1957 STANDARD INDUSTRIAL CLASSIFICATION

A. INTRODUCTION

The industry and commodity classifications of the Census of Manufactures are based on the Standard Industrial Classification (SIC), sponsored by the Bureau of the Budget. Late in 1957, a revised edition of the SIC was issued by the Bureau of the Budget for use by all Federal agencies. It represents a major change from the former edition of the SIC (1945) followed in the 1954 Census of Manufactures and subsequent Annual Surveys of Manufactures for 1955-1957.

The new (1957) SIC represents the results of several years' efforts by representatives of Industry and Government organized in committees by the Budget Bureau's Advisory Council on Federal Reports. Recognizing the need to conform to the new classification system, as well as to provide continuity with past statistical series, the 1958 Census of Manufactures classified establishments by the classification system in use during the years 1954-1957, as well as by the 1957 SIC. This was accomplished by developing a Census report form to meet the requirements of both systems of classification. Product codes assigned were consistent with industry classifications conforming to the system in use prior to 1958. Subsequently, they were mechanically converted to the revised 1957 SIC and new industry classifications derived. Product codes used in both systems of classifications are included in this manual.

The Standard Industrial Classification system, as expressed in terms of Census product codes, has been widely used and incorporated in the statistical and accounting records of manufacturing companies, trade associations, and research groups. The conversion tables in Appendix A will be useful to such users, as well as to others developing statistical series linking the periods before and after 1958. The list of products by 1957 SIC industries shown in Part I describe the content of the 1957 SIC manufacturing industries by listing items for which data are collected in the 1958 Census of Manufactures.

B. INDUSTRIES

The 1957 Standard Industrial Classification lists the following general principles which served as a guide in establishing industry classifications.

1. The classification should conform to the existing structure of American industry.
2. The reporting units to be classified are establishments, rather than legal entities or companies.

3. Each establishment is to be classified according to its major line of economic activity. In the manufacturing division, line of activity is generally defined in terms of products made, materials consumed or process of manufacture used. Value of production is the measure used to determine major line of manufacturing activity.
4. The group of establishments in the industry should be of significant size from the standpoint of such economic factors as number of persons employed, value added, value of shipments, and number of establishments.
5. It follows, therefore, that an industry is a grouping of establishments primarily engaged in the same or similar lines of activity. There should be a high degree of specialization in the activities of the industry. Furthermore, establishments in the industry should, in the aggregate, account for a significant proportion of the total of that activity produced in all manufacturing industries.

C. PRODUCT CLASSES

Product classes originally developed during the 1947 Census of Manufactures were subsequently revised for the 1954 Census. The issuance of the 1957 SIC afforded an opportunity for an over-all review and updating of the product class structure. Guides developed for establishing product classes gave particular emphasis to such factors as economic significance, economic character, and homogeneity, to maximize its general usefulness. Representatives of industry and Federal agencies contributed greatly to the development of the revised product classes, which were approved by the Bureau of the Budget.

Product classes are relatively homogeneous groupings of individual 7-digit products of an industry. They provide a convenient and more economical means of collecting and analyzing economic data. During Census years, product class totals are derived by aggregating individual 7-digit products; during intercensal years, 5-digit product class, rather than 7-digit product data, are reported in the Annual Survey of Manufactures. Product classes developed from the 1957 SIC for the 1958 Census tabulations will be continued as the reporting measure for product shipments in the Annual Surveys of Manufactures 1959-1963.

D. DERIVATION OF THE PRODUCT NUMBERING SYSTEM

Each of the Census products is assigned a unique 7-digit code. The product code is derived as follows:

1. The first four digits identify the industry in which the product is classified by the SIC.
2. The fifth digit, together with the four digit industry code, identifies the product class.
3. The sixth and seventh digits uniquely identify the individual products in the product class and arrange them in numerical sequence. For the 1958 Census, data are collected for approximately 7,500 individual products in all manufacturing activities.

4. Codes beginning with 93--- represent receipts for miscellaneous manufacturing operations performed on a contract or commission basis on materials owned by others.
5. Codes beginning with 9 (other than 93) represent receipts for nonmanufacturing operations performed in manufacturing establishments (i.e., merchandising, construction, etc.).

Gaps appear in the 5-digit and 7-digit numbering system primarily for the purpose of (1) retaining former code numbers wherever possible, and, (2) providing flexibility for the insertion of additional products, when necessary.

During the changeover to the 1957 SIC, one major change in the product numbering system was made. Products classified by the SIC in more than one 4-digit industry, according to process of manufacture, are now assigned two or more codes rather than the single code formerly used. The content of product classes which include such products are similarly changed from the earlier system. The revised system distinguishes by process of manufacture as illustrated in the following example.

Old classification		New classification	
Product class and product code	Title	Product class and product code	Title
33930 01	Steel pipe and tube	33126 01	Steel pipe and tube - made by establishments which produce their own hot rolled materials
		33176 01	Steel pipe and tube - made by establishments which do <u>not</u> produce their own hot rolled materials.

E. MANUFACTURING INDUSTRY CHANGES FROM 1954 CENSUS

1. Summary of Revisions

The 1954 Census total of 454 manufacturing industries have been reduced in the 1957 SIC to a total of 433 industries. These 433 industries are further combined or rearranged by the Census into 429 industries. The twenty-one 2-digit major groups of the 1945 edition of the SIC appear in the 1957 SIC.

Standard Industrial Classification revisions in manufacturing industries arise from (1) creation of new industries from larger 1954 Census groupings; (2) elimination of small industries by merging them with other related industries; (3) transfer of plants producing specified products from one industry to another; and (4) shifting 4-digit

NUMERICAL LIST OF MANUFACTURED PRODUCTS

industries within the 2- or 3-digit S.I.C. structure without changing the content of the 4-digit industry. Comparison of the number of 1954 Census industries with the 1958 Census (1957 SIC) is as follows:

2. Changes in Scope of Manufactures

The revised 1957 SIC increased the scope of Census manufacturing industries from the 1954 Census by the following changes:

a. Additions to Manufactures

- (1) Transferred from Trade Industries approximately 3,500 establishments with 59,500 employees primarily engaged in producing ready-mixed concrete (Industry 3273).
- (2) Transferred from Service Trades are an indeterminate large number of machine shops solely engaged in repair work which are merged with other machine shops in Census Industry 3599.

b. Transfers from Manufactures

Transferred from Manufactures are establishments primarily engaged in re-treading or rebuilding tires (to Service Trades). Separate figures on such establishments are not currently available.

- ### c. Other changes in the scope of manufacturing industries reflected in the 1957 edition of the SIC had previously been approved as revisions to the 1945 edition of the SIC for use in the 1954 Census of Manufactures. However, due to the relatively few revisions made at that time, the manual was not reissued. Revisions in the scope of manufactures from the 1945 edition of the SIC included in the 1954 Census of Manufactures and continued in the 1958 Census are:

- (1) Transferred from Trade Industries to Manufactures of (1) milk pasteurizing plants; (2) fresh fish packagers; and (3) apparel and leather jobbers.
- (2) Transferred from Manufactures to Wholesale Trade are establishments primarily engaged in producing wiping rags.

F. COLUMNAR FORMAT OF "NUMERICAL LIST OF MANUFACTURED PRODUCTS 1957 STANDARD INDUSTRIAL CLASSIFICATION"

Due to space limitations an abbreviated version of the standard columnar structures and lettering of the product inquiry of 1958 Census report forms is shown in the table "Numerical List of Manufactured Products - 1957 SIC." The standard columnar format is as follows:

Product (A)	Census product code (B-1)	Unit of measure (B-2)	Production for all purposes (quantity) (C)	Total shipments and interplant transfers	
				Quantity (D)	Value (\$1,000) (E)

Columns (F)-(I) are generally nonstandard and are fully described in the heading of the product list for the industries in which they have been used.

NUMERICAL LIST OF MANUFACTURED PRODUCTS

Measures shown for column (A)-(E) are not requested for all products or industries. Where such information is not requested they have been omitted from this table.

PART II - CENSUS PRODUCT CONVERSIONS

The conversion of Census product codes are spelled out at the 7-digit product detail in Appendixes A and B. Product titles for the new and old SIC codes remain unchanged and are shown in Part I "Numerical List of Manufactured Products - 1957 Standard Industrial Classification" by the new SIC code.

Appendix A shows the product codes of the old SIC industry and the equivalent code in the new SIC industry. Titles shown are the short industry titles corresponding to the old SIC used in the Census of Manufactures. When two or more new SIC codes correspond to one old SIC code, a distinction by process of manufacture (i. e., products made from onw or purchased materials, etc.) has been made in the new numbering system. Two or more product codes are now assigned to the product.

Appendix B shows the product codes of the new SIC industry and the equivalent code in the old system. Titles shown are the short industry titles corresponding to the new SIC used in the Census of Manufactures. An asterisk beside a product code denotes that only a part of the old code is equivalent to the new code. As noted above, distinction by process of manufacture in the numbering system yields two or more codes for a product in the new system where one code was formerly assigned.
