tion, Gate Hinges and Fittings, Iron Doors and Gates, Artistic and other Metal Work, Metal Casements and Frames, &c., &c.

The “Universal” Pattern is an extremely simple, neat, effective, and cheap Fanlight Opener, having a Screw and Link action, connected by a universal joint to the Vertical Rod, which has a tube at the lower end concealing a jointed handle. The Fanlight is operated by turning the handle (C), first slipping up the cover tube (B). The action is communicated by the rod (A) to the nut (F), causing it to traverse the screw (E), thereby acting on the sash by the link. The “Universal joint” (D) admits of the rod (A) being angled to any convenient extent for working it, when released from the hand the tube drops over and conceals the handle, and the rod hangs vertically.

## MEYER'S STONE-CEMENT

SERVES TO

Imitate and Repair Marble, Granite, Porphyry,

Sandstone, Limestone, Lithographic Stones, &c.,

Also for Mending Broken Edges of Flagstones and Steps,

Repairing the Façades of Churches, Monuments, Statues, &c.

Its principal advantages are—(1) Every kind of Stone (Marble, Granite, Freestone, Sandstone, &c.) can be repaired by it. (2) No head is required in making the mend. (3) It can be coloured in any way required, and the stone may be imitated perfectly. (4) The joins are unaffected by any kind of weather and remain permanently as hard and as durable as the rest of the stone. (5) The cost becomes trifling in comparison with advantages, when it is remembered that one must always use from two to four parts of stone-dust or hard sand to one part of the Cement. (6) The mend is hard and solid in two days, and may be worked, carved, sawn, or polished afterwards in the same way as an ordinary block of stone.
