A N EXPLANATION

O F \mathbf{T} Η E

TERMS of ART in the several Branches of MEDI-CINE, accented as they are to be pronounced.

N. B. When a Word is not accented, the Accent is always supposed to be on the first Syllable.

Α.

Abaptiston, of a privitive, and Earlo to dip. The perforating part of a Trepan, which is prevented from finking into the brain by the rim or circle of this instrument.

Abies, the fir-tree.

- Abdomen, the belly, properly fo called. It contains the Stomach, Liver, Spleen, Intestines, Bladder, &c. It reaches from the Diapbragm to the Os Pubis.
- Abductores, muscles that draw one part from another, and which are antagonifts to the Adductores. Thus there is the Abdúctor of the Ear, of the Fore-finger, of the little Finger, of the little Toe, of the Thumb, of the great Toe, and of the Eye.
- Ablactátio, a Weaning, when a child is permitted to fuck no longer.
- Abomá sum, the name of the fourth ventricle of fuch animals as chew the cud.
- Abortus, Aborfus, and Abortio, a miscarriage, or an exclusion of the Fætus before the due time

Abrotanum, Southernwood. It is pretty much of the fame nature as wormwood.

- Absceffus, an Abscess. This differs from an Ulcer; for it contains plenty of pure, thick, white, cocted pus; whereas an Ulcer pours out a little thin ichor, and fetid ferum.
- Absinthium, Wormwood, This is a good bitter Stomachic, but the frequent use of it is hurtful to the eyes and head.

Absorbentia, Absorbents. These imbibe

- acids, deftroy their acrimony, and change them into a tertium quid. If they meet with a thick grofs phlegm, they may
- concrete, and prove very prejudicial. Abstergentia, Abstergents, are cleanfing medicines. See Detergents.

Acàcia vera, true Acacia, is the infpiffated juce of an Egyptian Thorn.

- Acanthábolus, from anavSa a Thorn, and βαλλο to caft out. A kind of pincers to take out any prickly or offenfive matter from a wound. It is likewife called Volfella.
- Acantha, from ann a point; the posterior proceffes of the vertebra of the back have sometimes this name.
- Acanthus, Brank-Urfine. This is a mucilaginous plant of a fweetish taste.
- Acceleràtio Gravium, the acceleration of heavy bodies. The motion of a body falling freely is accelerated equally in equal times. Therefore the celerity acquired in falling is as the time in which the body falls, and confequently the velocity acquired in a certain time will be double if the time is double, and triple if the time is tripple, &c. That is, the Spaces run through from the beginning, are among themselves as the squares of the times in which the body falls.
- Acceleratores, Accelerators. Muscles fo called, becaufe they haften the expulsion of the urine and the femen.
- Acceffio, the fame as Paroxy (m, which fee. Accessòrius nervus, the accessory Nerve. This pair proceeds from the Medulla of the Vertebræ of the neck, and is wrapped up in the fame coat from the Dura Mater as the Par Vagum, after its entrance into the skull; and soon after it returns from thence it leaves the Par Vagum again, and is diffributed into the muscles of the neck and shoulders.
- Acetabulum, the Socket of the Thigh-bone, fo called from its likenefs to the veffel in which the antients used to put Acetum, or Vinegar, when brought to table.
- Acetofa vulgaris or Oxalis, common Sorrel. Kk It

It is an agreeable acid, and most used as a fauce.

Acétum, Vinegar. This, properly fpeaking, is four wine.

Achillea, Yarrow, a herb.

- Acborcs, a species of a scald-head, from c priv. and Xwpos a place, because the matter of the ulcers proceed from small holes in the skin.
- Acida, Acids. Every thing is fo called that has a tartific or four tafte. They are faid to be of great fervice in the plague. They temperate heat, abate the pulfe, coagulate the blood, retard the circulation, are hurtful to the lungs, and to perfons in years. They fhould never be mixt with clyfters.

Acidulæ, cold mineral waters.

- Acinif drmis Tunica, a Coat of the Eye, the fame as the Tunica uwea, which fee.
- Acme, the Vigour, State, or Height of a difeafe. Difeafes have generally four times; the first is Aγχ'n, Principium or invasion; 2, Αναβασις, Augmentúm or increase; 3, Ακμή, or vigor, when the symptoms are most urgent; 4, Παραχμ'n, or declination, when the difease is grown mild, and the patient is thought to be out of danger.

Aconitum, Wolf-bane, a dangerous herb. Acorus verus, the fweet-fmelling flag, or

Càlamus of Ray, a herb.

- Acoustica, Medicines to cure deafness, from axea to hear.
- Acrockordum, a kind of Wart, with a large head and a fmall root. From aupos the top, and xopon.
- Acrómium, the upper process of the shoulder-bone, which receives the extremity of the Clavicula or collar-bone. From any of the top and whos the shoulder-bone.
- Adductores Musculi, those muscles which bring forward, close, or draw together any part of the body. Their antagonists are the Abductores.
- Adenológia, a treatife of the Glands, from 'Adny a gland, and hoyos a difcourfe.
- Adianthum verum, or Capillus Vineris, the true Maidenhair, a herb.
- Adnàta Tùnica Oculi, or rather Albuginea, the albugineous coat of the eye, commonly called the *vohite of the eye*. It is formed by the tendinous expansion of four muscles, and adheres closely to the Sclerotic. Some have improperly termed it the conjunctive Coat.

Ægilops, an ulceration of the lachrymal gland in the greater corner of the eye.

From $\hat{\omega}$'s a goat, and $\hat{\omega}\psi$ an eye, becaufe that animal is fuppofed to be often afflicted with this difeafe.

- *Eoli Pila*, an Æleopile, an inftrument to fhow the great elafticity, which vapours acquire by the action of fire. It is a hollow globe of hard metal, with a fmall tube, whofe aperture is not the twentieth part of an inch in diameter. This being filled with water and placed over the fire till it boils very faft, the vapours will force themfelves through the tube with great rapidity.
- Æquàtio Tèmporis, Equation of Time. If a clock is fuppofed to go exactly true for a whole year, it will fometimes be flower, and fometimes fafter than a good fun-dial, and the difference between the clock and the dial will be the equation of time. In the latter end of Ostober and the beginning of November clocks and watches fhould be near 16 minutes flower than the fun,
- *Acquator*, is a great circle, whofe poles are the poles of the world. It divides the globe equally into the *fouthern* and northern hemisphere and passes through the east and west parts of the *Horizon*. Whenever the fun comes to this circle, it makes equal days and nights in all parts of the earth; which happens on the 22d of March, and the 23d of September.
- This is an elaftic fluid which Aer, Air. covers the furface of the earth and furrounds it on every fide. All the air which encompasses the earth confidered together, is called the atmosphere, and the altitude of the air from the furface of the earth is termed the altitude of the atmosphere. Cold air contracts the fibres, bot and moift relaxes them. Hot air debilitates the body, the ferene increases the ftrength : Moift air is hurtful. When the air is full of noxious and contagious particles, fasting is bad. Sudden changes of the air from bot to cold, or from cold to bot, are very injurious to the tone of the folid parts, and fuppress perspiration,
- Ærùgo, Verdigreafe. This is copper reduced into a green brittle body by means of an acid. This made into powder and made up into tents with any liquid not oily or unctuous, is a most excellent remedy to destroy the hardest Callus of a Fistula, which it will do in three or four days in such a manner that it may be all drawn out together, and a white Pus will supply its room.

Æther, is supposed to be a thin diaphanous fluid,

fluid which not only furrounds the earth, but extends to the planets and fixed flars, and pervades all things, fuffering all bodies to pass through it without refistance.

- Ætiologia, Ætiology, From 'æriæ a caufe, and λογος a difcourfe. This is a part of medicine which treats of the caufes of health and difeafes.
- Aëtites, the Eagle-ftone. From & too an Eagle. It has another ftone within it which rattles when fhaken.
- Agàllochum, Aloes-wood, remarkable for its fragrant fmell.
- Agàricus, Agaric, a fungus growing to the trunks of certain trees. It is purgative.

Agératum, Maudlin, from a priv. and ynpaç old age. It preferves the colour

- of its flowers a long while. Agnus caftus, the chafte tree; it is not much unlike a willow.
- Agrimonia, Agrimony, a herb. It is hepatic, pectoral and vulnerary.
- Agr'ypnia, conftant waking. From α priv. and ὑπνος fleep. The fame as Coma Vigil.
- Ag'yrta, a Mountebank, from ayugéw to assemble the people.

Alæ Nafi, the fides of the noftrils.

Albugo, is a white fuperficial fpot on the transparent cornea of the eye:

Albumen Ovi, the white of an egg.

- Alcali, whatever ferments with acids is fuppofed to be an Alcali. Lixivial, fixed, and volatile falts are Alcalies; they render the blood more fluid, but do not promote putrefaction, as was formerly fuppofed.
- Alce, an Elk, the name of an animal, whofe hoof was faid to cure the Fallingficknefs.
- Alcea, Vervain Mallows. It has the fame virtues as mallows.
- Alchémia, Alchemy, is properly that part of chemistry which treats of the transmutation of metals.
- Alcobol, is an Arabic word, and fignifies the pure part of a fubftance feparated from its impurity. It is applied to fpirit of wine highly rectified, and to a most impalpable powder.
- Alchimilla, Ladies Mantle. It is an aftrictive vulnerary.
- Alexipbàrmaca, Alexipharmacs, from α'λέξω to drive away, and Φάρμακον poifon, becaufe they were taken to be antidotes against it; but now this name is given to Diapboretics.

K. k 21

Alexitérium, an Alexiterial, or antidote against poison.

499

- Alkekengi, Winter cherries: They have a fubacid tafle, and are detergent, aperient, diuretic, and proper to expel gavel. An ounce of the juice is a dofe.
- Allantoides, a membrane placed between the Annion and the Chorion, which enwrap the Fœtus. Its ufe is to receive and contain the urine, which paffes into it by the Urachus; but its existence is doubted by many. It is derived from ²αλλας a stuffed gut; and είδος shape, because in brutes it is like one.

Allium, Garlick.

- Alliària, Jack by the hedge, Sauce alone. It is diuretic and aperient, and good in cold fourvies.
- Alnus nigra, the black Alder. A dram of the inner bark will vomit and purge very violently.
- Aloe, Aloes, the infpiffated juice of a plant growing in Arabia, Ceylon, America, &c.
- Alopecia, falling off of the hair in a confumption, the French pox, and other difeafes. From αλώπης a Fox, and πίπτο to fall, because foxes were faid to be troubled with this difeafe.
- Alphos or Vitiligo, Morphew, whitish fcurf or fcales.
- Alsine, Chickweed. It has been given inwardly for fpitting of blood, and applied externally against inflammations.
- Althada, Marshmallows. It is emollient, lubricating, and proper to soften the acrimony of the humours.
- Altitudo Poli, the altitude of the polea This is the angle which the axis of the earth makes with the horizon, and is the fame as the *latitude of the place*.
- Aludel, vel Aludelli, are fubliming pots ufed in chemistry. They are without bottoms, and are fitted into one another. In the furnace at the bottom there is a pot which holds the matter to be sublimed, and at the top there is a head to retain the flowers that rife into it.
- Albedrium, five Meatus auditorius, the cavity of the ear wherein the wax is ges nerated.
- Alvéoli Dentium, the fockets of the teeth.
- Alùmen, Alum, a factitious falt. The Roch or Rock Alum is generally to be preferred.
- Alvus, the belly or cavity of the Abdomen, containing the flomach, liver, fpleen, inteflines, kidneys, bladder, &c. as alfo the place by which the natural excretion of excrements is made. Thus we fay Alvi Aftrictio, cofliveness; Alvi Fluenus, a hoofeness, Ec. Amala

- Amálgama, is the mixture of any other metal with quickfilver.
- Amaurofis, five Gutta ferena, from apavgos obfcure, a lofs of fight without any external blemish in the eye.
- Ambly pia, Obscurity of fight. From αμβλύς dull, and δπτομαι to see. There are four kinds, Myopia, Presbyopia, Nycialopia, and Hemeralopia, which see.
- Ambra Grifea, Ambergreafe, a great perfume. This is a bituminous fubftance of an Afh-colour, with fpots or veins, and is found floating on the fea in the Indian ocean. It melts into a yellow rohn, and will burn like it. It diffolves in fpirit of wine, but not entirely. It is aphrodifiac, cordial, and firengthens the nervous fyftem. The dofe is gr. viii.
- Amomum vulgare, Bastard Stone-parsley. The feed is carminative, aperient, diuretic, and emmenagogue.

Ammoniacum Gummi, Gum Ammoniac.

- Amnios, the inner membrane which, includes the *I ætus*, and the liquor wherein it lies. It is white, foft, thin, and transparent.
- Amplitude Siderum, Amplitude of the flars. This is an arch of the horizon intercepted between the point of the eaft or weft, and the point in which the flar rifes or fets. The first is called Amplitude ortive, and the other Amplitude occufive. It may be either North

or South in both. Am'ygdalæ, amàre et dulcis, Almonds, bit-

ter and fweet.

Amylum, Starch.

- Anabafis, is the increase of the disease before it arrives at the state. From avagaine to ascend.
- Anacàrdia, the Malacca Bean. This is quite difused.
- Anacathàrtica, Vomit. From xa9asgéw to purge, and àrw upwards.
- Anagállis, male and temale Pimpernel. It is eaten as a fallad.

Anagallis acquatua. See Becabunga.

- Anaifthifia, is a lofs of the faculty of perceiving the action of fentible objects on the organs of the fenfes.
- Analiptica, Analeptics, are medicines that raife the fpirits and reflore the ftrength.
- Anàlyfis, is the reducing of any thing into its component principles. From aradúw to diffolve.

Anamnefica, Remedies that help the memory; as also figns belonging to the Diagnoffics, which recal to the mind the past state of the body or difease.

- Anafarca, is that kind of dropfy wherein the Lympka stagnates throughout the whole habit of body, causing it to appear bloated.
- Anastomosis, the Inosculation or mutual opening of the vessels into one another.
- Anàtome, Anatomy, the skilful dissection of an animal, especially man, in order to demonstrate the matter, shape, structure, and connection of the parts, for phyfical and medicinal purposes.
- Anchúfa, Alkanet, of no use in medecine at present.
- Anchilops, ἀγχίλωπς, a tumor in the greater corner of the eye, which breaking turns to a Fiftula Lachrymalis.

Ancon, aynwv, the elbow.

- Anconacus, a muscle that ferves to extend the Cubit. From ayzwv the elbow.
- Ancylle, ayun, or Ancyclosis, a contracted or fliff joint.
- Androgynos, an Hermaphrodite. From avng a Man, and youn a Woman.
- Anethum, Dill. The feed is carminative and good in the flatulent Colic.
- Anèmius Furnus, a Wind-furnace. From aveµos the Wind.
- Anemoscopium, Anèmoscope, a machine invented to shew the change of the air or wind. From α'νέμος the wind, and σχοπος a centinel or watch.
- Aneurisma, an Aneurism. This is a fost tumor full of blood, and, when true, is a dilatation of an artery with pulfation, which disappears by prefiure, and returns again afterwards. A *spurious aneurism* is when the artery being divided, pours out the blood into the adjacent parts, whence the tumor increases continually, which is fost, with little or no pulfation, and appears livid, tending to an abscess or mortification. It is derived from avergive to dilate.
- Angeiològia Angeiólogy. This treats of the Blood-vessels, as well arteries as veins. From αγγείον a Vessel, and λογος a difcourse.

Angeiotòmia, the opening a vein or artery.

From ayysion a veffel, and Tépro to cut. Angèlica, Angélica, a herb. Every part of it is in use.

- Angina, the Quinfey. From avyw to choak, throttle, or strangle. See Febris anguinosa.
- Anguilla, the Eel. The liver and gall have been used to promote child-birth.

Angulus.

- Angulus Incidentiæ, the Angle of Incidence, is that which the line of direction of a firiking body makes with a perpendicular to the fuperficies at the point of contract.
- Angulus Reflexionis, the Angle of Reflexion, is that which the fame perpendicular makes with the line of direction of the body after it is ftruck. There two are always equal to each other.
- Angulus Refractionis, the angle of Refraction. This affects the rays of light, and in order to make a refraction it is neceflary the mediums through which they pass should differ. Thus it they pass through a rarer into a denser medium, the angle of refraction will be less than the angle of incidence, and the contrary.

trary. Anime, a Rofin. It is feldom or never used. Aniscalptor, see Latissimus Dorsi.

Anifi Semen, Anifeed. Thefe are good to ftrengthen the ftomach and inteffines, to cure the gripes, and to abate the violence of Diarrhœas. The dofe is half a dram.

Annulàris Cartilàgo, see Cricoides Cartilàgo.

- Annulàris Protuberàntia, annular Protuberance, is a tuberous part of the brain between the Cerebellum and the Testes of the brain.
- Andynum, Anody'ne, a medicine to ease pain. From a priv. and woven Pain.
- Anorexia, Anorexy, a loathing of food. From & priv. and ogex Dew to defire.
- Antagonista, Antagonist, one muscle is said to be an antagonist to another, when their actions are opposite. From avri against, and aywrigo to strive.
- Antaphrodisiaca, Antaphrodifiacs, medicines to reprefs venereal defires. From avri against, and Apew Venus.
- Antarthriticæ, Antarthritics, medicines for the gout and rheumatism. From avri against, and aggeiris a disease of the joints.
- Anthelmintica; Anthelmintics, remedies againft worms. From αντί againft, and έλμινς a worm.
- Antiepileptica, Antiepileptics, medicines against the falling-fickness. From αντι and επιλαμβάνω to invade.
- Anthelix, the inward protuberance of the ear anfwering to the whole extent of the outward ear. From $\lambda \lambda \xi$ the volume of the ear.
- Anthèræ, the Summits or Apices. They are the male genital organs of a flower,

and are placed at the top of the chive and filaments. They contain the prolifi powder analogous to the femen in animals. From apples a flower.

mals. From àbos a flozver. Anthos, a Flower; likewife Rosemary i fo called.

- Anthrax, a Carbuncle or Plague-fore. This begins from a puffule of the fize of a muffard-feed, fometimes many break out together, which itch at first and grow red with violent heat and pain. Round about it there is a circle or burning halo of a large fize, which induces a crufty ulcer of a livid or black colour, as if burnt with a hot iron.
- Anthropològia, any treatife concerning man. From du goveros a man, and royos a
- AnticachèEtica, Remedies against the Ca-
- Anticardium, the pit of the Stomach, from avri against, and ragdia the heart.

Anticolica, Remedies against the col c.

- Antidotum, an Antidote, a medicine against poison. From airs' against, and Sidomas to give.
- Antidysentèrica, Remedies against the bloody. Flux. Many other words are compounded with anti in the same manner; which need no farther explanation.
- Antimonium, Antimony. This is a metallic fubftance, heavy, folid, brittle, of a leaden colour, with long fhining Spicula or needles. It melts in the fire, but is not ductile. Some of the most efficacious medicines are produced from this mineral.
- Antipàthia, Antipathy, an unaccountable averfion fome have to certain perfons or things. From avri and mados affection. This is fometimes applied to inanimate bodies.
- Antithora; or Anthora, wholefome Wolfsbane, from avri and Obwea Corruption. The virtues are doubtful.
- Antispasmodicum, an Antispasmodic, is a remedy against contractions, spasms, and convulsions. From αντισπαω to contract.
- Antithenar, one of the muscles that extend the thumb. From avri against, and Oévag the palm of the hand.
- Antlia pneumatica, an Air-pump, a machine invented to draw the air out from any veffel. The Elasticity of the air is the foundation of this contrivance.
- Antrum Maxillæ fuperidris, the cavity of the upper Jaw. It is two inches in length, and above an inch high. This cavity

cavity communicates with the Foramina narium, and is fuppofed to be the feat of the Ozæna. If the first upper grinder is drawn, it will let out the matter, which afterwards may be cleanfed by injections. If there is no communication, a hole may be bored in the focket into the Antrum.

- Anus, the Fundament, the extreme part of the firait gut.
- Abrta five Artèria magna, the great Artery, which proceeds immediately from the left Ventricle of the heart.
- Aparine, Goose-grass. It is faid to be aperient, but it not used.
- Apathia, Apathy, Stoicifm, without paffions, from a priv. and magos Affection:
- Apepsia, from a priv. and mémber to cook. Indigestion.

Aperièntia, Aperients, opening Medicines. Apes, Bees. Their boney and wax are in ufe. Apètalus, Apetalous. This is applied to flowers that want those beautiful leaves which generally give them that denomination. From α priv. and πεταλον á leaf.

- Apaèresis, from αφαιεέω to take away, a part of furgery; it fignifies properly to take away fuperfluous things, as Wens; but is applied to the Amputation of the legs, arms, fingers, toes, &c.
- Aphèlium, is the point of a Planet's orbit, in which he is at the greateft diftance from the Sun. From απο from, and ηλιος the Sun.
- Aphònia, from a priv. and Quvn voice, loss of voice.
- Aphrodisus morbus, from Aqeodirn Venus, the French pox.
- Aphthæ, the Thrush. These are small round superficial ulcers occupying the mouth and fauces.
- Apices, are the *fummits* of the stamina or chieves of a flower. See Antheræ.
- Apium, Smallage. The root is one of the five opening roots.
- Aponeuròfis, is the tail or tendon of a muicle.
- Apophlegmatizantia, from απο from, and Φλέγμα Phlegm, provokers of spittle.
- Apophysis, from anoque to grow out, the process or protuberance of a bone.
- Apoplexia, from αποπληπίω to strike suddenly, an Apoplexy, is a fudden privation of all fense and motion, the pulse at the fame time beating pretty strongly.
- Apostèma, an Imposthume, Abscess, or collection of matter.

4 4

- Apozèma, from αποζεω to make bot, Apozem, a decoction of feveral things put together.
- Apparàtus, the medicines, inftruments, Ec. that are to be got ready before the performance of an operation.
- Apyrèxia, from a priv. and πυρίασσω te have a fever, an intermission in fevers.
- Aquila alba, a name given by the chemists to Mercurius dulcis.
- Aquilègia, Columbines, a herb not in use. Aràbicum Gummi. Gum Arabic.
- Arachnoides, from agaxvn a spider, and eidos shape, because is is thought to refemble a spider's web. This is an epithet given to the Capsula of the crystalline humour, and was thought to be a distinct covering; but it is nothing else but a continuation of the membrane of the vitreous humour.
- Araneàrum Telæ, Spider's web. Inwardly they will cure an Ague, and outwarldly they ftop the bleeding of fmall wounds.
- Arcànum, is a name given to medicines whofe authors pretend to a fecret manner of making and diffributing them.
- Arche, $ae\chi n$, from $aea\chi \omega$ to begin, the time of the invalion of a difeafe.
- Archiater aggiatgos, a chief Physician, from aggin chief, and iatios physician.
- Ardor Ventriculi, heat of the ftomach, by fome called Soda.
- Ardor Urina, heat of urine. See Dysuria.
- Arèola Papillàris, the dusky circle that furrounds the nipple.
- Argemon, from agyos white, is a little ulcer occupying the circle of the Iris, within which it is white, but without it is red.
- Argentina, Silver-weed or wild Tanfey. This has been celebrated for curing Agues, the Whites, the bloody Flux, and the overflowing of the menfes. The dofe of the juice is four ounces, of the bruifed feed a dram.
- Argentum, Silver. This metal is well known; its chief use in medicine is to make the lunar caustic.

Argentum vivum, Quickfilver.

- Aridura, an Atrophy or waiting of some particular part or member.
- Aristolochia, agiotiloxía, from agiotos the best, and loxos pregnant; not from loxea as fome have supposed, whence they would have the antepenultima long. Birthwort. Of this there are three forts, the long, the round, and the slender. This has been supposed to be of peculiar use

ife to cleanfe the womb, to promote the menses, and to hasten delivery. The dofe is from a fcruple to a dram.

Aròma, agupa, Spice. Aròmata Spices. Aromàtica, Aromàtics, spicey compositions. Arquatus Morbus, the King's-evil.

Arfenicum, Arfnic. This is either white, yellow, or red, all which have Cobalt for their basis. It consists of an acid falt, and a metallic fubstance, with a small quantity of fulphur. It is highly volatile, for if a piece of it is put into a crucible over the fire, it readily refolves and flies off in white fmoak. Some have endeavoured to correct it by burning fpirit of winc over it ten times, in order to cure intermitting fevers; but fuch medicines are best entirely omitted.

- Artemisia, Mugwort, a berb. Artèria, an Artery. This is a strong elas-tic conical canal, which carries the blood from the heart to all parts of the body. It has three coats; the external, which is vafcular; the fecond, mufcular; and the third nervous; to which Ruisch adds a fourth, which he terms cellular. All the arteries take their beginning from two principal trunks; of which one proceeds from the right ventricle of the heart, and is diffributed in the Lungs; and the other, called the Aorta, comes from the left ventricle, and fends blood to every part, not excepting the heart and lungs.
- Arteriotimia, from agregia and Teuve to cut, to open an artery. This is fometimes performed in the temples.
- Athanita, Sow-bread. The root has been given as a purgative, but the use of it is not fafe, for it inflames the Fauces and the inteffinal Canal.
- Artbritica, medicines for the Gout, the flying Gout, and the Rheumatism.
- Artbritis, from apogov a Joint, the Gout, is a fixed pain in one of the joints. When it effects the foot it is the true Gout called Podàgra.
- Arthritis vaga, the flying Gout, is a pain with fwelling, first in one joint, then in another.
- Artbrodia, from apogow to articulate, the articulation of the bones It is otherwife called Arthrofis and Articulàtio.

Arum, Cuckow-pint, a plant.

Arytanoides, from aguraiva, a kind of cup, and Esdos shape. These are two Cartilages at the upper part of the Larynx, which jo ned together refemble the figure of an Equer.

Arytænidaeus, is a pair of muscles belong-

ing to the cartilages of the Larynx : It has its head in one of the Arytenoide Cartilages, and its tail in the other, and ferves to fhut the Rima or chink.

Afa Foètida; the fame in English.

- Asarum, "Asagov, Afarabacca.
- Afcàrides, are finall round worms generally lodging in the strait gut, which create a tickling, fenfation, and uneafinefs.
- Ascites, from "Aoxos a bottle, is a dropsy wherein water is collected in the belly, and caufes it to fwell.
- Ajparagus, corruptly called Sparrow-grass. It gives a strong smell to the urine foon after eating, and is therefore accounted diuretic, but is not to be depended upon for any medicinal purpofe.
- Aspera artèria, the Wind-pipe. This is a cartilaginous canal that reaches from the Fauces to the fourth vertebra of the back, where it is divided into two parts called Bronchia, which are distributed throughout the lungs, and serve for respiration.
- Asphaltus, Jew's-pitch, a bitumen from the lake Asphaltites in Judea; it is never to be had genuine.
- Asphyxia, from a priv. and opula to beat, a ceffation of the pulse. It is fometimes taken for the highest degree of fwooning, when the perfon feems quite dcad.
- Affatio, a roafting. This is fometimes applied to the toasfing of Nutmegs or Rhubarb.
- Afterismus, an Afterism or Constellation. The fixed stars referred to various figures, are thus called, and were invented to diffinguish them more readily.
- Afthma convalsivum, a convultive Afthma. It is a frequent, impeded, laborious and wheezing refpiration attended with anxiety.
- Afthma humorale, a pituitous or moist Afthma, befides what is above, is attended with a cough and a rejection of vifcid phlegm, which is troublefome in the day as well as the night.
- Aftràgalus, is the principal bone of the Tarfus, having fix fides. It is covered with a cartilage, and its head is received into'a Sinus at the lower end of the Tibia, and its hollow receives the fmall protuberance of that bone.
- Astringentia, astringents or binding medicines.

Atàxia, Ataxy, Irregularity, Confusion.

Athanor, a chemical furnace formerly employed to obtain the philosopher's stone. It is now used in tedious processes.

. Asherdina,

. 24

- Atheroma, from Adaga Pap, an encyfted tumor which contains a matter like thin pafte.
- Atlas, is the first vertebra of the neck fuftaining the head.
- Atònia, is a weaknefs of the tone of the nervous and musculous parts.
- Atriplex fætida, ftinking Orrach. It is looked upon as a great Antihyfteric, and the very fmell of it is faid to be good in hyfteric fits. It is beft taken in the manner of tea.
- Atròphia, Atrophy, from α^{*} priv. and $\tau_{g} \in \varphi \omega$ to nourifh, a falling away of the whole body.
- Attenuántia, Attenuants, such medicines as resolve and thin vicid humours.
- Attonitus Morbus, the fame as the Apoplexy.
- Attractio, Attraction, is that force whereby two bodies mutually tend to each other. This is very great in the contact of the particles, and fuddenly decreafes, infomuch that it will not act at a fmall diffance, but changes into a repelling force, by which particles mutually fly each other.
- Avèna, Oats: Gruel made of Oat-meal has a foft mucilaginous quality, and is ufeful in all difeafes attended with an acrimony of the humours.

Auràntia Mala, Oranges.

- Auricula Judæ, Jews-ear, a fungus growing on an Elder-tree. The internal use is dangerous.
- Auricula Muris, Mouse-ear. The use of this is laid aside.
- Auripigmentum, Orpiment. This confifts of common fulphur and mercurial particles, which fome call arfenical. It was thought to be a ftrong poifon, but upon trial it will not kill a dog.
- Aurum, Gold, the virtues of this metal have been highly extolled, but upon no good foundation.
- Auris, the Ear. It is divided in three cavities; the external contains the Meatus auditorius; the middle, the Tympanum; and the internal the Labyrinth.

Austerus, austere, a rough aftringent tafte.

- Autopfia, Autopfy, from autos ones-felf, and outs fight, the fame as ocular demonstration.
- Axilla, the Arm-pit, the cavity under the arm.
- Axillàres venæ et arteriæ, Axillary Veins and Arteries, are those which come from the top of the trunk of the Vena cava and great Artery, over the heart to the -Arm-pits.

Axioma, Axiom, is a felf-evident propofition.

- Axis, is the third Vertebra of the neck.
- Axungia, the Fat of Animals. Hog's-lard; Mutton-fuet, and the Fat of a Viper, are all now ordered to be kept in the fhops.
- Azygos, from a priv. and Evyos a yoke; a vein without a fellow. It is compofed of the intercostal, phrenic, and bronchial veins, and enters the descending Cava near the Auricle.
 - B.
- Bacca, a Berry, contains naked feeds in the midft of a fucculent pulp.

Bàlanus, an Acorn; or Glans Penis.

- Balauftia; Balauftines, are the flowers of a wild Pomegranate-tree. They are aftringents, and may be useful in loofeneffes, and the laxity of the gums. The dose is a dram in powder; half an ounce in infusion.
- Balbùtics, Stammering.
- Bàlneum marice, a Water-bath ufed in diftillation.
- Balfamita; Coftmary, a herb of the mint kind, but now out of use.
- Balsamum Brafilienfe five Capaiba, Balfam of Capivi.
- Bàlfamum Giliadènfe, Balm of Gilead. The dofe is from fix drops to half a dram.
- Bàlsamum Peruvianum, Balsam of Peru.
- Bàlfamum Tolutànum, Balfam of Tolu. Bardàna, Burdock.
- Baryecoid, from Bagu beavy, and aned to bear, hardness of hearing,
- Bardmetrum, Bardmeter, from Bagos a weight, and mergos a measure, an instrument to measure the weight of the air.

Basilica Vena, a vein in the arm.

Basilicum, an ointment fo called.

- Bàfio Glossum, from βάσις the bottom, and γλωσσα the tongue, a pair of muscles that depress the tongue. But Winslow includes them under the general name of Hyo-glossum.
- Bafio is the upper part of the heart oppofite the point.
- Bdellium, is a gummy rofinous juice, concreted into glebes of various forms and magnitude. The external appearance is much like Myrrb. It is good in diforders of the breaft, and to promote mine. The dofe is half a dram. Outwardly it foftens, refolves, and ripens Tumors.
- Becabunga, Brook-lime. This herb temperates acrimony, and is good in the

2

bot Scurvy. It may be either eaten as fallad, or four ounces of the juice may be taken as a dofe.

- Bèchica, Bechies, from $\beta'' \xi$ a cough, Medicines proper for a cough and to promote expectoration.
- Bellis major et minor, the Ox-eye and common daify. They are vulnerary, detergent, emollient, and attenuant. The decoction of the leaves of the Ox-eye before the flowers appear, is a great diuretic and vulnerary, and commended in a purulent fpitting. The dofe of the juice is four ounces.
- Benzdinum or Aja dulcis, Benjamin, a concrete rofincus juice.
- Bèrberis, the Barberry-bufh. The berries are cooling and aftringent. They refirain the effervescence of the humours, mitigate bilious fluxes, strengthen the stomach, excite the appetite, abate the acrimony of the humours, and thicken the dissolved fluids. The dose of the expressed juice is an ounce.
- Beribèrii, a kind of a Palfey or Tremor in the East-Indies. It depraves the motion of the hands and feet, and makes them tremble, and fometimes the whole body.
- Beta, Beets, a garden herb. The juice of the root promotes fneezing, but is not fafe.

Betonica, Betony, an herb.

- Bètula, the Birch-tree. Before the appearance of the leaves or buds, a liquor may be gained by wounding the bark of this tree, which promotes urine, cleanfes the kidneys, and is good against the Scurvy. It opens obstructions of the Viscera, and is proper in the jaundice. After this liquor has undergone a gentle fermentation it is called *Birch-wine*; a glass or two of which may be drank in a morning fasting. Some drink a bottle of it in the beginning of a Confumption.
- Eèzoar, a calculous concretion in the ftomachs of certain animals of the goat kind. It has been looked upon as a great antidote against poison, but has no more real vertues than prepared Oisterschells.
- Eèzoar mineràle, mineral Bezoar; a preparation of Antimony differing little from the Calx.
- Biceps Mùsculus, a muscle with two heads. There are two so called, the one bends the Cubit, and the other the Tibia. There is likewise the Biceps externus bumeri, which has likewise the name of Gemellus.

Bilis, the Gall, is a refino-fulphureous

- humour, or animal foap, of a yellow colour, a bitter tafte, diluted with ferum, fecreted in the liver, ferving for the diffolution of aliments and the fecretion of the chyle. It is of an alkaline nature, when dried is inflammable, and will diffolve in fpirit of wine or water. It is of two forts, the *bepatic* and the *cyflic*; the former is brought by biliferous ducts every where difperfed in the liver to the *Cholodochus*, and fo to the *Duodenum*. It is more fluid than the *cyflic*, which is thicker, of a deeper colour, and a bitterer tafte. This laft is a kind of purgative and natural clyfter.
- Bilis atra, black Bile. When the gall turns black, it fometimes taftes as four as vinegar, and fometimes like corrupted blood. It is very corrofive.
 Bifmùthum, Bifmuth, is a femi-metal like
- Bilmuthum, Bilmuth, is a femi-metal like the Regulus of Antimony or Zinc. It will diffolve in fpirit of nitre.

Bistorta, Bistort, a Plant.

- Bitùmen, a bituminous juice, is a mineral fubstance which is inflammable, and will mix with oil. Thus Naptha or Petroleum, Piffasphaltum or mineral pitch, and Barbadoes Tar are liquid Bitumens. The folid Bitumens are Bitumen Judaicum or Jew's-pitch, Ambergrease, Amber, Agate, and Carbo fossilis or pit-coal.
- Bolus, Bole, is a heavy, fat, ftyptic earth. Bolus Armena, Bole Armenic, is now very rarely to be had; inftead of which is ufed Bolus Gallica, French Bole. It is abforbent and good against a loofenes. The dose is half a dram.
- Bonus Henricus, English Mercury, a plant. In some parts of England, it is eaten like spinage.
- Boràgo, Borrage. It diflolves grofs humours, and as it abounds with a nitrous falt, is good in all inflammatory fevers, as well as all difeafes wherein the humours are not fufficiently fluid. The juice of the leaves is taken from two to fix ounces. The flowers are one of the cordial flowers.

Borax, a mineral falt.

- Borbor'ygmus, from BopBogu Co to make a noife, a grumbling of the guts.
- Botànica, Botany, from Botávn a herb, the art of describing and enumerating the virtues of plants.
- Botrys, Jerufalem Oak. This herb is greatly commended in pituitous diforders of the breaft, in fhortnefs of breath, and the moift afthma. It is faid to heal Ulcers of the lungs. A dram of the dried leaves is a dose, or it may be drank as tea. Bràfica

Bràffica capitàta alba, white Cabbage. Bràffica capitàta rubra, red Cabbage.

Braffica rubra vulgaris; red Coleworts.

Bràffica alba vulgàris, white or green Coleworts.

Bràffica alba crispa, Savoy Cabbages.

- Braffica Cauli-flora, Collyflowers. Thefe are of more use in the kitchen than in the shops; and though some have applied them to medicinal uses, they may very well be spared.
- Brachiàlis or Brachiaèus extèrnus, a muscle, ferving to extend the arm, from Brachium an arm.
- Brachialis or Brachiadus intérnus, a muscle which serves to bend the arm.
- Bradypèpsia, from Beadu slow, and πέπτω to cook, flow digestion.
- Bregma or Parietália Offa, the parietal bones which compose the superior and lateral parts of the skull. They join to the Os Frontis by the coronal Suture, to each other on the crown of the head by the fagittal Suture, to the bone of the Occiput by the lambdoidal, and to the bones of the Temples by the fquamcus Suture.
- Bronchia, the Ramifications of the Aspera Arteria or Wind-pipe.
- Bronchocèle, from Bgóyxos the middle part of the Wind-pipe, and nnn a fwelling, a tumour or wen on the fore part of the neck.
- Bronchotomia, from βεόγχος and τεμνω to cut, Bronchotomy. The operation of cutting the Wind-pipe.
- Bryonia alba, white Briony. The root of this has been accounted a good purge in the dropfy, hysteric passion, the althma, epilepfy, vertigo, palfey, gout, madnefs, and chronic difeafes, particularly in the moist asthma, dropfy of the breaft and womb. The dofe of the root in powder is from a fcruple to a dram; of the juice from a dram to half an ounce in broth. Mad people, after fufficient bleeding, may take a dram every third or fourth day till they are well. An Extract made with wine is safest, the dofe of which is from a fcruple to a The root held in the hand has dram. been known to loofen the belly.
- Bubo, from Bußwv the groin, a venereal or pestilential boil in the groin.
- Bubonocèle, from Bebwy and nnAn a fivelling, a rupture in the groin.
- Buccinator, a muscle in the cheek, which ferves to draw the lips lengthwife, and to widen the mouth.

- Bufo, a Toad. A Woman, fays Solinander, whofe hufband had a dropfy, being tired of the expence he put her to, was defirous of difpatching him out of the world; therefore the burnt a Toad to powder in an earthern pot, and gave him fome with his drink; which proved very diuretic. She thinking he had not had enough, repeats the dofe to make fure work, which carried off the water and he recovered. Others cutting off the head, and taking out the guts, dry them in the fhade. The dofe of the powder is from half a fcruple to half a dram, as a diuretic.
- Buglòssum, Garden Bugloss, from βες an ox, and γλωσσα a tongue, because the leaves refemble an ox's tongue. It has much the fame virtues as Borrage.
- Bùgula, Bugle or middle Confound. It is an aftringent vulnerary, and reckoned good in *hæmorrhages*, the *blocdy flux*, and the *vubites*. The expressed juice is given from four to fix ounces; or a handful of the leaves in infusion or decoction.
- Bùlimus, from $\beta \tilde{e} \varsigma$ an ox, and $\lambda \iota \mu o \varsigma$ hunger, infatiable hunger, a canine appetite. Burfa Paftoris, Shepherds-purfe. This is
- Burfa Paftoris, Shepherds-purfe. This is vulnerary, aftringent, and cooling, and is recommended in all homorrhages and fluxes by Ray. A bit of cotton dipped in the juice and put into the noftrils, flops bleeding at the nofe.
- Buxus, the Box-tree. Some prefer the decoction of the wood in venereal cafes,
- to Guaiacum. A dram of the leaves will purge, but we have more agreeable Cathartics. The dofe of the wood in decoction is from half an ounce to an ounce.

C.

- Cachèxia, from razòs evil, and Ézis habit, a Cachexy. It is a bad and subtumid habit of body with a discoloured face and skin, with weakness, listless, and shortness of breath.
- Cacoch'ymia, from zazo's evil, and zupo's juice, a depravation of the fluids of the body, or when it abounds with bad humours.
- Càdmia, this term has been used for Lapis Calaminaris, as well as for tutty.
- Cæsàreus Partus, Cæsàrean birth, is the cutting open the womb after the death of the mother, to fave the life of the child.

Calaminàris Lapis, Càlamine stone.

Calamintha, Field Calamint, Calamintha montana

montana, common Calamint. These incide viscid humours, excite the appetite, help digestion, promote urine and the menses, and are useful in diseases of the breaft. They are to be used as tea.

- Càlamus aromàticus, Sweet-scented Flag. Càlamus Scriptòrius, is a cavity between the process of the brain called Nates and Testes, and is the fourth ventricle.
- Calcinàtio, Calcinàtion, is the reduction of hard bodies into powder, or to a fubftance that will readily powder, by the action of fire. This may likewife be done with acid spirits.
- Calcinàtio philosophica, Philosophic calcination, is to hang horns, bones or hoofs over boiling water for fome hours, till they have loft their mucilage, and may be reduced into powder.
- Càlculus, the Stone, is a hard concretion generated in various parts of the body, as the kidneys, bladder, gall-bladder, &c.
- Calèndula, Garden Marigold. It is faid to open obstructions of the liver, fpleen, and womb, to cure the jaundice, and to promote the Menfes. The juice of the whole plant is given from an ounce to four ounces; the extract, from a dram to two drams,
- Calx viva, quick lime. This is made by the calcination of certain stones and shells. Of the latter the best Limewater is made for medicinal purpofes.
- Calentura, Calenture, is a disease which failors are fubject to in hot climates; it confifts in a depraved imagination, for they take the fea to be green fields, and would jump over-board if not prevented.
- The pulse is weak, flow, and equal, without a fever or exceffive heat.
- Calyx in Botany, is that part of a flower which fustains or involves the reft.
- Callus, is a hardness of the skin without fense arising from hard labour. It is likewife the fubstance that unites a broken bone.

Calòmelas, Càlomel, Mercurius dulcis. Calva, the skull, Scalp, or top of the head. Calvitium and Calvities, Baldnefs.

Calyptra, a Cap, from nahumrw to bide, It is the thin membranous covering of flower, and is put on the parts of fructification, as in mosses.

Campechense Lignum, Logwood.

Càmpbora, Càmphire, a rofin.

Camera obscura, is an optic machine, wherein the light paffing through a convex glass into a dark room, objects opposite to the glass in the day-time are reprefented inverted, on a white wall, paper,

The focus of the glafs will or cloth. be best to be about four or five feet, and the white cloth fhould be placed oppofite to the glass, at a little more than the distance of the focus. Then objects at the diffance of 55 feet will be reprefent-ed diffinctly on the cloth.

- Canaliculus arteriòsus, is the vessel between the great artery and the pulmonary artery in a fætus, which is obliterated in adults.
- Canàlis Alimentorum, the alimentary Canal. This reaches from the Fauces to the Anus, and includes the Oefophagus, fomach, and all the intestines.
- Cancer, a disease so called from turgid veins refembling the feet of a crab.
- Cancrorum Chelæ, the black tips of Crabsclaws.
- Cancrorum Occuli, Crabs-eyes. Thefe are hard concretions on each fide of the
- ftomach, towards the head of a Crawfish. They absorb acids and are given to half a dram.

Canèlla alba, a Bark.

Cannabis, Hemp, the feed. It is good in coughs, heat of urine, and the jaundice. The dose in substance is a dram: in

infutions or emulfions half an ounce. Cantbràrides, Spanish Flies.

- Canthus, xav Dos, either angle of the eye. That next the nofe is Cantbus major, or the greater angle.
- Capillària vasa, Capillary Veffels, fo called becaufe they are as fine as a hair.
- Capillàris Herba, a capillary Herb. Thefe have no main stalk or stem, but their leaves rife immediately from the root upon pedicles, and produce their feed on the back of the leaves.
- Capparis, the Caper-bush. The bark of the root is accounted very good in obftructions of the liver, fpleen, pancreas and womb, as well as the hypochondriac diforders. The dose in powder is a dram; decocted in water or wine, an ounce.
- Caprifolium, Wood-bind, or Honey-fuckle. Its virtues are doubtful.
- Capficum, Guinea Pepper. See Piper Indicum.
- Capfula Cordis, the fame as Pericardium. a pouch which contains the heart.
- Capfulæ Atrabiliáriæ, are the fame as Renes succenturiati, which fee.
- Càpsula communis, is a membrane arising from the Peritonaeum, and inclosing both the Vena Porta and Porus biliàris.
- Càpfulæ seminides, the same as Vesiculæ seminides.

Caput vel Rostrum Gallinaginis, a kind of caruncle-

caruncle at the extremities or apertures of the Vesiculæ seminales.

- Caput Mortuum, is what remains after the distillation, particularly of minerals, and especially of Vitriol.
- Carànna, this is a rofin brought from New Spain, but is not used.
- Carbunculus, a Carbuncle. See Antbrax.
- Carcinoma, the fame as Cancer.

Cardamomum, Cardamoms.

Cardiaca, Cordials.

508

- Cardiaca, Motherwort. This is faid to be good in a palpitation of the heart, obflructions of the Vifcera, and hyfteric difeafes. The *dofe* of the leaves in powder is a dram.
- Cardiàlgia, a violent pain in either orifice of the ftomach.
- Carduus benedictus, bleffed Thiftle.
- Caries, Foulnefs of the Bones.
- Carica, dried Figs.

Carlina, Carline Thiftle, not used.

- Carminantia vel Carminativa, Carminatives.
- Caròtides Arteriæ, the caròtid Arteries, rife from the Aorta a little above the heart, and afcend on each fide of the Afpera Arteria, towards the head.
- Carpobàlfamum, the fruit of the Balfamtree, out of use.
- Càrthamus, Bastard Sastron. An ounce of the feeds given in an emulsion will purge.
- Carpus, the Wrift, confifts of eight little bones, and connects the Cubit to the hand.
- Cartilàgo, a Càrtilage. This is a fmooth folid body, drier and harder than a ligament, but fofter than a bone. It is fmooth and elastic, covering the heads and fockets of the bones, of the joints, rendering their motion eafy.

Carui, Caraway. The feeds are in ufe. Cartilàgo enfiformis, the extremity of the Sternum, near the ftomach.

- Carùncula lachrymàlis, or Glàndula lachrymàlis, is feated in the greater corner of the eye, from whence proceed two or three imall ducts, which ferve to moisten the globe of the eye. Therè are likewife two fmall perforations called Punzta Lachrymalia, which open and difcharge the fuperfluous moisture into the nofe, through a large excretory tube. Carùnculæ Myrtiformes, Thefe lie near
- Carinculæ Myrtiformes, These lie near the entrance of the Vagina, and are fupposed to proceed from the rupture of the Hymen.
- Carùnculæ papillàres. Thefe are fmall corpufcles in the Pelvis of the kidneys, about twelve in number, which are only

-05

a bundle or collection of little urinary pipes.

Carus, a fleepy difeafe, in which the patient cannot be waked, or immediately falls afleep again.

Caryoph'ylla aromàtica, Cloves.

- Caryoph'ylla rubra, Clove July-flowers.
- Cascarilla, this was formerly called grey Peruvian Bark. It is the fame as Cortex Eleuthèriæ.
- Càffia Fistulàris, Cassia Fistula, or the Pudding-pipe tree.
- Cassia Lignea, a Bark. It is an inferior kind of Cinnamon, but slimy when chewed.
- Cafforeum, Caftor, the inguinal glands of a Beaver.
- Casumunar, a tuberous root. It firengthens the nerves, refreshes the spirits, and is a good stomachic. The dose is from half a scruple to half a dram.
- Catalèpfis, from καταλαμβανω to feize, a Catalepfy. It is a fudden abolition of all the fenfes and voluntary motions, and the body continues in the fame pofture it was in at the attack of the difeafe.
- Catamènia, from nara and unv a month, the fame as Menses.
- Catàphora, the fame as Coma.

Cataplàsma, a Poultice.

- Cataràcta, is a want of transparency of the chrystalline humour, whereby the sight is diminisched or lost.
- Catàrrbus, a Catarrh, a flux of humours from the glandulous coats of the fauces, mouth, nostrils, and bronchia.
- Catàrrhus fuffocativus, a fuffocating Catarrh. This is a kind of palfey affecting the nerves which ferve for refpiration. It comes on unawares, with great anxiety and wheezing; the face is fwelled and looks red.

Càtechu, sive Terra Japonica, Japan earth. Gathærètica, milder Caustics.

- Cathàrtica, purging medicines.
- Catheter, a filver inftrument to draw off . urine out of the bladder.
- Catbolicum, a universal medicine.

Catochus, the fame as Catalepfis.

- Cauda equina, Horfe tail. This is aftringent, and faid to be good in all hæmorrhages and fluxes. The dofe of the herb or root in powder is a dram.
- Caulis, the flalk of a herb.
- Cauffica, Cauffics, are fuch things as burn the fkin and flefh to a hard cruft or efchar.
- Caufus, a burning Fever. 'It is attended with a burning heat over the whole body,

- body, an unquenchable thirst, and a dry, chapped, black tongue.
- Cauterium, 2 Cautery, is either actual, as a hot iron, gold, or filver; or potential, as cauftic medicines.
- Centaurium majus et minus, Centaury the greater and the lefs.
- Centinodium, Knot-grass. This is an aftringent, and cried up for its efficacy in all hæmorrhages and fluxes. The dofe of the juice is two or three ounces.
- Centrum Gravitàtis, the centre of gravity, is that point of a body about which all parts of the body, however placed,
- are in Æquilibrium. Cepa, Onions. These are frequently eaten raw, and agree well enough with cold ftomachs, and by their diuretic qualities are ferviceable in the gravel. They enter into Suppurating Cataplasms.
- Cephalada, from uepann the head, and
- äγw to labour, a violent and obstinate Head-ach.
- Cephalàlgia, a Pain in the Head.
- Cepbàlica. Cephàlics, medicines proper for the head and nerves.

- Cera flava, yellow Bees-wax. Cera alba, white Bees-wax. Cerafus, a Cherry-tree. The fruit is cool-25 ing, and quenches thirst.
- Cerato glossum, from négas a born, and γλωσσα a tongue. This pair of muscles proceeds from the fuperior part of the Os Hyoides laterally, and draws the tongue into the mouth.
- Ceratum, a Cerate, an external medicine thicker than an ointment, and fofter than a plafter.
- Cerebellum, is part of the brain, and is feated in the lower part of the skull, under the posterior lobes of the brain, and the fecond process of the Dura Mater. It is composed of a cortical and medullary fubstance.
- Cèrebrum, is that part of the brain which posses the upper and fore part of the fkull. It is feparated from the Cerebellum by the fecond process of the Dura Mater. Its upper part is divided into four lobes, two anterior, and two posterior, which last 'are much the largest.
- Cerevisia, sive Cervisia, medicata, a Dietdrink.
- Cervix, the back part of the neck.

Cerùmina, Ear-wax.

Cerùssa, Cerus or white Lead.

Ceteroch, Spleen-wort. It is faid to be pectoral, aperient, and to open obstructions of the Viscera. It may be drank as tea,

Charefolium, Chervil. This is diuretic, opens obstructions of the Viscera, and resolves grumous blood. Geoffroy affirms it is a specific for the Dropsy, and if this will not cure it nothing elfe will. The dofe of the juice is three ounces every third or fourth hour.

Chalybs, Steel.

- Chamæciffus, Ground-ivy. See Hedera terrestris.
- Chamaedrus, Germander, or Ground-oak. Chamæmelum, Camomile.
- Chamaèpitys, Ground-pine. This is aperient, vulnerary, cephalic, and nervine. It is good in the Palfy, and greatly esteemed against the Gout. It may be drank as tea, or a dram of the powder may be taken in wine or whey. Cheiri, Wall-flower. A Conferve of thefe
- flowers is recommended in Catarrhs, pains of the head, suppression of the menses, and the jaundice.
- Cheledonium majus, Celandine. Some fay the powder of the root given from half a dram to a dram is diuretic, aperient, and fudorific; and that it cures the Cachexy, dropfy, and jaundice. Others affirm, the internal use is not safe. The juice dropping from the broken stalk, with a little breaft-milk, is good for ulcers or films in the eyes. The extract is proper in the fame cafes, if the fize of a pin's head is put in at a time.
- Cheledonium minus, Pile-wort. This is faid to be antifcorbutic and good against the piles. It may be eaten as a fallad.
- Chèmia, Chemistry, as applied to medicine, is the art of feparating the ufeful parts of bodies from the grofs and lefs ufeful.
- China, China-root. ' It diffolves thick grofs humours, and carries off acrid falts by fweat and urine. The dose in substance is from half a dram to a dram and a half; in decoction, from a dram to an ounce.

Chiragra, the Gout in the hands.

- Chirùrgia, Surgery, is that branch of medicine that removes difeafes by manual operations, affisted with instruments and topical remedies.
- Chirurgus, a Surgeon, is one skilled in the art of furgery.
- Chlordfis, from nhupila to be green, the Green-ficknefs. It is the cachexy of virgins, attended with heavinefs of body, a tenfive laffitude of the legs and feet, difficulty of breathing, palpitation of the heart, pain of the head, suppresfion of the menses, a discoloured face, dark circles under the eyes, and a longing for coals, chalk, Ge.

Cholagoga,

- Cholagoga, Chologogues, medicines which evacuate the bile.
- Cholèdochus, the biliary Duct, which is made up of the union of Porus biliàrius and the cystic duct, discharging the bile into the Duodènum.
- Chòlera Morbus, a Vomiting and Loofenefs. This happens when the periftalic motion of the guts is partly inverted, from a most sharp caustic matter of various kinds, irritating them to a convulsive contraction, attended with a very plentiful evacuation of a bilious Suburra, upwards and downwards.
- Chondrofy defmos, from χουδοος a cartilage, and συνδεσμος a ligament, a cartilaginous Ligament.
- Chorea Sancti Viti, St. Vitus's Dance, is attended with vague and violent fpafmodic motions, in which all parts of the body are agitated involuntarily, with various antic poflures and ridiculous gefficulations.
- Chorion, the external membrane that contains the reft, the waters and the *fætus* in the womb.
- Chronicus Morbus, a chronic difeafe is one of long duration, as the Dropfy, Afthma, &c.
- Chylus, Chyle, is a milky liquor or natural emulfion, which is infipid, confifting of oleous and mucilaginous parts, extracted from the diffolved aliments.
- Cicatrisàntia, fuch things as heal wounds after they are filled up with good flefh.
- Cicatrix, is the mark or fcar that remains after the healing of a wound.
- Cicer rubrum, red Chicles or vetches, faid to be diuretic, but now out of ufe.
- Cichdreum, wild Succory. This attenuates groß humours, and renders them fluid, reftores all the fecretions, and temperates the heat of the Vifcera, arifing from the flagnation of fharp humours therein; for it opens incipient obftructions. Eaten as a fallad, it will cure obftinate agues. A dram of the dried leaves is a dofe, and three ounces of the juice.
- Cicùta, Hemlock. Some look upon this as a dangerous poifon, and others a falutary medicine in a proper dofe; but it is beft to abftain both from the inward and outward ufe of it.
- Cilia are two fmall foft cartilages on the edges of the eye-lids.

Cineres Ruffici, Ruffian Pot-afhes.

Cinnàbaris nativa, native Cinnabar, a ponderous mineral of a red colour, composed of fulphur and mercury. Some prefer this to the factitious, but without reason.

- Cinnamomum, Cinnamon, an aromatic bark.
- Circulatio chèmica, Circulation in Chemistry is when one body called a Blind Head, is inverted into another, in which there is matter to be digested by heat. What the heat raises is collected in the upper part of the receiver, because it cannot fly away, and then falls down again.
- Circocèle, from x1600; a Varix, and xnhn a Tumour, is a varicous swelling of the veffels going to the Teffes.
- Citrea Malus, the Citron-tree. It bears a fruit akin to Lemons, but the juice is not quite fo acid.
- Citràllus, Citruls. The feed is one of the four greater cold feeds.
- Clarificatio, is the manner of rendering juices and decoctions more fine and clear, which is done by filtration, fubfidence, fermentation, or by the addition of the white of an egg or milk. A few grains of Alum will carry down the oily parts of diffilled waters.
- Claviculæ, the channel or Collar Bones. They are feated at the bafis of the neck, above the breaft; one on each fide.
- Clavus, a Nail or Button. It fignifies alfo a corn on the feet.
- Clavus bystèricus, is a circumferibed pain in the head, as if a nail were driven into it. It attends the hysteric passion.
- Clitoris, or Penis muliebris, is a fmall fpongy body, feated in the upper part of the *Rima* of the female *Pudenda*, the greatest part of which is concealed under the fkin or prepuce. It is analogous to the *Penis* in men.
- Clyfter sive Enema, a Clyfter or Glyfter.
- Coalescentia, Coalèscence, is the union of folid parts that were before separated.
- Cobàltum, Cobalt, is a foffile body, hard, heavy, almost black like Antimony, or fome of the Pyrites. It has a strong fulphureous smell when thrown on the fire. The several kinds of Arsnic are made of this mineral.
- Coccinèlla, Cochineal. These infects are faid to be cordial and alexipharmac. The dose is from fix grains to half a dram.
- Cochleàre, a Spoon or Spoonful. A large fpoonful contains half an ounce, a fmall fpoonful, a dram.

Cochleària Hortenfis, Garden Scurvy-grafs.

Cæliaca arteria, the Cæliac Artery, arifes from the Aorta, and is divided into feveral branches, which are beftowed onthe

3

An Explanation of the TERMS of ART.

the Liver, Spleen, Pancreas, Stomach, Omentum, and Duodenum.

- Caliaca Pàffio, sive Affèstio, is a kind of Diarrhaa, wherein the aliment comes away little altered:
- Coffe, Coffee. This is frequently taken with a defign to prevent fleepinefs.
- Cobobàtio, is the returning a diffilled liquor on what it was drawn from, or on fresh ingredients of the same kind.
- Coindicantia, Coindicants, are figns which, confidered with other figns, favour the Indication.
- Colica, the Cholic, properly fo called, is a pain in the Colon, attended with coffivenefs.
- Colica biliofa, a bilious Colic, is attended with a Cardialgia, a hoarfe voice, a loathing of victuals, a vomiting of porraceous bile, hiccuping, a feverifh heat, reftleffnefs, intenfe thirft, a bitter tafte in the mouth, little reddifh urine, and fometimes turns to a bilious Diarrbæa.
- Colica à calculo felleo, the Colic from a ftone in the Gall-bladder. When ftones in the Gall-bladder prevent the excretion of the bile, the ducts which are very fenfible are diftended ; hence by confent there is not only a most acute pain in the Abdamen, chiefly in the right Hypo-chondrium, but fuch a straitness and difficulty of breathing as seems to threaten fuffocation. The body is bound at the fame time, with coldness of the extremities. But if the ftone attempts to pass through the DuEtus cholodochus, there is a fixed intolerable pain in that region, and a most troublesome reaching to vomit, with a yellow colour of the fkin, laffitude and costiveness. When the stones come away, all the fymptoms cease.
- Colica calculofa, the Stone Colic. This is a dull heavy pain in one of the Urèters when a small stone stops there in its
- passage from the kidneys to the bladder. Colica convulsiva et spasmodica, the convulfive and spasmodic Colic. It is known by a compression of the belly, and 'a drawing of the navel inwards. The body is conflipated to the higheft degree, for it will neither emit a Flatus, nor admit a clyfter, but with difficulty; the Penitonæum and the muscles of the Abdomen are violently contracted. There is a coldness of the extremities, fhivering and quaking, a hard and contracted pulse, the highest anxiety, and fometimes fainting. It is frequently attended with a Parefis or palicy of the hands:

- Colica flatulenta, the Wind Colic. This is an acute pain in the finall guts, and the Abdomem is inflated and fwells, infomuch that the pain is often exafperated with touching. The body is bound, the flomach inflated, and the refpiration becomes difficult. To thefe cardialgic paffions fupervene an inffectual reaching to vomit.
- Colica hæmorrhoidàlis, the Colic, from the fupprefion of the bleeding piles. When this evacuation, which has been periodical, is ftopped, the blood will ftagnate in the membranes of the inteffines, and produce most violent pains.
- Colica Hyftèrica, the hyfteric Colic. This happens from the fupprefilon of the menfes, which caufes the blood to ftagnate in the coats of the inteffines, particularly in the colon, and is the caufe of fevere griping pains.
- Colica Hypochondriaca, the Colic of Hypochondriacs. This is a common fymptom of the hypochondriac difeafe, and is a violent tenfive pain in the right Hypochondrium under the Os Ileum, or under the liver about the flexure of the colon, but chiefly in the left Hypochondrium, under the Diaphragm and Spleen, about the great flexure of the Colon, attended with coffivenefs, difficulty of urine, anxiety, and dejection of ftrength.
- Colica Infantum, the Colic of fucking infants. This happens from milk greatly corrupted by the mixture of the bile, and rendered corrofive. Hence the ftools are little and green, from the corrofion of the intestinal coats. This is often followed with fatal epileptic convultions.
- Colica Puerperàrum, the Colic of childbed women. When the belly has been exposed to cold, or the flux of the Lochia is deficient, and the body is not properly bound after delivery, there are often violent griping pains in the Abdomen.
- Colica Vermindfa, Colic from Worms. This affects children, from worms in the *Ileum*, which is often attended with a fever and a Syncope. There is a fharp pain in the belly, as if it was bored with a piercer.
- Collum, the Neck. The fore part is properly called Collum, the back part Cer-...vix.
- Colocy'nthis, Coloquintida. The pulp of the bitter apple. It is never given without preparation.
- Colon: This is the greatest and widest of L1 al

*

SII

all the inteffines. It begins where the *Ileum* ends.

Colly'rium, is the form of a medicine to apply to the eyes.

Colsphonia, Rofin.

- Columnæ càrneæ cordis, fleshy pillars of the heart. They are little muscles fastened to the Parietes of the heart on one fide, and to the Tricuspid and Mitral Valves on the other, which affist the contraction of the heart in the Systele, and prevents its too great dilatation in the Diàstole.
- Coma Somnolèntum, is a fleepy difeafe or conftant drowfinefs; the patient often falls afleep unawares in the midst of bufinefs.
- Coma Vigil, in this difease the patient has a constant inclination to fleep, but cannot. It is the fymptom of a fever.
- Complexum par, a pair of muscles ferving to extend the neck, or pull it backwards.
- Complicati Morbi, a complication of difcafes, when more difeafes than one concur in one fubject.
- Comprèffe, Compresses, are commonly made of linen folded together, defigned to keep on dreffings, or the parts in their due fituation.
- Conditum, a fimple medicine candied with fugar.
- Conductor, is an inftrument to be conveyed into the bladder, to conduct the knife in cutting for the flone.
- Condyloma, Kovdunaua, a general name for flefhy excrefcences, generally venereal, which appear about the Anus in men, and the Anus and Pudenda in women. The kinds are the Cryftæ, Ficus, Marifca, and Thymus, which fee.
- Confèctio, is used to fignify any composition made with powders, gums, boney, sugars, syrups, &cc.
- Conglobàta Glàndula, is a fimple gland, confifting of elaftic circular fibres, which impel the Lympha and Chyle into their proper ducts.
- Conglomeràta Glàndula, is a compound Gland, confifting of feveral others connected by one common membrane. They have each a finall canal, which being united, form an excretory duct, for the paffage of a fecreted fluid, fuch as the bile, urine, faliwa, &cc.
- Confènfus, Pàrtium nervofarum, Confent of the nervous parts, is the mutual communication of vitiated motions, which the nervous parts, endowed with an exquisite fense and motion, maintain among themielves.

- Confèrva, Conferve, is the mixture of any fresh vegetable with fugar, in order to preferve it.
- Consolida major, Comfrey. The root is good in internal ulcers, fpitting of blood, and the Dyfentery, but is feldom given alone.
- Contàgium, Contagion, is a poifon whereby a' difeafe is communicated from one perfon to another, which may either be by immediate contact, as the *Itch* and *French Pox*, or at a diftance, by effluvia in the air, as peftilential diftempers.
- Contrayerva, a root fo called.
- Convulfio, is an involuntary contraction of.
- Copal, a rofin, of little or no use in medicine.
- Cor, the heart, is a hollow muscle, and the principal organ of the circulation of the blood. It has two auricles, and as many wentricles. The Vena Cava joins to the right auricle, and the pulmonary Vein to the left. The pulmonary artery adheres to the right Ventricle, and the greas artery to the left.
- Coràllina, Sea-mofs. This is celebrated for killing worms. The dofe is from half a drain to a dram.
- Coràllium rubrum, red Coral, a fubmarine plant. It is an abforbent, and is faid to be good in Hœmorrhages, fluxes of the belly, and the whites. The dofe is from a foruple to a dram.

- and sidoç like, a process of the Scapula; or Blade-bone like a Raven's bill,
- Coracobràchialis, is a muscle arising from
- the coracoide process of the Scapula, and is inferted about the middle of the Humerus.
- Coracobyoides. This muscle arises from the fuperior Costa of the Scapula, near the
- coracoide process, and is inserted into the basis of the Os Hyoides.
- Coriandrum, Coriander, the feed is in ufe.
- Còrnea Occuli Tùnica, the horny coat of the eye, is the fore part of the eye furrounded with the white.

Cornu cervi, Hartshorn.

- Cornus, the Cornel-tree. Some give a dram of the dried powder of the fruit against fluxes of the belly.
- Coronàlis Sutùra, the còronal Suture. It reaches from one temple to the other transversity; it joins the Os Frontis to the Offa Parietaria. It is open in children.
- Coronària Vafa, Coronary Vessels, are two branches

Caracoides Processies, from nogaz a Raven,

branches of the great artery, which fpread over the outfide of the heart.

- Corpora cavernofa, cavernous bodies. These with the cavernous body of the Urethra, frame the body of the Penis.
- Corpus callefum, is a white medullary fubflance, and is feated above the ventricles, and between the two hemifpheres of the brain, lower than the circumvolutions. It is of a firmer confiftence than the reft of the brain.
- Corticalis fubstantia Cèrebri, the cortical fubstance of the brain, is the external part, of an ash colour. Some suppose it to be glandulous.
- Corymbiferæ Herbæ, corymbiferous herbs, have a compound difcoide flower, with feeds not pappous.
- Coryza, Κόρυζα, a catarrh of the nostrils, or an extraordinary running at the nose.
- Cofmètica, Cofmetics, from κοσμεω to adorn, medicines to make the skin beautiful.
- Coftæ, the Ribs, of which there are twelve on each fide. The uper feven are long or true ribs, the lower five, are fhort or fpurious ribs. They are all articulated to the bodies of the twelve vertebræ of the back, and the true ribs reach the Sternum or breaft bone, to which they are connected. They have each a fmall canal or finus on the under fide, in which lies a nerve, a vein, and an artery.
- Coftus, the root is expectorant, cephalic, uterine, diuretic, and diaphoretic. The dose is half a dram.
 - Cotula Foètida, May-weed or wild Camomile, not ufed.
 - Cotyle, the focket of the hip-bone.
 - Courap, the Indian itch, Herpes, or Impetigo. It affects the arm-pits, groin, and face, with intolerable itching; 'being neglected it turns to a leprofy.
 - Crànium the skull, is a compages of eight bones which form that cavity that contains the brain. These are the Os frontis, the occipital bone, the two parietal, the two temporal, the Ethmoides, and Sphenoides.
 - Crafis, a mixture in general. It fometimes means the temperament.
 - Cremàster, from xpeµaw to suspend, a muscle running on the outside of the Tùnica vaginàlis, which serves to suspend and draw up the Testes.

Grenæ, notches on the fide of a leaf.

- Creta, Chalk, a white abforbent earth. It cures the heart-burn and coughs from acrid phlegm. The *dofe* is from a fcruple to a dram.
- Cribifum Os, the fieve-like bone of the nofe.

- Cricoides, from *nelnos a ring*, and eldos *fhape*, is a cartilage of the top of the *Larynx*, in the fhape of a ring, whence it is called the *annular cartilage*.
- Cricoarytenoides, are muscles which rife from the Annular, and are inferted into the Arytenoide cartilage. They open the Rima or chink.
- Cricothyoides, is a pair of muscles rising from the Annular, and are inferted into the Scutiform Cartilage. It dilates the Scutiform Cartilage.
- Crifis. The matter of a difeafe is fo difpofed, that at a certain time there is, a fudden change for recovery or death. This change is called a Crifis. The days on which this happens are called *critical*, becaufe then a judgment may be made of the event of a difeafe. Thefe are the *feptenary* and the *femifeptenary*.
- are the *feptenary* and the *femifeptenary*. Criftæ, are flefhy excrefeences about the Anus and Peritonaeum, like the comb of a cock.
- Crista Galli, is a small process of the Æthmoide bone.
- Critica Signa, critical figns, are fuch as prognofticate death or recovery from the Crifis.
- Crocus, Saffron. There are fome preparations of minerals fo called from their colour.
- Crotophites, from Kooroqog the temple. This term is applied to the temporal muscles, veins, and arteries.
- Crùditas Morbòrum, the crudity of difeafes, is when the morbific matter is not fufficiently attenuated and fitted for excretion.
- Cruræus, one of the muscles ferving to extend the leg.
- Crusta Làctea, is the scabbiness of infants when they begin to suck.
- Cryftallinus Humor Oculi, the chryftalline humour of the eye. It is feated in a cavity of the anterior part of the vitrous. It is convex on both fides, but most on the backfide.
- Cryftallisàtio, is the reducing any purified falt into cryftals, by diffolving it in water, evaporating it to a pellicle, and then fetting it in a cold place to fhoot. Cùbchæ, Cubebs.
- Cucumis bortenfis, Garden Cucumbers. The feed is one of the greater cold feeds.
- Cucurbita, the Gourd. The feed is one of the greater cold feeds.
- Cuprèsseure du cupresseure de la comprèsseure de la cupresseure de
- Cucurbitula or Cucurbita, a Cupping-glass L 1.2 Culmu

Culmus, the stalk of corn or grafs.

- Culmiferæ Herbæ, culmiferous herbs, have a fmooth geniculated stalk, generally hollow, with long narrow sharp leaves, at each knee. The feeds are inclosed in chaffy husks.
- Cuneif or me Os, See Sphenoides.
- Cuneif drmia Offa, are those which constitute the 5th, 6th, and 7th bones of the Tarfus. Cuprum, Copper.
- Curcùma Tùrmeric. The root opens ob-Aructions of the Viscera, and is faid to be a specific in the jaundice. The dose is from a scruple to a dram.
- Cùscuta, Dodder. It is a parafitical plant, and was accounted a purge, but is now out of use.
- Cuticula, the Sharfskin. This is raised by a flight burn or blifter.
- Cutis, the Skin.

Cutànei morbi, diseases seated in the skin.

- Cy'anus, Blue-bottle. Its virtues are uncertain.
- Cydonia Malus, the Quince tree. A mucilage is made of the feeds which is proper to temperate heat and the acrimony of the humours, to cool the tongue and fauces, to heal fore mouths, and the thrufh. It is made with a dram of the feed boiled in four ounces of water till it is roapy.

Cyminum, Cummin, the feed.

- Cynanche, is a fpecies of the quinfey, and is an inflammation of the internal mufcles of the Larynx.
- Cynogloffum, Hounds-tongue. Some look upon it as anodyne and narcotic, but its virtues are doubtful.
- Cynòfbatos, the Hip-tree. A conferve of the fruit is in use.
- Cypèrus longus, long Cyperus, the root. It is ftrengthening, carminative, and diuretic, and is good in fhortness of breath and the dropsy. The dose is half a dram.
- Cyflicus Ductus, is the duct that runs from the gall-bladder to the Ductus communis cholidochus, which is made by the union of this and the bepatic duct.

Dartos, is the inner coat of the Scrotum, by the means of which it is contracted. Daucus Creticus, Carrot of Candy. The feed is ufed in Venice Treacle.

- Daucus Sylvestris, the wild carrot. The feed is carminative, diuretic, and uterine.
- The dose is from half a dram to 2 drams. Declinàtio Morbi, the declension of a disease is when it recedes from its state and vigour, and the patient is out of danger. Deflagràtic, is a chemical term, and signifies throwing certain things into the cru-

cible, whence a fudden flame will arife, as Nitre mixt with Sulphur, Antimony with Nitre.

Deletèrium, any thing poisonous.

- Deliquium Animi, Swooning.
- Deliquium, is the fetting lixivious falts in a moift air to melt. Thus we have Oil of Tartar per deliquium, which with us is now called Lye of Tartar.
- Deltoides is a muscle like the Greek Δ . It arises from the *clawicle* of the Acròmium, and the whole length of the spine of the Scapula, and is inferted into the middle of the inner fide of the Humerus.
- Demulcentia, Demulcents, are fuch things as blunt, flieathe, or involve the burning corroding acrimony of the fluid, and relax and foften tenfe fibres.
- Dendroides, from $\Delta \varepsilon v \delta \rho o v$ a tree, and erdos form, is a plant like a tree.
- Dens Leònis, Dandelyon. It is aperient, diuretic, opens obstructions of the Vifcera, and dissolves grumous blood. The dose of the juice is four ounces four times a day.
- Dentes, the Teeth, are little bones fixed into the jaws per Gomphofin, or like a nail. Adults have generally twentyeight, though fome have thirty-two. The upper fore teeth appear first, then the lower; afterwards the dog teeth, and last of all the grinders. About twentyone, two grinders called the wife teeth appear. They grow continually, and have each an artery. a vein, and a nerve.
- cach an artery, a vein, and a nerve. Dentrifricium, a Dentrifice, a medicine to clean the teeth.
- Dentitio, is the time when children begin to breed the teeth, which is about the feventh month or later. 'It is often attended with a fever, fits, or a loofenefs.
- Deobstruentia, Deobstruents, are fuch medicines as open obstructions.

Deopilantia, the same as Deobstruents.

- Depilatorium, a medicine to take off the hair.
- Depuratio, is the feparating the pure part from the impure, which may be done either by clarification, defpumation, or chryftallifation.
- Deprèffor Labii inferidris, the depreffor of the lower lip. This muscle arises broad from the lower jaw at the chin, and is inferted into the sphincter of the mouth.
- Depreffor labii superioris, the depreffor of the upper lip; one part of this is inferted into the fockets of the dentes inciforii, and terminates inwardly in this lip.
- Deprèssion Labidrum communis, the common depression of the lips, arifes laterally from the lower jaw near the chin, and is inferted into the sphincter of the mouth. Depblegmàtio,

D.

- Depblegmátio, is an operation whereby fuperfluous water is feparated from fpirits by diftillation.
- Derivation, is the inviting of humours from one part to another, by bleeding, bliftering, cupping, frictions, Sc.
 - Deficcátio, is the evaporation of fuperfluous moisture by heat.
 - Desiccativum, a desiccative er drying medicine.
- Desquamátio, is the scaling carious bones.
- Detergentia, Detergents, cleansing medicines.
- Detonátio, is a deflagration with a noife or bounce.
- Diabètes, is too large and quick excretion of crude fweet-tafted urine, exceeding the proportion of the fluid taken into the body, accompanied with intolerable thirft.
- Diadrefis, is a branch of furgery, and fignifies the division of parts joined, as when the fingers grow together, the opening of absceffes, Sc.
- Diætètica, are eating or corroding medicines.
- Diætètica, Dietetics, a part of medicine that teaches the use of the fix non-naturals, in order to prevent diseases when absent, and to cure them when present.
- Diagnoffica Signa, Diagnoffic figns, flew the prefent state of a living body, whether well or fick. Or they declare the cause, symptoms, and part affected of a prefent difease.
- Diagr'ydium, see Scammonium.
- Diapedefis, is when the membranous fides of the veflels are fo difunited, that they difcharge their contents through the gaping interffices.
- Diaphorètica, Diaphoretics properly speaking, are such medicines as promote infensible perspiration; but they are often taken for *sudorifics*.
- Diaphrágma, the Diaphragm, is a strong musculous membrane, which divides the Thorax from the Abdomen.
- Diarrhæa, is a frequent and copious excretion of liquid excrements by flool.
- Diartbrofis, is a kind of articulation, which permits the motion of the articulated bone. The motion in fome joints is fenfible and manifeft, in others obfcure.
- Diástole, is the dilatation of the arteries, the auricles, and ventricles of the heart, and is opposite to the Systele or contraction.
- Dictámnum Crèticum, Dittany of Crete. It is attenuating, aperient, uterine, and alexipharmac. The antient phyficians L 1 3

accounted it excellent to promote the menfes, and to expel the after-birth. The *dofe* is from half a dram to a dram.

- Digáffricus, is a muscle with two bellies. It arises from the Sinus of the mamillary process of the temple bone, and terminates in the inequalites of the lower part of the chin. It does not pass through a pulley, as has been formerly faid. It pulls down the lower jaw.
- Digiftio, Digeftion, in Chemistry, is the folution of bodies in a menstruum, by the affistance of heat.
- Digitalis, Fox-glove. The internal use of it is not very fafe. 'The flowers bruifed and laid on fcrofulous tumours is faid to difperfe them; as alfo the juice made , into an ointment with hog's lard.
- Diluèntia, Diluents, are fuch things as being mixed with any fluid render it more fluid; or they render those things fluid which were not fo before. Thus whey is faid to thin the blood.
- Didptrica, Dioptrics; is the fcience of refracted vision; or it is that part of optics which teaches the different refractions of the rays of light, as it passes through different mediums.
- Discus in Botany, is the plain, round, flat part of some flowers, such as a Sunflower. Hence some flowers are discoide , or discoidal.
- Diurèfis, the fecretion of urine by the kidneys, and whatever promotes that fecretion are called Diuretics.
- Dordnicum Románum, Roman Wolf's-bane. A poifonous herb quite out of ufe.
- Dracontium, Dragons. It has the fame virtues as Arum, but ftronger.
- Dracùnculus, the Guinea-worm. It is a long white filver worm that breeds between the fkin and the flefh in feveral parts of Afia and Africa, fuppofed to be bred by drinking unwholefome waters. They are called Guinea Worms of late, becaufe frequently feen there, and fometimes brought from thence. They are often feveral yards long.
- Dràftica, Draftics, medicines of great force, particularly ftrong purges are fo called.

Ductus Biliàrius, see Porus Biliarius.

Ductus Chyliferus, see Venæ Lacteæ.

- Ductus Lachrymáles, Làchrymal Ducts, or those that take up all the lympha that waters the eye, and empty themselves into the nose through the bones of the nose.
- Ductus Pancreàticus, is a fhort excretory duct of the pancreas, which always enters the duodenum with the biliary duct.

Duodenum,

Duodènum, is the first small intestine about twelve inches long.

- Dura Mater, is a very compact membrane which lines the infide of the skull, and contains the whole brain somewhat loofely.
- Dysentèria, a Dysentery, is a Diarthœa with violent griping pains, and the excretion of various matters, particularly blood. It is often attended with a Tenesmus.
- Dyspèpsia, is a difficulty of digefting aliment.
- Dyspnoèa, a difficulty of breathing.

Dystocia, a difficult birth.

Dysùria, a difficulty of making water.

E.

- *Ebulus*, Dwarf-elder. The bark is a rough purge, and works upwards and downwards. It has been given in the dropfy to those that can bear it. The *dose* of the juice is an ounce, of the feed a dram.
- Ecchymòfis, is the black and blue marks in the fkin from bruifes.
- Eccoprotica, Eccoprotics. Gentle cathartics or laxatives.

Eclègma, a Lambative.

- Ecliptica Linea, the ecliptic line, is the apparent path of the fun. It is divided into twelve parts, each containing 30 degrees. These parts are called figns, the names of which are Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricornus, Aquarius, Pisces.
- Ecpbracticum, a deobstruent medicine.
- Edulcoràtio, is the wafhing away the falts from any thing that is calcin'd.
- Effervescentia, Effervescence, is a sudden intestine motion arising from two bodies mixed together, attended with frothing, the rising of bubbles, and rarefaction.
- Efflorescentia, Efflorèscence, is the appearance of spots or pussilies on the skin.
- Elæosàccharium, from Elæiov oil, is the mixture of an effential oil with fugar.
- Elatèrium, is the expressed and inspissated juice of the wild cucumber. It is a violent purge, and is given in the dropfy. The dose is from half a grain to three grains.
- Elasticitas, Elasticity, is a propriety of bodies, whereby if the figure is any way changed by force, they return to their pristine form. The *elasticity of the air* is faid to arife from the particles of it mutually repelling each other.

Elatine, Fluellin or female Speedwell. It

was formerly given against a cancer, the gout, impetigo, leprofy, dropfy, and the king's evil. The *dofe* of the juice is three of four ounces thrice a day; of the extract a dram.

Electàrium or Electuarium, an electary.

Elemi, a rofin. Thie is used only externally, to resolve tumors, to cleanse ulcers, and to ease pain. There is an ointment made of it.

Eleuthèriæ Cortex, Cascarilla.

- Elephantiafis Arabum, the Elephantiafis of the Arabs, is faid to be a fwelled foot and leg full of *warices*. Others fay, the feet are fwelled like facks, and full of crufty fcabs, which return after being taken off.
- Elephanitafis Græcorum, the Leprofy of the Greeks, is a loathfome difeafe, and faid by fome to be a cancer of the whole body. The fkin is covered with fpots, and tumours which turn black. While the body falls away, the face, legs, and feet are enormoufly fwelled. At length it penetrates to the very bones. In fome the fcabs are whitifn and fcaly, and fall off like bran.
- Elevatorium, an Elevator. An inftrument us'd in furgery to raife a depress'd skull.
- Elevator Labii inferioris, the elevator of the lower lip; a muscle.
- Elevator Labii Superioris, the elevator of the upper lip.
- *Elixir*, is the effence or tincture of any thing extracted by fpirit of wine, or other fpirit.
- Embrocatio, is the rubbing any medicinal liquor or fpirits into any part.
- Embryon, an Embryo, is the rudiments of a totus in the womb.

Emèticum, from eµéw to vomit, an emetic. • A medicine that caufes vomiting.

- Emmenagoga, Emmenagogues, medicines to promote the menses.
- Emmollientia, Emollients, fuch things as abate, fheath, or foften the acrimony of the humours, and that relax and foften the folids.
- Emphyseina, is a white, indolent, foft; fhining, and elaftic tumour, from air collected in the cellular membrane.
- Empirici, Empirics. These were formerly a fect of physicians that rely'd entirely upon experience. The word is now us'd to fignify quacks.
- Emplastrum, a plaster, is a topical remedy, which being fpread upon thin leather or linnen, and apply'd to the skin, adheres firmly thereto.

Empyèma, from wood Pus; is a collection of

of purulent matter in the cavity of the thorax, between the lungs and the pleura, generally from the breaking of a vomica.

- Emprofibitionos, is a fpalm of the mulcles, whereby the head, neck, thorax, and loins are bended forwards.
- Empyreuma, from eurovydw to burn, is the burning to of any matter in boiling or diffillation, which gives it a difagreeable tafte and fmell.
- Emulgèntia Vafa, Emulgent veffels, are the arteries and veins which go to the kidneys.
- Emilfio, is the drawing out of the fubftance of oily feeds by bruifing of them. and adding water by little and little, which becomes milky. Emulfions are likewife made of gummy rofins.
- Emuneforia, Emunctories, are cavities of the body into which any thing is excreted, as the noftrils receive mucus, the ears ear-wax, the bladder urine, &c.
- Encorèma, is a cloudy matter fufpended in the middle of the Urine, or hangs downward from the top to the middle.
- Encanthis, is a fleshy excrescence in the greater angle of the eye.
- Encephalos, is the whole contents of the kull.
- Endèmius Morbus, an endemic disease af-
- fects many péople together in the famé country, as 'the fcurvy in Holland, a confumption in England, and an ague in
- *Kent.* Endivia, Endive, a kitchen herb. The feed are one of the lefter cold feeds.

Enema, a clyster, or glyster.

- Enixum Sal, a neutral falt, arifing from the mixture of an acid and an alkali.
- Ensiformis Cartilàgo, the sword-like cartilage.

Enteron, an inteffine.

- Enterocèle, is an intestinal hernia or rup-
- ture, formed by the gut or omentum falling down thro' the rings of the abdominal muscles, into the groin or fcrotum.
- Enteroepiplocèle; is when a rupture is formed in the fcrotum by the falling down of the Omentum and inteffine together.
- Enterèmphalos, from ou parle, an umbilical or navel, rupture.
- Enula Campàna, Elecampane. The root is pectoral, fiomachic, diuretic, uterine, aperient, alexipharmac, and fudorific. It is good in a moift afthma, and deterges ulcers of the lungs. When fresh, it is given in broth and pectoral apozems, L1 4

from half an ounce to an ounce; in powder from a dram to two drams.

- Ephèlis or Ephèlides, from Ηλιος the fun, Some mean by this a tann'd face, others one that is fun-burnt, others rough, tawny, large fpots in the forchead. Pregnant women fometimes have fpots of this kind. Others again affirm they are the fame as Lentigines, or freekles.
- Ephimiera, is a fever that terminates in twenty-four hours.
- Ephippium, five Sella equina, feu. Turcica, is part of the sphenoidal bone, conspicuous on the infide of the skull.
- Epicarpium, from smi upon, and ragmog the wrift, is a medicine in form of a cataplaim, apply'd to the wrift to cureagues.
- Epidemius Morbus, an epidemic difeafe, is one that fpreads among the people, and yet arifes from fome uncommon but general caule, which is faid to be the conflitution of the air. Sometimes it affects one country, fometimes more than one.

Epidermis, the Cuticle or Scarf-skin.

- Epididymis, is a varicous body lying on the fuperior circumference of the tefficle, like a caterpillar.
- Epigaffrium, is the upper part of the Abdomen: It commences at the enfiform cartilage and terminates two fingers breadth above the navel. Its two fides are the Hypochondria.
- Epiglóttis, is the fifth cartilage of the Las rynx, and covers its chink at the time of fwallowing, left any thing fhould fall into it.
- Epilèpfia, the Falling-ficknefs. It is fo called becaufe the patient often falls down fuddenly. It is a general convultive difease, and returns periodically. In the fit the patient is deprived of all his fenses and voluntary motions, and often froths at the mouth.
- Epilèptica, are medicines against the epileply.
- Epin'yctides, are reddifh or livid puffules that appear in the night, attended with inflammation and pain. When they are open'd or break, a fanies flows out.
- Epiphora, a watery eye, in which tears run down the cheek with deformity.
- Epiphysis, from implus to grow to, an appendix, so called, because it appears to be a part added to a bone, and is distinguished from it by the intervention of a cartilage. The thickness of this diminishes by age, and becomes almost infensible at last. Thus, what was an Exiphysis

Epiphysis in a child, appears like an Apo physis in an adult, as we see in the extremities of the Os Humeri and other parts.

- Epiploon, from $\epsilon \varpi \epsilon \varpi \lambda oov$ the omentum, and $\varkappa \eta \lambda \eta$ a fwelling, a rupture caus'd by the Omentum paffing thro' the ring of the abdominal muscles into the groin or forotum.
- Epiplomphalum, a navel rupture arifing from the prolaption of the Omentum into the navel.
- Epiploon, the Omentum.
- Epispastica, Epispastics. Medicines that raise blisters.
- Epithèma, Epithem, is an external topicalremedy.
- Equisitum, Horfe-tail. It is a powerful aftringent, and is an efficacious remedy in fpitting of blood and overflowing of the menfes. The *dofe* is a dram in powder. Drank in plantain-water morning and evening, it is good against a confumption. Some fay it has done miracles in flow and malignant fevers.
- Erectores Penis, are muscles which rife flefhy from the Os Ifchium, and after an oblique progress, end partly flefhy and partly tendinous, in the beginning of the cavernous body of the Penis.
- Erestores Clitoridis, are muscles which arise from the Offa Coxendicis, and terminate in the Crura of the Clitoris.
- Erigerum, Groundfil. This was called herba torminalis, it was thought fo effectual against the gripes. It is commended against obstructions of the viscera. The dose of the juice is two ounces. It will fometimes vomit. A poultice made with the fresh herb, and laid cold to the pit of the stomach on the well days of an ague, will cause vomiting some hours after, and cure it.

Erethismus, an irritation.

Errbinum, an Errhine, is a medicine to put up the nostrils to purge the head.

- Erùca, Rocket. The herb eaten as a fallad helps digeftion, excites the appetite, diffolves viscidities in the flomach, and promotes urine. It is good in chronic diseases and the scurvy. It has been long celebrated as an Aphrodistic. The seed is good in sleepy diseases, and is a prefervative against the apoplexy. The dose is faid to be twenty grains; but it may be taken as freely as mustard-feed.
- Eryngium, Sea-Eringo. This incides großs humours, opens obstructions of the vifcera, and cleanfes the kidneys. Half an ounce of the root in decoction is a dose. The candied root is a great restorative

and aphrodifiac. It may be eaten at pleafure.

- Er'yfimum, Hedge-mustard. This is good to diffolve thick phlegm in the breaft, to cure a hoarfenefs, to reftore the lofs of voice, and to promote urine. It is an antifcorbutic, and an excellent medicine in cancro-fchirrous tumors taken inwardly, and outwardly apply'd. The dofe of the decoction in water, or of the infusion in wine is a handful; of the feed a dram.
- Erysipelas, St. Anthony's fire. It is a fuperficial inflammatory tumour of the fkin, of the colour of a role, with a burning heat. It turns white when preffed with the finger. It is generally attended with a fever, watching, pain in the head, thirft, reftlefinefs, Gc.
- Eschàra, is a hard crust or scab made by a caustic.
- Effera or Sora, are fmall reddift turbercles attended with great itching all over the body. They appear fuddenly and after fome time difappear, without breaking.
- Ethmoides, the fieve-like bone. It is fituated in the middle of the basis of the Os Frontis. It is perforated with small holes, through which the fibres of the olfactory nerves pass.
- Eupatorium Cannabinum, Hemp Agrimony. It opens obstructions of the viscera, and , is of use in the cachexy, as well as ca
 - tarrhs and coughs. It may be taken as tea feveral times a day.
- Eubépsia, a good digestion.
- Euphorbium, a gummy rofin. This is the moft violent of all hydragogues. It exulcerates the inteffines, caufes fainting, and brings on a cold fweat. It is never to be given but in a palfy of the membranes of the bowels, and then the dose is from two grains to eight. Used as an errhine it causes an homorrhage of the nose, and sometimes inflames the brain. Some sprinkle the powder on a carious bone.
- Euphràfia, Eye-bright. It has been accounted a great cephalic and ophthalmic, but experience in fome cafes has not allow'd it. The dofe is a dram three times a day.

Eusarcos, well in flesh.

Exacerbàtio, the fame as Paroxy/m.

- Exadressis, in surgery, is the extirpation of morbid parts.
- Exanthémata, are spots on the skin, as in the measles, spotted fevers, &c.

Exomphalos, a protuberance of the navel. Exoftofis, An Explanation of the TERMS of ART. 519

- E xoft dis, is a præternatural protuberance of a bone.
- Expectorantia, Expectorants. Thefe are medicines which promote the expulsion of matter that stuffs the Bronchia of the lungs,
- Exfpiratio, is the expulsion of air contained in the lungs, through the Afpera Arteria, mouth, and noftrils.
- Extensor Carpi, the extender of the wrift, is two diffinct muscles, one arises from the external protuberance of the humerus, and the other from the lowermost part of it, and passing under the annular ligament, one is inferted into the bone of the carpus, that suffains the fore finger, and the other into that which suffains the middle finger.
- Extensor Digitorum communis, the common extender of the fingers, rifes from the external protuberance of the *bumerus*, and is divided into four tendons, three of which pass under the annular ligament, the fourth goes to the little finger, and passes through a particular ring of the fame ligament. They are inferted into all the bones of the fingers.
- Extensor primi internòdii pòllicis, the extender of the first bone of the thumb, arifes from the upper and external part of the ulna, and from the transverse ligament, and passing over the tendon of Radiadus intèrnus, is inferted into the fifth bone of the carpus, and the first of the thumb. It is sometimes divided into two, three, or four tendons.
- Extensor secundi internodii pollicis, the extender of the fecond bone of the thumb, arifes from the radius immediately below the former, and from the transverse ligament, and is inferted by a few fibres into the fecond bone of the thumb, but chiefly into the third.
- Extenfor tèrtii internòdii pòllicis, the extender of the third bone of the thumb, arifes immediately below the laft, and paffing over the radius nearer the ulna, is inferted into the third bone of the thumb.
- Extensor Indicis, the extender of the forefinger, arifes from the middle of the ulna, and paffing under the ligament of the carpus, is inferted with the extensor communis, into the fore finger.
- Extensor minimi digiti, the extender of the little finger, arises from the external protuberance, and paffing under a particular annular ligament, is inferted into the length of this finger.
- Extensor longus digitorum pedis, the long extender of the toes, arises from the uv-

per part of the *Tibia*, and from the upper and middle part of the *Fibula*, and the ligament between thefe bones, then dividing into five tendons, four of them are inferted into the fecond bone of each leffer toe, and the fifth into the metatarfal bone of the little toe.

- Extensor brevis digitorum pedis, the fhort extender of the toes, arifes from the Os Calcis, or bone of the heel, and dividing into three fmall tendons, is inferted into the fecond joint of the three toes next the great toe.
- Extensor longus pollicis pedis, the long extender of the great toe, arifes from the upper and middle part of the Fibula, and the transverse ligament, and is inferted in the last bone of the great toe.
- Extenfor brevis pollicis pedis, the flort extender of the great toe, arifes from the fore part of the Os Calcis, and is inferted into the fame place with the former.

Extenuàtio, Leanness of the whole body.

- Extinctio, is the heating flints, chryftal, Sc. in the fire, and quenching them in water; which is to be repeated till they become brittle. Sometimes it is meant of quenching metals.
- Exterpàtio, is the taking off a limb, a cancer, Sc.
- Extràctum, an Extract. This is the separation of the pure and efficacious part of a medicine from the less efficacious, by the means of a *menstruum*, and then bringing it to a proper confistence.
- Extravasatum, extravafated, is faid of blood or any humour that is fpilt out of the veffels, and yet continues in the foft parts of the body.
- Exulceràtio, an ulceration, a folution of continuity from a corroding matter.

F. ,

Faba, Garden-beans. Their meal is reckoned one of the four refolvent meals.

Facies Hippocràtica, an Hippocràtic face, is when the nofe is fharp, the eyes hollow, the temples collaps'd, the ears cold and contracted, and their lobes inverted; the fkin about the forehead hard, ftrait, and dry, the colour of the whole face pale, or black, or livid, or lead-colour. Quincy and others have it thus; "The noftrils " are fharp, the tips of the ears contract-" ed, the eyes hollow, the temples low, " the forehead dry and wrinkled, and " the complexion pale and livid." If I had not mentioned this, fome might have.thought I had-made a miftake.

Faces,

Fæces, Excrements, as also fettlings of liquors.

- Falx, is a process of the Dura Mater, which beginning at the Christia Galli, and running backward under the fagittal future to the Cerebellum, divides the Cerebrum into two hemispheres.
- Farina, Meal:
- Febrifugum, a Febrifuge, a medicine against a fever.
- Febris, a Fever. Of this a frequent pulse is the Pathognomonic fign, and yet there may be a frequent pulse without a fever ; for children and perfons of billious constitutions have fuch pulses. The fame will happen from violent excrcife, from baths, from sudorifics, from paffions of the mind, and from the falling-ficknefs. And therefore it will be neceffary to enquire, whether there has been a shivering or coldness of the extremities. In most fevers, the pulse is somewhat harder than ordinary, unless they are of the nervous or malignant kind. A spaffic contraction of the capillary veffels caufes a quicker motion of the blood; and a greater attrition which begets heat.
- Febris acuta, an acute fever, comes on with violence, and runs its courfe in feven or fourteen days. It feldom continues till the twenty-first.
- Febris alba, the white fever. The greenficknefs is fo called.
- Febris angino fa, the quinfey. This is an inflammation of the fauces, attended with a burning pain, a tumour, rednefs, a difficulty of breathing or fwallowing, arifing from a flagnation of blood, or a fharp vifcid ferum, in the fanguineous or lymphatic veffels.
- Febris ardens, five caufus, a burning fever. In this there is a burning or igneous heat of the whole body, with unquenchable thirst, and a dry black tongue with fistures.
- Febris bilidfa, five cholerica, the bilious fever. This is a kind of burning fever,' and is attended with intenfe heat, thirft, anxiety, reftleffnefs, with copious bilious vomiting, internal heat and coldnefs of the extremities; fometimes the fymptoms are very violent, and it kills before the feventh day.
- Febris Caftrènfis, a Camp Fever. This is a malignant fever which in the time of war is apt to infeft camps.
- Febris catarrhàlis, a catarrhal fever. It generally begins in the evening with fhivering, coldnefs of the extremities, especially of the feet and soals of the feet,

coffivenels, a *flimulus* to make water, weaknels of the head, a univerfal languor of the whole body, with an increased false appetite and thirst. There is likewise a difficulty of swallowing, a *flimulus* in the *larynx*, a heat in the fauces and nostrils, fneezing, heavinels of the breast, a heat towards night with a quick pulse, a violent cough with running at the nose, heat in the fauces, troubled fleep, with morning fweats, a heavinels and torpor of the whole body, with want of appetite.

- Febris Chronica, a chronical fever. It is fo called when it continues above forty days, Of this kind are the flow, hettic, and generally intermitting fever's.
- Febris continua, a continual fever, is without any compleat intermiffion, till the end of the difeafe.
- Febris continens, is a continual fever without remission.
- Febris contagiòsa, an infectious fever, such as the small pox, malignant and pestilential fevers.
- Febris dyfentèrica, a dyfenteric fever. This happens when with a preternatural heat and pulfe the patient is afflicted with violent gripes, and heat in the abdomen, attended with frequent painful flools, which are either mucous, purulent, or bloody.
- Febris endèmica, an endemic fever; is proper to a certain country, as the plague to Egypt, an ague to some parts of Effer and Kent.
- Febris epidèmica, an epidemic fever, is when many fall ill at the fame time in the fame place or country, of the fame fever, which is not endemic or proper to that country. Sometimes it is benign, and fometimes malignant.
- Febris eryfipelàcea, an eryfipelaceous fever. This when violent, begins fuddenly with fhivering and fhaking, lofs of firength, a pain in the back and head, to which vomiting and a delirum fupervene: When the Erysipelas appears between the third and fourth day, the fymptoms abate. When it attacks the head, the parotid glands are affected; when the breaft, the axillary. See Eryfipelas.
- Febris Exanthemática, a fever with fpots or pufules on the fkin, fuch as the fcarlet fever, the meafles, the fmall pox, the miliary fever, and the fpotted fever.
- Febris bèttica, a hectic fever. A continual heat attends this fever, with a hard, weak, quick pulfe, which fymptoms increase after cating and towards the evening.

evening. The fkin and tongue are hard and dry, the cheeks are red, the whole body is weak and flaccid, the fleep without refreshment, the urine red with a fediment, and a blue fatty cuticle on the top. The whole body falls away, infomuch that the bones flick out every where.

- Febris Hepàtica, five Hepatitis, an inflammation of the liver. This begins with coldnefs and fhivering, fometimes with vomiting and a fever. Then fucceeds pain about the fpurious ribs extending to the pit of the ftomach with a difficulty of breathing and of lying on the left fide. There is likewife watching, reflefinefs, and coftivenefs.
- Febris Hungàrica, the Hungaric Fever. This is a peculiar malignant fever which reigns in Hungary, especially in the time of war.' It invades the patient with fudden loss of strength, a most violent pain in the head, an inflammation of the tongue and fauces, with heat, dryness, and blackness. It often kills in a few days.
- Febris inflammatoria, an inflammatory fe-ver. This has a different name according to the part affected. If the meninges of the brain are inflam'd, then it is call'd a Pbrenitis, a phrenfy. If the fauces, Angina, a quinley. If the pleu-ta, Pleuritis, a pleutify: If the lungs, Febris peripneumonia, a peripneumony. If the flomach, Stomachica, a flomach fever. If the Duodénum and biliary duEts, ardens et biliofa, a burning and bilious, fever. If the Ilium, Iliaca, an iliac fever. If the mesentery, Mesentèrica, a mefenteric fever. If the bladder, Veficalis, a vefical fever: If the uterus, Uterina, a uterine fever. If the intestinum rectum, Hæinorrhoidàlia, an hæinorrhoidal fever. We must likewise observe, that some of these fevers are Idiopathica, idiopathic or primary; others Sympto-maticae, fymptomatic or fecondary, that supervene to another disease, generally with a fatal event.
- Febris intermittens, an intermitting fever. This begins with chilnefs and fhaking, the pulfe is fmall, contracted, and weak. When the fhaking goes off, a heat all over the body fucceeds, the pulfe becomes great, full, and quick. After fome time, the fymptoms begin to abate, the fkin grows moift, the urine is of a flame-colour, but without a fediment, the pulfe is more moderate, and the breaking out of a fweat terminates

the paroxyfm. An intermission fucceeds.

- Febris Inteffindrum inflammatdria, an inflammation of the inteffines. A fever proceeding from hence is attended with a burning pain in the abdomen, a preternatural heat of the whole body, a quick pulfe, lofs of ftrength, anxiety, and inquietude.
- Febris maligna, a malignant fever. The most certain fign of malignity in acutedifeases is a fudden loss of strength, though some of these fevers come on almost infensibly. The pulse is tense and hard, but quick and small. There is a head-ach, giddiness, nausea, and vomiting. The tongue is white at first, but becomes daily dark and dry, and at last shift and black.
- Febris lattea, the Milk fever. This appears the third or fourth day after childbirth, and continues till the feventh, when it terminates with a gentle fweat.
- Febris lenta, a flow fever. This has milder fymptoms than a *bectic*, a gentler heat, a profuse fweat in the night, a natural pulse after sleep and before dinner. The fkin is not so dry; nor the body so weak.
- Febris mefentérica, a mefenteric fever. This is attended with coldness of the extremities, thin urine with little fediment, frequent coughing while nothing is brought up but a little unconcocted matter: There is a pain and redness of the fauces, a confant loathing of victuals, and absence of thirst. The fever is ftronger one day and remits the other. It has been commonly mistaken for a malignant fever, but it is neither epidemic, nor spotted, nor speedily kills, but is generally protracted till the twenty-first day, and apt to turn to a flow hectic fever.
- Febris miliáris, the miliary fever. It begins with a flight fhivering followed with heat, a great languor and dejection of ftrength. There is a ftraitnefs of the præcordja, deep fighs, reftleffnefs, watching, or unquiet and disturbed 'sleep; a fense of a pricking heat in the back, with alternate cold fhivering and heat under the skin, which is particularly felt in the palms of the hands. In child-bed women there is a retention of the lochia, and the milk returns back. To these fucceed a roughness like the fkin of a goofe, and innumerable puftules arife either white or red, or both. of the fize of a millet-feed, fight on the neck,

neck, then on the breaft and back, laft of all on the hands. Then the pulfe which was hard before grows foft, and the reft of the fymptoms become more mild.

- Febris morbillofa, the Measles. This is a catarrhal eruptive fever, which begins with chillness and fhivering, to which cold and heat fucceed by turns. On the fecond day the fever comes on with ficknefs, the tongue is white but not dry, there is a little cough, and a continual fleepinefs, as alfo a fneezing and fwelling of the eye-lids, and a ferous humour dropping from the nofe and eyes, which are forerunners of the eruptions which, happen on the fourth day. The fpots are like flea-bites, and rife but little above the fkin, and appear first on the face, then on the breaft, belly, thighs, and legs. The cough, fever, and difficulty of breathing encreafe. On the fixth day the fkin on the face and forehead begin to grow rough, and the pustules die away; on the eighth and ninth days they all difappear.
- Febris Nephritica five nephritis, a nephritic fever. This proceeds from an inflamimation of the kidneys, and is attended with a fixt burning pain in the loins, with difficulty of making water, and other fpafmodic affections of the lower belly.
- Febris Pestilentialis, a pestilential fever, is a contagious malignant fever, and the acutest of all others. It is attended with fudden loss of strength, the highest anxiety, and other grievous symptoms. Buboes, carbuncles, and wibices appear in various parts of the body.
- Febris petechidlis vera, a true fpotted fever, is very malignant, contagious, and greatly detrimental to the head and frength. It is attended with fpots of various colours arifing from a corruption of the vital fluids; and a putrid diffolution confequent thereon.
- Fibris Phrenitica five Phrenitis, the Phrenfy is an inflammation of the meninges of the brain, attended with an acute fever, terrible pains in the head, a redneis of the face and eyes, a continual delirium, with great boldnefs and reftlefinefs.
- Febris Pneumonica fine Plauritis et Peripneumonica, a Lung-Fever, or the pleurify and peripneumony. The first is attended with a violent pricking pain in the fide, frequent hard pulle, difficulty of,

and painful breathing, a very troublefome cough, and fometimes bloody fpittle. It is either moift or dry. In a peripneumony, the pain is not fo acute, but is more tenfive, blunt, and prefling. The pulfe is foft and quick, the difficulty of breathing and anxiety greater, the expectoration is more troublefome, and the fpittle is of various colours.

- Febris Quartana, a quartan Ague. This is a fever of the intermitting kind, and is more obftinate than the reft. The fit generally begins in the afternoon, continues about three hours, and returns every third day.
- Febris Quotidiàna, a daily ague. This is an intermitting fever which returns every day, and the fits generally continue long.
- Febris fcarlatina, the fcarlet fever. This chiefly attacks children. It begins with coldnefs and fhivering, without any violent ficknefs. Afterwards the fkin is covered with red fpots, which are larger, more florid, and not fo uniform as the measses. The rednefs remains two or three days, and then disappears. Then the cuticle falls off, and leaves many scales behind it.
- Febris jecundària Variolàrum, the fecondary fever of the fmall pox. This happens on the ninth or tenth day from the eruption, with a quick pulfe, internal heat, thirft, watching, reftleflnefs; as alfo a delirium. If the pox is of the confluent fort, and the patient an adult, it fometimes kills on the eleventh day.
- Febris semitertiàna, a semitertian sever. It begins before noon, with cold, violent shaking, and a contracted pulse. This is fubceeded by heat and a frequent pulfe, which continues fome hours till a fweat breaks out, and then it abates; but does not quite intermit. In the night, after a slight chillness, the heat increases with a quickness of pulse, the next day it is milder and without thirst till the evening, at which time, after a flight fhivering, it is more intense. On the third day the fhaking returns with a more violent heat, and runs the fame courfe over again without any abfolute intermission. Some have a cardialgia, others vomit; fome faint away, and others again fall into a delirium. It is often mistaken for a malignant fever.
- Febris stomàchica instammatòria, an instammation of the stomach. This is attended with a violent internal heat, a high anxiety, a tensive heavy pain in the præcordia,

522

præcordia, chiefly about the pit of the ftomach, great thirft, watching, reftleffnefs, tumbling and tofling, a coldnefs of the extremities, a pretty hard contracted and frequent pulfe, fometimes unequal, a difficult breathing, and often reaching to vomit. The pain is increas'd as often as any thing is fwallow'd.

- Febris fymptomàtica, a fymptomatic fever. This fupervenes to fome primary difeate, or dangerous external hurt, becaufe the nervous fystem is thereby grievously affected and greatly irritated. It observes no regular type.
- Febris Sy'nocha, is the fame as continens, and is a continual fever without remiffion. It begins without any remarkable coldnefs or fhivering, and attacks the fanguineous, the fanguineo-bilious, the plethoric, or thofe who are accuftom'd to evacuations of blood in the prime of life. It is very violent at the first onfet, and continues, with little or no remiffion of the fymptoms, till the time of the crifis. The pulfe is great and full. It affects the nervofo-membranous parts with a flight inflammation, and infests one part more than another, whence arife variety of fymptoms.
- Febris tertiàna, a tertain ague, is an inter-' mitting fever that returns every other day.
- Febris tertiana duplex, a double-tertian ague. This has a fit every day, but at different times. Thus, if it comes on at eight in the morning on the first day, the invasion will be at the fame time on the third day; and if at four in the afternoon on the fecond day, it will begin at the fame hour on the fourth.
- Febris variolòfa, a variolous fever, or the fmall-pox. This is an acute exanthematic, contagious fever, in which, by a critical motion, a thin; cauftic, corrupt inflaming, and ulcerating matter is thrown out on the skin, often attended It begins with grievous fymptoms. with wearinefs, languor, difturb'd fleep, loathing of victuals, reaching to vomit, pain in the head, coffivenefs, coughing and fhivering now and then. These are fucceeded with heat all over the body, a quick pulse, then an acute pain in the head, loins, and fpine of the back. Children fometimes have epileptic fits. On the fourth day fpots appear on the face and neck, and fucceffively all over the body. This eruption continues two

or three days. In the mean while the fever and fymptoms abate and almoft ceafe. Afterwards the pox tend to fuppuration, beginning at the face, and then proceed downwards. On the eleventh day the fwelling in the face and inflammation difappear, the puftules rall off, and on the fourteenth or fifteenth day they perifh entirely. They have been generally divided into the diftinct and confluent fort.

- Febris ex inflammatione Vesicæ, a fever from the inflammation of the bladder. The pathognomonic and effential figns of this difeafe are an acute, burning and preffing pain in the region of the *pubes*, with a fever, a conftant tenefmus, and a perpetual firiving to make water.
- Febris uterina five inflammàtio uteri, a uterine fever or inflammation of the womb. This is known by a heat and fixt pain in the groin, with an acute fever, a pain in the loins and bottom of the belly, an inflation of the abdomen, a ftimulus to make water and to go to ftool, a heat and difficulty of urine. The breafts fwell in proportion as the inflam'd Uterus.

Ferrum, Iron, a metal.

- Ficus, the Fig-tree. The fruit called Càricæ or figs, are in ufe. Fclipèndula, Dropwort. The root is diure-
 - Felipèndula, Dropwort. The root is diuretic and cleanfes the kidneys. It has been given againft the whites with fuccefs; as alfo the bloody flux. It is recomy mended for the virtigo, falling ficknefs, and king's-evil. The dofe in powder, is a dram once a day.

Filix mas, common male fern.

- Filix faimina, Female Fern or Brakes. The root of this has been accounted the most fecret of all fecrets for killing worms, not excepting the tape-worm. The dofe in powder is from one dram to three. It has been us'd in decoctions against a fchirrus of the spleen and pancreas, but is now laid aside on account of its nauseous taste.
- Filix florida, the flowering Fern, or Ofmund royal. A conferve made of the tender fhoots of this and the male fern has been recommended against the rickets.
- Filtratio, Filtration, is a method of rendering liquors fine and clear. It is now done chiefly by letting them run thro' paper.
- Fiftula, is a long, narrow, finuous, callous ulcer, which generally rifes from an abfcefs.

Fistula,

- Fifula Lachrymalis. This is either true or falle. The latter arifes from an obfluction of the lachrymal ducts, fo that the tears cannot pals from the eyes into the nofe, but run down the cheek. The true, besides the former, is accompanied with an ulceration of the lachrymal fack, and a purplent difcharge.
- Flexdres Pollieis, The benders of the thumb. There are two of these; the first arises from the external protuberance of the Humerus, passing under the annular ligament; is inferted into the third bone of the thumb. The second arises from the bones of the carpus and is inferted into the second bone of the thumb.
- Flexor Pollicis Pedis longus, the long bender of the great toe. It arifes from the upper and back part of the Fibula, and passing behind the inner ankle is inierted into the last bone of the great toe.
- Flexor Pollicis Pedis brewis, the flort bender of the great toe. It arifes from the Os cuneiforme medium, and is inferted into the Offa fefamoidada upon the fecond joint of the great toe.
- Flores, Flowers, in chemistry are the finer parts of dry bodies, which are raifed by fublimation from the more gross in a dry form, fuch as flowers of benjamin, and flowers of fulphur.
- Fluer Albuz, the whites. This is a very troublefome diforder in women. It is a cachectic difeafe, and confits in a flux, of white, lymphatic, ferous or aqueous humour from the matrix! But the colours may be different, as yellow, brownifn, green or blackifh. Sometimes it is fharp and correfive, fometimes roul and fetid.

Fluor Uterinus, the fame as Fluor albus.

Focus in optics, is the point of concourfe of the converging rays.

Feniculum, Fennel.

- Fænum Græcum, Fenugreek. The meal of the feed has been often ufed in cataplasms and fomentations of the emollient ripening and discutient kind, as also in clysters to obtund the acrimony in the humours.
- Fortus. The child in the womb is fo called when perfectly formed.

Foilieulus Fellis. The gall-bladder.

Fomentum, Fomentation, is the applying a medicated decoction to any part, by the means of a flannel, linnen cloth, fpunge or bladder. Fontanella sive Fonticulus, an issue.

- Foràmen Owàle, a hole which ferves to maintain the circulation of the blood in a fætus. It opens from the right auricle into the left.
- Forceps, an inftrument made use of by Surgeons to extract things out of wounds and the like.
- Formicæ, Ants. These have been in external use to lay to paralytic limbs, and in ointments as an aphrodifiac, but are now laid afide.
- Fornix, an arch, is a medullary body beginning from the fore part of the venticles of the brain, with two fmall roots, which uniting run towards the back parts called Cura Fornicis.
- Frodnulum, the little ligament under the tongue.
- Franum, a bridle, is the ligament under the penis.
- Fragaria, the firawberry bufh. The fruit is cooling, quenches thirft, abates the heat of the flømach, loofens the belly, proinctes urine, and cleanfes the kidneys.
- Fraxinella, white or baftard dittany. The root is cordial, uterine and alexipharmac. It promotes fweat, urine and the menfes, kills worms, and refifts putrefaction. The dofe in fubftance is from one dram to two.
- Fràxinus, the afh-tree. The bark has been faid to be proper to fupply the place of the Jefuits bark, but falfely. A dram of the feeds in powder is faid to be an excellent remedy againft the jaundice and dropfy, taken frequently. Fuligo Ligni, wood foot.
- Fumaria, Fumitory. The leaves cleanfe the blood and render it more fluid. They incide vifcid humours, open obfiructions, ftrengthen the ftomach and wifcera, promote urine and the menfes. Hence they are good in the cachexy, chronic, melanchollic and hypocondriac difeafes, the jaundice, and fcorbutic diforders. It is accounted fpecific in all cutaneous affections. The dofe of the juice is three ounces; of a flight decoction of the herb, in whey a handful.
- Furor Uterinus, is an unbounded and shameless falacity in women.
- Furúnculus, a Boil. It is an inflammatory tubercle, fcarce ever 'exceeding the fize of a pidgeon's egg.

Galànga minor, the leffer Galangal. This root

soot is ftomachic, cephalic, cordial and uterine. It difcuffes wind, eafes the pain of the colic, and cures all diforders depending on the weaknefs of the ftomach. The dofe is from gr. xv. to half a dram.

Gàlbanum, a gummy rofin.

- Galèga, Goat's rue. This has been accounted a great fudorific and alexipharmac. Where it grows in plenty it is eaten as a fallad.
- Gallæ, Galls. These are a great aftringent, and have been given in fluxes and hæmorrhages. They have a febrifuge virtue which has not been long discovered, for they will cure agues depending on a laxity of the fibres, if given from half a dram to a dram, as the fit is coming on:
- Gallium, Ladies bedftraw. This has been ' commended' against Hæmorrhages, and the falling fickness. The dose of the herb in powder is a dram. Some fay if it be drank as tea it will cure the gout.

Gambogia, Gumbooge.

- Gànglion, is an indolent tumour on the tendinous parts, chiefly the wrifts and feet.
- Gangraina, a gangrene, is the beginning of a mortification in a flefhy part. It begins in the integuments, and ipreading by degrees extends to the bone, and

forms a perfect sphacelus.

- Gastrocnèmium, the calf of the leg. Gastrocnèmius externus, is a muscle which arises fleshy from both processes of the thigh-bone in the ham, and constituting a fleshy belly, makes the outward part of the calf of the leg. The tendon
- joins the great tendon. Gaftrocnèmius internus, arifes fleshy from ' the external process of the fibula and makes the inner part of the calf of the leg. Its strong tendon uniting with the tendon of Gastronòmius externus, make the great tendon or Tendo achilles.
- Geniogloffum, a pair of muscles arising from the internal and lower part of the chin, and are inferted into the root of the tongue.
- Geniobyoides, muscles which arise from the external and lower part of the chin, and are inferted into the Os byoides.
- Genista, Broom. Sydenham ordered a pound of broom ashes to be put in two quarts of rhenish wine, of which three ounces is to be given thrice a day till the patient is cured of the dropsy.

Gentiàna, Gentian, a root.

- Gerànium Robertiànum, Herb-Robert. This has been accounted a great vulnerary internally and externally. It refolves coagulated blood, and cleanfes wounds and ulcers. The dofe of it in powder is a dram. A perfon frequently afflicted with fits of the gravel could find no relief, but from a decoction of this herb.
- Gilla Vitrioli, Salt of Vitriol. It is a naufeous vomit; the dofe is from a fcruple to a dram.
- Ginglymus, is an articulation like the hinge of a door.
- Glàndula, a Gland. Some glands are called conglobate or lymphatic, others conglomerate.
- Glastum, Woad. This is chiefly used by Dyers.
- Gladiolus làteus, yellow water flag, or water flower de luce. The root of this plant has been commended for flopping fluxes of the belly and hæmorrhages. But the recent juice has been found to purge when all other things failed, and carried off the water in a dropfy moft furprifingly. Eighty drops in a little fyrup of buckthorn was a dofe every hour or two. This was gradually encreafed to two drams every two or three hours. At laft it was given by fpoonfuls with one fourth of fyrup of buckthorn as the patient could bear the operation.
- Glaucoma, is a change of colour in the crystalline humour of the eye, with an opacity and diminution thereof.
- Glottis, is the chink of the Larynx, almost of an eliptic figure, and is enlarg'd and straiten'd by muscles and cartilages for the modulation of the voice in speaking and finging.

Glycyrrbiza, Liquorice, a root.

- Glutaèi, from YABTOS the buttock. They are three muscles, maximus, medius, and minimus, all which arise from the external superfices of the Ilium, Ischium, and Os sacrum. The maximus terminates four fingers breadth below the great Trochanter, the other two in the Trochanter itself.
- Gomphofis, a kind of articulation, like 2 nail drove into any place, as the teeth in the jaw-bone.
- Gonorrhoèa virulènta, a virulent Gonorrhœa or Clap, is the involuntary efflux of purulent matter from the penis with pain and heat of urine.

Gramen caninum, Dog-grass. Tho roots are

are aperient and diurctic. Some give a dram of the dry'd powder against the worms and rickets. The dose in decoction is an ounce.

526

Grana Paradifi, Grains of Paradife. They have nearly the fame virtues as pepper.

- Granàti Cortex, the rind of a Pomegranate. It is an aftringent, and is given in fluxes of the belly, the whites, and hæmorrhages. The *dofe* is from half a dram to a dram.
- Gratiola, Hedge-hyffop. The leaves are a great hydragogue, and work upwards and downwards. It is recommended in the dropfy; but it caufes intolerable gripes or fuperpurgations. The dry herb has been given to a dram, macerated in water or wine.
- Guaiacum, a wood by fome called Lignum fanEtum, and Lignum Vitx.
- Gummi, Gum. This is a concreted juice diffilling from trees and herbs; it is diffolvable in water and not inflammaable.

Gummi Aràbicum, Gum Arabic.

Gummi Ammoniacum, Gum Ammoniac.

- Gummi Tragacanthum, five Tragacanthæ, Gum Tragacanth. It is of a glutinous nature, and corrects the acrimony of the humours. It is good in coughs, hoarfe-
- nefs, and catarrhs, heat of urine, and excoriation of the bowels. The dofe is from half a fcruple to two drams. It is ufeful to make troches.
- Gutta Rosàcea, is a redness with tubercles in the face. Sometimes the nose is ftrangely affected with it, and becomes of an enormous fize.

H.

- Hæmatites, Blood-ftone. It is ufeful againft hæmorrhages, fpitting of blood, ulcers of the lungs, the whites, and fluxes of the belly; as alfo in the cachexy and fupprefilion of the menfes. The dofe in fine powder is from one fcruple to four.
- Hæmoptoica, are medicines to ftop spitting of blood.

Hæmeptysis, a spitting of blood.

- Hæmorrbàgia, a hæmorrhage or flux of blood.
- Hæmdrrhois, a flux of blood from the veins of the Anus. Sometimes it means the blind piles, which are tumors or varices in the anus, without any flux of blood.
- Halo, is the red or dufky arcola round the nipple of the breaft.

Hauftus, a draught, is a liquid medicine to be taken at one dofe. Hestica, a hestic fever, See Febris besties. Hedera terrèstris, Ground-ivy, a herb. Hedera arborea, the Ivy-tree. No part of

it is now in use.

Helleborus albus, white Hellebore, a herbe Helleborus niger, black Hellebore.

- Hemeralopia, is a defect in the eyes, and those that are afflicted with it can only fee in the day-time.
- Hemicrània, a pain in the head which affects one fide only.
- Hemiplègia, is a palfy of one fide of the body below the head.
- Hemitritadus, a semitertian ague. See Febris semitertiàna.
- Hepar, the Liver. This is the largeft of all the vifcera, for it takes up the greatest part of the *abdomen* above the *mefocolon*. It ferves to feparate the bile from the blood.

Hepatitis, the inflammation of the liver.

- Hepàtica nobilis, noble Liverwort. The leaves are faid to be cooling, drying, ftrengthening, and binding.
- Herba Paris, Herb Paris, true-love, or one berry. The internal use of it is not fafe.
- Hereditàrii morbi, Hereditary diseases, such as are deriv'd from the parents.
- Hermaphroditus, an Hermaphrodite. This is faid of late to be nothing but a woman with an enlarg'd *clitoris*; but if this be true, whence come the *teftes in labiis pudendi*, for fuch there are fometimes? To what' likewife muft we afcribe the beard on the upper lip, the flatnefs of the breafts, and the narrownefs of the hips. Thofe who can give a fatisfactory anfwer to thefe queffions can likewife tell why males, when depriv'd of their virility when young, as they grow up, have their hips greatly enlarg'd, and have no hair on their chins.
- Hermètice figillàre, to feal hermetically, is to heat the neck of a glafs till it is ready to melt, and then clofe it with a pair of pincers.
- Hernia, a rupture. This happens when the inteffines or *ementum* fall into the groin or ferotum. Sometimes there is a protuberance of the navel, which is call'd a navel rupture.
- Hernidria, Rupture-wort. This has been cry'd up for curing ruptures, but the experiments that are produc'd feem to depend more on external applications than the dose of the herb, which is a dram in powder, or two or three ounces of the juice in white wine. Others have

- have more lately call'd it a fpecific for weak fight, and advife to fprinkle the powder of it on bread and butter morning and evening, and fo eat it.
- Herpes exedens, a tetter, or little creeping ulcer.

Herpes miliàris, a Ring-worm.

- Hippogloffum, Double-tongue. This herb is faid to be vulnerary, good for ruptures in children, and is us'd as a gargle for the inflammation of the fauces. The dose is a dram and a half, to be taken every morning.
- Hippofelinum, Alexanders. The herb may be eaten as a fallad. The feed is carminative and good in the flatulent colic and afthma. The *dofe* is two fcruples or a dram.

Hirùdo, a Leech.

Homoplàta, the shoulder-bone or bladebone.

Hordeum deftichum, common barley.

Hordeum Gallicum, decorticated barley.

- Hordeum Perlàtum, is barley made into fmall round white grains refembling pearl. Barley is more cooling, and not fo clammy and nourifhing as oats or wheat.
- Horminum fatioum, Garden Clary. The leaves and feeds are antifpafmodic, and accounted excellent in the whites, hyfteric fits, and the colic. The leaves with the flowers may be drank as tea.
- Horror, a fhivering or fhaking, not fo great as trembling.

HumeEtantia, moistening medicines.

Humerus, the Shoulder.

- Humdres fanguinei. These humours were faid by the ancients to be bilious, pituitous, melancholic, and fanguineous. This distinction is now laid adde.
- Humbres Ocularis, the humburs of the eye. These are the aqueous, the crystalline, and the witreous.

Hydrárgyrus, Quickfilver.

Hydàtides, Watery bladders. They have been found in the abdomen of perfons afflicted with the dropfy.

Hydragdga, medicines to purge off water. Hydrocele, is a watery fwelling of the

fcrotùm. Hydrocèphalum, a dropfy of the head, a difeafe which fometimes afflicts chil-

dren. *Hydromel*, a mixture of water and honey.

Hydrophobia, the dread of water, a fymp-

- tom of the bite of a mad dog.
- Hydrops, the Dropfy. This is of three kinds, the Anafarca, the Afcites, and the Tympanites; which fee.

Hydrops ad màtulam, the same as Diabetes.

- Hygieine, is that part of medicine which teaches the method of preferving health.
- Hymen, is a membrane fometimes circular, fometimes femilunar, which firaiten's the wagina in virgins. It has an aperture into the wagina. The laceration of this in the first congress generally produces the Mosaic figns of virginity.
- Hybides, the forked bone at the root of the tongue.
- Hyofcy amus, the common black Henbane. This is anodynë, eafes pain, promotes fleep, and abates the acrimony of the humours. But it difturbs the mind, and brings ridiculous deliriums and fantaftical dreams. The roots, leaves, and feed, have all the fame effects. The feed has been greatly commended for fpitting of blood, and has been given from half a fcruple to a fcruple. However, it is an unfafe medicine, and ought to be entirely rejected:
- Hyofcy amus albus, white hendane. This is milder and fafer than the black.
- Hyo-Thyroides. These are two muscles which raise the *larynx*, and firditen the glottis or chink.

Hypercatharfis, exceffive purgation.

- Hypèricum, St. John's wort. This is given inwardly againft wounds and ulcers; and has been accounted of great efficacy to rectify all diforders of the mind. A handful of the tops of this herb in flower are given in dècoction, or a dram of the herb or feed. Some commend it highly for difficulty in making water, and for ulcers of the kidneys or bladder.
- Hypochondria. These lie on each fide the Epigastric region above the navel, and reach from the spurious ribs to the Ilia. The liver is in the right Hypochondrium, and the spleen in the left.
- Hypochondriaca affectio, the Hipochondriac difeafe. This is a fpafmodico-flatulent diforder of the ftomach and inteffines, whereby the periftaltic motion is perverted, and irregular motions are produc'd, difturbing the whole animal æconomy.
- Hypocifiidis fuccus, the inspissated juice of Hypociftis. It is like Acacia and has been used against hæmorrhages and fluxes. The dose is from half a dram to a dram.
- Hypogaffrium, the lower part of the belly. ' The Hypogaffric region begins two fin-
- gers breadth below the navel, and reaches to the Os pubis. On each fide lie the Ilia.

Mm

Hypotyon,

- Hypòpyon, is a collection of pus under the Cornea of the eye, or between its Làmina.
- Hypòftasis Urinæ, the sediment of the urine.
- Hystèrica Passio, the hysteric difease. This is a spasmodico-convulsive affection of the Genus nerwosum, proceeding from corruption or retention of lympha and blood in the Uterus, infecting the nervous parts of the body more or less, by the nerves of the Os sacrum, the loins and the whole spinal marrow. It is attended with a long train of symptoms, of which a strangulation of the fauces, and an intercepted breathing almost to sufficient of the principal.
- Hyff dpus, Hyflop. This firengthens the fromach, helps digeftion, promotes expectoration, and is of great fervice in the humoral afthma. The dofe of the leaves in powder, is a dram, in decoction a handful.
- Hystèrica. Remedies appropriated to cure the diforders of the Uterus.

Jalapium, Jalap, a root:

Japonica Terra. Japan earth.

- Jassininum, Jeffamy. It is of no use in medicine.
- Iberis, fciatica Creffes. This powerfully incides and attenuates pituitous humours in the flomach, helps digeftion, and is good in the hypochondriac difeafe. Half an ounce of the powdered leaves taken in wine in a morning fafting, is a great diuretic, and excellent in the dropfy. Externally the frefh leaves or roots mixt with lard and laid to the part eafes the pain of the hipgout.
- IEthyocolla, Ifing-glafs, or fifh-glue. This made into a gelly and taken by fpoonfuls from half a pint to a pint in a day, may be very useful in an acrimonious flate of the humours, thin catarrhs and fpitting of blood.
- Itterus, the jaundice. This appears first with a yellow colour in the white of the eye, which is followed by a yellownefs of all the fkin. The urine is of faffron colour, and the excrements are pale.
- Idiopathia, a primary difease which depends on no other.
- Idiofynaràfiz, Idiofyncrafy. This means fomething peculiar to a particular temperament.

- Jejunum intestinum. This is the fecond fmall intestine. It is called jejune, because it is frequently empty.
- Ilia, are those parts of the fides which join to the hypogastric region: Iliaca Paffio, the Iliac passion: This is a
- Iliaca Paffio, the Iliac paffion: This is a most acute pain in the small intestines tending to an inflammation, in which the peristaltic motion of the guts is inverted, and the contents of the intestines are thrown up by the mouth.
- Ilium, the third fmall inteffine. It begins where the jejùnum ends, and is terminated by the Cœcum.
- Ilium Os, a bone which is part of the Os innominatum. It is fo called becaufe it contains the Gut Ilium.
- Imperatòria, Masterwort. The root is good in all cold diforders of the bowels, brain and nerves. It opens obstructions, cures the jaundice, and is good in asthmas. The dose is from half a dram to a dram. Externally mixt with a little hogs-lard it cures obstinate ringworms.
- Impetigo, is a dry fealy crufty itch which leaves bloody fpots after the feabs are taken off, which is fucceeded by a painful heat, and an intolerable itching. It is hard to cure and apt to return. The higheft degree of it is called a Leprous Pfora.
- Incarnàntia and Incarnativa, are medicines supposed to generate flesh.

Incisores Dentes, the fore teeth.

- Incrassinia, medicines which thicken the humours.
- Incubus, the Night-mare, an opprefilion in fleep, in which a perfon flrives to fpeak and move but cannot. Some think there is a fort of weight laid on their breafts, hence they have fuppofed themfelves hag-ridden.

Index, the Fore-finger.

- Indicans, an Indicant, or thing indicating, is every circumstance that accompanies the difease; and the judgment that is made in confequence of the circumstances is termed the indication. The means or remedies which these circumstances direct to be made use of are the indicata, or things indicated.
- Inflammation, an Inflammation, ftrictly fpeaking, is a very hot tumour, in flefhy and fanguineous parts, with rednefs and pain. It proceeds from a preternatural congestion of blood, or other humours which distends and presses the nervous membranes.

Infusio,

I.

Infusio, Infusion, is the extraction of the ftrength of any medicine, by a proper liquor with or without heat.

Inguen, the groin.

- Innominatum Os, the namelefs bonc. It confifts of three bones, the Ilium, the Os Pubis, and the Ischium. Thefe are joined by cartilages in children, till they are feven years old, but in adults they unite into one bone.
- Inquietùdo, Reftlesinefs, is when the patient moves himfelf from one fide of the bed to the other, throwing his arms about, drawing up his feet and legs, and never continuing long in a posture. Insèssius, a half bath.
- Inspiratio, is the induction of the air into the lungs by the mouth, nostrils, and aspera arteria.
- Iuspiffatio, is the reducing any liquid to a proper confistence by evaporation.

Insultus, is the first attack of a difease.

- Integumentum, is the covering of any external part.
- Intercostales Musculi, the intercostal mufcles. These are very thin fieshy planes, which occupy the intersfices of the ribs, whose fibres run obliquely from one fide to the other. One of the planes is external, the other internal. They are divided by an extremely thin and fine cellular membrane, and are forty-four in all, that is, twenty-two of a fide, eleven internal, and as many external. Intermittens Febris sintermittens.

Intermittens Febris, see Febris intermittens. Internódium, this is the name of the bones

- of the fingers, as they are mutually join'd and articulated among themfelves. Interòffei Mùfculi, Muscles between the
- bones of the fingers and toes. Intertrigo, a galling or excoriation. This frequently happens to perfons not us'd to ride, and to children from the fharpnefs of their urine.

Ipecacuanha, a root.

- *Îris Florentina*, Florentine Orris,' the root. *Iris purpurea nofiras*, Flower-de-luce. The juice of the fresh root is a hydragogue, and given to two or three ounces works upwards and downwards; but it is acrimonious, and can be given fafely to very few, though fome recommend it in the dropfy.
- Iris, the varioufly-coloured circle in the eye, which in fome is black, grey, hazle, Sc.

Ischias, the Hip-gout. See Sciatica.

Ischium, a Bone. It is the lower and posterior part of the Os innominatum.

Ischuria, a suppression of urine.

Juglans, a Walnut-tree. The powder of the dry'd inner bark is a vomit; as alfo of the Iùli or Catkins, but milder. The dofe of each is from half a dram to a dram. Some cry up the catkins as a most excellent remedy against the falling fickness and bloody flux, in which cases the dose is from two scruples to a dram.

529

Jugularis vena, the jugular vein.

Julapium or Julipum, a Julep.

- Iùlus, a Catkin, an aggregation of flowers of the fame fex fixt to a kind of an axis. It is otherwife called Amentum.
- axis. It is otherwise called Amentum. Jujubæ, Jujubs. A pectoral fruit which sheaths the acrimony or tickling phlegm. It allays coughs, abates the heat of urine, and eases pains of the bladder. The decoction may be used as common drink. The proportion is an ounce to three quarts of water.
- Juncus odoràtus, Camel's-hay. See Schanànthus.

Juniperus, the Juniper-tree. Jupiter, Tin.

K.

Kali, Glaffwort. This is of little or no ufe in medicine.

Kermes, the juice is only used with us.

L.

Làbdanum, a Rofin. It is feldom given inwardly, yet is has been ufed to firengthen the ftomach, to help digeftion, to ftop defluxious, and againft the bloody flux. The dofe is a dram. Outwardly apply'd to the head, it is good againft cold diforders of the brain; laid to the pit of the ftomach, it is a remedy againft a weaknefs of that part; and to the temples, it fometimes cures the toothach.

Labium Laporinum, a Hare-lip.,

- Lacca, Lac, by fome improperly called Gum-lac. It has been given in obstructions of the viscera, the dropsy, and the jaundice; as also in the whites and rheumatism. The dose is from half a dram to a dram; diffolv'd in spirit of wine it cures the laxity of the gums.
- Puncta Lachrymàlia. These are two little holes, one in each eye-lid, over against each other in the corner of the eye next the nose. They receive the superfluous moisture of the eye, and discharge it into a reservoir call'd the lachrymal fack.

Lasonicumy

Mm 2

Laconicum, a Bagnio.

Làctea Febris, the milk-fever. See Febris laEtea.

- Lastùca, Lettuce. It is anodyne, cooling, and relaxing, and faid to be good in hypochondriac and fcorbutic cafes. The dose of the juice is from an ounce to two; of the feed in emulfions, from a dram to a dram and a half.
- Lagopthalmus, is a diforder of the eyes, wherein the upper eye-lid will not cover the eye.
- Lambdoides, is the posterior future of the skull, which divides the bone of the occiput from the bones of the Bregma and the temples.
- Làmium album, white Archangel. It is of great use against the whites and hæmorrhages of the womb. It may be drank as tea.
- Lapis Bezoar Orientalis, Oriental Bezoarstole. This abforbs acids, abates acrimony, and refolves grofs humours. The dose is from ten grains to fourteen. Prepared oister-shells will answer the fame purpofes.

Lavendula, Lavender. Laureola, Spurge Laurel. The internal ufe of it is dangerous.

Laurus, the Bay-tree.

Laxàntia, laxative medicines.

- Lapis Lazuli, the Azure stone. It is will vomit and purge, but is never ufed.
- Lèmnia Terra, Lemnian earth. Is an abforbent. The dofe is from half a fcruple to half a dram.
- Lens vulgàris, Lentils. They are of no ufe in phyfic.

Lentigines, Freckles.

- Lepidium, Dittander or pepper-wort. This is a great diuretic, opens obstructions. of the vifcera, incides vifcid phlegm adhering to the flomach, and helps di-The leaves are good in fcorgeftion. butic and hypochondriac diforders. The dose of the leaves in powder, and taken in wine, is from two drams to half an ounce.
- Lepra, the Leprofy. It is a dry fcab with itching, which changes into fcales like those of fish. It appears first on the knees and elbows, and is rough to the touch, fpreading by degrees over the whole body.
- Lepra Arabum, the leprofy of the Arabs. It is the fame as the Elephantiasis of the Greeks, and is a most filthy difease, by fome called a cancer of the whole body.

Lethargus, a Lethargy. It is a heavy and

perpetual fleep, with fcarce any intervals of waking, and is attended with a frequent pulse.

- Levàtor, a muscle of the scapula is so call'd, as alfo of the anus.
- Leucophlegmàtia. This is a milder kind of a dropfy anafarca, and more eafily cured.
- Levisticum, Lovage. The root strengthens the stomach, attenuates viscid humours, eases the colic, helps the affhma, cures the jaundice, and opens obstructions of the viscera. The dose is from half a dram to a dram; and of the feed, which is good in the fame cafes, from a fcruple to half a dram.
- This is drying and Lichen, Liverwort. binding, and has been formerly given with fuccefs against confumptions. The dose in powder is a dram.
- Lichen cinèreus terrèstris, Ash-coloured ground Liverwort.
- Lientèria, Lientery, is a flux of the belly, wherein the aliment comes away but little altered.
- Ligamentum, a Ligament, is a white fibrous clofe-compacted fubftance, more fupple than a cartilage, and more hard to break.
- There is Lignum Rhodium, Rose-wood. an effential oil drawn from this, which at prefent is of no other use than to fcent pomatum.
- Limònia Mala, Lemons.
- Lilium Convallium, Lilly of the valley. The flowers are accounted cephalic and nervine. They are recommended against the apoplexy, epilepfy, vertigo, convultions, the palfey, catarrhs, and other colds diseases of the head. The dose of the flowers in powder is a dram, of the conferve half an ounce. It is likewife an errhine.
- Linària, Toad-flax. This is recommended for external ufe, to refolve congeal'd blood and lympha, to abate their acrimony, to relax the over-tenfe parts, and to eafe pain.
- Linea alba, the white line. It runs from the cartilago enfiformis to the juncture of the os pubis, dividing the abdomen in the middle. It is formed by the tendons of the abdominal muscles.
- Lingua cervina, Harts-tongue. It is faid to open obstructions of the vifcera, to cure hysteric diforders, to stop loofeneffes and fpitting of blood. The dose of the herb in powder is a dram, or two.
- Lingua, the Tongue. It is divided into the bafis, the point, the fuperior and inferior furface, and the edges. The fuperior

fuperior furface is divided into two parts by a line call'd the Linea mediana. The inferior furface is about half the length of the upper. It is composed of foft fleshy fibres, intermixed with a medullary web of a fingular kind. They are ranged very differently; fome are bounded by the fubftance of the tongue, and others go to form muscles. The whole extent of the fuperior furface is covered with thick membranes of a different texture, which is full of papillæ. Befides that it has a very fine membrane or kind of epedermis, which likewife covers the inferior furface, but without papillæ. Some of the papillæ have heads, fome are femilenticular or orbicular, and others are downy. The tongue confifts of three forts of fibres, longitudinal, transverse, and vertical, which are intermixt with each other, and may be called internal muscles.

- Linimentum, a Liniment. It is an external medicine of a middle confistence between an ointment and an oil.
- Linum, Flax. The feed, and oil of the feed are in use.
- Linum cathàrticum, Purging Flax: It is accounted good againft rheumatic pains, tertian and quartan agues; as alfo for the dropfy. It is common to take the decoction of a handful in wine or ale as a ftróng purge. Likewife a dram or two of the bruifed leaves, or a dram of the powdered leaves is a dofe.

Lipoth'ymia, a fainting fit.

Lippitudo, Lippitude, a diforder of the eyes, whereby they are closed up in the night-time and opened with difficulty in the morning.

Liquoritia, Liquorice, a root.

- Lithàrgyrus, Litharge, a preparation of lead. It is used to make plasters.
- Lithiafis, a ftone in the kidneys, bladder, or other parts.
- Lithitòmia, Lithotomy, a cutting for the ftone.

Litbotomus, one that cuts for the stone.

- Lithontriptica, medicines faid to break the ftone.
- Lithofpermum, Gromwel. This is a powerful diuretic, and good to cleanfe the urinary paffages, as well as to abate the fharpnefs of the urine. The *dofe* of the feed is from half a dram to a dram, in emulfion to half an ounce.
- Lixivium, a Lye, is falt diffolved in water. It is generally made with Potafhes.

 Mm_3

Lixivium fal, a lixivious falt. It is an alkalious fixt falt.

- Locàlia Medicamènta, local medicines. Thefe are external remedies apply'd to a certain place or part.
- Loboch, a Lambative.
- Lochia or Lochia, the purgations of childbed women after the exclusion of the birth and after-birth.
- Longiffimus dorfi, the longeft muscle of the back. It rifes from the Os facrum, and the posterior spine of the Ilium, and terminates partly in all the vertebræ of the spine of the back, particularly in their transverse apophyses, and partly in the ribs.
- Lotus urbàna, fweet Trefoil. It is faid to absterge, digest, ease pain, resolve coagulated blood, and heal wounds. A dram of the tops in flowers boil'd in wine, is faid to cure the pleurify. The *dose* of the feeds is a dram.
- Lucius, a Pike. The jaw bone is faid to have the fame virture as crabs-eyes, and to be efficacious against the pleurify and peripneumony. The *dofe* in powder is

from half a dram to a dram. Lues venèrea, the French pox.

- Lupinus, Lupins. The meal is one of the refolving farinas.
- Lùjula, Wood-forrel. It is cooling and proper to terminate the fervor of blood, as well as abate the acrimony of a cauftic bile: with fcurvy-grafs and other things of the fame kind, it is proper for the fcurvy. It may be taken any way at pleafure.
- Lùmbrici, Earth-worms. They are diuretic and good in all nervous diforders. Some account them a fpecific in convulfions. The *dofe* in powder is from half a dram to a dram.
- Lunàtici, Lunatics. They are fo called from Luna the moon, becaufe their madnefs is increafed at certain phafes of that planet.
- Lùpulus, Hops. Thefe are chiefly employ'd in making malt liqours. The tops boil'd refemble asparagus.
- Luxàtio, Luxation, is the putting a bone out of joint.
- Lympha. This is a fluid fecreted from the arterial blood, and is transparent, aqueous, and imbuted with a fubtile gelly. It is carried back to the heart from the outward and other parts of the body by peculiar pellucid veffels called lymphatics. It feems to be the watery part and recrement of the nutritious juice. Macis,

M.

Macis, Mace, a spice.

- Màcula Hepàtica, a liver spot. This is a dusky spot as big as the palm of the hand, and appears in the groin, back breast, and other parts of the body. It is a sign of the dissolv'd state of the blood.
- Magisterium, a magistery. A powder gain'd from substances by solution and precipitation.
- Magma. The remainder after the expreffion of juices; as also after infusion, decoction, or distillation.

Magna artèria, the great artery.

Majoràna, Marjoram, a herb.

- Malàbathrum, the Indian leaf. It is only ufed in Venice Treacle and Mithridate. Malàcia, the longing of pregnant women. Malicorium, the rind or peel of a pome-
- granate. Malignus Morbus, a malignant difeafe. It
- is attended with a folution and putrefaction of the humours, and generally makes its onfet with a fudden lofs of ftrength.
- Malleus, is one of the little bones of the ear.

Malva, Mallows, a herb.

- Mamme, the breafts of women. They are compounded of numerous glands and lactiferous ducts, ferving for the fecretion of milk. In pregnant women and thofe that give fuck, the magnitude is enlarged. Before puberty, and in virgins they are lefs. In countries where they go naked, and there is no preffure on the breaft, virgins have the Ardolæ about the nipples, rifing up like half a globe, which occafioned an ignorant traveller to affirm in one of the magazines, that he had feen women with one breaft upon another.
- Malva arborea, Hollyhocks. It is emollient, but never used in physic.
- Mammiformes, or Mamillares Proceffus, Mammiform processes. Those are two Apophyses of the temporal bones.
- Mandràgora, Mandrake. The leaves of this are narcotic, and have been only used in external applications.
- Mania, Madnefs, a depravation of the imagination and judgment, with heat and raving: but without a fever or dread.
- Mánica Hippdcratis, Hippocrates's bag. A flannel bag-of a pyramidical figure, through which liquors are firained.

Manipulus, a handful, as much as can be contained in the hand. Herbs are often prescribed thus; but it would be better to substitute a more determinate weight ' in its stead.

- Manna, a limpid liquor which flows from a tree, and afterwards coagulates.
- Maràsmus. This is a difease which happens to old persons when they fall into a corruption of the viscera. The appetite is quite lost, there is constant heat, the strength is exhausted by degrees, and at length quite fails.
- Margaritæ, Pearls. These when prepared, are absorbent, but have no more virtues than oister-schells. The dose is from a scruple to half a dram.

Marrhubium, Horehound, a herb.

Mars, Iron or Steel.

- Marum Syriacum, Syrian herb Mastic. The use of this has been long laid aside.
- Marum vulgàre, Herb Mastick. This is counted an efficacious nervous medicine, and is more powerful than marjoram. The dose of the leaves in powder is half a dram; used as an errhine, it is faid to purge and strengthen the brain, and to restore a lost smell.
- Mastiche, Mastich, a rosin.
- Massetteres, Muscles which arise from the inferior and interior part of the Os Jugale, and are inferted into the external superficies of the angle of the Maxilla.
- Maftoidaeus Músculus. It arifes from the Sternum and Clavicula, and is inferted into the external furface of the mamillary or maftoide process.
- Mastoides, are the fame as the mammiform or mammillary processes.
- Matricària, Feverfew, a herb.
- Maturàntia, Suppurating medicines.

Meàtus auditorius, the auditory canal.

- Mechoacànna, the root of an American Convolvalus. It purges ferous humours, and is reckoned good in catarrhous and cold difeafes, in the epilepfy, afthma, King's-evil, gout, and French-pox. It is faid to open the obftructions of the wifcera, and is a very fafe purge in the dropfy. The dofe is from one dram to two.
- Mediàna vena, a vein in the arm between the cephalic and bafilic.
- Mediaftinum, a membrane dividing the thorax and lungs into two parts. It is formed of a duplicature of the pleura, and includes the heart between its two lamellæ. It is connected to the fternum before, and to the vertebræ behind.
- Medicina, Medicine, is the art of healing, or of preferving health while prefent, and reftoring it when abfent.

Medulla

Medulla, the marrow.

- Medulla oblongata. This is the more compact basis, or inferior medullary fubstance of the Cèrebrum and Cerebellum. It unites as it were into a tail, and is extended to the great hole of the Os Occipitis. It is the root of the nerves of the brain, and the origin of the fpinal marrow. It collects the fluid which is feparated in the cortex of the brain, from whence it is transferred to the Senfória and other parts, for the continuance of fense, and the preservation of motion. Hurts in this are mortal, but not fo in the reft of the brain.
- Medulla Offium, the marrow of the bones. This, while fresh, is the most fubtile of all kinds of fat, and is good internally in an acrid fcorbutic difposition of the humours.
- Medulla spinalis, the spinal marrow. It is a continuation of the Medulla oblongata, and as it were the tail of the brain. It is included in the boney canal of the vertebræ, and is extended from the head to the end of the Os facrum.
- Mel, honey. This is very penetrating, aperient, and detergent. It diffolves grofs humours and promotes expectoration. It is apt to turn bilious. An ounce or two may be taken at a time.
- Melampodium, black Hellebore. See Helleborus niger.
- Melanagoga, Melanagogues, Purgers of choler.
- Melancholia, is a lasting obstinate delirium, with a fixt attention of the mind upon a particular object, but without a fever. There is likewife a constant dejection, dread, and fadness, without any evident caule.
- Melilotus, Melilot. The leaves and flowers are emollient, and fometimes ufed in
- fomentations, cataplasms, and clysters. Melissa, Balm. The leaves are cordial, cephalic, stomachic, and useful in all nervous diseases. It is likewise uterine, and revives pregnant women in danger of abortion, as well as eases spurious pains after child-birth. When the menses are deficient, they are of fervice in uterine baths and pediluvia.
- Melo, a Melon. The feed is one of the greater cold feeds.
- Membrana, a Membrane. This is a flexible texture of fibres croffing each other on the fame plane.
- Membràna adipòsa, is a texture of very fine membranous leaves, in which there are an infinite number of fine transpa-

rent vesicles or cellulæ, which contain fat. It is placed on the internal furface of the skin, and enters between the fibres of the muscles.

533

- Menses, are the fanguineous excretions from the uterus and vagina, which happen every month to women apt for generation.
- Menstruum, any liquor is fo called which is used as a diffolvent, or which is defign'd to extract the virtues of ingredients.
- Mentha vulgàris, Garden or Spear-mint. Mentha piperitis, Pepper-mint.
- Mercurius, Quickfilver. Mercuriàlis, French Mercury. The virtues
- of this are doubtful. It is fometimes ordered in clyfters.

Mesaraeum, the Mesentery.

- Mesaráica Vasa, the mesenteric vessels.
- Mesentèrica Vasa, the mesenteric vessels.
- Mesenterium, the Mesentery. This is a thick fat membrane placed in the middle of the inteftines. When separated from them it is three ells in circumference.
- Mefocolon, is that part of the mesentery connected to the grofs intestines.
- Méspilus, a Medlar-tree. Medlars are aftringent, but never used in physic.
- Meum Athamanticum, Spignel. The root is aromatic, carminative, attenuating, and ftrengthening. It is accounted good in flatulencies, the gripes and moift afthma. The *dofe* is from half a dram to a dram.
- Mezèreon or Mezeradon, Spurge Olive. It is a draftic purge, and some give three of the berries against the dropfy; but it is unsafe.
- Metacarpus, four bones of the hand next to the fingers.
- Metallum, a Metal. There are seven metals, gold, filver, copper, iron, tin, lead, and quickfilver. Some reject this laft from the number, because it is not malleable.
- Metaftafis, the removal of a difease or hu mour from one part to another.
- Metatarsus. These are five little bones connected to the bones of the Tarfus, and constitute the bottom of the foot.
- Miasma, is the infectious matter of epidemic diseases, and is very noxious to the vital fpirits.
- Milium, Millet. The feed is more used for aliment than for medicine.
- Millefolium, Yarrow. This is a mild aftringent, and is recommended in a debility and laxity of the fibres, in hee morrhages and fluxes of every kind, to prevent

Mm4

534 An Explanation of the Terms of Art.

prevent abortion; as a prefervative against the gravel, and as a most useful remedy for hypochondraic and hysteric fits. In hæmourhages, loosenesses and incontinence of urine it may be drank as tea. The dose of the herb in powder is from one dram to two. In the whites and simple gonorrhæa, an ounce of the juice will be proper.

Millepedae, Hog-lice or Wood-lice.

Minium, Red-lead.

Miferere mei, the iliac Passion.

- Mons veneris, the superior part of the Pubes in women.
- Morbili, the Measles. See Febris Merbil-Idfa.

Morbus, a Disease.

Merbus Règius; the Jaundice.

Morfus Diaboli, Devils Bit. This is alexipharmac, and faid to be good in the quinfey and ulcers of the mouth and throat of every kind. The dole of the juice of the leaves and roots is from one ounce to two.

Moschàta nux, a Nutmeg.

Moschus, Musk.

Morus, the Mulberry-tree. Ripe mulberries are cooling and render the belly flippery; used in gargles they are deterfive. The bark of the root is faid to open obstructions of the liver and spleen, to ftop loosenesses and to kill worms. The dose in normalize a down

The dofe in powder is a dram.

Mucago, Mucilage.

Mucilàgo, the fame.

- Mucus, is a thick, vifeid, liquid excrement, which flows to the noftrils and palate.
- Mucus inteffindrum, is a kind of viscidity, proceeding from the glands and lines the inteffines, to defend them from tharp acrid humours.
- Muriàtica acrimènia, muriatic Acrimony. This is a fharpnels of the humours fuppofed to approach to the nature of fea falt, as in the fcurvy, melancholy, &c.
- Majculus, a Muscle, is the inftrument of motion; or a part of the body defigned for the performance of voluntary motion. It is divided into the body or belly and two extremitics, which are generally whitish and are called *tendons*, its action confists in the contraction of the belly.

Mydriafis, is too great a Dilatation of the pupil of the eye,

Myològia, Myology, is that part of anatomy which treats of the ftructure, fituation and functions of all the muscles of the body.

- Mydpia sive Myopiasis, short or near-fightednets.
- Myops, a perfon who is near-fighted.

Myrobàlani, Myrobalans. A fruit brought from the East Indies, they are now never used.

- Myrrha, Myrrh. A gummy rofin.,
- Myrrhis, fweet Cicely, of the fame nature as chervil.

Myrthus, the Myrtle-tree. The berries are an aftringent but never uled.

N.

- Nopus dulcis, navew gentle. The feeds are an ingredient in the Venice-treacle.
- Napus fylvestris, rape. The feeds are faid to be detergent, strengthening, and to open obstructions of the viscera. The dole is from half a dram to a dram.
- Narcòtica are medicines that induce a ftupor and eafe pain.

Nardus celtica, celtic nard.

- Nardus indica, Indian fpike-nard. At prefent their only use is in mithridate and venice-treacle.
- Nafturtium aquàticum, water-creffes. The leaves are diuretic, incide grofs humours, open obstructions of the viscera, are a great antifcorbutic, and are good in many chronic difeases. They also purify the blood and humours. They are eaten as a fallad, and the dose of the juice is from one ounce to two.
- Nafturtium hortonfe. Garden-creffes. They have the virtues of the former but weaker. The dofe of the juice is from two ounces to three.
- Nates cèrebri, are two orbicular prominen-, ces of the brain, behind the thalamus of the optic nerves.
- Naviculare os, is the third bow of the tarfus in both feet.
- Naufea, is a kind of loathing and inclination to vomit.
- Nèpeta, Nep or Catmint. The leaves are uterine and promote the menfes. They open obfiructions of the *vifcera*, cure the jaundice, and are good in coughs and the afthma. The dofe in powder is half a dram.
- Nephriticum Lignum, Nephritic Wood. It was effeemed good against the gravel but has lost its credit.

Nephritis, an inflammation of the kidneys. Nephros, a Kidney.

- Nervi, the Nerves, are little bundles of transparent, and tenfile filaments, whose fides are united to each other by the means of membranes. There is an exceeding fine fluid passes through them from the brain to the extremities.
- Neurològia, Neurology. A treatife of the nerves.

Nicotiànas

Nicotiana, Tobacco.

Nigella, Fennel Flower. The feeds promote urine and the menfes, incide grofs phlegm in the lungs, kill worms, and are faid to be a fpecific in agues. The dofe is from two fcruples to a dram.

Nitrum, Salt Petre.

Nofocomium, a Hospital.

Nucha, the Nape of the Neck.

Nummulária, Moneyworth. It is a vulnerary herb, and good in all hæmorrhages and fluxes. It is likewife an antifcorbutic, and commended againft hectics in children. The dofe in Powder is half a dram.

Nux Moschàta, a Nutmeg.

- Nux piftàchia, the Piftachio or Fiftic Nut. It is analeptic and good in emaciated habits.
- Ny Elolopia, a Diforder in the Eyes, when the patient can fee best in the night.
- Nymphæ, are two membraneous Parts of the Pudèndum Muliebre. They are reddifh, carvernous, fometimes large and fometimes little. They are continued to the prepuce, and joined to the interior fide of the labia.
- Nymphaea alba, White-water-lilly. The root is given in ptifans, to allay heat of urine, in all internal inflammations, burning fevers, watching and other cafes where it is neceffary to curb the inordinate motion of the blood and fpirits. Cut lengthwife and applied to the foals of the feet they have cured tertian agues. The dofe in decoction is from two drams to half an ounce; of the dried root from half a dram to a dram.

- Obtundentia, are Medicines which sheath acrid humours.
- Ochra, yellow Oker. It is used only as a paint.

Occiput, the posterior part of the skull.

- Ocimum, bafil. The leaves are faid to be cordial, pectoral and cephalic. Some drink it as tea againft pains of the head.
- it as tea against pains of the head. Oculus, the Eye. This is the external organ of fight. The bulb of it is made up of tunics, humours and vessels. The tunics are, 1. the albuginea, adnata or conjunctiva; the white of the eye. 2. Cornea, which is transparent, convex, and divided into feveral lamellæ. 3. Scleròtica. This is hard, opake, and is extended from the cornea to the optic nerve. 4. Choroides. It is feated immediately under the Seleròtica, whose interior lamélla is called Ruyschiana. It is full of vessels and

imbuted with blacknefs. 5. The Uvea. This is the anterior part of the Choroides, and may be feen through the cornea. The anterior part is coloured and is called the Iris. In the midft of this is the pupil, which is round, and capable of being dilated and contracted. The posterior furface is black, which being wiped off, the Sphincter of the pupil appears with orbicular fibres. There are likewife ciliary fibres for the dilatation of the pupil. The fpace between the uvea and the cornea is called the anterior chamber of the eye; and that between the uvea and the crystalline humour is termed the posterior. 6. Rètina, This is a very tender, and, as it were, a mucous tunic, being the expansion of the optic nerve in the bottom of the eye, and is the primary part of the eye and fight. The bumours of the eye are three. The Aqueous fills both chambers of the eye, and in which the Uvea fluctuates. If this is loft it is foon repaired. The Vitreous. This is like gelly and fills the posterior part of the eye, being contiguous to the Retina. The Crystalline. This is more folid than the reft and is like a glass lens, lying in a pit of the vitreous There is likewife an exceedhumour. ing fine tunic called Arachnoides. It is vafculous and furrounds the cryftaline and vitreous humours. By the affistance of this the cryftalline lens is included in a finus of the vitreous humour; which being broke or cut the lens fall down. Odentàlgia, the Tooth-ach.

- Oedema, is a cold, lax, foft, whitifh tumor without pain, arifing from a pituitous caufe, and will pit when prefied with the fingers.
- Oesophagus, the Gullet; it reaches from the fauces to the flomach.
- Olea, the Olive-tree. Its fruit and oil. This laft is emollient, lenient and fheathes all kinds of acrimony, whence it is excellent againft corrofive poifons of all forts. It loofens the belly, mitigates gripes, eafes coughs, relaxes the urinary paflages, is good in the gravel and kills worms. Taken by fpoonfuls, it has cured the bloody flux. It is good in clyfters to foften the excrements.

Omphalocèle, a Rupture of the Navel.

Olibanum, a Rofin. It is commended in various difeafes of the head and breaft; and in fluxes of the belly. Some account it a fpecific in the pleurify. It fheathes acrid humours. The dofe is from a fcruple to two drams.

Ononis

^{0.}

- Ondnis, Reft Harrow. The root refolves infpiffated humours, opens obfructions of the Viscera, cleanses the kidneys and bladder; and cures a suppression of urine. The dose of the bark of the root is a dram.
- Ophiogloffum, Adders Tongues. The leaves are accounted a great vulnerary inwardly and outwardly. The dofe in powder is a dram.
- Ophthàlmia, the inflammation of the eye. It is attended with a pricking pain, and the veffels of the white of the eye are turgid with blood.
- Ophthalmica, Medicines against the diforders of the eyes.
- Opiàta and Opiátum, have been used to fignify electaries.
- Opifibitonos. A convultion of the neck and fpine backwards.
- Opium, a gummy Rofin.
- Opodeldock, the fame as the faponaceous liniment.
- Opobàlfamum, Balm of Gilead. This will ferve the purpofes of most balfams if it can be met with genuine. The dose is from fix drops to half a dram.
- Opòponax, a gummy rofinous juice concreted into drops.
- Opticus Nervus, the optic Nerve.
- Orexis, Hunger.
- Orgàfmus, a turgescence and violent motion of the humours.
- Origanum, wild Marjoram.
- Orobus, bitter or wild Vetch. The meal of the feed has been ufed outwardly as a refolvent.
- Orthopnæ'a, Shortness of breath.
- Ory'za, Rice: This is good aliment in fluxes of the belly and a thin acrimonious flate of the juices.
- Offeocolla, the Bone-binder, a foffile fubftance. It is faid to have a peculiar virtue in generating a Callus; as alfo to be good in the whites and intermitting fevers. The dofe is from one dram to two.
- Os Sèpiæ, Cuttle-fish Bone. It is an abforbent, and faid to be good in the whites. The *dofe* is from one fcruple to two. Some use it as a dentrifice.
- Offredrum Teftæ, Oifter-fhells. Thefe are well known as an abforbent. The doje is from half a dram to a dram.
- Ofteologia, Ofteology. A defcription of the bones.
- Ovàrium, an Ovary. This is the female Teftis. The use of it is uncertain, notwithstanding all the fine things that have been faid about it.

Oxy'cratum, Oxycrate. A mixture of water and vinegar.

Oxydercica, Medicines to sharpen the fight. Oxy'gala, four milk.

- Oxymel, a mixture of Vinegar and Honey. Oxylàpathum, fharp pointed Dock. The root is faid to open obftructions of the vifcera and to have a faint refemblance of the virtues of rhubarb. The dofe in decoficion is an auror. It has here for
- decoction is an ounce. It has been used externally in liniments for the itch.
- Ozaèna is an ulcer in the infide of the nofe, with a fetid fmell and a fanious or purulent flux, with or without the corruption of the bones or griftles. It is generally a fymptom of the *French* pox.

P.

Pædnia, Piony, an herb.

- Palmàris, a Muscle. It rifes from the internal protuberance of the humerus, and is inferted with a broad tendon into the palm of the hand.
- Pàlpebræ, the eye-lids.
- Palma, the Palm-oil tree. The oil is used externally to ease pains in the nervous parts; as also of the gout and rheumatism, to relax contractions and to attenuate cold humours.
- Panacea, an universal medicine.
- Palpitàtio Cordis, a Palpitation of the heart. A convultive motion of the heart.
- Pànicum, a Seed. In fome places they make bread of it.
- Papàver album, white Poppy.
- Papaver rhæas, wild Poppy.
- Papilla, the Nipple of the breaft.
- Pappus, a fort of down that adheres to Seeds, as in the Dandelion.
- Pàpulæ, Puffules or Pimples.
- Parasentifis Abdominis, a Tapping of the abdomen. This is performed with a trocher to let out the water in the dropfy.
- Paracentèfis Thoràcis. This is an opening made in the thorax, ufually between the ribs, to difcharge matter contained in that cavity.
- Paralyfis, the Palfy. This is the lofs of fenfe and motion in any part.
- Paralysis, Cowflips. The flowers have fomething of a fleepy quality, and are commended against the Vertigo, Palfy, and Apoplexy. They may be drank as tea.
- Pareira brava, a Root. It cures hæmorrhages and fluxes of all kinds. It is efficacious in nephritic complaints and a fuppression of urine : In ulcers of the kidneys

kidneys and bladder, the moift afthma, and jaundice. The dose is from twelve grains to half a dram.

Paraphrenitis, an inflammation of the diaphragm.

- Paraplègia, a palfey of all parts beneath the head.
- Parasynanche, is an inflammation of the muscles of the pharynx, with a continual fever.
- Paregorica, Paregorics, medicines to ease pain.
- Parefis, a kind of palfey which fucceeds
- the colic and dry belly-ach. Parietària, Pellitory of the Wall. Two or three ounces of the juice of the leaves will cleanfe the kidneys from fand and gravel. They are used in emollient cataplasms, fomentations and clysters.

Paron'ychia, a Whitlow.

- Parctides, tumours of the glands behind the ears.
- Parox'y/mus, a paroxyfm or fit. Thus there is an hysteric fit, a fit of an ague, a fit of the gout, Sc.
- Pastináca bortensis, garden parsnips.
- The Pastinàca sylvestris, wild parsnips. feed of each is faid to be a specific against hysteric fits.
- Pavo, a Peacock. A dram of the dung is given against the vertigo and epilepsy.
- Pentaphy'llum, Cinquefoil. It is aftringent and good against a flux. The dose is from half a dram to a dram.
- Pathognomonicum, is the proper and inseparable fign of any difeafe, and belongs nct only to one, but to all of the fame kind.
- Pathologia, Pathology, a part of medicine which treats of the difeafes of a human body, their differences, caufes and effects.
- Pestoràlia, Pectorals, are medicines appropriated to the diforders of the breaft and lungs.
- Pectoralis major, a muscle which rifes from the clavicle, fternum, and all the true ribs, and is inferted four fingers breadth below the neck of the humerus.

Pedilùvium, a bath for the feet.

- Pelvis Renum, a receptacle in each kidney, into which the urine is fecreted, from whence it passes to the ureters.
- Pepo, a Pompion. The feed formerly used 1s now laid aside.
- Pèrfica Malus, a Peach-tree. A syrup made of the flowers is a hydragogue, and is useful in catarrhs, the rheumatifm, apoplexy, palfey, and diforders of the brain from a redundant ferum. The dose to children is from two drams

to half an ounce ; to adults, from half an ounce to two ounces.

- Persicària Mitis, dead Arsmart. It is a great vulnerary, and its decoction in wine will ftop a gangrene in a furprifing manner.
- Persicària urens, biting Arsmart. It is a deterfive and vulnerary herb; as alfo diuretic, and proper to cleanfe the urinary paffages. It is likewife recommended for the jaundice and dropfy. The dose of the leaves in powder made into a bolus is a dram. Some bruife the leaves, and apply them to old ulcers to cleanfe them, and to confume fungous fiefh.
- Perforàtus, a muscle which arises from the internal protuberance of the Humerus and Radius. It is divided into four tendons, which are inferted into the phalanx of the four fingers.
- Perforans, its origin is the fuperior part and middle of the ulna. This is divided into four tendons, which perforate the tendons of the preceding, and end in the beginning of the third phalanx.
- Perianthium, is the most common kind of calyx of a flower. It often confifts of feveral fmall leaves : but if it is monophyllous, or with one leaf only, it is divided in various manners. It does not always involve the whole flower.
- Pericardium, the membrane that contains the heart as it were in a bag.
- Pericarpium, belongs to fruit, and is placed on the germen. It grows thicker, and contains the feeds. Sometimes it is wanting.
- Pericranium, the membrane that immedi-
- ately invefts the skull. It is thin, but pretty ftrong.
- Perinacum, is the ligamentous future between the Anus and the Scrotum.
- Periosteum, is a nervous and vasculous membrane of very acute fense, investing all the bones internally and externally. except the teeth and the places where the muscles are inferted.
- Peripneumonia, an inflammation of the lungs. See Febris pneumonica.
- Peristàlticus motus, the peristaltic motion. The ftomach and inteffines have a fingular motion of constriction and dilatation, which is fo called. It proceeds progreffively, from the upper parts to the lower. The organ of this motion aré the annular fibres, which run fpirally or like a fcrew from the *æfophagus* to the anus.
- Peritonaeum, is a thin, fmooth, and flippery

pery membrane invefting the whole abdomen internally, and contains most of the abdominal *vifcera*, as it were in a fack. It confifts of two *lamellæ*; the *external* has longitudinal fibres, and the *internal* ftrong transverse fibres.

- Peronaèus anticus, a muscle which arifes from the anterior and middle part of the Fibula, and is inferted into the metatarfal bone externally.
- Peronaèus posticus, rifes from the fuperior part of the Fibula, and is inferted into the metatarfal bone that fustains the great toe.

Peruviànus cortex, Peruvian bark.

Pefis, the plague. See Febris pestilentialis.

- Petasitis, Butter-bur. The root is accounted fudorific, alexipharmac, cordial, diuretic, and pectoral. Some give it to deftroy joint-worms. The dose of the dry'd root in decoction is from two drams to half an ounce; of the fresh, from one ounce to two.
- Petèchiæ, spots on the skin attending malignant and other fevers.
- Petròleum Barbadènfe, Barbadoes Tar. It is ufed externally to foften tumors, in the palfey, contraction of the tendons, and pains of the rheumatifm. At Barbadoes they give it to cure the dry bellyach. The dofe is two drams thrice a day. Mixt with an equal quantity of rum, it is good to anoint the back bone and joints, when a palfey is fufpected to be coming on.
- Petrofelinum vulgàre, common Parfley. The feed is attenuating and diuretic. It is recommended in the gravel, the dropfy, and the afthma. The dofe is half a dram.
- Peucedanum, Hogs Fennel. The root is aperient, diuretic, pectoral, and antihyfleric. The dofe of the dry'd root is a dram; but it cannot be depended on in any intention.

Phagedaena, eating ulcers.

- Phagedadnica, Medicines proper to take down fungous flesh, and callous lips.
- Phalanx, is the feries of the bones of the fingers, fet as it were in battle array.

Pharmàcia, Pharmacy.

Pharmacopoèia, a Difpenfatory.

Pharmacopoèus, an Apothecary.

- Pharmacopola, a Druggist.
- Phàrmacum, a Drug, a medicine, a remedy. Pharynx, the upper part of the æsophagus or gullet.

Phiala, a Vial.

Philonium, a medicine of the confiftence of an electary, with opium in the composition.

- Philtrum, a medicine to procure love. There has been much hurt done by compositions of this kind.
- Phimòfis, is when the prepuce cannot be drawn back. Paraphimòfis, is a diforder wherein the prepuce cannot be drawn forward to cover the glans.

Phlebotòmia, Phlebòtomy, letting of blood. Phlegma, Phlegm.

- Phlegmagoga, Phlegmagogues, medicines that purge phlegm.
- Phlègmone. This in general is an inflammation; but it often fignifies a violent hot tumor, called, corruptly, a *phleg*mon. It is red, hard, tenfive, fhining, and attended with pain and pulfation.
- PhlyEtaenæ, little blifters on the fkin, containing lympha or a fharp ferofity.
- Pbrenitis, a phrenfy, an inflammation of the meninges of the brain, attended with an acute fever, terrible pains of the head, a conftant delirium, great boldnefs, and reftleflnefs.

Phthiriafis, the loufy difease.

- Phthifis, a confumption of the lungs. It is wafting away of the body with a flow fever, a difficulty of breathing, a troublefome continual cough, attended with a plentiful fpitting of phlegm and corrupt purulent matter, arifing from a remarkable fault in the fubftance of the lungs, which proceeds from a fchirrous or ulcerous corruption or abfcefs.
- Phygèthlon, is a fuperficial tumor of the glands, which is red, hard, tenfive, and burning. It grows infenfibly, and becomes larger than the phyma, with puftules or fmall blifters.
- Phyma, is an inflammatory tumor feated in the glands; but it is not fo large, hard, elevated, red, nor fo painful as a phlegmon. It increafes quickly, and foon comes to a fuppuration.
- Phyfialogia, Phyfiology. A part of medicine which confiders a man as in health, and teaches the fituation, fubftance, and connection of the parts, with their functions.
- Phytològia, Phytòlogy, is a part of medicine belonging to Pharmacològia, and teaches the knowledge of herbs and plants.
- Pia Mater, is one of the meninges or membranes of the brain, in which it is immediately involved.
- Pica, is an abfard defire of eating things unfit for aliment, as chalk, coals, &c.
- Pimpinèlla Saxìfraga, Burnet Saxifrage. The root is stomachic, diuretic, attenuating, aperient, detergent, diaphoretic,

retic, and alexipharmac. It cleanfes the blood, opens obstructions of the glands, and promotes the fecretion of the fluids. It is recommended against hæmorrhages, fpitting of blood, and the bloody flux. The dofe in fubstance is a dram. Some make a tincture of it, which is given from twenty to fixty drops.

- Piper nigrum, black pepper.
- Piper album, white pepper. Piper longum, long pepper.
- Piper Jamaicènse, Jamaica pepper. these are well known as spices. All The two first strengthen the relaxed fibres of the viscera, and excite an oscillation therein. They clear the spirits, attenuate grofs humours, and increase the motion of the blood. Their chief use is in coldness and crudities of the stomach, pains of the colic from a cold caufe, and in a cold intemperies of the brain. The dose is from one grain to ten. Long pepper is of the fame nature, and is to be taken in the fame dose. Jamaica pepper strengthens the stomach, helps digeftion, quickens the circulation, of the blood, and chears the fpirits.
- Pistillum, the pistil, in botany, comprehends the female parts of generation belonging to a flower, which are the germen or ovary, containing and cherishing the embryoes of the feeds. The stylum or style. It is placed on the germen, and fuftains the ftyle, ferving instead of a tube. The stigma, is the female genital organ and terminates the style. But if the style is wanting, it is placed on the germen.

Pix liquida, Tar.

- Pix àrida, stone pitch. This is only used in external applications.
- Pix Burgundica, Burgundy pitch.

Plantàgo, Plantain, a herb.

- Plantàris, a muscle which rifes from the interior part of the external protuberance of the thigh bone, and joins two other tendons to make the Tendo Achilles.
- Plethôra, is two great a redundance of the blood and humours,
- Pleura, is a firong fmooth tense membrane adhering to the ribs and intercostal muscles, and lining the whole cavity of the thorax. It confifts of two vasculous lamellæ.
- Pleuritis, a pleurify. See Febris pneumonica.
- Pleuritis notba five spùria, a bastard pleu-rify, is attended with a very acute and

pungent pain in the fide, which will not bear touching. There is I kewife a cough which exafperates the pain, but without fpitting. The patient cannot lie on the affected fide. Add to thefe a fever, with a hard, depress'd and quick pulse. This is properly a kind of rheumatifm.

539

Plica, a Polish disease, wherein the hair clots together and hangs down like a cow's tail.

Plumbum, Lead.

- Plexus nervosus, a plexus of nerves, is when two or more meet and make a kind of a protuberance.
- Podagra, the gout in the feet. It is a very painful difeafe, and is feated in the joints and ligaments of the feet.

Pæonia, Piony, a Kerb.

Polium montanum, Poley mountain. The tops are an ingredient in Mithridate and Venice treacle. They are accounted alexipharmac, diuretic, and uterine. They are faid to promote urine and the menses, and are drank as tea.

Pollex, the Thumb.

Pollex pedis, the great toe.

- Polychreftum, a medicine of many virtues.
- Polypodium quernum, Polypody of the oak. The root is faid to open obstructions of the viscera, and to be of use in the jaundice and the dropfy. Its purging quality is uncertain, becaufe it has been feldom or never given alone for that intention. Along the *Rbine* and *Mofelle* it is taken to cure the gout. The *dofe* is three to cure the gout. drams; in decoction an ounce.
- Polypus, is a fleshy excrescence of the pituitary membrane of the noftrils.' It is of various shapes and fizes. It obstructs the cavity of the noftrils and fauces, fo as to deprave the voice, fwallowing, and refpiration. It is fometimes cancerous. There are likewife concretions of blood in the heart and arteries of the fame name, attended with a compression of the breast and a fixed pain about the heart. Afterwards fhortness of breath, incredible anxiety and fainting, without any evident caufe.

Poples, the Ham.

- Poplitaeus Musculus. This muscle arifes with a round tendon from the external protuberance of the thigh bone, and paffing under the ham, terminates in the fuperior and interior parts of the Tibia.
- Populus nigra, the black Poplar-tree. The buds have heen used externally in an ointment. Tournefort observes, that a tincture made with these buds in spirit

of wine is an excellent remedy against an inveterate diarrhœa. The *dofe* of which diluted is a dram night and morning.

- Porrum, Leeks. These are more used in the kitchen than in medicine; however, they are good to attenuate tough phlegm, and help fhortnefs of breath.
- Parta, the concave part of the liver is fo called. Hence the vein which carries the blood from the vifcera of the lower belly to this part is called Vena Portæ.
- Fortulàca, Purslane. The leaves are used as a fallad; they are cooling, and good against the hot fcurvy. The feed is cooling and binding, and is faid to kill worms; the dose of which is from two fcruples to a dram.

Pori Biliàrii, are branches of the hepatic duct distributed throughout the liver.

Posca, the fame as Oxycrate.

- Præcipitatio. Precipitation. A process, whereby the particles fuspended in a menstruum are made to fink to the bottom.
- Præcordia. This is a word often mentioned, and yet authors are not agreed in its fignification. Some affirm it fignifies the contents of the thorax, others the diaphragm, others again the fore part of the thorax. But certainly anxiety about the Præcordia must fignify the parts about the heart.

Præpùtium, the Prepuce or fore-skin.

- Prefbytia, a fault in the eyes which old perfons are most fubject to, when near objects are not seen so diffinct as those at a diffance. Common spectacles are a remedy for this defect.
- Priapismus, is an involuntary crection of the penis, with pain.
- Primulæ veris, Primrose. The flowers drank as tea are faid to cure the vertigo. The decoction of the roots is good for the fame purpofe. An equal quantity of the juice of the herb and flowers and milk has cured an inveterate head-ach. The dofe of the juice is three ounces.
- Procatàrtica cauja, the antecedent, præexistent, or præ-disposing cause of a difeafe.
- Precifius peritonaci. . These are two procelles fent out of the abdomen, and which involve the fpermatic veficls and teffes...
- Procidentia Ani, a falling down of the fundament, or rather of the rectum, which happens from its laxity.
- Procidentia Uteri, a falling down of the This is faid to happen when womb. the Os Tincæ appears externally out of the vagina.

- Proegumena, is an internal antecedent caufe of a difeafe.
- Prognòfis and Prognòftica figna, are figns by which may be foretold what will happen to a patient, relating to the difeafe.
- Prolapfus, the same as Procidentia. Prophylàctica, is a part of Hygieine, which
- averts imminent diseases.
- Prostàtæ, or rather Prostàta, is a fingle globous body of the fize of a walnut, almost of the shape of a heart, scated before the neck of the bladder, and encompasses the beginning of the urethra.
- Profibefis, is a part of furgery, whereby loft members are fupply'd, and other deficiencies, by inftruments artificially contrived, as artificial teeth, eyes, hands, Ec.
- Protopathia, a primary difease.
- Prunèlla, Self-heal. It is a vulnerary plant, and good against hæmorrhages, fpitting and piffing of blood. In gargles it is good for ulcers of the mouth, throat and gums. The juice or the decoction may be used. The dose of the juice is from two ounces to four.
- Pruna Gàllica, French prunes. These are an ingredient of the lenitive electary.
- Pruna Damascena, Damascene plumbs or damsons. These are cooling, quench thirst, and are good in bilious constitutions; but are highly improper when acids abound. If they are eaten too plentifully, they bring on dangerous fluxes of the belly. Some flone them and give their decoctions as a laxative, but it will be neceffary to add fome carminative ingredient.
- Prunus fylveftris, the Slow-bufh. Sloes are cooling and aftringent, and are recommended by fome to ftop fluxes of the The infpiffated juice of the unbelly. ripe fruit is called Acàcia Germànica, the dose of which is from half a dram to a dram, and is given in the fame diforders,

Prurigo, and Pruritus, the itch.

- Ploas major, is a muscle that arises from the internal fide of the transverse procefies of the vertebræ of the loins, within the abdomen, and defcending upon part of the internal fide of the ilium, is inferted into the lower part of the little, trochanter.
- Pfoas parvus, rifes from the upper verte-bræ of the loins, and is inferted into the os innominatum, at the juncture of the pubis and the ilium.
- P for a, the itch, or rather the ferine itch. When there are white fcales on the kness

3

knees and elbows, it is called the *leprous* Pfora.

- Pfy'llium, Flea-wort. A mucilage made with the feeds is demulcent, and proper to affwage the inflammation of the eyes. It is ufeful in clyfters in the bloody flux. Three drams foaked in water all night, and the water drank in the morning, is a ufeful medicine againft heat of urine.
 Ptármica, fneezing medicines.
- Pfylótbron, or more properly Pfilótbron. A medicine to take off the hair.
- Ptármica, Sneezewort or bastard Pellitory. The root chewed provokes spittle and cures the tooth-ach. The powder of the dried leaves cause fneezing.
- Ptery'gium is a membranous flefhy excrefcence, which arifing from either angle of the eye fpreads as far as the pupil, and often obfcures the fight.
- Pterygoidaéus internus. This muscle arifes from the Processus Pterygoides of the Os sphenoides and is inferted at the bottom of the lower jaw.
- Pterygoidaéus externus, arifes from the external part of the fame Proceffus Pterygoides, and from the superior part of the Os fphenoides, and running backward is inferted into the Proceffus Condyloides of the lower jaw.
- Pterygoides, the wing-like Process of the Os sphenoides.
- Ptisana, a Decoction of decorticated barley, raifins, liquorice, &c.
- Ptyalismus, a Salivation.
- Pubis Os five Pectinis Os, the fore part of the Os innominatum.
- Pterygostaphylini, two Muscles which arise from the Os sphenoides and are inferted into the Uvula.
- Pudendàgra, the French Pox.

Puérpera, a Woman in child-bed.

- Pulégium, Pennyroyal, a herb.
- Pulegium Cervinum, Hart-pennyroyal. This is ftronger than the former. See page 262.
- Pulmonária maculófa, Sage of Jerufalem. This is recommended against ulcers of the lungs and spitting of blood. Thedofe of the juice is from half an ounce to an ounce.

Pulmónes, the Lungs.

- Pulsus, the Pulse.
- Pulsatio Cordis & Arteriarum, the beating of the heart and arteries.
- Punctum Lachrymale, see Lachrymale punctum.
- Punctúra Nervórum, a Puncture of a Nerve. This is alfo faid, but improperly, when any needle, thorn or fharp inftrument,

pricks a tendon. It is generally attended. with troublefome accidents.

Pupilla, the Pupil of the eye.

- Purgantia, Purgatives.
- Púrpura Febris, a miliary Fever. See Febris Miliáris.
- Pústulæ, Pustules or Pimples on the skin. Pútrida Febris, a putrid Fever. See Maligna Febris.
- Pylórus, the Orifice of the Stomach, joining to the duodénum.
- Pyramidáles Múculi, the Pyramidal Muscles, are very small. They rise from the juncture of the bones of the pubis, and ascending four fingers breadth terminate in the Linea alba.
- Py'rethrum, Pellitory of Spain. The root is a mafticatory and promotes fpittle; hence it cures the tooth-ach proceeding from obstructions and catarrhs, and is of fome efficacy in fleepy difeates and the palfy of the tongue.
- Pyretológia is a Defcription of Fevers, containing their fymptoms, effects, caules, and methods of cure.
 - Q
- 2. V. stands for Quantum vis, as much as you will.
- Q. S. means Quantum fufficit, as much as is fufficient.
- Quadratus is a Muscle confisting of reticular fibres; it rifes from the anterior part of the lower jaw, and is inferted in the whole lower part of the orbicular muscle. That is the muscle that furrounds the mouth and constitutes the lips.
- Quadràtus Femoris. It arifes from the tubercle of the Os Ischium, and is inferted in the eminence between the trochanters.
- Quadrátus Lumbórum; it rifes from the anterior and posterior part of the posterior process of the Os Ilium, and is inferted into the tranverse apophysis of the Vertebræ of the loins, the last Vertebræ of the thorax and last rib.
- Quadrátus Rádii, rifes from the inferior part of the Ulna, and is inferted in the inferior part of the Rádius.
- Quartána Febris intermíttens, a Quartan-ague. Sec Febrís Quartana.
- Quercus, the Oak. Every part of the oak has an aftringent quality, a decoction of three ounces of the bark is given againft the whites, fluxes of the belly, hæmorrhages and spitting of blood. A dram or two of the powder of roasted acorns, has been given against the bloody-flux.

Quotidisma

Quotidiána Febris intermittens. A Quotidian or every day ague. See Febris Quotidiána.

542

R.

- Rachitis, the Rickets. A diftemper in children in which they are not able to walk; there is a flaccid tumour in the head and face; a flabby loofe fkin, a fwelling of the abdomen, and a falling away of the reft of the parts; as also protuberances of the joints, as the wrifts, ankles, knees, elbows, &c.
- Radiaèus internus, arifes from the internal protuberance of the Humerus, and is inferted into the little bone of the carpus next the thumb.
- Radiaeus externus longus & brevis, rifes from the external protuberance of the Humerus, the first of which is inserted in the first bone of the Metacarpus, and the fecond in the fecond bone of the Metacarpus.

Ràdius, the lesser bone of the cubit.

- Radix, a root, is the lowest part of the Plant fixed in the earth by which it receives nourishment.
- Rami, Branches.
- Ranina vena, the Veins that are visible under the tongue.
- Ranæ, Frogs, the sperm. The use of this is laid afide.
- Ràphanus rusticanus; Horse-radish. The root is aperient, attenuating and antifcorbutic. The express'd juice cures coughs, and inveterate hoarfeneffes proceeding from a vifcous phlegm. It is prevalent against the wandering rheumatism, the cachexy, obstructions of the mesenteric glands, the jaundice, the palfy, fleepy, difeafes, the lientery and cæliac paffion. The *dofe* of the juice is from a dram to half an ounce.
- Rapum, a Turnep., A large spoonful of the juice of baked turneps is accounted good in all difeafes of the breaft. The feed has been reckoned an alexipharmac. The dose is from half a dram to a dram.

Raspatorium seu Ràdula, a Rasp.

Raucèdo, Hoarfeness.

- Recrudescentia, Recrudescence is when a difeafe becomes violent again after having been mild.
- Rectificatio, is a repeated Distillation of liquors in order for their purification or exaltation.
- Rectus major anticus arifes from the transverse Apophysis of the five inferior Vertebræ of the neck, and is inferted in the

bone of the occiput before the condyloide process.

- Rectus minor anticus, arises from the anterial or furface of the first Vertebra called Atlas, and is inferted behind the former in the bone of the occiput.
- ReEtus lateralis arifes from the fuperior furface of the transverse Apóphysis of the Atlas, and is inferted partly in the occipital bone, and partly in the temporal bone.
- Rectus major posticus, arising from the spinous Apophyfis, of the first Vertebra, and is inferted into the bone of the occiput.
- Rectus minor posticus, arises from the posterior part of the Atlas, and is inferted under the former.
- Rectus tibiæ arifes from the anterior and inferior spine of the ilium, and, with the Cruralis vastus internus, and vastus externus, make a robust common tendon a little above the knee, and is inferted in the tubercle of the Tibiæ, a little below the knee.
- Rectum intestinum, the frait gut. It is the last of all the gross intestines, beginning at the end of the colon and terminating at the anus.
- Refrigeratorium, a Refrigeratory. A wooden veifel full of water with a fpiral pipe through which the water that is to be diffilled is to pass in order to be cooled.

- Règius morbus, the Jaundice. Remission of the fymptoms in fevers : If they ceafe entirely it is called an intermission.
- Repellantia, repelling Medicines.
- Res naturales, natural Things. Thefe are faid to be health, the caufes of health, and the effects of health.
- Res non-naturales, the Non-naturals. Thefe are fix : air; meat and drink; motion and reft; fleeping and watching; the paffions of the mind; and things excreted and retained. They have this appellation becaufe an excefs of any of them is often the caufe of difeafes.
- Res præter naturam, the Preternaturals, are a difease, the causes of a difease, and the effects of a difease, or the symptoms.

Resina, Rofin.

Refolventia, refolving Medicines.

Rete miràbile, is a Plexus, like a Net of veffels, and membranaceous fibres feated on both fides of the pituitary gland of the brain, under the dura mater. Its use is unknown,

Rètina, an exceeding tender, and, as it were,

to be an expansion of the optic nerve, in the bottom of the eye, and is the principal part of the eye, and fight, for whofe fake the reft were formed.

- Reverberium, is a chemical Furn ce, wherein the fire is reflected back on the bodies put into the furnace or the veffels that contain them.
- Revulsio, a Revulsion, is a turning the course of the blood and humours from one part to another. This may be done by bleeding, rubefying medicines applied to the foals of the feet in diffafes of the head, and ligatures of the joints in enormous hæ orrhages. There may likewife be a revultion of the spirits, if I may be allowed the expression; for a ftrong friction on the hypogastric region has often prevented vomiting. And what can this be afcribed to elfe but the calling off the fpirits that were employed in attempting to expel the contents of the fomach to a other place?

Rhabarbarum, Rhubarb.

Rhamnus carthàrticus, fee Spina Cervina.

- Rhaponticum, true Rhapontic. This is a purge in a large dose; that is, from two drams to half an ounce. It is more a-flringent than rhubarh, and therefore is no despicable remedy in a Diarrhæa or Dysentery.
- Rheumat smus, a Rheumatism. This begins with a fpontaneous laffitude and heaviness of the Limbs, with coldness of the extremities, shivering and shaking. This is followed with an anxious internal heat, chiefly about the Pracordia, a more brifk and strait pulse, inquietude, thirst, want of appetite, coft:venefs, fometimes difficulty of breathing. To thefe fucceed a grievous pain, either acute or heavy and tenfive in fome part or other, which is worfe in the night. This febrile commotion is more grievous in fome and milder in others. But the pains will be eft behind and generally continue a long while. They proceed from an infpiffated acrimonious ferum which is deposited on "the part.
- Rhodium lignum, Rose-Wood, or Rhodium.
- Rhomboides. This muscle arises from the five inferior fpinous apophyles of the neck, and the three fuperior of the back under the Cucularis, and is inferted into the whole bafis of the Scapula.
- Ribefia, Currants. They are cooling and quench thirst, but are feldom used in physic.

- were, mucous coat of the eye. It is faid Rigor. This term is differently understood by authors. Galen fays it is an unequal concuffion and diffurbance of the whole body. Others, that it is a spafmodic constriction of the muscular parts, and an impediment of motion. Hoffman calls it a spasmodic constriction of the whole nervous system, whereby the blood and humours are driven violently from the external parts of the body, to the heart, brain, and large veflels; for which reason the extremities become cold, and the internal parts are diftended with blood; whence the pulfe is contracted with anxiety about the Præcordia, while the face and the veffels about the head are fwelled.
 - Rob, is the juice of vegetables brought into a due confiftence by boiling it with fugar.
 - Rosa, a Rose.
 - Rofmarinus, Rofemary.
 - Rotàtor internus. This muscle arises from the internal circumferences of the Foràmen of the Os pubis, paffes by the incifura of the Ischium, and is inferted in the Fovea near the greater Trochanter.
 - Rotàtor internus arifes from the external circumference of the Foràmen of the Os pubis, and is inferted in the fame place with the former.
 - Rotundus sive Teres major, arises from the inferior angles of the Scapula, and is inferted three fingers breadth below the head of the Humerus.
 - Rotundu's five Teres minor arifes from the inferior Costa of the Scapula, and is inferted in the inferior part of the neck of the Himerus.
 - Rotundus Radii, arifes from the internal protuberance of the Humerus, and is inferted about the middle part of the Ràdius.
 - Rubefacientia are Medicines that being apply'd to the fkin produce a flight inflammation and make it look red.
 - Rubia tinetorum, Madder. The root is faid to open obstructions of the Viscera, to refolve congrumated blood, and to be very ufeful in the jaundice, dropfy, and suppression of the Menses. The dose in fubftance is from halt a dram to a dram; in decoction from half an ounce to two ounces. It turns the bones of animals that feed upon it red.
 - Rubrica fabrilis, Red-oker. It has been used in vulnerary and drying plasters.
 - Rubus Idaeus, the Rafberry-bufh. Rafberries are humecting, refreshing, and cor-They are proper for bilious dial. Nn con a

conflitutions, and are accounted good in the fcurvy.

Rubus vulgáris, the Black-berry-bufh. The leaves are aftringent. The berries are cooling, refreshing and quench thirst.

Ruscus, Butchers Broom. The roots are accounted good in the gravel, whites, jaundice and deplorable dropfies. The dose in decoction is from one ounce to two.

Ruta Rue.

544

S.

Sabina, Savine.

Sáccharum, Sugar.

- Sacrolumbráris. This Muscle arises from the Os facrum and the posterior spine of the Ileum. It is inferted into the posterior part of the ribs.
- Sacrum Os, is a bone of a triangular figure, placed under the vertebræ of the loins, and joined to the fides of the Offa innominata. The Os Coccygis is joined to the lower part.

Sagapènum, a concrete juice.

Sagittàlis Sutùra, the fagittal future.

Sago. It is made of the pith of a tree in the East - Indies, and is eaten there when rice is fcarce. It is nourifhing and reftorative.

Sal Ammoniacus. Sal Ammoniac.

Sal cathàrtieus amàrus, Epfom Salt.

Sal communis, common Salt. Sal marinus, Sea Salt. Sal gemmæ, Sal Gem, or Rock-Salt. Saliva, Spittle.

Salivantia, Medicines that cause a spitting.

Salivàtio, Salivation.

Salvia bortenfis major, common Sage.

Salvia hortensis minor, Sage of virtue.

Salvia sylvestris, Wood Sage. It has the fame virtues as Water Germander.

Salvatella, is a vein which runs towards the little finger.

Sambucus, common Elder.

Sandàracha, Gum Sandarach. It is the rofin of the Juniper-tree, which flows from it in hot countries. It is likewife call'd Vernix scriptòria, pounce. It has been given inwardly against hæmorrhages and internal ulcers. The *dofe* is from a fcruple to a dram. Outwardly it stops blood, heals putrid ulcers, and eafes pains of the joints.

Sandàracha Græcorum, a kind of red arsnic. Sanguis, Blood.

Sanguis Draconis, Dragon's blood.

÷ (

يده م مر

Sanicula Sanicle. This herb is good against the whites, spitting of blood, and hæmorrhages of all kinds. It may be either drank as tea, or two or three ounces of the juice may be given for a dose.

Sánies, is a thin, bloody, acrimonious, corroding matter in wounds or ulcers.

Sántalum album, white Sanders.

Sántalum citrinum, yellow Sanders.

- Sántalum rubrum, red Sanders. Of these woods the yellow is more inciding than the white, and the red is more aftringent than both. They are faid to open obstructions of the liver, to restore the tone of the viscera, and to allay commotions of the blood which occasion hæmorrhages. They are very proper in thin falt catarrhs, and in the beginning of a confumption. The dose is half an ounce in decoction.
- Santonicum, Wormfeed. This given from a fcruple to a dram is proper to kill worms.

Saphaèna. This vein is a branch of the internal crural vein near the internal

Mallcollus, or lower process of the Tibis. Sapo albes Hispinicus, white Spanish foap ... Sapo durus, hard foap. Sapo mollis, foft foap.

- Sapo niger, black foap. This will cure common burns before a blifter is raifed; and has been often used to kill inguinal lice!
- Saponária, Soapwort. This has been accounted a fpecific for curing the venereal difeafe, the itch, ringworms, and tetters, used inwardly and outwardly. It is aperient, ftrengthening, and diaphoretic. The decoction of two handfuls of the leaves in four quarts of water may ferve for common drink; but it will be proper to add a few raifins to mend the tafte.
- Sarcocèle, is an induration and enlargement of the tefficle, frequently turning into. a perfect schirrus, and sometimes degenerating into a cancerous disposition, with ulceration and most acute pains.
- Sarcocolla, a gummy rofin. The internal use of this is sufpected; but outwardly. disfolved in affes or breast-milk, it is good for inflammations and fluxes of the eyes. It cleanses, confolidates, and cicatrises wounds.
- Sarcològia, is a part of anatomy which treats of the foft parts.
- Sarcòtica, Sarcotics, medicines supposed to generate flesh. ...
- Sartorius. This muscle proceeds on the ; infide, from the interior and fuperior fpine of the ilium, and descending ob-

. .

....

.

. .

liquely,

liquely, is inferted into the interior and fuperior part of the *Tibia*.

Sarsaparilla, a root.

Saffafras, a root.

Saturcia, Savoury, a culinary herb. It is attenuating, aperient, difcutient, and proper in uterine diforders. It promotes the menfes, facilitates expectoration, and is excellent for a cold ftomach. It may be drank as tea. Some give a dram in powder for a *dofe*. Externally its decoction in wine difcuffes cold tumours, and cures pains as well as noifes in the ears.

Saturnus, Lead.

Satyriasis, the same as Priapismus.

- Saty'rion mas, Male Satyrion. This has always been looked upon as an aphrodifiac; and Herman fays this virtue is warranted both by reafon and experience. But as it is generally prefcrib'd with aromatics and other flimulating ingredients, it is highly probable the effects are owing to them. The dofe is a dram.
- Saxifraga alba, white Saxifrage. This is faid to be aperient, diuretic, and proper to cleanfe the urinary passages. The dase of the root in infusion is half an ounce.
- Saxifraga vulgáris, Meadow Saxifrage. Authors afiirm the root of this is a powerful diuretic, and a good remedy against the gravel. The *dofe* of the juice of the whole plant is two or three ounces.
- Scammonium, a gummy rofin.
- Scabioja, Scabious. The leaves are accounted cordial, alexipharmac, fudorific, and pectoral. They promote expectoration, and are good in the affhma. The dofe of the juice is two ounces; in decoclion two handfuls.

Scabies, the Itch.

- Scalenus. This muscle arises from the first, fecond, and fometimes the third rib, and is inferted into the transverse apophyses of the vertebræ of the neck.
- Scàpula, the fhoulder blade, commonly called the blade-bone.
- Scarificàtio, Scarification. This is commonly perform'd by a fcalpel or lancet, in gangrenes, mortifications, or dropfies, to difcharge the offending humours, and to make way for the topical remedies to penetrate to the founder parts.
- Scarlatina Febris, the fcarlet fever. Sec Febris scarlatina.
- Scileton, a Skeleton. The bones of an animal connected together in their natural fituation.

- Schirrus, a Schirrus, is a hard unequal indolent tumor feated in fome glandular part, form'd by the infpiflation of the humours, obftructing the excretory ducts of the gland, and diftending its membranous cells, while the more fluid parts are exhaled.
- Schænànthus, Camels Hay. This has been given in 'obstructions of the viscera, retention of urine, suppression of the mens s, the after-pains of child-birth, $\mathfrak{S}c$. but it is now in disuse, unless for Mithridate and Venice treacle. The dose in substance is a dram; in infusion two drams.
- Scilla, fquill or Sea-onion.

Scleròtica, one of the coats of the eye.

- Scincus, a Skink. Their bellies are an ingredient of mithridate.
- Scorbùtus, the Scurvy. In this difease the functions of the whole body are vitiated from a high difcrafy and corruption of the blood and vital fluids, proceeding from bad diet and unwholesome air. It is common in maritime and northern countries, as alfo among failors in long voyages. It begins with a fpontaneous lassitude, which invades the whole body with a heavinefs of the legs and feet, and a difficulty of walking. Then the lively colour of the face decays, an ichor mixt with blood flows from the gums, the flesh whereof is relaxed and confumed to the roots of the teeth, which foon become loofe. There are fpots on the legs of various figures, fize, and colours, which often turn to ulcers of a bad fort. As the disease increases, there are fixt or wandering lancinatir g pains, with an impotence of moving, or a convulfive stricture attacks the joints.

Scorbùtica, medicines against the scurvy. Scordium, Water Germander

- Scorzonèra. Viper's-grafs. The root is accounted cordial, fudorific, and alexipharmac. Boerbaave fays, it is an excellent remedy in hypochondriac difeafes and obfructions of the vifcera. It has likewife been given with fuccefs againft the jaundice, arifing from obfructions of the liver. The dofe in powder is from half a dram to a dram.
- Scórpio, a Scorpion. The oil of Scorpions has been famous for curing the bite of this venomous animal; but perhaps the effect has been owing to the oil wherewith it is made, for it has been found ferviceable in curing the bite of a viper.
- Scotòma or Scotòmia, a vertigo attended Nn2 with

with a fudden dimnefs or temporary deprivation of fight.

- Scrofula, the king's-evil, is a hard glandulous tumor feated principally on the fides of the neck behind the ears, either fingle or in clufters. In fome, they reach from the ear to the clavicle.
- Scropbulària; Figwort. This plant has been accounted good against scrophulous tumours; as also the pain and swelling of the piles. The *dose* of the root in powder is a dram.
- Scrophulària aquàtica major, Water Figwort or Water Betony. This has the fame virtues as the former, and as fome fay in a greater degree. In the Memoirs of the French academy, it is recommended to correct the bad tafte of fena.

Scrobiculus Cordis, the pit of the flomach.

- Scy'bala, dry excrements in finall balls like fheeps dung.
- Sebèften. This fruit is cooling and moistening, and is useful against sharp thin defluxions on the lungs, and take off the heat of urine. It is good in coughs, hoarseness, and difficulty of breathing. It is like a small plumb, and ten or twenty of them may be taken at a time.
- Secàle, Rye. Rye-bread is faid to keep the body open, to be good for those that are troubled with the piles, a fwimming in the head, and a palpitation of the heart. The meal is used in poultices, to discuss tumors, and ease pain.
- Secundinæ, the After-birth. This confifts of the membranes which contained the *fætus* and the *Placenta uterina*.
- Sedimentum urinæ, the groffer parts of the urine which fink to the bottom. It is of various colours, figures, weight and nature, according to the different difeafes. Sometimes the urine has no fediment.
- Sedum majus, Houfe-leek. This is cooling and fomewhat aftringent. It quenches thirft, allays heat, and is ufeful in bilious fevers. Four ounces of the juice are given in intermitting fevers that have little or no cold fit. The powder of the dry'd leaves has furprizingly cur'd an obftinate ichorous ulcer in twenty-four hours.
- Semimembranófus. This muscle arises from the upper part of the tubercle of the Ischium, and is inferted into the interior and superior part of the Tibia.

Seminervofus, proceeds from the fame ta-

bercle as the former backwards, and is inferted in the fame part.

- Sem spindfus, arises from the Os facrum and the vertebræ of the loins, and is inferted into the superior vertebræ of the thorax, especially the spinous apophyses.
- Semeidtice, a part of medicine which treats of the figns of health and difeafes.

Sena or Senna, the fame in English.

- Seneka, Rattle-Snake-root. This has been found very efficacious in pleurifies and peripneumonies. If the patient is plethoric and has a fever, he must bleed in the arm opposite the pained fide; then give thirty-five grains of the root every fixth hour.
- Sipia, the Cuttle-fish. See Os Sepia.
- Septum Cordis, the partition between the ventricles of the heart.
- Septum lùcidum, a thin transparent partition between the ventricles of the brain.
- Septum nàrium, a partition partly cartilaginous and partly boney, between the noffrils.
- Septum transversum, the diaphragm.
- Septica, things that cause putrefaction.
- Sericum, Silk. This is quite out of use.
- Serpentària Virginiàna, Virginian Snakeroot.
- Serpy'llum, Mother of Thyme. This is cephalic, ftomachic, and uterine, good for the vertigo, palfey, epilepfy, greenficknefs, and promoting the menfes. It is ufeful against defluxions on the lungs, old coughs, and helps spitting of blood. A dram taken for a dose promotes urine powerfully.
- Serrátus five dentátus minor anticus, arifes with a dentated beginning, from the fecond, third, and fourth true ribs, and paffing under the great pectoral, is inferted into the coracoide process of the *fcapula*.
- Serratus five dentatus minor possicus, arifes with a dentated beginning, from the fix lower true ribs, and from one and fometimes two of the superior spurious ribs, and is inferted into the basis of the scapula.
- Serrâtus postieus superior, arises with a thin broad tendon from the two inferior vertebræ of the neck, and the two superior of the back, and is inferted into the second, third, and fourth ribs.
- Serrátus positicus inférior, arifes with a broad tendon from the three inferior vertebræ of the back, and the two superior of the loins, and is inferted into the four inferior spurious ribs.

Sefa-

Serum, the thin part of the blood.

- Sesamoidea Osa. These are little bones like the feed of Selamum, found at the joints of the fingers and toes; as also in the joints of other parts of the body; there are feldom more than fixteen, but often lefs.
- Sésamum, the oily purging grain, of no ule in phyfic.

Sefeli Massiliènse, French Hartwort.

- The Sefeli vulgare, common Hartwort. leaves incide grofs humours, help digeftion, difcuss wind, promote urine and the menfes, ease after pains, and cleanse the kidneys. The powder is given to a dram.
- Setaceum, a Seton. It is made by pinching up the skin and fat, and perforating them with a feton-needle, armed with a skain of thread or filk, and spread with some digestive Ointment : which being drawn a little or shifted every day, keeps it open and running as an iffue.
- Sialagoga, Sialagogues, medicines that provoke spittle.
- Sigillum Solomonis, Solomon's feal. This may be applied outwaroly to take away the black and blue marks of bruiles, which it is faid to do in a night's time.
- Silesiaca terra, Silefian fealed earth. An abforbent.
- Silex, the Flint. This may be reduced to a powder by heating it red hot feveral times, and quenching it as often. It has been faid to break the flone, which can be no farther true, than as it partakes of the nature of lime. The dose is a scruple. I am informed Dr. Cockburn's secret to cure fluxes were flints of Epsom Dourns.
- Siliqua, a Pod.
- Siphium, the fame as Afa Foetida.

Sinàpi, Mustard.

- Sinapismus, a Sinapism, is a medicine made in the form of a cataplasm, which affects the fkin with heat, rednefs, and pain.
- Sinciput, is the fore part of the head or skull from the forehead to the coronal future.

Singultus, a Hiccuping.

- Sinus, is when the beginning of an abscess or ulcer is nariow, and broader farther in.
- Sinus duræ matris. These belong to the Veins of the Dura Mater, the principal of which are four; the fagittal or longitudinal, which runs from the forehead to the occiput along the middle of the brain, ending in the two lateral, reprefenting the shape of a Greek circumflex

accent. They difburthen themfelves on both fides into the finus of the Jugulars. The fourth comes from the region of the pineal gland, and terminates near the place where the three, former meet. This place is called Torcular Herophili.

Sirones, are pusfules which break out in the palms of the hands and foals of the feet, in which a fmall worm is included.

Soda, the Heart-burn.

Sol, Gold.

- Solanum vulgare, Night-shade. The inward use of this herb is unsafe; for there are inftances of perfons falling into mortal convultions by eating the berries. Some beat the leaves for fome time in a leaden mortar, and apply them to the piles and cancers ; but the use of it may be dangerous.
- The Solànum lethàle, deadly night-shade. berries are poisonous, and produce fleepinefs, a lethargy, madnefs, and death.
- Solànum tuberdsum esculèntum, Potatoes. The use of these as aliment, are well known.
- Solàris, a muscle. It arises from the superior and posterior part of the Tibia and Fibula. The tendon of this joining with two others makes the Tendo Achilles.
- Solutio Continui, is the feparation of parts which before cohered, as in wounds, ulceis, and fractures.

Solutiva, the fame as laxatives.

Somnifera, medicines to procure sleep.

Somnolèntia, Sleepineis.

Somnus, Sleep.

- Sophia Chirurgorum, Flixweed. The feed is proper to promote urine, expel the gravel, and is useful against the bloody flux. The dose is a dram.
- Sorbus Sylvestris, the Quicken-tree. It is of no use in physic.
- Spasmus, a Spasm, is a præternatural contraction of the muscular, membranous, or nervous fibres in any part of the body. The violent spasm or contraction of the mufcles of the legs and feet has been ufually called a cramp. A univerfal fpafm begins from the extreme parts and affects the whole fystem of the fleshy fibres and veffels, which last are a contexture of nervous membranes and mufcles. Such a motion as this is very evident in the beginning of intermitting fevers. When the meninges of the brain and nerves are brought into confent, it changes to an epilepsy; if the nerves only which go to certain parts, or the nerves of the fpinal marrow, them

Nn 3

then it produces convultions. Sometimes fpasms of nervous and membranous parts produce pain, which have different names according to the part affected. If it is feated in the nervous coat of the ftomach, or its orifices, it is called a Cardialgia; in the inteffines, the colic; in the membranes of the head, the bead-ach; in the Rectum, the painful piles; in the joins, the bip-gout, the knee-gout, the gout of the hands and fect. A fpastic constriction of the intestines hinders the exit of the wind and excrements; of the urinary passages, the urine is either fupprefled or made with difficulty and pain; of the bilious ducts, hinders the defcent of the gall into the intestines, whence it regurgitates to the lymphatic veffels, and fuddenly produces a jaundice.

- Spasmus Cynius, a convultion of the muscles of the mouth.
- Spèculum, an inftrument to dilate the anus. Spèculum Matricis, an inftrument to dilate the vagina.

Spermaceti. See page 286. The dose is a dram. Sphacelus, a mortification.

SphinEter, is a circular muscle which has a power of confiringing the part where it is placed. Thus there is the *fpbinEter* ani to shut the anus; and of several other parts.

Spica vulgàris, Lavender-spike. The virtues agree with those of lavender.

- Spina alba, Hawthorn. This is quite out of use.
- Spina cervina, Buckthorn. The juice of the berries is made into a fyrup, which is in use as a purge.
- Spina dorfi, is that boney column which is extended from the head to the anas, containing the fpinal marrow.
- Spiritus vinosus rectificatus, rectify'd spirit of wine.
- Splanchnològia, is that part of anatomy which treats of the .viseera.
- Splen, five Lien, the spleen, is a reddish black vifcus, feated under the dia-phragm, near the ribs, on the left fide of the flomach. It is about five or fix inches long, three broad, and one thick, and weighs about twelve ounces.
- Splenius. This muscle arises from the three inferior vertebræ of the neck, and the five fuperior of the back. It is inferted

above the maftoide process.

Spóngia, Sponge. Sporàdici morbi, are difeases of the same kind that are difpers'd here and there, without any fuspicion of contagion. quammofa Sutura, the scaly suture.

- An EXPLANATION of the TERMS of ART.
 - Stàmina, the chieves of a flower on which the apices or fummits are plac'd.
 - Stannum, Tin. Staphisàgria, the internal use of this is not fafe.
 - Stapes, is a little bone in the internal part of the ear.
 - Steatomia, is an encyfted tumor containing a matter like fuet.
 - Sterno-hyoides, arifes fometimes from the sternum and clavicle, fometimes from the sternum alone, and is inferted into the basis of the os byoides.
 - Sternum, is a bone in the fore part of the thorax, join'd to the cartilages of the ribs. Sternutàtio, Sneezing.
 - Sternutatorium, a remedy to promote ineezing.
 - Stibium, Glafs of antimony. Some give antimony this name.
 - Stimulantia, stimulants. Medicines which encreafe the ofcillatory motion of the fibres.
 - Stoechas, French lavender. It is an aromatic plant, is good in cold diforders of the head and nerves; as also promotes urine and the menfes. The dose is from half a dram to a dram. It is an ingredient, in Mithridate and Venice treacle.,
 - Stomàcace, a fymptom of the Scurvy, when the gums are attended with fpontaneous hæmorrhages, from their vesiels.
 - Stomachica, medicines against diforders of the ftomach,

Strabismus, a squinting.

- Stranguria, the strangury, a disease in which the urine comes away drop by drop, with heat and pain, with a continual defire of making water.
- Strobilus, is properly the fruit of the pinetree, or the pine-apple; but it is apply'd to other fruits that are like it.
- Stupefacientia, stupefying medicines; the fame as marcotics.
- Stupor, is an obtuse, blunt, or dull fense of feeling.
- Stylo-gloffus, arifes from the apex of the ftyloide process, and descending obliquely, is inferted in the root and fide of the tongue.
- Stylo-byoides, arifes from the Styloide process. and is inferted and terminates in the horn and bafis of the os byoides.
- Stylo pharyngaeus, arifes from the beginning of the styloide process, and is inferted into the fides of the Pharynx, and of the thyroide cartilage.

St'yptica, a stronger sort of astringents.

Styrax calamita, Cane-florax.

Styptica,

548

An Explanation of the Terms of Art. 549

- Styrax liquida, Liquid-storax. Subclàvia vasa, Subclavian Vessels, are veins and arteries which pass under the clavicles, or collar-bones. Subclavius. This muscle arises from the in-
- ferior part of the Clavicle near the Acromium, and is inferted in the anterior part of the upper rib and the Sternum.
- Suber, the Cork-tree. The bark is accounted aftringent and detergent, and is faid to be good in hæmorrhages, fluxes of the belly, and whites. The dose in powder is from half a dram to a dram; in decoction from half an ounce to an ounce. A dram of the ashes has been extolled to ftop hæmorrhages and to cure the colic. Mixt with oil of fweet almonds they eafe the pain of the external piles and reduce them infenfibly.
- Succinum, Amber.
- Sublimatio, Sublimation, is a kind of a dry diftillation, whereby the more fubtile parts of a body are raifed by fire, and adhere to the veffel.
- Sublimatum, is any thing raifed by fire, as flowers of fulphur.

Succus nutritius, the fame as Chyle.

- Sudamina, are pimples on the furface of the skin, of the fize of a millet seed, fupposed to be occasioned by fweating.
- Sudor, Sweat. Sudor Anglicus, the fweating Sickness, a kind of a plague in which the patient died or recovered in twenty-four hours. If the fweating was continued without intermission it was falutary.
- Sudorifera, sive sudorifica, Sudorifics. Medicines to promote fweat.
- Suffitus, a Fumigation. In general it is prepared of oderiferous ingredients which are thrown on live coals to raife an agreeable fmell. There are likewife fumigations made with cinnabar, put on a hot heater to cure venereal fymptoms

Suffocatio Hysterica, the Hysteric Passion. Suffocatio Uterina, the Hysteric Passion.

Suffúsio, a Cataract in the eye.

Sugillatio, is the black and blue marks of bruifes.

Sugillation of the cye, is a blood-fhot eye. Sulphur, Brimstone.

Summitates, the tops of herbs and plants with fmall leaves.

Supercilia, the Eye-brows.

Superciliorum Corrugator sive Depressor, is a muscle which arises on each fide of the nose, and is inferted obliquely into both Supercilia, which brings them nearer

each other and likewife pulls them downwards.

- Supraspinatus, this muscle rifes above from the cavity above the spine of the Scapula, and is inferted into the neck of the Humerus.
- Superfætàtio, is when a woman conceives again, sometime after a first conception, which occafions the births to be at different times. This has been much talked of; but whether it ever took place is doubtful.
- Superpurgatio is when a purge works with great violence.
- Suppositorium, a Suppository, a medicine formed to put up the Anus.
- Suppreffio menfium, a stoppage of the monthly evacuations in women.

Suppressio Urinæ, a Stoppage of urine.

Suppurantia, suppurating Medicines.

Sura, the Calf of the leg.

Surditas, Deafness.

- Suturæ Cranii, the Sutures of the fcull. A true future is when the bones are joined together by indentations like a faw. These are the coronal, fagittal, and Lambdoide. The spurious are the futres of squammous and parietal bones :
- ' as also of the Os Frontis and sphenoide bone, at that angle where they join with the parietal.
- Sutura, a Suture, in Surgery, is the connexion of the lips of a wound by fewing it up, or the bringing of them together by a conglutinating plaster.
- Syscofis, is an excrescence about the Anus like a fig.
- Symptoma, a Symptom. Symptoms are of two kinds; for they are either produced immediately by the morbid motions, or from other concurring causes. The former are called effential, the latter fecondary. The effential follow the difeafe clofely, nor can they be feparated from. it. Hence diseases are known and diftinguished; hence also certain figns and prognoffics are deduced; thus in a fever which is an accelerated motion of the folids and fluids, the fymptoms are immoderate heat, unufual thirft, conftant watching, proftration of ftrength, a confumption of the fluids, a dejection of appetite, an increased refpiration, a flame-coloured urine; becaufe all thefe are the effects of an accelerated circulation of the blood. Likewife the fymptoms of an inflammation are a pain in the part affected, a tumor, rednefs, a violent pulfation of the arteries;

becaufe all these proceed from an impeded Nn4

ed circulation of the blood, which neceffarily fucceed a flagnation in the veffels, or a firicture of the nervous parts. Secondary fymptoms, do not proceed immediately from the former difeafe or a morbid motion; but from tome other fupervening caufe. 'The inflammation of the meninges of the brain, lungs, or ftomach, fucceeding acute or eruptive fevers, is an inflance of this; becaufe thefe fevers may exift without fuch an inflammation; but as it is the effect and produce of the difeafe, it is called a fymptom. Miliary eruptions often fucceed acute fevers, the fmall-pox and meafles, which are generally fatal.

- Synànche, a kind of a Quinfey which is feated in the internal muscles of the pharynx, without any remarkable external tumour or redness. In this the difficulty of swallowing is greater than that of breathing.
- Sy'mphyfis, is a Coalition of the bones which is fometimes without motion when two bones touch or approach each other, either without a medium, as in the bone of the forehead, the lower jaw, the Offa innominata, &c. or with a medium, as by a cartilage in the bones of the Pubis, the Vertebræ, &c. This is called Synchonarofis. By a Ligament in the connexion of all the joints, this is term'd fyneurdfis. By Flefth in the Scapula, the bone in the tongue, &c. this is named fyffarcefis.
- Synartbrofis, is a junction of the bones with an obscure motion; as the bones of the Carpus, Metacarpus, Tarsus, Metatarsus, &c. or with no motion; as in a sutura, barmonia and gomphosis. Harmonia is a conjunction of the bones with a simple line, as the bones of the palate.
- Synbondròfis, the connexion of two bones by means of a cartilage.

Sy'noope, a fainting or fwooning.

- Syneurofis, is the connexion of bones by means of a ligament.
- Sy'nochus five Synocha, a continual fever without remiffion.
- Syndvia, the glutinous liquor between the joints.
- Sy'mbefis fignifies all the joints of the bones with or without motion.

Syrùpus, a Syrup,

- Syffarcofis, is a connexion of the bones by means of flefh.
- Sy'flole, 'a Contraction. In medicine it means the contraction of the heart and arteries. By this and the *diaffole* the circulation of the blood is carried on.

т.

Tabes, a Confump ion.

- Tabes dorsàlis, tuch a loss of the feminal fluid as brings on a confumption.
- Tacamabàcca, Tacamahac, a Rofin. It is only of external use, and is anodyne and
- cephalic. It eafes pain in any part of the body; particularly when laid to the temples it fometimes cures the tooth-ach, as I have found by experience. A plafter made of it, and laid to the head after being fhaved, has cured deafnefs.
- Talpa, is a foftifh tumor which grows on the head and contains a kind of white thick pus. It does not rife much, but enlarges its bafe.
- Talcum, Talck. It has been accounted a cofmetic. Many attempts have been made to gain an oil from this fubftance but without fuccefs.

Tamarindus, Tamarind.

- Tamarifcus, the Tamarife-tree. The bark is faid to open obfiructions of the *wifeera*, and to attenuate tartarous humours.' The *dofe* is from half a dram to two feruples; in decoction from one ounce to two.
- Tanacètum, Tanfey. The leaves are accounted good to open obfructions of the liver and fpleen. They are of great ufe in the jaundice, cachexy and dropfy. The dofe of the juice is three or four ounces. The feed has been given with fuccefs againft worms. The dofe is from half a dram to a dram.
- Tapfus barbàtus, Mullein. The leaves are ufed externally in fomentations, are good against a *tenefmus*, and ease the pain of the piles.
- Tàrtarus sive Tàrtarum, Tartar.
- Tarfus, is the cartilaginous extremity of the eye-lids; as also the feven posterior bones of the foot.

Tèmpora, the Temples.

- Temporàlis Mùsculus, the temporal Muscle. It arifes from the whole region of the temples, passes under the jugum, and is inferted into the acute process of the lower jaw.
- Tendo, a Tendon, is the continuation of a muscle, and is more white, hard, slender, and annexed to the part to be moved. The fibres of which they are composed are united together in the manner of a cord.
- Tenèsmus, is a conflant defire of going to ftool; when at the fame time nothing comes away but a little blood, mucous or purulent

550

purulent matter, unlefs it attends a dyfentery, or other flux of the belly. Terebinthina, Turpentine.

- Tercs sive Rotundus major, arifes from the inferior angle of the *scapula*, and terminates three fingers breadth below the head of the bumerus.
- Teres five Rotundus minor, arifes from the inferior cofta of the fcàpula, and afterwards making one tendon with the infraspinatus, is inferted into the posterior part of the neck of the humerus.

Terra Japonica, Japan earth.

Tertiàna Febris intermittens, see Febris tertiàna.

Testes muliebres, the Ovaries.

- Teftes ccrebri, are two posterior prominences of the brain.
- Testes viriles, are the two oval bodies included in the scrotum which ferve for the generation of semen.
- Tétanus, is a very grievous kind of convulfion, whereby the body continues erect and rigid like a ftatue.

Teftudo, the fame as talpa.

- Tetrapharmacum, is a medicine confifting of four ingredients.
- Thàlami nervorum opticorum, two protuberances of the brain, from whence the optic nerves have been faid to arife; but Hoffman denies it, and affirms that they proceed from the inferior and anterior part of the crura of the medulla oblongata.
- Thàpfia, the deadly Carrot. The root purges upwards and downwards, but it is unfafe.
- Thea, Tea. This has a gentle affriction, whereby it ftrengthens the ftomach, and prevents the hot water from relaxing it too much. It likewife tends to reftore the tone and ofcillation of the fibres. It is not improper in fluxes of the belly, for it will ftop the operation of a gentle purge. Drank late at night it will prevent fleep. The conftant use of it will hinder the breeding of the gravel; but that perhaps may be owing to the hot water diffolving the falts of the blood. In a loofenefs or the bloody-flux half an ounce of tea must be infused in a pint of milk, and be drank for a dofe.
- Thenar. This muscle arises from the transferse ligament, joining the bones of the carpus, and is inferted into the first and second phalanx.
- Theoria, Theory; is the knowledge of all those things which belong to a human body, either in health or as obnoxious to difease; which can never be

perfect without understanding natural philosophy, which leads us to a knowledge of all corporcal fubftances; as alfo anatomy, which yields an intimate acquaintance with the ftructure of a human body. It was formerly faid that aftronomy and anatomy were the two eyes of medicine; and though the former is not of fo much use as it was thought to be formerly, yet it ought not to be entirely rejected, because it fupplies us with accurate tables of the moon's progrefs through the twelve figns, upon which a great many morbid motions depend. However, natural philofophy is now properly fubfituted in its room; I mean that philosophy which includes chemistry and mechanics: For all the reafons which a phyfician brings, unlefs they are phyfical or anatomical, are mere speculations and the idle inventions of a fruitful brain. Though at the fame time it must be acknowledged we are in the dark with refpect to many things which relate to a human body, of which the various opinions of phyficians about them is a convincing proof.

Therapeùtice, Therapeutics, is a part of medicine which teaches, the rules that are to be obferved in the cure of difeafes: Thermee, hot natural baths.

- The feeds promote urine and the menfes, and diffolve coagulated blood. The dofe is from one fcruple to two. Its chief ufe is in Mithridate and Venice-treacle.
- Thlipfis is a compression of the vessels from an internal cause, so as to destroy their cavity.

Thoràcica, are pectoral medicines.

Thorax. This is the middle wenter or belly. It is circumferibed on the upper part by the clavicles or collar-bones, on the lower by the diaphragm, on the fore part by the *fternum*, on the hind with the bones of the back, and on the fides by the ribs. It contains the heart and the lungs.

Thus masculum, see Olibanum.

- Thus vulgare, common frankincenfe. The dried rofin of the pine tree. It is not fo good for internal use as the former.
- Thymus, common Thyme.
- Thymus citrátus, lemon Thyme. These are culinary herbs, and the use of them helps digestion, attenuates viscous humours, is good in the asthma and strengthens the brain. The effential oil is good to strengthen the stomach, to ease

eafe the wind-colic, and to promote urine and the menfes. The dofe is five or fix drops.

Thymlaea, Spurge Flax.

- Tithymálus, German fpurge. The root of this and the berries of the former make part of the *materia medica*, but are violent dangerous purges, and not fit for internal ufe.
- Thymus, is a gland remarkable in infants, feated in the fuperior part of the thorax next under the fternum, lying on the *pericardium*, the trunk of the *aorta* and the fuperior *vena cava*. Its use is uncertain.
- Thyroides, the fcutiform cartilage; it is part of the larynx, feated in the fore part of the neck, and makes that prominence called *pomum Adami* or *Adam*'s apple.
- Thyro-arytænoides. This muscle arises from the thyroide cartilage, and ends in the arytænoide.
- Thyro-flaphilinus, arifes from the lateral part of the thyroide cartilage, and is inferted in the fide of the velum palatinum.
- Tibia, the fhin-bone of the leg, confifts of two bones, the *tibia* properly fo called and the *fibula*.

Tilia, the Lime or Linden-tree.

- **Tibiális antícus.** This muscle arises from the superior and anterior surface of the *tibia*, and terminates in the internal cuneiform bone and the internal metatarsál bone.
- Tibiális postícus, arifes from the superior parts of the ligaméntum interesseum, and terminates in the os naviculare or the third bone of the tarsus.
- Tinctura, a Tincture. It is the extraction of the colour and virtues of any fubftance by means of a proper menstruum.
- Timea, a fcald Head. It is fmall running ulcers in the heads of children/which preys on the cutaneous glands, and in time deftroy its texture.
- Tinnitus aúrium, a noise or finging in the ears.
- Tonsillæ, the Almonds of the ears. Thefe are two remarkable glands like almonds, feated on both fides the *fauces* near the *uvula*, which fecrete a liquor to render the *fauces* flippery, and which is excreted through various vifible irregular fmall holes.

Tormentilla, Tormentil.

Torcular Hierophili, is the place where the four finuffes of the dura mater are conjoin'd.

Tormina, the gripes.

Formina infantum, children's gripes.

Tormina post partum, the after-pains of women after delivery.

Trachèa, the wind-pipe.

- Tragacànthum, See Gummi Tragacànthum. Transversàlis, this muscle is a part of the longissimus dorsi.
- Tranfversus ureibræ virilis. This muscle, when it exists, generally rifes from the tubercle of the Os Ischium, and is commonly inferted in the posterior part of the bulb of the uretbra.
- Trapèzius five Cucullàris, arifes from the bone of the occiput, the spinous apophysis of the neck, and the seventh and eighth of the back. It is inferted into the spine of the fcápula, the acrómium, and clavicula.
- Traumática, medicines to cure wounds and ulcers.
- Transpirátio, Perspiration. Insensible perspiration, according to Sanstorius, is more than all the other secretions put together. The stopping of this is often the beginning of acute or epidemic difeases; and of all remedies in these cases diaphoretics are the best and most secure.
- Triangulares músculi labrorum, the triangular muscles of the lips. These are two, and arise from the lateral and lowest part of the lower jaw, about the middle, from whence they ascend obliquely to the angle of the orbicularis.
- Trianguláris sterni, this arifes from the inferior and interior part of the sternum, and is inferted into the cartilages of the fourth, fifth, fixth and seventh true ribs.
- Trichiafis is a diforder of the hairs of the cilia; the principal is when they turn inwards and irritate the eyes.
- Trichómanes, English black maiden hair.
- Trif dium paludojum, Marsh trefoil or buckbeans.
- Triticum, Wheat. From whence is gained amylum, ftarch, which fee.
- Trochanter major et minor. Thefe are two. apophyfes, at the superior part of the thigh bone, serving for the insertions of the tendons of several muscles.

Trochisci, Troches.

Trochleáris five oblíquus major, arifes from the bottom of the orbit of the eye, and paffing through a fingular almost cartilagineous Trochlea, or Pully, over the great corner of the eye, whence reverting back, it is inferted into the fuperior part of the eye about the middle.

Tumor, a Tumor, is the enlargement of any part

part beyond its natural dimensions. An inflammatory tumor in a soft part is diffended with blood: A dropfical with watery lymph and an *empbysema* with classic air. These again are diffinguished into cystic, when the humours are collected into a sort of bag. Or *schirrous* when the humours are dried up and collected into a hard body.

Tunica, a Tunic or coat.

- Turpèthum, Turbith. The root of this melts the humors, and powerfully flimulates the passages; hence it is placed in the class of strong purges. But it is only to be given to robust patients in obstinate diseases; such as the leprofy and dropsy. The dose in substance is from one scruple to two. In infusion from a dram and a half to three drams.
- Turiones, the fresh shoots of the tops of trees which appear in the spring every year.

Turunda, a Tent.

Tuffilágo, Colts-foot.

Tútia, Tutty. It is the fublimate of lapis calamináris, produced when it is melted with copper to make brafs. It is reckoned 2 good medicine for the eyes, becaufe it cleanfes and dries without corrofion or *fharpnefs*, whence it is prefcribed in ulcers of the cornea and eye-lids; in obftinate inflammations of the eyes, and in thin *fharp* defluxions. It partakes of the nature of zinc.

Tuffis, a Cough.

Tympanites, a Tympany. A kind of a dropfy in which the belly is tumid, inflated, and hard, and will not yield to the imprefion of the fingers.

Ty'mpani membrana, the drum of the ear.

U.

Vagina úteri. It is a Membraneous part feated between the bladder of urine and the inteffinum rectum, and reaches from the rima juft above the labia to the neck of the uterus. Its orifice is contracted with a fpbinter, called músculus fpbinter waginæ. The inner part of the wagina is formed into rugæ, which are largeft in those who have not used coition, and least in those who have had many children, near the beginning immediately behind the orifice of the meátus urinarius, is constantly found in children, a valve called hymen, which when they grow up changes its name and is called carúnculæ myrtifórmes. Under the abovementioned rugæ, are fraall glands whofe excretory ducts are called lacúnæ. They feparate a mucílaginous fluid to lubricate the vagína, especially in the time of coition, and are the seat of a virulent gonorrbæa in women, as the glands of the uretbra are in men.

- Valeriàna bortènsis major, the greater garden valerian.
- Valeriàna Sylvèstris, the greater wild valerian.
- Vàlvula, a Valve. This is a fmall membrane adhering to a part of certain veffels in order to refift the returning back of a fluid, and to promote their natural progrefs. They are to be found in the veins, arteries, lymphatic and lacteal veffels.
- Vàlvulæ mitràles, mitral valves. Thefe are two, and are placed at the exit of the left ventricle of the heart, to hinder the return of the blood into the pulmonary veins.
- Vàloulæ femilunàres, femilunar Valves. Thefe are placed at the orifice of the arteries proceeding from the heart; they are three in number, which being expanded clofe the orifice of the artery, and prevent the return of the blood into the heart at the time of its dilatation. Some call those in the pulmonary artery, figmoides or figmoidàles.
- Valvulæ tricúspides. These valves have three points which are fastened by tendinous fibres to the carnous columns of the heart. They are feated at the mouth of the right ventricle just at its juncture with the auricle. They close the orifice of it upon its contraction or systele, and hinder the blood from returning into the great vein.

Valvulæ semicirculares sive conniventes. These are valves of the intestines, especially in the jejunum and about the beginning of the ilium. They are only plica that rife up, and in the jejunum are half an inch distant, in the ilium an inch and a half. In the beginning of the co-Ion there is a carnous and circular valve, which is formed out of the production of the inward coat of the ilium, and, like the finger of a glove when its extremity is cut off, hangs loofe in the cavity of the colon, in order to prevent the return of the excrements : Though it is not always fufficient for that purpofe, if as as it is afferted they are forced back through this valve in the iliac paffion. But this may be jufily doubted.

Variola

Variolæ, the Small-pox, fee febris variolòfa.

554

T

- Varix. This is too great a dilatation of the veins in the external parts of the body fo as to rife into a winding tumor. It arifes from an impeded motion of the blood through thefe veins.
- Vafa, Veffels. Thefe are hollow canals, confifting of conical or cylindrical membranes, through which the fluids pafs to all parts of the body, fuch as veins, arteries, lymphatics, &c.
- Vafa deferèntia, those vessels are so called which carry the *femen* from the testicles to the vesiculæ femináles.
- Vasa seminària, the same as the præparantia.

Vasa spermàtica, the fame.

- Vasa umbilicàlia, umbilical vessels. These are two arteries, one vein and the urachus. They twift about each other, particu-'larly the arteries about the vein, and are contained in one common coat with the *ùrachus*, which last arifes from the top of the bladder of urine, and ends in the membrana allàntois. The umbilical vein goes from the navel directly into the liver, and there enters the great trunk of the vena portæ. Near this entrance the ductus venofus goes out to the great trunk of the cava, which carries part of the blood that is brought by the umbilical vein that way into the cava, while the reft circulates with the blood in the porta. When the umbilical vein is stopped it becomes a ligament, and the ductus venofus foon fhrinks and al-most disappears. The umbilical arteries, which arife from the internal iliac arteries, paffing by the outfides of the bladder goes directly to the navel and Thefe with the *ùrachus* placenta. fhrink up after birth and are not to be diftinguished near the navel.
- Vaftus extérnus. This muscle arises from the root of the great trochanter, and from the linea afpéra, outwardly tendinous and inwardly fleshy. It descends obliquely forward and becomes tendinous internally, and outwardly fleshy, till meeting with the tendon of the restruction, it grows entirely tendinous, and is inferted together with it into the protuberance of the patilla, a little below the knee.
- Vastus intérnus. This rifes partly tendinous and partly fleshy from the linea - aspera, immediately below the lesser trochanter, upon the outsides of the bone, and is continued almost to the lower

apophysis of the fame bone on the infide; whence it defcends obliquely and almost femicircularly. It grows tendinous and joins the former at once, and is inferted with it.

- Vegetàbila, Vegitables. These are all moss, fungi, herbs, plants, shrubs, trees, &c.
- Vena arteriófa, the pulmonary Artery is fo called which carries the blood from the right venticle of the heart into the lungs, and has three figmoides valves to prevent the return of the blood into the heart. It afcends directly upwards from the right ventricle of the heart, and at the curvature of the *aorta* is divided into two branches; one of which is called the right pulmonary artery and the other the left.
- Vena, Veins. The blood being diftributed to all parts of the body by two kinds of arteries, the *aorta* and pulmonary artery, is returned by three kinds of veins, called the vena cava, the vena portæ, and the pulmonary vein.
- Vena cava. This comprehends two principal trunks, called the vena cava fuperior, and the vena cava inferior, or the descending vena cava, and the ascending vena cava. These two unite at the right auricle of the heart and discharge the blood which they have received from the parts with which they communicate.
- Vena cava supérior sive descéndens. This extends from the right auricle of the heart to the fuperior part of the fternum. There is a confiderable vein which difcharges itself herein called azygos or vena fine pari. It lies anteriorly along the right lateral part of the body of the vértebræ of the back and penetrates into the lower belly, passing between the two appendices of the diapbragm. It communicates with the right emulgent vein and receives in its way the eight lower intercostals on each fide, and fometimes the four *fuperior intercostals*, as well as the two fmall veins which have received blood from the bronchial arteries. The vena cava superior, seems to be formed of two confiderable branches called the fubclavian, which appear to be made by two other branches termed the axillary.
- Vena fubclawiæ, the fubclavian Veins. That on the right fide is not fo long as that on the left, which depends on the fituation of the vena cawa, which does not anfwer

answer to the middle of the vertebræ, but to their right lateral part. However they receive the blood from the fame parts as the arteries, and the veins are known by the fame names.

- Venæ jugulàres, are either internal or exter-nal. The internal begin at the end of the lateral finuffes, defcend along the anterior part of the neck on the fide of the aspera artéria, join the cardtides and pass to the fubclavians.
- Venæ jugulares externæ. These are situated along the lateral parts of the neck and are covered with nothing but the fkin, the fat and the musculus cutaneous.
- Venæ axillares, these discharge themselves into the *fubclavians* as they pass between the *clavicle* and the anterior branch of the scalenus muscle. Vena salvatélla. This is a vein of the
- hand which paffes between the ring and the little finger.
- Vena cephàlica. The cephalic vein. This afcends along the external part of the arm and runs to the line which feparates the deltoide and pectoral muscles, and afterwards, empties itself into the fubclavian vein.
- Vena basilica, the bafilic vein. This communicates with the cephalic at the flexure of the cubit, by a branch known by the name of the vena mediana. It is composed of branches of the cubital.
- Vena cava inférior sive ascéndens. This extends from the fourth vertebræ of the loins to the right auricle of the heart. It lies along the right lateral part of the body of the *vertibræ*, and in proportion as it approaches the diaphragm it bears more to the right to gain the posterior part of the liver, and to traverse the right fide of the diaphragm in that part called the nervous centre. At length it penetrates the pericardium to pass to the heart.
- Vena iliacæ, the iliac Veins. These are composed of two branches like the arteries of the fame name. They are divided into the external and internal, which receive as many branches as the arteries, which they accompany in their distributions. The external iliac vein is continued to the crural wein. The internal is called the hypogastric which receives branches from the intestinum rectum and the anus, termed bæmorrhoidàles extèrnæ.
- Vena cruràlis, the crural Vein. This runs to the foot, and the internal

branch near the malleolus internus is called faphaena; the external about the knee, the poplitaea; in the calves of the legs, the furalis; and about the great toes, the cephalica.

5.55

- Vena portæ. This vein is of a peculiar ftructure, and may be compared to a tree whofe root is divided into a great number of *fibrilla*; for the trunk is in the middle from whence innumerable ramifications proceed. This vein is difperfed on the stomach, intestines, mesentery, pancreas, and spleen, receives the blood brought by the arteries to these parts, and carry it to the trunk; from whence it fends greater, fmaller, and exceeding fmall branches to the liver, bringing the blood to this viscus, and acting the part of an artery.
- Vena pulmonàlis, the pulmonary Vein. This proceeds from the left auricle of the heart where it first forms a finus, and then is divided into four, afterwards into innumerable branches, which are diffributed throughout the lungs.

Vena sectio, letting of Blood.

Venenum, Poison.

Ventriculus, the Stomach.

Ventriculi cerebri, Ventricles of the brain. Ventriculi cordis, the Ventricles of the heart. The right is thinner and weaker, but generally more capacious than the left. It receives the blood from the vena cava and the right auricles and fends it into the pulmonary artery, and the lungs. The left is ftronger, thicker and firaiter than the right. It receives the blood from the pulmonary vein and the left auricle, and forces it into the great artery. This is feated in the anterior part of the thorax, and the other in the posterior.

Venus, Copper.

Verátrum, white Hellebore. Verbèna, Vervain.

- Vermiformis proceffus, the wormlike Procefs. A prominence of the brain, fo called from its figure.
- Vermiformis appéndicula, the wormlike Appendix. This is a fmall canal like an oblong worm which opens into the intestinum coecum.

Vermifuga, Medicines against worms.

Verònica, Male-speedwel. Verrùcæ, Warts.

Vertebræ, the Bones of the spine of the back.

Vertex, the Top of the Head.

Vertigo,

Vertigo, a fwimming of the head, when objects seem to turn round. Vesica, a Bladder. Thus there is the

vesica urinària, the urinary bladder : vesica biliária, the gall-bladder, Ec.

Vesica aistillatoria, a Still.

Vesicatoria, medicines to raise blifters.

- Nigilia, watching.
- Vincetoxicum, Swallow-wort. The root is alexipharmac and fudorific, and is commended against malignant difeases. The dose in powder 18 half a dram.

Finum album, white wine or mountain.

- Finum Canarinum, Sack.
- Finum rubrum, red port.
- Vinum rhenanum, Rhenish wine, properly used, is one of the greatest cordials in the world, and in low, nervous and hofpital fevers it performs wonders; it ftrengthens the wifcera, helps digettion, chears the fpirits, invigorates the blood, and affifts nature in performing all her functions. Rhenish and new wines must be used with caution.
- Viola, Violets. The flowers are moiftening, cooling, and relaxing, and good against diforders of the lungs. Half an ounce of the fyrup is a gentle laxative for children.
- Fipera, the Viper. The flesh is looked upon as a great reflorative, and is accounted good in the leprofy, French-pox, king's-evil, and inveterate ulcers. The broth of half a one or more may ferve a day. The dofe of the flefh is faid to be half a dram, but it may be eaten more freely. Two drops of the gall given internally promotes a fweat. Outwardly it is good to deterge the eye. A dram of the fat will likewife caufe a fweat. Dropt into the eye two or three times a day, it will take away films that ob-ftruct the fight.
- Figra aurea, Golden rod. The leaves are detergent and ftrengthen the tone of the viscera. They are useful in difficulty of urine, the gravel, nephritic colic, and beginning of a dropfy. The dose in powder is two drams.
- Wiscus five Viscera, the entrails. The heart, liver, spleen, lungs, &c. are so called.
- Viscus quernus, Misletoe of the oak.
- Fitiligo, the Morphew. Whitish spots, rough to the touch, which fall off in, fcales.

Vitriolum album, white Vitriol.

Fitriolum cærilleum, blue or Roman vitriol. Vitriolum viride, green vitriol or copperas. Vitis vinifera, the Vine.

Ulcus, an ulcer.

Ulmus, the Elm-tree. The bark incides

F

I

N

grofs phlegm, and ftrengthens the fibres, A decoction of it used for five or fix weeks will cure the dropfy afcites. An ounce or an ounce and a half is enough for a quart of water.

Ulmaria. Meadow-fweet.

Umbilicalis funiculus, the Navel-string. It is about the thickness of one's finger, and confifts of the *ùrachus*, two arteries, and one vein; as alfo a fpongious body, which ferves to defend them.

Umbilicus, the navel.

- Vomica, a tubercle in the lungs full of pus or matter, and included in its proper membrane.
- Urachus. This is one of the umbilical veffels, and is very feldom pervious in a human fætus, but is generally like a folid ligament.
- Uretères, the Ureters. These are two membranaceous and almost cylindric canals, about the thickness of a goose-quill, which are extended from each kidney to the bladder.
- Urèthra. This is a membranaceous and almost cylindric canal, continued from the neck of the bladder to the end of the glans, and ferves to transmit the urine and femen.
- Urina, Urine.
- Urtica major vulgàris, the common nettle.
- Urtica Romàna, the Roman nettle. The juice of nettle ftops spitting of blood, bleeding at the nofe, too great a flux of the piles. It is likewife of use in the bloody flux, the whites, the jaundice, and moift afthma. The dose is from two ounces to four a little warm. Drank as tea it is recommended against the rheumatism, gout, and gravel.
- Uterus, the womb, is a part in women, feated between the inteffinum restum and the bladder. It is hollow, of the fhape of a flatted pear, and defigned for the generation of the fætus.
- Vulnerària, medicines against wounds and ulcers.

I

S.

Vulnus, a wound. Uvula, This is a round and almost conical part, feated at the posterior part of the palate over the root of the tongue, between the two tonfils. It is of the fize of the first joint of a child's finger, and is pendulous from the velum palatinum.

Z. Zedoària, Zedoary, a root. Zinziber, Ginger.

Zygoma, is the os jugale, seated about the temples.
