Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured covers/
Couverture de couleur

required. Th
method:

The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

H. G. AN Clopper.
ALMANACK,

FOR THE
YEAR OF OUR LORD

1825; *26*

BEING THE FIRST AFTER BISSEXTILE OR LEAP YEAR;
CALCULATED FOR THE MERIDIAN OF
SAINT JOHN, N. B.

BEING IN LATITUDE 45° 20' NORTH, LONGITUDE 66° 3' WEST;

But will serve for any part of the Province.

—CONTAINING—

*The Universal Calendar,
Feasts and Fasts of the Church,
Eclipses of the Luminaries,
Rising and Setting of the Sun
and Moon,
Sun's Declination,*

*The Moon's Place,
Equation of Time, &c.
Time Tables differing three
List
opposite longitudes, or
each other.*

... planet stands from another four signs, or 120 degrees; which make one third part of the ecliptic.

* Sextile is the sixth part of the ecliptic; viz. two signs, which make 60 degrees.

SIGNS OF THE ZODIAC.

♈ Aries, head.	♌ Leo, heart.	♐ Sagitarus, thighs.
♉ Taurus, neck.	♍ Virgo, belly.	♑ Capricornus, knees
♊ Gemini, arms.	♎ Libra, reins.	♒ Aquarius, legs.
♋ Cancer, breast.	♏ Scorpio, secrets.	♓ Pisces, feet.

SIGNALS made at Partridge Island, and repeated at Howe, on the approach of Vessels to this Harbour.

- One Ball close, for one square rigged vessel,
- One Ball half hoisted, for two do.
- Two Balls close, for three do.
- Two Balls separated, for four do.
- A pendant of any colour, for five do.
- A do. under a Ball, for six do.
- A do. over a Ball half hoisted, for seven do.
- A do. under two Balls close, for eight do.
- A do. between two Balls separate, for nine do.
- A Flag of any colour for ten or more do.

[The above are hoisted at the East or West yard arm, according to the quarter the vessels first appear in, with the addition of a Ball at the centre of the Yard until the Rig of the vessels can be made out, when one or more of the following descriptive Colours will be hoisted at the Mast head.]

- An Union Jack, for a *Flag Ship*, with or without a squadron.
- Do. with a red pendant over, for a *Two-Decker*.
- Do. with a blue pendant over, for a *Frigate*.
- Do. with a white do. do. for a *small Armed Vessel*.
- A blue pendant, for a *Merchant ship*.
- A red pendant, for a *Merchant brig*.
- A white pendant, for a *topsail schooner or sloop*.
- A Flag blue and white horizontally, a *Neutral Fleet*.
- A Pendant white and blue, *Neutral Man of War*.
- and blue, an *Enemy's Fleet*.
- white and blue, an *Enemy's Man of War*.
- Merchant Vessel.
- al or Enemy's signals, the vessel

ECLIPSES FOR THE YEAR 1825.

HERE will be Four Eclipses in the Year 1825: Two of the Sun, and Two of the Moon, in the following order:—

1st. The first will be of the Moon, on the Evening of the 31st May, partial and visible, as follows:—

Beginning at.....	7 h. 30 m.	}	Digits Eclipsed
Ecliptic Opposition.....	7 h. 34 m.		one-fifth from
Middle.....	7 h. 44 m.		the Sun's Nor-
End of Eclipse.....	7 h. 59 m.		thern Limb.

2d. The second will be of the Sun, on the Morning of the 1st of June, at 8 hours 8 minutes, invisible here, on account of the Moon's south latitude.

3d. The third will be of the Moon, at noon of the 25th of September, consequently invisible.

4th. The fourth will be of the Sun, on the evening of the 9th December, at 4 hours 20 minutes, invisible.

The PLANETS and their RELATIONS.

☉ The Sun.	♀ Venus.	♃ Jupiter.
☾ The Moon.	♁ The Earth.	♄ Saturn.
☿ Mercury.	♂ Mars.	♆ Georgian.
♋ A Planet's Ascending Node.		
♏ The Descending Node.		
♌ Conjunction, or Planets situate in the same longitude.		
☐ Quadrature, or Planets situate in longitudes differing three signs from each other.		
♋ Opposition, or Planets situate in opposite longitudes, or differing six signs from each other.		
♌ Trine happens when one Planet stands from another four signs, or 120 degrees; which make one third part of the ecliptic.		
* Sextile is the sixth part of the ecliptic; viz. two signs, which make 60 degrees.		

SIGNS OF THE ZODIAC.

♈ Aries, head.	♌ Leo, heart.	♐ Sagitarus, thighs.
♊ Taurus, neck.	♍ Virgo, belly.	♑ Capricornus, knees
♈ Gemini, arms.	♎ Libra, reins.	♒ Aquarius, legs.
♋ Cancer, breast.	♏ Scorpio, secrets.	♓ Pisces, feet.

THE ECLECTIC LIBRARY

Was founded in March, 1821, and is managed by a Society of twenty-five
Gentlemen belonging to the City.

The object of this Institution is to put it in the power of every class of
the community to acquire knowledge on every interesting and important
subject. Semi-annual importations of the latest and best works, to the
utmost extent allowed by the funds, are made from Great-Britain.

OFFICE-BEARERS FOR THE PRESENT YEAR.

Mr. James Paterson, President,
John Boyd, Esq. M. D. Vice President,
Mr. W. C. Sears, Secretary and Treasurer,
Mr. W. J. Boyd, Librarian.

TERMS OF SUBSCRIPTION :

Persons who include in their reading the Periodical works, of which a
dozen varieties are imported, pay, when they subscribe, for a year 25s.—
for a half year 15s.—for a quarter 9s.

Persons who do not include the Periodical works in their reading, pay,
when they subscribe, for a year 20s.—for half a year 12s. 6d.—for a quarter
of a year 7s. 6d.

Farmer's Calendar,

From the *AMERICAN ALMANACK*, for the Year 1825.

JANUARY.—Friends, Countrymen, Lovers! We thank you for the past; we intreat you for the future; we anticipate your indulgence; we count on your good will; we detest sycophancy; and we hope for the best. Accept our best wishes for your happiness; our joy in your prosperity; our sorrow in your adversity; our hand and heart in your perplexities; our counsel in your doubts; our smiles in your mirth; and our tears in your afflictions.—May neither hob-goblin, nor ghost, fairy nor witch, trouble either your dwellings or your imaginations.—The long winter nights are the occasion of terror and uneasiness to many persons, because they are tormented with the ridiculous apprehension of spectres. This superstitious fear was more pardonable in the time of our ancestors, as they had not so clear ideas of the nature of spirits, and as it was then favoured by religion itself. But we have reason to be surprised, that, in an age so enlightened as ours, such ideas and such fears can exist. It shows how ingenious man is to raise imaginary monsters, and to torment himself. Is it not enough that he should, from time to time, feel real evils? Must he also create to himself fancied ones, and become unhappy because he thinks himself so? How is the miser tormented with the fear of robbers! the misanthrope, by his distrust of those about him! the discontented man, by his anxiety about what may happen!—Let us learn from hence to know the nature of the human heart, and to feel the necessity of watching over our imaginations. If it deceive us in the night, by presenting to us frightful phantoms, it often, in the day time, produces illusions still more dangerous, by painting vice to us under attractive forms. Let us be as ready to fly from all temptations to evil, as we are to avoid the appearance of a spectre. But the former, man is too ready to meet boldly and rashly, while the bare imagination of the latter renders him timid, and pale as the ghost that haunts him.

FEBRUARY.—"I mean to sue Will Weaver," says Lewis Litigus. Uncle Sam replies, 'Thrice is he armed, that hath his quarrel just, and he but naked, though locked up in steel, whose conscience with injustice is corrupted, as Julius Cæsar says in his Commentaries; so never go to war, or to law, in an unjust quarrel; nor, if it be possible to avoid it, even in a just one, and with a conscience bright in all the whiteness of innocency.'—Give your young cattle and colts a few potatoes occasionally, which will greatly better their appearance and growth.—Whatever multiplies feed for your stock enlarges the quantity of your hay, and enables you to increase the quantity of your stock. Whatever enables you to increase the quantity of your stock, increases the value of your property directly, and the subsequent value of your farm indirectly by increasing the quantity of your manure, and thereby the quantity and value of your crops; and thus your potatoe-fallows, which do not exhaust your soil, may be made the source of great improvement and wealth.—Feed your sheep upon potatoes daily; no article of stock will repay you with more profit; the wool will be more in quantity and finer in quality; they will be free from ticks, unless kept in too warm a covering and too many in a fold; they will never shed their wool, and will seldom lose their lambs if thus fed.—Much chaff or straw that is often thrown away, might,

with a little pains, be made, in the autumn, good fodder for cattle, by being mixed with green cornstalks, or with hay not fully dried, and sprinkling a little salt through the whole. In this way the moisture and much of the sweetness of the stalks, or of the hay, is absorbed by the straw and chaff, and with the addition of salt, the whole mass is converted into good fodder.

MARCH.—“‘Order,’” said my aunt Dorothy, “‘is heaven’s first law,’ as Mohammed told the gigantic *rooster* that he saw in the fifth heaven, in his ascent to the celestial regions. This chief chorister of the crowing tribe opens his throat in a tremendously shrill quaver, which sets all the crows on earth at it in full chorus. So says the moslem legend, my dear.” The good old lady was not given to doubting. Fables, she thought, are to be believed, or why were they made? Like all other famous travellers and voyagers, the prophet of the mussulmans, you know, must have his *cock-and-bull* story. But never mind that. Attend to *cock-crowing*, rise early, and get every thing about the farm in *order*, as preparative to business.—Finish threshing. Complete the dressing of your flax and hemp. Cut up your wood. House it if you have a woodhouse, which you should have. If not, pile it up neatly for next summer’s and winter’s use. There is great difference in the saving, between green and dry or seasoned wood. It will almost pay the expense of sledging. Look, too, at the extra trouble in kindling fires which is thus avoided. Are not these objects worthy of attention?—Split rails. Point and mortise posts, and draw them to the handiest places for use. Trim your orchards, and sled off the brush in season. Look to your fences. If down, put them up, so as to secure your orchards, grain-land, and mowing-ground, from the inroads of your cattle. Bad fences, you know will render all your labours profitless. Cut your scions, and secure them in some dry part of your cellar, with the ends in the ground, till you want them in April. Bleed your working cattle, to prevent their heating; and let them have good hay, and at times a few potatoes. If you detest slavery, preserve your sugar maples, keep them in good order, and attend seasonably, with the fittest apparatus, to the making of your year’s sugar. Your cattle and cows require the curry-come, as well as your horses, and will equally benefit by its use.

APRIL.—“You are to be at Court, I’m told,” says my aunt Dinah—reader, don’t laugh at a good old scripture name, if it sounds less pleasing to your modern refined ears, than Fabricia, or Floretto, or even Dulcinea—“and to be a juryman; but I charge you to be careful, and wise, and merciful, not prejudiced, nor rash, nor indifferent. It is hard enough upon poor culprits, that they *are* culprits. Justice should ever be tempered with mercy. If *they* have offended human laws, *who* is there, that is not hourly offending those of our Maker? The Divine author of our religion taught us how to deal with our erring fellow-mortals, when he said—“neither do I accuse thee; go, and sin no more, lest a worse thing come upon thee—let him that is *without* sin, cast the first stone.” Whatever may have been their crime, it has not thrown them beyond the pale of humanity; it cannot have made them less than men; it cannot have unsouled them.” So said my aunt Dinah.—“What if she did!” rejoined Tom Showforth; “no rogues ought to be suffered to live; I can give law for it—‘and wretches hang, that jury-men may dine,’ as Coke upon Lyttleton has it.” Let Tom and his law pass. When you are trying your fellow-worms, endeavour to act impartially, and do *justice* even to a *thief*; whether the cry of appetite strive to drown the

Bid patience wait, and prejudice be mute.

Till truth shall clear the cause, and end dispute;

which Blackstone may have said, for aught we know.—Now repair your fences thoroughly. Let your flax-ground be ploughed repeatedly. Plough for spring grain. Soak your seed-grain in a strong pickle of sea-salt, or salt-petre, rinse it clean, and then roll it in plaister, or live ashes, before sowing. Sow plaister on your hemp, flax, barley, and oats.

MAY.—“Friend Timothy,” said cousin Sim, “thou knowest what Addison says—‘Out! out! brief candle!—See that the boys and girls are careful of their *lights*; and do not let them wander too much in the *dark*, lest something come to *light*, that were better extinguished in the *sparks*.’—Corn-ground ought to be ploughed in the fall, in single bouts; in the spring it should be harrowed down as smooth as possible, and ploughed again; then harrowed again, and the furrows marked out at *eight feet* distance; in these furrows drop the seed single, at about the distance of every foot; let the cart with manure follow in the alleys between the furrows; cover the seed in the furrows, about three or four inches thick, with the manure. This may be done almost as expeditiously as in the common way, covering it with mould by the hoe. When the plants are about six inches high, plough between, taking the mould *from* the plants, and throwing it up in a ridge in the middle of the alley; and with a hand hoe cut up the weeds and superfluous plants; for if you leave the plants at two feet distance in the rows, they will be thick enough—The next ploughing take the mould from the middle, throwing it up *to* the plants. Every time of ploughing use the hand hoe to stir the ground between the plants, and to destroy the weeds. The third ploughing, do as at the first, throwing up the mould in the middle of the alley.—This is of great use, as it admits the influences of the air and dews to penetrate to the roots. The fourth ploughing manage as at the second, by throwing up the mould to the stalks of the corn. If this last ploughing could be so contrived, as to be done *early in the morning*, before the sun has exhale the dew, the corn would receive a double nourishment. Soils of a loam and clay mixture will require *four* ploughings and hoeings: sandy and light lands, not so many. If the seed be smeared all over with tar, and then have ashes or plaister sprinkled on it, till it is fit to be handled, immediately before it be planted, neither birds nor squirrels will touch it.

JUNE.—“Hark!” exclaims cousin Christabella Radelifsetta, “I hear a death-watch! what a doleful and interesting sound! Some one is going; I hope it is not you, dear, lovely Sensibilia, my heart’s first friend; but, if it is, oh! how I shall weep for thee. You know—To weep another’s fate oft teaches to be wise,” as Lord Byron has it—and I do *so* love to weep. The fate of the wealthy, the proud, the honorable, and the mighty is wept or feigned to be wept, by thousands; but the man or woman, unknown to fortune and to fame,” whom, through life, melancholy marked for her own, and who has been untimely sunk into the grave by overpowering sorrow, is suffered to pass away, mourned perhaps in heart-felt anguish by a few surviving relatives, but unwept, unregretted, unhonored by the busy, the gay, and the pompons tribe that swarm around. Not even hypocrisy whose sycophantic sympathy called forth, the other day, a deluge of tears and a babel of groans and sighs, when one of the great ones of the world was con-

signed to the dust, in all the parade and pomp of a royal interment, now deems it necessary to squeeze from his eyelids a solitary drop to the memory of departed, wo-struck worth. But, sweet Sensy, so it cannot be with us." —Plant more potatoes. Look to your fences; and see that they are good. Sow plaister or live ashes upon your pasture grounds; it will profit them every way. Weed early corn, cabbage, and other sauce. Plant cucumbers enough both for yourselves and the bugs. Sow radishes. Set out cabbages in the middle of the day; let their tops lie first an hour or so in very cold water. Hoe them in the morning.—Bleed fattening cattle. Don't forget to salt your cattle often. When the dew is on, attend to ploughing. Begin to sow winter sauce. Remember cucumbers for pickling. Ladies it is time to muster your troops and open the campaign against those inveterate foes to comfort and peace and rest, the bugs and fleas.

JULY.—"Timothy, I say," shouted uncle Zerubbabel, as Tim was riding by from a radical caucus, in a pretty pamby-manby, tipsitopsical state, "Drink deep, or taste not the Pierian spring, as Falstaff told Brutus, when, to frighten the stern patriot, he appeared to him in his tent on the eve of the battle of Lutzen, where the immortal Gustavus Adolphus fell vindicating the honor of protestanism.—But quench your thirst principally in pure, fair water, the juice of the apple, the decoction of spruce, or the fermentation of barley;—and don't fight government, religion, law and taxes." Timothy rode, or rather vibrated, on hiccupping out—"Don't care f-or y-e, o-ld fe-ll-ow; we r-ad-dies w-ill h-a-ve g-oo-d ti-m-es y-et, w-h-en w-e're all ru-lers." —Attend to hay-making, but no long stories; the less you say now, the more you speak to the purpose; like some of our great spin-fine orators, who always speak best when they speak least; but who, because they admire the sound of their own voice, think every one else must.—Try to pitch upon the best weather. Frequently the change and full of the moon produce an alteration of the weather, either for the better or the worse; but there is no certainty in this being the effect. As a general rule, the weather between the change and the full, may be expected to be the best. When, in hay-time, a long spell of rainy weather seems at hand, it were as well perhaps for you to let your grass stand untouched till the signs of the weather become more favorable.—Begin mowing as early in the morning as possible. Take the thinnest grass as soon as it is ripe.—Hoe and weed lettuce. Watch the bees. Pole your beans. Hill corn.—Don't let the cattle sigh for salt, or water. Set out celery. Gather herbs for drying before dog days. Set French turnips.—Keep the cucumbers nearest the root for seed. Pull flax, if it begins to lodge. Burn new lands for sowing. Don't let weeds go to seed. Don't drink cold water when you are heated.

AUGUST.—"But better boon benignant heaven
 "To faith and charity has given,
 "And bids the christian hope sublime
 "Transcend the bounds of fate and time,!"

as Chaucer says,' quoted nunt Dinah; 'let your faith be evidenced by your works; and remember that charity covereth a multitude of sins. Hope humbly.'—Ridge in with one-bout ridges such stubble lands as you intend to winter-fallow for spring crops. Pull flax. Attend to late haying and oats, after securing grain. Attend to early planted potatoes. White and yellow ripen the first. When dug, gather and house them, as soon as dry, to preserve them from injury, from cattle and from the weather. Your early

potatoes generally command a good market and a fair price; but one of your best markets is your hogsty. Mow natural meadows, and keep the hay in constant motion. When you stow it away, throw salt among the hay. Pull and rot your hemp if you raise it. Secure your flax. Inoculate fruit trees; those of the stone kinds in damp weather. Mow bushes and kill them, if you can, in the old of the moon, and sign in the heart; Saturday the 13th will be the right time. Break up weak lands intended for sowing next year. Sow plaister upon fallow grounds, before ploughing them. Let your cattle graze upon the fields that you have done mowing for this year. Gather cucumbers for pickling. Drain marshes. Gather potatoe vines, coarse hay, and stout stubble, and fill your hogpens; then cart in earth that is rich, such as turf, &c. to cover those vegetables; the great heat and warm rains of dog days will soon convert the whole mass into a rich manure; spare no time or expense, for it will prove a mine of value. Transplant late cabbages, broccoli, ruta бага, celery, &c. Gather seeds as they ripen, and dry them well. See to seed-peas. Plant a new crop for autumn. Pull late onions. Hoe in the morning while the dew is on; it is both watering and manuring the plants.

SEPTEMBER.—“Anachronisms and mistomers,” remarked master Solomon Spurious, “are the pith and marrow of history, as the Great Unknown told Tacius at an evening confab, in Ballantyne’s labyrinthian crypta, in the Athens of the North. But it is only to fibfab Gulliver, splashdash. Munchausen, tittletattle Schehezarade, metempsychosical Fum Hoam, or veraceous Waverly, that the magical power of thus giving life, strength, and beauty to the annals of past ages, legitimately belongs.”—Don’t let errors and wrong names in charging show their unblushing fronts in your day books and ledgers; for there they are no beauties, but symptoms of fever and consumption in the body mercantile.—This is the happy season in which divine goodness lavishes all sorts of fruit upon us in great abundance. The charms of summer give place to more solid enjoyments. The boughs of the apple-tree bend under the weight of that golden fruit, the beauty of which is still heightened by its purple streaks. The melting pear, the plum, sweet as honey, display their charms, and seem to invite the hand of their master. Should we not be unpardonable, if the sight of these blessings which we owe, as we do all others, to the munificence of God, did not create in us grateful reflections, and by such means sanctify the pleasures of autumn?—Finish cutting, curing and securing corn-stalks. Muster all hands, and attend vigorously to your potatoe fallows; let digging, housing, and Marketing be the order of the day. One man, with a hook-fork, can throw out of the hill as many as five or six hands can pick up and cart in; the children can all be useful here, at least, if no bigger than Tommy Thumb, or the men of Lilliput; let them be busy here, and in gathering apples. Get the cider mills in order, and begin making early cider, before the apples which fall off, are rotted and waisted.

OCTOBER.—Timothy Twilight and Nehemiah Northeast, two officers in a gallant regiment of *Lightfingers*, went out together, as it was their wont, on a foraging duty. Having secured the contents of Mr. Steadyman’s pear trees and watermelon beds, they disputed about the division of the spoil; Twilight called Northeast cheat, and he called Twilight liar. These opprobrious terms stuck heavy and hard in the gizzards, crops, and *wherenots* of these honor loving innocents. “The name of Northeast,” said its owner,

“ ever bore a fair fame, and I will never submit to this insolent aspersion, without having due and *gentlemanly* satisfaction.” “ And (retorted Tim) *Twilight* is an honourable man, as well as name, and I as strenuously demand reparation for this insult as thou.”—In the bosoms of rogues, &c. honor is not simply a *flame*; it is a *conflagration*—and devours every *honest* principle within them, if nature ever gave them any.—These *gentlemen fruiterers* chose two *noncoms*, belonging to the same heroic corps, for their seconds, and agreed to meet the next evening, with pistols, if they could *light upon* them, just before sunset, so that, if neither should be greatly *harmed*, they might proceed from the *arena* upon another evening excursion of duty. “ Now came still evening on ”—The rogues in fruit intent on dire revenge, appeared. The seconds measured off the ground, and gave them the weapons they *coveted*. “ All is ready,” said the seconds. “ O for one sip, or one *wash* of *eau de cologne*,” exclaimed both heroes in the same breath, “ to nerve my arm in this just cause; it trembles with eagerness!” The seconds gave them something better, a junk bottle of cognac, or true essence of courage, which they had *picked up* in their *sorties*. Each drank thirstily, to the tune of a half pint; reeled and *did* the evolutions and exercise. Both fell (how could they help it?); “ yo’ve done me man,” cried Tim; “ I’m dead as a dumpling.” “ So you have me, boy,” said Miah; “ I’m full of holes as a riddle; but we die in *honor*.”

NOVEMBER.—“ And what is friendship but a name—

“ A charm that lulls to sleep—

“ A shade that follows wealth and fame,

“ And leaves the wretch—to weep,”

as poor Dryden feelingly sings, who, in his old age, pined with want, and found a garret his last asylum, while living,’ remarked my aunt Dinah; ‘ endeavour my dear, to keep all the friends you have, and to make as many more as you can. Aim less to acquire them in the ranks of wealth and power, than in the quiet circle of modest merit, unobtrusive wisdom, and unpretending virtue, though poverty may have enveloped it in her gloomiest mantle. As the great are seldom real friends, so neither *have* they, often, any; sycophants they may have, but not friends.—Among my own sex, (I grieve to say it,) though friendship may bud and blossom, it rarely produces abundant or wholesome fruit. Scandal, like a frost or a blight, passes over the opening flower, and it droops in hopeless decay.—As they sip the fragrant beverage which far-off China furnishes, the *steam* of the tea-urn sets too often their tongues in motion, with a next-door acquaintance, for whom but yesterday, they professed *eternal* friendship.—The tea-pot is a steam-engine of no diminutive powers. It would, certainly, not be beneath the genius of a Watts, to task his invention, in giving it so different a modification, as to produce a contrary result, to what it now too frequently does: and instead of propelling the most unruly member to scarify absent characters, only move the heart to think no evil, and the hands to unostentatious charity. Alas! some there are, who go about, like the prince of the power of the air, seeking whose characters they may devour, and popping their heads into every house, with their faces dressed in the smiles of benevolence and heaven. While demon malice lies in ambush at their hearts. God knows, I am not censorious, though it is the imputation on old maids, but thus it is.’

DECEMBER.—"Let such teach others, who themselves excel,
"And censure freely," who've fine crops to sell,
as Louis the eleventh of France told Tristan d' Hermite, his hang-master-
general, after he had taken Alexander the Great, prisoner, at the battle of
the Granicus, and despatched Oliver Eain, his shaving-prime-minister, with
proposals of marriage to Queen Penelope of Ithaca, whose husband, Charles
the twelfth of Sweden, had in his travels, got lost in Dryden's *kingdom of
me*," was uncle Zerubabel's tirade, shouted after Tim Twaddle, as he pas-
sed in *st tu quo*, from another radical *cabal*; "get your crops ready for
market, Finny, and effect your sales as soon as you can obtain a fair and
reasonable price—but the deuce a crop has he—never sowed or planted—
too busy for the public, good fellow—whipping and spurring, sipping and
stirring, thinking and spouting, winking and flouting, all to cure the terrible
ulcers, and cancers in the body politic, for which he conceives, wise soul,
he shall be rewarded in the day of better things, when the wheel turns up,
the sky falls, and larks creep." So ended uncle Rubby.—Like Adam
and Eve in Eden, instructing and instructed, true philosophy and improve-
ment advance arm in arm. Experiments elicit results. Results establish
rules. What yesterday was fact, to-day is doctrine. Be not prejudiced
then, against new modes, and practices in husbandry, but test them fairly,
ere you condemn them. Visit your barns often, and see that all is orderly
conducted; permit no waste, nor slovenliness in any department of your
business or household. Kill hogs for family use, and make your bacon.—
Frost and snow have their charms, and winter has its sweets. None can
want innocent and pure pleasures, but those who are so dull and insensible
that they do not reflect on any thing, or give any attention to the works,
or thanks for the mercies of God. Let thankfulness for the bounties of hea-
ven fill your hearts.—Farewell!

MISCELLANIES.

Useful Domestic Hints.

Cure for Deafness.—Fill a clean stone Bottle, about the size of a blacking
bottle, with hot water; lay the ear on the bottle as hot as it can be borne,
so that the steam may ascend into it, every night when going to bed, for
five or ten minutes.

Remedy for Deafness.—Put a table-spoonful of bay-salt into nearly half-a-
pint of cold spring water; and after it has steeped therein for twenty-four
hours, (now and then shaking the phial,) cause a small tea-spoonful to be
poured in the ear most affected, every night when in bed, for seven or eight
nights successively.

Effective method of curing the Stings of Bees and Wasps.—The sting of a
bee is generally more virulent than that of a wasp, and with some people at-
tended with very violent effects. The sting of a bee is barbed at the end,
and, consequently, always left in the wound: that of a wasp, is pointed only
so that they can sting more than once, which a bee cannot do,

When any person is stung by a bee, let the sting, in the first place, be instantly pulled out; for the longer it remains in the wound, the deeper it will pierce, owing to its peculiar form, and emit more of the poison. The sting is hollow, and the poison flows through it, which is the sole cause of the pain and inflammation. The pulling out of the sting should be done carefully, and with a steady hand; for if any part of it breaks in, all remedies then, in a great measure, will be ineffectual. When the sting is extracted, suck the wounded part, if possible, and very little inflammation, if any, will ensue. If hartshorn drops are immediately afterwards rubbed on the part, the cure will be more complete. All notions of the efficacy of sweet oil, bruised parsley, burnet, tobacco, &c. appear, on various trials, to be totally groundless. On some people, the sting of bees and wasps have no effect, it is therefore of little consequence what remedy they may apply to the wound. However, the effect of stings greatly depends on the habit of body a person is of; at one time a sting shall take little or no effect, though no remedy is used, which at another time will be very virulent on the same person.

Remedy for the Gout.—Dissolve two ounces of resin of guaiacum in three pints of the best French Brandy. One or two table spoonfuls of this solution are to be taken every morning fasting, taking afterwards either a cup of tea, or a glass of water.

To extricate Horses from Fire.—If the harness be thrown over a draught, or the saddle placed on the back of a saddle horse, they may be led out of the stable as easily as on common occasions. Should there be time to substitute the bridle for the halter, the difficulty towards saving them will be still further diminished.

Economical Receipts.

How to increase Milk in Cows.—The quantity of milk produced by cows fed by Sainfoin is nearly double to that of any other food. The milk is also much richer, and will yield a larger quantity of cream. The butter will also be better coloured and flavoured than any other.

Parsnips productive of Milk in Cows.—Parsnips cause cows to produce abundance of milk, and they eat them as free as they do oil-cake. Land, 7l. an acre in Guersney, is sown with parsnips to feed cattle, and the milk is like cream.—Sheep, when lambing, fed with them, produce much milk. They are improper food for horses, subjecting them to blindness.

To discover if Bread is adulterated with Alum.—The Bread must be soaked in water, and to the water in which it has been soaked, a little of any test for sulphuric acid must be added. (Solution of muriate of lime will do.) Upon which, if any alum be present, the liquid will be pervaded with milkiness; but if the bread be pure, the liquid will remain limpid.—*Rationale.* Sulphuric acid has a stronger affinity for lime than for the alumina and potash with which it forms alum; it, therefore, quits those bodies, to form sulphate of lime with the lime of the test—which produces the milkiness.—*Griffin's Chemical Recreations.*

To preserve Cream for long Voyages, &c.—Mix with a quantity of fresh rich cream half its weight of white sugar in powder; stir the whole well together, and preserve it in bottles well corked. In this state it is ready to mix with tea or coffee, and will keep good many months.

tains 144 inches,
× 14 = 2,016,00

To preserve Eggs.—Put an egg for one minute in water just about to boil, (it will not in that time be hard) and it will afterwards keep well for a month.
Substitute for Hemp and Flax.—From the *Urtica Dioica* (common nettle) an excellent hemp might be obtained, by cutting it before the seed is ripe, steeping it in water as they do hemp, and manufacturing it in the same way.

Scientific Amusements, &c.

To set a combustible body on fire by the contact of cold water.—Fill a saucer with water, and let fall into it a piece of potassium, of the size of a peppercorn (which is about two grains.) The potassium will instantly become red-hot, with a slight explosion, and burn vividly on the surface of the water, darting at the same time from one side of the vessel to the other, with great violence, in the form of a red-hot fire-ball.

Vivid combustion of three metals when brought into contact with each other.—Mix a grain or two of potassium with a like quantity of sodium. This mixture will take place quietly; but if the alloy of these two bodies be brought into contact with a globule of quicksilver, the compound, when agitated, instantly takes fire, and burns vividly.

A Metal which bursts into flame when thrown upon Cold Water.—Place a piece of potassium, of about two grains weight, upon cold water in a basin, when it inflames and exhibits a beautiful light of a violet red colour.

To make Cinders, or little Wicker-baskets, appear as if they were Crystallized.—Saturate water, kept boiling, with alum; then set the solution in a cool place, suspending in it, by a hair, or fine silk thread, a cinder, a sprig of a plant, or any other trifle; as the solution cools, a beautiful crystallization of the salt takes place upon the cinder, &c. which resemble specimens of mineralogical spars.—*Chemical Recreations.*

To make Faces and Hands Luminous; so that, in the Dark, they appear as if on Fire.—Though the phosphorized oil and ether are luminous in the dark, yet they have not the power to burn any thing; so that either of them may be rubbed on the face and hands without danger; and the appearance thereby produced is most hideously frightful. All the parts of the face that have been rubbed, appear to be covered with a luminous, bluish flame, and the mouth and eyes appear as black spots.—When the bottles containing the phosphorized oil and ether are opened in the dark, light enough to tell the hour on a watch is evolved.—*Chemical Recreations.*

Pores of the Human Body.—The skin of the human body is a very curious object for the microscope. By cutting a thin piece with a very sharp pen-knife or razor, and applying it to a good microscope, a multitude of small pores will be seen, through which the perspirable matter is supposed to be perpetually transmitted. These are best seen in the under or second skin. There are said to be 1000 pores in the length of an inch, and, of course, in a surface an inch square, there will be 1,000,000, through which either the sensible or insensible perspiration is continually issuing.

If there are 1,000,000 pores in every square inch, the following calculation is made of the number in the whole body. The surface of the body of a middle-sized person is reckoned to contain 14 feet; and, as each foot contains 144 inches, the number of pores will be estimated at $1,000,000 \times 144 \times 14 = 2,016,000,000$, or two thousand and sixteen millions.

ARITHMETICAL PUZZLE.

The following tables have been denominated an arithmetical puzzle; we therefore present them with an explanation. They are, no doubt, familiar to many of our readers, but we trust they will still be acceptable.

(1.)	(2.)	(3.)	(4.)	(5.)	(6.)
1	2	4	8	16	32

59	59	61	61	61	61
61	62	62	62	62	62

These columns of figures are to be written or pasted on slips of cardboard, ivory, bone, &c. which are to be given into the hands of a person to fix upon a number, and having done so he returns the cards, and on which the number fixed on is found; and his friend tells him instantly, by addition, what number he has selected; this is done by adding together the top figures on the cards returned.

Example (1.) Suppose he fix on 18;

then he will return the cards No. 2 and 5, because 18 will be found on those only; and the top figures of those cards are 2 and 16, which added together give 18.

(2.) Suppose he fix on 41; then he will return No. 1, 4, and 6, and the top figures in these are 1, 8, and 32=41.

(3.) Suppose he fix on 58; then he will return No. 2, 4, 5, and 6, and the upper figures on these are, 2, 8, 16, 32=58.

For subtraction, the method is equally obvious; and in this case the cards are to be returned which have not the number; and the upper figures added together, and their sum subtracted from 63, (which is the sum of the top figures on all the cards,) will give the number fixed on.

Example (1.) Suppose a person fix on 41, as above; then, for an exercise in subtraction, he will return the cards No. 2, 3, and 5, the top figures of which are 2, 4, and 16,=22, and 22 taken from 63, leave 41.

(2.) Suppose he fix on 51; then he will return No. 3 and 4, the top figures of which are 4 and 8,=12, and 12 from 63, give 51; and so of all other numbers.

MATRIMONIAL FELICITY.

O'LEARY was as poor as Job,
But love in poverty can please us;
He saw the widow Bonarobe,
And lov'd, for she was rich as Cræsus.

Punctual the love their bosoms own,
He was sincere—she, none could doubt her;
She lov'd him for himself alone,
And he—because he could not live without her.

THE RETORT.

TOM call'd his friend a pimp, forsooth
When warm engaged in strife,
Said Will, "I cant deny the truth,
But curse your tattling wife.

EPITAPH ON A SAILOR.

(Written by his Messmate.)

HERE is honest Jack, to the lobsters a
prey,

Who lived like a Sailor, free, hearty,
and gay;

His rigging well-fitted, his sides close
and tight,

His bread-room well furnished, his
main-mast upright:

When death, like a pirate, built solely
for plunder,

Thus hail'd Jack, in a voice loud as
thunder—

“Drop your peak, my old boy, and
your top-sails throw back!

For already too long you've remained
on that tack.”

Jack heard the dread call, and with-
out more ado,

His sails flatten'd in, and his Bark she
broach'd to.

DRINKING.

THREE cups of wine a prudent man
may take:

The first of these, for constitution's
sake;

The second to the girl he loves the best;

The third and last to lull him to his rest;

Then home to bed. But if a fourth
he pours,

That is the cup of folly, and not ours:
Loud noisy talking on the fifth attends;

The sixth breeds feuds and falling out
of friends;

Seven begets blows and faces stained
with gore,

Eight, and the watch patrol breaks ope
the door:

Mad with the ninth, another cup goes
round,

And the swell'd sot drops senseless on
the ground.

*Epigram on a Sailor, who was thrown
on the neck of his horse.*

SPECTATOR, cease your cruel glee,
From taunting jests refrain,

Sure tis no wondrous thing to see
A sailor on the mane!
