## FOR THE YEAR 1929

---

The Sixtieth Report of the Registrar-General for the Province of Ontario, is herewith presented:

### POPULATION

The estimated population is 3,271,000, distributed as follows:

City municipalities.....	1,392,223 or 42.56 per cent.
Towns (over 5,000 population).....	214,917 or 6.57 per cent.
Rural (including all other municipalities).....	1,663,860 or 50.87 per cent.

### BIRTHS

	1929		1928	
	Number	Ratio	Number	Ratio
Province.....	68,458	20.9	68,510	21.2
Cities.....	32,478	23.3	31,602	23.6
Towns.....	6,288	29.2	5,939	27.8
Rural.....	29,692	17.8	30,969	18.4

Of the above, 35,154 were males and 33,304 females, giving a rate of 1,055 males to 1,000 females. The fluctuation in these proportions in a period of twenty years has been from 1,053 to 1,117, with no particular trend excepting in the five years, 1916 to 1920, when there was an increase in masculinity of from 1,063 males in 1916 to 1,117 males in 1920 to 1,000 females.

## NUMBER OF BIRTHS AND RATE FOR 10 YEARS

Year	Number	Ratio	Year	Number	Ratio
1920	72,511	25.1	1925	70,122	22.6
1921	74,152	25.3	1926	67,617	21.5
1922	71,320	23.9	1927	67,671	21.2
1923	70,056	23.1	1928	68,510	21.2
1924	71,510	23.3	1929	68,458	20.9

It will be immediately noted that there has been a decline in the birth rate from the high point (25.3) reached in 1921, and seems to be quite consonant with the birth rate in all other countries.

## NATURAL INCREASE BY RATES PER 1,000 OF POPULATION

	Birth Rate	Death Rate	Rate of Natural Increase		Birth Rate	Death Rate	Rate of Natural Increase
1910	22.4	12.5	9.9	1920	25.1	14.0	11.1
1911	22.2	12.6	9.6	1921	25.3	11.8	13.5
1912	22.9	12.5	10.4	1922	23.9	11.4	12.5
1913	22.7	13.1	9.6	1923	23.1	11.8	11.3
1914	25.0	12.2	12.8	1924	23.3	10.8	12.5
1915	24.9	12.3	12.6	1925	22.6	10.9	11.7
1916	23.9	13.0	10.9	1926	21.5	11.4	10.1
1917	22.6	12.0	10.6	1927	21.2	10.9	10.3
1918	23.0	15.3	7.7	1928	21.2	11.5	9.7
1919	22.0	11.9	10.1	1929	20.9	11.7	9.2

The largest natural increase during the past twenty years was in 1921, when there were 13.5 more births per 1,000 of population than deaths. A high rate was reached in 1914, the year war was declared and it gradually declined during the war years (for the rate in 1918 cannot be considered as at all normal, due to the tremendous number of deaths in that year from influenza). After the armistice and the men began to return the rate increased gradually until the high mark of 13.5 was reached in 1921. From this point a gradual decline is indicated until what might be considered a normal rate was again established. The rates in the last quinquennial of the period agree approximately with those in the first quinquennial.

## ILLEGITIMATE BIRTHS

Rate per 1,000 living births

1900	12.5	1908	14.9	1915	21.9	1922	21.2
1901	17.7	1909	13.7	1916	20.9	1923	22.5
1902	17.5	1910	19.3	1917	19.5	1924	24.2
1903	16.4	1911	19.4	1918	18.2	1925	26.8
1904	16.2	1912	21.3	1919	19.8	1926	26.9
1905	12.5	1913	21.6	1920	19.7	1927	28.9
1906	15.9	1914	22.1	1921	21.5	1928	31.7
1907	14.4					1929	34.7

The above table indicates a steady rise in the rates of illegitimacy in the Province. It has almost trebled in the 30 years shown in above table. The increase in 1929 over the rate of 1928 is the greatest in nineteen years. The admitted freedom exercised between the sexes during the last several years may in some measure be responsible. In the first decade shown above the increase was 9.5%. In the second decade the increase was 44.5%. In the third decade 75.2%.

Rate of Illegitimacy. Number of illegitimate births per 1000 living births.

The above table shows the ten highest causes of death and these account for 25,587 of all deaths, or 67.2%. Increased rates are indicated in four, viz.: Organic Heart Diseases, Influenza, Diseases of the Arteries, and Infantile Diarrhoea. Decreases occurred in Pneumonia, Tuberculosis, Cancer, Accidental and other external causes, and Apoplexy, and no change worth noting in the rate of Bright's Disease.

There is indicated a slight decline in the death rate from Cancer this year. In 1928, it was 106.5, and this year is 104.0 per 100,000 of population. The last drop was in 1925, when it fell 1.1 in the hundred thousand and there is no reason to believe that the drop this year will be maintained. There are fluctuations in the rate of each type of cancer classification, the greatest of which is in cancer of the stomach. Here the decline is 2.5, agreeing with the decline in the whole class. This is a drop of 2.5 in the rate.

Tuberculosis is down to eighth place and is at the lowest point ever reached. The rate is 52.0 per 100,000 of population and is 9% of a decline. The rate for 1929 was only two-thirds the rate of 1919, a reduction of 50%. This is substantial evidence proving the benefit derived from the efforts put forward by health authorities to exterminate the White Plague, as it was at one time popularly known.

## CANCER

There were 39 fewer deaths from cancer in 1929 which, with the normal increase in population, brought the death rate down by 2.5. This, while not the first decline in the rate, it is the first time since 1918 that the actual number of deaths reported has been lower.

Table showing the distribution of deaths from various types according to class and rates per 100,000 of population as follows:—

The foregoing Table shows the death rates by age groups. It is interesting to note in the five years shown how consistently the female rate exceeds the male up to about the end of the sixties, when the rate is higher among the males.

MATERNAL MORTALITY

Province—368, being 5.18 deaths per 1,000 births.\*  
 Cities and towns—262, being 6.48 deaths per 1,000 births.  
 Rural—106, being 2.62 deaths per 1,000 births.

\*Still-births included.

Death rates from automobiles, per 100,000 population.

LEFT index for automobile death rates  
 RIGHT index for organic Heart and cancer death rates.

The above graph shows the death rates from automotive accidents compared with the rates from deaths from organic heart diseases and cancer.

For years it has been an appalling fact that these two causes have been responsible for a very large proportion of deaths (between 24% and 25% of all deaths) in our province and with a steadily increasing rate.

Although deaths from automotive vehicles have been few in number when compared with the huge totals piled up by cancer, organic heart, or tuberculosis, and the rates consequently lower, the fact is that the rate of deaths from automotive accidents is increasing by leaps and bounds.
