INTRODUCTION.

The present volume contains the results
of the meteorological observation made at
The Miyazaki Meteorological Observatory
for the year 40 years, 1886-1925. Here all
the observations and computations have
been conducted uniformly as The Central
Meteorological Observatory. The following
points are specially to be noticed;—

The Observatory. — $\varphi = 31^{\circ} 54' 54'' N$
 $\lambda = 131^{\circ} 25' 12'' E$
 $h = 6.8m.$ above sea level.

Situation of Instruments.
Barometer.—8.4m. above sea level
Thermometer.—1.2m. above the earth
Rainingauge.—0.2m. above the earth
Anemometer.—13.1m. above the earth
Sunshine gauge.—11.7m. above the earth

Time used.—The Central Standard Time
(civil mean time of the meridian $135^{\circ} E$)
But for the measure of sunshine duration
the apparent solar time is used.

Pressure.—The barometric readings given
in millimetres which is corrected for mean
sea level.

Temperature.—The temperature are given
in Centigrade degree; those below zero
are shown by minus sign or adding 100.

Tension of Vapour.—are given in milim-
etres.

Relative Humidity.—are given in percen-
tages.

Velocity of Wind.—As the wind velocity at
the hour of observation is taken the mean
velocity for the preceding twenty minu-
tes, it is given in metres per second, and
the day with gale is a day on which the
maximum velocity reaches exceeds 10 me-
tres per second.

Precipitation.—The amount of precipitation
is given in millimetres, Snow, Graupel and
Hail are given in height of liquid measure.

Clear & Cloudy.—The mean amount of
cloud for a clear day is less than 2 ex-
clusive and that for a cloudy day is more
than 8 inclusive.
