ece another way "hoy ond-those who may wish to compline the be possluy fiud, cither itt the seneral arrangeme or minor detalls, some poilts that can be Intro duced into their prospective plan in such a wo
as to ereate additional satisfaction. The dwelling here illustrated was built so
four or five ycars ago by Jonss Ecker, Esq., a slight elevation atbout onc-ball mile west
the village of Fayetterille, Onondaga Conn
N. Y. Althotugh this pearance closely rescmbles lundreds if not tho sauds of others scattered about the country, stil
the arrangement of the frout hall-the symme rical placing of the openlugs tin the sitting roo
-the long, narrow, horuo tilated dinlug room-the lack poreh and son of the kitehen fixtures-19 not entirely orlyinal, improvencot upon similar coutriyanees to met with in a niajorlty of the equarce bouse plans.
By uaing the smallest nume By uaing thes smallest number of openinga
practicable, and making the wladows extra and low, s cheerfulicess was imparted to the roomes haraly attainable in any other way. The foundations were lan in the only way that
it is possible -to build founuation walls with a certainty that the building wher completed will remain sound, that is, the center of the stone
wall was drectly below the center of the Ericks Wall was drectly below the center an the brick
wall. The stone work being comusuced six walls were
the surface

the market. Grecrbuckis will go ne two hinu
dred per ceut. premlum, aud Uncle suma will be
in funds.
WEALTH OF THE MORMONS.
$\qquad$

 Of course, the Mornons were reudy, in tru
Yaukec style, to trado good aulmals for thos that were about worn out, pocketlng a hand at most, these troken down nuluals would be
fat and sleck, and Btr. Mormon elder was ready
and Xdallo, and tho Mormons have been able to
sell all their surplus graln and provislons a
lars a bushel, and wheat at cight to tex dollars, ned provisions of nll kinds at proportlonate
figurce, the Bormons lave. Decomes rich fur Now, the lundred thoosanad peopele of E Lat
give a tenth of all they prodnce to the chureh Brigham Young and his clders are the church,
and hence the untold wealth they tiveu been oblo to place in their caffers. Two of the merchants
of Salt Lake assared its that thele freight bills
$\qquad$
treatiant of fish.
As there are many pet gold nish lin our city,
for the benentit of those who are unedueated as to the proper treatnent, wo cops the following
rubes from a long article eredited to the Slypenus Magazhe:- When purchastng a globe, procur no wide-monthed one as possible, and subsc
quently let It never he more than threc parta tull o
$\qquad$
$\qquad$ tenderly while doing so. Somo persons whe changing use a snall net, sonce the land. Neve
give the fish uny food; all they require when
 They will derive sultieitent uutriment from the
nimalculie conflined th the water. Numbers of aneople kill their gold tish by giving them pleces
of breald. Whenever a fish seems unlientliy
place it by itaelf for at few days; you will then1
see if the fungus will make tra appearance-it
not, the fish may be retnrned to the globe.

| AN UNHEALTHY HOUSE. <br> A dark house is always an unhoolthy house, always an ill-uired house, always a dirty house, Want of light stops growth, and promotes scrof ula, riekcts, cte., among children. People lose their bealth in a house, and if they got 112 , they camot ret well again in it. Thece, out of many negligences and lgnoraneces in managing the health of houses generally, I will here wention as specint 15.5 . First, that the fernale head in eharge of iny building does not thlnk it neces. sary to visit every hole and corner of it every to alr, to sun, and to clean rooms, while kininhabited. Third, one window is considered enough to air a room, - Fherence Niightingale. <br> Were a wan cuery day to throw a purse of money, or even a single guluca, into the sea, he would be looked upon as a madman, and hls friends Would soon coufine him for sucth man who throws away that wheh to of more value than goid, than mines, than the whole world, even his lueath, his peace, his time, and his soul-sueh an one is often admired, tstecmed, |

 な紷. 13.

ROCHESTER, N. Y., JANUAR
IN MEMOHRIMT.

| Rarrlit hat a more painful duty devolved upon un than the anmouncement of the deuth of Cnanue Fllis Calinwell, one of he Editors of this paper Fince April, 18its. He was prostrated by sudiden illness December 21et, and ufor ten dayg of ncule Ruffring, whlch was borne whit herole fortitude, parsed peacesfully away with the clortag hoars of the expiring yenr. For monthe he had devoted hle bent energice to the ilterary department of the ROBAL, and We have the eatleffactlon of knowing that his labors were recognized und hifuly valued by all wha ware acquainted whith their reallts. Newer have we known ane who worked with more zanl and fidelity, or with a keener senee of the respionilbility of hat porition. <br> Mr. Chinwell, lronght to his task talenta of the lilgheat order. (iradunting from the 15 niveresty of honor, he diseovered a refmenent of turte, a laryctneps of culturo and an aptltude for literary pursilite that we have rarely geen equaled. His kuperiority in theve regpecte wne nulvereally acknowledged by those who were hrought Into relation wiul hime Wo have Who were hrought into relation with hima, Wo have no words at commund to portray jutily Mr, ('at, wzLL as a genlal, chivalroun gevtleman -a faltirna, unselneh friend. To the few who were admitted to His intlmate requantance wo critical annlysis is -peded to increare the ence of his many excellencien of character; to thowe who knew him not no delinemison, bowerer sceurate, can convey an adequate imprepsion of hin great supuriority. <br> Daring the perlod of Mr. Cishonketits connection Whth the leuay, he has writcon many of the articleb Which have apprared as cummonicationy in the Lits. erary: Deparimente. Aud muny who bave eent to the Runat aruclea which were hastly written, wili recall the inbor that he ham experided upon their pm. ductlons lil pruparing them for publication. That genulac modenly, which no charactirized his life. and whith in wo commendablo in ono porscened of each extrsordinary talents, whll account for hls ictlcence as to the authoretin of his own productions. His consclentions dewntlon to the interemie of the Hifa conselentiona devotion to the interceste of the Rural and the amurement und Inetruction of sta readery will excuse any liberlese he han taken whit communicutious. He gave promire of $\Omega$ succersfin carecr as in editor. He wan remarkable fur the broatuces of hie viewa, for varled culture, for hla knowledge of men, and for readinees of exprepeion. - But he has gone from friends and earth, and we trinst to a better, brighter homo-leaving kladred and friende to molum his lows and impiale his virtuers. May thore of an in portions to laktrnct and gulde the readlug, thinking publlc-to monld the mind and clevate the churacler-uct as wisely and well as did (1) |

 to the thirid quenestion of our correspondent.
For transplanting, let a trec te two years old For transplanting, let a tree be two years old
roont the bud, well cut back at one year oll, and with bix to nine main branclues, wilich form the
riane-work, or foundation, whieh is to five forn
and elharicter to the future tree, with proper and character
eare and man

FIG. 1. - DWARF PEAR TWO TEARS OLD.
The annexed cut, fignre 1, will illustrate The annexed eut, fignre 1, will illustrate a
two year old tree, ane above describect, its lower
brauches about one foot fronn the gronud, and brauches about one foot fron the grouncl, anc
it epper brancles being the strongest and mos upricht, and
horizontal.
I speak of this moore partienlarly for the reason
that all the euts whlch I have noteed in works that all the cuts which I have notiecd in works
on Pomology, and in agricuttural papers, repre sent a two year old tree, with brapches muel the longest, and strongest, at the bottom; an dimintshing in vigor toward the top, except rinnce mustrates the principle that the sap Hown most freely aud readily to the upper branches, giving them vigor, strength and uprightness to
the ifiminntion of the same claracteristies in
those below.
Tho dotted lines Indieate where the branehe The dotted lines indieate where the branches In cuttling a tree, with branehes formed a within four toslx inches of the place where the one year old tree was cut off, and just above a
grood bud on the slde of the tree over the pre good bud on the slde of the tree over the pre-
Tlous year's ent, thus kepping the leader in perpendicular position

1
If the slde branches are too horizoutal a apper bud is left for its extenslon; if too upright, if desirable, to fill wide spaces, in the bame way, Cut the other braneless at such a distanee from the trunk, that the ends of all ol them would
form a pyrimild, the base of whlieh slould not be over a pyrume to sixteen Inches In diameter, and In smalish trees much less; thus the lowest branches will be left the longest; the objeet pper branches, and induce it to How mor corcibly to the lower ones, inereasing the vige
and force of the latter as meth as possible, whic

## UNSATISFIED

How many aehing hearts hare moaned the cry! -and why? Because this world is so full
of sorrow, so destitute of real culpymeut. Eren in ehlinhiood, the suaniest time of life, we see
the little oue, weary of his plaything, easting it the little oue, weary of his plaything, easting it
aside and seeking some better tos; and so, too, men, who "are but childten of a larger growth,"
no sooner galn a long-sought treasure, than they tire of it and erave some higher boon. The
youth, whose heart beats high with hope aud Ofly expeetation, is destined to sce his bright
visions take wings and flee away-his firy. eastles crumble into dust.
Almost all mark a road by whied they hope
o reneh the goal of thefr ambition, and cagerly. airect all their energies to this cud, whatever it nay be. Some would, by darlng exploits or
mighty filgats of gentus, win for themselves laurels of hozor and wreaths of fame, but how still unsatisfied. He whose ldol ts goid, and Whose diaily eare and toll is for the glittering
dust, inds in his weighty treasurea but a poor recompense fo: all hls labor; sual the rotaries is butterdies pass theirs, find but au empty void when gatbering clouds obscure their sunshine.
But even those who have less seltish alins than Bat even those who have less sellish alnas than
these in view often tind their dearest hopes eut low, as some unlooked-for sorrow luyghts their often wilth what crushing agony the heart yields up its fairest, dearest treasures to the grim
destrover, Death, as with his sickle keen he euts own both the old and gray, the young and fair, ne in sorrow the motuer gives up Ler prde, or and "monruers" ererywhere "go about the crness," and could we only lift the vell from those around us, even there we might find deep
wounds, whieh time, Indeed, has bealed, but wounds, whieh time, Indeed, has healcu, Wrings loaels the story of some great wrong or heary sorrow of long aso. All seek in some way for bappliess, and our
very nature is such that we are depradent upon pach other for sympathy and love; and yet
buman nature is so dark and imperfect that

Does it Pay to Cut Corn Stallus
Peacrical mend differ widely in regard to
the utility of corn talks for cattle food. Without tuy preparation it is well kuown that any
kind of stock will cat but little of the stalk, after stripping off the leaves and husks. By cut
ting it up) fine and starving them down to it ting it up the and starving them down to it
cattle aud sheep will counsume a part. If meal will eat inore, and if the whole be steamed softened and cooked together, they will pretty
much clean out the troughs. Chemineal out the troughs.
substance in corn stalks. The pith is worthless that, unlees it is cooked and loftened, it injure the mouth and stomach of the anlmal. The
natural iustinet of unimals cuusce them com monly to reject improper food, and they seen to
be guided by this finstinct when they refus unprepared corn stalks. Doubtiess the onl
time when slock should be forecd to cat then is when they have been steanied and softence and then mixed with recher food, But then doe
it pay to incur this uxpense and labor? Her agaln men of experience differ widely in their
views. It is not probable that stock would views. It is not probable that stock woul
thrive well on stearned corn stalks alone, is mixxed with them, ther greatest bencfit is give the requisite amount of bull to the food. If
this be the casee sumething checepor, oonsider Ing apparatus and labor, should
straw or hay less expensive.
In one light it is a quod practiee to cut corn
stalks. They are then iu better shane to so the manure heap - ot ofork over in the spring, come in contact. Their light, porons structure
makes them execllent absorbents, and we almost hink it would pay to increase their capacity at utility in this rus of beat

MORTEXCUTUURAX．
SHADE TREES－NO．IV The Oak is the monareh of trece．Every
epithect denoting beauty，tatatiness or grandeur
which wc appls to rariows other forest trees，it Whieb we apply to rarious other forest trees，it
can justly claim．It is the most pieturesquc of all，and is the type of strength and endurance
Its age is not connted by yeari or scores of ycurs， ths age is not connted by ycaris or scores of ycur trees in song，roinance and history．The limber
of the oak stands fret in point of utility，and is of the oak stands frest in point of utility，and is
used for a great wariety of parposes，the most importaut of whichis is ship－bullding．Untivaled on land in beauty and grandcur by any of
its compecrs of the forest，on the sea it has uphorne the richest treasures，the proudest
fagss，and the greatest heroes of the cartb． Of the seycral varictics we will mentlon but
one，which is हnllicient for the purpose of this one，which is Elinicient for the purpose of this
article．The American White Oak ls very gen－ the Northern States，eristing plentifilly in a forests．The bark of thls variety is of a whitish
color，by which it may bue readily distingulshed． It comes late into leaf in the sprins，and alter th frost hat dried the foliage in the autuma，it it still apt to remain on the branches．Theres are a
few ppecimens of this oak seattered throughout the conntry of immenes size and age，but 1
order to grow in pertection it should be allowe to stand in a rieh soil and apart from other trees．
Then Its mesive branchce extend widely，its Then tha massive branche6 extend widely，its
huge limbs beconie mossy，lts trunk furrowed， huge limbs beconc mossy，its trunk furrowe
and lit hids deflance to the assuults of the el avages of Time． or mere timber purposes．Ito srowth is low，and It should not be cut untll it ha scarcely out of pluee naywhere．It is suitable for large plautations nud masses，for a roadsid
or avenue，and nothing of the kind could ad hore to the bewuty and value of a plate than few noble specimens，properly disposed，of th
white oalk．It is is someshat dilicieult tree to row really when properly trented．
Of the Chestuut，Downing eays that
aust to the oalk for its qualities $\ln$
gardening．Lilke that tree it attains an eno mous sizc，and its longerity in some cuscs i
almost equully remarkatio．Its filuc，mass foliage and sweet nuts have rendered it a favorite ree since a yery remote period．＂
The Cheshnut is one of the most valuabie trece
for timber that we have．In favorablo altuations it is a rupid grower．It is easily ralsed from the
seed．The sweet nut lt bears is lighly rateenced， nul meets witil ready bale in the market．For posts and rnils，clesstuut tmber is equul of cars，ehurches and dwellhngs，the lightnees the wood and the benuly of the grain，render inferior to none．For making plantations for shelter，and especiully for the purpose of growing
timber，we have no tree which eurpasses this． The nuts alone would yield a handsome return It is not，however，adapted ta so wide a diversity of soils and situations as some otlier treces．Th sonthern elopes of nowutainous cllstriets in mitd clinates are livorable to its best development．
It does best in a rich，bomewhat moist，loose soilt，and it
situations．
awn in elose proximity to the dwelling，nor for bordering walks or lane，on aceount of
prickly burrss which fill from it in autumn． prickly burr＇s which fill from it in autumn． With the American Lime，Linden or Basswoo it is Fariously named，we will close for the our decidnous trees．The Basswood is a rap erable，ure in manulactures．The leaves arc large，especially while the tree is young，an w clusters，Thuy are very frugraut，wind it aid the tinest honey is made from them．Th
ree is liable to be iufested with insects，whiel ree is liable to be infested with insects，Whiel it
serious objection to plantiug it in the strect nd parks of a city or near dwellings．It eau b and for forming belts and sereens，it should

HORTICOLTURAL QUEETIONS ANSWERED Eds．Rural New－Yorker：－1．Are the Iona e，or aro they popular beeause Dr．Gussyr an others choose to make theans so？
2．What grape would you rceommend for incyard culture？
What do yon think of the Clinton for wine for a door－yard fence？
5．Will Honay Loeast make a good liedge？ it Ts good as Orage Orange？
B．What ehall I do with roubled extensively with the borer We．e will endeavor to answer these questions uffliciently tested to to say positively us to the merits．So far they promise well，but they mus be widely disecminated，nad tested by culture in pronouneed．We rould discoural boosing these varietices extens vely or ere largely for a vineyard，but we would advise to the extent，at least，of one or two of cac kind．

Wo dion poseess a grape of sueh per

promlnent pult in organizing the National So ciety of lruit Growers，how ealled the Ame President at its tirst meethy - an ollice whlech he

It maty be properer to state that when we grave he consented with relnetance，yet in tho sane hotter expressed a sentlinent which did honor to thrant，and exhimited his strong love of Rura ursulta and Rurul Life，asf follows ：－＂But I do remembered in conneation with thut cst of all temporal pursuits to the promotion ny luend shall be lididtoeneath the soods of the meleatoral with hichent pride his Mother Ekerth，＇I Blall feel that I lave no

 ritten for 3toore's Raral Nem. TorTHE VALUE OF BOOKS. Trinorga the medium of books we are enabled
to converse with kindred spiritt who have lived
 not glowed
ite anthor, imaginatiou, lu some fairly land where all is
purity, harmony nud lore, and breathed the parity, harmony and lore, and breathed the
haliowed attmosphere of a more exalted state existence. Oftentle es whicn sloomy thaughts
have chased all the sunshine from the heart and We picree the darknees in rain for one ray o
light,
soinc little word of encourageruent, clothed in the teautitul language of pocss, an
burled deep among the preclous th memory, has dlapetled the gloom and awatiene withln us new and holler nspirations, made u.
to feel that there are got ligber attainments and more glorions achiseremente before
thus gilralling the star of hope, with joy sud peace unutterable.
and the retined, what can compensate for the loss, what cau seep the soul unpollutod when
brought, daily and hoarly, perhaps, in contaet with low and vulgar minds? What but farmliar times, the record of whose decds hats becn transmitted to us by the pen of the historian. The
arm of the patriot soldier hass been nerved for decds of yalor by peruzlug the lives of those who
have pourcd ont blood and treasure the wate for country and the sacred canse of liberty. Th
heart of the Christian has been warmed with holier zeal by reading of the martors and cran-
celists who have risen abore the ranltes geliats who have risen above the ranltles o
the world aud whose rittues tower aloft in sub line grandenr, their follies and weakuesse
buried by the lappe of yeare. How base, bow un trifling converation which vecuphics so large unjoy the companionship of poett, phitlosopher
and tages, and receive finspiration from them to If ticre ls anything more than the blitaful assul ance that we shasll see the King in H1s beauty nud
dwell forever with Him in slory required to lu the soul to Hearcon, it must he the dellghtfol auticipation of meeting and
thosc whose charaeters

## READ hlotd.

Reidivg aloud is one of those exercises that combine meutal and muscular etrort, and well, a person should not only understand the wifhin him that crery syllable was distinctly enunclated, white there is un fistinct presidlug
whicll modulates the volce to the number and ought to be ablo to tell whether he is distluctly heard by the furthest listener in the roomp; he is not able to do so, it is for want of proper judgrent and obscrration.
Reading aloud helpo develop the luugs just as is to induce the drawlige of a tong breath onece in a while, oftener and deener than that of reading
without cnunciuting. These deep luhalations never fall to develop the eapaelty of the longat
in direct proportion to their pructlec. Common consumption bergius uniforminy with auperfect, insumpecent breathing; it is the char shorter and shorter throngh weary months, do short breathing, whatever promotes deeper in spiriations is curatlve to that cxtent, inevitallyy
and under all clremmstances. Lat any person malke the experiment by reading this page aloua,
and in less than three minluites the instinct of a
long lreath will shovi itecif. This readiur aloud durelops a weak roieceand makes it sonorous It has a great efllcieney, also, in making the
tones elear and disthnct, freeiug them trom that anuoying Loarsencss which the unaceustom reader exhilits before he has goue over half a
rmge, whent he has to stop and clear away, to
the confusion of himself as mueh as that of the subject.
This loud reading, when properly douc, Luas great agency in inducing vocil power, on the
Eame prineiple that nuseles are strengthened b exurcest-those of tolev-making thencral rule. Henco in man cases, absoiute silecuee diminishes the yocal
power, just as the protracted non unse of the arm power, just as the protracted noll- 1 ne of the ur
of the Hiudoo devotee at length paralyzes it io cver. The geueral plan ln approprinte casses, i for a minute or two, or three at a time, ine ing a minute crery day, whleh is to be con
until the desired object is aecomplished. ayed thus, the
form result.
-inating of health, of arcrting con any company, as a nleans of showlige the quallty or the mind, let reading aloud be consldered an of empattering French, or lisping Italian, or dane ing cotillions, gallopades, polkas and quadrilles.

A sux proves himself fit to go higher, who
shows that he is faithrul where the is. A man shows that he is faithrul where he is. A man
that with not do well in his present place because he longs to be liggher, is fit neither to be wher

TERMS, $\$ 3.00$ PEER YEAR

VOL, XVII. NO.
ROCHESTER, N. Y. - FOR THE WEEK ENDING SATURDAY, FEBRUARY 3, 1866.
\{WHOLE NO. 837

MORTYGOMTORAK.
FRUIT GROWERS' ASSOCLATION OF
WESTERN NEW YORE. Tar Annual Meeting of this Aseociatio
was held in this city in Corinthian Hall o was held in this city in Corinthian Hall
the with and 20 of
of Jonuary, Mr. PATHIC BakRy, the Preeldent, in the Chalr. Arrang Cormathian Hall, becanse an unueual number gentlemen were expected to be preeent, and the
aceommndations of the Supreme Court Room, accommnations of the Supreme Court Room,
where the meetinge were usually held, were The ehow of irnite was inferior. The variety an snail, and the specimens few , comparatlvely.
Ellwanger is Barry showed $\$ 36$ varicties of nter feare, nost of then very fine Martina $P$. Whiter or
Benjamin Fish, Girtes, 19 varietics of apples. Hng of Tonpplins Co." apples. apples
20 o\%. Langworthy, Gipeece, 8 varietics appice Tompkins.
Merminoth Northern Spy apples, by Joseph Harris
Apples from the Clevcland Fruit House anong them summer apples perfectly sonnd
and hard. Also, a plate of Cnlarbba grapce. fabella Sith, Le Roy.
Grapes by J. (iregg, Hammondsport, J. L. ner, do., \&. B. Fairchild, do., J. A. Cramm, do. arner, Rochester.
caling the meeting to ordcr, Mr. Barry made a sbort adaress, in the conrat of which be
referred to the preseree of eeveral distlngulshed P. Whllder of Maseachlusetts, Presldent of the American Pomologlcal soclety, and the father of American Pomology. Mr. Barry referred ap.
propriately to the death, Joserp Frost, an houored member of th Mesprs. H .
ere appointed to prepare resolutions on the death of Mr. Fruet.
order of businesa for the kegeion.
The following gentlemea were chosen ofteere Prevident-II. E. Hoo
 Stcrecury und Trusurer-James Vick, Rochester.
Exceutce Com, Wm. Smith, Geneva: E. A. Frost,

 of the harberry, Murshal Pe Widecting the valu was not cultivated in h\& section; farmers objected
excellent for precerves. The plant takea root casily and thrives with litule or no

The new President, Mr. II. E. Hooker, was
introduced. Mr. Hooker thanked the Associaintroduced. Mr. Hooker thanked the Associa-
tion for the honor done hihn. His first knowl. It had heen his hope that Mr. Barry wonld be retained in the ponition That gentlemuna wa cerninuently qualliced to flll it, both by experience
and avility. Nevertiectess he (Mfr. Hooker) would accept the place to which he had been to
une:pectedly clerated, and would endenyor do his duty in it. In conelustos he came down to busincss, and calted for reports from Com-
mittcers, or the presentation of other matter for diselussion.
The Committee to prepare the order of tusision:
1st. Do the past results or proats in Pear growing
 I. For Anateur II. For Market.

## orchard pilauting in Western New York? 4th. What are the beat modes of planting frult

trecs in different soils?
5 th. What is the beet treatment for Apple orchard after plautsug, Hecluding cullivation and pruning?
6ith. What are the vett six varictles of Aprile for orchard planting in Western Now Yorts?
th. Can the Curraut Worm be deatroyed so th 8 tb . Can hentrnay and thriffy old Grape Vines, w
estaullebed in good soil, be grafted succeesfully a
 10.h. What is the bett Grape for general cultivation
in Westrin New York? 13th. Which are tho beet varictice of Grapes for
long keephnz and the best node of preservation?
12th. Whut early G rate 13th, What are the best methodis of kecping, pack19t. Appice. 2d. Pearse. 3 d . Peachee. Ath. Grapes.

1. The Preident requested Hon. Marshall P. comer to take a seat ou the platform. On
con tion brieily. He said that after a long illuees it
gave hin great pleasure to meet so marry gentle.
 ence. This organization, standing first among
 trees, Stundurds, aboat 12 years siluce. The were in four years afterwards budded with the
Bartlett. He had nut recelved a shiling for the Bartlett. He had not received a shiling for that
ten acres, nor was there a tree apon lt he con sidered worth anythlug. His trees had not
sit rueelved such care as Mr. Yeomans. His soil is what is termed gravally lonm - good wheat
tand. Mr. Burtls of Rochester, had had some expe-
rience in pear raising. The Duchesse erwe hind done well with him. The trecs wanted careful altendance. When the ulight first appear put the kinfe to the limb. He conld not disMr. Barry naked Mr. Chapin if there were no Mood?
Mr. Chapin did know one or two, and onc of
those was on stiffer soil than his - on a bide hill, hoose was on stiffer soil than his - on a side hill,
nd not much exposed to the wind. Mr. L. F. Alled of Burtalo, was invited to ident. W. P. Townsend of Lockport, anid he had
commenced with a large number of varicties; wut had gradually reduced the number to about
ten or twelve. For the first ten years they paid well; but for the last flve years they had bee hadly linjured by blight. The White Doyenne Hue Duchens de Angenterne badd mostly encared If thourht there were very few loculitics in
which pear culture coaid tee mado proftinule He reverninicnded the Duehess de Angouleme on the Quluee, Bartlett and Seckel. His Boil wa pan." Ifls opiniou was that only in a few prolit, on a large seale.
Mr. Barry kaid that if it were not for the blight As loug as summer pears brought $\$ 8$ to $\$ 10$ barrel, and later pears 812 to $\$ 20$, nothing could
be more proitabie. Every thing that was raised had its cemenics. There are logses in chery de-
partment of Industry. The pear had the advan age of bearius cvery year, while apples bon ouly every other year, or less frequently. Yca cul were those who becume dlscouraged at an pear culture was the most lucrative busines he bight attucked thedr trees, abandoned them aitogecther, and did not attempt to remove the shouled watch bis trcea of bligbt lop ofl the affected parts, and if necees place with another. Those who neglected thei rowsers. Pears need not commund mes lruit
grem one-fourth their present price in order to be a pears for $\$ 30$ per barrel, and fot hle pay for Mr. Cbapin asked whether the pear blight wa Mr. Barry gaid he thought woderate cultur Meary mumuring. cessive growth of the trce, was ulways follow Wr. Brooks of yoars by blight. Mr. Brooks of Wyomiug, sald he thought would not advisc any one to to and soll.

## ＂THE TEACHER＇S PROFESSION．＂

$\qquad$

 So much for the assertlon．And now let os see
to the argnmento sustaining it，as advenced by
 young man soon inds mental stimulas loat a gets＂into a $7 x 9$ treadmill and begins to grind．＂
I am ready to admit that when mental stimulus is lost，the young man ourht cither to secore a is lofessorship or do something cise to get him－
self out of the school－room．If he docs not ＂educational boards and the public will mos no subject worder that ther do
But it is a matter of doubt，if this be the case，
and a teacher leaves his desk vecause be feels that he bas learaed it all and fects no mental stimulus，whether he will succeed long at any
thing else，unless he scenres a situation as pro． thing else，unless he sceares a situation as pro－
fessor．The gooner the profession is rid of such fessor．The sooner the profesion is rid or such
wiscacree，the better for all concerned．Id eny
that teaching doen lose its mental stimulus afler a few years．No onc of our common school
studies lash been aystematized to purfection or anything like it．If it were so，indolcnt teal crs wonld lind some cexcuse．But
teacler who feels anythingr like a
his whole duty to those commitled can honestly gay he has lenrued all there is to b learned in ereu such ntulies as Arilhmetic
Geography or（irammar．Our text books are Geography or（irammar，Our text books are
confeescedly imperfect lu illustration，explaua conisscaly imperfect hand And lave real teaches do what he feels he ought to do lu remedylur defects by oral inastruction．I prewinio your taught anyluing in Arithmet sprit apeak onr best and most honored names
Some yeara alnce，in an luetitute in Whactnaln I heard Henky Batramb，of Conn．，and Prol Joins OODEN，declare that they had that day gainced valunble ldeas on tise sabject of＂frue thought they understoort the subject．But sucl men as thest are not the ones who declain
about＂treadnuill routinc，＂de．Any teache can find a lack of mental ntimulus，it he shat his eges and doce uol deyire to learn，bnt if ho
has half a wlsh to do so，fee can tind plenty of has half a wish to do so，he carn tind plenty of
ficlde not fully explored，and ruady to be wronght out by honest，sturdy loil
But our Profensor thinks，and this is his sceond
argument，that teaching furnulsics poor pay Agreced ；but whose fault is it？It is not elmarge able to the taucbucr，but to just such men as your
correspondent．The world rates ne at abon of inco who only care to teach an year or two，
who can asord to ceach for less thau a live teacher，hecpe down decent salarles．Bnt thank
God，ont West rnany of our school boards are GoD，ont West anany of our echool boards are
 accordingly．It men who teach ouly for a
＂make－shift＂can be rated at their jnst ralne， hals second argunnent will sall to plecee of itecif 0 other professions that experto are preferred nd consider they have made such a step in for pou and sncer at thulr former assoclateo common school teaching．

## $\underbrace{\text { Evanston，ill．}}_{\text {THOUGHT AND EXPRESSION }}$

 Uror the opening of the Statiztical seetionof the Britizh Association，Lord Stanley，the
Presldent， Preeldent，offered some excelleut advice ab
sprakius： ＂You can say all you have got to any in a very
fow words it you will thluk it over beforcliand aration，want of exact thought，that maket dif fusecuess．A man goes round and round h
meaning，when Le is not pertectly elear．Again
we don＂t wiut preamble or perorations． not a echool of rhetoric；and in sddrussing a granted．Listly，we only wish to get the truth of thisgass＂
Qulntilia
（Qus a written to the same effect，and thonght will always clothre ittelf in appropriate
lauguage，nud that when people supposi that they are in want of words to expreas themsel ver，
they arc really in want of thought，have only got hold of a part of a thought instewd of the
complete thought，aud aro in difficulty abont The clothing of an unformed thing．De Rctz
gags that strong emotions tind their utterancee Su monosylahles，sad the language of the poor

 real meanlng when be is not perfectly clear．＂
London azsamiser．

## Thret occan.

Sosse's life crept on throngh the long monthe
of the autumn, with wenry of the autumnt, with weary pace. Sometimes bin
recelvel a brice note from Ben, inclosed in letter to his mother. They were the brightest words his haud penued; bit she fooked in vain for auy trice of the love ble knew he held for
her in his noble heart. She was oftea nt hing inother's house, staylag there days togethe
greatly to the old lady's counfort.
"How I wish yon could nlways Suerne dear,") Mra. Maney said to ber one day,
Indeed, this was a remarle she was ofle
 what pain it fave the qniet little woman.
"Good newe, Susie," kaid the mother to her one day when fhe had received a letter from
non. "BEN is compling home to Curistnak." Sosie's face lighted up with joy.
"Dear boy." enid the garrulous old lady, ",
do wish I could keep him nt thoine. Ther secms to be fomething nbout the ole Harbor that makes bind uneary. I suppose it is becaube
we are so very qulet here, and the wnitrast with
the linstle of life abrond is too great. I don't know what other reason there can be."
Sosme tricd hard not to look so very cons out the keen-cyed mother noticed the spealking
expreffion of her countenance.
"Whan "What were you going to say, dear,"
Mre. Manir.
"Nothing," pald sosir. "Nothiug." "Rut you were," persisted the old lady. "I
ams sure you werc. Susix, you kuow ronething. Tcdl me what it is. Harbor so much?",
"I don't think he really dislikes it, Mros.
Mantr," אald Sossik.
"Then what is it? Ah, I eee jon know. "Then what is it? Ah, I zee yon know
What is it dear? Do you know?"
Susie could not deny that she knew. Miss Subie could not deny that she knew. She
MaxLy was an unmeroiful cateclisecr. She
world not let Sosire ofl in Eilence. And bosiden, Sosse had long boen aching for that

MORTRGUKMURAK
FRUIT GROWERS＇ASSOCIATION OF
WESTERN NEW YORK．
$=$ Deme．Discussion on Pears Contin
［Continued from page 39．］ D．R．Ruztboons of Oakiteld，Genesee County，
eaid he disliked to have Geresee County left as it was by the etatement of Mr．Fisher．Eight years ago he planted 200 trces，of which 100
were White Doyennes and carly peare，which blighted badif，bat from the othcr handred he
had sold eight hnndred dollarag worth with had cold eight hundred dollarg＇worth within
the past four years，and last year ho picked 26 the past four years，and last year ha picked 26
barrele，which sold for thrce hendred and Aftcen dollars－all raised from a plece of ground not larger than one quarter of an acre．This w
at the rate of twelse hnndred dollars per Mr．Olmasted of Le Roy，zaid their trees blight－ sandy and gravelly loam－dry land．He coa sandy and gravely loam－dry lnad．He
sidered penr raising a precarious bnsineas，
Mr．Allen inquired whether any one point out a pear orehard thirty sears old，i Mr．Wilder enid that
rere imported from Europe，nand iniwed were imported from Europe，and injured by
transportation；hut he wonld say that nive． tenthr of the trees he got from the
now living and in good conditiou．
Mr．Ward said his best crops were
trecs from twelve to fifteen years old． Mr．Codding of this eity，referred to son in Ontario County，where he formorly live He knew them as oid trees when he wask ame
boy．They are set in good coudition，and ha borne crops worth len times The eame number of apple trees．
Mr．Brooks asked Mr．Barry Mr．Barry sald that if a tree died died first remove the soil and replace It with ne If did not believe the old soll was good for the
Mr．Wilder confirned this opinion．
2d．What varloties of Wint
beet adapted to cultivation
Mr．Ward eald that what was trnc in onc local
ity mightrt not be true in anothcr．He would ity might not be trac in another．He would
choose－1st，Winter Nelss；2d，Joscphine D Maline；Sd，Lawrence；4th，Ester Benrre；5th Doycne De Eleneon．He did not conside
Vicar of Winkfeld a good table pear．It good for cooklng，but for eating whs indufferen． John J．Thomas of Union Springs，would ad
he urme of Jones＇Scecdling．He worked th Winter Nelis at standard gelght．Me did no now snother pear，th
Mr．Townsend of Lockport，also
Mr．Sylvester of Lsone，said Dana＇s Hov was an exeellent winter pear．He had eaten
one the last week in December，1865，that was ery ine．
Mr．Mursh
Inning out the Wluter arged the neecesblty of son．The remalning epceimens would pply to other pears．The Doyenne D＇Alcneon was \＆very excelent winter pear－hardy，a abundaut bearer and a good ripener．The cars uro be lind beeu laughed at for saying b prefrred the Vicar of Winkifeld if he eould
have but one variety．Now he wonld ancon ceret of keeping winter pears is to keep them below the tenperatnre whith will ferment the
fulees and bring them to maturity．His wint pears are left on the trees as loug iss possible．
But，after all，Mr．Wilder doubted the expedi－ ency of rasing winter pearrs extenstvely．Pro
vidence suppyies a peculiar bounty for ceason，and fruit out of season Is not relishled a uways cost a great deal，for aside from the dilli－ colly of raising them，they require a great deal
of care aferward．IIe had sold selected lots of he Vicar of Winkfie
at $\$ 12$ per bublel．
Mr．Yeomans said he was kecplng severn Mr．Barry mentioned the Bearre Gris d＇Hiver As nobody
neetlou further，the Convention adjourned thil evening．
The evening sitting of the socicty was de roted to an aldreess deliverred by L．F．Allen of
Buffalo．The attendauce wa large，including
many of onr most listened with much apparrent interest． speaker sought to lay before his audienee suci
faets atb would be caleulated to excite an interes a froit growing and make that branch of indus ry appear profitable as well as pleasant．It
went over in coarse the whole list of glancing at their history，mode of caltrre，valu
and adaptation to the wanto of our people mportance of maintaining those jouruals de roted in part to froit growing，as well as of at poong and arged with firce Soeieties，was dwe Yorker，Conntry Gentleman and reulturist were named as papers that every amily should hare．．
At the couelusion，on motion of Jobeph Har ris，a vote of thanks Was tendered to Mr．Allen
with a request for a copy of the address for pub－ With a request for a copy of the address for pub
lication．
The meeting then adjourned till 9 A．u．nex
day，

Mr．barry＇s entertanument．
The members of the Society，and eitizens to
the namber of two hundred or more，on leaving the Hall，toos a train of or more，on leaving standing in
State street，and proceeded to the elegant rexi－ State street，and procecded to the olegant resi－
deuce of P．Barry，Esq．，on Mt．Hope Averue， deuce of P．Barry，Esq．，on Mt．Hope Averuc，
where they had bcen invited by that gentleman to partake of his horpitality，and gpend a little
time in zoeinl Intercourse．The gneets were time in qoeial Intercourse．The gneets wer
moet eordially rceeived，and though the par
was numerous the reon was numerous，the rooms of the mausion we． ample to make all comfortalle，and atiord th
ntmost freedum to the onotifully spread by the host，who made h
bucsts welcome，and who omitted nothing that cocts welcome，and who omitted nothing that
could contribate in any masner to their pleas． ure．Having spent two hours or more in thi
most agrecable way，the party took the cors most ayrecable way，the party took the cars and
returned to the clty，having taken leave of the te had afforded them．
The gentlemen from＇abrond will carry with Lem the pleasant recolleetions of the socla
gathering under Mr．Barry＇s roof，while snch or
onr cilizens as hed the privleger Wr cilizens as had the privllege of meeting ther
will not zoon forget the occasfion． eroond day－morning beesion． At the seesiou thls morni．
Mr．Lew ．Allen of Erie county，spoke of rowers of the country as to what others a doing．There was a great annand production
of apples，bat who eorld tell the aronont？Mr． of apples，bat who eould tell the nmonant？Mr．
Chapinin of Bloonutield tind three bundred acrca in full bearing，others had large orehards．There planted oat each year；and he feared that when
thity were all in bearing the market might be
overstocked．This ustembly of froit overstocked．This nescmbly of frait growers
represented vincyards anougl to supply nll En－ ope with grapes when they were all in fall bear lig．He moved that cach delcgate procure at
the informatlon ho conld from his own county and report at the meeting next June．
Mr．Yeomans snggested that these facts were
taken by the census enumerators，and when tha was publlshed it wonld give the information Mr．Allen said he had no confidence in the nuncrators．They were a mere get of politi－
anns．He had rather have a guess from Mr． Yeomans than all the statistics the ecnsus would Mr．Frost moved to amend by appointing a Mr．Barry onid from each town． Mr．Barry said that wheo the soclety wa
formed this plan was adopted，and a grea amionnt of valuable information was accomn－ inted，but it was not complete and wha never ubllisted．
matlon furnulsea be thonght that the info matlon furnlshed by the census would be
cellable as any which could be had by the pla proposed by Mr．Allen．This plan wonld in ceire to askame for himbelf
Mr．Thomne said that mach time was being pent ja tuis dlecnssion，and on his suggeestio port at a future meeting
r．Alleu， F w and By request of the Soclety，Mr．Nice read a interesting paper on the preservation of froit，
The great essentiuls to this wero colduess，dry Cess，evenness of temperature，purlty of alf， rent destroyer of fruit．Large bulldings
cing erected in Ohio devoted entirely son＇s frult puid the entire expense of the buil
nys．Drynees of atnosplere was secured by
naling the rcfusc of salt works，of whieh the wigt the reruse of sait works，of Whieh th
works an Sugnaw，Mlch，supplied what was
wanted at litle expense． Mr．Allen said that dryncess was not ensential
preserving some kindz of fruit．A gentlema Le Roy had kept grapes in a very moist sitna
lon．At his sngestion，Mr．Flazelton of Le oy，gave the mode there adopted．The grape ept eonstantly moist，the lower tiers often sab－
erged in water．They were prescrycd in per lect order till late in the winter，and brought
the highcest price in the Buffilo market． Mr．Tho hints asked how much would be the serving fruit one scason．Also，how long per－
shable fruit will keep． Mr．Niee snid that the cost of keeping grapes
through the seasou would not exceed five cents per bushel．The houses would cost fiom so ents to one dollar per bushel．Apples could
be kept indefnitely．He had in Jnly， 1863 ， pples of the crop of 1860 ．The main aim in y weeks from May to July，when uew frui Mr．Brooks said he wanted to ask the meanest sult－works wonld be bencllcial to put into floorb of onr cellars．He did not care about these
large eetablizbments，but wanted something Mr．Nice said thiser could apply for himself： Mre $i$ ialif the cellare were mater would Mr．Allen sald that fruit should never be ke the fruit Wus very nnhealthy． ary or very moist would preberve it．It was the Questlon number seven Was then takerabic． 7th．Can tho Carrant Worni be detroyed so that
ood crops or Currants can be growns Can the Currant Worm be destroyed so that Mr．Smith，of Syracnse，said he had sncceeded in preserving

Is Salt Necessary for Stock ?
A comirssroxDEsT of the Maganchusetts
Ploughman argues, In a letter to that journal, Ploughman argues, In a letter to that journal),
against the nose and neceesalty of salt for stock.

 It is a necessity. But many minerals and dele never used ne articles of diet, but are taken in
combined with the daily food. Salt is a natural combined with the daily food. Salt is a natural
constitneut of most of the food of both animals and mankind, and it enters largely Into this coin-
position of the trass. The question is
 sufficient for animals. What do our reader
think: We will give in this conncetion the is perinetulal laces of the Ploughman's correspon
dent :--I had a chance and did try keeping cattle
 miles firm the evan, which wast the nearest
balt water of nay account, and although ail my
 always been in the habit of receiving their weekly
rations of salt, yet, at the year's end, I was
 a supply of ant, or ni ne well as my neighbors stock which were and supplied with it. Gi. H
Ambrose, Io a letter to \& New York Medical

 in Oregon, who occupy the country betireeu the
Rocky Mountains and the Coast Range, wto have raised extensive herds of dine fat cathie as one would wish to look at, without the ne o
salt. Reared in that manner, stock will not use , witch proves conclusively that it is an antic
 yersally raised withont salt. I regard tic expel iment of stock raising in Urecion ae conclusive
and satisfactory. 1 have seen thousand of the nd

 of stock to be found anywhere. I Have not writ ten this for publication, but to call your aten
Lion to the fact that stocks do quite
sis will in better without the use of salt than with it,-1 least in y experience so teaches me, and 1 nav
tested it it oregon for seven years, aud in this State the same length of time, and all the tim
owning several hundred head of cattle."

## Broom Corn,

the RURal, Mr. PEter WYKory sends us the
 ing, wayangement and profits of Broom Corn in
Central Sew York d " Seciug an inquiry in relation to broom corm Will give my views, having hat something ore
twenty years experience withlts eutitvation, dec. frow; select a good chance for Indian com green \& ward is beet because cleanest - plow the
ground north and south, and plant in drills the same way, with rows about three and $s$ half feet apart. One peck of seed will plant three ares
Thin out the broom corn so that there will one plant curry four inches, or three to the foot stir the ground often, keep it clean. At first looks small and very spindling, and it is some-
times three weeks before it slows itself above ground, bat if the soil t it good it will neverthe
lees come. In this

 the legal length, eight inches, it docs not destroy
the support of the table, being entirely outside.
 direct rays of the furs upon It. If If the eat her
appears favorable leave it thus, three or four appears if not, take it in the barn, where es should
day quantities are stored together with seed on, it will soon become hack. Attach a common inch wire splices drove in aud dattence so as to
form
 by the stem in carectully in the cylinder. It it soon
lirrasled one Eide; turn It over and it Ulurathed one Eide; turn It over and it is ready
to be spread In some airy place to cure. The seed may be left about an leech deep on tue barn with good weather, it nay y be gavel bo us to feed almost any kind of stock or ponltry with profit
Five lundrud pounds of brush, when eared, is Bout the a arrays amount to the acre, and int it very often far exceeds that amount. Brush
ranges in price from fifty to one hundred dol. lars per ton. The seed is worth as much ns the clucapest way in this end would be to lire broom slop o few times and steal the trade an tying on large brooms; get thu plated wire; it
can be bought at twenty cents to two shillings per pound. As to proves or raising broom corn, think if a good crop, and there is favorable use of the laud and the work till ready for ma king brooms.
Another correspondent sends us the follow Log emmunication about Broom Corn:
"At the request of C. C. Exarsson, of Minn I rata, I will give the dwarf corn, and row in in drills about wye and a half feet apart, and cultivate as Id according to the pol. If planted in hills from eighteen inclucs to two feet apart in the rows,
and about ten or fifteen seeds so the hill, I thin and about tex or fie
The dwarf corn needs no breaking down $t$ makes the best broom, as the stray is tine and will yield about eight hundred ponds to the acre. There is unother advantage in the dwarf;
you do not have to break it down to cat. Instead you do not have to break it down to cat. Instead
of cutting I break it out of the boot by taking hold of the top leaf in one hand and the brush out nicely and breaks off at the first joint. A to the profits, be can judge that from the price
he can get per pound for the brush." $\xrightarrow[\text { HOW TO MAKE SHINGLES }]{\text { Le get per pound for the brush." }}$ Servals, the most common material urea
Cor roofing in this country, are yearly becoming scarcer and costlier. The greater cost of tabor and the expense of long transeortation from the now remote forests where the timber from Which they are made in large quantities abounds, ne of the heaviest items in building at th an outbuilding is permitted to remain for years with a leaky roof, to the detriment of the frame and floors, and frequently to the damage by we or crops stored therein, because the owner ha shrinks from incurring the expense necessary to procure a new covering. Yet these same furn small comparative cost of their neighbors, sufficient amount of suitable timber to make al the shingles they require. A very few tree will furnish enough roofing for un ordinary

Herewirn we republish the Scale of Points
Excellence, as adopted by the Royal Jersey Agricultural Society, for the government of
judges in all the shows of that Society. This sale has been continued nearly twenty y curs, mention is being given to the Jersey breed of cat the in this country, especially for the clary, many of our readers will be interested in learning the established points. We therefore give the rove ne portrait of a Jersey bull, with illustrations
showing the Scale of Points for Bulls -and will, owing the scale of Points for Bulls - and will,
in a future number, pullilst the portrait of : Jersey cow with the Scale of Points for Cows
and Heifers. By reference to the corresponding fignres above the reader will readily understand the following
gles many be made by the farmer and his men in spring, and he will not feel the expense. The varieties of timber adapted to shingles are few. A wood is required that will spit easy aud true, and one also that when
exposed to the weather on the building, will wot warp frown its place or "curl" up. The dora-- utility of the timber is a secondary consideration shingles sear ont more than they rot-an these changes, might, for good reasons, not be
all suitable for roofing purposes, Pine at all suitable for rooting purposes. Pine 18 doubles the bees, but hemlock, cedar and
chestnut are excellent. Tho tres should no have passed their prime when cut, but should be vigorous in growth and sound at the
so that the wood will not be "brash." The frat work to be done when we commence shingle maklug is to get out the bolts. Saw the trunk of the tree with a cross-ent saw Into sec
ions, each one of the length you intend to make the shingles. Sisters inches is sntileient length for any easy splitting wood, and if it be tough
or "brambly," twelve will do. The shorter the or "ingle, the less space you can lay to the weathsha, and the more time and nails it will take
er,
to make them into a roof. These sections of the trunk may then be set on end and split into
volta.

$\triangle$ Section foist mailing shingle bolts. The numbered lines in the engraving show the place aud order in which the section should be

S. W. A. of Cortland, Ill., furnishes the fol Ozage Orange Sced and Plants, with the vlew of maklug hedges:
"Your correspondent makes inquifles about
Oeage Orange Seed. A pound of yood seed, nauaged in the best manner, will produce 5,000 jante, but three thousand is as many as it is may be soaked in warm water severul days, put nio a bag and laid where it will frecze but no
dry, ou the ground on the north side of a bulld ing, covered Fith a board or some straw, o sllghtly buricd in the earth. Dry seed in the spring must be bcalded and soaked thoronghly
before planting. Flant in secd bed in rows 15 inches apart on rich land, and abont as tirick as beets or other vegetablee are grown. In the call cover with straw, and let them remain till spring,
when transplant into the hedede, 1,000 plants at when transplant into the hedge, 1,000 plants at
six inehes, (willed I think is the proper dislance, ) will plant 30 rods, at S laches 40 rods.
get in a siogle row which is fust as good set in a siagle row which is just as yood as a well etarted ufter transplanting you may be sure
of a hedge, either with or without cultivation of a hedge, either with or withoat cultivation,
in from 3 to 7 years, accoratug to the care they in from to
receive.
Peppermint and Wool Growing in Minnesota. Mr. P. G. Lamaraux writes us from
Lansing, Monroe Co., Minn., that in 1860 he Imported peppernlut roots to that locality from Wrotected the roote with a Straw, during the first winter, and in 1861 bet
sta four acres. This was covered in a sinnilar man-
uer, aud in 1863 had forty ucres, and thote preparatory to plautling one hundred more the next scason. During the winter of $1860-3$ the oots were protected la different ways, some by
corcring with strak, others by wowing under but principally by eutting and covering with the plow. All the protection, however, was insufficient, as during the very open wiuter of
roots, and almost extirely destroyed them.
"My phan when 1 came to Minnesota was to ralse peppermint and sheep extensively. The peppermint business I was obliged to dliscon tinue, thongh very reluctantily, und the conse quenee ts I have become nore deeply engraged
in slicep. Minnesota, although not adapted to peppermint, cannot be excelled as a wool grow
iny State, ad statistics will soon show land, cheap hay and grulu in a leaalthy ellmate can grow wool cheap."

## Removing Large Rocks.

Tue best and chcapest method of rernoving ont of the way rocks that are too henvy to be
drawn with a team, is to bury them. We have in the course of onr farming, put several out of sight in this way, and we conslder ft a very sat
isfictory job. In dolng thls work, one should consider well two thingg. First, dige the hol large and derp cnough to bury the btone at leas twenty lnelhes under the surface. Somebody may want to subsoll there somctime, and if it
were left nearer the surfuce, tha subsoil plow if the rock be on the brow of a bull it should be If the rock be on the brow of a bill it should be the coil by the plow and the rain briugs it grad ually to the surface again.
Make op your mind that you will no longe plow and harrow, mow and reap, around or ove
those great rocks. If they arc in a pasture lo those great rocks. It they are in a pusture lo
they do yery well to salt the cattle on, provid ing there are no Canada thistlcs; - we should give the latter the prefercince in sillting - but in
cultivated fields the yocks are a nulsanuee which shonld and can be abated.

## Farmers' Cellars

Davio Lrman of Miladlefidd, Cli., says in he Albany Cultivator, that the ill-ventilated unncalthy as the filthy strects of New York The public is not aware of the of New York.

the sludent a more earcucst and faitliful stud） e student to a more earncst and faitliful study illishment of the intended acquirement，But，
remember that a life of Icarnlag la nol a lift of laziness and ense．When compositions written
bs grammartang and the so－called good spellers， were prosented for correction，I bavo becen per－ fectly astonished to see such apelling of the mon
o：yllabie words，or perthaps better known as orsllabic words，or perhaps better known as
＂small＂words，many of which were of lncorrect Orihography．Such as wee for we，mutch for
mach，are ior air，shure for sure，se or sea for sce，son for sun，and a multiplicity of words very
commonly uscd in writing friendiy and bnsi－ uess lettcrs，csanys，sc．Some，or
devolve upon every sane individual．
Then it is the duty of，and should be oblign
tory upon，every student to acqulre，if posuibl
a thorough knowledge of Orthography and bring
it o a noble and practical nse．How is this
be accompllished？By the commou method
teaching？No．Such a method comes far shor
of the desired end．Sueth a tucthod soars abor the＂simple＂words aud tencluce the＂honored＂ only，over in the back part of the spelling book，and rost of those words are seldom
ever used by the common scholar．Then whint benefit is it to him or her，If his or her：mind ca
contain genli and griants sisty icet bulth if ho o contain genii and giants sisty icet high，if he or
she use，when writiug，words of which the write knows no meaning and docs not understand．I
is nousenso to think of fit，and worse to use them， Reader，were I to ouse，in these imperfect lines mords nearly all of which you and I know n
defnition or meaning，my lgrorance would definition or meaning，my igriorance would Burely be exposed and my ponnposity humbled
Theu let the method of teachiny the last part only，of the spelling book，be done away with
and put the scholar at the startlng point， T ， is the first part of the spelling book，lit uscd，till he knows how to spell a word of two letters，or is jur better．This method teaches the mono method teaches when and how to use the＂slor－ ple＂words．It tells the writer how．to spell we
mact，sure，\＆c．To the etudent it imparta Instruction whleb is indispensable in busines one，because it is not dull and monotonous， but interesting and varled．It is not drows
and irksome，but energetic aud high toned．And because it is not first geated on the summit then falls word afier word coming bump－e－ty－bump to
the hottom；but commences at the boitomp an gradually rises in the intelleetual seale of exis enee till it reachese the sumunalt of perfection． Teachers，let it he a part of your study to ge Woung mind in the rifht channel，then the ewlll helpy you in the great and hoomable work dopt the method of teaching your selo teach． and others will not sec such bad spelling business of daily occurrence． Enowledge and fame are gained not by surprise，
Ct well your part，tbere all the honor liea． And be not too forlorn，
The sun that seta to－nigh Again

## Harrowing Winter Wheat in the Spring,

$\qquad$ ts of asking for information about the re Who among our readers has tried infs unethod o cultlvation, and will report to 11 his conclnsion regarding it? If done nt ulf this work should
be performed as soon in the spring as the burface of the ground dries and cracks open. It not likely, however, that all wheat flelds would come ont the better for this operatlon. Drillced frost, would doubtlesz to an dirown up by the frost, would doubtless be fu the nost favorable
conditlon; but that sown raised by the frost, mlght be aprooted by the harrow. If grass seed had been sown the pre ceeding nutumn, it would of course, be mostly barrowing were donc early it would fut if the barroying were donce carly it would leave the
ground in excellent conditlon to sow sruss and elover secd immedlately after. Iu England they use cultivators eo conatructed that a toeth passes between the drilled rows of wheat, and a great deal is Loed by hand.
Regarding the limrrowing of whater whent in tural writer, eags: " If it is only juan begrinulur to vegetate in the spring, and the soil is tolerably dry, nothing will prove so benctivinl as to
pass a harrow, havlng lrou tecth, over it. B this means the erust will be broken up, which has been formed over the ground during the past
winter, and the superticlal stratum of the soil brought into direct contuct with the athos phere, the coromul roots which shoot ubont this pegnated with atuouspheric matter, wbict tend grcatly to fivor the growth of the planta, while all be deestroyed by the actlou of the harrow A fine day eliould be cloosen for this operation which mnst be boldly andertaken. If after tha the ileld bas every appearance of being ucwly the bare ground is pereceptible, wen there is attended with succees. Should a fews tornlen or blades of wheat be perceptible, it will no matter providing the plants themsclyes are no
torn up. After a lapbe of eight or ten daya, i the weather is favoruble, the plants will shoot
up afresth, and the fleld will then prcseut a up afresh, and the tilla will then preseut a much operation." plants would defy the power of the harrow to pull them ont of the gronnd, or materially in jure them, and we adivise wheat growers to try
harrowing at least on a small seale for experl Farm Gates-Again
nications on the aboye subject scyeral commu re dulginal plans and drawings, for which w presenting our readers with a variety of topies trations al present.
the general position of the main a reversal or bean improrement, namely, let it run froun the top of the rear post of the gate to the bottom or
the middle or front post. Tluis posilion of the Eaggng. viz: that encer haves our remark on furm-bars he thinks is to remaln in use until the farme can replace then with gates. He likewise de
seribes n gite made entircly of romnd poles, the only toclas neceded being an ax, drawing-knife
inch chlisel, two tnch auger, nud saw gates are deseribed constructed eatirely with
nalls and strips of boards, and are recol
ed for cheapness, and admit of speedy making.
The durability of gates depend in a reeat mast-
sure in the solidity and size of the posts to which
they are hung.

 kew, the file should be used nt an angle of forty
tive degrees, or what carpentens call a "miter",

In the sketch. The file must incline to the end o holding the fllo level and ualug git in the directlon of the lines. File hoth sides without turning the
sans around as bouc meehanics do. It is poesible, even now, for yout to file entircly wrong, an it is posillbe to grind the wrong side of it seythe, but I shall muke no supposition so derogatory
to your common sense. I am confldent that with a hitthe practice you will save many tlmes
the trouble it took to learn."

## FARM TENANT HOUSES - NO.

[We publish Detow the tirst one of a serie
of artleles on Farm Tenant Houses, written fo the Rumar, by a correspondent in New Yor 1 send you a plan and somedirections for building a small cottnge suitatie for a farm tennat, thinklng it might be of Intercest to farmcrs,
also to men of small means, who possess the landable desire of having a home of their own.
For the latter clase the buitding directious are For the latler class the huilding directious are
cepecfally designed, as the savlug of a fow dollars to a well-to-do farmer is not of tonch ate-
count. The bulldius of honses thet sher couut. The building of honses that shall be
within the means of the most humble, is of grent
importurce to society. A little cottage, thougt importunce to society. A little cottage, thongh
eheap and bimple, is as mueh a home to its ineheseap and bimple, is as mueh a home to its
mate as the more pretending strueture is to

Elevation - exd view. I do not think it possible to build a cottage
chacaper than here laid down. The bnilding is chcaper than here laid down. The brilding is
13 by 22, and contains one room 13 by 14 , inclu-
sive of wonls, a bed pantry on the ground lloor. The stairs start at the side and land ncar the middle, siving two bed roome and acloset in the chamber. For a
small family the rooins are large euough and there are plenty of them. It is to he cove tened. 1 reeommend this covering for Buch a cottage, because it is chcupper, tighteter, more du
ruble, and, to nyy thate, looks better than any other. The roof is what the builders call a
sqnare plteh - that is, it rises balf the width or sqnare pltch-thit iss, it rises half the width of
the house. It sives more room, is more dura-
tee bile, and looks hetter than a roof of ordinary
piteh. Tho lloor timuers run lengthwise th Louse, becellise bavligg a support near the mid-
dle, they are mucl stronger than if they run die, they are muck stronger than if they run
across the housc. All the material for a hoose should be bought ions enough before use to ensure a thorough scasoning; sueb a conrse will
well pay the trouble. Pine is best for the waath-
er bonrdinir er boarding, but for the floors, spruce or hem-
lock will do. If there if uot much difference in

ROCHESTER, N. Y. - FOR THE WEEK ENDING SATURDAY, MARCH 10, 1866.

## HORTMURTORAK

## FARMERS' GARDENS

Now that the scason of making gardens is
drawing nigh, we will offer some engenestions generally have good gardens. That class of
pcople whle onght to have the beet-the legitipeopte tillers of the carth -often lack the laxuries
which a well cultivated garden will snpply to the table each day in the year. We belleve they
generally itherd to enion these ppodnct, bnt In the ordinary plan of yearly labors, and the
cesult is the fruit and vegetablez are neglected. We addise every farmer to expend at least fift
dollars $\ln$ labor on his carden devoted to for dollars $\ln$ labor on his garden devoted to fruit
and regetables for family usc. The " ralue re grned in a pariety of wase which will be readily aggested to the imagination of the lover ood things "all the year ronna"
In a garden one shoald conlti times. Of spring growth, abparagus, the lettnee is grown lia hot-bed, and the as
paragus well managed, these regetables mar be paragus well managed, these regetables may be placed on the table very early in the season. cold frame, which would bring it forwat pring vegetables are gone the more dellcious ones of summer growth anpply their place.
Early potatoes, beans, corn, onions, peas, becte, Early potntoes, beans, corn, onions, peas, becte, he farmer's lising. At thls season also the on his table. Strawberrices, raspberries and blackberries succeed one another in order, an There need be no failnre in growlug these fruits, or should the garden be without a bed of whieh remain in the ground to be used when cultwated.
We believe every farmer wonld make money by having such a garden, though it cost him wice the amonnt we have indicated. It woul beneficial to the general bealth of the family. would enpply the maso lunk of the food. W can likewise add that gardening is pleasant em poyment, and all the members of the family aise thecor berries and grapes, and aid the ladie o having what they invariably take delight ln,

## seasonable work in the garden.

As spring advances the attentlon of the farme or gardener will naturally be drawn toward the and as I happen to beloncs to that numerous Clase of RURAL renderb who make Horticulture thelr study and delight, I propose, as a practica
man, to offer from time to tlme, through the colomns of your paper, sueh hints or sugges tlons as I Lope may prove of sulleient interes ar large audience.
on of the horticalturlat is the pronine of his grape vines. Of the different modes of pruning the vine, us now practiced by horticulturist, each as a ratter of conrse has its advocates
some preferring the long rod, or renewal systcm, others the epur or elose prunlog, while
some adopt an intermediatc one. Each has its merits, but the one which I prefer for garden culture is what may be called, the buse and per pendieular or right-angled bystern - one set o vertceally. As this aystem of pruning is fumilio to most of my readers, I need not here enlarge upon it. Suflice it to say that whatever style is adopted, the work should be thoroughly done.
As regards the kind of soll for growing grupes
in, people differ widely. Some prefer a atifit clay, in, people difer widely. Some prefer a atifi clay,
like the soil around Clneinnati; others a gravelly like the eoil around Cincinnati ; othersagravein
loam, and some alluval soil. The great point grapes, is to get well rlpened, short-jolnted wood,
and whatever 日oil will produce that in the great.
perfection is the one best adapted to grow
vines in. Having tried nearly all kinds of
il, I wonla recommend a dry loamy one as best dapted to the purpose, and if the soil is not of drainage, and fertilized with a compost of ds, manure, lime, and broken bones, or manure.
frese, currant bubbes, \&c. Thin out nll super the shoots of last year's growth from such tree

Hot-veds must now be started, because we
take it for granted that no good farmer or gardener wotld like to forego hie dish of carly gaiad.
Without toot-keds it woald be impossible for hiis palatable disters of early vegetables, whieh palatable distes of early vegctables, which give
such a zest to the noouday meal, at a time when
the weather is pet too cold for them to mature

 rst be measured, and the bed marked out least one foot longer every way than the frame
a stake shoald be placed at each corner, and the a stake shonld be placed at each corner, and the
bed boilit nj within the stakes, nad as it pro resees the manare shond be well benten wo
the back of the fork to make it lay eren, -bu are must be taken not to tread it with the feet The height of the bed when finished should b
about 3 feet behind, and $23 /$ feet in front; this Fill give it a slight inclination to the soath. A boon as the bed is made, the frame and sashe
should be pat on; the later suould we ralse abont an inch bebind. The bed should remanin
for a fers dayz in this condlition, in order to low the rank steam generated by the ferraenta of this time lt will be ready for the soil, which The following list comprisces the kinds seds which thould be sown on the first hot
beds, selections from which can be made aecord $\mathrm{g} g$ to the wants of each. To bave a snccession
of eraly vegetables, other beds must be started
at iutervals, which heat, as the senson adranuece. The mode
making, and the seceds required to be eovn them, will be mentioned in dne Eeason:
Cabbage - Early York, Wheeler's I Carter's Superfine Early Dwarr. -Tnrner's Incomparable Dwirf
Win's White. Cress-Fine Carled Cuenod - Early Frame. Egg Plant - Early Long Par ple, Improved New York Purple. Lettuec
Early Tennis Ball, Malta Drumhead. Parsley Double Curled. Tomato-Early. Smooth Red
Radish-Rose Ollre Shaped, New French Brealsfast, Salmon Color.
The above is but a small portion of the differ ent klnds of seeds, which may be sown in bot
bede, but it sis quite as large as the limita of this paper wlll allow. In my next will be given cithcr in hot-beds or the dwelling house.
Rocheetcr, N. Y. SETting A gTEEP HILL-SLDE WITH Mr. C. Rictiardson of Pitteford, Monro
Co., makes the foliowing query relative to the Co., makes the foliowing query relative to the
above subject:
"In common with some of my neighbors
bave a slight tonch of the "grape fever," now anve a slight tonch of the "grape fever," now
prevallug to some extent in onr commanity Last tepring I set out one hnndred and tifty vines conslsting of Dianas, Delawarck, Concords, and
I Eabellas, and a few of the fancy kinds. I have been clearing off some more of my Elde--hllit this winter, perhaps two neres, and propose setting
it ont with vines this spring. Most of It lie expozed to the enst und is well grotected from
from the north and west winds. A part lice lowards the north hnd west, and all is on the aeres extent. Some of my nelghbors advocate
training to stakes and others to trellise. Wil yon or some your able correspondents who are
thororoaghly posted in the grape lutuincese, glve as through the colurang of the Rusal, Be bee plan for setting a stecp hlll-efde, the distance dc., fic. My soil is of a light, Randy character, grapes growing on jt."
Rape growers send not some of our experienced best method of plantling vineyards on steep slde hils! We are inclined to recommend terracing vinces on trellises. If very steep it is probably horses, and thle method provents the wasbing of the soll, and likemise rnakes a great depth or
well worked gronud to plant in. If desired weel2 worked gronnd to plant in. If desired the as well as growing them along the outer edge.

## SUCCESS THE RESULT OF DILIGENCE.

Trere ts nothing in all the routine of iffe which we may be called to cngage but what it is
necessary to be dlligent in order to suceecd Whilst we traycl life's ancertain course, and
wander up and down the shores of mortality lus searcl of tmasicnt treasures, we can seo no
better wny to pursue thnn that in whlch all tho wise and judcious linvo trodden - the puth of
Dhlgence. It was thls trait of character. that murked the Father of his 'Country, GBorow
Whssuncorow, and his noble commades as they Wissuivaros, and his noble cominades 23 they diligence. It also charricterized the reformers of past ages, and still characterizes the snc
ful men and women of the prisent day. Without dillgence we prust not expect to
succeed in any laudable cnterprise. There is nothing that gocs so fur toward the building up
of an individual or commnnity as to be aiways dlligent in busincess, and in evcry parsult of ufe
whleh we mas be called to follow. Did you over see the slothful mana and know him to pros.
per? Un the contrury, we ail of us, daliy
 than others? We cannot ascribe it to thoir
superior abitities, or say that Providence has especially favored them; but it is'beeause they
have made better uso of the taiente given them, and by thelr own ardent exertions have secured
$\begin{array}{llll}\text { to themselves peace and prosperity. } & \text { E. B. M. }\end{array}$

## names or countries.

Europe signifies a country of white compiexion; so namcd beeause the luhabitants
here were of a lighter complexion than those of either Asia or Africa.
Asia signtfies between, or in the midde, from the fuct that the geographers then placed lit beAfrica signifies the land of corn, or ears. It
was celcbrated for its nbuncaneo of corn, and all spain, a country of. rabblts or conies. This country was once so infested with theseanimals
that the innabitants petitioncd Augustus for an flaty, a coumtry of pitch; from Ita yiclding great quautitice of black pitch. a yellow hair characterized its first lilunbitants. Hyond this wata, the Pureulciang, we are old, never extended their voyages.
Britain, the country of tin; ; there were great quantitles of lead and tin found on the adjacent
Island. The (ireeks called It Alblon, whici fligities in the Plomilclan tougus, either, white or or the high rocks on the western coast.

## CAPITAL FOR THE YOUNG.

Ir is $n$ consoiation for all right minded soung
men in this country, that though they mys be able to command so much pecunlary capitai as they would wish to commence business with for themseives, yet there is raomil capital which they can huve that will weligh as much as moncy
with peopla whose oplinion ta worth bavlog. and it does not take a great whlle to accumuconsists in truth, integrity, to which may b added: decision, inrmness, courage, perseverance, With these quaitiles, there are fow ob-
stacles which may not be overcome. Friends pring up and surround such a young man as usiness accumulates on his hands detster than he can askf it. And in a few short years such a man is far in advance'of many who started with hlm, anvlog equasi talents and large pecuniary means, and ere long our young frienc blands foremost mong we conld induce evory youthful reader to commence llfe on the princlple that mortal capi tal is the maln thing after all.
How Tren. - A young person once mentioned to Dr. Frukklin his surprise that the possession ollettude and instanced a merchunt who, possession of unbonnded wealth, was as busy cierk in tis more anslous than the most nsylavous reply, took an appie from the fruit basket, and
prescuted it to a child in the rem scarcely grasp it in his hand. He then gave It a ong a third, renarkable for ith size and beauty, he presented that also. The chud, after many
ineffectral attempts to hoid the three apples, dropped the last on the carpet, and burst into
tearz. "Sce," sald the phllobopber, "here is a

## MORTXGOTORAL.

 - Some of these are communications froin persuns
evidently bavins a peccunisry interst in the
sale of the plant, and ticy sale of the plant, and thicy uttack those wh
have seen fit to discountenance its culture,
terms we shōuld not care to publish. Oihe terms we shinuld not care to publish. Otbers
state the reccipts which have been derived from
the article, in the most notuble instanee of whieh they are figured at thiry-thrce thousend seven
handred and twenty-cight dollars ( ( 83, T2S) from handred and twenty-cight dollars ( 833, T25) from
one acre in two years. of this sum twenty
thonsand dollass were derived from the sale of plants at torty cents caeh, and the residue by
estimating four thonsand tive hundred and seventy-sld gallous of wine made from the said
acre, but yet unsold, to be worth three dollars
 mass, the quality of the liguor natire of this basi-
it will keep, and whether it will sell ; and for the opinions whiet have herctofore been to reiterate Onr opinian or this business is, that it it
huge speculation, haviug many plansible t radically unsound reasons to recoinmende it
pablie favor, and that the gainers will be tho selling the plants, and the losers those who se them and inanuacture the liquor fir mark
No compound that ean justly rank with wire, sally y popular, can be made from rhubarb juice.
It is elienleally impossible. In manulacturing, the pure juice of the phant is lirst diluted by
addlng an equal bulk of water, then three ponnds When the fermentintion is finmod the surnar is tranaformed into alcohol, whichl imparts
strength and spirit to the liquor, (pure spirit
would anser the would answer the samue purpose us sugar,) thi
water reduces it to a proper consistency, an the julee of the rhubarb giver its distincti
eharacter. Oxalic is the predominatlur actil the litter. Thls in a pare and condensed for
is a powerful poison, and if even emall culatities were tuken into the system frequently,
they ecramly would be in zsh , this compoun
 injury io the lealth. Athough thls rhuba
liquor may be agreeable to an unenlivated o depraved taste, yet it is no nomere so tlan th
villajnous compounds that are sold under th villafinous compounds that are sold under the
guise of forelgu wires, but whilh rarely contalu "particle of the juleo of the grape. Thereforc,
if its taste the ngreeable, it is not proof of ite good quality; and in purty, healthfulness, and
all the saperior traits whlch should recommend a eommon beverage to the people, it ls not one whit alove the vilest "stuff" usually
pounded thy dishonest liquor dealers. But will it sell? will it pay!-are the practlea questions, perhaps, to deal witti. The wine, no.
One of the welghtest arguments of the wine plant venders, is in estimating the compoand to casees, at least, the yield at tive on, and in sornc per aere. And, to manufucture this quantity an at Ienat three thousand dollars will be neeecssar, Now we belleve there is no market in the United
States in whice the protect of tates in whitel the product of ten aercs could we have been reliably informed that twenty-flye cents per gallon fs the highest price that manuacturens of spuricus champagnes and other ny extent for this rautard joice are willing to pay. In fiet, there is no market for this stuff.
We have heard of a and large profits are flgured on it at three dollare, per gallow, lut we have yet to learn of large qnantlties belng sold, or the spriaging up of any As a pleasannt, le
will not bear comparison in a single point wit snpplied for at least one-Lalf the cost of the rhabarb compound. 'To the apple and the grape we advise those to tom thelr attention who de re to produce a proper and common bererage Hanufaeture your cider carcriully; put it ln clean casks; add some sugar, if yon please, before it
ferments; manage it propererly uutll jt become still," and gou will have a drink "good to grape is eontinued a few years longer, the genu applant in popisr use ancient and royal, will irits, and poisoluse boll fery, intozieating The varione forms of apnrious wince.

Gignaing for the filmugy THE WRONG ROAD A rew dass since some horses were alvertlsed reslde, and being in noed of a apan 1 determined
to attend. When tho
 noon, whew, thrinkling I mlght yet be in thme, I
started for he phace, which was some ten miles distant. After traveling nearly far chough, as I
surp osed, I halled a farmer whon I chanced to waplosed, I halled a farmer whont I chauced
meel, and inguired how thr I was from iny destimation. "A long way," he replied, "if you keep
ou thls road. Yon took the wroug forle nt the
 will take gou to the rlyght rond. When you
get on the other road son are nimost there."
Thanking the frour or Thanking tho farmer for the correctlon, I re-
sumed my way and soon arrived at the cross roand, which I foulud difitced, and in some places
ainost impasalisho. Howerer, alter a slow, tedrons ride of aivont two miles, I reached the desired
place, thongh too late for tho snle. Had Italen the e light foad at the beliool house 1 would hare
been lin lime. Is there not a moral to be derived frome thls
mistulce? Look out upon the world aud note mistake? Look out mipon the world and note
people as they press forward to reacle the goal of
Huppluess. Ahas liow many are taling tho
 sharted on the wrong road. And there is
annother, soarcely entered npon his "teens,"
struting along the strect with

 at that gulte board (the Bible) thut points you sturted and its will bo comparatively casy to change now to what it will be lin a few years.
Perraps youl hitend somu time to talko the other road. But why not now? Stop and reflect;
you aro not stauding stillt; you aro continatly progresslig, - If not in the right, most:'surely in
the wrongr road. Though you nay in atter ycans take the cross road, and it last rench; the place you rects, consider the valuable thuo wasted the
doing so. I repeat, talke the rlight roud now, winle you are comparatively free from tho snare
mad temptations of the wrong ouc. Look at those men carousing in tho bar.romin; they aro fur advanced on the wrong roud. And yonder
see thant mann ascending the seaffold, - he has nearly renched the cud of the samc rond. Let us boy, by laliug the time whiels should bave been sipent In study. Then came lying, swearing,
atcaling, and at last murder. Mo took the wrong road at the school house.
 lave etarted int the wrong raad, do not it for the rifht one mmedtaty. But 5
change the smoothent and easiest to travel." It may look so from where you now stand, bat a little on, justioner the hill of deception, tho road winds round the mountain of despair, down And to these who wre far udraneed ou the wrong rond, my word for it you had better taks the cross roud. You will never find lappiacess in The way you are folng - hut ly you are not very
farl ladeed on the wrong way you mayiset talice the cross road, and tinugh late, reach the place
your are seeking.
Irov- Foon.

## SURPRISED FATHER.

## HORSES AND BREEDING-AGAIN.

Mr. Moore:-SInce my last converse with
your wide circle of readers, I have recelved several letters from distant pointe in relation to
the subject mater of my communications, all of which 1 should be pleased to answer, If I only
was possessed of the requisite information to was possessed of the requisite information to
do so correctly. The fact is, 1 am not exaetly a Horse Enclyclopedia, and write only of horsee
and breeding from what I have secn and noticed.
Before ine is a letter from a gentleman of Rockford, Ih, making some inquiry as to the The most I can say beyond what I have aiready
written, is, hat the breed fa regarded here, by
horsemen, as second only to the Hamlltonian horsemen, as second only to the Hamiltoniab
and by some as even the equal of that jubtly celcbrated stock. The old horsc was not ong well bred. "Young Royal George," commoni known as the "Fleid"s Horse," when living,
considered as good a stock horse, for all pur poses, as theru was in the country; and I believ Wilkes has received, was his equal as a trotter as ho was lis superior in staging qualitics, But my purpose is not to praies any particular
stock of horsce for the benefl of the brecders of such atock; but elmply to direct the attentio of our farmers to jadicious selection and proper crosslng. It copts uo more to raise a yoo
than a poor colt, and certainly one that will sel cyen $\$ 3,000$, is of rome consequence; $\$ 300$ is bra a common price for two year old Royal George'
here. I saw a few daye ago a three year ol mare, for which the owner has refused $\$ 1,000$
The dam of his colt is a pacee of large bon of crossing. Hibas Woodrure mainteins tha when the sire is a trotter and the dana a pacer, But farmers in general do not seek speed, ye sen they are not opposed 10 a borse that ea
"ga-hang" on the road. They mostly desir borses suitable for ell work-the plow and the
rond. But eveu in the raising of this class judgnent and a proper diserimination of th
points of the eiro should be used. The leadin fualities wanting iu the mare should be sough of any nusoundness that couid be hereditary in
character. Avold, as a rule, heavy, ring.boned, or sparined animals on cither side. They arc
not safc to breed from, as all experienced stock raisers will adrige.
The Inst requisite for brecdlng purposes, in
aire and dam, is $a$ good native constitulion. Th indications of this are plain to any person who
is aequainted with the liorse. These indicatlon

ISINGLE NO. TEN CENTS

VOL. XVII. N0. 13.\}
ROCHESTER, N. Y. - FOR THE WEEK ENDING SATURDAY, MARCH 31, 1866.
§WHOLE N0. 845.

MORTMOLTORAN.
DR. SCHRODER'S NEW SYSTEM OF Is a cireular which the Doctor distributes retty frecly among the Hortienltural Journals, growing grape vines, by whieh he claims the rot
will be entlrely overcomc. We quote so as to give in our limited spaec the chief points of the
ssstem: system:
in Years Catawba rithes was not injured by the rot, as I nerer forget the sight of my first Catartbac crop When the fruit ou my neighbors' ines were rot
ting. mine stood there in perfect health and ting, minue stood there in perfect health and
glory. This I notleed on all my first frulthig Catawbas, as my rineyards were planted iu suc cossive jears. \& I forther noticed, that the fruit
on my old wood lasere, that I used to make every sear were free from rot. Ithen laid down severat old wood layers and cut them off from the mother vine in the fall, and found this gear that the fruit the fruit on older vines rotted entirely. "After preparing your land for the vineyards,
plant the same with good strong layers or first rate eutting plants, from S to 12 fect npart in a equare, in the usual manner; when your tines
come into liearlug the tirst bir erop, say the third or fourth year after planting,
strong eane of the bearing vine ralied purpose, close to the root of the vine, make a
little diteh with the hoe or spade from 4 to incles deep in the row up to the center between
your two bearing vincs, let his cane stick about one foot ont of the ground, and after covering
sour ditel cut it off, as I sald one foot uloove the gour dit this I will call the ftrst reverse. Let from
ground
this grow three uncheeked vincs; two of them are for fruiting the next ycar and ean be cut long
glve a good erop of frult. The third cane is for the eecond reverve.
"Cut your first reverse loose in the spring
from the motlier rine; lct the mother vine bear a good crop or two, if you choose, as the ca
may be, then chop It away to give room for tli "Let us go lank uow to the second reverse.
Take the third cane of the first reverse, lay it
aerosss the row up to the center of the row as aeross the rownp to the center of the row as
before described, $\&$ to 6 inches decp, and one
foot abore the gronnd, cut it off. Now you have instead of oue, two rows of vines. Let
again three cances grow of the scoond reeverse (two
fruiting and one for the tivird reverse.) The third reverve is made by layering the eane of the
second reverse in the new row up to the center of the neve row, and treat it the eame way as the
other reversces were treated. The jourth reverse If made by luking a cane (lu flic second year utter
fruiting) from the first reverse, and after chopfruting) frora the irst reverse, and after chop-
ping the origlunl mother vine ont, to become
the mothers phace, ouc-third of the vines, or as e case may be one-fonrth, are removed every year by chopping out and thns making rooun for other reverses, and so go on thit 'the day of
Judgmeut.' "You will have this way, by lithe labor and
withont any doctoring, alwas a new and vigor-
ons vine eard, free from discase, aud puying well for your labor, superior fruit and wine. It may be that in some slower growcrs than Catawba or
Concords, that yon can make the reverse only every two years, but good hicalthy vines in good
soil and loeality will stand the reverse almost rery year.
iThis is malny written or recommended for Catawba and other varieties of great value, but
adopted and fuclined to rot. Whenever a variety proves free from disease, grow it as long as
yon ean proftauly without reversc. But one thing is sure, the,
on young vines.'
flower garden - seasonable work. In resuming iny remarks on seasonable gardening, I wish to impress apon the minds of eat of everything they may have occasion to introduce into their gardens, in the way of fruits, slmply put the question, Docs a farmer, If be the agricultural comnunnity stand well amoug Lee agricultural community as an enterprising enimals, or with those of pure blood and that hare a pedigree? To this there ean lee but one
reply, viz: that be will always select the best. And I say in like manner should lis efforts be for his garden. If he wishes to plant a grape its elaims lim procure oue from a source where though it shoupd cost him a dollar, let him pay is brought to his notice that well known Hortspreceded it. Or if his wife or daurhters take preceded it. Or if his wife or daughters take
a faney to some new lowe which their friends
tell them is benutiful, (becanse they have seen , and can therefore attest to its beauty or fira(cance, ) let him not begrudge the twenty-five ausc pcrehance it may not contain more than great many hruabugs in this world; but is Chat a reason why nay one should stamp the Del Having said this mnch by way of introducing
Horticulture in its trac light, I think the reader will readily comprellend that I am ay adrocate
for doing everything in a thorough manner, ani not dy haveres; for depend upongh manner, and
not whoever un-
dertakes and pursucs a half- way poliey, dertakes and pursues a half-way poliey, will
inost assuredly be doomed to disappointinent.
Assuming,

$|$| each other in this matter, I will proceed with | the sale of it. We have known fruit to be ren- |
| :--- | :--- |
| my directions for makivg hot-beds for raising |  |
| the hardier kinds of annual flowers. If the lo- |  |
| dered wortuless from this enuse alone, and the |  |
| demmlssion dealers are frequently censured for |  | my directions for making hot-beds for raising

the ehardier kinds of annual flowers. If the lo-
catlon lias not already been deeided on, choose
some theller catlon lias not already beeu deeided on, choose
some aheltered Epot, such as the south side of a
barn or close board fence, or any pluce that will
afford shelter, for slelter of some klud, at this
senson, is absolutely neesesary to bralk the cold season, is tabsolutely neeessary to break the cold
and piercing wids of spring. Altbough we
may oceaslonaly have at this scason some rery
ine days, yet the earth nad atmospbere are still ine days, Set the earth and atmospbere are stil
very cold aud fresh sown seds need all the
warmth they ean get to stimulate their growth To furnish loattom heat for the beds, a sulti-
cient quantity of fresh stable manare slould be
used, in about the proportion of a double wagon used, in about the proportion of a donule wayo
load to f frame of six feet square. Beds of this
deseription should be made the same in every as those described in iny last communceation. not-bed, for annuals, a very grood substitute ma be had in shallow boxes, say from lour to fil These may bo placed in the parlor or kitclene ean reccive the full bencit of light and heat. I these the different kinds of lardy aunnals may
be sown if the air of the room is dry, (and in What room is it not where stoves are used ") the the boxes should be made from six to seven in clees in depth, so as to allow not less than tho
inehes between the earth and the glass; if t box is one foot wide and two and a balf leet
length
then turce panes of $10 \times 12$ glase will boxes should be made fiue on the surface,
hat the seeds may germinate and root readil Those seeds that are small, should he sown on
the surface, and barcly covered with a little fll earth, scattered over thein from a coarse dredy hig box, or something of that kind that woula
help to spread it evenly. In this way seeds of nate frecly, whifli if sown in tho open ground or without these prectutiona, would fiil entirclys.
Haw often do we hear of the secdsman belig a cheat and a humbug, simply because those who
buy of him fail throush their ionorance in ing low to plaut the seeds. Care, howeve
Bhould be taken toguard against too much moi ture on the one hand, as well as too dry an atseeds are up is to remove the glass from the
joxes,
young a plants to to dry sufliceerytly to to preventive them soung plants to dry sufteiently to prevent, then
rottling from an excess of moisturs. There is uo reason why any one following these direction
cannot make their gardens charnning from the unlolding of the flrst flower in apring unt autumn
beauty.

 March 17,1866 .

## MARKETING FRUIT

## arions Modes of Sending Fruit to Marke

Sthawberries being the carliest frult of the
seagon, we whll notiee them first. In Bergen
Co., N. J., the favarite mode is a small basket with a handle, holding about a half pint each, nd eostiug about $\$ 1.50$ per hundred. These are o thrce Lundred, as the growers may prefer, turned to the farmer.
In Burlington Co
bolds one quart is used. These boxes are paeck-
din light eases containing from forty to slxty counties the Coor \& Brecier phtent pints and for onr New York markct. We prefer the pints In all cases, as they generally pay the cost or
transportation above the quarts, and besides the ait earries better. A neat octagou box is mso
comiug into use, which we like very much. The latcast invention is the "Gift Fruit Box," thin pieces of board afjout one-sistcenth of au ed by one plece, and the bottom is the other.
They are clicap, and can ensly by any elith to a slort time. These boxes are tended to be returned, but sold with are not in in thit
Thie greatest adrantage to be derived from this style is that persons at a great distance can scud
them to market by exprees, and not be troubled with the return of the enipty packages. The bagket arrangement we are luartily thren?
of us it is so much trouble to grevent their being lost by the retailera, and the boxes are apt to
heat the fruit, making it very soft on arrival,
Our fruit denlers prefer to have berries precked Our fruit denlers prefer to lave berries packed
in small ceses, holding, say of baskets from one
hundred to one lundred and fifty, and or quart boxes from sixtecn to tweuty-four or thi
heir bervies, und not retaiuremany in thell hands
while pieking, as it is apt to bruise the fruit
dithough it may uot show before packing, it
dren, make quite it business of it. Speculators
drive aronnd the conntry and buy then uth and drive aronnd the conntry and buy them uph, and
send them to market to be sold on commission. Quantities also arrive from other parts of the sand linshela lo market. Large quantitles of Lhese berries are shipped to distant citices,
Boston taking the greatest amount and Boston taking the greatest amount, and other
smaller places in proportion. Last year a preut smaler phaecs in proportion. Last year a great
many were sent to Buthlo, N. Yo, at $a$ good
proflt, and Albany and Troy also drew lackely On us. It is with this fruil as with all others,
that the best marks, are sold first, and at the
highest prices. For many years, it was sold for twenty-ive cents per bushel commas eion, but
now at ten per cent, the same as ather fruit.
Thene berves are these berrics are sent to fuarket in toxes coul
taining sixtecn yuarts, and are gencrilly sold
without re-meanuring. One slinglar feature of this trade is, that the advanee or decline is
least fifty cents per bushel, and in come instap ecs two dollars per bushel in a day.
Now Avd Tres. Remarks. - We are muelh ohliged to our cor shall be glad to receive and publish the others which he has kindly promised on the same inter-

FRUITS, \&c., IN NEW YORK MARKET. Tue Following are the prices of fruits, vege
tables, de., in the New York market, for the Frurrs.-The stock of sonnd apples on
market is small, with fair dumand at abo

the sale of it. We hare known fruit to be ren-
dercd worthless from this eanse alone, and the
commstssion dealers are frequently censured for
not selling the fruit at higher prlcees. Specind
care should not selling the frnit at higher prlves. Speeinl
care slould also be taken to prevent imperiect
irnit from leeing packell, as It depreciates the sale

| and unehanged. Onions are lower without d mand. <br> blans and Pras. - The bean market show no improvement. Peas are dull and lower. |

## THE OAT CROP

Trie ont is the best grain for feeding horsee.
It strengthens the muscles instcad of produclng It strcngthens the muscles instcad of producligg
fat. It 1s not heating. Hence, for worklug anfmals, it is bighly prized, and in 6 ome countrice,
the meal, as common food, is extensively nacd the meal, as common food, is extensively nacd
by the lavorlug cineses. It will keep well, not
belng liatle, like Indian corm, to heat or become belng liaule, like Indian corn, to heat
bitter frome the rancldity of its oil.
The oat crop is, likewise, valnable for solling,
cenecially for milch coms. It is at for this pur. cepecially for milch cows. It is at for this pur-
pose at a period of the sainmer when isass is region is generally a good one for the oat crop, for lt succecds best in a cool, moist climate, and
on somewhat heary land. It affords a large on somewhat heary land. It affords a large
quantity of feed to the aere, aud when designed
to bo used for soiliner, it shondd be eown at serto bo used for soiling, it shonld be fown at ser
eral periode, eo as to bare a suceession of crops. When the crop is gronn for the gran of cheplys it
shonld invarlably be cut early, before the straw shonld invarlably be cut early, before the straw
is wholly ripened or the grain begins to fall from the head. Cut in thls way and well eured the
strave is ralanble for fodder. In our climate oats fhould be sown early; they
can hardly be got lato the ground to boon to receive the benelit of the epring ralne, and to grow
daring the cool weather whilh precedes midsummer. The oat plant grows slow previous to
the perlod of Elooting jinto head. Nutriment is accumulated in the roots, whence it is eent into
the stalk and head in the latter stages of tis the stalk and head in the latter stages of Its
growth. When the head vegine to shoot its
growth is extremely rapid, and if everything growth is extremely rapid, and if everything
has been farorable up to this period, therc is lit-
the danger then of harm the danger then of harm resulting from dry
weather. Wet weatier and rubt are far more liable to injure the crop,
Broadeast sowiug, if the groand is suffelently
rough to cusare good coverng, Is equal to drillIng. TVe belleve, likewise, in rolluag. From
three to four basbols of seed per acre are gencrally ueed, and experience teaches that it is
about the right quanity. about the right quanity. It in impossible to
say which of the eeveral rarietics is best, but it
is generally coneldcred prostable to chente often, and it is sdylaable to procurare et from a
considerable dietarec, and from a different $\begin{aligned} & \text { goil }\end{aligned}$ of land. The oat pliant is a vigorous feeder,
having a yower similar to rank weeds of appohaving a power sinilar to rank weeds of appro-
priating nutriment in the soil. It eends It roots
into the sulusoit to a greater exteut than barley lito the silusoil to a greater exteut than barley,
and it does not seem 10 be so favorable a crop as

## SPRING HARROWING OF WHEAT.

 Mr. Willianc Cose of Troy, Mich., writes neas follows on the avove gubject:-" In a late
No. of the kupar yourequest communleation on dragging wheat in the eprong. Now, as it
bas been practised somewtat on the plalns near
 as far as I know, boping some other correspond
ent who has had more experlence will answer your inquiries more fulty. I suppose from what
information I am able to obtain, that furmers have had their eses more on making clover grow by harrowing wheat in the spring, than on bene-
fiting their whent, as I thanksta a sure prceention
of routur clover hilling ts dront part of summer, as it will frequently on ourdry
Ilght land when not dragged : on sneli land depend mostly on their cloper crop a serions one.
"I bad tried sowing elorer with mens wheat "I bad tried sowing clorer with nely wheat hn
the fall, soonng fit with oats in the sprlhg, 8 ow-
ing and rolling it on wheat in the spring, and

We advise farmers and others to be particular and thorongh ln cleaning their cellare, sinke, \&cc., vicinity of their dwellings. We advise it as tion ayaninst the approneh of raylous forms of sickness to which we ere partichlurly liable in
the sunmer scason. Do not wait until hot the sunnmer season. Do not wait until hot
weather comes, and the foul smell of decaycd ceeslty, but purify your premlees now.
Soon as danger from freezing 1 s over, all reg .
etables keep where the air is dreer. After removing sueh
from the is well to serape off a fittle of the bottom, If it some qritck line, or other dieinfectant, in rarlous places. Don't neglect to white-wasu
Wails and ceiling overhead. Then give the cel
lar a free airing when the weather lo warm and lar a free airing when the weather lo wapm and
dry. Proorde, alo, for a free circuation of air throughout the entire beason. We belleve that
farmers' cellare can onen justiy be charged with
producing mach sickness and the proner clengsproducing mach sidkness, and the proper clenns-
ing of them is a matter that cannot be eacciy neglected, drring the comint season. Clean up
the fards also, and be watuful that there is no the gards also, and ${ }^{\text {b }}$ be waturul that there is no
decaying vegetable matter in proximity to the dwelling.

| :--- |

| How innes should they be? From 18 to 22 fect. Gth. How many vinces to a pole? Two. <br> I will give a little more advlee than is asked or called for, with regard to the roots and planting. The roote or beed, lis lust years ranucrs; they should be cut five or elx inches long; three pieces to a hill; thes should be cut so that the eyer, or buds, should he left on both ends of the rocts. Thes shouid be planted about the same roots. They shouid be phanted about the same depth proper for potatoen, and should be dur early, before the buds on the routs start, put in a cellar and kept there until you are ready to plant your corn. Three busbels to the acre it the roots are grood, are enough. <br> Another correapondent from Wisconsin हends us the following on the same subjects:-" Plant seyen fect apart each way. I make no lille, but set a smail stake 18 inches lone to denote where the hill 15. I have always planted potatoes and think it much better than eorn for hopwsti.e Hist beasou; phant the potatoes duep bo as to avoid hillilug as inuch ar possibic. I uee a small cultivator with three shovel teeth the first season. Flat culture is the best for thits sectlon. My land is sandy and we sontectines have drouths that injure the hopa If hilied. Set only one pole to the hill the eccond season, unkens it in a very strong hill; then 1 bet two. Aiterwards set two, and to the strong hilis three-leaving ouly two vines to u pole. Niy poles are from it to 20 feet long, bat I think by observation, that polus from 12 to 1 lif feet are long enongh. Cedar rails | The growing is nothing to getting hops in good order for market. Onc-half, perhaps, of the hop erop doce not command over one-half housecsand macliduery for pacling aud proper eare In pleking. Any neglect on the part of the hop grower ln any of these things must result lin logs." <br> Mr. G. P. Pockweld, Madison Co., N. Y., writes us on this topic, that the hills should be suven fect apart each way, unless set dinmondlng whech, he considers the better way. There should be one male hill in every ecienty-live. Potatoes are better than corn to cultivate the first season, and liat culture is preferable. Never more than two poles shorid be set to one hill, and care should be taken that the vines put up Lave good heads, not affected by insects. We adrise beghners in hop-culture to procure the essays of practical hop growers, published in book form. <br> We have several other communications on the subject of hop cuiture, from practical men. <br> Straight Rail Fence. <br> S. P. Mills writes us that he bas built the kind of fence lllustrated and deseribed In the Rurat, recently, and suggests that instead of using a stone or block of rood to set the stake on, it is better to drive an iron spike into the post at the bottom to support the rails. Also, to raise a ridge of earth aloug the line of fence, |

 posed daring the winter; and nalthourb it may not
be practicable for him to rear leaff shelter for his entire farm, yet there are certnin parts whlch
ho may readly protect by screens, and so doing will bring ilm both pleasure and profit. Wo will brictiy note some of these points.
First, the dwelling as above. If the posilion were such that we had structed vlew on the hilchwiy, we anoo unhesilatingly choose the elhelter, because datily tance to us than the grailitiation of beeing a fow paseling travelerb:
Second, the fruit
berries, penclues, dwarf pears, plums, inulnees, thick bet linv or hedge of Norwny Spruce. Third, the vegetable garden. Thls, if pobsibie,
should recelve shelter by beligg placed in the rear of the bouas nud front yard. Trees along the western border would injure it but little; on
the cast a lline of evergreens would be adiulissiluie but thare should be no trees in a
iminediately on the Boutien border.
Fourth, the barns, elteds and yards attnehea
should be amply sheltered by trees. This highly important. The bleakeat yards contid is made permanently comfortable, in a few years,
by planting plenty of trees around them1 this ter for stock; lt costs nothlug to keep it in repalr, and it is in no danger from fire. Warm bealth of stock. Turn the cattie into an unsharp winter das, and see how they shiver and shrink from the blast. If your yard were sarrounded by a dense grove your stock
thrive better aud dee lege liathe to discase. If you cannot piant ns much as you would
like this present beason, forma a plan, at least, and begin to carry it out. You can pinut moro nex 1 not neceranry or even profitable at the same prices to procure the largest evergreens from them well. Prepare the grouod thoroughly, Choose moist, clondy days for removing the treen, and with care and bkill you may continuc
planting until haryest time, successfuly. If you are young and Intend to make your farm a
homo for old aje you can make no Improvement thant will bring more plecasure with advan.
cing years, than amplo screens of trees around to tengthen wlond your path youdows beglu work that will better keep you genial and tender in the inemory of those who shali occupy when

THE HERMANN (MO.) VINEYARDS.

 bank of the Missoarl River, elighty-ono willes
weet of St, Louls. There are plated in the weet of St, Louls. There are plauted in the
vicinity of IIermann vever 500 acres of rincyards, prored that preparations aro wade to plant stil The land upon which most of the vinogards so steep in some casce that they have to bo terraced. The Eoil las strongly caleareons, the hills vincyards are generally in Eastern or Southern expozures, though I saw some on. Western I visited the vincyard of Gzo. Hessiann, Esq., Hermann, and lse pioucers in the buwness at raaker. He bas a vincyrd of Cower wine aeres, which has been planted an another vineyard of Norton's of and Coneords of about the great farorite for wine makled

growers. The Catawb he lins lost faith in, at
least for hils locality. Eveu our celebrated Del-
aware he does not regard favorably, eays it is
liable to leaf bllght and consequacutly makes a
poor growth. Ho gireo the following reasons
for preferring Norton's Vlginfa to all others as a

the flower garden.
SET ont the annuals you may have got forward plan uned to be to set out In a shower; Dut that plan is barbarons. No wonder with snch old fogyligh ruies our handsome young ladies are dif.
guated with gardening. L.et the girls lift the gusted with gardenlng.
scedllngg corefuliy from the noll in tho pots, ect the roots in a saucer of water, take them the water dibble them at ouee in. Cover for
twenty four hours with an inverted flowerpoonext day cover only six hours during the mid-
dic of the day, - next but an hour or so during hot sun, if there be auy; and the pinut ls safe.
Study the differenco between thardy ond tender duriuils. The intter must he set out only in April. In the north - extreme north - aleo of
conse, our ruies are too enrly. Go by the sa.
sonn, not the almanac. March fis rallicr a trenchgon, not the almanac, March fis rulher a trench-
crons month, even in our favorcd latitude. undreseed if they chowr signs of growth, whieh tected plants.
Prune slirruhs, roses and vince. Those which fower fron young wood, cut in beverely to manke
wew growth wigorous. Tea, Culna, Bonfion nnd Noisetto Robes are of this class. What ar
called annutal flowerng roses, as Pramic Qucen, and so on, reqnire much of last year's wood to make a good slow of flowers. Henco, with
these, thin out weak wood, and leave all the Btronger.
Prepare
Prepare for somo little "out of the way"
notion In the gardenluy way, notion in the gardening way, The greut Land.
scape Gardeners will tell you to nuke overytisng right in a gencral way; but we never see in nature a pole with a hoop at the bottom, leading
a dozen of striugs to the top of the pole like a a dozen of Btriugs to the top of the pole like is
sugar-loaf, with seoree of Cypress-vine Uranches dozen of colors grafted on one bush; or upright Irieh Junipers, or Weepige Wiliows, or, for the mutter of that, double Robes. In fact,
in Rome things, the more unlike nature, if not in some thinge, the more unlike nature, if no
ridicuious, the better it will please. Sirubs are not near ciough employed in plant
ing sinull places. By a jndclons selection place may be had la a blooming state all the ycar; and they, tesides, glve it a greater inter-
eBt, by their variety, than 18 obtained by the too Cest, by their variety, than 18 obtained by the too
frequent error of gilling ft up with bat two or three forest trees of gigantle growti. Plan
thlekly at tirst, to give the pearance, and thin out as they enrowhed apMasses or shrubs have a ine effect on a small nited with evergreen shrubs, to prevent a too naked appearancec in the winter season. - Giar-
deners' Monthlg.

## best winter pears

Joun J. Thosas, in answer to an inquiry,
gives the foliowing bints in the cogntry man about different varietics of whinter pears: "Amoug the burst pears which ripen eurly fu winter are the Lawrence and Beurro d'Anjou; the later, altiongh an autunn variety, will keep in a cool room througt January. Langelier
and winter Nelis are also excellent carly winter sorts-the former a poor bearer, untll the tree attains good size, with large, handsome fruilt; and the latter very productive at all times, with small, poor-looking, but deliclous fruit. Jose-
phine de Malines is an excellent winter rarlety. Phine de Malines is ancescelient winter rarlety. not of the highest quaility, is s hardy, productive and relinble varicty for midd.winter und later.
Easter Beurre keeps till spingr, but requires Easter Beurre keeps till sping, but requircs

CAUSE OF DEW
Tus capacity of the air for holding moisture
depends upon it temperature. When the tem-
peralure is reduced below the dew point anor perature is reduced below the dew point, a por
tion of its moisturc is deposited in the form of
dew. The dew point that is the mint peratnre at which a, gisen quantity of water can
remain suspended in the alr, depcuds upon the humidits of the atmosphcre; the groater the
humidity the nearer lt is to the temperature of part of its o wn welght of water, the dew point
is 59 degrees. If the temperature is redniced to 5is degrees, the dew becomes frozen, forming
hoor-jrost. This is falling or erenlug dow, which French call Nereit
Dew is the most abundant in clear nights
because the earth and vegetation radiate their heat and become colder than the surronnding alr, whlch, coning fu contact with theso colde objcets, reduces its semperatnro and causes it to dew, the same as whey a recsel is filled with col mater and placed in a warm room, the moistur
from the air yery soon collects on the poteld from the air rery soon collectis on the ontalde or prevented, or rather, the clouds radiate tbe heat
back to the earth and prevent its becouning mueb colder than the air, and there ls very little
dew, Dew forned in this way, which is seen in
des the morning upon the leaves of plants and other
conl surfaces, the French call rorec. In English these phenomena Previous to the beglaning of
ite precent century qugue and curious notions were catertained even by those who made cou-
siderable pretensious to seince, in regard to the Ita benutiful aud brillinnt. sjariklltng lu the mornstars, and diligentiy exerciscd thelr fuventive faculties in vainly trying to convert it into dia-
nonds. Still luter it was supposed by bome to be the aweat of plants.
Not till IS1, When Dr. War. Cirailles Weir.s.
published his Essay on Derr, of his resenrchos, was the real caluse of devy
known. The merit of the discovery of the Theory of Dew does not, however, belong eselualvely to him. Prof. Wilson of Glasgow, contribated
largely by many intercsting oxperiments nad and others, shonld also bave a share of the merit.
Rome, Mlch., 1866.

THE PITCHER PLANT.-SMALL - POX.
Is a recent issue of your paper $I f$ find an art cie on the use of the pitcher Plant as a cure fo
the small-pox. I am a strong bellever in the was used wliti the happlest results it coalt, C.
W., $\begin{aligned} & \text { Eome years slnce, when the mall-pox ruged }\end{aligned}$ therc. Abont a year ago I wrote all account of
It, which appeared fu your columns. My informant said that, after whltessing the nlmosi had only a supply of the root of the Pitcher Plant, he would not fear the suail-pos any moro
than the chlcken-pox. I wish everybody korw than the chlick
of its virtucs.
There is another thing about small-pox that
cverybody ought to know. It is that a frec of glycerine will prevent pitting. Per free uso fact is gencrally known, bit as I did not knows it tiil quite recently, I feared that some one clse
might not know it. I have it from a lady on might not know it. I have it from a lady on
whose veracly I can rely, that several yearg ago her little dayrbter had the small-pox. She bad
it so thard that for some time the mother fol that if she only lived she wonld ask for nothling more; but as the cllid begin to recover the mother begzan to regret the little one's loat bcanscabs with glycerine,--to wet them whenercr she thought of $1 t$, if $1 t$ should be every five minutes. She aid oo, and when the scabs cume ofit
she had the satlafactlon to lind that on the and other parts where she had been careful
about wetting them. With the giscerine, not scar remained, while on other places, where shc aid neglected it, the child was frightraly ruarked. I shall hope to see more nbout the Petcher
Plant, and that to virtues may become generully

ATE. -The poet Tennyson is thas descrlbed by
one who asw him recently: - "He was dreesed

his thick, curly gray bafr ung lo long and
shaggy loke down over a broad collar. His
bat was down over bls face, so that I could not
sec his plrenologital devclopment; but he traly
had the 'sad passive eye,' Whatel I liase heard credited to him, and which, withal, was ncrrous noustache; both were plentifully sprinkled with White, thugh orlginally very dark. The poet's
complexion whs sallow, his nose stralght, and his facc rather long.

A FEW WORDS FOR THE LITTLE ONES, dy artom Fermet.
Sirtiva in church is fow Sabbathes sluce, my thoughts borno hearenward where my beauliful
darling had so lately gonu to dwell with the angels, my attention wasas arrested by tho, movemenle of a iltte glry in a sido pew, whose bright
ffico and airy, restlcas movements had often bcfore attracted my attention. The sermon
Whas about to commence Was about to commence, and I was setlling
myself to bear it, when' suddenly the littlo girl myself to hear it, when suddenly the littlo girl
drew her dainty garments closer about ter, and
with a littie toss of ber lead whleh sct the glittering piumes of her hat all in a futter, retired to the fartbest corner of the pew, and, hanging
her head, furtiveig cast a glance over the audlher head, furtively cust a glauce over the aud-
once, while a blush of shame, $1 t$ beepucd to me, orerspread her face. Surprlsed, I looised about
for the cause, and saw an old man alowis adrand ing up the aisle, tremblligg and gray. His garments were oid and poor lookligg, and moreover
he was aadly deformed. He scated himself ln the enme per with the ilttle grrl, to her evident
dissatisfactlon.
 the aged and poor in Goo's own nocssz-should
fear to soill her marunents by contact with poverty.
The next Sabbati she The next Sabbath sho was there agnain, and
with luer another little girl as dalntily dressed as she. Again, the old manil camme, and again the proud chald moved nway, but the other littlo girl
rotalued her sent close by him; and wheu the
hymu was read, she toot the hy the rack, and Andiny the place, passect it to him and looked over with him durlng the einging.
It did my heart good to sec her, and surely houghtI, "Of such is the Klugdom of Meaven." have ever been gullty of such wrong aud wicked
feelings as puescessed the hlttle girl of whom I have toid. It is uo cause of shame;to be scen
with the poor and needy ones of earth. How,
thinle yon, God looked down upon those two think yon, GOD looked down upon those two
litle elirs, the one so proud and the other so
innocent? Our Ulessed Saviour when upon earth did not go about becking tho society of the
rich, but rather the poor and lowiy, the suffer-
ing ait ing and sorrowing ones, sind shall wo poor mor-
tals fear to follow His cxumpic? Little children, when youl are tempted to
laugh at those who are not 60 well dressed as
you, or those who are alged and deformed remember the exanuple Jesuy has set, and that
in Heaven "the rich and the poor mect togcther, Ae Lord is the Maker of them all.

| Tris subject Lus been much diseussed in Eng and it appears espectially desiruble in our colder cllmate. The following casy mode of doublo glazing a new homse, or ane already brilt, Chronlece: - If amy one is building a house with deep sanh bars or ratiere, 1 would be cusy being "chanplterce" ofr, let there be a groove made a 1 iftlo wider than the thickness of tho glass to be used, about half un incle from the under side of the bars or matters. This sroove slooald be made the whole length, nad whicn the outer glazing is done, a picee of wood on the possible, should be eut out the length of one of the squares. This will of conrse allow a pane of glass to be slipped in and pushed down to the bottom, then another, nud so on to tho top, edge to edge, and the ton one might be kept in its place by nalling on the litile slips cut out, at first. Those who have such houses alrealy buitt could glaze the under side by nalling on two very emali slips of wood to form the groove. On this pian a good sized house oould be glazed on the nuderside for te or $x^{2}$. The glass coula, if necessary, be taken out once or twice a year, washed aud rephaced in a fociw hours, and ishable woolen cloth and rolles. Double glaz $\operatorname{lng}$, it is believed, would save half the quantity of fuel usually required to keep np the proper temperature of the Louse in our cold winters, with the temperature frequently at zero, or near it. $\qquad$ <br> FLORAL EFFECTS. |

MIGRATION OF BIRDS AND ANIMALS. Wosperfeul are the works of Gon, whether
we rice them fin the starry licaccus aborv, where mighty worlds and ssatems move oll in their
annual coursc, or ta the bring deep, Where
muinds of living creatnres show forth tho wiemyriads of living creatnres show forth tho wie
doma and power of their Creator. Or, if w invectigatc the differcnt motives that yorcm and actuate the diflereut classes or antmats wisdom hast thon made thom all." Migrntion
is a movement under the gridance of iustinc for tho accomplishment of certain ends a purposes, of which the actors have
sligutest ldea from rellective renson; as impulse urges. Migration is clther per and swallow, or imperfect, as in the case of tho Kingfisher, whel merely leaves the strean
wider water courses-or Irregular, as in the of the migration of herrings in thic

## We will at ifrsi attend to perfec

migration as we see it performed by birds passage Great Britain 13 well situated for riewed from it, may be likened to a tide-stream nowlog northward in spring with a sonthern
reflux in autnmn. We inay say, indeed, that is an Afrlea to the wild fowl of the Arctic regions, and an Aretie breeding place to the
swallow whllch wiuters in Africa. Let us palit a 60 mmer in the Arctic regions. It is very shor out short as it is, it sues the birth of thousanh promontory, 1 s thronged by a denso popalatlor As if by magic the Enows of winter have
dissolved and coarso herlage lins covered the dissolved and coarso herbago has covered the
land. Frery stanll pool, every lake, every linct is garlanded with regotation. Floasing onwar wild fowl, water birds of rarious species-scoter pochards and many epecies of wading birds,
The work of fincubation now commences. The ground is converted into a city of neste, rarel ands of wild fowl are rearcd. The water
supplies them with food-the reeds bend over their nests.
"By plashy brluk of wesdy lake or marge of river Whide,
Or when tho rocky billo
chafed ocean sile."
But the suininer \&s slort. It passes not into
winter by the trausition of a mellowed autumn. As It aprang of a silden out of whinter, so 1
returne; but the wild birds, instinct-taught anticlpate the time when river, lake, pond an fedged strong on the wing, nnd now they con-
mence their southern journey, not to seek brecdlng place, but open waters where the lec-
Cow is nuter scen, nnd wherc they rnay find dow is never scen, and where they rnay find
food to susalan them until another Arctic summer arrives.
hion of hards, treating the subject tas if the blird reasoned on the necessity of thelrjouruey, snd on the direction best for them to take, as the captuin might do with hits chart leforo him, calculation any persons labor under slingular confosion or ideas: the cual to be answered by the wigratio of a bird is ts own preservatlon, but the modu
operandi is cntircly instlnetive. The bird knows pothing of north or bouth, east or west not for this instinctive impulse it
We have only mentioned the migration of birds. But we must. not forget that other
animals migrate, and hero we will allude to the
and occanic mammal la. Crastz, in hls history of considers mlgratory; one the ealls Ncitersoal Phoca Cbristata Utsuls; the name of the othe Pbocaburbuta. These species emigrate twlee In
the year ; fret they retire in July and return in the ear; frrst they retire in July and return in
September. He thinks these the only two epecies that migrate, But Desmarrst aays tha
the Attarsoak Phoea Greenlandica leaves the coast of Greenland twlee a year, in the mont of March to return In May, In July to rcturn in
September; and Professor Belic confrmis it September; and Professor Bell confirms It
The probatility is that all ecals are migratory. The Phoca Proboseidia of the southern ocen
travels between lattidad $35^{\circ}$ and $50^{\circ}$-passing to thic Anturctic in summmer and retracing to
course in wiuter. There aro mady specles of fish which are migratory-the salmon, herring
and others. Therc are also mans tinds in lay znimals that are partially mingratory, impelled reasen to change their locallty. It semems that
the Crealor has inglanled an instinct in the inferior animuls that forewarns then of innpcud
ing danyer. It is a well known fact tha squirrels and othcr aninals, before a very eever
winter, migrate to a more congenial cline.

ONe of the most distingulshed personages in
Rome is an Amsterdann lads, who has bce raveling about in her sacht, with black and White attendants. She is captivating, and
woman of splrit; she hails from the Nile, wher she had beeu crocodiling. She lives on boar lry by day.
Estimation of Firaniness. - Firmness both in sufferance aud excrtion, la a character which I would wish to possess. I have alwass do-
epplsed the whining yelp of complaint, and the
cowardly feeble resolve.-Bumas.

THE CLOSE OF SCHOOL

 -

## 

Watches, which in former ycars were regar ad as a luxury of the opalent, have now become
common neccesity of the world. The fact that they have become so gencral a necesalt gives importauce to the clroumstance that wo
are no louger dependent upon a distant market andedr by Aply, and that to Amcrican ingenuity prisod , weare lndebted for the amplound constant
production of watehce which in all respects ar eqnal, and in many lmportant reeppects snperio The Aenerican Watch Company, of Walluam, tons which eutille it to a first rank amony the Inanuflacturlng entcrprises of the New World
It emplosa betwecu 800 and 1000 artigans of en prior skill and charaeter, nad a large and thly nir town has grown ap in its viciulty. 'tbo
fuctory covera over tbree acres of gronnd, and 28 an Illustration of its cxtent, we may mentio
hat It ls supplled with more than 60 milles of ron pipes and produces an aqgeregate of nearly 5,000 watches per annnm. The quality of thes
uistruments has been thoroughly tested by m: nte comparisons, and the result is decidedly in favor of the American over the imported arti-
cle. Tho principal difference arlses from the modlo of manufacture. Forelgn time-piceess ar mado princlpally ly hand, and each 18 finliabed separately. All those missterious and Infintest the wateh, are the frnlt of slow and tollsome
manual processea. In the recults there minst o couras be lack of uniforinity. The constituen parts of the A merlcan watch, on the other hand,
arc fizhenoned by machinery. Wheels, pinlons, aprings, screws, absolutely uniforuz in weight,
cireumference, dinensions, and In crery possl
ble partlcular, are turncd out to myyriads by uncremartlecular, are turncd out th nyyrlads by un-
crrlug mechanleal processes. The dificuity or arling mechanlcal processes. The dilmentry of metal must be evident. It involver such dig
al cunnlng, such superlatlvo acutencss of cye snch cxhaustling patience of eflort, that it
almost a wonder how the work-slopy of Gencr nd La Chaux de Fonds continue to replenles helr armles of opcrators. In the Wathan
Manufactory, machinery supplles the means o their production. Wheels, pivots and jewels, hands. As oue practical and caaslly apprreciatec
rcault of thla perfect roethod, it tuay bo instun result of thlas perfect moethod, it way bo instinn
ced that the owncr of a wateh of whleh hy ac cldent nny part gets lost or Injured, has only to his watch and stating the organ wauted-sercw whecl, juwcl, spring, or what not-and forth.
with by recturn mall comes the desired article, hich any watchmaker may adjust to lis place The first duty or a watch, as all the world un ties are decorative and enbsldiary. The sim ties are decorativo and ensidiary. Trechanism, the more trustworthy lto onstructed by the American Company is the perfection of simplicity. The motlve power 1 pplled directly to 1 ts purpose, aud ls not dis
sipated amidsta nselcss complication of machla ery. The lmportance of this extreme simplication of strncture must be apparent. The and unncecesary impedimenta; flletlon is lessen d one half, and the liatility to fracture two
thirds. These advantages of 1 mproved con Aruction havlog becon seeured to the fullest ex taty that is expedient, those of perfect nolforin-
ity are of course moro cosily attaiued. And to these, more than to ayy other causcs, thai attribnted. The fact is, that there is virtually o variation in the working of even the nilnu
test detuils of all these instrunents. They musi all ineritably be equally good. Exact unily is the first quality which watcles, by whomsocve unattainable by tho European process. Of the instraments हimultaneously completed in a for they will bear more tunn a gencral aud superítie between them to hold them1 to exactitude.
Devlations in regularity are always cxpected in Devlations in regularity are always cxpected in
imported watches - their harmony being coningent apon doobtful conditions. The dexter hy or good falth of individual worsis and in the Waltham Marufuectory nothing is left to
he discretion of the artisan. From beginnin to cnd all 15 carefully wrought out by unvarylug mechanical rulo. The isolated partieles must of necessity be identical in every watch, since
they aro modeled by force of maclinery, and

OORE'S RURAL NEW-YORIER,
 CONDUCTED BY D. D. T. MOORE,

HENRY 8. RANDALL, LLL, D., hon. t. C. PETERS,
(2) Fos Tanys end other particulars bee last page.

AndGURTORAN. potato cultore.
In a proper cllmate, potatoes will flourish in
sandy or loamy land-any soil that works up andy or loary land-any soil that works up
indly and remaing loose. Hard clays are lnadmisslble. Varlettes incost inclined to rot slould
me planted out the lightest soll. It ts uselcss to be planted out the lightest soll. It ts uselcss to
ndiente a preferencermong the numerous yarleindiante a prufuren ee among the numerous varle-
tics, as localltes have their tiavorltes, and even tics, as localltles have their fivorltes, and even
these are llable to change. Proper caltare of lic beavicest klnd, bnt by skillfal management 1 can bo greatly lessened.
Stnbble ground, if rich, is best. Summe fallowlog for wheat, turning under a heny growth of clover and in coat of barn- yard ma-
nure, then potatoce, next oats and secdlu, Is a
good rotation. A rleh coru stubhle s next best, gure, thention. A trleh cornstubble se socxt best,
ghen a clover sod one or tro years old. PHow
then deep and narrow furrows, so as to turn the stabble well under, and harrow till emooth and mellow. Rows are commonly made both wass,
with the hills two and a-lalf to three feet apart.
Two eyes in a hill are sullicicont and the secil would be planted in a slallow furrow. If the land is in the right order, the covering may be
done with a plowor cullivator, by detachlug the alddle teeth, or even the drag. If the seed 1 field many he harro wed within \& weck after plantag, and agaln as thes plant begins to show above
he ground. A very good potato enverer shaped like the A ctter $V$, with the lower enderer, oif and a plece of shect steel to llatten the ridgo dent tec farmers syow of it through the adpe
ilsing eolumns of the Ayricultural papers. planted in drmles.
But with litele if any more lator, except in
digging, potatocs may be grown in drills, and rger yleld ubtained. Mr. Hexar Thoden glves, the Pruirie Farmer, Lis method of deill-cul ight and one-balf acres, or over 450 bushels per II comenenced by laying off the ground with a elngle shovel plow, in row just two fect apart
one way. (I do not like the conmon emall plow olay ofl with for the reason that, especially if
ecours, it leaves a wle hard track on which odrop, the eeed, and it is diffeult to get the he shovel leares a mark like the letter V and the sced must fail in a direct llne; moreover a portion of the displaced earth will fall back,
forming a very solt bed on which to drop the
secd. This ls quite essential with my overing. My two little bose, aged respectively 10 and 13 years, did most of the droppling and llo of the covering.) My part of the work was ugle eye piecess and werce calens were cut to ingle eje pieces and werc ealeulated to be
ropped just 10 luches apart in the drill. It
was fequired that erery plece dropped should stepled uipon with the leeel or ball of the
 row without auy further covering and wonld cover, a light double elx.foot harrow was. To tren every two rows. This effectuailiy covere-
the seed to the depth of about three fuehes, and eft the hand lu beruutilul condtion. The Eaule plows, with the only differengec that they were
Bere at 12 inches in the drill and two feet sir inches tween rows - they maling more vines aud

Doring the prevalence of the late rebclllon but now that the wur is over, cotton will probably rcsume its former asecndency. Still some
vax will begrown; lenee f few words la relatlon to ltz cnlture may not be luapproprinte. It la gencrally
exhanstive
havling fich and weil prepured the necessity of lo deposit the seed. Land on whach shecep have growth of thls crop. In any event the laud hould be profuscly manured and well strrci hen be well harrowed before the seed ls sown,
When the seed is in barrow theroughly nugaiu, pulverizing the ground ind rendecing as mmoth
as mayy be. After thita, a free nie of the roller essentlal, but where thls iluplenent canno
co ohtulned let a Gash drar be subsituta be ohtulped let a Gush drar be substituted whilct
will leave the surface smooth and welt compacted
Wood ashes, sown will the seed bood ashes, sown wilh the seed, or furow intrusive labor of insects which are often higbly
detrlmental to the suceesful culture of flas.

## ASHES AS A MANURE.

Unleached ashes, applied to land, ofte an harm lostcacl of good, -not that they are
useless as a fertilizer, Lut for the reason that to mueh of a good thing is used. Those who have had experience faclearing new lund will proba
bly have seen proofs of this. From cartess. eess or a want of Information on the subject Leaps have ceen burned, nudisturbed at suecdivg
time ; and the consequence is that at the sueceding barrest they find the crop in all sneb places to - nsist of nothing but a heary growth of etraw
the heads laylug no wheat in them. Ther was too much of a good thing. The ashe of the ground luthe vicinity of the leap-thu
mpartiug a general average of strength aut niformity in the sicld at hatvest time. We hav If worthlese, cxcept in the way of produclng ductive by the aid of a thorough harrowing and a liberal top-dres sing of leaehed ashes. In this
tate a much more liberal supply should be used than when unleached.

Kicking Cows. - A correspondent of the Obio cows given to the pastime of kieking while the process of mllking is going on. This may be cannot be curcd of the kleking propensity by
kind usage, the sooner rhe in introduced to the
vuther or beef barrel the better.

SALT-ITS USES AND EFFECTS. Salt may be made a valuable assistant to cheap and obtained easilis, and farmers and gar ger
deners sloould nse it more freely than bus becr the practice. Salt is supposed to bencflt "greenn
crops," that is, turnips,
gotatoce, nad the grass. es, more than graila crops. It may be proitably
sown broadeast over uld meadows Rnd pastures
that are becoming mosas, and where the grres sown broadeas over uld ncadows nid pastures
that are beoming mosa, and where the grase
is ranning out. As a worm-killer it is valgable. It should be sown liberally under frnit trees for
the purpose of destroying insect life. A well the purpose of destroying insect life. A well
established tree would hardly be injured by a sullicient quantity of ealt to kill we verctatlon
nnder it. Salt may also ve used proftably to destroy foul weeds. P'utches of Canuda thistles
may be kilied by dropping a small bandful upon may be klited by dropping a small handful upon
exch one after belug cutt to the eround. If you have a tery dense patch of the thistles, or quack, sow salt enoughto kill them completely the flrat
year. The next year plow the land and seed witt clover and lt will thrive wcll.
Salt is ralnable in the
Salt is valuable in the garden. It will keep
the weeds from growing aloug the walks. It is a weeds from growing along the walks. It is
a good manure for the asparagus which is a ma.
rine plant. Seatter it frecly under the currant bushes. It is more beneficial as a fertilizer on rich lend than on poor, hence jon should be
able to use it freely in the garden. If there are able to use it freely in the garden. If there are
troublesome weeds in the lawnor yard, ns docke, plaintain, horse - radishe, they may bc forever
banished by entting them just below the tnrf banished by entting them just below the tnri,
and dropping a tablespoonful of salt on them.

## CEMENT WATER PIPE.

Tuis klnd of a condnctor for water is very
cheap and darable when it is properly constructed and does not luare to bear too much pres.
sure. Twelve or fifteen feet head is as much as would be safe to put on it. The method of las-
ing it is very smple, yet there is a right wouy,
leadiny to perfece tnce leading to perfect saccess. The litcl must be deep
cnough to lay the pipe below the frost, aud the
pressure of cattle or horses in plow pressure of attle er horses in plowing over it.
Two feet and a half in depth is not too mnch, Then the bottom of the ditch should be aecu.
rately graded, EO as to rately graded, ${ }^{\text {so }}$ as to leave no lnequalitles of
surface to sarmount. The dith should be wide ing and working in It conveniently. One part water-lime audd three parts clean, sharp sand wrill
make about the rlght proportion shonld not be mixed untll wanted for urse. In
layiug the pipe some ne layiug the pipe some nse a smooth stick three
or four feet long, of the diameter which it is in-
tended to make the pipe. To the ent of stick a ball of leather, filled with sand, is attached
by means of a string six inches long , is of the same diameter anthe the stiek $\rightarrow$ a trille
more perlaps-and is for the purpose of smooth-
ing and ing and perfecting the bore of the pipe. A
Emooth leather tube fllled with satu, is, how-
ever, IIore \#exible than the stick and on ever, Hore Hexible than the stick, and on that
ncount better. Lay cemcut alogy the bottoru
of the ditch, of the ditch, place the stick or leather tate on
it, and mould more cement over the top of it, pressing and shaping it with the hands or trowel.
Then draw the stick along two or three feet operation. The cement must be allowed to proper care and skill a a cementing dirt on it. Wiith lowerer, that it will not bearal asays much preepting,
as wood or metal. Care and skill, wis
 essentials to suecess in making cement

TEXRMS, \$3.00 PER YHAR.]

|  | that possesses a large amonnt of vegetable mold. On eool, moist, frosty highlands it will not ripen, and on soils naturally barren or that havebeen exhaustively cropped it turns out a meagre yield of "nubbins." Vegetable mold, to fupnish nutriment to the plant, and to keep the soil loose and porous in dry weather, is an essential element in successful corn groving. This is geucrally well anderstood and we believe it true that Indian corn is grown on better soll, and with more manure than any other leading crop of the United States. | With the same kind frce from stone and clods. The distance of the hills apart is governed by the eilmate and the variety of corn planted. The ame of planting should be chosen wher it Is probable that the seed will germinate quickly, eold sterms or frosts. Too early planting is to be avolded. |

MORTMOXMOAM．
SEASONABLE WORK． Tne scason so far，has been much the same as
ato corrceponding ones for years past．Aslight that of corresponding ones for years past．A slight warm days a short time since when the mercury
indicated a degree of heat rarels secn in April lu
 and snows with prevalling westerly and north．
erly winds bave predominated．The warm days erly winds have predominated．The warrm days
in Aprli causcd regetation to develope itself rap．
idly and，as the event has proved，pomewhat prematurely．The consequenee ls，that some
damage bas becn done to the carly fruite，but less serions probahly than was apprehended at the time the cold snap occurred．At all events
there are some of the earller kinds of fruit blos－ soms whish indicate sufficient vitalits now to
assure the matarity of fruit in ita serson unless assure de dain by a severe frost．At the present
agiting，the second of May，the wind comes cut－ Writing，the second or May，the wind comes cat－ May they prove equal to the oecasion．
Garden yrounds are now belug prejnred． some have already been secded，but the ehauces
are that licir owners will liave the annoyance or the pleasure，as the case may he，of dollgg the
work over again．Be this as it may，nothing has work over agan． ary results may be fairly anticipated．In clttes
and the larger towns and the firger towns where lots are small，the
occupants of them usually make cvery foot of
ground，not oceupled by huilding ground，not occupled by huildings，avallnble for
the production of vegetabies．Thls is rood， the production of vegetabies．This is good，as affording henithful and nutritlve luxurics in wlse enabie them to obtain when wanted．A good varicty of garden products helps a fannliy
along amazingly，and when it is remembered that every lathorer has a few unoceupied hours pably remlso if no vegetable gardeu well stocked， and elcar of weeds，llanks or unvirons hiss dweil．
ing．So much for the elty and town，but what of the farms and fariners？
In most instances，perhaps，tills ciass is duly In most instancees，perhaps，thls ciass is duly
provident with reapect to garden prodncta，bnt it cannot be truthrully denied that some are re－
miss in reference to thein．With many the appropriate space is alioted to this purpose The ground is plowed and thell ieft to the
women and children to plant and tend．Possl－ bly soine of the labor of plantint may be per－ more attention is paid to the matter and the and grase，with here and there a dlmlnutive sam－ ple of vegetable prodincts．Now this is ull
wrong．It is bad taste and worse economy． by the garden，the chances are mavy to one against th，that it is but a too falturuil miniature of the farm itself of which this is an appendage． Thls should not be so．A few honre work weekly would give a cheerfin and invely aspect to the
vegetable enclosurc，whice repaylug in its products the labor and expense incurred
in planilig and dressioy it．
Reform this aitogether and now is the time to
begin．Plant liberaily and：virlonsly as you
have the menas；cultivate timely and well，and the result will be boluething plensant to look
upon，re you enjoy your pipe of an evening； upon，Re you enjoy your pipe of an evening
seasonabie varicty of garden producte when yer want them during the summer and a supply for

## ered in． In the

In the precedlng remarks，reference is made
simply to snct produets as arc embroced in culinary departinent，but thece do not conssitnte the whole of a well arranged garden．Flowers
of various kivds may lave a place，blooming at intervals dnring the season．They are pleasant indicate a refind love of natnre in those by whom they are planted and nurtured．They are to the
garden what the dessert is to the ferest；not in－ dlspensabie to it，but renderlng it more varied
and pleasing． and pleasing．
den，and if faithrovide to tours there is is littic danger gar－ that your farm will be neglected，for attention
here will incite it therealso，and the consequence will be that no man，in paselug your dwelling and farn will inave a chance to say，＂thls is the
home of the careless man and the हluggard．＂ hame of the carelees man and the bluggard．＂
The garden lis to the farm what the parior to to

## ORCHARD PLANTING

## The Rockford（III．）Register is ot opinion that

 orchards，especially in the West，shouid be plant－ ed on the lighest point of land on the farm．This secares a free current of ail and exempts the early bloseoms from the frosts preyalent on Serenee in temperature is sald to be fiom five to
seven degrees．Another advantage ciaimed for the high gronnd fs that it is thoroughly surface drained，while the lime stone，whieh is so benc－ Aicial to the frnit tree， 15 nuore readity reached
by the roots，being nearer the eurface than on awder ground．The practice of planting oreh
ards，under the sheiter of forest trece，as is some limes done，is regarded as unwlee as the forest trees appropriate the atmospheric influcnece cs－ sential to the growth and maturity of frult In
preparing the ground for the young trees the
soil should lue sirred to the depth of inches by a sub－soll plow and well palverized．
ind Twenes by a sub－soll plow and well pulverized．
Twenty feet apart in rows is regarded as a butts． Gle dllstance to piant the trees．
The holes should be excavated twenty inches in depth and four fect in diameter．The lowe

 if dipped lnto it，and apply it with a stout gwab so that the bark can be thoroughly rutbied and
courcd．Concentrated potash cent ean－diksolved in fonr galions of ruin water，
with in small plece of saitpette，wlll make lice fall in piatoons，and lenve the bark in a clear， soft and silky condition．＂
The beat manure for th
to be wood aslies－applled litheraily is thonglit roota any season．Plow the ground y carly，ma－ no exhanetive erops ns the orchnrd wiil need all

POT CULTURE OF ROSES．
We illustrate hecrewith a specimen of a pot－
rose，so perfect it form and proportlot that our readers who enltivate the＂Quteen of Flowerr＂
by this method，may well take it for a model and strive to attain its perfection．In floricul． ture there is nothlog inore finselnatlog than those
roses of dwarf and stocky hatit，which may bo roses of dwarf and stocky habit，whith may bo dow，or adorn，with gorgeous colors，the green
and well kept lawn．The China，Tea，and Bour－ bon Roses are adapted to pot－culture．The ra．
ritelles of these are numerous．The China rietles of these are numerous．The China，
known commoniy as the＂Mouthly Rose，＂is often seen exposed for bale on the corners of
streets，and in market places，in the sijring every littil shoot crowned with a bud or flower．
They are very hardy．The Tea roses requir more heat，and llyht，and some protection in winter．Their growth is more gracelul and dell－
eato than the China．The Bonrton Rose was cato than the China Damask lyerpetual．They are free，Yigorous
growers，and hardier than the China．They re growers，and hardier than the China．They re－
quire more room than the varieties previously mentloued．
The soil four parts of rieb potting should consist of two parts of well rotted munnre，and a silght
admixture of sand．The soil should be well Iutermixed，but it is better to leave it lumpy
than to reduee it to powder．Pruning is also essentlal，and as the eyes wlll freak any whlere， if a brunch becomes too long，lop it off withont for drainage，and slyghtly mixed through the
Boil makes the plants healthy，and limparts brit llaney to the मlowers．

## RAISING BERRIES．

As the juising of berries extensive every year，and as there are many just commencing，perhaps a few ideas would not bus\｛ness pay well is to understand the best mode
of cuitivation，end then practiee it．The first thing that eloould be attended to is the gceuring
of good sets for planting，which should be grown on good，strong soil，so as to secure plants with
strong，fileerous roots；for the tetter the plant strong，filerous roots；for the tetter the plants
the larger will be the yield．Sets should never
be taken up in the spriug，particulariy blackber． ries．One reason is，they start Bo very carly that
many of the shoots are broken，which mnch－needed carly growth．Raspberry plants
解 as soou as the frost is out of the ground．Th
second jear they throw out long tap roots，to
which whe from wblech the plants derlye，thread－llike abers The blaekherry ss very different in its growth． lood like the raspberry．The sets spring up
from the long tap roots，which run in all direc－ tions，giving It the ndvantage of the raspberry
eet，by drawing on the parent stalk for Its sup pmort，thus enusing it to start very enrly．Th
zuts should he duy in the fill and heeled In on irom the warmin sub，so ns to kecp them fron
starting bufore the soil ean be prepared for plant
ince them out，which should be done as soon a
ing them out，which should be done as

keep the water cooi even ln warm weather, and sand trout nis far as it can travel in twenty-four or thisty honns. With proper care we know not
why they cannot in this way be sent to any pait Why they cannot tut the
of the United States.

Mr. Green's buccess, it would seem, is already aeknowledged to be far ahead of those of our
English cousins. The London Field some timo Eaglisa cousing, The Londun Fileld some time
since aliuded to the subject, and commented upon an articie in Wilkes' Spirit of the Times,
as follows:- "Now, althougl we lave been engaged in flish hatehing aud culture generaily
for yuars, there is uot na establishment in England where any one who wanted to purchaso trout or ova, to stock their witers with, could
calculato upon thel rbeing able to do so. Xet onr
lat Amertcan frlends, with that shrewdness which distiuguishes them, though they oniy took the
gubject up the other day, have already gone far ahead of us in this respect." Tilsis is eertainly
complimentary, and the compitment is deserved. ratuuise and secoesses
There have been in England country a greal suany notempts and failires in this buslness. Some fail for hack of the
requlsite skill and kuowledge op the sulject, somo, because they lack in perseverence,
and some for want of an adequate bupply of wa-
ter wortir, Esq., of West Bloomficld. But cven
with this drawbuck he has not failed, but rather With this drawbuck he has not friled, but rather
succeeded beyond all expectatiou, considerlag succedcd egond all expectatiou, consideriug
his seanty supply of water. Fortunately, Mr.
Grex possesses all the means, to secure suecess. To begin with, he is an en-
thusiastle sportsman aud las for years been carefully obscrving the habits of the beantifial
finny tribe he is now so successfuily caltivating. inny tribe he is now so successfuily caltivatlog.
In the sceond place ho is patlent and perscver-
ing - confident if tish to a smand estent, that there is not necessarily
any limlt to the numbers which can thus be produced and grown. And lastly, he lias geeured control of the best strcam of water in Amerien,
perhaps in the worid, for the purposi perhaps in the worid, for the purpose. The
creek, as was stated on a forner ocenaion, tlows maluly from springs which cover five or six
acres, aud is inceased by a number of rivulets
from sinilar sources. There being very littie
surfice drainage, there is but slight rariation In the yolum
known there.
en's otarar pond
We have omitted to state in the proper placy
that Mr. Grexs, In addition to the pond do that Mr. GREEN, In addition to the pond deyear old trout. These will spawn this year; and
add immeusely to the production of another
year. He has aiso a emailer pond of yearlings,
and another about ready for the hundreds of thoasands of thin fo whe fillng orders. troughs The enterprise has already attracted attention Irom all quartera of the country, and, as stated
alione, to some extent in England. It is one in

## AREA OF THE UNITED STATES

 Hon. Mr. Harlani, Secretary of the Interior ha recent letter to the Rer. J. C. Fleteher, repiled to a question concerning tho territorint xtent of thls country, In orler to afford the Inter certaln data for comparing the area of
Brazal with that of the Unlted Statcs. The fol-

 Grand total or area of the Uultel furce miles hoa two thousand and thirteen Thls does not include the area of the great Iakee just within and forming a portion of onr
Northern boundarics ; nelther does it iuelude the marine league on the const.
Brazil, in 18 , 14, had an area of $3,007,460$ square miles; but it is estlmated that-gince the settle-
ment of her boandary finca withi several of the 3,100,000 square mulles. Euronean Russia has to aren of $3,14,5,50$ s square miles, and all the other'
countrics of Europo have a total of $1,637,620$ countrics of
squaire mifes.

## the rising generation

In the United States there are about 60,000 by the Stitt Truasury, and partly by seliool there are achool taxes, In Eiigland and Wates there are $46,0.19$ pubile and privato sehools,
attended by $2,144,375$ seholars, In addition thero are $1,54,5$ evenling, schools, which provide
 mated that li Enigland thero is a seliolar for
every 8.36 persons; in Scotland about onceventh of the peopie are at school, while in ive persous. In Ry33la only oue child for crery
two hundred persona feceites lustructlon iu schools; so that while at nine $0^{\prime}$ cloek on every
Monday morning there are $4,000,000$ American boss and Eirls at school, there are lin Russla,
only 100,000 enjoging the beuent of Instruetion.'

## NATIONAL PECULIARITIES.

Herinhtou Herise, the German wit and peet, anauers is which Engllshmen, Frenchmen and Gernans regard liberty:-"The Englisbenau
oves liberty like his lawfui wifo the French. man lores her like ble mistrees; oves her llke his old, grandenother.
aiter all, no one ean cyer tell how
turn out. The gutopy Engushman, io an ill temper with his wife, is capable of some day
puttIng. a. rope round her neck, and taking ber a besoldat Smilthield. The inconstant Frenchmanu may become unfalthrul to his adored mils:
tress, and be seen Huttering about the Palais Royal after another. Dint the (immnans will never
Trite abandon his old granumother: he will always Truite abandon his old grandmother: he will al ways she ean
chiidren."

Photograpiy in Astronosiy. - At a recent meeting of the Royai Astronomical Society In Eugliand, Mr. De La Rue stated that his hopes with regard to the use of photograplay in astro. that the Lunar Committee of the British Aso to prepare an acenrate oulline map of the moon sections of these photographas are to be distriseives with cillng to the details of the severnparts of the lanar surface. A serlés of yones. assigned him, at which he will be expeeted to assigned him, at whied he will bo
worla whenever it may be visible.

Remed for Over-Reaching in Horses. Mr. D. S. Grifres, Pine Run, Mich., Writces
us that he has read articles from correspondents,
in the Reras, that recommend ecrtain methods of shoeling to remedy over-reaching. He docs not agrce with them, and gives his own rem.
eds, whiteh, he anys, he hias never known to fuil, but it seems to be directly at variance with the
common notions of shocing horses in such cases, Which is right? It is of some innlortance to farmers and other horse owners to know. Horse
shoeing in general, we may say, is ormething of an art, although it may not be admilted among
those classed as fine. Every firmer sbould
know when a horks's foot is properly treated,
and the sloees righly set. Very many do not. They trust the judgment or whim or the smith
and they are apt io have horses with rais shapen fect, and oftentimes lanne. But we will give oris
correspondent's piau aud sec if our readers think
it is sound:
"Have the fore sunes set baek as far is pu:sible so as to thorten the fue as mulelh as you can,
leting the aboe procet behind rathr longer
than common. So much for the fore shue; than common. So much for the fore shue;
now for the hind one. Keep the toe of tho lud
foot very lous, and bave the shoe set well for. now for the hind one. K
foot very lous, and bave
foot les the fulcruan on which the foot turns) Shortening the toe of the fore foot causes the oo loug on the hipd foot bo does not leaving the p so quick as he would if it wees not take that Thus the fore font bas time to get out of the way cfore the hind foot is brought to its place." Plabtor.
scrmer from Chemango Co rraires of ands is benctlestal, and how much should sown to the nere, an aiso the best time to
Renlly, we wonder if "Subscriber" nsks these Hestions lnuocently! Has he never read, or plater ? his to igtern out, or olserved his elghbors using lt? We cau inform "Subseribor" that plaster is zore gencrully used in thls arm yard manure; that it is considered of areent Lenedit to grass, esprecially clover; that the best time to sow it, in our judgment, is tu the sprimg,
fier the blade of grass sloots a little; that one bushel per acré is suflicient if sown eaeh year.
On old sond des benelicial effeet lo not alwass een, and if applied to wheat in the spring it is ipening. Mixed with ashes it is used rrolitably seond growth of elover, intended for seed, ver Portable Fence. - One More Plan Mu. ©. B. Lorr, Tioga Co., Pa, deseribes
his method of making portable fence, which he natterm, which form is a ecrious objection in any of four boards, esch flve inches wide, one fuch thlek, and slxteen feet long. The two end posts
are mnde from Norway pine bcantling, two inches hy three and a balf, sawn in two corner ways. The length of host is ive fect. The
middle part is four inches square. The end posto are nalled on in sucu mannes hiat when the fenee is set up the beveled edges j mit wend our feet threo inches lu heighlt, whleh leaven ine inelies of post above the top board. Thi locks the corners together. A smali stake two feet long driven into the ground on eaeh lnside Making Rence Across Creek Botioms.
Is answer to an inquiry haserted a short
time since to the Rurai, Mr. E. C. Chossman plau for making durable fenee across ereek bottoms that are liable to heavy lloods. He says. "Set willow posts four or flve inches in diamelet much water flow through. Instend of using ing them up to the posts by inserting staples.
On the bottom laud set out wilow enttings or stakes two or three inclies in diameter, and ono foot apart. You will thus have living posts, and
a fenco cheap aund durable." We uko this plan, and have no doubt but that it will be successful.
We notice our correspondeut doesn't reeom. not hesitrate to set it in sucli damp places, considering how largely it has totally falled on land Road Making.- Questions Asked. Tite season is near at hand when the work
repairing the hyways will be peformed of repairing the lighways will we peformed.
nd $i t$ is an important work. We invite Ruras readers to give nss some praclical lideas on the
oilowing topics, belicving if they respond he invitation we ellall be able to furnish inform ation that will be of valuc to the wiolo Roriad makiy cemmon roads on the prairies? 2d
What is the best nethod of taking a road across is the hest method of kecpiug in repair ordinary

## WONDERFOL OPTICAL ILLUBIONS.

 Profissor Perper, dellverlng lectures onoptles in London, gives some new and astonlshlng experiments in uluastration of optical illu"the Modern Detplit Oracle" and "the Farle Casket." In introduclna the former, the pro fessor ealls upou the audience to call to mind
ancent Grecee. The curtaln risea and the interior of a Gireina temple is disclosed. Draper In the backgrouvd is pushed one blde, and a
oigure, cinseiculy costumed and rendiug intently
a seroll which he holds in one haud, advances. a scroll which he holds in one haud, adyances.
The professor explalna that the figure must be supposed to represent a noble Athenlan, erradite and highly gifted. Through au acquaintance
ship which he had formed with one of the priest
of IRls the learned indlvidual gets possesfion of of IRls the learned individual gets possession of
a sacred scroll, whlleh inforus bim that, by
meana of ecrtaln eharms and Incantations, ho can thold converse with the dead. He proceeds
to do so at once; and after some forinalltes he calls apon Soerates. Slowly the eurtain through
whlch the Athenle aside, amla a head, apparently floating in the air,
is diselosed. There seems to be uo mistake abont tbe head helng hmman. It if, apparently
Socrates, avd seemlugly "all alfye?" socrates, avd aenimpsty "all allve."
Gradnally the eyes open and look about most
naturally, and in obedience to the demind of the Athenian the voice of Socrates is heard pro.
nouncing bils own opinion of the decibion of his
 which hass the ciffeet of throwing a strong reflec-
tion on any object that comes betwecn it and
the papered wall at the back of the stage. The refection of the had, and tha head ulone, on the
baekground, adds much to the bowilderment with which every spectator, not In the secret,
witheesscs it. Besides, as the head delivers ltself withesscs it. Besides, as the head delivers itseli the beard is obeerved to wrove with elach artlen-
lation of the voice. Yet the whole is, as the professor takes some trouble to remind his audience, when any freah cause for snririse
unfolded, nothlog more nor fess than a slmple illuelou,
The "Firiry Casket" is equally surprisigng. It
consists of a strong tuble some four feet high with fonr lega, which are open to the inspection of all. On this table is deposited a targe glass
bex, of nearly the aame size fis the table. The box, of nearly the same size is the table. The
whole is covered with drapery, when it fo
broult Hghta. The closest inspectlon is invited. Ou the covering belug removed the taile and glass box, as above deseribed, appcar. The glass box
neems to contaln blaek velvet and charcoal The profecsor opens the box and fils it still fur Her with what appears to be more eharcoal
He then orders hls asfistant to shit down the glass $11 d$ and cover the box. In a few minates the box ls ancovered and lt applars to be filled
with white satin instead of black relvet and robes inetead of charcoal. A white satin cush ion is taken out of the box, and siter it a real extricates berself, and bows her seknowledg.
ments of the greetiogs with whici sho is reeelved. The box ls again covered and uncovercd. age result is that the black vedvet ned chareoal the box are again produced. They consist of a ing litule negro, who, atter jumping our of the box, throws hlmself in a kneciling sttitude, and appealing to the audienee, says "sm I not a
man and a brother?" Thesc are the two principan and a brother 9 ". These are the two princidrawlog sueh vast numbers to the Polytehnle

THE STORY OF A HORSE SHOE.
A cood countryman was taklng a rural walk
with his gou Thomas. As they walked slowly aloug toe fother suldenny stopyed.
"Look!" sald he, "there's a bl "Look!" sald he, "theres's a blt of iron-a your pocket."
"Pooh!"
worth stooping fur."
The father, without uttering another word,
pleked up the tron and put it in his pocket. When they eame to a village he entered tho
blacksmith's shop and soldtit for three blacksmith's shop and sold for three arthings,
with whleh sam he bought some churrlue. Then the father nud sot set off again on their ramble. The sun was burning lot, and neilher a house, tree or fountain of water was in sight. Thomas
soon complained of beinis tired, and had some soon conplained of being tired, and had some
diffleulty in following his father, who walked ous tlred dent. Thomas stooped and qulckly pleked it
up, and deroured tit. Alltle further he dropped another, and the boy pleked It up as eagerly as ever; and thas they contlnued, the father drop.
plng the fruit, aud the son pleking them up. and turniug to the boy, sald: "Look, my sou! and turniug chosen to stoop once and plck up a
plece of horse shoe, you would not have been ouliged at last to stoop so often and pick up the
eherrics." A WORD FOR LITTLIE GIRLS. Wro ls lovely? It is the Ilttle girl who drops
words, kind remarks, and pleasant smiles, as sbe words, kind remarks, and pleasant smilles, as she
passea along; who has a kind word of sypan-
thy for ceery glrl or boy she nects in trouble,
and a kind tand to help her complunions out of ditheulty; who never seolds, nevur contends,
uever teases her mother, nor secks in auy way to
diminish, but always to luerease her happincess.

$\overline{\text { the new fotato bug. }}$
We condense the following account of this
ner pest to farmers from an article in the Pracneer pest to armers from an article in the Prac-
tieal Entomologist, by B. D. Was.s. Thls new
and destructive enemy of the potato has sprend and destructive enemy of the potato has sprend,
تithin the last ive years, from Colorado and Nebraska enstward into Iowa, nud within the
iast year and a half has crossed Into Illinois and isst year and $\pi$ half has crossed into Illinois and
Wisconsin; whenee, in courfe of time, it will
probably travel to the Atlantic, cetablishling ittelf permanentiy wherever it goes, and publing east ward at the rale of abont fifty mifics a year.
Hitherto yoxious insects have epread frome enst Mitherto noxious insects have elpread from enst
to west in tho Cnited States, and this is the irst instanee on reeord of one travelling from the
weat towards the east.
But, it will be asked, where does this susect
come from? come from? And how does it happen that it
did not trouble the lowa farmers before 1841 , did not trouble the 10 wa farmers before 1881 ,
and the Illinols farmers before 186t? Unille several otber noxitous fissects, it is not a generni
feecer, but is contined to plants belonginy to the fecter, but is contined to plants belongius to the
botanical family solanacecr, and ceppecially to the geenns Solarum, which iacludes the potato, the
tomato, the egg.pinat, and a wed tomato, the tgs.plinnt, and a weed ealled the
borse.nettic, , foud more usalily in the South-
crn States, but which also trows in crn states, but whieh also grows in certain
localities in Iowa, Iu ISEA, Dr. VELIE, the ornithologist of Rock Island, Ini, and Dre,
PARRY, the botanist of Davenjort, Ia., both Bity this insect in rery great numbers in, Coio rado,
feeding upon a wild species of Silanum - the ros. tratum of Dorsin-which is peccular to that revion
to of country, and is not found enst of the Missis.
eippi River. Assuming, therefore, that .this
viit Sis. wild Solanum is the natural food of the fusect,
and that the region of country bordering on the Rocky Mountalos 13 its natural home, its range
Would for a long zeries of fears be ifinited by the rayse of the plant that it feeds on. But in pro-
cess of time civilization marehed Mountains-potatoes were phanted in Kankas and
Yebraska aud Colo Nebraska aud Colorado - and the fusect diseov-
ered that one epecles of Solanem cred that one epecles of Silanum was about as
palatable as another. Havicre thua acquired a
taste for potato leares it woul eastward irom potato patch to potato patch, tiil
it overespread Iowa and tinalls overleaped the Slisisfsipp into Itluos.s. In confleanatiou of this theory, R. W. HAzES of Fremont, Dodge
Co., Nebraska, says that "the potato buy which
io so destren cred in $189 j$, about 100 iniles west of Omaba city,
whinee they have becin marching castward sunualls." From Onahan City to Rock Isiand is orer
2co miles; so that, if the noove statement be correct, $i$ appears that the insect has traveled
about 360 inlles in eix yenrs, or at the avcrage rate of sixty milies a year. At this ratc of pro-
gress it will reach the Atlantic in about fourtecu
The new potato bug is not what naturalists
call a bug, but a trane beelle, belonging to the
Order che Order Colfoptera or Sherly -rings, and is rather
more than oneethird of an inch long, of eo short
an oval shape ns to be nlinost as round as grape, and eream- eolored with ten black lines or
stripez pleced lengthways on its back. Ite wings
are rosen
 ten-striped spenaman," which in the meaning of
the हcientife name given to it The abore is

 with out any wings, of colvse. There are four
or fiee and or nive successive broods of them during the
summer, und the larvaof each brond yoes under-
ground to assume the pript state. Une who

|  | Probably the carlier planted vegctables wili need hoeing, for weeds spring up with the first approsch of warm weather. Sweet corn, bcans, tomatocs, cucumbers, beets and turnips, for winter use, ought to be in the groand. 'Sow lettuee and peas again for later uec. Tomatoes main stalks being allowed to growe, The side branches are shortened in by pincling. The froit is verj perfect grown by this method, and is said to ripen earlicr. Do not tiorget to protcet sour tomatocs and other tender plants if there is danger of a frost. Old newspapers will do it perlectly. Plant squashes and melons. For these it is best to preparc a rich hill of vegctable monld and sand -a warm, qulck soil is what. they require. To protect them from the bugs and hasten them along, place a square frame one foot high around vaeh hill, and corcr it with cotton cloth, or even the newspapers willanawer a rery good purposc. Nail-kegs, snwn apart, hand. Many use glass framce, but at this tinic of ycar, we should prefer cotton cloth, as there that covering. <br> Many resort to the watering-pot at this time of year, if the weather be very dry, to culiven oughly done, it is better to trust to the hoe to seep up the thrifty appearanee of the garden in a drouth. It is great labor to wuter even smal garden, in a manner to produce an eflect simllar night and morning, and the weeds will be killed and the planta kept fresh and thrifty. <br> HAWTHORN HEDGES |

| Ens. Rural: - I noticed in a late number n the Reral. (May 12th,) a letter frout Mr. Grif. frnit trecs from the ravages of insects. I will give him my experience. I fornd that washing the trees with atrong soft soap and solt water, Eay one quart of water to two of soap, tends tokeep the lnsects oif, and is a sure protection against the lousa This washing shoutd bedone late in the fall, or early in the spring. I nolleed last summer that somo of my trees were dying and could nol asecrtaln the cause, until I dug around the roots, I found myrfads of little white worms, about the elghth of an inch long, feed. ing unon the roots. I immedintely dug up the ground around the tree, about four inches decp, and mixed in about a bushel of untenched ashes. I then poured two pails of water on the ashes. The result was mytrees began to thrive, and are at this date lealiby and fill of fruit buds. I have frequently checked and killed the borer, niter ascertainlug where it was, by applying soft soap to thell holes, and pricking it inwith a small broom wire, Belvidere, Ill., May, 1860. |  |

 February and March, and we have known
better. Letting go all diecussion of what the perience I hope will not be lost on us and $t$ at perience I hope will not be lost on us and th
experience all points one way. Prune while wood is growing iy yon wish
and sound. Say in Jure.
"Limbs that grows close together, and parallel, and that cross, must have one of them removed.
The formation of crotekes must be avoided, or clse we lose more or less of trees by splitting
down whien they get to bearing. If praetienble, establish a lendius branclu, nnd grow laterals at intervals. Sor
mucl cuting."
with the lower br possible, from the ground. They stand the high winds better, and landsomer, nund the frutt is more easily got at. If the plow cannot approaet
thie tree in consequence of tils ssstem of grow ing, so mach the better, as a plow never ought
to get near a fruit trec. All this is sound doce trine. Low-branched trees also protect their
trinks against the hot sun of summer, which sometimes is very injurions, ns well as, to a
certaiu extent, agalust the freczing and thawiug process of a maked diflerence between the anputated limbs of trees that have been operated The fret often show, especially where the limbs are of any, considerable size, a black stump,
whlehi never clanges, except to decay; while thooe of the latter readily heal over, and presen
a ueat appearauce. Besiles, early summer pru-
niug lueurcs fruit buds, while spring pruntuc $\underset{\text { THE DOOLITTLE }}{\text { gives us only wood. }}$ A. Bancock of Benton Harbor, Mich., writing
to the Coouutry Gentleman, says: - The merlts of this raspberry are uot, in my opinion, yet
fully known or apprectiated by the rural populatlon of this couutry. It should find a place of
the garden of every faraily having control of the garden of every farally laving eontrol of a
single acre of good land. 1t is sery yardy. It is as eertain to produce a crop as the potato.
Its culture it simple. I know of no beryy that Is equal to the improved Black Crab Raspber
for canning, for tryiul, for jum, or for wine.
It is the opinion of several fruit growers here, that this berry can be grown about as chchply as
wheat, bushel for bushel, not ficludug the picking. No fruit rctains its flavor, or keeeps better when canned, than this raspberry. It is casily
and rapidly dried. Dried raspberrice are now worth 60 cts. per ib. In Chleago. Three pounds of the fresh berrles will make about one pound
of dried fruit. The time is not fur distant, in of dried fruit. The time is not far distant, in
my opinion, when 20 bushels of this berry will
be grown for cyery slogle bushel pow prodnced. There is no reason why any family haviog any land, may not have a liberal, nuderstand me, a
libcral supply of this wholesome and delcious berry, not only durlug its reason of ripening,
but daring the entire winter und spring; notonce a month or week, but every day shoutd a goodly quantity of this, or some other good fruit, be
secn tupon our tables. You can have a good supply of this raspberiy when the peach, pear, therefore I urge yon to plant for your usc, from 200 to 500 plants, according to the size of your
famils. You will nerer regret it, I assure yon. Sore berries and less pork. As porks gocs out
of fashion the demand for cantued and drled berries will increase, of course. What a nice thing
to have a few jars of raspberry jum or jelly, and awsy in one's cellar fur liberal every day use Cheaper than pork, fur more wholesonye, and
then how plensed are the ehildren. Good butter is now selling bere at 50 cents per pound and searce at that. I would recommend ras
berry jelly as a substitute for spreading on o bread. An excellent jelly (one lobe sugar to our
bb. juiee) would cost only about 15 or 20 cents ib. juiee) would cost only about 15 or 20 cents
por lb, growing the berrice yourself, , laving
only the sugar to buy. More berries and legs
pork.

 A CHAPTER ON GRINDSTONES.

 ing name of roks. It it inplifes frrmnecs sud
inerti. The stonc or rock lams
net
 of mumerons raricties, idificriuy in their resture
somewhat, bua agreeting iu their t yencral charac somewhert, but agreeting in theirin yenerral charac
teristics. Stonc is of great and extenslve nse
 opposing a barrier to the cencroncukients of the
occan eurge: to the carterlng waters of the
 rushing and swollen fiver. In the lorty erests
of monntains, in pyramids and in statues of the gigantic monld, Etene becomes poetical, au made to partaike of the eublime. Hi fence, wh
read of thic rocki or stonc of ayes- of lively nud precions stones. But it is not of the cravilite,
marule, veined or willte, nor of the " stone of stumbling," of which we purpose now to st sumb but of a varlety which plays an laportaut part in he coonomy of civilized life-rup (krix DsToNe Fashioncd for this oflce, the inert inass be
 industry. The Grindstoue is indispecsable to
 to wanan wants have rendered necesarary, it promineut among the agencies cmployed in the gun shop; in the basiluess carriced formurd by the carpenter and Joiuer; in the shop of the
tanner and currier; in that or the whece-wright
 seythes and other implements of rurall labor., Being thus inportant in the onlees it performs, the process of manufacturine the criul-
ftone, thourch presesting no intrieate fearurues, can scarrely fill of proving of interest to the
readers of the RumaL.
The Scientilic Ameri
The Scientlac American, in giving the ae. unucsed deseription, pertinentily sayse of the
 facturing arts? The dependenec on then is so
great that if the sulply were stopecel a cry would go up from the workshlopss fat ind near. From the cutlere' ${ }^{\text {a }}$ hops, from the griulers of
axxes, aud the armorics; from those who make

The method of quarrying such a block is as
follo ows.

The surface dirt lariurb been remin orea, trenehe

MORTIGUKTURAK. Tuss exectlent and valuable vegetable is unknown in the majority of farmers' fanllies.
Yet it many be casily grown, and in abuudnnee. The seed should be sown early, as it is slow to
germinate. $A$ small bed will supply plants enough for $\AA$ large number of families. If yo
have negieeted sowing the seed it is best to pro cure the plants when ther are about two inehe
high. Set them out in ine, moist soll, thre high. Set them out in tne, moist soll, three
inches apart. They bear transplanting well. In this position they will grow stoeky, and beeome
well rooted. The midade of fuly is coon enough signed for winter use ; but if the plants attain a height of four or five inches, they may b mored earier. It is not well to let the
too large vefore the hast transplanting. The soil should be rich, but not made so wit
coarse or unrotted manure, for that mlght im part a bad Ilavor to the celery. The best and rich to give room and food for the roots,
which are numerous aud strong. Make the rows three or three and $a$-balf feet apart, and plant
six to elght incles apart in the row. The oldfashioned method of planting in treneles is no
followed by the large growers of this vegetable for inarket. Plant on the surface where the soil
is rich and warm. When the plauts bave attained a helght of ten or twelve inehes, carth them up for blanehlng. A dry day should be
chosen for that operation, nnd the dirt slould be made finc. Draw up the leares so they rill not be covered, and be carefnl not to plant an the learcs. That would cause them to decay.
Repeat the earthing up from time to time as the plants inerease $\ln$ s Ize.
faken up, the waste leares remored may be rotten and worthless parts separated, from thi
sound. A good way to store it for winter us is to paek in sand or tue mold, in a dry, cool cellar. It is then aceessible at all times. Large
growers for market pack it m trenches in the to keep it from freezing.
Celery grown on the surface requires more
room than when grown in trenches, as there must be soil culough betrrecu the
up with, but it Is mueh less lavor. up with, but it 13 much less lavor. It is one of
the very lest of tegctables for winter use.
not liked at first, a taste for it is soon sequired, as with tomatoes. It is eouvenient and heallty,
and all farmers' fimilies slould be liberully supplled with

## HORTICULTURAL HINTS.

Training the Tomato.-It don't pay to let the
tomato rines trail on the ground. The fruit
dears, decays, aud does not ripen. Brosh, ent fine and
placed uuder the plants before they lop over, is aclean, cheap, and execllent support. The vince
may be tled to a single stake, if pains are taken
to pinelo off the side branches and lead op a cet to pinela off the side branches and lead np a cen-
tral shooo. This is a French nethod and is said to be suceessful. Trellises of varions forms whll
suggest themselves to every tomato prover suggest themselves to every tomato grower.
pile of stone ladd around the plant would be cellent, for it would keep the frult clenn, and cellent, for it trould keep the frult clenn, and
also radate a good deal of heat to the plant. he tomato is a native of torrid ellmes and $r$ quires heat. The stone-pile would admlt of the plant taking a natural and advantageous form o
growth. Girass, struw or boardz will answer-a any rate put something under the vines to pro serve the fruit. $\Lambda$ small shrub, having many
limbs, nnay le stuck in the ground by the sideo a plant, and it will afford a good support.
that "the ravages of the cabbage bag may be prevented by placing pieees of woolen cloth, saturated with kerosene, among the plants. The
cloth must be re-supplied with lerosene from time to time, as it eraporates. I I have sared

GIANT OF BATILEES ROSE.

hainh. Some of the Hymrid Ching roses are well adapted to this use; and even some of the most Vigorous Moss rosen, such as the Prlneess Ade-
hide, may bo bo tralued. Where a pole is used, two stems are suflielont. Thebe should bo exmined, and cut back to the 1rat atrong, planp
bud, removing the weaker buds always founi owards the extremity of a stem. Then let the sten so pruned lie lat on the carth thll the budd reak into leaf, after which they are to be tied the sap pole if they wero ited up immediately upward, expuding the haral telldency, would llow any of those below dormunt, so that $\Omega$ portlon of the sten would be bare. (The same course of proceeding may be followed with equal all antage ln the case of wall and trellis rosces. he highest bud now throws up a strong leading with an abundanee of small side slioots. In the Hllowing spring the leading shoot is to se pruned back to the first strong bud, and the treat uing this process, prese year repeated, By pur of two or three years, be enveloned from the fround to the summit will a mass of leaves and lossoms.
We may ehoose some of the most hardy and vigorous ones of the June roses-we mean such -and eneonrage the growth of a single strong upright stem, removing all other shoots from tem bhould be kept stralcht by tying. The tiek till it has cained strength cnoung to hold tself erect. Thus, in as single senson, we shaul igh. Early in the spring prune it down to th rat healthy and plump bud. During the followelves, exeept at the top; and, in the suceecedhg spriug, prunc back these top shoots to two elop iuto shoots, and these, again, are to b
punce laces like the tirst. Thus, hree seasous, wo obtain a thick, bushy hea at the top of a tall, uprlyht sten-in short, a
standard, eapable of bearing even a NewEngland winter.
Some of the more hardy klads of climbin oosce, as or cxample, the Quecen of the Prairles, ssume beauties beyond those with whith naturc endowed them. At the proper season they may ardy and vigorous of the June and Hybrid Pe hetuan the Prairic roses, the period of carlie the clingler will be greatly protraeted by thi process, whille at the same tline lt will be made
o bear flowers incomparably finer in form an color than its own. It will be necessary, howver, in our northern ellmate, to protect it by
nalling mats over $1 t$, sinco otherwlso many the buds will be kllled; and, as It is expecte to yleld more than its natural share of bloom,
it should be stimulated with more than the usu manarlug, and pruned more elosely thann th
ordinary elimbing roses. - Hurkinan's Book
Roses

inquiries, original recipes, Lamb's Knitting Macmise. - Will you in the Lamb Knitting Manhine? Is it what of manuffietures recommend it to be? Is it worth
the price they ask for lt ?-or, will it pay to send Yrars ago wo examined and voluntarily eom-
 ainong the irst, it recelved from any puper, and

## LITTLE HELPERS.

Ciraries was erying. He was the little baby,
three montlas otu. George left his play, aud eame ruming to ace what was the matter. Georgic Wis only a two-year-old baby himself; though
he eould tulk "like a little man," and loved his he eonlt talk "like a little man," and loved his
new brother with a lore big cnought to till a great
"What wal Georgie do to hetp ns:" thought weary mannina, hotding the restless baly, as she
saw bin leare bis little uew rocking-horse aud conne to her aid. Yes, even thon, mamman had
carmeal to expect holp rather than trouble when Georgie came.
What couth the little darluge do to help? Not tuoch, you think. He ellinbed apon a stool, and
took Chartle's little fat flists In his, and pat his richt tace uj to baby's and sald
$\qquad$ Charlie stopped erying, thourgh he dkd not understaud the worts; for, somchow, Georgic's
sunny face comlorted binn; but manama, who sumny face comforted blin; but maxima, who
did understand all, was comforted yet more. l, rothers and istcrs follow Georgie's cxample,
and try to be little helpers? - Child at Home.

## FRANKNESS

Be frank with the world. Frankness is the
child of honcsty and courage. Say just what for granted that you mean to do what is right. if it is reasomable; If it is not, tell him plaiml wrong yourself by equivocatlon of any kind.
Never do \& wrong thlng to make a friend or Keep one; the man who requires yon to do so
is dearly purchascd, anit at a snerlifee. Deul kindly gud firmly with all men, and you will
find it the policy whleh wears the best. Avove alf, do not appear to others what you are not.
If you hare any fault to ind with ayy oue, tctl
himm, not others of what you complitin. There is uo more dancerous experiment than that of
nudertaling to do one thing to atmn's face and madertaling to do one thing to : man's face and
another behind. ula baek. We shoold live, uct
and speal out doors, as the plirase 1s, and say and speak out doors, as the plirase ls, and say
and do what we are willing should be knowu
and read by ull men. It is not only best as a

June 16 th lor makliug loop yent, I will gye my way, whlch nyself and nelghbors think
"can't bs beat." Take four mildile sized pot
of water. Tie up two handfrils of hops in
cloth and pue in with the potatocs to boll; the
take lu a pun, four large spoons of tlour an
stlr together with a hair leacup of mollases nad On tableglioon of ginger, alpo add a litle ealt
one
Masi sour potatoes soft, stlr all tegether; when Mash sour potatoes sont, sir all together;
enol chough add onc-lult teacup of yeast. When
cellar. For making Hor Yeast Bread. - For my lamily, which conise ond holl them. Mash them
fargo potatose, pare and
suit, then stlr lu the water to which they were boiled. Flour cenough for two quarts of batter,
thick as paucaken, aleo add the potatoce and salt.
$\qquad$
$\qquad$ the third thme, and it ls then ready for the oven,
withe must be very hot at first. - L. Warisa, Graman Breat. - Take balt rising one pint,
one tableep poouful of sugat or molaster, enough unbolted inour to make a two.quart masin half
full, a llttle ealt; wet with water or mulk, air as bllice yon can wilua larye aroon; let it rise until yonr dieh is in. . Wha and let it Etram.
douc, cover it up in the dish and
It is good; try li. In you wish to make et ratra add one egg and one tarlespoonful of melted
butter. When dry steam it in the loaf, aud it io.
as good as now.-Mrs. O. W. Brows. Criensing Whine Kin Groves, - Will some
of the readera of the Runat plase give me a.
reclpe for eleaning white kld gloves? aun oblige -Mrs. D. S. H., Hze.

In glancing over the columns of a paper pub
lished in Hudson, N. F., in 1801, our attentio
was arrested by a comanuaicatlon setting fort the deleterloas intinence whith the dlacovery on
gold and sltver mlanes bad excreised upon th
Spanish nation. In reference to mines in ou
. own country, the writer sald:
"And if theres are now rastly rich and cete slve mines-a thing not improwabio-within the
T'nted States, lar distant be the Inanspicions day that shall discover them to the Intabitants
snch a discovery would be a great such a discovery would be a great nationa
calamity, as it would become a substltute fo
indnatry tending to and nltimateiy to national poverty and wretch edness." sluce the noore was writteu the drouded dis coverles ave bcen made; territorlhi acquisi-
tlons, anple for an emplre, have becn added to the United States, Whosc soil teems with gold Stily the predicted "poverty and wretchedness"
have not resulted. On the coutrary, our go acquisitions allorded strength to the national
arrua dorlng a struggle without a parailiei in arua doring a struggle without a paraiiei in
modern hlatorg, while stimnating in no smail
degreo the adrancene modern histors, whule stimulating in no smail
degree the advancement of the agricaitural:and
mechanleai ludastry of the country- proving mechanleai ludastry of the country-proving
that mining and farming arc not neeessarily encmics to cach other, but joint aids in humnn
progress. - B. COFREE CRUSHED vs. COFFEE GROUND. Tre following la from the Annual Scientific
Disoovery for 130i:
"It ts not generill has been beaten is better than that which has his brief article on the sabject, Savarin glves What he coneldors the reasons for the differcnee.
As lie remarlks, a mere decoetion of grecn coflee is a most fusipid drlnk, bat carbonization de relops the aroma, and na oll which is the pecirity
larity of the eoffeo wo drink. He agrees with other writera, that tue Turks excel in this, The
employ no mills, but boat the berry with wooden peetles In mortars. When long nacd these pess
ties beeome precious and bring grent prices. ties become precions and bring grent pricces.
He determined by aetual
theriment whe fully a poind of good Mocha, and separated into two equal portions. The one was passed Turkish hashion io a mortar, He made coffee or each. Taking equal welghts of each, and pour
ing on an equal weicht ol bolling water, be treated them both precisely alike. He tasted the coffee himbelf, and causclat other competent
judges to do so. The nuantronous oplnion was that coffee beaten in a mortar was far better
thau that ground in a mill." In explanation ho than that ground in a mill.," In explanation bic
teills the following ancedote: "housicur," sald Napoleon to La Plaee,
"how comes it that a glass of water hato whic I put a lump of loaf sugar, tastes more pleas.
anily than if I had put ln the same quautity of crushed sagar?", "Sirc," sald the phllosophical senator, "there are thrce substances the constltuents of which a identien - sugar, gum and stareh; they difier
only In certafn conditions, the sccret of which anture has preserved. Ithink it possilite that in cause the difffrcnce."

COMPENSATION FOR AMERICAN WORES
Washington Irvisa realized a handzom fortune from his writings, as did also Mitchell,
the geographer. Professor Davies recelved more than 850,1000 , and Professor Authou more than
$\$ 00,000$. The Frencli 8 series of Mr. Bollana ylelds bim upward of $\$ 20,000$, and the selio geography of Mr. Morse more than $\$ 20,000$.
slugle medicul speo,000. The first two worke of Miss Warner
spent bronght her about $\$ 20,000$. Mr. Headley bas Mitchell-al)out $\$ 20,000$. Miss Leelle's cookery and receipt books bave pald her 112,000 , and the Rev. Aljert Barns has realized more than $8: 30,-$
000 Dy his pailications. Mr. Preseott, the hissoriay, reccived more than 8100,000 from h
wooks. The present $82 l e$ of cacti of Mr. Ba crofl's volumes sieids him more than $\$ 15,000$, aud be has turity-oue years for fulure sale.
Jndye story died in the reeelpt of more than \$8,0w per annura for his works. In three years
Daniel Webster's works pald $\$ 25,000$. Kent's
Commenteres his helrs, $\$ 180,000$

The Monttor Question- It secms, from communlcation in the Scicatlic Annerlcan, that efliciency of thelr lron ach exerelsed abont the a colllsion with vessele bnith on the plan of the American Monitors. The beat naval englneer in the Bitilsh service. glve it as their opinion
that their Iron clails rould be powerless to comfront ships constructed on the monitor model. ships correspondlng ln form, armor and equi
ment, with the most approved of our own Patemts-activity of Inventors.-Owing to the close or the war, or bornething else, the
patent business secms to bave seceived a new mpulse. It embraces implemente machl ery for all departinents

If he were alive at thls das be would chauge "books" to "patents" for their name is logion

## an appeal to the young.

You are enteriug npon 11 fe . Perhaps
school days are ended. What do sou prop io? Will you consider your education comin laleucess and make uo further chiort retr lupprovement or adrancement in knowledgo?
hope not. You have get scareely launched on the great ocean or knowledge. Bufore you is
vast expanse, boundless as tho creatlon of (too seliool room andl collere hall. porlug over print cd pages, but at the plow, the navil, the work
bencli, the connter-ln the doctor's or lawyer's otllee, or the snered desk; -Whatever may be
your vocation in ilfe, stlll remd, oliserve, study, thluk, push forward your And Nature, Gou's great Unlversity
 plles of Wisdom, la ever open for ail-from the
highiest even to the Lumbleat. Enter It. Stud 11 the Graduatelu Aequiat you reelves wit your conceptions of Delty will be more noble your love for hin more csilted, and your souls
will grow stroulger han unconquerable love of truth aud virtue. Culthyute, develop all you Such au education will greatly increase yo happhiess. It will unfold to you all the wonders ures of the past aud tho amuence of the present. It will increase your capactles of enjoyment at
the same tme that it angments your bources or happiness. How vastly different does ever
thluy nppear to the educuted man and to norant. Flowers, hllls, valce, streams, forests,
hirds are becautlini to all; but fa all thece the guorunt see not half the beautleb which the ed brigutnens aud glory of a sumnaer morning hen first the davulng sun bathes tho earth at with slittering Jewels; or this iey splendo of a wiuter morn, when the earth is robed in
dazziing white aud the bare boughs are richly dia but how muc occasion in the educated belholder! All gaze
with awe and admlratlon on the star-lit dome of heaven, "thelk enmbossed with studs of living
Itght." Yet how muel more laterestiuy is this ublinge dlaplay of Creative power and wisdon
$\qquad$ their alunast luealeulablo distauces, thelr in
mense magnitudes, the rogularlty of their mo tions, and the subline harmony of the whole But educatlon will not only open to you nov
sources of enfoyment and increase your happiacultics of mind and spirit will prepare you for higher suheres of bllss in the spirit world. Press
on, then, in your self-culture ; and haviny drank your spirita tu the garments of pirtue in thl worlh, in brighter worlds above you will drin atrike your golden harps to gladder numbers,
and vie with Areh-angel and Seraphiu in ascrip

## $\triangle$ RECIPE FOR: HAPPINESS

Ir is simple: wheu you rise in the morning
form a resolution to malke the day a happy one to a fcllow-creaturu. It 13 easlly done : a left-ot
gaument, to the to the sorrowful; an eucouruglng erpression to
the striving-trilles in themsclves llyht as airthe stilving-trilles in themselves light as air-
will do it, at least for the twenty-four hours; and if yoo ary young, depend upon it, it wili
tell when you aro old; and if you are old, rest assured it will send you gently and happily do wn snlt: You send one person, only. Look an the re happly
tirough the day - that is, three huudred a tilrough the day - that is, three huudred and
sixty-fle in the course of the ycar-and sup-
posict posing yon live forty sears ouly, atter you com-
mence thls course, you have madc fourtcen
thousand six hundred humman beiurs happy, thousand six hundred humma beiugs happy,
all event for a tlewe. Now, worthy reader, Is
not simple, aud ts it not worth accompllshing The Way to Arord Calusny.- "If any one
speaks till of thee," said Epletetus, consider whether ha hath truth on his side; and If so, re-
form thyself, that hls censures may not affect thee." When Auaximander was told lihat th
very boys laughed at Lis siaging, "Ay," sald he told that he had many enemies who spoke ill of
hime, zald: - It lo no matter; I will live so that none ahall believe them." Hearing at another
tlme that aul Intimate friend of, his had spoken

## HORTYGUKTURAL

FRUIT GROWERS' SOCIETY OF WESTERN SUAMERMERT,

## Tre Snmmer Meetling of the Fruit Growers

 Society of Westcrn New York, was held inRoebeeter, Jane 2rith. The attendance was not Roebester, Jone arth.
large, though a reepctahle pumber of experi-
enccd frait growers were preseut and participated in the proceedings. Owing to the hail
storm here early in the enson the eamples of frait, sbown fro
gite limited.
There were 6 everal very fine specimens of beed-
lin straw berries exhlblted by J. Kercriof Water100, E. Ford is Soxs of Syracuse, and Jaco Moons of Brighton. There were also
immatare eamples of cherries presented.
H. E. Hookzr, President, called the meeting order, when the misestes yick, Seeretary of the Associntion, and approred. The President then
Eaid the meetling was ready to proced to bussess, whereapon $P$. BAдhr, Esq., of Rochester moved a committee of three to prepare and pre-
sent sabjects for consileration to the Associaion. The motion was.carried whed Rochester, W. B. Sxitit of Syracuse, and E . IIerendrex of Macedon. ent called for information as to fruit prospects in the rarious sectlons represented in the meetNlagara eounts. Apples and pears not very
promising. Peaches, grupes, ©ce, were better Mr. Downing of Newburg, reported about th same for his ecction. Peathes were very un-
promislng at the east, and even in New Jerse nd none this side of Delawnre.
Mr. Grimith of North East, Pa, spoke of the grape as beting in a promising condition. Penehes aer fruite In fuir guantities.
The Chalr appointed a committee on Fruite, consistlng of Messrs. Downing of Newburg;
Moody of Lockport; Grillith of North East, Pa., and Dr. Farley of Culon Syriugs.
The committee on questions for reported the following:

, ":
 andex This report was aceepted, when the chair sugscoted that the meeting had betcer detcrmine at what tine it would finally adjourn in the erc
ning, as the disconsslon would necessarily be re stricted or extended accored to make the after noou scesion the closiuk one, and that
for dinner should take pliace at 12 M .

## The report of the committec on basiness was

 then taken up. Mr. Hooker adrerted to the in-trolluction of new varleties of frult by puiding trond advertisements in the phpers and Ly handbuls putforth by irresponiblbe partles and hoper ation, and, if possible, internose a corrective
of the cyll. Mr. Barry - This is a point of much Impor apon, expending large sams for what nre supposed to be new fruits when they are but fecting
old, and often timcs rejected once over again, under a new name. The Catawba is known to at rates varying from two to flive dollars ench Those origiuatlug new raricties nd meanligg to their products to the serutiny of some compe tent society by which their clahns to favor may be pasted upon, in appro

nees to withat und the teat of winter.

## 4th. What, crnpas have veen preeerved most nuc- cesescally during the past whntur Mr. Langworthy - Sent a qnantity of grapee

$\qquad$ Those retalned at bome followed the same ex
Mr. Barrs-That was my experienee too. Mr. (Griftith-Gnthercd hise grapes entry. Pu
them, boxed up, In a dry room of a temperature nst above freczing. They came oware second. -H. G. Warncr-Had been hichly suceeberul in
kecping grapes. Put up a large quautity lay all in boxes of rarying eizes and found the las ot fresid in the ecllar that morning. Had Ca-
tawbas, Isubellas, Rebeceas and Dlanas. They ali kept well, Managenent lall, Grapes should
be rlpe when pleked and kepte clean, dry and cold. Had a cellar under a portlon of his barn, in which were plaeed the boxes, containing s,
a and ? 24 lbe. There should not be cnough in one box to make welght sufficient to crush or
press hard upon the lower strata of grapes. Pack in lightly and nail the hoxes up, nud set them one upon the other, as they will thus oe-
cupy less room. The tempcrature of the cellar was about 2t degrees. A temperature that will freeze potatoes, uncovered, will not freeze granes
in boxus. Pine boxes shouid not lee used, as in boxte. Pine boxes shouid not le used, as
they flaror the grape with their own aroma. they llaror the grape with their own aromi.
Some few of the grapes decayed, but ncarly aul were preserved fresh and good, The Iantellas nod Coneords were among the last used und they
were fresli and palutable. No other covering, but the boxes were need.
Mr. Babcock, Lockport-Kept his grapes well
till May. They wcre boxed up with sawdust till May. They wcre boxed up with sawdust
and shaviogs intermixed and put into a cool cellar. The stems were as green as when put
sth. Is a rich soll neceepary for the produetion or
giod grapes?
Mr. Smith-Very rich soils are not neeessary
for the production of the grape. Moderately
strong soifs were the best and should be as unf.
form as possibic, that the grape may ripen
evenly.
Mr. Downlag - Rich soils produced a largo
are not so good to eat or keep.
Mr. Farley-A moderately riel soil ss the bes
adapted to inost varictice. The Delavare re quireb a stronger soil than any other varicty. Mr. Hoarg-Had not manured his vineyard for
even years, with the exception of a small shov ceven years, with the exception of a mall shor
elful to a vine, twlee in that time. The thener
the ground the more prolonged will be the ripening. $\qquad$ of a clay texture sulted bim the best. Would
not care if it would tuake brick, were It not to
the dillenity of working it. To produce tinc andy
carly grapes, a stifl soil is cssentinl, both as to
appendiand flavor. Mr. Grillith - A rich soll is not ussential
Whatever causes an excesive growth of woo decreases the quantity of frrit. An nuluvial
soll whieh will produce about thirty bushels of
corn to the acre is rich cnough for most kinds

## of grapcs. stronger.

Mr. Herendeen - Saw in Washington 100
vines in the Government expcrimentai grounds.
They were trelllsed up and a roof two feet wide put ofer them. This, It was stated, was an ample protection against mildew.
thonght that a slingle board would do less width than this.
Mr. Babcouk-Thought milldew generally sulted 'from a too close plaitligg of the vincs. Whined, "becauze the air cannot circulate freely among the leaves.
Mr. Moods-Unleached nshes, sown two o it prevents the rising of the fungus to the rlnes. it prevents the rising of the fungus to the vines.
Vincs trained on high, open trellises were nol
so liable to milldew as when tralned lower and more compactiy.
Mr. Langworthy-Have used ashes for ycars but do not think they will prevent mildew.
Sulphur will do it, undoubtedly. Mr. Sulth-Thero is to be a meeting of the
Pomologieal Soelety at st. Louis, , and those in tending to to shonld hand their nanus to the
President. They will be found below.

$\qquad$
$\qquad$
sent would finfsh theren and the treest too. Gr effectual in the ease of insecters on the ro with water it will not kill plants.
Mr. Sharp-Had found soft soap yery effective agninst the worm. His sons had used two bar-
rels of it thls scazon, diluted with water, and

Mr. Ferris - Soft seap will kill then, but Mr. Santher mlttens and ernish the vermin. Mr. Suith-a few years sinee the reglon of nd got raid of thicmb by using a mixture of s ec. The contluse should we serent body of the d put on pretty libcrally. The worms will at pass thls barrier, but will sceumanate helow

## notes on grapes

$\qquad$ Ohio and Lake shore Grape Growers' Absocia
ion for $186=-6$, from which we extract some in
formatiou about grape enlture fin that State : Soil for a Vincyard.-Contrary to the dea en
ertained nt the commenement of grape cull ture in this country, it ls now the opinlon of
 hence underdrainfug is often a neessity: Sund
soils may prodnce is fulr clusters, but the cuna ity of the wine is inferior. Gravelly soil is probathly next best.as Clay crests that crop on
of gravelly or saudy districts are c:xcellent. Mamuring is aleo discarded. Most experienced
frowers now consider manure an injury when growers now conslaer manure an injury whent
wine is the object of production. The vine will
bear abuidautly a long tince, and remalu healthy bear abundautly a long tine, and remalu healthy nuring luay epoil a rineyard. We renemiber Fincyard wblele prolluces the far-famed Johaniz oergee, had it hearlly dunged, and the proplity wa perecptiliy lujured for many years following though the gleld was increased. The winc
makers atate that the must of grupes grown on finter lands of the dake iblands, or from sandy
Variclies. - The Catawba stlll takes the first
place. The Ieabeclia prodnces a fine sparkiug wine; it is not so hardy as the Cntawba, and 1 liable to overbenr. The Delaware holds 1
own; it is a splendld whe grape, and we
ndanted to inixing with the must of other yaric
 use as sowe others. The Coucord inakes a ve beautiful line, and is a showy markect grapo.
The ynality of its wine sa not higli. The Dlana The ynaitey or tes wine is not higli. The Dlana
is a ine tuble grape, and fanous for leceping
well it its whe has a neenilar flluvor, not fleasant to some-agrecable to others. The Clinton is
no mean grape for wine. It has sweetness and acid; repluires a poor soll. The winc ls rough at Arst, hut itpproves in quality. It makes a finc that is very promising.
Discoseses - The Mildew and Rot are the chle
Irawbacks to the profle of grape caifure some years the crop ls nearly cxempt; In other rom one fourth to one-haif of the grapes an lost in a few vineyard
The Luke Sharc Cirape Reyion.-Tuls extende for several miles luland, fund embraces th islands of the lake. It is the most southerly vantages of a proper soll, a warm latitnde, and the protecting inducnes of a large body of wa
er on the North. The purchasie of hids he preparatlons, for plating vlnes In the year In thif country before witacessed. Seven thouand acres are supposed to be alrendy set with
vines. Had the entire crop of grapes of last car been made into whe it is cetimated that

## SOAP SUDS FOR ROSES,

Ilcan say from experience, ,oap suds should
never.be wasted. We Wour alittle every weels aronid roses, dallias, and fruit trees and shrub bery. It. 18 good for pot flowers; but a very lit.
tle is entongh, as of cannot escape so rapidiy as on the ground.
Our soft soanp Our soft soap is made from wood ashes. hundreds of rose bushes, and my method tha been published In the Rurest, but as $i t$ is de-
signed to make its sulseribers one family, I whii serd it agglo. The last of leaky, and put wood-plle dirt luto it, tharoughly stead of cutlug them off tuc bushles. The sil honld not hure lese than fivo cyele though thes can be ralfed from less. Three of the ey should be mider the ground ; and then put wher can slitue on them, nad water twlee a day, mornng nud eveniug, for six weeks, until they begi
0 grow niecly. After that, once a day is sull cient untll cold weather sets in. Just before the ground beglas to freeze, put them in the hot- - ved, and to not water them but two or three tlmos
daring the winter. Pinks and Verbenas can be preserved through the winter in the hot-ved.

The banehce are forned at two fect high ond year this is raised unother foot, eovering
the lower parts of the limbs nad lenving the liti lock three feet high. No ather protection i
needed, as the extrecues of wet or dry, heat o cold, are regulated by thls inass of earth if it b he top. The worm eaunot grain access, and ghit duwn the brauches, neillher wan the
how the tree over. The tulrd nud fourth The mound is made still larger, so that whe ght. For older trees-lf more than tiree or

## productiveness of the apple orchards.

It it well known that the last thilty sears have
tances of the conntry - mutataionc brought
bout by the 3atroduction of the rallroad system, The consequence is that towns and cllice have sprung up all orce the land, maklng a hundred
local markets now where one could ecarcely
Lave been found thly placese have become the marts for farm prodncts, great ani Limereasing decmand fort them in the Atlantie citles. The greatiy multiplicd faeilitles
of transporturion-the raplaly lucreasing popn
intion of of transporturion-the rapldyly lucreasing popn
lation of towus and cities-and the consequent
augumented den augumented deranand for farm products, cepeci-
ally of the apple nare lead to a premature gath ring of this crop. In former years the apple
tree was allowed to perfeet the growth of froit tree was allored to perfeet the growth of frait
till it fell from the pendant boughs by the action
of auturnal
nipular ribrations. In those daps there ras no
corpplaint of a lack of apples, for the ripening
influcnces of nature were not interfered with by
by an orer.hasty greed for the avails of farm
prodncts. Now, howerer, the case is changed. Tho
proximity of markets leads to prematre as
sanlts upon the apple orchards. The trecs arc
stripped of their balf-rlpened frnis, often br persons who care nothing for the beaith and perpe
tulty of the trees. ration of stripping is complete, the ground un
der and about them is literaly covered with the small twigs or branches from which the pedicle
of the fruit proceeds. This ls believed to be
wrong Wrong, nor nced it be a matter of surprise if
orchards subjeeted to this harrestligg process show decreased productivencss, become sickly
in appearance, and in a few years cease to bear
or die in consegucnce of the treatment jeceived. This may be an error, but our impression is
the reverse, and it would be well, pcrhaps, for
orchardists to assume sts correctnces and nct orcbardists to assume sts correctnces and act
accordingly. A more lenient treatment of the
apple tree can cortalaly do no barnn, whilc there BULBOUS ROOTS-SUMMER TREATMENT. Tue following deseription of a mode of treat-
 burgh Botanlcal Soeicts, on tbe 10th nlt :
The treatment I am about to describe was designed in consent inene of an obsersvation I made,
that after a wet cold summer a large number of hyaciuth (EIyccinthus aricatalis) roots did not
flower at all, althouyh for evcral years previous
they lad ilowered nooderately well. The roots,
 leaves to preserve the valus from destruction,
nad this was all they did in their season of nctires
growth. In the native soil for the lyacinth the balb is exposed to summer elrought and sun - Uaked
earth during what is technically termed its dead season, so I thought If I could make a snmmer
to them to resemble their native one, I wound get the desired vitality next spring. The first that I hope a slort notice of it may prove o
ralue to thoso intercsted in the enlture of our Hyacinth roote are lifted when the leaves s. symptoms of decay, about midsnmmer day.
this season the forcing pit is not in use, and thought it would answer my purpose to imitate,
in so far as heat and dronght are concecrncd castern snmmer. 1 placed the bublbs intiee eand
rilich had becn uecd for striking enttings, and lighted the fire under them twice or thrlee a
weck, in order to keep the temperature of the Weck, in order to keep the temperature of
sand near su F., whlch was couthucd for
weeks. The hayacinthis were then remored piaced in a dry attic on a wooden floor in one
Instance; in anotler they were snspended in a
net or bar lu a warm inhablted room, where gns burned till midnight.
The flce of this trcatment was to make a
marked change ln the character of the manked change in the character of the growth
next Eyriug; every root, small or large, fowered,
aud the older roots appeared aud the oldcr roots appeared to maike elliorts
that e ebansted then, for they sent np many
heads, and thus sepurated the bulb hato parts. In the heating process, moist ure is freciy thrown
of from the plants; this it is deesirable to get of from the plants; this it is deeirable to geh
rid of by actlre rentiation, for If not so attund
cd to, there is a tendency in the byacint bult

## The polyanthus uarclesus ( $N$. Tuztllus) I have treated in a simular manner. After heation in

 treated in a simular manner. After heatiog inthe pit, I kept them for the remainder of the summer and autumn in a very drg, warin place, sald that be thought they must we well cooked.
Yet they have flowered this spring with as large full heads as can be desirced; one rarlety had just a little too mueb ritailty imparted to it , for in
the oncn air it had a large head above the oncn air it had a large head above gro
In Fobrnary, which the March frosts destroy
In them I consider the change wrou reer beating to be more evident than in the bya
claths, for I bave never found our summer to Hower the polyanthus nareissus with sny degree untll I treated them as above described, whlcb has bronght roots that have been grown for
some jears in this country to be equal to the imported one

| Mitten for Moreres Rura Sar. -orker. HOUSEHOLD BIRDS OF NEW EMGLAND. |

- NuMBer Mil- THE Bide bibo.

 cienes of tood but inraaly the bazang of ore
 scription. He la oue of tha few of our song-
sters who can boast of bright-tinted piumage. The hue of the upper portiou of his body as his
popular nome ludceates, 1 s an azure blue, and the popular mine ludtentes, Is an azure blue, and the
color of uls breast is ferruyinous, fading Into
brownis white toward the tail. The femnle is a pretty bird, though more soberly attireal than softened and shated hy brown, so that sho ean
without mach difficulty be distingulshed from her companion.
Our Bue Blrd helongs to the same sutb family
 Bird commences her nest buidllag about the
last week in Aprll, or frst week in Dlas. She appears to he very fastlalops, and oftea racillatiug In her eclection of a nesting place. I hare ecen cach other, carrying her strawa somethues into
one and sometimes into the other, apparently unabio to decide between them. Fin settling
this noiot the male takes a prominent part, calling the attention of tis matis to nome sulta. hre placo-explortng and nesthng in the rarions
caritics under discusion, chatterigg menarwhlle
in a low tone to his more timia and cilutions companiou, ns if be were endenvoring by his
musical cloynence to quintet her feare and remove Ler scraples. In there axnminations he bome-
times, like other explovera, mectes with noppleasandy hato crannies, from which he cannot easily extricate himself. When satisfied, thes will
occups the same place for yenra f not dlaturbed, and do not readily resign their choice to harge
birds. They usually seleet a cavitt in a decayee
rail or post, or sume dark nools which will afior them conccalment and athelter, and hare kinown
a Bine Bird in the spring, before the arrical o the rightful owners, to talee possebsion of one of
the clay tenemeuts of the Clit Swallows under the eaves of the baru. They become strongly then, The female builds, or rather gathers materlals with great rapidity; for little skill is displayed
In the construction of the nest, whicla is little In the construction of the nest, whica is the pine, wilu perliaps a felw feathers intermized
lu the center whoce the egys are depositcd
Thes are sometiones composed almost excluslvely of plac learce. I hape fivand nearly a
quart of theso in one nebt. Tho male bird ex hiblts unuct inturest in the baliding process,
though never offerlug auy practical asaiatauce. He accompantes his mate in her little foruging
expeditious, societines sluglug and performing a kiud of acrial wailz in a delirium of jos, after the fushiton of the Bobolink.
He may frequently be seen entering the bos or peepiug in the door, appearing to esaming
the progrees of his companion's labors with the progrees of his companion's labors with
mach sollcitnde. He rigilantly guards his pre cious charge, doing battle mith ans neighoor
Bine Bird who may penture too near, and drring aray smaller intruders. The number o
emgy deposited is from four to six; they dre of light-blnc color, and withont spots.
The period of lacnbation is from twelre to fontecn days, and the young are fed in the ness from ifflcen to seventeen days. It is difficult to
assigu a precise period for either of these pro cesses, as the majority of bltds comprecuces sit ting, witll muorc or less regulatity, before they
hare leposited all of thefr eggas and the joung diffirence of tlme ranglug from balf a das to day nud a Lalf, or pertraps more. The male
sonistimes feeds bis mate while sho is depositing her eggo , and very constantly during incubation.
1 think thatt birds feed thelr mates at all timus Ituink that birds feed thelr mates at all timus,
eren when they are not layiug or sitting fet,
thece attentions are not habitnal, luat occasiona!, possilly outly when they have sone extraord dary totheome morvenu to ofier.
The joung of the Blue Bird when fledged, ar
white or light :ath color on the breast, striped or spotted with wond brown. The back is woo
brown, and the terminal feathers of the wlong brown, and the terminal fcathery of the whigg
nud tail are brown, luternixed with a fow whit birds, is very short. Their note is similar t
the chirp of the old birds, only huiks and feeble Young birds nsualls take night trom the nest in
the early part of the day, all leaving withlu the early part of the day, all leaving wilthlu

## - 1 MOORES BUNG MTMNDNME 

TERMS, \$3.00 PER YEAR.]

VOL. XVII. N0. 30.3
ROCHESTER, N. Y.-FOR THE WEEK ENDING SATURDAY, JULY 28, 1866.
WHOLE NO. 862,

THE NEW POTATO BUG.
A rniesth whose letter is dated nt Barrington,
the Stute we cannot (hace sulte we cannot make out owing to the
illegiblity of the post-mark) writec, undcr date
of July Tth, about the nuich drended potato bug which is uraking its way from the West In this
directlon. He ficlosed specimens of the bug, well secured in thick brown paper, whech ar
fived safely-"allve and kleliug." It Is of the
 In reference to this pest he quotes from a letter
addressed to limin by a lady friend, In Delaware county, Iown, as follows: - "I write you whing
times we had yesterday gathering potato uugs ng last ulght we came to the conclusion that we
gathered and burnt three quarts of them. We off the potato oups with the other lnto the pann. reported to be very poisonous and will kill the aching worit, I assure you."
Our correspondent adds - "I eend you thes speclmuns to let you determine if you ever Enar
any thing like thein, I'took them from a nelghboring potato pateb and they are the only oncs
that ever cane ander my yotice, bnt I think, yerltable W Cstecrn I'tatato Bug Whichris marchlng
eastward, and I send you theso as pioucers of coming ruin. If they should be alve do no yonr time, which, according to the theory tha
they travel 50 miles a sear, yon may expect them aboat the year 1850. ."
As stated allove the bugs wero aife when the
letter reached us and nre so now. A potato letter reached us and are so now. A potato
leaf has been luclosed in the papicer for tempo rary alinent, but the bugs are uncasy and refuse
to operate upoo It. The next thing will be to

## $\xrightarrow[\text { PARM LABOR AND LABORERS, }]{\text { "tiush them out," as recommended. }}$

## Muca time is sometlmes lost and cxpense unnceecsarily ineurred by farmers in consequence

 of a laek of eommunleatlveness towards their einployees. It is by no means a had plan for afarmer to inf iart to his hired help at the close of each day's businees, his plans and purposes
with respect to each laborer during the succecding one. It may be said that thls does not con-
cern the taborer; that he is paid for bls time, Whether advantakeously employed or not, an
that is all he nced know or care about the met hat is all he need know or care about the mat
ter. Strietly speaking, thls mag be true, bit the policy of sucheh retiectice is at luast questlon.
able. A fariner rarcely or never loses anjthlug by imparting to his help, before hand, lis pur-
loces in reference to iminediate future operations. They are enabled frequently, from thatr
experience is farming operntions, to make valcuprienee in farming operations, to make valin hand. Beseides, ceing preareaciscalar of whinet 13
expected of them they will think niout it and henee be better prepared to act than they other-
wise would be. This confidence detructs noth. ing frora the authority of the einployer, whilt
it lmparts epirit and encrgy to the employed.

## MANURES, - TOP DRESSLNG MEADOWS.

 The Cultivatur and Country Gentleman givce the results of an experiment made on elghtpiots of meadow land, with rarious kinds of manure, for two years- cach mown twice during the seasou. The experiments were madc on the

The ©uayblex Writen for store's Rural New. orke
NORTH-EASTERN MOHIGAN. A few items relative to this country may no
be ont of place in Joar jouran, and if so her
they are. I will spealk of this locality, and o that part of Miehigan north from Detroit and east of a line drawn from that city to Sagiauaw
Bay, via Corunna and the Sagioaw River, which may, and should, be termed the eastern penin sula of the State, terminating as it does in a well
projeeted and prominent point, or penlanula, in
Lake Furon Lake furon.
Tue physical character of this large tract o
country is as follows:, - For a distanee back eountry is as followss, - For a dlstanee back
from Detroit River, Lake St. Clair, and St. Clair River, Eay from tifteen to thirty miles, the sur-
face is very level and hearlly timbered, the soil face is very level and heasily timbered, the soil
somotimes eandy, but more generally a clas. Then, beck from this, comes a narrow belt, usn-
ally a few mulles wide, of ligher, sloping, slight15 rolllng, and magnifieent land; and back from hilly conntry, which evidently has been th longest elerated above the anclent water. There
are sandy tracts of soll, but more generally it clas. Back from St. Clair River aud Lake some parts of the country are set pretty new, but set-
tlements hare penetrated all thirough. North from the railroad now bullding from Port Huron direetily weztward, the grest body of the coun-
try ls jet a wilderness and a lumber conutry. There is a chain of settlementa and ecattered villages on its eastern side, on the shore of Lathe
Hron in plaees they have penetrated well into its interlor, and aloug the northern side of the ment is considderable. Bnt in the main it is a
great wilderness, roamed by deer, bear, wolves and even get by many elk. The land has but lit the elevation, and only a fuw limlted tracts ur
hilly. The Cass Rirer aud its tributaries draiu a great part of this region, aull on and around its y seatterel over with emall spruec. This counry, on the whole, does uot promise to be one o
the best for agriculture, but there are often cou iderabte tracts, and small ones from the size o
small farm to a few hundred acres, that have very good and fertile soil. And there are tract
of bard Lemlock land, where the numerous lit tle hillocks, cansed by the overturning of an an
eient growth of trees whileh lave rotted away remain. O coll has beeu derecloped, aud no doubt lrou and copper, If not other valaakle minerals, will yct
be found. All of this wildernees fs destived to be settled, aud its occupation I Is perogtivestling,
but it will be more of a stock than grain-grow, ing eountry.
The climate of the region at large of have becn speaking, is slmanlar to that of Wcst-
ern New York. The average amount of snow is a little less, and the winters, on the whole, think not quite iss severe, although the differ
ence is not great. The summers aro very agree
ble nad pleasant. ble nad pleasant; ; usually not over warm, and sub-
ject to chilly days. The barometrieal ehanges
are creater, bare a greatcr range, and on the whole are wore rapid and frequent than in West-
Wer York. This great region, in the main, grows well There la seareely any spring wheat riased. Win.
ter whent usually is a pretty good crop, much outdoing at the present day Westeru Now York throwing all such drawbacks as the wcerll
[midge] aslde. Last year wheat was a good
crop; this year it will ayerage little more if luan haif the yield of the previous jear. The slimness of thie erop thls year is due mainly to
winter killing. Winter killing. Cats, barley, and potatos prom. and corn is quite smalh, yet a congenial Beason and in the esrly spring rery little raln fcll, and But for the last two or three weeks there has been heavy and abundant rain and frequent
showers. Apples grow well in thls eountry, but the
reael bears only oceasionally, exeept in favored
locations; aud these loeations posed nops of some of the liills, and the barders of some of the little lakes, in which Oakland Co., and some other parts, abound. Onkland one of the regin we are considering, as well as
onic of the foremost ones of the Well as some coutlt souous of tocalitites, Sta, great many , is
apples ; it has nunerous good orechards of good sized trees, which yleld bountifuly almost
every jear. It is emphatieally cery jear. It is emyhatieally a good apple
eountry. Tobacco ale? grows famously. It
grows so luxuriantly ant with so little tronble that I wonder that more of it is not ralsed. Oakland county, of Whieh Pontlac is the
county zeat, lias beco long tettled, aud the farm ers generally are about as weil oif, hase as much
or more loose change, and live in as good hous cs as in the farored portions of Webtern New RURAL NEw-YORAEE In the comananity. The agricaltural paper pablished at Detroit, a ralua-
ble pnblication, is snppoted to le pnblieaticn, is snpported to the excluslon of
the Rusar io inauy, on the ground that a home enterprise orght to be the filst encouraged and
patronized, but the testimony the RCRAL NEw-Y OP.LER is the nest paper of its I may mentiou, by way of variets, that red
squirrels have recently appeared here and in other localitites in great numbers. They frequent the farm-house yards, and as one rides the fenees on the move. Whenee they came or
whither going no onc seems to know,

Tire Falcon was a bird nuuch honored in the atilitarianlsm graded from its honorable position, and made to take its true place among the feathered
tribe. He is, in faet, only a bawk, -a bloodthirsty, rapaclous, nuserupulous robber, the legitimate alm of every old slot-gua, in the
hands of man or bos, that can le fred off without the danger of bursting.
There are a great mauy brauches of the hawk men, they have all sunk very low in public estlmation, the unentiable claraeterlsties of the
frithe rendering them untt associates in a wellordered and peaseful community. The rearing probably the northurn woods abound with the
and they are migrating lither. $\Delta$ nother ite
and one for horsunen to consider, 1s this: T or three days since, while driving my horse, 1
had oceasion to discharge a gun from the rehihad oceasion to discharge a gun from the refi-
ele to which he was attuched, 1 mmediately after whieh he manifested signs of deafness, and has been totally deaf ever fince. Ever betore he had
been Ilvely and apparently all right, never mand ifesting Indisposition in the sllghtest derree and there is no doubt but 1 l was duct the the das:
charge of the cuus, the report of which was not charge of the guv, the report of which was not
uuusually loud. I tave once known of a horse belng made dens by a baud of musie. Will the
deafness be likely to prove temporary, treatucnt will avall

the dean seal

In modern times, masses of bitumen are ouly
oceasionally found floating in the Dead Sea, at oceasionally found iloating in the Dead Sea, at
long and irregular interrale. The Arabs on the western coast aderm that it is thus found only
after earthunkes. The only two known reecnt instances of its appearance secm to conifrm this
ruport. After the earthquake of $18 y_{j}$, a large quatatity of asphaltum was cast apon the shores oue tribe of the Arabs bronght about fifty kiznpurelased ly the Frank merchants of Beirut Agaln, after the great earthquake of January,
1837, which destroyed Sated, a large mass of bitumen (one said like an ssland, another like a house) was diseovered floatiug in the sea, aud
was driven north of Jebel Uedum. The uelgbborling Arabs swam off around it, and cot lit top writing axes, ,o
as to bring it astore. It was earried off oy as to bring it ashore. It was carried off by
eatnel loads, and sold for four plasters (abont twenty cents) the suth or pound. In this way lars, whilice others sold to the amount of two or
three thousand dollars. Exectit in these two instances, the Arab shiek who acted as o gulde, a man of inty yeurs old, who had alwas
lived near by, had never known of bitumen pearlng in the eca, no: heard of it from his inen told him they remelnber its a ppenrance orly

$\qquad$ to know a trade on jolning the army. If he bas
not jet learned a rade he is taught some occu. not yet learned a trade he is taught some ocen-
pation after jolning his corps. Should tie be iguorant of reading ard writing - or knowing
these, should he wish to improve so as to qualify himself for promotlon - be goes day when he is not ou guard or on fatigue duty. IIs schooling over, he is put to work at Eome
trade or handicraft, or should he not Enow one he is put to learn onc. In every French regiment there are regular ganys of butchers, bakers,
cooks, lavorers, eart drivers, watel makers, sllversmithes, tailors, shocmakers, blachsuithe, and what uot. All these trades or haudiorafts 8 re under thelr regular head men, and every soldier, when he
can work may and does gain a certaln sum
and emplogment of the falcon in the sports of
the field was essentinlly an aristocratic preromative, and could only he waintained in those
times when the fron rule of dugnotiom reder the mass of men mere ef despotiam reudered minleter to the wants and caprices of the few
The narch of cirlligal The narch of cirllizatlon, and the inventlon or
artlicial means wherely the feathered trlucs ar imade to fall before death-dealing ifre-urms, hav rendered the servlees of the falcon as useless as
they certainly are cruet. Fine ladies do not now Indnlge in tho cruel sport of sending a rapacio linwk in prursuit of a poor fugitive sobigster
the forest, and elap their hands over the sueces ful seizurc of the prey.
Falcoury is a very old amusement in Enrope
and Asia. In the middle ages It was the favorit
per day, by working in the shop of hls trade. In Algeria, the whole of the goverumeat work
is done thy these military artisaus, who, as well carn extra, pay, and the government get work
done better and chenper than they could do hy employlng the people of the country, besides treasuring up the vast advautage of always hat ing a corps of workweu at coramand. The sya eccret why the Freneh army get on so well when a service. In the Euglish army we have noth-
ing of the kind, except as rearardy the tallorsand shocmalsers, und (in cavalry y usuments) the sad-
diers and farriers. There are ereny diers and farriers, There are tany good work-
mon whlo enter our ranks, but through want of men whoo enter our raiks, bat through want
prautice they sonu forget what they know. In Algiers I hape seen a whole pile of ba
racks, lurge enough to contann three thousan mun, that was bullt entirely by a reglment of the line, from the digglog of the foundations to the
maklng of gluss for the barrack whadows, and
 out Algeria, miles upous milcs of cexellent pub ice roads hare becen made eutrely by the troops the raen belng pald a small additionai sum by
tho state while so cunplosed wo State while so cmployed. Thas the goveru nent gained by getting their work better and
fery mueh cheaper done than could bave been effected by private contractors, whule the troopp gained avery comfortable addition to their regu-
lar pay.-All he Fear Roumd.
prossian and austrian soldiers. "Matakorf," the well-known eorrespondeat o ted Frankfort-on-the-Muin, May 20, says: lown is now erammed with them, present general a soft appcarance, as compured wit the famous fortress of Eirrenbreitstein, opposite inspectlon, and there several reginents under fronticr. They werv composed of as good material as any country in E.urope, perhapls, eould turn out, and they were well equlpped. Prus-
sian unitorms and Prussian firearms are, Iu fact, not to be eriticised; but the men did not lool soldierly; they stared ahout and were kaokky
and mllitia like; ticir accoutremeuts lacked compactness, nind when they marehed they
sliowed a fault whlelh is the despair of all old generals-they support their knapsacle on the - "The Austrlans looked hardy and machine-llike; whinu they
passed they stared neither to the right yor to lic left; they walked upright and lithe, like the rench, but they looked so expresslonless, so nne daily associates with, that the only impresson left on the mind was that of a remorseles ing why. As to the physique of the nene, the
Austrians are the tallest, but this appears not to be an advantage in war, sinee we recolleet haviog secn the little pion phous of the Frencla
Army pat the tall Austriaus to fight at Solierino. "The soldiers of the other Germanic States as far as we have seen them, although fine looks-
log men, bave a most miserable lenue, and appear infinitely more like loose militiamen than
sport of priuces and nobles; and as ladies conld ngage in it, it became very prevalent, as a gen-
tle kind of hunting, lu which wives, daughter nd lady-lores could engago enurally with thei hasbonds, fathers and lovers. The falcon wa
rained with the greatest care, tanght to pur ne the bird, as soon as released from the hand sud return with it to its keeper. The faleon
was guacrally hlinded until the game appearei In slght, hy baving the head covered with lenther hood, Thls hood was removed when
the game appeared in sight, and the bird whiel the game appearred in slght, and the bird whiteb
was tanght to perch upon the wrist was inme was talught to perch upon the wriat was inme-
diately reteased to eommence the chase, whill diately released to commence the chase, whit the spee tators looked on in the greatest exelter
ment, cheering the falcou by various well known
lgnals.

J. Bloon of Carlton, N. Y., writes us: "Dun Pedro, Jr., was bred by Jous II. Tnomas of Orwell, Vt. He was grot by Joserif Shele nos's Don Pcdro, dam bred by Messrs. Ricil of Vermont. Don Pedro, bred by Victon Wmenr, was got by Cross Tom, le by Swuepstaker. The dam of Don Pedro was a first class cwe bred by Wm. R. Sanvoind. Don Pedro, Jr., has bleared 21 $1 / 2$ ponnds of wool, of one year's growth, on very modorate kecp. He has proved himself a good slre ram, getting quite a nurnher of ewe tegs that sheared from 10 to $12 \%$ pounds of washed wool, und ram tegs that sheared from 12 to 17 poands. I have about 40 breeding ewes, selected by myself from some of the best llouks in Vermont,- some Pandare, some Infantados, and some crosses between the two. I have not been tenacious about the family of the sheep, provided they were grood, pure blood animals." <br> WANT OF UNIFORMITX IN FULL BLOOD IMPROVED MERINOS. <br> Wre have been asked several times to exphain a want of uniformits in full blood and henproved flocks of Ameriean Merinos,-It being claimed that pure diver anlmals ought not to preberit such disparities, and that the doing so by a flock goes to show that it has been crossed with some other breed or variety. <br> People who read more than they observe, are apt to entertain exaggerated ideas on this subject, All persons do not concede a pure pedigree to short-Horu cattle, but they at least bave been carefully bred without any extrancous mixture for a long serics of years. Do they as a breed, or do the herds of them belonging to, celebrated breeders, exhbit a marked and pervading unlformity? The English turf horses Lave an ohd pedigrce. Arc they uniform in size, sbape and aetlon, either as a whole, or fu the studs of indlvidual breeders? Devon cattle aud South Down sheep are, aecording to aceepted tradition, pure, original breeds. Are even they "as Hke as peas?" <br> The Spanish Merino boasts a pedigree to which all the precediner are "as the gourd compared with the cedar." 'Ine writers who obserped them at the opening of the preseat century, do indeed claim that in the cabanas, or flocks, they exhlbited a marvellons uniformilty. But we suspeet there never was a flock in Spain fo which a good judge could not readily ind sbuep consid- | erably differing in quality and value. The cabanas thenaselves differed from each other widely in the size, form, armount of wool and quality of wool. The close resemblance of the sheep of the same cabaua was partly due to the fact that they were atationary - that liftle or no eflort was made to intproye and theroby change them. The same was true of the nuimproved Devons and South Downs, - Wefore Engligh improvements began. They resembled each other moro uloscly than do their improvel descendants. <br> The Spanibl Roeks doubtless dald mprove somewhat during the 18the eentury. The shephoeds were cxperfonced tuen. It cannot be supposed that in the selection of stock rame they dal not take what they deemed the best of the cabana. But they never went out of the cabana for better animais. They never went to work vigorously to improve a defeet by pairing defeetire naimals only with those which wers superior in the same partieular. They did not learn what were comparatively defecte, and what points were susceptible of improvement, by rellection, by experlment and by a close study and comparison of all the best Hocks of the conntry. The old traditional form and qualities of each cabana were those estermed by the ignorant, prejudiced and innovatlon-hating Spmniards. They sought to prevent changen, rather than to make them, in any direction. <br> The Amerieau brecder traveled in the same rut for a tlme. At length the traditional tandmarks lell, and a keen spirit of improvement rapidly developed iteelf. The result we know. The Spanish Merino hus heen changed and manfestiy improved in almost every partieular, fashloned lito a sheep whlelf fir American wants arul objects has no equal in the world. <br> We come now to the answer to the first ques. tion. It is impromeneat that hus contributed to increese dixpiertity. One mau has improved more than another ou the same stock, aud therelore their floeks differ in appearance, And itruprovement accounts for disparity in the sume jock. The sheep dropped in 1sto, In a rapidly foproying flock, are conslderabiy inferior to those dropped in 1866, yet they may be too valuable to be ejected from the flocls. There is, therefore, a necessary diaparity between the drop of 1860 and 1SB6, proportioned to the amount of the inprovement which has been made within that time. The drop of Intermedlate years will natnraliy occupy Intermedlate positions, and here is reazon for more dlsparity. <br> We go a otep farther. Suppose there is in the drop of 15 Gif a $^{2}$ remarkably superior ram, in which all the improvenents alrearly made in the rest of the flac: culminate, or are surpassed. Betrucen this ram and the lenst ralnable ewes of the drop of 1860 there ts a very mandilly in the improved points. 'lhough of the same purity of blood, ind of the same identieal famlly blood, they have to all intents and purposce become, for brceding purposes, different sub-families. One rupresents a comparatively unimproved and the other an improved family. If sueb a ram is coupled with sneh ewes it is a quasi cross, so far as quality is concerned. The produce is not likely to be unlform, because some of it will breed back more cowards the quimyroven dara, and some baek more towards the improved sire. All expericuce shows that the progeny of pure blood anlmais breed back sometimes to one parent or parent's ancestors, and sometiues to the other parent or its ancestors, precisely as do the progeny of grade rams and ewes, or pure blood rams and grade ewes. The reason why pure bloode usually throw out less disparities in |

## FINE SEEDLING CARNATIONS．

Dear Roral：－Being an admirer of Flowers，
I have followed with much satisfaction the in－ troduction of many rare and beautifnul speeimens man of this city．Annong those for beauty， raricty and fragranee，the Carnalime，whieh is pre－omident．It is a perfect pleasure to culti－
vate this variety－from their great beauty in
fo form－sporting finto all coiors and variegations －frugrant as the Rose or Mignonette and of easy
opt－door cultivation．I have often wondered
that dadies aud flower fanciers have not pald that ladies aud lower fanciers hare not pala
more attention to this Princc of the Florul Kingdom．
With a hatious，I recelved tue following note from Mr．
Vick，which is De pleased Ehend．－Knowing that you are a lover of that most berutiful of all 110 wers，the Cass－
Nation，I send you about tweuty specimens grown from secd last year，and，of course，flow－
ering for the dirst time．They are the best of
about two huudred，thourh about two huudred，though have iffty or sixty
more nearly as good．This is a very good per
centage of fair flowers，and many others are
desirabie for unttlug． I do hope the people of this country will soon
apprecate thils most beautiful and fragrant
Ilower－sceond ouly to the rowe if ilower－sceond ouly to the rose．If good seed
is procured aud sown any time in the sipring，or
oven in the mlddle of sumer in a plaee，the next July the plants will produee
abondauee of Howers，one－half worthy ol pre－ servation．They can then be layered and in－
ercased quite rapidy，or a little news seed pro－ cured every year．The young plants have seed．
or layers，are perfecty hardy and nced no pro－
tcction in the winter，but old plants sufcermate How it wooid have rejoieed the heart of our
old friend，Jons Dosmellas，now gonu to his cest，to have seen such a eollection of Seedling
Carnations．No man loved this flower lietter or was more flamiliar with the properties of a
yood Carnation．Some of the best tlowers have ever secn were scedlings produeed by
Mr．Donskrian．
I do not，of course，claim that these speci－ ing and eneouraging．To－day I have visited the sands of seedlings－haif an acre，Ithauk．Many ing the point of a good carnation．It will unt
do to make the standard too low．Eluswavaer $\& \cdot$ BARRY have
good seedlings．

## TO GROW FINE PHLOXES，

 To grow plants to perfection is not an easy ful and eonstant attention to details is neceessary．These details sare all little thingg in themselves；
they seem alnost trivial，but their obscrranee is
imperative if we would grow fine，liealthy plo mperative if we would grow fine，heallhy plath
with a profusion of bloom． proper mode of cultivating oue or two of our
Lest annuals，
No annual exceeds the Phlox lor a brilliant
and constant show．A good bed of phlowes is and constant Eliow． 1 good bed of Phloxes is
a ight that dezzles the ese with its brilliancy
Every one who cultivates ouly half a dozcu an nuals shoold have Phlore Drummondi．
The best soil for the Phiox is good yellow loam，enriched with well rotted manure and a
little sand．Pllowx seed should be sown fromin the
middle to the last of April in this middle to the last of $\Delta$ pril in this latitude，
farther north a little Iater．Prcparv a nice sec
bed in some sunny situation in the

| blushing: Now, who could look op to such a man? How much would he help a wife to progress, morally or intellectually? I shonld consider a woman falling far short of har wifely dutics, if, at the end of tise years her husband did not feel that he was a better man for ber lising presence. And a man must be a poor husband If at the end of dive yeare his uifecannot feel that she has galned a elearer perception of things ligh and lolty in the intellectual world. But woman is oftener the slave than the companion of man. And if 1 am av old maid, I believe I'm quite as happy sitting here in ios cozy room by the shaded window, as I should be to be the slave of any man. Not long ago I had a letter from a bride of ouly a few inonths. She enid, "I've a good man, but if I was in your place I wever would marry." And I think I never will. I've no one to expect me to obey orders; no erging children to fret and seold at from mornloge till night, and if I'm not happy, there's no husband to blame in the casc. So l'il continue to be an old maid. <br> Oakland Co., Mlch., $18 f$ ff. <br> Written for Moore's Raral New Iorker. <br> EDUCATED LADIES. |

Young Giris's Love.- What has woman young, confiding and unsuspeeting heart? Fult of lifo-lmyressed with a conseiousuess of he wn purlty and devolion-she pours forth all The treasures of her thought at man's fcet; sh
fancles ehe hears the josous tones of intan voices, In the distant horizon of her life, sweep
past like the toue of a distant bell; she place
her litile joys in them-the happlaess they mus acrord her. In fancy- she rears them to hrilliant positions; she makes them nul like ferself, goo and pure; she gives them her thoughts; she in
spires them with her own elenated sentiments, and the husbaui
and tenderness.

The Suffering of Toman:-An overrirked than is a wars a sad sight-sadder a great
hlan an overworked man, because she much more fertile in capacities of suflering tha sometimes as if Jael were driviug the nail which ening around the brow as if her cap-band wer Luke's irou erown-and tuen her ueuralgias an
backaches, and her fits of depression, and man more trials, linked to her fine and noble struc ture, entitle her to pity, when she is placed in
conditions which develop her nervous tendencies

| We have known a country societs which withcred away all to nothing under the dry rot of yossip only. Friendships once arm ater, onls dissolved to jelly and then ran to water becausc of this; love thast promised a fature as enduring as Heaven and as stable as truth, evap. orated into morning mist that turned to a day's long tears, only because of this; a father and anrer thet foot to foo: with the đery breatio only becausc of this; and a husband and his joung wife, Etralning at the bated lash which Io the beginning had been the golden bondage of God-blessed lore, sat mournfully by tho side of a grave where all thelr joy lay burfed becanse of this. We hate seen falth transformed to doat, hope give place to grim despasir, aud olence, all because of the spell worde of seandal, and the magic mutterings of gossip. Great crimes work great wrongs, and the deeper tragedies of human llfe spring from lts larger passions; bat wocful and most melanchols are the unentalogued tragedics that fsane from goss 1 p and detraction; most moarnfal the shlpareck made of noble natares and lovely life by the bitter winds and dead ealt waters of scandal. So cass to sar, set so hard to disapprove - throw. of demoustrating thelr innocence, and punishing them as guity if mable to plack out the stings they never sce, and to sifience words they never hear. Gossip and slander are the deadliest and cruelest, weapons man has forged for his brother's lurt. |

## arcient egyptian fashions.

Tue Egyptians shaved their beads and elln aud looked with abhorrence on the rough-baired
and long.beardeed Asiatie nations. They only allowed their hair and beard to grow when
mourning, and looked upon it, in any other c its. Most of the men wore over their sharer poll, wirg made of eurled hair, with a feries
plaits at the back. Poor peoplc, who afford the expesse of real halr, had theirs made
of black sheep's wool. By a singular contradiction, the great people wore artificial beard which they llkewise aflixed to the Images
their gods. The beard of an lndividual of rank wab short and square; that of a king equally pointed and turned ap at the end. Ladies wore emall plaits, , artt of which hung down their
 vencrally had an ormamented tlliet round the head, with a bud in front by way of jerronicre.

VOL. XVII. NO. 32.
RoCHESTER, N. Y.-FOR THE WEEK ENDING SATURDAY, AUGUST' 11, 1866.
WHOLE NO. 864.

AGRICULTURAL Pairs F0R 1866,
Elsmwire we publish hist of Agricultural
Fairs to be held in the United States sud Canada
Fairs to we ella in the United States and Canada
during the ensuIng three months. Though the during the ensuing three months. Though the
list is not complete - the times and places of list is not complete - the times and places of
holding many Furs not being yet announced-
it is creditable in numbers, and includes cediions to take place in 8 ore twenty States, the
Canada, cite. It will ere long lie given again,
With inch additions and corrections as will render the list as complete and accurate as
possible, and we trust show that in unusually
large number of Societies desired to prone large number of Societies designed to promote
Improvement in the Rural and other Industrial Arts are organized and making season
arrangements for their fall exhibitions. The progressive Farmers, Horticulturists
Manufacturers of the country Manufacturers of the country should make timely
preparation to secure creditable exhibitions o
the products of theIr industry and skill at the Fairs announced. As we have said, sabstan tally, on a similar occasion, hundreds of thou
sands of dollars will be expended $\ln$ getting up these exhibitions, aud whether this moses, an or necessary time, shall be properly expended
or wasted, depends mainly aron the action o
the scores of thousands of farmers and horticul tourists who read the RCRAL and other agric a tarsal periodicals. Those whoa do not either
attend the Fairs or contribute thereto, cans o
course derive no course derive no benefit or satisfaction; ont,
more than this, they doa positive injury, as their
presence, influence and couvel are needed to render them sneceseful. Every friend of Rural
Improvement should bear this in mind at the regard to what each shall contribute or' exhibit The best men in every locality should be the
leaders and managers on such ocenslons. For there are, in every neighborhood, those "of the
baser sort," who always attend popular gatheringe, and if the better portion of community
-the intelligent, reading and thinking tanners-- hic intelligent, reading and thinking tanners-
remain at tome insctive, these will give the
Fair a character which will result in injury to Fair a character which rill result in injury to
the Society and its laudable objects. To prevent
such a result, and secure a creditable exhibition and proper management, every right-thinking
person interested, should ne his personal Lulu-
once. Every one is in dots boy fence. Every one is in duty bound to evert him.
self to render the exhibitions of his Local or
State Society ? ? State Society' as credlfable and saccessffal a
possible. -No one can justly evade this respon sibility, aid then complain at what others han
done or left undone. Go to the Far, therefore and do what fou mays to make it a success But it ts not alone jour presence that is need-
ed. Your aid Is wanted as a contributor of some
product of sonar skill or industry to this or that department of the exhibition. See what you
can do in that line, and don't be so mode can do in that line, and don't be so modest as
 on witnessing the display, that you could have Take something to the Fur, therefore, for complay. Leave the matter of merit with the com
mattes, for if they are properly constituted yo
will be dealt mattes, ream ind saris. And, speaking of con judge. If you hare been appointed, don't fail
to attend, for intelligent, stralght-forward men cannot be sired on encl occasions. And If
sou have not been appointed you mar be receded

CROSSING LONG WOOLS AND MERINOS, Crossing long wools and merinos,
George barnard, Esq., Boston, Mass, writos Gborge Barnard, Esq., Boston, Mass, writos
us that he is cngaged in wool growing and has
 "The great objection to the eatter is that they mili, so that we have to resort to the bottle milk, sesuil 3 the loss of a rery large proportlon of the young nud my people are therefore b
coming diseouragcd with thern, as this faul isk and loss," Mr. BAREA lad therefore ask our ophinton of the expedilency of crossling ble rams.
The high bred Leicesters do nol cojoy so good
a reputation as the Cotswolds, as mothers. The nd that they are less liable to disown the mbs, than Merinos. But there is a difierence iards paid lithe attention to milking properties It was not their object to increase thectr flocks neys vargluy from 500 to 1,000 miles, and none but strong lambs could follow their dams on these long marehes. The wealser lambs wer therefore killed, and the others trained to such two ewes npicec.
The Spanish M
is country was a poor nurse and mother. The axoo was still worse. The elanges wronght in the spranish stock, and which have produced that distinctive and well characterized family now recogulzed thronglout the world as the "ugncrican Mualitics. In liockes possessing the moost onstitatiou and stamina - and fin thoso cspect attended to - i. e., where a constant effort has leen made to improve milking properties - the change has been marked. Hith proprer ferca, he ewes, after for a fair supply of milk, and do not ofter isown their progeny. It mnst. be eonfessed,
however, that immature evves - those urvelin threc yenrs old-do not unfrequently laek mills, rey apt to disown her lamb. Young evyes, too having mills, are more prone to disown thei in the best tlocks, numbering a hundred or two recders, very rarcly exceeds nbove the aver age increase, in good flocks, and in bed oncs it
often falls short of filty. But it mnst be taken into conssderatlon that a large proportion of the ambs whicl perlsh, perish not from the defec
ive nursing propertles of their dams, but frou inismanagernuent or from disenses or imperfec
tions incident to climate or other unknown auses
abject with willing to leare this branch of the the duty of the Merino breeder to select his ranss aud breeding ewes from good milking families, as it is the duty of the dairyman to selee Here is the wenkest point of the Merimo, nand fiere should be a steedy and gencral effort to improve it in that particular.
Whether it would be best to seek this improvement in the mode proposed by Mr. Barr
Nand, where the primary object is wool grownother questlon. The cross bct seale, is quilt ton and the Merino sluecp, is a "riolent" onc.
The dismarity in siza is great. "The elements te e mixed are not homogonco. We have heard or crosses between Long Wools and Merinos which
resulted fayorably. But we never say suel instance- - Lhongli in early life we tricd the ox whieh were "neither one thing nor the other"sheep lacking the full good qualities of cither brecd, and the syjecial adaptation of cnch to paricular sitantions aud circunktances. The ficee The first cross with the South Down appeare ous to result better - but the expcctations it grounds.
A "division of lavor" is as requisite in stoel rower should aim to raise the best materin? for some one branch of manufacturers or consumptiou. Crossing het ween the breeds which st perfection, is tirrowing away au alrcady a
 that the gain does not eompensate for the loss, There are, indeed, circunstances where such
crossing is justianule and neeessary. It is when the region of produetion is adapted only to one ufficient uriners as soon or be procured in equired. The sliece reglon of Texas lying im. of this. Therc is no market for montton there or accessible from there. The Long Wooled English sheefi could scareely hive there - could
not preserve its characteristics in a region 50 varm and dry that verectation is, during a part of the year, dried up-a recion eabjecting a par which sometimes extend this pinching penury
of foed, at neariy famine polut, turough months,

and sometimes through the year. Much of Aus-
tralia is worse situated, for thic soil is poorcr, the lieat greater, and the drouths more frequent ture and protraeted. The Merino lives and
lourishes in both these regions. The 'Texas wool grower cannot obtain a su tock with any reasonabie degree of rapidin. The cost too would be enormous. He therefor bnys the hairy, light fleceed Mexican shecp an breeds it steadily towards the Merino, by using only Merino rams. He sometincs lurings, from
the States lying north of Texas, grade ewes, with an infusion of lenplish blood. This under the circumstances, legitimate brcedingthe hest that can be resorted to-and so it would be if the cwes thas procured were pure English sheen. This is a cross of necessity, intended to produce slicep suited almost countless generatious to pnt th mongrels Lhas produced on a perfect par in ail particulars with first class Merinos. But thi would gradually and not slowly produce ver rillabe wool growing sice.
Mr. Barmard propeses to statain a similar re sult by reversing the line of breeding. ITe pro poses to brced from the Long Wool ram aud our Western prairies. If Lone Wool sheen and more prontable than Mcrinos for that purpose some physilogieal dificulties. Te admit that he danger, improprlety and inexpediency o breeding between large males and smail females
lave been somewhat magnibed, where the dis. Cotswold and Merino it is great. A gorid Cote wold ratn is more than double the sucight of the ordinary run of Mering eves. Murino ewes occasionally lamb with dimeuty when seryca by
orcr-grown Merino rumos. Can it reasenaliy be expected that the fowtus proercatcd by the evelopment in the womb of the Merino ewe nd that it will be ycaned without diniculty and anger? All
But, waiving other points, and admitting that hat Mr. Barnard can, in the conrsc of a fey generations, casily and safely couvert his Merino uto respectable Cotssolds-will he thns secarc wis real end, viz: the produetion of a better woo rowing shecp, all things cousiderca, for
Prairies? Before considering this question let na say that we cluim to bu warne friende or be nu
he Long and Midale wool shecp. We have u eeasingly urged their multiplication in the
United States. We bave always admitted their unca superiority in profit, over the Merino
in proper situations-and those situations are numuerous-that is, in all phaces where mutton is
the leading object and wool the leading object and wool but the aecessory
And the receut commencement of a new class of manuferecters in our coutry more profitable than crer before, and given them a manifest superiorty in some sitnations where previously it was doubtful or obviously
agaiust then. We think we have a right to disclose the faet and plaec it on record that during all the rceent eonfercuces between the Woo
Growers nud Manufaeturers we made it an indispensable condition of ayrecment that the dutic on all coarsc and middle clothing wools should be as high as those on tine wool-that the committees parted without a full agreement beconse
this was not conceded - that we, as Cluirman this was not concesce - that we, as Cuirman
the Woul Growers' Committec, refusca to convene that body again after its first adjournment though carncstly jmportaned to do so, unt virtually given to understand tiat our ultima-
tum, on this sulject, woula lose aecepted. Had the tarifr bill passed, it would have rendered the referengee to mutton. With suel anteceedent we feel that we have a right to discoss the prin Linhal question now under conclderation, hon tetly and plainly.
 or wool and mutton combined as the American Murino, Some of the uader proper circnm-
strinces, will mulliyly fater, nhey are better
milkers. But they require mure, better, and
 great impunity the short lieep, occasionally pro
duced lyy frost, drouth, and other circumsta ces. The must be well fed the year round to
fereiop thetr best yuaitices. They yannot travel
for their food over grait ranges as well 86 the suailer and more actire Meriuos. Nor can they
complate with the Merino in the abilits to witi
stand stand Eudden and ixtreme Ficissitndes of

THE SQUIRREL PEST
Never since the memory of man, perlapps have squirrels been so generally abundant as
they are this season. In almost crery region we hear from, they - partieually the red squirrels on the orchards and on the early grain. Con stantly increasivg in number3, they will soon
inrade the corn-fields, not only to obtain present food, but to lay up their winter stores. Barn
fold and grauaries will be rulnously infested by thien
next winter. The red squircel will gnas through the roor of these buiidings after food, thns letting in rain
they do not consume.
Now while they are at work in the orchards is the time to attack these pests. Evers farme waits until winter, he will ind lie has made great mistake We know a boy who has knled
twents-five rda squirclo in a small orchard in
the last two dags. A boy and a shot-gun is the the last two dags. A boy and a shot-gun is the
best remedy. Let the remedy be universally applied.
Central Ne

## ABOUT THAT NORWEGIAN SEED-CORN

Eds. Rulisi Netw - Yonker. - In pour ral uable paper of April 28 , a persou calling himse nish any person with an "carl's elght-rowe corn that will ripen In 40 days from planting,"

- suffieient to plant "three hundred hille, fo -suffieient to plant "three handred hille, for one pollar." In respouse to this advertise
ment, the Post-Maeter In lurlington says that etters come, directed to "H. B. MAss," by the ever received a specimen of thís carly "Norw

It has been ascerlained that no person by the
name of "H. B. Mass" is to be found in Burname of "Hi, B. Mass " is to be found in Bur-
lington. The letters thas directed were clime lington. The letters thas dirceted were chime
and taken out by Mr. KrDore, who is known beeause te deals in bees and bec-bires. Ju abore the advertisement of hif corn he adre:
tiscs pure Itallan bees, bee-hives, and whit tiscs pure Itallan becs, bec-hires, and white
clover beed, orer his true name, K. P. KidDEr.
It is time that such rascally impiositions were ehecked, and it is the duty of erery man to do What he cau to expose such scouvdrels and bring
them to justice. A competent attorney has becu secured in Barington, Vt ., who will attend to the clalms of all those who have been de-
frauded of their moncy, ff they will only for ward them. Send on your claims, feilovy
tims, and Mr. Kinder will undouhtedly he to settle them by refunding the money, beside paying the attorney's fees
Wrigirt, Esq., Burlingtou,
Thorn Hill, Onoudaga Co., E. N. Y., Jaly, 1866.

## Tranelated for the Fural New-Yorker RAPID TANNING

## Industikr has for a long thme sought to

 place tamin by other substanecs more active ing based upon the ussential ceonomy ime requircd to mummify the skins, by snchprocesses as the raeuum, sulphate of iron, ete Mr. Vos Koonseroes has resolved this ques tion by the application of the dividivit to the tan ning of skins, :lld the perfecting of the differen
processce of preparation of this prodnct, whicl red in South Ameriea.
As usual heretofore the hides are first given to the workmen, who subject them to a bath of contain; then they are piunged secretions the of lime which destroys the hair and detaelies th flesh and tilaments in aboutten to fiftecn dass. Then they serape of with a knife all paris tha are foreign to the skin. Alter these ordinary o crations the inventor prepares his solution or atividub, learing the skins in it for a time pro
portioned to the theknezs of the leather;-fo cxample: forty-eight hours for sole-leather, and our hours for the thinnest leather. After this proeess they nre perfectis tauned and ready for the trade. Lf skins are requircd with the hair on, it iz only necessary to tricat them directly to the solution of dividiow, which tans them in two
dass. This proeess is applied mainly to millta-

Thus, in the space of iftecu days, is realized notable economy of time without taking awa rom the Lides their supplencss, clasticity, benut or the good quallties they obtain by a prolonge sojoura in the tan vate. In the markets these
producte scll the same as those treated afler the have been otucr proeesses of rapia tannin been auandoned because they decompose the fibers instead of transforming them-the most elementary notions of chemistry sufficing to
show the reason for sueh a result

## CANADA THISTLES.

A whiter in the Western Rural tells how eriy in the springe as soon os ther are oll of the ground. As soon as they are up the second time, plow or cultivate with a whecled calin sight, whicll will be about three or four time during the summer. If the season is wet it is agree with me - beeause thuy sprout and malis their appearance mueh more certainly than in a dry season. In a dry season the roots lay in
the ground without coming up; in a warm, wet the ground without eoming up; in a Warm, wet
season they come up three or four times, and

MORTMCOMORAK. GRAPE GROWING,-VARIETIES, MARKE
ING IN N. Y. CITY, \&c. EDS. Rural NEw-YoRkER.-As tbe Agric
tural world is at present quite exceited on t
snbject of Grape Growing, an artiele on Grap
icc, will not be ont of senson, and may be inte
esting to some of jour readers. As many ren with avidity anythour readers. As many rca
to give you a few ideas on the it, I probject, as
 some of these are also painted. Others use the
commmon peach basket witha a. linen corer, and
some use boxes holding from it to 10 pounds.
dealer.
In some locailties the grape growing mania
previlis to a rery great extent and there you
Fill find that land has riscn hnndreds of dollars
per acre, and many farmers realize more mones purchasers do in growing the grape. purchasers do in growing the grape. I anu
aware that it is a general idea that the grape can
be grown almost anywhere in this eountry; so it aware tast nimost anywhere in this equantry; so st
be grown nit
can, but not to snch a degree of perlection that it can, bnt not to snch a degree of perliection that it
will be songht for by lovers of this fruit for their Will be songht for by loycrs of this fruit for their
tables. Many of onr grape growers never taste tables. Many of onr grape growers never tas
any but those grown in their immediate vie
ity, and of course are not ity, and of course are not compretent to judge
correctly of their quality, whlie those who re-
side ln largc cities side in large cities hare them from an parts of
the country, and can compare and judge of their
respective value anc merits the country, and can compare and judge of their
respective value and merits. Those which are
saperlor will meet with superior will meet with snccess, and those
which are poor will be condemned. In Inpeaking
of those living in large cities, I do not rufer to of those living in large cities, I do not rufer to
Agricaltural Clubs who meet to praise crergthing they have to seil, and condernn evcrything
they bave not, bat the propple in the broad scuse

## Every seetion of conutry expecting to grow the grape sucessfilly suould have a press to

werk up the inferior fruit into wine and vinegar. By so doing they will aroid seuding a large quan-
tity of poor fruit to market, which injures the demand for cluoice frait, as that will bring more
moncy alone than the whole amount will if sent to markct. Last fali a large quantlty of thss sin.
ferior fruit was thrown into marlet cuite iate in the senson, and there being no demand for it, it
sold for tivo or three cents per pound, which
would not pay the expense of

## mould freight.

The various growcrs are apt to think that
their own section of country is just the place to
grow the grape and that their own section of country is just the plaee to
grow the grapc, and that thicir frait is superior
to ali others. The cause of this is that the farmers do not take time to vlsit other seetlons
of country and compnre notes with otber sroww ers, notloing the differencc in soils, stituation of
vincyards, and the guaiity of the fruit. vincyards, and the quasity of the fruit; thus in
forming themselves by practicai obscrvation or what they cannot obtain by reading. Some nur
serymen crente a grent excitement orer som nelv vraiets which they brve mado a pet of, and
by the forciug process bring the fruit to a ligh
degree of perfection, and then recommend it degree of perfection, and then recommend it as
leeing just the thlug that eversblody wants, as it
will grow and will grow anywhere, aud under any circonmatan-
ces, thus palmius off an aricle perfectly worthless to many parts of the country, and not worth
he cost of transportation to many growers.
1 would advise those of limited means not to urehase these wonders until some norer wealthy and unlased opinion of the article. I I do no
wish to suy that any particular variety is jest wish to say that any particular variets is best,
or sclls
the best in our markict, as we have a arge varicty of very cloice frult, and I do not
carc what name you may glve a grape, so the
lusters are large and finc, and the fruit rieh and swect. As notual with all fruit, the earlier vari-
eties bring the most moueg, veanuse then fruit is
carce, and in demand, Fop is in, priees arc governed by the quantity mong the early fruit, while the Isabella is th
cincipal variety. The Catawba is a great favor rincipal rariety. The Catawba is a great favor
in in our market, and when choice always com For a number of gears Ohio has sent a large
nantity of good grapes. They are principall vantlty of good grapes. They are principall
atawbas, and a very fair article, but owing to he distance they are apt to te damaged by rop of early rarieties, bersey sends 148 a good York Btate fur
bishes us with the largest quantity of fruit. The ishes us with the largest quantity of fruit. The
est grapes that we receive come from Steaben grapes that we recelve come from Steuber
in this state; they are priucipally Catawbas in this state; they are priucipally Catawbas er met with. Their vallcy ( Pleasant Valley this delicate variets, and the growers thor bly understand the raising, curing, and pack eeep them until after all others are out
narket, thus giving them the adrantages of rarket, and realizing the highest prices fo
them. The grenter part of their crop brough
20 20 cts. per ponnd here, and one grower bold his
crop of sereral thousand pounds at 20 ets, per rop of sereral thousand pounds at 20 etto pe The retarns of the crop would be a very interesting item, but I cannot glve it. Severny
tons of their Catawbas which damagcd in trang perting were bold to a wine denler for 10 ets. per
peund, peund, and he informed me tbat they were the
best wine grapes he had seen in this country.
Their plav of sending their friit is orlcinal he dealers are greatly pleased with it. The Hammoonden bort, made size Farbciuld bros. of
and the other ten pounds. These are paoked in, and the other tcn pounds. These are paeked in
Fkeietor caseas, whieh are sold with the grapes. The plans adopted by the growers in different
states to market their froit varies considierably.
The countles rake countles of a bordering on the Huadson river
The tops are dung with abont linges, and pounds, with a ccrewr or lock. With lingeses, and fastened them are neatly
painted and orwamented, and have the owner's

These are packed in large wooden eases, neatly

boxes

## of both paper and wood, and are pareked in cheap cases whieh arc not returned. The others are all returned to the owners. The paper boxes cheap cases whieh are not returned. The others are all returned to the owners. The paper boxes are the poorest kind, as dampuess spoils them, and I hare freqnentiy noticed tbat when they

 do arrive free from damp noticed tbat when theyThere must be something are spoiled.
the paper that in omposition of There must be something in the composition of
the paper that is injnilous to them. The Ohio
plan is a clueap wooden box, made light and flat, plan is a cheap wooden box, made light and llat,
holding about 25 pounds.
There is one point in regard to the selling of grapes in our market that mang growers do not
understand, and I will endearor to explain it.
It it the a prevaling opinion anongy growers that
money they can keep their grapus the more woney they will get for them. This is incorrect
in a great degre.. During the hight of the grape
season we lave a large number of denless in the pooer qualities, who sell in the streets frome
wagons and baskets As the scason advancos these deaters all quit the
busincss, and also all the cheap grocers who
bare have been dealling in them. Erca some of our
beet grocers tire of them. At least 90 per cent of nil who hare been dealing in them retire from
tho businces, ceavius only a fow of the first class
fruit dealers la these the fruit must wo very cboiec. Thlis ac-
counts for a poor article of grapes not sclling
late in the season, and I would advise crevy late in the season, and I would advise crer
furmer who lives at a distance from market, an
bas bas a crop of poor grapes, to seli them to
wine makers, or if none are near make them
into tinegar, which is always in demand. A very choice article of Catanllas will sell
nntil the Holldays, when the entire trade falls
off antil Mareh or April, when there is a slight demand for it ifstrictly fine. During the mouths of January and Fobruary it is nlmost impossibie
to sell a pound of grapes, to sell a pound of grapes. 1 presume the cruse
of it is that pcople have not leeen a ceustomed to
secing them in market and concountls the ccing them in market, and consecrucntly tblols
they cannot procure thecu. This idea will soon
disappear, and the people be taught that the can procure them in winter as well ns in the
fill, for with the aid of the frult houses we will lee able to keep the grapca. I lave kept som aiscd no more care with them than I should wilh

## the wool tarife

 We place before our readers, withont vouch-ing for its accuraes, the following articie from ing for its accuraes, the following article from
the N. Y. Economist, the orgau of the wool the N. Y. Economist, the organ of the wool
dealers, and oun of the most strennous adro-
cates of free trade. We trust that $1 t s$ statecates of free trad.
The defeat of BisGinss's Anendment by the
Scnate, would scem to put a somewhat different aspcet on the postponcment of the Wool Tariff,
from that presented when we gave our vicwe on the subject, Jaly 2sth. We are engaged in a
careful inrestigation of the frets - through a carctal inrestigation of the faets - througn the wool tarifr in Congress-and as soon as thos
facts can be satlefactorily asectrtalned, they will be placed before our readers, withont fear o faror. In the meantime, we cannot too ur-
gently press on our friends the necessity of cently press on our friends the necessity of esolutions, and circulate petitions for gencral signature. Let every friend of home industry write to bis Congressman, and to the Senators of
his State, iu faror of the proposed jnerease In the dutles on wool. And let evers such friend make
the best efforts within hls power, and fuclte the best efforts within his power, and iucte
others to make efforts to defeat the nonilation and election of every candidate for Congress who 18 unwilling to vote for that fafr aud just proteetion of the wool growing interest which
the scale of duties now necessary for revenue purposes rendens but an incidental one, and but fair ernallzation of the benefits aud burthens
of taxation among different protected indus. tries. Let our frilende bear in mind that nomi nations for the next Congress are already begin ning to be made.
Tre Fartuen is the Economist's article :
 tho introdnction or 1 lis suditent method of incereasing
the dntios, was to cive $n$ bonus to the wool-grower The following la s copy of thif famone pection:

## Eryipelas among Horses, A Misssssirpy correspondent of the South en Culuvator, dating from Panola

 Etates that a acw disense has broken out amothe horses there, which bas proved to be ver fatal. What lt really is be docs not know,
pames it the erysipelas for want of a lueter ap pellation. It commennes with a swellitg about
$\qquad$
$\qquad$ are quite rare. Where doga and hogs have cate
of the carcasses of the hores the resnit ha generally becu fatal to them also.
Transferring Hozey Bees
Trise editor of the Livingston Republican,
invitation, witncesed the transferring of a hive of bee sy a very simple process. The operato
took a cotton rag, fired it and blew the smok took a cotton rug, int
into the hive annong the bes. This seemed to
direst them of all propensily to sting, thoug they crawled about quite frecly. The hirc was
then lald on a talle and the honey taken out, the bees being brushed off with a feathcr. After up by the Land and replaced in the hive or put
into a ner one, when, rccorcring from the
stupefaetion of the emoke, they will commene working again. Germinating Power of Corn,
Ir is stated that a woman in Maine, having heard a disenssion as to the power, selected a car and planted a few kervels from it for thlirty
cears. It germinated the twenty-ninth year but failed to come to time on the tiniftiecti-inducing
the inference that its reprodnctive powcr bad dicd out. This does not accord with statement made in refereuec to grain taken from whe pyay tated after uaving reposed in tho
Mulching Wheat.
IT is asserted by some that mulching whea
auring the winter, not only protects it from the serere action of the frost, but also inrigorates is a matter ensily tested, as au acre or two could be readils mulched with straw by way of exper utility of the proeess.

## Surlis For Mavere.-It is stated that ojste

 shells, ground into llour, make a rerystrong and

| Cradier |  |
| :---: | :---: |

Life is not all sunshine, as we truly find the frther we adrance upon its pilgrimage. Ths we were called upon to part with friends, whom We had known but a few short months, but who
bind closely interwoven lnto our natures their hopes and fears, lore sud friendship. We felt, as the good-bye was spolen, that all the sun-
shine had rankished, and that the wares of life had swept across our path a bright ray, let it filmmer upon us for a brief moment, and the
succeeding wave carrled it away. Borc of life from the outer world did the ray bring, leaping us with the knowledge that onc more wair od the
world had crossed our path, and ranished, gro ing us added wisdorn of the "ways of the
world." "We live and move and bave our belng," bothow little do we realize the real faet of
living, we who lle out our dass "far from the crowd's ignoble strifc; "- cach day, cach hour
brings its little minutia of worls and the aecubrings its litte minulue or works days, weeks and months sweep past, bearing with them many a mecting and many a
parting, and finally one great whole is formed, and we number another yenr.
And so we go-the sears roll around and our
life-task will soon be eompleted. Our heart
fails us, our mind slnks into inanits at mant fails us, our mind stnks into inanity at many
a portion of "our task," and we ask for rest. but it comes not yet, and we plod on-for so it
must be. Is our task well done? Has our plodmust be. Is our task well done? Has our plodmurmur and repine that partugs muss come. -for our places aro wanted by the rising multi-
fude, and wee must not stand in the way of ans tude, and we must not stand in the way of any
adrancement. God reigns, and our murmuring hcart mas rejolce-for we may know, however
sinall au atom we are in the grcat scale of humanity, yet we are one of God's children, lored
as a father loveth his ehildren. Thauke for the blessed assuranee! And by and by all this strug.
ple of living will be orer;-" all the hope, and fcar, and the sorrow; all the aching of beart,
the reatless unsatisned longing: all the dull,

THE FASAIOXS FOR AUGUST.
Dranorest's Monthly Magazine for August,
White ganze or grenadiue dresses are among
the most elegaut styles Torn. JIany of them
are gored orer a stirf lluincs,
marceline silk, and trimmed dor
rucles of white or colored silk.
the bodice 1s cut rery low, and the
wed square, with ruches to match. Dresses of
rose, or maure, are mounted in the same way
apou white silk, but charmingly trimmed with White eluny laee, worked with pearl heads. hese striped dresses, made of suls the color o the stripes, and orramented with a border Quite a ner method of trimming evening dresses consists of the apron-style, put on a
the back as well as the front. Narrow fionnces or lace, sills raching, or strapls of ribbon o purpose.
Another style is to cut open the back brendth of the upper dress, so as to pernit a rich under
skirt to be seen. The under-skirt is frequently trimmed with a flomnee, headed with cluny lace and the unper-Ekirt is deeply randyked all round front, as well as at the back.
wear with a high or low-necked dress. would be more proper, howerer, to call it a re were worn some fifteen jears ago.

comfort there is in a cheerful spirit! How the bcart leaps up to meet a sunstiny faee, a merry
tongue, an even temper, and leart Thieb cither naturally, or, what is bettcr, from conscientious
principles, has learned to talee all things on the principles, has learned to take nill tilings on the bim is to enjog to the full what he sends of good,
and bear what he allows of eril; like a eliild who, when once it belie eves in its father, belicres
in all his dealings with it, wietuer it understaudo them or no
smong th cmployed, cither by or upon a naturally susious
or morbid temperament, there is nonc so cead to hand, or so wholcsome, as thà so often
referred to - constant emplosment large number of women, particularly young
women, are by nature constituted so exceedingly womeu, are by nature constituted so exceedingly
restlcss of mind, or with such a strong phesical tendicney to depression that they eau ly no possibility keep themselves in a state of ercu
tolerable cheerfulness, except by being contin-

## WORE TO DO.

MY bellering reader, let us remember that all God's chlldren are also his servants. You and
I then hare a "lowly work of love to do." We Lave enome special service, some little sphere so
peenliarly our own that we shall have to give aceount about it as being its only occupants, eharged to look after it but ourselves. Where is it?
about it? It is an awfally solemn thing to
hare entrusted to us what concerus the Lord's glory, and the ceerlastlng blessing of prectous souls. Oh, to be aderuatcly alive to this! $\mathrm{Oh}_{\text {, }}$
to be constantls so tllued rith the Spirit that we shall not only know our place of special service, bat shall be constrained by love to give our-
selves to it as those that "cannot but." Uinlcs3 Te experience tlis in some degree, what reason can wc hare for conclnding that we are truly born again? "Yost reighty are the words of
M'Cbeyne: "You are greatly mistaken if you think that to be a Christian is merely to hare lights. This is all welf; bat if it leass not to a devoted lite, 1 fear it is a delaslon." And what is a deroted lite? Ask Gethscmane, ask Calyary:
nas, "ask deathbeds, tuey can tell." "oh,
brother brother," cried the dring Leigh Richmovd, "none of us is more than half awakc." But Why spealk of the awfin solemnities of a
dying hour? Are they a whit more awfou than the solemnities of the preeent liking hour? It
is God's most hols prosence fully realized at is God's most hols presence falls realizad present mowent with all the tremendous im.
portance of life's last hour. - Farnily Treasury.

THE POWER OF EXAMPLE.
I s.triseried my Quaker friend by lending esample as well as my precept to lessening the
gencral sin of latemperance. What was the regunt? It was of a most pleasing charaeter. The resalt of such a coursc, ,Thich did not emanate
from me as an individual, bat from the high of
 expectations. It soon got wind that I ac "Te.
eome a teetotaler. "Oh," zaid some, "The come a teetotaler. "Oh," said some, dignity of his proicssion." But what was tbe
I
do not say that these re sults are to day in full force. The mayor be-
eame a tectotaler; the es-magor became a tee. totaler; the superintendent of poliee became a teeiotaler; I belicere that became teetotalers; elght hundred uamies were registered la the pledge book: seren hun-
dred of our roung people became members of our Band of Hope. The whole moral aspeet of
the town beeame changed. Sobriety was soon the town beeane changed sobrioty whic houses and hindrauees Trerr lesseued, and philanthropy and rellgior progressed. In ehurches and chap mproved attendance, and teetotalism1 was gencrally pronounce
Griphths, Wres.

Beactirct was the reply of a venerable man
mas
the living:- "No, put I am almost there."

## ABOUT MARRIAGE．

I Would ask May Maple if we are to under－
stand，by her＂old Maid＇s Solilioquy，＂（in the
RUR RUR．aL of Aug．4th，）．that marriage incvitably
leads to unhappiness？Perkaps it has been hcr leads to unhappiyess：Rerhaps
lot to sec only the dark side of the pleture，and，
ind jndging from that alone，shipe there would be no
ize that were there no mansbing
shadow，and that in marringo as lo all things elise， shadow，and that in marriare ass lo all things else，
there Is $a$ ．blending of the ．two．That thero are many unhnpyy marriages is but too trine；and
can we wonder at it whlicn we sec so many mar－ raning for couvenience－on the one hand for
a home，on the other for a housekeepcr－with－ out．any regard to a，nnion of sentiment or feel－
ing？Such marriages are mere sbams ；avd I do ing？Such marrlages arc mere sbams，
not wonder that \＆sensitive nature sbrinks from
the thought of furrying when looking at the ruin of so manny bomes．But we would not judge too
harshly of a tic．which should be regarded as sacrcd，for seattcrcd all over the earth are many

happy fircsides，made so by lore and congen－ | ialits． |
| :---: |
| Mn |
| Mn |

Mnch depends on the wounu in making ${ }^{2}$
homecrhat it t hould be．There may be many dis． appointwents－many diseouragements，which，
unlooked for，spring up around her was；but if shc be a true woman she will seek to over－
come them，and when trials come meet them
bravelyand cheerfuls，that her husbaud，return－ ing at night，weary with his day＇s toll，may meet
only smiles and words of cliecr，－making his home the dearest spot on carth，to ward which
he ever turns with eager fect． And wonld the husband sometimes whisper a
word of appreciation to her who seeks to make his home happr th would give new life and en－
orgy to her orery effort．It seems but vatural that we should．wish to be appreciated by those
we love；and were therc oftencr words of praise and endearment por in the home circle ho rugred poths of life．

## Written for Mooore＇ B Rural New．Forker．

In the far West，many hundred miles from the
home of her girlhood，lives a young，though caremora woman，whose manifold labors forbid
the indulgence of literary tates or，amusements of any kind－whagoes，fin takk to task dream． ing or the wistant incuds and scenes that she shall
sce no more．Every little act of kindness that
warmed herchildist heart is fondly remembered． Warmed her childict heart is fondly remembered，
It is and carc for，but slie has a passionate longing for sociel joys．and appreclative frieuds to talk
to．Popple，particularls laboring farmers and their fanilies，learn such reserve with regard to the better part of their lives that it seems
robbed of half its beauty．My friend who goes about ber house feels it，too，and lougs．to pour
out her little story of homesickness into some out her little story or homesickness into some
kind old lady＇s ear and hear her say，＂it is too Par
Particulatly she longs for one dear old lady to her father＇s，and who，being an＂inpalid，was
ever pleased when per little friend came In．In her inaglation she is often a child again，sit
ting on the stone door step at Aunt $K$ arx＇s feet ting on the stoae doorstep at Aunt KanX＇s f
with her hands foll of pinks and marigolds
dreesing her doll，or listening to some
 Wigh comes that she，too，mighit be kindly re－
micmion micmbered by some who are now joung．The timely thought makes her fetch the baby out of
bls new found scat in the onion bed，and help hls new found seat in the onion bed，ava hel the older one out canght，whthout feoling irritated that
hade had fo many steps to take，and feeis thank－
site she had so many stens to ememory of such a wo－
ful that she has ercn tue

man to think of．So far does the radianee of a | $\begin{array}{l}\text { man to think of．．So far does the radiance of } \\ \text { good life extend．} \\ \text { Elkhorn，Wis．，} 1866 .\end{array}$ |

Ferbaps the old Jewish eostume woru by Re
bece and Raehel may hare beon a shade vetter but there was the same exposurc of neck and that slowed a leg encased In hideous hose an boots，and that refuscd 10 sweep with Greclan
amplitude around the 11 mbs of the fair wearer． Cleopatria，who is reppresented as being bot white or purple，and the heary dladem of strings of pearls which were allotted ns the garb of
Epyptian princesses．How dark and uncomels must have been the majority of her countyme may be judged from the senation she made
The Roman ladies were famed for their stately carriage and somewhat large，but noble fea lures；and when to these clarms they addo
regularty，delicacy and beautifal color， dress was rerr becoming to theme ；but without they noust have appeared．

## TAEING CARE OF CHILDREA

Trut children are so mueh left to the care o
servants in so many families of the mldd serrants in so many familics of the mlddle
classes，Is perhaps unavoidablc．Nerertuelcss，
it is $\Omega$ grent evil．Howerer attentive and con－ sclentious servants may be，and even allowin
s． them to posscss the necessary intelligence，it
canot be expected that their efforts can cyer hanit the ow or the loving，watehful cye o Who arc attended to Ly their mother，whe ar
undrcesed and put to bed by her，who open their cyes in the morning to behold her cheerful fae and 10 ving looks，wha hy lier are dressed，an
keptunder her tender and jndiclous eare tirongib out the day，are，ss a rule，far more good－ten left almost wholiy to the care of scrvants．I the accldents which so frequently lappen to malmed，or rendered idiotic，mostly arisc from the nepligence of those in whose care they ar left by inconsiderate mothers．Parents who lo their chidren，and are solicitous of thcir wel
fare，shonld give thase considerations thelr．earn the utmost importance in relation to domestio happiness and well－being．

## AN ODD OPINION OF LOVE

Sir William Cornwallis in 1631 ，in speaking o the tender．passion，sald：－＂＂It is，a pretty sof
thing，this same lore；an excellent compans thlngs，this same lore；an axcellent company
keeper，full of gentieness and affabilities，mak－ ing men ine and go clcauls，teaching thicm good qualites，bandsome protestations；and if the ground be not too barren，It brlogeth timcs and arms and the nat pulled down；yea，it is a very not to be disallowed；better spenà thy time so than at dice．I ame content to call this lore joyne carth to carth；the one must be celestial
＂Mstrared conples resemble a pair of shears， says Sidnoy Smith，＂so joined tuat they cann be scparated，often．moving in opposite direc tions，yet alwa
between them．
Lar it down as a rule never to snile，nor any way show approval or merriment，aish grow with bis growth，and strengthen with his

Two ears bat a single tongue
The lesson she would ceachic

ENGITM SPARBOWS TREE PROTECTORS
A corresponder of the N: Y. Evening Post
says that three hundred sparrow liouses have re-
says that three hundred sparrow loouses have re-
entiy been erected in Madizon, Ünon, Gramer-
5 and Sturvesant Parks, and the bleds are
hese sparrowz devour the white utillicra, the pa-
these sparrowz devour whe wite willers, the pa-
Lyasto exceediug that of any other bird known

bjth, I lueg to state that wo lane any quantity of

thein. Last year and year before our trees ay
this period were almost stripped of thectr foliaga
by the worms; thls senanu I have not seen the
Birds that smeetly warble
All the summer days；
All thing speak in musio
Their Cazator＇s praise，

WHICH WAY；YOUNG MAN
IT was a favorite theory of Lord Bacos that te mind of man is ，llke a sheot of blank－paper， be erased，but may at any time return to But whether we accept thls theory cantirely －not we camot deny the graat induence whlch
habltual modes of thought exert unon the char． Do wo not nsually find ．．that those strengthen with the manit－that，his mind and
aims are shaned aud directed by Certalu thint In the boyish breast of our country＇s
 al wass in theit triin．These alded him with their
adriso and direeted him with tholl＇counsels，un． ii now his unime is a synanyn of counsels，un． purity．
Like all great things，character is not formed Like all．great things，character is not formed
in a day．At the moment when the mind wakes foom lts Lethatgy and swift－winged thought
comes to ally us to tho race of mortals，at that moruent does tho task begin，Day by day，
month by montlo，sear by yenr，the work goes on，for the task is not for time bnt for eternity is a moment is its progreces arrcated．Its marech
is ord，untll at hast the goal is resehed the nana has．formed for hlmaselfa a cliaracter，and
the task is dore．The coral 13 lands are the rc． salt of ycars，of ages of patient toll．Slowly those little betngs is retwarded；for the su shines kindly upou them，－the blue sky，with itg
mythad stars，－looks sullingly upon them，－the of from the seeds borne thither wo spring ad the blids bulld their nests upon then．So if we do our work patiently and well，angels
will applaud us，and God will reward us． Character is ereclasting；it will go with us be
yond the grave．Shionld we not，on this ac－ count，strlve to make it what it alould be？
Since it is to be forcrer our conizmanion，should e not wish it to be above reproach？And gress，clther in the paths of virtue or of vice，is
no thls a question which deserves at least Which way aro we moying？Are we riging or
sinking in the moral seale？Nerve in the hlsto ry of our natlon was there as great a need of
men of yonng men of pure principles，as a
prescut．In these exceiting times，wit hle old ship of state hus been tossed for so long
a time apon the rongt and turbulent sea of civll strite，now，as she beglus to right again，she de
mands，and must linve，minen of alcring wort
$\qquad$ and thus fall to emuinte the example of our fore－
fathers？GoD forbid！Well，then，does It become

WALK ACROSS EURORE BY A BOY．

$\qquad$ henrs．Turee months ago，blishatisfled wtht his
jen tratment by an uucle in Paris，he started from o his mother，who is married to a second hus． sand，a Freuch workman in the employ of the
Shaih ae Teleran．With the ald of a man and galde－book the 山tte＇ad renturer tramped right across Euyope，recelvtury such hospitality on
the way that，on reichlag Constantinople，he had still nearly balf hils francs，remalning．After a short rest tu Pera，he crossed tho Bosphorus
en route for Porsta，but，a littlo beyond Beutari， en ronte for Porsta，but，a 1 iltle beyond Seutari，
was stopped by some Turkisl policemen，and hrought back vatil an interpreter was foond．
His story being thus learned，he was．passed over to Pera and placed in charge of tha French
Consu，to whose custody．Lo now is，unable to understand Why he silould be interfered with， Love for his mother，and anseen yearalog for
her protection，ratier than any mice wid

Boys Upiag Tobscco，－A strong and sensl－
 boys．It tends to softening and weakening of the bones，and it，greatly injures the brain，the
spinal marrow ande the whole nerypus luid．A woy who stuoles carly and frequently，or in any known to make a man of much energy，and generally lacks muscnlar and phasical，as well
as mental pawer．We would particularly warn
boys who want to be anything in the world to boys who want to be anything in tbe world to Injures the teeth．It produces an unkealthy
state of the throat and lungs，kurts the stomaeh state of the throat and lungs，
and Blasts the braino aud uerve
> ＂No prolt grows where no pleasure＇s ta＇cen．＂
－Shakspeare．－This ls the seeret underlying a our heart is in it，and we shall glve it our atten－ lon－not drided，as it would be if the hainds other，which is often the case．It makes a man heed this enough．The ancients dild more than we do－and they sueceeded，ceven in those carly
days．Let us do what we llke to do if it is con sonant with good morals．

| HOW CYRUS LAID THE CABLE. <br> EI JOHS G. EATE. |

| Fall $F_{\text {ecel }}$ - Seanomable rains have made fall feed fush. The meadows and pastures are yreen. Newly seeded filds are also doing well. green. Newly seded fields are also doing well. There is certalnily grass enough to fatten stock designed for the buteher, and to put that kept Sor store in good condition to enter the winter. Farmers stould take imely muabres to pre- vent injurs to last spring'b ecedhag ly bard and late pasturiog. <br> Sill as Manure- - A correspondent of the Canada Farmer experimented with salt thls season as a munure. He sowed it on barley and oats ${ }^{n}$ t the rate of one hundrelf aud difty poonds per acre, leaving strips of unsown graln in caeh field in order to test the efllency of the salt.. He is contident that it added one-third to his erop. Jonn Jonssxon, wo belleve, clainus that salt is a yaluable mannre on lis land a valuable manare on his land. It is prolinale that the leest results with it are produced on rich land. $\qquad$ <br> Fightiany the Potato Buy, - An Indiana correspondent says that a very good way to head the potato bug is to whip the vines lightly with a Landiful of brish-willow twif are good; this causes them to drop into the furrow where they may be laslicd to death with the twige, tramped on, or desstroyed by the caltivator pasing along immediately. The best time is when the sun shines. Our correspondent states that the bugs aro very destructive to beets and tomatoes as well as potatoes. $\qquad$ <br> Corer Scel.- We believe that a crop of clover than the crop which is cut for hay. Any seed mere fodder erop, One strong reason for eut ting timotly for hay early, is to remove it from whieh torore it has anstracted thuse clements mued less than if cut later. The first growth of clover is not gencrally draposed to seed mucli; hence it is not so exhaustive on other hence it is not so exhaustive as other grasscs it cut late. But thu second erop, which bearj the seed, is injurlous to the land -at least tho |  |

The Putato Crop.-There is an extraordinary
breadth of potatoes planted this season so for our olservation extends. The high prices of last cully they are looking well; we hear no serious complaint, and the season bas been fivorable,
In the cent of a oood yold they will still briog a fuir priee, for they will, to a great degrec, be
used in the stead of wheat, whiell must be dear. Gencrally when potatoes are very high in the
spring they are low the next autumn; for obvions reasons many are planted; the reverse is
also ant to be true. The potato crop is genc-
rally well tilled - better on rally well tilled - better on an average than tho
corn crop. Properly managed it is less labor to
hoe potatoes and keep them free from weceds hoe potatoes and keep them free from weed
sany to is corn. On free land it is hardly neces
sary them by hand.

Irrotection to Wïnter Wheat.-It is snggested, by a Western farmer, that wheat bields may be
protected from the severe weather of winter by oats frst and covering them and then follow iu a day or two with wheat. It is thought the oats will help protect the wheat durlyg the winter,
disappearing, of conrsc, in the spring. Another Mha is to suluch the wheat, late in tho fall, with stravy. What effeet elther of these tilans may
lave in protectlng the wheat from the severity
of the winter be de not them winter we do not kno:\%. One or all of
them be tried on sinall lots of ground, Ring expense. As the country beoomes divested to increasingly severe trials from wind and frost.
Lesa snow falls now than formerly, and what does come is borne from the wheat ficlds by the
winter blasts which carcer over them since di-

## DREAM AND A MISTAKE

Tue toleco Blade is responsible for a story to this effiect :- $\Delta n$ Inse girl at a boardng iouse
dreamed that a certaln tieket in a certain gift
cuterprise would draw a prize of 810,000 , which coterprise would draw a prize of 810,000 , whichs
was advertised. $A$ middle-aged gentleman boarder who heard her telling the drean laughe and finally got him to write a letter, for her to the concern, inclosing one dollar and asking for the partlcenlar number of the dream. The dram-
ing took place at the designated time, and the ing took place at the designated time, and the
boarder diseovered by the papers that the identieal tieket bad drawn the 810,000 . The girl was The boarder fell desperately a-rooing, sueThe boaraer was speedily married. He Eoon
ceeded, and
delicately broached the mattcr of her lottery renture, and dlscorcred that; after the lette was written, she had taken with the matter, and to have anythe letter. He had a wife without the currency encumbrance. He was something
a philosopher, howercr, and more a man. It did not desert his wife nor let her know his diappointment, bul resonch the make the tlonal institution in Michigan, reeefing the may more in the sphere of which her husband is an ornament. Nobody is obliged to belierc this story, in whole or in part, but it is narrated at length and as be that wo has
any one drawing $\$ 10,000$ in gift enterprises either with ticliets they had drearned of or those they
had not dreamed of.

## FUTURE HOUSEREEPING.

We sometimcs catch ourselves wondering how are to perforin the part of housekeepers, when the young men who now cse them so admiringWe listen to those young ladies of whom. we speak, and bear them not only acknowledging, duties, as if nothing would so 10 wer them in the estimatlon of their fitends as the confession of picee of meat, or a dispusition to cngage in avy uscful employment.
Speaking from our own youthful recollee. lily hands are very pretty to look at with lily hands are rery pretty to look an wand cyes, and sometimes we harc known the artless innocence of practleal knowl. edge displayed by a young miss to appear rather
interesting than otherwise. But we Lave lived interesting than othorwise. But we have lived
long enough to learn that life is full of rugged experiences, and that the most loring, romantic otherwise, food, and the house kept cleau and tidy by induatrions bands. And for all the prac-
tieal tieal purposes of married life, it is generally
found that for a husband to sit and gaze at a found that for a husband to sit and gaze at a
wife's taper ingers and lly hands, or for a wife make the pot boil, or put the smallest piec make the
food therein

## a traveler's experience of woikan

 I have observed among all nations, that the men; that wherever found they are the same Kind, civil, obliging humanc, tender beings; that they are cerer inclined to be gay and ehcer-ful, timorous and modest. They do not hesitate, ful, timorous and modest. They as aot hesitate, hauglty, nor arrogant, nor supercillous, but full
of courtesy, fond of soeiet5; idustrious, ceonomical, ingenious; more ilable in general to err than man, but in gencral also more virtuous, and performing more good aetions than bo.
never addressed myself in the language of cency and friendship to a woman, whether civil izcd or savage, without receiving a decent and
friendly answer. With man it has often been otherwise. In wandering over the barren plains of Inhospitable Denmark, through honest 8 wc den, frozen Lapland, rude and ehurlish Finlana, unprincipled Russia, and the Tride-eprcad re gions of the waidering Tartar, if hungry, dry,
cold, wet, or sick, woman has crer been friendly to me, and unitiormly so; and to add to this sirlence, these actions Lave been performed in s ree and so kind a manuer, that, if I was drs, drank the sweetest draught, and if hung
the coarse morsel with a double relish.
A Pucabsy sermosi-St. Jerome, in oue i
his serouns, gate a reljkike to the women of to
das, whieh has seemed to be so apropos to ou day, whieh has seemed to be so apropos to our unirersalls. The following is a sample:
"Abl I khall tell you who are the wnin eandalizc christians. They are those who dank thosc who plaster feees tear without its tracing a furrow fail to teach them that they are groming oold people's lair; those who chalk wrinkles into who aflect the demeanor of the bashful maidens in the presence of troops of grandchildren." Ond Folks.-The old, like withered leare hold to life by a frail tenure;
husky breath, and they are gone.

OUR fathers in Agricultare quite generally held the opinion that eummer-fallowing greatly ben-
efited the soil by the rest which It gare. If the the land lay ntterly idle throngh all the season of growth should it not recaperate its powers of production? They believed it would. And ent time among farmere.
Eat afbsolute rest obvlozely addes nothing to the soil; po food for plants deseends from the ar above or rises from the subsoil below. favorable chemical aetlon is known to be in the elements; on the cuntrary it may be appre henced that the washing of the raln, the parch. ing of the sun, the eraporation of the atmos. phere, remove some of the rolatile substances impart fertility to the eands of the desert, nol are increasfig in fertillty, ever permitted to be destitate of regetable covering.
cultiration. Ey cultiratlon we mean bere those physical changes which may be made. It want deep and thorongh working $k o$ that the roots of
plants can reach every particle of soill; it needs dralning to draw off the stagnant water whieh $1=$ polson to the roots of our cereaisand enltlvatei grasees. Deep, thorough and frequent pulver ization of the soil, though it adds nothlyg to the amount of plant food, will, by making it al productive. Then, except during the brief pe riod of this thorough working, the soil shourd be produclag, for it is by the sole agency of what grows apon it that the farmer cay hope to increase the amonnt of plant food in bls land. But is not land constantly prodncing crops, Yest, if those crops are remored from the cif and no remaneration made therefor: wint if the whole produce of the ground is returned to it the amount of plant food is inereased. Tiu soil becomes richer for the reason that the substance of the plant was onls partly derise and while the soil reeeirto sgain what it through the decomposition of the plant, it has in addition all that was drawn from othe sotrces. This is the reason why the plowing under of cloref, or other green cropjs, for manure, entiches the soil. The crops have dramp the soil - they barc yankered fomponents from wise-and it is precisely this whien increases the previous richness of the soil. And if all the masure which crops will make by passing
tbrough the avimal systern be returned to the soil, its fertility will donvtless be maintained chough will be returned to replace the ash.con.
stituents of the fhant ryich alone were derived from the earth.
We concinde, then, that the eoil does not $=-2=$ tion and cropping. Not reckless, wasteful, un
methodical farming, but that eo plapred and e
ecated as to grow large and raricd crops, and
dispose of them in ench dispose of them in such mavier as to return

## FALL PLOWING FOR POTATOES.

A. W. Harrison of Philadelphla, who profesees to know how the potato sbould be manwhich potatoes are to be cultivated should be plowed at lenst 20 lnches deep, with a sab -soil plow, in the fall; in early spring sub-8oll across the old forrows, barrow and roll down. Then mark out, as for corn rowe, sbout three feet ench way, to the depth of eight lnches. At the inter-
scction of the angles drop a whole potato of the sctrgest size yon have and spread upou it a handinl of the richest compost manure, coutrining elght parts of wood ashes, four of phosphate of lime, four of ground plaster, four of finely slaked lime and four of salt, or, In lien of these, three
ounces of an artificial fertlizer ver hill. Cover in the seed, roll the ground and spread broadeast a half a ton of a good fertllizer to the acre. Cultivate both wass; remore weeds ngar the plants, but leare the ground entirely flat about them.
Te believe this is abont right. Hilling cape eially in dry weather, is apt to let so mnch
moisture escape from the ground as to serlously Smpair the fecundilty of the seed and hence a diminisbed yield. In our opinion potatoes planted prodace more, by one cightu or a quarter per acre, than by the hilling yrocess. It trould be
yood plan to test this matter by drilling in a By this system of colture an arperiment. is said to be required, as the ground cets crops each year, precisely the allment needed for the produetion of the crop reqnired. The antnmnal plowing is manifestly a good step taken towards Thecess the ensting jear.
The sulject is roferred to thus enrly that farmers, who do not practlce on this plan, can have
time to thiuk about it before the fall season and act upon the suggestions if deemed adrisable. Those who practiee this modee of preparation of conrse will need no ineentive to action is this direction.

## fattening hogs

TIIE editor of the Germantown Telegraph having made inquiries of a farmer as to the
profitableness of pork raising and the best way to feed hogs, reeeired a reply, the substance of which was:-1st. That feeding grain-espectally same amount fed to any other kind of farm stock. Bnt tbis is qualliced as to the kind or breed of hogs fed and the manner of treating them. The breed should be the "Chester White"-the nom cic plume of the writcr - and
they should be fed in suck a manaer as to gain a pound a day. In other words the tog, gain a pound a day. In other words the hog,
at a geaf old, should weigh three hundred and gixtry-fre pounds. Greater weight than this
eould he produced but the inerease would not pay the extra cepense neeessary to proeare it. 2d. One busbel of good shelled corn, made to meai and fed to the hogs regularly, in such more, will produce from tive to seven poonds of york daring the months of Oetober and November. After this eeason of the year more feed is reqnircd and lees pork produced accordog to the fuantity fed. sa. An important point is to keep the hogs Ois frames, duriog the summer, and then at empting to finish off quichly on the arrival of cold weather.
o entire eea pat in the fall - lndeed daring be provided so that the hogs may avail them. Le antumnal storms commence the hogs shoula be peaned for good till ready for slaughter. 5th. With the pure "Chester White" stock roogz, properly brought forward during the igbts-fire cent corn on a basis of ilve cents per pound for the animal fed. This feed for October ad Noverber should be corn meal, mived with to the consisteney of a thick slop.

## marketing domestic woois.

## 

 cramine alot of wool conturdi in ing bookers, velilice,

 who wants a permanent, reliable, quiek market and full prices for his goots, he will look care fully atter their uniform quality, fall measure,
de.; so tt will be with a miller whose brand is known as reliable; and in fact through ever Uceasionally men who do not believe that
honesty is the best poliey succeed, but this is the raception and not the relle. The weol bnyers right ralue of wool, eren atter it had been
gradca in the Eastern markets, and for this reason the agents in the interlior could not be
expected to know better, and were instructed to to buy at an average priee, aeeording to the Statce. This bad practiee will drop as soon as
the wool is properly prepared for market, so Let the wool be prepared in the manner I have indleated and you will soon be convineed that
buyers will pay more for it than for in the present mannuer - the actual ralue of whi

| paper of Dec. 2d and 9 tb, 1865, to which my plan in your iseuc of June 16th, 1566, mas be considered an appendis. <br> I adrocate ghearing in the unwashed state as bciug more proftable to the growers. <br> They can shear thele sheup in May, regardless of unfarorable weather, cold or dirty water, and risk of health. There is a saving of expense; there is not the risk of the wool being injured by kecping two or three yeare, as it keeps better in the unuashed Etate, is not eo liable to iojury by motbe, and will liring more than two-thirds (2) mise of the washed. I think you ought to adrocate this plan as it is to the best of my beHel favoring the interest of the growers, and as unwaslicd wool preserves lietter for ycars all its good quallications for mannfacturing, and w111 work better than the washed, it is only in this latter respect favorlog the manufaeturer. <br> In raply to your adyle " to contlnue our mis. slonsry labors, but first. introduce our proposed reforms at home among the buyers," I beg to say that we have already doue so, and bagers have given strict orders to their agents to carefully examine every lot of wool they wish to buy, and pay a price according to its condution and actual value. They are in general anxious to do so but experience in most instances mach dimeulty, except with those fine and superior elipe, the owners of which take a pride in doing their wool up right aud reeelving a corresponding adrance in priec; also wool coming from markets as being the elips of eareful and relisble growers. <br> I would also nnggest the cetablishment in each state, of various wool fairs-at different datesto allow buycrs to visit each of them, one after the other, and ereatc the desired competition for obtaining the highest valuc, as it has been fonnd most expedieut in slletia and Saxony as you are probabls aware. <br> Hoplugy you will kindly publish this reply to your remarks-to do ine justice-beliere me Very respectfully yours, <br> New York, Auguet 10,1566 . <br> II. D. Tellikamif, <br> I. D. Telikampe, <br> Condensed Correspondence, Items, de. <br> Inflathdo Sheer:-Dr. F. B, hathewat, Milton, <br> Vt., wites that he is breeding Atwood \& Hammond Shecp, aud wlehoe to kuow hy what familly name they should be called. We have hitherio assigurd our reneone for hellicuing that tho ehecen fmported by Col. Hidapmarym, from whiell the above llocks are defcended, were from the Infuntudo cubana in Spain, The princlpal brecders of hese ebecp usually deetgnate them at Infatados, and they are gencrally known ly that namo. The name is spplled to them bearaee it la belleved to bclong to themi, and becanse It is conveulent aud projer to have fumily deelgnatlons. But it nelther adde to, nor detracts from, thelr valuc. They would be just as valuaibe, and eell for just as much, were they dezeended from any other prime Spanleh cabana. <br>  Wie, writes:-"Take ennal parts blue vitriol, alum and ealtpetre well pulverized and Eaturated with arlue. One applicntou affer the foot is well pared will enfe. The foot Elould hee hared so that the medfetno whll come in contaet with ali that is deecered. 1 have trled thie tor yeara, and know it to fie a sure cure." Appiled at the very outect of the dieuse, as nll remedies shonld ha ayplled ir practleable, and with the feet pared so that "the medictoc will come Win contact with all that is disecasel," Mr. Monse'e remelly, and fichaps fify more that have been neod, might prove a "snre cure," But in advaneed stages of the discage "ouc applicution," we venture to say, would nut. $\qquad$ <br> Names Ceamen.-Johin E. established in 19Jo.
MOORE'S RURAL NEW-YORKER,
 CONBUCTED BY D. D. T. HOORE,

IT frequently happens that in seeding land to the first sear and yleld buta seanty crop of hay ably, to the rank, heavy growth of wheat, rs barley or oats, as the case may be, by whel the grass is choked out before it hans attalned sufll-
cient vigor to hold Its own against the erop with Whieh St is sown. At other times the severity of
the winter season may have killed out both the grain and the grase, or they may suffer from the effects of extreme drouth, involving a partial or
entire destruction of both. These are casnalit not easily provided against, and when they oe curn requires more time to repair the damase than is agreenbls to the farmer who has stock in
want of has. When the fallure is pretty general in a seeded deld, it would seem to be good pol iey to plow ayain as a preparation for another
trial instead of waiting the slow process of selfseeding, as is sometimes done. The end, be sur
will be attained in time, if the partlal crop grass is cut late in the season, but in this way there is a loss of the customary a vails of the
capital invested, which is rarcly sustained with capital invested, which is rarcly sustained with equanimity by the live farmer. But partial fall
ures of newiy seeded lands to return promptly the expected crop of Lay, not infrequently oceur from the parsimoniousnees with whleh the far-
mer dispeuses his grass seed when laying down his lands to meadow, This article Is often rathe expensive, bence the arnount alloted to each aere is so smail that it Troutd bardly suffice, did
every seed germinate aud coutinue to grow, but if only one-fourth of the amount doce this, owing to the droath or serere froste, the crop of
bay the first season will not be worth the ex. pense of gathering. The better and safer way is of haif that amount, and then, if a fullure oo curs, the farmer will not have the unpleasant rc be attributed the ioss to which he has been sui jeeted by the failure of lis grass see ding.

You are pretty sure of one thing if you so
timothy with the wheat in the autumn, and the timothy with the wheat in the autumn, and that
is, the grass seed will roostly all grow and live and your land will be well stocked. Hence at the time of wheat secding ; but there is one disadrantage attending this time, which is the the next spring and summer. This growth, we apprchend, on rieh iands and in favorable sea
sons, sometinies very materfally injures the wheat. When grass seed has been thickly sown early in the autumn, we have seen a yod formed among the grain tefore harrest time, and a great thing for the stock that picks over the sa good inter bat it probably injures the cirains but in field and quality. In the majority or cases We are as certain of yetting a good stand of grass
then get sunicient growth to injure the grain
Sowing timothy sced in the spring would be fa
more sueceesful
entl earth could be broken between the stools o
wheat. Where the grain is drilled this result courd be attained, on most land, by usiug alight
harrow. The time will come, we think, when

## grow a variety of grasses.

 varicty of grass alone to stock his laud. Neitherclover, timothy of the grasses wifi yieid as largely when gro separate ns will different kinds mixed in th is grenter than in meadows, betwecn stockiu variety there fs the best for cach scason; on the summer-time and withstands dry reather a third may supply an abundance of late fal feed, endurfng frosts well. Then stock has choicc and a rariety, and the land is apt to have
a denser covering and more pasture is thercb aIforded.
For manuriai purposes it is also better spot. Some draw more nutriment from the air
others more from the soil; some send thei oots down deep into the subsuil, others thri be wanting in some materials necessary may be well supplied with what will promo the euecess of another. The elover may winte krass. 'There is room and food then and bincsoii for many kinds to use ut once; give Nature Ime enough und she will puat them there. Th farmer sbould anticipate and place them in his

## FARMERS' HORSES IN AUTUMN

Farmers' horses are often neglected in the ntamn - perhans we should be jestified in say
ing abused. The heary work of the season done, and, though there are almost dally jobs sidered well cnongh to drop their arain them thrive as best they can on the pastur make, had he the power, is that proper au Inely shelter is not furnished. There is searce which the farmers work horscs should not sheltered in the stable. Preservation of their health and coonomy in their keeping demand -we will not diseuss the absolde froelty nigh osing these daithful servants of man to a furi us storm - after feeding awhile they become chilled and resort to running to get warm; the a stnmble and fall in the dark, a cat or a sprain eing warm and tired from rumer they are in clined to rest, and the chilly airs operating o stiffen them, render them spiritless and ofte iducees a seyere cold. A horse treated in this way is not prepared to serve his owner weil, It is well farm or road.
It is well enongh to let the borses ran in the atumn night should find them in the stable little grain; they wiill be safce, and quict; the will rest well, and when their master calls o them for serviec they whll have the spirit and
endurance to perform it well. It shoald troubl he rest and the conseience of a farmer to wake without, and know that through all the lon ours his faithful horseb are unsbeltered frow
$\qquad$ his letters to the Utica Herald, refers to a visi sade to the residence of Lady Prgor in Sufiolls tock raizing, and has now a fle herd of Shor Horns of "the BJoqn strain of blood." Som the animals were purciased at a cost of frow
ve hudred to one thousand guineas cach. On of theese, a three-year heifer, had been acompeti-
three prizes.

Ocre engraving represents tro of a lot of twelve
hogs fed and slaughtered by Mr. D. . Presmure of East Bethavy, Gencsee Co., N. Y. Mr. P. tration of the old adage, that "it's a good deal air breed, thourh uo particuler polnever, or talien in that direction, and were of too small were of a mixed breed - mainly Native and
Suffoll:. When killed, these hogs were a little

## HORSES AND THEIR FOIBLES

The horse family, as a general thing, recelve re rough ueage than any other class of quad nd the tasks inuposed upon them, they are the host amiable of the bensts subject to the conis sometimes accorded them. Occaslonally ough customer fs presented for manipulationoue that neitber foree nor kindness can concil te, or hard usage fully subdnce. Thesc are ex ceptional eases, which may be turned over to
Racry or any other person who believes in the possibility of rendering such animals docilc, and Leir lators a vallabe.
Labits predominate, bat these ara not proper peaking, viscious. They result from imprope ralning when youns, in most cases, aud will disappear with a change of manassement. Among
heane defects may be classed the disagreeable ud daurerons habit which some horses lave or suddenly shying or jumping aside at the slght o n ouject suddenly presented to vilew or a noise
bruptiy madc. This infirnity is not cofined to the equine race, but pertains to that of the lu man also, yet, in the one case, commlsseration,
or, at the worst, ridienle is extended to the viethe rule and forbearance the exception. Is this This species of involuntary timidity is a de foct, no doubt, and otten involes smous coneuences. Yet harshness is not the means by
Fhich it can be removed. It is a habit, so to of a good temper and a patience not easily exausted. The best way, and the only' surc one, in such cases, is to coax the frightered animal up to pursue it. In the frst instance the horse wil will not be readily dececived again by a like oc carrenee: in the second he will conter into the spirit of the parsait, the effect of which wil prove equally ealutary. This method of trent ent is almost certain to prove effective, whill ertainly augment the evil intended to be cured certainly aug
or removed. Some horses, not otherwise objectionable,
over 19 months old, and dressed about 540 lbs
each. They were remarkily mensuriug from 11 to 13 inclics thatk above thea shoulder, and aflorded, of clear mess pork and
hard, about 800 lbs. each. Tho most rapid growth of these hogs was made whill being fed on cooked rood, suel as earrot3, potatoes
pumpkins, de., well cooked nnd inashed up While lot-when just taken from tho steam-
not on
not oniy when one passes near them, but eve
when stauding undistarbed in their stalls. Th cause of this is not elearly napparent, but, be it wiat it may, the practlce is a dangerous on and requires to be repressed. It is said tha
this propensty to klek can be overcome in a short time tiy stmply conaning the ausmal in a stall with a plank or board piaced across it so as
to just clear hits loins. The horse slould be fastenel so that the plank shall eover that see-
tloz of his body all the thrue. The consequance
will be that, when he attempts to throw out his heels, the plank will kecp him down and defea his parpose. The abortive effiorts at kilcking for
a day or tro will disgnast himo with the buigess a day or two will disgnst him with the businges
and it will require much provoeation thereafter and it whll require much provoeation thereafter
to faduce the Lorse to resume the practiee. The pian is worthy a trial. If it falls no harm
done; if it suceceds much good will result.

## samut in grain firlds.

Farmers often tind in their gelds of wheat, of a black appearance, commonly called smut. In some eases this prevails to such an extent a colored appearance, considerably deprectating its ralue in market. There are two kinds of appearance and rendily detached by wind and oder a filtn or skluny coating. $\Delta$ limited nu ber of grain heads thus alfected will glve a somber tiuge to many bushels of threshed graln. Its prevalence in geucraliy imputed to wet weather
and is regarded as beyond the control of the harmer. This, however, is not the case, since tive or propagating power in this pest not ne ger erully supposed to pertain to lt . The proper
tests bave demoustrated that this incrt, mealy substance or powder, coming in contact with mination and sent by the elrculating Eap of the plant to every part of it, and by thle impregnalon securing to itself perpetuity.
the proper the correetnees of this conclasion, smut from our proin course to pursue to banis itcelf. It is simply to pick out of the ficlds the infected partions of the grain and burn them nu

Wheat and Tares. In selecting whent for seed great care shoald be taisen that no portion of it
has been in contact with amut. or if it has has been in contact with amut; or, if it has let it
be well cleance betore leing sown generally adopted, would cause the gradual dissappearance from our grain fields of this ebor

EPIDEMIC AMONG THE CHICKENS.
Mr. P. Hubbard writes us from Columbia, Mo concerning a curious discasc among the ehickens, cently manifested itseif in the poultry yard of struetive to his fowls. Out of one huudred and fifty halfgrown chickens, fully ouc-half. have The disease Is aluost always confined to the hend, seurecly cree exliditinng itself ou ang other
part of tie body. Its first appicarance is a small pimple, enrrounded by a red disk. The pimple the same time in proportion to the elevation, nutil It attuins the slze and shape of a half pea. advances the fluid becomes purnient. Thes pustules frequently attacis a corncr of the eye. when the chicken soon ber bin of starvation. When this is not the ease the pustules break in the course of five or six days,
lenving a ragced lookjug sore, which seldom heals, and the chlcken droops and dles. In never before seen auything like 3t. If you ean ing the diecaso or its cure, it will be most gratefuily received."
Will some of our experienced readers answer?

Rxa for Brean.-Ryc will do better on ligh and partially exhaused solls than wheat, and em.
dares the rigors of an operan winter more suedares the rigors of an opicla winter more sucbace sectlons where rye would do passably well iput in early In the season. It is a better bread
sobstitute for wheat than corn and quite as calthful. Two or three acres would help much in breading a small familly, should the whent crop be damaged. The light sandy soil of New
England used to produce rye'the flour of which

Havino told how dresses aro made, let me a
a word conceruing their expensiveness, a word conceruing their expensiveness,
nared with the same fabrics in America. seems to me that, exchange and duties allowe for, our merchante mast make short and usu rious protits. We cau buy in Paris, a grod sumwer sill for 0 francs a yard-a dollar and twen
cents. Black silks, whieh at home are sis cents. Black sills, whieh at home are $\$$ s.id
yald, are bere $\$ 1.50$. Freneh cambrics, for whicl we pay is eents, are here so cents, Kid gloves,
for whleh we sive a dollar, are fifty eents in Parfor which re gire a dollar, are nity eents at Naples 20 or 30 cents; $\$ 2.50$ glor with us, are here $\$ 1$ a pair! Six months ago i here it is 18 or 20 . Lace edging for whiel Boston, I patterned here for 11 cents. Lubin' soap for which I paid Harris oc Chapman s1,
I found in $G$ enoa for 80 cents, and am told it less in Paris. Lubin's extracts for which out drugglsts charge $\$ 1.50$ or $\$ 1.25$, aro here ins cts,
A point lace collar and cuffs, for which at home Ap pay s.5, are here $\$ 19$ A s.see shaml for which
we pay $\$ 400$, is in Parls $\$ 200$, at Brassels, where it is made, $\$ 150$. Black trimming lace of narro Tldth for which we pas 75 cents, is here 30 cts. As for bonnets, which with my last smeriean 820 to $\$ 80$ the ordinary priee of a handsome one in Paris is 85 , often only 84 , with fine French flowers. Those with blonde lace trimmings are $\S 6$ or $\$ 5$, and the most exhorbitant nilliners
charge $\$ 15$ or $\$ 15$. Tet riblons are from some unknown reason, as cxnenslve in Paris as in
Ameriea. So are boots and shoes, provisions, Anute, and a few other thingz. Lnder garments of all kinuds can be bought here ready made and elaborately trimmed, for what the mere cotton costs at home. One is suspicious of cueap read made elothes, Worked into then; bat as I waited the other
day in a large shop of this kind, obserred the neat little sering-girls who brought home thein work in a handkerchief, and they look smiling
and prosperous. A Freneb woman lives upon an inconsiderably small sum, aud provisions are 80 subdirided to suit their economy that a few
sous procures them a luxurlous dinner; once or twree a week a ferr lodgers in the attic or son
great house club together and order a dinner Which is really luxurions, though it is paid for in
hardly cenred sous - and this is all they ask.Ext

§ubluath antringri SABBATH

SWettir as the angels' breathing
Through the song of "Peace on Through the song or Peace on
Came thla hotg sazibath morning,
Morn of high colestial birth!

Sacredly and ail-sesenely
By the Father's presen And the Saviour is benvenly teachinge,
And the Holy Spirt's rest,
More along the Sabbath hours;
May onr sonls harmonlons be
With their bearaty, trath and te
With thefr worshijh, high in
As the Sabbath eveniog clooes
With ite henedictlons deep I
May wewrap our sarmente, purer,
Nearer bome one Sabbath's journe,
Nearer all that's good and trne,
Bleseed will 1 IIt from God Eternal
To proceed with Henvo In viewt

## A FINE FRUIT FARM - NAUMREAG

 Of the nhore upwards of 8,000 are, noww well
cstablished and in good conditien. About 20
per cerut, of the meat per ecut. of the preaches were killed, maninly
during the whater of 1 sGh 1.5 , by freczing anter excessise rains. Full 25 pry cecent. of the equinces
failed the first season aiter plauting. Aloout 10 failed the first seasonalter plauting. About 10
per cent of the हlandard pears have died from
different canscs. Of the apples nid dwar different cansc3. Of the apples and dwarf pear
the loss Las Lardly execeded one per cent. Leaching Varieties Clanted.-As it will be inter.
csting to many of our readers to know the prinel-
pal waricties of fruits planted, we will wame them in this eonvectlon. Of Teachess there were plant-
cd :of Crawford's 'Farly, 1 , Sit trees; Hale's Early, 493; Early York, 415 ; Old M1xon Free,
2ht; Cruford's Late, , 250; and over 100 each of
Red Check Melaenton, Morrls Whit aud Cool-

 131; Newtown Pippin, 108; Lady Apple, 40. Of
Diany Tars the leading rarletles are Duchess
d'Angouleme and T.ouise Bonne do Jerany, of

 reetangular system, 40 feet apart. Whice the
gronud is sulfieiently elevated to shed the water Irecly, peach trees are planted between the npple
treen, 20 fect apart, thus givlug 27 apple tree and $s 1$ peach trees th the acre. By the thne the
apple trece aro suffielently large to encroach
upon the peach trees, the latter will upon the peach trees, the latter will have passed
their maturity, nad can te removed. Where the
gronand is lower, and the drainage not quilte oo complete, in the eenter of (very lour apple er rees
another tree of smaller lubit oi growill is plant
 MOTHER'S RECIPES - PRACTICAL AND PRACTICABLE. Mancors.-Seleet the old fankioned muskmel. ns, green and small, not 8 gft t immerec them for more the sceds, and fill the spacee with einn mon, maee, mustard-seed, small roots of horse by"sewine or tylng with a cord Secld the vin egar and pour on hot; let them remaln a fev weeks before ueing, and you will find a deliefous riekle for the winter or epring.
Baken Flous Punding, -Take thrce pints or two quarts of milk; E Euld to nearly bollhig heat,
 nilk. Turn the हcalding mulk on this, carefolly stlrring to precent lts settling. Beat three eggs and add, with eugar to the tuste, and a emall
piece of botter, and a little salt. Care mnst be taken not to let it over-do. Grate on nutmeg Coconsut Pudding.-Secure a fresh cocoagrate the nut, turn on two quarts of sealding
inilk, with a little enll); (a table-spoonfui of Hour may be stlreed in the milk.) Three eggs,
and sugar to the taste, and a small piece of butter. Be carful not to orer-bakc.- Yankee,
Rural Ogllee.

Whisky Picries, - Inotice in the Rural an Sou ins method of makinit them, which is as
follows:-Wash your pickles ln cold water, put them In a stone far, and to three quarts of
water add one of water add one of whiskr; mix it well before
putting it on the piekles; after the resscl is full put a clenn cloth orer them and no more welght 1

Hisu OMPLET. - Godey's Lady's Book gives Howing recipe:- 'Tlwo egga, fuur ounces of ousful of minced ham. Aluec the ham very flinely, withont. any fat, and fry it tor two nifio-
utua in a little butter; then make the batter tor the omelct, sil in the ham, and proeced as ln
the cuse of a plalu omelct. Do not add any salt the case of a plaln omelct. Do not add any salt
to the batter, us the ham is usually sufliclently sult to innjart a fluyor to the omelet. Good, this diebs, but they mnast also be Elightly cooked previonsly to mixing them with the batter. Serve
very hot and quickly, without gravy. Haum used in tbla way will make a very nalatable disb

BABY ON THE PORCH.

## UT ou the porch, by the open door,

 Baby is creeping over the floor-Dear lttle wineome bliee eye-malda! All about her the shandows dance,
All avove her the roses ewlog, unbeams in the latice glance, In at the bloseoms her ingers reach,
Lisplug ler pleadiog in broken words, Lisping der pleadiog in trokech,
Songs like the twitterer of neectling Creepiug, creeping over the fioor,
Soon my birdie will find her wlo Soon my birdie will ind her wlogs,
Flatterigo out at the open door,
Into the wonderful world of thiuge. Bloom of rozes and balm of derw,
Broolzs that bntbhe, and winds that call,
All things lovely and glad and new, Brooizs that tabile, alad and now,
All thigs lovelsand glat
And the Father watcling us over it all.

TIME IS WINGING US AWAY,"
Tre sunlight has faded out, and the long shad ows that threw their finewy forms about the hills have merged and blended into the robe or
twilight. Hither and thither buss feet are dy ing - some to rest, others to toil sgain, and I only thinkiug. To-morrow another month will be born, to live its lortef day and then die that another may lise
There is alwase counected with the closing o
each jear, cach season, each montb, and cren each year, cach season, each montb, and cren
cach day, something sad yet pleasing, $-a$ kind the expense of tears and a few heartaches. Per haps to erery ose this is not so. Some find all their delight in fay assemblies and crowded lecture rooms, glad of any exeltement to rid
them of unpleasant retrospections and self-eonthem of unpieasant retrospections and selfecon
demmations, that unconseiously, in moments of leisure or idleness, erecp into the heart, striving

parent stalk is brolen, they roll to the botom, parent stalk is broken, they roll to the bottom,
their appropriate place, aud their beautiful, golden coat is broken and exposes the vacunm it formely covered. They forget that the irst
iterrogative to man was to act and thinkt. IIenee, he is the true man who comes in contaet with things aud ideas and knows bs aetual experf-
ment bow to apply them - who has a well balment low to apply them - who has a well bal
auced mind and a robust, vigorous constitutio -who can execute as well as plan, and bring to bear on a mighty objeet the complicated machin ery of means, ludunee, and illustrates the idea by a fable of an ass that was aecustomed to throw upon himself the
skin of a lion and " ter ritubat homines et bestins," skin of a lion and "ter rilusat homines et testins,"
vut in his haste to frighten a compans of pass. ing trapelers be forgol to cover his head, a. was thas a time, domineer orer wodest inan and woomanhlood, jet its mulish ears will stick out and sink its patrons to the remotest obscurits.
What has man erer accomplished by assumWhat has man erer accomplished by assum
ing the reaponsibility of that which does no ing the reaponsibility of that which does bee
concern him? How mueh has the world been advanced by delicate aud timid woman exclavg ing her graceful Howing robe for make alimbing Into pulpits, and lifting her strill, trampet voice
amid the rush of popular assemblies, -claimiug amid the rush of popular assemblies, -claiming
the exelusive perogative of making herself nan, the exelusive perogative of makiug hersecm nad
while God bas asslgned her a sphere and made her woman? The only ans wer we can gire is that thes have made their subjects odious, an
given themselves a lasting place in the popular given themselves a lasting place in the populan
disgust. This is their end. Although they may shine for a time, thes are like an old tree that has been struck bs lightning; it may blaze for a time, but it is soon
ment of heareu's wrath
But modesty, which comes welling from the deep fountaiu of a pure heart, and is fired with an enthusiasm fuch as burned in the master minds of our forefathers, and made them but to be feared, and knounn but to be prized,
will ever counteract this influence and tura the tide of a world's thonghts and felings into channels of consistency. Then let not the erystal fountain of a modest mind beeome 2 stag.
nant pool, or the flowing rivalets of pure nant pool, or the flowing rivalets of pure
thonghts to ledried up. But let it earn a noble distinction, by stamping its orni impress on the distinction, by stamp a nation's life and all th
whole current of nation. Worle with deed, in Yot, 1866.
Tirnee Kisds. - There are three kinds of men
in the world: the Wills, the Wonts, and the
Cants. The former effect everything. The othCrs oppose everstining. "I Will" builds our
erailroads and steamboats, "I Won' $t$ " don't be-

Can't" grows weeds for wheat, and commonly
ends his days in the slow digestion of bank-

## he submissiveness of americans.

 No matter what extortion mas bc practiced on him by cabmen, omnibns men, hotel-kecpers or railroads, it is rare to find angbody or ansnumber of bodies who will make the smallest resistance to it. Those rows which are so com-
mon in England between travclers aud walters, mon in England betreen travelers aud waiters,
hotel-keepera, porters and cabs, are here tn angry word uttered about a hotel blll but onee, though the hotel charges are barcfaced and out
rageons, and the demeanor of hotel-keepers very highest expression of cool insolene
hackney coaeles of New York are the dearest,
worst and most inl-regulated In the world, though ominaly under the eoutrol of the law; but
one ever thnks of bringing the drivers to jus tice, uo natter what he masy suficr at the
hands. The remedy to which those who swindled by theno resort is not to hire them
again, bnt ride in omnibuses or cars, or else get again, bnt ride in omnibuses or cars, or else get
carriages at the livery stables; so also the orer-
crowdiug of the street railroad ears, or omnibuses, has beeome almost an intolerable nusavee. People complain of it pricatels, but
nothing is done to abate it.
I am spending this summer twenty miles up the Hudson river, and hare to use the railroad to
get in and out of town ereers day. There is a contempt for the eomfort, conslas whieh sould in Eugland lead to twenty lawsuits a week. Here an aetion against the eompany a rare thing, complaints to the conduetors eron almost as rare. So also is the matter of the in-
come tax. It might bo donbled, and few woons proposo to head an opposition as loug as the The cause of this passireness in submiltling to the minor ineonveniences and tronbles, formin such a striking contrast to the energy and rigo displayed in resisting the greater ones, is to
found, like many other peeuliarities of $\Delta$ meriean iife, in the exterual circumstauces of the people
crer sinee the country was flist settled. tue whieh is most Etrongly called out by coloni life, or perhaps most strougly after that of er
ergs, is that of patient cendurance. Its har =hips, trials aud disappointments are so gre
that the very first lesson the settler has to lea has now been so long practiced here that has become a feature in the national characte think Americans take as mneh pride in not be ing put out or ruftied by these things as Englis them. If a hotel-keeper or a tas.gatherer imposes on him, he will be as muel ashamed
seeming to be annosed by it as an Englishma seeming to be annoged by it as an Englishman
would be in subuitting to it. - N. Y. Correspond

## 

 Is his artiele in reply to ours, Mr. CampereL,apparently criousls, imputes to us as an incoo-
sistency that apparentiy seriously, imputes to us as a
sisteney that, under our orlghal informat
the faets, we epoke of his Hamburg tic the faets, we epoke of his Hamburg rictory
an unparalleced one, "won under a cloud
difineultice," whlle now he says we vlew it " dificultices," whlle now he says we rlew st "
insignitieant as possible." It is true that arrived at the conclusion that beating the fict
-beating the representatives of the best liok of Germany-beating the Emperor NuroLeons
shicep-cntirely outecling all the other sheep on the ground, cic., tec., - 18 a quilte different affulr from being placed second in a single class.* rectly or clearly on any point. Bat we gather
the idea that he still clasims to bave beaten fiell, becuuse he offred $n$ swcepstakes whleh was
not accepted; and that he liolds that we 2 bound to the bane view because we sald in the Praetieal Shepherd that "thls (ofter of a sweep-
stakes) rendered the triumph of the American stakes) renderod the triumph of the American
Sheep glisolute and undenlatle." Under the then cupposea facts it certainly so struck us.
Mr. Camporer, was represented as laving beate Mr. Casmprerd, Was yeprescuted as having beat
the ficld, that fs, all the classes of Merinos.
"Loud expressions of "Loud expressions of dissatisfaction" broke
forth, "which were promptly re-chood in the
German newepapers." "On the ofluclal promul. German nevpenapers." "On the oflclat promu gation or the deelision, , he previous censures too
the form of acuastons," "It was asserte
that the committec had heen unduly infueneed. Then it was that the vietor magnanlmousi fercd to test the questlon over agaln, bu
nen committe, chosen by the "German tion under whose ansplees and direction
ternational Exbbbition took place." all vers, fluc; and were it true, would, in o
ment, bear out our original infercuce. But yetllng down from these poctleal my ths to solid gronnd, the fcene changes. If the ofliei
Prize List is to be trusted, it would seem tha the offered sweepstakes was only an appeal from -a thing usually langhed nt and never worthno tielng. And by tho conditions of the sweep
stakes, as declared by Mr. Nebdisarat Ruland t was " open to previous eompetilors" -so that nos on exblbition. This was what Mr. Casin BriL eonelders beatllg the ficld.
We are now treated to
Mr. Casprbri, writes:

 letter of Mr. Nexemiast; There is some ambliguity in hotb of the abore
statenceats, confon nding as they do the decilling first ou the American siteep, and deeld ing to place them first; Unt Mr. NeEDHAM's worde he thus equarely makes up the iesue that Mr Camprell's sheep bere been deprived of the po-
sition in the olliulul prize list to which they were
 cetaunstra, Mr. Nas. justice as he hns shown to forelgners. And Mr. RANDALL will, to the extent of his poor
abilities, join in deallng ont a nother kind of juswronged and insulted an Amerlean eshibitor, very grave responsiblitity. The weight of testi
mony is altogether agaiust him. IIe expressly mony is altogether agaiust him. IIe expressly
deelared at Rutland that, "notwithstanding and in defiance of" the marmurs of the press and
people, "the gencrat committee with manly in people, "the gencral committee with manty in
dependanee ratificel the uction of the sub-commillce oy a unanimous vole,' he alio declared that this
accision wuas offlicilly momelpatel. The general
committec consisted of "eelghteen noblemen and committee consisted of " eighteen noblemen and
gentlicmen" of afferent countrics, whose secice-
tion on such an oceasion would secme to tion on such an occasion would seem to give suff
fieient warrant of their prominenco and character. We are ealled on to believe that thls bods
of men, after making nad oflicially ammouncing manamous deeision, subsequently reversed their action, without the knowledge of the $\Lambda$ meriean petitor, or else that they connived at a fraudulent ehange in the prize list-in either ease a crime ns foolish as base, because a change in an
annonniced avurd could not be mude without the knowledge of the thousands who attended the exhbibition, of the reporters of the uewspapers
and through them of the world. hypothicsis which can be presented is that those who superintended the publication of the oflicial prize list, clanged it without the pririty of the
committee. Thle, as in the other case, would be known to the pnblle; and it would be known to the general committee, who, to aroid beeoming
parties to the frand, would be required imin ately to expose and denounce it. from the position he lins opened. But virtually he occupies the position of a eingle witness tes-

|  zented by thatlocks of L. L. Lonillard. Cushmere Gouts werc shown by W. B. Dissmone, Stantsbure; and JGins S. Scmidyone, Saratora extibited a pen of Reochy Moumlain Shecrp. These Eheep were rather under fize and had two extra horns projecting forward over the cyes. We have not flpaee to notice alt the entrics of sheep. There were, we believe, over fifty cablibitors, and their stock formed one of the leading features of the Fair. Being so near the borders of VerUrecerers of Merinos in that Statc would exhibit their choiee stock. $\triangle$ few ten-thousanind dollar rams would have becu a great atiraction. But it is hardly the rolc of those elaiming such high superlority above others to conpcte before the pablic. <br> Horses. <br> The exibitition of hories waz not at all salitsfactory. The faeilitics for secing them were poor indeed, except when thicy were displayed poor indeed, except when they were displayed on the track. The stalls they oecupied being furnished with doors and locks, the animals were mostly blanketed and quiltc inaceessible for elose lispoetions without causing considerable trouble. A few palrs of matched borses were showy. An own brother to "Dexter," a three-ycar-old stalllon, was much admired. We should like to see a better exhibition of draught horses like to see a better cxhibition of draught horses |

This department of the Falr we think was the farm funplements and machinery; it would astonish a farmer unused to such exhibltions to see
the aid white Science and Invention offer lim There were two pllows on the ground such as
were used fiffy years ago enc were used hils yeare ago; one had a wood cross pin in the top of it to grasp with the
hands. By them stood some of tie best plow of the fresent time. Thes were the types of the
farmer's implements of the Past and the Present. But the tenacecs of the Present is tomar The care of co many implements, zuany of then of labor but the master is taskied. A skilled
meehanic and a well stocked workshop are a meehanie and a well stoclsed workshop are a
necesity on the farm where all the modern laborsaxing machinery is enployed. Most of the machlnes whieh were in competi-
tion at Auburn were present. The announce ment of the premlums awarded at that trian lrecw
considerable attention to the priza-takers, und the exhibitors of them were fecling very wcll.
The collection of implements for The collection of implements for haying was
remarkale. Among the numcrous horse-ralce we motlied three stylcs of the woodeu revolving pattern, dignified by whecls, levers, and a dri-
ver's scat attiehed. There were five Itay-tedders, one of them bicing a combined tedder and loader, numerons hay-forks, and a hay-loader,
which, being attached behind a wagon, ly means Which, being attaehed behind a wayon, wy means
of revolving forks and an cadless apron, would carry the hay from the wiarow to the hay-rack. Frevou's Husker promises to be the lest ma-
ehine sot brought out for husking corn. It is new thing and has not been extensively tried. The stalks are first passed between two rollers, the under one of wood and the unper one having
blant, straight knlves anised to it do not eut the stalks ebmpletely, but separate the ear, which, with the husks aronnd it , falls upon a set of small, inclined, rubber-covered
rollers. These catch the hakks and silk, tear them from the ear, which falls from the lower cud of the rollers quite clean. The husks are it would husk as fast as two men could feed in the stalke, buts foremost.

## Trues's Polato Planten is one of the great labor

saring implements of the age. It euts the po
tatocs, drops and corers them, doing with the
ald of one horse aud a man the work of six o
eight mon. Five or six aeres per day ean easily
be planted with it, and the work well done.

## a curiosity

ONe of the most curious instruments of lat years is a little wooden larometer invented by Mexican gultar makcr, a few years since.
consists only of a strip of cedar, very thin about two and a half feet in length, ahout, an inch wide, cut with the grain, Eet in a block or
fort. This cedar etrip is backed or llned with one of wiste pine cut aeross the gralu, and the two are tightly glued togetbor. To bend these
wheu dry is to snap them, but on the approach When dry is to snap them, but on the approach
of bad weather the cedar carls over until at times it toncles the ground.
It is said this kimple instrumcnt will indieate the coming of a "norther" full twenty four hours before any other kind of barometer known on
the const. The phillosophy of the thing seems the coast. The phillosophy of the thing seems Inluence of fair weather, and curls over on its side; while in foul weather, swelling and ex-
panding, its motion is towards the other side, pac; while in fond weather, swelling and cx-
panding, its motion is towards the other elde,
the cedar yicloing to the pessure, because cut with the grain, and $y$ not susceptible to the in-
fluevice of drynesef

Gilit mad inmor.
$\overline{\text { a Very Novel Illustration or tar Tele- }}$ place a few weeks ago in a small village near Parls. Two peasants were discussing about the war between Austria and Prussia, when one of
them remarked that he could not andcrstand How messages could be sent by the electric tele
graph. His companicn, after having tricd to make him conprelicud the manner in which the telegraph works, at last, struck with a bright idea, exclaimed:
"Imagine that
long dogine that the telegraph is an immense long dog-so long that its head is at Vienna and
its tall at Parls. Well, tread on its tall which is its tall at Parls. Well, tread on its tall which is onderstand now, etupid, what the telegrapl s like?"
" 0 , yes," replied the other, "I have an Ides now what a telegraph must be."
As Irish girl was ordered to hang the washe clothes on the horse in the kitchen to dry. Her
mistress shortly after found a very gentle famils horse standing in the kitchen, completely cor ered with the artieles washed that day. Upon
nterrogating the girl, the repls was, "Och to be shure, ye told me to hang the clothes on the horse in the

"PROGRESS AND IMPROVHRMENT
isingle no. ten centis
V0L, XVII. N0. 40,3
ROCHESTER, N. Y.-FOR THE WEEK ENDING SATURDAY, OCTOBER 6, 1866.
\{WHOLE NO. 872,

IT is often asserted that the older a pasture
becomes the more valuable tit is ; that land many becomes the more valuable 1t is; that land may
loe pastured for an ludefnite period and the
grasses constantly incrense in tlehnces and the grasses constantly incrense in rlehness and abun-
cance. Mr. Wrinarn, in his letterz from Eng-
land, stales that such is the opinion entertained land, states that such, is the opinion entertanied
by the farmers of some localities fu that country, and pastures that bave been grazed a cuundred ycars without deteriorating are the evidence with
which they support thelr assertions. We regret which they support thelr assertions. We regret
hafing no more definite information about these haring no more delinite information about these
pastares, the slecl, quality, and varlety of grass-
es as compared with that of haif a century ago
 they recelve. If it sa a fact that land may be lati
down to grass, coustantly pastured without any manure except the droppings of the stoekt, any
the quality of the feed. Improved anil its yleld maintanned or increased for an indedifitto tilue,
then some of the soundest theories of the best Agricaltural writers are upsct, and the stoek
grower aud dairy farmer may deem thelrs the only species of hushandry which
land without impoverishins it.
$\qquad$ renovating, top-dresslig, and firtilizing the ol
pastures of Enstern dairy reglons of this ounn
try? Why stould the Western prairics, that
have been grazed for centurne be benetted have been grazed for centuriezs be benetited by
plowiug and zeeding? Their grasses, if thi
theory bo correct, should tee the thriftiest and most aromatic of any prstures on the cuntinent.
Which fats cattle loest, gives the most delicious
butter aud cheeso butter and cheese, blue-griss red-top, white
clover, or the wild, coarec ppalrie grases? Thi
product of a pasture is eruss; entice consume t; out of it milk and meat are produeed, an
hese are removed from the lend; the exer ments of the stock replace but a part, eand thi ing, then, there is a constant drain on the soi
and how can this fail, In tice course of time, to
impoperish it if the elements neceseary to the thrift of the fine, rlcl grasses, causes them to obvions that without more fertilizing material urnished the land than the stock supplies while Wheu land is newly sceded large crops of

rass are obtained if it be in good condition wo or three fears the yicld diminitishes. | inn, and heneforwarded gradually give place |
| :--- | Frequently the firms grasses atc it out faster than the succeedlag ove come in. Hence

the pasture rapldy becomes poor; numerous |  |  |  |

A HORSE ŞHOW, OR OONVENTION As Honss swows are now.in vogue all ore
 with a brief aeeount of their origin and charrac eristies. Thaugh we cannot diepllay the "stgle and speed "of speclmens of noted breeds or familes, , Fc show them in the "ring," and the
portratts and descriptious will enatle our andil ence to juage of aud comparc thel features and proninent Hoints and quarititee, so that the slow must prove both Lituerestling aud lisitructire. A friend at onr elbow suzgestst that we should call our assembly of noted animals of the equine that it exeels, in somue respeets, severaly politiong and other conventions recently hold, whereat notea nags have been "trotted out" for the
edification of audittors and the pubtie. C Calling it a con vention, let us enter the grapre assemb bage and note the prominent characteristics of the
Dclegates from the four quarters of the filo The central tras arizinand posis. the eugraviug, is a truo representative of the Sheclund race, uuquestionably the mosts remarka. ble of af Europtan ronies. These are to be found in ail the northern Scottish isles, but the Tinost
perfect, are natives of the same the the no perfect, are natives of the estreme northerin
isles of Teli and Unst.
The arerage helght of the Shetlander is nine or ten hands, nnd none
 whieh do not esceed dhirty or thirts 5 two tuches,
and are, coussenuentr 5 , inf errolo in of the largest सevrooundland dog.t The Lard-
 Hescirr Tilliad Hernerp sass, "Oat of mans
hundreds milich we have seen, - somelimas in droves of ifty or eisty at a time, triveling
down from their native ninoors aud mannting the raggedest, rustiest, most comical loollin, little quadrupeds that crer eso dwelt unpon driven by a gigantic, slx-foot Highliander, perched uyon the back, perapas, of the smallest
of the unuber, - we nerer saiv a lame shectlander." In their native sites they rua as wild
as the Eluce, neerer herded, thelterea, as the sucee, never herrded, sleclered, or fed;
pieking up a liviliood from the tender shootso the heather, aud the coarrie grassese growing
among it. Eren when domesticated tioe thre but listlo hetter. OAts are unknown to lhem,
and a fewr bundus of meadornas
 great, but they will coreer consideradlle nnder a lond of 150 to 200 ponnds. With a yrent bulking Highlander on his back, - appparently better titted to arres the pouy, than the pony to carry him, -he will secoumplish tiny miles be
tween sundsc tween sunrlse aidd Eunset. The colors of the
Shetlanders are $\&$ cueurally blaek, dark brown, and a sort of rust-colored sorrel. Whites and grays aro exceedloyly rare, aud blaeks are con sidered the best of the race.
 We have Just described, and 13 hls neighbor, on
the left of our engrarlug. This pony is on larged pattern of the Shetlander. the general form, the close barrel, strong lolnes igher withers, and Aner hair to the muwe m toil. His oriinary helgut is from cleven to tobr teen hands. The Scocth pony is the seeond step
to an English boy's education in the sst ot Co an Eugligh boy's education in the art of
horsemanslip, as they offen possess a fart turn of speed, call leap rery cieverls, have anl the endarance, with qreater strength, greater quick ness, and more Ebowy action, than their smaller countrymel
 Cunaulan, as his conntenathee readils a genaine ta tuis country they are often chased amone the pony races, but if we adopt the English standard for height, thelr posttion is armong the teen lands. The Canadian hyphe werer thltno cross of the Engllish thoroughthere there doubtedy of $\mp$ rench Norman orlgin. His chat and well tormend; Tery broad forehend, earsis well apart, and carried lomitiy; small, clear ese, and
courageoous aspect : bold courageous aspect; boll, upytanding, but thich
crest ; a looad, fnil chest , and a stron, 3 stout, strongls.frumed barrel, (somevhen en sided is very apt to be a fault in this polut escellcent loins; muscular thlybs; flatbonedilegs nd feet, for toaghaness aud hardiness, not to 1 equaled. Imuunity from diseass of the legs and
feet, is a marlied ounlits in the fin dian, even when ill-groomed, illshod, and sub weli erried in the pecalliaritles of this partlem lar raee, Eitates that "there are numbibers of thorze In Candda which, uuder a mass of shaggs hair,
never timmed, and rarcly cleaned aever thimmied, and rarcly, cleaned or dried,
possess dry, sinewy legs, ou whied the possess dry, sinewy legs, on whileh the severes
service never ralse a wrdda-gail. The pruailing
 brown. When true-bred, they are remarkable for
thic great rolunie of their wanes and talls, with the wavy texture of the hairs corappsing them
for the Ellaggy coation of ther for the tlaggy coatlug of thecl baek sinews
nearly to the kine, and of their fectiocks fourteen to fourtecen and a male hands From ustal sizz. Their powers of endurance are ee cellent, for though not reekoned speedr, tirey period." ravel ifts miles dally for a consideraule Sotwithstanding the repute in wrich Canadian
horses are held by those Lorsee are hellit by those best calculated to judge
of their r merits, it is a remarkable faet that Wi their merits, it is is remarkable fact that, oven in these dass of agrienilural progrese, no 8 yr3.

Cond
tematie attempts have been made to improte
this breed in of experiments by crossing bave been carrled in we wate with great success. The authorpinion'thet " tible of direct improventent than thls : and, as both as the small, poor farmer's worluc Il Americon breeds, aud thay are adapted above Fhiel to raise a bighly iuproved und usefulan eneral working roadstre, lis Urecding them to norough-breds, it is evidemt that this is ats end
most devoutly to be wisted."

 Palermo to enjoy from the distant hill-top thbeauties of au Italian sunset. The kly was clea and cloudless, the nir soft and balmy, and N
ture, radlaut in her swcetest smiles, presented picture not to be equaled in theee westen
climes. Both the maidens were betrothed, and climes. Both the maidens were betrothed, an
were expecting the consummation of their happp ness, cre long, in the inarriage tic. The gay
seenes that snrounded them, nud the brigh gome thourhts from their minds; and as they
sisel leisurely walked along, conversing upou thlogs o come as though there was not a possibility of
hose bright fancics fading, they uurcservedry told each other some of the many joss that lould pass away.
On, on they wandered, nutll they found them-
scives at the foot of a tower, whiieh stood upon rocky emluence about tro miles from the eits and rose to the helght of one hundrod and
twenty feet. The ton of the tower commanded a magnifieent rlew of the eity and sarrounding country, and
waters of the Hediterrancan. The tower ha heen hailt long ares before as a monument of at the time mentioned It was in quite a dhapldated condition. The whll ivy had erept high nuward and clung to its moss-clad sides, forming a rast eolumn of green; the spiral stair-
case leading to the top was old andrlckety; and case leading to the top was old and rickety; an
the parapet that formerly crowned its summi he mallen dons, with the green ivy encircling it and almost closing ap the entrance. The sea bathed in snnlight, spread out to the horizon be fore them,-and yet, ideality, as ever, searching after something more grand and beautlful than hat already reallzed, is not eatisfied with the up Into the towor. With much perseassion on the part of the English maiden, they commence thn ascent, laughing and chatteriug as they go,
unmindful of the trembling of the stairs beneath unnindful of the trembling of tha stairs vencath
their welght. Never wele larks inerrier than
they and they would stop for a mornent to heir weight. Never wele larks merricr than look from the window upon the sea, and the
shipe, with their white sails spread to the breeze,
they would sing a few lines of some sweet stratu they would sing a few lines of somesweet etrain
suggestive of coming happiness. $\tau_{i}$ higher and higher they weat - the falr daughter of
Sielly still Lale timid, and her English slister, continued the aseent.
There! the last step is reached and they stan upon the platiorm. Bnt why do they start ?
Oh! horrors! Beconing loosened below, the whole stalrease grave way, and fell with a cerash to (the hottom. No wonder their cheeks paled
and thelr tongues wro specelless; completely
isolated from the earth, whint hopc wns the escape from the daugers that surrounded them? They looked wildy at one another, then cast
themselves iuto eaeh other's arms and wept.
 altract attention, alled aloud for aid; but all was in
vain. The tower was some dlstane highway, aud days might interrene before
would he risited hy others. A lingering deat by starvation seemed to be their fate. Beauti(n) iudecd was the scenc before therim, -the sun jast
sinking o rest beneath the sea, thaging the
waters with 8 thousand sundes, spires of Palermo glittering in the dastance,the distant lowing of the cows and bleating of the sheep as they return with their shepherd
from the hills. But they ear it not from the hills. But they eav it not ; they beheld
nauglt but the grim, darik shadow, nauglit but the grim, darie fhadow, Death; they they felt, that they mulst die. Soon the sun wathered slowls over the carth. The sisters sang together a sweet but mournful Italian air, commeuded themselves to Hin who is never out othur's arms they wept long and bltterly, till
sleep for a time made them forget theirdle The day dawned and thicir efforts to attract attention were renewce, hat no one heard then, that bloomed around? Their hearts were chilled
and desolate. The day went bs, and another

## OONTENTMENT

It

It i
dustry and Honcesty of subjects which hereryc, lio
boy and glrl has written a composition, or rather
has put together a collection of proverbs, hollee
has pat toyectucr a collection of proverbs, holluegreet their eyes and ears. Yet, while most that
basa been written coneeming home and honeety
is true, that which lus been written ahont Contentment i
me that th al ways think aluout st, kut that many, echool-hop 11 ke , write off all they have been secustomed to
hear ahout it. Coutentuent 1 s said to always hring happlness, and lts pussecsor iz slway
praised, and reluted to be one of the happicst or
GoD's creaturos.
The wise man has said " $\Delta$ contented miod is one rarcls enjoged by us poor mortals.

## example! Many a

 eontinually harplng upon the lack of it in onnation - fearing tuat discontent will rnin us. But they look onls at the evils of discontent and
not at the good also. "Man eannot he contented not at the good also. "Man eannot he contented
anywhere or with anything." It is eutirely at varianee wito his nature.
Contentment is a myth of whith we often bear and read, rather than a reality of a common is longing and striving after somethligg hetterafter an undeflna ble sozecthing,-the unattained of msnhood or womanhooil with pright sntie pations - building farry castles which fall to the ground as soon as the coh-lhonses whleh he construets in lis play. When he is a man, what
great tulugs he hopes to dol And when manhood is reached is there then perfect content
Far from It! Tae saie lusatlate lougng anter the unattained, strengthened with his yeare, still prevents him from enjoying what he slready pos-
sesses. No! He is jet looking forward into the sesses. No! He is set looklng forward into the
malsy future for that which will satisfy his natural longing - for that gem, contentment. Old
age ereeps npou him unawares, and he is still seeking the unattained, whleh, like a delusive phantom, still eludes his grasp. Few ever realize
heir cxpectations. Some work on, hope on, till thes find rest in the grave. Others begin to despair wheu old age comes; they look back they hare missed; the future looke dark to them reigns universally from the cradie to the grave Contentment is often preaclicd in families where discontent, if fill wed by proper efforts,
would be productive of mueh yood. How fool wonld be productive of muel good. How foo even of the necessarles of life, to be contented When they might have abundanee by stiving
it. Who, after a moment's reflection, will say
that all should be contented? We cannot fall that all should be contented? We cannot fall
to see that puryect content would cause all ad rencement lu cirilization and bnowledge to
ecase, For it is this nnivereal discontent-this distagte of the old and desire for the new, that makes our's the age of progress. Yet many
while they bonst of our age of impro vement, er out against the lack, of contentment. How ab-
surd ! - to glory in our adrancement and se disapprove the rery cause of it . What if wi any more improrement? - would progressive nge? We need only to glance over
unicersal history to answer in the negative. if our forefathers had been contented with the ot and had not longed for and earnestly striven after better things, where would have been our
boasted ninetconth century? Eeho answers
nowhere.
Peritos Virtutis.
Cautious Men. - Some men use words as rine men do ballets. They say bat little. The fe talk, and gulde with thelr eye and face, on and ou, till what yon say can be answered in a wor plerce the matter to the qulek, and are done.
Yon never know where sou stand with them. Your converation falls into their mind as rivers
into a deep chasm, and Is lost from eight hy its depth and darkness. They will sometimes surrise a gou with a ferw words, that go to then they are sllent again, is if they were re-loading. Snch men are safe counselors, and true friends, In every case whero
ther profess to be such. To thent, truth is more
 k like titles without merit, onls betrasing the weaknesses of the blinded dupes who are
used as promoters of wiser men's schemes. A distingursmed teacher

## 

Wint a blessed gitt is memory! How we love present, to rcrel in the delights of other ycars
and gaze upon her pleasiog pletures of the past
TWe What trensures memory accumulates, and hon
frecly she brings them to our riew. What fammiliar ecencs sbe exhiblts to us. There, palnted upon her riuh and glowing eanvas is our
ehildhood's home, the home we loved,-where was epent some of onr happlest liours; again
with our mirthful companions we roam through the green fields, catehing the pare brceczes as
they danec along, or in the lonely forest 1 lstening to the song of hirds, and gathering swect How crs, not thinking of wh hours, hours to
ture, To Tose wappe
cnjoyed in memors, but nerer to be recalled. Learing the fairy secnes of childish eports,
we next see the old echool house in whose halls We next see the old $\varepsilon$ chool house in whose halls
we so often assembled to rebearse our tasks Where we sipped the first draugnit from the foun come thronging ahout us! Each dear, famillar
face It up with the enme swect smille as of yore We can alnost feel the grasp of their hand, and thelr warm lreath upon our chcel, as we roved
through our favorite haunts of sclence, gleanhigg Can we ber productions of dilizence and are fraught with $\mathrm{mo} \mathrm{rach}_{\mathrm{o}}$ interest and pleasure Dags, thonths and yeare have passed since then;
the carce and dutle of life bave multiplled, but the remenbrance of the sweet fricnds and comour path of our happy echool days emiles upo whose blossoming diffases fragrance which long
remains thongh the flower be withered. Glancing long on the canvas we find memories tha
$\qquad$ o live over. We would they were not here,
as they are, wed aro glad memory reminds us them. She brlags a sigh, and causes a tear,
when we look upon many wasted hours amd bee o many things left uudone that ought to hav been done; - but yet we feel bo muel that is
dear to us, ls associated with memory, that afte weay.
"Ry.tat beaed nemorte"
NEVER TOO OLD TO LEARN,
We are told that Socrates, at an extreme ol learned to play on mnsieal instruments. proper to learn the Greck language.
Platareh, When between serenty and elghty, mmenced the stads of Latin. Sir Heary Spclman neglected the selences in
Ws youth, but commenced the study of them When between fifty and sixty ycars of age. After this time he
and laryer.
Lndorico, at the great age of one hundred and ifteen, wrote the metmoirs of hls own time ; himself one of the most remarbable instances of the progrees of the age in new studies
Accarco, a great lawyer, belng asked why
began the study of lave zo late; replied that ndeed lie began it late, but he Ehould therefore Dryden, in his sixtieth year, commeneed th Illiad, and his most pleasing productions

## THE IDLER

Trie ldie man is an annogance-a nuisanee der in the busy thoroughfare of cerery-day life. He stands in our path, and we push him contemptuously aside! He is of no adrantage to
anybody. Ho annoys basy men. He make nybody. Ho annoys bnsy men. He make
them unlappy. He masy hare an income to on his yood natured friends. But in elther cas he is deppised. Young man, do something in this bustling, wide-arake world! Move shbout
for the benelt of mankind, if not for yoursel. for the beneflt of mankind, is not for yourseec of our hrow we ehall earn onr hread. That la Do not be idle. Minutes are too precious to he squandered thonghtlessly. Erery man and crery woman, howerer esalted or horwerer hum-
ble, ean do good in this short life, if so inclined therefore do not be ialle.
Hope, - Hope is the sweetest friend that ever ept a distressca friend company; it beguile our pilgrimage. It tells the sonl such swee stories of the succeeding jogs; what comforts rinmplis, what marriame songs and laalelujabs there are in that country whither she is travel lng that b
burden.

AFFLICTIONs eerve to quieken our pace in the
ary to our rest, 'Twere well if more love would Way to our rest, 'Twere well if more love would prevail among ue, and that we were rather drawn
o heaven than driven. But seeing our heart re so vad that merces will not do it, it is hetter o be put on with the esharpest ह conrge, than to
oiter, like the foolish virglns, till the door is shnt.
If jou should ever find it necessary in any
way to assert your social rank, don't forget you

How many bright, beautiful and Wessed dreamas have faded as the harvest waned; fed with 11 fc 's snturnn-time; how many tears have been shed orer wested treasnres, lost for ever; how many ylsions of urightness have
dled as the harrest-tIme elosed and the summer ended, leaving the soul desolate and alone, tandling
indly offered, peaceful life, hastening to redecrn the wasted
oments, losing sight of the world awhile, moments, losing sight of the world awhile,
ooking inward and above - resolving to do noble deeds, 1 spe n

## the treabures of the wicked.

EvrRy man is treasuring ap stores for_eternity; the good are laying up "treasures in
heaven, where mota doth not corrupt;" the cvil and impenitent are treasuring up "wrath arainst
the day of wrath." What an ides is this 1 Treasures of wrafin! Whatever the impenitent man is doing, he is treasuring np wrath. He may be
getting wealth; but he is treasuring ap wrath. ge may be forming pleasant counnections; but ometusy to the heap. utters, there is something gone to the heap of Trath. Every the the liar tells, there is some
thing gone to the heap of wrath. Every licentious aet the lewd man commlts, there is some thing gone to the dreasure of wrath. Every day records it against him. The impenitent man has a weightier treasure of wrath to day than he had yesterday ; he will have a wightior morow than he bas to-day. When hic nes down at night, He is contingly deppening and darkening his eternal portion, Every negleeted Sabbath in creases his store of wrath; every forgotten serment. All the ehecks of conscience, ,all the rayers of parents will be taken 'into the account, and will tend to inerense the treasures or wrath laid up against the day of wrath.
Jumes.

Gratrutde.- -It has been beautifully Eidd that beart that has been taken to Calrary and washed in the blood that ransomed a world, willihave a rady tongue to utter lts praise. Those who are ot thankful for Goll's unspeakable gift, cannol reatest gift, we are not likely to praise IIIm for THE present hour is always wealthiest when is poorer than the future ones, as that is the

IN AND AROUND QUEBEC.--MO. IV.

A FEN minutes drive outzlde the city wall, along
a strect more moderazed than those within it,
brought us to " the battlefield of emppire,"-
The Pluins or Abrnhan.
In my early reading of hlistory I invested wit,
ot a littlo of romance the narratice of Wours'
sneces upon these Plains, -the climblog up the
stecp ocent in the grey dawn of the morning-
he hot battling When the two armles met-and
he cugur questioniug of the dysing vietor
"Whn fly?" And as I sat down where the
Ising chieftain breathed hils life out in thos
ast words - "Then I die hajpy" 1 could no
help thinking in how great a degree hlstoric ro-
mance is only a myth. There may be a peculiar
internst nttaching to placea once the seene of
great crents-I felt such jnterest as I sat therebut the ectual Present absorlust tha dreamy Prast,
and romanec is sadly toned down. There are some places where ali actualities seem uniserathl stupi ,- where they cannot exlst without jos
tling 耳istory. But actnalities have little respect for anything. They thrust thenselres, or ar
thrust In, crurywhere and at any time; an
sometimcs they seenn most ludicrously out or ometimes they seen most ludicrously on the Plains of Abrabam, wherc you and $I, 1$
our hoylhood, somehow got the impression, an have foolishly hicpt it ever elnce, that History had here, - a thely turned elliptic enelrcling the fores formed in line. Nor do I wonder at the electing of such a piace for the purpose, hy those ant to all past associntions. It ccrtainly is a well adapted to it as for the raanceuvering or
embattled hostg. What a $\begin{aligned} & \text { eplendld base ball }\end{aligned}$ hat matter! But they don't play base ball Quebec, that I know of, and we can't import the Plains. What a pity we canoot! They would
sell well here, divivided up into smali section o suit purebasers! It would be a novelty, too,
mong curlosity seckers. That's au Idca for ome enterprising genlus, and I throw it in The Upper Town has stretched itself alon the upland some distance outside the wali, an blendlng of thre past and present, are scattered ere and there along the swell of land whic proper. This land-swell reaches nortbwar from the blnf boundigg the river, and breals plain by a risc of a few feet.
aring foes, were drawn up the Frent foree auder Mostcasm, The line of battle is dis. inctly marked out by the Martello towers which ositions of the the elty's defences, and the eadily. The new Jail, a massive and quito lm osing edifice, stands aboat where the center of he French line must have been posted. aly a few rods from where Wolpe died, as th
pot is jodicated by the monument erected t his memory. This may be said to be the sceon aition of a meraorlal tahlet, as the inscriptio near the rising ground, searce a pistol-shot re French. It is a granite shaft, thirty feet in nd simple in decirn and simple in desig

| :---: |
| Triskisc that the origin and signication of |
| the proper names |
|  |
|  |
| I will begin with the name of my native State |
| Hilinois. T |
| gin of this name. One is thent |
| from the Indian word illun, meaning " |
| and the French sufixix ois, "tribe of men." The |
| that a party of Frenclimen, while on an |
| pedition down the iver, fo |
| ec of tuls river with the Mi |
| and thiekly wooded wth bla |
|  |
| ere ripe; and they greatly enjoged the luxary |
| his frult whlie eneemping on the isl |
| this eireumstance they named the |
|  |
| (eland of Nuts.) |
| The latter |
| from the |
| cb, would casily be coverted |
| ent form-Illinois. And it 13 well known that |
|  |
| on. Tlinots is called the Prairle |
| from its extensive prairies. It is also |
| the Sucker State. |
|  |
| linois, and is generally supposed to have heen |
|  |
|  |
|  |
|  |
|  |
|  |
|  |

| River is a darh, turbid struam; also that the soil in Itlinois la very black, but extremely fertice, as Was that of nucient Endypt,-and It looka more water should be the cause of the nickname than the imputed irnorance ol the inhabitants. But enough for this time. In my next I will take up tio names of some of the citics in Illinois. |  |
| :---: | :---: |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
| war was briiliunt and decisive, and her nequisitions in teritory are correspondingly sizable and important. Before the war, Prusela owned |  |
|  |  |
| an irreguriy shaped teritory containiug 108,- |  |
|  |  |
| inces a population of 19,301, sijo. By the treaty of Prague, just signed, slic gets aduitional terri- |  |
| tory to the amount of 42,5858 square miles, with an additlonal populatlon of $7,171,550$, maklng her entire present population $25,176,523$. Prus- |  |
|  |  |
|  |  |
| Eia's new dominions fuclude nearly all the emall German states, except the kinerdom of Baxony, |  |
|  |  |
| the most lmportant of whiel are, the kingdom of Hanover, the grauld duchies of Mecklenburg and Oldenburg, the ciectorate of Hesse.Casecl, |  |
|  |  |
| and Oldenturg, the ciectorate of Hesse-Cassec, the landgravlate of Hesse-Homburg, and the |  |
| duchies of Nassau, Brmuswlek aud Save, hesides a strip of Bavaria. Besldez these states, Prus. sia now becomes undispated owner of the Danish duclies of Schleswlg and Holstoin, over |  |
|  |  |
|  |  |
| which Prnsaia and Anstria hare quarreied so much. Prussla's boundaries now lic betreen |  |
|  |  |
|  |  |
| north; the Netherlands, Begginm, Linemburg and France on the west; the Pulatinate, the river Main and Rodach, the klinglom of Sasony |  |
|  |  |
|  |  |
| and the emplre of Austria on the bouth, and Russia on the enst. Prussia will thus become |  |
|  |  |
| the fifth mation in Europe in point of popula. tlon, and the seventh for extent of territory. |  |
|  |  |
| Rnasia, France, Austria and Great Britain ouly exceed it in the former respect. As there is a strong party in Saxony wbiciu favors the annex- |  |
|  |  |
|  |  |
| ation of that kinglom to Prussia, the latter Hower may possibiy in thlis way grain an add1tional territory of 5,917 scuare milles, with over |  |

## MORTSGOLTORAL

A TRIP TO CROOKED LAKE． The Hammondsport Fnir．
Tue Seventh Annual Fair of the Pleasant
Valley Fruit Growers＇Aseoclation，held at Inam－
 and forth of the present October was the oc
castion of a nmerous gathering of those inter ested in the growth of the vine．The celelerity
of tuis loealits，which，with its three thousand of this loeality，whict，with its three thousand acres of succeefful vineyards，bas demonstratce
the adaptability of the shores of the lakes हltu
ated in Western and Central Yow York to extensive vino growing，drew visitors to the Fair from pointo 83 distant as New York clty on
one slde，and St．Lonis on the other．The Fair istraction；the rineyards，and wine cellars，the soil and exposure，tbe training of the vine nad
the gathering of the fruit－evergthing connected with the great braneh of culture which has sprung up so recently and grown so raplaly
along the shores of Crooked Lake－were point $t$ least，of equal interest．
The little rillage was throngce wilh pcople，
the solitary hotel jammed and overflowed，hut the unbounded hospitality of the eitizens was cqual to the emergenes，and the pleasantest
recollections of the oceasion th the menorlcs recollections of the oceaslon in the menorles
of the guests will be those of their generous ntertainment．
pitthed on plecasant grounds，and well adspted to the display of its coutents．Cirapes were the leading fruit，and we have never seen any siow
of them that approached this in rariety and per fecion．Thero were two hunäred aud seventy upwards of exxty varicticene ，One exlluitor，Mr Croxs of leng Yna，had fftt－Aye varletles in bis collcetlon．The interest，however，of the speotators centered in half a dozen of the lead－
ing kinde．The Delawaree，Catawbas，Isavellias，
Concords and Dianas were the noost promincot and the very sight of heaped plates of rip specimens was refreshing．Dr．Ballesy exlub－ specimens of the Iona and Israella．Col．SWIITT that place，which，when corupared wlth thos produced on Crooked Lake，strengthened the south－west．Amon＇s grape growers at Ham mondsport the Concord has not a high reputu－ duigua Lake，exhiblted one plate of Canan that were pieked at his place on the the of Sept．
They were well colored，and althongh not deaid ripe，set theelr rery advanced condition at that Lime shows is very farorable to the of Canly mandaigua the grape．Another plate liom the same the pieked on the 20 th of Septelnber，was weil ripencd．There were itve new seedlings exhib－
ited，bnt the Cornmittee did not deem any of hem of mately ralue
One of the great questlons to be solved b comparison，at the Fair，was which grapo is hes frutt will bardly ripen．In this trial the Dela ware comes out far ahead．It eonald be sent to
market hast inonth，beloro thore wals any danger of a frost harming it．At present the unlk or In the Sacharometer tests whech tit to piek it will be seen that the must of no other made， approached that of the Delaware in swcetuess heee tests were made with the ripest speclmene is follows：－HAmmondsport trapes ：Culawba

 Tine Valley by Dr．Serlue，Sept，20th，gave $76^{\circ}$ Swirt gave $\tau 6$ E．Some Coneords from Ciaguga Allen＇s Hybrid gave S2＇．There was not juled instrument alone．It was，thereforc mixe with the Catawba juice and lt raised the latter shown lye Dr．I．W．Beciluen，Plattsburg，gave fully ripe，It is the most hand Isabellas were no he grape grovers of Pleasant Vahley have cye expericneed．The bulk ol the crop，at the tim
of the Falr，was not sufficiently ripened fo either the market or for wine．But the Deln－ wares were goue．
The other fruits grown in Pleasant Valles There were one hundred and seyents pate of apples，thirty－six of pcars，some peaches，
quinccs，and plums．The fruit was of very fine quality．There was also a large dispiay The ladies obtained great ercdit lor their di phay of llowers．It was unexpectedly large． and the other Moral－exhbibited by Mrs．II．D larly attractive and prominent features．Mrs． oollection．A Iarge and tastly the finest general eollection．$A$ large and tastly arranged lsouque Arseworris of Prattsuurg．Mr．C．W．IDELL of New York city，also exlilited several bril
hant bouquets of this class of flowers，for whici at the close of the Fair，there was a sharp com－
petition by the ladies， Wines and brandics lrom the cellars of the
Pleasant Valley Wine Company the numerous Committce with great satisfactio and considerable hilarity．
Fine weather，though s． ued throughont the three days of the Fall．

## exhibition were disposed of to the highest bidders．The Vincyards． From the deck of the steamer a fine panoramic view of the vinegards on Crooked Lalke may be verv of the vinevards on Crooked Lake may be

 the lake，down the west shore for some miles， ntil you arrive opposite Bluif Paint，the slopend hllls are alrendy rine－clad，or lin course o preparation for plantiug．Thie bulk of the rine cesorted to only where the elope is so steep a
to preclade other cultivation．At frequent in ervals deep ravines break down the slopes fron drainage，and capaclous courses for the surfac water．Well set vineceards in this locality will cll for seven hundred to one thousand dollarg
per acre．From the head of the lake up the por acre．From the head of the lake up the
est
side of Plensant land a distance of tlisce or four milcs．On these slopes the oldest vinegards of the region are illage the wine house and cellars of the Pleassao The vines are trained chlety on trellises， lanted with peresed protaction or in this Valley，prices have also advanced yearly Once they wero sold from four to six cents per ound，now they are worth lion twenty to
hirty．The orlginal purpose of the Wine Com－ any in organkiug and building hes eellars wya mand for table uee should be supplind． ar that demand has been greater than the sup
ply，and the Company has even been compelled buy grapes in Ohio to flll their ensks with
ine At the packing honse in the rincyard operation of putting up the grapes for inarket． The fruit is itrat pleked into open boxes o
ratce，of convenient size and ahape，aud con voyed to the packling roon．If it is designed for five or six hours in the boxes，Is coneider
necessary；but if otherwise，the grapes placed in a periectly close room for twentyfour off from thein．The temperature of the roon hould be cool．Before shlpying they are ex－ daye，then packed in the eblpping boxes，nu the covers．It requires considerable slith an
pactlee to pack pronerly；the frolt thould practlee to pack properly；the frilt thould rin to prevent thanking in the box．The boxes ar
made of very thin wood nalled together，and ar wil oblong sqaare in eliape．They nre wesghel
with the frut and sold at the same price per pound，and in this way more than cost is fre－
quently recelved for themu．They are packed in crites when sent to market．

Tho Whe Cellar．
The process of making aparkling winc， up a large stock，ls very interesting aud nuw to most Amerlean vintueris．Only the best Juice is wine or thil purpose．It is treated as a stlil
wine nutil nearly one ycar old，when ft is take in hand to manufueture into champugne．It brought from tho cellar to an upper roora，
litle sugar addea to it and placed in call The teroperature of this apartment is kept at ．From this cask it is drawn int
bottlee，whilch are corked，wired，and cordeal o their sldes in the same room．The highatemper Cermentation and the winc in the bottles become charged with gas．After the fermentation has they are removed to the duep cellar，where the coolness ehecks the fermentation again．There
they are also corded on thelr stdes，the same ap as when above，lest the sediment whlly th wine deposits should chance to come into the
arr bubble whlch is on the upper slde and to the glass．In this state the wine may reruain The next proecss is the finishing onf，which is not goue through with in quartifies much ahead
of orders．The first step is to plaee the bottles In racks，whieh support them with the neeks twice a day for five or six weeks，lu such a way
as to give the wine in it a rotary motion whil results，at last，in depositing the sediment on the cork．The racks，with the bottles in them， loosencd，the cork permitted to ily out，and the scapent and some of the contents of the bottl scipe．sirup，composed of the purest sugar
lisolved in the best wine，is next added to th contents of the botle，another cork is drlven in
and wired down，labels and tin foil put on，and the Champagne is ready for marlict．some
are，however，improves it of corking，wiring down and injecting the rapid maanner．All the machincry togetber with
the bottles and corks are imported．It was the bottles and corks are imported．It was nished had been Landled at least troo hundred bursting．The sirup which per cent．are lost to the wine
changes its taste greatly；the quantity usel Tepends on the acidity of the wine．
The still wines are stored in casks ranging in in a cellar deep enough to maintain aln ellous temperature．
The sparkling wines are mostly wade from the Catawba，beeause that grape is the only good onc
lor that purpoze that is yet plentful．The lor that purpose that is yet plentfful．Thes
have，however，some quantitice of other branda． One，a mixture of four varieties，viz：Catawba，
l sabella，Dlana and Delaware，comes near perhaps，to French Champagne than any other
Diana is wery tich，but has its peculiar foxy f

MANURING TREES．
Tue engraving here given illistrates admira bly the folly of the contrion mode of manurlugg
fruit trees in the autumn．As the nutriment
must all cnter the roots at their uxtremlties， the proper place for applylng it should be a wear those extrenities as posible，namely，
at some distaneo from the trunk．A ranss o manure close to the collar of the tree forms a
harboring plaece for insects through the winter． mown or carth would be beneficial in pre－ the winter winds．

Dried Fiectis.-1 riced frults are in better de

sketch：
We met Joun on the stairs．He was earrsine an old cradle to be stowed away among what he
termed＂plunder＂in the Jumber－room．One rocker was gone，and the wicker－work of the
sides broken；it was an old willowy affur：b we eould not refrain from casting a sad look int
its cmpty depthe．
＂Gone，＂we eaid，dreamily，＂ali ＂Gone，＂we eaid，dreamily，＂ali gone！＂
What golden heads were onee pillowed here
heads ou whleh carls grew moist in slumier and the checks and lips flushed to the hue of
rose learec．When sleep broke，the silken－ rose leares．When sleep broke，the silken－
fringed lids opeued heavily from the slambrous
eres；smiles filted like sunbcams over the fies the white Ilst was tbrust into the noouth，and
when mamma lifted the muslin and peeped in to sce if baly was awake，what cooing and erow－ ing was beard！The jittle fect began to klek
out of pure delight，and kleked on until both of erade．Where ere thoge heads now？Some slecping oy battle－fields；some are bleached with
time and cares；and the feet have grown sore and weary on the rough paths of life． Perthaps soone little one once tenderly roeked
here is sleplug fu the coffic．Over it grows tuf，and etarry jessamine．The blue－lird the ters its bright wings through the willow boughs， leares and grass $s$－blades on the grave．What of Periap）s of its mortality．Sleep）on，intue drean
less one！＂Of sueh is the kingdom of henven．＂
aQUATIC COURTSHIP．
A Lownox Magazine，in an article on bathing，
tells the following story．We suppose all the young ladics winl pronounce the adventurous
youth who went on so swimmingly／with his count ship，a dear chucle of a lover：
＂It is reported tbat one young gentleman who
swam lodifiecently，followed out into the sea young lady who swam excellently；that，pan meut，aud almost choled himself in the attemp1 his back，be explained quietly his positiou and
elreumstances，and breathed words of tender－ ness，while the fair one again and agaiu plungeu
under water to couecal her blushes；and that
fivalty，when they swam to shore，the daring yonth had becn accepted，at the cost of being
alnost paraiyzed with the cold．

REST－HERE AND HEREAFTER．
Resst：It is the never censing cicsirc of the Earth，of its jors which we wish when weary of －Its disappointmenta，tolls and trinls，－all that
makes np the busy scenes and struggles of llfe． We desire Rest，both plysically and mentally，
Wittout thits preeions boon the coustitutlon Wat is the most robust wouid ponn becorne pher would ere，long degencrate iuto an idiot．
There are hourd when the most energetle splitls are wearled，－when they bave no hope，no do－
sire，no wish but for repose．While，annidst the tumults of llfe，dark clouds of 111 and disal． ．
pofntment gather and o＇creast the sonl with
ond and pleasures，with its gilded temptations，nils the mind with sorrow－when the past，with its trial，transgressions，its aecnmulating reapon． sibilities，lts elinging memorles，weilghe down
the epirlt，and when hopes that eluster around life have fallen like the forest leaves when chilled with the frosts of autumn are beheld around us－＇tis then we ask and seek for rest． And there are hours when those who toil aimost weeasingly for wealsh，whose every ghought seems placed preeminently on the one gladiy would they exan oll the wealth that they possees for rest．And often is the votary
at pleasure＇s shrines tired of the world on whleh he bestows so many thougute，and from which those too，who are compelled to latort．Aud daily bread ardently wish for some respite，some cessation from their ever－wearying，never cens－ iug toil；－bat neeesslty ever eternly urges then1
onward．And those wio are harrassed with palu， who count the tedlous hours or measure the yery moments by their throbbing pulse，Lope
for some relief，some Rest from their sufferiug． And as the lamp when Nlytht Las robed the carth． In earkbess sheds lts pale，lifekering beams o＇er the emaciated form of the＂anthor＂as he tracess
those liues that gain for him a livelibood，and endearors from the beauteous scenes of Nature， or the exhaustless fountains of Pallosoplay or Seienee，time after the the the mortals nerer vefore rested－iaborlug thus he beeomes wears，worn And what does Rest then promise that ali so muel desire it？It builds no grand palaee in
the distant future to which onr fancy leads us It gilds not coming scenes with rain illusions that disappear as we approach thelly．It makes with airy phantoms or visions，，，right with splen－ dor．It paints not the memories of the past
with a false coloring，－but it stops imagination＇s widd career．It calms our feelings and stllls the ur fevered，aching brows with quiet，peaceful elumbers．It comes in us encu Saluath day，and quells the strife and battle with the worrd． that greets the weary spirit as it eomen uear the eterual home．Then，and not till then，shall each of us fully experie．
Rest．

MORTMOMTORAM.
GRAPE GROWERS IN COUNOIL.

## 

CRASE, T. M. Yousclove, on invitation, gave
a short bistory of grape culture in Plensat Yal-
 brought to the Valles from Long Island, thirly
years ago, and cnltivated with indifferent suc-
cess owing to the esstem of garden cultnre cess owing to the esstem of garden cultnre
adopted. The Catawba was grown here nearly twenty-five jcars without seeing a ripe grape Daring that time they were grown only not taken to the side bill. Manure has been used but the experiment proved a failure;
withort manure the growth of weod is compact, soild ande system. The hoe is the best manure. The elight yeare
exhibition.
C. D. Charplits said la repls to a questiou
by Dr. Grant, the first opcration in the summer
was to cultirate thoronghly, then plach baek the Was to cultivate thoronghly
branches are strung to the wires with firs The unnecessary wood is taken ont, leavi
to three canesfor beariug next seanson.
August lit the bearint August lit the bearing eanes are pinched back,
and finally eut off entircly three leaves beyond the fruit. The fruit is kept close to the ground
-the closer the better. The laterals shonld, if
possible, be pinehed ont entlrely before lcaves possible, be pinehed ont entirely before leaves
are formed on them; but if they are formen
before ehecking, two leaves should be left. Dr. Nichols, Vine Valley, Canandalgan La though that of fruit was older. He claimed for
his locality a favorable exposure and remarkable exemption frou frost. Lsabella grapes bad been
grown lor some ycars, not in vineyarde, but by farmers, as casual produets. This year ripe Isam
bellas were picked from such vines on Sentembellas were picked from such vines on Septem-
ber ith. The viues had rcceived little calture;
the ripening depended ou no adentitious eirthe ripening depended ou no adrentituous cir-
cumstanees, no ringling, disease, nor rapture of the roota. Last year the entlrc crop of one vinc-
yard of Isabcllas was disposcd of September
10th. Grape calture has been begun as a business, abont eeventy acres haylng been planted
the least apring. The late frost was not observed to produce any effect in the locality. Tho land on which the Isabellas mentioned werc
grown was clayish, the soll not being considered grown was clatyish, the soll hot belng
good for anything else by the owner
Mr. A. T. Baker, Pleasant Valley, Illustrated
the system of praning adopted fo this loeallty by a diagram. The system was charracterized by
bim as a combination of the spur aud renewal system, being mainly the renerval; were pruned different from any system ladd down in the books.
The closer we can grow the fruit to the ground We better it ripens. It is best to grow a moderate crop- tay from four to fle thoosand pounds
per acre. Would not advise a close summer praning, set eome is essentinl. [As Mr, Baker's
remarks were chiefly explauatory of drawings on the black-board it is difleult to convey them to our readors. He rery kindly promised, how-
ever, to furnish the Rukal an illustrated article on the tine in Pleasant Vallcy.]
Mr. C. D. Cusmplin, Pleasant Valley, said
the repuations of the Diana and Dclaware were fally established here. As a wine grape he con-
sidered the Dlana the best yet found. Its shipping qualities are better than that of the Delathe Delaware, and hangs longer on the vines than ansp pther Yarioty
Adro i. L. ©iliérr, Peun Yan, had fruited the Adriondac, It is astrong grower; not as strong
as the Catawbha, but of as good size as the Isaware, but docs not ripen as soon. The Israella,
lona and Adrlondae stand the winter in the order named. The Adriondae was injured by a
severe winter. The apper buds of the Iona were killed, but the lower ones shat Israella was uninjured. Hnd seen thirty
Tlue unable to see the Iona and Ieraella in benrivg at Dr. Gp.ast's place; 8 aw both at Waterloo. The Ieraella is the strouger grower of the hoo, but
the Iona is stronger than the Delaware. At that aee, about September
rere on yellow loam; t

Geo. H. Colung depoecd: 1 Linve long regarded
the Wheeler \& W Whaon wechinc as the
Fenlous in phan and the most. remurknble to in performance. The wide range of work to whiel is anapted, the grent rupidity of to move cnt, and lts alunost noisceess cxecution, aredno of these machince will do cimatatistled that as much as can be done by hand, and quite one lifth more than any other two-thread machlne
will do. With very tritin will do. With very tristing repairs it atlu run ten
years. No machine of equal merit bas ever Charles my observation.
miliar with serving -machlues for many years The Whecler it Whison Machines are vastly su perior in their adaptation and uge upon all
chasses of work for domestic purposes. rent consideration in the ute of Sewing. Ya chlues is the cxpense of repairs. From the ease WHison Machine ls subjeeted to but silghecler wear and the expense of repair ls very slikht in com parison with other raachines. I am fully con
yinced that they do not coat onefteth of that of an other two thread machine
N. D. Stoops deposed: I have visited all the principal seving-machine manufactoriee, and ouly what was hest, but why it was best. The Wheeler \& Wilson ls the simplest in parts, the most direet, quet and rapld in action of any
two-turead machinc. Other machines canuot keep np with it. I now sell all kinds, and sell ten of these to one of any other. Others come
baek for eschange with many murmurs and com. plaints; these never. Onee soid, they are gone,
and as an artiele of merehandise they are al salable.
Sewing upon hand-serving that hould wot be surprlsiug to hear noy machine commended. Those, however, aro best quallied to judge of their
comparative valuc, who have tried more than one thoroughly. A maeline may, by some pe-
cullarlty, be well sulted to a apochal work, and sewing. Many of what a called ateling points a machine are simply frivolous, and intended that it can walk on three legs; and so uscless Substantial exccllencies only can stand the tee: usefiul, and coes it execute thena well.
Other questions are important. Is the Com. pany honorable and responsible? Are its guar-
anties well flled? Does it furaigh facllitles for
supplies and repirs. most who intend to perform least. Scores of manuffeturcrs have disappeared aud left pur-
chasces of machincs with no means of repairen. or of obtaining needles and parts of maehince,
greatly to the detriment of the Bewing Machine
bulnesu

| FUGITIVE PRINCES. <br> A ciefaran journal gives a list of dethroned princes who now lise lo diferent parts of Ell rope. First, there is Don Mirguei, dethroned in 18s0, who resides da Germany, having married a German prlucess; next, the Count de Chambord, in cxile since 1830, residing generully in Austria. With hirm mas be classed the Orleazist prlnces, who reside mastly in Eagland, Leopold and Fer dinand of Tnscanj, Francis $\mathcal{V}$. of Modena, and Robert of Parcaa, were driven from their states in 1859. The three first reside in Austrla, the last in Switzerland. The followlog year Fraucis II. was seat to increase the list of retired kloge. In 156:, King Otho of Cireece, was drlven from his thronc. King George of Hanover, the Elector Fredcrick Wllifam of Hesse, and the Dake Adolph, of Nassau, have just bcen added to the list, which may further be augmented by the addition of Prince Couza, who now resides in Paris, and the Prince of Augastenburg, who lives in Bavaria. <br> EjGland and Scotland. - An Englishman and a Scotehman were diseussing, over the dinncr - table, the relative greatacss of their respectlve countries, when the former put in What he considered a poser: - "You will," be sald, "at least admalt that England is larger in cxten: than Seotiand!" "Certainly not," was tbe confideut repiy. "You see, s? r , ours is mountainous, yours is a dat country. Now, if our hills were rolled out flat, we should beat you by trundreds o? square miles." This reminds us of a Vurnonter who claimed that his State had more land to the acre than ang other, becanse | day, Bessie, and they will come up large, strong plants alter awhile," said her father. <br> ' $O$, no, father; I Lave not planted any seeds for a long while." <br> "I have seen my daughter" sow a number of seceds to day." <br> Bessle looked puzzled, and her father smiled and sald, "Yes, I have watched you planting lowers, and seeds, and weeds to day." <br> "Now I know that you are joking, for I would not plant ugls weeds." <br> "I will tell you what I mean. When you laid aslde that interesting book, and attended to What your mother wished done, you were sowing beeds of kindness and love. When you broke the dish that you knuw your mother val ued, and came lastantly and told her, you were Bowing seeds of truth. When you took the cup of cold water to the poor woman at the gate, 5ou were sowing the seeds of mercy. These are all heatiful fowers, Bessie. But I hope my little girl has been planting the great tree of 'love until lts branehes reach the skies and meet be ${ }^{\perp}$ fore his throne."-Selected. <br> Love is a severe eritic. Hate can pardon more than love. They who aspire to love worthily, sabject themselves to an ordeal more rigid than auy other. <br> Thou may'st be more happy than ever were Alcxander and Cresar, if thou wilt be more virtuous. <br> By how much lower the Saviour was made for me, by so mach the dearer may he be to me.Bernard. <br> Ir is beauty's privilege to kiil time, and time kills beauty. |

MOORE'S RURAL NEW-YORKER, rural, literary and pamily netspapgr. CONDUCTED BY D. D. T. MOORE,

 $\stackrel{\square}{\square}$
AGRYUOXURALE

Somse farmers treat their horses in winter
rachas they do their fattentur cattle and oheen. they give them abunalant food, and but llttle exercise, keep them in a warm and dimly lighted stable, nod if they do but grow fat, with their cattle and sheep, they deen it convinclug proof
that the proper course hus been pursned. Now that the proper coursc has becn pursned, Now farmer, but his gratitude towards these faithful servants should not Induce hlm, at any time of the sear, to stall fecd them. The butcher wants thick meat and plenty of tallow in the cattle and sheep, but the plowrian looks tor strong muscle,
spirit and end anance in his tam. The food and eare of the diftierent animals should be consis-
tent with the ultimate purpose they aro to serve Fat horses that have been wintered mostly in the stable, without much excrcise, are not fit for hard service at the openlug of the working sesson in the spring, and a prolife source of
disease is the hard work they are frequently compelled to do when they are not lu proper condition.
The o
docs not call for mach busces of the farm a if ho have scveral most or them may be entirel idle. In such cases it is anl excellent plan to
have a sard for their especial bencfit, well litter ed anil safe, and let them Lave access to it several hours eaele day. The horses should be unshod,
and $f$ any are vicious they may be turned loose at different hours from thc others. The horses will ghow by thelr plagful actions how muen
they cujoy this temporary rellef from the stoll Another very important thing, often neglected by farmerse, is the grooming of ther teams. In the summer time the horse, by rolling in the
pasture, to a certaiu extent cleans himsclf; be pasture, to a certaiue extent cleans himself; be
sides the raius bave solne fffect. But in the stable he relies on the care of his master, and
the kecen enjoyment the curry-comb mad brush eridently give him, slould be ample reward for the labor. A well lighted stable, thoroughly
rentilated yet free from enrrents of air, should also le provided.
we think, will agree to the propositlon that it is alwass good economy to grind or mash all kifds
of grain before feeding. It is well of grain before feeding. It is welt established
that cut straw, comstalks or other coarse fodder fed with some gruin is cheaper than to winter
the horses wholly the horses wholly on hay. Witthout stopping to
assigu reasons we think they also come out in spring in better condition than when fed on hay
alone. Good wheat or oat straw fod with bran strengthened with corn meal has been found ex preterable to dampen the eut hay or straw and The wintering of horses should begin with the
frst approach of cold autumn nichte. No worl horse should now be left in the pasture execpt in the day time. Exposure to a sivgle autumn
storm might cause damage enough to the furmstorm might cause damage enough to the furm-
cr's teams to have pala for years of timely care.

SWINE.- SUFFOLK AND ESSEX.
THE Suffolks, when pure, are noted for as
many excellent points as any other brecd of
many excellent points as any other breed on
hogs; and we think that thie Snaltolk biood has
done is mach, if not more, to lmprove the common swine of thls conutry as any other stralin Whatsocver. The following general description,
by an English writer, of the points of a yood hog, are especially applicable to a grood sulfillk
These points are, -"Snaficlent depth of circo and such an clongation of body as will insnrc sufficient lateral cxpanslon. Let the loin and chest be broad. The breadth of the latter de-
notes good room for the play of the lungs, and conseqnent free and healthy clrcnlation, ea ential to the thriving or fattening of any
animal. The bone should be emall aud tho joints fine. Nothing is more indicative of high oreediag than this; and the legs should be no longer than, when fally fat, to prevent the body
from traling on the ground. The leg is the least profitable portion of the hos, and we require no more sonnd, uad the tocs lie woll together, and press straightly on the ground, as also that the claws
are eren, upright, and healthy. Many say that Lue form of the head is of little or no conse
quence, and that a good hog may hare an ugl) headd but I regard the head of all animals one of the rery priucipal points where pare or
impure breding will be most obviously inds cated. A hlgh brad aninal will invariably found to arrive more speedily to matarlty,
turn out more prontally than one of lurn out more profitaly than one of inpary
stock; and such becing the case I coneider the by the purchaser. The description of head nos ilkely to be a coneomitant of high breeding is one not carrying heary bone, not too llat on tho
forehead, or poseeseng too long a suont; the forehead ehould be raticer convex, curying upward, and the ear should be penduious, a
inclined somewhat forward, and also lyght an
thin." The Suflolk is remarkable for carly maturity, ears keening, and quiet habits. During the
first yarr of their lives they will malce as much meat with the same feed as any other breed of
hogs. They should not be kept too pasture, in
The Improved Essex, some fine specimens of general description of a well bred hog. They
were originated in the county of Esscx, Encland by crossing wita the Neapolitan, and lhey in-
herit the black color of the race. On this side
 compact form, a amall amount of bonc and offral,
and, when well curcd, a delieious ham. dark color in the bide does not penetrate deep,
as after drossing they are quite white. Manj farmers lave a dislike, ampouyting alnost to prejndice, to a dark skinncd hor, but in the ene
of the Essex, at least, a dark hide covers many Eolne parts of England, and has wou many first he dressed ricight of falr specimens is said io

Loncid ranure is the best form for applica
Hon to grass lande. Solld mannre is often yer nasaisfactory in its results; and thell, but fow
farmers can aftorit to tive thelr gras lands a barm- arard. Any farme fesum sutisfy himeself of the by observing his meadows in the spriug that bave been pustured in the preceding autnmn pots on which the liquid manure has been de growth of grass than those that have received the olld cxerements.
If the farmer ha
he could enrich his meadows mapldy fyand cheaply. Then he bholld construct his stables so as to ave 1t, and when these improvements wete
made he wolld probably conclude to tie the cows in the stables at night, and provide som
extra food for them, which would Incrense th dairy products.
It is asserted by some that soiid manure is more lasting in ils beneficial actlon, but gate is as large as that resulting from the appli cation of the eame quantily in a liquid forn, apply this top-dressing to meadows, and we ad-
vise farmers who have poor spots in such tield Vise farmers who have poor spots in such tields
to try the experiment of an applleation of hiqud manure. Just before the ground frececs
solid whll auswer in point of time. Kcep an account of the cost of labor and valne of materials used and nest year report to th
it was a proftalle opuration.

## burying vs. blasting rocks.

Trakisu a stroll, not long since, we observed a farmer engaged in digging a pit alougside of
considerable rock or boulder, for the purpose quite a number of theshe. Thecks, whild contalned were to be disposed of in the sarme way. The question w
asked whether the party had an abundance tive. Still he was digging deep holes to hide
below the surface the very material wanted for fencing the farm!
These rocks, besure, were too gross and un-
wieldy for a fence wall, but how easily thes
could, be rendered manageable by the aid of a
drill and a trilling expenditure for blasting pow-
der. A center blast will throw one of the sear snrfare rocks into fragments suited to the construc-
tion of a common ficld wall, which, properly put up, will reqnire littic or wo other repairs
during an ordinary lifetime. Any man of ordinary judgment can drill one of these rocks, and properly dried and servewed, will supply all the packing necessary to a blast. Drill the rock
rell down towards the center: pour in a quantity of powder,
fourthys full ; insert a tube, in the shape of a rye, whent or oat strass, filled with fine powder, an
then fill the hole willd dry, fine eanu, and the train, and then seck a place of sality. The train, and then seek a place of sality. The ex-
plosion wilt present the rock in sectious easily
remowed to a line of stone wall by means of an
this operation will not exceed that required fo
the vurying process, while providing the matu lill for a good fence, which the other mode of $\underset{\text { Extracts from reading. }}{ }$

> Underdraining and Pulverizing the Soil. zing the soil; wen thorougil draining stsel will not supersede tho neceesilty of performing this operation. Almost the whole superiority of gerden over field produco is referable to the
greater perfection to which this pulveriziur or the soil can be carried. soil examined mechanically, is fonnd to consist of partclece of all sizes nd shapes, from stones and pebbles dowa to the flinest powder, and, on account of their ex reme irregularity of shape, they cannot he so close to one another as to prevent there being
pasaakes between them, owiug to which soll 1 n the mass is always more or less porous. There onus whech exist between the particles of coil and secend, the very minute ones, which occu in the particles themsclves.
Leet any one should suppose that the content that thelr whole amount can be of but little con sequence, I may here notice the fuct that in
moderately well pulverized soil, they amount to no less than one-fourth of the whole bulk of he soil itself; for exanple, 100 cubic inches noist soil (that is of soil in which the porcs
the particles are filled with water whlle th canals between the particles are filled with air, contain 20 enbie inches of air. Accorang to
this calculation, iu a field pulverized to a depth of cight Inches, every imperial acre will return
bencath its surtice $12,555,200$ cubic inches of air. And, to take one more clement into the culcula tion, supplosivg the soll were not properl
dralucd, the suffcient pulyerizing of an addl lional hineh in depth would Increase the cscapo
of water from the surface by upwards of on hundred gallons per acre cach day.-Di; Naulden Clovar differs entirely from the cerear plants in this respect, that it sends itz main tacles stand in the way; to a depth which the he fibrous roots of wheat and barley fall to reach; the principal roots of clover branch of
into crecplnts shoots, whicll again send fort fresh roots downwards. Thus clover, ilke the
pea plant, derives its principal food from lasers bet the arable surface soll; and the difierence he clover, from its larger and inore extensiro rootsurface, can still ind a sulliciency of food
inficiss where peus will no longer thrive; the proportionably turuch 100 erer by clover than by ize, eau furnish from ils own mass, but fo formative clements for lho young plant, and r quires a rich arable surface for its derelopinent
but the plant takes comparatively but iittle food rom the surface soll. When the roots have piereed through this, the upper parts are Eoon

OHARITABLE FAIR -TODRNAMENT, by amilie pettit, of st. louts.
Dear Rural :-The most brilliant of many recherche entertainments given by the "South-
ern Rellef ABsoclation" took plaee in the Amern Rellef Asboclation" took plaee in "he AmLouis, ) on Thureday, Oct. 11th. The animatcd
crowd, giftering costumes of the Knights, proud gracefalncess of the horses, and bcauty
of the bluc, sniling kky, rendered tice scene a of the bluc, smiling oks, rendere,
jiving picture upon the menory.
living picture upon the meniory.
The Tournmment was fashioned, as nearly as compatble with the spirit of the present agc,
apon recelved notlous of Enightly tits of olden npon recelved
times. In the terse language of the news-hos,
the game was to take away upon a long lance, while riding at "falli titt," curtain small rings suspended by hook and cord, and victoriously
bear the eame to the judgos. Twenty.elght gentlcmcu entercd thic libto. pccially noticeabie, Rowarier. He rode with a
of a graceful Indian warl
aakli and abandon that strongly reminded orie of askh and wepanern warrior. The Kulght of Crescent was fuely costumed in ecarlet, slasted
with gold, and a bure mantle. God frey De mautle. Knight of Grave Cocnr, black, with mautle. Knight of Grave Cocar, black, wits
sweeping white plume. Midnlght was eleggntly
dressed in black velvet, trimmed with silver dressed in black velvet, trimmed with silver
cord. Knight of sccond 8 ., in gold corsict, with silver and black ornaments. Knight of Bclmont wore a simple pink jacket. Knigh
Whitc Cockade was handsomely apparrolled in white and blue. Other Kulghts were appropriately costumed.
Thus, in the eclat that brilliant colors and quaint dress affords, well monnted, wilh glittering lanees and gay pennons, the contestants
dashed round in suceession, each trying thrce dimes, and, mid cleecrs and waving of hands and canght to the stand. Whatevcr of rings the eud of three rounds, Knights of White Cockado and Belmont had each won six rings; Grave Coear and Lost
Gause, each ave; Black Plume, Midnytgt and Crescent, each four. Atter a tria Becmont (E A. McClomp) was deciarcd victor
 sie Holliday) Queen of Jove and Beauty,
the other victors cach crowning a Maid of Honor. The day of festivity closcd with a bril-
liant ball at the Southern Hotel. The day's liant ball at the Southern Hotel.
procceds were ten thousand dollars.
The "Far" dece sucess, Donations from evers part of our country-North, Enst, Sonth and West $t_{1}-$
have added their moncy value, and what is still better, promoted good feeling, both parties
haviug taken the deepest interest In the welfare of the project. An unfinished warchouse, near
the intersection of Fifth street aud Choteau Avenne, has been the seene of the Fair. Rafters and supporting timhers wound with evergreens,
ctudded with white lilies, - walls bright with mirrors and draped in oriental splendor win scarlet, gold and white, thousands of jects o
light in clusterced stars, words and fancifu light in clusterce stars, words and
tigures, -elegantly dressed women, presiding al
dind finest prozuctions of combined taste, labor an wealth,--have transformed a common building
into a palace of elegauce snd pleasure. It is into a palace of elegauce and pleasure. It is
thought a half fallion of dollars will be realized. If only the truly needy receive this moncy, every
generous heart will be glad ; but still, as ever "tarcs grow with the wheat."

Heavy shoes for the ladies. Wrinter is coming, and we desire to say a
word or two to our lady readers about clothing When the celehrated physician Abernethy
sied, report sald that, besides a will of some interest 10 lis beirs, in a pecuniary point of
riew, there was fonnd among his cerects a sealed envelope, said to contain the secret of his great success in the healing art, and also a rule of
living, the following of which would insare longerity. At was found to was paid for the scaled envelope insure continued health and a ripe old age, kee the head cool, the system open and the fee

> en for Moore's Raral Sew. WRITINE POETRY.

2a clear head. Espccialls is thls so with poe-
When thoughts drop like sparkies from the pen,
both warnaing aud enlightening the whind, there
s an effect, and it is instantancous and poslive. No explanation is neccesary, no persuasion; the lightnlng Etrikes, and "re arc hit. This is true
literature. When wo look upon a pleture and are affected ly it, that tells the story. So with Trith any strking seene in Nature;
in poctrs, in prosc. The orator has this power
if he be a true orator; there is llghtang io his inscourse; he calls it forth, and that without a
dill of his hearers. As foon as the man bering to coax, to fawn
there ls a suspielou of mikchief, -the true meta is not there, - pinchbeck occupices its place.
But the man of true talent commands; besides, he knows what he can do; be knowe it before-
tand. He knows his metal and bls caliber. II is a live man: this he mast be, or he canuot
compunuiente what is waited. He cannot communicate what he has not to give-a warm heart, a pure, a profoundiy lively cniotion, if
lis qualits is good, hls tame will be great if
harsh and bitter, if repellant, no one will accept t; if vulgar, or mean, neople will turn away from it, sare perbaps the rulgar and the iucan.
A writer mast be as bls audience is. His taste A writer must be as bs audience is. Tistat to
and capacity must be graded to chat, or ithat him, 一for there are cilferent grades of tasto,
ikc lajers, one above the other. These must and be addressed, - and if sul a man is sincere, and
has the talent to express hinself, and a respect-
able taste, he will cover many layeres, zometiaes able taste, he will cover many lase to the highest.
reach them all, from the lowest
Thns the simplicitr of "The Song of the Sbitt" Thus the simplicity of "The Song of the
addressess itself to all hearte-the h!ghest re spond as well'as the lowest. So with "Robituson Crusoc." Bunss' poctry sTrays all hearts, and yet Burss was not a highly cultivated poet,

## ${ }^{\text {man. }}$ Bntbo

Bntsome poeta are made for the few. Witness
Tcnnyon, Brownlng, Keate, TFordsworth, Shellcy, Lowell, Bryant, Coieridge, Arthur Hngh Clough, Ewinburue, Miss. Rosetti, Mrs. Browning. Thess are all poets of the genuine stamp,
elcrated and refined in their way, Fith a large elcrated and refined in their way, with a larg crocies, as well as to the common feelings of
the heart. Then therc are some poets who are on the surface, who are palpable to crerybody. These make their work, not among the few, bu the many. They stand ont to be beholden by the multitude, and they are never mistakenyon see what there is of you; the Arst impres. glance from effeet - gou get the force of their
sion is full
Such is Breon, pre entire caliter at once. Such is Byros, pre-
eminently. He bas no peer in this respeet, and he addresses himself to all classes; not
designedly to any one; he ouly addresses, glrcs designedly to any one; he ouly adaresses, glves
 to give utteranee; that accomplished, he had re-
lief; otherwise, not. It was this Dy Dyronic in Brros that made his poetry what it is; not any thing elsc. We see it in all his efforts; the great
complaing man is there, alrrays in the came ley complaing man is there, always in the same key,
and that key in consonance with the human
heart. Gloom has its attraction, and tears are hearl.
welcome when drawn from a heart softened.
Broox was a live mas, - intensely so. And
he gave expression to this intensely llve nature he gave expression to this intensely llve natur
of his. This is the sum of the Whole thing-an intensiincd nature, and a taste to give it diree
tion. As to the expression, that will come. No man, unless absolutely defective,
expression to an animated natare. The woods
man will do it in his slang phrase- in his rough but ant narative. So the sallor. So all classes,
All have their poets, in disguise, under disadrantages; put this disguise will be broken through
if not in one way, then in another; there must
be an cseape. These are the fiowers that "blush

HARVEST HOME AT FAIRLIGHT.

##  $\overline{\text { REGULATIONS FOR THE PAYMENT OF }}$

 Tur following rules and regulations for the payment of bounties ander the act to equalizebountites, approved July 28,1866 , have been
wayte issued bot the War Department:
Firirat - All applications sball the period of six morths from the ficrit taso
Oetober, 1866 , and befort any payments are made shall be colasitited br reglimentst, battalions,
or other separate irganyatious, and no applicaor other separate organizations, and no applica-
tion tled affer that period shall be gettled until the former shall have been pald.
Second - No application shall b
 the Boadier, and the amiduyit required by the
fourteenth section of tha Act, and the further aftlderit that he has not receired, nor is he ent1-
tled to rccelve, from the Unitod States, under any laws or regulatlons prior to the Act of July
28, 1866 , more than one hnndred dollarz bounty for ang and all mulltary service rendered by bim amount thercin claimed. Thitrd - All appllications for the additional
bounty anthorized by thls net from surviving soldiers, , chall be in form hereinafter provided,
and the evidence of identity shall be the same and the eviacnce of identer aplications from the
as is now requlrad and
helrs of deceased soldiers shall be tn tho form now required by the Treasury Department. Fourth-As soou as the examination of the
claims of any roglment or other Independent on, the Paymaster Goueral sball take the neces sary steps for thelr prompt payment,
Fiy th - A register shall bo kept in master Gcneral's offlce, and also in the office of
the Sccond Auditor, of all claims presented under the law, in which the ceglanonts, icc. If the claims be allowed, the amount of bountr patd to each will will be disclinetiy stated.
 shall state each aud every period of service rendered by the cluimant, und elso that
served otherwise thau as thereln stated.
Seventh-Organizations irregularly in the ser-
viee of the United States, or calcd out for
spcciai parposes as state Militia, bome guards, spcciai parposes as State Militia, bome guards,
\&c., and not ineluded in the general bounty
laws, are not included within the meanin. of
the Act.
Eiphth - Soldiers calisted for three years or
during the war who were discharged by during the war who were discharged by reason cred as having served out the period of their
colistment, and are entitted to bounty under this act.
Ninth - The minority of heirs claimants for
bounty under this act nust be proven to have
extated at the date of Its passage. Parent shall exjeted at the date of its passage. Parents shal
recelvo joinilly the bouuty to which they nay be cntiled as heirs his familly, in whlch case it sha be paid to the mother. Non-resldenee in tho heirs who would othcrwise legally inherit. The pro following elasses: 1 . Those who, after
serving the fall period of their enlistment, were dishonorably discharged at its expiration. 2.
Those discbarged during enilstment by was of favor or punishment. 8. Those diseharge on account of disability contracted in the ser
rice, but not occasioned by wouds received in served two or three yeurs respectlyely at the
tlme of discharge. 4. Those discharged on ac connt of disability existlug at the the of eulls ment. S. The heiri of those who have died
since their discharge of wounds or dlsease not contracted in survivlog solders and the helris of do ceased soldiers, who, under previous laws, hav received or are eatitled to receive a boanty
more Hian $\$ 100$ from tha United States. The surviring solulers, 28 well as heirs tered, sold, assigned, loaned, transferred, ex
changed, or glven away their final discharge papers, or any luturest in the bounty provided
by this or any other Act of Congress. 8. The Aet of the 38th of July, 1866, ureates no right under which these heirs recelved or were encertaiu classes, brothers and elsters of heirs that were entitled to receive the original bounty,
from any claim for additional bounty prorlded for by this act.
The above having been referred by the Secrotary of War to the Attorney General for his
opinion on the point whether the rales and reg. ulatlons,
wis with thin amended, are in conformity
whe the latter has given an allurmatlve

Arecdote or rme Czask NichoLas. - What
little chanec of help from Russia, Austria has to expect in any contingence, may be judged from an aneedote told of the late Czar Nicholas. He
was crossing the Summer Garden with an aidWas crossing the Summer Garden with an aid-
de-camp when he suddenly stopped before one
of the statues, saved Vienna from a Moslem invasion. "Do you
know," be asked, "wlio was the greatest Idio know," be asked, "who was the greatest Idio
in the world next to Sobieski ?" Recciving no answer, "I am the man," he said; "beeanse I
was fool enough to sare Austria the sceond
inc." He did not think that Austria's partial he deserved for preserving Hungary to Satime should not be like a saw, but a sword

less talker. "It knows when to shut its mouth,"

"NOTHING BUT LEAVES

## Over a wasted life ;

## 'er sing committed whle conectence

 And reap from years of strifc-How many of us at the close of life will look truth of the sad refrain, "Nothing but feaves," Then, thinking of the great fleld for action in which we are placed, we shall know that onrtime was oft misppent. we shll time was oft misspent; we shall remember the
conntless opportunitics for doing noble deeds and beneititing those aroand us-the many kind
nesses in our power to perform, but whlch were nesses in our power to perform, but which were
passed enrelessly by - and the many dile moments whileh nilght have been employed.
Will it bo a pleasure to look back und see that ours has been a useless, an nimicss Iffe-one that the spirit grleves over? Nol-rather let as
soow that the world of mankind will be the better for our having lived in it. Do we not
often stide thut "stlll, small rolee" that will
tise up and reprove us for words and deeds of wrong? Stilled too oft, consclence eleceps at
last, leaving us to pursue our conrse wifliout its timely warnlugs, and nnshaken in our bellef of arts, ind, though at first we many shun as a deadly encmy, set by constant association
with its varied forms we learn to look with com or. Let us strise, then, to fikepp alive that
ittle monitor, that lu listening to it a There are promlses made, bat never kept. Tcacliery and deceit often tie in the fairest
vows, and poisonous slanders behind the noothest words. The lipg, tuned to the most
oving utterancco, souetimes sadly betray. The ost ancred promises-glyen ever so solemnlsrust; and we ever look with distrust on one ho has onec betrayed a conidenee, and woundonesty and Kindness, that we may not bring
our Maker at the last great day "Nothing

EXCELLENCE WITHOUT LABOR."
Thiss is a maxim which, though doubtiess very one, la appreclated as lively few. It is, nevertheless, a truth which we all must acecept, and a formula by which wo may solve the most ain. problems or human proper ase of which greatest obstaelee, aud win the brightest Laurels Wisely has it been anda, that the odueation of crery indi ildual, woth moral and intellectual, is hleny hls own worls. The best lustitutions of learning can give omly the opportunty of men-
tal diselphine, while it rents entrely with ouror not. Every one le, to a certain extent, the "archltect of hia own fortune," and though
adversity may rest heavily upou him, he can by 2diverilty may rest heavily upoun him, he can by
vigorous efrort, and ribid application, nolly overcome every barrler; and, having once
galued the mastery, can goe how the burden le has borne, the eflorts he has pat fortb, have koit his muscles and strengtheued his whole being.
Thls truth is veritied, and falthfully illustrated, This truth is verited, and falthfully illustrated,
in the life of every scholar, and $\ln$ all the characters who appear as brilliant and shining lights npon the
uistory.
Thistory
The sablime stratns of Murton are the pro-
duets of mach thought and the most severe mental labor, while the power and ability of Desmoxsrureses were acqnired by great cxer-
tion nad fasthfal study. Thas it is, and ever tion nud falthfal study. Thas it is, and ever
has been, that to the carnest, falthful worker is revealed a splendid triumph, and by virtuc of
the toll and exertion that hare so thoroughly developed his powers, is he euabled the more readlly
reward.

A Fable for Youth.-A young man onee picked apa sovereign lying on the rond. Ever
afterwards, as he walked along, he kept his eyes teadrastly fixed on the ground, in hopes of findbe dila plek, up, at different times, a good amount of gold and silver. But all these days, as se was
looking for them, be saw not that heaven wa bright alove him, and nature beautilitul around

## grape vines-manure.

In all the discussions on the callure of the
grape whieh have fallen under our notlee for the frape whieh have fallen under our notlee for the
last year, there has been evinced great nnanimity on one point, unougg grape growers, in ref. The deceision lias been against the usce, excepta ong intervale, and a sparing application even
then. This conclufion is alissented from by 1r. Hovex, in his Magazlne of Horticulture for for table ube. With respect to wine vinogards, this dissent is somewhat qualiiked. We qnoto the closing paragraphs of hls artlcle. Thus :-
"It will be perceived that we are no advocat for growing grape vines without manure. All
the weaker klnds, suel as Delaware, Rebecen, e, cannot be well established without its use. The fiulure to make sucly varicties grow freely lerial of some kind. Thure, or curiching ma equires less, but they will be more vigorou nd productive If not neglected. The stronger Prollife, will grow freely in any good soill, and orts; bat moderate manarin! will not be los theece kinds.
For the culture of grapes for the table or re the desideratam. For this purpose the soil well drained, and well manured, the success be-
ing in the ratlo of the absence or exeess of ing in the rallo of the absence or cecess of
either. Thoroughly decayed manuro should俾
ane other side of the question, and grap years and with many varioties of the vine, ean
better determine what 15 proper in the premises than we can whose cxperience is at least of the
lloited amateur character. The main argument llmited amateur character. The main argnomen
againt the usc of manure is based on the face that it tends to augment the wood or cane at tity and protracting the period of maturity.

## FLOWERS AFTER FROST,

No matter how long winter may delay its
coming, the first frosts are always unwelcome
 with hoar frost, particularly as we remenhe nd die. Weeks and months mnst pass befor we shall sec their pleasant fiees ayain. Amldst We see a few precty things quite unseathed, that ven sevcre froste, sometimes until almos Christmass A notice of a fow of thie zuos taken in the garden, Nov. 5th, may be interes The Dwarf Chryse
The Dwarf Chrysanthum Flowocred Aster, a very late raricty, is unusually so this senson, and thas
far, although ice has formed balf an fach thickness, is entirely unaffected except a 11 ittio
diecoloration of a few of the oldest flower Mignomelle is as green and surect as The White, Siwect Scented Candathert, is a fin
thing for late Autumn. It follago seems to thing for late Autumn. Its foliage seems to
become a brighter green, and its llowers a purer White as the weather beeomes more severe.

CAPE BULBS.
There is no fince class of window plants than
ince, in a remarkable degree, the two requlsite
of easy cultivation and floral beauty. Ye
strange it is, that we seldom see them, esecpt
In the green-house or conservatory, in thit ountry, while in England they are popula the window and garden.
Now, the Inelemaney of our climate debars
from blooming these floral gems in the garden
but, as a compensation, our winter suns brlng them to pefection at a seasou when the carth is
locked with frobt, and out-door gardening is en tirely prevented.
They are mostly natives of Sonthern Africa,
the region of the Cape of Good Hope; whence Lheir hortienltural name, Cape Balls. From obrlous that the bults must have a season of
rest. The year Is theredivided into two portions the dry and rainy season; duriug the one, the
earth is eaturated vith moisture ; drien the other, parched with drouth.
the plants start into growth, give plenty of water and sun; Keep them vigorously growing
uutil after the flowerz have faded; then dry until after the fowers have faded; then dry
them off gradually, ly watering less and less ill the foliage withers; then place them In a dry, ary plaee, without removing thern from
the pots, until the season of grovth. The so Should be sandy loan, for almost all the species,
Never allow water to stand round the roots.

pril; let them dry ofr from march to June,
ules; special caltural directions will gencival wib we treat of cach species. We have only de here are more than a handrud speece?, and ountless varieties.
The Ixis. - These are all bullus of cuag growth and remarkable for the brillancy of their llow carlicr if the bulbs begin to grow, they should be shaken from the soill in the pote, and planted anew, tu a compost made of one part sandy decomposed dung, pote about an inc
 if the carth around the roots becomes sodden
Plaee the pot in a eool place till the plants be
gin to grow, when thoy shonld be placed in strong llglit ou a sheff close to the whodow.
As a general rule, ull bulbs should be grown as As a general rule, ull bulbs should be grown as
close to the glass as possithe, as thus the feaves are shorter and of a better color, and the plant
never become drawn, weak, nud sickly. Do no
attempt to forco these plantso they do well, and are deflelent in sfze and number of
flowers. The temperature sufliclent to grow hem is about forty degrees at night, to sixty
by day.
Thas Oxat.1s. - A very benutiful whiter anil aring flowering butb. The varictics are very Goon Hope and America. The details or culturc
for the New Holland species are idenitieal with hioge given for the Ixla.
The : nus of Cape bulbs, with hairy plaited leaves, aud brilinnt filowers. They are natives of arid
plains, and durlng thelr growlig season will
 lic expofed to the flerce rays of the sun. Tue H, Funstuvs. - This bntb, commonly
calied Blood Fiower, is not mueominou, but is grown more for Its oddily than lts beauty. The
bull is very harge, ofen a foot In elreumference. bulb lis very hryc, of en a foot to elrumference
About the irst of september, It pashes forth a flower stem an ineh thleis, crowned by a large
bud, which, openlng, diselozes a multitude of crowded lowers, of no beauty. These soon fade, and the bulb then produres two lmmense
lenves, which olten grow elyliteen fuches long and six inches wide, hanging down, one on erch
side of the pot. These wither; the bulb goes to rest, to repeat the process the next year. fore, bly about the last of Angnsh, the bulb die part \∧ glve plenty of snn and water a raduully.
Thle Ariarralis, -This is an immense fanily of fiuc tlowering bulbs, in regard to which great
botanleal confusion existe, and from which Be V ral familles have been separated. They are al ment to insure good bloom. Thes flowers arce o many colors, produced in great profuslon, and
will well repay the eare required. The soil should be richest lear mould aud loan, with a little tlye sand. Good dralnage is fuportant. The pots
shoald lee large, as the roots are very strong and Bhoald lee large, us the roots art very strong and
require much room. The specles differ so roncla
in thelr babits no general cultural given.
Time Lachenalia, - These are pretty $1 i t t l e$ bulbs, requiring a rough, peaty, and sandy foll.
The bulbs are small, but a poot filled with the follage and flower makes a pretty show. The wito growth should never be allowed to become parehed, pot in October, and they will bloon
from Jquary to Eebruary. The loliage ls pret tliy varlegated wlth black; the flowers are pro higced in upright spikey, and are pendulous,
high-olored tubes. The Aromatheca. - Thif le a beuntiful litele other with searlet flowers. The bulbs are seall
nd ehould be plauted thickly in the pot. ieh loam and leaf monld, in equal parts. Mlan the bulbs in January; the leaves will soon make
their appearance, followed by the flowers in Say; the plants will continue in bloom the em rest from September to January:
Tira Thrrosra - The plants composing this enus are clobely allied to lxia and Sparaxis. In
form, thoy vary greally one from the other, Ike beiug funnel-shaped, others salver-shaped, he sla, otiers beli-slaped
THE EOMBRLA, - A race of fine flowering buibs, dueed in profusion for a long time. The proper Boil is equal parts of loam, leaf mould, and sand. The bulbs should be trented like 1xias as to pot-
ting, watering, and rest. They Hower from

## Tue Nering.- The treatment of these bean- thful bulhs is identically that required for the Belladonna Lily. Thus cared for Beeliadonna Lily. Thus cared for, the flowers will be plentifully produecd, and by their bril lin linucy and beanty repay for the care afforded. The soll ahould be rich loum, peat, rud sand, in equal proportions, and water should be plenti- fully supplied during the flowering and growth. All these bulbs may be procured of any largo Aculer at a trilling cost. fitted close to the glass, and do well in loug boxes set Into the window. They are hardy, and will bear ill-treatment; the prlmal rule if, yrow the leaves well, dry off the plants gradually, and you will be sure of a profusion of fine bloom. Garkler.

VOL. XVII. NO. 46.3
ROCHESTER, N. Y.-FOR THE WEEK ENDING SATURDAY, NOVEMBER 17, 1866.
\{WHOLE NO. 878.

| I beliere, on some lands would result In a lose, forcing vlnes without fruit, and making then more susceptible to blight. The great object is to grow an average quantity of a good sort and quality, thereby realizing the best market phices; but "there"s many a slip'twixt the cup and lip." <br> There are many enemies to conteud with through the snmmer; the fly, llea, lice, mold, S.e., \&c., for which, until lately, no very succeseful remedy has been found: but sulphor ls now senerally used with proft as au exterml. gator and preventive. No British hop grower is without his sulphurlig machinces. They are drawn by onc horse, between the rown, throwing 25 it moves the powdercd eulphur on each side to the tops of the poles; this is gencrally doue while the rine is a little damp. Picking, drylug and packlog I will notice some fature fime, as perlaps I am now occupying too much - врасе. <br> In conclusion I would urge Ancriean farmers to turn thatr attention more to Hop growing.To those who have been so fortunate as to grow them the last few ycars the work has proved prontable, and they are likely (at Jeast.for a few ycars to come, ) to realize still better putces from the fact that $\ln 1865$ there was none leflon band, all being eold at high prices for lmmediate consumption. The 1866 crop In England falls cenen short of half an averarge, the llee and mold shaving spread very rapldiy through the Districts or Miadle and East Kent just at the commencement of picking. In consequeuce I sce that zrices in the Borough London are nearly double what they were a few years ago. The Bavarian crop le also a partial failure, and the Ameriean fulls 20 or 25 per cent. below the cetimate of three weeks ago; and it is doubtful if we will grow suflicelent prime hops for home uses, under all these circumstances, and alargely increasing dewaud for Lager Beer. Hops must pay; therefore plant in freal ecttlements and Statee, where they are not yet known. Try the experiment lu Iown, Michigan, and part of Illinois. Many are anxious to plant, but I nuderstand cannot get the sets, even by offerlog extravagant prices. Would it not pay an enterprising man to import some of the choice borts, ent from gook and clear linglish hop yards? It could be done at the priecs now paid for American sets, pay a first rate profit, and be introdueing hops far superior to those at present grown - here. <br> Cearles Dat. <br> Iicclicster, N. Y., $186 B$. |

fashionable call.
Eater Misg Lucindi Cinderblua, nearly on
of breath with the exertion of walkiug from he papa's
friend.
How stiff, desolate und awkward do the ban
tree-branches look! Somethiug in this seasono tee year reminds me of youth aud old
graceful the gnit and bounding th child; how broken and uncteady the earriage of an old person when the "wcight of ycars"
so keenly fest and the "snows of many wiuters" chlll the blood! A few months ago aud the no 8 stir branches sway ed gracefully to the summe
breeze, clothed in thelr bright gurmente. Now the "old nge" bas coure to thum, Just as it must
come to all of us. Oh! that we may be finly prepared for old aye - the gradual nearing river which all mnst crose alonc.
I wonder if the approaching desolate, cold gusty days do not awaken an cecho of sadness in
every heart in the laud - sadness that tire mys. tical, bright summer days have flown; and gone
with it are golden opportuuitles not improved and happy hoars perliaps ncver to return again and happy hoars periaps never to return arain
I heard a litle grir say to another in the stree
to day, "Christumes in just five weeks, and $I$ an going clear to chrandma'r Thlanksgiving." And that set me thinking. Thare is a picture in
my mind of a grandmother, too, nnd of dear the well-filled board. Will they mise soine that will not be with them thls year! Will they
long for the empty places to ve flled? Then how rain is louging, for three will never, ca never mect again in that dear old farm. House, in waking There is at oribht little faee with flaze hair, bluc cyes and bahy lips, that will not lisp
out her wants at the famlly woard to attentive "Grandma" this year, and they will miss "bowed form and grey hend in the person man ralssing, whom aching hearts sigh for in not "going to Grandma's," "nt I hope that lit tle girl (GoD bless ber,) will not be disnppointed
in her anticipations. What a pity people ever grow too large to
"hang up their etockings?" I soppose one might, but tone are all those blissful feelingsi in regard to "Chilistmas and New Year's cres,"
Oh, that they might return ! Can wo not all
remember sleepless nights in ehildhood, oeea remember sleeplesss nights in elild hood, ocea
sioned by alternately woudering what ecould
"Solt "Santa Claus" brlag, and if it toosan" near
morning enourg to warrant going down stairs to the ehimuey and examining the coutents of
said stockings, plaued and hung the night before, Oh, so ecrorgitly, togethar:
such reccolleetions we all have! Else why the
use of happy, care.free Clindhood, mysterious Santa Claus, Cluristmas and Nuw Yeiar

THE TRULY HONORABLE.
CunLL December has come, and with its mighty powers has closed the summer seenes. The plow
stands in the farrow, fixed by the frost, whieh bids defiance to the luety stecers to move the sod, or deprive the soil of its wiuter's rest. The falbul steers are rcleveal to to rest until the and enter thi coafls them to renew their wonte task, $a$ amall boou for the summer's fuithful libbor, set that pittance by felfish man is too
often denied. The farmer is relleved from his perplexing earcs, hls auxiety about the coming crop is past, the nuxious weeds have ceased to
grow, and the devonifing insects rest in Elecp. The iengthened evenlygs invite him to forego which the Cruator bias blessed his summer's
toil, and by the elicerful fire with conselous toil, and by the elheerful fire with couselous
gratitude review the past and meditate on the future, so that he may faithfully perform the
part allotted by liis creator.
Mankind are ereated to fic the regulators of Mankind are creale a ctors of their own hap.
thelr actions and the abe Unicre
 winter's biasts, nor sereens thein fro:n the
summer's seoreling sun; but he has created summer's seorehing sun, but
them with powere, and spplied them with
the means, to accoupllish all these great and importaut objects, so that every human being has a duty to perforin, which calls forth the
haetive energies of body and mind, - yes, solemn duty demanded of them by their
Maker. No one has the rlght to splend his
time in daleness or folly. Aristocratie pride, wileh is reared in luxury
and eloth has suceeeded in atteehing the nane and yloth, has suceeeded in artaehing tho nane
of IIonorable to the pomp and display of wealth, and branded useful labor as degrading, low, and
mean, whith is faise and unjust, and ruinous mean, which is false and unjust, and ruinous human afford ample room for all to be usefully employed, and every calling or pursuit
which adds to the general good of society is honorable, -no nseful rocation in the checkered scenes of life is servile nor mcan. The title of great, or honorable, are the jnst tributcs to wisdom and goodness; they who perform
alloted to them lif ufe with judicious prudence, ano wo their duty to themselves and fellows as
and do
and required of them by thelr Maker are truly great,
for "an honest mar is the noblest work of fer "an honest man is the a oblest work of
God; and they who with a congenial glow spread happiness ar
deserving of houor.
The eobbler on hls bench may be equally as ehair, or they who wear the Monareh's crown; and he who cultuates his anty aeres, so as to tho soil, is equally desceng on hore name of a good farmer as those who oecupp
their hundreds. Aud those who kkillfully uee the meehanle's tools, though solitary and alone, may be cqually ns great and honorable as those who oversce a thousand. The kitchen maid who
prepares the daily food is much more usctinly employed than they who spend their time at the oiifet for rain clisplay, and ought to be mor
honored. Tlic matron, who, with judicious pradence, prepares the earth's produetions to feed,
elothe and comfort her household, and trains the iufant mlads to fix the moral chart, so as to shan the rock of rice, and to expand the soul and lay the foundation for its fature greatncss, per
forms the noble part nllotted her by her Creator and is the most foomoraille of the hamau race She who attends the siek, and wipes the sweat from the aching brow, or mitigates the sorrows
of the unfortunate and eheers the weary aud of the unfortunate and eheers the reary and
forlorn, enjoys the heavenly balm of conscions

## plea

Those who instruet the young to unlock the of mind, are much more honerable thau the who ape the buttertly and flutter life away as an
enpty dream. To promote virtue and increase e:npts dream. To promote virtue and increase
hnman happlness, make labor houorable, and to prevent
grading.

 been moved repeatedly, and burst fo th in pralices
of the auturunal cxlibition of GoD's handiwerk, both in poetry and prose. Oren it has veen, aud as the faneseseson, again in its glory, passes
before and hathes ns in the mellow tide of its before and hatbes ns in the mellow way on the purom re-kindie and harn afresh with emotions
lof joy and gladness, felt often before, in time of Antumn's hollest noo The apring-time brings baek the robin with
the same carol, the hedge witt its blue-eged violets, and the newf follaged forests with a thousaud fresh and faviting attraetions and charms,
How gladly we welcome them back again Then a releareal of antumnal seenes may again strike upon the chord of thesonl's wolian lovero

## 'GO ON, SIR; GO ON

Arago saje, in his "Antobiography," that master in mathematies was a word or two
of advee, which he found in the binding of one of his text-books. Puzzied and discouraged
the dilleutles he met with in his early studSs, ho was almost ready to give over the pur suit. Some words which he found on the waste cext-book cangent his ere and interested him. "Inpelled," he says, "by an indefinable euri-
ositr, I damped thic cover of the book, aud carefully nurolied the leaf, to see wbat was on the other side. It proved to be a bhort letter from
D'Alentbert to a young person disheartened like dayself, by the difienitics of mathematieal study, and who had written to him for counsel. "' 'Go on, Eir; go on,' was the connscl whith D'Alembert gare him. 'The difficulties you
tnect will resolve tirinselves 23 soll advance. mnect will resolve thicinselves 23 soin ad wanec.
Proeeced, nnd light will dawn and suine with increasligy elearness on your path.'
"hat maxim," says Araho, " was my greatthese simple words "Go on, Elr; fo on," made hirm the first astronomieal mathcmatician of his age. What Cluristinns it would make of us! What herocs of faith, what anges in holy wis-
dom, sliguld we beeomo, just by neffug ont that

## value of a soul.

A ciry is nothing when weighce in the balwas a stutuc of gold and ivory so magnifieent that a man that dled without हevelng it might be commisserated, and a ;man that had seen it might say, "Now let me die in peace." That
statue, whose annual disclosure was so angnet that men and women, in their enthasiasm, fell before it with outerics and exclatnations; that
statue, which I would willlugly have made a statue, which I would willingly have made a pilgrimage to see, if it had belln saved from
medispal violenee and ienoelasm, was wonderlil beyond all deserlption. But one poor
soul, draged out of the slongh and saved, and soul, dragged out of the slongi
begiuning to speak the language of heaven and to shout the praizes of God, is more wonderful
and more glorions, in the fight of angcle and Ged, than the lordiliest statue of the greatest of all artists. And I would go further to save one
soul thau to see a million Phidian works of art. soul thau to a

## THE CHURCHES OF THE SOUTH

A conkespondext of the Atlanta Era, com-
euting on Mr. Beechel's comparison of the menting on Mr. Beecher's comparison of the
churches aud behool-houses of that seetion to "light-houses, twinkllng aloug the edge of the eontineut of darkness," sayb: - "In 1850 there
were 21,337 ehurehes in the Northern states, and 16,658 in the Southern• States. The proportion, oue chureh to 628 perzons in the
North, and one church to 562 persons in the South. The accommodations of these clurehes were $5,656,061$ sittings for $13,434,932$ persons
North, and $5,5411,575$ sittings for $0,664,656$ persons South. Thus $4 \pm$ persons out of the hurdred conld attend service at the Eame time in
the North, avd 57 out of 100 in the South, ineluding whites and blacks alike. Thus the Northeru States had only $\tau$ per eent. greater
zecommodations than the South. Sarcly, this was iot a suftielent differeuce to justify a charge Too Late regrets ! - The moment a friend, or ever a mere actuaintance, iachant han sure
there etarts up before us each instane of unthere starts up
kindnees of whicl we have been gailty towards
him. In fact, many and many an aet or word him. In fact, many and many an aet or word
which, while he was in life, did not seem to us to be unkind at all, now "bites back" as if is
were a serpent, and slows us what it really waz. Alas! 'twas thus we eaused him to euficr who now is dust, and yet then we did not pity or reproach onrselves. There is always a bitter-
neEs beyond that of death iu the dyiug of a
fellow.creaturo to whom we bave been unjust fellow-creatu
or unkind.

altutul, stimutitio, dr. HOW TO BURN COAL Nise out of ten who attempt to burn conf in a store, waste about as much coal as is nccessary
to be consumed for the obtaining of all the heat desirable. Observe the following sioplo rule sugeseated by a cotemporary, aud fuw who adopt
the burniug of coal will return to wood fres. We will suppose the stove to be cleaned ont : First-To trake a craal biru-put in a donble
handful of shavings, or use lindling wood instend. Fill the cartben cavity (If the stove ha one) nearly full of chanks of dry wood, suy four
or six inchese in lenuth. On tic top a dozen luaps of cege coal. In
about twenty lumps more of conl the wood has burned out, fill the
two-thirds full of coal. The tire
thoroughly ignted.
Second-Never till a stove more than hale or
two-thlrds full or cosl, even in the elle
Third-When the fire is low, never sbake the grate or dssurb the asbes; but add from ten to
fiftecu emall lumps of coal, and set the draft somewhat ignited, add the amount nucessary f
 the ashes. The coal will be thoroughly ignited, and will keep the stove at a hlghl heat fromi the wenther.
Fourth-For very cold wenther. After the
firc is made, according to rules first and third add every hour twelve or twenty lumps of coal
You will fiud that the ashes made cach hour wil $\xrightarrow{\text { be in about that rate. }- \text { ADouny Argus. }}$

## Mr. Fierid has brought ont to this eo

 number of very latercstlug speelnensent of thesystcu of telegraphiag, now iu operation be bystcu of telegraphing, now it operation be
tween Paris and Lyons, uud Paris and Bordeaux by wich exact eopies of the incsuare ars pro meelianical means. The minssage is written o prepared paper, covered with lend-colored bur-
face, which is a non-conduetor of the electric Auld. The wrillng, or drawing, in this luk fured by it to the opposito electrical character irenit in unison. Its upper cud is dlvided into points, say, like a fllye tooth coulh. The mes ange being pased over these at onc end, sends aud produces an exact copy of the orlgital up on the prepared paper held to the vibrating pen
dulum in of distant city. Thus a fac simile o riting or signature is furnished without an nesses of is thice or absconding elerk is repro duced with minnte faithruiness. Patterns machinery, patterns of bonnets hieroglyphice, re copied with as nittec tronble as the simples his have been flyen in furbet. Some notices of nere verbal deseription can conver a full idea the wonderful process. The Hiburninn who in sisted, some years ago, that the telegraph oper tor should for ward his photograph over the of his age, eluce this can be done without the on the proper materixl.
a steaji girdle around the world A phladehipuia paper calls attention to the nces the inauguration of anbroken steam comrosecuted ns regularly as the arrlyal aud do parture of European steamships at our wharves hc etcamship Heury Chauncey will eail on the ect there with the Golden City for ; will concisco; aud from San Franciseo, on the 1st dat保 China. | Edg. Roral New-Yonkr: - From reading your remarks on "Manaring Grape Yincs," in Remu or "or 10 th I lum judnced 10 offer | the Rumsf of Nor. 10 th I I im indnced to offer course ngalust the opinlon and advice of Mr. The questinn or propriaty of manuring vine-

yarde, to what extent, dce, is onc deserving more attention thau it recuive. If grapu cul-
inre continues to adyancu for tion are continues to ndyance for ten fars form the hast ten more rapidiy, I entertain not the slightust doubt cultaral prodnctions.
Are stimulating manures of any kind uccesor desirable to anceessfnl graec culture? and if so, what kinds, and when, and to what
extent, shouid they be applicd!' It is not my extent, shouid they be applicas a lengthy article npon this snbject,--bnt ratier by brielly preobservations, to provoke others to bring forWard their testimouy, so that by aggregating
our experimentai tcste, wo raay ercatnally dear experimentai cste, we lay evcntnaly de
vclope the trac method. Nor do I intend now to argue the points I am sbout to state, but
mercly to present a few statencents of facts, to me quite apparent.
And first, I remark that to secure weli derel-
oped, medium-sized, close-jointed, and well oped, medium-sized, close-jointed, and well grapect cuiture, Is Whatever may be teaid regarding he number of vines to be set upon a given
space or piece of ground, how the vines ghould be trained and supported, how and when they
should, be praned, - whatever differences of pinion may cxist among grape growers, apo regard to the slyle, texture, and size or growth ably abuodant and weil matured crops of fruit Snch wood cannot be produeed from strong,
ich solis, or by the uace of large bupplies of stimulating manures, - eapucially, from the
trong growing valletles, sucu as Iabeullas, Con cords, Dianas, nud allonost every other sort now belng generally cultivated in our country, except the Delaware. So far na my expernace stinted growth, will bear a riclice soll, and cven
to be well fed with composted or woll rotte manures, nor can It be expected to prodnce entisfactory results apon such sous, and under sach
trentencent as will be found heet adapted to the Isabclas or Dlana. That excessive growth and trees, is unfavomble to the prodnction of fruit, generaily anderstood, cyen by persons of lim ited experience. The trees of a thrifty youn orchard, when a high etato of cultivation 18
malatalucd, will attain to a large aize, befor producing fralt, - except in a very limited mount; nor will they produee abundantly, na,
thl this excesslve yrowth abates, while Naturc's. process of "getting ready to bear fruit, is vig
oronsly carricd on, frnit-beariug wiil be kept in abcisauce. Hence, some have advised and prac ticed "root pruning," with a viow to check the development of fruit buds,
Bat there is another, and still more seriou
difliculty, resalting from excessivo grape vines. I reter to the danger and almosi certain occurrence of the destruction of what few frult buds there may be devcloped by the storms and frostz of winter, and added to this,
the ulmost certain destruction of cyen the fraitwearing canes, themselvce under very low tumperatare, for, let it be borue in mind, that
overgeown vines \&re always tender, are soft, spongy and immaturo. They continue their growth late in the fall, 80 that the early fro3t inds them in " "aill feather," and in vigoron
growth, finds them immature throrghout, in root, branch, leaf and fralt-buds. Stimulated begond the requircments of their nature they
keep on growlug, keep on "getting ready" to bear fralt, and they will keep multiplsing and
extending their vigorons and rampant interals, keep climbing upou and smotheriug each other,
to the inevitable destruction of tha smali amonot of fratt that may lave appeared in the early part of the scason, and to the utter dismay
and discouragement of the "vine dresser." He and discouragement of the "vine dresser." He
sees no hope of restralnt, through any of the modes of tralning or trimming, of whlch be ha read or heard, anlos are planted too close to
clude that his vines gether, or that his trelisess or stakes are too
low. He imagines, perhaps, that he has nes low. He imagines, perhaps, that he has neg
lected to prune sulticlently durlag the fore par of tue scason, and hence, seelog that something slashing, and rigorouly proscentes his lecoie slashing, and rigorouly proscentes his berole
blinal surgery to the snre and eertain destrnction of the over-fed and over-grown vincs. Or, Te tiring in disgust, he permits the weeds and grass to grow and check and choke his ungovernabie and stunted, until a fcw loose ctusters of fruit way he coned and partially matured. cess and jealonsly proclaims hiss accidental diseov-
ery of the "trae way" to prodnce grapes. One ery of the "trae way" to produce grapes. Une
of our best varieties has thus far faiied, almost niverzally, from no other canse than beln blated with strong ferlllizurs. Fence, it aimost universally condemned. It is eald tha it growe viguronsiy, that it produces very large dither killed outright in the winter or that thes ruit-bads are destroyed; or, if any frnit it len late. The tralh $1 \approx$, thls grape, I speats of the Diama, is a prolitic bearer, and ripeus ten das
or two weeks earller than the Isabella; but
requires a dry, lean soll and cannot be made to

| Mble SE |  |
| :---: | :---: |
| A curbious incident of Ocean Telegrapily (the latest wonder of this wonderful age, is thus related by the Loudon Times:-"The contents of a lady's thimble wonid hardly be expeeted to constitute a very powerfal instrument. It would earcely have been thought capuble of one of the most astonlshing feats ever performed by science. The Chairman, however, of tho Atlanthe Telegraph Company informs us that this little instrument, has actually achieved such a feat. By way of experiment the enginecr of the company joiued the extremeties of the two cables which now stretch across the Aliantic, thus forming an immense loop llne of seven thousand seven handred milce. Ifs then put some acid In a lady's eilver thimble, whth bits of zine and eopper, and by this simple agency he fucceeded in passlug slynals through the whole length in little more than a second of time. A few years ago, how incredible such a statement would have sounded! It seems, indeed, that the bimplicity of the fact lias taken even electriclans by surprise. When a cable was lirst faid across the whole breadth of the Atlantle, it was anticlpated that an unnsually high gower would be requisite to drive the ecrrest with sumclent force through buch a length. Fo the first linstance, therefore, they used a battery with firty celis, and alterwards employed five hundred cells. But this extraordinary power only injured the cable, and the company are nos work. Ing between Vaientia and Heart's Content with at lattery of ouly twenty ecilis. It is, in fact, remarkable low gratly the fuccess of the present year has dissipated the supposed dificulties of distant or decp-sea tclegraphy. <br> A Successful Bore. - The arid waste of the Desert of Sahara, noder the hands of enterprising Frenchmen, is to uc clad with verdure, and water is to spring up in abtudance to the sarface wheresoever required. Five places aro named where deep wells linve beed suak ou the Arteslau principle, and the result has been a hood of water to the surface, continuons and vast. Beside thia, there is something for the epleure, who, on his travels, bas tasted only dried meat, dates and dried fish; for fish hare come to the snrface with the stream, wheh fows from some mgsterions source beneath the arust of the earth. of the earth. |  |

## MORTMCORTORAN

## kREPING APPLES IN WINTER.

 AT the last New York State Falr, Delos Randnil bad on exbibition russet apples grown year ago. The Utica Hcrald says these apples good as the same kind of apples, are ordinarils on the approaed of spring. We inquired as to the manncr of keeping, and were informed that the groceries put up in refuse boxes obtsined A lajer of dry sawd inst was foprinkled manncr: om of the box, and then a layer the bot pheed on it that they did not toueh cach ther. Upon these was placed a layer of samust, and so on untii the box was filied. The oses, after being paclicd in this way, were ronnd, where thas the cellar, up from the cir freshness and llavor nntil brought out and axibited at the falr. He sags that be has kept appics in this
time named.
From experiments made with dry sand, packing the apples in the same way, he finds that he thinks, beiog too heary a material and pressing the apples too mucl, causing them to decay ore rapidly than with bawdnst. The above destring to preserye, inay be suggestive to those next year.
It will be needless to remark, perbaps, that apple will keep late, by any process of packApples ehoold be handled carctully, and the less moving about after having been picked the better. A large part of the fruit grown and sold ring, pouring into berrels, add roncli handling while being driven to markict, that it soon de cays, under whatever treatment it may be sub jected for the purpose of keeplng.
 experienee of others in reference to for the pples. My cxperience is tbat apples should bc kept $\ln$ a dry building untll quite cold weather; cool cellar, and pieked over and remored to They will keep better then in mir.tight marrels. ment I ever tried. A colir by any other treatshould be well dralaed, but should not have the bottom made of lydraulie cement. Cement celiar is cuused by evaporation mainl, it is important that nothing be done to prevent the THE AREA OF GRAPE LANDS,- INELU
ENCE OF WATER, the staple crops of our country it become one of portant to sacertafu how widely its cuitivation may extend. There are certain physical reasons cept in a few locallities: I mean in concew exof the prevalence of late spring and early fall less to do with it, the vilue flourishing apon lightest of soil, from the stlffest clay to the Bnt of what arail is it for the vina to pat gravel. the thriftiest shoots, louded with blossom bnd pinching frose in one night ean wither them all : Then, again, if by chauce they escape in the spring and the vines carry thelr preclous load through the summer monthr, and autamn ing clasters, and our hearts bergin to rejolco vicw of the harvest, all may be dasked in an hour by the work of that same ruthlesy, biting frost that so fitfally spared us in the epring. from this canse it becomes pertiape growing whether there be auy localitles sempuestion, free from untinely frosts. It has become a well cstabllshed fact that there are such localities on the borders of large bodies of deep and cold fresh water. This protection is wholly due to the
softeniug inflncnces of the water up softening ininncnces of the water upon the at flnid than the air ehanges fts temperature far less rapidiy. During the summer montha the water of onr lakes aequires a temperature ( 1 think, ) of avout $5^{\circ}$, which is $\sum^{\circ}$ or more abovc that of the atmosplere during a freesing night.
In Nature's ellorts to preserve twcen the two bodics in contact the water beparts a portion of its latent heat to the air which canses it to expand and rise. To perent a vacuuin there is a constant rush of cold alr from near the surface of the adjacent land to
snpply its place, which in sapply its place, which in its torn is warmed and thereby eqtablishine a circular current - the and near the enrlace of the ground moving toward the lake, whille hlgher up it is moving toward strikes the hills point where this heated alr strikes the hills may be termed the isothermal
line of greatest heat at differeut times. Valley the 3 d ult, I could trace this tine Persant from the effects of a slight frost which oceurred in September. The leavis of the vines year the road in the valley were considerably seared, while as the eye ascended the hill its effects beon the lighest ground were until the rincyards I also observed the same while visiling the vine yardz of Chatanqua county, near Fredonia, on the ehore of Lake Erie the 16th ult. On the level land near the lake the effects of the heavy
frosts of the 5th and Bth $^{\text {nlt }}$. but as we began to ascend the hills wo reached a and yet the hills are from tbree to five milcs from the lake. Confirmatory of the theory of the circular current of air on the borders of our

## COURTSHIP IN GREENLAND

Thers is something execedingly melancholy in the aceounts which are given of the eustom
of courtship in Greenland. Geverally, women cnter upout the blessed estate with more willing. ness and less sollicitude than the men. The
women of Greenland are an exeeptlon to this rule. $\triangle$ Grecellander, havlng fixed his affectious upon some ferasle, aequaints his parents wit
the state of his lieart. They anply to the parent of the girl, and if the phartices thins far are agreed, the nest proceeding is to appoint two demal
negotlatore, whose duty it is to broach the sul ject to the young lady. The lady enbassador do not shock the young lady by any sudden o
brubt avowal of the awful subject of their mis sion. Instcad of this, they lauvech out in praises of the gentleman who scens her late. Huyp-
speak of the splendor of his shuse, the sump
thoueness of his couraze in catehngs seale, and tuousness of his courage in
other like aceomplishments. The lady, prectending to be afronted even a lets of her halr as she retires, while the cmbassadors, having got the consent of her parents, her by foree to the house of her destined husland, and there leave her. Compelled to remain
there, slie sits for dass with distheveled there, shee sits for days with disheveled hair,
silent and dejected, refusing erery kind of sus Bilent and dejectcd, refusing erer'r kind of $\begin{aligned} & \text { eun } \\ & \text { temanec, till at tast, if kinu entreaties do no }\end{aligned}$ prevall, she is conyrelled by foree, and cren
blows, to submit to the detested union. In some cases, Groenland wormen faint at the proposal of marriage-in others they ily to th
mountaine, and only return when compelled do so by cold and hunger. If one cats off her
hair, it is a sign that she intends to resist to death. All this secems so unnatural to us that we see the first principle of human nature. The Greena iffe of toil, drulgery and privation; and, if the die, Ehe and hier clitldren have no resour
against starvation. Tho marriage state is miscrable condition,
still more appalling

A KIND WORD FOR CHARLOTTE.
Criarioteris is bolored loy the whole popula-
tion of the palley of Merice. She has worked unceasingly to improve the poorer classes-she has fonnded sehools and lospitals, supporting
them from her own purse, and sineere no ournerb them from her own purse, and sineere mourner
in thousands would lament her death, should that be the result of her dangerous illness. To this noble and royal Iads has been the only mis sionary that has ever visited the foor of the valles of Mexico; hers the only bande to dis-
tributc charity and toil for the eleration of the tens of thousands of the half-elad and most numerous portion of the Mesican people. I hare
seen her in the suburban Pueblos of this capital accompanied by a single lady or honor, calling at the mud huts of the poor, and stopining for a mements. Whatcrer may be enid of Maximilian
sehools and his sad elfort to govern these people, nothing can be suid of Charlottc of Belgiam that
will lessen the opinion of thousands of her, and that is that ele is one of the nob
the centurg. - Letter from Mexcico.

END OF A FRENCH LADY'S ELOPEMENT. Secir a stors of love and suicide as this could have originated only in France:
M. de F -, having aequired a fortnue in
busincss, retired to a handsome property be posscssed near Fontalueblenu. Soon efter, his
daughter Julie, 21 jears of age, was asked in marriage by a gentlcman in the nelighborhood, the weddiug took place. In the erening the bride was missed, and the result of the researeb-
cs made was only to find that the groomsman who had been a friend of the young lady's from infancy bad likerise disappeared. The father, like erery one else, believed in an clopenuen,
and all the usual means were employed to trace the fugutives, but nneuecessfully. This o curred five sears ago, and M. dc K -, havin
Intely purehased some adjoining property, o which was a quarry long out of nse, set son
men to work, who found at the bottom of men to work, who found at the bottom of a remains of the clothes and tte jerevele, were r
cogrized as the missing bride and her lover.

## AUTUMN'S ENDING.

To-DAT closes ont the advertised stock of dear, delightful Aufumu dass; and what a eplended
makc-up of pleasant time it has been-this rand mater-picee of summer's after.thought
It would he something worth living for if only to sce the coming of these warn, bazy norn-
inge, before the bright sunlight has quite taken 2way the hears curtain of night, und Nature eecma leave us something besides a mere memory of their pleasantness. All the days have been fu of Joy: but more that thls is the rich inlasing
of better deeds aud thoughts-the brighter hop nd stronger falth which lift has taken on. Thus ve live, drinking $\ln$, as is mete, these influenec
of beantr and purity and foveliness into a better life.
When the ralu cane la such fitfol showers
yesterday, I thought of the tears the child has for hls broken toy or disuppointcd hope-of the
hitter, deeper agons of the strong man's eor over the clange. The certain coming of the virter of our dags should glve no cause fo of life, are glorious seasons. We love them all, oh, so dearly, and the more if in their time we
have grown into that grean, Iflug Faith whel ends sll doubts and fears and questioulings; pr weep because they are not. glad weleome to the eoming end. Spring gave of her beauty in tiny hads and cunning blos
oms: Autunn perfected; whay weep? - that he fruit of onr life is eoon to be tasted, our
attaluments measured, our faith rewarded When opens up the brightness and greatness of taught, guided, sared - weep that we go into is fulheses, its gloriousness?
or departing loveliness she coning glory gives glad welco
Maple Lonne, Nor. 80th, 186g.

## THE SUNBEAM.

Ir was a bright and benutiful morning. The the morngy emblems of night had disappearea,
the morning twilight had come and gone, and the first rays of the rising sun fhone forth with
their aeeustomed splendor. Ali Nature seemed of a waken and to put forth ncw life at the touc
of joyous sunbeam. The flowers, warmed its genial glance, opened their tins petals and
sent forth their sweet odore, to eurich the pur air of morning. The litle dew-drop conecaled amoug the fresh rose leaves fparkled with a
diamond-like brillaney as the glittering sun-place- the birds warmy welcomed the brimp sunbeam, and, enlivened by lis influence, tilled the alr with melodious song. Man, too, was
delighted at its presence, and many a a aid leart was checred by ite friendy toweh. The connt merrily danecd over his pleasing features. It penetrated through cracks aud broken shutCortunates, aud its genial warmth cheered the inmatcs of mlserable homes. The little ones
eagerls tried to grasp the shadow that it might not depart. It sought betwist iron bars the
captiye home of erring owes, and its purits brought shame to the cheek and repentance to
he guilty heart. It entered the rich man's windowe, and those basking in all the splendor that wealth ean give were made more josous by the
presence of the pure and lovely ray. sumbeam, beantifula nud bright Thy path of love parrane ;

Mr. Bowres, in one of his letters from the
Pacific side, gives a deseription of the Yo sentite Valley in Culifornia. It is a cleft lu the roek, about half a mile wide and ten to fifteen
milcs lit length. The walls whieh hound its siles ure perpendfcular, znd from half a mill to a inlle la helight. These walls appear to have been split ofr from ench other and inoved their prosent distanee apart.
There are three noted waterfalls in the valley
One of themi is niue bundred fect hith by a strean coming over the mountain eides in the world, is two thousund six hundred feet figh. On the struan which runs through the
valley, are two otter falls, oue three hundred valley, are two otber falls, one three hundrea and fift
high.
re the vicinity of Yo Seuite is a grove of bly
trees, about alx hundred in nninber. The largest are thirty and forty fect in dlamoter, and two The tries are to be preservec to the State
are to be retuined for the future as objecte public euriosity and interest.

## effect of light

Dr. Moore, the metaphysician, thus
of the effect of light on body and mind: tadpole contined in darkness wonld never betree light will grow up a shapelless diot insten of a beautiful and responsible being. Henco in the deep, dark foryes of the Swiss Yalois, where the direet sunshine never reaches, the hideous prevalence of idioey startles the travelur. It is
a strange, melanchoiy fluocy. Many ire Ineapaa strange, mellanchoiy ddiocy. Many are Incapa-
ble of any articulate speeeh; some are deaf, some blind, some labor under all these priva. body. I believe there is in all places a marlecd diference in the healthincess of houses aceord.
ing to their aspect with regard to the sun ; and ing to their aspect with regard to the sun; and
those are decidedly the healthlest, other things being cqnal, in which aft the rooms are, during light. Epidemies attack lubabitants on the shady side of the strect, and exempt those on the other side; and even in epidemiee, suel as
ague, the morbid influenee is often thus partial in its labors.
Rallrosos. - The celcbrated statistieian, Hon. Samuel B. Ruggles, has colleeted the fol-
lowing figures concerning railroads in this of raif was which have cost $81,350,000,000$ Lurope there are :0,000, which cost the enormous sum of $£=, 500,000,000$. The construction
of railwass in an old, elosely settled country is of railpays in an old, elosely settled country is
of course more expensive than in a new, while built. But buit, But tue saring in the transportation or
freight and passengers amounts in ench hemis phere to $\$ 500,000,000$ per annum. Mr. Ruggrices estimates the telegraphle Ilnes in this conntry
at 90,000 milies in length, aud in Europeat 60,000 . 50 that the New Worid decidedly leads the old in its facilities of communicatiou.
A Sruink.-The old Duke of Cumberland was with a great heap of gold before him, when somebody said "he looked like the prodigal

Sorrow shows truth, as the night brings

THE STROGGLE AND THE VICTORY.
"Jorrvys," sald a farmer to his little boy, "it
s timu for you to go to the pastnre and drive ls time for yon to
home the cattlu""

## Johnny was phayiup at bil,

 was a lour waly off, but ho was sce pored to obey; so of he started without a word, as fast as his legs could carry hlm. Being in a great hurry to get baek to play, ho ouly half lot down the bars, and then furrled the cattle out; andone fine cow in trylug to crowd over stmble and fell down, wilh her leg brolsen.
Johnny stood by the snffering erenture, and
thought to himself, "Now, what shall I do That wis the finest cow father had, aud $1 t$ will be agrent loss to father. What shali It tell him?"
"Teli hfm," whipered found the bars half down, and the coov lyong there."
"No, I enn't say that," saidd Johnng, "for it
would bo a lie."
"Tell hilm," whispered the tempter again,
"thet when jon wereding "that while yon were ditfing the eows, that big
boy of farmer Brown's threw a stonc, and hurrled her so that slee fell and broke a leg
"No, no," bald Sohnny, "I never told a lle,
and I won't begin now. I'll tell my father the truth. I was in a liorry, and frighteued the poo creature, and so she fell and broke her leg."
So, tuving taken thlib right und brave resolve, Johnny ran lome as if he was afrald the tesmpter would eated him; ind he went struight to hhis
father, and told him the whole trutle. Aud what did his father do?
He lald his hand on Jolnuy's licad, sud said My dear son, I would ruther loso uvury cow And Johnay, though very sorry for the mig chitef he had done, was math happler than if he had told a lie to sereen
never beou found out.

finance and markets.
Thus is a reading aye, and readers increase
more rapidly than the increase of population There are more newspapers, and they are larger his, and the requirement is mut. Conductors of papers, in whatever department they may ers will bestow their patronage ciscwhere. The past and continued success of the Rural New pared no labor or expense to make lt the best in its sphere of journalism?.
Readers, farmers is well as others, devote more time than formerly to subjects pertaining and radical change in the financial operations
and of the country, the system of taxation, sse, interests every man. Markets, present an farmer's produce as well as stocks, foreign and domestic dry goods. The following from amerce is to the point on this sub l of ComJournal says:
"Refection will convince sensible men that the woman and chmerce in the community. The farmer way related to the price n of foreign goode, but if h studies the market reports of the world he will very wide, and that the is as inch intennmerce is would York merchazt in having 14 recreated ba the Ne the nd its prosperity unimpeded by selligh or short ighted legislation. He ought to keep himself we surprise that some intelligent merchants retail trade take so lithe interest in the study of tho ark
Instances are daily occurring where consider nd ours are saved by farmers, retail dealers the state of the markets and the causes like t to influence them. "study the markets," the ournal ears, "is the rule of every wise man." In order to meet this increasing and necessary
demand we shall devote more space than demand we shall devote more space than hereto dial subjects as directly effect the stan trade- giving in each number of the state o prefix to our usual reports of the principal Grain, Provision, Cattle and other Markets, Commercial Article which must prove of inter cost and value to the great mass of farmers country. This review of the Maroughout the \&c., (recently commenced in the Pest) receive special attention during the ensuing sear, with the addition of more extended sriles whenever there is any occasion for a fuller discussion of the subject than can be given in
connection with our regal ar Market Reports. This department of the Rural will be con ducted by a gentleman who is thoroughly com-
potent to collate, condense and impart the roost important and valuable information obtainable concerning the Commerce, Finances and Mar-
gets of this Country and Euro polong studied the whole subject, and possess
peculiar facilities and qualitiontions for procur-
ing and arranging facts, and advising producers and others as to future prospects. That this feature of the paper will be widely appreciated
by its intelligent aud enterprissyg readers-thos Tho chink and study, as well as worik-we con be timely and of the most reliable clara n always dice which will redound to the interest the Producing Classes.
TEN-HOUR SYSTEM FOR FARMERS, Cav farmers adopt the ten or cight-hn
system, or, io a broader sense, any deflation lin itation to the time of daily labor on the farina
We think not; and any law designed to color such a system of farm labor would fall null nu
powericss from the legislators' lands power of making special contracts were likewis destroyed.
hie regular operation or witt a system again tons are lisle to arise; and how often It is a
absolute necessity for the luger in he has no control, to call his help eariy to th field and continue work until in the dark. To
offset against these extra hours of labor th workman has the benefit of rainy days, an many periods of leisure occur in the finires
weather, and on the best ordered farm, reanlt ing from broken implements, the changing of
work, and the waiting for teams to feed and breaking up" in duly; loo some days the the meter ranges from $40^{\circ}$ to $100^{\circ}$ in the hateo do n fur r day's work with a team, unless he is hours in the middle of the lay, continues his Again, it is not practicable for the the skit apt a system for lis lived bur the lamer to not for himself, and no sensible working farmer would think of limiting his own day's work to The or ten hours.
the to heavy, from out harl to labor from he fargnucht against the ten-hour system. chorus," to milk the cows, teed the stuck teams before urcalkfast. This exercise in the he real labor of the day begins and condo, an this kind the Farm hand does not toil more factory, or the carpenter at bis bench. For ter crab months of the year the principal work taking care of stock, and the skillful and sue
cessful farmer must recrulate cessfnl farmer must regulate his time of labor If the ten-lour cat co
hat his time of daily stern means to the farmer seasons of the year, and in all kinds of wal at an manifestly he cannot adopt it. He cannot light ap in the hours of night, or protect from storing and cold his fields and barns; so, of necessity, hat time is iostin wet weather, and in the short cred in the fairer season of sumpust be recon ten-hour system means that a specijfeel number of hours be the measure of a day's work, then
from the incessant variableness of puls labor is is from the incessant variableness of hus labor it is

## HINTS TO HORSE KEEPERS

Never feed grin or give water to a horse
when warm from exercise. Sweat is not always a sign of warmth; place the hand on the elicit than to give it before. Never drive fast or Never drive ling tod and drink.

## MORTYGULRORAK20

THE CLOSE OF THE YEAR. Our Horticultnral Department this
Ilmulted, as readers will perecive, owin
the necessity of publishing the Index, in the closing number of the volumc. We
take occasion to thank our contribators to
this 1)epartment for their numerous and take occasion to thank our
this 1) lepartment for their
valuable favors during the invitce for the coming volume \& contluance of
corrcspondence from practian and experituced
curtivators. Facts and iaformation bearing ou
Horticulture, gathered thus from all parts of Horticulture, gathered thus from all parts of
the country, and under difterent circumstuctes of soil, exposurc and cllmate, are of trear value
and iuterest. In the Future, as in the Past, wo
Blaill endeavor to keep this Department fully shall endeavor to keep this Dtpaltural sclence.
evcu with the adranco f Hortituturn
The proceedings of Horticultural Societies will The proceedings of Horticultural Societies win be notleced, new and valuable fruits, plants and
flowers, described and llustrated, and extensive and successful frult growivg regions visited by view of gathering knowledge of intrinsic valu to our readers. We invite the nid and
ration of Horticulturists cverywhere.
illinois state horticult'l society
Deare Rurar:-The above Society held its
11th annual session in the city of Champaign, Inl, Dec. 11 th to 14th. The attendance was at Icast double that of any former meeting; an
the first time that crery Congressional distri In the State has been represented. On actount of tho
sending the mereury Was yot so large as anticipsted. The largest part of the State. Of winc there were cight samples.
of Standlng Committees, foliowed in the cren iug ly a lecture on the "Btatus of Horticul-
turo" by M. L. Dunial. The second day to a tars" by M. L. DusLal'. The second day to a
revisiou of the "'rait List in the morning, and nasse to the nursery and grounds of M. L. Deviarp, $3 \%$,
milles south of the city - aspecial irain baviog been tendered by the I. C. R. R. for the purof the Entomolopist, addressed a very large audlence. This was followed by a, discussion
on cherries, of a very Interesting elaracter.
What is lenown as the May eherry of the West, or soluctimes called Early Elehmond, was do clded to bo a native or Ain
originating near Rlehmond, $V$ the elder Pisince took selons to Long Island Downivg committed the crror of makiug it a Eyuonlsm at Kentish, It is supposed that the one sent beck to us under this new name. all events the Society decided to call thls cherry claim to it, let them proce it This cherry is the ouly market colcry or
much importance in the state, and now stand at the head of the ilist. It was stated that there
was an orchard of 6,00 trees in lyenring near this ifty; and that the trees were now leeled.ln for one orchard
of one thon fifty and a huudred cact
rello was suekera, or the seedling of the Morello, is the ouly stock sultcel to this cherry; that on its
own roots it is less productive and ripens later, white on the Maszard sind Mahalet it was of changes of wiuter and liable to lose the crop eariy frost. There were some exeeptions stated
to these positions, bat on the whole they were sustalned by the facts. The impression that this is only a cooking cherry was denied, as it is Cincinnatt, Cliengo and St. Louis, where larg nomomats are citum daily in the cherry season The Iarge Langlish Morello comes in a full outh later and is onis fit for cooking. The ree is hardy, a good bearer, and, like the other,
hould be grafted on the Morello. These two cherries make the cutire Ilst for markect. Along tic anssissippi river blnfis, es sweet cherries do well, but as this section is narrow, being confined to the soil kuown as Locs8,
by geologists, it was not thouxht proper to con sider its claims, in making a list for the three divisions of the Btate,-yet May Duke and Black
Tartarian were added for family use at the rerartarian were added for
quest of a few members.
This cherry question has been tending to thi yesult, practicalls, for the past hall a dozen time, at least until some new kind shall have been fuly proved. Every cherry grower con-
demned the Mazzard and ue Mataleb for stock, and it is more thau probatle that some of the
old sorts wheu grafted on the Morello, in cer sin locatious, may give reasonable satisfaction Much was said pro and con in regard to the suckering habit of the Morello, but this is less scrious thnn generally supposed, the bearing trees producing fine 6 pro
destroyed when yourg.
Arple List. - Little attempt was made to re Vise the Apple Lisl, and Rome Beauty wer highly commended, but no vote was taken on them. Ben Davis was already on the list for fmarket for all parts of the State; Rome Beanty Central Illinois it will soon trob Central Illinois it will soon take a commanding
position. The Stanard is a seedling sent out by

MPROVED METHOD OF MAKING WELLS Tue method of getting water by driving gas pipe iuto the earth without exearating, whic
we illustrated in the last number of the Runsi is certainly very practical where a body of thit
nuid can be reached, tuliclently larne to kee Lhe few lnches of the bottom of the pipe in-
wersed in $1 t-a$ very cunall reservolr - con tantly fin. But widu as be re :ions are wher where it would utterly fail arv far wider.
bills, rolling land, and a large part of the pra ices, ouly small springe and velus of tapped at the bottom of the wells, and in mu
meroms instances the natural soakage from the moist earth is the ouly reliauce In these cases
a reservoir mune te forment or the water to
accumulate in lefore a quantity can be pumped out. Hepe. the necessity of ordinary wells
dug to the eroper dephlt and stoned or bricke
up. We illustratc a method of making wells i up. We sllustratc a method of making wchls ity
such localities which possesseas some superiority
ver the ordinary onc. The surth is cexeavate over the ordiury one. The surth is cxeavate
a unal to the proper deplth, but instead the ground, ouly six or eighit fitet of the space eeservoir for the water. A cap stone is the
placed over the resersoir nata suspipe reachin from the surface ol the çarth juserted through
hole in the eap-stone to nuarly the bottom

In localities wheré stove are scarce this plan aves much expense, and even if they were a
hand it is still cbeaper than to continue the well the top. The iron pipe makes the best kind fo-time. The bottom of the pipe sliould b eft open so that any article falling tnto it will pass readily out, and smal holes sita fore distance upwards.
An experienced fricnd, and eontribntor to the
BURAX, at our clhow, to whom wo have ehown his article, endorses it, and suggests that a nverted iron potash bettle, with a hole drilled in the bottom for the pipe to pass through into the water, wonld be stronger than a flat capHe has known of wells thus constructed whic ave the best satisfaction.

## TOUOHING INCIDENT

A gevtleman traveliug from the West in a
iceping car, witurgaed the following ecene
> ing to still a erylag child by carrylng it to
and fro in the car, and which, by It screams, finally irritated a man in one of the berths to wid cried out, profanely, "What is the matter
with that young one?" And soon again,
"Where is the mother of that ebild that she se "Where is the wother of that child that she 3 s
vot here to pacify it?" $\Delta t$ this the poor genleman in cbarge of the ehild stepped up to the is in her coflin, in the baggage car!" Our in
formant sass the gruff grumuler immediatels rose, compelled the allicted father to retire to
to his berth, and from that time uutil morning Lhis berth, and from that time uulii
bok the littlo orphan under hls own eare.

LONGEVITY OF MAN.
$\qquad$ statisties that a man's longevity is in exact pro-
portion to bis cducational attaiuments, provided portion to his educational attainments, provided
his health has not been lijured by over.mental
exertion. It keems that increasing intelligence and decreasing war have prolonged the avcrage length of life in Europe from twenty-Ilve years
in the secnteath centary to Lhisty-five in the cighteenth, and to forty-five in the nincteenth.
The best educated conmunities are the longest lred, and the best educuted soldiers lye amazingly longer than the more lgnorant, and seem et and bayonet, as against the effects of disease,
privation, and even severe wounds, on their privation, and even severe wounds, on thei
constitntions and lives.

Whistring. - An Engllsh exchange publishes et attention from its vovelty: "Whistling.J. H. Adarns will whistle any man within twenty
miles of London, for N 1 up to 25.5 , who has never Whlstled for a like sum. Man and mones read road, east." If the challenge slionld be ac epted, the contest itself will prove more norel to witness it will then have some excuse for in
dulging to the slang expressiou, "prepare to pucker." A Good Suggestion.-"A Travcled Parson" of Germany every bottle containiag. poison is labcled with a death's head and cross-bones, as
back as printer's ink can paint them. Every parcel of polsonous medicine sent to the pationt has a simtlar label over the address. Pray help doption of this rery simple method whieh is plainly within the comprehenston of the duilest

A Suerien Con.-Archlishop Whatels once pany he was by askius them this question: "How is it that white shcep eat more than blaek?" Some were not aware of the curious earned and long reasons; but all were ansions to know the real cause. After keeping them
wondering for \& while, he said, "The reason is, becanse there are more of them."
if he did not think the small bonnets the ladie wore had a tendency to produce congestion of the brain. "O, no," replied "he,
have brains don't wear them."
80. long as life remains to us onr duties ar
anfinished. There is nd room for idleness here.

    is the best eacason to do do lty ind and if so, whie pounded to ub by a correspondent. Perhaps wo can best answer by eonsilierlyg some or the re
    sults of thorough sub-soiling. It is a fact tha
    

    OUR cngraving represents a front ricw of otato Digger recently patented and now being ford, Monroo Co., N. Y. We have secu this machine, but had no apportunity of wituessing the maelune and seen It in operation are favora-
    bly impressed as to ita value, and think the inventor has sapplicd a long songht desideratum.
    "Th. Ma This machine is drawn by two horses, and divides, or splits the row and throws the earth and potatoes into two separators. The separa hors constitute the wheels of the carriage; a the wheels revolve the carth is separated from the potatoes aud they are discharged in the rea,
    into the furrow from which they were taken.

    This is a novel plan, but is sald to be a sure pre ventive - the moth seldow going over the bat
    ting. Another plan 1 have found snccesefal the use of a leaden or tin trough encircling the base of the tree and imbedded in the ground, bill the moth if he rets on lt,
    Both of these plans would prove rather ex cnsive ot the present prices of eotton, tion and ead, if applied to ar extensive apple orehard. nended by an orchardist in New Jerscy, will whlle it is certainly much less expensire than with the cottou or the oll

    Production of Timber, in BAyARD Tarlol, in a recent letter fron fhich have been protected from fire by contigu us cultivated fields, arc overgrown with hick ory and oak trees from four to six feet high.
    Where laud is toleratly well watcred nud undis turbed, cespeeially if in viciutty of wooded counry, it will give support to what ts commonly
    callect a eppontanueons growth of timber. Tho character of the growth depends ualuly upon the quallty of the eoil. The seed may hare re-
    malned for years in the soil, possessing a latent itality, which awalts only fa for its development. Poor solls beem itrst to the wiore rapid growing deciduous trees, until the ehestunt and the oak find fittlng support and
    conditions for their growth and devclopment. Mh. Haymass ITre, the Britigh Vlee Consul
    Ghent, writes about the treatment of flax that country thus:- "The new sgstem o teating diax consists in planting elim trees round is retted; when the learea fall they are gathered $r_{\text {, where }}$ of conrse they decay, whech impreguates the water, and
    gives the flax a more even color (as it is calied silvery blue) and renders the fiber softer and ilky. When tho 1 ditches becom of mud and placo it in to of mud, and place it in heaps on the sides,
    which is again thrown into the water when the retting sconson returns, and this repeated every year. As color and soitness increase its value so considerably, and as the method of producing mentloning. Ho adds: - "The most effective $\begin{aligned} & \text { these quallites applecurs so simple, the iuformation } \\ & \text { tlen. by Mr. Haymans Hye may perhaps be of }\end{aligned}$
