Pin-point targets assigned were not hit due to cloud conditions over the target. All planes dove through the clouds, breaking out at approximately 2300 ft. Aiming was against target area WA-202 for 5 planes, and all claim hits. Exact damage estimation is not possible due to the already pock-marked condition of the target area.

* Jicpoa Bulletin 80-44 for target description.

(p) Were Photographs Taken? Yes Photographs of Damage, WhenTaken, Should Be Attached By Staple.

⁽o) RESULTS: (For all hits claimed on ship targets and for land targets of special interest, draw diagram, top or side view or both, as appropriate, showing type and location of hits. For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary).

The attack, carried out as planned, was made following one VBF and one VF sweep of the atoll. After making one run, the 12 VF rejoined the 18 VT and 14 VB comprising the strike group assigned to target area WA-2. Rendezvous made at 12,000 feet, about 15 miles northwest of the atoll. Approach made by proceeding south until in position to turn into the lagoon and to make northerly runs on the targets on northwest Wake Island. Vt lost 5000 feet before pushover Method of Locating, Distance which was made over the south shore of Wilkes Island. The three 3-planes sections broke up, with one section assigned to WA2-27, one to WA2-34, and one to WA2-02 and 05. Glides of about 35 degrees were used, speeds approximately 290, and release at 2000 feet. Evasive action was taken by changes of altitude and course up to the push-over point, but thereafter until pull out, e vasive action was not possible in the TBM-3E. Evasive action was taken on retrievement made normal to the beachline. Planes broke througj the clouds at about 2300 feet, and released on targets of opportunity; 5 planes hitting target area WA2-02. One pilot did notrelease due to an electrical failure of the bomb release system and being too low for emergency release. One plane dropped over the target, hitting only the north beach. The planes assigned to target WA2-27 missed. The reamining 5 planes hit target area WA2-02. Several of the planes strafed while in the bombing runs. All targets assigned were camoflaged, difficult to locate in the pictures provided for breifing, but were rela-Method of Locating Target tively easy to pick up in the bombing run.

> It is recommended that section leaders be prepared to take an appropriate interval during the approach so as to achieve a position satisfactory for taking evasive action and for picking a push-over point that will but the section on assigned targets. If all the planes stay together in close formation up until the push-over point, evasive action is impossible and trailing sections have an extremely hard task of hitting their targets from a push-over point selected by a leader to facilitate his own bombing run.

The photographs provided for briefing were taken from about 20,000 feet and were not too satisfactory. Much better shots were made by VF(P) on the first strike and proved helpful at later stages.

Operational: YE made homing, recognition, approach, and rendezvous in assigned sector easy. A microphone button on some plane in the strike became jammed and made communications on the strike very difficult. Flight operations were conducted with minimum difficulties. The TBMSE performed well under full load conditions. The 15 planes assigned to the squadron were operational for the first strikes and 13 were operational at days end.

REPORT PREPARED BY:

REPORT NoV194-1

XIII. MATERIAL DATA. (Comment freely on performance or suitability, following check list at left. Use additional sheets if necessary).

> Communications The following notes were taken by Townsend, G.J., ARMSc (CA), who was flying in a TBM equipped with a spot jammer and an APR-1 receiver:

"1. After taking off picked up a signal on 217 mc. This signal was picked up at about 30 mi. from ship. was jamming this signal with a barrage jammer.

dammer was covering 9 mc). "2. A signal was packed up at 203. No one was jamming it." (Townsend was instructed to jam a signal at 207 if he found one. The 203 signal was jammed later by a parrage jammer). 3. Townsend jammed a signal at 209 mc. (This probably the signal expected at 207 mc.) The receiver calibration could easily have been off 2 mc. He stated that the 209 mc signal seemed to be tracking. This signal came on and off inter-

mittently. 4. At this time a barrage of jammer was heard in the neigh-

borhood of 209 mc. 5. By this time the barrage jammers were covering from 201 me to 228 me. There was a null in the barrage at 205 mc to 207 mc. The most effective part of the barrage was from 209 me to 228 me.

6. Townsend stated that several of the barrage jammers were shutting off the equipment and turning it on again. This should not be done. The operators will be cautioned about this practice.

7. The above notes are set down as Townsend took them in a

more or less chronological order.

Inasmuch as this was Townsend's first flight under fire, it is my opinion that he did an excellent job of observation and acted in a very cool manner.

> WH.F. MARKER RCM Officer."
