continue to hold with all the Demotae ; for since a son was registered in the demus of his real or adoptive father, and the former might change his residence, it would often happen that the members of a demus did not all reside in it. Still this would not cause any inconvenience, siace the meetings of each demus were not held within its limits, but at Athens. (Dem. c. Eubul. p. 1302.) No one, however, could purchase property situate within a demus to which he did not himself belong, without paying to the demarchs a fee for the privilege of doing so ( єं $\gamma \kappa \tau \eta \tau \ldots \delta \nu)$, which would, of course, go to the treasury of the demus. (Böckh, Publ. Econ. of Athens, p. 297, 2nd ed.)

Two of the most important functions of the general assemblies of the demi, were, the admission of new members and the revision of the names of members already admitted. The register
 because any person whose name was inscribed in it could enter upon an inheritance and enjoy a

[^26]parimony, the expression for which in Attic
 heing equivalent to the Roman phrase adire hereditatem. These registers were kept by the demarchs, who, with the approbation of the members of the demus assembled in general mecting, inserted or erased names according to circumstances. Thus, when a youth was proposed for enrolment, it was competent for any demote to object to his admission on the ground of illegitimacy, or noncitizenship, by the side of either parent. The Demotae decided on the validity of these objections under the sanction of an oath, and the question was determined by a majority of votes. (Dem. c. Eub. p. 1318.) The same process was observed when a citizen changed bis demus in consequence of adoption. (Isaeus, Dc Apoll. Hered. p. 66. 17.) Sometimes, however, a demarch was bribed to place, or assist in placing, on the register of a demus, persons who had no claim to citizenship. (Demosth. c. Leoch. p. 1091.) To remedy this admission of spurious citizens ( $\pi a, \operatorname{\epsilon } \gamma \gamma \rho a \pi \tau 0$ ) the
 Lastly, crowns and other honorary distinctions could be awarded by the demi in the same way as by the tribes. (K. F. Hermann, Griech. Staatsulterth. §111, \&c.; Wachsmuth, Hellen. Alterthumsk. vol. i. p. 544, \&c., 2nd ed.; Leake, The Demi of Attika, London, 1841, 2nd ed.; Ross, Die Demen von Attilia.)
[R.W.]
DENA'RIUS, the principal silver coin among the Romans, was so called because it was originally equal to ten asses; but on the reduction of the weight of the as [As], it was made equal to sixteen asses, except in military pay, in which it was still reekoned as equal to ten asses. (Plin. H.N. xxxiii. 13.) The denarius was first coined five years before the first Punic war, в. c. 269. [Argentum.] There were originally 84 denarii to a pound (Plin. H. N. xxxiii. 46 ; Celsus, v. 17.§1), but subsequently 96. At what time this reduction was made in the weight of the denarius is uncertain, as it is not mentioned in bistory. Some have conjectured that it was completed in Nero's reign; and Mr. Hussey (Ancient Weights, \&c. p. 137) justly remarks, that Suetonius (Jul. 54) proves that 84 denarii went still to the pound, about the year в.c. 50 ; since if we reckon 96 to the pound, the proportion of the value of gold to silver is 7.8 to 1 , which is incredihly low; while the value on the other supposition, $8 \cdot 9$ to 1 , is more probable. Compare Argentum.

Mr. Hussey calculates the average weight of the denarii coined at the end of the commonwealth at 60 grains, and those under the empire at 52.5 grains. If we deduct, as the average, $\frac{1}{30}$ of the weight for alloy, from the denarii of the commonwealtli, there will remain 58 grains of pure silver; and since the shilling contains 80.7 grains of pure silver, the value of the best denarii will be $\frac{58}{80 \cdot 7}$ of a shilling, or 8.6245 pence; which may be reckoned in round numbers $8 \frac{1}{2} d$. If the same method of reckoning be applied to the later denarius, its value will be about 7.5 pence, or $7 \frac{1}{2} d$. (Hussey, pp. 141, 142.)

The Roman coins of silver went at one time as low down th the fortieth part of the denarius, the teruncius. They were, the quinarius or half denarius, the sestertius or quarter denarius [Sestereruse7, the libella or tenth of the denarius (equal to

BRITISH MUSRUM. ACTUAL SIZE. WEIGHT 60.6 grains.

BRITISH MUSEUM. ACTUAL SIZE. WEIGHT 58.5 GRAINB.
the as), the sembella or half likella, and the teruncius or quarter libella.

The quinarius was also called victoriatus (Cic. Pro Font. 5), from the impression of a figure of Victory which it bore. Pliny (H.N. xxxiii. 13) says that victoriati were first coined at Rome in pursuance of the lex Clodia; and that previous to that time, they were imported as an article of trade from Illyria. The Clodius, who proposed this law, is supposed to have been the person who ohtained a trinmph for his victories in Istria, whence ho brought home a large sum of money (Liv. xli. 13); which would fix the first coinage of the victoriati at Rome, в. c. 177 ; that is, 92 years after the first silver coinage.

If the denarius weighed 60 grains, the teruncius would only have weighed $1 \frac{1}{2} \mathrm{gr}$; which would have been so small a coin, that some have doubted whetber it was ever coined in silyer; for we know that it was coined in copper. [As.] But Varro (De Ling. Lat. v. 174, ed. Müller) names it among the silver coins with the libella and sembella. It is, however, improbable that the teruncius continued to be coined in silver after the as had been reduced to $\frac{1}{16}$ of the denarius; for then the teruncius would have been $\frac{-7}{6}$ th of the denarins, whereas Varro only describes it as a subdivision of libella, when the latter was $\frac{1}{10}$ th of the denarins. In the time of Cicero, the libella appears to have been the smallest silver coin in use (Cic. Pro. Rosc. Com. c. 4) ; and it is frequently used, not merely to express a silver coin equal to the as, but any very small sum. (Plaut. Cas. ii. 5. 7, Capt. v. 1. 27.) Gronovius (De Sestertiis, ii. 2), however, maintains that there was no such coin as the libella when Varro wrote; hut that the word was used to signify the tenth part of a sestertius. No specimens of the libelia are now found.

If the denarius be reckoned in value $8 \frac{1}{2} d$, the other coins which have been mentioned, will be of the following value:-

| Teruncius | Pence | Farth. $\cdot 53125$ |
| :---: | :---: | :---: |
| Sembela |  | I-0625 |
| Libella . |  | $2 \cdot 125$ |
| Sestertius | 2 | $\cdot 5$ |
| Quinarins or Victoriatus | 4 | 1 |
| Denarius | 8 | 2 |

It has been frequently stated that the denarius
is equal in value to the drachma; but this is not quite correct. The Attic drachma was almost equal to $9 \frac{3}{4} d$., whercas we have seen that the denirius was but little above $8 \frac{1}{2} d$. The later drachmac, however, appear to have fallen off in weight; and there can le no doubt that they were at one time nearly enough equal to pass for equal. Gronovius has given all the authoritics upon the subject in his De Sestertiis (iii. 2).

The earliest denaxii have usually, on the obverse, the head of Rome with a helmet, the Dioscuri, or the head of Jupiter. Many have, on the reverse, chariots drawn by two or four horses (bigae, quadrigue), whence they are called respectively bigati•and quadriguti, sc. nummi. [Bigatus.] Some denarii were called serrati (Tacit. Germ. 5), because their edges were notched like a saw, which appears to have been done to prove that they were solid silver, and not plated. Many of the gentile denarii, as those of the Aelian, Calpurnian, Papinian, Tullian, and numerous other gentes, are marked with the numeral $X$, in order to show their value.
Pliny (II.N. xxxiii. 13) speaka of the denarius aureus. Gronovius (De Sester. iii. 15) says, that this coin was never struck at Rome; hut there is one of Augustus in the British Museum, weighing 60 grains, and others of less weight. The average weight of the common aureus was 120 grains. [Aurum.] In later times, a copper coin was called denarius. (Ducange, s. v. Denarius.)

## DEnica'LeS FE'RIAE. [Feriae.]

DENTA'LE. [ARATRUM.]
DENTIFRI'CIUM ( ${ }^{\circ} \delta о \nu \tau о \tau \rho!\mu \mu \alpha$ ), dentrifice or tooth-powder, appears to have been skilfully prepared and generally used among the Romans. A variety of substances, such as the bones, hoofs, and horns of certain animals, crahs, egg-shells, and the shells of the oyster and the murex, constituted the basis of the preparation. Having been previously burnt, and sometimes mixed with honey, they were reduced to a fine powder. Though fancy and superstition often directed the choice of these ingredients, the addition of astringents, such as myrrh, or of nitre and of hartahorn ground in a raw state, indicates science which was the result of experience, the intention being not only to clean the teeth and to render them white, but also to fix them when loose, to strengthen the gums, and to assuage tooth-ache. (Plin. II.N. xxviii. 49, xxxi. 46, xxxii. 21, 26.) Pounded pumice was a more dubious article, though Pliny (xxxvi. 42) says, "Utilissima fiunt ex his dentifricia." [J. Y.]

DEPENSI AC'SIO. [Intercessio.]
DEPORTA'TIO. [Exsilium.]
DEPO'SITI ACTIO. [DEfositum.]
DEPO'SITKUM. The notion of depositum is this: a moveable thing is given by one man to another to keep until it is demanded back, and without any reward for the trouble of keeping it. The party who makes the depositum is called deponens or depositor, and he who receives the thing is called depositurius. The act of deposit may be purely voluntary; or it may be from necessity, as in the case of fire, shipwreck, or other casualty. The depositarius is bound to take care of the thing which he has consented to receive. He cannet use the thing unless he has permission to use it, either by express words or by necessary implication. If the thing is one "quae usu non consumitur," and it is given to a persou to be used,
the transaction becomes a case of locatio and conductio [Locatio], if money is to be paid for the use of it ; or a case of commodatuen [Сомmodatum ], if nothing is to be paid for the use. If a bag of money not sealed up is the subject of the depositum, and the depositarius at any time asks for permission to use it, the money becomes a loan [MuTuum] from the time when the permission is granted; if the deponens proffers the use of the money, it becomes a loan from the time when the depositarius begins to use it. (Dig. 12. tit. l. s. 9. $\S 9$, s. 10.) If money is deposited with the condition that the same amount be returned, the use of it is tacitly given. If the depositum continues purely a depositum, the depositarius is bound to make good any damage to it which happens through dolus or culpa lata; and he is bound to restore the thing on demand to the deponens, or to the person to whom the deponens orders it to be restored. If several persons had received the deposit, they were severally liable for the whole (in solidum). The remedy of the deponens against the depositarius, is by an actio depositi directa. The depositarius is entitled to be secured against all damage which he may have sustained through any culpa on the part of the deponens, and to all costs and expenses incurred by his charge ; and his remedy against the deponens is by an actio depositi contraria. The actio was in duplum, if the deposit was made from necessity ; if the depositarius was guilty of dolus, infamia was a consequence. (Inst. 3. tit. 14 (15) ; Cod. 4. tit. 34 ; Dig. 16. tit. 3 ; Cic. de Off. i. 10 ; Juv. Sat. xiii. 60 ; Dirksen, Uebersicht, \&c. p. 597 ; Thibant, System, \&c. § 480 , \&c., 9th ed.)
[G. L.]
DESERTOR, is defined by Modestinus to be one "qui per prolixum tempus vagatus, reducitur," and differs from an emansor, "qui diu vagatus ad castra egreditur." (Dig. 49. tit. 16. s. 3.) Those who deserted in time of peace, were punished by loss of rank, corporal chastisement, fines, ignominious dismission from the service, \&c. Those who left the standards in time of war were usually punished with death. The transfugae, or deserters to the enemy, when taken, were sometimes deprived of their hands or feet (Liv. xxvi. 12), but generally were put to death. (Lipsius, De Milit. Rom. iv. 4.)

DESIGNA'TOR. [Funus.]
DESMOTE'RION ( $\delta$ е $\sigma \mu \omega \tau$ h $\rho i o \nu$ ). [Саноен. ј
DESPOSIONAUTAE ( $\delta \in \sigma \pi \sigma \sigma \iota \vartheta a \hat{\tau} \tau a$.$) [ \mathrm{Ct}-$ vitas.]
 rally " one who leaps off," was applied to a person who rode several horses or chariots, leaping from one to the other. As early as the Homeric times, we find the description of a man, who keeps four horses abreast at full gallop, and leaps from one to another, amidst a crowd of admiring spectators. (Il. xv. 679-684.) In the games of the Roman circus this sport was also very popular. The Roman desultor generally rode only two horses at the same time, sitting on them without s saddle, and vaulting upon either of them at his pleasure. (Isid. Orig. xviii. 39.) He wore a hat or cap made of felt. The taste for these exercises was carricd to so great an extent, that young men of the highest rank not only drove bigae and quadrigae in the circus, but exhibited these feats of horsemanship. (Suet. Jul. 39.) Among other mations this species of equestrian dexterity was
applied to the purposes of war. Livy mentions a troop of horse in the Numidian army, in which each soldier was supplied with a couple of horses, and in the heat of hattle, and when clad in armour, would leap with the greatest ease and celerity from that which was wearied or disabled upon the hack of the horse which was still somen and fresh. (xxiii. 29). The Scythians, Armenians, and some of the Indians, were skilled in the same art.

The annexed woodcut shows three figures of desultores, one from a bronze lamp, published by Bartoli (Antiche Lucerne Sepolcrali, i. 24), the others from coins. In all these the rider wears a pileus, or cap of felt, and his horse is without a ssddle ; but these examples prove that he had tbe ase both of the whip and the rein. On the coins we also observe the wreatl and palm-brauch as ensigns of victory.
[J. Y.]

DETESTATIO SACRORUM. [Gens.] DEVERSO'RIUM. [Caupona.]
DEUNX. [As, p. 140, b; Libra.]
DEXTANS. [Ass, p. 140, b; Libra.]
DIABATE/RIA ( $\delta$ iabartipia), a sacrifice offered to Zeus and Athena by the kings of Sparta, upon passing the frontiers of Lacedaemon with the command of an army. If the victims were unfavourahle, they distanded the army and returned home. (Xen. De Rep. Lac. xi. 2 ; Thuc. v. $54,55,116$.)

DIADE'MA (óá $\delta \eta \mu \alpha$ ), a white fillet used to encircle the head (fascia alba, Val. Max. vi. 2. §7). The invention of this ornament is by Pliny (vii. 57) attributed to " Liber Pater." Diodorus Siculus adds (iv. p. 250, Wessel.), that he wore it to assuage headache, the consequence of indulgence in wine. Accordingly, in werks of ancient art, Dionysus wears a plain bandage on his head, as shown in the cut under Cantharus. The decoration is properly Oriental. It is commonly represented on the heads of Eastern monarchs. Justin (xii, 3) relates that Alexander the Great adopted the large diadem of the kings of Persia, the ends of which fell upon the shoulders, and that this nrark of royalty was preserved by his successors. Antany asumed it in his luxurious intercourse with Cleo-
patra in Egypt. (Florus, iv. 11.) Aclian says (V. HI. vi. 38) that the kings of that country had the figure of an asp upon their diadems. In process of time the sculptors placed the diadema on the head of Zeus, and various other divinities besides Dionysus; and it was also gradually assumed by the sovereigns of the Western world. It was tied behind in a buw; whence Tacitus (Ann. vi. 37) speaks of the Euphrates rising in waves " white with foam, so as to resemble a diadem." By the addition of gold and gems, and ly a continual increase in richness, size, and splendour, this bandage was at length converted into the crown which has heen for many centuries the badge of sovereignty in modern Europe. [J. Y.]

DIADICA'SIA ( $\ddagger$ adín $\alpha \sigma^{\prime} a$ ), in its most extended sense is a mere synonym of סíc\%: technically, it denotes the proceedings in a contest for preference between two or more rival parties ; as, for instance, in the case of several claiming to succeed as heirs or legatees to the estate of a deceased person. Upon an occasion of this kind, it will be observed that, as all the claimants are similarly situated with respect to the subject of dispute, the ordinary classification of the litigants as plaintiffs and defendants becomes no longer applicable. This, in fact, is the essential distinction between the proceedings in question and all other suits in which the parties appear as immediately opposed to each other; but as far as forms are concerned, we are not told that they were peculiarly characterised. Besides the case above mentioned, there are several others to be classed with it in respect of the object of proceedings being an absolute acquisition of property. Among these are to be reckoned the claims of private creditors upon a confiscated estate, and the contests between informers claiming rewards proposed by the state for the discovery of crimes, \&c., as upon the occasion of the mutilation of the Hermae (Andoc. 14) and the like. The other class of causes included under the general term consists of cases like the antidosis of the trierauchs [Antidosis], contests as to who was to be held responsible to the state for public property alleged to have been transferred on one hand and denied on the other (as in Dem. c. Everg. et Maes.), and questions as to who should undertake a choregia, and many others, in which exemptions from personal or pecuniary liabilitics to the state were the suhject of claim by rival parties. In a diadicasia, as in an ordinary סíк $\eta$, the proper court, the presiding magistrate, and the expenses of the trial, mainly depended upon the peculiar object of the proceedings, and present no leading characteristics for discussion under the general term. (Platner, Process und Klagen, ii. p. 17. s. 9.) [Dike.]
[J. S. M.]

## DIADOSEIS ( $\delta \iota a \delta \delta \sigma \epsilon l s$.) [Dianomae.] <br> DIAE'TA. [Domus.]

DIAETE/TICA, or DIAETE ${ }^{\prime \prime}$ TICE ( $\delta \iota \alpha \iota \tau \eta-$ тик $\boldsymbol{\eta}^{\prime}$, one of the principal branches into which the ancients divided the art and science of medicine. [Medicina.] The word is derived from Siasta, which meant much the same as our word diet. It is defined by Celsus (De Medic. Praefat. in lib. i.) to signify that part of medicine quae victu medetur, "which cures diseases hy means of regimen and diet;" and a similar explanation is given by Plato (ap. Diog. Luërt. iii. 1. § 85.) Taken strictly in this sense, it would correspond very ncarly with the modern dietetics, and this is
the meaning which it always bears in the earlier medical writers, and that which will be adhered to in the present artiele; in some of the later authors, it seems to comprehend Celsus's second grand division, Pharmaceutica, and is used by Scribonins Largus (De Compos. Medicam. § 200) simply in opposition to chirurgia, so as to answer exactly to the provinee of our physician.

No attention seems to have been paid to this branch of medicine before the date of Hippocrates. Homer represents Machaon, who bad been wounded in the shoulder by an arrow ( 11. xi. 507) and forced to quit the field, as taking a draught composed of wine, goat's-milk cheese, and flour (ibid. 638), which eertainly no modern surgeon would prescribe in such a case. (Sce Plat. De Repub.. iii. pp. 405, 406 ; Max. Tyı. Serm. 29 ; Athen. i. p. 10.) Hippocrates seems to claim for bimself the credit of being the first person who bad studied this subject, and says that "the aneients had written nothing on it worth mentioning" (De Rat. Vict. in Morb. Acul. vol. ii. p. 26, ed. Kühn). Among the works commonly aseribed to Hippocrates, there are four that bear upon this subject. It would be out of place here to attenpt any thing like a complete account of the opinions of the ancients on this point ; those who wish for more detailed information must be reforred to the different works on medical antiquities, while in this article mention is made of only such particulars as may be supposed to have some interest for the general reader.

In the works of Hippocrates and his suceessors almost all the articles of food used by the aucients are mentioned, and their real or supposed properties discussed, sometimes quite as fancifully as by Burton in his Anatomy of Melancholy. In some respects they appear to have been much less delicate in their tastes than the moderns, as we find the flesh of the fox, the dog, the horse, and the ass spoken of as common articles of food. (Pseudo-Hippocr. De Vict. Rut. lih. ii. vol. i. pp. 679,680 .) With regard to the quantity of wine drank by the ancients, we may arrive at something like certainty from the fact that Caelius Aurelianus mentions it as something extraordinary that the famous Asclepiades at Rome in the first eentury B. C., sometimes ordered his patients to double and treble the quantity of wine, till at last they drank half wine and half water ( $D e$ Morl. Chron. lib. iii. c. 7. p. 336), from which it appears that wine was commonly diluted with five or six times its quantity of water. Hippocratcs recommends wine to be mixed with an equal quantity of water, and Galen approves of the proportion; but Le Clerc (Hist. de la Méd.) thinks that this was only in particular cases. In one place (Pseudo-Hippocr. De Tict. Rat. lih. iii. in fin.) the patient, after great fatigue, is recommended
 much doubted whether aetual intoxication is meant, or only the "drinking freely and to eheerfulness," in which sense the same word is used by St. John (ii. 10) and the LXX. (Gen. xliii. 34 ; Cant. v. 1 ; and perhaps Gen. ix. 21). Aceording to Hippocrates, the proportions in which wine and water should be mixed together, vary aecording to the season of the year; for instance, in summer the wine shonld be most diluted, and in winter the least so. (Compare Cclsus, De Merlic. i. 3. p. 31. ed. Argent.) Exercise of various sorts, and bath-
ing, are also much insisted upon by the writers on diet and regimen; but for further particulars on these subjects the articles Balneae and Gymnasium must be consulted. It may, however, be added that the bath could not have been very common, at least in private families, in the time of Hippoerates, as he says (De Rat. Vict. in Morb. Acut. p. 62) that "there are few houses in which the necessary eonvenienees are to be found."

Another very favourite practice with the aneients, hoth as a preventive of sickness and as a remedy, was the taking of an emetie from time to time. The author of the treatise De Victus Ratione, falsely attributed to Hippoerates, recommends it two or three times a month (lib. iii. p. 710). Celsus considers it more henefiejal in the winter than in the summer (De Medic. i. 3. p. 28), and says that those who take an emetic twice a month had better do so on two suecessive days than once a fortnight (Did. p. 29). At the time in which Celsus wrote, this practice was so commonly abused, that Asclepiades, in his work De Sanitate Tuenda, rejeeted the use of emeties altogether, "Offensus," says Celsus (Ibid. p. 27), " eorum consuetudine, qui quotidie ejieiendo vorandi facultatem moliuntur." (See also Plin. H. N. xxvi. 8.) It was the enstom among the Romans to take an emetic immediately before their meals, in order to prepare themselves to eat more plentifully ; and again soon after, so as to avoid any injury from repletion. Cieero, in his account of the day that Caesar spent with him at his house in the country (ad Att. xiii. 52), says, "Accubuit, $\epsilon^{\epsilon} \mu \in \tau \iota \kappa \grave{\eta} \nu$ agebat, itaque et edit et bibit $\dot{a} \delta \epsilon \omega \bar{\omega}$ et jucunde; " and this seems to have heen considered a sort of eompliment paid hy Caesar to his host, as it intimated a resolution to pass the day cheerfully, and to eat and drink freeiy with him. He is represented as having done the same thing when he was entertained by King Deiotarus (Cic. Pro Deiot. e. 7). The glutton Vitellius is said to have preserved his own life by constant emetics, while he destroyed all his companions who did not use the same preeaution (Suet. Fitell. c. 13 ; Dion Cass. lxv. 2), so that one of them, who was prevented by illness from dining with him for a few days, said, " I should certainly have been dead if I had not fallen sick." Even women, after bathing before supper, used to drink wine and throw it up again to sharpen their appetite -
[Falerni] " sextarius alter
Ducitur ante cibum, rabidam facturus orexim."
Juv. Sat. vi. 427, 428.
so that it might truly be said, in the strong language of Seneea (Cons. ad Helv. 9. § 10)," Vomunt, ut edant ; edunt, ut vomant." (Compare Seneca, De Provid. c. 4. §11, Epist. 95. § 21.) By some, the practice was thought so effectual for strengthening the constitution, that it was the coustant regimen of all the athletae, or professed wrestlers, trained for the publie shows, in order to make then more robust. Celsus, however, (l. c. p. 28), wams his readers against the too frequent use of emetics without neeessity and merely for luxury and gluttony, and says that no one who has any regard for his health, and wishes to live to old age, ought to make it a daily practice.
[W. A. G.]
DLAETE'TAE ( $\delta<a \iota \tau \eta \tau a l$ ), arbitrators, umpires. The diaetetae mentioned by the Athenian

DIAETETAE
DIAETETAE.
orators, were of two kinds ; the one public and appointed by lot ( $\kappa \lambda \eta \rho \omega \tau 0 \%$ ), the other private and chosen (aipetoi) by the parties who referred to them the decision of a disputed point, instead of trying it before a court of justice ; the judgments of both, according to Aristotle, being founded on

 13). We shall, in the first place, treat of the public diaetetae, following as closely as possible the $o$ der and statements of Hudtwalcker in his treatise "Ueber dic öffentlichen und PrivatSchiedsrichter Diäteten in Athen, und den Process vor denselben."
According to Suidas (s. v.), the public Diaetetae were required to be not less than 50 years of age ; according to Pollux (viii. 126) and Hesychius, not less than 60 . With respect to their number there is some difficulty, in consequence of a statement of Upian (Demostb. c. Meid. p. 542. 15), according to which it was 440 , i. e. 44 for each tribe,
 $\phi \nu \lambda \not \eta \nu)$. This number, bowever, appears so unnecessarily large, more especially when it is considered that the Attic orators frequently speak of only one arbitrator in each case, that some writers have, with good reason, supposed the reading
 K. $\hat{e} . \phi$. At any rate, litigious as the Athenians were, it seems that 40 must bave been enough for all purposes.
The words $\kappa a \theta^{\prime}$ écá $\sigma \tau \eta \nu \quad \phi u \lambda \eta \eta$, imply that each tribe had its own arbitrator; an inference which is supported by Demosthenes (c. Everg. p. 1142. 25), where he speaks of the arbitrators of the Ocneid and Erectheid tribes: as well as by Lysias (c. Pancl. p. 731), who, in the words $\pi \rho \rho \sigma \sigma \lambda \eta \sigma \alpha \dot{\alpha} \mu \nu 0$ s
 thought to allude to the Diaetetae of the Hippothoontid tribe. With regard to the election of these officers, it is doubtful wbether they were chosen by the members of the tribe for which they adjudicated, or in a general assembly of the people. Hudtwalcker inclines to the latter supposition, as being more probable: we do not tbink so; for it seems just as likely, if not more so, that the four arbitrators of each tribe were chosen in an assembly of the tribe itself. Again, whether they were appointed for life, or only for a definite period, is not expressly mentioned by the orators; but as none of the Athenian magistrates, with the exceptien of the Areiopagites, remained permanently in office, and Demesthenes (c. Mcid. p. 542.15) speaks of the last day of the llth month of the year as heing the last day of the Diaetetae ( $\dot{\eta} \tau \in \lambda \epsilon u \tau a i a$ $\hat{\eta} \mu \epsilon \rho \rho \sigma \hat{\omega} \nu \delta(a i \tau \eta \tau \omega \bar{\omega})$, it seems almost certain that they were clected for a year only. The only objection to this conclusion arises from a statement in a fragment of Isaeus (p. 361, ed. Reiske), where an arbitrator is spoken of as being engaged on a
 $\delta i \kappa \eta \nu$ ढ̈ $\chi$ оутos): if, however, we admit the conjectural reading $\tau \hat{\omega} \nu \delta \alpha_{1} / \tau \eta \tau \hat{\omega} \nu$, the meaning would he in accordance with what we infer from other authorities, and would only imply that the same cause came before the arbitrators of two different years, a case which might not unfrequently happen; if, on the contrary, the reading of the text is correct, we must suppose that it was sometimes necessary or convenient to re-clect an arbitrator for the decision of a particular case.

It is donbtful whether the public Dinetetae took any general bath before entering upon their duties. Such a guarantee would seem to be unnecessary ; for we read of their taking oaths previous to giving judgment in the particular cases which came before them. (Isacus, De Dicaeog. Hered. p. 54 ; Dem. c. Callip. p. 1244.) From this circumstance we should infer that no oath was exacted from them before they entered upon office: Hudtwalcker is of a contrary opinion, and suggests that the purport of their oath of office was the same as that of the Heliastic oath given by Demosthenes (c. Timocr. p. 747).
The Diaetetae of the different tribes appear to have sat in different places; as temples, halls, and courts of justice, if not wanted for other purposes. Those of the Oeneid and Erectheid tribes met in the heliaea (Dem. c. Everg. p. 1142. 25.); we read of others holding a court in the delphinium (c. Boeot. ii. p. 1011), and also in the $\sigma$ rod токıi入h́ (c. Steph. i. p. 1106). Again, we are told of slaves being examined by the Diaetetae sitting for that purpose, under the appellation of $\beta a \sigma \alpha y$ otal [Tormentum], in the hephaisteium, or temple of Poseidon. (Isocr. Tpatє§. p. 361. 21, ed. Bekker.) Moreover, we are told of private arbjtrators meeting in the temple of Athena on the Acropolis; and, if the amended reading of Pollux (viii. 126) is correct, we are informed by him, in general terms, that the arbitrators formerly beld
 $\pi \dot{d} \lambda a i$ ). Harpocration also (s. v.) contrasts the dicasts with the arbitrators, observing that the former had regularly appointed courts of justice

Another point of difference was the mode of payment, inasmuch as the dicasts received an allowance from the state, whereas the only remuneration of the Diaetetae was a drachma deposited as a $\pi$ ajáбтaбts by the complainant, on the commencement of the suit, the same sum being also paid for the $\dot{d} \nu \tau \omega \mu \sigma \sigma i a$, and every $\dot{u} \pi \omega \mu \circ \sigma i a$ sworn during the proceedings. (Pollux, viii. 39, 127; Harpocr. s. v.) This $\pi \alpha$. $\alpha \sigma \tau \alpha \sigma t s$ is the same as
 Demosthenes (c. Timoth. p. 1190). The defendant in this case bad failed to give evidence as he ought to have done, and therefore the plaintiff commenced proceedings against him for this neglect, hefore the arbitrators in the principal suit, the first step of which was the payment of the $\pi$ тapá$\sigma \tau a \sigma$ s.
 one who had, or fancied he bad, a cause of complaint against them for their decisions, might proceed against them by ei $\sigma \alpha \gamma \gamma \in \lambda \dot{\lambda}$, or information laid before the senate. For this purpose, says Ulpian, whose statement is confirmed hy Demosthencs (c. Meid.) in the case of Straton, the public Dia tetae were towards the close of tbeir year of office, and during the latter days of the month Thargelion, required to present themselves in some fixed place, probably near the senate-honse, that they might be ready to answer any charge brought against them, of which they received a previous notice. The punishment, in case of condemnation, was atimia, or the loss of civic rights. Harpocration (s. v.), however, informs us that the cia $\alpha \gamma-$ $\gamma \in \lambda$ ía against the arbitrators was brought before the dicasts or judges of the regular courts, but this probably happened only on appeal, or in cases of

## DIAETETAE.

great importance, inasmuch as the Bounth could not inflict a greater penalty than a fine of 500 drachmae with atimia.
As to the extent of the jurisdiction of the liactetae, Pollux (vii. 126) states, that in former times no suit was hrought into a court before it had been investigated by the Diaetetae ( $\pi$ d́八at
 There can be but little douht that the word $\pi \dot{\alpha} \lambda u$ a here refers to a time which was ancient with reference to the age of the Athenian orators, and therefore that this previous investigation was no longer requisite in the days of Demosthenes and his contemporaries. Still we find the Diaetetae mentioned by them in very many cases of civil actions, and it is not unlikely that the magistrates, whose duty it was to bring actions into court ( $\epsilon i \sigma d \gamma \epsilon \omega \nu)$, encouraged the process before the arbitrators, as a means of saving the state the payment which would otherwise have been due to the dicasts. Hudtwalcker is accordingly of opinion that the Diaetetac were competent to act in all cases of civil actions for restitution or compensation, but not of penal or criminal indictments ( $\gamma \rho a \phi a i$ ), and, moreover, that it rested with the complainant whether his cause was brought before them in the first instance, or sent at once to a higher court of judicature. (Dem. c. Androt. p. 601. 18.)

But besides hearing cases of this sort the Diaetetae sat as commissioners of inquiry on matters of fact which could not be conveniently examined in a court of justice (Dem. c. Steph. p.1106), just as what is called an "issue" is sometimes directed hy our own Court of Chancery to an inferior court, for the purpose of trying a question of fact, to be determined by a jury. Either party in a suit could demand or challenge ( $\tau \rho о к а л \epsilon і ̈ テ \forall a ı) ~$ an inquiry of this sort before an arbitrator, the challenge being called про́к $\lambda \eta \sigma \Delta s$ : a term which was also applied to the "articles of agreement" by which the extent and object of the inquiry were defined. (Dem. c. Neaer. p. 1387.) Many instances of these $\pi$ pook $\lambda \dot{\prime} \sigma$ eis are found in the orators; one of the most frequent is the demand or offer to examine hy torture a slave supposed to be cognisant of a matter in dispute, the damage which might result to the owner of the slave being guaranteed by the party who demanded the examination. (Harpocr. s. v. $\pi \rho \delta \kappa \kappa \lambda \eta \sigma / s_{\text {. }}$ ) See also Demosthenes (Onetor. i. p. 874), who observes that the testimony of a slave, elicited by torture, was thought of more value by the Athenians than the evidence of freemen. Another instance somewhat sinilar to the last, was the $\pi \rho \delta \kappa \lambda \eta \sigma$ is eis $\mu \alpha \rho \tau \nu-$ piay (Pollux, viii 62), where a party proposed to his opponent that the decision of a disputed point should be determined by the evidence of a third party. (Antiphon, De Choreut. p. 144, ed. Bekker.) Sometimes also we read of a $\pi \rho \delta \dot{\kappa} \lambda \eta \sigma t s$, by which a party was challenged to allow the examination of documents; as wills (Dem. c. Steph. p. 1104), deeds, bankers' books, \&c. (c. Timoth. p. 1197). It is manifest that the forms and ohjects of a $\pi$ porir $\eta \sigma$ ots would vary according to the matter in dispute, and the evidence which was producible; we shall, thereforc, content ourselves with adding that the term was also used when a party challenged his adversary to make his allegation under the sanction of an oath, or offered to make his own statements under the satue obliga-
tion. (Dem. c. Apat. p. 896, c. Con. p. 1269. 19.) The presumption or prepossession which might arise from a voluntary oath in the last ease, might he met by a similar $\pi \rho \delta \kappa \lambda \eta \sigma t s$, tendered by the opposite party, to which the original challenger appears to have had the option of consenting or not as he might think proper. (Dem. Timoth. p. 1203; compare Arist. Rhet. i. 16.) In all cases where any of these investigations or depositions were made before the Diaetetae, we may conclude with Hudtwalcker ( p .48 ), that they might he called as witnesses in sulbequent stages of the action, either to state the evidence they had taken, or to produce the documents they had examined, and which were deposited by them in an echinus. [Apprtlatio (Grebi).]
The proceedings in the trials before the pullic arhitrators were of two kinds, lst, When two parties agreed by a regular contract to refer s matter in dispute to a judge or judges selected from them. 2dy, When a cause was brought before a puhlic arbitrator, without any such previous compromise, and in the regular course of law. The chief difference seems to have been that, in case of a reference by contract between two parties, the award was final, and no appeal could he brought before another court, though the unsuccessful party might, in some instances, move for a new trisl
 Except in this point, of non-appeal, an arbitrator who was selected from the public Diaetetae by litigant parties, seems to have heen subject to the same liabilities, and to have stood in the same relation to those parties as an arbitrator appointed by lot : the course of proceeding also appears to have been the same hefore both (Dem. c. Meid. p. 541), an account of which is given below. It must, however, he first stated, that there are strong reasons in support of Hudtwalcker's opinion, that whenever a suitor wished to bring an action hefore one or more of the public Diaetetae, he applied to one of the many officers called ei $\sigma \alpha \gamma \omega \gamma$ Eis (Dem. c. Lacrit. p. 940. 5, c. Pantace. p. 976. 10 ; Pollux, viii. 93), whose duty it was to bring the cause ( $\epsilon \dot{i} \sigma \dot{\alpha} \gamma \epsilon \tau \nu$ ) into a proper court. By some such officer, at any rate, a requisite number of arbitrators was allotted to the complainant, care heing taken that they were of the same tribe as the defendant. (Harpocr. s. e. סraır $\eta \tau a l$.) Pollux (viii. 126) informs us that if a Diaetetes refused to hear a cause, he might be punished with atimia : but it appears that under extraordinary circumstances, and after hearing the case, a Diaetetes sometimes refused to decide himself, and referred the parties to a court of justice. (Dem. c. Phorm. p. 913. )

The process before the public Diaetetae was conducted in the following manner. After complaint made, and payment of the $\pi$ apda $\sigma a \sigma t s$, the plaintiff supported his averment by an oath, to the effect that his accusation was true, which the defendant met by a like oath as to the matter of his defence. When the oath (à $\nu \tau \omega \mu \circ \sigma i \alpha)$ had heen thus taken by the parties, the arbitrators entered upon the inquiry, heard witnesscs, examined documents, and held as many conferences ( $\sigma \dot{v} 0$ ooou) with the parties, as might be necessary for the settlement of the question. (See authorities, Hudtwalcker, p. 80.) The day of pronouncing judgment
 was probahly fixed by law, if we may judge from
the name ( $\boldsymbol{\eta}$ кขpia scil. $\hat{\eta} \mu \epsilon \epsilon_{\rho}$ ) by which it is called in the orators ; it might, however, with consent of botll parties, be postponed. The verdict given was countersigned by the proper authorities, perhaps by the $\epsilon \dot{j} \sigma \pi \gamma \omega \gamma \epsilon \bar{s}$, and thereby anquired its validity. The archons, mentioned by Demosthenes (c. Meid. p. 542) as having signed a judgment, were probably thesmothetae, as the action was a $\delta$ iк $\eta$ как $\eta \gamma$ орias, which is, moreover, called
 the plaintiff was not required to assess the damages (aestimare litom), the penalty, in case of a verdict for him, being determined by law : this alone is sufficient to prove that the Diaetetae sometimes decided in cases where the plaintiff sued for damages, as distinguished from those in which he sought restitution of rights or property; nor, indeed, does there seem any reason for supposing that their jurisdiction was not extended to the ${ }^{\prime} \gamma \omega \nu \epsilon \epsilon \tau \tau \mu \tau \tau 0$, , or actions where the plaintiff was required to assess or lay his damages, provided the assessment did not exceed some fixed amount. In support of this opinion we may adduce the authority of Pollux (viii. 127), who expressly states that the plaintiff night assess his damages before the arbitrators, when the law did not do so for him.
If the defendant were not present on the proper day to make his last defence, judgment went against him by default ( $\epsilon \rho \eta \mu \eta \nu \hat{\omega} \varphi \lambda \epsilon$ ), the arhitrator being obliged to wait till the evening (ò $\bar{\psi}$ e ${ }_{\eta} \boldsymbol{\mu} \mu \mathrm{é}$ рas, Dem. c. Meid. p. 541, c. Timoth. p. 1190 ). Sometimes, however, the time of pronouncing sentence was deferred in consequence of a deposition (ijn $\boldsymbol{\mu} \boldsymbol{\sigma} \sigma \mathrm{ta}$, Pollux, viii. 60 ; Harpocr. s. v.) alleging a satisfactory cause for postponement, such as sickness, absence from town, military service, or other reasons. To substantiate these, the applicant, when possible, appeared personally ; but if ${ }^{a}$ a party was prevented from appearing on the day of trial, hy any unexpected event, the $\dot{\sin \omega \mu} \mathbf{\mu} \boldsymbol{\sigma} / \alpha$ might be made on oath by autborised friends. (Dem. c. Olymp. p. 1174.4 ; Pollux, viii. 56.) The $\dot{v} \pi \omega \mu 0 \sigma i a$ might be met by a counter-statement ( $\left.{ }^{( } \nu \theta v \pi \omega \mu \sigma \sigma i \alpha\right)$ from the opposite party affirming his belief that the reasons alleged were fictitious or colourable. In cannection with this point, we may observe that, according to Pollux (viii. 60), the motion for a new trial conld only be sustained in cases where the applicant had made a $\dot{\text { un }} \boldsymbol{\mu} \mu \sigma \sigma i a$, and demurred either personally or by proxy against the passing of judgment on the regular day. Moreover, it was incumbent on the party who wished for a new trial to move for it within ten days after judgment had been pronounced, and even then he was obliged to take a kind of $\dot{v} \pi \omega \mu$ ofia, to the effect that his absence on the proper day was involuntary. (Pollux, viii. 60.) In default of compliance with these conditions, the previous sentence was confirmed. (Dem. c. Meid. p. 542.) We are told also by Photius (Lex. s. v. $\mu \bar{\eta}$ oì $\sigma \alpha$ oikn), that it was competent for plaintiff as well as defendant to move far a new trial on the grounds we have mentioned. When it was granted, the former ver-
 ties went again before an arbitrator, probably through the instrumentality of the eiray $\omega \gamma \epsilon \bar{i}$, to whom application had been made in the first instance. The process itself is called $\dot{a} \nu \tau i \lambda \eta \xi i s$ in Greek, and does not seem to have been confined to trials before the Diaetetae : the corresponding term in Roman law is restauratio eremodicii.

This, however, was not the only means of setting aside a judgment, inasmuch as it might also be effected hy an Eै $\phi \in \sigma t s$, or appeal to the higher courts [Appellatio (Greei)], and if false evidence had heen tendered, by a $\delta і к \eta \eta$ какотє $\chi \nu \bar{\omega}$, (Harpocr. s. v. ; Dem. c. Timoth. p. 1201. 5).

It remains to speak of the strictly private arbitrators, chosen by mutual agreement between contending parties, and therefore generally distinguished hy the title aipecoi, of whom it must be under. stood that they were not selected from the dıait ntal of the tribes. The powers with which they were invested, were, as we might suppose, not always the same ; sometimes they were merely $\delta \iota a \lambda \lambda a k \tau a i$, or chosen to effect a compromise or reconciliation: thus Isaens (De Dicaeog. Hered. p. 54, ed. Bekk.) speaks of arhitrators offcring either to bring about a reconciliation if they could, without taking an oath, or to make an award (à (àoфaivec $\theta a \iota$ ) upon oath. Sometimes, on the other hand, they were purely referees, and then their powers depended upon the terms of the agreement of reference; if these powers were limited, the arbitration was a $\delta$ íalq $\dot{e} \pi l$ $\quad$ qroîs (Isocr. o.Call. p. 373 ,ed. Bekk.). The agreement was not merely a verbal contract (stipulatio),
 Dem. c. Phor. p. 912), and signed by the parties; it fixed the number of referees (generally three), determined how many unanimous votes were necessary for a valid decision, and probably reserved or probibited, as the case might be, a right of appeal to other authorities. (Isocr. o. Call. p. 375 , ed. Bekk. ; Dem. c. Apat. p. 897.)

If there were no limitations, these Diaetetae were then, so to speak, arbitrators proper, according to the defnition of Festus (p. 15, ed. Müler) : -" Arbiter dicitur judex, quod totius rei habeat arbitrium et potestatem." Moreover, no appeal could be brought against their judgment (Dem. c. Meid. p. 545) ; though we read of an instance of a party baving persuaded his oppouent to leave a matter to the arbitration of three persons; and afterwards, when he found they were likely to decide against himself, going before one of the public arbitrators. (Dem. c. Apheb. p. 862.) We should, however, suppose that in this case there was no written $\sigma v v \theta \eta \nmid r \eta$. The award was frequently given under the sanction of an oath, and had the same force as the judgment which proceeded from a court of law, so that it might be fol-
 22.) We may add, that these private Diaetetae
 $\sigma \tau \epsilon\{\psi$, and that in some cases it was customary to give notice of their appointment to the proper archon or magistrate ( $\dot{\alpha} \pi о \phi \dot{\rho} \rho \epsilon \epsilon \nu \pi \rho \partial s=\tau \eta \nu \dot{\alpha} \rho \chi \hat{\eta} \nu)$, who, as Hudtwalcker suggests, may have acted as an cicarajeús in the case. (Dem. c. Callip. p. 1244. 14, c. Meid. p. 542. 14.)

DIAMASTIGO'SIS ( $\delta \iota \mu \mu \sigma \tau i \gamma \omega \sigma / s$ ), was a solemnity performed at Sparta at the festival of Artemis Orthia, whose temple was called Limnaeon, from its situation in a marshy part of the town. (Paus. iii. 16. \& 6.) The solemnity was this:-Spartan youths ( $(\notin \eta \delta 0 r)$ were scourged on the occasion at the altar of Artemis, by persong appointed for the purpose, untii their blood gushed
forth and covered the altar. The scourging itself was preceded by a preparation, by which those who intended to undergo the diamastigosis tried to harden themselves against its pains. Pansanias describes the origin of the worship of Artemis Urthia, and of the diamastigosis, in the following manner:-A wooden statue of Artemis, which Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of lrbus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbourmg places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth haman victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a smbstitute for human sacrifice, and Lycurgus made it also serye his purposes of education, in so far as he made it a part of the system of hardening the Spartan youths against bodily sufferings. (Plut. Lyc. 18, Instit. Laced. p. 254 ; Cic. Tuscul. v. 27.) According to another far less probahle account, the diamastigosis originated in a circumstance, recorded by Pantarch (Avistid. 17), which happened before the battle of Plataeae.

The worship of Artemis Orthia was unquestionably very ancient, and the diamastigosis only a step from harbarism towards civilisation. Many unecdotes are related of the courage and intrepidity with which young Spartans bore the lashes of the scourge; some even died without nttering a murmur at their sufferings, for to die under the strokes was considered as honourable a death as that on the tield of battle. (Compare Müller's Dor. ii. 9. § 6 . note $k$, and iv. 5. § 8., note c.; Manso, Sparta, i. 2. . 183.)
[L. S.]
DIA'NOMAE ( $\left.\delta, a \nu o \mu a^{\prime}\right)$ or DIA'DOSEIS ( $\delta$ la $\delta o ́ \sigma \in t s$ ) were public donations to the Athenian people, which corresponded to the Roman congiaria. [Conglarium.] To these belong the free distributions of com (Aristoph. Vesp. 715), the cleruchiae [Colonis (Greek)], the revenues from the mines, and the money of the theorica. [TнвоRicon.]

DIAPSE ${ }^{\prime}$ PHISIS ( $\delta \iota a \psi \neq \eta \not \iota \sigma \iota s$ ), a political institution at Athens, the object of which was to prevent aliens, or such as were the offspring of an unlawfol marriage, from assuming the rights of citizens. As usurpations of this kind were not uncommon at Athens (Plut. Pericl. 37 ; Harpocr. s. v. $\pi \mathbf{\pi} \alpha \mu \mu \delta$ ), various measures had been adopted against them ( $\gamma \rho a \phi a l \xi \in \nu i a s$ and $\delta \omega \rho \circ \xi \in \nu(a s)$; but as none of them had the desired effect, a new method, the $\delta$ ta $\psi \eta \emptyset \iota \sigma t s$ was devised, according to which the trial on spurious citizens was to be held by the demotae, within whose deme intruders were suspected to exist ; for if each deme separately was kept clear of intruders, the whole body of citizens would naturally feel the benefit. Every deme therefore obtained the right or duty at certain times to revise its lexiarchic registers, and to ascertain whether any had entered their names who had no claims to the rights of citizens. The assembly of the demotae, in which these investigations took place. was held under the presidency of the demaxch, or some senator belonging to the deme
(Harpocr. s. v. $\delta \eta \dot{\eta} \mu \rho \chi 0$ ) ; for in the case brought forward in the oration of Demosthenes against Eubulides, we do not find that he was demarch, but it is merely stated that he was a member of the $\beta$ oud $\eta$. When the demotae were assembled, an oath was administered to them, in which they promised to judge impartially, without favour tawards, or enmity against, those persons on whom they might have to pass sentence. The presideat then read the names of the demotae from the register, asking the opinion of the assembly ( $\delta, a \psi \eta$ $\phi\left(\int \in \sigma \theta a l\right)$ respecting each individual, whether they thonght him a true and legitimate citizen or not. Any one then had the right to say what he thought or knew of the person in question; and when any one was impeached, a regular trial took place. (Dem. c. Eubul. p. 1302; Aeschin. De Fals. Leg. p. 345.) Pallux (viii. 18) says that the demotae on this occasion gave their votes with leaves and not with pebbles as was nsual, but Demosthenes simply calls them $\psi \hat{\eta} \phi 0!$. If a persoa was found guilty of having usurped the rights of a citizen ( $a \pi 0 \psi \eta \phi\langle\zeta \in \sigma \theta a \iota)$, his name was struck from the lexiarchic register, and he himself was dsgraded to the rank of an alien. But if he did not acquiesce in the verdict, but appealed to the great courts of justice, at Athens, a heavier punislument awaited him, if he was found guilty there also; for he was then sold as a slave, and his property was confiscated by the state. (Dionys. Hal. de Isaeo, c. 16. p. 617, ed. Reiske ; Argument. ad Demosth. c. Eubul.)

If by any accident the lexiarchic registers had been lost or destroyed, a careful scrutiny of the same nature as that described above, and likewise called $\delta$ เa $\psi$ भ่фเбts, took place, in order to prevent any spurious citizen from having his name entered in the new registers. (Dem. l. c. p. l306.)

It is commonly helieved that the $\delta, \alpha \psi \eta$ intors was introduced at Athens in b. c. 419 , by one Demophilns. (Schömann, De Comitiis, p. 358, transl.; Wachsmnth, Hellen. Alterthumsh. vol. i. p. 549, 2nd ed.) But it has justly been remarked by Siebelis on Philochorus (Fragm. p. 61), that Harpocration (s. v. סıa $\psi \eta \phi \iota \sigma t s$ ), the apparent authority for this supposition, cannot be interpreted in this sense. One $\delta$ ta $\psi$ 多фuts is mentioned by Plutarch (Pericl. 37) as early as в. c. 445 . Clinton (F.H. ii. p. l41) has, moreover, shown that the $\delta$ a $\alpha \dot{\eta} \phi \iota \sigma t s$ mentioned by Harpocration, ia the archonship of Arehias, does not belong to B. c. 419, but to в.c. 347. Compare Hermann, Manual of the Pol. Ant. of Greece, § 123. n. 14, \&c. ; and Schömaun, l. c., whose lengthened account, however, should be read with great care, as he makes soms statements which seem to be irreconcilable with each other, and not founded on good authority. The source from which we derive most information on this snbject is the oration of Demosthenes against Enbulides.
[L. S.]
DIA'RIUM. [Servus.]
DIA ${ }^{\prime}$ SIA ( $\delta \iota a ́ \sigma a \alpha$ ), a great festival celebrated at Athens, withont the walls of the city ( ${ }^{\prime} \xi \omega \tau$ $\pi \delta \delta \lambda \in \omega s)$, in honour of Zeus, surnamed Mei $\lambda$ रios (Thuc. i. 126). The whole penple took part in it, and the wealthier citizens offered victims (iepeia), while the poorer classes burnt such incense as their
 scholiast on Thucydides erroneously explaias as cakes in the shape of animals. (Compare Xen. Anab. vii. 8. §4; Lalcian Tim. 7; Aristoph

Nub. 402, \&c.) The diasia took place in the latter half of the month of Anthesterion (Schol. ad Aristoph. l. c.) with feasting and rejoicings, and was, like most other festivals, accompanied by a fair. (Aristoph. Nub. 841.) It was this festival at which Cylon was enjoined by an oracle to take possession of the acropolis of Athens; but he mistook the oracle, and made the attempt during the celebration of the Olympian games. (Compare Pollux, i . 26 ; Suidas s. v.) The etymology of $\delta$ odara, given by most of the ancient grammarians (from $\Delta i d s$ and $\chi_{\sigma} \sigma \eta$ ) is false, the name is a mere derivative from $\delta i d s, ~ a s ~ " A \pi o \lambda \lambda \omega \omega \nu \iota a$ from 'A ${ }^{\prime} \delta \lambda \lambda \omega \nu$. [L.S.]

DIASTYLOS. ['Templum.]
DIATRE'TA. [Vitrum.]
DIAULOS ( $\delta$ íauдos). [Stanium.]
DIAZO'MA ( $\delta a ́ j^{\prime} \omega \mu \alpha$ ). [Subligaculum.]
DICASTE'RION ( $\delta \iota \kappa a \sigma \tau^{\prime} \dot{\eta} \rho เ \nu \nu$ ), indicates both the aggregate judges that sat in court, and the place itself in which they held their sittings. For an account of the former, the reader is referred to the article Dicastes: with respect to the latter, our information is very imperfect. In the earlier ages there were five celebrated places at Athens set apart for the sittings of the judges, who had cognizance of the graver causes in which the loss of human life was avenged or expiated, viz. the areiopagites and the ephetae. These places were the Areiopagus [Areiopagus], and the $\varepsilon \pi i \Pi a \lambda \lambda \alpha \delta i \varphi$,
 The antiquity of these four last is sufficiently vouched for by the archaic character of the division of the causes that were appropriated to each: in the first we are told that accidental deaths were discussed ; in the second homicides confessed, hut justified ; in the third there were quasi trials of inanimate things, which, by falling and the like, had occasioned a loss of human life; in the fourth homicides who had returned from exile, and committed a fresh manslaughter, were appointed to be tried. With respect to these ancient institutions, of which little more than the name remained when the historical age commenced, it will be sufficient to observe that, in accordance with the ancient Greek feeling respecting murder, viz., that it partook more of the nature of a ceremonial pollution than a political offence, tho presiding judge was invariably the king archon, the Athenian rex sacrorum ; and that the places in which the trials were held were open to the sky, to avoid the contamination which the judges might incur by being under the same roof with a murderer. (Matthiae, De Jud. Ath. p. 157.) The places, however, remained after the office of the judges who originally sat there, was abolished; and they appear from Demosthenes (c. Neaer. p. 1348.21) to have been accasionally used by the ordinary Heliastic judges when trying a cause of the kind to which they were originally appropriated. The most important court in later ages was the Heliaea, in which, we are told by the grammarians, the weightiest causes were decided; and if so, we may conclude the thesmothetae were the presiding magistrates. Besides this, ordinary Heliastic courts sate in the Odeium, in the courts Trigonon, the Greater (MeíJov), the Middle (Mé $\sigma O \nu$ ), the Green, the Red, that of Metiochus, and the Parabyston: but of these we are unable to fix the localities, or to what magistrates it was usual to apportion them. They were all painted with their distinctive colours ; and, it appears, had a letter of the alphabet
inscribed over the doorway. With the exception of the Heliaea, and those in which canses of murder were tried, they were probably protected from the weather. The dicasts sat upon wooden benches, which were covered with rugs or matting ( $\psi$ /al $\{a$, ) and there were elevations or tribumes ( $\beta \eta \mu a \tau \alpha$ ), upon which the antagonist advocates stood during their address to the court. The space occupied by the persons engaged in the trial was protected by a railing ( $\delta \rho \cup \phi \alpha_{k} \kappa \tau o t s$ ) from the intrusion of the bystanders; but in causes which bore npon the violation of the mysteries, a further space of fifty feet all round was enclosed by a rope, and the security of this barrier guarantced by the presence of the public slaves. (Meier, Att. Proc. p. 1141.)
[J. S. M.]
DICASTES ( $\delta \iota \kappa \alpha \sigma \tau \eta s$ ), in its broadest acceptation a judge, more peculiarly denotes the Attic functionary of the democratic period, who, with his colleagues, was constitutionally empowered to try and pass judgment upon all causes and questions that the laws and customs of his country pronounced susceptible of judicial investigation. In the circumstance of a plurality of persons being selected from the mass of private citizens, and associated temporarily as representatives of the whole body of the people, adjudicating between its individual members, and of such delegates swearing an oath that they would well and truly discharge the duties entrusted to them, there appears some resemblance hetween the constitution of the Attic dicasterion and an English jury, but in nearly all other respects the distinctions between them are as great as the intervals of space and time which separate their several nations. At Athens the conditions of his eligibility were, that the dicast should he a free citizen, in the enjoyment of his full franchise ( $\bar{\pi} / \tau \iota \mu / \alpha$ ), and not less than thirty years of age, and of persons so qualified six thousand were selected by lot for the service of every year. Of the precise method of their appointment our notices are somewhat obscure: but we may gather from them that it took place every year under the conduct of the nine archons and their official scribe; that each of these ten personages drew by lot the names of six hundred persons of the tribe assigned to him; that the whole number so selected was again divided by lot into ten sections of 500 each, together with a supernumerary one, consisting of a thonsand persons, from among whom the occasional deficiencies in the sections of 500 might be supplied. To each of the ten sections one of the ten first letters of the alphabet was appropriated as a distinguishing mark, and a small tablet ( $\pi \iota \alpha \dot{\alpha} \kappa \iota \circ \nu$ ), inscribed with the letter of the section and the name of the individual, was delivered as a certificate of his appointment to each dicast. Three bronze plates found in the Peiraeeus, and described hy Dodwell (Travels, vol. i. pp. 433-437), are supposed to have served this purpose ; the inscriptions upon them consist of the following letters:- $\triangle$. $\triangle I O \triangle \Omega P O \Sigma$ \$PEA, E. $\triangle E I N I A \Sigma$ AAAIETE, and B. ANTIXAPMOZ AAMI, and bear besides representations of owls and Gorgon heads, and other devices symbolic of the Attic people. The thonsand supernumeraries had in all probability some different token, hut of this we have no certain knowledge.

Before proceeding to the exercise of his functions the dicast was obliged to swear the official oath; which was done in the earlier ages at a place called Ardettus, without the city, on the banks of
the Ilissus, but in after times at some other spot, of which we are not informed. In the time of Demosthenes the oath (which is given at full length in Dem. c. Timoc. p. 746) asserted the qualification of the dicast, and a solemn engagement by him to discharge his office faithfully and incorruptibly in general, as well as in certain specified cases which bore reference to the appointment of magistrates, a matter in no small degree under the control of the dicast, inasmuch as few could enter upon any office without having had their election submitted to a court for its approbation [Docimasia]; and besides these, it contained a general promise to support the existing constitution, which the dicast would of course be peculiarly enabled to do, when persons were accused before him of attempting its subversion. This oath being taken, and the divisions made as above mentioned, it remained to assign the courts to the several sections of dicasts in which they were to sit. This was not, like the first, an appointment intended to last during the year, but took place under the conduct of the thesmothetae, $d e$ novo, every time that it was necessary to impanel a number of dicasts. In ordinary cases, when one, two, or more sections of 500 made up the complement of judges appropriated to trying the particular kind of canse in hand, the process was extremely simple. Two urns or caskets ( $\kappa \lambda \eta \rho \omega \tau \eta \rho \circ \alpha$ ) were produced, one containing tickets inscribed with the distinctive letters of the sections; the other furnished, in like manner, with similar tickets to indicate the courts in which the sittings were to be held. If the cause was to be tried by a single section, a ticket would be drawn simultaneously from each urn, and the result announced, that section $B$, for instance, was to sit in court $\Gamma$; if a thousand dicasts were requisite, two tablets would, in like manner, be drawn from the urn that represented the sections, while one was drawn from the other as ahove mentioned, and the announcement might run that sections $\mathbf{A}$ and $\mathbf{B}$ were to sit in court $\Gamma$, and the like. A more complicated system must have been adopted when fractional parts of the section sat by themselves, or were added to other whole sections: bnt what this might have been we can only conjecture, and it is obvious that sone other process of selection must have prevailed upon all those occasions when judges of a peculiar qualification were required; as, for instance, in the trial of violators of the mysteries, when the initiated only were allowed to judge; and in that of military offenders who were left to the justice of those only whose comrades they were, or should have heen at the time when the offence was alleged to have been committed. It is pretty clear that the allotment of the dicasts to their several courts for the day, took place in the manner ahove-mentioned, in the market place, and that it was conducted in all cases, except one, by the thesmothetae; in that one, which was when the magistrates and public officers rendered an account of their conduct at the expiration of their term of office, and defended themselves against all charges of maiversation in it [Euthynsi], the logistae were the officiating personages. As soon as the allotment had taken place, each dicast received a staff, on which was painted the letter and colour of the court awarded him, which might serve both as a ticket to procure admittance, and also to distinguish him from any loiterer that might endea-
vour clandestinely to obtain a sitting alter busmess had begun.

The dicasts received a fee for their attendance
 ment is said to have been first instituted by Pe ricles (Aristot. Polit. ii. 9. p. 67, ed. Göttling; Plut. Per. 9 ; Plat. Gorg. p. 515) ; and it is generally supposed from Aristophanes ( $N u b .840$ ), who makes Strepsiades say that for the first oholus he ever received as a dicast, he bought a toy for his son, that it was at first only one obolus. According to the Scholiast on Aristophanes (Ran. 140) the pay was subsequently increased to two oholi, but this seems to be merely an erroneous inference from the passage of bis author. Three oboli or the
 the comedies of Aristophanes, and is afterwards mentioned frequently. (Aristoph. Eq. 51, 255, Vesp. 584, 654, 660, Ran. 1540, \&c.) Böckh has inferred from these passages that the trioholon was introduced by Cleon about в. c. 421 ; but G. Hermann (Praef. ad Aristoph. Nub. p. 1, \&c. 2nd edit.) has disputed this opinion, at least so far as it is founded upon Aristophanes, and thinks that the pay of three oboli for the dicasts existed hefore that time. However this may be, thus much is certain, that the pay of the dicasts was not the same at all times, although it is improbable that it should ever have been two oboli. (Aristot. ap. Schol. ad Aristoph. Vesp. 682 ; Hesych. s. v. $\delta$ utu$\sigma \tau \iota \kappa \delta \nu$; Suid. s. v. ท̂̀ıaбтal.) The payment was made after every assembly of a court of heliastae hy the Colacretae (Lucian, Bis acousat. 12, 15) in the following manner. After a citizen had been appointed by lot to act as judge in a particular court, he received on entering the court together with the staff (Bakt $\quad$ pla or $\rho$ á $6 \delta o s$ ) a tablet or
 was over, the dicast, on going out, delivered his ticket to the prytaneis, and received his fee in return. (Schol. ad Aristoph. Plut. 277 ; Suid. s. v.
 16.) Those who had come too late had no claim to the trioholon. (Aristoph. Vesp. 660.) The andnual amount of these fees is reckoned by Aristophanes (Vesp. 560, \&c. with the Schol.) at 150 talents, a sum which is very high and can perhaps only be applied to the most flourishing times of Athens. (Böckh, Publ. Econ. of Athens, p. 227, 2nd ed. ; Meier, Att. Proc. p. 125, \&c. [J.S.M.]

DICASTICON ( $\delta \iota \kappa a \sigma \tau \kappa \kappa \delta)$. [DTcastes.]
DIKE' ( $\delta$ LK $\eta$ ), signifies generally any proceedings at law hy one party directly or mediately against others. (Harpocrat. s. v. ; Pollux, viii. 40, 41.) The object of all such actions is to protect the hody politic, or one or more of its individual members, from injury and aggression ; a distinetion which has in most countries suggested the division of all causes into two great classes, the public and the private, and assigned to each its peculiar form and treatment. At Athens the first of these was implied by the terms public סitcat, or $\dot{\alpha} \gamma \omega \bar{\omega} \boldsymbol{\mu} \mathrm{s}$, or still more peculiarly by $\gamma$ paфal: causes of the other class were termed private סikas or á $\gamma \omega \bar{\nu} \in s$, or simply $\delta / \kappa a l$ in its limited sense. Thers is a still further subdivision of $\gamma p a \phi a 1$ into $\delta \eta \mu \mathrm{o}$ la and \%isac, of which the former is somewhat analogous to impeachments for offences directly against the state; the latter, to criminal prosecutions, in which the state appears as a party mediately injured in the violence or other wrong done to indi-
vidual citizens. It will be observed that cases frequently arise, which, with reference to the wrong complained of, may with equal propriety be brought before a court in the form of the $\gamma \rho a \phi h$ last mentioned, or in that of an ordinary $\delta i \mathrm{k} \eta$, and under these circumstances the laws of Athens gave the prosecutor an ample choice of methods to vindicate his rights by private or public proceedings (Dem. c. Andoc. p. 601), much in the same way as a plaintiff in modern times may, for the same offence, prefer an indictment for assault, or bring his civil action for trespass on the person. It will be necessary to mention some of the principal distinctions in the treatment of causes of the two great classes above mentioned, before proceeding to discuss the forms and treatment of the private Jawsuit.

In a $\delta \iota \kappa n$, only the person whose rights were alleged to be affected, or the legal protector ( $\kappa$ ípos) of such person, if a minor or otherwise incapable of appearing suo gure, was permitted to institute an action as plaintiff; in public causes, with the exception of some few in which the person injured or his family were peculiarly bound and interested to act, any free citizen, and sometimes, when the state was directly attacked, almost any alien, was empowered to do so. In all private causes, except those of $\xi \xi \sigma \dot{v} \lambda \eta s, \beta a a i \omega \nu$, and $\xi \xi a a \rho \sigma \sigma \omega s$, the penalty or other subject of contention was exclusively recovered by the plaintiff, while in most others the state alone, or jointly with the prosecutor, profited by the pecuniary punishment of the offender. The court fees, called prytaneia, were paid in private but not in public causes, and a public prosecutor that compromised the action with the defendant was in most cases punished by a fine of a thousand drachmae and a modified disfranchisement, while there was no legal impediment at any period of a private lawsuit to the reconciliation of the litigant parties. (Meier, Att. Process, p. 163.)

The proceedings in the $\delta i \kappa \eta$ were commenced by a summons to the defendant ( $\pi \rho \sigma \dot{\sigma} \kappa \lambda \eta \sigma t s$ ) to appear on a certain day before the proper magistrate ( $\epsilon i \sigma \alpha \gamma \omega \gamma \epsilon \dot{\omega} s)$, and there answer the charges preferred against him. (Arist. Nub. 1221, Av. 1046.) This summons was often served by the plaintiff in person, accompanied by one or two witnesses [Cleteres], whose names were endorsed upon the declaration ( $\lambda \hat{\eta} \xi t s$ or $\stackrel{\text { ® }}{ } \boldsymbol{\gamma} \kappa \lambda \eta \mu \alpha)$. If there were an insufficient service of the summons, the lawsuit was styled $\dot{z} \pi \rho \sigma \sigma \kappa \lambda \eta \tau o s$, and dismissed by the magistrate. (Hesych.) From the circumstance of the same officer that conducted the anacrisis being also necessarily present at the trial, and as there were besides dies nefasti (äraфpádes) and festivals, during which none, or only some special causes could be commenced, the power of the plaintiff in selecting his time was, of course, in some degree limited; and of several causes, we know that the time for their institution was particularised by law. (Aristoph. Nub. 1190.) There were also occasions upon which a personal arrest of the party proceeded against took the place of, or at all events was simultaneous with, the service of the summons ; as for instance, when the plaintiff doubted whether such party would not leave the country to avoid answering the action; and accordingly we find that in such cases (Dem. e. Zenoth. p. 890, c. Aristog. p. 778) an Athenian plaintilf might compel a foreigner to
accompany him to the polemarch's office, and there produce bail for his appearance, or failing to do so, submit to remain in custody till the trial. The word $\kappa a \tau \epsilon \gamma \gamma \nu \hat{a} \nu$ is peculiarly used of this proceeding. Between the service of the summons and appearance of the parties before the magistrate, it is very probable that the law prescribed the intervention of a period of five days. (Meier, Att. Process, p. 580.) If both parties appeared, the proceedings commenced by the plaintiff putting in his declaration, and at the same time depositing his share of the court fees ( $\pi \rho u \tau \alpha \nu \bar{i})$, the non-payment of which was a fatal objection to the further progress of a cause. (Matth. De Jud. Ath. p. 261.) These were very trifling in amount. If the subject of litigation was rated at less than 100 drachmae, nothing was paid; if at more than 100 drachmae ánd less than 1000 drachmac, 3 drachmae was a sufficient deposit, and so ou in proportion. If the defendant neglected or refused to make his payment, it is natural to conclude that he underwent the penalties consequent upon non-appearance ; in all cases the successful party was reim. bursed his prytaneia by the other. (Meier, Att. Process, p. 613.) The $\pi \alpha \rho a \kappa a \pi a 60 \lambda$ y was another deposit in some cases, but paid by the plaintiff only. This was not in the nature nor of the usual amount of the court fees, but a kind of penalty, as it was forfeited by the suitor in case he failed in establishing his cause. In a suit against the treasury, it was fixed at a fifth; in that of a claim to the property of a deceased person by an alleged heir or devisee, at a tenth of the value sought to be recovered. (Matth. De Jud. Ath. p. 260.) If the action was not intended to be brought before an heliastic court, but merely submitted to the arbitration of a diaetetes [DIAetetes], a course which was competent to the plaintiff to adopt in all private actions (Hudtwalcker, De Diaetet. p. 35), the drachma paid in the place of the deposit above mentioned bore the name of $\pi \alpha \mathrm{p} \alpha \sigma \tau \alpha \sigma t s$. The deposits being made, it became the duty of the magistrate, if no manifest objection appeared on the face of the declaration, to cause it to be written out on a tablet, and exposed for the inspection of the public on the wall or other place that served as the cause list of his court. (Meier, Att. Process, p. 605.)

The magistrate then appointed a day for the further proceedings of the anacrisis [ANACR1sis], which was done by drawing lots for the priority in case there was a plurality of causes instituted at the same time ; and to this proceeding the phrase $\lambda a \gamma \chi a ́ \nu \in i \nu \delta i k \eta \nu$, which generally denotes to bring an action, is to be primarily attributed. If the plaintiff failed to appear at the anacrisis, the suit, of course, fell to the ground; if the defendant made default, judgment passed against him. (Mcier, Att. Process, p. 623.) Both parties, however, received an official summons before their non-appearance was made the ground of either result. An affidavit might at this, as well as at other periods of the action, be made in behalf of a person unable to attend upon the given day, and this would, if allowed, have the effect of postponing further proceedings (ijumuoria); it might, however, be combated by a counter affidavit to the effect, that the alleged reason was unfounded or otherwise insufficient ( ${ }^{2} \nu \theta u \pi \omega \mu \sigma \sigma^{\prime} \alpha$ ) ; and a question wuld arise upon this point, the decision of which, when adverse to the defendant, would

## DICTATOR.

render him liable to the penalty of contumacy. (Dem. c. Olymp. p. 1174.) The plaintiff was in this case said $\epsilon \rho \nmid \mu \eta \eta \nu \in \lambda \in \hat{\epsilon} \nu:$ the defendant, $\epsilon \rho \notin \mu \eta \nu$ ó $\phi \lambda \epsilon \hat{\imath}$, , $\delta \kappa \eta \nu$ being the word omitted in both phrases. If the canse were primarily brought before an umpire ( $\delta$ tait $\eta \tau \pi \bar{\prime}$ ), the anacrisis was conducted by him ; in cases of appeal it was dispensed with as unnecessary. The anacrisis began with the affidavit of the plaintiff ( $\pi \rho o \omega \mu \boldsymbol{\sigma}$ ia), then
 or ávitypaф多 [Antigraphe], then the parties prodnced their respective witnesses, and reduced their evidence to writing, and pot in originals, or authenticated copies, of all the records, deeds, and contracts that might be useful in establishing their case, as well as memoranda of offers and requisitions then made by either side ( $\pi \rho 0 \kappa \lambda \eta \sigma \in \epsilon s$ ). The whole of the documents were then, if the cause took a straight-forward course ( $\epsilon \dot{\nu} \theta v \delta \iota \kappa i \alpha$ ), enclosed on the last day of the anacrisis in a casket ( $\chi^{\boldsymbol{i}} \chi^{\boldsymbol{\nu}} \nu_{0}$ ), which was sealed and entrusted to the cnstody of the presiding magistrate, till it was produced and opened at the trial. During the interval no alteration in its contents was permitted, and accordingly evidence that had been discovered after the anacrisis was not producible at the trial. (Dem. c. Boeot. i. p. 999.) In some canses, the trial before the dicasts was by law appointed to come on within a given time; in such as were not provided for by such regulations, we may suppose that it would principally depend upon the leisure of the magistrate. The parties, however, might defer the day ( $\kappa v p i \alpha$ ) by mntual consent. (Dem. c. Phaen. p. 1042.) Upon the court being assembled, the magistrate called on the canse (Platner, Process und Klagen, vol. i. p. 182), and the plaintiff opened his case. At the commencement of the speech, the proper officer ( $\delta \delta^{\prime} \phi^{\prime}$ v' $\delta \omega \rho$ ) filled the clepsydra with water. As long as the water flowed from this vessel, the orator was permitted to speak; if, however, evidence was to be read by the officer of the court, or a law recited, the water was stopped till the speaker recommenced. The quantity of water, or, in other words, the length of the speeches, was not by any means the same in all causes: in the speech against Macartatus, and elsewhere, one amphora only was deemed sufficient; eleven are mentioned in the impeachment of Aeschines for misconduct in his embassy. In some few cases, as those of $\kappa \alpha \kappa \omega \sigma t s$, according to Harpocration, no limit was prescribed. The speeches were sometimes interrupted by the cry натd.6a-" go down," in effect, "cease speaking" - from the dicasts, which placed the advocate in a serions dilemma; for if after this he still persisted in his address, he could hardly fail to offend those who hid lim stop; if he obeyed the order, it might be found, after the votes had been taken, that it had emanated from a minority of the dicasts. (Aristoph. Vesp. 973.) After the speeches of the advocates, which were in general two on each side, and the incidental reading of the documentary and other evidence, the dicasts proceaded to give their judgment by ballot. [Pserhos.]

When the principal point at issue was decided in favour of the plaintiff, there followed in many cases a further discussion as to the amount of damages, or penalty, which the defendant shonld pay. [Timema.] The method of voting upon this question seems to have varied, in that the dicasts used a amall tablet instrad of a ballot-hall, upon
which those that approved of the heavier penalty drew a long line, the others a short one. (Aristoph. Vesp. 167.) Upon judgment being given in a private suit, the Athenian law left its execation very much in the hands of the successful party, who was empowered to seize the movables of his antagonist as a pledge for the payment of the money, or institute an action of ejectment ( $\xi \xi 0 \dot{\chi} \lambda \eta s$ ) against the refractory debtor. The judgment of a court of dicasts was in general decisive ( $\delta$ í $\eta$ $\alpha$ ủ $\tau 0 \tau \epsilon \lambda \nmid s$ ); but upon certain occasions, as, for instance, when s gross case of perjury or conspiracy could be proved by the unsnccessful party to have operated to his disadvantage, the cause, upon the conviction of such conspirators or witnesses, might be commenced de novo. [Appellatio (Greek).] In addition to which, the party against whom judgment had passed by default, had the power to revive the cause, upon proving that his non-appearance in court was inevitable ( $\tau \grave{\eta} \nu \in \rho \eta \mu \eta \nu \quad \alpha \nu \tau i \lambda a \chi \in i \bar{\nu}$, Platner, Process und Klagen, vol. i. p. 396) ; this, however, was to be exercised within two months after the original judgment. If the parties were willing to refer the matter to an umpire ( $\delta$ sat$\tau \eta \tau \eta$ 多), it was in the power of the magistrate to transfer the proceedings as they stood to that officer ; and in the same way, if the diactetes considered the matter in hand too high for him, he might refer it to the ci$\sigma a \gamma \omega \gamma \in \dot{\prime} s$, to be hrought hy him before an heliastic court. The whole of the proceedings before the diaetetes were analogous to those before the dicasts, and bore equally the name of $\delta i \kappa \eta$ : but it seems that the phrase $\alpha \nu \tau!\lambda \alpha \chi \epsilon \omega$ $\tau \grave{\eta} \nu \mu \bar{\eta}$ o $\bar{\delta} \sigma \alpha \nu$ is peculiarly applied to the revival of a cause before the umpire in which judgment hsd passed by default.

The following are the principal actions, hoth public and private, which we read of in the Greek writers, and which are briefly discussed under their several heads:-

 Aiklas: 'A $10 \gamma 100:{ }^{\prime} A \mu 6 \lambda \omega \sigma \epsilon \omega s: ~ ' A \mu \in \lambda$ lov: 'Ava $\gamma \omega \gamma \eta \bar{s}$ : 'A $\nu \alpha \nu \mu a \chi i o v: ~ ' A \nu \delta \rho a \pi о \delta 1 \sigma \mu 0 \hat{1}$ : 'A $\nu \delta \rho a-$ $\pi \delta \delta \omega \nu: ~ ' A \pi \alpha \pi \eta \sigma \epsilon \omega s ~ \tau 0 \hat{v} \delta \eta \mu 0 \hat{v}: ~ ' A \phi о \rho \mu \hat{\eta} s: ~ ' A \pi o-$ $\lambda \in l \psi \in \omega s: ~ ' A \pi о \pi \epsilon ́ \mu \psi \epsilon \omega s: ~ ' A \pi \sigma \sigma \tau a \sigma l o v: ~ ' A \pi \rho o \sigma \tau a-$ oiou: 'Ap

[J. S. M.]

## DI'CROTUM. [Navis.]

DICTA'TOR, an extraordinary magistrate at Rome. The name is of Latin origin, and the office probabiy existed in many Latin towns hefore it was introduced into Rome (Dionys. v. 74). We
find it in Lannvinm even in very late times (Cic. pro Mil. 10). At Rome this magistrate was originally called magister populi and not dictator, and in the sacred books he was always designated by the former name down to the latest times. (Cic. de Rep. i. 40, de Leg. iii. 3, de Fin. iii. 22 ; Var. L. L. v. 82, ed. Müller ; Festus, s. v. optima lex, p. 198, ed. Müller.)

On the establishment of the Roman republic the government of the state was entrusted to two consuls, that the citizens might be the better protected against the tyrannical exercise of the supreme power. But it was soon felt that circumstances might arise in which it was of importance for the asfety of the state that the government should be vested in the hands of a single person, who should possess for a senson absolute power, and from whose decision there should be no appeal to any other hody. Thus it came to pass that in B.c. 501, nine years after the expulsion of the Tarquins, the dictatorship (dictatura) was instituted. The name of the first dictator and the immediate reason of his appointment were differently stated in the amnalists. The oldest anthorities mention T. Larcius, one of the consuls of the year, as the first dictator, hut others ascribed this honour to $\mathrm{M}^{2}$. Valerius. (Liv. ii. 18.) Livy states (l. c.) that a formidable war with the Latins led to the appointment; and he also found mentioned in the annals that the consuls of this year were suspected of belonging to the party of the Tarquins ; but in the latter case T. Larcius could not have been one of the consuls. Dionysius relates at length (v. 63-70) that the plebs, who were oppressed by the weight of their dehts, took advantage of the danger of the republic to obtain some mitigation of their sufferings, and refused to serve in the army, and that thereupon recourse was had to a dictator to bring them to their duty. But as Livy makes no mention of any internal disturbances in this year, and does not speak of any commotions on account of debts till four years subsequently, we may conclude that Dionysius has in this case, as he has in many others, deserted the annalists in order to give what appeared to him a more satisfactory reason. It is true that the patricians frequently availed themselves of the dictatorship as a means of oppressing the plebs; but it is certainly unnecessary to seek the first institution of the office in any other cause than the simple one mentioned by Livy, namely, the great danger with which the state was threatened. Modern scholars have stated other reasons for the establishment of the dictatorship, which are so purely conjectural and possess such little inherent probability, that they do not require any refutation. Thus Niehuhr infers (Hist. of Rome, vol. i. p. 564) from the Roman dictator heing appointed only for six months, that he was at the head both of Rome and of the Latin league, and that a Latin dictator possessed the supreme power for the other six months of the year ; but this supposition, independent of other considerations, is contradicted by the fact, that in the year in which the dictator was first appointed, Rome and the Latins were preparing for war with one another. In like manner Huschke (Verfassung d. Servius Tullius, p. 516) starts the strange hypothesis, that the dictatorship was part of the constitution of Servius Tullins, and that a dictator was to be nominated every decenninm for the purpose of fixing the clavus annalis and of holding the census.

By the original law respecting the appointment of a dictator (lew de dictatore creando) no one was eligible for this office, unless he had previously been consul (Liv. ii. 18). We find, however, a few instances in which this law was not observed. (See e.g. Liv. iv. 26, 48, vii. 24.) When a dictator was considered necessary, the senate passed a senatus consultum that one of the consuls should nominate (dicere) a dictator; and without a previous decree of the senate the consuls had not the power of naming a dictator, although the contrary used to be asserted in most works on Roman antiquities. In almost all cases we find mention of a previous decree of the senate (see e.g. ii. 30, iv. $17,21,23,26,57$, vi. 2 , vii. 21 , viii. 17 , ix. 29 , x. 11, xxii. 57); and in the few instances, in which the appointment hy the consul is alone spoken of, the senatus consultum is probably not mentioned, simply hecause it was a matter of course. Niebuhr indeed supposes (Hist. of Rome, vol. i. p. 567) that the dictator was originally created by the curiae, like the kings. According to his view the senate proposed a person as dictator, whom the curiae elected and the consul then proclaimed (dixit); and after this proclamation the newly elected magistrate received the imperium from the curiae. Niebnhr further supposes that the right of conferring the imperium may have led the curiae to dispense with voting on the preliminary nomination of the senate. But this election of the dictator by the curiae is only supported by two passages, one of Dionysius and the other in Festns, neither of which is conclusive in favour of Niehuhr's view. Dionysius simply says (v. 70) that the dictator should be one " whom the senate should nominate and the people approve of " (ėлı廿 $\eta \phi i \sigma$ $\tau \eta \tau \alpha \iota$, but this may merely refer to the granting of the imperium by the curiae. In Festus (p. 198) we read " M. Valerius - qui primus magister a populo creatus est;" but even if there were no corruption in this passage, we need only understand that a dictator was appointed in virtue of a senatus consultum, and certainly need not suppose that by populus the curiae are intended: there can however be hardly any doubt that the passage is corrupt, and that the true reading is "qui primus magister populi creatus est." We may therefore safely reject the election hy the curiae.

The nomination or proclamation of the dictator by the consul was, however, necessary in all cases. It was always made by the consul, probably without any witnesses, betweell midnight and morning, and with the observance of the auspices (surgens or oriens nocte silentio * dictatorent dicebat, Liv. viii. 23, ix. 38, xxiii. 22 ; Dionys. x. 11). The technical word for this nomination or proclamation was dicere (seldom creare or facere). So essential was the nomination of the consuls, that we find the senate on one occasion having recourse to the tribunes of the people to compel the consuls to nominate a dictator, when they had refused to do so (Liv. iv. 26) ; and after the battle at the lake Trasimenus, when all communication with the surviving consul was cut off, the senate provided for the emergency by causing the people to elect a prodictator, because, says Livy, the people could not elect (creare) a dictator, having never up to that time exercised such a power (Liv. xxii. 8).

* Respecting the meaning of silentium in relation to the auspices, see Aveur, p. 176, b.

In the same spirit it became a question, whether the tribuni militum with consular power could nominate a dictator, and they did not venture to do so till the augurs had heen consulted and declared it allowable (Liv. iv. 21). The nomination of Sulla by an interrex and of Caesar by a praetor was contrary to all precedent and altogether illegal. (Comp. Cic. ad Att. ix. 15.) The senste seems to have usually mentioned in their decree the name of the person whom the consul was to nominate (Liv. ip. 17, 21, 23, 46, vi. 2, vii. 12, viii. 17, ix. 29 , x. 11, xxii. 57); but that the consul was not absolutely bound to nominate the person whom the senate had named, is evident from the cases in which the consuls appointed persons in opposition to the wishes of the senate (Liv. viii. 12, Epit. 19 ; Suet. Tib. 2.) It is doubtful what rule was sdopted, or whether any existed, for the purpose of determining which of the two consuls should nominate the dictator. In one case we read thst the nomination was made by the consul who had the fasces (Liv. viii. 12), in another that it was decided by lot (iv. 26), and in a third that it was matter of agreement among themselves (iv. 21). In later times the senate usually entrusted the office to the consul who was nearest at hand. The nomination took place at Rome, as a general rule; and if the consuls were absent, one of them was recalled to the city, whenever it was practicable (Liv. vii. 19, xxiii. 22) ; but if this could not be done, a senatus consultum authorising the appointment was gent to the consul, who thereupon made the nomination in the camp. (Liv. vii. 2l, viii. 23, ix. 38, xxy. 2, xxvii. 5.) Nevertheless, the rule was maintained that the nomination could not take place outside of the Ager Romanus, though the meaning of this expression was extended so as to include the whole of Italia. Thus we find the senate in the second Punic war opposing the nomination of a dictator in Sicily, because it was outside of the ager Romanus (extra agrum Romanum eum autem Italia terminari, Liv. xxvii. 5).

Originally the dictator was of course a patrician. The first plebeian dictator was C. Marcius Rutilus, nominated in B. c. 356 by the plebeian consul M. Popillius Laenas. (Liv. vii. 17.)

The reasons, which led to the appointment of a dictator, required that there should be only one at a time. The only exception to this rule occurred in B. c. 216 after the battle of Cannae, when M. Fabius Buteo was nominated dictator for the purpose of filling up the vacancies in the senate, although M. Junius Pera was discharging the regular duties of the dictator; but Fabius resigned on the day of his nomination on the ground that there could not be two dictators at the same time. (Liv. xxiii. 22, 23 ; Plut. Fab. 9.) The dictators that were appointed for carrying on the business of the state were said to be nominated rei gerundae causa, or sometimes seditionis sedandae causa; and upon them, as well as upon the other magistrates, the imperium was conferred by a Lex Curiata. (Liv. ix. 38, 39 ; Dionys. v. 70.) Dictators were also frequently appointed for some special purpose, and frequently one of small importance, of whom further mention will be made below. At present we confine our remarks to the duties and powers of the dictator rei gerundae causa.

The dictatorship was limited to six months (Cic. de Leg. iii. 3 ; Liv. iii. 29, ix. 34, xxiii. 23 ; Dionys. v. 70, x. 25 ; Dion Cass. xxxvi, 17, xlii, 21 ;

Zonar. vii. 13), and no instances occur in which a person held this office for a longer time, for the dictatorships of Sulla and Cacsar are of course not to be taken into account. On the contrary, though a dictator was appointed for six months, he often resigned his office long previously, immedistely after he had despatched the business for which he had been appointed. (Liv. iii. 29, iv. 46, vi. 29.) As soon as the dictstor was nominated, a kind of suspension took place with respect to the consuls and all the other magistrates, with the exception of the tribuni plebis. It is frequently stated that the duties and functions of all the ordinsry magistrates entirely ceased, and some writers have even gone so far as to say that the consule shdicated (Polyb. iii. 87 ; Cic. de Leg. iii. 3 ; Dionys. v. 70, 72) ; but this is not a correct way of stating the facts of the case. The regular magistrates continued to discharge the duties of their various offices under the dictator, but they were no loager independent officers, but were subject to the higher imperium of the dictator, and obliged to obey his orders in every thing. We often find the dictator and the consuls at the head of separate armies st the same time, and carrying on war independent of one another (Liv. ii. 30, viii. 29) ; we see that the soldiers levied by the dictator took the oath of allegiance to the consul (Liv. ii. 32), and that the consuls could hold the consular comitia during a dictatorship. (Liv. xxiii. 23.) All this shows thst the consuls did not resign their functions, although they were subject to the imperium of the dictator; and accordingly, as soon as the dictator sbdicated, they again entered forthwith into the full possession of the consular power.

The superiority of the dictator's power to thst of the consuls consisted chiefly in the three following points - greater independence of the senste, more extensive power of punishment without any sppeal (provocatio) from their sentence to the people, and irresponsibility. To these three points, must of course be added that he was not fettered by a colleague. We may naturally suppose that the distator would usually act in unison with the senate; but it is expressly stated that in many cases where the consuls required the co-operation of the senste, the dictator could act on his own responsibility. (Polyb. iii. 87.) For how long a time the dictatorship was a magistratus sine provocatione, is uncertain. That there was originally no sppeal from the sentence of the dictator is certain, and accordingly the lictors bore the axes in the fasces before them even in the city, as a symbal of their absolute power over the lives of the citizens, although by the Valerian law the axes had disappeared from the fasces of the consuls. (Liv. ii. 18, 29, iii. 20 ; Zonar. vii. 13; Dionys. v. 70, 75; Pompon. de Orig. Jur. § 18.) That an appeal afterwards lay from their sentence to the people, is expressly stated by Festus (s. v. optima lex), snd it has been supposed that this privilage was granted by the lex Valeria Horstia, passed after the abolition of the decemvirate in B.c. 449 , which enacted "ne quis ullum magistratum sine provocatione crearet." (Liv. iii. 15). But eleven years afterwards the dictatorship is spoken of as a magistratus sine provocations; and the only instance in Livy (viii. 33-34) in which the dictator is threstened with provocatio, certainly does not prove that this was a legal right; for L. Papirius, who was then dictator, treated the provo-
catio as an infringement of the rights of his office. We may therefore suppose that the Lex Valeria Horatia only applied to the regular magistracies, and that the dictatorship was regarded as exempt from it. Whether however the right of provocatio was afterwards given, or the statement in Festus is an error, cannot be determined. In connection with the provocatio there arises another question respecting the relation of the dictatorship to the tribunes of the plebs. We know that the tribunes continued in office during a dictatorship; but we have no reason to believe that they had any control over a dictator, or could hamper his proceedings by their intercessio or auxilium, as they could in the case of the consuls. The few instances, which appear to prove the contrary, are to be explained in a different manner, as Becker has shown. That the tribunes continued in office as independent magistrates durmg a dictatorship, while all the other magistrates became simply the officers of the dictator, is to be explained by the fact, that the lex de dictatore creando was passed before the institution of the tribuneship of the plebs, and consequently made no mention of it, and that as a dictator was appointed in virtue of a senatus consultum, the senate had no power over the tribunes of the plebs, though they could suspend the other magistrates.

It has been already stated that the dictator was irresponsible, that is, he was not liable after his abdication to be called to account for any of his official acts. This is expressly stated by ancient writers (Zonar. vii. 13, Dionys. v. 70, vii. 56 ; Plut. Fab. 3 ; Appian, B. C. ii. 23), and, even if it had not been stated, it would follow from the very nature of the dictatorship. We find moreover no instance recorded in which a dictator after his resignation was made answerable for the misuse of his power, with the exception of Camillus, whose case however was a very peculiar one. (Compare Becker, Römisch. Alterth. vol. ii. part ii. p. 172.)

It was in consequence of the great and irresponsible power possessed by the dictatorship, that we find it frequently compared with the regal dignity, from which it only differed in being held for a limited time. (Cic. de Rep. ii. 32 ; Zonar. vii. 13 ; Dionys. v. 70, 73 ; Appian, B. C. i. 99 ; Tac. Ann. i. 1.) There were however a few limits to the power of the dictator. 1. The most important was that which we have often mentioned, that the period of his office was only six months. 2. He had not power over the treasury, but could only make use of the money which was granted him by the senate. (Zonar. vii. 13.) 3. He was notallowed to leave Italy, since he might in that case casily become dangerous to the republic (Dion Cass. xxxyi. 17) ; though the case of Atilius Calatinus in the first Punic war forms an exception to this rule. (Liv. Epit. 19.) 4. He was not allowed to ride on horseback at Rome, without previously obtaining the permission of the people (Liv. xxiii. 14 ; Zonar. vii. 13) ; a regulation apparently capricious, but perhaps adopted that he might not bear too great a resemblance to the kings, who were accustomed to ride.

The insignia of the consuls were nearly the same as those of the kings in earlier times; and of the consuls subsequently. Instead however of having only twelve lictors, as was the case with the consuls, he was preceded by twenty-four bearing the secures as well as the fasces. The sella curulis
and toga praetexta also belonged to the dictator. (Polyb. iii. 87 ; Dionys. x. 24; Plut. Fab. 4 ; Appian, B. C. i. 100 ; Dion Cass. liv 1.).
The preceding account of the dictatorship applies more particularly to the dictator rei gerundae causa ; but dictators were also frequently appointed, especially when the consuls were absent from the city, to perform certain acts, which conld not be done by any inferior magistrate. These dictators had little more than the name; and as they were only appointed to discharge a particular duty, they had to resign inmediately that duty was performed, and they were not entitled to exercise the power of their office in reference to any other matter than the one for which they were nominated. The occasions on which such dictators were appointed, were principally :-1. For the purpose of holding the comitia for the elections (comitiorum habendorum causa). 2. For fixing the clavus annalis in the temple of Jupiter (clavi fyendi causa) in times of pestilence or civil discord, because the law said that this ceremony was to be performed by the praetor maximus, and after the institution of the dictatorship the latter was regarded as the highest magistracy in the state (Liv. vii. 3). 3. For appointing holidays (feriarum constituendarum cuusa) on the appearance of prodigies (Liv. vii. 28 ), and for officiating at the public games ( $l u-$ doram fociendorum causa), the presidency of which belonged to the consuls or praetors (viii. 40, ix. 34). 4. For holding trials (quastionilus excrcendis, ix. 36). 5. And on one occasion, for filling up vacancies in the senate (legendo senatui, xxiii. 22).

Along with the dictator there was always a magister equitum, the nomination of whom was left to the choice of the dictator, unless the senatus consultum specified, as was sometimes the case, the name of the person who was to be appointed (Liv. viii. 17, xxiे. 57). The magister equitum had, like the dictator, to receive the imperium by a lex curiata (Liv. ix. 38). The dictator could not be without a magister equitum, and, consequently, if the latter died during the six months of the dictatorship, another had to be nominated in his stead. The magister equitum was subject to the inperimm of the dictator, but in the absence of his superior he became his representative, and exercised the same powers as the dictator. On one occasion, shortly before legal dictators ceased to be appointed, we find an instance of a magister equitum being invested with an imperium equal to that of the dictator, so that there were then virtually two dictators, but this is expressly mentioned as an anomaly, which had never occurred before (Polyb. iii. 103, 106). The rank which the magister equitum held among the other Roman magistrates is doubtful. Niebuhr asserts (vol. ii. p. 390) "no one ever supposed that his office was a curule one;" and if he is right in supposing that the consular tribunate was not a curale office, his view is supported by the account in Livy, that the imperium of the magister equitum was not regarded as superior to that of a consular tribune (vi. 39). Cicero on the contrary places the magister equitum on a par with the praetor (de Leg. iii. 3); and after the establishment of the praetorship, it seems to have been considered necessary that the person who was to be nominated magister equitum should previously have been praetor, just as the dictator, according to the old law, had to be chosen from the consulars (Dion Cass. xlii. 21). Accordingly, we
find at a later time that the magister equitum had the insignia of a praetor (Dion Cass. xlii. 27). The magister equitum was originally, as his name imports, the commander of the cavalry, while the dictator was at the head of the legions, the infantry (Liv. iii. 27), and the relation between them was in this respect similar to that which subsisted between the king and the tribunns celerum.

Dictators were only appointed so long as the Romans had to carry on wars in Italy. A solitary instance occurs in the first Punic war of the nomination of a dictator for the purpose of carrying on war out of Italy (Liv. Epit. 19) ; but this was never repeated, because, as has been already remarked, it was feared that so great a power might become dangerous at a distance from Rome. But after the battle of Trasimene in B. c. 216, when Rome itself was threatened by Hannibal, recourse was again had to a dictator, and Q. Fabius Maximus was appointed to the office. In the next year, в. c. 216, after the battle of Camae, M. Jnnus Pera was also nominated dictator, but this was the last time of the appointment of a dictator rei gerundae causa. From that time dictators were frequently appointed for holding the elections down to B. C. 202 , but from that year the dictatorship disappears altogether. After a lapse of 120 years, Snlla caused himself to be appointed dictator in B. c. 82, reipublicae constituendae causa (Vell. Pat. ii. 28), but as Niebnhr remarks, " the title was a mere name, without any ground for such a use in the ancient constitution." Neither the magistrate (interrex) who nominated him, nor the time for which he was appointed, nor the extent nor exercise of his power, was in accordance with the ancient laws and precedents; and the same was the case with the dictatorship of Caesar. Soon after Caesar's death the dictatorship was abolished for ever by a lex proposed by the consul Antonius (Cic. Phil. i. 1 ; Liv. Epit. 116 ; Dion Cass. xliv. 51). The title indeed was offered to Augustus, but he resolutely refused it in consequence of the odium attached to it from the tyranny of Sulla when dictator (Suet. Aug. 52).

During the time, however, that the dictatorship was in aheyance, a substitute was invented for it, whenever the circumstances of the republic required the adoption of extraordinary measures, by the senate investing the consuls with dictatorial power. This was done by the well-known formula, Videant or dent operam consules, ne quid respublica detrimenti capiat. (Comp. Sall. Catil. 29.)
(The preceding account has been mostly taken from Becker, Handbuch der Römischen Alterthümer, vol. ii. part ii. p. 150, \&c.; comp. Niebuhr, Hist. of Rome, vol. i. p. 563, \&c.; Göttling, Geschichte der Rönzisch. Staatsverfassung, p. 279 , \&c.)
DICTY'NNIA ( $\delta \iota \tau \tau \dot{v} \nu \iota a$ ), a festival with sacrifices, celebrated at Cydonia in Crete, in honour of Artemis, surnamed $\Delta i k \tau v \nu v a$ or $\Delta ı \kappa \tau u ́ v \nu a i a$, from Síkтvov, a hunter's net. (Diodor. Sic. v. 76 ; compare Straho x. p. 479 ; Pausan. ii. 30. §3.) Particulars respecting its celebration are not known. Artemis $\Delta$ iкcuvva was also worshipped at Sparta (Paus. iii. 12. §7), and at Ambrysus in Phocis. (Paus. x. 36. § 3 ; compare the Schol. ad Aristoph. Ran. 1284, Vesp. 357 ; and Meursius, Creta, c. 3.)
[L. S.]
DIES (of the same root as $\delta$ tós and deus, Buttmann, Mythol. ii. p. 74). The naine dies was ap-
plied, like our word day, to the time during which, according to the notions of the ancients, the sun performed his course round the earth, and this time they called the civil day (dies civilis, in Greek $\nu v \chi \theta \dagger \mu \in \rho o \nu$, because it included hoth night and day. See Censorin. De Die Nat. 23 ; Plin. II. N. ii. 77, 79 ; Varro, De Re Rust. i. 28 ; Macrob. Sat. i.3). The natural day (dies naturalis), or the time from the rising to the setting of the sun, was likewise designated by the name dies. The civil day began with the Greeks at the setting of the sun, and with the Romans at midnight ; with the Babylonians at the rising of the sun, and with the Umbrians at midday. (Macrob. l. c.; Gellius, iii. 2.) We have here only to consider the natural day, and as its subdivisions were different at dif. ferent times, and not always the same among the Greeks as among the Romans, we shall endeavour to give a brief account of the various parts into which it was divided by the Greeks at the different periods of their history, and then proceed to consider its divisions among the Romans, to which will be subjoined a short list of remarkable days.

At the time of the Homeric poems, the natural day was divided into three parts ( 1 . xxi. 111). The first, called $\bar{\eta} \omega$ s, hegan with sunrise, and comprehended the whole space of time during which light seemed to be increasing, i. e. till midday. ( 11 . viii. 66, ix. 84, Od. ix. 56.) Some ancient grammarians have supposed that in some instances Homer used the word $\eta \boldsymbol{\eta} \omega$ s for the whole day, hut Nitzsch (Anmerkungen zur Odyssee, i. 125) ham shown the incorrectness of this opinion. The second part was called $\mu$ éбov $\AA \mu a \rho$ or midday, during which the sun was thought to stand still. (Hermias, ad Plat. Phaedr. p. 342.) The third part bore the name of $\delta \in i \lambda \eta$ or $\delta \in i \in \lambda o \nu j \mu a \rho$ ( $O d$. xvii. 606 ; compare Buttmann's Lexilog. ii. n. 95), which derived its name from the increased warmth of the atmosphere. The last part of the $\delta \in i \lambda \eta$ was sometimes designated by the words moтl $\frac{!}{\sigma} \sigma \pi \epsilon \rho a \nu$ or $\beta$ ounutós (Od. xvii. 191, Il. xvi. 779). Besides these three great divisions no others seem to have been known at the time when the Homeric poems were composed. The chief information respecting the divisions of the day in the period after Homer, and more especially the divisions made by the Athenians, is to be derived from Pollux (Onom. i. 68). The first and last of the divisions made at the time of Homer were afterwards subdivided into two parts. The earlier part of the morning was termed $\pi \rho \omega t$ or $\pi \rho \dot{\omega} \tau \hat{\eta} s{ }_{\eta} \eta \mu$ épas: the later,
 (Herod. iv. 181; Xen. Memorab. i. l. §10, Hellen. i. 1. §30; Dion Chrysost. Orat. lxvii). The $\mu$ é $\sigma o \nu \bar{\hbar} \mu \alpha \rho$ of Homer was afterwards expres-
 and comprehended, as before, the middle of the day, when the sun seemed neither to rise nor to decline. The two parts of the aftermoon were called $\delta \in i \lambda \eta$
 vii. 167, viii. 6 ; Thucyd. iii. 74, viii. 26 ; compare Libanius, Epist. 1084). This division continued to be observed down to the latest period of Grecian history, though another more accurate division, and more adapted to the purposes of cammon life, was introduced at an early period; for Anaximander, or according to others, his disciple Anaximencs, is said to have made the Greeks acquainted with the use of the Babylonian chrono-

sometimes with the epithet $\sigma x: 0 \theta \eta p$ oк $\delta \nu$ or $\dot{\eta} \lambda<\alpha-$ $\mu d \nu \delta \rho o \nu)$ by means of which the natural day was divided into twelve equal spaces of time. (Herod. ii. 109 ; Diog. Laërt. ii. 1. 3 ; Plin. H. N. ii. 6. 78 ; Suidas, s. v. 'Avakípavopos.) These spaces were, of course, longer or shorter according to the various seasons of the year. The name hours ( $\hat{\omega} \rho a t$ ), however, did not come into general use till a very late period, and the difference between natural and equinoctial hours was first observed by the Alexandrine astronomers.
During the early ages of the history of Rome, when artificial means of dividing time were yet unknown, the natural phenomena of increasing light and darkness formed with the Romans, as with the Greeks, the standard of division, as we see from the vague expressions in Censorinus ( $D e$ Die Nat. 24). Pliny states (H. N. vii. 60) that in the Twelve Tables only the rising and the setting of the sun were mentioned as the two parts into which the day was then divided, but from Censorinus (l. c.) and Gellius (xvii. 2) we learn that midday (meridies) was also mentioned. Varro (De Ling. Lat. vi. 4, 5, ed. Müller ; and Isidor. Orig. r. 30 and 31 ) likewise distinguished three parts of the day, viz., mane, meridies, and suprema, scil. tempestas, after which no assembly could be held in the forum. The lex Plaetoria prescribed that a herald should proclaim the suprema in the comitium, that the people might know that their meeting was to be adjourned. But the division of the day most generally observed by the Romans, was that into tempus antemeridiunum and pomeridianum, the meridies itself being only considered as a point at which the one ended and the other commenced. But as it was of importance that this moment should be known, an especial officer [Accensus] was appointed, who proclaimed the time of midday, when from the curia he saw the sun standing between the rostra and the graecostasis. The division of the day into twelve equal spaces, which, here as in Greece, were shorter in winter than in summer, was adopted at the time when artificial means of measuring time were introduced among the Romans from Greece. This was about the year B. c. 291, when L. Papirins Cursor, before the war with Pyrrhus, brought to Rome an instrument called solarim horologium, or simply solarium. (Plaut. ap. Gellium, iii. 3. § 5 ; Plin. H. N. vii. 60.) But as the solarium had been made for a different latituic. it showed the time at Rome very incorrectly. (Plin. l. c.) Scipio Nasica, therefore, erected in B. c. 159 a public clepsydra, which indicated the hours of the night as well as of the day. (Censorin. c. 23.) Before the erection of a clepsydra it was customary for one of the subordinate officers of the praetor to proclaim the third, sixth, and ninth hours; which shows that the day was, like the night, divided into four parts, each consisting of three hours. See Dissen's treatise, De Partibus Noctis et Dici ex Divisionibus Veterum, in his Kleine Lateinische und Deutsche Schriften, Pp. 130, 150. Compare the article Horologium.

All the days of the year were, according to different points of view, divided by the Romans into different classes. For the purpose of the administration of justice, and holding assemblies of the people, all the days were divided into dies fasti and dies nefasti.

Dirs fasti were the days on which the praetor
was allowed to administer justice in the public courts; they derived their name from fari (fari tria verba; do, dico, addico, Ovid, Fast. i. 45, \&c. ; Varro, De Ling. Lat. vi.29, 30. ed. Müller ; Macrob. Sat. i. 16). On some of the dies fasti comitia could be keld, but not on all. (Cicero, pro Sext. 15, with the note of Manutius.) Dies might be fasti in three different ways: 1. dies fasti proprie et toti or simply dies fasti, were days on which the praetor nsed to hold his courts, and could do so at all hours. They were marked in the Roman calendar by the letter F, and their number in the comse of the year was 38 (Niebuhr, Hist. of Rome, iii. p. 314) ; 2. dies proprie sed non toti fasti, or dies intercisi, days on which the praetor might hold his courts, but not at all hours, so that sometimes one half of such a day was fastus, while the other half was nefastus. Their number was 65 in the year, and they were marked in the calendar by the signs $\mathrm{Fp}=$ fastus primo, $\mathrm{NP}=$ nefastus primo, $\mathrm{En}=$ endotercisus $=$ intercisus, Q. Rex C.F $=$ quando Rex comitio fugit, or quando Rex comitiavit fas, Q. $\mathrm{St} . \mathrm{Df}=$ quando stercus defertur; 3. dies roon proprie sed casu fasti, or days which were not fasti properly speaking, but became fasti accidentally ; a dies comitialis, for instance, might become fastus, if either during its whole course, or during a part of $i t$, no comitia were held, so that it accordingly became either a dies fastus totus, or fastus ex parte. (Macrob. Sat. i. 16; Varro, De Ling. Lat. l. c.)

Digs nefastr were days on which neither courts of justice nor comitia were allowed to be held, and which were dedicated to other purposes. (Varro, l. c.) According to the ancient legends they were said to have been fixed by Numa Pompilius. (Iiv.i. 19.) From the remarks made above it will be understood that one part of a day might be fastus while another was nefastus. (Ovid. Fast. i. 50.) The nundinae, which had originally been dies fasti for the plebeians, had been made nefasti at the time when the twelvemonths-year was introdnced ; but in в. c. 286 they were again made fasti by a law of Q. Hortensius. (Macrob. Sat. i. 16.) The term dies nefasti, which originally had nothing to do with religion, but simply indicated days on which no courts were to be held, was in subsequent times applied to religious days in general, as dies nefasti were mostly dedicated to the worship of the gods. (Gellius, iv. 9, v. 17.)
In a religious point of view all days of the year were either dies festi, or dies profesti, or dies inter. cisi. According to the definition given by Macrobins, dies festi were dedicated to the gods, and spent with sacrifices, repasts, games, and other solemnities ; dies profesti belonged to men for the administration of their private and public affairs. They were either dies fasti, or comitiales, or comperendini, or stati, or proeliales. Dies intercisi were common between gods and men, that is, partly devoted to the worship of the gods, partly to the transaction of ordinary business.

We have lastly to add a few remarks on some of the subdivisions of the dies profesti, which are likewise defined by Macrobins. Dies comitiales were days on which comitia were held ; their number was 184 in a year. Dies comperendini were days to which any action was allowed to be transferred (quibus vadimoniun licet dicere, Gaius, iv. §15). Dies stati were days set apart for causes between Roman citizens and foreigners (qui judicii

## DIONYSIA.

causa cum peregrinis instituuntur). Dies proeliales were all days on which religion did not forbid to commence a war ; a list of days and festivals on which it was contrary to religion to commence a war is given by Macrohius. See also Festus, s. v. Compare Manutius, De Veterum Dierum Ratione, and the article Calendarium.
[L. S.]
DIFFAREA'TIO. [Divortium.]
DIGESTA. [Pandectae.]
Digita'lia. [Manica.]
DI'GITUS. [Pes.]
DIIPOLEIA ( $\delta u \pi \delta \bar{\lambda} \epsilon \iota a$ ), also called $\Delta \iota \pi \delta \lambda_{\epsilon} \in \alpha$ or $\Delta \iota \pi \delta \lambda \iota \alpha$, a very ancient festival celebrated every year on the acropolis of Athens in honour of Zeus, surnamed IIo入t $\epsilon$ ús. (Paus. i. 14. § 4 ; comp. Antiphon, 120. 10.) Suidas and the Scholiast on Aristophanes ( $P(x, 410$ ) are mistaken in believing that the Diipolia were the same festival as the Diasia. It was held on the 14 th of Scirrophorion. The manner in which the sacrifice of an ox was offered on this occasion, and the origin of the rite, are described by Porphyrius (De Abstinent. ii. § 29), with whose account may be compared the fragmentary descriptions of Pausanias (i. 28. § 11) and Aelian (V.H. viii. 3). The Athenians placed barley mixed with wheat upon the altar of Zeus and left it unguarded ; the ox destined to be sacrificed was then allowed to go and take of the seeds. One of the priests, who hore the name of $\beta$ oupóvos (whence the festival was sometimes called Bou$\phi$ ovia), at seeing the ox eating, snatched the axe, killed the ox, and ran away. The others, as if not knowing who bad killed the animal, made inquiries, and at last also summoned the axe, which was in the end declared guilty of having committed the murder. This custom is said to have arisen from the following circumstance : - In the reign of Erechtheus, at the celebration of the Dionysia, or, according to the Scholiast on Aristophanes ( $N u b$. 972 ), at the diipolia, an ox ate the cakes offered to the god, and one Baulon or Thaulon, or, according to others, the $\beta$ ouqobos, killed the ox with an axe and fled from his country. The murderer having thus escaped, the axe was declared guilty, and the rite observed at the diipolia was performed in commemoration of that event. (Compare Suidas and Hesych. s. v. Bou$\phi$ óvia.) This legend of the origin of the diipolia manifestly leads us back to a time when it had not yet become customary to offer animal sacrifices to the gods, but merely the fruits of the earth. Porphyrius also informs us that three Athenian families had their especial (probably hereditary) functions to perform at this festival. Members of the one drove the ox to the altar, and were thence called $\kappa \in \nu \tau \rho \iota \alpha \delta a l$ : another family, descended from Baulon and called the Bovtúmot, knocked the victim down; and a third, designated by the name of $\delta \alpha \iota \tau \rho o i$, killed it. (Compare Creuzer's Mythol. und Symbol. i. p. 172, iv. p. 122, \&c.) [L. S.]

DIMACHAE ( $\delta \iota \mu a ́ \chi \alpha ı$ ), Macedonian horsesoldiers, who also fought on foot when occasion required. Their armour was heavier than that of the ordinary horse-soldiers, and lighter than that of the regular heavy-armed foot. A servant accompanied each soldier in order to take care of his horse when he alighted to fight on foot. This species of troops is said to have been first introduced by Alexander the Great. (Pollux, i. 132 ; Curtius, v. 13.)
DIMACHERI. [Glamiatores.]

## DIMENSUM. [SERvUS.] diminutio caritis. [Caput.] DIO'BOLOS. [Drachma.]

DIOCLEIA ( $\delta t \delta \delta \lambda \in t \alpha$ ), a festival celebrated hy the Megarians in honour of an ancient Athenian hero, Diocles, around whose grave young men assembled on the occasion, and amused themselvea with gymnastic and other contests. We read that he who gave the sweetest kiss ohtained the prize, consisting of a garland of flowers. (Theocrit. Idyll. xii. 27, \&c.) The Scholiast on Theocritus (l. c.) relates the origin of this festival as fal-lows:-Diocles, an Athenian exile, fled to Megara, where he found a youth with whom he fell in love. In some battle, while protecting the object of his love with his shield, he was slain. The Megarians honoured the gallant lover with a tomb, raised him to the rank of a hero, and in commemoration of his faithful attachment, instituted the festival of the Diocleia. See Böckh, ad Pind. Olymp. vii. 157. p. 176, and the Scholiast, ad Aristoph. Acharn. 730, where a Megarian swears by Diocles, from which we may infer that he was held in great honour by the Megarians. (Compare Welcker's Sappho, p. 39, and ad Theogn. p. 79.)
[L. S.]
DIONY'SIA ( $\Delta \iota \omega \nu \cup \sigma \iota \alpha$ ), festivals celehrated in various parts of Greece in honour of Dionysus, We have to consider under this head several festivals of the same deity, although some of them bore different names; for here, as in other cases, the name of the festival was sometimes derived from that of the god, sometimes from the place where it was celebrated, and sometimes from some particular circumstance connected with its celebration. We shall, however, direct our attention chiefly to the Attic festivals of Dionysus, as, on account of their intimate connection with the origin and the development of dramatic literature, they are of greater importance to us than any other ancient festival.

The general character of the festivals of Dionysus was extravagant merriment and enthusiastic joy, which manifested themselves in various ways. The import of some of the apparently unmeaning and absurd practices in which the Greeks indulged during the celebration of the Dionysia, has been well explained by Müller (Hist. of the Lit. of Anc. Greece, i. p. 289) : - "The intense desire felt by every worshipper of Dionysus to fight, to conquer, to suffer in common with him, made them regard the subordinate beings (satyrs, panes, and nymphs, by whom the god himself was surrounded, and through whom life seemed to pass from him into vegetation, and branch off into a variety of beautiful or grotesque forms), who were ever present to the fancy of the Greeks, as a convenient step by which they could approach more nearly to the presence of their divinity. The customs so prevalent at the festivals of Dionysus, of taking the disguise of satyrs, doubtless originated in this feeling, and not in the mere desire of concealing excesses under the disguise of a mask, otherwise so serious and pathetic a spectacle as tragedy could never have originated in the choruses of these satyrs. The desire of escaping from self into something new and strange, of living in an imaginary world, breaks forth in a thousand instances in these festivals of Dionysus. It is seen in the colnuring the body with plaster, soot, vermilion, and different sorts of green and red juices of plants, wenr-
ing goats and deer skins round the loins, covering the face with large leaves of different plants; and, lastly, in the wearing masks of wood, bark, and other materials, and of a complete costume belonging to the character." Drunkenness, and the hoisterous music of flutes, cymbals, and drums, were likewise common to all Dionysiac festivals. In the processions called Níagoc (from సt $\ddagger \mathfrak{L}\{\omega$ ), with which they were celebrated, women also took part in the disguise of Bacchae, Lenae, Thyades, Naiades, Nymphs, \&c., adorued with garlands of ivy, and bearing the thyrsus in their hands (hence
 that the whole train represented a population inspired, and actuated by the powerfil presence of the god. The choruses sung on the occasion were called dithyrambs, and were hymns addressed to the god in the freest metres and with the boldest imagery, in which his exploits and achievements were extolled. [Chorus.] The phallus, the symbol of the fertility of nature, was also carried in these processions (Plut. De Oupid. Divit. p. 527, D ; Aristoph. Acharn. 229, with the Schol.; Herod. ii. 49), and men disguised as women, called ioúqcidoo (Hesych. s.v. ; Athen. xiv. p. 622 ), followed the phallus. A woman called $\lambda \iota \kappa \nu 0 \phi \delta \rho o s$ carried the $\lambda i \kappa \nu 0 \nu$, a long basket containing the image of the god. Maidens of noble birth ( $\kappa \alpha \nu \eta \phi \delta \rho o t$ ) used to carry figs in baskets, which were sometimes of gold, and to wear garlands of figs round their necks. (Aristoph. Acharn. l. c.; Lysistr. 647 ; Natal. Com. v. 13.) The indulgence in drinking was considered by the Greeks as a duty of gratitude which they owed to the giver of the vine; hence in some places it was thought a crime to remain soher at the Dionysia. (Lacian, De Calumn. 16.)
The Attic festivals of Dionysus were four in number: the $\Delta i o v i \sigma t a k \tau^{\prime}$ 'a ${ }^{2} p o u ́ s$, or the rutal Dionysia, the $\Lambda \hat{\eta} \nu a a$, , the ' $A \nu \theta \in \sigma \tau$ ' $p \alpha a$, and the
 Hesych. vol. i. p. 199) and Spalding (Abhandl. der Berl. Acad. von 1804-1811, p. 70, \&cc.) had declared the Anthesteria and the Lenaea to be only two names for one and the same festival, it was generally taken for granted that there could be no doubt as to the real identity of the two, until in 1817, A. Böckh read a paper to the Berlin Academy (Vom Unterschiede der Attischen Lenaeen, Anthesterien und ländl. Dionysien, published in 1819, in the Abhandl. d. Berl. Acad.), in which he established by the strongest arguments the difference between the Lenaea and Anthesteria. An abridgment of Böckh's essay, containing ail that is necessary to form a clear idea of the whole question, is given in the Philological Museum, vol. ii. p. 273, \&c. A writer in the Classical Mu. seum, Th. Dyer (vol. iv. p. 70, \&cc.), has since endeavoured to support Ruhnken's view with some new arguments. The season of the year sacred to Dionysus was during the months nearest to the shortest day (Plut. De Ei ap. Delph. 9), and the Attic festivals were accordingly celebrated in the Poseideon, Gamelion (the Lenaeon of the Ionians), Anthesterion, and Elaphebolion.
 lesser Dionysia, a vintage festival, were celebrated in the varouss demes of Attica in the month of Poseideon, and were under the superintendence of the several local magistrates, the demarchs. This was doubtless the most ancient of all, and was
held with the highest degree of merriment and freedom ; even slaves enjoyed full liberty during its celebration, and their boisterous shouts on the occasion were almost intolerable. It is here that we have to seek for the origin of comedy, in the jests and the scurrilous abuse which the peasants vented upon the bystanders from a waggon in
 Aristophanes (Vesp. 620 and 1479) calls the comic poets $\tau \rho v \gamma \varphi \delta 0 i$, lee-singers ; and comedy, $\tau \rho v \gamma \varphi \bar{\sigma} i a$, lee-song (Aclarn. 464, 834; Athen. ii. p. 40) ; from the custom of smearing the face with lees of wine, in which the merry country people indulged at the vintage. The Ascolia and other amusements, which were afterwards introduced into the city, seem also originally to have been peculiar to the rural Dionysia. The Dionysia in the Peiraeeus, as well as those of the other demes of Attica, belonged to the lesser Dionysia, as is acknowledged both by Spalding and Böckh. Those in the Peiraeeus ware celebrated with as much splendour as those in the city ; for we read of a procession, of the perfornance of comedies and tragedies, which at first may bave been new as well as old pieces; but when the drama had attained a regular form, only old pieces were represented at the rural Dionysia. Their liberal and democratical character seems to have been the cause of the opposition which these festivals met with, when, in the time of Peisistratus, Thespis attempted to introduce the rural amusements of the Dionysia into the city of Athens. (Plut. Sol. c. 29, 30 ; Diog. Laërt. Sol. c. 11.) That in other places, also, the introduction of the worship of Dionysus met with great opposition, must be inferred from the legends of Orchomenos, Thebes, Argos, Ephesus, and other places. Something similar seems to be implied in the account of the restoration of tragic chorises to Dionysus at Sicyon. (Herod. v. 67.)

The second festival, the Lencea (from $\lambda \eta \nu \delta$ s, the wine-press, from which also the month of Gamelion was called by the Ionians Lenaeon), was celebrated in the month of Gamelion; the place of its celebration was the ancient temple of Dionysus Limnaeus (from $\lambda i \mu \nu \eta$, as the district was originally a swamp, whence the god was also called $\left.\lambda_{\iota} \mu \nu a \gamma \in \nu \eta^{\prime} s\right)$. This temple, the Lenaeon, was situate south of the theatre of Dionysus, and close by it. (Schol. ad Aristoph. Ran. 480.) 'The Lenaea were celebrated with a procession and scenic contests in tragedy and comedy. (Demosth. c. Mid. p. 517.) The procession probably went to the Lenaeon, where a goat (roáरos, hence the chorus and tragedy which arose out of it were calied $\tau \rho a \gamma \iota \kappa \grave{s}$ रоро́s, and $\tau \rho а \gamma \varphi \bar{\delta}(\alpha)$ was sacrificed, and a chorus standing around the altar sang the dithyrambic ode to the god. As the dithyramb was the element out of which, by the introduction of an actor, tragedy arose [Chorus], it is natural that, in the scenic contests of this festival, tragedy should have preceded comedy, as we sea from the important documents in Dermosthenes. (l. c.) The poet who wished his play to be hrought ont at the Lenaea applied to the second archon, who had the superintendence of this festival as well as the Anthesteria, and who gave him the chorus if the piece was thought to deserve it.
The third Dionysiac festival, the Anthesteria, was celebrated on the 12th of the month of Anthesterion (Thucyd. ii. 15) ; that is to say, the second day fell on the 12th, for it lasted three
days, and the first fell on the llth (Suidas, s. v. Xoess), and the third on the 13th (Philoch. ap. Suidam, s. v. Xúrpot). The second archon superintended the celebration of the Anthesteria, and distributed the prizes among the victors in the various games which were carried on during the season. (Aristoph. Acharn. 1143, with the Schol.) The first day was called $\pi / \theta$ or $\gamma$ la : the second, $\chi^{b \in s}$ : and the third, $\chi^{\dot{d} \tau p o t . ~(H a r p o c r a t . ~ a n d ~}$ Suidas, s. v.; Schol. ad Aristoph. Ran. 219 ; Athen. x. p. 437, vii. p. 276 , and iv. 129.) The first day derived its name from the opening of the casks to taste the wine of the preceding year; the second from $\chi^{\text {oûs, the cup, and seems to have been }}$ the day devoted to drinking. The ascolia seem to have been played on this day. [Ascolis.]. We read in Suidas (s. v. 'A $\boldsymbol{\text { rress }}$ ) of another similar amusement peculiar to this day. The drinker placed himself upon a bag filled with air, trumpets were sounded, and he who emptied his cup quickest, or drank most, received as his prize a leather bag filled with wine, and a garland, or, according to Aelian (V.H. ï. 41), a golden crown. (Aristoph. Acharn. 943, with the Schol.) The
 and the jests and abuse which persons poured forth on this occasion were doubtless an imitation of the amusements customary at the rural Dionysia. Athenaeus (x. p. 437) says that it was customary on the day of the Choës to send to the sophists their salaries and presenta, that they too might enjoy themselves with their friends. The third day had its name from $\chi^{f} u$ pos, a pot, as on this day persons offered pots with flowers, seeds, or cooked vegetables, as a sacrifice to Dionysus and Hermes Chthonius. (Schol. ad Aristoph. Acharn. 1009 ; Suidas, s. v. Xutpol.) With this sacrifice
 by the Scholiast on Aristophanes (Ran. 220), in which the second archon distributed the prizes. Slaves were permitted to take part in the general rejoicings of the Anthesteria; but at the close of the day, they were sent home with the words
 ©ưpaS' ; Proclus, ad Hesiod. Op. et Dies.)
It-is uncertain whether dramas were performed at the Anthesteria; but Böckh supposes that co= medies were represented, and that tragedies which were to be brought out at the great Dionysia were perhaps rehearsed at the Anthesteria. The mysteries connected with the celebration of the Anthesteria were held at night, in the ancient temple èv Síp $\mu a \operatorname{ls}$, which was opened only once a year, on the 12th of Anthesterion. They were likewise under the superintendence of the second archon and a certain number of e $\pi \pi \tau \mu \in \lambda \eta \tau \alpha i . \quad$ He appointed fourteen priestesses, called $\gamma$ epoupai or $\gamma \in p a p a i$, the venerable, who conducted the ceremonies with the assistance of one other priestess. (Pollux, viii. 9.) The wife of the second archon ( $\beta \alpha \sigma(\lambda / \sigma \sigma \alpha)$ ) offered a mysterions sacrifice for the welfare of the city; she was betrothed to the god in a secret solemnity, and also tendered the oath to the geraerae, which, according to Demosthenes (c. Necuer. p. 1371. 22), ran thus:-"I am pure and unspotted by any thing that pollutes, and have never had intercourse with man. I will solemnize the Theognia and Iobakcheia at their proper time, according to the laws of my ancestors." The admission to the mysteries, from which men were excluded, took place after especial preparations,
which seem to have consisted in purifications by air, water, or fire. (Serv. ad Aen. vi. 740; Pans. ix. 20. § 4 ; Liv. xxxix. 13.) The initiated persons wore skins of fawns, and sometimes those of panthers. Instead of ivy, which was worn in the public part of the Dionysia, the mystae wore myrtle. (Schol. ad Aristoph. Ran. 330.) The sacrifice offered to the god in these mysteries consisted of a sow, the usual sacrifice of Demeter, and in some places of a cow with calf. It is more than probable that the history of Dionysus was symbolically represented in these mysteries, as the history of Demeter was acted in those of Eleusia, which were in some respects connected with the former. (Schol. ad Aristoph. Ran. 343.)

The fourth Attic festival of Dionysus, $\Delta$ loviota
 the 12th of the month of Elaphebolion (Aesch. c. Ctesiph. p. 63) ; but we do not know whether they lasted more than one day or not. The order in which the solemnities took place was, according to the document in Demosthenes, as follows:The great public procession, the chorus of boys, the $\kappa \grave{\omega} \mu \boldsymbol{\mu}$ [Chorus], comedy, and, lastly, tragedy. We possess in Athenaeus (v. p. 197, 199) the description of a great Bacchic procession, held at Alexandria in the reign of Ptolemaens Philadelphus, from which we may form some idea of the great Attic procession. It seems to have been customary to represent the god by a man in this procession. Plutarch (Nic. 3), at least, relates that on one occasion a beautiful slave of Nicias represented Dionysus (compare Athen. v. p. 200). A ridiculous imitation of a Bacchic procession is described in Aristophanes (Eccles. 759, \&c.). Of the dramas which were performed at the great Dionysia, the tragedies at least were generally new pieces ; repetitions do not, however, seem to have been excluded from any Dionysiac festival. The first archon had the superintendence, and gave the chorus to the dramatic poet who wished to bring out his piece at this festival. The prize awarded to the dramatist for the best play consisted of a crown, and his name was proclaimed in the theatre of Dionysus. (Demosth. De Coron. p. 267.) Strangers were prohibited from taking part in the choruses of boys. During this and some other of the great Attic festivals, prisoners were set free, and nobody was allowed to seizs the goods of a debtor ; but a war was not interrupted by its celebration. (Demosth. c. Boeot. de Nom. p. 999.) As the great Dionysir wers celebrated at the beginning of spring, when the navigation was re-opened, Athens was not only visited by numbers of country people, but also by strangers from other parts of Greece, and the various amusements and exhibitions on this occasion were not unlike those of a modern faic. (Isocr. Areop. p. 203, ed. Bekker ; Xen. Hiera, i. 11 ; compare Becker, Charilles, ii. p. 237, \&c.) Respecting the scrupulons regularity, and the enormous sums spent by the Athenians on the celebration of these and other festivals, see Demosthenes (Philip. i. p. 50). As many circumstances connected with the celebration of the Dionysia cannot be made clear without entering into minute details, we must refer the reader to Böckh's essay.

The worship of Dionysus was almost universal among the Greeks in Asis as well as in Europe, and the character of his festivals was the sama

DIONYSIA.
DIONYSIA.
everywhere, only modified by the national differences of the various tribes of the Greeks. It is expressly stated that the Spartans did not indulge so much in drinking during the celebration of the Dionysia as other Greeks. (Athen. iv. p. 156 ; Plato, De Leg. i. p. 637.) The worship of Dionysus was in general, with the exception of Co rinth, Sicyon, and the Doric colonies in southern Italy, less popular among the Doric states than in other parts of Greece. (Müller, Dorians, ii. 10. § 6; Böttiger, Ydeen z. Archaeol. der. Malerei, p. 289, \&c.) It was most enthusiastic in Boeotia in the orgies on Mount Cithaeron, as is well known from allusions and descriptions in several Roman poets. That the extravagant merriment, and the unrestrained conduct with which all festivals of this class were celebrated, did in the course of time lead to the grossest excesses, cannot he denied; but we must at the same time acknowledge, that such excesses did not occur until a comparatively late period. At a very early period of Grecian history, Bacchic festivals were solemnized with human sacrifices, and traces of this custom are discernible even until very late. In Chios this custom was superseded by another, according to which the Bacchae were obliged to eat the raw pieces of flesh of the victim which were distributed among them. This act was called $\dot{\omega} \mu o \phi a \gamma^{\prime} a$, and Dionysus derived from it the name of $\dot{\omega} \mu \dot{d} \dot{\delta} \cos$ and $\dot{\omega} \mu \eta \sigma \tau \eta s$. There was a report that even Themistocles, after the battle of Salamis, sacrificed three noble Persians to this divinity. (Plut. Themist. 13, Pelop. 21 ; compare Thirlwall, Hist. of Greece, ii. p. 310.) But Plutarch's account of this very instance, if true, shows that at this time such savage rites were looked upon with horror.

The worship of Dionysus, whom the Romans called Bacchus, or rather the Bacchic mysteries and orgies (Bacchanalia), are said to have been introdnced from southern Italy into Etruria, and from thence to Rome (Liv. xxxix. 8), where for a time they were carried on in secret, and, during the latter period of their existence, at night. The initiated, according to Livy, did not only indulge in feasting and drinking at their meetings, but when their minds were heated with wine, they indulged in the coarsest excesses and the most umnatural vices. Young girls and youths were seduced, and all modesty was set aside; every kind of vice found here its full satisfaction. But the crimes did not remain confined to these meetings: their consequences were manifest in all directions; for false witnesses, forgeries, false wills, and denunciations proceeded from this focus of crime. Poison and assassination were carried on under the cover of the society; and the voices of those who had been fraudulently drawn into these orgies, and would cry out against the shameless practices, were drowned by the shouts of the Bacchantes, and the deafening sounds of drums and cymbals.
The time of initiation lasted ten days, during which a person was obliged to abstain from all sexual intercourse ; on the tenth be took a solemn meal, underwent a purification by water, and was led into the sanctuary (Bacchanal). At first only women were initiated, and the orgies were celebrated every year during three daye. Matrons alternately performed the functions of priests. But Pacula Annia, a Campanian matron, pretending to act under the direct influence of Bacchus,
changed the whole method of celehration: she admitted men to the initiation, and transferred the solemnisation which had bitherto taken place during the daytime to the night. Instead of three days in the year, she ordered that the Bacchanalia should be held during five days in every month. It was from the time that these orgies were carried on after this new plan that, according to the statement of an eye-witness (Liv. xxxix. 13), licentiousness and crimes of every description were committed. Men as well as women indulged in the most unnatural appetites, and those who attempted to stop or to oppose such odious proceedings fell as victims. It was, as Livy says, a principle of the society to hold every ordinance of god and nature in contempt. Men, as if seized by fits of madness, and under great convulsions, gave oracles; and the matrons, dressed as Bacchae, with dishevelled hair and burning torches in their hands, ran down to the Tiher and plunged their torches into the water; the torches, however, containing sulphur and chalk, were not extinguished. Men who refused to take part in the crimes of these orgies, were frequently thrown into dark caverns and despatched, while the perpetrators declared that they had been carried off hy the gods. Among the number of the members of these mysteries, were, at the time when they were suppressed, persons of all classes ; and during the last two years, nobody had been initiated who was above the age of twenty years, as this age was thought most fit for seduction and sensual pleasure.
In the year b. c. 186, the consuls Spurius Postumius Albinns and Q. Marcius Philippus were informed of the existence of these meetings; and after having ascertained the facts mentioned above, they made a report to the senate. (Liv. xxxix. 14.) The senate, alarmed by this singular discovery, and although dreading lest memhers of their own families might he involved, invested the consuls with extraordinary power, to inquire into the nature of these nocturnal meetings, to exert all their energy to secure the priests and priestesses, to issue a proclamation throughout Rome and Italy, forbidding any one to be initiated in the Bacchic mysteries, or to meet for the purpose of celebrating them ; but above all things, to submit those individuals who had already been secured to a rigid trial. The consuls, after having given to the subordinate magistrates all the necessary instructions, held an assembly of the people, in which the facts just discovered were explained to the public, in order that the objects of the proceedings which were to take place might be known to every citizen. A reward was at the same time offered to any one who might be ahle to give further information, or to name any one that belonged to the conspiracy, as it was called. Measures were also taken to prevent any one from leaving Italy. During the night following, a great number of persons were apprehended; many of them put an end to their own lives. The whole number of the initiated was said to be 7000 . The trial of all those who were apprehended lasted thirty days. Rome was almost deserted, for the innocent as well as the guilty had reason to fear. The punishment inflicted on those who were convicted, varied according to the degree of their guilt ; some were thrown into prison, others were put to death. The women were surrendered to
their parents or husbands, that they might receive their punishment in private. The consuls then were urdered by the senate to destroy all Bacchanalia throughout Rome and Italy, with the exception of such altars or statues of the god as had existed there from ancient times. In order to prevent a restoration of the Bacchic orgies, the celebrated decree of the senate (Senatus auctoritas de Bacchanalibus) was issued, commanding that no Bacchanalia should he held either in Rome or Italy; that if any one should think such ceremonies necessary, or if he could not neglect them without scruples or making atonements, he should apply to the praetor urbanus, who might then consult the senate. If the permission should be granted to him in an assembly of the senate, consisting of not less than one hundred members, he might solemnise the Bacchic sacra; but no more than five persons were to be present at the celebration; there should be no common fond, and no master of the sacra or priest. (Liv. xxxix. 18.) This decree is also mentioned by Cicero ( $D e$ Legg. ii. 15). A brazen table containing this important document was discovered near Bari, in southern Italy, in the year 1640, and is at present in the imperial Museum of Vienna. A copy of it is given in Drakenhorch's edition of Livy (vol. vii. p. 197, \&c. ).

We have in our account of the Roman Bacchanalia closely followed the description given by Livy, which may, indeed, be somewhat exaggerated; hut considering the difference of character between the Greeks and Remans, it cannot be surprising that a festival like the Dionysia, when once introduced among the Romans, should have immediately degenerated into the grossest and coarsest excesses. Similar consequences were seen immediately after the time when the Romans were made acquainted with the elegance and the luxuries of Greek life; for, like barbarians, they knew not where to stop, and became brutal in their enjoyments. But whether the account of Livy be exaggerated or not, this much is certain, that the Romans, ever since the time of the suppression of the Bacchanalia, considered these orgies as in the highest degree immoral and licentious, as we see from the manner in which they applied the words derived from Bacchus, e. g. bacchor, bacchans, bacchatio, bacchicus, and others. But the most surprising circumstance in the account of Livy is, that the Bacchanalia should have been celebrated for several years in the boisterons manner described by him, and by thousands of persons, without any of the magistrates appearing to have heen aware of $i t$.

While the Bacchanalia were thus suppressed, another more simple and innocent festival of Bacchis, the Liberalia (from Liber, or Liber Pater, a name of Bacchus), continued to be celebrated at Rome every year on the 16 th of March. (Ovid, Fast. iii. 713.) A description of the ceremonies customary at this festival is given hy Ovid (l.c.), with which may be compared Varro (De Ling. Lat. v. 55 , ed. Bipont). Priests and aged priestesses, adorned with garlands of ivy, carried through the city wine, honey, cakes, and sweet-meats, together with an altar with a handle (ansata ara), in the middle of which there was a small fire-pan (foculus), in which from time to time sacrifices were burnt. On this day Roman youths whe had attained their sixteenth year received the tuga
virilis. (Cic. ad Att. vi. l.) That the Liberalia were celehrated with various amusements and great merriment, might be inferred from the general character of Dionysiac festivals; but we may also see it from the name Ludi Liberales, which is sometimes used instead of Liberalia; and Naevius ( $\alpha p$. Fest.) expressly says that persons expressed themselves very freely at the Liheralia. St. Augustine ( $D e$ Civ. Dei, vii. 21) even speaks of a high degree of licentiousness carried on at this festival.
[L.S.]
DIOSCU'RIA ( $\delta, 0 \sigma \kappa o v \rho \prime a$ ), festivals celehrated in various parts of Greece in honour of the dioscuri. The Spartan dioscuria mentioned by Pausanias (iv. 27.§ 1; compare with iii. 16. §3) and Spanheim (ad Callim. Hymn. in Pall. 24), were celebrated with sacrifices, rejoicings, and drinking. At Cyrene the dioscuri were likewise honoured with a great festival. (Schol. ad Pind. Pyth. v. 629.) The Athenian festival of the diogcuri has been described under Anaceia. Their worship was very generally adopted in Greece, especially in the Doric and Achaean states, as we conclude from the great number of temples dedicated to them; but scarcely anything is known respecting the manner in which their festivala were celehrated.
[L. S.]
DIO'TA. [Амрнопа.]
DIPHTHERA ( $\delta \iota \phi \theta \in \rho a$ ), a kind of cloak made of the skins of animals and worn by herdsmen and country people in general. It is frequently mentioned by Greek writers. (Aristoph. Nub. 72, and Schol. Vesp. 444 ; Plato, Crit. p. 53 ; Lucian, Tim. c. 12.) Pollux (vii. 70) says that it had a covering for the head (ė $\pi \iota \kappa \rho \alpha^{\prime} \nu o \nu$ ), in which respect it would correspond to the Roman cucullus. [Cuculdus.] (Becker, Charikles, vol. ii. p. 359.)

DIPHROS ( $\delta$ i $\phi \rho o s$ ). [Currus ; Thronus.] DIPLAX ( $\delta i \pi \lambda a \xi$ ). [PALLIUM.]

## DIPLOIS ( $\delta \iota \pi$ 保's). [Pallium.]

DIPLO'MA, a writ or puhlic document, which conferted upon a person any right or privilege. During the republic, it was granted hy the consuls and senate; and under the empire by the emperor and the magistrates whom he authorised to do so. (Cic. ad Fam. vi. 12, ad Att. x. 17, c. Pis. 37 ; Scn. Ben. vii. 10 ; Suet. Cal. 38, Ner. 12, Oth. 7 ; Dig. 48. tit. 10. s. 27.) The diploma was sealed hy the emperor (Suet. Aug. 50); it consisted of two leaves, whence it derived its name. These writs were especially given to public couriers, or to those who wished to procure the use of the public horses or carriages. (Plin. Ep. x. 14, 121 ; compare x. 54, 55.) The tahellarii of the emperor would naturally always have a diploma; whence we read in an inscription (Orelli, No. 2917) of a diplomarius tabellarius.

DI'PTYCHA. [TABULAE.]
DIRECTA ACTIO. [Actio.]
DIR1BITO'RES, are said by most modern writers to have been the persons who gave to the citizens the tabella with which they voted in the comitia ; but Wunder has most distinctly proved, in the preface to his Codea Erfutensis (pp. cxxvi.clviii.), that it was the office of the diribitores to divide the votes when taken out of the cistae, so as to determine which had the majority. He remarks that the etymology of diribere would lead us to assign to it the meaning of "separation" or "division," as it is compounded of dis and hatere
in the same manner as divimere is of dis and emere; the $h$ disappears as in praebere and debere, which come respectively from prae and habere, and de and habere. In several passages the word cannot have any other signification than that given by Wunder. (Cic. Pro Plancio, 20, ad Qu. Fratr. iii. 4. § 1 ; Varro, De Re Rust. iii. 2. § 1, iii. 5. § 18.)

When Cicero says (in Pison. 15), " vos rogatores, vos diribitores, vos custodes tabellarum," we may presume that he mentions these officers in the order in which they discharged their duties in the comitia. It was the office of the rogatores to collect the tabellae which each century gave, as they used, hefore the ballot was introduced, to ask (rogare) each century for its votes, and report them to the magistrate who presided over the comitia. The diribitores, as has been already remarked, divided the votes when taken out of the cistae, and handed them over to the custodes, who checked them off by points marked on a tablet. [Compare Cista ; Situla.]

DISCUS ( $\delta \dot{\prime} \sigma k 0 s$ ), a circular plate of stone ( $\lambda 1$ ivivot $\delta i \sigma \kappa o t$, Pind. Isth. i. 34), or metal (splendida pondera disei, Mart. xiv. 164), made for throwing to a distance as an exercise of strength and dexterity. This was, indeed, one of the principal gymnastic exercises of the ancients, being included in the Pentathlon. It was practised in the heroic age. (Hom. Il. ii. 774, Od. viii. 129, 186-188, xvii. 168.)

The discus was ten or twelve inches in diameter, so as to reach ahove the middle of the forearm when held in the right hand. The object was to throw it from a fixed spot to the greatest distance; and in doing this each player had a friend to mark the point at which the discus, when thrown by him, struck the ground. (Od. viii. 186-200; Stat. Theb. si. 703.) The distance to which it was commonly thrown became a measure of length, called tà סírкоира. (Il. xxiii. 431, 523.)
The space on which the discobolus, or thrower of the discus, stood, was called $\beta a \lambda e l s$, and was indicated by being a little higher than the ground surrounding it. As each man took his station, with his body entirely naked, on the $\beta a \lambda 6 i s$, he placed his right foot forward, bending his knee,

and resting principally on this foot. The discus heing held, ready to be thrown, in his right hand, he stooped, turning his body towards it, and his left hand was naturally turned in the same direction. (Philostr. Imag. i. 24 ; Welcker, ad loc.) This attitude was represented by the sculptor Myron in one of his works, and is adduced by Quintilian (Inst. Or. ii. I3. § 10) to show how much greater skill is displayed by the artist, and how much more powerful an effect is produced on the spectator, when a person is represented in action, than when he is at rest or standing erect. We fortunately possess several copies, more or less entire, of this celebrated statue; and one of the hest of them is in the British Museum (see the preceding woodcut). It represents the player just ready to swing round his outstretched arm, so as to describe with it a semicircle in the air, and thus, with his collected force, to project the discus at an angle of forty-five degrees, at the same time springing forward so as to give to it the impetus of his whole body. Discum "vasto contorquet turhine, et ipse prosequitur." (Statius, l. c.)

Sometimes a heavy mass of a spherical form ( $\sigma \delta \lambda_{0} s$ ) was used instead of a discus, as when the Greeks at the funeral games contended for a lump of iron, whicb was to be given to him who could throw it furthest. (1l. xxiii. 826-846.) The $\sigma \delta \lambda 0 s$ was perforated in the centre, so that a rope or thong might be passed through and used in throwing it. (Eratosth. ed. Bernhardy, p. 251.) In this form the discobolia is still practised by the mountaineers of the canton of Appenzell, in Switzerland. They meet twice a year to throw round stones of great weight and size. This they do by a sudden leap and forcible swinging of the whole hody. The same stone is taken by all, as in the case of the ancient discus and $\sigma$ odos: he who sends it to the greatest distance receives a public prize. The stone is lifted as high as the right shoulder (see woodcut; нат $\omega \mu$ aitoo, 11. xxiii. 431) hefore being projected. (Ehel, Schilderung der Gebirgsvölker der Schweitz, i. p. 174.) [J. Y.]

DIVIDI'CULUM. [AQUaEDUC

## 114, a.]

DIVINA'TIO is, according to Cicero (De Divinat. i. 1), a presension and a knowledge of future things; or, according to Chrysippus (Cic. Dc Divinat. ii. 63), a power in man which foresees and explains those signs which the gods throw in his way, and the diviner must therefore know the disposition of the gods towards men, the import of their signs, and by what means these signs are to be ohtained. According to this latter definition, the meaning of the Latin word divinatio is narrower than that of the Greek $\mu$ aveisin, in as much as the latter signifies any means by which the decrees of the gods can be discovered, the natural as well as the artificial ; that is to say, the seers and the oracles, where the will of the gods is revealed by inspiration, as well as the divinatio in the sense of Chrysippus. In the one, man is the passive medium through which the deity reveals the future ; while in the other, man discovers it by his own skill or experience, without any pretension to inspiration. As, however, the seer or vates was also frequently called divinus, we shall treat, under this head, of seers as well as of other
kinds of divinatio. The subject of oracles is discussed in a separate article. [Oraculum.]

The belief that the decrees of the divine will were occasionally revealed by the deity himself, or could be discovered by certain iudividuals, is one which the classical nations of antiquity had, in common with many other nations, before the attainment of a certain degree of intellectual cultivation. In early ages such a belief was natural, and perhaps founded on the feeling of a very close connection between man, God, and nature. But in the course of time, when men became more acquainted with the laws of nature, this belief was abandoned, at least by the more enlightened minds, while the multitudes still continued to adhere to it ; and the governments, seeing the advantages to be derived from it, not only countenanced, but encouraged and snpported it.

The seers or $\mu \dot{\alpha} \nu \tau \in t 5$, who, under the direct influence of the gods, chiefly that of Apollo, announced the future, seem originally to have been connected with certain places where oracles were given ; but in subsequent times they formed a distinct class of persons, independent of any locality ; one of them is Calchas in the Homeric poems. Apollo, the god of prophecy, was generally the source from which the seers, as well as other diviners, derived their knowledge. In many families of seers the inspired knowledge of the future was considered to be hereditary, and to be transmitted from father to son. To these families belonged the Iamids (Paus. iii. 11. §5, \&c. ; Böckh, ad Pind. Ol. vi. p. 152), who from Olympia spread over a considerable part of Greece; the Branchidae, near Miletus (Conon, 33) ; the Eumolpids, at Athens and Elensis; the Clytiads (Paus. vi. 17. §4), the Telliads (Herod. viii. 27 ; Pans. x. 1. § 4, \&c. ; Herod. ix. 37), the Acarnanian seers, and others. Some of these families retained their celebrity till a very late period of Grecian history. The manteis made their revelations either when requested to do so on important emergencies, or they made them spontaneously whenever they thought it necessary, either to prevent some calamity or to stimulate their countrymen to something beneficial. The civil government of Athens not only tolerated, but protected and honoured them ; and Cicero (De Divinat. i. 43) says, that the manteis were present in all the public assemblies of the Athenians. (Compare Aristoph. Pax, 1025 , with the Schol. ; Nub. 325, \&c. and the Schol. ; Lycurg. c. Leocrat. p. 196.) Along with the seers we may also mention the Bacides and the Sibyllae. Both existed from a very remote time, and were distinct from the inanteis so far as they pretended to derive their knowledge of the future from sacred books ( $\chi \rho \eta \sigma \mu o l$ ) which they consulted, and which were in some places, as at Athens and Rome, kept by the government or some especial officers, in the acropolis and in the most revered sanctuary. Bacis was, according to Pausanias (x. 12. § 6 ; compare with iv. 27. §2), in Boeotia a general name for a man inspired by nymphs. The Scholiast on Aristophanes (Pax, 1009) and Aelian (V.H. xii. 35) mention three original Bacides, one of Eleon in Boeotia, a second of Athens, and a third of Caphys in Arcadia. (Compare Aristoph. Equit. 123, 998, Aves, 963 ; Clam. Alex. Strom. i. 398.) From these three Bacides all others were said to be descended, and to have derived their name. Antichares (Herod.

## DIVINATIO.

v. 43), Musaeus (Herod. vii. 6), Euclous of Cyprus (Paus. x. 12. §6), and Lycus, son of Pandion (Paus. l. c.), probably helonged to the Bacides. The Sibyllae were prophetic women, probahly of Asiatic origin, whose peculiar custom seems to have been to wander with their sacred hooks from place to place. (Liv. i. 7.) Aelian (V.H. xii. 35) states that, according to some authors, there were four Sibyllae, - the Erythraean, the Samian, the Egyptian, and the Sardinian; but that others added six more, among whom there was one called the Cumaean, and another called the Jewish Sibylla. Compare Suidas (s.v. $\Sigma(i s u \lambda \lambda \alpha u)$, and Pausanias (x. 12), who has devoted a whole chapter to the Sibyllae, in which, however, he does not clearly distinguish between the Sibyllae properly so called, and other women who travelled about and made the prophetic art their profession, and who seem to have been very numerous in all parts of the ancient world. (Clem. Alex. Strom. i. 319.) The Sibylla whose books gained so great an importance at Rome, was, according to Varro (ap. Lactant. i. 6), the Erythraean : the books which she was said to have sold to one of the Tarquins, were carefully concealed from the public, and only accessible to the duumvirs. The early existence of the Sibyllae is not as certain as that of the Bacides; but in some legends of a late date, they occur even in the period previous to the Trojan war, and it is not improbable that at an early period every town in Greece had its prophecies by some Bacis or Sibylla. (Paus. l.c.) They seem to have retained their celebrity down to the time of Antiochus and Demetrius. (See Niebuhr, Hist. of Rome, i. p. 503, \&c.)

Besides these more respectable prophets and prophetesses, there were numbers of diviners of an inferior order ( $\chi p \eta \sigma \mu 0 \lambda$ ó $\gamma 01$ ), who made it their business to explain all sorts of signs, and to tell fortunes. They were, however, more particularly popnlar with the lower orders, who are everywhere most ready to believe what is most marvellous and least entitled to belief. This class of diviners, however, does not seem to have existed until a comparatively late period (Thncyd. ii. 21; Aristoph. Aves, 897, Pax, 986, 1034, \&c.), and to have been looked upon, even by the Greeks themselves, as nnisances to the pnblic.

These soothsayers lead us naturally to the mode of divination, of which such frequent use was msde by the ancients in all the affairs of public and private life, and which chiefly consisted in the interpretation of numberless signs and phenomena, No public undertaking of any consequence was ever entered upon by the Greeks and Romans without consulting the will of the gods, by ohserving the signs which they sent, especially those in the sacrifices offered for the purpose, and by which they were thought to indicate the success or the failure of the undertaking. For this kind of divination no divine inspiration was thought necessary, but merely experience and a certain knowledge acquired by routine ; and although in some cases priests were appointed for the purpose of observing and explaining signs [Augur; Haruspex], yet on any sudden emergency, especially in private affairs, any one who met with something extraordinary, might act as his own interpreter. The principal signs by which the gods were thought to declare their will, were things connected with the offering of sacrifices, the flight and voice of birds,
all kinds of natural phenomena, ordinary as well as extraordinary, and dreams.

The interpretation of signs of the first class (iepoдаитtia or iepoбкотia, haruspicium or ars haruspicina), was, according to Aeschylus (Prometh. 492 , \&c.), the invention of Prometheus. It seems to have been mosst cultivated by the Etruscans, among whom it was raised into a complete science, and from whom it passed to the Romans. Sacrifices were either offered for the special purpose of consulting the gods, or in the ordinary way; but in both cases the signs were observed, and when they were propitious, the sacrifice was said $\kappa a \lambda \lambda t \epsilon-$ $\rho \epsilon i v$. The principal points that were generally observed were, 1. The manner in which the victim approached to the altar, whether uttering a sound or not ; the former was considered a favourable omen in the sacrifice at the Panionium. (Strab. viii. p. 384 ; compare Paus. iv. 32. § 3.) 2. The nature of the intestines with respect to their colour and smoothness (Aeschyl. Prometh. 493, \&c.; Eurip. Elect. 833) ; the liver and hile were of particular importance. [Caput Extorum.] 3. The nature of the flame which consumed the sacrifice (see Valckenaer, ad Eurip. Phoen. 1261); hence the words, $\pi v \rho o \mu a \nu \tau \epsilon i a, ~ そ \mu \pi v \rho a \quad \sigma \eta \mu a \tau a$, $\phi \lambda о \gamma \omega \pi \alpha$ 设 $\mu \alpha \tau \alpha$. That the smoke rising from the altar, the libation, and various other things offered to the gods, were likewise considered as a means through which the will of the gods might be learned, is clear from the names,
 others. Especial care was also taken during a sacrifice, that no inauspicious or frivolous words were uttered by any of the hystanders: hence the admonitions of the prieste, $\in \mathfrak{v} \phi \eta \mu \in i \tau \epsilon$ and $\epsilon \dot{\jmath} \phi \eta \mu i \alpha$, or $\sigma \iota \gamma \hat{\alpha} \tau \epsilon, \sigma \iota \omega \pi \alpha \tilde{\tau} \epsilon$, favete linguis, and others; for improper expressions were not only thought to polIute and profane the sacred act, but to be mnlucky omens ( $\delta v \sigma \phi \eta \mu i a, ~ \kappa \lambda \eta \delta \delta \nu \in s, \phi \eta \eta^{\prime} \mu a r, \phi \omega \nu \alpha$ or ópqai, Pind. Ol. vi. 112 ; Hom. Il.ii. 41).

The art of interpreting signs of the second class was called oiwעıбтьcŋ, augurium or auspicizm. It was, like the former, common to Greeks and Romans, but was never developed into so complete a system by the former as by the latter; nor did it ever attain the same degree of importance in Greece as it did at Kome. [Augur.] The Greeks, when obscrving the flight of birds, turned their face towards the north, and then a bird appearing to the right (east), especially an eagle, a heron, or a falcon, was a favourable sign (Hom. Il. xiv. 274, xxiv. 310, Od. xv. 524); while birds appearing to the left (west) were considered as unlucky signs. (Hom. Il. xii. 201, 230 ; Festus, 3. v. Sinistrae Aves.) Sometimes the mere appearance of a hird was thought sufficient: thus the Athenians always considered the appearance of an owl as a lucky sign ; hence the proverb, $\gamma \lambda \alpha \dot{\nu} \xi$ intatal, " the owl is out," i.e. we have good luck. Other animals appearing unexpectedly, especially to travellers on their road ( $\epsilon \nu \delta \delta t a \sigma \dot{v} \mu 60 \lambda a$ ), were also thought ominous ; and at Athens it was considered a very unlucky omen, when a weasel appeared during the assembly of the people. (Aristoph. Eccles. 793.) Superstitions of this kind are still met with in several European countries. Various other means were used to ascertain the will of the gods, such as the $\sigma i \delta \eta \rho o \mu a \nu \tau e l a$, or divination by placing straws on red hotiron; the $\mu \circ \lambda \nu E \delta \mu \alpha \nu \tau \in l a$, lyy observing the figures which melted lead formed;
the Boтауо $\alpha \alpha \nu \tau \in$ ia, or divination by writing one's own name on herbs and leaves, which were then exposed to the wind, \&c.

Of greater importance than the appearance of animals, at least to the Greeks, were the phenomena in the heavens, particularly during any public transaction. They were not only observed and interpreted by private individuals in their own affairs, but by the public magistrates. The Spartan ephors, as we learn from Plutarch (Agesil. 11), made regular observations in the heavens every ninth year during the night; and the family of the Pythaistae, of Athens, made similar observations every year before the theoris set sail for Delos. (Müller, Dorians, ii. 2. § 14.) Among the unlucky phenomena in the heavens ( $\delta$ too $\eta \mu$ кia, signa, or portenta) were thunder and lightning (Aristoph. Eccles. 793 ; Eustath. ad Hom. Od. xx. 104), an eclipse of the sum or moon (Thucyd. vii. 50), earthquakes (Xen. Hellen. iv. 7. §4), rain of blood, stones, milk, \&c. (Hom. Il. xi. 53, \&c.; Cic. De Divinat. i. 43). Any one of these signs was sufficient at Athens, as well as at Rome, to break up the assembly of the people. (Schömann, De Comit. Ath. p. 146. \&c. transl.) In common life, things apparently of no importance, when occurring at a critical moment, were thought by the ancients to he signs sent hy the gods, from which conclusions might be drawn respecting the future. Among these common occurrences we may mention sneezing (Hom. Od. xvii. 561, with the note of Eustath.; Xen. Anab. iii. 2. § 9 ; Plnt. Themist. 13 ; Ovid, Heroid. 19, 151 ; Propert. ii. 2. 33), twinkling of the eyes (Theocrit. iii. 37 ; Plaut. Pseud. i. 2. 105 ; compare Wüstemann, ad Theocrit. l.c.), tinkling of the ears, and numberless other things which we cannot here enumerate. Some of them have retained their significance with the superstitions multitude down to the present day.

The art of interpreting dreams (oेveipoтодía), which had probably been introduced into Europe from Asia, where it is still a universal practice, seems in the Homeric age to have been held in high esteem; for dreams were said to be sent by Zeus. (Hom. Il. i. 63, ii. init., Od. iv. 841, xix. 457.) In subsequent times, that class of diviners who occupied themselves with the interpretation of dreams, seems to have been very numerous and popular; but they never enjoyed any protection from the state, and were only resorted to by private individuals. Some persons are said to have gained their livelihood by this profession. (Plut. Aristid. 27.) Respecting the oracles which were obtained by passing a night and dreaming in a temple, see Oraculum.

For further information concerning the art of divination in general, see Cicero's work, De Divinatione. The $\mu a \mu \tau i \kappa n$ of the Greeks is treated of at some length by Wachsmuth (Hellen. Alterth. ii. 2. p. 259, \&c., vol. ii. p. 585, 2d edit.) Compare Thirlwall's Hist. of Greece, i. p. 206, \&c.

The word divinatio was used in a particular manner by the Romans as a law-teru, which requires some explanation. If in any case two or more accusers came forward agrainst one and the same individual, it was, as the phrase ran, decided by divinatio, who should he the chief or real accuser, whom the others then joined as subscriptores; i.e. by putting their names to the charge brought against the offender. This transaction, by which one of several accusers was selected to con-
dact the accusation, was called divinatio, as the question here was not about facts, but about something which was to be done, and which could not be found out by witnesses or written documents ; oo that the judices had, as it were, to divine the course which they had to take. (Ascon. in Argum. ad Cic. Divinat. in Caec. p. 99. ed. Orelli.) Hence the oration of Cicere, in which he tries to show that he, and not Q. Caeciliua Niger, ought to conduct the accusation against Verres, is called Divinatio in Caecilium. Compare c. 15 and 20 of the oration, and Gellius, ii. 4.
[L. S.]

## DIVI'SOR. [Ambitus.]

DIVORTIUM, divorce. ]. Greek. The term
 denoting the act of a wife leaving her husband, and the latter that of a hushand dismissing his wife. (Dem. c. Onet. p. 865, с. Neaer. pp. 1362, 1365.) The only Greek states respecting whose laws of divorce we have any knowledge, are Athens and Sparta. In both states the law, it appears, permitted both husband and wife to call for and effect a divorce, though it was much easier for a husband to get rid of his wife than for a wife to get rid of her husband. The law at Athens allowed a man to divorce his wife without ceremony, simply by his act of sending
 he was bound to restore to her the dowry which she had brought to him, or to pay her the interest of nine oboli per drachma every month, and in addition to this, to provide for her maintenance. (Demosth. c. Neaer. p. 1362.) It would, however, seem that a husband thus dismissing his wife, usually did so in the presence of witnesses. (Lysias, c. Alcib. p. 541 .). What became of the children in such a case is not mentioned, but it is probable that they remained with the father. If, on the other hand, a wife wished to leave her husband, she was obliged in person to appear before the archon and to deliver up to him a memorial containing the reasons why she wished to be divorced. (Plut. Alcib. 8.) She had to conduct her case quite alone, for as she was in her husband's power so long as the verdict was not given, no one had a right to come forward and plead her case. If hoth parties agreed upon a divorce, no further proceedings were required, mutual consent being sufficient to dissolve a marriage. But if one party ob-
 might be brought against the other: the proceedings in such a case, however, are unknown. (Heffter, Athen. Gerichtsverf. pp. 250, 414; Meier, Att. Proc. p. 413, \&c.)

At Sparta, it seems, a man might dismiss his wife, if she bore him no issue. (Herod. v. 39 , vi. 61.)

Charondas, in his legislation at Thurii, had permitted divorce, but his law was subsequently modified by the addition, that if divorced persons should wish to marry again, they should not be allowed to marry a person younger than the one from whom he (or she) had been separated. (Diod. xii. 18.)

A woman, after her divorce, returned to the house of her father, or of that relative who was under obligation to protect her if she had never been married at all. In reference to her he was her кúpıos. (Demosth. c. Neaer. p. 1362.) [L. S.]
2. Roman. The word divortium signified generally a separation, and, in a special sense, a dissolution of marriage. A Roman marriage was dissolved by the death of the wife or husband, and by divortium in the lifetime of the husband and wife.

## DIVORTIUM.

The statement of Plutarch (Romul. 22) that the husband alone had originally the power of effecting a divorce may be true; but we cannot rely altogether on such an authority. In the cases of conventio in manum, one might suppose that a woman could not effect a divorce without the consent of her husband, but a passage of Gaius (i. 137) seems to say, that the conventio in manum did not limit the wife's freedom of divorce at the time when Gaius wrote (Böcking, Instit. j. 229. n. 3). The passage of Dionysius (Antiq. Rom. ї. 25), in which he treats of marriage by confarreatio, declares that the marriage could not be dissolved.

As the essential part of a marriage was the consent and conjugal affection of the parties, it was considered that this affection was necessary to its continuance, and accordingly either party might declare his or her intention to dissolve the connection. No judicial decree, and no interference of any public authority, was requisite to dissolve a marriage. Filiifamilias, of course, required the consent of those in whose power they were. The first instance of divorce at Rome is said to have occurred about b. c. 234, when Sp. Carvilius Rugs put away his wife (A. Gell. iv. 3, xvii. 21; Val. Max. ii. l. §4) on the ground of barresness: it is added that his conduct was generally condemned. The real meaning of the story is explained by Savigny with his usual acuteness (Zeitschrift, \&c. vol. v. p. 269).

Towards the latter part of the republic, and under the empire, divorces became very common; and in the case of marriages, where we assums that there was no conventio in manum, there was no particular form required. Cn. Pompeius divorced his wife Mucia for alleged adultery, and his conduct was approved (Cic. ad Att. i. 12, 18) ; and Cicero speaks of Paula Valeria (ad Fam. viii. 7) as being ready to serve her hushand, on his return from his province, with notice of divoree. (Compare Juv. vi. 224, \&c. ; Mart. vi. 7.) Cicero himself divorced his wife Terentia, after living with her thirty years, and married a young womsa whom he also divorced (Plut. Cic. 41). Cato the younger divorced his wife Marcia, that his friend Hortensius might narry her and have children hy her ; for this is the true meaning of the story. (Plat. Cat. Min. 25.) If a husband divorced his wife, the wife's dos, as a general rule, was restored [Dos]; and the same was the case when the divorce took place by mutual consent. As divorce became more common, attempts were made to check it indirectly, by affixing pecuniary penalties or pecuniary loss on the party whose conduct rendered the divorcs necessary. This was part of the object of the lex Papia Poppaea, and of the rules as to the retentio dotis, and judicium morum. There was the retentio dotis propter liberos, when the divorce was caused by the fault of the wife, or of her father, in whose power she was: three-sixths of the dos was the limit of what could be so retained. On account of matters morum graviorum, such as adultery, a sixth part might be retained; in the case of matters morum leviorum, one cighth. The husband, when in fault, was punished hy being requiree' to return the dos earlier than it was otherwise re turnable. After the divorce, either party might marry again. (Sucton. Aug. 34.)

By the lex Papia Poppaea, a freedwoman who had married her patronus could not divorce her self; there appears to have been no other class of
persons subjected to this incapacity. (Dig. 24. tit. 2. s. 11.)
Carresponding to the forms of marriage hy confarreatio and coemtio, there were the forms of divorce by diffarreatio and remancipatio. According to Festus (s. v. Diffarreatio), diffarreatio was a kind of religious ceremony so called, "quia fiebat farreo libo adhibito," by which a marriage was dissolved ; and Plutarch (Quaest. Rom. 50) has been supposed to allude to this ceremony in the case of a divore between the flamen dialis and his wife, It is said that originally marriages contracted by confarreatio were indissoduble; and in a later age, this was the case with the marriage of the flamen dialis (Gell. x. 15), who was married by confarreatio. In the case referred to by Plutarch, the emperor authorised the divorce. A marriage by coemtio was dissolved by remancipatio (Festus, 8. v. Remancipatum). In other cases, less ceremony was used ; but still some distinct notice or declaration of intention was necessary to constitute a divorce: the simple fact of either party contracting another marriage was not a legal divorce. (Cic. Orat. i. 40.) The ceremony of breaking the nuptiales tabulae (Tacit. Ann. xi. 30), or of taking the keys of the house from the woman and turning her out of doors, were probably considered to be acts of themselves significant enough, though it may be presumed that they were generally accompanied with declarations that could not be misunderstood. The general practice was apparently to deliver a written notice, and perhaps to assign a reason. In the case of Paula Valeria, mentioned hy Cicero, no reason was assigned. By the Lex Julia de Adulteriis, it was provided that there should be seven witnesses to a divorce, Roman citizens of full age (puberes), and a freedman of the party who made the divarce. (Dig. 24. tit. 2. s. 9.)

Under the early Christian emperors, the power of divorce remained, as before, subject to the observance of certain forms. Justinian restricted the power of divorce, both on the part of the husband and the wife, to certain cases, and he did not allow a divorce even by the consent of both parties, unless the ohject of the paxties was to live a life of chastity; a concession made to the opinions of his Christian subjects.

The term repudium, it is said, properly applies to a marriage only contracted [Matrimoniun], and divartium to an actual marriage (Dig. 50. tit. 16. s. 101. 191) ; but sometimes divortium and repudium appear to be used indifferently. The phrases to express a divorce are, nuncium remittere, divortium facere; and the form of words might be as follow - " "Tuas res tibi haheto, tuas res tihi agito." (Cic. Phil. ii. 28 ; Plaut. Amphit. iii. 2. 47, Trinum. ii. 1. 43.) The phrases used to express the renunciation of a marriage contract were, rennutiare repudium, repudium remittere, dicere, and repudiare ; and the form of words might he, "Conditione tua non utor." (Dig. 24. tit. 2 ; Ulp. Frag. vi. ; Heinecc. Syntagma ; Cod. 5. tit. 17, and 24 ; Rein, Das Römisshe Privatrecht ; and as to the later Roman Law, Thibant, System, \&c. 9th ed.)
[G. L.]
DO'CANA ( (c̀ $\delta \delta 6 \kappa a \nu a$, from $\delta o \kappa b s$, a beam) was an ancient symbolical representation of the Dioscuri (Castor and Polydenees), at Sparta. It consisted of two upright beams with others laid across them transversely. (Plut. De Amor. Fratr.

1. p. 36.) This rude symbol of fraternal unity evidently points to a very remote age, in which scarcely any attempts in sculpture can have been made. At a later time, when works of art were introdnced into all the gpheres of ordinary life, this rude and ancient object of worship, like many others of its kind, was not superseded by a more appropriate symbol. The Dioscuri were worshipped as gods of war, and we know that their images accompanied the Spartan kings whenever they took the field against an enemy. But when in the year 504 в.c. the two kings, during their invasion of Attica, failed in their undertaking on account of their secret enmity towards each other, it was decreed at Sparta, that in future only one king should command the army, and in consequence should oorly he accompanied by one of the images of the Dioscuri. (Herod. v. 75.) It is not improbable that these images, accompanying the kings into the field, were the ancient $\delta$ orava, which were now disjointed, so that one half of the symbol remained at Sparta, while the other was taken into the field hy one of the kings. Suidas and the Etymologicum Magnum (s.v.) state that $\delta$ orrava was the name of the graves of the Diascmi at
 ler, Dorians, i. 5. § 12. note m, ii. 10. §8; Zoega, De Obeliscis, p. 228.)
[L. S.]
DOCIMA'SIA ( $\delta o \kappa$ máia). When any cit1zen of Athens was either appointed by lot, or
 a public office, he was obliged, before entering on its duties, to submit to a docimasia, or scrutiny into his previons life and conduct, in which any person could object to him as unfit. This was the case with the archons, the senators, the strategi, and other magistrates. The examination, or anacrisis, for the archonship was conducted by the senators, or in the courts of the heliaea. The docimasia, however, was not confined to persons appointed to public offices; for we read of the denouncement
 tors who spoke in the assembly while leading profligate lives, or after having committed flagitious crimes. This denouncement might be made
 i. e. to compel the party complained of to appear hefore a court of justice, and give an account of his life and conduct. If found guilty, he was punished with atimia, and prohibited from the assenblies. (Aesch. Timarchl. p. 5.)
 few words of explanation. At the age of eighteen, every Athenian became an ephebus, and after two years was enrolled amongst the men, so that he could he present and vote at the assemblies. (Poil. viii. 105.) In the case of wards who were heirs to property, this enrolment might take place before the expiration of the two years, on it heing esta. blished hy a docimasia that the youth was physically qualified to discharge any duties the state might impose upon him. If so, he was released from guardianship, and " became a man " (abilp е่ $\gamma \in \dot{\varepsilon} \nu \tau \tau$, or $\delta$ окс $\mu \dot{\alpha} \sigma \theta \eta$ ), heing therely empowered to enter upon his inheritance, and enjoy other privileges, just as if he were of the full age of
 c. Apksb. p. 857, c. Onet. p. 865, c. Steph. p. 1135.) We may add that the statements of the grammarians and orators are at variance on this point; but the explanation we have given seems the best way of
reconciling them, and it agrees in substance with the supposition of Schömann, "that among the Athenians, no one period was appointed for enrolment, provided that it was not done before the attainment of the 18 th , nor after the completion of the 20th year." (Schömann, De Comititis, pp. $75,241, \& \mathrm{c}$. )
[R. W.]
DODRANS. [As.]
DOLABRA, dim. DOLABELLA ( $\sigma \mu i \lambda \eta$, dim. $\sigma \mu \lambda(o \nu)$, a chisel, a celt, was used for a variety of purposes in ancient as in modern times. They were frequently employed in making entrenchments and in destroying fortifications (Liv. ix. 37, xxi. 11 ; Curt. ix. 5 ; Tacit. Hist. iii. 20); and hence they are often found in ancient earth-works and encampments. They abound in our public museums, being known under the equivalent name of "celts" to antiquaries, who, however, generally ase the word without understanding its true sense. (See Jamieson's Etym. Dict. s. v. Celt.) Celtes is an old Latin word for a chisel, probably derived from coelo, to engrave. Thus the phrase celte sculpantur in silice occurs in the volgate version of Job (xix. 24), and malleolo et celte literatus silex in an inscription found at Pola. (Gruter, p. 329.) These articles are for the most part of hronze, more rarely of hard stome. The sizes and forms which they present, are as various as the uses to which they were applied. The annexed woodcut is designed to show a few of the most remarkable varieties. Fig. 1 is from a celt found, with several others, at Karnbrê in Cornwall. (Borlase, Ant. of Cornwoall, iii. 13.) Its length was six inches withont the haft, which was no doubt of wood, and fixed directly inta the sacket at the top. It must have been a very effective implement for removing the stones in the wall of a city or fortification, after they had been first shattered and loosened in some degree by the battering-ram. The ear, or loop, which is seen in this and many other celts, would be useful to suspend them from the soldier's girdle, and may also have had a cord or chain attached to it to assist in drawing back the celt whenever it became too firmly wedged between the stones of the wall which it was intended to destroy. Figs 2 and 3 are from Sir W. Hamilton's collection in the British Museum. These chisels seem best adapted for the use of the carpenter. The celt (fig. 4) which was found in Funiess, co. Lancaster (Archaeologia, v. p. 106), instead of being shaped to receive, or to be inserted into a handle, like the three preceding, is made thick, smooth, and round in the middle, so as to be conveniently manipulated without a handle. It is 9 inches long, and weighs 2 lb .5 oz . Its sharp edge is like that of a common hatchet, end may have been used for polishing timber. On

the other hand, figs. 5, 6, 7, exactly resemble the knife now used by leather-cutters, and there-

## DOMICILIUM.

fore illnstrate the account given by Julins Pollux who reckons this same tool, the $\sigma \mu l \lambda \eta$, among the ${ }_{\epsilon} \rho \gamma \alpha \lambda \epsilon i a$ тov̂ $\sigma \kappa v \tau о \tau \delta \mu 0 \nu$. This instrument was also used for cutting paper, and probably in the same manner ( $\sigma \mu \mathrm{i} \lambda \alpha$ хартот $\mu \boldsymbol{}$, sicila, Philox. Gloss.).

The following woodcut shows a small hronze celt, fixed into a handle of stag's horn, and therefore exemplifies one of the modes of attaching ths metal to its haft. It was evidently adapted for very fine work, and is atrongly contrasted with the above-figured celt from Cornwall. It was found in an ancient tomb in Wiltshire. (Sir R. C. Hoare's Anc. Wilts. South, pp. 182, 203.) The two ather figures in this woodcut represent the knife used in sacrifices, as it is often exhibited on cameos and bas-reliefs, being the scena, sacena, or dolabra pontificalis, mentioned by Festus (s. v. Scena) ; and the securis dolabrata, or hatchet furnished with a chisel (Pallad. De Re Rust. i. 43) as sculptured on a funereal monument.
[J. Y.]

DÓLICHOS ( $\delta$ ódicoos). [Stadium.] DO'LIUM. [Vinvm.]
DOLO ( $\delta 6 \lambda \omega \nu)$. 1. A secret poniard or dagger contained in a case, used by the Italians. It was inserted in the handles of whips (Dig. 9. tit. 2. s. 52 ; Serv. ad Virg. Aen. vii. 664), and also in walking-sticks, thus carrespanding to our swordstick. It was a weapon of the latter kind that Tib. Gracchus carried (Plut. Tib. Gracch. 10 ; comp. Hesych. s. v. $\left.\Delta{ }^{6} \lambda \omega \nu \in s\right)$.

## 2. A small top-sail. [Navis.] <br> DE DOLO MALO ACTIO. [Culpa.] <br> DOLUS MALUS. [CULPa.] <br> DOME'STICI. [PraEtoriani.]

DOMICI'LIUM. This word signifies a man's regular place of abode. It was used in the Las Plantia Papiria in such a manner, that when that lex was enacted, в. c. 89 , the word domicilium must have had a fixed meaning: "Si qui foederatis civitatibus adscripti fuissent, si tum cum lex ferebatur in Italia domicilium habnissent, et si sexaginta diehus apud praetorem essent professi." (Cicero, Pro Archia, c. 4.) This further appears from another passage in the same chapter: " At domicilinm Romae non habuit: is qui tot annis ante civitatem datam sedem omnium rerum ac
fortunarum suarum Romae collacavit;" and this indirect definition agrees, in part, with one in the Code, which will presently be cited.

There are various definitions of domicilium in the Corpus Juris. One of these (Dig. 50. tit. 1. s. 27. §1) determines that a person must be considered to have his domicilium in a municipium, if he buys and sells there, attends the public spectacles, keeps the festival days there, and, in fine, enjoys all the advantages of the municipium, and none of the colonia, or the place where he is merely for the purpose of cultivation (ubi colendi ruris causa versatur). In another passage (Cod. 10. tit. 40 (39.) s. 7), it is stated that a civis is made by origo, manumissio, allectio vel adoptio ; but that domicilium, as an edict of Divus Hadrianus declares, makes a person an incola. Domicilium is then defined in the following terms: "In eo loco singulos habere domicilium non ambigitur ubi quis larem rerumque ac fortunarum summam constituit, unde rursus non discessurus si nihil avocet, unde cum profectus est peregrinari videtur, quod (quo?) si rediit, peregrinari jam destitit."
In a passage in the Digest (50. tit. l. s. 5), "incolam esse" and "domicilium habere" are used as equivalent terms.
It was important, for many purposes, to determine where a man had his permanent abode. An incola was bound to obey the magistrates of the place where he was an incola, and also the magistrates of the place where he was a civis; and he was not only subject to the municipal jurisdiction in both municipia, but he was bound to perform all public functions (publica munera). If a man was bound (obligatus), to pay a sum of money in Italy, and had his domicilium in a provincia, he might be sued either in Italy or in the province (Dig. 5. tit. l. s. $19, \S 4$ ). A son followed the civitas which was the naturalis origo of his father, and did not follow his father's domicilium. If a man had no legal father (justus pater), he followed the origo of his mother. In the Praescriptio longi temporis decem vel viginti annorum, it was enacted by Justinian, that the ten years' prescription should apply, if both parties (tam petens quam possidens) had their domicilium in the same provincia; if the two parties had not their domicilium in the same province, the prescription of twenty years applied. (Cod. 7. tit. 33. s. 12 .)

The modern law of Domicile is a branch of what is sometimes called international law; and many of the principles which are admitted in modern times are founded on the Roman rules. (The Law of Domicile by Robert Phillimore, 1847 ; Burge, Commentaries on Colonial and Foreign Laws, vol. i.)
[G. L.]
DOMI'NIUM. Dominium signifies quiritarian awnership of a thing; and dominus, or dominus legitimus, is the owner. Possessor is often used by Raman writers as equivalent to owner ; but this is not a strictly correct use of the word. In like manner, "to have ownership" is sometimes expressed by "possidere;" and the thing in which there is property is sometimes called "possessio." (Savigny, Das Recht des Besitzes, p. 85, 5th ed.)

The complete notion of property or ownership comprehends the determination of the things which may be the objects of ownership; the power which a man may have over such objects, both as to duration of time and extent of enjoyment; the modes in which ownership may be acquired and
lost ; the persons who are capable of acquiring, transferring, or losing ownership.

Res is the general name for anything which is the object of a legal act. The chief division of res is into res divini juris, and res humani juris. Rea divini juris are those which are appropriated to religious purposes, namely, res sacrae, sanctae, religiosae ; and so long as they have this character, they cannot be objects of property. Res humani juris are all other things that can be the objects of property; and they are either res publicae or res privatae. Res publicae belong to the state, and can only become private property by being deprived of this public character. [Agrariae Leges.] Res universitatis are the property of a universitas, and are not the property of any individual. The phrase res mullius is ambiguous; it sometimes means that the thing cannot be the property of any individual, which is affirmed of things divini juris ; when applied to things humani juris, it sometimes means that they are not the property of an individual but of a universitas; yet such things may become the property of an individual; res hereditariae are res nullius until there is a heres. Res communes are those which cannot be the objects of property, and therefore are res nullius, as the sea.

Res corporales are defined to be those "quae tangi possunt;" incorporales are those "quæ tangi non possunt, sed in jure consistunt," as Hereditas, Ususfructus, Obligationes; and they are consequently incapable of tradition, or delivery. The distinction of things into corporeal and incorporeal did not exist in the older Roman law; and it is a useless distinction. An incorporeal thing is merely a right, and so it is explained in the Institutiones (ii. tit. 2, ed. Schrader).

Corporeal things are divided into immobiles, or solum et res soli, and mobiles. The ground (solum), and that which is so attached to the ground as to be inseparable from it without being destroyed, as a building for instance, are res immobiles. Mobiles res are all such as can be removed from one place to another without the destruction of their character. The class of res mobiles "quae pondere, numero, mensura constant," are such things as wine, oil, corn, silver, gold, which are of such a nature that any the same number, weight, or measure, may be considered the same thing. [Mutuum.] There is another class of res, consisting of thase "quae usu consumuntur, minuuntur," and those "quae non, \&c." The term siugulae res comprehends either one thing or several things, separately considered as ones. Such things are either simple, as an animal, a stone ; or compounded of parts, as a carriage, or a ship. Any number of things, not mechanically connected, may in a legal sense he viewed as one, or as a universitas. (Dig. 41. tit. 3. s. 30 ; 6. tit. 1. s. 23. § 5.)

Some things are appurtenant to others, that is, as subordinate parts they go with that which forms the principal thing. (Dig. 18. tit. l. s. 49.) lf a thing, as a house or a ship, was purchased. the buyer got every thing that was a part of the house or ship. (Dig.21. tit. 2. s. 44.)

Fructus are what is produced out of a thing by its own productive power ; as the grass in a field, the fruit on a tree.

The division of thinge into res mancipi and res nec mancipi, was one of ancient origin ; and it continued to a late period in the empire. Rea mancipi

## DOMINIUM.

(Ulp. Frag. xix.) are praedia in Italico solo, both rustic and urban ; also jura rusticorum praediorum or servitutes, as via, iter, aquaeductus; also slaves, and four-footed animals, as oxen, horses, \&c., quae collo dorsove domantur. Other things were nec mancipi.
All the things have been enumerated which are the object of dominium, and some which are not. Every dominus has a right to the possession of the thing of which he is dominus; but possession alone, which is a bare fact without any legal character, neither makes a man dominus, nor does the want of possession deprive him of dominium. Possession has the same relation to a legal right to a thing, as the physical power to operate upon it has to the legal power; and accordingly the doctrine of possession precedes that of ownership. Things cannot be the objects of possessio civilis which cannot be the objects of dominium.
Certain things are not properly objects of ownership (dominium), though a claim to them is prosecuted by an actio in rem: they are servitutes, emphyteusis, superficies, and pignus and hypotheca.

Dominium properly signifies the right of dealing with a corporeal thing as a person (dominus) pleases; this, of course, implies the right to exclude all others from meddling with it. The dominus has the right to possess, and is distinguished in that respect from the bare possessor, who has only the right of possession. He who has the ususfructus of a thing, is never considered as owner; and proprietas is the name for that which remains after the ususfructus is deducted from the ownership. Ownership may be either absolute, that is, as complete as the law allows any ownership to be, or it may be limited. The distinction between bare ownership and ownership united with the beneficial interest, is explained in another place. [Bona.] A person who has no ownership of a thing, may have rights in or to a thing which, as far as they extend, limit the owner's power over his property, as hereafter explained. Ownership, heing in its nature single, can only be conceived as belonging to one person; consequently there cannot be several owners of one thing, but several persons may own undivided shares or parts of a thing.

As a man's right to deal with a thing and to exclude others from the use or enjoyment of it, may be limited, this may arise either from his being bound to allow to another person a certain use or enjoyment of the thing of which he is dominus, or from his being bound to abstain from doing certain acts on or to his property, and for the benefit of some other person.

This limitation of a man's enjoyment of his own is explained under Servitutes.

In order to acquire ownership, a person must have a legal capacity to acquire; and ownership may be acquired by such a person, or by another for him. There must also be a thing which can he the object of such ownership, and there must be a legal mode of acquisition (acquisitio civilis). Ownership may be acquired in single things (acquisitio rerum singularum), or it may be acquired in a number of things of different kinds at once (acquisitio per universitatem), in which case a person acquires them not as individual things, but he acquires the parts hy virtue of acquiring the whole. The latter kind of acquisition is either successio inter vivos, as in the case where man adrogates another,
and so becomes the owner of ali the adrogated person's property (Gaius, iii. 21); or it is successio mortis causa, as in the case of a testamentary heres, or a heres ab intestato.

Acquisitiones per universitatem are properly discussed under other heads [Anoptio; Heres; Successio; Universitas]. The following remarks apply to acquisitiones rerum singularum. Acquisitiones were either civiles (ex jure civili); or naturales (ex jure gentiums), that is, there was no formality prescribed for the mode of acquisition: in both cases dominium could be acquired. Ths civiles acquisitiones of single things were by mancipatio, in jure cessio, and usucapio : those naturali jure were by traditio or delivery. In the case of res mancipi, the only modes of acquiring dominium were mancipatio, in jure cessio, and nsucapio ; but usucapio applied also to things nec mancipi. The alienation of things nec mancipi was the peculisr effect of traditio or delivery (Ulp. Frag. xix. 8), and if there was a justa causa, that is, some legal ground or motive for the delivery, dominium was thus acquired; traditio, in the case of a thing mancipi, merely made it in bonis, and the dominium or ownership continued unchanged. The notion that in the case of res nec mancipi, bare tradition with a justa causa did not confer quiritarian ownership or dominium, is erroneous ; for when the Roman law did not require peculiar forms, the transfer of ownership was effected in what may be called the natural way, that is, the simplest and most easy way in which the parties to the act could show their meaning and carry it into effect.

A man who was dominus of a thing, whether acquired jure civili or naturali, prosecuted his right to it in the same way, by the rei vindicatio. He could not of course prosecute such a right unless he was out of possession; and, in order to succeed, he must prove his ownership. If he lad a thing in bonis, and was in possession, he could acquire the ownership by usucapion: if he was out of possession, it seems not an improhable conjecture of Unterholzner (Rhein. Mus. für Jurisprud. Erster Jahrgang, p. 129), that he was aided in his action after the time when the legis actiones fell into disuse and the formula was introduced (for as to a previous time it is difficult to form any conjecture) by the fiction of his having received the property by mancipatio. There are examples of a similsr fiction in the case of the bonorum possessor and the bonorum entor. (Gaius, iv. 34, 35.) A man could only dispose of a legacy by his will per vindicationem (Ulp. Frag. xxiv. 7) when he had the dominium of it: if he had not the dominium, he could only give per damnationem or sinendi modo. A slave who was the property of his master (domi$n u s$ ) might attain the Roman civitas by the act of manumission: if he was only in bonis of the person who manumitted him, he became a Latinus by the act of manumission. The difference between quiritarian ownership and in bonis was destroyed by the legislation of Justinian, who declared in bonis to be complete ownership.

Some modern writers enumerate in addition to the civiles acquisitiones here enumerated, addictio, emtio sub corona, sectio bonorum, adjudicatio, and lex (Ulp. Frag. tit. xix. § 2), by which last they understand those circumstances under which some special enactment gives property to a person; and caducum [Canucum] is mentioned as an instance,

A bonae fidei possessio was not ownership (do.
minium), nor was it the same as in bonis. The two things are distinguished by Ulpian (Frag. xix. 20, 21). A bonac fidei possessor had a capacity for acquiring by usucapion the ownership of the thing which he possessed. He had a kind of action, actio publiciana in rom, by which, if he lost the possession before he had aequired the ownership by usucapion, he could recover it against all except the owner, or such person as had a better right than himself, in which latter respest he differed from him who had a thing in bonis, for his claim was good against the person who had the hare ownership. (Dig. 6. tit. 2.)

As to fundi provinciales, it was an old principle of Roman law that there could be no dominium in them, that is, no quiritarian ownership; nor were they said to be in bonis, but the occupier had possessio and ususfructus. In fact the terms dominium and in bonis were not applicable to provincial lands, nor were the fictions that were applicable to things in bonis applicable to provincial lands ; but it is an ingenious conjecture of Unterholzner, that the formula actionis was adapted to the case of provincial lands by a fiction of their heing Italic lands, combined with a fiction of their heing acquired by usucapion. In the case of the sger publicus in Italy, the dominium was in the Roman people, and the terms possessio and possessor were appropriate to the enjoyment and the person by whom the land was enjoyed. Still the property in provincial land was like the property in bonis in Rome and Italy, and it consequently became dominium after the distinction hetween quiritarian and bonitarian ownership was destroyed.

Ownership was also acquired in the case of occupatio, accessio, \&c. [Accessio; Alluvio; Confusio.]

A man, who had a legal capacity, could acquire property either himself or by those who were "in potestate, manu, mancipiove." He could even acquire thus per universitatem, as in the case of an hereditas; and he could also thus acquire a legacy. If a slave wasa man's in bonis, every thing that the slave aequired belonged to the owner in bonis, and not to him who had the bare quiritarian ownership. If a man was the "bona fide possessor " of another person, whether that person happoned to he a freeman supposed to be and possessed as a slave, or was the property of another, the possessor only acquired the ownership of that which the person so possessed acquired "ex re possidentis " and "ex operis suis." The same rule applied to a slave in which a man had only the ususfructus; and the rule was consistent with the rule just laid down, for ususfructus was not property. Sons who were in the power of a father, and slaves, of course, could not acquire property for themselves. [Peculium.]

Ownership was lost either with the consent of the owner or against it. With the consent, when be transferred it to another, which was the general mode of acquiring and losing property; without the consent, when the thing perished, when it hecame the property of another by accession or usucapion, when it was judicially declared to be the property of another, or forfeited by being pledged. 0 wnership was not lost by death, for the heres was considered to be the same person as the defunct.
As certain persons had not a capacity to acquire, no soms persons had not the same liability to lose
that others had. Thus the property of a pupillus who was in tutela legitima, could not becoms the property of another by usucapion ; a fundamental principle of law which Cicero was surprised that his friend Atticus did not know ( $A d$ Att. i. 5 ).

Ownership might be lost by the Maxima capitis diminutio ; when it was the consequence of a conviction for a capital crime, the property was forfeited to the state. [Sectio Bonorum.] The media capitis diminutio only effected an incapacity for quiritarian ownership: the person could still retain or acquire property by the jus gentium; still if the media capitis diminutio was the consequence of conviction for a capital crime, it had the same consequences as the Maxima. (Mackeldey, Lehrbuch, \&c. 12th ed.; Ueber die Verschiedenen Arten des Eigenthums, \&c. von Unterholzner, Rhein. Mus. Erster Jahrg.; Gaius, ii. 1, \&c. ; Ulp. Frag. tit. xix. ; Thibaut, System, \&c. §ु 146. \&c., § 242 , \&c., 9th ed.)
[G. L.]
DOMINUS means master, owner [Dominium]. Dominus is opposed to Servus, as master to slave. Plinius, in his letters, always addresses Trajanus as Dominus; but this must be viewed rather as a mode of showing his respect than any acknowledgment of a title. (C. Plinii Caecilii Secundi $E p$. ed. G. H. Schaefer, p. 500, note.) Domitianus clsimed the titles of Dominus and Deus. (Dion Cass. Lxvii. 13, and the note of Reimarus; also Martialis, Ep. v. 8, and x. 72, when Domitianus was dead.) It is said, that Aurelianus first adopted the title Dominus on his medals. (Eckhel, Doct. Num. Vet. vol. vii. p. 482.)
[G. L.]
DOMUS (oîkos, oikía, and in old Greek $\delta \delta \mu o s$ ), a house. 1. Greer. - The arrangement of the several parts of the dwellings of the Greeks forms one of the most difficult subjects in their antiquities. The only regular description of the Greek house, that of Vitruvius, is in many respects inconsistent with the allusions found in the Greek writers; while those allusions themselves are far too scanty and obscure, to he woven into a clear description. It is manifest, also, that the arrangement of the parts differed much at different periods. To say nothing of the early period when, according to tradition, rude huts of clay, or wood, or stone, hegan to be used instead of the hollow trees, and caves, and clefts in the rocks, in which the savage aborigines found shelter (Diod. v. 68, Paus. x. 17), we have to distinguish between the houses, or rather palaces, of the heroic age, to which Homer's allusions apply, the houses of the historical period down to the time of Alexander the Great, and those after his time.
There were also considerable differences between the arrangements of a town and a country house. All of these had two principal features in common. Firstly, in Greece, as in all warm climates, the general arrangement of a house of the better sort was that of one or more open courts, surrounded by the various rooms. Secondly, in a Greek family the women lived in private apartments allotted to their exclusive use. Hence the house was always divided into two distinct portions, namely, the Andronitis, or men's apartments ( $\dot{\alpha} \delta \delta \omega \omega \bar{\nu} \tau \tau s)$, and the Gynueconitiss, or wo-
 times, as in the houses referred to by Homer, the women's apartments were in the upper story (jं $\dot{\pi} \boldsymbol{\rho}$ $\omega_{0} \boldsymbol{y}$ ). The same arrangement is found at the time of the Peloponnesian war in the house spoken of
by Lysias (De Caed. Eratosth. pp. 12, 13 ; comp. Aristoph. Eccles. 961, Thesm. 482). But it does not follow that that was the usnal custom at this period. On the contrary, we have the express testimony of several writers, and of Lysias himgelf among the rest, that the Gynaeconitis was on the same story with the Andronitis, and behind it (Lysias, c. Simon. p. 139 ; Demosth. c. Euerg. p. 1155 ; Xen. Oecon. ix. 5 ; Antiph. de Venif. p. 611) ; and even the tragic poets transfer to the heroic ages the practice of their own, and describs both sets of apartments as on the same floor. (Soph. Oed. Tyr. 1241-1262.)
The scanty notices of the domestic, or rather the palatial architecture of the early Greeks, which we find in Homer, are insufficient to give an accurate notion of the names, uses, and arrangement of the apartments; besides which, an allowance must no doubt be made for poetical exaggeration. The various passages and words, in Homer, which throw any light upon the subject, are collected and discussed by Schneider (Epim. ad Xenoph. Mem. iii. 8. § 9), by Krause (in Pauly's Real-Encyclop. d. Class. Alterth. s. v. Domus), and by Hirt, who gives a ground-plan of the Homeric house (Geschichte der Baukunst, vol. i. pp. 208-216, and Plate VI. fig. 1). The general plan was not very different from that of the later houses. The chief points of difference appear to have heen, the position of the women's apartments in the upper story, and the great court in front of the house, which was wanting at least in the ordinary town dwellings of lator times.

We first gain precise information on the subject about the time of the Peloponnesian war; and from the allusions made by Greek writers to the houses of this and the immediately subsequent periods, till the time of Alexander, we may conclude that their general arrangement corresponded with that described by Vitruvius (vi. 7, Schneider). In this description, however, there is one considerahle difficulty, among others of less importance. Vitruvius seems to describe the Gynaeconitis as lying before the $\operatorname{Andronitits}$, an arrangement alike inconsistent with the careful state of secInsion in which the Greek women were kept, and also with the allusions in the writers of the period, who, as above stated, almost uniformly refer to the two sets of apartments as being on the same floor, the Gynaeconitis behind the Andronitis. Becker (Charikles, vol. i. pp. 184, 185) notices the different explanations which have been given of the inconsistency between the statements and the description of Vitruyius, the most plansible of which is that of Galiani, namely, that in the time of Vitruvius a slight change had taken place in the disposition of the apartments, by which the Andronitis and Gynaeconitis were placed side by side, each of them having its own front towards the street, and its own entrance. It is also very likely that Vitruvius to some extent misunderstood the descriptions given by his Greek anthorities.
The front of the honse towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns the houses were often built side by side, with party walls between. (Thncyd. ii. 3.) The exterior wall was plain, being composed generally of stone, brick, and timber (Xen. Mem. iii. 1. § 7; Demosth. חepl ミuyrak. p. 175), and often covered with stucco. (Plntarch. Comp. Arist. et Cat. 4).

## DOMUS.

Plutarch speaks of Phocion's house as heing ornamented with plates of iron. (Plut. Phoc. 10.)

The general character of the ordinary houses in towns was very plain, even at the time of the Peloponnesian war; the Greeks preferring to expend their wealth on temples and other public buildings. The ease with which the Plataeans broke through the party walls of their houses, to communicate with one another, in the instance just quoted, shows how indifferently they were constructed; and even at Atheus, in the time of Pericles, foreigners were struck by the contrast between the splendour of the puhlic huildings and the mean dwellings of the common people. (Thuc. ii. 14, 65 ; Dicaearch. Stat. Graec. p. 8.)

Xenophon (Mem. iii. 8. $\S \S 9,10$ ) represents Socrates as stating briefly the chief requisites of a good house : that it should be cool in summer and warm in winter, and that the apartments should furnish convenient abodes for the family, and safe receptacles for their property : for the former purpose, the chief apartments should face the south, and should be lofty, so as to receive the full rays of the sun in winter, and to be shaded by their projecting roofs in summer ; and that those facing the north should be lower, for the sake of shelter. Paintings and elaborate decorations, he says, destroy more pleasures than they furnish.

Ths advance of luxury, after the time of Alexander the Great, caused a corresponding improvement in the dwelling-honses of the principal Greek cities, which had already begun to receive more attention, in proportion as the public buildings were neglected. (Demosth. in Aristocr. p. 689, Olynth. iii. p. 36.) It is probably to the larger and more splendid bouses of this period that the description of Vitruvius applies ; but thers is no reason to suppose that the general arrangements of the previous period were much altered. The following description, therefore, which is derived from a comparison of Vitruvius with the allusions in the Greek writers, will serve for the probable arrangements (for further we cannot go) of the Greek house, at the time of the Peloponnesian war and onwards.

That there was no open space between ths street and the house-door, like the Roman vestibulum, is plain from the law of Hippias, which laid a tax on house-doors opening outwards, because they encroached upon the street. (Aristot. Oecon ii. 6, p. 1347. Bekk.) The $\pi \rho \circ \theta$ ט́pov, which is sometimes mentioned (Herod. vi. 35), seems to be merely the space in front of the house. We learn, however, from the same law of Hippias, that houses sometimes stood back from the street, within enclosures of their own ( $\pi \rho \circ \phi \rho \alpha \alpha^{\gamma} \mu \alpha \tau \alpha$ or $\delta \rho \dot{\prime} \phi \alpha-$ кто, Heracl. Pont. Polit. 1). In front of the house was generally an altar of Apollo Agyjeus, or a rude obelisk emblematical of the god. Sometimes there was a laurel tree in the sams position, and sometimes a terminal bust of the god Hermes. (Thucyd. vi. 27 ; Aristoph. Plut. 1153.)

A few steps ( $\delta \nu \alpha 6 \alpha \theta \mu 0 l$ ) led np to the housedoor, which generally bore some inscription, for the sake of a good omen, or as a charra, such as
 Vit. Crat.; Diog. Laërt. vi. 50.) The form and fastenings of the door are described under Janva. This door, as we have seen, sometimes opened outwards; but the opposite was the general rule, as is proved by the expreasions used for opening,
evoouvat，and shutting it，èmı $\kappa \dot{u} \sigma \alpha \sigma \theta a \mathrm{~L}$ ．（Plutarch．Pelop．11，Dio，57．）The handles were called $\bar{\epsilon} \pi เ \sigma \pi a \sigma \tau \bar{\eta} \rho \in s$ ．
 Nưpa（Pind．Nem．i．19；Harpocr．s．v．；Eustath． ad Iliad，xxii．66），because it led to the aùnj．It
 $\pi \nu \lambda \hat{\omega} \nu, \lambda \nu \rho \hat{\omega} \nu)$ ，on one side of which，in a large house，were ths stables，on the other the porter＇s lodge．The duty of the porter（Avpopós）was to admit visitors，and to prevent anything improper from being carried into or out of the house．（Aristot． Oecon．i．6．）Plato（Protag．p．314．）gives a lively picture of an officious porter．The porter was attended hy a dog．（Apollod．apud Athen．i．p．3； Theocr．xv．43；Aristoph．Thesm．416，Equit．
 （Aristopi．Lysist．1215），corresponding to the Latin Cuve canem．

At the further end of the passage Vitruvius places another door，which，however，does not seem generally to have existed．Plutarch（ $d e$ Gen．Socr．18）mentions the house－door as being visible from the peristyle．

From the Avpapeiol we pass into the peristyle or court（ $\pi \in \rho เ \sigma \tau \cup \dot{\lambda} เ o \nu, \alpha \dot{\lambda} \lambda \lambda \hat{\eta}$ ）of the Andronitis， which was a space open to the sky in the centre （Üтai $\theta \rho o \nu$ ），and surrounded on all four sides by porticoes（ $\sigma$ тoal），of which one，prohably that nearest the entrance，was called $\pi \rho o \sigma \tau 60 \nu$（Plato， Protag．pp．314，315）．These porticoes were used for exercise，and sometimes for dining in．（Pollux， i． 78 ；Plato，Symp．p．212，Protag．p． 311 ；Plu－ tarch．de Gen．Socr．32．）Here was commonly the altar on which sacrifices were offered to the household gods，but frequently portable altars were used for this purpose．（Plato，de Repull．i． p．328．）Vitruvius（l．c．）says that the porticoes of the peristyle were of equal height，or else the one facing the south was built with loftier columns． This he calls a Rhodian peristyle ；and it cor－ responds with the arrangement recommended by Xenophon，for the purpose of obtaining as much sun in winter，and as much shade and air in sum－ mer，as possible．（Xen．Oecon．ix． 4 ；Mem．ïi． 8. § 9；Aristot．Oecon．i．6．）

Round the peristyle were arranged the chambers used by the men（olkou，$\dot{\alpha} v \delta \rho \bar{\omega} \nu \epsilon s$ ），such as ban－ queting rooms，which were large enough to con－
 $\tau \rho \iota a \kappa o \nu \tau a ́ \kappa \lambda(\nu 0 t)$ ，and at the same time to allow ahundant room for attendants，musicians，and per－ formers of games（Vitruv．l．c．；Xen．Symp．i． 4. §13；Plutarch．Symp．v．5．§ 2；Aristoph．Eccles． 676）；parlours or sitting rooms（ $\ddagger \xi \in \delta \delta \rho a \iota$ ），and smaller chambers and sleeping rooms（ $\delta \omega \mu \dot{\alpha} \tau \alpha a$ ，
 and sometimes store－rooms；and in the arrange－ ment of these apartments attention was paid to their aspect．（Vitruv．l．c．；Lysias，de Caede Era－ tosth．p．28，in Eratosth．p．389；Aristoph．Eccles． 8,14 ；Pollux，i．79；Plato，Protag．pp．314．316．）
The peristyle of the Andronitis was connected with that of the Gynaeconitis by a door cailed uérau入as，$\mu \dot{\epsilon} \sigma \alpha \nu \lambda o s$ ，or $\mu \in \sigma \alpha \dot{1} \lambda 10 s$ ，which was in the middle of the portico of the peristyle opposite to the entrance．Vitruvius applies the name $\mu$ é $\sigma u \lambda o s$ to a passage between the two peristyles， in which was the $\mu \epsilon \in \sigma u \lambda$ os $\uparrow$ tipa．By means of this door all communication between the Andronitis and the Gynaeconitis could be shnt off．Its uses
are mentioned by Xenophon，who calls it $\$ 1 t_{p a}$ Ba入avards（Oecon．ix． 5 ；compare Plut．Arat．26）． Its name $\mu \dot{\epsilon} \sigma \alpha u \lambda o s$ is evidently derived from $\mu^{\prime} \boldsymbol{\sigma} \sigma s$, and means the door between the two aù $\lambda a l$ or peristyles．（Suidas s．v．M $\epsilon \sigma a \dot{u} \lambda 10 \nu$ ：Ael．Dion． apud Eustath．ad Iliad，xi．547；Schol．in Apoll． Rhod．iii．335．）The other name，$\mu \dot{\epsilon} \tau \alpha u \lambda o s$, is taken by some writers as merely the Attic form of $\mu$ éacuגos．（Moer．Att．p．264．）But it should rather be derived from $\mu \epsilon \tau \alpha$, ，as being the door behind or beyond the aùn，with respect to the
 Symp．vii．1；Ael．Dion apud Eustath．l．c．）It should be observed that in the house described by Vitruvius，if the Andronitis and Gynaeconitis lay side by side，the $\mu$ ́́cau入os úpa would not be opposite to the entrance，but in one of the other sides of the peristyle．

This door gave admittance to the peristyle of the Gynaeconitis，which differed from that of the Andronitis in having porticoes round only three of its sides．On the fourth side，that opposite to the
 ing to Vitruvius），were placed two antae［ANTaE］， at a considerable distance from each other．A third of the distance between these antae was set off inwards（Vitruv．l．c．§ 1．Quantum inter antas distut，ex eo tertia dempta spatium datur introrsus）， thus forming a chamber or vestibule，which was called $\pi p o \sigma \tau \alpha s, \pi \alpha p a \sigma \tau \alpha ́ s$ and perhaps $\pi \Delta \sigma \tau \alpha \dot{s}$ ，and also $\pi p \delta \delta o \mu o s$ ；although some of the later Greek writers apply the word $\pi \rho 6 \delta o \mu 0$ s to the vestibule of the Andronitis，and such seems to have been its meaning in Homer＇s time．（Pollux ；Suid．； Hesych．；Etymol．Mag．；Vitruv．l．c．）On the right and left of this $\pi \rho o \sigma \tau \alpha{ }^{\prime} s$ were two bed－
 the former was the principal bed－chamber of the house，and here also seem to have been kept the vases，and other valuable articles of ornament． （Xen．Oecon．ix．3．）Beyond these rooms（for this seems to be what Vitruvius means hy in his locis introrsus）were large apartments（iбт $\omega \nu \epsilon s$ ）used for working in wool（oeci magni，in quibus matres familiarum cum lanifcis habent sessionem，Vitruv．）． Round the peristyle were the eating－rooms，bed－ chambers，store－rooms，and other apartments in common use（triclinia quotidiana，cubicala，et cellae familiaricae）．

 ing to the garden．（Pollux，i．76；Demosth．in Euerg．p． 1155 ；Lysias，in Eratosth．p．393．） Lysias（l．c．p．394）speaks of another door，which probably led from the garden into the street．
There was usually，though not always，an upper story（ $\dot{v} \pi \epsilon \rho \hat{\psi} o \nu, \delta i \grave{\eta} \rho \epsilon s$ ），which seldom extended over the whole space occupied by the lower story． The principal use of the upper story was for the lodging of the slaves．（Demosth．in Euerg．p．1156， where the words $\bar{e} \nu \tau \hat{\varphi} \pi \dot{\varphi} \gamma \varphi \varphi$ seem to imply a building several stories high．）The access to the upper floor seems to have been sometimes by stairs on the outside of the house，leading up from the street．Guests were also lodged in the upper story．（Antiph．de Venef．p．611．）But in some large houses there were rooms set apart for their reception（ $\xi \in \nu \bar{\nu} \nu \epsilon s$ ）on the ground floor．（Vitruv． l．c．；Pollux，iv． 125 ；Eurip．Aicest．564．）In cases of emergency store－rooms were fitted up for the accommodation of guests．（Plato，Protag．p．315．）

DOMUS.
Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandahs ( $\pi \rho 0$ go $\lambda a l$, रei $\sigma t \pi o \delta i \sigma \mu \alpha \tau \alpha$, Pollux, i. 81).

The following plan of the ground-floor of a Greek house of the larger size is taken from Bekker's Charikles. It is of course conjectural, as there are no Greek houses in existence. Other plans, differing very much from this and from one another, are given by Hirt, Stieglitz, and the commentators on Vitruvius.

a, House-door, ай $\lambda \in t o s$ Țúpa: Țup. passage, Nupwpeiov or Nupáv: A, peristyle or aù $\bar{y}$ of the Andronitis: 0 , the halls and chambers of the An-
 style of the Gynaeconitis; $\gamma$, chambers of the Gynaeconitis ; $\pi$, $\pi \rho \sigma \sigma \tau \grave{s} s$ or $\pi a \rho \alpha \sigma \tau \alpha ̀ s: ~ \theta$, ञ̂á $\lambda \alpha-$ $\mu o s$ and $\hat{a} \mu \phi \iota \theta \dot{\alpha} \lambda \alpha \mu 0 s:$ I, rooms for working in wool ( $\boldsymbol{i} \tau \tau \hat{\omega} \nu \epsilon s$ ); K, garden-door, $\kappa \eta \pi \alpha i \alpha \mathfrak{N} \cup{ }^{\rho} \rho \alpha$.

The roofs were generally flat, and it was customary to walk ahout upon them. (Lysias, adv. Simon. p. 142 ; Plaut. Mil. ii. 2. 3.) But pointed roofs were also used. (Pollux, i. 81.)

In the interior of the house the place of doors was sometimes supplied by curtains ( $\pi a \rho a \pi \in \tau a ́ \sigma-$ a $\alpha \tau \alpha$ ), which were either plain, or dyed, or embroidered. (Pollux, x. 32; Theophrast. 5.)

The principal openings for the admission of light and air were in the roofs of the peristyles ; but it is incorrect to suppose that the houses had no windows (ڭvopi(ics), or at least none overlooking the street. They were not at all uncommon. (Aristoph. Thesm. 797, Eccles. 961 ; Plutarch. de Curios. 13, Dion, 56.)

Artificial warmth was procured partly by means of fire-places. It is supposed that chimneys were altogether unknown, and that the smoke escaped through an opening in the roof ( $\kappa \alpha \pi \nu o \delta o r i n$, Herod. viii. 137). It is not easy to understand how this could be the case when there was an upper story.

Little portable stoves ( $\in \sigma \chi \chi^{\alpha} \rho a l, \dot{E}^{\prime} \sigma \chi \alpha \rho(\delta \in s)$ or chafing dishes (à $\partial_{p a ́ k i a}$ ) were frequently used.

## DOMUS.

(Plutarch. Apophth. i. p. 717; Aristoph. Vesp. 811, Pollux, vi. 89, x. 101.) [Focus.]

The decorations of the interior were very plain at the period to which our description refers. The floors were of stone. At a late period coloured stones were used. (Plin. H. N. xxxvi. 25. s. 60.) Mosaics are first mentioned as introduced undsr the kings of Pergamus.

The walls, up to the fourth century B. C., scem to have been only whited. The first instance of painting them is that of Alcibiades. (Andoc. in Alcib. p. 119 ; Plutarch. Alcib. 16.) This innovation met with considerable opposition. (Xen. Mem. iii. 8. § 10 ; Oecon. ix. 2.) Platomentions the painting of the walls of houses as a mark of a $\tau \rho \nu \phi \hat{\omega} \sigma \alpha \pi \delta \lambda / s$ (Repub. iii. pp. 372,373). These allusions prove that the practice was not uncommon in the time of Plato and Xenophon. We have also mention of painted ceilings at the same period. (Plato, Repub. vii. 529.) At a later period this mode of decoration became general. (The commentators on Vitruvius, l. c. ; Schneider, Epim. ad Xen. Mem. ; Hirt, Die Lehre der Gebäude, pp. 287 -289; Stieglitz, Archäol. d. Baukunst, vol. ii. pt. 2. pp. 150-159; Becker, Charikles, vol. i. pp. 166-205.)
[P. S.]
2. Roman. The houses of the Romans were poor and mean for many centuries after the foundation of the city. Till the war with Pyrrhus the houses were covered only with thatch or shingles (Plin. H. N. xvi. 15), and were usually built of wood or unbaked bricks. It was not till the latter times of the republic, when wealth had been acquired by conquests in the East, that houses of any splendour began to be built; but it then becams the fashion not only to build houses of an immenss size, but also to adorn them with columns, paintings, statues, and costly works of art.
M. Lepidus, who was consul B. c. 78, was the first who introduced Numidian marble into Rome for the purpose of paving the threshold of his house; but the fashion of building magnificent houses increased so rapidly that the house of Lepidus, which, in his consulship, was the first in Rome, was, thirty-five years later, eclipsed by a hundred others. (Id. xxxvi. 8. 24. § 4.) Lucullus especially surpassed all his contemporaries in the magnificence of his houses and the splendour of their decorations. Marble columns were first introduced into private houses by the orator L. Crassus, but they did not exceed twelve feet in height, and were only six in numher. (Id. xpii. 1, xxxyi.' 3.) He was soon outdone by M. Scaurus, who placed in his atrium columns of black marble, called Lucullean, thirty-eight feet high, and of such immense weight that the contractor of the sewers took security for any injury that might be done to the sewers in consequence of the columns being carried along the streets. (Id. xxxvi. 2.)

The Romans were exceedingly partial to marble for the decoration of their houses. Mamurra, who was Caesar's praefectus fahrûm in Gaul, set the example of lining his room with slabs of marble. (Id, xxxvi. 7.) Some idea may be formed of the size and magnificence of the houses of the Roman nobles during the later times of the repuhlic by the price which they fetched. The consul Messalla bought the house of Autronius for 3700 sestertia (nearly $33,000 l$.), and Cicero the house of Crassus, on the Palatine, for 3500 ses tertia (nearly 31,000l.). (Cic. ad Att. i. 13, ad

Fam. v. 6.) The house of P. Clodius, whom Milo killed, cost 14,800 sestertia (about 131,000l.) ; and the Tusculan villa of Scaurus was fitted up with such magnificence, that when it was burnt by his slaves, he lost 100,000 sestertia, upwards of 885,0002. (Plin. H. N. xxxvi. 24.) The houserent, which persons in poor circumstances usually paid at Rome, was about 2000 sesterces, between 17l. and 18l. (Suet. Jul. 38.) It was brought as a charge of extravagance against Caelius that he paid 30 sestertia (about 266l.) for the rent of his honse. (Cic. pro Cuel. 7.)

Houses were originally only one story high ; hut as the value of ground increased in the city they were built several stories in height. In many houses each story was let out to separate tenants, the highest floors being usuaily inhabited by the poor. (Cic. Agr. ii. 35 ; Hor. Ep. i. 1. 91 ; Juv. Sat. iii. 268, \&c., x. 17.) To guard against danger from the extreme height of houses, Augustus restricted the height of all new houses which were bnilt by the side of the public roads to seventy feet. (Strab. v. p. 235.) Till the time of Nero, the streets in Rome were narrow and irregular, and bore traces of the haste and confusion with which the city was built after it had been burnt by the Gauls; but after the great fire in the time of that emperor, by which two-thirds of Rome was burnt to the ground, the city was huilt with great regularity. The streets were made straight and broad; the height of the houses was restricted, and a certain part of each was required to be built of Gahian or Alban stone, which was proof against fire. (Tacit. Ann. xy. 43; Suet. Ner. 38.)

Our information respecting the form and arrangement of a Roman house is principally derived from the description of Vitruvius, and the remains of the houses which have been found at Pompeii. Many points, however, are still doubtful ; but without entering into architectural details, we shall confine ourselves to those topics which serve to illustrate the classical writers. The chief rooms in the house of a respectable Roman, though differing of course in size and splendour according to the circumstances of the owner, appear to have been usually arranged in the same manner; while the others varied according to the taste and circumstances of the mazter.

The principal parts of a Roman house were the 1. Vestibuilum, 2. Ostium, 3. Atrium or Cavum Aedium, 4. Alae, 5. Tabinum, 6. Fauces, 7. Peristylizm. The parts of a house which were considered of less importance, and of which the arrangement differed in different houses, were the 1. Cubicula, 2. Triclinia, 3. Oeci, 4. Exedrae, 5. Pinacotheca, 6. Bibliotheca, 7. Balineum, 8. Culina, 9. Coenacula, 10. Diaeta, 11. Solaria. We shall speak of each in order.

1. Vestibulum. The vestihulum did not properly form part of the house, but was a vacant space before the door, forming a court, which was surrounded on three sides by the house, and was open on the fourth to the street. The two sides of the house joined the street, but the middle part of it, where the door was placed, was at some little distance from the street. (Gell. xvi. 5 ; Macrob. Sat. vi. 8.) Hence Plautus (Mostell. iii. 2. 132) says, "Viden' vestibulum ante aedes hoc et ambulacrum quoiusmodi ?"
2. Ostium. The ostium, which is also called
janua and fores, was the entrance to the house. The street-door admitted into a hall, to which the name of ostium was also given, and in which there was frequently a small room (cella) for the porter (janitor or ostiarius), and also for a dog, which was usually kept in the hall to guard the house. A full account of this part of the honse is given under Janua. Another door (janua interior) opposite the street door led into the atrium.
3. Atrium or Cavum Aenium, as it is written by Varro and Vitruvins; Pliny writes it Cavaedium. Hirt, Müller (Etrusker, vol. i. p. 255), Marini, and most modern writers, consider the Atrium and Carum Aedium to be the same; but Newton, Stratico, and more recently Becker (Gallus, vol. i. p. 77, \&c.), maintain that they were distinct rooms. It is impossible to give a decisive opinion on the subject; but from the statements of Varro (De Ling. Lat. v. 161, Müller) and Vitruvius (vi. 3, 4, Bipont), taken in connection with the fact that no houses in Pompeii have been yet discovered which contain hoth an Atrium and Cavum Aedium, it is most probable that they were the same. The Atrium or Cavum Aedium was a large apartment roofed over with the exception of an opening in the centre, called compluvium, towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed impluvium (Varro, l. c. ; Festus, s. v. Implawium), which was frequently ornamented with statues, columns, and other works of art. (Cic. c. Verr. ii. 23, 56.) The word impluvium, however, is also employed to denote the aperture in the roof. (Ter. Eun. iii. 5. 41.) Schneider, in his commentary on Vitruvius, supposes cavum aedium to mean the whole of this apartment including the impluvium, while atrium signified only the covered part exclusive of the impluvium. Mazois, on the contrary, maintains that atrium is applied to the whole apartment, and carum aedium only to the uncovered part. The breadth of the impluvium, according to Vitruvius (vi. 4), was not less than a quarter nor greater than a third of the breadth of the atrium ; its length was in the same proportion according to the length of the atrium.

Vitruvius (vi. 3) distinguishes five kinds of atria or cava aedium, which were called by the following names:-
(1.) Tuscanicum. In this the roof was supported hy four beams, crossing each other at right angles, the included space forming the compluvium. This kind of atrium was probably the most ancient of all, as it is more simple than the others, and is not adapted for a very large huilding.
(2.) Tetrastylum. This was of the same form as the preceding, except that the main beams of the roof were supported by pillars, placed at the four angles of the impluvium.
(3.) Corinthium was on the same principle as the tetrastyle, only that there were a greater number of pillars around the impluvium, on which the beams of the roof rested.
(4.) Displuviatum had its roof sloping the contrary way to the impluvium, so that the water fell outside the house instead of heing carried into the impluvium.
(5.) Testudinatum was roofed all over and bad no compluvium.

The atrium was the most important room in the house, and among the wealthy was fitted up with much splendour and magnificence. (Compare Hor.

Carn. iii. 1. 46.) The marble columns of Scaurus already spoken of were placed in the atrium. The atrium appears originally to have been the only sitting-room in the house, and to have served also as a kitchen (Serv. ad Virg. Aen. i. 726, iii 353); and it probably continued to do so among the lower and middle classes. In the houses of the wealthy, however, it was distinct from the private apartments, and was used as a reception room, where the patron received his clients, and the great and noble the numerous visitors who were accustomed to call every morning to pay their respects or solicit favours. (Hor. Ep. i. 5. 30; Juv. vii. 7, 91.) Cicero frequently complains that he was not exempt from this annoyance, when he retired to his country-houses. (Ad Att. ii. 14, v. $2, \& c$.) But though the atrium does not appear to have been used by the wealthy as a sittingroom for the family, it still continued to be entployed for many purposes which it had originally seryed. Thus the nuptial couch was placed in the atrium opposite the door (in aula, Hor. Ep. i. 1. 87 ; Ascon. in Cic. pro Milo p. 43, Orelli), and also the instruments and materials for spinning and weaving, which were formerly carried on by the women of the family in this room. (Ascon. l. c.) Here also the images of their ancestors were placed (Juv. viii. 19; Mart. ii. 90), and the focus or fire-place, which possessed a sacred character, heing dedicated to the Lares of each family. [Focus.]
4. Alae, wings, were small apartments or recesses on the left and right sides of the atrium. (Vitruv. vi. 4.)
5. Tablinum was in all probability a recess or room at the firther end of the atrium opposite the door leading into the hall, and was regarded as part of the atrium. It contained the family records and archives. (Vitruv. vi. 4 ; Festus, s. v. ; Plin. H. N. xxxy. 2.)

With the tablinum, the Roman honse appears to have originally ceased; and the sleeping rooms were probably arranged on each side of the atrium. But when the atrium and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house; and the following rooms were accordingly added: -
6. Fauces appear to have been passages, which passed from the atrium to the peristylium or interior of the house. (Vitruv. vi. 3.)
7. Peristylium was in its general form like the atrium, but it was one-third greater in breadth, meazured transversely, than in length. (Vitruv. vi. 4.) It was a court open to the sky in the middle ; the open part, which was surrounded by columns, was larger than the impluvium in the atrium, and was frequently decorated with flowers and shrubs.
The arrangement of the rooms, which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is therefore impossible to assign to them any regular place in the house.

1. Cubicula, bed-chambers, appear to have been usually small. There were separate cubicula for the day and night (oubicula diurna et nocturna, Plin. $E p$. i. 3); the latter were also called dormitoria. (Id. v. 6 ; Plin. H. N. xxx. 17.) Vitruvius (vi. 7) recommends that they should face the east for the benefit of the rising sun. They some-
times had a small ante-room, which was called by the Greek name of $\pi \rho o \kappa o t \tau \omega \dot{v}$. (Plin. Ep. ii. 17.)
2. Triclinis, dining-rooms, are treated of in a separate article. [Trichinium.]
3. Oect, from the Greek olkos, were spacious halls or saloons borrowed from the Greeks, and were frequently used as triclinia. They were to have the same proportions as triclinia, but were to be more spacious on account of having columns, which triclinia had not. (Vitruv. vi. 5.) Vitruvius mentions four kinds of oeci : -
(1.) The Tetrastyle, which needs no further description. Four columns supported the roof.
(2.) The Corinthian, which possessed only one row of columns, supporting the architrave (epistylium), cornice (corona), and a vaulted roof.
(3.) The Aegyptian, which was more splendid and more like a basilica than a Corinthian triclinium. In the Aegyptian oecus, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.
(4.) The Cyzicene ( $K u \zeta \iota \kappa \eta \nu o i)$ appears in ths time of Vitruvius to have been seldora used in Italy. These oeci were meant for summer uss, looking to the north, and, if possible, facing gardens, to which they opened by folding-doora, Pliny had oeci of this kind in his villa.
4. Exedrax, which appear to have been in form much the same as the oeci, for Vitruvius (vi. 5) speaks of the exedrae in connection with oeci quadrati, were rooms for conversation and the other purposes of society. (Cic. de Nat. Deor. i. 6, De Orat. iii. 5.) They served the same purposes as the exedrae in the Thermae and Gymnasia, which were semicircular rooms with seats for philosophers and others to converse in. (Vitruv. v. 11, vii. 9 ; Balneae.)

5, 6, 7. Pinacotheca, Bibliothrca, and Balinedm [see Balnear], are treated of in separate articles.
8. Culina, the kitchen. The food was originally cooked in the atrium, as has been already stated; but the progress of refinement afterwards led to the use of another part of the house for this purpose. In the kitchen of Pansa's house, of which a ground-plan is given below, a stove for stews and similar preparations was found, very much like the charcoal stoves used in the present day. (See woodcut.) Before it lie a knife, a strainer, and a kind of frying-pan with fout spherical cavities, as if it were meant to cook eggs.

In this kitchen, as well as in many others at Pompeii, there are paintings of the Lares or domestic gods, under whose care the provisions and all the coaking utensils were placed.
9. Cornacula preperly signified rooms to dine in ; but after it hecame the fashion to dine in the upper part of the house, the whele of the roams above the ground-floor were called coenacula (Varr. de Ling. Lat. v. 162, Müller), and hence Festus eays," "Coenacula dicuntur, ad quae scalis ascenditur." (Compare Dig. 9. tit. 3. s. 1.) As the rooms on the ground-floor were of different heights and sometimes reached to the roof, all the rooms on the upper story could not be united with one another, and consequently different sets of stairs would be needed to connect them with the lower part of the house, as we find to be the case in houses at Pompeii. Sometimes the stairs had no connection with the lower part of the house, but ascer.ded at once from the street. (Liv. xxxix. l4.)
10. Diaeta was an apartment used for dining in , and for the other purposes of life. (Plin. Ep. ii. 17 ; Suet. Claud. 10.) It appears to have been
smaller than the triclinium. Diaeta is also the name given by Pliny ( $E p$. vi. 5 ) to rooms containing three or four bed-chambers (cubicula). Plea-sure-houses or summer-houses are also called diaetae. (Dig. 30. tit. 1. s. 43 ; 7. tit. l. s. 13. § 8.$)$
11. Solaria, properly places for hasking in the sun, were terraces on the tops of housce. (Plaut. Mil. ii. 3. 69, ii. 4. 25 ; Suet. Ner. 16.) In the time of Seneca the Romans formed artificial gardens on the tops of their houses, which contained even fruit-trees and fish-ponds. (Sen. Ep. 122, Contr. Exc. v. 5 ; Suet. Claud. 10.)
The two weedcuts annexed represent two atria of houses at Pompeii. The first is the atrium of what is usually called the house of the Quaestor. The view is taken near the entrance-ball facing the tablinum, through which the columns of the peristyle and the garden are seen. This atrium, which is a specimen of what Vitruvius calls the Corinthian, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

The next woodcut represents the atrium of what is usually called the house of Ceres. In the centre is the impluvium, and the passage at the further end is the ostium or entrance-hall. As there are no pillars around the impluvium, this atrium must helong to the kind called by Vitruvius the Tuscan.

The preceding account of the different rooms, and especially of the arrangement of the atrium, tablinum, peristyle, \&c., is best illustrated by the honses which have been disinterred at Pompeii. The ground-plan of two is accordingly subjoined. The first is the plan of a house, usually called the house of the tragic poet.

Like most of the other houses at Pompeii, it had no vestibulum according to the meaning which we have attached to the word. 1. The ostium or entrance hall, which is six feet wide and nearly thirty long. Near the street door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written Cave Canem. The two large rooms on each side of the vestibule appear from the large openings in front of them to bave been shops; they communicate with the entrance hall, and were therefore probably occupied by the master of the house. 2. The atrium, which is about twenty-eight feet in length and twenty in breadth; its impluvium is near the centre of the room, and its floor is paved with white tesserae. spotted with black. 3. Chambers for the use of

the family, or intended for the reception of guests, who were entitled to claim hospitality. When a house did not possess an hospitium, or rooms expressly for the reception of guests, they appear to have been lodged in rooms attached to the atrium. [Hospitium.] 4. A small room with \& stair-case leading up to the npper rooms. 5. Alae. 6. The tablinum. 7. The fauces. 8. Peristyle, with Doric columns and garden in the centre. The large room on the right of the peristyle is the triclinum ; beside it is the kitchen; and the smaller apartments are cubicula and other rooms for the use of the family.

The next woodcut contains the ground-plan of an insula, which was properly a house not joined to the neighhouring houses by a common wall. (Festus, s. v.) An insula, however, generally contained several separate houses, or at least separate apartments or shops, which were let to different families; and hence the term domus under the emperors appears to he applied to the house where one family lived, whether it were an insula or not, and insula to any hired lodgings. This insula contains a house, surrounded by shops, which belonged to the owner and were let out by him. The house itself, which is usually called the house of Pansa, evidently belonged to one of the principal men of Pompeii. Including the garden, which is a third of the whole length, it is ahout 300 feet long and 100 wide.
A. Ostium, or entrance-hall, paved with mosaic. B. Tuscan atrium. I. Impluvium. C. Chambers on each side of the atrium, probably for the reception of guests. D. Ala. E. Tablinum, which is open to the peristyle, so that the whole length of the house could be seen at once; but as there is a passage (fauces), F, beside it, the tahlinum might probably be closed at the pleasure of the owner. C. Chambers by the fauces and tablinum, of which the use is uncertain. G. Peristyle. D. Ala to the peristyle. C. Cubicula by the side of the peristyle. K. Triclinium. L. Oecus, and by its side there is a passage leading from the peristyle to the garden. M. Back door (posticum ostium) to

DOMUS.

the street. N. Culina. H. Servants' hall, with a back door to the street. P. Portico of two stories, which proves that the house had an upper floor. The site of the staircase, however, is unknown, though it is thonght there is some indication of one in the passage, M. Q. The garden. R. Reservoir for supplying a tank, S .

The preceding rooms belonged exclusively to Pansass house ; but there were a good many apartments besides in the insula, which were not in his occupation. a. Six shops let out to tenants. Those on the right and left hand corners were bakers shops, which contained mills, ovens, \&c. at $b$. The one on the right appears to have been a large establishment, as it contains many rooms. c. Two houses of a very mean class, baving formerly an upper story. On the other side are two houses much larger, $d$.

Having given a general description of the rooms of a Roman house, it remains to speak of the (1) floors, (2) walls, (3) ceilings, (4) windows, and (5) the mode of warming the rooms. For the doors see Janva.
(1.) The floor (solum) of a room was seldom boarded, though this appears to have been sometimes done (strata solo tabulata, Stat. Silv. i. 5. 57), It was generally covered with stone or marble, or mosaics. The common floors were paved with
preces of hricks, tiles, stones, \& c., forming a kind of composition called ruderatio. (Vitruv. vii. 1.) Another kind of pavement was that called opus Signinum, which was a kind of plaster made of tiles beaten to powder and tempered with mortar. It derived its name from Signia, a town of Italy, celebrated for its tiles. (Plin. H. N. xxxy. 46.) Sometimes pieces of marble were imbedded in a composition ground, which appear to have formed the floors called by Pliny barbarica or subtegulanea, and which probably gave the idea of mosaics. As these floors were beaten down (pavita) with rammers (fistucae), the word pavimentum became the general name for a floor. The kind of pavement called scalpturatum was first introduced in the temple of Jupiter Capitolinus after the beginning of the third Punic war, but became quite common in Rome before the beginning of the Cimbric war. (Id. xxxyi. 61.) Mosaics, called by Pliny lithostrota ( $\lambda \iota \theta \delta \sigma \tau \rho \omega \tau \alpha$ ), though this word has a more

extensive meaning, first came into use in Sulla's time, who made one in the temple of Fortune at Praeneste. (Id. xxxvi. 64.) Mosaic work was

afterwards called Musivun opus. (Spartian. Pescen. Nig. 6 ; Trebell. Pollio, Trigin. Tyrann. 24 ; Augustin. De Civitate Dei, xvi. 8.) The floors of the houses at Pompeii are frequently composed of mosaics, which are usually formed of black frets on a white ground, or white ones on a black ground, though some of them are in coloured marbles. The materials of which they are generally formed are small pieces of red and white marble and red tile, set in a very fine cement and laid upon a deep hed of mortar, which served as a base. The three examples here given, which are taken from houses at Pompeii, will convey a general idea of their form and appearance.

Mosaic pavements, however, have been discovered at Pompeii, which represent figures and scenes of actual life, and are in reality pictures in mosaic. One of the most beautiful of these is given in its original colours in Gell's Pompeiana, 2nd series, plate xlv. It is composed of very fine pieces of glass, and represents the choragus, or master of the chorus, instructing the actors in their parts. A still more extraordinary mosaic painting was discovered in Pompeii in 1831 ; it is supposed to represent the battle of Issus. (Museo Borbonico, viii. t. 36-45.)
(2.) The inner walls (parietes) of private rooms were frequently lined with slabs of marble (Plin. H. N: xxxvi. 7), but were more usually covered by paintings, which in the time of Augustus were made upon the walls themselves. The prevalence of this practice is attested not only by Pliny (H.N. xxxv. 37), but also by the circumstance that even the small houses in Pompeii have paintings upon their walls. The following woodcut, which represents the side of a wall at Pompeii, is one of the simplest but most common kind. The compartments are usually filled with figures.

The general appearance of the walls may he scen from the woodcuts given above. Subjects of all kinds were chosen for painting on the walls, as may he seen by a reference to the Museo Borbonico, Gell, Mazois, \&c. (Compare Vitruv. vii. 5.) The colours seem usually to have heen laid upon a dry ground, hut were sometimes placed upon it wet, as in the modern fresco painting (colores udo tectorio inducere, Vitruv. vii. 3). The walls also appear to have been sometimes ornamented with raised figures, or a species of has-relief (typos in tectorio atrioli includere, Cic. ad Att. i. 10), and sometimes with mosaics. (Plin. H.N. xxxyi, 64.)
(3.) The ceilings seem originally to have been left uncovered, the beams which supported the roof or the upper story being visible. Afterwards planks were placed across these beams at eertain intervals, leaving hollow spaces, called lacunaria or laquearia, which were frequently eovered with gold and ivory, and sometimes with paintings. (Hor. Carm. ii. 18 ; Plin. H. N. xxxiii. 18 ; Sen. Ep. 90 ; Suet. Ner. 31.) There was an arched ceiling in common use, called Camara, which is described in a separate article.
(4.) The Roman houses had few windows (fenestrae). The principal aparments, the atrium, peristyle, \&c., were lighted, as we have seen, from above, and the cubicula and other small rooms generally derived their light from them, and not from windows looking into the street. The rooms only on the upper story seem to have been nsually lighted by windows. (Jnv. iii. 270.) Very few houses in Pompeii have windows on the ground-floor opening into the street, though there is an exception to this in the house of the tragic poet, which has six windows on the gromnd-floor. Even in this case, however, the windows are not near the ground as in a modern house, but are six feet six inches above the foot-pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two; and at the side there is a wooden frame, in which the window or shotter might he moved backwards or forwards. The lower part of the wall is occopied by a row of red panels four feet and a half high. The following woodcut represents part of the wall, with apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.

The windows appear originally to have been merely openings in the wall, closed hy means of shotters, which frequently had two leaves (bifores fenestrae, Ovid, Pont. iii. 3. 5), whence Ovid (Amor. i. 5. 3) says,
"Pars adaperta fuit, pars altera clausa fenestrae."
They are for this reason said to be joined, when they are shut. (Hor. Carm. ii. 25.) Windows were also sometimes covered by a kind of lattice or trellis work (clathri), and sometimes by network, to prevent serpents and other noxious reptiles from getting in. (Plaut. Mill. ii. 4. 25; Varro, Re Rust. iii. 7.)

Afterwards, however, windows were made of a transparent stone, called lapis specularis (mica), which was first found in Hispania Citerior, and afterwards in Cyprus, Cappadocia, Sicily, and Africa; but the best came from Spain and Cappadocia. It was easily split into the thinnest
laminæ, but no pieces had been discovered, sayo Pliny, above five feet long. (Ylin. H. N. xxxvi. 45.) Windows made of this stone were called specularia. (Sen. Ep. 90 ; Plin. Ep. ii. 17 ; Mart. viii. 14.) Windows made of glass (vitrum) are first mentioned by Lactantits (De Opif. Dei, 8), but the discoveries at Pompeii prove that glass was used for windows under the early emperore, as frames of glass and glass windows have been found in several of the houses.
(5.) The rooms were heated in winter in different ways; but the Romans had no stoves like ours. The cubicula, triclinia, and other roome, which were intended for winter use, were built in that part of the house upon whieh the sun shone most ; and in the mild climate of Italy this frequently enabled them to dispense with any artificial mode of warming the rooms. Rooms exposed to the sun in this way were sometimes called heliocamini. (Plin. Ep. ii. 17 ; Dig. 8. tit. 2. s. 17.) The rooms were sometimes heated by hot air, which was introduced by means of pipes from a furnace below (Plin. Ep. ii. 17 ; Sen. Ep. 90), but mare frequently by portahle furnaces or braziers (foculi), in which coal or clarcoal was burnt. (See woodcut, p. 190.) The caminus was also a kind of stove, in which wood appears to have heen usually burnt, and probably only differed from the fooulus in being larger and fixed to one place. (Suet. Vitell. 8 ; Hor. Sat. i. 5. 81.) It has heen a subject of much dispute among modern writers, whether the Romans had chimneys for carrying off the smoke. From many passages in ancient writers, it certainly appears that rooms usually had no chimneys, but that the smoke escaped through the windows, doors, and openings in the roof (Vitruv. vii. 3 ; Hor. l. c. ; Voss, ad Virg. Georg. ii. 242) ; but chimneys do not appear to have been entirely unknown to the ancients, as some are eaid to have been found in the ruins of ancient build. ings. (Becker, Gallus, vol. i. p. 102.)
(Winkelmann, Schriften über die Herkulaniselven Entdeckungen; Hirt, Geschiclite der Baukunst; Mazois, Les Ruines de Ponpéi, part ii., Le Palais de Scaurus; Gell, Pompeiana; Pompeii, Lond. 12mo. 1832 ; Becker, Gallus; Schneider, ad Vitruv.)
 names hy which the ancients designated presents made to the gods, either by individuals or communities. Sometimes they are also called dona or $\delta \omega \bar{\omega} \rho a$. The helief that the gods were pleased with costly presents was as natural to the ancients as the belief that they could be influenced in their conduct towards men hy the offering of sacrifices; and, indeed, hoth sprang from the same feeling. Presents wore mostly given as tokens of gratitude for some favour which a god had hestowed on man ; but in many cases they were intended to induce the deity to grant some special favour. At Athens, every one of the six thesmothetae, or, according to Plato (Phaedr. p. 235, d), all the nine archons, on entering upon their office, had to taks an oath, that if they violated any of the lawn, they would dedicate in the temple of Delphi a gilt statue of the size of the man who dedicated it
 25 ; Pollux viii. 85 ; Suidas, s. v. Xpuâ̂ Eikúv; Heraclid. Pont. c. 1.) In this last case the anathema was a kind of punishment, in which the statue was regarded as a substitute for the person
forfeited to the gods. Almost all presents of this kind were dedicated in temples, to which in some places an especial huilding was added, in which these treasures were preserved. Such huildings were called $\uparrow \eta \sigma \alpha u p o$ ! (treasuries) ; and in the most frequented temples of Grecee many states had their separate treasuries. (Böckh, Pub. Econs. of Ath. p. 441, \&c. 2d edit.) The act of dedication was called àvatt⿴囗́val, donare, dedicare, or sacrarc.

The custom of making donations to the gods is foond among the ancients from the earliest times of which we have any record, down to the introduction of Christianity ; and even after that period it was, with some modifications, observed by the Christians during the middle ages. In the heroic ages of Grecian history the amathemata were of a simple description, and consisted of chaplets and garlands of flowers. A very common donation to the gods seems to have been that of locks of hair ( $\kappa \delta j_{\eta} \eta \mathrm{s}$ à $\pi \alpha \rho \chi \alpha i$ ), which youths and maidens, especially young brides, cut off from their heads and consecrated to some deity. (Hom. Il. xxiii. 141 ; Aeschyl. Chocpl. 6 ; Eurip. Orest. 96 and 1427, Baccl. 493, Helen. 1093; Plut. Thes. 5 ; Paus. i. 37. § 2.) This custom in some places lasted till a very late period : the maidens of Delos dedicated their hair before their wedding to Hecaerge (Paus.i. 43. \& 4), and thase of Megara to lphinoe. Pausanias (ii. 11. § 6) saw the statue of Hygieia at Titane, covered all over with locks of hair which had been dedicated by women. Costly garments ( $\pi \dot{\prime} \in \lambda \lambda 0)$ are likewise mentioned among the carliest presents made to the gods, especially to Athena and Hera. (Hom. Il. vi. 293,303 .) At Athens the sacred $\pi \epsilon \pi \lambda$ os of Athena, in which the great adventures of ancient heroes were worked, was woven by maidens every fifth year, at the festival of the great Panathemaca. [Arrephoria.] (Compare Aristoph. Av. 792; Pollux. vii. 50 ; Wesseling, ad Diod. Sic. ii. p. 440.) A similar pephus was woven every five years at Olympia, by sixteen women, and dedicated to Hera. (Paus. v. 16. § 2.)
At the time when the fine arts flourished in Greece the anathemata were generally works of art of exquisite workmanship, such as high tripods bearing vases, craters, cups, candelabras, pictures, statues, and various other things. The materials of which they were made differed according to circumstances ; some were of bronze, others of silver or gold (Athen. vi. p. 231, \&c.), and their number is to us almost inconceivable. (Demosth. Olyntlh. iii. p.35.) The treasures of the temples of Delphi and Olympia, in particular, surpass all conception. Even Pausanias, at a period when numberless works of art must have perighed in the varions ravages and plunders to which Greece had heen exposed, saw and described an astonishing numher of anathemata. Many works of art are still extant, hearing evidence by their inscriptions that they were dedicated to the gods as tokens of gratitude. Every one knows of the magnificent presents which Croesus made to the god of Delphi. (Herod. i. $50,8 c \mathrm{c}$.) It was an almost invariable custom, after the happy issue of a war, to dedicate the tenth part of the spoil (ákpooi intov, àkpódetov, or $\pi \rho \omega \tau \delta \lambda \epsilon \omega \nu)$ to the gods, generally in the form of some work of art. (Herod. viii. 82, 121; Thucyd. i. 132 ; Paus. iii. $18 . \S 5$; Athen. vi. p. 231, \&c.) Sometimes magnificent specimens of armour, such as a fine aword, helmet, or shield, were set apart
as anathemata for the gods. (Aristoph. Equit. 792, and Schol.) The Athenians always dedicated to Athena the tenth part of the spoil and of confiscated goods ; and to all the other gods collectively, the fiftieth part. (Demosth. c. Timocr. p. 738, \&c.) After a seafight, a ship, placed upon some emiuence, was sometimes dedicated to Neptune. (Thucyd. ii. 84; Herod. viii. ]21.) It is not improbable that trophies which were always erected on the field of battle, as well as the statues of the vietors in Olympia and other places, werg originally intended as tokens of gratitude to the god who was supposed to be the cause of the success which the vietorious party had gained. We also find that on some occasions the tenth part of the profit of some commercial undertaking was dedicated to a god in the shape of a work of art. Respecting the large and beautiful crater dedicated by the Samians to Hera, see the article Craten.
Individuals who had escaped from some danger were no less anxious to show their gratitnde to the gods by anathemata than commemities. The in. stances which occur most frequently, are those of persons who had recovered from an illness, especially by spending one or more nights in a temple of Asclepius (inculatio). The most celebrated temples of this divinity were those of Epidaurus, Cos, Tricca, and at a later period, that of Rome. (Plin. H. N. xxix. 1 ; compare F. A. Wolf, Vermisclte Schriften und Aufs̈ätze, p. 411, \&c.) Cures were also effected in the grotto of Pluto and Proserpina, in the neighbourhood of Nisa. (Strab. ix. p. 437, xiv. p. 649.) In all cases in which a cure was effected presents were made to the temple, and little tahlets (tabulue votivac) were suspended on its walls, containing an account of the danger from which the patient had escaped, and of the manner in which he had been restored to health. Same tablets of this kind, with their inscriptions, are still extant. (Wolf, l.c. p. 424, \&c.) From some relics of ancient art we must infer, that in some cases, when a particular part of the body was attacked by disease, the person, after liis recovery, dedicated an imitation of that part in gold or silver to the god to whom he owed bis recovery. Persons who had escaped from shipwreck usually dedicated to Neptune the dress whicb they wore at the time of their danger (Ilor. Carm. i. 5. 13 ; Virg. Aen. xii. 768) ; but if they had escaped naked, they dedicated some locks of their hair. (Lucian, de Merc. Cond. c. J. vol. i. p. 652, ed. Reiz.) Shipwrecked persons also suspended votive tablets in the temple of Neptune, on which their accident was described or painted. Individuals who gave up the profession or occupation hy which they had gained their livelihood, frequently dedicated in a temple the instruments which they had used, as a gratefill acknowledgment of the favour of the gods. The soldier thus dedicated his arms, the fisherman his net, the shepherd his flute, the poet his lyre, cithara, or harp, \&c.
It would be impossible to attempt to enumerate all the occasions on which individuals, as well as communities, showed their gratefulness towards the gods by anathemata. Descriptions of the most remarkable presents in the various temples of Greece may be read in the works of Herodotus, Strabo, Pausanias, Athenaeus, and others.
The custom of making presents to the gods was common to Greeks and Romans, but among the latter the donaria were neither as numerons nor
as magnificent as in Greece ; and it was more frequent among the Romans to show their gratitude towards a god, by building him a temple, by public prayers and thanksgivings (supplicatio), or by celebrating festive games in honour of him, than to adom his sanctuary with beantiful and costly works of art. Hence the word donaria was used by the Romans to designate a temple or an altar, as well as statues and other things dedicated in a temple. (Virg. Georg. iii. 533 ; Ovid, Fast. iii. 335.) The occasions on which the Romans made donaria to their gods, are, on the whole, the same as those we have described among the Greeks, as will be seen from a comparison of the following passages:Liv. x. 36 , xxix. 36 , xxxii. 30 , xl. 40,37 ; Plin H. N. vii. 48 ; Suet. Claud. 25 ; Tacit. Ann. iii. 71 ; Plaut. Amphitr. iii. 2. 65, Curcul. i. 1. 61, ii. 2. 10 ; Aurel. Vict. Caes. 35 ; Gellius, ii. 10 ; Lucan. ix. 515 ; Cic. De Nat. Deor. iii. 37 ; Tibull. ii. 5.29 ; Horat. Epist. i. 1.4 ; Stat. Silv. iv. 92 .
[L. S.]
DONA'TIO. Donatio or gift is an agreement between two persons by which one gives without remuneration and without any legal obligation (nullo jure cogente), and the other accepts something that has a pecuniary value. (Dig. 24. tit. l. s. 5 . $\S 8,16$; 39. tit. 5. s. 19. § 2,29 .) It is properly called an agreement, because it is not sufficient that there be a person to give: there must also be a person who consents to receive. He who is incapacitated to dispose of his property or to make a contract is consequently incapable of giving : every person who has a capacity to acquire, is capable of receiving a gift. The exceptions to these rules occurred in the case of persons who were in certain relations to one another, as pater and filiusfamilias; yet this exception itself is subject to exceptions in the matter of peculium. It is essential to the notion of gift that the giver gives in order that the property of the receiver may be increased hy the gift: there must be the animus donandi. The object of gift may be any thing which accomplishes this end; for instance, the release of a debt. A gift of the whole of a person's property comprises no more than the property after the donor's debts are deducted. Such a gift is not a case of universal succession, and consequently the donee is not immediately liable for the debts of the donor. By the old Roman law a mere agreement (pactum) to give did not confer a right of action on the intended donee. In order that a gift should be valid, it was required to be either in the form of a stipulatio, or to be made complete at once by the delivery of the thing. Gifts also were limited in amount by the lex Cincia. The legislation of Justinian allowed a personal action in cases of a mere pactum donationis, where there had been neither delivery of the thing which was made a gift, nor stipulatio. (Cod. 8. tit. 54. s. 25,29 ; 35. § 5 ; Inst. 2. tit. 7. § 2.) Thus, the promise to give was put on the footing of a consensual contract, when the promise related to a gift of less than 500 solidi: when the gift was above 500 solidi, a certain form was required, as will presently be explained, and the form was reqnired whether the gift was perfected at once by traditio, or was only a promise to give.

If a man gave something to another for the benefit of a third person, the third person could sue him to whom the thing was given. (Cod. 8. tit. 55. .7. 3.)

It was required hy the legislation of Justinian that a gift which was in value more than 500 solidi, must, with the exception of some few cases, have the evidence of certain solemnities before official persons (insinuatio). If these formalities were not observed, the gift was invalid as to sil the amount which exceeded the 500 solidi. Some few kinds of gifts, which exceeded 500 solidi, were excepted from the solemnities of insinnatio.
If then a gift was not perfected at once by delivery, or what was equivalent to delivery, the donee might sue ex stipulatu, if there had been a stipulatio ; and if there had not, he might sue hy virtue of the simple agreement. (Cod. 8. tit. 54, De Donationibus, s. 35. § 5.) The right of action which arises from the promise to give is, according to the Roman system, the real gift (Dig. 50. tit. 16. s. 49) : the actual giving was the payment of a debt. Accordingly, if there was a promise of a gift between a man and a woman before their marriage, the payment during the marriage was a valid act, because the promise was the gift, and the payment was not the gift. (Savigny, System, \&c., iv. 119.) The heredes of a man might impugn the validity of a donatio inofficiosa by a querela inofficiosae donationis : and the donor could revoke his gift if the donee was guilty of gross ingratitude towards him, as for instance, of offering violence to his person. (Cod. 8. tit. 56. s. 10.) But the donor's claim was only in personam, snd he could not recover the fruits which the donee had enjoyed. (Inst. 2. tit. 7. §3; Savigny, System, \&c., vol. iv. § $142, \& c \mathrm{c}$., Schenkung; Mackeldey, Lehrbuch, \&c., § 421, \&c., 12th ed. ; Ortolan, Explication Historique des Instituts, vol. i. p. 472, 5th ed.)
[G. L.]
DONA'TIO MORTIS CAUSA. There were, according to Julisnus (Dig. 39. tit. 6. s. 2), three kinds of donatio mortis causa :- l. When a msn under no apprehension of present danger, but moved solely by a consideration of mortality, makes a gift to another. 2. When a man, being in immediate danger, makes a gift to another in such manner that the thing immediately becomes the property of the donee. 3. When a man, moved by the consideration of danger, gives a thing in such manner that it shall become the property of the donee only in case the giver dies. Every person could receive such a gift who was capable of receiving s legacy.

It appears, then, that there were several forms of gift called donatio mortis causa; but the third is the only proper one; for it was a rule of law that a donation of this kind was not perfected unless death followed, and it was revocable by the donor. A thing given absolutely could hardly be a donatio mortis causa, for this donatio had a condition attached to it, namely, the death of the donor and the survivorship of the donee. (Compare Dig. 39. tit. 6, s. 1 and 35.) Accordingly, a donatio mortis causa has been defined to be "s gift which a man makes with reference to the event of his death, and so makes that the right of the donee either commences with the death of the donor or is in suspense until the death." It resembles in some respects a proper donatio or gift: in others, it resembles a legacy. It was necessary that the donatio should be accepted by the dones, and consequently there must be traditio or delivery, or a proffer or offer, which is assented to. Yet the donatio might be maintained as a fideicom-
missum in the absence of these conditions. No person could make a donatio mortis causa, who could not make a testament. The death of the donee before the death of the donor was ipso jure a revocation of the donatio. It would appear as if the law about such donations was not free from difficulty. They were finally assimilated to legacies hy Justinian, though this had been done in some particulars before his time. Still they differed in some respects from legacies ; for instance, such a donation could take effect though there was no person to take the hereditas. A filins familias might with his father's consent make a donatio mortis causa of his Peculium Profectitium.

The English law of donationes mortis causa is frst stated by Bracton (ii. c. 26) in the very words of the Digest (39. tit. 6. s. 2, \&c.) ; and the present law is expounded by Lord Hardwicke (Ward v. Turner, 2 Vez. 431) ; but what he there states to be the English law is not exactly the law as stated in Bracton. The rules of donationes mortis causa in English law are now pretty well fixed by varions recent decisions. Tradition or delivery is considered one essential of such a gift, and the death of the donor in the life of the donee is another essential. The gift is not an absolute gift, but a gift made in contemplation of death, and it is revocable. (Dig. 39. tit. 6 ; Cod. 8. tit. 57 ; Inst. 2. tit. 7 ; Savigny, System, \&c. iv. 276 ; Zeitschrift für Gesch. Rechtswessenschaft, xii. p. 400, Ueber L. Seia, 42. pr. ; De mor. ca. don. ; Thibaut, System, \&c. §495, \&c. 9th ed.) [G. L.]
DONA'TIO PROPTER NU'PTIAS. The meaning of this term is explained in the Institutiones (2. tit. 7. § 3). It was originally called Donatio ante nuptias, because it could not take place after the marriage; but when it was made legal to increase the donatio after marriage, and even to constitute it altogether after marriage, the more comprehensive term donatio propter nuptias was used. If a dos had been given by the wife, or on the part of the wife, and the husband by the terms of the contract was entitled to it , or to a part of it in case of the wife's death, it was necessary that the husband, or some person on the part of the husband, should give or secure something to the wife which she should have in the event of the husband's death: this was a donatio propter nuptias. Justinian's legislation required that the donatio must be equal to what was secured to the husband in case of the wife's death, and that it must be increased if the dos was increased during the marriage. The husband had the management of the property given as donatio. Such part of it as consisted of things immoveable he could not alienate or pledge even with the consent of his wife, unless she ratified her consent after two years. If the hushand became impoverished during the marriage, the wife was entitled to the profits of the donatio for her support; and it was not liable to the demands of the creditors. If the marriage was dissolved by the death of the wife, the hushand was entitled to the donatio; unless some third person, who had made the donatio, was entitled to have it by the terms of the agreement. If the husband died, the event had happened with reference to which the donatio was made; the wife had the ususfructus of the donatio, and the property of it belonged to the children of the marriage if there were any: if there were no children, the wife obtained by the death of the husband full
power of disposition over the property included in the donatio.

The opinions of modern jurists are much divided as to the notions, purposc, and law of the donatio propter nuptias. The term donatio propter nuptias is nsed by Bracton (ii. c. 39); and the law, as there stated, is apparently formed upon a Roman original.
(Cod. 5. tit. 3 ; Nov. 22. с. $20 ; 97$. c. 1,$2 ; 98$. c. 1, 2; Mackeldey, Lehrbuch, \&c. § 528 , 12th ed.; Thihaut, System, \&c. § 742, 9th ed.; Ortolan, Explication Historique des Instituts, \&c., vol. i. p. 479. )
[G. L.]
DONATIO'NES INTER VIRUM ET UXO'REM. During marriage neither husband nor wife could, as a general rule, make a gift of anything to one another. The reason for this rule was said to be the preservation of the marriage relation in its purity, as an agreement sulusisting by affection, and not maintained by purchase or by gift from one party to the other. Donationes of this kind were, however, valid when there were certain considerations, as mortis causa, divortii causa, servi manumittendi gratia. By certain inperial constitutions, a woman could make gifts to her husband in order to qualify him for certain honours. This was a gift "ad processus viri" (Dig. 24. tit. 1. s. 41 ; Juv. Sat. i. 39 ; and the note of Heinrich). The wife had the means of doing this, because when there was no conventio in manum (Gaius, ii. 98), a wife retained all her rights of property which she did not surrender on her marriage [Dos], and she might during the marriage hold property quite distinct from her husband. It was a consequence of this rule as to gifts between husband and wife, that every legal form by which the gift was affected to be transferred, as mancipatio, cessio, and traditio, conveyed no ownership ; stipulationes were not binding, and acceptilationes were no release. A difficulty might remain as to usucapion; but the law provided for this also. If a woman received from a third person the property of her luashand, and neither the third person nor she nor her husband knew that it was the husband's property, she might acquire the ownership by usucapion. If both the giver and the husband knew at the time of the gift that it was the husband's property, and the wife did not know, it might also become her property by usucapion; but not if she knew, for in that case the bona fides which was essential to the commencement of possession was wanting. If, before the ownership was acquired by usucapion, the husband and wife discovered that it was the husband's, though the husband did not choose to claim it, there was no usucapion; for this would have been a mere evasion of the law. If, before the ownership was acquired by usucapion, the wife alone discovered that it was the husband's property, this would not destroy her right to acquire the property by usucapion. This, at lenst, is Savigny's ingenious explanation of the passage in Digest 24. tit. 1. s. 44. The strictness of the law as to these donations was relaxed in the time of Septimius Severus, and they were made valid if the donor died first, and did not revoke his gift before death. There were also some exceptions as to the general rule. (Dig. 24. tit. 1 ; Cod. 5. tit. 16 ; Savigny, Zeitschrift, \&c. i. p. 270; Mackeldey, Lehrhuch, \&c. § 531,12 th ed.)

 ripides（Afel． $2 \geqslant 1$ i）makes Medeia complain that， independent of other misfortunes to which women were subject，they were obliged to buy their hus－
 Bodip）．On this the Scholiast remarks，that the poet wrote as if Medeia had been his contem－ porary，and not a character of the beroic ages，in which it was customary for the husband to pur－ chase his wife from her relations，by gifts called é $\delta \nu a$ or $\epsilon \in \delta \nu a$ ．The same practice prevailed in the East during the patriarchal ages（Genes．xxxiv． 2），and Tacitas（Germ．c．18）says of the ancient Germans，＂Dotem non uxor marito，sed uxori maritus offert．＂The custom of the heroic times is illustrated by many passages in Homer．Thus， we read of the $\dot{\alpha} \pi \epsilon \rho \epsilon i \sigma t a$ ，and $\mu \nu \rho i a$ é $\bar{\nu} \nu$ ，or many gifts by which wives were parchased．（Il．xvi． 178，190．）In another place（ Il ．xi．243）we are told of a bundred oxen，and a thousand sbeep and goats，baving been given by a Thracian hero to his maternal grandfather，whose daughter he was abont to marry．Moreover，the poetical epithet， $\dot{\alpha} \lambda \phi \epsilon \sigma t$ Boual（Heyne，ad Il．xviii．593），applied to females，is supposed to have had its origin in the presents of this sort，which were made to a woman＇s relatives on her marriage．These nuptial gifts，bowever，or equivalents for them were re－ turned to the husband in the event of the conimis－ sion of adultery by the wife，and perhaps in otber cases．（Od．viii．318．）

We must not infer from the above facts that it was not usual in those times for relations to give a portion with a woman when she married．On the contrary，mention is made（Il．ix．147）of the $\mu$ eidıa or marriage gifts whicb men gave with their daughters（ $\mathrm{E} \mathrm{\pi}$ e $\delta \omega \kappa \alpha \alpha$ ），and we are told by Aeschines（ $\Pi \epsilon \rho l$ Парав $\rho \in \sigma$ ．33），of one of the sons of Thesens baving received a territory near Ans－ phipolis as a $\phi \in \rho \nu$ y or dower with his wife．More－ over，both Andromache and Penelope are spoken of as ă入oxot тo入úóopot（Il．vi．394，Od．xxiv． 294），or wives who brought to their husbands many gifts，which probably would have been re－ turned to their relations，in case of a capricions dismissal．（Od．ii．132．）
The Doric term for a portion was $\delta \infty$ oti $\eta$ ，and Muiller（Dor．iii．10）observes，that we know for certainty that daughters in Sparta had originally no dower，but were married with a gift of clothes only ；afterwards they were at least provided with money，and other personal property（Plut．Lys． 30）：but in the time of Aristotle（Polit．ii． 6. $\S 10$ ），so great were the dowers given（ $\delta$ à $\tau \dot{\delta}$
 of $\boldsymbol{\epsilon} \pi i \kappa \lambda \eta \rho o t$, or female representatives of families （olkol），that nearly two fifths of the whole terri－ tory of Sparta had come into the possession of

DOS．
fermales．The regulations of Solon were，accord－ ing to Plutarch，somewhat similar in respect of dower to the old regulations at Sparta：for the Athenian legislator，as he tells us，did not allow a woman，unless she were an emikגnpos，to have any $\phi \epsilon \rho \nu \dot{\eta}$ or dower，except a few clothes and articles of housebold farniture．It is plain，how－ ever，that such an interference with private rights could not be permanent ；and，accordingly，we find that in after times the dowers of women formed， according to the account in Böck（Pub．Econ．of Athens，p．514，2nd ed．），a considerable part of the noveable property of the state：＂even with poor people they varied in amount from ten to a hundred and twenty minae．The daughter of Hipponicus received ten talents at her marriage， and ten others were promised her．＂This，how－ ever，was a very large portion，for Demosthenes （c．Steph．p．1112．19，and p．1124．2）informs us that even five talents was more than was usually given；and Lacian（Dial．Meret．7．p．298，ed． Reitz）also speaks of the same sum as a large dowry．The daughters of Aristeides received from the state，as a portion，only thirty minac each． （Plut．Arist． 27 ；Aesch．c．Ctes．p．90．）We may observe too，that one of the cliief distinctions be－ tween a wife and a $\pi a \lambda \lambda a \kappa$ 盾，consisted in the former having a portion，whereas the latter had not ；bence，persons who married wives without portions appear to have given them or their guar－ dians an $\delta \mu$ лдоүіа проккós（Isaeus，De Pyr． Hered．p．41），or acknowledgment in writing by which the receipt of a portion was admitted， ［Concubina．］Moreover，poor heiresses（tūv
 married or portioned by their next of kin［AR－ chos］，according to a law which fixed the amount of portion to be given at five minae by a Pentacosiomedimnus，three by a Horseman，and one and a half by a Zeugites．（Dem．c．Macar． p．1068．）In illustration of this law，and the amount of portion，the reader is referred to Terence，who says（Phorm．ii．1．75），
＂Lex est ut orbae，qui sint genere proximi lis nubant：＂
and again（ii．2．62），
＂Itidem ut cognata si sit，id quod lex jubet，
Dotem dare，abduce hanc：minas quinque accipe．＂
It remains to state some of the conditions and obligations attached to the receipt of a portion，or $\pi \rho o t \xi$ ，in the time of the Athenian orators．The most important of these was the obligation under which the bushand lay to give a security for it， either by way of settlement on the wife，or as a provision for repayment in case circumstances should arise to require it．With regard to this， we are told that whenever relatives or guardiaus gave a woman a portion on her marriage，they took from the bushand，by way of security，some－ thing equivalent to it，as a house or piece of lsnd． The person who gave this equivalent（ $\tau \delta$ d $\mathrm{a}_{\mathrm{o}}$－ ri $\mu \eta \mu a)$ was said $\grave{a} \pi о т ц \mu \bar{\nu} \nu$ ：the person who re－ ceived it àmoт $\mu \mathrm{a} \sigma$ áaı．（Harpocrat．s．v．；Dem． c．Onet．p．866．）The word àmoríu $\mu \boldsymbol{\alpha}$ is also nsed generally for a security．（Pollux，viii．142．）The necessity for this security will appear from the fact that the portion was not considered the pro－ perty of the husband himself，bat rather of his wife and children．Thus，if a husband died，and
 might claim ber portion, even though children had been horn (Dem. Boeot. de Dot. p. 1010); and in the event of a wifc dying without issue, her portion reverted to the relatives who had giveu her in marriage (oi кúpıo) and portioned her. (Isacus, De Ciron. Hered. p. 69, De Pyr. Hered. p. 41.) The portion was also returned, if a husband put away his wife, and in some cases, probably scttled by law, when a woman left her husband. (De Pyr. IIered. p. 45.) That after the death of the wifc, her portion belonged to her children, if she had left any, may be inferred from Demosthenes (c. Boeot. de Dot. pp. 1023, 1026); if they were minors, the interest was set apart for their education and maintenance. When the hushand died before the wife, and she remained
 pears to have given her portion to her sons, if of age, subject, however, to an allowance for her maintenance. (1d. c. Pluen. p. 1047.) If the representatives of the deceased husband (ot tov
 from his widow, her guardians conld bring an action against them for it, as well as for alimony ( $\delta i \kappa \eta \pi \rho o \iota \kappa \partial s$ каl бítov). (Isacus, De Pyr. Hered. p. 45 ; Hudtwalcker, Diaet. note 84.) Moreover, if a husband after dismissing his wife refused to return her portion, he migbt be sued for interest upon it as well as the principal: the former would, of course, be reckoned from the day of dismissal, and the rate was fixed by law at nine oboli for every mina, or about 18 per cent. I'he guardians were further anthorised by the same law to bring an action fer alimony in the』ideiov. (Dem. c. Neaer. p. 1362.) We may add that a $\delta \kappa \kappa \eta \pi \rho o \kappa \kappa \delta s$, was one of the $\epsilon \mu \mu \eta \nu \frac{}{\epsilon}$ Sitcol or suits that might be tried every month. (Pollux, viii. 63, 101.)
[R. W.]
2. Roman. Dos (res uxoria) is every thing which on the occasion of a woman's marriage was transferred by her, or by another person. to the hnsband, or to the hnsband's father (if the hushand was in his father's power), fir the purpose of enabling the hasband to sustain the charges of the marriage state (onera motrimonii). All the property of the wife which was not made dos, or was not a donatio propter nuptias, continued to be her own, and was comprised under the name of Parapherna. The dos upon its delivery became the husbund's property, and continued to be his so long as the marriage relation existed. All things that could be objects of property, and in fact anything by which the substance of the husband could be increased, might be the objects of dos. All a woman's property might be made a dos; but the whole property was only what remained after deducting the debts. There was $n 0$ universal succession in such a case, and consequently the hushand was not personally answerable for the wife's debts. Any person who had a legal power to dispose of his property could give the dos; but the dos was divided into two kinds, dos profectitia and dos adventitia, a division which had reference to the demand of the dos after the purposes were satisfied for which it was given. That dos is profectitia which was given by the father or father's father of the bride ; and it is profectitia, even if the daughter was emancipated, provided the father gave it as such (ut parens). All other dos is adventitia. The dos rcceptitia was a species of dos
adventitia, and was that which was given by some other person than the father or father's father, on the consideration of marriage, but on the condition that it should be restored on the death of the wife. The giving of the dos depended on the will of the giver ; but certain persons, such as a father and father's father, were bound to give a dos with a woman when she married, and in proportion to their means. The dos might be either given at the time of the marriage, or there miglit be an agrecment to give. The technical words applicable to the dos were dare, dicere, promittere. Any person, who was competent to dispose of his property, was competent dure, promittere. Tho word dicere was applied to the woman who was goung to marry, who conld promise her property as dos, but the promise was not binding unless certain legal forms were observed (non deberi viro dotem, quam nullo auctore dixisset, Cic. Pro Caecin. c. 25, compare Pro Flueco, c. 34, 35, and Ulp. Frag. xi. 20). An example of a promissio dotis occurs in Plantus (Trinum. v. 2). The hushand had a right to the sole management of the dos, and to the fruits of it ; in fact, he exercised over it all the rights of ownership, with the exception hereafter mentioned. He could dispose of such parts of the dos as consisted of things movable; but the Julia lex (de adulterizs) prevented bim from alienating such part of the dos as was land (fundus dotalis, dotalia praedia, Cic. ad Att. xv. 20 ; dotales agri, Hor. Ep. i. 1. 21) without his wife's consent, or pledging it with her consent. (Gaius, ii. 63 ; Inst. ii. 8.) The legislation of Justinian prevented him from selling it also even with the wife's consent, and it extended the law to provincial lands. Still there were some cases in which the land given as dos conld be alienated.

The husband's right to the dos ceased with the marriage. If the marriage was dissolved by the death of the wife, her father or father's father (as the case might be) was intitled to recover the dos profectitia, unless it had becn agreed that in suct. casc the dos shonld belong to the husband. The dos adventitia became the property of the wife's heirs (Cod. 5. tit. 13. §6), unless the person whe gave it had stipulated that it should be returned to him (dos receptitio) : as to the older law, see Ulpian, Frag. vi. 5.

In the case of divorce, the woman, if she was sui juris, could bring an action for the restitution of the dos; if she was in the power of her father, he brought the action jointly with his daughter. The dos could be claimed imnediately upon the dissolntion of the marriage, except it consisted of things quae numero, \&e., for which time was allowed. (Ulp. Frug. vi. 8: but compare Cod. 7. tit. 13. § 7.) [Divortium.]

The dus could not be restored during the marriage, but in the case of the hushand's insolvency, the wife could demand back her dos during the marriage. In certain cases, also, the husband was permitted to restore the dos during the marringe, and such restoration was a good legal acquittance to him: these excepted cases were either cases of necessity, as the payment of the wife's debts, or the sustentation of near kinsfolks. (Zeitschrift, \&c. v. p. 31I, cssay by Hasse.)

What should be returned as dos, depended on the fact of what was given as dos. If the things given wore ready money (dos numerata, Cic. Pro Cuecina, c. 4), or things estimated by quaintity, \&c.,
the husband must return the like sum or the like quantity. If the things, whether movable or immovable, were valued when they were given to the husband (dos aestimata), this was a species of sale, and at the end of the marriage the husband must restore the things or their value. If the things were not valued, he must restore the specific things, and he must make good all loss or deterioration which had happened to them except by accident. But the husband was intitled to be reimbursed for all necessary expences (impensae necessariac) ; as, for instance, necessary repairs of houses incurred by him in respect of his wife's property, and also for all outlays by which he had improved the property (impensae utiles).

The husband's heirs, if be were dead, were bound to restore the dos. The wife's father, or the surviving wife, might demand it by an actio ex stipulatu de dote reddenda, which was an actio strictì juris, if there was any agreement on the subject; and by an actio rei uxoriae or dotis, which was an actio bonae fidei, when there was no agreement. A third person who had given the dos must always demand it ex stipulatu, when he had bargained for its restoration. Justinian enacted, that the action should always be ex stipulatu, even when there was no contract, and should be an actio bonae fidei.
The wife had no security for ber dos, except in the case of the fundus dotalis, unless she had by contract a special security ; but she had some privileges as compared with the husband's creditors. Justinian enacted that on the dissolution of the marriage, the wife's ownership should revive, with all the legal remedies for recovering such parts of the dos as still existed; that all the husband's property should be considered legally pledged (tacita liypotheca) as a security for the dos; and that the wife, but she alone, should have a priority of claim on such property over all other creditors to whom the same might be pledged.

The dos was a matter of great importance in Roman law, both because it was an ingredient in almost every marriage, and was sometimes of a large amount. The frequency of divorces also gave rise to many legal questions as to dos. A woman whose dos was large (dotata uxor) had some influence over her husband, inasmuch as she had the power of divorcing herself, and thus of depriving him of the enjoyment of her property. The allusions to the dos and its restitution are numerous in the Roman writers. (Cic, ad Att. xiv. 13.)

It is a disputed point whether there could be dos, properly so called, in the case of a marriage with conventio in manum. [Matrimonium.] (Hasse, Rhein. Mus. ii. 75.)
The name by which the Greek writers designate the Roman dos is $\phi \in \rho \nu{ }^{\prime}$ (Plutarch, Caesar, c. 1, Marius, c. 38, Cicero, c. 8).
(Ulp. Frag. vi. ; Dig. 23. tit. 3 ; Cod. 5. tit. 12 ; Thibant, System, \&c., § 728 \&c., 9th ed, \& 747 , \&c.; Mackeldey, Lehrluch, \&c., § 517, \&c., 12th ed.)

DOULOS ( $\delta 0$ û入os). [SERvus.]
DRACHMA ( $\delta \rho \alpha \chi \mu$ ) , the principal silver coin among the Greeks. Like all other denominations of money, the word $\delta \rho a \chi \mu \bar{\eta}$ (sometimes written $\left.\delta \rho \sigma \gamma_{\mu}^{\prime} \eta^{\prime}\right)$ no douht signified originally a weiblit; und it continued to be used in this sense,

## DRACHMA.

as one of the subdivisions of the talent, of which it was the 6000th part. [Talentum.] The original meaning of the word is a landful. Ths two chief standards in the currencies of the Greek states were the Attic and Aeginetan. We shall therefore first speak of the Attic drachma, and afterwards of the Aeginetan.

The average weight of the Attic drachma from the time of Solon to that of Alexander was 66.5 grains. It contained about $\frac{1}{60}$ th of the weight alloy; and hence there remain 65.4 grains to be valued. Each of our shillings contains 80.7 grains of pure silver. The drachma is therefore worth $\frac{65.4}{80.7}$ of a shilling, or 9.72 pence, which may be called 93 ${ }^{4} d$. (Hussey, Ancient Weights and Money, pp. 47, 48.) After Alexander's time, there was a slight decrease in the weight of the drachma; till in course of time it only weighed 63 grains. The drachma contained six obols ( ${ }^{3} 50 \lambda 0$ o $)$; and the Athenians had separate silver coins, from four drachmae to a quarter of an obol. Among those now preserved, the tetradrachm is conmonly found; but we possess no specimens of the tridrachm, and only a few of the didrachm. Specimens of the tetrobolus, trioholus, dioholus, three-quarter-obol, half-obol, and quarter-obol, are still found. For the respective values of these coins see the Tables.

The tetradrachm in later times was called stater (Phot. s. v. シ̌rarท̂p; Hesych. s. v. Г $\lambda \alpha u ̄ k \in s$ Lavpıotıkaí: Matth. xxvii. 27); but it has heen doulted whether it bore that name in the flourishing times of the republic. (Hussey, Ibid. p. 49.) We know that stater, in writers of that nge, usually signifies a gold coin, equal in value to twenty drachmae [STATER]; but there appear strong reasons for believing that the tetradrachm, even in the age of Thucydides and Xenophon, was sometimes called by this name. (Thucyd. iii. 70, with Armold's note ; Xen. Hell. v. 2. § 22.) The obolos, in later times, was of bronze (Lucian, Contempl. 11. vol. i. p. 504, ed. Reiz) ; but in the hest times of Athens we only read of silver obols. The $\chi$ ancoûs was a copper coin, and the eighth part of an obol. [Chalcus.]

ATHENIAN DRACHMA. BRITISH MUSEUM. ACTUAL SIZE.

The Aeginetan standard appears to have been used in Greece in very early times. According to most ancient writers, money was first coined at Aegina by order of Pheidon of Argos; and the Aeginetan standard was used in almost all the states of the Peloponnesur, in Boeotia and in some other parts of northern Greece, though the Attic standard prevailed most in the maritime and commercial states.

The average weight of the Aeginetan drachma, calculated by Mr. Hussey (pp. 59, 60) from the coins of Aegina and Bueotia, was 96 grains, It

DUODECIM TABULARUM LEX.
contains about $\frac{1}{32} \mathrm{nd}$ part of the weight alloy. Hence its value is 93 grains of pure silver, or, as hefore, $\frac{93}{80.7}$ of a shilling; that is, ls. $1 d .3 \cdot 2$ farthings. The largest coin of the Aeginetan standard appears to have heen the didrachma, and the values of the different coins of this standard will be found in the Tables.
The proportion of the Aeginetan drachma to the Attic, according to the value given above, is as 93 to $65^{\circ} 4$, or as 4.18 to 3 nearly. According to Pollnx, however, the proportion was 5 to 3 ; for he states (ix. 76, 86) that the Aeginetan drachma was equal to 10 Attic obols, and that the Aegine$\tan$ talent contained 10,000 Attic drachmae. For a full discussion of this question, which is one of the most interesting in ancient numismatics, and of the respective values of the other standards which were used by the Greeks, see Nummus and Talentum.

ARGINETAN DRACHMA. BRITISH MUSEUM. ACTUAL SIZE.

As the Romans reckoned in sesterces, so the Greeks generally reckoned by drachmae; and when a sum is mentioned in the Attic writers, without any specification of the unit, drachmae are usually meant. (Böckh, Pol. Econ. of Athens, i. p. 25.)

DRACO. [Signa Militaria.]
DUCENA'RII, the name of various officers and magistrates, in the imperial pericd, of whom the principal were as follow: -

1. The imperial procuratores, who received a salary of 200 sestertia. Dion Cassius (liii. 15) says that the procuratores first received a salary in the time of Augustus, and that they derived their title from the amonnt of their salary. We thus read of centenarii, \&c., as well as of ducenarii. (See Capitolin. Pertin. 2; Orelli, Inscrip. No. 946.) Claudius granted to the procuratores ducenarii the consular ornaments. (Suet. Cluad. 24.)
2. A class or decuria of judices, first established by Augustus. They were so called because their property, as valued in the census, only amounted to 200 sestertia, and they tried causes of small importance. (Suet. Aug. 32.)
3. Officers who commanded two centuries, and who held the same rank as the primi hastati in the ancient legion. (Veget. ii. 8; Orelli, Inserip. No. 3444.)
4. The imperial household troops, who were under the authority of the magister officiorum. They are frequently mentioned among the agentes in rebus, or ushers. (Cod. 1. tit. 31 ; 12. tit. 20.)

DUCENTE'SIMA. [Centesima.]
DUELLA. [UNCIA.]
DULCIA'RII. [Pistor.]
DUODECIM SCRIPTA. [Latrunculi.]
DUODECIM TABULARUM LEX. [LEX.]

DUPLA'RII or DUPLICA'RII, were soldiers who received on account of their good conduct double allowance (duplicia cibaria), and perhaps in some cases double pay likewise. (Varro, De Ling. Lat. v. 90, Müller; Liv. ii. 59, xxiv. 47 ; Orelli, Inscrip. No. 3535.) They are frequently mentioned in inscriptions (Orelli, Nos. 3533, 4994), but more commonly under the name of duplarii. (Orelli, Nos. 3531, 3535, 3476, 3481, \&c.) In one inscription the form duplicarius occurs. (Orelli, No. 3534.) Vegetius (ii. 7) calls thern duplares milites.

DUPLICA ${ }^{\prime}$ TIO. [Actio.]
DUPONDIUS. [As, p. 141, a; Pes.]
DUSSIS. [As. p. 141, a.]
DUU'MVIR1, or the two men, the name of various magistrates and functionaries at Rume, and in the coloniae and municipia. In inscriptions we also meet with the form duomvires (Orelli, Inscrip. No. 3808), and duovir (Orelli, No. 3886).

1. Duumviri Juri Dicundo, the highest magistrates in the municipal towns. [Colonia, p. 318.)
2. Duumpirt Navales, extraordinary magistrates, who were created, whenever occasion required, for the purpose of equipping and repairing the fleet. They appear to have been originally appointed by the consuls and dictators, but were first elected by the people, в. с. 311. (Liv. ix. 30, xl. 18, 26, xli.. 1.)
3. Duumyirl Perduellionis. [PerduelLio.]
4. Duemviri Quinquennales, the censors in the municipal towns, who must not be confounded with the duumviri juri dicundo. [CoLON1A, p. 318.]
5. Duumviri Sacri, extraordinary magistrates, like the duumviri Navales, appointed for the purpose of building or dedicating a temple. (Liv. vii. 28, xxii. 33, xxxv. 41.)
6. Duumviri Sacrorum, originally had the charge of the Sibylline books. Their duties were afterwards discharged by the decemvini sacris faciundis. [Decemviri, No. 3.]
7. Duumviri Vils extra urbem purganDis, were officers under the aediles, who had the charge of the streets of the suburbs of Rome, outside the city gates. (Tabul. Heracl. i. 50, ed. Göttling.) Their office appears to have been abolished by Augustus, and their duties devolved upon the Quattuorviri. (Comp. Dion Cass. liv. 26 Pompon. De Orig. Jur. § 30 ; Becker, Römisch. Alterth. vol. ii. part ii. p. 366.)

DUX. [PRovincia.]

## E.

ECCLE/SIA (éккл $\eta \sigma$ 臽a), the general assembly of the citizens at Athens, in which they met to discuss and determine npon matters of public interest. These assemblies were either ordinury, and held four times in each prytany, or extraordinary, that is, specially convened, upon any sudden emergency, and therefore called $\sigma \dot{\prime} \gamma \kappa \lambda \eta \tau o$. On occasions of extreme importance, when it was desirable for as many persons as possible to he present at the discussion of any question, the people were summoned by express from the country to the city, and then the assembly was called a $\kappa \alpha \tau \alpha \kappa \lambda \sigma i a$, the proper meaning of катакалєiz
being to call from the country into the city．The ordinary assemblies were called $\nu \dot{\nu} \mu \mu \mu 0 t$ or кúpta， according to the Scholiast on Aristophanes（Achar． 19），who，moreover，informs us that there were three such in every month．But according to the best－informed grammarians who followed Aristotle， the name кupía was appropriated to the first only of the regular assemblies of each prytany．Such， at least，is the account given by Pollux（viii．96） and Harpocration，the former of whom asserts that the third of the regular assemblies in each prytany was partly devoted to the reception of ambassadors from foreign states．

Aristophanes，however，in the Achamians（6I）， represents ambassadors who had just returned from Persia and Thrace，as giving an account of their embassy in a кupia écкл $\eta \sigma$ ia，which，ac－ cording to Pollux，would be not the third but the first of the regular assemblies．With a view of reconciling these discrepancies，Schömann（Dc Comit．c．i．）supposes，that Solon originally ap－ pointed one regular assembly，called кupia，to bo held on a certain day of every prytany，and that afterwards additional assemblies were instituted， appropriated respectively to particular purposes， though the term kupía was still reserved for the assembly formerly so called．If，however，the re－ presentation of Aristophanes is in agreement with the practice of his age，we must further suppose， what is very probable，that the arrangements for business，as described by Pollux，were not always observed even in the time of the poet；and since a few years after Aristotle＇s time many changes took place in the constitution of Athens，it may have lappened that the name of kupía was then given to all the regular assemblies，in which crse the Scholiast probably identified the customs and terms of a late age with those of an earlier period． Moreover，the number of prytanies in each year， originally ten，one for cach tribe，was，on the in－ crease in the number of the tribes at Athens， raised to twelve；so that the prytanics would then coincide with the months of the year，a fact which，taken in conjunction with other circum－ stances（Schommun，ii．44），seems to show，that the authorities who speak of three regular as－ semblies in each month，had in view the times when a prytany and a month were the same thing． Some authors have endeavoured to determine the particular days on which the four regular assem－ blies of each prytany were held，but Schömann（ii． 47）has proved almost to demonstration，that there were no invariably fixed days of assembly ；and at any rate，even if there were，we have not suffi－ cient data to determine them．Ulpian（ad Do－ mosth．Timoe．p．706）says，in allusion to the times when there were three assemblies in every month，that one was held on the eleventh，another about the twentieth，a third about the thirtieth of each month；and it is of course not impro－ bable that they were always held at nearly equal intervals．

The place in which the assemblies were anciently held was，we are told by Harpocration（s．$v$ ．
 were transferred to the Pnyx，and at last to the great theatre of Dionysus，and other places．Thus Thucydides（viii．97）speaks of the people being sumnioned to the Pnyx，the usual place of assembly in his times；and Aristophanes（Equit．42），in describing＂Demus，＂the representative of the

Athenian people，just as＂John Bull＂is of the English，calls that character $\Delta \eta \mu o s$ חuк $\boldsymbol{\nu}_{i}^{\prime} \eta \boldsymbol{\eta}$ ，or Denus of the（parish of）Pnyx：a joke by which that place is represented as the home of the Athenians．The sitnation of it was to the west of the Areiopagus，on a slope comnected with Mount Lycabettus，and partly at least within the walls of the city．It was semicircular in form， with a boundary wall，part rock and part masonry， and an area of about 12,000 square yards．On the north the ground was filled up and paved with large stones，so as to get a level surface on the slope ；from which fact some grammarians derive its name（ $\pi \alpha \rho \alpha ̀ ~ \tau \grave{\eta} \nu \tau \hat{\omega} \nu \lambda i \theta \omega \nu$ тик $\nu \delta \dot{\tau} \eta \tau \alpha)$ ．To－ wards this side，and close to the wall，was the bcma（ $\beta \hat{\eta} \mu \alpha$ ），a stone platform or hustings ten or eleven feet high，with an ascent of steps；it was cut out of the solid rock，whence it is sometimes called $\delta \lambda i$ Oos，as in Aristophanes（Pax，680）we
 The position of the bema was such as to command a view of the sea from behind（on which account the thirty tyrants are said to have altered it）， and of the חротviגaia and Parthenon in front， though the hill of the Aciopagus lay partly be－ tween it and the Acropolis．Hence Demosthenes （IIepl 之ıvтa乡．174），when reminding the Athenians from this very bema of the other splendid works of their ancestors，says emphatically $\Pi$ попо́д $\lambda, \alpha$ т $\alpha \hat{\tau} \tau \alpha$ ：and we may be sure that the Athenian orators would often rouse the national feelings of their hearers by pointing to the assomblage of magnificent edifices，＂monuments of Athenian gratitude and glory，＂which they had in view from the Pnyx．（Cramer，Ancient Greece，rol．ii． p． 335 ；Wordswarth，Athens and 1 ttica．In the latter of these works are two views of the re－ mains of the Pnyx．）That the general situation of the place was elevated is clear from the phrase $\dot{\alpha} \nu a 6 a i \nu \in \iota \nu$ єis rì $\dot{\epsilon} \kappa \kappa \lambda \eta \sigma i a \nu$ ，and the words $\pi \hat{a} s$ $\delta \delta \hat{\eta} \mu o s$ b．$\nu \omega \kappa \alpha \theta \hat{\eta} \tau 0$ ，applied to a mecting of the people in the Pnyx．（Dem．De Cor．p．285．） After the great theatre of Dionysus was built，the assemblies were frequently held in it，as it afforded space and convenience for a large multitude ；and in some particular cases it was specially deter－ mined by law that the people should assemble there．（Dem．c．Mcid．p．517．）Assemblies were also held in the Pciraceus，and in the theatre at Munychia．（Dem．De Fuls．Leg．p． 359 ；Lysias， e．Jgor．p． 133 ；Thucyd．viii．93．）

The right of convening the people generally vested in the prytanes or presidents of the council of Five Hundred［Boule］；but in cases of sud－ den emergency，and especially during wars，the strategi also had the power of calling extraordi－ nary meetings，for which，however，if we may judge by the form in which several decrees are drawn up，the consent of the senate appears tr have been necessary．（Dem．De Cor．p．249．） The four ordinary meetings of every prytany were，nevertheless，always convened by the pry－ tanes，who not only gave a previous notice（ $\pi \rho 0$－ $\gamma р \alpha ́ \phi \epsilon \epsilon \nu$ т $̀ \boldsymbol{\eta} \nu$ є́кк $\lambda \eta \sigma(\alpha \nu)$ of the day of assembly， and published a programme of the subjects to be discnssed，but also，as it appears，sent a crier round to collect the citizens（ $\sigma v \nu$ á $\gamma \in l \nu$ т $\partial \nu \delta \bar{\eta} \mu 0 \nu, \mathrm{P}_{0} \mathrm{l}$－ lux，viii． 95 ；Harpocrat．s．v．Kupía＇Екидクŋбía； Dem．c．Aristog．p．772．）At any rate，whenever the strategi wished to convene one of the extra－ ordinary assemblies，notice was certainly given of

## ECCLESIA.

ECCLESIA.
it hy a public proclamation; for as Ulpian (ad Demosth. de Fals. Leg. p. 100, a) observes, these assemblies were called $\sigma \dot{\partial} \gamma \kappa \lambda \eta \tau o t$, because the people were summoned to them by officers sent
 $\pi \in \rho i=\nu r \epsilon s$ ). But independent of the right which we have said the strategi possessed of convening an extraordinary meeting, it would seem from the case of Pericles (Thucyd. ii. 22) that a strategus had the power of preventing any assembly being called. It is, however, important to observe, that such an exercise of power would perhaps not have heen tolerated except during wars and commotions, or in the person of a distinguished character like Pericles; and that under different circumstances, at any rate after the time of Solon, the assemblies were always called by the prytanes. All persons who did not obey the call were subject to a fine, and six magistrates called lexiarchs ( $\lambda \eta \xi\{\alpha \rho \chi \circ \iota$ ) were appointed, whose duty it was to take care that the people attended the meetings, and to levy fines on those who refused to do so. (Pollux, viii. 104.) With a view to this, whenever an assembly was to be held, certain public slaves ( $\Sigma \kappa \dot{v} \theta \alpha$, or rogotal) were sent round to sweep the agora, and other places of public resort, with a rope coloured with vermilion. The different persons whom these ropemen met, were driven by them towards the ecclesia, and those who refused to go were narked by the rope and fined. (Schol. ad Arist. Achur. 29.) Aristophanes (l.c.) alludes to this subject in the lines

##  тठ $\sigma \chi 0 \iota \nu$ 'о $\nu \phi \in \cup ́ \gamma \sigma \nu \sigma \iota \tau \delta \mu \in \mu \iota \lambda \tau \omega \mu \in \nu 0 \nu$.

Besides this, all the roads except those which led to the meeting were blocked up witb burdles ( $\gamma \boldsymbol{\epsilon} \dot{\rho} \hat{\rho} \alpha$ ), wbich were also used to fence in the place of assembly against the intrusion of persons who had no right to be present: their removal in the latter case seems to have served as a signal for the admission of strangers who might wish to appeal to the people. (Dem. c. Necter. p. 1375.) An additional inducement to attend, with the
 pay which they received for it. The originator of this practice seems to have been a person named Callistrutus, who introduced it " long after the beginning of the influence of Pericles." The payment itself, originally an obolus, was afterwards raised to three by a popular favourite called Agyrrhius, of Collytus. The increase took place but a short time before the Ecclesiazusae of Aristophanes came out, or about B. C. 392 . A ticket ( $\sigma \dot{\prime} u \mathrm{~b}_{0} \lambda_{0} \nu$ ) appears to have been given to those who attended, on producing which, at the close of the proceedings, they received the money from one of the thesmothetae. (Aristoph. Eccles. 295, 380.) This payment, however, was not made to the richer classes, who attended the assemblies giatis,
 hy the poet Antiphanes in a fragment preserved by Athenaeus (vi. p. 247, f). The same word oikóviros is applied generally to a person who receives no pay for his services.

With respect to the right of attending, we may observe that it was enjoyed by all legitimate citizens who were of the proper age (generally supposed to be twenty, certainly not less than eighteen), and not labouring under any atimio or loss of civil rights. All were considered citizcns,
whose parents were both such, or who had been presented with the frcedom of the state, and enrolled in the register of some demus or parisb. (Dem. c. Neaer. p. 1380.) Adopted citizens, however ( $\pi 0 \% \pi \tau 01$ ), were not qualified to bold the office of archon or any priesthood. (Id. p. 1376.) De-
 those above sixty) seem not to have been admitted, although it is not expressly so stated. (Aristot. Polit. iii. 1.) Slaves and foreigners also were certainly excluded (Aristoph. Thesm. 294): though occasions would of course occur when it would be necessary or desirable to admit them; and from Demosthenes (c. Neaer. p. 1375) we may infer that it was not unusual to allow foreigners to enter towards the close of the proceedings, when the most important business of the day had been concluded; otherwise they stood outside. (Aesch. c. Ctes. [. 86.)

The $i \sigma \circ \tau \epsilon \lambda \epsilon i s$, or foreigners, who enjoyed nearly equal privileges with the citizens, are by some thought to have had the same rights as adopted citizens, with respect to roting in the assembly. (Wolf, ad Dem. Lept. p. 70.) This, however, seems very doultful ; at any rate the etymology of the word íot $\epsilon \lambda \in \hat{i} s$ does not justify such an opinion.

In the article Boule it is explained who the prytanes and the proedri were ; and we may here remark, that it was the duty of the proedri of the same tribe, under the presidency of their chairman ( $\delta \dot{\varepsilon} \pi เ \iota \tau a \dot{r} \eta s$ ), to lay before the people the subjects to be discussed ; to read, or cause to be read, the previous bill ( $\tau \delta \pi \rho o \delta o u ́ \lambda \epsilon \nu \mu \alpha)$ of the sernate; and
 speakers to address the people. They most probably sat on the steps near the bema, to which they were on some occasions called by the people. In later times they were assisted in keeping order ( єi, $\sigma \sigma \mu(\alpha)$ by the members of the presiding tribe
 and Boole) ; and the officers who acted under them, the "serjeants-at-arms" were the criex (" $\kappa n \rho \nu \xi$ ), and tbe Scythian bowmen. Thus, in Aristophanes (Acharn.24), the cricr says to a speaker, who was out of order, "á $\theta \eta \sigma o$ oí $\gamma$ a, and in another passage the rog $6 \tau a i$ are represented as dragging a drunken man out of the assembly. (Eccles. 143.) When the discussion upon any subject had terminated, the chairman of the pruedri, if he thought proper, put the question to the vote: we read in some instances of his refusing to do so. (Xen. Mem. і. 1.§ 18 ; Thuc. vi. 14.)

Previous, however, to the commencement of any business, it was usual to make a lustration or purification of the place where the assembly was held. This was performed by an officiating priest called the Peristiarchus ( $\pi \in \rho \iota \sigma \tau i a \rho-$ $\chi o s$ ), a name given to him because he went before the lustral victims ( $\tau \alpha \dot{\alpha} \pi \epsilon \rho i \sigma \tau i \alpha$ ) as they were carried round the boundary of the place. The favourite victims were sucking pigs ( $\chi^{0} \rho \rho / \delta \iota a$ ) : the blood of which was sprinkled about the seats, and their bodies afterwards thrown into the sea. (Schol. ad Avistoph. l.c., ad Aesch. c. Timar. p. 48.). After tbe peristiarch the crier followed, burning incense in a censer. When these ceremonies were concluded, the crier proclaimed silence, and then offered up a prayer, in which the gods were implored to bless the proceedings of the meeting, and bring down destruction on all those who were hostilely disposed towards the state, or who
traitorously plotted its overthrow, or received bribes for misleading and deceiving the people. (Aristoph. Thesm. 330.) On the conclnsion of this prayer business began, and the first subject proposed was gaid to be brought forward, $\pi \rho \hat{\omega} \tau о \nu \quad \mu \in \tau \alpha$ тà $i \in \rho \alpha$. (Dem. c. Timocr. p. 706.) We must, however, understand that it was illegal to propose to the ecclesia any particular measure unless it had previously received the sanction of the senate, or been formally referted by that body to the people, under the title of a $\pi \rho 00_{0} \dot{v} \lambda \in \nu \mu a$. The assembly, nevertheless, had the power of altering a previous decree of the senate as might seem fit. Further information on this point will be found under Boule, to which we may add, according to Schömann (De Comitiis, c. 9), that the object of the law, mentioned by the gram-
 $\dot{\epsilon} \nu \tau \hat{̣} \delta \delta \bar{\eta} \mu q)$, seems to have been, not to provide that no motion should be proposed in the assembly anless previously approved of by the senate, but rather that no subject should be presented for discossion to the people, about which a bill of the senate had not been drawn up and read in the assembly.

The privilege of addressing the assembly was not confined to any class or age amongst those who had the right to be present: all, withoat any distinction, were invited to do so by the proclamation
 crier after the proedri had gone through the necessary preliminaries, and laid the subject of disenssion before the meeting; for though, according to the institutions of Solon, those persons who were ahove fifty years of age ought to have been called upon to speak first (Aesch. c. Ctesiph. p. 54), this regulation had in the days of Aristophanes become quite obsolete. (Dem. De Cor. p. 285 ; Aristoph. Acharn. 43.) The speakers are sometimes simply called oi $\pi$ apiontes, and appear to have worn a crown of myrtle on their heads while addressing the assembly, to intimate, perhaps, that they were then representatives of the people, and like the archons when crowned, inviolable. (Aristoph. Eccles. 130, 147.) They were by an old law required to confine themselves to the subject before the meeting, and keep themselves to the discassion of one thing at a time, and forbidden to indalge in scurrilous or abusive language: the law, however, had in the time of Aristophanes become neglected and almost forgotten. (Aesch. c. Timar. p. 5 ; Aristoph. Eccles. 142.) The most influential and practised speakers of the assembly were generally distinguished by the name of $\bar{\rho} \eta \tau 0 \rho \in s$.

After the speakers had concluded, any one was at liberty to propose a decree, whether drawn up beforehand or framed in the meeting ( ${ }^{\mathrm{E}} \nu \tau \hat{\varphi} \delta \dot{\eta} \mu \omega$ $\sigma v \gamma \gamma \rho \alpha \alpha^{\prime} \phi \in \sigma \theta a \iota$, Plat. Gorg. p. 451), which, however, it was necessary to present to the proedri, that they might see, in conjunction with the $\nu 0 \mu 0-$ фú入aкєs, whether there was contained in it anything injurions to the state, or contrary to the existing laws. (Pollnx, viii. 94.) If not, it was read by the crier; though, even after the reading, the chairman could prevent it being put to the vote, nnless his opposition wis overborne by threats and clamours. (Aesch. De Fols. Leg. p. 39.) Private individuals also could do the same, by engaging npon oath ( $v \pi \omega \mu \sigma \sigma(\alpha)$ to bring against the anthor of any measure they might object to, an accusation called a $\gamma \rho a \phi \emptyset \pi а \rho a \nu \delta \mu \omega \nu$. If, however, the chairman refused to submit any question to the decision

ECCLESIA.
of the people, he might be proceeded against by endeixis (Plat. Apol. p. 32) ; and if he allowed the people to vote upon a proposal which was contrary to existing constitntional laws, he was in some cases liable to atimia. (Dem. c. Timoc. p. 716.) If, on the contrary, no opposition of this sort was offered to a proposed decree, the votes of the people were taken, by the permission of the chairman and with the consent of the rest of the proedri: whence the permission is said to have been given sometimes by the proedri and sometimes by the chairman, who is also simply called $\delta \pi \rho \delta \epsilon \delta \rho o s$, just as the proedri are sometimes styled prytanes. (Aesch. c. Ctesiph. p. 64 ; Dem. c. Meid. p. 517.) The decision of the people was given either by show of hands, or by ballot, i. e. by casting pebhles into urns (кабі'бко!) ; the former was expressed by the word $\chi \in!\rho о \tau о \nu \epsilon \hat{I V}$, the latter by $\psi \eta \phi!\zeta \epsilon \sigma \theta a L$, adthough the two terms are frequently confounded. The more usnal method of voting was by show of hands, as being more expeditious and convenient ( $\chi$ eipotovia). The process was as follows:--the crier first proclaimed that all those who were in favour of a proposed measure should hold up their
 he proclaimed that all those who were opposed to it should do the same ( $\delta \tau \varphi \mu \hat{\eta} \delta о к \in i ̂ \kappa . \tau, \lambda$. .): they did so, and the crier then formed as accurate an idea as possible of the numbers for and against ( $\dot{\eta} \rho[\theta \mu \in t$ $\tau \dot{\alpha} s \chi \in i p a s)$, and the chairman of the meeting pronounced the opinion of the majority. (Suidas, s. v. KatєХєєротby $\quad$ бєע.) In this way most matters of public interest were determined. Vote by ballot ( $\kappa \rho \dot{u} \delta \delta \eta \nu)$ ), on the other hand, was only used in a few special cases determined by law; as, for instance, when a proposition was made for allowing those who had suffered atimia to appeal to the people for restitation of their former rights; or for inflicting extraordinary punishments on atrocions offenders, and generally, upon any matter which affected private persons. (Dem. c. Timocr. pp. 715,719 .) In cases of this sort it was settled by law, that a decree should not be valid unless six thousand citizens at least voted in favour of it. This was by far the majority of those citizens who were in the habit of attending; for, in time of war the number never amounted to five thousand, and in time of peace seldom to ten thousand. (Thuc. vii. 72.)

With respect to the actual mode of voting by ballot in the ecclesia we have no certain information; but it was probably the same as in the courts of law, namely, by means of black and white pehbles, or shells, pat into urns ( $\kappa$ кoifonol); the white for adoption, the black for rejection of any given measure. (Schol. ad Arist. Vesp. 981).

The determination or decree of the people was called a Psephisma ( $\psi \dot{\eta} \phi \iota \sigma \mu \alpha$ ), which properly signifies a law proposed to an assembly, and approved of by the people. The form for drawing up the Psephisma varied in differentages. [Bovler.]

We now come to the dismissal of the assembly ; the order for which, when business was over, was given by the prytanes ( ${ }^{*} \lambda \cup \sigma \alpha \nu \tau \dot{\eta} \nu \dot{\epsilon} \kappa \kappa \lambda \eta \sigma(a \nu)$, through the proclamation of the crier to the people (Aristoph. Acharn. 173) ; and as it was not customary to continue meetings which usually began early in the monning (Id. 20) till after sunset, if one day were not sufficient for the completion of any business, it was adjourned to the aext. But an assembly was sometimes broken up if any one,
whether a magistrate or private individual, declared that he saw an unfavourable omen, or perceived thunder and lightring. The sudden appearance of rain also, or the shock of an earthquake, or any natural phaenomenon of the kind called $\delta$ ioo $\eta \mu i a t$, was a sufficient reason for the hasty adjournment of an assembly. (Aristoph. Nub. 579 ; Thuc. v. 46.)

We have already stated in general terms, that all matters of public and national interest, whether foreign or domestic, were determined upon by the people in their assemblies, and we shall conclude this article hy stating in detail what some of these matters were. On this point Julius Pollux (viii. 95) informs us, that in the first assembly of every
 of the magistrates was held ; i.e. an inquisition into their conduct, which, if it proved nnfavourable, was followed by their deposition. In the same assembly, moreover, the єía $\alpha \gamma \gamma \mathrm{\lambda}$ íal or extraordinary informations were laid before the people, as well as all matters relating to the watch and ward of the country of Attica; the regular officers also read over the lists of confiscated property, and the names of those who had entered upon inheritances. The second was devoted to the hearing of those who appeared before the people as suppliants for some favour, or for the privilege of addressing the assembly withont incurring a penalty to which they otherwise would have been liable, or for indemuity previous to giving information about any crime in which they were accomplices. In all these cases it was necessary to obtain an ä $\delta \epsilon$ ta, i. e. a special permission or immunity. In the third assembly, ambassadors from foreign states were received. In the fourth, religious and other public matters of the state were discussed.

From this statement, compared with what is said under Elsangelia, it appears that in cases which required an extraordinary trial, the people sometimes acted in a judicial capacity, althougb they usually referred such matters to the court of the Heliaea. There were, however, other cases in which they exercised a judicial power: thus, for instance, the proedri could ex officio prosecute an individual before the people for misconduct in the ecclesia. (Aesch. e. Timarch. p. 5.) Again, on some occasions information ( $\mu \eta \nu v \sigma$ ) ) was simply laid before the people in assembly, without the informant making a regular impeachment ; and although the final determination in cases of this sort was generally referred to a court of law, still there seems no reason to doubt that the people might have taken cognizance of them in assembly, and decided upon them as judges ; just as they did in some instances of heinous and notorious crimes, even when no one came forward with an accusation. Moreover, in turbulent and excited times, if any one had incurred the displeasure of thepeople, they not unfrequently passed summary sentence upon him, without any regard to the regular and established forms of proceeding: as examples of which we may mention the eases of Demosthenes and Phocion. The proceedings called $\pi \rho_{0} 60 \lambda \dot{y}$ and ${ }_{e} \pi a \gamma \gamma \in \lambda i ́ a$ were also instituted before the people: further iuformation with respect to them is given under those heads.

The legislative powers of the people in assembly, so far as they were defined by the enactments of Solon, were very limited ; in fact, strictly speaking, no laws could, without violating the spirit of
the Athenian constitution, he either repealed or enacted, except by the corrt of the Nouo日étal: it might, however, doubtless happen that $\psi \eta \phi i \sigma \mu \alpha \pi \alpha$ passed by the assemblies had reference to general and permanent objects, and were therefore virtually ขdнoi or laws [Nomothetes]; moreover, if we may judge by the complaints of Demosthenes, it appears that in his days the institutions of Solon had, in this respect, fallen into disuse, and that new laws were made by the people collectively in assembly, without the intervention of the court of the nomothetae. (Dem. c. Timocr. p. 744 ; Aristot. Polit. iv. 4.)
The foreign policy of the state, and all matters connected with it, and the regulation and appropriation of the taxes and revenues, were, as we might expect, determined upon by the people in assembly. The domestic economy of the state was umder the same superintendence ; a fact which Pollux briefly expresses by informing us that the people decided in the fourth assembly $\pi \in \rho!$ i $\in \rho \bar{\omega} \nu$ nal $\delta \eta \mu 0 \sigma l \omega \nu$, i.e. on all matters, whether spiritual or secular, in which the citizens collectively had an interest. Such, for example, says Schömann (p. 298), " are the priesthood, the temples of the gods, and all other sacred things ; the treasury, the public land, and public property in general ; the magistracy, the courts, the laws and institutions of the state, and, in fine, the state itself: " in connection with which we may observe, that the meetings for the election of magistrates were called $\dot{a} \rho \chi \alpha$ Lastly, as Schömann remarks, "the people likewise determined in assemhly upon the propriety of conferring rewards and honours on such citizens or strangers, or even foreign states, as had in any manner signally benefitted the commonwealth." It is hardly necessary to add, that the signification of a religious assembly or church, which ecclesia bore in later times, sprang from its earlier meaning of an assembly in generai, whether of the constituency of a whole state, or of its sub-divisions, such as tribes and cantons. See Tribus and Demus.
[R.W.]
ECCLETTI ( $\kappa \kappa \kappa \lambda \eta \tau \sigma$ ), was the name of an assembly at Sparta, and seems to have been the same as the so-called lesser assembly ( $\dot{\eta} \mu$ нкрà $\kappa \alpha-$
 name seems to indicate a select assembly, but it is difficult to determine of what persons it was composed ; since, however, Xenophon (Hell. ii. 4. § 38) mentions the ephors along with and as distinet from it, we cannot with Tittman (Griech. Staatsv. p. 100) and Wachsmuth (Hell. Alter. vol. i. pp. 464, 690 , 2d edit.), consider it as having consisted of the Spartaul magistrates, with the addition of some deputies elected from among the citizens. As, however, the ëккл $\quad$ тоt do not occur until the period when the franchise had been granted to a great number of freedmen and aliens, and when the number of ancient citizens had been considerably thinned, it does not seem improbable that the lesser assembly consisted exclnsively of ancient citizens, either in or out of office; and this supposition seems very well to agree with the fact, that they appear to have always been jealously watchful in upholding the ancient constitution, and in preventing any innovation that might be made by the ephors or the new citizens. (Thirlwall, Hist. of Grcece, iv. p. $372, \& \mathrm{c}$.
The whole snbject of the ërккд $\eta \tau \circ 1$ is involved in difficulty. Tittmann thinks, that though the name

## EDICTUM.

of this assembly is not mentioned, it existed long before the Persian wars, and that in many cases in
 are said to have made decrees, the magistrates are mentioned instead of the ěкк入 $\eta \tau 0 \iota$, of whom they were the chief members. This last supposition is rejected by Müller ( $D_{0}$ r. iii. 5. § 10 ), who observes that the magistrates were often said to have decreed a measure (especially in foroign affairs), though it had been discussed before the whole assembly and approved by it; for the magistrates wore the representatives and the organs of the assembly, and acted in its name. Müller is also
 and distinct from the lessor assembly, which he considers to have been a kind of select assembly, But his arguments on this point are not convincing. The ék $^{\kappa} \kappa \lambda \eta \tau 0$ and the lesser assembly are mentioned about the same time in Grecien history, and previous to that time we hear of no assembly, except the regidar éкк $\lambda \eta \sigma i \alpha$ of all the Spartans, (See Xen. Hell. v. ii. § 33, vi. 3. § 3.) [L. S.]
$\mathrm{E}^{\prime} \mathrm{CDICUS}$ (ěfinos), the name of an officer in many of the towns of Asia Minor during the Roman dominion, whose principal duty was the care of the public money, and the prosecution of all parties who owed money to the state. The word is translated in the ancient glossaries by cognitor, an attorney. (Cic. ad Fum. xiii. 56 ; Plim. Ep. x. III ; Gronovius, de Sestert. iv. 3. p. 277.)

E'CDOSIS (ék $\delta 0 \sigma t s$ ). [FENUS.]

## ECULEUS. [Eqodleus.]

E'DERE ACTIO'NEM. [Actio.]
EDICTUM. The Jus Edicendi, or power of making edicts, belonged to the higher magistratus populi Romani, but it was principally exercised by the two practors, the practor urbanus and the praetor peregrinus, whose jurisdiction was exercised in the proviuces by the praeses. The curule aediles
also made many edicts, and their jurisdiction was exercised (under the empire at least) in the provinciae populi Romani by the quacstors. (Gaius, i. 6.) There was no ediet promulgated in the provinciae Caesaris. The tribunes, censors, and pontifices also promulgated edicts relating to the matters of their respective jurisdictions. The edicta are enumerated by Gaius among the sources of Roman law, and this part of the Roman law is somotimes called in the Pandect, Jus Honorariun (Dig. 44. tit. 7. s. 52 ), apparently because the edictal power belonged to those magistrates only who had the honores, and not so much ad honorem praetorum. (Dig. I. tit. 1. s. 7.) As the edicts of the praetors were the most important, the jus honorarium was sometimes called jus practorium ; but, properly, the jus honorarium was the term under which was comprehended all the edictal law.

Edictum signifies, generally, any public notice made by a competent authority (Tacit. Aun. i. 7 ; Liv. xxxi. 6, ii. 30). But it specially signifies, under the republic, a aule pronulgated by a magistratus, which was done by writing it on an albon, and placing it in a conspicuous place, "Unde de plano recte legi potest." From this circumstance, the Edict was considered to be a part of the jus scriptum. As the office of a magistratus was annnal, the rules promulgated by a predecessor were not binding on a successor, but he might confirm or adopt the rules of his predecessor, and introduce them into his own Edict, and hence such adopted rules were called edictum tralatitium (Cic. ad Att. iij. 23, v. 21 ; ad Fam. iii. 8 ; in Verr. i. 45), or vetus, as opposed to edictum novum. A repentinum edictum was that rule which was made (prout res incidit) for the occasion. (In Verr. iij. 14.) A perpetuum edictum was that rule which was made by the magistratus on entering upon office, and which was intended to apply to all cases to which it was applicable, during the year of his office: hence it was sometimes called also annua lex. It was not called perpetuom because the rules were fixed, but because each practor puhlished his edict upon entering on his office, and thus there was a perpetuum (continuous) edictum. Until it became the, practice for magistratus to adopt the edicta of their predccessors, the edicta could not form a body of permanent binding rules; but when this practice becane common, the edicta (edictum tralatitium) soon constituted a large body of law, which was practically of as much importance as any other part of the law. The several edicta, when thus cstablished, were designated by the names of their promulgators, as the Edictum Carbonianum; or they wure named with reference to the formula, and the actio which they established, as Aquiliana, Publiciana, Rutiliana.

The origin of the edictal power cannot be historically shown ; but as the praetor was a magistrate established for the administration of justice on account of the occupations of the consuls, and the consular power was the representative of the kingly power, it seems that the jus edicendi may have lueen a remnant of the kingly prerogative. However this may be, the edictal power was carly exercised, and so far established, that the jus praetorimm was a recognised division of law in and before the time of Cicero (in Verr. i. 44), in whose are the study of the Edict formed a part of the regular study of the law. (de Leg. i. 5, ii. 23.) The cdict of the aediles about the buying and
selling of slaves is mentioned by Cicero (de Off. iii. 17) ; the Edictiones Aedilitiae are alluded to by Plautus (Capt. iv. 2, v. 43); and an edict of the praetor Peregrinus is mentioned in the Lex (ralliae Cisalpinac, whicb probably belongs to the beginning of the eighth ceatury of the city. The Lex Corvelia, в. c. 67 , provided against abuses of the edictal power, by declaring that the praetors sbould decide in particular cases, conformably to their perpetual edict. The edicts made in the provinces are often mentioned by Ciccro. They were founded on the edictum urbanum, though they likewise comprehended rules applicable only to the administration of justice in the provinces, and so far they were properly edictum provinciale. 'Thus Cicero (ad Att. vi. 1) says, that he promulgated in his province two edicta; one provinciale, which, among other matters, contained every thing that related to the publicani, and another, to which he gives no name, relating to matters of which he sitys, "ex edicto et postnlari et fieri solent." As to all the rest, he made no edict, but declared that he would frame all his decrees (decreta) upon the edicta urbana. It appears, then, that in the time of Cicero the edicta already formed a large body of law, which is confirmed by the fact, that, in his time, an attempt had been already made to reduce it into order, and to comment on it. Servius Sulpicius, the great jurist and orator, the friend and contemporary of Cicero, addressed to Brutus two very short books on the Edict, which was followed by the wark of Ofilins (Pomponius, Dig. 1. tit. 2. s. 2) ; though we do not know whether the work of Ofilius was an attempt to collect and arrange the various edicta, like the subsequent compilation of Julian, or a commentary like those of many subsequent jurists (Ofilius edictum praetoris primas diligenter composuit).

The object of the Edict, according to the Roman jurists, was the following (Papinianus, Dig. 1. tit. 1. s. 7):-"Adjuvandi vel supplendi vel corrigendi juris civilis gratia propter utilitatem publicam:" the Edict is also described as "viva vox juris civilis." It was, in effect, an indirect method of legislating, and it was the means by which numerous rules of law became established. It was found to be a more effectual, because an easier and more practical way of gradually enlarging and altering the existing law, and keeping the whole system in harmony, than the method of direct legislation; and it is undeaiable that the most valuable part of the Roman law is derived from the edicts. If a praetor established any rule which was found to be ioconvenient or injarious, it fell into disuse, if not adopted by his successor. The publicity of the Edict must also have been a great security against any arbitrary changes, for a magistratus would hardly venture to promulgate a rule to which opinion had not by anticipation already given its sanction. Many of the rules promulgated by the Edict were merely in conformity to existing custom, more particularly in cases of coatracts, and thus the edict would bave the effect of converting custom into law. This is what Cicero seems to mean (de Invent. ii. 22), when he says that the Edict depends in a great degree on custom.

As to the matter of the Edict, it must be supposed that the defects of the existing law must generally have been acknowledged and felt hefore any magistratas ventured to supply them; and in doing this, he must have conformed to the so-called
natural equity (Jus Naturale or Gentium). Under the emperors, also, it may be presumed, that the opinions of legal writers would act on publis opinion, and on those who had the jus edicendi. Hence, a large part of the edictal rules were founded on the so-called jus gentium ; and the necessity of some modifications of the strict rules of the civil law, and of additional rules of law, wonld become the more apparent with the extension of the Roman power and their intercourse with other nations. But the method in which the praetor introduced new rules of law was altogether conforosable to the spirit of Roman institutions. The process was slow and gradual ; it was not effected hy the destruction of that which existed, but by adapting it to circumstances. Accordingly, when a light existed, or was recognised, the praetor weuld give an action, if there was none; he would interfere by way of protecting possession, but he could not make possession into ownership, and, accordingly, that was effected by the law [UsiJcapro]: he aided plaintiffs by fictions, as, for instince, in the Publiciana actio, where the fiction was, that the possessor had obtained the ownership by usucapion, and so was quasi ex jure Quiritinm dominus (Gaius, iv. 36) ; and he also aided parties hy exceptines, and in integrum restitutio. [Jus.]

The old forms of procedure were few in number, and they were often inconvenient and failed to do justice. Accordingly, the practor extended the remedies by action, as already intimated in the case of the Publiciana actio. This change probably commenced after many of the legis actiones were abolished by the Acbutia lex, and the necessity of new forms of actions arose. These were introduced by the praetors, and it is hardly a matter of doubt that in establishing the formulae they followed the analogy of the legis actiones. It is the conclusion of an ingenious writer (Rhein. Mus. für Juris. i. p. 51, Die Oeconomie des Edictes, von Heffter), "that the edict of the praetor urbanus was in the main part relating to actions arranged after the model of the old legis actiones, and that the system is apparent in the Code of Justimian and still more in the Digest."

Under the emperors, there were many commeatators on the Edict. Thus we find that Labeo wrate four books on the Edict, and a work of his in thirty books, Ad Edictum Praetoris Peregrini. is cited by Ulpian. (Dig. 4. tit. 3 s. 9.) Silvias Julianus, a distinguished jurist, who lived in the time of Hadrian, and filled the office of practor, made a compilation of Edictal law by order of the emperor ; the work was arranged in titles, according to subjects (Böckiag, Instit. i. 30. n. 11). It was called Edictum Perpeturum; and it seems, that from the date of this treatise, the name Perpetum was more particularly applied to this edictum than to that which was originally and properly called the Edictum Perpetuum. Julian appears to have collected and arranged the old edicts, and he probably both omitted what had fallen into disuse, and abridged many parts, thus giving to the whole a systematic character. The work of Julian must have had great influence on the study of the law, and on subsequent juristical writings. It does not seem probable, that the edicts of the two Roman praetors, together with the Edictrm Provinciale, and the edicts of the curule aediles, were blended into one in this compilation. If the work of Julian comprehended all these edicts,
they nust have been kept distinct, as the subjectmatter of them was different. We know that the edicts of the curnle aediles were the subject of distinct treatises by Gaius, Ulpian, and Paulus, and the Edictum Provinciale would, from its nature, be of necessity kept separate from all the rest. But some writers are of opinion, that the Edictum Perpetuum of Jnlianus made one hody of law out of the edicta of the praetor urbanus and peregrinus, that there was also incorporated into it much of the Edictumi Proviuciale, and a large part of the Edictum Aedilitium, as an appendage at least. The Edict thus arranged and systematised was, it is further supposed, promulgated in the provinces, and thus became, as far as its provisions extended, a hody of law for the empire. This view of the edictum of Julianus is confirmed by the fact of Italy being divided by Hadrian into the city of Rome with its appurtenant part, and four districts. The magistratus remained as before, but the jurisdiction of the praetor was limited to Rome and its territory ; and magistrates, called consulares, and subsequently, in the time of Aurelius, juridici, were appointed to administer justice in the districts. As the edietal power of the praetor was thus Iimited, the necessity for a comprehensive Edict (such as the Edictum Perpetnum of Julian) is the more apparent.

There were numerous writings on the Edict besides those above enumerated. They were sometimes simply entitled Ad Edictum, according to the citations in the Digest ; and there were also other juristical writings, not so entitled, which followed the order of the Edict, as, for instance, the epitome of Hermogenianus. (Dig. l. tit. 5. s. 2.) Ultimately, the writings on the Edict, and those which followed the arrangenent of the Edict, ohtained more authority than the Edict itself, and hecame the basis of instruction.

Some few fragments of the older edicts are found in the Roman writers, but it is chiefly from the writings of the jurists, as excerpted in the Digest, that we know anything of the Edict in its later form. It seems pretty clear that the order of Justinian's Digest, and more particularly that of his Code, to some extent followed that of the Edjct. The writings on the Edict, as well as the Edict itself, were divided into tituli or rubricae, and these into capita; some special or detached rules were named clansulae ; and some parts were simply named edictum, as Edictum Carbonianum, $\& c$.

The Edicta or Edictales Leges of the emperors are mentioned under Constitutio.

The Digest, as already observed, contains numerons fragments of the Edicts. The most complete collection of the fragments of the Edicts is by Wieling, in his "Fragmenta Edicti Perpetui," Franck. 1733. The latest essay on the subject is by C. G. L. de Weyhe, " Libri Tres Edicti sipc de Origine Fatisque Jurisprudentiae Romanae praesertim Edictorum Praetoris ac de Forma Edicii Perpetui," Cell. 1821. The twenty-first hook of the Digest (tit. l) is on the Aedilitium Edictum. (Zimmern, Geschichte des Röm. Privatrechts; Marezoll, Lehrduch, \&c.; Rein, Das Römische Privatrecht, \&c., Leipzig, 1836 ; Savigay, Geschichte des R. R., dc. vol. i. e. l; Savigny, System, \&c., vol. i. pp. $109,8 \mathrm{cc} ., 116$, \&ce.)
[G. L.]
EDICTUM THEODORICI. This is the first collection of law that was made after the downfal
of the Roman power in Italy. It was promulgatod by Theodoric, king of the Ostrogoths, at Rome, in the year A.D. 500 . It consists of 154 chapters, in which we recognise parts taken from the Code and Novellae of Theodosius, from the Codices Gregorianns and Hermogenianns, and the Sententiao of Paulus. The Edict was, doubtless, drawn up hy Roman writers, but the original sources are more disfigured and altered than in any other compilation. This callection of law was intended to apply both to the Goths (Barbari) and the Romans, so far as its provisions went; but when it made no alteration in the Gothic law, that law was still to be in force for the Barbari; and the Roman law was still to prevail for the Romans in thoss eases to which the Edictum was not applicable. Athalarich, the grandson of Theodoric, or rather Amalasuntha, the mother of Athalarich, who was a minor, completed this Edictum by a new one; but after Narses had again united Italy to the dominion of Justinian, the legislation of Justinian was established in Italy (A. D. 554), and the Edictum of Theodoric had no longer authority. The opinion of modern writers as to the design and object of the Edicturn of Theodoric is by no means uniform. There is an edition of this Edictum by G. F. Rhon, Halle, 1816, 4to. (Savigny, Geschichte des R. R. \&c.; Böcking, Instit. i. 89.)
[G. L.]
EEDNA ( $\epsilon \in \delta \nu \alpha$ ). [Dos.]
EICOSTE ( $\epsilon$ iкoot $\tilde{y}^{\prime}$ ), a tax or duty of one twentieth (five per cent.) upon all commodities exported or imported by sea in the states of the allies subject to Athens. This tax was first imposed B. c. 415 , in the place of the direct tribute which had up to this time been paid by the subject allies; and the change was made with the hope of raising a greater revenue. (Thuc. vii. 28.) This tax, like all others, was farmed, and the farmers of it were called eicostologi (єікобто入б $\boldsymbol{\text { 人 }}$ ). It continued to be collected in B. c. 405 , as Aristophanes mentions an eicostologus in that year (Ran. 348). It was of course terminated by the issue of the Peloponnesian war, but the tribute was afterwards revived on more equitable principles under the name of Syntaais ( $\sigma$ úprásts). (Böckh, Publ. Econ. of Athens, Pp. 325, 401, 2nd ed.)

We also read of an eicoste levied by the sons of Peisistratus. This tax was a twentieth of the produce of the lands in Attica, and was only half of what had been levied by Peisistratus himself, (Thuc. vi. 54.)

EIREN ( $\epsilon\lceil\rho \eta \nu)$ or IREN ( $\varphi \rho \eta \nu$ ), the name given to the Spartan youth when he attained the age of twenty. At the age of eighteen he emerged from childhood, and was called Melleiren ( $\mu \in \lambda$ גeípnv, Plut. Lyc. 17). When he had attained his twentieth year, he began to exercise a direct influence over his juniors, and was entrusted with the command of thoops in battle. The word appears to have orignally signified a commander.
 коעтєs: and єipquá̧єє by кратє̂. The ipéves mentioned in Herodotus (ix. 85) were certainly not youths, but commanders. (Müller, Dorians, vol. ii. p. 315 .)
EISAGO'GEIS ( $\epsilon i \sigma \alpha \gamma \omega \gamma \in \hat{\imath} \mathrm{~s}$ ), at Athens, were not themselves distinct magistrates; but the name was given to the ordinary magistrates when application was made to them for the purpose of
innging a canse ( eiod́reiv) into a proper court. [Diagtetae; Dike.] The cause itself was tried, as is explained under Dime, by dicasts chosen by lot; but all the preliminary proceedings, such as receiving the accusation, drawing up the indictment, introducing the cause into court, \&c., were conducted by the regular magistrate, who attended in his own department to all that was understood in Athenian law by the $\eta \gamma \epsilon \mu$ ovia roû $\delta$ ıcactupiou. Thus we find the strategi, the $\operatorname{logistare,}$ the $\dot{\in} \pi \sigma \sigma \tau \dot{\alpha} \tau a, ~ \tau \hat{\omega} \nu \quad \delta \eta \mu \circ \sigma\{\omega \nu \bar{\epsilon} \rho \gamma \omega \nu$, the
 $\dot{\eta} \gamma \in \mu \mathrm{ov}$ ia ; but it was not the chief business of any of the public magistrates, except of the archons snd perhaps of the eleven. The chief part of the duties of the former, and especially of the thesmothetae, consisted in receiving accusations and bringing causes to trial (eicad $\epsilon \nu$ ) in the proper courts. [Archon.]

EISANGE/LIA ( $\epsilon$ i $\sigma a \gamma \gamma \in \lambda / a$ ), signifies, in its primary and most general sense, a denunciation of any kind (Schömann, De Comitiis, p. 181), but, mnch more usually, an information laid before the council or the assembly of the people, and the consequent impeachment and trial of state criminals at Athens under novel or extraordinary circumstances. Among these were the occasions upon which manifest crimes were alleged to have been committed, and yet of such a nature as the existing laws had failed to anticipate or at least
 of which omission would have been, but for the enactment by which the accusations in question might be preferred ( $\nu \delta \mu o s \in i \sigma a \gamma \gamma \epsilon \lambda \tau \pi \kappa \delta s$ ), that a prosecutor would not have known to what magistrate to apply; that a magistrate, if applied to, conld not with safety have accepted the indictment or brought it into court ; and that, in short, there would have been a total failure of justice. (Harpocrat. s. v.) The process in question was peculiarly adapted to supply these deficiencies; it pointed out, as the authority competent to determine the criminality of the alleged act, the assembly of the people, to which applications for this purpose might be made on the first businessday of each prytany (кvpía éккл $\eta \sigma i \alpha$, Harpocrat.), or the council, which was at all times capable of undertaking such investigations ; and occasionally the accusation was suhmitted to the cognizance of hoth these bodies. After the offence had been declared penal, the forms of the trial and amount of the punishment were prescribed by the same suthority ; and, as upon the conviction of the offenders a precedent would be established for the fature, the whole of the proceedings, although extraordinary, and not originating in any specific lsw, may be considered as virtually establishing a pensl statute, retrospective in its first application. (Lycurg. c. Leocrat. p. 149, ed Steph.)
The speech of Euryptolemus (Xen. Hell. i. 7. sub fin.) clearly shows that the crime charged against the ten generals who fonght at Arginusae was one of these unspecified offences. The decree of the senate against Antiphon and his colleagues (Plut. Vit. Dec. Orator. p. 833, e), directing that they should be tried, and, if found guilty, punished as traitors, seems to warrant the inference, that their delinquency (viz. having undertaken an embassy to Sparta by order of the Four Hundred, a government declared illegal upon the remstatement of the democracy), did not amount
to treason in the usual sense of the term, but roquired a special declaration by the senate to render it cognizable as such by the Heliaea. Another instance of treason by implication, prosecuted as an extraordinary and unspecificd crime, appears in the case of Leocrates, who is, in the speech already cited, accused of having absented himself from his country, and dropped the character of an Athenian citizen at a time when the state was in imminent danger. Offences, however, of this nature were by no means the only ones, nor indeed the most numerous class of those to which extraordinary denunciations were applicable. They might be adopted when the charge embraced a combination of crimes, as that of treasen and impiety in the fanous case of Alcibiades, for each of which a common indictment ( $\gamma \rho a \phi \phi$ ) was admissible, when the accused were persons of great influence in the state, when the imputed crime, though punishable by the ordinary laws, was peculiarly heinous, or when a more speedy trial than was permitted by the usual course of business was requisite to accomplish the ends of justice. (Schömann, De Com. p. 190 ; Harpocrat.) Circumstances such as these would, of course, be very often pretended by an informer to excite the greater odium against the accused, and the adoption of the process in question must have been much more frequent than was absolutely necessary.
The first step taken by the informer was to reduce his denunciation to writing, and submit it immediately to the cognizance of the council, which had a discretionary power to accept or reject it. (Lys. c. Nicom. p. 185.) Schömann maintains that a reference to this body was also necessary when it was intended to bring the matter before the assembly of the people, but that its agency was in such cases limited to permitting the impeachment to be announced for discussion, and directing the proedri to obtain a hearing for the informer. The thesmothetae are also mentioned by Pollux (viii. 87) as taking part in bringing the matter before the assembly, but upon what occasion they were so employed we can only conjecture.

In causes intended for the cognizance of the council only, after the reception of the denunciation, three courses with respect to it might be adopted by that body. If the alleged offence were punishable by a fine of no greater amount than five hundred drachmae, the conncil itself formed a court competent for its trial ; if it was of a graver character they might pass a decree, such as that in the case of Antiphon already mentioned, directing the proper officers to introduce the cause to a He liastic court, and prescribing the time and forms of the trial, and the penalty to be inflicted upon the conviction of the criminals ; lastly, if the matter were highly important, and from donbts or other reasons they required the sanction of the assembly, they might submit the cause as it stood to the consideration of that body. In the first case, the trial was conducted before the council with all the forms of an ordinary court, and if, upon the assessment of penalties, the offence seen:ed to deserve a heavier punishment than fell within its competency, the trial was transferred to a Heliastic court, by the delivery of the sentence of the council ( $\kappa a \tau d \gamma \nu \omega \sigma t s$ ) to the thesmothetae by the scribe of the prytanes, and upon these officeri it then devolved to bring the criminals to justice.
(Dem. c. Timocr. p. 720.) The accused were in the meanwhile put into prison for safe custody by the authority of the council. When tbe offence was obviously beyond the reach of the senate's competency, the trial was dispensed with, and a decree immediately drawn up for submitting the cause to a superior court.

When a cause of this kind was so referred, the decree of the senate, or vote of the people, associated other public advocates, generally ten in number, with the informer, who receited a drachma each from the public treasury ( $\sigma \nu \nu \dot{\eta} \gamma o \rho 00$ ). And besides these, permission was given to any other citizen to woluntecer his serrices on the side of the mosecution. If the information were laid before the asscmbly, either by the acenser himself, or the senate, the first proceedings in the cause bad for their object to estahlish the penalty of the offence, or the apparent culpability of the accused ; and this being decided by a vote of the people after a public disenssion, the mode of conducting the trial and the penalty were next fixed. In the case of the ten generals, the assembly directed that the senate should propose the requisite arrangements. The plan of the senate, however, was not necessarily adopted, but might he combated by rival proposals of any private citizen. The assembly very often referred the matter to the Heliastic courts, but occasionally undertook the trial itself ; and when the prisoner was accnsed of treason, we are told (Xen. l.c.) that be made his defence to the assembly in chains, and with a keeper upon either side ; and, according to another authority (Schol. ad Aristoph. Eccles. 1081), that the time for such defence was limited. After this the tribes voted by ballot, two urns being assigned to each tribe for this purpose. The informer, in the event of the prisoner being acquitted, was subjected to no penalty if he obtained the votes of as many as a fifth of the judges; otherwise, he was liable to a fine of a thousand drachmae. For a more ample discussion of the trials in question the reader is referred to Schömann (De Comitizis, c. iii.).

Besides the class of causes litherto described, there were also two others which equally bore the name of eisangelia, though by no means of the same importance, nor indeed much resembling it in the conduct of the proceedings. The first of these consists of cases of alleged rák $\omega \sigma t s$, i. e. wrong done to aged or helpless parents, women, or orphans. Upon such occasions the informer laid his indictment before the archon, if the aggrieved persons were of a free Attic family ; or before the polemarch, if they were resident aliens. The peculiarities of this kind of canse were, that any Athenian citizen might undertake the accusation ; that the informer was not limited as to time in his address to the court, and incurred no penalty whatever upon failing to obtain a verdict. With respect to the accused it is obvions that the cause must have been $\tau \iota \mu \eta \tau \delta s$, or, in other words, that the court would have the power of fixing the amount of the penalty upon conviction. The third kind of eisangelia was available against one of the public arhitrators ( $\delta \iota a \iota \tau \dot{j} \tau \eta \mathrm{~s}$ ), when any one complained of his having given an unjust verdict against him. The information was in this case laid before the senate; and that the magistrate who had so offended, or did not appear to defend hinself, might be punished by disfranchisement, we know from the instance mentioned by Demos-
thenes (c. Meid. p. 542. 14). This passage, how ever, and an allusion to it in Harpocration, constitutes the whole of our information upon the subject. (Hudtwalcker, über dic Dï̈tet. p. 19; Meier, Att. Process, p. 270.)
[J. S. M.]
 which were offered at Athens by the senate hefore the session began, in honour of the ©eol Bov-入aiot, i. e. Zeus and Athena. (Antiph. De Chor. p. 789 : Böckh, Corp. Inscript. i. p. 671.) The sacrifice was accompanied by libations, and a common meal for all the senators. (Demosth. De Fials. Leg. p. 400. 34 ; compared with c. Mid. p. 552. 2 , where eioivípia are said to be offered

Suidas (s.v.) calls the ciout the first of every year-on which all the Athenian magistrates entered upon their office, and on which the senate offered up sacrifices for the purpose of obtaining the goodwill of the gods for the new magistrates. But this statement, as well as the further remarks be adds, seem to have arisen from a gross misunderstanding of the passage of Demosthenes (De Fuls. Le\%. p. 400), to which he refers, Schömam (De Comit. p. 29], transl.) adopts ths accomnt of Suidas, and rejects the other statement without giving any reason.
[L. S.]
EI'SPHORA ( $\in i \sigma \phi \rho \rho \alpha$ ), literally a contribution or tribute, was an extraordinary tax on property, raised at Athens, whenever the means of the state were not sufficient to carry on a war. The money thus raised was sometımes called $\tau \dot{\alpha} \kappa \alpha \tau \alpha 8 \lambda \nmid \mu a \tau \alpha$, (Demosth. c. Timocr. p. 731.) We must carefully distinguish between this tax and the various liturgies which consisted in personal or direct services which citizens had to perform, whereas ths ciaфopd conasted in paying a certain contribation towards defraying the expenses of a war. Soms ancient writers do not always clearly distinguish between the two, and Ulpian on Demosthenes (Olynth. ii. p. 33, ,.) entirely confounds them ; snd it is partly owing to these inaccuracies that this subject is involved in great difficulties. At the time when armies consisted only of Athenian citizens, who equipped themselves and served without pay, the military service was indeed nothing but a species of extraordinary liturgy; but when mercenaries were bired to perform the duties of the citizens, when wars became more expensive and frequent, the state was obliged to levy contributions on the citizens in order to be able to carry them on, and the citizens then paid money for services which previonsly they had performed in person.

It is not quite certain when this property-tax was introduced ; for, although it is commonly inferred, from a passage in Thucydides (iii. 19), that it was first instituted in 428 в. c. in order to defray the expenses of the siege of Mytilene, yet we find cioфора́ mentioned at an earlier period. (See Antiph. Tetral. i.b. c. 12 ; Isaeus, De Dicaeog. c. 37 ; and Tittmam, Griech. Staatsv. p. 41, note 31); and even the passage of Thucydides admits of an interpretation quite in accordance with this, for it is certainly not impossible that he merely meant to say, that so large in amount as 200 talents had never before been raised as ci $\sigma \phi o p a ́$. But, however this may be, after the year 428 B. c. this pro-perty-tax seems to have frequently been raised, for, a few years afterwards, Aristophanes (Equit. 922) speaks of it as something of common occurrence.

Such a contribution could never be raised withont a decree of the people, who also fixed upon the amount required (Demosth. c. Polycl. p. 1208 ; Aristoph. Eccles. 818) ; the generals superintended its collection, and presided in the courts where disputes connected with, or arising from, the levying of the tax were settled. (Wolf, Proleg. in Leptin. p. 94 ; Demosth. c. Boeot. p. 1002.) Such disputes seem to have occurred rather frequently ; personal enmity not seldom induced the officers to tax persons higher than was lawful, according to the amount of their property. (Aristoph. $l$. c.; Demosth. c. Aphob. p. 815.) The usual expressions for paying this property-tax are : єi $\sigma \phi^{\prime} \rho^{\prime} \in \iota \nu$

 who paid it were called oi $\epsilon i \sigma \phi \epsilon \rho \rho \nu \tau \epsilon s$. On the occasion mentioned by Thucydides, the amount which was raised was, as we have seen, 200 talents, which, if we suppose the taxahle property to have been 20,000 talents, was a tax of one per cent. (Bückh, Pabl. Econ. p. 520, 2d edil.) On other occasions, the rates were higber or lower, according to the wants of the republic at the time; we have accounts of rates of a twelfth, a fiftieth, a hundredth, and a five hundredth part of the taxable proporty.

The census of Solon was during the first period the standard according to which the ci $\sigma \phi o \rho$ ó was raised, until in $377^{\circ} \mathrm{B}$. c., in the archonship of Nausinicus, a new census was instituted, in which the people, for the purpose of fixing the rates of the property-tax, were divided into a number of symmoriae ( $\sigma u \mu \mu o p i a l$ ) or classes, similar to those which were afterwards made for the trierarchy. (Philoch. apud Harpocrat. s.v. Ev $\mu \mu$ opia; Demosth. c. Androt. p. 606 ; Ulpian, ad Demosth. Olynth. ii. p. 33, є.) The nature of this new census, notwithstanding the minute investigation of Böckh (Publ. Econ. book iv), is still involved in great obscurity. Each of the ten phylae, according to Ulpian, appointed 120 of its wealthier citizens, who were divided into two parts, according to their property, called symmoriae, each consisting of sixty persons; and the members of the wealthier of the two symmoriae were obliged, in cases of urgent necessity, to advance to the less wealthy the sum required for the $\epsilon \boldsymbol{i} \boldsymbol{\sigma} \phi$ ара́ ( $\pi \rho о є \iota \sigma \phi о \rho \alpha$, Denosth. $c$. Mid. p. $564,8 c \mathrm{c}$.). When the wants of the state had been thus supplied, those who had advanced the money could at their ease, and in the usual way, exact their money back from those to whom they had advanced it. The whole number of persons included in the symmoriae was 1200 , who were considered as the representatives of the whole republic ; it would, however, as Böckh justly observes, be absurd to suppose with Ulpian that these 1200 alone paid the property-tax, and that all the rest were exempt from it. The whole census of 6000 (Demosth. De Symmor.), or more accurately of 5750 talents (Polyb. ii. 62. § 7), was surely not the property of 1200 citizens, but the taxable property of the whoie republic. Many others, therefore, though their property was smaller than that of the 1200 , must have contributed to the ei $\sigma \phi \circ \rho \alpha$, and their property must be considered as included in the census of 5750 talents of taxable property.

The body of 1200 was, according to Ulpian, also divided into four classes, each consisting of 300. The first class, or the richest, were the
leaders of the symmoriae ( $\bar{\eta} \gamma \in \mu \delta \nu \in s \quad \sigma \nu \mu \mu о \rho(\hat{\omega} \nu)$, and are often called the three hundred $\kappa \alpha \tau^{\prime} \epsilon \xi=\chi \dot{\eta} \nu$. They probably conducted the proceedings of the symmoriae, and they, or, which is more likely, the demarchs, had to value the taxable property. Other officers were appointed to make out the lists of the rates, and were called $\bar{\epsilon} \pi i \gamma \rho a \phi \in i s$, $\delta \iota a \gamma p a \phi \in i \hat{s}$, or $\boldsymbol{e} \kappa \boldsymbol{\pi} \boldsymbol{r} \boldsymbol{\gamma} \boldsymbol{\gamma} \epsilon \mathrm{is}$. When the wants of the state were pressing, the 300 leaders, perhaps in connection with the 300 included in the second class - for Ulpian, in the first portion of his remark, states that the richer symmoria of every phyle had to perform this duty - advanced the money to the others on the above-mentioned terms (Demosth. c. Phaenipp. p. 146), which, however, was never done unless it was decreed by the people. (Demosth. c. Polyd. p. 1209.) The rates of taxation for the four classes have been made out with great probability by Böckh (Publ. Econ. p. 519, 2d edit.), from whose work the following table is taken:-

First Clisss, from twelve talents upwards.

| Property. | Taxable. | axable Capital |  |
| :---: | :---: | :---: | :---: |
| 500 tal. | $\frac{1}{5}$ | 100 tal. |  |
| 100 | $\frac{1}{5}$ | 20 | $1 \%$ |
| 50 | $\frac{1}{5}$ | 10 | 30 m |
| 15 | $\frac{1}{5}$ | 3 | 9 |
| 12 |  | 2 tal. 24 min | 720 dra |

Second Class, from six talents and upwards, but under twalve.

| Property. | Taxable. | Taxable Capital. |  |  |  |  |  | $\begin{array}{c}\text { Property. tax } \\ \text { of }\end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 11 tal.20th part |  |  |  |  |  |  |  |  |$)$.

Third Class, from two talents upwards, but under six.

| Property. | Taxable. | Taxable Ca | $\mathrm{Prog}_{1}$ |
| :---: | :---: | :---: | :---: |
| 5 tal. | \% | $37 \pm \mathrm{min}$. | $187 \frac{1}{2}$ drach |
| 4 | . $\frac{1}{8}$ | 30 | 150 |
| 3 | - $\frac{1}{8}$ | 221 | $112 \frac{1}{2}$ |
| 21 |  | $18 \frac{2}{4}$ | $93{ }^{\frac{2}{4}}$ |
| 9 | . $\frac{1}{8}$. | 15 | 75 |

Fourth Class, from twenty-five mince upwards, but under two talents.
Property. Taxable. Taxable Capital.
Property-tax

Every one had to pay his tax in the phyle where his landed property lay, as appears from the oration of Demosthenes against Polycles; and if any one refused to pay, the state had a right to confiscate his estate, but not to punish the individual with atimia. (Demosth. c. Androt. p. 609, c. Timocrat. p. 752.) But if any one thought that his property was taxed higher than that of another man on whom juster claims conld be made, he had the right to call upon this person to take the office in his stead, or to submit to a complete exchange of property. [Antinosis.] No Athenian, on the other hand, if belonging to the tax-paying classes, could be exempt from the $\epsilon i \sigma \phi o \rho \alpha$, not even the descendants of Harmodius and Aristogiton.
(Demosth. c. Teptin. p. $462,8 \mathrm{cc}$.) Orohans, though exempt from liturgies, were obliged to pay the pro-perty-tax, as we see in the instance of Demosthenes, who was one of the leaders of the sytrmoriae for ten years (c. Mid. p. 565 ; compare Isaeus, ap. Dionys. Isaeus, p. 108 ; or Orat. Graec. vol. vii. p. 331, ed. Reiske). Even trierarchs were not exempt from paying the ei $\sigma$ фopd themselves, although they could not be compelled to pay the $\pi \rho о є$ тбфора́. (Demosth. c. Polycl. p. 1209, c. Phaenipp. p. 1046.) It seems that aliens were likewise subject to it, for the only instance we have of any exception being made is one of aliens. (Marm. Oxon. ii. xxiv. ; Böckh, Pull. Econ. p. 538.)

For further information concerning the subject of the ei $\sigma \phi \frac{\rho}{}$, see the fourth book of Böckh's Public Economy of Athens; Wolf, Prolegomena in Leptin.; Wachsmuth, IIellen. Alterth. vol. ii. p. 98, 2d edit. ; Hermann, Pol. Ant. of Greece, $\$ 162$.
[L. S.]
ELAEOTHE'SIUM. [Balnbae, p. 190.]
ELAPHEBO'LIA (ė $\lambda a \phi \eta \delta \delta \lambda!\alpha$ ), the greatest festival in the town of Hyampolis, in Phocis, which was celebrated in bonour of Artemis, in commemoration, it is said, of a victory which its inhabitants had gained over the Thessalians, who bad ravaged the country and reduced the Phocians in the neighbourbood of the town nearly to the last extremity. (Plut. De Mul. Dirt. p. 267 ; Paus. x. 35. § 4.) The only particular which we know of its celebration is, that a peculiar kind of cake (ĕ $\lambda \alpha \phi o s$ ) was made on the occasion. (Athen. xv. p. 646.) These cakes were, as their name indicates, probably made in the shape of a stag or deer, and offered to the goddess. The festival of the elaphebolia was also celebrated in many other parts of Greece, but no particulars are known.

ELAPHEBO'LiON. [Calennarium.]
 used by the ancient writers in two different senses, either for amber or for a mixture of metals composed of gold and silver. In the former sense, it does not come within the scope of this work, except as a substance used in the arts, and also on account of the difficulty of deciding, with respect to several of the passages in which the word occurs. in which of the two senses it is used. If we could determine which was first known to the Greeks, the mineral or the metal, the subject would be simplified; but the only means we bave of determining this question is the slight internal evidence of a few passages in Homer. If, as we shall endeavour to show, those passages refer to amber, a simple explanation of the twofold use of the word suggests itself; namely, that the word originally meant amber, and that it was afterwards applied to the mixed metal, because its pale yellow colour resembled that of amber. Etymologically, the word is probably connected with $\vec{\eta} \lambda \in$ ék $\omega \omega$, the sun, the root-meaning being brilliant. (Pott, Etym. Forsch. pt. i. p. 237: this derivation was known to Pliny, H. N. xxxvii. 2. s. 11: Buttmann's derivation from é $\lambda \kappa \kappa$, to draw, is objectionable both on philological and historical grounds: the attractive power of amber, when rubbed, is said, and no doubt correctly, to have been discovered long after the mineral was first known.)

The word occurs three times in Homer ; in two cases where mention is made of a necklace of gold, bound, or held together, ŋ̀ $\lambda$ ékт pototv, where the
plural is almost alone sufficient to prove that the meaning is, with amber beads. (Od. xy 460, xviii. 295.) In the former passage the necklace is brought by a Phoenician merchant. The other passage is in the description of the palace of Me nelaus, which is said to be omamented with the brilliancy of copper (or bronze) and gold, and electrum, and silver, and ivory. (Od. iv. 73.) Now, since the metallic electrum was a mixture of gold with a small poition of silver, the enumeration of it, as distinct from gold and silver would seem almost superfluous; also, the supposition that it means amber agrees very well with the subsequent mention of ivory: moreover, the order of the words supports this view; for, applying to them the principle of parallelism, - which is so common in early poets, and among the rest in Homer, - and remembering that the Homeric line is really a distich divided at the caesura, we have gold and amber very aptly contrasted with silver and ivory:

## $\mathrm{X} \rho \cup \sigma o \hat{u} \tau^{3} \grave{\eta} \lambda$ éккрои $\tau \epsilon$ 

In tbis last passage, Pliny understood the wood to mean the metallic electrum ( $H . N$. xxxiii, 4. s. 23) ; but his authority on the meaning of a pasaage of Homer is worthless : and indeed the Latin writers seem generally to have underatood the word in the sense of the metal, rather than of amber, for which they have another word, succinum. In Hesiod's description of the shield of Hercules (v. 141), the word again occurs, and we have gypsum, and white ivory, and electrum, connected with shining gold and cyanas, where amber is the more natural interpretation ; although here again, the Roman imitator, Virgil, evidently understood by it the metal. (Aen. viii. 402.) For the discussion of other passages, in which the meaning is more doubtful, see the Lexicons of Liddell and Scott, and Seiler and Jacobitz, and especially Buttmann's Mythologus, Supp. J. Ueber das Electron, vol. ii. pp. 337, foll.

The earliest passage of any Greek writer, in which the word is certainly used for the metal, is in the Antigone of Sophocles (1038), where mention is made of Indian gold and the electrom of Sardis, as objects of the highest value. There can be little doubt that what is here meant is the pale gold deposited by certain rivers of Asia Minor, especially the Pactolus, which contained a considerable alloy of silver. We have here an example of native electrum; but the compound was also made artificially. Pliny states that when gold contains a fifth part of siliver, it is called electrum; that it is found in veins of gold; and that it is also made by art: if, be adds, it contains more than a fifth of silver, it becomes too brittle to be malleable. Among its properties are, according to the same author, the reflecting the light of a lamp more brightly than silver, and that a cup of native electrum detects the presence of poison by certain signs. One cannot but suspect that the last statement is copied from some Greek writer, who made it respecting amber, on account of the similar property that used to be attributed to opal. (Plin. H. N. xxxiii. 4. s. 23, with Harduin's note; comp. ix. 50. s. 65 ; Paus. v. 12. §6.) Isidorus alsa distinguishes the three kinds of electrum, namely, (1) amber ; (2) the metal, found in its natural state ; (3) the metal artificially composed of three
parts of gold and one of silver, proportions differing from those mentioned by Pliny. (Isid. xvi. 23.)

Electrum was used for plate, and the other similar purposes for which gold and silver were employed. It was also used as a material for money. Lampridius tells us, that Alexander Severus struck coins of it; and coins are in existence, of this metal, struck by the kings of Bosporus, by Syracuse, and by other Greek states. (Eckhel, Doct. Num. Vot. vol. i. pp. xxiv. xxv.)
[P. S.]
E'LEPHAS (ė $\lambda \epsilon ́ \phi a s)$. As we have to spenk of ivory chiefly in connection with Greek art, we place what we have to say of it under its Greek name, in preference to the proper Latin word Ebur. (Elephantus is also used in poetry for ivory ; Virg. Georg. iii, 26, Acn. iii, 464, vi, 896.) In the early writers, such as Homer, Hesiod, and Pindar, the word invariably means ivory, never the elephant; just because the Greeks obtained ivory hy conmerce long before they ever saw, or had occasion to speak of, the animal from which it was obtained. But, on the other hand, there can be no doubt that the word etymologically signifies the animal, being identical with the Hebrew and Arahic, Aleph and Elef, whicb means an ox or other large graminivorous animal ; that is to say, the Greeks received the substance ivory, together with the name of the animal which produces it, and naturally applied the latter to the former. (Respecting the name see further Liddell and Scott's Lexicon, and Pott's Etym. Forsch. pt. i. p. Ixxxi.) Herodotus, as might be expected from his researches in Asia and Africa, knew that ivory came from the teeth of the elephant. (iv. 191 ; Plin. H. N. viii. 3. s. 4) ; while on the other hand writers as late ss Jubs (Plin. l.c.) and Pausanias (v. 12. s.1.) fell into the mistake of regarding the tusks as horns.
The ealliest mention of ivory in a Greek writer is in a passage of the Iliad (v. 583), where

 luxury is so often referred to, that it is needless to enumerate the passages, which prove how extensively the Phoenician traders had introduced it into the Greek cities of Asia Minor, and no doubt also into Greece Proper. It appears among the ornaments of houses, furniture, vessels, armour, harness, and so forth. Neither is there any occasion to trace its continued use among the Greeks and Romans, down to the luxurious and expensive period of the empire, when the supply furnished by increased commerce was greatly enlarged by the prodigious quantity of elephants, which were provided for the slaughters of the amphitheatre. It was used, not only as an ornament for, hut as the entire material of chairs, beds, footstools, and other furniture, statues, flutes, and the frames of lyres, hesides many other objects.
The most important application of ivory was to works of art, and especially to those statues which, heing composed of gold and ivory, were called chryselephautine ( $\chi$ рипє $\lambda \epsilon ф \dot{\alpha} \nu \tau \tau \nu \alpha$ ).
The art of chryselephantine statuary must be regarded as a distinct subdivision, different from casting in bronze, and sculpturing in marble, and indeed more nearly connected with carving in wood, as is even indicated by the application of the name $\xi$ Gava to the master works in this art (Strab.
viii. p. 372). While the sculptor wrought at once upon a material, which had been comparatively neglected in the early stages of art, on account of the difficulty of working it, while the statuary reproduced in a more durable substance those forms which had heen first moulded in a plastic material, another class of artists developed the capabilities of the other original brauch of sculpture, carving in wood, which, on account of its facility, had been the most extensively practised in early times, especially for the statues of the gods. (Comp. Statuarla, and Dict. of Biog. art. Daedulus.) The rude wooden images were not only improved in form, but elalorately decorated, at first with colours and real drapery, and afterwards with more costly materials. The first great step in their improvement was to make the parts which were not covered by drapery, namely the face, hands, and feet, of white marble; such statues were called acroliths. The next was to substituto plates of ivory for the marble ; and the further improvement, the use of beaten gold in place of real drapery, constituted the chrysclephantine statues. This art was one of those which have attained to their perfection almost as soon as they bave received their first development. There were some works of this description before the time of Pheidias*; but the art, properly regarded, was at once created and perfected by him ; and the reason for its immediate perfection was, that the artist was prepared for his work, not only by his genius, but also by a perfect knowledge of the artistic laws, and the technical processes, of all the other departments of his art.

Chryselephantine statuary, as practised by Pheidias, combined, in addition to that perfection of form which characterised all the great works of the age, the elements of colossal grandeur, exquisite beauty and delicacy of material, and the most rich and elaborate subsidiary decorations. The general effect of his Zeus or Athena was that of the most imposing grandeur and the most perfect illusion to which art can attain. In a bronze or marble statue the material at once dispels the illusion of reality; but the impression produced upon a spectator by the soft tints of the ivory, the coloured eyes and the golden robe of the Olympian Zeus, to say nothing of the expression of the features and the figure, was almost that of looking upon the praesens numen. These statues were the highest efforts ever made, und probably that ever can be made, to invest a religion of idolatry with an external appearance of reality ; and for the sake of this immediate effect the artist was willing to forego the lasting fame which be would have obtained if he had executed his greatest works in a more durable material.
The most celebrated chryselephantine statues in Greece and the Greek states were those of Athena in the Acropolis of Athens, of Zeus at Olympia, of Asclepius at Epidaurns, all three by Pheidias; the Hera near Argos by Polycleitus (whose works in this department are esteemed by some the most heautiful in existence, though others considered them far inferior to those of Pheidias: comp. Strab. viii. p. 372 ; Quintil. xii. 10) ; the Olympian Zeus,

[^27]ELEPHAS.
set up at Daphne by Antiochus IV., in imitation of that of Pheidias; certain statues, in the temple of Zcus Olympius at Athens, which are praised, but not specified, by Pausanias: and even some of the Greek kings of the conquered states of Assia arrogated to themselves this highest honour that the piety of earlier times could pay to the gods; for Pausanias saw, in the temple of Zeus at Olympia, an ivory statue of king Nicomedes (v. 12. §5). The chief of the above works are fully described in the Dictionary of Biography, arts. Pheidias, Polycleitus.
The question respecting the mechanical execution of chryselephantine statues involves certain difficulties, which have been wery elahorately and ingenionsly examined by Quatremère de Quincy, in his splendid work entitled "Le Jupiter Olympien, ou, l'Art de la Sculpture Antique, considéré sous un nonveau point de vue:" \&c. Paris, 1815, folio. A very slight consideration of the material employed will show the nature of the difficulties. From a log of wood or a block of marble the required figure can be elaborated by cutting away certain portions: clay can be moulded, and bronze or plaster east, in the form previously determined on : but the material for an ivory statue is presented in pieces which must be made to assume an entirely new form before the work can be commenced. Now De Quincy supposes that the ancients possessed the art, now lost, of cutting the curved parts of the elephant's tusk into thin plates, varying in breadth op to 12 or even 20 inches, and bending them into the exact curves required by the varions parts of the figure to be covered. These plates, having been brought to their proper forms by comparison with a model, on which each of them was marked, were placed upon the core of the statue, which was of wood, strengthened with metal rods, and were fastened to it and to each other chiefly by isinglass ; and of course the whole surface was polished. (An excellent account of the process, according to De Quincy's views, is given in the work entitled Menageries, vol. ii. c. 13.) The ivgry was used for the flesh parts, that is, in the colossal statues of the deities, the face, neck, breast, arms, hands, and feet. The other parts of the wooden core were covered with thin beaten gold, to represent the hair and drapery, which was affixed to the statue in such a manner as to be taken off at pleasure, as, nltimately, it was. The gold was in many places embossed and chased; and colours were freely employed. The eyes were formed either of precious stones or of coloured marbles. To preserve the ivory from injury, either from too much or too little moisture, oil was poured over it in the first case, water in the second. (Comp. Dict. of Biog. art. Pheidias, and Müller, Arch. d. Kunst, § 312.) The prodigious quantities of ivory required for these works were imported, in the time of Pheidias, chiefly from Africa. (Hermipp. ap. Ath. i. p. 27.)

The other uses of ivory in the arts were chiefly the making of statuettes and other small objects, which conld be carved at once out of the solid part of the tusk; and for such purposes it seems to have been employed from a very carly period. Thus on the chest of Cypselus there were ivory figures in relief (Paus. v. 17. §2). Various small works in ivory have come down to us, belonging to all periods of the art, among the most interest-

## ELEUSINIA.

ing of which are writing tablets ( $\delta$ é $\lambda$ тot, libri elephantini), with two, three, five, or more leaves (diptycha, triptycha, pentaptycha, \&c.), either entirely of ivory, or with the leaves of parchment and the covers of ivory: the covers are carved in relief. These tablets are chiefly of the later oges of Rome, and are divided into two classes, Consularia and Ecclesiastica, which are distinguished by the carpings on their covers; those on the former heing figures of consuls at the pompa Circensis, missiones, and so forth, those on the latter representing hiblical subjects (Muiller, l. c. n. 3). The teeth of the hippopotamus were sometimes used as a substitute for ivory in works of art. (Paus. viii. 46. § 2.)
[P. S.]
ELEUSI'NIA ('EnєU ${ }^{\prime}(\nu i a)$, a festival and mysteries, originally celchrated only at Eleusis in Attica, in honour of Demeter and Persephone. (Andoc. De Myst. 15.) All the ancients who have occasion to mention the Eleusinian mysteries, or the mysteries, as they were sometimes called, agree that they were the holiest and most venerahle of all that were celebrated in Greece. (Aristot. Rhet, ii. 24 ; Cic. De Nat. Deor. i. 42.) Various traditions were current among the Greeks respecting the author of these mysteries ; for, while some corisidered Eumolpus or Musaeus to be their founder, others stated that they had been introduced from Egypt by Erechtheus, who at a time of scarcity provided his country with corn from Egypt, and imported from the same quarter the sacred rites and mysteries of Eleusis. A third tradition attributed the institution to Demeter herself, who, when waudering about in search of her daughter, Persephone, was believed to have come to Attica, in the reign of Erechtheus, to have supplied its inhabitants with corn, and to have instituted the $\tau \in \lambda \epsilon \tau a l$ and mysteries at Eleusis. (Diod. Sic. i. 29 ; Isocrat. Panegyr. p. 46, ed. Steph.) This last opinion seems to have been the most common among the ancients, and in subsequent times a stone, called
 the well Callichoros at Eleusis, on which the goddess, overwhelmed with grief and fatigue, was believed to have rested on her arrival in Attica. (Apollod. Biblioll. i. 5 ; Ovid. Fast. iv. 502, \&c.) Around the well Callichoros, the Eleusinian women were said to have first perfermed their chorus, and to have sung hymns to the goddess. (Paus. i. 38. §6.) All the accounts and allusions in ancient writers seem to warrant the conclusion that the legends concerning the introduction of the Elellsinia are descriptions of a period when the inhahitants of Attica were becoming acquainted with the benefits of agriculture, and of a regularly constituted form of society. (Cic. De Leg. ii. 14, in Verr. v. 14.)

In the reign of Erechtheus a war is said to have broken out between the Athenians and Eleusinians (Hermann, Polit. Antiq. of Greece, § 91. note 9), and when the latter were defeated, they acknowledged the supremacy of Athens in every thing except the $\tau \in \lambda \epsilon \tau \alpha l$, which they wished to conduct and regulate for themselves. (Thucyd. ii. 15; Paus. i. 38. § 3.) Thus the superintendence remained with the descendants of Emmolpus [Evmolpidas], the daughters of the Eleusiniau king Celeus, and a third class of priests, the Keryces, who seem likewise to have been connected with the family of Eunolpus, though they themselves traced their arigin to Hermes and Aglauros.

ELEUSIN1A.
ELEUSINIA.
453

At the time when the local goveruments of the reveral townships of Attica were concentrated at Athens, the capital became also the centre of religion, and several deities who had hitherto only enjoyed a local worship, were now raised to the rank of national gods. This seems also to have heen the case with the Eleusinian goddess, for in the reign of Thesens we find mention of a temple at Athens, called Eleusinion (Thucyd. ii. 17), probably the new and national sanctuary of Demeter. Her priests and pricstesses now becume naturally attached to the national temple of the capital, though her original place of worship at Eleusis, with which so many sacred associations were connected, still retained its importance and its special share in the celebration of the national solemnities; and though, as we shall sce hereafter, the great Eleusinian festival was commenced at Athens, yet a numerous procession always went, on a certain day, to Eleusis: it was here that the most solemn part of the sacred rites was performed.

We must distinguish between the greater Eleusisia which were celebrated at Athens and Eleusis, and the lesser which were held at Agrae on the Ilissses. (Steph. Byz. s.v. ${ }^{*}$ A $\gamma \rho \alpha$.) From the tradition respecting the institution of the lesser Eleusinia, it seems to be clear, that the initiation into the Eleusinian mysteries was originally confined to Atticass only ; for it is said that Heracles, before descending into the lower world, wished to be initiated, but as the law did not admit strangers, the lesser Eleusinia were instituted in order to evade the law, and not to disappoint the great besefactor of Attica. (Schol. cd Aristophl. Plut. 846.) Other legends concerning the initiation of Heracles do not meation the lesser Eleusinia, but merely state that he was adopted into the family of one Pylius, ill order to beconce lawfully intitled to the initiation. But both traditions in reality express the same thing, if wo suppose that the initiation of Heracles was only the first stage in the real initiation; for the lesser Eleusinia were in reality orly a preparation ( $\pi \rho о к \alpha ́ \theta \alpha \rho \sigma \iota s$, or $\pi \rho о \alpha ́ \gamma \nu \epsilon u \sigma \iota s$ ) for the real mystexies. (Schol. ad Aristoph. l. c.) After the time when the lesser Elensinia are said to have been instituted, we no longer hear of the exclusion of any one from the mysteries, except barbarians ; and Herodotus (viii. 65) expressly states, that any Greek who wished it, might be initiated. The lesser Eleusinia were held every year in the month of Anthesterion (Plut. Demetr. 26), and, according to some accounts, in honour of Persephone alone. Those who were initiated in them bore the name of mystae ( $\mu \dot{v} \sigma \tau a t$, Suidas, s. v. $\left.{ }^{\text {'ETÁt }} \boldsymbol{\prime} \eta \mathrm{S}\right)$, and had to wait at least another year hefore they could be admitted to the great mysteries. The principal rites of this first stage of initiation consisted in the sacrifice of a sow, which the mystre seem to lave first washed in the Cantharus (Aristoph. Acharn. 703, with the Schol. 720, and Pax, 368 ; Varro, De Re Rust. ii. 4 ; Plut. Phoc. 28 , and in the purification by a priest, who bore the name of Hydranos. (Hesych. s. v. 'ropavós; Polyacn. v. 17.) The mystae had also to take an oath of secrecy, which was administered to them by the mystagogus, also called iepoфduptns or $\pi \rho \circ \phi$ йт $\eta s$ : they received some kind of preparatory instruction, which enabled them afterwards to understand the mysterics which were revealed to them in the great Eleusinia; they were not admitted into the sauctuary of Demeter, but
remained during the solemnities in the vestibule. (Seneca, Qucest. Nat. vii. 31.)

The great mysteries were celebrated every year in the month of Boedromion during nine days, from the 15th to the 23d (Plut. Demetr. 26; Meursius, Eleusin. c. 21), both at Athens and Eleusis. The initiated were called $\dot{\epsilon} \pi \dot{\sigma} \pi \tau \alpha$ or épupo. (Suidas, s.v.) On the first day, those who had been initiated in the lesser Eleusinia, assembled at Athens, whence its name was ảrupuós (Hesych. s.v.); but strangers who wished to witness the celebration of these national solemnities likewise visited Athens in great numbers at this scason, and we find it expressly stated that Athons was crowded with visitors on the occasion. (Maxim. Tyr. Dissert. 33. sub fin., ; Philostrat. Vit. Apoll. iv. 6.) On the second day the mystae went in solemn procession to the seacoast, where they underwent a purification. Hence the day was called "A入a $\delta \in \mu \dot{\partial} \sigma \tau a L$, probably the conventional phrase by which the mystae were invited to assemble for the purpose. (Hesych. s. $v$.; Polyaen. iii. 11.) Suidas (s. e. 'Peitol': compare Paus. i. 38. § 2.) mentions two rivulets, called $\dot{p}$ eital, as the place to which the mystae went in order to be purified. Of the third day scarcely anything is known with certainty ; we only learn from Clemens of Alexandria (Protropt. p. 18, ed. Potter) that it was a day of fasting, and that in the evening a fragal meal was taken, which consisted of cakes madc of sesame and honey. Whether sacrifices were offered on this day, as Meursius sapposes, is uncertain ; but that which he assigns to it consisted of two kinds of sea-fish ( $\tau \rho i \gamma \lambda \eta$ and $\mu a v i$ is, Athen. vii. p. 325), and of cakes of barley grown in the Rharian plain. (Paus. i. 38. §6.) It may be, however, that this sacrifice belonged to the fourth day, on which also tho
 was a procession with a basket containing pomegranates and poppy-sceds ; it was carried on a wagron drawn by oxen, and women followed with small mystic cases in their hands. (Callim. Hymn. in Cer.; Virg. Georg. i. 166 ; Mcursius, l. c. c. 25.) On the fifth day, which appears to have been called the torch day ( $\dot{\eta} \tau \hat{\omega} \nu \lambda a \mu \pi \dot{\alpha} \delta \omega \nu \dot{\eta} \mu \epsilon \dot{f} \rho a$ ), the mystae, led by the $\delta$ a $\delta 0 \hat{\imath} \chi o s$, went in the evening with torches to the temple of Demeter at Eleusis, where they seem to have remained during the following night. This rite was probably a symbolical representation of Demeter wandering about in search of Persephone. The sixth day, called Iakchos (Hesycl. s. v. "IatXoy), was the most solemn of all. The statue of Takchos, son of Demeter, adorned with a garland of myrtle and bearing a torch in his hand, was carried along the sacred road (Plut. Aleib. 34; Etymol. Magn., and Suidas, s. v. 'Iepà 'Oסós) amidst joyous shouts (iarx\{tev) and songs, from the Cerameicus to Eleusis. (Aristoph. Ran. 315, \&c. ; Plut. Phocion, 28, and Valcken. ad Herod. viii. 65.) This solemn procession was accompanied by great numbers of followers and spectators, and the story related by Herodotus is founded on the supposition that 30,000 persons walking along the sacred road on this occasion was nothing uncommon. During the night from the sixth to the seventh day the mystae remained at Eleusis, and were initiated into the last mysteries (Ėлortéa). Those who were neither émónta nor $\mu$ úctat were sent away by a herald. The
mystae now repeated the oath of secresy which had been admimistered to them at the lesser Eleusinia, underwent a new purification, and then they were led by the mystagogus in the darkness of night into the lighted interior of the sanctuary ( $\phi \omega \tau \alpha \gamma \omega \gamma^{i}(a)$, and were allowed to see (aivo廿ía) what none except the epoptae ever beheld. The awful and horrible manner in which the initiation is described by later, espccially Christian writers, seems partly to proceed from their ignorance of its real character, partly from their horror and aversion to these pagan rites. The more ancient writers always abstained from entering upon any description of the subject. Each individual, after his initiation, is said to have been dismissed by the words $\kappa \delta \delta \gamma \xi, \not \approx \mu \pi a \xi$ (Hesycb. s. v.), in order to make room for other mystae.

On the seventh day the initiated returned to Athens amid various kinds of raillery and jests, especially at the bridge over the Cephisus, where they sat down to rest, and poured forth their ridicule on those who passed by. Hence the words $\gamma \in \phi \nu \rho i \zeta \epsilon \iota \nu$ and $\gamma \epsilon ф \cup \rho \iota \sigma \mu$ ós (Strabo, ix. p. 395; Suidas, s.v. Г $\epsilon \phi u \rho i(\zeta \omega \nu$ : Hesych. s. v. Гєфирı $\sigma \tau \alpha i$ : Aelian, Hist. Animal. iv. 43 ; Müller, Hist. of the Lit. of Groces, p. 132). These $\sigma \kappa \alpha{ }_{\mu} \mu \mu \pi \alpha$ seem, like the procession with torches to Eleusis, to have been dramatical and symbolical representations of the jests by which, according to the ancient legend, Iambe or Baubo had dispelled the grief of the goddess and made her smile. We may here observe, that probably the whole bistory of Demeter and Persephone was in some way or other symbolically represented at the Eleusinia. Hence Clemens of Alexandria (Protrept. p. 12, ed. Potter) calls the Eleusinian mysteries a "mystical drama." (See Minller, Hist. of the Lit. of Grecec, p. 287, \&c.) The eighth day, called 'E $\pi i \delta \alpha \dot{\prime} p i a$, was a kind of additional day for those who by some accident had come too late, or had been prevented from being iuitiated on the sixth day. It was said to have been added to the original number of days, when Asclepins, coming over from Epidaurus to be initiated, arrived too late, and the Athenians, not to disappoint the god, added an eighth day. (Philostr. Vit. Apoll. iv. 6; Paus. ii. 26. § 7.) The ninth and last day bore the name of $\pi \lambda \eta \mu 0 \chi \alpha^{\delta} \boldsymbol{a}$ (Pollux, x. 74 ; Athen. xi. p. 496), from a peculiar kind of vessel called $\pi \lambda \eta \mu 0 \chi o f \eta$, which is described as a small kind of $\kappa$ ótu入os. Two of these vessels were on this day filled with water or wine, and the contents of the one thrown to the east, and those of the other to the west, while those who performed this rite uttered some mystical words.

Besides the various rites and ceremonies described above, several others are mentioned, but it is not known to whick day they belonged. Among them we shall mention only the Eleusinian games and contests, which Meursius assigns to the seventh day. They are mentioned by Gellius (xv. 20), and are said to have been the most ancient in Greece. The prize of the victors consisted in ears of barley. (Schol. ad Pind. Ol. ix. 150.) It was considered as one of the greatest profanations of the Eleusinia, if during their celebration an áriuos came as a suppliant to the temple (the Eleusinion), and placed his olive branch (iket ${ }^{\prime} i^{\alpha}$ ) in it (Andoc. De MIyst. p. 54) ; and whoever did so might be put to death without any trial, or had to pay a fine of one thousand drachmae. It may also be remarked that at other festivals, as well as the Elensinia, nr man,
while celebrating the festival, could be seized or arrested for any offence. (Demosth. c. Mid. p. 571.) Lycurgus made it a law that any woman using a carriage in the procession to Eleusis should be fined one thousand drachmae. (Plut. De Cup. Div. ix, p. 348 ; Aelian, V. H. xiii. 24.) The custom against which this law was directed seems to have been very common before. (Demosth. c. Mid. p. 565.)

The Eleusinian mysteries long survived the independence of Greece. Attempts to suppress them were made by the emperor Valentinian, but he met with strong opposition, and they seem to have coutinued down to the time of the elder Theodosius. Respecting the secret doctrines which were revealed in them to the initiated, nothing certain is known. The general belief of the ancients was that they opened to man a comforting prospect of a future state. (Pind. Thrcn. p. 8. ed. Böckh.) But this feature does not seem to have been originally conncted with these mysteries, and was probably added to them at the period which followed the opening of a regular intercourse between Greece and Egypt, when some of the speculative doctrines of the latter country, and of the East, may have been introduced into the mysteries, and hallowed by the names of the venerable bards of the mythical age. This supposition would also account, in some measure, for the legend of their introduction from Egypt. In modern times many attempts have been made to discover the nature of the mysterien revealed to the initiated, but the results have heen as various and as fanciful as might be expected, The most sober and probable view is that, ac. cording to which, "they were the remains of a worship which preceded the rise of the Hellenic mythology aud its attendant rites, grounded on a view of nature, less fanciful, more earnest, and better fitted to awaken both philosophical thought and religious feeling." (Thirlwall, Hist. of Greece ii. p. $140, \& c$.) Respecting the Attic Eleusinis see Meursius, Eleusinia, Lugd. Bat. 1619 ; St Croix, Recherches Hist. et Critiq. sur les Mystère. du Paganisme (a second edition was published it 1817, by Sylvestre de Sacy, in 2 vols. Paris) Ouwaroff, Essai sur les Mystères d'Eleusis, 3d edi tion, Paris, 1816; Wachsmuth, Hell. Alter. val. ii p. 575, \&c. 2d edit. p. 249, \&c.; Creuzer, Symbol u. Mythol. iv. p. 534, \&c.; Nitzsch, De Eleusin Rationc, Kiel, 1842.

Eleusinia were also celebrated in other parts of Greece. At Ephesus they had been introduced from Athens. (Strabo, xiv. p. 633.) In Laconia they were, as far as we know, only celebrated by the inhabitants of the aucient town of Helos, who on certain days, carried a wooden statue of Persephoue to the Eleusinion, in the heights of Tay* getus. (Paus. iii. 20. § 5, \&c.) Crete had likewise its Eleusinia. (See Meurs. Eleus, c. 33.) [L. S.]

ELEU'SHIER1A (è $\lambda \in v \theta$ épla), the feast of liberty, a festival which the Greeks, after the battle of Platacae (479, в. c.), instituted in honour of Zens Elcutherios (the deliverer). It was intended not merely to be a token of their gratitude to the god to whom they believed themselves to be indebted for their victory over the barbariams, hut also as a hond of union among themselves; for, in an assenibly of all the Greeks, Aristides carried a
 all the Greek states should assemble every year at Plataeae for the celebration of the Eleutheria. The
town itself was at the same time declared sucred and inviolable，as long as ita citizens offered the an－ sual sacrifices which were thea instituted on behalf af Greece．Every fifth ycar these solemaities were celebrated with contests（ $\dot{\alpha} \gamma \omega \dot{\nu} \nu \tau \hat{\omega} \nu{ }^{3} E \lambda \in v \theta \in \rho(\omega \nu)$ in which the victors were rewarded with chaplets
 The annual solemnity at Plataeae，which con－ tinued to be observed down to the time of Plutareh （Aristid．19，21；Paus．ix．2．§ 4），was as follows：－ Oa the sixteenth of the month of Maimacterion，a procession，led by a trumpeter，who blew the signal for battle，marched at daybreak through the middle of the town．It was followed by waggons loaded with myrtle houghs and chaplets，by a black bull， and by free youtha who carried the vesaels con－ taining the libations for the dead．No slave was permitted to minister on this occasion．At the end of this procession followed the archon of Plataeae， who was not allowed at any other time，during his office，to touch a weapon，or to wear any other hut white garments，now wearing a purple tunic，and with a sword in his hand，and also bearing an urn， kept for this solemnity in the public archive（rpau－ $\mu a \phi u \lambda \alpha \kappa t o \nu)$ ．When the procession came to the place where the Greeks，who had fallen at Pla－ taeae，were buried，the archon first washed and anointed the tombstoaes，and then led the bull to a pyre and sacrificed it，praying to Zews and Her－ mes Chthonios，and inviting the brave men who had fallen in the defence of their country，to take part in the banquet prepared for them．This ac－ count of Plutarch（Aristid． 19 and 21）agrees with that of Thucydides（iii．58）．The latter，however， expressly states that dresses formed a part of the offeriags，which were probahly consumed on the pyre with the victim．This part of the ceremony seems to have no longer existed in the days of Plu．－ tarch，who does not mention it，and if so，the Pla－ taeans had probably been compelled by poverty to drop it．（See Thirlwall＇s Hist．of Greece，ii．p．353， \＆c．；Böckh，Expl．Pind．p．208，and ad Corp． Inscript．i．p．904．）

Eleutheria was also the name of a festival cele－ brated in Samos，in honour of Eros．（Athen，xiii． p． 562. ）

ELLY＇CHNIUM［LUCERNA．］
EMANCIPA＇TIO was an act by which the patria potestas was dissolved in the lifetime of the parent，and it was so called because it was in the form of a sale（mancipatio）．By the Twelve Tables it was necessary that a son should be sold three times in order to be released from the paternal power，or to be suijuris．In the case of daughters and grandchildren，one sale was sufficient．The father transferred the son by the form of a sale to
another person who mannmitted him，upon which he returned into the power of the father．This was repeated，and with the like result．After a third sale，the paternal power was extinguished， but the son was resold to the parent，who then manumitted him，and so acquired the rights of a patron over his emancipated son，which would otherwise have belonged to the purchaser who gave him his final manumission．

The following view of emancipatio is given by a German writer ：－＂The patria potestas could not be dissolved immodiately by manumissio，because the patria potestas must be viewed as an imperium， and not as a right of property like the power of a master over his slave．Now it was a fundamental priaciple that the patria potestas was extinguished by exercising once or thrice（as the case might be） the right which the pater fanmilias possessed of sell－ ing or rather pledging his child．Conformally to this fundamental priaciple，the release of a child from the patria potestas was clothed with the form of a mancipatio，effected once or three times．T＇he patria potestas was indeed thus dissolved，though the child was not yet free，but came into the con－ dition of a nexns．Consequently a manumissio was necessarily connected with the mancipatio，in order that the proper object of the emancipatio might be attained．This manumissio must take place once or thrice，according to circumstances．In the case when the manumissio was not followed by a return into the patria potestas，the manumissio was at－ tended with important consequences to the mana－ missor，which consequences ought to apply to the emancipating party．Accordingly，it was necessary to provide that the decisive manumission should be made by the emancipating party ；and for that reason a remancipatio，which preceded the final mannmissio，was a part of the form of emancipatio．＂ （Untcrholzner，Zeitschrift，vol．ii．p．139；Von den forneen der Manumissio per Vindictan und der Emancipatio．）

The legal effect of emancipation was to make the emancipated person become sui juris ：and all the previonsly existing relations of agnatio between the parent＇s familia and the emancipated child ceased at once．Buta relation analogous to that of pation and freedman was formed hetween the per－ son who gave the final emancipation and the child， so that if the child died without children or legal beirs，or if he required a tutor or curator，the rights which would have belonged to the father，if he had not emancipated the child，were secured to him as a kind of patronal right，in case he had taken the precautioa to secure to himself the final manumis－ sion of the child．Accordingly，the father would always stipulate for a remancipatio from the pur－ chaser：this stipulation was the pactom fiduciae．

The emancipated child could not take any part of his parent＇s property as heres，in case the paront died intestate．This rigor of the civil law（juris inipnitates，Gaius，iii．25）was modified by the praetor＇s edict，which placed emancipated childrea， and those who were in the parent＇s power at the time of his death，on the same footing as to suc－ ceeding to the intestate parent＇s property．

The emperor Anastasius introduced the practice of effecting emancipation hy an imperial rescript， when the parties were not present．（Cod．8．tit． 49 ． s．5．）Justinian cnacted that emancipation conld be effected before a magistrate．But he still al－ lowed，what was prohably the old law，a father to
emancipate a grandson, without emancipating the son, and to emancipate the son without emancipating the grandson, or to emancipate them all. Justimian also (Nov. 89. c. 11) did not allow a parent to emancipate a child against his will, though it seems that this might be done by the old law, and that the parent might so destroy all the son's rights of agnation. But a man might emancipate an adopted child against the will of the child (Inst. l. tit. 11. s. 3). As a general rule the father could not be compelled to emancipate a child; but there were some cases in which he might be compelled.

The emperor Anastasiug allowed an emancipated child (under certain restrictions) to succeed to the property of an intestate brother or sister, which the praetor had not allowed; and Justinian put an emancipated child in all respects on the same footing as one not eurancipated, with respect to such succession.

An emancipatio effected a capitis diminutio minima, in consequence of the servile character (servilis causa) into which the child was brought by such act. (Gaius, i. 132, \&c.; Dig. l. tit. 7; Cod. 6. tit. 57. s. 15; 8. tit. 49; Inst. l. tit. 12; 3. tit. 5; Dirksen, Uebersicht, \&c. p. 278 ; Thibaut, System, $\& \mathrm{c}$., $\S 783$, \&c., 9 th ed.)
[G. L.]
EMANSOR. [Desertor.]
EMBAS ( $\epsilon \mu 6 \alpha \alpha^{\prime}$ ), a shoe worn by men (Suidas, s. v.), frequently mentioned by Aristophanes (Equit. 321, 869, 872, Ecc. 314, 850) and other Greek writers. This appears to have been the most common kind of shoe worn at Athens ( $\epsilon \mathrm{v}$ $\tau \in \lambda \grave{\epsilon} s \tilde{v}_{\pi} \delta \delta \eta \mu \alpha$, Pollux. vii. 85 ; compare Isaeus, de Dicacog. Hered. 94). Pollux (l. c.) says that it was invented by the Thracians, and that it was like the low cothumns. The embas was also worn by the Boeotians (Herod. i. 195), and probably in other parts of Greece. (Becker, Charikles, vol. ii. p. 372.)

EMBATEIA ( $e^{\mu} \mu$ हateía). In Attic law this word (like the corresponding English one, entry), was used to denote a formal taking possession of real property. Thus, when a son entered upon the land left him by his father, he was said $\dot{\epsilon} \mu \epsilon \alpha \tau \in \dot{\in} \in I \nu$, or $\beta a \delta i \xi \in \iota \nu \in i s \tau \alpha ̀ \pi a \tau \rho \hat{\varphi} \alpha$, and thercupon he became seised, or possessed of his inheritance. If any one disturbed him in the enjoyment of this property, with an intention to dispute the title, he might maintain an action of ejectment, eそoú $\lambda \eta s$ б $\delta \kappa \eta$. Before entry he could not maintain such action. ' $E$ govi $\lambda \eta$ is from e $\epsilon \xi \in \lambda$ $\lambda \epsilon \iota v$, an old word signifying to eject. The supposed ejectment, for which the action was brought, was a mere formality. The defendant, after the plaintiff's entry, came and turned him off, $\epsilon \xi \eta \neq \in \nu$ $\dot{\epsilon} \kappa \tau \hat{\eta} s \gamma \hat{\eta} s$. This proceeding (called $\mathfrak{\epsilon} \xi \alpha \gamma \omega \gamma \dot{\eta}$ ) took place quietly, and in the presence of witnesses ; the defendant then became a wrong-doer, and the plaintiff was in a condition to try the sight.

All this was a relict of ancient times, when before writs and pleadings and other regular processes were invented, parties adopted a ruder method and took the law into their own hands. There was then an actual ouster, accompanied often with vioIence and breach of the peace, for which the person in the wreng was not only responsible to the party injured, but was also punishable as a poblic offender: Alterwards, in the course of civilization, violent remedies became useless and were discontinued ; yet the ceremony of ejecting was still kept
up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words "ex jure te manum consertum voco," to go with him to the land in dispute, and (in the presence of the praetor and others) turn him out by force. Afterwards this was changed into the symbolical act of breaking a clod of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased. We may observe also, that the English action of ejectment in this respect resembles the Athenian, that, although an entry by the plaintiff and an ouster of him by the defendant are supposed to have taken place, and are considered necessary to support the action, yet both entry and ouster are mere fictions of law.

These proceedings by entry, ouster, \&c., took place also at Athens in case of resistance to an execution; when the defendant, refusing to give up the land or the chattel adjudged, or to pay the damages awarded to the plaintiff, by the appointed time, and thus being $\dot{v} \pi \in \rho \eta \mu \in \rho o s$, i.e. the time having expired by which he was bound to satisfy the judgment, the plaintiff proceeded to satisfy himself by seizure of the defendant's lands. This he certainly might do, if there were no goods to levy upon; though, whether it was lawful in all cases, does not appear. The Athenian laws had made no provision for putting the party, who succeeded, in possession of his rights; he was therefore obliged to levy execution himself, without the aid of a ministerial officer, or any other person If, in doing so, he encomntered opposition, he had
 the subject-matter was land) must have been grounded upon his own previous entry. The action conld be brought against any one who impeded him in his endeavour to get possession, as well as against the party to the former suit. The canse of Demosthenes against Onetor was this:- DemoBthenes having recovered a judgment against Aphobus, proceeded to take his lands in execution. Onetor claimed them as mortgagee, and turucd him out ( $\xi^{\xi} \xi \bar{\eta} \gamma \in V$ ), whereupon Demosthenes, contending that the mortgage was collusive and fraudulent, brought the $\in \xi 0 \dot{\prime} \lambda \eta s$ 任 $\kappa \eta$, which is called $\delta i \kappa \eta \pi \rho \delta s$ ' $\mathbf{O} \nu \eta$ ntopa, because the proceeding is in rem, and collateral to another object, rather than a direct controversy between the parties in the cause. The consequence to the defendant, if he failed in the action of ejectment, was, that (besides his liability to the plaintiff) he was, as a public offender. condemned to pay to the treasury a sum equal to the damages, or to the value of the property recovered in the first action. While this remained unpaid (and we may presume it could not be paid without also satisfying the party), he became, as a state debtor, sulject to the disabilities of àripla, (Meier, Att. Proc. pp. 372, 460, 748.) [C.R.K.]

E'MBATES. [Monulus.]
EMBLE'MA ( $\left.{ }^{\epsilon} \mu \epsilon \lambda \eta \mu \alpha, \stackrel{\rightrightarrows}{\epsilon} \mu \pi \alpha / \sigma \mu \alpha\right)$, an inlaid ornament. The art of inlaying ( $\bar{\eta} \tau \epsilon \in \chi \nu \eta$ द́ $\mu \pi \alpha a \sigma_{-}$ $\tau \iota \kappa \eta$, Ath. xi. p. 488) was employed in producing benutiful works of two descriptions, viz.:-lst, Those which resembled our marquetry, buhl, and Florentine mosaics; and 2dly, those in which crusts (crustuc), exquisitely wrought in relief and of precious metals, such as gold, silver, and amber. were fastened upon the surface of vessels or other
pieces of furniture. Works of both classes, when in metal, come under the head of Carlatura.

To productions of the former class we may refer all attempts to adorn the walls and floors of houses with the figures of flowers and animals, or with any other devices expressed upon a common ground by the insertion of variously coloured woods or narbles, all of which were polished so as to be bronght to a plain surface. To snich mosaics Lucilius alludes (ap. Cic. de Orat. iii. 43), when he compares the well-connected words of a skilful orator to the small pieces (tesseruloue) which compose the "emblema vermiculatim" of an ornamental pavement. In the time of Pliny these decorations for the walls of apartments had become very fashionable. (H. N. xxxv. 1.) Respecting emblemata in metal work, see Cablatura and Chrisbndeta. It may here be added that Athenaeus, in describing two Corinthian vases (v. p. 199), distinguishes between the emblems in bas-relief ( $\pi \rho \delta \sigma \tau \nu \pi \alpha$ ) which adorned the body and neck of each vessel, and the figures in high
 placed upon its brim. An artist, whose business it was to make works ornamented with emblems, was called erustarius. (Plin. H. N. xxxiii, 12. s. 55 ; Cic. Verr. iv. 23 ; Martial. viii. 51 ; Juv. i. 76, v. 38 ; Dig. 24. tit. 2. s. 23. § 1 ; Heyne, Antiq. Aufs. vol. i. p. 147.)
[J. Y.]
 or artificial, by which an outlet is formed to carry off any stagnant body of water. (Plin. II. N. xxxiii. 4. s. 21 ; Cic. ad Pom. xvi. 18.) Such channels may be either open or underground ; but the most remarkable works of the kind are of the latter description, as they carry off the waters of lakes surrounded by hills. In Greece, the most remarkahle example is presented by the subtcrraneous channels which carry off the waters of the lake Copais into the Cephisns, which were partly natural and partly artificial. (Strab. ix. p. 406 ; Thiersch, E'tat actuel de la Grèce, vol. ii. p. 23 ; Müller, Orchomenos, pp. 49, \&c., 2nd ed.)

Another specimen of such works among the Greeks at an early period is presented by the subterraneous channels constructed by Phaenx at Agrigentum in Sicily, to drain the city, about b.c. 480 ; which were admired for their magnitude, although the workmanship was very rude. (Diod. Sic. xi. 25.)

Some works of this kind are among the most remarkable efforts of Roman ingennity. Remains still exist to show that the lakes Trasimene, Alhano, Nemi, and Fucino, were all drained by means of emisscria, the last of which is still nearly perfect, and open to inspection, having been partially cleared by the present king of Naples. Julins Caesar is said to have first conceived the idea of this stupendous undertaking (Suet. Jul. 44), which was carried into effect by the Emperor Claudius. (Tacit. Ann. xii. 57.)

The following account of the works, from observations on the spot, will give some idea of their extent and difficulties. The circumference of the lake, including the bays and promontories, is about thirty miles in extent. The length of the emissary, which lies nearly in a durect line from the lake to the river Liris (Garigliano), is something more than three miles. The number of worknen employed was 30,000 , and the time occupied in the work eleven years. (Suet. Cloud. 20; compare

Plin. H. N. xxxvi. 15. s. 24. § 11.) For more than a mile the tunnel is carried under a mountain, of which the highest part is 1000 feet above the level of the lake, and through a stratum of rocky formation (carnclian) so hard that every inch required to be worked by the chisel. The remaining portion runs through a softer soil, not much below the level of the earth, and is vanlted with brick. Perpendicular openings (putti) are sunk at various distances into the tunnel, through which the excavations were partly discharged ; and a number of lateral shafts (cuniculi), some of which separate themselves into two branches, one above the other, are likewise directed into it, the lowest at an elevation of five feet from the bottom. Through these the materials excavated were also carried out. Their object was to enable the prodigious multitude of 30,000 men to carry on ther:

operations at the same time, without incommoding one another. The immediate month of the tunnel is some distance from the present margin of the lake, which space is occupied by two ample rescrvoirs, intended to break the ussh of water before it entered the emissary, connected by a narrow pas. sage, in which were placed the sluices (epistomia). The mouth of the tunnel itself consists of a splendid archway of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resernbling in construction the works of the Claudian nquednct. That through which the waters discharged themselves into the Liris was more simple, and is represented in the preceding woodcut. The river lies in a ravine between the arch and foreground, at a depth of 60 feet below, and consequently cannot be seen in the cut. The small aperture above the embonchure is one of the cmiculi above mentioned. It appears that the actual drainage was relinquished soon after the death of Claudius, either from the perversity of Nero, as the

## EMPHYTEUSIS.

words of Pliny (l. c.) seem to imply, or by neglect ; for it was reopened by Hadrian. (Spart. Hadr. 22.) For further information see Hirt, who gives a series of plans and sections of the works connected with the Lacus Fucinus (Geläude d. Griech. u. Röm. pp. 371-375, Pl. XXXI. figs. 14 -21).

E/MBOLUM. [Navis.]
EME'RITI. [ExERcITUs.]
EMME'NI DIKAE ( ${ }^{\ell} \mu \mu \eta \nu 0 \iota \delta \ell \kappa a \iota$ ), suits in the Athenian courts, which were not allowed to be pending above a month. This regulation was not introduced till after the date of Xcnophon's treatise on the revenue, in which it was proposed that a more rapid progress should be allowed to commercial suits (Xen. dc Vectig. 3), and it appears to have been first established in the time of Philip. (Or. de Halon. p. 79. 23.) It was confined to those subjects which required a speedy decision; and of these the most important were disputes respecting commerce (é $\mu$ торькаl סіка!, Pollux, viii. 63, 101 ; Harpocrat. and Suid. s. v. ${ }^{\nu} E \mu \mu \eta \nu 0 \iota \Delta i к a l$ ), which were heard during the six winter months from Boëdromion to Munychion, so that the merchants might quickly obtain their rights and sail away (Dem. c. Apat. p. 900. 3) ; by which we are not to understand, as some have done, that a suit could be protracted through this whole time, but it was necessary that it should be decided within a month. (Böckh, Publ. Econ. of Athens, p. 50, 2nd ed.)

All canses relating to mines ( $\mu \in \tau a \lambda \lambda$ нкаl סiкаи)
 17) ; the object, as Böckh remarks (On the Silver Mines of Laurion, Publ. Econ. of Athens, p. 667) being no doubt that the mine proprietor might not be detained too long from his business. The same was the case with causes relating to erpayou (Pollux, viii. 101; Harpocrat. and Suid. l. c.) [Erani] ; and Pollux (l.c.) includes in the list, suits respecting dowry, which are omitted by Harpocration and Suidas.

EMPHRU'RI ( $\epsilon \mu \phi \rho o v \rho o r$ ), from $\phi \rho o u \rho \alpha$, , the name given to the Spartan citizens during the period in which they were liable to military service. (Xen. Rep. Lac. v. 7.) This period lasted to the fortieth year from manhood ( ${ }^{\prime} \phi^{\prime}{ }^{\prime} \eta^{\prime}(\eta)$ ), that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities. (Isacr. Busir. p. 235, where $\mu$ á $\nless \mu$ as, according to Müller, Dor. iii. 12. § 1 , is evidently put for $\epsilon \nLeftarrow ф \rho o v p o s$.

EMPHYTEUSIS ( $\epsilon\langle\phi u ́ \tau \epsilon v \sigma \iota s$, literally an " in-planting ") is a perpetual right in a piece of land that is the property of another: the right consists in the legal power to cultivate it, and treat it as our own, on condition of cultivating it properly, and paying a fixed sum (canon, pensio, reditus) to the owner (dominus) at fixed times. The right is founded on contract between the owner (dominus emphyteuseos) and the lessee (emphyteuta), and the land is called ager vectigalis or emphyteuticarius. It was long douhted whether this was a contract of buying and selling, or of letting and hiring, till the emperor Zeno gave it a definite character, and the distinctive name of contractus emphyteuticarius.

The Ager Vectigalis is first distinctly mentioned about the time of Hadrian, and the term is applied to lands which were leased by the Roman state, by towns, by ecclesiastical corpatations, and by the

Vestal virgins. In the Digest mention only is made of lands of towns so let, with a distinction of them into agri vectigales and non vectigales, according as the lease was perpetual or not ; but in either case the lessee had a real action (utilis in rem actio) for the protection of his rights, even against the owner.

The term Emphyteusis first occurs in the Digest. The Pruedia Emphytentica are also frequently mentioned in the Theodosian and Justinian Codes, but they are distinguished from the agri vectigales. Justinian, however, put the emphyteusis and the ager vectigalis on the same footing; and in the case of an emphyteusis (whether the lessor was a community or an individual), the law was declared to be the same as in the case of leases of town property. This emphytensis was not ownership; it was a jus in re only, and the lessee is constantly distinguished from the owner (dominus). Yet the occupier of the ager vectigalis and the emphyteuta had a juristical possessio; a kind of inconsistency, which is explained by Savigny, by showing that the ager vectigalis was formed on the analogy of the ager publicus, and though there were many differences between them, there was nothing inconsistent in the notion of possession, as applied to the public land, heing transferxed to the ager vectigalis as a modified form of the ager publicus.
Though the emphytenta had not the ownership of the land, he had an almost unlimited right to the enjoyment of it, unless there were special agreements limiting his right. The fruits belonged to him as soon as they were separated from the soil. (Dig. 22. tit. 1. s. 25. § 1.) He could sell his interest in the land, after giving notice to the owner, who had the power of choosing whether ho would buy the land at the price which the purchaser was willing to give. But the lessee could not sell his interest to a person who was unable to maintain the property in good condition. The lessee was bound to pay all the public charges and burdens which might fall on the land, to improvs the property, or at least not to deteriorate it, and to pay the rent regularly. In case of the lessee's interest being transferred to another, a fiftieth part of the price, or of the value of the property, when the nature of the transfer did not require a price to be fixed, was payable to the owner on the admission of the new emphyteuta, and which, as a general rule, was payable by him. Under these limitations the dominns was bound to admit the new emphyteuta (in possessionem suscipere.) If the dominus refused to admit him, the seller, after certain formalities, could transfer all his right without the consent of the dominus. The heredes of the emphyteuta were not liable to such payment. The emphyteuta could dispose of his right hy testament: in case of intestacy it devolved on his heredes.
The origin of the emphyteusis, as already stated, was by contract with the owner and by tradition; or the owner might make an emphyteusis by his last will. It might also in certain cases be founded on prescription.
The right of the cmphyteuta might cease in several ways; by surrender to the dominus, or by dying without heirs, in which case the emphyteusis reverted to the owner. He might also lose his right by injuring the property, by non-payment of his rent or the public burdens to which the land was liable, by alienation without notice to the dominus, \&c. In such cases the dominus could
take legal measures for recovering the possession. (Dig. 6. tit. 3, and 39. tit. 4 ; Cod. 4. tit. 66 ; Inst. 3. tit. 24 (25) ; Mühlenbruch, Doctrina Pandectarum ; Savigny, Des Recht des Besitzes, p. 99, \&c. p. 180; Mackeldey, Lehrbuch, \&c. § 295, \&c. § 384, 12th ed.)
[G. L.]
 sale trade in commodities carried by sea. The name is sometimes applied to a sea-port town, hut it properly signifies only a particular place in such a town. Thus Amphitryo says (Plaut. Amph. iv. 1. 4) that he looked for a person.
"Apud emporium, atque in macello, in palaestra atque in foro,
In medicinis, in tonstrinis, apud omnis aedis sacras."
(Compare Liv. xxxv. 10, xli. 27.) The word is derived from $\check{\mu} \mu \pi 0 \rho o s$, which signifies in Homer a person who sails as a passenger in a ship belonging to another person (Od.ii. 319, xxiv. 300) ; but in later writers it signifies the merchant who carries on commerce with foreign countries, and differs from кám $\eta \lambda o s$, the retail dealer, who purchases his goods from the ${ }^{\mu} \mu \pi o \rho o s$ and retails them in the market-place. (Plat. De Rep. ї. p. 371.)

At Athens, it is said (Leex. Seg. p. 208) that there were two kinds of emporin, one for foreigners and the other for natives ( $\xi \in \nu \omega \kappa \dot{\delta} \nu$ and $\mathfrak{d} \sigma \tau \iota \kappa \dot{\delta} \nu$ ); but this appears doubtful. (Böckh, Publ. Econ. of Athens, p. 313, 2nd ed.) The emporium at Athens was under the inspection of certain officers, who were elected annually (è $\pi \mu \mu \in \lambda \eta \tau a l$ tồ $\dot{\epsilon} \mu \pi o \rho i o v)$. [Epimbletae, No. 3.]

EMPTI ET VE'NDITI A'CTIO. The seller has an actio venditi, and the buyer has an actio empti, upon the contract of sale and purchase. Both of them are actiones directae, and their object is to obtain the fulfilment of the obligations resulting from the contract. (Dig. 19. tit. 1.) [G. L.]
E/MPTIO ET VENDI'TIO. The contract of buying and selling is one of tbose which the Romans called ex consensu, because nothing more was requited than the consent of the parties to the contract. (Gaius, iii. 135, \&c.) It consists in the buyer agreeing to give a certain sum of money to the seller, and the seller agreeing to give to the buyer some certain thing for his money; and the contract is complete as soon as both parties have agreed about the thing that is to be sold and about the price. No writing is required, unless it be part of the contract that it shall not be complete till it is reduced to writing. (Dig. 44. tit. 7. 8. 2; lnst. 3. tit. 23.) After the agreement is made, the buyer is bound to pay his money, even if the thing which is the object of purchase should be accidentsilly destroyed hefore it is delivered; and the seller must deliver the thing with all its intermediate increase. The purchaser does not obtain the ownership of the thing till it has been dolivered to him, and till he has paid the purchase money, unless the thing is sold on credit. (Dig. 19. tit. 1. s. $11, \& \%$.) If he does not pay the purchase money at the time when it is due, he must pay interest on it. The scller must also warrant a good title to the purchase [Eviotio], and he must also warrant that the thing has no concealed defects, and that it has all the good qualities which he (the seller) attribntes to it. It was with a riew to check frauds in sales, and especially in the sales of slaves, that the sellcr was obliged by the edict of the curule aodiles
[Emictum] to inform the buyer of the defects of any slave offered for sale: "Qui mancipia vendunt, certiores faciant emptores quod morbi vitique," \&c. (Dig. 21. tit. 1.) In reference to this part of the law, in addition to the usual action arising from the contract, the buyer had against the seller, according to the circumstances, an actio ex stipulatu, redhibitoria, and quanti minoris. Horace, in his Satires (ii. 3. 286), and in the beginning of the second epistle of the second hook, alludes to the precautions to be taken by the buyer and seller of a slave.

ENCAUSTICA. [Pictura, No. 7.]
ENCLE'MA ( $\left.{ }^{\prime} \gamma \kappa \lambda \eta \mu a\right)$. [Dike.]
ENCTE'SIS ( $\epsilon \gamma \kappa \tau \eta \sigma t s)$, the right of possessing landed property and houses ( $\mathrm{z} \gamma \kappa \tau \eta \sigma \iota s$ भ̂̀s кal oikias) in a foreign country, which was frequently granted by one Greek state to another, or to separate individuals of another state. (Dem. Do Cor. p. 265. 7 ; Böckh, Corp. Inscript. vol i. p. 725.) ${ }^{5} \mathrm{E} \gamma \kappa \tau\{\mu a \tau \alpha$ were such possessions in a foreign country, and are opposed by Demosthenes (De Halon. p. 87. 7) to кт $\ddagger \mu a \tau \alpha$, possessions in one's own country. (Valcken. ad Herod. v. 23.) The term è $\gamma \kappa \tau \bar{\eta} \mu a \tau a$ was also applied to the landed property or bouses which an Athenian possessed in a different $\delta \bar{\eta} \mu$ os from that to whicb he belonged by birth, and with respect to such property he was called єं $\gamma \kappa \epsilon \kappa \tau \eta \mu$ épos: whence we find Demosthenes (c. Polycl. p. 1208. 27) speaking of of
 holding property in a $\delta \bar{\eta} \mu$ os to which he did not helong, he had to pay such $\delta \eta_{\eta} \mu$ os a tax, which is mentioned in inscriptions under the name of e $\gamma \gamma$ ктทтєкӧ. (Böckh, Publ. Econ. of Athcns, p. 297, 2nd ed.)
ENDEIXIS (ë $\nu \delta \varepsilon \epsilon(\xi)(s)$, properly denotes a prosecution instituted against such persons as were alleged to have exercised rights or held offices whils labouring under a peculiar disqualification. Among these are to be reckoned state debtors, who during their liability sate in eourt as dicasts, or took any other part in public life ; exiles, who had returned clandestinely to Athens; those that visited holy places after a conviction for impiety (à $\sigma$ é $6 \in a$ ); and all such as having incurred a partial disfranchise-
 their forbidden functions as hefore their condemnation. Besides these, however, the same form of action was available against the chairman of the proedri (èntavá $\tau \eta$ ), who wrongly refused to take the votes of the people in the assembly (Plat. Apol. p. 32) ; against malefactors, especially murderers (which Schömann thinks was probably the course pursned when the time for an apagoge had been suffered to elapse) ; traitors, ambassadors accused of malversation (Isocrat. c Callim. 11); and persons who furnished supplies to the enemy during war. (Aristoph. Equit. 278 ; Andoc. De Reditu, 82.) The first step taken by the prosecutor was to lay his information in writing, also called endcixis, before the proper magistrate, who might be the archon or king archon, or one of the thesmothetae, according to the subject-matter of the information; but in the case of a malefactor (какоîpyos) being the accused person, the Eleven werc the officers applied to. It then hecame the duty of the magistrate to arrest, or hold to hail, the person crininated, and take the usual steps for hringing him to trial. There is great obscurity as to the result of condernation in a prosecution of

## ENGYE.

this kiud. Heraldus (Animadv. in Salm. iv. 9. $\S 10$ ) ridicules the idea that it was invariably a capital punishment. The accuser, if unsuccessful, was responsible for bringing a roalicious charge
 Com. p. 175, Att. Proc. p. 239, \&c.)

The endeixis, apagoge ( $\alpha^{2} \pi \alpha \gamma \omega \gamma \hat{\eta}$ ) and ephegesis ( $\bar{\epsilon} \phi \dot{\eta} \gamma \eta \sigma t s$ ) must be carefully distinguished. Pollux says (viii. 49) that the endeixis was adopted when the accused was absent; the apagoge when he was present; and we know that the apagoge was a summary process, in which the defendant was allowed to apprehend a culprit caught in ipso fucto and lead him before a magistrate. In case the charge was ill-founded, the complainant ran the risk of forfeiting 1000 drachmae. If be did not like to expose himself to this risk, he might have recourse to the ephegesis (é $\phi \dot{\prime} \gamma \eta \sigma \tau s$ ), in which he made an application to the proper magistrate, as, for instance, to one of the Eleven, if it were a case of burglary or robbery attended with murder, and conducted him and his officers to the spot where the capture was to be effected. (Comp. Dem. c. Audrot. p. 601.)

The cases in which the apayoge and ephegesis were most generally allowed, were those of theft, murder, ill-usage of parents, \&c. The punishment in these cases was generally fixed by law; and if the accused confessed, or was proved guilty, the magistrate could execute the sentence at once, without appealing to any of the jury-courts; otherwise, it was necessary that the case should be referred to a higher tribunal. (Aesch. c. Timarch. c. 37 ; Dem. De Fals. Legat. p. 431.) The magistrates who presided over the apagoge were generally the Eleven (oí Є゙ $\nu \delta \in \kappa \alpha$, Dem. c. Timocr. p. 736 ; Lysias, c. Agorat. c. 85); sometimes the chief archon (Aesch. c. Timarch. c. 64), or the thesmothetae (Dem. c. Aristocr. p. 630). The most important passage with regard to the apagoge (Lysias, e. Agorat. $\S 85,86$ ) is unfortunately corrupt ind unintclligible. (See Sluiter, Lect. Andocid. p. 354, \&c.) The complainant was said $\dot{\alpha} \pi \alpha \dot{\alpha} \epsilon \epsilon \nu \tau \dot{\eta} \nu \dot{\lambda} \pi \alpha a \gamma \omega \gamma \eta \nu$ : the magistrates, when they allowed it, $\pi а р \in \delta \in ́ \chi о \nu \tau 0$ т $\grave{\eta} \nu$ à $\pi a \gamma \omega \gamma \dot{\eta} \nu$.
[J. S. M.]
$\mathrm{E}^{\prime}$ NDROMIS ( $\epsilon \nu \delta \rho o \mu i s$ ), a thick coarse blanket, manufactured in Gaul, and called "endromis" hecause those who had been exercising in the stadium ( $\epsilon \nu \delta \rho \delta \mu \omega)$ threw it over them to obviate the effects of sudden exposure when they were heated. Notwithstanding its coarse and shaggy appearance, it was worn on other occasions as a protection from the cold by rich and fashionable persons at Rome. (Juv. iii. 103 ; Mart. iv. 19, xiv. 126.) Ladies also put on an eudromis of a finer description (endromidas Tyrias, Juv. vi. 246), when they partook, as they sometimes did, of the exercises of the paliestra. Moreover, boots [Cothurnus] were called $\epsilon^{\epsilon} \nu \delta \rho o \mu i \delta i \in s$ on account of the use of them in rumning. (Callim. IIymn. in Diun. 16, in Delum, 238 ; Pollux, iii. 155 , vii. 93 ; Brunck, Anal. iii. 206.)
[J. Y.]
ENECHYRA ( $\epsilon \searrow \nu^{\prime} \chi \chi p a$ ). In private suits at Athens, whether tried by a court of law, or before an arbitrator, whenever judgment was given against a defendant, a certain period was at the same time fixed ( $\hat{\eta} \pi \rho o \theta_{\epsilon} \sigma \mu(\alpha)$, hefore the expiration of which it was incmment upon him to comply with the verdict. In default of doing so he becane $v \pi \in \rho \eta \mu \in \rho o s$, or over the day, as it was called, and the plaintiff was privileged to seize upon ( $\dot{d} \psi \alpha \sigma \theta a l$ ) his goods
and chattels as a security or compensation for noncompliance. (Dem. c. Meid. p. 540. 21 ; Ulpian, ad loc. ; Aristoph. Nubes, 35.) The property thus taken was called $\epsilon^{\top} \nu \epsilon ́ \chi u \rho a$, and slaves were generally seized before anything else. (Athen. xiii. p. 612, c.) This "taking in execution " was usually left to the party who gained the suit, and who, if he met with resistance in making a seizure, had his remedy in a ठíc $\eta$ égovin $\bar{\prime}$ : if with personal violence, in a $\delta i k \eta$ aikias. (Dem. c. Everg. p. 1153.) On one occasion, indeed, we read of a public officer ( $\hat{v} \pi \eta \rho \epsilon ́ \tau \eta s$, $\pi a \rho \alpha \alpha^{\tau} \tau \hat{\jmath} s$ ả $\rho \chi \hat{\eta} s$ ) heing taken to assist in, or perhaps to be a witness of, a seizure ; but this was in a case where public interests were concerned, and consequent upon a decision of the Boungr. (Id. e. Everg. 1I49.) The same oration gives an amusing account of what Englishmen would consider a case of "assault and trespass," committed by some plaintiffs in a defendant's house, thongh the amount of damages which had been given ( $\stackrel{\eta}{\eta} \kappa a \tau \alpha \delta i \kappa \eta$ ) was, accordiug
 and there awaiting their receipt.

It seems probable, thongh we are not aware of it being expressly so stated, that goods thus seized were publicly sold, and that the party from whom they were taken could sue his opponent, perhaps by a סik $\quad \beta \lambda \alpha{ }^{\prime} \leqslant \eta s$, for any surplus which might remain after all legal demands were satisfied. No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenaea, \&e. They were, in fact, dies non in Athenian law. (Dem. c. Mcid. p. 518; IIudtwalcker, Diat. p. 132.)
[R. W.]
ENGYE ( ${ }^{2} \gamma \gamma \nu \dot{\eta} \eta$ ), hail or suretics, were in very frequent requisition, both in the private and public affairs of the Athemians. Private agreements, as, for instance, to ahide by the decision of arbitrators (Dem. c. Aputur. pp. 892-899), or that the evidence resulting from the application of torture to a slave should be conclusive (Dem. c. Pantucn. p. 978. 11), were corroborated by the parties reciprocally giving each other such sureties; and the same took place generally in all money lending or mercantile transactions, and was invariably necessary when persons undertook to farm tolls, taxes, or otber public property.

In judicial matters hail or sureties were provided upon two occasions; first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial ; and secondly, when security was demanded for the satisfaction of the award of the court. In the first case, bail was very gunerally required when the accused was other than an Atherian citizen, whether the action were public or private; but if of that privileged class, npon no other occasion, except when proceeded against ly way of Apagoge, Endeixis, Ephegesis, or Eisangelia. Upon the last-mentioned form being idopted in a case of high treason bail was not acecpted. The technical word for requiring bail of an accused person is $\kappa \alpha \tau \epsilon \gamma \gamma u a \hat{a}$, that for becoming surety in such case $\hat{\epsilon}_{\xi} \epsilon \gamma \gamma v \hat{a} \sigma \theta$ ent. Surety of the other kind was demanded at the beginning of a suit upon two occasions only; first, when a citiz'n asserted the freedom of a person detained in slavery by another ; and secondly, when a litigant, who liad suffercil judyment to go by default before the arbitrator ( $\delta$ aLiv $\eta \tau i t$ ), had recommenced his action within the given time ( $\mu \eta{ }_{\eta} 0 \hat{\sigma} \sigma \alpha \delta i k \eta$ ). After the judgrent, security of this kind was re-
quired in all mercantile and some other private causes ; and state debtors, who had been sentenced to remain in prison till they had acquitted themselves of their liabilities, were, by a law of Timocrates (Dem. c. Timocr. pp. 712-716), allowed to go at large if they could provide three sureties that the money should be paid within a limited period. If the principal in a contract made default the surety was bound to make it good, or if he refused to do so, might be attacked by an e $\gamma \gamma^{i} \eta \boldsymbol{\eta} s$ iikn, if such action were brought within a twelvemonth after the ohligation was undertaken. (Dem. $c$. Apatur. pp. 901,910.) If, however, a person accused in a public action by one of the forms above mentioned failed to appear to take his trial, his bail became liahle to any punishment that such person had incurred by contempt of court ; and, consistently with this, it appears, from a passage in Xenophon (Hell. i. 7. § 39), that the law allowed the hail to secure the person of the accused by private confinement. (Meier, Att. Proo. p. 515.) [J. S. M.]

E'NNATA (évpara). [FuNus.]
ENOIK1OU DIKE (èvouiou סiky), action brought (like our trespass for mesne profits after a successful action of ejectment) to recover the rents withheld from the owner during the period of his heing kept out of possession. If the property recovered were not a house, but land (in the more confined sense of the word), the action for the rents and profits was called $\kappa$ apтoì $\bar{\delta} i \kappa \eta$. It seems from the language of the grammarians, that these actions could he brought to try the title to the estate, as well as for the ahove-mentioned purpose. Perhaps both the tenement and the intermediate profits might he recovered by one suit, but the proceeding would he more hazardous, because a failure in one part of the demand would involve the loss of the whole cause. Thus, the title of a party to the land itself might have expired, as for instance where he held under a lease for a term; yet he would be entitled to recover certain bygone profits from one who had dispossessed him. Therefore it is not improbahle that the $\delta i \kappa \alpha, \epsilon \nu$. and кар. might in practice be confined to those cases where the rents and profits only were the subject of claim. We are told that, if the defendant, after a judgment in one of these actions, still refused to givo satisfaction, an ouvrias $\delta i \kappa \eta$ might be commenced against him, of which the effect was, that the plaintiff obtained a right to indemnify himself out of the whole property of the defendant. Schömann observes, that this was a circuitous proceeding, when the plaintiff might take immediate steps to execution by means of entry and ejectment. His conjecture, however, that the ovoias $\delta / i m$ was in ancient times an important advantage, when real property could not in the first instance be taken in execution, is prohably not far from the truth, and is supported by analogy to the laws of other nations, which, being (in the infancy of civilization) framed by the landowners only, bear marks of a watchful jealousy of any encroachment upon their rights. He remarks also, tbat the giving to the party the choice between a milder and a more stringent remedy, accords witb the general tenor and spirit of the Athenian laws. We may add, that our own law furnishes an illnstration of this, viz., where the plaintiff has obtained a judgment, he has the option of proceeding at once to execution, or bringing an action on the judgment;
though with us the latter mensure is considered the more vexntious, as it increases the costs, and is rendered less necessary by the facility with which
 $\delta i \kappa \eta$, as it was tbe ultimate and most efficacious remedy, drew with it also more penal consequences, as is explained under Embateia. [Meier, Att. Proc. p. 749.)
[C.R. K.]
ENOMO'TIA (è $\omega \omega \mu \boldsymbol{T}$ ia). [ExERCITUs.]
ENSIS. [Gladrus.]
E'NTASIS ( $\left.{ }^{( } \mu \nu \tau a \sigma t s\right)$. The most ancient columns now existing are remarkable for the extreme diminution of the shaft hetween its lower and upper extremity, the sides of which, like those of a cone, converge immediately and regularly from the base to the neck, so that the cdge forms a straight linea mode of construction which is wanting in grace and apparent solidity. To correct this, a swelling outline, called entasis (Vitruv, iii. 2, iv, 3), was given to the shaft, which seems to have been the first step towards combining grace and grandeur in the Doric column.

The original form is represented by the figure on the Ieft in the annexed woodeut, which is taken from the great temple at Posidonia (Paestum), which is one of the most ancient temples now re. maining ; that on the right shows the entasis, and is from a building of rather later construction in the same city. Two other examples of the same style are still to be seen in Italy, one belonging to an ancient temple at Alha Fucinensis (Piranesi, Magnif. de' Rom. tav. 31. fig. 6), and the other at Rome, on the sepulchrc of C. Publicius. (Ib. fig. 7.)

In the example at Paestum the greatest devia. tion which the curved edge of the column makes from the straight line of the cone of which the pillar may be considered as a part, is at ahout the middle of the height, but it still kceps within the line of a perpendicular drawn from the circumference of the hase ; or, in other words, the column is thickest at the base: hoth these properties are clearly shown by the dotted lines in the woodeut. (Comp. Stieglitz, Archäol. d. Baukunst, vol. i. p. 161.)
[A. R.]

## EO'RA [AEORA.]

EPANGE'LIA (é $\pi a \gamma \gamma \in \lambda(\alpha)$. If a eitizen of Athens had incurred $\dot{\alpha} \tau i \mu i \alpha$, the privilege of taking part or speaking in the public assembly was forfeited [Atimia]. But as it sometimes might happen that a person, though not formally declared ácipos, had committed such crimes as would, on accusation, draw upon him this punishment, it was of course desirable that such individuals, like real aftipot, should be excluded from the exercise of the rights of citizens. Whenever, therefore, such a person veatured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself (Aeschin. c. Timurch. p. 104), and demand of him to establish his right to speak by a trial or examination of his conduct ( $\delta$ кк $\mu$ acta тoù $\beta$ íou), and this demand, denouncement, or
 $\mu \alpha \sigma_{i}^{\prime} a s$. The impeached individual was thea compelled to desist from speaking, and to submit to a scrutiny into his eonduct (Pollux, viii. 43 ; Suidas, s. v. $\quad \dot{\pi} \pi \alpha \gamma \in \lambda i \alpha$ ), and if he was convicted, a formal declaration of àrı $\mu l \boldsymbol{l}$ followed.

Some writers have confounded the $z^{2} \pi \alpha \gamma \gamma \in \lambda i \alpha$ with $\delta$ oкıuacia, and considered the two words as synonyms ; but from the statements made above, it is evident that the $\delta$ on $\mu \alpha \sigma$ ia is the actual trial, while the $\bar{e} \pi \alpha \gamma \gamma \in \lambda i \alpha$ is only the threat to subject a man to the $\delta$ oкimaбia: hence the expression
 p. 232. note 8. transl.) Other writers, such as Harpoaration and Suidas, do not sufficiently distinguish
 accusation against persons who, though they had been declared ăt $\iota \mu 0$, nevertheless ventured to assume the rights of eitizens in the public assembly; whereas é $\pi a \gamma \gamma \in \lambda i \alpha$ applied only to those who had not yet been convieted of the crime laid to their charge, but were only threatened with an aecusation for the first time. (Mcier, Att. Proc. p. 210 ; Schömann, De Comit. p. 232, note 7. transl.) Waehsmuth (Hellen. Alterthumsk, vol. ii. p. 236, 2d edit.) scems to be inclined to consider the $\beta \eta \tau 0 \rho \iota \kappa \bar{\eta} \gamma \rho a \phi \grave{\eta}$ to be connected or identical with the $e^{2} \pi \gamma_{\gamma} \in \lambda i a$, but the former, according to the definitions of Photius and Suidas, was in reality quite a different thing, inasmuch as it was intended to prevent orators from saying or doing unlawful things in the assembly where they had a right to come forward; whereas the $\bar{\epsilon} \pi \alpha \gamma \gamma \in \lambda i \alpha$ was a denunciation, or a promise to prove that the orator had no right at all to speak in the assembly. [L.S.]
 army in Arcadia, which was formed to preserve the independeace of the Arcadian towns, when they became united as one state after the defeat of the Spartans at Leuetra. They were 5000 in number, aad were paid by the state. (Xen. Hell. vii. 4. § 34, vii. 5. §3; Diod. xv. 62, 67 ; Hesyeh. s. v. émopóntol; Bejot, in Mém. de l'Acad. des Inscrip. xxxii. p. 234 ; Jellermann, De Re Militari Arcudum, p. 44 ; Wachsmuth, Hellen. Alterthumsk. vel. i. p. $283,2 \mathrm{~d}$ ed.)

## EPAU/LIA. [MATRIMONIUM.]

EPEONACTAE ( $\left.{ }^{2} \pi \in \cup \nu \alpha \kappa \tau \alpha i\right)$, a elass of citizens at Sparta who are said to have heen the offspring of slaves and the widows of Spartan citizens. Theopompus tells us (Athen. vii. p. 271 d) that in the Messenian war, in consequence of the great losses whieh the Spartans sustained, they married the widows of those who were slain
to helots, and that these helots were admitted to the citizenship under the name of ánevvancal. Diodorus (Mai, Eac. Vat. p. 10) also calls the partisans of Phalanthus é $\pi є \frac{\nu}{}$ aктal. [Partheniae.] (Thirlwall, Hist. of Greece, vol. i. p. 353; Müller. Dor. iii. 3. § 5.)

EPHEBE'UM. [Grmnasium.]
EPHE'BUS ( $\varepsilon \neq \eta$ हैos), the name of an Athenian youth after he had attained the age of 18. (Pollux,

 young men had attained the age of 20 , when they became men, and were admitted to share all the rights and duties of a citizen, for which the law did not prescribe a more advanced age. That the young men, when they became ${ }^{\text {En }} \phi \eta 601$, did not receive all the privileges of full citizens, is admitted on all hands; but trom the assertion of Pollux and Harpocration, who state that their nsmes were not entered in the lexiarchie registers until they had completed their 20th year, that is to say, until they had gone through the period of $\epsilon \phi \eta \xi \in l \alpha$, it would seem that they were not looked upon as citizens as long as they were $\phi \eta 501$, and that consequently they enjoyed none of the privileges of full citizens. But we have sufficient grouad for believing, that the names of young men at the time they becsme $\neq \eta \eta_{0} 0$, were entered as citizens in the lexiarchic registers, for Lycurgus (c. Leocrat. p. 189) uses the
 रра $\mu \mu \tau \epsilon$ єiov è $\gamma \gamma \rho \alpha \phi \in \sigma \theta \alpha \iota$ as synonymous. The statement of Harpocration and Photius is therefore prohably nothing but a false inference from the fact, that young men before the completion of their 20th year were not allowed to take an active part in the public assembly; or it may be, that it arose out of the law whieh, as Schömann (De Comit. p. 71, transl.) interprets it, prescribed that no Athenian should beenrolled in the lexiarchic registers before the attainment of the 18 th , or after the completion of the 20 th year [Docimasia.] From the oration of Demosthenes against Aphobus (p. 814, \&c.; compare c. Onetor. p. 868), we see that some of the privileges of citizens were conferred upon young
 the age of 18 , entered upon his patrimony, and brought an action against his guardians; one Mantitheus (Demosth. c. Boeot. De Dote, p. 1009) relates that he married at the age of 18 ; and these facts are stated in such a manner that we must infer that their occurrence had nothing extraordinary, but were in aceardance with the usual custom.

Before a youth was enrolled among the ephebi, he had to undergo a $\delta о к \mu$ a $\sigma$ ta, the ohject of which was partly to ascertain whether he was the son of Athenian citizens, or adopted by a eitizen, and partly whether his body was sufficiently developed and strong to undertake the duties which now devolved upon him. (Aristoph. Vesp. 533, with the Sehol. ; Demosth. c. Onetor. p. 868 ; Xen. De Rep. Ath. c. 3. § 4 ; Plato, Crito, p. 51, with Stallbaum's note p. 174. Eng. transl.) Schömana (l.c.) believes that this $\delta o \kappa \iota \mu a \sigma l a$ oaly applied to orphans, but Aristophanes and Plato mention it in such a general way, that there seems to be no ground for such a supposition. After the $\delta о к \mu \boldsymbol{\mu} \sigma$ ia the young men reccived in the assembly a shield and a lance (Aristot. ap. Harpocrat. s. v. $\Delta о к \iota \mu a \sigma!a)$; but those whose fathers had fallen in the defence of their country, received a complete suit of armour
in the theatre．（Aesehin．e．Ctesiph．p．75，ed．Steph．； Plato，Menex．p．249，with Stallhaum＇s note．）It seems to have been on this oeeasion that the épnsou took an oath in the temple of Arternis Aglauros（Demosth．De Fals．Leg．p．438；Pollux， viii．106），by whieh they pledged themselves never to disgrace their arms or to desert their comrades ； to fight to the last in the defenee of their country， its altars and hearths ；to leave their eountry not in a warse but in a better state than they found it； to ohey the magistrates and the laws；to resist all attempts to sulvert the institutions of Attiea，and finally to respect the religion of their forefathers． This solemsity took place towards the close of the year（è $\nu$ à $\rho \chi$ uupєGía．s），and the lestive season bore the name of é $\phi$ 亿́stco．（Isacus，De Apollod．e．28； Demosth．c．Leoehar．p．1092．）The external dis－ tinetion of the $\tilde{\varepsilon} \phi \eta 506$ consisted in the $\chi \lambda a \mu u{ }^{\prime}$ s and the тétaбos．（Hemsterhuis，aud Pollue．x．164．）
During the two years of the $\dot{\epsilon} \phi \eta$ हitic，which may he considered as a kind of apprenticeship in arms， and in whieh the young men prepared themselves for the higher duties of full citizens，they were gene－ rally sent into the country，under the name of $\pi \in \rho i \pi \times \lambda o c$ ，to keep wateh in the towns and for－ tresses，on the eoast and frontier，and to perform other duties whieh might be neeessary for the pro－ teetion of Attiea．（Pollux，viii．106；Photius，s．v． Mepíro入os：Plato，De Leg．vi．p． 760 ，e．）［L．S．］

 Ionians at Ephesus，the ancient capital of the lomians in Asia．It was held every year，and had， like all panegyreis，a twofold eharaeter，tbat of a hond of politieal union among the Greeks of the Ionian race，and that of a eommon worship of the Ephesian Artemis．（Dionys．Hal．Antiq．Rom．iv． p．229，ed．Sylburg ；Straho，xiv．p．639．）The Ephesia continued to he held in the time of Thu－ eydides and Strabo，and the former compares it （iii．104）to the ancient panegyris of Delos ［Delia］，where a great numher of the Ionians assembled with tbeir wives and ehildren．Re－ speeting the particulars of its celebration，we only know that it was aeeompanied with mueh mirth and feasting，and that mystical sacrifiees were of－ fered to the Ephesian goddess．（Strabo，l．e．）That games and contests formed likewise a ehief part of the solemnities is elear from Hesychius（s．v．），who
 Paus．vii．2．§ 4 ；Müller，Dor．ii． 9.88 ；Bëekh， Corp．Inseript．ii．n．2909．）

From the manner in whieh Thueydides and Strabo speak of the Ephesia，it seems that it was only a panegyris of some Ionians，perhaps of those who lived in Ephesus itself and its vieinity． Thueydides seems to indicate this by eomparing it with the Delian panegyris，which likewise eon－ sisted only of the Ionians of the islands near Delos；and Strabo，who ealls the great national panegyris of all the Ionians in the Panionium the
 simply the name $\pi$ av＇iरupts．It may，however， have existed ever since the time when Ephesiss was the head of the Ionian eolonies in Asia．［L．S．］

E／PHESIS（ $\# \phi \in \sigma / s)$ ．［APPELLATIO．］
EPHESTRIS（éqє⿱宀八刀ís）．［Amictus．］
E／PHETAE（ $\bar{\phi} \dot{\epsilon} \tau \alpha u$ ），the name of certain judges at Athens．They were fifty－one in number， selected from nohle families（ $\alpha \boldsymbol{\alpha}!\sigma \tau i v \delta \eta \nu$ aip $\rho \in \hat{\epsilon} \nu \tau \epsilon s$ ）， and more than fifty years of age．They formed a
tribunal of great antiquity，so mueh so，indeed， that Pollux（viii．125），aseribed their institution to Draeo；moreover，if we can depend upon the au－ thority of Plutareh（Solon，e．I9），one of Solon＇s laws（afoves）speaks of the courts of the Ephetae and Areiopagus as eo－existent before the time of that legislator．Again，we are told by Pollux （l．c．），the Ephetae formerly sat in one or other of the five eourts，neeording to the nature of the causes they had to try．In historical times，how－ ever，they sat in four only，ealled respeetively the
 Delphinium（ $\tau \delta \dot{\xi} \pi i \Delta \in \lambda \phi \nu \nu(\psi)$ ，by the Prytaneium （ $\tau \dot{\delta} \dot{\epsilon} \pi<\Pi \rho v \tau \alpha \nu \epsilon(\omega)$ ，and the eourt at Phreato or
 they tried eases of unintentional，at the seeond，of intentional but justifable homicide，sueh as slay－ ing another in self－defenee，taking the life of an adulterer，killing a tyrant or a nightly rohber． （Plat．Leg．ix．p．874．）At the Prytaneium，by a strange eustom，somewhat analogous to the imposi－ tion of a deodand，they passed sentence upon the instrument of murder when the perpetrator of the aet was not known．In the court at Phreatto，on the sea－shore at the Peiraeeus，they tried steh per－ sons as were eharged with wilful murder during a temporary exile for unintentional homicide．In cases of this sort，a defendant pleaded his cause on board ship（ $\tau \hat{\eta} s \gamma \hat{\eta} s \mu \bar{\eta} \dot{\mathrm{c}} \pi \tau \tau \delta \mu\left(\nu_{0}\right)$ ），the judges sitting close by bim on shore．（Dem．e．Aristocr． p．644．）Now we know that the jurisdietion in eases of wilful murder was hy Solon＇s laws entrusted to the court of the Areiopagus，whieh is mentioned by Demosthenes（l．e．）in conneetion with the four courts in which the Ephetae sat．Moreover，Draeo， in his Thesmi，spoke of the Ephetae only，though the jurisdiction of the Areiopagus in eases of murder is admitted to have been of great autiquity． Henee Müller（Eumenid．§ 65）conjeetures that the eourt of the Areiopagus was unciently included in the five eourts of the Ephetae，and infers，more－ over，the early existence of a senate at Athens， resembling the Gerousia at Sparta，and invested with the jurisdietion in eases of homieide．（Thirl－ wall，Hist．of Greece，vol．ii．p．4I．）The name of Ephetue given to the members of this eouneil was， as he conceives，rather derived from their granting
 $\tau \delta \nu$ à $\nu \delta \rho \eta \lambda d \tau \tau \nu)$ than their heing appealed $t 0$ ，or from the transfer to them of a jurisdietion which before the time of Draeo had belonged to the kings．（Pollux，l．e．）If this hypothesis be true， it beeomes a question，why and when was this separation of the courts made？On this subject Müller adds，that when an act of homieide was not punished by death or perpetual banishment， the perpetrator had to receive expiation．［Exsi－ Lidm．］Now the atonement for hlood and the purification of a shedder of hlood came under the sacred law of Athens，the knowledge of whieh was confined to the old nobility，even after they liad lost their political power．［Exegetabe］Con－ sequently the administration of the rights of ex－ piation eould not be taken away from them，and none but an aristocratieal eourt like that of the Ephetae would be competent to grant pernission of expiation for homieide，and to preside over the ceremonies connected with it．Aecordingly，that court retained the right of deeision in aetions for manslaughter，in whieh a temporary flight was followed hy expiation，and also in cases of justifi－

## EPHORI.

able homicide, whether from the similarity of the latter (as regards the guilt of the perpetrator) to acts of accidental homicide, or as requiring a like expiation. (Plat. Leg. ix. pp. 864, 875.) For acts of wifful murder, on the other hand, the punishment was either death or ȧєıфuरia, and therefore no expiation ( $k$ d́dapots) was connected with the administration of justice in such cases, so that there could be no objection against their being tried by the court of the Areiopagus, though its members did not of necessity belong to the old aristocracy.

Such briefly are the reasons which Mialler alleges in support of this hypothesis, and if they are valid there can be little douht that the separation alluded to was effected when the Athenian nobility lost their supremacy in the state, and a timocracy or aristocracy of wealth was substituted for an aristocracy of birth. This, as is well known, happened in the time of Solon.

Lastly, we may remark, that the comparatively unimportant and antiquated duties of the Ephetae sufficiently explain the statement in Pollux (l.c.), that their court gradually lost all respect, and became at last an object of ridicule.
[R. W.]
 a saddle. Although the Greeks occasionally rode without any saddle (èml $\psi i \lambda o \hat{v}$ limrov, Xenoph. $_{\text {De }}$ Re Eques. vii. 5), yet they commonly used one, and from them the name, togetlier with the thing, was borrowed by the Romans. (Varr. De Re Rust. ii. 7; Caes. B. G. iv. 2; Hor. Epist. i. 14. 43 ; Gellius, v. 5.) It has indeed been asserted, that the use of saddles was unknown until the fourth century of our era. But Ginzrot, in his valuable work on the history of carriages (vol. ii. c. 26), has shown, both from the general practice of the Egyptians and other Oriental nations, from the pictures preserved on the walls of houses at Herculaneum, and from the expressions employed by J. Caesar and other authors, that the term "ephip-

pium" denoted not a mere horse-cloth, a skin, or a flexible covering of any kind, but a saddle-tree, or frame of wood, which, after being filled with a stuffing of wool or cloth. was covered with softer materials, and fastencd by means of a girth (cingulum, nona) upon the back of the animal. The ancient saddles appcar, indeed, to have been thas fir different from ours, that the cover stretehed upon the hard frane was probably of stuffed or padded cloth rather than leather, and that the saddle was, as it were, a cushion fitted to the horse's back. Pendent cloths ( $\sigma \tau \rho \hat{\omega} \mu \alpha \tau \alpha$, strata) were always attached to it so as to cover the sides of the animal; but it was not provided with stirrups. As a suhstitute for the use of stirrups the horses, more particularly in Spain, were tanght to kneel at the word of command, when their riders wished to mount them. See the preceding figure from an antique lamp found at Herculaneum, and compare Strabo, iii. I. p. 436, ed. Sieb. ; and Silius Italicus, x. 465.

The saddle with the pendent cloths is also ex. hibited in the annexed coin of $Q$. Labienus.

The term "Ephippium" was in later times in part supplanted hy the word "sella," and the more specific expression " sella equestris."
[J. Y.]
E/PHORI ( ${ }^{\text {T}}$ © opor). Magistrates called Ephori or "Oversecrs" were common to many Dorian constitutions in times of remote antiquity. Cyrene and the mother state of Thera may be mentioned as examples: the latter colonized from Laconia in early ages, and where, as we are told, the ephars were $\epsilon \pi \omega \dot{\nu} \nu \mu 0$, i.e. gave their name to their year of office. (Heracl. Pont. 4.) The ephoralty at Sparta is classed by Herodotus (i. 65) among the institutions of Lycurgus. Since, however, the ephori are not mentioned in the oracle which contains a general outline of the constitation ascribed to him (Plut. Lycurg. 6), we may infer that no new powers were given to them by that legislator, or in the age of which he may be considered the representative. Another account refers the institution of the Spartan ephoralty to Theopompus (B. с. 770-720), who is said to have founded this office with a view of limiting the authority of the kings, and to have justified the innovation by remarking that "he banded down the royal power to his descendants more durable, because he had diminished it." (Aristot. Polit. v. 9.) The inconsistency of these accounts is still farther complicated by a speech of Cleomenes III., who is represented to have stated (Plut. Cleom. 10) that the ephors were originally appointed by the kings, to act for them in a judicial capacity ( $\pi \rho \delta s \tau \delta \kappa \kappa / \nu \in, \nu$ ) during their absence from Sparta in the first Messenias war, and that it was only by gradual usurpations that these new magistrates had made themselves paramount even over the kings themselves. Now, according to some authorities (Thirlwall, Hist. of Greece, vol. i. p. 353), Polydorus, the colleague of Theopompus, and one of the kings under whom the first Messenian war (B. c. 743723) was completed, appropriated a part of the
conquered Messenian territory to the augmentation of the number of portions of land possessed by the Spartans - an augmentation which implies an increase in the number of Spartan citizens. But the ephors, as we shall see hereafter, were the representatives of the whole nation, and therefore, if in the reign of Theopompus the franchise at Sparta was extended to a new class of citizens who nevertheless were not placed on an equality with the oid ones ( $\dot{\nu} \pi \rho \mu \mathrm{Elo} \mathrm{\nu} \mathrm{\epsilon s}$ ), the ephors would thenceforward stand in a new position with respect to the kings, and the councillors (oi $\gamma$ '́poy ${ }^{\text {ess })}$ who were elected from the higher class. Moreover, it is aot improbable that, during the absence of the kings, the ephors usurped, or had conferred upon them, powers which did not originally belong to them ; so that, from both these causes, their authority may have heen so far altered as to lead to the opinion that the creation of the office, and not merely an extension of its powers, took place during the reign of Theopompus. Again, as Thirlwall observes, " if the extension of the ephoralty was connected with the admission of an inferior class of citizens to the franchise, the comparison which Cicero (De Leg. iii. 7, De Rep. ii. 33) draws between the ephoralty and the Roman tribunate would be more applicable than he himself suspected, and would throw a light on the seeming contradiction of the ephors being allpowerful, though the class which they more especially represented enjoyed only a limited franchise." (Hist. of Grecee, vol. i. p. 356.) But after all, the various accounts which we have been considering merely show how different were the opinions, and how little historical the statements, about the origin of the ephoralty. (Müller, Dorians, iii. c. 7 ; and see Clinton, F. H. vol. i. Appendix 6.)
We therefore proceed to investigate the functions and authority of the ephors in historical times, after first observing that their office, considered as a counterpoise to the kings and council, and in that respect peculiar to Sparta alone of the Dorian states, would have been altogether inconsistent with the constitution of Lycurgus, and that their gradual usurpations and encroachments were facilitated by the vague and indefnite nature of their duties. Their number, five, appears to have heen always the same, and was probably connected with the five divisions of the town of Sparta, namely, the four к $\omega$ м $\mu \iota$, Limnae, Mesoa, Pitana, Cynosura, and the ח $\quad$ $\lambda \lambda$ cs or city properly so called, around which the kâuaı lay. (Philolog. Museum, vol. ii. p. 52.) They were elected from and by the people ( $\epsilon \xi$ $\dot{\alpha} \pi \dot{\alpha} \nu(\omega \nu)$, without any qualification of age or property, and without undergoing any scrutiny (oi
 7), the $\delta$ nuos enjoyed through them a participation in the highest magistracy of the state. The precise mode of their election is not known, but Aristotle (l.c.) speaks of it as being very puerile ; and Plato (Leg. iii. p. 692) describes their office
 may apply to a want of a directing and discriminating principle in the electors, without of necessity implying an election by lot. They entered upon office at the autumnal solstice, and the first in rank of the five gave his name to the year, which was called after him in all civil transactions. (Miiller, Dor. iii . 7. § 7.) Their meetings were held in the public building called $\dot{p} p \chi$ Eiov , which in some re-
spects resembled the Prytancium at Athens, as being the place where foreigners and ambassadors were entertained, and where, moreover, the ephors took their meals together. (Pausan. iii. 11. §2.)

The ephors also possessed judicial authority, on which subject Aristotle (Polit. iii. 1) remarks that they decided in civil suits. (ठikat T $\bar{\omega} \nu \sigma \mu \mu \mathrm{Go}$ $\lambda a i \omega \nu)$, and generally in actions of great importance ( $\kappa \rho 1 \sigma \epsilon \omega \nu \mu \epsilon \gamma \dot{d} \lambda \omega \nu \nu$ кúpoot, Polit. ii. ${ }^{6}$ ): whereas the council presided over capital crimes ( $\delta i \kappa \alpha$, фоvıкal). In this arrangement we see an exemplification of a practice common to many of the ancient Greek states, according to which a criminal jurisdiction was given to courts of aristocratic composition, while civil actions were decided by popular tribunals. [Compare Ephetare and Areiopagus.] But with this civil jurisdiction was united a censorial authority, such as was possessed by the ephors at Cyrene: for example, the ephors punished a man for having brought money into the state (Plut. Lysan. 19), and others for indolence. (Schol. ad Tluecyd. i. 84.) We are told also, that they inspected the clothing and the bedding of the young men. (Athen. xii. p. 550.) Moreover, something like a superintendence over the laws and their execution is implied in the language of the edict, which they published on entering upon their office, ordering the citizens "to shave the upper lip ( $\mu \dot{\prime} \sigma \pi a \kappa \alpha$ ), i.e. to be submissive, and to obey the laws." Now the symbolical and archaic character of this expression seems to prove that the ephors exercised such a general superintendence from very early tiroes, and there can be no doubt "that in the hands of able men, it would alone prove an instrument of unlimited power." (Thirlwall, Hist of Greece, vol. i. p. 355.)

Their jurisdiction and power were still farther increased by the privilege of instituting scrutinies ( $\epsilon$ ध̈vval) into the conduct of all the magistrates, on which Aristotle (Polit. ii. 6. § 17) observes that it was a very great gift to the ephoralty ( $\tau 0 \hat{i} \tau o \delta \hat{k}$ $\tau \hat{y}$ épopéa $\mu \in \mathcal{\gamma} \alpha \lambda \dot{\lambda} a \nu \tau \delta \delta \hat{\omega} \rho o \nu)$. Nor were they obliged to wait till a magistrate had completed his term of office, since, even before its termination, they might exercise the privilege of deposition (Xen, De Rc. Lac. viii. 4.) Even the kings themselves could be brought before their tribunal (as Cleomenes was for bribery, $\delta \omega$ podokia, Herod. vi. 82), though they were not obliged to answer a summons to appear there, till it had been repeated three times. (Plut. Cleom. 10.) In extreme cases, the ephors were also competent to lay an accusation against the kings as well as the other magistrates, and briug them to a capital trial before the great court of justice. (Xen. l. c. ; Herod. vi. 85.) If they sat as judges themselves, they were only able, according to Müller, to impose a fine, and compel immediate payment ; but they were not in any case, great as was their julicial authority, bound by a written code of laws. (Aristot. Polit. ii. 6.)

In later times the power of the ephors was greatly increased; and this increase appears to have been principally owing to the fact, that they put themselves in connection with the assembly of the people, convened its meetings, laid measures before it, and were constituted its agents and representatives. When this connection arose is matter of conjecture; some refer the origin of it to Asteropus, onc of the first ephors to whom the extension of the powers of the ephoralty is ascribed,
and who is said to have lived many years after the 1 time of Theopompus; probably about в.c. 560. That it was not known in early times appears from the circumstance that the two ordinances of the oracle at Delphi, which regulated the assembly of the people, made no mention of the functions of the ephors. (Thirlwall, vol. i. p. 356.) It is clear, however, that the power which such a connection gave, would, more than any thing elsc, enable them to encroach on the royal authority, and make thernselves virtually supreme in the state. Accordingly, we find that they transacted business with foreign ambassadors (Herod. ix. 8) ; dismissed them from the state (Xen. Hell. ii. 13. § 19); decided upon the government of dependent cities (Xen. Hell. iii. 4. §2) ; subscribed in the presence of other persons to treaties of peace (Thucyd. v. 19), and in the time of war sent out troops when they thought necessary. (Herod. ix. 7.) In all these capacities the ephors acted as the representatives of the nation, and the agents of the public assembly, being in fact the executive of the state. Their anthority in this respect is further illustrated by the fact, that after a declaration of war, "they entrusted the army to the king, or some other general, who received from them instructions how to act; sent back to them for fresh instructions, were restrained by them through the attendance of extraordinary plenipotentiaries, were recalled by means of the scytale, summoned before a judicial tribunal, and their first duty after return was to visit the office of the ephors." (Muiller, Dor. vol. ii. p, 127.) Another striking proof of this representative character is given by Xenophon ( $D$ e Rep. Lac. 15), who informs us, that the ephors. acting on behalf of the state ( $\delta \pi \in \rho \tau \hat{\eta} s \pi \sigma \lambda \in \omega s$ ), received from the kings every month an oath, by which the latter bound themselves to rule according to law; and that, in return for this, the state engaged, through the ephors, to maintain unshaken the authority of the kings, if they adhered to their oath.

It has been said that the ephors encroached upon the royal authority; in course of time the kings became completely under their control. For example, they fined Agesilaus (Plut. Ages. 2, 5) on the vague charge of trying to make himself popular, and interfered even with the domestic arrangements of other kings ; moreover, as we are told by Thncydides (i. 131), they could even imprison the kings, as they did Pansanias. We know also tbat in the field the kings were followed by two ephors who belonged to the council of war ; the three who remained at home received the booty in charge, and paid it into the treasury, which was under the superintendence of the whole College of Five. But the ephors had still another preragative, hased on a religious foundation, which enabled them to effect a temporary deposition of the kings. Once in eight years ( $\delta r^{3}{ }^{2} \tau \mathcal{\omega} \nu \epsilon^{2} \nu \nu \epsilon^{\prime} \alpha$ ), as we are told, they chose a calm and cloudless night to observe the heavens, and if there was any appearance of a falling meteor, it was believed to be a sign that the gods were displeased with the kings, who were accordingly suspended from their functions until an oracle allowed of their restoration. (Plut. Agis, 11.) The outward symbols of supreme authority also were assumed by the ephors; and they alone kept their seats while the kings passed ; whereas it was not considered below the diguity of the kings to rise in honour of the ephors. (Xen. De Rep. Lac. 15.)

The position which, as we have shown, the ephors occupied at Sparta, will explain and justify the statement of Müller," that the ephoralty was the moving element, the principle of change in the Spartan constitution, and in the end, the cause of its dissolution." In confirmation of this opinion we may cite the authority of Aristotle, who olserves, that from the excessive and absolute power
 to court them ( $\delta \eta \mu a \gamma \omega \gamma \epsilon \bar{i})$, and eventually the government became a democracy instead of an aristocracy. Their relaxed and dissolute mode of life too ( $\dot{\alpha} \nu \in \mu^{\prime} \dot{\prime} \nu \eta \delta$ $\dot{\prime} \alpha u \tau \alpha$ ), he adds, was contrary to the spirit of the constitution ; and we may remark that it was one of the ephors, Epitadeius, who first carried through the law permitting a free inherit ance of property in contravention of the regulation of Lycurgus, by which an equal share in the common territory was secured to all the citizens.

The change, indeed, to which Aristotle alludes, might have been described as a transition from an aristocracy to an oligarchy; for we find that in later times, the ephors, instead of heing demagogues, invariably supported oligarchical principles and privileges. The case of Cinadon, s. c. 399 , is an instance of this ; and the fact is apparently ao inconsistent with their being representatives of the whole community, and as much so of the lower
 citizens, that Wachsmoth supposes the $\delta \hat{\eta} \mu$ os, from and by whom the ephors were chosen, to mean the whole body of privileged or patrician citizens only, the most eminent ( $\kappa \alpha \lambda 0 l \kappa \alpha \alpha^{2} \gamma \theta o l$ ) of whom wers elected to serve as $\gamma^{\prime} \rho \circ \nu \tau \epsilon 5$. This supposition is not itself improbable, and would go far to explain a great difficulty ; but any analysio of the arguments that may be urged for and against it is precluded by our limits. (See Thirlwall, vol. iv, p. 377.) We only add that the ephors hecame at last thoroughly identified with all opposition to the extension of popular privileges.

For this and other reasons, when Agis and Cleomenes undertook to restore the old constitution, it was necessary for them to overthrow the ephoralty, and accordingly Cleomenes murdered the ephors for the time being, and aboliahed the office (B. c. 225) ; it was, however, restored under the Romans.
[R. W.]
EPI'BATAE ( $\epsilon \pi \iota 8 \alpha \dot{\alpha} \tau a l$ ), soldiers or marines appointed to defend the vessels in the Athenian navy, were entirely distinct from the rowers, and also from the land soldiers, such as hoplitae, peltasts, and cavalry. (Xen. Hell. i. 2. § 7, v. l. § 11 ; Harpocrat. and Hesych. s. v.) It appears that the ordinary number of epibatae on hoard a trireme was ten. Dr. Arnold ( $a d$ Thuc. iii. 95) remarks that by comparing Thuc. iii. 95 with cc. 91, 94, we find three hundred epibatae as the complement of thirty sliips, and also by comparing ii. 92 with c. 102 , we find four hundred as the complement of forty ships ; and the same proportion results from a comparison of iv. 76 with c .101 . In Thucydides vi. 42 , we find seven hundred epibatae for a fleet of one hundred ships, sixty of which were equipped in the ordinary way and forty had troops ou hoard. In consequence of the number of heavyarmed men ék tồ $\kappa \alpha \tau \alpha \lambda \delta \gamma^{\prime} v$ on the expedition, the Athenians appear to have reduced the number of regular epihatae from ten to seven. The number of forty epibatae to a ship mentioned by Herodotus (vi. 15), Dr. Arnold justly remarks (l.c.), "be-
longs to the earlier state of Greek naval tactics, when victory depended more on the number and prowess of the soldiers on hoard than on the manceuvres of the seamen (Thuc. i. 49) ; and it was in this very point that the Athenians improved the system, by decreasing the number of $\dot{e} \pi \iota \in \alpha \dot{\alpha} \alpha \downarrow$, and relying on the more skilful managemeut of their vessels."

The epibatae were usually taken from the Thetes, or fourth class of Athenian citizens (Thuc. vi. 42) ; but on one occasion, in a season of extraordinary danger, the citizens of the higher
 epihatae. (Thuc. viii. 24.)

The term is sometimes also applied by the Roman writers to the marines (Hirt. de Bell. Alex. 11, de Bell. Afric. 63) ; but they are more usually called classiarii milites. The latter term, however, is also applied to the rowers or sailors as well as the marines (classiariorum remigio vehi, Tac. Ann. xiv. 4).

## EPIBLE'MA ( $(\pi \pi i \epsilon \lambda \eta \mu \alpha)$. [AMictus.]

EPl'BOLE (é $\pi 6$ EOAh), a fine imposed by a magistrate, or other official person or body, for a misdemeanour. The various magistrates at Athens had (each in his own department) a summary penal jurisdiction; i.e. for certain offences they might inflict a pecuniary mulct or fine, not exceeding a fixed amount; if the offender deserved further punisbment, it was their duty to bring him before a judicial tribunal. Thus, in case of an injury done to orphans or heiresses, the archon might fine the parties, or (if the injury were of a serious nature) hring them hefore the court of Heliaea. (Dem. c. Macart. p. 1076.) Upon any one who made a disturbance, or otherwise mishehaved himself in the public assembly, the proedri might impose a fine of fifty drachms, or else bring him for condign punishment before the senate of 500 , or the next assembly. (Aesch. c. Timar. 35, Bekk.) The senate of 500 were competent to fine to the extent of 500 drachms. (Dem. c. Euerg. and Mnes. p. 1152; gee also Dem. c. Mid. p. 572 .)

The magistrate who imposed the fine ( $\boldsymbol{e} \pi 160 \lambda \lambda_{\eta} \nu$ ${ }_{\boldsymbol{\epsilon}} \boldsymbol{\pi} \epsilon \in \alpha \lambda \epsilon$ ) had not the charge of levying it, but was obliged to make a return thereof to the treasury
 or $\vec{\epsilon} \gamma \gamma \mathrm{\gamma} d \phi \epsilon \iota \nu \bar{\varphi} \delta \eta \mu \mathrm{\sigma}(\psi)$, whereupon, like all other penalties and amerciaments, it hecame (as we should say) a debt of record, to be demanded or recovered by the collectors. (Aesch. c. Timar. l.e.; Dem. c. Nicost. p. 1251.) If it were made payable to the fund of a temple, it was collected by the functionaries who had the charge of that fund (rajlau). There might (it seems) be an appeal from the sentence of the magistrate to a jury or superior court. (Meier, Att. Proc. pp. 32, 34, 565; Schömann, Ant. Jur. Pub. Graec. pp. 242, 293.)
As under the old Roman law no magistrate could impose a fine of more than two oxen and thirty sheep, so by the laws of Solon fines were of very small amount at Athens. How greatly they increased after wards (as money became more plentiful, and laws more numerous), and how important a hranch they formed of the public revenue, may be seen from the examples collected by Böckh, Pub. Econ. of Athens, p. 375, \&c., 2nd ed.
These epibolae are to be distinguished from the penalties awarded by a jury or court of law ( $\tau \mu \mu \eta$ $\mu a \tau a)$ upon a formal prosecution. There the magistrate or other person, who instituted the pro-
ceeding (for any one might prosecute, raтך was said $\tau i \mu \eta \mu a \operatorname{e} \pi \tau \quad \gamma \rho \alpha \psi a \sigma \theta a t$, as the court or jury were said $\tau, \mu \hat{\alpha} \nu$, "to assess the penalty," which always devolved upon them, except whero the penalty was one fixed by law ( $\epsilon_{c} \tau \hat{\omega} \nu \nu \quad \nu \quad \alpha \mu \nu$
 altered. (Aesch. Пєpl Mápa6. 14, Bekk. ; Dem. c. Theocr. p. 1328 ; Harpocr. s. v. 'Arif $\eta \tau$ os à $\gamma \boldsymbol{\sigma} \nu_{\text {. }}$ )
[C. R. K.]
 hotonia.]

EPICLE ${ }^{\prime}$ RUS ( $\epsilon \pi / \kappa \lambda \eta p o s$, heiress), the name given to the daughter of an Athenian citizen, who had no son to inherit his estate. It was deemed an object of importance at Athens to preserve the family name and property of every citizen. This was effected, where a man had no child, by adoption (eionol $\eta \sigma t s$ ) ; if he had a daughter, the inheritance was transmitted through her to a grandson, who would take the name of the maternal ancestor. If the father dled intestate, the heiress had not the choice of a hushand, but was bound to marry her nearest relation, not in the ascending line. Upon such person making his claim before the archon, whose duty it was $\bar{\epsilon} \pi \iota \mu \in \lambda \epsilon \hat{i} \sigma \theta a i ~ \tau \omega \bar{\omega}$
 (Dem. c. Macart. p.1076), public notice was given of the claim ; and if no one appeared to dispute it, the archon adjudged the heiress to him (ė $\pi \in \delta \dot{\delta} \kappa \alpha \sigma \sigma \in$ $\left.\alpha \dot{\jmath} \tau \hat{\varphi} \boldsymbol{\tau} \boldsymbol{\eta} \nu \boldsymbol{\epsilon} \pi I_{\kappa} \lambda \eta \rho o \nu\right)$. If another claimant appeared ( $\dot{\mu} \mu \phi เ \sigma \hat{\eta} \tau \epsilon \hat{\epsilon} \boldsymbol{\nu}$ à̀ $\tau \hat{\varphi} \tau \hat{\eta} s \boldsymbol{\epsilon}^{\boldsymbol{\epsilon}} \pi \iota \kappa$.), a court was held for the decision of the right ( $\delta i \alpha \delta \iota \kappa a \sigma i a ~ \tau \bar{\eta} S$ Entur.), which was determined according to the Athenian law of consanguinity ( $\gamma$ '́ $\nu 0$ ovs $\kappa a \tau^{\prime}$ à $\gamma$ X $\quad \sigma \tau \epsilon i a \nu$.) Even where a woman was already married, her hushand was ohliged to give her up to a man with a better title; and men often put away their former wives in order to marry heiresses. (Dcm. c. Onet. argum., c. Eubul. p. 1311 ; Isaeus, De Pyrr. Hered. p. 78.)

A man without male issue might bequeath his property; hut if he had a daughter, the devisee was obliged to marry her. (Isaeus, De Arist. Mered. p. 19.) If the daughter was poor, and the nearest relative did not choose to marry her, he was bound to give her a portion corresponding to his own fortune. (Dem. c. Macart. p. 1067.)

The hushand of an heiress took her property
 $\sigma a \nu \tau \alpha$ ), who was usually adopted into his maternal grandfather's family, and took possession of the estate. He then became his mother's legal protector ( $\kappa$ úptos), and was hound to find her maintenance ( $\sigma i \tau 0 \nu$ ). If there were more sons, they shared the property equally. (Isaeus, De Pyrr. Hered. p. 59, De Cir. Hered. p. 40 ; Dem. c. Steph. pp. 1134, 1135.)

When there was but one daughter, she was
 more they inherited equally, like our co-parceners ; and were severally married to relatives, the nearest having the first choice. (Andoc. De Myst. p. 11', \&c.; Isaeus, De Cir. Hered. pp. 57, 58.) Illegitimate sons did not share with the daughter, the law
 $\delta \sigma i \omega \nu$. (Dem. c. Macart. p. 1067 ; Aristoph. Aves, 1652.)

The heiress was under the special protection of the archon; and if she was injured by her husband or relatives, or by strangers ejecting her from her estate, the law gave a criminal prosecution against
the offender，called как $\omega \sigma \epsilon \omega \mathrm{s}$ єiбayүє入ía．（Isaeus， De Pyrr．Hered．p． 76 ；Meier，Att．Proc．pp．269， 460，468．）

EPIDAU＇RTA．［Eleusinia．］ EPIDICA＇SIA（ėлı $\delta \kappa \alpha \sigma i ́ a)$ ．［Heres．］ EPIDEMIURGI．［Demivegi．］
EPI ${ }^{\prime}$ DOSEIS（ $\left.e^{2} \pi i \delta \delta \dot{\sigma} \in t s\right)$ ，were voluntary con－ ributions，either in money，arms，or ships，which were made by the Athenian citizens in order to meet the extraordinary demands of the state． When the expences of the state were greater than its revenue，it was usual for the prytanes to sum－ mon an assembly of the people，and after ex－ plaining the necessities of the state，to call npon the citizens to contribute according to their means． Those who were willing to contrihute then rose and mentioned what they would give；while those， who were unwilling to give any thing，remained silent or retired privately from the assembly． （P＇ut．Alcib．10，Phoc． 9 ；Dem．c．Meid．p． 567 ； Theophras．Char． 22 ；Athen．iv．p．168，e．）The names of those who had promised to contribute， together with the amount of their contributions， were written on tablets，which were placed before the statues of the Eponymi，where they remained till the amount was paid．（Isaeus，De Dicarog． p．111，ed．Reisk．）
These epidoseis，or voluntary contrihutions，were frequently very large．Sometimes the more wealthy citizens voluntarily undertook a trierarchy，or the expences of equipping a trireme．（Dem．c．Meid． p．566．23．）We read that Pasion furnished 1000 shields，together with five triremes，which he equipped at his own expence．（Dem．c．Stexh． p．1127．12．）Chrysippus presented a talent to the state，when Alexander moved against Thehes （Dem．c．Phorm．p．918．20）；Aristophanes，the son of Nicophemus，gave 30,000 drachmae for an expedition against Cyprus（Lysias，pro Aristoph． bonis，p．644）；Charidemus and Diotimus，two commanders，made a free gift of 800 shields（Dem． pro Coron．p．265．18）；and similar instances of liberality are mentioned by Böckh（Publ．Econ．of Athens，pp．586， 587 ，2nd．ed．），from whom the preceding examples have been taken．（Compare Schömann，De Comitiis，p．292．）

3．＇Етt $\mu \in \lambda \eta \tau a l$ той＇$E \mu \pi a \rho i a v$, were the overseers of the emporium．［Emporium．］They were ten in number，and were elected yearly by lot．（Har－ pocrat．s．v．）They had the enture management of the emporium，and had jurisdiction in all breaches of the commercial laws．（Dem．c．Lacrit．p． 941.15 ． c．Theoc．p． 1324 ；Dinarch．c．Aristog．pp．81，82．） According to Aristotle（apud Harpocrat．s．v．）， it was part of their duty to compel the merchants to bring into the city two－thirds of the corn which had been brought by sea into the Attic emporium ； by which we learn that only one－third could be carried away to other countries from the port of the Peirasens．（Böckh，Publ．Econ．of Athens， pp．48，81，2nd ed．；Meier，Att．Proc．p．86．）

## EPISTATES．

4．${ }^{'} \mathrm{E} \pi \mu \mu \lambda \eta \tau \alpha l \tau \bar{\omega} \nu$ M $\nu \sigma \tau \eta \rho^{\prime} \omega \nu$ ，were，in con－ nection with the king archon，the managers of the Eleusinian mysteries．They were elected hy open vote，and were four in number；of whom two wers chosen from the general body of citizens，one from the Eumolpidae，and one from the Ceryces． （Harpocrat and Suid．s．v．；Dem．c．Meid．p．570．6．）

5．${ }^{3} E \pi \iota \mu \in \lambda \eta r a i \quad \tau \omega \nu \nu \in \omega \rho i \omega \nu$ ，the inspectors of the dockyards，formed a regular à $\rho \chi{ }_{h}$ ，and were not an extraordinary commission，as appears from Demosthenes（c．Euerg．et Mnes．p．1145），Acs－ chines（c．Ctesiph．p．419），and the inscriptions published by Böckh（Urhunden über das Seewesen des Attisches Staates，Berlin，1840），in which they are sometimes called oi àpoovtes èv roîs vewplas， and their office designated an $\quad \mathrm{d} \rho \chi$ h．（No．xvi．b． 104，\＆c．；No．x．c． 125 ；No．xiv．c． 122.138.$)$ We learn from the same inscriptions that their of－ fice was yearly，and that they were ten in number． It also appears that they were elected by lot from those persons who possessed a knowledge of ship－ ping．

The principal duty of the inspectors of the dock－ yards was to take care of the ships，and all the rigging，tools，\＆c．（ $\sigma \kappa \in u$ 亿）belonging to them． They also had to see that the ships were sea－ worthy ；and for this purpose they availed them－ selves of the services of a $\delta$ oкt $\mu a \sigma \tau$＇ोs，who was well skilled in such matters．（Böckh，lbid．No．ii． 56．）They had at one time the charge of various kinds of military $\sigma k \in u n$ ，which did not necessarily belong to ships，such as engines of war（No．xi．m）， which were afterwards，however，entrusted to the generals by a decree of the senate and people． （No．xvi．a．195．）They had to make out a list of all those persons who owed anything to the docks （Dem．c．Euerg．et Mnes．p．1145），and also to get in what was due．（Id．c．Androt．p．612．） We also find that they sold the rigging，\＆c．，of the ships and purchased new，under the direc－ tion of the senate，but not on their own responsi－ bility．（No．xiv．b．I90，\＆c．，compared with Nos．
 conjunction with the $\dot{\alpha} \pi \sigma \sigma \tau 0 \lambda e i ̂ s ~ i n ~ a l l ~ m a t t e r s ~$ comnected with their own department．（Dem．c． Euerg．et Mnes．p．1147．）To assist them in dis－ charging their duties they had a secretary（ $\gamma$ pa $\mu$－ $\mu a \tau \epsilon \dot{S}$, No．xvi．b．165），and a public servant（ $\delta \eta-$
 further account of these inspectors，see Böckh， Orkunden，\＆c．pp．48－64．

6．${ }^{3} E \pi \iota \mu \in \lambda \eta \tau a l \tau \hat{\omega} \nu \phi u \lambda \hat{\omega} \nu$ ，the inspectors of the фu入ai or tribes．［＇Tribus．］

EPIRHE＇DIUM．［Rhena．］
EPISCE＇PSIS（ $̇ \pi / \sigma \kappa \kappa \eta \psi s)$ ）．［MARTYRIA．］
EPI＇SCOPI（ $\boldsymbol{\pi} \boldsymbol{\pi} / \sigma \kappa о \pi o r)$ ，inspcctors，who were sometimes sent by the Athenians to subject states． Harpocration compares them to the Lacedaemonian harmosts，and says that they were also called фúdakes，It appears that these Episcopi received a salary at the cost of the cities over which they presided．（Aristoph．Aves，1022，\＆c．，with Schol．； Harpocrat．s．v．；Böckh，Publ．Econ．of Athens， pp．156，238，2d ed．；Schömann，Antiq．Juris Pub．Graec．p．432．18．）

EPI＇S＇TATES（è $\pi / \sigma \tau \alpha ́ \tau \eta s)$ ，which means a per－ son placed over any thing，was the name of two distinct elasses of functionaries in the Athenian state；namely，of the chairman of the senate snd assembly of the people，respecting whose duties see the articles Boule and Ecclesia；and also of the
directors of the public works. ('Ent $\sigma \tau a \tau a l$ $\tau \hat{\omega} \nu$ ठquoat $\omega \nu \stackrel{\leftrightarrows}{\oplus} \rho \gamma \omega \nu$.) These directors had different names, as $\tau \in \iota$ orotol, the repairers of the walls;
 the repairers of the trenches, \&c.; all of whom were elected by the tribes, one from each: but the most distinguished of these were the $\tau \in\llcorner\backslash 0 \pi o b l$. (Aeschin. c. Ctesiph. pp. 400, 422, 425.) Over other public buildings a manager of public works had the superintendence; and it was in this capacity that Pericles, and subsequently Lycurgus, undertook so many works of architecture. In the inscriptions relating to the building of the temple of Athena Polias, we find $\begin{aligned} & \pi / \sigma \tau \tau a \tau a l \\ & m e n t i o n e d, ~\end{aligned}$ (Böckh, Publ. Econ. of Athens, p. 203, 2ad ed.) Similar authorities were appointed for the care of the roads, and of the supply of water ( $\delta \delta o \pi o t o$,
 Plut. Them. 31 ; Schömann, Antiq. Juris Publ. Graec. p. 247).

The directors received the money which was mecessary for these works from the public treasury

EPI'STOLA. [Constitutio.]
EPISTOLEUS ( $\in \pi / \sigma \pi 0 \lambda \epsilon u^{\prime}$ ), was the officer second in rank in the Spartan fleet, and succeeded to the command if any thing happened to the vavápxos or admiral. (Xen. Hell. i. 1. §23, iv. 8. §11, v. l. §5, 6; Sturtz, Lex. Xenoph. s. v.) Thus, when the Chians and the other allies of Sparta on the Asiatic coast sent to Sparta to request that Lysander might be again appointed to the command of the navy, he was sent with the title of $\dot{e} \pi$ ro $\sigma 0 \lambda \in u ́ s$, because the laws of Sparta did not permit the same person to hold the office of $\nu a v a \rho \chi o s$ twice. (Xen. Hell. ii. 1. §7.)

EPISTY'LIUM (e่ $\pi \iota \sigma \tau u ́ \lambda \iota o v)$, is properly, as the name implies, the architrave, or lower member of an entablature, which lies immediately over the columns. (Plut. Per. 13; Paus. pass. ; Varr. R. R. iii. 2 ; Festus, s. v. ; comp. Columna, p. 324, a) The rules for the height of the architrave are given by Vitruvins (iii. 3. s. 5, ed. Schn.). In the best examples of the Doric order, the front of the architrave was a plain flat surface, with no carvings, but sometivies ornamented with metal shields affixed to it over each column, as in the Parthenon, where there are also inscriptions between the shields. (See Lucas's model). In the Ionic and Corinthian orders it was cut up into two or usually three surfaces (fasciae), projecting beyond one another, the edges of which were afterwards decorated with mouldings. (See the woodcuts under Columna.) Originally the architrave was the main beam, laid along the top of the columns to support the roof. When stone was used, a natural limit was set to the length of the pieces of the architrave, and consequently the distance of the columns, by the impossibility of obtaining blocks of stone or marble beyond a certain size. In the temple of Artemis at Ephestrs the pieces of the architrave were so large that Pliny wonders how they could have been raised to their places. (H.N. xxxvi. 14. s. 2l.) When an intercolummiation was of the kind called araeostyle, that is, when the columns were more than three diameters apart, the epistylium was necessarily made of wood instead of stone (Vitruv. iii. 2. s. 3. §5. ed. Schn.); a construction exemplified by the restoration in the annexed woodcut (Pompeii, vol. i. p. 143) of the Doric portico, which surrounds three sides of the

## EPITROPUS.

Forum at Pompeii. The holes seen at the back of the frieze received the beams which supported an upper gallery.

The word is sometimes also used for the whole of the entahlature.

## EPITA'PHIUM. [Funus.]

## EPITHALA'MIUM. [MATRIMonium.]

EPITI'MIA (è $\pi / \tau \iota \mu i ́ a)$. [ATIMiA.]
EPITRIERARCHE $/$ MATOS DIKE ( $\bar{\pi} \pi \tau \rho \iota-$ $\eta \rho a \rho \chi \eta \mu a t o s ~ \delta i ́ \kappa \eta)$. [TRIERARCHIA.]
 [EpItropus.]

EPI'TROPUS (ė $\pi i \tau \rho \circ \pi o s)$, which signifies literally a person to whom any thing is given in charge (Dem. c Aphob. i. p. 819. 18), occurs, however, much more frequently in the sense of a guardian of orphan children. Of such guardians there were at Athens three kinds: first, those appointed in the will of the deceased father; secondly, the next of kin, whom the law designated as tntores legitimi in default of such appointment, and who required the authorization of the archon to enable them to act; and lastly, such persons as the archon selected if there were no next of kin living to undertake the office. The duties of the guardian comprehended the education, maintenance, and protection of the ward, the assertion of his rights, and the safe custody and profitable disposition of his inheritance during his minority, besides making a proper provision for the widow if she remained in the house of her late husband. In accordance with these, the guardian was bound to appear in court in all actions in hehalf of or against his ward, and give in an account of the taxable capital ( $\tau i \mu \eta \mu \alpha$ ) when an $\epsilon i \sigma \phi o \rho \alpha$ (the only impost to which orphans were liable) was levied, and make the proportionate payment in the minor's name. With reference to the disposition of the property, two courses were open to the guardian to pursue, if the deceased had left no will, or no specific directions as to its management, viz., to keep it in his own hands and employ it as he best could for the benefit of the minor ( $\delta$ toukeiv), or let it out to farm to the highest bidder ( $\mu$ to $\theta \omega \hat{v} \nu$ $\tau \delta \nu$ oì $\kappa \nu$ ). In the former case it seems probable (Dem. $c$. Onetor. i. p.865.17) that a constant control of the guardian's proceedings might be exercised by the archon; and a special law ordained that all money belonging to a minor should be vested in
mortgages, and upon no account be lent out upon the more lucrative but hazardous security of bottomry. (Suidas, s. v. ${ }^{*} \mathrm{E} \gamma \gamma \in ⿺ 0 \nu$.)

To insure the performance of these duties the Jaw permitted any free citizen to institute a public action, as, for instance, an apagoge or eisangelia against a guardian who maltreated his ward
 neglect or injury of his person or property; and the pumishment, upon conviction, depended entirely upon the greater or less severity of the dicasts. (Meier, Att. Proc. p. 294.) If the guardian preferred that the estate should be farmed, the regular method of accomplishing this was by making an application to the archon, who thereupon let the inheritance to the highest bidder, and took care that the farmer should hypothecatc a sufficient piece of ground or other real property to guarantee the fulfilment of the contract ( $\hat{a} \pi \rho \tau / \mu \eta \mu \alpha)$. In some cases the guardian might he compclled to adopt this course or be punished, if the lease were irregularly or fraudulently made, hy a phasis, which, upon this occasion, might be instituted by any free citizen. The guardianship expired when the ward had attained his eighteenth year, and if the estate had been leased out, the farmer paid in the market-place the capital he had received to trade with, and the interest that had accrued (Dem. c. Aphob. i. 832. 1) ; if, however, the inheritance had been managed by the guardian, it was from him that the heir received his property and the account of his disbursements during the minority. In case the accounts were unsatisfactory, the heir might institute an action $\xi^{2} \pi เ \tau \rho o \pi \hat{\eta} s$ against his late guardian ; this, however, was a mere private lawsuit, in which the danages and epobelia only could be lost by the defendant, to the latter of which the plaintiff was equally liable upon failing to obtain the votes of a fifth of the dicasts. This action was barred by the lapse of five years from the termination of the guardianship; and, if the defendant in it died before that time, an action $\beta \lambda a B \eta{ }^{\prime} s$ would lie against his representatives to recover what was claimed from his estate. (Meier, Att. Proc. p. 444, \&c.)
[J.S. M.]
EPOBE/LIA ( $̇ \pi \omega \epsilon \in \lambda i \alpha)$, as its etymology implies, at the rate of one obolus for a drachma, or one in six, was payable on the assessment ( $\tau i \mu \eta \mu \alpha$ ) of several private causes, and sometimes in a casc of phasis, by the litigant that failed to obtain the votes of one-fifth of the dicasts. (Dein. c. Aphob. p. 834. 25, c. Euerg. et Mnesib. p. 1158. 20.) It is not, however, quite certain that such was invariably the case when the defeated suitor was the defendant in the cause (Meier, Att. Proc. p. 730); though in two great classes, namely, cross suits (ả $\nu \tau \iota \gamma \rho a \phi a l$ ), and those in which a preliminary question as to the admissibility of the original cause of action was raised ( $\pi \alpha \rho a \gamma p a \phi a l$ ), it may be confidently asserted. As the object of the regulation was to inflict a penalty upon litigiousness, and reimburse the person that was causelessly attacked for his trouble and anxiety, the fine was paid to the successful suitor in private causes, and those cases of phasis in which a private citizen was the party immediately aggrieved. In public accusations, in general, a fine of a thousand drachmae, payable to the public treasury, or a complete or partial disfranchisement, supplicd the place of the spobelia as a punishment for frivolous prosecutions.

## EPULONES

## EPO'MIS (etauls). [Tunica.]

## EPO'NIA (è $\pi \omega$ lía). $^{\prime}$ [Telos.]

EPO'N YMUS ( $\left.\epsilon^{\prime} \pi \dot{\omega} \nu \nu \mu o s\right)$, having or giving a name, was the surname of the first of the nins archons at Athens, because his name, like that of the consuls at Rome, was used in public records to mark the year [Archon]. The expression è $\pi \omega$ $\nu \nu \mu 0 t \tau \hat{\omega} \nu \dot{\eta} \lambda \iota \epsilon \hat{\omega} \nu$, whose number is stated by Suidas, the Etymologicum Magn., and other grammarians, to have been forty, likewise applies to the chief-archon of Athens. Every Athenian had to serve in the army from his 19 th to his 60 th year; i. e. during the archonship of forty archons. Now as an army generally consisted of men from the age of 18 to that of 60 , the forty archons under whom they had been enlisted, were called $\epsilon \pi \omega 10$ $\mu o t \tau \hat{\omega} \nu \hat{\eta} \lambda \iota \kappa \iota \hat{\omega} \nu$, in order to distinguish them from
 Harpocrat. s. v. 'Eт ${ }^{\prime} \omega \nu \nu \mu o t$, and Bekker, Arecdotan p. 245.) At Sparta the first of the five ephors gave his name to the year, and was therefore called

It was a very prevalent tendency among the ancients in general to refer the origin of their institutions to some ancient or fabulous hero (ảpXn$\gamma \dot{\epsilon} \tau \eta \mathrm{s}$, Demosth. c. Macart. p. 1072), from whom, in most cases, the institution was also helieved to have derived its name, so that the hero hecame its
 tions were often named after ancient heroes, on account of some fabulons or legendary connection which was thought to exist between them and the new institutions, and the heroes thus became, as it were, their patrons or tutelary deities. A strikiog instance of this custom are the names of the ten Attic tribes instituted by Cleisthenes, all of which were named after some national hero. (Demosth, Epitaph. p. 1397, \&c. ; Paus. i. 5.) These ten heroes who were at Athens, generally called the
 with statues, which stood in the Ceramicus, near the Tholos. (Paus. i. 5. § 1 ; Suidas and Etymol. Magn. s. v. 'E $\pi \omega \dot{\mu} \nu \nu \mu o l_{\text {. }}$ ) If an Athenian citizen wished to make proposals for a new law, he exhibited them for public inspection in front of these statues of the eт $\bar{\epsilon} \omega \nu \mu 01$, whence the expressions
 $\nu \mathrm{u}^{\prime}$ ous. (Aeschin. c. Ctesiph. p. 59, ed Steph.; Wolf, Proleg. ad Demosth. Leptin. p. 133.) [L. S.]

## EPOPTAE (ė $\pi \delta \pi \tau \alpha \iota$ ). [Eleusinia.]

EPULO'NES, who were originally three in number (Triumviri Epulones), were first created in B.c. 196, to attend to the Epulum Jovis (Valer. Max. ii. 1. § 2 ; Liv. xxxi. 4 ; Gell. xii. 8), and the banquets given in honour of the other gods; which duty had originally belonged to the Pontifices. (Liv. xxxiii. 42 ; Cic. De Orat. iui. 19, De Harusp. Respons. 10; Festus, s. v. Epolonos.) Their number was afterwards increased to seven (Gell. i. 12; Lucan, i. 602), and they were called Septemviri Epulones or Septemviri Epulonum; under which names they are frequently mentioned in inscriptions. (Orelli, Inscrip. No. $590,773,2259,2260,2365$.) Julins Caesar added three more (Dion Cass. xliii. 51), hut after his time the number appears to have been again limited to seven.

The Epulones formed a collegium, and were one of the four great religious corporations at Rome; the other three were those of the Pontifices, Arigures, and Quindecemviri. (Dion Cass. liii. I,
wiii. 12; Plin. Ep. x. 3; Walter, Gescliailute des Rüm. Rechts, § 141, 2d ed.)

E/PULUM JoVis. [Epulones.]
EQUI'RIA, horse-races, which are said to have been instituted by Romulus in honour of Mars, and were celebrated in the Carpus Martius. (Festus, s. v. ; Varro, Ling. Lat. vi. 13, Müller.) There were two festivals of this name; of which one was celebrated a.d. Ill. Cal. Mart., and the other prid. Id. Mart. (Ovid, Fast. ii. 859, iii. 519.) If the Campus Martius was overflowed by the Tiber, the races took place on a part of the Mons Coelius, which was called from that circumstance the Martialis Campus. (Festus, s. v. Mart. Campus.)
$E^{\prime}$ QUITES. The Roman Equites were originally the horse-soldiers of the Roman state, and did not form a distinct class or ordo in the commonwealth till the time of the Gracchi. Their institution is attributed to Romulus, who cansed 300 equites, divided into three centuries, to be elected hy the curiae. Each of the old Roman tribes, the Ramnes, Tities, and Luceres was represented by 100 equites, and consequently each of the 30 curiae by 10 equites; and each of the three centuries bore the name of the tribe which it represented. The three centuries were divided into 10 turmae, each consisting of 30 men ; every turma contained 10 Ramnes, 10 Tities, and 10 Luceres; and each of these decuries was commanded by a decurio. The whole body likewise bore the name of Celeres, who are erroneously regarded by some writers simply as the body-guard of the king. The commander of the 300 equites was called Tribunus Celerum. (Dionys. ii. 13; Varr. L. L. v. 91, ed. Müller ; Plin. H. N. xxxiii. 9 ; Festus, s.v. Celeres; Liv. i. 13, 15.) [Celeres.]

To the three hundred eqnites of Romulus, ten Alhan turmae were added by Tullns Hostilins. (Liv. i. 30.) There were consequently now 600 equites ; but as the number of centuries was not increased, each of these centuries contained 200 men. Tarquinius Priscus, according to Livy (i. 36), wished to establish some new centuries of horsemen, and to call them by his own name, but gave up his intention in consequence of the opposition of the augur Attus Navius, and only doubled the number of the centuries. The three centuries which be added were called the Ramnes, Titienses, and Luceres Posteriores. The number ought therefore now to be 1200 in all, which number is given in many editions of Livy (l.c.), but is not found in any manuscript. The number in the manuscripts is different, hut some of the best manuscripts have 1800, which has been adopted by most modern editors. This number, however, is opposed to Livy's previons account, and cannot be supported by the statement of Plutarch (Rom.20), that after the union with the Sabines, the equites were increased to 600 ; because the original 300 are spoken of as the representatives of the three tribes; whereas, sccording to Plutareh's account, the original 300 ought only to represent the Ramnes. If therefore we adopt Livy's account that there were originally 300 equites, tlat these were increased to 600 by Tullus Hostilius, and that the 600 were doubled by Tarquinius Priscus, there were 1200 in the time of the last-mentioned king, being divided into three centuries of Ramnes, Tities, and Luceres, each century containing 200 priores and 200 posn teriores.

The cormplete organization of the equites Livy (i. 43) attributes to Servius Tullius. He says that this king formed (scripsit) 12 centuries of equites from the leading men of the state (ex primaribus civitatis) ; and that he also made six centuries out of the three established by Romulus. Thus, there were now 18 centuries. As each of the 12 new centuries probably contained the same number as the six old centuries, if the latter contained 1200 men, the former would have contained 2400, and the whole number of the equites would have been 3600.

The eccount, however, which Cicero (De Rep. ii. 20) gives is quite different. He attributes the complete organization of the equites to Tarquinius Priscus. He agrees with Livy in saying that Tarquinins Priscus increased the number of the Ramnes, Titienses, and Luceres, by adding new centuries under the name of Ramnes, Titienses, and Laceres secundi (not, however, posteriores, as Livy states; compare Festus s.v. Sex Vestae); but he differs from him in stating, that this king also doubled their number after the conquest of the Aequi. Scipio, who is represented by Cicero as giving this account, also says that the arrangement of the equites, which was made by Tarquinius Priscus, continued unchanged to his day (в.c. 129). The account, which Cicero gave of the equites in the constitution of Servius Tullius, is unfortunately lost, and the only words which remain are duodeviginti censu maximo; but it is difficult to conceive in what way he represented the division of the 18 centuries in the Servian constitution, after he had expressly said that the organization of the body by Tarquinius Priscus had continued unchanged to the time of Scipio. The number of equites in this passage of Cicero is open to much doubt and dispute. Sceipio states, according to the reading adopted in all editions of the "De Republica," that Tarquinius Priscus increased the original number of the equites to 1200 , and that he subsequently doubled this number after the conquest of the Aequi ; which account would make the whole number 2400 , which number cannot be correct, since if 2400 be divided by 18 (the number of the centuries), the quotient is not a complete number. The MS., however, has $\infty$ ACCC, which is interpreted to mean mille ac ducentos; but instead of this, Zumpt (Ueber die Römisclien Ritter und den Ritterstand in Rom, Berlin, 1840) proposes to read $\infty$ DCCC, 1800, justly remarking, that such a use of ac never occurs in Cicero. This reading would make the number, when doubled, 3600 , which agrees with Livy's view, and which appears to have been the regular number of equites in the flourishing times of the republic.
Both Livy and Cicero agree in stating that each of the equites received a horse from the state (equus publicus), or money to purchase one, as well as a sum of money for its anmual support ; and that the expense of its support was defrayed by the orphans and unmarried females; since, says Niebuhr (Hist. of Rome, vol. i. p. 461), "in a military state it could not be esteemed unjust, that the women and the children were to contribute largely for those who fought in behalf of them and of the commonwealth." According to Gaius (iv. 27) the purchase-money for a knight's horse was called aes equestre, and its annual provision aes hordearium. [Aes Hornearium.] The former amounted, according to Livy (i. 43), to 10,000 asses, and the
latter to 2000 : but these sums are so large as to be almost incredible, especially when we take into account that 126 years afterwards a sheep was only reckoned at 10 , and an ox at 100 asses in the tables of penalties. (Gell. xi. 1.) The correctness of these numbers has accordingly been questioned by some modern writers, while others have attempted to account for the largeness of the sum. Niebuhr (vol. i. p. 433) remarks that the sum was doubtless intended not only for the purchase of the horse, but also for its equipment, which would be incomplete without a groom or slave, who had to he bought and then to be mounted. Böckh ( $M e$ trolog. Untersuch. c. 29) supposes that the sums of money in the Servian census are not given in asses of a pound weight, but in the reduced asses of the first Punic war, when they were struck of the same weight as the sextans, that is, two ounces, or onesixth of the original weight. [As.] Zumpt considers that 1000 .asses of the old weight were given for the purchase of the horse, and 200 for its snnual provision; and that the original sum has been retained in a passage of Varro (equum publicum mille assariorum, L. L. viii. 71).
All the equites, of whom we have been speaking, received a horse from the state, and were included in the 18 equestrian centuries of the Servian constitution; but in course of time, we read of another class of equites in Roman history, who did not receive a horse from the state, and were not included in the 18 centuries. This latter class is first mentioned by Livy (r. 7) in his account of the siege of Veii, b. c. 403. He says that during the siege, when the Romans had at one time suffered great disasters, all those citizens who had an equestrian fortune, and no horse allotted to them (quibus census equester erat, equi publici non erant), volunteered to serve with their own horses; and he adds, that from this time equites first began to serve with thcir own horses (tum primum equis merere equites coeperunt). The state paid them (certus numerus aeris est assignatus) as a kind of compensation for serving with thcir own horses. The foot soldiers had received pay a few years before (Liv. iv. 59) ; and two years afterwards, в. c. 401 , the pay of the equites was made threefold that of the infantry. (Liv. v. 12 ; see Niebuhr, vol. ii. p. 439.)

From the year в. c. 403, there were therefore two classes of Roman knights: one who received horses from the state, and are therefore frequently called equites equo publico (Cic. Phil. vi. 5), and sometimes Flexumines or Trossuli, the latter of which, according to Göttling, is an Etruscan word (Plin. H. N. xxxiii. 9 ; Festus, s. v. ; Götling, Gesčh. der Rö̀m. Staatsv. p. 372), and another class, who served, when they were required, with their own horses, but were not classed among the 18 centuries. As they served on horseback they were called equites; and, when spoken of in opposition to cavalry, which did not consist of Roman citizens, they were also called equites Romani; but they had no legal claim to the name of equites, since in ancient times this title was strictly confined to those who received horses from the state, as Pliny (H.N. xxxiii. 7) expressly says, "Equitum nomen subsistchat in turmis equarum publicorum."
But here two questions srise. Why did the equitos, who belonged to the eighteen centuries, receive a horse from the state, and the others not? and how was a person admitted into each class re-
spectively? These questions have occasioned much controversy among modern writers, but the follow. ing a ccount is perhaps the most satisfactory:-
In the constitution of Servius Tullius all the Roman citizens were arranged in different classes according to the amount of their property, and it may therefore fairly be presumed that a place in the centuries of equites was determined by the same qualification. Dionysius (iv. 18) expressly says, that the equites were chosen by Servius out of the richest and most illustrious families; and Cicero ( $D e$ Rep. ii. 22) that they were of the highest census (censu maximo). Livy (i. 43) also states that the twelve centuries formed by Servius Tullius consisted of the leading men of the state. None of these writers, however, mention the property which was necessary to entitle a person to s place among the equites; but it was probshly of the same smount as in the latter times of the republic, that is, four times that of the first class, Every one therefore who possessed the requisite property, and whose character was unblemished (for this latter qualification appears to hsve hesn always necessary in the ancient times of the republic), was admitted among the equites of the Servian constitution ; and it may be presumed that the twelve new centuries were created in order to include all those persons in the state who possessed the necessary qualifications. Niebuhr (Hist. of Rome, vol. i. p. 427, \&c.), however, supposes that the qualification of property was only necessary for admission into the twelve new centuries, and thst the statement of Dionysius, quoted above, ought to be confined to these centuries, and not applied to the whole eighteen. He maintains that the twelve centuries consisted exclusively of plebeiaos; and that the six old centuries (that is, the thres double centuries of Ramnes, Tities and Luceren, priores and posteriores), which were incorporated by Servius into his comitia under the title of the sex suffragia, comprised all the patricians, independent of the amount of property which they possessed. This account, however, does not seem to rest on sufficient evidence; and we have, on the contrary, an express instance of a patrician, L. Tarquitius, B. c. 458, who was compelled on account of his poverty to serve on foot. (Liv, iii. 27.) That the six old centuries consisted entirely of patricians is most probable, since the plebeisns would certainly not have been admitted among the equites at all till the Servian constitution; and as by this constitution new centuries were created, it is not likely that any plebeians would have beea placed among the ancient six. But we hsve no reason for supposing that these six centuries contained the whole body of patricians, or that the twelve consisted entirely of plebeians. We may suppose that those patricians, who belonged to the six, were allowed by the Servian conetitution to continue in them, if they possessed the requisite property ; and that all other persons in the state, whether patricians or plebeians, who possessed the requisite property, were admitted into the 12 new centuries. That the latter were not confined to plebeians may be inferred from Livy, who says that they consisted of the leading men in the state (primores civitatis), not in the plebs.

As vacancies occurred in the eighteen centuries, the descendants of those who were originally enrolled succeeded to their places, whether plebeians or patricians, provided they had not dissipated
their property ; for Niebuhr goes too far when he asserts that all vacancies were filled up according to hirth, independent of any property qualification. But in course of time, as population and wealth increased, the number of persons, who possessed an equestrian fortune, also increased greatly ; and as the number of equites in the 18 centuries was limited, those persons, whose ancestors had not been enrolled in the centuries, could not receive horses from the state, and were therefore allowed the privilege of serving with their own horses anongst the cavalry, instead of the infantry, as they would otherwise have been obliged to have done. Thus arose the two distinct classes of equites, which have been already mentioned.
The inspection of the equites who received horses from the state, belonged to the censors, who had the power of depriving an eques of his horse, snd reducing him to the condition of an aerarian (Liv. xxiv. 43), and also of giving the vacant horse to the most distinguished of the equites who had previously served at their own expense. For these purposes they made during their censorship a public inspection, in the forum, of all the knights who possessed public horses (equitatum recognoscunt, Liv. xxxix. 44 ; equitum centurias recognoscunt, Valer. Max. ii. 9. §6). The tribes were taken in order, and each knight was summoned by name. Every one, as his name was called, walked past the censors, leading his horse. This ceremony is represented on the reverse of many Roman coins struck by the censors. A specimen is annexed.

If the censors had no fault to find either with the character of the knight or the equipments of his horse, they ordered him to pass on (traduc equum, Valer. Max. iv. 1. § 10); but if on the contrary they considered him unworthy of his rank, they struck him out of the list of knights, and deprived him of his horse (Liv. zxxix. 44) or ordered him to sell it (Liv. xxix. 37 ; Valer. Max. ii. 9. $\S 6$ ), with the intention no doubt that the person thus degraded should refund to the state the money which had been advanced to him for its purchase. (Niebubr, Hist. of Rome, vol. i. p. 433.) At the same review, those equites who had served the regular time, and wished to be discharged, were accustomed to give an account to the censors of the campaigns in which they had served, and were then dismissed with honour or disgrace, as they might have deserved. (Plut. Pomp. 22.)

This review of the equites by the censors must not be confounded with the Equitum Transvectio, which was a solemn procession of the body every year on the Ides of Quintilis (July). The procession started from the temple of Mars outside the aity, and passed through the city over the forum, and by the temple of the Dioscuri. On this occasion the equites were always crowned with olive cbaplets, and wore their state dress, the trabea, with all the honourable distinctions which they had

EQUITES.
gained in hattle. (Dionys. vi. 13.) According to Livy (ix. 46) this annual procession was first establisbed by the censors Q. Fabius and P. Decius, B. c. 304 ; but according to Dionysius (l.c.) it was instituted after the defeat of the Latins near the lake Regillus, of which an account was brought to Rome by the Dioscuri.

It may be asked, how long did the knight retain his public horse, and a vote in the equestrian century to which he helonged? On this subject we have no positive information ; but as those equites, who served with their own horses, were only obliged to serve for ten years (stipendia, $\sigma \tau \rho a \tau \in i a s$ ) under the age of 46 (Polyb. vi. 19. \& 2), we may presume that the same rule extended to those who served with the public horses, provided they wished to give up the service. For it is certain that in the ancient times of the republic a knight might retain his horse as long as he pleased, even after he had entered the senate, provided he continued able to discharge the duties of a knight. Thus the two censors, M. Livius Salinator and C. Claudius Nero, in B. c. 204, were also equites (Liv. xxix. 37); and L. Scipio Asiaticus, who was deprived of his horse by the censors in B. c. 185 (Liv. xxxix. 44), had himself been censor in B. c. 191. This is also proved by a fragment in the fourth book (c. 2) of Cicero's "De Republica," in which he says, equitatus, in quo suffragia sunt etiam senatus; by which he evidently means, that most of the senators were enabled to vote at the Comitia Centuriata in consequence of their belonging to the equestrian centuries. But during the later times of the republic the knights were obliged to give up their horses on entering the senate, and consequently ceased to belong to the equestrian centuries. This regulation is alluded to in the fragment of Cicero already referred to, in which Scipio says that many persons were anxious that a plebiscitum should be passed, ordaining that the public horses should be restored to the state, which decree was in all probability passed afterwards; since, as Niebuhr observes (vol. i. p. 433, note 1016), "when Cicero makes Scipio speak of any measure as intended, we are to suppose that it had actually taken place, but, according to theinformation possessed by Cicero, was later than the date he assigns to Scipio's discourse." That the greater nurnber of the equites equo publico, after the exclusion of senators from the equestrian centuries, were young men, is proved by a passage in the work of Q . Cicero, De Petitione Consulatus (c. 8).

The equestrian centuries, of which we have hitherto been treating, were only regarded as a division of the army ; they did not form a distinct class or ordo in the constitution. The community, in a political point of view, was only divided into patricians and plebeians; and the equestrian centuries were composed of both. But in the year B. c. 123, a new class, called the Ordo Equestris, was formed in the state by the Lex Sempronia, which was introduced by C. Gracchus. By this law all the judices had to be chosen from those citizens who possessed an equestrian fortune. (Plut. C. Gracch. 5 ; Appian, De Bell. Civ. i. 22 ; Tac. $A n n$. xii. 60.). We know very little respecting the provisions of this law; but it appears from the Lex Servilia repetundarum, passed eighteen years afterwards, that every person who was to be chosen judex wasrequired to be above thirty and under sixty years of age, to have either an equus publicus or to

## EQUITES.

be qualifed by his fortune to possess one, and not to be a senator. The number of judices, who were required yearly, was chosen from this class by the praetor urbanus. (Klenze, Lex Servilia, Berl. 1825.)

As the name of equites had been originally extended from those who possessed the public horses to those who served with their own horses, it now came to be applied to all those persons who were qualified by their fortune to act as judices, in which sense the word is msually used by Cicero. Pliny (H.N. xxxiii, 7) indeed says that those persons who possessed the equestrian fortune, but did not serve as equites, were only called judices, and that the name of equites was always confined to the possessors of the equi publici. This may have been the correct use of the term ; but custom soon gave the name of equites to the judices chosen in accordance with the Lex Sempronia.

After the reform of Sulla, which entirely deprived the equestrian order of the right of being chosen as judices, and the passing of the Lex Anrelia (в.c.70), which ordained that the judices should be chosen from the senators, equites, and tribuni aerarii, the influence of the order, says Pliny, was still maintained by the publicani (Plin. H. N. xxxiii. 8), or farmers of the public taxes. We find that the publicani were almost always called equites, not because any particular rank was necessary in order to obtain from the state the farming of the tazes, but because the state naturally would not let them to any one who did not possess a considerable fortune. Thus the publicani are frequently spoken of by Cicero as identical with the eqnestrian order (Ad Att. ii. 1. § 8). [Poblicani.] The consulship of Cicero and the active part which the knights then took in suppressing the conspiracy of Catiline, tended still further to increase the power and influence of the equestrian order; and " from that time," says Pliny (l.c.), "it became a third body (corpus) in the state, and, to the title of Senatus Populusque Romanus, there began to he added Et Equestris Ordo."

In b. c. 63, a distinction was conferred upon them, which tended to separate them still further from the plebs. By the Lex Roscia Othonis, passed in that year, the first fourteen seats in the theatre behind the orchestra were given to the equites (Liv. Epit. 99) ; which, according to Cicero (pro Mur. 19) and Velleius Paterculus (ii. 32), was only a restoration of an ancient privilege; which is alluded to by Livy (i. 35), when he says that special seats were set apart in the Circus Maximus for the senators and equites. They also possessed the right of wearing the Clavus Angustus [Clavus]; and subsequently obtaincd the privilege of wearing a gold ring, which was originally confined to the equites equo pnblico.

The number of equites increased greatly under the early emperors, and all persons were admitted into the order, provided they possessed the reqnisite property, without any inquiry into their character or into the free birth of their father and grandfather, which had always been reqnired by the censors under the republic. Property became now the only qualification; and the order in consequence gradually began to loseall the consideration which it had acquired during the later times of the republic. Thns Horace ( $E p$. i. 1. 58) says, with no small degree of contempt, -

Si quadringentis sex septem milia desunt,
Plebs eris.

Augustus formed a select class of equites, cons sisting of those equites who possessed the property of a senator, and the old requirement of free hirth up to the grandfather. He permitted this class to wear the latus clavus (Ovid. Trist. iv. 10. 35) ; and also allowed the tribunes of the plehs to he chosen from them, as well as the senators, and gave them the option at the termination of their office to remain in the senate or return to the equestrian order. (Suet. Aug. 40 ; Dion Cass. liv. 30.) This class of knights was distinguished by the special title illustres (sometimes insignes and splendidi) equites Romani. (Tacit. Ann. xi. 4, with the note of Lipsius.)

The formation of this distinct class tended to lower the others still more in public estimation. In the ninth year of the reign of Tiberins an attempt was made to improve the order by requiring the old qualifications of free birth up to the grandfather, and by strictly forbidding any one to wear the gold ring unless he possessed this qualification. This regulation, however, was of little avail, as the emperors frequently admitted freedmen into the equestrian order. (Plin. H.N. xxxiii. 8.) When private persons were no longer appointed judices, the necessity for a distinct class in the community, like the equestrian order, ceased entirely; and the gold ring came at length to be worn by all frea citizens. Even slaves, after their manumissiom, were allowed to wear it by special permission from the emperor, which appears to have been nsually granted provided the patronus consented. (Dig. 40. tit. 10. s. 3.) [ANnulus.]

Having thus traced the history of the equestrian order to its final extinction gs a distinct class in the community, we must now return to the equites equo publico, who formed the eighteen equestrian centuries. This class still existed during the latter years of the republic, but had entirely ceased to serve as horse-soldiers in the army. The cavalry of the Roman legions no longer consisted, as in ths time of Polybius, of Roman equites, but their placs was supplied by the cavalry of the allied states. It is evident that Caesar in his Gallic wars possessed дo Roman cavalry. (Caes. Bell. Gall. i. 15.) When he went to an interview with Ariovistus, and was obliged to take cavalry with him, we are told that he did not dare to trust his safety to the Gallic cavalry, and therefore mounted his legionary soldiers upon their horses. (Id. i. 42.) The Roman equites are, however, frequently meationed in the Gallic and civil wars, but never as common soldiers; they were officers attached to the staff of the general, or commanded the cavalry of the allies, or sometimes the legions. (Id. vii. 70; Bell. Civ. i. 77, iii. 71, \&c.)

After the year B. c. 50 , there were no censors in the state, and it would therefore follow that for some years no review of the body took place, and that the vacancies were not filled up. When Angustos however took npon himself, in 8.c. 29 , the praefectura morum, he frequently reviewed the troops of equites, and restored, according to Snetonius (Aug. 38), the long-neglected custom of the solcmn procession (transvectio); by which we are prohably to understand that Augustus connected the review of the knights (recognitio) with the annual procession (transvectio) of the 15 th of July. From this time these equites formed an honourable corps, from which all the higher officers in the army (Suet. Aug. 38, Claud. 25) and the chief magis-
trates in the state were chosen. Admission into this body was equivalent to an introduction into public life, and was therefore esteemed a great privilege ; whence we find it recorded in inscriptions that such a person was equo publico honoratus, exornatus, \&c. by the emperor. (Orelli, Inscrip. No. $3457,313,1229$. .) If a young man was not admitted into this body, he was excluded from all civil offices of any importance, except in municipal towns ; and also from all rank in the army, with the exception of centurion.

All those equites who were not employed in actual service were obliged to reside at Rome (Dion Cass. lix. 9), where they were allowed to fill the lower magistracies, which entitled a person to admission into the senate. They were divided into six turmae, each of which was commanded by an officer, who is frequently mentioned in inscriptions as Sevir equitum Rom. turmae 1. II. \&c., or commonly Sevir turmae or Sevir turmarum equitum Romanorum. From the time that the equites bestowed the title of principes juventutis upon Caius snd Lucius Caesar, the grandsons of Augustus (Tacit. Ann. i. 3 ; Monum. Ancyr.), it became the custom to confer this title, as well as that of Sevir, upon the probable successor to the throne, when he first entered into public life and was presented with an equus publicus. (Capitol. M: Anton. Plit. 6 ; Lamprid. Commod. 1.)

The practice of filling all the higher offices in the state from these equites appears to have continued as long as Rome was the centre of the government and the residence of the emperor. They are mentioned in the time of Severus (Gruter, Inscrip. p. 1001.5 ; Papinian, in Dig. 29. tit. 1. s. 43), and of Caracalla (Gruter, p. 379. 7) ; and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the Praefectus Vigilum; but they still retained in the time of Valentinianus and Valens, A. D. 364 , the second rank in the city, and were not subject to corporal punishment. (Cod. Theodos. 6. tit. 36.) Respecting the Magister Equitum, see Dictator.
(Zumpt, Ueber die Römischen Ritter und den Ritterstand in Rom, Berlin, 1840; Marqusrdt, Historiae Equitum Romanorum libri IV. Berlin, 1840 ; Madvig, De Loco Ciceronis in lib. iv. de Republica, in Opuscula, vol. i. p. 72, \&c. ; Becker Handbuch der Römischen Alterthümer, vol. ii. part i. p. $235, \& \mathrm{c}$.)

EQUULEUS or ECULEUS, an instrument of torture, which is supposed to hsve been so called hecause it was in the form of a horse. We have no description of its form given by any of the ancient writers, but it appears not to have differed greatly from the crux. (Cic. Pro Mil. 21, compared with certa crux, c. 22.) It appears to have been commonly used at Rome in taking the evidence of slaves. (See Sigonius, De Judiciis, iii. 17 ; Magius, De Equuleo, in Salengre's Nov. Thesaur. Ant. Rom. vol. ii. p. 1211, \&c.)

## EQUUS OCTOBER. [Palilia.]

E'RANI ( $\epsilon$ ( $\rho \alpha \nu 0 \varsigma$ ), were clubs or societies, established for charitable or convivial purposes, or for both. They were very common at Athens, and suited the temper of the people, who were both social and generous. The term ${ }^{\circ} \rho a \nu o s$, in the sense of a convivial party, is of ancient date. (Hom. Od. i. 226.) It resembled our picnics, or the German pikeniks, and was also called $\delta \in \hat{i} \pi \nu 0 \nu$
 hrought his own dish, or (to save trouble) one was deputed to cater for the rest, and was afterwards repaid by contributions. [Corns, p. 304, b.] The clubs that were formed at Athens used to dine together at stated periods, as once a month; and every member was bound to pay his subscription, which (as well as the society jtself) was called Épavos, and the members épavoctal. If any member failed to pay, the sum was made up by the
 who afterwards recovered it, if he could, from the
 pay the subscription, as $\lambda \epsilon i \pi \epsilon \epsilon \nu$ or $\hat{\epsilon} \kappa \lambda \epsilon i \pi \epsilon \epsilon \nu$, to make default. (Dem. c. Aphob. p. 821, c. Mid. p. 547, c. Aristog. p. 776.)

There were also associations under this name, for the purpose of mutual relief, resembling in some degree our friendly or benefit societies; but with this essential difference, thst the relief which they afforded was not (as it is with us) based upon any calculation of natural contingencies, but was given pro re nata, to such poor members as stood in need of it. The Athenian societies do not appear to have kept up a common fund by regular subscriptions, though it is probahle that the sum which each member was expected to advance, in case of need, was pretty well understood. If a man was reduced to poverty, or in distress for money for any cause, he applied to the members of his club for assistance; this was called $\sigma u \lambda$ $\lambda \epsilon ́ \gamma \epsilon \epsilon \nu \stackrel{\epsilon}{\rho} \rho \alpha \nu 0 \nu:$ those who advanced it were ssid
 loan, repayable by the borrower when in better circumstances. Isaeus (De Hagn. Mered. p. 294) reckons among the assets of a person, $\bar{\epsilon} \xi \in \rho \alpha \nu \omega \nu$ ò $\phi \in \lambda \dot{\eta} \mu \alpha \pi \alpha$ єi $\sigma \pi \in \pi \rho \alpha \gamma \mu \epsilon \in \nu a$, from which we may infer, that each contributor was entitled to recover the sum he had lent. For the recovery of such losms, and for the decision of other disputes, there were tpavikal סikal, in which a summary and equitable kind of justice was administered. Plato (Leg. xi. p. 915) disapproved of lawsuits in such matters, and would not allow them in his republic.

Salmasius contends that wherever the term € $\rho \alpha \nu \circ s$ is applied to an established society, it means only a convivial club, and that there were no regular associations for the purposes of charity ; but others have held a different opinion. (See Salmas. De Usuris, c. 3, Obs. ad Jus Att. et Rom. and Herald. Animadv. in Salmas., referred to in Meier's Att. Proc. p. 540.) It is not probable that many permanent societies were formed with the sole view of feasting. We know that at Athens, as well as in the other Grecian republics, there were clubs for various purposes, political as well as social: the members of which would naturally meet, and dine together at certain periods. Such were the religious companies ( (1ia $\sigma 01$ ), the commercial ( $\epsilon^{\prime} \mu \pi$ торєкal), and some others. (Böckh, Pol. Econ. of Athens, p. 245, 2nd ed.) Unions of this kind were called by the general name of exatplat, and were often converted to mischievous ends, such as bribery, overawing the public assembly, or influencing courts of justice. (Thuc. iii. 82; Dem. De Coron. p. 329 ; Thirlwall, Gr. Hist. vol. iv. p. 36.) In the days of the Roman empire friendly societies, under the name of ${ }^{\circ} \rho a \nu 0$, , were frequent among the Greek cities, but were looked on with suspicion by the emperors as leading to political combinations. (Plin. Ep. x. 93, 94.) The
gilds, or fraternities for mutual aid, among the ancient Saxons, resembled the ${ }^{2} \rho a a_{0}$ of the Greeks. (Turner's Hist. of the Anglo-Saxons, iv. 10.) Compare also the àaral, or love-feasts of the early Christians.

The word $\epsilon \rho a \nu o s$ is often used metaphorically, to signify any contributions or friendly advance of money.
[C. R. K.]
ERGA'STULUM was a private prison attached to most Roman farms, called carcer rusticus by Juvenal (xiy. 24), where the slaves were made to work in chains. It appears to have been usually under ground, and according to Columella (i. 6) ought to be lighted by narrow windows, which shonld be too high from the ground to be touched hy the hand. The slaves confined in an ergastulum were also employed to cultivate the fields in chains. (Plin. H. N. xviii. 7. §4; Flor. iii. 19.) Slayes who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon or were barbarous in their habits, were regularly kept. A trustworthy slave had the care of the ergastulum, and was therefore called ergastularius. (Colum. i. 8.) According to Plutarch (Tib. Gracch.8), these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarons slaves who were employed to cultivate the conquered lands. In the time of Hadriau and Antoninus, many enactments were made to ameliorate the condition of slaves; and among other salntary measures, Hadrian abolished the ergastula, which must have been liable to great abuse in the hands of tyrannical masters. (Spart. Hadrian, 18, compared with Gaius, i. 53.) For further information on the subject, see Brissonius, Antiq. Select. ii. 9 ; Lipsius, Elect. ii. 15, Opera, vol. i. p. 317, \&c.; Gottling, Gesch. der Röm. Staatsv. p. 135.

ERI'CIUS, a military engine full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy. (Caes. B. C. iii. 67 ; Sallust, apud Non. xviii. 16 ; Lipsius, Poliorcet. v. 4.)

EROGA'TIO. [Aquarnuctus, p.115, a.]
 $0(\alpha)$, the most solemn of all the festivals celebrated in the Boeotian town of Thespiae. It took place every fifth year, and in honour of Eros, the principal divinity of the Thespians. Respecting the particulars nothing is known, except that it was solemnised with contests in music and gymnastics. (Plut. Amat. 1 ; Pans. ix. 31. § 3 ; Athen. xiii. p. 561.) The worslip of Eros seems to have been established at Thespiae from the earliest times; and the ancient symbolic representation of the god,
 upon with particular reverence even when sculpture had attained the highest degree of perfection among the Greeks. (Paus. ix. 27. § 1 ; compare Schol. ad Pind. Olymp. vii. 154 ; Ritschl, in the Rhein. Mus. val. ii. p. 106.) [L.S.]

ERRHEPHO'RIA or ERSEPHO'RIA ( $\epsilon^{\prime} p$ $\rho \eta \phi \delta \rho \iota a$ or é $\rho \sigma \eta \phi$ о́pla.) [Arrephoria.]

ESCHARA ( $\epsilon \sigma \chi d \rho a$ ). [Focus.]
E'SSEDA or E'SSEDUM (from the Celtic Ess, a carriage, Ginzrot, vol. i. p. 377), the name of a chariot used, especially in war, by the Britons, the Gauls and Belgae (Virg. Georg. iii. 204 ; Servius, ad loc.) ; and also by the Germans (Pers. vi. 47).

According to the account given by Caesar (Bell Gail. iv. 33), and agreeably to the remarks of Diodorus Siculus (v. 21, 29), the method of using the essedum in the ancient British army was very similar to the practice of the Greeks in the heroic ages, as described by Homer, and in the articls Currus. The principal difference seems to have been that the essedum was stronger and more ponderous than the $\delta$ í $\phi \rho o s$, that it was open before instead of behind; and that in consequence of these circumstances and the width of the pole, the owner was able, whenever he pleased, to run along the pole (de temone Britanno excidet, Juv. iv. 125), and even to raise himself upon the yoke, and then to retreat with the greatest speed into the body of the car, which be drove with extraordinary swiftness and skill. From the extremity of the pole, he threw his missiles, especially the cateia (Val. Flacc. Argon. vi. 83). It appears also that these cars were purposely made as noisy as possible, prohahly by the creaking and clanging of the wheels (strepitu rotarum, Caes. l.c. ; compare Tacit. Agric. 35 ; Esseda multisonora, Claud. Epig.iv.) ; and that this was done in order to strike dismay into the enemy. The formidable British warriors who drove these chariots, the "car-borne" of Ossian, were called in Latin Essedariz. (Caes. B. G. iv. 24 ; Cic. ad Fam. vii. 6.) There were about 4000 of them in the army of Cassibelaunus. (Caes. B. G. v. 19.) Having heen captured, they were sometimes exhibited in the gladiatorial shows at Rome, and seem to have been great favourites with the people. (Sueton Calig. 35, Claud.21.) They must have held the highest rank in the armies of their own country; and Tacitus (Agric. 12) observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans. (Propert. ii. 1. 76 ; Cic. ad Att. vi. 1 ; Ovid. Am. ii. 16 , 49.) Cicero (Phil. ii. 24) mentions the use of it on one occasion by the tribune of the people as a piece of extravagance; but in the time of Seneca, it seems to have been much more common; for he (Epist. 57) reckons the sound of the "essedae transcurrentes" among those noises which did not distract him. As nsed by the Romans, the essedum may have differed from the cisinm in this; that the cisinm was drawn by one horse (see woodcut, p. 288), the essedum always by a pair. The essedura, like the cisium, appears to have been kept for hire at the post-houses or stations (Salonem quinto essedo videbis, Mart. x. 104.) [Mansio.] The essedum must have heen similar to the Covrnus, except that the latter had a cover. [J. Y.]

ESSEDA'RII. [Essena.]
EVI'CTIO. If the purchaser of a thing was deprived of it by a third person by legal process (evicted), the seller was bound to make good the loss (evictionem praestare). If the seller knew that he was selling what was not his own, this was a case of dolns, and he was bound in case of eviction to make good to the purchaser all loss and damage that he sustained. If there was no dolus on the part of the seller, he was simply bound to make good to the purchaser the value of the thing at the time of eviction. It was necessary for the purchaser to neglect no proper means of defence, when an attempt was made to evict him ; and it was his duty to give the seller notice of the ad
verse claim (litem denunciare), and to pray his aid in defence of the action. The stipulatio duplae was nsual among the Romans; and, in such case, if the purchaser was evicted from the whole thing, he might by virtue of his agreement demand from the seller double its value (Dig. 21. tit. 2, De evictionibus et duplae stipulatione; Mackeldey, Lelirbuch, \&c., § 370, 12th ed.)
[G. L.]
EUMO'LPIDAE ( $\left.\epsilon \dot{\dot{j}} \mu_{0} \lambda \pi!\delta a 1\right)$, the most distinguished and venerable among the priestly families in Attica. They were devoted to the service of Demeter at Athens and Eleusis, and were said to be the descendants of the Thracian bard Eumolpus, who, according to some legends, had introduced the Eleusinian mysteries into Attica. (Diod. Sic. i. 29; Apollod. iii. 15. §4; Demosth. o. Neaer. p. 1384.) The high priest of the Elensinian
 ducted the celebration of her mysteries and the initiation of the mystae, was always a member of the family of the Eumolpidae, as Eumolpus himself was believed to have been the first hierophant. (Hesych. 8.v. È̀ $\mu$ о $\boldsymbol{\lambda}$ rißat: Tacit. Hist. iv. 83; Arnob., v. 25; Clemens Alex. Protrent.p. 16, \&c.) In his external appearance the hierophant was distinguished by a peeuliar cut of his hair, a kind of diadem ( $\sigma \tau \rho \delta$ $\phi t o \nu$ ), and a long purple robe. (Arrian. in Epictet. iii. 21 ; Plut. Alcib. 22.) In his voice he seems always to have affected a solemn tone suited to the sacred character of his office, which he held for life, and which obliged him to remain unmarried. (Pans. ii. 14. § 1.) The hierophant was attended by four $\dot{\epsilon} \pi \tau \mu \in \lambda \eta \tau \alpha i$, one of whom likewise belonged to the family of the Eumolpidae. (Harpocrat. and
 members of their family do not seem to have had any particular functions at the Eleusinia, though they undoubtedly took part in the great procession to Eleusis. The Eumolpidae had on certain occasions to offer up prayers for the welfare of the state, and in case of neglect they might be taken to account and punished; for they were, like all other priests and magistrates, responsible for their conduct, and for the sacred treasures entrusted to their care. (Aeschin. c. Ctesiph. p. 56, Steph.; compare Euthyne.)
The Eumolpidae had also judicial power in cases where religion was violated ( $\pi \in \rho!$ à $\sigma \in 6 \epsilon \in\{a s$, Demosth. e. Androt. p. 601). This power probably belonged to this family from the earliest times, and Solon as well as Pericies do not seem to have made any alteration in this respect. Whether this religious court acted independent of the archon king, or under his guidance, is uncertain. The law according to which they pronounced their sentence, and of which they had the exclusive possession, was not written, hat handed down by tradition; and the Eumolpidae alone had the right to interpret it, whence they are sometimes called ${ }^{\prime} \xi \eta \gamma \eta \tau \alpha$. [Exegetae.] In cases for which the law had made no provisions, they acted according to their own discretion. (Lysias, c. Andocid. p. 204 ; Andocid, De Myst. p. 57.) Respecting the mode of proceeding in these religious courts nothing is known. (Heffter, Athen. Geriehtsverf. p. 405, \&c. ; Platner, Process, ii. p. 147, \&c.) In some cases, when a person was convicted of gross violation of the public institutions of his country, the people, besides sending the offender into exile, added a clause in their verdict that a curse should be pro. nounced upon him by the Eumolpidae. (Plut.

Alcib. 22 ; Corn. Nep. Alcib. 4, 5.) But the Eumolpidae could pronounce such a curse only at the command of the people, and might afterwards be compelled by the people to revoke it and purify the person whom they had cursed before. (Plat. Alcib. 33 ; Corn. Nep. Alcib. 6. 5.) [L. S.]

EVOCA'TI, were soldiers in the Roman army, who had served out their time and obtained their discharge (missio), but had voluntarily enlisted again at the invitation of the consul or other commander. (Dion Cass. xlv. 12.) There appears always to have been a considerable number of evocati in every army of importance; and when the general was a favourite among the soldiers, the number of veterans who joined his standard would of course be increased. The evocati were, doubt less, released, like the vexillarii, from the common military duties of fortifying the camp, making roads, \&c. (Tacit. Ann. i. 36), and held a higher rank in the army than the common legionary soldiers. They are sometimes spoken of in conjunction with the equites Romani (Caes. Bell. Gall. vii. 65), and sometimes classed with the centurions. (Caes. Bell. Civ. i. 17.) They appear to have been frequently promoted to the rank of centurions. Thus Pompey induced a great many of the veterans, who had served under him in former years, to join his standard at the breaking out of the civil war, by the promise of rewards and the command of centuries (ordinum, Caes. Bell. Civ. i. 3). All the evocati could not, however, have held the rank of centurions, as we read of two thonsand on one occasion (Ib. iii. 88), and of their belonging to certain cohorts in the army. Cicero (ad Fam. iii. 6. § 5) speaks of a Praefectus evocatorum. (See Cic. ad Fam. xv. 4. § 3 ; Caes. Bell. Civ. iii. 91 ; Suet. Aug. 56 ; Lipsius, De Milit. Rom. i. 8.)
The name of evocati was also given to a select body of young men of the equestrian order, who were appointed by Domitian to gaard his hedchamber. (Suet. Dom. 10.) This body is supposed by some writers to have existed under the succeeding emperors, and to have been the same as those who are called Ewocati Augusti. (Hyginus, de Lim. 'p. 209 ; Orelli, Inscrip. No. 3495, 153.)

EUPA'TRIDAE ( $\epsilon \dot{j} \pi \alpha \tau \rho i \delta a \iota$ ), i.e. descended from noble ancestors, is the name by which in early times the nobility of Attica was designated. Who the Eupatridae originally were has been the subject of much dispute ; but the opinion now almost universally adopted is, that they were the noble Ionic or Hellenic families who at the time of the Ionian migration settled in Attica, and there exercised the power and influence of an aristoeracy of warriors and conquerors, possessing the best parts of the land, and commanding the services of a numerous class of dependents. (Thirlwall, Hist. of Greece, vol. i. p. 115, \&ce. ; Wachsmuth, vol. i. p. 361 , \&c., 2d ed.) The chiefs who are mentioned as kings of the several Attic towns, before the organisation of the country ascribed to Tbeseus, belonged to the highest or ruling class of the Eupatridae; and when Theseus made Athens the seat of government for the whole country, it must bave been chiefly these nobles of the bighest rank, that left their former residences and migrated to Athens, where, after Thesens had given up his royal prerogatives and divided them among the nobles, they occupied a station similar to that which they had previously held in their several districts of Attica. Other Eupatridae, however, who either were not

## EUTHYNE.

of the highest rank, or were less desirous to exercise any direct influence upon the government, remained in their former places of residence. (Thirlwall, vol ii. p. 8.) In the division of the inhabitants of Attica into three classes, which is ascribed to Theseus, the Enpatridae were the first class (Plut. Thes. 25), and thus formed a compact order of nobles, united by their interests, rights, and privileges. The first, or at least the most ambitious among them, undoubtedly resided at Athens, where they enjoyed nearly the same privileges as they had before the union in the separate townships of Attica. They were in the exclusive possession of all the civil and religions offices in the state, regulated the affairs of religion, and interpreted the laws human and divine. (Müller, Dor. ii. 2. § 15.) The king was thus only the first among his equals, being distinguished from them only hy the duration of his office (Schömann, De Comit. p. 4, transl.) ; and the four kings of the phylae ( $\phi u \lambda 0$ ba $\sigma 1 \lambda \epsilon i s)$, who were chosen from the Enpatridae, were more his colleagues than his counsellors. (Pollux, viii. 111.) The kingly power was in a state of great weakness; and, while the overbearing influence of the nobles, on the one hand, naturally tended gradually to abolish it altogether, and to establish a purely aristocratical government in its stead (Hermann, Pol. Ant. of Greece, § 102), it produced, on the other hand, effects which threatened its own existence, and at last led to the entire overthrow of the hereditary aristocracy as an order: for the commonalty, which had likewise gained in strength by the union of all the Attic townships, soon hegan to feel the oppression of the aristocracy, which in Attica produced nearly the same effects as that of the patricians at Rome. The legislation of Draco seems to have arisen ont of the growing discontent of the commonalty with the oppressive rule of the nobles (Thirlwall, vol. ii. p. 18, \&c.) ; but his attempts to remedy the evil were more calculated to intimidate the people than to satisfy them, and could consequently not have aay lasting results. The disturhances which, some years after, arose from the attempt of Cylon, one of the Eupatridae, who tried to overthrow the aristocratical governmeat and establish himelf as tyrant, at length led to the legislation of Solon, by which the political power and inflnence of the Eupatridae as as order was broken, and property instead of hirth was made the standard of political rights. (Aristot. Polit. ii. 9 ; Dionys. Hal. Ant. Rom. ii. 8 ; Aelian, V. $H$. v. 13.) But as Solon, like all ancient legislators, abstained from abolishing any of the religious institutions, those families of the Eupatridae in which certain priestly offices and functions were hereditary, retained these distinctions down to a very late period of Grecian history. (Compare Schömann, Antiq. Jur. publ. Graec. p. 167, \&c., and p. 77, \&c.)
[L.S.]
EURI'PUS. [Amphitheatrum, p. 88, b.]

## EUSTYLOS. [Templum.]

EUTHY'NE and EUTHY'NI (e $\dot{\theta} \dot{v} w \eta$, Ejuvvou). All public officers at Athens, especially generals, ambassadors, the archons and their assessors, the diaetetae, priests and priestesses (Aeschin. c. Ctesiph. p. 56. Steph.), the secretaries of the state (Lysias, c. Nicomach.), the superintendents of public buildings, the trierarchs, and even the senate of the Five Hundred and the members of the Areiopagus, were accountahle for
their conduct and the manner in which they acquitted themselves of their official duties. The judges in the popular courts seem to have heen the only anthorities who were not responsible (Aristoph. Vesp. 546 ; Hudtwalcker, Von den Diaetet. p. 32) ; for they were themselves the representatives of the people, and would therefore, in theory, have been responsible to themselves. This account, which officers had to give after the time of their office was over, was called $\epsilon \dot{\theta} \theta \dot{\nu} \nu \eta$ : and the officers subject to it, vinciulvvot. Every puhlic officer had to render his account within thirty days after the expiration of his offics (Harpocrat. Phot. and Swid. s. v. Novioval and EVOvyoi) ; and as loag as this duty was not fulfilled, the whole property of the ex-officer was in hoadage to the state (Aeschin. c. Ctesiph. p. 56. Steph.): he was not allowed to travel beyond the frontiers of Attica, to consecrate any part of his property as a donarium to the gods, to make his will, or to pass from one family into another by adoption; no public honours or rewards, and no new office conld be given to him. (Aeschin, and Demosth. DeCoron. and c. Tim.p. 747.) If within the stated period an officer did not send in his account, an
 against him. (Pollux, viii. 54 ; Hesych. Suid. Etym. Mag. s. v. 'A入oy an officer submitted to the $\epsilon \hat{\theta} \theta \dot{v} v \eta$, any citizen had the right to come forward and impeach him. Those who, after having refused to suhmit to the $\epsilon \dot{3} 0 \delta v \eta$, also disoheyed the summons to defend themselves before a court of justice, therehy forfeited their rights as citizens. (Demosth. c. Mid. p. 542.)
It will appear from the list of officers subject to the euthyne, that it was not confined to those whose office was connected with the administration of the public money, or any part of it; hut in many cases it was only an inquiry into the manner in which a person had behaved himself in the discharge of his official dnties. In the former case the scrutiny was conducted with great strictness, as the state had various means to check and control the proceedings of its officers ; in the latter, the euthyne may in many instances have been no more than a personal attendance of the ex-officer before the representatives of the people, to sec whether any charge was brought againat him. When no accuser appeared, the officer was honourably dismissed (ėı, Coron.p.310). After an officer had gone through the euthyne, he hecame àveíguvos. (Pollux, viii. 54.)

The officers before whom the accounts were given were in some places called $\epsilon \ddot{\omega} \theta \nu \nu o l$ or $\lambda o \gamma i \sigma-$ Taí, in others ékeraataí or ouvifropol. (Aristot. Polit. vi. 5. p. 213, ed. Goettling.) At Athens we meet with the first two of these names, and both are mostly mentioned together ; but how far their functions differed is very uncertain. Some grammarians (Etymol. Magn. and Phot. s. v. E Efovol) state that $\lambda 0 \gamma เ \sigma \tau a l$ was the name of the same officers who were formerly called ev̌धvvol. But from the manner in which the Greek orators speak of them, it can scarcely be douhted that their functions were distinct. From the authorities referred to by Böckh (Publ. Econ. p. 190, \&c. 2d ed. compare the Rhein. Mus. 1827, vol. i. p. 72, \&c.), it seems, moreover, clear that the office of the خoyiotai, though closely connected with that of the evouvol, was of greater extent than that of the latter, who appear rather to have been the

EXAIRESEOS DIKE.
EXAUGURATIO.
assessors of the former, than a totally distinct class of officers, as will be seen hereafter. All accounts of those officers who had anything to do with the public money were, after the expiration of their office, first sent in to the $\lambda o \gamma เ \sigma \tau a i$, who examined them, and if any difficulty or ineorreetness was discovered, or if charges were brought against an exofficer within the period of 30 days, the further inquiry devolved apon the coblvoos, before whom the officer was obliged to appear and plead his cause. (Hermann, Polit. Antiq. of Greece, § 154. 8.) If the $\epsilon^{3} \theta u v o l$ found that the accounts were unsatisfactory, that the officer had embezzled part of the public money, that he had accepted bribes, or that charges bronght against him were well founded, they referred the case to a court of jintice, for which the doytotal appointed the judges by lot, and in this court their herald proclaimed the question who would come forward as accuser. (Aeschin. c. Ctesiph. p. 57, ed. Steph. ; Etymol. Magn. s. v. Eu̇túva; Bekker, Anecdot. p. 245. 6.) The place where the court was held was the same as that to which ex-officers sent their aecounts to be examined by the $\lambda о \gamma เ \sigma \tau \alpha i$, and was called $\lambda о \gamma เ \sigma \tau \eta$ hoov. (Andocid. De Myst. p. 37 ; Lys. c. Polystrat. p. 672.) It can scarcely be donbted that the ev̌月uvou took an active part in the trials of the $\lambda 0 \gamma \boldsymbol{\sigma} \tau \mathfrak{q}$ poov: but whether they acted only as the assessars of the रoysotal, or whether they, as Pollux atates, exacted the embezzled sums and fines, instead of the practores, is uncertain. The number of the evevvol, as well as that of the doraftai, was ten, one being taken from every tribe. (Phot. s. v.
 doyıotal were appointed by the senate, and chosen by lot; whether the euvovol were likewise chosen by lot is uncertain, for Photius uses an expression derived from $\kappa \lambda \bar{\eta} \rho 0 s$ (lot), while Pollux (viii. 99)
 خopiotaîs, according to which they were like the asscssors of the archons; the latter account, however, seems to be more consistent and more probable. Every $\epsilon \ddot{\forall} \theta u \nu 0 s$ had two assessors ( $\pi \dot{\alpha} \rho \in \delta \rho 01$ ). (See Böckh, Publ. Econ. l.c.; Titmann, Griech. Stactsv. p. 323, \&c.; Hermann, Polit. Antiq. of Greece, § 154; Schömann, Antiq. Jur. publ. Graec. p. 239, \&c.)
The first traces of this truly democratic institution are generally found in the establishment of the archonship (á $\rho \chi \bar{\eta} \dot{v} \tau \in \dot{U} \theta u v o s$ ) instcad of the kingly power, by the Attic nobles (Paus. iv. 5. 4). It was from this state of dependence of the first magistrates upon the order of the nobles that, in the course of time, the regular euthyne arose. Similar institutions were established in several other republics of Greece. (Arist. Polit. vi. 5 ; Wachsmuth, Hellen Alterth. i. p. 419, \&c. 2d. ed.) [L.S.]

EXAGO'GES DIKE' ( ${ }^{\prime} \xi a \gamma \omega \gamma \hat{\eta} s \delta(k \eta)$, a suit of a public nature, which might be instituted against one, who, assuming to aet as the proteetor (cúptos) of an Athenian woman, married her to a foreigner in a foreign land. This was contrary to law, intermarriage with aliens being (as a general rule) prohibited. In the speech of Demosthenes against Timocrates (p. 763), he is charged with having sold his sister to a Corcyrean, on pretence of giving her in marriage. (Meier, Att. Proc. p. 350. )
[C. R. K.]
EXAIRE'SEOS DIKE' (ध $\xi \alpha a \rho \in \sigma \epsilon \omega s$ סín $\eta$ ), was an action brought to recover damages for the attempt to deprive the plaintiff of his slave; not where the defendant claimed a property in the
slave, bnt where he asserted him to he a freeman As the condition of clavery at Athens incapaeitated a man to take any legal step in his own person, if a repnted slave wished to recover his rights as a freeman, he could only do it by the assistanee of one who was himself a frecman. He then put himself under the protection of such a person, who
 Oeplay, in libertatem vindicare. If the master sought to reclaim him, he proceeded to take manual possession, ö $\gamma \epsilon t \nu$ aù $\tau \dot{\partial} \nu$ єís $\delta o u \lambda$ eíav. A runaway slave might at any time be seized by his master, either in the open street or elsewhere, except in a sanctuary. If the friend or person who harboured the slave meant to contest the master's right, the proper course was to go with him before the magistrate, and give security for the value of the slave and costs, in case a court of law should decide against him. The magistrate who took cognizance of the cause was the archon, where a man elaimed to be a citizen ; the polemarch, where he claimed to be an alien freeman. It was the duty of the archon or polemarch to set the man at liberty pendente lite. In the suit that followed, the plaintiff had to prove his title to the ownership of the slave, and, if successful, obtained such compensation as the jury chose to award; this being a $\tau \iota \mu \tau \tau \dot{\delta} \dot{\alpha} \gamma \dot{\omega} \nu$, and half of the $\tau i \mu \eta \mu \alpha$ being given to the state. (Dem. c. Theoer. p. I328.) A verdict for the plaintiff drew with it, as a necessary consequence, the adjudication of the ownership, and he would be entitled to take possession of his slave immediately: if, however, the slave had escaped in the meantime, and evidence of such fact were produced, the jury would probably take that into consideration in estimating the damages.

If the friend, in resisting the capture of the slave, had used actual violence, he was subjeet to a $\delta i \kappa \eta$ Bıaiwy. And if the soi-disant master had failed in the $\boldsymbol{\epsilon} \xi$. Siten, the injured party might maintain an action against him for the attempted seizure. (Lys. e. Pancl. p. 734, \&e., with Reiske's note ; Dem. e. Neaer. p. 1358; Harpocr. s. v.

In a speech of Isocrates (Trapez. p. 361), the defendant, a banker, from whom it is sought to recover a deposit, is charged with having asserted the freedom of his own slave, in order to prevent his being examined by torture respecting the sum of money deposited in his hands. This is remarkable on two accounts: first (as Meier observes), because it scems to prove that one not the owner of the slave could bring the $\bar{\epsilon} \xi$. Ditc $\eta$, if he had an interest in the matter; secondly, because it was optional with a man to give up his slave to the torture or not, the refneal being only matter of observation to the jury ; and, therefore, it appears strange that aay one should have recourse to a measure, the result of which (if suecessful) would be, to deprive him of his property. [C. R. K.]

EXAUCTORA'TIO. [ExERCITUS.]
EXAUGURATIO is the act of changing a sacred thing into a profane one, or of taking away from it the sacred character which it had received by inauguratio, consecratio, or dedicatio. That buch an act was performed by the augurs, and never without consulting the pleasure of the gods by augurium, is implied in the name itself. (Lir. i. 55, v. 54 ; Dionys. Hal. Antiq. Rom. iii. p. 202, ed. Sylburg ; Cato. ap. Fest. s. v. Nequitizm.) Temples, chapels, and other consecrated places, as

## EXERCITORIA ACTIO.

well as priests, were considered as helonging to the gods. No consecrated place whatever could be applied for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, withont being previously exaugurated; and priests could not give up their sacred functions, or (in case they were abliged to live in celihacy) enter into matrimony, without first undergoing the process of exauguratio. (Gellins, vi. 7. 4 ; Jul. Capitol. M. Anton. Philos. c. 4.) [L. S.]

EXCE'PTIO. [Actio.]
EXCU'BIAE. [CASTRA, p. 250.]
EXCUBITO'RES, which properly means watchmen or sentinels of any kind (Caes. Bell. Gall. vii. 69), was the name more particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor. (Suet. Ner. 8, Oth. 6.) Their commanding officer was called triburus excubitor. (Snet. Claud. 42, Ner. 9.) When the emperor went to an entertainment at the house of another person, the excubitores appear to have accompanied him, and to have kept guard as in his own palace. (Suet. Oth. 4.)

EXEDRA ( $\epsilon^{\prime} \xi \in \delta \delta \rho \alpha$ ), which properly signifies a seat out of doors, came to be used for a chamber furnished with seats, and opening into a portico, where people met to enjoy conversation ; such as the room which Vitruvius descrihes as opening on to the peristyle of the gynaeconitis of a Greek house [Domus], and as the rooms attached to a gymnasium, which were used for the lectures and disputations of the rhetoricians and philosophers. [Gymnasium.] The former class of exedrae Vitruvius indeed calls hy another name, namely $\pi \alpha \rho a \sigma \tau \alpha ́ s$ or $\pi a \sigma \tau \alpha ́ s$, but the word $\mathfrak{\epsilon} \xi \in \dot{\delta} \delta \rho a$ occurs in Euripides (Orest. 1449) in this sense, and Pollux mentions the words $\varepsilon \xi \in \in \delta \rho \alpha l$ and $\pi \alpha \sigma \tau \alpha \dot{\delta} \epsilon s$ as synonymous (vii. 122). In this sense the word might be translated parlour.

In old Greek the word $\lambda \epsilon \epsilon \sigma \chi \eta$ appears to have had a similar meaning; but the ordinary use of the word is for a larger and more public place of resort than the $\epsilon^{\xi} \xi \in \delta \rho \alpha$. [Lescae.]

Among the Romans the werd had a wider meaning, answering to both the Greek terms, $\begin{gathered} \\ \xi\end{gathered} \in \delta \rho \alpha$ and $\lambda \epsilon \in \sigma \chi \eta$. Thus it is not only used to signify a chamber for ordinary resort and conversation in a private house, or in the public baths and gymnasia open to the sun and air, (Vitruv. v. 11 ; vii. 9 ; Cic. Orat. iii. 5, De Nat. Deor. i. 6 ; Varro, R. R. iii. 5 ; Ulpian, Dig. ix. tit. 3, leg. 5) ; but the word is even applied to the hall attached to the theatre of Pompey, which was used as a place of meeting by the senate. (Plnt. Brut. 14, 17). The diminutive exedrium also occurs. (Cic. ad Fam. vii. 23.)
[P. S.]
EXEGE'TAE (é $\xi \eta \gamma \eta \tau \alpha$, interpreters; on this and other meanings of the word see Rhunken, ad Timaei Glossar. p. 109, \&c.), is the name of the Eumolpidae, by which they were designated as the interpreters of the laws relating to religion and of the sacred rites. (Demosth. Euerg. p. 1160.) [Evmolpidae.] They were thas at Athens the only class of persons who, in some measure, resembled the Roman jurists ; but the laws, of which the $\epsilon \xi \xi \eta \gamma \eta \tau \alpha i$ were the interpreters, were not written but handed down by tradition. Plutarch (Thes. 25) applies the term to the whole order of the Enpatridae, though properly speaking it belonged only to certain members of their order, i. e. the Eumolpidae. The Etymologicum Magn. (s. v.), in
accordance with the etymological meaning of the word, states, that it was applied to any interpreter of laws, whether sacred or profane ; but we know that at Athens the name was principally applied to three members of the family of the Eumolpidac (Suidas, s. v.), whose province it was to interpret the religious and ceremonial laws, the signs in the heavens, and the oracles ; whence Cicero (De Leg. ii. 27) calls them religionum interpretes. (Compare Pollux, viii. 124 and 188; Plato, Euthyphr. p. 4,d.) They had also to perform the public and private expiatory sacrifices, and were never appointed without the sanction of the Delphic oracle, whence they were called HvӨó $\chi \rho \eta \sigma \tau o r$. (Timaeus, Glossar: s. v. 'E $\xi \eta \gamma \eta \tau \alpha$ : : compare Meier, De Bonis Damnat. p. 7 ; Müller, ad Aeschyl. Eumen. p. 162, \&c.)

The name ${ }^{\mathbf{e}} \xi \eta \gamma \eta \tau \dot{\eta} s$ was also applied to these persons whe served as guides (cicerone) to the visitors in the most remarkable towns and places of Greece, who showed to strangers the curiosities of a place, and explained to them its history and antiquities. (Paus. i. 41. § 2.)
Respecting the $\begin{gathered}\epsilon \\ \xi \\ \xi\end{gathered} \gamma \eta \tau \boldsymbol{n} s$ of the laws of Lycurgus at Sparta, see Müller, Dor. iii. 11. 2. [L. S.]

EXERCITO'RLA ACTIO, was an action granted by the edict against the exercitor navis. By the term navis was understood any vessel, whether used for the navigation of rivers, lakes, or the sea. The exercitor navis is the person to whom all the ship's gains and earnings (obventiones et reditus) belong, whether he is the owner, or has hired the ship (per aversionem) from the ownes for a time definite or indefinite. The magister navis is he who has the care and management of the ship, and was appointed (praepositus) by the exercitor. The exercitor was hound generally by the contracts of the magister, who was his agent, but with this limitation, that the contract of the magister must be with reference to furthering the ohject for which he was appointed; as, for instance, if he purchased things useful for the navigation of the ship, or entered into a contract or incurred expense for the ship's repairs, the exercitor was bound by such contract: the terms of the master's appointment (praepositio) accordingly determine the rights of third parties against the exercitoc. If the magister, being appointed to manage the ship and to use it for a particular purpose, used it for a different purpose, his employer was not hound by the contract. If there were several magistri, without any partition of their duties (non divisis officis), a contract with one was the same as a contract with all. If there were several exelcitores, whe appointed a magister either out of their own number or not, they were severally answerable (in solidum) for the contracts of the magister. The contracting party might have his action either against the exercitor or the magister, so long as the magister continued to be such.

A party might have an action ex delicto against an exercitor in respect of the act either of the magister or the sailors, but not on the contract of the sailors. If the magister substituted a parson in his place, thongh he was forkidden to do so, the exercitor would still he bound by any proper contract of such person.

The term Nanta properly applies to all persons whe are engaged in navigating a ship; hut in the Practor's Edict (Dig. 4. tit. 9. s. 1) the term Nauta means Exercitor (qui navem excreet).
(Dig. 14. tit. I; Peckins, in Titt. Dig. et Cod.
kl Rem Nauticam pertinentes Comment. ; Abbott ${ }^{12}$ Shipping, Index, Eaercitor Navis.) [G.L.] $\cdot$ EXE'RCITUS ( $\sigma$ tpat $^{\prime} s$ ), army. I. Greek. The earliest notices which we possess of the miliary art among the Greeks are those contained in he Homeric peems. The unsettled state of society n the first ages of Greece, led to the early and reneral cultivation of the art of arms, which were aabitually worn for defence, even when aggressive warfare was not intended. (Thnc. i. 6.) But the Homeric poems contain an exhibition of combincd military operations in their earliest stage. Warlike undertakings before the time described in them can have been little else than predatory inrosds ( $\beta \circ \eta \lambda a \sigma\{a$, Il. xi. 667). A collection of warriors exhibiting less of organisation and discipline than we see depicted in the Grecian troaps before Troy, would hardly deserve the name of an army. The organisation which we see there, snch as it was, arose, not from any studied, formative system, but naturally, out of the imperfect constitution of society in that age. Every freeman in those times was of course a soldier ; but when all the members of a family were not needed to go upon an expedition under the command of their chieftain or king, those who were to go seem to have been selected by lot (Il. x. 418). As the confederated states, which are represented as taking part in the Trojan war, are united by scarcely any other bond than their participation in a common object, the different bodies of troops, led by their respective chieftains, are far from heing nnited by a common discipline under the command-in-chief of Agamemnon. Each body oheys its own leader, and follows him to the conlict, or remains inactive, according as he chooses to mingle in the fight or not. Anthority and obedience are regulated much more by the nature of the circumstances, or by the relative personal listinction of the cbieftains, than by any law of nilitary discipline. Agamemnon sometimes urges the chieftains to engage, not by commands, but by saunts (Il. iv. 338, \&c. 368, \&c.). Accordingly, lothing like the tactics or strategy of a regularly lisciplined army is to be traced in the Homeric lescriptions of battles. Each chieftain with his andy of troops acts for himself, without reference io the movements of the rest, except as these urnish occasion for a vigorons attack, or, when hard pressed, call for assistance from the common eeling of brotherhood in arms. The wide interval which in the Homeric age separated the noble or chieftain from the common freeman, appears in as narked a manner in military, as in civil affairs. The former is distinguished by that smperior skill and prowess in the use of his arms, which would laturally result from the constant practice of warlike exercises, for which his station gave him the cisure and the means. A single hero is able to put to flight a whole troop of common soldiers. The account of a battle consists slmost entirely of lescriptions of the single combats of the chiefs on both sides; and the fortnne of the day, when not sverruled by the intervention of the gods, is desided by the individual valcur of these heroes. While the mass of the common soldiers were on aot, the chiefs rode in chariots [Currus], which asually contained two, one to drive and one to ight. In these they advanced against the ansgonists whom they singled out for encounter, sometimes hurling their spears from their chariots,
but more commonly alighting, as they drew nean, and fighting on foot, making use of the chariot for pursuit or flight. The Greeks did not, like the ancient Britons and several nations of the East, use the chariot itself as an instrument of warfare. Cavalry was unknown at that time to the Greeks, and horsemanship but very rarely practised; the $i \pi \pi \hat{\eta} \epsilon s$ of Homer are the chieftains who ride in chariots. These chiefs are drawn up in the front of the hatile array ( $11 . \mathrm{iv} .297$, $\pi \rho \delta \mu a \chi 0!$, $\pi \rho o \mu \alpha-$ $\chi \in \sigma \theta \alpha a$ ) ; and frequently the foot soldiers seem to have done nothing bnt watch the single combats of their leaders, forming, in two opposite, parallel
 $\mu 0 t 0, I l$. iv. 299) within which the more important single combats are fought. How they got the chariots out of the way when the foot soldiers came to close quarters (as in $\Pi l$. iv. $427, \& c$.) is not described.

Though so little account is usually made of the common soldiers ( $\pi \rho u \lambda \epsilon \in \in s, 7$. xi. 49, xii. 77), Homer occasionally lays considerable stress on their orderly and compact array ; Nestor and Menestheus are honourably distinguished by the epithet $\kappa о \sigma \mu \dot{\eta} \tau о \rho \in \lambda \alpha ́ \omega \nu(1 l$. ii. 553 , iv. 293, \&c.). The troops were naturally drawn up in separats bodies according to their different nations. It would appear to be rather a restoration of the old arrangement, than a new classification, when Nestor (Il. ii. 362) recommends Agamemnon to draw the troops up by tribes and phratries. Arranged in these natural divisions, the foot soldiers were drawn up in densely compacted bodies ( $\pi v \kappa \iota \nu \alpha l$ ф́d $\lambda \alpha \gamma \gamma \in s$ ) shield close to shield, - helmet to helmet - man to man ( $n$. xiii. 130, xvi. $212, \& c$.). In these masses, though not usually commencing the attack, they frequently offer a powerful resistance, even to distinguished herocs (as Hector $1 l$. xiii. $145, \& c$., comp. xvii. 267, 354, \&c., xiii. 339), the dense array of their spears forming a barrier not easily broken through. The signal for advance or retreat was not given by instruments of any kind, but by the voice of the leader. A loud voice was conseqnently an important matter, and the epithet $\beta \circ \eta \nu \nu \quad d \gamma \alpha \theta 0$ s is common. The trumpet, however, was not absolintely unknown (IL. xviii. 219). Respecting the armour, offensive and defensive, see Arma.

Under the king or chieftain who commands his separate contingent we commonly find subordinate chiefs, who command smaller divisions. It is difficult to say whether it is altogether accidental or not, that these are frequently five in number. Thus the Myrmidons of Achilles are divided into five $\sigma \tau i \chi \in S$, each of 500 men. Five chiefs command the Boeotians; and the whole Trojan aimy is formed in five divisions, each under three leaders. (Il. iv. 295, \&c., xvi. 171-197, ii. 494, \&c., xij. 87-104.) The term $\phi \dot{\alpha} \lambda \alpha \gamma \xi$ is applied either to the whole army (as $I l$. vi. 6), or to these smaller divisions and subdivisions, which are also called $\sigma \tau\{\chi \in S$ and $\pi \dot{u} \rho \gamma 06$.

When an enemy was slain, it was the universal practice to stop and strip off his arms, which were carefully preserved by the victor as trophics. The division of the booty generally was arranged by the leader of the troop, for whom a portion was set aside as an honorary present ( $\gamma$ f́pas, $n$. i. 392, 368, ix. 328, xi. 703). The recovery of the dead bodies of the slain was in the Homeric age, as in all later times, a point of the greatest importance, and fre
quently either led to a fierce contest, or was effected by the payment of a heary ransom (Köpke, Kriegswesen der Griechen in. lkeroischen Zeitalter; Wachsmuth, Hellen. Alterthumsk. vol. ii. § 110 ; Grote, History of Greece, vol. ì. p. 141).

After the heroic age considerable impulse was given to the cultivation of the military art by the conquests of the Thessalians (the first Grecian people, apparently, that employed cavalry, to the use of which their conquests were probably in great part owing) and Dorians, among the latter of whom the art of warfare was earliest reduced to system. The distinction of heary and light armed foot soldiers of course took its rise with the beginnings of military service, the poorer class being unable to provide themselves with the more efficient, but more costly weapons of those who were better off than themselves. Political considerations tended to make the distinction more marked and systematic. The system of military castes was indeed unknown among the Greeks, though something answering the same purpose existed in the earliest times, when the nohles and their more immediate dependants and retainers, having greater leisure for the cultivation of skill in the use of arme, and greater means for procuring them, were separated in that respect by a wide interval from the lower class ; while conversely, military superiority was the most direct means of securing political supremacy. Hence, as boon as the distinction between the nobles (the privileged class) and the cormononalty (demus) was established, it became the object of the former to prevent the latter from placing themselves on a par with them in military strength, and so the use of the full armour of the heary-armed infantry was reserved by the former for themselves; and when, in times of distress, it was found necessary to entrust the demus with full armour, the result was not uncommonly a revolution (as was in some degree the case at Mytilene, Thuc. iii. 27). But in the democracies this distinction as regards the kinds of service depended merely upon the greater or less ahility of the.citizens to procure arms. In the Greek commonwealths all those who enjoyed the privileges of citizens or freemen were held bound to serve as soldiers when called upon, and were provided with arms and trained in military exerciees as a matter of course. The modern system of standing armies was foreign to Greek habits, and would have heen dangerous to the liberties of the different commonwealths, though something of the kind may be seen in the body guards, usually of mercenary troops, kept by tyrants. The mercenaries in the pay of Alexander of Pherae formed a considerable army. Practically too, from the continuity of the warlike operations in which they were engaged, the armies of Philip and Alexander of Macedon, and their successors, vecame standing armies. The thousand $\lambda o \gamma \dot{\alpha} \delta \in s$ at Argos (Thuc. v. 67) and the sacred band at Thehes (Plut. Pelop. 18; K. F. Hermann, Griech. Stautsalterth. § 181 note 2) were not considerable enough to be called armies. The employment of mercenary troops might have led to the use of standing armies, had it not been that the use of them characterised the decline of the Grecian states, so that the circumstances which led to their employment, also rendered it impossible to provide the resources for their maintenance, except when they were immediately needed. Still,
as in the case of the Scythian bowmen at Athens, individual corps of mercenaries might he regularly maintained. Slaves were but darely trusted with arms, and when it was the case, they were usually manumitted. The Greek armies accordingly were national armies, resembling rather the militia than the regular armies of modern times.

In all the states of Greece, in the earliest as in later times, the general type of their militsry organisation was the phalunx, a body of troops in close array with a long spear as their principal weapon. It was among the Dorians, and especisily among the Spartans, that this type was most rigidly adhered to. The strength of their military array consisted in the heavy-armed infantry ( $\delta \pi \lambda i$ itai). They attached comparatively small importance to their cavalry, which was always inferior (Xen Hellen. vi. 4. § 10). Indeed, the Thessalians and Boeotians were the only Greek people who dis. tinguished themselves much for their cavalry; scarcely any other states had territories adapted for the evolutions of cavalry. The Spartan army, as described by Xenophon, was probably in all it main features the same that it was in the time of Lycurgus. The institutions of that lawgiver cone verted the hody of Spartan citizens into a kind of military brotherhood, whose almost sole occupation was the practice of warlike and athletic exercised The whole life of a Spartan was little else than either the preparation for or the practice of war. The result was, that in the strictness of their dis. cipline, the precision and facility with which they performed their military evolutions, and the skill and power with which they used their weapons, the Spartans were unrivalled among the Greeks, so that they seemed like real masters of the art of war ( $\tau \in \chi \nu i \tau a s ~ \tau \hat{\omega} \nu \quad \pi о \lambda \in \mu \kappa \kappa \bar{\omega} \nu$ ), while in comparison with them other Greeks appeared mere tiros ( $\alpha \hat{v} \tau \sigma \sigma \chi \in \delta \iota a \sigma \tau \grave{\alpha} s \tau \hat{\omega} \nu \quad \sigma \tau \rho \alpha \tau \iota \omega \tau \iota \kappa \omega \hat{\nu}, \mathrm{X}$ еп Rep. Laced. xiii. § 6 ; Plut. Pelop. 23). The heary armed infantry of the Spartan armies was composed partly of genuine Spartan citizens, partly of Perioeci (e. g. Thucyd. iv. 8, comp. Grote, Hist. of Greece, vol. ii. p. 493). In later times, at the number of Spartan citizens decreased, the Perioed constituted the larger portion, a fact which rendery nugatory all attempts to connect the numbers of the divisions of the army with the political divisions of the Spartan citizens. Every Spartan citizen was liable to military service ( $\left.{ }^{\prime} \mu \phi \rho o u p o s\right)$ from the age of twenty to the age of sisty years. Those beyond that age were, however, sometimes employed in the less arduous kinds of serviceas at Mantineia, where they had charge of the haggage (Thuc. v. 72). On the occasion of sny military expedition, the kings at first, and atterwards the ephors, made proclamation what class, according to age, were to go on the expedition
 § 2) as, for example, all citizens between twenty and thirty, or between twenty and thirty-five \& $c_{\mathrm{c}}$
 When in the field, the troops were drawn up in some manner according to their ages, so thst for any special service, those of a particular age might be separated and employed (Xen. Hellen. iv. 4. $\S 16,5 . \S 15,16$ ). On one occasion (в. с. 418), on a sudden emergency, when probably there was not time to collect the Perioeci, all the citizens of the military age were called forth (Thuc. v. 64).

The political and military divisions of the

Spartans were mixed up tegether in some way which it is not easy to unravel. The whole life of a Spartan was passed in the discipline of a kind of camp. The citizens messed together in companies, and slept in a sert of barracks. It appears from Xenophon (Rep. Lac. xi.) that the whole bedy ef citizens of military age was divided inte six divisiens called $\mu \delta \rho a l$ (rодıтıкаl $\mu \delta \rho \alpha a$ he terms them), under the command or superintendence of a pelemarch, each mera being subdivided inte four $\lambda \delta \chi^{\circ 1}$ (commanded by $\lambda \theta \chi a \gamma 0$ ), each $\lambda \dot{\alpha}$ रos into twe $\pi \in \nu \tau \eta \kappa o \sigma \tau u ́ \epsilon s$ (headed by $\pi \in \nu \tau \eta$ -
 (headed by enemetarchs). The $\dot{\boldsymbol{e}} \boldsymbol{\nu} \mu \mu \boldsymbol{\tau}$ lat were so called frem the men compesing them being hound tegether by a cemmon oath ( $\tau \alpha \xi_{1 s} \tau i s \delta_{i \alpha}$ oфaүiav èvळ́ $\mu$ atos, Hesych. s.v.). These were not merely divisions of treeps engaged in actual military expeditions. The whele body of citizens at all times formed an army, whether they were cengregated at head-quarters in Sparta, or a portion of them were detached on fereign service. Herodetus (i. 6.5) speaks of enemotiea, triacades, and syssitia as military divisiens, and we learn that the polemarchs presided over the public tables (Plut. Lyc. 12). When a pertien of the citizens was sent eut on fercign service, the army that they fermed was arranged in divisiens cerrespending to, and hearing the same names as the divisiens of the entire military force of Sparta, i. e. ef the entire bedy of citizens of military age. As has slready heen remarked, an armay sent on fereign service censisted of citizens between certain ages, determined according to the number of soldiers wanted. Se that, as it would seem, every enemetia of the general hody sent cut a certain preportien of its numbers fer the expedition in question, who (with seme Perieeci) formed an enometin of the army se sent; and the detachment of these enemetiae which fermed a mera of the whole bedy of citizens, fermed (apparently) a mera of the army on service. All the accounts that we have of Spartan military operations indicate that the Perieeci whe served as heavy-armed soldiers, formed integral members of the different divisions to which they were attached; se that an enomotia, pentecestys, \&c., in the field, weuld contain a number of seldiers whe did net belong to the correspending larger divisiens of the whele body of citizens ef military age. Thirlwall (Hist. of Greece, vel. i. app. ii.) talks of thirty families being represented in the amny by thirty seldiers; an idea totally at variance with all the accounts that we have. Suppesing a family te censist of a father and three sens, if the latter were abeve twenty, and the father not above sixty years of age, all would be seldiers, liable to be called out for active service at any time; and according to the limits ef the age preclaimed by the ephors, ene, twe, three, or all of them might be called eut at once. The strength of a mera en actual service, of course, varied, accerding te circumstances. 'Te judge by the name pentecestys, the nermal number of a mora would have been 400 ; but 500,600 , and 900 are mentiened as the number of men in a mera en different eccasiens (Plut. Pelop. 16 ; Xen. Hellen. iv. 5. § 11, 12, vi. 4. § 12 ; Schol, ad Thuc. v. 66 ; Died. xy. 32, \&c. ; Müller, Dorians, iii. 12. § 2 , nete t.). That these variatiens arose from variatiens in the number of Spartan citizens (Haase in Ersch and Graber's Encyclerädie, art.

Plalanx), is an assumption which leaves out of sight the propertion of citizens called eut, and the number of Perieeci in the army. (Of the 292 heary-armed soldiers whe surrendered at Sphacteria, 120 were Spartans, Thuc. iv. 38. At the battle of Plataeae, ene half of the heavy-armed seldiers of the Lacedaemenians were Spartans.) When in the field, each mera ef infantry was attended hy a mera ef cavalry, consisting at the most ef 100 men , and commanded by an hipparmest (imтapuөaт hs, Xen. Hellen. iv. 4. § 10, 5. \& 12). Plutarch (Lyc. 23) mentiens squadrons (où $\wedge a \mu 0$ l) ef fifty, which may pessibly be the same divisions. It is net easy, hewever, te see in what manner the cavalry ceuld have been thus apportiened, er how each mera of cavalry could have "helonged te a mera of infantry without heing in clese connection with it" (as Müiller says). The cavalry seems merely to have heen employed te protect the flanks, and but little regard was paid to it. The cerps ef 300 in $\pi \in i$ (Hered, viii. 124) formed a sert of body-guard for the king, and consisted of the flower of the yeung seldiers. Theugh called horsemen, they fought on feet. (Xen. Rep. Lac. iv. § 3.)

Thucydides in bis acceunt of the battle of Mantineia (v.68) describes the Lacedaemenian army as divided inte seven lechi, each centaining four pentecostyes, and each pentecostys four enemotiae, with thirty-twe men in each ; so that the lochus here is a bedy of 512 men, and is commanded by a pelemarch. It is clear, therefere, that the lochus of Thucydides, in this instance, answers to the mora of Xenophon. As on this eccasion, the pentecestys contained feur instead of two enometiae, and as feur pentecestyes were thrown together into one divisien, Thucydides may have been led te call this divisien a lochus, as being next above the pentecestys, though it was, in fact, a mora cemmanded by a pelemarch (Thirlwall, l.c. p. 445 ; cemp. Arnold on Thuc. v. 68). Aristotle appears to use the terms lechus and mora indiscriminately ( $\Lambda \alpha \kappa \omega \nu \omega \nu \pi o \lambda i \tau$. Fr. 5 and 6 ; Phetius s. v. $\lambda 6 \chi 0$ ). The suggestien of Arnold (l.c.) that ene of the seven lochi speken of censisted of the Brasidean seldiers and Needanedes, who weuld not be taken account of in the ordinary divisiens of the Spartan ferces, is not unlikely, and weuld explain the discrepancy between the number of lochi (or merae) here, and the erdinary number of six merae ; but even independently of it, ne difficulty need be felt with respect te that particular peint, as the whele arrangement of the troops on that occasien was a departure frem the ordinary divisions. It was net universally the case that an army was made up of six merae and twenty-feur ordinary lechi. On ene eccasion, we hear of twelve lechi (Xen. Hellcn. vii. 4. § 20, cemp. § 27), each of about 100 men . The Needamodes were not usually incerperated in the merae (Xen. Hellen. iv. 3. § 15).

It seems a probable epinion that the number of merae in the Spartan military force had reference to the districts inte which Laconia was divided. These, including Sparta and the districts immediately areund it, were six in number. Perhaps, as Thirlwall suggests, the division of the armay may have been founded on the fiction that one mera was assigned fer the pretection of each district. The same writer alse suggests a very probable explanation ef the $\lambda$ óxos Miravátŋs $^{\text {of }}$

## EXERCITUS.

which Herodotus (ix. 53) speaks of, and of which Thucydides (i. 20), though doubtless erroneously, denies the existence. Thirlwall suggests that as each mora consisted of four lochi, the four lochi of the mora belonging to the district of Sparta may have heen distributed on the same principle among the four к $\omega \mu \alpha t$, Limnae, Cynosira, Mesoa, and Pitana, of which Sparta was composed.*

A Spartan army, divided as above described, was drawn up in the dense array of the phalanx, the depth of which depended upon circumstances. An é $\varphi \omega \mu \rho \tau i a$ sometimes made but a single file, sometimes was drawn up in three or six files ( $\delta \dot{\prime} \gamma \alpha$, Xen. Rep. Lac. xi. § 4; Müller, iii. 12. §. 3, note a). At the battle of Mantineia the phalanx was eight deep, so that each enomotia made four files. (Thuc. v. 68 ; comp. Xen. Hellen. iii. 2. § 16 , vi. 2. § 21.) At the battle of Leuctra it was twelve deep. (Xen. Hellen. vi. 4. § 12.) The enomotarch stood at the head of his file ( $\pi \rho \omega \tau 0 \sigma \tau \alpha \tau \eta s$ ), or at the head of the right-hand file, if the enomotia was broken up into more than one. The last man was called oùpa $\gamma$ ós. It was a matter of great importance that he, like the enomotarch, should be a man of strength and skill, as in certain evolutions he would have to lead the movements. (Xen. Cyrop. iii. 3. §41, \&c.) The commander-in-chief, who was usually the king (after the affair of Demaratus and Cleomenes it was the practice not to send out both kings together, Herod. v. 75 ; but comp. vi. 73), had his station sometimes in the centre (as at Mantineia, Thuc. v. 72), more commonly (as at Leuctra) on the right wing. The deployments by which the arrangements of the phalanx were altered took place under the direction of the enomotarch. When the troops were drawn op in a line in the ordinary battle array, they were said to be $\epsilon \pi i$ фáлaryos. Supposing an enomotia to consist of twenty-five men, inclnding its leader, and to be drawn up eight deep, the front line of the army would consist of 288 . In an ordinary march the army advanced émi кє́pos (or катà кє́pas, Xen. Hellen. vii. 4. § 23), the first enomotia of the right wing filing off, and the rest in succession following it; so that if the enomotia was drawn up in three or two files, the whole army would march in three or two files. The most usual arrangement was in two files. (Xen. Hellen. vii, 4. § 22, iii. 1. § 22, Polyaen. ii. 1. § 10.) If an army in marching order had to form in phalanx, the movement hegan with the hindmost enomotia of the column, which placed itself on the left of ( $\pi$ ap) $\dot{\alpha} \sigma \pi i \delta a s)$ and on a line with ( $\epsilon i s \mu_{\epsilon}^{\prime} \tau \omega \pi o \nu$ ) the enomotia before it. These two then performed the same evolution with respect to the last but two, and so on, till all were in a line with the

[^28]first enomotia, which now, with the commander. in-chief at its head, occupied the extremity of the right wing. This evolution was called $\pi \alpha \rho a \gamma \omega \gamma \dot{h}$ (Xen. Rep. Lac. xi. § 6), a name also given to the reverse movement, when a phalanx had to fall into marching order, and to subordinate movements of the aame kind for changing the depth of the phalanx. In the latter the evolutions were conducted on much the same principle. Thus, if the depth of the phalanx was to be diminished by half, the hinder portion of each enomoty marched for: wards and placed itself on the left of the half io front of it. Similarly, if the depth had to be increased, the left-hand portion of each enomotia faced about towards the right, took up its station in the rear, and then, facing to the left again, assumed their proper position. (Xen. Rep. Lac. xi. §8.) The facing to the right was always the usage, becanse if the evolution were performed in the face of an enemy, the shielded side could be presented towards him. Modifications of this evolution, conducted on the same principle, were employed if the depth had to be increased or diminished in any other proportion (comp. Xen. Anab. iv. 3. $\S 26$, iv. 6. $\$ 6$, Cyrop. ii. 3. §21). It is very likely that at those points of the files where in such evolutions they would have to separate, there were placed men suitable for taking their station in the front rank, where it was always an object to get the best men. These would answer to the $\delta \in \kappa a ́ \delta a \rho \chi o i$ and $\pi \epsilon \mu \pi a \dot{\delta} \alpha \rho \chi 01$ of Xezophon. (Cyrop. ii. 1; comp. Hipparch. ii. §6, iv. § 9.) If an enemy appeared in the rear, it was not enongh that the soldiers should face about towards the enemy. The Spartan tactics required that the stouteat soldier should be opposed to the eneny. This was accomplished by the manœeurre termed $\mathfrak{e} \xi \in \lambda ı \gamma \mu \delta{ }^{\prime} s$. Of this there were three varieties: 1. The Macedonian. In this the leader of each file kept his place, only turning towards the enemy. The man behind him ( $\bar{\pi} \pi \sigma \tau \alpha \dot{d} \eta \mathrm{~s}$ ) retreating and again taking up his station behind him, and so on. In this way the army retreated from the enemy by a distance equal to its depth. 2. The Laconian (the one usually adopted by the Macedonian phalanx of Philip and Alexander). This was the reverse of the preceding, the rear man remaining stationary and the others advancing successively one before the other. In this way of course the army advanced against the enemy by a distance equal to its depth. 3. The Cretan. In this the leader and rearman, the second and last but two, and so on, changed places, so that the whole army remained at the same distance from the enemy. This species was also called $\chi$ opeios (Haase ad Xen. Rep. Lac. xi. 89. ; Müller, iii. 12. 88; Aelianus, Tact. 26, 27, 33.) These evolutions would of course leave the general on the left wing. If it was deemed expedient that he should be upon the right, it was not enough that he should simply remove from the left to the right, the whols army had to reverse its position, so that what was the left wing should become the right. This was effected by an exeligmus, termed (at least by the later tacticians), ${ }^{\xi} \xi \in \lambda \iota \gamma \mu \delta s$ к $\alpha \tau \grave{\alpha}$ ( $\langle\gamma \dot{\alpha}$, as contrasted with the $\hat{\varepsilon} \xi \in \lambda i \gamma \mu\rangle s \kappa \alpha \tau \grave{\alpha} \sigma \tau i \chi$ ous. If the army changed its front by wheeling round through a half circle, round one corner as a pivot, the movement scems to have been expressed by $\pi \in \rho \iota \pi \tau \dot{v} \sigma \sigma \epsilon \iota y$ or $\dot{\alpha} \nu \alpha \pi \tau \quad \dot{\sigma} \sigma \sigma \epsilon \iota \nu$. One more evolution remains to be noticed. Suppose an enemy

EXERCITUS.
jeared on the right, while the army was march; in column, two abreast. The different lochi ceeled round through a cuadrant of a circle, ind their leader, as on a pivot, so that the army sented twenty-four columns to the enemy, conting of two files each, and separated by a conlerable interval from each other. Tbe depth of a whole body was then lessened, and these invals filled up by the ordinary paragoge, and by a different lochi siding up nearer to each other case the intervals still remained too great. If was necessary for the general to take bis station the right, this would be effected, as in other ses, by an $\hat{e} \xi \in \lambda \quad \gamma \mu o ́ s$. Similar manceurres took ice if the enemy appeared on the left, though, this was the shielded side of the soldiers, and e danger was consequently less, it was frequently ought sufficient to keep the enemy in clieck by zans of the cavalry and light troops. (Xen. Rep. vc. xi. $\S 10$.) One point that a general had to be his guard against was the tendency of an army, hen advancing $\mathfrak{\epsilon} \pi l$ ф $\alpha \lambda \alpha \gamma \gamma o s$, to sheer off towards e right, each man pressing closer to his right-hand ighbour in order to protect his unshielded side, that the right wing frequently got beyond the tt wing of the enemy, (See especially the acunt of the battle of Mantineia, Thucyd. v. 71.) slight consideration will shew that the analogy aced between the evolutions of an army and ose of a chorus is by no means fanciful. One nd of $\hat{\varepsilon} \xi \in \lambda r \gamma \mu{ }^{\prime} s$ was even called $\chi 0 \rho \in \hat{\imath} 0$. The portance attached to the war dances among the jartans as a means of military training was conquently very great. [Chorus.]
When an army was led to attack a height, it us usually drawn up in what were termed $\lambda \delta \sigma^{\prime} 0 t$ $\theta$ tot, a term which merely implies that the lochi id greater depth than breadtb ( $\pi \alpha \rho \alpha \mu \eta \kappa \in s ~ \mu e ̀ \nu ~$

 uct. c. 29). The breadth of the lochi would, of urse, vary according to circumstances. They sre drawn up with considerable intervals between em . In this way the army presented a conlerable front to the enemy, and was less liable to : thrown into confusion than if drawn up in close ralanx, while at the same time the intervals bereen the lochi were not left so great that the remy could safely press in between them. (Xen. nab. iv. 2. § $11,13,8 . \S 10-19$, จ. 4. § 22 , yrop. iii. 2. § 6, Anab. iv. 3. § 17 ; Polyaen. trat. v. 16. § 1.) There is no ground for affirming lat a $\lambda \delta \chi$ os ofotros was drawn up in two files, or ren one, as Sturz (Lex. Xen.) says. Such an aringement would be perfectly useless for attack. his system of arrangements, which formed some ?proximation to the Roman tactics, was not, howrer, employed, except in the particular case menoned.
In special circumstances, such as those of the itreating Greeks in the Anabasis, the arrangeent in a hollow square was adopted, the troops eing so placed that by simply facing about they resented a front for battle on whichever side it was ecessary. The term $\pi \lambda a i \sigma t o \nu$ was applied to an my so arranged, whether square or oblong. fterwards the term $\pi \lambda \alpha i \sigma t o \nu$ was restricted to re square, the oblong being called $\pi \lambda i \nu \theta t o \nu$.
Though at first sight the arrangement and maœuyres of a Lacedaemonian army seem exceedigly complex, they were in reality quite the

EXERCITUS.
485
reverse, owing to the carefully graduated system of subordination which prevailed ( $\sigma \chi \in \delta \delta \nu \quad \gamma \dot{\alpha} \rho \tau 0 \iota$
 d $\rho \chi$ б $\quad \nu \tau \omega \nu$ є $\mathfrak{i} \sigma$. Thuc. $\nabla .66$ ). The commands of the general were issued in the first place to the polemarchs, by these to the lochagi, by these again to the pentecosteres, by the latter to the enomotarchs, and by these last to their respective divisions. From the orderly manner in which this was done, commands were transmitted with great rapidity: every soldier, in fact, regulating the movements of the man behind him, every two being connected together as $\pi \rho \omega \tau 0 \sigma \pi \alpha \dot{\alpha} \eta s$ and モ̇ $\pi เ \sigma \tau \alpha ́ \tau \eta \mathrm{~s}$.

In later times the king was usually accompanied by two ephors, as controllers and advisers. These, with the polemarchs, the four Pythii, three peers ( $\delta \mu 0 t 06$ ), who had to provide for the necessities of the king in war, the laphyropolae and some other officers, constituted what was called the damosia of the king. (Xen. Rep. Lac. xiii. § 1, 7, xv. § 14, Hellen. iv. 5. § 8, vi. 4. § 14 ; Plut. Lyc. 22.) The polemarchs also had some sort of suite or staff with them, called $\sigma u \mu \phi о \rho \in i=1$ (Plut. Pelop. 17 ; Xen. Hellen. vi. 4. § 14). With the exception of the enomotarchs, the superior officers and those immediately about then, are not to be reckoned with the division which they led. They stood distinct, forming what was called the ${ }^{3} \gamma \eta \mu \alpha$.

The Spartan and Perioecian hoplites were accompanied in the field by helots, partly in the capacity of attendants, partly to serve as lightarmed troops. The number attached to an army was probahly not uniform. At Plataeae each Spartan was accompanied by seven helots; hut that was probably an extraordinary case. One helot in particular of those attached to each Spartan was called his $\uparrow \epsilon \rho \alpha \alpha^{2} \pi \omega \nu$, and performed the functions of an armourer or shieldbearer (Eustath. ad Dionys. Per. 533). Xenophon (Hellen. iv. 5. $\S 14,8$. § 39) calls them $\delta \pi \alpha \sigma \pi \iota \sigma \tau \alpha i$. (Comp. Herod. v. 111 ; Müller, Dor. iii. 3. § 2.) In extraordinary cases, helots served as hoplites, and in that case it was usual to give them their liberty (Thucyd. vii. 19, iv. 80, v. 34). Distinct corps were, sometimes, composed entirely of these Neodamodes. A separate troop in the Lacedaemonian army was formed by the Sciritae ( ginally, no doubt, inhabitants of the district Sciritis. In battle, they occupied the extreme left of the line. On a march, they formed the vanguard, and were usually employed on the most dangerous kinds of service. (Thuc. v. 67, with Arnold's note; Xen. Cyrop. iv. 2. § 1 ; K. F. Hermann, § 29, note 13 , infers from this passage that they were cavalry, an inference which is certainly not necessary, and is contradicted by Müller, Manso, Haase, Thirlwall, Arnold, \&c.)

The arms of the phalanx consisted of the long spear and a short sword ( $\xi \cup \eta \eta \eta$ ). The chief part of the defensive armour was the large brazen shield, which covered the body from the shonlder to the knee (Tyrtaeus, fr. ii. 23), suspended, as in ancient times, by a thong round the neck, and managed by a simple handle or ring ( $\pi \delta \rho \pi \alpha \xi)$. The improved Carian handle (ỏ $\chi \dot{\alpha} \nu \eta$ ) was not introduced till the time of Cleomenes III. Besides this, they had the ordinary armour of the hoplite [Arma]. The heavy-armed soldiers wore a scarlet uniform (Xen. Rep. Lac. xi. § 3, Ages. ii. 7). The Spartan encampments were circular.

Only the heavy-armed were stationed within it, the cavalry being placed to look out, and the helots being kept as much as possible outside. As another precaution against the latter, every soldier was obliged always to carty his spear about with him. (Xen. Rep. Lac. xii.) Though strict discipline was, of course, kept up in the camp, it was less rigorous than in the city itself (Plut. Lyc. 22, comp. Herod. vii. 208). Preparatory to a battle the Spartan soldier dressed his hair and crowned himself as others would do for a feast. The signal for attack in ancient times was given by priests of Ares ( $\pi u p \phi \phi \rho o t$ ), who threw lighted torches into the interval between the two armies (Schol. ad Eurip. Phoen. 1186). Afterwards it was given not by the trumpet, but by the music of flltes, and sometimes also of the lyre and cithara, to which the men sang the battle song ( $\pi$ aud $\bar{\epsilon} \mu \mathrm{E} a-$ тhpıos). (Paus. iii. 17. § 5 ; Plut.l.c..) The object of the music was not so much to inspirit the men, as simply to regulate the march of the phalanx (Thuc. v. 70). This rhythmical regularity of movement was a point to which the Spartans attached great importance. A sacrifice was offered to the Muses before a hattle, as also to Eros (Plut. Aristid.17). To prevent the ranks being broken the soldiers were forbidden to stop in order to strip a slain enemy while the fight lasted, or to pursue a routed enemy. The younger hoplites or the cavalry or light-armed troops were despatched for this purpose (Xen. Hellen. iv. 4. § 16, v. 14. § 16). All the booty collected had to he handed over to the laphyropolae and ephors, by whom it was sold.
The rigid inflexibility of the Spartan tactics rendered them indisposed to the attack of fortified places. At the battle of Plataeae, they even assigned to the Athenians the task of storming the palisade formed by the $\gamma^{\prime} \beta \rho \sigma a$ of the Persians.

In Athens, the military system was in its leading principles the same as among the Spartans, though differing in detail, and carried out with less exactness; inasmuch as when Athens became powerful, greater attention was paid to the navy. Of the times hefore Solon, we have but little information. We learn that there' were twelve phratriae, and in each of these four naucrariae, each of whicl was bound to furnish two horsemen and one ship. Of the four classes into which the citizens were arranged by the constitution of Solon, the citizens of the first and second served as cavalry, or as commanders of the infantry (still it need not be assumed that the imetis never served as heavy-armed infantry), those of the third class ( $\delta$ Evjitral) formed the heary-armed infantry. The Thetes served either as light-armed troops on land, or on board the ships. The same general principles remained when the constitution was remodelled hy Cleisthenes. The cavalry service continued to be compulsory on the wealthier class (Xen. Oecon. ii. 6 ; Lycurg. Leocr. § 139). All citizens qualified to serve either as horsemen, or in the ranks of the heary-armed infantry, were enrolled in a list [Catalogus]. The case of Thetes serving as heary-armed soldiers is spoken of as an exception to the general rule; and even when it was the case, they were not enrolled in the catalogus. (Thucyd. vi. 43.) Every citizen was liable to service from his eighteenth to his sixtieth year. On reaching their eighteenth year, the young citizens were formally enrolled $\epsilon i s$ т $\tau \eta \nu \lambda \eta \xi \hbar a \rho \chi \iota \kappa \delta \nu$

## EXERCITUS.

$\gamma \rho a \mu \mu a \tau \epsilon i o \nu$, and received a shield and spear in a public assembly of the people, hinding themselves by oath to perform rightly the duties of a citizen and a soldier (Aristot. ap. Harpocr. p. 241 ; Hermann, l.c. § 123). During the first two years, they were only liable to service in Attica isself, chiefly as garrison soldiers in the different fortresses in the country. During this period, they were
 Pollux, viii. 105; Lycurg. Leocr. § 76.) According to some anthorities, this service was also called $\sigma \tau \rho a \tau \epsilon i ́ a$ èv $\boldsymbol{\nu}$ тoís $\mu$ é $\rho \in \sigma t$ (Wachsmuth, l. c. vol. i. § 56, note 45). The levies were made under the direction of the generals [Strategi]. The soldiers were selected either according to age, as among the Spartans (Aristot. ap. Harpocr. s.v.

 archons being, of course, those in whose year of office they had entered the military servics), when
 $\mu o t s$, or else according to a certain rotation (Aesch.
 vices of those below or above the ordinary military age, were only called for on emergencies, or for guarding the walls. (Comp. Thuc. i. 105, ii. 13.) Members of the senate during the period of their office, farmers of the revenue, chorentae at the Dionysia during the festival ; in later times, traders by sea also, were exempted from military service, (Lycurg. Leoor. § 164 ; Demosth. Neaer. p. 1353, Meid. p. 516 ; Aristoph. Eccles. 1019, with the Schol.) Any one bound to serve who attempted to avoid doing so, was liable to a sentence of à ácia. The resident aliens commonly served as heavy-armed soldiers, especially for the purpose of garrisoning the city. They were prohibited from serving as cavalry (Thuc. ii. 13, 31, iv. 90 ; Xen, de Vect. ii. \& 5, Hipparch. ix. § 6). Slaves were only employed as soldiers in cases of great necessity, as at Marathon (according to Paus. i. 32. § 33), and Arginusae (Xen. Hellen, i. 6. § 17).

Of the details of the Athenian military organisation, we have no distinct accounts as we have of those of Sparta. The heary-armed troops, as was the universal practice in Greece, fonght in phalanx order. They were arranged in bodies in a manner dependent on the political divisions of the citizens. The soldiers of each tribe formed a separate body in the army, also called a tribe, and these bodies stood in some precancerted arder (Herod. vi. 111 ; Plut. Arist. 5 ; Thuc. vi. 98; Xen. Hellen. iv. 2, § 19 , with Schneider's notes). It seems that the name of one division was $\tau d \xi \xi$, and of another $\lambda \delta \chi 0 s$, but in what relations these stood to the $\phi \nu \lambda \hat{h}$, and to each other, we do not learn, unless Xenophon's expressions (Cyrop. ii. 1 . §4) may be looked upon as indicating that the Tákts contained four lochi, and consisted of one hundred men. (Comp. Xen. Mem. iii. 4. § 1 ; Pollux, viii. § 114 ; Lysias pro Mantitheo, § 15 , \&c.) Every hoplite was accompanied by an attendant (ن́m $\boldsymbol{\eta} \rho \dot{\varepsilon} \tau \eta s$, Thnc. iii. 17), to take charge of his haggage, and carry his shield on a march. Each horseman also had a servant, called into$\kappa \delta \mu \mathrm{os}$, to attend to his horse (Thuc, vii. 75, 78; Xen. Hellen. ii. 4).

It would appear, that before the time of Solon the cavalry which the Athenians could muster was under 100. In the time of Cimon it was

10, and soon after, 600 (Andoc. de Pace, p. 92 ; :hol. Aristoph. Equit. 577, 624) ; at the heginng of the Peloponnesian war, 1200 , of whon 10 seem to have been hired Scythian bownen Chuc. ii. 13, v. 84, vi. 94). Besides the lightmed soldiers drawn from the ranks of the sorer citizens, there was at Athens a regiment Thracian slaves, armed with hows. The umber of these increased from 300 , who were urchased after the battle of Salamis, to 1000 or 200 (Aeschin. de fals. Leg. p. 335, 336 ; Böckh, uulic Econ. of Ath. book ii. c. 11). These, howver, were generally employed as a sort of police t city guard. Besides these, however, the Atheians had a troop of howmen of their own citizens, mounting, at the beginning of the Peloponnesian rar, to 1600 (Thuc. ii. 13 ; Böckh, l. c. ii. e. 21).
For the command of the army, there were hosen every year ten generals [Strategi], and en taxiarchs [Taxiarchi], and for the cavalry, wo hipparchs (ltrtapxor) and ten phylarchs ( $\varphi \dot{u}$ ap ${ }^{0} 0$ ). Respecting the military functions of the
 umber of strategi sent with an army was not uiform. Three was a common number. Someimes one was invested with the supreme comnand; at other times, they either took the comnand in turn (as at Marathon), or conducted heir operations by common consent (as in the כicilian expedition). (Xen. Hipparch. i. §8; Demosth. Phil. i. § 26 ; Pollux, viii. § 87 ; Schönann, de Com. Ath. pp. 313-315.)
The practice of paying the troops when upon iervice was first introduced by Pericles (Ulpian. ıd Demosth. $\pi \in \rho l$ $\sigma v \nu \tau a \xi \xi$. p. $50, \mathrm{a}$ ). The pay consisted partly of wages ( $\mu \sigma \theta \delta \delta s$ ), partly of provinions, or, more commonly, provision-money ( $\sigma / \tau \eta$ -
 two obols a day. The oır $\quad$ péotor amounted to :wo obols more. Hence, the life of a soldier was salled, proverbially, тєт $\rho \omega$ ódiou Bíos (Enstath. ad Od. p. 1405, ad II. p. 951). Higher pay, however, was sometimes given, as at the siege of Potidaea the soldiers received two drachmae apiece, one for themselves, the other for their attendants. This, doubtless, included the provision-money (Thnc. iii. 17). Officers received twice as much ; horsemen, three times ; generals, four times as much (comp. Xen. Anab. vii. 6. § 1, 3. § 9). The horsemen received pay even in time of peace, that they might always be in readiness, and also a sum of money for their outfit (кaráбтaбts, Xen. Hipparch. i. § 19 ; K. F. Hermann, § 152 , note 19). They were reviewed from time to time by the senate (Xen. Hipparch. iii. §9, Oecon. ix. 15). Before entering the service, both men and horses had to undergo an examination before the hipparchs, who also had to drill and train them in time of peace. The horses of the heary-armed cavalry were protected by defensive armour.

As regards the military strength of the Athenians, we find 10,000 heavy-armed soldiers at Marathon, 8,000 heavy armed, and as many light armed at Plataeae ; and at the beginning of the Peloponnesian war there were 13,000 heavy armed ready for foreign service, and 16,000 consisting of those heyond the limits of the ordinary military age and of the metoeci, for garrison service.

It was the natural result of the national character of the Atheuians and their democratical constitution, that military discipline was much less
stringent among them than among the Spartans
 vii. 14), and after defeat especially it was often found extremely difficult to maintain it. The generals had some power of punishing military offences on the spot, but for the greater number of such offences a species of court-martial was held, consisting of persons who had served in the army to which the offender belonged, and presided over by the strategi (Lysias, Adv. Alc. § 5, 6; Plato, Leg. xii, 2. p. 943 ; K. F. Hermann, l. c. § 146 , 153 ; Meier and Schömann, der Attische Process, pp. 133, 363-366). Varions rewards also were held out for those who especially distinguished themselves for their courage or conduct, in the shape of chaplets, statues, \&c. In connection with
 had fallen in war, must not be omitted. Respecting the provision made for those who were disabled in war, see the article Adunatr.

The Peltastae ( $\pi \in \lambda \tau \alpha \sigma \tau \alpha l$ ), so called from the kind of shield which they wore [Pelta], were a kind of troops of which we hear very little before the end of the Peloponnesian war. The first time we have any mention of them is in Thuc. iv. 111, where they are spoken of as heing in the army of Brasidas. With the more frequent employment of mercenary troops a greater degree of attention was bestowed upon the peltastae; and the Athenian general Iphicrates introduced some important improvements in the mode of arming them, combining as far as possible the peculiar advantages of heavy ( $\delta \pi \lambda i \bar{r} a t$ ) and light armed ( $\psi(\lambda 0 i)$ troops. He snhstituted a linen corslet for the coat of mail worm by the hoplites, and lessened the shield, while he doubled the length of the spear and sword. He even took the pains to introduce for them an improved sort of shoe, callied after him 'Iфисрatiठes (Pollux, vii. 89). This equipment was very commonly adopted by mercenary troops, and proved very effective. The almost total destruction of a mora of Lacedaemonian heavy-armed troops by a body of peltastae under the command of Iphicrates was an exploit that became very famous. (Xen. Hellen. iv. 5. § 11.) The peltast style of arming was general among the Achaeans until Philopoemen again introduced heavy armour. (Plut. Philop. 9 ; Liv. xlii. 55.)

When the use of mercenary troops became general, Athenian citizens seldom served except as volunteers, and then in but small numbers. Thus we find 10,000 mercenaries sent to Olynthns with only 400 Athenians (Demosth. de fals. Leg. p. 425). With 15,000 mercenaries sent against Philip to Chaeroneia, there were 2000 citizens (Demosth. de Cor. p. 306). It became not uncommon also for those bound to serve in the cavalry to commute their services for those of horsemen hired in their stead, and the duties of the intorpoфia were ill executed. The employment of mercenaries also led in other respects to considerable alterations in the military system of Greece. War came to be studied as an art, and Greek generals, rising above the old simple rules of warfare, became tacticians. The old method of arranging the troops, a method still retained by Agesilaus at the battle of Coronea, was to draw np the opposing armies in two parallel lines of greater or less depth, according to the strength of the forces, the engagement commencing nsually very nearly at the same moment in all parts of the line.

The genius of Epaminondas introduced a complete revolution in the military system. He was the first who adopted the method of charging in column, concentrating his attack npon one point of the hostile line, so as to throw the whole into confusion by breaking through it. For minute details the reader is referred to the account of the battle of Mantineia (Xen. Hellen. vii. 5. § 22 ; comp. vi. 4. § 12). It seems from the description that the troops were drawn up in a form somewhat like a wedge.

Philip, king of Macedonia, is sometimes spoken of by Greek writers as the inventor of the phalanx. It is probable enough that he was the first to introduce that mode of organisation into the army of Macedonia, and that he made several improvements in its arms and arrangement, but the phalanx was certainly not invented by him. The spear ( $\sigma \alpha \dot{\alpha} \rho \iota \sigma \sigma \alpha$ or $\sigma \alpha \rho 1 \sigma \alpha$ ), with which the soldiers of the Macedonian phalanx were armed, was ordinarily 24 feet long; but the ordinary length was 21 feet (Polyb. xviii. 12; Aelian. Tact. 14), and the lines were arranged at such distances that the spears of the fifth rank projected three feet beyond the first, so that every man in the front rank was protected by five spears. The men in the ranks further back rested their spears on the shoulders of those in front of them, inclining them opwards, in which position they, to some extent at least, arrested the missiles that might be hurled by the enemy. Besides the spear they carried a short sword. The shield was very large and covered nearly the whole body, so that on favourable ground an impenetrable front was presented to the enemy. The soldiers were also defended by helmets, coats of mail, and greaves; so that any thing like rapid movement was impossible. When in dense battle array ( $\pi \tilde{u}_{\kappa}^{\prime} \nu \omega \sigma \iota s$ or $\left.\pi \nu \kappa \nu \delta \tau \eta\right)^{\text {) }}$, three feet were allowed for each man, and in this position their shields touched ( $\sigma \nu \nu \alpha \sigma \pi \iota \sigma \mu o ́ s$, Polyb. l. c.; Aelian, Tact. c. 11. gives six feet for each man in the ordinary arrangement, three feet for the $\pi \dot{u} \kappa \nu \omega \sigma$ s or dense battle array, and one and a half feet for the $\sigma v \nu a \sigma \pi \iota \sigma \mu \delta s^{\prime}$ ). On a march six feet were allowed for each man. The ordinary depth of the phalanx was sixteen, though depths of eight and of thirty-two are also mentioned. (Polyb. l.c. comp. xii. 19-21.) Each file of sixteen was called $\lambda \delta$ Xos. It is difficult to say what reliance is to be placed upon the subdivisions mentioned by the tacticians Aelian, \&c. as connected with the phalanx of Philip, though they may have been usual in later times. According to them each higher division was the double of the one below it. Two lochi made a dilochia; two dilochiae made a $\tau \in$ т $\rho \alpha \rho \chi i \alpha$, consisting of sixty-four men; two tetrarchies made a $\tau \dot{\alpha} \xi \iota s$; two $\tau \hat{\alpha} \xi \in i s$ a $\sigma \dot{u} \nu \tau \alpha \gamma \mu \alpha$ or $\xi \in \nu a \gamma i a$, to which were attached five supernumeraries, a herald, an ensign, a trumpeter, a servant, and an officer to bring up the rear (oujpayos); two syntagmata formed a pentacogiarchia, two of which made a $\chi_{i \lambda}$ icapxía, containing 1024 men; two chiliarchies made a $\tau \in ́ \lambda o s$, and two $\tau \in ́ \lambda \eta$ made a phalangarchia or phalanx in tbe narrower sense of the word, the normal number of which would therefore be 4096. It was commanded by a polemarch or strategus; four such bodies formed the larger phalanx, the normal number of which would be 16,384. When drawn up, the two middle sections constituted what was termed the $\dot{\rho} \mu \phi \alpha{ }^{\prime}{ }^{\prime} s$, the nthers being called кéfara or wings. The phalanx
soldiers in the army of Alexander amounted to 18,000 , and were divided not into four, but into six divisions, each named after a Macedonian province, from which it was to derive its recruits. These bodies areoftener called $\tau \alpha ́ \xi \in เ s$ tban $\phi \dot{\alpha} \lambda a \gamma \dot{\gamma} \epsilon s$ by the historians, and their leaders taxiarchs or strategi. The phalanx of Antiochus consisted of 16,000 men, and was formed into ten divisions ( $\mu \in \rho \eta$ ) of 1600 each, arranged 50 broad and 32 deep (Appian, Syr. 32 ; Liv. xxxvii. 40).

In the general principles of its arrangement and the modes of altering its form, the Macedonian phalanx resembled the Lacedaemonian, though tbe late tacticians do not always describe the movements by the same technical terms as Xenophon. The Macedonian phalanx, however, altered its form with great difficulty. If an attack on the flanks or rear was apprehended, a separate front was formed in that direction, if possible before the commencement of the fight. Such a double pha. lanx, with two fronts in opposite directions, was called $\phi \dot{\alpha} \lambda \alpha \gamma \xi \bar{\alpha} \mu \phi \dot{i} \sigma \tau \sigma \mu o s$. To guard against being taken in flank, the line was bent round,
 The cavalry or light troops were not unfrequently employed for this purpose, or to protect the rean (comp. Arrian, Anab. ii. 9, iii. 12 ; Polyb. xii, 21). Respecting the relative advantages and disadvantages of the Roman legion and the phalanx, there is an instructive passage in Polybius (xviii, 12 , and comp. xii. $19, \& c$.). The phalanx, of course, became all but useless, if its ranks were broken. It required, therefore, level and open ground, so that its operations were restricted to very narrow limits ; and being incapable of rapid movement, it became almost helpless in the face of an active enemy, unless accompanied by a sufficient number of cavalry and light troops.

The light-armed troops were arranged in files ( $\lambda 0$ ó $\chi 01$ ) eight deep. Four lochi formed a av́a $a \sigma t s$, and then larger divisions were successively formed, eack being the donble of the one below it; the largest (called $\dot{e} \pi i \tau \alpha \gamma \mu \alpha$ ), consisting of 8192 men. The cavalry (according to Aelianus), were arranged in an analogous manner, the lowest division or squadron ( $\bar{i} \lambda \eta$ ), containing 64 men, and the successive larger divisions being each the double of that below it ; the highest ( $\varepsilon \pi i \tau \alpha \gamma \mu \alpha$ ) containing 4096.

Both Philip and Alexander attached great importance to the cavalry, which, in their armies, consisted partly of Macedonians, and partly of Thessalians. The Macedonian horsemen were the flower of the young nobles. They amounted to about 1200 in number, forming eight squadrons, and, under the name ${ }^{\prime}$ foapot, formed a sort of body-guard for the king. The Thessalian capalry consisted chiefly of the elite of the wealthier class of the Thessalians, but included also a number of Grecian youth from other states. There was also a guard of foot-soldjers ( $\dot{v} \pi \alpha \sigma \pi / \sigma \tau \alpha l$ ), whom ws find greatly distinguishing themselves in the campaigns of Alexander. They seem to be identical with the $\pi \in \oint_{\varepsilon}^{\prime} \tau \alpha \iota \rho o t$, of whom we find mention. They amounted to about 3000 men, arranged in six battalions ( $\tau a ́ \xi \in i s)$. There was also a troop called Argyraspids, from the silver with which their shields were ornamented. [Argyraspidme] They seem to have been a species of peltastae. Alexander also organised a kind of troops called $\delta \iota \mu a ́ \chi a \iota$, who were something intermediate be-
tween cavalry and infantry, being designed to fight on horseback or on foot, as circumstances required.

It is in the time of Alexander the Great, that we first meet with artillery in the train of a Grecian army. His balistae and catapeltae were frequently employed witb great effect, as, for instance, at the passage of the Jaxartes (Arrian. iv. 4. §7). After the invasion of Asia also elcphants began to be employed in connection with Grecian armies. (Müller, Dorians, book iii. c. 12; Wachsmnth, Hellenische Alterthumsluunde, hook vi.; K. F. Hermann, Griech. Staatsalterth. § 29, 30, 152; Haase in Ersch and Gruber's Encyclop. art. Phalanx; Heeren's Reflections, \&c. Ancient Greece, c. xii.; Böckb's Public Eeonomy of Athens, c. xxi. xxii.)
[C. P. M.]
2. Roman. In the present article we shall attempt to present a view of the constitution of a Roman army at several remarkahle epochs, and to point out in what respect the usages of one age differed most conspicuously from those of another, abstaining most carefully from those general statements which in many works upon antiquities are enunciated broadly, without reference to any specified time, as if they were applicable alike to the reign of Tarquin and to the reign of Valentinian, including the whole intermediate space within their wide sweep.

Our authorities will enable us to form a conception, more or less complete, of the organisation of a Roman army at five periods: -

1. At the establishment of the comitia centuriata by Servius.
2. About a century and a half after the expulsion of the kings.
3. During the wars of the younger Scipio, when the discipline of the troops was, perhaps, more perfect than at any previous or subsequent era ; and here, fortunately, our information is most complete.
4. In the times of Marins, Sulla, and Julius Caesar.
5. A hundred and fifty years later, when the empire had reached its culminating point under Trajan and Hadrian.

Beyond this, we sball not seek to advance. After the death of M. Aurelius, we discern nought save disorder, decay, and disgrace; while an inquiry into the complicated arrangements introduced when every department in the state was remodelled by Diocletian and Constantine, would demand lengthened and tedious investigation, and would prove of little or no service to the classical student.

Autliorities. The number of ancient writers now extant, who treat professedly of the military affairs of the Romans, is not great, and their works are, with one or two exceptions, of little value. Incomparably the most important is. Polybius, who in a fragment preserved from his sixth book, presents us with a sketch of a Roman army at the time when its character stood highest, and its discipline was most perfect. This, so far as it reaches, yields the best information we could desire. The tract $\pi \epsilon \rho ो \quad \sigma \tau \rho a \tau \eta \gamma \iota \hat{\omega} \nu \tau d \xi \in \omega \nu$ ' $\mathrm{E} \lambda \lambda \eta \nu \iota \kappa \hat{\omega} \nu$ of Aelianus who flourished under Nerva, belongs, as the title implies, to Greek tactics, hut contains also a brief, imperfect, and indistinct account of a Roman army. The тé $\chi \nu \eta$ चaктьк $\eta$ of Arrian, governor of Cappadocia under Hadrian, is occupied in a great measure with the manoeuvres of the phalanx, to which is subjoined a
minute practical exposition of the preliminary exercises by which the Roman cavalry were traincd ; to Arrian, likewise, we are indebted for
 'A $\lambda a \nu \hat{\omega} \nu$, supposed to be a portion of his lost history, whicb bore the name 'A入avıć, consistmg of instructions for the order of march to be adopted by the force despatched against the Scythians, and for the precautions to be observed in marshalling the line of battle. This piece taken in connction with the essay of Hygimus, of which we bave spoken under Castra, will assist us materially when we seek to form a distinct idea of the constitution of a Roman army in the early part of the second century. It remains for us to notice the Latin "Scriptores de Re Militari," Frontinus, Modestus, and Vegetius. The Strategematica of the first, who lived under Vespasian, is merely a collection of anecdotes compiled without much care or nice discrimination, and presents very little that is available for our present purpose; the Libellus de Vocabulis Rei Militaris of the second, addressed to the emperor Tacitus, affords a considerable number of technical terms, but is in such a confused state, and so loaded with interpolations, that we can employ it with little confidence ; the Rei Militaris Instituta of the third, dedicated to tbe younger Valentinian, is a formal treatise drawn up in an age when the ancient discipline of Rome was no longer known, or had, at least, fallen into desuetude ; but the materials, we are assured by the author himself, were derived from sources the most pure, such as Cato the Censor, Cornelius Celsus, and the official regulations of the earlier emperors. Misled by these specious professions, and by the regularity displayed in the distribution of the different sections, many scholars have been induced to adopt the statements here embodied without hesitation, without even asking to what period they applied. But when the book is subjected to critical scrutiny, it will be found to be full of inconsistencies and contradictions, to mix up into one confused and heterogeneous mass the systems pursued at epochs the most remote from each other, and to exhibit a state of things which never did and never could bave existed. Hence, if we are to make any use at all of this farrago, we must proceed with the utmost caution, and onght to accept the novelties which it offers, merely in illustration or confirmation of the testimony of others, without ever permitting them to weigh against more trustworthy witnesses.
But while the number of direct authorities is very limited, much knowledge may be obtained throngh a multitude of indirect channels. Not only do the narratives of the historians of Roman affairs abound in details relating to military operations, but there is scarcely a Latin writer upon any topic, whether in prose or verse, whose pages are not filled with allusions to the science of war. The writings of the jurists also, inseriptions, medals, and monuments of art commumicate much that is curious and important; but even after we have brought together and classified all these scattered notices, we shall have to regret that there are many things left in total darkness, and many upon which the assertions of different writers cannot by any dexterity be reconciled in a satisfactory manner. We shall endeavour to expound in each case those views which are supported by the greatest amount of credible evidence,
without attempting to discuss the various points upon which controversies have arisen.

Among the writings of modern scholars we ought to notice specially the dialogues "De Militia Komana" by the learned and indefatigable Lipsius, in which the text of Polybius (vi. 19, 42 ), and a chapter in Livy (viii. 8) serve as a foundation for a great superstructure of illustration and supplementary matter; nor must we forget the "Poliorcetica" of the same author, which may be regarded as a continuation of the preceding. The posthumous dissertation of Salmasius "De Re militari Romanorum," which displays the deep reading, mixed up with not a little of the rashness, of that celebrated critic, is well worthy of perusal, and will be found in the "Corpus Antiquitatum Romanarum" of Graevius, vol. x. p. 1284. The same volume includes the admirable commentary of Schelius on Hyginus, his notes on Polybins, together with essays on various topics connected with Roman warfare by Bocclerus, Robertellus, Erycius Puteanus, M. A. Causeus (De la Chausse), Petrus Ramus, \&cc. A most elaborate series of papers by M. Le Beau is printed in the twentyfifth and several succeeding volumes of the "Memoires de l'Académie des Inscriptions et Belles Lettres;" and although we are far from acquiescing in all the conclusions at which he arrives, it is impossible to deny that in so far as facts are concerned, he has almost exhausted every topic on which he has entered, and we cannot but lament that he should not have completed the design which he originally sketched out. We may consult with profit Folard's "Commentaire," attached to the French translation of Polybius, by the Benedictine Vincent Thuillier, 6 tom. 4to, Amst. 1729 ; Guischard, "Mémoires Militaires sur les Grees et les Romains," 2 tom. 4to, La Haye, 1757, and "Mémoires Critiques et Historiques sur Plusieurs Ponts et Antiquités Militaires," 4 tom. 4to, Berlin et Paris, 1775 ; Vaudoncourt," Histoire des Campagnes d'Hannibal en Italie," 3 tom. 4to, Paris, 1812 ; Roy, "Military Antiquities of the Romans in Britain," fol. Lond. 1793 ; Nast, "Römische Kriegsalterthümer," 8vo, Halle, 1782 ; Löhr, "Ueber die Tactik und das Kriegswesen der Griechen und Römer," 8vo. Kempt. 1825; Lehner, "De Republica Romana sive ex Polybii Megalop. sexta Historia Excerpta," 8vo. Salzb. 1823.

## General Remarks on the Legion.

The name Legio is coeval with the foundation of Rome, and always denoted a body of troops, which, although sobdivided into several smaller bodies, was regarded as forming an organised whole. It cannot be held to have been equivalent to what we call a reginent, inasmuch as it contained troops of all arms, infantry, cavalry, and, when military engines were extensively employed, artillery also; it might thus, so far, be regarded as a complete army, but on the other hand the number of soldiers in a legion was fixed within certain limits, nover mach exceeding 6000, and hence when war was carried on upon a large scale, a single army, under the command of one general, frequently contained two, threc, or more legions, besides a large number of anxiliaries of various denominations. In like macner the legion being complete within itself, and not directly or necesbaxily connected with any other corps, cannot be
translated by battalion, division, detachment, nor any other term in ordinary use among modern tacticians. Ancient etymologists agree in deriving legio from legere to choose (Varr. L. L. v. §87, vi. § 66. ed. Müller ; Plat. Rom. 13 ; Non. Marcell. i. s. v. legionum; Modest. de Vocabl. R. M.; Isidor. Orig. ix. 3. §46), and the name endured as long as the thing itself. Le Beau and others are mistaken when they assert that in Tacitus, and the writers who followed him, the word numeri is frequently substituted for legio, for it will be seen from the passages to which we give references below, that numeri is used to denote either the different corps of which a legion was compossd, or a corps generally, without any allusion to the legion (Tac. Hist. i. 6, 87. Agric. 18, comp. Ann. ii. 80, Hist. ii. 69 ; Plin. Ep. iii. 8, x. 38 ; Vopisc. Prob. 14 ; Ulpian. in Dig. 3. tit. 3. s. 8. § 2 ; 29. tit. 1. s. 43, \&c. \&c. See below the remarks on the Cohors).

In the Scriptures of the Naw Testament, in Plutarch (e.g. Rom. 13, 20), and elsewhere, we meet with the Grecized word $\lambda \in \gamma \epsilon \omega \nu$, but the Greek writers upon Roman affairs for ths most part employ some term borrowed from their own literature as an equivalent; and since each considered himself at liberty to select that which hs deemed most appropriate or which suggested itself at the moment, without reference to the practice of those who had gone before him, and without endeavouring to preserve uniformity even within the bounds of his own writings, we not only find a considerable variety of words used indiscriminately as representatives of Legio, but we find the same author using different words in different passages, and, what is still more perplexing, the same word which is nsed by one author for the legion as a whole is used by others to indicate some ons or other of the subdivisions. The terms which we meet with most commonly are, $\sigma \tau \rho a \tau \delta \pi \epsilon \delta 0 \nu, \phi \dot{\alpha}$ $\lambda a \gamma \xi, \tau \alpha \dot{\alpha} \mu \alpha, \tau \in ́ \lambda o s$, lesss frequently $\sigma \tau \rho \alpha \tau \epsilon \nu \mu a$ and $\tau \epsilon i \chi \chi o s$. Polybius in those chapters which are devoted exclusively to a description of the legion uniformly designates it by $\sigma \tau \rho a \tau \delta \pi \epsilon \delta o \nu$, which he sometimes applies to an army in general (e.g. ii. 73,86 ), while by others it is usually employed to denote a camp (eastra). Again Polybius gives a choice of three names for the maniple, $\sigma \eta \mu a i a$, $\sigma \pi \in i \rho a$, and $\tau \alpha \gamma \mu \alpha$, but of these the first is for the most part introduced by others as the translation of the Latin vexillum, the second almost uniformly as equivalent to colors, and the third, although of wids acceptation, is constantly the representative of legio. Dionysios uses sometimes, especially in the earlier books of his history, $\phi \dot{a} \lambda \alpha{ }^{2} \boldsymbol{\gamma} \xi$ (e. g. v. 67), sometimes $\tau \alpha ́ \gamma \mu a \tau \alpha$ (e. g. vi. 45 , ix. 10, 13), or $\sigma \tau \rho a-$ $\tau เ \omega \tau \iota \kappa \alpha \alpha_{\text {. }} \tau \dot{d} \gamma \mu a \tau \alpha$ (vi. 42), and his example is followed by Josephus (B. J. iii. 5. § 5 ; 6. § 2); Appian adopts $\tau$ é $\lambda o s$ (e. g. Annib. 8, B. C. ii. 76, 79,96 , iii. $45,83,92$, iv. 115 ) ; Plutarch within the compass of a single sentence (M. Anton. 18) has both $\tau \alpha \dot{\alpha} \gamma \mu \alpha \tau a$ and $\tau \in ́ \lambda \eta$; Dion Cassius, when speaking of the legions in contradistinction to the houschold troops, calls them in one passage ta $\pi о \lambda ı \tau \iota \kappa \alpha=\tau \rho a \tau \delta \pi \epsilon \delta \alpha$ (xxxviii. 47), in another
 and where no particular emphasis is required, we

 $\tau \in(\chi o u s$, lxxix. 7), $\sigma \tau \rho a \tau \delta \pi \in \delta o \nu$ (xxxviii. 46, x].

(omp. xl. 18), whence the legionaries are styled
 lix. 2), or simply $\kappa \alpha \tau \alpha \lambda \epsilon \gamma \delta \mu \in \nu 0 t($ liv. 25).

Neither Livy nor Dionysius notice the first establishment of the legion, but they both take for granted that it existed from the very foundation of the city, while Varro (L. L. v. § 89) and Plutarch (Rom. 13) expressly ascribe the institution to Romulus. The latter speaks of the band led by Romulus against Amulius as being divided into
 $\sigma \tau \delta \alpha s)$, giving at the same time the origin of the term maniple, and the former states that Romulus, to establish his legion, took 1000 men from each tribe.
Constitution of the Legion. The legion for many centuries was composed exclusively of Roman citizens. By the ordinances of Servius Tullius those alone who were enrolled in the five classes were eligible, and one of the greatest changes introduced by Marius was the admission of all orders of citizens, including the lowest, into the ranks. (Sall. Jug. 86 ; Plut. Mar. 9 ; Flor. iii. 1 ; Gell. xvi. 10.) Up to the year в.c. 107 ло оле was permitted to serve among the regular troops of the state except those who were regarded as possessing a strong personal interest in the stability of the commonwealth, but the principle haring been at this period abandoned, the privilege was extended after the close of the Social War (в. c. 87) to nearly the whole of the free population of Italy, and by the famous edict of Caracalla (or perhaps of M. Aurelius), to the whole Roman world. Long before this, however, the legions were raised chiefly in the provinces, and hence are ranked by Hyginus among the provincialis militioa (legioncs quoniam sunt militiae provincialis fidelissima). Even under Augustus, the youth of Latium, Umbria, Etruria, and the ancient colonies, served chiefly $m$ the household troops (Tac. Ann. iv. 5), who for this reason are complimented by Otho as Italize alumni et vere Romana juventus (Tac. Hist. i. 84). But although the legions contained comparatively few native Italians, it does not appear that the admission of foreigners not subjects was ever practised upon a large scale until the reign of the second Claudius (A. D. 268-270), who incorporated a large body of vanquished Goths, and of Probus (A. D. 276-282), who distributed 16,000 Germans among legionary and frontier battalions (numeris et limitaneis militibus, Vopisc. Prob. 14.). From this time forward what had originally been the leading characterist:c of the legion was rapidly obliterated, so that under Diocletian, Constantine, and their successors, the best soldiers in the Roman armies were barbarians. The name Legion was still retained in the fifth century, since it appears in an edict addressed by the emperors Arcadius and Honorius to the prefect Romulianus (Cod. Justin. 12. tit. 36. s. 13) and also in the tract known as the Notitia Dignitatum Imperii (c. 59). It probably did not fall into total disuse until the epoch of Justinian's sway ; but in the nmerous ordjnances of that prince with regard to military affairs nothing bearsuin any way upon the constitution of the legion, nor does the name occur in legal documents subsequent to the above-mentioned edict of Arcadius and Honorius.

There is yet another circumstance connected with the social position of the soldier to which it is very necessary to advert, if we desire to form a
distinct idea of the changes gradually introduced into the Roman military system. The Roman armies for a long period consisted entirely of what we might term militia. Every citizen was, to a certain extent, trained to arms during a fixed period of his life ; he was, at all times, liable to be called nuon to serve; but the legion in which he was enrolled was disbanded as soon as the special service for which it had been levied, was performed ; and although these calls were frequent in the early ages of the kingdom and the commonwealth, when the enemies of the republic were almost at the gates, yet a few months, or more frequently, a few weeks or even days, sufficed to decide the fortunes of the campaign. The Roman annalists assure us that a Roman army had never wintered in the field, until more than three centwries after the foundation of the city, when the blockade of Veii required the constant presence of the besiegers. As the scene of action became by degrees farther removed from Latium, when southern Italy and Sicily were now the seat of war-when the existence of Rome was menaced by the Carthaginian invasion - when her armies were opposed to such leaders as Pyrrhus, Hamilcar, and Hannihal - it was, of course, impossible to leave the foe for a moment unwatched; and the exigencies of the state rendered it necessary that the same legions and the same soldiers should remain in activity for several years in succession. This protracted service became inevitable as the dominion of Rome extended over Greece and Asia, when the distances rendered frequent relief impracticable ; but down to the very termination of the repnblic, the ancient principle was recognised, that when a campaign was concluded, the soldier was entitled to return home and to resume the occupation of a peaceful citizen. It was a conviction that their leader had broken faith with them by commencing a new war against Tigranes, after the defeat of Mithridates, their proper and legitimate opponent, which induced the troops of Lucullus to mutiny, and compelled their leader to abandon his Armenian conquests. Hence, for upwards of seven centuries, there was no such thing as the military profession, and no man considered himself as a soldier in contradistinction to other callings. Every individual knew that he was bound as a member of the body politic to perform certain duties; but these duties were performed without distinction by all - at least by all whose stake in the prosperity of their country was considered sufficient to insure their zeal in defending it ; and each man, when his share of this obligation was discharged, returned to take his place in society, and to pursue his ordinary avocations. The admission of the Capite Censi into the ranks, persons who, probably, found their condition as soldiers much superior to their position as civilians, and who could now cherish hopes of amassing wealth by plunder, or of rising to honour as officers, tended to create a numerous class disposed to devote themselves permanently to a military life as the only source from whence tbey conld secure comfort and distinction. The long-continued operations of Caesar in Gaul, and the necessity imposed upon Pompeius of keeping up a large force as a check on his dreaded rival, contributed strongly to nourish this fecling, which was, at length, fully developed and confirmed by the civil broils which lasted for twenty years, and by the
practice first introduced upon a large scale, after the Mithridatic wars, of granting pensions for long service in the shape of donations of land. Hence, when Augustus in compliance, as we are told by Dion Cassius (lii. 27), with the advice of Maecenas, determined to provide for the security of the distant provinces, and for tranquil submission at home by the establishment of a powerful standing army, he found the public mind in a great degree prepared for such a measure, and the distinction between soldier and civilian unknown, or at least not recognised before, became from this time forward as broadly marked as in the most pure military despotisms of ancient or modern times. In this place, we are required simply to call attention to the fact - it belongs to the philosophic historian to trace the results.

The numbering of the legions and their titles. The legions were originally numbered according to the order in which they were raised. Thus in the early part of the second Punic war, we hear of the fourth legion ( $\tau \delta$ тє́ $\tau a \rho \tau 0 \nu \quad \sigma \tau \rho a \tau \delta \pi \in \delta o \nu$ ), heing hard pressed by the Boii (Polyb. iii. 40); the tenth legion plays a conspicuous part in the history of Caesar as his favourite corps (Dion Cass. xxxviii. 17), and the cabinets of numismatologists present us with an assemblage of denarii struck by M. Antonius in honour of the legions which he commanded, exhibiting a regular series of numbers from 1 up to 30 , with only four blanks ( 25,27 , $28,29)$. As the legions became permanent, the same numbers remained attached to the same

EXERCITUS
corps, which were moreover distinguished hy various epithets of which we have early examples in the Legio Martia (Cic. Philip. v. 2 ; Vell. Pat. ii. 61; Dion Cass. xlv. 13 ; Appian, B. C. iv. 115), and the Legio Quinta Alauda. [Alauna.]

Dion Cassius, who flourished under Alexander Severus, tells us (lv. 23) that the military estahlishment of Augustus consisted of twenty-three or twenty-five legions (we know from Tac. Ann. iv. 5, that twenty-five was the real number), of which nineteen still existed when he wrote, the rest having been destroyed, dispersed, or incorporated by Augustus or his successors in other legions. He gives the names of nineteen, and the localities where they were stationed in his own day, adding the designations of those which had been raised by subsequent emperors. This list has been considerably enlarged from inscriptions and other authorities, which supply also several additional titles. We give the catalogue as it stands in the pages of the historian, and refer those who desire more complete information to the collections of Roman Inscriptions by Gruter and Orelli, to the fifth book of the Comment. Reip. Rom. of Wolfgang Lazius, fol. Francf. 1598, and to Eckhel, Doctrina Numm. Vet. vol. vi. p. 50 , vol. viii. p. 488 . In the following table an asterisk is subjoined to the nineteen legions of Augustus, to the remainder the name of the prince by whom they were first levied; the epithets included within brackets are not given by Dion, but have been derived from various sources:-

List of the Legions in the Reign of Alexander Severus.

| Number of the Legion. | Title. | By whom raised. | Where stationed in the age of Dion Cassius. |
| :---: | :---: | :---: | :---: |
| Prima | Italica | Nero | Hiberna in Mysia Inferiore. |
|  | Adjutrix | Galba | Pannonia Inferior. |
| - | Minervia | Domitianus | Germania Inferior. |
| -- | Parthica | Sept. Severus | Mesopotamia. |
| Secunda | Augusta | Wept ${ }^{*}$ | Hiberna in Britannia Superiore. |
|  | Adjutrix | Vespasianus | Pamnonia Iuferior. |
| -- | Egyptia Trajana | Trajanus | (Egypt ?) |
|  | Italica | M. Antoninus | Noricum. |
|  | Media (Parthica) | Sept. Severus | Italia. |
| Tertia | Augusta | * | Numidia. |
|  | Gallica | * | Phoenicia. |
| - | Cyrenaica | * ** | Arabia. |
|  | Italica | M. Antoninus | Rhaetia. |
|  | Parthica | Sept. Severus | Mesopotamia. |
| Quarta | Scythica |  | Syria |
|  | Flavia (F'elix) | Vespasianus | Syria |
| Quinta | Macedonica | * | Dacia. |
| Sexta | Victrix | * | Britannia Inferior. |
| Septima | Ferrata <br> Claudia | * | Judaea. |
|  | (Gemina) | Galba | Hispania. |
| Octava | Augusta | * | Germania Superior. |
| Decima | Gemina | * | Pannonia Superior. |
| Undecima | (Fretensis) | * | Judaea. |
| Duodecima | Fulminatrix | * | Cappadocia. |
| Decima Tertia | Gemina | * | Dacia. e |
| Decima Quarta | Gemina | * | Pannonia Superior. |
| Decima Quinta | Apollinaris | * | Cappadocia. |
| Vigesima | $\underline{\text { Valeria Victrix }}$ | * | Britannia Superior. <br> Hiberna in Germania |
| Trigesima | Ulpia (Victrix) | Trajanus | (Germania ?). |

## EXERCITUS.

On this we may remark -

1. That several legions bore the same number: thus there were four Firsts, five Seconds, and five Thirds.
2. The titles were derived from various circumstances; some indicated the deity under whose patronage the legions were placed, such as Minervia and Apollinaris; some the country in which they had been levied or recruited, as Italica, Macedonico, Gallica; or the scene of their most brilliant achievements, as Parthica, Seythict; some the emperor under whom they had served or by whom they had been created, as Augusta, Mlavia, Ulpia; some a special service, as Claudiana Pia Felix, applied to the 7th and 11 th, which had remained true to their allegiance during the rebellion of Camillus, praefect of Dalmatia, in the reign of Claudius (Dion Cass. 1x. 15) ; some, the fact that another legion had been incorporated with them; at least, this is the explanation given by Dion Cassius of the epithet Gemina ( $\Delta \delta \delta v \mu a$ ), and there seems little doubt that he is correct. (See Eckhel, vol. iv. p. 472.)
3. The same legions appear in certain cases to have been quartered in the same districts for centuries. Thus the Secunda Augusta, the Sexta Victrix, and the Vicesima Victrix, which were stationed in Britain when Dion drew up his statement, were there in the age of the Antonines, as we learn from Ptolemy (ii. 31 ), and the first of them as early as the reign of Claudius. (Tac. Hist. jii. 22, 24.)
4. The six legions of Augustus which had disappeared when Dion wrote, were probably the following, whose existence in the early years of the empire can be demonstrated: Prima Germanica; Quarta Macedonica; Quinta Alauda; Nona Hispana; Decima Sexta Gallica; Vigesima Prima Rapax; besides these, it would seem that there was a second fifteenth and a twenty-second, both named Primigenia, and one of these ought, perhaps, to be substituted for the second twentieth in the above table, since the words of Dion with regard to the latter are very obscure and apparently corrupt.
5. We find notices also of a Prima Macriana Liberatrix raised in Africa, after the death of Nero, by Clodius Macer ; of a Decima Sexta Flavia Firma raised by Vespasian; and of a Vigesima Secunda Deiotariona, apparently originally a foreign corps, raised by Deiotarus, which, eventually, like the Alauda of Caesar, was admitted to the name and privileges of a Roman legion.
6. It will be seen that the numbers XVII., XVIII., XIX. are altogether wanting in the above lists. We know that the XVIII. and XIX. were two of the legions commanded by Varus, and hence it is probable that the XVII. was the third in that ill-fated host.
7. The total number of legions under Augustus was twenty-five, under Alexander Severus thirtytwo, but during the civil wars the number was far greater. Thus, when the second triumvirate was formed the forces of the confederates were calculated at forty-three legions, which, after the battle of Philippi, had dwindled down to twenty-eight (Appian, B. C. v. 6) ; but a few years afterwards, when war between Octavianus and M. Antonius was imminent, the former alone had upwards of forty legions, and his adversaries nearly the same. (Appian, B. C. v. 53.) In order that we may be ahle to form some idea of the magnitude of these and other armies, we must next consider

EXERCITUS.
The number of foot soldiers in a Romain legion.Although we can determine with tolerable certainty the number of soldiers who, at different periods, were contained in a legion, we must hear im mind that at no epoch does this number appear to have heen absolutely fixed, but to have varied within moderate limits, especially when troops were required for some special or extraordinary service. The permanent changes may be referred to four epochs.

1. Under the Kings.-Varro (L. L. v. § 89) and Plutarch (Rom. 13), both of whom describe the first establishment of the legion, agree that under Romulus it contained 3000 foot soldiers. The words of Plutarch indeed, in a subsequent passage (Rom. 20), would, at first sight, appear to imply that after the junction with the Sabines the number was raised to 6000 ; but he must be understood to mean two legions, one from each nation. It is highly probable that some change may have been introdnced by Servius Tullius, but, in so far as numbers are concerned, we have no evidence.
2. From the expulsion of the Kings until the second year of the second Punic War.- The regular number during this space of time may be fixed at 4000 or 4200 infantry. According to Dionysius (vi. 42) M. Valerius, the brother of Publicola, raised two legions (в. c. 492), each consisting of 4000 , and Livy, in the first passage, where he specifies the numbers in the legions (vi. 22, в. c. 378), reckons them at 4000 , and a few years afterwards (vii. 25 , B. c. 346) he tells us that legions were raised each containing 4200 foot soldiers, and 300 horse. The legion which possessed itself of Rhegium (в. c. 281-271) is described (Liv. xxviii. 28) as having consisted of 4000 , and we find the same number in the first year of the second Punic War (Liv. xxi. 17, в. c. 218). Polybius, in like manner (i. 16), fixes the number at 4000 in the second year of the first Punic War (b. c. 263), and again in the first year of the second Punic War (iii. 72, B. c. 218). In the war against Veii, however, when the Romans put forth all their energies, according to Dionysius (ix. 13), an army was raised of 20,000 infantry and 1200 cavalry, divided into four legions ; and, according to Polybius (ii. 24), in the war against the Gauls, which preceded the second Punic War, the legions of the consuls consisted of 5200 infantry, while those serving in Sicily and Tarentum contained 4200 only, a proof that the latter was the ordinary number.
3. From the second year of the second Punic War until the consulship of Marius. - During this interval the ordinary number may be fixed at from 5000 to 5200 . Polybius, indeed, in his treatise on Roman warfare, lays it down (vi. 20) that the legion consists of 4200 foot soldiers, and in cases of peculiar danger of 5000 . However, the whole of the space we are now considering, was in fact a period of extraordinary exertion, and hence from the year в.c. 216 , we shall scarcely find the number stated under 5000 (e. g. Polyb. iii. 107, Liv. xxii. 36, xxvi. 28, xxxix. 38), and after the commencement of the Ligurian war it seems to have heen raised to 5200 (Liv. xl. 1, 18, 36, xli. 9, but in xli. 21 it is again 5000). The two legions which passed over into Africa under Scipio (B. с. 204) contained each 6200 (Liv. xxix. 24), those which served against Antiochus 5400 (Liv. xxxvii. 39), those employed in the last Macedonian war 6000 (Liv. xlii. 31 , xliv 21, comp. xliii. 12), but these were special cases.
4. From the first consulship of Marius (в. с. 107) until the extinction of the legion. - For some centuries after Marius the numbers varied from 5000 to 6200 , generally approaching to the higher limit. Festus (s. v. sex millium et ducentorum) expressly declares that C. Marius raised the numbers from 4000 to 6200 , but his system in this respect was not immediately adopted, for in the army which Sulla led against Rome to destroy his rival, the six complete legions ( $\hat{\epsilon} \xi$ тá $\gamma \mu a \tau a$ тé $\in \epsilon 1 \alpha$ ) amounted to 30,000 men (Plut. Sull. 9 , Mar. 35, but the text in the latter passage is doubtful). In the war against Mithridates again, the 30,000 men of Lucullus formed five legions (Appian. Mithr. 72). Comparing Plutarch (Cic. 36) with Cicero (ad Att. v. 15), we conclude that the two legions commanded by the latter in Cilicia contained each 6000. Caesar never specifies in his Commentaries the number of men in his legions, but we infer that the 13th did not contain more than 5000 (B. C. i. 7), while the two mentioned in the fifth book of the Gallic war (c. 48, 49) were evidently incomplete. In Appian, M. Antonius is represented as calculating the amount of 28 legions at upwards of 170,000 men, that is nearly 6100 to each legion, but he seems to include auxiliaries ( $\tau \hat{\omega} \nu \sigma u \nu \tau \alpha \sigma$ $\sigma 0 \mu \epsilon(\nu \omega \nu)$. During the first century the standard force was certainly 6000 , although subject to constant variatioas according to circumstances, and the caprice of the reigning prince. The legion of Hadrian, if we can trust Hyginns, was 5280, of Alexander Severus 5000 (Lamprid. Sev. 50), that described by Vegetius (ii. 6), to whatever period it may belong, 6100 , and most of the grammarians agree uрол 6000 (e. g. Serv. ad Virg. Aen. vii. 274 ; Isidor. Orig. ix. 3. §46; Suidas, s. v. $\lambda \epsilon \gamma \epsilon \omega \nu$, but Hesychius gives 6666). The Jovians and Herculeans of Diccletian and Maximian formed each a corps of 6000 (Veget. i. 17), but beyond this we have no clue to guide us. If we
 of Sozomen to designate the legions of Honorius, they must at that epoch have been reduced to a number varying from 1200 to 700.

Number of Cavalry attached to the Legion. According to Varro and the other authorities who describe the original constitution of the legion, it oonsisted of 3000 infantry and 300 cavalry. The number of foot soldiers was, as we have seen above, gradually increased until it amounted to 6000 , but the number of horsemen remained always the same, except upon particular occasions. In those passages of Livy and Dionysius, where the numbers of the legion are specified, we find uniformly, amid all the variations with regard to the infantry, 300 horsemen set down as the regular complement (justus equitatus) of the legion.

Polybius, however, is at variance with these authorities, for although in his chapter upon Roman warfare (vi. 20) he gives 300 as the number, yet when he is detailing (iii. 107) the military preparations of the year в.c. 216, after having remarked that each legion contained 5000 infantry, he adds, that under ordinary circumstances it contained 4000 infantry and 200 cavalry, but that upon pressing emergencies it was increased to 5000 infantry and 300 cavalry, and this representation is confirmed by his review of the Roman forces at the time of the war against the Cisalpine Gauls (ii. 24). It is true that when narrating the
events of the first Punic War, he in one place (i. 16) makes the legions to consist of 4000 infantry and 300 cavalry; and in the passage referred to above (ii. 24) the consular legions amounted to 5200 infantry and 300 cavalry, but both of these were pressing emergencics. The statements, therefore, of Polybius upon this point are directly at variance with those of Dionysius and Livy, and it does not seem possible to reconcile the discrepancy. There are two passages in the last-named historian which might appear to bear out the Greek (Liv. xxii. 36, xlij. 31), but in the first he is evidently alluding to the assertions of Polybius, and in the second the best editors agree in considering the text corrupt, and that we should substitute duceni pedites for duceni equites.

When troops were raised for a service which required special arrangements, the number of horsemen was sometimes increased beyond 300. Thus the legion despatched to Sardinia in B. c. 215 (Liv. xxiii. 34) consisted of 5000 infantry and 400 cavalry, the same number of horsemen was attached to a legion sent to Spain in B.c. 180 under Tiberius Sempronius (Liv. xl. 36), and in B. c. 169 it was resolved that the legions in Spain should consist of 5000 infantry and 330 cavalry (Liv. xdiii. 112), but in the war against Perseus when the infantry of the legions was raised to 6000 the cavalry retained the ancient number of 300 . (Liv. xlii. 31.) It must be observed that these remarks with regard to the cavalry apply only to the period before Marius ; about that epoch the system appears to have undergone a very material change, which will be adverted to in the proper place.

We now proceed to consider the organisation of the legion at the five periods named above.

First Period. Servius Tullius.-The legion of Servius is so closely connected with the Comitia Centuriata that it has already been discussed in a former article [Comitia], and it is only necessary to repeat here that it was a phalanx equipped in the Greek fashion, the front ranks being furnished with a complete suit of armour, their weapons being long spears, and their chief defence the round Argolic shield (clipeus).

Second Period. The Great Latin War, в.c. 340. - Our sole authority is a single chapter in Livy (viii. 8), but it " is equalled by few others in compressed richness of information," and is in itself sufficiently intelligible, although tortured and elaborately corrupted by Lipsius and others, who were determined to force it into harmony with the words of Polybius, which represent, it is true, most accurately the state of a Roman army, but of a Roman army as it existed two centuries afterwards. According to the plain and obvious sense of the passage in question, the legion in the year b. c. 340 had thrown aside the arms and almost entirely discarded the tactics of the phalanx. It was now drawn up in three, or perhaps we ought to say, in five lines. The soldiers of the first line, called Hastati, consisted of youths in the first bloom of manhood (florem jurenum pubescentium in militiam) äistributed into fifteen companies or maniples ( $m a$ nipuli), a moderate space being left between each. The maniple contained sixty privates, two centurions (centuriones), and a standard bearer (vexillarius) ; two thirds were heavily armed and bore the scutum or large oblong shield, the remainder carried only a spear (hasta) and light javelins (gaesa). The second line, the Prineipes, was com-
posed of men in the full vigour of life, divided in like manner into fifteen maniples, all heavily armed (scutati onnnes), and distinguished by the splendour of their equipments (insignibus maxime armis). The two lines of the Hastati and Principes taken together amounted to thirty maniples and tormed the Antepilani. The third line, the Triarii, composed of tried veterans (veteranum inilitem spectatae virtutis), was also in fifteen divisions, but each of these was
triple, coutaining 3 manipuli, 180 privates, 6 centurions, and 3 vexillarii. In these triple manipuli the veterans or triarii proper formed the front ranks ; immediately behind them stood the Rorarii, inferior in age and prowess (minus roboris aetate factisque), while the Accensi or supernumeraries, less trustworthy than either (minimae fiduciae manum), were posted in the extreme rear. The battle array may be thus represented.

The fight was commenced by the Rorarii, so called because the light missiles which they sprinkled among the foe were like the drops which are the forerunners of the thunder shower (Festus 8. v. Rorarios milites), who, running forward between the ranks of the antepilani, acted as tirailleurs; when they were driven in they returned to their station behind the triarii, and the battle began in earnest by the ouset of the hastati ; if they were unable to make any impression they retired between the ranks of the principes, who now advanced and bore the brunt of the combat, supported by the hastati, who had rallied in their rear. If the principes also failed to make an impression, they retired through the openings between the maniples of the triarii, who up to this time had been crouclied on the ground (hence called subsidiariz), but now arose to make the last effort (whence the phrase rem ad triarios redisse). No longer retaining the open order of the two first lines, they closed up their ranks so as to present an unhroken line of heary armed veterans in front, while the rorarii and accensi, pressing up from behind, gave weight and consistency to the mass, an arrangement bearing evidence to a lingering predilection for the principle of the phalanx, and exhihiting, just as we might expect at that period, the Roman tactics in their transition state. It must he observed that the words ordo, manipulus, vexillum, although generally kept distinct, are throughout the chapter used as synonymous; and in like manner, Polybius, when describing the maniple, remarks (vi. 20), кal тò $\mu$ ѐ $\nu \mu$ є́pos є́кка-

Livy concludes by saying, that four legions were commonly levied, each consisting of 5000 infantry and 300 horse. We must suppose that he speaks in round numbers in so far as the infantry are concerned, for according to their own calculations the numbers will atand thus:-

In deference to a great name, we ought not to omit mentioning that Niehuhr (Hist. of Rome, vol.iii. p.97) while he admits that the text of Livy is sound and consistent with itself, argues, we venture to think, somewhat unreasonably, that he did not understand his excellent materials, and althongh clear at first, hecame eventually completely bewildered and wrote nonsense.

Third Period. Polybius. - Polybius describes minutely the method pursued in raising the four legions, which under ordinary circumstances were levied yearly, two being assigned to each consul. It must be observed that a regular consular army (justus consularis exercitus) no longer consisted of Roman legions only, but as Italy became gradually subjugated, the various states under the dominion of Rome were hound to furnish a contingent, and the number of allies (socii) usually exceeded that of citizens. They were, however, kept perfectly distinct, both in the camp and in the battle field.
I. After the election of consuls was concluded, the first step was to choose the twenty-four chief officera of the legions, named tribuni militum, and by the Greek writers $\chi^{i \lambda \lambda d} \rho \chi 0<$. Of these, fourteen were selected from persons who had served five campaigns of one year (annua stipendia, è $\nu$ lauolous $\sigma \tau \rho a \tau$ elas) and were termed juniores (oi $\nu \in \omega$ $\left.\tau \in \rho o \iota \tau \hat{\omega} \nu, \chi i \lambda d d_{\rho} \chi \omega \nu\right)$, the remaining ten (seniores, $\pi p \in \sigma \varepsilon \cup \tau \in \rho 01$ ), from those who had served for ten campaigns. The manner of their election will he explained below, when we treat more particularly of the legionary officers. (Polyb. vi. 19.)
2. All Roman citizens whose fortune was not rated under 4000 asses were eligible for military service from the age of manhood up to their fortysixth year, and could he required to serve for twenty years if in the infantry, and for ten years, if in the cavalry. Those whose fortune was below the above sum were reserved for naval service, except in any case of great necessity, when they also might be called upon to serve for the regular period in the infantry.

The consuls having made proclamation of a day upon which all Roman citizens eligible for service must assemble in the Capitol, and these being in attendance at the time appointed in the presence uf the consuls, the tribunes were divided into four
gections, according to the order of their election, in the following mamer:- The four junior tribunes first elected, and the two scaior tribunes first elected were assigned to the first legion, the three juniors and the three seniors next in order to the second ; the four juniors and the two seniors next in order to the third, the last three juniors and the last three seniors to the fourth legion. (Polyb. vi. 14.)

The tribunes being thus distributed into four parties of six, those belonging to each legion seated themselves apart, and the tribes were summoned in succession by lot. The trihe whose lot came out first being called up, they picked out from it four youths as nearly matched as possible in age and form ; out of these four, the tribumes of the first legion chose one, the tribunes of the second legion one of the remaining three; the tribunes of the third legion, one of the remaining two, and the last fell to the fourth legion. Upon the next tribe being called np, the first choice was given to the tribunes of the second legion, the second choice to those of the third, and the last man fell to the first legion. On the next tribe being called up, the tribunes of the third legion had the first choice, and so on in succession, the object in view being that the four legions should he as nearly alike as possible, not in the number only, hat in the quality of the soldiers. This process was continued until the ranks were complete, the regular number, according to Polyhins in this passage, being 4200, but when any danger greater than usual was impending, 5000.

In ancient times, the cavalry were not chosen until after the infantry levy was concluded, but when Polybius wrote the cavalry were picked in the first place from the list on which they were enrolled by the censor according to their fortune, and 300 were apportioned to each legion. (Polyb. vi. 20.)
3. The levy being completed ( $\epsilon \pi i \tau \in \lambda \in \sigma \theta \in\{\sigma \eta s$ $\tau \hat{\eta} s \kappa \alpha \tau \alpha \gamma \rho a \phi \hat{\eta} s)$, the tribunes collected the men belonging to their respective legions, and making one individual stand out from the rest administered to him an oath ( $\mathcal{\xi} \xi$ opki $\zeta$ ovaıv) " that he would ohey orders and execute to the best of his ability the command of his officers." (Sacramentum s. Jusiurandum militare, Cic. de Off. i. 11 ; Liv. xxii. 38 ; sacramento milites adigere s. rogare, Liv. vii. 11 ; sacramentum s. sacramento dicere, Fest. s. v.; Caes. B. C. i. 23 ; Liv. ii. 24 , iv. 53 ; Gell. xvi. 4.) The rest of the soldiers then came forward one hy one, and swore to do what the first had bound himself to perform. They were then dismissed, a day and place having been appointed where each legion was to assemble withont arms. (Polyb. vi. 21 ; Caes. B. C. i. 76.) The words uttered by each soldier after the first were probably simply "idem in me," (see Festr s. v. Praejurationes).
4. At the same time the consuls gave notice to the magistrates of those towns in Italy in alliance with Rome, from whom they desired to receive a contingent, of the number which each would be required to furnish, and of the day and place of gathering. The allied cities levied their troops and administered the oath much in the same manner as the Romans, and then sent them forth after appointing a commander and a pay-master (bpxovia каі $\mu \sigma \sigma 0 \delta \delta ́ \tau \eta \nu)$. [Soci.] (Polyb. vi. 21.)
5. The soldiers having again assembled, the men belonging to each legion were separated into four
divisions ; and here, we must remark in passing, that Polyhius has fallen into a slight inconsistency, for while in the passage quoted ahove he fixes the number of the legion when he wrote, under ordinary circumstances, at 4200, in descrihing the arrangements which follow he supposes it to consist of 4000 only (vi. 21).
(1) One thousand of the youngest and poorest were set apart to form the Velites ( $\Gamma \rho \circ \sigma \phi 0 \mu \dot{\alpha} \chi 0$, $\left.\Gamma \rho 0 \sigma \phi \circ \phi \delta \rho_{0}\right)$, or skirmishers of the legion.
(2) Twelve hundred who came next in age (or who were of the same age with the preceding but more wealthy - the words of Polybins are not very distinct) formed the Hastati ('A $\sigma \tau \alpha \alpha^{\prime} \tau o l$ ).
(3) Twelve hundred, consisting of those in the full vigour of manhood, formed the Principes (Пріүн $\iota \pi \epsilon s$ ).
(4) Six hundred, consisting of the oldest and most experienced, formed the Triarii (Tpidotor).

When the number of soldiers in the legion exceeded 4000 , the first three divisions were increased proportionally, but the number of the Triarii remained always the same.

The equipment of these corps was as follows:-
For defensive armour the Velites were furnished with a plain head-piece ( $\lambda \iota \tau \hat{\varphi} \pi \epsilon \rho t \kappa \in \phi \alpha \lambda\{\varphi)$, sometimes covered with the hide of a wolf ( $\lambda v$ $\kappa$ cia $\alpha$ ) or any similar material, and a strong circular hnckler ( parma - $\pi \alpha ́ \rho \mu \eta$ ), three feet in diameter. Their offensive weapons were a sword ( $\mu \alpha \chi \alpha \iota \rho \alpha$ ), and the light javelin (hasta velitaris - $\gamma p o ́ \sigma \phi \circ s$ ), the shaft of which (hastile - $\tau \delta \xi \dot{\xi} \dot{\boldsymbol{j}} \boldsymbol{0} \boldsymbol{\nu})$ was generally two cubits ( $\delta(\pi \eta \chi \nu$ ), that is, about three feet in length, and in thickness a finger's breadth ( $\tau \hat{\psi}$ $\delta \in ̇ \pi a ́ \chi \in t \quad \delta \alpha \kappa \pi \nu \lambda i a \hat{i} 0 \nu)$, i.e. about 7584 of an inch;
 $\theta a \mu(\alpha i o \nu)$, i. e. about nine inches, hammered out so fine that it was of necessity bent at the first cast, and therefore could not be hurled back by the enemy.

The Hastati wore a full suit of defensive armour ( $\pi \alpha \nu 0 \pi \lambda i \alpha$ ), consisting of shield, helmet, breastplate, and greave. Their shield, termed Scutun ( $\mathrm{A} u \rho \in \dot{d} s$ ), was formed of two rectangular hoards from four feet to four feet three inches long hy two and a half feet broad, the one laid over the other, and united with strong glue; the outer surface was then covered with coarse canvas, and over this a calf's hide was stretched, and a curvature was given to the whole, the convexity heing turned outwards. The upper and under edge was strengthened by an iron $\operatorname{rim}(\sigma \iota \delta \eta \rho o \tilde{\nu} \nu \sigma \iota \alpha \lambda \omega \mu \alpha)$, the former, that it might resist the downward stroke of a sword ; the latter, that it might not be injured by resting upon the ground. In addition, it was still further fortified by an iron boss ( $\sigma \iota \delta \eta \rho \hat{\alpha}$ $\kappa \delta \gamma \chi 0 s)$, which served to render it more secure against blows from stones, against thrusts from the long pikes of the phalanx, and, in general, from all heary missiles. [See a figure of the Scutum under that article.] One leg was protected by a greave (ocrea - $\pi \alpha \rho \alpha \kappa \nu h \mu u s$ ), and the head by a bronze helmet (galea- $\pi \epsilon \rho เ \kappa \in \phi \alpha \lambda \alpha \alpha^{\prime} \alpha \chi \alpha \lambda \kappa \hat{\eta}$ ), with a crest composed of three scarlet or black feathers, standing erect to the height of about eighteen inches, so that the casque added greatly to the apparent stature and imposing carriage of the soldier. The greater number of the Hastati wore in front of their breast a brass plate nine inches square. which was called the Heart-preserver (rap$\delta i o q u ́ \lambda a c ̧)$; but those whose fortune exceeded

100,000 asses had complete cuirasses of chain-

The offensive weapons of the Hastati consisted of a sword and heavy javelins. The sword, which was girded on the right side, had a strong straight blade, double-edged, and sharp-pointed, being thus calculated both for cotting and thrusting. It was
 tradistinction to the Gaulish sword, which was a cutting sword only. Each man carried in his hand two of those heavy missiles, called pila by the Latins, ívool by the Greek's, which may be regarded as the characteristic weapon of the Roman infantry. The shaft of these was in every case four and a half feet (three cubits) long, and the harbed iron head was of the same length, but this extended half way down the shaft to which it was attached with extreme care (Polyb. vi. 23), so that the whole length of the weapon was about six feet nine inches. The shaft varied both in form and thickness - in form it was sometimes cylindrical, sometimes quadrangular - in the heaviest, the diameter of the cylinder or the hreadth across one of the flat sides was about three

The equipment of the Principes and the Triarii was in every respect the same with that of the Hastati, except that the latter carried pikes (hastoe - $\delta \delta \rho a r a$ ) instead of pila. (Polyb. vi. 21, 22, 23. For more minute information with regard to the different parts of the equipment, consult Galea, Hasta, lorica, Scutum, Parma, \&c.)

We may remark, in passing, that in addition to his armour and weapons the legionary, when in marching order, usually carried provisions for a fortnight at least, and three or four stakes, used in forming the palisade of the camp, besides various tools, an enumeration of which will be found in Josephus. (B.J. iii. 5. § 5.) The Roman writers frequently allude with pride to the powers of endurance exhibited by their countrymen in snpporting with ease such overwhelming loads; and Polybius draws a contrast between the Italian and the Greek soldier in this respect little favourable to the energy of the latter. (See Cic. Tuscul. ii. 16., which is the locus classicus; Polyb. xviii. 1 ; comp. Veget. i. 19 ; from Liv. Epit. lvii. it appears that Scipio trained his men to carry food for thirty days, and seven stakes each - double the usual burden.)
6. The Hastati, Principes, and Triarii were each divided into ten companies called Manipuli, to which Polybins gives, as equivalents, the three terms $\tau d \gamma \mu a, \sigma \pi \epsilon i \rho a, \sigma \eta \mu a l a$. The Velites were not divided into companies, but were distributed equally among the Hastati, Principes, and Triarii.
7. Before the division of the three classes into maniples, officers were appointed inferior to the tribunes. Thirty men were chosen by merit, ten from the Ilastati, ten from the Principes, and ten from the Triarii ; and this first choice being completed, thirty more in like manner. These sixty officers, of whom twenty were assigned to each of the three classes, and distributed equally among the maniples, were named centuriones, or ordinum ductores ( $\kappa \in \nu \tau u p i \omega \nu \in s, \tau \alpha \xi d \alpha \rho \chi 0 t$ ), and each of the sixty chose for himself a lieutenant (optio), who, heing posted in the rear of the company while the centurion was at the head, was named ouparos (i. e. Tergiductor) by the Greeks, so that in each maniple there were two centurions and two op-
tiones. Farther, the centurions selected out of each maniple two of the bravest and most vigorous men as standard bearers (vexillarii, signiferi, $\sigma \eta$ $\mu a เ o \phi \dot{\rho} 04$ ). The first elected centurion of the whole had a seat in the military council ( $\sigma v v \in \delta \rho \rho_{0}$ $n o l \nu \omega \nu \epsilon \bar{i}$ ), and in each maniple the first chosen commanded the right division of the maniple, and the other the left. Each of these subdivisions of the maniple was called, as we shall see hereafter, centuria, but it is not specifically noticed here by Polyhius. (Polyb. vi. 24.)
8. The cavalry were divided into ten troops (turmae, $(\lambda \alpha a)$, and out of each of these three officers were chosen, named decuriones (i^áp $\chi a i$ ). who named three lieutenants (optioncs, oupayoi). In each troop the decurio first chosen commanded the whole troop, and failing him, the second.

The equipment of the cavaliy was originally adapted solely to secure great ease and rapidity of movement. Hence they wore no breastplate, hut were clad in a single garment girded tight round their bodies; their shields were formed simply of an ox's hide, were incapable of withstanding a strong blow, and were readily damaged by wet; their lances ( $\delta \delta \rho a r a$ ) were so light and the shaft so thin, that they vibrated from the action of the horse ; could not be directed to their object with a steady aim, and were constantly snapped in a charge merely by the rapid motion. Moreover, not being furnished with a point at both ends, they served for one thrust only, by which they were broken, and then became useless. In the time of Polybius, however, they had adopted the Greek equipment, - a breastplate, a solid buckler, and a strong spear, fashioned in such a manner that the end by which it was held was so far pointed as to he available in case of necessity.
9. After the soldiers had been thus divided and officered, the tribunes having given the different classes instructions with regard to the arms which they were to provide, dismissed them to their homes, having first bound them by an oath to assemble again on a day and in a place fixed by the consul. Then and there accordingly they did assemble, no excuse for absence being admitted except inevitable necessity or the appearance of evil omens.
10. The infantry furnished by the socii was for the most part equal in number to the Roman legions, the cavalry twice or thrice as numerous, and the whole were divided equally between the two consular armies. Each consul named twelve superior officers, who were termed Praefecti Sociorum ( $\pi \rho \alpha / \phi \epsilon \kappa \tau 0 t$ ), and corresponded to the legionary tribunes. A selection was then made of the best men, to the extent of one fifth of the infantry and one third of the cavalry; these were formed into a separate corps under the name of eatraordinarit, and on the march and in the camp were always near the person of the consul. The remainder were divided into two equal portions, and were styled respectively the Dextera Ala and the Sinistra
 [Ala.]

It will be ohserved that we have implied a donbt with regard to the number of cavalry furnished by the allies. Polybins (iii. 107), when giving a sketch of the Roman forces before the battle of Cannae, after stating that the legion under ordinary circumstances consisted of 4000 infantry and 200 cavalry, but that in circumstances of pe-

## EXERCITUS.

culiar difficulty and danger it was angmented to 5000 infantry and 300 cavalry, adds distinctly that the allies supplied a foree of infantry equal to that of the legion, and generally thrice as many cavalry ( $\tau \hat{\omega} \nu \delta \dot{\epsilon} \sigma \nu \mu \mu \alpha ́ \chi \omega \nu, \tau \delta \quad \mu \dot{\epsilon} \nu \tau \omega ิ \nu \pi \epsilon \delta \hat{\omega} \nu$

 When treating more formally of the same subject (vi. 26) he repeats the above observation in nearly the same words, but when he came to $\tau \delta \delta \hat{\varepsilon} \tau \hat{\omega} \nu$
 $\delta เ \pi \lambda \alpha \sigma t o v$; and a little further on (vi. 30), in the passage where he explains the mamer in which the troops were quartered in a camp, his expressions, when interpreted according to their natural meaning and their connection with the preceding clause, must signify that the total number of the allied cavalry was double that of the Romans, and not, as the Latin translation attached to the edition of Schweighaeuser has it, donble that of the Romans after deducting one-third for the extraordinarii equites. Livy, when referring to the position of affairs between the Romans and their allies hefore the great Latin war of в. c. 340 , after specifying the ordinary strength of the Roman armies, adds (viii. 8) "alterum tantum ex Latino delectu adjiciebatur." When recounting the preparations for the campaign of Cannae, although he appears to allude directly to the narrative of $\mathrm{P}_{0}-$ lyhius and to copy his words, he contradicts him directly with regard to the allied cavalry (xxii. 36), "socii duplicem numerum equitum darent." At a somewhat later period (в. c. 189), when four legions were raised, the socii were required to contribute 15,000 infantry and 1200 cavalry (xxxviii. 35 ), and nine years afterwards the consuls were ordered to levy a new army of four legions "et socium Latini nominis, quantus semper numerus, quindecim millia peditum et octingenti equites" (xl. 36), which exactly corresponds with what we read in a former chapter (xl. 18). The truth geems to be, that although the contingent which each state was bound to furnish, was fixed by treaty, it was seldom necessary to tax all the allies to the full extent, and hence the senate used their discretion as to the precise number to be supplied, according to the circumstances of the case, the proportion of confederates to Roman citizens becoming of course gradually larger as the limits of the Roman sway embraced a greater number of cities and districts. (See Lips. de Milit. Rom. ii. 7.)
11. Agmen or Line of March.-The Extraordinarii Pedites led the van followed by the right wing of the infantry of the allies and the baggage of these two divisions; next came one of the Roman legions with its haggage following ; next the other Roman legion with its own baggage, and that of the left wing of the allies, who hrought up the rear. The different corps of cavalry sometimes followed immediately behind the infantry to which they were attached, sometimes rode on the flanks of the beasts of burden, at once protecting them and preventing them from straggling. If there was any apprehension of an attack from behind, the only change in the above order consisted in making the Extraordinarii bring up the rear instead of leading the van. As far as the position of the two legions with regard to each other, and also of the two wings of the allies, was concerned, it was understood that the legion and the wing which took the
lcad upon one day should fall behind upon the next day, in order that each in turn migbt have the advantage of arriving first at the watering places and fresh pastures. When marching in open ground where an attack on the flanks was anticipated, a different disposition was sometimes adopted. The Hastati, Principes, and Triarii marched in three columns parallel to each other, the baggage of the first maniples took the lead, the haggage of the second maniples was placed between the firstand second maniples, and so on for the rest, the baggage in each case preceding the maniple to which it belonged. If an attack was made then the soldiers wheeling either to the right or to the left, according to circumstances, and adyancing at the same time a few steps, by this simple and easily exceuted movement presented at once an even front to the enemy, the whole of the haggage heing now in the rear.

Generally, when advancing through a country in which it was necessary to guard against a sudden onset, the troops, instead of proceeding in a loose straggling column, were kept together in close compact bodies ready to act in any direction at a moment's warning, and hence an army under these circumstances was said agmine quadrato incedere. (e. g. Sall. Jug. 105 ; Sencc. Ep. 59 ; comp. Cic. Phil. ii. 42, v. 7.)

It is to be observed that Polybius, at the outset, promises an account of the order of march, of the encampment, and of the battle array of the Roman
 men, Castra, Acies) ; but that while he has redeemed his pledge with regard to the two former, he has left the last topic untouched, unless, indeed, it was included in a section now lost. It is, moreover, comparatively speaking, a subject of little consequence, for while we know that a camp was always the same so long as the constitution of the army remained unchanged, and while the order of march was subject to few modifications, the marshalling of the troops for an engagement must have varied materially in almost every contest, depending necessarily in a great measure on the nature of the ground, and on the aspect assumed by the foe.

Some doubt exists with regard to the force of the term Agmen Pilatum as distinguished from Agmen Quadratum. The explanation quoted from Varro by Servius (Ad Virg. Aen. xii. 121), "Quadratum, quod immixtis etiam jumentis incedit, ut ubivis possit considere: pilatum, quod sine jumentis incedit, sed inter se densum est, qua facilins per iniquiora loca tramittatur," has not heen considered satisfactory, although it is difficult to understand how Varro, himself a soldier, should have been inaccurate upon such a point. Whers the phrase occurs in poetry as in the passage in Virgil referred to above (comp. Martial. x. 48), it probably denotes merely "columns bristling with spears."

Polybius being our most copious and pure sauree of information, before passing on to the fourth period, it may be fitting to enter more fully upon certain topics which he has either touched very lightly or passed over in silence. We shall, therefore, make a few remarks:-1. On the levying of soldicrs. 2. On the division of the legion as a hody into cohorts, maniples, and centuries, ol which the cohort and the century are not named by Polybius in the above description. 3. On the distrihution of the soldiers into Triarii, Principes,

Hastati, Velites, Antepilani, Antesignani, \&c., and on the original import of these terms. 4. On the officers of the legion, the tribunes, the centurions and subalteras.

1. The levy (delectus, кataүрaф才) was usually held in the Capitol (Liv. xxvi. 31) hy the consuls scated on their chairs of state (positis sollis, Liv. jii. 11); but sometimes in the Campus Martius (Dionys. viii. 87), which was beyond the jurisdiction of the tribunes of the plebs, who, in the earlier ages of the commonwealth especially, frequently interfered to prevent an army from being raised.

According to the principles of the constitution, none were enrolled in the legion, except freeborn citizens (ingenui) above the age of seventeen, and under the age of forty-six, possessing the amount of fortune specified above (Gell. x. 28); but in times of peculiar difficulty, these conditions were not insisted upon. Thus, in consequence of the scarcity of men during the second Punic war, it was at one time ordained, that lads under seventeen might be admitted into the ranks, and that thsir time should be allowed to count just as if they had attained to the legal age (Liv. xxv. 5), and on the other hand, when strenuous exertions wers made for the campaign against Perseus, the senate decreed that no one under fifty should be excused from enlisting (Liv. xlii. 33). Moreover, not only were all freeborn citizens without distinction of fortnne called out on such occasions, but even freedmen were armed (Liv. x. 21, xxii. 11); and after the battle of Cannae, eight thousand slaves who bad declared themselves willing to fight for the republic, were purchased by the state, and formed into two legions, who, under the name of Volones, displayed great bravery, and eventually earned their freedom (Liv, xxii. 57 ).

In moments of sudden panic or when the necessity was so pressing as to admit of not a moment's delay, all formalities were dispensed with, and every man capable of bearing arms was summoned to join in warding off the threatened danger, a force raised under such circumstances being termed subitarius s. tumultuarius exercitus (Subiturii milites, Liv. iii. 4, xli. 17; Sulitarius exercitus, iii. 30 ; Legiones subitariae tumultus causa seriptae, xxxi. 2, xl. 26; Tumultuarius exercitus raptim conscriptus, viii. 11 ; Legiones tumultuarias scriberet, xl. 26).

If citizens between the ages of seventeen and forty-six did not appear and answer to their names or contumaciously refused to come forward, they might be punished in varions ways, - by fine, by imprisonment, by stripes, by confiscation of their property, and even, in extreme cases, by being sold as slaves (Dionys. viii. 87 ; Liv. vii. 4 ; Varr. ap. Gell. xi. 1, ap. Non. s. v. Tenebrionem; Val. Max. vi. 3. §4). At the same time, causes might be alleged which were recognised as forming a legitimate ground for exemption (vacatio justa militiaes). Thus, all who had served for the full period of twenty years in the infantry or ten in cavalry, were relieved from further service, although they might still be within the regular age; and so, in ilike manner, when they were afflicted by any grievous malady, or disabled by any personal defect, or engaged in any sacred or civil offices which required their constant attendance; but these and similar pleas, although sustained under ordinary circumstances, might be rendered void by
a decres of the senate "ne vacationes valerent," and hence in the case of a Gallic war, we read that Aemilius Mamercinus, then consul, was instructed "scribere exercitum sine ulla vacationis venia" (Liv. viii. 20), and one of the measures urged by Cicero upon the senate in the contest with Antonius was "delectum haberi sublatis vacationibus" (Philipp. v. 12). So, also, if the soldier, after being enrolled, failed to appear at the place of muster appointed by the consul, his absence might be justified by various "excusationes," a list of which will be formd in Gellius (xvi. 4), the most important being severe bodily ailment (morbus sonticus) ; the death of a near relation (funus familiarc) ; the obligation of performing a stated sacrifice (sacrificizon anniversarium), or some other religious impediment.

While those who had served for the stipulated period were entitled to immunity for the future, even although within the legal age, and were styled Emeriti, so on the other hand, it appears from some passages in the classics, that persons who had not completed their regular term within the usual limits, might be forced, if required, to serve between the ages of forty-five and fifty (Liv. xxvii. 11 , xlii. 34 ; Senec. de brev. Vit. cap. ult. ; Quintil. ix. 2. § 85). Towards the close of the republic, and under the empire, when the legions became permanent, the soldier who bad served his full time received a regular discharge (missio) together with a bounty (praemium) in money or an allotment of land. The jurists distinguish three kinds of discharge:-1. Missio honesta, granted for length of service. 2. Missio coussaria, in consequence of bad health. 3. Missio Ignominiosa, when a man was drummed out for bad conduct (Macer in Dig. 49. tit.16. s. 13 ; Ulpian in Dig. 3. tit.2. s. 2, comp. Hirt. B.A. 54 ; Suet. Jul. 69, Oetav. 24). It frequently happened that emeriti were induced to continue in the ranks, either from attachment to the person of the general or from hopes of profit or promotion (Appian. B. C. y. 3), and were then called veterani, or when they joined an army, in consequence of a special invitation evocati (ava$\kappa \lambda \not \eta^{\prime} \tau \circ$, Dion Cass. Iv. 24). Dion Cassius states (l.e.) that troops bearing this last denomination were first employed by Octavianus, when he called out ( $\grave{\omega} \nu \epsilon \kappa d \lambda \in \sigma \in \nu$ ) the veterans of Julius Caesar to aid him against Antonius, but we read of them at an earlier period. (Caes. B. G. vii. 65, B. C. i. 17, iii. 88.) [Evocatr.] They must in no way be confounded with the volunteers mentioned by Polybius in his description of a Roman camp
 $\dot{v} \pi \alpha \dot{\alpha} \tau \nu \chi \chi \alpha \rho \tau \iota)$, who seem to have formed part of what may be termed the personal suite of the general. (Comp. Sallust. Jug. 84.) We shall make some further remarks upon the Veterani and the changes introduced by Augustus with regard to the term of service, when we speak of the Vexillarii, who belong to our fifth period.
2. We next proceed to consider the division of the legion into Colortes, Manipuli, Centuriae, Signa, Ordines, Contubernia.

Cokortes.-It will be observed that Polybins takes no notice of the Colort, a division of the legion mentioned so often in the Roman writers. Hence Salmasius and other distinguished scholars have supposed that the cohort had no existence until the time of Marius, and although named by Livy almost immediately after the expulsion of
the kings (ii. 11), and repeatedly afterwards (e.g. xxvi. 13, 41) he may be supposed to speak proleptically. But in a quotation preserved by A. Gellius (N. A. xvi. 4) from the treatise $D e \operatorname{Re}$ Militari of Cincius, who is generally admitted to be Cineius Alimentus, the annalist contemporary with Hannibal, we find the cohort not only named but specifically defined, In legione sunt centuriae sexaginta, manipuli triginta, cohortes decem; and Polybius himself uses the Latin word $\kappa 0 \delta \rho \tau$ ss twice in his history of Scipio's Spanish campaigns (xi. 23, 33), giving in the first of these passages an explanation of the term, kal $\lambda a \delta \dot{\omega} \nu . . . \pi \rho \in i s$
 тара̀ 'Pupainıs кобртьs . . . where it must be borne in mind that Polybius uses the words rá $\gamma \mu a$, $\sigma \eta \mu a i a$ and $\sigma \pi \epsilon i \rho a$ indifferently, to denote the maniple. On the other hand, the later Greek writers generally designate the maniple by $\lambda 6 \chi 0 s$, and almost invariably employ $\sigma \pi \epsilon l \rho \alpha$ as the representative of cohors. Hence considerable confusion is apt to arise ; and Livy has rendered his description of the order in which Scipio marshalled his army at Zama unintelligible by translating $\tau \dot{\alpha}$ s $\sigma \pi$ eipas in the text of Polybius by cohortes instead of manipulos (Liv. xxx. 33 ; Polyb. xv. 9) ; while Polybius himself is guilty of an inconsistency in the same chapter when he uses the expression tais
 or Velites were not divided into maniples, as he most distinctly states elsewhere.

When the soldiers of the legion were elassified as Velites, Hastati, Principes and Triarii, the cohort contained one maniple of each of the three latter denominations, together with their complement of Velites, so that when the legion contained 4000 , each cohort would consist of 60 Triarii, 120 Prineipes, I 20 Hastati, and 100 Velites, in all 400 men.
The number of cohorts in a legion being always ten (Cincius, l. c. ; Cic. Philip. iv. 27; the words of Isidor. Orig. ix. 3. § 47, are evidently corrupt), and the cohorts, during the republic, being all equal to each other, the strength of the cohort varied from time to time with the strength of the legion, and thus at different periods ranged between the limits of 300 and 600 . They were regularly numbered from 1 to 10 , the centurion of the first century of the first maniple of the first cohort was the guardian of the cagle, and hence the first cohort seems always to have been regarded as superior in dignity to the rest. (Caes. B. C. iii. 64, Cic. ad Att. v. 20.) From some expressions in the deseription given by Caesar of the battle of Pharsalia, it has been inferred that even then the firat cohorts in the legions were more numerous than the rest ; and this was certainly the case under the empire, when they were termed cohortes milliariae, and contained twice as many soldiers as the others. Thus the legion described by Hygimus amounted to 5280 men, divided into ten cohorts; and of these, the first, which had the charge of the eagle, consisted of 960 men, while the remaining nine had 480 each.

The word cohort lasted as long as the word legion, and even longer, for not only does Ammianus (xxi. 13, xxiii. 5) speak of eenturies and cohorts in the army of Julian, but cohors, as a military term, is met with in authors after Justinian. But although cohortes is found oceasionally in the writers of the later empire, they for the most part
prefer the somewhat vague term numeri, which appears in Tacitus and Suetonius, and perhaps even in Cieero (ad Fam. xi. 10, xii. 13). Numer seems to have signified strietly the muster roll, whence the phrases referre in numeros, distribuere in numeros (Plin. Ep. iii. 8, x. 30, 31), and thus served to denote any body of legionaries. In the Digest and the two Codes it is used sometimes for a century, sometimes for a cohort ; by Suetonius (Vespas. 6) for a detachment selected from three different legions. Nor is it absolutely restricted to legionaries, for we read in inseriptions of Numerus Britonum (Orell. 1627), Numeri Dalmatarum (Grut. dxxviii.; Orell. 3410), while Ammianus applies it to cavalry as well as infantry, and to auxiliaries as well as legionaries (xxiii. 2). In like manner the later Greeks introduced $\dot{d} \rho i \theta \mu \mathrm{o}$ ) or $\nu 0 u \mu \in \rho 0$ for colhortes, the former being the explanation given by St. Chrysostom in his exposition of the tenth ehapter of the Acts for the word $\sigma \pi \in i \rho a s$, while Suidas interprets $\sigma \pi \epsilon i \rho a l$ by $\nu 0 \dot{d}$. $\mu \in \rho \alpha$.

Whenever Cohors occurs in the Latin classics in connection with the legion, it always signifies a specific division of the legion ; but it is very frequently found, in the general sense of battalion, to denote troops altogether distinct from the legion. Thus in Livy (iv. 39) it is applied to a hody of dismounted cavalry, to the force of the allies (alariae cohortes, x. 40, 41 ; cohors Peligna, xxv. 14 ; cohortem Marsorum, xxxiii. 36, \&c.), to the troops of an enemy (vii. 7, x. 40, xxx. 36), with various other modifications; and we shall be called upon to speak under our fifth period of Cohortes praetorianae, Colortes peditatae, Cohortes equitatae, and several others.

Manipulus.-The original meaning of this word, which is clearly derived from manus, was a handful or wisp of hay, straw, fern, or the like, and this, according to Roman tradition, affixed to the end of a pole, formed the primitive military standard in the days of Romulus -

## Pertica suspensos portabat longa maniplos Unde maniplaris nomina miles habet.

(Ovid. Fast. iii. 117 ; eompare Plut. Rom. 8) Hence it was applied to a body of soldiers serving under the same ensign (see Varr. L.L. v. 8, vi. 85 who connects it in this sense directly with manus): when the ponderous mass of the phalanx was resolved into small companies marshalled in open order, these were termed manipuli, and down to a very late period the common soldiers of the legion were designated as manipulares or manipularii, terms equivalent to gregarii milites. By whom this momentous innovation upon the tacties of a Roman army was first introduced, it is impossible to determine with certainty; but from the remark of Livy (viii. 8), that a change in the equipment of the heavy-armed soldiery took place at the period when they began to receive pay, compared with the words of Plutarch (Camill. 40), we may conjecture that the revolution was brought about in part at least hy the greatest general of whom the infant republie could boast - Camillus.

When the phalanx was first broken up, it appears (Liv. viii. 8) that each of the three elasses of Hastati, Prineipes, and Triarii, contained fifteen maniples; but before the seeond Punic war (see Cincius, as quoted by Gell. above) the number of maniples in each of these classes was re-
duced to ten, as stated by Polybins. Hence it is easy to calculate the number of soldiers in each maniple, according to the varying numbers in the legion, it being always borne in mind that the Triarii never exceeded 600, and that the Velites were not divided into maniples, bnt distributed equally among the heavy armed companies.
Some writers, especially Le Beau, in his " Mémoires" on the Legion, maintain that, after the distinctions between the Hastati, Principes and Triarii were abolished, and the legion was marshalled in cohorts, the division into maniples was no longer practised, and that the term manipulus must from this time be understood to indicate cither a small number of men indefinitely, or a mass of ten soldiers quartered in the same tent. No one, however, who reads withont prejudice the words of Caesar "adeo ut paucis mutatis centurionibus, iidem ordines, manipulique constarent" ( $B . C$. ii. 28, comp. B. G. ii. 25, vi. 33), and of Tacitus, "assistentem concionem quia permixta videbatur discedere in manipnlos jnbet " (Ann. i. 34), together with the still more explicit expressions of Ammianus, "omnes centurias et manipulos et cohortes in concionem convocabat " (xxi. l3. §9), repeated almost in the same words in two other passages (xvii. 13. $\S 25$, xxiii. 5. § 15), can doubt that the manipulus continued to the very last to form one of the larger subdivisions of the legion. Indeed, the whole system of classifying and naming the centurions upon which Le Beau himself bestows so much labour and ingennity is unintelligible npon any other supposition. At the same time it cannot be denied that nanipulus must sometimes be taken in a general sense, as when Tacitus gives this name to the detachment of sixty men, sent into Asia by Nero, for the purpose of putting Plantns to death. (Ann. xiv. 58,59 .) As to the identity of manipulus and contubernium, no donbt Vegetins states very distinctly that the centuries were divided into contubernia, and adds "contubernium autem manipulus vocabatur," but an assertion proceeding from such a source is as worthless as the etymology by which it is followed up.

Centuriae. - The distribution of soldiers into centuriae must be regarded as coeval with the origin of Rome. Plutarch, as noticed above, speaks of the furce led by Romulus against Amulins as formed of centuries; and from the close comnections between the centnries of Servius Tullins, and the organization of the military force, we cannot hesitate to believe that the term was communicated to the ranks of the phalanx. For a lang period after the establishment of the manipular constitution, the legion contained invariably sixty centuries, and even after the introduction of the cohors milliaria, we have no good evidence to prove that any change took place in this respect except we choose to adopt the statements of Vegetius.

Signum. - There is much donbt with regard to 'he import of the word signum, when used to denote a division of the legion, in such phrases as signi unius milites ferre scalas jussit (Liv. xxv. 23) ; and postero die cum unius signi militibus . . . . pergit ire ad urbem. (Liv. xxxiii. 1.) The question is, whether in these passages we are to understand that a maniple is meant or a century. On the one hand, it is admitted that after the legion was marshalled by cohorts, each century had its own standard, and in so far as the carlier ages are concerned, Polyhius expressly tells us that there were two standard.
 (see also Liv. viii. 8). On the other hand, one of the names given by Polybins to the maniple is $\sigma \eta \mu a i a$, which seems to correspond exactly with signum, and Varro in his glossary of military terms, "Manipulos exercitns minimas manns quæ unum sequuntur signum," to which we mayadd Liv. xxwii. 14., " ni C. Decimius Flavns . . . . . signo adrepto primi hastati, manipulum eins signi se sequi jns-
 there were two standard-bearers, it does not follow that there were two standards.

Ordo generally signifies a century, and ordinum ductor is synonymous with centurio, and ducere honestum ordinem means to be one of the principal centurions in a legion. On the other hand, in the celebrated chapter in Liry (viii. 8.), discussed above, ordo undoubtedly denotes one of the original maniples, and when we read in book xlii. 34. "Mihi T. Quinctius Flamininus decumuro ordinem hastatum adsignavit," the speaker seems to declare that he had been raised from the ranks to the post of a centurion in the 10 th maniple of the Hastati. These must, bowever, be regarded as exceptions.

Contubernium. - This was the name given under the empire to the body of soldiers who were quartered together in the same tent; the captain of the mess, decanus or decurio, is called by Vegetins caput contulternii, and Ammianus designates the mess-mates by the word concorporales.
3. Hastati, Principes, Triarii, Pilani, Antepilani, Antesignani, Principia. - No reasonable doubt can exist that the Hastati were so called, from baving been armed with a hasta (Hastati dieti qui primi hastis pugnabant, Varr. L. L. v. 39), the Principes from having occupied the front line (the etymology of Varro, l. c. is here not distinct, Principes qui a principio gladiis), the Triarii, otherwise named Pilani, from having been ranged behind the first two lines as a body of reserve and armed with the pilum (Pilani, qui pilis... Pilani Triarii quoque dicti quod in acie tertio ordine extremis suldsidio deponebantur; quod hi subsidebant, ab co subsidium dictum, a quo Plautus,

Agite nunc subsidite omnes quasi solent triarti,
Varr. l.c. ; comp. Liv. viii. 8), while the first two lines were termed collectively Antepilani, from standing in front of the Pilani. In process of time, it came to pass, that these designations no longer expressed the actual condition of the troops to which they were attached. When Polybius wrote, and long before that period, the Hastati were not armed with luastae, but in common with the Principes bore the heavy pilum: on the other hand, the pilani carried llastae and not pila, while the Principes were not drawn up in the front, but formed the second linc. The origin of this discrepancy between the names and the objects which they represented, is somewhat obscure, but perhaps not altogether beyond the reach of a very simple conjecture. The names were first bestowed when the Roman array was disciplined according to the tactics of the Grecian phalanx. At that time the hastati were the skirmishers armed with a light javelin (the lasta velitaris), who were thrown forward in advarce of the main body, and it is with reference to their ancient duty that Ennius in the eighth book of his aunals uses an expression no longer applicable in his day.
"Hastati spargunt hastas, fit ferreus imler."

In corroboration of this, it will be seen from the celebrated chapter in Livy (viii. 8), which we have discussed at length above, that after the open order had been established, and the majority of the hastati had become hoplites (scutati), one-third of the men in each maniple were equipped as light troops "manipulus leves vicenos milites . . . . leves autem, qui hastam tantum gaesaque gererent." The Princupes were the front ranks of the phalanx, men in the full vigour of their years and strength, clad in complete defensive armour, and hence distinguished by Livy (l. c.) as "insignibus maxime armis." The Pilani were in the rear of the phalanx, and as the opposing hosts approached each other, before they were required to give weight and momentum to the mass, threw the heavy pilum over the heads of their comrades, in order to break, if possible, the continuity of the enemy's line.

Vegetius uniformly places the Principes in front (i. 20, ii. 2,15, iii. 14 ), and it is only necessary to read the sentences in which they are mentioned, to perceive how hopeless is the confusion which pervades his statements.

Antesignani.-While the Hastati and Principes, taken together, were sometimes termed Antepilani, in contradistinction to the Triarii, so the Hastati alone were sometimes termed Antesignani, in contradistinction to the Principes and Triarii taken together. That the Antesignani were the soldiers who fought in the front ranks: is manifest from almost every passage in which the word is found (e. g. Liv. ii. 20, vii. 33) ; that they were so called from being placed before the standards, is proved by the description of the confusion which prevailed in the engagernent at the Thrasymene lake, "Non illa (sc. pugna) ordinata per principes, hastatosque ac triarios, nec ut pro signis antesignani, post signa alia pugnaret acies" (Liv. xxii. 5) ; that they were not the Velites is clear from the marshalling of the troops before Zama, "vias patentes inter manipulos antesignanorum velitihus complevit" (Liv. xxx. 33, who hère translates Polybius); that they were the soldiers who formed the first line as distinguished from the second, appears from the narratives of the battles against the Latins, "caesos hastatos principesque, stragem et ante signa et post signa factam, triarios postremo rem restituisse" (Liv. viii. 11), and against the Tuscans, "cadunt antesignani, et ne nudentur propugnatoribus sigua, fit ex secunda prima acies" (Liv. ix. 39) ; and from these two quotations, it is further evident that the position of the "signa" was behind the hastati and before the principes. These signa must have been the ordinary standards of the maniples, for we know that the aquila was in the custody of the first maniple of the triarii. The term Antesignuni having become established as denoting the front ranks in a line of battle, was retained in this general sense long after the Hastati, Principes, and Triarii had disappeared (see Caes. B. C. i. 43, iii. 84, where they are the oldest and best soldiers, who now led the van. Comp. Varro ap. Non. s. v. Antesignanorum.)

Another term employed to denote the front ranks of an army in battle array is Principia, and in this sense must be carefully distinguished from the Priacipict or chief street in the camp, and from Principia, which in the later writers, such as Ammianus and Vegctius, is equivalent to principales milites (Liv. ii. 65, iii. 22, viii. 10 ; Sisenn. ap.

## EXERCITUS.

Non. s.v. mandare ; Sall. Jug. 54 ; Tac. Hist. ii 43 ; comp. Varr. ap. Gell. iii. 4 ; Terent. Eun. iv. 7, and note of Donatus ; Senec. de Vit. beat. 14).

Postsignani does not occur in any anthor earlier than Ammianus Marcellinus (xviii. 8. § 7, xxiv. 6. § 9), and therefore need not be illustrated here; the Subsignanus miles of Tacitus (Hist. i. 70, iv. 33) seems to be the same with the Vexillarii, who fall under our next period.

## Rorarii, Accensi, Ferentarii, Jaculatores, Velites, Proculitores.

Light-armed troops (levis armatura) were, from the first, associated with the hoplites, but under different circumstances and different names, at different periods.
When the Hastati had, in a great measure, ceased to act as tirailleurs, their place was supplied by the Rorarii (Roraria dicti ab rore, qui committebant bellum ante, ideo quod ante rorat quam pluit, Varro, L. L. vii. § 57), whose method of fighting has heen described ahove (p. 495). The Accensi, as described by Livy (viii. 8), were inferior in equipment to the rorarii, although employed in a similar manner, and seem to have been camp followers or servants (Accensos ministratores Cato esse scribit, Varro, l.c. and ap. Non. Marcell. s. v. accensi), and hence the name is given to those also who attended upon magistrates or other officials (e.g. Cic. ad Fam. iii. 7, ad Q. Fr. i. 1. §4, 7). At a later period the accersi were supernumeraries, who served to fill up any vacancies, which occurred in the course of a campaign (Accernsi dicebantur qui in locum mortuorum militum subito subrogabantur, Fest. s. v.), persons to whom Varro gives the name of adscriptivi (quod olim adscribebantur inermes, armatis militibus qui succederent, L. L. vii. §56); and, according to Festus (p. 198, ed. Müller), accensus was the name given, originally, to the optio or lieutenant of the centurion, a fact to which the Pseudo-Asconius, perhaps, refers, when he says (in Verr. ii. 28), "Accensus nomen est ordinis et promotionis in militia, ut nunc dicitur princeps, vel commentariensis aut cornicularius. Haec enim nomina de legionaria militia sumpta sunt."
Another ancient term for light-armed soldiers was Ferentarii, a word found in the Trinummus of Plautus (ii. 4. 55), where ferentarius amicus signifies a friend nimble and prompt to lend assistance ; in Sallust (Catil. 60), "Postquam eo ventum est, unde a ferentariis proelium committi posset ;" and even in Tacitus (Ann. xii. 35), " ferentarius gravisque miles." The term is twice explained by Varro, who, in his treatise De Vita Populi Romani, after defining accensi, adds (ap. Non. Marcell. s. v. Decurio)," Eosdem etiam quidam vocabant forentarios qui depugaabant pugnis et lapidibus, his armis quae ferrentur, non quae tenerentur; and, again (L. L. vii. § 57), "Ferentarium a fírendo . . . . aut quod ferentarii equites hi dicti qui ea modo habebant arma quae ferrentur, ut jaculum," whence it appears that horsemen as well as foot-soldiers were sometimes known by this appellation. Rorarii and accensi stand together in a line quoted (Varro, l. c.) from the Frivolaria of Plautus.
Uhi rorarii estis? en sunt. Ubi sunt accensi? Ecce ! -
"Rorarius velox" occurs twice in the fragments of Lucilius; and even Symmachuc, in one of his
epistles (viii. 47), draws an illustration from this - source "tamquam levis armaturae miles Rorarios aemularis."

The Velites, called also Procubitores, because they were employed on outpost duty when the Romans were encamped before an enemy (Festus, 8. v.), were first formed into a corps at the siege of Capua, в. c. 211, as we are informed by Livy (xxvi. 4, comp. xxxviii. 2l, and Val. Max. ii. 3 ; Frontin. iv. 7), who gives a minute description of the circunstances which led to their institution, and of the manner in which they were armed. It is true that the historian uses the term Velites before the epoch in question (e.g. xxi. 56 , xxiv. 34 ) ; and Polybius, in like manner, speaks of रpooфо $\mu \alpha \alpha^{\prime}$ о from the time of the first Punic war; but these expressions must be understood to indicate the light-armed troops as they then existed, and which, after the name Rorarii fell into disuse, were styled jaculatores or $\pi \in \zeta \alpha к о \nu \tau \iota \sigma \tau \alpha l$. We must not conclude from the narrative of Livy, that it was customary for the Velites to mount behind the cavalry ; on the contrary, the above passage is, perhaps, the only one in which they are represented as employed in this manner, although, in later times, it was by no means uncommon for lightarmed troops to mingle with the horsemen, to keep pace with them, and to support them in their operations (Caesar, B. G. i. 48, viii. 19, B.C. iii. 84 ; Sall. Jug. 9]).
The foreign light-armed troops will be noticed under the next epoch.

## The Officers of the Legion.

Triluni. - The chief officers of the legion were the Tribuni Militum, rendered by the Greeks $\dot{\chi} \iota \lambda i a \rho \chi o 1$. Tribunus is, unquestionably, derived from trilus; and, according to Varro (L. L. マ, § 81), in ancient times tbree were sent to the army, - one from the Ramnes; one from the Luceres; one from the Tities, - who would then be the commanders of the original legion of 3000 . In the time of Polybius, the number in each legion was six ; but when and under what circumstances this increase took place, is unknown. Two passages from Livy (vii. 5 , ix. 30), to be more particularly adverted to hereafter, by which Sigonius endeavoured to throw light upon the question, admit of an interpretation totally different from that which he has assigned to them, and they leave the matter altogetber in doubt. After the number six was once established, it does not appear to have varied for many centuries, nor do we know what changes were introduced, in this respect, during the decline of the empire. The case in Livy (xlii. 35), where four military tribunes are represented to have been chosen from the senate to command four legions, supposing the text to be faultless, is manifestly quite special.

It must be understood that the authority of each tribune was not confined to a particular portion of the legion, but extended equally over the whole. In order, however, to prevent confusion and collision, it was the practice (Polyb. vi.) for the tribunes to divide themselves into three sections of two, and each pair undertook the routine functions for two months out of the six, during which active operations in the field usually lasted. (Comp. Liv. xl. 41, "Securdie legionis Fulvius tribunns militum erat, is monsibus suis dimisit legionem.") In addition to the duties specified by Polybius,
and already detailed under Castra, and to the general superintendence which they must have exercised, we perceive that they nominated the centurions, and assigned to each the company which he was to command. They presided also at courts-martial, and bad the power of awarding the highest punishments.

Up to the year в. c. 361, the tribunes were chosen by the commanders-in-chief, that is, by the kings in the first instance, and afterwards by the consuls, or a dictator, as the case might be. In the year above named the people assumed to themselves the right of electing either the whole or a certain number, it is impossible to say which (Liv. vii. 5 ), but they seem to have allowed matters to return to a great extent to their former state until B. c. 311 , when it was ordained that they should choose sixteen for the four legions (Liv. ix. 30); but whether this embraced a whole or a part only, is a point upon which we are again left in doubt. From this time forward, in virtue of the rogation then passed, the people continued to elect the whole, or, at all events, the greater number until B. c. 207 , when the consuls, Claudius Nero and Livius Salinator, appointed the tribunes to nineteen out of the twenty-three legions of that year, the people taking to themselves the nomination to the first four only (Liv. xxvii. 36). When war was declared against Perseus b. c. 171, a special act was passed that the military tribunes for that year should not be elected by the votes of the people, but should be nominated by the consuls and praetors (Liv. xlii. 31.) ; the same arrangement probably was adopted the following year, for it is particularly mentioned that in the third year of the war (в.c. 169), the people named the tribunes of four legions, which were kept in reserve (Liv. xliii. 12); and, finally, in the fourth and last year of the war (в. c. ]68), the senate resolved that the tribunes for the eight legions should be named one half by the people and one half by the consuls, Aemilius Paulus being allowed to select out of the whole body those whom he considered best fitted for serving in the two legions which he was about to transport into Macedonia. Polybius (vi. 19) refers incidentally to the fact that some of the tribunes were chosen by the people, and some by the consuls, but without specifying the proportions, and this division of patronage probably subsisted so long as the forms of the constitution were maintained, for even under Angustus the people retained some power, nominally at least, in the military elections; but from the reign of Tiberius these offices were held to be in the gift of the prince exclusively. It is clear that in the latrer ages of the republic the nomination of tribunes, not elected by the people, was vested not in th: consuls alone but in proconsuls also, and generally in those who held the chief command in an army: Thus Cicero, when in Cilicia, offered, at the request of Brutus, a tribuneship to Scaptius (Cic. ad Att. vi. 3) ; and the orator, at another time, gives a hint to Caesar, when in Gaul, that he might bestow a tribuneship, or some such office, on Trebatius (Cic. ad Fam. vii. 5) ; while Caesar himself found, to his cost, that he bad attended too much to the claims of friendship in granting these appointments. (Caes. B. G. i. 39.) Those tribunes elected by the rotes of the people were terned Comitiati, those chosen by the general Rufuli; because, says Festus, their privileges were fixed by
a law of Rutilius Rufus. (Liv. vii. 5; Pseud. Ascon. in Verr. Act. i. 30 ; Festus, s. v. Rufuli.) That all tribunes were not upon an equality is thear from the expression of Livy (xli. 3.)," L. Atius, tribunus primus secundae legionis;" and, from the Cornelian law quoted by Cicero (Pro Cluent. 54), where the tribunes of the first four legions are evidently regarded as superior to others. How this precedence was regulated, whether by seniority, by the mode of election, or by some other principle we cannot determine.

We have seen from Polybius that no one was eligible to the office of tribune who had not served for ten years in the infantry or five in the cavalry. This rule admitted of exceptions, for we find that the elder Scipio Africanus was tribune of the soldiers at the battle of Cannae (Liv. xxii. 53), although certainly not twenty years old ; and Hortensius rose to the same rank in his second campaign. Augustus introduced certain regulations altogether new. He permitted the sons of senators to wear the tunica laticlavia as soon as they assumed the manly gown, and to commence their military career as tribunes, or as commanders (praefecti) of cavalry (Suet. Octav. 38). Such persons were the Tribuni Laticlavii (Sueton. Dom. 10), whom we find frequently commemorated in the inscriptions of the empire (Orelli, n. 133, 1665, $2379,3113,3143,3441$ ), and to these we observe allusions in Horace (Sat. i. 6. 25), and in Statius (Sylv. v. 1.97). We find also, in one passage at least, the phrase Tribunus Augusticlavius (Suet.Oth. 10). We can scarcely suppose that raw youths entering the army for the first time were actually allowed to exercise the authority which the name implies; and hence we may conclude that in their case it was a mere honorary title. By the later emperors, tribuneships were bestowed without regard to the birtb of the individual ; and, in order that they might have an opportunity of obliging a greater number of applicants, the post was frequently conferred for six months only. Hence, we read in Pliny (Ep. iv. 4. 1), "Hunc rogo semestri tribunatu splendidiorem facias," and in Juvenal, "Semestri vatum digitos circumligat auro," where there is an allusion to the gold ring which formed one of their insignia.

Tribunes were, from a very early period, distinguished by their dress from the common soldiers (Liv, vii. 34), and their equipments and rations in the middle of the third century may be seen from a curious letter written by Valerian, when he bestowed the command of certain battalions of Saracens on Probus. (Vopisc. Prob. 4.) Under the empire they were attended by a certain number of apparitores, or of soldiers who walked before them (Lamprid. Alex. Sev. 52), by a Vicarius, or aide-de-camp (Vopisc. Aurelian. 7. 10), and by a person termed Cornicularius Tribuni (Val, Max. vi. 1 ; Frontin. iii. 14 ; Orelli, Inscripp. Lat. 3465), who was probably a sort of fugle-man who gave certain signals according to the orders which the officers wished to communicate - thus we meet with the Cornicularius of a centurion (Val. Max vi. $1 . \S 11$ ), of a propraetor (Orell. 3486), and others. (Orell. 3487, 3522, comp. 1251, comp. Silet. Dom. 17.)

Tribuni Cohortium.-It has been maintained by some critics, that in addition to the six tribunes of the legions there were ten inferior tribunes, each of whom commanded a cohort. We have no rea-
son to believe that any such tribunes existed even so late as Hadrian ; for Hyginus, in his minute description of a camp, and of the accommodation required for the officers, makes no mention of them. It is true that we read in Caesar (B.C.ii. 20), and in Pliny (Ep. iii. 9 ; comp. Juv. i. 58 ; Stat. Sylv. v. 96) of tribunes who commanded cohorts; but those in Caesar were not legionary but auxiliary cohorts, and such, in all probability, was ths cohort alluded to by Pliny.

Under Augustus and his snccessors Tribunus was employed with reference to many military offices, Thus Velleius Paterculus tells us (ii. 104), that be discharged the duties of Tribunus Castrorum, and in inscriptions we meet with Tribunus Praetorianus (Orell. 1133), Tribunus Fabrum Navalizm (Orell. 3140), and many others.

Centuriones. - Next in rank to the Tribunus was the Centurio, who, as the name implies, commanded a century; and the century, being termed also ordo, the centurions were frequently designated ordinum ductores (hence, adimere ordines, offerre ordines, ordines impetrare, \&c.), words represented
 glap ${ }^{\circ}$ os, and more rarely by $\lambda o \chi a \gamma \delta s$. The number of centurions in a legion was sixty, that being at all epochs the number of centuries. (Dionys. ix. 107 ; Tac. Ann. i. 32.)

The moral qualities desired in a centurion are described by Polybius (vi. 24), who tells us that those regarded as best adapted for the office were persons not so much remarkable for daring valour as for calmness and sagacity; men not eager to begin a battle at all hazards, but who would keep their ground although overwhelmed by a superior force, and die rather than quit their post. Their chief ordinary duties were to drill the soldiers, to inspect their arms, clothing, and food, to watch the execution of the toils imposed, to visit the centinels, and to regulate the conduct of their men, both in the camp and in the field. They sat as judges also in minor offences, and had the power of inflicting corporal punishment, whence their badge of office was a vine sapling, and thus vitis is frequently used to denote the office itself. (Tac. Ann. i. 23 ; Plin. II. N. xiv. 1 ; Martial. x. 26 ; comp. Juv. viii. 247, xiv. 193, vitem posce libello ; Spartian. Hadrian. 10.)

According to the system described by Polyhius, the centurions were chosen according to merit by the
 however, it is evident, to the control of the consuls (see Liv. xlii. 33, 34) ; during the decline of the republic, it was notorious that these posts were made an object of mercenary traffic (Quem enim possumus imperatorem aliquo in numero putare, cuius in exercitu veneant centuriatus ct venierint? Cic. pro Leg. Manil. 13. Quid ? centuriatus palam venditos ? Cic. in Pison. 36) ; and under the empire, the greatest corruption prevailed (Tac. Hist. i. 52, iii. 49; Plin. Ep. vi. 25), although many laws, as may bs seen upon reference to the codes, were promulgated from time to time to remedy such disorders,

The regular pay of the centurions is considered inder another head [STIPENDiUM]; but, in addition to this, their income was increased by the money which they received from the soldiers for leave of absence, exemption from fatiguing or disagreeable duties, and other indulgences. Thisabuse, so subversive of all discipline, probably arose during the confusion of the civil wars, and gradually be-
came so intolerable that Otho, to satisfy all parties, granted to the centurions a fixed sum out of the imperial exchequer as a compensation for these emoluments; and his example, in this respect, was followed by the most worthy of his successors. (Tac. Hist. i. 46 ; comp. i. 17.) Even the tribunes appear to have derived perquisites, called stellaturae, from the rations of the soldiers, and these, although for a time strictly prohibited, were eventually recognised as lawful. (Spartian. Hadr. 10 ; Spartian. Pescenn. Nig. 3 ; Lamprid. Alex. Sev. 15 ; Cod, 12. tit. 38. s. 12 ; Cod. Theod. 7. tit. 4. s. 28.)

It will be seen from Polybius that of the two centurions in each maniple the one first chosen took the command of the right division ( $\delta \mu \mathrm{c} \nu$
 $\sigma \pi \epsilon(p a s)$, the other of the left. The century to the right was considered as the first century of the maniple, and its commander took precedence probably with the title Prior, his companion to the left being called Posterior, the priores in each of the three divisions of Triari, Principes, and Hastati heing the ten centurions first chosen. (Polyb. vi. 24.) So long as these divisions were recognised, all the centurions of the Triarii appear to have ranked before those of the Principes, and all the centurions of the Principes before those of the Hastaii. Moreover, since the maniples were numbered in each division from 1 to 10 , there was probably a regular progression from the first centarion of the first maniple down to the second centurion of the tenth maniple.

The first centurion of the first maniple of the Triarii, originally named (Liv. vii. 41) Centurio Primus, and afterwards Centurio Primipili, or simply Primipilus, occupied a very conspicuous position. He stood next in rank to the Tribuni militum; he had a seat in the military council (Polyb. vi. 24); to his charge was committed the eagle of the legion, whence be is sometimes styled Aquilifer (Val. Max. i. 6. § 11 ; Tac. Hist. iii. 22; Dionys. x. 36 ), and, under the empire at least, his office was very lucrative (locupletem aquilam, Juv. xiv. 197 ; Mart. i. 32 , vi. 58).

A series of terms connected with these arrangements are furnished by the narrative whicb Sp. Ligustinus gives of his own career in the 34th chapter of the 42d Book of Livy. He thus enumerates the various steps of his promotion: " Mihi T. Quinctius Flamininus decumum ordinem luastatum adsignavit... me imperator dignum judicavit cui primum hastatum prioris centuriae adsignaret . . . a M'. Acilio mihi primus princeps prioris centuriae est adsignatus... quater intra paucos annos prinum pilum duxi." The gradual ascent from the ranks being to the post of centurion : 1. In the tenth maniple of the Hastati. 2. In the first century of the first maniple of the Hastati. 3. In the first century of the first maniple of the Prinsipes. 4. lu the first century of the first maniple of the Triarii.

But even after the distinction between Hastati, Principes, and Triarii was altogether abolished, and they were all blended together in the cohorts, the same nomenclature with regard to the centuries and their commanders was retained, although it is hy 110 means easy to perceive how it was applied. The cohorts being numbered from 1 to 10 , and the first cohort having unquestionably the precedence over the others, we may suppose that the
rest took rank in like manner in, regular order, each containing three muniples. The first maniple in each cohort may have been considered as representing Triarii according to the ancient arrangement, the second maniple in each cohort as representing Principes, the third as representing Hastati. If this hypothesis be admitted, the Primipilus, whom we find mentioned down to a very late date, was, under the new system, the first centurion of the first maniple of the first cohort, and as sucb had as formerly the charge of the eagle; thus also, when Caesar says (B. C. iii. 64), "Hoc casu aquila conservatur omnibus primae cohortis centurionibus interfectis practer principem priorem," he must intend to designate the first centurion of the second maniple of the first cohort, who would at full length have been denominated primus princeps prior; in like manner, "Cretensi bello octavum principsm duxit" (Ep. cul Brut. i. 8) will denote the second maniple of the eighth cohort, " Q . Fulginius ex primo hastato legionis XIV. qui propter eximiam virtutem ex inferioribus ordinibus in eum locum pervenerat" (Caes. B.C.i. 46), and "Cum signifer primi hastati signum non posset movere loco" (Cic. de Div. i. 35), the third maniple of the first cohort.

That great differences of rank existed among the centurions is evident from the phrases primores centurionum (Liv. xxvi. 5), primi ordines ( . .e. chief centurions, Caes. B. C. vi. 6), as opposed to inferiores ordines (Caes. B. C. i. 46), and infimi ordines (Ibid. ii. 35) ; and that promotion from a lower to a higher grade frequently took place, is evident from the career of Ligustinus as detailed by himself (Liv. xlii. 34), of Scaeva, who was raised "ab octavis ordinibus ad primum pilum "(Caes. B. C. iii. 53) for his gallant conduct at Dyrrhachium, and from many other passages of which it will be sufficient to quote one from Caesar (B. G. vi. 42): "Centuriones quorum nonnulli ex inforioribus ordinibus reliquarum legionum virtutis causa in superiores erant ordines buins legionis traducti;" but we are ignorant whether in ordinary cases this promotion proceeded regularly, or was couducted according to any fixed principle. While on the one hand we should be led to infer that there was some regular progression, from such observations as "Erant in ea legione fortissimi viri centuriones qui jant primis ordinibus appropinquarent" (Caes. B. G. v. 44), and while it is probable that such was actually the case when the legion became permanent, so on the other hand it is difficult to see how promotion could have been systematic during the long period when the legions were disbanded amually, since the choice of the centurion depended entirely upon the discretion of the tribunes subject to the control of the general, who was himself changed from year to year, so that those who served together in one season might be in different legions and different countries the next. Nor was it unconstitutional for a centurion who had commanded one of the higher companies to be called upon subsequently to fill lower stations: this was not common, as we perceive from a case in which strenuous resistance was offered by twenty-three conturions "qui primos pilos duxerant" to encolling unless their former rank was guaranteed to them (Liv. xlii. 32, 33), but this resistance was overcome, and it was held, that the consul ought not to be prevented from assigning that post to any individual in which his services were likely to prove most

## EXERCITUS.

valuable to the state. It was not until the year B. c. 341 , that a law was passed by which it was ordained, that no one who had held the office of military tribone should be eligible as a centurion (ne quis, ubi tribunus militum fuisset, postea ordinum ductor esset, Liv. vii. 41), and at that time the regulation was made in consequence of the dislike entertained by the soldiers to a particular individual who during a succession of years had been alternately a trihuce and primipilus.
Optiones. - In like manner as the trihunes named the centurions, so each centurion named his own lieutenant, who is called by Polybius ouvpa $\sigma$ s, because his station was in the rear of the company. By Livy (viii. 8), a subaltern of this kind is named subcenturio, hut the individual there mentioned was selected for a particular purpose, and it seems clear from Varro and Festus that the regular term was optio, which signifies in general a person chosen (optatus), by another as an assistant. They agree as to the etymology, but the former (L. L. v. 91) confines the term to the lieutenant chosen originally by the decurio in a troop of cavalry, and adds that the tribunes had assumed to themselves the patronage, "Quos hi (sc. decuriones) primo administros ipsi sibi adoptabant, optiones vocari coepti, quos nunc propter ambitiones tribuni faciont," while the words of the latter (p. 198, ed. Müller), althongh very corrupt, seem to imply that they had been originally appointed by the trihunes, and the nomination afterwards transferred to the centurions: "Optio qui nunc dicitur, antea appellahatur Accensus, his adjutor dahatur a Trih. Militum, qui ex eo tempore, quem velint, centurionibus permissum eist optare, etiam nomen ex facto sortitus est." The explanation in the Excerpta of Paulus Diaconus, is somewhat different from either : " $O p$ tio est optatio, sed in re militari optio appellatur is, quem decurio ant centurio optat sibi rerum privatarum ministrum, quo facilius obeat publica officia" (p. 184, ed. Müller).

Fourth Pcriod. From the tines of the Gracchi until the downfall of the Republic. - The century which immediately preceded the destruction of the Roman constitution, was above all others a season of restless excitement and revolution. A vast number of organic changes was introduced into the army, the greater number of which are commonly ascribed to Marius, but, although he was undonbtedly the author of many most important modifications, others not less vital were the result of the new position assumed by the Italian states; and some must have required so much time for their full development, that they could searcely have been the work of a single individual. We shall call attention very briefly to the leading features of the new system, in so far as they can be gleaned from the pages of Sallust, Caesar, and Plutarch, who must he here regarded as our chief guides.

1. In the first consulship of Marius, the legions were thrown open to citizens of all grades, without distinction of fortune. (See above.)
2. The whole of the legionaries were armed and equipped in the same manner, all being now furnished with the pilum ; and hence we see in Tacitus (Ann. xii. 35) the pila and gladii of the legionaries, opposed to the hastae and sputhae of the auxiliaries.
3. The legionaries when in battle order were no longer arranged in three lines, each consisting of
ten maniples with an open space between each maniple, but in two lines, each consisting of five cohorts with a space between each cohort.
4. The younger soldiers were no longer placed in the front, but in reserve, the van being composed of veterans as may be seen from various passages in Caesar.
5. As a necessary result of the ahove arrangements, the distinction between Hastati, Principes, and Triarii ceased to exist. These names, as applied to particular classes of soldiers, are not found in Caesar, in Tacitus, in the treatise of Hygious on castrarnetation, nor in any writer upon military affairs after the time of Marius, while Varro explsins them as terms no longer in use. The words Hastatus and Princeps occur at a later period, in coonection with the legion, but are used only with reference to the precedence of the centuries and of the officers by whom they were commanded, as we have pointed out when treating of the centuriones.
6. The Velites disappeared. The skirmishers, included under the general term levis armatura, consisted for the most part of foreign mercenaries possessing peculiar skill in the use of some national weapon, such as the Balearic slingers (funditores), the Cretan archers (sagittarii), and the Moorish dartmen (jaculatores). Troops of this description had, it is true, been employed by the Romans even before the second Punic war (Liv. xxii. 37), and were denominated levium armatorum (s. armorum) auxilia (Liv. l. c. and xlii. 65, where they are distinguished from the Velites), but now the levis armatura consisted exclusively of foreigners, were formed into a regular corps under their own officers, and no longer entered into the constitution of the legion; indeed, the terms legionarius and levis armatura became opposed to each other in the Latin writers, just as $\delta \pi \lambda \iota \tau \alpha i$ and $\psi \iota \lambda a i$ among the Greeks (e.g. "ceciderunt ex levi armatura cecxxiv. ex legionariis cxxxviii," Auct. de B. Hispan. 24, comp. Tacit. Ann. ii. 16). The word vclites is not found in Caesar, and that they had ceased to exist when Livy wrote is clear from the expression in his description of the hattle of Zama, where after having used the word "velitihus," he adds the explanation "ea tunc levis armatura erat" (xxx. 33). When operntions requiring great activity were undertaken, such as could not he performed by mere skirmishers, detachmeats of legionaries were lightly equipped, and marched withont haggage, for these special services ; and hence, the frequent occurrence of such phrases as expediti, capediti miltites, expeditae cohortes, and cven expeditae legiones.
7. The cavalry of the legion underwent a change in every respect analogous to that which took place in regard of the light armed troops. Whocver reads with attention the history of Caesar"; campaigns in Gaul, will perceive that the number of Roman equites attached to his army was very small, and that they were chiefly employed as aide-decamps, and on confidential missions. On the other hand, it is evident that the bulk of his eavalry consisted of foreigners, a fact which hecomes strikingly apparent wheo we read that Ariovistus having stipulated that the Roman general should come to their conference attended by cavalry alone, Caesar feeling no confidence in his Gaulish horse, dismounted them and supplied their place by soldiers of the tenth legion. (B. G. i. 42.) In like manner they ceascd to form part of the legion, and frow
this time forward we find the legions and the cavalry spoken of as completely distinct from eacb other (e. g. Caesar, B. G. v. 11, 18 ; Appian, B. C. r. 5). Whether there was not to a certain extent a return to the ancient system under the empire, is a question which will fall to be considered in the next section.
8. When, after the termination of the Social War, a large proportion of the inhabitants of ltaly were admitted to the privilege of Roman citizens, the ancient distinction so long maintained between the Legiones and the Socii at once disappeared, all who had formerly served as Socii became as a matter of right incorporated with the legiones, and an army during the last years of the republic and under the earlier emperors consisted of Romanae Legiones et Auxilia s. Auxiliares, the latter term comprehending troops of all kinds, except the legions and the imperial guards, whether infantry or cavalry, light armed or heavy armed, mercenaries in the pay of the state or contingents furnished at the cost of kings and cities in alliance with Rome. The infantry, not legionary, was for the most part organised in battalions called cohortes, the cavalry in squadrons called alue, the numbers in each cohors and ala varying according to circumstances, and hence such phrases as alue auxiliaque coliortium (Tacit. Ann. iv. 5); agmen legionum alas cohortesque praeveniebant. (Tacit. H. ii. 11.) Whenever the word socii is applied to troops after the date of the Marsic war, it is genecally to be regarded as equivalent to auriliares, slthough a distinction is occasionally drawn between socii in the sense of the civilised allies or subjects of Rome, and the barbarian Germans, Numidians, Spaniards and others who are more specially termed auxiliares (Auxillares dicuntur in bello socii Romanorum exterarum nationum, Paul. Diac.). In the description of the army of Germanicus, as marshalled to encounter Arminius, sociae cohortes is used in the most extended signification, for we are told that the army was composed of auxiliares Galli Germanique, pedites sagittarii, quatuor leyiones, duae praetoriae cohortes ac delecti equites, quatuor legiones, levis armatura, equites sagittarii, Ceterae sociorum cohortes.
9. The manner of levying troops in Italy must necessarily have changed with this change of circumstances. We are destitute of any definite information, but, in all probability, a system of conscription was established and carried out by means of Conquisitores, such as were occasionally appointed in ancient times when difficulty was experienced in finding men (see Liv. xxii. 11 ; comp. Cic. ad Att. vii. 10 ; Hirt, B. Alex. 2) ; and we find that the Emperor Tiberius was not satisfied with obtaining volunteers, whom he regarded as, for the most part, an indifferent class of soldiers, and insisted upon the necessity of recruiting the legions "delectibus." (Ann. iv. 4.)
10. The most important change of all, in so fir as society at large was concerned, was that to which we have already adverted, the establishment namely of the military profession, and the distinction now first introduced between the civilian and the soldier. This naturally led to the abrogation of the rule, still in force when Polybius wrote, by which no one could hold any magistracy ( $\pi 0 \lambda$ d-
 military service, a rule which had fallen so com. pletely into desuctude in the course of sixty or
seventy years afterwards, that we see Cicero passing through all the highest dignities and attumning to the consulship, although his experience of a military life was limited to a single campaign under Pompeius Strabo.
Fifth Period. From the establislment of the Imperial government until the age of the Antonineg, a. c. 31-A. D. 150.-We shall be enabled to form a correct idea of the materials which constituted an imperial army during the first two centuries of our era by passing under review the various kinds of troops for which Hyginus proposes to provide accommodation in the camp, whose construction he describes [CASTRA]. We shall not take these precisely in the order in which they are named by him, but shall endeavour to arrange them systematically.
A regular army during this period consisted of a certain number of Legiones and of Supplementa, the Supplementa being again divided into the imperial guards, which appear under several different forms, distinguished by different names; and the Auxilia, which were subdivided into Sociae Cohortes and Nationes, the latter heing for the most part barbarians.
11. The Legiones, as we have already had occasion to point out, although still composed of persons who enjoyed the privileges of Roman citizens, were now raised almost exclusively in the provinces; and hence Tiberius, when ahout to undertake bis long projected progress through the provinces, alleged as one of his excuses for quitting Italy, the necessity of recruiting the legions by a regular levy or conscription. (Tac. Ann. iv. 4.) The legion was divided into ten cohorts, and each cohort into six centuries; the first cohort, which had the custody of the eagle, was double the size of the others, and contained 960 men, the remaining cohorts contained each 480 men; and consequently each ordinary century 80 men , the total strength of the legion being thus 5280 men.
12. Legionum Vexillarii. The term Vexillarii or Vexilla, which is found repeatedly in Tacitus, has proved a source of the greatest embarrassment to commentators, and a vast number of hypotheses, all of them highly unsatisfactory, have been pro. pounded in order to reconcile the statements of the historian, which at first sight appear replete with contradictions. But the difficulty has arisen entirely from almost all critics having entered upor a wrong path from the very frst, starting upon the supposition that Vexillarii, in every case, denoted troops of the same kind, whereas, in reality, the word is a general term ; and we must ascertain its signification in each particular case from the words with which it is immediately joined or the general context of the passage. Vexillum is used in the earliest account of the manipular legion (Liv. viii. 8) to denote the standard of the ordo or maniple, vexillarius being the standard bearer ; and in process of time, vexillum was employed to denote any military standard whatsoever, except the sacred eagle of the legion. By a careful examination of the various passages in Tacitus where Vexillarii are mentioned, it will be seen that he designates by this appellation any body of soldiers serving apart from the legion under a separate ensign, or even an army collectively. In this sense we must understand such expressions ns Vexillum tironum (Ann. ii. 78) ; Germanica vexilla (Hist. i. 31); Germanis vexillis (Hist. i. 70) ; vcuillis inferioris

Germaniae prueventus est (Hist. i. 53) ; Equitum vexilla (Hist. ii. 11). Compare, Manipuli ante coeptam seditionem Nauportum missi . . . vexilla convellunt (Ann. i. 20). But when Vexillarit or $V$ exilla are accompanied by any word which denotes an immediate connection with a legion, as vexillarii discordium legionum (Ann. i. 38) ; quarta decima legio cum vexillariis vicesimanis (Ann. xiv. 34) ; cum vexillis nonae secundaeque et vicesimae Britannicarum legionum (Hist. iii. 22), then they bear a specific meaning connected with certain changes intraduced by Augustus. We have seen that under the republic a citizen might be called upon to serve for twenty years in the infantry; when the legions became permanent the full period was generally exacted, and those who chose to remain after their time was completed, were termed veterani. Augustus, in the year в. c. 13, limited the period of scrvice to twelve years for the praetorians, and sixteen for the legionarics, after which they were to be entitled to an bonourable discharge (missio honesta), and to reccive a bounty (praemıum, commoda missionum); but not long afterwards, A. a. 5 , it was found necessary to increase the period to sixtecn years for the praetorians, and twenty for the legionaries. At this time it appears probable that the practice was first introduced of discharging the soldiers from the legion at the end of sixteen years, and keeping them together under a vexillum with peculiar privileges during the remaining four years of their service. Abuses, however, crept in, and many soldiers, instead of being pensioned off at the end of twenty years, were compelled to remain for a much longer period, and the discontent cansed by such oppression gave rise to the formidable mutinies in Pannonia and Germany, which burst forth immediately after the accession of Tiberius. The soldiers then demanded that the original arrangement by Augustus should be restored, and that they should receive a full discharge and the bounty at the end of sixteen years; while, in order to calm their wrath, Germanicus proposed to put an end to the disorders of which they complained, and to carry honestly into effect the second arrangement according to which they were to serve in the legion for sixteen years, and then being embodied under a vexillum by themselves to be relieved of all irksome labours, and to be required only to face the enemy in the field. (Dion Cass. liv. 25, lv. 23 ; Suet. Octav. 49 ; Tacit. Ann. i. 17, 36, the proposal contained in the last passage being in these words: missionem dari vicena stipendia moritis; cxauctorari, qui senadena fecissent, ac relineri sub vexillo, ceterorum immunes nisi propulsandi hostis). The vexillarii or vexilla legionum, then, were those soldiers who, after having served in the legion for sixteen years, bccame exauctorati, but continued to serve in company with that legrion, under a vexillum of their own, until they received their full discharge. Hyginus states the number attached to each legion as osually about five or six hundred.
3. Evocati (à a $\alpha \kappa$ htot). Dion Cassius tells us that Augustus began to employ troops bearing this denomination when he called out (àveródeテєv) the veterans of Julius Caesar to aid him against Antonius. They still, says Dion, form a peculiar corps ( $\sigma \dot{\prime} \sigma \tau \eta \mu a \operatorname{lo} \dot{\prime} \delta o \nu$ ), and carry sticks in their hands like centurions. (Dion Cass. zlv. 12, lv. 24). Galba gave the name of Evocuti to a hody of life-

## EXERCITUS.

guards instituted by himself, who are described by Suctonius (Galb. 10)," Delegit et equestris ordinis juvenes, qui, manente annulorum aureorum ush, Evocati appellarentur, excubiasque circa cuhiculum suum vice militum agerent."
4. Colortes Praetoriae. To these a separate article is devoted. [Praetorianl.]

## 5. Equites Praetoriani. [Praktoriani.]

6. Primipilares. These, according to the arrangements of the Hyginian camp, were placed close to the person of the emperor, and must have been a small corps, consisting of persons who had discharged the office of legionary Primipilus, and who now acted as guards or aide-decamps to ths commander-in-chief Primipilares is met with frequently in Tacitus and in inscriptions (e.g. Tacit. Ann. ii. 11, iv. 72 , Hist. i. 31, 87, ii. 22, iii. 70, iv. 15, Ann. xiii. 36 ; Orelli, No. $517,748,3568$ ).
7. Officiales. These appear to have been puhlic servants. Thus we read in Appuleius of the officialis of an aedile, and in Ulpian of the officialis of a praefect. (Dig. 36. tit. 4. s. 5 ; comp. Gruter, Inscr. p. ccccaxii. ; Orelli, No. 2952, 4013.)
8. Equites Singulares Imperatoris. These are classed by Hyginus along with the Equites Praetoriani, were like them quartered in the Latera Practorii, and equalled or slightly exceeded them in number. The only classical author by whom they are noticed is Tacitus, who, in that portion of his Histories (iv. 70) where he is descrihing the confusion that arose upon the death of Vitellins, mentions among the troops "ala Singularium excita olim a Vitellio, deinde in partes Vespasiani transgressa," but they are very frequently cammemorated in inscriptions, as Equites Singulares s. Singularii Imperatoris - Augusti-Caesaris-D0. mini Nostri, \&c. (Orell. No. 3525, \&c., 3100, 3496,1576 ), and on one stone we read T. Flavius. Quintinus. Eq. Sing. Aug. Lectus. Ex. Exer. citu. Raetico. Ex. Ala. flavia. Pia. Finbil Milliaria. (Orell. No. 3409), which may lead us to suppose that they received their appellation in consequence of being selected individually from other corps, and thus they may belong to the same class with the Equites Electi (Orell. 3155) and the Eq. Cust. Aug. (Orell. 4453).
9. Statores. - Hyginus assigns a place for two "Centuriae Statorum" immediately in the rear of the Praetorium which they protected, and allots to them, as to the Praetorians, twice as much space, in propartion to their numbers, as to the troops of the line. Hence, it is evident that they were ranked among the life-guards, although memhers of their body may have been employed in the capacity of couriers, as persons bearing the same designation certainly were employed both under the republic and the empire by those invested with military command. (Cic. ad Fam. ii. 17, 19; " ut ad te statores $m$ cos et lictores cum literis mitterem;" comp. x. 21 ; Vulcat. Gallie. Avid. Cass. 9 ; Lamprid. Alex. Sev. 52 ; Ulpian, Dig. 1. tit. 16. s. 4.) In inscriptions we find Stator. Avg. (Orell. 3524), Stator. Civitatis. Virnes. (Ib. 2780), and once Statorvm. Evocati. (Ib. 3422.)
10. Spcculatores, although not provided for by Hyginus, ought to be mentioned here, siace they also occupied a place among the personal attendants of the emperors (Ipsum Othonem comitabantur speculatorum lecta corpora, Tacit. Hist. ii. 11, comp. i. 24 ; Suet. Octav. 74.). They were the executioners of the army (Senec, de Ira, i, 16;

St. Mark, vi. 27, and comment. of Chrysost. ; comp. Suet. Calig. 32), and seem to have acted as couriers likewise. (Tacit. Hist ii. 73.) They formed a regular corps with officers of their own (Tacitus speaks of an optio speculatorum, H. i. 25), and must have been numerons, as appears from such expressions as "praetoriarum cohortium et speculatorum equitumque valida manus" (Tacit. H. ii. 33) ; and from inscriptions where mention is made of a sixth cohort of speculatores (Orell. 3518) ; while from another inscription, in which a certain L. Veturias is styled Prarf. Turmae. Speculat., it is manifest that there must have been mounted speculatorcs. The word is used also by Tacitus to denote an ordinary scout. (Ann. ii. 12.)
11. The scouts, however, formed a distinct body under the name of Exploratores, and Hyginus quarters them appropriately at the extremity of the camp nearest to the Praetorian gate, and close to the Pioneers.
12. Alac. - From the time when the cavalry were separated from the legion they were formed into bodies called alae, which varied in number according to circumstances. Hyginus provides accommodation in his camp for four Alue Milliariae, and for five Alae Quingenariae.
The Ala Milliaria was divided into 24 turmae, each of which, according to the conjecture of Schelius, consisted of 40 men except the first which had 80 . The commander of tbe whole was the Praefectus Alae, the inferior officers were 24 decurimes, 24 duplicarii, and 24 sesquiplarii, that is, a decurio, a duplicarius, and a sesquiplarius for each turme.
The Ala Quingenaria was divided into 16 turmae with a decurio, a duplicarins and sesquiplarins for each, and we may suppose that each turma consisted of 30 men except the first, which thus would have 50.

Each decurio had three horses allowed to him, each duplicarius and each sesquiplarius two horses, so that the total number of horses in the Ala Milliaria was 1090, and in the Ala Quingenaria 504, exclusive of those helonging to the Praefecti.

It is evident that the duplicarii and sesquiplarii herc named were subalterns; according to the ancient signification of duplicarius, as interpreted hy Varro (L. L. v. § 90 ), it denoted a soldier who on account of his valour was allowed dobble rations (comp. Liv. xxiv. 47, ii. 59), which must of course have been convertible into increased pay. (Orelli, C. I. 3535.) Such persons are frequently presented to us in inscriptions under the cognate forms duplarius, duplicarius, and dupliciarius. Thus we have Dupl. N. Explor. (Duplarii numeri exploratorum, Orell. 206) ; Duplario Leg. I. (Ib. 3531); Duplarius Alarius (Ib. 2003); Duplicarius (Ib. 3533); Dupliclar. (Ih. 3534). Scsquiplarius, which evidently denotes a soldier who received a ration and a half, appears in no authors except Hyginus and Vegetius, of whom the latter gives them gold collars and styles them Torquati duplares, torquati sesquiplares (ii. 7), but the title is met with in inscriptions. (Orell. 3470.)
13. Mauri Equites. Pannonii Veredarii. The Alae were raised in the Roman provinces and consisted, probably, for the most part, of citizens, or at least subjects. But in addition to these every army at this period was attended by squadrons of light horse composed entirely of barbarians ; and the chief duty performed by those
named above was guarding the pioneers as they performed their lahours in advance of the army. When Tacitus spcaks of "Alarcs Pannonios, robur equitatus" (Ann. xv. 10) le must mean cavalry of a different description from the Pannonii veredarii of Hygims, who, probably, resembled the Cossacks of modern warfare.
14. Cohortes peditatae, were battalions raised chiefly in the provinccs, composed of Roman citizens, of subjects and allies, or of citizens, allies, and subjects indiscriminately. They were, it would appear, not hound down by the same strict rules with regard to the period of service as the legionaries, not so heavily equipped, and not subjected to the same cxhausting labours. Vegetias, in the chapter where he endeavours to account for the decay of the legionary force (ii. 3), throws some light upon these points. To this class of troops helonged the cohortes auxiliares, the auxilia cohortium, and the sociorum cohortes, of whom we read in Tacitus, together with a multitnde of others recorded in inscriptions and named for the most part from the nations of which they were composed. The expression cohortem decimam octavam (Tacit. H. i. 64) indicates that these cohorts werc numhered regularly like the lcgions. Hyginus provides accommodation for Cohortes peditatae milliariae tres, and Cohortes peditatae quingenariae tres.
15. Colortes Equitatae differed from the Peditatae in this only, that they were made up of infantry combined with cavalry. A Cohors Equitata Milliaria contained 760 foot soldiers divided into 10 centuries, and 240 horsemen divided into 10 turmae. A Cohors Equitata quingenaria contained 380 foot-soldiers divided into six (?) centuries and 120 horsemen, divided into 5 turmae. There is an inscription in the collections of Gruter (p. Mcviin.) to the memory of L. Flavius, who among other military titles is styled Prazf. Сoh. Primae. Equitatar. Civ. Roman. in. German. Inferiore ; Pliny, in one of his epistles (x. 108), and Trajan in bis reply, make use of the terms Cohors equestris, the former mentioning a centurion in connection with it, which proves that it contained infantry. Tacitns (Hist. iv. 19) speaks of cohorts of the Batavi and Canninefates, wbo, among other demands, insisted that the number of horse should be increased (augeri nunierum equitum); and Josephns, in describing the army of Vespasian, notices 10 cohorts ( $\sigma \pi$ eipal) of 600 infantry and 120 cavalry, a series of passages which evidently refer to Cohontes Equitatae. The Cohortes Peditatae are not mentioned under that name except by Hyginus, but are indicated by Tacitus in the words (Ann. xiii. 35), "ex Germania legio cum equitihus alariis et peditatu cohortium." Hyginus allows space for Cohortes equitatae nilliariae duae, and Cohortes equitatae quingenariae quatuor.
16. C/assici, which we may fairly render Marines, were employed, according to Hyginns, as pioneers. They corresponded to the Navales Socii, under the republic, who were always regarded as inferior to regular soldiers, and were recruited, as we learn from Polybins, among those persons whose fortune did not entitle them to enlist in the legions. After the establishment by Augustus of regular permanent fleets at Misenum, Ravenna, and on the coast of Gaul, a large body of men must have been required to man them, who, when their services were not required afloat, were called upon, at least in great emergencies, to spree as

## EXERCITUS.

ordinary soldiers. Tacitus mentions at the commencement of his history (i. 6), that Galba found in the city a legion "quam e classe Nero conscripserat" (comp. Dion Cass. lxiv. 3 ; Suet. Galb. 12; Plut. Galb. 15), which he subsequently (i. 31, 36) terms "legio classica" and "classicorum legio" (comp. ii. 11, 14, 17, 22, iii. 55), and elsewhere (ii. 67) we hear of the "prima classicorum legio." In the Annals classiarias is the form which he generally employs, as classiariorum copia (Ann.iv. 27), and centurione classiario (Ann. xiv. 8).
17. Nationes. - These occupied the same position with regard to the sociae cohortes, that the Mauri and Pannonii Veredarii did with regard to the regular Alae of cavalry. They were battalions composed entirely of barbarians, or of the most uncivilised among the subjects of Rome, and were probably chiefly employed upon outpost duties. Hyginus allows space for 3300 , consisting of Palmyreni; Gaetae; Daci; Britones; Cantabri.

Urbanae Cohortes. - We may take occasion to notice in this place two bodies of men established during the first years of the empire, who held a station intermediate between regular troops and an armed police, their services being, properly speaking, confined to the city. These were the Urbanae Cohortes and the Cohortes Vigilum.

Dion Cassins (lv. 24) informs us that Angustus, in addition to the praetorian cohorts; institnted a force of city guards, amonnting to six thousand men divided into four battalions: to these he elsewhere gives the name of $\dot{\alpha} \sigma \tau$ тко (lix. 2), while, by the Latin writers, they are usually distinguished as Cohortes Urbanae or Urbana militia, their quarters, which were within the city, being the Urbana Castra. According to Tacitus, who states the number of cohorts at tbree only, they, like the praetorians, were levied in Latium, Umbria, Etruria, and the ancient Roman colonies (Tacit. $A n n$.iv. 5), and were under the immediate command of the praefect of the city, whence it was urged upon Flavius Sabinus (Tacit. Hist. iii. 64), " esse illi proprium militem cohortium urbanarum."

Cohortes Tigilum. - Augustus organised a large body of night-watchers also, whose chief duty was to act as firemen (Adversus incendia excubias nocturnas vigilesque commentus est, Sueton. Octav. 30). They were divided into seven cohorts, in the proportion of one cohort to each two Regiones, were stationed in fourteen guardhouses (excubitoria), and are called עиктофú入aкєs by the Greek, Cahortes Vigilum by the Latin writers. They were commanded by a Praefectus (Tacit. Ann. xi. 35), who was of equestrian rank; but the corps, in consequence of being raised among the class of libertini, was regarded as occupying a position inferior to that of regular soldiers (Dion Cass. lv. 26, lix. 2). In Tacitus (Hist. iii. 64), they are termed the servitia of the aristacracy, and Suetonins (Octav. 25) allndes to them as "libertino milite." (Comp. Dig. 1. tit. 15. s. 3.)

## Equipment of the Troops under the Empire.

Josephus has transmitted to us a description of the equipment of the Roman troops, and his testimony is peculiarly valuable, procecding, as it does, from a competent eye-witness (B. J. iii. 5. § 5).

The infantry wore cuirasses, helmets, and two
 uaха!рофоройעтєs $\dot{\alpha} \mu ф о \tau \epsilon \rho \omega \theta \epsilon \nu)$, that is, a long sword on the left, and a short dagger ( $\sigma \pi t \theta a \mu \hat{n} s$

## EXERCITUS.

 infantry in attendance upon the general carried a long spear ( $\lambda o ́ \gamma \chi \eta \nu$, hastam), and a round shield ( $\alpha \sigma \pi i \delta \alpha$, clipeum); the rest of the legionaries ( $\dot{\eta}$ ঠ̇̀ $\lambda o \iota \pi \grave{\eta} \phi \alpha \lambda \alpha \gamma \xi)$ a pilum (?) ( $\xi \nu \sigma \pi \delta \nu$ ), and a scutum ( $\uparrow \cup \rho \epsilon \grave{\partial \nu} \bar{\epsilon} \pi \iota \mu \eta \kappa \eta$ ). In addition, each man had a saw and a basket ( $\pi \rho \frac{1}{2} \nu \alpha$ ral $\kappa \delta \delta \nu_{0} \nu$ ), s mattock and a hatchet (ä $\mu \eta \nu \kappa \alpha a i \frac{\pi}{\epsilon} \lambda \epsilon \epsilon \kappa \nu \nu$ ), a leather strap, a hook and a chain ( $\ddagger \mu a ́ \nu \tau а$ каl $\delta \rho \in ́ т \alpha \nu о в ~$ $\kappa \alpha \dot{\alpha} \lambda \nu \sigma(\nu)$, together with provisions for three days, - so that, says Josephus, the Roman infantry differ little from mules of burden.

The Equites wore hehnets and cuirasses like the infantry, with a broadsword at their right side ( $\mu d \chi$ a $\rho a \mu \alpha \kappa \rho a$ ), and carried in their hand a long pole ( $\kappa 0 \nu \tau \partial s \epsilon \pi \mu \eta \kappa \eta \rho$ ) ; a buckler swung at their
 $\pi \lambda d \chi \omega o s)$, and they were furnished with a quives containing three or more javelins (zкоעтєs), with broad points, and as large as spears (oùk àmoóton. tes $\left.\delta \dot{\epsilon} \delta 0 \rho \alpha \alpha^{\prime} \tau \nu \mu{ }^{\prime} \gamma \in \theta o s\right)$. Those selected to attend the general differed, in no respect, in their appointments from the regular cavalry ( $\tau \hat{\omega} \nu \dot{\epsilon} \nu \tau$ oîs

The Jewish historian has moreover given an account of the Agmen or line of march in which the army of Vespasian entered Galilee (B.J. iii. 6. § 2), this being, he adds, the regular arrangement followed by the Romans. 1. The light-armed auxiliaries and bowmen (roús $\mu \in ́ \nu \gamma \in \psi i \lambda o u s \tau \omega \bar{\nu} \in \pi \not \approx$
 to examine woods and suspicious localities, and to give timely notice of the approach of an enemy. 2. A detachment of Roman heavy-armed troops,
 кal inteîs). 3. Ten men out of each century carrying their own equipments and the measures of the
 (ঠסomolol). The baggage of Vespasian and his legati ( $\tau \hat{\omega} \nu \quad \dot{\psi} \pi^{\prime}$ à̇T $\left.\hat{\varphi} \hat{\eta} \gamma \epsilon \mu \dot{\nu} \nu \omega \nu\right)$ guarded by a strong body of horse. 6. Vespasian himself attended by Selceti Pedites, Selecti Equites, and a hody of spearmen ( $\lambda 0 \gamma \chi \circ \phi$ ópous). 7. The peculiar
 $\pi \kappa \kappa \delta \nu)$, for, he subjoins, each legion has 120 horse attached to it. This we perceive was a return, to a certain extent, to the ancient system. 8. The

 legati, praefects of cohorts and tribunes ( $\eta=\not \subset \mu \delta \nu \in s$
 by a body of picked soldiers. 10. The standards surrounding the eagle ( $\alpha$ i $\sigma \eta \mu a i a l$ $\pi \in p t l \sigma \chi$ ou $\sigma \alpha$ $\left.\tau \delta \nu \quad \alpha_{\epsilon} \in \tau \delta \nu\right)$. 11. The trumpeters (oi $\left.\sigma \alpha \lambda \pi t \gamma \kappa \tau \alpha i\right)$. 12. The main body of the infantry ( $\dot{\eta} \phi d \lambda a \gamma \xi)$ six abreast, accompanied by a centurion (ératop$\tau \alpha(\rho \chi \eta s)$, whose duty it was to see that the men kept their ranks. 13. The whole body of slaves
 uatos), driving the mules and beasts of hurden loaded with the baggage. 14. Behind all the legions followed the mercenaries ( $\delta \mu i \sigma \theta \iota o s$ o $\chi \chi \lambda 0 s$ ). 15. The rear was brought up by a strong body of infantry and cavalry. Josephus seems to designate the legati by the word ${ }_{\eta} \boldsymbol{\gamma} \in \mu \delta \nu \in s$, the Tribuni militum by $\lambda o \chi a \gamma o i=1$ or $\chi$ i $\lambda$ dd $\rho \chi 0$, the centuriones
 by ouparol (in iii. 6. § 2) the optiones who are so designated by Polybins, or intends to comprehend the whole rear-guard under the appellation, may admit of doubt. Four words are used to denote

EXERCITUS．
EXHIBENDUM，ACTIO AD．
weapons of the spear kind，$-\xi v \sigma \tau \delta \nu$ probably in－ tended to represent the pilum，for which $\dot{v} \sigma \sigma \delta$ is generally employed；đinc $\omega \nu$ the light javelin；$\lambda \delta \gamma \chi \eta$ and $\delta 6 p v$ ，pikes of different kinds．It would ap－ pear from Arrian that the $\lambda \delta \gamma \chi \eta$ was sometimes us ${ }^{\text {d }}$ as a missile．

Finally，some additional light will be thrown upon the constitntion of a Roman army abont half a century later by the instructions issued for the line of march to be observed by the force despatched against the Scythian Alani，preserved in the frag－ ment of Arrian，of which we have spoken above．

The force in question consisted of the fifteenth legion，which was complete，and of the tweltth， which appears to have been a fragment only，these legions having both cavalry and skirmishers at－ tached to them exactly as under the republic－of several colortes equitatae，composed of Italians， Cyrenians，Armenians，and others，each of these battalions containing heavy and light infaotry to－ gether with squadrons of cavalry－of cohortes pe－ ditatae，including infantry only，both light and heary，and of light cavalry of the allies and of barbarians．The order in which they were to ad－ vance was as follows：－

1．Horse sconts（ката⿱䒑兀ótous imméas），horse archers and slingers（iттото弓óras kal $\pi \in \tau \rho a i o u s$ ）， commanded by their own decurions（ $\delta \in \kappa \alpha \delta \alpha \rho \chi \alpha \iota$ ）． 2．Various corps of foreign cavalry，Cyrenians， Ituraeans，Celts，and others，of whom the names are doubtful．3．The whole of the infantry arch－ ers，followed by different bodies of heavy－armed infantry，not legionaries，Italians，Cyrenians，Bos－ puranians and Numidians，the flanks of this division being covered by cavalry．4．The equites selecti and the equites of the legion（oi $\dot{\alpha} \pi \delta \tau \hat{\eta} s$ ф $\dot{\lambda} \lambda a \gamma \gamma o s$ inneis）．5．The artillery（кaтanধ́ $\lambda \tau a l$ ）．6．The standard（ $\sigma \eta \mu \hat{i} \nu \nu$ ）of the fifteenth legion，and around it the principal officers，namely the com－ mander of the legion（ $\tilde{\eta} \gamma \epsilon \mu \dot{\omega} \nu \tau \hat{\eta} s$ фá $\lambda a \gamma \gamma o s$ ），the
 and the centurions of the first cohort（eкатס $\nu \tau \alpha \rho \chi a l$ oi $\tau \hat{\eta} s \pi \rho \omega \bar{\tau} \eta s{ }^{\sigma} \pi \in \mathfrak{i} \rho \eta s$ ė $\left.\pi เ \sigma \tau \alpha ́ \tau \alpha a\right)$ ．Here，it will be remarked，we mect with an officer called the
 7．The infantry of the legion，four and four，pre－
 $\tau \alpha_{i}^{\prime}$ ）．8．Foreign（ $\tau \delta \sigma \nu \mu \mu a \chi \iota \kappa \delta \nu$ ）infantry，both light and heavy．9．The baggage（ $\tau \alpha \alpha^{\sigma} \sigma \kappa \in \nu \quad \phi \quad \rho a$ ）． 10．The rear brought up by an ala of Getae under their praefectus（ $\epsilon i \lambda \alpha \dot{\rho} \rho \eta \eta$ ）．The centurions were to march on the flanks of the iofantry，kceping the men to their ranks ：for the sake of greater sccurity a body of horscmen was to ride in single file along the whole length of the line；the commander－in－ chief，Xenophon，was to march in front of the in－ fantry，standards，but to move about occasionally from place to place，watching everything，and pre－ serving order everywhere．It appears that of the capalry some were archers（inтoтołórai），some lancers（ $\lambda \boldsymbol{\sigma} \gamma \chi 0 \phi \delta \rho o t$ ），some pole－men（кодтофópot）， some sword－men（ $\mu a \chi a \iota \rho o \phi \delta \rho o \iota$ ），some axe－men （ $\pi \epsilon \lambda \epsilon \kappa о ф \delta \rho о 1$ ）；these and many other curious par－ ticulars may be extracted fiom the detailed account of the Agmen，and from the Acies or scheme of battle by which it is followed；but unfortunately we are so mnch emharrassed at every step by the uncertainty of the text that it is scarcely safc to form positive conclusions．
A great many topics connected with a Roman army are discussed under separate articles：thos，
much that belongs to the cavalry is necessarily in－ cluded under Equites ；the position of the allies in the service under Socir ；the life－guards nnder Praetorlani ；the pay of the soldier under Stipendium；a detailed account of his armour and weapons under Galea，Lorica，Ocrea， Caliga，Hasta，Pilum，Glanius，Scutum， \＆c．；of his dress under Chlamys，Paluda－ mentum，Sagum；of the standards under Signa Militaria ；of military processions under Oya－ tio，Triumphus ；of punishments under Fustu－ arium，Decimatio；of military rewards under Torques，Phalekae，Corona；of military en－ gincs under Tormentum，Aries，Vineae， Plutei，Helefolis，Turris，\＆c．［W．R．］

EXETASTAE（ $\left.{ }^{\prime} \xi \in \tau a \sigma \tau \alpha i\right)$ ，special commis－ sioners sent out by the Athenian people to investi－ gate any matters that might claim attention．Thus we find mention of Exetastae being appointed to ascertain whether there were as many mercenaries as the gencrals reported．It appears to have been no uncommon plan for the commanders，who received pay for troops，to report a greater number than they possessed，in order to receive the pay them－ selves；in which case they were said＂to draw pay for empty places in the mercenary force＂
 c．Ctes．p．536）．The commissioners，however，who were sent to make inquiries into the matter，often allowed themselves to be bribed．（Aeschin．c． Timarch．p．131，De Fals．Leg．p． 339 ；Böckh． Publ．Econ．of Athens，p．292，2nd ed．）

EXHERES．［IEERES．］
EXHIBENDUM，ACTIO AD．This action was introdnced mainly with respect to vindica－ tiones or actions about property．＂Exhibere＂is defined to be＂facere in publico potestatem，ut ei qui agat experiundi sit copia．＂This was a per－ sooal action，and he had the right of action who intended to bring an actio in rem．The actio ad exhibendum was against a person who was io possession of the thing in question，or had fraudn－ lently parted with the possession of it；and the olject was the production of the thing for the pur－ pose of its being examined by the plaintiff．The thing，which was of course a movable thing，was to be produced at the place where it was at the commencement of the legal proceedings respecting it ；but it was to be taken to the place where the action was tried，at the cost and expense of the plaintiff．

The action was extended to other cases：for in－ stance，to cases when a man claimed the privilege of taking his property off another person＇s land， that other person not being legally bound to restore the thing，though bound by this action to allow the owner to take it ；and to some cases where a man had in his possession something in which his own and the plaintiff＇s property were united，as a jewel set in the defendant＇s gold，in which case there might be an actio ad exhibendum for the purpose of separating the things（ut excludatur ad exhibendum agi potest，Dig．10．tit．4．s．6）．

If the thing was not produced when it ought to have been，the plaintiff might have damages for loss caused by such non－production．This action would lie to produce a slave，in order that he might be put to the torture to discover his confederates．

The ground of the right to the production of a thing，was either property in the thing or some in－ terest；and it was the business of the judex to

## EXOMOSIA.

declare whether there was sufficient reason (justa et probabilis causa) for prodnction. The word " interest" was obviously a word of doubtful import. Accordingly, it was a question if a man could bring this action for the production of his adversary's accounts, though it was a general rule of law that all persons might have this action who had an interest in the thing to be produced (quorum interest); hut the opinion as given in the Digest (Dig. 10. tit. 4. s. 19) is not favourable to the production on the mere ground of its being for the plaintiff's advantage. A man might have this actio thongh he had no vindicatio ; as, for instance, if he had a legacy given to him of such a slave as Titins might choose, he had a right to the production of the testator's slaves in order that Titius might make the choice ; when the choice was madc, then the plaintiff might claim the slave as his property, though he had no power to make the choice. If a man wished to assert the freedom of a slave (in libertatem vindicare), he might have this action.
This action was, as it appears, generilly in aid of another action, and for the purpose of obtaining evidence ; in which respect it bears some resemhlance to a Bill of Discovery in Equity.
(Mühlenbruch, Doctrina Pandectarum; Dig. $\mathrm{J0}$. tit. 4.)
[G. L.]
 doiax), the names of the sacrifices which were offered by generals before they set out on their expeditions. (Xenoph. Anab. vi. 5. § 2.) The principal object of these sacrifices always was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter. According to Hesychius, é $\grave{\xi} \tau \hat{\eta} \downarrow \iota x$ was also the name of the day on which the annual magistrates laid down their offices.
[L. S.]
 old-fashioned and laughable interlndes in verses, inserted in other plays, lmt chiefly in the Atellanae. (Liv. vii. 2.) It is difficult to ascertain the real character of the exodia; but from the words of Livy we must infer that, although distinct from the Atellanae, they were closely connected with them, and never performed alone. Hence Juvenal calls them exodium Atellanae (Sat. vi. 71), and Suetonius (Tib. 45) exodium Atellanicum. They were, like the Atellanae themselves, played by young and well-born Romans, and not by the histriones. Since the time of Jos. Scaliger and Casaubon, the exodia have almost generally been considered as short comedies or farces which were performed after the Atellanae; and this opiniou is founded upon the vague and incorrect statement of the Scholiast on Juvenal (Sat. iii. 174). But the words of Livy, exodia conserta fabellis, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Atellanae, which would suggest a false idea of the Atellanae themselves. But as several Atellanae were performed on the same day, it is probable that the exodia were played between them. This supposition is also supported by the etymology of the word itself, which signifies something $\bar{\epsilon} \xi \delta \delta \delta o \hat{v}$, extra viam, or something not belonging to the main subject, and thus is synonymous with $\dot{\epsilon} \pi \epsilon \epsilon \sigma-$ ofoo. The play, as well as the name of exodium, seems to have been introduced among the Romans from Italian Grecce ; but after its introduction it appears to have become very popular among the

Romans, and continued to be played down to a very late period. (Sueton. Domit. 10.) [L. S.]
EXO'MIS ( $\epsilon$ E $\omega \mu$ is ), a dress which had only a sleeve for the left arm, leaving the right with the shoulder and a part of the breast free, and was for this reason called exomis. It is also frequently called $\chi \iota \tau \grave{\omega} \nu \dot{\xi} \tau \in \rho \rho o \mu \dot{\alpha} \sigma \chi a \lambda o s$. (Phot. and Hesych. s. v. 'E ${ }^{\prime} \in \rho \rho \mu$. : Heliod. Aethiop. iii. ]; Paus. v. 16. § 2.) The exomis, however, was not only a chiton [Tunica], hut also an í íáriov or $\pi \in \rho i t \lambda \eta \mu a$. [Palinum.] According to Hesychins (s. v. ' $\mathrm{E} \xi \mathrm{w}$ $\mu$ is), and Aelius Dionysius (ap. Eustath. ad 11 . xviii. 595), it served at the same time both the purposes of a chiton and an himation; but Pollux (vii. 48) speaks of two different kinds of exonuis, one of which was a $\pi \in \rho i(\bar{\lambda} \eta \mu \alpha$ and the other a
 by existing works of art. Thus we find in the Mus. Pio-Clement. (vol. iv. pl. 11), Hephaestos wearing an exomis, which is an himation thrown round the hady in the way in which this garnent was always worn, and which clothes the hody like an exomis when it is girded round the waist. The following figure of Charon, on the contrary (taken from Stackelherg, Die Gräber der Hellenen, pl. 47),
 we see a similar dress in the figure of Ulysses represented in the article Pileus.

The exomis was usually worn by slaves and working people (Phot. s. v. ; SchoL ad Aristoph. Equit. 879), whence we find Hephaestos, the working deity, frequently represented with this garment in works of art. (Müller, Archäol. der Kunst, $\S 366.6$.) The chorus of old men in the Lysistrata of Aristophanes (1. 662) wear the exomis; which is in accordance with the state ment of Pollux (iv. 118), who says that it was the dress of old men in comic plays. According to Gellius (vii. 12), the exomis was the same as the common tunic without sleeves (citra humerum desinentes) ; but his statement is opposed to the accounts of all the Greek grammarians, and is withont douht erroneous. (Becker, Charikles, vol. ii. p. $112, \& \mathrm{c}$.

EXOMO'SIA ( $(\xi \omega \mu \sigma \sigma$ áa). Any Atheniaa citizen when called upon to appear as a witness in
a court of justice ( $\kappa \lambda \eta \tau \epsilon \dot{U} \epsilon \iota \nu$ or $\left.Z_{\kappa \kappa \kappa} \lambda \eta \tau \epsilon \cup \dot{\epsilon} \epsilon \nu, \mathrm{P}_{0}\right]-$ lux, viii. 37 ; Aeschin. c. Timarch. p. 71), was ohliged hy law to obey the summons, unless he could estahlish hy oath that he was unacquainted with the case in question. (Demosth. De Fals. Leg. p. 396, c. Neaer. p. 1354, c. Aphob. p. 850 ; Suidas, s. v. ${ }^{2}$ E $\left.\xi 0 \mu \delta \sigma \alpha \sigma \theta \alpha a.\right)$ This oath was called $\epsilon \xi \omega \mu \sigma \sigma a$, and the act of taking it was expressed by é $\varsigma \delta \mu \nu \nu \sigma \theta a \iota$. (Demosth. c. Steph. i. p.1119; c. Eubulid. p. 1317 ; Harpocrat. s. v.) Those who refused to obey the summons without being able to take the $\epsilon_{\xi}^{\epsilon} \omega \mu \mu \sigma i a$, incurred a fine of one thousand drachmae ; and if a person, after promising to give his evidence, did nevertheless not appear when called upon, an action called $\lambda e เ \pi \sigma \mu a \rho \tau v p i o v$, or $\beta \lambda \alpha^{\prime} \eta \mathrm{s}$ ठíк $\eta$, might be hrought against him by the parlies who thought themselves injured by his having withheld his evidence. (Demosth. c. Timoth. p. 1190 ; Meier, Att. Proc. p. 387, \&c.)

When the people in their assembly appointed a man to a magistracy or any other public office, he was at liberty, before the $\delta$ oк $\mu$ a $\sigma_{i}$ a took place, to declioe the office, if he could take an oath that the state of his health or other circumstances rendered it impossible for him to fulfil the duties conaected with it ( $\epsilon \xi 6 \mu \nu \nu \sigma \theta a t \tau \eta \nu \lambda \rho \chi \eta \eta \nu$, or $\tau \grave{\eta} \nu$ $\chi$ <tporovial): and this oath was likewise called

[L. S.]
EXOSTRA ( ${ }_{\xi} \xi \bar{\xi} \sigma \sigma \tau \rho \alpha$, from ${ }_{\xi} \xi \omega \theta \in \epsilon$ ), was one of the many kinds of machines used in the theatres of the ancients. Cicero (De Prov. Cons. 6), in speaking of a man who formerly concealed his vices, expresses this sentiment by post siparium heluabatur ; and then stating that he now shamelessly indulged in his vicious practices in public, says, jam in exostra heluatur. From an attentive consideration of this passage, it is evident that the exostra was a machine by means of which things which had been concealed behind the siparium, were pushed or rolled forward from behind it, and thus became visible to the spectators. This machine was therefore very mnch like the érku$\kappa \lambda \eta \mu a$, with this distinction, that the latter was moved on wheels, while the exostra was pushed forward upon rollers. (Pollux, iv. 128 ; Schol. ad Aristoph. Acharn. 375.) But both seem to have heen used for the same purpose ; namely, to exhibit to the eyes of the spectators the results or consequences of such things-e.g. murder or suicide -as could not consistently take place in the proacenium, and were therefore described as having occurred behind the siparium or in the scene.
The name exostra was also applied to a peculiar kind of bridge, which was thrown from a tower of the besiegers upon the walls of the besieged town, sad across which the assailants marcbed to attack those of the besieged who were stationed on the ramparts to defend the town. (Veget. De Re Milit. iv. 21.)

EXSI'LIUM (фuर向), banishment. 1. Greek. - Banishment among the Greek states seldom, if ever, appears as a punishment appointed by law for particular offences. We might, indeed, expect this; for the division of Greece into a number of
independent states would neither admit of the establishment of penal colonies, as amongst us, nor of the various kinds of exile which we read of under the Roman emperors. The general term $\phi \nu \gamma$ n (flight) was for the ouost part applied in the case of those who, in order to avoid some punishment or danger, removed from their own country to another. Proof of this is found in the records of the heroic ages, and chiefly where homicide had been committed, whether with or withont malice aforethought. Thus (Il. xxiii. 88) Patroclus appears as a fugitive for life, in consequence of manslaughter ( $\dot{\alpha} \nu \delta \rho o \kappa \tau \alpha \sigma l \eta$ ) committed by him when a boy, and in anger. In the same manner (Hom. Od. xy. 275) Theoclymenus is represented as a fugitive and wanderer over the earth, and even in foreign lands haunted by the fear of vengeance, from the numerous kinsmen of the man whom he had slain. The duty of taking vengeance was in cases of this kind considered sacred, though the penalty of exile was sometimes remitted, and the homicide allowed to remain in his country on payment of a $\pi 0 เ \nu \eta^{\prime}$, the price of blood, or wehrgeld of the Gernans (Tacit. Germ. 21), which was made to the relatives or nearest connections of the slain. (II. ix. 630.) Even though there were no relatives to succour the slain man, still deference to public opinion imposed on the homicide a temporary absence (Od. xxiii. 119 , and Schol.), until he had obtained expiation at the hands of another, who seems to have been called the $\dot{\alpha} \gamma \nu i \tau \eta s$ or purifier. For an illustration of this, the reader is referred to the story of Adrastus and Croesus. (Herod. i. 35.)

In the later times of Athenian history, $\phi v \gamma$ 另, or banishment, partook of the same nature, and was practised nearly in the same cases, as in the heroic ages, with this difference, that the laws more strictly defined its limits, its legal consequences, and duration. Thens an action for wilful murder was brought before the Areiopagus, and for manslaughter before the court of the Ephetae. The accused might, in either case, withdraw himself ( $\phi \cup \gamma \epsilon i \nu$ ) before sentence was passed; but when a criminal evaded the punishment to which an act of murder would have exposed him had he remained in bis own land, he was then hanished for ever ( $\phi$ єú $\boldsymbol{\epsilon}$ c̀ ċeıфuүíav), and not allowed to return home even when other exiles were restored upon a general amnesty, since on such occasions a special exception was made against criminals banished by the Areiopagus (of Ég 'Apéóv $\pi \alpha \dot{d} \gamma o u$ фeb $\left.\gamma_{0} \nu \tau \epsilon s\right)$. A convicted murderer, if found within the limits of the state, might be seized and put to death (Dem. c. Aris. p. 629), and whoever harboured or entertained ( $\dot{u} \epsilon \epsilon \delta \xi \xi a \tau 0$ ) any one who had fled from his country to avoid a capital punishment, was liable to the same penalties as the fugitive himself. (Dem. c. Polycl. p. 1222. 2.)

Demosthenes (c. Aris. p. 634) says, that the word $\phi \in \hat{\gamma} \gamma \in i \nu$ was properly applied to the exile of those who committed murder, with malice aforethought, whereas the term $\mu \in \theta i \sigma \tau \alpha \sigma \theta \alpha L$, was used where the act was not intentional. The property also was confiscated in the former case, but not in the latter.

When a verdict of manslaugbter was returned, it was usual for the convicted party to leave ( $(\xi \xi \hat{\eta}, \lambda \theta \epsilon)$ his country by a certain road, and to remain in exile till he induced some one of the relatives of the slain man te take compassion on him. During his absence, his possessions were $\dot{e} \pi i \tau \mu \mu \alpha$, that is, not confiscated; hut if he remained at home or returned before the requirements of the law were

## EXSILIUM.

satisfied, he was liable to be driven or carried out of the country by force. (Dem. c. Aris. pp. 634 and 644.) It sometimes happened that a fugitive for manslaughter was charged with murder ; in that case he pleaded on board ship, before a court which sat at Phreatto, in the Peiraeeus. (Dem. c. Aris. p. 646.) We are not informed what were the consequences if the relatives of the slain man refused to make a reconciliation; supposing that there was no compulsion, it is reasonable to conclude that the exile was allowed to return after a fixed time. In cases of manslaughter, but not of murder, this seems to have been nsual in other parts of Greece as wall as at Athers. (Meursins, cul Lycop. 282; Eurip. Hipp. $: 37$, and Seholia.) Plato (Leg. ix. p. 865), who is believed to have copied many of his laws from the constitution of Athens, fixes the period of banishment for manslaughter at one year, and the word $\dot{a} \pi \epsilon \nu \iota \alpha u \tau \iota \sigma \mu \hat{s}$, explained to mean a year's exile for the commission of homicide (rais $\phi \delta \nu 0 \nu \delta \rho \alpha \sigma \alpha \sigma \iota)$ scems to imply that the custom was pretty general. We have indeed the authority of Xenophon (Anab. iv. 8. §15) to prove that at Sparta banishment was the consequence of involuntary homicide, though be does not tell us its duration.
Moreover, not only was an actual murder punished with banishment and confiscation, but also a $\tau \rho \alpha \hat{\nu} \mu \alpha$ Éк $\pi \rho о \nu o l a s$, or wounding with intent to kill, though death might not ensue. (Lysias, $c$. Simon. p. 100 ; Dem. c. Boeot. p. 1018. 10.) The same punishment was inflicted on persons who rooted up the sacred olives at Athens (Lyysias,
 every one was liable to it who remained nenter during political contentions. (Plut. Sol. 20 ; Gell. ii. 12.)

Under $\phi u \gamma \bar{n}$, or banishment, as a general term, is comprehended Ostracism (ò ot $\rho a \kappa \iota \sigma \mu \delta s$ ); the difference between the two is correctly stated by Suidas, and the Scholiast on Aristophanes (Equit. 861), if we are to understand by the former aeıфu$\gamma^{\prime} a_{0}$, or banishment for life. " $\Phi u \gamma \dot{n}$ (say they) differs from ostracism, inasmuch as those who are banished lose their property hy confiscation, whereas the ostracised do not; the former also have no fixed place of abode, no time of return assigned, but the latter have." This ostracism was instituted by Cleisthenes, after the expulsion of the Peisistratidae; its nature and objects are thus explained by Aristotle (Pol. iii. 8):-" Democratical states (he observes) used to ostracise, and remove from the city for a definite time, those who appeared to be pre-eminent above their fellow-citizens, by reason of their wealth, the number of their friends, or any other means of influence." It is well known, and implied in the quotation just given, that ostracism was not a punishment for any crime, but rather a precautionary removal of those who possessed sufficient power in the state to excite either envy or fear. Thus Plutarch (Arist. 10) says it was a good-natured way of allaying envy ( $\phi \theta \delta \nu$ ov $\pi \alpha \rho \alpha-$ $\mu \nu \theta i \alpha \phi(\lambda \alpha \dot{\alpha} \theta \rho \omega \pi \delta s)$, by the humiliation of superior dignity and power. Mr. Grote (History of Greece, vol. iv. p. 200, \&c.) has some very ingenious remarks in defence of ostracism, which he maintains was a wise precaution for maintaining the democratical constitution established by Cleisthenes. He observes that "Cleisthenes, by the spirit of his reforms, secured the hearty attachment of the body of citizess; but from the first generation of leading men, under the nascent democracy, and
with such precedents as they had to look back upon, no self-imposed limits to ambition could be expected : and the problem required was to eliminate beforehand any one about to transgress these limits, so as to escape the necessity of putting him down afterwards, with all that bloodshed and reaction, in the midst of which the free working of the constitution would be suspended at least, if not irrevocably extinguished. To acquire such influence as wonld render him dangerous under democratical forms, a man must stand in evidence before the public, so as to afford some reasonable means of judging of his character and purposes; and the security which Cleisthenes provided was, to call in the positive judgment of the citizens respecting his future promise purely and simply, so that they might not remain too long neutral between two political rivals. He incorporated in the constitation itself the principle of privilegium (to employ the Roman phrase, which signifies, not a peculiar favour granted to any one, but a peculiar inconvenience imposed), yet only under circumstances solemn and well defined, with full notice and discussion beforehand, and ty the positive secret vote of a large proportion of the citizens. 'No law shall be made against any single citizen, without the same being made against all Athenian citizens; unless it shall so seem good to 6000 citizens voting secretly ' (Andoc. de Myst. p. 12). Such was that general principle of the constitution, under which the ostracism was a particular case." Mr. Grote further observes, - "Care was taken to divest the ostracism of all painful consequence, except what was inseparable from exile; and this is not one of the least proofs of the wisdom with which it was devised. Most certainly it never deprived the public of candidates for political influence; and when we consider the small amount of individual evil which it inflicted, two remarks will be quite sufficient to offer in the way of justification. First, it completely produced its intended effect ; for the democracy grew up from infancy to manhood without a single attempt to overthrow it by force: next, through such tranquil working of the denocratical forms, a constitutional morality quite sufficiently complete, was prodnced among the leading Athenians, to enable the people after a certain time to dispense with that exceptional security which the ostracism offered. To the nascent democracy, it was absolutely indispensable; to the growing, yet military democracy it was necessary; but the fullgrown democracy both could and did stand without it." The manner of effecting it was as follows:Before the vote of ostracism could be taken, the senate and the ecclesia had to determine in the sixth prytany of the year whether such a step was necessary. If they decided in the affirmative, a day was fixed, and the agora was enclosed by barriers, with ten entrances for the ten tribes. By those the tribesmen entered, each with his of $\sigma \tau \rho a-$ $\kappa \alpha \nu$, or piece of tile, on which was written the name of the individual whom he wished to be ostracised. The nine archons and the senate, i.e. the presidents of that body, superintended the proceedings, and the party who had the greatent number of votes against him, supposing that this number amounted to 6000 , was obliged to withdraw ( $\mu \in \tau \alpha \sigma \tau \hat{\eta} \nu \alpha \iota$ ) from the city within ten days; if the number of votes did not amount to 6000 , nothing was done. (Schol. ad Aristoph Equ. 851; Pollux, viii. 19.) Plutarch (Arist. c. 7) differs

## FXSILIUM.

from other authorities in stating, that for an expulsion of this sort it was not necessary that the votes given against any individual should amount to 6000 , hut only that the sum total should not be less than that number. Böckh and Wachsmutr are in favour of Plutarch ; but Mr. Grote, yio supports the other opinion, justly remarks, "fat the purpose of the general law would by no mans he obtained, if the simple majority of votes miong 6000 in all, had been allowed to take effec. A person might then be ostracised with a very small number of votes against him, and withont deating any reasonable presnmption that he was dqugerons to the constitution, which was by no mean either the purpose of Cleisthenes, or the well-un erstood operation of the ostracism, so long as it continued to he a reality." All, however, agree hat the party thus expelled was not deprived of his property. The period of his banishment was ten years. The ostracism was also called the кєрацкюो $u d \sigma \tau!\xi$, or earthenware scourge, from the material of the ð̈бтракoy on which the names were written.
Some of the most distinguished men at Athens were removed by ostracism, but recalled when the city found their sarvices indispensable. Amongst these were Thenistocles, Aristeides, Cimon, and Alcibiades; of the first of whom Thucydides (i. 135) states, that his residence during ostracism was at Argos, though he was not confined to that city, but visited other parts of Peloponnesus. The last person against whom it was used at Athens was Hyperbolus, a demagogue of low birth and character, whom Nicias and Alcibiades conspired together to ostracise, when the banishment threatened each of themselves; but the Athenians thought their own dignity compromised, and os. tracism degraded by such an application of it, and accordingly discontinued the practice. (Plut. Nic. c. 11, Alcib. c. 13, Arist. c. 7 ; Thuc. viii. 73.)

Ostracism prevailed in other democratical states as well as Athens; namely, at Argos, Miletus, and Megara, but we have no particulars of the way in which it was administered in those states. Aristotle says (Pol. iii. 8) that it was abused for party purposes.
From the ostracism of Athens was copied the Petalism ( $\pi \epsilon \tau \alpha \lambda \iota \sigma \mu \delta s$ ) of the Syracnsans, so called from the $\pi \in \tilde{\varepsilon} \pi \lambda \alpha$, or leaves of the olive, on which was written the name of the person whom they wished to remove from the city. The removal, however, was only for five years; a sufficient time, as they thought, to hnmble the pride and hopes of the exile. But petalism did not last long ; for the fear of this "humbling," deterred the best qualified amongst the citizens from taking any part in public affairs, and the degeneracy and bad government which followed, soon led to a repeal of the law в. c. 452. (Diod, xi. 87.)
In connection with petalism it may be remarked that if any one were falsely registered in a demus, or ward, at Athens, his expulsion was called еккфиллофорia, from the votes being given by leaves. (Meier, His. Juris. Att. 83; Lys. c. Nicom. p. 844.)
The reader of Greek history will remember, that hesides those exiled by law, or ostracised, there was frequently a great number of political exiles in Greece ; men who, having distinguished themselves as the leaders of one party, were expelled, or obliged to remove, from their native city when the opposite faction became predominant. They are spoken of

$06 y$ s after their return ( $\dot{\eta}$ кd́ $\theta_{o} \delta o s$ ), the word $\kappa \alpha^{2} \gamma \in i v$ being applied to those who were instru$\mathrm{r}^{\text {rintal }}$ in effecting it.
[R. W.]
2. Roman. In the later imperial period, exsilium was a general term used to express a punishment, of which there were several species. Paulus (Dig. 48. tit. ]. s. 2), when speaking of those judicia publich, which are capitalia, defines them by the consequent punishment, which is death, or exsilinm; and exsilium he defines to be aquae et ignis interdictio, by which the caput or citizenship of the criminal was taken away. Other kinds of exsilinm he says were properly called relegatio, and the relegatus retained his citizenship. The distinction hetween relegatio and exsilium existed under the republic. (Liv. iii. 10, iv. 4 ; Cic. Pro P. Sext. c. 12.) Ovid also (Trist. v. 11) describes himself, not as exsul, which he considers a term of reproach, but as relegatus. Speaking of the emperor, he says, -
"Nec vitam, nec opes, nec jus mihi civis ademit ;" and a little further on,
"Nil nisi me patriis jussit abire focis."
Compare also Tristia, ii. 127, \&c.
Marcianus ( Dig. 48. tit. 22. s. 5) makes three divisions of exsilinm : it was either an interdiction from certain places named, and was then called lata fuga (a term equivalent to the libera fuga or liberum exsilium of some writers); or it was an interdiction of all places, except some place named; or it was the constraint of an island (as opposed to luta fuga).*

Of relegatio there were two kinds: a person might be forbidden to live in a particular province, or in Rome, and either for an indefinite or a definite time; or an island might he assigned to the relegatus for his residence. Relegatio was not followed by loss of citizenship or property, except so far as the sentence of relegatio might extend to part of the person's property. The relegatus retained his citizenship, the ownership of his property, and the patria potestas, whether the relegatio was for a definite or an indefinite time. The relegatio, in fact, morely confined the person within, or excluded him from, particular places, which is according to the definition of Aelins Gallus (Festus, s. Relegati), who says that the punishment was imposed by a lex, senatus-consultum, or the edictum of a magistratus. The words of Ovid express the legal effect of relegatio in a manner literally and techni-

[^29]
## EXSILIUM.

cally correct. (Instances of relegatio occur ho the following passages :-Suet. Aug. c. 16, Tib. \& 50 ; Tacit. Ann. iii. 17, 68 ; Suet. Claud. c. 23, which last, as the historian remarks, was a new kind of relegatio.) The term relegatio is applied by Cicero (de Off. iii. 31) to the case of T. Manlius, who had been compelled by his father to live in solitude in the country.
Deportatic in insulam, or deportatio simply, was introduced under the emperors in place of the aquae et ignis interdictio. (Elpian, Dig. 48. tit. 13. s. 3; tit. 19. s. 2.) The governor of a province (prueses) had not the power of pronouncing the sentence of deportatio; but this power was given to the praefectus urbi by a rescript of the emperor Severus. The consequence of deportatio was loss of property and citizenship, hut not of freedom. Though the deportatus ceased to be a Roman citizen, he had the capacity to buy and sell, and do other acts which might be done according to the jus gentium. Deportatio differed from relegatio, as already shown, and also in being always for an indefinite time. The relegatus went into hanishment; the deportatus was conducted to his place of banishment, sometimes in chains.
As the exsilium in the special sense, and the deportatio took away a persen's civitas, it follows that if he was a father, his children ceased to be in his power; and if he was a son, he ceased to be in his father's power; for the relationship expressed by the terms patria potestas could not exist when either party had ceased to be a Roman citizen. (Gaius, i. 128.) Relegatio of a father or of a son, of course, had not this effect. But the interdict and the deportatio did not dissolve marriage. (Cod. 5. tit. 16. s. 24 ; tit. 17. s. 1 ; com: pare Gaius, i. 128, with the Institutes, i. tit. 12, in which the deportatio stands in the place of the aquae et ignis interdictio of Gaius.)
When a person, either parent or child, was condemned to the mines or to fight with wild beasts, the relation of the patria potestas was dissolved. This, though not reckoned a species of exsilium, resembled deportatio in its consequences.
It remains to examine the meaning of the term exsilium in the republican period, and to ascend, so far as we can, to its origin. Cicero (Pro Caecina, c. 34) affirms that no Roman was ever deprived of his civitas or his freedom by a lex. In the oration Pro Dono (c. 16, 17) he makes the same assertion, but in a qualified way; he says that no special lex, that is, no privilegizm, could be passed against the caput of a Roman citizen, unless he was first conderned in a judicium. It was, according to Cicero, a fundamental principle of Roman law (Pro Dono, c. 29), that no Roman citizen could lose his freedom or his citizenship without his consent. He adds, that Roman citizens who went out as Latin colonists, could not become Latin, unless they went voluntarily and registered their names: those who were condemned of capital crimes did not lose their citizenship till they were admitted as citizens of another state; and this was effected, not by depriving them of their civitas (adcmptio crovtatis), but by the interdictio tecti aquae et ignis. The same thing is stated in the oration Pro Caecina (c. 34), with the addition, that a Roman citizen, when he was received into another state, lost his citizenship at Rome, because by the Roman law a man could not be a citizen of two states. This reason, however, would be equally
good for showing that a Roman citizen could not become a citizen of another community. In the oration Pro Balbo (c. 11) the proposition is put rather in this form ; that a Roman who became a pitizen of another state, therely ceased to be a R (1man citizen. It must not be forgotten that in the oration Pro Caecina, it is one of Cicero's objects to prơe that his client had the rights of a Roman citizen; and in the oration Pro Domo, to prove that he himself had not heen an exsul, though he was interdicted from fire and water within 400 miles of Rome. (Cic. $A d$ Attic. iii. 4.) Now, as Cicero' had been interdicted from fire and water, and as he evaded the penalty, to use his own words (Pro Caecina c. 34), by going beyond the limits, he could only escape the consequences, namely, exsiliun, either by relying on the fact of his not being received as a citizen into another state, or hy alleging 'the illegality of the proceedings against him. But the latter is the ground on which he seems to maintain his case in the Pro Domo: he alleges that he was made the subject of a privilegium, without having been first condemned in a judicium (c. 17).

In the earlier republican period, a Roman citizen might have a right to go into exsilium to another state, or a citizen of another state might have a right to go into exsilium at Rome, by virtus of certain isopolitical relations existing between such state and Rome. This right was called jus exulandi with reference to the state to which tha person came; with respect to his own state which he left, he was exul, and his condition was exsilium : with respect to the state which he entered, he was inquilinus*; and at Rome he might attach himself (applicare se) to a quasi patronus, s relationship which gave rise to questions involving the jus applicationis.
The sentence of aquae et ignis, to which Cicero adds (Pro Domo, c. 30) tecti interdictio (comp. Plut. Marius, c. 29), was equivalent to the deprivation of the chief necessaries of life, and its effect was to incapacitate a person from exercising the rights of a citizen within the limits which the sentence comprised. Supposing it to he true, that no Roman citizen could in dircet terms be deprived of his civitas, it requires but little knowledge of the history of Roman jurisprudence to perceive that a way would readily be discovered of doing that indirectly which could not be done directly; and such, in fact, was the aquae et ignis interdictio. The meaning of the sentence of aquae et ignis interdictio is clear when we consider the symbolical meaning of the aqua et ignis. The bride, on the day of her marriage, was received by her husband with fire and water (Dig. 24. tit. 1. s. 66), which were symbolical of his taking her under his protection and sustentation. Varro ( $D_{\mathrm{o}}$ Ling. Lat. iv.) gives a different explanation of the symbolical meaning of aquae et ignis in the marriage ceremony:-Aquae et ignis (according to the expression of Festus) sunt duo elementa quas humanam vilam maxime continent. The sentence of interdict was cither pronounced in a judicium, or it was the subject of a lex. The punishment
*This word appears, hy its termination inus, to denote a person who was one of a class, like the word libertinus. The prefix in appears to be the correlative of ex in exsul, and the remaining part quil, is probably related to col in incola and colonus.
was lufficted for various crimes, as vis publica, pecalatus, veneficium, \&c. The Lex Julia de vi publicu et privata applied, among other cases, to auyy person qui receperit, celuverit, tenuerit, the interdicted person (Paulus, Sent. Recept. ed. Schulting); and there was a clause to this effect in the lex of Clodius, by which Cicero was hanislled.
The sentence of the interdict, which in the time of the Antonines was accompanied with the loss of citizenship (Gaius, i. 90), could hardly have had any other effect in the time of Cicero. It may he true that exsilium, that is, the change of solum, or ground, was not in direct terms included in the sentence of aquue et ignis interdictio: the person might stay if he liked, and subnit to the penalty of being an outcast, and being incapacitated from doing any legal act. Indeed, it is not easy to conceive that banishment can exist in any state, except such state has distant possessions of its own to which the offender can be sent. Thus banishment as a penalty did not exist in the old English law. When isopolitical relations existed between Rome and another state, exsilium might be the privilege of an offender. Cicero might then truly ssy that exsilium was not a punishment, but a mode of evading punishment (Pro Caecina) ; and this is quite consistent with the interdict being a punishment, and having for its object the exsilium.
According to Niehuhr, the interdict was intended to prevent a person, who had become an exsul, from returning to Rowe and resuming his citizenship, and the interdict was taken off when an exsul was recalled. Further, Niebuhr asserts, that they who settled in an unprivileged place (one that was not in an isopolitical connection with Rome) needed a decree of the people, declaring that their settlement should operate as a legal exsilinm. And this assertion is supported by a single passage in Livy (xxvi, 3), from which it appears that it was declared by a plebiscitum, that C. Fabius, by going into exile (exulatum) to Tarquinii, which was a municipium (Pro Crecin. c. 4), was legally in exile.

Niehuhr asserts that Cicero had not lost the civitas by the interdict; but Cicero (Ad Attic. iii. 23) by implication adnits that he had lost his civitas and his ordo, though in the Oratio Pro Domo he denies that he had lost his civitas. And the ground on which he mainly attempted to support his case was, that the lex by which he was interdicted, was in fact no lex, but a procceding altogether irregular. Cicero was restored by a lex Centuriata. (Ad Attic. iv. 1.)

## F.

FABRI, are workmen who make any thing out oi hard materials, as fabri tignarii, carpenters, fabri aerarii, smiths, \&c. The different trades were divided by Numa (Plut. Numa, 17) into nine collegia, which correspond to our companies or guilds. In the constitution of Servius Tullius, the fubri tignarii (тéктоves, Orelli, Inscrip. 60, $417,3690,4086,4088,4184)$ and the fabri cerarii or ferrarii ( $\chi$ алкотíтor) were formed into two centuries, which were called the centuriae fabrüm, and not fubrorum. (Cic. Orat. 46.) They did not
belong to any of the five classes into which Servius divided the people ; but the fabri tign. probably voted with the first class, and the fabri aer. with the second. Livy (i. 43) and Dionysius (vii. 59) name hoth the centuries together: the former says that they voted with the first class; the latter, that they voted with the second. Cicero (De Rep. ii. 22) names only one century of fabri, which he says voted with the first class; but as he adds the word tignariorum, he must have recognized the existence of the second century, which we suppose to have voted with the second class. (Göttling, Gesch. der Röm. Stuastv. p. 249.)

The fabri in the army were under the commend of an officer called praefertus fubrûm. (Caes. op. Cic. $\alpha d$ Att. ix. 3, Bell. Civ. i. 24; Veget. ii. 11.) It has been supposed by some modern writers that there was a praefectus fabrîm attached to each legion ; and this may have been the case. No genvine inscriptions however, contain the title of praefectus fabrûm with the name of a legion added to it. There were also civil magistrates at Rome and in the municipal towns, called praefecti fahrûm; but we know nothing respecting them beyond their name. Thus we find in Gruter, Prabf. Fabr. Romae (467. 7), Praefectus Fabr. Caer. (235. 9.) The subject of the praefecti fabrûm is discussed with great accuracy in a letter of Hagenbuchius, published by Orelli (Inserip. vol, ii. p. $95, \& \mathrm{c}$.).

FA'bULA. [Comoedia.]
FACTIO'NES AURIGA'RUM. [Circus, p. 287.]

FALA'RICA. [Hasta.]
FALSA'RIUS. [Falsum.]
FALSUM. The oldest legislative provision at Rome against Falsum was that of the Twelve Tahles against false testimony (Gell. xx. 1); but there were trials for giving false testimony before the enactment of the Twelve Tables. (Liv. iii. 24, \&c.) The next legislation on Falsum, so far as we know, was a Lex Cornelia, passed in the time of the Dictator Sulla, which Cicero also calls testamentaria and numaria (In Verr. ii. lib. l. c. 42), with reference to the crimes which it was the object of the law to punish. The offence was a Crimen Publicum. The provisions of this lex are stated by Paulus (Sent. Recept. v. 25, ed. Berl.), who also entitles it Lex Cornelia testamentaria, to apply to any person " qui testamentum quodve aliud instrumentum falsum sciens dolo malo scripserit, recitaverit, subjecerit, suppresserit, amoverit, resignaverit, deleverit," \&c. The punishment was deportatio in insulam (at least when Paulus wrote) for the "honestiores;" and the mines or crucifixion for the "humiliores." In place of deportatio, the law prohably contained the pumishment of the interdictio aquae et ignis. According to Paulns the law applied to any instrument as well as a will, and to the adulteration of gold and silver coin, or refusing to accept in payment genuine coin stamped with the head of the princeps. But it appears from Ulpian (sub titulo de poena legis Corneliae testamentariae) that these were subsequent additions made to the Lex Cornelia (Mos. et Rom. Leg. Coll. tit. 8. s. 7) by various genatus-consulta. (Tacit. Ann. xiv. 40, 41.) By a senatus-consultum, in the consulship of Statilius and Taurus, the penalties of the law were extended to the case of other than testamentary instrumeits. It is conjectured that, for the consulship of Statilius
and Taurus, as it stands in the text of Ulpian, we should read Statilins Taurus, and that the consulship of T. Statilius Taurus and L. Scribonius Libo (A. n. 16) is meant. A subsequent senatns-consulturn, in the fourteenth year of Tiberius, extended the penalties of the law to those who for money undertook the defence of a (criminal?) cause, or to procure testimony; and by a senatus-consultun, passed between the dates of those just mentioned, conspiracies for the ruin of innocent persoas were comprised within the provisions of the law. Another senatns-consnltum, passed A. n. 26, extended the law to those who received money for selling, or giving, or not giving testimony. There were probably other legislative provisions for the purpose of checking frand. In the time of Nero it was enacted against fraudulent persons (falsarii), that tabulae or written contracts should be pierced with holes, and a triple thread passed through the holes, in addition to the signature. (Snet. Nero, c. 17 ; compare Paulus, Sent. Recept. v. tit. 25. s. 6.) In the time of Nero it was also provided that the first two parts (cerae) of a will should have only the testator's signature, and the remaining one that of the witnesses : it was also provided that no man who wrote the will should give himself a legacy in it. The provisions, as to adulterating money and refusing to take legal coin in payment, were also made by senatus-consulta or imperial constitutions. Allusion is made to the latter law by Arrian (Epict. iii. 3). It appears from numerous passages in the Roman writers that the crime of falsum in all its forms was very common, and especially in the case of wills, against which legislative enactments are a feeble security. (Heinecc. Syntayma; Rein, Das Criminalrecht der Römer, where the subject is fully discussed.) [G. L.]

FALX, dim. FALCULA ( $\alpha \rho \pi \eta, \delta \rho \in ́ \pi a \nu 0 \nu$, poet. $\delta \rho \in \pi a ́ \nu \eta, \operatorname{dim} . \delta \rho \in \pi \alpha ́ \nu(0 \nu)$, a sickle; a scythe; a pruning-knife, or pruning-hook; a bill; a falchion; a halbert.

As Culter denoted a knife with one straight edge, " falx" signified any similar instrument, the single edge of which was curved. ( $\Delta \rho$ éтavov $\in \dot{u}$ «а а $\pi$ е́s, Hom. Od. xviii. 367 ; curvae falces, Virg. Georg. i. 508 ; ourvamine falcis aenae, Ovid, Met. vii. 227 ; adunca falce, xiv. 628.) By additional epithets the various uses of the falx were indicated, and its corresponding varieties in form and size. Thus the sickle, hecause it was used by reapers, was called falx messoria; the scythe, which was employed in mowing hay, was called falx foenaria; the pruning-knife and the bill, on account of their use in dressing vines, as well as in hedging and in cutting off the shoots and branches of trees, were distinguished by the appellation of fulx putatoria, vinitoria, arboraria, or silvatica (Cato, De Re Rust. 10, 11 ; Pallad. i. 43 ; Colum. iv. 25), or by the diminutive falcula. (Colum. xii. 18.)

A rare coin published by Pellerin (Med. de Rois, Par. 1762. p. 208) shows the head of one of the Lagidae, kings of Egypt, werring the Dianema, and on the reverse a man cutting down corn with a sickle. (See woodent.)

The lower figure in the same woodeut is taken from the MSS. of Columella, and illustrates his description of the various parts of the falx vinitoria. (De Re Rust. iv. 25. p. 518, ed. Gesner.) [Culter.] The curvature in the fore part of the blade is expressed by Virgil in the phrase procurva falx. (Georg. ii. 421.) After the removal of a branch

by the proning-hook, it was often smoothed, as in modern gardening, by the chisel. (Colum. De Avbor. 10.) [Dolabra.] The edge of the falx was often toothed or serrated ( ${ }^{\circ} \rho \pi \eta \nu$ кар$\chi а \rho \delta \delta \delta \nu \tau \alpha$, Hesiod, Theog. 174, 179 ; denticulata, Colum. De Re Rust. ii. 21). The indispensable process of sharpening these instruments (a $\rho \pi \eta \nu$
 $\nu \in o \theta \eta \gamma^{\prime} \alpha$, Apoll. Rhod. iii. 1388) was effected by whetstones which the Romans obtained from Crete and other distant places, with the addition of oil or water which the mower (foenisex) carried in a horn upon his thigh. (Plin. H.N. xviiu. 67.)

Numerous as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geloni were noted for its use. (Claudian, De Laud. Stil. i. 110.) It was the weapon with which Jupiter wounded Typhon (Apollod. i. 6) ; with which Hercules slew the Lernaean Hydra (Eurip. Ion, 191) ; and with which Mercury cut off the head of Argus (falcato ense, Ovid, Met. j. 718 ; harpen Cyllenidu, Lucan, ix. 662-667). Persens, having received the same weapon from Mercury, or, accordiag to other authorities, from Vulcan, used it to decapitate Medusa and to slay the sea-monster. (Apollod. ii. 4 ; Eratosth, Cataster. 22 ; Ovid, Met. iv. 666, 720, 727 , v. 69 ; Brunck, Anal. iii. 157.) From the passages now referred to, we may conclude that the falchion was a weapon of the most remote antiguity ; that it was girt like a dagger upon the waist ; that it was held in the hand by a short hilt ; and that, as it was in fact a dagger or sharppointed blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature (curvo tenus abdidit hamo). In the following woodcut, four examples are selected from works of ancient art to illustrate its form. One of the four cameos here copied represents Persetts with the falchion in his right hand, and the head of Medusa in his left. The two smaller figures are heads of Saturn with the falx in its original form ; and the fourth cameo, representing the same divinity at full length, was prohably engraved in Italy at a later period than the others, but carly enongh to prove that the scythe was in use among the Romans, whilst it illustrates the adaptation of the symbols of Saturn (Kpopos: senex falcifer, Ovid, Fast. v. 627, in llin, 216) for the purpose of personifying Time ( $\mathrm{X} \rho \delta \nu o s$ ).

If we imagine the weapon which has now been

described to be attached to the end of a pole, it would assume the form and be applicable to all the purposes of the modern halbert. Such must have been the asseres falcati used by the Romans at the siege of Ambracia. (Liv. xxxviii. 5 ; compare Caes. Bell. Gall. vii. 22, 86 ; Q. Curt. iv. 19.) Sometimes the iron head was so large as to he fastened, instead of the ram's head, to a wooden beam, and worked by men under a testudo. (Veget. iv. 14.)
Lastly, the Assyrians, the Persians, the Medes, and the Syrians in Asia (Xen. Cyrop. vi. 1, 2, Anab. i. 8; Diod. ii. 5, xvii. 53 ; Polyb. v. 53 ; Q. Curt. iv. $9,12,13$; Gell. v. 5 ; 2 Mace. xiii. 2; Veget. iii, 24 ; Liv. xxxvii. 41), and the Gauls and Britons in Europe [Covinus], made themselves formidable on the field of battle hy the use of chariots with scythes, fixed at right angles ( $\epsilon$ is $\pi \lambda$ dávov) to the axle and turned downwards; or inserted parallel to the axle into the felly of the wheel, so as to revolve, when the chariot was put in motion, with more than thrice the velocity of the chariot itself; and sometimes also projecting from the extremities of the axle.
[J.Y.]
FAMI'LIA. This word contains the same element as "famulus," which is said to he the same as the Oscan famul or famel, which signified "servus." The conjecture that it contains the same element as the Greek $\delta \mu \lambda \lambda i a$, and is the same as $\delta \mu$ or $\dot{\alpha} \mu$, is specious, but somewhat doubtful. In its widest sense Familia comprehends all that is subjected to the will of an individual, who is sui juris, hoth free persons, slaves, and ohjects of property. In this sense it corresponds to the Greek oiteos and oixio, But the word has various narrower signiffcations (familiae - appellatio et in res et in personas diducitur, Dig. 50 . tit. 16. s. 195. §1). In the third kind of testamentary disposition mentioned hy Gaius (ii. 102), the word "familia" is explained by the equivalent "patrimonium ;" and the person who received the familia from the testator (qui a testatore familiam accipiehat mancipio) was called " farniliae emptor." And in the formula adopted by the "familiae emptor," when he took the testator's familia by at fictitious sale, his words were: "Familiam pecuniamque tuam endo mandatam tutelam custodelamque meam recipio," \&c.

In the passage of the Twelve Tables which de-
clares that in default of any heres sums, the property of the intestate shall go to the next agnatus, the word "familia" signifies the property only: "Agnatus proximus familiam habeto." In the same section in which Ulpian (Frag. tit. 26. 1) quotes this passage from the Twelve Tahles, he explains agnati to be "cognati virilis sexus per mares descendentes ejusdem familiae," where the word "familia" comprehends only persons. (Dig. 50. tit. 16. s. 195 ; 10. tit. 2.)

The word "familia" sometimes signifies only "persons," that is, all those who are in the power of a paterfamilias, such as his sons (flizifamilias), daughters, grandchildren, and slaves, who are strictly objects of dominium, but are also in a sense objects of potestas. In another sense "familia "siguifies ouly the free persons who are in the power of a paterfamilias ; and, in a more extended sense of this kind, all those who are agnati, that is, all who are sprung from a common ancestor, and would be in his power if he were living. With this sense of familia is connected the status familiae, by virtue of which a person belonged to a particular familia, and thereby had a capacity for certain rights which only the members of the familia could claim. A person who changed this status, ceased to belong to the familia, and sustained a capitis diminutio minima. [Adoptio; Caput.] Members of the same family were "familiares;" and hence familiaris came to signify an intimate friend. Slaves who belonged to the same familia were called, with respect to this relation, familiares. Generally, "familiaris " might signify any thing relating to a familia.

Sometimes "familia" is used to signify only the slaves belonging to a person (Cic. ad Fam. xiv. 4, ad Quint. Fr. ii. 6); or to a body of persons (societas), in which sense they are sometimes opposed to liberti (Cic. Brut. 22), where the true reading is "liberti." (Cic. ad Fam. i. 3.)

The word familia is also applied (improperly) to sects of philosophers, and to a body of gladiators: in the latter sense with less impropriety. In a sense still less exact, it is sometimes applied to siguify a living, a man's means of subsistence. (Ter. Heauton. v. 1. 36.)

A paterfamilias and a materfamilias were respectively a Roman citizen who was sui juris, and his wife in manu. (Cic. Top. 3 ; comp. Ulp. Frug. iv. 1, and Böcking, Instizt. i. pp. 217, 229.) A filiusfamilias and a filiafamilias were a son and daughter in the power of a paterfamilias. The familia of a paterfamilias, in its widest sense, comprehended all his agnati ; the extent of which term, and its legal import, are explained under Cognati. The relation of familia and gens is explained under Gens.
The notion of Familia as a natural relation consists of Marriage, the Patria Potestas, and Cognatio (kiirship). But Positive Law can fashion other relations after the type of these natural relations. Of these artificial family yelations the Roman law had five, which are as follow:-(1) Manns, or the strict marriage relation between the hushand and wife ; (2) Servitus, or the relation of master and slave; (3) Patronatus, or the relation of former master to former slave ; (4) Mancipii causa, or that intermediate state between servitus and libertas, which characterized a child who was mancipated by his fatber [Emancipatio]; (5) Tutela and Curatio, the origin of which must be
traced to the Patria Potestas. These relations are treated under their appropriate heads.

The doctrine of representation, as applied to the acquisition of property, is connected with the doctrine of the relations of familia; but being limited with reference to potestas, manus, and mancipium, it is not co-extensive nor identical with the relations of familia. Legal capaeity is also connected with the relations of familia, though not identical with, hut rather distinct from them. The notions of liberi and servi, sui juris and alieni, are comprised in the ahove-mentioned relations of familia. The distinctions of Cives, Latini, Peregrini, are entirely unconnected with the relations of familia. Some of the relations of familia have no effect on legal capacity, for instance, marriage as such. That family relationship which has an influence on legal capacity, is the Patria Potestas, in connection with which the legal incapacities of filiusfamilias, filiafamilias, and a wife in manu, may be most appropriately considered. (Savigny, System des heutigen Röm. Rechts, vol. i. pp. 345, \&c., 356, \&c. vol. ii. Berlin, 1840 ; Böcking, Instutionen, vol. i. p. 213, \&c.)
[G. L.]
FAMI'HAE ERCISCUNDAE ACTIO. Every heres, who had full power of disposition over his property, was entitled to a division of the hereditas, unless the testator had declared, or the co-heredes had agreed, that it should remain in common for a fixed time. The division could be made by agreement among the co-heredes ; but in case they could not agree, the division was made hy a judex. For this purpose every heres had against each of his co-heredes an actio familiae erciscundae, which, like the actiones communi dividundo, and finium regundorum, was of the class of Mixtae Actiones, or, as they were sometimes called, Duplicia Judicia, hecause, ss in the familiae erciscundac judicium, each heres was both plaintiff and defendant (actor and reus); though he who brought the actio and claimed a judicium (ad judicium provocavit) was properly the actor. A heres, either ex testamento or ab intestato, might hring this action. All the heredes were liable to the bonorum collatio [Bonorum Collatio], that is, bound to allow, in taking the account of the property, what they had received from the testator in his lifetime, as part of their share of the hereditas, at least so far as they had been enriched hy such donations.

This action was given by the Twelve Tables. The word Familia here signifies the "property," as explained in the previous article, and is equivalent to hereditas.

The meaning and origin of the verb ere, iscere, or herc, iscere, have heen a subject of some disputc. It is, however, certain that the word means "division." (Dig. 10. tit. 2; Cic. De Orat. i. 56, Pro Cuecina, c. 7 ; Apul. Met. ix. p. 210, Bipont.)
[G.L.]
FAMO'SI LIBELLI. [Libellus.]

## FANUM. [Templem.]

## FA'RREUM. [Matrimonium.]

FARTOR ( $\sigma \iota \tau \in u \tau \eta$ ' $s$ ), was a slave who fattened poultry. (Colum. viii. 7 ; Hor. Sat. ii. 3. 228 ; Plaut. Truc. i. 2. 11.) Donatus ( $\alpha$ d Terent. Eun. ii. 2. 26) says that the name was given to a maker of sausages; but compare Becker, Gallus, vol. ii. p. 190.

The name of fartores or crammers was also given to the nomenclatores, who accompanied the candidates for the public sfices at Rome, and gave

## FASCES.

them the names of such persons as they might meet. (Festus, s. v. Fartores.)

FAS. [FASTI; Jus.]
FASCES, were rods bound in the form of a bundle, and containing an axe (securis) in the middle, the iron of which projected from them. These rods were carried by lictors before the superior magistrates at Rome, and are often represented on the reverse of consular coins. (Spanh. De Praest. et Usu Numism. vol. ii. pp. 88, 91.) The following woodcuts give the reverses of four consular coins ; in the first of which we see the lictors carrying the fasces on their shoulders; in the second, two fasces, and between them a sella curulis ; in the third, two fasces crowned, with the consul standing hetween them; and in the fourth, the same, only with no crowns around the fasces.

The next two woodcuts, which are taken from the consular coins of C. Norbanus, contain in addition to the fasces- the one a spica and caduceus, and the other a spica, caduceus, and prora.

The fasces appear to have heen usually made of hirch (betulla, Plin. H.N. xvi. 30), hut sometimes also of the twigs of the elm. (Plaut. Asin. iii. 2. 29, ii. 3. 74.) They are said to have been derived from Vetulonia, a city of Etruria. (Sil. Ital. viii. 485 ; compare Liv. i. 8.) Twelve were carried before each of the kings hy twelve lictors; and on the expulsion of the Tarquins, one of the consuls was preceded by twelve lictors with the fasces and secures, and the other by the same number of lictors with the fasces only, or, according to some accounts, with crowns round them. (Dionys. v. 2.) But P. Valerius Publicola, who gave to the people the right of provocatio, ordained that
the secures should be removed front the fasces, and allowed only one of the consuls to be preceded by the lictors while they were at Rome. (Cic. de Rep. ii. 31 ; Valer. Max. iv. 1.81.$)$ The other consul was attended only by a single accensus [Accensus]. When they were out of Rome, and at the head of the army, each of the consuls retained the axe in the fasces, and was preceded by his own lictors. (Dionys. v. 19 ; Liv. xxiv. 9, xxviii. 27.)

When the decemviri were first appointed, the fasces were only carried before the one who presided for the day (Liv. iii. 33 ) ; and it was not till the second decernvirate, when they began to act in a tyrannical manner, that the fasces with the axe were carried before each of the ten. (Liv. iii. 36.) The fasces and secures were, however, carried before the dictator even in the city (Liv. ii. 18) : be was preceded by 24 lictors, and the magister equitum by six.

The praetors were preceded in the city hy two lictors with the fasces (Censorin. De Die Natal. 24 ; Cic. Agrar. ii. 34) ; but out of Rome and at the head of an army by six, with the fasces and secures, whence they are called by the Greek writers $\sigma \tau \rho \alpha \tau \eta \gamma$ oi $\epsilon \xi \alpha \pi \in \lambda \epsilon$ є́кє1s. (Appian, Syr. 15 ; Polyb. ii. 24. § 6 , iii. 40. §9, 106. §6.) The proconsuls also were allowed, in the time of Ulpian, six fasces. (Dig. l. tit.16.s. 14.) The tribumes of the plebs, the aediles and quaestars, had no lictors in the city (Plut. Quaest. Rom. 81 ; Gell. xiii. 12); but in the provinces the quaestors were permitted to have the fasces. (Cic. Pro Planc. 41.)

The lictors carried the fasces on their shoulders, as is seen in the coin of Brutu given above ; and when an inferior magistrate met one who was higher in rank, the lictors lowered their fasces to him. This was done by Valerius Publicola, when he addressed the people (Cic. de Rep. ii. 31 ; Liv. ii. 7 ; Valer. Max. iv. l. §1); and hence came the expression submittere fasces in the sense of to yield, to confess one's self inferior to another. (Cic. Brut. 6.)

When a general had gained a victory, and had been saluted as Imperator by his soldiers, his fasces were always crowned with laurel. (Cic. ad Att. viii. 3. § 5, de Div. i. 28 ; Caes. Bell. Civ. iii. 71.)

FASCIA ( $\tau \alpha \ldots l a$ ), dim. FASCIOLA, a band or fillet of cloth, worn, l. round the head as an ensign of royalty (Sueton. Jul. 79) [Diadema; woodcut to FALX]: 2. by women over the breast (Ovid, De Art. Amat. iii. 622 ; Propert. iv. 10. 49 ; Fascia Pectoralis, Mart. xiv. 134) [Strophium]: 3. round the legs and feet, especially by women (see the woodcut under the article Libra). Cicero reproached Clodius for wearing fasciae upon his feet, and the Calantica, a female ornament, upon his head (ap. Non. Marc. xiv. 2). Afterwards, when the toga had fallen into disuse, and the shorter pallium was worn in its stcad, so that the legs were naked and exposed, fasciae crurales became common even with the male sex. (Hor. Sat. ii. 3. 255 ; Val. Max. vi. 2. § 7 ; Grat. Cyneg. 338.) The emperor Alexander Severus (Lamprid. Alex. Sev. 40) always used them, even although, when in town, he wore the toga. Quintilian, nevertheless, asserts that the adoption of them could only be excused on the plea of infirm health. (Inst. Or. xi. 3.) White fasciae, worn
by men (Vail Max. l. c. ; Phaed. v. 7. 37), were a sign of extraordinary refinement in dress: the mode of cleaning them was by rubbing them with a white tenacious earth, resembling our pipe-clay (fasciae cretatae, Cic. ad Att. ii. 3). The finer fasciae, worn by ladies, were purple. (Cic. de Harusp. Resp. 21.) The bandages wound about the legs, as shown in the illuminations of ancient MSS., prove that the Roman usage was generally adopted in Europe during the middle ages.

On the use of fasciae in the nursing of childrent (Plaut. Truc. v. 13) see Incunabula. [J. Y.]
FA'SCIA ( $\tau \alpha / \nu i \alpha$ ), in architecture, signifies (by an obvious analogy with the ordinary meaning of the word) any long flat surface of wond, stone, or marble, such as the band which divides the architrave from the frieze in the Doric order, and the surfaces into which the architrave itself is divided in the Ionic and Corinthian orders. (See Epistylium, and the cuts under Columna.) [P. S.]

FA'SCINUM ( $\beta \alpha \sigma \kappa \alpha \nu i \alpha)$, fascination, enchantment. The belief that some persons had the power of injuring others by their looks, was as prevalent among the Greeks and Romans as it is among the superstitious in modern times. The $\dot{\partial} \phi \theta a \lambda \mu \dot{s} \beta$ á $\sigma \kappa \alpha \mu o s$, or evil eye, is frequently mentioned by ancient writers. (Alciphr. Ep. i. 15 ; Heliod. Aethiop. iii. 7 ; compare Plin. H. N. vii. 2.) Plutarch, in his Symposium (v. 7), has a separate

 posed to injure children particularly, but sometimes cattle also ; whence Virgil (Ecl. iii. 103) says,

## "Nescio quis teneros aculos mihi fascinat agnum."

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the phallus, called by the Romans fascinum, which was hung round the necks of children (turpicula res, Varr. De Ling. Lat. vii. 97, ed. Müller). Pliny (H. N. xix. 19. § 1) also says that Satyrica signa, by whicb he means the phallus, were placed in gardens and on heartlis as a protection against the fascinations of the envious; and we learn from Pollux (viii. 118) that smitbs were accustomed to place the same figures before their forges with the same design. Sometimes other objects were employed for this purpose. Peisistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination. (Hesych. s. v. $\mathrm{K} \alpha \pi \alpha \chi \eta \nu \eta$.)

Another common mode of averting fascination was by spitting into the folds of one's own dress. (Theocr. vi. 39 ; Plin. H. N. xxviii. 7; Lucian, Navig. 15. vol. iii. p. 259, ed. Reitz.)

According to Pliny (H. N. xxviii. 7), Fascinus was the name of a god, who was worshipped among the Roman sacra by the Vestal virgins, and was placed under the cbariot of those who triumphed as a protection against fascination ; by which be means in all probability that the phallus was placed under the chariot. (Miiller, Archöol. der Kunst, § 436. 1, 2; Böttiger, Flein. Schr. iii. p. 111 ; Becker, Charikles, vol. ii. pp. 109, 291.)

FASTI. Fas signifies divine law: the epithet fastus is properly applied to anything in accordance with divine law, and hence those days upon which legal business might, without impiety (sine piaculo). he transacted before the praetor, were technically
denominated fusti dies, i. e. lawfid days. Varro and Festus derive fastus directly from fari (Varr. de Ling. Lat. vi. 2 ; Festus, s. v. Fasti), while Ovid (Fust. i 47) may he quoted in support of either etymology.

The sacred books in which the fusti dies of the year were marked, were themselves denominated fasti; the term, however, was employed in an extended sense to denote registers of various descriptions, and many mistakes have arisen among commentators from confounding fasti of different kinds. It will be useful, therefore, to cousider separately the two great divisions, which have heen distinguished as Fasti Sacri or Fasti Kalendares, and Fasti Annales or Fasti Historici.
I. Fasti Sacri or Kalendares. For nearly four centuries and a half after the foundation of the city a knowledge of the calendar was possessed exclusively by the priests. One of the pontifices regularly proclaimed the appearance of the new moon, and at the same time announced the period which would intervene between the Kalends and the Nones. On the Nones the country people assembled for the purpose of learning from the Rex Sacrorum the various festivals to be celehrated during the month, and the days on which they would fall. (Macroh. i. 15.) In like manner all who wished to go to law were obliged to inquire of the privileged few on what day they might bring their suit, and received the reply as if from the lips of an astrologer. (Cic. Pro Muren. 11.) The whole of this lore, so long a source of power and profit, and therefore jealously enveloped in mystery, was at length made public by a certain Cn. Flavius, scribe to App. Claudius Caecns (Liv. ix. 46 ; Plin. H. N. xxxiii. 1 ; Gell. vi. 9 ; Val. Max. ij. 5), who, having gained access to the pontifical books, copied out all the requisite information, and exhibited it in the forum for the use of the people at large. From this time forward such tahles became common, and were known by the name of Fasti. They usnally contained an emmeration of the months and duys of the year ; the Nones, Ides, Nundinae, Dies Fasti, Nefasti, Comitiales, Atri, \&c. [Calendarium], together with the different festivals, were marked in their proper places: astronomical ohservations on the risings and settings of the fixed stars, and the commencement of the seasons were frequently inserted, and sometimes brief notices annexed regarding the introduction and signification of certain rites, the dedication of temples, glorious victories, and terrible disasters. In later times it became common to pay homage to the members of the imperial family by noting down their exploits and honours in the calendar, a species of flattery with which Antonins is charged by Cicero (Philipp. ii. 34. See also Tacit. Ann. i. 15).

It will be seen from the ahove description that these fasti closely resembled a modern almanac (Fastorum libri appellantur totius anni descriptio. Festus) ; and the celebrated work of Ovid may be considered as a poetical Ycar-book or Companion to the Almanac, having been composed to illustrate the Fasti puhlished by Julins Caesar, who remodelled the Roman year. All the more remarkable epochs are examined in succession, the origin of the different festivals explained, the various ceremonies described, the legends comnected with the principal constellations narrated, and many curious discussions interwoven upon subjects likely

FASTI.
to prove interesting to his countrymen ; the whole being seasoned with frequent allusions to the glories of the Julian line.

Several specimens of fasti, more or less perfect, on stone and marble, have been discovered at different times in different places, none of them, however, older than the age of Augustus. The most remarkable, though one of the least entire, is that known as the Kalendarium Praenestinum or Fasti Verriani. Suetonius, in his short treatise on distinguished grammarians, tells us that a statue of Verrins Flaccus, preceptor to the grandsons of Augustus, stood in the lower part of the forim of his native town, Praeneste, opposite to the Hemicyclium, on which he had exhibited to public view the fasti, arranged by himself, and engraved on marble slabs. In the year 1770 the remains of a circular building were discovered in the inmediate vicinity of the modern Palestrina, together with several fragments of marble tablets, which were soon recognised as forming part of an ancient calendar; and upon further examination no doubt was entertained by the learned that these were the very fasti of Verrius described by Suetonius. An Italian antiquary, named Foggini, continned the excavatiuns, collected and arranged the scattered morsels with great patience and skill; and in this manner the months of January, March, April, and December, to which a very small portion of Fehruary was aftervards added, were recovered; and, although much defaced and mutilated, form a very curious and useful monument. They appear to have embraced much information concerning the festivals, and a careful detail of the honours bestowed upon, and the triumphs achieved by, Julius, Augustus, and Tiberius. The publication of Foggini contains not only an account of this particular discovery, but also the complete fasti of the Roman year, so far as such a compilation can be extracted from the ancient calendars now extant. Of these he enumerates eleven, the names being derived either from the places where they were found, or from the family who porsessed them when they first became known to the literary world :-
I. Calendarium Maffeiorum, which contains the twelve months complete.
2. Cal. Pracnestinum, deacribed above.
3. Cal. Capranicorum, August and September complete.
4. Cal. Amiterninum, fragments of the month from May to December.
5. Cal. Antiatinum, fragments of the slx last months.
6. Cal. Esquilinum, fragments of May and June.
7. Cal. Farnesianum, a few days of February and March.
8. Cal. Pincianum, fragments of Jtuly, August, and September.
9. Cal. Venusinum, May and Jnnc complete.
10. Cal. Vaticanum, a few days of March and April.
11. Cal. Allifanum, a few days of July and August.

Some of the above, with others of more recent date, are given in the Corpus Inscriptionum of Gruter, in the 11th vol. of the Thescurus Rom. Antigq. of Oraevius, and in other works of a similar description; but the fullest information upon all matters connected with the Fasti Sacri is emhodied in the work of Foggini, entitled Fastorum

FASTI.
FASTIGIUM.
anni Romani a Verrio Flacco ordinatorum Reliquiae, \&c. Romae, 1779 ; and in Juc. Van Vaassen Animadverss. ad Fastos Rom. Sacros fragmenta, Traj. ad Rhen. 1795: to which add Ideler's Handbuch der Mathematischen und Technischen Chronologie. Berlin, 1826.
Before quitting this part of our subject, we may make mention of a curious relic, the antiquity of which has been called in question without good cause, the Calendarium Rusticum Farnesianum. This Rural Almanac is cut upon four sides of a cube, each face being divided into three columns, and each column including a month. At the top of the column is carved the appropriate sign of the zodiac; then follows the name of the month, the oumber of the days, the position of the nones, the length of the day and night, the name of the sign through which the sun passes, the god under whose protection the month was placed, the various agricultural operations to be performed, and a list of the principal festivals. Take May as an ex-ample:-

11. Fasti Annales or Historici. Chronicles such as the Annales Maximi, containing the names of the chief magistrates for each year, and a short account of the most remarkable events noted down opposite to the days on which they occurred, were, from the resemblance which they bore in arrangement to the sacred calendars, denominated fasti; and hence this word is used, especially by the poets, in the general sense of historical records. (Horat. Sat. i. 3. 112, Carm. iv. 13. 13, iii. 17. 7.)
In prose writers fasti is commonly employed as the technical term for the registers of consuls, dictators, censors, and other magistrates, which formed part of the public archives. (Liv. ix. 18 ; Cic. Pro Sext. 14; compare Cic. Philipp. xiii. 12; Tacit. Am. iii. 17, 18.) Again, when Cicero remarks in the famous epistle to Lucceius ( $A d$ Fam. v. 12), "Etenim ordo ille annalium mediocriter nos retinet quasi enumeratione fastorum," he means that the regular succession of events meagrely detailed in chronicles fixed the attention but feehly, and was little more interesting than a mere catalogue of names. (Compare Ad Att. iv. 8.)

A most important specimen of fasit belonging to this class, executed probably at the beginning of the reign of Tiberins, has been partially preserved. In the year 1547, several fragments of marble tablets were discovered in excavating the Roman
forum, and were found to contain a list of consuls dictators with their masters of horse, censors with the lustra which they closed, triumphs and ovations, all arranged in regular succession according to the years of the Catonian era. These had evidently extended from the cxpulsion of the kings to the death of Augustus, and although defective in many places, have proved of the greatest value in chronology. The different pieces were collected and arranged under the inspection of Cardinal Alexander Farnese, and deposited in the Capitol, where they still remain. From this circumstance they are generally distinguished as the Fasti Cupitolini. In the years 1817 and 1818, two other fragments of the same marble tablets were discovered in the course of a new excavation in the Forum. A fac-simile of them was published at Milan, by Borghesi, in 1818 . [W.R.]

FASTI'GIUM ( $\mathfrak{a} \in \tau \delta s, ~ \stackrel{a}{c} \in ́ \tau \omega \mu \alpha$ ), literally, $a$ slope, in architecture a pediment, is the triangle which surmounts each end of a rectangular building, and which, in fact, represents the gahle end of the roof. (See woodcut, p. 97.) It is composed of three sets of mouldings (forming respectively the horizontal base and the sloping sides of the triangle, and representing the timber framing of the roof), and of a flat surface enclosed hy them, which covers the vacant space of the roof, and which, from its resemblance to a membrane stretched upon the triangular frame, is called tympanum. (Vitruv. iii. 3.) This flat surface was generally ornamented with sculpture ; originally, in the early temples of Zeus, with a simple eagle as a symbol of the god (Pind. Olymp. xiii. 29, and Schol. ad loc.), an instance of which is afforded by the coin represented in the following woodcut (Beger. Spicil. Autio

p. 6), whence the Greek name $\dot{\alpha} \epsilon \tau \delta$ shich was at first applied to the tympanum and afterwards to the whole pediment; and in after times with elaborate sculptures in high relief, such as those in the pediments of the Parthenon, the fragments of which are among the Elgin marbles in the British Museum; where also may be seen a full-sized model of the pediments of the temple of Zens Panhellenius, at Aegina, with casts of the staties in them, restored. Most of the celebrated Greek temples were similarly adorned. (See Paus. i. 24. § 5 , ii. 7. § 3, v. 10. § 2 , ix. $11 . \$ 4$; Aristoph. Aves, 1110.) Terra-cotta figures were applied in a similar manner by the Romans in the early ages. (Cic. Divin. i. 10 ; Vitruv. iii. 2 ; Plin. H. N. xxxv. I2. s. 43 , 46, xxxvi. 2.)

The dwelling-houses of the Romana had no gable ends ; consequently, when the word is applied to them (Cic. Epist. ud Q. Fr. iii. 1. 4 ; Virg. Aen. viii. 491), it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to an apex as distinguished
from a flat one, or sometimes it niay refer to the pediment of a portico attached to the front of a mansion, as when the Romans decreed to Caesar the liberty of erecting a fastigium to his house (Cic. Phil. ii. 43 ; Florus, iv. 2 ; Plut. Caes. 81 ; comp. Acroterium), that is, a portico and pediment towards the street like that of a temple. [A. R.]
FAUCES. [Dомus, p. 428, a.]
FAX ( $\phi a \nu b s$ ), a torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Bellona, Hymen (woodcut, p. 238), Phosphorus, by females in Bacchanalian processions (p. 288), and, in an inverted position, by Sleep and Death. In the annexed woodcut, the female figure in the middle is copied from a fictile vase. The winged figure on the left hand, asleep and leaning on a torch, is from a funeral monument at Rome: the word "Somnus" is inscribed beside it. The other winged figure, also with the torch inverted, is taken from an antique gem, and represents Cupid under the character of Avátpos (Serv. in Virg. Aen. iv. 520) or "Lethacus Amor" (Ovid, Rem. Amor. 555). In ancient marbles the torch is sometimes more ornamented than in the examples now pro-

duced; but it appears to be formed of wooden staves or twigs, either bound by a rope drawn round them in a spiral form, as in the above middle figure, or surrounded by circular bands at equal distances, as in the two exterior figures. The inside of the torch may be supposed to have been filled with flax, tow, or other vegetable fibres, the whole being abundantly impregnated with pitch, rosin, wax, oil, and other inflammable substances. As the principal use of torches was to give light to those who went abroad after sunset, the portion of the Roman day immediately succeeding sun-set was called fax or prima fax. (Gell. iii. 2 ; Macrob. Sat. i. 2.) Torches, as now described, appear to have been more cominon among the Romans than the Greeks. The use of torches after sun-sct, and the practice of celebrating marriages at that time, probably led to the consideration of the torch as one of the necessary accompaniments and symbols of marriage. Among the Romans the fax nuptialis (Cic. pro Clucnt. 6), having been lighted at the parental hearth, was carried before the bride by a boy whose parents were alive. (Plaut. Cas. i. 30 ; Ovid, Epist. xi. 101 ; Scrvius, in Virg. Ecl. viii. 29 ; Plin. H. N. xvi. 13 ; Festus, s. v. Patrimi.) The torch was also carried at funerals (fax sequulhralis, Ovid, Epist. ii. 120), both because
these were often nocturnal ceremonies, and betause it was nsed to set fire to the pile. Hence the expression of Propertius (iv. 12. 46), "Vivimus insignes inter utramque facem." The torch-hearer turned away his face from the pile in setting it on fire. (Virg. Aen. vi. 224.)
[J. Y.]

## FEBRUUM. [Lupercalia.] <br> FECTA'LES. [Fetiales.]

FEMINA'LIA, were worn in winter by Angustus Caesar, who was very susceptible of cold. (Sueton. Aug. 82.) Casaubon supposes them to have been bandages or fillets [ FASCla ] wound about the thighs; it seems more probable that they were breeches resembling ours, since garments for the thighs ( $\pi \epsilon \rho!\mu \eta \rho 1 a)$ were worm by the Roman horsemen (Arrian, Tact. p. 14, ed. Blanc.); and the column of Trajan, the arch of Constantinc, and other monuments of the same period, present m. merous examples of both horse and foot soldiers who wear breeches, closely fitted to the body, and never reaching much below the knees. (See woodcuts, pp. 2, 117, 136.)
[J. Y.]
FENESTRA. [Domus, p. 432.]
FENUS (tókos), interest of money. 1. Greer. At Athens, Solon, among other reforms, abolished the law by which a creditor was empowered to sell or enslave a debtor, and prohibited the lending of money upon a person's own body (ėml toîs
 other restriction, we are told, was introduced by him, and the rate of interest was left to the dis-

 p. 117). The only case in which the rate was prescribed by law, was in the event of a man separating from his lawful wife, and not refunding the dowry he had received with her. Her trustees or guardians (oi kípiot) could in that case proceed against him for the principal, with lawful interest at the rate of 18 per cent. [Dos (Greeri).]

Any rate might be expressed or represented in two different ways: (1.) by the number of oboli or drachmae paid by the month for every mina; (2) by the part of the principal (rod appxaĩo or $\kappa \in \phi$ da $\lambda a \iota \nu$ ) paid as interest either annually or for the whole period of the loan. According to tho former method, which was generally used when money was lent upon real security ( $\tau 6$ кot è $\gamma \gamma$ vou or ${ }^{\prime} \gamma \gamma \epsilon(a t)$, different rates were expressed as fol-
 5 oboli per month for every mina, or 60 obli a year $=10$ drachmae $=\frac{1}{10}$ of a mina. Sinilarly,

Another method was generally adopted in cases of hottomry, where money was lent upon ths ship's cargo or freightage ( $\bar{\epsilon} \pi \boldsymbol{I} \tau \hat{\varphi} \nu \alpha \dot{v} \lambda \mu$ ) or the ship itself, for a specified time, commonly that of the voyage. By this method the following rates were thus represented.

10 per cent. by тóroı è $\boldsymbol{\pi}$ ঠ̀́ércatot, i. e. interest at the rate of a tenth; $12 \frac{1}{2}, 16 \frac{2}{3}, 20,33 \frac{1}{3}$, by токо
 spectively. So that, as Böckh (Publ. Economy of A thens, pp. 123, 124, 2nd ed.) remarks, the tókos

FENUS.
FENUS.

"These nearly corresponding expressions are not to be considered as identical, however closely the rates indicated by them may approach each other in value; although in the age of Justinian, as Salmasius (de M.U.) observes, the тóros é $\pi \dot{\sigma} \boldsymbol{\gamma} \boldsymbol{\gamma} \delta \mathrm{oos}$ or $12 \frac{1}{2}$ per cent. was confounded with the centesimae, which is exactly equal to the interest at a drachmas or 12 per cent.
The rates, above explained, frequently occur in the orators; the lowest in ordinary use at Athens being the tónos énıó́catos or 10 per cent., the
 latter, however, was chiefly confined to cases of bottomry, and denotes more than it appears to do, ss the time of a ship's voyage was generally less than a yesr. Its near equivalent, the $\langle\pi i \quad \tau \rho / \sigma l$ $\delta \rho a \chi \mu a i s$ or 36 per cent., was sometimes exacted of bankers at Athens. (Lys. Frag. B.) The en $\delta \rho a \chi \mu \hat{\eta}$, or rate of 12 per cent., was common in the time of Demosthenes (c. Aph. p. 820. 16), but appears to have been thought low. The interest nf eight oboli or 16 per cent. occurs in that orator (c. Nicos. p. 1250.18) ; and even in the age of Lysias (в. c. 440) and Isaens (в. c. 400), nine oboli for the mina, or 18 per cent., appears to have been a common rate. (Isaeus, de Hagn. Hered. p. 293.) Aeschines also (c. Timarch. p. 15) speaks of money being borrowed on the same terms; so that on the whole we may conclude, that the usual rates of interest at Athens about the time of Demosthenes varied from 12 to 18 per cent. That they were nearly the same in range, and similarly expressed, throughont the rest of Greece, appears from the authorities quoted by Böckh. No conclusions on the subject of the general rate of interest can be drawn from what we are told of the exorbitant rates exaeted by conimon usurers (токоү入и́фо!, toculliones, $\mathfrak{\eta} \mu \in \rho о \delta \alpha \nu \in \iota \sigma \tau a i ́)$. Some of these (Theophr. Charact. 6) exacted as much as an obolus and a half per day for each drachma; and money-lenders and bankers in general, from the high profits which they realised, and the severity with which they exacted their dues, seem to have been as unpopular amongst their fellowcitizens as Jews and usurers in more modern times. Demosthenes (c. Pant. p. 981), indeed, intimates that the fact of a man being a moneylender was enough to prejudice him, even in a court of law, amongst the Athenians. (Mı 0 ou-
 also to observe that Aristotle (Pol. i. 3. § 23) objects, on principle, to putting money out at
 as being a perversion of it from its proper use, as a medinm of exchange, to an unnatural purpose, viz. the reproduction or inerease of itself; whence, he adds, comes the name of interest or tóкоs, as being the offspring ( $\tau \delta \gamma \gamma \gamma \delta \mathcal{\sigma}_{\mu} \nu_{0} \nu$ ) of a parent like itself.

The arrangement of a loan would of course depend upon the relation between the borrower and the lender, and the confidence placed by one in the other. Sometimes money was lent, e.g. hy the banker Pasion at Athens, without a security, or written bond, or witnesses. (Dem. c. Timoth. p. 1185.) But generally either a simple acknowledgment ( $\chi$ eipor $\rho \alpha \phi o v$ ) was given by the bor-
rower to the lender [Chirographum] ; or a regular instrument ( $\sigma \nu \gamma \gamma \rho a \phi \eta$ ), executed by both parties and attested by witnesses, was deposited wih a third party, usually a banker. (Dem. c. Lacr. p. 927, c. Phorm. p. 908. 22.) Witnesses, as we might expect, were also present at the payment of the money borrowed. (Id. c. Phorm. p. 915. 27.) The security for a loan was either a $\dot{\varepsilon} \pi \alpha \theta \hat{\eta} \kappa \eta$ or an évé $\chi$ upov: the latter was put into the posgession of the lender, the former was merely assured to him, and generally, though not always, consisted of real or immovable property. The ėvé$\chi u \rho a$, on the contrary, generally consisted of movable property, such as goods or slaves. (Böckh, lbid. p. 128.) At Athens, when land was given as security, or mortgaged (ov̀бia únó$\chi \rho \epsilon \omega S$ ), pillars ( $8 \rho 0 t$ or $\sigma \tau \hat{\eta} \lambda a i)$ were set upon it, with the deht and the mortgagee's name inscribed. Hence an unincumbered estate was called an そ̌ $\sigma \tau \iota \kappa \tau 0 \nu$ रwpiov. (Harpocrat. s. v.) In the rest of Greece there were public books of debt, like the German and Scotch registers of mortgages ; but they are not mentioned as having existed at Athens.
 Érסoбts) was considered a matter of so much importance at Athens, that fraud or breach of contract in transactions connected with it was sometimes punished with death. (Dem. c. Phorm. p. 922. 3.) In these cases the loans were generally made upon the cargo shipped, sometimes on the vessel itself, and sometimes on the money received or due for passengers and freightage ( $\left.\dot{\epsilon}^{\pi} \boldsymbol{l} \tau \hat{\varphi} \nu \alpha \dot{i} \lambda \psi\right)$. The principal ( $\epsilon \kappa \delta 0 \sigma t s$, oiovel ${ }_{\xi} \xi \omega \delta \delta \sigma \tau t s$, Harpocrat.) as well as the interest, could only be recovered in case the ship met with no disaster in her voyage ( $\sigma \omega$ $\theta \epsilon l \sigma \eta s \tau \hat{s} \nu \nu \epsilon \omega s$, Dem. c. Zenoth. p.883.16); a clanse to this effect being generally inserted in all agreements of bottomry or vavтıкаl $\sigma v \gamma \gamma \rho a \phi a$. The additional risk incurred in loans of this description was compensated for by a high rate of interest, and the lenders took every precaution against negligence or deception on the part of the borrowers; the latter also were careful to have witnesses present when the cargo was put on hoard, for the purpose of deposing, if necessary, to a bona fide shipping of the required amount of goods. (Dem. c. Phorm. p. 915. 13). The loan itself

 a voyage out and home. In the former case the principal and interest were paid at the place of destination, either to the creditor himself, if he sailed in the ship, or to an authorised agent. (Dem. c. Phorm. p. 909.24 , and p. 914.28 .) In the latter case the payment was made on the return of the ship, and it was specially provided in the agreement between the contracting parties, that she should sail to some specificd places ouly. A deviation from the terms of the agreement, in this or other respects, was, according to a clause nsually inserted in the agreement, punishable by a fine of twice the amount of the money lent. (Dem. c. Dionys. p. 1294.) Moreover, if the goods which formed the original security were sold, fresh articles of the same value were to be shipped in their place. (Dem. c. Phorm. p. 909. 26.) Some-
 owner of the vessel ( $\delta$ vaúr $\lambda$ npos), which in that case might gerve as a security for the money borrowed. (Id. c. Dionys. p. 1284. 11.)

The rate of interest would of course vary with the risks and duration of the voyage, and therefore we cannot expect to find that it was at all fixed. Xenophon (de Vectig. iii. 7-14) speaks of the fifth and third parts of the capital lent as heing commonly given in bottomry, referring of course to voyages ont and home. The interest of an eighth or $12 \frac{2}{3}$ per cent., mentioned by Demosthenes (c. Polycl. p. 1212), was for money lent on a trireme, during a passage from Sestos to Athens, but upon condition that she should first go to Hierum to convoy vessels laden with corn ; the principal and interest were to be paid at Athens on her arrival there.

The best illustration of the facts mentioned above, is found in a $\nu a u \tau \kappa \kappa \grave{\eta} \sigma u \gamma \gamma \rho a \phi \bar{n}$, given in the speech of Demosthenes against Lacritus. It contains the following statement and conditions.

Two Athenians lent two Phaselitans 3000 drachmae upon a cargo of 3000 casks of Mendean wine, on which the latter were not to owe anything
 $\tau a c$ ). They were to sail from Athens to Mende or Scione, where the wine was to be shipped, and thence to the Bosporus, with liberty, if they preferred it, to continue their voyage on the left side of the Black Sea as far as the Borysthenes, and then to return to Athens; the rate of interest being fixed at 225 drachmae in 1000 , or 25 per cent. for the whole time of absence. If, however, they did not return to Hierum, a port in Bithynia close to the Thracian Bosporus (Wolf, ad Lept. p. 259), before the early rising of Arcturus, i.e. before the 20th of September or thereabouts, when navigation began to be dangerous, they had to pay a higher rate of 30 per cent. on account of the additional risk. The agreement further specified that there should be no change of vessel for the return cargo, and that if it arrived safe at Athens, the loan was to be repaid within twenty days afterwards, without any deductions except for loss by payments made to enemies, and for jettisons
 consent of all on bnawd (oi $\sigma \dot{\psi} \mu \pi \lambda 01$ ) ; that till the money was repaid, the goods pledged ( $\tau$ à $\dot{v} \pi 0-$ $\kappa \in\{\mu \in \nu a)$ should be under the control of the lenders, and be sold by them, if payment was not made within the appointed time; that if the sale of the goods did not realise the required amount, the lender might raise the remainder by making a levy ( $\pi \rho \bar{a} \xi \stackrel{\xi}{s}$ ) upon the property of both or either of the traders, just as if they had been cast in a suit, and became $\dot{v} \pi \epsilon \rho \upharpoonleft \mu \epsilon \rho a$, , i.e. had not complied with a judgment given against then within the time appointed. Another clause in the agreement provides for the contingency of their not entering the Pontus; in that case they were to remain in the Hellespont, at the end of Jnly, for ten days after the early rising of the dog-star ( $\left(\mathbf{e} \pi \mathrm{k} \mathrm{kvv} \mathrm{v}^{\prime}\right.$, discharge their cargo ( $\bar{\xi} \xi \dot{\epsilon} \hat{\lambda} \epsilon \sigma \theta a i$ ) in some place where the Athenians had no right of reprisals
 might be executed unfairly, and would lead to retaliations,) and then, on their return to Athens, they were to pay the lower rate of interest, or 25 per cent. Lastly, if the vessel were to be wrecked, the cargo was, if possible, to be saved; and the agreement was to be conclusive on all points.

From the preceding investigation, it appears that the rate of interest emongst the ancient Greeks was higher than in modern Europe, and at Rome in the
age of Cicero. This high rate does not appear w have been caused by any scarcity of money, for the rent of land and houses in Athens and its neigh. bourhood was not at all proportional to it. Thus Isaeus (de Hagn. Hered. p. 88) says that a house at Thriae was let for only 8 per cent. of its value, and some houses at Melite and Eleusis for a fraction more. We should therefore rather refer it to a low state of credit, occasioned by a variety of canses, such as the division of Greece into a number of petty states, and the constitution and regulation of the courts of law, which do not seem to have heen at all favourable to money-lenders in enforcing their rights. Böckh assigus as an additional cause "the want of moral principles." (Böckh, Iuid. pp. 123 -139, 2nd ed.)
2. Roman. The Latin word for interest, fenus or foenus, originally meant any increase, and was thence applied, like the Greek $\boldsymbol{\tau} \boldsymbol{\delta} \kappa$ os, to denote ths interest or increase of money. "Fenus," says Varro (apud Gell. xvi. 12), " dictum a fetu et quasi a fetura quadam pecuniae parientis atque increscentis." The same root is found in fecmuldus. Fenus was also used for the principal as well as ths interest. (Tacit. Ann, vi. 17, xiv. 53.) Another term for interest was usurae, generally found in the plural, and also impendium, on which Varro (de Ling. Lat. v. 183, Miiller) remarks, "a quo (pondere) usura quod in sorte accedebat, impendium appellatum."
Towards the close of the republic, the interest of money became due on the first of every mouth: hence the phrases tristes or celeres calendae and calendarium, the latter meaning a debt-book or hook of accounts. The rate of interest was expressed in the time of Cicero, and afterwards by means of the as and its divisions, according to the following table :-

Instead of the phrase asses usurae, a synonyme was used, viz. centesimae usurae, inasmuch as at this rate of interest there was paid in a hundred months a sum equal to the whole principal. Hence binae centesimae $=24$ per cent., and quaternas centesimae $=48$ per cent. So also in the line of Horace (Sat. i. 2. 14), "Quinas hic capiti mercedes exsecat," we must understand quinas centesimas, or 60 per cent., as the sum taken from the capital. Niebuhr (Hist. of Rom. vol. iii. p. 57) is of opinion that the monthly rate of the centesimae was of foreign origin, and first adopted at Rome in the time of Sulla. The old yearly rate established by the Twelve Tables (u. c. 450) was the unciarium fenus. This has been variously interpreted to mean, (1) one-twelfth of the centesima paid monthly, i.e. one per cent. per sunum ; and (2) one-twelfth of the principal paid monthly, or a handred per cent. per amum. Niebuhr (l. c.) re-
futes at length the two opinions; but it may he sufficient to observe that one is inconsistent with common sense, and the other with the early history of the republic. A third and satisfactory opinion is as follows:- The uncia was the twelfth part of the as, and since the full ( 12 oz .) copper coinage was still in use at Rome when the Twelve Tables became law, the phrase unciarium fenus would be a natural expression for intcrest of one ounce in the pound; i.e. a twelfth part of the sum borrowed, or $8 \frac{1}{3}$ per cent., not per month, but per year. This rate, if calculated for the old Roman year of ten months, would give 10 per cent. for the civil year of twelve montbs, which was in common use in the time of the decernvirs. The analogy of the Greek terms то́коs, е̇тiтрıтоs, \&c., confirms this view, which, as Niebuhr observes, is not invalidated by the admission, that it supposes a yearly and not a monthly payment of interest; for though in the later times of the republic interest became due every month, there is no trace of this having been the case formerly. (Rein, Römische Privatrecht, p. 304.) Nor is it difficult to account for the change: it probably was connected with the modifications made from time to time in the Roman law of debtor and creditor (such as the abolition of personal slavery for debt), the natural effect of which would be to make creditors more scrupulous in lending money, and more vigilant in exacting the interest due upon it.

If a debtor could not pay the principal and interest at the end of the year, he used to borrow money from a fresh creditor, to pay off his old debt. This proceeding was very frequent, and called a versura (compare Ter. Phorm. v. 2. 16), a word which Festus (s. v.) thus explains: "Versuram facere, mutuam pecuniam sumere, ex eo dictum est, quod initio qui mutuabantur ab aliis, ut aliis solverent, welnt verterent creditorem." It amounted to little short of paying compound interest, or an Anatocismus anniversarius, another phrase for which was usurae renovatae; e.g. centesimae renovatae is twelve per cent. compound interest, to which Cicero ( $a d$ Att. v. 21) opposes centisimae perpetuo fenore $=12$ per cent. simple interest. The following phrases are of common occurrence in connection with borrowing and lending money at interest :- Pecuniam apud aliquem collocare, to lend money at interest; relegere, to call it in again; cavere, to give security for it; opponere or opponere pignori, to give as a pledge or mortgage: hence the pun in Catullus (Car. 26),
"Furi, villula nostra non ad Austri Flatus opposita est, nec ad Favoni : Verum ad millia quindecim et ducentos. 0 ventum horribilem atque pestilentem."
The word nomen is also of extensive use in money transactions. Properly it denoted the name of a debtor, registered in a banker's or any other ac-count-book; hence it came to signify the articles of an account, a debtor, or a debt itself. Thus we have bonum nomen, a good deht: nomina facere, to lend monies (Cic. ad Fam. vii. 23), and also to horrow money (Id. de Off. iii. 14). Moreover, the Romans generally discharged debts through the agency of a banker (in foro et de mensae seriptura) rather than by a direct personal payment (ex arca domoque) ; and as an order or undertaking for payment was given by writing down the sum to be paid. with the receiver's name undernenth or along-
side it (see Dem. c. Callip. p. 1236), hence came the phrases scribere nummos alicui, to promise to pay (Plaut. Asin. ii. 4. 34) ; rescribere, to pay back, of a debtor (Ter. Phorm. v. 7. 29). So also perseribere, to give a bill or draft (perscriptio) on a banker for payment, in opposition to payment by ready money. (Cic. ad Att. xii. 51, xvi. 2.)

The Roman law of debtor and creditor is given under Nexum. It is sufficient to remark here that the Liciniail laws [Leges Liciniaf], by which the grievances of delotors were to a certain extent redressed, did not lay any restriction on the rate of interest that might be legally demanded; and it is clear from varions circumstances that the searcity of money at Rome after the taking of the city by the Gauls had either led to the actual abolition of the old uncial rate (unciarum fenus) of the Twelve Tables, or caused it to fall into disuse. Nine years, however, after the passing of these laws (Liv. vii. 16) the rate of the Twolve Tables was re-established, and any higher rate prohibited by the bill (rogatio) of the tribunes Duilius and Maenins. Still this limitation of the rate of interest did not enable debtors to pay the principal, and what Tacitus (Ann. vi. 16) calls the fenebre nzalum became at last so serious that the government thought it necessary to interfere, and remedy, if possible, an evil so great and inveterate. Accordingly, fourteen years after the passing of the Licinian laws, five commissioners were appointed for this purpose under the title of mensarii or bankers. These opened their banks in the fornm, and in the name of the treasury offered ready money to any debtor who could give security (cavere) to the state for it: moreover, they ordered that land and cattle should be received in payment of debts at a fair valuation, a regulation which Caesar adopted for a similar purpose. (Suct. Jul. Caes. 42.) By these means Livy (vii. 21) tells us that a great amount of debt was satisfactorily liquidated. Five years afterwards, the legal rate of interest was still further lowered to the semanciarium fenus, or the twenty-fourth part of the whole sum (ad semuncias redacta usura, Tac. Ann. vi. 16) ; and in в.c. 346 we read of several usurers being punished for a violation of the law (Liv. vii. 28), by which they were subjected to a penalty of four times the amount of the loan. (Cato, de Re Rust. init.) But all these enactments were merely palliatives ; the termination and cure of the evil was something more decisive-meither more nor less than a species of national bankruptcy -a general aholition of debts or $\chi р \epsilon \omega \bar{\nu}$ àтокот $\eta$. This happened in B. c. 341, a year remarkable for political changes of great importance, and was followed up by the passing of the Genucian laws, which forbade the taking of usury altogether. (Liv. vii. 42.) A law like this, however, was sure to be evaded, and there was a very simple way of doing so; it only affected Roman citizens, and therefore the usurers granted loans, not in the name of themselves, but of the Latins and allies who were not bound by it. (Liv. xxxy. 7.) To prevent this evasion the Sempronian law was passed (b.c. 194), which placed the Latins and allies on the same footing in respect of lending money as the full Roman citizens. At last, after many futile attempts to prevent the exaction of interest at any rate, and in any shape, the idea was abandoned altogether, and the centesima or 12 per cent. per annum became the legal and recognised rate. Nicbuhr, as we have already observed, is of opi-
nion that it was first adopted at Rome in the time of Sulla; but whether it became the legal rate by any special enactment, or from general consent, does not appear. Some writers have inferred (Heinecc. iii. 15) that it was first legaliaed by the edicts of the city praetors, an inference drawn from the general resemhlance between the praetorian and proconsular edicts, coupled with the fact that some proconsular edicts are extant, by which the centesima is fixed as the legal rate in proconsular provinces. (In edicto tralaticio centesimas me observaturum habui, Cic. ad Att. v. 21.) Whether this supposition is true or not, it is admitted that the centesima or 12 per cent. was the legal rate towards the close of the republic, and also under the emperors. Justinian reduced it to 6 per cent. (Heinec. iii. 16.)

In cases of fenus nauticum, however, or bottomry, as the risk was the money lender's, he might demand any interest he liked while the vessel on which the money was lent was at sea; but after she reached harbour, and while she was there, no more than the usual rate of 12 per cent. on the centesima could be demanded.

Justinian made it the legal rate for fenus nauticum under all circumstances. (Heinec. l.c.) [R.W.]

## FERA'LIA. [Funus.]

FE'RCULUM (from fer-0), is applied to any kind of tray or platform used for carrying any thing. Thus it is used to signify the tray or frame on which several dishes were brought in at once at dinner (Petron. 35 ; Plin. H. N. xxviii. 2) ; and hence fercula came to mean the number of courses at dinner, and even the dishes themselves. (Suet. Aug. 74 ; Serv. ad Virg. Aen. i. 637; Juv. i. 93, xi. 64 ; Hor. Sat. ii. 6. 104 ; Mart. iii. 50, ix. 82, xi. 31.)

The ferculum was also used for carrying the images of the gods in the procession of the circus (Suet. Jul. 76) [Crircus, p. 287, a], the ashes of the dead in a funeral (Suet. Cal. 15), and the spoils in a triumph (Suet. Jul. 37; Liv. i. 10); in all which cases it appears to have been carried on the shoulders or in the hands of men. The most illustrious captives were sometimes placed on a ferculum in a triumph, in order that they might be better seen. (Senec. Herc. Oet. 109.)
FERENTA'RII. [ExERCITUs, p. 502, h.]

## FERETRUM. [Funus.]

FE'RIAE, holidays, were, generally speaking, days, or seasons during which free-born Romans suspended their political transactions and their law-suits, and during which slaves enjoyed a cessation from labour. (Cic. de Leg. ii. 8, 12, de Div. i. 45.) All feriae were thus dies nefasti. The feriae included all days consecrated to any deity; consequently all days on which public festivals were celebrated were feriae or dies feriati. But some of them, such as the feria vindemialis, and the feriae aestivae, seem to have had no direct connection with the worship of the gods. The nundinae, however, during the time of the kings and the early period of the republic, were feriae only for the populus, and days of business for the plebeians, until, by the Hortensian law, they became fasti or days of business for both orders. (Macrob. Sut. i. 16; compare Niebuhr, Hist. of Rome, vol. ii. p. 213, \&c. ; Walter, Geschichte d. Röm. Rechts, p. 190.)

All feriae were dividgd into two classes, feriae pullicae and feriac privatae. The latter were only

FERIAE.
observed by single families or individuals, in commemoration of some particular event which had been of importance to them or their ancestors. As family feriae, are mentioned the feriae Claudiae, Aemiliae, Juliae, Corneliae, \&c., and we must suppose that all the great Roman families had their particular feriae, as they had their private sacra. Among the family-holidays we may also mention the feriae denicales, i.e. the day on which a family, after having lost one of its members by death, underwent a purification. (Fest. s. v.; Cic. de Leg. ii. 22 ; Columell. ii. 22.) Individuals kept feriae on their birthdays, and other occasions which marked any memorable event of their lives. During the time of the empire the birthday of an emperor sometimes assumed the character of a public holiday, and was celebrated by the whole nation with games and sacrifices. Thus the hirthday of Augustus, called Augustalia, was celebrated with great splendour even in the time of Dion Cassius (liv. 34, lvi. 46). The day on which Augustus had returned from his wars was likewise for a long time made a holiday of. (Tacit. Annal. i. 15, with the note of Lipsius; Dion Cass. liv. 10.) The dies natalicii of the cities of Rome and Constantinopls were at a still later period likewise reckoned among the feriae. (Cod. 3. tit. 12. s. 6.)

All feriae publicae, i. e. those which were observed by the whole nation, were divided into feriae stativae, feriae conceptivae, and feriae imperativae. Feriae stativae or statae were those which were held regularly, and on certain day marked in the calendar. (Fest. s. v.; Macrob. l.c.) To these belonged some of the great festivals, such as the Agonalia, Carmentalia, Lupercalia, \&c. Ferise conceptivae or conceptae were held every year, but not on ccrtain or fixed days, the time heing every year appointed by the magistrates or priests (quotannis a magistratibus vel sacerdotibus concipiuntur, Macrob. l.c. ; Varro, de Ling. Lat. vi. 25, \&c.; Fest. s. v.). Among these we may mention the feriae Latinae, feriae Sementivae, Paganalia, and Compitalia. Feriue imperativae are those which were held on certain emergencies at the command of the consuls, praetors, or of a dictator. The hooks of Livy record many feriae imperativae, which were chiefly held in order to avert the dangers which some extraordinary prodigy seemed to forebode, but also after great victories. (Liv. i. 31, iii. 5 , vii. 28 , xxxv. 40 , xlii. 3 ; Polyb. xxi. 1.) They frequently lasted for several days, the number of which depended upon the importance of the event which was the cause of their celebration. But whenever a rain of stones was believed to have happened, the anger of the gods was appeased by a sacrum novemdiale, or feriae per novum dies. This number of days had becn fixed at the time when this prodigy had first been observed. (Liv. i. 31.) Respecting the legitimate forms in which the feriae conceptivae and imperativae were announced and appointed, see Brisson. de Form. p. 107, \&c.

The manner in which all public feriae were kept bears great analogy to our Sunday. The people generally visited the temples of the gods, and offered up their prayers and sacrifices. The most serious and solemn seem to have been the feriae imperativac, but all the others were generally attended by rejoicings and feasting. All kiuds of business, especially law-suits, were suspended during the public ferine, as they were comsidered to
pollute the sacred season; the rex sacrorum and the flamines were not even allowed to behold any work being done during the feriae; hence, when they went out, they were preceded by their heralds (praectae, praeclamitatores, or calatores), who enjoined the people to abstain from working, that the sanctity of the day might not be polluted by the priesta seeing persons at work. (Fest. s. v. Praecia; Macroh. l.c.; compare Serv. ad Virg. Georg. v. 268 ; Plut. Numa, c. 14.) Those who neglected this admonition were not only liable to a fine, but in case their disohedience was intentional, their crime was considered to be beyond the power of any atonement ; whereas those who had unconsciously continued their work, might atone for their tranggression by offering a pig. It seems that doubts as to what kinds of work might be done at public feriae were not unfrequent, and we possess some curions and interesting decisions given by Roman pontiffs on this subject. One Umhro declared it to be no violation of the feriae, if a person did such work as had reference to the gode, or was connected with the offering of sacrifices; all work, he moreover declared, was allowed which was necessary to supply the urgent wants of human life. The pontiff Scaevola, when asked what kind of work might be done on a dies feriatus, answered that any work might he done, if any suffering or injury should be the result of neglect or delay, e. $g$. if an ox should fall into a pit, the owner might employ workmen to lift it out; or if a house threatened to fall down, the inhahitants might take such measures as would prevent its falling, without polluting the feriae. (Macrob. l.c. and iii. 3; Virg. Georg. i. 270, with the remarks of J. H.Voss; Cato, de Re Rust. 2 ; Columella, ii. 22 ; compare Math. xii. 11 ; Luke xiv. 5.) Respecting the various kinds of legal affairs which might he brought before the praetor on days of puhlic feriae, see Digest. 2. tit. 12. s. 2.

It seems to bave been owing to the immense increase of the Roman republic and of the accumulation of business arising therefrom, that some of the feriae such as the Compitalia and Lupercalia, in the course of time ceased to he observed, until they were restored by Augustus, who revived many of the ancient religious rites and ceremonies. (Suet. Aug. 31.) Marcus Antoninus again increased the number of days of business (dies fasti) to 230, and the remaining days were feriae. (Capitol. M. Anton. Phil. c. 10.) After the introduction of Christianity in the Roman empire, the old feriae were abolished, and the Sahbath, together with the Cbristian festivals, were substituted; hut the manner in which they were kept was nearly the same as that in which the feriae had heen ohserved. Law-suits were accordingly illegal on Sundays and holidays, though a master might emancipate his slave if he liked. (Cod. 3. tit. 12.) All work and all political as well as judicial proceedings, were suspended; but the country people were allowed freely and unrestrainedly to apply themselves to their agricultural labours, which seem at all times to have been distinguished from and thought superior to all other kinds of work; for, as mentioned helow, certain feriae were instituted merely for the purpose of enabling the country people to follow their rural occupations without being interrapted by law-suits and other public transactions.

After this general view of the Roman feriae, we
shall proceed to give a short account of thuse festivals and holidays which were designated by the name of feriae.

Feriae Latinae, or simply Latinae (the original name was Latiar, Macrob. l. c. ; Cic. ad Quint. Frat. ii. 4), had, according to the Roman legends, been instituted by the last Tarquin in commemoration of the alliance between the Romans and Latins. (Dionys, Hal. iv. p. 250. Sylb.) But Niebuhr (Hist. of Rome, ii. p. 34) has shown that the festival, which was originally a panegyris of the Latins, is of much higher antiquity ; for we find it stated that the towns of the Priscans and Latins received their shares of the sacrifice on the Alhan mount-which was the place of its celebration -along with the Albans and the thirty towns of the Alban commonwealth. All that the last Tarquin did was to convert the original Latin festival into a Roman one, and to make it the means of hallowing and cementing the alliance between the two nations. Betore the union, the chief magistrate of the Latins had presided at the festival; hut Tarquin now assumed this distinction, which subsequently, after the destruction of the Latin commonwealth, remained with the chief magistrates of Rome. (Liv, v. 17.) The object of this panegyris on the Alban mount was the worship of Jupiter Latiaris, and, at least as long as the Latin republic existed, to deliberate and decide on matters of the confederacy, and to settle any disputes which might have arisen among its memhers. As the feriae Latinae helonged to the conceptivae, the time of their celehration greatly depended on the state of affairs at Rome, as the consuls were never allowed to take the field until they had held the Latinae. (Liv. xxi. 63, xxii. 1, xxv. 12.) This festival was a great engine in the hands of the magistrates, who had to appoint the time of its celehration (concipere, edicere, or indicere Latinas); as it might often suit their purpose either to hold the festival at a particular time or to delay it, in order to prevent or delay such public proceedings as seemed injurious and pernicions, and to promote others to which they were favourably disposed. This feature, however, the feriae Latinae had in common with all other feriae conceptivae. Whenever any of the forms or ceremonies customary at the Latinae had been neglected, the consuls had the right to propose to the senate, or the college of pontiffs, that their celehration should he repeated (instaurari, Cic. ad Quint. Frat. ii. 6 ; Liv. xxii. 1, xli. 16). Respecting the duration of the feriae Latinae, the common opinion formerly was, that at first they only lasted for one day, to which suhsequently a second, a third, and a fourth were added (Dionys. Hal. vi. p. 415. Sylh.) ; but it is clear that this supposition was founded on a confusion of the feriae Latinae with the Ludi Maximi, and that they lasted for six days; one for each decury of the Alban and Latin towns. (Niehuhr, Hist. of Rome, ii. p. 35 ; comp. Liv. vi. 42 ; Plut. Camill. 42.) The festive season was attended hy a sacred truce, and no battle was allowed to be fought during those days. (Dionys. Hal. iv. p. 250, Sylb. ; Macroh. l. c.) In early times, during the alliance of the Romans and Latins, the chief magistrates of hoth nations met on the Alhan mount, and conducted the solemnities, at which the Romans, however, had the presidency. But afterwards the Romans alone conducted the celehration, and offered the
common sacrifice of an ox to Jnpiter Latiaris, in the name and on behalf of all who took part in it. The flesh of the victim was distributed among the several towns whose common sanctuary stood on the Alban mount. (Dionys. Hal. l.c.; Varro, de Ling. Lat. vi. 25 ; Schol. Babiens. in Cic. Orat. pro Planc. p. 255, \&c. Orelli.) Besides the cammon sacrifice of an ox, the several towns offered each separately lambs, cheeses, or a certain quantity of milk (Cic. de Div. i. 11), or cakes. Multitudes flocked to the Alban mount on the occasion, and the season was one of great rejoicings and feasting. Various kinds of games were not wanting, among which may be mentioned the oscillatio (swinging, Fest. s. v. Oscillum). It was a symbolic game, and the legend respecting its origin shows that it was derived from the Latins. Pliny (H.N. xxvii. 2) mentions that during the Latin holidays a race of four-horse chariots (quadrigae certant) took place on the Capitol, in which the victor received a draught of absynthium.
Although the Roman consuls were always present on the Alban mount, and conducted the solemn sacrifice of an ox, yet we read that the superintendence of the Latinae, like that of other festivals, was given by the senate to the Aediles, who, therefore, probably conducted the minor sacrifices, the various games, and other selemnities (Dionys. Hal. vi. p. 415 .) While the consuls were engaged on the Alhan mount, their place at Rame was filled by the praefectus urbi. [Praefectus Uabi.]
The two days following the celebration of the Latin holidays were considered as dies religiosi, so that no marriages could be contracted. (Cic. ad Quint. Frat. ii. 4.) From Dion Cassius we see that in his times the Feriae Latinae were still strictly observed by the Ramans, whereas the Latin towns had, at the time of Cicero, almost entirely given up taking any part in them. The Romans seemed to have continued to keep them down to the fourth century of our era. (Lactant. Institut. i. 21.)

Feriae Sementivae, or Sementina dies, was kept in seed-time for the purpose of praying for a good crop ; it lasted only for one day, which was fixed by the pontiffs. (Varro, de Ling. Lat. vi. 26, de Re Rust. i. 2, init. ; Ovid, Fust. i. 658, \&c.)

Feria vindemialis lasted from the 22d of August to the 15 th of October, and was institnted for the purpase of enabling the country-people to get in the fruits of the field and to hold the vintage. (Codex, 3. tit. 12.)

Feriae aestivae were holidays kept during the lottest season of summer, when many of the wealthier Romans left the city and went into the country. (Gellins, ix. 15. § 1.) They seem to have been the same as the messis feria (Cad. 3. tit. 12. s. 2, 6), and lasted from the 24th of June till the ]st of August.

Feriac praecidaneae are said to have been preparatory days, or such as preceded the ordinary feriae; although they did not belong to the feriae, and often even were dies atri, they were on certain occasions inaugurated by the chief pontiff, and thus made feriae. (Gellius, iv. 6.)
[L. S.]
FESCENNI'NA, scil. carmina, one of the earliest kinds of Italimn paetry, which consisted of rude and jocose verses, or rather dialogues in extempore verses (Liv. vii. 2), in which the merry country folks assailed and ridiculed one another.
(Horat. Epist. ii. 1. 145.) This amusement seems originally to have been peculiar to country people, but it was also introduced into the towns of Itsly and at Rome, where we find it mentioned as ons of those in which young people indulged at weddings. (Serv. ad Aen. vii. 695 ; Seneca, Controv. 21 ; Plin. H. N. xv. 22.) The fescennina were one of the popular amnsements at various festivals, and on many other occasions, but especially after the harvest was over. After their introduction inta the towns they seem to have lost much of their original rustic character, and to have been modified by the influence of Greek refinement (see Virg. Georg. ii. 385, \&c. ; Tibull. ii. 1. 55 ; Catull. 61. 27) ; they remained, however, in so far the same, as they wore at all times irregular, and mostly extempare doggerel verses. Sometimes, however, versus fescennini were also written as satires upon persoms. (Macrob. Saturn. ii. 4.) That these railleries had no malicious character, and were not intended to hurt or injure, may be inferred from the circumstance that one person often called upon another to answer and retort in a similar strain. The fescennina are generally helieved to have been introdnced among the Romans from Etruria, and to have derived their name from Fescennia, a town of that country. But, in the first place, Fescennia was not an Etruscan but a Faliscan town (Niebuhr, Hist. of Rome, i. p. 136), and, in the secand, this kind of amusement has at all times been, and is still, so popular in Italy, that it can scarcely be considered as peculiar to any particular place. The derivation of a name of this kind from that of some particular place was formerly a favourite custom, as may be seen in ths derivation of caerimonia from Caere. Festus (s. v.) endeavours to solve the question by supposing fess cennina to be derived from fascinum, either hecause they were thonght to be a protection against sorcerers and witches, or because fascinum (phallus), the symbol of fertility, had in early times, or in rural districts, been connected with the amusements of the fescemnina. But whatever may be thought of this etymology, it is of importance not to be misled by the common opinion that the fescennina were of Etruscan origin.
[L. S.]

## FESTI DIES. [DIEs.]

FESTU'CA. [MANUMissio.]
FETIA'LES, a college (Liv. xxxvi. 3) of Roman priests who acted as the guardians of the public faith. It was their province, when any dispute arose with a foreign state, to demand satisfaction, to determine the circumstances uuder which hostilities might be commenced, to perform the various religious rites attendant on the solemn declaration of war, and to preside at the formal ratification of peace. These functions are briefly but comprehensively defined by Varra (De Ling. Lat. v. 86, ed Müller), "Fetiales. . fidei publicae inter populos praeerant: nam per hos fiebat ut justum conciperetur bellum et inde desitum, ut foedere fides pacis constitueretur. Ex his mittebantur, antequam coaciperetur, qui res repeterent, et per hos etiam nunc fit foedus," to which we may add the ald law quoted by Cicero (De Leg. ii. 9), "Foederidm, pacis, belli, innuciarum oratores fetiales judicesque sunto; bella disceptanto." Dionysius (ii. 72) and Livy (i. 32) detail at considerable length the ceremonies observed by the Ramans in the earlier ages, when they felt themselves aggrieved by a neighbouring
people. It appears that when an injury had been sustained, four fetiales (Varro, ap. Non.) were deputed to seek redress, whe again elected one of their number to act as their representative. This individaal was styled the paier patrutus populi Romani. A fillet of white wool was hound round his head, together with a wreath of sacred herhs gathered within the inclosure of the Capitoline hill (verbenae, sagmina) [Sagmina], whence he was sometimes named Verbenarius. (Plin. H. N. xxii. 2.) Thus equipped he proceeded to the confines of the offending tribe, where he halted and addressed a prayer to Jupiter, calling the god to witness, with heavy imprecations, that his complaints were well founded and his demands reasonable. He then crossed the horder, and the same form was repeated in nearly the same words to the first native of the soil whom he might chance to meet ; again a third time to the sentinel or any citizen whom he eacountered at the gate of the chief town; and a fourth time to the magistrates in the forum in presence of the people. If a satisfactory answer was not returned within thirty days, after puhlicly delivering a solemn denunciation, -in which the gods celestial, terrestrial, and infernal were invoked,-of what might he expected to follow, he returned to Rome, and, accompanied by the rest of the fetiales, made a report of his mission to the senate. If the people (Liv. x. 45), as well as the senate, decided for war, the pater patratos again get forth to the border of the hostile territory, and launched a spear tipped with iron, or charred at the extremity and smeared with blood (emblematic doubtless of fire and slanghter) across the boundary, pronouncing at the same time a solemn declaration of war. The demand for redress and the proclamation of hostilities were alike termed clarigatio, which word the Romans in later times explained by clare repetere (Plin. IT. N. xxii. 3 ; Serv. ad Virg. Aen. ix. 53) ; but Göttling (Geschichte der Rönn. Staatsverf. p. 196) and other modern writers, connect it with the Doric form of $\kappa \hat{\eta} \rho \cup \xi$ and кәри́кєьoע.

Several of the formulae employed on these occasions have heen preserved hy Livy (i. 24, 32), and Aulas Gellius (xvi. 4), forming a portion of the Jus Fetiale by which the college was regulated. The services of the fetiales were considered absolutely essential in concluding a treaty (Liv. ix. 5); and we read that at the termination of the second Punic war fetiales were sent over to Africa, who carried with them their own verbenae and their own flint stenes for smiting the victim. Here also the chief was termed pater patratus. (Liv. xxx. 43.)

The institution of these priests was ascribed by tradition, in conmon with other matters connected with religion, to Numa (Dionys. ii. 71); and although Livy (i. 32) speaks as if he attrihuted their introduction to Ancus Martius, yet in an earlier chapter (i. 24) he supposes them to have existed in the reign of Hostilius. The whole system is said to have been horrowed from the Aequicolae or the Ardeates (Liv. and Dionys. l.c.), and similar usages undoubtedly prevailed among the Latin states; for it is clear that the formula preserved by Livy (i. 32), must have been employed when the patcr patratus of the Romans was put in communication with the pater patratus of the Prisci Latini.

The number of the fetiales cannot be ascertained
with certainty, but some have inferred from a passage quoted from Varro by Nonius (xii 43) that it amounted to twenty ; of whom Niebuhr supposes ten were elected from the Ramnes and ten from the Titienses; but Göttling (Geschichte der Röm. Staatsverf. p. 195) thinks it more probahle that they were at first all chosen from the Ramnes, as the Sahines were originally macquainted with the use of fetiales. They were originally selected from the most nohle families ; their office lasted for life (Dionys. ii 72) ; and it seems prohable that vacancies were filled up by the college (cooptatione) until the passing of the Lex Domitia, when in common with most other priests they would he nominated in the comitia tributa. This, however, is nowhere expressly stated.

The etymology of fetialis is uncertain. Varro would connect it with fidus and foedus; Festus with ferio or facio: while some modern scholars suppose it to he allied to $\phi \eta \mu$ ', and thus $\phi \eta \tau i \alpha \dot{\lambda} \epsilon \epsilon s$ would be orutores, spealers. In inscriptions we find both fetialis and fecialis; but since in Greek MSS. the word always appears under some one of the forms $\phi \eta \tau \iota \dot{d} \lambda \in i s \quad \phi \in \tau i d \lambda \in i s, \phi i \tau l d \lambda \in i s$, the orthography we have adopted in this article is probahly correct.

The explanation given by Livy (i. 24) of the origin of the term Pater Patratus is satisfactory:" Pater Patratus ad jusjurandum patrandum, in est, sanciendum fit foedus ; " and we may at once reject the speculations of Servius (ad Aen. ix. 53, x. I4, xii. 206) and Plutarch (Q. R. p. 127, ed. Reiske) ; the former of whom supposes that he was so called hecause it was necessary that his father should be alive, the latter that the name indicated that his father was living, and that he himself was the father of children.
[W.R.]
FI'BULA ( $\pi \epsilon \rho \dot{\partial} \nu \eta, \pi \epsilon \rho \circ \nu i s, \pi \epsilon \rho \circ \nu \eta \tau \rho i s: \pi \delta \rho \pi \eta$, €̇riroprís: $̇ \nu \in \tau \dot{\prime})$, a brooch consisting of a pin (acus), and of a curved portion furnished with a hook ( $\kappa \lambda \epsilon i s$, Hom. Od. xviii. 293). The curved portion was sometimes a circular ring or disc, the pin passing across its centre (woodcut, figs. 1, 2), and sometimes an arc, the pin heing as the chord of the are (fig. 3). The forms of brooches, which were commonly of gold or bronze, and more rarely of silver (Aelian, V. H. i. 18), were, however, as various in ancient as in modern times; for the fibula served in dress not merely as a fastening, hut also as an ornament. (Hom. Cd. xix. 256, 257 ; Eurip. Ploen. 821.)

$$

\end{array}
$$

Women wore the fibula both with the Amictus and the indutus; men wore it with the amictus only. Its most frequent use was to pin together two parts of the scarf, shawl or cloals [Chlamys; Peflum; Pallium], which constituted the amictus, so as to fasten it over the right shoulder. (Soph. Trach. 923 ; Theocrit. xiv. 66 ;

## FICTILE.

Ovid, Mei. viii. 318; Tacit. Germ. 17). [Woodcuts, pp. 2, 117, 213.] More rarely we see it over the breast. [Woodcut, p. 218.] The epithet ét $\epsilon \rho \dot{\sigma} \pi о \rho \pi \neq s$ was applied to a person wearing the fihula on one shoulder only (Schol. in Eurip. Hec. 933, 934) ; for women often wore it on both shoulders. [Woodcuts, pp. 136, 243, 257.] In consequence of the habit of putting on the amictus with the aid of a fibula, it was called $\pi \epsilon \rho о \nu \upharpoonleft \mu \alpha$ ог $\dot{\epsilon} \mu \pi \epsilon \rho \delta \nu \eta \mu \alpha$ (Theocrit. Adon. 34. 79), $\pi о р \pi \not \neg \mu \alpha$ (Eurip. Elect. 820), or ${ }^{\alpha} \mu \pi \epsilon \chi \delta \nu \eta \pi \in \rho 0-$ $\nu$ fitts (Brunck, Anal. ii. 28). The splendid shawl of Ulysses, described in the Odyssey (xix. 225231), was provided with two small pipes for admitting the pin of the golden brooch; this contrivance would secure the cloth from being torn. The highest degree of ornament was bestowed upon brooches after the fall of the western empire. Justin II. (Corippus, ii. 122), and many of the emperors who preceded him, as we perceive from the portraits on their medals, wore upon their right shoulders fibulae, from which jewels, attached by three small chains, depended. (Beger, Thes. Pal. p. 407, 408, \&c.)

It has been already stated that women often wore the fibula on both shoulders. In addition to this, a lady sometimes displayed an elegant row of brooches down each arm upon the sleeves of her tunic (Aelian, V.H.i. 18), examples of which are seen in many ancient statues. It was also fashionsble to wear them on the breast (Isid. Orig. xix. 30 ) ; and another occasional distinction of female attire, in later times, was the use of the fihula in tucking up the tunic ahove the knee.

Not only might slight accidents to the person arise from wearing brooches (Hom. Il. v. 426), but they were sometimes used, especially by females, to inflict serious injuries. The pin of the fibula is the instrument, which the Phrygian women employ to deprive Polymnestor of his sight by piercing his pupils (Eurip. Hec. 1170), snd with which the Athenian women, having first blinded a man, then dispatch him. (Herod. v. 87 ; Schol. in Eurip. Hec. 934). Oedipus strikes the pupils of his own eyehalls with a brooch taken from the dress of Jocasta (Soph. Oed. Tyr. 1269 ; Eurip. Phoen. 62). For the same reason we find that $\pi \in \rho o \nu a \dot{\omega}$ meant to pierce, since $\pi \varepsilon \rho \delta \nu \eta$ was properly the pin of the broach ( $\pi \epsilon \rho \delta \nu \eta \sigma \epsilon$, "pinned him," Hom. Il. vii. 145 ; xiii. 397).

Brooches were succeeded by buckles, especially among the Romans, who called them by the same name. The preceding woodcut shows on the right hand the forms of four bronze buckles $(4,5,6,7)$ from the collection in the British Museum. This article of dress was chiefly used to fasten the belt [BaLteus], and the girdle [Zona]. (Virg. Aen. xii. 274 ; Lydus, De Mag. Rom. ii. 13). It appears to have been in general much more richly ornamented than the brooch; for, although Hadrian was simple and unexpensive in this as well as in other matters of costume (Spartian. Hadr. 10), yet many of his successors were exceedingly prone to display buckles set with jewels (fibulae gemmatae).

The terms which have now heen illustrated as applied to articles of dress, were also used to denote pins variously introduced in carpentry ; c. $g$. the linch-pins of a chariot (Parthen. 6); the wooden pins inserted through the sides of a boat, to which the sailors fasten their lines or ropes (Apoll. Rhod. i.
567) : the trenails which unite ths posts and planks of a wooden bridge (Caesar, B. G. iv. 17); and the pins fixed into the top of a wooden triangle used as a mechanical engine (Vitruv. x. 2).

The practice of infibulating singers, alluded to hy Juvenal and Martial, is descrihed in Rhodius De Acia and Pitiscus.
[J. Y.]

 made of baked clay.

The instruments used in pottery (ars figulina) were the following :-1. The wheel ( $\tau \rho 0 \times 0$ s, orbis, rota, "rota figularis," Plaut. Epid. iii. 2. 35), which is mentioned by Homer (Il. xviii. 600), and is among the most ancient of all human inventions. According to the representations of it on the walls of Egyptian tomhs (Wilkinson, Manners and Customs, iii. p. 163), it was a circular table, placed on a cylindrical pedestal, and turning freely on a point. The workman, having placed a lump of clay upon it, whirled it swiftly with his left hand, and employed his right in moulding the clay to the requisite shape. Hence a dish is called "the daughter of the wheel" ( $\tau \rho 0 \chi \eta \lambda \alpha{ }^{\prime} \tau o s \kappa \delta \rho \eta$, Xenarchus, ap. Athen. ii. p. 64). 2. Pieces of wood or bone, which the potter ( $\kappa \in \rho \alpha \mu \in u ́ s$, figulus) held in his right hand, and applied occasionally to the surface of the clay during its revolution. A pointed stick, touching the clay, would inscribe a circle upon it ; and circles were in this manner disposed parallel to one another, and in any number, according to the fancy of the artist. By having the end of the stick curved or indented, and hy turning it in different directions, he would impress many beautiful varieties of form and outline upon his vases. 3. Moulds (formae, тúnot, Schol. in Arist. Eccles. 1), used either to decorate with figures in relief ( $\pi \rho \dot{\sigma} \sigma \tau v \pi \alpha)$ vessels which had been thrown on the wheel, or to produce foliage, animals, or any other appearances, on Antefixa, on comices of terra cotta, and imitative or ornamental pottery of all other kinds, in which the wheel was not adapted to give the first shape. The annexed woodcut shows three moulds, which were found near Rome hy M. Seroux d'Agincourt. (Recueil de Fragmens, p. 88-92.) They are cut in stone. One of them was prohably used for making antefixa, and the other two for making hesrts and legs, designed to be suspended by poor persons "ex voto," in the temples and sanctuaries. [Donaria.] Copies of the same suhject, which might

in this manner be moltiplied to any extent, were called "ectypa." 4. Gravers or scalpels, used by skiiful modellers in giving to figures of all kinds a more perfect finish and a higher relief than could be produced by the nse of moulds. These instruments, exceedingly simple in themselves, and ds
riving their efficiency altogether from the ability and taste of the sculptor, would not only contribute to the more exquisite decoration of earthen vessels, hut would be almost the only tools applicable for making " Dii fictiles," or gods of baked earth, and other entire figures. (Propert. ii. 3. 25, iv. 1.5 ; Plin. H. N. xxxv. 45,46 ; Sen. Cons. ad
 1. $2 . \S 4$, i. $3 . \S 1$, vii. $22 . \S 6$.) These were among the earliest efforts of the plastic art, and even in times of the greatest refinement and luxury they continued to be regarded with reverence.

Veesels of all kinds were very frequently furnished with at least one handle (ansa, oủas, $\overline{\cos }$ ). The Amphora was called Diota, because it had two. The name of the potter was commonly stamped upon the handle, the rim, or some other part. Of this we have an example in the amphora, adapted for holding grain or fruits, oil or wine, which is here introduced from the work of Seroux d'Agincourt. The figure on the right hand shows the name in the genitive case "Maturi," impressed on an oblong surface which is seen on the handle of the amphora.

The earth used for making pottery ( $\kappa \in \rho d \mu \iota \kappa \eta$ $\gamma \hat{\eta}$, Geopon. ii. 49) was commonly red, and often of so lively a colour as to resemble coral. Vauquelin found, by analysis, that a piece of Etruscan earthenware contained the following ingredients: Silica, 53 ; alumina, 15 ; lime, 8 ; oxide of iron, 24. To the great abundance of the last constituent the deep red colour is to be attributed. Other pottery is brown or cream-coloured, and sometimes white. The pipe-clay, which must have been used for white ware, is called "figlina creta." (Varro, Re Rust. iii. 9.) Some of the ancient earthenware is throughout its substance black, an effect produced by mixing the earth with comminuted asphaltum (gagates), or with some other bituminous or oleaginous substance. It appears also that asphaltum, with pitch and tar, both mineral and vegetable, was used to cover the surface like a varnish. In the finer kinds of earthenware this varnish served as a black paint, and to its application many of the most beautiful vases owe the decorations which are now so highly admired. (Plin. $H$. N. xxxvi. 34.) But the coarser vessels, designed for common purposes, were also smeared with pitch, and had it burnt into them, because by this kind of encaustic they became more impervious to moisture and less liable to decay. (Hor. Carm. i.
20. 3 ; Plin. H. N. xiv. 25, 27.) Hence a "dolium picatum fictile" was used, as well as a glass jar to hold pickles. (Colum. Re Rust. xii. 18, 54.) Also the year of the vintage was inscribed by the use of pitch, either upon the amphorae themselves or upon the labels (pittacia, schedia), which were tied round their necks. (Hor. Carm. iü. 21. 1-5.) Although oily or bituminous substances were most commonly employed in pottery to produce by the aid of fire ( $\epsilon \tilde{U} \delta \dot{\in} \mu \in \lambda a \nu \theta \in \hat{\imath} \epsilon \nu$, Hom. Epig. xiv. 3) the various shades of black and brown, the vessels, before being sent for the last time to the furnace [Fornax], were sometimes immersed in that finely prepared mud, now technically called " slip," by which the surface is both smoothed and glazed, and at the same time receives a fresh colour. Ruddle, or red ochre ( $\mu i \lambda \tau 0 s$, rubrica), was principally employed for
 To produce a further variety in the paintings upon vases the artists emplayed a few brightly coloured earths and metallic ores. [Pictura, No. 9.]

As we might expect concerning an art so indispensable as that of the potter, it was practised to a great extent in every ancient nation; even the most uncivilized not heing strangers to it, and sometimes displaying a surprising degree of dexterity. The remains of an ancient pottery have been found in Britain, and some of the potters' names preserved on their works, are probably British. We are told of a place called the Potteries ( $F i g$ linae) in Gaul. Numa instituted a corporation of potters at Rome. (Plin. H. N. xxxv. 46.) Mention has already been made of Egypt, and there are frequent allusions to the art in the ancient writings of the Jews. We also read of its productions in Tralles, Pergamus, Cnidus, Chios, Sicyon, Corinth, Cumae, Adria, Modena, and Nola, from which city the exports of earthenware were considerable, and where some of the most exquisite specimens are still discovered. But three places were distinguished above all others for the extent and excellence of this beautiful manufacture.

1. Samos, to which the Romans resorted for the articles of earthenware necessary at meals, and intended for use rather than display. (Plaut. Bacch. ï. 2. 24, Stich. v. 4. 12 ; Tibull. ii. 3. 51 ; Cic. pro Muren. 36 ; Plin. H. N. xxxv. 46 ; Tertull. Apol. 25.)
2. Athens, a considerable part of which was called Cerameicus, because it was inhabited by potters. In this quarter of the city were temples dedicated to Athena, as presiding over every kind of handicraft, and to the two fire-gods, Hephaestos and Prometheus, the latter of whom was also the mythical inventor of the art of modelling. Various traditions respecting Coroebus and others point to the early efforts of the Athenian potters (Plin.II.N. vii. 57, xxxv. 45 ; Critias ap. Athen. i. p. 28); and it is a remarkable circumstance that the enemies of free trade, and especially of Athenian influence at Aegina and Argos, imposed restrictions on the use of these productions. (Herod. v. 88.) The Athenian ware was of the finest description ; the masterpieces were publicly exhibited at the PaNAthenaea, and were given, filled with oil, to the victors at the games; in consequence of which, we now read on some of them, in the British Museum and other collections, the inscription T $\hat{\omega} \nu$ ' $A \theta \dot{\eta} \nu \eta \theta \in \nu$ $\bar{d} \theta \lambda \omega \nu$ or other equivalent expressions. (Pind. Nom.
x. 35 ; Schol. and Böckh, ad loc.; Böckh, Corp. Inse. vol. i. p. 49.) Many other specimens were presents given to relations and friends on particular occasions, and often distinguished by the epithets $\kappa \alpha \lambda \delta s$ and $\kappa \alpha \lambda \eta$ added to their names. A circumstance which contributed to the success of the Athenians in this manufacture, was a mine of fine potter's clay in the Colian Promontory, near Phalerum. (Suidas, l. c.; Athen. xi. p. 482.) The articles made from it hecame so fashionahle, that Plutarch (De Audit.) describing an act of extreme folly, compares it to that of the man who, having swallowed poison, refuses to take the antidote unless it he administered to him in a cup made of Colian clay. Some of the "Panathenaic" vases, as they were called, are two feet in height, which accords with what is said by ancient authors of their uncommon size. (Athen. xi. p. 495 ; Böckh, in Pind. Frag. No. 89.) A diota was often stamped upon the coins of Athens, in allusion to the facts which have now been explained.
3. Etruria, especially the cities of Aretium and Tarquinii. Whilst the Athenian potters excelled all others in the manufacture of vessels, the Tuscans, besides exercising this branch of industry to a great extent though in a less tasteful and elahorate manner, were very remarkable for their skill in producing all kinds of statuary in baked clay. Even the most celehrated of the Roman temples were adorned, both within and without, by the aid of these productions. The most distinguished among them was an entire quadriga, made at Veiu, which surmounted the pediment of the temple of Tupiter Capitolinus. (Plin. H. N. xxviii. 4, xxxv. 45, xxxvi. 2 ; K. O. Müller, Etrusker, iv. 3. 1, 2.) The Etrurians also manifested their partiality to this branch of art by recurring to it for the purpose of interment; for whilst Pliny mentions (H.N. xxxv. 46), that many persons preferred to be buried in earthen jars, and in other parts of Italy the bones of the dead have been found preserved in amphorae, Etruria alone has afforded examples, some of them now deposited in the British Museum, of large sarcophagi made wholly of terra cotta, and ornamented with figures in bas-relief and with recumbent statues of the deceased.

Among many qualities which we admire in the Greek pottery, not the least wonderful is its thinness ( $\lambda \epsilon \pi \tau \alpha$ ) and consequent lightness, notwithstanding the great size of the vessels and the perfect regularity and elegance of their forms. That it was an object of ambition to excel in this respect we learn from the story of a master and his pupil, who contended which could throw the thinnest clay, and whose two amphorae, the result of the trial, were preserved in the temple at Erythrae. (Plin. $H . N . \operatorname{xxxy} .46$.$) The well-known passage of$ Hesiod (Kal кєрацє̀̀s кєрацєí котєе́t, \&ec. Op. et Dies, 25) describes the emulation, which incited potters to excellence as well as architects and poets.

The Greeks and Romans contented themselves with using earthenware on all occasions until the time of Alexander the Great: the Macedonian conquests introduced from the East a taste for vessels of gold and silver, in which, however, the Spartans refused to indulge themselves. The Persians, on the contrary, beld earthenware in so low estimation, that they condemned persons to drink out of fictile vessels as a punishment. (Athen. vi. p. 229, c, xi. $\mu .464$, a, p. 483, c. d.) But althor.gh the Romans,
as they deviated from the ancient simplicity, made a great display of the more splendid kind of vessels, yet they continued to look upon pottery not only with respect but even with veneration. (Orid, Met. viii. 690 ; Cic. ad Att. vi. 1 ; Juv. iii. 168 , x. 25.) They called to mind the magnanimity of the Consul Curius, who preferred the use of his own earthenware to the gold of the Samnites (Florus, $i$. 18); they reckoned some of their consecrated terra-cottas, and especially the above-mentioned quadriga, among the safeguards of their imperial city (Serv. ad Virg. Aen. vii. 188); and, bound by old associations and the traditons of their earliest history, they considered earthen vessels proper for religious ceremonies, although gold and silver might be admitted in their private entertainments (Tertull. l. c.) ; for Pliny says (H. N. xxxv. 46), that the productions of this class, " both in regard to their skilful fabrication and their high antiquity, were more sacred, and certainly more jnnocent, than gold."

Another term, often used as synonymous with fictile was testa. [Dolium; Later; Patrra; Patina; Tegula.]
[J. Y.]
FI'CTIO. Fictions in Roman law are like fictions in English law, of which it has heen said that they are " those things that have no real essence in their own body, but are so acknowledged and accepted in law for some especial purpose." The fictions of the Roman law apparently had their origin in the edictal power, and they were devised for the purpose of providing for cases where there was no legislative provision. A fiction supposed something to be which was not; but the thing supposed to be was such a thing as, heing admitted to be a fact, gave to some person a right or imposed on some person a duty. Various instances of fictions are mentioned by Gaius. One instance is that of a person who had obtained the honorum possessio ex edicto. As he was not heres, he had no direct action: he could neither clajm the property of the defunct as his (legal) property, nor could he claim a debt due to the defunct as his (legal) debt. He therefore brought his suit (intendit) as heres (ficto se herede), and the formula was accordingly adapted to the fiction. In the Publiciana Actio, the fiction was that the possessor had obtained by usucapion the ownership of the thing of which he had lost the possession. A woman by coemptio, and a male by being adrogated, ceased, according to the civil law, to be debtors, if they were debtors before; for by the coemptio and adrogatio they had sustained a capitis diminutio, and there could be no direct action against them. But as this capitis diminutio might be made available for fraudulent purposes, an actio utilis was still allowed against such persons, ths fiction heing that they had sustained no capitis diminutiv. The formula did not (as it appears from Garis) express the fiction as a fact, but it ran thus:-If it shall appear that such and such are the facts (the facts in issue), and that the party, plaintiff or defendant, would have such and such a right, or be liable to such and such a duty, if such and such other facts (the facts supposed) were true; et reliqua. (Gaius, iv. I0. 32, \&c. ; Ulp. Frag. xxviii. 12.)

It was by a fiction that the notion of legal capacity was extended to artificial persons. [COLLEglum ; Fiscus.] Instances of fiction occur in the chapter intitled Juristische Personen in Savigny's

System des hout. R. R. vol. ii., and in Puchta's Institutionen, i. § 80, ii. § 165.) [G. L.]

FIDEICOMMISSUM is a testamentary disposition, by which a person who gives something to another imposes on him the obligation of transferring it to a third person. The obligation was not created by words of legal binding force (civilia verba), but by words of request (precativè), such as "fideicommitto," "peto," "volo dari," and the like: which were the operative words (verba utilia). If the object of the fideicommissum was the hereditas, the whole or a part, it was called fideicommissaria hereditas, which is equivalent to a universal fideicommissum; if it was a single thing or a sum of money, it was called fideicommissum singulae rai or fideicommissum speciale. The obligation to transfer a fideicommissaria hereditas could only he imposed on the heres; the ohligation of transferring a single thing might be imposed on a legatee.
By the legislation of Justinian a fideicommissum of the hereditas was a universal succession; but bafore his time the person entitled to it was sometimes "heredis loco," and sometimes "legatarii loco." The heres still remained heres after he had parted with the hereditas. Though the fideicommissum resembled a valgar suhstitution, it differed from it in this: - in the case of a vulgar substitution, the substituted person only became heres when the first person, named heres, failed to become such; in the case of the fideicommissum, the second heres had only a claim on the inheritance when the person, named heres, had actually become such. There could be no fideicommissum unless there was a heres.

The person who created the fideicommissum must be a person who was capable of making a will ; but he might create a fideicommissum orally without having made a will. The person who was to receive the benefit of the fideicommissum was the fideicommissarius; and a person might be a fideicommissarius who could take a legacy (Ulp. Frag. xxv. 6) ; the person on whom the obligation was laid was the fiduciarius. The fideicommissarius himself might be bound to give the fideicommissum to a second fideicommissarius. Originally the fideicommissarius was considered as a purchaser (emptoris loco); and when the heres transferred to him the hereditas, mutual covenants (cautiones) were entered into by which the heres was not to he answerable for any thing which he had been hound to do as heres, nor for what he had given hona fide, and if an action was brought against him as heres, he was to be defended. On the other hand the fideicommissarius (qui recipiebat hereditatem) was to have whatever part of the hereditas might still come to the hands of the heres, and was to be allowed to prosecute all rights of action which the heres might have. But it was enacted by the senatus-consultum Trebellianum, in the time of Nero, that when the heres had given up the hereditas to the fideicommissarius, all right of action by or against the heres should be transferred to the fideicommissarius. The praetor accordingly gave ntiles actiones to and against the fideicommissarius. From this time the heres ceased to require from the fideicommissarius the covenants which he had formerly taken as his security against his general liabilities as heres.
As fideicommissa were sometimes lost because the heres would not accept the inheritance, it was
enacted by the senatus-consultum Pegasianum, in the time of Vespasian, that the fiduciarius might retain one fourth of the hereditas, and the same power of retainer was allowed him in the case of single things. In this case the heres was liable to all debts and charges (onera hereditaria) ; but the aame agreement was made between him and the fideicommissarius which was made between the heres and the legatus partiarius, that is, the profit or loss of the inheritance was shared between them according to their shares (pro rata parte). Accordingly, if the heres was required to restore not more than three-fourths of the hereditas, the senatus-consultum Trebellianum took effect, and any loss was horne by him and the fideicommissarius in proportion to their shares. If the heres was required to restore more than three-fourths or the whole, the senatus-consultum Pegasianum applied. If the heres refused to take possession of (adire) the hereditas, the fideicommissarius could compel him, by application to the praetor, to take possession of it and to restore it to him; hut all the costs and charges accompanying the hereditas were borne by the fideicommissarins.

Whether the heres was sole heir (ex asse), and required to restore the whole or a part of the hereditas, or whether he was not sole heir (ex parte) and was required to restore the whole of such part, or a part of such part, was immaterial : in all cases the S. C. Pegasianum gave him a fourth.

By the legislation of Justinian the senatus-consulta Trebellianum and Pegasianum were consolidated, and the following rules were established:The heres who was charged with a universal fideicommissum always retained one-fourth part of the hereditas (which was called simply Quarta, or Falcidia, or commodum Legis Falcidiae), and all claims on behalf of or against the hereditas were shared between the fiduciarius and fideicommissarins who was considered heredis loco. If the fiduciaring suffered himself to be compelled to take the inheritance, he lost his Quarta, and any other advantage that he might have from the hereditas. If the fidnciarius was in possession, the fideicommissarius had a personal actio ex testamento against him for the hereditas. If not in possession, he must at least verbally assent to the claim of the fideicommissarius, who had then the hereditatis petitio fideicommissaria against any person who was in possession of the property.

The Quarta is in fact the Falcidia, applied to the case of universal fideicommissa. Accordingly, the heres only was entitled to it, and not a fideicommissarius, who was himself charged with a fideicommissum. If there were several heredes charged with fideicommissa, each was entitled to a quarta of his portion of the hereditas. The heres was entitled to retain is fourth out of the hereditas, not including therein what he took as legatee.

The fiduciarius was bound to restore the hereditas at the time named by the testator, or, if no time was named, immediately after taking possession of it. He was entitled to be indemnified for all proper costs and cbarges which he had sustained with respect to the hereditas; but he was answerable for any damage or loss which it had sustained through his culpa.

Res singulae, as already observed, might also M M 4
be the objects of a fideicommissum, as a particular piece of land, a slave, a garment, piece of silver, or a sum of money; and the duty of giving it to the fideicommissarius might be imposed either on the heres or on a legatee. In this way a slave also might receive his liberty, and the request to manumit might be addressed either to the heres or the legatarius. The slave when manumitted was the libertus of the person who manumitted him. There were many differences between fideicommissa of single things and legacies. A person about to die intestate might charge his heres with a fideicommissum, whereas a legacy could only be given by a testament, or by a codicil which was confirmed by a proper declaration of the teatator in a will; but a fideicommissum could be given by a simple codicil not so confirmed. A heres instituted by a will might be requested by a codicil, not so confirmed as above, to transfer the whole hereditas, or a part, to a third person. A woman who was prevented by the provisions of the Voconia lex from taking a certain hereditas, might take it as a fideicommissum. The Latini, also, who were prohibited by the Lex Junia from taking hereditates and legacies by direct gift (directo jure) could take by fideicommissa. It was not legal to name a person as heres, and also to name another who after the death of the heres, should become heres; but it was lawful to request the heres on his death to transfer the whole or a part of the hereditas to another. In this way a testator indirectly exercised a testamentary power over his property for a longer period than the law allowed him to do directly. A man sued for a legacy per formulam; but he sued for a fideicommisaum before the consul or praetor for fideicommissa at Rome, and in the provinces before the praeses. A fideicommissum was valid, if given in the Greek language, but a legacy was not, until a late period. Justinian finally assimilated legacies and singular fideicommissa. [Legatum; Inst. 2. tit. 20. § 3 ; Cod. 6. tit. 43. s. 2.]

It appears that there were no legal means of enforcing the due discharge of the trust called fideicommissum till the time of Augustus, who gave the consuls jurisdiction in fideicommissa. In the time of Claudius praetores fideicommissarii were appointed: in the provinces the praesides took cognizance of fideicommissa. The consuls still retained their jurisdiction, hat only exercised it in important cases. (Quintil. Inst. iii. 6.) The proceeding was always extra ordinem. (Gaius, ii. 228 ; Ulp. Frag. tit. 25. s. 12.) Fideicommissa seem to have been introduced in order to evade the civil law, and to give the hereditas, or a legacy, to a person who was either incapacitated from taking directly, or who could not take as much as the donor wished to give. Gains, when observing that peregrini could take fideicommissa, observes that "this" (the object of evading the law) " was probably the origin of fideicommissa ;" but by a senatus-consultum made in the time of Hadrian, such fideicommissa were claimed by the fiscus. They are supposed to he the commendationes mortuorum mentioned by Cicero (de Fin. iii. 20). There is the case of Q. Pompeius Rufins (Val. Max. iv. 2. 7), who, being in exile, was legally incapacitated from taking any thing under the will of a Roman citizen, but could claim it from his mother, who was the heres fiduciarius. They were also adopted in the case of gifts to women, in order to cvade the

Lex Voconia [Lex Voconia]; and in the case of proscribed persons, incertae personae, Latini, peregrini, caelibes, orhi. But the senatus-consultum Pegasianum destroyed the capacity of caelihes and orbi to take fideicommissa, and gave them to those persons mentioned in the will who had children, and in default of such to the populus, as in the case of hereditates and legata. [Bona Canuca.] Municipia could not take as heredes [Collegrum] ; but hy the senatus-consultum Apronianum, which was probably passed in the time of Hadrian, they could take a fideicommissa hereditas. (Ulp. Frag. tit. 22. s. 5 ; Plin. Ep. v. 7.) [Heres (Roman).] (Gaius, ii. 247-289 ; Ulp. Frag. tit. 25: Inst. 2. tit. 23, 24 ; Dig. 36. tit. 1 ; Cod. 6. tit. 49 ; Mackeldey, Lehrbuch, \&c., 12th ed. §726, \&c.; Vangerow, Leitfaden für Pandekten Vorlesungen, vol. ii. p 561.)
[G. L.]

## FIDEJUSSOR. [Intercessio.] <br> FIDEPROMISSOR. [INTERCESSIO.] <br> FIDES. [Lrra.]

FIDI'CULA is said to have been an instrun ment of torture, consisting of a number of strings. According to some modern writers, it was the same as the equuleus, or at all events formed part of it. [EquULEUS.] The term, however, appears to be applied to any strings, whether forming part of the equuleus or not, by which the limbs or extremities of individuals were tied tightly. (Sueton. Tib. 62, Cal. 33 ; Cod. Theod. 9. tit. 35. s. 1 ; Sigonius, De Jud. iii. 17.)

FIDU ${ }^{\prime}$ CIA. If a man transferred his property to another, on condition that it should be restored to him, this contract was called Fiducia, and the person to whom the preperty was se transferred was said fiduciam accipere. (Cic. Top. c. 10.) A man might transfer his property to another for the sake of greater security in time of danger, or for other. sufficient reason. (Gaius, ii. 60.) The contract of fiducia or pactum fiduciae also existed in the case of pignus; and in the case of mancipation. [Emancipatio.] The hereditas itself might be an ohject of fiducia. [Fideicommissum.] The trustee was bound to discharge his trust by restaring the thing: if he did not, he was liable to an actio fiduciae or fiduciaria, which was an actio bonae fidei. (Cic. de Off. iii. 15, ad Fam. vii. 12; ut inter bonos bene agier oportet.) If the trustee was condemned in the action, the consequence was infamia. Cicero enumerates the judiciom fiduciae with that tutelae and societatis as "judicia summae existimationis et paene capitis" (Cic. pro Ros. Com. c. 6), where he is evidently alluding to the consequence of infamia. (Compare Savigny, System, \&cc. vol. ii. p. 176.)

When the object for which a thing was transferred to another was attained, a remancipatio of those things which required to be transferred by mancipatio or in jure cessio was necessary ; and with this view a particular contract (pactum fiduciae) was inserted in the formula of mancipatio. If no remancipatio took place, but only a simple restitutio, usucapio was necessary to restore the Quiritarian ownership, and this was called usureceptio. The contract of fiducia might be accompanied with a condition, by virtue of which the fiducia might cease in a given case, and thus the fiducia was con nected with the Commissoria Lex, as we see in Paulus (Sent. Recept. ï. tit. 13), and in Cic. pro Flaceo, c. 21, "fiducia commissa," which may bs
explained by reference to Commissum. (Gains, ii. 60, iii. 201 ; Rosshirt, Grundlinien, \&c. §99; Rein, Das Rö̀n. Privatreoht; Heinecc. Syntagma. ed. Haubold.)
FIDUClA'RIA ACTIO. [Actio] [G. L.]
FIGLI/NA ARS. [Fictile.]
Fighinat. [Figtile.]
FIGULUS. [Fictile.]
FILIUSFAMILIAS. [Faminia.]
FI'MBRIAE (kpoofol; Ionice, Tứcavol, Greg. Corinth.), thrums ; tassels ; a fringe.
When the weaver had finished any garment on the loom [TeLa], the thrums, i.e. the extremities of the threads of the warp, hung in a row at the bottom. In this state they were frequently left, heing considered ornamental. Often also, to prevent them from ravelling, and to give a still more artificial and ornamental appearance, they were separated into bundles, each of which was twisted ( $\sigma \tau \rho \epsilon \pi \tau 0 \hat{s}$ stuod́vols, Brunck, Anal. i. 416), and tied in one or more knots. The thrums were thns, hy a very simple process, transformed into a row of tasseis. The linen shirts, found in Egyptian tombs, sometimes show this ornament among their lower edge, and illustrate, in a very interesting manner, the description of these garments by Herodatus (ii. 81). Among the Greeks and Romans fringes were seldom worm except by females (kpoofwiod $\chi \iota \tau \omega \nu \alpha$, Brunck, ii. 525 ; Jacobs, \&c. ad loc. ; Pollux, vii. 64; Sueton. Jul. 45). Of their mamer of displaying them the best idea may be formed by the inspection of the annexed woodcut, taken from a small bronze, representing a Roman lady who wears an inner and an onter tumic, the latter being fringed, and over these a large shawl or pallium.

Among barbarous nations the amictus was often worn by men with a fringe, as is seen very conspicuously in the group of Sarmatians at p. 213 By crossing the bundles of thrums, and tying them at the points of intersection, a kind of network was produced, and we are informed of a fringe of this description, which was, moreover, hang with hells. (Diod. xviii. 26.) The ancients also mannfactured fringes separately, and sewed them to the borders of their garments. They were
likewise made of gold thread and other costly materials. Of this kind was the ornament, consisting of a hundred golden tassels, which surrounded the mythical shield of Jupiter, the aizis Tvo auv $6 \sigma \sigma a$, and which depended from the girdle of Juno. (Hom. П. ij. 448, v. 738, xiv. 181, xvii. 593.$)$

In consequence of the tendency of wool to form itself into separate bundles like tassels (nvoavクjov, Aelian, $H . A$. xvi. 11), the poets speak of the golden fleece as consisting of them (Pind. Pyth. iv. 411 ; Apoll. Rhod. iv. 1146) ; and Cicero, declaiming against the effeminacy of Gabinins, applies the same expression to his curling locks of hair (in Pis. 11).
[J. Y.]

## FINITO'RES. [Agrimensores.]

FI'NIUM REGUNDO'RUM ACTIO. If the boundaries of contiguons estates were accidentally confused, each of the parties interested in the reestablishment of the houndaries might have an action against the other for that purpose. This action belonged to the class of duplicia judicia. [Familiar Erciscundae Actio.] In this action each party was bound to account for the fruits and profits which he had received from any part of the land which did not belong to him, and also to account for any injury which it had sustained through his culpa. Each party was also entitlod to compensation for improvements made in the portion of land which did not belong to him. (Dig. 10. tit. 1.) There is an article entitled 'Ueber die Gränzscheidungsklage, by Rudorff in the Zeitselhrift für Geschichithiche Rechtrwissenschaft, vol. x. [Aoer.]
[G. L.]
FISCA/LES. [Gladiatores.]
FISCUS. The following is Savigny's account of the origin and meaning of this term:-

In the republican period, the state was designated by the term Aerarium, in so far as it waa viewed with respect to its having property, whicb ultimately resolved itself into receipts into, and payments made out of, the public chest. On the establishment of the imperial power, there was a division of the provinces between the senate, as the representative of the old republic, and the Caesar; and there was consequently a division of the most important branches of public income and expenditure. The property of the senate retained the name of Aerarium, and that of the Caesar, as such, received the name of Fiscus. The private property of the Caesar (res privata Principis, ratio Caesaris) was quite distinct from that of the Fiscus. The word Fiscus signified a wicker-basket, or pannier, in which the Romans were accustomed to keep and carry abont large sums of money (Cic. Verr. i. 8 ; Phaedr. Fab. ii. 7) ; and hence Fiscus came to signify any person's treasure or money chest. The importance of the imperial Fiscus soon led to the practice of appropriating the name to that property which the Caesar claimed as Caesar, and the word Fiscus, without any adjunct, was used in this sense (res fisci est, Juv. Sat. iv. 54). Ultimately the word came to signify generally the property of the state, the Caesar having concentrated in himself all the sovereign power, and thus the word Fiscus finally had the same signification as Aerarium in the republican period. It does not appear at what time the Aerarium was merged in the Fiscus, though the distinction of name and of thing continued at least to the time of Hadrian. In the later periods the words Aerarium and Fis-
cus were often used indiscriminately, but only in the sense of the imperial chest, for there was then no other public chest. So long as the distinction existed between the aerarium and the fiscus, the law relating to them severally might be expressed by the terms jus populi and jus fisci, as in Paulus (Sent. Recept. v. 12), though there is no reason for applying the distinction to the time when Paulus wrote ; for, as already observed, it had then long ceased.

The Fiscus had a legal persomal existence ; that is, as the subject of certain rights, it was legally a person, by virtue of the same fiction of law which gave a personal existence to corporations, and the communities of cities and villages. But the Fiscus differed in many respects from other persons existing by fiction of law; and, as an instance, it was never under any incapacity as to taking an hereditas, which, for a long time, was tne case with corporations, for the reason given by Ulpian. [CoLlegium]. These reasons would also apply to the Populas, as well as to a Municipium, and yet the populus is never alluded to as being under such disability; and in fact it could not, consistently with being the source of all rights, be under any legal disabilities.

Various officers, as Procuratores, Advocati [Advocatus], Patroni, and Praefecti were employed in the administration of the Fiscus. Nerva established a Praetor Fiscalis to administer the law in matters relating to the Fiscns. The patrimonium or private property of the Caesar was administered by Procuratores Caesaris. The privileges of the Fiscus were, however, extended to the private property (ratio) of the Caesar, and of his wife the Augusta. (Dig. 49. tit. 14. s. 6.)
Property was acquired by the Fiscus in various ways, enumerated in the Digest (49. tit. 14. s. 1), many of which may be arranged under the head of penalties and forfeitures. Thus, if a man was led to commit suicide in consequence of having done some criminal act (flagitium), or if a man made counterfent coim, his property was forfeited to the figcus. (Paulus, S. R. v.12.) The officers of the Fiscus generally received information (nunciationes) of such occurrences from private individuals, who were rewarded for their pains. Treasure (ilhesaurus) which was found in certain places was also subject to a claim on the part of the Fiscus. To explain the rights and privileges of the Fiscus, and its administrations, would require a long discossion. (Dig. 49. tit. 15. de Jure Fisci; Cod. 10. tit. 1; Cod. Theod. 10. tit. 1; Paulus, Sert. Recept. v. 12 ; Savigny, System des heut. Röm. R. vol. ii.; Fraymentum veteris jurris-consulti de Jure Fisci, printed in Goeschen's edition of Gaius ; Savigny, Neu entdeckte Quellen des Röm. R., Zeitschrift, vol. iii.) [G. L.]

FISTU'CA, an instrument used for ramming down pavements and threshing floors, and the foundations of buildings (Cato, R. R. 18, 28 ; Plin. H. N. xxxvi. 25. в. 61 ; Vitruv. iii. 3. в. 4. § 1 , x. 3. s. 2. § 3) ; and also for driving piles (Caes. B. G. iv. 17). When used for the former purpose, that of making earth solid, it was no doubt a mere log of wood (shod perhaps with iron), with handles to lift it up ; just like a paviour's rammer. But in the case cited from Caesar, where it was used for driving the piles of his bridge over the Rhine, it is almost evident that it must have been a machine, something like our pile-driving engine (or monkey), by which a heary log of wood, shod
with iron, was lifted up to a considerable height and then let fall on the head of the pile. [P.S.]

F1'STULA ( $\sigma \omega \lambda \nmid \nu$ ), a water-pipe. Vitruvius (vii. 7. 8. 6. §.1, ed. Schn.) distinguishes three modes of conveying water: by channels of masonry (per canales structiles), by leaden pipes (fistultis plumbeis), and by earthen pipes (tubulis foctilibus); hut of these two sorts of pipes the leaden were the more commonly used.* [Aquarductus.] They were made by bending up cast plates of lead into a form not perfectly cylindrical, but having a sort of ridge at the junction of the edges of the plate, as represented in the following engraving, taken from antiqne specimens. (Frontin. de Aquaed. p. 73. fig. 15, 16, ed. Polen. ; Hirt, Lehre d. Gebäude, pl. xxxii. fig. 8.)

In the manufacture of these pipes, particular attention was paid to the bore, and to the thickness. The accounts of Vitruvius, Frontinus, and other writers, are not in perfect accordance; but it appears, from a comparison of them, that two different systems of measurement were adopted, namely, either by the width of the plate of Iead (lamina or lamna) hefore it was bent into the shape of a pipe, or by the internal diameter or hore (lumen) of the pipe when formed. The former is the system adopted by Vitruvius (l. c. § 4); according to him the leaden plates were cast of a length not less than ten feet, and of a width containing an exact number of digits (sixteenths of a foot), which number was of course different for different sized pipes ; and then the sizes of the pipes were named from the number of digits in the width of the plates, as in the following table, where the numbers on the right hand indicate the number of pounds which Vitruvius assigns to each ten-feet length of pipe : --
Centenaria, from a plate 100 digits wide: 1200 lbs. Octogenaria - 80 - 960 -Quinquagenaria- 50 - : 600 -

* The etymological distinction between fistula and tubus seems to be that the former, which originally signified a fute, was a small pipe, the lstter a large one ; but, in usage, at least so far as waterpipes are concerned, it seems that fistula is applied to a Jeaden pipe, tubus and tububus to one of any other material, especially of terra-cotta, as in the above and the following passages. (Varro, R.R. i. 8 ; Colum. i. 5 ; Plin. v. 31. s. 34, xvi. 42. s. 81, xxxv. 12. s. 46 ; Frontinus, see below.)

| Quadragenaria |  | 40 | -- | 480 |
| :---: | :---: | :---: | :---: | :---: |
| Tricenaria | - | 30 | - | 360 |
| Vicenaria | - | 20 | -- | 240 |
| Quindena | - | 15 | - | 180 |
| Dena |  | 10 | - | 120 |
| Octona | - | 8 | - | 96* |
| Quinaria | - | 5 |  |  |

From this scale it is evident, at a mere glance, that the thickness of the platos was the same for pipes of all sizes, namely, such that each strip of lead, ten feet long and one digit wide, weighed twelve pounds. The account of Vitruvins is followed by Pliny (H.N. xxxi. 6. s. 31) and Palladins (ix. 12 : comp. the notes of Schneider and Gesner).

Frontinus, who enters into the subject much more minutely, objects to the system of Vitruvins as too indefinite, on account of the variation which is made in the shape of the pipe in bending up the plate of lead ; and he thinks it more probable that the names werc derived from the length of the internal diameters, reckoned in quadrantes (the unit heing the digit), that is, in quarters of a digit ; so that the Quinaria had a diameter of five fourths of a digit, or $1 \frac{1}{4}$ digit, and so on, up to the Vicenaria, ahove which the notation was altered, and the names were no longer taken from the number of linear quarters of a digit in the diameter of the pipe, but from the number of square quarters of a digit in its area, and this system prevailed up to the Centumvicena, which was the largest size in use, as the Quinaria was the smallest: the latter is adopted by Frontinus as the standard measure (modulus) of the whole system. (For further details see Frontinus, de Aquaed. 20-63, pp. 70-112, with the Notes of Polenus.) Another mode of explaining the nomenclature was by the story that when Agrippa undertook the oversight of the aquaeducts, finding the modulus inconveniently small, he enlarged it to five times its diameter, and hence the origin of the fistula quinaria. (Frontin. 25, pp. 80, 81.) Of these accounts that of Vitruvius appears at once the most simple and the most correct: indeed it would seem that the plan of measurement was very probably the invention of Vitruvins himself. (Frontin. l.c.) Respecting the uscs of pipes in the aqueducts, see Aquarductus.

Of the earthen (terra-cotta) pipes we know very little. Pliny says that they are best when their thickness is two digita ( $1 \frac{1}{2}$ inch), and that each pipe should have its end inserted in the next, and the joints should be cemented; but that leaden pipes should be used where the water rises. The earthen pipes were thought more wholesome than the leaden. (Plin. H. N. xxxi. 6. s. 31 ; Vitruv. l.c. $\S 10$; Pallad. ix. 11.) Water pipes were also made of leather (Plin. H.N. v. 31. s. 34; Vitruv. l.o. §8) ; and of wood (Pallad. l.c.), especially of the hollowed trunks of the pine, fir, and aider. (Plin. M. N. xvi. 42. s. 81.)
[P.S.]
FLABELLUM, dim. FLABELLULUM,
 ercise of the fan," so wittily described by Addison (Spect. No. 102), was wholly unknown to the ancients. Neither were their fans so constructed

[^30]that they might be furled, unfurled, and fluttered, nor were they even carried by the ladies themselves. They were, it is true, of elegant forms, of delicate colours ( prasino fabello, Mart. iii. 40), and sometimes of costly and splendid matorials, such as peacock's feathers (Propert. ii. 15) ; but they were stiff and of a fixed shape, and were held by female slaves (flabelliferae, Philemon, as translated by Plaut. Trin. ii. 1. 22), by beautiful hoys (Strato, Epig. 22), or by eunuchs (Eurip. Orest. 1408 1412 ; Menander, p. 175, ed. Meineke; and as translated by Terence, Eun. iii. 5. 45-54), whose duty it was to wave them so as to produce a cooling breeze. (Brunck, Anal. ii. 92.) A gentieman might, nevertheless, take the fan into his own hand and use it in fanning a lady as a compliment. (Ovid, Ars Am. i. 161, Amor. iii. 2. 38.) The woodcut at p. 257 shows a female bestowing this attendance upon her mistress. The fan which she holds is apparently made of separate feathers joined at the base, and also united both by a thread pass. ing along the tips and by another stronger threas tied to the middle of the shaft of each feather. Another use of the fan was to drive away flies from living persons, and from articles of food which were either placed upon the table or offered in sacrifice. When intended for a fly-flapper it was less stiff, and was called muscarium (Mart. xiv. 67), and $\mu v t o \sigma \delta 6 \eta$ (Menander, p. 175 ; Aelian, H. A. xv. 14 ; Brunck, Anal. ii. 388, iii. 92). In short, the manner of using fans was precisely that which is still practised in China, India, and other parts of the East ; and Euripides (l. c.) says that the Greeks derived their knowledge of them from "barbarous" countries. The emperor Angustus had a slave to fan him during bis sleep (Sueton. Aug. 82) ; for the use of fans was not confined to females.

Besides separate feathers the ancient fan was sometimes made of linen, extended upon a light frame. (Strato, l. c.) From the above-cited passage of Euripides and the ancient Scholia upon it, compared with representations of the flabellum in ancient paintings, it also appears to have been made by placing the two wings of a b.rd back to back, fastening them together in this position, and attaching a handle at the base. (See also Brunck,

A more homely application of the fan was its use in cookery [Focus]. In a painting which represents a sacrifice to Isis (Ant. d' Ercolano, ii. 60), a priest is seen fanning the fire upon the altar with a triangular flabellum, such as is still used in Italy. This practice gave origin among classical writers to expressions corresponding to ours, meaning to fan the flame of hope (Alciph. iii. 47), of love ( $\delta \iota \pi i\} \in \iota \nu$, Brunck, ii. 306), or of sedition (Aristoph. Ran. 360 ; Cic. pro Flacc. 23).
[J. Y.]
FLAGRUM, dim. FLAGELLUM ( $\mu \alpha \sigma \tau \iota \xi$ ), a whip, a scourge, to the handlo of which was fixed a lash made of cords (funibus, Hor. Epod. iv. 3 ; John, ii. 15), or thongs of leather (loris, Hor. Epist. i. 16.47 ; $\sigma \kappa v \boldsymbol{c}_{\text {liva, Anac. p. 357, ed. }}$ Fischer), especially thongs made from the ox's -hide (bubulis exuviis, Plaut. Most. iv. 1. 26). The flagellum properly so called was a dreadful instrument, and is thus put in opposition to the scutica, which was a simple whip. (Hor. Sat. i. 3. 119.) Cicero in like manner contrasts the severe flagellas with the virgae ( $p$ тo Rabir. 4). The fagellum was chiefly used in the punishment of slaves. It
was knotted with bones or heavy indented circles of bronze or terminated by hooks, in which case it was aptly denominated a scorpion. The cut below represents a scourge taken from a bas-relief of the statue of Cybele in the Museum of the Capitol at Rome, and fully justifies the epithet of Horace (l. c.), horribile fagellum. The infliction of punishment with it upon the naked back of the sufferer (Juv. vi. 382) was sometimes fatal (Hor. Sat. i. 2. 41), and was carried into execution by a class of persons, themselves slaves, who were called lorarii. A slave who had been flogged was called flagrio ( $\mu \alpha \sigma \tau$ rilas, Philemon, p. 415. ed. Mein. ; Aristoph. Ran. 502, Equit. 1225, Lys. 1242 ; mastigia, Plautus, passim; Ter. Adelph. v. 2. 6), which of course became a term of mockery and contempt. During the Saturnalia the scourge was deposited under the seal of the master. We likewise find that some gladiators fought with the flagella (Tertull. Apol. 21), as in the coin here introduced. The flagellum here has two lashes. (See also cut, p. 101.)
[J. Y.]

FLAMEN, the name for any Roman priest who was devoted to the service of one particular god (Divisque alies alil sacerdotes, omnibus pontifices, singulis flamines sunto, Cic. De Leg. ii. 8), and who received a distinguishing epithet from the deity to whom he ministered. (Horum, sc. flaminum, singuli cognomina habent ab eo deo quoi sacra faciunt, Varro, De Ling. Lat. v. 84.) The most dignified were those attached to Diiovis, Mars, and Quirinus, the Flamen Dialis, Flamen Martialis, and Flamen Quirinalis. The two first are said by Plutarch (Num. c. 7) to hsve been established by Romulus; but the greater number of authorities agree in referring the institntion of the whole three, in common with all other matters connected with state religion, to Numa. (Liv. i. 20 ; Dionys. ii. 64. \&c.) The number was eventually increased to fifteen (Fest. s. v. Maximae dignationis): the three original flamens were always chosen from among the patricians, and styled Majores (Gaius, i. 112) ; the rest from the plebeians, with the epithet Minores (Fest. Majores Flamines). Two rude lines of Ennius (Varro, de Ling. Lat. vii. 44) preserve the names of six of these, appointed, says the poet, by Numa, -

> Volturnalem, Palatualem, Furinalem,
> Floralemque, Falacrem et Pomonalem fecit
> Hic idem.....

to which we may add the Flamen Volcanalis (Varro, De Ling. Lat. v. 84), and the Flamen Carmentalis (Cic. Brut. 14). We find in books of antiquities mention made of the Virbialis, Laurentialis, Lavinalis, and Lurullaris, which would com-
plete the list; but there is nothing to prove thst these four were Roman and not merely provincial priests.

It is generally stated, upon the anthority of Aulus Gellius (xv. 27), that the flamens were elected at the Comitia Curiata, and this was doubtless the case in the esrlier times; but upon examining the passage in question, it will he seen that the grammarian speaks of their induction into office only, snd therefore we may conclude that subsequently to the passing of the Lex Domitia they were chosen in the Comitia Tributa, especially since so many of them were plebeians. After being nominated by the people, they were received (capti) and installed (inaugurabantur) by the Pontifex Maximus (Liv. xxvii. 8, xxix, 38 ; Val. Max. vi. 9. § 3), to whose suthority they were at all times subject. (Liv. Epit. xix., xxxvî. 51 ; Val. Max. i. 1. §2.)

The office was understood to last for life ; hut s fiamen might be compelled to resign (flaminio abire) for a breach of duty, or even on account of the occurrence of an ill-omened accident while digcharging his functions. (Val. Max. i. l. § 4.)

Their characteristic dress was the apex [APEX], the laena [Laena], snd a laurel wreath. The name, according to Varro and Festus, was derived from the band of white wool (filum, filamen, famen) which was wrapped ronnd the apex, and which they wore, without the spex, when the hest was oppressive. (Serv. Virg. Aen. viii. 664.) This etymology is more reasonable than the transformation of pileamines (from pileus) into flamines. (Plutarch, Num. 7.) The most distinguished of sll the flamens was the Dialis; the lowest in rank the Pomonalis. (Festus, s. v. Maximae dignationis.)

The former enjoyed many peculiar honours. When a vacancy occurred, three persons of patrician descent. whose parents had been married according to the ceremonies of confarreatio [MARriage], were nominated by the Comitia, one of whom was selected (captus), snd consecrated (inaugurabatur) by the Pontifex Maximus. (Tacit. Ann. iv. 16 ; Liv. xxvii. 8.) From that time forward he was emancipated from the control of his father, and became sui juris. (Gaius, i. 130 ; Ulpian, Frag. x. 5 ; Tac. Ann. iv. 16.) He alone of all priests wore the albogalerus [APEX] (Varro, ap. Gell. x. 15); he had a right to a lictor (Plut. Q. R. p. 119, ed. Reiske), to the toga practemta, the sella curulis, and to a seat in the senate in virtue of his office. This last privilege, sfter having been suffered to fall into disuse for a long period, was asserted by C. Valerius Flaccus (в. с. 209), and the claim allowed, more, however, says Livy, in deference to his high personal character than from a conviction of the justice of the demand. (Liv. xxvii. 8; compare i. 20.) The Rex Sacrifictlus alone was entitled to recline above him at a banquet: if one in honds took refuge in his house, the chains were immediately struck off and conveyed through the impluvium to the roof, sud thence cast down into the street (Aul. Gell x. 15): if a criminal on his wsy to punishment met him, and fell suppliant st his feet, he was respited for that day (Aul. Gell. x. 15 ; Plut. Q. R. p. 166) ; usages which remind us of the right of sanctuary attached to the persons and dwellings of the papal cardinals.

To counterbalance these high honours, the Dialis was subjected to a multitude of restrictions and
privations, a long cotalogue of which has been compiled hy Aulns Gellius (x. 15) from the works of Fahius Pictor and Masurius Sabinns, while Plutarch, in his Roman Questions, endeavours to explain their import. Arnong these were the following: 一

It was unlawful for him to be out of the city for a single night (Liv. v. 52) ; a regulation which seems to have been modified by Augustus, in so far that an absence of two nights was permitted (Tacit. Ann. iii. 58.71); and he was forbidden to sleep out of his own bed for three nights consecntively. Thus, it was impossible for him to undertake the government of a province. He might not mount upon horseback, nor even touch a horse, nor look upon an army marshalled without the pomoerium, and hence was seldom elected to the consulship. Indeed, it would seem that originally he was aitogether precluded from seeking or accepting any civil magistracy (Plut. Q.R. p. 169) ; but this last prohibition was certainly not enforced in later times. The object of the above rules was manifestly to make him literally Jovi adsidurm sacerdotem ; to compel constant attention to the dutios of the priesthood; to leave him in a great measure without any temptation to neglect them. The origin of the superstitions which we shall next enumerate is not so clear, but the curions will find abundance of speculation in Plutarch (Q. R. pp. 114, 118, 164-170), Festus (s. v. Edera and Equo), and Pliny (H. N. xviii. 30, xxviii. 40). He was not allowed to swear an oath (Liv. xxxi. 50), nor to wear a ring " nisi pervio et casso," that is, as they explain it, unless plain and without stones (Kirchmann, De Annulis, p. 14); nor to strip himself naked in the open air, nor to go out without his proper head-dress, nor to have a knot in any part of his attire, nor to walk along a path overcanopied by vines. He might not touch flour, nor leaven, nor leavened bread, nor a dead body: he might not enter a bustum [FUNUS], but was not prevented from attending a funeral. He was forbidden either to touch or to name a dog, a shegoat, ivy, beans, or raw flesh. None but a free man might cut his hair ; the clippings of which, together with the parings of his nails, were buried beneath a felix arbor. No one might sleep in his bed, the lege of which were smeared with fine clay; and it was unlawful to place a box containing sacrificial cakes in contact with the bedstead.

Flaminica was the name given to the wife of the dialis. He was required to wed a virgn according to the ceremonies of confarreatio, which regulation also applied to the two other flamines majores (Serv. ad Virg. Aen. iv. 104, 374 ; Gaius, i. 112) ; and he could not marry a second time. Hence, since her assistance was essential in the performance of certain ordinances, a divorce was not permitted, and if she died the dialis was obliged to resign. The restrictions imposed upon the flaminica were similar to those by which her husband was fettered. (Aul. Gell. x. 15.) Her dress consisted of a dyed rohe (venenalo operitur); her lair was plaited up with a purple band in a conical form (tutulus); and she wore a small square cloak with a border (rica), to which was attached a slip cut from a felix arbor. (Fest. s. v. Tutulum, Rica; Varro, De Ling. Lat. vii. 44.) It is difficult to determine what the rica really was ; whether a short cloak, as appears most pro-
bable, or a napkin thrown over the bead. She was prohihited from mounting a staircase consisting of more than three steps (the text of Aulus Gellius is uncertain, but the object must lave heen to prevent her ancles from being seen); and when she went to the argei [ARGEI] she neither combed nor arranged her hair. On each of the nundinae a ram was sacrificed to Jupiter in the regia by the flaminica. (Macrob. i. 16.)

After the death of the flamen Merula, who was chosen consul suffectus on the expulsion of Cinna (Vell. Pat. ii. 20 ; Val. Max. ix. 12. §5), and who, upon the restoration of the Marian faction, shed his olvn blood in the sanctuary (в. c. 87), calling down curses on his encmies with his dying breath (Vell. Pat. ii. 22), the priesthood remained pacant until the consecration of Servius Maluginensis (в. c. 11) by Augustus, then Pontifex Maximus. Julius Caesar had indeed heen nominated in his 17 th year, but was never installed ; and during the whole of the above period the duties of the office were discharged by the Pontifex Maximus. (Suet. Jul. c. 1, compared with Vell. Pat. ii. 43, and the Commentators. See also Suet. Octav. 31 ; Dion Cass. liv. 36 ; Tacit. Ann. iii. 58. The last quoted historian, if the text be correct, states the interruption lasted for 72 years only.)

The municipal towns also had their flamens. Thus the celebrated affray between Milo and Clodius took place while the former was on his way to Lanuvium, of which he was then dictator, to declare the election of a flamen (ad flaminem prodendum). After the deification of the emperors, flamens were appointed to superintend their worship in Rome and in all the provinces; and we find constantly in inscriptions such titles as Flamen Augustalis; Flamen Tiberii Caesaris; Flamen D. Julif, \&c., and sometimes Flamen Divorum Omnium (sc. imperatorum).

Flaminia, according to Festus and Aulus Gellius (x. 15), was the house of the Flamen Dialis, from which it was unlawful to carry out fire except for sacred purposes.

Flaminia, according to Festus, was also a name given to a little priestess (sacerdotula), who assisted the flaminica in her duties.

FLA'MMEUM. [MATRimonium.]
FLEXU'MINES. [Equites.]
FLORA/LIA, or Florales Ludi, a festival which was celebrated at Rome in honour of Flora or Chloris. It was solemnized during five days, heginning on the 28th of April and ending on the 2 d of May. (Ovid, Fost. v. 185 ; Plin. H. N. xviii. 69.) It was said to have heen instituted at Rome in 238 в. c., at the command of an oracle in the Sihylline hooks, for the purpose of obtaining from the goddess the protection of the blossoms (ut omnia bene defloresccrent, Plin. l. c.; compare Vell. Pat. i. 14 ; Varro, De Re Rust. i. 1). Some time after its institution at Rome its celchration was discontinued; but in the consulship of L. Postumius Albinus and M. Popilius Laenas ( 173 b. c.), it was restored, at the command of the senate, by the aedile C. Servilius (Eckhel, De Num. Vet. v. p. 308 ; cornpare Ovid, Fast. $\nabla .329, \& c$. ), as the blossoms in that year had severely suffered from winds, hail, and rain. The celebration was, as usual, conducted by the rediles (Cic. in Verr. v. 14 ; Valer. Max. ii. 10. § !3; Eckhel, l.c.), and was carried on with excessive merriment, drinking, and lascivious games. (Mart.

## FOEDERATAE CIVITATES.

i. 3; Senec. Epist. 96.) From Valerius Maximns we learn that theatrical and mimic representations formed a principal part of the various amusements, and that it was customary for the assembled people on this occasion to demand the female actors to appear naked on the stage, and to amuse the multitude with their indecent gestures and dances. This indecency is probably the only ground on which the absurd story of its origin, related by Lactantius (Institut. i. 20), is founded. Similar festivals, chiefly in spring and autumn, are in southern countries seasons for rejoicing, and, as it were, called forth by the season of the year itself, without any distinct connection with any particnlar divinity; they are to this day very popular in ltaly (Voss, ad Virg. Georg. ii. 385), and in ancient times we find them celebrated from the southern to the northern extremity of Italy. (See Anthesphoria, and Justin. xilii, 4.) The Floralia were originally festivals of the country people, which were afterwards, in Italy as in Greece, introduced into the towns, where they naturally assumed a more dissolute and licentious character, while the country people continued to celebrate them in their old and merry but innocent manner. And it is highly probable that such festivals did not become connected with the worship of any particular deity until a comparatively late period. (Buttmann, Mytholog. ii. p.54.) This would account for the late introduction of the Floralia at Rome, as well as for the manner in which we find them celebrated there. (See Spanheim, De Praest. et Usu Numism. ii. p. 145, \&c.)
[L. S.]
FOCA'LE, a covering for the ears and neck, made of wool and worn by infirm and delicate persons. (Hor. Sat. ii. 3. 255 ; Senec. Qut. Nat. iv. 13; Quintil. xi. 3. 144; Mart. i. 121, xiv. 142.)
[J. Y.]
FOCUS, dim. FO'CULUS ( $\epsilon \sigma \tau \ell \alpha:$ é $\sigma \chi \alpha{ }_{\alpha}^{\prime} \rho a$,
 brazier. The fire-place, considered as the highest member of an altar, is described under Ara, p .116. Used by itself, it possessed the same sacred character, being, among the Romans, dedicated to the Lares of each family. (Plaut. Aul. ii. 8. 16 ; Cato, De Re Rust. 15 ; Ovid, Fast. ii. 589, 611, iii. 423; Juv. xii. 85-95.) It was, nevertheless, made subservient to all the requirements of ordinary life. (Hor. Epod. ii. 43, Epist. i. 5.7 ; Ovid, Met. viii. 673 ; Sen. De Cons. ad Alb. 1.) It was sometimes constructed of stone or brick, in which case it was elevated only a few inches above the ground, and remained on the same spot; but it was also frequently made of bronze, and it was then variously ornamented, and was carried continually from place to place. This movahle-hearth, or brazier, was properly called foculus and є' $\sigma \chi \alpha{ }_{\alpha} \rho \alpha$. One is shown at p. 190. Another, found at Caere in Etruria, and preserved in the British Museum, is represented in the annexed woodcut.

In accordance with the sentiments of veneration with which the domestic fire-place was regarded, we find that the exercise of hospitality was at the same time an act of religious worship. Suppliants, strangers, all who sought for mercy and favour, had recourse to the domestic hearth as to an altar. (Hom. Od. vii. 153-169; Apoll. Rhod. iv. 693.) The phrase "pro aris et focis" was used to express attachment to all that was most dear and venerable. (Cic. de Nat. Deor. iii. 40 ; Flor. iii. 13.) Among the Romans the focus was placed in the Atrium, which, in primitive times, was their kitchen and dining-room. (Virg. Aen. i. 726 ; Servius, ad loc.) There it remained, as we see in numerous examples at Pompeii, even after the progress of refinement had led to the use of another part of the house for culinary purposes. On festivals the house-wife decorated the hearth with garlands (Cato, De Re Rust. 143; Ovid, Trist. v. 5. 10); a woollen fillet was sometimes added. (Propert. iv. 6. 1-6). [J. Y.]

FOEDERA'TAE CIVITA'TES, FOEDERA'TI, SO'CII. In the seventh century of Rome these names expressed those Italian states which were connected with Rome by a treaty (foedus). These names did not include Roman colonies or Latin colonies, or any place which had obtained the Roman civitas. Among the foederati were the Latini, who were the most nearly related to the Romans, and were designated by this distinctive name; the rest of the foederati were comprised under the name of Socii or F'oederati. They were independent states, yet under a general liability to furnish a contingent to the Roman army. Thus they contributed to increase the power of Rome, but they had not the privileges of Roman citizens. The relations of any particular federate state to Rome might have some peculiarities, but the general relation was that expressed above; a kind of condition, inconsistent with the sovereignty of the federates, and the first stage towards unconditional submission. The discontent among the foederati, and their clauns to be admitted to the privileges of Roman citizens, led to the Social War. The Julia Lex (b. c. 90) gave the civitas to the Socï and Latini ; and a lex of the following year contained, among other provisions, one for the admission to the Roman civitas of those peregrini who were entered on the lists of the citizens of federate states, and who complied with the provisions of the lex. [Civitas.] It appears, bowever, that the Lex Julia, and probably also the Lex of the following year, contained a condition that the federate state slould consent to accept what the Leges offered, or, as it was technically expressed, "populus fundus fieret." (Cic. pro Balbo, c. 8.) Those who did not become fundi populi did not obtain the civitas. Balbus, the client of Cicero, was a citizen of Gader, a federate town in Spain. Cn. Pompeius Magnus had conferred the Roman civitas on Balbus, by virtue of certain powers given to him by a lex. It was objected to Balbus that he could not have the civitas, unless the state to which he belonged " fundus factus esset; which was a complete misapprehension, for the term fundus, in this sense, applied to a whole state or community, whether federate or other free state, which accepted what was offered, and not to an individual of such state or community, for he might accept the Roman civitas without asking the consent of his fellow citizens at home, or withont all of them receiving
the same privilege that was offered to himself. The people of a state which had accepted the Roman civitas (findus factus est), were called, in reference to their condition after such acceptance, " fundani." This word only occurs in the Latin inscription (the Lex Romana) of the tahlet of Heraclea, 1. 85, and proves that the inscription is posterior to the Lex Julia de Civitate. It has indeed been supposed that the word may refer to the acceptance by the state of Heraclea of this lex which is on the tahlet; but there is no doubt that it refers to the prior lex which gave the civitas. [Funnus.]

It must be observed that the acceptance of the two Leges above mentioned could only refer to the federate states, and the few old Latin states. The Latinae coloniae also received the civitas by the Julia Lex ; hut as they were under the sovereignty of Rome, their consent to the provisions of this lex was not required.

Before the passing of the Julia Lex, it was not unusual for the Socii and Latini to adopt Roman leges into their own system, as examples of which Cicero mentions the Lex Furia de Testamentis, and the Lex Voconia de Mulierum Hereditatibus; and he adds that there were other instances. (Pro Balbo, c. 8.) In such cases, the state which adopted a Roman lex was said ' in eam legem fundus fieri." It hardly needs remark that the state which adopted a Roman lex, did not thereby obtain for its citizens any privileges with respect to the Roman state: the federate state merely adopted the provisions of the Roman lex as heing applicable to its own circumstances.

An apparent difficulty is caused by the undonbted fact, that the provisions of the Lex Julia required that the states which wished to avail themselves of its benefits, should consent to accept them. As the federate states commenced the war in order to obtain the civitas, it may be asked why was it given to them on the condition of becoming "fundus?" In addition to the reasons for such condition, which are suggested by Savigny, it may be observed that the lex only expressed in terms what would necessarily have been implied, if it had not been expressed: a federate state must of necessity declare by a public act its consent to accept such a proposal as was contained in the Lex Julia. It appears from the cases of Heraclea and Naples, that the citizens of a federate state were not in all cases unanimons in changing their former alliance with Rome into an incorporation with the Roman state. [Civitas.]

There were federate cities beyond the limits of Italy, as shown by the example of Gades: Saguntum and Massilia also are enumerated among such cities. (Savigny, Volkssolluss der Tafel Von Heraclea, Zeitschrift, \&c. vol. ix. ; Mazochi, Tab. Herac. p. 465.)
[G. L.]
FOEDUS. [Foederatae Civitates.]
FOENUS. [FENUS.]
FOLLIS, dim. FOLLI'CULUS, an inflated ball of leather, perhaps originally the skin of a quadruped filled with air: Martial (iv. 19) calls it " light as a feather." Boys and old men among the Romans threw it from one to another with their arms and hands as a gentle exercise of the body, unattended with danger. (Mart. vii. 31, xiv. 45, 47: Athen. i. 25.) The emperor Augustus (Suct. Aug. 83) became fond of the exercise as he grew old. (See Becker, Gallus, vol. i.

The term folls is also applied to a leather purse or bag (Plant. Aul. ii. 4. 23 ; Juv. xiv. 281) ; and the diminntive folliculus to the swollen capsule of a plant, the husk of a seed, or anything of similar appearance. (Senec. Nat. Quuest. v. 18 ; Tertnll. De Res. Carn. 52.)

Two inflated skins ( ov́o $^{\text {púval, Herod. i. } 68 \text {; }}$ §ढ́тvpa, Ephor. Frag. p. 188 ; $\pi \rho \eta \sigma \tau \eta \rho \epsilon s$, Apoll. Rhod. iv. 763, 777), constituting a pair of bellows, and having valves adjusted to the natural apertures at one part for admitting the air, and a pipe inserted into another part for its emission, were an essential piece of furniture in every forge and foundry. (Il. x viii. 372-470; Virg. Aen. viii. 449.) According to the nature and extent of the work to be done the bellows were made of the hides of oxen (taurinis follibus, Virg. Georg. iv. 171), or of goats (hircinis, Hor. Sat. i. 4. 19), and other smaller animals. The nozzle of the bellows was called àкрофи́бıov or $\alpha_{\kappa} \kappa о \sigma \tau \delta \mu о \nu$ (Thncyd. iv. 100 ; Enst. in 1l. xviii. 470). In bellows made after the fashion of those exhibited in the lamp here introduced from Bartoli (Ant. Lucerne, iij. 21), we may imagine the skin to have been placed between the two boards so as to produce a machine like that which we now employ.
[J. Y.]

FONS ( $\kappa \rho \eta \dot{\eta} \nu \eta$ ), signifies originally a natural spring of water, but both the Greeks and Romans had artificial fountains, made either by covering and decorating a spring with bnildings and sculpture, or by making a jet or stream of water, sup)plied by an elevated cistern, play into an artificial basin. Such fountains served the double purpose of use and ornament. Among the Greeks, they formed the only public supply of water except the rain-water which was collected in cisterne [AQUAEpuctus]; and at Rome, the poorer people, who could not afford to have water laid on to their houses, no donht procured it from the public fountains.
Several examples of natural springs, converted into ornamented fountains, in the cities of Greece, have heen mentioned under Aquaenuctus. They were covered to keep them pure and cool, and the covering was frequently in the form of a monopteral temple: there were also statues, the subjects of which were suggested by the circumstance that every fountain was sacred to some divinity, or they were taken from the whole range of mythological legends. That at Megara, erected by Theagenes, is described by Pausanias as worth seeing for its size, its beauty, and the number of its columns (i. 40. §1). That of Peirene at Corinth was adorned with covered cisterns of white marble like grottoes,

## FONS.

out of which the water flowed into the open air, nnd with a statne of Apollo, and was enclosed with a wall, on which was painted the slaughter of the suitors by Ulysses. (Paus. ii. 3. § 3; see a paper by Göttling, on the present state of this fountain, and of the Craneion, with an engraving of the source of the Peirene, in Gerhard's Archäologische Zeitung for 1844 , pp. 326,328 ; the engraving is given below.) Corinth contained numerous other fountains ;

over one of which was a statue of Bellerophon and Pegasus, with the water flowing out of the horse's hoofs (Ib. §5); over another, that of Glauce, was the Odeium ( $I b . \S 6$ ); and another was adorned with a bronze statue of Poseidon, with a dolphin at his feet, out of the mouth of which the water flowed. (Paus. ii. 2. §7. s. 8.) ln the same city, was another fountain on a still grander scale ; namely, that of Lerna, which was surrounded by a colonnade with seats for those who desired a cool retreat in summer ; the water was no doubt collected in a spacious basin in the centre. (Ib. 4. §5. s. 6 ; see also 5. § 1.) Several other fountains of a similar kind to these are descrihed or referred to by Pausanias (ii. 27, iv. 31, 33, 34, vii. 5, 2l, viii. 1), among which two descrve special mention, as they were within temples; namely, that in the temple of Erechtheus at Athens, and of Poseidon at Mantineia, which were salt-water springs (i. 26. § 5 , viii. 10. §4). Vitruvius mentions the fountain of Salmacis as among the admirable works of art at Halicarnassus. (ii. 8. § 12.)

The Romans also erected edifices of various degrees of splendour over natural springs, such as the well-known grotto of Egeria, near Rome, where the natural cave is converted by the architect into a sort of temple (comp. Plin. H. N. xxxvi. 21. s.42), and the baptisterium of Constantine. A simple mode of decorating less considerable springs was by covering thern with a vault, in the top of which was an opening, surrounded by a balustrade, or by a low wall adoraed with marble bas-reliefs, one example of which, among many, is seen in a relief representing the twelve gods, now in the Capitoline Museum. In all cases, a cistern was constructed to contain the water, either by cutting it out of the living rock, or (if the spring did not rise out of rock) by building it of masonry. Vitruvius discusses at length the different sorts of springs, and gives minute rules for testing the goodness of the spring, and for the construction of the cisterns (viii, 3. 7). The observations of Vitruvius apply chiefly to those springs and cisterns which formed the sources of the aqueducts.

At Rome, a very large proportion of the immense supply of water brought to the city by the aqueducts, was devoted to the public fountains,
which were divided into two classes; namely, lacus, ponds or reservoirs, and salientes, jets of water, besides which many of the castella werm so constructed as to be also fountains. (See Aquals ductus, p. 114, b, and the woodcut.) Agrippa, who during his aedileship paid special attention to the restoration of the Romar waterworks, is said to have constructed 700 lacus, 105 salientes, and 130 castella, of which very many were magnificently adorned; they were decorated with 300 bronze or marble statues, and 400 marble columns. (Plin. H. N. xxxvi. 15. s. 24. §9.) There were also many small private fountains in the houses and villas of the wealthy. (Plin. Epist. v. 6.) At Pompeii, the fountains are extremely numerous, and that rot ondy in the streets and public places, especially at the junctions of streets (in biviis, in triviis) ; but also in private houses. The engraving on p. 109 represents a section of one of these fountains, in which the water pours into a basin ; that now given, in which the water is thrown up in a jet, is taken from an arabesque painting on the wall

of a house at Pompeii : in the painting, the vase and pedestal rise out of a sheet of water, which may be supposed to represent the impluvium in the atrium of a house. (Respecting the fountains of Pompeii, see Pompeii, vol. i. p. 131, vol. ii. pp. 71, 78, and Sir W. Gell's Pompeiana, vol. i. pp. 390, 395, plates 50,53 .) The proof which these fountains afford, of the acquaintance of the ancients with the chief law of hydrostatics is noticed under Aquazductus, p. 109.

The forms given to fountains were as numerous as the varieties of taste and fancy. The large flat vases were a common form, and they are found, of $5,10,20$, and 30 fect in diameter, cut out of a single piece of some hard stone, such as porphyry, granite, basarite, breccia, alabaster and marble. An ingenious and elegant variety, of which there is a specimen in the Capitoline Museum, is a tripod, up the centre of which the jet passes, the legs beiog hollow to carry off the water again. Very often the water was made to flow out of bronze statues, especially of boys, and of Tritons, Nereids, Satyrs, and such beings: several of these statues have been found at Pompeii ; and four of them are engraved in Pompeii, vol. i. p. 104, one of which is given below. On the Monte Cavallo, at Rome, is a colossal statue of a river god, probably the Rhine, which was formerly in the forum of Augustus, which it refreshes with a stream of water pouring continually into a basin of granite twenty-seven feet in diameter. The celebrated group, known as the Toro Farnese, originally, in Hirt's opinion, adorned a fountain. Mythological subjects were

also sculptured over the fountains, as among the Greeks; thus at Rome, there were the fountains of Ganymedeand Prometheus, and the Nymphaeum of Jupiter. (Stieglitz, Archäol. d. Baukunst, vol. ji. pt. 2. pp. 76, 79 ; Hirt, Lehre der Gebäude, pp. 399, 403.)
[P. S.]
FORCEPS ( $\pi \nu \rho \alpha \dot{\alpha} \gamma a$ ), tongs or pincers, need no further explanation here, as they were used in antiquity for the same purposes as they are in modern times. They were invented, as the etymology indicates, for taking hold of what is hot (forvum, Festus, s. v.; Servius, ad Virg. Gearg. iv. 175, Aen. viil. 453, xii. 404), used by smiths, and therefore attributed to Vulcan and the Cyclopes. (Virg. ll. ce. ; Hom. Il. xviii. 477, Od. iii. 434; Callim. in Del. 144 ; forcipe curva, Ovid, Met. xii. 277.) [Incus; Malleus.]

FORES. [JANUA.]
FORFEX, dim. FORFICULA ( $\psi a \lambda i s$, dim. $\psi a \lambda\left(\delta_{i} \nu \nu\right)$, shears (Serv. in Virg. Aen. viii. 453), used, l. in shearing sheep, as represented in the annexed woodcut, which is taken from a carnelian

in the Stosch collection of antique gems at Berlin ; 2. in cutting hair (Eurip. Orest. 954 ; Schol. in loc.; Brunck, Anol. iii. 9 ; Virg. Catal. vii. 9 ; ferro bidenti, Ciris, 213) ; 3. in clipping hedges, myrtles, and other shrubs ( $\psi a \lambda \_\sigma \tau o l ~ \mu \nu \rho \rho_{\nu \nu \omega}^{\prime} \omega \in s$, Hierocles, ap. Stob. Serm. 65.)

In military manoeuvres the forfex was a tenaille, i. e. a hody of troops arranged in the form of an acute angle, so as to receive and overcome the oppasite hody, called a Cuncus. (Gell. x. 9 ; Amm. Marc. xvi. 11.)

In architecture the term $\psi a \lambda$ is denoted a conatruction which was probably the origin of the arch (Macculloch's West. 1slands, i. p. 142, iii. p. 49), consisting of two stones leaning against each other
so as to form an acute angle overhead, as is seen in the entrance to the pyiamid of Cheops and in the ruins of Mycenae ; and gradually brought nearer to the forms which we now employ. (See woodcut, p. 125.) (Plat. De Leg. xii. p. 292. ed. Bekker ; Diod. Sic. ii. 9.)
[J. Y.]
FORI. [Navis ; Gircus, p. 283, b.]
FORMA, dim. FORMULA, second dim. FORMELLA ( (úmos), a pattern, a mould ; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making pottery, pastry, cheese, bricks, and coins. The moulds for coins were made of a kind of stone, which was indestructible by heat. (Plin. H.N. xxxvi. 49.) The mode of pouring into them the melted metal for casting the coins will be hest understood from the annexed woodcut, which represents one side of a mould, engraved by Seroux

d'Agincourt. Moulds were also employed in making walls of the kind, now called pisé, which were built in Africa, in Spain, and about Tarentum. (Varro, De Re Rust. i. 14 ; Pallad. i. 34 ; parietes formacei, Plin. H. N. xxxv. 48.) The shoemaker's last was also called forma (Hor. Sat. ii. 3. 106) and tentipellium (Festus, s. v.), in Greek ка入ótous. (Plato, Conviv. p. 404, ed. Bekker.)

The spouts and channels of aquaeducts are called formae, perhaps from their resemblance to some of the moulds included in the above enumeration. (Frontin. De Aquaeduct. 75, 126.) [J. Y.]

FO'RMULA. [Actio.]
FORNACA'LIA, a festival in honour of Fornax, the goddess of furnaces, in order that the corn might be properly baked. (Festus, s. v.) This ancient festival is said to have heen instituted by Numa. (Plin. H. N. xviii. 2.) The time for its celebration was proclaimed every year by the Curio Maximus, who arnounced in tablets, which were placed in the forum, the different part which each curia had to take in the celebration of the festival. Those persons who did not know to what curia they belonged, performed the sacred rites on the Quirinalia, called from this circumstance the Sturtorum fericce, which fell on the last day of tlo; Fornacalia. (Ovid, Fasti, ii. 527 ; Varro, De Ling.

Lat. vi. 13, with Müller's note ; Festus, s. v. Quirinalia, Stultor. feriae.)
The Fornacalia continued to be celebrated in the time of Lactantins. (Lactant. i. 20.)

FORNAX, dim. FORNA'CULA ( $\kappa \alpha \alpha^{\prime} \mu \nu 0 s$, dim. кац(viov), a kiln; a furnace. The construction of the kilns used for baking earthenware [Fictile] may be seen in the annexed woodcut, which represents part of a Roman pottery discovered at Castor, in Northamptonshire. (Artis's Durobrivae, Lond. 1828.) The dome-shaped roof has heen destroyed ; but the flat circular floor on which the earthenware was set to be baked is preserved entire. The middle of this floor is supported by a

thick column of brick-work, which is encircled by the oven (furnus, $\kappa \lambda i 6 a v o s$ ). The entrance to the oven (praefurnium) is seen in front. The lower part of a smelting-furnace, shaped like an inverted bell, and sunk into the earth, with an opening and a cbannel at the bottom for the discharge of the melted metal, has been discovered near Arles. (Florencourt, über die Bergwerke der Alten, p. 30.) In Spain these furnaces were raised to a great height, in order that the noxious fumes might be carried off. (Strabo, iii. 2. p. 391, ed. Sieb.) They were alsn provided with long flues (longinquae fornaeis cuniculo, Plin. H.N.ix. 62), and with chambers (camerue) for the purpose of collecting more plentifully the oxides and other matters by sublimation (lidd. xxxiv. 22. 33-4]). Homer describes a blast-furnace with twenty crucibles ( $\chi$ oavol, $1 l$. xviii. 470). Melting-pots or crucibles bave been found at Castor (Artis, pl. 38), and at different places in Egypt, in form and material very like those which we now employ. (Wilkinson, Man. and Cust. vol. iii. p. 224.) A glass-house, or furnace for making glass, was called $\dot{U} \in \lambda o u \rho \gamma \in \hat{i} 0 \nu$. (Dioscor. v. 182.)

Firnaces of an appropriate construction were erected for casting large statues of bronze (Claud. De Laud. Stil. ii. 176), and for making lamp-black. (Vitruv. vii. 10.) [Atramentum.] The limekiln (formax calcaria) is described by Cato. (De Re Rust. 38 ; see also Plin. H. N. xvii. 6 ; Vitruv. vii. 3.) On the mode of heating baths, see p. 193.

The carly Romans recognized, under the name of Fornax, a divinity who presided over ovens and furuaces [Fornacalia].
[J. Y.]

FORNIX, in its primary sense, is synonymous with Arcus (Senec. Ep. 90), but more commonly implies an arched vault, constituting both roof and ceiling to the apartment which it encloses. (Cic. Top. 4.) It is composed of a semicylindrical snd oblong arch like the Camera, but differs from it in construction, consisting entirely of stone or brick, whereas the other was formed upon a frame-work of wood, like the skeleton of a ship (Sallust, Jugurth. 18 ; Suet. Nero, 34 ; Camera) ; both of which methods appear to have been sometimes united, as in the roof of the Tullianum, described by Sallust (Cat. 55), where the ribs of the Camera were strengthened by alternate courses of stone arches.*

From the roof alone, the same word came to signify the chamber itself, in which sense it designates a long narrow vault, covered by an arch of brick or masonry (tectum fornicatum), similar to those whicb occupy the ground floors of the modern Roman palaces. Three such cells are represented in the annexed woodcut, from the remains of $s$ villa at Mola di Gaieta, which passes for the Formian Villa of Cicero. They are covered internally with a coating of stucco, tastily ornamented, and painted in streaks of szure, pink, and yellow.

Being small and dark, and situated upon the level of the street, these vaults were occupied by prostitutes (Hor. Sat. i. 2.30 ; Juv. Sat. iii. 156 ; xi. 171 ; compare Snet. Jul. 49), whence comes the meaning of the word formicatio in the ecclesiastical writers, and its English derivation.

Fornix is also a sallyport in the walls (Liv. xxxvi. 23 ; compare xliv. 11); a triumphal arch (Cic. De Orat. ii. 66) ; and a street in Rome, which led to the Campus Martius, was called Via Fornicata (Liv. xxii. 36), probably on account of the triumphal arches built across it.
[A. R.]
FORUM. As the plan of the present work does not include a topographical description of the various fora at Rome, the following article only contains a brief statement of the purposes which they served.

Forum, originally, signifies an open place (area) before any building, especially before a sepulerum (Festus, s.v.; Cic. De Leg. 1i. 24), and seems, therefore, etymologically to be connected with the adverb foras. The characteristic features of a Roman forum were, that it was a levelled space of

* "Tullianum . . . . muniunt undique parietes, atque insuper Camera, lapideis fornicibus viocta." If the stone chamber now seen at Rome under ths Mammertine prisons was really the Tullianum, as commonly supposed, it is not constructed in the manner described; being neither cameratum nor fornicatum, but consisting of a circular dome, formed by projecting one course of stones beyond the course below it, like the treasury of Atreus at Mycenae, described at p. 125. [Ancus.]
ground of an oblong form, and surrounded by buildinge, houses, temples, basilicae or porticoes. (Vitruv. v. 1, 2.) It was originally used as a place where justice was administered, and where goods were exhibited for sale. (Varro, De Ling. Lat. v. 145, ed. Müller.) We have accordingly to distinguish between two kinds of fora; of which some were exclusively devoted to commercial purposes, and were real market-places, while others were places of meeting for the popular assembly, and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called fora judicialiu, to distinguish them from the mere market-places.

Among the fora judicialia the most important was the Forum Romanum, which was simply called forum, as long as it was the only one of its kind which existed at Rome. At a late period of the republic, and doring the empire, when other fora judicialia were built, the Forum Romanum was distinguished from them by the epitbets vetus or magnum. It was situated between the Palatine and the Capitoline hills, and its extent was seven jugera, whence Varro ( $D$ R. Re Rust. i. 2) calls it the "Septem jugera forensia." it was originally a swamp or marsh, but whs said to have been filled up hy Romulus and Tatius, and to have been set apart as a place for the administration of justice, for holding the assemblies of the people, and for the transaction of other kinds of public business. (Dion. Hal. Ant. Rom. iii. p. 200, compare ii. p. 113, Sylburg.) In this widest sense the forum included the comitium, or the place of assembly for the cariae (Varro, De Ling. Lat. v. I55, Müller), which was separated from the form in its narrower sense, or the place of assembly for the comitia tributa, by the Rostra. (Niebuhr, Hist. of Rome, i. p. 291. note 746, and p. 426. note 990 ; Walter, (Gescch. des Röm. Rechts, P. 83; Göttling, Gesch. der Röm. Staatsverf. p. 155.) These ancient rostra were an elevated space of ground or a stage (suggestum), from which the orators addressed the people, and which derived their name from the circumstance that, after the sobjugation of Latium, its sides were adorned with the beaks (rostra) of the ships of the Antiates. (Liv. viii. 14.) In subsequent times, when the curiae had lost their importance, the accurate distinction between comitium and forum likewise ceased, and the comitia tributa were sometimes held in the Circus Flaminius; but towards the end of the republic the forum seems to have been chiefly used for judicial proceedings, and as a money market ; hence Cicero (De Orat. i. 36) distinguishes between a speaker in the popular assembly (orator) and the mere pleader:"Ego istos non modo oratoris nomine, sed ne foro quidem dignoes putârim." The orators when addressing the people from the rostra, and even the tribunes of the people in the early times of the republic, used to front the comitium and the curia ; but C. Gracchus (Plut. C. Gracek. 5), or, according to Varro ( $\mathrm{De}_{\mathrm{e}} R e$ Rust. i. 2) and Cicero (De Amicit. 25), C. Licinius, introdnced the custom of facing the forum, therehy acknowledging the sovereignty of the people. In 308 в.c. the Romans adorned the formm, or rather the bankers' shops (argentarias) around, with gilt shields which they had taken from the Samnites; and this custom of adurning
the forum with these shields and other ornaments was subsequently always observed during the tinse of the Lud. Romani, when the Aediles rode in their chariots (tensae) in solemn procession around the forum. (Liv. ix. 40 ; Cic. in Verr. i. 54, and iii. 4.) After the victory of C. Duilius over the Carthaginians the forum was adorned with the celebrated columna rostrata [Columna]. In the upper part of the form, or the comitium, the laws of the Twelve Tables were exhibited for public inspection, and it was probably in the same part that, in 304 в. c., Cn. Flavius exhibited the Fasti, written on white tables (in albo), that every citizen might be able to know the days on which the law allowed the administration of justice. (Liv. ix. 46.) Besides the ordinary business which was carried on in the forum, we read that gladiatorial games were held in it (Vitruv. v. 1, 2), and that prisoners of war and faithless colonists or legionaries were put to death there. (Liv. vii. I9, ix. 24, xxviii. 28.)

A second forum judiciarium was built by $\mathbf{J}$. Caesar, and was called Forum Caesaris or Julii. The levelling of the ground alone cost him above a million of sesterces, and he adorned it besides with a magnificent temple of Venus Genitrix. (Suet. J.Caes. 26 ; Plin. H. N. xxxiv. 15 ; Dion Cass. xliii. 22.)
A third forum was bnilt by Augustus and called Forum Augusti, because the two existing ones were not found sufficient for the great increase of business which had taken place. Augustus adorned his forum with a temple of Mars and the statues of the most distinguished men of the repuhlic, and issued a decree that only the judicia publica and the sortitiones judicum shonld take place in it. (Suet. Octav. 29 and 31; compare Dion Cass. lvi. 27 ; Plin. H. N. l. c. ; Vell. Pat. ii. 39; Ovid, $E x$ Pont. iv. 15, 16 ; Martial. iii. 38. 3; Seneca, De Ira, ii. 9; Stat. Silv. iv. 9. 15.) After the Forum Augusti had severely suffered by fire, it was restored by Hadrianus. (Ael. Spart. Hadr. c. 19.)

The three fora which have been mentioned seem to have been the only ones that were destined for the transaction of public business. All the others, which were subsequently built by the emperors, such as the Forum Trajani or Ulpium, the Forum Sallustii, Forum Diocletiani, Forum A ureliani, \&c., were probably more intended as embellishments of the city than to supply any actual want.

Different from these fora were the numerous markets at Rome, which were neither as large nor as beautiful as the former. They are always distinguished from one another by epithets expressing the particular kinds of things which were sold in them, e.g. forum boarium, according to Festus, the cattie-market; according to others, it derived the name boarium from the statne of an ox which stood there (Plin. H. N. xxxiv. 2; Ovid, Fast. vi.477); forum olitoorium, the vegetable market (Varro, De Ling. Lat. v. I46); forum piscarium, fish-market; forum cupedinis, market for dainties; forum coquinum, a market in which cooked and prepared dishes were to be had, \&c.
(Respecting the fora in the provinces, see the articles Colonia and Conventus; compare Sigonius, De Antiq. Jur. Ital. ii. 15, and Walter Gesch. des Röm. Rechts, p. 206.)

FoSSA. [Castra.]
framea. [Hasta.]
fratres ARVA'LES. [Arvales Fratres.]

FRAUS. [Poena.]
FRENUM ( $\chi$ a入ı $\nu o ́ s$ ), a bridle. That Bellerophon might be enabled to perform the exploits required of him by the king of Lycia, he was presented by Athena with a bridle as the means of subduing the winged horse Pegasus, who submitted to receive it whilst he was slaking his thirst at the fountain Peirene. See the annexed woodcut, from

an antique which renresents this event, and compare Pindar, Olymp. xiii. 85-115. Such was the Grecian account of the invention of the bridle, and in reference to it Athena was worshipped at
 (Paus. ii. 4. $\$ \S 1,5$.) The several parts of the bridle, more especially the bit, are engraved from ancient authorities in the treatises of Invernizi (De Frenis), Ginzrot (Ueber Wägen), and Bracy Clark (Chalinology, Lond. 1835).

The bit (orea, Fectus, s. v.; $\delta \hat{\eta} \gamma \mu a$, Brunck, Anal. ii. 237 ; $\sigma \tau \delta \mu \kappa \alpha$, Aeschyl. Prom. 1045) was commonly made of several pieces, and flexible, so as not to hurt the horse's mouth ; for the Greeks considered a kind and gentle treatment the best discipline, although, when the horse was intractable, they taught it submission by the use of a bit which was armed with protuberances resembling wolves'-teeth, and therefore called lupatum. (Xen. De Re Eq. vi. 13, x. 6 ; Virg. Georg. iii. 208 ; Hor. Curm. i. 8. 7 ; Ovid, Amor. i. 2. 15.) The bit was held in its place by a leathern strap passing under the chin, and called $\dot{v} \pi o \chi a \lambda i v i \delta i a$, for which a chain ( $\psi a \lambda(O \nu$ ) was often substituted; a rope or thong, distinct from the reins, was sometimes fastened to this chain or strap by means of a ring, and was used to lead the horse (futarajeìs, Xen. l. c. vii. 1 ; Aristoph. Pac. 154). The upper part of the bridle, by which it was fixed round the ears, is called by Xenophon корифaía (iii 2), and it included the Ampyx, which was often ornamental.
 mapayva日iסiov, Eustath. ad loc.), which joined this upper portion to the bit, were also in some cases riclıly adorned, especially among the nations of Asia. Those who took delight in horsemanship bestowed, indeed, the highest degree of splendour and elegance upon every part of the bridle, not excepting the bit, which, though commonly of bronze or iron, was sometimes silver or gold (fulvum mandunt sub dentibus aurum, Virg. Aen. vii. 279). These precious metals were also either embossed (frenu caelata, Apul. De Deo Soc.) or set with jewels. (Claud. Epig. 34. 36.)

## FRUMENTARIAE LEGES.

Not only was the bridle dispensed with in the management of creatures invented by the imagination of the poet (Aeschyl. Prom. 294), but of some which were actually trained by man to go without it. Thus the Numidian desultor guided his two horses by the whip, and the Gallic essedarius, on the banks of the Rhone, directed and animated his mules entirely by the voice. (Claud. Epig. 4.)
[J. Y.]
FRIGIDA'RIUM. [Balneae, pp. 189, 190.]
FRITILLUS ( $\phi\lrcorner \mu \delta^{\prime}$ ), a dice-hox of a cylindrical form, and therefore called also turricula (Mart. xiv. 16), or pyrgus (Sidon. Epist. viii. 12), and formed with parallel indentations (gradus) on the inside, so as to make a rattling noise when the dice was shaken it. (Mart. iv. 14, xiv. ] ; Hor. Sat. ii. 7. 17, who uses the Greek form phimus.) (Becker, Gallus, vol. ii. p. 222.)
[J. Y.]
FRONTA'LE. [Ampyx.]
FRUCTUS. [Ususpructus.]
FRUMENTA'RIAE LEGES. From the earliest times the supply of corn at Rome was considered one of the duties of the government. Not only was it expected that the government should take care that the corn-market (annona) was properly supplied, but likewise that in all seasons of scarcity, they shonld purchase corn in the surrounding countries, and sell it to the people at a moderate price (Liv. ii. 9,34 , iv. 12,52, x. 11 , \&c. xxvi. 40; Cic. pro Dom. 5.) This price, which is spoken of as annona vetus (Liv. ii. 34), could not rise much, without exciting formidable discontent ; and the administration was in all such cases considered to have neglected one of its most important duties. The superintendence of the cornmarket belonged in ordinary times to the aediles, but when great scarcity prevailed, an extraordinary officer was appointed for the purpose under the title of Praefectus Annonue (Liv. iv. 12). With the decay of agriculture in Italy, which followed the importation of corn from the provinces, and the decrease of the free population, the government had to pay still further attention to the supply of corn for the city. In addition to this, an indigent population gradually increased in Rome, which could noteven purchase corn at the moderate price at which it was usually sold, and who demanded to be fed at the expence of the state. Even in early times it had been usual for the state on certain occasions, and for wealthy individuals who wished to obtain popularity and influence, to make occasional donations of corn to the people (donatio, largitio, divisio; subsequently called frumentatio). But such donations were only casnal ; and it was not till the year b. c. 123, that the first legal provision was made for supplying the poor at Rome with corn at a price much below its market value. In that year C. Sempronius Gracchos brought forward the first Lex Frumentaria, by which each citizen was entitled to receive every month a certain quantity of wheat (triticum) at the price of $6 \frac{1}{3}$ asses for the modius, which was equal to 1 gallon and nearly 8 pints English.* (Liv. Epit. 60; Appian, B. C. i. 21 ;

* The price of $6 \frac{1}{3}$ asses (senos aeris et trientes) occura in the Schol. Bob. ad Cic. Sext. c. 25. p. 300. c. 48, p. 300 ; but in the editions of Livy (Ep. 60), we find ut semisse et triente frumentum pledi daretur that is, at sths of an as. But instead of semisse, the manuscripts have senis, sexis, sesis, evidently for senis, and therefore there can be little doubt that

Plut. C. Gracchus, 5 ; Vell. Pat. ii. 6 ; Cic. pro Sext. 48.) This was only a trifle more than half the market price, since in the time of Cicero 3 ses. terces $=12$ asses were considered a low sum for a modius of wheat (Böckh, Metrol. Untersch. p. 420. ) It must not be supposed that each person was allowed to receive as much as he pleased every month; the quantity must of course have been fixed, and was prohably five modii monthly, as in later times. This quantity was only given to fathers of families; but it was not confined to the poor, as Plutarch (l. c,) would imply, for every citizen had a right to it , whether he were rich or
 Cic. Tusc. Disp. iii. 20) ; and even Piso, who had been consul, applied for his share at the distribution (Cic. $l$. c.) It appears, however, from the anecdote which Cicero relates about Piso, that each citizen had to apply in person, a regulation which would of itself deter most of the rich. The example that had been set by Gracchus was too tempting not to be followed, although the consequences of such a measure were equally prejudicial to the public finances and the public morality. It emptied the treasury, and at the same time taught the poor to become state-paupers instead of depending upon their own exertions for obtaining a living.

The demagogue Appuleius Saturninus went still further. In B.c. 100 he brought forward his Lex Appuleia, by which the state was to sell corn at sths of an as for the modins. The city quaestor $Q$. Caepio pointed out that the treasury could not hear such an expense, and the most violent opposition was offered to the nieasure. It is doubtfol whether it ever passed into a law; and it is at all events certain that it was never carried into execution (Auctor, ad Herenn. i. 12 ; comp. Cic. de Leg. ii. 6.) The Lea Livia, which was proposed by the tribune, M. Livins Drusus, in B.c. 91, was likewise never carried into effect, as it was repealed by the senate, together with all his other laws as passed in opposition to the auspices. Of the provisions of this Lex Frumentaria we have no account (Liv. Epit. 71). About the same time, either shortly before or shortly after the Lex Livia, the tribune M. Octavius, supported by the aristocracy, brought forward the Lew Octavia, which modified the law of Gracehus to some extent, so that the public treasury did not suffer so much. He probably either raised the price of the corn, or diminished the number of modii which each citizen was entitled to receive. (Cic. Brut. 22 , de Off. ii. 21.) Sulla went still further, and by his Lex Cornelia, в. c. 82, did away altogether with these distributions of corn, so that in the language which Sallust puts into the mouth of Lepidus, populus Romanus - ne servilia quidem alimenta reliqua habet. (Sall, Hist. in Orat. Lepid. p. 939, ed. Cort.) But the senate soon found it inexpedient to deprive the people of their customary largesses, as the popular party began to increase in power; and it was accordingly at the desire of the senate, that the consuls of B. c. 73 brought forward the Lex Terentia Cassia, which was probably only a renewal of the Lex Sempronia, with one or two additions respecting the manner in which the state was to obtain the corn. The law enacted that each Roman citizen should receive 5

[^31]modii a month at the price of $6 \frac{1}{3}$ asses for each modius. It appears from the various orations of Cicero, that by this law the provinces were obliged to furmish the greater part of the corn at a fixed price, which was paid by the Roman treasury, and that the governors of the provinces had to take care that the proper quantity of com was supplied. (Cic. Verr. iii. 70, v. 21, pro Sext. 25 ; Ascon. in Pis. 4, p. 9, ed. Orelli.) Occasionally extraordinary distributions of corn were made in virtue of decrees of the senate. (Cic. Verr. l. c.; Plut. Cat. min. 26, Caes. 8.)

All the Leges Frumentariae, that have been hitherto mentioned, had sold corn to the people, although at a price much helow what the state had paid for it; hut as the great party-leaders towards the close of the repuhlic were ready to purchase the support of the people at any sacrifice to the state, the distribntion of corn became at length quite gratuitous. Caesar, in his consulship, в. c. 59 , had threatened to make it so (Cic. ad Att. ii. 19 ; comp. pro Dom. 10); and this threat was carried into execution in the following year, , c. 58 , by the Lex Clodia of the tribune Clodius. The corn was thus in future distributed without any payment ; and the aholition of the payment cost the state a fifth part of its revenues. (Cic. pro Sext. 25 ; Schol. Bob. ad Sext. 25, p. 301, ed. Orelli; Ascon. in Pis. 4. p. 9 ; Dion Cass. xxxviii. 13.) In s. c. 57, Pompey received by the Lex Cornelia Caecilia the superintendence of the corn-market (cura annonae) for a period of five years; but no alteration was made in the distribution of corn by virtue of this measure. The only extension which he gave to the distrihution was by allowing those citizens, whose names had not hitherto been entered in the lists of the censors, to share in the bounty of the state. (Dion Cass. xxxix. 24.)

The dangerous consequences of such a system did not escape the penetration of Caesar ; and accordingly, when he became master of the Roman world, he resolved to remedy the evils attending it, as far as he was ahle. He did not venture to abolish altogether these distributions of corn, hut he did the next best thing in his power, which was reducing the number of the recipients. During the civil wars numbers of persons, who had no claim to the Roman franchise, had settled at Rome in order to obtain a share in the distributions of corn. The first thing, therefore, that Caesar did was to have an accurate list made out of all the corn-receivers, and to exclude from this privilege every person who could not prove that he was a Roman citizen. By this measure the 320,000 persons, who had previously received the corn, were at once reduced to 150,000 .* Having thus reduced the number of corn-receivers to 150,000 , he enacted that this number should not be exceeded for the future, and that vacancies that occurred by death, should be filled up every year by lot by the praetor urbanus. (Suet. Caes. 55 ; Dion Cass. xliii. 2I.) It is further exceedingly prohable that as a general rule, the corn was not given even to these 150,000 , but sold at a low price, as had been the case at an earlier period; and that it was only to the utterly destitute that the corn was supplied

[^32]gratuitously : the latter class of persons were furnished with tickets, called tesserae nummariae or firmentariae. Thus we find it stated (Suet. Octav. 41) that Angustns, on one occasion, doubled the number of the tessercae frumentariae. - If, therefore, the corn was, as a general rule, not given, but sold, we may conclude that every citizen was entitled to be enrolled in the 150,000 corn-receivers, independent of his fortune. The opposite opinion has been maintained by many modern writers; but the arguments, which have heen brought forward by Mommsen (Die Römischen Tribus, p. 187) and others, but into which our space will not allow us to enter, render the sbove supposition exceedingly probable.

The useful regulations of Caessr fell into neglect after his death, and the number of corn-receivers was soon increased beyond the limits of 150,000 , which had been fixed by the dictator. This we learn from the Monnmentum Ancyranum, in which Augustns enumerates the number of persons to whom he had given congiaria at different times ; and there can be no doubt that the receivers of the congiaria and of the public corn were the same. Thns, in в. c. 44, and on the three following occasions, he distributed the congiaria to 250,000 persons; and in B.c. 5 , the number of recipients had amounted to 320,000 . At length, in B. c. 2, Augustus reduced the number of recipients to 200,000 , and renewed many of Caesar's regulations. (Suet. Octav. 40 ; Dion Cass. Iv. 10.) He had, indeed, thought of abolishing the system of corn-distributions altogether on account of their injurious influence upon Italian agriculture, but had not persevered in his intention from the conviction that the practice would again be introduced by his snccessors. (Suet. Octav. 42.) The chief regulations of Augustus seem to have been: 1. That every citizen should receive monthly a certain quantity of corn (probably 5 modii) on the payment of a certain small sum. As the number of recipients was fixed by Augustins at 200,000, there were consequently $12,000,000$ modii distributed every year. Occasionally, in seasons of scarcity, or in order to confer a particular favour, Augustus made these distributions quite gratuitous: they then became congiaria. [Congiarium.] 2. That those who were completely indigent should receive the corn gratuitonsly, as Julius Caesar had determined, and should be furnished for the purpose with tesserae numinariae or frumentariae, which entitled them to the corn withont payment. (Suet. Octav. 41.)

The system, which had leen established by Augustus, was followed by his successors; but as it was always one of the first maxims of the state policy of the Roman emperors to prevent any disturbance in the capital, they frequently lowered the price of the public corn, and frequently distributed it gratnitously as a congiarium. Hence, the cry of the populace panem et circenses. No emperor ventured to abolish the public distributions cf corn : the most that he dared do, was to raise the price at which it was sold. When, therefore, we find it stated in Dion Cassius (lxii. 18), that Nero did away with the distributions of corn after the burning of Rome, we cannot understand this literally, but must suppose that he either raised the price of the commodity or, what is more probshle, obliged those poor to pay for it, who had previously roceived it gratuitously. The care, which the
emperors took to keep Rome well supplied wath corn, is frequently referred to in their coins by the legends, Annona, Dbertas, Abundantia, Liberalitas, \&c. We find in a coin of Nerva the legend plebei urbanae firumento constituto. (Eckhel, vol. vi, p. 406.)

In course of time, the sale of the corn hy the state seems to havs ceased altogether, and the distribution became altogether gratuitous. Every corn-receiver was therefore now provided with a tessera, and this tessera, when once granted to him, became his property. Hence, it came to pass, that he was not only allowed to keep the tesscra. fon life, bnt even to dispose of it by sale, and bequeath it by will. (Dig. 5. tit. l. s. 52 ; 39. tit. 1. в. 49 ; 39. tit. 1. 8. 87.) Every citizen was competent to hold a tessera with the exception of senators. Further, as the corn had been originally distributed to the people according to the thirty-five tribes into which they were divided, the cornreceivers in each tribe formed a kind of corporation, which came eventually to be looked upon as the tribe, when the tribes hed lost all political significance. Hence, the purchase of a tessera became equivalent to the purchase of a place in a tribe; and, accordingly, we find in the Digest the expressions emere tribum and emere tesseram used as synonymous. (Dig. 32. tit. 1. s. 35.)

Another change was also introduced at a later period, which rendered the bounty still more acceptable to the people. Instead of distributing the corn every month, whesten bresd, called annona eivica, was given to the people. It is uncertain st what time this change was introduced, but it seems to have been the custom before the reign of Aurelian (A. n. 270-275), as it is related of this emperor that on his return from his Eastern expedition, he distributed among the people a larger quantity of bread, and of a different form from that which had been usnally given. (Vopisc. Aurel. 35 ; Zosim. i. 61.) The bread was baked by the Pistores, who delivered it to the various depots in the city, from which it was fetched a way on certain days by the holders of the tesserae. (Orelli, Inscrip. No. 3358.) These depots had steps (gradus) leading to them, whence the bread was called panis gradilis; and there were the strictest regulations that the bread should only be distrihuted from these steps, and should never be obtained at the bakers. (Cod. Theod. 14. tit. 17. ss. 3, 4.) When Constantine transferred the seat of government to Constantinople, the system of gratuitous distribution of bread was also transferred to that city; and in order to encourage the building of houses, all householders were entitled to a share of the imperial bounty. (Zosim. ii, 32; Socrat. H. E. ii. 13 ; Sozom. iii. 7 ; Cod. Theod. 14. tit. 17.) The distribution of bread at Roma was, however, still continued ; and the care which the later emperors took that both Rome ad Constantinople should be properly supplied with corn, may be seen by the regulations in the Cod. Theod. 14. tit. 15, De Canone Frumentario urbis Ronua, and tit. 16, De Frumento Urbis Constantinopolitanue. The superintendence of the corn-market, under the emperors, belonged to the Praefectus Annonae.

Many points connected with this subject have been necessarily omitted in consequence of our limits. The reader who wishes for further information is referred to: Contareni, De Frum. Rom. Largitione, in the Thesaurus of Graevias, vol. viii. p. 923 ; Dirksen, Civilist. Abhandlungen,
val. ii. p. 163, \&c.; Mommsen, Die Römischen Trious, Altona, 1844, which work contains the best account of the subject; Kuhn, Ueber die Kornsinfuhr in Rom im Alterthum, in the Zeitschrift für die Alterthumswissenschaft, 1845, pp. 9931008, 1078 -1084; Rein, in the Real Encyelopädie der classischen Alterthumswissenschaft, art. Largitio; Höckh, Römische Geschichte, vol. i. part ii. p. 138, \&c., p. 384, \&c. ; Walter, Geschichte des Römischen Rechts, $\S \S 276-278,360,361$, 3nd ed.
FRUMENTA'RII, officers under the Roman empirs, who acted as spics in the provinces, and reported to the emperors anything which they considered of importance. (Aurel. Vict. De Caes. 39, sub fin.; Spartian. Hadrian. 11 ; Capitol. Macrin. 12, Commod. 4.) They appear to have heen called Frumentarii because it was their duty to collect information in the same way as it was the duty of other officers, called by the same name, to collect corn. They were accustomed to accuse persons falsely, and their office was at length abolished by Diocletian. We frequently find in inscriptions mention made of Frumentarii belonging to particular legions (Orelli, Inser. 74, 3491, 4922), from which it has been supposed that the frumentarii, who acted as spies, were soldiers attached to the legions in the provinces ; they may, however, have been different officers, whose duty it was to distribute the corn to the legions.

FRUMENTA'TIO. [Frumentariae Leges.]

FUCUS ( $\phi \hat{u} \kappa 0 s$ ), was the general term to signify the paint which the Greek and Roman ladies employed in painting their cheeks, eye-hrows, and other parts of their faces. The practice of painting the face was very general among the Greek ladies, and probably came into fashion in consequence of their sedentary mode of life, which robbed their complexions of their natural freshness, and induced them to bave recourse to artificial means for restoring the red and wbite of nature. This at the least is the reason given by some of the ancient writers themselves. (Xen. Oecon. 10. § 10 ; Phintys, ap. Stobaeum, tit. Ixxiv. 61.) The practice, however, was of great antiquity among the Greeks, and was probably first introduced among the Asiatic Ionians from the East, where the custom has prevailed from the earliest times. That it was as ancient as the time of Homer is inferred from the expression èntхpiбaба rapetás (Od. xviii. 172), but this is perhaps hardly sufficient to prove that the cheeks were painted. The ladies at Athens, as might have been expected, did not always paint their faces when at home, but only had recourse to this adormment when they went abroad or wished to appear beautiful or captivating. Of this we have a striking example in the speech of Lysias on the murder of Eratosthenes, in which it is related (p. 93. 20, ed. Steph.) that the wife, after leaving her hushand to visit her paramour, painted herself, which the husband observed on the following
 ̇̇ $\psi \mu \mu \nu \theta_{1} \omega \bar{\sigma} \theta$ al. (Comp. Aristoph. Lysistr. 149, Eccl. 878, Plut. 1064 ; Plut. Alcib. 39.) In order to give a blooming colour to the cheeks, z $\gamma$ रoura or ${ }^{6} \gamma \chi$ oura, a red, obtained from the root of a plant, was most frequently employed (Xen. Oecon. 10. §2); and the following paints were also used to produce the same colour, namely, $\pi \alpha \lesssim \delta \epsilon \in \rho \omega s$, also a vegetable dye resembling the rosy hue on the checks of young children (Alexis, ap. Athen. xiii.
p. 568, c), owkápivov (Eubulis, ap. Athen. xiii. p. $557, \mathrm{f}$ ), and $\phi$ v̂кos, which was probably a red paint, though used to signify paint in general, as has been already remarked. In order to produce a fair complexion, $\psi<\mu \dot{v} \theta t o \nu$, cerussa, white lead was employed. (Alexis, ap. Athen. l.c.; Xen. Oevon. 10. §2; Aristoph. Eccl. 878, 92.9.) The eye-brows and eye-lids were stained black with $\sigma \tau\{\mu \mu \iota$ or $\sigma \tau\{\mu \mu s$, a sulphuret of antimony, which is still employed by the Turkish ladies for the same purpose. (Pollux, v. 101.) The eye-brows were likewise stained with árBo入os, a preparation of soot. Thus Alexis says (l.c.),

(Comp. Juv. ii. 93.) Ladies, who used paint, were occasionally betrayed by perspiration, tears, \&c., of which a humorous picture is given by the comic poet Eubulus (ap. Athen. l.c.), and by Xenophon (Oecon. 10. §8). It would appear from Xenophon (Ibid. § 5) that even in his time men sometimes used paint, and in later times it may have been still more comnon: Demetrius Phalerens is expressly said to have done so. (Duris, ap. Athen. xii. p. 542, d.)

Among the Romans the art of painting the complexion was carried to a still greater extent than among the Greeks ; and even Ovid did not disdain to write a poem on the subject, which he calls (de Art. $A m$. iii. 206) "parvus, sed cura grande, libellus, opus;" though the genuineness of the fragment of the Medicamina faciei, ascribed to this poet, is doubtful. The Roman ladies even went so far as to paint with blue the veins on the temples, as we may infer from Propertius (ii. 14. 27), "si caeruleo quaedam sua tempora fuco tinxerit." The ridiculous use of patches (splenia), which were common among the English ladies in the reign of Qucen Anne and the first Georges, was not unknown to the Roman ladies. (Mart. ii. 29. 9, x. 22; Plin. $E p$. vi.2.) The more effeminate of the male sex at Rome also employed paint. Cicero speaks (in Pison. 11) of the cerussatae buccae of his enemy, the consul Piso.

On a Greek vase (Tischbein, Engravings, ii. 58) we see the figure of a female engaged in putting the paint upon her face with a small brush. This figure is copied in Böttiger's Sabina (pl. ix.), (Comp. Becker, Charikles, vol. ii. p. 232, \&c.; Böttiger, Sabina, vol. i. p. 24, \&c., p. 51, \&c.)

FUGA LATA. [Exsilium.]
FUGA LIBERA. [Exsilium.]
FUGITIVA'RIUS. [Servos.]
FUGITI'VUS. [SERvUS.]
FULCRUM. [Lectus.]
FULLO ( $\kappa \nu \alpha \phi \in \dot{\prime}{ }^{\prime}, \quad \gamma \nu a \phi \in \dot{\prime} s$ ), also called NACCA (Festus, s. v.; Apul. Met. ix p. 206, Bipont), a fuller, a washer or scourer of cloth and linen. The fullones not only received the cloth as it came from the loom in order to scour and smooth it, but also washed and cleansed garments which had heen already worn. As the Romans generally wore woollen dresses, which were often of a light colour, they frequently needed, in the hot climate of Italy, a thorough purification. The way in which this was done has heen described by Pliny and other ancient writers, but is most clearly explained by some paintings which have been found on the walls of a fullonica at Pompeii. Two of these paintings are given by Gell (Pompeiana, vol. i. pl. 51, 52), and the whole of them in the Museo Borbonico (vol. iv. pl. 49,50); from the

FULLO.
Iatter of which works the following cnts have been taken.

The clothes were first washed, which was done in tubs or vats, where they were trodden upon and stamped by the feet of the fullones, whence Seneca ( $E p .15$ ) speaks of saltus fullonicus. The following woodcut represents four persons thus employed, of whom three are boys, probably under the superintendence of the man. Their dress is tucked up, learing the legs hare; the boys seem to have done their work, and to be wringing the articles on which they had heen employed.

The ancients were not acquainted with soap, but they used in its stead different kinds of alkali, by which the dirt was more easily separated from the clothes. Of these, by far the most common was the urine of men and animals, which was mixed with the water in which the clothes were washed. (Plin. H. N. xxviii. 18. 26 ; Athen. xi. p. 484.) To procure a sufficient supply of it, the fullones were accustomed to place at the corners of the streets vessels, which they carried away after they had been filled by the passengers. (Martial, vi. 93; Macrob. Saturn. ii. 12.) We are told by Suetonius (Vesp. 23) that Vespasian imposed a urinae vectigal, which is supposed by Casaubon and others to have been a tax paid by the fullones. Nitrum, of which Pliny (H. N. xxxi. 46) gives an account, was also mixed with the water by the scourers. Fullers' earth (creta fullonia, Plin. H. N. xviii. 4), of which there were many kinds, was employed for the same purpose. We do not know the exact nature of this earth, but it appears to have acted in the same way as our fullers' earth, namely, partly in scouring and partly in absorhing the greasy dirt. Pliny (H. N. xxxv. 57) says that the clothes should be washed with the Sardinian earth.

After the clothes had been washed, they were hung out to dry, and were allowed to be placed in the street before the doors of the fullonica. (Dig. 43. tit. 10. s. l. §4.) When dry, the wool was brushed and carded to raise the nap, sometimes with the skin of a hedgehog, and sometimes with some plants of the thistle kind. The clothes were then hung on a vessel of basket-work (viminea cavea), under which sulphur was placed in order to whiten the cloth ; for the ancient fullers appear to have known that many colours were destroyed by the volatile steam of sulphur. (Apul. Met. ix. p. 208, Bipont ; Plin. H. N. xxxv. 50, 57 ; Pollux, vii. 41.) A fine white earth, called Cimolian by Pliny, was often rubbed into the cloth to increase its whiteness. (Theophr. Char. 10 ; Plaut. Aulul. iv. 9. 6; Plin. H. N. xxxv. 57.) The preceding account is well illustrated by the following woodeut.

On the left we see a fullo brushing or carding a white tunic, suspended over a rope, with a card or

## FULLO.

brush, which bears considerable resemblance to a modern horse-brush. On the right, another man carries a frame of wicker-work, which was without doubt intended for the purpose described ahove; he has also a pot in his hand, perhaps intended for holding the snlphur. On his head he wears a kind of garland, which is supposed to be an olive garland, and above him an owl is represented sitting. It is thought that the olive garland and the owl indicate that the establishment was under the patronage of Minerva, the tutelary goddess of the loom. SirW. Gell imagines that the owl is probably the picture of a bird which really existed in the family. . On the left, a well-dressed female is sitting, examining a piece of work which a younger girl brings to her. A reticulum [see p. 329, a] upon her head, a necklace, and bracelets denote a person of higher rank than one of the ordinary work-people of the establishment.

In the following woodcut we see a young man in a green tunic giving a piece of cloth, which appears to be finished, to a woman, who wears a green under-tunic, and over it a yellow tunic with

red stripes. On the right is another female in s white tunic, who appears to be engaged in cleaning one of the cards or brushes. Among these paintings there was a press, worked by two upright screws, in which the cloth was placed to be smoothened. A drawing of this press is given on p. 300.

The establishment or workshop of the fullers was called Fullonica (Dig. 39. tit. 3. s. 3), Fullonicum

## FUNAMBULUS.

(Dig. 7. tit. 1. s. 13. § 8), or Fullonium (Amm. Marc. xiv. 11. p. 44, Bipont.) Of such establishments there were great numbers in Rome, for the Romans do not appear to have washed at home even their linen clothes. (Marial, xiv. 51.) The trade of the fullers was considered so important that the censors, C. Flaminins and L. Acmilius, в.c. 220 , prescrihed the mode in which the dresses were to be washed. (Plin. H. N. xxzv. 57.) Like the other principal trades in Rome, the Fullones formed a collegium. (Fabretti, Inser. p. 278.) To large farms a fullonica was sometimes attached, in which the work was performed by the slaves who selonged to the familia rustica. (Varro, R.R. i. 16.)

The fullo was answerable for the property while it was in his possession ; and if he returned by mistake a different garment from the one he had received, he was liable to an action ex locato; to which action he was also subject if the garment was injured. (Dig. 19. tit. 2. s.13. §6; s. 60. §2; 12 tit 7. s. 2.) Woollen garments, which had been once washed, were considered to be less valuable than they were previonsly (Petron. 30; Lamprid. Heliogab. 26) ; hence Martial (x. 11) speaks of a toga lota terque quaterque as a poor present.

The Greeks were also accustomed to send their garments to fullers to he washed and scoured, who appear to have adopted a similar method to that which has been described above. (Theophr. Char. 10; Athen. xi. p. 582, d. ; Pollux, vii. 39, 40, 41.) The word $\pi \lambda \dot{\nu} \nu \in \iota \nu$ denoted the washing of linen,
 clothes. (Eustath. ad Od. xxiv. 148. p. 1956. 41.)
(Schöttgen Antioquitates Triturae et Fulloniace, Traj. ad Rhen. 1727 ; Beckmann, Hist. of Inventions and Discoveries, vol. iii. p. 266, \&c., transl. : Becker, Gallus, vol. ii. p. 100, \&c., Charikles, vol. ii. p. 408.)

FULLO'NICA. [Fullo.]
FUNA'LE ( $\sigma \kappa 0 \lambda \alpha{ }^{\prime} \xi$, , sid. Orig. xx. 10), a link, used in the same manner as a torcb [FAX], bnt made of papyrus and other fibrons plants, twisted like a rope, and smeared with pitch and wax. (Virg. Aen. i. 727 ; Servius, ad loc.; Hor. Carm. iii. 26. 7; Val. Max. iii. 6. § 4.) It was indeed, as Antipater describes it, "a light coated with wax " ( $\lambda a \mu \pi d \dot{s}$ к $\boldsymbol{\kappa} \rho \circ \chi i \tau \omega \nu$, Brunck, Anal. ii. 112 ; Jacobs, ad loc.). For this reason it was also called cereus. Funalia are sculptured upon a monument of considerable antiquity preserved at Padua. (Pignor. De Servis, p. 259.) At the Saturnalia they were presented by clients to their superiors, and were lighted in honour of Saturn. (Antipater, l.c.; Macrob. Sat. i. 6.)
[J. Y.]
FUNA'LIS EQUUS. [Currus. p. 379, b.]
 a rope-dancer. The art of dancing on the tight rope was carried to as great perfection among the Romans as it is with us. (Hor. Epist. ii. 1. 210; Terent. Hecyr. Prol. 4.34 ; Juv. iii. 80; Bulenger, de Theat. i. 42.) If we may judge from a series of paintings discovered in the excavations (Ant.d'Ercol. T. iii. p. 160-165), from which the figures in the annexed woodeut are selected, the performers placed themselves in an endless variety of graceful and sportive attitudes, and represented the characters of bacchanals, satyrs, and other imaginary beings. Three of the persons here exhibited hold the thyrsus, which may have served for a balancing pole two are performing on the donble pipe, and
one on the lyre : two others are pouring wine into vessels of different forms. They all have their heads enveloped in skins or caps, probably intended as a protection in case of falling. The emperor Antoninus, in consequence of the fall of a boy, caused feather-beds (culcitras) to be laid under the rope to obviate the danger of such accidents. (Capitol. M. Anton. 12.) One of the most difficult exploits was running down the rope (Sueton. Nera, 11) at the conclusion of the performance. It was a strange attempt of Germanicus and of the emperor Galba to exhibit elephants walking on the rope. (Plin. FI. N. viii. 2; Sueton. Galb. 6 ; Sen. Epist. 86.)
[J. Y.]
FUMA'RIUM. [Vinum.]
FUNDA ( $\sigma \phi \epsilon \nu \delta \delta \nu \eta$ ), a sling. The light troops of the Greek and Roman armies consisted in great part of slingers (funditores, $\sigma \phi \in \nu \delta o \nu$ hicai). In the earliest times, however, the sling appears not to have been used by the Greeks. It is not mentioned in the Iliad; for in the only passage ( 17 . xiii. 599) in which the word $\sigma \phi \in \nu \delta \delta \nu \eta$ occurs, it is used in its original signification of a bandage. But in the times of the Persian wars slingers had come into use ; for among the other troops which Gelon offered to send to the assistance of the Greeks against Xerxes, mention is made of 2000 slingers (Herod. vii. 158); and that the sling was then known among the Greeks is also evident from the allusion to it by Aeschylus (Agam. 982). At the same time it must be stated that we rarely read of slingers in these wars. Among the Greeks the Acarnanians in early times attained to the greatest expertness in the use of this weapon (Thuc. ij. 81); and at a later time the Achaeana, especially the inhahitants of Agium, Patrae, and Dymae, were celebrated as expert slingers. The slings of these Achaeans were made of three thongs of leather, and not of one only, like those of other nations. (Liv. xxxviii. 29.) The people, however, who enjoyed the greatest celebrity as dingers were the natives of the Balearic islands. Their skill in the use of this weapon is said to have arisen from the circumstance, that, when they were children, their mothers obliged them to obtain their food by striking it with a sling. 〈Veget.
de Re Mil. i. 16 ; Strab.iii. p. 168.) Most slinga were made of leather, but the Balearic ones were manufactured out of a kind of rush. (Strab. l.c.) The manner in which the sling was wielded may be seen in the annexed figure (Bartoli, Col. Traj. t. 46) of a

soldier with a provision of stones in the sinus of his pallium, and with his arm extended in order to whirl the sling about his head. (Virg. Aen. ix. 587, 588 , xi. 579 .) Besides stones, plummets, called glandes ( $\mu 0 \lambda v 6 \delta i \delta \epsilon s$ ), of a form between acorns and almonds, were cast in moulds to be thrown with slings. (Lucret. vi. 176 ; Ovid, Met. ii. 729, vii. 778 , xiv. 825,826 .) They have been found on the plain of Marathon, and in other parts of Greece, and are remarkable for the inscriptions and devices which they exhibit, such as thunderbolte, the names of persons, and the word $\triangle$ EEAI, meaning "Take this." (Dodwell's Tour, vol. ii. pp. 159--161; Böckh, Corp. Ins. vol. i. p. 311 ; Mommsell, in Zeitschrift für die Altenthumswissenschajt, 1846, p. 782.)
[J. Y.]
While the sling was a very efficacious and important instrument of ancient warfare, stones thrown with the hand alone were slso much in use both among the Romans (Veget. i. 16, ii. 23) and with other nations (oi $\pi \in \tau \rho 0$ ódol, Xen. Hellen. ii. 4. § 12). The Libyans carried no other arms than three spears and a bag full of stones. (Diod. Sic. iii. 49.)

FUNDITORES. [Funna.]
FUNDUS. The primary signification of this word appears to be the bottom or foundation of a thing ; and its elementary part (fud), seems to be the same as that of $\beta u \theta_{0}$ os and $\pi v \theta \mu \eta \nu$, the $n$ in fundus being used to strengthen the syllable. The conjectures of the Latin writers as to the etymology of fundus may be safely neglected.

Fundus is often used as applied to land, the solid substratum of all man's labours. According to Florentinus (Dig. 50. tit.16. s. 211) the term fundus comprised all land and constructions on it; bnt nsage had restricted the name of aedes to city houses, villae to rural houses, area to a plot of ground in a city not built upon, ager to a plot of ground in the country, and fundus to ager cum aedificiis. This definition of fundus may be compared with the uses of that word by Horace, and other writers. In one passage (Ep. i. 2.47), Horace places domus and fundus in opposition to one another, domus being apparently there used as equivalent to sedes.

The term fundus often occurred in Roman wills,
and the testator frequently indicated the fundus, to which his last dispositions referred, by some name, such as Sempronianus, Seianus; sometimes also, with reference to a particular tract of country, as Fundus Trebstianus qui est in regione Atellana. (Brissonius, de Formulis, vii. 80.) A fundus was sometimes devised cum omni instrumento, with its stock and implements of husbandry. Occasionslly a question arose as to the extent of the word instrumentum, between or among the parties who derived their claim from a testator. (Dig. 33. tit. 17. в. 12.)

Fundus has a derived sense which flows easily enough from its primary mearing. "Fundus," says Festus, " dicitur populus esse rei, quam alienat, hoc est auctor." [AUCTOR.] Compare Plantus, Trinum. v. i. 7 (fundus potior). In this sense "fundus esse" is to confirm or ratify a thing; and in Gellins (xix. 8) there is the expression " sententiae legisque fundus subscriptorque fieri." [Fognenati.]
[G. L.]
FUNES. [Navis.]
FUNUS. 1t is proposed in the following article to give a brief account of Greek and Roman funerals, and of the different rites and ceremonies connected therewith.

1. Greeis. The Greeks attached great importance to the burial of the dead. They helieved that souls could not enter the Elysian fields till their bodies had been buried; and sccordingly we find the shade of Elpenor in the Odyssey (xi. 66. \&c.) earneatly imploring Ulysses to bury his body. Ulysses also, when in danger of shipwreck, deplores that he had not fallen hefore Troy, as he should in that case have obtained an honourable burial. (Od. v. 311.) So strong was this feeling among the Greeks, that it was considered a religious duty to throw earth upon a dead body, which a persan might happen to find nnburied (Ael. Var. Hist. v. 14) ; and among the Athenians, those children who were released from all other obligations to unworthy parents, were nevertheless bound to bury them by one of Solon's laws. (Aesch. c. Timarc. p. 40.) The neglect of burying one's relatives is frequently mentioned by the orators as a grave cbarge against the moral charscter of a man (Dem. c. Aristog. i. p. 787.2 ; Lys. c. Phil. p. 883, c. Aleib. p. 539), since the burial of the body by the relations of the dead was considered a religious duty by ths universal law of the Greeks. Sophocles represents Antigone as disregarding all consequences in order to bury the dead hody of her brother Polyneices, which Creon, the king of Thehes, had commanded to be left unburied. The common expressions for the funeral rites, $\tau$ à $\delta i \kappa \alpha \iota a, \nu \delta \mu \mu a$ or $\nu о \mu \zeta \delta \mu \epsilon \nu a$, $\pi \rho о \sigma$ икоут $\alpha$, show that the dead had, as it were, $s$ legal and moral claim to hurial.

The common customs connected with a Greek funeral are described by Lucian in his trestise de Luctu (c. 10, \&c., vol. ii. p. 926. ed. Reitz) ; and there is no reason for supposing that they differ much from those which were practised in earlier times. After a person was dead, it was the custom first to place in his mouth an oholus, called סavák $\quad$ [DaNACE], with which he might pay the ferryman in Hades. The body was then washed and anointed with perfumed oil, and the head was crowned with the flowers which happened to be in season. The deceased was next dressed in as hsndsome a robe as the family could afford, in order, according to Lucian, that he might not be
cold on ths passage to Hades, nor be seen naked hy Cerberus: this garment appears to have been usually white. ( 11. xviii. 353 ; Artemiod. Oneirocr. ii. 3.) These dnties were not performed by hired persons, like the pollinctores among the Romans, but by the women of the family, upon whom the care of the corpse always devolved. (Isaeus, de Philoct. her. p. 143, de Ciron. her. p. 209.)
The corpse was then laid out ( $\pi \rho 6 \theta \in \sigma \iota s$, $\pi \rho 0 \pi i-$ $\theta \in \sigma \theta a t)$ on a bed ( $\kappa \lambda(\nu \eta)$, which appears to have been of the ordinary kind, with a pillow (rробиє$\phi d \lambda \pi u 0 \nu)$ for supporting the head and back. (Lys. c. Eratosth. p. 395.) It is said that the bed on which the corpse was laid out was originally placed outside the house (Schol. ad Aristoph. Lysistr. 611) ; but at Athens we know it was placed inside; by one of Solon's laws. (Dem. c. Macart. p. 1071.) The ohject of this formal $\pi \rho 6 \theta \epsilon \sigma t s$ was that it might he seen that the deceased had'died naturally, and that no violence had been done to him. (Pollux, viii. 65.) Plato (Leg. xii. 9. p. 959) assigns another reason, namely, that there might be no doulbt that the person was dead, and says, that the body ought only to be kept in the house so long as it may be necessary to ascertain that fact. By the side of the bed there were placed painted earthen vessels, called $\lambda$ भfкu日ou (Aristoph. Eccl. 1032, 996), which were also buried with the corpse ; examples of which may be seen in the drawings of the coffins given by Böttiger (Vaseng. title-page) and Stackelberg (Die Gräber der Hellenen, pl. 8). Great numbers of these painted vases have been found in modern times ; and they have heen of great nse in explaining many matters connected with antiquity. A honey-cake, called $\mu \in \lambda ı \tau \tau o \hat{\tau} \tau a$, which appears to have been intended for Cerberns, was also placed by the side of the corpse. (Aristoph. Lysistr. 601 , with Schol. ; compare Virg. Aen. vi. 419.) Before the door a vessel of water was placed,
 persons who had been in the house might purify themselves by sprinkling water on their persons. (Aristoph. Eccl. 1033 ; Pollux, viii. 65; Hesych. s. v. 'Ap $\delta$.) The relatives stood around the bed, the women uttering great lamentations, rending their garments and tearing their hair. (Lucian. Ib. 12.) Solon attempted to puta atop to this (Plut. Sol. 12. 21), hut his regulations on the subject do not appear to have heen generally observed. It was formerly the practice to sacrifice victims before carrying ont the dead; but this custom was not observed in the time of Plato. (Min. p. 315.) No females under 60 years of age, except the nearest
 present while the corpse was in the house. (Dem. c. Macart. p. 1071.)

On the day after the $\pi \rho \sigma \theta \in \sigma t s$, or the third day after death, the corpse was carried out (Éкфoó, ékкou $\bar{\delta} \dot{\eta}$ ) for burial, early in the morning and before sunrise, by a law of Solon, which law appears to have been revived by Demetrius Phalerens. (Dem. l. c.; Antiph. de Chor. p. 782 ; Cic. $d e$ Leg. ii. 26.) A burial soon after death was supposed to be pleasing to the dead. Thus we find the shade of Patroclus saying to Achilles (Il. xxiii. 71).
 (Compare Xen. Mem. i. 2. §53.) In some places it appears to have been usual to bury the dead on the day following death. (Callim. Epigr. 15; Diog. Laërt. i. 122.) The men walked hefore the
corpse and the women behind. (Dem. l. c.) The funeral procession was preceded or followed by hired mourners ( $\uparrow \rho \eta \eta \nu \psi \delta o i)$, who appear to have been nsually Carian women, though Plato speaks of men engaged in this office. They played monrnful tunes on the flute. (Plat. Ley. vii. 9. p. 800 ; Hesych. s. v. Kapivat ; Pollux, iv. 75.)
The body was either buried or burnt. Lucian (Ib. 21) says that the Greeks burn and the Persians bury their dead; hut modern writers are greatly divided in opinion as to which was the nsual practice. Wachsmnth says that in historical times the dead were always huried ; hut this statement is not strictly correct. Thus we find that Socrates speaks of his hody being either burnt or buried (Plat. Phaed. p. 115); the hody of Timoleon was burnt (Plut. Timol. 39), and so was that of Philopoemen. (Id. Philop. 21.) The word Adinteay is used in connection with either mode ; it is applied to the collection of the ashes after burning, and accordingly we find the words kaiety and Adiacely nsed together. (Dionys. Ant. Rom. v. 48.) The proper expression for interment in the earth is

 the bodies of the dead are burnt (I. xxiii. 127, \&c., xxiv. 787, \&c.) ; bnt interment was also used in very ancient times. Cicero (de Leg. ii. 25) says that the dead were buried at Athens in the time of Cecrops; and we also read of the bones of Orestes being found in a coffin at Tegea. (Herod. i. 68; compare Plut. Sol. 10.) The dead were commonly bnried among the Spartans (Plut. Lyc. 27 ; compare Thucyd. i. 134) and the Sicyonians (Paus. ii. 7. § 3) ; and the prevalence of this practice is proved hy the great number of skeletons found in coffins in modern times, which have evidently not been exposed to the action of fire. Both burning and burying appear to have been always used to a greater or less extent at different periods; till the spread of Christianity at length put an end to the former practice.

The dead bodies were usually burnt on piles of wood, called $\pi v \rho a i$. The hody was placed on the top; and in the heroic times it was customary to burn with the corpse animals and even captives or slaves. Thus at the funeral of Patroclus, Achilles killed many sheep, oxen, horses, and dogs, and also twelve captive Trojans, whose bodies he burnt with those of his friend. ( $l l$. xxiii. $165, \& \mathrm{cc}$.) Oils and perfumes were also thrown into the flames When the pyre was burnt down, the remains of the fire were quenched with wine, and the relatives and friends collected the bones. (Il. xxiv. 791.) The bones were then washed with wine and oil, and placed in urns, which were sometimes made of gold. (Od. xxiv. 71, \&c.)
The corpses, which were not burnt, were buried in coffins, which were called by various names, as
 some of these names are also applied to the urns in which the bones were collected. They were made of various materials, hut were nsually of baked clay or earthenware. Their forms are very various, as may be seen by a reference to Stackelberg (Die Gräber der Hellenen, pl. 7, 8). The pre-

## FUNUS.

ceding woodcut contains two of the mout ancient kind; the figure in the middle is the section of one.

The dead were usually buried outside the town, as it was thought that their presence in the city brought pollution to the living. At Athens the dead were formerly buried in their own houses (Plat. Min. l. c.), but in historical times none were allowed to be buried within the city. (Cic. ad Fam. iv. 12. § 3.) Lycurgus, in order to remove all superstition respecting the presence of the dead, allowed of burial in Sparta (Plut. Lyc. 27); and at Megara also the dead were buried within the town. (Paus. i. 43. § 2.)

Persons who possessed lands in Attica were frequently buried in them, and we therefore read of tombs in the fields. (Dem. c. Euerg. p. 1159; Donat. ad Ter. Eun. Prol. 10.) Tombs, however, were most frequently built hy the side of roads and near the gates of the city. Thus the tomb of Thucydides was near the Melitian gate (Paus. i. 23. § 11); but the most common place of burial was outside of the Itonian gate, near the road leading to the Peiraeeus, which gate was for that reason called the burial gate. ('Hplaı múnai, Etym. Mag. and Harpocr. s.v.; Theophr. Char. 14.) Those who had fallen in battle were buried at the public expense in the outer Cerameicus, on the road leading to the Academia. (Thuc. ii. 34 ; Paus. i. 29. §4.)

The tombs were regarded as private property, and belonged exclusively to the families whose relatives had heen buried in them. (Dem. c. Eubul. p. 1307, c. Macart. p. 1077 ; Cic. de Leg. ii. 26.)
 u $\nu \eta \mu \mathrm{Eia}$, $\sigma$ गината. Many of these were only mounds of earth or stones ( $\chi \omega \mu \mu \tau \alpha$, кол $\omega \nu \alpha!$, $\tau \dot{u} \mu 60 t$ ). Others were built of stone, and frequently ornamented with great taste. Some of the most remarkable Greek tombs are those which have been discovered in Lycia by Sir C. Fellows. In the neighbourhood of Antiphellus the tombs are very numerous. They all have Greek inscriptions, which are generally much destroyed by the damp sea air. The following woodcut, taken from Fellows's work (Excursion in Asia Minor, p. 219), contains one of these tombs, and will give an idea of the general appearance of the whole.

## FUNUS.

At Xanthus the tombs are still more numerous, They are cut into, or are formed by cutting away, the rock, leaving the tombs standing like works of sculpture. (Ib. p. 226.) The same is the case at Telmessus, where they are cut out of the rock in the form of temples. They are generally approached by steps, and the coiumns of the portico stand out about six feet from the entrance to the cella; the interiors vary but little; they are usually about six feet in height and nine feet by twelve in size. One side is occupied by the door, and the other sides contain benches on which the coffins or urns have been placed. (Ib. p. 245.)

Some Greek tombs were built under ground, and called hypogea (ínóyaıa or $\dot{v} \pi \dot{\delta} \gamma \in 1 a$ ). They correspond to the Roman conditoria. (Petron, c. 111. )

At Athens the dead appear to have heen usually buried in the earth; and originally the place of their interment was not marked by any monument. (Cic. de Leg. ii. 25.) Afterwards, however, so much expense was incurred in the erection of monuments to the deceased, that it was provided by one of Solon's laws, that no one should erect a monument which could not be completed by ten men in the course of three days. (Id. ii. 26.) This law, however, does not seem to have been strictly observed. We read of one monument which cost twenty-five minae (Lys. c. Diog..p. 905), and of another which cost more than two talents. (Dem. c. Steph. i. p. 1125. 15.) Demetrius Phalereus also attempted to put a stop to this expense by forbidding the erection of any funeral monument more than three cubits in height. (Cic. l.c.)
The monuments erected over the graves of persons were usually of four kinds: 1. $\sigma \pi \hat{\eta} \lambda a$, , pillars or upright stone tablets; 2. кíoves, columns; 3. $\nu a t \delta a$ or $\dot{\eta} \rho \hat{\psi} a$, small buildings in the form of tem-
 Cicero ( $l$ c.) mensae. The term $\sigma \tau \hat{\eta} \lambda a l$ is sometimes applied to all kinds of funeral monuments, but properly designates upright stone tablets, which were usually terminated with an ovai heading, called $\boldsymbol{i} \pi i \theta \eta \mu a$. These $\in \pi i \theta \dot{\eta} \mu a \tau a$ were frequently ornamented with a kind of arabesque work, as in the two following specimens taken from Stackelberg (pl. 3). The shape of the $\boldsymbol{e} \pi i \theta \eta \mu \alpha$, however, sometimes differed; among the Sicyonians it was

in the shape of the $\mathbf{a} \epsilon \tau \delta \delta$ or fastigium [FASTIGIUM], which is placed over the extremity of a temple.

The sioves, or columns, were of various forms.

The three in the following woodcut are taken from Stackelherg (pl. 44, 46) and Millin (Peindde Vases Ant. vol. ii. pl. 51.)

The following example of an $\dot{\eta} \rho \hat{\varphi} 0 \nu$, which is also taken from Stackelberg (pl. 1) will give a general idea of monuments of this kind. Another $\eta p \notin \hat{o}$ is given in the course of this article (p. 558, a.).

The inscriptions upon these funeral monuments usually contain the name of the deceased person, and that of the demus to which he belonged, as well as frequently some account of his life. A
 was written by Diodorus Periegetes. (Plut. Them. 32.)

Orations in praise of the dead were sometimes pronounced; but Solon ordained that such orations should be confined to persons who were honoured with a public funeral. (Cic. de Lea. ii. 26.) In the heroic ages games were celebrated at the funeral of a great man, as in the case of Patroclus (Il. xxiii.) ; but this practice does not seem to have been usual in the historical times.

All persons who had been engaged in funerals were considered polluted, and could not enter the temples of the gods till they had been purified. Those persons who were reported to have died in forcign countries, and whose funeral rites had been performed in their own cities, were called $\dot{v} \sigma \tau \in \rho \delta$ -
 persons were considered impure, and could only be delivered from their impurity by being dressed in
swaddling clothes, and treated like new-born infants. (Hesych. s. v.; Plut. Quaest. Rom. 5.)

After the funeral was over the relatives partook of a feast, which was called $\pi \epsilon \rho(\delta \in \iota \pi \nu 0 \nu$ or $\nu \in \kappa \rho \delta-$ סєırvov. (Lucian, Ib. с. 24 ; Cic. de Leg. ii. 25.) This feast was always given at the house of the nearest relative of the deceased. Thus the relatives of those who had fallen at the battle of Chaeroneia partook of the $\pi \epsilon \rho i \delta \in \iota \pi \nu 0 \nu$ at the honse of Demosthenes, as if he were the nearest relative to them all. (Dem. pro Coron. p. 321. 15.) These feasts are frequently represented on funcral monuments. In one corner a horse's head is usually placed, which was intended to represent death as a journey. The following woodcut, which represents a $\pi \in p(\delta \in L \pi \nu 0 \nu$ or $\nu \in \kappa \rho \delta \delta \in!\pi \nu 0 \nu$, is taken from the Marmora Oxon. i. tab. 52. No. 135. A similar example of a $\pi \epsilon \rho i \delta \in \iota \pi \nu 0 \nu$ is given at the beginning of Hohhouse's Travels. (Compare Müller, Archäol. der Kunst, § 428. 2.)

On the second day after the funeral a sacrifice to the dead was offered, called toita. Pollux (viii. 146) enumerates, in order, all the sacrifices and ceremonies which followed the funeral,- $\tau \rho i \tau a$,
 (Lysistr. 611, with Schol.) ailudes to the $\tau \rho i \tau \alpha$. The principal sacrifice, however, to the dead was on the ninth day, called évyara or évara. (Aeschin. c. Ctesiph. p. 617 ; Isaeus, de Ciron. hered. p. 224.) The mourning for the dead appears to have lasted till the thirtieth day after the funeral (Lys. de caed. Erat. p. 16), on which day sacrifices were again offered. (Harpocrat. s. v. тptakós.) At Sparta the time of monrning was limited to eleven days. (Plut. Lye. 27.). During the time of mounning it was considered indecorous for the relatives of the deceased to appear in public (Aeschin. c. Ctesiph. pp. 468,469 ); they were accustomed to wear a black dress (Eurip. Helen. 1087, Iphig. Aul. 1438; Isaeus, de Nicostr. her. p. 71 ; Plut. Pericl. 38), and in ancieut times cut off their hair as a sign of

The tombs were preserved by the family to which they belonged with the greatest care, and were regarded as among the strongest ties which attached a man to his native land. (Aeschyl. Pers. 405; Lycurg. c. Leocr. p. 141.) In the Docimasia of the Athenian archons it was always a subject of inquiry whether they had kept in proper repair the tomhs of their ancestors. (Xen. Mem. ii. 2. § 13.) On certain days the tombs were crowned with flowers, and offerings were made to the dead, consisting of garlands of flowers and various other things; for an account of which see Aeschyl. Pesrs.

609 , \&c., Choëph. 86, \&c. The act of offering
 ings themselves 'ंvari $\sigma \mu a \tau \alpha$, or more commonly xoal. Such offerings at the tombs are represented npon many $\lambda$ भ́кข $\theta o t$, or painted vases; of which an example is given in the following woodcut. (Millin, Peint. de Vases, vol. ii. pl. 27.) The tomb is built in the form of a temple ( $\eta \rho \hat{\rho} 0 \nu$ ), and upon it is a representation of the deceased. (See also Stackelberg, pl. 44-46, and Millin, vol. ii. pl. 32. 38, for further examples.)

The $\gamma \in \nu$ ย́ $\sigma$ เa mentioned by Herodotus (iv. 26) appear to have consisted in offerings of the same kind, which were presented on the anniversary of the birth-day of the deceased. The $\nu \in \kappa v \sigma_{1}$ were probably offerings on the anniversary of the day of the death; though, according to some writers, the $\nu \in \kappa \dot{v} \sigma \iota a$ were the same as the $\gamma \in \nu \epsilon \sigma \iota a$. (Hesych. є. v. Гє $\boldsymbol{\ell} \neq \sigma \mathrm{ta}$ : Grammat. Bekk. p. 231.) Meals were also presented to the dead and burnt. (Lucian, Contempl. 22. vol. i. p. 519, ed. Reitz. ; de Merc. Cond.28. p. 687 ; Artemiod. Oneirocr. iv. 81.)

Certain criminals, who were put to death by the state, were also deprived of the rights of burial, which was considered as an additional punishment. There were places, hoth at Athens and Sparta, where the dead bodies of such criminals were cast. (Plut. Them. 22; Thuc. i. 134.) A person who had committed suicide was not deprived of burial, but the hand with which he had killed himself was cut off and huried by itself. (Aeschin. c. Ctes. pp. 636, 637.) The hodies of those persons who had been struck by lightning were regarded as sacred ( $i \in \rho o l, \nu \in \kappa \rho o l$ ); they were never buried with others (Eurip. Suppl. 935), but usually on the spot where they had heen struck. (Artemiod. Oneirocr. ii. 9. p. 146 ; Bimental.)
2. Roman. When a Roman was at the point of death, his nearest relation present endeavonred to catch the last breath with his month. (Virg. Aen. iv. 684 ; Cic. Verr. v. 45.) The ring was taken off the finger of the dying person (Suet. Tib. 73 ) ; and as soon as he was dead his eyes and mouth were closed by the nearest relation (Virg. Aen. ix. 487 ; Lncan, iii. 740), who called upon the deceased by name (inclamare, conclamare), exclaiming have or vale. (Ovid, Trist. iii. 3. 43, Met. x. 62, Fast. iv. 852 ; Catull. ci. 10.) The corpse was then washed, and anointed with oil and perfumes by slaves, called Pollinctores, who belonged to the Libitinarii, or undertakers, called hy the Greeks עєкроөánтаı. (Dig. 14. tit. 3. в. 5. §8.)

The Libitinaril appear to have been so called because they dwelt near the temple of Venus Libitina, where all things requisite for funerals were sold. (Senec. de Benef. vi. 38 ; Plut. Quaest. Rom. 23 ; Liv. xli. 21 ; Plut. Num. 12.) Hence we find the expressions vitare Libitinam and evadere Libitinamt used in the sense of escaping death. (Hor. Carm. iii. 30. 6 ; Juv. xii. 122.) At tbis temple an account (ratio, ephemeris) was kept of those who died, and a small sum was paid for the registration of their names. (Suet. Ner. 39 ; Dionys. Ant. Rom. iv. 15.)

A small coin was then placed in the mouth of the corpse, in order to pay the ferryman in Hades (Juv. iii. 267), and the body was laid ont on a couch in the vestibule of the house, with its feet towards the door, and dressed in the best rohe which the deceased had worn when alive. Ordinary citizens were dressed in a white toga, and magistrates in their official rohes. (Juv. iii. 173; Liv. xxxiv. 7 ; Suet. Ner. 50.) If the deceased had received a crown while alive as a reward for his bravery, it was now placed on his head (Cic. de Leg. ii. 24) ; and the conch on which he was laid was sometimes covered with leaves and flowers. A branch of cypress was also usually placed at the door of the house, if he was a person of consequence. (Lucan. iij. 442 ; ${ }^{\text {Hor. Carm. ii. 14. 23.) }}$

Funerals were usually called funera justa or exsequiae; the latter term was generally applied to the funeral pracession ( $p o m p a$ funebris). Thers were two kinds of funerals, public and private ; of which the former was called funus publicum (Tacit. Ann. vi.11) or indictivum, becanse the people were invited to it by a herald. (Festus, s. v.; Cic. de Leg. ii. 24) ; the latter funus tacitum (Ovid, Trist. i. 3. 22), translatitium (Suet. Ner. 33), or plebeium. A person appears to have usually left a certain sum of money in his will to pay the expenses of hid funeral ; but if he did not do so, nor appoint any one to bury him, this duty devolved upon the persons to whom the property was left, and if he died without a will, upon his relations according to their order of succession to the property. (Dig. 11. tit. 7. s. 12.) The expenses of the funeral were in such cases decided by an arbiter according to the property and rank of the deceased (Dig. l. c.), whence arbitria is used to signify the funeral expenses. (Cic. pro Domo, 37, post Red. in Sen. 7, in $P$ is. 9.) The following description of the mode in which a funeral was conducted applies strictly only to the funerals of the great ; the same pomp and ceremony could not of course be observed in the case of persons in ordinary circumstances.

All funerals in ancient times were performed at night (Serv. ad Virg. Aen. xi. 143; Isidor, xi. 2, xx. 10), but afterwards the poor only were buried at night, becanse they could not afford to have any funeral procession. (Festus, s. v. Vespae; Suet. Dom. 17; Dionys. iv. 40.) The corpse was usually carried out of the house (efferebatur) on the eighth day after death. (Serv. ad Virg. Aen. v. 64.) The order of the funeral procession was regulated by a person called Designator or Dominus Funeris, who was attended by lictors dressed in black. (Donat ad Ter. Adelph. i. 2.7; Cic. de Leg. ii. 24; Hor. Ep. i. 7. 6.) It was headed by musicians of varions kinds (cornicines, siticines), who played mournful strains (Cic. Ibid. ii. 23 ; Gell. xx. 2), and next came mourning women, called Procficue (Festus. s. v.), who wore hired to lament and sing
the funeral song (naenia or lessus) in praise of the deceased. These were sometimes followed by players and buffoons (scurrae, histriones), of whom one, called Archimimus, represented the character of the deceased, and imitated his words and actions. (Suet. Vesp. 19.) Then came the slaves whom the deceased had liberated, wearing the cap of liberty (pileati); the number of whom was occasionally very great, since a master sometimes liberated all his slaves, in his will, in order to add to the pomp of his funeral. (Dionys. iv. 24 ; compare Liv. xxxviii. 55.) Before the corpse persons walked wearing waxen masks [ImaGo], representing the sncestors of the deceased, and clothed in the official dresses of those whom they represented (Polyb. vi. 53 ; Plin. H. N. xexv. 2) ; and there were also carried before the corpse the crowns or military rewards which the deceased had gained. (Cic. de Leg. ii. 24.)

The corpse was carried on a couch (lectica), to which the name of Feretrum (Varro, de Ling. Lat. v. 166) or Capulus (Festus, s. v.) was usually given; but the bodies of poor citizens and of slaves were carried on a common kind of bier or coffin, called Sandapila. (Mart. ii. 81, viii. 75. 14; Juv. viii. 175; vilis arca, Hor. Sat. i. 8. 9.) The Sandapila was carried by bearers, called Vespae or Vespillones (Suet. Dom. 17 ; Mart. i. 31. 48), because, according to Festus (s.v.), they carried out the corpess in the evening (vespertino tempore). The couches on which the corpses of the rich were carnied were sometimes made of ivory, and covered with gold and purple. (Suet. Jul. 84.) They were often carried on the shoulders of the nearest relstions of the deceased (Valer. Max. vii. $1 . \S 1$; Hor. Sat. ii. 8. 56 ), and sometimes on those of his freedmen. (Pers. iii. 106.) Julius Caesar was carried hy the magistrates (Suet. Jul. 84), and Augustus by the senators. (Id. Aug. 100; Tacit. Ann. i. 8.)
The relations of the deceased walked behind the corpse in mourning; his sons with their heads veiled, and his daughters with their heads bare and their hair dishevelled, contrary to the ordinary practice of beth. (Plut. Qucest. Rom. 14.) They often uttered loud lamentations, and the women beat their breasts and tore their cheeks, though this was forbidden by the Twelve Tables. (Mulicres genas $n e$ radrnto, Cic. de Leg. ii. 23.) If the deceased was of illustrious rank, the funeral procession went through the forum (Dionys. iv. 40), and stopped before the rostra, where a funeral oration (laudatio) in praise of the deceased was delivered. (Dionys. v. 17 ; Cic. pro Mil. 13, de Orat. ii 84 ; Suet. Jul. 84, Aug. 100.) This practice was of great antiquity among the Romans, and is said by some writers to have been first introduced by Publicola, who pronounced a funeral oration in honour of his colleague Brutus. (Plut. Public. 9 ; Dionys. v. 17.) Women also were honoured by funeral orations. (Cic. de Orat. ii. 11; Suet. Jul. 26, Cal. 10.) From the forum the corpse was carried to the place of burning or burial, which, according to a law of the Twelve Tables, was obliged to be outside the city. (Cic. de Leg. ii. 23.)

The Romans in the most ancient times buried their dead (Plin. H.N. vii. 55), though they elso early adopted, to some extent, the custom of burning, which is mentioned in the Twelve Tables. (Cic. l. c.) Burning, however, does not appear to have become general till the later times of the republic; Marius was buried, and Sulla was the first
of the Cornelian gens whose body was burned. (Cic. ib. ii. 22.) Under the empire burning was almost universally practised, but was gradually discontinued as Christianity spread (Minuc. Felix, p. 327, ed. Ouzel. 1672), so that it had fallen into disuse in the fourth century. (Macrob. vii. 7.) Persons struck by lightning were not burnt, but buried on the spot, which was called Bidental, and was considered sacred. [Bidental.] Children also, whe had not cut their teeth, were not burnt, but buried in a place called Suggrundarium. (Plin. H. N. vii. 15 ; Juv. xv. 140 ; Fulgent. de prisc. Serm. 7.) Those who were buried were placed in a coffin (arca or loculus), which was frequently made of stone (Valer. Max. i. 1. § 12; Aurel. Vict. de Vir. Ill. 42), and sometimes of the Assian stone, which came from Assos in Troas, and which consumed all the body, with the exception of the teeth, in 40 days (Plin. $H . N$. ii. 98 , xxxvi. 27), whence it was called Sarcophagus. This name was in course of time applied to any kind of coffin or tomb. (Juv. x. 172; Dig. 34. tit. 1. s. 18. §5; Orelli, Inscr. No. 194, 4432, 4554.)
The corpse was bumt on a pile of wood (pyra or rogus). Servius (ad Virg. Aen. xi. 185) thus defines the difference between pyra and rogus, "Pyra est lignorum congeries; rogus, cum jam ardere coeperit, dicitur." This pile was built in the form of an altar, with four equal sides, whence we find it called ara sepulcri (Virg. Aen. vi. 177) and funeris ara. (Ovid, Trist. iii. 13.21.) The sides of the pile were, according to the Twelve Tables, to be left rough and unpolished (Cic. de Leg. ii. 23) ; but were frequently covered with dark leaves. (Virg. Aen. vi. 215.) Cypress trees were sometimes placed before the pile. (Virg. Ovid, l. c.; Sil. Ital. x. 535.) On the top of the pile the corpse was placed, with the couch on which it had been carried (Tibull. i. 1. 61), and the nearest relation then set fire to the pile with his face turned away. [FAx.] When the flames began to rise, various perfumes were thrown into the fire (called by Cicero (l. c.) sumptuosa respersio), though this practice was forbiaden by the Twelve Tables; cups ${ }^{\text {of }}$ oil, ornaments, clothes, dishes of food, and other thinge, which were supposed to be agreeable to the deceased, were also thrown upon the flames. (Virg. Aen. vi. 225 ; Stat. Theb. vi. 126 ; Lucan. ix. 175.)

The place where a person was hurnt was called Bustum, if he was afterwards buried on the same spot, and Ustrina or Ustrinum if he was buried at a different place. (Festus, s. v. bustum.) Persons of property frequently set apart a space, surrounded by a wall, near their sepulchres, for the purpose of burning the dead; but those who could not afford the space appear to have sometimes placed the funeral pyres against the monuments of others, which was frequently forbidden in inscriptions on monuments. (Huic monumento ustrinum applicari non licet, Gruter, 755. 4. 656. 3 ; Orelli, 4384, 4385.)

If the deceased was an emperor, or an illustrious general, the soldiers marched (decurrebant) three times round the pile (Virg. Aen. xi. 188 ; Tacit. Ann. ii. 7), which custom was observed annually at a monument built by the soldiers in honour of Drusus. (Suet. Clazd. 1.) Sometimes animals were slaughtered at the pile, and in ancient times captives and slaves, since the Manes were supposed to be fond of blood; but afterwards gladiators,
called Bustuarii, were hired to fight round the burning pile. (Serv. ad Virg. Aen. x. 519; comp. Hor. Sat. ii. 3. 85.)

When the pile was burnt down, the embers were soaked with wine, and the bones and ashes of the deceased were gathered by the nearest relatives (Virg. Aen. vi. 226-228; Tibull. i. 3. 6, iii. 2. 10 ; Suet. Aug. 100), who sprinkled them with perfumes, and placed them in a vessel called urna (Ovid, Ann. iii. 9. 39 ; feralis urna, Tacit. Ann. iii. 1), which was made of various materials, according to the circumstances of individuals. Most of the funeral urns in the British Museum are made of marble, alabaster, or baked clay. They are of various shapes, but most commonly square or round; and upon them there is usually an inscription or epitaph (titulus or epitaphiumb), beginning with the letters D. M. S. or only D. M., that is, Dis Manibus Sacrum, followed by the name of the deceased, with the length of his life, \&c., and also by the name of the person who had the urn made. The following examples, taken from urns in the British Museum, will give a general knowledge of such inseriptions. The first is to Serullia Zosimenes, who lived 26 years, and is dedicated by her son Prosdecius; -

## D. M. <br> Serviliae Zosimeni <br> Qvae vixit ann xxvi. <br> Bene meren. fecit

Prosnecivs Filivs.
The next is an inscription to Licinius Successus, who lived 13 years one month and 19 days, by his most unhappy parents, Comicus and Auriola : -

Dis. Man.<br>Comicys. et<br>Avriola. Parentes<br>Infelicissimi<br>Licinie Svccesso.<br>Y. A. Xili. M. I. D. XIX.

The following woodent is a representation of a sepulchral urn in the British Museum. It is of an

upright rectangular form, richly ornamented with foliage, and supported at the sides by pilasters. It is erected to the memory of Cossutia Prima. Its height is twenty-one inches, and its width, at the base, fourteen inches six-eighths. Below the inscription an infant genius is represented driving a car drawn hy four horses.

After the bones and ashes of the deceased had been placed in the urn, the persons present were thrice sprinkled hy a priest with pure water from a branch of olive or laurel for the purpose of purification (Virg. Aen. vi. 229 ; Serv. ad loc.); after which they were dismissed by the praefica, or some other person, hy the solemn word Ilicet, that is, ire licet. (Serv. l. c.) At their departure they were accustomed to hid farewell to the deceased by pronouncing the word Vale. (Serr. l.c.)
The urns were placed in sepulchres, which, as already stated, were outside the city, though in a few cases we read of the dead being buried within the city. Thus Valerius, Publicola, Tuhertus, and Fabricius were buried in the city; which right their descendants also possessed, but did not use. (Cic. de Leg. ii. 23.) The vestal virgins and the emperors were huried in the city, according to Servius (ad Virg. Aen. xi. 205), because they were not bound by the laws. By a rescript of Hadrian, those who huried a person in the city were liable to a penalty of 40 aurei, which was to be paid to the fiscus; and the spot where the burial had taken place was confiscated. (Dig. 47. tit. 12. s. 3 § 5.) The practice was also forbidden by Antoninus Pius (Capitol. Anton. Pius, 12), and Theodosius II. (Cod. Theod. 9. tit. 17. s. 6.)
The verb sepelire, like the Greek $\uparrow$ áa $\tau \tau \epsilon \nu$, was applied to every mode of disposing of the dead (Plin. H. N. vì. 55); and sepulcrum signified any kind of tomb in which the body or bones of a man were placed. (Sepulcrum est, ubi corpus ossave hominis condita sunt, Dig. 11. tit. 7. s. 2. \& 5 ; compare 47. tit. 12. s. 3. § 2.) The term humare was originally used for hurial in the earth (Plin. l. c.), but was afterwards applied like sepelire to any mode of disposing of the dead ; since it appears to have been the custom, after the body was burnt, to throw some earth upon the bones. (Cic. de Leg. ii. 23.)

The places for burial were either public or private. The public places of burial were of two kinds ; one for illustrious citizens, who were buried at the public expense, and the other for poor citizens, who could not afford to purchase ground for the purpose. The former was in the Campus Martius, which was ornamented with the tombs of the illustrions dead, and in the Campus Esquilinus (Cic. Phil. ix. 7) ; the latter was also in the Campus Esquilinus, and consisted of small pits or caverns, called puticuli or puticulae (Varr. de Ling. Lut. v. 25. ed. Müller ; Festus, s. v. ; Hor. Sat. i. 8. 10 ) ; but as this place rendered the neighbourhood unhealthy, it was given to Maecenas. who converted it into gardens, and huilt a magnificent house upon it. Private places for burial were usually by the sides of the roads leading to Rome; and on some of these roads, such as the Via Appia, the tombs formed an almost uninterrupted street for many miles from the gates of the city. They were frequently built by individuals during their life-time (Senec. de Brev. Vit. 20) ; thns Angustus, in his sixth consulship, built the Mausoleum for his sepulchre between the Via

Flaminia and the Tiber, and planted round it woods and walks for public use. (Suet. Aug. 100.) The heirs were often ordered by the will of the deceased to build a tomb for him (Hor. Sat. ii. 3. 84 ; Plin. Ep. vi. 10) ; and they sometimes did it at their own expense (de swo), which is not unfrequently recorded in the inscription on funeral monuments, as in the following example taken from an urn in the British Museum:-

De Svo.
Sepulchres were originally called busta (Festus, s. v. Sepulcrum), but this word was afterwards employed in the manner mentioned above (p. $559, \mathrm{~b}$.). Sepulchres were also frequently called Monumenta Cic. cul Fam. iv. 12. § 3 ; Ovid, Met. xiii. 524), but this term was also applied to a monument erected to the memory of a person in a different place from where he was buried. (Festus, s.v.; Cic. pro Sext. 67 ; comp. Dig. 11. tit. 8.) Conditoria or conditiva were sepulchres under ground, in which dead bodies were placed entire, in contradistinction to those sepulchres which contained the bones and ashes only. They answered to the

The tombs of the rich were commonly built of marble, and the ground enclosed with an iron railing or wall, and planted round with trees. (Cic. ad Fam. iv. 12. § 3 ; Tibull. iui. 2. 22 ; Suet. Ner. 33. 50 ; Martial, i. 89.) The extent of the burying ground was marked by Cippi [Cippus]. The name of Mausoleum, which was originally the name of the magnificent sepulchre erected by Artemisia to the memory of Mausolus king of Caria (Plin. H. N. xxxvi. 4. § 9, xxxv. 49 ; Gell. x. 18), was sometimes given to any splendid tomb. (Suet. Aug. 100 ; Paus. viï. 16. § 3.) The open space before a sepulchre was called forum [FORUM], and
neither this space nor the sepulchre itself could become the property of a person by usucapion. (Cic. de Leg. ii. 24.)

Private tombs were either built by an individual for himself and the members of his family (sepulcra familiaria), or for himself and his heirs (sepulcra hereditaria, Dig. 11. tit. 7. s. 5). A tomb, which was fitted up with niches to receive the funeral urns, was called columbarium, on account of the resemblance of these niches to the holes of a pigeon-house. In these tombs the ashes of the freedmen and slaves of great families were frequently placed in vessels made of baked clay, called ollae, which were let into the thickness of the wall within these niches, the lids only being seen, and the inscriptions placed in front. Several of these columbaria are still to be seen at Rome. One of the most perfect of them, which was discovered in the year 1822, at the villa Rufini, about two miles beyond the Porta Pia , is represented in the amexed woodcut.

Tombs were of various sizes and forms, according to the wealth and taste of the owner. The following woodcut, which represents part of the street of tombs at Pompeii, is taken from Mazois, Pompeiana, part i. pl. 18.

All these tombs were raised on a platform of masonry above the level of the footway. The first building on the right hand is a funeral triclinium, which presents to the street a plain front about twenty feet in length. The next is the family tomb of Naevoleia Tyche; it consists of a square building, containing a small chamber, and from the level of the outer wall steps rise, which support a marble cippos richly ornamented. The burialground of Nestacidius follows next, which is surrounded by a low wall; next to which comes a monument erected to the memory of C. Calventius Quietus. The building is solid, and was not therefore a place of burial, but only an honorary tomb. The wall in front is scarcely four feet high, from which three steps lead up to a cippus. The back rises into a pediment ; and the extreme height of the whole from the footway is about seventeen feet. An unoccupied space intervenes
between this tomb and the next, which bears no inscription. The last building on the left is the tomb of Scaurus, which is ornamented with basreliefs representing gladiatorial combats and the hunting of wild beasts.

The tombs of the Romans were ornamented in various ways, but they seldom represented death in a direct manner. (Miller, Archäol. der. Kunst, $§ 431$; Lessing, Wie die Alten den Tod gebildet haben?) A horse's head was one of the most common representations of death, as it signified departure ; but we rarely meet with skeletons upon tomhs. The following woodcut, however, which is taken from a bas-relief upon one of the tombs of Pompeii, represcuts the skeleton of a child lying on a heap of stones. The dress of the female, who is stooping over it, is remarkable. and is still preserved, according to Mazois, in the country around Sora. (Mazois, Pomp. i. pl. 29.)

A sepulchre, or any place in which a person was buried, was religiosus; all things which were left or belonged to the Dii Manes were religiosae; those consecrated to the Dii Superi were called Sacrae. (Gaius, ii. 46.) Even the place in which a slave was buried was considered religiosus. (Dig. 11. tit. 7. s. 2.) Whoever violated a sepulchre was subject to an action termed sepulcri violati actio. (Dig. 47. tit. 12 ; compare Cic. Tusc. i. 12, de Leg. ii. 22.) Those who removed the hodies or bones from the sepulchre were punished by death or deportstio in insulam, according to their rank; if the sepulchre was violated in any other way, they were punished by deportatio, or condemmation to the inines. (Dig. 47. tit. 12. s. 11.) The title in the Digest (11. tit. 7), "De Religiosis et Sumtibus Funerum," \&c., also contains much curious information on the subject, and is well worth perusal.

After the bones had been placed in the urn at the funcral, the friends returned home. They then underwent a further purification called suffitio, which consisted in being sprinkled with water and stepping over a fire. (Festns, s. v. Aqua et igni.) The house itself was also swept with a certain kind of broom ; which sweeping or purification was called exverrae, and the person who did it everriator. (Festus, s. v.) The Denicales Feriae were also days set apart for the purification of the family. (Festus, s. v. ; Cic. de Leg. ii. 22.) The mourning and solemnities connected with the dead lasted for nine days after the funeral, at the end of which time a sacrifice was performed, called Novendiale. (Porphyr. ad Horat. Epod. xvii. 48.)

A feast was given in honour of the dead, but it is uncertain on what day; it sometimes appears to have heen given at the time of the funeral, sometimes on the Novendiale, and sometimes later. The name of Silicernium was given to this feast (Festus, s. v.) ; of which the etymology is unknown. Among the tombs at Pompcii there is a funeral triclinium for the celebration of these fensts, which is represented in the annexed woodcut. (Mazois, Pomp. i. pl. xx.) It is open to the sky, and the walls are ornamented by paintings of animals in the centre of compartments, which have borders of flowers. The triclinium is made of stone, with a pedestal in the centre to reccive the table.

After the funeral of great men, there was, in addition to the feast for the friends of the deceased, a distribution of raw meat to the people, called Viscerutio (Liv. viii. 22), and sometimes a public banquet. (Suet. Jul. 26.) Combats of gladiators and other games were also frequently exhibited in

honour of the deceased. Thus at the funeral of P. Licinius Crassus, who had been Pontifex Msximus, raw meat was distributed to the people, a hundred and twenty gladiators fought, and funeral games were celehrated for three days; at the end of which a public banquet was given in the forum. (Liv. xxxix. 46.) Public feasts and funeral games were sometimes given on the anniversary of funerals. Faustus, the son of Sulla, exhibited in honour of his father a show of gladistors seversl years after his death, and gave a feast to the people, according to his father's testament. (Dion Cass. xxxvii. 51 ; Cic. pro Sull. 19.) At all banquets in honour of the dead, the guests were dressed in white. (Cic. c. Vatin. 13.)
The Romans, like the Greeks, were accustomed to visit the tombs of their relatives at certain periods, and to.offer to them sacrifices and various gifts, which were called Inferiae and Parentalia. The Romans appear to have regarded the Manes or departed souls of their ancestors as gods; whence arose the practice of presenting to them ohlations, which consisted of victims, wine, milk, garlands of flowers, and other things. (Virg. Aen. v. 77, ix. 215, x. 519 ; Tacit. Hist. ii. 95 ; Suet. Cal. 15; Ner. 57 ; Cic. Plil. i. 6.) The tombs were sometimes illuminated on these occasions with lamps. (Dig. 40. tit. 4. s. 44.) In the latter end of the month of Fehruary there was a festival, called Feralia, in which the Romans were accustomed to carry food to the sepulchres for the use of the dead. (Festus, s. v. ; Varro, de Ling. Lat. vi. 13 ; Ovid, Fast. ii. $565-570$; Cic. ad Att. viii. 14.)

The Romans, like ourselves, were accustomed to wear mourning for their deceased friends, which appears to have heen black or dark-blue (atra) under the republic for both sexes. (Serv. ad Virg. Aen. xi. 287.) Under the empire the men continued to wear black in mourning (Juv. x. 245), but the women wore white. (Herodian. iv. 2.) They laid aside all kinds of ornaments (Herodian. l. c.; Terent. Heaut. ii. 3. 47), and did not cut either their hair or heard. (Suet. Jul. 67, Aug. 23, Cal. 24.) Men appear to have usually worn their mourning for only a few days (Dion Cass. lvi. 43), but women for a year when they lost a husband or parent. (Ovid, Fast. iii. 134 ; Senec. Epist. 63, Consol. ad Helv. 16.)

In a public mourning on account of some signal calamity, as for instance the loss of a battle or the death of an emperor, there was a total cessation from business, called Justitium. [Justitium.] In a public mourning the senators did not wear the latus clavus and their rings (Liv. ix. 7), nor the magistrates their hadges of office. (Tacit. Ann. iii. 4.)
(Meursius, de Funere ; Stackelherg, Die Gräber der Hellenen, Berlin, 1837 ; Kirchmann, de Funeribus Romanis; Becker, Charikles, vol. ii. pp. 166210, Gallus, vol. ii. pp. 271 - 301. )

FURCA, which properly means a fork, wal also
the name of an instrument of punishment. It was a piece of wood in the form of the letter $\Lambda$, which was placed upon the shoulders of the offender, whose hands were tied to it. Slaves were frequently punished in this way, and were obliged to carry about the furca wherever they went (Donat. ad Ter. Andr. iii. 5. 12 ; Plut. Coriol. 24 ; Plaut. Cas. i. 6. 37) ; whence the appellation of furcifer was applied to a man as a term of reproach. (Cic. in Vatin. 6.) The furca was used in the ancient mode of capital punishment among the Romans; the criminal was tied to it, and then scourged to death. (Liv. i. 26; Suct. Ner. 49.) The patibulum was also an instrument of punishment, resembling the furca ; it appears to have been in the form of the letter ח. (Plaut. Mil. ii. 4. 7, Mostell. i. 1. 53.) Both the furca and patibulum were also employed as crosses, to which criminals were nailed (in furca suspendere, Dig. 48. tit. I3. s. 6 ; tit. 19. s. 28. § 15 ; tit. 19. s. 38). See Lipsius, de Cruce.
FU'RCIFER. [Furca.]
FURIO'SUS. [CURator.]
FURNUS. [Fornax.]
FUROR. [CURator.]
FURTI ACTIO. [Furtum.]
FURTUM, "theft," is one of the four kinds of delicts which were the foundation of obligationes; it is also called "crimen." Moveable things only could be the objects of furtum ; for the frandulent handling (contrectatio fraudulosa) of a thing was furtum, and contrectatio is defined to be " loco movere." But a man might commit theft without carrying off another person's property. Thus it was furtum to use a thing which was deposited (depositum). It was also furtum to use a thing which had been lent for use, in a way different from that which the lender had agreed to ; but with this qualification, that the horrower must believe that he was doing it against the owner's consent, and that the owner would not consent to such use if he was aware of it; for dolus malns was an essential ingredient in furtum. Another requisite of furtum (Dig. 47. tit. 2. s. 1) is the "lucri faciendi gratia," the intention of appropriating the property. This was otherwise expressed by saying that furtum consisted in the intention (furtum ex affectu consistit; or, sine affectu furandi non committitur, Gaius, ii. 50). It was not necessary, in order to constitnte furtum, that the thief should know whose property the thing was. A person who was in the power of another might be the object of furtum. (Inst. 4. tit. 1. § 9.) A debtor might commit furtum by taking a thing which he had given as a pledge (pignori) to a creditor ; or by taking his property when in the possession of a bona fide possessor. Thus there might be furtum either of a moveable thing itself, or of the use of a thing, or of the possession, as it is expressed. (Inst. 4. tit. l. § I.)

The definition of furtum in the Institntes is rei contrectatio frandulosa, withont the addition of the word "alienae." Accordingly the definition comprises both the case of a man stealing the property of another, and also the case of a man stealing his own property, as when a man fraudulently takes a moveahle thing, which is his property, from a person who has the legal possession of it. This latter case is the " furtum possessionis." The definition in the lnstitntes is not intended as a classification of theft into three distinct kinds, bnt only to show by way of example the extent of the meaning of the term Furtum. This is well explained by Vangcrow,

Pandehten, \&c. iii. p. 550. See also Rein, Das Criminalrecht der Römer, p. 304.

A person might commit furtun by aiding in a furtnm, as if a man should jostle you in order to give another the opportunity of taking your money; or drive away your sheep or cattle in order that another might get possession of them: but if it were done meroly in a sportive way, and not with a view of aiding in a theft, it was not furtum, thongh there might be in such case an actio ntilis under the Lex Aquilia, which gave such an action even in the case of culpa. [Damnum.]

Furtum was either Manifestum or Nec Manifestum. It was clearly manifestum when the person was canght in the act ; bnt in varions other cases there was a difference of opinion as to whether the furtum was manifestum or not. Some were of opinion that it was furtum manifestum so long as the thief was engaged in carrying the thing to the place to which he designed to carry it: and others maintained that it was furtum manifestum if the thief was ever foumd with the stolen thing in his possession; but this opinion did not prevail. (Gains, iii. 184 ; Inst. 4. tit. 1. § 3.) That which was not manifestum was nec manifestum. Furtum conceptum and oblatum were not species of theft, but species of action. It was called conceptum furtum when a stolen thing was sought and found, in the presence of witnesses, in the possession of a person, who, though he might not be the thief, was liable to an action called Furti Concepti. If a man gave you a stolen thing, in order that it might be found (conciperetur) in your possession, rather than in his, this was called Furtum Oblatum, and you had an action Furti Oblati against him, even if he was not the thief. There was also the action Prohibiti Furti against him who prevented a person from searching for a stolen thing (furtum); for the word furtom signifies hoth the act of theft and the thing stolen.

The punishment for furtum manifestum by the law of the Twelve Tables was capitalis, that is, it affected the person's capnt: a freeman who had committed theft was flogged and consigned (addiotus) to the injured person; but whether the thief became a slave in consequence of this addictio, or an adjudicatus, was a matter in dispute among the ancient Romans. The Edict subsequently changed the penalty into an actio quadrupli, both in the case of a slave and a freedman. The penalty of the Twelve Tables, in the case of a furtum nec manifestum, was duplum, and this was retained in the Edict: in the case of the conceptum and oblatum it was triplum, and this also was retained in the Edict. In the case of Prohibitum, the penalty was quadruplum, according to the provisions of the Edict; for the law of the Twelve Tables had affixed no penalty in this case, but merely enacted that if a man would search for stolen property, he must he naked all but a cloth round his middle, and must hold a dish in his hand. If he found any thing, it was furtum manifestum. The absurdity of the law, says Gains, is apparent ; for if a man would not let a person search in his ordinary dress, much less wonld he allow him to search undressed, when the penalty would he so much more severe if any thing was found. (Compare Grimm, Von der Poesie in Recht, Zeitschrift, vol. ii. p. 91.)

The actio furti was given to all persons who had an interest in the preservation of the thing stolen (cujus interest rem salvam esse), and the owner of
a thing, therefore, had not necessarily this action. A creditor might have this action even against the owner of a thing pledged, if the owner was the thief. A person to whom a thing was delivered in order to work upon it, as in the case of clothes given to a tailor to mend, could bring this action against the thief, and the owner could not, for the owner had an action (locati) against the tailor. But if the tailor was not a solvent person, the owner had his action against the thief, for in such case the owner had an interest in the preservation of the thing. The rule was the same in the case of commodatum [Commodatum]. But in a case of depositum, the depositee was under no obligation for the safe costody of the thing (custodian praestare), and he was under no liability except in the case of dolus : consequently, if the deposited thing was stolen, the owner alone had the actio furti. A bona fide purchaser might have the actio furti, even if the thing had not heen delivered to him, and he were consequently not dominus.

An impubes might commit theft (obligatur crimine furti), if he was borderiug on the age of puherty, and consequently of sufficient capacity to understand what he was doing. If a person who was in the power of another committed furtum, the actio furti was against the latter.

The right of action died with the offending person. If a peregrinus committed furtum, he was made liable to an action oy the fiction of his being a Roman citizen (Gaius, iv. 37); and by the same fiction he had a right of action, if his property was stolen.

He who took the property of another by force was guilty of theft ; but in the case of this delict, the prator gave a special action Vi bonorum raptorum. The origin of the action Vi honorum raptorum is referred by Cicero to the time of the civil wars, when men had become accustomed to acts of violence and to the use of arms against one another. Accordingly, the Edict was originally directed against those who with bodies of armed men (hominilus armatis coactisque) did injury to the property of another or carried it off (quid aut rapuerint aut damni dederint). With the establishment of order under the empire the prohihition against the use of arms was less needed, and the word armatis is not contained in the Edict as cited in the Digest (47. tit. 8). The application of the Edict wonld however have still been very limited, if it had been confined to cases where numbers were engaged in the violence or rohbery; and accordingly the jurists discovered that the Edict, when properly understood, applied also to the case of a single person committing damnum or carrying off property. Originally the Edict comprehended both damnum and bona rapta, and, indeed, damnum which was effected vi homninibus armatis coactisque, was that kind of violence to the repression of which the Edict was at first mainly directed. Under the empire the reasons for this part of the Edict ceased, and thus we see that in Ulpian's time the action was simply called "vi honorum raptorim." In the Institutes and Code the action applies to robbery only, and there is no trace of the other part of the Edict. This instructive illinstration of the gradual adaptation, even of the Edictal law, to circumstances is given by Savigny (Zeitschrift, vol. v. Ueber Cicero Pro Tullio und die Actio vi bonorum Raptorum), who has also given the masterly emendation of Dig. 47. tit. 8. s. 2. § 7, by Heise.

## FUSTUARIUM.

The object of the furti actio was to get a penalty as to the thing stolen the owner could recover it either by a vindicatio, which was available against any possessor, whether the thief or another, or by a condictio, which was available against the thief or his heres, though he had not the possession. (Inst. 4. tit. 1. § 19.)

The strictness of the old law in the case of actions of theft was gradually modified, as already shown. By the law of the Twelve Tahles, if theft (furtum) was committed in the night, ths thief, if canght in the act, might he killed: and he might also be killed in the daytime, if he was caught in the act and defended himself with any kind of a weapon (telum) ; if he did not so defend himself, he was whipped and hecame addictus, if a freeman (as above stated); and if a slave, hs was whipped and thrown down a precipice.

The following are peculiar kinds of actiones furti: (1) Actio de tigno juncto, against a person who employed another person's timber in his huilding; (2) Actio arborum furtim caesarum, against a person who secretly cut wood on another person's ground ; (3) Actio furti adversus nautas et caupones, against nautae and caupones [ExarCITOR], who were liable for the acts of the men in their employment.

There were two cases in which a bona fide possessor of another person's property could not ohtain the ownership by usucapion ; and one of them was the case of a res furtiva, which was provided for in the Twelve Tahles. The Roman Law as to Furtum underwent changes, as appears from what has been said; and the subject requires to he treated historically in order to be folly understood. The work of Rein (Das Criminalrecht der Römer) contains a complete view of the matter.
(Gains, iii. 183-209, iv. ] ; Gellius, xi. 18; Dig. 47. tit. 2; Inst. 4. tit. 1; Dirksen, Uebersicht, \&cc. pp. 564-594; Heinec. Syntag. ed. Hanbold; Rein, Das Röm. Privatrecht, p. 345 ; Rein, Das Criminalrecht der Römer, p. 293.) [G. L.]

FU'SCINA ( $\tau$ laiva), a trident; more commonly called tridens, meaning tridens stimulus, because it was originally a three-pronged goad, used to incite horses to greater swiftness. Neptune was supposed to be armed with it when he drove his chariot, and it thus became his usual attrihute, perhaps with an allusion also to the use of the same instrument in harpooning fish. It is represented in the cut on p. 276. (Hom. Il. xii. 27, Od. iv. 506, v. 292 ; Virg. Georg. i. 13, Aen. i. 138, 145, ii. 610; Cic. de Nat. Deor. i. 36 ; Philost. 1mag. ii. 14.) The trident was also attributed to Nereus (Virg. Aen. ii. 418) and to the Tritons. (Cic. de Nat. Deor. ii. 35 ; Mart. Spect. xxvi. 3.)

In the contests of gladiators the Retiarius was armed with a trident. (Juv. ii. 148, viii. 203.) [Glamiator.]
[J. Y.]
FUSTUA'RIUM ( $\xi \cup \lambda о к о \pi i a)$ was a capital punishment inficted upon the Roman soldiers for desertion, theft, and similar crimes. It was administered in the following manner:-When a soldier was condemned, the tribune touched him slightly with a stick, upon which all the soldiers of the legion fell npon him with sticks and stones, and generally killed him upon the spot. If however he escaped, for he was allowed to fly, he could not return to his native country, nor did-any of his relatives dare to receive him into their houses. (Polyb. vi. 37 ; compare Liv. v. 6.) This punish-
ment continued to be inflicted in the later times of the republic（Cic．Philip．iii．6），and under the empire．（Tacit．Ann．iii．21．）

Different from the fustuarium was the animad－ versio fustium，which was a corporal punishment inflicted under the emperors upon free men，but only those of the lower orders（tenuiores，Dig． 48. tit．19．s．28．§ 2）．It was a less severe punish－ ment than the flogging with flagella；which punish－ ment was confined to slaves．（Dig．48．tit． 19. s． 10 ；47．tit．10．s．45．）［Flagrum．］
 wheo in use，accompanied by the distaff（colus， मे入acait $\eta$ ），as an indisputable part of the same apparatus．（Ovid，Met．iv．220－229．）The wool， flax，or other material，having been prepared for spianing，and having sometimes been dyed（ioסve－ ф’̀s eīpos é $\chi$ ovaa，Hom．Od．iv．135），was rolled into a ball（（тo入v́ $\pi \eta$ ，glomus，Hor．Epist．i．13． 14 ； Ovid，Met．vi．19），which was，however，sufficiently loose to allow the fibres to he easily drawn out hy the hand of the spinner．The upper part of the distaff was then inserted into this mass of flax or woal（colus comta，Plin．H．N．viii．74），and the lower part was held in the left hand under the left arm in such a position as was most convenient for conducting the operation．The fibres were drawn out，and at the same time spirally twisted，chiefly by the use of the fore－finger and thumh of the right
 docto，Claud．de Prob．Cons．177）；and the thread （filum，stamen，$\nu \eta \mu a$ ）so produced was wound upon the spindle until the quantity was as great as it would carry．
The spindle was a stick， 10 or 12 inches long， having at the top a slit or catch（dens，byкıбт $\rho o \nu$ ） in which the thread was fixed，so that the weight of the spindle might continually carry down the thread as it was formed．Its lower extremity was inserted into a small wheel called the whorl（vor－ ticellum），made of wood，stone，or metal（see wood－ cut），the use of which was to keep the spindle more steady and to promote its rotation ：for the

spinner，who was commoaly a female，every now and then $t$ wirled round the spindle with her right hand（Herod．v． 12 ；Ovid．Met．vi．22），so as to twist the thread still more completely；and when－ ever，by its continual prolongation，it let down the spindle to the ground，she took it out of the slit， wound it upon the spindle，and，having replaced it in the slit，drew out and twisted another length． All these circumstances are mentioned in detail by Catullus（lxiv．305－319）．The accompanying
woodcut is taken from a series of has－reliefs repre－ senting the arts of Minerva upon a frieze of the Forum Palladium at Rome．It shows the opera－ tion of spinning，at the moment when the woman has drawn out a sufficient length of yarn to twist it by whirling the spindle with her right thumb and fore－finger，and previously to the act of taking it
 already formed．

The distaff was about three times the length of the spindle，strong and thick in proportion，com－ monly either a stick or a reed，with an expansion near the top for holding the ball．It was some－ times of richer materials and ornamented．Theo－ critus has left a poem（Idyll．xxviii．）written on sending an ivory distaff to the wife of a friend． Golden spindles were sent as presents to ladies of high rank（Hom．Od．iv．131；Herod．iv．162）； and a golden distaff is attributed by Homer and Pindar to goddesses，and other females of remark－ able dignity，who are called $\chi \rho \cup \sigma \eta \lambda \alpha{ }^{\prime} \kappa a t o t$.

It was usual to have a hasket to hold the dis－ taff and spindle，with the balls of wool prepared for spinning，and the bobhins already spun．（Brunck， Anal．ii． 12 ；Ovid，Met．iv．10．）［Calathus．］

In the rural districts of Italy women were for－ bidden to spin when they were travelling on foot， the act being considered of evil omen．（Plin．H．N． xxviii．5．）The distaff and spindle，with the wool and thread upon them，were carried in bridal pro－ cessions ；and，without the wool and thread，they were often suspended by females as offerings of re．． ligious gratitude，especially in old age，or on relin－ quishing the constant use of them．（Plin．H．N． viii．74．）［Donaria．］They were most frequently dedicated to Pallas，the patroness of spinning，and of the arts connected with it．This goddess was herself rudely sculptured with a distaff and spindle in the Trojan Palladium．（Apollod．iii．12．3．） They were also exhibited in the representations of the three Fates，who were conceived，by their spin－ ning，to determine the life of every man；and at the same time by singing，as females usually did whilst they sat together at their work，to predict his future lot．（Catull．l．c．）

GALEA.
Herefordshire. (Skelton, Engraved Illust. i. pl. 44.) The perforations for the lining and exterior border are visible along its edge. A side and a front view of it are presented in the annexed woodcut.

Two casques very like this were fished up from the bed of the Alpheus, near Olympia, and are in the possession of Mr. Hamilton. (Dodwell, Tour, vol. ii. p. 330.) Among the materials used for the lining of helmets were felt ( $\pi i \lambda \lambda a s$, Hom. Il. x. 265) and sponge. (Aristot. H. A. v. 16.)

The helmet, especially that of skin or leather, was sometimes a mere cap conformed to the shape of the head, without either crest or any other orna-
 state it was prohably used in hunting (galea venatoria, C. Nep. Dat. iii. 2.), and was called rarairug (Hom. Il. l.c.), in Latin Cuno. The preceding woodcut shows an example of it as worn by Diomede in a small Greek bronze, which is also in the collection at Goodrich Court. (Skelton, l. c.) The additions by which the external appearance of the helmet was varied, and which served both for ornament and protection, were the following: -

1. Bosses or plates, proceeding either from the top ( $\phi \dot{d} \lambda o s$, Hom. Il. iii. 362) or the sides, and varying in number from one to four ( $\dot{\alpha} \mu \phi i \phi a \lambda о s$, ठıфа́лos, Hom. Il. v. 743, xi. 41 ; Eustath. ad loc.; тєтрáфадоs, 11. xii. 384). It is however very douhtful what part of the helmet the $\phi d \lambda o s$ was. Buttmann thought that it was what was afterwards called the $\kappa \hat{\omega} \nu 0 s$, that is, a metal ridge in which the plume was fixed ; but Liddell and Scott (Lex. s.v.) maintain with more probability that the $\phi$ d́ $\lambda o s$ was the shade or fore-piece of the helmet; and that an $\dot{\alpha} \mu \phi \dot{\prime} \phi a \lambda o s$ helmet was one that had a like projection behind as well as before, such as may be seen in the representations of many ancient helmets.
2. The helmet thus adorned was very commonly surmounted by the crest (crista, $\lambda$ d́фos, Hom, Il. xxii. 316 ), which was often'of horse-hair ( $/ \pi \pi \pi o u p t s$,
 xxii. 186 ; hirsuta juba, Propert. iv. 11. 19), and made so as to look imposing and terrihle (Hom, $I l$. iii. 337 ; Virg. Aen. viii. 620), as well as handsome. (Ib. ix. 365 ; є号 The helmet often had two or even three crests. (Aesch. Sep, c. Theb. 384.) In the Roman army of later times the crest served not only for ornament, but also to distinguish the different centnrions, each of whom wore a casque of a peculiar form and appearance. (Veget. ii. 13.)
3. The two cheek-pieces (bucculae, Juv. x. 134 ; $\pi a \rho a \gamma \nu \alpha \theta i \delta \in s$, Eustath. in Il. v. 743), which were attached to the helmet by linges, so as to be lifted up and down. They had buttons or ties at their extremities for fastening the helmet on the head. (Val. Flace. vi. 626.)
4. The beaver, or visor, a peculiar form of which is supposed to have been the $\alpha \cup \lambda \omega \bar{\omega} \pi t 5 \tau \rho \cup \phi \alpha \lambda \epsilon i \alpha$, i. c. the perforated beaver. (Hom. I. xi, 353.) The gladiators wore helmets of this kind (Juv. viii. 203), and specimens of them, not unlike those

GALLI.
worn in the middle ages, have been found at Pompeii. See the wood-cut to Gladiatores.

The five following helmets are selected from an. tique gems, and are engraved of the size of the originals.
[J. Y.]

GALERI'CULUM. [Galkrus.]
GALE'RUS or GALE'RUM, was originally a covering for the head worn hy priests, especially hy the flamen dialis (Gell. x. 15; Serv. ad Virg. Aen. ii. 683). It appears to have been a round cap made of leather, with its top ending in an apex or point. [See cut on p. 102.] The word is probably connected with galea, a helmet. In course of time the name was applied to any kind of cap fitting close to the head like a helmet. (Virg. Aen. vii. 688; Virg. Moret. 121; Suet. Ner. 26.) Galerus and its diminutive Galericulum are also used to signify a covering for the head made of hair, and bence a wig. (Juv. Sat. vi. 120, with the Schol.; Suet. Oth. 12 ; Mart. xiv. 50.)

GALLI, the priests of Cybele, whose worship was introduced at Rome from Phrygia, in B.c. 204. (Liv. xxix. 10, 14, xxxvi. 36.) The Galli were, according to an ancient custom, always castrated (spadones, semimares, semiviri, nec viri nec feminae), and it would seem that impelled hy religious fanaticism they performed this operation on themselves. (Juv. vi. 5l2, \&c. ; Ovid, Fast. iv. 237; Martial, iii. 81, xi. 74 ; Plin. H. N. xi. 49.) In their wild, enthnsiastic, and boisterous rites, they resembled the Corybantes (Lucan. i. 565, \&c.; compare Hilaria), and even went further, in as much, as in their fury, they mutilated their own bodies. (Propert. ii. 18. 15.) They seem to have been always chosen from a poor and despised class of people, for while no other priests were allowed to beg, the Galli ( famuli Idacoe matris) were allowed to do so on certain days. (Cic. de Leg. ii. 9 and 16.) The chief priest among them was called archigallus. (Servius, ad Aen. ix. 116.) The origin of the name of Galli is uncertain: according to Festus (s. v.), Ovid (Fast. iv. 363), and others, it was derived from the river Gallus in Phrygia, which flowed near the temple of Cybele, and the water of which was fabled to put those persons who drank of it into such a state of madness, that they castrated themselves. (Compare Plin. H.N. v. 32, xi. 40, xxxi. 2 ; Herodian. 11.) The supposition of Hieronymus (Cap. Oseae, 4) that Galli was the name of the Gauls, which had been given to these priests by the Romans in order to show their contempt of that nation, is unfounded, as the Romans must have received the name from Asia, or from the Greeks, by whom, as Suidas (s. v.) informs ns, Gallus was used as a common noun in the sense of eunuch. There exists a verh gallare, which signifies to rage (insanare, baochari), and
which occurs in one of the fragments of Varro (p. 273, ed. Bip.) and in the Antholog. Lat. vol. i. p. 34, ed. Burmann.
[L. S.]
GAME/LIA ( $\gamma a \mu \eta \lambda(a)$. The demes and phratries of Attica possessed various means to prevent intruders from assuming the rights of citizens. Among other regulations it was ordained that every bride, previous to her marriage, should be introduced by her parents or guardians to the phratria
 Isaeus, de Pyrrh. Haered. pp. 62, 65, \&c. ; de Ciron. Haered. p. 208 ; Demosth. c. Eubul. p. 1312 and 1320). This introduction of the young women was accompanied by presents to their new phratores, which were called $\gamma \quad \mu \mu \eta \lambda i a$. (Suidas, s. v.; Schol. ad Dem. c. Eubul. p. 1312.) The women were enrolled in the lists of the phratries, and this enrolment was also called rapŋ入ia. The presents seem to have consisted in a feast given to the phratores, and the phratores in return made some offerings to the gods on behalf of the young bride. (Pollux, iii. 3, viii. 9, 28.) The acceptance of the presents and the permission to enroll the bride in the registers of the phratria, was equivalent to a declaration that she was considered a true citizen, and that consequently her children would have legitimate claims to all the rights and privileges of citizens. (Herm. Lehr. d. griech. Staatsalt. § 100 . n. 1.)
ra $\mu \eta \lambda l a$ was also the name of a sacrifice offered to Athena on the day previous to the marriage of a girl. She was taken by ber parents to the temple of the goddess in the Acropolis, where the offerings were made on her hehalf. (Suidas, s.v. Протé $\lambda$ eta.)

The plural, raرŋ入iai, was used to express wedding solemnities in gencral. (Lycophron, ap. Etym. M. s. v.)
[L.S.]
GAMOS ( $\gamma \alpha \mu o s$ ). [Matrimonium.]
GA'MORI. [Geomori.]
GA'NEA. [CAUPona, p. 259, a.]
GAUSAPA, GAUSAPE, or GAUSAPUM, a kind of thick cloth, which was on one side very woolly, and was used to cover tables (Horat. Sat. ii. 11 ; Lucil. ap. Priscian. ix. 870), beds (Mart. xiv. 147), and by persons to wrap themselves up after taking a bath (Petron. 28), or in general to protect themselves against rain and cold. (Seneca, Epist. 53.) It was worn by men as well as women. (Ovid, Ars Amat. ii. 300.) It came in use among the Romans about the time of Augustus (Plin. H. N. viï. 48), and the wealthier Romans had it made of the finest wool, and mostly of a purple colour. The gausapum seems, however, sometimes to have been made of linen, but its peculiarity of having one side more woolly than the other always remained the same. (Mart. xiv. 138.) As Martial (xiv. 152) calls it gausapa quadrata, we have reason to suppose that, like the Scotch plaid, it was always, for whatever purpose it might be used, a square or oblong piece of cloth. (See Böttiger, Sabina, ii. p. 102.)

The word gausapa is also sometimes used to designate a thick wig, such as was made of the hair of Germans, and worn by the fashionable people at Rome at the time of the emperors. (Pers. Sat. vi. 46.) Persins (Sat. iv. 38) also applies the word in a figurative sense to a full beard. [L. S.]

GELEONTES. [Tribus, Greek.]
GELOTOPOII ( $\gamma \in \lambda \omega T 0 \pi 0,0 l$ ) [Parasimi.]
GENE'SIA. [Funus, p. 558, a.]
GE'NIUS. See Dict. of Gr. and Rom. Biography.

GENOS ( $\gamma$ ćyos). [Tribus, Greeik.]
GENS. This word contains the same element as the Latin gen us, and gi $i_{i} n_{i}$, and as the Greek $\gamma^{\epsilon} \nu, 0 s, \gamma l^{l}-\gamma \nu-0 \mu a i, \& c$., and it primarily signifies kin. But the word has numerous significations, which have either a very remote connection with this its primary notion, or perhaps none at all.

Gens sometimes signifies a whole political com munity, as Gens Latinorum, Gens Campanorum, \&c. (Juv. Sat. viii. 239, and Heinrich's note); though it is probable that in this application of the term, the notion of a distinction of race or stock is implied, or at least the notion of a totality of persons distinguished from other totalities by sameness of language, community of law, and increase of their numbers among themselves only. Cicero (pro Balbo, c. 13) speaks of "Gentes universae in civitatem receptae, ut Sabinorum, Volscorum, Hernicorum." It is a consequence of such meaning of Gens, rather than an independent meaning, that the word is sometimes used to express a people simply with reference to their territorial limits.
The meaning of the word in the expression Jus Gentium is explained under Jus.
The words Gens and Gentiles have a special meaning in the system of the Roman law and in the Roman constitution. Cicero (Top.6) has preserved a definition of Gentiles which was given by Scaevola, the pontifex, and which, with reference to the time, must be considered complete. Those were Gentiles, according to Scaevola, (1) who bore the same name, (2) who were horn of freemen (ingenui), (3) none of whose ancestors had been a slave, and (4) who had suffered no capitis diminutio. This definition contains nothing which shows a common bond of union among gentiles, except the possession of a common name; but those who had a common name were not gentiles, if the three other conditions, contained in this definition, were not applicable to them. There is also a definition of gentilis by Festus: - "That is called Gens Aelia which is composed (conficitur) of many familiae. Gentilis is both one who is of the same stock (genus), and one who is called by the same name (simili nomine) ${ }^{*}$, as Cincius says, those are my gentiles who are called by my name."

We cannot conclude any thing more from the conficitur of Festus than that a Gens contained several familiae, or that several familiae were comprehended under one Gens. According to the definition, persons of the same genus (kin) were gentiles, and also persons of the same name were gentiles. If Festus meant to say that all persons of the same genus and all persons of the same name were gentiles, his statement is inconsistent

[^33]with the defuition of the Pontifex; for persons might be of the same genus, and might have sustrined a capitis diminutio either by adoption or adrogation, or by emancipation: in all these cases the genus would remain, for the natural relationship was not affected by any change in the juristical condition of a person ; in the cases of adoption and adrogation the name would be lost: in the case of emancipation it would be retained. If the definition of Festus means that among those of the same genus there may be gentiles; and among those of the same name, gentiles may also be included, his definition is true; but neither part of the definition is absolutely true, nor, if both parts are taken together, is the whole definition absolutely true. It seems as if the definition of gentiles was a matter of some difficulty; for while the possession of a common name was the simplest general characteristic of gentilitas, there were other conditions which were equally essential.

The name of the gens was generally characterised by the termination eia or $i a$, as Jnlia, Cornelia, Valeria.

When a man died intestate and withont agnati, his familia [Familia] by the law of the Twelve Tables came to the gentiles; and in the case of a innatic (furiosus) who had no guardians, the guardianship of the lunatic and his property belonged to the agnati and to the gentiles; to the latter, we may presume, in case the former did not exist.

Accordingly, one part of the jus gentilitium or jus gentilitatis related to successions to the property of intestates, who had no agnati. A notahle example of a dispute on this subject between the Clandii and Marcelli is mentioned in a difficult passage of Cicero (de Orat. i. 39). The Marcelli claimed the inheritance of an intestate son of one of the liberti or freedmen of their familia (stirpe); the Clandii claimed the same by the gentile rights (gente). The Marcelli were plebeians and belonged to the patrician Clandia gens. Niebubr observes that this claim of the Clandii is inconsistent with Cicero's definition, according to which no descendant of a freedman conld be a gentilis; and he concludes that Cicero (that is Scaevola) most have been mistaken in this part of his definition. But it must be observed though the descendants of freedmen might have no claim as gentiles, the members of a gens might as such have claims against them; and in this sense the descendants of froedmen might be gentiles. It would seem as if the Marcelli united to defend their supposed patronal rights to the inheritance of the sons of freedmen against the claims of the gens; for the law of the Twelve Tables gave the inheritance of a freedman only, who died intestate and without heirs, to his patron, and not the inheritance of the son of a freedman. The question might be this: whether the law, in the case supposed, gave the hereditas to the gens as having a right paramount to the patronal right. It may be that the Marcelli, as being included in the Clandia gens, were supposed to have merged their patronal rights (if they really existed in the case in dispute) in those of the gens. Whether as nembers of the gens, the plebeian Marcelli would take as gentiles what they lost as patroni, may be donbted.

It is generally said or supposed that the hereditas which came to a gens was divided among the gentiles, which must mean the heads of familiae. This may be so; at least we must conceive that
the hereditas, at one period at least, must have been a benefit to the members of the gens: Caesar is said (Sneton. Jul. 1) to have been deprived of his gentilitiae hereditates.

In determining that the property of intestates should ultimately belong to the gens, the law of the Twelve Tahles was only providing for a case which in every civilized country is provided for hy some positive law ; that is, the law finds some rule as to the disposition of the property of a person wha dies without having disposed of it or leaving those whom the law recognizes as immediately entitled to it in case there is no disposition. The gens had thus a relation to the gentiles, similar to that which subsists in modern states between the sovereign power and persons dying intestate and without heirs or next of kin. The mode in which such a succession was applied by the gens was probably not determined by law; and as the gens was a kind of juristical person, analogous to the community of a civitas, it seems not unlikely that originally inheritances accrued to the gens as such, and were common property. The gens must have had some common property, snch as sacella, \&c. It would be no difficult transition to imagine, that what originally belonged to the gens as such, was in the course of time distributed among the members, which would easily take place when the familiae inclnded in a gens were reduced to a small number.
There were certain sacred rites (sacra gentilitia) which belonged to a gens, to the observance of which all the members of a gens, as such, were bound, whether they were members by birth, adoption, or adrogation. A person was freed from the observance of such sacra, and lost the privileges connected with his gentile rights, when he lost his gens, that is, when he was adrogated, adopted, or even emancipated ; for adrogation, adoption, and emancipation were accompanied by a diminatio capitis.

When the adoption was from one familia into another of the same gens, the name of the gens was still retained; and when a son was emancipated, the name of the gens was still retained; and yet in both these cases, if we adopt the definition of Scaevola, the adopted and emancipated persons lost the gentile rights, thongh they were also freed from the gentile burdens (sacra). In the case of adoption and adrogation, the adopted and adrogated person who passed into a familia of another gens, must have passed into the gens of such familia, and so must have acquired the rights of that gens. Such a person had sustained a capitis diminutio, and its effect was to destroy his former gentile rights, together with the rights of agnation. The gentile rights were in fact implied in the rights of agnation, if the pater-familias had a gens. Consequently he who obtained by adrogation or adoption the rights of agnation, obtained also the gentile rights of his adopted father. In the case of adrogation, the adrogated person renounced his gens at the Comitia Curiata, which solemnity might also he expressed by the term " sacra detestari," for sacra and gens are often synonymons. Thus, in such case, adrogatio, on the part of the adoptive father, corresponded to detestatio sacrorum on the part of the adrogated son. This detestatio sacrorum is probably the same thing as the sacrorum alienatio mentioned by Cicero (Orator, c. 42). It was the duty of the pontifices to look after the due observation of the gentile sacra, and to see that
they were not lost. (Pro Domo, c. 13, \&c.) Each gens seems to have had its peculiar place (sacellum) for the celebration of the sacra gentilitia, which were performed at stated times. The sacra gentilitin, as already observed, were a burden on the members of a gens as sueh. The sacra privata were a charge on the property of an individual ; the two kinds of sacra were thus quite distinct.
According to Dionysins (Antiq. Rom. ii. 7), the curjae were respectively subdivided into Decades; and Niebuhr argues that Decades and Gentes were the same. Accordingly aach of the three tribes contained ten curiae and 100 gentes; and the three tribes contained 300 gentes. Now if there is any truth in the tradition of this original distribution of the population into tribes, curriae and gentes, it follows that there was no necessary kinship among those families which belonged to a gens, any more than among those families which belonged to one curia.
We know nothing historically of the organisatiou of civil society, but we know that many new political bodies have been organised out of the materials of existing political bodies. It is useless to conjecture what was the original organisation of the Roman state. We must take the tradition as it has come down to ns. The tradition is not, that familiae related by blood were formed into gentes, that these gentes were formed into curiae, that these curiae were formed into tribes. Such a tradition would contain its own refitation, for it involves the notion of the construction of a body politic by the aggregation of families into unities, and by further combinations of these new unities. The tradition is of three findamental parts (in whatever manner formed), and of the divisions of them into smaller parts. The smallest political division is gens. No further division is made, and thus of necessity, when we come to consider the component parts of gens, we come to consider the individuals comprised in it or the heads of families. According to the fundamental principles of Roman law, the individuals arrange themselves into familiae under their respective patres-familiae. It follows, that if the distribution of the people was effected by a division of the larger into smaller parts, there could be no necessary kin among the familiae of a gens; for kinship among all the members of a gens could only be effected by selecting kindred familiae, and forming therm into a gons. If the gens was the result of subdivision, the kinship of the original members of such gens, whenever it existed, must have been accidental.
There is no proof that the Romans considered that there was kinship among the familiae originally included in a gens. Yet as kinship was evidence of the rights of agnatio, and consequently of gentile rights, when there had been no capitis diminutio, it is easy to see how that which was evidence of the rights of agnatio, and consequently of gentile rights, might be viewed as part of the definition of gentilis, and be so extended as to comprehend a supposed kinship among the original members of the gens. The word gens itself would also favour such a supposition, especially as the word genus secms to be often used in the same sense. (Cic. pro Balbo, c. 14.) This notion of kinship appears also to be confirmed by the fact of the members of the gens being distinguished by a common name, as Cornelia, Julia, \&c. But many circumstances, besides that of a common origin,
may have given a common name to the gentiles; and indeed there seems nothing more strange in all the gentiles having a common name, than there being a common name for all the members of a curia and a tribe.

As the gentes were subdivisions of the three ancient tribes, the populus (in the ancient sense) alone had gentes, so that to be a patrician and to have a gens were synonymons; and thus we find the expressions gens and patri, ii constantly united. Yet it appears, as in the case already cited, that some gentes contained plebeian familiae, which it is conjectured had their origin in marriages between patricians and plebeians before there was connubium between them. When the lex was carried which estahlished conmubium between the plebs and the patres, it was alleged that this measure would confound the gentile rights (jura gentium, Liv. iv. 1). Before this connubinm existed, if a gentilis married a woman not a gentilis, it followed that the children could not be gentiles ; yet they might retain the gentile name, and thus, in a sense, the family might be gentiles without the gentile privileges. Such marriages would in effect introduce confusion ; and it does not appear how this would be increased by giving to a marriage between a gentile man, and a woman not gentilis, the legal character of connubium ; the effect of the legal change was to give the children the gentilitas of their father. It is sometimes said that the effect of this lex was to give the gentile rights to the plebs, which is an absurdity ; for, according to the expreasion of Livy (iv. 4), which is conformable to a strict principle of Roman law, "patrem sequmntur liberi," and the children of a plebeian man could only be plebeian. Before the passing of this lex, it may be inferred that if a patrician woman married out of her gena (e gente, e patribus enupsit) it was no marriage at all, and that the children of such marriage were not in the power of their father, and, it seems a necessary consequence, not Roman citizens. The effect would be the same, according to the strict principles of Roman law, if a plebeian married a patrician woman, before there was connubium between them; for if there was no connubium, there was no legal marriage, and the offspring were not citizens, which is the thing complained of by Canuleins. (Liv. iv. 4.) It does not appear then how such marriages will account for plebeian familiae being contained in patrician gentes, unless ws suppose that when the children of a gentile man and a plebeian woman took the name of the father, and followed the condition of the mother, they were in some way or other, not easy to explain, considered as citizens and plebeians. But if this be so, what would be the status of the children of a patrician woman by a plebeian man?
Niebnhr assumes that the members of the gens (gentiles) were bound to assist their indigent fellows in bearing extraordinary burdens; but this assertion is founded on the interpretation given to the words rò̀s $\gamma \dot{\prime} \nu \in \iota$ тробһкоутаs of Dionysius (ii. 10), which have a simpler and more obvious meaning. Whatever probability there may be in the assumption of Niehuhr, as founded on the passage above cited, and one or two other passages, it cannot be considered as a thing demonstrated.

A hundred new members were added to the senate by the first Tarquin. These were the re.

GENS.
presentatives of the Luceres, the third and inferior tribe; and they were called Patres Minorum gentium (Liv. i. 35). See the curious letter of Cicero to Paetus (ad Fam. ix. 21).

If the gentes were such subdivisions of a curia, as already stated, it may be asked what is meant by now gentes being introduced among the curiae, for this undoubtedly took place. Tullus Hostilius incorporated the Julii, Servilii, and others, among the Patricii, and consequently among the curiae. The Claudii were a Sabine gens, who, it was said (Liv. iv. 3), were received among the patricii after the banishment of the kings. A recent writer (Goettling) attempts to remave this difficulty by assuming, according to his interpretation of Dionysius (ii. 7), a division of the curiae into ten decuriae, and by the furtler assumption of an indefinite number of gentes in each decuria. Consistently with this, he assumes a kinship among the members of the same gens, according to which hypothesis the several patres-familiae of such gens must have descended, or claimed descent, from a common ancestor. Thus the gentes would be nothing more than aggregates of kindred families, and it must have been contrived in making the division into decuriae, that all the members of a gens (thus understood) must have been included in the same decuria. But to assume this, is nothing more than to say that the political system was formed by beginning with aggregations of families; for if the ultimate political division, the decuriae, was to consist of aggregates of gentes (thus understood), such arrangement could only be effected by making aggregation of families the basis of the political system, and then ascending from them to decuriae, from decuriae to curiae, and from curiae to tribes; a proceeding which is inconsistent with saying that the curiae were subdivided into decuriae, for this mode of expression implies that the curiae were formed hefore the decuriae. But the introduction of new gentes is conceivahle even on the hypothesis of the gens being a mere political division. If the mumber was originally limited, it is perfectly consistent with what we know of the Roman constitution, which was always in a state of progressive change, to suppose that the strict rule of limitation was soon neglected. Now if a new gens was introduced, it must have been assimilated to the old gentes by having a distinctive name ; and if a number of foreigners were admitted as a gens, it is conceivable that they would take the name of some distinguished person among them, who might he the head of a family consisting of many branches, each with a numerous body of retainers. And this is the better tradition as to the patrician Claudii, who came to Rome with Atta Claudius, their head (gentis princeps), after the expulsion of the kinge, and were co-aptated (cooptati) by the patres among the patricii; which is the same thing as saying that this immigrating body was recognised as a Roman gens. (Sueton. Tib. l; Liv. ii. 16.) According to the tradition, Atta Claudius received a tract of Iand for his clients on the Anio, and a piece of buryingground, under the Capitol, was given to him by the state (publice). According to the original constitution of a gens, the possession of a common burying-place, and the gentile right to interment therein, were a part of the gentile sacra. (Cic. Teg. ii. 22 ; Vell. Pat.ii. 119 ; Festue, s. v. Cincia; Liv. iv. 3, vi. 40 ; Virgil, Aen. vii. 706. As to the Gens Octavia, see Suetonius, Aug. 2.)

## GEOMORI.

It is prohahle that even in the time of Cicero the proper notion of a gens and its rights were in] understood; and atill later, owing to the great changes in the constitution, and the extinction of so many ancient gentes, the traces of the jus gen* tilitium were nearly effaced. Thus we find that the word gens and familia are used indifferently by later writers, though Livy carefully distiaguishes them. The " elder Pliny speaks of the sacra Serviliae familiae; Macrohius of the sacra familiae Claudiae, Aemiliae, Juliae, Corneliae ; and an ancient inscription mentions an Aedituus and a Sacerdos Sergiae familiae, though those were all well known ancient gentes, and these sacra, in the more correct language of the older writers, would certainly have heen called sacra gentilitia." (Savigny, Zeitschrift, \&c. vol. ii. p. 385.)

In the time of Gaius (the age of the Antonines), the jus gentilitium had entirely fallen into disuse. (Gaius, iii. 17.) Thus an ancient institution, which formed an integral part of the old constitution, and was long held together hy the conservative power of religious rights, gradually lostits primitive character in the changes which circumstances impressed on the form of the Roman state, and was finally extinguished.

The word Gens has recently heen rendered in English by the word House, a term which has hers been purposely not used, as it is not necessary, and can only lead to misconception.

The subject of the gens is discussed with great acuteness both by Niehuhr (Rom. Hist. vol. i.) and by Malden (Hist. of Rome, published hy the Society for the Diffusion of Useful Knowledge).

The views of Goettling are contained in his Geschichte der Röm. Staatsverfassung, Halle, 1840, and those of Becker in his Handbuch der Römiselien Alterthümer 2ter Theil, 1ste Abth. See also Savigny, Zeitschrift, \&c. vol. ii. p. 380, \&c., and Unterholzner, Zeitschrift, \&ec. vol. v. p. 119. [G. L.]

GENTILES. [Gens.]
GENTIL/ITAS. [Gens.]
GEO ${ }^{\prime}$ MORI ( $\gamma \epsilon \omega \mu \delta \rho \circ \iota$; Doric, $\gamma \alpha \mu \rho \rho 0 \imath$ ) is the name of the second of the three classes into which Theseus is said to have divided the inhabitants of Attica. (Plut. Thes. 25 ; Pollux, viii. 111.) This class was, together with the third, the $\delta \eta \mu$ ouprol, excluded from the great civil and priestly offices which belonged exclusively to the eupatrids, so that there was a great distinction between the first and the two inferior classes. We possess, however, no means to ascertain any particulars respecting the relation in which the $\gamma \in \omega \mu \delta \rho o t$ stood to the two other classes. The name may either signify independent land-owners, or peasants who cultivated the lands of others as tenants. The $\gamma \in \omega \mu$ opot have, accordingly, by some writers been thought to be free land-owners, while others have conceived them to have been a class of tenants. It seems, however, inconsistent with the state of affairs in Attica, as well as with the manner in which the name $\boldsymbol{\gamma} \epsilon \omega \mu$ ópor was used in other Greek states, to auppose that the whole class consisted of the latter only; there were undouhtedly among them a considerahle number of freemen who cultivated their own lands (Timaeus, Glossar. so v. Гe $\omega \mu$ opot; Valckenaer ad Herad. v. 77), hut had by their hirth no claims to the rights and privileges of ths nobles. We do not hear of any political distinctions between the $\gamma \epsilon \omega \mu \delta \rho \circ$ and the $\delta \eta \mu \Delta v v \gamma \gamma^{\prime}$; and it may either be that there existed none at all,
or if there were any originally, that they gradually vanished. This would sccount for the fact that Dionysius (ii. 8) only mentions two classes of Atticans; one corresponding to the Roman patricians, the other to the plebeians. (Thirlwall, History of Greece, vol. ii. p. 14 ; Wachsmuth, Hellenische Alterthumshunde, vol. i. p. 361, 2d edit. ; Platner, Beitruige, de., p. 19; Titmann, Sriech. Staatsverfassungen, p. $575, \& \mathrm{cc}$.)
In Samos the name $\gamma \epsilon \omega \mu \delta \rho o t$ was applied to the oligarchical psrty, consisting of the wealthy and powerful. (Thucyd. viii. 21; Plut. Quaest. Rom. p. 303; Müller, Dor. iii. 1. § 4.) In Syracuse the aristocratical party was likewise called $\gamma \epsilon \omega \mu \delta \rho o t$ or $\gamma \alpha \mu \delta \rho o u$, in opposition to the $\delta \hat{\eta} \mu o s$. (Herod. vii. 155 ; Hesych. s. v. 「व́ $\alpha o \rho o t$; Müller, Dor. iii. 4. § 4; Göller, de Situ et Orig. Syrac. p. 9.) [L. S.]
GERAERAE or GERARAE ( $\gamma \in \rho \alpha, p a i$ or $\gamma \in \rho \alpha$ paí). [Dronysia, p. 412, a.]
GERANOS ( $\gamma$ épapos). [Hyporchema.]
germa'ni. [Cognatl]
GEROU'SIA ( $\gamma \in \rho o v a i ́ a$ ), the council of elders ( $\gamma^{\prime}$ foy $\rho \epsilon s$ ), was the name of the Senate in most Doric states, and was especially used to signify the Senate at Sparta. In connection with this subject it is proposed to give a general view of the Spartan constitution, and to explain the functions of its legislative and administrative elements. In the later ages of Spartan history one of the most prominent of these was the college of the five ephors; but as an account of the Ephoralty is given in a separate article [Ephori], we shall confine our inquiries to the kings, the $\boldsymbol{\gamma}$ épovecs or councillors, and the ék $\kappa \lambda \eta \sigma t a$ or assennbly of Spar$\tan$ freemen.
I. The Kings. The kingly authority at Sparta was, as it is well known, coeval with the settlement of the Dorians in the Peloponnesus, and confined to the descendants of Aristodemus, one of the Heracleid leaders, under whom, according to the Spsrtan legend, the conquest of Laconia was achieved. To him were born twin sons, Eurysthenes and Procles; and from this canse arose the diarchy, or divided royalty, the sovereignty being always shared by the representatives of the two families which clained descent from them (Herod. vi. 52) ; the precedence in point of honour was, however, granted to the older branch, who were called Agiads, as the younger house was styled Eurypontides from certain alleged descendants of the twin brothers. (Niebuhr, Hist. of Rom. vol. i. p. 356.) Such was the national legend; but as we read that the sanction of the Pythian oracle was procured for the arrangement of the diarchy (Herod. l. c.), we may conclude that it was not altogether fortuitous, but rather the work of policy and design ; nor indeed is it improbable that the nohles would gladly avail themselves of an opportunity to weaken the royal authority by dividing it.
The descent of the Spartan kinga from the national heroes and leaders contributed in no small degree to support their dignity and honour; and it is, perhaps, from this circumstance partly that they were considered as heroes, and enjoyed a certain religious respect. (Xen. De Rep. Lac. c. 15.) The honours paid to them were, however, of a sinple and heroic character, such as a Spartan might give without derogating from his own dignity or forgetting his self-respect. Thus, we are told that the kings united the character of priest and king,
the priesthoods of Zeus Uranius (Herod. vi. 56) and the Lacedaemonian Zeus being filled by them; and that, in their capacity of national high priests, they officiated at all the public sacrifices offered on behalf of the state. (Xen. De Rep. Lac. 15.) Moreover they were amply provided with the means for exercising the heroic virtue of hospitality; for this purpose, public or domain lands were assigned to them in the district of the perioeci, or provincial subjecte, and certain perquisites belonged to them whenever any animal was slain in sacrifice. Besides this, the kings were entitled to various pay-
 that they might never be in want of victims to sacrifice; in addition to which they received, twice a month from the state, an iphío $\tau \in \lambda \in \bar{i} \nu$, to be offered as a sacrifice to Apollo, and then served up at the royal table. Whenever also any of the citizens made a public sacrifice to the gods, the kings were invited to the feast, and honoured above the other guesta: a double portion of food was given to them, and they commenced the libations to the gods. (Herod. vi. 57.) All these distinctions are of a simple and antiquated character, and, so far as they go, prove that the Spartan sovereignty was a continuation of the heroic or Homeric. The distinctions and privileges granted to the king as commander of the forces in war, lead to the same conclusion. These were greater than he enjoyed at home. He was guarded by a bedy of 100 chosen men, and his table was maintained at the public expense : he might sacrifice in his sacerdotal capacity as many victims as he chose; the skins and lacks of which were his perquisites, and he was assisted by so many subordinate officers, that he had nothing else to do, except to act as priest and strategus. (Xen. De Rep. Lac. 14, 15; Herod. vi. 55.)

The accession and demise of the Spartan kings were marked by observances of an Oriental character. (Herod, vi. 58.) The former event was signalised by a remission of all debts due from private individuals to the state or the king; and on the death of a king, the funeral solemnities were celebrated by the whole community. There was a general mourning for ten days, during which all public business was suspended: horsemen went round the country to carry the tidings, and a fixed number of the perioeci, or provincials, was obliged to come from all parts of the country to the city, where, with the Spartans and Helots, and their wives, to the number of many thousands, they made loud lamentations, and proclaimed the virtues of the deceased king as superior to those of all his predecessors. (Herod. l. c.)

In comparison with their dignity and honours, the constitutional powers of the kings were very limited. In fact they can scarcely be said to have possessed any; for though they presided over the council of $\gamma \in \rho \rho \nu \tau \epsilon s$ or $k p \chi a \gamma \epsilon \tau a x$, or prinoipes senatus, and the king of the elder house probably had a casting vote*, still the voice of each counted for no more than that of any other senator: when ahsent, their place was supplied and their proxies tendered by the councillors who were most nearly related to them, and therefore of an Heracleid family. Still the kings had some important prero-

[^34]gatives ; thus they had in common with other magistrates the right of addressing the public assembly; besides this, they sat in a separate court of their own, where they gave judgment in all cases of heiresses claimed by different parties: a function formerly exercised by the kings at Athens, but afterwards transferred to the Archon Eponymus. (Herod. vi. 57.) They also appointed the four Pythians ( $\Pi \dot{v} \theta$ tot), whose duty it was to go as messengers to consult the god at Delphi. Adoptions also took place in their presence, and they held a court in all cases connected with the maintenance of the public roads; probably in their capacity of generals, and as superintendents of the intercourse with foreign nations. (Müller, Dor. iii. 6. § 7.) In foreign affairs, indeed, their prerogatives were considerable: thus they were the commanders of the Spartan forces, and had the privilege of nominating from amongst the citizens, persons to act as "proxeni" or protectors and entertainers of foreigners visiting Sparta. But their chief power was in war; for after they had once crossed the borders of Laconia, in command of troops, their authority became unlimited. They could send out and assemble armies, despatch ambassadors to collect money, and refer those who applied to themselves for justice to the proper officers appointed for that purpose. (Xen. De Rep. Lac. 13 ; Thuc. v. 60, viii. 5.) Two ephors, indeed, accompanied the kings on their expeditions, hut those magistrates had no authority to interfere with the king's operations: they simply watched over the proceedings of the army. (Xen. l.e.) Moreover, there can be no doubt that the kings were, on their return home, accountable for their conduct as generals (Thucyd. v. 63 ), and more especially after the increase of the ephoral authority. Their military power also was not connected with any political functions, for the kings were not allowed to conclude treaties or to decide the fate of cities, without communicating with the anthorities at home. (Xen. Hell. ii. 2. § 12, จ. 3. § 24.) In former times the two kings had a joint command ; this, however, led to inconveniences, and a law was in consequence passed that for the future one only of the two kings should have the command of the army on foreign expeditions. (Herod. v. 57.)
II. The $\gamma \in p o u \sigma l a$, or council of elders. This body was the aristocratic element of the Spartan polity, and not peculiar to Sparta only, bnt found, as has been already observed, in other Dorian states, just as a $\beta$ ou $\lambda \bar{\eta}$ or democratical council was an element of most Ionian constitutions.

The $\gamma \in p o v \sigma l a$ or $\gamma \in \rho \omega v i a$ at Sparta included the two kings, ite presidents, and consisted of thirty members: a number which seems connected with the divisions of the Spartan people. Every Dorian state, in fact, was divided into three tribes: the Hylleis, the Dymanes, and the Pamphyli, whence the Dorians are called $\tau \rho \iota \chi$ d̈̈kes, or thrice divided. (Od. xix. 174.) The tribes at Sparta were again subdivided into $\omega 6 a l$, also called $\phi p a \tau \rho t a l(M u ̈ l l e r, ~$ Dor. iii. 5. § 3), a word which signifies a union of families, whether founded npon ties of relationship, or formed for political purposes, irrespective of any such conmection. The obae were like the $\gamma \in \rho 0 \nu \tau \epsilon s$, thirty in number, so that each oba was represented ly ite councillor: an inference which leads to the conclusion that two obae at least, of the Hyllean tribe, must have belonged to the royal house of the Heracleida. No one was eligible to the
council till he was sixty years of age (Plut. Iycurg. 26), and the additional qualifications were strictly of anl aristocratic nature. We are told, for instance, that the office of a councillor was the rervard and prize of virtue (Aristot. Polit. ii. 6. § 15 ; Demosth. c. Lept. p. 489), and that it was confined to men of distinguished character and station ( $\left.\kappa \alpha, \lambda o l \kappa \alpha^{\prime} \gamma a \theta o l\right)$.

The election was determined by vote, and the mode of conducting it was remarksble for its oldfashioned simplicity. The competitors presented themselves one after another to the assembly of electors (Plut. Lycurg. 26); the latter testified their esteem by acclamations, which varied in intensity according to the popularity of the candidates for whom they were given. These nuanifestations of esteem were noted by persons in an adjoining building, who could judge of the shouting, but could not tell in whose favour it was given. The person whom these judges thought to have been most applauded was declared the successful candidate. The different competitors for a vacant placs offered themselves upon their own judgment (Aristot. Polit. ii. 6. § 18), prohably slwsys from the $\omega 6 \alpha$, to which the councillor whose place was vacant had belonged; and as the office was for life, and therefore only one vacancy could (in ordinary cases) happen at a time, the attention of the whole state would be fixed on the choice of the electors. The office of a councillor, however, was not only for life, but also irresponsible (Aristot. Polit. ii. 6), as if a previous reputation, and the near approach of death, were considered a sufficient guarantee for integrity and moderation. But the councillors did not always prove so, for Aristotle (l. c.) tells us that the members of the $\gamma \in p o v a i=$ received bribes, and frequently showed partiality in their decisions.

The functions of the councillors were partly deliberative, partly judicial, and partly executive. In the discharge of the first they prepared measures and passed preliminary decrees (Plut. Agis, 11) which were to be laid hefore the popular assembly, so that the important privilege of initiating all changes in the government or laws was vested in them. As a criminal court they could punish, with death and civil degradation (ả $\tau \mu i a$, Xen, $D e$ Rep. Lac. 10. § 2 ; Arist. Polit. iii. 1), and that, too, without being restrained by any code of written laws (Aristot. Polit. ii. 6), for which national feeling and recognised usages would form a sufficient substitute. They also appear to have exercised, like the Areiopagus at Athens, a genersl superintendence and inspection over the lives and manners of the citizens (arbitri et magistri disciplinae publicae, Aul. Gell. xviii. 3), and prohably were allowed "a kind of patriarchal authority to enforce the observance of ancient nsage and discipline." (Thirlwall, Hist. of Greece, vol. i. p. 318.) It is not, however, easy to define with exactness the original extent of their functions; especially as respects the last-mentioned duty, since the ephors not only encroached upon the prerogatives of the king and council, but also possessed, in very early times, a censorial power, and were not likely to permit any diminution of its extent.
III. The Éкн入クбia, or assembly of Spartan freemen. This assembly possessed, in theory at least, the supreme authority in all matters affecting the general interests of the state. Its original position at Sparta is shortly explained by a rhetra or ordinance of Lycurgus, which, in the form of an
oracle, exhihits the principal features of the Spartan polity:- "Build a temple," siys the Pythian god, " to-Hellanian Zeus and Hellanian Athena; divide the tribes, and institute thirty obas; appoint a council with its princes ; call an assembly ( $\quad$ m $\pi \lambda \lambda \alpha \zeta_{\epsilon} t \nu$ ) between Babyca and Knakion, then make a motion and depart ; and let there be a right of decision and power to the people " ( $\delta \dot{\alpha} \mu \varphi$
 Dor. iii. 5. § 8).
By this ordinance full power was given to the people to adopt or reject whatever was proposed to them by the king and other magistrates. It was, however, found necessary to define this power more exactly, and the following clause, ascribed to the kings Theopompus and Polydorus, was added to the original rhetra, " but if the people should follow a crooked opinion the elders and the princes shall withdraw" ( $\tau o u ̀ s ~ \pi \rho \epsilon \sigma \delta \nu \gamma \epsilon \nu$ éas kai à $\rho \chi \alpha$ -
 terprets these words to mean "That in case the people does not either reject or approve in toto a measure proposed to them, the kings and councillors should dissolve the assembly, and declare the proposed decree to be invalid." According to this interpretation, which is confirmed by some verses in the Eunomia of Tyrtaeus, the assembly was not competent to originate any measures, but only to pass or reject, without modification, the laws and decrees proposed by the proper authorities: a limitation of its power, which almost determined the character of the Spartan constitution, and justifies the words of Demostlenes, who observed (c. Lep. p. 489. 20), that the $\gamma \in \rho o v a i=$ at Sparta was in many respects supreme- $\Delta \in \sigma \pi \delta \tau \eta s$ हे $\sigma \tau i \tau \omega \bar{\omega} \nu \pi 0 \lambda-$ $\lambda \hat{\omega} \nu$. All citizens above the age of thirty, who were not labouring under any loss of franchise, were admissible to the general assembly or öme $\pi \lambda a$ (Plut. Lyourg. 25), as it was called in the old Spar$\tan$ dialect ; but no one except public magistrates, and chiefly the ephors and kings, addressed the people without being specially called upon. (Müller, $D_{0 r}$.iii. 4. § 11.) The same public functionaries also put the question to the vote. (Thuc. i. 80. 87.) Hence, as the magistrates only ( $\tau \dot{\alpha} \tau \dot{\epsilon} \lambda \eta$ or $\dot{\alpha} \rho \chi a i$ ) were the leaders and speakers of the assembly, decrees of the whole people are often spoken of as the decision of the authorities only, especially in matters relating to foreign affairs. The intimate connection of the ephors with the assembly is shown by a phrase of very frequent occurrence in
 The method of voting was by acclamation; the place of meeting between the brook Knakion and the bridge Babyca, to the west of the city, and enclosed. (Plut. Lycurg. 6.) The regular assemblies were beld every full moon; and on occasions of emergency extraordinary meetings were convened. (Herod. vii. 134.)

The whole people alone could proclaim "a war, conclude a peace, enter into an armistice for any length of time ; and all negotiations with foreign states, though conducted by the kings and ephors, could be ratified by the same authority only." With regard to domestic affairs, the highest offices, such as magistracies and priesthoods, were filled " by the votes of the people; a disputed succession to the throne was decided upon by them ; changes in the constitution were proposed and explained, and all new laws, after a previons decree in the senate, were confirmed by them," (Müller, Dor. 4. § 9.)

It appears, therefore, to use the words of Müller, that the popular assembly really possessed the supreme political and legislative authority at Sparta, but it was so hampered and checked by the spirit of the constitution, that it could only exert its authority within certain prescribed limits; so that the government of the state is often spoken of as an aristocracy.
 scribed, we read in later times of another called the small assembly (Xen. Hell. iii. 3. § 18), which appears to have been convened on occasions of emergency, or which were not of sufficient importance to require the decision of the entire body of citizens. This more select assembly was probably composed of the $\delta \mu o t o$, or superior citizens, or of some class enjoying a similar precedence, together with some of the magistrates of the state [EcclemtI], and if, as appears to have been the case, it was convened more frequently than the greater assembly, it is evident that an additional restraint was thus laid upon the power of the latter (Philol. Museum, vol. ii. p. 65), the functions of which must have heen often superseded by it.
The preceding remarks will enable us to decide a question which has been raised, what was the real nature of the constitution of Sparta? From the expressions of Greek writers, every one would at once answer that it was aristocratic ; but it has been asserted that the aristocracy at Sparta was an aristocracy of conquest, in which the conquering people, or Dorians, stood towards the conquered, or Achaians, in the relation of nobles to commons, and that it was principally in this sense that the constitution of Sparta was so completely anti-popular or oligarchical. (Arnold, Thuc. Append. ii.) Now this indeed is true ; but it seems no less true that the Spartan government would have been equally called an oligarchy or aristocracy even if there had been no subject class at all, on account of the disposition and administration of the sovereign power within the Spartan hody alone. The fact is, that in theory at least, the Spartan constitution, as settled by Lycurgus, was a decided democracy, with two hereditary officers, the generals of the commonwealth, at its head; but in practice (at least before the encroachments of the ephors) it was a limited aristocracy ; that is, it worked as if the supreme authority was settled in the hands of a minority. The principal circumstances which justify us in considering it as such, are hriefly "the restraints imposed upon the assemhly, the extensive powers of the councillors, their election for life, their irresponsibility, the absence of written laws, of paid offices, of offices determined by let," and other things thought by the Greeks characteristic of a democracy. Independent of which we must remember that Sparta was at the head of the oligarchical interest in Greece, and always supported, as at Corcyra and Argos, the cligarchical party, in opposition to the democratic, which was aided by Athens. In fact Dr. Arnold himself observes, that even in the relations of the conquering people among themselves the constitution was far less popular than at Athens. We must, however, bear in mind that the constitution, as settled by Lycurgus, was completely altered in character by the usurpation of the ephors. To such an extent was this the case, that Plato (Leg. iv. p. 713) doubted whether the government at Sparta might
not be called a " tyranny," in consequence of the extensive powers of the ephoralty, though it was as much like a democracy as any form of government could well be; and yet, he adds, not to call it an aristocracy (i. e. a government of the ápıotot), is quite absurd. Moreover, Aristotle (Polit. iv. 8), when he enumerates the reasous why the Spartan government was called an oligarchy, makes no mention of the relations between the Spartans and their conquered subjects, but observes that it received this oame because it bad many oligarchical institutions, such as that none of the magistrates were chosen by lot ; that a few persons were competeat to inflict banishment and death.
Perhaps the shortest and most accurate description of the constitution of Sparta is contained in the following observations of Aristotle (Polit. ii. 6) : - Some affirm that the best form of goverument is one mixed of all the forms, wherefore they praise the Spartan constitution: for some say that it is composed of an oligarchy, and a monarchy, and a democracy - a mocarchy on account of the kinge, an oligarchy on account of the councillors, and a democracy on account of the ephors ; but others say that the ephoralty is a "tyranny;" whereas, on the other hand, it may be affirmed that the public tables, and the regulations of daily life, are of a democratic tendency.
[R. W.]
GERRHA ( $\gamma \in \dot{\epsilon} \rho \dot{\rho} \alpha$ ), in Latin, Gerrae, properly signified any thing made of wicker-work, and was especially used as the name of the Persian shields, which were made of wicker-work, and were smaller and shorter than the Greek shields (àvil $\dot{\alpha} \sigma \pi i \delta \omega \nu$, $\gamma^{\prime} \hat{\rho} \rho \rho a$, Herod. vii. 61, ix. 61 ; Xen. Anal. ii. 1.86 ; Festus, s. ve. ccrrones, gerrae).
 fought with swords in the amphitheatre and other places for the amusement of the Roman people. (Gladiator est, qui in arena, populo spectante, pugnavit, Quintil. Declam. 302.) They are said to have been first exhibited by the Etruscans, and to have had their origin from the custom of killing slaves and captives at the funeral pyres of the deceased. (Tertull. de Spectac. 12 ; Serv. ad Virg. Aen. x. 519.) [Funus, p. 559, a.] A show of gladiators was called munus, and the person who exlibited (edebat) it, editor, munerator, or dominus, who was honoured during the day of exhibition, if a private person, with the official signs of a magistrate. (Capitol. M. Anton. Philos. 23 ; Flor. iii. 20 ; Cic. $a d$ Att. ii. 19. § 3.)

Gladiators were first exhibited at Rome in B. c. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father. (Valer. Max. ii. 4. § 7; Liv. Epit. 16.) They were at first confined to public funerals, but afterwards fought at the funerals of most persons of consequence, and even at those of women. (Suet. $J u l$. 26 ; Spartan. Hadr. 9.) Private persons sometimes left a sum of money in their will to pay the expenses of such an exbibition at their funerals. (Sen de Brev. Vit. 20.) Combats of gladiators were also exhibited at entertainments (Athen. ir. p. 153 ; Sil. Ytal. xi. 51 ), and especially at public festivals by the aediles and other magistrates, who sometimes exhibited immense numbers with the view of pleasing the people. (Cic. pro Mur. 18 ; de Off. ii. 16.) [AEniles.] Under the empire the passion of the Romans for this amusement rose to its greatest height, and the number of rrladiators who fought on some occasions appears
almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibited. (Dion Cass. Ixviii. 15.)

Gladiators consisted either of captives (Vopisc. Prob. 19), slaves (Suet. Vitell. 12), and condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned ad gladium, in which case they were obliged to be killed at least within a year ; and others ad ludum, who might obtain their discharge at the end of three years. (Ulpian, Collat. Mos. et Rom. Leg. tit. ii. s. 7. § 4.) Freemen, who became gladiators for hire, were called auctorati (Quint. l.c. ; Hor. Sat. ii. 7. 58), and their hire auctoramentum or gladiatorium. (Suet. Tib. 7 ; Liv. xliv. 31.) They also took an oath on entering upon the service, which is preserved by Petronins (117). - " In verba Eumolpi sacramentum juravimus, uri, vinciri, verberari, fertaque necari, et quicquid aliud Eumolpus jussisset, tamquam legitimi gladiatores domino corpora animasque religiosissime addicimus." (Compare Senec. Eppist. 7.) Even under the republic free-born citizens fought as gladiators (Liv. xxviii. 21), hut they appear to have belonged only to the lower orders. Under the empire, however, both equites and senators fought in the arena (Dion Cass. li. 22 ; lvi. 25 ; Suet. Jul. 39 ; Aug. 43 ; Ner. 12), and even women (Tacit. Ann. xv. 32 ; Suet. Dom. 4 ; Juv. vi. 250, \&c. ; Stat. Silv. x. vi. 53) ; which practice was at length forbidden in the time of Severus. (Dion Cass. lxxy. 16.)

Gladiators were kept in schools (ludi), where they were trained by persons called lanistae. (Suet. Jul. 26 ; Cic. pro Rosc. Amer. 40 ; Juv. vi. 216, xi. 8.) The whole body of gladiators under one lanista was frequently called familia. (Suet. Aug. 42.) They sometimes were the property of the lanistae, who let them out to persons who wished to exhibit a show of gladiators; but at other times belonged to citizens, who kept them for the purpose of exhibition, and engaged lanistac to instruct them. Thus we read of the ludus Aemilius at Rome (Hor. de Art. poeet. 32), and of Caesar's ludus at Capua. (Caes. Bell. Civ. i. 14.) The superintendence of the ludi, which helonged to the emperors, was entrusted to a person of high rank, called curator or procurator. (Tacit. Ann. xi. 35 ; xiii. 22 ; Suet. Cal. 27 ; Gruter, Inser. p. 489.) The gladiators fought in these ludi with wooden swords, called rudes. (Suet. Cal. 32, 54.) Great attention was paid to their diet in order to increase the strength of their bodies, whence Cicero (Phil. ii. 25) speaks of "gladiatoria totius corporis firmitas." They were fed with nourishing food, called gladiatoria sagina. (Tacit. Hist. ii. 88.) A great number of gladiators were trained at Ravenna on account of the salubrity of the place. (Straho, v. p. 213.)
Gladiators were soraetimes exhibited at the funeral pyre, and sometimes in the forum, but more frequently in the amphitheatre. [Amphitheatrum.] The person who was to exhibit a show of gladiators published some days before the exhibition bills (libelli), containing the number and sometimes the oames of those who were to fight. (Cic. ad Fam, ii. 8 ; Suet. Caes. 26.) When the day came, they were led along the arena in procession, and matched by pairs (Hor. Sat. i. 7.20); and their swords were examined by the editor to see if they were sufficiently sharp.
(Dion Cass. 1xviii. 3; Suet. Tit. 9 ; Lipsius, Excurs. ad Tac. Ann. iii. 37.) At first there was a kind of sham battle, called praelusio, in which th:y fought with wooden swords, or the like (Cic. de Orat. ii. 78, 80 ; Ovid, Ars Amat. iii. 515 ; Senec. Epist. 117), and afterwards at the sound of the trumpet the real battle began. When a gladiator was wounded, the people called out habet or hoc habet ; and the one who was vanquished lowered his arms in token of submission. His fate, however, depended upon the people, who pressed down their thumbs if they wished him to be saved, but turned them up if they wished him to he killed (Hor. Ep. i. 18. 66 ; Juv. iii. 36), and ordered him to receive the sword (ferrum recipere), which gladiators usually did with the greatest firmness. (Cic. Tusc. ii. 17, pro Sext. 37, pro Mil. 34.) If the life of a vanquished gladiator was spared, he obtained his discharge for that day, which was called missio (Mart. xii. 29. 7); and hence in an exhibition of gladiators sine missione (Liv. xli. 20), the lives of the conquered were never spared. This kind of exhibition, however, was forbidden by Augustus. (Suet. Aug. 45.)

Palms were usually given to the victorious gladiators (Suet. Cal. 32); and hence, a gladiator, who had frequently conquered, is called "plurimarum palmarum gladiator" (Cic. pro Rose. Amer. 6) ; money also was sometimes given. (Juv. vii. 243 ; Suet. Claud. 21.) Old gladiators, and sometimes those who had only fought for a short time, were discharged from the service by the editor at the request of the people, who presented each of them with a rudis or wooden sword; whence those who were discharged were called Rudiarii. (Cic. Philip. ï. 29 ; Hor. Ep. i. 1, 2 ; Suet. Tib. 7; Quint. l.c.) If a person was free before he entered the ludus, he became on his discharge free again; and if he had been a slave, he returned to the same condition again. A man, however, who oad been a gladiator was always considered to have disgraced himself, and consequently it appears that he could not obtain the equestrian rank if he afterwards acquired sufficient property to entitle him to it (Quint. l.c.) ; and a slave who had been sent into a ludus and there manumitted either by his then owner or another owner, merely acquired the status of a peregrinus dediticius. (Gaius, i. 13.) [Deditici.]

Shows of gladiators were abolished hy Constantine (Cod. 11. tit. 43), hut appear notwithstanding to have been generally exhibited till the time of Honorius, by whom they were finally suppressed. (Theodoret. Hist. Eccles. v. 20.)

Gladiators were divided into different classes, according to their arms and different mode of fighting, or other circumstances. The names of the most important of these classes is given in alphahetical order:-

Andabatae (Cic. ad Fam. vii. 10), wore helmets without any aperture for the eyes, so that they were obliged to fight blindfold, and thus excited the mirth of the spectators. Some modern writers say that they fought on horseback, but this is denied by Orelli. (Inscr. 2577.)

Catervarii was the name given to gladiators when they did not fight in pairs, hut when several fought together. (Suet. Aug. 45 ; gregatim dimicantes, Cal. 30.)

Dimacheri appear to have been so called, be-
cause they fought with two swords. (Artemiod. ii. 32 ; Orelli, Inscr. 2584.)

Equites were those who fought on horseback. (Orelli, 2569. 2577.)

Essedarii fought from chariots like the Gaula and Britons. [Esseda.] They are frequently mentioned in inscriptions. (Orelli, 2566. 2584, \&c.)

Fiscales were those under the empire, who were trained and supported from the fiscus. (Capitol. Gord. 33.)

Hoplomachi appear to have heen those who fought in a complete suit of armour. (Suet. Cal. 35 ; Martial, viii. 74 ; Orelli, 2566.) Lipsius considers them to have been the same with the Samnites, and that this name was disused under the emperors, and hoplomachi substituted for it.

Laqueatores were those who used a noose to catch their adversaries. (laiod. xviii. 56.)

Meridiani were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators wera very slightly armed. (Senec. Epist. 7; Suet. Claud. 34 ; Orelli, 2587.)

Mirmillones are said to have been so called from their having the image of a fish (mormyr, uop. $\mu$ upos) on their helmets. (Festus, s. v. Retiario.) Their arms were like those of the Gauls, whence we find that they were also called Galli. They were usually matched with the retiarii or Thracians. (Cic. Phil. iii. 12, vii. 6 ; Juv. viii. 200 ; Suet. Cal. 32 ; Orelli, 2566, 2580.)

Ordinarii was the name applied to all the regular gladiators, who fought in pairs, in the ordinary way. (Senec. Epist. 7; Suet. Aug. 45, Cal. 26.)

Postulaticii were such as were demanded by the people from the editor, in addition to those who were exhibited. (Senec. l.c.)

Provocatores fought with the Samnites (Cic. pro Sext. 64), but we do not know any thing respecting them except their name. They are mentioned in inscriptions. (Orelli, 2566.) The $\pi \rho о$ оок $\boldsymbol{\tau} \tau \boldsymbol{\beta}$ mentioned by Artemiodorus (ii. 32) appears to bs the same as the provocator.

Retiarii carried only a three-pointed lance, called tridens or fuscina [F USCINA], and a net (rete), which they endcavoured to throw over their adyersaries, and then to attack them with the fuscina while they were entangled. The retiarius was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he betook limself to flight, and endearoured to prepare his net for a second cast, while his adversary followed him round the arena in order to kill him before he could make a second attempt. His adversary was usually a secutor or a mirmillo. (Juv. ii. 143, viii. 203; Suet. Cal. 30 ; Claud. 34 ; Orelli, 2578.) In the following woodcut, taken from Winckelmann (Monum.

Ined. pl. 197), a combat is represented between a retiarius and a mirmillo: the former has thrown his net over the head of the latter, and is proceedmg to attack him with the fuscina. The lanista stands behind the retiarius.

Samnites were so called, because they were ermed in the same way as that people, and were particularly distinguished by the oblong scutum. (Liv. ix. 40 ; Cic. pro Sext. 64.)

Secutores are supposed by some writers to be so called because the secutor in his combat with the retiarius pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the suppositititi, mentioned by Martial (v. 24), who were gladiators substitnted in the place of those who were wearied or were killed. (Suet. Cal. 30 ; Juv. viii. 210.) If the old reading in a letter of Cicero's (ad Att. vii. 14) is correct, Julius Caesar had no less than 500 secutores in his rudus at Capua; but it appears probable that we ought to read scutorum instead of secutorum.

Supposititii. See Secutores.
Thraces or Threces were armed like the Thracians with a round shield or huckler (Festus, s. v. Thraeces), and a short sword or dagger (sica, Suet. Cal. 32), which is called falx supina by Juvenal (viii. 201). They were usually matched, as already stated, with the mirmillones. The woodcut in the next column, taken from Winckelmann (l. c.), represents a combat between two Thracians. A lanista stands behind each.

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists. (Plin. H.N. xxxy. 33 ; Capitol. Gord. 3 ; Vopisc. Carin. 18.) Several statues of gladiators have come down to ns, which are highly admired as works of art: of these the most celebrated is the gladiator of the

## GLADIATORES.

Borghese collection, now in the Museum of the Louvre, and the dying gladiator, as it is called, in the Capitoline Museum. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scaurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. Thess bas-reliefs are represented in the following wood. cuts from Mazois (Pomp. i. pl. 32). The figures are made of stucco, and appear to have heen moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the friezs are written the name of the person to whom the gladiators helonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with vizors, which cover the whole face, and are armed with spears and round bucklers. In the second pair the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hand towards them. His antagonist stands behind him waiting the signal of the people. Like

all the other gladiators represented on the frieze, they wear the subligaculum or short apron fixed above the hips. The one on the left appears to be a mirmillo, and the one on the right, with an oblong shield (scutum), a Samnite. The third pair consists of a Thracian and a mirmillo, the latter of
whom is defeated. The fourth group consists of four figures ; two are secutores and two retiarii. The secutor on his knee appears to have been defeated by the retiarius behind him, but as the fuscina is not adapted for producing certain death, the other secutor is called upon to do it. The

gRADUS．
GRAMMATEUS．
retiarius in the distance is probably destined to fight in his turn with the surviving secutor．The last group consists of a mirmillo and a Samnitc ； the latter is defeated．

In the last woodcut two combats are repre－ sented．In the first a Sanmite lias been conquered by a mirmillo；the former is holding up his hand to the people to implore mercy，while the latter apparently wishes to become his enemy＇s execu－ tioner before receiving the signal from the people； but the lanista holds him back．In the other combat a mirmillo is mortally wounded by a Sammite．

It will he observed that the right arm of every figure is protected by armour，which the left does not require on account of the shield．［Bestiarin； Venatio．］（Lipsius，Saturnalia．）
 aword or glaive，by the Latin poets called ensis． The ancient sword had generally a straight two－ edged blade（九ّ $\mu \phi \eta \kappa \in$ ，Hom．Il．x．256），rather broad，and nearly of equal width from hilt to point． Gladiators，however，used a sword which was curved like a scimitar．（Mariette，Recueil，No．92．） In times of the remotest antiquity swords were made of bronze，but afterwards of iron．（Eurip． Phoen．67，529， 1438 ；Virg．Aen．iv． 579 ，vi．260， xii．950．）The Greeks and Romans wore them on the left side（Sid．Apollin．Carm．2），so as to draw them out of the sheath（vagina，кол $\epsilon \delta s$ ）by passing the right hand in front of the body to take hold of the hilt with the thumb next to the blade． Hence Aeschylus distinguishes the army of Xerxes by the denomination of $\mu \alpha \chi \alpha \iota \rho \circ \phi \delta \rho \circ \nu$ єै $\theta \nu \circ s$（Pers． 56），alluding to the obvious difference in their ap－ pearance in consequence of the use of the Acinaces tostead of the sword．
The early Greeks used a very short sword． Iphicrates，who made various improvements in armour about 400 в．c．，doubled its length（Diod． xv．44），so that an iron sword，found in a tomb at Athens，and represented by Dodwell（Tour，i． p．443），was two feet five inches long，including the handle，which was also of iron．The Roman sword，as was the case also with their other offensive weapons，was larger，heavier，and more formidable than the Greek．（Florus，ii．7．）Its length gave occasion to the joke of Lentulus upon his son－in－law，who was of very low stature， ＂Who tied my son－in－law to his sword ？＂（Ma－ crob．Saturn．ii．）To this Roman sword the Greeks applied the term $\sigma \pi \alpha^{\prime} \theta \eta$（Arrian，Tact．）， which was the name of a piece of wood of the same form used in weaving［Tela］．The Britigh glaive was atill larger than the Roman．（Tac．Agric．36．） In a monument found in London，and preserved at Oxford，the glaive is represented between three and four feet long．（Montfauçon，Supplem．iv． p．16．）

The principal ornament of the sword was be－ stowed upon the hilt．［Capulus．］
Gladius was sometimes used in a wide sense，so as to include Pugio．（A．Gell．ix．13．）［J．Y．］ GLANDES．［Funda．］

GRADUS COGNATIONIS．［Cognati．］
GRAECOSTASIS，a place in the Roman forum，on the right of the Comitium，was so called becanse the Greek ambassadors，and perhaps also deputies from other foreign or allied states，were allowed to stand there to hear the dehates．The Graecostasis was，as Niebuhr remarks，like privi－ leged seats in the hall of a parliamentary assem－ bly．The Stationes Municipiorum，of which Pliny speaks（II．N．xvi．44．8．86），appear to have been places allotted to municipals for the same purpose． When the sun was seen from the Curia coming out between the Rostra and the Graecostasis，it was mid－day ；and an accensus of the consul an－ nounced the time with a clear loud voice．（Plin． H．N．vï．60，xxxiii．1．s． 6 ；Cic．ad Q．Fr．ii．1； Varr．L．L．v． 155 ，ed．Müller ；Niebuhr，Hist．of Rome，vol．ii．note 116．）

GRAMMATEUS（ $\gamma p a \mu \mu \alpha \tau \epsilon \dot{s}$ ），a clerk or scribe．Among the great number of scribes em－ ployed by the magistrates and governments of Athens，there were three of a higher rank，who were real state－officers．（Suidas，s．v．）Their finctions are described by Pollux（viii．98）．One of them was appointed by lot，by the senate，to serve the time of the administration of each prytany， though he always belonged to a different prytany from that which was in power．He was therefore called $\gamma \rho \alpha \mu \mu a \tau \epsilon \grave{̀} s \kappa \alpha \tau \grave{\alpha} \pi \rho u \tau \alpha \nu \epsilon i \alpha \nu$. （Demosth． c．Timocrat．p．720．）His province was to keep the public records，and the decrees of the people which were made during the time of his office，and to de－ liver to the thesmothetae the decrees of the senate． （Demosth．l．c．）Demosthenes in another passage （de Fals．Leg．p．381）states that the public docn－ ments，which were deposited in the Metroon，were in the keeping of a public slave ；whence we must suppose with Schömann（de Comit．p．302，transl．） that this servant，whose office was probably for life， was under the $\gamma \rho a \mu \mu a \tau \in \dot{u} s$ ，and was his assistant． Previous to the archonship of Eucleides，the name of this scribe was attached to the beginning of every decree of the people（Schömann，p．132，\＆cc．： compare Boule）；and the name of the $\gamma \rho \alpha \mu \mu \alpha \tau \epsilon u^{\prime} s$ who officiated during the administration of the first prytany in a year was，like that of the archon eponymus，used to designate the year．

The second $\gamma \rho \alpha \mu \mu \alpha \tau \in \dot{\prime} s$ was elected by the senate，by $\chi \in!\rho o \tau o \nu i a$ ，and was entrusted with the custody of the laws（ $e^{2 l}$ ）$\pi$ ov̀s vouous，Pollux， l．c．；Demosth．c．Timocrat．p． 713 ；de Coron．p． 238）．His usual name was $\gamma \rho \alpha \mu \mu \alpha \tau \epsilon i_{s} \tau \hat{\eta} s$ Bou入 $\hat{\eta} s$ ， hut in inscriptions he is also cailed $\gamma \rho a \mu \mu a \tau \epsilon \dot{\epsilon} s$ r $\bar{\omega} \nu$ ßou入єut $\omega \nu$（Böckh，Publ．Econ．p．185，2d edit．）． Further particulars concerning his office are not known．
 $\pi o ́ \lambda \epsilon \omega s$（Thucyd．vii．10），or $\gamma \rho \alpha \mu \mu \alpha \tau \epsilon \grave{̀} s$ т $\hat{\eta} s$
 people，by $\chi \in\llcorner\rho о \tau o \nu i \alpha$, and the principal part of his office was to read any laws or documents which were required to be read in the assembly or in the senate．（Pollux，l．c．；Demosth．de Fals，Leg．p． 419 ；c．Leptin．p． 485 ；Suidas，s．v．）

A class of scribes，inferior to these，were those persons who were appointed clerks to the several civil or military officers of the state，or who served any of the three $\gamma \rho a \mu \mu a \tau$ eis mentioned above as under－clerks（iлтоүрациarєis，Demosth．de Fals．

Leg. p. 419 ; de Coron. p. 314 ; Antiphon, de Choreut. p. 792 ; Lysias, c. Nicomach. p. 864). These persons were either pnblic slaves or citizens of the lower orders, as appears from the manner in which Demosthenes speaks of them, and were not allowed to hold their office for two succeeding years. (Lysias, c. Nicomach. p. 864, according to the interpretation of this passage by Böckh, Publ. Econ. p. 188, note 168.)

Different from these common clerks were the à $\nu \tau \iota \gamma \rho a \phi \in i ̂ s$, checking-clerks or counter-scribes, who must likewise be divided into two classes, a lower and a higher one. The former comprised those who accompanied the generale and cashiers of the armies (Demosth. de Cherson. p. 101), who kept the control of the expenditure of the sacred money, \&c. (Böckh, Publ. Econ. p. 187). The higher class of $\dot{\alpha} \nu \tau t \gamma \rho a \phi e i \bar{s}$, on the other hand, were public officers. Their number was, accordiug to Harpocration (s. v.), only two, the à $\nu \tau \tau \gamma \beta a \phi \in \dot{\nu} s$ т $\hat{\eta} s$
 office of the former was to control the expenditure of the puhlic treasury ( $\delta$ ofir $\eta \sigma t s$ ) ; the latter was always present at the meetings of the senate, and recorded the accounts of money which was paid into the senate. (Compare Pollux, viii. 98 ; Suidas, s. v.) He had also to lay the accounts of the public revenue before the people in every prytany, so that he was a check upon the àmoঠékтau. He was at first elected by the people by $\chi$ eı ootovia, but was afterwards appointed by lot. (Aeschin. c. Ctesiph. p. 417 ; Pollux, l. c.)

The great number of clerks and counter-clerks at Athens was a necessary consequence of the institution of the $\epsilon \dot{\jmath} \theta \dot{v} \nu \eta$, which could not otherwise have been carried into effect. (See Schömann, de Comit. p. 302, \&c. ; Böckb, l. c.; Hermann, Polit. Antiq. §127. n. 17 and 18.) [L. S.]

GRAMMATOPHYLACIUM. [TABULARIUM.]

GRAPHE ( $\gamma \rho a \phi \eta$ ), in its most general acceptation, comprehends all state trials and criminal prosecutions whatever in the Attic courts ; but in its more limlted sense, those only which were not
 by a special name and a peculiar conduct of the proceedings. The principal characteristic differences between public and private actions are enumerated under Diкe, and the peculiar forms of public prosecutions, such as those above mentioned, are separately noticed. Of these forms, together with that of the Graphe, properly so called, it frequently happened that two or more were applicable to the same cause of action; and the discretion of the prosecutor in selecting the most preferable of his available remedies was attended by results of great importance to himself and the accused. If the prosecutor's speech (кaт $\quad$ jopia), and the evidence adduced by bim, were insufficient to establish the aggravated character of the wrong in question, as indicated by the form of action he had chosen, his ill-judged rigour might be alleged in mitigation of the punishment hy the defendant in his reply ( $\dot{\alpha} \pi o \lambda o \gamma i a$ ), or npon the assessment of the penalty after judgment given; and if the case were one of those in which
 ypa巾多), it might cause a total failure of justice, and even render the prosecutor liable to a fine or other punishment. (Dem. c. Androt. p. 601, c. Meid. p. 523.)

The courts before which public causes conld bs tried were very various; and, besides the ordinary Heliastic bodies under the control of the nine archons or the generals or logistae, the council and even the assembly of the people occasionally hecame judicial bodies for that purpose, as in the caso of certain Docimasiae and Eisangeliae. (Meier, Att. Proc. pp. 205. 268.) The proper court in which to bring a particular action was for the most part determined by the subject-matter of the accusation. In the trial of state offences it was in general requisite that the ostensible prosecutor should be an Athenian citizen in the full possession of his franchise ; but on some particular occasions (Thuc. vi. 28 ; Lys. pro Call. p. 186) even slayes and resident aliens were invited to come forward and lay informations. In such cases, and in some Eisangeliae and other special proceedings, the prosecution and condict of the cause in court was carried on hy advocates retained by the state
 tion of these temporary appointments, the protection of purely state interests seems to have been left to volunteer accusers.

In criminal causes the prosecution was conducted by the kúpros in behalf of the aggrieved woman, minor, or slave ; his $\pi \rho 0 \sigma \tau \alpha \dot{\tau} \eta \mathrm{~s}$ probably gave some assistance to the resident alien in the commencement of proceedings, thongh the accusation was in the name of the person aggrieved, who also made his appearance at the trial without the intervention of the patron (Meier, Att. Proc. p. 661) ; and a complete foreigner would upon this occasion require the same or a still further protection from the proxenns of his country With the exception of cases in which the Apagoge, Ephegesis Endeizis, or Eisangelia were adopted, in the three first of which an arrest actually did and in the last might take place, and accusatione at the Euthynae and Docimasiae, when the accused was or was supposed by the law to be present, a public action against a citizen commenced like an ordinary law-snit, with a summons to appear before the proper magistrate on a fixed day. (Plato, Euthyph. init.) The anacrisis then followed [Anacrisis]; but the bill of accusation was called a $\gamma \rho a \phi \dot{n}$, or $\phi$ á $\Delta s$, as the case might be, and not an $\begin{gathered} \\ \gamma\end{gathered} \lambda \eta \mu \alpha$ or $\lambda \hat{\eta} \xi \iota s$, as in private actions; neither could a pullic prosecntion be referred to an arbitrator [DIAETETAE], and if it were compromised, would in many cases render the accuser liable to an action $\kappa \alpha \theta \cup \phi \in \sigma \epsilon \omega s$, if not ipso facto to a fine of a thousand drachmae. (Meier, Att. Proc. p. 35.5.) The same sum was also forfeited when the prosecutor failed to ohtain the voices of a fifth of the dicasts in all cases except those brought before the archon that had reference to injury ( $\kappa \alpha \dot{\alpha} \kappa \omega \sigma \iota s$ ) done to women or orphans; and besides this penalty, a modified disfranchisement, as, for instance, an incapacity to bring a similar accusation, was incurred upon several occasions. Upon the conviction of the accused, if the sentence were death, the presiding magistrate of the conrt delivered the prisoner, who remained in the custody of the Scythae during the trial, to the Eleven, whose husiness it was to exccute judgment upon him. If the punishment were confiscation of property, the demarchs made an inventory of the effects of the criminal, which was read in the assembly of the people, and delivered to the poletae, that they might make a sale of the goods, and pay

GUTTUS, a vessel, with a narrow mouth or neck, from which the liqnid was poured in drops: hence its name " Qu vinum dabant nt minutatim funderent, a guttis guttwom appellarunt." (Varr. L. L. v. 124, ed. Müller.) It was especially used in sacrifices (Plin. H. N. xvi. 38. s. 73), and bence we find it represented on the Roman coins struck by persons who held any of the priestly offices; ss , for instance, in the annexed coin of L. Plancns, the contemporary of Angustns, where it appears, though in different forms, hoth on the obversc and reverse. The guttus was also used for keeping

the oil, with which persons were anointed in the baths. (Jnv. iii. 263, xi. 158.) A guttus of this kind is figured on p. 192.

GY MNASIARCHES. [Gymnasium.]
GYMNA'SIUM ( $\gamma v \mu \nu \alpha \sigma t o \nu$ ). The whole edvcation of a Greck youth was divided into three parts: grammar, music, and gymnastics ( $\gamma \rho \alpha \mu \mu a \tau \alpha$, ноvatки, and $\gamma \nu \mu \nu a \sigma \tau \iota \hbar$, Plato, Theag. p. 122 ; Plut. de Audit. c. 17 ; Clitoph. p. 497), to which Aristotle (de Republ. viii. 3) adds a fourth, the art of drawing or painting. Gymnastics, however, were thought by the ancients a matter of such importance, that this part of education alone occupied as mnch time and attention as all the others put together; and while the latter necessarily ccased at a certain period of life, gymnastics continned to be cultivated by persons of all ages, though those of an advanced age naturally took lightor and less fatiguing exercises than boys and youths. (Xen. Sympos. i. 7; Lacian, Lexiph. 5.) The ancients, and more cspecially the Greeks, seem to have been thoroughly convinced that the mind could not possilhy be in a healthy state, unless the body was likewise in perfect health, and no means were thought, either by philosophers, or physicians, to be more conducive to preserve or restore bodily health than well-regulated exercise. The word gymnastics is derived from ruupos (naked), becanse the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short $\chi \iota \tau \omega \dot{\nu}$. (See the authorities inWachsmnth, Hellen. Alterth. vol. ii. p. 354. 2 d edit., and Becker, Charikles, vol. i. p. 316.)

The great partiality of the Greeks for gymnastic exercises was productive of infmite good: they gave to the hody that healthy and bcantifnl deve-
lopment by which the Greeks excelled all other nations, and which at the same time imparted to their minds that power and elasticity which will ever be admired in all their productions. (Lacian, de Gymnast. 15.) The plastic art in particnlar must have found its first and chief nourishment in the gymnastic and athletic performances, and it may be justly observed that the Greeks wonld never have attained their preeminence in scnlptnre had not their gymnastic and athletic exhibitions made the artists familiar with the bcantiful forms of the human body and its various attitndes. Respecting the advantages of gymnastics in a medical point of view, some remarks are made at the end of this article. Bnt we mnst at the same time confess, that at a later period of Greek history when the gymmasia had become places of resort for idle loungers, their evil effects were no less striking. The chief objects for which they had originally been institnted were gradually lost sight of, and instead of being places of education and training they became mere places of amnsement ; and among other injurious practices to which they gave rise, the gymnasia were charged, even by the ancients themselves, with having produced and fostered that most odions vice of the Greeks, the $\pi a t \delta \overline{\varepsilon p a \sigma t i a . ~(P l u t . ~ Q u a e s t . ~ R o m . ~ 40 . ~ v o l . ~ i i . ~}$ p. 122. ed. Wyttenb. ; compare Aristot. de Republ. viii. 4 ; Plut. Pluilop. 3.)

Gymnastics, in the widest sense of the word, comprehended also the agonistic and athletic arts
 who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession [AThletae and Agonothetae]. Both originated in the gymnasia, in as far as the athletae, as well as the agonistae were originally trained in them. The athletae, however, afterwards formed a distinct class of persons unconnected with the gymnasia; while the gymnasia, at the time when they had degencrated, were in reality little more than agonistic schools, attended by numbers of spectators. On certain occasions the most distinguished pupils of the gymnasia were selected for the exhibition of public contests [Lampadephoria], so that on the whole there was always a closer connection between the gymnastic and agonistic than between the gymnastic and athletic arts. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests, and were places of exercise for the purpose of strengthening and improving the body, or in other words, places for physical education and training; and it is chiefly in this point of view that we shall consider them in this article.

Gymnastic exercises among the Grecks scem to have been as old as the Greek nation itself, as may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of Grecian story ; but they were, as might be supposed, of a rude and mostly of a warlike character. They werc generally held in the open air, and in plains near a river, which afforded an opportunity for swimming and bathing. The Attic legends indeed referred the regulation of gymmastics to Theseus (Paus. i. 39. § 3), but according to Galen it seems to have been about the time of Cleisthenes that gymnastics were reduced to a regular and complete system. Great progress, however, mnst have been made as early as the time of Solon, as appears
from scme of his laws which are mentioned below. It was ahout the same period that the Greek towns began to build their regular gymasia as places of "exercise for the young, with baths, and other conveniences for philosophers and all persons who gought intellectual amusements. There was probahly no Greek town of any importance which did not possess its gymnasium. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasia have been discovered in modern times. Athens alone pos--sessed three great gymnasia, the Lycenm ( $\Lambda \dot{v} \kappa \in i 0 \nu$ ),
 $\delta \eta \mu i a)$; to which, in later times, sereral smaller ones wero added. All places of this kind were, on the whole, built on the same plan, though, from the remains, as well as from the descriptions still extant, we must infer that there were many differences in their detail. The most complete description of a gymnasium which we possess, is that given by Vitruvins (v. 11), which, however, is very ohscure, and at the same time defective, in as far as many parts which seem to have been essential to a gymnasium, are not mentioned in it. Among the numerons plans which have heen drawn, according to the description of Vitruvins, that of W. Newton, in his translation of Vitruvius, vol. i. fig. 52, deserves the preference. The following woodent is a copy of it, with a few alterations.

The peristylia (D) in a gymnasium, which Vitruvius incorrectly calls palaestra, are placed in the form of a square or ohlong, and have two stadia ( 1200 feet) in circuunference. They consist of four porticoes. In three of them (A BC) spacious exedrae with seats were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to had weather. The double portico contained the following apart-ments:-The Ephebeum (F), a spacious hall with seats, in the middle, and by one-third longer than broad. On the right is the Coryceum (G), perhaps the same room which in other cases was
called Apodyterium ; then came the Conisterium (H) adjoining ; and next to the Conisterium, in the returns of the portico, is the cold bath, $\lambda 0$ ôt $\rho 0 \nu$ (I). On the left of the Epheheum is the Elaeothesinm, where persons were anointed by the aliptae (K). Adjoining the Elaeothesium is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propnigeum (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the returns the Laconicum ( 0 ) on one side, and opposite the Laconicum, the hot-hath (P). On the outside three porticoes are bnilt; one ( $Q$ ), in passing out from the peristyle, and, on the right and left, the two stadial porticoes (R.S), of which, the one ( S ) that faces the north, is made double and of great breadth, the other ( $\mathbf{R}$ ) is single, and so designed that in the parts which encircle the walls, and which adjoin to the columns, there may be margins for paths, not less than ten feet ; and the middle is so excavated, that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks $\xi$ vorós, because in the winter season the athletae exercised themselves in these covered stadia. The $\xi u \sigma \tau \delta s$ had groves or plantations between the' two porticoes, and walks hetween the trees, with seats of signine work. Adjoining to the $\xi \nu \sigma \tau \delta s(\mathrm{R})$ and double portico (S), are the uncovered walks (U), which in Greek are called $\pi a \rho a \delta \rho o \mu i \delta e s$, to which the athletae, in fair weather, go from the winterxystus, to exercise. Beyond the xystus is the stadium (W), so large that a multitude of people may have sufficient room to behold the contests of the athletae.

It is generally believed that Vitruvius in this description of his gymnasium took that of Naples as his model ; bnt two important parts of other Greek gymnasia, the apodyterium and the sphaeristerium, are not mentioned by him. The Greeks bestowed great care upon the ontward and inward splendour of their gymnasia, and adorned them with the statues of gods, heroes, victors in the public games, and of eminent men of every class. Hermes was the tutelary deity of the gymnasia, and his statue was consequently seen in most of them.

The earliest regulations which we possess concerning the gymnasia are contained in the laws of Solon. One of these laws forbade all adults to enter a gymnasium during the time that hoys were taking their exercises, and at the festival of the Hermaea. The gymnasia were, according to the same law, not allowed to be opened before sunrise, and were to be shut at sunset. (Aeschin. c. Timarch. p. 38.) Another law of Solon excluded slaves from gymnastic exercises. (Aeschin, c. Timarch. p. 147 ; Plut. Solon, 1 ; Dernosth. c. Timocrat. p. 736.) Boys, who were children of an Athenian citizen and a foreign mother ( $\nu \delta \theta o t$ ), were not admitted to any other gymnasium bot the Cynosarges. (Plut. Them. 1.) Some of the laws of Solon relating to the management and the superintendence of the gymnasia, show that he was aware of the evil consequences which these institutions might produce, unless they were regulated
hy the strictest rules. As we, however, find that adults also frequented the gymnasia, we must suppose that, at least as long as the laws of Solon were in force, the gymnasia were divided into different parts for persons of different ages, or that persons of different ages took their exercise at different times of the day. (Böckb, Corp. Inseript. n. 246 and 2214.) The education of hoys up to the age of sixteen was divided into the three parts mentioned above, so that gymnastics formed only one of them; but during the period from the sixteenth to the eighteenth year the instruction in grammar and music seems to have ceased, and gymnastics were exclusively pursued. In the time of Plato the salutary regulations of Solon appear to have been no longer observed, and we find persons of all ages visiting the gymnasia. (Plat. De Rep. v. p. 452 ; Xen. Sympos. ii. 18.) Athens now possessed a number of smaller gymnasia, which are sometimes called palaestrae, in which persons of all ages used to assemble, and in which even the Hermaea were celebrated by the hoys, while formerly this solemnity had been kept only in the great gymnasia, and to the exclusion of all adults. (Plat. Lys. p. 206.) These changes, and the laxitude in the superintendence of these public places, caused the gymnasia to differ very little from the schools of the athletae ; and it is perhaps partly owing to this circumstance that writers of this and suhsequent times use the words gymnasium and palaestra indiscriminately. (Becker, Charikles, vol. i. p. 341.)

Married as well as unmarried women were, at Athens, and in all the Ionian states, excluded from the gymnasia ; but at Sparta, and in some other Doric states, maidens, dressed in the short $\chi \iota \tau \omega \nu$, were not only admitted as spectators, but also took part in the exercises of the youths. Married women, however, did not frequent the gymnasia. (Plat. De Leg. vii. p. 806.)

Respecting the superintendence and administration of the gymnasia at Athens, we know that Solon in his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. His laws mention a magistrate, called the Gymnasiarch ( $\gamma \nu \mu \nu \alpha \sigma\{\alpha \rho \chi$ os or $\gamma \nu \mu \nu \alpha \sigma \iota \alpha ́ \rho \chi \eta s$ ) who was entrusted with the whole management of the gymnasia, and with every thing connected therewith. His office was one of the regular liturgies like the choregia and trierachy (Isaeus, De Philoctem. her. p. 154), and was attended with considerable expense. He had to maintain and pay the persons who were preparing themselves for the games and contests in the public festivals, to provide them with oil, and perhaps with the wrestlers' dust. It also devolved upon him to adorn the gymnasium or the place where the agones took place. (Xen. De Rep. Athen. i. 13.) The gymnasiarch was a real magistrate, and invested with a kind of jurisdiction over all those who frequented or were connected with the gymnasia; and his power seems even to have extended beyond the gymnasia, for Plutarch (Amator. c. 9, \&e.) states that he watched and controlled the conduct of the ephebi in general. He had also the power to remove from the gymnasia teachers, philosophers, and sephists, whenever he conceived that they exercised an injurious influence upon the young. (Aeschin. c. Timarch.) Another part of his duties was to conduct the solemn sames at certain great
festivals, especially the torch1-race ( $\lambda \alpha \mu \pi \alpha \delta \eta \phi$ о $\hat{i} \alpha$ ), for which he selected the most distinguished among the ephebi of the gymnasia. The number of gymnasiarchs was, according to Libanius on Demosthenes (c. Mid. p. 510) ten, one from every tribe. (Compare Demosth. c. Philip. p. 50, c. Boeot. p. 996 ; Isaens, De Menecl. c. 42.) They seem to have undertaken their official duties in turns, but in what manner is unknown. Among the external distinctions of a gymnasiarch, were a purple cloak and white shoes. (Plut. Anton. 33.) In early times the office of gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were 12 or 13 gymnasiarchs in one year. This office seems to have been considered so great an honour, that even Roman generals and emperors were ambitious to hold it. Other Greek towns, like Athens, had their own gymnasiarchs, but we do not know whether, or to what extent their duties differed from the Athenian gymnasiarchs. In Cyrene the office was sometimes held by women. (Krause, Gymnastik und Agonistik d. Hellenen, p. 179, \&c.)

Another office which was formerly believed to he connected with the superintendence of the gymnasia, is that of Xystarchus ( $\xi v \sigma \tau \alpha \rho \chi o s$ ). But it is not mentioned previous to the time of the Roman emperors, and then only in Italy and Crete. Krause (Ib. p. 205, \&c.) has shown that this office had nothing to do with the gymnasia properly so called, but was only connected with the schools of the athletae.

An office which is likewise not mentioned before the time of the Roman emperors, but was nevertheless decidedly connected with the gymnasia, is that of Cosmetes. He had to arrange certain games, to register the names and keep the lists of the epheli, and to maintain order and discipline among them. He was assisted by an Anticosmetes and two Hypocosmetae. (Krause, Ib. p. 211, \&c.)

An office of very great importance, in an educa tional point of view, was that of the Sophronistae ( $\sigma \omega \phi \rho 0 \nu i \sigma \tau \alpha t$ ). Their province was to inspire the youths with a love of $\sigma \omega \phi \rho \sigma \sigma \dot{v} \eta$, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day. (Etymol. Mag. s. v.) Their duty not only required them to be present at all the games of the ephebi, but to watch and correct their conduct wherever they might meet them, both within and without the gymnasium. At the time of the emperor Marcus Aurelius only six Sophronistae, assisted by as many Hyposophronistae, are mentioned. (Krause, lb. p. 214, \&c.)

The instructions in the gymnasia were given by the Gymnastae ( $\gamma \nu \mu \nu \alpha \sigma \tau \alpha i)$ and the Paedotribae ( $\pi \alpha$, orotpı6al) ; at a later period Hypopaedotribae were added. The Paedotribes was required to possess a knowledge of all the various exercises which were performed in the gymnasia ; the Gymnastes was the practical teacher, and was expected to know the physiological effects and influences on the constitution of the youths, and therefore assigned to each of them those exercises which he thought most suitable. (Galen. De Valet. tuend. ii. 9. 11 ; Aristot. Polit. viii. 3. 2.) These teachers were usually athletae, who had left their profession, or could not succeed in it. (Aelian, V.F. ii. 6 ; Galen, l. c. ii. 3, \&c.)

The anointing of the bodies of the youths, and
strewing them with dinst, before they commenced their exercises, as well as the regulation of their diet, was the duty of the aliptae. [Aliptaf.] These men sometimes also acted as surgeons or teachers. (Plut. Dion. c. l.) Galen (l.c. ii. 11) mentions among the gymnastic teachers, a $\sigma$ oatpเaтikós, or teacher of the various games at ball; and it is not improbahle that in some cases particular ganes may have heen taught by separate persous.

The games and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorians, however, they were regarded chiefly as institutions for hardening the body and for military training ; among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beanty, and to make it the basis of a healthy and sound mind. But among all the different tribes of the Greeks the exercises which were carried on in a Greek gymnasium were either mere games, or the more important exercises which the gymnasia had in common with the public agones in the great festivals.

Among the former we may mention, l. The ball ( $\sigma \phi \frac{1}{\rho} เ \sigma \iota s, \sigma \phi a \iota \rho о \mu \alpha \chi l a, \& c$.), which was in universal favour with the Greeks, and was here, as at Rome, played in a variety of ways, as appears from
 $\tau \delta \nu$, \&c. (Plat. De Legg. vii. p. 797 ; compare Gronov. ad Plaut. Cweul. ii. 3.17, and Becker, Gallus, i. p. 270.) Every gymnasium contained one large room for the purpose of playing at ball in
 $\kappa \nu \sigma \tau i \nu \delta \alpha$, or $\delta i a ̀ \gamma \rho a \mu \mu \hat{\eta} s$, was a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end, across a line marked lu tween them on the ground. 3. The top ( $\beta \dot{\epsilon} \mu \xi_{\eta \xi}$, $\left.\beta \epsilon \in \mu 6 \iota \xi, \beta \delta \mu 60 s, \sigma \tau \rho \delta \delta_{\iota} \lambda o s\right)$, which was is common an amusement with Greek boys as in our awn days. 4. The $\pi \in \nu \tau \dot{d} \lambda \lambda \theta$ os, which was a gane with five stones, which were thrown up from the upper part of the hand and caught in the palm. 5. Ekatép $\delta a$, which was a game in which a rope was drawn through the upper part of a tree or a post. Two hoys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia. (Hesych. s. v.) These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running ( $\delta \rho \delta \mu о s$ ), throwing of the $\delta i=\kappa o s$ and the $\alpha \kappa \omega \nu$, jumping and leaping ( $\alpha, \lambda \mu \alpha$, with and without $\dot{\alpha} \lambda \tau \hat{\eta} \rho \in s$ ), wrestling ( $\pi \alpha^{\prime} \lambda \eta$ ), boxing ( $\pi v \gamma \mu \hat{\eta}$ ), the
 pia, dancing ( $0 \rho \chi \eta \sigma t s$ ), \&c., are described in separate articles.

A gymnasium was, as Vitruvius observes, not a Roman institution, and Dionysins of Halicarnassus (Ant. Rom. vii. 70-72), expressly states that the
 practised at an carly period in the Ludi Maximi, was introduced among the Romans from Greece. Their attention, however, to developing and strengthening the body by exercises was considerahle, though only for military purposes. The regular training of boys in the Greek gymantics was toreign to Roman manners, and even held in con-
tempt. (Plnt. Qucest. Rom. 40.) Towards the end of the republic many wealtiny Romans, who had acquired a taste for Greek manners, used to attach to their villas small places for bodily exercise, sometimes called gymnasia, sometimes palaestrac, and to adorn them with beautiful works of art. (Cic. ad Att. i. 4, c. Vcrr. iii. 5.) The emperor Nero was the first who built a public gymnasium at Rome (Sueton. Ner. 12) ; another was erected by Commodus. (Herod. i. 12.4.) But although these institutions were intended to introduce Greek gymnastics among the Romans, yet they never gained any great importance, as the magnificent thermae, amphitheatres, and other colossal buildings had always greater charms for the Romans than the gymnasia.

For a fuller account of this important subject, which has been necessarily treated with brevity in this article, the reader is referred to Hieronymus Mercurialis, De Arte Gymnastica, Libri vi. lst ed. Venice, 1573 , 4th ibid. 1601 ; Burette, Histoire des Athlètes, in the Mém. de l'Acad. des Inscript. i. 3 ; G. Löbker, Die Gymnastik der Hellenen, Münster, 1835 ; Wachsmnth, Hellen. Alterth. vol. ï. p. 344, \&c. 2d. edit. ; Müller, Dor. iv. 5. § 4, \&c.; Bccker, Gallus, vol. i. p. 270, \&c.; Charikles, vol. i. pp. 309-345 ; and especially J. H. Kranse, Die Gymnastik und Agonistik der Hellenen, Leipzig, 1841 ; Olympia, Wien, 1838 ; Dic Pythien, Ne. meen \&c., Leipzig, 1841. The histories of edacation among the ancients, such as those of Hochheimer, Schwarz, Cramer, and others, likewise contain much useful information on the subject. [L. S.]

The Relation of Gymnastics to the Mfedical Art.The games of the Greeks had an immediate influence upon the art of healing, because they considered gymnastics to be almost as necessary for the preservation of health, as medicine is for the cure of diseases. (Hippocrates, De Locis in Hominc, vol. ii. p. 138, ed. Kühn ; Tinaeus Locrensis, De Anina Mundi, p. 564, in Gale's Opuse. Mythol.) lt was for this reason that the gymnasia were dedicated to Apollo, the god of physicians. (Plut. Synp. viii. 4. § 4.) The directors of these establishuments, as well as the persons employed under their orders, the bathers or aliptae, passed for physicians, and were called so, on account of the skill which long experience had given them. The directors, called $\pi a \lambda a \iota \sigma \tau \rho о ф \dot{\sim} \lambda a \kappa \in s$, regulated the diet of the young men brought up in the gymnasia ; the sub-directors or Gymnastae, prescribed for their diseases (Plat. de Leg. xi. p. 916) ; and the inferiors or bathers, aliptae, iatraliptae, practised bloodletting, administered clysters, and dressed wounds, nlcers, and fractures. (Plat. De Leg. iv. p. 720 ; Celsus, de Mcdic. i. 1 ; Plin. H. N. xxix. 2.) Two of these directors, lecus, of Tarentum, and Herodicus, of Selymbria, a town of Thrace, deserve particular notice for having contributed to unite more closely medicine and gymnastics. lccus, who appears to have lived before Herodicus (Olynup. 1xxvii. Stephan. Byzant. s. v. Tapás, p. 693 ; compare Paus. vi. $10 . \S 2$ ), gave his chicf attention to correcting the diet of the wrestlers, and to accustoming them to greater moderation ind abstemiousness, of which virtues he was himself a perfcet model. (Plat. de Leg. viii. p. 840 ; Aelian, I'ur. Hist. xi. 3 ; Id. Hist. Animal. vi. 1.) Plato considers him, as woll as Herodicus, to have been one of the inventors of medical gymnastics. (Plat. Protagor. § 20. p. 316 ; Lucian, De Conserib. Hist.
§ 35. p. 626.) Herodicus, who is sometimes called Prodicus (Plin. H. N. xxix. 2), lived at Athens a short time hefore the Peloponnesian war. Plato says that he was not only a sophist (Plat. Protag. l. c.), but also a master of the gymnasium (Id. Rep. iii. p. 406), and physician (ld. Gorg. § 2. p. 448), and in fact he united in his own person these three qualities. He was troubled, says the same author, with very weak health, and tried if gymnastic exercises would not help to improve it; and having perfectly succeeded, le imparted his method to others. Before him medical dietetics had been entirely neglected, especially by the Asclepiadae. (Id. Rep. iii. p. 406.) If Plato's account may be taken literally (Id. Plaedr. p. 228), he much abused the exercise of gymnastics, as he recommended his patients to walk from Athens to Megara and to return as soon as they had reached the walls of the latter town.* The author of the sixth book De Morl. Vulgar. (Hippoer. Epidem. vi. c. 3. vol. iii. p. 599) agrees with Plato: "Herodicus," says he, " zursed poople, uttacked with fever, to die from walkiug and too hard exercise, and many of his patients suffered much from dry rubbing." A short time after we find, says Fuller (Medicina Gymnastica, \&c. Lond. 1718, 8vo), that Hippocrates (Dc Vict. Rat. iii. vol. i. p. 716 ), with sorne sort of glory, assumes to himself the honour of bringing that method to a perfection, so as to be able to distinguish $\pi \delta{ }^{\circ} \tau \in \rho 0 \nu \tau \delta \quad \sigma u \tau i o \nu$

 Pursuant to this, we find him in several places of his works recommending several sorts of exercises upon proper occasions ; as first, friction or chafing, the effects of which he explains (De Vict. Rat. ii. p. 701), and tells us, that in some cases it will bring down the bloatedness of the solid parts, in others it will incarn and cause an increase of flesh, and make the part tbrive. He advises (ilid. p. 700) walking, of which they had two sorts, their roumd and straight courses. He gives
 preparatory exercises, which served to warm and fit the wrestlers for the more vehement ones. In some cases he advises the $\Pi \alpha \lambda \eta$, or common wrestling (izid.), and the 'Akpoxtipia, or wrestling by the hands only, without coming close, and also the Kшрикоиа $\chi^{i \alpha}$, or the exereise of the Coryens, or the hanging ball (see Antyllus, apud Mercur. de Arte Gymn. p. 123) ; the Xeєpovoul(a, a sort of dexterous and regular motion of the hands, and upper parts of the body, something after a military manner ; the 'A入ivṑ $\sigma t s$, or rolling in sand; and once (ibid. p. 700) we find mentioned, with some approbation, the "Hтє 1 pol "I $\pi \pi 0 \iota$, Equi Indefiniti, by which is probably meant galloping long courses in the open field.
As for Galen, he follows Hippocrates in this, as closely as in other thinge, and declares his opinion of the benefit of exercises in several places; his second book "De Sauitate Tuenda," is whally upon the use of the strigil, or the adrantage of

* "The distance from Athens to Megara was 210 stadia, as we learn from Procopius. (Bell. Vand. i. 1.) Dion Chrysostom calls it a day's journey. (Orat. vi.) Mndern travellers reckon eight hours. (Dodwell, Class. Tour, vol. ii. p. 177.)" Cramer, Anc. Greece, vol, ii. sect. 13, p. 430 .
regular chafing: he has written a little tract,
 in he recommends an exercise, hy which the body and mind are both at the same time affected. In his discourse to Thrasybulus, Inó-
 he inveighs against the athletic and other violent practices of the gymnasium, but mpproves of the more moderate exercises, us subservient to the ends of a physician, and consequently part of that art. The other Greek writers express a similar opinion; and the sense of most of them in this matter is collected in Orihasius's "Collecta Medicinalia." In those remains which are preserved of the writings of Antyllus, we read of some sorts of exercises that are not mentioned by Galen or any fommer author ; umong the rest the Cricilasia as the translators by mistake call it, instead of Cricoëlasia. This, as it had for many ages been disused, Mercurialis himself, who had made the most judicious inquiries into this subject (De Arte Gymnastica, 4to. Amstel. 1672), does not pretend to explain ; and I believe, says Freind (Hist. of Physic, vol. i.), though we have the description of it set down in Oribasius (Coll. Medic. vi. 26), it will be hard to form any idea of what it was.
The ancient physicians relied much on exercise in the cure of the dropsy (compare Hor. Epist. i. 2. 34. "Si noles samus, curres hydropicus"), wbereas we almost totally neglect it. (Alexander Trallianus, De Medic. ix. 3. p. 524, ed. Basil.) Hippocrates (De Internis Affection. sect. 28. vol. ii. p. 518) prescribes for one that has a dropsy
 use of the same word in his Epidemics, and almost al ways when he speaks of the regimen of a dropsical person, implying, that though it he a lahour for such people to move, yet they must undergo it ; and this is so much the sense of Hippocrates, that Spon has collected it into one of the new Aphorisms, which he has drawn out of his works. Celsus says of this case (De Medic. iii. 21. p. 152, ed. Argent.), "Concutiendum multa gestatione corpus est." The Romans placed great reliance upon exercise for the cure of diseases ; and Asclepiades, who lived in the time of Pompey the Great, brought this mode of treatment into great request. He called exercises the common aids of physic, and wrote a treatise on the subject, which is mentioned by Celsus in his chapter "De Frictione" (De Medio. ii. 14. p. 82), but the book is lost. He carried these notions so far, that he invented the Lecti Pensiles (Plin. H. N. xxvi. 8) or hanging beds, that the sick might be rocked to sleep ; which took so much at that time, that they came afterwards to be made of silver, and were a great part of the luxury of that people ; he had so many particular ways to make physic agreeable, and was so exquisite in the invention of exercises to supply the place of medicine, that perlaps no man in any age ever had the happiness to obtain so general an applause ; and Pliny says (ibid. c. 7) by these means be made himself the delight of mankind. About this time the Roman physicians sent their consumptive patients to Alexandria, and with very good success, as we find by both the Plinys; this was done partly for the change of air, but chiefy for the sake of the exercise by the motion of the ship; and therefore Celsus says (De Medic. iii. 22. p. 15́ ${ }^{\text {2 }}$ ), " Si vera Phthisis est, opus est longa navigatione;" and a little after he makes Vehiculum and Navis tn be two of the

## GY NAECONOMI.

chief remedies. As for the other more common exercises, they were daily practised, as is manifest from Celsus, Caelins Aurelianus, Theodorus Priscianus, and the rest of the Latin physicians. And we do not want instances of cures wrought by these means. Suetonius (Calig. c. 3) tells us that Germanicus was cured of a "crurum gracilitas," as he expresses it (by which he probably means an Atro$p h y$ ), by riding ; and Plutarch, in his life of Cicero, gives us an account of bis weakness, and that he recovered his health by travelling, and excessive diligence in ruhbing and chafing his hody. (Compare Cic. Brut. c. 91. ) Pliny (H. N. xxxi. 33) tells us Annaeus Gallio, who had been consul, was cured of a consumption by a sea voyage ; and Galen gives us such accounts of the good effects of particular exercises, and they were practised so universally by all classes, that it cannot be supposed but they must have been ahle to produce great and good effects. However, from an attentive perasal of what we find on this subject in the classical authors, the reader can hardly fail of being convinced that the ancients esteemed gymnastics too highly, just as the moderns too much neglect them; and that in this, as in many other matters, both in medicine and philosophy, truth lies between the two extremes.
[W. A. G.]
GYMNASTES. [Gymnasidm, p. 581, b.]
GYMNE'SII or GYMNE'TES ( $\gamma \nu \mu \nu \eta \sigma t o t$, or $\gamma \nu \mu \nu \hat{\eta} \tau \epsilon s$ ), were a class of bond-slaves at Argos, who may be compared with the Helots at Sparta. (Steph. Byz. s. v. Xios: Pollux, iii. 83.) Their name shows that they attended their masters on military service in the capacity of light-armed troops. Müller (Dor. iii. 4. § 2) remarks that it is to these gymnesii that the account of Herodotus (vi. 83) refers, that 6000 of the citizens of Argos having been slain in battle by Cleomenes, king of Sparta (Id. vii. 148), the slaves got the government into their own hands, and retained possession of it until the sons of those who had fallen nad grown to manhood. Afterwards, when the young citizens had grown up, the slaves were compelled by them to retire to Tiryns, and then after a long war, as it appears, were either driven from the territory, or again suhdued.

GYMNOPAEDIA ( $\gamma \nu \mu \nu о \pi a \iota \delta i a$ ), the festival of "naked youths," was celebrated at Sparta every year in honour of Apollo Pythaeus, Artemis, and Leto. The statues of these deities stood in a part of the Agora called $\chi 0 \rho \delta \delta$, and it was around these statues that, at the gymnopaedia, Spartan youths performed their chornses and dances in honour of Apollo. (Paus. iii. 11. § 7.) The festival lasted for several, perhaps for ten, days, and on the last day men also performed choruses and dances in the theatre ; and during these gymnastic exhibitions they sang the songs of Thaletas and Alcman, and the pacans of Dionysodotus. The leader of the chorns ( $\pi \rho o \sigma \tau a ́ t \eta s$ or $\chi o \rho o \pi o t o ́ s$ ) wore a kind of chaplet, called $\sigma \tau$ є́ $\varphi \alpha \nu 0 \iota$ సे $\rho \in \in \tau \iota \kappa \frac{l}{}$, in commenoration of the victory of the Spartans at Thyrea. This event seems to have been closely connceted with the gymnopaedia, for those Spartans who had fallen on that occasion were always praised in songs at this festival. (Athen. xv. p. 678 ; Plut. Agesil. 29 ; Xen. Hellen. vi. 4. § 16 ; Hesych. Suid. Etym. Mag. and Timaeus, Glossar. s. v. Гu $\mu \nu 0 \pi \alpha . \delta i ́ a$.$) The boys in their dances per-$ formed such rhythmical movements as resembled the exercises of the palaestra aud the pancration,
and also imitated the wild gestures of the worship of Dionysus. (Athen. xiv. p.631.) Mäller (Hist. of Gr Lit. vol. i. p. 161) supposes, with great probability, that the dances of the gymnopaedia partly consisted of mimic representations, as the establishment of the dances and musical entertainments at this festival was ascribed to the musicians, at the head of whom was Thaletas. (Plut. de Mus. c.9.) The whole season of the gymnopaedia, during which Sparta was visited hy great numbers of strangers, was one of great merriment and rejoicings (Xen. Memor. i. 2. § 61 ; Plut. Agesil. 29 ; Pollux, iv. 14. 104), and old hachelors alone seem to havs been excluded from the festivities. (Osann, ds Coelibum apud Veteres Populos Conditione Comm mentat. p. 7, \&c.) The introduction of the gymnopaedia, which subsequently became of such importance as an institution for gymnastic and orchestic performances, and for the cultivation of the poetic and musical arts at Sparta, is generally assigned to the year 665 в. c. (Compare Meursius, Orchestra, p. 12, \&c. ; Creuzer, Commentat. Herod. i. p. 230 ; Miiller, Dor. vol. ii. p. 350, \&c.) [L. S.]

GYNAECONITIS. [Domus, pp. 423425.$]$

GYNAECO'NOMI or GYNAECOCOSMI ( $\gamma \nu \nu a \iota \kappa \nu \nu \delta \mu \circ$ or $\gamma \nu \nu \alpha u \% \kappa \delta \sigma \mu 01$ ), were magistrates at Athens, who superintended the conduct of Athenian women. (Pollux, viii. 112.) We know little of the duties of these officers, and even the time when they were instituted is not quite certain. Böckh (de Philoch. p. 24) has endeavoured to show that they did not exist until the time of Demetrius Phalereus, whereas, according to others, they were instituted by Solon, whose regulations conceming the female sex certainly rendered some special officers necessary for their maintenance. (Plut. Sol. 21 ; comp. Thirlwall, Hist. of Greece, vol. ii. p. 51.) Their name is also mentioned by Aristotle (Pol. iv. 12. p. 144, and vi. 5. p. 214. ed. Göttling) as something which he supposes to be well known to his readers. These circumstances induce us to think that the $\gamma v \nu a, k o \nu \delta \mu o$, , as the superintendents of the conduct of women, existed ever since the time of Solon, hut that their power was afterwards extended in such a manner that they became a kind of police for the purpose of preventing any excesses or indecencies, whether committed by men or by women. (See the Fragm. of Timocles and Menander, ap. Athen. vi. p. 245, where a кac $\nu$ ons $\nu \delta \mu 0 s$ is mentioned as the source from which they derived their increased power ; compare Plut. Sol. 21. in fin.) In their first and original capacity, therefore, they had to see that the regulations concerning the conduct of Athenian women were observed, and to punish any transgressions of them (Harpocrat. s. v. "OTı $\chi$ ı $\lambda$ acs: Hesych. s. v. $\Pi \lambda \alpha \dot{\alpha} \tau \alpha \nu \rho$ ) ; in the latter capacity they seem to have acted as ministers of the areopagus, and as such had to take care that decency and moderation were observed in private as well as in public. Hence they auperintended even the mectings of friends in their private houses, e. g. at weddings, and on other festive occasions. (Philoch. ap. Allhen. vi. p. 245.) Meetings of this kind were not allowed to consist of more than thirty persons, and the $\gamma^{\text {voucoun }} \delta \mu o t$ had the right to enter any house and send away all the guests above that number ; and that they might be able, previous to entering a house, to form an estimate of the number of persons assembled in $\mathrm{i}_{\mathrm{t}}$ the cooks who were
engaged for the occasion had to give in their names to the ruvausovofou. (Athen. l. c.) They had also to punish those men who showed their effeminate eharacter by frantic or immoderate wailing at their own or other persons' misfortunes. (Plut. l. c.) The number of these officers is unknown. Meier (Att. Proc. p. 97) thinks that they were appointed by lot; but Hermann (Polit. Ant. $\S 150$. n. 5), referring to Menander (Rhet. de Encom. p. 105, ed. Heeren.), reckons them among those officers who were elected.
[L. S.]

## H.

HABE'NAE ( $\boldsymbol{\eta} v i ́ a)$ were, generally speaking, leathern thongs, by means of which things were held and managed. Hence the word was in particular applied-l. To the reins by means of which horses were guided and managed. (Virg. Acn. x. 576 , xi. 670,765 , xii. 327.) The habenae were, as with us, fixed to the bit or bridle (fraenum). 2. To the thongs attached to a lance, by which it was held and wielded. (Lucan. vi. 221.) [Compare HAsta, p. 558 , a.] 3. To the thong which was formed into a sling, by means of which stones were thrown. (Lucan. iii. 710 ; Valer. Flacc. v. 609.) [Funda.] 4. To thongs by means of which the sandals were fastened to the feet. (Gellius, xiii. 21. 4.) From this passage it is also clear that the hahenae in this case were not always made of leather, but of strings or chords, whence Gellius calls them teretes habenae. 5. To the thongs formed into a scourge with which young slaves were chastised. (Horat. Epist. ii. 2. 15.) The commentators on this passage, indeed, differ about the meaning of habenae ; but if we consider the expressions of Ulpian (Dig. 29. tit. 5. s. 33), impuberes servi terreri tantum solent, et habena vel ferula caedi, it is clear that the habena is the scourge itself. (Comp. Ov. Heroid. ix. 81 ; Virg. Aen. vii. 380.) [L. S.]
Habita'Tio. [Servitutes.]
HAERES. [Heres.]
HALIA (à $(\alpha)$ ). [Agora.]
HALMA ( $\left.{ }^{\circ} \lambda \mu \alpha\right)$. [Pentathlon.]
$\mathrm{HALO}^{\prime} \mathrm{A}(\dot{\alpha} \lambda \hat{\omega} \alpha)$. [ALOA.]
HALTE'RES ( $\grave{\alpha} \lambda \tau \eta \hat{\eta} \rho \in$ ) were certaim masses of stone or metal, which were used in the gymnastic

exercises of the Greeks and Romans. Persons who practised leaping often performed their exercises with halteres in both hands; but they were also frequently uscd merely to exercise the body
in somewhat the same manner as our dumb-hells. (Martial, xiv. 49, vij. 67. 6 ; Pollux, iii. 155, x. 64 ; graves massae, Juv. vii. 421; Senec. Eip. 1ó, 56.) Pausanias (v. 26. § 3, v. 27.88 , vi, 3. §4) speaks of certain statues of athletes who were represented with halteres. They appear to have been made of various forms and sizes. The preceding woodcut is taken from Tassie, Catalogue, \&c. pl. 46, No. 7978 . (Mercurialis, De Arte Gymnastica, ii. 12 ; Becker, Gallus, vol. i. p. 277 ; Krause, Die Gymnastik und Agonistik der Hellenen, vol. i. p. 395.)

## hamaxa (ápaga). [Harmamaxa; Plaus-

 TRUM.]HAMAXO'PODES ( $\alpha \mu a \xi \sigma \pi \delta \delta \epsilon s$ ), in Latin, ARBUSCULAF, appear to have been cylindrical pieces of wood, placed vertically, and with a socket cut in the lower end, to receive the upright pivot fixed above a wheel or above the middle of the axis of a pair of wheels, which could thas turn horizontally in every direction. One use of this sort of socket was to unite the axis of the forewheels of a chariot to the body (Pollux, i. 144, 253 ; Hesych. s. v. $\alpha \mu 0 \xi\{\pi o \delta e s)$; another use of it was to attach the wheels of a testudo to the framing in such a manner, that the machine might easily be moved in any direction: in fact, the arbuscula and the wheel together formed a castor or universal joint. (Vitruv. x. 20. s. 14. § 1, ed. Schneid.) Newton (ad loc.) supposes that, for the latter purpose, a single piece of timber would be both clumsy and insufficient, and that the arbuscula must have been a sort of framing. (See his figure, No. 114.)
[P.S.]
HARMA ( $\alpha \rho \mu \alpha$ ). [Currus; Harmamaxa.]
HARMAMAXA ( $\alpha \rho \mu \alpha \mu \mu \xi \alpha)$ is evidently compounded of á $\rho \mu \alpha$, a general term, including not only the Latin Currus, but other descriptions of carriages for persons; and $\alpha \mu a \xi a$, which meant a cart, having commonly four wheels, and used to carry loads or burthens as well as persons. (Hes. Op. et Dies, 692 ; Hom. Il. vii. 426, xxiv. 782.) The harmamaxa was a carriage for persons, in its construction very similar to the Carpentum, being covered overhead and inelosed with curtains (Diod. xi. 56 ; Charito, v. 2, 3), so as to be used at night as well as by day (Xen. Cyrop. iv. 2. § 15) ; but it was in general larger, often drawn by four horses, or other suitable quadrupeds, and attired with ornaments more splendid, Inxurious, and expensive, and in the Oriental style. (Diod. xvii. 35 ; Aristoph. Achar. 70.) It occupied among the Persians (Max. Tyr. 34) the same place which the carpentum did among the Romans, being used, especially upon state occasions, for the conveyance of women and children, of eunuchs, and of the sons of the king with their tutors. (Herod. vii. 83, ix. 76 ; Xen. Cyrop. iii. 1. § 8, iv. 3. § 1, vi. 4. § 11 ; Q. Curt. iii. 3. § 23.) Also, as persons might lie in it at length, and it was made as commodious as possible, it was used by the kings of Persia, and by men of high rank in travelling hy night, or in any other circumstances when they wished to consult their ease and their pleasure. (Herod. vii. 41 ; Xen. Cyrop. iii. 1. §40.)

The body of Alexander the Grent was trans ported from Babylon to Alexandria in a magnificent harmamoxa, the construction of which occupied two years, and the description of which, with its paintings and ornaments in gold, silver, and ivory, employed the pen of more than one historian,
(Diod. xviii. 26-28; Ather. v. p. 206, e; Aelian, V.H. xii. 64.)

The harmamaxa was occasionally used by the ladies of Greece. A priestess of Diana is represented as riding in one which is drawn by two white cows (Heliod. Aeth. iii. p. 133, ed. Commelini), and the coins of Ephesus show, that this carriage, probably containing also symbols of the attributes and worship of Diana, added to the splendour of the religious processions in that city.
[J. Y.]
HARMOSTAE (from á $p \mu o ́ \check{〔} \omega$, to fit or join together) was the name of the governors whom the Lacedaemonians, after the Peloponnesian war, sent into their sabject or conquered towns, partly to keep then in submission, and partly to abolish the democratical form of government, and establish in its stead one similar to their own. (Diod. Sic. xiv. 10 ; Xen. Hellen. iv. 2.85 ; Isocrat. Paneg. p. 92 ; Suidas, Hesych. s. v.; Etymol. Mag. s. v. ${ }^{\text {'E }}$ тio $\tau \alpha \theta \mu \mathrm{o}$.) Although in many cases they were ostensibly sent for the purpose of abolishing the tyrannical government of a town, and to restore the people to freedom, yet they themselves acted like kings or tyrants, whence Dionysius (Antiq. Rom. v. p. 337, Sylburg) thinks that harmostre was merely another name for kings. How little sincere the Lacedaemonians were in their prefessions to restore their subject towns to freedom was manifest after the peace of Antalcidas ; for although they had pledged thernselves to re-cstablish free governments in the various towns, yet they left them in the hands of the harmostac. (Polyb. iv. 27.) The cbaracter of their rule is sufficiently described by the word $\kappa a \tau \epsilon \chi \chi \in L$, which Isocrates (l.c.) and Demosthenes (De Coron. p. 258) use in speaking of the harmostae. (Compare Dennosth. c. Timocrat. p. 740 ; Plut. Narrat. Amat. c. 3.) Even Xenophon (Dc Rep. Lac. c. 14) could not help censuring the Lacedaemonians for the mamer in which they allowed their harmostae to govern.

It is uncertain how long the office of an harmostes lasted ; but considering that a governor of the same kind, who was appointed by the Lacedaemonians in Cythera, with the title of Cytherodices, held his office only for one year (Thncyd. iv. 53), it is not improbable that the office of harmostes was of the same duration.
[L. S.]
HARPAGES GRAPHE (á $\rho \pi \alpha \gamma \hat{\eta} s{ }_{s} \gamma \rho a \phi \hat{\eta}$ ). This action seems, according to Lucian (Jud. Voc. c. l. vel. i. p. 82, ed. Hemsterh.), to have been applicable to cases of open robbery, attended with violence. Under these circumstances the offenders would be included in the class of rakeovprot, and as such be tried before a court under the control and management of the Eleren. With respect to the punishment upon conviction, we have no certain information, but there seems ne reason to doubt that it was capital, as in cases of burglary and stealing from the person. (Xen. Mem. i. 2. § 62.)
[J. S. M.]
HARPAGINE'TULI, a sort of decoration for the walls and ceilings of rooms, thus mentioned by Vitruvius, in a passage where he is speaking of irregular and fantastic ornaments (vii. 5. §3), " pro colunnis exim statuuntur calami, pro fustigüs harpayinetuli striati cum crispis foliis et volutis teneris." The commentators have laboured in vain to explain the term; and it is even very donbtful whether the reading is correct. As the word $\operatorname{stand}$ s, it seems to refer to some sozt of scroll-

## HARUSPICES.

pattern. (See Schneider, Newton, and the other commentators and translators, l.c., and an addition hy Bailey to the article in Forcellini.) [P. S.]
 крєd́ $\gamma \rho / s$ ), a grappling-iron, a drag, a flesh-hook. ( $E x$. xxvii. 3 ; 1 Sam. ii. I3, 14. Sept. ; Aristoph. Vesp. 1152 ; Anaxippus, ap. Athen. iv. p. 169, b.)
入os, Brunck, Anal. ii. 215) is described by the Scholiast on Aristophanes (Equit. 769), as "an instrument used in cookery, resembling a hand with the fingers bent in wards, used to take boiled meat out of the caldron." Four specimens of it, in bronze, are in the British Musemm. One of them is here represented. Into its hollow extrenity a wooden handle was inserted.

A similar instrument, or even the flesh-book itself (Aristoph. Eccles. 994) was used to draw up a pail, or to recover any thing which had fallen into a well. (Hesychius, s. vv. 'A $\rho \pi a ́ \gamma \eta$, K $\rho \in a ́ \gamma \rho a$, Aúkos.)
In war the grappling-iron, thrown at an enemy's ship, seized the rigging, and was then used to drag the ship within reach, so that it might be easily boarded ordestroyed. ( ${ }^{\text {A }}$ A $\rho \pi a \xi$, Athen. v. p. 208, d.) These instruments appear to have been much the same as the munus ferreae (manus ferreace atque harpagones, Caes. B. C. i. 57 ; Q. Curt. iv. 9 ; Dion Cass. xlix. 3, 1. 32, 34). The manus ferreae wers employed by the Consul Duilius against the Car. thaginians (Flor. ii. 2 ; Front. Stratag. ii. 3. § 24), and were said to have been invented by Pericles. (Plin. A. N. vii. 57.) [J. Y.]

HARPASTUM ( $\alpha, \neq \pi \alpha \sigma \delta \nu \nu$ from ${ }_{\alpha}^{\alpha} \rho \pi \alpha \delta_{\omega} \omega$ ) was a ball, used in a game of which we have no accurate account ; but it appears both from the etymology of the word and the statement of Galen
 that a ball was thrown among the players, each of whom endeavoured to obtain possession of it. (Comp. Pollax, ix. 105, 106 ; Athen. i. p. 14, f.) Hence Martial (iv. 19.6) speaks of the larpasta pulverulenta. The game required a great deal of bodily exertion. (Martial, vii. 67. 4; comp. xiv. 48.) (See Becker, Gallus, vol. i. p. 276 ; Krause, Gymnastik und Agonistith der Hellencn, vol. i. pp. 307, 308.)

HARU SPICES, or ARU/SPICES, were soothsayers or diviners, who interpreted the will of the gods. They originally came to Rome from Etruria, whence haraspices were often sent for by the Romans on important occasions. (Liv, xxvii. 37 ; Cic. Cat. iii. 8, de Div. ii. 4.) The art of the haruspices resembled in many respects that of the augurs; but they never acquired that political importance which the latter possessed, and were regarded rather as means for ascertaining the will of the gods than as pessessing any religious authority. They did not in fact form any part of the ecclesiastical polity of the Roman state during the republic ; they are never called sacerdotes, they did not form a collegiam, and had no magister at their head. The account of Dionysius (ii. 22),
that the haruspices were instituted by Romulus, and that one was chosen from each tribe, is opposed to all the other authorities, and is manifestly incorrect. In the time of the emperors, we read of a collegium or order of sixty haruspices (Tacit. Ann. xi. 15 ; Orelli, Inscr. i. p. 399) ; but the time of its institution is nncertain. It has been supposed that such a collegium existed in the time of Cicero, since he speaks of a summus magister (de Div. i. 24) ; but by this we are probably to understand not a mugister collegii, but merely the most eminent of the haruspices at the time.

The art of the haruspices, which was called karuspicina, consisted in explaining and interpreting the will of the gods from the appearance of the entrails (exta) of animals offered in sacrifice, whence they are sometimes called eatispices, and their art extispicium (Cic. de Div. ii. 11 ; Suct. Ner. 56); and also from lightning, earthquakes, and all extraordinary phenomena in nature, to which the general name of portenta was given. (Valer. Max. i. 1. § 1.) Their art is said to have been invented by the Etruscan Tages (Cic. de Div. ii. 23 ; Festus, s. v. Tages), and was contained in certain hooks called lilni haruspicini, fulgurales, and tonitruales. (Cic. de Div. i. 33 ; compare Macroh. Saturn. iii. 7).

This art was considered by the Romans so important at one time, that the senate decreed that a certain number of young Etruscans, belonging to the principal families in the state, should always be instructed in it. (Cic. de Div. i. 41.) Niebuhr appears to he mistaken in supposing the passage in Cicero to refer to the children of Roman families. (See Orelli, ad loc.) The senate sometimes consulted the haruspices (Cic. de Div. i. 43 , ji. 35 ; Liv. xxvii. 37), as did also private persons. (Cic. dc Div. ii. 29.) In later times, however, their art fell into disrepute among well-educated Romans; and Cicero (de Div. ii. 24) relates a saying of Cato, that he wondered that one haruspex did not laugh when he saw another. The Emperor Claudins attempted to revive the stndy of the art, which had then become neglected; and the senate, under his directions, passed a decree that the pontifices should examine what parts of it should be retained and established (Tacit. Ann. xi. 15); hut we do not know what effect this decree produced.

The name of haruspex is sometimes applied to sny kind of soothsayer or prophet (Prop. iii. 13. 59) ; whence Juvenal (vi. 550) speaks of Armenius eel Commagenus haruspex.

The latter part of the word haruspex contains the root spec; and Donatus (ad Ter. Phorm. iv. 4. 28) derives the former part from haruga, a victim. Compare Festus, s. v. Harviga, and Varro, De Ling. Lat. v. 98, ed. Müller. (Göttling, Geseh. der Röm. Staatsv. p. 213 ; Walter, Gesch. des Röm. Rechts, SS 142, 770, 2nd ed.; Brissonius, De Formulis, i. 29, \&c.)
 is defined by Homer, $\delta \delta \delta^{\rho} u$ x $a \lambda \kappa \eta p \in s$, "a pole fitted
 "a pole heavy with bronze" (Od. xi. 531). The bronze, for which iron was afterwards substituted, was indispensable to form the point ( $\alpha i \chi \mu \dot{\eta}, \dot{\alpha} \kappa \omega \kappa \dot{\eta}$, Homer ; $\lambda \delta \gamma \chi \eta$, Xenophon ; acies, cuspis, spiculum, Ovid, Met. viii. 375) of the spear. Each of these two essential parts is often put for the wbole, so that a spear is called $\delta \delta \rho v$ and $\delta o \rho d \dot{\alpha} เ o \nu, a^{i} \chi \mu \dot{\eta}$,
and $\lambda \delta \gamma \chi \eta$. Even the more especial term $\mu \in \lambda i ́ a$, meaning an ash-tree, is used in the same manner, because the pole of the spear was often the stem of a young ash, stript of its bark and polished. (Il. xix. 390 , xx. 277 , xxii. 328 , Od. xxii. 259 ; Plin. H. N. xvi. 24 ; Ovid, Met. xii. 369.) In like mamer the spear is designated by the term $\kappa \alpha \mu \alpha \xi$ (Aesch. Ag. 65 ; Enrip. HIcc. 1155, Phocn. 1421 ; Brunck, Anal. i. 191, 226 ; Ant. Sid. 34), meaning properly the strong tall reed of the south of Europe, which served both for spears and for various other uses. (Hes. Seut. 298 ; Schol. in loc.; Xen. de Re Equest. xii. 12.)
The bottom of the spear was often inclosed in a pointed cap of bronze, called hy the Jonic writers $\sigma a u \rho \omega \tau \hat{\eta} \rho$ (Hom. Il. x. 153 ; Herod. vii. 40, 41 ; also Polyb. vi. 23), and ouplaxos (II. xiii. 443, xvi. 612, xvii. 528), and in Attic or common Greek $\sigma \tau$ úpag. (Xen. Hellen. vi. $2 . \S 19$; Athen. xii. p. $514, \mathrm{~b}$; $\tau \tau \cup р \alpha \alpha_{\kappa} о \nu$, Thuc. ii. 4 ; Aen. Tact. 18.) By forcing this into the ground the spear was fixed erect. (Virg. Aen. xii. 130.) Many of the lancers ( $\delta о \rho и ф о ́ \rho о \iota, ~ а і \chi \mu о ф о \rho о \iota, ~ \lambda о \gamma \chi о ф о \rho о \iota, ~ w o o d e n t, ~ p . ~$ 237), who accompanied the king of Persia, had, instead of this spike at the bottom of their spears, an apple or a pomegranate, either gilt or silvered. (Herod. ; Athen.; ll. cc.) With this, or a similar ornament, the spear is often terminated both on Persian and Egyptian monuments. Fig. l. in the annexed woodcut shows the top and bottom of a spear, which is held by one of the king's guards in the sculptures at Persepolis. (Sir R. K. Porter's Travels, vol. i. p. 601.) It may be compared with those in the hand of the Greek warrior at p. 135, which have the spike at the bottom. The spike at the bottom of the spear was used in fighting by the Greeks and Romans, when the head was broken off. (Polyb. vi. 25.)

A well-finished spear was kept in a case ( $\delta 0 \rho a-$ тoө $\uparrow \kappa \eta$ ), which, on account of its form, is called by Homer a pipe ( $\sigma \dot{\prime} \rho^{\prime} \boldsymbol{\gamma} \xi$, Il. xix. 387).

The spear was used as a weapon of attack in three different ways:-1. It was thrown from catapults and other engines [Tornentum]. 2. It was thrust for ward as a pike. In this manner Acbilles

killed Hector by piercing him with his spear through the neck. (Il. xxii. 326.) The Eubneans

## hasta.

were particularly celehrated as pikemen. (Hom. [l. ii. 543.) 3. It was commonly thrown by the hand. The Homeric bero generally went to the field with two spears. (Hom. 1l. iii. 18, x. 76, xii. 298 ; Pind. Pyth. iv. 139.) On approaching the enemy he first threw either one spear or both, and then on coming to close quarters drew his sword. (Hom. Il. iii. 340, xvii. 530, xx. 273284.) The spear frequently had a leathern thong tied to the middle of the shaft, which was called d$\gamma \kappa v \in \lambda \eta$ by the Greeks, and amentumz by the Romans, and which was of assistance in throwing the spear. (Pollux, i. 136 ; Schol. ad Eurip. Orest. 1477; Xen. Anab. iv. 2. § 28 ; Virg. Aen. ix. 665 ; Oт. Met. xii. 321 ; Cic. de Orat. i. 57.) The annexed figure, taken from Sir W. Hamilton's Etruscan Vases (iii. pl. 33), represents the amentum attached to the spear at the centre of gravity, a little above the middle.

We are not informed how the amentum added to the effect of throwing the lance; perhaps it was by giving it rotation, and hence a greater degree of steadiness and directness in its flight, as in the case of a hall, shot from a rifle gun. This supposition both suits the expressions relative to the insertion of the fingers, and accounts for the frequent use of the verb torquere, to whirl, or twist, in connection with this subject. We also find mention in the Latin grammarians of Hastae ansatae, and Ennius speaks of Ansatis concurrunt undique telis (Macrob. Sat. vi. 1). The ansa was probably the same as the amentum, and was so called as heing the part which the soldier laid hold of in hurling the spear.

Under the general terms hasta and ${ }^{\text {Ex }} \gamma \chi$ os were included various kinds of missiles, of which the principal were as follow :-

Lancea ( $\lambda \delta \gamma \chi \eta$, Festus, s. v. Lancea), the lance, a comparatively slender spear commonly used by the Greeks. lphicrates, who doubled the length of the sword [Glamius], also added greatly to the dimensions of the lance. (Diod, xv. 44 ; Nep.
xi. 1. 3.) This weapon was used by the Grecian horsemen (Polyh. vi. 23) ; and by means of an appendage to it, which is supposed by Stuart (Ant. of Athens, vol. iii. p. 47; woodcut, fig. 2) to he exhibited on the shafts of three spears in an ancient bas-relief, they mounted their horses with greater facility. (Xen. de Re Equest. vii. xii.)

Pilum (varós), the javelin, much thicker and stronger than the Grecian lance (Flor. ii. 7), as may be seen on comparing the woodcuts at pp. 135 and 136. Its shaft, often made of cornel (Virg. Aen. ix. 698; Ovid, Met. viii. 408), was four and a half feet (three cubits) long, and the barbed irou head was of the same length, but this extended half way down the shaft, to which it was attached with extreme care, so that the whole length of the weapon was about six feet mine inches. Each soldier carried two. (Polyt. vi. 23.) [Exercatus, p. 497, a.] It was used either to throw or to thrust with ; it was peculiar to the Romans, and gave the name of pilani to the division of the army by which it was adopted. When Marius fought against the Cimbri, he ordered that of the two nails or pins ( $\pi \epsilon \rho \delta \nu a i)$ by which the head was fastened to the staff, one should be of iron and the other of wood. The consequence was, that, when the pilum struck the shields of the enemy, the wooden nail broke, and as the iron head was thus bent, the spear, owing to the twist in the metal part, still held to the shield and so dragged along the ground. (Plut. Mar. 25.)

Whilst the heavy-armed Roman soldiers hore the long lance and the thick and ponderous javelin, the light-armed used smaller missiles, which, though of different kinds, were included under the general term hastae velitares (Liv. xxxviii. 20; Plin. $H_{\text {. }} N$. xxviii. 6). From $\gamma \rho o \delta \sigma \phi o s$, the corresponding Greek term (Polyb. i. 40 ; Straho, iv. 4. §3), the velites, or light-armed, are called by Polybius roóфо $\mu \dot{\alpha} \chi o$ (vi. 19, 20). According to his description the $\gamma \rho \delta \sigma \phi \sigma_{0}$ was a dart, with a shaft about three feet long and an inch in thickness: the iron head was a span long, and so thin and acuminated as to be bent by striking against any thing, and thus rendered unfit to be sent back against the enemy. Fig. 3, in the preceding woodcut, shows one which was found, with nearly four hundred others, in a Roman entrenchment at Meon Hill, in Gloucestershire. (Skelton's Engraved Illustrutions, vol. i. pl. 45.)

The light infantry of the Roman army used a similar weapon, called a spit (veru, verutum, Liv. xxi. 55 ; $\sigma a u v_{1} 0 \nu$, Diod. Sic. xiv. 27 ; Festus, s. v. Samnites). It was adopted by them from the Samnites (Virg. Aen. vii. 665), and the Volsci (Georg. ii. 168). Its shaft was $3 \frac{1}{2}$ feet long, its point five inches. (Veget. ii. 15.) Fig. 4, in the preceding woodcut, represents the head of a dart in the Royal Collection at Naples; it may he taken as a specimen of the verutum, and may be contrasted with fig. 5 , which is the head of a lance in the same collection. The Romans adopted in like manner the gaesum, which was properly a Celtic weapon (Liv. xxviii. 45) ; it was given as a reward to any soldier who wounded an enemy. (Polyb. vi. 37.) Sparus is evidently the same word with the English spar and spear. It was the rudest missile of the whole class, and only used when better could not be obtained. (Virg. Aen. xi. 682, Serv. in loc.; Nepos, xv. 9. § 1 ; Sallust, Cat. 56 ; Gell. x. 25.)

HASTA.
HECTE.

Besides the terms jaculum and spiculum ( $\kappa \kappa \omega \nu$, áк $\delta \nu \tau \iota \nu \nu$ ), which prohably denoted darts, resembling in form the lance and javelin, but much smaller, adapted consequently to the light-armed (jaculatores), and used in hunting as well as in hattle (Thucyd. ii. 4; Virg. Aen. ix. 52; Serv. in loc.; Ovid, Met. viii. 411; Cic. ad Fam. v. 12 ; Flor. ii. 7), we find in classical authors the names of various other spears, which were characteristic of particular nations. Thus, Servius states (in Aen. vii. 664), that, as the pilsm was proper to the Romans, and the gaesum to the Gauls, so the surissa was the spear peculiar to the Macedonians. This was used both to throw and as a pike. It exceeded in length all other missiles. [See p. 488, a.] It was made of cornel, the tall dense stem of which also aerved to make spears of other kinds. (Theoph. HI. P. iii. 12. 2 ; $\sigma \dot{\alpha} \rho \in \iota \sigma a$, Arrian, Tact.; крадє́̈va, Xen. de Re Equest. xii. 12.) The Thracian rompluea, which had a very long point, like the blade of a sword (Val. Flac. vi. 98; rumpia, Gell. l. c. ; ¢о $\mu \phi$ aia, Apoc. i. 16), was prohably not unlike the sarissa; since Livy asserts (xxxi. 39), that in a country partly covered with wood the Macedonian phalanx was ineffective on account of their praelongae hastae, and that the romphaea of the Thracians was a hindrance for the same reason. With these weapons we may also class the Illyrian sibina, which resembled a huntingpole. (Festus, s. v.; ouRíviov, Polyb. vi. 21; sibon, Gell. l. c.; Ant. Sid. 13.)
The iron head of the German spear, called framea, was short and narrow, but very sharp. The Germans used it with great effect either as a lance or a pike: they gave to each youth a framea and a shield on coming of age. (Tacit. Germ. $6,13,18,24$; Juv. xiii. 79.) The Falarica or Phalarica was the spear of the Saguntines, and was impelled by the aid of twisted ropes; it was large and ponderous, having a head of iron a cubit in length, and a ball of lead at its other end; it sometimes carried flaming pitch and tow. (Liv. xxi. 8, xxxiv. 18 ; Virg. Aen. ix. 706 ; Lucan, vi. 198 ; Sil. Ital. i. 351 ; Gell. l. e. ; Isid. Orig. xviii. 7 ; Grat. Falisc. Cyneg. 342.) The matara and tragula were chiefly used in Gaul and Spain: the tragula was probably barbed, as it required to be cut out of the wound. (Plaut. Cas. ii. 4. 18, Epid. v. 2. 25 ; Caes. B.G. i. 26, v. 35 ; Gell. l. c.) The Aclis and Cateia were much smaller missiles. (Virg. Aen. vii. 730, 741.)

Among the decorations which the Roman generals bestowed on their soldiers, more especially for saving the life of a fellow-citizen, was a spear without a head, called hasta pura. (Virg. Aen. vi. 760 ; Serv. in loc. ; Festus, s. v. Hasta; Sueton. Claud. 28 ; Tacit. Ann. iii. 21.) The gift of it is sometimes recorded in funereal inscriptions.

The celibaris hasta (Festus, s. v.), having been fixed into the body of a gladiator lying dead on the arera, was used at marriages to part the hair of the bride. (Ovid, Fast. ii. 560 .)
A spear was erected at auctions [Avctro], and when tenders were received for public offices (locationes). It served both to announce, by a conventional sign conspicuous at a distance, that a sale was going on, and to show that it was conducted under the authority of the public functionarics. (Cic, Offic. ii. 8 ; Nepos, Attic. 6; Festus, s. v. Hasta.) Hence an auction was called hasta, and an auction-room hastarium. (Tertull. Apol. I3.)

It was also the practice to set up a spear in the court of the Centumyiri.

The throwing of spears (àcovtıб $\mu$ ós) was one of the gymnastic exercises of the Greeks, and is described at length by Krause (Gymnastil) und Ayonistik der Hellenen, vol. i. p. 465, \&c..).

HECATOMBAEA. [Heraea.]
HECATOMBAEON. [CALENDARIUM,

## Greer.]

HECATOMBE. [SACRIFICium.]
HECATOMPEDON. [Pes; Templum.]

HECTE or HECTEUS (Éктך, ék $\tau \in \dot{\prime})$, and its half, Hemiecton or Hemiccteon ( $\dot{\eta} \mu(\epsilon \kappa \tau о \nu, \dot{\eta} \mu \epsilon \kappa-$ $\tau$ t́o $\nu$ ), are terms which occur, in more than one sense, in the Greak metrical system, and are interesting on account of the examples they furnish of the duodecimal division.

1. In dry measures, the hecteus was the sixth part of the medimnus, and the hemiecteon, of course, the twelftb part. (Aristoph. Eccl. 547, Nub. 638, 645.) The hecteus was equal to the Roman modius, as each contained $16 \xi \in \epsilon \sigma \tau a \_$or sextarii. (Böckh, Metrol. Untersuch. pp. 33, 200.)
2. The Hecte or Hecteus and Hemiecton were also the names of coins, but the accounts we have of their value are very various. The only consistent explanation is, that there were different hectae, derived from different units; in fact, that these coins were not properly denominations of money, but subdivisions of the recognised denominations. This view is confirmed by the statement of Hesychius, that the words $\varepsilon \in \kappa \tau \eta, \tau \rho i \tau \eta$, and $\tau \in \tau \alpha \rho \tau \eta$ were applied to coins of gold, silver, and copper ; that is, we think, that the various denominations of money were subdivided for convenience into thirds, fourths, and sixths, which would be of gold, silver, and copper, according to the value of their respective units. (Hesych. s. v. Écтท.) Now, since the drachma was the unit of the silver coinages, which chiefly prevailed in Greece, we might expect, à priori, that the common hecteus would he the sixth of a drachma, that is, an ohol; and that there was such a hecteus, is expressly stated by Hesychius,
 (s.v.). But then from a passage of the comic poet Crates (Pollux, ix. 374), we learn that the hemiecton of gold was eight obols, the natural interpretation of which is, that it was equal in value to eight silver obols or (according to Mr. Hubsey's computation of the drachma), a little more than 13 d ., which is certainly a very small value for a gold coin. This objection Böckh meets by supposing that the gold had a very large mixture of alloy; and the probability of this will appear further presently. This stater could not have been an Attic coin, for at that time Athens had no gold money: the question therefore arises, to what foreign state did it belong? Now, among the foreign staters, which were current at Athens in the fifth century B. c., that of Phocaea is frequently mentioned, and an inscription exists (found in the Acropelis) in wbich, among certain offerings, we find Phocaean stuters, and "̈rтat Фака́ties (Böckh, Corp. Inscr. No. 150, lines 41, 43, vol. i. pp. 231, 236. §§ 19, 22: the hasty conjecture that these écтаı must have been of silver, is corrected by Böckh himself, in his Metrologische Untersuchungen, p. 135). Little doubt can remain that these éctal were the sixith,
and the hemiecta of Crates the twelfth of the Phocaeau stater. The weight of the hemiecton would be a little less than that of the Attic obol; and their value would therefore give a ratio of gold to silver, as 8 to l, a low value for gold, it is true, but one easily explained by the fact, conjectured by Böckh, and distinctly stated ly Hesychius (s. v. Фшкаt's), that the Phocaean gold money was very base: this fact also wili explain the light weight of the coin as compared with the Attic obol. The result of this somewhat intricate discussion seems to us both clear and consistent: namely, that the standard weight, the drachma, was divided, on the duodecimal system, into sixths (eficat or $\quad$ Gajol ), and twelfths, $\eta^{\eta} \mu i \in \kappa \tau \alpha$ : that Athens had silver coins of these weights: and that, in those states which used a gold coinage, of which the unit was a stater equal (generally) in weight to two drachmae and in value to twenty, this stater was subjected to a similar duodecimal division, by which the sixth ( ${ }^{6} \kappa \tau \eta$ or $\epsilon \kappa \tau \in \nu s$ ) became in weight a piece of two obols,
 The values of these coins (according to the average ratio of the value of gold to that of silver, namely $10: 1)$ would have been 20 obols and 10 obols respectively; but those of Phocaea were so light and debased, that they were only worth 16 and 8 respectively of the obols of Athens, whose coinage was proverbially pure.
[P.S.]
HECTEMO RII (écтпuópiot), a name given to the poor citizens of Attica before the time of Solon, who coltivated the fields of the rich and received only a sixth part (hence their name) of the produce. (Hesych. s. v. éкт $\quad \mu$ ópou ; Eustath. ad Hom. Od. xix. 28. p. 680. 49, ed. Basil. p. 1854, ed. Rom.) Plutarch (Solon, 13) seems to have made a mistake in stating that they paid a sixth portion to their masters, and retained five-sixths themselves. (Comp. Schömann, De Comities, p. 362, Antiq. Jur. Publ. Graec. p. 169 ; Hermann, Lehrluch d. Griech. Staatsalterth. § 101, n. 10.)

HEDNA ( $\epsilon \delta \nu \alpha$ ). [Dos.]
HEGEMO NIA DICASTE RIOU ( $\eta \gamma \eta \mu_{0 \nu i \alpha}^{\prime}$ סiкa $\sigma \tau \eta \rho i ́ a y$ ). [Eisagogeis.]

HEGETO'RIA. [Plynteria.]
HEIRGMOU GRAPHE' ( $\epsilon i p \gamma \mu o \hat{v} \gamma \rho \alpha \phi \grave{\eta})$. This was an action for false imprisonment of a free citizen or stranger, and keeping such person in private custody. There are no orations upon this subject extant, nor indeed any direct allusions to it by name; but it is hinted at as a remedy that might have been adopted by Agatharchus, the painter, for the restraint put upon his personal liberty by Alcibiades (Andoc. c. Alc. p. 119) ; and in a passage of Deinarchus (c. Dem. 17), where a miller is mentioned to have incurred capital punishment for a like offence. The thesmothetae probably presided in the court before which offenders of this kind were brought to trial. (Meier, Att. Proc. p. 332.)
[J.S. M.]
HELE'POLIS (é $\bar{\lambda} \epsilon^{\prime} \pi \sigma \lambda \iota s$ ). When Demetrius Poliorcetes besieged Salamis, in Cyprus, he caused a machine to be conatructed, which he called " the taker of cities." Its form was that of a square to wer, each side being 90 cubits high and 45 wide. It rested on four wheels, each eight cubits high. It was divided into nine stories, the lower of which contained machines for throwing great stones, the middle large catapults for thirowing spears, and the highest, other machines for throwing smaller stonek, together with smaller catapults.

It was manned with 200 soldiers, besides those who moved it by pushing the parallel beams at the bottom. (Diod. xx. 48.)

At the siege of Rhodes, в. c. 306, Demetrius employed an helepolis of still greater dimensioos and more complicated construction. Besides wheels it had castors (à at! $\sigma \tau \rho$ ént $\alpha$ ), so as to admit of being moved laterally as well as directly. Its form was pyramidal. The three sides which were exposed to attack, were rendered fire-proof by being covered with iron plates. In front ench story had port-holes, which were adapted to the several kinds of missiles, and were furnished with shutters that could be opened or closed at pleasure, and were made of skins stuffed with wool. Each story had two broad flights of steps, the one for ascending, the other for descending. (Diod. xx. 91 ; compare Vitrup. x. 22.) This helepolis was constructed by Epimachus the Athenian ; and a much esteemed deacription of it was written by Dioeclides of Abdera. (Athen. v. p. 206, d.) It was no doubt the greatest and most remarkable engine of the kind that was ever erected. In subsequent ages we find the name of " helepolis" applied to moving towers which carried battering rams, as well as machines for throwing spears and stones. (Amm. Marcell. xxiii. ; Agathias, i. 18. p. 30, ed. Ven. ; Nicet. Chon. Jo. Commenus, p. 14, b.) Towers of this description were used to destroy the walls of Jerusalem, when it was taken by the Romans. (Jos. B. J. ii. 19. § 9, iii. 6. § 2.) [Aries ; TorMENTUM.]
[J. Y.]

## HELIAEA. [Dicasterion.]

## HELIOCAMI/NUS. [Domus, p. 432, b.]

HELIX ( $\epsilon \lambda \iota \xi$ ), anything of a spiral form, whether in one plane, as the spiral curve, or in different planes, as the screw.

1. In architecture, the spiral volutes of the Ionic and Corinthian capitals. The Roman architects, while they used the word volutae for the angular spirals, retained the term helices for the smaller spirals in the middle of each face of the Corinthian capital. (Vitruv. iv. 1. § 12.)
2. In mechanics, the word designates the screw in its varions applications; but its chief use was to describe a machine used for pushing or drawing ships in the water from the beach, which was said to have been invented by Archimedes. (Athen. v. p. 207, a., with Casaubon's Notes.) [P. S.]

HELLANO'DICAE ('EA ${ }^{\prime} \alpha \nu_{0} \delta_{i c a l}$ ), the judges in the Olympic games, of whom an account is given under Olympla, The same name was also given to the judges or court-martial in the Lacedaemonian army (Xen. Rep. Lac. xiii. 11); and they were probably first called by this name when Sparta was at the head of the Greek confederacy.

HELLENOTA'MIAE ('E $\left.{ }^{\prime} \lambda \eta \nu a \tau a \mu i ́ a l\right)$, or treasurers of the Greeks, were magistrates appointed by the Athenians to receive the contributions of the allied states. They were first appointed B. c. 477 , when Athens, in consequence of the conduct of Pausanias, had obtained the command of the allied states. The money paid by the different states, which was originally fixed at 460 talents, was deposited in Delos, which was the place of meeting for the discussion of all common interests; and there can be no doubt that the hellenotamiae not only received, but were also the guardians of these monies, which were called by Xenophon (de Vectig. v. 5) 'E入入nvorauia. (Thuc.
1.96; Plut. Aristid. 24 ; Andoc. de Pace, p. 107.) The office was retained after the treasury was transferred to Athens on the proposal of the Samians (Plut. Aristid. 25 ; Diod. xii. 38), but was of course aholished on the conquest of Athens by the Lacedaemonians. The Hellenotamiae were not reappointed after the restoration of the democracy; for which reason the grammarians afford ths little information respecting their duties. Böckh, however, concludes from inscriptions that they were probably ten in number, chosen by lot, like the treasurers of the gods, out of the Pentacosiomedimni, and that they did not enter upon their office at the beginning of the year, but after the Panathenaea and the first Prytaneia. With regard to their duties, Böckh supposes that they remained treasurers of the monies collected from the allies, and that payments for certain objects were assigned to them. In the first place they would oi course pay the expenses of wars in the common cause, as the contributions were originally designed for that purpose ; but as the Athenians in course of tioe considered the money as their own property, the Hellenotamiae had to pay the Theorica and military expenses not connected with wars on behalf of the common cause. (Böckh, Publ. Econ. of Athens, p. 176, 2nd ed. ; Corp. Inscrip. No. 147.)
heliotia. [Ellotia.]
HELO'TES (E' $\lambda \omega \boldsymbol{\prime}$ 'es, the Latin form Ilotac is also used, Liv. xxxiv. 27), were a class of bondsmen subject to Sparta. The whole of the inhabitants of Laconia were included in the three classes of Spartans, Perioeci, and Helots, of whom the Helots were the lowest. They formed the rustie population, as distinguished both from the inhabitants of Sparta itself, and from the Perioeci who dwelt in the large towns. (Liv. l.c.) Their condition was that of serfs attached to the land, adscripti glebae ; and they appear to have been the only class of slaves among the Lacedaemonians. Different etymologies are given of their name. The common account is, that they were originally the Achaean inhabitants of the town of Helos in Laconia, who, having been the last to suhmit to the Dorian invaders, and that only after a desperate struggle, were reduced by the victors to slavery. (Paus. iii. $20.8 \S$; Harpocr. s.v. fincotéetv, who cites Hellanicns as his authority). Another account, preserved by Athenaens from Theopompus, represents them as the general body of the ancient Achaean population of Laconia, reduced to slavery by the Dorians, like the Penestae in Thessaly. (Ath. vi. p. 265, c.) The statement of Ephorus, again, preserved by Straho, has something in common with both the other stories; for, according to it, the original inhabitants of the conntry, when suhdned by the Dorians, were at first permitted to enjoy an equality of civil and political rights with their conquerors, and were called Helots; but they were deprived of their equal statns by Agis, the son of Eurysthenes, who made them pay tribute: this decree was resisted
 "Eגos), who rebelled and were reduced to slavery moder certain conditions. (Strab. viii. p. 365.) Now, all these theories (for such they are) rest on the doubtful foundation of the historical truth of the circumstances attending the Dorian invasion, and the connection of the name with Helos is not only a manifest invention, opposed to the best authorities (Theopomp. Eph. $u$. co.), but is etymologically faulty, for the people of "Eגas were not
 тat (Athen. vi. p. 271). The name has heen also derived from É $\lambda \eta$, marshes, as if it signified inhalitants of the lowlands. But Müller seems to be nearer the mark in explaining et $\lambda \omega \tau \epsilon \epsilon$ as meaning prisoners, from the root of $\dot{\epsilon} \lambda \in \hat{i} \nu$, to take, like $\delta \mu \omega \bar{\omega}$ from the root of $\delta \alpha \mu \dot{\alpha} \omega$. He supposes that they were an aboriginal race, who were subdued at a very early period, and who naturally passed over as slaves to the Doric conquerors. It is objected by Thirlwall that this theory does not account for the hereditary enmity between them and their masters ; for unless they lost their liberty by the Dorian conquest, there is no probahility that it placed them in a worse condition than before. But to this objection, we may oppose the acute ohservation of Grote, that those dangers from the servile population, the dread of which is the only prohable cause that can be assigned for the cruelty of the Spartans, and the consequent resentment of the Helots, "did not become serious until after the Messenian war - nor indeed until after the gradnal diminution of the number of Spartan citizens had made itself felt."

At the end of the second Messenian war (B. c. 668), the conquered Messenians were reduced to slavery, and included under the denomination of Helots. Their condition appears to have been the same, with some sligltt differences, as that of the other Helots. But, in addition to that remembrance of their freedom, which made not only them, but, through their influence, the whole class of Helots more and more dangerous to their masters, they preserved the recollection of their national existence, and were ready to seize any opportunity of regaining it; until, at length, the policy of Epaminondas, after the battle of Leuctra, restored the main body of these Messenian Helots to their country, where they no doubt formed the chief part of the population of the new city of Messene. (Thirlwall, Hist. of Greece, vol. т. pp. 104, 105.)
The Helots were regarded as the property of the state, which, while it gave their services to individoals, reserved to itself the power of emancipating them. (Ephorus, ap. Strab. l. c.; Paus. l.c.) They were attached to the land, and could not be sold away from it. Several families, as many perhaps as six or seven, resided on each $1 c \lambda \hat{\eta} \rho o s$, in dwellings of their own, either in detached farms or in villages. They cultivated the land and paid to their masters as rent a fixed measure of corn, the exact amount of which had been fixed at a very early period, the raising of that amount being forbidden under heary imprecations. (Plnt. Inst. Lac. p. 255.) The annual rent paid for each $\kappa \lambda \hat{\eta} \rho o s$ was eighty-two medimni of barley, and a proportionate quantity of oil and wine. (Plnt. Lyc. 8. 24.) The domestic servants of the Spartans were all Helots. They attended on their masters at the public meal; and many of them were no doubt employed by the state in public works.

In war the Helots served as light-armed troops ( $\psi(\lambda) 1$ ), a certain number of them attending every heavy-armed Spartan to the field ; at the battle of Plataeae, there were seven Helots to each Spartan, and one to every hoplite of the Perioeci. (Herod. ix. 10. 28.) These attendants were probably called $\dot{\alpha} \mu \pi i \tau \tau \alpha \rho \epsilon s$ (i.e. $\dot{\alpha} \mu \phi i \sigma \tau \alpha \nu \tau \epsilon s$, Hesych. s.v.), and one of them in particular, the $3 \in \rho \dot{\alpha} \pi \omega \nu$, or servant (Herod. vii. 229 ; Sturz. Lex. Xen. s. v.); though İєpánoy was also used by the Dorians as
a general name for armed slaves. The Helots only served as hoplites in particular emergencies ; and on such occasions they were generally emancipated, if they showed distinguished bravery. The first instance of this kind was in the expedition of Brasidas, в. c. 424. (Thneyd. iv. 80, v. 34, vii. 19.)

The treatment to which the Helots were subpected, as described by the later Greek writers, is marked by the most wanton cruelty. Thus Myron states that " the Spartans impose upon them every ignominions service, for they compel them to wear a cap of dog's skin, and to he clothed with a garment of sheep's skin, and to have stripes inflicted upon them every year for no fault, that they may never forget that they are slaves. And hesides all this, if any rise by their qualities above the condition of a slave, they appoint death as the penalty, and their masters are liable to punishment if they do not destroy the most excellent." (Athen. xiv. p.657.) And Plutarch (Lyc. 28) states that $\mathrm{He}-$ lots were forced to intoxicate themselves, and perform indecent dances as a warning to the Spartan youth. These statements must be received with some caution. There is no evidence that they are true of the period before the Messenian wars; nor can we believe that such wanton and impolitic oppressions, provocations, and destruction of a valuable servile population formed any part of the original system of Lyeurgus. What has been said above, respecting the legal condition of the Helots, indicates a very different state of things; and their real condition is probahly not misrepresented by Grote, when he says:-"The Helots were a part of the state, having their domestic and social sympathies developed, a certain power of acquiring property (Plut. Cleom. 23), and the consciousness of Grecian lineage and dialect - all points of marked superiority over the foreigners who formed the slave population of Athens or Chios. They seem to have been no way inferior to any village population of Greece." As is usual with serfs, every means was taken to mark the distinction between them and their masters: they were obliged to wear the rustic garb described above, and they were not permitted to sing one of the Spartan songs. (Plut. Lyyc. 28.) But the state of things described in the above quotations belongs to a period when the fear of a servile insurrection had prodnced the natural result of cruel oppression on the one part and rebellious hatred on the other. That the cruelty of their masters knew no restraint when it was thus stimulated by fear, is manifest enough from the institution of the kpumteia [CRypteia]. How far the statements of ancient writers respecting the crypteica are to be believed, is somewhat doubtful; but there can be no doubt of the fact related hy Thucydides, that on one occasion two thousand of the Helots who had rendered the greatest service to the state in war, were induced to come forward hy the offer of emancipation, and then were put to death. (Thuc. iv. 80.)

The Helots might be emancipated, but in that case, instead of passing into the class of Perioeci, they formed a distinct body in the state, known, at the time of the Peloponnesian war, by the gencral term of $\nu \in o \delta a \mu \omega \delta \in \epsilon s$, hnt subdivided into several classes. Myron of Priene (ap. Athen. vi. p. 271, f.), enumerates the following classes of emancipated
 vaúral, and $\nu \in 0 \delta a \mu \alpha \delta_{\epsilon \epsilon \tau}$. Of these the $\dot{a} \phi \in \tau a i$ were probably relcased from all service; the $2 \rho$ un-
$\tau \eta \hat{\rho} \epsilon s$ were those employed in war ; the $\delta \in \sigma \pi$ тобтоעul. tac served on board the fleet; and the $\nu \in 0 \delta a \mu \omega \bar{\delta} t s$ were those who had been possessed of freedom fior sonue time. Besides these there were the $\mu \dot{\sigma} \theta_{\omega} \nu_{\text {es }}$ or $\mu \delta \theta a \kappa \epsilon s$, who were domestic slaver, brought up with the young Spartans, and then emancipated. Upon being emancipated they received permission to dwell where they wished. [Compare Civitas (Greek), p. 290.]
(Müller, Dorians, iii. 3 ; Hermann, Political Antiquities of Greece, $\S \S 19,24,28,30,48$; Wachsmuth, Hellen. Alterth. 2d ed. see Index ; Manso, Sparta, see Index; Thirlwall's Hist. of Greece, vol. i. pp. 309-313; Grote, Hist. of Greece, vol. ii. pp. 494-499.)
[P. S.]
HE MERA ( ${ }^{\boldsymbol{\eta}} \mu \epsilon \in \rho \alpha$ ). [Digs.]
HEMERODROMI ( $\eta \mu \in \rho o \delta \rho \delta \mu 0 t$ ), were cou. riers in the Greek states, who could keep on running all day, and were often employed to carry news of important events. As the Greeks had no system of posts, and but few roads, such messengers must have been of great service. They were trained for the purpose, and conld perform the longest journeys in an almost incredibly short space of time. (Herod. vi. 105 ; Corn. Nep. Mill. 4 ; Plut. Arist. 20 ; Paus. vi. 16. §5.) Such couriers appear to have been kept by most of the Greek states, and were in times of danger stationed on some eminence in order to observe any thing of importance that miglit happen, and carry the intelligence with speed to the proper quarter. Hence, we frequently find them called Hemeroscopi ( $\eta \mu \in \rho о \sigma \kappa$ о́тol, Herod. vii. 182, 192; Xen. Hell. i. 1. § 2 ; Aeneas Tact. e. 6.) That the Hemeroscopi were the same as the Hemerodromi appears not only from the passage of Aeneas Tacticus just referred to, hat also from the words of Livy (xxxi. 24) " ni speculator (hemerodromos vocant Graeci, ingens die uno cursu emetientes spatium), contemplans regium agmen e specula quadam, praegressus nocte media Athenas pervenisset." (See Duker, ad Liv. l. c.) The Hemerodromi were also called Dromokerukes ( $\delta \rho 0 \mu 0$ кйpuкes, Harpocrat. and Hesych. s. v.).

HEMEROSCOPI. [HEMERODROMI.]
HEMICHRYSUS. [AURUM ; STaTER.]
HEM1CO'NGIUS. [Congrus ; and the Tables.]
HEMICY'CLIUM ( $\grave{\eta} \mu \iota \dot{\prime} \kappa \lambda \iota \circ \nu$ ), a semicircular seat, for the accommodation of persons engaged in conversation, either in private houses or in places of public resort ; and also the semicircular seat round the tribunal in a basilica. (Plat. Aleib. 17, Nic. 12 ; Cic. Lael. 1 ; Vitruv. v. 1. § 8, comp. Schneider's Notc.)
[P. S.]

## HEMIECTEON, HEMIECTON. [HEc-

 teus.]
## HEMILITRON. [LItra.]

HE'MINA ( $\left.\stackrel{i}{\eta}_{\eta} \mu i \nu a\right)$, the name of a Greek and Roman measure, seems to be nothing more than the dialectie form used by the Sicilian and Italian Greeks for $\dot{\eta} \mu i \sigma v$. (See the quotations from Epicharmus and Sophron, ap. Ath. xi. p. 479, a, h. xiv. p. 648, d., and Hesych. s. v. év $\eta_{\eta} \mu i v g$, which he explains as $\dot{y} \nu \dot{\eta} \mu(\sigma v$.) It was therefore naturally applied to the half of the standard fluid measure, the $\xi \in \sigma \tau \eta s$, which the other Greeks called noт $\dot{U} \lambda \eta$, and the word passed into the Roman metrical system, where it is uscd with exactly the same force, namely for a measure which is half of the sextarius, and equal to the Greek cotyle. (Böckh Metrol. Untersuch. pp. 17, 200, 203.) [P. S.]

HENDECA．
HEMIOBO＇LION，HEMIO＇BOLUS．［OBo－ Lus］．
HEMIPO＇DION．［Pes］．
hemistater．［Stater］．
HEMIXESTON．［Sextarlus］．
HE／NDECA，HOI，（oi Evסeka，）the Eleven， were magistrates at Athens of considerable im－ portance．They are always called by this name in the classical writers ；but in the time of Demetrius Phalereus，their name Is said to have been changed into that of $\nu \not \mu о ф \dot{\text { údanєs（Pollux，viii．102），who }}$ were，however，during the demoeracy distinct func－ tionaries．［Nomophylaces．］The grammarians slso give other names to the Eleven，as $\delta \epsilon \sigma \mu o \phi \dot{u}$－
 Plut．277，Vesp．775，1108．）

The time at which the office of the Eleven was instituted is disputed．Ulrich considers the office to have been of an aristocratical character，and concludes from a passage in Heraclides Ponticus （i．$\S 10$ ）that it was establighed by Aristeides． Maier，on the other hand，maintains that the office existed not only before the time of Cleisthenes， but probably before the legislation of Solon ；but it seems impossible to come to any satisfactory con－ clusion on the subject．They were annually chosen by lot，one from cach of the ten tribes，and a secretary（ $\gamma \rho a \mu \mu \alpha \tau \epsilon \dot{\prime}$ ），who must proparly be re－ garded as their servant（ $\dot{\pi} \pi \eta \rho \dot{\epsilon} \tau \eta \mathrm{s}$ ），thougb he formed one of their number．（Pollux，viii．］02．）
The principal duty of the Eleven was the care and management of the public prison（ $\delta \epsilon \sigma \mu \omega \tau$ h́pov $)$ ［Carcer］，which was entirely under their juris－ diction．The prison，however，was seldom used by the Atbenians as a mere place of confinement， serving generally for punishments and executions． When a person was condemned to death he was immediately given into the custody of the Eleven， who were then bound to carry the sentence into execution according to the laws．（Xen．Hell． ii．3．§ 54．）The most common mode of execution was by hemlock juice（ $\kappa \omega \dot{\nu} \epsilon 10 \nu$ ），which was drunk sfter sunset．（Plat．Phaed．cc．65，66．）The Eleven had under them jailors，executioners，and torturers，who were called by various names（oi $\pi \alpha \rho a \sigma \tau \alpha ́ \tau a \iota$, Bekker，Anecd．p．296． 32 ；$\delta \tau \hat{\omega} \nu$
 кoıvos，Antiph．De Venef． 615 ；$\delta$ injubaros，or סhmios，\＆c．）．When torture was inflicted in causes affecting the state，it was either done in the immediate presence of the Eleven（Dem．c． Nicost．p．1254．2）or by their servant（ $\delta \delta$ 杊 10 ）．
The Eleven usually only bad to carry into execution the sentence passed in the courts of law and the public assemblies；but in some instances they possessed an $\dot{\eta} \gamma \epsilon \mu$ оvia $\delta$ ıка $\alpha \tau \eta p i o v$ ．This was the case in those summary proceedings called $\dot{\alpha} \pi \alpha_{-}$
 was fixed by law，and might be inflicted by the court on the confession or conviction of the accused without appealing to any of the jury courts．They
 кaкoúpyot，because the summary proceeding men－ tioned above were chiefly adopted in the case of such persons：hence Antiphon（de Caede Herod．p．713） calls them $\dot{e}^{\pi} \tau \mu \in \lambda \eta \tau a i \quad \tau \hat{\omega}_{\nu} \kappa a \kappa o \dot{\prime} \rho \gamma \omega \nu$ ．The word кaжó́pyor properly means any kind of male－ factors，hut is only applied in Athenian law to
 man－stealers（ $\alpha \nu \delta \rho \alpha \pi o \delta, \sigma \tau \alpha i$ ），and other criminals of a similar kind．（Meier，Att．Proc．pp．76，77．）
heraea．
593
The Eleven are also－said to have poasessed $\hat{\eta} \gamma \mathrm{f}$－ movia סкка⿱二小欠七刀iou in the case of confiscated pro． perty（Etymol．Mag．p．338．35），which staternest is confirmed by an inscription published by Böckh （Orkunden über das Sceu：esen des Attischen Stautes， p．535）．（Ullrich，Ueber die Elf Männer，ap－ pended to his translation of Plato＇s Meno，Crito， and the first and sccond Alcibiades，Berlin，182］； Sluiter，Lcetiones Andocid．pp．256－261；Meier， Att．Proc．pp．68－77；Schubert，de Acdilibus， pp．93－96；Hermann，Lehrb．der Griech．Staats－ alterth．§ 139．）
hephaestaea．［Lampadiphoria．］
HERAEA（＇Hpaia）is the name of festivals celebrated in honour of Hera in all the towns of Greece where the worship of this divinity was in－ troduced．The original seat of her worship，from which it spread over the other parts of Greece，was Argos；whence her festivals in other places were， more or less，imitations of those which were cele－ brated at Argos．（Müller，Dor．ii．10．§ 1．）The Argives had three temples of Hera；one lay be－ tween Argos and Mycenae， 45 stadia from Argos； the eecond lay on the road to the acropolis，and near it was the stadium in which the games and con－ tests at the Heraea were held（Pans．î．24．\＆2）； the third was in the city itself（ Paus．ii．22．\＆1）． Her service was performed by the most distin－ guished priestesses of the place；one of them was the high－priestess，and the Argives counted their years by the date of her office．（Thucyd．ii．2．） The Heraea of Argos were celehrated every fifth year，and，according to the calculation of Böckh （Abhandl．der Berl．Akad．von 1818－19，p．92， \＆c．）in the middle of the sccond year of every Olympiad．One of the great solemnities which took place on the occasion，was a magnificent pro－ cession to the great temple of Hera，hetween Argos and Mycenae．A vast number of young men－for the festival is called a panegyris－assembled at Argos，and marched in armour to the tenple of the goddess．They were preceded by cne hundrod oxen（én $\alpha \tau \delta \mu \boxminus \eta$ ，whence the festival is also called éкatס $\mu$ Ea：a）．The high－priestess accompanied this procession，riding in a chariot drawn by two white oxen，as we see from the story of Cleobis and Biton related by Herodotus（i．3］）and Cicero （Tuscul．i．47）．The hundred oxen were sacrificed， and their flesh distributed among all the citizens， （Schol．ad Pind．Ol．vii．152，and ad Nem．x．39．） The sacrifice itself was called $\lambda \in \chi \in ́ \rho \nu a$（Hesych． s．v．）or＂the bed of twigs．＂（Comp．Welcker on Schwenok＇s Etymologische Andeutungen，p．268．） The games and contests of the Heraea took place in the stadium，near the temple on the road to the acropolis．A brazen shield was fixed in a place above the theatre，which was scarcely accessible to any one，and the young man who succeeded in pulling it down received the shield and a garland of myrtle as a prize．Hence Pindar（Nem．x． 41）calls the contest á $\gamma \dot{\omega} \nu \chi$ d́ $\lambda \kappa \in 05$ ．It seems that this contest took place before the procession went out to the Heracon，for Strabo（viii．p．556）states that the vietor went with his prizes in solemn pro－ cession to that temple．This contest was said to have been instituted，according to some traditions， by Acrisius and Proetus（Aelian，V．H．iii．24）， according to others by Archinus．（Schol．ad Pind． Ol．vii．152．）

The Heraea or Hecatombaea of Aegina were celebrated in the same manner as these of Argos
(See Schol. ad Pind. Isthm. viii. 114 ; Müller, Aeginet. p. 149.)

The Heruea of Samos, which island also derived the worship of Hera from Argos (Paus. vii. 4. § 4), were perhaps the most brilliant of all the festivals of this divinity. A magnificent procession, consisting of maidens and married women in splendid attire, and with floating hair (Asius, ap. Athen. xii. p. 525), together with men and youth in armour (Polyaen. Strat. i. 23, vi. 45), went to the temple of Hera. After they arrived within the sacred precincts, the men deposited their armour; and prayers and vows were offered up to the goddess. Her altar consisted of the ashes of the vietims which had been burnt to her. (Paus. v. 13. § 5.)

The Heraea of Elis were eelebrated every fifth year, or in the fourth year of every Olympiad. (Corsini, Dissert. iii. 30.) The festival was ehiefly celebrated by maidens, and conducted by sixteen matrons who wove the sacred peplus for the goddess. But hefore the solemnities commeneed, these matrons sacrifieed a pig, and purified themselves in the well Piera. (Paus. v. 16. §5.) One of the principal solemnities was a raee of the maidens in the stadium, for which purpose they were divided into three classes, according to their age. The youngest ran first and the oldest last. Their only dress on this occasion was a $\chi \iota \tau \omega \nu$, which came down to the knee, and their hair was floating. She who won the prize, received a garland of olive boughs, together with a part of a cow which was sacrificed to Hera, and might dedicate her own painted likeness in the temple of the goddess. The sixteen matrons were attended by as many female attendants, and performed two dances; the one called the dance of Physcoa, the other the dance of Hippodameia. Respecting further partieulars, and the history of this solemnity, see Paus. v. 16. § 2, \&e.

Heraea were celebrated in various other places; e. $g$. in Cos (Athen. xiv. p. 639, vi. p. 262), at Corinth (Eurip. Med. 1379; Philostrat. Her. xix. 14), at Athens (Plut. Quacst. Rom. vii. 168), at Cnossus in Crete (Diod. v. 72), \&c. [L. S.]

HERE'DITAS. [HERES.]
HERES. 1. Greek. The Athenian laws of inheritance are to be explained under this title. The subjeet may be divided into five parts, of which we shall speak: lst, of personal capacity to inherit; 2dly, of the rules of descent and succession; Bdly, of the power of devising ; 4thly, of the remedies of the heir for recovering his rights; 5thly, of the obligations to which he succeeded.

1. Of Personal Capacity to Inherit. - To obtain the right of inheritance as well as citizenship ( $\dot{\alpha} \gamma \chi เ \sigma \tau \epsilon i a$ and $\pi 0 \lambda \iota \tau \epsilon i a$ ), legitimacy was a necessary qualification. Those children were legitimate who were horn in lawful wedlock. (Dem. e. Neaer. p. 1386.) The validity of a marriage depended partly on the capacity of the contracting parties, partly on the nature of the contract. On the first point little needs to be noticed here, except that brother and sister by the same mother were forbidden to marry; but consanguinity in general was so far from being deemed an objeetion, that marriage between collateral relations was encouraged, in order to keep the property in the family. (Andoc. de Myst. § 119 , e. Alcih. § 33, ed. Bekk. ; Lys. c. Alc. § t1, ed. Bekk. ; Dem. c. Leoch. p. 1083 , c. Ewbul. p. 1305 ; Plut. Cimon, 4, Themist. 32.) The eontract was made by the
husband with the father, brother, or other legal guardian (кúpoos) of the intended wife : then only was she properly betrothed ( $\dot{\gamma} \gamma \gamma \eta \eta \tau \eta)$. An heiress, however, was assigned, or adjudged, to the next of kin (è $\pi \delta \delta i \kappa \alpha \sigma \theta \in i \sigma a)$ by process of law, as explained under Epiclerus. (Isaeus, $d e C_{i r}$. lier. §26, de Philoct. her. § 19, ed. Bekk.; Dem. pro Phorm. p. 954, c. Steph. p. 1134.) No ceremony was necessary to ratify the contract: but it was nsual to betroth the bride in the presence of witnesses, and to give a marriage feast, and invite the friends and relations, for the sake of publicity. (Isaeus, de Cir. her. § 18 ; Dem. c. Onet. p. 869, c. Eubul. pp. 1311, 1312.) A marriage without proper esponsals was irregular ; but the issue lost their heritable rights only, not their franchise; and the former, it seems, might be restored, if the members of their father's elan would consent to their being registered. (Isaeus, de Philoct. her. §§ 29-33.) As it was necessary for every man to be enrolled in his clan, in order to obtain his full eivil rights, so was the registration the hest evidence of legitimacy, and the фpátopes and $\sigma v \gamma v e-$ $\boldsymbol{\nu} \in i$ is were usually called to prove it in courts of jugtice. (Andoe. de Myst. § 127 , ed. Bekk. ; Isaeus, de Cir. her. § 26, de Philoct. § 13 ; Dem. c. Eubul. p. 1305, \&c.) For further partieulars see Platner, Beiträge, p. 10t, \&c.; Schömann, Antiq. juris publici Graccomum, lih. v. §§ 19, 21, 88.
II. Of the Rules of Descent and Succession. Here we would premise, that, as the Athenian law made no differenee in this respeet between real and personal estate, the words heir, inherit, \&e., will he applied indiscriminately to both. When an Athenian died leaving sons, they shared the inheritance, like our heirs in gavelkind, and as they now do in France (Isaeus, de Philoci. her. §32) : a law no less favourable to that balance of property which Solon meant to establish, than the law of primogeniture was suited to the military aristoeracies created in the feudal times. The only advantage possessed by the eldest son was the first ehoice in the division. (Dem. pro Phorm. p. 947.) If there was but one son, he took the whole estate; but if he had sisters, it was incumbent on him to provide for them, and give them suitable marriage portions; they were then called eminposkot. (Harpocr. s. $v$. 'Enioukos.) There was no positive law, making it imperative on a brother to give his sister a partion of a certain amount; but the moral obligation, to assign her a fortune corresponding to his own rank, was strengthened by eustom and public opinion, insomuch that if she was given in marriage portionless, it was deemed a slur upon her character, and might even raise a doubt of her legitimacy. (Isaeus, de Pyrr. her. $\S 40$; Lys. de Arist. bon, § 16 , ed. Bekk. ; Dem. c. Boeot. de dote, p. 1014.)

On failure of sons and their issue, daughters and daughters' children succeeded (as to the law concerning beiresses, see Epiclerus) ; and there seems to have been no limit to the succession in the descending line. (Isacus, de Cir. her. sis 39-46, de Pyrr. her. § 59, de Philoct. §§ 38, 67; Dem. e. Macart. pp. 1057, 1058.) If the deceased left grandsons by different sons, it is clear that they would take the shares of their respective fathers. So if he had a granddanghter by one son, and a grandson by another, the latter would not exclude the former, as a brother would a sister, but both would share alike. Of this there is no direct evidence; hut it follows from a prineiple of Attic law,
by which，on the birth of a son，his title to his father＇s inheritance，or to a share thereof，imme－ diately accrued ；if then he died before his father， but leaving issue，they claimed their grandfather＇s inheritance as representing him．It was otherwise with daughters．Their title did not thus accrue ； and therefore it was the practice for the son of an heiress to be adopted into lis maternal grand－ father＇s house，and to become his son in point of law．Further（as will presently be shown）the general preference of males to females did not com－ mence till the deceased＇s father＇s descendants were exhansted．
On failure of lineal descendants the collateral branches were resorted to．And first came the issue of the same father with the deceased；viz． brothers and brothers＇children，the children of a deceased brother taking the share of their father （Isaeus，de Hagn．her．हुs 1， 2 ；Dem．c．Macart． p．1067，c．Leoch．p．1083）；and after them，sisters snd sisters＇children，among whom the principle of representation also prevailed（Isaeus，de Apoll． ler．§ 23）；but whether sisters＇children took per stirpes or per cupita，does not appear．

Next come the descendants of the same grand－ frather with the deceased；cousins and cousins？ children．Here the law declared，that males and the issuc of males should be preferred to females snd their issue．（Isaens，de Hagn．her．\＆s l， 2 ； Dem．c．Macart．p．1067．）Thus，the son of an uncle would exclude the son of an aunt，while the son of an aunt would exclude the daughter of an uncle．On the same principle Isaeus（de Apoll． her．$\$ 825,26$ ）contends that the son of a female first cousin prevented his mother＇s sister from inherit－ ing，although he was further removed from the de－ ceased（ $\left.\gamma^{\prime} \dot{\ell} \epsilon \iota \dot{\jmath} \pi \pi \omega \tau^{\prime} \rho \omega\right)$ by one degree．This pre－ ference，however，was confined to those who were descended from the same common ancestor，that is to say，from the grandfather of the deceased；for the words $\dot{e} \kappa \tau \hat{\omega} \nu$ aj̀ $\tau \hat{\omega} \nu$ in Demosthenes are to be explained by the $\tau \rho^{\prime} \tau \boldsymbol{\tau} \boldsymbol{\gamma} \gamma^{\prime} \nu \in \operatorname{of}$ Isaeus．Therefore a first cousin once removed，claiming through a female，had a better title than a second cousin claiming through males；for a second consin is de－ scended not from the grandfather，but only from the great－grandfather of the deceased，and so is beyond the legal degrees of succession（ěk $\tau \hat{\eta}$ s
 founds his pretension to the estate of Hagnias ；be－ cause he claims as representative（son by adoption） of his maternal grandfather，who was first cousin to Hagnias ；whereas the father of his opponent， Macartatus，was second cousin to Hagnias，and（as Demosthenes expresses it）was not in the same
 c．Macart．p．1070）．
On failure of first cousins and their issue，the in－ heritance went to the half－hlood by the mother＇s side；hrothers and sisters，nephews and nieces， cousins and their children，as before．But if there were no maternal kinsmen within the legal degree， it returned to the agnati，or next of kin on the pa－
 was traced by counting the degrees from the com－ mon ancestor．（Isacus，de Ifugn．her．$\$$ § $1-18$ ； Dem．c．Macart．p．1067．）

The suceession of parents to their children is matter of dispute among the learned．From the silence of the orators，the absence of any example， and the express declaration of Isapus（de Hagm．
ler：§ 26）respecting the mother，it may be inferred that parents could not inherit at Athens．At Athens the maxim，hereditas nunguam ascendit， held only of lineal，not of collateral ascent．For example，an uncle might inherit．（Isaens，de Cleon． her．\＆ 55 ．）So also he might marry the heiress，as next of kin．（De Pyrr．Ler．§90．）On this part of the subject the reader is referred to Bunsen，$d e$ jure hered．Athen．；SirWilliam Jones＇s Comanentury annexed to the translation of Isaeus；and a short summary of the law by Schömann，Ant．j．p．Gr ． lih．v．\＆20．These and other writers are not agreed on many of the foregoing points，wlich are left is： much obscurity，owing to the mutilated state in which the laws have reached us，and the artifices used by the orators to misrepresent the truth．

It will assist the stndent to be informed，that
 cousin＇s son；formed in the same manner as $\dot{a} \delta \bar{\delta} \boldsymbol{\lambda}$－
 Thip．Thus，my first cousin＇s son is áve屯cadoùs to me ；but not conversely．Again，though it is true that two or more second cousins may be spoken of collectively as àvє甘就ô（Dem．c．Steph．p．1117）， yet one of them cannot be said to be àvequadoùs to another．Herein consists the fallacy of those who maintain that second cousins cume within the legal degrees of succession．

K $\lambda \hat{\eta} \rho o s$ is the subject－matter of inheritance，or （iv one sense of the word）the inheritance；$\kappa \lambda \eta \rho o-$ yóuos the heir．＇A $\gamma \chi$ Io $\tau \epsilon i a$ ，proximity of blood in reference to succession，and sometimes right of suc－ cession．Z $v \gamma \gamma^{\prime} \nu \in \epsilon a$, natural consanguinity．Zv $\gamma \in \nu \epsilon i s$, collateral relations，are opposed to èккरoyou， lineal descendants．
III．Of the power of Devising．－That the owner had power to alienate his property during his life－ time，and that sucb alienation was valid in point of law，hoth as against the heir and all the rest of the world，is heyond a doubt．T＇here was，however， an ancient law which punished with degradation （à $\tau \mu \dot{\mu} \dot{\alpha})$ a man who had wasted his patrimony（rà
 offender against the state，because he disabled him－ self from contributing to the public service．Pro． secutions for such an offence were rare；but the re－ putation of a spendthrift was always prejudicial to a man in a court of justice．（Diog．Laërt．Solon， 55 ；Aeschin．c．Timarch．$\S 897-105,154$ ，ed． Bekk．）

Every man of full age and sound mind，not under durance or improper influence，was competent to make a will ；but if he had a son，he could not disinherit him ；althougb his will migbt take effect on the contingency of the son not completing his seventeenth year．（Isaeus，de Arist．hiser．§ 14 ，de Philoct．§ 10 ；Dem．c．Steph．pp．1133，1136．）The bulk of the estate being left to the son，legacies might he given to friends and relations，espe－ cially to those who performed the office of our exe－ cutor or testamentary guardian．（Dem．c．Aphob． pp． 814,827 ．）And in the division of property among sons，the recommendations of the father would he attended to．（Dem．c．Macart．p．1055， pro Phorm．p．955．）Also a provision，not ex－ ceeding a thousand drachmas，might be assigued to an illegitimate child．（Harpocr．s．v．Noetía．）

A daughter could not be disinherited，though the estate might be devised to any person on con－ dition of his narrying her．（Isaens，de Pyrr．hrr． §§ 32－84．）

It was only when a man had no issue that he was at full liberty to appoint an heir. His house and heritage were then considered desolate ( ${ }_{\mathrm{L}}^{\mathrm{\rho}} \mathrm{\eta} \eta \mu \mathrm{os}$ ual a a $\nu \omega \nu \nu \mu 0 s$ ), a great misfortune in the eyes of an Athenian; for every head of a family was anxious to trinsmit his name and religious usages to posterity. The same feeling prevailed among the Greeks in more ancient times. We learn from Hesychius and the Etymol. Mag. that distant relations were called $\chi \eta \rho \omega \sigma \tau a i$, because, when they
 Hom. Il. v. 158 ; Hes. Theog. 607.) To ohviate this misfortune, an Athenian had two courses open to him. Either he might bequeath his property by will, or he might adopt a son in his lifetime. [Adoptio, Greek.]

Wills were in writing, and usually had one or more attesting witnesses, whose names were superscribed, but who did not know the contents. They were often deposited with friends, or other trustworthy persons, such as a magistrate. It was considered a badge of fraud if they were made secretly or in the presence of strangers. (Isseus, de Philoct. her. § 8, de Astyph. her. §§ 8-17; Dem. c. Steph. p. 1137.) A will was ambulatory until the death of the maker, and might be revoked wholly or partially, by a new one. It seems also that there might be a parol revocation. (Isaeus, de Philoct. her. § 40, de Cleon. her. § 32.) The client of Isaeus, in the last-cited cause, contends, that the testator sent for the depositary of his will, with an intention to cancel it, but died before he got it into his possession; this (he says) was a virtual revocation. He calls witnesses to prove the testator's affection for himself and dislike of his opponents, and thence infers that the will was unnatural, and a proof of insanity. Similar arguments were often used. (Isaeus, de Nicost. her. § 23, de Astyph. her. § 21.)

With respect to the proceeding by which a father puhlicly renounced his paternal authority over his son, see Apokeruxis. Plato (Leg. xi. 9. p. 928) refers to it, and recommends that a father should not take such a step alone, but in conjunction with the other members of the family. At Athens the paternal authority ceased altogether after the son had completed his nineteenth year ; he was then considered to belong less to his father than to the state. (Valckenaer, ad Ammonium, s.v. 'Алокйриктоs: Meier, de Bonis Damn. p. 26.)
IV. Of the Remedies of the Heir for Recovering his Rights. - A son or other male descendant might enter and take possession of the estate immediately after the owner's death. (Isaeus, de Pyrr. her. § 72, de Cir. her. §47.) If he was prevented from so doing, he night bring an action of ejectment against the intruder. [Embatela.] Any one who disturbed a minor in the enjoyment of his patrimony was liable to a criminal prosecution (кан $\sigma \sigma \epsilon \omega s$ єi $\sigma \alpha \gamma \gamma \in \lambda i a$, Isaeus, de Pyrr. her. § 76). As to the proceedings in case of heiress, see Epiclerus.

Other heirs at law and claimants by adoption or devise were not at liberty to ent:r, until the estate was formally adjudged to them. The proper course was, to make application to the archon, who attended at his office for that purpose every month in the year except the last (Scirophorion). The party who applied was regarded as a suitor, and (orr obtaining a hearing) was said $\lambda a \gamma \chi a ́ \nu \in \iota \nu \tau 0 \hat{\imath} \kappa \lambda$ h́pov. (Isaeus, de Hayn. her. §§ 22, 40, de Pyrr. her. § 74, de Astyph. her. § 4 ; Dem. c. Steph. p. 1136. )

At the first regular assembly ( $\kappa \cup \rho i a \mathcal{e}^{2} \kappa \kappa \lambda \eta \sigma\{a$ ), held after he had received notice, the archon caused proclamation to be made, that such a person had died without issue, and that such and such persons claimed to be his heirs. The herald then asked
 $\tau 0 \hat{\nu} \kappa \lambda \eta$ poov ; these words are variously interpreted. Perhaps the best explanation is this:-' $\mathrm{A} \mu \phi 1 \sigma$ $S_{\eta \tau \in i \nu}$ is a term of general import, applied to all who dispute the title of another, and would include those who claimed a moiety or other share of the estate. Пapaкaтa6á $\lambda \lambda \epsilon \epsilon \nu$ signifies to make a deposit by way of security for costs, which was required of those who maintained their exclusive title to the whole inheritance. Perlaps, however, the payment in this case was optional, and might be intended for the mere purpose of compelling the other parties to do the same. The deposit thus paid was a tenth part of the value of the property in dispute, and was returned to the party if successful. (Pollux, viii. 32, 95; Isaeus de Nicost. her. § 13, de Hagn. her. $\$ 20$; Dem. c. Maeart. p. 1051, c. Leoch. pp. 1090-1093.)

If no other claimant appeared the archon adjudged the estate to the first suitor (eme $\pi$ ika aủ $\hat{\varphi}$ т $\boldsymbol{\tau} \nu \boldsymbol{\nu} \kappa \lambda \hat{\eta} \rho \circ \nu)$. If, however, there were adverse claims, he proceeded to prepare the cause for
 the usual way, except that no party was considered as plaintiff or defendant; and the hills in which they set forth their respective titles, were called àvтıүpaфaí. (Harpocr. s.v.; Dem. c. Olymp. pp. 1173,1175 .) The dicasts were then to be sum. moned, and, whatever the number of parties, ons court was held for the decision of all their claims. If any one neglected to attend on the appointed day, and had no good excuse to offer, his claim was
 and the contest was carried on between the remaining parties, or, if but one, the estate was awarded to him. (Dem. c. Olymp. p. 1174.) The trial was thus managed. The dicasts had to give their verdict either for one person proving a title to the whole, or for several persons coming in under the same title, as (for instance) two brothers entitled each to a moiety. One ballotting box therefore was provided for every party who appeared in a distinct interest. The speeches were measured by the clepsydra. Each party had an à $\mu \phi$ opeús of water for his first speech, and half that, or three $\chi 0 \in \hat{i s}$ for the second. (Isaeus, de Hugn. her. §30, \&c.; Dem. c. Macart. p. 1052.) That these arrangements gave rise to fraud and collusion, is clearly shown in the cases above cited.

The verdict, if fairly obtained, was final against the parties to the cause. But any other person, who by absence or mavoidable accident was prevented from being a party, might afterwards bring an action against the successful candidate, to recover the estate. He was then obliged to pay his deposit (паракатa6o $\lambda \dot{\eta}$ ), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death. (Isacus, de Pyrr. her. $\S 70$; Dem. c. Olymp. p. 1175, c. Maeart. p. 1054.)
lt has hitherto been supposed that a simple issue was raised between the litigant parties, viz. who was entitled to possess the estate; and that they proceeded at once to the trial of such issue. This was called єì̈vóckía ei cićvu. The cause, however,

HERES.
might hecome more complicated, if one of the parties chose to make exception to the right of any other to dispute his title : this was done by tendering an affidavit ( $\delta$ capaptupia) sworn either hy himself or by another, wherein he declared that the estate was not the suhject of litigation ( $\mu \dot{\eta} \dot{\epsilon} \pi$ i $\delta \kappa \kappa \circ$ ), and alleged some matter of fact or law to support his assertion. Sons, adopted sons, and persons in legal possession, were allowed this advantage. For example, a witness might depose that the last occupier had left male issue surviving him, and therefore the property could not be claimed by any collateral relative or devisee: or that the title had already been legally determined, and that the new claimants were not at liberty to reopen the question. This had the effect of a dilatory plea, and stayed further proceedings in the cause. (Isaens, de Dieaeog. her. § 30, de Apoll. § 3, de Philoct. §§ 4, 52, de Pyrr. §3; Dem. c. Leoch. p. 1097.) If then the suitor was resolved to prosecute his claim, he lad no other course bint to procure a conviction of the witness (who had sworn the affidavit) in an action for false testimony ( $\delta<\kappa \eta \psi \in v \delta о \mu a \rho \tau \nu \rho t \omega ̄ \nu$ ). Examples of such actions are the causes in which Demosthenes was engaged against Leochares, and Isaeus for the estate of Philoctemon. On the trial of the witness the questions were, first, the truth of the facts deposed to ; secondfy, their legal effect, if true. With respect to the witness, the conscquences were the same as in any other action for false teatimony. [Martyria.] With respect to the original cause nothing further was determined, than that it could or could not be entertained; the סıa $\alpha a p \tau \nu p i \alpha$ in this particular resembling the $\pi$ aparoady. If the conrt decided that the suit conld he entertained, the parties proceeded to trial in the manner before explained.

As to the further remedies to be pursued by the successful party, in order to oltain the fruits of his judgment, see Embateia and Exoules Dife. And on this part of the subject see Meier, Att. Proc. pp. 459, 616, 638 ; Platner, Att. Proc. vol. i. p. 163, vol. ii. p. 309.
V. Of the Obligations to which the Heir succeeded. -The first duty of an heir, as with us of an executor, was, to hury the dead and perform the cus tomary funeral rites ( $\tau \dot{\alpha} \nu \nu \mu \zeta \delta \delta \mu \in \nu \alpha \pi \alpha \in i \nu)$ ). It is well known what importance was attached to this by the ancients. The Athenian law regulated the time of burial, and the order in which the female relations should attend. If no money was left to pay the expenses of burial, still the nearest rclatives were hound to defray them; and if they neglected to perform their duty, the chief magistrate ( $\delta \eta \mu \alpha p \chi o s)$ of the demus, in which the death took place, after warning them by public notice
 got the work done by contract, paid for it himself, and was then empowered to sue them for donble the amount. When a rich man died, there was no hackwardness ahout his funeral. It is rather amnsing to see how eagerly the relations hastened to show respect to his memory, as if to raise a presumption of their heing the heirs. (Isaeus, de Astyph. her. $\$ 40$, de Cir. her. $\$ \S 29-33$, de Nicost. her. $\S \S 9,25$; Dem. c. Macart. pp. 1069, 1071.)

Children, who neglected to bury their parents, were liahle to a criminal prosecution ( $\gamma \rho \alpha \phi \bar{\eta}$ ) $\kappa \alpha \kappa \omega$ $\sigma \epsilon \omega s$ ravé $\omega \nu$ ), just as they were for refusing to support or assist them in their lifetime. The word
raveis in this case includes all ancestors. (Meier, de Bon. Damn. p. 126.)

Among heritahle obligations may be reckoned that of marrying a poor heiress ( $\hat{\imath} \tilde{\eta} \sigma \sigma \alpha$ ), or giving her in marriage with a suitable portion. (See Epiclerus, and Meurs. Them. Att. i. 13.)

That the beir was bound to pay the debts of the deceased, as far as the assets would extend, cannot be doulted. Five years seem to have been the period for the limitation of actions against him ( $\pi \rho \sigma \theta \in \sigma \mu i \alpha)$. In case of a mortgage, he was entitled only to the suruplus of the mortgaged property, remaining after payment of the debt charged thereon. (Lys. de Bon. Publ. $\S \S 4,5$; Isaeus, de Arist. her. \& 23 ; Demosth. c. Calipp. p. 1240, c. Spud. p. 1030, c. Nausim. pp. 988, 989.)

State dehtors, such as farmers of the public revenue who had made default, or persons condemned to pay a fine or penalty, were disfianchised (ă $\boldsymbol{\tau} \boldsymbol{\mu} \mu \mathrm{ot}$ ) until they had settled the deht; and the disgrace extended to their posterity. Thus Cimon, son of Miltiades, was compelled to pay a fine of fifty talents which had been imposed on his father; and the story is, that Callias advanced him the money, in return for the hand of his sister Elpinice. (Dem. c. Androt. p. 603, c. Theoc. pp. 1322, 1327, c. Aphob. p. 836, pro Cor: p. 329, c. Macart. p. 1069.) When the whole of is man's property was confiscated, of course nothing could descend to his heir. It seems to have heen a common practice, in snch a case, for the relations of the deceased to conceal his effects, or to lay claim to them by pretended mortgages. Against these frauds there were severe penalties, as may be seen from the speeches of Lysias, c. Philocr. and de bon. Arist. (Meier, de Bon. Dainn. p. 212.)

The posterity of those who were put to death by the people, or were convicted of certain infamous crimes, such as theft, inherited the $\dot{\alpha} r u \mu i \alpha$ of their ancestors, a damnosa hereditas, which they conld not decline or escape from. It may be compared to the corruption of blood following upon attainder in the feudal law. The legislator seems to have thought that such children must he the natural enengies of their country, and ought to he disarmed of all power to do mischief. We cannot wonder at this, when we consider, that with respect to private feuds, it was deemed honourable and meritorious in the child to preserve the emmity of the father; and we find pulblic prosecutors (as in the opening of the speech of Lysias against Agoratns, of Demosthenes against Theocrines), telling the dicasts, that they had been induced to come forward by a desire to avenge the wrongs of their family. In the same spirit the Athenian law required, that men, guilty of mintentional homicide, shonld remain in exile, until they had $x p-$ peased the ncarest relatives of the deccased, to whom it more especially helonged to resent and forgive the injury. (Dem. c. Mid. p. 551. c. Aristoc. pp. 640, 643, c. Aristog. p. 790, с. Macart. p. 1069 ; Meier, de Bom. Damn. pp. 106, 136.)

Isaens tells us, that parents, who apprehended their own insolvency, used to get their children adopted into other fanilies, that they might escape the consequences. (De Arist. her. § 24.) This however could not he done, aftcr the infamy had once attached. (Meier, de Bon. Damn. p. 136 ; Acsch. c. Ctes. $\$ 21$, ed. Bekk.)

We find no mention of property escheating to
the state of Athens for want of heirs. This prohably arose from a principle of Athenian law, according to which no civic family was suffered to expire; and therefore the property of an intestate was always assigned to such person as was most fit to be his snccessor and representative. With aliens, and those illegitimate children who were regarded as aliens, it was no donbt otherwise. (Meier, de Bon. Damn. p. 148.) [C. R. K.]
2. Roman. When a man died, a certain person or certain persons sueceeded to all his property, under the name of heres or heredes: this was a universal suecession, the whole property being considered a universitas. [Universitas]. Such a succession comprehended all the rights and liabilities of the person deceased, and was expressed by the term Hereditas. The word hereditas is accordingly defined to be a succession to all the rights of the deceased (Dig. 50. tit. 16. 8. 24.) ; and sometimes it is used to express the property which is the object of the succession. The term pecunia is sometimes used to express the whole property of a testator or intestate (Cic. de Invent. ii. 21 ; Gaius, ii. 104) ; but it only expresses it as property, and therefore the definition of hereditas by pecunia would be incomplete. Cicero (Top. 6) completes the definition thus : - "Hereditas est pecunia quae morte alicujus ad quempiam pervenit jure, nec ea ant legata testamento aut possessione retenta." The negative part of the definition excludes legacies, and property of the deceased, the ownership of which is acquired by a sufficient possession of it. The word "jure" excludes the "bonornm possessio," in opposition to which the hereditas is appropriately called "jnsta." The heres was the person who acqnired all that had belonged to another, morte and jure; the etymological relation of the word to heras seems probable.

A person might become a heres by being named as such (institutus, scriptus, factus) in a will, exeented by a competent person, according to the forms required by law [Testamentum]. If a person died intestate (intestatus), or having made a will which was not valid, the inheritance came to those to whom the law gave it in such cases, and was called hereditas legitima or ab intestato. But a man could not die testate as to part of his property and intestate as to another part, except he were a soldier (cnjus sola voluntas in testando spectatur). Accordingly, if a man gave a part of the hereditas to one heres or more, and did not dispose of the rest, the heres or heredes took the whole. (Inst. ii. tit. 14. §5 ; Cic. de Invent. ii. 21 ; Vangerow, Pandekten, \&c. vol. ii. p. 5.)
In order that a testamentary succession should take place, the person dying mnst have snch rights as are capable of being transmitted to another; consequently neither a slitve, nor a filins-familias, according to the old Romen law, could make a heres. Also, the person who is made heres mnst have a legal capacity to be heres.

The institution of a heres was that formality which could not be dispensed with in a will. If the testator named no heres or heredes, and complied with all the other legal forms, still his disposition of his property was not a will. The beres called heres directus, or simply heres, represented the testator, and was thus opposed to the heres fideicommissarius. [Fideiconmissum.] The testator might either name one prson as heres, or he might name several heredes (coheredes), and he
might divide the hereditas among them as he pleased. The shares of the heredes were generally expressed by reference to the divisions of the As : thns, "heres ex asse" is heres to the whole pro. perty; "heres ex dodrante," heres to threefourths; heres "ex semuncia," heir to one twentyfourth. (Cie. ad Att. xiii. 48, vii. 8 ; Cic. Pro Cuecina, 6 ; Inst. 2. tit. 14. § 5.) If there were several heredes named, without any definite shares being given to them, the property belonged to them in equal shares. A heres might be institnted either unconditionally (pure), or conditionally (sub conditione).

If the testator had a legal capaeity to dispose, and if his will was made in due form, the first inquiry as to the heres was, whether he had a legal capacity to take what was given to him. He must have this capacity at the time of the institution, or the institution is null; and in order to take he must have the capacity to take (Inst. 2. tit. 19. §4), at the time of the testator's death, and at the time of accepting the inheritance. This capacity might be expressed by the word " testamentifactio," an expression which had reference not only to the legal capacity of the testator, but also to the legal capacity of the person named heres. As a general rule, only Roman citizens could be named as heredes in the will of a Roman citizen; but a slave could also be named heres, thongh he had no power to make a will, and a filius-familias could also be named heres, thongh he was under the same ineapacity; for the slave, if he belonged to the testator, could, by his master's testament, receive his freedom and become heres; and if he belonged to another, he took the inheritance for the benefit of his master: the filius-familias in like mamer acquired it for his father. Persons, not Roman citizens, who had received the commercium, could take hereditates, legata and fideicommissa by testament. (Cic. pro Caecin. 7, 32 ; Savigny, Zeitschrift, vol. v. p. 229, System, \&c. vol. ii. p. 27.)

Heredes were either Necessarii, Sui et Necessarii, or Extranei. The heres necessarins was a slave of the testator, who was made a heres and liber at the same time; and he was called necessarins, becanse of the necessity that he was under of accepting the hereditas. A slave was sometimes appointed heres, if the testator thought that he was not solvent, for the purpose of evading the ignominia which was a consequence of a person's pro* perty being sold to pay his debts, as explained by Gaius (ii. 154, \&c.). The heredes sui et necessarii were sons and daughters, and the sons and danghters of a son, who were in the power of a testator; but a grandson or granddanghter could not be a suus heres, noless the testator's son had ceased to be a scus heres in the testator's lifetime, either by death or being released from his power. These heredes sui were called necessarii, because of the necessity that they were under, according to the civil law, of taking the hereditas with its incminbrances. But the praetor permitted such persons to refase the hereditas (abstinere se ab hereditate), and to allow the property to be sold to pay the testator's debts (an instance is mentioned by Cic. Phil. ii. 16) ; and lie gave the same privilege to a mancipated son (qui in causa mancipii est). All other heredes are called extranei, and comprehend all persons who are not in the power of a testater, such as emancipated children. As a mother liad no potestas over her ehildren, they were extranei
heredes when named heredes in her will. Extramei heredes had the potestas or jus deliberandi (Dig. 28. tit. 8. s. 1), or privilege of considering whether they would accept the hereditas or not: but if either extranei heredes, or those who had the abstinendi potestas, meddled with the testator's property, they could not afterwards disclaim the inheritance, unless the person who had so meddled was under twenty-five years of age, and so belonged to a class who were relieved by the praetor in all cases where they were overreached [Cura. Tor], and also in cases where they had accepted an insolvent hereditas (damnosa hereditas). The emperor Hadrian gave this relief to a person above twenty-five years of age who had accepted an hereditas, and afterwards discovered that it was incumbered with a heary deht. (Gaius, i. 163.)

A certain time was allowed to extranei for the cretio hereditatis, that is, for them to determine whether they would take the hereditas or not: hence the phrase "cernere hereditatem." (Cic. ad dtt. xi. 12.) Thus, if the testator had written in his will "Heres Titius esto," he ought to add, "Cernitoque in centum diebus prozrmis quibus scies poterisque: quod ni ita creveris exheres esto." (Gaius, ii. 165; Cic. de Orat. i. 22.) If the extraneus wished to take the hereditas, he was reguired to make a formal declaration of his intention within the time named (intra diem cretionis). The formal words of cretion were "eam hereditatem adeo cernoque." Unless he did this, he lost the hereditas, and he could not obtain it merely by acting as heres (pro herede gerendo). If a person was named heres witbout any time of cretion being fixed, or if he succeeded (legitimo jure) to the property of an intestate, he might become heres without any formal declaration of his intention, and might take possession of the hereditas when he pleased : but the praetor was accustomed, upon the demand of the creditors of the testator or intestate, to name a time within which the heres shonld take possession, and in default of his doing so, he gave the creditors permission to sell the property. The common form of cretion in the will (vulgaris cretio) has been already mentioued. Sometimes the words "quibus sciet poteritque" were omitted, and it was then specially called "cretio certorum dierum," which was the more disadvantageous to the heres, as the days began to be reckoned, or, as we say, the time began to run immediately, and it was not reckoned from the time when the heres knew that he was named heros, and had no impediment to his cretion.
It was not unusual to make several degrees of heredes in a will, which was called substitutio. (Inst. 2. tit. 15.) Thus in the formula beginning "Heres Titius," \&c., after the words "exheres esto," the testator might add, "Tum Maevius heres esto cernitoque in diebus centum," \&c.; and he might go on substituting as far as he pleased. The person first named as heres (primo graduc) hecame heres by the act of cretion; and the substitutus (secundus heres, Cic. Top. 10 ; Hor. Sat. ï. 5. 48 ; Tacit. Ann. i. . ${ }^{2}$ ) was then entirely excluded. If the words "si non creveris" were not followed by words of exheredation, this gave some advantage to the first heres: for instance, if he neglected the formality of cretion, and only acted as heres, he did not lose all, but shared the hereditas equally with the substituted person. This was the old rule; but a constitation of M. Antoninus made
the acting as heres equivalent to cretion, provided such acting took place within the time of cretion. (Compare Gaius, ii. 177, \&c., with Ulpian, Frag. xxii. 34.)

In the case of liberi impuheres, who were in the power of a testator, there might be not only the kind of substitution just mentioned (vulgaris substitutio), but the testator might declare that if such children should live to become his heredes, and should die impuberes, some other person, whom he named, should be his heres. This was expressed thus, "si prins moriatur quam in suam tutelam venerit" (Cic. de Invent. ii. 42, Top. 10 ; Gaius, ii. 179), for the termination of impuberty and of the tutela were coincident. [Curator.] Thus, as Gaius remarks, one testamentary disposition comprised two hereditates. This was called pupillaris substitutio. (Inst. 2. tit. 16.) This kind of substitution was contained in a clause by itself, and in a separate part of the will, which was secured hy the testator's own thread and seal, with a provision in the first part of the will that this second part should not be opened so long as the son lived and was impubes. A substitution could also be made in the case of children being exheredated (disinherited) by the parent's will, and the substituted person then took all that the pupillus acquired by hereditas, legatum (legacy) or gift. Gaius observes (ii. 183) that all his remarks with reference to substitution for children impuberes, when made heredes or exheredated, apply to posthumous (postumi) children, of which there is an example cited by Cicero ( $T_{o} p$. 10. Si filius natus esset in decem mensihus, \&c.).

If an extraneus was made heres, there could he no substitution to the effect, that if he died within a certain time, another person should be heres : for though a testator could attach a condition to be performed before a person could take the hereditas, a person when he had once become heres continued such. The case of a pupillaris substitutio, which was an exception to this general rule, was probably founded on the patria potestas. The heres might, however, be charged with a fideicommissum, in which case he was heres fiduciarias. [Finetcommissum.]

As to conditions which the heres was bound to perform, they might be any that were not contrary to positive law or positive morality ; such as the setting up of statues, \&c. (Cic. Ferr. ii. 8, 9, 14), or changing the name ( $a d \Lambda t$. vii. 8). Impossible conditions were treated as if there were no conditions mentioned (pro non scripto, Inst. 2. tit. 14. s. 10).

If a man's own slave was made heres by his will, it was necessary that he should be made free also by the will : the words were "Stichus servus meus liber heresque esto." If the slave were not made free by the testament, he could not take under it, even if he were manumitted by his master, and of course he could not if he were sold; and the reason is, that the institution was not valid. If he was instituted free as well as heres, he became both a freeman and heres necessarius by the death of his master: if he was manumitted by his master in his lifetime, he might accept the inberitance or refuse it. If he was sold by his master in his lifetime, he could take possession of the inheritance with the permission of his new master, who thus hecame heres through the medium of his slave. If the slave who was made heres was at
that time the property of another person, and not of the testator, be could not take the inheritance without the consent of his master, for if he took it his master became heres: if such slave was manumitted before taking possession of the inheritance, be might accept it or refuse it as he pleased.

If an Ingenous died intestate, either from not having made a will, or having made a will but not in due form, or having made a will in due form which afterwards became invalid (ruptum, irritum), or if there was no heres under the will, the hereditas, according to the law of the Twelve Tables, came to the hercdes sui, and was then called $l e$ gitima hereditas. (Gaius, iii. 2.) The heredes sui were " liberi" in the power of the testator at the time of his death; the term liheri comprehended not only children, but the children of the testator's male children, and the children of a son's son. Adopted children were considered the same as other children. But grandchildren could not be heredes sui, unless their father had ccased to be in the power of the intestate, either by death or in any other way, as by emancipation. A wife in manu being considered as a daughter, and a daughter in-law (nurus) in manu filii being considered a granddaughter, were sui heredes; but the latter only when her husband was not in the power of the intestate at the time of his death. Posthumous children, who would have been in the power of the intestate if he were living, were also sui heredes. The sui heredes took the hereditas in equal shares: If there was a son or daughter, and children of a son deceased, the children of the deceased son took the portion which their parent would have taken. But the distribution was in stirpes, that is, among the stocks or stems sprung from the ancestor, and not in capita, or among the individuals: thus, if there were a son, nad the sons of a deceased son, the son would take half of the hereditas, and the sons of the deceased son would take the other half, in equal shares.

If in intestate had no sui heredes, the Twelve Tables gave the hereditas to the agnati. (Gaius, iii. 9.) It is stated under Cognati, who are agnati. The hereditas did not belong to all the agnati, but only to those who were nearest at the time when it was ascertained that a person had died intestate. If the nearest agnatus either neglected to take the inleeritance or died before he had taken possession of it, in neither case did the next in succession, as agnatus, take the inheritance. He was the ncarest agnatus who was nearest at the time when it was ascertained that a person had died intestate, and not he who was nearest at the time of the death; the reason of which appears to be that the hereditas was in a sense the property of the intestate until his heir was ascertained, and his heir could not be ascertained nutil it was certain that he had left no will; and as Gaius observes, if he had left a will, still it might happen that no person would be heres under that will; and accordingly it seemed better, as he obscrves, to look out for the nearest agnatus at the time when it is ascertained that there is no heres under the will. If there were several agnati in the same degree, and any one refused to take his share or died before he had assented to take it, such share accrued (adcrevit) to those who consented to take the hereditas.

In the case of women, there were some peculinritics which arose from their lemal condition (G:iius, iii. 14). The hereditates of women intes-
tate came to their agnati just as the inheritances of males; but women who were beyond the degree of consanguinei (a term which legally means hrothers and sisters) could not take hereditates ah intestato. Thus, a sister might take from a brother or sister as legitima heres; but an aunt or a brother's daughter could not be a legitima heres. The principle of Roman law which gave to those who came into the potestas or manus the quality of children of the blood, was followed out in this case also: a mother or a stepmother who had come in manum viri thereby obtained the status of a daughter; and, consequently, as to legitimate succession, there were the same relations between such mother or stepmother and the husband's children, as there were among the husband's children themselves. By the Twelve Tables the hereditas of an intestate mother could not come to her children, because women have no sui heredes; but by a SCtum Orphitianum of M. Aptoninus and Commodus, the sons of a wife, not in manu, might take as her legitimi heredes, to the exclusion of consinguinei and other agnati. (Ulp. Frog. xxvi. §7; comp. Inst. 3. tit. 4.)
If a person died leaving no sui heredes, but only a brother and another brother's children, the brother took all as the nearest agnatus. If there was no brother surviving, and only children of brethren, the hereditas was divided among all the children in capita, that is, the whole was equally divided among all the children.

If there were no agnati, the Twelve Tables gave the hereditas to the gentiles. [Gens.]

Gaius (iii. 18, \&c.) briefly recapitulates the strict law of the Twelve Tables as to the hereditates of intestates:- emancipated children could claim nothing, as they had ceased to be sui hercdes: the same was the case if a man and his children were at the same time made Roman citizens, unless the imperator reduced the children into the power of the father : agnati who had sustained a capitis diminutio were excluded, and consequently a son who had been given in adoption, and a daughter who was married and in manu viri: if the next agnatus did not take possession, he who was next in order conld not for that reason make any claim: feminac agnatae who were beyond the degree of consanguinci had no claim: cognati, whose kinship depended on a female, had no mutual rights as to their hereditates, and conscquently there were no such mutual rights between a mother and her children, unless the mother had come in manum viri, and so the rights of consanguinity had been established between them.

Gaius proceeds to show (iii. 25, \&c.) how these inequitable rules of the civil law were modified by the practor's edict. As to the succession of cognati under the Imperial legislation, see Inst. 3. tit. 5 , De SCto Tertall.; Cod. 6. tit. 58 ; Nov. 118.

If a man had a son in his power, he was bound either to make him heres, or to exheredate (exheredure) him expressly (nominatim). If he passed him over in silence (silentio praeterierit), the will was altngether void (inutile, non jure factum). Some jurists were of opinion that cyen if the son, so passed over, died in the father's lifetime, there conld be no heres under that will. (Gaius, ii. 123, \&c.) Other liberi could be passed over, and the will would still be a valid will; but the liberi so passed over took a certain portion of the hereditas adcrescendo, as it was termed, or jure adcrescendi.

For mistance, if the heredes instituti were sui, the persor, or persons passed over took an equal share with them. If the beredes instituti were extranei, the person or persons passed over took a half of the whole hereditas; and as the praetor gave the contra tahulas bonorum possessio to the person so passed over, the extranei were deprived of all the hereditas. A rescript of the emperor M. Antoninus limited the amount which women could take by the bonorum possessio to that which they could take jure adcrescendi; and the same was the law in the case of emancipated females.

It was necessary cither to institute as heredes, or to exheredate posthumous children nominatim, otherwise the will, which was originally valid, became invalid (ruptum); and the will became invalid by the birth either of a pothumous son or daughter, or, as the phrase was, adgnascendo rumpitur testamentum. (Cic. de Or: i. 57.) Postumi were not only those who were born after the testator's will was made, and came into his power or would have come into his power if he had lived, but also those who might become the sui heredes of the testator by the death of some other person in the testator's lifetime. Thus, if a testator's son, who was in his power, had cbildren, and the son died in the testator's lifetime, the grandchildren became sai heredes, and the testament became raptum by this quasi agnatio: it was therefore a necessary precaution to institute as heredes or to exheredate such grandchildren. It follows that if the testament could be made invalid by this quasi agnatio, it must have become invalid by a son heing born in the lifetime of the testator, unless the will had provided for the case; for it became invalid if the testator adopted a son or a daughter (Ulpian) either by adrogation or adoption properly so called, after the date of his will. The case was the same if he took a wife in manum after the date of the will.
The word Postumus has clearly the same signification as Postremus, and literally means a child born last. The passage of Gaius is defective where he treats of Postumi ; bat the definition of Postumi, as preserved in the Breviarium, appears to be exact: "Postumorum duo genera sunt: quia postumi adpellantur hi, qui post mortem patris de nxore nati fuerint, et illi qui post testamentum factum nascuntur." Sometimes the word postumus is defined only as a child born after a father"s death, as we see in some of the Glossae, and in Plutarch (Sulla, 37); but there is no proof that the menning was limited to such children; and the passages sometimes cited as being to that effect (Dig. 50. tit. 16. s. 164 ; 28. tit. 3. s. 3) have been misunderstood.

As to Postumi alieni, see Gaius, i. 147, ii. 242 ; Vangerow, Pandekten, \&c. vol. ii. p. 90.

Other cases in which a valid testamentum hecame ruptum or irritum, are more properly considered under Testamentum.
The strictness of the old civil law was modified by the praetorian law, which gave the bonorum possessio to those who could not take the hereditas by the rules of the civil law. [Bonorum Possessio.]
The heres represented the testator and intestate (Cic. de Leg. ii. 19), and had not only a clainı to all his property and all that was due to him, hut was hound by all his obligations. He succeeded to the sacra privata, and was bound to maintain them,
but only in respect of the property, for the obligation of the sacra privata was attached to property and to the heres only as the owner of it. Hence the expression " sine sacris hereditas" meant an hereditas unencumbered with sacra. (Plaut. Capt. iv. 1. 8, Trinum. ii. 4. 83 ; Festus, s. v. Sine sacris hereditas.)

The legislation of Justinian released the heres, who accepted an hereditas, fiom all the debts and ohligations of the testator or intestate, beyond what the property would satisfy, provided he made out an inventory (inventarium) of the property in a certain form and within a given time. (Cod. 6. tit. 30. s. 22.) It also allowed the institation of a man's own slave as heres without giving him his freedom. (Inst. 2. tit. 14 ; comp. Gaius, ii. 185.)

The heres could claim any property which belonged to his testator or intestate by the hereditatis petitio (Dig. 5. tit. 3. s. 20), which was an actio in rem, and properly belonged to a heres only, though it was afterwarda given to the bonorum possessor. Each heres claimed only his share. (Cic. Pro Rosc. Com. c. 18.)

The colieredes shared among themselves the property, and bore their share of the debts in the same proportions. For the purpose of division and settling the affairs of the testator, a sale was often necessary. (Cic. ad Att. xi. 15.) If the parties could not agree about the division of the property, any of them might have an actio familiae erciscundae. [Familiae Erc. Ac.]

The hereditas might be alienated by the form of in jure cessio. The heres legitimus might alienate the hereditas before he took possession of it, and the purchaser then became heres, just as if he had been the legitimus heres. The scriptus heres could only alienate it after the aditio: after such alienation by him, or by the heres legitimus after aditio, hoth of them still remained heredes, and consequently answerable to creditors, but all debts due to them as heredes were extinguished.

The bereditates of freedmen are more properly considered noder Libenti and Patroni.

Before it was determined who was heres, the hereditas was without an owner, and was said "jacere." When a heres was ascertained, such person was considered to possess all the rights incident to the hereditas from the time of the death of the testator or intestate. But this does not explain how we are to view the hereditas in the intelval between' the death of the former owner and the time when the heres is ascertained. During sach interval, according to one form of expression used by the Roman jurists, the hereditas is a juristical person (vice personae fungitur), and is the domina, that is, the domina of itself; according to another form of expression, it representa the defunct, and not the person of the future heres. These two forms are the same in meaning, and they express a fiction which has relation to the legal capacity of the defunct, and not that of the future hores, and which does not involve the notion of any juristical personality of the hereditas. The relation to the legal capacity of the defunct is this:-Slaves generally helonged to an hereditas. A slave, as is well known, could acquire property for his living master, even without his knowledge ; but the validity of the act of acquisition, in some cases, depended on the legal capacity of his master to acquire. Now, while the hereditas was without an ascertained owner, many acts of a slave by
which the lereditas might receive additions, were strictly void, and such acts conld only have their legal effect on the supposition that the slave had an owner of a sufficient legal capacity ; and accordingly, the fiction of law gave validity to the act of the slave by relation to the known legal capacity of the late owner, and not by relation to the yet unascertained owner who might not have such legal capacity. The following are examples:"When a Roman, who had a legal capacity to make a will, died intestate, and another person appointed as his heres a slave, who belonged to this hereditas which was still without an owner, such institution of a heres would be valid by virtue of this fiction, because it had reference to the legal capacity of the defunct. If there had been no such fiction, the validity of the institution would have been doubtful, for the nnascertained legitimus heres might be an intestabilis, who (at least according to the old law) could not be instituted heres. - If a soldier died and left a will, which was not yet opened, another testator might institute as heres a slave belonging to the soldier's hereditas, because the institution, according to this fiction, had reference to the deceased; but if there were not this fiction, the institution might be void, inasmuch as the naacertained heres might be a peregrinus who had no testamentifactio with this other testator. It was to provide for such cases as these only, that this fiction was introduced ; and it had no other object than to facilitate certain acquisitions by means of the slaves who belonged to an hereditas."

This masterly exposition is by Savigny (System des hcut. R. R. vol. ii. p. 363).
(Gaius, 2. 99-190, 3. 1-24; Ulpian, Frag. xxii., Dig. 28, 29 ; Inst. 2, 3 ; Rein, Das Rïmische Privatrecht, p. 361, \&c. Erbrecht, a nseful compendium of the Law of Hereditas, as it appears chiefly in the Latin classics; Vangerow, Pandekten, \&c. Erbrecht, vol. ii. The chapter on Erbrecht in Puchta's Institutioncn, \&c. iii. p. 215, \&c. is concise and very clear.)
[G. L.]
HERMAE ( $\epsilon \rho \mu a i ̄)$, and the diminutive Hermuli ( $\in \rho p i \delta \iota a$ ), statıes composed of a head, nsually that of the god Hermes, placed on a quadrangular pillar, the height of which corresponds to the stature of
 27 ; $\tau \grave{\partial} \sigma \chi \hat{\eta} \mu \alpha$ т $\begin{gathered}\tau \epsilon \tau \rho \alpha ́ \gamma \omega \nu o \nu, ~ P a u s . ~ i v . ~ 33 . ~ § ~ 4, ~\end{gathered}$ s. 3). Some difficulties are involved in the question of their origin, and of their meaning as symbols of Hermes. One of the most important features in the mythology of Hermes is his presidence over the common intercourse of life, traffic, journeys, roads, boundaries, and soforth, and there can be no doubt that it was chiefly in such relations as these that he was intended to be represented by the Hermae of the Greeks and by the Termini of the Romans, when the latter were identified with the Hermae. It is therefore natural that we should look for the existence of this symbol in the very earliest times in which the use of boundary-marks was required; and in such times the symbols would be of the simplest character, a heap of stones or an unhewn block of marble. Now we find that there were in many parts of Greece heaps of stones by the sides of roads, especially at their crossinga, and on the boundaries of lands, which were called

[^35](Hesych. s. vv.). An épuaios $\lambda \dot{\phi} \phi$ os near Ithaca is mentioned in the Odyasey (xvi. 471); Strabo noticed many $\varepsilon$ épeita on the roads in Elis (viii. p. 343) ; and even now an ancient heap of stones may be seen on the boundary of Laconia (Ross, Pelop. vol. i. pp. 18, 174). The religions respect paid to such heaps of stones, especially at the meetings of roads, is shown by the custom of each passer by throwing a stone on to the heap (Nicand. Ther. 150) ; this custom was also observed with reference to the Hermae of later times, at least to those which stood where roads met. (Anth. Graec. loc. infra cit.) Such heaps of stones were also seen by Straho on the roads in Egypt (xvii. p. 818). Another mode of marking a boundary or other definite locality was by a pillar of stone, originally unhewn, the sacred character of which was marked by pouring oil upon it and adorning it (Theophrast. 16, comp. Genesis xxviii. 18, 22, xxxi. 45-48, where both the pillar and the heap of stones ars set up for a witness, xxxv. 14). The Egyptian obelisk probably belongs to the same class of monn ments.

Referring the reader, for the further examination of these matters, to works in which they are discussed at length (Zoega, de Orig. et Us. Obelisc., Romae, 1797, p. 217; Gerhard, dc Reluyione Hermarum, Berol. 1845, 4to. ; Otto, de Dizis Vialibus, c. 7; Müller, Archäol. d. Kunst, § 66 ; Preller, in Pauly's Real-Encye. d. Class. Alterth. s. v. Mercurius, vol. iv. p. 1845), we assume that, of these heaps of stones and pillars, those which marked boundaries were either originally symbols of, or were afterwards consecrated to, the god Hermes. It is not denied that such rude memorials were at first symbols of the varions gods alike, but at a very early period they came to be more especially associated with the worship of Hermes.

The first attempt at the artistic development of the blocks of stone and wood, by which, in the earliest period of idol-worship, all the divinities were represented, was by adding to them a head, in the features of which the characteristics of the god were supposed to be expressed ; and afterwards other members of the body were added, at first with a symbolical meaning. These changes produced the Hermae, such as they are described by the ancient authors, and as we now have them. The phallus formed an essential part of the symbol, probably because the divinity represented by it was in the earliest times, before the worship of Dionysurs was imported from the East, the personification of the reproductive powers of nature. So the symbol is described by Herodotus, who ascribes the origin of it to the Pelasgians, who communicated it to the Athenians, and they to the other Greeks. (Herod. ii. 51 ; Plut. an Seni sit Resp. ger. 28. p. 797, f. ; Cic. de Nat. Deos. iii. 22 ; comp. Creuzer's Note, in Baehr's edition of Herodotns.) Pausanias gives the same account of the matter (i. 24. § 3, iv. 33. § 3. s. 4), and also states that the Arcadians were particularly fond of the $\not{ }_{\alpha}^{\gamma} \alpha \lambda \mu \mu \alpha \tau \in \tau \rho \alpha \dot{\gamma} \omega_{\nu \nu} \nu$ (viii. 48. § 4. s. 6 ; where the statue referred to is one of Zens), which is
from đ̈ $\rho \mu a$, a heap (comp. Buttmann, Lexil. pp. 302, 303). It would seem, at all events, that the words are in some way connected; though the question, whether the god took his name from the symbol, or the symbol from the god, cannot be entered into here.

HERMAE.
HERMAE.
some confirmation of the tradition which carried hack the invention to the Pelasgic times.
In the historical times of Greece, too, it was at Athens that the Hermae were most numerous and most vencrated. So great was the demand for these works that the words $£ \rho \mu \sigma \gamma \lambda \nu \phi o s$, ép $\rho 0$ -
 the generic terms for a sculptor, his art, and his studio (Plat. Symp. p. 215, a.; Lucian, de Somn. i. 7, vol. i. pp. 3, 4, 10, 11; and the Lexicons).

Houses in Athens had one of thesc statues placed at the door called $\dot{\epsilon} \rho \mu \hat{\eta} s$ бт $\rho о ф а \hat{i o s}$ or $\sigma \tau \rho o-$ фeús (Thucyd. vi. 27 ; Aelian. V. H. ii. 4] ; Suid. s. v. ; Pollux, viii. 72 ; Ath. x. p. 437, b.) ; sometimes also in the peristyle (Lucian, Navig. 20, rol. iii. p. 262), which were worshipped by the women as instrumental to fecundity (see bas-relief in Boissarde, Antig. Roman. part l), and the great reverence attached to them is shown by the alarm and indignation which were felt at Athens in consequence of the mutilation of the whole number in a single night, just before the sailing of the Sicilian expedition. (Thucyd. vi. 27, with Poppo's note ; Andoc. de. Myst.; Aristoph. Lysist. 1093, 1094, and Solol. ; Aristophanes applies the term épuono$\pi / \delta a t$ to the mutilators; see also Phot. s. v. Efpooко $\pi$ i $\delta a 1$.)

They were likewise placed in front of temples, near to tombs, in the gymnasia, palaestrae, libraries, porticoes, and public places, at the corners of streets, on high roads as sign-posts, with distances inscribed upon them (Böckh, Corp. Insor. No. 12; Epigr. Incert. No. 234, Brunck, Anal. vol. iii. p. 197, Anth. Planud. iv. 254; the other cpigrams on Hermae, Nos. 255, 256. descrve notice) ; and some are still to be seen at Athens with the names of victors in the gymnastic contests inscribed upon them. (Leake, Athens, p. 17, n. 1.) They were even made vehicles of public instruction, according to the author of the Hipparchus (falsely ascribed to Plato, p. 229), who says that the tyrant Hipparchus placed Hermae in the streets of the city and in roads throughout Attica, inscribed with moral verses, such as the following:

## 

(Comp. Harpocrat. s. v. 'Epuaî; Hesych. s. v. '1 $\pi \pi{ }^{\prime}{ }^{\prime} \rho \chi \in 10 t$ 'Epuai, with Alberti's note). Those which stood at cross roads had often three or four heads (Philoch. p. 45, ed. Siebelis; Harpocr. and Etynn. M. s. v. триќ́фалаs 'Epuฑ̂s; Phot. Hesych.
 1353. 3).

Numerous examples occur in Pausanias and other writers of their being placed on the boundaries of lands and states and at the gates of cities ( $\pi \rho \delta s \tau \hat{n} \pi v \lambda i \delta \iota, \pi \rho o \pi v \lambda \alpha \hat{i} o s, ~ P a u s . ~ v i i i . ~ 34 . ~$ §3. s. 6, iv. 33. § 3. s. 4, et alib.; Harpocr.) Small Hermae were also uscd as pilasters, and as supports for furniture and utensils. (Pollux, vii. $1 \bar{\delta}$, 73 ; Müller, Arch. § 379 , n. 2.) Respecting the use of the Hermae and Hermuli in the Circus, see pp. 285, a, 286, a.

With respect to the form of these works, the essential parts have been already mentioncd. A pointed heard ( $\sigma \phi \eta \nu 0 \pi \omega \gamma \omega \nu$ ) belonged to the ancient type (Artcmid. ii. 37). A mantle ( i $\mu a ́ \tau \iota \nu \nu$ ) was frequently hung over the shoulders (Paus. viii. 39. §4; Diog. Laërt. v. 82). Originally the legs and arms were altogether wanting (Pausanias calls them áco-
( $\lambda 01$, i. $24 . \S 3$ ), and, in place of the arms, there were often projections to hang garlands upon; but, when the reverence attached to the ancient type bocame less, and the love of novelty greater, the whole torso was placed upon a quadrangular pillar, which lessened towards the base, and finally the pillar itself was sometimes chiselled to indicate the separation of the lege, as may be seen in a tetragonal female statue in the Villa Albani. (Winkelm. Storia delle Arte, vol. i. tav. 1.) Sometimes, as above stated, the head was douhle, triple, and cven fourfold. The whole figure was generally of stone or marhle ; but Cicero (ad Att. i. 8) mentions some which were of Pentelic marble, with bronze heads. (Müller, Archäol. d. Kunst, § 67.)

Many statues existed of other deities, of the same form as the Hermae; which no doubt originated in the same manner ; and which were still called by the generic name of Hermae, cven though the bust upon them was that of another deity. Several images of this kind are described hy Pausanias ; one of Poseidon at Tricoloni in Arcadia (viii 35. §6), another of Zeus Teleios at Tegea (ib. 48. §4), and another of Aphrodite Urania at Athens (i. 19. § 2). The reason why the statues of the other deities were developed into perfect forms, while those of Hermes so generally (by no means universally) retained their ancient fashion, is obviously on account of the religious significance attached to the symbol of the pillar, as a boundary mark. Where this motive was not called into action, Hermes himself was represented in the complete luman form with all the perfection of Greek art, as, for example, in his statues in the palcestrae, and in those which embodied others of his attributes. (Sec Müller, Archäol. d. Kunst, $\$ \S 380,381$.

Some statues of this kind are described by a name compounded of that of Hermes and another divinity: thus we have Hermanubis, Hermares, Hermathena (Cic. ad Att. i. 4), Hermeracles (Cic. ad Att. i. 10), Hormeros (Plin. H. N. xxxvi. 5. s. 4. § 10), Hermopan. It has been much disputed whether such figures wers composed of the square pillar, as the emblem of Hermes, surmounted by the bust of the other divinity; or, secondly, whether the heads of Hermes and the other god were united, as in the bust of Janus ; or, lastly, whether the symbolical claracteristics of the two deities werc combined in the same statue. As to the first explanation, it seems hardly probable that, so late as the time of Ciccro, the mere pillar should have been considered as adequate a representation of Hermes as the bust was of the other deity: the secund is supported by many existing terminal double husts: the third can only be regarded as an ingenious conjecture, which may be truc of some works of a late period of art. We think that the second is the true explanation in the passiges from Cicero. (Comp. Müller, Archäol. d. Kunst, § 345, n. 2.)

There is still another class of these works, in which the bust represented no deity at all, but was simply the portrait of a man, and in which the pillar loses all its symbolical meaning, and becomes a mere pedcstal. Even these statues, however, retained the names of Hermae and Termini. The examples of them are very numerous. A list of these and of the other Hermac is given by C. W. Müller. (Ersch and Griber's Encyklopädie, art. Hermon.)

The Hermae of all kinds were in great request among the wealthy Romans, for the decoration of their houses and villas. It is also stated that they used them as posts for ornamental railings to a garden, in which case they were commonly decorated with the busts of philosophers and eminent men, some of which may be seen at the Vatican and other museums, with the square holes in their shonlders into which the transverse rail was inserted. This square hole, however, is also seen in Hermae of old Greek workmanship, in which cases they were probably the sockets of the projections, above mentioned, for hanging garlands on.

The existing remains of ancient art are rich in terminal statues of all the classes which have been descrihed; and specimens of nearly all may be seem in the British Mnseum, and in engravings in Müller's Denkmäler der alten Kunst (vol. i. pl. i. Nos. 3, 4, 5, vol. ii. pl. xxviii. Nos. $299,300,303$, pl. xxxi. No. 341, pl. xxxiii. Nos. 376, 386, 387, pl. xxxvi. Nos. 428, 429, pl. xlii. No. 526). The first two examples in Müller are very interesting : the one is a bas-relief, exbibiting a Hermes decorated with garlands and surronnded with the implements of his worship, as shown in the following engraving; the other is also a bas-relief, in which

we see a terminal hust of Dionysus washed and decorated by a man and three women. Respecting the Hermae on coins, see Rasche, Lex Univ. Rei Num. 8. vv. Herma, Hermathene, Hermes. [P. S.]

HERMAEA ("Epuaia), festivals of Hermes, celebrated in varions parts of Greece. As Hermes was the tutelary deity of the gymnasia and palaes. trae, the boys at Athens celebrated the Hermaea in the gymnasia. They were on this occasion dressed in their best, offered sacrifices to the god, and amused themselves with varions games and sports, which were probably of a more free and unrestrained character than usual. Hence the gymnasiarch was probibited by a law of Solon (Aeschin. c. Timarch. p. 38) from admitting any adnlts on the occasion. This law, however, was afterwards neglected, and in the time of Plato (Lysis. p. 206, d. \&c.) we find the boys celebrating the Hermaea in a palaestra, and in the presence of persons of all ages. (Becker, Charikles, vol. i. p. 335, \&c.; compare Gxmnasium, p. $580, \mathrm{~h}$.)

Hermaea were also celebrated in Crete, where, on this occasion, the same enstom prevailed which was observed at Rome during the Satumalia ; for the day was a season of freedom and enioyment for the slaves, and their masters waited upon them at their repasts. (Athen, xiv. p. 639.)

## HETAERAE.

The town of Pheneos, in Arcadia, of which Hermes was the principal divinity, likewise celebrated Hermaea with games and contests. (Paus, viii. 14. § 7.) A festival of the same kind was celebrated at Pellene. (Schol. ad Pind. Ol. vii. 156, and Nem. x. 82.) Tanagra, in Bocotia (Paus. ix. 22. § 2), and some other places, likewise celebrated festivals of Hermes, but partionlars are not known.
[L.S.]
HERMATHENA. [HERMaE.]
HERMERACLAE. [Hermae.]
HERO'NES, baskets or crates of sedge, which were employed, when filled with chalk, for making a foundation in the water (Vitruv. v. 12. §5). Pliny states that the architect of the temple of Diana, at Ephesus, raised to their places immense blocks, which formed the architrave, by means of an inclined plane, constructed of herones filled with sund (H.N. xxxvi. 14. s. 21). In these and the few other passages where it occurs, the readings of the word are very varions. Different modern scholars have adopted one of the three forms, aerones, erones, or herones. (See Schneider, ad Vitruv. l. c.)
[P. S.]
HEROON (inpêod) [Apotheosis; Funus, pp. 556, b., 557, a.]

HESTIA (e $\sigma \tau(a)$ [Focus.]
HESTIASIS ( $\epsilon \sigma \tau\{a \sigma / s$ ), was a species of liturgy, and consisted in giving a feast to one of the tribes at Athens ( $\tau \grave{\eta} \nu \phi \cup \lambda \dot{\eta} \nu \dot{\jmath} \sigma \tau \iota \hat{a} \nu$, Dem. c. Meid. p. 565. 10 ; Pollux, iii. 67.) It was provided for each tribe at the expense of a person belonging to that tribe, who was called é $\sigma \tau$ tár $\omega \rho$. (Dem. c. Boeot. p. 996, 24.) Marpocration (s.v. 'E $\sigma \tau$ ıd $\tau \omega p$ ) states on the authority of the speech of Demosthenes against Meidias, that this feast was sometimes provided by persons voluntarily, and at other times by persons appointed by lot; but as Böckh remarks, nothing of this kind occurs in the speech, and no burthen of this description could have been imposed upon a citizen by lot. The é $\sigma \tau$ áropes were donbtless appointed, like all persons serving liturgies, according to the amount of their property in some regular succession. These banquets of the tribes, called $\phi$ илєтıà $\delta \in$ êrva by Athenaeus (v. p. 185, d), were introdnced for sacred purposes, and for keeping $n p$ a friendly intercourse between persons of the same tribe, and must be distinguished from the great feastings of the people, which were defrayed from the Theorica. (Böckh, Pull. Econ. of Allens, p. 452, 2nd. ed. ; Wolf, Proleg. ad Dem. Leptin. p. lxxxvii. note 60.)

HETAERAE (é $\tau a i p a i$ ). The word $\dot{\text { ézalpa ori- }}$ ginally signified a friend or companion, but at Athens, and in other towns of Greece, it was afterwards used as a euphemistic name for $\pi \delta \rho \nu \eta$, that is, in prostitute, or mistress. (Plut. Solon, c. 15 ; Athen. xiii. p. 571.) As persons of this class acted a much more prominent and influential part in some of the Greek states than in any of the most demoralized capitals of modern times, we cannot avoid in this work stating their position and their relations to other classes of society. But as their conduct, manners, onsnaring artifices, and impositions, have at all times and in all countries been the same, we shall confine ourselves to those points which were peculiar to the hetarae in Greece.

First we may mention that the young men at Athens, previous to their marriage, spent a great part of their time in the company of hetaerae withont its being thought blaniable in any reapect
whatever. Marriage, indeed, produced on the whole a chaoge in this mode of living of young men, but in innmerable instances even married men continued their intercouse with hetaerae, without drawing upon themselves the censure of public opinion; it seems, on the contrary, evident from the manner in which Demosthenes (c. Neaer. p. 1351, \&c.) relates the history of Lysias the sophist, that such connections after marriage were not looked upon as anything extraordinary or inconsistent, provided a man did not offend against pablic decency, or altogether neglect his legitimate wife and the affairs of his household, as was the case with Alcibiades. (Andoc. c. Alcib. p. 177.) This irregular condition of private life among the Greeks seems to have arisen chiefly from two causes; first from the great love of sensual pleasures, which the Greeks appear to have possessed in as high a degree as most other southern nations ; and, secondly, from the generally prevailing indifference between hushands and wives. As regards the latter point, matrimonial life in the historical times of Greece was very different from that which we find described in the heroic age. How this change was brougltt about is not clear; but it can scarcely be doubted that, generally speaking, the Greeks looked upon marriage merely as a means of producing citizens for the state. (Dem. c. Neaer. p. 1386 ; Becker, Charikles, vol. ii. p. 215, \&c.) The education of women was almost entirely neglected; they were thought a kind of inferior beings, less endowed by nature, and incapable of taking any part in public affairs and of sympathising with tbeir husbands. In an intellectual point of view, therefore, they were not fit to be agreeable companions to their husbands, who consequently sought elsewhere that which they did not find at home. It is true the history of Greece furnishes many pleasing eximples of domestic happiness, and well-educated women, but these are exceptions, aud only confirm the general rule. A consequence of all this was, that women were bound down by rules which men might violate with impunity ; and a wife appears to have had no right to proceed against her husband, even if sbe could prove that he was unfaithful (Plaut. Mercat. iv. 6. 3), although she herself was subject to severe punishment if she was detected. The isolated testimony of a late writer like Alciphron (Epist. i. 6), who represents a wife threatening her husband, that unless he would give up his dissolute mode of living, she would induce her father to bring a charge against him, can, as Becker (Charikles, vol. i. p. 112) observes, prove nothing, inasmuch is a neglect of family affairs might, in this case, have been the ground for accusation.

But to return to the hetaerae; the state not only tolerated, but protected them, and obtained profit from them. Solon is said to have established
 or ơкп $\mu \alpha$ ), in which prostitutes were kept (Athen. xiii. p. 569 ), and to have built the temple of Aphrodite Pandemos with the profit which had been obtained from them. At a later period the number of such houses at Athens was incrensed, and the persons who kept them were called $\pi ⿰ 丿 ㇄$ opvogorsol, lenones. The conduct of the hetaerae in these houses is described in Athenaeus (xiii. p. 568). All the hetacrae of such houses, as well as individauls who lived by themselves and gained their livelihood by prostitution, had to pay to the state
 \&c.), and the collecting of this tax was every year let by the senate to such persons ( $\tau \in \lambda \bar{\omega} \nu a t$, or таруотєлйขaı, Philonides, ap. Polluc. vii. 202) as were best acquainted with those who had to pay it. The hetaerae were under the superintendence of the $\alpha \gamma_{0} \rho a \nu \delta \mu 01$ (Snidas, s. v. $\Delta ı \alpha ́ \gamma \rho \alpha \mu \mu \alpha$ ), and their places of abode were chiefly in the Cerameicus. (Hesych. s. v. Kєрацєıкоs.)

The number of private hetaerae, or such as did not live in a $\pi 0 \rho \nu \in \operatorname{cov} 0$, was very great at Athens. They were, however, generally not mere prostitutes, but acted at the same time as flute or cithara players, and is dancers, and were as such frequently engaged to add to the splendour of family sacrifices (Plont. Epid. iii. 4. 64), or to enliven and heighten the pleasures of men at their symposia. Their private abodes, where often two, three, and more lived together, were also frequently places of resort for young men. (lsocrat. Areopag. p. 202, Bekker.) Most of these hetaerae not only took the greatest care to preserve their physical beauty, and to acquire such accomplisbments as we just mientioned, but also paid considerable attention to the cultivation of their minds. Tbus the Arcadian Lastheneia was a disciple of Plato (Athen. xii. p. 546), and Leontion a disciple of Epicurus (Athen. xiii. p. 588) ; Aspasia is even said to have instructed Socrates and Pericles. Whatever we may think of the historical truth of these and similar reports, they are of importance to the historian, inasmuch as they show in what light these hetaerae were looked npon by the ancients. It seems to have been owing, especially to their superiority in intellectual cultivation over the female citizens, that men preferred their society and conversation to those of citizens and wives, and that some hetaerae, such as Aspasia, Lais, Phryne, and others, formed comections with the most eminent men of their age, and acquired considerable influence over their contemporaries. The free and unrestrained conduct and conversation, which were not subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded; were well calculated to ensnare young men, and to draw the attention of husbands away from their wives. Women, howeyer, of the intellect and character of Aspasia were exceptions: and even Athenian citizens did not scruple to introduce their wives and daughters to her cireles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. The disorderly life of the majority of Greek hetaerae is nowhere set forth in better colours than in the warks of the writers who belong to the so-called school of the middle comedy, and in the plays of Plautus and Terence; with which may be compared Demosth. c. Neaer. p. 1355, \&c., and Athen. book xiii. It was formerly supposed that at Athens a peculiar dress was by law prescribed to the hetaerae, but this opinion is without any foundation. (Becker, Charikles, vol. i. p. 126, \&c.)

The town most notorious in Greece for the number of its hetaerne, as well as for their refined manners and beauty, was Corinth. (Plato, De Rep. iii. p. 404 ; Dio Chrysost. Orat. xxxvii. p. 119, Reiske; Aristoph. Plut. 149, with the Schol.; and Schol. ad Lysistr. 90 ; Athen, xiii. p. 573 , \& c ; Müller, Dor. ii. 10. § 7.) Straho (viii. p. 378) states that the temple of Aphrodite in this town
possessed more than one thousand hetacrae, who were called $i \in p \delta \delta \delta 0 v \lambda o \iota$, and who were the ruin of many a stranger who visited Corinth. (Wachsnuth, Hellen. Alterth. vol. ii. p. 392.) Hence the name Kopı $\theta_{i} \alpha \kappa \delta \rho \eta$ was used as synonymous with
 $p \in i ̄ \nu$. (Eustath. ad Niad. ii. 570.) At Sparta, and in most other Doric states, the hetaerae seem oever to have acquired that importance which they bad in other parts of Greece, and among the Greeks of Asia Minor.

An important question is who the hetaerae generally were? The iepóסov入ol of Corinth were, as their name indicates, persons who had dedicated themselves as slaves to Aphrodite; and their prostitution was a kind of service to the goddess. [Hieroduli.] Those $\pi \delta \rho \nu a t$ who were kept at A thens in public brothels by the $\pi о \rho \nu 0$ goonoí, were generally slaves belonging to these ropvoborнol, who compelled them to prostitute their persons for the purpose of enriching themselves. The owners of these $\pi \delta \rho \nu \alpha$, were justly held in greater contempt than the unhappy victims themselves. Sometimes, however, they were real prostitutes, who voluntarily entered into a contract with a mopvoboords: others again were females who had been educated in better circumstances and for a beiter fate, but had by misfortunes lost their liberty, and werc compelled by want to take to this mode of liwing. Among this last class we may also reckon those girls who had heen picked up as young children, and brought up by тор $о$ обобкоí for the purpose of prostitution. An instance of this kind is Nicarcte, a freed woman, who had contrived to procure seven young children, and afterwards compelled them to prostitution, or sold them to men who wished to have the exclusive possession of them. (Dem. c. Neaer. p. ]35], \&c.) Other instances of the same kind are mentioned in the comedies of Plautus. (Compare Isaeus, De Philoctem. hered. p. 143.) Thus all prostitutes kept in public or private houses were either real slaves or at least looked upon and treated as such. Those hetaerae, on the other hand, who lived alone either as mistresses of certain individuals or as common hetaerae, were almost invariably strangers or aliens, or freedwomen. The cases in which daughters of Athenian citizens adopted the life of an hetaera, as Lamia, the daughter of Cleanor (Athen. xiii. p. 577), seem to have occurred very seldom; and whenever such a case happened, the woman was by law excluded from all public sacrifices and offices, sank down to the rank of an alien, and as such became subject to the $\pi$ opvtкठ $\nu \tau \in ́ \lambda o s:$ she generally also changed her namc. The same degradation took place when an Athenian citizen kept a $\pi 0$ veion, which seems to have happened very seldom. (Böckh, Publ. Econ. of Athens, p. 333, 2nd ed.)
(Fr. Jacobs, Beitrïge Zur Gesch. des Weillich. Geschlechts, in his Vermischte Schriften, vol. iv.; Becker, Charikles, vol. i. p. $109-128$, and vol. ii. p. 4I4-489; Limburg-Brouwer, Histoire de la Civilisration Morale et Rcligieuse des Grecs; Wachsmuth, Hellen. Allerth. vol. ii. p. 392, \&c.) [L. S.]

HETAERI (є́т人ipoi). [Exercitus, p. 488, b.]
 $\gamma \rho \alpha \phi$ ). This action was maintainable against such Athenian citizens as liad administered to the umatoral lusts of another ; but only if after such degradation they ventured to excreise their politicnl

## HIERODULI.

franchise, and aspire to bear office in tho state. From the law, which is recited by Aeschines (c. Timarch. p.47), we learn that such offenders were capitally punished. The cause was tried by the court of the thesmothetae. (Meier, Att. Proc. p. 334.)

HETAIRIAE (éralpual). [ERANos.]
HEXA'PHORUM. [Lectica.]
HEXA'STYLOS. [Templum.]
HEXE'RES. [NAvis.]
HIEREION (ípeĩov). [SACR1ficIUM.]
 $\rho \omega \nu)$, priests of the Saviours, that is, of Antigonus and Demetrius, who were received by the Athenians, in B. c. 307 , as their liberators with honours and flatteries of every sort. They even went so far as to pay divine honours to these princes undor the title of Saviours ( $\sigma \omega \tau \hat{\eta} \rho \in s$ ), and to assign a priest (iepeys) to attend to their worship, who was to he elected annually and to give his name to the year in place of the first archon. This continued for twenty years till the conquest of Demetrius by Pyrrhus in B. c. 287 , when the office was aholished and the first archon restored to his former position in the state. (Plut. Demetr. I0, 46.) The magistrates of these twenty. ycars were in later times called archons, as, for instance, by Diodorus and Dionysius of Halicarnassus, since the Athenians, as Clinton remarks, would not leave upon their Fasti this mark of their humiliation. (Droysen, Geschichte des Hellenismus, vol. i. p. 439 ; Clinton, F.H. vol. ii. p. 380, 2d ed. ; Hermann, Lehrbuch. d. Griech. Staatsalterth. § 175, n. 7; Schämann, Antiqu. Jur. Publ. Graec. p. 360.)

HIERODU'LI ( $\mathcal{L} \in \rho \delta \delta_{0 \nu \lambda o l), ~ w e r e ~ p e r s o n s ~ o f ~}$ both sexes, who were devoted like slaves to the worship of the gods. They were of Eastern origin, and are most frequently met with in connection with the worship of the deities of Syria, Phoenicia, and Asia Minor. They consisted of two classes; one composed of slaves properly so called, who attended to all the lower duties connected with the worship of the gods, cultivated the sacred lands, \&c., and whose descendants continued in the same servile condition ; and the other, comprising persons, who were personally free, but had dedicated themselves as slaves to the gods, and who were either attached to the temples, or were dispersed throughout the country and brought to the gods the money they had gained. To the latter class belonged the women, who prostituted their persons and presented to the gads the money they had obtained by this means. The pomp with which religious worship was celebrated in the East, and the vast domains which many of the temples possessed, required a great number of servants and slaves. Thus, the great temple at the Cappadocian Comana possesscd as many as 6000 hieroduli (Strab. xij. p. 535), and that at Morimene had 3000 of the same class of persons. (Strab. xij. p. 537.) So numerous were the hicroduli at Tyre, that tho high-priest by their support frequently obtained the regal dignity. (Joseph. c. Apion. i. 18, 21.) These large numbers arose from the idea, prevalent in the East, that the deity must have a certain class of persons specially dedicated to his service and separated from the ordinary duties of life, and that it was the duty of all who had the power to supply as many persons as they could for their service. Thus, kings dedicated as sacred slaves the prisoncrs whom they took in war, parents their children,
and even persons of the highest families sent their danghters to the temples to sacrifice their chastrty to the gods, at least till the time of their marriage. This practice of females offering their chastity to the gods was of ancient origin in the East, and seems to have arisen from the notion that the gods ought to have the first-fruits of every thing. The custom prevailed at Babylon (Herod. i. 199; Strab. xvi. p. 745), as well as in many other places. (Comp. Heyne, De Balyloniorum instituto religioso, \&c. in Comment. Societ. Gatting. vol. xvi. p. 30, \&c.) The Greek temples had of course slaves to perform the lowest services (Paus. z. 32. § 8); but we also find mention in some Greek temples of free persons of both sexes, who had dedicated themselves voluntarily to the services of some god, and to whom the term of hieroduli was generally applied. Masters, who wished to give slaves their freedom, but were prevented by various canses from manumitting them, presented them to some temple as $i \in p o \delta o v \lambda 01$ under the form of a gift or a sale, and thus procured for them liberty in reality. Such cases of manumission frequently occur in inscriptions, and are explained at length by Curtius (de Manumissione sacra Graecorum, in his Anecdota Delphica, Berlin, 1843, p. 10, \&c.; comp. Plut.

 $\sigma \cdot v)$. The female hieroduli, who prostituted their persons, are only found in Greece connected with the worship of divinities who were of Eastern origin, or many of whose religious rites were borrowed from the East. This was the case with Aphrodite, who was originally an Oriental goddess. At her temple at Corinth there were a thousand iepóouv入ol £тaipat, who were the ruin of many a stranger who visited Corinth, and there was also a large number of the same class of women at her temple at Eryx, in Sicily. (Strab. viii. p. 378, vi. p. 272, comp. xii. p. 559.) (Hirt, Die Hierodulen, with appendices by Böckh and Buttnann, Berlin, 1818 ; Kreuser, Der Hellenen Priesterstat, mit vorzüglicher Rüelosicht auf die Hierodulen, Mainz, 1824 ; Movers, Die Phönizier, p. 359, \&c.; Hermann, Lehrbuch d. gottesdienstlichen Alterthümer d. Griechen, § 20, n. 13-16.)
HIEROMANTEIA (iepomanteia). [DivinaTIO.]

HJEROME'NIA ( iepo $^{2} \mu \eta{ }^{\prime}(\alpha)$, was the time of the month at which the sacred festivals of the Greeks began, and in consequence of which the whele month received the name of $\mu \dot{\eta} \nu$ iepós. It was a part of the international law of Greece that all hostilities should cease for the tine between states who took part in these festivals, so that the inhabitants of the different states might ge and return in safety. The hieromeniae of the four great national festivals were of course of the most importance: they were proclaimed by heralds ( $\sigma \pi \alpha \nu \delta 0 \phi \delta \rho 0 t$ ), who visited the different states of Greece for the purpose. The suspension of hosti-
 Strab. viii. p. 343 ; Krause, Olympia, p. 40, \&c.; and the article Onympia.)

HIEROMNE'MONES (iepo $\mu \nu \eta \mu o \nu \in s$ ), were the more honourable of the two classes of representatives who composed the Amphictyonic council. An account of them is given under Amphictyones. We also read of Hieromnemones in Grecian states, distinet from the Amphictyonic representatives of this name. Thus the priests of Poseidon, at

Megara, were called hieromnemones (Plut. Sympi. viii. 8. § 4) ; and at Byzantium, which was a colony of Megara, the chief magistrate in the state appears to have been called by this name. In a decree of Byzantium, quoted by Demosthenes (pro Coron. p. 255. 20 ; compare Polyb. iv. 52. § 4), an hieromnemon is mentioned, who gives his name to the year ; and we also find the same word on the coins of this city. (Eckhel, Doctr. Num. vol. ii. p. 31, \&c.) At Chalcedon, another colony of Megara, an hieromnemon also existed, as is proved by a decree which is still extant. (Mïller, Dor. iii. 9. § 10.) An inscription found in Thasos also mentions an hieromnemon who presided over the treasury. (Böckh, Corp. Inserip. vol. ii. pp. 183, 184.) HIERONI CAE. [AThlettar.]
HIEROPHANTES (iєpoфá $\nu \tau \eta s$ ). [Elevsinia.]

HIEROPOII (ifpomotol), were sacrificers at Athens, of whom ten were appointed every year, and conducted all the usual sacrifices, as well as those belonging to the quinquennial festivals, with the exception of those of the Panathenaea. (Pollux, vii. 107; Photius, s. v. 'Iepotoнol.) They are frequently mentioned in inscriptions. (Böckh, Corp. Inser. vol. i. p. 250.) The most honourable of these officers were the sacrificers for the revered goddesses or Eumenides (ífotorol taîs afuvaîs A $\in a i s$ ), who were chosen by open vote, and probably only performed the commencement of the sacrifice, and did not kill the victim themselves. (Dem. c. Meid. p. 552. 6 ; Böckh, Publ. Econ. of Athens, p. 216. )

HIEROSXLIAS GRAPHE ( $i \in \rho o \sigma u \lambda i a s ~ \gamma p a-$ $\phi$ 分. The action for sacrilege is distinguished from the $\kappa \lambda о \pi \hat{\eta} s{ }_{i} \in \rho \bar{\omega} \nu \quad \chi \rho \eta \mu a \dot{\alpha} \omega \nu \quad \gamma \rho a \phi \dot{\eta}$, in that it was directed against the offence of robbery, aggravated by violence and desecration, to which the penalty of death was awarded. In the latter action, on the contrary, the theft or embezzlement, and its subject-matter, only were taken into consideration, and the dicasts had a power of assessing the penalty upon the conviction of the offender. With respect to the tribunal before which a case of sacrilege might have been tried, some circumstances seem to have produced considerable differences. The $\gamma \rho a \phi \dot{\eta}$ might be preferred to the king archon, who would thereupon assemble the areiopagus and preside at the trial, or to one of the thesmothetae in his character of chief of an ordinary Heliastic hody ; or, if the prosecution assumed the form of an apagoge or ephegesis, would fall within the jurisdiction of the Eleven. Before the first-mentioned court it is conjectured (Meier, Att. Proc. p. 307) that the sacrilege of the alleged spoliation, as well as the fact itself, came in ques. tion ; that the thesmothetae took cognizance of those cases in which the sacrilege was obvious if the fact were established; and that the Eleven had jurisdiction when the criminal appeared in the character of a common robber or burglar, surprised in the commission of the offence. In all these cases the convict was put to death, his property confiscated, and his body denied burial within the Attic territory. There is a speech of Lysias (pro Callia) extant upon this subject, but it adds little to our knowledge; except that slaves were allowed upon that occasion to appear as informers against their master-a resident alien - and anticipated their emancipation in the event of his conviction.
[J. S. M.]

HILA'RIA (i^dápıa) seems originally to have been a name which was given to any day or season of rejoicing. The hilaria were, therefore, according to Maximus Monachus (Schol. ad Dionys. Areopag. Epist. 8) either private or public. Among the former he reckons the day on which a person married, and on which a son was born; among the latter, those days of public rejoicings appointed by a new emperor. Such days were devoted to general rejoicings and public sacrifices, and no one was allowed to show any symptoms of grief or sorrow.

But the Romans alse celehrated hilaria, as a feris stativa, on the 25th of March, in honour of Cybele, the mother of the gods (Macrob. Sat. i. 21); and it is probably to distinguish these hilaria from those mentioned above, that Lampridius (Alexand. Sever. c. 37) calls them Hilaria Matris Deam. The day of its celebration was the first after the vernal equinox, or the first day of the year which was longer than the night. The winter with its gloom had passed away, and the first day of a better season was spent in rejoicings. (Flav. Vopisc. Aurelian. c. 1.) The manner of its celebration during the time of the republic is unknown, except that Valerius Maximus (ii. 4. §3) mentions games in honour of the mother of the gods. Respecting its celebration at the time of the empire, we learn from Herodian (i. I0, Il) that, among other things, there was a solemn procession, in which the statue of the goddess was carried, and before this statue were carried the most costly specimens of plate and works of art belonging either to wealthy Romans or to the emperors themselves. All kinds of games and amusements were allowed on this day ; masquerades were the most prominent anong them, and every one might, in his disguise, imitate whomsoever he liked, and even magistrates.

The hilaria were in reality only the last day of a festival of Cybele, which commenced on the 22 d of March, and was solemnised by the Galli with various mysterious rites. (Ovid, Fast. iv. 337, \&c.) It must, however, he observed that the hilaria are neither mentioned in the Roman calendar nor in Ovid's Fasti.

HIPPARCHUS. [Exercitus, p. 487, a]
HIPPARMOSTES. [ExERCITOS, p. 483, b.]
HI'PPICON ( $i \pi \pi \iota \kappa \delta \nu$, sc. $\sigma \tau \alpha ́ \delta \iota \nu \nu$ ), a Greek measure of distance, equal to four stadia. According to Plotarch it was mentioned in the laws of Solon (Plut. Sol. 23). Hesyching also mentions it under the name of $\ell \pi \pi \in t o s ~ \delta \rho \delta \mu o s$. (Comp. Hipponromus; Stanium.)
[P.S.]
 horses, was the name of the nobility of Chalcis in Euboea, corresponding to the $i \pi \pi \in i s$ in other Greek states. On the conquest of the Chalcidians by the Athenians in B. c. 506, these Hippobatae were deprived of their lands, and 4000 Athenian cleruchi sent to take possession of them. (Herod. v. 77, vi. 100 ; Strab. x. p. 447 ; Plut. Pericl. 23 ; Aelian, V. H. vi. I.) [Colonia, p. 3I4, a.]
 adjective derived from the name of the architect Hippodamus of Miletus, who is said to have been the first of the Greeks who built whole cities on a regular architectural plan; and hence the word is applied to such cities, and to the puhlic places and buildings in them. Peiraeeus, for example, was

designed hy Hippodamns, and its market-place
 Hippodamus flourished during the second half of the fifth century 8. c. (See Dict. of Biog. art. Hippodamus; Müller, Archëol. d. Kunst, § 11 I.)
[P. S.]
HIPPO'DROMUS ( $i \pi \pi \delta \delta \rho o \mu \sigma s$ ) was the name by which the Greeks designated the place appropriated to the horse-races, both of chariots and of single horses, which formed a part of their games. The word was also applied to the races themselves,
. The mode of fighting from chariots, as described by Homer, involves the necessity of much previous practice; and the funeral games in honour of Patroclus present us with an example of ths chariot-race, occupying the first and most important place in these games. (Il. xxiii. 262-650.) In this vivid description the nature of the contest and the arrangements for it are very clearly indicated. There is no artificially constructed hippodrome; hut an existing land mark or monument ( $\sigma \hat{\eta} \mu a$, 33 I ) is chosen as the goal ( $\tau$ ' $\rho \mu a$ ), round which the chariots had to pass, leaving it on the left hand (336), and so returning to the Greek ships on the sea-shore, from which they had started (365). The course thus marked out was so long, that the goal, which was the stump of a tree, could only be clearly seen by its having two white stones lesning against it (327-329), and that, as the chariota return, the spectators are uncertain which is first ( 450 , \&c. : the passage furnishes a precedent for betting at a horse-race, 485). The ground is a level plain (330), but with its natural inequalities, which are sufficient to make the light chariots lesp from the ground ( 369,370 ), and to threaten an overthrow where the earth was hroken by s winter torrent, or a collision in the narrow hollow way thus formed (419-447). The chariots were five in number, each with two horses and a single driver (288, \&c.)*; who stood upright in his chariot (370).

In a race of this nature, success would obviously depend quite as much on the courage and skill of the driver as on the speed of the horses; $s$ fact which Homer represents Nestor as impressing upon his son Antilochns in a speech which fully explains the chief stratagems and dangers of the contest, and is nearly as applicable to the chariot races of later times as to the one described by Homer (305-348). At starting, it was necessary so to direct the horses as, on the one hand, to avoid the loss of time by driving wide of the straightest course, and on the other not to incur the risk of a collision in the crowd of chariots, nor to malse so straight for the goal as to leave insufficient room to turm it. Here was the critical point of the race, to turn the goal as sharp as possible, with the nave of the near wheel almost grazing it, and to do this safely: very often the driver was here thrown out, and the chariot broken in pieces (334-343, 465 -468). There was another danger at this point, which deserves particular notice as connected with the arrangements of the hippodrome of later times As the horse is a very timid animal, it can easily he understood that the noise and crush of many chariots turning the goal together, with the addi-

* Bit Nestor complains of having been once heaten by two brothers driving at once, the one managing the reins and the other plying the whip (638-642).

HIPPODROMUS.
thonal confusion created by the overthrow of some of them, would so frighten some of the horses as to make them unmanageable; and this is expressly referred to by Homer (468)

Among the other disasters, to which the competitors were liable were the loss of the whip (384); the reins escaping from the hands (465); the breaking of the pole (392); the light chariot being overturned, or the driver thrown out of it, through the roughness of the ground, or by neglecting to halance the body properly in turning the goal (368, $369,417-425,335$ ) ; and the heing compelled to give way to a bolder driver, for fear of a collision ( $426-437$ ) ; but it was considered foul play to take such an advantage ( $439-441,566-611$ ). These and similar disasters were no doubt frequent, snd, in secordance with the religious character of the games, they were ascribed to the intervention

HIPPODROMUS.
of the deities, whom the sufferer had neglected to propitiste (383-393, 546, 547). The prizes, as in the other Homeric games, were of substantial value, and one for each competitor (262-270). The charioteer accused of foul play was required to lay his hand upon his horses, and to swear by Poseidon, the patron deity of the race, that he was guiltless (581-585).

This description may be illustrated by the following engraving from an antique Greek vase; in which we see the goal as a mere stone post, with a fillet wound round it: the form of the chariot:, are well shown, and the attitude of the drivers; each has four horses, as in the earliest Olympic chariot race; and the vividness of the representation is increased by the introduction of the incident of a horse having got loose from the first chariot, the driver of which strives to retain his place with the other. (Panofka, Bilder Antiken Lelens, pl. iii. No. 10.)

For other representations of the race and its disasters, see Circus, p. 285, Currus, p. 379.
In no other writer, not even in Pindar, have we a description at once so vivid and so minute, of the Greek chariot race as this of Homer's ; but it may he safely assumed that, with a few points of difference, it will give us an equally good idea of a chariot race at Olympis or any other of the great games of later times. The chief points of difference were the greater compactness of the course, in order that a large body of apectators might view the race with convenience, and the grester number of chariots. The tirst of these conditions involved the necessity of making the race consist of several double lengths of the course, instead of only one;
the second required some arrangement by which the chariats might start without confusion and on equal terms. It is now to be seen how these conditions were satisfied in the hippodrome at Olympia; of which the only description we possess is in two passages of Pausanias (vi. 20, v. 15. §4). Very different explanations have been proposed of some important points in those descriptions; but, from want of space, and from a strong conviction of what the correct explanation is, we pass over the discussion, and give only the result of it, according to the view of Alexandre de la Borde, which is adopted by Hirt (Lehre d. Gebäude, pp. 147-150). The following is the ground-plan, which Hirt (pl. xx. ñg. 8) has drawn out from the

description of Pausanias. A, B, the sides, C , the end of the hippodrome, with raised seats for the spectators (the dotted line D d is the axis of the figure). a. Place of honour for the magistrates and musicians ; $b, d$. gateways; $D$, the starting-place; $e$, its apex ; $f, g$, its curved sides ; $h, i, \& c$., up to $l$, stations of the chariots, their directions converging towards the point E. F, G, the goals, or turning-posts; H , the spina; $p p$, small intervals
hetween the spina and the goals; $q$, the winning line; $m$, dolphin used as a signal ; $n$, altar, with cagle for signal ; o o o, portico of Agnamptus.

The general form of the hippodrome was an ohlong, with a semicircular end, and with the right side, A, somewhat longer than the left, B, for a reason to be stated presently. The right side, $A$, was formed by an artificial-mound; the left, B, by the natural slope of a hill. There were (besides
the starting-place) two entrances to the area, $b$ and d, of which the former was probably for the exit of disabled chariots and horses, and the latter appears to have been for the same purpose as the porta triumphalis in the Roman circus. The base of the fourth side, $\mathbf{D}$, was formed by the portico of Agnamptus, so called from its builder. At this end of the hippodrome was the starting-place ( $\alpha \phi \in \sigma t s$ ), in the form of the prow of a ship, with its apex, $e$, towards the area, and each of its sides more than 400 feet long. Along hoth these sides were stalls (ointuata) for the chariots about to start, like the carceres in the Roman circus; and it was in the arrangement of these stalls that the peculiarity of the Greek starting-place consisted. According to the view which we follow, the stalls were so arranged, as that the pole of each chariot, while standing in its stall, was directed to a normal point, E, at which, as nearly as possible, each chariot ought to fall into its proper course. As this point, $E$, was necessarily on the right side of the area (in order to turn the goal on the left hand), and as the corresponding stalle on each side were required to he equidistant from the apex, $e$ (as will presently be seen) and of course also from the point E , it follows that the base of the aphesis must have been perpendicular to the line E e, and therefore oblique to the axis D d; and this is the reason why the side A was longer than the side B. The curvature of the sides of the aphesis, $f, g$, is a conjectural arrangement, assumed as that which was probably adopted to give more space to each chariot at starting. The front of each stall had a cord drawn across it, and the necessary arrangements were made for letting these cords fall at the right moments. On the signal being given for the race to begin, the cords in front of the two extreme stalls, $h h$, were let fall simnltaneously, and the two chariots started; then those of the next pair ; and so on, each pair of chariots being liberated at the precise moment when those which had already started came abreast of their position ; and, when all the chariots formed an even line abreast of the apex of the aphesis, $e$, it was a fair start. This arrangement of the aphesis was the invention of the statuary Cleoctas, and was improved by Aristeides (perhaps the famous painter; see Hirt, l.c.). Cleoetas celebrated his invention in an epigram, which be inscribed on the base of a statne made by him at Athens:

##  <br> 

Precisely the same arrangements were made for the start in the race of single horses ( $\kappa$ é $\lambda \eta \tau \in s$ ), and in both cases, as in the race described by Homer, the stalls were assigned to the competitors by lot. How many chariots usually started, cannot be determined; but that the number was
large is proved by the well-known story, that Alcibiades alone sent to one race seven chariots. Sophocles (Elect. 701-708) mentions ten chariots as running at once in the Pythian games; and the number at Olympia was no doubt greater than at any of the other games. This is probably the reason why the arrangements of a starting-place were so much more complicated in the Greek hippodromus than they were in the Roman circus [Circus]. About the centre of the triangular area of the aphesis there was an altar, $n$, of rough brick, which was plastered afresh before each festival, surmounted by a bronze eagle with outstretched wings; and ahove the apex of the aphesis was a bronze dolphin, $m$. As the sigual for the race to hegin, the eagle was made to soar aloft, so as to be seen hy all the spectators, and the dolphin sank to the ground.

The chariots, thus started, had to pass several times round two goals ( $\nu$ v́б看al), the distinction between which is one of the difficult points in the description of Pausanias. On the whole it seems most probable that the one which he describes as having upon it a hronze statue of Hippodameia, holding out the victor's fillet, as if ahout to crown Pelops with it, was the one nearer to the aphesis, and abreast of the winning line, $\boldsymbol{F}$; and that the other, $G$, round which the chariots made their firat turn, was that which Pausanias calls "Taraxippus, the terror of the horses." This was a round altar, dedicated to Taraxippus, who was supposed to strike a supernatural terror into the horses as they passed the spot, and whom, therefore, the charioteers songht to propitiate, before the race began, by offering sacrifices and making vows at this altar. Pausanias gives varions accounts as to who this Taraxippus was: some modern scholars take the word for an appellation of Poseidon Hippius. He was similarly hnnoured in the Isthmian hippon drome. At Nemea there was no such hero, but above the turning point of the course there was a hright red rock, which was supposed to frighten the horses. He adds the remark that, the Olympian Taraxippus had by far the most powerful effect upon the horses; and considering that the number of chariots which joined in the race there was greater than at any of the other ganes, that remark affords a pretty clear proof that the explanation of the supposed supernatural terror is that which has been given above in descrihing the Homeric race. There are several vase paintings, on which chariots or single horses are exhibited turning the goal, which is represented as a Dorio or Ionic column. (See Panofka, Bilder Antiken Lebens, pl. iii.) One of these is shown in the following engraving, which exhibits a vivid picture of a race of single horses: the last rider has been unlucky in turning the goal.

There is no authority in the account of Pausanias

for the connecting wall, $H$, between the goals, nor does he state that the winning line, $q$, was marked out as a white line ; but these details are inserted from the analogy of the Roman circus. So also is the oblique position of the line of the goals, as compared with the axis of the figure: of course the greatest space was required at E , where the chariots were all nearly abreast of each other.

Respecting the dimensions of the Olympic Hippodrome we have no precise information; but, from the length of the measure called Hippicon, and on other grounds, it seems probable that the distance from the starting-place to the goal, or perhaps rather from one goal to the other, was two stadia, so that one double course was four stadia. How many such double courses made up the whole race, we are not informed. The width must have been, at least, as great as the length of each side of the aphesis, namely, more than 400 feet. There does not appear to have heen much arehitectural display in the structure, and not many statues. The interaal area of. the aphesis, D , contained several altars.

The chief points of difference hetween the Greek hippodrome and the Roman circus are the smaller width of the latter, as only four chariots ran at once, and the different arrangement of the carceres. The periods at which the Olympic horse-races were instituted are mentioned under Olympia.

A few other hippodromes in Greece, Syria, and Egypt, are mentioned by Pausanias and other writers; but they deserve no special mention. (Comp. Krause, Gymn. und Agon. vol. i. pp. 151, \&e.) See also Hortus.
[P. S.]
HIPPOPE'RAE (immomhpar), saddle-bags. This appendage to the saddle [Ephrppium] was made of leather (sacculi scortei, Festus, s. v. Bulgae), and does not appear ever to have changed its form and appearance. Its proper Latin name was bisaccium (Petron. Sat. 31), which gave origin to bisaccia in Italian and besace in French. By the Gauls, saddje-bags were called bulgae (Festus, l.c. ; Onomust. Gr. Lat.), because they bulge or swell outwards ; this significant appellation is still retained in the Welsh bolgan or bulgan. The more elegant term hippoperae is adopted by Seneca (Epist. 88).
[J. Y.]
HISTION and HISTOS (iotiuv, iovós). [Navis.]

HI'STRIO (їтокрıтиs), an actor. l. Greer. It is shown in the articles Chorus and Dionysia that the Greek drama originated in the chorus which at the festivals of Dionysus danced around his altar, and that at first one person detached himself from the chorus, and, with mimic gesticulation, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person they were all represented in succession by the same actor, and there was never more than one person on the stage at a time. This custom was retained by Thespis and Phrynichus. But it was clear that if the chorus took an active and independent part in such a play, it would have been obliged to leave its original and characteristic sphere. Aeschylus therefore added a second actor, so that the action and the dialogue became independent of the chorus, and the dramatist at the same time had an opportunity of showing two persons in contrast with each other on the stage. (Aristot. Poet. ii. 14.) Towards the close of his career, Aeschylus found it necensary
to introduce a third actor, as is the case in the Agamemnon, Choëphori, and Eumenides. (Pollux, iv. 110.) This number of three actors was also adopted by Sophocles and Euripides, and was but seldom exceeded in any Greek drama. In the Oedipus in Colonus, however, which was performed after the death of Sophocles, four actors appeared on the stage at once, and this deviation from the general rule was called $\pi \alpha \rho a \chi \circ \rho \neq\{\quad \eta \eta \mu$. (Pollux, l. e.) The three regular actors were distinguished by the technical names of $\pi \rho \omega \tau \alpha \gamma \omega \nu \tau \sigma \tau$ is, $\delta \in \omega \tau \in \rho a-$
 र由viaths: Demosth. de Coron. p. 315, de Fals. Leg. p. 344 and 403), which indicated the more or less prominent part which an actor had to perform in the drama. Certain conventional means were also devised, by which the spectators, at the moment an actor appeared on the stage, were enabled to judge which part he was going to perform ; thus, the protagonistes always came on the stage from a door in the centre, the deuteragonistes from one on the right, and the tritagonistes from a door on the left hand side. (Pollux, iv. 124.) The protagonistes was the principal hero or heroine of a play, in whom all the power and energy of the drama were concentrated; and whenever a Greek drama is called after the name of one of its personae, it is always the name of the character which was performed by the protagonistes. The deuteragonistes, in the pieces of Aeschylus for two actors, calls forth the various emotions of the protagonistes either by friendly sympathy or by painful tidings, \&c. The part of a tritagonistes is represented by some external and invisible power, by which the hero is actuated or caused to suffer. When a tritagonistes was added, the part assigned to him was generally that of an instigator who was the cause of the sufferings of the protagonistes, while he himself was the least capable of depth of feeling or sympathy. The deuteragonistes in the dramas for tbree actors is generally distinguished by loftiness and warmth of feeling, but has not its depth and vehemence peculiar to the protagonistes, and thus serves as a foil to set forth the character of the ehief hero in its most striking and vivid colours. (Müller, Hist of Greek Lit. i. p. 305, \&c. ; compare Böttiger, De Actoribus Primarum, Secund. et Tert. Partium.)
The female characters of a play were always performed by young men, A distinct class of persons, who made acting on the stage their prefession, was unknown to the Greeks during the period of their great dramatists. The earliest and greatest dramatic poets, Thespis, Melanthius, Sophocles, and probably Aeschylus also, acted in their own plays, and in all prolability as protagonistae. We also know of several instances in which distinguished Athenian eitizens appeared on the stage, and Aeschines, the orator, did not scruple to act the part of tritagonistes. (Demosth. l.c.) These circumstances show that it was by no means thonght degrading in Greece to perform as an actor, and that no stigma whatever was attached to the name of a man for his appearing on the stage. Bad actors, however, to whatever station in life they belonged, were not, on that account, spared ; and the general mode of showing displeasure on the part of the spectators seems to have been by whistling. (Demosth. De Coron. p. 315.) It appears that when the spectators showed their displeasure in too offensive or insulting a manner,

## HISTRIO.

the actors would sometimes attack the most forward of the audience, and quarrels of this kind ended not unfrequently in hlows and wounds. (Demosth. de Coron. p. 314, de Fals. Leg. p. 449 ; Andocid. c. Alcib. p. 121 ; Athen. ix. p. 406.) At a later period, bowever, persons began to devote themselves exclusively to the profession of actors, and distinguished individuals received even as early as the time of Demosthenes exorbitant sums for their performances. Various instances are mentioned in Bückh's Publ. Econ. of Athens, p. 120, \&c. At the time when Greece had lost her independence, we find regular troops of actors, who were either stationary in particular towns of Greece, or wandered from place to place, and engaged themselves wherever they found it most profitable. They formed regular conpanies or guilds, with their own internal organisation, with their common officers, property, and sacra. We possess a number of inscriptions belonging to such companies, with decrees to honour their superiors, or to declare their gratitude to some king by whom they bad been engaged. But these actors are generally spoken of in very contemptuous terms; they were perhaps in some cases slaves or freedmen, and their ordinary pay seems to have been seven drachmae for every performance. (Lucian, Icaromen. 29, de Merced. Cond. 5 ; Theophrast. Charact. 6.)
(Compare Miuller, Hist. of Greek Lit. i. p. 304, \&c. ; Becker, Charikles, ii. p. 274 ; Bode, Gesch. der Dram. Dichtkunst der Hellenen, 2 vols. 1839 and 1840.)
2. Roman. The word histriones, by which the Romsn actors were called, is said to have been formed from the Etruscan hister which signified a ludio or dancer. (Liv. vii. 2 ; Val. Max. ii. 4. § 4 ; compare Plut. Quaest. Rom. p. 289, c.) In the year 364 в. c. Rome was visited by a plague, and as no human means could stop it, the Romans are said to have tried to avert the anger of the gods by scenic plays (ludi sceniei), which, until then, had been unknown to them; and as there were no persons at Rome prepared for such performances, the Romans sent to Etruria for them. The first histriones who were thus introduced from Etruria, were dancers, and performed their movements to the accompaniment of a flute. Thst the art of dancing to this accompaniment should have been altogether unknown to the Romans is hardly credible; the real secret must have been in the mode of dancing, that is, in the mimic representations of the dancers, such as they are described by Dionysius (Antiq. Rom. vii. 72) and Appian (viii. 66). That the Etruscans far excelled the Romans in these mimic dances, is more than probable; and we find that in subsequent times also, a fresh supply of Etruscan dancers (histriones) came to Rome. (Mïller, Etrusk. iv. 1. 6.) Roman youths afterwards not only imitated these dancers, but also recited rude and jocose verses, adapted to the movements of the dance and the melody of the flute. This kind of amusement, which was the basis of the Roman drama, remained unaltered until the time of Livins Andronicus, who introduced a slave upon the stage for the purpose of singing or reciting the recitative, while he himself performed the appropriate dance and gesticulation. [CANTICum.] A further step in the development of the drama, which is likewise ascribed to Livins, was, that the dancer and reciter carried on a dialogue, and acted a story with the accompaniment of the flute. (See

Gronov. ad Liv. l. c.) The name bistrio, which originally signified a dancer, was now applied to the actors in the drama. The atellanae were played by freeborn Romans, while the regular drama was left to the histriones who formed s distinct class of persons. It is clear from the words of Livy, that the histriones were not citizens; that they were not contained in the tribes, nor allowed to be enlisted as soldiers in the Roman legions; and that if any citizen entered the profession of histrio, be, on this account, was excluded from his tribe. Niebuhr (Hist. of Rome, i. p. 520, note 1150) thinks differently, but does not assign any reason for his opinion. The histriones were therefore alwsys either freed-men, strangers, or slaves, and many passages of Roman writers show that they were generally held in great contempt. (Cic. pro Arch. 5 ; Corn. Nep. Praefat. 5 ; Sueton. Tbb. 35.) Towards the close of the republic it was only sach men as Cicero, who, by their Greek educstion, rsised themselves ahove the prejudices of their countrymen, and valned the person no less thsn the talents of an Aesopus and Roscins. (Macrob. Sat. ii. 10.) But notwithstanding this low estimation in which actors were generally held, distinguished individuals smong them sttracted immense crowds to the theatres, and were exorbitantly paid. (Cic. e. Verr. iv. 16.) Roscius alone received every day that he performed one thousand denarii, and Aesopus left his son a fortune of 200,000 sesterces, which he had acquired solely ly his profession. (Macroh. l.e.) The position of the histriones was in some respects altered during the empire. By an ancient law the Roman magistrates were empowered to coerce the histriones st any time and in any place, and the practor bad the right to scourge them (jus virgarum in listoviones). This law was partly aholished by Augustus, in as far as he did entirely away with the jus virgarum, and confined the interference of the magistrates to the time when, and the place where (ludi et scena) the actors performed. (Tacit. Annal. i.77.) But be nevertheless inflicted very scvere pnnishmenta upon those actors who, either in their private life or in their conduct on the stage, committed any impropriety. (Suet. Aug. 45.) After these regulations of Augustus the only legal punishments that could be inflicted upon actors for improper conduct, seem to have been imprisonment and exile. (Tacit. Annal. iv. 14, xiii. 28.) The jus virgarum is indeed said to bave been restored to the prsetor by a law of Augustus himself (Paull. Sent. v. tit. 26), not expressly, but by the interpretation put upon this law by the jurists. But this interpretation cannot have become valid till after the reign of Tiberins, of whom it is clearly stated that he refused to restore the jus virgarum, because it had been abolished by his predecessor. (Tacit. Annal. i. 77.) These circumstances, and the favour of the emperors, increased the arrogance and the loose conduct of the histriones, and the theatres were not seldom the scenes of bloody fights. Hence Tiberius on one occasion found himself obliged to expel all histriones from Italy (Tacit. Annal. iv. 14 ; Dion Cass. lix. 2) ; but they were recalled and patronised by his successor. (Dion Cass. lix. p. 738.) Sorne of the later emperors were exceedingly fond of histriones, and kept them for their private amusement (histriones aulici, Spartian. Hadrian. c. 19 ; Jul. Capitol. Verus, c. 8). They performed at the repasts of
the emperors (Sueton. Aug. 74), and were occasionally allowed also to play in the theatres before the people (publicabantur). In the Digest (3.tit. 2. s. 1) we read that all actors were infamous. From the time of Tacitus the word histrio was used as synonymous with pantomimus. (Bötticher, Lex. Tacit. p. 233.)
Respecting the ordinary pay which common actors received during the time of the republic nothing is known. The pay itself was called lucar (Tacit. Annal. i. 77 ; Plut. Quaest. Rom. p. 285, c. ; Festus, s. vv. lucar and pecunia); which word was perhaps confined originally to the payment made to those who took part in the religions services celebrated in groves. In the times of the empire it seems that five denarii (Senec. Epist. 80), or, according to others (Lucian. Icaromen. c. 29), seven drachmae, was the common pay for a histrio for une performance. Several emperors formd it necessary to restrict the practice of giving immoderate sums to actors. (Tacit. l. c.; Suet. Tib. 34.) The emperor M. Antoninus, who was fond of all histrionic arts, ordained that every actor should receive five aurei, and that no one who gave or conducted theatrical representations should exceed the sum of ten aurei. (Jul. Capitol. M. Anton. c. II; compare Schol. ad Juvenal. vii. 243.) But it is not clear whether in this regulation the payment for one or more performances is to be understood. These sums were either paid by those who engaged the actors to play for the amusement of the people, or from the fiscus. (Lipsius, Excurs. N. ad Tacit. Annal. i.) Besides their regular pay, however, skilful histriones received from the people gold and silver crowns which were given or thrown to them upon the stage. (Phaedr. Fab. v. 7. 36 ; Plin. H. N. xxi. 3.)
[L. S.]
HODOPOEI ( $\delta \delta \pi 0 \pi 010$ ), public officers at Athens, who had to take care of the roads (oi $\delta \delta \omega \bar{\epsilon} \dot{\epsilon} \pi \mu \mu \in \lambda \eta \tau \alpha$ !, Phot. Lex. s.v.) They are mentioned in the fragment of a comic poet of the time of Pericles (Plut. Pracc. Pol. c. 15) ; but in the time of Aeschines their duties were discharged by the managers of the Theoric fund. (Aesch. c. Ctes. p. 419, Reiske ; comp. Bäckh, Publ. Econ. of Athens, p. 203, 2nd ed.)

## HOLOSE'RICA VESTIS. [SERIcum.]

HOLOSPHY'RATON, HOLOSPHYRE'Lata [Malleus; Metalla.]

HOMOEI ( $\% \mu 0 t 0 t$ ), the Equals, were those Spartans who possessed the full rights of citizenship, and are opposed to the ito $\boldsymbol{\mu}$ eloves, or those who had undergone some kind of civil degradation. (Xen. de Rep. Laced. x. 4. s. 7, Hellen. iii. 3. §5; Arist. Pol. ii. 6. § 21.) This distinction hetween the citizens was no part of the ancient Spartan constitution, and is not mentioned by any writer before Xenophon ; and Aristotle simply makes a later institution applicable to an early time, when he speaks of the Partheniae as beloriging to the Homoei (Pol. v. 6. §1). In the institution ascribed to Lyycurgus, every citizen had a certain portion of land; but as in course of time many citizens lost their lands through various causes, they were unable to contribute to the expenses of the syssitia, and therefore ceased to possess the full rights of Spartan citizens. Hence the distinction appears to have arisen between the
 were in the possession of their land, and consequently able to contribute to the syssitia, the
latter those who through having no land were unable to do so. (Comp. Arist. Pol. ii. 6. § 21, ii. 7. §4.) Those persons likewise, who did not adopt the Spartan mode of life or had disgraced themselves by any base act, were also reduced to the condition of $\dot{v} \pi \boldsymbol{\sigma} \in \boldsymbol{i} 0 \boldsymbol{\nu} \in s$, even if they possessed the requisite landed property (Xen. de Rep. Lac. x. 4. s. 7 ; Plut. Inst. Lae. 21 ; Teles. ap. Stob. Floril. xl. p. 233) ; but as the severity of the ancient Spartan manners decayed, the possession of property became the chief test to a place among the Homoei. The Homoei were the ruling class in the state, and they obtained possession of almost all the privileges and exclusive rights which the legislation of Lycurgus conferred upon the Spartan citizens. They filled all the public offices of the state with the exception of the Fphoralty, and they probably met together to determine upon public affairs under the name of éкнл $\boldsymbol{\text { rot }}$ in an assembly of their own, which is called $\dot{\eta} \mu$ uкpà ${ }^{2} \kappa \kappa \lambda \eta \sigma i a$, to distinguish it from the assembly of the whole body of Spartan citizens. (Hermann, Lehrb. d. Griech. Staatsalterth. § 47 ; Id. de Conditione atque Origine eorum qui Homoei ap. Laced. dicebantur, Marburg, 1832; Schömann, Antiq. Jur. Publ. Graee p. 119.)

HONORA'R1A ACTIO. [Actio.]
HONORA'RII LUDI. [LUDI.]
HONORA'RIUM. [Anvocatus; Lex Cincia.]

HONORA'RIUM JUS. [Enictum.]
HONO ${ }^{\prime}$ RES. Cicero (Top. c. 20) speaks of the "honores populi," and Horace (Serm. i. 6. 5) speaks of the populus
"qui stultus honores
Saepe dat indignis."
In hoth passages the word " honores" means the high offices of the state to which qualified individuals were called by the votes of the Roman citizens. Cicero calls the quaestorship "honor" (see also Liv. vi. 39) ; and the words "magistratus" and " honores" are sometimes coupled together. The capacity of enjoying the honores was one of the distinguishing marks of citizenship. [Civitas.] In Sulla's proscription (Vell. Pat. ii. 28), there was a clause that the children of the proscribed "petendorum honorum jure prohiberentur."
There appears to be no exact definition of honor earlier than in the jurists whose writings are excerpted in the Digest. "Honor municipalis" is defined to be "administratio reipublicae cum dignitatis gradu, sive cum sumptu, sive sine erogatione contingens." Munus was either publicum or privatum. A publicum munus was concerned about administration (in administranda republicu), and was attended with cost (sumptus) but not with rank (dignitas). "Honor" was properly said "deferri,"" "dari;" munus was said "imponi." Cicero (de Or. i. 45) uses the phrase" honorihus et reipublicae muneribus perfunctum," to signify one who has attained all the honours that his state can give, and discharged all the duties which can be required from a citizen. A person who held a magistratus might be said to discharge munera, but only as incident to the office (magnificentissimo munere aedilitatis perfunctus, Cic. ad Fam. xi. 17), for the office itself was the honor. Such munera as these were public games and other things of the kind. (Dig. 50. tit. 4. De Muneribus ef Ho. noribus.)
[G. I.]

## HORL

HOPLI'TAE ( $\dot{\sigma \pi \lambda i ̄ \tau a l) ~}$ citus.]
hoplomachi. [Gladiatores, p. 575, b.]
HORA (\#pa), in the signification of hour, that is, the 12 th part of the natural day, did not come into general use among the ancients until about the middle of the second century в. c. The equinoctial hours, thongh known to astronomers, were not used in the affairs of common life till towards the end of the fourth century of the Christian era. As the division of the natural day into twelve equal parts, both in summer and winter, rendered the duration of the hours longer or shorter according to the different seasons of the year, it is not easy, with accuracy, to compare or reduce the hours of the ancients to our equinoctial hours. The hours of an ancient day would only coincide with the hours of our day at the two equinoxes. [Dies and Honologium.] As the duration of the natural day, moreover, depends on the polar altitnde of a place, our natural days would not coincide with the natural days in Italy or Greece. Ideler, in his Handbuch der Chronologie, has given the following approximate duration of the natural days at Rome, in the year 45 B. C., which was the first after the new regulation of the calendar by J. Caesar ; the length of the days is only marked at the eight principal points in the apparent course of the sun.

Days of the year.
45 в. с.

The following table contains a comparison of the hours of a Roman natural day, at the summer and winter solstice, with the honrs of our day.

## . Modern Hours.

| an Hours. | . Modern Hours. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 11th hour | 2 o'clock, 58 minutes 0 |  |  |  |  | Ond |
| 12th | 3 | 42 |  | 30 |  |  |
| End of the day | 4 | 27 |  |  |  |  |

The custom of dividing the natural day into twelve equal parts or hours lasted, as we have ohserved, till a very late period. The first calendarium in which we find the duration of day and night marked according to equinoctial hours, is the calendarium rusticum Farnesiannm. (Ideler, Handbuch der Chron. ii. p. 139, \&c. ; Graev. Thesaur. Ant. Rom. viii.)

Another question which has often been discussed, is whether in such expressions as prima, altera, tertia, hors, \&c., we have to understand the hour which is passing, or that which has already elapsed. From the construction of ancient sun-dials on which the hours are marked by eleven lines, so that the first hour had elapsed when the shadow of the gnomon fell upon the first line, it might seem as if hora prima meant after the lapse of the first hour. But the manner in which Martial (iv. 8), when describing the varions pnrposes to which the hours of the day were devoted by the Romans, speaks of the hours, leaves no doubt that the expressions prima, altera, tertia hora, \&c., mean the hour which is passing, and not that which has already elapeed. (Becker, Gallus, vol. i. p. 184, \&c.) [L. S.]

## HORCUS (8ркоs). [JUSJURANDUM.]

HORDEA'RIUM AES. [Aes Hordearium.]
HORT ( $\%$ pol), were stone tablets or pillars placed on mortgaged houses and lands at Athens, upon which the debt and the creditor's name were inscribed, and also the name of the archon eponymus in whose year the mortgage lad been made. (Harpocrat. s.v. "Opos and "Actiktov: Pollux, iii. 85, ix. 9.) The following inscription upon an ©pos, found at Acharnae, is taken from Böckh (Corp.

 Matav ( $\iota \in \hat{\imath}$ ) xx , that is, $\delta \iota \sigma \chi \iota \lambda i \omega \nu \delta \rho a \chi \mu \hat{\omega} \nu$. It appears that the eatate had been bought of Phanostratns, hat that the purchase-money, instead of being paid, was allowed to remain on mortgage.

When the estate of an orphan was let by the archon and his gnardian [Epitropus], the person to whom it was let was obliged to hypothecate a sufficient piece of ground or other real property, which was called $\dot{a} \pi 0 \tau i \mu \eta \mu a$ : and upon this an opos was placed, hearing an inscription to that effect, as in the following example, which is taken from an 8 opos found upon the plain of Marathon (Böckh, p. 485):-"Opos $\chi$ wpiou кal oikías,
 (Aıriou). (Compare Isaeus, Philoct. hered. p. 141.) "Opol were also placed upon houses and lands on account of money due to a husband for the dowry of his wife (Dem. c. Spud. p. 1029. 21), and also upon the property which a hosband was obliged to give as a security for the dowry which he received with his wife. (Dem. c. Onetor. ii. p. 877.)

The practice of placing these $\delta \rho 0$ upon property was of great antiqnity at Athens: it existed before the time of Solon, who removed all stones standing upon eatates, when he released or relieved the dehtors. (Plut. Sol. 15.)
(Böckh, Pabl. Econ. of Athens, p. 129, 2nd ed, Corp. Inscrip. i. p. 484 ; Museum Criticum, No. viii. p. 622 ; Herald. Observ. ad J. A. et $R$, p. 216 ; Meicr, Att. Process, p. 506.)
horulugidm．
 of the various instruments by means of which the ancients measured tlie time of the day and night． The earliest and simplest horologia of which men－ tion is made，were called $\pi \delta \lambda$ as and $\gamma \nu \dot{\omega} \mu \omega \nu$ ． Herodotus（ii．109）aseribes their invention to the Babylonians ；Phavorinus（ap．Diog．Laert．ii．1． 3 ；compare Suidas，s．v．Г $\nu \omega \mu \omega \nu$ and＇$A \nu \alpha \xi \xi \mu \alpha \nu-$ Spos）to Anaximander ；and Pliny（H．N．i．76） to his disciple Anaximenes．Herodotus mentions the $\pi \dot{\sigma} \lambda^{\lambda} o s$ and $\gamma \nu \dot{\sigma} \mu \omega \nu$ as two distinct instruments． Both，however，divided the day into twelve equal parts，and were a kind of sun－dial．The $\gamma \nu \omega \mu \omega \nu$ ， which was also called $\sigma$ roc $\chi$ €ioy，was the more simple of the two，and probably the more ancient． It consisted of a staff or pillar standing perpen－ dicular，in a place exposed to the sun（ $\sigma \kappa ⿺ 辶 ⿱ 亠 乂 \theta \theta \rho o \nu$ ）， so that the length of its shadow might be easily ascertained．The shadow of the gnomon was measured by feet，which were probably marked on the place where the shadow fell．（Hesych．s．v．
 The gnomon is almost without exception mentioned in connection with the $\delta$ einnvoy or the bath；and the time for the former was towards sunset，or at the time when the shadow of the gnomon mea－ sured ten or twelve feet．（Aristoph．Eecles．652，with the Schol．；Pollux，l．c．；Menander，ap．Athen．vi． p． 243 ；Hesych．s．v．$\Delta \in \kappa \alpha ́ \pi o v \nu$ 玉roiхєiov．）The longest shadow of the gnomon，at sunrise and sun－ get，was generally 12 feet，but in some cases 24 feet，so that at the time of the $\delta$ eimvov it was 20 feet．（Eubulides，ap．Athen．i．p．8．）The time for bathing＇was when the gnomon threw a shadow of six feet．（Lucian，Cronos．c．17，Somn．s．Gall． c．9．）In later times the name gnomon was applied to any kind of sur－dial，especially its finger，which threw the shadow，and thus pointed to the hour． Even the clepsydra is sometimes called gnomons． （Athen．ii．p．42．）

The gnomon was evidently a very imperfect in－ strument，and it was impossible to divide the day into twelve equal spaces by it．This may be the reason that we find it only used for such purposes as are mentioned above．The $\pi \delta \delta^{2}$ os or $\eta \dot{\eta} \lambda t o t \rho \delta-$ $\pi t o \nu$ ，on the other hand，seems to bare heen a more perfect kind of sun－dial ；but it appears，neverthe－ less，not to have been much used，as it is but seldom mentioned．（Aristoph．ap．Polluc．ix．5．）It con－ sisted of a basin（Aekavis），in the middle of which the perpendicular staff or finger（ $\gamma \nu \omega{ }^{\prime} \mu \omega \nu$ ）was erected，and in it the twelve parts of the day were marked by lines．（Alciphron，Epist．iii． 4 ；Lucian， Lexiph．c．4．）

Another kind of horologium was the clepsydra （ $\kappa \lambda \in \psi \dot{b} \delta \rho a$ ）．It derived its name from $\kappa \lambda \in \dot{\prime} \pi \tau \in \iota \nu$ and $v \delta \omega \rho$ ，as in its original and simple form it con－ sisted of a vessel with several little openings （т $\left.\rho \cup \pi \boldsymbol{q}_{\mu} \mu a \tau a\right)$ at the bottom，through which the water contained in it escaped，as it were，hy stealth．This instrument seems as first to bave been used only for the purpose of measuring the time during which persons were allowed to speak in the courts of justice at Athens．The time of its invention or introduction is not known；hut in the age of Aristophanes（see Acharn． 653 ，Vesp． 93 and 827）it appears to have been in common use． Its form and construction may be seen very clearly from a passage of Aristotle（Problem．xvi．8）．The clepsydra was a hollow glohe，probably some－ what flat at the top part，where it had a short

HOROLOGLUM．
neck（aủ入ós），like that of a bottle，throngh which the water was poured into it．This opening might be closed by a lid or stopper（ $\pi \bar{\omega} \mu \alpha$ ），to prevent the water running out at the bottom．The clepsy－ dra which Aristotle had in view was probahly not of glass or of any transparent material，but of bronze or brass，so that it could not be seen in the clepsydra itself what quantity of water had escaped．As the time for speaking in the Athenian courts was thus measured by water，the orators frequently use the term $\delta \delta \omega \rho$ instead of the time allowed to them（ $\epsilon \nu \tau \hat{\varphi} \hat{\epsilon} \mu \hat{\varphi} \boldsymbol{\nu} \delta \alpha \tau \iota$ ，Demosth．de
 1094）．Aeschines（c．Ctesiph．p． 587 ），when de－ scribing the order in which the several parties were allowed to speak，says that the first water was given to the accuser，the second to the accused， and the third to the judges．An especial officer （ $\delta \dot{\varepsilon}{ }^{\epsilon} \phi^{2} v \delta \omega \rho$ ）was appointed in the courts for the purpose of watching the clepsydra，and stopping it when any documents were read，whereby the speaker was interrupted；and it is to this officer that Demosthenes（c．Steph．i．p．1103）calls out：
 quently the quantity of water allowed to a speaker clepended upon the importance of the case；and we are informed that in a $\gamma \rho \alpha \phi \eta$ п $\pi \alpha \rho a \pi \rho \in \sigma \xi \in\{\alpha s$ the water allowed to each party amounted to eleven amphorae（Aeschin．de Fals．Leg．§ 126），whereas in trials concerning the right of inheritance only one amphora was allowed．（Demosth．c．Macart． p．1502．）Those actions in which the time was thus measured to the speakers are called by Pollux （viii．113）$\delta / \kappa \alpha a t \pi \rho \bar{s}$ j $\delta \omega \rho$ ：others are termed $\delta i \kappa a \iota$ ăvєu $3 \delta a r o s$ ，and in these the speakers were not tied down to a certain space of time．The only instance of this kind of actions of which we know，is the $\gamma \rho a \phi \grave{\eta}$ кан $\sigma \sigma \epsilon \omega s$（Harpocrat．s．$v$ ． $\kappa \alpha(\tau \omega \sigma t s)$ ．
The clepsydra used in the courts of justice how－ ever was，properly speaking，no horologium；but smaller ones，made of glass，and of the same simple structure，were undoubtedly used very early in families for the parposes of ordinary life，and for dividing the day into twelve equal parts．In these glass－clepsydrae the division inta twelve parts must have been visible，either on the glass－globe itself，or in the basin into which the water flowed．These instruments，however，did not show the time quite correctly all the year round；first，because the water ran out of the clepsydra sometimes quicker and sometimes slower，according to the different temperature of the water（Athen．ii．p． 42 ；Plut．． Quaest．Natur．c．7）；and secondly，because the length of the hours varied in the different seasons of the year．To remove the second of these de－ fects the inside of the clepsydra was covered with a coat of wax during the shorter days，and when they became longer the wax was gradually taken away again．（Aen．Tact．c．22．）Plato is said to
 large clepsydra，which indicated the hours of the night，and seems to have been of a complicated structure．（Athen．iv．p．174．）This instance shows that at an early period improvements were made on the old and simple clepsydra．But all these improvements were excelled hy the ingeni－ ous invention of Ctesibins，a celebrated mathema－ tician of Alexandria（about $135 \mathrm{~B} . \mathrm{c}$ ．）．It is called $\dot{\omega} \rho 0 \lambda \delta$ folov $\dot{v} \delta \rho a u \lambda i \kappa \partial \nu$ ，and is described by Vitri－ vius（ix． 9 ；compare Athen．l．c．）．Water was

HOROLOGIUM.
made to drop upon wheels which were thereby turned. The regular movement of these wheels was communicated to a small statue, which, gradually rising, pointed with a little stick to the hours marked on a pillar which was attached to the mechanism. It indicated the hours regularly throughout the year, but still required to be often attended to and regulated. This complicated clepsydra seems never to have come into general use, and was probably only found in the houses of very wealthy persons. The sun-dial or gnomon, and a simpler kind of clepsydra, on the other hand, were much used down to a very late period. The twelve parts of the day were not designated by the name ${ }_{\omega} \rho \rho \alpha$ until the time of the Alexandrian astronomers, and even then the old and vague divisions, described in the article Dies, were prefersed in the affairs of common life. At the time of the geographer Hipparchus, however (about 150 в. c.), it seems to have been very common to reckon by hours. (Comp. Becker, Charikles, vol. ii. p. 490, \&c.)

There is still existing, though in ruins, a horo-

## HOROLOGIUM.

logical building, which is one of the most interesting monuments at Athens. It is the structurs formerly called the Tower of the Winds, but now known as the Horological Monument of Andronicus Cyrrhestes (see Dict. of Biog. s. v.). It is expressly called horologium by Varro (R. R. iii. 5. § 17). This building is fully described by Vitruvius (i. 6. § 4), and the preceding woodcuts show its elevation and ground plan, as restored hy Stuart (Antiq. of Athens, vol. i. c. 3.)

The structure is octagonal; with its faces to tho points of the compass. On the N.E. and N.W. sides are distyle Corinthian porticoes, giving access to the interior ; and to the south wall is affixed a sort of turret, forming three quarters of a circle, to contain the cistern which supplied water to the clepsydra in the interior. On the summit of the building was a bronze figure of a Triton, holding a wand in his hand; and this figure turned on a pivot, so that the wand always pointed above that side of the building which faced the wind then blowing. The directions of the several faces wers indicated by figures of the eight winds on the frieze of the entablature. On the plain wall below ths entablature of each face, lines are still visible, which, with the gnomons that stood out above them, formed a series of sun-dials. In the centre of the interior of the building was a clepsydra, the remains of which are still visible, and are shown on the plan, where the dark lines represent the channels for the water, which was supplied from the turret on the south, and escaped by the hols in the centre.
The first horologium with which the Romans became acquainted was a sun-dial (solxrium, or horologium sciothoricum), and was, according to some writers, brought to Rome by Papirius Cursor twelve years before the war with Pyrrhus, and placed before the temple of Quirinus (Plin. II.N. vii. 60) ; others stated that it was brought to Rome at the time of the first Punic war, by the consul M. Valerius Messala, and erected on a column behind the Rostra. But this solarium being made for a different latitude did not show the time at Rome correctly. Ninetynine years afterwards, the censor Q. Marcius Philippus erected by the side of the old solarium a new one, which was more carefully regulated according to the latitude of Rome. But as sun-dials, however perfect they might be, were useless when the sky was cloudy, P. Scipio Nasica, in his censorship, 159 B. c., established a public clepsydra, which indicated the hours both of day and night. This clepsydra was in aftertimes generally called solarimm. (Plin. H. N. vii. 60 ; Censorin. de Die Nat. c. 23.) The word hora for hour was introduced at Rome at the time when the Romans became acquainted with the Greek horologia, and was in this signification well known at the time of Plautus. (Pseudol. v. 2. 10.) After the time of Scipio Nasica several horologia, chiefly solaria, seem to lave been erected in various public places at Rome. A magnificent horologium was erected by Augustus in the Campus Martius. It was a gnomon in the shape of an obelisk ; but Pliny ( $H . N$. xxxvi. 10) complains that in the course of time it had becoms incorrect. Another horologium stood in the Circus Flaminius. (Vitruv. ix. 9. 1.) Sometimes solaria were attached to the front-side of temples and basilicae. (Varro, de Ling. Lat. vi. 4 ; Gruter, Inscript. vi. 6.) The old solarium which had been erected behind the Rostra seems to have existed on that
spot till a very late period, and it would seem that the place was called ad Solarizm, so that Cicero uses this expression as synonymous with Rostra or Forum (pro Quinct. 18, ad Herenn. iv. 10). Horologia of various descriptions seem also to have been commonly kept by private individuals (Cic. ad Fam. xvi. 18); and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty it was to announce the hours of the day to their masters. (Juven. x. 215; Mart. viii. 67; Petron. 26.)

From the number of solaria which have been discovered in modern times in Italy, we must infer that they were very generally used among the ancients. The following woodcut represents one of the simplest horologia which have been discovered; it seems to hear great similarity to that, the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, among the ruins of an ancient villa, and is described by Gio. Luca Zuzzeri, in a work entitled $D^{\prime}$ una antica villa scoperta sul dosso del Tusculo, e d'un antico orologio a sole, Venezia,

1746, and by G. H. Martini, in his Ablandlung von den Sonnenullren der Alten, Leipzig, I7i7, p. $49, \& c$.

The following woodcut shows the same solarium as restored by Zuzzeri.

The breadth as well as the height (A O, and $P$ A) are somewhat more than cight inches; and the length (A B) a little more than sixteen inches. The surface ( $A$ ORB) is horizontal. S P Q T is the basis of the solarium, which, originally, was probably erected upon a pillar. Its side, ASTB, inclines somewhat towards the basis.
 solarii and enclima succisum (Vitruv. l.c.), and
shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about $40^{\circ} 43^{\prime}$, which coincides with the latitude of Tusculum. In the body of the solarium is the almost spherical excavation, HK D M I F N, which forms a double hemicyclium (hemicyclium excavatum ex quadrato, Vitruv.). Within this excavation the cleven hour-lines are marked which pass through three semicircles, H L N, K E F, and D M J. The middle one, K E F, represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the other two curves somewhat smaller. The ten middle parts or hours in each of the three curves are all equal to one another ; but the two extreme ones, though equal to each other, are by one-fourth smaller than the rest. In the middle, G, of the curve D K H N I J, there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible in the lead by means of which it was fixed. It must have stood in a perpendicular position upon the surface A BRO, and at a certain distance from the surface it must have turned in a right angle above the spheric excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the above woodcut. See the description of another solarium in G. H. Martini's Antiquorum Monimcntorum Sylloge, p. 95, \&c.
Clepsydrae were used by the Romans in their camps, chiefly for the purpose of measuring accurately the four vigiliae into which the night was divided. (Caes. de Bell. Gall. v. 13 ; Veget. de Re Milit. iij. 8 ; Aen. Tact. c. 22.)

The custom of using clepsydrae as a check upon the speakers in the courts of justice at Rome was introduced by a law of Cn. Pompeius, in his third consulship. (Tacit. De clar. Orot. 38.) Before that time the speakers had been under no restrictions, hut spoke as long as they deemed proper. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny (Epist. ii. 11) states that on one important occasion he spoke for nearly five hours, ten large clepsydrae having been granted to him by the judices, but the case was so important that four others were added. (Compare Plin. Epist. vi. 2; Martial, vi. 35, viii. 7.) Pompeius, in his law, is said to have limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours. (Ascon. in Milon. p. 37, ed. Orelli.) This, however, as is clear from the case of Pliny and others, was not observed on all occasions, and we must suppose that it was merely the intention of Pompeins to fix the proportions of the time to be allowed to each party, that is, that in all cases the accuser should only have two-thirds of the time allowed to the accused. This supposition is supported by a case mentioned by Pliny (Epist. iv. 9), where, according to law (c lege) the accuser had six hours, while the accused had nine. An especial officer was at Rome as well as at Athens appointed to stop the clepsydra during the time when docu. ments were read. (Apul. Apolog. i. and ii. ; compare Ernesti, de Solariis, in his Opuscul. Philolog. et Crit. pp. 21-31; Becker, Gallus, vol. i. p. 186, 8 cc .)
[I. S.]
HOROSCOPUS. [Astroloriia, p. 144, b.]

## HORREA'RII. [Horreum.]

 was, according to its etymological signification, a place in which ripe fruits, and especially corn, were kept, and thus answered to our granary. (Virg. Georg. i. 49 ; Tibull. ii. 5. 84 ; Horat. Carm. i. 1. 7; Cie. de Leg. Agr. ii. 83.) During the empire the name horreum was given to any place destined for the safe presprvation of things of any kind. Thus we find it applied to a place in which beantiful works of art were kept (Plin. Epist. viii. 18); to eellars (horrea subterranea, horrea vinaria, Dig. 18. tit. 1. s. 76); to depôts for merchandise, and all sorts of provisions (horreum penarium, Dig. 30. tit. 9. s. 3). Seneca (Epist. 45) even calls his library a horreum. But the more general application of the word horreum was to places for keeping fruit and corn ; and as some kinds of fruit required to be kept more dry than others, the ancients had besides the horrea subterranea, or cellars, two other kinds, one of which was built like every other house upon the ground; but others (horrea pensilia or sublimia) were erected above the ground, and rested upon posts or stone pillars, that the fruits kept in them might remain dry. (Colnm. xii. 50, i. 6 ; Vitruv. vi. 6. 4.)

From about the year 140 after Christ, Rome possessed two kinds of public horrea. The one class consisted of buildings in which the Romans might deposit their goods, and even their money, seeurities, and other valuables (Cod. 4. tit. 24. s. 9), for which they had no safe place in their own houses. This kind of public horrea is mentioned as early as the time of Antoninus Pius (Dig. 1. tit. 15. s. 3), though Lampridius (Alex. Sev. c. 39) assigns their institntion to Alexander Severus. (Compare Dig. 10. tit. 4. s. 5.) The officers who had the superintendence of these establishments were called horrearii. The second and more important class of horrea, which may be termed public granaries, were buildings in which a plentiful supply of corn was constantly kept at the expense of the state, and from which, in seasons of scarcity, the corn was distributed among the poor, or sold at a moderate price. The first idea of bnilding such a publie granary arose with C. Sempronins Gracchus (lex Sempronia frumentaria) ; and the ruins of the great granary (horrea populi Romani) which he built were seen down to the sixteenth century between the Arentine and the Monte Testaceo. (Appian, de Betl. Civ. i. 21 ; Plut. C. Gracect. 5 ; Liv. Epit. 60 ; Vell. Pat. ii. 6 ; Cic. pro Sext. 24.)
The plan of C. Gracchus was followed out and carried further by Clodius, Pompey, and several of the emperors ; and during the empire we thus find a great number of public horrea which were ealled after the names of their founders, e. g., horrea Aniceti, Vargunteii, Seiani, Angusti, Domitiani, \&c. The manner in which corn from these granaries was given to the people differed at different times. [Comp. Frumentariae Leges.] [L. S.]

HORTUS ( $\kappa \hat{\eta} \pi t o s$ ), garden. 1. Greek. Our knowledge of the horticulture of the Greeks is very limited. We must not look for information respecting their gardens to the accounts which we find in Greek writers of the gardens of Alcinoüs, filled with all manner of trets and fruit and flowers, and adorned with fountains (Odyss. vii. 112-130), or of those of the Hesperides (Hesiod. Theog. 25), or of the paradises of the Persian satraps, which resembled our parko (Xen. Anub. i. 2. § 7, Occo-
nom. iv. 26, 27 ; Plut. Alcib. 24) ; for the former gardens are only imaginary, and the manner in which the paradises are spoken of by Greek writers shows that they were not familiar with anything of the kind in their own country. In fact the Greeks seem to have had no great taste for landscape beanties, and the small number of flowers with which they were acquainted afforded but little inducement to ornamental horticulture.
The saered groves were eultivated with special care. They eontained ornamental and odoriferous plants and fruit trees, particularly olives and vines. (Soph. Oed. Col. 16 ; Xen. Anab. v. 3. § 12.) Somer times they were without fruit trees. (Paus. i. 21. § 9.)

The only passage in the earlier Greek writers, in which flower-gardens appear to be mentioned, is one in Aristophanes, who speaks of кй $\boldsymbol{\pi}$ ous evंब́jets (Aves, v. 1066). At Athens the flowers most enltivated were probably those used for making garlands, such as violets and roses. In the time of the Ptolemies the art of gardening seems to have advanced in the favourable climate of Eigypt so far, that a succession of flowers was obtained all the year round. (Callixenus, ap. Ath. v. p. 196.) Longus (Past. ii. p. 36) deseribes a garden containing every production of each season, "in spring, roses, lilies, hyacinths, and vio-
 and all fruit ; in autumn, vines and figs, and pomegranates and myrtles." That the Greek idea of horticultural beanty was not quite the same as ours, may be inferred from a passage in Plutarch, where he speaks of the practice of setting off the beauties of roses and violets, by planting them side hy side with leeks and onions (De capienda em inimicis utilitate, e. 10). Becker considers this passage a proof that flowers were cultivated more to be used for garlands than to beautify the garden. (Becker, Charikles, vol. ii. p. 403-405.)
2. Roman. The Romans, like the Greeks, laboured under the disadvantage of a very limited flora. This disadvantage they endeavoured to overcome, by arranging the materials they did possess in such a way as to produce a striking effect. We have a very full deseription of a Roman garden in a letter of the younger Pliny, in which he describes his Tnscan villa. (Plin. Epist. v. 6.) In front of the porticus there was generally a xystur, or flat piece of ground, divided into flower-beds of different shapes by borders of box. There were also such flower-beds in other parts of the gardeo. Sometimes they were raised so as to form terraces, and their sloping sides planted with evergreens or ereepers. The most striking features of a Roman garden were lines of large trees, among which the plane appears to have been a great favourite, planted in regular order; alleys or walks (ambulationes) formed by closely elipt hedges of box, yew, cypress, and other evergreens; beds of acanthus, rows of fruit-trees, especially of vines, with statues, pyramids, fountains, and summer-houses (diaetae). The trunks of the trees and the parts of the honse or any other buildings which were visible from the garden, were often covered with ivy. (Plin. l.c.; Cic. ad Q. F. iii. 1, 2.) In one respect the Roman taste differed most materially from that of the present day, namely, in their fondness for the ars topiaria, which consisted in tying, twisting, or cutting trees and shrubs (especially the hoox) into the figures of animals, ships, letters. \&c. The im-
purtance attached to this part of horticulture is proved not only by the description of Pliny, and the notices of other writers (Plin. H. N. xvi. 33. s. 60, xxi. 11. s. 39, xxii. 22. s. 34 ; Martial, bii. 19), but also by the fact that topiarius is the only name used in good Latin writers for the ornamental gardener. Cicero (Parad. v. 2) mentions the topiurius among the higher class of slaves.
Attached to the garden were places for exercise, the gestatio and hippodromus. The gestatio was a sort of avenue, shaded by trees, for the purpose of taking gentle exercise, such as riding in a litter. (Plin. Epist. v. 6, ii. 17.) The hippodromus (not, as one reading gives the word in Pliny, hypodromus) was a place for running or horse exercise, in the form of a circus, consisting of several pathe divided by hedges of box, ornamented with topiarian work, and surrounded by large trees. (Plin. l. c.; Martial, xii. 50, lvii. 23.)

The flowers which the Romans possessed, though few in comparison with the species known to us, were more numerous than some writers have represented; but the subject still requires investigation. Their principal garden-flowers seem to have heen violets and roses, and they also had the crocus, narcissus, lily, gladiolus, iris, poppy, amaranth, and others.
Conservatories and hot-houses are not mentioned hy any writer earlier than the first century of our era. They are frequently referred to by Martial (viii. 14,68 , iv. 19 , xiii. 127). They were used both to preserve foreign plants and to produce flowers and fruit out of season. Columella (xi. 3. §§51, 52) and Pliny (H. N. xix. 5. s. 23) speak of forcing-houses for grapes, melons, \&c. In every garden there was a space set apart for vegetables (olera).
Flowers and plants were also kept in the central space of the peristyle [Domus], on the roofs, and in the windows of the houses. Sometimes, in a town, where the garden was very small, its walls were painted in imitation of a real garden, with trees, fountains, birds, \&c., and the small area was ornamented with flowers in vases. A beautiful example of such a garden was found at Pompeii. (Gell's Pompeiana, ii. 4.)
An ornamental garden was also called viridarium (Dig. 33. tit. 7. s. 8), and the gardener topiarius or viridarius. The common name for a gardener is villicus or cultor hortorum. We find also the special names vinitor, olitor. The word hortulanus is only of late formation. The aquurius had charge of the fountains both in the garden and in the house. (Becker, Gallus, vol. i. p. 283, \&c.; Böttiger, Racemationen zur Gasten-Kunst der Alten.)
[P. S.]
HOSPES. [Hospitium.]
HOSPI'TIUM ( $\xi \in \nu i a, ~ \pi \rho o \xi \in \nu i \alpha)$. Hospitality is one of the characteristic features of almost all nations previous to their attaining a certain degree of civilisation. In civilised countries the necessity of general hospitality is not so much felt ; but at a time when the state or the laws of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was hallowed by religion, it was to some degree observed to the latest period of their existence, and acquired a political importance which
it has never had in any other state. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals, or between two states. (Hospilium privatum and hospitium publicum, $\xi^{\prime} \in \nu^{\prime} \alpha$ and $\pi \rho a \xi \in y^{\prime} \alpha_{0}$.)

1. Greek. In ancient Greece the stranger,
 enemy (Cic. de Off. i. 12 ; Herod. ix. 11 ; Plut. Aristid. 10); but whenever he appeared among another tribe or nation without any sign of hostile intentions, he was considered not only as one who required aid, but as a suppliant, and Zeus was the protecting deity of strangers and suppliants. (Z $\in \dot{\text { ins }}$ Éévos and ikeviñoos: Hom. Od. xiv. 57, \&c. 283, ix. 270, xiii. 213, vii. 164: compare Apollon. Argonaut. ii. 1134; Aelian. V. H. iv. 1.) This religious feeling was strengthened by the belief that the stranger might possibly be a god in disguise. (Odyss. xvii. 484.) On his arrival therefore, the stranger, of whatever station in life he might he, was kindly received, and provided with everything necessary to make him comfortable, and to satisfy his immediate wants. The host did not inquire who the stranger was, or what had led him to his house, until the duties of hospitality were fulfilled. During his stay, it was a sacred duty of his host to protect him against any persecution, even if he betonged to a politically hostile race, so that the host's house was a perfect asylum to him. On his departure he was dismissed with presents and good wishes. (Odyss. iv. 37, \&c., Nitzch's note.) It seems to have been customary for the host, on the departure of the stranger,
 which he himself retained, while the other half was given to the stranger; and when at any future time they or their descendants met, they had a means of recognising each other, and the hospitahle connection was renewed. (Schol. ad Eurip. Med. 613.) Hospitality thus not only existed between the persons who had originally formed it, but was transferred as an inheritance from father to son. To violate the laws of hospitality was a great crime and act of impiety, and was punished by men as well as gods ( $\delta$ ikal kako $\xi$ ejias, Aelian, l.c.; Paus. vii. 25). Instances of such hereditary connections of hospitality are mentioned down to a very late period of Greek history; and many towns, such as Athens, Corinth, Byzantium, Phasis, and others, were celebrated for the hospitahle character of their citizens. (Herod. vi. 35 ; Thucyd. ii. 13 ; Plata, Crito, p. 45, c. ; Stobacus, Florileg. tit. xliv. 40, \&c.) But when a more regular and frequent intercourse among the Greeks began to he established, it was impossible to receive all these strangers in private houses. This naturally led to the establishment of inns ( $\pi a \nu \delta o \kappa \epsilon i \hat{O} \nu$, "a $\alpha \alpha \gamma \omega \gamma \iota \circ$, кardi入vots), in which such strangers as had no hospitable connections found accommodation. For those occasions, on which numerous visitors flocked to a particular place for the purpose of celebrating one of the great or national festivals, the state or the temple provided for the accommodation of the visitors either in tents or temporary inns erected about the temple. (Aelian, V. H. iv. 9 ; Schol. ad Pind. Ol. xi. 51 and 55 : compare Plato, de Leg. xii. p. 952 ; Lucian, Amor. 12; Thucyd. iii. 68.) The kind of hospitality which was exercised by private individuals on such festive occasions probably differed very little from that which is cus.

## HOSPITIUM.

tomary among ourselves, and was chiefly shown towards friends or persons of distinction and merit, whose presence was an honour to the house wherein they stayed. (Xen. Oecon. 2. 5 ; Plato, Protag. p. 315 ; Becker, Charikles, vol. i. p. 134.) In the houses of the wealthier Greeks a separate part (hospitium or hospitalia and $\xi \in \nu \omega \bar{\nu} \in s)$ with a separate entrance, was destined for the reception and habitation of strangers, and was provided with all the necessary comforts for the temporary occupants. On the first dayafter their arrival they were generally invited to the table of their host ; but afterwards their provisions ( $\xi \in \in(a)$, consisting of fowl, eggs, and fruit, were either sent to them, or they had to purchase them themselves. (Vitruv. vi. 7. 4 ; Apul. Metam. ii. p. 19.)

What has been said hitherto, only refers to hospitium privatum, that is, the hospitality existing between two individuals or families of different states. Of far greater importance, however, was the hospitium publicum ( $\pi \rho 0 \xi \epsilon \boldsymbol{\nu}^{\prime} \alpha$, sometimes simply $\xi \in v i a)$, or public hospitality which existed between two states, or between an individual or a family on the one hand, and a whole state on the other. Of the latter kind of public hospitality many instances are recorded, such as that between the Peisistratids and Sparta, in which the people of Athens had no share. The hospitium publicum umong the Greeks arose undoubtedly from the hospitium privatum, and it may have originated in two ways. When the Greek tribes were governed by chieftains or kings, the private hospitality existing between the ruling families of two tribes may have produced similar relations between their subjects, which after the abolition of the kingly power, contimed to exist between the new republics as a kind of political inheritance of former times. Or a person belonging to one state might have either extensive connections with the citizens of another state, or entertain great partiality for the other state itself, and thus offer to receive all those who came from that state either on private or public business, and act as their patron in his own city. This he at first did merely as a private individual, but the state to which he offered this kind service would naturally soon recognise and reward him for it. When two states established public hospitality, and no individuals came forward to act as the representatives of their state, it was necessary that in each state persons should be appointed to show hospitality to, and watch over the interests of, all persons who came from the state connected by hospitality. The persons who were appointed to this office as the recognised agents of the state for which they acted were called $\pi \rho \sigma^{-}$ $\xi \in \nu 0 c$, but those who undertook it voluntarily ${ }^{2} \theta \in \lambda 0-$ $\pi \rho \not \xi_{\xi \in \nu 0 \prec}$ (Pollux, iii. 59 ; compare Tlnncyd. ii. 29 with Arnold's note, and iii. 70 with Göller's.)

The office of proxenns, which bears great resemblance to that of a modern consul or ministerresident, was in some cases hereditary in a particular family. When a state appointed a proxenus, it either sent out one of its own citizens to reside in the otber state, or it selected one of the citizens of this state, and conferred upon him the honour of proxenus. The former was, in early times, the custom of Sparta, where the kings had the right to select from among the Spartan citizens those whom they wished to send out as proxeni to other states. (Herod. vi. 57.) But in subsequent times this custom seous to have been given up, for we find
that at Athens the family of Callias were the proxeni of Sparta (Xen. Hellen. v. 4. § 22, vi. 3. § 4, \&c.) ; at Elis, the Elean Xenias (Paus. iii. 8. § 2); and at Argos, the Argive Alciphron. (Thucyd. v. 59.) A Spartan sent out as proxenus was sometimes also entrusted with the power of harmosteg, as Clearchus at Byzantium. (Xen. Hellen. i. 1. § 35, i. 3. § 15.)

The custom of conferring the honour of proxenus upon a citizen of the state with which public hospitality existed, seems in later times to have been universally adopted by the Greeks. Thus we find besides the instances of Spartan proxeni mentioned above, Nicias the Athenian, as proxenus of Syracuse at Athens (Diodor. xiii. 27), and Arthmius, of Zeleia, as the proxenus of Athens at Zeleia. (Aeschin. c. Ctesiph. p. 647: compare Plato, de Leg. i. p. 642.) The common mode of appointing a proxenus was, with the exception of Sparta, by show of hands. (Ulpian, $\alpha d$ Demosth. Mid. p. 374.) The principal duties of a proxenus were to receive those persons, especially ambassadors, who came from the state which he represented ; to procure for them the admission to the assembly, and seats in the theatre (Pollux, l. c.) ; to act as the patron of the strangers, and to mediate between the two states if any disputes arose. (Xen. Hellen. vi. 3. § 4.) If a stranger died in the state, the proxenus of his country had to take care of the property of the deceased. (Demosth. c. Callip. p. 1237, \&c.)

Regarding the honours and privileges which a proxenus enjoyed from the state which he represented, the varions Greek states followed different principles: some honoured their proxenus with the full civic franchise, and other distinctions besides. (Böckh, Corp. Inseript. n. $1691-93$, and ii. p. 79; Demosth. de Cor. p. 256 ; Xen. Hellen. i. 1. § 26.) But the right of acquiring property in the state of which he thus became a citizen seems not to have been included in his privileges; for we find that where this right was granted, it was done by an especial document. (Böckh, Publ. Econ.p.140.) A foreigner who was appointed in his own country as proxenus of Athens, enjoyed for his own person the right of hospitality at Athens whenever he visited this city, and all the other privileges that a foreigner could possess without becoming a real Athenian citizen. Among these privileges, though they were not necessarily included in the proxeny, but were granted by special decrees, we may mention, 1. 'E $\pi \cdot \gamma a \mu i a$, which, in cases when it was granted by the more powerfin state, generally became mutual (Platner's Process, ii. p. 73 ; Xen. Hellen. v. 2. § 19); 2. The right to acquire property at Athens

 Demosth. c. Leptin. p. 475, compare p. 498) ; and 4. Inviolability in times of peace and war, hoth by sea and by land. (Böckh, Corp. Inscrip. i. p. 725.) Some of these privileges were granted to individuals as well as to whole states; but we have no instance of a whole state having received all of them, with the exception of those cases where the civic franchise or isopolity was granted to a whole state ; and in this case the practical consequences could not become manifest, unless a citizen of the privileged state actually took up his residence at Athens. (Compare F. W. UlIrich, de Proxenia, Berlin, 1822 ; Wachsmuth, Hellen. Alterth. vol. i. p. 168, \&c. ; Hermann, Polit. Ant. § 116. )
2. Roman. The hospitality of the Romans was,
as in Ureece, either hospitinm privatum, or publicum. Private hospitality with the Romans, however, seems to have been more accurately and legally defined than in Greece. The character of a hospes, 2. e. a person connected with a Roman by ties of hospitality, was deemed even more sacred, and to have greater claims upon the host, than that of a person connected by blood or affinity. The relation of a hospes to his Roman friend was next in importance to that of a cliens. (Gellius, v. 13.) According to Massurius Sabinus (ap. Gellium, l. c.), a hospes had even higher claims than a cliens. The obligations which the comnection of hospitality with a foreiguer imposed upon a Roman were to receive in his house his hospes when travelling (Liv. xlii. 1), and to protect, and, in case of need, to represent him as his patron in the courts of justice. (Cic. in Q. Caecil. Divin. c. 20.) Private hospitality thus gave to the hospes the claims upon his host which the client had on his patron, but withont any degree of the dependence implied in the clientela. Private hospitality was established between individuals by mutual presents, or by the mediation of a third person (Serv, ad Aen. ix. 360 ), and hallowed by religion ; for Jupiter hospitalis was thought to watch over the jus hospitii, as Zeus xenios did with the Greeks (Cic. c. Verr. iv. 22, ad Quint. frat. ii. 12, pro Deiotar. 6), and the violation of it was as great a crime and impiety at Rome as in Greece. When hospitality was formed, the two friends used to divide between themselves a tessera hospitalis (Plant. Poen. v. 2.87, \&c.), by which, afterwards, they themselves or their descendants-for the connection was hereditary as in Greece - might recognise one another. From an expression in Plautus (deum hospitalem ac tesseram mecum fero, Poen. v. l. 25) it has been concluded that this tessera bore the image of Jupiter hospitalis. Hospitality, when thus once established, could not be dissolved except by a formal declaration (renuntiatio, Liv. xxv. 18 ; Cic. in Verr. ii. 36 ), and in this case the tessera hospitalis was broken to pieces. (Plaut. Cistell. ii. 1. 27.) Hospitality was at Rome never exercised in that indiscriminate manner as in the heroic age of Greece, but the custom of ohserving the laws of hospitality was probably common to all the nations of ltaly. (Aelian. V. H. iv. 1 ; Liv. i. 1.) In many cases it was exercised without any formal agreement between the parties, and it was deemed an honourable duty to receive distinguished guests into the honse. (Cic. de Off. ii. 18, pro Rose. Am. 6.)

Public hospitality seems likewise to have existed at a very early period among the nations of Italy, and the foedus hospitii mentioned in Livy (i. 9) can scarcely be looked upon in any other light than that of hospitium publicum. But the first direct mention of public hospitality being established between Rome and another city, is after the Ganls had departed from Rome, when it was decreed that Caere should be rewarded for its good services by the establishment of public hospitality between the two cities. (Liv. v. 50.) The public hospitality after the war with the Gauls gave to the Caerites the right of isopolity with Rome, that is, the civitas without the suffragium and the honores. [Civitas; Colunia.] In the later times of the republic we no longer find public hospitality established between Rome and a foreign state; but a relation which amounted to the same thing was introduced in its stead, that is, towns were raised
to the rank of municipia (Liv. viii. 14), and thns obtained the civitas without the snffragium and the honores ; and when a town was desirous of forming a similar relation with Rome, it entered into clientela to some distinguished Roman, who then acted as patron of the client-town. But the custom of granting the honour of hospes publicns to a distinguished foreigner by a decree of the senate, seems to have existed down to the end of the republic. (Liv. i. 45 , v. 28 , xxxvii. 54.) Whether such a public hospes undertook the same duties towards Roman citizens, as the Greek proxenus, is uncertain; but his privileges were the same as those of a municeps, that is, he had the civitas, but not the suffragium nor the honores. Public hospitality was, like the hospitium privatum, hereditary in the family of the person to whom it had been granted. (Diod. Sic. xiv. 93.) The honour of public hospes was sometimes also conferred npon a distinguished Roman by a foreign state. (Böckh, Corp. Inscrip. vol. i. n. 1331 ; Cic. pro Balb. 18, c. Verr. iv. 65. Compare Niebnhr, Hist. of Rome, vol. ii. p. 58; Walter, Gesol. des Röm. Rechts, p. 54, \&c.; Göttling, Gesch. der Röm. Staatsv. p. 216, \&c.)
[L.S.]

## HO'STIA. [Sacrificium.]

HOSTIS. [Hospitium ; Postliminium.]
HYACI'NTHIA ('Takiv $\theta_{i \alpha}$ ), a great national festival, celebrated every year at Amyclae by the Amyclaeans and Spartans. The ancient writers who mention this festival do not agree in the name of the divinity in whose honour it was held: some say that it was the Amyclaean or the Carneian Apollo, others that it was the Amyclaean hero, Hyacinthus: a third and more probable statement assigns the festival to the Amyclaean Apollo and Hyacinthus together. This Amyclaean Apollo, however, with whom Hyacinthus was assimilated in later times, must not be confounded with Apollo, the national divinity of the Dorians. (Mïller, Orchom. p. 327, Dor. ii. 8. § 15.) The festival was called after the youthful hero Hyacinthus, who evidently derived his name from the flower hyacinth (the emblem of death among the ancient Greeks), and whom Apollo accidentally struck dead with a quoit. The Hyacinthia lasted for three days, and began on the longest day of the Spartan month Hecatombens (the Attic Hecatomhaeon, Hesych. s. v. 'Eкато 6 6и́s : Manso, Sparta, iii. 2. p. 201), at the time when the tender flowers oppressed by the heat of the sun, drooped their languid heads. On the first and last day of the Hyacinthia sacrifices were offered to the dead, and the death of Hyacinthus was lamented. During these two days nobody wore any garlands at the repasts, nor took bread, but only cakes and similar things, and no paeans were sung in praise of Apollo; and when the solenin repasts were over, every hody went home in the greatest quiet and order. This serious and melancholy character was foreign to all the other festivals of Apollo. The second day, however, was wholly spent in public rejoicings and amusements. Amyclae was visited
 $\mu \in \gamma \alpha \boldsymbol{\lambda} \eta$ ), and boys played the cithara or sang to the accompaniment of the flute, and celebrated in anapaestic metres the praise of Apollo, while others, in splendid attire, performed a horse-race in the theatre. This horse-race is probably the $\alpha \boldsymbol{\alpha} \boldsymbol{\sigma} \nu$ mentioned by Strabo (vi. p. 278). After this race there followed a number of chornses of youths

## HYDRAULA.

conducted by a $\chi$ opotorós (Xen. Agesil. 2. 17), in which some of their national songs ( $\epsilon \pi \imath \chi \omega \dot{\omega} \cdot a$ motnuata) were sung. During the songs of these choruses dancers performed some of the ancient and simple movements with the accompaniment of the flute and the song. The Spartan and Amyclaean majdens, after this, riding in chariots made of wicker-work ( $\kappa \alpha ́ \nu \alpha \theta \rho \alpha$ ), and splendidly adorned, performed a heautiful procession. Numerous sacrifices were also offered on this day, and the citizens kept open house for their friends and relations; and even slaves were allowed to enjoy themselves. (Didymus, ap. Athen. iv. p. 139.) One of the favourite meals on this occasion was called komis, and is described by Molpis (ap. Athen. iv. p. 140) as consisting of cake, bread, meat, raw herbs, broth, figs, dessert, and the seeds of Inpine. Some ancient writers, when speaking of the Hyacinthia, apply to the whole festival such epithets as can only be used in regard to the second day; for instance, when they call it a merry or joyful solemnity. Macrobius (Saturn. i. 11) states that the Amyclaeans wore chaplets of ivy at the Hyacinthia, which can only he true if it be understood of the second day. The incorrectness of these writers is however in some degree excused by the fact, that the second day formed the principal part of the festive season, as appears from the description of Didymus, and as may also be inferred from Xenophon (Heller. iv. 5. §11; compare Agesil. 2. 17), who makes the paean the principal part of the Hyacinthia. The great importance attached to this festival by the Amyclaeans and Lacedaemonians is seen from the fact, that the Amyclaeans, even when they had taken the field against an enemy, always returned home on the approach of the season of the Hyacinthia, that they might not be obliged to neglect its celebration (Xen. Hellen. iv. 5. § 11 ; Paus. iii. $10 . \S 1$ ), and that the Lacedaemonians on one occasion concluded a truce of forty days with the town of Eira, merely to be ahle to return home and celebrate the national festival (Paus. iv. 19. § 3) ; and that in a treaty with Sparta, в.c. 421 , the Athenians, in order to show their good-will towards Sparta, promised every year to attend the celebration of the Hyacinthia. (Thucyd. v. 23.)
[L. S.]

## HY'ALUS. [Vitrum.]

HYBREOS GRAPHE (ש́spews $\gamma p a \phi 介$ ). This action was the principal remedy prescribed by the Attic law for wanton and contumelious injury to the person, whether in the nature of indecent ( $\delta i^{2}$ ai $\sigma \chi \rho o u \rho \gamma i a s$ ) or other assaults ( $\delta$ ì $\pi \lambda \eta \gamma \omega \bar{\omega}$ ). If the offence were of the former kind, it would always be available when the sufferer was a minor of either sex (for the consent of the infant was immaterial), or when an adult female was forcibly violated: and this protection was extended to all conditions of life, whether bond or free. (Dem. c. Meid. p.529. 15.) The legal representative ( $\kappa \dot{u}$ pios), however, of such person might, if he pleased, consider the injury as a private rather than a public wrong, and sue for damages in a civil action. [Bialon Dike.] With respect to common assaults, a prosecution of this kind seems to have been allowable only when the object of a wanton attack was a free person (Aristot. Rhet. ii. 24), as the essence lay in its contumely, and a slave could incur no degradation by receiving a blow, though the injury, if slight, might entitle the master to recover damages for the battery (aikia), or, if
serious, for the loss of his services [Blabes Dike] in a private lawsuit. (Meier, Att. Proc. p. 326.) These two last-mentioned actions might also he resorted to by a free citizen when similarly outraged in his own person, if he were more desirous of ohtaining compensation for the wrong, than the mere punishment of the wrongdoer, as the penalty incurred by the defendant in the public prosecution accrued to the state and not to the plaintiff. A fine also of a thousand drachmue, forfeited by the prosecutor upon his relinquishing his suit or failing to obtain the votes of a fifth of the dicasts, may have contributed to render causes of this kind less frequent, and partly account for the circumstance that there are no speeches extant upon this subject. If, however, the case for the prosecution was hoth strong and clear, the redress afforded by the puhlic action was prompt and efficient. Besides the legitimate protectors of women and children, any Athenian citizen in the enjoyment of his full franchise might volunteer an accusation: the declitration was laid before the thesmothetae, who, except it were hindered by extraordinary public business, were hound not to defer the trial hefore the Heliaea beyond a month. The severity of the sentence extended to confiscation or death; aod if the latter were awarded, the criminal was executed on the same day: if a fine were imposed upon him he was allowed but eleven days for its payment, and, if the object of his assault were a free person, he was imprisoned till the claim of the state was liquidated. (Dem. l.c. ; Aeschin. c. Timarch. p. 41.)
[J. S. M.]
HYDRA'LETA. [Mola.]
HYDRAULA ( $\delta \delta(\rho a u ́ \lambda \eta \xi)$ ), an organist. According to an author quoted hy Athenaeus (iv. 75; compare Plin. H. N. vii. 38), the first organist was Ctesibius of Alexandria, who lived about B.c. 200. He evidently took the idea of his organ from the Syrinx or Pandean pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adapting keys with levers ( ${ }^{3} \gamma \kappa \omega \nu i \sigma \kappa \sigma t$ ), and with perforated sliders ( $\pi \dot{\omega} \mu a r a$ ), to open and shnt the mouths of the pipes ( $\gamma \lambda \omega \sigma \sigma \delta$ $\kappa о \mu a$ ), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight. On this account the instrument invented by Ctesibius was called the water-organ ( $\delta \delta \rho a v \lambda u s$, Athen. l.c. ; i $\delta \rho a u \lambda i-$ кд̀ ỏ $\rho \gamma \alpha^{\alpha} \nu 0 \nu$, Hero, Spirit.; hydraulica machina. Vitruv. x. 13 ; Schneider, ad loc.; Drieberg, die pnewm. Erfindungen der Griechen, pp. 53-61; ludraulus, Plin. H. N. ix. 8 ; Cic. Tusc. iii. 18).
 Jul. Imp. in Brunck's Anal. ii. 403 ; seges aëna, Claud. de Mall. Theod. Cons. 316), and partly of reed. The number of its stops, and consequently of its rows of pipes, varied from one to eight (Vitruv. l. c.), so that Tertulian (de Anima, 14) describes it with reason as an excecdingly complicated instrument. It continued in use so late as the ninth century of our cra: in the year 826, a water-organ was erected by in Venetian in the church of Aquisgranum, the modern Aix-la-Chapelle. (Quix, Münster-kirche in Aachen, p. 14.)
The organ was well adapted to gratify the Roman people in the splendid entertainments prorided

HYLORI.
HYPOBOLES GRAPHE.
for them by the emperors and other opulent persons. Nero was very curious about organs, both in regard to their musical effect and their mechanism. (Sueton. Ner. 41. 54.) A contorniate coin of this emperor, in the British Museum (see woodcut). shows an organ with a sprig of laurel on one

side, and a man standing on the other, who may have been victorious in the exhibitions of the circus or the amphitheatre. It is probable that these medals were bestowed upon such victors, and that the organ was impressed upon them on account of its introduction on such occasions. (Havercamp, de Num. contorniatis; Rasche, Lex. Univ. Rei Num. s.v. Hydraulicum Instrumentum.) The general form of the organ is also clearly exhibited in a poem by Publilius Porphyrius Optatianus, describing the instrument, and composed of verses so constructed as to show both the lower part which contained the bellows, the wind-chest which lay upon it, and over this the row of 26 pipes. These are represented by 26 lines, which increase in length each by one letter, until the last line is twice as long as the first. (Wernsdorf, Poetae Lat. Min. vol. ii. pp. 394-413.)

HYDRAU'LICA MA'CHINA. [HYnraula.]

## HYDRAULUS [Hvnraula.] <br> HY'DRIA (sifía). [Situla.]

HYDRIAPHO'RIA (ídotaфopia) was one of the services which aliens ( $\mu \epsilon \in \tau 0 \mu 0 \iota$ ) residing at Athens had to perform to the Athenians at the Panathenaea, and by which it was probably only intended to impress upon them the recollection that they were mere aliens and not citizens. The hydriaphoria was performed only by the wives of aliens (Pollux, iii. 55); whereas their daughters had on the same occasion to perform the $\sigma \kappa \stackrel{\alpha}{ } \eta \phi$ орía (the carrying of parasols) to the Athenian maidens, and their husbands the $\sigma \kappa \alpha ф \eta \phi$ opia (the carrying of vessels, see Aelian, V.H. vi. l, with Perizonius ; Harpocrat. s. v. इкаф $\not$ форои). It is clear from the words of Aelian that these humiliating services were riot demanded of the aliens by the laws of Solen, but that they were introduced at a later period. ( Pe titus, Leg. Att. p. 95.) The hydriaphoria was the carrying of a vessel with water (idpio, Aristoph. Eccles. 738), which service the married alien women had to perform to the married part of the female citizens of Athens, when they walked to the temple of Athena in the great procession at the Panathenaea. (Compare Meursius, Ponathenaea, c. 21.)
[L. S.]

## HYDROMELI. [VINUM.]

HYLO'RI or HYLEO'RI (í $\lambda \omega \omega \rho o i ́, \dot{v} \lambda \eta \omega \rho o i)$, are said by Hesychius (s. v.) to have been officers who
had the superintendence of forests ( $\tilde{\lambda} \lambda \eta \nu \phi \nu \lambda d \sigma \sigma \omega \nu$, compare Suidas, s. v.). Aristotle (Polit. vi. 5), who divides all public officers into three classes
 í $\lambda \omega \rho 0 \mathfrak{l}$ among the $\dot{e} \pi \mu \mu \in \lambda \eta \tau \alpha \dot{l}$, and says that by
 have been a kind of police for the protection of the forests, similar to the German förster. But the exact nature of their office, or the Greek states where it existed, are unknown. [L. S.]

HYPAETHRUS. [TEMPLUM.]
HYPASPISTAE ( ย $\pi \alpha \sigma \pi t \sigma \tau \alpha i ́)$. [Exercitus, p. 488 , b. $]$

HYPE'RETES (ín $\eta \rho \in ́ \tau \eta s)$. This word is derived from '́ $\rho \in \epsilon \sigma \sigma \omega$, $\epsilon^{\epsilon} \rho \in ́ \tau \eta s$, and therefore originally signifies a rower ; but in later times the word was, with the exception of the soldiers or marines, applied to the whole body of persons who performed any service in a vessel. (Thucyd. vi. 31, with Gö̀ller's note ; Demosth. c. Polyd. pp. 1214, 1216, \&c.; Polyb. v. 109.) In a still wider sense $\dot{v} \pi \eta \rho$ Étクs was applied to any person who acted as the assistant of another, and performed manual lahour for him, whether in sacred or profane things (Pollux, i. 1,16 , viii. 10), whence the word is sometimes used as synonymous with slave. (Clitarchus, ap. Athen. vi. p. 267 ; compare Pollux, vii. 8. 2 ; Hesych. s.v.) Hence also the name íтŋре́т $\alpha$, was sometimes given to those men by whom the hoplitae were accompanied when they took the field, and who carried the luggage, the provisions, and the shield of the hoplites. (Xen. Cyrop. ii. 1. § 31.) The more common name for this servant of the loplites was $\sigma \kappa \in \cup \dot{d} \phi о р о s$.

At Athens the name $\dot{v} \pi \eta \rho \in \dot{\tau} \tau \eta s$, or the abstract $\dot{\varepsilon} \pi \eta \rho \in \sigma i a$, seems to have been applied to a whole class of officers. Aristotle (Polit. vi. 5) divides all public offices into three classes, $\dot{\alpha} \rho \chi^{a i}$ or magistracies, é $\pi t \mu$ é $\lambda \epsilon \iota a l$ or administrations, and $\hat{v} \pi \eta \rho \in \sigma$ fal or services. Now all public officers at Athens, in as far as they were the representatives of the people, or the executors of its will, were appointed by the people itself or by the senate; and with the exception of some subaltern military officers, we never find that one public officer was appointed by another. A public officer, therefore, when he appointed another person to perform the lower or more mechanical parts of his office, could not raise him to the rank of a public officer, but merely engaged him as a servant (ívnpé $\tau \eta s$ ), and on his
 were not public officers, properly speaking, but only in as far as they took a part in the functions of such officers. The original and characteristic difference between them and real public officers was, that the former received salaries, while the latter had none. Among the ím $\eta \rho \in \in \tau \alpha a$, were reckoned the lower classes of scribes [Grammateus], heralds, messengers, the ministers of the Eleven, and others. This class of persons, as might he supposed, did not enjoy any high degree of estimation at Athens (Pollux, vi. 31), and from Aristotle (Polit. iv. 12) it is clear that they were notalways Athenian citizens, hut sometimes slaves. [L.S.]

HYPOBOLES GRAPHE (inobo $\lambda \hat{\eta} s \gamma \rho a \phi \eta$ ). Of this action we learn from the Lex Rhet. that it was one of the many institutions calculated to preserve the purity of Attic descent, and preferred against persons suspected of having been supposititious children. If this fact was established at the
trial，the pretended citizen was rednced to slavery， and his property confiscated．

HYPORCHE＇MA（ $\tilde{j} \pi \delta \rho \chi \eta \mu \alpha$ ），was a lively kind of mimic dance which accompanied the songs used in the worship of Apollo，especially among the Dorians．It was performed by men and women． （Athen．xiv．p．631．）A chorus of singers at the festivals of Apollo usually danced aronnd the altar， while several other persons were appointed to ac－ company the action of the song with an appropriate mimic performance（ $\dot{\varepsilon} \pi \sigma \rho \chi \in \stackrel{\imath}{\sigma} \sigma \theta a$ ）．The hypor－ chema was thns a lyric dance，and often passed into the playful and comic，whence Athenaeus （xiv．p． $630, \& c$. ）compares it with the cordax of comedy．It had，according to the supposition of Müler，like all the mnsic and poetry of the Dorians， originated in Crete，hut was at an early period in－ troduced in the island of Delos，where it seems to have continued to be performed down to the time of Lucian．（Athen，i．p． 15 ；Lucian，de Saltat． 16 ；compare Müller，Dor．ii．8．§ 14．）A similar kind of dance was the $\gamma \in \underline{f} \rho \alpha \nu 0 s$ ，which Theseus on his retnrn from Crete was said to have performed in Delos，and which was customary in this island as late as the time of Plutarch．（Thes．21．）The Ieader of this dance was called $\gamma \in \rho a \nu 0 \cup \lambda \mu 6$ s． （Hesycl．s．v．）It was performed with blows，and with various turnings and windings（év $\dot{\rho} \nu \theta \mu \hat{\varphi}$
 be an imitation of the windings of the Cretan lahyrinth．When the chorus was at rest，it formed a semicircle，with leaders at the two wings．（Pol－ Iux，iv．101．）

The poems or songs which were accompanied by the hyporchem were like wise called hyporchemata． The first poet to whom such poems are ascribed was Thaletas：their character must have been in accordance with the playfulness of the dance which bore the same name，and by which they were ac－ companied．The fragments of the hyporchemata of Pindar confirm this supposition，for their rhythms are peculiarly light，and have a very imitative and graphic character．（Böckh，de Meir．Pind． p．201，\＆c．，and p．270．）These characteristics must have existed in a mnch higher degree in the hyporchematic songs of Thaletas．（Miiller，Hist． of Greek Lit．i．p．23，\＆c．；compare with p．160， \＆c．）

JACULATO ${ }^{\prime}$ RES．［ExERcITUS，p．503，i．］ JA＇CULUM．［HAsta．］
JA＇NITOR．［JANUA．］
JA＇NUA（s̛upa），a door．Besides being appli－ cable to the doors of aparments in the interior of a house，which were properly called ostia（Isid． Orig．xv．7；Virg．Aen．vi．43．81），this term mare especially denoted the first entrance into the house， i．e．the front or street door，which was also called anticum（Festus，s．v．），and in Greek $\stackrel{\rightharpoonup}{v} \rho \alpha a \dot{u} \lambda$ cios， aù入eía，aủ入los，aủ入ia（Od．xxiii． 19 ；Pind．Nem． i． 19 ；Menand．p．87，ed．Mein．；Harpocration， s．v．；Theophr．Char．18；Theocrit．xv．43； Charit．i．2；Herodian，ii．1）．The houses of the Romans commonly had a back－door，called posti－ cum，pastica，or posticula（Festus，s．v．；Hor．Epist． i．5． 31 ；Plant．Most．iii． 3.27 ；Sueton．Claud． 18），and in Greek $\pi a \rho a ́ \theta u \rho a$ dim．$\pi a \rho a \theta b \rho!o v . ~$ Cicero（past．Red．6）also calls it pseudothyron， ＂the false door，＂in contradistinction to janua，the front door ；and，because it often led into the garden of the house（Plant．Stich．iii．1．40－44）， it was called the garden－door（ $\kappa \eta \pi \alpha i a$ ，Hermip．ap． Athen．xv．6）．
The door－way，when complete，consisted of four indispensable parts，the threshold，or sill；the lintel；and the two jambs．

The threshold（limen，$\beta \eta \lambda \delta s$ ，oű $\delta a s$ ）was the oh－ ject of superstitious reverence，and it was thought unfortunate to tread on it with the left foot．On this account the steps leading into a temple were of an nneven number，hecanse the worshipper， after placing his right foot on the hottom step， would then place the same foot on the threshold also．（Vitruv．iii．4．）Of this an example is pre－ sented in the woodent，p． 97.

The lintel（jugumentum，Cat．de Re Rust．14； supercilium，Vitruv．iv．6）was also called limen （Juv．vi．227），and more specifically limen superum， to distinguish it from the sill，which was called limen inferum．（Plant．Merc．v．1．1．）Being de－ signed to support a superincumbent weight，it was generally a single piece，either of wood or stone． Hence those lintels，which still remain in ancient buildings，astonish us by their great length．In large and splendid edifices the jambs or door－posts （postes，$\sigma \tau \alpha \theta \mu o i$ ）were made to converge towards the top，according to certain rules，which are given by Vitruvius（l．c．）．In describing the construc－ tion of ternples he calls them antepagmenta，the propriety of which term may be understood from the ground－plan of the door at p．241，where the hinges are seen to be behind the jambs．This plan may also serve to show what Theocritus means by the hollow door－posts（ $\sigma \tau \alpha 0 \mu$ к кої $\lambda \alpha$ Țupáay，Idyll．xxiv．15）．In the Augustan age it was fashionable to inlay the posts with tortoise－ shell．（Virg．Georg．ii．463．）Although the jamb was sometimes pearly twice the length of the lintel，it was made of a single stone even in the largest edifices．A very strikiog effect was pro－ duced by the height of these door－ways，as well as by their costly decorations，beautiful materials，and tasteful proportions．

The door in the front of a temple，as it reached nearly to the ceiling，allowed the worshippers to view from without the entire statue of the divinity，

JANUA.
and to observe the rites performed before it. Also the whole light of the bnilding was commouly admitted through the same aperture. These circumstances are illustrated in the accompanying woodcut, showing the front of a small temple of Jupiter,

taken from a bas-relief. (Mon. Matt. vol. iii. Tab. 39.) The term antepagmentum, which has been already explained, and which was applied to the lintel as well as the jambs (antepagmentum superius, Vitruv. iv. 6. § 1), implies, that the doors opened inwards. This is clearly seen in the same woodcut, and is found to be the construction of all ancient buildings at Pompeii and other places. In some of these buildings, as for example, in that called "the house of the tragic poet," even the marble threshold rises about an inch higher than the bottom of the door (Gell's Pompeiana, 2nd Ser. vol. i. p. 144), so that the door was in every part behind the door-case. After the time of Hippias the street-doors were not permitted to open outwardly at Athens (Becker, Cliarikles, vol. i. pp. 189, 200); and hence $\dot{e} \nu \delta o v \nu \quad$ c. meant to open the door on coming in, and $\dot{\epsilon} \pi ı \sigma \pi \dot{d} \sigma a \sigma \theta a i$ or $\hat{\epsilon} \phi \in \lambda \kappa \dot{U} \sigma \alpha \sigma \theta a \iota$ to shut it on going out. In a single instance only were the doors allowed to open outwardly at Rome; an exception was made as a special privilege in honour of M. Valerius Publicola. (Schneider, in Vitruv. iv. 6. § 6.)
The lintel of the oblong door-case was in all large and splendid buildings, such as the great temples, surmounted either by an architrave and cornice, or by a cornice only. As this is not shown in the bas-relief above introduced, an actual door-way, vi., that of the temple of Hercules at Cora, is here added. Above the lintel is an architrave with a Latin inscription upon it, and above this a projecting cornice supported on each side by a console, which reaches to a level with the bottom of the lintel. The top of the cornice (corona summa, Vitruv. iv. 6. § 1) coincided in height with the tops of the capitals of the columns of the pronaos, so that the door-way, with its superstructure, was exactly equal in height to the columns and the

JANUA.
625

Antae. This superstruction was the liyperthyrum of Vitruvius (l.c.), and of the Greek architects whom he followed. The next woodcut shows one of the two consoles which support the cornice of a beautiful Ionic door-way in the temple of Minerva Polias at Athens. In the inscription relating to the huilding of that temple, which is now in the Elgin collection of the British Museum, the object here
 Greek names for it, used by Vitruvius (iv. 6. § 4), are parotis and ancon, literally a "side-ear" and "an elbow." The use of consoles, or trusses, in this situation was characteristic of the Ionic style of architecture, being never admitted in the Doric. It is to be observed that Homer ( $O d$. vii. 90), Hesiod (Scut. 271), and Herodotus (i. 179), use the term in $\pi \in \rho \theta \nu \rho o \nu$, or its diminutive $i \pi \epsilon \rho \partial \dot{v} \rho \iota o \nu$, to inclnde the lintel. Upon some part of the hyperthyrum there was often an inscription, recording the date and occasion of the erection, as in the case of the temple of Hercules above represented, or else merely expressing a moral sentiment, like the celebrated "Know thyself" upon the temple at Delpbi.

The door itself was called foris or valva, and in Greek $\sigma \alpha \nu i s$, , $\kappa \lambda \sigma \sigma a s$, or $\uparrow \cup \cup \rho \in \tau \rho 0 \nu$. These words are commonly found in the plural, because the doorway of every building of the least importance contained two doors folding together, as in all the instances already referred to. When foris is used in the singular, we may observe that it denotes one of the folding-doors only, as in the phrase foris crepuit, which occurs repeatedly in Plautus, and describes the creaking of a single valve, opened alone and turning on its pivots. Even the internal doors of houses were bivalve (Guls Pompeiana, 2nd Ser. vol. i. p. 166); hence we read of "the folding-doors of a bed-chamber" (fores cubiculi,
 Hom. Od. xxiii. 42; $\pi \dot{d} \lambda a 1$ ס $\delta \pi \lambda \alpha \hat{1}$, Soph. Oed. Tyr. 1261). But in every case each of the two valves was wide enough to allow persons to pass through without opening the other valve also.

Even each valve was sometimes double, so as to fold like our window-shutters (duplices complicabilesque, Isid. Orig. xv. 7). The mode of attaching doors to the door-way is explained under the article Carno.

The remaining specimens of ancient doors are all of marble or of bronze; those made of wood, which was by far the most common material, have perished. The door of a tomb at Pompeii (Mazois, Ruines de Pompéi, vol. i. pl, xix. fig. 4) is made of a single piece of marble, including the pivots, which were encased in bronze, and turned in sockets of the same metal. It is 3 feet high, 2 feet 9 inches wide, $4 \frac{1}{4}$ inches thick. It is cut in front to resemble panels, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully wrought tombs of Asia Minor and other eastern countries have stone doors, made either to turn on pivots or to slide sideways in grooves. Doors of bronze are often mentioned by ancient writers. (Herod. i. 179 ; Plin. H. N. xxxiv. 7.) The doors of a supposed temple of Remus, still existing at Rome, and now occupied as a Christian church, are of this material. Mr. Donaldson (Collection of Door-ways from Ancient Buildings, London, 1833, pl.21) has represented them filling up the lower part of the door-way of the temple at Cora, as shown in the last woodcut, which is taken from him. The four panels are surrounded by rows of small circles, marking the spots on which were fixed rosettes or bosses, similar to those which are described and figured in the article Bulla, and which served both to strengthen and to adorn the doors. The leaves of the doors were sometimes overlaid with gold, which was an Eastern practice, as we see from the doors in the temple of Solomon at Jerusalem (1 Kings, vi. 3235); at other times they were enriched with the most exquisite carving. (Ovid. Met. viii. 705 ; Virg. Georg. iii. 26, Aen. vi. 20-33.) Those in the temple of Minerva, at Syracuse, are said by Cicero (Verr. iv. 56) to have exceeded all others in the curions and beautiful workmanship executed upon them in gold and ivory. "It is incredible," says he, "how many Greeks have left writings descriptive of the elegance of these valves." One of the ornaments was "a most beautiful Gorgon's head with tresses of snakes," probably occupying the centre of a panel. In addition to the sculptures upon the valves themselves, the finest statues were sometimes placed beside them, probably at the base of the antepagmenta, as in the magnificent temple of Juno in Samos. (Cic. Verr. i. 23.) In the fancied palace of Alcinous (Od. vii. 83-94) the door-case, which was of silver with a threshold of bronze, included folding-doors of gold; whilst dogs, wrought in gold and silver, guarded the approach, probably disposed like the avenue of sphinxes before an Egyptian temple. As luxury advanced among the Romans metal took the place of wood, even in the doors of the interior of a house. Hence the Quaestor Sp . Carvilius reproved Camillus for having his chamber doors covered with bronze (aerata ostia, Plin. l. c.).
