Def. Doc. 1290

INTERNATIONAL MILITARY TRIBUNAL FOR THE FAR EAST

THE UNITED STATES OF AMERICA, et al

- vs -

ARAKI, Sadao, et al

SWORN DEPOSITION

DEPONENT: BABA, Shachi

Having first duly sworn an oath as on attached sheet and
in accordance with the procedure followed in my country I
hereby depose as follows:

AFFIDAVIT OF BABA, SHOCHI

1. I was born at my permanent domicile, No. 64 Shihamoto-machi, Aza Shimogamo, Sakyo-ku, Kyoto City on August 18th, (the 27th year of Meiji); the present address is 1710, Shinhara-machi, Kohoku-ku, Yokohama City.

2. I went to Manchuria in 1936 (Showa 11) and studied the opium problem. I became executive manager of the Hsinking Central Anti-Opium Committee (central organ for anti-opium policy in Manchoukuo) in January 1930 (Showa 5). I was given the position of non-regular member of the Manchoukuo Anti-Opium General Bureau together with the position of secretary of the Manchoukuo Anti-Opium Society until the end of the war, and in the former capacity served in drafting Manchurian opium policies. Concerning opium I wrote the following books:

"Outline of the History of Chinese Opium"
"The History of the Eastern Penetration of Opium"
"Establishment of the Co-prosperity Sphere in East Asia and the Opium Policy"

"The Race and Opium"

I attended the Opium Conference several times and travelled throughout East Asia for the purpose of investigation.

3. General Account of the prohibition of smoking under the Wang Government.

At the beginning of 1944, the government of Wang Chings-wei established a three-year program for suppressing opium smoking and issued new regulations prohibiting the use of opium and other narcotics.

With the promulgation of these regulations the old system of anti-opium administration was reorganized but to expect opium addicts in a country as vast as China to be eliminated within three years was regarded as an extremely bold political measure. The anti-opium and narcotic regulations were issued in a series during February and March 1944; a resume of these regulations is as follows:

1- The prohibition of poppy cultivation; strict prohibition of illicit manufacture, smuggling and illicit traffic in opium and narcotics;

2- Registration of opium and narcotic addicts. The registration was to be completed by August 31st of the first year.

3- Registered opium and narcotic addicts were to be treated and cured within three years. In the first year, one-fifth of all patients were to be cured by March 31st of the following year; and in the second year, half of the remainder were to be healed by March 31st of the following year; in the third year all of the remainder were to be completely healed by March 31st of the following year.

4- For the treatment of the opium and narcotic addicts, all hospitals, official and private, shall be obliged to receive patients and to treat them.

Thus the Anti-Opium Bureau, which was formerly the supervising office for the anti-opium policy, and Hong-Chi Shan-T'ang (Shanghai) and Fu-Ming-T'ang (Canton) etc. which were private monopoly organizations for opium and narcotics were abolished and the Anti-Opium General Bureau was established in Shanghai uniting all anti-opium organizations. Nevertheless, owing to the vast region covered considerable differences were inevitably noticed in actual application, even though each locality followed the official instructions in principle.

Opium regulations and administrative measures under the Chungking Government were not very different from those mentioned above, but both seemed to be far from obtaining their goals.

When I had an occasion to visit the Anti-Opium General Bureau in Shanghai, I asked the chief as follows:

"Do you believe in your ultimate success in solving this difficult task merely through the readjustment of regulations?"

I remember that the chief made a grimace at my impudent question.

The Japanese Government maintained a strong stand in rendering indirect help to the enforcement of the opium policy in China whenever requests were made by the Chinese. At first the Liaison Office of the Main and later the Financial Section of the Embassy took part in this service and consular police in each place assisted in maintaining this control. The Japanese Government adopted a non-interference policy in this regard, preferring that China herself deal with matters concerning China, and took an attitude of cooperating with the Chinese Anti-Opium Policy based upon the spirit of the International Opium Convention. But because of China's request for Japan's cooperation in procuring the opium necessary for the enforcement of the Anti-Opium Policy, Japan was misunderstood in various ways, but both China's request and Japan's cooperation were inevitable results of the policy.

Supply and demand of opium in China were as follows: though China prohibited cultivation of poppy for years, illicit cultivation was made to some extent. (It was the so-called "cultivation-by-paying punishment", meaning secret cultivation was connived in by the authorities to whom penalties were paid in advance). In spite of the extensive illicit cultivation of poppy, the internal supply was always short and the gap was filled by the importation of Iranian and Indian opium. The stoppage of the importation of opium following the outbreak of the East Asia war resulted in the demand for other sources of supply, and consequently Jap Mongolian and Sinkiang opium was imported through the assistance of Japan. This stoppage of impor-

tation of Iranian and Indian opium, which importation had been carried on by the assistance of the British Government, affected not only China but also many other places all over East Asia. The opium situations in China, as well as the Souther Regions which had close connections with China in the matters of opium, are as below:

Outline of the Demand for Opium in
Each District of East Asia (1942)

China: -

North China	Tael	3,500,000
Central China (Nanking, Shanghai, Fou-Chow)	Tael	2,000,000
South China (Canton, Hongkong, Huang-Chow).....	Tael	1,500,000
French Indo-China	Tons	80
Thailand	Tamulun	970,000
Malay Area (including North Borneo)....	Tahil	1,000,000
Java Area	Tahil	1,000,000

Note:

1 Tamulun - Gramme 37.8 - 1 Tael
1 Tahil - Gramme 37.8 - 1 Tael

Of course the above figures indicate the amount of opium under the control of each local government, but as illicit cultivation of poppy, illicit manufacture and illicit traffic of opium and narcotics are effected on a large scale, especially in China, a comparatively accurate amount of opium shall be estimated by adding the amount of those illicit quantities to those of the opium under the control of the government. It is regrettable that the fragmentary official reports are not enough for the investigation of the whole amounts.

For instance, in Shansi Province in North China, a territory which professed itself to be a land clean of opium under the motto of clean and honest administration, illicit poppy is cultivated on more than 500,000 Mu and raw heroin, called Chiich-Wu, is used in great quantities. Correct perception of illicit opiate traffic of this kind moving underground is not only necessary for those who desire to accomplish anti-opium work, but also is a much more important problem as illicit opium traffic in China is inseparable from the secret societies such as Ching Pung and Hung Fang, and is connected with the activities of the Comintern or Chinese bandits. I add that the complex activity of the illicit traffic has also a large and important connection with the economic life of China.

Next, a brief summary of anti-opium administration in each place is given as follows:

North China

The China Political Council established the Anti-Opium General Bureau in Tsinping with nine branches under its control and charged them with the anti-opium administration.

Application of addicts registration system; sale of opium for the medical treatment of the registered addicts; medical treatment of the exsistent addicts, etc. - these were the outward aspects of the organization common to all. But if criticism is made as to the actual fact, the administration was still in a preparatory stage.

The national control over opium was especially difficult. Throughout the five provinces of North China, poppy was cultivated illicitly in a large scale. Nevertheless the raw opium which the government made the Raw Opium Company (private management) buy up was not enough to meet the demand; the government therefore bought about 2,500,000 Tael of raw opium (the unit of opium weight in North China is 31 grammes for one tael) every year from Mongolian Government and also planned to import from Hwai-hai district.

The Raw Opium Company engaging in purchase and wholesale of raw opium and the Opium Paste Company engaging in production of opium-paste, were the main obstacles to the national control of opiate. As the problem of opium smoking had been neglected without adequate regulation in China, a great effort was to be made for the accomplishment of the plan. Difficulty was not merely for North China but also for all over China.

The fact that the concentration of executive power was limited within districts along the railways and in cities to some extent, rendered the accomplishment of the anti-opium policy extremely difficult.

Especially the control over illicit cultivation, smuggling and traffic were extremely difficult in North China like other places in China. Except some success on the part of the Japanese Consulate police in controlling illicit sale by Koreans, things were left untouched as they were before.

The opiate smuggling by Koreans was utilized as a material for attacking Japan, and caused misunderstandings as if the Japanese Government had played some part with those smuggling. That was no more than a distortion of facts. It was a sad truth that illicit goods by Koreans were considerable in number.

Illicit manufacture of opium and its smuggling into North China were in a large scale and Tsinping and Tientsin were the centres for distribution to whole China extending vast networks over central China, South China and Manchuria.

Members of the Anti-Opium General Office belonging to the North China Political Council visited the neighboring Manchoukuo to study the anti-opium administration there and learned its installations and success; especially they were interested in complete measures for healing addicts and its special method of healing.

Treatment for chronic addicts has been hitherto very incomplete; it was a difficult question, not only for the Chinese Government, but also to those who considered the anti-opium problem in sincerity and in earnest. Nevertheless effective method for healing was not discovered in any country of the world.

The healing method for chronic addicts which has been applied hitherto is as below:

1. gradual healing by means of narcotics.
2. Extracting method; long sleeping method; self-serum treatment.
3. Medical treatment (atropine, iishrine, iodine, salicytine, etc.)

Among foregoing treatments, the gradual healing was applied in general, but all treatments were not fully effective to the disappointment of the authorities concerned.

Members of the Anti-Opium General Bureau discovered the marvelous effect of Tungkuang Medicine Treatment and decided to apply this method. Thus they sent students to Manchoukuo for study and purchased the same medicine, and establishing Tungkuang Medicine Control Bureau, began to apply the same treatment.

Tungkuang Medicine is a powder medicine extracted from a special plant (*H. Tansyrrum F.*) which grows in Japan proper. Superior points of the medicine compared with others are as below:

It creates a feeling of perfect recovery; it does not give pain to patients during treatments; the time required for healing is extremely short; the method of treatment is simple; the expense for treatment is small; the least chance for recrudescence, etc.

The North China Political Council ordered nine sanatoriums under the branches of the General Bureau to apply Tungkuang Medicine Treatment and distributed the very medicine to other noted hospitals, official and private; thus started the healing and salvation of the patients effectively. The Tatung coal min in Mongolia decided to apply this method to miners in view of the good effect Tungkuang Treatment might have in enhancing efficiency of labor.

Central China District:

Though there is no knowing why the Anti-opium Bureau, an organ for the execution of the aforementioned anti-opium 3-year plan, was established at Shanghai, instead of at Nanking, Shanghai was a special area where official sale of opium paste was not permitted.

After the close of the World War I, the opium problem in the Orient came to draw the attention of the world, being discussed with ardent enthusiasm by intelligent younger generation of China. Since then Shanghai became the centre of the anti-opium campaign, but it had an appearance of a home of opium addicts partly because of its being a free city. Aside from the fact that there were so many opium smokers, Shanghai was a transit port for illicit sales of opium and other narcotics for Central China and the South Sea Islands.

Moreover, opium has helped to accentuate the financial characteristics of the city, and opium has become the most popular object of speculation next to gold bullion.

The aforementioned Hungchi Shantong, an agency for opium traffic, with its base at Shanghai, was conducting its business both in the northern and southern regions, according to instructions by the Anti-Opium Bureau. The total annual consumption of opium in and around Shanghai was given as 1,000,000 tael.

South China District:

At Kwantung, a monopoly agency, the Fumin-tang, which was a monopoly agency under the supervision of the Anti-opium Bureau, annually produced opium paste to the total value of 1,000,000 tael and sold it in behalf of the Bureau. In this district there was also a shortage of opium paste for official sale, and Mongolia produced opium could barely satisfy the demand, consequently the purchase of privately produced opium was attempted. However, this proved unsuccessful.

In Canton there were "Chich-yen-lieisos," infirmaries for opium addicts, which appeared to be modestly successful as compared with those in other districts.

At Hongkong, during the military occupation by the Japanese forces, an anti-opium policy was established under the Governor General's administration, and the official sale of opium paste was conducted by the Yuchen Co., a monopoly agency, using as the basic figure some 21,000 opium addicts, registered during the former Hongkong Government.

Under the British administration anti-opium facilities were comparatively well organized in this district, and the Japanese administration, in following its course, had intended to put into practice an ideal anti-opium policy. In each district mentioned above, according to the International Opium Treaty, some formal measures for uprooting the opium eating habit were adopted, such as the registration of opium addicts, a complete control of the sale of opium paste, limitations on the amount of its official sale and medical treatment of its addicts. Nevertheless, the present author, who had devoted himself to the anti-opium work in Manchoukuo over a long period, could not help regarding all these measures as superficial and unsubstantial.

Next a brief reference will be made to the anti-opium policy adopted in the Southern regions.

Malay Sector:

Prior to the World War II, Indian opium had been imported into this district by the British Government. It was refined in opium works at Singapore, and sold under Government monopoly system. After the fall of Singapore, the Japanese military administration, in following the example of the British administration, adopted an almost similar policy.

Of course, opium addicts here were also registered. But most of them were Chinese overseas merchants, and the official sale of opium paste appeared to have been conducted chiefly "over the counter," no matter whether the buyers were registered or not.

Despite the fact that in the Malay sector the registered opium addicts totaled around 110,000, an annual consumption of opium paste amounts to 1,800,000 tahil (1 tahil - 37.8 gr.) In every province of this district anti-opium laws had been enforced one after another since the first decade of this century. These laws, though more or less diversified, according to different provinces, were all drafted in conformity with the spirit of the International Anti-Opium Treaty. They were, however, so ineffective that it might be said they all but left that vicious habit uncontrolled.

Under the Japanese administration the anti-opium campaign was carried on almost in the same way as under the British administration.

Java Sector:

The anti-opium policy adopted by the Dutch Government in this district also followed the pattern of that by the Malay District. An excellent opium factory at Ljakarta (T.N. Batavia) produced annually about 900,000 tahil (1 tahil - 37.8 gr.) of refined opium paste.

In Java opium addicts were registered, exclusive of those in major cities and port areas. It is estimated, therefore, that the registered number of about 90,000 constitute only a part of the actual number of addicts.

In this district, unlike other districts, more addicts were found among the native inhabitants than among the Chinese merchants. Raw opium consumed there seemed to come mostly from Iran.

Thailand:

According to the report of the Opium Monopoly Bureau, the total registered opium addicts totaled 200,000, the annual consumption of opium was approximately 970,000 tael (T.N. as of 1941) and illicit cultivation of poppy-plants and smuggling of opium were never done. It was said, however, a considerable amount of poppy plants were illicitly grown in the frontier districts and that in addition, annually about 1,500,000 tael of opium was smuggled from Burma into this district.

A large number of opium addicts are found among the Thailanders as well as among the Chinese merchants here. Usually Thailanders prefer eating opium paste while Chinese merchants like to smoke it with opium pipes. The licenses for opening of opium dens "yenlins", are obtained annually through auction.

French Indo-China: The annual consumption of opium in French Indo-China is estimated at about 60 - 120 tons. The addicts are, for the most part, Chinese merchants. It is said, however, not a few opium smokers are found among French nationals.

Needless to say, these French opium smokers are not registered as they are legally forbidden to smoke opium.

Like in other districts, here are enforced also anti-opium laws based upon the International Opium Treaty, and there is soon another likeness between this district and others in respect of the half-hearted attitude of the authorities toward the anti-opium work. It is said poppy plants are privately cultivated in the district up the Nekong River.

Burma District.

The annual consumption of opium in the Burma district is about 1,500,000 tael.

In this district registration of opium addicts is limited to Chinese merchants only. Accordingly, the amount of the sale of opium paste under the official monopoly system is correspondingly not considerable. In this district, however, household medicines called "Hemp" and others, containing opium, are popular among the people. Besides, the cultivation of poppy plants and private extraction and possession of opium are permitted within limited quantities. The amount of the domestic consumption of opium should not be made, therefore, regardless of these facts.

The cultivation of poppy plants is permitted in a limited area on the Salween. Its annual production is estimated at about 500,000 tael, which is not sufficient to cover domestic consumption. Accordingly, they had to rely upon opium imported from India.

NOTE: "Tael", the Chinese unit of weight, varies in different districts as shown below:

Tael	50 gr.	in Manchuria	Tael	36 gr. at Nanking
	"	Mongolia		37.8 gr. at Canton
	"	North China		37.8 gr. at Hong Kong
	"	at Shanghai		

The "Southern Tael", which is used in Java, Sumatra, Malay, Thailand, French Indo-China and other southern regions, is 37.8 gr.

Outline of Anti-Opium Policy Adopted by Former Manchoukuo

When it was first established, the former Manchoukuo decided to forbid the use of opium and other narcotics. In November 1932, the Anti-Opium Act was promulgated as an ordinance of the State Council, and at the same time a rescript was given to the people in the name of the Premier ordering them to break their national habit of the use of opium and other narcotics.

Simultaneously with the issue of the Opium and Narcotics Act, the new government set about the task of the long neglected administrative readjustment which was necessary for the enforcement of the new act. After a close study of the question by the Council on People's Welfare, the 10-year plan for the anti-opium campaign was formed and officially announced on October 12, 1937.

In the execution of this 10-year plan the Manchoukuo Government paid the utmost attention to the practical method for effecting a radical cure of the registered addicts, totaling to an amazing figure of 820,000 within 10 years.

It was natural that various plans for the medical treatment of the registered addicts, which were prescribed in the enforcement plans of the 10-Year Anti-Opium Policy, required an enormously large-scale mechanism. At the outset five anti-opium hospitals were projected, but later their number was quickly doubled and further, plans were formed to build one hospital of this kind in each of the provinces, cities, prefectures and Mongolian villages.

Thus at the end of 1941 two national hospitals and 189 minor ones, including those established respectively by provinces, cities and Mongolian villages, had been completed and they were renamed "Kangshêng-yuans". The smaller of these hospitals was equipped with 30 beds and the larger as many as 390 or more, each addict being permitted to receive hospital treatment, as a rule, for 45 days.

Prior to the establishment of Manchoukuo, the unlawful cultivation of poppy plants generally prevailed throughout the region as the result of Tang Yülin's sham anti-opium policy which he had practiced in Jehol. But at the end of 1941, concurrent with the prohibition of private cultivation of poppy plants in all the provinces except two Mongolian villages in Jehol and West Hsingan Provinces, the business control of purchase, manufacture and sale of opium was placed under the government management, whereby a complete system for controlling the use of opium and other narcotics was established. In January 1940, the Anti-Opium Bureau was established with the aim in view of strengthening and unifying the anti-opium campaign, and unremitting efforts were made for materializing the 10-Year Anti-Opium Plan.

But this laborious medical work of curing opium addicts, toward which Manchoukuo had made such tremendous efforts, was faced with a sad failure. Under "North China District" mention was already made as to the difficulty of the medical treatment of chronic morphine addicts. Manchoukuo had spent an enormous sum of money in the management of the Kangshêng-yuans, and their well organized large-scale facilities may have been unparalleled. All those, however, brought an extremely poor result. The addicts who were admitted to the Kangshêng-yuans totaled tens of thousands a year. The closer one looked into the percentage of the addicts who relapsed into the vicious habit after they had left the hospital, the more disappointing facts were revealed, which amazed those concerned. The percentage of those who again took up the opium consuming habit after they had been discharged from the hospital as completely cured through the "gradual reduction treatment" was closely studied and by way of coping with the sad situation a conclusion was reached. It is as follows:

(1) It is absolutely necessary to give mental guidance together with moral training to those opium addicts, as opium poisoning usually causes not only physical disorders but also a collapse of will-power and conscience.

(2) Eighty percent of the discharges relapsed into the opium habit within a month after their leaving the hospital (not a few of them only a few days after they were discharged), and fifteen percent of the rest within six months after they got out of the hospital. In view of these facts, it is necessary to keep the discharged under supervision as long as six months after their leaving the hospital.

Thus, the Anti-Opium Bureau took the following measures:

1. Prolonging by two months the period of hospitalization in the Kangshêng hospital.

2. The replacement of the management of the Kangshêng hospital as a spiritual training institute.

3. Education during hospitalization and the entrusting of the supervision of opium addicts after leaving the hospital to religious moral training institutions.

At that time it happened that the aforesaid medicine "Tungkuang" (Ophnodin) was discovered, suddenly bringing great hope to the future of the work of curing. In 1942, the ninth year of Kangtsh, collective labor services of healthy men were operated as one of the measures of supervising opium addicts who had left the hospital, the most noteworthy of them being completion of the construction works of a flume in Wuchang Hsien.

The adoption of the "Tungkuang" medical treatment in Manchoukuo made possible the treatment of opium addicts on a large scale. Because it produced a remarkable difference in the recovery of their health, the above-mentioned collective labor service was planned with the double purpose of preventing re-addiction and of cultivating the spirit of labor. The following are a few extracts illustrating the great success achieved by the enforcement of the various measures:

1. The Construction of a Flume in Wuchang Hsien in Pinkiang Province.

When the reclamation of three thousand chō-bu of rice paddies was planned, it was decided that the flume with a length of 22 kilometres, five metres wide and five metres deep, be constructed only by the cured addicts. Waiting for the thawing season the plan was put into operation and admirably completed by early October the same year. The total number of cured addicts assigned to the construction project was two hundred and eighty thousand and its success astounded the Manchoukuan staff and invited their high praise.

2. The Construction of the Kanshōng Village in Tangyüan Hsien in Sankiang Province.

Addicts among the poorest people in Tangyüan Hsien were made to organize a group village with their families and to engage themselves in the construction of a new village. In this village a barrel-manufacturing factory was newly established and by combining such projects as would enable the village children to acquire technique in occupations other than farming, they were enabled to contribute to the prosperity of the village. The construction of villages for cured addicts was being carried on at several places in the country and considerable results were expected in every one of them.

3. The Kangshōng Training Institute of the Hsitalo Coal Mine in Tungan Province.

Tungan Province was naturally a home of opium addicts because it was once located on the border and was the producing district of secret opium of superior quality, which had such names as the so-called "Sungari River Opium", and "Eastern Opium". Since 1941, the eighth year of Kangtsh, the clearing of opium addicts in this province was planned, the Kangshōng Hospital was moved to the Hsitalo coal mine, and cured addicts were assigned to work in the said mine.

Besides the above, many substantial results were achieved in consequence of which the anti-opium projects in Manchoukuo made rapid progress, but it should be said that it was partly due to the new discovery of Ophnodin, that is, "Tungkuang". The government invited Professor MASAYAMA of Harbin Medical College, an authority on this medical treatment, as chief of the newly-established National Anti-Opium Medical Research Institute and had him devote himself to the study of the medicine "Tungkuang".

As for the name of "Tungkuang", the Minister of Civil Affairs of the time, YU CHING-YUAN, gave the name "Tungkuang", meaning "Ex oriente lux", signifying the great effect of the medicine "Ophnodin", which was discovered in Japan, in the curing of opium addicts, and the great contribution it made to the anti-opium administration in Manchoukuo.

Thus, at the end of the eighth year of the 10-Year Anti-Opium Policy the remainder of the registered opium addicts who completed the cure was only three hundred and forty thousand. But since a stronger driving force was necessary in order to accomplish the 10-Year Anti-Opium Policy in the remaining two years, the government, with the idea of making a further advance, began to make preparations for the establishment of an Anti-Opium Association. Thus, the Anti-Opium Association was established as a juridical person by an Imperial Ordinance on the 1st of January, 1944. This was planned in expectation of the development of an anti-opium movement by the will of the people, on the plans of a national mobilization by combining all the power of educational enlightenment of educational institutions and cultural organizations, especially religious and moral institutions, throughout the country in addition to political power.

Moreover, the intention of the Manchoukuo government was that the successful consummation of the 10-Year Anti-Opium Policy by the extension of the anti-opium movement in the remaining two years lay in eradicating the disgraceful and corrupt custom which had been prevailing for three hundred years by the self-realization and strength of the people themselves.

Of course, it was the plan of the Manchoukuo government to suspend the supply of opium paste at the end of 1946, the tenth year of this policy. Together with the suspension of the official sale of opium paste, the reduction at once of poppy cultivation to those for medical purposes only was planned. The cultivation of opium under the cooperative system of joint management of capitalists and laborers conducted since 1942, was first planned on the understanding that the cultivation fields would be gradually transferred from Jehol and West Hsingan Province to the central region where public peace was well maintained.

KU TSU-HENG, the Minister of Communications, who had an enthusiastic interest in the promotion of public welfare in Manchoukuo, used to tell me as follows: "The most successful of the policies taken by the Japanese in Manchoukuo is the anti-opium policy, and this has borne remarkable results."

In conclusion, I will record a part of the plan of effectuation in the first year of the establishment of the Anti-Opium Association.

The Effectuation Plan of the Welfare Department

1. Full Utilization of the Kangshêng Hospital.

The immediate equipping of those among the Kangshêng hospitals which were transferred from the government and the treatment of ninety thousand male opium addicts during the current year

2. The Effectuation Plan of the Cure of Female Opium Addicts by the Moral Training Society.

The accommodation as speedily as possible of female opium addicts by the 450 branches of the Moral Training Society and full effectuation of the current year's plan to cure twenty five thousand of them.

3. The Construction of Kangshêng Villages in Lanping Hsien, Pinkiang Province.

The construction of the Third Kangsheng Village will be pushed forward after the construction of the First and Second Kangsheng Villages.

4. The perfection and expansion of the National Anti-Opium Research Institute.

The perfection of the staff or laboratory workers and replenishment of equipment for research for the purpose of perfecting the organization for cytological research in this research institute which was newly established in the preceding year.

5. The training of experts in the "Tungkuang" medical treatment together with quick expansion of activities for the cure of opium addicts.

6. Training of "Anti-Opium Workers" in the Concordia Young Men's Association.

By promoting the third year plan of training anti-opium workers which was formulated to bring forth voluntary cooperation in the general activities for the prevention of the use of opium through the use of the cell system of the Concordia Young Men's Association, the training of one worker per each village shall be realized.

Plan for Enterprise of the Department of Publicity

1. Furtherance of the Anti-Opium Promotion Movement of the Religious Moral Training Institutions throughout the country.

To further the anti-opium movement by all the fifteen religious and moral education institutions, a united guiding organ shall be created so as to effect a structure for an organized movement.

2. The Formation of the Mothers' Anti-Opium Society.

The "Mothers' Anti-Opium Society" shall be formed by mothers of pupils of the national primary schools and national higher schools, and anti-opium thoughts will be diffused thoroughly.

3. The National Anti-Opium Exhibition of Works of School Children.

The drawings and calligraphy expressive of anti-opium thought will be collected from the twenty thousand pupils of the national primary and higher schools of the country and an "anti-opium exhibition works by school children" will be held in each school. The excellent ones shall be placed on display at the National Anti-Opium Exhibition of Works of School Children, to be held in the capital. Individual prizes and school prizes shall be awarded to excellent works, and after the conclusion of the national exhibition, they shall be used in circulating exhibitions to be sent to all parts of the country from time to time.

4. The National Young Men's Anti-Opium Oratorial Contest.

Preliminary anti-opium elimination oratorial contests shall first be held in each city, prefecture and special Mongolian

villages throughout the country, followed by semi-final preliminary contests in each province. The final national contest shall be held in the capital among the finalists representing each province. Although the object of the anti-opium exhibition of works of school children and the anti-opium oratorial contest lies in the effectiveness of the preliminaries in each locality, the national final contest has been drawing enthusiastic interest from the third time and is growing year by year.

5. Inaugural Ceremony of the Greater East Asia Young Men's Anti-Opium League.

On the occasion of the national young men's anti-opium oratorial contest, the representatives of the young men of North China, Mongolia, Central China and South China shall be invited to Hsinking and an anti-opium young men's league shall be organized by the young men of Greater East Asia, with assistance of the embassies in Manchoukuo.

6. Dispatch of Anti-Opium Envoys to the Republic of China.

Anti-opium envoys (civil representatives) shall be dispatched to the Republic of China and the anti-opium policy shall be realized in concert with all the countries of East Asia so as to eradicate the racial disgrace.

7. General Utilization of School Education and Social Cultural Organs.

In every school an anti-opium lecture shall be given by the principal regularly once a month. Teaching materials for the diffusion of anti-opium thought shall be put in the national text books as much as possible. Pamphlets with supplementary teaching materials concerning the anti-opium policy shall be published. The newspaper offices and radio broadcasting stations shall offer positive assistance in the cultivation and dissemination of the anti-opium thought. The latter especially shall make monthly plans and draw up a program for "Anti-Opium Week" twice a year.

8. Effectuation of programs for Anti-Opium Day and Anti-Opium Week.

October 12, the date of publication of the Ten-Year Anti-Opium Policy, shall be established as "Anti-Opium Day", and July 3, the date of the burning of opium by Lin-Tsohsu, shall be established as the principal day of "Anti-Opium Week". The national publicity efforts shall be concentrated on these two points.

9. Invitation of Thinkers

Japanese and Chinese thinkers or scholars who are versed in or concerned with the anti-opium problem shall be invited, one from each country, to Manchoukuo. They shall be asked to inspect the anti-opium institutions in Manchoukuo and write their views thereon. Their writings shall be published in magazines or newspapers and then published in book form so that they may contribute to the dissemination of anti-opium thoughts.

On this 3rd day of April 1947
at Tokyo

Dponont: BABA, Shachi (seal)

I, EMNARI, Yasutaro hereby certify that the above statement was sworn by the Dponont, who affixed his signature and seal thereto in the presence of this witness.

On the same date,
at Tokyo

Witness: (signed) EMNARI, Yasutaro (seal)

QITH

In accordance with my conscience, I swear to tell the truth withholding nothing and adding nothing.

元滿洲國ニ於ケル禁煙行政概況

元滿洲國ハ、ソノ建国ト共ニ、阿片麻薬ノ斷禁ヲ決意シ、大同元年十一月國務院敎令ヲ以テ禁煙令ヲ佈告、同時に勅務總理名ヲ以テ、阿片麻薬嗜好ノ民族的陋習打破ヲ國民ニ誓告シタノデアル。

次デ、阿片麻薬法ノ發布ト俱ニ、舊來殆ト放擲狀態ニ置カレテキタ之ニ對スル行政整備ニ着手、民生部興委員會ニ於テ研鑽ノ後、康德四年十月十二日、十ヶ年ヲ以テスル阿片麻薬斷禁政策ヲ決定發表シタノデアル。滿洲國政府ガ、コノ十ヶ年斷禁政策ノ遂行ニ當ツテ、最モ意ヲ用ヒタノハ、康德四年度ニ於テ完成シタ全國癌者ノ登録數八十二萬四千ニ及ブ。然大ナ数ノ中毒者ヲ、十ヶ年ヲ限ツテ全治根絶セシメルニハ、如何ニスベキカトイフコトデアツタ。

十ヶ年斷禁政策ノ實施要綱ニ規定サレタ、既存中毒者矯治ニ關スル諸施策ガ迄大ナ根柢ヲ必要トシタコトハ當然デアツタ。

當時五ヶ所ニ設計セラレテキタ戒煙病院ヲ急遽ニ倍加シ、更ニ各省市縣旗ニ一個宛ノ病院新設ニ乘リ出シタノデアツタ。

斯クテ康徳八年夏末迄ニ建立病院二、全市廢立百八十九ヲ完成、之ヲ
康生院ト改稱シタ。康生院ハ小ニシテ三十、大ニシテ三百九十餘ノベツ
ト數ヲ據シ、一人取番期滿四十五日ヲ基準トシテ遷醫シテキタモノデア
ル。

建國前ニ於ケル同地方ノ阿片狀況ハ、熱河ニ於ケル湯玉鱗ノ歎聞的禁煙
政策ノ後ヲ受ケテ、全國ニ禁煙の蓄積培ヲ見テモタモノデアルガ、康徳
四年末ヲ以テ熱河省及興安西省ノ二旗ヲ限リ、禁止スルニ至リ、阿片ノ
販賣、製造、販賣ヲ官營ニ施行、專賣法ニヨル阿片販賣ノ完全管理体勢
ヲ確立シタノデアツタ。斯クテ、康徳七年一月禁煙行政ノ一元強化ヲ目
堵トシ、禁煙總局ヲ創設、十ヶ年斷禁政策ノ強力ナ推進ニ努力シ來ツタ
ノデアツタ。

然シナガラ滿洲國ガ寺ニ力ヲ傾向シツ、アツタ阿片飛香ノ標榜廢治ニ關
シテ、ヤガテ慈シムベキ被局ニ同達シナケレバナラナカツタノデアル。
モルヒホ慢性半毒患者ノ醫藥匡救ノ困難性ニ關シテハ、華北ノ頭ニ於テ
多少ノ訛潤ヲ加エタガ、滿洲國ガ多額ノ康生院經營費ヲ費シ、大規模ノ

恐ラク世界ニ冠絶スル程ノ組織立ツタ施設ヲ誇ツテモ、其ノ結果ハ甚ダ
察心スペキモノデアツタノデアル。

即チ一ヶ年數万ニ上ル康生院治療患者ガ同院退院後ニ於テ再ビ同片麻薬
ノ習慣ニ墮チ入ル比率ハ、深ク調査スレバスル程、驚クベキ結果ヲ發見

スルノミニアツテ、關係者ヲシテ區然タラシムルモノデアツタ。

次ニ漸減療法ニ依ツテ全般セリト認定、退院セシメタ者ノ、再発率ヲ檢

討シ、之ガ對策トシテ到底シタ結論ハ、
一阿片癮中毒症狀ハ、單ナル肉苔的疾患ノミニ非ズ、意志並ニ良心ノ
衰減ヲ伴フモノナルヲ以テ、之ガ對策トシテ精神的補導教化ヲ必要ト

スル。

ニ再発セル者ノ八割ガ退院後一ヶ月（甚シキハ二三日ニテ再発セル者多
数アリ）測定ノ一割五分以上ガ六ヶ月以内ニ再発ニ頗落スル狀態ニ致
シ、之ガ防止ニハ退院後尙六ヶ月間ノ監督管理ヲ必要トスル。

斯クテ禁煙總局ガ採用シタ措置ハ、

一 康生院 入院期間ノ二ヶ月延長

二 康生院 經營ノ精神道場的置換

三 入院中ニ於ケル教化及退院後ノ管理ヲ宗教道德教化團体ヘノ依頼
コノ時適々前述東光癒（オフノデン）の發見ニ及ビ、俄然特治事業ノ將
來ニ一大光明ヲ齎シ得タノデアルガ、康德九年ニ行ハレタ退院後ノ癒者
管理處置トシテノ、健康者ノ團体的勞務就役ノ内、特筆スベキモノヲ舉
グレバ、五常縣ニ於ケル用水路開墾事業ノ完成デアル。

滿洲國ノ東光癒療法採用ハ、癒者ノ大量矯治ヲ可能ニシ、治療後ノ健康
回復ニ各段ノ相違ヲ免希タノデ、再度防止ト勤勞精神涵養ノ一石二鳥ヲ
狙ツテ計畫シタノダガ上述ノ團体就勞デアツタ。客體實施シテ大ニ成果
擧ゲ得タ中カラ二三披露スルト

一 濱江省五常縣用水路開墾

五常縣ニ於テ水田三千丁歩ノ開墾ヲ企劃シタ際、ソノ用水路、全長二
十三キロ、巾及深サ各五米ヲ標定者ノミノ力デ開墾スルコトニ決意シ

1290

解氷期ヲ待ツテ實施同年十月初開通ニ立派ニ完成ヲ告ゲタノデアル。
之ニ就勞シタ解氷者通人數二十八万石デアツテ、コノ事業ハ蒲糸職員
ノ歸國船議シタ金策デアツタ。

二三江省湯源縣生村建設

湯源縣ノ最底薪民ノ廳若ヲソノ家族ヲ俱ニ聚落部落ラ形成セシメ、新
シキ村ノ建設ニ當ラシメタ。

コノ村落ニハーノ製絲工場ヲ建設シ、河ノ子弟ニ養業以外ノ技術ヲ習
得セシメル方法ヲ併用シテ、村ノ築業ニ費セシメタ。解氷者村ノ建設
ハ尙國內ニ二三ヶ所實施セラレツ、アツタガ、イヅレモ相等ノ成業ヲ
期待サレテキタ。

東安省濱遠炭坑生道場

東安省ハ嘗テ國境ニ位在シタ關係カラ、所謂「江寧」「東土」等ノ通稱
ヲ持ツ良質石作河片ノ生産地デ

May 6th 1912

アツタ爲、自然阿片癒者ノ巣窟デアツタノデアル。

康徳八年度以來、省下ノ癒者掃蕩ヲ企劃シ、康生院ヲ瀉道炭坑ニ移シ、解癒者ヲシテ同礦山ニ就労セシメタ。

以上ノ外夥多ノ實績ヲ擧ゲ得テ、滿洲國ノ禁煙事業ハ急速ナ進展ヲトゲタノデアルガ、之ハ半バ「オフノヂン」即チ東光劑ノ新發見ニ功ヲ讓ルベキモノデアルトモ謂フベク、政府ハ尙同療法ノ研究家デアツタハルビン醫大ノ正山教授ヲ、新設シタ國立藥煙醫學研究所長ニ聘シ、東光劑研究ニ没頭セシメタノデアル。

東光劑ノ名稱ハ時ノ厚生部干靜遠大臣ガ、解癒藥「オフノヂン」ノ偉效ト同劑ガ日本内地ニ於テ新發見セラレ、滿洲國ノ煙政ニ一大貢獻ヲ成シタ意味ヲ含メ「光ハ東方ヨリ」ノ東光劑命名デアツタ。

斯くて十ヶ年斷禁政策施行第八年度末ニ於テ矯治ヲ畢ツタ登錄癒者ノ殘餘數ハ僅々三十四万ノ夥少數ニ至ツタノデアルガ、殘餘ノ二ヶ年間ニ十ヶ年斷禁ノ完遂ヲ期待スルニハ、尙一層ノ強力ナル推進力ガ必要トセラル、ノデ、政府ハ百尺竿頭更ニ一步ヲ進ムルノ意圖ノ下ニ、阿片斷禁協會設立ノ準備ガ初メラレタ。

チ康徳十一年一月一日ヲ期シテ、勅令ニ依ル財團法人阿片斷禁協會ハ設立セラレタノデアルガ、コレハ全國民ガ總力ヲ結集シ、政治力ニ加フルニ教育機關、教化機構、特ニ全國ノ宗教道德團体等ノ教化力ノ一切ノ力ヲ凝結セシメ、民意ニ盛り上ル國民總動員的禁煙運動展開ヲ待望企圖シタモノデアル。

尙滿洲國政府ノ意図スル處ハコノ殘餘二ヶ年ノ禁煙運動展開ニヨツテ、十ヶ年斷禁政策ニ有終ノ美ヲ成サシムルコトハ、父祖三百年ニ亘ル恥ズベキ阻習ノ打破ヲ、國民自ラノ自覺ト力トニ依ツテ成就セシムルコトニ在ツ々。

滿洲國政府ハ勿論コノ十ヶ年月、即チ康徳十三年末ヲ期シテ、阿兵煙膏ノ供給ヲ停止スル豫定デアツタノデアル。

阿片煙膏ノ賣下ゲ停止ト俱ニ、國內ニ於ケル罂粟ノ栽培ハ通用阿片用ノミニ一學縮少ノ豫定デアツテ、康徳九年度ヨリ實施シツ、アツタ勞資合併ニ成ル組合組織ノ阿片栽培ハ逐次熱河興安西省カラ中央部ノ治安良好ナ地域エノ栽培地移管ヲ前提トシテ、計劃サレテキタモノデアツタ。遮莫、滿洲ニ於テ最モ民生振興ニ熱意ヲ持ツテキタ谷次卓交通部大臣ハ

常ニ筆者ニ談ツテキタ。

「日本人ガ滿洲ニ行ツタ政治デ尤モ立派ナノハ阿片斷禁政策デアル。シカモ之ハ非常ニ優レメ成界ヲ生ンデキル」ト
最後ニ阿片斷禁協會ノ創立第一年度ニ於ケル實施計劃ノ一部ヲ錄スレバ
