JANUARY, 1912

Publisher Mar 19 1912 HIS pamphlet is issued by the Trustees of the Metropolitan Museum of Art in response to many inquiries which have been received as to the system followed in the arrangement and cataloguing of the books and photographs in the library of the Museum. To the two authors belongs the credit of having worked out, each in her respective department, the method of classification which is set forth in the following pages, and which has successfully stood the test of an experience that has included rapid growth, the transference of books and photographs from small, cramped quarters to the ample space provided in our new library, and a constantly increasing use on the part of students and other visitors.

Edward Robinson,
Director.

December, 1911.

CLASSIFICATION FOR PHOTOGRAPHS

INTRODUCTION

HE Library of the Metropolitan Museum of Art contains a collection of photographs of Architecture, Sculpture, and Painting, and of all creative work that may be included under the term Minor Arts, or Decorative Arts. collection had already grown beyond the number of 15,000, and was being used by a variety of art students, archæologists, connoisseurs, collectors, and craftsmen, when the work of classification and cataloguing was commenced. Several librarians and collections of photographs were consulted, and each system of classification was found to differ from every other according to the class of students that used the photographs. In view of the breadth of this collection, and the wide range of students that were likely to consult it, the need became increasingly evident of a classification that should be logical and consistent, simple and easy of application, and entirely comprehensible to anyone who should use the photographs for any purpose. to satisfy these requirements that this classification was arranged, and it is now published, together with notes on cataloguing and all other points connected with the handling of photographs, in the hope that it may prove useful to the growing number of art librarians and teachers who desire help and information, many of whom have sought such help at the Metropolitan Museum.

The more important steps in the care of photographs are taken up in the order in which they naturally follow one another, the explanation of the Classification being placed at the end of the Introduction.

PURCHASING

The majority of the photographs in this collection have been purchased of the foreign dealers in person, not ordered by mail. Valuable notes on this subject and on the mounting of photographs will be found in the preface of a pamphlet entitled List of Photograph Deal-

ers, compiled by Miss Etheldred Abbot (1907), and obtainable of Miss Hooper, Librarian of the Public Library of Brookline, Mass.

Accessioning

All photographs are accessioned before they are mounted, in large books that contain 5000 entries each. Every left-hand page is numbered for forty photographs, and the items are entered under these headings, running across both pages: Accession No., Class, Artist, Subject, Original in. Photographer and Number, Process (i.e., kind of print), Size of Print, Size of Mount, Cost of Print, Cost of Mount, Source (gift or purchase), Where obtained, Remarks. cession number is written in pencil on the back of the photograph, whence it is transferred by the mounter to the mount. It is then written in ink on the paper label after it is pasted on the mount (see below), and on the back of the main catalogue card (p. 9). Each lot of photographs should be accessioned as soon as possible after it is received, and the date of accessioning noted in the extreme left-hand margin of the page. Experience has shown that it is more practicable to keep accounts of expenditures for photographs and mounting in a separate book, in which the itemized bills may be entered entire, rather than in the Accession Book.

MOUNTING

Notes on mounting will be found in the pamphlet referred to above (p. 3). All mounting for this collection has been done with entire satisfaction by the Rose Bindery of Boston, Mass. Dark mounts, known as stone gray and steel gray, have been used in preference to the light gray, as they harmonize better with the tones of the photographs and are less easily soiled. For some of the larger carbon prints, brown mounts have been chosen. It is of the greatest importance that the mounting should be well done in order to prevent warping, and that the mounts should be light in weight, thin, and flexible, yet tough.

LABELING

The photographer's label is removed from the print in most cases before mounting, as it is often inaccurate and always unsightly. This fact and the dark color of the mount, which makes writing on it illegible, necessitate the pasting of a white paper label on the back of each mount, in the upper right-hand corner. The following forms were adopted, (1) for Architecture, (2) for Sculpture and Painting, (3) for the Minor Arts. The labels measure $2\frac{3}{4} \times 3\frac{3}{4}$ inches.

The paper of the labels is thin, and the paste (Higgins' Photo Mounter) is applied as lightly and as dry as possible to prevent its

curling the mount.

LABELS

The blank lines of the label are filled in with information necessary to identify the photograph. In the case of this collection, where the photographs had to be labeled and stacked for use before they could be catalogued, brief information taken from the Accession Book was written in pencil on the labels, and a tentative class and division number assigned. After each photograph is catalogued and finally classified, information corresponding with the catalogue card is written in ink.

STACKING

The photographs are stacked in oak cases especially designed tor this collection. As will be seen from the illustrations, a case has one vertical partition and three horizontal shelves. Each of these six divisions has its own door, which opens downward to the horizontal and provides a shelf upon which to draw out the photographs. In each division are upright partitions forming fifteen compartments, with a card holder above each one and a card indicating briefly the contents of the compartment. These card holders are of brass, and are attached to the outside of the shelf doors in such a way that the contents of a compartment can be read before as well as after the shelf door has been opened. That is, the card holders for one shelf are placed on the lower part of the door of the shelf above it, the upper row being placed on the case itself, beneath the top moulding. Each door is held firmly in place, when closed, by a steel bar that slides through its upper edge into sockets in the case at either end, and is operated by a knob in the centre of the upper panel of the door. One compartment easily holds from 45 to 50 photographs, so that the capacity of the whole case is between 4000 and 4500, there b compartments in a case. These cases hold the three smaller s mounts, 11 x 14, 14 x 18, and 18 x 22 inches. The photographs are stacked like books; that is, they stand on end and the class numbers read from left to right, the photographs facing to the right so that the class numbers are easily seen on the white labels in the upper righthand corner of the back, as above noted.

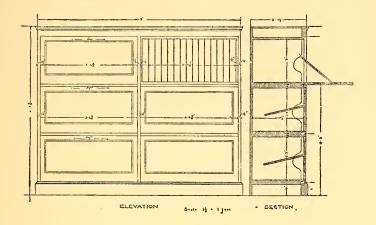

For mounts larger than 18 x 22 inches, another specially designed case is provided, with shallow sliding shelves and dust-proof double doors. The photographs are laid flat and face down, with the white label conspicuous in the outer right-hand corner of the back. To protect the face of the lowest photograph a sheet of paper or pasteboard should be placed on the shelf.

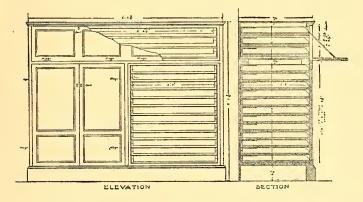

CASES SHOWING STORAGE OF PHOTOGRAPHS

30

THE CASES

CATALOGUING

The work of cataloguing photographs if done thoroughly is necessarily slow. It is well to start out by doubting the accuracy of the photographer's label in the case of paintings, or at least believing it to be wrong until it is proved right, not only by the gallery catalogue, but also by careful study of the best authorities in art histories, monographs, and periodicals. For identifying architectural photographs, Baedeker's Guide Books are most useful. Once this research work is satisfactorily accomplished—that is, the gallery and artist attributions determined—the actual work of printing the catalogue cards may be done. The neatest, clearest, most compact and uniform cards can be printed on a typewriter, the Hammond being used here. For use on this machine, the cards may be fairly heavy, and should of course be without lines, with the exception of top and left-hand margins.

In cataloguing, the aim should be to make each card describe the photograph sufficiently to identify it and to show its position in the case. Unnecessary and complex details that distract and confuse the layman (such as size and kind of print, photographer, etc.) should be omitted, as they can be found in the Accession Book, in the rare instances when they are desired. If no Accession Book is used, the items can be entered on the back of the main catalogue card, in such a way as not to interfere with other entries noted below (p. 9); or, better, on the back of the shelf-list card,

which is blank.

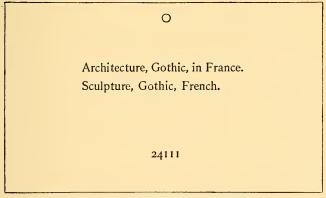

ARCHITECTURE

The method of cataloguing each class of photographs should be in harmony with the scheme of classification. That is, on the main card for a photograph of a building (Architecture), the first word on the top margin line is the name of the city, as in this classification the photographs are arranged alphabetically by cities under the different country divisions, as will be seen later (p. 16). Next follows, also on the top line, the name of the building, given either in English or in the language of the country, according to best usage, as found in Baedeker's Guides. On the second line, indented five spaces (about one-half inch), should be shown the exact part of the building represented in the photograph, using always first the general term Exterior or Interior. It is desirable also, for the sake of alphabeting together the cards for all views of the same part of the building, to state next whether it is west side, or apse, or south aisle, or court façade, etc. For example, we have a photograph showing a part of an exterior doorway of Chartres Cathedral, and the card reads as follows:

175 C486	CHARTRES, Cathedral of Notre-Dame.
286	Exterior, north transept, porch: coving of east side of central doorway.
	0

CARD FOR ARCHITECTURE: FACE

On the reverse of the card, where it can be read without being taken from the tray, are printed the accession number and a list of the subject headings by which this photograph is represented in the catalogue. The purpose of this is, of course, to make it possible to remove from the catalogue all cards for one photograph, in case of additions or other changes.

CARD FOR ARCHITECTURE: REVERSE

It is essential to make subject style cards for every important building to accommodate students in the history of architecture who wish to see many examples of a style, but do not know in what places they exist. Also, in the case of the photograph under consideration, for students of mediæval sculpture we make a subject card under Sculpture, Gothic, French. The subject catalogue should be regarded as a supplement to the classification, and therefore of great importance. For any classification can arrange the photographs in but one order; and whereas it may stack together, as in this case, all details of Chartres Cathedral and be satisfactory for a student of architecture, it can not also keep in one class all examples of Gothic sculpture, most of which exist as adjuncts of the cathedral architecture of the period. Any features of the building that may interest an architect, or perhaps assist in identifying some other photograph, are also noted, such as towers, rose windows, doorways, balustrades, and particularly any ornament characteristic of a style. Again, for the student of sculpture or iconography, the subjects of reliefs and statues are entered in the subject catalogue. For each building a card is made, giving the historic style, dates, names of architects, etc.

Only one photograph is represented on each "main card, except in the case of a duplicate, when the words "Same, another copy" are added two lines below the first entry, and its number is placed in the margin opposite. On the contrary, a *subject* card may represent the entire series of views of one building, when the form is as follows:

175 C486	ARCHITECTURE, Gothic, in France.
201 L 270-298 233-266 211-230 305, 308	Chartres, Cathedral of Notre-Dame. Exterior, ensemble from northwest. "north side and details. "south "" west portal, details. Interior, nave and south transept.
	9

PAINTING AND SCULPTURE

The artist cards (that is, the main cards) for painting and sculpture have much the same form as an author card for a book. Preceding each artist's cards in the catalogue is a biography card which gives his full name, dates, school, and all variations of his name. The first line of the main card contains the artist's name, the best known form being adopted, and only the initials of his given names. The second line gives the title of the picture or piece of sculpture, in English with rare exceptions. The gallery in which

it is found is placed two lines below the title. Below this may be placed a brief note as to disputed attribution or other facts that would help to identify the photograph. Cross references are made from unused forms of the artist's name, and rejected attributions, as well as secondary artist cards in the case of "joint authorship." Gallery cards are made for painting, sculpture, and the minor arts, as well as subject cards. As in cataloguing architecture, the accession number and list of subject headings are printed on the back of the card, and a painting and all its details may be entered on one subject or gallery card.

A few typical examples may be given.

(1) Form for main artist card for painting and sculpture.

374.1 D994	DYCK, A. van.				
523	Portrait of a little girl with dogs.				
	Antwerp, Royal Museum.				
	(Dogs by J. Fyt).				
	0				

(2) Form for secondary artist card, for disputed attributions, etc.

374.1 D994	FYT, J. see also
523	Dyck, A. van. Portrait of a little girl with dogs. (Dogs by J. Fyt). Antwerp, Royal Museum.
	0

(3) Form for the gallery card for Painting, Sculpture, and the Minor Arts.

374.1 D994	ANTWERP, Royal Museum.
523	Dyck, A. van. Portrait of a little girl with dogs. (Dogs by J. Fyt).
	0

(4) Form for the subject card for Painting, Sculpture, and the Minor Arts, with a painting and detail on one card.

374.1 D994	PORTRAITS, Children, Flemish.
515	Dyck, A. van. Portraits of William II, Prince of Orange, and his bride, Henrietta Maria Stuart.
518	— Same, detail: head of Henrietta Maria.
	Amsterdam, Ryks Museum.
	0

Works by an unknown pupil, follower, etc., of an artist are arranged immediately after his own works by adding a figure to his Cutter author number: 1 for Copy of, 2 for Pupil of, 3 for School of, 4 for Follower or Style of. The card is written as shown on page 13.

In the case of paintings and sculpture by unknown artists, the photographs are catalogued and stacked under "Master" or "School," with a sufficient addition to the Cutter number representing these words to keep all of one school and century together. The first line of

374.1 D994	DYCK, A. van, Copy of.
521	Portrait of Abbé Scaglia.
	Antwerp, Royal Museum.
	(Copy of an original in the possession of Capt. G. L. Holford, London.)
	0

the card would read: Master of Flémalle, and the class and author

number would be M423Fl; or, School (Painting, French) of Amiens,

15th century, with the number S₃₇₂Am₅; or School (Sculpture,

Greek) Archaic, with the number S3722, assuming that Greek sculpture by unknown artists is divided into (1) prehistoric, (2) archaic, (3) 5th century, etc. In the case of Egyptian (and Assyrian) sculpture where no artists' names are known, the author line of the main card reads: Sculptor, Egyptian, 18th dynasty. The class number is

18——, with additions in the second line to group together all sculpture from the same local school or of the same provenance.

Wherever necessary, cross reference cards should be made, as: Painting, French, see School (Painting, French), etc. Cards with lists of artists in the various schools, of whose work photographs are to be found in the collection, may be kept in the catalogue if desired, as: School (Sculpture, Greek) 4th century B.C., see also Bryaxis, Damophon, Lysippus, Praxiteles, Scopas. The names should be written in a column and arranged alphabetically. For the larger schools, as the Florentine school of painting in Italy, lists on sheets of paper would be preferable, if it is desirable to save space in the catalogue case.

MINOR ARTS

The name of an artist is rarely known in connection with any of the Minor Arts. The important items are the craft and the style (locality and century, or smaller division), as will be seen in the notes on classification (p. 18). The author line on the main card,

therefore, gives the kind of work, the country, and century, as: Gold, Egyptian, 12th dynasty, the word gold being understood to mean work in gold, or goldsmith, as author. The second line gives the name of the object, followed by a description sufficient to identify it, and its provenance, in most cases. The gallery is given two lines below the title, as in Painting and Sculpture.

572.1 12DK	GOLD, Egyptian, 12th dynasty.
923	Crown of gold and colored stones, alternating lyres and rosettes; from tomb of Princess Khnumuit, at <u>Dahshur</u> . <u>Cairo</u> , Museum.
	0

Subject cards are necessary for the name of the object, as Chair, Chippendale; or for the class of object, as in this case, Jewelry, Egyptian. Provenance cards are similar in form to subject cards. Artist cards, where the artist or maker is known, have the form of secondary artist cards, given on page 11, and the gallery card is identical with the sample on page 12.

A shelf-list card is made for every photograph. Its form is similar to the main card, but the title is much simplified, and the accession number is printed on the face, in the lower left-hand margin. The back, as noted above (p. 8), may give items of size, publisher, etc., if desired. These cards are of course filed by the class number and are kept in catalogue trays separate from the main catalogue.

CLASSIFYING

As was said in the beginning of the Introduction, the aim of this Classification is to be simple and logical, yet comprehensive enough to cover all forms of art in all countries. It is not especially designed for the archæologist, who would place together all Greek art from architecture to terracottas; nor for the student of mediæval art, who would place together everything of one style from a Gothic Cathedral to a panel of Gothic wood carving. This arrangement,

though it has undoubted advantages, would not be convenient for the student who is interested simply in architecture or in wood carving. Experience has shown that it is more practical to give to each class of the arts its own number and to subdivide it by countries, depending on the subject catalogue or one's knowledge of art in general to bring together all the work of one nation or one period, as it is manifested in various forms of art.

All creative work in the arts was easily divided into nine main classes (p. 21), and each class of such work, whether of the architect, the silversmith, or the furniture designer, was considered by itself as showing a somewhat continuous development from the pre-Christian era to the present in the important countries of the world. It remained to arrange a system of notation that should express this independence of the arts, and yet serve to trace their development and to show the influence of the art of one nation upon that of its neighbors. A decimal classification with a figure notation was adopted unhesitatingly as being the most elastic and the clearest to write and to read, as well as the most logical means of emphasizing or subordinating points. Thus Architecture stands by itself as 100, and work of the silversmith by itself and yet subordinated, under 560, that is, the 6th section of Metal Work, 500.

It should be kept in mind that for the general public a simple geographical and alphabetical arrangement is undoubtedly best suited. Beginning with the pre-Christian era in Asia, the art of Architecture is divided into two great time-periods (ancient and modern) and by countries, following in its main outlines the progress of civilization, while at the same time keeping together countries that though unimportant are contiguous to those of greater prominence. Similarly, all classes of the arts are given the same chronological and geographical sequence. In this way, each art or craft in each country has been assigned a separate number, regardless of whether any examples of it exist or not. The dividing line between ancient and modern is drawn at about the beginning of the Christian era. Inasmuch as the pagan influence actually extended beyond the year 1 A.D., Roman art and Early Christian art overlap in point of date, but all late Roman art, being pre-Christian in style, is classed as ancient. All Roman architecture in Europe, for instance, though it may date in the early centuries A.D., is numbered 130. No further chronological or style divisions are made in the main classification, as of Romanesque, Gothic, and Renaissance in architecture, or of Schools in painting, since they would tend to destroy the simplicity of the original scheme and inevitable confusion of styles would arise. The subject catalogue is so arranged as to group the architectural photographs by styles (p. 9) and lists of painters and sculptors grouped by schools are kept easily accessible (p. 13). The secondary division of all arts is therefore indicated in the second line of the class number, as will be explained below.

ARCHITECTURE

To classify architecture further under the country division, the most obvious method is an alphabetical arrangement by cities, since styles are disregarded. The second line in the class number therefore stands for the city, the Cutter three-figure author table being used here as well as for the names of the artists in painting

and sculpture. Thus classic architecture in Rome is R763; in Nîmes,

(France) it is N713.

The third line of the class number must provide an individual number for each building in a city and for all of its details. For this purpose buildings of a kind are grouped together, and at least 100 numbers are available for each group, as follows:

100 General views, city walls and gates, bridges, aqueducts, triumphal arches, fountains, and monuments (if not classed as Sculpture).

200-400 Ecclesiastical architecture: temples, churches, chapels, convents.

500-600 Educational institutions: schools, museums, libraries, 700 Institutions for public amusement: theatres, amphitheatres, gymnasia, baths.

800 Municipal and commercial architecture, hospitals, etc. 000 Domestic architecture.

For example, a comprehensive view of the Roman amphitheatre

at Nîmes has the number N713, and other views or details would be 702

703, 704, etc., or if desired 7021, 7022, etc. So far as possible, all views of one side of a building are kept together, and a detail next to its whole, for convenience in careful study and comparison. The main façade stands first; then, if the building is a church, the south, east, and north sides follow; and views of the exterior all precede those of the interior.

PAINTING AND SCULPTURE

These arts under the different country divisions naturally group themselves by artists, and the alphabetical sequence is adopted, disregarding school groups. The artist's number is of course obtained from the Cutter table, and is placed in the second line of the class number. Notes as to the disposal of unknown artists will be found

under Cataloguing (p. 12). Paintings (and drawings) by a given artist are grouped by subjects, and then by museums arranged alphabetically by the name of the city. The groups are nine and each group is divisible into 100, as under Architecture.

100 Old Testament and Apocryphal subjects.

200-300 New Testament subjects and Christian mythology.

400 Classic mythology, legend, allegory, history.

500-700 Portraits.

800 Landscape and marine.

900 Genre, still life, animals, hunting scenes, etc.

No definite rule for the numbers assigned to the different museums can be established, but some estimate of the probable place in a group occupied by a given city can be formed from the position in the alphabet of its initial letter. Thus, van Dyck's Pietà in Antwerp is num-

bered D994, and his Madonna and Child in Paris is D994, where

Antwerp being near the beginning of the alphabet has a number near the beginning of the group 200–399, and Paris being past the middle of the alphabet is placed past the middle of the group, which is 300. In the case of the great artists, an estimate of the numbers needed for a city can be made from lists of their works found in monographs. Here, again, details of a painting are numbered to follow the whole, either by consecutive numbers or by adding 1, 2, 3, etc., to the number of the whole painting. The former method is preferable and usually possible, except in the case of an overcrowded group. In case of too great overcrowding, however, it would be permissible to extend one group into the next; for example, the portraits by van Dyck can be numbered 500–800, since no provision need be made for landscapes by him.

Under Christian sculpture the subject groups are nearly parallel with those under painting; but in classic or other ancient sculpture some such grouping as the following is suggested:

100 Male divinities.

200 Female divinities.

300 Mixed groups of above.

400 Mythological figures: heroes, centaurs, nymphs, etc.

500 Athletes.

600 Portraits.

700 Grave reliefs (if merely inscriptions, they are placed under Stone Carving).

800 Votive reliefs, contracts, etc.

900 Genre, animals, and miscellaneous.

Another possible group division for sculpture is into statues, statuettes, busts, reliefs; but there would still remain a need of subject subdivision, and for the sake of uniformity as well as convenience the subject division is made directly under the artist division. In any case, all sculpture as well as all painting is arranged by museums

alphabetically within each group division (p. 17).

In classifying Greek and Roman sculpture inevitable difficulties will arise, many of which will require an individual solution. Only broad outlines of methods can be given here, but with these clearly in mind it should be fairly easy to settle each question as it presents itself. It is important, for the sake of being consistent and therefore comprehensible, to remember that the first line of the class number should represent the art and the country; the second line, the artist or century-school (and sometimes the provenance; see p. 14); the third line, the subject and museum.

MINOR ARTS

Many collections of photographs do not give a separate classification to these arts, placing them as architectural details or as a kind of sculpture. In view of the growing importance of the crafts in the modern world, and their recognized place in ancient and mediæval times, it seemed imperative to assign to each of them a section in this scheme of classification. The wide range of work covered by the term Minor Arts makes it impossible to give more than very general directions for their classification. The main idea of the division of the arts into sections will be seen in Table IV. Materials are considered as governing processes, and a section is in some cases named by the material, meaning of course all objects made in that material. Work in metals (500) has to be divided into sections according to the various metals or materials, while work in wood (600) can be divided directly into groups of allied objects made of wood.

Following the method of grouping the architecture of a country by cities, and the painting and sculpture by artists, the first subdivision of a minor art should be into such groups as the nature or historical development of the art may suggest. This will in most cases be by time-periods, in order that one may see together all the Greek pottery (483.1) of the fifth century, or all French tapestries (827.5) of the sixteenth century, or all English household furniture (657.7) of the eighteenth century. In the latter case a primary separation into chairs, tables, beds, desks, etc., with a secondary division by centuries or shorter periods, is possible, but the first suggestion seems more worthy of approval, and is certainly more consistent with methods adopted in the other classes. The figures used in the second line of the class number must of course represent the development of the art in historical order, and its phases within the century divis-

ions if necessary. For instance, a simple number such as 160, 170, 180, may be used to denote the 16th, 17th, and 18th centuries A.D. or the dynasties in Egyptian art. The provenance of the object or any variation in the style of the century, as governed by different localities, artists, or schools in the country, may be indicated by a figure or letter in place of the o. Thus, most of the 18th-century domestic furniture in England naturally falls into groups as the work of Chippendale, Sheraton, or Hepplewhite, and the numbers may be accordingly 184, 186, 188, allowing 181, 182, 183 for earlier 18th-century work, and 185, 187, 189 for furniture in the style of these designers.

The third line of the class number is used as before to group all examples of one style or period by subjects and museums, and to give to each photograph an individual number in that group. Thus the subject-group divisions of English 18th-century domestic furniture by Chippendale would be into chairs and sofas, desks, tables, beds, etc. Supposing chairs are assigned the first three groups (100–300), then the chairs by Chippendale in the South Kensington Museum, London, would be numbered about 250, and the whole class number

657.7

of one would be 184 . Similarly, work in the metals can be roughly

257

grouped as architectural, sculptural, for church use, for domestic use, for personal use or ornament; and the group numbers assigned as above.

Even with the scheme of classification in mind, it is not always easy to place each photograph in its proper class at a glance. A carved door, for example, may be most interesting as a piece of wood carving, and yet, if the photograph shows the frame of the door or other architectural features of the building, it will be more logical to class it under Architecture, as a detail of the building, than under Wood Carving. Whichever class is decided upon, however, it is always possible by cross references in the subject catalogue to place the photograph theoretically in the other class or classes, and thus provide for it several points of contact, as it were, by which it may be reached, according to the varying needs of the public.

CLASSIFICATION FOR PHOTOGRAPHS

TABLE I

THE CLASSES OF THE ARTS

- 100 ARCHITECTURE (including general views)
- 200 SCULPTURE
- 300 PAINTING AND DRAWING
- 400 WORK IN MINERAL STUFFS
- 500 WORK IN METALS
- 600 Work in Wood
- 700 WORK IN IVORY, LEATHER, PAPER, ETC.
- 800 TEXTILES AND EMBROIDERIES

CLASSIFICATION FOR BOOKS

INTRODUCTION

HE following classification was prepared originally for use in the Library of The Metropolitan Museum of Art, with no thought of its publication. So many inquiries have been made, however, as to the Museum's system of arranging books that it was finally decided to have it printed. Having stood the test of five years' use in a growing library, it is now presented in an elaborated form with the hope that it may save others the labor of classifying and reclassifying under an inadequate system.

Little explanation of its use is necessary, as it is based upon the decimal system, a form of classifying which Melvil Dewey has made familiar to all librarians—indeed, Architecture has, with slight alterations, been reprinted from his decimal classification, by permission of the publishers, Forest Press, Lake Placid Club, N. Y.

The Cutter numbers alluded to throughout the classification refer

to the C. A. Cutter Alfabetic Order Table.

Numbers have been used for Ancient Art and letters for Post-Christian Art, for two reasons: in this day of departmental libraries it seemed well to have Ancient and Modern Art independent of each other; at the same time a greater uniformity could be secured by giving a full number to each division of the classifica-

tion, which this plan enables one to do.

The table in front gives the scheme entire. It may be used in that form by those who wish a simple method. In our own experience we have found that too simple classifying produces a complicated appearance upon the shelves, and so, although it involves more labor on the part of the cataloguer, we recommend the amplified form which will greatly facilitate the work of the reference librarian and present a comprehensive shelf arrangement to the reading public.

The table of "Subdivisions for close classification" is to be referred to in each class since in the main work only numbers 7 and

8 (for special works) have been elaborated.

Ancient Art has been arranged by countries for the sake of the

Egyptologists, and the Greek and Roman archæologists, who expect to find all works relating to their particular studies together. On the other hand, Post-Christian Art has been arranged under subjects with period and local subdivision, for the reason that requests from students of modern art are invariably for access to the books on painting, ceramics, furniture, etc.—never for all of the works on the Byzantine, Gothic, or Renaissance arts together.

There is a difference of opinion as to the historic development of art in general, different branches and styles of art following individual lines of development. Yet it seemed wisest to sacrifice accuracy in this direction to the uniformity of the general scheme, since the classification is not a history of art but a working plan to simplify, as much as possible, the problem of the librarian and to present the contents of the library to the reader in a way that may

be readily grasped and retained.

CLASSIFICATION OF BOOKS

FIRST DIVISION

SUBDIVISIONS

FOR CLOSE CLASSIFICATION

POST-CHRISTIAN ARTS

THE FOLLOWING MAIN DIVISIONS ARE TO BE USED IN EACH CLASS

OI BIBLIOGRAI	PHY.
---------------	------

(Local division if limited to the art of one country. The Bibliography of an artist goes with his work.)

DICTIONARIES OF TERMS. 02

(For Language dictionaries, see 130-138.)

ENCYCLOPEDIAS. 03

PHILOSOPHY, ESTHETICS, PRINCIPLES. 04

TECHNIQUE. 05

об Essays, Lectures, etc.

COMPENDS, OUTLINES. 07

80 EDUCATION.

(Local division.)

09 BIOGRAPHY.

(Local division.)

(For dictionary Biographies only, e.g. — Allgemeines künstler-lexicon is Aog. Cean-Bermudez, J. A. Diccionario . . . de los . . . profesore . . . en España is A09.2.

Bryan's Dictionary of painters and engravers is Eoo.) Local collective and single Biographies are classed

with local Histories, e. g .-

Brinton, Chr. Modern artists is E10.9. Morelli, G. Italian painters is E11.

For single Biographies add the Cutter number from artist's name to class number, e. g.—

Symonds, J. A. The life of Michel-Angelo is C11 M58.

In cataloguing we follow the Dewey rule of entering a book under its author's real name rather than his pseudonym, but on an artist's card we use the most popular form of his name and make references from all other forms.

A card giving names, dates, and school of an artist is placed in the catalogue before his subject cards, e. g.:

Correggio, 1494–1534.

(Allegri, Antonio)

Italian painter, Lombard
School.

0

Allegri, Antonio, 1494-1534 called,

Correggio

0

Painters — Italian (Lombard School)

see also

Correggio

0

In filing the latter card ignore the (Lombard School) so that all painters may stand together in one alphabetical list.

10 HISTORY — General.

. 1 ANCIENT.

(Formal Histories may be kept here, or better, under Ancient Art.)

- .2 Post-Christian.
- .21 Early Christian.
- .22 Coptic.
- .3 MEDIEVAL.
- .4 BYZANTINE.
- .5 MOHAMMEDAN.
- .51 Saracenic, Arabic.
- .52 Moorish.
- .53 Persian.
- . 54 Turkish.
- .55 Indo-Saracenic.

(For Non-Moslem Art of India, see 19.1.)

- .6 Romanesque, Norman.
- . 7 Сотніс.
- .8 RENAISSANCE.
- .9 Modern (1550-date).
- .01 Later Modern (1800-date).
- .92 Contemporary.

II ITALIAN.

(11-19 include local collective Biographies as well as local Histories, see note after 09. A period division is introduced by adding A and the time number, e. g.—Freeman, L. J. Italian sculpture of the Renaissance is C11A8. This is followed by individual Biographies with Cutter number from the name of the artist in the class number and book number from the author, e. g.—

Valerie, F. M. Gio. Antonio Amadeo is C11Am6.

V 23

If an author's name begins with X, Y or Z, use V instead in Cutter number. Reproductions of the Drawings and Designs of a Sculptor, Painter, etc. take X for book number, e. g.—

Frey, Karl. Die handzeichnungen Michelagniolos

Buonarroti, is C11M58

X

The Etchings or Engravings of a Sculptor or Painter are classed with his works and take Y–Z for book number, e. g.—

Hamerton, P. G. The etchings of Rembrandt is E14R28

Y

11 ITALIAN — Continued.

Include among individual Biographies all Criticisms, Plate Publications, and Bibliographies relating to the Artist.

Put biographies of a family of Sculptors, Painters,

Potters, etc., with the single lives, e. g.— Reymond, Marcel. Les Della Robbia, is C11R53

R33

For works on the general art of a city (class A) add the Cutter number from the name of the city to the history number, e. g.—

Weese, Arthur. München, is A13M92

W41

Ordinarily works on any one branch of art in a city are mainly confined to a particular period and may be classed under the period division of the history of that art, e. g.—

Berenson, B. The Florentine painters of the Renaissance, is E11A8

B45

Books on a particular school of art are to be classed under the period during which the school flourished,

Bate, P. H. The English Pre-Raphaelite painters, is E16A91.)

B31

12 SPANISH.

2 Portuguese.

13 GERMAN.

.2 Austrian, Hungarian.

.4 Swiss.

14 Дитсн.

.2 Belgian, Flemish.

15 French.

16 British.

(It is better to keep all British — except Colonial — Histories, Biographies, Museums, etc., in one alphabetical list. The following arrangement is given for those who prefer a closer classification. If this division is adopted for histories, use .5 and Cutter number from artist's name for single Biographies.)

- . 1 English.
- .2 Scottish.
- .3 Irish.
- .4 Welsh.

BRITISH - Continued. 16 .6 Canadian. Other Colonial. .7 SCANDINAVIAN AND RUSSIAN. Norwegian. . 1 Swedish. .2 Danish. .3 RUSSIAN. ٠5 AMERICAN — UNITED STATES. 18 MEXICAN. OTHER. 10 INDIAN (NON-MOSLEM.) CHINESE. . 2 JAPANESE. .3 20 Periodicals. (Local division.) Societies. 30 (Local division.) EXHIBITIONS. 40 (Local division.) PRIVATE COLLECTIONS. 50 (Local division.) (Enter all Private Collections under owner and take book number from his name.) 60 Museums. (Local division.) Cutter number in class number from name of city, book number from name of Museum, e.g. - New York (city) — Metropolitan Museum of Art. Catalogue of the paintings, is E18N48. M56 SPECIAL WORKS. 70 SPECIAL WORKS. 80 MISCELLANEOUS. 90 Preservation. 91 Cleaning and Restoration. 92 Marks and Monograms. 93 Forgeries. 94 Law, Tariff. 95 96 97 98 Pamphlets.

99 Sale Catalogues.

(Local division.)

(All Sale Catalogues are kept in chronological order under the country in which the sale is held by adding local Subdivisions and using the following time numbers for book numbers. Do not use local Subdivisions in minor classes.)

Α	1800-09	G	1860-69
В	1810-19	Н	1870-79
С	1820-29	I	1880-89
D	1830-39	J	1890-99
E	1840-49	K	1900-99
F	1850-59	L	1010-10

M 1920-29

e. g.— Catalogues of a sale of art objects held in Italy 1910 is Art (A), Sale catalogue (99), Italy (1), 1910 (L) is A99.1

L

Catalogue of a 2d sale is A99.1

Loi

Catalogue of a sale held in Germany (3), 1911 is A 99.3

Lı

Catalogue of a sale of paintings (E) held in England (6) 1895 is E99.6

J5

Catalogue of a sale of English paintings held in New York (8) 1879 is E99.8

Н9

Alternative: — All catalogues may be kept in one chronological list, in which case local order is secured by adding local division to the book and time number with increase number below, e. g.—

Catalogue of a sale of art objects held in Italy 1910 is Aoo

Loi

A 2d sale is A99

Loi

2

Catalogue of a sale held in Germany 1911 is A99

L13

Catalogues of 2d and 3d sales held in Germany 1911 are A99, A99.

- G87 Wall Paper.
- G90 MISCELLANEOUS.

Н BOOK ARTS. ILLUSTRATION.

(See Subdivisions for close classification.)

(For Illustrated Books — i. e., those interesting for the Illustrations rather than for the text — add 1 to history number of the country to which the Illustrator belongs and take the book number from his name, e. g.

Kutschmann, Th. Geschichte der deutschen illustration, is H13.

K96

Harte, Bret. The Queen of the Pirate Isle; ill. by Kate Greenaway is H16.1.

La Fontaine, J. de. Fables; ill. by J. J. Grandville. (pseud. of J. I. I. Gerard) is H15.1.

If a book is illustrated by several artists of different nationalities, class under the country in which it is published and take the book number from author entry.

Books illustrated by a Painter, Etcher, Engraver, etc., go with the artist's works, e. g.—

Omar Khayyám. Rubáiyát; drawings by Elihu Vedder, is E18V51.)
