POWER EQUIPMENT AND ENERGY CONSUMPTION

INTRODUCTION

The first census of power-equipment installation in manufacturing establishments was made by the Bureau of the Census in 1870, covering the year 1869. The 70-year period from 1869 to 1939 has witnessed not only a tremendous growth in the use of power equipment in manufacturing establishments, but also the rapid development and adoption of several new types of such equipment. Within this period came the invention and rapid development of the electric motor and its widespread utilization. The horsepower of prime movers plus the horsepower of electric motors driven by purchased energy gives the total horsepower of installed equipment capable of turning the wheels of industry at the close of 1939—50,452,280 horsepower, as against 2,346,142 horsepower in 1869, or an increase of 2,050.4 percent during the 70-year period. During these seven decades, also, the number of *types* of prime movers in manufacturing establishments was increased from two (steam engines and water wheels) to six by the addition of steam turbines, Diesel and semi-Diesel engines, other internal-combustion engines, and hydro-turbines.

As certain industries included in earlier censuses were not covered by the 1939 census, the power-equipment and energy-consumption figures for 1929 and earlier years, back to and including 1899, have been adjusted, for publication in this report, by the subtraction of data for those industries, thereby making the power-equipment statistics for the several censuses of the 70-year period comparable. The industries involved in this adjustment are specified in the headnote to table 1.

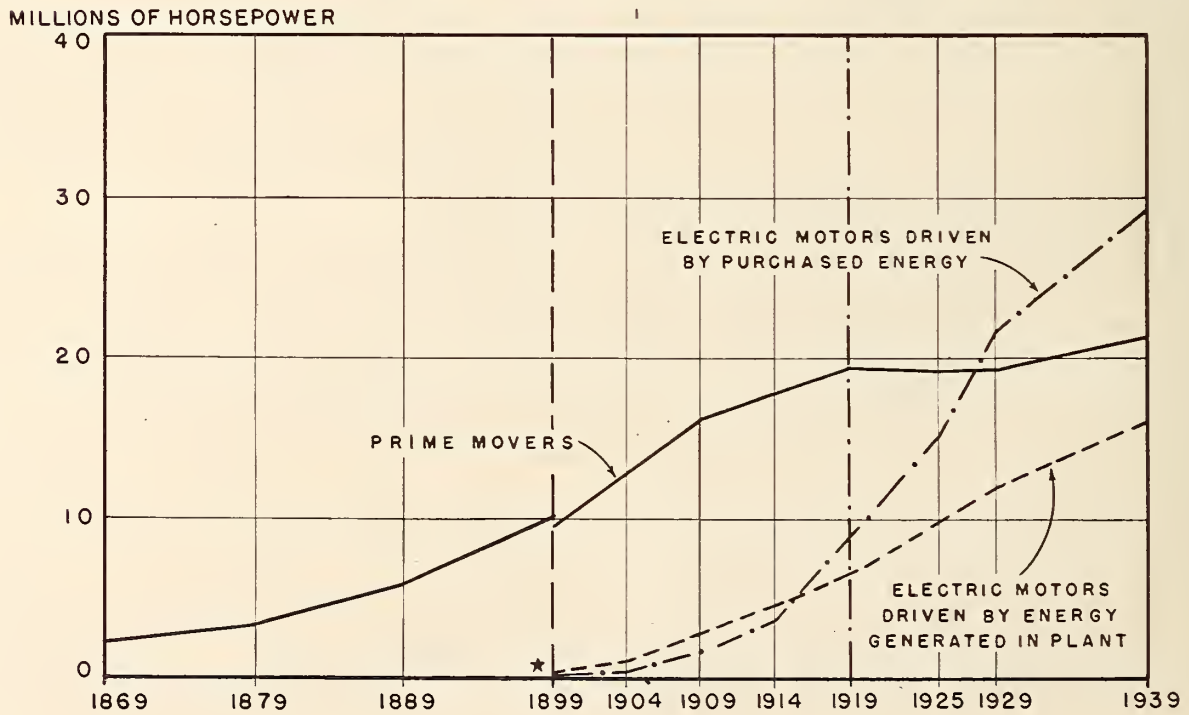

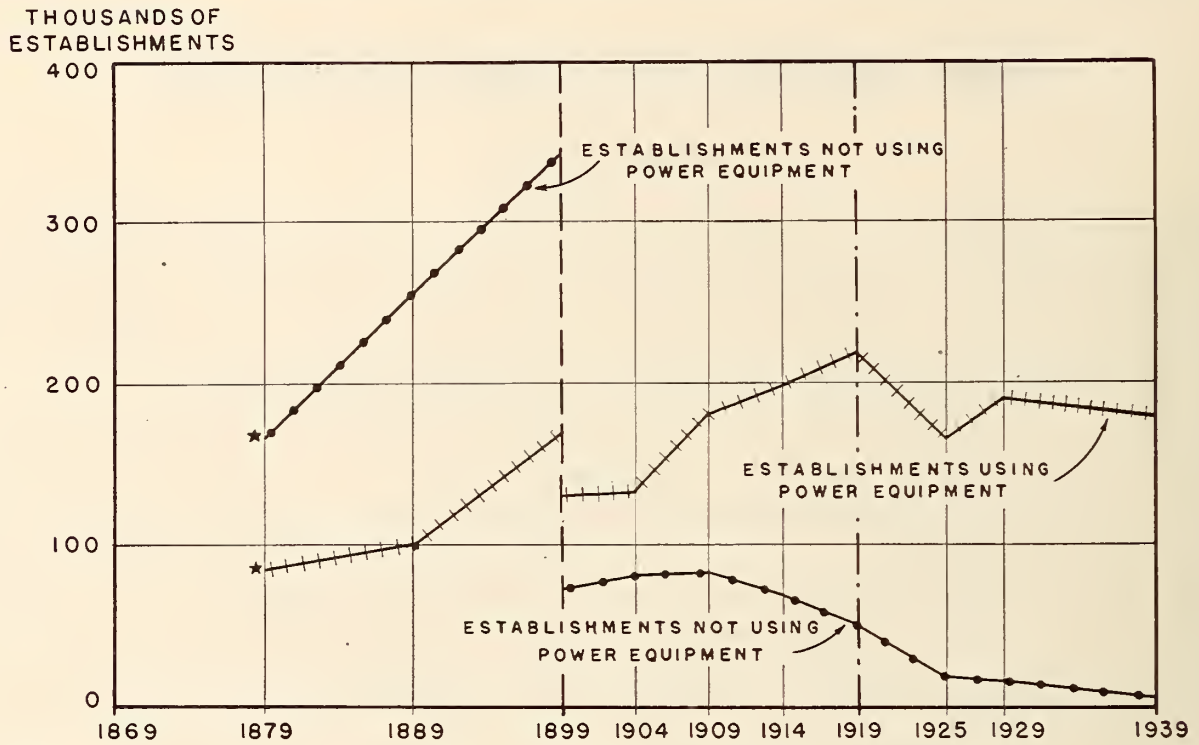

A private power unit operated by a manufacturer and serving two or more plants classified in different industries has been credited, for census purposes, to the industry in which the most important of the plants, on the basis of value of products, has been classified. In some cases the report for such a unit carried data for motors in the plants, but no attempt was made to allocate them. In the case of the "Steel works and rolling mills" and "Blast-furnace products" industries it was

impossible to obtain an approximate break-down of prime-mover data for assignment to the respective industries and the power-equipment statistics for these two industries are given in combination. The same practice was followed in the case of "Paper and paper-board mills" and "Pulp mills."

It is difficult to draw any definite conclusion as to the increase in the power installation per wage earner between 1869 and 1939, because prior to 1899 the number of wage earners as published in the census reports covered those in hand trades and neighborhood industries (carpentry, millinery, dressmaking, custom tailoring, painting, paperhanging, etc.), except gristmilling, custom sawmilling, and cotton ginning. (See headnote to table 1.) Also for 1919 and prior years the census reports covered all establishments with a minimum value of products of \$500, as against a minimum value of products of \$5,000 for subsequent censuses, and the statistics for power equipment were not revised to show the figures for establishments reporting products of "\$5,000 and over" separately. This change of base, however, did not materially impair the comparableness of the figures on power equipment or on electric-energy consumption.

Several types of power statistics are included in this report for the first time. Diesel and semi-Diesel engine installation data are reported separately, whereas in prior reports they have been included with "internal-combustion engines." Data on prime-mover equipment ordinarily idle were first collected for 1929, but were not published in the report for the census. The 1939 report shows, for the first time, a distribution of the types of prime movers into two classes—those driving generators and those not driving generators. A correlated series gives the capacity of electric generators driven by each type of prime mover. Data on the rated capacity of electric generators ordinarily idle were first collected for 1929, but were not published in the report for that census. Data on electric energy, sold by manufacturers are also included in this report.

TABLE 1.—PRIME MOVERS AND MOTORS BY NUMBER AND RATED CAPACITY, GENERATORS BY KILOWATT RATING, AND ELECTRIC ENERGY PURCHASED (KILOWATT HOURS): 1869 TO 1939

[As certain industries canvassed in earlier censuses were not included for 1939, the figures for 1929 and earlier years, back to 1869, inclusive, as given under the head "Factory industries," have been adjusted by subtracting the data for these industries, namely: Gas, manufacture, illuminating, and heating; Railroad repair shops (electric and steam); Coffee and spice, roasting and grinding; Peanuts, walnuts, and other nuts, processed or shelled; Flax and hemp, dressed; and Motion pictures, not including projection in theaters. The data for "Grindstones, pulping, and millstones," which industry has not been canvassed since the census for 1927, have also been deducted from the figures for 1899 to 1925, inclusive; the data for "Automobile repairing," which was not treated as a manufacturing industry except at the censuses for 1914 and 1919, have been subtracted from the totals for those years; and the data for "Rented power other than electric" (power generated outside and transmitted into the plant by belt or by shaft) have been deducted from the totals for 1899 to 1919, inclusive. The figures for 1899 have been further adjusted by deducting the data for the so-called hand and neighborhood industries (operation of custom grain mills and sawmills, cotton ginning, carpentry, blacksmithing, etc.), which have not been treated as manufacturing industries at subsequent censuses. The figures for 1899 and earlier years as given under the head "Factories and Hand and Neighborhood Industries," are those found on page 330 of the "Thirteenth Census of the U. S., 1910, Volume VIII, Manufactures." These figures are the same as those originally published, except that the totals have been adjusted by subtracting the data for horsepower of electric motors driven by energy generated in the plant, thus eliminating duplication, and that a further slight adjustment of the 1889 total has been made.]

 2 Because of the change from \$500 to \$5,000 in the minimum-value-of-products limit, the "Number of establishments reporting power equipment" figures for 1919 and earlier years are not comparable with those for 1925 and subsequent years. This change did not, however, materially impair the comparableness of the figures for the other items in this table.
 3 Returns for the "Logging camps and logging contractors (not operating mills)" industry, numbering 967 establishments, were excluded from power tabulations.
 4 No data.
 5 Includes 28,213 horsepower reported as "Other" owned power (principally from steam turbines and hydroturbines) and internal-combustion engines other than gas or gasoline, as follows: 1904, 75,348; 1899, 47,192.
 6 Includes data for owned horsepower derived from sources other than steam engines, water wheels, gas or gasoline engines, or electric motors; also includes data for "Rented" horsepower other than electric (principally power generated outside the plant and delivered by belt or shaft). The amounts thus included are, respectively, as follows: 1899, 54,490 and 137,369; 1889, 4,784 and 88,571.
 7 Figures for "Steam engines" for 1914 and earlier years include data for "Steam turbines," not reported separately.
 8 Not called for on schedule.
 9 Includes data for water motors.
 10 For 1929, number of generators reported was 16,596; for 1925, 22,633.
 11 Horsepower shown for motors driven by energy generated in plant includes that of motors driven by purchased energy, not reported separately.

CENSUS OF MANUFACTURES: 1939

TABLE 8.—PRIME MOVERS AND MOTORS BY NUMBER AND RATED CAPACITY AND ELECTRIC

[As certain industries canvassed in earlier censuses were not included in 1939, the United States and industrial area figures for 1929 have been adjusted by subtracting the walnuts, and other nuts, processed or shelled; Flax and hemp, dressed;
