# JAPANESE MILITARY AND TECHNICAL TERMS

(Japanese-English)

30 July 1945

## INTRODUCTION

1. The purpose of this publication is:

- (a) To provide translations for military and technical terms which do not appear in the principal dictionaries available to Japanese language personnel (such dictionaries include KENKYUSHA's *New Japanese-English Dictionary*, OZAKI's *Japanese-English Dictionary of Sea Terms*, CRESWELL's *A Dictionary of Military Terms*, ROSE-INNES' *Japanese Character Dictionary*).
- (b) To provide more up-to-date translations for terms appearing in available dictionaries.
- (c) To help standardize translations of Japanese order of battle terms.

2. The sources for Japanese terms found in this publication include documents studied at JICPOA, glossaries prepared by Allied translating centers, PW reports and a few specialized dictionaries not generally available to Japanese language personnel.

3. The underlined subject labels prefixed to the translations indicate the context or subject matter to which the translation applies: (e.g., comm, chem, elec, navy, standing respectively for communications, chemistry, electricity, navy, etc.; see complete listing of subject labels at the end of this introduction).

4. Owing to the fact that standardized translations for many Japanese order of battle terms have not been determined by Allied translating centers, the inclusion of romaji transliterations of such terms is believed advisable in most cases. The inclusion of romaji is especially recommended for those terms marked with an asterisk in the following publication.

5. This publication supersedes the following JICPOA and CINCPAC-CINCPA translation aids:

<i>List of Air Terms</i>		March 1944
