ILLUSTRATED CATALOGUE

NEW ROSE ASTER PLANT.

633

GROUP OF PETUNIAS.

FLOWER AND FEGETABLE SEEDS,

GFor 1879.♥

AMHERST, MASS.

GAZETTE PRINTING COMPANY, PRINTERS, NORTHAMPTON, MASS.

To my Friends and Customer's.

In presenting my Catalogue of Seeds and Bules for 1879, I return my best thanks to those who have favored me with their patronage in the past; and, trusting that the quality of my seeds and the efforts I have made to please all who have dealt with me have been appreciated, I solicit a continuance of orders. The seeds and bulbs I offer are mainly of my own growing, from stock which has been carefully selected, and the quality will, I know, please all. The great advantages of buying seeds direct of the grower will be appreciated by everybody, especially by those who have been in the habit of buying the seeds left in the stores to be sold on commission, and which have been on their travels nobody knows how long. I test the germinating qualities of every variety before sending out, and nothing shall leave my hands that will fail to grow through fault of mine.

The figures on the right of the columns give the prices per packet in cents, and are as low as seeds of the first quality can be furnished and leave a fair profit. Each packet contains from one hundred to five hundred seeds, except scarce varieties or those with very large

seeds, which necessarily contain less.

Everything offered in this Catalogue will be sent to any part of the United States or Canada, by mail, postage paid, at the prices annexed, and I guarantee the safe delivery at

your post-office of everything ordered.

Money may be sent at my risk if sent according to these directions:—All sums of One Dollar or over, by Post-Office Money Order, which is always the best way when they can be obtained; or if a Money Order cannot be obtained at your office, remit in Bank bills and get the letter registered. The expense of sending by either of these ways may be selected in seeds. Sums less than One Dollar, in scrip, or if this is not to be had, in clean, undetached 3-cent stamps, may be enclosed in a letter and sent at my risk. Fifty cents or less in silver can be sent safely if wrapped in a piece of paper or pasted to the letter.

Please be sure and write NAME, POST-OFFICE, COUNTY and STATE as plain as possible. Please anticipate the planting time and order early. All orders entrusted to me, whether large or small, will receive prompt attention, a ten-cent order being as carefully filled as one

for ten dollars' worth of seeds.

I take the greatest care in filling orders, always intending to do a little more than I promise or fair dealing requires, but mistakes may sometimes occur, and in all such cases I de-

sire to be informed of the fact and promise to make satisfactory correction.

While the great majority of orders are sure to reach me safely, it occasionally happens that a letter is lost or stolen, or perhaps a package fails to reach its destination. After waiting a reasonable length of time, if the seeds ordered do not arrive, then write again, always repeating the order, so it can be filled without further delay, if the directions for sending money have been followed.

If you receive more than one catalogue, please hand the extra copy to some friend who is interested in the subject.

TRIAL COLLECTION OF SEEDS.

Last year I advertised trial collections of flower seeds, and filled many thousand orders for these, which were sent to every State and Territory; and I have reason to believe they gave very general satisfaction. Of course, among so many and under such varied conditions, there were some failures; indeed it would be strange if there were not, for, as all experienced gardeners well know, failure will sometimes occur from causes beyond control.

The past season I have grown several varieties in extra large quantities, and all of the very choicest quality, which I offer at a merely nominal price. This I do in order to introduce extensively, trusting to future orders at the usual prices for profit.

For only twenty-five cents I will send one packet each of the following varieties, provided the order is sent previous to March 1st, before the busiest part of the seed season:—

Aster, New Rose, mixed colors.
Cockscomb, Vick's New Japan, mixed colors.
Dianthus. (China and Japan Pinks,) all varieties mixed.

Petunia, finest mixed.
Phlox Drummondii grandiflora, mixed colors.
Portulaca, Double Rose-flowered, mixed colors.
Verbena Montana.

At this low price no change can be made in the varieties. The same varieties, of like quality, if selected from any catalogue in America, would cost three or four times this sum. I shall esteem it a favor if you will show this offer to your friends and induce them to give my seeds a trial; and, as a slight compensation for the trouble, I will send a collection free to any one who will raise a club of four new customers for this trial collection, remitting a dollar at one time. Please give the name and post-office address of each member of the club, so a catalogue can be sent to each.

DOLLAR COLLECTION.

This collection consists of easily grown and showy varieties, and is particularly recommended to beginners, or those not acquainted with the different varieties. No change can be made in the varieties.

Antirrhinum, (Snapdragon,) tall varieties mixed.

Alyssum,, sweet.

Aster, New Rose, mixed colors.

Aster, Newest Dwarf Bouquet.

Balsam, Common Double, mixed colors.

Calliopsis, all colors mixed.

Cassia chamæcrista.

Cockscomb, Vick's New Japan. [varieties.

Dianthus, (China and Japan Pinks,) mixed

Mignonette, sweet.

Pansy, all varieties mixed.
Petunia, Blotched and Striped.
Phlox Drummondii, all varieties mixed.
Portulaca, Double rose-flowered, mixed colors.
Verbena hybrida, choicest mixed.
Zinnia, Double, choicest mixed.
Helichrysum monstrosum, mixed colors.
Morning Glory, mixed colors.
Gourds, Ornamental, mixed varieties.
Peas, Sweet, mixed colors.

PREMIUMS TO CLUBS.

I offer the following very liberal premiums to those who get up clubs or send large orders for themselves. Almost any one can, by making a little effort, get the orders of their neighbors, and thus obtain their own seeds for little or nothing.

Persons	sending	\$ 1.00	may	select	Seeds	amounting	to	\$ 1.15
6.6	"	2.00	"	66	4.	44	66	2.35
"	"	3.00	66	66	"	44	66	3,65
66	"	4,00	66	66		46	44	4.95
66	66	5.00	66	66	66	66	66	6.25
44	66	10.00	66	46	66	66	66	13.00
66	4.6	20,00	66	6.6	66	"	"	27.00

These will be put in one package and sent to one address, or in separate packages and mailed to each person forming the club, as desired. It must be understood that I can make this offer only on Seeds at the Catalogue prices, and not on Collections nor on Bulbs, neither can the Premiums be paid in collections or bulbs, otherwise it would bring the prices below cost in some cases.

Besides the above premiums, I will add, gratis, a packet of choicest mixed l'ansy or Verbena seed to all \$3.00 orders, whether for seeds or bulbs; and to all orders which amount to \$5.00 or over, a packet of Cinnamon vine tubers and Miles' new Spiral Mignonette.

Very Respectfully,

AMHERST, MASS., January 1, 1879.

L. W. GOODELL.

Sowing Flower Seeds, Transplanting, &c.

Sowing in Cold-Frames. - A cold-frame is easily managed by anybody and in no other way can such uniform success be had; and I would recommend those who have more than half a dozen varieties to sow to try one. Make a box-like frame of boards without a bottom, which should be twelve or fifteen inches high at the back, sloping to about six inches in front, so as to catch the direct rays of the sun as much as possible. It can be made of any size de-Make a box-like frame of boards without a bottom, so as to catch the direct rays of the sun as much as possible. It can be made of any size desired and nailed at the corners, if small enough to be easily moved about, or if larger, fastened together with hooks and staples. About the last of April is the proper time, in this latitude, to start seeds in a cold frame, and the plants will be large enough to transplant to the beds where they are to bloom as early as would be safe from frost.

Prepare a bed in a warm, sheltered spot in the garden; rake out all the lumps and stones and on this set the frame, and cover with ordinary hot-bed sash, or old window sash, which will do quite as well. Make the soil in the frame smooth end firm with a heard and sow the

will do quite as well. Make the soil in the frame smooth and firm with a board, and sow the seeds thinly and evenly on the surface in squares, and label each sort with a short pine stick. Have a pile of light sandy soil, or leaf mold from the woods, which has been sifted through a fine seive, near at hand, and if the seeds are very small, carefully sift it over them. Probably more failures to make seeds germinate result from covering too deep than from any other cause. A good and safe rule for the smaller kinds of seed is to cover to a depth of about twice the diameter of the seed. This would give a covering of one-eighth to one-fourth of an inch to such seeds as Aster, Phlox and Verbena; one-sixteenth of an inch to Petunia, Portulaca, and seeds of like size, while very fine seeds, like Lobelia and Mimulus, should be scarcely covered at all, but merely pressed slightly into the soil. After the seeds are all covered make the soil firm again with the hands and water carefully with a pot having a fine rose, so as not to wash the soil from the seeds. Now put on the sash and keep it tightly closed until the plants begin to come up, watering often enough to keep the surface moist. Some seeds, like Aster and Zinnia, germinate, under favorable conditions, in a few days, while others require several weeks. Geranium and Verbena seeds germinate very unevenly, some seeds coming up in a week or ten days, while some will remain dormant for a month or more, and the soil should be kept moist, and not be disturbed for at least a month after sowing. Cover the frame with straw mats or boards at night to keep out the cold, and after the plants are up give plenty of air during warm, sunny days. Pull out the weeds as fast as they appear, and keep the plants well thinned out, so they will grow strong and stocky. The thinnings can be saved and transplanted to another frame if desired.

Sowing in Boxes in the House.—When only a few varieties are to be sown, good plants can be grown by sowing in shallow boxes of earth, putting these in a warm, sunny window in the house, covering each box with a pane of glass to retain the moisture. Never sow seeds in pots unless they are sunk up to the rims in boxes of moist earth or moss; otherwise

they are apt to quickly dry out and injure the seeds or young plants.

Sowing in the Open Ground.—With care, and by sowing at the proper time, plants can be grown successfully in the open ground; but not much success can be expected from sowing the small, delicate seeds in the beds where they are to flower. It is always best to sow all except a few varieties like the Larkspurs and Poppys, which do not transplant well, in a seed-bed in the same way as directed for cold-frames. Sow the half-hardy varieties about the middle of May, in this latitude, or about the time corn is usually planted. Hardy annuals may be sown two weeks earlier, and tender annuals not until two weeks later than this. Great care must be taken in watering and shading to prevent the surface from drying out; a few hours of hot sun will sometimes ruin a whole bed, in a dry time. It is a good plan to spread several thicknesses of newspaper over the bed to help keep in the moisture, but they must be removed as soon as the plants begin to come up.

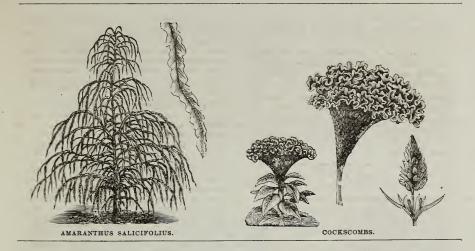

TRANSPLANTING.—After the plants in the cold-frame or seed-bed have obtained their second leaves and grown an inch or two, transplant to the garden, first giving the seed-bed a good soaking with water. Transplanting should be done in a showery day, if possible; but it is better to transplant in a dry time than to wait too long for rain. Make holes where the plants are to be set, fill them with water, and then set the plant, making the soil firm about the roots; water again, and cover each plant with a piece of paper held down with clods of earth; or what is better, with a large leaf or handful of fresh grass.

A frequent cause of failure to make a good show of flowers is setting plants too thick in the beds, and before the summer is half through the vines become so crowded together they either die outright, or become so much weakened in the struggle for existence, that their beauty is greatly injured. The soil for flowers, if not already rich, should be made so with fertilizers or well decayed manure. Some varieties do well in almost any ordinary soil, but all do much better in a rich one.

I am thus explicit in giving directions because I know some of my customers are inexperienced in the culture of flowers, -some perhaps beginning their culture for the first time this year; and I am anxious that all who purchase even a single packet of seed should suc-

ceed as well as the most experienced gardeners.

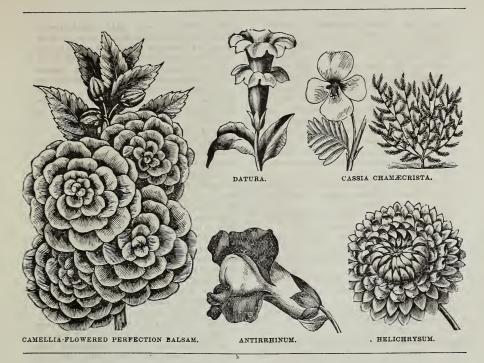

The flowers produced from seeds are classed as Annuals, Biennials, and Herbaceous Perennials. Annuals perfect their seed and die the first year. Biennials live two years. Herbaceous Perennials die down to the ground every year, the roots living many years. Annuals are called hardy, half-hardy, and tender. A hardy annual will bear a severe frost without injury; a half-hardy annual will bear considerable frost; while tender annuals are destroyed by the least frost.

Palafoxia Hookeriana, fine half-hardy an-	J
nual; flowers rosy crimson,	5
Pansy: The Pansy is one of the most beauti-	J
ful and popular flowers in cultivation. It may	
be called a perpetual bloomer, for a bed is	
never without flowers while the ground re-	
mains open; but it is a good plan to keep the	
flowers picked off during the hot, dry weather	
of summer. In order to grow plants that will	
give flowers two inches or more in diameter,	
the soil should be made very rich. No flower	
responds quicker to generous treatment, and	
none is more easily spoiled by neglect. The colors and markings are almost endless. Set	
plants eight inches apart.

rieties · mixed colors	11

BULBS AND PLANTS.

Orders for Bulbs and Plants will be put on file and filled as soon as safe from freezing,—usually about the first of April.

DAHLIAS.

Of these popular plants I have fifty of the choicest named sorts. In ordering, name the color or colors desired, and satisfaction can be given in every case. Tubers may be planted in the open ground after danger from frost is past, or started earlier in frames.

CHINESE YAM, or CINNAMON VINE.

(Dioscorea batatas.)

A beautiful ornamental Vine, of very rapid growth.

The flowers are small, white, growing in clusters,
and have a peculiar, cinnamon-like fragrance,

filling the air of a whole garden with its odor. The leaves are heart-shaped, glossy green, veined with purple. The vine is herbaceous, and grows from fitteen to thirty feet in a season, according to the soil. The roots are edible, endure the most severe winters with perfect safety, and continue to increase in size for several years, attaining a length of two or three feet and a weight of several pounds each. Begins to bloom the second or third year, and when once planted will last a long time. It is usually propagated from small tubers about the size of peas, which grow on the vines. Plant the tubers in the open ground, two inches deep; or they can be started early under glass, or in the house.

I have a few good, year-old roots, this year; price 50 cents each.

GLADIOLUS.

The Gladiolus is the best and most popular of what are called the Summer Bulbs. Its tall spikes of large flowers, which are of almost every shade of color, frequently spotted, blotched and striped in the most beautiful manner are truly gorgeous. The bulbs may be planted six inches apart, in any ordinary garden soil in May, and covered from three to five inches deep, according to size. In the autumn, before hard frost, take up the bulbs, dry thoroughly, and preserve in a cool cellar, free from frost.

WHAT MY CUSTOMERS SAY.

It is very gratifying to know that my customers have almost unexceptionable success with the seeds I furnish, and are satisfied with the efforts I make to please them. I have received hundreds of letters entirely unsolicited on my part, speaking of the beautiful results obtained, and, to show that my seeds are just what they are represented to be, I publish extracts from a few of these.

From Mrs. L. A. RAMSAY, Rock Falls, Whitesides Co., Ill., March 5, 1878.—The Portulacas grown from seed you sent me last year were pronounced by every one who saw them the most beautiful they had ever seen.

From Mrs. Emma Bowman, West Liberty, Muscatine Co., Iowa, April 1, 1878.—The Phlox Drummondii grandiflora you sent last year was beautiful.

From MRS. JOSEPH BOYD, Marlboro, Mass., March, 20, 1878.—The seeds I had from you last year proved very satisfactory, and I am hoping to be equally successful again.

From Wm. Wilkinson, M. A., Brantford, Ont., Canada, March 16, 1878.—I was much pleased with the character of the flowers produced from your seeds last year.

From Mrs. A. B. Barnes, Fair Haven, Ct., March 22, 1878.—The seeds you sent me before were very nice and have all come up.

From Charles L. Mason, Milnesville, Luzerne Co., Pa., Sept. 2, 1878.—The trial package of seeds that I had of you last spring have all given good satisfaction, except the Double Portulaca, and I think that the fault in that case was my own and not yours.

From Charlotte Coville, Ornoville, Catt. Co., N. Y., April 20, 1878.—I was very much pleased with those sample packets you sent me; they are all growing finely. We are making up a club to send you for a larger order soon.

From George W. Hankinson, Philadelphia, Pa., April 16, 1878.—It gives me great pleasure to say that the seeds I received from you last season were what they were represented to be.

From Miss N. W. Smythe, Nashville, Tenn.. March 26, 1878.—The seeds that I received from you last year proved in every respect perfect; the Portulacas and Phlox were perfectly beautiful and attracted the attention of all who saw them.

From Mrs. W. H. Crockett, Orange Co., Vt., April 18, 1878.—The new Rose Asters were the finest I ever cultivated, and I have had some very fine ones.

From KATIE E. COOK, Centreville, Queen Anne Co., Md., Feb. 23, 1878.—I have received the collection of flower seeds and was very much pleased with the selection. I show your catalogue to all my friends and have another order, and think it likely you may receive several more orders through me.

From Mrs. E. C. White, Newberry, S. C., March 11, 1878.—I have had seeds from several firms this spring, but none come up so well as yours.

From Mrs. Calvin Noves, Byfield, Mass., April 15, 1878.—I received your catalogue and a number of others, and have concluded to purchase my seeds of you. I bought some seeds last year of you and they came up nice. The Double Portulaca I enjoyed very much.

From Ezra Hughes, Detroit, Mich., April 8, 1878.—Your seeds came to hand all right, and I am glad to say that they are alive.

From Mrs. S. Adams, Bangor, Me., April 8, 1878.—The Portulaca I had of you last year was beautiful; the other seeds were perfectly satisfactory.

From Mrs. C. O'Brien, New Orleans, La., March 12, 1878.—I am quite satisfied with the seeds which you sent me; they have all come up and are doing well.

From Annie Brown, Lancaster, Wis., March 2, 1878.—Last year I sent to you for a Tuberose, and it grew and blossomed nicely. This year I have induced my friends to send to you, through me, for what they want. Please send me seven Tuberoses and the seeds named below.

From E. [Van Patter, Las Cruses, New Mexico, March 20, 1878.—Seeds came O. K.; a thousand thanks; I am more than satisfied. I now enclose—for the following.

From IRA J. EGGLESTON, Amsterdam, N. Y., Aug. 19, 1878.—The seeds have proved all I expected of them. The new Japan Cockscombs are marvels of beauty. The Asters as far as they have blossomed are splendid.

From Mrs. M. W. Freeman, Beatrice, Page Co., Neb., March 19, 1878.—I received the flower seeds all right, and have sown the Portulaca, which has come up nicely.

From Carrie H. Cox, Gardiner Me., April 19, 1878.—I have had one package of seeds from you this spring and was much pleased with them. I never had Asters come up so quick or look so nice.

From S. Burlingame, Jr., Oneco, Windham Co., Ct., April 22, 1878.—The seeds obtained from you last season proved all I could ask.

From CARRIE F. BRIGHAM, Manchester, N. H., May 12, 1878.—The seeds you sent before were planted and all have proved good.

From N. GILBECK, Pekin, Md., April 4, 1878.—The seeds you sent me last year were very nice, the Cockscombs especially, they were admired by every one who saw them.

From Mrs. M. A. H. Butler, Plymouth Union, Vt., March 9, 1878.—The Portulacas, Japan Cockscombs and Phlox you sent me last year were much praised.

From Miss Ema Wrigler, Liberty, Mo., March 8, 1878.—Your sample packets pleased me and I concluded I would send for a list of seeds, for they are so cheap, the cheapest I have seen this season.
