- FRIDAY, September 10th.—Sales of Dutch bulbs and Orchids by Messrs. Protheroe & Morris. Trade Sale at The Mill Lane Nursery, Cheshunt, by Messrs. Protheroe & Morris.

AMONGST THE BULBS.—While passing in review some of the many fine bulbs now at the command of the cultivator, we have not attempted to give select general lists for several reasons. There would be little alteration in those put forward last year. No list, however carefully made, would be followed absolutely by cultivators generally, even if the result of a plebiscite. Many gardeners have, of course, their favourites, to which they cling; and so long as individual tastes vary so long will a large number of varieties find their admirers, even though they can in no sense be termed popular sorts. Many bulbs, like

other plants, vary more or less from year to year, according to the character of the season, so that if a selection is made from results, it could only apply to that particular season. This fact has been well illustrated by the lists of Roses which annually turn out to be the best during any one season.

Our attention has been directed more particularly to varieties for some given purpose, or to some particular phases of gardening in which bulbs are employed, and their culture extended with advantage to all concerned. Space compels us to omit many beautiful bulbous plants at the command of the cultivator, which are requirements of modern establishments, more or less. Some things succeed admirably in most gardens, while others flower indifferently in any part of the British Isles. This would apply more particularly to half-hardy or tender subjects; but there is a deal of romance, and sometimes delightful surprise, in discovering what bulbs will succeed in the open garden in certain localities, especially in the case of those which prove refractory, or altogether fail in most gardens. Juno or Spanish Irises are easily grown in certain soils, whereas in other gardens they flower well as a rule the first year and afterwards degenerate till they cease to exist. In cold clay soils this is particularly the case, whereas in warmer and lighter soils we have seen what was a single row of bulbs, when planted, grow into practically a broad band of plants in the course of two or three years. This is a point for every gardener to solve for himself, either in the case of Spanish Irises, or any other subject which may happen to be his own or his employer's favourites. We have seen English Irises behave in the same way, yet the old-fashioned blue or typical form was a common perennial in cottage gardens thirty or forty years ago. The question arises whether modern varieties are weaker in constitution owing to much artificial crossing in order to obtain variety, or whether the constitution has become altered through long continued cultivation in the sandy soils of Holland. From the latter point of view it might be worth while giving their cultivation in this country a good trial in different soils with the object of supplying the demand with home-grown bulbs. There has been an immense increase in the demand for Spanish and English Irises during the past few years, but particularly for the former. There is little room for surprise at this, seeing how many exquisitely beautiful varieties there are amongst them, and the ease with which they may be grown in pots for decoration or boxes for cut flowers in the early part of summer. Those who grow for market even go further, and having placed soil on the benches of some of their glasshouses plant Spanish Irises and urge them into bloom in a gentle heat for the purpose of getting cut flowers in advance of those in the open air.

New varieties of bulbs there have been since last year, and some of them announced for sale are already several years old. It is astonishing how many years it takes to get a good stock of a new bulb, sufficient to enable the same to be sold at a rate within reach of the general public. Even some of those which have been in commerce for several years are yet comparatively rare. The Daffodils Madame de Graaf, Glory of Leiden, Monarch, and Weardale Perfection are instances of what we mean. How many years will elapse before it will be practicable to naturalise these on grass, as well as Hodsock's Pride, Golden Bell, and Ellen Willmott? Novelties amongst Hyacinths include several of

various colours. A real yellow is yet a desideratum, as it is amongst Sweet Peas and Stocks. A Dutch variety named Citroenboom is said to be a first-rate improvement amongst yellow Hyacinths. We hope it will prove to be so when it finds its way into British gardens. The translation of the name means Lemon Tree. Trilby is described as a new orange-yellow coloured variety. Both are single. The pure white La Grandesse is well known. Now a double sport from it has arisen, which, retaining all the good qualities of its parent, is declared to be the best pure white, double Hyacinth ever introduced. Several Tulips are also offered as novelties which will have to be seen and tried before any definite conclusions concerning them can be come to. Amongst single early varieties Grace Darling is a promising large scarlet one. Golden King is said to be the best double yellow Tulip, and Prins van Oranje (Prince of Orange) is dark orange. *Lilium elegans citrinum* (verum) is said to be one of the very best of the Thunbergianum type, with nankeen, unspotted flowers. A new name has been given to *Lilium roseum*, namely, *Fritillaria macrophylla*, and it may in the near future come before the Royal Horticultural Society seeking for fresh favour.

Royal Horticultural Society.—The next fruit and floral meeting of the Royal Horticultural Society will be held on Tuesday, September 7th, in the Drill Hall, James Street, Victoria Street, Westminster, 1 to 5 p.m. A lecture on "Pitcher plants" will be given by Mr. H. J. Veitch, F.L.S., at 3 o'clock.

Flower Show at Candie, Guernsey.—At the Summer Exhibition held here on August 11th, Mr. W. J. Taylor was awarded first for six Begonias, and also for Ferns. Colonel Carey contributed the best Black Hamburg Grapes, and Mr. F. Le Poidevin the best dish of dessert Apples. Mr. William Colchester, Ipswich, had a stand of Ichthemic Guano and agricultural manures.

Tropaeolum speciosum.—This plant may be grown from seed or from its fleshy rhizomes. If from seed it probably will not flower till the third year, but from a rhizome bloom may be expected in the year of planting. I have never seen it growing more luxuriantly than at Kingsteignton on the slope to the River Teign in Devon, twining among the Rhododendrons and the shrubs in a garden there, with a full south aspect. It grows very well also in Mr. Shaw's garden at New Place, Lingfield, on a southern wall, though he thinks that it may be grown as well with an eastern or western aspect. Put plenty of manure around, mixed with coconut fibre, that its roots may run into, is his rule for growing it. It seems, however, to exhaust the soil, and to run year after year along the wall, not coming up again where it has already blossomed.—*J. C. Stogdon.*

Medals at Shrewsbury.—At this great commemorative exhibition and fete on the 18th and 19th ult. Gold Medals were awarded to Mr. James Cypher for the most meritorious plant not in commerce, who showed *Bougainvillea Cypheri*; to Messrs. Dobbie & Co., Rothesay, for Dahlias; Mr. R. B. Davis, Yeovil, for Begonias; Messrs. J. Carter & Co., London, for Gloxinias, and other plants and flowers; Messrs. J. Veitch & Sons, Chelsea, for a magnificent group of plants; they also had a set of china; Mr. James Hudson, Gunnersbury House, for Water Lilies; Messrs. R. P. Ker & Sons, for flowers; Messrs. Cowan, Liverpool, for plants; Mr. T. S. Ware, for Begonias and cut flowers; and Messrs. Smith & Co., Worcester, for plants and flowers. Silver Medals were awarded to Messrs. Webb & Sons, Stourbridge, for cut flowers; Mr. A. Myers, Shrewsbury, for plants and flowers; Messrs. Dicksons, Chester, for plants and flowers; Messrs. W. & J. Birkenhead, Sale, Manchester, for Ferns; Mr. Murrell, Shrewsbury, for Roses; Messrs. White & Sons, Worcester, for cut flowers; Messrs. Wallace & Co., Colchester, for Lilies, &c.; Mr. W. F. Gunn, for cut flowers; Messrs. Balchin & Sons, Hassocks, for alpine plants; Mr. S. Mortimer, Farnham, Surrey, for Dahlias; and Messrs. Wallace & Co. also received a certificate.

Correction.—By some means or other we were led into error concerning the Grape classes at Aberdeen on the 19th, 20th, and 21st ult. Mr. Andrew Hutton, The Gardens, Usan House, Montrose, N.B., took the first award for Muscat of Alexandria and Hamburg in the single entries. Mr. Steward, Eden House, Banff, took the second place, not the first as stated last week. Mr. Andrew Hutton also secured the premier honours for four bunches of Grapes, distinct.

Bute National Rose and Horticultural Society.—This society held a most successful show on the 26th and 27th August, at the new public hall. The opening ceremony was performed by Ex Provost Millory in the absence of the President, The Most Hon. The Marquess of Bute. The classes for competition numbered 126, and for these 500 entries were made. Messrs. Dobbie & Co., showed a fine display of Dahlia blooms interspersed with blooms of herbaceous flowers, for which the judges awarded them a Gold Medal. Mr. M. Cuthbertson of Rothesay, a well known figure at this show, staged a splendid array of pot plants, consisting of Coleus, Cockscombs, Fuchsias, Geraniums, and various other foliage plants. Mr. Cuthbertson's name is usually associated with herbaceous flowers, for which he has a wide reputation, but recent shows had taken up his herbaceous blooms. Mr. Cuthbertson also staged an exhibit of Pure Ichthemic Guano, a very widely known fertiliser which has attained great success in the Land o' Cakes.

Resignation of Mr. G. W. Cummins.—We regret to learn that Mr. Cummins, gardener to A. H. Smee, Esq., "My Garden," The Grange, Carshalton, Surrey, has found it necessary to resign his position as head gardener, after having seen sixteen years of faithful service. From what we can gather he is suffering from pressure of work and ill-health. Nor do we forget the loss he sustained by the death of his wife about fourteen months ago. The garden in which he has laboured for the last sixteen years consists of a shallow layer of soil beneath which comes water, the garden being bounded on one side by the River Wandle, and traversed by a stream. The difficulty in cultivating fruit trees has been great on this account. Besides his home work Mr. Cummins has had a deal to do in connection with various societies, and has done it cheerfully, without hope of reward, as we have had ample opportunity of witnessing for many years past. We hope he will soon find another situation more congenial to health, for he should still have many years of useful life before him.

Gardeners' Royal Benevolent Institution.—The committee, treasurer, and trustees, acting on behalf of the members and subscribers of the above institution, with the concurrence of its president, the Duke of Westminster, recently forwarded through the Home Secretary a loyal and dutiful address to the Queen, for forty-six years the gracious Patroness of the Charity, congratulating her Majesty on the completion of the sixtieth year of her beneficent reign, and the undermentioned reply has been received from the Right Hon. Sir Matthew White Ridley, M.P., which may interest our readers, especially those of them who are identified with the Institution.

Secretary of State,
Home Department.

Whitehall, S.W.

August 24th, 1897.

SIR,—I have had the honour to lay before the Queen the loyal and dutiful address of the Gardeners' Royal Benevolent Institution, congratulating her Majesty on the completion of the sixtieth year of her reign, and I have to inform you that her Majesty was pleased to receive the same very graciously. With reference to the application for permission to make use of the words: "Victorian Era," in connection with the title of a fund now being raised by the Institution, I have to acquaint you that her Majesty graciously approves of the desired permission being granted.

I am, Sir,

Your obedient servant,

(signed) M. W. RIDLEY.

G. J. Ingram, Esq., Secretary to the Gardeners' Royal Benevolent Institution, 50, Parliament Street, S.W.

SUTTON'S INIMITABLE BEDDING HYACINTHS.

HYACINTHS AND EVERGREEN CONIFERS.

In spring gardening, as in bedding out at any other season, the successful gardener studies how he may produce the most effective picture. His work, however, is limited to filling in the details, and giving colour and brightness to the surroundings which the landscape gardener and the planter have already mapped out for him. This does not imply that his is the simplest or least important art in the making of a striking or attractive picture. On a large scale a landscape gardener is generally employed to arrange or create the more important features of a place; but not infrequently the gardener does this himself and the planting as well.

A flower garden that is well furnished with evergreen Conifers as a background to any particular view may be made to suggest a summer scene rather than that of spring. Conifers, indeed, are most appreciated in winter and spring by reason of their being clothed, by their contrast with deciduous subjects, and the shelter they suggest. The accompanying illustration placed at our disposal by Messrs. Sutton & Sons, Reading, serves well to elucidate our remarks on this aspect of spring gardening, so that details are unnecessary. Araucarias, Cedars, Douglas Firs, Thuyas, Cupressus, Pines, and ornamental Spruces in their various shades of green form the background of this picture, against which the Hyacinths are seen to best advantage.

What we wish to say here is that the simpler the design the better. The large bed in front may consist of one or not more than three colours that will blend and harmonise with one another. For hedging purposes a great number of named kinds would not only be superfluous but incapable of producing any

pleasing or desirable effect, because the mixture of many colours would neutralise and nullify the whole. Sutton's Inimitable Scarlet, Inimitable Pink, and Inimitable Light Rose, indicate that the best bedding varieties of those colours have been selected for the purpose of producing effective pictures in the spring garden. Blue, and white Hyacinths have been selected in the same way. A line of Crocuses may be used as an edging to give an indication of reviving nature, as they flower early, and their foliage would form a fringe to the Hyacinths when they come into bloom later on. Large beds of simple design arrest the eye at once by reason of their effect.

THE ROMAN HYACINTH.

Most of us admire the larger-flowered Hyacinths with their large bells, huge imposing spikes, and rich and varied hues; but the early Roman, although of less stately presence, is, if anything, more in request from its great usefulness. This is more particularly true of the common white form, which is grown year by year in its hundreds of thousands in pots, boxes, and other receptacles, and under all sorts of conditions.

The popular Roman Hyacinth is a variety of *Hyacinthus orientalis* named *alulus*. Southern France is its native place, and it is cultivated there very extensively at the present time for export to this country, especially in the district around Ollioules, Toulon. The true Roman Hyacinth, on the other hand, is the offspring of *H. romanus*, which was figured at an early date in the *Botanical Magazine* under the name of *Scilla romana*. This plant has pale blue flowers fading to blue white or white at the margins of the segments. This is a

native of Greece and is not to be confounded with the so-called Roman Hyacinths under notice.

The number of plants that take kindly to early forcing is unfortunately all too few, but the white Roman Hyacinth occupies a very high position among them. The flower spikes and the individual bells are smaller as compared with those of the other forms, but this instead of being a disadvantage is in its favour, as it enables the "Roman" to fill the need for white cut flowers that is never more urgent than during the months of November, December, and January. Moreover, the larger-flowered Hyacinths do not take kindly to too early forcing, and here the Roman undoubtedly scores.

The bulbs are cheap to buy and easy to grow, hence there is no difficulty in the way of growing large quantities. They should be obtained as early in August as possible, for the consignments, which arrive during that month are invariably composed of finer bulbs than are those which reach our shores later. The soil employed should be light but rich, and may be composed of half good mellow loam, and the remaining half of leaf soil, and dried cow manure or horse droppings in equal quantities, with a good addition of coarse river sand.

Five-inch pots constitute a handy size for use, and as the plants are comparatively dwarf and do not make a great deal of foliage, five medium-sized bulbs will go to a pot of this size. Pot with fair firmness, and bury the bases of the bulbs, leaving the necks exposed. After potting, the bulbs will need to be covered with ashes or cocoanut fibre refuse in order to induce root action. Water will not be required during the period of plunging. After roots have been freely made and the young leaves are just making their appearance from the crown of the bulb, which

EARLY WHITE ROMAN HYACINTHS.

will be after the lapse of about six weeks, the plants may be taken from the plunging bed, placed in a cold frame, and gradually inured to the light. They may then be shifted into heat as they are required. If plunged in a bottom heat of from 65° to 75° Fahr., the flowers will be fit for use in a week or ten days. The illustration, kindly lent us by Messrs. Jas. Veitch & Sons, Ltd., Chelsea, depicts a batch of Roman Hyacinths in full flower, each bulb throwing up two or three spikes of bloom. At this stage the plants may, if desired, be gently shaken out of the soil and transferred to ornamental pots or baskets for service on the dinner table or in other ways. The operation does not injure the flowers, and the bulbs, of course, would in any case be of no further use after going through the ordeal of early forcing.

The single white, and the double rose Italian Hyacinths are about a fortnight or three weeks later than the Romans, but they are not so free-flowering and useful. The blue Roman, however, is well worth growing; and the straw-coloured French

EARLY SINGLE TULIPS.

EARLY and single are epithets applied to those which succeed the Duc Van Thol Tulips in the open ground, and come before the species of Tulips such as *T. elegans*, *T. fulgens*, *T. retroflexa*, and others of that class. The true florists' and the Darwin Tulips are the latest of all. The early single Tulips commenced blooming about the middle of April of this year in the open ground, but of course vary in time according to the nature of the season. They are amongst the most generally useful of all the sections of Tulip, and those which we select here are amongst the most suitable and useful either for forcing, pot culture, exhibition, or for bedding out. Thus, therefore, they are everybody's Tulips. Tastes vary in the selection to be made, but the undermentioned can hardly fail to give satisfaction for every purpose if properly treated.

In the open ground that grand Tulip, Keizer Kroon is amongst the first to open, making a fine display while the Hyacinths are still in bloom. The

open air in several successive years. Proserpine is a massive and magnificent dark rose variety which no exhibitor omits from his collection. To these may be added Pottebakker Scarlet, and White, the latter being a stronger grower than the former. Joost Van Vondel and Joost van Vondel White form another pair that may be bracketed together, the former being rosy-crimson and the latter a choice exhibition plant of fine form. Thomas Moore is an easily-managed orange flower; and Duchesse de Parma is orange red, with a yellow margin. It is a showy flower and quite distinct from Keizer Kroon, but for bedding purposes they had better not be placed in close proximity. Large and handsome also is Empress of India, with rich dark orange flowers.

Besides Proserpine a number of other shades of rose and purple are useful and indispensable for bedding and pot work. Rose Gris de Lin is rose shading off to white, dwarf and charming. Almost the same might be said of Cottage Maid, having rosy-pink flowers shading into white. La Reine is

TULIPS: WHITE POTTEBAKKER.

KEIZER KROON.

PROSERPINE.

Hyacinths may be placed in the same category. The latter are to be seen in the market, but are not so often seen in private establishments as they ought to be, for they exhibit a pretty shade of yellow that is difficult to obtain elsewhere, more especially during the months of late autumn.

large blooms are crimson-scarlet, edged with clear yellow. The bright yellow and large-flowered Yellow Prince is sweetly scented. The best of all yellows is Ophir d'Or, a variety of very dwarf habit with large golden-yellow flowers. It is certain for pot work, and we have seen it in grand condition in the

white suffused with a rosy tint, delicate and charming as a bedder amongst light varieties. Koh-i-noor is a rich scarlet which is much in request for exhibition purposes on account of its size and brilliancy. To complete this list of useful varieties we may add a couple of violet flowers namely Queen

SUTTON'S NARCISSE OR DAFFODILS SUITABLE FOR MASSING.

of the Violets and Van der Neer, the former being light violet and the latter dark purplish-violet or what would generally be described as dark purple. This does by no means exhaust the list of fine things, but they should certainly be included in all collections of any extent. The accompanying illustration of White Pottbakker, Keizer Kroon, and Proserpine was placed at our disposal by Messrs. James Veitch & Sons, Ltd.

DAFFODILS ON THE GRASS.

OF recent years much attention has been given to this delightful phase of outdoor gardening. It is well illustrated in some of the London parks, particularly at Regent's Park and in Kew Gardens. The charms of massing Daffodils upon the grass are due to several coincidences. When massed upon the grass in a careless manner, yet according to a certain

a glimpse of fresh colonies of Daffodils from different coigns of vantage. If in association with water so much the better, for they delight in moisture, and the planter should always study the beauty of appropriateness. The nature poet spoke truly when in his wonderings he beheld—

"A host of golden Daffodils,
Beside the lake, beneath the trees,
Fluttering and dancing in the breeze."

FORCED LILY OF THE VALLEY.

Any Japanese Farmer possessed of ten acres of land is looked upon as a monopolist.

Damsons are very plentiful in many orchards, though the larger varieties of Plums are a very thin crop in most parts of the country.

plan, they have a natural appearance and prove most effective, even at a distance, when they are made to occupy rising ground. Should they pass amongst and beneath deciduous trees the effect is even heightened, especially when the eye can catch

Being yet spring, the deciduous trees are leafless, so that the Daffodils are practically able to complete their growth before the shade becomes too dense. Daffodils beneath evergreen subjects could only degenerate year by year owing to the relative lack of

NARCISSUS JOHNSTONI QUEEN OF SPAIN.

sunlight; hence Daffodils should be planted in full exposure when in association with evergreen trees and shrubs. The accompanying illustration (see p. 9) of Daffodils on the grass and under deciduous trees serves to give an idea of what we mean, and was lent us by Messrs. Sutton & Sons, who give special attention to this delightful form of gardening.

The number of varieties suitable for this style of gardening is very great, but many of them are yet too rare for extensive planting. Many of the most effective, however, are both plentiful and well adapted for naturalising. Almost the sole attention they require is to see that the foliage is not mowed down before it is fairly mature. The wild Daffodil, or Lent Lily, is the only admitted British species, but strange to say it has not been much employed by planters. Other species which have become naturalised in various parts of the country are *N. poeticus*, *N. biflorus*, and *N. incomparabilis*, which may be utilised by the planter with every hope of success. *N. scoticus* is a variety of *N. Pseudo-Narcissus* which grows wild in great abundance in Scotland, and finds its way to the South in considerable quantity. *N. poeticus ornatus* is suitable for and highly effective on the grass. The same may be said of *N. Telamonius plenus*, *N. maximus*, *N. nanus*, *N. incomparabilis*, *N. i. Sir Watkin* (the Giant Welsh Daffodil), *N. i. flore pleno*, *N. i. Cynosure*, *N. obvallaris* (the Tenby Daffodil), *N. Leedsii*, *N. muticus*, and many others. All these should be planted in clumps, groups, and plantations of irregular outline to resemble Nature's method of arrangement or disposal.

NARCISSUS BICOLOR GRANDIS.

THE LILY OF THE VALLEY.

CONVALLARIA is a monotypic genus, and its solitary species, *C. majalis*, popularly known by the time-honoured name of Lily of the Valley, has thus no near relatives to share its glory. The plant is distributed naturally over Europe, including England, and Russian Asia from the Mediterranean nearly to the Arctic circle. It is safe to say that there is none of our indigenous plants that is more widely cultivated and more universally admired. In the months of April and May it scents our hardy flower gardens with its delicious fragrance, and, being so amenable to forcing, our plant houses know it well during the winter months. Millions of crowns are forced annually both by the trade for supplying the market, and by gardeners to meet the requirements of their respective establishments. Half a century ago Lilies of the Valley were largely grown for forcing purposes in the neighbourhood of Hamburg, and since that time great strides have been made. Even now the value of the Berlin crowns is recognised as being very high, but continental growers have by no means the monopoly of the market, for English growers are giving an excellent account of themselves. Of these the name of Mr. T. Jannoch will be familiar to all of our readers. At his huge establishment at Dersingham, King's Lynn, Norfolk, many acres are devoted to this charming flower.

A crown is a single rootlet bearing a bud, whilst a clump is a mass of roots bearing a number of buds. Clumps are to be preferred for the making of beds in the open air, whilst for forcing purposes selected crowns are to be desired. Crowns usually require three full seasons of growth before they bloom, but occasionally they may be induced to flower in two years by high cultivation, and under ordinary circumstances will bloom every alternate year afterwards.

The method of forcing is simple. When the crowns come to hand in October and November they are potted up at once. Twelve good crowns will do for a 5-in. pot, although those who force on a large scale employ boxes, allowing 1 in. of space between the crowns. After this the pots or boxes should be plunged in cocoanut fibre in a house having a brisk bottom heat, and an atmospheric temperature of not less than 80° Fahr. Cover the crowns with moss, and keep this gently sprinkled or syringed with tepid water. The temperature may be increased to 90° or even 95° after the lapse of a fortnight, and subsequently should never be allowed to rise above 100° or sink below 80°. As soon as the growths are 2 in. in height, the moss must be taken away, and when the lower bells begin to open the plants should be removed to a cooler house, and syringing discontinued. Crowns treated thus will bloom in four or five weeks from the date of potting.

The accompanying illustration, (see p. 9) for which we are indebted to Messrs. John Peed & Sons, Roupell Park Nurseries, West Norwood, S.E., shows a box of crowns forced in this way. When the plants are in flower they may, if desired, be taken out of the boxes, and put into ornamental receptacles for table or dwelling room decoration. The change does not hurt them, as root action is not very strong.

In addition to the ordinary white form there is a variety with double flowers. Another form has prettily marked leaves, whilst the variety with pale rose-coloured flowers is also very handsome.

NARCISSUS BICOLOR GRANDIS.

WHEN the yellow and golden-yellow trumpet Daffodils from *N. maximus* to *N. minimus* have passed across the scene and disappeared for another year, *N. bicolor Grandis* keeps up the succession for some weeks longer. It is the latest to flower of the bicolor Daffodils, and practically comes into bloom about ten to fourteen days later than *N. Empress*, *N. bicolor Horsfieldi*, and others belonging to that section. It is a robust Daffodil with very broad strap-shaped leaves recalling those of a *Clivia*, yet it is amongst the dwarfiest of the trumpet Daffodils. The segments are pure white and the long trumpet of a full rich yellow. Its distinction from the *Empress* type consists chiefly in its broader leaves, dwarfer habit and later flowering, all of which render it valuable for beds in the spring garden. *Grandee* is often used as the name of this variety. The accompanying figure was lent us by Messrs. Barr & Sons, and shows two flowers very much reduced

NARCISSUS BULBOCODIUM CITRINUS.

NARCISSUS JOHNSTONI QUEEN OF SPAIN.

THIS is one of the most graceful of all the Trumpet Daffodils. The flowers are nowhere by comparison with *Glory of Leiden* and *Madame de Graaff*, but in that we think lies their special charm. Both the truncate trumpet and the reflexed and slightly twisted segments are lemon or clear delicate yellow, of a shade that few, if any other Daffodil, could exactly match. It may be grown in beds, or naturalised on grass, either in the open or under deciduous trees, where it appears to great advantage. The flowers are carried just clear above the foliage, and swing gracefully in the lightest breeze. In Scotland it is generally most liked as a pot plant for greenhouse or conservatory decoration. The discovery of this Daffodil in Spain by Mr. Peter Barr, was one of his greatest triumphs while hunting for his favourite flowers. Many thousands of it we have seen at Long Ditton, with Messrs. Barr & Sons, who supplied the illustration.

HOOP PETTICOAT DAFFODILS.

THERE are numerous forms of these charming dwarf Daffodils, but all belong to one species, namely, *Narcissus Bulbocodium*, so named by Linnaeus. The segments of the flower are always small and relatively inconspicuous, while the trumpet is short but very much inflated, thus suggesting the popular name. Many varieties of the type differing in the size of the flowers or their earliness have been intro-

TYPES OF ENGLISH TULIPS.

EARLY FLOWERING GLADIOLI.

mon, though not the finest. There is a pretty white form of it, namely, *M. b. album*. This species is often found as an escape from gardens, so easy is it to grow; and *M. racemosum* is a British plant often cultivated. We must not overlook the Feather Hyacinth (*M. comosum monstrosum*), which forms a bright blue batch with its feathery or plummy flower heads.

We consider *M. conicum* (see figure), the finest of all for producing a brilliant blue mass when planted in beds or on the grass. Small beds planted with a standard Rose or Rhododendron might be carpeted with the species, the long conical spikes of which produce a splendid effect in spring, whether viewed from a distance or close at hand. It grows and blooms with increased vigour year after year until the bulbs get crowded, and when more generally known will be more extensively planted. We speak from personal observation. To Messrs. Barr & Sons, King Street, Covent Garden, we owe the picture. To those interested we may say that *Muscari* comes from the Greek *moschos* or Latin *muscus*, meaning musk, in allusion to the smell.

EARLY FLOWERING GLADIOLI.

THESE are of mixed pedigree, belonging to several species, such as *G. cardinalis*, *G. ramosus*, *G. sagittalis*, *G. Colvillei*, &c. They all agree in flowering early compared with the *G. gandavensis*, *G. Lemoinei* and *G. nanceianus* types, and in having much smaller but charming flowers gracefully poised on slender stems. On the Continent they are planted 4 in. deep in autumn, and covered with 3 in. of some protecting material. In this country their cultivation is mostly confined to pots and used for conservatory decoration. The corms should be planted rather thickly in 48-or 32-size pots in light, rich, sandy soil. When allowed to come on slowly with the natural heat of the sun they bloom in June and July; but if gently forced in a night temperature of 55° they bloom in April and May, thus affording a succession.

G. Colvillei has rosy-purple flowers, but *G. Colvillei alba*, better known as The Bride, has pure white flowers. We have seen a fine plantation of this in the open ground in Middlesex, but a much more extensive one in Guernsey, where it proves perfectly hardy. It is invaluable for cut flowers, and the others are more or less employed for the same purpose. A great number of varieties belonging to other species have received special names, and a large proportion of them have pale flowers with a beautiful almond-shaped blotch on the three lower segments. Very often the blotch is edged with another colour, the groundwork forming a third hue. A charming novelty for last year was *Queen Wilhelmina*, named in honour of the young Queen of the Netherlands. The segments are delicate rosy-pink, with a yellow blotch on the three lower segments, surrounded by a rosy-carmine band. Very choice also is *G. delicatissima*, with white flowers and a rosy-crimson blotch on the lower petals. More highly coloured are *G. cardinalis*, bright scarlet; *Duke of Albany*, purplish-scarlet, with rosy-purple blotches; *Alfred Tennyson*, rosy-salmon; *Formosissima*, salmon; *Ardens* or *Fire King*, red; *Blushing Bride*, white, with rosy-crimson blotches on the lower petals; and *Non Plus Ultra*, red, flaked white. The accompanying illustrations of *G. Colvillei alba*, and early-flowering varieties were furnished by Messrs. Wm. Cutbush & Sons, Highgate, London.

GLADIOLUS COLVILLEI ALBUS.

If the flower is all of one colour (disregarding the base for the moment) the flower is termed a breeder (see illustration p. 10, uppermost flower). After a number of years these breeders usually break, or become rectified, as the florists term it. If a broad, jagged band of colour goes along the centre, with or without a dark margin the sport is termed flamed (see the middle flower of illustration). If the dark colour is confined to the margin the flower is said to be feathered (see lowest flower). The ground colour is the same as the base in all cases in rectified flowers. These terms apply to all of the sections. Thus we have bizarre breeders, bizarre flamed, and bizarre feathered, and so on with bybloemen and rose. Those who do not care to remember these terms might say bizarre breeder for the selfs, and bizarre rectified for the other two types. Anyone having a small collection of all the types, which could be represented by nine varieties, could get up to these terms while his Tulips are in bloom in May; for the florist's Tulip is amongst the latest to flower.

The variations of colour are endlessly diversified in this old and beautiful race of Tulips. The under-mentioned notes were made from a small collection in a suburban garden. Several of the bizarres were extremely handsome. The flamed form of *Dr. Hardy* is glowing-scarlet on an orange-yellow ground, and is one of the finest in cultivation. Next to this, perhaps, we would place *Sir Joseph Paxton*, flamed with maroon on a yellow ground. *Colbert* is heavily flamed with chocolate on a golden yellow ground, and is a charming Tulip of dwarf habit. The bloom is small, but we do not regard that as any blemish. *George Hayward* is flamed with crimson-maroon on

GRAPE HYACINTHS.

OF all bulbs the Grape Hyacinths (*Muscari*) are most closely allied to the true Hyacinth (*Hyacinthus*), the chief distinction being that the mouth of the flower of the latter is open, while that of *Muscari* is contracted. A species often grown under the name of *M. azureum* is really *Hyacinthus azureus*, a small flowered but early and very pretty bulbous plant. Something like forty species of Grape Hyacinths are admitted by botanists, but in gardens the names of forms have been much more multiplied. In practice very few are extensively cultivated in gardens, and *M. botryoides* is by far the most com-

MUSCARI CONICUM ON THE GRASS.

ENGLISH AMATEUR TULIPS.

THE above epithet is applied to the Tulips of the florist in order to distinguish them from the Continental strains which are not quite the same. For the purpose of classification they are divided into three sections, namely, bizarre, bybloemen and rose. The varieties belonging to the first are distinguished by their yellow base. A bybloemen has a purple body colour and a white base. A rose is of some shade of rose, red or scarlet with a white base. Now, each of these is again divided into three groups.

GALTONIA CANDICANS.

NARCISSUS ARD-RIGH OR IRISH KING.

NARCISSUS PRIMROSE DAME.

gold. Lord Stanley is flamed with mahogany-crimson on yellow, and is a short, cup-shaped, well formed flower. Excelsior is flamed with chocolate on a yellow ground. A good bizarre breeder is John Heap, of a bright orange-scarlet edged with gold. We would also mention both the flamed and breeder forms of Sulphur, the flowers of which, though not very bright, have a strong and delightful scent of Primroses.

Bybloemen varieties were not very numerous and we shall only mention two of them. Pick-Me-Out was the first to expand in the collection, opening on the 1st of May last. The variety was flamed with chocolate-crimson on a clear or shining white ground. Agnes is a magnificent self of large size and rich purple. The purple ground colour is the

only distinction between the bybloemen and rose sections.

The most charming of the rose section in this collection was the breeder form of Annie McGregor, which is rich rosy-scarlet. One of the rectified forms is flamed with brilliant rose-scarlet on white. Both forms last in perfection a long time. Mabel is a large and beautiful rose flower in the breeder stage, and the rectified flower is flamed with rose on white. Quite of another style is Lord Derby in the flamed stage, the flame being rose-scarlet. Of the above, Mabel, Lord Derby, John Heap, Excelsior, George

Hayward, Sir Joseph Paxton, Masterpiece, Agnes, and Pick-Me-Out, are all very large flowers. Choice and very handsome are Dr. Hardy (very durable), Sir Joseph Paxton, Colbert, Annie McGregor, Agnes, Mabel, Lord Stanley, George Hayward, and Pick-Me-Out, the first four, in our opinion, being the choicest of all. The illustration was lent by Messrs. Barr & Sons.

IRISH DAFFODILS.

MANY parts of the British Isles are well-adapted for

NARCISSUS BUTTERFLY.

NARCISSUS COUNTESS OF ANNESLEY.

the cultivation not merely of Daffodils but of several other hardy bulbs. We see additional proof of this every year in various parts of the country. Bulbs of various kinds are grown in considerable quantity in Lincolnshire, the Midlands, the Thames Valley, and Ireland. Addressing an assembly of gardeners at Birmingham recently, Mr. F. W. Burbidge, of Dublin, said, "As to the comparative merits of Continental *v.* English bulbs, I may say that while Holland produces the best Hyacinths, and, perhaps, also some early Tulips, we in England and Ireland can grow by far the best Narcissi, late Tulips, Snowdrops, and Crocus of all kinds. So far as Narcissi are concerned, we can defy the world, both in rearing new and in growing all other varieties to the greatest perfection of luxuriant health and beauty."

While England, Scotland, and Wales each have their respective and peculiar varieties of Daffodil, Ireland is also responsible for the placing of many fine sorts at the disposal of the cultivator, and to some of these we wish to refer. Amongst bright yellow, trumpet Daffodils no one will deny the bold and telling appearance of Ard-Righ or Irish King (see figure). It is useful alike for cut flowers, market, forcing, pot culture and bedding purposes. Countess of Annesley (see illustration) is well-known in this country for the large size of its flowers, and rich yellow, widely expanded, fringed and plaited trumpet. John Ridd and Lorna Doone, are light yellow varieties of great size, and the latter being

NARCISSUS BISHOP MANN.

raised between Emperor and *Narcissus muticus*, is a late bloomer. Primrose Dame (see figure) is primrose or soft yellow, as the name would imply, and remarkable for the plaited and inflated character of its trumpet. A more important feature is that the flowers are deliciously scented—a rare occurrence amongst trumpet Daffodils. It is therefore very choice for pot culture in the conservatory. A tall and beautiful variety of the Irish *N. moschatum cernuum* is that named Butterfly (see illustration). The pale, nearly white, flowers are characterised by their widely expanded trumpet, twisted segments, and the pendent habit of the blooms. Bishop Mann belongs to the same type and is the tallest, earliest, and hardiest of the section. Colleen Bawn or The Fair Maid of Erin is considered to be the purest white trumpet Daffodil in cultivation. Others might be named, but the above serve to show that Ireland can raise as well as grow Daffodils. The illustrations of Ard-Righ, Countess of Annesley, Primrose Dame, Bishop Mann, and Butterfly were lent us by Mr. William B. Hartland, Cork, Ireland, who has done so much for the cause in the Sister Isle. They are some of the woodcuts from his beautifully executed book on "Conference Daffodils." Mr. Hartland also keeps alive the reputation of Tulips, of which he cultivates a large and representative collection of bedding species.

Potatoes in Co. Limerick have been very badly attacked with disease, and prices are now three or four times higher than last year.

BULB SALES.

WHEN the poet Tennyson wrote that "the thoughts of men are widened by the process of the suns" he was undoubtedly right in a general sense, but the words may also be specially applied, and in no direction more truly than in that of horticulture, for the dreams of yesterday are but the facts of to-day. The love for gardens and gardening has grown to tremendous proportions, and is still growing. With the increased facilities for transport, horticultural commodities are brought within the reach of everyone possessing a garden. Having regard not only to the cheapness of bulbs, but the ease with which they may be grown, as well as their beauty, it is manifest that they must be prime favourites with all, and the autumn months remind us that we must lay in our stock, modest or otherwise, of the floral treasures.

The machine, whereby the private grower is supplied with the needful material, is an intricate and far-reaching one, but its mechanism is, perhaps, most interesting at the centre of distribution—the public auction room. At 67 & 68, Cheapside, under the shade of "Bennett's" clock, lies one of the most important of these centres, for here Messrs. Protheroe & Morris have for many years held sales of the bulb treasures which Southern France, Holland and Japan pour in. The quantity disposed of, both to the trade and directly to amateur cultiva-

red Gertrude, and Norma, which are evidently favourites. Narcissi, Tulips, Crocuses, Scillas, Ixias, and bulbous Irises were all in great quantity, made up in parcels of a size to suit all sorts of growers. Porters were busy at work bustling up the bags, and opening them for buyers to see. Curiously enough, however, the buyers did not want to see, and this called down a mild rebuke from the rostrum. Gentlemen, said Mr. T. A. Morris, "you ought sometimes to look at the bulbs you are buying." The trust reposed in the firm is evidently unlimited, fair dealing the motto, and—this is as it ought to be. We had a look at a number of the samples, and in all cases found fine, well-ripened, and heavy bulbs of medium size, which all experienced cultivators know are what is wanted to insure success.

On the day of our visit the "trade" element was not so strongly represented as we expected to see it, but amateurs were in strong force, and in a buying humour. Prices all round were, moreover, wonderfully reasonable, and we found ourselves wondering whether, after all, the cheapest way to make a garden beautiful was not to plant it with bulbs.

THE CAPE HYACINTH.

THIS noble Liliaceous plant is often met with under the name of *Hyacinthus candicans*, but its correct name is *Galtonia candicans*. It differs from a true Hyacinth by having angled and compressed or almost flat seeds, whereas those of *Hyacinthus* are globular. There are two species of *Galtonia*, both natives of South Africa, and that under notice is by far the finer of the two. From a bold, radical tuft of leaves, the flower scapes rise to a height of 2½ ft. to 4 ft. according to vigour. The bell-shaped, drooping flowers are pure white, of great substance, and, individually, not unlike those of a Snowdrop. It gives most satisfaction as a garden plant owing to its great size and vigour, which militate against it for pot work. It is often planted in the herbaceous border and in mixtures of bedding plants. Very effective is a large bed of it mixed with an equal number of scarlet or other highly coloured *Gladioli*, with which it forms a fine contrast. The bulbs are perfectly hardy and may be left in the open ground, unprotected all the winter. Under any of these conditions it is a bold and telling plant during July, August, and part of September. The accompanying illustration (p. 11), lent us by Messrs. William Cutbush & Sons, Highgate, gives a good idea of the plant very much reduced.

SOCIETIES.

LOCHEE AMATEUR HORTICULTURAL.—

August 20th & 21st.

THIS two days' fixture was opened in Ancrum Public School by the Rev. Stewart Galloway in presence of a fair attendance. In the course of his remarks the reverend gentleman referred to the benefits to be derived from good gardening, and concluded by expressing a hope that Lochee people would not withhold from the show the support it deserved.

This season the exhibits were very satisfactory, pot plants being specially fine. The cut blooms showed a falling off, but this was well compensated for by the improvement in fruit and vegetables.

Mr. J. Beocher was one of the most successful exhibitors, winning first awards for four specimen stove and greenhouse plants, *Petunias* and *Gloxinias*. Mr. Young and Mr. James Warden had the best *Asters*, while the *Dahlias* sent by Mr. John Lamond were placed at the top of the list.

BROUGHTY FERRY.—August 20th & 21st.

IN the unavoidable absence of Provost Orchar, Mr. R. M. Brodie opened this show, which was held in the Volunteer Drill Shed, Broughty Ferry.

A lengthy schedule of prizes had been arranged, and the committee are to be congratulated upon the success of the undertaking.

Roses were a special feature, and some excellent blooms were shown in the various classes. Messrs. D. & W. Croll, Dundee, staged the premier forty-eight. In the class for twelve blooms of *Teas* or *Noisettes*, open to gardeners only, Mr. D. Keillor, Seabourne, was first. Mr. Keillor also had the best twelve blooms of *H.P.'s*. In the amateurs' class for

tors on such occasions, is immense. Two years ago when only two sales were held in each week, over twenty tons of bulbs were sold, on the average, by the firm during each week from September till Christmas. The business has grown, as healthy businesses have a knack of doing, and sales of bulbs are now held each week-day excepting Saturday, so that a substantial increase in the turnover is inevitable.

Situated thus in one of the busiest of London thoroughfares, the attendance at the rooms is good, although but a small proportion of those who go to make up the thronging crowds of Cheapside reck of the quiet passage that leads to them. Messrs. Protheroe & Morris make a feature of executing orders for gentlemen who cannot attend, this department receiving careful and personal attention. The firm requests that a remittance should accompany all such commissions. A statement of account is then rendered by the firm, the balance refunded to the client, and everybody is satisfied.

We recently paid a visit to one of these sales, and were most favourably impressed with the manner in which they were conducted. Mr. T. A. Morris occupied the rostrum, and the frequent click, click, of his hammer bespoke the fact that buyers were present in plenty, and that business was brisk. As between two thousand and three thousand lots were catalogued for that day's sale, it was evident that the auctioneer's task was by no means a sinecure.

Hyacinths were there in plenty, made up in lots of named varieties. Blues seemed to always command their price, and the same may be said of the single

six blooms of H.P.'s Mr. James Coutts secured the leading award.

In addition to the Roses, cut flowers, both hardy and otherwise, were very numerous. Mr. John Mathers, Taymount, Dundee, sent the first prize lot of twelve tuberous Begonia blooms, a similar honour falling to Messrs. Laird & Sinclair for eighteen bunches of cut hardy herbaceous flowers. A smaller class for twelve bunches of similar material had Mr. James Kydd, Forthill House, placed at the head of it.

There were numerous small classes for pot plants, and some good samples of cultivation turned up in consequence.

In the classes for fruit and vegetables the following exhibitors were credited with first awards in their respective classes:—Mr. D. Saunders, for one bunch of black Grapes; Mr. James Joss, for one bunch of white Grapes; Mr. Peter Petrie, for Strawberries; Mr. John Ednie, Carnoustie, for Gooseberries; Mr. John Machar, for Peas; and Mr. J. McDougall, for Potatos.

ROYAL HORTICULTURAL.—August 24th.

At a meeting of the fruit and vegetable committee, Mr. A. H. Rickwood, gardener to the Dowager Lady Freake, Fulwell Park, was awarded a Silver Banksian Medal for a collection of fruit. Mr. Rickwood had good dishes of Morello Cherries, Peaches of several varieties, Nectarines, Plums, and small plants.

Messrs. Rivers & Sons, Sawbridgeworth, sent boxes of Plums, Late Transparent Gage, Golden Transparent Gage, and Monarch, also bunches of Grapes, Gradiska and Directeur Tisserand.

Nineteen dishes of nuts were exhibited by Messrs. Geo. Bunyard & Co., Maidstone, including amongst others good samples of the Purple Filbert and the Kentish Cob.

Mr. Geo. Wythes, gardener to Earl Percy, Syon House, Brentford, sent thirty fruits of Melon Middlesex Hero. Mr. Owen Thomas, The Royal Gardens, Frogmore, had half a dozen large fruits of Melon, Frogmore Scarlet.

Four dishes of Apples were presented in the flavour competition. The first prize was awarded to Mr. G. Wythes, for Irish Peach, and the second to Mr. C. Herrin, Dropmore, for Lady Sudeley.

A Silver Banksian Medal was awarded to Mr. T. Robinson, gardener to W. Lawrence, Esq., Elsfield House, Hollingbourne, for a very nice collection of vegetables. Capital Beet, Runner Beans, Onions, Carrots, and Potatos, were the best dishes. Mr. W. Kemp, Barnes, had a dozen and a half samples of Cucumber Covent Garden Favourite.

A Silver Knightian Medal went to Mr. G. Elliott, gardener to Captain Macdonald, Hurstside, West Molesey, Surrey, for a dozen fine bunches of Grapes—six each of Gros Maroc, and Madresfield Court.

BRIGHTON AND SUSSEX HORTICULTURAL.—

August 24th and 25th.

THE sixth annual show of the Brighton and Sussex Horticultural Society was held on Tuesday and Wednesday, August 24th and 25th, in the Corn Exchange and Dome at the Royal Pavilion. The groups and specimen plants were arranged in tents on the lawn, and some very pretty effects were obtained in some of them. Mr. W. C. Holland, of Tunbridge Wells, succeeded in winning the Corporation Challenge Cup, together with the Society's Silver Medal, and £5, for the best group of flowering and foliage plants arranged for effect. Mr. George Miles, Victorian Nursery, Brighton; Mr. E. Meachen and Mr. Bonson Lister receiving second and third prizes respectively.

For a group of Ferns Mr. G. Mills was first, followed by Mr. James Adams, Lewes; Messrs. W. Mills & Co., and Mr. Bonson Lister.

For a table of flowering plants, Mr. Lawrence, Horsham, gained the first prize. Mr. W. C. Holland was second, and Mr. G. Miles third.

Mr. J. Warren, Handcross Park, Crawley, gained first prizes for a specimen Croton, specimen Palm, six Ferns, one specimen stove and greenhouse plant in bloom, and second for six stove and greenhouse plants; Mr. Alfred Gibson, Sevenoaks, being first in the latter class. For a box of cut stove and greenhouse flowers Mr. W. Archer, Mill House, Saffron Walden, gained first prize, followed by Mr. Alfred Gibson and Mr. S. Osman, Chertsey.

For twenty-four Roses, distinct, only two collections were staged, the first prize going to Mr. William Taylor, Hampton, and the second to Mr. T. Durrant Young, Eastbourne. For the ten Roses, Mr. W. Harris, Denne Park, Horsham, gained first, Mr. T. Durrant Young, second, and Mr. W. Taylor, third.

Forty-eight Dahlias, distinct, were shown in very fine style by Mr. S. Mortimer, of Farnham, who gained first prize. Messrs. Keynes Williams & Co., of Salisbury, were awarded second, but unfortunately it was found that by an oversight their collection contained two flowers of one sort, and it had to be disqualified. Mrs. Seale, of Sevenoaks, then received second, and Mr. James Stredwick, St. Leonards, third.

Mrs. Seale gained first prizes for single and pompon Dahlias; and Messrs. Keynes Williams & Co. first for Cactus Dahlias.

Mr. W. Manton, Pickwell, Bolney, received the first prize for a collection of hardy perennials and bulbous flowers. Mr. J. Charlton, obtained first prizes for a bride's bouquet, a ball bouquet, a wreath, and other devices of flowers. He was followed by Mrs. Seale, Sevenoaks, who gained third for the bridal bouquet, and second for device, and Mr. Cyril Kevell, who gained second for bride's and ball bouquet. Mrs. F. W. Seale gained first for table decoration. Mr. E. Meachen was second, and Mr. S. S. Williams, third.

Fruit was rather smaller in quantity this year than formerly, but several very creditable exhibits were shown. Mr. J. Gore, Polegate, gained first for a collection of fruit, Mr. Goldsmith, Leonardslee, being second, Mr. D. Gibson, Kingston-on-Thames, third, and Mr. George Fennell, Tonbridge, fourth. For three bunches of black Grapes, Mr. Dancy gained first, and for three bunches of any other black variety and three bunches of white Mr. W. Spencer, Burgess Hill, and Mr. J. Gore, Polegate, gained first and second respectively. Mr. Lawrence and Mr. S. Mortimer gained first and second for Melons. Mr. F. Potter was first and Mr. W. Spencer second for Peaches. Mr. W. Manton gained the Society's Bronze Medal and first prize for collection of nine vegetables.

Messrs. Cheal and Sons, Crawley, had a varied and interesting collection of Dahlias, including several new varieties, among which a very handsome dark crimson, with a purple tinge at the edges and base of the petals, was awarded a first-class certificate. Mrs. Quentin, salmon, Mrs. Gilleat, crimson maroon, and Mrs. John Goddard, purplish pink, were also very striking flowers.

Messrs. Jarman & Co., Chard, showed a large collection of fruit and vegetables, including some magnificent specimens of their Somersetshire Hero Onion and some very fine specimens of "King of the West" and "Magnificent" Potatos. Messrs. Tilley Bros., and Messrs. Balchin & Son, Hassocks, Brighton, had collections of bulbs in great variety. Messrs. J. Veitch & Son, Limited, Chelsea, had a very interesting collection of new and rare plants, which merited all the interest that was taken in it.

Messrs. J. Laing & Sons, Forest Hill, had a fine collection of Begonias and foliage plants.

ATHOLE HORTICULTURAL.

THE tenth annual flower show took place recently at Pitlochry, in the schoolroom. The opening ceremony was performed by Mrs. R. W. Barbour, of Bonskeid, who, in a very interesting speech, spoke of the work performed by their and similar societies in promoting the cultivation of all sorts of flowers, fruits and vegetables.

Considering the season the show was a very creditable one. Mr. R. Pearson, of Fisher's Hotel, staged the most effective group of plants occupying 60 sq. ft. of space. Mr. D. McHardy, Faskally, made a close second. In a smaller group occupying 30 sq. ft. Mr. John Campbell, Union Bank, scored; Mr. P. Ward was second.

In the amateurs' and cottagers' section the exhibits were very praiseworthy, window plants being evidently well looked after in the neighbourhood of Pitlochry.

In a fine stand of Roses contributed by Messrs. W. & D. Croll, of Dundee, which found a place among the non-competitive exhibits, such varieties as Mrs. John Laing, Countess of Oxford, and Captain Hayward were represented by capital samples.

HINTS FOR AMATEURS.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Peaches.—Your trees are evidently in a weakened condition, *Reader*, through some cause or other, hence the stones of the fruit being bad. You do not say to what extent the stones are faulty, whether the shells are all right and the kernel bad or not. We assume, however, that this is the case, and that the fruits have ripened all right. Are the trees old? because many varieties first show signs that age is telling on them by behaving in this way. If this is the case, the best thing will be to root them out and plant young ones. If the trees are young, and have got into a bad condition by improper treatment you may pull them round. Remove as much of the surface soil as you can without disturbing the roots, and give a dressing of mellow loam to which add a nice sprinkling of old mortar rubbish. The lack of lime in the soil is probably a cause of the failure.

Vine Border.—What is the best way to make a Vine border? and what is the best time?—*Reader*.

Dealing with the latter question first, any time during late autumn, winter, or early spring will do. As to the best way to make it, the border should, if possible, be inside the house rather than outside, more particularly if the Vines are to be forced pretty early. As to size, the border should be of the same width as the house. With regard to depth, 3 ft. will answer well, and is what we should generally recommend. After making the necessary excavations place in the bottom from a foot to 18 in. of broken bricks, first putting in a drain to carry off the water. On the top of the broken bricks put a layer of freshly cut turves with the grassy side downwards. After this may come the soil. This should consist mainly of good fibrous loam such as that obtained from the top spit of an old pasture. To five cubic yards of this add one yard of old mortar rubbish, a sprinkling of charcoal, and from one and a half to two cwt. of half inch bones. Well mix all these ingredients together by turning several times. The soil may be got in readiness as soon as convenient, but should be kept in a shed out of the way of rain until it is required.

Plumbago capensis.—*S. R. L.*: The blue *Plumbago* makes a capital pillar rafter, or wall plant for a greenhouse, and is also employed to a fair extent for sub-tropical bedding in the flower garden. *Plumbago rosea*, on the other hand, needs the temperature of an intermediate stove during the winter months. It may be grown in a cold frame through the summer, and such a position suits it well, as it helps to retard the flowering season. This is a matter of some consideration, as the flowers are naturally of more value in the dull months.

Lobelia pumila magnifica.—Would it be possible for me to strike a few cuttings of this *Lobelia*, and keep them through the winter. I have only a greenhouse, and should like to know if the cuttings would strike if the pots were placed on a shelf in it.—*G. Entwistle*.

In order to root the cuttings of the *Lobelias*, you will need a closer and warmer house than the greenhouse. If you can build a hot-bed and root the cuttings you may manage to keep them through the winter in the greenhouse. Another plan is to lift the old plants before the frost has cut them back, and cut away the old growths which have flowered, subsequently potting them up. If these are kept dry at the root a fair proportion of them will winter safely in the greenhouse, and may be propagated from in the spring. Damp, however, is the greatest enemy. The best plan of all for you will be not to attempt to obtain a stock for next year from this year's plants, but to sow seed in heat in the spring. It will save you a good deal of trouble, and as seedlings come pretty true, and bloom freely, the effect will be the same.

QUESTIONS AND ANSWERS

* * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Trenching Herbaceous Border.—G. Sangster; It would be advisable to wait till the plants have finished flowering, so that the stems might be cut down before you commence lifting them. Many of them have already reached that condition. Another and very important point to observe is to wait till the autumn rains have moistened the ground, because the plants will then lift with good balls of soil. After that you may commence when you like, say towards the end of September and during October. That would be the best time, as the plants would get more or less established before winter. We should not advise you to lift the whole of the plants at once. A better plan would be to lift a portion at one end, trench and manure the ground, and re-plant directly. Then you may lift another portion, and so on till you complete the whole.

Propagating Rosa rugosa.—A. Walters; The species and its varieties may, of course, be propagated by budding in the usual way. You can more rapidly get up a stock by collecting the large hips, rubbing out the seeds and sowing them at once in a cold frame in soil, or you may sow them in boxes in cold frames. Then, if you cared to, you could put the boxes in heat in spring, thereby securing more rapid germination.

Vine leaves changing colour.—W. J., G.; We have examined the leaves you sent us, and think there is no cause whatever for alarm. We are of opinion that the leaves on the main stems of the young Vines have fulfilled their functions and are changing colour previous to falling. There is certainly no fungus in or upon them; and if anything is materially wrong with them, it is the roots, and we can hardly imagine that to be the case with Vines planted last May. The treatment you are giving them now is perfectly correct; but we are of opinion that during the growing period you kept the vinery rather close, with the object of encouraging and hastening rapid growth. The result of that has produced the small green warts to be seen all over the under surface. The warts are not altogether the cause of the leaves falling, but the close atmosphere has made them rather thin in tissue, though otherwise well developed. The abundance of air you have lately been giving them, and the cooler atmosphere outside is causing them to ripen or mature early. They seemed to us to belong chiefly to the variety Gros Colman, which often becomes coloured in this way before other kinds. Another year you should let the atmosphere of the house get dry once in every twenty-four hours, say about mid-day, to harden the tissues.

Everlasting Peas.—J. W.; The best way to increase this plant is by seeds. It is the only practical method to pursue, for the plant divides very badly owing to the great depth to which the roots penetrate, and the difficulty of separating crowns with good fibrous roots attached. Sow the seeds as soon as they are ripe, in boxes which may be placed in a cold frame. The seedlings seldom flower the first year, at least when sown in the open ground, but they will the second year.

Drying Everlastings.—H. M.; The process is very simple indeed. Select a dry day for gathering the flowers; cut them with long stalks, and remove

most or all of the leaves, particularly of such things as Helichrysums. All the different kinds should be gathered when in their most ornamental state, that is, neither too young, nor too expanded by old age. Tie them in bunches of moderate size, and hang them up in some shed or other convenient place where the sun cannot shine directly upon them, and where rain cannot wet them. They should be hung up so that the heads hang straight down. In this position the stems will not get bent and twisted while the drying process is taking place. They may remain here till perfectly dry. Grasses may be treated in the same way, but we are afraid most or all of them are too old by this time to keep. When they lose their green colour they are practically useless for drying, and would gradually crumble to pieces. They should be cut when in flower or soon after.

Names of Fruits.—D. E.; Apples: 1, a worthless seedling not better than a Crab; 2, Red Astrachan.

Names of Plants.—A weekly reader: 1, Browallia speciosa major; 2, Tradescantia virginica alba; 3, Tradescantia virginica; 4, Herniaria glabra.—E. R.: 1, Heracleum Sphondylium; 2, Centaurea nigra; 3, Senecio Jacobaea; 4, Chaerophyllum sylvestre.—G. C.: Escallonia macrantha, a native of Chiloe.—J. S.: Ornithogalum longibracteatum.—F. Brewer; The stove flower is Schuertia grandiflora; the hardy shrub is Rhus Cotinus.—R. G.: 1, Cornus alba; 2, Coronilla Emerus; 3, Jasminum revolutum; 4, Spiraea Douglasii; 5, Hibiscus syriacus; 6, Aristolochia sipo; 7, Spiraea salicifolia.—W. S.: 1, Impatiens fulva; 2, Aster diffusus, not a native.—R. T.: 1, Pelargonium Radula; 2, P. tomentosum; 3, P. denticulatum; 4, Oxalis floribunda.—W. F.: 1, Pteris scaberula; 2, Nephrodium decompositum glabellum; 3, Asplenium flaccidum; 4, Asplenium Filix-foemina var.; 5, Onoclea sensihilis.

A NEW FERTILISER.

LAIRDS' "DEMOTIC."

THE "RECORD" FERTILISER.

IT is with the greatest confidence we bring this New Fertiliser under the notice of our Customers. It is specially and carefully manufactured, and will be found a decided improvement upon all other Artificial Manures, whether for Vines, Stove and Greenhouse Plants, and all Fruits, Flowers and Vegetables. FOR THE VINE BORDER it will be found of the greatest service, not only enriching the colour of the leaf, but adding size and colour to the fruit.

FOR THE STOVE AND GREENHOUSE its fertilising qualities cannot be surpassed.

FOR CHRYSANTHEMUMS it will be especially welcomed for its colouring properties.

FOR GENERAL GARDEN CROPS its qualities have been proved in a most satisfactory manner, this Fertiliser being found beyond doubt to be more efficacious in every way, and less trouble in its application, than ordinary Manures.

Prices—Per cwt., 17/6; $\frac{1}{2}$ cwt., 9/-; $\frac{1}{4}$ cwt., 5/-; 14 lbs., 3/-.

Carriage Paid on Orders for 1 cwt. and over.

This being a perfectly safe Manure, supplies a long felt want.

FRIDAY, September 17th.—Sales of Dutch bulbs and Orchids by Messrs. Protheroe & Morris.

EXPERIMENTS WITH NITRAGIN.—We have on several previous occasions referred to this matter, and are pleased to note that progress is still being made, in fact, rapidly advancing, in this branch of science. Our readers may remember that the term "nitragin" is applied to those microscopical organisms, known as bacteria, which are found in the nodules of Clover, Beans, Peas, and all other leguminous plants. The application is made collectively, for each plant or species has its own peculiar organism; or possibly it may be that science will yet reveal that many of them are but forms or stages of the same thing. These bacteria and their host plants live in a sort of symbiosis, or mutual interdependence. Both are vegetable organisms and mutually of primary advantage to the other for their continued existence. Nitragin must not be confused with the chemical element nitrogen. The German

name for the latter is "stickstoff," consequently the great chemical firm of Meister, Lucius and Brüning, who are responsible for the term, may look at the possible confusion of names in this country with great unconcern.

In the September number of *Knowledge* Mr. C. F. Townsend, F.C.S., gives an interesting article on the subject of Nitragin, commenting generally upon the interdependence of the higher animals and microscopical animal parasites for their mutual well-being as well as upon the higher and lower vegetable organisms from the same point of view. At one time the parasites were believed to be harmful, but are now known to be "absolutely essential to the lives of their hosts." In proceeding to explain the use of the nodules on the roots of Peas, Beans, Vetches, &c., Mr. Townsend mentions the fact that many farmers, especially on the Continent, grow a crop of some leguminous subject in order to prepare the land for wheat or other grain. They were well aware of the advantage of so doing, but of the reason they were ignorant. The practice is very ancient, for we read that Virgil while speaking of fallowing and other methods of renovating the soil for grain, according to Dryden's translation, says:—

"At least where vetches, pulse, and tares have stood,

And stalks of lupines grew (a stubborn wood),
The ensuing season, in return may bear,
The bearded product of the golded year."

Within the last few years it has been discovered that Peas, Beans, Vetches, &c., have the power of fixing and utilising the free nitrogen of the air, and that the nodules on the roots are the channels through which this all important operation is effected. A thimbleful of soil contains millions of the bacteria, some of which invade the substance of the root hairs, stimulating them to intense action, with the result that they develop into the complicated growths termed nodules, in which the fixation of nitrogen, under the influence of the bacteria, takes place. If the plants are well supplied with nitrogenous food by artificial means, the nodules do not take nitrogen from the air, so that, as they still continue to be formed, they must have some other function to perform in the economy of the plant, but which remains to be discovered.

It has been found possible to isolate the organisms that form the nodules, by cultivation and selection. Dr. J. A. Voelcker has been making experiments and recently delivered an instructive lecture, with illustrations and micro-photographs of the organisms, at a meeting of the Society of Chemical Industry. Red, white, and other species of Clover patronise eight different forms, or possibly stages of the same individual, the final shape being a three-pointed star. The organism of the Broad Bean is similar in shape but two of the arms are branched, while all three arms are again branched in that of the Vetch. The Bacterium of the Broom is like a well-formed comma; that of the Gorse a badly formed comma; and that of Lucerne like a point of exclamation.

Meister, Lucius and Brüning, and other enterprising Germans have begun to cultivate these organisms, collectively termed nitragin, and to offer them for sale commercially. Many experiments have also been carried out in England, on the land of Mr. Howard Ryling, as well as that of Messrs. Sutton and Sons, Reading, with whom nearly the whole of the trials have given favourable indications of the utility of seeding the land with these organisms. The experiments are to be repeated. The ground must be inoculated before sowing, or the seed itself must be inoculated and then sown, because the

nodules are formed in the early stages of the host plant. To complete this form of manuring, phosphates and potash must also be supplied. Something very important will have been gained if nitragin enable the farmer and gardener to grow leguminous crops in many successive years upon the same land. Cultivated plants of themselves are unable to utilise the free nitrogen of the air; and its combination can only be effected by electricity either during thunderstorms, or by artificial means. These organisms (nitragin) can accomplish it at the ordinary temperature of the soil; the study of how to turn them to practical account should, therefore, be fostered and encouraged.

Lilies of the Valley are much in request for forming bridal wreaths.

Monifieth Nurseries.—No 681 of THE GARDENING WORLD will contain an illustrated article dealing with these nurseries.

Our Bulb Number.—By a printer's error our last issue was marked No. 1, instead of 679. Subscribers will kindly note this.

Oranges to the extent of 1,000 cases are to be sent to Europe by way of experiment by the New South Wales Board of Export. They want to test whether they can be sent as ordinary cargo.

Dr. R. Hamilton Ramsay entertained the members of the Torquay District Gardeners' Association to dinner at his residence, Duncan House, on the evening of Wednesday, September 1st. Between fifty and sixty attended.

Little Johnny's Essay on the "Fall."—"Adam and Eve lived in a big garden. Eve left Adam one day, and ate an Apple, and then gave some Apples to Adam, and Adam 'ad 'em! But the Apples were bad ones, for they made Eve ill; and through this eve-ill the human family has lived unbappily ever since."—*Scraps*.

Mr. William Coomber.—We are pleased to learn that Mr. William Coomber, who for so many years acted as Superintendent of the Royal Botanic Society's Gardens at Regent's Park, has been appointed gardener to Lord Grey de Wilton at Houghton Hall, Swaffham, Norfolk, and we hope that Mr. Coomber's great knowledge and skill will there receive the recognition it deserves.

National Chrysanthemum Society.—The early autumn three days' exhibition of this society was held, as usual, at the Royal Aquarium, on September 7th, 8th, and 9th. There was a good gathering, the greater part of the body of the hall being filled with the various exhibits. Early Chrysanthemums were well-represented, and Dahlias were present in great numbers. Gladioli were also good. The pressure on our space, due to the number of shows which have taken place in various parts of the country during the past ten days, prevents a full report appearing in this week's issue. This, however, will find a place in next week's number.

Dutch Horticultural and Botanical Society.—At the meeting of the floral committee of this society on August 14th, First-class Certificates were awarded to Mr. C. G. Van Tubergen, Jun., of Haarlem, for Cactus Dahlias Bridesmaid, Cycle, Fantasy, and Starfish; to Messrs. E. H. Krelage & Son, of Haarlem, for Gladiolus *gandavensis* Weisse Dame, G. Lemonei Henriette Renan, G. nancieanus Colonel Gillon, and Lygodium japonicum; and Mr. K. Wezelenburg, of Hazerswoude, for Glyceria spectabilis fol. var. Certificates of Merit fell to the lot of Mr. C. G. Van Tubergen, Jun., for Canna Ami Jules Chrétien, C. Vice-President Luizet, Cactus Dahlia Cinderella, and Kniphofia Surprise, *Nov. hyb.*; to Mr. Phil Henkel, of Hilversum, for Heliotropium Madame René André; and to Mr. K. Wezelenburg for Tamarix Odessana. A botanical Certificate was awarded to Mr. J. H. Schrober, of Pulten, for Oenothera tetraptera. Messrs. M. Van Waveren & Son, of Hillegom, showed a collection of seedlings of Gladiolus *gandavensis*, which received honourable mention.

Cobnuts and Filberts present a fine appearance this season, and nut-growers are expecting to harvest the largest crop known for years.

Apples and Pears promise to be an exceptionally good crop in Kent, as far as quality is concerned, but the trees are not very heavily laden, and Pears are even scarce in some of the orchards. The season for soft fruits has been good but short, owing to the hot weather. Strawberries did not command high prices, but other crops were satisfactory in this respect.

The Irish Potato Crop.—A Skibbereen correspondent says that the Potato crop in West Cork is in a bad way; also, in consequence of the continuous spell of damp weather, the grain crop has been seriously injured. From Mitchelstown come reports that Potato disease has appeared extensively in north Cork, and adjacent parts of County Limerick. It is likewise stated that there is a prevalence of Potato disease in County Donegal, so that, altogether, the outlook for the Irish cultivator is not very promising.

Foxgloves with a Regular Top Flower.—In reference to a note on this subject on p. 819 of last volume a correspondent writes from Tivoli, Coppoquin, Co. Waterford:—Mrs. Keane has had Foxgloves with the pot bloom of every plant bell-shaped for many years. Plants always come true to seed. She received the seed from a friend at Macon, in France, but it probably came originally from America, as the plant grows wild in some parts of California. The late Dr. Moore, of Glasnevin, when on a visit to Lismore, was much pleased with it and asked for some seed, which Mrs. Keane sent. The Foxgloves vary in colour from deep purple to pure white, and are large and very handsome.

The Royal Scottish Arboricultural Society.—The members of this association paid a visit to the woodlands and pleasure grounds of the Right Hon. Earl Fitzwilliam, at Coollatin, Co. Wicklow, on August 19th. The run by rail to Shillelagh, through a country of great natural beauty and historical interest was much enjoyed by the party. The visitors were piloted over the earl's estate by the agent, Mr. F. Brooke, the gardener, Mr. Whytock, and the forester, Mr. Jobstone. They were entertained to lunch by his lordship in the Town Hall, Shillelagh. A balt was called at Ballybeg, where is much fine timber of Oak, Beech, Silver Fir, and Larch, and also a fine park, the property of Major G. G. Newton, J.P. On the following day the party visited St. Stephen's Green, Merrion Square, the University, and Botanic Gardens at Dublin, and Carton, Co. Kildare.

Loughborough Horticultural Society held its fortieth annual exhibition at Elms Park, on August 21st. The cut flowers were in distinct advance of last year, and vegetables were of high quality. A new feature of the show was the competition in which Messrs. H. Cannell & Sons, of Swanley, Kent, presented £6 in prizes and a championship belt. This was to be competed for by horticultural societies in Leicestershire and Derbyshire. The exhibits were to consist of ten kinds of vegetables, six distinct varieties of bardy fruit, and a stand of annuals or other outdoor grown flowers arranged for effect. Only three societies entered, Loughborough being first, Hugglescote second, and Sibley third. The fine specimens of Cauliflowers, Potatoes, and Carrots, staged by the Loughborough Society, went a great way towards deciding the awards of the judges.

A Nursery of great Gardeners.—On Saturday, August 28th, Mr. Asquith, M.P., opened a flower show at Tayport. In an interesting speech, he said he believed that it was a truism that the love of flowers both in their wild and cultivated states was as intense, and as common in Great Britain as in any other country in the world. It was certain, moreover, that in no part of Great Britain had the taste been more remarkably developed than in Scotland, which had been and still is training ground and nursery of many of the great gardeners of the world. An exhibition such as he was about to open, continued Mr. Asquith, did not represent merely the endeavour of a comparatively restricted body of experts who surpassed one another in technical processes or in a particular trade, but was rather the outcome of the expression of an instinct spontaneous in its nature, and universal in its diffusion throughout the length and breadth of Scotland.

A weed indeed.—An American contemporary recently described *Plantago major* as foremost among those pests which encourage backache, and foster ill temper and profanity.

Mr. Chas. Hott gave a practical demonstration of the summer management of fruit at St. Agnes on Thursday, August 26th. Several gardens were visited by the party, and the lecturer very clearly explained the manner in which the trees should be pruned. A lengthy list of the best dessert and cooking Apples was given. A goodly number of gardeners attended.

Tropaeolum speciosum.—At Brucklay, Aberdeenshire, this showy climber does not seem to have moved a foot from where it was growing ten or twelve years ago. Nor has it been liberally fed with manure, as in the case mentioned by Mr. J. C. Stogdon last week. It was planted against the wall of a house, and a gravelled walk comes close up to it, thus preventing all escape from its well-trodden root-run. It is still in full bloom and apparently happy.

Tea Roses at Aberdeen. — Recently we stated that Messrs. Adam & Craigmyle, Aberdeen, secured the premier award for Tea Roses at the annual show there. They had some very noteworthy blooms in their stand, including the pure white *Souvenir de S. A. Prince*, the deep yellow *Amazone*, and that beautifully formed white Rose, *The Bride*. Very good in every respect were *Madame Charles*, apricot-yellow; and *Madame Hoste*, white. All these were very creditable after the wild season experienced in Scotland during the past summer.

Wintry weather in the North.—Ben Nevis is already mantled with 6 in. of snow. In the inland districts of Aberdeenshire, between Ellon and Auchnagat, many of the fields of Potatoes were blackened with frost on the morning of the 4th inst. Though the morning opened fine, it began to rain heavily about mid-day, and continued for two days, after which there was a cessation, to be renewed about mid-day on Monday last. The breeze on Saturday soon rose to a gale, putting a stop to harvesting operations, and making locomotion difficult. Low-lying fields of Potatoes at Inverkeillor, south of Montrose, also show how general the frost has been.

Buchlyvie Gardeners.—The thirteenth annual exhibition of the Buchlyvie Horticultural Society was held in the Public Hall, Buchlyvie, on Saturday, 28th ult. The show, although not so large as last year, was considered very good, taking into consideration the cold spring and backward season. Pot plants were very good; cut flowers were a feature of the show, and compared favourably with other local shows in the neighbourhood. Vegetables were good, especially Onions and Leeks. The African Marigolds, Comet Asters, and Carnations exhibited by Mr. Cross were good; also the Dahlias exhibited by Mr. McPhail. A feature of this show was a neat exhibition stand of Ichthemic Guano, manufactured by Mr. William Colchester, Ipswich, England, and exhibited by the local agent, Mr. Alex. Cross, and hopes are entertained that its use as a fertiliser will be proved in the district next year.

Petite Culture.—It is now a number of years ago since Mr. Gladstone advised farmers to grow fruit and flowers, and his advice has been proved good by a letter recently received by him from Mr. R. H. Bath, of Wisbeach, Cambridgeshire. The letter is as follows:—

"Dear Sir,—Some years ago, in a speech made at Hawarden, you suggested that under certain conditions farmers should devote a part of their land to the culture of fruit and flowers. I am pleased to say that I took your advice, especially with regard to flowers, and that for the past three years, although I have largely increased my growth, I have received many more orders than I have been able to supply. You will, I am sure, be pleased to hear that I send cut flowers to dwellers in our large towns at a cost to them of something like fifty per cent. under what they formerly had to give; also that I am able to pay my workpeople twenty per cent. higher wages than they used to receive when the land was worked for purely agricultural purposes. In addition to this I put by a very substantial profit for myself."

THE GARDEN SALPIGLOSSIS.

As an annual for sunny sites there is, perhaps, nothing much more showy—when well grown—than the new and beautiful varieties of *Salpiglossis*

sinuata. It is, therefore, only in such seasons as we are passing through, that this brilliant South American subject can fulfil its highest floral mission. Sunshine, and sunshine accompanied by a high temperature, it must have; it is a *sine qua non*; and if, in addition, the soil be light, rich and warm, and the culture adequate, there is no reason why the result should not be of surpassing brilliance. But this can only be brought about by massing; as, in itself, the plant is of a slender habit, if not positively weak and weedy, so that to produce the desired effect a large bed must be in request.

Such a bed came under my notice the other day at Brook House, Chigwell, the residence of Mrs. Mildred, which the gardener, Mr. C. Skingsley, had well conceived. The colours were of the most glowing description and were variously mixed and blended. Moreover, these colours ranged from pale yellow to dark purple with many intermediate shades, while others affected stripes or lines, or were beautifully crossed or reticulated. The flowers are also of a soft metallic lustre, funnel-shaped, or campanulate in character, with five lobes and a long tongue-like style; hence its common name—which is merely a translation of its Latin one—viz., "*Scalloped Tubetongue*." Many other showy annuals are approved at Brook House, but here I must give the Palm to the large-flowered modern forms of *S. sinuata*.—*C. B. G. Acton, W.*

CARNATIONS AT KELSO-ON-TWEED.

IN the south and midlands the time of Carnations is now past and gone, but in the north good blooms are still being cut out-of-doors. A boxful of very bright flowers reached us on the last day of August from Messrs. Laing & Mather, Kelso-on-Tweed. A number of varieties was included, all of which do well across the Tweed, and some of them this side of it. Of these is *Haye's Scarlet*, still one of the best scarlet selfs in cultivation. *Duchess of Fife* bears a resemblance to *Ketton Rose*, but is slightly deeper in colour, and the petals are more fimbriated. *Mary Morris* is a rich rose, and a large flower with a stout calyx. *Lady Nina Balfour* is almost as large as a *Malmaison*, and has a large substantial petal. The colour is deep flesh pink. *Dundas Scarlet* is a grand free-flowering variety with flowers of large size, bright scarlet in colour, and invested with a stout non-splitting calyx. *Viscountess Hill* resembles the last-named variety in build, but is of deeper hue, and approaching crimson. It may be described as dull crimson-scarlet. *Queen of Bedders* is a very vigorous sort with deep scarlet flowers and petals having fimbriated edges. It should prove valuable as a hedder and thus bear out its title. A scarlet seedling that was also enclosed was rather a fuller flower, but not so good, the petals being small and too much inclined to curl. The colour, however, was very good. An old, and at one time, largely cultivated fancy variety was represented by *Terra Cotta*. The flowers exhibit a curious mixture of orange-yellow, rosy-red, and magenta. *Kelso Abbey*, another pretty fancy, is orange-yellow, thickly striated with heavy markings of rose-magenta. *Primrose League* was the best yellow ground submitted. The deep rose markings are very numerous, and give the flower a mottled appearance. Such a boxful of blooms as were these would delight any southern grower at this time of year.

JUDGING FLOWERS, FRUITS, AND VEGETABLES.

It is hardly possible to find two judges holding the same opinion on this subject! When more than one judge is appointed to each section of a show, the one that sticks most persistently to his opinion, and has the freest delivery in his conversation, generally gets the decision given in accordance with his ideas.

The opinions of the competitors vary just as much as the opinions of the judges. After a show is declared open, it is very amusing to go round the exhibits and hear them all judged over again by the competitors and their friends; in fact it is one of the attractions of the show. A gardener with three under him in the garden (only a woman and two boys) is quite indignant if his opinion is not accepted in preference to a gardener who has only one man under him. Another will give his opinion in that "decision-

shall-be-final" tone, and then goes away without hearing the opinions of others. This is the gardener from the great big place who has nothing to learn from anybody. Another who has no opinion of his own is always asking anyone he knows, how he was not first in this or that competition. Another will buttonhole you to hear him judge something all over again to his satisfaction but contrary to the decision of the judges.

All this misunderstanding amongst competitors and judges arises from the want of a few first principles in judging, and a standard of excellence for each competition being embodied in the schedule. For instance it might be stated that the nearer a vegetable stood to perfection for culinary purposes, the greater would be the competitor's chance of success, and judges would be expected to keep this principle in view in giving their decision. This is a fundamental principle often forgotten. The same principle should be stated for fruits, adding the words "and dessert" after culinary. The most beautiful should be the principle guiding the competitors and judges in plants and cut flowers; this principle is also forgotten at times. A standard of excellence should be stated for each of the competitions in flowers, fruits, and vegetables.

There is nothing that has given rise to more discussion than how to judge one miscellaneous group against another. For example, in the case of a collection of vegetables of any twelve kinds, you are told on every hand it can only be done by point judging. Let us examine what this point judging means. It simply means that a judge takes a certain number, say five, to represent high water mark in his estimation, and he goes over the collection and gives each dish of vegetables five points, or a less number, according to the position it holds in his estimation; he then adds them up and the total is the estimate of the collection as a whole. He then passes on to the next collection and it may total the same number of points, but he is not done yet. This collection contains two or three vegetables of a different kind from the other collection, so he examines them on what he calls their "relative value," and he says something like this. "An Onion goes before a Leek" or a "Beetroot before a Carrot" or a "Cauliflower before a Cabbage," and gives additional points to one or other of the collections, and so places one or other of them first. The anomaly of judging one variety against another is great enough, but when we have subjects not even belonging to the same natural order competing against each other it is an absurdity. The only condition in which miscellaneous groups can compete against each other is "for effect." Some schedules put it "for quality and effect," but the term "quality" in this sense is quite as absurd as the term "relative value"; in fact, it comes to the same thing. For instance one group of plants may contain a large percentage of *Crotons*; another a large percentage of *Pancreatiums*; and according to the predilection of the judge for *Crotons* or *Pancreatiums* the decision may depend. Who can say a *Croton* is better than a *Pancreatium*, a *Gooseberry* than a *Strawberry*, or a *Leek* than a *Savoy*? They are all good in their way, and should not be compared the one against the other, as it leads to no useful end. But a *Croton* against a *Croton*, a *Strawberry* against a *Strawberry*, and a *Leek* against a *Leek*, leads to the highest development of these respective subjects; and it is the only form of competition that should be encouraged.—*W.K.*

PEOPLE WE HAVE MET.

MR. DAVID WILLIAM THOMSON.

We have frequently had the opportunity of meeting this gentleman, and therefore have much pleasure in presenting our readers with his portrait. Mr. Thomson is the only son of Mr. David Thomson, late of Dumlanrig, and a nephew of the late Mr. William Thomson, of Clovenfords. He was born at Durhan Park, Herts, where his father then resided, and commenced his gardening career with him at Dumlanrig, where he stayed four years. His knowledge of nursery work was gained with Messrs. James Veitch & Sons, Chelsea, with whom he served for four years, making a practical study of the various departments of a nursery business.

The subject of our notice has now been in business for 21 years, and carries it on under the style and title of Mr. David William Thomson, at 24, Frederick Street, Edinburgh. He has been closely identified

with the Royal Caledonian Horticultural Society for the last 20 years, being now senior member of the council. His attention to the arrangements for the shows is unremitting, and such is his faculty of making himself respected amongst his neighbours, and all with whom he comes in contact, that he is popular wherever known. During his long career he has been a very active and very successful exhibitor, though latterly he has given less attention to it. His nursery is situated at Windlestrawlee, Granton Road, and is most extensively devoted to the cultivation of forest trees.

MR. JOHN LESLIE.

IN Mr. Leslie, gardener to A. Coates, Esq., Pitcullen House, Perth, we have a most successful competitor at several of the most important shows in Scotland. Time prevents us from entering into a detailed history of Mr. Leslie's career, so for the present we must be content to record some of his last year's successes as an exhibitor.

At the September show of the Royal Caledonian Horticultural Society last year he took the leading honours for six and four bunches of Grapes; and had the special prize for a bunch of Black Alicante, weighing 13 lbs. 6 ozs. Later on, at the Chrysanthemum Show, held under the auspices of the Scottish Horticultural Association, he secured four leading prizes for Grapes. He again scored well at the September show of the Dundee Horticultural Society last year, taking the first position for four

MR. DAVID W. THOMSON.

though then under twenty years of age. He stayed for three-and-a-half years, and after leaving was extensively engaged in London, and elsewhere, in landscape work for four years.

After that time he was engaged to go as landscape gardener to Balbirnie, Fifeshire, the beautiful seat of John Balfour, Esq. Here he remained for ten years; and during that time competed extensively with collections of fruits and vegetables in the leading classes at the shows of the Royal Caledonian Society, where he won 170 prizes at the spring, summer and autumn shows.

He was then asked by the then Duke of Marlborough to undertake the management of the gardens at Blenheim, Woodstock.

After some years of active service there, he was engaged to lay out the park, ornamental grounds, and gardens at Impney Hall. While here he was under the supervision of the late Mr. Marnock, who gave him a special certificate. After he had completed his engagement of seven years active service at Impney Hall, Droitwich, he was engaged to form the pleasure grounds, plantations, and extensive glass erections for the late Sir T. D. Brodie, Bart., Carron House, where he has been for the last fifteen years. He has had twenty years experience as an exhibitor in England and Scotland, but has not entered the field since he came to Carron House. As a judge at flower shows he is in great request, and owing to pressure for time, has to refuse many invitations.

MR. JOHN LESLIE.

Park, Falkirk, Stirlingshire, for nearly twenty years, with credit to himself, and much satisfaction to his employer, W. Forbes, Esq.

MR. M. TEMPLE.

Mr. M. Temple (see portrait), gardener at Carron House, Falkirk, Stirlingshire, is well known to readers of THE GARDENING WORLD as a contributor to our pages of notes relating to Scottish gardens and various other matters of horticultural interest.

He is a native of Fifeshire; and after serving an apprenticeship to gardening and forestry, was sent as a journeyman (at sixteen years of age) to a well-known garden near Dublin. The following year he went to London, where he was employed in the Orchid houses and plant stoves, in the nurseries of Messrs. Hugh Low & Co., Clapton. He spent a season in the glass department of an extensive market garden establishment, after which he was employed at Wrotham Park, near Barnet, under the late Mr. W. Thomson (late of Clovenfords), who sent him to Rood Ashton, Wilts, as general foreman,

MR. MUNGO TEMPLE.

and one bunches of Grapes. At the Glasgow September show of last year he carried off the leading prizes in four classes for black and white Grapes, the latter including Muscats. This feat he practically repeated at the Glasgow Chrysanthemum Show. Mr. Leslie's *forte* would seem to be as a Grape cultivator.

MR. THOMAS BOYD.

IN Mr. Boyd (see portrait) we have an exhibitor of long standing, who has not yet given up the contest to his younger rivals. He has been an exhibitor of fruits for over thirty years at the shows of the Royal Caledonian Horticultural Society. In the Grape classes, and with collections of fruits, he has been a most successful prize-taker. Valuable cups and other high-class awards have been amongst Mr. Boyd's victories. The Veitch Memorial prize was taken by him at the International Exhibitions held at Dundee and Carlisle.

The Grapes with which he has been most successful are Muscat Hamburg, Lady Downe's Seedling, Alicante, and Black Hamburg. These Grapes in Mr. Boyd's exhibits have always been noted for their excellent colour and the fine form of the bunch. He has only competed once during his long career without receiving at least one first prize.

He has managed the fine gardens at Callendar

MR THOMAS BOYD.

Gleanings from the World of Science.

THE undermentioned subjects were brought before the Scientific Committee of the Royal Horticultural Society on the 10th ult.

Vine Leaves Defective.—Mr. Ch. Pearson, of Chilwell, Notts, sent some Vine leaves, which appeared to have decayed prematurely. No fungus was present, and their defective appearance was attributable to too high cultivation, guano being freely used with great heat, and too much water, such being quite consistent with their appearance.

Chrysanthemum Leaves Attacked by Grubs.—These were received from Mr. Jenkins and were forwarded to Mr. McLachlan, who reports "that the grubs are very young larvae of the 'Silver Y Moth' (*Plusia Gamma*). It will attack almost anything. They should be destroyed by hand-picking." The caterpillars are doing considerable damage to the Chrysanthemums.

Green-flowered Cross-leaved Heath.—Dr. Masters showed specimens from Kew of this unusual condition. It resembles the "wheat-eared" Carna-

tions sent to the last meeting, and consists of an abnormal repetition of ciliated bracts; the flower in the centre having been arrested in consequence of an attack by some grub.

Pelargoniums Decaying.—Examples of the varieties "Vesuvius" and "West Brighton" were shown, which had decayed from the collar upwards. It was attributed to too deep planting. They had large roots, and had been apparently quite healthy when planted, some being over two-year-old plants.

PLANTS RECENTLY CERTIFICATED.

THE awards mentioned hereunder were made by the Royal Horticultural Society on the 24th ult.

Orchid Committee.

GRAMMATOPHYLLUM SPECIOSUM.—The magnificent spike of this plant exhibited by Sir Trevor Lawrence, Bart. (grower, Mr. W. H. White, Burford Lodge, Dorking), measured $7\frac{1}{2}$ ft. in length. There were two flowers near the base of the peduncle consisting of four segments each, arranged cross-wise, with a straight column and an aborted lip in addition. These were followed by three bracts having aborted flowers in their axils. Higher up were twenty-seven fully expanded flowers and about twenty-four or more buds. The sepals and petals are thickly blotched with brownish-crimson on a yellow ground. The lip is always small. It had not flowered in Britain for many years previously. The two lowest flowers had already been expanded for twenty days previous to the 24th August. First-class Certificate.

LAELIOCATTLEYA ANDREANA. *Nov. hyb. bigen.*—The seed parent of this bigeneric hybrid was Cattleya bicolor, and the pollen bearer Laeliocattleya elegans. The sepals and petals are of the faintest blush-lilac, deepening to purple at the very base. The side lobes of the lip are white externally and blush internally, while the terminal lobe is transverse, narrowing downwards into a long, broad claw, and of an intense crimson purple, with a white edge. Award of Merit. R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Camberwell.

LAELIOCATTLEYA JUNO. *Nov. hyb. bigen.*—This originated from Cattleya Mossiae, crossed with Laelia majalis. The sepals are of a soft purple, tinted with apricot. The petals are broader, oblong, and of a deeper purple, tinted with apricot towards the base. The lamina of the lip is intense purple, deepening to crimson towards the base; the throat is pale orange, lined with purple, and having a triangular-shaped purple band running down the tube where the arms join. The hybrid is intermediate between the parents and very distinct. Award of Merit. Norman C. Cookson, Esq. (gardener, Mr. Murray), Oakwood, Wylam-on-Tyne.

GOODYERA ROLLISSONII.—Like the rest of its congeners this is a fine foliage plant. The leaves are ovate and dark velvety-olive, with yellow or old gold edges of irregular width, and sometimes striped along the centre. Award of Merit. Mr. Wm. Bull, 536, King's Road, Chelsea.

Floral Committee.

FICUS RADICANS.—Some weeks ago this received an Award of Merit, and when again brought up on the above date was accorded a First-class Certificate. The leaves are silvery-white with a central green blotch of irregular size. Plants established in small pots produce long, slender, and gracefully drooping lateral shoots. It will make a useful plant for groups and other decorative purposes. Mr. Wm. Bull.

DAHLIA AMBER.—Choice and striking is this Cactus variety, having long pointed florets of a yellow hue, and tinted with pale orange-red, suggesting an amber tint. Award of Merit. Mr. James Stredwick, Silver Hill Park, St. Leonards.

DAHLIA NIGHT.—As the name would suggest, this is very dark, being of an intense blackish-maroon and velvety. It belongs to the Cactus section. Award of Merit. Mr. James Stredwick.

DAHLIA HYPATIA.—Here we have a very small and neat pompon of a salmon colour, with a yellow centre, due to the tips of the unopened florets being of that hue. Award of Merit. Mr. C. Turner, Slough.

DAHLIA VESTA.—The blooms of this pompon are

also very small, neat, and pure white. Award of Merit. Mr. C. Turner.

DAHLIA PHRYNE.—The small and pretty blooms of this pompon are yellow, with broad orange-scarlet edges to the florets. Award of Merit. Mr. C. Turner.

Fruit and Vegetable Committee.

MELON FROGMORE SCARLET.—The fruits of this Melon are oval, pale yellow, netted with gray, and vary from 6 lbs. to 8 lbs. in weight. The flesh is of great depth, very juicy and of a deep red. The variety has a clean and handsome appearance. Award of Merit. Her Majesty The Queen (gardener, Mr. Owen Thomas), Windsor.

TROPAEOLUM SPECIOSUM.

IT was my privilege to behold a few days ago in a garden in Surrey, several very fine specimens of this lovely Flame Flower in full bloom; and gorgeous and lovely they were. It was doubly interesting to me because I know that for several years efforts have been made, and not always with success, to establish this fickle subject in this particular garden. One nook formed by the projecting porch over the front door was particular gay, and my friend informed me that the roots were never disturbed; and the fact that the plants in this corner I mention were planted twelve years ago, at the time I was employed there, bears out, I think, the opinion of my friend that once established they are best left alone. I hardly know whether I admired those trained to the wall most, or others planted in a Rhododendron bed, which were making a gay patch of colour here and there upon the green foliage of their supporters. Being allowed to grow as they please, the slender growths had rambled up through the Rhododendrons, and in graceful trails or carelessly disposed bunches showed a profusion of bloom artistically displayed.—A. P.

The Orchid Grower's Calendar.

THE advice given in these notes a fortnight ago respecting the probable necessity of using fire beat rather earlier than usual, even in the cool houses, has unfortunately proved true; for more cheerless weather could hardly be imagined than what we have experienced this last few days.

VANDAS.—Just now the species of Vandas have gone completely out of fashion; why it is I suppose no one could tell, unless it is that they are rather tall growers and take up more room than do Cattleyas and the like. A well grown specimen, however, is an object not easily beaten. We have grown a good number now for some years with the Cattleyas, and while it is somewhat difficult to keep the foliage on down to the pot, there is no doubt of their floriferousness, for they are nearly always in flower. The summer spikes have now been cut, and the plants immediately show their appreciation at being relieved by pushing out numerous roots all up the stems.

As some of them have become a little leggy we shall cut them down forthwith. Most of our plants of *V. suavis* have several young breaks at the base, which will be left to make—as they will do—fine specimens. The bare stem of the centre piece is then shortened, so that when potted the bottom leaves will be just above the rim of the pot and as nearly as possible resting on the moss. I should mention that for at least a month the plants should be put in crocks alone. This admits of plenty of moisture being afforded, which, of course, promotes quicker root action. When it is seen that this has taken place, a layer of moss may be placed over the crocks, which should be almost level with the top of the pots. A gentle sprinkling through a fine rose pot will keep the moss alive and prevent any loss of the lower leaves.

ANGRAECUMS.—These we treat in a similar manner to the Vandas, but only in cases where they have got very unsightly it is necessary to have recourse to this system with *A. sesquipedale*. The smaller growing kinds, however, do not mind being lowered if it is done with proper care. So much depends on the after treatment of plants so disturbed whether you are to succeed or not.

Those plants that have been operated on should, if possible, be placed together in the shadiest part of the house, where they can be properly looked after,

as leaving anything to chance will almost certainly result in failure.

CATTLEYA HOUSE.—We have just now in flower the shy-blooming *C. speciosissima*. Our plants have been growing up close to the glass at one end of the house where the blind does not quite cover. The glass was whitewashed over, but the storms have washed it almost quite clean, so that the plants have been for some time almost fully exposed to the sun. The result has been short leaves and thick ones with broad sheaths and brilliant flowers.—G.

VEGETABLE CALENDAR.

CABBAGES.—These are one of the most important crops for autumn planting, and one that can be forwarded considerably by making a good start at the present time. The first thing to aim at is the securing of strong, stocky plants capable of resisting the storms and changes of temperature during the winter months. This can only be obtained by pricking out the young plants as soon as they are fit to handle, 4 to 6 ins. apart, in a well-prepared bed in a sunny position. Here they will soon gain strength, both in stock and leaf, while at the same time they form a mass of feeding roots close at home, and may be transferred to the permanent bed without much check, as every plant may be lifted with a nice ball. Where transplanting has not been done it will be necessary to thin the plants in the seed bed, taking out the weakest to help in the development of the best plants.

The next, and an equally important point in the production of an early crop, is the preparation of the permanent bed. Where the land is of a heavy nature a thorough dressing of rather long, but well-saturated, manure should be well-worked into the ground to keep it open and prevent too great cohesiveness during the winter season. With lighter land well-rotted manure will be preferable. In each case the ground should be "bastard" trenched to let free superfluous rains and give a good root run, for the heat of early summer often proves trying to this crop. A small bed on a south border, or under a fence, selecting a few of the strongest plants, would give a few heads a week or two in advance of the main crop.

DWARF BEANS.—Crops of these sown in frames, as advised, should now be well-advanced, and it will be advisable to cover them during cold nights to prevent the plants getting a chill. A slight top dressing would assist in pushing on the plants, and a few supports should be put to them to prevent them from rocking at the collar. Another crop may be sown in boxes at once, and the plants, as soon as up, potted singly into 60 sized pots. These will come in useful, either for potting on or planting out in heated pits and frames as soon as they are cleared of Melons, or Cucumbers, and will carry on the supply well into December.

LETTUCES.—It will be necessary to carefully watch any now nearly full-grown, and a tie should be placed around them to prevent injury from high winds. Where strong plants are in hand in seed beds, a good planting may be made in frames, orcbard houses, and other positions where they will get protection from storms. Borders should also now be prepared for planting out the hardier kinds of Bath Cos and some of the best winter kinds of Cabbage Lettuce. The latter may also be largely planted in groups of from 3 to 5, and when well-established can be covered with bell glasses or other protectors.

CELERY.—As this is not likely to suffer from drought again this season, every favourable opportunity should be taken to advance the earthing up. A good watering with nitrate of soda before earthing would give greater vigour and add materially to the weight of the heads, as the plants will keep growing for some time yet.

ROOT CROPS.—It will be advisable to lift all Potatoes that are ripened before they have time to superterate after the heavy rains. Turnips full grown will last longer stored than in the beds during this weather, as they rapidly outgrow a useful size. Onions must be got under cover to secure the final ripening process. These should be frequently turned, but where the time can be given they may be roped at once, and in this way a quantity can be stored in positions above other crops. It is important to store the Onions in a cool airy place.—J. R.

HINTS FOR AMATEURS.

Retarding Lilies of the Valley.—Most amateur gardeners know of the practice so commonly put in force of forcing Lilies of the Valley for the purpose of supplying cut flowers at various seasons of the year, but to many of them the idea of retarding the plants with a view to the more easy timing of the period of blooming comes as a surprise. Two or three amateurs to whom we have mentioned the fact received it in this way, and the return question invariably was "how long is it since such a system was invented." For the benefit of our readers who are of the same mind it may be stated that the idea is not a new one, although it is only of late years that it has been put into extensive practice. Even now it is not at all common, and, to quote the words of an eminent grower, is not generally understood, and less believed in by the amateur gardener.

The whole subject is a most interesting and important one—interesting because it is a break away from the methods of culture usually employed, and important because the results thus obtained are brilliant successes. An article on the forcing of Lily of the Valley that appeared in the last issue of THE GARDENING WORLD gave the method of quick forcing, but did not deal with the question of retarded crowns. Now a very little thought will convince one that under ordinary conditions it would not be possible to have Lilies of the Valley in bloom all through the year, for while the crowns or clumps would remain dormant through the winter and early spring, if placed in cold frames, just as their relatives out-of-doors do, they would break into growth with the advent of the warm weather, and no amount of shading or of keeping cool in the ordinary way would prevent the flowers from opening. By placing the plants in a frame having a north aspect, airing them freely, and keeping them shaded from all the sun's direct rays an extension of a few weeks in the flowering period may be obtained. The remainder of the summer would thus be a blank. In September and October again it would not be possible to get ordinary crowns in bloom, for they would not have completed their growth in time.

Here it is that the retarding process proves itself to be of such value, and it is by taking advantage of it that modern cultivators have been able to do such great things with the popular Lily. Writing on the subject quite recently, Mr. T. Jannoch, of King's Lynn, Dersingham, Norfolk, our largest, and one of our most successful cultivators, said:—"As in most things connected with horticulture, Nature has here taught us a lesson. I, for one, took Nature as my guide, and yet, 25 years ago, when I mentioned to an eminent horticulturist that horticulture was quite in its infancy, and that what we accomplished by heat then would one day be done by cold, I was laughed at. My words have already come true to a certain extent, but this is only the commencement. Every plant that has a natural period of rest may be retarded, and already we are treating in this way Liliums, Spiraeas, Lilacs, Gladioli, and hosts of other things, besides Lily of the Valley."

Mr. Jannoch grows an enormous quantity of Lilies of the Valley, and retards the crowns by placing them in a huge refrigerator, from whence they are taken as they are required. The refrigerator is opened as seldom as possible for obvious reasons, the 1st and the 15th of each month being the days set apart for so doing. In the summer and autumn months there is absolutely no skill needed to obtain bloom from these crowns. All that is required is to pot or box them up as soon as they have arrived at their destination. No artificial heat of any kind should be given, particularly bottom heat. Do not keep them in the dark, but expose them to the full light at once, no matter whether they are placed in a frame, in the greenhouse, or in an ordinary dwelling room. In a space of two or three weeks, under ordinary conditions, they will have opened their flowers, and developed fine vigorous foliage, and this without practically any trouble at all, whilst the expense is not a very formidable matter.

In late autumn, winter, and early spring, when temperatures all round are very low, artificial heat will be a necessity, but even then it will be found that crowns which have been frozen for a time start away better than others which have not been subjected to the low temperature.

Very few amateur growers have the proper conveniences for freezing the crowns themselves. Those who can boast of the possession of an icehouse may easily do it, however, by potting up the crowns in the usual way, and simply storing them away in the icehouse, on the top of the ice. In their natural condition all Lilies of the Valley growing outside must be frozen through and through during periods of frosty weather, and the degree of cold which they are called upon to bear must in the majority of cases be much greater than they would be subjected to in the icehouse, for the clumps lie close to the surface of the soil—a fact which any amateur may easily verify for himself. When the ground is covered by a coating of snow, on the other hand, a sort of blanket is spread over the plants which shields them from a good deal of the rigour of the cold.

In a few words, therefore, the system of retarding may be summed up. It is but taking advantage of the fact that the plants need an annual rest, which is given to them in the course of nature during the winter time, when low temperatures prevail. During this stage in their life's history the plants are capable of withstanding easily enough a degree of cold that would kill them at any other time. The skilful gardener steps in, and simply lengthens the resting period, by extending the conditions that are associated with it, and which in reality have caused it. While it would not be possible to keep the crowns in a dormant state for an indefinite period in the same way as the fabulous mummy wheat, still no evil results accrue from a moderate extension of the resting period such as Mr Jannoch and other growers induce in the cases of the Lily of the Valley, and the other plants which have been mentioned.

Before leaving the subject of the discussion we may with advantage speak of the value of the plants for decorative purposes after they have been forced into bloom. At this stage they may be easily transferred from the pots or boxes in which they have been forced, and employed to fill ornamental receptacles of all kinds. They should be gently shaken out of the soil and replanted in cocoanut fibre. In this way the dinner table may be made to look magnificent. A capital plan that we have seen adopted with marked success is to procure cone-shaped wire cages of about a foot in height. These may be lined with moss and filled with cocoanut fibre. The bottom should consist of a piece of board cut to fit so that the rim of the cone at the bottom rests on and is supported by the board. In such a contrivance the dormant crowns may be placed if desired, and forced thus. This plan, however, has the disadvantage that the plants all draw up straight, and thus we prefer to force the crowns in the ordinary way and furnish the wire frames with them afterwards. This idea may furnish individual taste with hints for other contrivances for dwelling room or table decoration. Hanging baskets, similarly furnished, will at once suggest themselves to some of our readers as likely to be effective. We remember only to have seen one of these, but it was at least a marked success, and the wonder is that the idea has not been extensively copied. Probably it arises from the fact that not a few think that Lilies of the Valley, Hyacinths, and other forced flowers of that class will not transplant. We trust that such persons have by this time found out their mistake.—*Rex*.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Lilium auratum.—A bulb of *Lilium auratum* that is growing in a border along with a miscellaneous collection of plants has this year produced a large head of rather small blooms, there being no fewer than ninety-three flowers on the one head. Is this a common occurrence? The bulb when purchased was a large one, but not larger than some others which have borne only five or six flowers.—*Uriah Heep*.

Fasciation of the flower stem, such as has occurred in this case, is comparatively common in *Lilium auratum*, for scarcely a season passes but we hear of several instances. Ninety-three flowers seem a lot to have on one head, but it is not by any means the record, as we occasionally hear of heads carrying well into the second hundred of flowers.

Solanum jasminoides is a native of South America, *Quercist*, having been introduced from thence in or about the year 1838. It will make a capital rafter or pillar plant for your greenhouse.

Lifting Chrysanthemums.—*F. N. O.*: You may, if you wish, lift Madame des Granges Chrysanthemums from the open and pot them up for the greenhouse with perfect safety. Keep the plants closely shaded for at least a week after lifting. All early-flowering Chrysanthemums may be treated in the same way, but it rarely pays to treat the later flowering ones thus.

Celsia Arcturus is the name of the plant, a specimen of which you send, *Geo. W.* It is a very pretty and easily grown greenhouse plant, and a native of Candia. Propagation is easy enough. Seed sown in heat in spring will produce plants which will flower the following autumn. Cuttings of the young growths also strike freely. These may be taken now. Put four or five of them in a thumb pot, and plunge in a gentle hotbed. When rooted, pot the little plants off singly into thumb pots, which size will carry them through the winter until spring, when a further shift may be given. Use a mixture of equal parts of loam and peat with sand. Small flowering specimens in 60-sized pots are better and more useful than larger ones.

Freesias.—*M. F.*: If the leaves of the Freesias are beginning to show above the fibre it is quite time they were uncovered. An inch of fibre was too shallow a covering; we should have given at least 2 in. or 3 in.

Ardisia crenulata alba is not so frequently grown as the type, *S. Hardy*, but you may give it the same treatment. For our own part we think the red berries of the species more handsome than the white ones of the variety, but tastes differ.

Chinese Primulas.—Please tell me why my Chinese Primulas are looking yellow. They are standing in a cold frame facing to the south, and on a bottom of ashes. The plants appear healthy but for the yellowness of the foliage.—*Charles Osmond*.

We think the plants have been too much exposed to the sunlight, and that this is the cause of the yellow foliage. You must keep them lightly shaded on bright days until the end of the month. You do not say anything about manures, but we assume you are not giving any to them yet. The soil will be quite rich enough for the present.

Tomatos.—*James C.*: Cut off the tops of the plants, and remove portions of the leaves where they are shading the fruit. In the two or three weeks of September during which we hope to be free from frost the fruit should make considerable progress. Outdoor Tomatos are at the mercy of the weather, and you must do everything both by stopping the growths, and by feeding to hurry the fruit along.

Plums.—*Marrow*: We consider it a waste of valuable wall space to plant Victoria Plums against a south wall. The site is too hot and dry, and we are not surprised that you complain of the fruit being mealy.

Stacking Loam.—*Nathan*: The turves should be stacked with the grassy side downwards. If desired a layer of fresh cow manure may be placed at intervals. When the stack is completed put over it some cover calculated to throw off the rain. Loam thus stacked will be fit for use in a year.

Berried Solanums.—I purchased a number of seedlings of the common berried Solanum and planted them out of doors at the beginning of the summer. They have flowered, but there are no berries on them. Will it be any use lifting them in the hope that they will produce berries after they have been potted up.—*Anxious*.

You may lift the plants about the middle of the month if you choose, but if they have not set berries already it is rather problematical as to whether they will do so this year. Both *Solanum Capsicastrum* and *S. Pseudo-capicum* may be raised from seed easily enough, but such seedlings do not all fruit equally well, and hence when you depend upon seedlings to furnish a stock of berried plants, it is advisable to plant enough of them in order that you may be able to select those most freely berried.

FLOWER GARDENING NOTES.

For years I have perused with interest and enlightenment, the notes from the pen of Mr. M. Temple. I quite agree with his remarks on the above (p. 741). Years ago it was all scarlet, purple, and yellow in the flower garden, something glaring; nothing quiet and subdued. Then that abomination, carpet bedding, came to the fore. It was rightly named, but it was anything but a "velvet pile" for those gardeners that were expected to carry it out with a limited staff and glass accommodation. The plants it required was enormous; thousands in one bed, and a constant labour of trimming to keep the pattern; and the result was as though the bed was covered with a rug from Maple & Co. Happily, that has had its day.

I can quite see those combinations mentioned by Mr. Temple at Dalkeith, Archerfield, and Dysart; they were quiet and beautiful, not loud and glaring. About twenty years ago I saw a large bed at Sundridge Park, Bromley, which I thought was very pretty. It consisted of *Pelargonium Manglesi*, and a good dark *Heliotrope* planted alternately.

After I had penned the above, I saw Mr. J. Mayne's "Flower Garden Notes," and have no doubt that his combinations look very effective, but perhaps he will pardon me for saying that I think

TOMATO LAIRD'S SUPREME.

The accompanying illustration will serve to give an idea of the fruitfulness of this grand new Tomato. The parents were Stirling Castle and Trophy. As the latter has been well known and largely cultivated for many years description is unnecessary; but Laird's Stirling Castle may not be so well known to some of our readers, and we here mention its leading features. The fruit is of medium and uniform size, excellent flavour, solid, and of a beautiful, glossy, crimson-red colour. As a cropper, it has already given abundant satisfaction, as the clusters are large and freely produced. Quantity and quality are features that cannot be ignored, whether the fruits are grown for private use or for market.

Laird's Supreme possesses many of the good features of Stirling Castle, but takes more after Trophy in size, though not equalling it in that respect. In numerous trials by different people it has proved to be a free setting and extremely heavy cropping variety. Cultivators both in England and Scotland have spoken of it in terms of high praise. Everyone who has seen it has expressed wonder and surprise at the magnitude of the crop. The fruit is of great depth, a great desideratum in a Tomato; and the flesh being solid, it weighs well. Another recom-

destroy some of their best friends from want of proper knowledge.

I have met with scores of good practical men, with the merest smatter of the knowledge of systematic botany, who, so far as their cultural skill is concerned, would not have made better practitioners by being made most proficient botanists, who have at times cause to regret their deficiency in entomological knowledge, a little of which at times would be of immense service to them.

Some of the so-called entomological societies appear to confine their researches to the discovery of the rare and beautiful till, alas, they are in some districts becoming very rare indeed. Their members can tell you much about moths and butterflies, but just ask some of them the life history of an earwig, and you will soon be able to judge how far these societies are of service in matters horticultural. Young men engaged in gardening pursuits should in their own interest take this subject up, and make a study of those insects especially which are known as enemies, in order that they may be the better able to cope with them. Those insects, which from their flesh-eating instincts become friends by preying on those which are destructive to vegetable life, should also be carefully studied.

TOMATO LAIRD'S SUPREME.

the edging of *Pyrethrum* would have been more effective if replaced by a good *Blue Lobelia*. We have a large bed, which, I think, looks very well. It has ground work of Ivy-leaf *Pelargonium Galilee*, and dot plants of *Iresine Lindenii* allowed to run up without stopping. Another bed is composed of *Calceolaria amplexicaulis*, as ground work, with *Lobelia cardinalis* as dot plants, edged with *Koenigia variegata*. *Blue Lobelia* would have made a better edging, but it occupied that position in the adjoining bed. Another very good all-foliage bed is composed of a centre row of *Acacia lophantha*, flanked on each side by a row of *Abutilon Switzii*. The ground-work is composed of red *Alternanthera*, edged with golden *Alternanthera*. The last-named is a combination not affected by wind or rain. We have two large beds of tuberous *Begonias*, edged with *Poa trivialis variegata*, which look well now that the weather is cooler. They are now at their best. Two round beds of *Coleus Verschaffeltii* edged with *Mesembryanthemum cordifolium variegatum*, which would have been greatly improved by a good plant of *Centaurea candidissima* being in the centre instead of the standard *Rose* that occupies that position.—*Geo. Potts, August 31st.*

mendation is that the very juicy flesh is of a fine bright scarlet colour, while the flavour leaves nothing to be desired. Those who have seen it consider that it is invincible for market purposes. Moderate sized fruits of uniform size, together with quality, are desiderata both with grower and consumer. The variety was raised and is being put into commerce by Messrs. R. B. Laird & Sons, 17a, South Frederick Street, Edinburgh.

ENTOMOLOGY AND BOTANY.

THE too generally prevailing ignorance respecting the natural history of the many insects we are constantly meeting with in the course of our daily labour among plants and flowers is often a source of regret and sometimes of annoyance. A most essential equipment for those who take part in the battle of life is the ability to readily distinguish between friend and foe, and it is most unfortunate that so large a percentage of those engaged in the pursuits of horticulture and agriculture are almost profoundly ignorant, respecting the life history of the various insects they are constantly meeting with, and should frequently

One cannot help wondering at times what useful purpose many living things serve in the economy of Nature. A very familiar idea respecting insects in general is that they are a natural provision for the food of birds. This to a great extent is undoubtedly true, but what about slugs and snails? When will some great naturalist take this subject in hand, and clear it up for us in the same way as the work of the earthworm has been? Why are snails almost conspicuous by their absence in some localities, and at the same time found in large numbers within a stone's throw, without any apparent difference in the surroundings to account for it? Having had a closer personal acquaintance with them recently than I wish for, it seems to me that they prefer decaying matter to that which is fresh and green. Is it that they were designed to eat up such, and that man, having destroyed the balance of nature, has driven them to extremities, and so by preying upon the produce he rears for his own use they become his enemies? If this and some other allied subjects had been taught in our public elementary schools in the past in place of much of the so-called religious teaching, many of us would have been better prepared for the battle of life when we left them than we were.—*W. B. G.*

NOTICE OF BOOK.

FRUIT GROWING. By B. Wells, F.R.H.S., R.A.S.E., the Fruit Nurseries, Crawley. Price 1s.

Mr. Wells, the well-known fruit grower of Crawley, fearlessly runs the gauntlet of the critics again with a second edition of his book on "Fruit Growing." THE GARDENING WORLD was somewhat freely lectured last year for making some remarks on his punctuation and style. He now admits that the criticisms were deserved; and thanks his reviewers for everything they said. As the work is in stereotype he has not attempted to revise the mistakes, especially as the subject matter is still quite up to date, and no special discovery has been made since last year, when the first edition was sent out.

The practical details of his book constitute its most valuable feature. He dwells at greatest length upon the Apple, which is, indeed, the "king" of British hardy fruits, as the Strawberry may be termed the "queen." Where Oaks or Elms grow well, there the Apple may be relied upon to give satisfaction. In the matter of stocks he is a great believer in the Crab for orchard trees; but being unable to get the true Crab in sufficient quantities he took to raising his own stocks from the pips of the wild Crab. It would be interesting to know where he can get pips of the wild Crab in sufficient quantity to meet his requirements; but no doubt that is his own secret. The produce of a single old patriarch would, however, give a great number of seeds annually if in a position to develop to the best advantage. We have seen isolated specimens in Kent and Berks considered to be the wild Crab, but nobody seemed to consider them of value except boys. The pips of cider Apples, now so much in use for the purpose of raising stocks, Mr. Wells terms the free stock, and we agree with him that they must vary greatly in character, and therefore must to some extent be unreliable. The same might be said of the free stocks of the Plum and Pear, which cannot be otherwise than a mixed lot.

The author is not very favourable on the whole to mixed orchards, except in the case of the more temporary subjects to form an undergrowth till the permanent trees profitably occupy the ground. He agrees with some other writers that of trees alone the Apple would be the most profitable; and of mixtures, the Apple and Black Currants would pay best, the latter to be removed after a time. Pears, he says, are very valuable when scarce, but otherwise when plentiful, and that is practically his opinion concerning Plums. Good crops of Plums are not worth gathering, unless the grower can bottle them—an expensive operation in the case of tons. We consider, however, that there should be special provision for the preservation of these and all other soft fruits, in districts where such are grown in quantity, so that bottling and jam-making could be carried on upon a large scale by efficient machinery and skilled labour. The fruit grower should not be expected to undertake this work. He gives less countenance to the culture of Cherries. Morellos are liable to destruction by late spring frost, and the Bigarreau Cherries are so devoured by birds as to be worthless. Nevertheless he favours the preservation of birds, and surely it would be possible to preserve the Cherries for a few weeks during the ripening period by means of boys.

SOCIETIES.

AYR HORTICULTURAL.—August 26th.

THE Artillery Hall, Ayr, was the scene of this annual fixture. A large schedule, containing upwards of 170 classes, had been drawn up, so that both gardeners and amateurs were well provided for.

In the open classes Mr. H. Stewart, gardener to R. Goudie, Esq., Alloway Place, was placed first for six stove and greenhouse plants. Mr. A. H. Scott, gardener to Mrs. Baird, Cambusdoon, was second. A collection of six dishes of fruit was best shown by Mr. D. Murray, Culzean Castle, Maybole. Mr. John Walters, Carbieston, took a similar position for a collection of vegetables.

Amateurs competed briskly, and showed some capital pot plants and cut flowers, including Dahlias and Gladioli.

SANDY AND DISTRICT FLORAL AND HORTICULTURAL.—August 26th.

THE twenty-ninth annual exhibition held at Sandy was a conspicuous success, the entries being equal in number to those of last year. The attendance was larger than at any time since the formation of the society, the takings at the gate being £342 as against £311 13s. 4d. last year. In the open division Mr. J. Cypher of Cheltenham was an easy winner of the prize for ten stove and greenhouse plants in full flower. Mr. W. J. Empson, gardener to Mrs. Wingfield, Ampthill, was the most successful exhibitor in the whole of the show. He took first in a brisk competition for a group of plants arranged for effect, the glory of his collection being some capital Orchids, Crotons, and Pancratiums. Mr. Empson had no fewer than 53 entries and took many firsts.

Dahlias were splendidly shown by Messrs. Keynes, Williams & Co., Salisbury; Mr. S. Mortimer, Farnham; and Mr. J. Walker, Thame. Cut Gladioli and China Asters, as in previous years, were bright and good.

Coming to the fruit classes Mr. Empson had matters nearly all his own way and was easily first for, black, white, and Muscat Grapes, as well as a fine collection of eight kinds of fruit. Mr. C. R. Allis, Old Warden, showed admirable Grapes and other fruit, and Mr. T. Stone, Mr. C. Moore, and Mrs. Foster, also figured prominently in the list of prize winners.

SWANSEA.—August 26th.

A VERY successful show was held in the new covered market at Swansea on Thursday, August 26th, and resulted in about £172 being taken at the gates. With subscriptions yet to come in addition to the gate money the energetic secretary, Mr. A. R. Drummond, expects to have a surplus of £30 to £40 to hand over to the local charities. The fact of this being the first show of this society to yield such a result must be very gratifying to the committee, and it is to be hoped the society will now be constituted on a permanent basis and shows held yearly.

Messrs. Kelway, of Langport, made an exhibit of Gladioli which was very much admired and attracted a great deal of attention.

Messrs. Clibran & Son, of Manchester, and Messrs. Dicksons, Ltd., Chester, had choice collections of hardy herbaceous and bulbous flowers. Mr. W. Tresider, Cardiff, had a fine and varied collection of Dahlias, among which some of the Cactus varieties were particularly attractive. Mr. Taplin, Newton Abbot, showed a miscellaneous collection of cut blooms, comprising Carnations, Dahlias, and hardy herbaceous flowers. Mr. J. Harris, Bracypill, Swansea, had a fine collection of fruit trees in pots, and Messrs. Parsons & Co., of Swansea, a collection of Potatoes.

FALKIRK HORTICULTURAL.—August 26th.

THE autumn flower and fruit show promoted by the Falkirk Horticultural Society took place on this date in the Town Hall, Falkirk. Although the entries were fewer than those of last year the interest showed no sign of abatement, although the competition in the various classes fluctuated considerably.

Mr. John McLaren, Millfield, Polmont; Mr. John Ogilvie, Broomage Park, Larbert; Mr. Robert Starrat, gardener, Wallside; and Mr. W. Robertson, Bainsford, were some of the most successful exhibitors of pot plants.

A collection of fruit, composed of six distinct varieties, sent by Mr. John McLaren, was adjudged the first, and the same cultivator scored for a Melon, and a dish of Peaches.

Mr. John Ogilvie, and Mr. Matthew Karrigan, Gargunock, were each awarded a first for a collection of six varieties of vegetables. Mr. John Ogilvie was likewise credited with the first awards for Leeks, Vegetable Marrow, Parsnips, and Celery. Amateurs also showed strongly.

Mr. John Downie, Princes Street, Edinburgh, had a tastefully arranged table of pot plants, and cut flowers, the latter including double tuberous Begonias, and Dahlias. Mr. Dow had a stand of Ichthemic Guano, and there was also an attractive bee and honey exhibit.

Great praise is due to Mr. Fleming, the secretary, for the manner in which he has carried out the arrangements.

BLAIRGOWRIE AND RATRAY HORTICULTURAL.

THIS old-standing society lately held its twentieth annual exhibition in the Public School, Blairgowrie. In opening the exhibition Mr. Allan Proctor remarked the fact that Scotch gardeners had for centuries been celebrated all over the world.

The schedule included classes for pot plants, cut flowers, fruit and vegetables, the greater part of the produce being contributed by the industrial section of the population.

Non-competitive exhibits came from Messrs. D. & W. Croll, Dundee, who showed cut Roses; and from Messrs. J. Russell, Coupar Angus, and J. J. Gellatly, Blairgowrie, who had groups of plants.

DUNDEE.—September 2nd, 3rd, and 4th.

THE annual show of the Dundee Horticultural Society was held on Magdalen Green on the above dates. The horticultural exhibits were arranged in three large marquees, while there were several side shows or accessories. Plants occupied one, cut flowers another, and vegetables a third. The show on the whole was much finer than last year, the plants in the nurserymen's classes being in grand form. The tables arranged for effect were as good as at mostly any show in the county, particularly the three first ones. The American Consul made an excellent speech at the opening ceremony on the first day. The first day was rather wet, but the second was very fine. During the three days over £500 was taken at the gate.

The premier award for six stove and greenhouse plants was taken by Mr. Peter Marshall, Balmore, Newport. He had a magnificent specimen of *Coprosma baueriana variegata* about 10 ft. to 12 ft. high, specimens of *Croton* and *Asparagus plumosus* scarcely dwarfed, and flowering plants represented by *Anthurium andreaeanum*, *Clerodendron Balfourii*, and *Lapageria alba*. The second prize was taken by Mr. Thos. Butchart, gardener to Jno. Robertson, Esq., Elmslea, with much dwarfed plants. He had a neat plant of *Elaeodendron orientale*, 6 ft. high. Mr. R. W. Saunders, Lismore, Broughty Ferry, was third. There were five tables (10 ft. by 6 ft.) in the competitive list, and the first award was taken by Mr. George Masson, St. Fort Gardens, Newport. Lilies, Crotons, Palms, *Dracaenas*, *Celosias*, and Maidenhair Ferns made a graceful arrangement. Mr. Geo. Ruckbie, Linfield, West Ferry, was a good second, but with a slightly heavier arrangement. Mr. Thos. Butchart was third.

Mr. Peter Marshall had the best four fine foliage plants, with grand specimens of *Cycas revoluta*, *Phormium tenax variegata*, &c. Mr. J. Baird, Kincaid, West Ferry, was second, and Mr. E. Cameron, Binrock, Dundee, was third. Mr. Geo. Masson had the best three *Crotons*. Mr. R. W. Saunders had the best two *Liliums*; he also had the best three *Dracaenas*. Mr. P. Marshall was first for *Lilium auratum*. Mr. Jas. Bethel, Westwood, Newport, had the best *Vallota purpurea*.

Mr. Peter Marshall again came to the front for six stove and greenhouse plants in another class. His plant of *Statice brassicaefolia* was fine. Mr. Jas. Bethel had the best *Coleus*. The leading award for a Palm was taken by Mr. W. R. P. Saunders, Tay Park, Broughty Ferry, with a magnificent specimen. Mr. J. Baird exhibited the best tree Fern. Mr. A. Cameron showed the best six exotic Ferns, in large well-furnished specimens grown in tubs, pans, and baskets. Mr. Alex. Duncan, gardener to Captain G. D. Clayhills, Invergowrie, took the lead in the class for six British Ferns with well-grown specimens.

NURSERYMEN AND FLORISTS.—The leading award for twelve plants for table decoration was taken by Messrs. Laird & Sinclair, Dundee, who had dwarf and very graceful specimens. Mr. R. Grossart, Clarendon Park Nurseries, Dundee, took the second place. In the cut flower section the first prize for twenty-four Roses, distinct, was taken by Messrs. D. & W. Croll, Dundee. They had fine blooms of Madame de Bonnaire, Her Majesty, Mrs. John Laing, and La France. They also led the way for Tea or Noisette Roses, and were followed by Messrs. Adam & Craigmyle, Aberdeen, who were a very good second. Messrs. Laird & Sinclair took the lead for twenty-four Dahlias, which were beautifully fresh. Messrs. D. & W. Croll, were second. Messrs. Laird & Sinclair were the only exhibitors in the competitive class for herbaceous cut flowers and

were accorded the first prize. They were also an easy first for Cactus Dahlias.

A large number of classes was set apart for amateurs, who exhibited Lilies, Ferns, Pelargoniums, cut flowers, and various other things in fine condition. In the open classes for amateurs and gardeners, the Sweet Peas were very fine, Mr. A. Cameron taking first for twelve of Mr. Eckford's varieties. Other classes for Sweet Peas were well represented.

FRUIT.—The first prize for a collection of twelve kinds was taken by Mr. James Beisant, gardener to Mrs. George Armitstead, Castle Huntly, who had grand Grapes, Peaches, Nectarines, &c. He also led the way for six dishes of hardy fruits, and for four varieties of Grapes, the black sorts being finely finished. Mr. A. Hutton, gardener to G. Keith, Esq., Usan House, Montrose, was a good second, his hunches being large but not so well formed. Mr. Alex. Duncan was first for Black Hamburgh. Mr. John Laing, gardener to Sir J. C. Rattray, Craighall, Blairgowrie, had the best Lady Downes. Mr. John Leslie, Pitcullen Gardens, Perth, staged the best Muscats. There were five competitors. Grapes were abundant as were Apples, Peaches, Apricots, Plums, Pears, Gooseberries, Black, White, and Red Currants.

Vegetables generally were abundant and good. There were six collections of vegetables of twelve kinds each, and the leading award was taken by Mr. A. Cameron, gardener to W. L. Boase, Esq., Binkrock, Dundee, who had grand Onions, Potatos, Carrots, Leeks, Peas, Cauliflower, and Celery. Mr. James Joss, gardener to the Lord Provost, Dundee, was second; and Mr. William Harper, Tullielton, Bankfoot, came in third. Mr. Alexander Paterson, Ruthrieston, Aberdeen, was deservedly first for a collection of twelve varieties of Potatos, which were handsome; Mr. Thomas Johnston and Mr. James Bethel, were second and third respectively. Potatos, Onions, Cabhages, Beet, Peas, Dwarf Beans, Celery, Longpod Beans, Golden Ball Turnips, Leeks, and Parsley were abundant and in wonderful form.

TRADE EXHIBITS.—Messrs. Laird & Sinclair, Dundee, set up an attractive exhibit of Dahlias, Gladioli, hardy herbaceous cut flowers, shower bouquets, and Sweet Peas, all neatly arranged with other subjects.

Messrs. James Cocker & Sons, Aberdeen, had the best display in the show, for which they had the Gold Medal of the society. The exhibit was made up of cut flowers of bardy herbaceous plants and Roses, very fine being the Montbretias, Gladioli, Phloxes, Chrysanthemum Princess May (of hybrid origin), and C. Mrs. Head, the latter receiving an Award of Merit. The Roses Mrs. John Laing and Cbas. Lefebvre were grand.

Mr. Robert Grossart, Clarendon Park Nursery, Perth Road, Dundee, had a collection of bouquets, baskets, shower bouquets, wreaths, &c.

Messrs. Storrie & Storrie, Dundee, staged a collection of herbaceous plants, Begonias, Carnations, Celosias, Pelargoniums, &c.

Messrs. D. & W. Croll had an elaborate arrangement of Roses, Dahlias, Sweet Peas, Iceland Poppies, shower bouquets, and other flowers arranged with cork, moss, wire arches, &c.

Mr. John Forbes, Hawick, Scotland, staged a choice collection of Cactus Dahlias, Carnations, Pentstemons, Phloxes, Hollyhocks, Delphiniums and other flowers all carefully named and displayed for comparison. The Carnations included a large number of varieties chiefly for border culture.

Mr. Wm. Colchester, Ipswich, occupied a tent between two large ones with a fine display of plants grown with their speciality, pure Ichthemic Guano. The plants and samples were arranged on a high conically built stand.

Messrs. Tbyne & Paton, 18, Union Street, Dundee, had a very extensive collection of Lilies, Gladioli, and herbaceous plants. Messrs. Harley & Sons, Reform Street, Dundee, had a collection of wreaths, baskets, bouquets and other devices (Gold Medal).

A large party sat down to luncheon at the Royal Hotel, under the presidency of Bailie McDonald, who was supported by the Hon. Mr. Higgins (United States Consul), Mr. Sanage (United States Consul), Sir John Leng, M.P., Mrs. McGrady, Mrs. Higgins, Captain Dewar, Bailie Doig, Mr. J. S. Gray, Mr. John Robertson Colonel Smith, Mr. Walker Inerville and Mr. W. F. Hill.

After the usual loyal toasts, Bailie McDonald

proposed the "National Artillery Volunteer Forces," which was responded to by Colonel Smith. Mr. Gray then proposed "The Judges," and thought they discharged a disagreeable, diligent, and difficult task. As there were important speakers to his left and they were all so well-known, his audience would pardon him for not saying more. Mr. Malcolm Dunn, in responding, said that he was highly pleased to be amongst them all once more. He was amazed at the fine exhibition both for its quantity and quality. It was better than it was four years ago—the abominable weather excepted. The quantity of herbaceous plants had greatly increased. The fruit was very creditable. Exhibitors had also shown great skill in cultivation. Two Gold Medals were recommended for two exhibits so nearly alike in artistic display and value that it was impossible to differentiate between them.

Sir John Leng proposed the "Lord Provost and Magistrates of Dundee" for their thoroughly intelligent municipal life, etc. They had taken up the work of their predecessors and continued it. The Council have supported horticulture, and the society does well to recognise it. Bailie Doig responded with thanks to the previous speaker in the names of his fellow-men. The more he studied it the more he recognised and understood why they supported the cultivation of flowers, and their sweetening influence on amateur gardeners in the higher walks of life, as well as on allotment holders, who were men of humbler opportunities. He desired to see more of this.

Mr. Higgins, United States Consul, proposed the "Dundee Horticultural Society, with the City Fathers." This was a municipal function part and parcel. This special work made Dundee well known in America, for things were not done in America so successfully as there. He was pleased to associate the "City Fathers" of Dundee with their show. Nature is lavish everywhere. Marks of skill were evidently the heirloom of our children in the humblest walks of life. Our duty to their well-being is plainly to spend half an hour a week on practical subjects, such as the study of plants. To this the chairman responded with thanks.

Mr. Watts proposed the "Successful Competitors," and said that the show was a considerable advance on previous ones. Mr. Mason and Mr. Roberts responded.

NATIONAL DAHLIA.—September 3rd and 4th.

DAHLIAS were admirably shown at the annual grand exhibition of this society which took place, as usual, at the Crystal Palace, on Friday and Saturday, September 3rd and 4th. The competitive exhibits and the numerous miscellaneous ones were staged in the centre of the building, the eastern and western ends being otherwise occupied. All sections of Dahlias were well-represented, and Cactus varieties in particular were in first-class condition. There was a brisk competition in all the important classes.

A very interesting feature was the V.R. Commemoration Class, consisting of a decorative exhibit of Dahlia blooms, set up with Palms, sprays of foliage, etc., and occupying 108 sq. feet of area. The idea was to display the development of the Dahlia during the 60 years of Her Majesty's reign. There were only two entries, the first prize being awarded to Mrs. M. V. Seale, Sevenoaks, who had an imposing, although a somewhat stiff, exhibit. The groundwork was composed of bunches of Cactus, pompon and single Dahlias, set up with Asparagus. At the back were five tall decorated pillars, the central one of which bore a floral crown. Four similar, but shorter, uprights, formed the front rank, the pillars in each row being connected with each other by arches dressed with Smilax. On the white screen, which hung from the edge of the table in the front the letters V.R., and the dates 1837 and 1897, were worked in crimson and scarlet Dahlias.

Messrs. J. Cheal & Sons, Crawley, made a close second. The ground work in this case was much prettier than in the first prize lot, but the central pyramid was not tall enough, and the group thus lacked the imposing effect it would otherwise have had.

In the nurserymen's classes for cut blooms, Messrs. Keynes, Williams & Co., Salisbury, took premier honours for the sixty show and fancy blooms, distinct. William Rawlings, Emin Pacha, Harrison, Weir, J. T. West, Mathew Campbell, Mrs. Langtry, Miss Cannell, Mrs. W. Slack, Mrs. C. Noyes, Mrs.

Saunders, Geo. Barnes, Duke of Fife, Dorothy, Alice Emily, Hon. P. Wyndham, and Goldsmith were some of the strongest blooms. Mr. C. Turner, Slough, was second with a very even lot; Mr. J. Walker, Thame, Oxon, was third; and Mr. S. Mortimer, fourth. There were five entries in this class.

There were also five entries in the class for forty-eight blooms of the same sections. Here Mr. J. Walker led the way, showing Maud Fellowes, Miss Cannell, Earl of Ravensworth, Dorothy (self), Henry Walton, Duke of Fife, John Standish, John Hickling, Mrs. Gladstone, Victor, Perfection, Eclipse, Mrs. Langtry, and Peacock in capital condition. Mr. C. Turner was second, and Mr. S. Mortimer, third.

Three entries only appeared in the competition for thirty-six blooms, distinct. Mr. G. Humphries, Kington Langley, was placed first with an even and well coloured lot, whilst Mr. J. T. West, Tower Hill, Brentwood, was accorded the second award.

Mr. G. Humphries scored another success for twenty-four show and fancy blooms, and was again followed in the second place by Mr. J. T. West. Mr. J. R. Tranter, Henley-on-Thames, had the best twelve.

Cactus varieties made a brave show, and the competition in the premier class for eighteen bunches of six blooms each was especially keen. Messrs. J. Burrell & Co., Howe House Nurseries, Cambridge, staged a grand lot, and headed the list of competitors. They had Regulus, Starfish, Mrs. Kingsley Foster, Fantasy, Gloriosa, Mrs. Francis Fell, and Mrs. A. Beck in excellent order. The second prize fell to the lot of Messrs. Keynes, Williams & Co., Salisbury; and the third to Messrs. J. Cheal & Sons. There were six exhibits staged.

In the smaller class for 12 bunches of Cactus varieties in similarly sized blooms Mr. J. T. West was first, and Mr. G. W. Humphries second.

For twelve varieties of decorative Dahlias in bunches of six blooms each Mrs. M. V. Seale was first. Kyneutb, Countess of Radnor, and J. H. Roach, were three of the best sorts shown. Messrs. J. Cheal & Sons were second.

Twenty four varieties of pompons in bunches of ten blooms each were best shown by Messrs Keynes, Williams & Co., who had a grand lot. Messrs. J. Cheal & Sons were second. In the smaller class for twelve bunches composed of the same number of blooms Messrs. J. Burrell & Co., were first.

Mr. J. Walker exhibited the premier twelve bunches of singles, while the first award in the larger class for twenty four bunches fell to the lot of Messrs. J. Cheal & Sons.

In the classes for six blooms each of varieties of show and fancy Dahlias of special colour, the first prizes went to the following exhibitors for the varieties shown respectively by them:—Mrs. M. V. Seale, for dark, with Prince of Denmark; Mr. J. Walker for a light, not yellow, with Mr. Gladstone; Mr. S. Mortimer, for yellow, with John Hickling; and also for red with Mrs. J. Downie (self); Mr. Walker, for white, with John Walker; Mr. G. W. Humphries for a tipped variety, with Mrs. Saunders; and Mrs. M. V. Seale, for a striped variety, with Mrs. John Downie, and Mr. G. Walker, for an edged Dahlia, with Miss Cannell.

In the amateur classes the following exhibitors received first awards in their respective classes:—T. Hobbs, Esq., Easton, Bristol, for twenty-four show and fancy blooms; S. Cooper, Esq., Chippenham, for twelve show blooms; C. Keep, Esq., Streatham, for six show blooms; S. Cooper, Esq., for twelve fancies; H. H. Raphael, Esq., Rosecourt, Havering, for six fancies; W. Mist, Esq., Ightham, for twelve bunches of six blooms each of Cactus varieties; Edward Mawley, Esq., Rosehank, Berkampstead, for six bunches of similar material, three blooms to each bunch; E. C. Wilkins, Esq., Swanley Junction, for nine bunches of Cactus blooms, three going to a bunch; W. C. Pagram, Esq., Weybridge, for six bunches, ten blooms in each, of pompons; E. Jefferies, Esq., Langley Burrell, for six bunches, six blooms in each, of pompons; T. W. Girdlestone, Esq., Sunningdale, Berks, for six bunches of singles; E. Mawley, Esq., for six smaller bunches of singles; Miss L. Hudson, Gunnersbury, Acton, W., for the best epergne; and R. Edwards, Esq., Beeby Lees, Sevenoaks, for the best vase of Dahlias.

MISCELLANEOUS.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., had a nice group of pompon and Cactus

Dahlias. The blooms were arranged in flat pyramidal bunches with their own foliage, the stiffness of the group being relieved by Palms, Araucarias, and other elegant foliage plants. Of the Cactus varieties Fusilier, Blanche Keith, Lady Penzance, Robert Cannell, and Mrs. Montefiore were very noticeable, and the credit of the pompons was well-sustained by such forms as, Janet, Lady Blanche, Rosea, Eva, Flora, Lilian, Darkness, Ariel, and Admiration.

Mr. John Charlton, Summervale and High Brooms Nurseries, Tunbridge Wells, showed a nice group of hardy flowers arranged in imposing bunches, and including *Crinum Powelli*, *Aster acris*, and *Solidago altissima*.

The Dahlias submitted by Messrs. H. Cannell & Son, Swanley, were unsurpassed by anything in the show. The exhibit consisted chiefly of Cactus varieties, all of them in superb condition, such varieties as Mrs. Turner, Bertha Mawley, Matchless, Cycle, and Blanche Keith, being especially fine. The bunches were made up in the pyramidal form, with sprays of *Asparagus*. Pieces of *Gypsophila paniculata* inserted here and there were very elegant. A row of bunches of blooms of pompons formed the front rank.

China Asters in considerable variety were sent by Messrs. A. W. Young & Co., Stevenage, Herts. Cut blooms of *Liliums* and *Gladioli* were also shown by this firm.

A brilliant although somewhat garish bank of Dahlias was sent by Messrs. Carter Page & Co., 52 & 53, London Wall. Cactus sorts were again prominent, and were arranged in vertical rows of each variety. Many leading sorts were on view, and all the flowers were fresh and good.

An excellent display of cut Roses was contributed by Messrs. Wm. Paul & Son, Waltham Cross. The blooms were in most cases cut with long stalks and were artistically arranged in large imposing bunches.

A group of tuberous *Begonias*, *Caladiums*, and *Gloxinias*, with Palms and Ferns, sent by Messrs. John Laing & Sons, Forest Hill, S.E., filled the right hand corner beneath the gallery and the organ.

Messrs. John Peed & Sons, Roupell Park Nurseries, S.E., had a very pretty group of cut hardy flowers including a considerable quantity of Dahlias.

ROYAL HORTICULTURAL.—September 7th.

Despite the counter attractions of Dahlias and *Chrysanthemums* at the Royal Aquarium, there was a good deal of material at the Drill Hall on this occasion. There were a few *Orchids* and *Nepenthes*, Dahlias, and cut hardy flowers were prominent features.

Messrs. James Veitch & Sons, Ltd., Chelsea, had a bright and showy group of *Orchids*, for which a Silver Flora Medal was voted. It included well flowered pieces of *Oncidium varicosum*, and *O. concolor*. The pretty little *O. pumilum* was very noticeable. There was also a grand piece of *O. incurvum* carrying six large spikes of flower. A painful of *Cypripedium Charlesworthii*, and a very finely flowered plant of *Odontoglossum grande* were very bright. *Laelio-Cattleya Nysa* and *L.-C. Clonia* were also shown.

Mr. T. Stafford, gardener to F. Hardy, Esq., Tyntesfield, Ashton-on-Mersey, Cheshire, showed *Laelia elegans Turneri*, a splendid piece of *Cattleya hardyana*, *C. minucia*, and *Cypripedium Alfred Hollington*. A Silver Flora Medal was awarded. Messrs. F. Sander & Co., St. Albans, had *Miltonia moreliana*, *Maxillaria striata*, and several hybrid *Cypripediums*. Mr. Chapman, gardener to R. I. Measures, Esq., Cambridge Lodge, Camberwell, S.E., sent flowering specimens of *Rhynchostylis coelestis*, Cambridge Lodge var., and *Cattleya schofieldiana superba*.

In the centre of the hall, upon the floor was a splendid display of *Crotons*. These were sent by Mr. Farr, gardener to A. Pears, Esq., Springrove House, Isleworth. The group took the form of three mounds with an undulating outline, the centre one being the most massive. All the plants were well grown and beautifully coloured, many of the leading varieties being shown. (Silver Flora Medal.)

Ten large and healthy plants of *Eucharis amazonica* were shown by Mr. F. Knight Eames, Fulwell Nursery, Twickenham. The plants were well furnished with flower spikes, and the individual blooms were of great size and substance. (Silver Flora Medal.)

Messrs. J. Cheal & Sons, Crawley, Sussex, sent a representative collection of cut Dahlias. The show,

fancy, Cactus, pompon, and single flowered sections were represented by first-class samples. The Cactus, single, and pompon flowers were in showy pyramidal bunches. (Silver Flora Medal.)

Messrs. Wm. Cutbush & Son, Highgate, N., showed a fine group of *Nerine Fothergillia major*. The flower umbels were conspicuously large.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., was again to the fore for cut hardy flowers. These were arranged in large and handsome bunches, and formed an extensive collection. Perennial Asters and *Liliums* were shown in variety. *Helianthus Miss Mellish* was very bright, and the same may be said of *Kniphofia (Tritoma) grandiflora* (Bronze Banksian Medal).

Mr. Eric F. Such, Royal Berkshire Nursery, Maidenhead, sent four stands of capital blooms of Cactus Dahlias.

Messrs. Dobbie & Co., Orpington, Kent, showed bunches of striped French Marigolds. These are showy flowers, and the Messrs. Dobbie have a good strain of them.

Mr. Robert Owen, Castle Hill, Maidenhead, showed a small collection of cut spikes of *Cannas*.

The cut hardy flowers contributed by Messrs. Barr & Son, King Street, Covent Garden, were first-class. *Pentstemons*, *Phloxes* and *Coreopses* were in variety, and bunches of *Solidago serotina* and *Eryngium caeruleum* were specially noteworthy. (Bronze Banksian Medal.)

Mr. J. Walker, Thame, Oxon, sent some grand show and Cactus Dahlias for which he received a Bronze Banksian Medal. Messrs. J. Veitch & Sons had samples of ornamental shrubs that included *Acer palmatum sanguineum*, *Hibiscus totus albus* and *Robinia hispida*. Mr. W. J. Godfrey, Exmouth, sent blooms of the early *Chrysanthemums* *Barbara Forbes* and *Queen of the Earlies*. Mr. Bain, gardener to Sir Trevor Lawrence, Burford Lodge, Dorking, showed a group of cut hardy flowers of which the bulk was *Pentstemons* and *Lobelia Carmine Gem*.

A Silver Gilt Flora Medal was voted to R. I. Measures, Esq., for a collection of *Pitcher* plants. These included some vigorous specimens of *Cephalotus follicularis*, *Sarracenia Courtii*, *S. Chelsonii*, *S. Atkinsoni*, and other forms of *Sarracenia*.

Messrs. Jas. Veitch & Sons made an imposing exhibit of *Nepenthes*, of which they make a speciality. The group was of great height, being backed up by some tall specimens of *Cocos plumosa*. The *Nepenthes* in their several baskets were scattered about, being stood on stands of varying height. *N. mixta*, *N. Burkei excellens*, *N. Morganiæ*, *N. hookeriana*, *N. mastersiana* red var. and *N. dicksoniana* were some of the most striking forms on view. (Silver Gilt Flora Medal.)

At a meeting of the fruit and vegetable committee a Silver Gilt Knightian Medal was awarded to Mr. Owen Thomas, gardener to Her Majesty the Queen, Frogmore, for upwards of three dozen dishes of Peaches and Nectarines in a number of varieties. The fruit throughout was well finished and of medium to large size.

Mr. W. Kemp, The Gunyah, Barnes, received a Silver Banksian Medal for twenty-four well finished Melons.

A Cultural Commendation went to Mr. W. Howe, gardener to Henry Tate, Esq., Streatham Common, for two good dishes of Peach Sterling Castle grown out of doors.

Mr. G. Wythes, gardener to Earl Percy, Syon House, Brentford, staged an extensive collection of fifty dishes of hardy fruit that comprised Pears, Apples, Peaches, Nectarines, Plums, and Damsons. The fruit was set up on autumn foliage of different kinds upon a white cloth (Silver Knightian Medal).

A Bronze Knightian Medal went to Mr. J. Miller, gardener to Lord Foley, Ruxley Lodge, Esher, for fifteen large and handsome fruits of Peach Princess of Wales.

There was a keen competition for the Veitch prizes for the best flavoured Apple and Pear. Nine dishes of Apples were shown. Mr. J. Mayne, Bicton Gardens, Devon, was placed first with Kerry Pippin. Second came Mr. Geo. Wythes with Gravenstein. Seven dishes of Pears competed. Mr. C. Herrin, Dropmore, was first with Williams' Bon Chrétien, and Mr. Geo. Wythes second with the same variety.

Mr. John Russell, Richmond, showed well-fruited plants of *Tomato Campbell's Trial*. Mr. W. Taylor,

gardener to C. Bayer, Esq., Forest Hill, sent three good bunches of Grape Madresfield Court.

BY TELEGRAPH.

ROYAL CALEDONIAN.—September 8th.

The September show of the Royal Caledonian Horticultural Society opened under very favourable auspices as to weather, and everything else at time of telegraphing promises splendidly. The show is a magnificent one, and larger than on any previous occasion, there being 2,300 entries, greatly exceeding that of last year, when they scarcely totalled 2,000. The Victoria Diamond Jubilee Prizes offered by the society has been the means of exciting a great amount of enthusiasm and rivalry amongst the competitors. There are six tables for cut flowers open to all. There were four groups of plants of various shapes, but not exceeding 300 sq. ft., for the Diamond Jubilee Prizes. There were four classes of sixteen dishes of fruit and vegetables, which are represented by numerous exhibits all round the sides of the market.

Mr. J. Hunter, gardener to the Earl of Durham, Lambton Castle, secured the premier honours in the Victoria Diamond Jubilee Class for twelve dishes of fruit. He had magnificent bunches of Gros Maroc, Chasselas, Neapolitan, and Barbarossa Grapes, hybrid Melons, Golden Eagle, and Pavi de Pompone, Peaches, River's Victoria Nectarine, Gascoigne's Scarlet Apple, Beurre de l'Assomption Pear, Magnum Bonum Plum, Brown Turkey Figs, and Moor Park Apricot. Mr. F. Harris, gardener to Lady H. Somerset, was a good second, his Gros Colman Grapes and Barrington and Royal George Peaches being grand. Mr. J. McHattie, gardener to the Duke of Wellington, Strathfieldsaye, Hants, took the third position with well-shaped, large bunches of Grapes.

Mr. J. G. Wood, gardener to J. Buchanan, Esq., Oswald Road, Edinburgh, took the lead for a table of plants, consisting of Palms, *Crotons*, *Eulalia japonica variegata*, *Lilium speciosum*, *L. s. Kraetzeri*, and a wealth of drooping flowering and foliage plants along the front. The whole is most tastefully arranged and wonderfully brightened up with long arching sprays of *Oncidium incurvum*. Mr. J. McIntyre, gardener to Mrs. Gurney Pease, Darlington, is placed second with a group of Palms and *Crotons*, but is lacking in flowering plants. Mr. Thos. Lunt, gardener to A. Stirling, Esq., Dunblane, takes the leading award for six foliage plants, staging huge and grandly grown specimens of *Anthurium crystallinum*, *Campylobotrys refulgens*, *Cissus discolor*, *Asparagus plumosus nanus*, a *Croton*, and a dark-leaved *Dracaena*. Mr. James McCartney, gardener to Messrs. Croall, Southfield, Liberton, Edinburgh, came second with fine specimens of *Calathea zebrina*, a *Croton*, and a *Dasy-lirion*. Mr. Thomas Lunt also takes the lead for two *Crotons*, showing grand specimens of *C. Chelsoni*, and *C. Aigburthense*. The *Fuchsias* were numerous, grandly grown, and profusely flowered. Mr. A. Thomson, gardener to W. Urquhart, Esq., Dalkeith, takes the leading award for three *Fuchsias*, showing columnar specimens of great neatness and beauty. Mr. W. Aitken, Balerno, is second. Mr. John Cumming, gardener to J. Wilson, Esq., Gren Park, Liberton, leads off for one *Fuchsia* with a large conical specimen. He is followed by Mr. Aitken. Mr. Thos. Gibb, gardener to Mrs. Edmonson, Kilgraston Road, secures the first place for two *Fuchsias*, and is followed by Mr. W. Aitken, whose plants were unequal in size, but good. Mr. R. J. Shillington, gardener to C. W. Cowan, Esq., leads off in the class for six tuberous *Begonias*, showing profusely flowered plants of medium height. Mr. J. Pearson, gardener to Lady Lucy Dundas, Beechwood, is a good second, though his varieties are not quite so good. Mr. D. Henderleith, gardener to J. Low, Esq., Spylaw Road, takes the lead for three tuberous *Begonias* which are particularly fine, beating Mr. John Argent, gardener to John Harrison, Esq., Rockville, Napier Road, Merchiston. Mr. P. Dempster, Blackwood, is first for three double tuberous *Begonias*, but the flowers are small. Mr. James, gardener to P. Neill Fraser Esq., Rockville, Murrayfield, secures the first prize for four large and well grown *Adiantums*, beating Mr. G. Wood, who is second with much smaller plants. He also heads the list for four British Ferns, showing a grand plant of the Welsh *Polypody*, *Aspidium angulare*, etc. Mr. William Muir, Birchbank, Car-

luke, N.B., is second with smaller but choice varieties. Mr. G. Chaplin, gardener to Mr. T. Nelson, St. Leonards, is first for six Lycopods.

Mr. David Wilson, gardener to H. Steven, Esq., Westmount, Glasgow, secures the leading award for three Cypripediums, showing fine pieces of *C. Morganiae*, etc. He is followed by Mr. W. Sharp, gardener to C. L. Wood, Esq., Forgandenny, who takes first prize for four Orchids, showing *Cattleya gigas* and *Odontoglossums* well. Messrs. D. & W. Croll, Dundee, lead off in the Nurserymen's class for thirty-six Roses, showing handsome blooms of Madame J. Bonnaire, Ulrich Brunner, Maman Cochet, Her Majesty, Gustave Piganeau, etc. Messrs. Jas. Cocker & Sons, Aberdeen, take the second prize with beautifully fresh stands of Roses. Messrs. D. & W. Croll again score for eighteen Roses, quite equal to their previous lot. Messrs. James Cocker are again second. Messrs. Croll are first, and Messrs. Thos. Smith & Sons, Stranraer, second for twelve Roses. Messrs. Croll lead, and Messrs. Adam & Craigmile follow in the class for twenty-four Tea Roses, amongst which are many grand blooms for the season; Messrs. J. Cocker & Sons have the best twelve Alfred Colomb Roses. Messrs. D. & W. Croll are first for twelve scarlet and twelve La France Roses. The twelve Roses of Madame Joseph Bonnaire, shown by Messrs. D. & W. Croll, are magnificent, taking first prize. Mr. F. Harris comes to the front in the class for eight dishes of fruit, showing Grapes, Peaches, Pears, and Figs well. He is followed by Mr. D. Kidd, gardener to Lord Elphinstone, Musselburgh, and Mr. Richard Cairns, gardener to James Martin White, Esq., Balruddery, Dundee, respectively. Mr. J. Hunter again scores in the class for twelve dishes of fruit grown in an orchard house, showing grand samples. Mr. James Gibson, gardener to E. H. Watts, Esq., Devonhurst, Chiswick, is second with grand samples of Apples, Figs, Pears, Peaches, etc.

Mr. T. Lunt carries off the leading award for six bunches of Grapes, Gros Maroc, Black Hamburgh, and Muscat of Alexandria being shapely bunches and well finished. Mr. Richard Cairns is a good second, but his bunches are less mature. Mr. J. Leslie, gardener to A. Coates, Esq., Pitcullen House, Perth, makes a very good third. There is grand competition in the class for four bunches of Grapes, Mr. D. Kidd taking first. Messrs. D. & W. Buchanan, Forth Vineyard, Kippen, are second. Mr. D. Kidd leads in the class for two bunches of Muscat of Alexandria. Mr. James Gibson takes first prizes for a collection of Apples, and for eleven dishes in as many classes.

In the special Victoria Diamond Jubilee classes, Mr. J. Hunter carries off the premier honours for the collection of fruit most tastefully and artistically arranged on a table, with Orchids, Carnations, *Bougainvilleas*, *Panocratiums*, and other flowers. Mr. R. Cairns makes a very good second, though distinctly behind Mr. Hunter. Mr. Alex. Kirk, gardener to J. Thomson Paton, Esq., Norwood, Alloa, takes the third place with grand samples of Grapes, Pears, Peaches, etc.

For a group of plants, not exceeding 300 sq. ft. in area, the leading prize is taken by Mr. J. McIntyre, gardener to Mrs. Gurney Pease, Darlington, who has a novel and artistically displayed group of Palms, Crotons, Lilies, Ferns, etc. Cork pedestals and arches are largely used to support the plants. Mr. Malcolm McIntyre, gardener to Sir James Tennant, The Glen, Innerleithen, is a good second, with a grand arrangement of Lilies, Crotons, Palms, Ferns, etc. It is a wavy eight cornered group. Mr. John Downie, 144, Princes Street, Edinburgh, takes the third place with an admirable arrangement of *Dracenas*, Lilies, Crotons, and other flowering plants. A tall, four-sided arch occupies the centre.

Messrs. Harkness & Sons, Bedale, Yorks, take the lead in the class for a collection of cut flowers of hardy herbaceous plants and annuals. They have a gorgeous display of *Gladioli*, *Montbretias*, etc. Messrs. James Cocker & Sons take the second place with an even more complicated arrangement of the best hardy flowers in season. Mr. John Forbes, Buccleuch Nurseries, Hawick, makes a very good third, the *Hollyhocks* and *Phloxes* being very gorgeous, as are the three winning stands.

Mr. James Gibson is an easy first for the table of vegetables, his Leeks, Cauliflowers, and Onions being unexcelled, and very hard to beat. Mr. Robert T. Rae, gardener to Major Scott Kerr, Sunlaws, Roxburgh, is second with an artistic display; Mr. W.

Harper, gardener to J. R. S. Richardson, Esq., Perth, is third.

Money and Victoria Diamond Jubilee Silver Gilt, silver and bronze medals, as well as Veitch memorial medals are awarded respectively to the above special classes.

TRADE EXHIBITS.

Messrs. Dobbie and Co., Rothsay have a collection of two hundred varieties of Dahlias, including Cactus, decorative, pompon, and single varieties in a charmingly fresh condition. Amongst the Cactus varieties are J. C. Frewer, Earl Pembroke, Leonora, John Welch, Lady Penzance, Mrs. A. Beck, Starfish, Miss Webster, Fantasy, Iona, Harry Stredwick, Cycle, Aurora, and Valkyrie, most of which are new. Herbaceous plants, Palms, and small Ferns were distributed through the collection to lighten it. Single Cactus varieties, including the newest, were staged along the front of the group, which is undulated with two banks to break the straight line.

Messrs. Kerr Bros., Dumfries, exhibit a collection of new varieties of Dahlias and herbaceous plants. The Dahlias consisted of show, fancy, and Cactus varieties. Mr. James Rowatt, Glassford, by Strathaven, staged *Pentstemons*, *Phloxes*, and China Asters in variety. Mr. John Phillips, Granton Road Nurseries, Edinburgh, had a table of *Araucaria excelsa* in plants of various sizes, interspersed and brightened with Lilies and Carnations, Ferns, *Selaginellas*, and other plants. Messrs. Laing & Mather, Kelso-on-Tweed, had a table of the new hybrid continuous flowering *Chrysanthemum Princess May*. They have also a fine lot of their popular Carnations, including the new crushed Strawberry self *Viscountess Melville*. This *Chrysanthemum* is quite hardy and has been flowering outside and inside for eighteen months. Mr. A. Findlay, Markinch, Fifeshire, showed a table of new hybrid Potatos, including *Klondyke*, the earliest variety in cultivation. He can dig it eight weeks from its planting. It produces 6½ lbs. to the root, and the quality is good. In an early district two crops can be obtained in a season by early and late planting. He has thirty new varieties.

Messrs. Scarlett Bros., Musselburgh, have a fine table of vegetables and herbs, including Vegetable Marrows, Cabbages, Cauliflowers, Scarlet Runners, etc. Mr. Michael Cuthbertson, Rothesay, N.B., has a table of Alpine plants in pots, including about seventy species and varieties of *Saxifragas*; also a collection of *Sedums* and *Sempervivums*. He also has cut flowers of herbaceous plants, conspicuous amongst which is the very complete collection of *Monthretias*, new *Phloxes*, Lemoine's hardy *Gladioli*, and the new *Rudbeckia Golden Glow*.

Mr. Hugh Hanan, 9, Bank Street, Edinburgh, has a fine collection of Sweet Peas in seventy varieties. On his table are long flowering stems of *Tropaeolum speciosum* and *Smilax*. Mr. Alexander Lister, Florist, Rothesay, N.B., has a collection of Sweet Peas, Carnations, *Pentstemons*, Dahlias, herbaceous plants and Pansies elevated to a high ridge along the centre of the table, making a very pleasing and effective exhibit. A new Dahlia named Jeannie Alister is a single Cactus variety of a new shade, and a new Cactus sort named Lister, purple with pointed petals.

On further looking into the exhibit of the Ichthemic Guano Co., after it was finished, we were better pleased with it than in the early morning. The company is specially indebted to Messrs. M. Todd & Co. for the cultivation of the plants by means of the noted fertiliser. *Hydrangea paniculata*, *Gladioli*, *Lilium Harrisii* and other flowering plants lightened up the Palms, Ferns, and *Araucaria excelsa*, all of which are arranged in tiers one above the other. We believe it is the finest group they have ever set up here. Messrs. Alex. Shanks & Son, Arbroath and London, have a nice collection of lawn mowers, including the Caledonia with fluted rollers and patent axle springs; also the Britannia, the Britisher, and the Pony machine with delivery apparatus.

Messrs. R. B. Laird & Sons, Frederick Street, Edinburgh, have a large exhibit of various subjects arranged for effect, the one to help the other. Cut flowers of herbaceous plants are in great variety, forming an important feature of the group. They are still plentiful and good in the open under the influence of a cool and moist northern atmosphere. Dahlias are extensively represented in their various sections of show, fancy, Cactus, decorative and

pompon. Messrs. Laird have long been noted for their collection of Dahlias. The group is backed up with choice Coniferae in great variety, and the variegated *Hedera madeiriensis*.

Messrs. Ford & Co., glass manufacturers to Her Majesty The Queen, 39, Princes Street, Edinburgh, have an exhibit of the latest table decorations, rustic glass, tastefully arranged *en suite*, in tubes, flower stands, and bowl centres. The vases used for the cut flower exhibits at this and other Edinburgh shows, the shape and colour being highly suitable for the purpose, give a pleasing effect to the flowers and foliage they contain.

Messrs. Thos. Methven & Sons, 15, Princes Street, Edinburgh, have a table of *Liliums*, double tuberous *Begonias*, *Crotons*, *Caladiums*, *Crozy's Cannas* in variety, *Panocratiums*, Palms and Ferns, the latter including *Pteris* and *Adiantum*, arranged as a groundwork to the group, which is most artistically arranged. The whole is interspersed and brightened with Lilies in fresh condition, including such as *Lilium auratum*, *L. a. rubro vittatum*, *L. a. platyphyllum* and *L. lancifolium*.

Messrs. Dicksons & Co., 1, Waterloo Place, Edinburgh, have a large and bold table at the east end of the Waverley Market. Along the centre of the table very good young Vines as well as fruiting Vines and Peaches in pots, are arranged in place of Palms. The fruiting Vines consist of Lady Hutt and Appley Towers. *Violas*, new *Picotees* and Carnations, the latter including Dowager Duchess of Athole (a white perpetual flowering variety), Duchess of Fife (shell pink), and others are shown. Hardy shrubs are represented by *Colutea sanguinea*, *Prunus Pissardi*, *Hypericum moserianum tricolor*, *Spiraea Bumalda*, *Abies pungens glauca Kosteri*, and the Japanese Wineberry.

Mr. Henry Eckford, Wem, Shropshire, stages a collection of Sweet Peas in many of the more interesting and newer varieties, which always create a considerable amount of interest.

Messrs. Dickson & Sons, 32, Hanover St., Edinburgh have a group of the more interesting and useful conifers arranged round the sides of the band stand. Some of the more showy and popular were the Golden Cypress, Golden Juniper, Golden Thuya, and *Abies parryama glauca*, Golden *Retinospora*, tuberous *Begonias* &c.

Messrs. James Grieve & Sons, Redbraes Nursery, Edinburgh, have a table of choice Palms, *Aspidistras*, *Dracaenas*, *Panicum variegatum*, bronze and ticolor *Pelargoniums*, and New Zealand shrubby *Veronicas* in great variety for pot work. All these are brightened with such flowering plants as tuberous *Begonias*, single and double, also choice Sweet Peas, Carnations, *Violas* and choice herbaceous flowers. They also have a beautiful anchor of flowers.

The Ichthemic Guano Company, Ipswich, seemingly undaunted at the clashing of date between the National Chrysanthemum Society's show in London, and the date of the Royal Caledonian, have graced the centre of the hall with their now famous Octagon group. A departure has been made in a wealth of cut blooms of *Hydrangeas* and *Gladioli*. Delicate and fragrant *Stephanotis* and graceful sprays of *Odontoglossum* add a delicate finish to a masterly piece of grouping, and we congratulate the company on a thoroughly representative exhibit.

ROWAN JELLY.

THOSE who like preserves having a slight acidity would do well to try a jelly made from the berries of the Mountain Ash or Rowan. Any expert matron, or even her daughters, can make it with a minimum of care and painstaking. First get the Rowan berries, as the cook said about the hare. The berries should be perfectly ripe. Pick them off the stalks and put them into a clean, white enamelled saucepan, just covering them with water. Take the pan off the fire just before the water boils, and mash the berries with a wooden spoon or pestle. When thoroughly broken, strain the mass through a jelly bag. To every pint of juice add one pound of the best loaf sugar, and boil slowly until the juice settles in the form of a firm jelly after cooling. This can be tested by taking a little of the juice now and again and cooling it on a plate. If it becomes firm enough after a few minutes it may be put in glass or stoneware jars and left to cool, after which the jelly should be firmly tied down and stored away until required for use.

QUESTIONS AND ANSWERS

Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Hardy Perennials.—*Begonia*: To name a dozen hardy perennials for market work is rather a difficult task, as there are so many fine subjects from which to pick and choose. You do not state any particular time of the year when you require them to be in flower. The following are well worthy of cultivation, and you may add very many more subjects to the list of which the same may be said, viz.: Delphiniums and double Pyrethrums of sorts, Lupinus polyphyllus, Gypsophila paniculata, Spiraea Aruncus, Heuchera sanguinea, Achillea Ptarmica flore pleno, Galega officinalis albiflora compacta, Doronicum austriacum, Eryngium alpinum, Lychnis Viscaria splendens plena, Helenium autumnale, Aster acris, A. Amellus bessarabicus, A. diffusus horizontalis, and Coreopsis grandiflora. There are many more perennial Asters (Michaelmas Daisies) you might well invest in, and you will observe that we have made no mention of Irises, of which there is a lot to pick and choose from, or of such bulbous subjects as Lilliums, which would be most valuable for supplying cut flowers.

Tuberous Begonias.—*Begonia*: If you have a good strain of these popular plants you should find a ready sale for them in Scotland. Most, if not all, of the best firms there buy in each year to a considerable extent. Amongst Edinburgh firms you may apply to Mr. John Downie, 144, Princes Street, and Messrs. R. B. Laird & Sons, 17, South Frederick Street. In Glasgow you may apply to Messrs. Austin and McAslan, 89, Mitchell Street, and Messrs. J. R. Thyne, 83, St. Vincent Street. You are mistaken, however, in thinking that the best forms of the tuberous Begonia have not yet got into Scotland.

Steel blue Eryngium.—*A. J.*: The term steel blue would apply to several species. The specimen you sent is Eryngium planum, and should be obtained from growers of hardy herbaceous plants under that name, though we are not certain you would get it. It is often grown under the erroneous name of E. amethystinum, and you would probably obtain it by asking for that. The name is wrong all the same. E. planum has oval, flat, and crenate, but otherwise undivided, leaves. The lower leaves of E. amethystinum are deeply three-lobed, and the upper ones are more or less cut. The heads of the latter are also larger than those of the former. You might possibly be able to get seeds from some of the seed merchants, otherwise you could ask for plants.

Origin of the Sweet Pea.—*T. Anderson*: There can be little doubt that all the garden forms of the Sweet Pea both ancient and modern have originated from Lathyrus odoratus, which grew, and probably still grows, wild in Sicily. Whoever first originated the idea that a species or variety was native of Ceylon, must have made a mistake. The variety coming from that island must have been taken there, or possibly the original from which the variety arose in gardens and got perpetuated on account of its distinctness.

Preserving old plants of Lobelia.—*A. S.*: Some of the plants should have all the flowering stems cut pretty close back at once, so as to induce them to develop flowerless shoots before winter comes on. Select those that are brightest in colour, and dwarfest, for your next year's stock. They should be potted up in 60-size pots, in light sandy soil as soon as they commence to grow, so that the pots may be well filled with roots before winter.

Names of Plants.—*Filices*: 1, Selaginella uncinata; 2, Nephrodium decompositum; 3, Aspidium Lonchitis (the Holly Fern).—*A. O.*: 1, Aster acris; 2, Celsia Arcturus.—*E. Morris*: Xylophylla frutescens.—*S. Fordham*: 1, Anemone japonica alba; 2, Helianthus Miss Mellish (both will do well in a London garden).

R. B. LAIRD & SONS, Edinburgh—Select Bulbs.

FRANCIS G. E. BONNETT, Heathfield, Sussex—Bulbous Roots.

ISAAC WITHERINGTON, Ribbleton, Preston—Catalogue of Bulbous Flowering Roots, Roses, Fruit Trees, &c.

FIXTURES FOR 1897.

SEPTEMBER.

- 21.—R.H.S. at Drill Hall.
- 28.—Radcliffe-on-Trent Potato Show.
- 30, 1, and 2, Oct.—R.H.S. Fruit Show at Crystal Palace.

OCTOBER.

- 12.—R.H.S. Committees and Lecture.
- 12, 13, 14.—N.C.S. at Royal Aquarium.
- 26.—R.H.S. Committees and Lecture.

NOVEMBER.

- 2, 3.—Watford Chrysanthemum Show.
- 2, 3.—Coventry Show.
- 2, 3.—Brighton Chrysanthemum Show.
- 2, 3.—Borough of Croydon Chrysanthemum Show.
- 2, 3.—Southampton Chrysanthemum Show.
- 2, 3.—West of England Chrysanthemum Show at Plymouth.
- 3.—Ealing Show.
- 3, 4.—R.H.S. of Ireland Chrysanthemum Show.
- 3, 4.—Ascot, Sunninghill, Sunningdale and District Chrysanthemum Show.
- 3, 4.—Isle of Thanet Chrysanthemum Show.
- 3, 4, 5, 6.—North Peckham Chrysanthemum Show.
- 3.—Teignmouth Chrysanthemum Show.
- 4.—Colchester Show.
- 4, 5.—Highgate Chrysanthemum Show.
- 4, 5.—Devon and Exeter Fruit and Chrysanthemum Show.
- 9, 10, 11.—N.C.S. at Royal Aquarium
- 9, 10, 11.—Birmingham Chrysanthemum and Fruit Show.
- 9, 10.—Kingston and Surbiton Chrysanthemum Show.
- 9, 10.—Leeds Paxton Chrysanthemum Show.
- 9.—R.H.S. Committees and Lecture.
- 9.—Croydon Chrysanthemum Show.
- 10.—Bodmin Chrysanthemum Show.
- 10, 11.—Liverpool Chrysanthemum Show.
- 10, 11.—Birmingham Chrysanthemum Show.
- 10.—Brixton Chrysanthemum Show.
- 11.—Reigate Show.
- 11.—Spalding Chrysanthemum Show.
- 11, 12.—Putney Show.
- 12, 13.—Bradford Chrysanthemum Show.
- 12, 13.—Hanley Chrysanthemum Show.
- 12, 13.—Sheffield Chrysanthemum Show.
- 12, 13.—Nottingham Show.
- 16, 17.—Ipswich Chrysanthemum Show.
- 16, 17.—Manchester Chrysanthemum Show.
- 16, 17.—Belfast Chrysanthemum Show.
- 16, 17.—Chester Paxton Chrysanthemum Show
- 16, 17.—Folkestone Show.
- 17, 18.—Hull Chrysanthemum Show.
- 17, 18, 19.—York Chrysanthemum Show.
- 17, 18.—South Shields and Northern Counties Chrysanthemum Show.
- 17, 18.—Bristol Chrysanthemum Show.
- 17.—Rugby Chrysanthemum Society.
- 18, 19, 20.—Edinburgh Chrysanthemum Show.
- 19, 20.—Stockport Chrysanthemum Show.
- 23.—R.H.S. Committees and Lecture.
- 25, 26, 27.—Dundee Chrysanthemum Carnival.

"AMERICAN GARDENING."

An illustrated Journal of Horticulture, published in the interests of the amateur in the Garden, the Conservatory, the House, the Fruit and Vegetable Grower, Trees, Shrubs, and Flowers.

The Leading American Horticultural Authority.

Issued weekly, and mailed, postage paid, to English subscribers for a 6s. money order.

Address, "AMERICAN GARDENING," 170, Fulton Street New York, U.S.A.

READERS OF ADVERTISEMENTS

in these pages will greatly oblige and assist us-by always mentioning

THE GARDENING WORLD

RUBBER STAMPS

WITH A MOVEABLE LINE.

SPECIALLY DESIGNED OUTFIT

FOR

Seedsman and Florists.

COMPLETE FOR 7/6.

The Outfit consists of Rubber Die (any wording) mounted on Special Air Cushion Rubber (1/4 inch thick) so as to neutralise any inequalities of surface in Seed Bags, &c.; a Font of Solid Rubber Type, containing 74 Letters, Points, and Ornaments. These are simply pressed into designs, and can be altered at will. In addition a Type Holder is enclosed for marking single lines of moveable type only. For 1/6 extra we include 21 figures, so that it can also be used as a dating stamp.

THE PUBLISHER,

F. A. COBBOLD,

1, Clement's Inn, Strand, London, W.C.

ORCHIDS of the highest quality, every plant guaranteed true to name, from 2/6 each. Please send for free list.—P. McARTHUR, The London Nurseries, 4, Malda Vale, London W.

RETARDED

Lily of the Valley Crowns NOW FROM ICE.

A LADY writes:—"These 'retarded' Crowns are the most delightful, inexpensive floral invention of the age, and Mr. Jannoch deserves the universal gratitude of all lovers of flowers.

WRITE FOR LIST.

T. JANNOCH,

Lily of the Valley Grower to H.R.H. the Prince of Wales.

DERSINGHAM, KING'S LYNN, NORFOLK.

ORCHIDS.

Clean Healthy Plants at Low Prices.

Always worth a visit of inspection. Kindly send for Catalogue

JAMES CYPHER,

Exotic Nurseries, CHELTENHAM.

BEEES! BEEES!! BEEES!!!

And Bee-keeping Appliances of every description.

Large stock on hand for delivery at a minute's notice. Send for Catalogue of 160 Illustrations, 80 pages; also my new Horticultural and Poultry Catalogue; post free.

T. B. BLOW, Welwyn, HERTS.

EPPS'S COCOAINE.

COCOA-NIB EXTRACT. (TEA-LIKE.)

The choicest roasted nibs (broken-up beans) of the natural Cocoa on being subjected to powerful hydraulic pressure, give forth their excess of oil, leaving for use a finely-flavoured powder—"Cocaine," a product which, when prepared with boiling water, has the consistence of tea, of which it is now, with many, beneficially taking the place. Its active principle being a gentle nerve stimulant, supplies the needed energy without unduly exciting the system. Sold only in labelled tins.

The Gardening World.

ESTABLISHED 1884.

Price One Penny; Post Free, Three-halfpence

Subscription (including postage): 3 months, 1s. 8d. 6 months, 3s. 3d.; 12 months, 6s. 6d., prepaid.

Foreign Subscriptions to all countries in the Postal Union, 8s. 8d. per annum, prepaid.

Published every Thursday morning, and can be obtained through all Newsagents and Booksellers, and from all Railway Bookstalls.

"Gardening is the purest of human pleasures, and the greatest refreshment to the spirit of man."—BACON.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, SEPTEMBER 18th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, September 20th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 TUESDAY, September 21st.—Royal Horticultural Society: Meeting of Committees at 12 o'clock.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 WEDNESDAY, September 22nd.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 THURSDAY, September 23rd.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 FRIDAY, September 24th.—Sales of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

FEATURES OF THE EDINBURGH SHOW.—

There will always be considerable diversity of opinion about the respective merits of the larger shows held in various parts of Great Britain, but, in our opinion, the difficulty experienced in comparing two large shows lies in their individual characteristics due largely to environment, to the period of the year at which they are held, and the latitude from which the exhibits are drawn. The autumn flower show of the Royal Caledonian Horticultural Society, held on the 8th and 9th inst., was noticeable, perhaps, as much for the quality and quantity of its Grapes as for anything. In saying so we do not mean to imply that the recent exhibition was a record-breaking one in this respect. On the other hand we may state that Grapes were shown in similar quantity at most of the autumn competitions held during the last ten years at least. But that the standard should have been maintained for so long a period of time we consider very creditable to the gardeners and growers, both north and south of the Cheviots, who have patronised the Edinburgh show. The soil, the favourable atmosphere, the enthusiasm and the rivalry of the growers to maintain their reputation, must all contribute to the realisation of the net result. Young exhibitors rub shoulders with the old, and in their efforts to climb the ladder of success, they serve to buoy up the exhibition as a whole.

The special prizes and medals offered for fruits, plants, flowers, and vegetables, by way of commemorating the Diamond Jubilee Year of Her Majesty the Queen, infused a considerable amount of fresh enthusiasm amongst exhibitors between Inverness and London at least; and we hope that the society will repeat the experiment in some form or other, though necessarily under a different name on future occasions; for the exhibits brought forward constituted no mean feature of the show. The rivalry brought into existence and the efforts put forward to secure the leading honours could not be otherwise than productive of good, both in the interests of the society and the community at large. The inducements to compete were great, but the requirements were equally so, and only those with ample resources as well as skill, both in cultivation and in arranging the exhibits, could hope to excel. On future occasions the requirements in some cases might be made less exacting in order to induce even a greater number of competitors to take the field. Under such circumstances the chances of success must necessarily be greatly reduced, but gardeners seldom grumble at being beaten in good company.

"He either fears his fate too much,
Or his deserts are small,
Who dare not put it to the touch,
To win or lose it all."

In all of the four classes strong efforts to secure the premier positions were visible; but those who fell behind this mark took defeat with good grace.

The exhibits in the special class for a group of plants arranged for effect were much more varied in outline than is usual at flower shows generally. The competition was limited to 300 square feet, while the form of the groups was left to the originality or otherwise of the exhibitors. The result was that no two were exactly alike, thereby adding greatly to the variety of arrangement in the Waverley Market. In the class for cut flowers of hardy plants the competitors were nurserymen, though we see no reason why a private establishment might not aspire to enter the competitive lists. The destruction of herbaceous borders to make room for bedding plants some years ago is no doubt largely responsible for the result. Herbaceous plants of all suitable and useful kinds might be more largely grown in private establishments, and no doubt they will be in the near future.

Stove plants were well represented by huge specimens of Crotons, Campylobotrys refulgens, Calatheas, Dracaenas, Anthuriums and others, testifying that the art of cultivating such things has not been lost, but that they would be forthcoming in plenty provided that glass accommodation was at command. Of greenhouse plants Fuchsias and single tuberous Begonias were best represented. Only at a few shows can so many well-grown and flowered specimens be seen. Few things are more effective and durable in greenhouses during the summer months than floriferous and pyramidally trained specimens of Fuchsias. Vegetables were amply represented by Potatos, Tomatos, Leeks, Onions, Cauliflowers, Carrots, Parsnips, and Beet. None of these, perhaps, excited more attention on the part of gardeners and visitors generally than the marvellous specimens of Leeks; particularly in two or three of the exhibits. Their enormous length and size generally made them objects of curiosity to not a few. The past season has not been particularly favourable to vegetables and other outdoor crops in the north, yet skill can accomplish a good deal in spite of the elements.

Notice of Book.—I thank you very much for your notice of my book in yours of 11th inst. I think it needs special attention, especially in reference to the Crabs, as you say "It would be interesting to know where I get the pips of the wild Crabs in sufficient quantity to meet requirements." This, as it indicates, that it is scarcely credible that they can be got, seems to me to require an answer. I therefore, with pleasure, give it, and will feel greatly obliged to you if you will kindly insert it in your excellent paper, as it may remove what may be implied, that my Crab story has but little foundation in fact, which would be somewhat serious to me. It is this, there are spots in the country where the soil seems specially adapted to the natural growth of the wild Crab; there is such a spot not many miles from here; in that district there are many trees which bear abundance for my use; these I pay the labourers to collect, and they are pleased to get the money for so doing. I also often hear persons whom I meet at the shows tell me they also have plenty of Crabs in the hedges, but that they go waste, because they are not wanted. There are none others who gather them around here that I know of. So that it is plain by this that nurserymen generally rely on another source from whence to get their stocks. It is not necessary to go into this matter here. It is sufficient to tell you how I get them. As regards the criticisms of which you speak, kindly let me say I met with this in the *Cable* on same day as yours came out:—

"A DEFINITION"—

Harry: "Papa, what is a critic?"

Harry's Papa: "A critic my boy, is a man who gets paid for telling other people how they ought to do things that he could not possibly do himself."

—B. Wells, Crawley.

Francoa sonchifolia is flowering freely as a herbaceous plant in the open border in the grounds of the Glenburn Hydropathic, Rothesay, N.B.

A Big Cabbage.—Mr. Wylie, M.P., was recently told by a clergyman that a Cabbage weighing 47 lbs. was shown at one of the Condorrat flower shows. It required the whole of his friend's eloquence to make Mr. Wylie digest it—that is, the story.—*Snaggs*.

The Duchess of York, it is rumoured, is about to make an appeal on behalf of the Irish, who are threatened with famine on account of the failure of the Potato crop. The appeal will be on the same lines as that issued by the Princess of Wales for the poor of London.

Mr. Alexander Lister, Rothesay, secured the special prize for the best exhibit at Larbert on Saturday last, on the occasion of the flower show there. He also won the first awards for twenty-four Dahlias and twenty-four Carnations. He had ten entries and took five first and five second prizes.

Fuchsia Riccartoni, which originated at Riccarton, near Edinburgh, the seat of Sir James Gihson-Craig, Bart., is a common shrubby border plant in almost every villa garden of Rothesay, Scotland, descending the slopes all round the bay to the high road running along the shores of the Firth of Clyde. Some of the plants cover a considerable area of ground, particularly at the gates leading to the residence of Lord Bute. On the steep slopes of Glenburn Hydropathic, facing the north and west, the plants run up to 8 ft. or 10 ft. in height, the stems being stout and corky in appearance.

Messrs. Barr & Sons' Bulb Catalogues for the autumn are to hand. One of them is devoted to Daffodils, in the cultivation and improvement of which the firm has taken, and is taking, so great a part. Several fine novelties are included, and will doubtless be eagerly snapped up. We observe that the general bulb catalogue, which runs to sixty pages, exclusive of the covers, is arranged in a purely alphabetical manner, which must facilitate easy reference on the part of intending buyers. Moreover this catalogue contains much useful information, especially with regard to Tulips, which are classified in such a manner as to inform amateurs and all others in need of such information what sorts to plant together.

The Preservation of Fresh Fruit has been the subject of a number of experiments in France. Apples and Pears were found to keep in first-rate condition when each fruit was wrapped separately in tissue paper. Wood wool was also tried, but the results were not at all satisfactory. Hay and sawdust packing gave had results. It was discovered, however, that the fruits packed in sand came out the best of all, but even in this case each fruit was separately wrapped in tissue paper before being covered with the sand. The colour, plumpness, and flavour were well maintained, and the expenses of storing were not great. This would suggest to fruit growers a new method of storing their best fruit. It might be tried by them on a small scale, and if found satisfactory could subsequently be practised extensively. The sand, of course, should be dry and clean.

Gardens of Ancient Egypt.—Gardening in all branches suitable to the country seems to have been well understood in ancient Egypt. The garden was generally of large size and surrounded by a battlemented wall, with the principal entrance through a lofty ornamented doorway which served as lodges for the keepers and gardeners or labourers. Inside of these lodges was a vineyard surrounded by rows of Palm trees. Irrigation was well understood and tanks and reservoirs held the water conveyed by canals from the river. Summer houses were situated where they overlooked the flower beds. The Egyptians also conducted experiments. Sycamores (*Ficus Sycomorus*) and Palms shaded the reservoirs. The vines were trained on horizontal wooden poles or bars supported by columns. Bowers and avenues of vines were also planted, and boys employed to scare the birds during the ripening of the fruit. Grapes for the wine press were put into deep wicker baskets, but those for dessert into flat baskets. The Date Palm supplied the natives with food for the greater part of the year. The Gingerbread Palm was also grown, together with Peaches, Almonds, Olives, Figs, and Pomegranates.

The Duke and Duchess of York planted two trees in Dalmeny Park, on Sunday last.

Young Rhubarb, according to Dr. R. Otto, contains oxalic acid, but as the plants mature this is changed into malic acid and sugar.

One thing Lacking.—“What do you think of my new hat, Tom?” “Well, it seems fairly representative. I only notice one thing you have missed, and that is a hunch of Carrots.”—*Scraps*.

Pear Beurre Hardy.—I see this Pear is again on sale in the shops in London, and looking even finer than it did last year when I sent you a line in reference to it. It is, I am informed, grown in California, and in addition to its excellent quality as an eating Pear, it has the finest skin of any Pear I have ever come across, and is, even for its sightliness alone, a decoration to any dinner-table.—*J. C. Stogdon*.

Moss and Lichen on Fruit Trees arise from want of drainage in the soil, and from lack of sunlight. It is chiefly to be found on closely planted trees in grass land, and on undrained soils. Moss may be got rid of by scraping it from the trees with an iron scraper, and by afterwards washing the branches and trunk with lime water. A cleansing of this kind cannot fail to do trees good, but the causes of the presence of the moss have also to be dealt with. The land should be drained if it needs it, and closely planted trees must be thinned to let in the sunlight.

The Dutch and Cauliflowers. — Until a comparatively recent date the Dutch used to supply all our pickle manufacturers with Cauliflowers. Of late years English growers have got a little of their own back, however, and have beaten the Dutch growers out of the market. This is in a large measure due to Mr. R. H. Bath, of Wisbeach, who first entered into an engagement with a well-known pickling firm in London to supply them with Cauliflowers. He now grows over 200 acres of this esteemed vegetable, the best heads going to one manufactory.

Apples on Grass.—A series of trials and experiments recently conducted in Bedfordshire with relation to profitable fruit culture have yielded some interesting facts. It was found that the growth of young Apple trees in grass was seriously interfered with by the grass. The effect was most marked in the leaves, reducing their growth by 35 per cent. in dwarf trees, and 41 per cent. in standards. The loss of wood growth from the same cause was 87 per cent. for dwarf trees, and 74 per cent. for standards. In the dwarf trees the fruit yield was reduced 71 per cent., from the same cause. That trees grown in grass are especially liable to become covered with moss is a matter of common knowledge, and it needed not the confirmation which it received in this case. An open, cultivated soil is recommended for Apples, Pears, and Plums.

Wolverhampton Gardeners.—A lecture on Orchids was given to the members of the Wolverhampton Gardeners' Horticultural Club, on the 7th inst., by Mr. H. A. Burberry. He treated his subject from the standpoint of gardeners having but little glass accommodation, and dwelt chiefly on those species requiring but little warmth so far as the hot water apparatus is concerned. After reviewing the general situation, and pointing out how extremely simple were the wants of those species we already thoroughly understand, he expressed an opinion that those now known as refractory species will be managed equally as easily when we become more familiar with the conditions of their native habitats. The lecturer then entered most fully and extensively into the culture of cool Orchids generally, dividing them into two classes, viz., the warmer and the cooler sections of cool growing Orchids, the former differing from the latter only because more sun-heat should be given during summer when they are growing. He also fully described the conditions which should prevail in each department, and enumerated an enormous quantity of the most popular and showy species which grow and flourish under exactly the same conditions. This at once made the frequently difficult matters of culture and selections very ready and easy to understand. The hearty and cordial manner in which the concluding vote of thanks was proclaimed by those present sufficed to show how greatly Mr. Burberry's remarks were appreciated.

The best cork comes from Algeria, where there are 2,500,000 acres of cork forest.

Sensitive plants are so abundant in some tropical forests that the path of a man is distinctly discernible for a long distance behind him.

Cedar Trees for Pencil Making are said to be practically exhausted in the Old World. Several forests of the tree in Europe have been consumed by this industry.

Grandeur and Decadence.—Under this heading the *Nord-Horticole* discusses the fate of *Symphytum asperimum* and *Polygonum sakhalinense*, which were announced to the world a few years ago as exceedingly productive and valuable fodder plants for dry climates and droughty seasons, or where Clover and Lucerne could not be cultivated to any advantage. The *Symphytum* produces very few seeds and can only be propagated by pieces of the fleshy rootstock and by suckers. Many of these fail to grow and would-be cultivators paid dearly for them. Cattle were by no means fond of it. The same might be said of the *Polygonum*, the stems of which soon get hard and uneatable. The roots of this plant are difficult to eradicate when once they have become established. Neither of the two thrive well in poor dry soils.

Ensilage of Potatoes.—According to the Bulletin de Séances de la Société Nationale d'Agriculture de France, experiments have been made for the purpose of determining whether Potatoes can be stored in silos. In one case the Potatoes were hurried amongst crimson Clover (*Trifolium incarnatum*) in a silo. The temperature of fermenting green clover rises to 160° Fahr., and it was found that the Potatoes had practically been cooked. They also acquired the characteristic colour of that plant, and the flavour due to the process of fermentation. Potatoes were also tried amongst Maize, stored, stalks, cobs and all. The hardness and lumpiness of the Maize did not lie so closely as the Clover, with the result that the temperature did not rise so high. The Potatoes when taken out of the silo parted rapidly with their moisture, becoming very hard, in which state they may be kept for a long time. Before being used as cattle food they must be soaked in water, when they will soften, regaining their digestibility.

NEPENTHES.

Mr. H. J. VEITCH delivered a most interesting lecture upon *Nepenthes* at the last meeting of the Royal Horticultural Society at the Westminster Drill Hall, J. T. Bennett Pöe, Esq., occupying the chair. The lecture was illustrated by diagrams, and also by specimens of the living plants brought from the Chelsea nurseries.

In his opening remarks Mr. Veitch averred that he wished to treat the subject from a horticultural standpoint, and would therefore omit mention of the exact part played by the pitchers, for this had been done by others. Dealing with the history of the *Nepenthes*, Mr. Veitch said that they were first mentioned by Etienne de Flacourt in “L'Histoire de la granadile de Madagascar,” published in 1661, under the name of “*Aromatica*.” They were then apparently forgotten for nearly 130 years. The species mentioned by Flacourt, *N. madagascariensis*, was the last to be introduced having been brought to this country by Curtis in 1878–79. Linnaeus brought *Nepenthes* into notice in the 18th century, but *N. distillatoria* was the only species known to him. The earlier literature relating to the genus is very scattered.

N. rafflesiana, introduced in 1845, *N. hookeriana*, brought to this country from Borneo in 1847, and *N. ampullacea* are some of the first introduced species. Thos. Lohb, sent a lot to the nursery at Exeter, including *N. albo-marginata*, *N. phyllamphora*, *N. sanguinea*, and *N. Veitchii*, and these formed the nucleus of the Chelsea collection. Blume and Koethals, two Dutch botanists at the botanic gardens at Buitenzorg in Java, also brought several species to light. Sir Hugh Low had an interesting find in 1851 when he ascended Mount Kina Balu in Borneo, and found four of the finest species ever discovered, viz., *N. Rajah*, *N. Lowii*, *N. villosa*, and *N. edwardiana*. He only succeeded in bringing dried specimens to this country. Other attempts to secure

living specimens subsequently made by Sir Henry Low, Mr. F. W. Burbidge, Mr. Thos. Lobb, and Mr. P. C. M. Veitch also failed. Sir Joseph Hooker in 1874 advanced the cause of the *Nepenthes* very much by a lecture delivered by him before the British Association (biological section) at Belfast.

By the year 1872, continued Mr. Veitch, there were ten species of *Nepenthes* in cultivation, including *N. Rajah*, and *N. bicalcarata* from Borneo, and *N. Northii*. The last named was discovered through Miss North, the celebrated artist, painting a spray brought to her by a native. Curtis was sent in search

At the conclusion of the paper Mr. F. W. Burbidge, M.A., Curator of the Trinity College Botanic Gardens, Dublin, made some interesting remarks concerning the subject of the lecture. Mr. Burbidge in recounting his experiences as a collector remarked on the prevalence of the white mist in the higher altitudes in Borneo, and the great evenness of the temperature and moistness of the atmosphere. Mr. Burbidge suggested as a suitable house for *Nepenthes* a house that was not directly heated with pipes, but which was surrounded with other hot houses, the air from the latter being allowed to pass into it. A condensation of moisture would thus occur which would be a very close imitation of the natural conditions.

Orchid Committee.

CATTLEYA EUPHRASIA. *Nov. hybr.*—This fine hybrid is the result of a cross between *C. superba* and *C. Warscewiczii*. Both sepals and petals are bright rose, although the sepals are narrower, and a shade deeper in hue than the petals. The lip is large, well expanded, and about 1½ inches in diameter. It exhibits a rich glowing purple, passing into a duller purple at the throat, where originate a series of dull purple stripes which occupy the centre and pass down to the base. On either side of these is a buff-yellow area. First-class Certificate. Messrs. James Veitch & Sons Limited, Chelsea.

PEOPLE I HAVE MET.

MR. JAMES W. LAIRD.

This gentleman, who has frequently been in our office, started life in Edinburgh, when the present firm of Messrs. R. B. Laird & Sons was differently constituted and traded under the old title of Downie, Laird & Laing. Mr. James W. Laird was for some time with the old firm, studying and practising landscape gardening. His next occupation was with Messrs. Fisher, Son & Sihray, the well-known firm at the Royal Handsworth Nurseries, Sheffield. Leaving this nursery he travelled in foreign countries, principally Australia, for the period of two years.

After leaving Australia he returned to the mother country, and joined the late Mr. Andrew Sinclair in the management of Messrs. W. P. Laird & Sinclair's Nurseries, in the neighbourhood of Dundee, where he has ever since been. He is now the senior partner of that firm. The head office is in Nethergate, Dundee, but the nurseries are at Monifieth and Monikie, a little way out of Dundee. Mr. James W. Laird is well known in the English trade as one of Scotland's prominent growers of forest tree seedlings for which the Monifieth Nurseries have long been famous. See p. 42 for a fuller account of these nurseries. Owing to pressure for time we were unable to furnish the dates relating to the various points in Mr. Laird's career, but, as the accompanying portrait will show, he is still a young man and has plenty of time to do some good work for the benefit of the community at large.—[ED.]

MR. WILLIAM P. LAIRD.

MONIFIETH is a delightful little place along the Tay side. It is one of those places that the poets love to dawdle, and when my good friend was too pressing to brook a denial in his cordial invitation to get a breath of fresh air, and an inkling of what true hospitality really is, I gladly availed myself of an invitation to spend a week end at Braefoot, the residence of Mr. William P. Laird. Mine host is just a typical Scotch laddie, possessing the qualities of that exquisite blend of manliness and courtesy which we in the south too often are unable to reciprocate, and rarely able to excel.

Born in Edinburgh in 1865, Mr. Laird was educated at the Edinburgh Institution; he served an apprenticeship with the famous firm of Messrs. Downie & Laird; he went to Dundee in 1885, and fulfilled a useful period of work with his late father, and is now a partner with Mr. James W. Laird, taking over the management of the indoor department of the well-known seed establishment in Nethergate, Dundee. Mr. Laird is a well-known figure at the shows of the Dundee Horticultural Society, and he is the progressive and energetic secretary of the Dundee Chrysanthemum Society, which in the coming November is to hold high carnival in that city of jute and hessian. Mr. Laird married in 1895 a daughter of the late Mr. Swan, of Inverpeffer; and a charming little hairn promises well to carry to posterity the attributes of both father and mother, to whom the genuine and heartfelt thanks of the writer are due for the many hospitalities which they have extended with their thoughtful kindness to him.—*Gyp.*

PLANTS RECENTLY CERTIFICATED.

At the meeting of the Royal Horticultural Society on the 7th inst. the following awards were made.

Floral Committee.

NEPENTHES TIVEYI. *Nov. hybr.*—This is the result of a cross between *N. Veitchii* and *N. Curtisii* superba

MR. WILLIAM P. LAIRD.

of it, and after a good deal of trouble was successful. The number of introduced species has now been brought up to twenty four, although all of these are not in cultivation, some having been lost. The first hybrid was raised by Dominy, and bears his name. This was exhibited by the Messrs. Veitch at a Royal Horticultural Society's meeting at South Kensington in 1862. Seden has also raised several. Here Mr. Veitch gave a list of the finest hybrids up to date. Of these, two of the finest are *N. mastersiana*, obtained by crossing *N. khasiana* with *N. sanguinea*, and *N. dicksoniana*, the result of a cross between *N. rafflesiana* and *N. Veitchii*.

Coming to the culture of *Nepenthes* Mr. Veitch stated that the seed is usually sown on the surface of peat fibre and sphagnum moss, and placed in a close frame with a temperature of 70°–75° Fahr. It will germinate in from six to eight weeks, although imported seeds grow much slower than home grown ones. *Nepenthes* are but poorly provided with roots, and are not wholly land plants, being epiphytal under certain conditions. In the wild state fertilisation is effected by aerial agency. The number of seeds in a capsule varies from 40 to 50, and the seeds are minute and light.

The lecturer discussed in detail the different characteristics of the various forms, both in leaf and pitcher. He quoted Sir Joseph Hocker's statement that he believed the pitchers to be modifications of a gland situated at the apex of the midrib of the leaf.

Coming to the geographical distribution Mr. Veitch stated that out of thirty-six species, or thereabouts, fourteen are confined to Borneo, and three others to that and adjacent islands; thirteen more are extra-Bornean, but strictly Malaysian. North Australia has one, New Caledonia has one, Ceylon one, The Seychelles one, and North East India one (*N. khasiana*). With the exception of the last named all come from insular positions, and all are equatorial. They are found, moreover, in a zone lying within 12° on either side of the equator.

The climatal conditions show that the temperature is very uniform both day and night, for while the greatest heat of the day is 90°–92° Fahr. it seldom falls below 74° Fahr. by night. The air is nearly saturated during the greater part of the year, and the rainfall varies from 75 to 80 inches.

MR. JAMES W. LAIRD.

BRASSIA LAWRENCEANA LONGISSIMA. This is a well marked variety of the species, the sepals being very much produced, and assuming the appearance of long brown-yellow tails, spotted near to their origin with chocolate on a yellow-green ground. The petals are shorter than the sepals, but still long and of the same colours. The lip is ovate-lanceolate in shape, and from three to four inches in length, white at the base, and spotted with deep maroon. Botanical Certificate. Messrs. J. Veitch & Sons, Limited.

RHYNCHOSTYLIS COELESTIS, CAMBRIDGE LODGE VAR.—The plant exhibited here a spike some six inches in length. The individual flowers are small but effective in the mass. The sepals and petals are blue-white, tipped with flesh pink. The bright violet-blue lip is the chief feature, however, and a very attractive one. Award of Merit. Mr. H. J. Chapman, gardener to R. I. Measures, Esq., Cambridge Lodge, Camberwell.

ACINETA BARKERI.—A grand plant was shown of this handsome Orchid, carrying two abnormally large pendent spikes, each of which bore twenty-two flowers—an unusual number. The flowers are subglobose in shape, and very fleshy. In colour they are rich yellow, the lip being spotted with dark red in the centre, and having a deep notch on either side. Botanical Certificate. Mr. F. J. Thorne, gardener to Major Joicey, Sunningdale, Berks.

ONCIDIUM PANDURATUM.—This is a rare species with long compound racemes of relatively small flowers. The sepals and petals are chocolate-brown, margined with green-yellow, and with a prettily crisped or waved outline. The apex of the lip is acute and tipped with yellow. From either side of it near to the base appears a small and narrow yellow process, standing at nearly right angles to the body of the lip. Botanical Certificate. Mr. S. Barrell, gardener to Wellhore Ellis, Esq., Hazelhourne, Dorking.

The pitchers are from 7 in. to 9 in. in length, yellow-green in colour, blotched with chestnut. The wings are strongly developed, and bear a few stout, long hairs. The rim is filled, whilst the lid is small, and

great merit. First-class Certificate. Messrs. J. Cheal & Sons, Crawley, Sussex.

ASTER MRS. W. PETERS.—This perennial Aster is from 2 ft. to 2½ ft. in height, and a very free

The latter is small and inconspicuous. The lower leaves are deep green, and linear-lanceolate in shape; the upper ones are narrowly linear in shape, and of a shade lighter green. Both are inclined to be

LILIUM LONGIFLORUM HARRISII IN THE BERMUDAS (See p. 41).

heavily blotched with chestnut-brown. First-class Certificate. Messrs. Jas. Veitch & Sons, Ltd.

CACTUS DAHLIA F. C. PAWLE.—Here we have a fiery crimson true Cactus flower of medium size and

flowerer. The flowers are about 1 in. in diameter, but appear to be considerably less on account of the way in which the long white ray florets, of which there are several rows, curve inwards over the disc.

succulent. Award of Merit. Mr. W. Peters, Givan's Grove, Leatherhead.

HIBISCUS MANIHOT.—This is a very pretty Hibiscus, with large yellow flowers, and from 3 ft.

to 4 ft. in height. The leaves are large, deep green, and palmate in shape, the segments being irregularly serrate. Award of Merit. Mr. F. D. Lambert, Bookham.

Fruit Committee.

MELON MRS. HERRIN.—This is a Melon of fine appearance, with white flesh of great depth and good flavour. The fruits are oval in shape, and handsomely netted. When ripe, the skin is a rich yellow. This new variety was obtained as the result of a cross between Favourite and another seedling. Award of Merit. Mr. C. Herrin, The Gardens, Dropmore, Maidenhead.

BLACKBERRY MITCHELL'S SEEDLING.—In this we have a very free fruiting variety that is well deserving of attention. The fruits are large, conical, and the drupes fleshy. The flavour is pleasantly acid and brisk. Award of Merit. Mr. W. Mitchell, Farnham Royal.

The National Chrysanthemum Society awarded First-class Certificates to the undermentioned Dahlias at the Royal Aquarium on September 7th.

JOHN TRANTER.—A new show variety of medium size, and salmon-scarlet in colour. Mr. R. Tranter, Henley-on-Thames.

HARBINGER.—A very pretty show form. The colour is delicate mauve, and the bloom of fair size and good shape. G. St. Pierre Harris, Esq., Orpington.

THOMAS ANSTISS.—Here we have a bright and handsome magenta-hued flower of striking individuality. Mr. T. Anstiss, Brill, Bucks.

KEYNES WHITE.—This is a medium-sized Cactus form, and marks the latest advance towards the coveted pure white. There is a little yellow in the centre. The form is good. Messrs. Keynes, Williams & Co., Salisbury.

MARY SERVICE.—A handsome Cactus variety. The blooms are of good size, with long revolute and incurving florets, rosy-salmon in colour. The florets are tipped with magenta. Messrs. Keynes, Williams & Co.

LAVERSTOCK BEAUTY.—Another good Cactus flower, has long florets, and exhibits a bright shade of orange-salmon. Messrs. Keynes, Williams & Co.

ARACHUE.—This is a curious Cactus form. The outer florets are white with a broad central band of orange-red. The central florets lack the white. The form is good. Messrs. Keynes, Williams & Co.

ALFRED VASEY.—A large, bright salmon-hued Cactus sort, with rather heavy florets. Messrs. Keynes, Williams & Co.

FALKA.—This is another charming Cactus variety. The flowers are large and fine, and the colour is rosy-magenta—a charming and distinct shade. Messrs. J. Burrell & Co., Howe House Nurseries, Cambridge.

CASSILDA.—Here the wide florets suggest the decorative rather than the most approved Cactus type. The colour is a bright primrose-yellow, the size medium. Messrs. J. Burrell & Co.

ANNIE TURNER.—A fine Cactus bloom of fair size exhibiting a bright shade of rose-crimson. Mr. G. Humphries, Chippenham.

NELLIE BROOMHEAD.—This is the latest addition to the ranks of the pompons. The blooms are neat, and of a delicate lilac hue. Mr. J. T. West, Tower Hill, Brentwood.

MR. MOORE.—This is a magnificent Cactus variety of great merit, and destined to become a great favourite in all gardens where dark-hued Dahlias are admired. The colour is a deep black crimson. The flowers are of perfect form, and borne on long stout stalks that lift them well above the foliage. Mr. John Green, Norfolk Nurseries, Dereham.

NIGHT.—Appropriately enough is also a deep black-crimson flower. It is large, and has very long florets. It belongs to the Cactus section. Mr. J. Stredwick, Silverhill, St. Leonards-on-Sea.

ISLAND QUEEN.—A rosy-pink Cactus variety of considerable merit. Mr. J. T. West.

TRUE FRIEND.—Another very fine deep crimson Cactus form, but several shades lighter than either Night or Mr. Moore. The flowers are of medium size and capital shape. Mr. J. T. West.

GYPSY.—This may be relegated to the decorative section, as the florets are too broad to put in the ranks of the true Cactus varieties. The colour is crimson, with a magenta shade evident at the tips of the florets. Mr. G. Humphries.

E. J. DEAL is a symmetrical Cactus flower of great merit. The colour is fiery-scarlet, and the blooms are both bright and showy. Mr. S. Mortimer, Rowledge, Farnham.

DOROTHY SEALE.—is a very handsome single variety. The outline is perfectly circular, and the petals full and even. The colour is white with a central area of orange-red irregular outline, and of varying size. In some of the blooms the flowers have the appearance of being orange-red with a white margin, whilst in others the relative size of the two colour areas is altered. The sides of the petals are occasionally margined with yellow. Mrs. F. W. Seale, Sevenoaks.

COLTON BEAUTY.—This is a striking and handsome single flower. It is pure white, but the margins of the petals at the sides are bright yellow. The effect is somewhat curious. Size, outline and shape are all first-class. T. W. Girdlestone, Esq., Sunningdale, Berks.

First-class Certificates were also awarded to Messrs. J. Burrell & Co. for the two Gladioli named below.

G. EUNICE.—This variety throws a huge spike, and the individual blooms are also large and substantial. The colour is flesh-pink with a cerise blotch on the lower segment. There is also a circular blotch of cerise at the base of the segments in the centre of the flower.

G. ORIENTAL.—The spike and flower are both as large here as in the former variety, but the colour is rich orange-salmon. The segments are striped and edged with deep violet in a most attractive manner, and the flower altogether has a very distinct individuality.

THE FLOWER GARDEN.

As the days of autumn creep on it becomes an increasingly difficult task to keep the flower garden in ship-shape condition. The wear of the year is beginning to tell heavily upon many things, but it is the gardeners task to prevent this from being too obvious. Up to the time of writing we have at least been spared the experience of sharp frosts, although for at least two nights during the past week the temperature on the grass was quite down to freezing point. The beauty of Dahlias, Gladioli, and other handsome but tender flowering plants may thus be left to us for a little while longer, although after the middle of September has turned we can never depend upon frost holding off for even a day.

Gales of wind and storms of rain have, in the absence of the frost, done their best to pull the plants about, and there is much tying and tidying necessary.

THE HERBACEOUS BORDER is presenting a truly autumnal appearance with the starry flowers of the earlier Michaelmas Daisies, Gladioli and Dahlias in variety. Here there will be plenty to do. The Perennial Asters are a host in themselves, and are worth all the attention that can be given them. Skilful staking and careful tying are among the most important of attentions. How often, however, do we see the poor plants looking sadly like brooms with their stems strained together in a hideous hunch, and their natural symmetry entirely spoiled. Gardens of any size might well include amongst other special features a border devoted to Michaelmas Daisies. We have so many fine forms exhibiting a considerable range of habit, colour and size of flower. Such a border if planted with due regard to these differences of habit may be made to look very handsome but may also in the hands of the man lacking in taste look very stiff and proportionately ugly. Those who propose making such a feature in their garden will do well to observe closely the characteristics of all the good forms they may come across.

ZONAL PELARGONIUMS.—By this time all the required cuttings of zonal Pelargoniums will have been got in, and many of the earliest ones rooted, especially in cases where the practice of putting the cuttings in the open ground to root is adhered to. Generally, it is necessary to lift and pot these up before the end of September, but as long as the frost holds off they will be better outdoors than in.

The heds themselves look rather straggling where the plants have been cut at all hard, but they will pay for a clean up and a hoe over, if only to prolong the season for another fortnight.

The propagation of the tenderer bedding plants

will be going on apace. As these have to be struck in heat they are usually left until the last. Besides, there is a natural disinclination on the part of the gardener to upset until the last moment the strict lines of a carpet bed in order to obtain the needful stock. Alternantheras, Iresines, Heliotropes, Lobelias, etc., all strike freely in a hot hed, and it is worth while to erect one on purpose for their accommodation.

PENTSTEMONS.—The value of these handsome flowers is not recognised so generally as we should expect. Occasionally one sees them used for bedding, and in every case they are brilliant successes. They flower with remarkable persistency and freedom, and given a fairly rich soil the flowers are of relatively large size, also the spikes. Their propagation is remarkably easy, for cuttings root readily. At this time of the year numbers of side shoots and others thrown up from the base make their appearance. These constitute capital cuttings if cut off at a length of about 4 in. Instead of putting them in pots or pans we prefer making up a hed of soil in a cold frame, and dibbling them into it. Shrubby Calceolarias answer well to the same treatment. After they are rooted a fair amount of air may be given, but no attempt should be made to disturb them until the winter is past. Artificial heat is not needed, but we believe in covering the frames up very warmly in cold weather.

GENERAL WORK.—As the grass is growing now with exceptional vigour there is more mowing to do than there has been at any time of the year. Tennis is over now for the season, and advantage may be taken of this to give the green a good dressing of soot. If this is done immediately before a shower so much the better. Showery weather should, of course, be chosen. The laying of turf may proceed apace. Continue to gather seeds of any choice annuals that are ripe, also attend to the drying of those that have been gathered. Do not delay too long in submitting orders for hulks to the selected firms. Bulbs nowadays are both cheap and good, and no spring arrangements can possibly be complete without the inclusion of a good quantity of them.—A. S. G.

HARDY FRUIT GARDEN.

Just now the all engrossing task is the gathering of Apples and Pears as the different varieties become fit for plucking. Gales of wind are to be expected now, and thus it is not advisable to leave Pears on the trees after they will part readily from the foot-stalk, as a sudden squall may leave the gardener lamenting the loss of some of his best fruit. The necessity of careful handling, and of as little of that as possible, has been insisted on by all writers on the subject, and the practical man knows full well that such advice is not to be gainsaid.

The storeroom shelves will have been brushed down previously, and the walls whitewashed where the latter was possible. Do not, as is frequently done, line the shelves with a layer of hay, or the flavour of the fruit will suffer as a consequence, particularly the later varieties of Apples and Pears. Clean, bare shelves are all that is required.

LATE APPLES AND PEARS.—Where trees of the later varieties are carrying good crops it will be advisable to get all those whose size renders this possible. With the gathering in of the grain crops the birds have had a good deal of their food taken from them, and hence they make a dead set at the fruit. It is most provoking to find the largest and best samples with holes pecked in them, and as the birds usually select a spot near the foot-stalk for their operations there is very little chance of the fruit keeping, although sometimes the wound will heal over enough to permit of the fruit keeping.

ALPINE STRAWBERRIES.—Although it cannot be claimed that the Alpine Strawberries are a serious rival to the larger-fruited summer varieties, they come in very handy for prolonging the season, and there are many who appreciate their delicate flavour. Seed sown in spring, in light soil, in shallow drills about 6 in. apart, will furnish fruiting plants in the autumn if the latter are carefully transplanted. A heavier crop will be obtained the second year, after which the beds should be destroyed. An annual sowing is thus necessary to keep up a good supply. As these Alpines are easy to manage, there is no difficulty in obtaining fruit at all seasons, both by planting beds in different positions as well as by lifting the plants and fruiting them under glass.—A. S. G.

HINTS FOR AMATEURS.

Campanula isophylla alba.—There is no greater favourite as a pot plant for the window in both town and country than this charming little Bell-flower, and we may add that there is nothing else to surpass it in its own way. The easiness with which it may be grown either in the smoke of the city or the pure air of the country is amply demonstrated by the fine specimens we often see in cottage windows. The treatment given it is usually of the simplest character, and yet success is obtained. At the present time the plants which have been flowering away for the last couple of months appear to have got to the end of their tether, as far as this season is concerned, and it is necessary to give them a little overhauling. The old flowering stems may be cut away, and to within a couple of inches of the bottom. A few pieces bearing leaves should be left for the present, just to carry on the work of the plant, but even these may be removed as soon as young growths appear in any quantity, so that the whole of the old growths will by that time have been got rid of. The young shoots which are thus thrown up from the base furnish capital material for cuttings, and those who wish to increase their stock of plants may do so with comparative ease. We say comparative because in order to ensure success in rooting these cuttings a little artificial heat must be given. Those who have a heated propagating frame or even a warm pit have nothing to fear. We have also rooted cuttings in a cold frame by covering them with a bell glass, but this can only be done with anything like certainty when September is a fairly warm and bright month. Shoots about a couple of inches long make the best cuttings. They may be inserted four or five in a small sixty-pot in very sandy soil. Place the cutting pots in any position where they will enjoy a gentle heat. We prefer a corner in a gentle hot bed, where the pots may be plunged to the rims in fibre or leaf soil. When the cuttings have made a fair quantity of roots they should be potted off singly into thumb pots, which will last them through the winter. If the cuttings are very late, on the other hand, it will be advisable to leave them in their cutting pots without disturbing them all through the winter. The treatment here recommended for the white form will answer equally well for the type *C. isophylla*, the light blue flowers of which are quite as handsome as those of the variety. Both may be grown side by side.

Chrysanthemums.—As the month wears along the anxiety of the Chrysanthemum grower will increase day by day. The reward of his labours is not so very far away now, and the interest in the plants themselves, which is really never absent throughout the whole of the year, is fast developing. The work of feeding the plants is now of the utmost importance, for everything really depends upon it. In their natural anxiety to do the thing well, not a few cultivators, in which are to be included a quantity of professional gardeners, overdo it. It has become the fashion of late years to dose the plants heavily with chemical manures of various kinds, and although these are excellent in their way, they are very harmful when used to excess, just as an overdose of stimulant would be to their masters. The homely, and it must be admitted, evil smelling manure tub has gone out of fashion to a very great degree, although solutions of sheep, deer, or cow manure are among the safest and most effectual foods that can be given Chrysanthemums. The great point in using them is to obtain the liquid as free from sediment as possible, otherwise harm will result, for the sediment will form a hard crust on the surface of the soil. A clear solution of soot water now and again is of the utmost value, and its effects will be seen in the dark green hue of the leaves, and the healthy appearance of the plants generally. Even in the giving of soot, however, great caution must be observed. The practice of enclosing the soot in a bag of coarse canvas and plunging it in the water has been frequently recommended, and there is no doubt that it is a first-class, and, in fact, the best method. There is one danger attaching to it, however, and in this way:—The solution of soot thus obtained being entirely free from sediment is always comparatively light in colour, and the novice is apt to mistake the lightness of the colour for weakness, and to give his plants a much

stronger dose than is either wise or safe. In no case should the water given the plants be more than a dirty brown-black shade, and should be perfectly clear. Some people dress the soil in the pots with a covering of soot, but this is inadvisable, for the reason suggested above, and also for the fact that the surface roots are in danger of being burnt.

Just now the plants will take a good deal of feeding, and their diet should be varied, not sticking absolutely to the same thing, Clay's Fertiliser, Thomson's, and Guano are excellent, and in careful hands will yield good results.

Earwigs.—Every grower of Chrysanthemums, whether on a large or a small scale, knows how necessary it is to keep the earwigs at bay. The dewy nights of September see the insects in great numbers among the 'Mums, but there is also more chance of catching them. Small pots filled with dry hay, moss, or straw form capital traps, for the earwigs flock into them on account of the warmth and protection from damp that they afford.

Housing.—By the end of September most growers will be thinking seriously of housing their plants, for they are not safe out of doors any later than this, and even now in northern districts the nights and days have to be carefully watched. We usually experience heavy gales and storms of rain about the present time and thus it is very important to see that all the shoots are well secured by ties to stout stakes, or the plants will not be able to pass through the test of the winds.

Rooting through.—Those growers who have plunged their plants in ashes have to think about the rooting through into the material surrounding the pots, which is certain to take place to some extent. Even when the plants are not plunged, but are only stood on the soil, the roots will pass through the hole in the bottom of the pot. Thus many good cultivators do not plunge their plants, but simply stand them on strips of board or rows of paving bricks, or any other flat hard surface. Plants which are not thus served must be gone over frequently and lifted up to disturb or break off the roots which have passed through the pot, for, if this little attention is not given, these outside roots have obtained a firm hold by the end of the season, and when the plants are housed, often in a hurry, a great check is given them as a consequence.

Show and Regal Pelargoniums.—It is high time that these should be pruned, for even those which flowered very late ought, by this time, to have ripened up sufficiently to warrant the knife dressing. The plants should be cut back to within an inch of the old wood, or in the case of young plants, close to the point at which they made their first breaks. Water will have been withheld for some time past, and may be held back for a little longer, at least, as far as root supply goes. After cutting them back put the plants close together in a cold frame, just as they are, in the pots in which they have flowered this season. Keep the frame close, but sprinkle the old stumps nicely each bright day with the syringe. Under such conditions young growths will soon make their appearance, and potting will then have to be taken in hand; but this we will make the subject of another note. Cuttings will be furnished in plenty by the prunings. Use very sandy soil, and place them in heat if possible, for although they will root in a cold frame the process is a slow and rather unsatisfactory one, whilst quick results are obtained from cuttings which have been placed in heat.—*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Bedding Calceolarias.—Please tell me if I can root cuttings of bedding Calceolarias in a frame, and also if they will keep through the winter in such a place. I shall be glad of any instructions, as I have never tried to root Calceolarias before.—*R. Craig.*

You may root the cuttings and keep them through the winter quite easily in a frame, but in the absence of artificial heat the frame must be covered up warmly during spells of frosty weather. We should advise you to make up a bed of soil from 6 in. to 8 in. deep in the frame. The soil may be rough at the bottom of the bed, but on the surface should be fine.

A layer of sand about $\frac{1}{2}$ in. in depth should be placed on top of the soil. The cuttings should consist of tops of the young growths from 3 in. to 4 in. in length. These may be dibbled in pretty closely to each other. If the soil is fairly moist water will not be required for the present, but a sprinkle with the syringe on bright days will do good. Keep the frame close, and shade from the bright sun until the end of the month, after which no shade will be required. Calceolarias strike very readily in this way, much more freely, indeed, than when the cuttings are put in pans.

Greenhouse Blinds.—*C. C. L.*: You must leave the blinds of the greenhouse up until the end of the month, but you should gradually inure the plants to bright sunlight. The summer cloud shading on the front of the house may be washed off now if desired.

Tecoma radicans.—Will *Tecoma radicans*, spoken of in your issue of August 28th, grow in a garden in East Lothian, close to the sea, where east and north-west winds are very prevalent?—*Novice.*

You may plant the *Tecoma* with every hope of success. Give it the shelter of a wall having a south aspect if possible.

Flies and Grapes.—Yours is by no means an uncommon case, *B. Entwistle*, for at this time of the year flies are often a greater enemy to ripe Grapes than wasps. Your only plan, if you do not want to cut the bunches, is to encase them with fine muslin. This will keep the winged intruders at bay.

Hay in the Fruit Room.—*Q.*: We do not believe in the practice of putting a layer of hay on the shelves in the fruit room for the fruit to rest on, for the latter invariably becomes impregnated with a most unpleasant odour as of musty hay by so doing. Simply lay the fruit on the bare wood. Shelves made after the fashion of trellises, with the spars very close together, are better than those which have no openings in them.

Zinc Labels.—*F. L. Ames*: In using the zinc labels you have probably forgotten to clean the smooth, oily surface of the zinc with a piece of emery or sand paper. If you do this you will find that the writing will not run in the way you mention.

Melons.—*Inquirer*: You are wasting your time and the pit as well in trying to ripen the Melons. After the present month has expired the season will be practically over. The latter part of August as well as the fore half of September, has been a most unfavourable time for Melons, and we are not surprised that you found a difficulty in getting the fruit to set. We hope you will have better luck next time.

Roses.—Please say in your *Amateurs' Page* when to prune and house Roses in pots.—*A. B.*

The Hybrid Perpetuals are hardy enough, and may remain out of doors the whole of the winter or until they are required for forcing purposes. In this case the pots should be deeply plunged in ashes by the end of October at the latest, otherwise severe frost will chip and break the pots. The Teas, on the other hand, being comparatively tender, should be housed some time in October. Pruning may be attended to any time before the plants are placed in heat. The Teas may be pruned if desired as soon as they are housed, as they will not be subjected to the frost, but you must leave the H.P.'s unpruned until you bring them under cover.

Snails in a Garden.—My garden is surrounded with very old walls covered with Ivy, etc. The snails have this year been a regular plague, having destroyed several Sunflowers and other plants. Can you give any recipe for destroying them?—*Novice.*

As long as there is such a convenient harbourage for them you will always be annoyed with snails and slugs in wet seasons. Can you do nothing to lessen the cover for them by trimming up some of the Ivy? The only other remedy is hand picking. A good plan is to drop the pests into a box of quicklime, which will make short work of them. Go round the plants after dusk with a lantern, for at that time you will be more likely to catch the predators at their work. Traps may also be set of Lettuce leaves, and examined occasionally.

Barrington Peach --I have an old Barrington Peach which bears and ripens its fruit well, but the stones are split, and in some cases the kernel is bad. Would you advise root pruning.—A. B.

If you will turn to the answer to *Reader* on p. 14 of the issue of THE GARDENING WORLD for September 4th, you will find something about Peach stones being bad. In your case we are certainly of opinion that it is the age of the tree that is the cause, and we

gardens and nurseries as *Chelone barbata*, is the name of the plant you send, *Old Boy*. It is one of the prettiest hardy herbaceous perennials that we have.

POPULAR LILIES.

ALL the true Lilies (*Lilium*) to the number of 45 species are beautiful and in every respect worthy of

L. Martagon, *L. pardalinum*, *L. umbellatum*, *L. Hansoni*, and many others hardly ever absent from good representative collections.

L. longiflorum eximium is, perhaps, the most popular of all, because the most generally useful for cut flowers and other purposes; and because it readily submits to gentle forcing it may be had in succession for a long period of time. It is best known as *L. l. Harrisii*, and less often as *L. l. floribundum*;

THE WHITE LILY (*LILIUM CANDIDUM*).

know from experience that Barrington is very apt to behave in this manner when the tree is old. We do not think root pruning would be of the slightest use, but you might try the dressing of loam and mortar rubbish recommended to *Reader*. If the tree bears well you would naturally not care to root it out yet.

cultivation; but as in other genera the popular choice has fixed upon a few which may be considered the aristocrats of the genus. Judging of their popularity by the quantity grown we should place *L. longiflorum*, *L. auratum*, *L. speciosum*, and *L. candidum* in the first rank, including of course the grand varieties belonging to the first three of these. Other well known and highly valued species are *L. tigrinum* and its varieties, *L. elegans*, and its forms, *L. davuricum*,

though *L. l. eximium* was first given it by the botanists. The variety is popularly known as the Bermuda or Easter Lily (see illustration p. 38), because, though a native of Japan, it is grown in the Bermudas by hundreds of thousands for supplying the wants of Europe and America. The pure white flowers are deliciously fragrant, but not so overpowering as *L. auratum* when grown in quantity. Some other varieties of it enjoy a greater or less repute.

Pentstemon barbatus, commonly met with in

The Golden-rayed Lily of Japan (*L. auratum*) is the largest and grandest of all Lilies, and is in great request for pot culture for conservatory decoration, and for outdoor beds, especially amongst Rhododendrons. The flowers vary from 6 in. to 12 in. in diameter, but in the latter case they are few. In beds of peaty soil in the open garden the stems are often fasciated, bearing from 30 to 132 flowers, which are of course relatively small. Grand varieties are *L. a. Wittei*, creamy white; *L. a. virginale*, white, with a pale yellow band; *L. a. rubro-vittatum*, with a heavy crimson band; and *L. a. platyphyllum*, with very broad and massive segments.

Very choice are *L. speciosum* and its numerous varieties. *L. s. album* is pure white, but *L. s. Kraetzeri* is the better of the two white forms, as the flowers are of good substance with a pale green band down the centre of each segment. The most handsome of the coloured varieties is *L. s. Melpomene*, having rich crimson flowers, heavily spotted and edged white. Others are indicated by such names as *L. s. roseum*, *L. s. rubrum*, *L. s. purpureum* and *L. s. cruentum*. For conservatory work *L. speciosum* and its varieties stand unrivalled.

The White Lily (*L. candidum*, see illustration) is the type of the genus, both names implying that the flowers are white. They, indeed, require neither painting nor gilding. It is *par excellence* the garden Lily, flowering in June, and extensively cultivated for garden decoration as well as for cut flower purposes. Its popularity is indicated by the several names applied to it, including Madona Lily, common White Lily, Bourbon Lily and St. Joseph's Lily. The double variety is much less ornamental. As the species develops its winter foliage in the autumn it should be planted as soon as received; and the bulbs when intended to be transplanted should be lifted as soon as the foliage dies down in July or August. For the illustrations of *L. candidum* and *L. longiflorum Harrisii* we are indebted to Messrs. J. Carter & Co., High Holborn, London. They should have appeared in our bulb number a fortnight ago, but some delay in procuring electros obliged us reluctantly to go to press without them.

MONIFIETH NURSERY.

THE nursery of Messrs. Laird & Sioclar, at Monifieth, on the sloping ground overlooking the Firth of Tay, is situated a little to the north of Dundee, and was established here about forty years ago. The nursery at Monikie belonging to the same firm is being broken up, as an eighteen acre field has been secured contiguous to the Monifieth nursery to accommodate the nursery stock, which is being rapidly transferred to its new quarters during the planting season. Mr. James W. Laird resides at Monifieth, and takes charge of the nursery there, while Mr. William P. Laird controls affairs at the seed shop in the Nethergate, Dundee.

On the old lawn in front of Mr. James W. Laird's residence at Monifieth, are some old and interesting trees and shrubs, including a fine bush of *Acer polymorphum atropurpureum*, 6 ft. high and 8 ft. wide. On the house itself is the finest piece of *Desfontainia spinosa* we have seen, measuring 8 ft. high and 6 ft. wide. It has been here for many years, and has been in bloom for weeks past. The scarlet tubular flowers are tipped with yellow at first, but soon change entirely to scarlet. A large plant of *Bridgesia spicata* is thriving well on the end of the house, and *Phlomis fruticosa* blooms in this mild northern clime. A fine piece of *Fabiana imbricata*, 8 ft. high, was killed by the severe winter two years ago. The Camperdown Weeping Elm, raised at Camperdown, near Dundee, overhangs the pathway at the gate, and is notable for its fine drooping habit, and its leaves, which are broader than those of the ordinary *Ulmus montana pendula*.

ORNAMENTAL CONIFERS.

The two leading features of Monifieth are forest trees and ornamental trees and shrubs, in great variety, which find their way all over the United Kingdom. Every part of the nursery is kept in clean and perfect order by a large staff of workers, and good management. The choice, ornamental Conifers constitute the bulk of the occupants of wide borders on either side of a broad walk, but many of the more popular are grown in quantity elsewhere in the nursery. *Cupressus lawsoniana* is represented by a large number of varieties of the best colour and habit, including the charming *C. l. Allumii*, of pyra-

midal habit and deep sea-green hue, *C. l. nana*, *C. l. erecta viridis*, and the silvery *C. l. albo-spica*, all of them being well represented. Beautiful and useful also are *Thuja vervaeneana*, *T. Lobbii* (8 ft. high), *Cupressus sphaeroidea variegata*, *Juniperus sinensis aurea* and *Cedrus atlantica glauca*. The two latter stand well on the Firth of Tay. The same may be said of *Thujopsis dolabrata* and its variegated variety.

The Retiosporas are equally as well-represented as the forms of *Cupressus lawsoniana*, and include *R. obtusa*, *R. o. nana aurea* (twenty years old, and forming spreading, dense tufts only 6 in. high), *R. o. aurea*, and *R. o. albo-variegata*, golden, and variegated, respectively. *R. tetragona aurea* is always very compact, and golden, and *R. filifera* is like whipcord. Hardy and useful are *R. squarrosa*, *R. plumosa aurea*, *R. p. argentea* and *R. p. albo-variegata*, the names of which indicate the colours or peculiarities of the same. *R. leptoclada* is always a dwarf and characteristic plant, suitable for borders and lawns. There are some handsome plants of the Golden Arbor-Vitae (*Thuja occidentalis aurea*, 5 ft. high. A curious and ornamental shrub is *Retiospora lycopodioides*, the branches of which are often fasciated and always dense in habit. The small shoots of *Cupressus nutkaeosis albo-variegata* are white, giving the bush a highly ornamental appearance.

In various parts of the nursery we noted some healthy batches of *Podocarpus koraiensis*, resembling a strong Irish Yew. Healthy trees of *Picea nobilis* and *P. grandis* are to be met with in different parts of the grounds. *Pseudotsuga Douglasii glauca* is the Colorado variety of the Douglas Fir, having glaucous foliage. There are some fine trees of *Sequoia gigantea*, and the weeping variety, *S. g. pendula*, also finds a place. A handsome and ornamental subject is *Abies Engelmanni glauca*; and the same might be said of *Picea concolor violacea* (a fine tree of which has been lifted recently and is fit to transplant, though 10 ft. high), *Picea magnifica*, and *Abies Morinda*, 6 ft. high. A strange looking plant is *Cryptomeria japonica spiralis*, of dense habit, and having branches like thick cord. *Juniperus japonica* is also of dense habit. A very uncommon tree is *Arthrotaxus cupressoides*. *Cupressus lawsoniana albo-variegata* is covered all over with small white branches, making it a useful subject for window boxes. *Fitzroya patagonica*, not often met with in collections, thrives satisfactorily here. Nor can we omit mention of the Deciduous Cypress. *Picea webbiana*, a beautiful Silver Fir is represented by a tree 30 ft. high. It is very far from being common in collections. There is also a beautiful specimen of the Golden Wellingtonia, 15 ft. high. *Pinus insignis* is a handsome Conifer that thrives on our sea coast up to a high latitude.

FLOWERING TREES AND SHRUBS.

Even as far north as Monifieth, the evergreen *Phillyraea vilmoriniana* proves quite hardy and happy. *Olearia Haastii* is also valued as a flowering evergreen bush. *Prunus Pissardii* runs up 6 ft. the first year from the bud and carries foliage of a rich dark purple. The purple-leaved Oak is valued for mixing with table decorations, as the foliage shows up well by contrast with a white cloth. Finely cut are the leaves of *Acer polymorphum dissectum*. The rich blue flowers of *Ceanothus Gloire de Versailles* are always serviceable.

Griselinia littoralis, *Laurus nobilis* and *Dipplopappus chrysophylla* are evergreens that seem quite as hardy and ornamental in the north as in the south. *Berberis Aquifolium* assumes a rich red hue in autumn, retaining it all the winter, and is much prized for decorations. The fact that bees puncture the base of the corolla of *Menziesia polifolia* and *M. p. alba* is evidence that they are not the desired visitors. The red berried *Cotoneaster Simonsii* is much valued for making ornamental hedges. Several species of Privet are grown in the collection, including the variegated *Ligustrum argenteo-marginatum* and the golden *L. ovalifolium aureum*. The round-leaved *Cotoneaster nummularia* grows well against a wall, and would probably do so in the open. Rhododendrons are grown in quantity in plantations 1 ft. to 2 ft. high, and well set with buds. The cut-leaved form of the Norway Apple is known as the Eagle's Claw, in allusion to the shape of the leaves. The variegated Mountain Ash, being laden with red berries, is highly ornamental. Here we noted a grand specimen of the Portugal Laurel in standard form, about 12 ft. high and as far through.

Cytisus scoparius andreanus grows and flowers well in this nursery.

Only two stocks are employed at Monifieth for the budding of Roses, namely—the Sweet Brier and the Dog-rose. The former is employed as a stock for *Gloire de Dijon* and other Tea Roses, while the Dog-rose is used for all the hybrid perpetuals. The latter is raised from seed, and we noted a large quantity of healthy stocks recently budded, as well as Tea Roses in a more advanced stage in the open, and full of vigour. Myrobalan stocks have just been budded with Plums. Fine bushes of *Veronica Travensii* are grown in some quantity, and *Rhododendron ferrugineum* is also grown in quantity. *Spiraea bullata* and *S. Bumalda* form bushy tufts about 6 in. high, and are still flowering freely. *Aralia Sieboldi* has survived many winters in sheltered positions. The leaves of *Prunus lusitanicus azoricus* take on a beautiful red tint in autumn and spring. *Abelia rupestris*, after being established for some years, is now about to flower in this northern latitude. It receives no protection whatever. *Ampelopsis Veitchii* is a popular but variable climber in the north. *Weigela Looymansii aurea* takes on a beautiful golden colour, and is well adapted for the front of shrubbery borders, or in beds on the lawn in almost any part of this country.

Herbaceous plants are grown to some extent, but they are an adjunct to rather than a feature of the place. *Gypsophila paniculata* is grown in quantity for the sake of mixing with cut flowers, of which there is a demand for decorative work of various kinds. The steel blue stems and bracts of *Eryngium amethystinum* and *E. oliverianum* are highly ornamental, and the plants are very easily managed—in fact they require only to be kept free from weeds, but otherwise to be left alone. *Aruodo conspicua* flowers in the open ground quite as freely as the Pampas Grass. The Edelweiss is still flowering in the open ground. Equally if not more rare is *Xerophyllum asphodeloides*, here known as Turkey's Beard. The ordinary run of herbaceous plants is also flowering. As might be expected, Chrysanthemums receive their due share of attention. They are grown in pots partly plunged in an open situation. Dahlias are represented by plantations of show, fancy, Cactus and decorative varieties. Those who have not seen Dahlias growing north of the Cheviots would be surprised to note the dwarf and bushy character of the plants and their sturdy appearance. About 18 in. to 2 ft. is a very common average height of Dahlias in the north. Sweet Peas are still in their summer garb, growing and flowering freely.

FOREST TREES.

The larger portion of the nursery is devoted to the culture of Conifers and deciduous trees for the planting of woods and forests. They constitute, in fact, the principal feature of Monifieth, and needless to say they receive the best of attention. Weeds are thriving luxuriantly in Scotland just now, but the beds and plantations here are kept scrupulously clean by a diligent staff of workers. Shelter is afforded by hedges of Holly, Beech and Hawthorn, kept in close and trim order. Ornamental Hollies are also grown in quantity, independently of the typical green form.

As the various plantations, according to age and convenience, are scattered about the nursery, we shall endeavour to mention them as we found them during a rapid survey of the place. All the trees of any size have been recently transplanted. We passed fine plantations of Scotch Fir, 12 ins. to 18 ins. high; Hazel used by planters to obtain rods for crate making; two-year old Douglas Fir in fine condition; one-year old Larch and two-year old Scotch Fir. The two latter Conifers were raised from native or home grown seed, about half a ton of Larch seed being sown. We noted healthy and clean trees of Larch 2 ft. to 3 ft. high. These plantations are repeated in other quarters, and amongst them one-year transplanted Larches are 18 in. to 24 in. high. Large plantations of Spruce have been once and twice transplanted. Pious Laricio has been taken in hand in earnest, many plantations already existing. Those that have been two years transplanted are healthy and vigorous. The Austrian Pine of the same age also grows in grand form, and no better will be got of the same age during the coming planting season. A plantation one year transplanted is also good. Sycamores raised from home and Continental seed show a

marked difference in the colour of the foliage, the former being reddish in colour and considered the hardiest, while trees from foreign seed are green. Seedling Oaks, two years old, are remarkably strong.

Very interesting are the beds of seedlings sown last spring. Oaks, Beeches, and Sweet Chestnut are about 6 ins. high, or the latter slightly over. The Conifers grow much more slowly, being comparatively tiny the first year from seed and very different from trees which have assumed the adult foliage. *Pinus austriaca*, *P. Laricio*, *P. sylvestris* (Scotch Pine) and Norway Spruces are only about two or three inches high. When they commence growth the second year they assume a much more vigorous growth. Intending planters would do well to see the above for themselves, and we can assure them courteous treatment from Mr. James W. Laird, who manages the Monifieth Nursery.

SOCIETIES.

RODMERSHAM GARDENERS.—August 25th and 26th.

THE institution of the Kent Championship Belt by Messrs. H. Caneil & Sons, of Swanley, has done an immense amount of good to horticulture. It has given a great impetus to the cultivation of fruit, vegetables, and flowers, and the degree of merit developed in the various competing exhibits has shown a brisk upward tendency.

This year the struggle for the county championship took place at the annual meeting of the Rodmersham Amateur and Cottage Gardener's Association at the Rodmersham Park on the above dates, through the kindness of Mr. Mercer. For the last few years the competition between Milton and Rodmersham has been very keen. Last year the coveted belt found a resting place at Rodmersham, but this time the Miltonians are the victors. Ever since the feature was instituted either Rodmersham or Milton has been acclaimed victor, other societies simply having to look on.

This year there were eleven entries in addition to the two societies named, Eynsford, Strood, Ash, Penshurst, Charing, Ightham, Linton, Milstead, and Westgate, but at the last minute Charing, Ightham, and Eynsford scratched. The competition is for ten varieties of vegetables, six dishes of fruit, and a stand of annuals or other hardy flowers arranged for effect.

For the rest, the exhibits coming from amateurs and cottagers were limited in number. Mr. W. Worsley scored a first for the best kept and cultivated garden, with 118 points. Mr. J. Allen taking a similar award for a smaller garden with seventy-seven points.

Amongst the gardeners Messrs. W. Saunders and Mr. T. Gordon were the most successful, a fair number of prizes falling to their share. Mr. W. Saunders received first prizes for three table plants, Tomatos, Beetroot, spring sown Onions, two bunches of Grapes, twelve Cactus Dahlias, twelve varieties of garden flowers, and Chinese Asters. The first prize for the collection of vegetables, presented by Messrs. Webb & Sons, Stourbridge, was secured by Mr. T. Gordon, with Mr. W. Saunders in the second place. In a collection of vegetables in which the prizes were presented by Messrs. Daniels Bros., Norwich, Mr. W. Worsley was adjudged to be first, and Mr. E. Day, second.

For a stand of twelve show Dahlias, open to the county, Mr. W. H. Drew, Rocabester, carried off chief honours, the second prize going to Mr. W. Terry, Bapchild. Six dishes of Potatos, shown by Mr. W. Saunders under this section of the schedule received premier honours.

Amongst the exhibits not for competition appeared a collection of fine Cactus Dahlias from Messrs. H. Cannell & Sons, of Swanley. Of the varieties staged, Starfish and Mrs. W. Noble were two of the most striking, although all of the blooms on view were perfect in form and colour, and of more than average size.

PERTSHIRE HORTICULTURAL.

THE annual two days show arranged for by this society was held in the City Hall, Perth. Compared with previous years there was a falling off in the number of entries, especially in the vegetable section. Messrs. D. & W. Croll, Dundee, exhibited

two stands of choice Roses. Messrs. Harley & Sons, Perth, had a lot of excellent pot plants on view, while Messrs. Dickson & Turnbull, Perth, showed a fine assortment of similar material; also forty varieties of Sweet Peas.

In the classes for pot plants Mr. J. Scobbie, Ruthven; Mr. J. Borthwick, Cherrybank; and Mr. A. Barclay, Almondbank, were the most successful exhibitors. Mr. J. Hepburn, Huntingtower, staged the prettiest window box, and Mr. F. Nicoll, Craigclowan, scored for table plants. Mr. J. Harris and Mr. G. Robinson, Fernhill, secured the leading awards for hand and table bouquets.

The model garden competition was an interesting feature, although there were only two entries. Both of the gardens submitted were of great merit, that of Mr. John McKenzie being adjudged the first. Mr. L. McAlister, Muirton Bank, thus received the second prize.

In the fruit section, Grapes were the most conspicuous feature, and seldom, indeed, is it that they have been shown in better condition, both amateurs' and gardeners' exhibits being above the usual standard. The contest practically lay between Mr. W. Little, Muirton Bank, and Mr. J. Leslie, Pitcullen, who divided the cream of the prizes between them, although Mr. T. Dobbin, Dalhousie, was also very successful.

ROYAL JERSEY AGRICULTURAL AND HORTICULTURAL.—

THE Triangle Park, Jersey, was the scene of one of the best shows ever held by the above society, and the energetic officials, Messrs. C. F. Le Feuvre and C. J. Nicolle, deserve all praise for their arduous labours. The entries numbered no fewer than 854, being an increase of upwards of 100 over those of last year. To house these three roomy tents were requisitioned.

The tent devoted to the groups and specimen plants was the centre of a good deal of attraction, for the material on view was capital. Here Mr. H. Becker, of the Imperial Nurseries, staged a fine lot of Dahlias and Asters. Mr. William Colchester, of Ipswich, had a trade exhibit of Ichthemic Guano, the stand being prettily decorated with plants.

Cut blooms were for the greater part accommodated in the second tent, where Mr. Philip Le Cornu showed some excellent Dahlias and Roses. The table decorations and the remainder of the cut flowers, together with the fruit and vegetables, occupied the third tent. Here Messrs. Joshua Le Cornu, High View Nurseries, showed a group of grand Dahlias, which were prettily set up with Ferns.

In the prize list notable exhibitors were Mr. E. G. Marett, who led the way for twenty-four and twelve show Dahlias, and twelve and six Roses; Mr. J. W. Aubin, who was first for twelve bunches of single Dahlias; Mr. J. Harper, who sent the premier stand of twenty-four Cactus Dahlias; and Mr. W. Norman who distanced all other competitors for twelve bunches of Pelargoniums.

Mr. J. J. Dupré was first for three bunches of Black Hamburgh Grapes, and also for three bunches of Grapes of any variety. Mrs. Bashford is also a successful grower and exhibitor of Grapes, for she was credited with firsts for one bunch of black, one bunch of white, and three bunches of Muscat of Alexandria.

GLASGOW AND WEST OF ENGLAND HORTICULTURAL.—September 1st & 2nd.

A GRAND show was got together on this occasion at Glasgow, the large St. Andrew's Hall, the Berkeley Hall, the Octagon Hall, and the South West Hall being all filled with the exhibits, which totalled over a thousand. The platform was tastefully decorated by Messrs. Austin & McAslan, 89, Mitchell Street, Glasgow. Great praise is due to the exertions of the capable secretary, Mr. John Coats.

Amongst the non-competitive exhibits Messrs. Dobbie & Co., Rothesay, had a large and varied exhibit of cut flowers, the leading features being Cactus and pompon Dahlias. Mr. M. Campbell, High Blantyre, showed a fine lot of cut flowers, including early Chrysanthemums. Mr. John Forbes, Hawick, also had cut hardy flowers in quantity; also samples of Carnations Buccleugh Clove, and Yuletide. Mr. M. Cuthbertson, Rothesay, staged a collection of cut hardy flowers and vegetables. Messrs. Smith & Simons, Kennishead Nurseries, had stove and greenhouse plants in good order. Mr. C.

Irvine, Jedburgh, sent Pentstemons and other cut flowers.

Messrs. J. & R. Thyne, of St. Vincent Street, the well-known firm of nurserymen and decorators, as usual, showed excellently well. Space entirely forbids further reviews, but we may just add that the show was an unqualified success throughout.

In the competitive classes Messrs. D. & W. Croll, Dundee, took the highest honours for twenty-four blooms of grand Roses, followed by Messrs. James Cocker & Sons, of Aberdeen, and Messrs. David Robinson & Co., Mossend Nursery, Helensburgh, in order of mention. Mr. Geo. Mair, Prestwick, was first for twenty-two spikes of Gladioli, Mr. M. Campbell taking a similar award for twenty-four blooms of Dahlias. Mr. A. Lister was first for Pansies.

Mr. David Wilson, head gardener to Hugh Steven, Esq., Westmount, Kelvinside, won the Corporation Silver Cup for a really excellent collection of plants in a well-sustained competition, and the same exhibitor was also signally successful in other classes.

The display of fruit was excellent. Here Mr. D. Murray, gardener to the Marquis of Ailsa, Culzean Castle, Maybole, came to the front for twelve dishes; the first prize for a second collection of the same magnitude going to Mr. D. Airdrie, gardener to J. H. N. Graham, Esq., Larbert. Mr. D. Menzies, gardener to J. A. N. Brown, Esq., Dunipace, was again successful for two bunches of Black Hamburgh, whilst Mr. J. Leslie, gardener to A. Coats, Esq., Pitcullen, Perth, was first for White Muscats.

There was a good array of amateurs' exhibits.

BATH HORTICULTURAL.—September 1st and 2nd.

A CONTINUOUS downpour of rain is not exactly conducive to the success of a flower show, and yet this is what the good people of Bath have had to contend with. As in previous years the exhibition was held in the Sydney Gardens, which are in every sense well adapted for the purpose. The number of exhibitors reached 240, including a large number of the best known growers in the south and west of England. Some 1,100 exhibits were contributed, which number was far in excess of that forthcoming in any previous year. The plant section was a remarkably good one, Fuchsias, which are always well shown, being especially good.

Mr. James Cypher, Cheltenham, staged a grand group occupying not less than 100 sq. ft. It was most artistically arranged, and consisted of Palms, Crotons, Orchids, Ferns, etc. in excellent condition. In the Dahlia classes some exhibits by Mr. Tresder of Cardiff came in for a good deal of attention. Mr. G. Humphries, Messrs. Keynes Williams & Co., of Salisbury, Messrs. Cray, of Frome, and Mr. A. Walters, Kensington Nurseries, Bath, were also successful exhibitors of Dahlias.

An exquisite collection of old fashioned garden Roses came from Messrs. Geo. Cooling & Sons, Bath. Mr. J. Mattock of Oxford, Mr. G. Garraway, Bath, and Mr. S. P. Budd, also of Bath, divided many of the prizes for Roses between them, all of them showing some capital material.

There were nearly 400 entries for fruit alone, and the competition was very keen, whilst the standard of quality was high throughout. Alderman Chaffin received a first for grand Grapes. The Rt. Hon. W. H. Long, M.P., staged the best collection of eight dishes of fruit. First awards also went to the following exhibitors in their several classes:—Mr. J. W. Heming, for Black Hamburgh Grapes; Mr. A. R. Bailey, for two bunches of Muscat of Alexandria; Mrs. Greaves, for a dish of nine Peaches; Mrs. C. Bayer, for a dish of nine Nectarines; and Mr. J. Duckett, for a green fleshed Melon.

In the open competition for a collection of twelve kinds of vegetables Lady Theodora Guest was returned first, followed by Mr. G. Garraway.

Cottagers' exhibits were in fair force, and some really good vegetables were staged among them. The Lady Theodora Guest was further successful in winning the special prizes for a collection of vegetables offered by Messrs. Webb & Sons of Stourbridge, and Messrs. Jas. Carter & Co., of High Holborn.

PAISLEY HORTICULTURAL.—September 2nd and 3rd.

THIS society held its annual show on September 2nd and 3rd in the beautiful Geo. A. Clark Hall. This

is a good place for such purpose, being different to most halls, and, having plenty of light, plants when shown in it are seen to great advantage.

The principal feature of the show was undoubtedly the table of plants arranged for effect. We have seldom seen a finer table than the honorary exhibit of Mrs. Coates, Ferguslie (Mr. Duncan Macdonald, gardener), it was a noble group of plants splendidly arranged and well finished. The Palms were grand specimens, clean and healthy. The Crotons, Dracaenas, &c., were well coloured. Liliiums (various), Celosias, Gloxinias, and Hydrangea paniculata were intermixed with Caladiums. Ferns had a most pleasing effect, and we congratulated Mr. Macdonald upon his exhibit, for he far outvalled the competing groups, which were not to be despised.

Mr. F. Davidson, Nurseryman, Paisley, and Mr. James Watkins were the other principal exhibitors of plants, such as Ferns, Palms, and table plants were well represented, and brought forth splendid competition.

In the classes for cut flowers, Gladiolus, Roses, Dahlias, Marigolds, Ploxes, &c., were well to the fore. The prizes fell to Mr. Hugh Dickson, Belfast, and Mr. Campbell, High Blantyre, who showed a good collection of cut flowers, as did also Mr. Alex. Lister, of Rothesay.

Among the vegetables were good grand examples of Leeks, Onions, Cabbages, Parsnips, Turnips, Celery, and Potatos, the prizes offered for a collection being secured by Messrs. J. Laing, Leech, and Leckie in the order named. Amateurs showed well in the classes allotted to them.

Fruit was not at all well represented. A couple of good bunches of Black Hamburgh were staged, but outdoor fruits were small, although some decent Peaches were shown.

New competitive exhibits came from Mr. R. Anderson, Paisley, who was showing cut herbaceous flowers and Sweet Peas; Mr. George Mair, Prestwich, who had Gladioli; and T. Smith & Son, Stanraer, with Roses. Messrs. Croll, Dundee, Hugh Dickson & Son and T. Smith & Son, took the prizes for thirty-six Roses in the order named.

NATIONAL CHRYSANTHEMUM.—

September 7th, 8th, & 9th.

THE Chrysanthemum season opened on Tuesday, September 8th, at the Royal Aquarium, when the National Chrysanthemum Society held its September show. Early Chrysanthemums were in fair quantity, but Dahlias were the chief feature. Gladioli were also good.

In the classes for Chrysanthemums Mr. Eric F. Such, the Royal Berks Nursery, Maidenhead, received the first award for twenty-four bunches in eighteen varieties. He was the only exhibitor in this class. There were three entries for twelve blooms of Madame Desgranges. The winning stand came from Mr. B. Calvert, gardener to Col. A. Houlton, Hallingbury Place, Bishop's Stortford, who had a splendid lot. Mr. Chas. Crooks, gardener to the Dowager Lady Hindlip, Hadsor House, Droitwich, was second; and Mr. W. Perrin, gardener to C. W. Richardson, Esq., Fairgreen House, Sawhridge-worth, was third. In a class for twelve blooms of any coloured Chrysanthemum, Madame Desgranges excepted, Mr. B. Calvert again bore off premier honours with grand samples of G. Wermig. Mr. James Agate, Havant, and Mr. W. J. Godfrey, Exmouth, Devon, were awarded special prizes. Mr. Godfrey had good blooms of varieties Lady Esther Smith, Barbara Forbes, Queen of the Earlies and Emily Silsbury. Six bunches of three blooms each of any yellow variety were best shown by Mr. Calvert, who had Geo. Wermig and Mrs. Hanking. Mr. E. F. Such was first for twelve bunches, three blooms in each, of pompon varieties, and was followed in the second place by Miss R. Debenham, St. Peters, St. Albans. Mr. T. S. Williams, 4a, Oxford Road, Ealing, won the first prize.

In the amateur's classes Mr. D. B. Crane, 4, Woodview Terrace, Archway Road, Highgate, had the best six blooms of any large flowering sort. Miss R. Debenham led the way for twelve bunches of any varieties set up with foliage. Mr. D. B. Crane fell into the second position here.

The class for a collection of cut flowers of Gladioli called forth two exhibits. The first award went to Messrs. J. Burrell & Co., Howe House Nurseries, Cambridge, who had a superb exhibit of this hand-

some flower. The spikes and the individual flowers were huge. Many of the leading varieties were staged. A much smaller exhibit won the second prize for Messrs. Harkness & Sons, Bedale, Yorks.

The nurserymen's classes for Dahlias were well patronised. Mr. J. Walker, Thame, Oxon, scored for forty-eight show and fancy blooms in thirty-six varieties. He had such varieties as Maud Fellowes, Colonist, Queen of Autumn, Mrs. C. Noyes, T. W. Girdlestone, (self) Chieftain, Mrs. J. Greaves, Mrs. Gladstone and Dorotby (self). Mr. S. Mortimer, Rowledge, Farnham, was second; and Messrs. Keynes, Williams & Co., Salisbury, third.

There were five entries for thirty-six show and fancy blooms distinct. Here Mr. S. Mortimer headed the list, followed by Mr. J. Walker, and Mrs. F. W. Seale, Vine Nurseries, Sevenoaks, in order of mention.

Six entries likewise appeared for twenty-four blooms distinct. Here Mr. G. Humphries, Chippenham, led; the second prize falling to Mr. J. T. West, Tower Hill, Brentwood. Mr. G. Humphries also had the best twelve blooms, and Mr. J. R. Tranter, Henley-on-Thames, the second best.

In the amateur's and gardener's classes for show and fancy Dahlias, Thomas Hobbs, Esq., Easton House, Marks Road, Bristol, was first for twenty-four blooms, distinct; Mr. C. F. Kees occupying a similar position for six blooms. Mr. G. Wyatt, gardener to G. Hilditch, Esq., Waldegrave Park, Twickenham, had the best exhibit of six bunches of pompon varieties.

In the open classes for pompon varieties Messrs. Keynes, Williams & Co. were the winners of the first prize for twenty-four bunches. Lady Blanche, Emily Hopper, Madge and Arthur West were some of the most noticeable forms. Mr. C. Turner, Slough, was a good second. In the smaller class for twelve bunches of similar material Mr. J. T. West was first, and Messrs. J. Burrell & Co. second. Mr. E. F. Such staged the winning lot of twelve bunches of single sorts with a very even and handsome lot.

Messrs. J. Burrell & Co. won another well-merited first for eighteen bunches of Cactus Dahlias, distinct. Messrs. Keynes, Williams & Co. were second. T. W. Girdlestone, Esq., Sunningdale, Berks, had the winning stand of twenty-four bunches of single varieties; Mrs. F. W. Seale coming in second. Mr. J. T. West was first for twelve bunches of Cactus forms arranged with their own foliage. Six bunches of like material, but only composed of three blooms each, came from Mr. G. Wyatt, gardener to G. Hilditch, Esq., Waldegrave Park, Twickenham.

The miscellaneous exhibits were numerous and good.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., received a Silver Gilt Medal for a grand oblong group of cut Dahlias and foliage plants. The central feature was a cone some 6 ft. in height, four smaller cones appearing at the corners.

A Silver Gilt Medal also fell to the lot of Mr. H. J. Jones, Ryecroft Nursery, Lewisham, for a prettily arranged group of early flowering Chrysanthemums and tuberous Begonias. The flowering element was well set up with Ferns, Palms and other foliage plants, and the effect was excellent.

Mr. John Green, Norfolk Nursery, Dereham, had a fine tableful of cut Dahlias. The blooms were good and were well arranged (Silver Gilt Medal).

Mr. J. H. Witty, Nunhead Cemetery, exhibited a grand lot of early Chrysanthemums (Silver Gilt Medal).

Mrs. F. W. Seale received a Silver Medal for a table of Epergnes well and prettily filled, and cut blooms of show and fancy Dahlias. A Silver Medal also went to Mr. J. R. Chard, Stoke Newington, for a handsome floral table.

Silver Medals were awarded to Messrs. H. Cannell & Sons, Swanley, Kent; and Mr. Norman Davis, The Vineries, Framfield, Sussex, both of whom had nice tables of cut Chrysanthemums.

Mr. Eric F. Such also had a con-competitive group of cut hardy flowers, including Dahlias in quantity.

Messrs. S. Spooner & Sons, Hounslow, staged a grand lot of Apples. The fruit throughout was excellent (Silver Gilt Medal). The Ichthemic Guano Co., Ipswich, had their usual imposing trophy stand which was this time prettily decorated with Ferns, Hydrangea paniculata and Liliiums. A Silver Medal went to Mr. W. Wells, Earlswood Nursery, Reigate, for a table of bunches of cut Chrysanthemums. Mr.

J. T. Williams had a very pretty floral table (Silver Medal). The Permanent Nitrate Committee had an exhibit of nitrate of soda of 95 per cent. and 96 per cent. purity, also a descriptive stand demonstrating its value. Messrs. Reid, Beckenham Hill, received a Bronze Medal for cut flowers.

ROYAL CALEDONIAN.—September 8th & 9th.

By way of supplementing the list of awards recorded in our telegram of last week, we now place on record a few more of the prizes distributed over the 2,300 entries at this important show. Splendid weather prevailed during the two days of the show so that it was largely patronised by the public, and no doubt the gate money will total up well. To put it briefly the show was the largest and finest that has been held here for many years by the Royal Caledonian Horticultural Society.

FRUIT.—The leading award for twelve dishes of fruit grown entirely out of doors was taken by Mr. J. Day, gardener to the Earl of Galloway, K.T., Garliestown. He had two dishes each of Pears, Apples, Peaches, Plums, Nectarines, a dish of Cherries and another of Figs. Mr. J. Nicholson, gardener to J. W. Milles, Esq., Stewardstone Lodge, Essex, took the second place with smaller fruits in greater variety. Mr. T. H. Cook, gardener to the Earl of Wemyss, Gosford, took the third position. Mr. J. Mattison, gardener to Messrs. Craig, Currie, showed the best two bunches of Black Hamburgh Grapes, which were large in bunch and berry. He was followed by Mr. J. Menzies, gardener to J. A. Harvie Brown, Esq., Dumpace. Mr. J. Sutherland, gardener to T. L. Learmouth, Esq., Polmont, came in third with well formed bunches.

Mr. P. Macdonald, gardener to J. C. McEwen, Esq., Inverness, had the best bunch of Muscat of Alexandria which was large and beautifully finished. Mr. D. Kidd, gardener to Lord Elphinstone, Musselburgh, was second. Mr. J. Menzies came to the front for one bunch of Black Hamburgh, beating Mr. S. Paterson, gardener to Messrs. Younger, Alloa. Mr. P. Hunt, gardener to H. H. Norie, Esq., Murrayfield, led the way for one bunch of Alicante. Messrs. Wm. Murray & Son, Polmont, were second; and Mr. J. Leslie, gardener to A. Cates, Esq., Perth, was third. Mr. A. Hutton, gardener to G. Keith, Esq., Montrose, took the lead for a bunch of Alnwick Seedling which was handsomely finished, the bloom on the berries being of a rich blue-black. Mr. Thos. Lunt, gardener to A. Stirling, Esq., Dunblane, was second with a somewhat smaller bunch. Mr. D. McPherson, gardener to Miss Raffin, Mayfield, led the way for a bunch of Gros Colman, followed by Messrs. W. Murray & Son. Mr. D. Airdrie, gardener to J. H. A. Graham, Esq., Larbert House, had the best bunch of Lady Downes, the berries of which were handsome. He was followed by Mr. J. Day, who came to the front with a grand bunch of Gros Maroc. Mr. L. McLean, gardener to D. Thomson, Esq., Alloa, came in second but beat all his rivals for a bunch of any other white Grape, showing Buckland Sweetwater handsomely. Mr. Wm. Williamson, gardener to J. H. Rigg, Esq., Tarvit, was a good second. Mr. T. Sutherland had the finest flavoured black, showing Madresfield Court. Mr. J. Leslie was second. Mr. D. Murray, gardener to the Marquis of Ailsa, Mayhole, had the finest flavoured white in Muscat of Alexandria. Mr. W. Rutherford, gardener to D. Graham, Esq., Bridge-of-Allan, being second. The black Grapes with the finest bloom were shown by Mr. J. McPherson and Mr. J. Day, respectively, Alicante and Gros Maroc being the varieties shown.

Mr. D. Kidd showed the best Queen Pineapple, beating Mr. D. Murray. Mr. Malcolm McIntyre, gardener to Sir Chas. Tennant, Bart., The Glen, Innerleithen, received the first award for any other Pineapple. Mr. A. Richardson, gardener to J. R. Forman, Esq., Craig Park, Ratho, showed the best green Melon, Mr. J. Waldie, gardener to W. H. Dobie, Esq., being second. Mr. A. Richardson again came to the front for a scarlet-fleshed Melon. The finest Figs were shown by Mr. J. Morrison, gardener to Mrs. N. Hamilton Ogilvy, Archerfield. Mr. F. Harris, gardener to Lady H. Somerset, Ledbury, had the finest Peaches, being large and richly coloured. The finest Nectarines were shown by Mr. T. Lunt, in strong competition. Mr. D. Mackay, gardener to A. Hope, Esq., Liberton, was first for Apricots. Mr. Wm. Laing, Mr. J. Harper and Mr. J. Day took all the

leading prizes for Plums, which were abundant. Mr. James Gibson, gardener to E. W. Watts, Esq., Devonhurst, Cbiswick, took the lead for a collection of twelve varieties of Apples; Mr. J. F. McLeod, gardener to J. Pierpont Morgan, Esq., Dover House, Roehampton, was a good second. Mr. J. Day had the best collection of Apples grown in Scotland. The best six varieties of Apples were shown by Mr. J. Cairns, gardener to the Earl of Home, The Hirsell, Coldstream. Mr. Jas. Gibson staged the best six dishes of dessert Apples, the best Kerry Pippin, Court of Wick, and others. Leading prizes for Apples were also taken by Mr. D. Murray, Mr. F. Harris, Mr. G. Edgar, Mr. J. Harper, Mr. R. J. Hamill (the two latter from Jersey), Mr. W. Williamson, Mr. J. Ovens, Mr. J. Matheson, Mr. A. McComb, Mr. G. Isaacs, Mr. J. F. McLeod, Mr. J. Cairns and Mr. J. Nicholson.

Mr. J. Harper, Jersey, tabled the best collection of twelve varieties of Pears, which were good though not yet ripe. Mr. James Gibson made a very good second, his fruits being much clearer skinned. Mr. D. Murray exhibited the best six dishes of Pears grown in Scotland. Mr. J. McIntyre, gardener to Mrs. Gurney Pease, Darlington, showed the best Jargonelle Pears. Mr. J. Harper had the best Williams Bon Chrétien, the best Beurré d'Amanlis and Louis Bonne of Jersey. Mr. J. Gibson was first for Marie Louise.

The first prize for a group of twenty-four evergreen shrubs was taken by Messrs. R. B. Laird & Sons, Frederick Street, Edinburgh, who showed choice Conifers, Olearia Haastii, Sweet Bay, variegated Hollies, Box, etc. Mr. D. Mackay secured the first award for six table plants.

VEGETABLES.—The leading award for six Cauliflowers was taken by Mr. J. Waldie, who was followed by Mr. Wm. Galloway, gardener to J. H. Ford, Esq., Liberton. The best French Beans were shown by Mr. D. Logan, Coldstream. Mr. W. Harper, gardener to J. R. S. Richardson, Tulliehutton House, Perth, was first for Scarlet Runners. Mr. J. Waldie was an easy first for a collection of vegetables showing fourteen kinds. He was followed by Mr. A. Dickson, gardener to M. G. Thorburn, Esq., Glenormiston. Mr. W. Wilson, Musselburgh, was first for Cabbages in heavy competition, his specimens being very hard; he was also first for Savoys. Mr. J. Waldie was first for Celery. Mr. James Gibson had the best Parsnips. The best Carrots were shown by Mr. C. Davidson, Pencaitland. Mr. John Hood, gardener to Miss Baillie, Dryburgh House, St. Bothwells, led the way for twelve Leeks. The best twelve Onions were shown by Mr. D. T. Mackinlay, Ampthill, Beds. Mr. A. Angus, gardener to Lord Hamilton, Dabyell, was second, and Mr. J. Gibson took third place. Mr. John Hood showed the best six dishes of Potatoes, which were clean and good.

TRADE EXHIBITS.—By an unfortunate oversight last week we omitted to mention two large exhibits made by Mr. John Forbes, Buccleuch Nurseries, Hawick, N.B. In the larger of the two exhibits he had a collection of 200 blooms of Carnations in 100 varieties, including the famous Yule-tide, the deliciously fragrant Buccleuch Clove, and the charming Countess Cowpar, the two latter being border varieties. He also had rich collections of Phloxes, Hollyhocks, Pentstemons, East Lothian Stocks, Cactus, decorative and Pompon Dahllas, Cannas, &c. The second collection consisted chiefly of the prize strain of Hollyhocks grown at Hawick. His exhibit in the competitive class was admitted to be very fine both in the matter of quality and arrangement. The herbaceous plants were extremely varied in character.

Messrs. James Cocker & Son, Aberdeen, independently of their grand exhibit in the competitive class, staged another, scarcely inferior in the matter of variety, though the arrangement was less effective. Phloxes, Gladioli, Montbretias, Chrysanthemums, perennial Asters and Roses were the more conspicuous subjects in this collection.

Messrs. D. & W. Buchanan, Forth Vineyards, Kippen, Stirling, exhibited nine baskets and twenty four bunches of grapes decorated with their well-known coloured Vine leaves. Cannon Hall Muscat, Gros Colman, Alnwich Seedling, Cooper's Black, and Gros Guillaume were staged in grand form.

Messrs. Page Brothers, Liberton, exhibited a fine collection of Tomatos most neatly arranged in market baskets. The variety mostly grown is a selection of their own, and the fruits were all graded according to size. They also had Vegetable Marrows and

Cucumbers, and received a First-class Award. They evidently understood both the cultivation and the most effective way of displaying the fruits. Besides their large group of Conifers Messrs. R. B. Laird & Sons, Edinburgh, also had a table of smaller specimens brightened with cut flowers of Lillies, Dahlias in the various sections, Hedera Helix madeirensis variegata and herbaceous plants.

Messrs. Geo. Bunyard & Co., Maidstone, staged a collection of Apples and Pears in their usual excellent style. Gascoyne's Seedling, Lady Sudely, Worcester Pearmain, Duchess of Gloucester, and Emperor of Alexander Apples were grandly coloured. They also had magnificent dishes of Dr. Jules Guyot and Beurré Mortillet Pears.

Mr. J. Hudson, gardener to Leopold de Rothschild, Esq., Gunnersbury House, Acton, showed twenty one varieties of Water Lillies, including the best and newest.

GARDENERS ON HOLIDAY.

ON the Friday morning after the show of the Royal Caledonian Horticultural Society at Edinburgh last week, a number of gardeners, judges, and others connected with the annual competition met by appointment at the Royal British Hotel, as the guests of Mr. David W. Thomson, of 24, Frederick Street and Windlestrawlee Nursery, who engaged a brake to conduct the party to the Forth Bridge, which is now one of the principal sights of the city and its neighbourhood. Besides the generous and courteous host, the party included Mr. J. Hunter, Lambton Castle, Fence Places; Mr. Nathaniel Barnes, gardener to the Duke of Westminster, Eaton Hall; Mr. H. E. Gribble, gardener to the Marquis of Londonderry, Wynyard Park; Mr. David Murray, gardener to the Marquis of Ailsa, Culzean Castle; Mr. A. Outram, of Messrs. Sutton & Sons, Reading; Mr. H. J. Jones, of Ryecroft Nursery, Lewisham; Mr. John Melville, of Finshury Park, London; and Mr. J. Fraser.

The route taken was by the Dean Bridge and Cramond Bridge, passing the Barnton estate and Dalmeny Park, the latter having been brought into prominence last week by the visit of the Duke and Duchess of York. The Dean Bridge spans the Water of Leith in one of the busiest thoroughfares of Edinburgh, and the water, trees, and fine buildings overhanging the precipices on either side constitute a magnificent spectacle of nature and art. Reaching the country the gardeners could not but admire the marvellous fertility of the land either for market gardening or farm crops. Celery is grown in long beds on the American principle. The woods and fine wall of about seven miles in length, surrounding the Barnton estate, and built of dressed stones, afforded matter for much comment. Unfortunately for the estate and gardening, the grounds or part of them are now used as a golf course by a club having fine buildings. Grand scenery was again witnessed at Cramond Bridge, which crosses the River Almond, which here flows through a rocky gorge, overhung with lofty Beeches and other trees.

The woods and enclosures of Dalmeny Park, the residence of Lord Rosebery, next engaged attention, the high trees overhanging the road in places greatly enhancing the pleasure of travellers. They consist largely of Oaks, Beeches, Elms, Cherry, Sycamore or Scotch Plane, and Scotch Firs. Dalmeny House is a modern structure, but the original structure known as Barnhogle Castle, previously in ruins, has been restored on the old Scotch baronial style. It stands on a rock on the Firth of Forth, where it is a conspicuous object. Lord Rosebery keeps his library in the castle.

The Forth Bridge having been reached, the party proceeded to view the bridge at close quarters by means of a steamer lying alongside of the quay. On the return of the steamer the party partook of luncheon at the hotel close by, and soon after commenced the return journey. When Cramond Bridge was again reached another route was taken, passing Barnton estate on the right and Dalmeny Park on the left. At one point on the road Cramond Kirk was passed, where one of the ancient Scottish kings lies buried. The road next descended to the mouth of the little River Almond, whence a fine view of Barnhogle Castle could be obtained. In the Forth itself lies Cramond Island or Inch, with the fortified Inchkeith a little further off. On the opposite side of the river the land gradually rises into the Ochil Hills extending

along the southern littoral of Fife. The view of the water, woods, and mountains obtained at this and other points along the broad waters of the Firth of Forth is picturesque and romantic.

Soon after the journey was resumed a tower in a wood to the right was pointed out as having been built by a gentleman who named it Rest-and-be-thankful. As the higher ground was reached a fine view of the modern Athens was obtained, including Fettes College, Calton Hill, National Monument, Edinburgh Castle, Salisbury Craigs, Arthur's Seat, &c., all towering above the city, which continues to expand on every side.

The party again touched the Forth at Granton Harbour, and paid a short visit to the Royal Forth Yacht Club, of which Mr. D. W. Thomson is a member. It is the finest of its kind in Scotland. Fine views of the river and the Fife hills on the opposite shore were also obtained from here. Away on the right the obtusely conical mass of the Bass Rock, one of the few haunts of the Solan-geese in the British Islands, was seen. The Royal British Hotel was reached before dusk, after a very pleasant outing under the guidance of Mr. Thomson.

SCUTELLARIA MOCINIANA.

PAYING a visit to an old friend a few days ago, who has charge of a garden noted for its rich collection of rare plants, I observed in passing through a greenhouse a very pretty shrubby plant bearing terminal, erect racemes of bright scarlet tubular flowers, each flower having its tubular corolla about 1¼ in. in length, with a small lip, the inside of which is yellow. This Labiate being a stranger to me, I enquired its name, and upon being shown the label I observed it marked *Scutellaria mociniana*. Being curious to know a little more about this genus I, as do other GARDENING WORLD readers, consulted Nicholson's *Dictionary of Gardening*, not to learn the derivation—that I learnt from the pages of the GARDENING WORLD a few months ago, although I really forget whether a round dish or square saucer was meant by the disputants. I fear I'm wandering from my text and to return. It is said by Nicholson to be a native of Mexico, and is described as one of the most beautiful of stove or warm greenhouse flowering plants. Williams, in his *Choice Stove and Greenhouse Plants*, speaks of this plant as being superb for drawing room decoration. My admiration of this beautiful flower led me to break the tenth commandment, and also my friend to break me off a few cuttings.—A. P.

THE COMPOSITION OF HARICOTS, LENTILS, PEAS.

THE analysis we made regarding Haricots, Lentils, and Peas, are epitomized in the following table:—

| | HARICOTS. | | LENTILS. | | PEAS. | |
|--|-----------|-----------|-----------|-----------|-----------|-----------|
| | Min. p.c. | Max. p.c. | Min. p.c. | Max. p.c. | Min. p.c. | Max. p.c. |
| Water..... | 10'00 | 20'40 | 11'70 | 13'50 | 10'60 | 14'20 |
| Nitrogenous substances | 13'81 | 25'16 | 20'32 | 24'24 | 18'88 | 23'48 |
| Fatty „ | 0'98 | 2'46 | 0'58 | 1'45 | 1'22 | 1'40 |
| Sugary and Amylaceous subs. | 52'91 | 60'98 | 56'07 | 62'45 | 56'21 | 61'10 |
| Cellulose..... | 2'46 | 4'62 | 2'96 | 3'56 | 2'90 | 5'52 |
| Ash..... | 2'38 | 4'20 | 1'99 | 2'66 | 2'26 | 3'50 |
| Average weight of 100 grains in grammes. | 20'00 | 134'60 | 2'49 | 6'26 | 15'46 | 50'00 |

HARICOTS.—The minimum of nitrogenous substances and the maximum of fatty, as indicated above, are only met with exceptionally in very big Spanish Haricots. In the case of all the others studied, white or coloured, the variations are less marked and resemble those obtained with Lentils and Peas. The average maximum weight of the grain decreases almost one half. The Germs, as with Beans, are very nitrogenous and relatively poor in fat.

LENTILS, with the exception of cellulose, are much the same as Beans. Egyptian Lentils, like Beans of similar origin occupy the first place as regards nitrogen. Auvergnian Lentils, almost as small as the Egyptian, are more nitrogenous than Bohemian, Spanish, Moravian and Russian, the average weight of which is twice as heavy.

PEAS.—The different varieties are somewhat uniform in composition and more like Lentils than Haricots. Imperfectly developed Peas are more nitrogenous than Peas gathered when quite mature;

this fact was noted in 1856 by Poggiale. It will be interesting to recall this to manufacturers and consumers, now that preserved Peas occupy such an important place in alimentation.

Haricots, Lentils, and Peas resemble Beans in acidity; the hull only amounts to seven to nine per cent., much less than Beans. The proportion of resisting cellulose does not exceed thirty per cent. in the hulls of Haricots and Lentils, whereas in Peas, like Beans, it attains forty-eight per cent.; these last contain more cellulose than Lentils and Haricots. Only in the decorticated seeds is less variation found. Cellulose decreases, and fat and nitrogen increase; there are also more mineral substances and as a rule the hulls give less ash when incinerated than the kernels. In equal weights the broken Peas of commerce are thus more nutritious than ordinary dry Peas. Peas, Haricots, and in particular Lentils keep for a long time without change in their chemical composition. They inflate considerably in water at the ordinary temperature. In the year after harvest the absorption of water attains one hundred per cent. in twenty-four hours, but afterwards absorption is slower and the proportion less; the kernel is dryer, darker, more corneous and less permeable.

The area occupied by Beans, Haricots, Lentils and Peas in France is very slight, not exceeding 0.65 per cent. of the total surface of the territory. Thence the necessity of onerous foreign imports (in 1895 more than £920,000). It seems that these leguminous plants which through their large proportion of nitrogen give such resources to alimentation ought to be cultivated much more extensively as they are in Belgium and Germany.—*Comptes Rendus*, July, 1897.

GARDENING MISCELLANY.

TRACHELOSPERMUM JASMINOIDES ANGUSTIFOLIUM.

Most gardeners are familiar with the more common and typical form of the plant, usually grown as a greenhouse subject. The narrow-leaved variety is much hardier, for it has grown and thriven against a wall at Kew for many years past. The leaves are very densely arranged, completely covering the wall. The flowers, produced in trusses, are creamy with a golden yellow centre, and forcibly remind one of the fragrance of a Clover field.

MICHAUXIA CAMPANULOIDES.

I NOTICED a very fine spike of this remarkable plant in Mr. John Forbes' Nurseries at Hawick lately. It was over 8 ft. in height, much branched, and carried, I was told, over 300 flowers, one half of which at least were in full bloom when I saw it. The flowers are white, slightly tinged with purple on the outside of the petals, 4 in. across, drooping, wheel-shaped, and the petals being curled back give it a curious appearance. It is certainly well worth growing, and prefers rather a dry position, being liable to damp off in winter.—*W. S.*

SHANKING OF GRAPES.

AFTER all that has been written on this subject there remains a widespread ignorance as to its causes and prevention. There are most likely more than one set of conditions which tend to bring about this unfortunate result, annoying alike to employer and cultivator. Having a deeply-rooted conviction that it is more often due to over dryness at the roots of the Vine, I have frequently given expression to it—in one instance this season with the most satisfactory results to a neighbour, who has had more or less trouble from the shanking of his Grapes for some time. Acting upon the hint he has watered his Vine borders more copiously this season than had been his custom, and recently he had the pleasure of showing me a house of Grapes without a single shanked berry in it.—*W. B. G.*

QUESTIONS AND ANSWERS

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Dimensions and plan of a Tennis Court.—*Inquirer*: The dimensions of the court will vary according to

the number of players. We shall first give the dimensions for four players. The plan is that of a parallelogram. The extreme length of the court should be 78 ft. Lay down a straight and tight line to guide you in marking off the court with a thin paste made of whitening and water. But peg out the whole before you commence with the whitening. The base line at either end of the court should be 36 ft. long. When the two sides and the two ends are marked off, find the centre and mark it off where the net should be fixed up, right across the whole width. The service lines should then be marked off at 18 ft. from the base lines at either end of the court. Then from one service line to the other, mark off a line right through the middle of the court longitudinally. This will be 42 ft. long and is termed the "half court line." The court is now marked off so that you may whiten the lines. If you desire a size for two players only, take off 4½ ft. from either side of the court, thereby reducing the base lines to 27 ft. in length. Both sizes of tennis court may be marked on the grass for the convenience of two or four players as may be desired.

Preparing Strawberries for forcing.—*H. H.*: You may succeed very well yet, but we must say that they should have been put into 6in. pots some time in August, the earlier the better, so as to let them fill their pots with roots before winter. Use good, substantial loam, of a turfy character and rather heavy than light. Some bone meal and wood ashes might be mixed with the soil now, and you could feed the plants with liquid manure, twice or three times a week, if not too strong, after the fruits have set. We should not advise you to begin forcing very early seeing that the plants must now be late in getting the pots filled with roots. If you put the first batch into heat about Christmas (which is indeed early) you may expect ripe fruit sometime in March according to the heat you apply. You must not give the plants a higher temperature than 50° till the fruits are well set, after which you can hurry them by giving more heat. Stand the plants as near the glass as possible. If you are in a smoky locality there may be some danger of the flowers not setting in the case of early batches. You may plunge the pots in coal ashes or cocoanut fibre in the cold frames or even out of doors until you require them; if in frames give plenty of ventilation always. Batches put in heat about February and March will come on much more rapidly than those put in during winter. Royal Sovereign is the best of the four you name for forcing.

Vine Leaf Perforated.—*W. B. G.*: We have no doubt that the injury is due to insect attack. We frequently receive leaves of some sort or other perforated in the same way, particularly Peach leaves. There are several large, or relatively large weevils of black and gray or clay colours that infest gardens and hothouses, either of which may be found outside or inside. The black Vine Weevil (*Otiorhynchus sulcatus*), is, perhaps, the most frequent under glass. They are all nocturnal in habit and have hard wing cases, but neither of them fly. They hide during the day under boards, in crevices or cracks in walls from which the mortar has fallen out. They come forth at night and climb up the tree stems or Vine rods and gnaw the leaves, or sometimes the stems, flowers, and buds. If you find similar damage to your Vines or Peaches in future, lay a white cloth on the floor of the house beneath the same; come in at night with a lantern and turn the light suddenly upon the foliage; tap the stems at the same time, and if any weevils are present they will drop on the cloth, where you can catch them before they escape. Cement all cracks and cranies in the walls and clear away every kind of rubbish in the house that affords any shelter for the depredators, and you should soon be able to get rid of them.

Names of Plants.—*W. C.*: 1, *Matricaria inodora* flore pleno; 2, *Leycesteria formosa*; 3, *Aster diffusus* horizontalis.—*J. C. S.*: 1, *Origanum Tournefortii*; 2, *Abies magnifica*; 3, *Amaryllis Belladonna*.—*A. W.*: 1, *Oncidium excavatum*; 2, *Oncidium incurvum*; 3, *Cypripedium harrisianum*.—*A. L.*: 1, *Tropaeolum tuberosum*; 2, *Jasminum officinale*; 3, *Cotoneaster microphylla*; 4, *Gypsophila paniculata*; 5, *Hydrangea paniculata grandiflora*; 6, *Pernettya mucronata*.—*Alex. Robertson*: 1, *Selaginella emiliana*; 2, *Selaginella uncinata*; 3, *Pteris straminea*; 4, *Adiantum Capillus-Veneris* var.; 5, *Aspidium falcatum*.

A Special Offer to Readers of THE GARDENING WORLD. 25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER
 { INFORMATION } ISSUED.
Size of Encyclopædia: 9 by 11½ inches. 656 Pages

It contains

MANY MAGNIFICENTLY ENGRAVED COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

18997. COUPON.

OGILVIE'S ENCYCLOPÆDIA OF
USEFUL INFORMATION,
AND WORLD'S ATLAS,
PRICE 25s.

HYACINTHS, for Pot Culture, with fine handsome spikes.

One each of twelve named varieties, 5s. 6d.

Do., do., un-named, in a good variety of colours, per dozen, 4s.

HYACINTHS, Dwarf White Roman, for Early Forcing.

Per 100, 10s. 6d. and 15s.;
Per doz., 1s. 6d. and 2s. 3d.

HYACINTHS, Barr's Beautiful Rainbow Mixture, for Beds and Borders, outdoors.

1st size bulbs, per 100, 17s. 6d.; per doz., 2s. 6d.
2nd " " per 100, 13s. 6d.; per doz., 2s.

TULIPS, Barr's handsome varieties, for pots.

Three each of twenty named sorts, 6s. 6d.

" Barr's Beautiful Rainbow Mixture, Single or Double, per 1,000, 42s.; per 100, 4s. 6d.

CROCUSES, Barr's choice Large-flowered sorts, for pots, &c., 100 in 10 named vars., 3s. 6d.

" Barr's Special Mixture, for planting in grass, &c., per 1,000, 10s. 6d.; per 100, 1s. 3d.

ILLUSTRATED CATALOGUE OF HYACINTHS, TULIPS, CROCUSES, SNOWDROPS, POLYANTHUS NARCISSI, and all the Best Bulbs for Spring and Summer-flowering.

| Oenothera Youngi, pure yellow bells | 10 0 | — |
| Allium magicum, white sweet-scented | 3 0 | — |
| Pyrethrum Bridesmaid, with fine double pure white flowers | 15 0 | — |
| Sedum Selfsklanum, with many pure yellow flowers | 10 6 | — |
| Tritoma Uvaria grandiflorum (Red-hot Poker) | 14 6 | — |

250 bulbs of the same kind will be charged at the 1,000 rate; 25 at the price per 100; 6 at the price per 12.

COLLECTION D for spring garden, containing 1,370 bulbs, £1 1s.; half of this, 11s.

COLLECTION B for indoor, containing 529 bulbs for 92 pots or glasses, £1 1s.; half of this, 11s.

"Gardening is the purest of human pleasures, and the greatest refreshment to the spirit of man."—BACON.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, SEPTEMBER 25th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, September 27th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
TUESDAY, September 28th.—Radcliffe-on-Trent Potato Show. Sale of Dutch bulbs by Messrs. Protheroe & Morris.
WEDNESDAY, September 29th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
THURSDAY, September 30th.—Royal Horticultural Society's Show at the Crystal Palace (3 days). Sale of Dutch bulbs by Messrs. Protheroe & Morris.
FRIDAY, October 1st.—Sales of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

THE PRINCIPLES OF FRUIT-GROWING.*—

The facile pen of Professor L. H. Bailey, of the Cornell University, Ithaca, New York, seems never at rest, judging from the number of books he has written for the services of mankind in all that pertains to the science and art of plant culture in garden, orchard, field, and under glass. Many of the details do not conform to our rules of gardening on this side of the Atlantic, but the climates of the two countries would easily account for apparent discrepancies—we say discrepancies because they do not conform to our experiences; but at the same time we do not imply that they mean errors. On the other hand there are many features of American gardening that we might well copy with advantage.

The inventory of fruits, forming part of the first chapter, appears formidable at first sight compared with the relatively small number of species of plants which we cultivate in Britain for the sake of their fruits. An analysis of the long list shows that most or all of the fruits grown here are also grown in North America, including the United States and Canada, together with a vast number, either native or exotic, that can be grown in some part or other of that vast continent. With the larger portion we are more or less familiar, but many of them are confined to glasshouses, some indeed to the economic houses of botanical gardens, while others are ornamental trees or shrubs on which we can place no reliance for the production of fruit in this country. We suspect, however, that many of the trees included in this list are still under experiment with a view to their improvement, before they can be placed on the same level of importance with the fruits of the temperate regions of the old world, which have been undergoing improvement at the hand of man for centuries. The species of Prunus (Plums and Cherries chiefly) are numerous, but some of them already in this country do not hold out much hope of becoming serviceable, though they may fruit more freely in some parts of America, and prove capable of improvement at the hands of enterprising experimenters. We hope they will. A large number of tropical and sub-tropical trees are included in the list, which cannot cope with our climate, and few of them offer facilities for cultivation under glass, like the Pineapple, for instance.

In speaking of the evolution of a fruit region, the author says that agriculture when at its best continues so, improving with succeeding years of cultivation, but

*The Principles of Fruit growing. By L. H. Bailey. New York: The Macmillan Company. London: Macmillan & Co., Ltd. 1897.

admits that American agriculturists, like miners, have hitherto been extracting as much as they could get from the soil without returning anything, and then shifting further and further into the wilds in order to secure virgin soil for their crops. Naturally enough they now recognise the mistake of impoverishing the soil. That kind of ruinous cultivation, by the robbing of the land of its natural fertility, is not unknown in this country, as has amply been testified in the case of the wasted orchards. Our countrymen may well take the hint and mend their neglect of both scientific principles and common sense. Success in the matter of fruit-growing, says the Professor, is dependent chiefly upon the personality of the grower and the prospective conditions of the market. The would-be grower must possess a love of the occupation, indomitable energy, cool judgment, and sterling honesty. As to the other point, the author says there is always a demand for, and not enough of, the best of any commodity. The latter he defines as the unlike—that of which there is least—or in other words "that in which there is the least competition." The cultivator should always be on the outlook for something with which the market is badly or not at all supplied; and if he produces the best article, he will always secure the top price. The author brightens the prospect when he says that cultivators need have no fear of success if they grow what the people want or so display it as to make them believe they want it. This latter implies sorting, grading, careful handling, and the putting up of the fruits in a tempting and attractive way. He admits that the growing of the more common kinds of fruit is overdone, particularly Apples, and that a good crop means low prices. This again means that Apple-growers allow the seasons and local conditions to control the bearing time of the orchard.

The author advises the fruit farmer to get a thorough and correct knowledge of the local conditions under which he is placed. We think that a man of energy and untiring devotion to business will overcome most difficulties, excepting, of course, the state of the weather, it may be, while his Apple trees are in bloom; and unless he can manage that, we fail to see how a man can control the bearing time of an orchard. Nevertheless, he says truly that "close and single-minded attention to business makes for success." Training is the best stock in trade of the fruit grower, business methods counting for a large part of it, as is evidenced by people of other occupations who take to farming and have succeeded. He thinks that the farmers of the future will be drawn from other occupations in which men are free from the bonds of tradition; and because they have well trained, unbiased minds they are more likely to adopt modern improvements in all that pertains to changing and progressive times. The cultivation of fruit and the disposal of it to the best advantage are the two lines along which the fruit growers of the present and future must direct their attention. Not every one can take a high rank in both those branches of the profession, so that to be successful, most people will have to confine their energies to one department only. The grower has not yet discovered the secret by which he can make his orchards bear in years of general scarcity, but Mr. Bailey says he must acquire that skill. We hope that science will succeed in making it possible, and the sooner the better.

In speaking of the influence of bodies of water upon fruit growing, the author makes some interesting observations, but chiefly with regard to vine culture in the open. The more notable Grape growing districts

lie around the margins of lakes as a rule, and in the case of Lake Erie, the Grape belt is confined to an area not extending beyond two or three miles from its shores. When the land slopes towards the lake, the area enjoying the greatest immunity from frost does not extend beyond the crest; and if the elevation is 300 ft., the suitable land only extends two-thirds of the distance towards the summit. The explanation of these facts is that a large body of water has an equalising effect upon temperature. The depth of the water is of more importance than its width. The atmosphere in the neighbourhood of these lakes is cooler in summer and warmer in winter, than land at greater distances or higher elevations. The low temperature of the water in spring has the effect of retarding the Vines till the season of frost is practically over; and should frost occur, the presence of water has the effect of moderating the temperature. Fruit growers in Britain when speak of suitable sites for plantations of Apples, Pears, Plums, etc., advise the planter to keep as far away from water as possible, because the frost is always most intense in valleys and on low-lying land, while water, if present, intensifies the evil. It is not very easy to reconcile these two opinions unless we take it for granted that the lakes and rivers in this country are neither broad enough nor sufficiently deep to exercise any ameliorating influence upon the atmosphere in their neighbourhood. In practice we find that a dry atmosphere is always more favourable to a good set of fruit than a wet one, even though cold weather or frost prevail at the time in either case. A better comparison, perhaps, would be to consider the effect of climate around our sea shores upon fruit growing, when thinking of the great inland lakes of America. The Vine growing area along the lower Hudson River does not extend more than a mile from its banks.

The book is of small octavo size, but runs to 508 pages, including an exhaustive index. It is made up of eight long chapters, of each of which a very full synopsis of contents is given at the beginning of the book. The hints above given have been culled at random from the first two chapters; and the whole book teems with information and suggestions, which those who are engaged in fruit culture or intend doing, would do well to study. Numerous illustrations are given relative to the tillage of the land and the tools employed; also fruits, flowers and leaves injured by frost or other means, tree pruning, root pruning, planting, etc. The fertilising of fruit lands, the evolution of soils, saving water, irrigation, pruning, the girdling of trees, the raising of new varieties from seeds, double planting, packing fruits, nitrogen for orchards and many other things pertaining to horticulture in its widest sense. The paper used is of the very best and the large type of the text is clear and in every way excellent.

Mimulus luteus.—One of the most remarkable of exotic plants that have been introduced to this country is *Mimulus luteus*, hailing from North America. Originally imported as a garden plant, it has become naturalised all over England, Scotland and Ireland, more or less, as well as on many of the smaller islands from Skye southwards. It loves the water and may be found upon the banks of rivers, streams and ditches, wading out to the centre of many of the smaller brooks. We found it last week on the margins of Loch Fad, a fine sheet of water occupying a valley between hills and extending across the island of Bute, almost from shore to shore. It luxuriates in the crystal and weedy springs that run from the base of the hills into the loch. It is perfectly at home amongst the native vegetation and bears a wealth of large, rich yellow flowers all

through the season, being much admired and appreciated by the collectors of wild flowers for the local flower show. We have seen it spring up spontaneously in gardens much further north, but it never looks finer nor more interesting than when growing in a truly wild state.

Other Uses for Fruit.—After eating as much fruit as we like or as we can obtain, we may proceed to apply it to other uses. It is stated that Orange juice is the best dressing for black boots and shoes. We are perfectly aware that there is no better application for tan boots or shoes than the inside of a Banana skin. The said skin should be rubbed well all over the boot, the latter wiped with a soft cloth and polished with soft leather or a piece of flannel.

French Rosarians.—Our Gallic neighbours have ever paid a deal of attention to the cultivation of what is generally regarded in this country as the English national flower, the Rose, but they are even proceeding to greater efforts. A congress of Rose-growers, recently held at Orleans, has resulted in a permanent commission having been appointed. Its work will be to deal with all communications touching Roses—their names, classification, cultivation, etc. The congress was under the presidency of M. Viger, sometime Minister of Agriculture. An interesting feature of the gathering was the presentation of a medal to M. Paul Verdier, one of the greatest authorities on Roses, not only in France, but in the world.

Parisian Flower Boxes.—Paris is nothing if not gay, and the garishness of all things Parisian has not forgotten the flower boxes. These almost excel in brilliancy the brightness of the flowers they contain, much to the disgust of our insular but more sober tastes. Plain boxes are almost, if not quite, unknown at the fashionable florists. The bunch of Roses, Daffodils, Carnations, or anything else that one may buy is invariably covered with designs of variously coloured ribbons, tied in knots and bows of all shapes and sizes, as obtrusive as they are ridiculous. The sober and garden flower pot is rigidly kept out of sight, and peculiarly constructed and wondrously hued receptacles take their place. This is going a few steps beyond the British country housewife, who daubs her pots with red ochre to enliven them up a bit.

Saxifraga aizoides.—As a rule this species grows upon wet rocks by alpine and subalpine streams. We noted it in plenty on an old sea bank, but within a hundreds yards or so of the present high water mark of the Firth of Clyde, at Craigmare, Bute. Water trickles down from above over the dark conglomerate rock, and keeps the plants continually moist. Cultivators would do well to make a note of this fact and plant it where the soil is moist rather than otherwise. The yellow flowers, spotted with orange, are really very pretty. The dense tufts have been flowering for a long time past, but have not yet gone out of bloom; and this coupled with the fact that the leaves are glandular-ciliate would make it identical with or closely allied to the form described by Linnaeus under the name of *S. autumnalis*. All the same it is evidently the prevailing form in this country. The northern latitude and the dripping rocks would account for its occurring at so low an elevation.

Durham Show.—The twenty-fifth annual exhibition promoted by the Durham Floral Society was held on Tuesday, September 8th, in the New Markets, Durham. The weather was fine, and the excellence of the show delighted everybody. The total number of entries was 1,480, as against 1,533 the previous year. Mr. F. Nicholas Upleatham, maintained the first position for four stove and greenhouse plants. Mr. Charles Burton, Seaton Carew, was first for a group of plants, and Mr. McIntyre, Woodside Gardens, Darlington, was second. Mr. McIntyre led the way for Crotons, and Mr. R. J. Knaggs, of Whorlton, for hardy Ferns. The section for table decorations was the most interesting in the floral department, and was well patronised both by exhibitors and visitors. Mr. J. Atkinson, Corbridge, secured the chief award for the best collection of cut flowers, the remaining prizes being won by Messrs. W. Reason, J. Tullet, Raby Castle; R. Wharton, West Hartlepool; G. Lonsdale, and R. Burton. Mr. H. E. Gribble, gardener to the Marquis of Londonderry, Wynyard Park; Mr. J. Hunter, Lambton, and Mr. Yare, Wolsingham, were the judges.

The last London season cost the aristocracy between £20,000 and £25,000 for flowers and Palms.

The Tree-planting Society of Newcastle set an example by dying, which is being followed by many of the trees themselves which were planted under its auspices. The only green tree is a Black Italian Poplar, which was planted by Mr. Robert Sanderson.

A Big Bunch of Nuts.—Mr. A. Loram is the happy gatherer of the biggest bunch of wild Nuts of which we have ever heard. It was picked at Ringmore, Shaldon, and contained fifteen well-formed, good-sized Nuts, all on one stem. We are waiting for the next bunch.

Too Contented.—"Well, gardener, how is my son getting on in the profession?" Gardener: "Well, sir, he's very contented." Father: "Ah, that is a good thing. I'm glad to hear it." Gardener: "Yes, yes—h'm—rather too much of a good thing. He says that by looking at the Chickweed choking down the Groundsel, it will save him the trouble of pulling it up."

Honour to whom honour is due.—Mr. Alfred Outram, F.R.H.S., a well-known and general representative of the horticultural profession, has been the recipient of a well-merited and well-earned honour at the hands of the County Borough of Hanley Corporation, which body so successfully inaugurated and carried out its first annual fête and horticultural exhibition. Naturally, as a body of business men the Council, in the arrangement and management of their show, consulted the best expert opinion obtainable, and Mr. Outram was readily able to give them valuable practical assistance in this way, which has been gracefully and fittingly recognised by the presentation of an illuminated address to that gentleman, setting out in suitable words the thanks and esteem of the Corporation for the services rendered on the occasion referred to.

Sleep of Plants.—A Norwegian observer has been making some investigations on the sleep of plants, with the object of shortening the period of repose, and he claims to have succeeded. His plan was to subject bulbs and the buds of resting plants to the action of chloroform vapour. He asserts that plants so treated subsequently grow more rapidly, than those under normal conditions. He considers that the repose of the plants was intensified by the narcotic, and therefore that a shorter period is necessary. The so called sleep of plants, from this point of view must be on a different footing to that of animals with which the less of narcotics used the better. Bulbous and other plants that have been retarded by low temperatures till past their usual period of growth usually come away more rapidly than those allowed to start under natural conditions.

After-Dinner Speeches.—The wisdom, or otherwise, of the tirade of adulation which sometimes follows the occasion of some of the public dinners held in connection with a few of the shows was brought sharply to the notice of some of the guests at a certain horticultural function recently. It was a matter of comment that some of the speeches fell short of the usual standard, and why this should have been so was not particularly clear, for there were many men present who could, and probably would, have done better justice to the occasion. The fault, we assume, rests with the managers or those who are responsible for the toast list, over which a little more trouble might, we think, profitably be taken. We are aware that in securing suitable speakers for or in response to a toast it is of paramount importance to "first catch your hare," and it may also be pleaded that until the last moment it is not always possible to tell who will be present, or if present, be agreeable to undertake a duty, often onerous, and one sometimes that is looked upon with a grudging stinginess by those who really ought to be better informed. Still, we do think that a frequent difficulty does occur, and certainly no small additional success might be obtained by adopting the custom which obtains in most of our leading societies in arranging by post beforehand matters of this kind. Moreover, it would give the horticultural Press a better chance of completing its record of an otherwise interesting function, especially when a special edition is in process of production. We commend the matter to the official consideration of committees of management.

Mr. Robert Lewis, foreman at Usan House, Montrose, the residence of George Keith, Esq., has been engaged as head gardener to Miss Paton, Links House, Montrose, N.B.

Second Flowering of Late Phloxes.—It is not generally known that the garden race of Phloxes belonging to the *P. paniculata* type can be made to flower a second time. In the more southern counties of England at least, when the Phloxes are cut down after having flowered, the stems will throw out side shoots and bloom a second time in October. The stems should be cut down to 6 in. or 9 in. from the base. The secondary shoots will be shorter than the original ones, but sufficiently long to make them suitable for cut flower purposes. Delphiniums may be treated in the same way, except that the old stems should be cut clean away.

Thomas a' Becket and the Fig.—There is a legend extant to the effect that Becket brought the Fig to England. Soon after he was made Archbishop of Canterbury by Henry II. he quarrelled with the king and went to Rome to lay his case before the Pope. When the quarrel was patched up he returned to England bringing with him a Fig tree, and planted it in his garden. The big Fig garden at West Tarring, near Worthing, is the result of that Fig tree, and the said garden was probably at one time part of the primate's palace grounds. Until recently there existed, if indeed it is not there still, an old Norman building alleged to have been the palace of Becket.

A new name in the Rose world is Mr. Augustus G. Green, who has commenced business at "Rose Lands," Great Horkesley, Colchester, that grandest centre in all the world for the cultivation of this flower. His catalogue, which is before us, refers to the success which has attended Mr. Green during the past season, and includes some very useful hints on growing and on the management of Roses. We wish Mr. Green all the success that he can possibly desire, and need hardly remind him, perhaps, that in entering the lists he has to try his mettle against the leading growers of the Rose in all the world; but we have always an admiration for the new comer and a new competitor, if for no other reason than for the additional stimulus which is thereby caused in the race for the tape.

The Destruction of Alpine Flowers.—The beauty and popularity of the Gentian, the Edelweiss, Cyclamen, *Arnica montana*, and other Alpine plants have caused them to become increasingly scarce in the market. The Edelweiss particularly is much prized by visitors to the Swiss mountains as a souvenir of their visit, and is now sold at a price sufficiently high to entice the Alpine peasants to risk life and limb in gathering it. An edict has just been issued by the Prefect of the Haute-Savoie with a view to stopping the indiscriminate destruction of native plants. All lovers of natural beauty and of plants will hail this as a necessary and laudable movement, for we know something of the destruction of charming native plants in our own country, and would like to see similarly restrictive measures rigidly enforced here.

The Rice Crop in Korea.—The food of the people of Korea is Rice, meat and vegetables being mere accessories. In the extreme north where Rice cannot be grown extensively, Wheat, Millet, and Beans are used as substitutes, but wherever Rice can be had it is always preferred. Korean Rice is of excellent quality, some of it being considered almost equal to the best Japanese. Consul Allen says it is difficult to estimate the amount of Rice grown in Korea, as no proper statistics are kept, but the actual consumption is estimated at about 2,000,000 bags per annum, or 320,000,000 pounds. In former years the surplus was stored in Government granaries against a bad year, the old Rice being issued the next season, bag for bag, for new Rice. In 1886 the export of Rice from Korea began in a small way and has increased year by year, subject, of course, to the condition of the yield. The native method of cleaning is by pounding in stone or wooden mortars and separating the chaff by winnowing. This leaves much gravel with the Rice and causes injury to the teeth in eating. Lately, a number of fanning mills have been introduced from Japan, and Japanese have started a few crude steam Rice mills.—*Journal of the Society of Arts.*

£15,000 for Flowers and Plants.—This was the estimated cost of the flowers and Plants employed along the route by which the Jubilee procession passed.

Public Fig Gardens.—It is stated that the only public Fig Garden in England is situated in the parish of West Tarring, near Worthing, in Sussex, and contains some hundreds of trees.

Mr. Chas. Hott gave a practical demonstration on the summer management of fruit trees at St. Agnes, at the beginning of the month. Several gardens were visited, and formed illustrative material for the lecturer. Mr. Hott gave a list of what he considered to be the best Apples. It was as follows:—Culinary: Lord Grosvenor, Lord Derby, Cox's Pomona, Ecklinville, Bismarck, Bramley's Seedling, Lane's Prince Albert, Pott's Seedling, and Grenadier. Dessert: Lady Sudeley, Worcester Pearmain, Beauty of Bath, Gladstone, Cox's Orange Pippin, Adam's Pearmain, and King of the Pippins. The demonstration was the result of an arrangement made by the Technical Education Committee.

Another Kailyard Story.—Dr. Leitner, a learned German philologist, declares that the Gaelic language is a contemporary or derivative of a tongue closely allied to the spoken language out of which the Sanscrit became evolved as a written language. This will go to confirm the ancient belief of the Gael himself that his mother tongue was spoken in the Garden of Eden. Some would fain have it that kilts were but a development or advance upon the Fig leaves worn by the first knight of the blue (?) apron. A. M'Leod considers that when Adam gathered up the Fig leaves it must have been autumn, and the leaves consequently in their customary autumnal yellow tints, just like the M'Leod tartan.

Southern Counties Carnation Society.—This society, which has been inaugurated in the neighbourhood of Southampton, has now fairly started, and has close upon one hundred members, including amongst others Mr. Martin R. Smith, Mr. James Douglas, Mr. Robert Sydenham, Mr. Weguelin, Mr. Nutt, Mr. Harden, Mr. Phillips, Mr. Keen, and others. By an advertisement appearing in our issue of to-day it will be seen that the society purposes sending out this autumn the first distribution of Carnations, so that those who take an interest in the culture of the Carnation and Picotee should lose no time in joining. In addition to this proposed annual distribution of plants, which is entirely the gift of the hon. secretary it is proposed to hold an annual exhibition, to which all members and their friends will be admitted. To those who have not yet received particulars of the society's intention, it may be mentioned that all subscriptions received will go to making up a liberal prize fund, in order that every class of Carnation can be represented, by which means it is hoped that a large and successful exhibition will be ensured. All information as to the society can be procured on application to the hon. secretary, Mr. William Garton, Jun., of Woolston.

Market Peas.—The conservatism that prevails in market gardening has again been brought to the front by a discussion on the subject in the *Daily Telegraph*. Messrs. J. Carter & Co., of High Holborn, London, find that the demand for Peas scarcely extends beyond half a dozen varieties, while in many districts nearly all the growers cling to one variety. Surely that is very bad policy when there are so many good sorts, early, midseason, and late, with which the grower might prolong the harvest, greatly to his own and other people's advantage. For instance, they made a general sowing on March 29th last, and the varieties were ready for picking in the following order:—Lightning, June 10th; Springtide, June 13th; Prince of Wales, June 24th; Telephone, Stratagem, and Daisy, June 28th; Telegraph, and Yorkshire Hero, June 30th; G. F. Wilson, July 10th; and Michaelmas, July 20th. Varieties picked from the above and sown at various periods from February or March and onwards to June, would furnish a supply to the end of September. All of the above are Marrowfat Peas, except the first named, and greatly superior to much that is put on the market. The main point to observe, however, is the succession that a selection from them will ensure.

The Sparrow again.—Miss Eleanor A. Ormerod has presented us with reliable information concerning the little ways of the house sparrow. She has recently issued gratuitously an eight page pamphlet, in the production of which she has been assisted by Mr. W. B. Tegetmeier, showing the nature of the sparrow's food as demonstrated by dissection. It is estimated that during the life of an adult sparrow 75% of its food is corn of some kind, and it is averred that even the insects they eat are so much food taken from other birds, almost entirely insectivorous. The pamphlet points out that in Canada, on the recommendation of the Agricultural Department, the sparrow is no longer protected. They have also found the sparrow out in the United States, for in the report made by the Board of Agriculture it states that Mr. C. V. Riley, entomologist to the board has found that out of 522 bodies examined only two contained insects. The evidence of Mr. G. H. Gurney, also an entomologist of fame, who examined the stomach contents of 694 sparrows killed during each month of the year bears out Miss Ormerod's statement. It shows too that in young sparrows only half is corn, the other half insects. Clearly our friend the sparrow is in a bad way unless he can clear himself, which seems scarcely likely. Hitherto farmers have been induced to put up with his cheek in assuming rights of proprietorship over new sown fields in the hope that he makes amends by keeping down the insects. If the latter is proved to be only a pretence on his part he had better look out for himself. Copies of the pamphlet in question may be obtained from Miss Ormerod, Torrington House, St. Albans.

TRIALS AT CHISWICK.

ZONAL PELARGONIUMS.

NEARLY 165 varieties of Zonal Pelargoniums have been subjected to trial at Chiswick this season. Amongst these are included many old varieties that have given a good account of themselves in gardens all over the country, and it is interesting to note how well these good old varieties have borne themselves when placed side by side with other and newer ones. The Floral Committee assembled at Chiswick on August 19th to decide upon the respective merits of the varieties. The verdict of highly commended, exemplified by the XXX, was given in the case of each of the following sorts:—

DOLLY VARDEN.—A dwarf, compact-habited tricolor that stands the drought remarkably well, and is, moreover, a free grower. The leaves have a central area of pale green, with a broad zone of black-brown and a red margin. The flowers are large and bright scarlet. Messrs. H. Cannell & Sons, Swanley, Kent.

MASTERPIECE.—This is one of the best of the tricolor section, a free grower, and of good habit. The centre of the leaves is green, the zone is dark brown and red, and the margin bright sulphur-yellow. Messrs. H. Cannell & Sons.

ZULU.—This belongs to the bronze section. The zone is dark and very broad, and the margin primrose-yellow. In habit this is a very vigorous variety.

MARECHAL McMAHON.—This is one of the finest and best known of the "bronze" section. It has a heavy zone of brown-red, and the margin is yellow. Messrs. H. Cannell & Sons.

GOLDEN HARRY HIEOVER.—This well-known variety needs little further description. The yellow-green foliage, with the narrow bronze zone, the profusion of scarlet flowers, and the dwarf, compact habit render it a great favourite for edging purposes. Messrs. H. Cannell & Sons.

MISS KINGSBURY.—This is a first-class bedder. The leaves are silvery-white, with a central area of light green. The flowers are orange-scarlet. Messrs. H. Cannell & Sons.

CREED'S SEEDLING.—There is no handsomer, and none more suitable for edging purposes than this. It is dwarf and compact in habit, although somewhat delicate of constitution. The foliage is bright green-yellow, and the flowers scarlet. Messrs. H. Cannell & Sons.

BOULE DE NEIGE (BICOLOR).—A variegated form of great merit. The leaves have green centres, with broad margins of pure white. The variety is free-growing, and a capital bedder. The flowers are scarlet. Messrs. H. Cannell & Sons.

FLOWER OF SPRING has for so long been recognised as one of our very best variegated bedding varieties,

that no more is necessary in the way of description. Messrs. H. Cannell & Sons.

SIR HAMILTON.—A free blooming form of great merit. The flowers are magenta in hue, and double. The leaves are free from markings of any kind. Messrs. H. Cannell & Sons.

MRS. BARNEY.—Like the last named there is no zone observable on the green foliage of this form. The plant is of medium height and sturdy. The flowers are double and exhibit a charming shade of rose pink. Messrs. H. Cannell & Sons.

HENRY JACOBY is still one of the finest deep crimson Pelargoniums that we have. Messrs. H. Cannell & Sons.

RASPAIL IMPROVED.—Here the flowers are double, large, and crimson-scarlet in colour. The truss is of great size, and the habit of the plant strong and vigorous. Messrs. H. Cannell & Sons.

ADOLPHE BRISSON.—In this we find a moderate bloomer, but one bearing exceedingly large trusses. The pips are of great size, scarlet in colour, with a pink-white centre or eye. The foliage is free from any zonal mark. M. Lemoine, Nancy, France.

MADAME ROECHLIA.—The flowers are white, and the trusses large, but the plant is a comparatively poor bloomer. There is no zone in the foliage. M. Lemoine.

BOULE DE NEIGE.—This must not be confused with the variety of the same name mentioned earlier in the list. In this case the flowers are pure white, and very double. The habit is free, and somewhat spreading and bushy. The zone is broad and deep. R. H. S.

ADVANCER is another double white, similar in many respects to Boule de Neige, but the leaves are much larger. R. H. S.

ALBION is a single white form of great merit. The habit is dwarf and bushy, and the plant is a free grower. Messrs. H. Cannell & Sons.

CAPTAIN H. COLVILLE.—Here the flowers are double scarlet, and the habit dwarf and spreading. R. H. S.

The two undermentioned subjects received an award of XXX. on the same date:—

AGERATUM AMERICANUM COMPACTUM, THE ZOO.—This is a very dwarf and compact-habited Ageratum, whose great point, however, is its marvellous floriferousness. The flowerheads are produced in dense clusters, are large, and bright purple-blue in hue. R. H. S.

CALLIOPSIS NIGRA NANA.—In this we have one of the dwarfiest and freest of all the Calliopses. The flowers are deep crimson-maroon—a rich and telling shade. Messrs. Watkins and Simpson, Essex Street, Strand.

CHINA ASTERS.

A meeting of the Floral Committee was also held at Chiswick on September 7th, when the merits of a quantity of China Asters, as well as French and African Marigolds, and scented Pelargoniums were taken into consideration. The China Asters have been grown on a border facing to the west, and against the wall dividing the property of Devonhurst from the society's gardens. The undermentioned Asters were awarded XXX.

A.—Dwarf Victoria Aster, bright rose, tipped with white, a large flower; height 1 foot.

B.—Liliputian Aster, rose; flowers about 1½ ins. in diameter; height, 8–10 ins.

C.—Imbricate or Pompon Crown Aster, rose, with white centre; height, 15 ins.; habit, spreading; also a rose variety, somewhat dwarfer in habit.

D.—Mignon Aster, large white, with reflexed segments. The stalks are long, and good for cutting.

E.—Great Chrysanthemum Aster, pure white. This is a huge flower, strong, and handsome. The height is about 15 ins.

F.—Dwarf Chrysanthemum Aster, shining rose-white. This is a very pretty form, the plants growing from 6 to 8 ins. in height.

MARIGOLDS AND PELARGONIUMS.

AFRICAN MARIGOLDS.—A fine strain of lemon and orange African Marigolds was commended for the size of the flowers, their well-developed character, and rich colour. Messrs. Watkins and Simpson.

PELARGONIUMS.—A large batch of sweet-scented varieties has been raised at Chiswick by hybridising *P. crispum* with the pollen of *P. radula*, *P. quercifolium*, and possibly *P. denticulatum*. Most if not all of them are very distinct from, and quite unlike, the seed parent, *P. crispum*. Unfortunately no

record has been kept of the various species used as pollen parents, so that we have been guided by the foliage alone to determine this.

WM. MARSHALL.—The leaves of this hybrid are pinnatifid with oblong segments similar to those of *P. radula*, but having a light bronzy zone down the centre of each, suggesting the influence of *P. quercifolium*. XXX. Royal Horticultural Society.

C. JEFFERIES.—The lobed leaves in this case have broad segments, with a bronzy-black centre, fading with age, and very similar to an old variety named *P. quercifolium majus*. XXX. R.H.S.

G. STEVENS.—The leaves here are very large, more or less bipinnatifid or twice divided, and resemble those of *P. radula*, but are much larger. XXX. R.H.S.

R. DEAN.—The light green, finely divided leaves of this hybrid are intermediate between *P. denticulatum* and *P. radula*, suggesting these two species as the parents. XXX. R.H.S.

H. B. MAY.—Leaves very large, light green, and pinnatifid, or having the lower segments again divided. A slender bronzy line runs along the centre of each segment. XXX. R.H.S.

J. D. PAWLE.—The leaves in this instance are similar in size and form to those of H. B. May, but they are more crisped, and without the bronzy line traversing the principal nerves. XXX. R.H.S.

EARLY-FLOWERING CHRYSANTHEMUMS.

Ten members of the Floral Committee of the Royal Horticultural Society met at Chiswick at one o'clock on Friday the 17th inst., and made the awards as mentioned hereunder. Awards of Merit were accorded to a few of the very finest of the newer varieties of early-flowering Chrysanthemums, and XXX was given to the best of the older kinds to indicate their value and generally meritorious character. Two China Asters also received recognition, together with the new *Matricaria Parthenium Golden Ball*. As a matter of course only those Chrysanthemums in full bloom could be dealt with. Many of the taller ones especially are not yet in flower, but will be examined again on the 4th October. The collection is very extensive.

JAPANESE.

MITCHETT WHITE.—The plant is of dwarf and bushy habit, being only 18 in. high. The blooms are of medium size for an early variety, and pure white, with gracefully drooping or recurved florets. For cut flowers the variety is one of the best, and simply charming. Award of Merit. Mr. H. J. Jones, Rye-croft Nursery, Lewisham.

MADAME CASTEX DESGRANGES.—Flowers large creamy-white, with a yellow centre during the early stages. XXX. Messrs. Dobbie & Co., Rothesay, Scotland.

G. WERMIG.—A soft yellow sport from the previously named variety. XXX. Messrs. Dobbie & Co.; Messrs. H. Cannell & Sons, Swanley; and Mr. Divers.

MRS HAWKINS.—The darkest yellow sport from Mme. C. Desgranges. XXX. Messrs. Dobbie & Co.; Divers; and Barr & Sons, King Street, Covent Garden.

MRS. BURRELL.—Plant vigorous and about 2 ft. 9 in. in height, producing a large quantity of soft yellow flowers, with a deeper centre. XXX. Messrs. Dobbie & Co., and H. Cannell & Sons.

MADAME MARIE MASSE.—Blooms large, with broad, spreading, silvery-purple or rose florets; plant about 18 in. to 2 ft. high. XXX. Messrs. Dobbie & Co.

MADAME GASTELIER.—Plant bushy, about 20 in. high, and bearing a profusion of creamy-white flowers. XXX. Messrs. H. Cannell & Sons; and Divers, Rutland.

EDITH SYRATT.—Blooms of a fine rich rose, with narrow and closely arranged florets. Plant 2 ft. high. XXX. Messrs. H. Cannell & Sons.

MADAME EULALIE MOREL.—Plant of good habit, and 2½ ft. high. Flowers cerise, shaded gold. XXX. Messrs. Barr & Sons; H. J. Jones; and Divers.

MADAME LOUIS LIONNET.—Blooms soft salmon-pink, with a yellow centre when young, and having narrow, graceful florets. XXX. Messrs. Barr & Sons; and Divers.

POMPONS.

L'AMI CONDERCHET.—Plant of dwarf, branching, bushy habit, 12 in. to 18 in. high, and admirably adapted for bedding purposes. Flowers bright

yellow gradually fading to pale yellow. Golden Drop is a synonym of the above. Award of Merit. Messrs. Dobbie & Co.; and Barr & Sons.

MADAME JOLLIVART.—Flowers of medium size and white, with a yellow centre in the early stages, but changing to white and ultimately becoming tinted with rose in the open air. The plant is very floriferous and grows only 18 in. high. Award of Merit. Messrs. Dobbie & Co.; and H. Cannell & Sons.

LONGFELLOW.—Plant about 2 ft. to 2½ ft. high, branching, and floriferous. The flowers are white, blushing somewhat as they grow old in the open air. Award of Merit. Messrs. Dobbie & Co.; H. Cannell & Sons; and Barr & Sons.

WHITE ST. CROUTS.—Flowers white, with a yellow centre, and ultimately tinted with purple in the open. Plants dwarf, branching and flowering profusely. XXX. Messrs. Dobbie & Co.

GOLDEN FLEECE.—Plants 2 ft. high, branching freely, and bearing a profusion of bright yellow flowers. XXX. Messrs. Dobbie & Co.

LITTLE BOB.—Stems 15 in. to 18 in. high, branching freely, and bearing a profusion of small, dark brick-red blooms. Messrs. Dobbie & Co.; and Barr & Sons.

STRATHMEATH.—Plant 2 ft. high, of good habit, and bearing rosy-pink flowers in great profusion. XXX. Messrs. H. Cannell & Sons; and Dobbie & Co.

MRS. CULLINGFORD.—The stems and branches of this variety are stouter and more rigid than those of most early varieties. The blush white flowers are also compact, neat, and very choice. The plant is 2 ft. to 2½ ft. high. XXX. Messrs. Dobbie & Co.

MISS DAVIS.—This is a pale pink and beautiful sport from Mrs. Cullingford, from which it differs merely in colour. XXX. Messrs. H. Cannell & Sons; and Dobbie & Co.

FLORA.—The golden-yellow flowers and profusely flowering nature of this variety are well known. XXX. Messrs. Dobbie & Co.; H. Cannell & Sons; and Divers.

MR. SELLEY.—Flowers of good average size, soft silvery-rose, and produced in profusion. The stems are only 16 in. to 18 in. high. XXX. Messrs. Barr & Sons; and Dobbie & Co.

NANUM.—Flowers blush-white, and produced in great profusion on bushy stems 18 in. high. XXX. Messrs. Dobbie & Co.

TOREADOR.—Stems 1½ ft. to 2 ft. high, bushy and floriferous, the blooms being dark bronzy-crimson. XXX. Messrs. Dobbie & Co.; and H. Cannell & Sons.

BLUSHING BRIDE.—Flowers blush-white, deepening to rose on the outer florets with age. XXX. Messrs. Dobbie & Co.

CANARI.—The florets of this variety are fluted and bright yellow, while the bushy branching stems are only 15 in. to 18 in. high. XXX. Messrs. Dobbie & Co.

PIERCY'S SEEDLING.—The bronzy-yellow flowers of this variety are borne in great profusion on stems 18 in. high, or less. XXX. Messrs. H. Cannell & Sons; Dobbie & Co.; and Divers.

BRONZE BLUSHING BRIDE.—This differs from Blushing Bride only in having bronzy yellow flowers, being a sport from it. The stems are 2 ft. high. XXX. Messrs. Dobbie & Co.

DODO.—This is one of the very dwarfiest in the collection, forming spreading bushes only 9 in. to 12 in. high, and covered with a profusion of bright yellow flowers. XXX. Messrs. H. Cannell & Sons.

SALTER'S EARLY BLUSH.—Flowers blush rose and profusely produced on stems 18 in. high. XXX. Mr. Divers.

ANASTASIA.—The plants are of dense, bushy habit, 18 in. high, and entirely covered on the top with a profusion of rich rosy-purple flowers. XXX. Messrs. Barr & Sons.

PETILLANT.—Flowers creamy-yellow with darker centre, and borne on branching stems 18 in. high. XXX. Messrs. Barr & Sons.

MISCELLANEOUS.

MATRICARIA PARTHENIUM GOLDEN BALL.—Seedlings of the Feverfew continue to vary. That under notice has semi-globose and neat densely-quilled heads of a soft or light buttery-yellow hue. Award of Merit.

CHINA ASTER LILIPUT WHITE AND ROSE CENTRE.—The name given to this charming variety is practically a description in itself. The plants are 9 in. to

12 in. high, erect, branching, and bearing small, extremely neat, and quilled heads of great beauty. The heads are white round the circumference, followed inwardly by a bright rosy zone, surrounding a yellowish centre. They are about the size of a Daisy, and amongst Asters a real "Daisy." XXX.

CHINA ASTER BALL OR JEWELL SCARLET.—The florets of this variety are of a dusky yet glossy rose colour, and so compactly incurved that they might be taken for an incurved or Chinese Chrysanthemum if shown in the cut state apart from the plant. XXX. Messrs. Dobbie & Co.

It will be seen from the above Chrysanthemums in perfection, on the 17th inst., that there is neither lack of colour nor variety generally amongst early-flowering Chrysanthemums. Some plants of the earliest sorts were indeed past their best, but later planted ones of the same variety were in their prime.

VEGETABLE CALENDAR.

THE maturation of root and other crops at this season will give occasion for reflection on future operations. It is very important to settle the rotation of cropping at the present time, so that land, as soon as vacant, can be dealt with in a manner suitable for the crop intended to be put on it. Where land is foul, either with weeds or insect pests, the present time should not be allowed to pass without making an effort to rid it of both. Perseverance with the fork will be needed to get rid of rhizomatous weeds; and for slugs, grubs, and insects of all kinds nothing equals moderate dressings of gas-lime. This should be broken fine, distributed equally over the surface, and be allowed to remain exposed for a few weeks before digging it into the land. In addition to being obnoxious and destructive to insect life, it is an excellent manure, being rich in ammonia, and when used in moderation is very valuable for all garden crops. Where "clubbing" has existed, an extra dressing may be given, as it is a safe and sure cure for the disease.

LETTUCE.—With the prospect of an early change to lower temperatures and rougher weather, it will be necessary to make preparation for the protection of several crops; and frames should be in readiness for Lettuces in various stages of growth. Full-grown plants of the Cos kinds will be better lifted with a ball of earth and placed under glass. Get the roots well covered with light soil and give a watering round the base of the plants as the work proceeds; at the same time remove decaying leaves. Abundance of air will be required to prevent decay, and no moisture overhead, or rain should be allowed to fall on the plants. Succession or half-grown crops of the Cos kinds may also be planted into frames in soil composed of half leaf mould and loam. In this they will make quick root action and acquire a succulency equal to a summer crop. Specially prepared beds in a sunny and sheltered position should be planted to stand over the winter. Hick's Hardy and Bath Cos are the best for this planting, and All the Year Round is a good Cabbage kind for the same purpose. Another sowing may be made in a cool house or frame to produce plants for frame planting early in the new year. A last sowing should be made early next month in a specially prepared frame filled with light sandy compost. These will prove useful for planting in warm positions in February next.

PARSLEY.—Provision for sheltering a well-grown bed should now be made. A few skeleton frames made of a size to suit any old lights will answer well for keeping off snow and breaking the force of rough winds. Some of the strongest plants may be potted up in 32-sized pots, and stood under a north wall for a fortnight until root action commences, when a more open position will be better. These may be placed under cover as convenience occurs, and also into gentle warmth should it be desirable to do so.

SPINACH.—Slugs are often troublesome with this crop, and where this is the case, no time should be lost in making up deficiencies by transplanting or fresh sowings, in freshly dug positions. A dressing of soot and lime will help to keep down slugs, and this with frequent hoeing among the crop will soon hasten the plants into a safer stage of growth.

POTATOS.—The latest of these ought to be lifted on favourable occasions, and a selection made for planting next season. None but the best shaped tubers and typical of the variety should be saved. These, after greening, should be stored away in a

cool dry place ready for future planting. Any seed previously stored and intended for early frame planting should be examined occasionally to detect diseased roots. After selecting seed the main crops may be stored in any position under cover free from frost, and where the light must be excluded from them by straw or other material.—*f. R.*

THE PLANT HOUSES.

The Stove.

Now that the end of September is practically here there will be little need to fear the effects of bright sun upon the plants. The blinds, therefore, may be taken down within the course of the next week or ten days, unless it is intended to employ them during the winter months for covering up the house. Before storing them away they should be carefully dried and folded up, so that they may be in good condition for next year. The upright sashes, angles in the roof, and other places over which the blinds cannot be worked are generally shaded by painting the glass with "Summer Cloud Shading" or whitening. The rains of the latter part of August and September have well-nigh washed the glass clean, but it will be advisable to finish the work of the rain, and give the glass a good washing, for the time of the year is fast approaching when all the light that it is possible to get will be needed.

During the daytime the outdoor temperature is fairly high, and, therefore, it will be possible to give air for a little while yet with some amount of freedom. The morning and afternoon syringings are also of moment, for within a few weeks the syringe will have to be given a holiday, as far as its general application is concerned. The nights are cool, and a considerable amount of fire-heat is necessary to keep the temperature up. For the next fortnight the thermometer in the larger stove should not be allowed to drop below 70° Fahr. by night, and this temperature should be kept up without much trouble.

CALADIUMS.—As most of the plants are now in a decidedly shabby condition, it will be well to take them out of the large stove and give them a place to themselves in a warm pit, where they may be allowed to ripen off gradually without any notice being taken of their shabbiness. The water supply may be gradually curtailed as the process of maturation goes on.

EDGINGS TO THE PLANT SHELVES.—The plan of planting *Panicum variegatum*, *Tradescantia zehrina*, and other trailing subjects on the edges of the plant stages is a good one, and is pretty commonly followed. The plants have made a great deal of growth during the summer, but although they will preserve their appearance for a month or six weeks yet, they will look straggly and untidy as the autumn wears on. Cuttings should, therefore, be rooted in small sixty-pots, ready to take the places of the old plants when it is found needful in the interests of tidiness to cut them away.

Cool Conservatory.

THE lapse of time has made itself felt upon the occupants of the cool conservatory. The summer-flowering things have had their turn for the year, and a rare clearance of them, or rather their remains, must soon be made. All plants that are past their best should be cleared out without delay, some to be thrown away, others to be cared for in other departments. A washing and cleansing, as far as can be conducted without unduly disturbing the permanent subjects, should be carried out, and then the heavy plants, such as Acacias, Azaleas, Camellias, and Oranges that have been out-of-doors for the latter part of the summer, may be settled into their places.

AZALEAS, particularly, should not be left out any longer in case of frost. Thrips are almost sure to be upon them to some extent, and therefore a good washing with a reliable insecticide by means of the syringe is to be recommended. The plants should be laid on their sides on the grass to effect this, otherwise harm may result to their root systems.

FUCHSIAS.—The few that remain are only carrying two or three straggling flowers, and they may as well be turned out along with the rest of the relatives in a sheltered corner of the frameyard to ripen off for the present. Of course they will require to be housed before the advent of hard and continuous frost.

TUBEROUS BEGONIAS.—The best thing for these is to transfer them to a cold frame where they may finish in peace. Do not dry them off too rapidly or the tubers will suffer. In cases where the stakes render the plants too tall for the frame, they (the stakes) may be taken out, for the plants, standing close together, will mutually support each other.

EUPATORIUMS AND SALVIAS may as well be housed without delay, since after the expiration of September they are never safe for two days together.

EARLY FLOWERING CHRYSANTHEMUMS have been and are still doing well, and they come in admirably at a time when, if the early autumn is cold and cheerless as it has been this year, there is apt to be a rather awkward break. In addition to those plants which have been grown in pots expressly for conservatory decoration, a good supplement may be effected by lifting some of the plants from the open, before their flowers have been too much weather beaten.

CLERODENDRON FALLAX.—Although this requires an intermediate house to grow it on properly it may be turned to capital account for the decoration of the cool conservatory when it is in flower. As soon as the blooms are expanded the plants should be shifted into their cooler quarters, where they will last longer than they would in the warmer house. The temperature, however, should not be too low, nor the atmosphere too heavily charged with moisture or the flowers will be liable to damp.—*A. S. G.*

The Orchid Grower's Calendar.

MANURING ORCHIDS.—This is a subject that is engaging the attention of scientists and practical gardeners all over the country, and in giving my experience with the use of manures I cannot be accused of imitations since the judicious use of stimulants has been advocated in the calendars from time to time for the past four years over the initial C.

Not so many years ago it would have been almost a criminal offence to have even thought of mixing cow manure with the compost for *Calanthes*; but who, I should like to know, grows them at the present time without its use or its equivalent? Then again, take *Cymbidium lowianum*, *Cypripedium insigne*, *C. villosum*, *Lycastes*, &c., all of which are very much benefited by a little help in this respect. Most of these I have enumerated are what are called terrestrial Orchids, and are naturally stronger growers, and being found growing on or near the ground get more nourishment than those growing high up the trees. I do not mean but that the *Dendrobiums*, *Cattleyas*, and the like, which grow high up, must get supplied with a certain amount of ammonia, by the heavy dews at night, as we are told they do get in their native habitats.

We know here at home how beneficial this is to plant life; but our Orchids under glass get no such health restorer or invigorator from the hot water pipes, so we have to supply this deficiency by means of stimulants, either supplied direct or in the atmosphere, if we are to keep our plants in rude health from year to year.

We are, I think, all agreed that there is a something that they want, but are as yet not quite unanimous as to what it is, or when to apply it.

As this is not a patent medicine advertisement, I must come to the point at once; here it is. Imported plants are treated in the ordinary way until established and well furnished with roots, after which they are treated to a weak dose of guano water once a week during the growing season. This is given to *Cattleyas*, *Laelias*, *Vandas*, *Oncidiums*, *Lycastes*, *Dendrobiums*, *Odontoglossums*, &c.

We use the best Peruvian Guano for the purpose. A pinch taken between the thumb and finger, to about two gallons of water, is all we give them. Such a small quantity cannot possibly do any harm to healthy plants, and is much better than to keep on watering with clear water, which in time washes out what little nutriment there is in such hungry stuff as peat and moss. For strong-growing kinds a double dose may be afforded.

DAMPING DOWN WITH MANURE.—Those who are opposed to the use of stimulants direct would do well to use a little farmyard liquid with the water when damping the walls and stages. A half pint to two gallons of water just colours it.—*C.*

HINTS FOR AMATEURS.

Hyacinths.—A few weeks ago we discussed the value and utility of the Roman Hyacinth, and now the large flowered varieties must have their turn. In this section, as a rule, the bulb only throws up a single flower spike, but the latter is larger, stouter, and more imposing than in the Roman. The individual flowers, too, are much larger and more massive. Then the range of colour is infinitely greater, ranging from deep purple-black, almost black, in fact, through a host of purples, blues, and reds, to yellow, pink, and white. The yellows are the weakest of all both in constitution and from a numerical point of view, but a considerable amount of improvement has been manifest of late years. The other colour sections seem to have been pretty well at a standstill for a number of years, and the flowers shown at exhibitions now are not better than they used to be as far as the intrinsic merit of the variety is concerned. Culture, perhaps, is carried out in a more enlightened manner now than it used to be thirty years ago. The idea must not be entertained, however, that the florists have relaxed their labours, for they keep adding year by year to the list of so-called varieties, many of which are little, if any, removed from some of the good old ones. Others again differ only by the merest shade of colour, and it is not easy to tell them apart except they are displayed side by side, and even then one must have a delicate and true perception of colour to do so. The result of this is evident to the amateur who picks up a catalogue with a view to making a selection. He or she is confronted with formidable lists of varieties that are all described as being good. The difficulty, of course, is one of confusion, for the would-be grower knows not which to select or which to pass over.

The following lists are intended to be as a guidance to those who are in such a fix, and we hope may prove of service, since the time for ordering the supply of bulbs is here with us. Those amateurs who have got beyond the need for such an aid will, we hope, pardon us for devoting the space to these lists.

The whites are a very strong section, and any or all of the following may be thoroughly relied upon:—Pure white—Alba Maxima, Queen of the Whites, La Grandesse, and La Neige; creamy-white—Lord Shaftesbury; rose-white—Grandeur a'Merveille. All these are single flowered varieties. La Tour d'Auvergne and Princess Alice are the best of the doubles.

In the single red section, General Pelissier, deep crimson; King of the Reds, fiery scarlet; Solfaterre, orange-scarlet; Macaulay, striped carmine; and Countess of Roseherry, dark red; are all good. Of the doubles, Koh-i-noor, salmon-red; and Duke of Albany, bright carmine, are excellent.

The rose and blush varieties are second only in numerical strength to the blues. Taking the singles first we have Norma, delicate waxy-pink; Blushing Bride, bright rose; Charles Dickens, light rose-pink; Lady Palmerston, bright rose; Fahiola, shaded rose; and Gigantea, delicate pink. Lord Wellington, bright rose; and Nohle par Merite, deep rose, are two of the best of the doubles.

For the sake of convenience we may divide the blues into light blue, blue and dark blue, and violet. In the first division, Duke of Teck, porcelain blue; King of the Blues, true Oxford blue; and Princess Wilhelmina, very bright blue; may be patronised as singles. A good double is Laurens Koster, which is almost a purple blue. Queen of the Blues, Princess Mary of Cambridge, and Lord Derby are three of the best singles, whilst in the doubles we may recommend Blocksberg and Van Speyk. Single dark blues would be well represented by King of the Blacks, deep blue-black; Starlight, violet-blue; General Havelock, purple black; and Black Prince. The Sultan is also a great favourite with many cultivators.

Coming to the yellows, Ida, pale yellow; Ball of Gold, golden yellow; Obelisque, and Marchioness of Lorne, striped creamy-orange, are all single forms well worthy of a place in any collection, whilst if the choice is limited to one variety only, Obelisque would be our first selection. It is a beautifully bright yellow. Cloth of Gold is one of the very best of the double yellow sorts.

It will be noticed that we have given much greater

prominence to single varieties than to double ones. This is due, not only to the fact that the singles are stronger in number and in range of colour, but also because they are more generally popular. The doubles are generally too stiff to be elegant, for when we have a large full spike, the flowers are naturally rather crowded, and when, in addition to this, the flowers are large and double, each bell seems to lose its individuality in what appears to the eye as a shapeless mass of colour.

So much for selection with regard to colour and variety. As far as the choice of the bulbs themselves goes, readers cannot do better than follow the advice given with regard to the Roman Hyacinths to choose sound, well-ripened, medium-sized bulbs of good weight relative to their size. Of course this only refers to cases when the purchases are personally conducted over the counter of a local tradesman. Orders entrusted to the care of respectable firms are always properly carried out and the best of material obtainable for the money sent in fulfilment of the order. To obtain a good article, naturally enough, good money is necessary.

The method of culture does not differ from that carried on in the case of the Romans with the single exception of the size of the pots used. For medium sized bulbs a large 48 pot will be required, one bulb being put in the centre of each pot. For the larger bulbs a 32 sized pot will not be too roomy, whilst for exhibition purposes we frequently see a size larger pot than 32's used. This is the extreme, however, and need not as a rule trouble the amateur.

In potting we must again remind our readers to make the soil moderately firm, and to leave the crown of the bulb peeping well out of the soil. The six weeks or so of probation in the plunging bed is required with Hyacinths, as with all bulbs that are to be forced, in order to admit of the root action being vigorous and healthy before the plants are introduced into heat.

Hyacinths in Glasses.—This represents a very popular and successful way of growing Hyacinths for indoor decoration. A special make of glass is needed, having a ledge at the mouth to support the bulb, and keep it from direct contact with the water. The glasses should be filled nearly full of soft water, and a nodule of charcoal, about the size of a marble dropped in. The bulb when placed on the circular ledge at the mouth of the bottle should have its base close to but not exactly touching the water, for if it did touch, the bulb would be likely to rot. Store the glasses with the bulbs in a cool dark place for a few weeks. This is analogous to the plunging in the case of the pot plants. When the roots are freely emitted, and the leaves are just making their appearance from the crown of the bulb the plants may be taken out and gradually inured to the light. All the attention that is needed is to keep the glass supplied with water as the plants exhaust it, but in refilling take care that the water shall never be higher than its first level, *i.e.*, just below the base of the bulb. For dwelling room decoration the glasses with their plants are always thought highly of, for somehow or other the ladies of the household will never become reconciled to the ordinary flower pots and resort to all sorts of devices to cover them up when the plants are inside the dwelling house.

Instead of filling the glasses with water, and allowing the bulbs to root in it in the manner described excellent results are obtained by filling them, as well as other ornamental vases, jardinetts, etc., with a mixture of cocoanut fibre, refuse and charcoal which can be purchased very cheaply from any dealer in horticultural sundries. When this medium is employed before the bulbs are placed on it, it should be watered until it is thoroughly saturated and cannot absorb any more water. Subsequently further supplies of water may be given as they become necessary. The roots of Hyacinths are very fond of this medium, and run freely in it.—*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Ficus elastica.—Will you kindly tell me what is the matter with my India-rubber plant? The leaves turn yellow and fall off. It is in a warm house,

and has done well for about eighteen months until the last few weeks. I should like to propagate it. How and when should I proceed?—*O. H.*

From what you say, it is very possible that the plant does not obtain sufficient nourishment, and may stand in need of being re-potted. It is too late however to do this now, you must wait till spring. If the roots look fairly healthy and vigorous you may give weak solutions of cow manure and soot about twice a week for the next month or six weeks. You may propagate by cuttings, but you should also wait until spring for this. About the end of January you may take off the top of the plant and insert it as a cutting in a small pot filled with very sandy soil. If you keep the old stem syringed it will break into growth, and the young shoots may be taken off and inserted as cuttings as fast as they appear. A brisk bottom heat is necessary to root the cuttings. You may also cut the old stem up into eyes, which will soon grow in a propagating frame.

Cocos weddeliana is a stove Palm, *F. L. O.*, and you cannot expect to keep it in good health for very long in a dwelling room. As soon as it shows signs of getting shabby, return it to a warm glasshouse or stove to recuperate its strength for another spell in the dwelling-room.

What is a Greenhouse?—In popular parlance, *Walter Carson*, all glasshouses are greenhouses, but the gardener has specialised the word greenhouse, and employs it to convey the idea of a cool-house, the temperature of which during winter does not usually decline below 40° Fahr., and does not rise above 50° to 55° by day. A warm greenhouse, from a gardener's point of view, is a house that is kept about 5° warmer than the greenhouse. Then comes the intermediate stove, which is warmer still, and lastly, the stove. We trust this explanation will satisfy you that when your man spoke of a warm greenhouse he had the correct idea from a gardener's point of view.

Tomato Seed.—*Robert S. L.*: If you wish to save seed of your Tomatos select the largest, finest shaped, and best ripened fruits from the plants that are carrying or have carried the heaviest crops. The fruits from which the seed is taken should be nearly dead ripe. Crush the fruits in water, and strain the pulp through fine muslin until you get it perfectly clear. The seed must be then dried as speedily as possible, for if it is allowed to remain damp it soon commences to germinate. It will dry quickly if spread thinly on the muslin and laid out in a warm room. You may also expose it to the sun on bright days. After it is thoroughly well dried pack it away in paper bags and keep it through the winter in a dry, cool room.

Carnations.—*R. S. O.*: "The Carnation" by *Dodwell* is a very practical book, and will afford you a deal of reliable information. If you are commencing to grow Carnations you will find it of the utmost value.

Fuchsias.—*C. B.*: The Fuchsias are getting to the end of their tether for this season. You may curtail the water supply, but do not dry the plants off at once. By-and-bye when the leaves have all dropped, water may be withheld entirely. Pruning had better be deferred until spring.

Chinese Primulas.—*W., Margate*: Lose no time in potting the plants off. As the season is so far advanced we should recommend 48's as the best size pots, 32's would be too large. Some of the plants may be left in the small pots they now occupy. They will bloom in them freely enough, although the flowers will naturally not be so fine as those on the plants which have had more room given them.

Aloysia citriodora.—I have a fine plant of the Lemon-scented Verhena growing out-of-doors against a wall facing to the south. Shall I require to lift it in order to keep it through the winter or would it keep in the open ground if protected?—*C. B.*

The plant will be all right (unless the winter is exceptionally severe), if you leave it where it is, and cover it up with a mat at night, and by day as well, during spells of hard frosts. Some of the tops of the branches will be likely to go off, but there will be

plenty of growths made lower down next year, and the loss will not be serious.

Cassia corymbosa.—Is this pretty plant generally used for bedding? I have had it in a bed in my flower garden where it has bloomed very freely. I am delighted with it, and shall have more of it next year.—*Subscriber.*

The plant is not so frequently employed for bedding as it ought to be and might be. It may occasionally be seen in greenhouses.

CARNATION MAUD DEAN.

THE powerful fragrance in this variety is delicious and its keeping qualities remarkable. It has an extra well-formed bloom, and a good stiff stem which always carries it erect, making it an ideal flower. The colour is white, deepening to the centre, which is a delicate pink, making it the most striking and attractive flower ever seen. The variety was raised by Mr. J. N. May, of New Jersey, and has received First-class Certificates from all the principal exhibitions in America. An eye-witness from this country saw the plants in December last, when a fine batch was bearing thousands of flowers. The same plants were again covered with bloom in May last. They were grown under the usual treatment accorded to Carnations as a rule, when they are being forced for the supply of cut flowers. About 4 in. of soil was placed upon the benches and the Carnations planted in this. Pot culture is seldom, if ever, attempted for market work. The fragrance of the flowers alone should recommend the variety to lovers of Carnations. Individual blooms measure about 3 in. across, on the stronger stems. The accompanying illustration was prepared from a photograph supplied us by Mr. May, and shows a popular method of displaying them in dwelling rooms, or on exhibition tables.

GLAMIS GARDENS, FORFAR.

GLAMIS CASTLE, of historical interest, is situated about a mile from Glamis Station, a beautiful part of Forfar. A few years ago the disastrous storm ruined the forest, uprooting thousands of trees. The gaps are plainly visible and will be so for many years to come. Gardening at Glamis for many years past has been a noticeable feature. It is now upwards of twenty-five years since I first visited Glamis. At that time the late renowned George Johnstone was in charge; and it may be fresh in the memory of many how he swept the decks of the principal prizes at the Dundee International Show with his grand Grapes, &c. After his death he was succeeded by Mr. Whitton, now Superintendent of the Parks and Gardens of Glasgow, and whose position there is giving the greatest of satisfaction to the Corporation. He was worthily succeeded by Mr. T. Wilson, the present gardener, a young man full of enterprise and a great enthusiast in gardening. Glamis has lost none of its prestige in high class gardening, for it is well represented in every department. Good order and cleanliness are the order of the day.

The fruit houses, a fine range, contain fine crops of Peaches, Nectarines, and Grapes, which are everything that one can desire. It is really astonishing what fine Grapes the old vines produce. Mr. Wilson is judiciously replanting, some grand young Vines being on the way.

The plant houses, of which there are many, contain numerous novelties worthy of note. Stove and greenhouse plants are well represented. I was particularly struck with a grand batch of the lovely *Gymnogramme schizophylla*, over 2 ft. through, a grand plant for baskets or elevated positions when well done. Standing at intervals between these and some well-grown Maidenhair Ferns, what struck me as a beautiful plant for decorative work are many dozens of the scarlet *Clerodendron fallax*, plants clothed with foliage to the pots, about 2 ft. high, with grand branching spikes of their rich scarlet flowers. They are used here extensively for indoor decoration, and stand well, so I was informed.

Other houses are gay, one with a grand batch of tuberous Begonias, many over 2 ft. through, as much in height, and superb varieties. These are quite a grand feature. Another house is full of well-grown and profusely-flowered plants of the best zonal, double, and single Pelargoniums, making a dashing display. *Lilium auratum* and its varieties, *L. lanci-*

folium, *L. Harrisii*, and Tuberoses are grown well, and swell the varied display. Noticeable were some fine *Hydrangea paniculata grandiflora* with enormous heads; the old favourite of mine, *Cassia corymbosa*, with its bright golden flowers; and the grand old *Vallota purpurea*, which is flowering profusely.

Marguerite Carnations, as well as others, are specially well done. A house of these in 48-size pots sown in January is grand. The strain is Sutton & Sons'. For variety of colours, flowers of fine form and substance, and most beautifully fringed, they are truly magnificent. As these are just in perfection, they will continue to flower for months to come. The plants are very free, producing enormous quantities of flowers. The Tree Carnations and the Souvenir de la Malmaison types are likewise well done.

The stove houses contain grand collections of young plants suitable for decorative purposes; and a house of splendidly-grown *Calanthes* of various

of bedding is well represented. Carpet bedding receives its due attention. Unfortunately the severe frost of a few days ago spoiled the effect of the flower garden on the terrace, the Begonias, *Tropaeolums*, *Heliotropiums*, &c., being completely cut up and black. The walls in various parts of the grounds are well planted with climbers, Clematis, Roses, &c., still making a good display. The pleasure grounds, which are well planted, contain many grand specimens of hardy trees and shrubs, Coniferae, &c. Every season some new addition to these is being made. The demand for cut flowers, fruit, vegetables, and plants for decorative work is great, but Mr. Wilson is equal to the demand, and I congratulate him upon his success in all-round gardening, which is fully appreciated by his noble employer.—*Alfred Outram, F.R.H.S.*

BUCCLEUCH NURSERIES, HAWICK.

MANY of our readers are familiar with Mr. John

CARNATION MAUD DEAN.

sorts calls for special comment. They are grown principally in 32-size pots. Many of the pseudo-bulbs are fully a foot, and others 15 in. long, and stout in proportion; and judging from their vigorous appearance they will give a good account of themselves later on. A large batch of all the best *Bouvardias* attracts one's attention, flowering profusely.

Tomatoes, Melons, Figs, Cucumbers, &c. are fruiting well and giving every satisfaction. The frames are full of seedling Begonias, Pelargoniums, Carnations, and other useful plants. A grand batch of *Chrysanthemums* will soon have to be housed, which will give a good supply of cut flowers, and make a fine display through the winter months. These combined with the scarlet *Salvias* make a good show.

Bedding is well done. The display in front of the large range I shall not forget. Every good annual, combined with all useful bedding plants, is there in full glory, not formally arranged, but broken up, which to me is more interesting. Every kind or style

Forbes, Buccleuch Nurseries, Hawick, N.B., but a greater number know him only by reputation. The nurseries from which his seeds and plants emanate are situated in a narrow valley amongst the mountains, which surround and tower above Hawick on every side. The Teviot and Slitrig flow through this valley, adding likewise to the romantic character of the situation. We had the pleasure of inspecting these nurseries on the 2nd inst., and noted a few of the several specialities here, particularly in the way of hardy plants. During a downpour of rain we passed through

THE GLASSHOUSES,

and in the conservatory saw some fine old Camellias, which prove very serviceable about Christmas. The varieties included many of the best such as Alba Plena and Imbricata, both handsome white flowers; also Beaulie, Guthrieana, Michael Angelo, Meteor, Juluthe, Rubens, Argus, Diana, Lourii, Archduchess Marie, and Coradino. *Lapageria rosea* and *L. r.*

alba were flowering freely on the roof. Some Tree Ferns also stand about amongst the Camellias. On the side shelves are *Lilium auratum*, *L. lancifolium*, and *L. l. rubrum* with a groundwork, as it were, of *Statice profusa*, *S. Butcheri*, and *S. brassicaefolia*. The latter has flowers of a purple-blue shade, while those of *S. Butcheri* are of a pleasing sky-blue colour. The little known Buttercup of the Canary Islands (*Ranunculus cortusaefolius*) was in seed. The large-flowering Cannas of the Madame Crozy strain have found their way here in considerable numbers and variety, in yellow, scarlet, crimson, spotted and edged varieties. Variety is also furnished by batches of *Araucaria imbricata* in various sizes, *Hydrangea paniculata grandiflora*, Harrison's Musk, and the variegated Musk, the latter being rather uncommon.

Many varieties of Clematis are grown in pots amongst which we noted several still in bloom. *C. Viticella kermesina* has small purple flowers, but those of *C. Star of India*, are many times larger and dark purple-blue. A very choice sort is the pure white Mrs. Geo. Jackman. Mr. G. M. Innes is double mauve. Fairy Queen is of a pale flesh with purple bars. The well-known *C. montana* is also here. Close by was *Crinum mooreanum* with blush-white flowers on scapes 4 ft. high. *Grevillea Hillii*, a little known species with deeply-lobed leaves, is located in the same house as the above.

One house is largely devoted to Palms of various sizes, including *Latania*, *Scaevthias*, and *Kentias*, associated with *Cycas revoluta*. Useful species and varieties of Maidenhair Fern, such as *Adiantum cuneatum*, *A. c. grandiceps*, *A. c. Pacotii*, etc., are also grown on the shelves. Useful foliage plants for the stove are *Phyllanthus nivosus* and *P. roseopictus*, variegated with white, and rose and white respectively. *Bougainvillea glabra sanderiana* flowers about the end of May and the beginning of June. The Tangerine Orange is a small fruiting variety. Bold climbers are *Passiflora quadrangularis* and *Stigmatopbyllum ciliatum*, the yellow flowers of the latter resembling an *Oncidium*. *Clerodendron fallax* is in its beauty.

Eucharis grandiflora, planted out in a frame in soil overlying hot-water pipes looks very healthy and is always flowering. A cold frame is filled with that useful little *Fuchsia Dunrobin Bedder*.

The greenhouse is brightened with *Celosia pyramidalis* in yellow and crimson colours, as well as a handsome crimson variety of *C. cristata*. Rare and curious is *Bowiea volubilis*.

The collection of *Fuchsias* is extensive, including all the best. *Lafayette* is a very large double variety with a rich purple corolla and scarlet sepals. *Duc d'Aumale* has a large double white flower, tinted with pink and capped with a red calyx. Another huge double is *Alfred Raimbaud*, with a purple-blue corolla changing to magenta. The lilac-blue corolla of *George Feydeau* is very handsome, especially by contrast with the scarlet sepals. A much older but certainly handsome variety is *Mrs. Rundell*, having light orange-red sepals and a bright scarlet corolla. *Fuchsia gracilis variegata* is a graceful and handsome subject for any purpose, but might be much more often bedded out than it is. *Dunrobin Bedder* forms little bushes about a foot in height, very freely branched and laden with coral-red flowers all the summer.

The collection of zonal *Pelargoniums* is very extensive including a large number of the finest and most recent varieties. The large salmon flowers of *Oenone*, borne in large trusses, are very handsome. The same may be said of *Livy*, with huge, rich orange flowers. *Sir Percival* is pure white, large and very choice. *Goldfinder* is a double variety, having scarlet flowers shaded with yellow; and *Love Gold* is, perhaps, the nearest approach to yellow we yet have. Very pretty is *Nydia*, having white flowers tinted with cream and a pinky-red centre. *Agnes* is even purer white than *Sir Percival* owing to the almost total absence of anthers. *Black Vesuvius* has small, very dark leaves and scarlet flowers, forming dwarf, flat-topped tufts. *Iseult* is rich salmon internally and orange scarlet on the outer face, making a unique variety.

Passing into the *Begonia* house we noted single and double tuberous sorts in great variety, many of the finer ones being named. Amongst the singles were some fine pure white, cream and rose seedlings, the flowers of which stand clear above the foliage. Very striking was *L'Orientale*, with yellow flowers

and a deep orange centre. *Gem* was of a beautiful salmon and very free. The circular flowers of *Ariel* were buff, suffused with pink. Of the double varieties a greater number has been honoured with names, but we noted only the best, including *Marquise de Treviso*, clear rose and crimped; *Buttonhole Bonquet*, rosy-pink, fringed, and having broad guard petals; *Dr. Marshall*, deep scarlet; *Madame E. Tourtell*, milky-white; *Conspicua*, rosy-carmine; *Mrs. Ross*, golden-yellow; and *Primrose Dame*, bright yellow. *Jessie Forbes* has large, wavy-petalled, straw-coloured flowers, that are both distinct and beautiful. They are carried erect on short, stout footstalks. *Panama* is large, pure white and of good form. The deep scarlet, erect flowers of *Surprise* are large and in shape like a *Hollyhock*. *Picotée* is French white with a well-defined pink edge. There are also many fine seedlings of white, salmon, salmon-pink, yellow and other colours. Amongst other kinds we noted the charming *Begonia La Lorraine*, which practically keeps up a succession of bloom all the year round under proper treatment.

Hybrid greenhouse *Rhododendrons* are also kept in stock. Showy and useful is *Browalia speciosa major*. A house is devoted to Palms of various useful sizes, including *Kentias*, *Geonoma*, *Cocos*, *Chamaerops*, &c. In the stove are *Caladiums*, including *Gerard Dow*, having yellow leaves and red veins; and *Mme. Jules Picot*, translucent pink, with green veins. *Panax Victoriae* has silvery variegated leaves. Other well known and useful things in the stove are *Dracaena sanderiana*, *D. goldiana*, *Pbyrium variegatum*, *Hoya bella*, and the beautiful *Reidia glaucescens*. The narrow-leaved *Dracaena Princess May* and *Miss Glendinning* are amongst the best table plants in cultivation. Choice also are *Croton*, *Mrs. Swan* and *C. superbum*, the latter having very long and graceful, narrow leaves. The large white flowers of *Scrubertia graveolens* are very fragrant. *Begonia President Carnot*, with pink flowers and scarlet fruits has found its way here.

The pits and frames are occupied by a variety of subjects. In one of them we noted *Rose White Pet* and *Red Pet*, very floriferous and useful for bedding, the one being a useful companion to the other. In the seed house we noted bright blue, and other varieties of *Delphinium grandiflorum*, some flowering, and others ripening a crop of seed. The same may be said of *East Lothian Stocks* which Mr. Forbes grows so well and which find their way into gardens all over the country as far as London at least. They are now in seven colours, namely, white, crimson, purple, white wallflower-leaved, scarlet, crimson wallflower-leaved, and rose, the latter being both choice and new. These Stocks are a speciality at Hawick. *Brompton Stocks* are also grown here. *Hollyhock eyes* were being rooted in quantity in frames. *Witbania origanifolia* is an uncommon plant belonging to the *Solanum* family.

OUTDOOR DEPARTMENT.

So important is this department of the *Buccleuch Nursery* that space is altogether inadequate to do it justice on this occasion. The leading specialities in florist's flowers must, therefore, be dealt with on another occasion. Suffice for the present to indicate a few of the more interesting subjects we noted while passing through the grounds.

The collection of *Montbretias* is rather extensive, both in quantity and variety, the plants being in the height of their glory when we saw them. Bright and floriferous were *Bouquet Parfait*, rich orange-scarlet; *Pluie d'Or*, golden-yellow; *Phare*, orange and scarlet, branching, and 2½ ft. high; and *Talisman*, dark orange-red or vermilion, and very handsome. Altogether there are about thirty-five to forty varieties in the collection. *Lilium tigrinum* was just beginning to open, while *L. candidum* was mature and ready for lifting. Many of the bulbs were lying almost on the surface of the soil, and in fine condition. *Antirrhinums*, in striped, mottled, and self colours, are grown in great variety. Several of the best varieties of tall *Lobelias* are grown, including the brilliant fiery scarlet *Firefly*.

A noted collection of *Hollyhocks* has been well grown here for many years. The fine spikes were being preserved from the violence of the wind and torrents of rain in readiness for the *Edinburgh* show. A large brake is occupied with them, and in passing through we noted handsome pink, rose, salmon, scarlet, purple, white, yellow, cream, purple-red, primrose, and other varieties. Orange and

lemon African as well as French Marigolds are grown in quantity. Violets are cultivated in quantity and variety.

Ornamental and flowering trees and shrubs are also amongst the requirements of this establishment. *Hydrangea paniculata grandiflora* is perfectly barded here, as is the handsome, free-flowering *Hypericum moserianum*. *Spiraea Douglasii*, *S. salicifolia*, *Golden Elder*, *Spruce*, *Scotch Fir*, single and double *Scotch Roses*, *Apples*, *Pears*, *Plums*, *Gooseberries*, and other small fruits go to make up a varied assemblage of necessary stock. We shall refer to specialities in florists' flowers in the near future, for they succeed remarkably well at Hawick.

SCOTTISH HORTICULTURAL ASSOCIATION.

THIS body of gardeners holds a series of monthly meetings throughout the year, the last one being held on the evening immediately prior to the opening of the *Royal Caledonian Horticultural Society's* annual show in the *Waverley Market*. The *Scottish society* convening these lectures are fortunate in securing annually a list of lecturers eminently able to deal with the wide range of subjects coming under notice. Mr. M. Todd, the president for the year, now current, occupied the chair, and there were present Mr. D. T. Fish, formerly of *Hardwick, Bury St. Edmunds*, the lecturer for the evening, Mr. Mackenzie, treasurer, Mr. H. J. Jones, *Lewisham*; Mr. Grieve, Mr. Morrison, Mr. Robert Laird, Mr. J. H. Murray, Mr. A. E. Stubbs, and many others. The president introduced the lecturer, who chose for his subject—"Plants, fruits, and flowers in the home and in the life." He observed in the course of his opening remarks, that spring-time was naturally the best time to approach such a subject. The attributes of horticulture filled us with admiration, and freshened us up from the zero of winter, fit for nobler opportunities. Quoting *Shakespeare*—"There is a tide in the affairs of men which taken at the flood leads on to fortune." Welcome spring! And what of autumn time? The lingering touch of summer he dwelt upon with excellent touch and effect. The *Apple* may be instanced as the commencement and the finish of our summer—the *Apple blossom* with its lovely radiance—the mellow fruit in autumn, full of poetry and teaching of seedtime and harvest. He touched upon the cheerful effect of flowers upon the garret or the mansion. We share the comradeship of flowers, and adore them as household pets. Amongst them we love to live, and move, and have our being; and we might safely follow the path of flowers, a statement, be declared, too deep for commonplace expression.

We praise art, we commune with Nature, we love the flowers. They live for us and others; the flowers so infinitely pure, spotless, and stainless. He described the plants as the scavengers of Nature; yet had it not been said, "that *Solomon* in all his glory was not arrayed like one of these." The markets of our cities contained a wealth of bloom, and a variety of growths not to be equalled in any nobleman's garden; but the lecturer did not touch upon the much discussed subject of market gardeners.

He touched upon the enormous developments of the fruit-growing of the world; also the *Lilies* and other flowers for cut blooms; vegetables all the year round, the aggregate of quantities being simply enormous; piling up *Narcissi*, and the like for *Christmas decorations*; picture the possibilities possible! *Tulips* and *Orchids* come in quantities from the south—in millions, constituting a mighty power in the decoration and adornment of our homes.

The speaker next referred to the lower percentage of bad seeds in the bulk of seeds now offered, describing it as a grand advance on fifty years ago. Open our doors and let the new beauty come in, raising us to higher conditions of social and physical life, when every home shall have its garden at the door. The growth of continuation schools was a great help to this end for the busy worker who is thus enabled to devote to study his leisure time.

He described the late *John Wills* as the pioneer of the new decoration of the home, the dinner table with his robust effects in icebergs and rockwork, rendering the dinner table of to-day more a fine art than a mere annual feast. All this had a very real effect in our home life. The presence of art and the spell of beauty made the good things of this life even

more palatable, promoting our health and refining our taste and manners.

The lecturer dwelt upon the even greater possibilities in the time to come, and concluded his peroration amidst applause. Discussion followed, and a successful meeting was brought to a close.

Exhibits are encouraged at these meetings, and certificates awarded where they are deserved. A collection of Cactus Dahlias came from Mr. Wilson, Belladrum, Beauvy. Messrs. Thos. Methven & Sons, Edinburgh, sent new Chrysanthemums. A new seedling yellow Carnation, named Miss Alley, was tabled by Mr. Robertson Munro, Langside, Glasgow, and was accorded a First-class Certificate. The table decorations were kindly provided by the president, Mr. M. Todd, Maitland Street, Edinburgh.

A RUN ROUND THE NURSERIES.

WHEN on a visit to the North of London recently, I thought I could kill two birds with one stone, as they say. My first step was, then, to give the Messrs. Hugh Low & Co. a look up at their Clapton nursery. Calling at the office, which is situated close to the entrance, I was asked to step this way by the smart and courteous clerk, and was soon introduced to Mr. Ianson, who very kindly did the amiable, for it was the Orchids I had called to see.

The first house we entered was a span-roofed one, the middle stage of which was crammed full of *Vanda caerulea*, all in grand condition, and in sizes to suit all parties. The price too was extremely moderate. Some of the pieces are marked as being flushed with rose. On the side stages are fine pieces of the easily-grown *Vanda kimbaliana* and *V. amesiana*, all in rude health.

In another division close by is a most wonderful batch of *Miltonia Roezlii*. This species is not always found in good condition, but here it grows like a weed, small pieces making fine specimens in a very short time. The house in which they are growing appears to be a naturally moist one, a condition of things which this beautiful Orchid likes. The temperature, too, must be brisk, and the shading fairly heavy.

PHALAEOPSIS.—This, the Moth Orchid, is a speciality here, and always has been. Eighteen years ago, when first I entered this nursery in quest of a situation as journeyman, the impression that a houseful of plants of this magnificent Orchid, with immense leaves without a sport, made on me has never been effaced. To-day they are, if anything, even in better order. The prices, too, are so reasonable; even the special varieties are not put at a prohibitive figure. I noticed in their culture that every precaution is taken to keep the heat and moisture nicely balanced, and with this end in view the spaces underneath the stages are filled with clinkers and other moisture holding material, whilst on the stages under the lattice work there is a quantity of ballast for the same purpose. At the end of this division I noticed a fine piece of the beautiful *Aerides lawrenceanum*, and a grand plant of *Vanda Lowii*. In another house there is a very fine lot of the pretty *Angraecum articulatum*.

The *Dendrobium* house is full of *D. wardianum*, *D. crassinode*, *D. primulinum*, &c., all in the pink of condition. *Cypripediums* are represented by great quantities of *C. Charlesworthii*, *C. Curtisii*, *C. bellatulum*, together with several of the best hybrids, including *C. Alfred Hollington*, *Mrs. E. V. Low*, &c. The Butterfly Orchid (*Oncidium Papilio majus*) is represented by great numbers in splendid condition. The pretty *Bulbophyllum claptonense* was to be seen in flower. Of *Cattleyas* and *Laelias* there is any quantity, including *C. Mendelii*, *C. Trianaei*, *C. Mossiae*, *C. labiata autumnalis*, and a fine lot of *Laelia purpurata*. There are, of course, numerous other Orchids of equal interest.

The Orchids are, however, being drafted to their new establishment at Bush Hill, Enfield. Indeed, the *Odontoglossums* are already located there, and are said to be making splendid growths. This I can readily believe, for, being more out in the country, the atmosphere is much clearer in winter, and the air more pure than what it is at Clapton. Time, however, would not permit of my extending my visit thus far, as I had other business to transact, so with a hearty "good-day" to my courteous guide I made tracks, but next time I go on the rampage I shall

certainly run down to the Bush Hill establishment of this most reliable firm.—*S. Cooke.*

TO THE IVY-LEAVED TOAD-FLAX.

Quaint little trailer
Cresting the wall,
Ivy-leaved Toad-flax
Flinging thy broad, lax
Cushions of blossom—
Darker or paler,

Daintily small—
Over the kindly
Stones that embosom
Rootlets and roots,
Searching so blindly,
Feeding thy shoots;
List me, I pray thee,
Homage I pay thee!

Old Father Time,
Hoary and crinite,
Weathers and crinkles,
Hardest of granite,
Smoothing each feature
Over with slime;
Old Mother Nature,
Harvesting seeds,
(Call them not weeds)
Sows them and sprinkles
Crannies and wrinkles.

Mountain and plain,
River and main,
Oft and again.
Golden-eyed wilding,
Wall, rock, and building—
Homes of thy choice—
Smile and rejoice,
When from the ledges,
Purpling the edges,
Springeth thy garlands,
Studded like star-lands
Over the stones.
Hues, tints, and tones,
Palate and spur;
Fashioned demurely,
Puzzle thee surely,
Sage connoisseur!

Sculptured and furrowed
Flower of the wall,
Savants scholastic
Hail thee with names;
Encomiastic—
Most of them borrowed—
Just as if all
Slighted thy claims.
Who is thy grower?
Seedsman and sower?
Who can unravel
How thou dost travel?
No one can answer,
Save a romancer.

—*Osmunda*, 1st July, 1897.

PATHOGENIC MICROBES ON KITCHEN-GARDEN VEGETABLES.

MR. BRANDEIS, of Bayonne, has called the attention of hygienists to the dangers for public health caused by the employment of human excrement for manuring vegetables, some of which are eaten raw.

On the other hand, Mr. G. Roux has sent to the Lyons Society of Medicine a brief note on this question, in which he mentions the resistance of certain microbes deposited on the surface of vegetables, and the great difficulty found in removing them by repeated washings. Mr. Guiraud, of Toulouse, has made a series of experiments on the Toulouse suburban grown vegetables where human excrement is employed as manure. A recrudescence of typhoid fever having occurred some months ago at Toulouse, the researches of Mr. Guiraud were devoted exclusively to the *Eberth bacillus* and the *coli bacillus*. Less successful than Mr. Brandeis, he did not succeed in isolating the *typhoid bacillus*. He found, by making cultures with the various colonies developed on plates, bacilli resembling by their characteristics those called *paratyphoid* or *similo-typhoid*, some causing very slight fermentation of lactose, and only turning litmus liquids red after several days, others which do not coagulate milk, or produce more or less scanty cultures on Potatos, but he never found colonies presenting typical characteristics of the *Eberth bacillus*.

On the other hand, in sixteen samples various salads, Strawberries, &c., collected at random in the market the author verified nine times the presence in large quantities of the *coli bacillus* with all its characteristic reactions. The *coli bacillus* is so common in the exterior medium, as the most recent researches tend to demonstrate, that there is no

reason to attach much importance to its presence on vegetables, had not the microbe thus isolated displayed particular virulence. With three of the microbes thus isolated the author made intraperitoneal injections with a dose of 2 cubic centimeters in three guinea pigs, all of which became seriously sick. One died forty-eight hours later, and at the autopsy a sero-fibrinous extravasation of the peritoneum, marked signs of peritonitis, and acute congestion of the intestines, kidneys, and lungs were observed.

Needless to add that the bacillus extracted from the peritoneal extravasation had preserved all its virulence, as was demonstrated by a series of inoculations. Without giving exaggerated importance to the presence of so ubiquitous a microbe as the *coli bacillus* in our aliments or beverages, we may say that it is not, doubtlessly, a subject of indifference to allow repeated entrance into our organism of a germ so markedly virulent in animals, and perhaps by continued researches in this direction some light might be thrown on what ancient medicine termed *season constitutions*, and an explanation found in the varying virulence of germs of the exterior medium, which enter one way or another into our organism.—*Revue Scientifique*, Sept. 11th, 1897.

ATHOLE HYDROPATHIC, PITLOCHRY.

THIS lovely spot is owned by Mr. William Macdonald, a great enthusiast in gardening. The gigantic mansion is built of stone, and stands in a prominent position overlooking a fine country. The scenery is magnificent, the surroundings most pleasant, and the grounds are beautifully undulated, well laid out and planted with ornamental trees and shrubs. *Rhododendrons* do well; in fact, everything seems to flourish. There are miles of walks through shady glens where the bubbling water flows, the whole being most pleasant and picturesque. The water fowl upon the various streams, and the beautiful colour of the autumn foliage, make this a most enjoyable retreat for a holiday. The place is so well patronised that many hundreds of people have to be turned away during the season. Two hundred and eighty guests is the average number. This with a staff of over seventy servants means great consideration and management. Yet all works with ease and comfort. All regret when their time comes to leave. Amusements of all kinds are provided. There are tennis grounds, racket courts, good fishing and shooting, and at night theatrical and other entertainments.

The place is beautifully decorated with plants and cut flowers. Stately Palms meet the eye in every direction, liveried up with bright cut flowers. These are grown in great quantities. For instance, there is a line of *Montbretia*, 200 yards long and 3 ft. through, a sight worthy of a long journey. Various other flowers, such as *Asters*, *Sweet Peas*, *Heliotrope*, *Stocks*, &c., are grown in great quantities for the decoration of the Hydro. Various kinds of bedding are well done, the ribbon borders specially so. Not only is the outside a feature, but Mr. Macdonald is an old Orchid enthusiast. He has a grand collection of *Cypripediums* in excellent health, noble specimens of good old sorts, many of the plants being 2 ft. through, including *C. Sedenii candidulum*, *C. Charles Canham*, *C. vexillarium*, *C. insigne Maulei*, *C. Morganiae*, and many smaller plants of the new varieties, which are grand. The stages are draped with *Panicum* and *Selaginella*, in narrow boxes (6 in.), which add much to the appearance of the houses. Cool Orchids are equally well done. Many hundreds of *Odontoglossums* of various kinds are grown, including *O. Pescatorei*, *O. Alexandrae*, &c., just now in flower, and a few *Masdevallias*. A grand plant of the curious *Nanodes Medusae* over 2 ft. through, and having thirty-six fine growths, attracts one's attention. *Cattleyas*, *Laelias*, *Dendrobies*, and *Coelogynes* in quantities occupy other houses. All seem to enjoy the treatment they receive.

Palms and decorative plants are well done, also great quantities are daily in use for the decoration of the various rooms and corridors of this gigantic palace. The bedding has very much suffered with the recent frosts. The *Begonias* and *Heliotropes*, which are greatly used, are perfectly black; for on September 13th there were ten degrees of frost, which likewise cut down all the Beans, Marrows, &c., in the kitchen garden. This is an important means of supply for such a place. A large garden of some acres is very well stocked with fruit trees in variety,

and vegetables, the demand being very great, as one can imagine.

There are upwards of thirty-five acres of pleasure grounds, with over six miles of walks, to which visitors have free access at all times; also to the plant houses. We congratulate Mr. Macdonald upon being the possessor of such a gigantic establishment, and so ably managed, as I heard some ladies express. A home from home is, indeed, found at the Athole Hydro.—*A. Outram.*

THE WOBURN EXPERIMENTAL FRUIT FARM.

DURING a visit of the Essex farmers to the experimental farm, by the permission of the Duke of Bedford and of the Royal Agricultural Society, the following notes were made by Mr. C. Wakely, horticultural lecturer to the Essex County Council:

"As might be expected (from the limited time the trees have been planted) very little difference was to be seen in some of the plots, as experiments must be conducted over a number of years in order to obtain reliable results. Hence the value of the farm as an experimental station will increase from year to year.

"One of the most forcible lessons learnt was that of the importance of the proper planting of, and after-cultivation around, young trees. In order to illustrate this, trees of the same age and kind had been planted on adjoining plots of ground. In one case the planting was thoroughly done, whilst in the other the roots were placed in the hard ground without any previous preparation, and the weeds had been allowed to grow afterwards. Some of the trees planted in the latter way were quite dead, and the remainder were in a very sickly state.

"The importance of the pruning of young trees in order to get them well furnished with useful wood was also well illustrated. The difference between pruned and unpruned trees was very marked. The former were developing into shapely specimens, whilst the latter consisted of a few weakly, badly-furnished branches, never likely to give satisfaction. These two experiments are specially commended to the notice of Essex farmers.

"An effort is also being made to solve the question as to the time at which the newly-planted trees should be pruned, whether in the year of planting or in the following one. This question has caused a deal of discussion, and the results to be obtained under the two systems will be closely watched for by fruit growers.

"Experiments in deep and shallow planting are also being carried out, but sufficient time has not yet elapsed to give good results. The droughts since planting have also interfered with this experiment.

"Further experiments are also being conducted in order to ascertain the best time for planting trees—autumn, winter, or spring. The last season appears to be the best, but fuller proof is certainly called for."—*The Journal of the Essex Technical Laboratories.*

WEEDS.

It is not every garden that can boast of growing more than a dozen weeds in perfection. In most, one particular one holds predominant sway, either Chickweed, Groundsel, or Shepherd's Purse. But in a garden that I knew in the West Riding of Yorkshire the following all grew luxuriantly:—

Coltsfoot, Couch Grass, Groundsel, Shepherd's Purse, Chickweed, Docks, Bindweed, Dandelions, Buttercups, Knot Grass, Peppermint, Willow Herb, Germander Speedwell, Yarrow, Lady's Mantle, White Goosefoot, Hedge Woundwort and Common Nettle.

The owner of this garden (who had only had it a short time) was in a terrible way about the state it was in, and waged war continually against the weeds. I often heard him murmuring to himself as he worked away (even by moonlight sometimes).

"One year's seeding, is
Seven years' weeding."

"Have you ever seen such an untidy garden?" he repeatedly asked me. "No," I used to reply laughingly, "although I have been in many, I never saw one before where the couch grass was as tall as yourself, the Convolvulus twined all round the Gooseberry and Currant bushes, and such quantities of Dandelions grew that anyone would think you were going to make gallons of Dandelion Tea."

"Well, you lazy fellow, set to and help to get rid of them," was his invariable answer.

"I will have a go at the Couch Grass, but nothing else," was my reply. I dared not confess it to him, but in my secret heart I could not help admiring the lovely yellow heads of the Coltsfoot, the graceful white flowers of the Convolvulus, the exquisite blue of the Speedwell or Veronica, and the pretty little flesh-coloured flowers of the Knot Grass. I remember something rather funny in connection with the latter plant. One day I heard a lady (a very clever botanist) go up to another who was first beginning the study of wild flowers, and say, "See, Miss G—, this is Knot Grass." "Well, I never said it was," smilingly replied the other one, not knowing there was a K in the word. I enjoyed a hearty good laugh at them both.

My "go" at the Couch Grass was generally over in ten minutes, for after digging furiously for a certain piece, which would always break in two as I took hold and pulled, my temper (I am ashamed to own) would so get the master of me that I would fling away the spade as far as I could, and march back to bully my friend.

"You would never make a gardener, you have no patience," he generally remarked as he worked industriously on.

It is three years since I first saw this garden, but when I went again this summer I should not have known it for the same place. My friend, with pride on his countenance, showed me all round. There was hardly a weed to be seen, just a stray bit of Groundsel and Chickweed here and there.

"You see what a great blessing it was I weeded so persistently that first year," he remarked to me. "I must confess," I replied, "that I don't like the garden as much as I did, it looks bare; I miss the Convolvulus, Dandelions, and Docks. You should have left a few in odd corners for 'auld lang syne.'" His disgust was so great that he walked off and left me.—*Solanaceae.*

GARDENING MISCELLANY.

DAHLIAS FROM BLOXHAM.

MESSRS. Townsend Bros., The Nurseries, Bloxham, Oxon, are well-known cultivators and exhibitors of Dahlias. They also engage in cross-breeding and raising new varieties. A box of blooms on our table contains decorative and single Dahlias. That named Monarch is a decorative sort to be sent out next year, and is notable for the enormous size of its blooms, which are of a rich maroon-crimson. Many of the outer florets measure $1\frac{1}{2}$ ins. across, but the others are not so much flattened. That named Mr. Chipperfield is smaller, though still a large Dahlia, and of a rich dark salmon-red, and as far as we remember it is quite distinct. Sulphur Queen is of a pleasing soft yellow, more or less shaded with a subtle tint of pink, which shines through from the back of the florets. It will be distributed next year, but Lady Sefton is new for this year. Like the three previous ones this also is a decorative variety, but the smallest bloom. The ground colour seems to be purple, heavily overlaid with scarlet, but shading into orange at the base. It is certainly a charming combination of colour, and should be valued for cut flower purposes. New single varieties are Beauty, Speckled Gem and Little Fairy. The first-named is scarlet, with a dash of cream along the centre of the broad florets. Speckled Gem grows only 18 ins. high and bears flowers that are striped and variously mottled with crimson on a yellow ground. Little Fairy is the most distinct of the three, and pretty, though the admirers of flat flowers might not like it. The single row of ray florets are scoop-shaped, and heavily shaded at the base and around the sides with a rich buff orange, while the remaining area is of a delicate blush pink. For cut flower purposes this ought to find a large share of favour amongst the British public.

THE WIREWORM BEETLE.

THE problem of dealing with the voracious wireworm always presents itself at some time or other to the gardener, and the result is that we hear of many desperate attempts to get rid of the pests. A plan recently adopted with success in Cambridgeshire in a Barley field where the Click beetles were very numerous is worth repetition. A wisp of Clover was

placed under a tile and left as a bait. It was occasionally examined and any beetles it contained put to death. So successful was the trap that within the space of a fortnight no fewer than sixty of the beetles were killed. Assuming half of these to be females, we get thirty, which, at a moderate computation would each lay thirty eggs, which totals up to an equivalent of 900 wireworms or 930 including the thirty killed which were supposed to be males. This may serve as a hint to the harassed gardener, for wisps of Clover are neither rare nor expensive articles.

VIOLA MARCHIONESS.

THIS Viola is without doubt one of the very best bedding varieties we have at the present time. Its colour is rich creamy white with clear yellow eye without rays of any sort. The flower is of good size, almost round and of splendid substance. The habit is all that could be desired, being robust, close and symmetrical; and the flowers having long footstalks, stand well clear of the foliage and are of uniform height. When seen in rows it has a charming effect, and is also well adapted for cut flower purposes when arranged with its own foliage or otherwise.—*Coila.*

FUCHSIA FULGENS.

A SMALL circular bed filled with this Fuchsia in the Royal Horticultural Society's gardens at Chiswick has rendered a capital account of itself during the past year. When we take into consideration the beauty of this half-hardy species, and the excellent effect produced by the racemes of bright scarlet flowers in contrast with the large, dark green leaves, it becomes a matter for some wonder that from enjoying a considerable share of popularity it has been sadly neglected of late years. In very few gardens do we meet with any more than a straggling plant of it, and that in a more or less miserable condition. As a sub-tropical bedding plant considerable use might be made of it, either in filling small beds entirely with it, as at Chiswick, or employing it as a dot plant among dwarfier subjects. *F. fulgens* was introduced to this country from Mexico in 1830.

PHLOX COCCINEA.

To those who are on the look out for a Phlox possessing a telling and durable colour, as well as a good branching habit, I would recommend this grand old variety. The flowers are certainly smaller than what is expected now-a-days, but the form and substance is above reproach, and in colour it is a rich vermilion. When massed in beds with suitable surroundings, it has a grand effect; and is also welcome in groups on the mixed border where it makes its presence felt in no unmistakable way.—*Coila.*

APPLE AND ROWAN JELLY.

TAKE about an equal weight each of Rowan berries and Apples. Slice up the Apples, skins, cores and all. Put the Rowan berries and Apples into an enamelled pan with just sufficient water to cover them. Put the pan on the fire until the water is on the point of boiling. Then mash up the contents of the pan finely. Strain the whole through a piece of gauze, and to a pint of the juice add one pound of loaf sugar, and boil until the juice solidifies sufficiently to form a jelly. The thicker it is the better, and the longer it will keep when stored.

SOCIETIES.

POLLOKSHIELDS HORTICULTURAL.—Sep., 8th and 9th.

THE 15th annual exhibition held at Maxwell Park, Pollokshields, Glasgow, was not so large as in other years, although the plants exhibited were remarkably good. Cut flowers were also a feature of the show, Asters being specially noteworthy. Dahlias, Gladioli, and herbaceous plants were good. Fruit was in small quantity, but excellent in quality, more particularly the grapes. Vegetables also showed a falling off, but Celery, Potatoes, and Greens were in capital condition.

In the open classes, and also in those confined to villa residents in Pollokshields, Mr. G. Irvine was a heavy winner, showing some excellent pot plants. Mr. J. Gault, Maxwell Park, also was most successful in the classes for bouquets, sprays, buttonholes etc., displaying a good deal of taste in his various arrangements.

ROYAL HORTICULTURAL.—September 21st.

HARDY plants and outdoor subjects generally were in strong force on Tuesday last, Michaelmas Daisies, Dahlias, Gladioli and Roses being conspicuous by their quantity and variety. Stove and greenhouse plants and large flowering Chrysanthemums were also staged in good form. Orchids are beginning again to fill their wonted positions. Fruit was represented by Melons and Apples; and vegetables by Onions.

Messrs. Hugh Low & Co., Clapton, exhibited an interesting and showy group of Orchids, including a number of plants of *Vanda caerulea*, bearing richly coloured flowers, Handsome also were the numerous specimens of *Cypripedium Charlesworthii*, *Odontoglossum grande*, *O. crispum*, *O. luteo-purpureum*, *sceptrum*, and *Oncidium jonesianum*. Very handsome was the new variety named *Cattleya hardyana Lowae*, both sepals, petals and lip being handsomely coloured. *Houlletia Brocklehurstiana* may be described as both handsome and pretty. *Cynoches chlorochilon*, *Cattleya schofieldiana*, *Oncidium unguiculatum*, *O. varicosum*, and *Odontoglossum harrayanum* added much to the general effect and conspicuous character of the group (Silver Flora Medal).

Messrs. F. Sander & Co., St. Alban's, staged a small group of Orchids containing a large and grandly flowered piece of *Odontoglossum grande*. They also had good pieces of *Laelia dayana*, *Dendrobium Farmeri aureo flavum*, *Miltonia moreliana*, *M. lamarcheana* and *M. lubbersiana*.

Very pretty and distinct was *Vanda amoena* exhibited by Messrs. Linden, Parc Leopold, Brussels. *Miltonia peetersiana*, a hybrid, was exhibited by R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Camherwell. W. S. McMillan, Esq. (gardener, Mr. W. S. Robertson), staged a plant of the beautiful *Cattleya aurea* Mrs. Fred. Hardy. *Lycaste denningsiana* was brought over from the Royal Botanic Gardens, Glasnevin. *Cattleya Harrisoniae major* and *Oncidium Papilio* were exhibited by D. M. Grimsdale, Esq., Kent Lodge, Uxbridge. Very pretty were the flowers of *Laelia praestans* Gatton Park var., exhibited by J. Coleman, Esq., Gatton Park, Reigate.

On the right hand side of the entrance to the hall just inside the door, Mr. J. H. Wittey, Nunhead Cemetery, staged a large semi-circular group of early Chrysanthemums. For early flowers some of them were of great size, although white predominated. An edging of Maidenhair Fern imparted a finish to the group (Silver Flora Medal).

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., made a brave display with Dahlias, of Cactus varieties chiefly. The flowers were large and very bright. In the centre of the group, in the background, some fine flowers of *Lilium nepalense* and *L. wallichianum* were very conspicuous (Silver Gilt Flora Medal).

Messrs. John Peed & Sons, Roupell Park Nurseries, Norwood Road, S.E., set up a nice lot of stove foliage plants in a very tasteful manner. They included finely variegated pieces of *Dracaena sanderiana*, the pretty *Leea acabilis*, several late *Caladiums* and some nicely coloured *Crotons* and *Dracaenas* (Bronze Banksian Medal).

Messrs. John Laing & Sons, Forest Hill, S.E., staged a lot of capital stove foliage plants. *Dracaena massangeana*, *D. Doucettii* and *D. indivisa rubra* were represented by some handsomely coloured specimens. *Crotons* in variety were also bright and attractive. A box of the pretty *Saxifraga sarmentosa tricolor superba* occupied a position in the front rank (Silver Banksian Medal).

Roses in capital condition considering the advanced season were shown by Messrs. Wm. Paul & Son, Waltham Cross, Herts. Baskets full of the new apricot-hued China Rose Queen Mab were very noteworthy here. Some capital examples of *Enchantress*, *Niphetos*, Mrs. John Laing and *Sylph* were also on view. The blooms all through were remarkably fresh (Silver Gilt Banksian Medal).

A very effective decorative exhibit came from Messrs. Jones & Sons, Shrewsbury. It was composed entirely of Dahlias, chiefly of the Cactus section, arranged with suitable greenery. The hardy autumn flower appeared to great advantage in the large pyramidal bunches and shower bouquets that found a place in the back of the exhibit. There was no semblance of stiffness in the arrangement, great taste and judgment being displayed throughout. The

front ranks displayed stands of cut blooms of both show and Cactus sections. Of the latter Cycle, Miss Wehster and Mrs. Turner were some of the most striking novelties (Silver Flora Medal).

Some first-class Dahlias were shown by Mr. J. Hudson, Gardener to Leopold de Rothschild, Esq., Gunnersbury House, Acton, Middlesex, which included Cactus, single, pompon, and the so-called single Cactus varieties. The narrow florets of the last-named are very distinct and striking, particularly in the case of such varieties as *Novar*, *Meg Merri-lees*, *Sir Walter*, *Ivanhoe*, *Brenda* and *Queen Mary*, which were all shown in excellent condition (Silver Flora Medal).

Messrs. H. Cannell & Sons, Swanley, Kent, were well to the fore for cut Dahlias. The blooms were staged in the fashion generally adopted by the Messrs. Cannell, viz., in large flat pyramidal bunches, with sprays of Asparagus. A layer of hardy Fern served for a ground-work. Cactus forms were chiefly in evidence, very choice being *Miss Irene Cannell*, *Gloriosa*, *Major Haskins*, *Mrs. W. Nohle*, *Fusilier*, *Robert Cannell*, *The Czar*, and *Mrs. H. Cannell*. A few bunches of pompoms were also staged. These, too, were all choice (Silver Flora Medal).

A grand batch of the early-flowering Chrysanthemum *Lady Mary Fitzwigram* was sent by Mr. Geo. Wythes, gardener to Earl Percy, Syon House, Brentford. The plants were marvellously floriferous, and in addition to the expanded flowers were carrying a heavy crop of buds (Silver Flora Medal).

Mr. H. B. May, Upper Edmonton, showed a nice batch of the grand *Salvia splendens grandiflora*. The plants were arranged in a semi-circular group, and edged with a broad band of Maidenhair Fern (Silver Banksian Medal).

Mr. Hudson likewise showed some magnificent specimens of the *Salvia*, the racemes of flower being much larger and finer than in the first named group. The plants indeed literally blazed with scarlet (Silver Flora Medal).

Mr. S. Mortimer, Rowledge, Farnham, Hants, received a Silver Flora Medal for a superb display of show and fancy Dahlias. *Duchess of York*, *Perfection*, *Arthur Rawlings*, *John Hickling*, *Shotsham Hero*, *Majestic*, *Shirley Hibberd*, *Jas. Cocker*, *Jas. Stephen*, *Burgundy*, *Eldorado*, *Duke of Fife*, and *Rebecca* were some of his strongest forms. In the background of the show and fancy blooms was a row of flat pyramidal bunches of Cactus and Pompon sorts.

A Silver Banksian Medal was awarded to Mr. J. T. West, Tower Hill, Brentwood, for a capital display of cut Dahlias. *Arthur Rawlings*, *Mande Fellowes*, *Virginale*, *William Powell*, *Hero*, *Willie Garrett*, *Mrs. John Downie*, and *Nellie Cramond*, were some of the best of the show and fancy forms and were all represented by superb blooms. Pompoms, and Cactus varieties were likewise shown in excellent form.

Stands of pompon, Cactus, show, and fancy Dahlias were contributed by Mr. Geo. Humphries, Kington Langley, Chippenham, Wilts. (Bronze Banksian Medal).

Messrs. J. Burrell & Co., Howe House Nurseries, Cambridge, sent cut Dahlias, conspicuous amongst which were some superb Cactus flowers. *Charles Woodbridge*, *Harmony*, *Falka*, *Cassilda*, *Lady Penzance*, *Beatrice*, *Regulus*, *Mrs. Wilson Noble* and *Fusilier* were the pick of the collection. A grand display of cut spikes of Gladioli was forthcoming from the same firm. Many of the leading varieties were on view, together with a host of very fine seedlings. The flower spikes and the individual flowers were of great size throughout, and the colours were both rich and varied (Silver Gilt Flora Medal).

Messrs. J. Cheal & Sons, Crawley, Sussex, weighed in strongly with a comprehensive collection of pompon, single, and Cactus Dahlias. The pompoms were especially fine, and such forms as *Jessica*, *Bacchus*, *Ruy Blas*, and *Erica* were splendid samples of their kind (Silver Flora Medal).

A Silver Flora Medal went to Mr. Chas. Turner, Slough, who showed Cactus Dahlias in a novel and effective fashion. Instead of being done up in bunches the stems of the flowers were inserted in baskets filled with moss, pots of *Adiantum* being interspersed between the baskets. *Mrs. Beck*, *Tonga*, *Earl of Pembroke*, *Fusilier*, *Mrs. C. Turner*, *Gloriosa*, and *Mrs. Barnes* were in particularly good condition.

Mr. John Green, Dereham, showed a number of bunches of miniature Cactus Dahlias.

Mr. W. J. Godfrey, Exmouth, Devon, showed four dozen large fine blooms of Chrysanthemums. *W. R. Prince*, *Barbara Forbes*, *Milano*, *M. Hoste*, *Lady Esther Smith*, *Lady Kennaway*, *Madame Gustave Henry*, *Miss Emily Silshury*, *Miss Oxenham*, and *In Memoriam* were the varieties shown.

Messrs. Wm. Cutbush & Sons, Highgate, N., had a small group of cut hardy flowers, including samples of the *Poke Plant*, *Phytolacca decandra*. A fine array of cut hardy flowers came from Messrs. Jas. Veitch & Sons, Ltd., Chelsea. It included a bright patch of the showy *Tritoma hybrida*, *Anemone japonica*, *A. j. alba*, *Helenium autumnale*, *Helianthus strumosus*, *H. multiflorus plenus*, and perennial Asters in variety (Silver Flora Medal).

Messrs. Paul & Son, the Old Nurseries, Cheshunt, received a Silver Banksian Medal for a bright and varied collection of cut hardy flowers.

Mr. Eric F. Such, Maidenhead, was awarded a Bronze Banksian Medal for a collection of cut early Chrysanthemums. Messrs. H. Cannell & Sons, had samples of *Physalis Franchetti*. Messrs. Sander also had an exhibit of similar material. A stand of Cactus Dahlias came from Messrs. Keynes Williams & Co., Salisbury. Messrs. Jas. Veitch & Sons, Ltd., sent samples of the tuberous rooted *Begonia Lafayette*.

At a meeting of the fruit and vegetable committee a Silver Knightian Medal went to Mr. Empson, gardener to Mrs. Wingfield, Amptill House, Amptill, Bucks, for a collection of Onions. There were some grand bulbs here—large, sound, and weighty—and many varieties were represented, including *Ailsa Craig*, *Giant Rocca*, *Holhorn*, *Barnet Hero*, and *Excelsior*. There were eleven dishes of Pears staged for the Veitch prizes. Mr. C. Herrin, Dropmore, was first with *Souvenir du Congrès*. Mr. Geo. Wythes was second with *Autumn Nelis*. Eleven dishes of Apples competed. Mr. Wythes won the first prize with *Ribston Pippin*. Mr. King, gardener to Col. Coleman, Reigate, was second with *Worcester Pearmain*.

Several Melons were shown, but none of them gained an award. Mr. W. Kemp, The Gunyah, Barnes, showed a dozen Melons, and a dozen Cucumbers. A Cultural Commendation was given to Mr. G. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone, for a fine dish of *Pear Beurré Martillet*.

OBITUARY.

MR. JAMES COCKER.

Though aware of the illness of the senior partner of the firm of Messrs. James Cocker & Sons, Aberdeen, we were pained to hear of his death at 12.35 on the morning of Wednesday, the 15th inst., at his residence, Sunnypark Nursery, in the sixty-fourth year of his age. He has been known to us by reputation for more than twenty years, but we made his personal acquaintance at some of the big shows of the Royal Horticultural Society, while still at South Kensington.

Mr. Cocker had been ailing for the last two years, and for some time past was unable to attend to business. He was borne at Corse, in the parish of Fergie, on the north-west borders of Aberdeenshire, in 1832. His father was the founder of the firm at the Sunnypark Nursery, and the deceased commenced his gardening career with his father at Sunnypark. After a time he went as a journeyman to Cloncaird Castle, Ayrshire. Sometime afterwards he found his way to London, where he spent a number of years studying the various branches of the nursery business. About 1871 he went into partnership with his father and brother, and this partnership continued till the death of his father in 1881, about which time we made his acquaintance, recognising him as an ardent florist. At this time he started business on his own account, taking into partnership his three sons, James, William and Alexander. His eldest son James died about three years ago, but the two younger are still carrying on the business with energy and courage, as the recent reports of the Aberdeen, Dundee, Edinburgh and other shows in our pages testify.

For many years past Mr. James Cocker was an enthusiastic and successful cultivator of Dahlias, Pansies, Pinks and Carnations. The *Dahlia James Cocker*, a show variety is still one of the best of its class and to be found in every representative collec-

tion of Dahlias, whether grown for exhibition or otherwise. For ten years past at least he has given his attention to herbaceous plants getting together a valuable and widely representative collection. Roses are another speciality of the firm, and an extensive collection has been got together, as many an exhibitor and visitor to various shows in Scotland can testify. Besides being an ardent cultivator and exhibitor, he was also a raiser of Roses, Pansies, Pentstemons, Phloxes and Violas. Sunnypark Rival was raised so long ago that it seems to have been the first Pansy in cultivation of a decidedly blue colour. It is still cherished as one of the best of its kind.

So well known was Mr. Cocker in the North, that his services as judge were constantly in great request at the various horticultural shows—a striking testimony to his knowledge of florist's flowers and garden produce generally. In this capacity he has served at Edinburgh, Newcastle and the Crystal Palace. The general nursery stock of the business is located at the Sunnypark Nursery, but the Roses which have been brought into such prominence during recent years, are grown at Morningfield. The ground here slopes to the south, and is well drained, thus enabling the Roses to be grown to great perfection even in the northern latitude of Aberdeen. That hybrid perpetual Roses can be grown here we are not surprised, but that Tea Roses should succeed so well in the open is indeed marvellous, considering the difficulties with which southern growers have to contend. Some seventy acres are planted with Roses and merely sheltered by hedges. In our report of the nursery in 1895 it is recorded that 50,000 dwarf Tea Roses were grown here, and passed successfully through the winter of 1894-95. Climbing Roses are grown by thousands, as are the best hybrid perpetual varieties. *Rosa rugosa* in numerous varieties also find a home here and fruit as freely as they do in the warmer and more sunny south. Mr. Cocker leaves a widow, the two sons in the business, and three daughters.

QUESTIONS AND ANSWERS

* * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Seed Pods of *Lilium giganteum* and Frost.—*M. M'L.*: We do not think that green seed pods would stand much, if any, frost without greater or less injury. You can protect them, however, for a considerable time yet without much danger, as early autumn and late spring frosts are easily warded off. By driving in a few long stakes round the plants, and securing them at the top by means of a piece of tar string, you will have made a framework over which you can throw a mat every night before leaving the garden, whether frost threatens or not. By so doing you can save yourself the trouble of going back late at night to it in case of frost. By tying the tops of the two stems together you can protect both as easily as one. Leave the stems attached to the bulbs as long as you can, and, unless winter comes early, they should mature where they are. After that you may cut the stems and hang them up so that the seeds will not drop out in case the pods should open. Let them complete their ripening in this way in a greenhouse or other place protected from frost before removing them from the pods. We intend using one of the photos as soon as we can find space.

Seed Growing.—*Eureka*: The soil should be poor rather than rich, as the seeds would be more likely to ripen early during fine weather. If the ground is too rich the plants keep growing and flowering to a late period, so that the autumn rains spoil the seed before it can be harvested and dried. You might try Delphiniums, Antirrhinums, Godetias, Clarkias, Poppies of sorts, Tropaeolums, Marigolds, Golden Feather, Eschscholtzia, Candytuft, Nemophila insignis, fine strains of Mignonette and similar things. The best plan is to begin with a few things and do them well. Many varieties of one species should not be grown except at long distances apart, in case the bees, &c., might mix them, which they are very apt to do. Gain experience by careful trials of a few things till you feel able to deal with more difficult subjects. Cockscombs and *Celosia pyramidalis* require careful management in frames over a shallow hot-bed, but you might learn in course of time to do them well. Some of the hardy annuals might be sown rather thickly in autumn and thinned out in spring to the necessary distances between the plants.

***Lilium sulphureum* not flowering.**—*M. M'L.*: You do not tell us whether you have been growing this Lily in pots or planted out. It requires the protection of a greenhouse, though it may with advantage be stood out of doors in a sheltered place with full exposure to sunlight during summer. It is usually grown in pots and flowers well, though we think it might even grow stronger if planted out either in a greenhouse or in a frame, where it may be protected in the colder weeks of late spring and early summer. Your bulbs have evidently not been very strong when you got them, or else you have been growing them in too small pots. You might use a 9 in. or 10 in. pot for each bulb, giving plenty of drainage, and not overwatering the plants till the soil is well permeated with roots. This ought to encourage vigorous growth and ensure flowering. When in full growth you could feed with weak liquid manure; but beware of using manure of a rank nature in the soil. The bulbets might be kept in slightly moist sand during winter, and planted in a compost of equal parts of peat and loam, either in pots or in a frame, the bulbs to be lifted and kept in sand during winter again.

Choice herbaceous plants.—*Eureka*: Such things as you mention might be grown to advantage provided you have the means of disposing of them. It is a question of finding out what is chiefly wanted, and of growing as many as are likely to be required each year. There would be less risk of large quantities of stock on hand for which there might be no demand.

Viola sport.—*J. Dick*: The occurrence of sports amongst Violas is very common, and many of them keep true to the change or comparatively so, provided the sport is real and not merely apparent. A considerable number of varieties, particularly white ones, sometimes yellow, blue and purple varieties change colour to some extent at different periods of the year, being darkest in spring and autumn, and palest in summer, particularly when the atmosphere is very dry. If you consider the new colour sufficiently pretty and distinct to constitute a desirable variety you should propagate it from the shoots that have sported. In any case there would be no harm in trying what it may do next year.

Names of Plants.—*A. O.*: The larger leaved species is *Cotoneaster buxifolia*; the other is *Cotoneaster congesta*.—*Alex. Reid, Jun.*: *Lycium europaeum*.—*A. T.*: 1, *Aster Amellus*; 2, *Lavatera trimestris*; 3, *Clematis Flammula*; 4, *Clematis Vitalba*; 5, *Corylus Avellana purpurea*; 6, *Berberis Darwinii*.—*W. Walls*: 1, *Oncidium incurvum*; 2, *Odontoglossum Pescaforei* var.; 3, *Cypripedium harrisianum*; 4, *Cypripedium Sedeni*.—*H. F.*: 1, *Liquidambar styraciflua*; 2, *Acer dasycarpum*; 3, *Pyrus japonica* (it often behaves in this way); 4, *Rosa indica monstrosa* (the green Rose); 5, *Fittonia Verschaffeltii*.—*A. N.*: 1, *Amaryllis Belladonna*; 2, *Colchicum autumnale*; 3, *Sternbergia lutea*.—*R. Walker*: 1, *Pteris longifolia*; 2, *Pteris cretica* Mayi; 3, *Asplenium hulbiferum fahianum*.—*J. C. S.*: 1, *Chenopodium rubrum*; 2, *Galeopsis tetrahit*; 3, *Setaria viridis*.—*Omega*: 1, Gout-weed; Bishop's-weed or Goat-weed (*Aegopodium Podagraria*); 2, Small or Field Bindweed (*Convolvulus arvensis*).—*A. Robb*: 1, *Adiantum tenerum*; 2, *Adiantum Ghiesbreghtii*; 3, *Adiantum cuneatum*; 4, *Adiantum formosum*; 5, *Ophiopogon Jaburan variegatus*; 6, *Agapanthus umbellatus variegatus* (Next time please pack Ferns with a little damp moss. The *Adiantums* were shrivelled up almost beyond recognition).

Fruits to Name.—Correspondents please note that our Pomologist is away from home at present, but the fruits will be attended to as soon as possible.

A Special Offer to Readers of THE GARDENING WORLD. 25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER
INFORMATION } ISSUED.
Size of Encyclopædia: 9 by 11½ inches. 656 Pages

It contains

MANY MAGNIFICENTLY ENGRAVED
COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF
GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

CARNATIONS.

From 4s. 6d. per dozen; 30s. per 100.

Our stock exceeds 30,000 well-rooted plants in perfect health.

A few Recent Testimonials.

"The Carnations came safely to hand this morning. I consider them a very fine lot." H. A., Beeston.

"Your Carnations are the best I ever had."—G. L., Portsmouth.

"The Carnation plants which I had from you are very fine."—T. S., Meiden.

"The Carnations to hand yesterday; they are sturdy plants, and I am well pleased with them."—G. F., Melrose.

"The Carnations arrived all right, and are very satisfactory."—C. T., London.

"The Carnations to hand; they were beautifully packed, and in good condition."—F. T., Kingston-on-Thames.

"The Carnations you sent me last year gave me much satisfaction."—J. D., Johnstone.

"I have received the 200 Carnation plants. They are good stuff; kindly repeat the order."—J. L., Withington.

ROSES.

From 5s. 6d. per dozen; 30s. per 100.

"The Roses I had from you have turned out well. I took the Silver Medal for Roses at Brynamman Show last season; also 19 Prizes at the Ammanford Show."—G. M. D., Ammanford.

"I have done very well with the Roses I got from you 3 years ago, even in this smoky district."—A. S., Leeds.

"I beg to express my entire satisfaction at the condition of the Rose Trees to hand, and also the packing of them, which was a perfect credit to your establishment."—R. M'W., Kilbrnie.

"I have much pleasure in informing you that the Rose Plants I received from your Orpington Nursery are doing splendidly."—H. M'G., Mid-Calder.

"I am glad to tell you that the Roses which you sent to Jamaica for me arrived in good condition, and are now growing splendidly."—C. L., Hamilton.

"I am glad to say that the DAHLIAS, single and double, and the ROSES, which I received from you last December are doing well. They rooted before the hot season, and after passing through that trying time, are now, during rainy season, in a healthy and vigorous condition. There are many flowers, and they make a fine show."—A. R., Nagpur, India.

"Mr. O. G. writes that the Roses arrived in Ceylon in very good condition, having been beautifully packed, and were doing well."—W. F. S., Bovey Tracey.

VIOLAS.

From 2s. 6d. per dozen; 12s. 6d. per 100.

- THURSDAY, October 7th.—Sales of Dutch bulbs by Messrs. Protheroe & Morris.
- FRIDAY, October 8th.—Sales of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

BURFORD LODGE, DORKING—Some weeks ago we made remarks upon the Orchids at the beautiful and romantically situated residence of Sir Trevor Lawrence, Bart., Burford Lodge, Dorking. Orchids may be regarded as the principal speciality of the establishment under the shadow of Box Hill, an abrupt spur of the North Downs in Surrey, where the range has been cut through by the River Mole. The superb collection here is well known to Orchid growers all over the world. There are

other specialities including subjects for outdoor and indoor decoration. Everything is done on entirely modern lines, as might be expected of the president of the Royal Horticultural Society. The garden is of limited extent, but the space at command is utilised to the best advantage, and occupied with the best of everything that finds favour with the owner. The favourites, whether rare or common, are given the best of attention and treatment at the hands of the gardener Mr. W. Bain, and, needless to say, the plants respond to the care bestowed upon them, with a wealth of blossom according to the season of the respective kinds, such as no gardener could possibly be ashamed to own.

Anthuriums are special favourites at Burford Lodge, as the splendidly grown specimens and large spathes from time to time testify as they are brought before the public at the meetings and shows of the Royal Horticultural Society. One house is mostly monopolised by species, varieties, and recently produced hybrids. A lawrenceae is practically a white A. andreaum, with its characteristically sculptured or wrinkled spathes. The crushed-strawberry spathes of A. rothschildianum attain handsome proportions here; and the same may be said of the popular A. scherzerianum. A parisense bears handsome salmon-pink spathes, and a white-spathed seedling promises to be a fine thing. In another house we measured leaves of Alocasia thibautiana, 2½ ft. in length by 18 in. or 19 in. in width. These facts speak for themselves. A case of Bertolonias is in grand condition. The Eucharis does well under the narrow side stages of a stove where they are subjected to drip two or three times a day, summer and winter, from the plants overhead when they are being watered. Some plants have been in one of the East Indian houses for the last twenty years or more, and still they flower well, though the border is saturated with water. The fernery contains large and healthy specimens of Adiantum farleyense, A. cultratum, A. Williamsii, Microlepia hirta cristata and many others.

The greenhouse is kept gay during the season with a great variety of subjects, including tuberous and other Begonias, Streptocarpus hybrids of various strains or races, Cannas, and the beautiful leafy stems and white flowers of Watsonia iridifolia Ardernei, about 4 ft. in height. Single and double tuberous Begonias in all the leading colours peculiar to the race are grown. A dwarf double yellow variety with small leaves, proves useful for table decoration. Named double varieties of the sweet-scented Begonia odorata, may be reckoned a speciality; for at the moment we do not recollect seeing double varieties of this species elsewhere, and they are not abundant anywhere in this country as yet. An old and beautiful subject is Trichinium Manglesii, which requires special treatment in very sandy soil to make it do well in our climate. The richly coloured and charming Torenia Fournieri is well grown in this house. That strange race of tuberous Begonias with a cross formed of crests upon the flowers has found its way to Burford Lodge. They exist in many colours and seem to have been rousing interest amongst the British public latterly. Lapagerias flower freely upon the roof of this cool and well ventilated house. A pit is filled with Caladiums of the finer and newer sorts, also Crotons and Sonerillas used for table decoration. Gardenias are also well cared for.

The outdoor garden is entirely occupied with flowers and is always interesting to us on account of its well kept character and the free flowering condition of the occupants, some of which are rare or special, and to be found only in a few gardens of the country.

Amongst a fine collection of late flowering Phloxes, that named Etna stands out conspicuously by reason of its large and brilliant scarlet flowers. Many other varieties are notable for the handsome proportions both of their spikes and flowers. We were particularly pleased with a vigorous well flowered piece of the purple Rudbeckia purpurea. The double R. laciniata Golden Glow and R. californica also do well here. A rich strain of Pentstemons, splendidly grown, is always a feature of this garden. A large plantation of Salpiglossis in a gorgeous array of colours should go far to make this garden race of flowers popular. Every plant stands 3 ft. high. Hollyhocks in a variety of colours add their quota to the display. The yellow Statice Bonduelli is strikingly distinct, but has not yet attained that popularity enjoyed by S. Sewerzowi, also grown here. Hydrangea paniculata grandiflora flowers profusely.

Tall Lobelias of the L. splendens type, but mostly hybrids have for some years received considerable attention, and some of them have been honoured with certificates from the Royal Horticultural Society, including Carmine Gem, of which there is a bed. Both it and Crimson Gem have dark foliage, and the colour of their flowers is well indicated by their names. Queen Victoria is of branching habit with scarlet flowers. Truly this splendid race deserves more extended cultivation. The glaucous foliage of Lonicera splendida climbing over an arch makes it very noticeable. A plantation of Montbretias shows that the half-hearted treatment given this race of plants in comparatively recent years has been entirely overcome, and that their proper position is in the open ground, where they give a profusion of flowers second to none in their beauty and usefulness for cut flower purposes. Eldorado has orange-scarlet flowers; Crocosmiaeflora, orange; and Etoile de Feu, darker orange. A bed of the handsome Pentstemon barbatus bespeaks the treatment it receives, for the stems are 3 ft. to 5 ft. high. The white Anemone japonica alba, and the rose A. j. elegans, also produce a rich harvest of blossom. Gladioli have long been favourites here, and the many varieties grown, flower profusely. A fine form of Chrysanthemum latifolium develops flowers of handsome size.

Some large beds in front of and between the glasshouses always constitute an interesting part of the garden, on account of the specialities with which they are adorned. A large bed is occupied with the pink Crinum Powelli and C. P. album, both rare hybrids, particularly the white one. The first-named was honoured with a First-class Certificate in 1886, and the white variety last summer. The flowering stems of the beautiful Eremurus Bungei attain a height of 5 ft. here. The fine new race of large flowering Cannas of the Madame Crozy type are grown in great variety and attain to wonderful perfection in the open. Formerly we were led to believe that Streptosolen Jamesoni could only be grown and flowered successfully in pots with special treatment, but the massive bushes in the open ground have literally been aglow for weeks. It is, indeed, a bedding plant of the first water, for southern gardens at least. A collection of hardy young Water Lilies is being established in tubs by the side of the beds we have just been mentioning. Liliun auratum and L. tigrinum attain perfection amongst a plantation of Azaleas.

Between the mansion and the River Mole, and isolated on the smooth shaven turf is a small but neat tank of aquatics, chiefly Water Lilies. It is elevated a little above the general level, so that it serves to attract the notice of visitors and invite inspection. Amongst those in flower at the

time of our visit were the massive Nymphaea marliacea alba, white, slightly tinted pink; N. m. carnea, flesh-coloured; and N. Chromatella, of a clear, soft yellow. The blue Pontederia azurea is also a pretty, hardy aquatic. The tank is of wavy outline, and tuberous Begonias are very effectively employed in the recesses or bays outside the walls that retain the water. Two beds of night-scented Tobacco are planted against the wall of the mansion, where they could hardly do otherwise than make their presence felt during the cool and dewy twilight hour. A short distance away on the soft and smooth turf are interesting and attractive beds of tuberous Begonias, Fuchsias, and fragrant Heliotrope.

Heavy falls of snow have taken place recently in various parts of France.

The Crystal Palace is not being sold to a syndicate. The rumour has been declared by Mr. W. Gardiner, Secretary to the Crystal Palace Company, to be absolutely without foundation.

United Horticultural Benefit and Provident Society.—The anniversary dinner of this society will be held at the Holborn Restaurant, High Holborn, London, on Tuesday, 12th October, at 6 for 6.30 p.m. As was announced last year Mr. H. B. May will preside, when we hope he will be well supported by the gardening fraternity and all interested in this useful benefit society.

Poisoned by Fruits from American Blackberry.—A friend told me a few days ago that one of his young men managed to scratch his arm a short time ago with this Blackberry, the result being that he had to seek medical aid. The doctor said that had the scratch been higher up the arm it would probably have proved fatal. Have any readers ever had such an experience with a scratch from this or any cultivated Blackberry? Or is it likely that blood poisoning was caused by accidental introduction of some microbe into the wound caused by the Bramble?—A. P.

Honour to whom honour is due.—In relation to a paragraph in our last issue under this heading, we are pleased to be in the position to give a copy of the illuminated address presented to Mr. A. Outram for his services at the Borough of Hanley Show. It is as follows:—

COUNTY BOROUGH OF HANLEY.

First Horticultural Fête in Hanley Park, Wednesday and Thursday, 7th and 8th July, 1897.

The thanks of the Mayor, Aldermen, and Burgesses of this County Borough are tendered to—

MR. OUTRAM,

for his valuable aid and assistance in making the fête the success it has proved. Hoping to have the benefit of similar assistance on future occasions.

Mr. James Dobbie, of Rothesay.—During the course of our peregrinations in the West of Scotland, we found time to call upon this noted Scotch florist, the real Mr. Dobbie, as he is frequently styled. He was the founder of the well-known firm of Messrs. Dobbie & Co., but retired altogether from business some years ago, and now lives in one of the beautiful, commodious, and recently-built villas on the wooded hill side above the beautiful Bay of Rothesay, on that side of the borough stretching towards Craigmore. We were sorry to find him confined to bed owing to an accidental injury to his leg. But though retired from business and confined to bed, he was otherwise hale, hearty, and as enthusiastic as ever over his favourite flowers and vegetables. It is contrary to his nature to remain idle for any length of time, and he finds both employment and pleasure in the ample garden surrounding his villa. He also carries on experiments of various kinds, and is very highly interested in the problem of preventing or remedying the Potato disease. He feels confident of discovering some method that will prove of service to Potato growers. It is to his active and enthusiastic nature that he owes a green old age, and that heartiness which has endeared him to a wide circle of friends. He is still as good as his portrait, which appeared in THE GARDENING WORLD on the 31st December, 1887, that is, close on ten years ago.

Immense timber forests have been discovered in Labrador by an American syndicate, which intends taking a lease of the tracts from the colony of Newfoundland, and to commence operations next year.

Edinburgh Show.—In another column we reproduce the portrait of the winner of the Diamond Jubilee Competition at this show for the best table of fruit arranged for effect. The competition excited much interest, and the fact that, apart from many other reasons, our readers will, we feel sure, welcome that doughty champion of Lambton—Mr. James Hunter—in our gallery of portraits of men of the day.

Syndical Chamber of Belgian Horticulturists.—At the monthly meeting of this body on the 5th ult., in the Casino, Ghent, Certificates of Merit were accorded to a lot of three Sonerillas, presented by M. L. De Smet-Duvivier; to Sobralia xantholeuca, presented by M. le Marquis de Wavrin (with unanimity); to Beaufortia purpurea, Chironia exifera and Chironia floribunda, all presented by M. E. Beddinghaus; and to a lot of cut flowers of Begonias, with double flowers, presented by M. Ernest de Clercq. Some certificates were also awarded for culture and flowering, and some honourable mentions made.

Shirley Gardeners' Mutual Improvement Association.—The monthly meeting of the above Society was held at the Parish Room, Shirley, Southampton, on the 20th inst., Mr. B. Ladhams, F.R.H.S., presiding over a good attendance of members. There was an exhibition of vegetables for medals kindly given by Messrs. Toogood & Sons, Seedsman, Southampton, and there were seven competitors for the four Medals. Mr. J. W. Mitchell, gardener to J. W. Fleming, Esq., Chilworth, was awarded first prize, Certificate, and Silver Medal; Mr. H. Curtis, gardener to W. F. G. Spranger, Esq., Southampton, was second (Bronze Medal); Mr. W. Risbridger, gardener to C. Stuart Menteth, Esq., J.P., Rowhams Mount, was third (Bronze Medal). The prizes were for six sorts of vegetables, open to all. For three sorts of vegetables, open to cottagers only, Mr. J. R. Cole was first, receiving a Bronze Medal. There was a first-class show of Dahlia blossoms, some very good fruits and Tomatos, and hardy herbaceous cut flowers. Mrs. Keates, Rowhams House, (gardener, Mr. W. G. Bushell), was awarded a Certificate for a seedling Potato, a cross between Schoolmaster and Beauty of Hebron. There was an interesting and useful discussion on the exhibits joined in by a number of the members. The annual excursion of the members will take place on the 2nd of October to the Crystal Palace, when it is hoped a good number will be present.

"Fruit Culture in Her Majesty's Reign, 1837-97."—This was the subject of the paper read by Mr. George Bunyard, of Maidstone, on the afternoon of the first day of the exhibition of British-grown fruit at the Crystal Palace on the 30th September. He commenced by asking the audience to follow him into a garden of 1837. He reviewed the system of culture then in vogue, stating the sorts with which a garden of that period would be furnished, both of wall trees, espaliers, and flowering shrubs. The leading fruit tree growers of that time were then mentioned by name, and sketches given of the introduction of Continental novelties and ways of culture. The grand work done by the late Thomas Rivers was touched upon, and the increase of glass culture in the "forties" and "fifties" alluded to. Passing to more recent times, allusion was made to the good work done at Chiswick under Mr. Barton, especially the first Apple Conference. The reader then spoke of other workers in the field, both by pen and practice, and paid a tribute to the activity and excellent work done by the trade and the Fruit Committee of the Royal Horticultural Society. He concluded with carefully compiled lists in the form of appendices of the fruits of 1837 now in culture; of the fruits certificated by the Royal Horticultural Society in the sixty years; of other notable fruits of the period, with the dates of introduction of the best of those, put into commerce; and gave a list of the best fruits in 1841 taken from a leading gardening paper. The pomological literature of the period was also reviewed. Altogether, a mass of valuable information, historical and otherwise relating to the Queen's reign, was got together,

A second crop of fruit has been produced by a Victoria Plum tree in the garden of Mr. Kelsey, Chessington.

Messrs. Edward Humphries, Ltd., Pershore, have just received advice from the Committee of the National and International Agricultural Society of Holland, whose show is now being held at The Hague, that their improved and patented oil engine has received the first prize Gold Medal.

Strawberries at Chiswick.—The recently issued part of the Royal Horticultural Society's *Journal* commences Vol. XXI. The reports of five of the numerous trials conducted at Chiswick this year are included. Some idea of the magnitude of the trials may be gleaned from the fact that there are fifty-six varieties of Strawberries alone. Many of them are merely mentioned owing to the fact of their being so lately received that they had insufficient time to show what they were capable of doing. This means, we should understand, that the trial will have to be continued the next, and possibly following years. Some of the varieties have borne heavily both the first and second year, yet their quality is declared to be decidedly bad. What then is to be the fate of heavily cropping, badly flavoured varieties? Some would declare that they must inevitably be discarded by growers and gardeners generally. We know, however, that some such varieties find considerable favour, even for dessert purposes. To their good looks, sweetness if not flavour, is added by means of sugar and cream. First-class Certificates have been awarded to Auguste Boisselot, Countess, Edouard Lefort, Latest of All, Leader, Monarch, Pioneer, Royal Sovereign, and Veitch's Perfection. Meatmore and Wonderful received Awards of Merit.

Devon and Exeter Gardeners' Association.—The annual business meeting of this association was held in the Council Chamber of the Guildhall, Exeter, on Wednesday, the 29th ult., under the presidency of E. A. Sanders, Esq., J.P., the president. The business of the meeting was to receive the treasurer's report for the past year; to elect a president, vice-president, secretary, treasurer, and committee for 1897-98; and to transact any other competent business that might be brought forward. The hon. secretary, Mr. Andrew Hope, has got together a good programme for the autumn half of the session. The association meets fortnightly. On the 13th October, Mr. J. Mayne, gardener to the Hon. Mark Rolle, Bicton, will read a paper on "The Qualifications and Duties of a Gardener." Mr. R. Hodder, gardener to Mrs. Trevor Barclay, Ponsonby, Torquay, will discourse on "How a Knowledge of Botany is a Help to Gardening" on the 27th October. Mr. T. H. Slade, gardener to Lord Poltimore, Poltimore Park, will treat of "Pruning and the General Management of Fruit Trees" on the 10th November. "Herbs—their Cultivation and their Uses" will be dealt with by Mr. W. Andrews, gardener to W. Danby, Esq., Elmfield, Exeter, on the 24th November. Mr. G. Camp, gardener to E. Byrom, Esq., Culver Gardens, Exeter, will speak about "Winter-flowering and Foliage Begonias," on the 8th December. The 22nd December will be set apart for sundry papers by the junior members.

The Dahlia and its History.—On this subject, Mr. George Blench, gardener to Thos. Carver, Esq., J.P., recently read a paper before the Marple Gardeners' Association. A fine collection of blooms contributed by Messrs. Clibran, Altrincham, illustrated the various points of the lecture. In his opening remarks, Mr. Blench stated that the Dahlia is a native of Mexico and Central America, and received its generic name after Dr. Dahl, a Swedish botanist, but was spoken of as late as the year 1812 as "Georgina." In 1787 a Frenchman, named Nicolas Joseph Thieri de Renonville, was sent to America to find Chichineal, and described the Dahlias he had seen growing in the gardens of Mexico. In 1789 the director of the Botanic Gardens at Mexico forwarded seeds to the Royal Gardens at Madrid. In 1802 John Fraser, a collector of American plants, obtained from Paris seeds of Dahlia coccinea. He raised a batch of seedlings, some of which flowered in one of his greenhouses in 1803. In 1815 a stock of double flowers was imported from France, and since that time continual progress has been made. Mr. Blench

then went into cultural details, and spoke of a well drained and manured heavy soil as being the best for them. Speaking of propagation, he said that seeds sown in March in heat under glass flower the same year, although cuttings form the means generally adopted, 90 per cent. of them rooting under skilful hands and proper conditions. The lecturer then dealt with the various sections or types of the popular flower. The show type embraces all the self-coloured and shaded flowers, the fancy section being a later development. The pompon or bouquet Dahlia is of German origin, and has a style and shape identical with the show flower, although the size is much less. The Cactus type is exceedingly popular, and since its introduction in 1880 much improvement has been made in it. The decorative section is intermediate between the show and the Cactus types. Singles and and single Cactus varieties are also thought highly of, and are most useful to grow for supplying cut flowers.

A Full Catalogue.—The autumn catalogue of Messrs. Ant. Roozen & Son, Overveen, near Haarlem, Holland, is stated on the front page to contain choice Dutch and Cape Bulbs, but a glance at the interior shows a vast number of subjects that can only be associated with bulbs by virtue of their having tuberous roots or rhizomes like those of Anemone, Paeony, Iris, Water Lilies, &c. The catalogue runs to 101 pages, including the index, and the whole is closely printed, each species or variety of plant mentioned having an appropriate description in English. All of these plants are also numbered, running up to 4,514, and finishing up with three species of Ginger Plants, so that hardy and hothouse plants are included. Independently of these standing numbers, so to speak, the new and rare plants are separately classified, and occupy the beginning of the catalogue. They, together with bulbs and plants for naturalisation, and for masses in wild gardens, &c., make an additional 224 to the general list, and for the sake of distinction are marked 0224. The fulness of the list of terrestrial Orchids will serve to give an idea of the exhaustive and comprehensive nature of the collection of plants that may be associated with bulbs by virtue of their tuberous roots. There are fourteen species of Cypripedium, and other species in proportion, including the greater number of British Orchids. Needless to say Lilies, Tulips, Hyacinths, and other popular bulbs are treated in the same comprehensive way. The work may be regarded as a valuable *vade mecum* for everything in the above line which may be required in the garden.

PEOPLE I HAVE MET.

MR. JAMES HUNTER, OF LAMBTON CASTLE GARDENS.

Who shall dispute the enthusiasm and popularity with which the judges' decision in the great Diamond Jubilee fruit class at Edinburgh was received? Mr. Hunter was the recipient of many congratulations and goodwill, as the hero of a well fought fight, no less than a man of great prominence in the ranks of horticulturists. I welcome him in the name of our thousands of readers to our portrait gallery.

Born at Dirleton, near North Berwick, on the bonny banks of the Firth of Forth, in 1839, Mr. Hunter can point to nearly sixty years spent amongst us. His apprenticeship at Archerfield with Mr. Thomson extended to seven years, when he was sent to Thoresby Park, as foreman to Mr. Henderson, where he remained until he was chosen for Lambton by the late Wm. Thomson, of Dalkeith. As director-general of the beautiful gardens of the famous Castle of Lambton, the seat of the Earls of Durham, Mr. Hunter has proved himself the occupant of a worthily-filled position.

In the ranks of competitors at our leading horticultural societies' shows his prowess is so well known as hardly to need comment; but it is interesting to trace Mr. Hunter's history as an exhibitor since the days of his first competition at the Glasgow International Exhibition, where he defeated the late Mr. Fowler, of Castle Kennedy, and Mr. Johnson, of Glamis Castle. In the year following, at Edinburgh, and indeed, every year since, he has been prodigiously successful. Again at Manchester, in the long-to-be-remembered Wills compe-

tion for fifty guineas offered for the best twelve bunches of Grapes, Mr. Hunter was equal to the occasion; and the reputation of Lambton Castle still maintained its supremacy. Mr. Hunter's winning twelve included Black Hamburg over 14 lb. to the bunch, only to be eclipsed at Belfast

MR. JAMES HUNTER.

later on with another fine bunch from Lambton—also of black Hamburg—weighing 21 lb. 12 oz. In the Queen's Jubilee class at Newcastle, fifty guineas for fifty dishes of fruit also fell to Mr. Hunter's share. My good friend's thirty years' record at Lambton is a fine tribute to the man and the master whom he is proud to serve.

One word more. I am sure Mr. Hunter will forgive me if I place on record the opinion of no less an authority than Mr. Thomson, who, on visiting Lambton this season remarked that "the bedding was not only original, but the prettiest and finest piece of work he had ever seen." This, as a tribute to the gardens as a whole, shows our friend to be not only a doughty champion in the world of competition, but also that the gardens themselves at Lambton Castle are a monument to his ingenuity and skill. Nor can I forget that Mr. Hunter was the raiser of the seedling Pineapple, named Lady Beatrice Lambton, put into commerce in 1882.—*Gyp.*

PIERIS FORMOSA AT BICTON.

THERE are something like ten species belonging to this genus of the Heath family, natives of the Himalayas, Malayan Peninsula, Japan and North West America. In this country gardeners are most familiar with *P. floribunda* and *P. japonica*, which are amongst the neatest in habit of evergreen shrubs in gardens. The former is a native of the United States, and the latter of Japan. Both are perfectly hardy in the south, at least, and *P. floribunda* even to the far north. They are all best known to gardeners under the name of *Andromeda*, including the subject under notice, but that name covers many things which are very distinct both in appearance and botanically.

Pieris formosa is a native of Eastern India and China, and is the handsomest and boldest of the genus, but unfortunately is not hardy except in the warmer and more sheltered places on the south coast of England, and possibly in Ireland. Even in the suburbs of London it requires the shelter of a greenhouse to make it thrive. It frequently flowers in the Temperate house at Kew, and we have been reminded of this fact by the receipt of the top of a shoot from a plant which has just flowered with Mr. J. Mayne, gardener to the Hon. Mark Rolle, Bicton, Devon. It is growing under glass and has now reached the height of 14 ft. If planted out in a well lighted house it will flower while only 4 ft. to 6 ft. in height. The foliage alone is highly ornamental, being

evergreen, dark and glossy, and resembling that of *Clethra arborea* greatly magnified and much brighter. Many of the individual leaves of the shoot sent us measured 6 ins. to 8 ins. in length, and in shape not unlike those of *Magnolia grandiflora*. The flowers are tubular, porcelain-white, with a waxy appearance, and are borne in branching racemes at the apex of the shoots. Each branch flowered for 4 ins. to 6 ins. of their length. At a short distance away they are not unlike Lily of the Valley. The fine ranges of houses at Bicton contain many tall growing subjects, many of which are very uncommon in gardens generally.

LAMBTON CASTLE GARDENS.

LAMBTON CASTLE, Fence Houses, Durham, is the seat of the Earl of Durham, and the gardens are pre-

central span-roofed house projecting at right angles from it. Higher up is a more roomy range of span-roofed houses, having a massive central block of three taller, span-roofed houses built closely together, and standing at right angles to the rest. Above and behind this range is another range of glasshouses and other structures to meet the requirements of the establishment. The gardeners' cottage, an elegant building on the upper right hand corner is another instance of a well-planned and equipped garden.

The broad walk with the high wall covered with fruit trees on the one hand, and the excellent example of chain-bedding on the other speaks plainly of the style and magnificence of this noted north of England establishment. The neatly-trimmed shrubs occupying the small circular beds between the links of the chain serve to break the monotony of what would otherwise be a level surface.

edges like *L. p. praestans*. The lamina is orbicular, emarginate, and rich purple blue, with the exception of the usual white area in the centre of the apex. The interior of the tube is lemon, with raised lines of the same colour, and fading to white towards the sides. In these latter respects it approaches *L. p. dayana*, but differs in the raised lines not being purple. First-class Certificate.

CATTELEYA HARDYANA LOWAE. Nov. var.—Here we have another very handsome variety of a famous *Cattleya* noted for the gorgeous colours of its flowers. The sepals are rose, shaded with white along the centre, while the petals are rich rose, with a silvery midrib. The lip is of an intense crimson, with the two eye-like blotches golden-yellow. The throat and tube are dark purple marked with numerous pale yellow lines. Award of Merit. Messrs. Hugh Low & Co., Clapton.

VANDA AMOENA. Nov. hyb. Nat.—This is evidently

LAMBTON CASTLE GARDENS, FENCE HOUSES, DURHAM.

sided over by Mr. J. Hunter, who was brought into great prominence at the autumn exhibition of the Royal Caledonian Horticultural Society, Edinburgh, on the 8th and 9th of September last. The fine collections of fruit which Mr. Hunter put up furnished good evidence of large resources, turned to the best advantage by a skilful horticulturist.

The accompanying illustration of Lambton Gardens, reproduced from a photograph placed at our disposal, will give our readers some idea of the extent of the glass ranges, their sunny southern exposure, on sloping ground, the wooded nature of the ground to the north, furnishing the necessary shelter, and the good keep-up of the place generally. The glass-houses are elevated one above the other, on terraces, as is shown by the three flights of steps at the upper left-hand corner. The front range consists of lean-to structures on the lower level of the garden, and in one continuous line running right and left of the

PLANTS RECENTLY CERTIFICATED.

THE Royal Horticultural Society made the under-mentioned awards at the meeting of the committees on the 21st ult. :—

Orchid Committee.

LAELIA PUMILA GATTON PARK VAR. Nov. var.—An extremely pretty variety was exhibited by J. Cleman, Esq. (gardener, Mr. King), Gatton Park, Reigate, under the name of *L. praestans* Gatton Park var.; but although it has much in common with *L. pumila praestans* it differs considerably, and seems to partake of the character both of *L. p. dayana* and *L. p. praestans*, while perfectly distinct from either. The sepals and elliptic petals are white, tinted with the faintest shade of blue, giving them a French gray appearance. The sides of the tube of the lip are creamy white and considerably overlapping at the

a natural hybrid between *V. Roxburghii* and *V. caerulea*, the combination resulting in an unassuming but marvellously pretty *Vanda*. The flowers are rather larger than those of *V. Roxburghii*, with rich or dark gray sepals and petals spotted with violet, especially towards the base. The lip is bright blue, spotted with violet in eight longitudinal lines; the bifid apex is like that of *V. caerulea*, but the breadth of the lower portion recalls *V. Roxburghii*. The column is white, lightly shaded and mottled with blue. Award of Merit. Messrs. Linden, Parc Leopold, Brussels.

LYCASTE DENNINGSIANA.—The long, incurved sepals and petals are pale yellow shaded with a fuscous tint. The lip is oblong, obtuse, reflexed at the edges in the upper half, and of a rich dusky salmon-red. Award of Merit. F. W. Moore, Esq., Royal Botanic Gardens, Glasnevin.

MILTONIA PEETERSIANA. Nov. hyb.—The seed bearer

in this case was *M. spectabilis moreliana*, and the pollen bearer *M. Regnellii*. The lanceolate sepals and the oblong petals are purple. The obovate, cuspidate lip is the largest organ of the flower, and rosy-purple, intensified to a dark buff-purple at the base, and radiating in lines along the veins. Award of Merit. R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Camberwell.

ONCIDIUM PAPILLO.—A fine variety of this species was exhibited by D. M. Grimsdale, Esq. (gardener, Mr. A. Kitwell), Kent Lodge, Uxbridge. The lateral sepals were very broad and richly banded with brownish-orange. The lip also was large, and rich brownish-orange, with a yellow centre. Award of Merit.

Floral Committee.

RETINOSPORA OBTUSA SULPHUREA.—The tips of the branches and twiglets of this Conifer are of a soft sulphur-yellow; but in other respects it has got the habit and vigour of the type. Like the other varieties of *R. obtusa* in cultivation it is a highly-ornamental and valuable subject either for the lawn or shrubbery border. First-class Certificate. Messrs. J. Veitch & Sons; Ltd., Chelsea.

APERA ARUNDINACEA.—The leafy portion of the stems of this beautiful and remarkable grass is 2 ft. high and erect. The flowering portion above this is 2 ft. to 3 ft. longer, but droops in the most elegant fashion, and being much longer than the leaves, it is necessary to elevate the plant on a pedestal to show off its peculiar beauty to the best advantage. The grass is allied to *Agrostis*, and the flowering panicle is 1 ft. 1½ ft. long, and of far-reaching delicacy and elegance. For groups of plants, conservatory and winter garden decoration it is an acquisition. The slender, drooping stems are pink. It should be grown in pots for the above purposes. First-class Certificate. Messrs. J. Veitch & Sons, Ltd.

CHRYSANTHEMUM MITCHETT WHITE.—This pure white early flowering Japanese variety was brought up to the meeting by Mr. M. Russell, Mitchett, Farnborough, and received an Award of Merit from the general committee. See last week's issue, p. 54.

DAHLIA NELLY BROOMHEAD.—The small, compact, and very neatly formed heads of this pompon Dahlia are of a soft lilac. Award of Merit. Mr. J. T. West, Brentwood.

DAHLIA ISLAND QUEEN.—The heads of this Cactus variety are of medium size, with long, pointed, clear, rosy-lilac florets. Award of Merit. Mr. J. T. West.

PRIMULA OBCONICA FIMBRIATA.—In this we have a great improvement upon the original, inasmuch as the flowers have six overlapping segments instead of five starry ones. The colour varies from pale to dark lilac. Award of Merit. Mr. Thomas Lowton, Faversham.

CORYLYNE AUSTRALIS RUSSELLI.—The leaves of this variety are linear, very narrow, arching, and of a light coppery-bronze. The plant comes very close to *C. a. lentiginosa*. Award of Merit. Mr. J. Russell, Richmond, Surrey.

DAHLIA CASILDA.—For a Cactus Dahlia the heads of this variety are large, with long, pointed yellow florets, shaded with pink at the tips. Award of Merit. Messrs. J. Burrell & Co., Howe House, Cambridge.

DAHLIA FALKA.—The florets of this Cactus variety are drawn out into a long slender point, and are of a rich carmine, tipped with violet. The heads are of the first size. Award of Merit. Messrs. J. Burrell & Co.

DAHLIA SALMON QUEEN.—The long projecting florets of this Cactus variety are orange-salmon, tipped with rosy-salmon and very pretty. Award of Merit. Messrs. J. Burrell & Co.

DAHLIA MINNIE RICHARDS.—This is of good average size for a pompon Dahlia, of a delicate blush, and very neatly formed. Award of Merit. Mr. T. S. Ware, Hale Farm Nurseries, Tottenham.

PHLOX MISS PEMBERTON.—This variety belongs to the *P. paniculata* type, and bears large flowers of a clear salmon colour, with a crimson eye. Award of Merit. Messrs. Paul & Son, Cheshunt.

CRASSULA COOPERI.—This species forms rosulate tufts of fleshy leaves, more or less tipped with red, and throws up a compact mass of flowering stems only 3 in. high. These terminate in cymes of small bright red flowers, supported by duller red bracts and calyx. It is a native of South Africa, and may be used for carpet bedding or greenhouse decoration. Award of Merit. Messrs. Paul & Son.

DAHLIA MRS. JOHN GODARD.—This is one of the finest of recent introductions amongst Cactus Dahlias, on account of its stiff, straight, sharply-pointed florets, and their glowing, crimson-scarlet colour. The heads are also large. Award of Merit. Messrs. J. Cheal & Sons, Lowfield Nurseries, Crawley, Sussex.

DAHLIA MISS FINCH.—The heads in this case are of good average size for a Cactus variety, and are made up of long, narrow, carmine florets, tipped with rosy-violet. Award of Merit. Messrs. J. Cheal & Sons.

DAHLIA MALUMA.—The neatly compressed and clear yellow florets of this beautifully refined pompon are of small size and well adapted for cut flowers. Award of Merit. Mr. C. Turner, Slough.

DAHLIA MARY SERVICE.—The long, pointed florets of this Cactus variety are incurved in a very characteristic way, as are those of the next three varieties mentioned below. They are of a beautiful apricot, tipped with pink, and very distinct. Award of Merit. Messrs. Keynes, Williams & Co., Salisbury.

DAHLIA ARACHNE.—The florets in this case are white, holdly edged with orange; and the heads are of medium size for a Cactus variety. Award of Merit. Messrs. Keynes, Williams & Co.

KEYNES WHITE.—This is a white Cactus variety of the same size and form as the two preceding, and highly meritorious. Award of Merit. Messrs. Keynes, Williams & Co.

HAVERSTOCK BEAUTY.—The flower heads of this Cactus variety are of a beautiful orange-salmon. All of the four preceding varieties throw their flowers well above the foliage like the pompons. All are closely allied, differing chiefly in colour. Award of Merit. Messrs. Keynes, Williams & Co.

DAHLIA HARBINGER.—The heads of this show variety are very small, but neatly formed, refined and soft lilac-pink, but darker than Maude Fellowes. Award of Merit. Mr. H. P. Harris, Orpington, Kent.

DAHLIA MURIEL HOBBS.—Here again we have a show variety, but of large size, and clear yellow, sometimes tipped with bronze. Award of Merit. Mr. Thos. Hobbs, St. Mark's Road, Bristol.

DAHLIA GREEN'S GEM.—Heads of small to medium size for a Cactus Dahlia. Florets long, narrow, pointed, incurved and orange-salmon in colour. It is both neat and pretty. Award of Merit. Mr. J. Green, Dereham.

THE PLANT HOUSES.

Pits and Frames.

ONCE again we are on the eve of the season when every inch of under-glass space will be of value. So many plants are requiring protection, or will be requiring it in the course of the next week or two that some management will be necessary to make the space adequate to requirements.

CHRYSANTHEMUMS.—The cultivator must not be tempted by fair weather to delay the housing of these for too long. Despite the damp and somewhat cold September the wood has ripened fairly well, and the plants look healthy. The first week in October is quite late enough to leave them out, however, and it is far better to do this while there is time to do it comfortably, than to have to do it in a hurry at a very short notice. Early Peach houses, vineries, and orchard houses have all to be requisitioned for the accommodation of the "Mums," although the plants are almost sure to become rather drawn from the lack of light. This fact compels the gardener to keep the plants out-of-doors until the last moment, in order that as many of the leaves as possible may fall before the houses have to be used. If a fairly roomy conservatory or greenhouse is part of the conveniences of the establishment the earlier plants may be housed forthwith in it, the later ones being relegated to the "protection ground" until a little more light can be commanded in the fruit houses. The "protection ground" should be fitted at once with heavy blinds or sheets of tarpaulin, attached to rollers, and these must be let down every night upon the slightest signs of frost.

Once in the show house the plants must be very closely watched. Fly usually causes some trouble, and it will be advisable to guard against it by fumigating or vapourising twice or thrice. If the fly should again make its appearance some weeks hence

another light fumigation may be given, but as the flowers will then be considerably advanced more caution must be used. Watering, too, must receive even greater attention.

WINTER-FLOWERING CARNATIONS.—A house should be got ready for these at once. A light, clean, roomy structure is necessary, which can be kept up to a temperature of from 55° to 50° Fahr. by night without making the atmosphere too dry and arid. Under such conditions the flowers will expand freely, which they would not do in a lower temperature and in a comparative absence of light. The pots should be washed, yellow leaves picked off, and the plants generally made presentable, whilst the cultivator should assure himself that fly is absent.

WINTER-FLOWERING PELARGONIUMS.—A batch of these may now be allowed to develop their flower buds, which hitherto have been kept closely picked off. Feeding may also be more liberally done now than it has been up to the present. These earliest plants should be given a place in a nice light pit near the glass. The others may for the time be stood in a frame on a bottom of ashes.

BULBS.—The potting up and plunging of these as they come to hand will take up a good deal of time where the bulb list is a heavy one. Hyacinths, Tulips, Crocuses, Snowdrops, and Narcissi are all indispensable for winter decoration. The African Tuberoses also come to hand about this time. Early batches of Roman Hyacinths are now ready for removal from the plunging beds to cold frames, where they may be gradually inured to the light, and from whence they may be introduced into heat as required.

LILIUM HARRISII.—Of all the Lilies this is the most useful for forcing, and the stock of bulbs should include a goodly number of it. Rich fibrous loam, with a little dried cow manure and plenty of sharp sand is the best compost to use. Place the bulbs singly in 6-in. pots, but keep them rather low down in the pot in order that there may be room for a substantial top-dressing to be given when the usual circle of thick fleshy roots is emitted at the base of the stems. After potting consign the bulbs to a cold frame.

BEDDING STUFF is taking up a good deal of space, and will need very careful looking after. *Alternantheras*, *Heliotropes*, and *Verbenas* do well upon shelves in an intermediate house. *Lobelias* are all right in a greenhouse, but must be watched to see that they do not damp off. *Zonal Pelargoniums* should all be under cover by this time, and if the cuttings are well-rooted may be given a pick over. Those that are not rooted must be let alone for a while yet, even though they may look untidy.

COLEUSES.—Cuttings of these to furnish plants from which to propagate next spring should be inserted. The old plants, after having furnished the cuttings, may as well be thrown away, as they are now of no further use. The cuttings may be allowed to remain in their first pots through the winter, and should be given a place on a shelf in a warm house.

RICHARDIAS must all be lifted from the open ground and brought under cover. After potting up place them in a pit, and keep them fairly close, giving occasional sprinklings with the syringe. Shade from the sun in the daytime, and turn on just enough heat during the night to warm the pipes if the temperature sinks below 40°.

BERRIED SOLANUMS should also be lifted, picking the best shaped and most heavily berried plants. Similar treatment to that given the *Richardias* should be accorded them for a week or so.

SALVIA SPLENDENS GRANDIFLORA.—Without doubt this is one of the best, if not the very best of the *Salvias*, and at the present time there is no more imposing object in the conservatory than this. The long racemes of brilliant scarlet flowers are very freely produced, and the constitution and general habit of the plant is good. The height varies from 3 to 4 ft.

SCUTELLARIA MOCINIANA.—Although it needs to be grown on in a warm house this beautiful Mexican shrub will stand the temperature of a cool house well enough when it is in flower; and the blooms indeed last longer in the lower temperature than they would in the higher. Take care before moving the plants to the conservatory, that they are free from mealy bug, which is very partial to the plants, and often finds a lodgment in the dense terminal racemes of flowers.

HINTS FOR AMATEURS.

PREPARING FOR FROST.

THE summer has taken a final farewell of us or the year with the vanishing September, and we have now to look forward to a long spell of more or less dull, dreary, and cold weather, and to make what arrangements we can to protect our floral pets from suffering from the experience. September has been a very chequered month, and on the whole we have had more bad weather than good; for the first two weeks at any rate were cold, wet, and miserable. Frost, however, only touched us very lightly, too lightly to do any damage, although on two evenings the thermometer showed a couple of degrees of frost upon the grass. It will not do to trust any longer to the weather in case of those plants that are of importance for the winter supply of bloom, but steps must be taken at once to get them under cover.

Richardias—Plants that were put out in an open border in well worked soil have made a good deal of headway of late. The drought of July and the first half of August kept them from starting into growth until late in the year, for no matter how they were watered the ground seemed to be too hot and the atmosphere too dry for them. They have made amends for it since the rain came, however; and although the plants are rather ranker in growth than we like to see them, still, they will doubtless improve. Lifting and potting up should be seen to without delay, for a fairly sharp frost would injure them considerably, having regard to their somewhat soft and sappy condition. Large plants will require a good deal of care in lifting, for it is very necessary that no more of the thick, fleshy roots should be injured than can be helped. If manure was buried in the soil previous to planting, the roots will almost surely have gone down after it, and will take a good deal of fishing out. A digging fork with long tines will be found absolutely essential to get the plants up, and the soil all round the largest specimens will have to be loosened well before attempting to lift. Good balls of earth will thus be attached, which is a consideration. Before potting, this soil may be reduced a little by the use of the fingers, and the lower roots may even be shaken quite free, in order to admit of a fair sized pot being employed. Any little suckers that are observed round the base should likewise be picked away, otherwise they will develop into a mass of small leaves. For soil, a compost of two-thirds of good loam and one-third leaf soil, or leaf soil and dried horse droppings mixed, with a liberal addition of coarse river sand should be employed.

The pots are the next consideration. It is manifest that fairly roomy ones will be required in order to get in the large balls of earth without too much breaking. There is another point to receive attention, however, and that is that it is not advisable to give too much root room at the approach of winter, otherwise there will be a lot of cold stagnant soil lying round the roots of the plants, and this cannot fail to do harm. The exact size of the pots must be decided by the plants themselves, whether they are large or small. Generally speaking, however, an 8-in. pot should be sufficiently roomy for a large fine plant. Second size plants may be accommodated in 7-in. pots. All of these plants should flower freely this season, but there will be a number of smaller ones that will not be large or strong enough to flower, or at best may each throw one late bloom. For the best of these 6 in. pots will be quite roomy enough, and the smallest samples of all may do in a pot a size less than this even.

Now a word as to potting:—The size and fleshy character of the roots will have prepared the amateur to some extent for the statement, that too firm potting would be a mistake; but on the other hand such free rooting subjects as Richardias must not have too loose a root run or they will grow too rankly, and there will be a corresponding hesitancy on their part to flower well. A medium course should therefore be adopted, and the soil made fairly firm. A rammer may be employed to effect this end, but it must not be too freely wielded, and above all, should not be used at all when the potting soil is very wet.

Filling the pots too full of soil is a mistake that amateurs and young gardeners are often guilty of. In no case should the surface of the soil come higher in the pots than to within an inch of the surface when

7-in. and 8-in pots are employed. In the smaller pots a proportionate amount of room must be left.

Treatment after Potting.—Supposing lifting and potting off to have been successfully performed, there ensues a period when a little coddling is necessary. The sun of October, although its brightness is a daily diminishing quantity, is yet strong enough to try these newly lifted plants not a little. It is a good plan therefore to stand them fairly close together in a brick pit, if possible, or failing that, in a frame and keep them close for a week or ten days, and shaded from all direct sunlight. If the pit is gently heated during cold nights, so much the better. Do not deluge the plants with water at the root, but keep them sprinkled overhead with a fine syringe. Under such conditions the plants will not be long in recovering from any check they may have sustained.

Berried Solanums.—These, too, are calling out for a change into winter quarters. They should now be fairly well set with berries, some of which are beginning to turn from the bright olive green, which they assume in their earlier stages, into the scarlet, which is at once so showy and so much admired. These plants naturally take on a symmetrical and bushy habit, and when well set with berries form very handsome plants for the greenhouse and conservatory, as well as being quite the thing for the dinner table. If the seed was sown early, good bushy plants are now the result, and as a few more of these should have been planted out than will be required, it should be possible to pick the best plants. If the grower does not want them all himself, there is usually plenty of opportunity to give them away to others less fortunately situated. The largest plants will be furnished by "cut-backs," i.e., last year's plants which were cut back in the spring and allowed to break into growth again. For these 7-in. pots may be needed if they have grown freely and done well. Seedlings of this year, resulting from seed sown in February, will, however, be amply satisfied with a 6-in. pot, and if they can possibly be got into a size smaller, so much the better. Pot rather firmly, and use a compost similar to that employed for the Richardias. The after treatment of the two subjects is likewise similar, although after the Solanums have picked up, after the shifting, they must be given all the light possible to enable them to ripen off the berries as speedily as may be.

Marguerites.—Perhaps we have had a little too much of the white Marguerites in beds, borders, and window boxes, during the summer months and some people will perhaps be asking in an injured sort of way what on earth we want to drag them into winter arrangements for, but the plants themselves must be their own excuse. White flowers, even if they are the despised Marguerites, are always welcome in the winter time, and in these plants we have subjects that are exceedingly tractable and useful. We had a number of plants in 7-in. pots which flowered themselves nearly to death early in the summer. When they got shabby they were cut back, knocked out of their pots, and planted out in a border facing to the east, where they got scarcely any sun. This situation was not given them as the result of choice, but from necessity; because there was no room for them anywhere else at that time. These plants have made a lot of growth and are now as healthy and vigorous specimens as could well be imagined. Lifting and potted up now, they will soon commence to flower, and by the aid of a little manure water at intervals, will remain in bloom all the winter and early spring. They will be placed, if possible, in 8 in. pots, and the soil made fairly firm about them. Large old plants that require very big pots or small tubs to hold them are often well worth the space they occupy, and in the absence of large subjects to fill the conservatory may well be utilised. Once they have got hold of the new soil, which they speedily do, they may be treated pretty liberally with manure water.—*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Lilium candidum.—I have several large clumps of the Madonna Lily in my garden, and should like to

divide them up so as to increase the stock. Will the present be a favourable opportunity for doing this?—*Q.*

It is now too late in the season to think of transplanting *Lilium candidum*. This Lily, and one or two others commence to grow early in the autumn—in fact, they should have started strongly now—and their foliage is persistent through the winter. If you disturb the bulbs now you will be almost sure to prevent the flowering next year. The best time to lift and replant the bulbs is some time during August, after they have bloomed, and the stems have ripened off. This being so we should advise you to wait until next year before you touch them.

Calathea (Maranta) zebrina.—*Geo. Tripps.*: This plant requires a warm house to do it properly. It would grow all right in an unheated house during the summer months, but the temperature there would be much too low for the greater part of the year.

Chamaepeuce dlanantha is the name of the plant you are enquiring about, *C. B.* It is a most handsome subject, and is used with great effect in the public parks, as well as in many private establishments, for sub-tropical and carpet bedding. The plants make symmetrical rosettes of handsomely-variegated foliage, and do not flower until the second year. They are not hardy. Propagation may be effected by seeds sown in heat in September or February.

Vines.—*Subscriber*: If the foliage is beginning to turn colour the wood should ripen up well in the coming six weeks if we get fairly bright weather. You may require to give a little artificial heat to assist in ripening the wood should the weather prove dull, but of that you must be the judge. In any case, a little fire-heat at the beginning of November cannot do harm. Give as much air as you can in the meantime.

Begonia Seed.—*S. L.*: If the capsules have dropped from the plants naturally, and not as the result of violence or rough handling you may assume that they are ripe, although they still appear to be green. Lay them on a sheet of paper in a dry room to finish drying. When dry they will burst open, and the seeds will fall out.

Dried Mint.—*A. O.*: Mint is dried in most gardens in the way you have done by simply cutting down the plants, and exposing the cuttings to the sun and air to dry. There is very little demand for Mint dried thus, however, for housewives prefer that that has been dried more quickly, either by putting it before a fire or laying it in a slow oven, most of the green colour then being retained for an indefinite period.

Gladstoll.—*M. T.*: The corms must not be left out all the winter, but must be housed before severe frost. You will do well to lift them with the half-ripened stems attached sometime during the present month, and pack them in shallow boxes with sand. The remains of the stems may be left on until they are quite dry, and then removed.

Ampelopsis Veitchii.—Than the propagation of this favourite climber nothing is easier, *Ash.* Take pieces of well-ripened growths of last year, cut them up into lengths of 3 in. or 4 in., and insert them in light sandy soil. The cuttings will root quicker if placed in a cold frame or in a greenhouse. You should have no difficulty in working up a stock.

Failure with Mushrooms.—We have no doubt that your failure in Mushroom growing last year was due to the fact that you let the droppings become much too wet, *J. G.* Once the manure has been exposed to the action of heavy rains in the manner yours was there is little chance of succeeding with it. Even good spawn would not be at all likely to yield results planted in such a medium. You must put the manure under cover somewhere, while it is undergoing the necessary turning and shaking up. It will not heat itself dry, unless it is allowed to remain without being disturbed for too long. Every time fresh manure is added to swell the heap a good turning should be given in order to thoroughly mix the old and new material.

MESSRS. COLCHESTER'S OCTAGON GROUP

AT THE ROYAL CALEDONIAN SOCIETY'S DIAMOND JUBILEE SHOW, EDINBURGH, SEPTEMBER, 1897.

From a photo by MESSRS. J. HORSBURGH & SON, EDINBURGH AND LONDON.

OUR ILLUSTRATIONS FROM EDINBURGH.

WE have been favoured with the copyright of several magnificent photos taken by those well-known artists to the Queen, Messrs. J. Horsburgh & Son, of Edinburgh and London. These pictures include the principal groups and portraits taken on the occasion of the Royal Caledonian Society's Diamond Jubilee Show a fortnight since, and to-day we have the pleasure of submitting to our readers the first of the series. Messrs. Colchester's beautiful Octagon shaped group (see p. 73), occupied a central position in the western extremity of the Waverley Market, and a brief description of the principal plants and flowers used in its very pretty decoration may not be out of place.

There were handsome specimens of *Latania borbonica*, *Kentia belmoreana*, and other Palms, *Araucaria excelsa*, *Aralias*, *Asparagus plumosus*, *Dracaenas*, *Maidenhair Ferns*, *Pteris major*, and *P. tremula*, and splendidly bloomed plants of *Hydrangea paniculata grandiflora*, interspersed with beautiful spikes of choice *Gladioli*. The edges of the stand were gracefully festooned with *Smilax* and pots of *Lysimachia Nummularia*. The statuary, which was a striking feature in the decoration, was adorned with lovely trails of *Tropaeolum speciosum*, with its lovely scarlet flowers, glowing like fireflies amongst its beautiful green foliage. The plants were all well grown attractive specimens of sturdy vigorous growth, and with rich shining green foliage, characteristic of plants that have had a judicious application of Ichthemic Guano.

VICTORIA PARK.

SOME idea of the extent of this London Park may be gained when we state that it is 1½ miles in length or more, and possesses 22 gates for the admission of the teeming population which surrounds it on all sides. Some years ago large areas of it consisted of bare ground without a vestige of grass; but since it was taken in hand by the present superintendent, Mr. J. W. Moorman, these areas have been trenched, re-sown with grass, and fenced off piece by piece to keep the public off until the grass should get well established. There is now a fine sward instead of bare ground; and in several other respects vast improvements have been effected.

PALM HOUSE AND NEIGHBOURHOOD.

Some time ago we made a rapid inspection of the park particularly in relation to the bedding, and the glasshouses. The large Palm house or "winter garden" at the west end of the park now contains many large and well grown specimens of Palms, *Dracaenas* and *Tree Ferns*, about 20 ft. in height. Two tall specimens of *Dicksonia antarctica* are furnished with fine heads. Originally they formed one specimen with two trunks which were cut asunder and successfully re-established by Mr. Moorman. These and other foliage plants were brightened with tall standard *Fuchsias*, some of which consisted of three varieties grafted on the top of one another and forming three tiers of flowers of different colours. *Impatiens Sultani Episcopi*, deep blue *Hydrangeas*, and *Pelargoniums* enlivened the benches.

The flat near the Palm house is always an interesting spot for all who are interested in flower bedding. Being fully exposed to light and air on all sides except what shelter is afforded by shrubs at the back, *Pelargoniums* and other flowering subjects produce a blaze of colour not often met with. All the plants were put out about the middle of May. The planting in several respects is different from that of former years. For instance, the carpet bedding has been omitted in this particular design, and succulents employed instead.

We shall only attempt to notice the finest of the beds this season. In the back line two mixed beds have been very gay indeed. They consist of white and yellow *Marguerites*, *Erythrina Crista-galli*, *Gladioli*, *Lilium auratum* and *Fuchsias*, on an undergrowth of *Pelargonium Lucius* with an outer band of *Crystal Palace Gem*. On either side of these central beds is one of the pink *Pelargonium Mrs. Turner* mixed with *Fuchsias*, and having a broad edging of white *Lobelia*. Towards either end is another mixture of white *Marguerites* and *Pelargonium Henry Jacoby* making a bold and effective contrast. These two are edged with a broad band of the blue *Ageratum Dunbar's Dwarf*. The corner

beds of the design are circular and consist of succulents on a restful groundwork of *Herniaria*, golden *Creeping Jenny*, and *Antennaria tomentosa*. The succulents are dotted over these, and consist of green and variegated American *Aloes*, *Echeveria metallica*, *Canary Island Houseleeks*, *Agave filamentososa*, *Pachyphyton bracteosum*, *Haworthia subulata*, *Opuntias*, *Cereus*, and other quaint or grotesque subjects.

In the second line from the back are two fine beds of East Lothian Stocks, and Ivy-leaved *Pelargonium Madame Crousse*, edged with the pretty *Cuphea platycentra* and the yellow *Fuchsia Golden Fleece*. Two circular beds of *Celosia pyramidalis* on a ground of *Viola Max Colb* and *The Mearns*, have been charmingly effective for a long time. Striking also are two beds of the dazzling scarlet *Pelargonium Bonfire*, edged with *Pelargonium Flower of Spring* and *Brighton Lobelia*. Here also are two beds of succulents, similar to those at the extreme corners of the design.

There are two fine beds of *Heliotrope President Garfield* and *Petunias* on a ground of *Harrison's Musk*, bordered with spotted *Mimulus*, and the whole edged with white *Lobelia*. The groundwork is seen in the early part of the season only previous to the growth of the taller subjects. Two circular beds of *Celosias* and *Viola Duchess of Sutherland*, edged with *Sempervivum canariense*, are also well worth copying. Massive beds of the pink *Pelargonium Cleopatra*, edged with *Centaurea ragusina candidissima* and *Amarantus melancholicus ruber*, are simple in design, but imposing in effect. The middle bed at the front edge of the design is known as the *Butterfly or Prince of Wales' Feather*, from its form and planting. The wings and tail consist of a mixture of *Duchess of Sutherland* and *William Niel Violas*, and the bronze *Pelargonium Mrs. Quilter*. Inside of the above come three rows of *Pelargonium Vesuvius* running all round; then two rows of the bicolor *Pelargonium Princess Alexandra*, mixed with *The Mearns Viola*. There is a triple edging of *Iresine Lindeni*, *Lobelia Blue Queen* and *Pyrethrum selaginoides*.

The large circular bed in the triangle between three broad walks, and for some years planted with succulents, is entirely different this year. Tall plants of *Plumbago capensis* are placed at intervals, between which are shorter specimens of the *Coral-tree*, yellow *Marguerites* and *Petunias*. There is a triple edging of *Coleus Verschaffelti*, *Centaurea geminicaarpa* and *Sempervivum arboreum*.

WEST END OF PARK.

Pursuing the path on the north side of the park and in a westward direction one comes upon a continuous line of oblong and other beds by the side of the walk. The number of beds throughout the park is simply enormous, and a pleasing feature is the reduction of the *Pelargoniums* in favour of other plants, separately or in mixture to furnish as much variety as possible. Pleasing is a mixture of the dark *Fuchsia Scarcity*, *Abutilon Souvenir de Bonn*, and Ivy-leaved *Pelargoniums*. A similar bed edged with *Pelargonium Creed's Seedling*, dwarfer than *Crystal Palace Gem*, has also been fine. Other noteworthy beds are filled with *Begonia atropurpurea*, *Acacia lophantha*, and *Chlorophytum elatum variegatum* in mixture; *White Intermediate Stocks* and *The Mearns Viola*; *Pentstemons* and *Viola Wm. Neil*; late *Phloxes* and *Gladioli*; *Phlox Drummondii* in rich variety; *Zinnias* in mixture; and succulents and rockwork. A striking mixture consists of early *Chrysanthemums*, *Dahlias*, white *Marguerites* and *Aster Amellus*, in a bed of scolloped outline. A large oval bed, built up into seven mounds, is planted with green and variegated American *Aloes*, and *Opuntias* on a ground of white *Antennaria*.

A large, three-lobed bed contains a striking mixture of *Gladioli*, night-scented *Tobacco*, *Heliotrope*, Ivy-leaved *Pelargoniums*, *Phlox Drummondii*, *Fuchsias*, *Cape Hyacinth*, and others edged with *Viola Ardwell Gem*, many of the subjects being old plants. Several large banks of shrubbery here have massive mixtures of popular and showy flowers in front of them, including *Sunflowers*, *Shirley Poppies*, *Tobaccos*, annual *Chrysanthemums*, *Phloxes*, *Rudbeckias*, *Chilian Beet*, *French* and other *Marigolds*, *Clarkias*, *Malva moschata*, *Coreopsis grandiflora* and many others producing a most gorgeous display. *Crimson Cockscobs*, tuberous *Begonias*, *Acacia*, *Abutilon megapotamicum variegatum* and others make a showy circular bed.

In the reserve ground are plantations of *Canterbury Bells*, *Delphiniums*, &c., for next year. *Chrysanthemums* in batches of five and ten, up to forty of each variety, give promise of a fine display presently. In the houses close by the offices are large quantities of stock for next year, as well as plants in reserve for any bed that may give out before the season is over. There are something like 1,000 *Fuchsias* alone, from 6 in. to 3 ft. in height. Other plants are *Amicia zygomeris*, hundreds of *Ficus elastica*, *Tuberoses*, *Azalea indica*, *A. amoena*, &c., all in pots.

THE SCROLL BED.

Not far from the east end of the ornamental water is the scroll bed, which is always an interesting feature of the park, being a neatly and elaborately executed carpet bed. This year it has been specially designed in reference to the Diamond Jubilee of Her Majesty The Queen. The bed is 78 yds. in length, and relatively narrow like chain bedding. In the centre is a crown and medallion, 10 ft. long and 3 ft. 6 in. wide. The monogram V.R.I. is made of *Alternanthera paronychoides aurea*, *A. amoena*, and *A. versicolor* on a ground of *Herniaria*. The outside is formed of a double row of *Echeveria Peacocki* and one of *Alternanthera paronychoides major* with *Sempervivum tabulaeforme* on the perpendicular slope. On either side of the medallion is a Maltese cross.

On the left-hand side of the central designs are the words "May children of our children say," and continued on the right, "She wrought her people lasting good." The letters are worked out with various *Alternantheras* and small succulents, such as *Pachyphyton bracteosum*, *Kleinia repens*, *K. tomentosa*, *Echeveria farinosa*, variegated *Mesembryanthemum*, variegated *Ground Ivy*, golden *Creeping Jenny*, &c. Between every two words is a stop formed of plants. At the extreme ends of the scroll is a shield with the monogram V.R. done with *Alternantheras* and *Echeveria Peacocki* on a ground of *Antennaria*.

The scroll bed is a continual source of attraction to visitors who take a lively interest in reading the legend of inscription, and studying the other pieces of intricate work. At either end of the design is a large circular bed of undulated outline, and planted with many varieties of *Celosia cristata*, mixed with *Verbena venosa*.

BAND STAND AND FOUNTAIN.

Towards the east end of the park the band stand is surrounded with plantations of popular flowers, and forms a great centre of attraction when the band plays. The large fountain bequeathed to the park by the Baroness Burdett Coutts, is another gay spot close by. It is surrounded by massive beds, four of which are filled with *White Marguerites*, which have buried the groundwork that was gay in the beginning of summer.

There are two of the scarlet *Pelargonium Bonfire*; three of *Ricinus Gibsoni*, *Cannas* and yellow *Marguerites*; and two of *Pelargonium Mrs. Turner*; all have a groundwork of something, and double edgings. Besides the beds there are eight massive vases filled with popular flowers, and all have flowered grandly.

SUB-TROPICAL NOOKS AND BAYS.

On the north side of the ornamental water are numerous creeks and bays sheltered with tall shrubbery, and occupied with beds consisting very largely of mixtures of flowering and foliage plants. In one large bay are fifteen beds of various shapes and sizes. One excellent mixture consists of *Abutilon Thomsoni*, *Coral-tree*, *Ficus*, *Fuchsias*, *Gladioli*, *Palms*, *Petunias*, &c. Others are variously occupied with *Cannas*, *Heliotropes*, tuberous *Begonias*, *Fuchsias*, *East Lothian Stocks*, *Abutilon Souvenir de Bonn*, &c. In another bay are *Latantias*, *Phoenix*, *Kentias*, *Dracaenas*, &c., where carpet bedding used to be. Further on one comes upon circular beds in another bay, variously filled with flowering and foliage plants, which have given the fullest satisfaction.

A piece of rockwork, usually entirely devoted to grotesque *Opuntias* and other succulents, has this year been enlivened with *Chinese Pinks*, *Phlox Drummondii*, *Antirrhinums*, *Statice*, *Crocoshia* and other flowering plants, as well as succulent subjects. The beauty, keeping and reputation of this large park are being fully sustained by Mr. Moorman.

At a fashionable Wedding celebrated a short time ago the flower bill came to 1,000 guineas.

HAMBURGH EXHIBITION.

"THE trust that's given, guard, and to yourself be just," thus are the words of Dana. In fact, the Hamburg Exhibition does guard the trust given by the Hamburg public and exceeds it in many a way. Therefore, we easily understand the great success which this undertaking has attained, and we understand why the exhibition will remain until October 4th. On this ground the fruit exhibition (fourth special show) had been postponed for a week and opened on September 24th, thus bringing the whole affair to a worthy end.

On September 17th there was but a small special exhibition of fruit for sale to tickle the most spoiled palate. All the halls have been so richly ornamented with fruit of every sort and description that the interest rises by each step, and the visitor will never get tired in comparing the hundreds of products of England, Germany, France, Belgium, and the Tropics. This exhibition was enlarged on September 24th, and is now carried over all the territory of the immense place, thus being the largest exhibition of the kind ever held. Above 1,000 exhibitors brought their products to Hamburg for competition. Even the Government themselves participate at this exhibition, having sent special delegates, as for instance, Hungary, represented by Mr. Von Molnar, the agricultural expert; Austria, by Ministerrath Ritter v. Herzmanowski; France, by Monsieur Viger, the agricultural leader in several departments, and the President of the French Horticultural Society; also from all parts of Germany have experts and delegates arrived. The advantage of certain countries as regards their climatic situation has been equalised by dividing the countries into certain zones, competing with one another. Thus there are together for competition in the first zone, Norway, Sweden, Finland, North Russia, and Poland; in the second zone, Denmark, Great Britain, Ireland, Holland, North Germany, the Highlands of South Germany, South Russia, excluding the Crimea, and the Highlands of Switzerland. Another zone is again formed by Belgium, North France, South Germany, Austria, Hungary, the Valleys of Switzerland, competing with South France and South Europe as a separate zone; whilst the last zone is occupied by the non-European countries. The fruit-hungry visitor, however, cares but very little for all these zones, and appreciates only what suits his tongue the best.

Now we had better go round the show and see the products themselves. The principal country is Germany on this occasion. Schleswig Holstein exhibited a series of dessert Apples, which grow in the damp climate of the province in an excellent way and are shown in wonderful assortments. Pears of this province, however, do not grow so well, as the climate keeps them back, though some special assortments prove that by right cultivation good results may be obtained. The high quality of the Schleswig dessert Apples is shown best in their competition against the Holstein Apples, as every single cultivator exhibited no less than 20 Apples of a kind. There are the so-called Belle de Boskoop, Gravenstein, etc., and certainly these fruits may successfully be put next to the French products.

The exhibits of Oldenburg, and of Lübeck, have about the same character as the fore-named one; then follow Brunswick and Saxony. Here the Apple has to give way for other fruit, though it still prevails, as in Brunswick the Apple is about 74 per cent. of all fruit, whilst the Pear is but 6½ per cent.

Now we see the exhibition of Hanover, showing a greater series of assortments fighting for the prizes. There are in fact very valuable provincial special fruits, as Hanover takes the first place in cultivating fruit. The Gravenstein however, must retire and in its place we notice the Golden Reinette, Golden Pearmain, etc.; but there are also other Apples, such as Belle de Boskoop, Harbert's Reinette, etc.; whilst of Pears we see the "Duchesse d'Angoulême," Napoleon, the "Baconspear," etc., which of course occupy the place of honour in the show.

The Rhine-Provinces, Brandenburg and Mecklenburg also sent their best products to Hamburg this year, but we shall refer thereto later on. Worth while mentioning also is the Holland exhibition, which is rather extensive and from which all products may pass as samples, whilst the other non-German competitors as England and Denmark take no serious place.

The chief point, however, of the whole exhibition,

is the fruits from France, Switzerland and of Tyrol. The blue sky and the warm sun of these privileged countries do more than all gardeners ever will be able to do. Certainly the best products are not to be had by everybody on account of their price, but this must not prevent us from having a good look at them.

Hungary must not be forgotten, as she brings a large assortment of Apples and Grapes. Up to now Hungary was but little known as a fruit cultivator, but no doubt now she will soon find the place she deserves.

The list of the prize-takers has not yet been published, but to give our readers an idea how the exhibition came off we shall just reckon up the prizes which the firm of Herr Johs. Mortensen, St. Pauly, Hamburg, was lucky enough to take during the show.

I. SPECIAL SHOW.—Neat flower basket, first prize, small Silver Medal and 40 marks; Orchid bouquet, small Silver Medal and 75 marks; vase bouquet, small Silver Medal and 10 marks; planted basket, small Silver Medal and 20 marks; a wireless bouquet, small Bronze Medal and 5 marks.

II. SPECIAL SHOW.—For a flower arrangement, fourteen different items, including mourning symbols, baskets, &c, large Golden States Award; a terrarium, small Silver Medal; fancy arrangement, a similar award; Cornflower bouquet, small Bronze medal.

III. SPECIAL SHOW.—Flowers in ice, highest prize, first prize, and the prize of honour, 200 marks (given by Mr. Theodor Levy); best table decoration, first prize, the large Gold Medal.

GREAT AUTUMN SHOW.—Table decoration of flowers, first prize, large Silver Medal; table decoration of flowers and plants, first prize, large Silver Medal; neat flower basket, first prize and 20 marks, large Silver Medal; a vase bouquet, first prize and 30 marks, large Silver Medal; various garlands, first prize and 30 marks, large Silver Medal; Orchid bouquet, first prize and 30 marks, large Silver Medal and prize of honour, 50 marks (from Dr. Petersen); a baptism garland, large Bronze Medal and 10 marks; easel, small Silver Medal and 10 marks; ten table bouquets, large Bronze Medal and 50 marks; for new introduction in the art of binding, large Bronze Medal; fancy Orchid bouquet, small Silver Medal and 30 marks.—F. D.

GLASGOW PARKS AND GARDENS.

For some time past the Corporation of Glasgow have been particularly active in securing open air spaces for the benefit of the ever-extending city. They do well to be ever on the alert for the securing of land on the outskirts of the city before it comes into the capacious and grasping clutches of the builder. Glasgow is the second city in the Empire for number of population, and within the last few years the County of Glasgow has been enlarging its borders by leaps and bounds. Several important suburbs have been annexed, while at the same time parks and gardens have been secured for the benefit of the community. The only certain method of doing this is by anticipating the builder. There are now fourteen parks, gardens, and recreation grounds, including, of course, the Botanic Gardens. With recent additions to four of these open spaces the fourteen have a combined area of 978½ acres. In addition to these larger spaces there are thirteen minor ones totalling 13 acres 2 roods 32 poles. Seven graveyards, five of which are open to the public, give another 11 acres 3 roods 24 poles. The total acreage under the care of Corporation amounts to 1,003 acres 2 roods 16 poles. All of this vast space with exception of the Botanic Gardens, is under the direct superintendence of Mr. James Whitton, formerly of Coltness, Wishaw, and Glamis Castle, Forfar. Needless to say he is one of the busiest men in Glasgow, and from what we can see he is both qualified and competent for the work. He was formerly a gardener, and has foremen under him in all of the principal places, who are also gardeners by profession.

GLASGOW GREEN.

In the limited time at our disposal one afternoon after 4 p.m., we made a rapid survey of a few of the principal parks, commencing at Glasgow Green, the oldest open space, it having been acquired in 1662 and added to up till 1792. It is situated on the banks of the Clyde, and extends to 136 acres. A

People's Palace has been built upon it at a cost of £22,000 or over. The palace includes a museum library and winter garden. The latter alone cost £8,500, is 180 ft. long, 120 ft. wide, and 60 ft. high in the centre. Sir Henry Doulton, of Lambeth, bequeathed to it a drinking fountain at considerable cost.

GOVANHILL GROUNDS AND QUEEN'S PARK.

On the south side of the Clyde we passed the Govanhill Recreation Grounds, opened to the public last year. They formerly consisted of an old brickfield, left in a chaotic condition, and involving a great amount of labour and time to put them in proper form. They cost the Corporation £12,000, though only four acres in extent.

The Queen's Park is close by Govanhill, and was designed by Sir Joseph Paxton. It was the third of the parks to be acquired, is now forty years old, and cost £30,000. The centre of the park is elevated, affording fine views of the city when the atmosphere is clear. A long and broad flight of stone steps gives access to the terrace, on which summer flower bedding is extensively carried out. The long border on the edge of the terrace is very imposing, consisting as it does of Pelargoniums and bold edgings of Lobelia and Cerastium tomentosum. Even in the second week of September the beds were still gay with blossom in this northern latitude. The ground below the terrace, as well as on the high ground around it, is sheltered with mixed plantations of trees, which have not in all cases grown very rapidly, owing to the ungenial nature of the ground, which consists largely of boulder clay, reaching generally to a great depth. Amongst the trees we noted fine specimens of Prunus Mahaleb and the gray-leaved Pyrus salicifolia. Mr. Whitton is very fond of trees and shrubs, and is doing all he can to enrich the parks with those species which will thrive here.

CAMP HILL.

The glasshouses and propagating department of the parks are situated at Camp Hill, which consists of fifty-eight acres, acquired in 1894 at a cost of £63,000. This price, however, included fifty-three acres of feuing land, not reckoned with the park. Camp Hill is contiguous to and continuous with the Queen's Park, making a combined area of 148 acres.

The glasshouses are situated on high ground, close to the beautiful village of Langside, and immediately outside the fence is the monument commemorating the battle of that name and well known in history. The plant houses are open to the public daily. Many of the large specimens in tubs have been presented by private gentlemen in the city or suburbs. Passing through the stove we noted that it is devoted to Palms, Eucharis, Caladiums, Hymenocallis macrostephana, and Pancratium fragrans, the two latter of which were carrying their fragrant white flowers. The Hymenocallis was, indeed, flowering for the second time this season. Numerous plants of Strobilanthes Dyeri are larger than we usually see them. There is a grand piece of Coelogyne massangara in a basket 18 in. square. A magnificent specimen of Musa Ensete, 20 ft. high, and bearing enormous leaves, with red petioles, was presented by Miss Drummond, of Megginch. Dicksonia squarrosa, 20 ft. high, was presented by J. B. Merrilees, Esq., Redlands. Both of these tall specimens stand in the roomy corridor connecting the houses together. Here also is a grand plant of the Bird's-nest Fern, with leaves 4 ft. to 5 ft. long, Oranges in fruit, large Camellias in bud, and a very old specimen of Beaucarnea recurva.

Orchids are not neglected, more than one house being devoted to them. A grand piece of Platyclinis was carrying thirty-two spikes of its flowers like golden filigree work. There is a good collection of Cyripediums, of which C. Charlesworthii, C. barbatum, and others were in flower. C. purpuratum is a dwarf and choice thing. Choice things in flower include Oncidium incurvum, Miltonia Phalaenopsis, Pleione Wallichii, and Vanda kimballiana. The uncommon Urceolina pendula flowers freely.

In the propagating pit we noted the third batch of Clerodendron fallax in bloom. Many things are propagated here, including Anthuriums, Golden Privet, Araucaria excelsa, and others, of which there are batches in various stages. In one division is the striking Begonia heracleifolia Sambo, with black leaves; also a grand plant of the graceful Restio

subverticillata, and flowering specimens of *Allamanda Williamsii* and *A. nerifolia*. The Stephanotis-like, fragrant flowers of *Scrubertia graveolens* adorn the roof.

A large number of species of *Masdevallias* are located in one of the useful span-roofed houses. Flowering subjects here include *Masdevallia dayana*, *Odontoglossums* (grown in quantity), *Oncidium excavatum*, and the pretty *Odontoglossum hastilabium*. One bench is occupied with Ferns, including several forms of *Nephrolepis*. The Onion Plant (*Ornithogalum longibracteatum*), well known in cottage windows all over the country, has been flowering for a long time past. Pretty also is the pale yellow *Cytisus scoparius sulphureus*.

In another house we noted *Pancreatium fragrans*, *Hydrangea paniculata grandiflora*, and *Tritonia rosea*, all in bloom. Austin's Eclipse and Comet Tomatoes are grown on one bench. Zonal and Ivy-leaved Pelargoniums, and *Swainsonia galeifolia alba* fill another house. The old double white Chinese Primula and Begonias, such as *B. metallica* and *B. President Carnot*, monopolise another house. Japanese Maples, *Cytisus proliferus*, and *Passiflora caerulea purpurea* are samples of the occupants of another structure. Others are *Acacia pulchella*, standard *A. armata*, *Lilium auratum*, Azaleas, and Rhododendrons in variety show what are popular here. Still another house is filled with Ferns, *Asparagus*, *Eryngium bromeliaefolia*, &c., for decorative work.

In the greenhouse are some tall and massive plants of *Euonymus japonicus laifolius albus*, Camellias, Palms, Cannas, Pelargoniums, Coleus, Lilliums, *Hydrangeas* and *Dicksonia antarctica*. Good stuff of *Begonia President Carnot* will afford flowering plants for the winter.

Leaving the hothouses at Camphill we passed through the shrubbery and nursery grounds around the base of the hill. Before they were acquired by the Corporation these grounds formed part of a private demesne. They are largely utilised for the rearing of shrubs, trees, &c., for the parks. A plantation of early flowering *Chrysanthemums* was very gay, including floriferous masses of Canary, Golden Shah, Piercy's Seedling, Flora, &c. A weeping Ash about 35 ft. high is considered the finest in Scotland. We hope the feuing land will not be built upon, as it is planted with tall and fine trees.

MAXWELL AND BELLAHOUSTON PARKS.

Maxwell Park consists of 21 acres, the gift of Sir John Stirling-Maxwell, Bart., in 1891. It is situated on houlder clay of great depth, and is planted with Limes, Poplars, Willows, and others which will thrive on this ungenial soil.

Bellahouston Park is situated in the southern suburbs of the city, and was acquired in 1895. Much of the land is yet under agricultural crops, but will undergo a transformation presently, which will render this one of the finest and most picturesque parks in Glasgow. It has an area of 178 acres, being the largest piece of land cared for by the Corporation in the interests of the people. The highest portion is 140 ft. above sea level, and here the superintendent's house is located. It was formerly the residence of the private gentleman who held the land. The latter cost the Corporation £50,000. The hill nearly in the centre is planted with trees which are conspicuous from a great distance owing to their elevated site. Great improvements are to be effected and we have every confidence that Mr. James Whitton will leave the imprint of his hand upon the beautifully undulated grounds which lie around the wooded heights.

PRESERVATION OF USEFUL BIRDS.

THE small birds, so useful to agriculture, are menaced with destruction with the object of preventing so-called damages which they cause crops in the neighbourhood of towns. In any case, the work they do in destroying all kinds of injurious insects more than compensates for their pilfering, and we cannot plead their cause too eloquently. The President of the Society for the Protection of Animals has just written an interesting communication on this subject to the head of the French police. Amongst other things he states that the starling, the value of which is disputed, is a useful bird. In many parts of Europe, particularly Germany, far from destroying it, nests are built by the people to assure reproduction.

The society advocates by the mouth of its presi-

dent that no birds should be sold in the markets except foreign species or home birds born and reared in cages. We must admit that, in spite of the clear instructions given, this principle is not always easily applied, and sellers and bird-catchers have been favoured by regrettable toleration. For years birds have been publicly sold; not merely adult native birds, crowded to suffocation in cages, but unfeathered young ones, some yet in the nest.

In any case, if arrest of the sellers is useful, it is equally necessary to provide against the supplies by exercising increased vigilance at the Paris gates and railway stations. Thus poachers who catch millions of birds in close time with prohibited snares would be detected. The actual classification being vague and ill defined also makes application of the law difficult. It is desirable that birds should cease to be classed by order of size, *e.g.*, stating that it is unlawful to kill such a bird of the same size or less than a blackbird or quail. It will be better, once for all, to give a simple accurate list—(1) Of all noxious birds; (2) Of game birds—and announce that all the others without exception are protected. —*La vie Scientifique.*

PERSIAN CYCLAMEN.

THERE was a fair attendance at the Westminster Drill Hall on Tuesday, 22nd ult., to hear Mr. W. Iggulden read a paper on the Persian Cyclamen. Mr. James Douglas occupied the chair. The lecturer commenced by commenting upon the popularity of the Cyclamen. There are no other plants that can be raised and grown so cheaply that are more profitable, for they may be had in bloom from October to March inclusive. In spite of this there is only a limited number of cultivators that can grow them well, and indeed there are far more failures than successes. Cyclamen cannot be grown in the haphazard fashion adopted with Primulas, and Cinerarias, but they must receive every care and attention. Private growers are placed at a disadvantage as compared with trade growers, for the former have not as a rule the kind of houses at their disposal that best suit the requirements of the Cyclamen. If private growers cannot do the plants well, however, it will be better to leave them alone.

With regard to seed sowing, the times vary considerably, said Mr. Iggulden. Many trade growers sow in August and September, others in October, November and January. February and March is too late for seed sowing, although I have raised good plants from seed sown in January. New seed is to be preferred to old. Thin sowing is very essential, as the necessity for pricking out may be thus obviated. The soil should consist of half loam, and half leaf soil, with sand; covering the seed to the depth of about a quarter of an inch. The seed pans should be placed in a temperature of from 60° to 70° Fahr., shaded, and kept moist. Under such conditions germination will take place in from five to six weeks. The young seedlings should be kept growing on steadily, taking care to shield them carefully from draughts, and spray them with tepid water. The first shift will be into 2½ inch pots, and if the thin sowing recommended has been practised the little plants may be taken out of the seed pans with a nice ball of earth attached, in such a way that they will not receive any check.

The winter temperature should range from 55° to 65° Fahr., and as it must be remembered that the plants will not thrive in dry surroundings, the atmosphere surrounding them must be kept moist. At this stage a small aphid attacks the plants, and if not checked will soon do them a great deal of harm. Nicotine fumes are the present day remedy for these aphides, and are very effective in clearing the plants of them.

The next shift will be into 5-inch pots. The soil should consist of two parts loam, one part leaf soil, and one part dried cow manure, with sand. After potting, stand the plants on ashes or moss and keep them damp. During the hottest part of the summer, continued the essayist, I put my plants in shallow pits or frames sloping away from the sun, shade them carefully when necessary, and spray them regularly.

In August the strongest plants may be given a further shift into 7-inch pots. The earliest flowers will need to be removed for a time. Clear soot water or other liquid manure may be applied occasionally with advantage. The plants will flower well and freely in a temperature of 45° to 50° by night, with a proportionate rise by day.

With regard to drying off, Mr. Iggulden went on to say, I am at variance with some authorities. I do not throw my plants away after the first season, but grow them on again after they have had a thorough resting. They are dried completely off and almost baked. The best lot of plants I ever had had been laid on their sides on a shelf in a Melon house where they were really baked. I treat all the plants to this annual resting, and find them do all the better for it. Early in July they are taken down, repeatedly watered until the balls are reduced to a state of moisture, and sprayed regularly with the syringe. The result is that the corms break into growth all over the upper surface. I have experimented in various ways with the plants to find out the best way to treat them, and amongst other things I planted them out in a bed of soil made up in a frame after they had done flowering and tried to keep them growing on, but success did not ensue. I have found good two-year-old plants better than good year-old ones.

In addition to the apbides spoken of, eelworms often attack Cyclamens. Bearing this in mind it is well to keep the plants away from old Melon or Cucumber beds. The best way to deal with the eelworms is to dissolve two ounces of Phenile in three gallons of water, and apply it to the roots of the affected plants.

In procuring any flowers or leaves they should always be "drawn" away from the corms, as if they are cut the bases are left and rot, spreading decay. In conclusion the lecturer pointed out the great improvement that had been made by the florists in Cyclamens, for the cultivated plants are superior to their ancestors in size of flower, and strength of constitution. The foliage too is exceedingly handsome. Of all the firms that have had a hand in the development of the flower, none has done more than that of Messrs. Sutton & Sons, of Reading, and only recently they have given us cherry-red, and rose—two colours hitherto wanting in Cyclamen.

At the close of the paper, Mr. R. Sydenham offered a few remarks. He advised his hearers to let their plants be exposed to the summer night dews, which strengthened the foliage immensely. He also spoke to the value of "XL All" as a fumigant. He had from time to time received complaints from various sources that the flowers of Cyclamen would not last when cut. He had found, however, a way to obviate this difficulty, for he slit down the base of the stem of each flower after it was cut, for the distance of about half an inch, and found that then they kept well for weeks together. Some flowers that he had thus treated had been sent to Switzerland where they arrived in a wonderfully fresh condition, and lasted for six weeks from the time at which they were cut.

Mr. John Wright followed with advice to intending growers, or those that had met with failures in their attempts to grow Cyclamen, to keep their plants amidst more humid surroundings, otherwise they would not succeed.

A vote of thanks to the lecturer terminated the proceedings.

GARDENING MISCELLANY.

GLORIOSA SUPERBA.

AMONGST the many interesting grand examples of cultivation in the houses at Brougham Hall, Penrith, is the above, covering the whole of the roof of one of the stoves. It is carrying hundreds of its queer shaped, orange and scarlet flowers which are found invaluable for cutting purposes. These plants have been in flower for months and will continue for some time yet. We ought to see this more frequently as it is most showy and useful; so Mr. A. Taylor finds it. —A. O.

CHRYSANTHEMUM MADAME MARIE MASSE.

THIS early flowering variety has already had a First-class Certificate awarded it, and its merits have been still further recognised by the Royal Horticultural Society's floral committee by a verdict of "highly commended" after trial at Chiswick. The variety is certainly the best of its colour among the early-flowering Japanese section and might well be largely grown. The flowers are bright rosy pink, and the florets long and slightly twisting. Grown without

disbudding, large trusses of brightly-coloured blooms are the result. These when cut with long stems carrying a fair amount of foliage, which, by the way, is healthy, clean, and of a deep green hue, are most effective in vases of cut flowers. In the open ground when exposed to the sun the flowers are apt to lose their colour soon, but this is only what might be expected when we consider the earliness of the season.

"ICHTHEMIC" AT YARMOUTH.

Griffin Mills Employees' Outing.

The employees of the firm of Wm. Colchester, of Griffin Mills, Ipswich, on Saturday, held their annual outing, the rendezvous being Yarmouth. Starting by the early morning train from Ipswich, the party to the number of between sixty and seventy were accommodated with special saloon carriages by the Great Eastern Railway Company, and favoured with magnificent weather everything augured well for a successful day. Besides the members of the staff, headed by the Ipswich manager, Mr. A. E. Stubbs, there were the workmen and workwomen from the entire factory at Ipswich, together with several visitors who had acceded to the kind and pressing invitations extended by the firm, including Mr. G. Gilbert, of the Floral Nurseries, Ipswich, Mr. J. Andrews (secretary of the Woodbridge Horticultural Society), Mr. F. Millar (Messrs. Fred Smith & Co., Woodbridge), Mr. Arthur Sowman, formerly head gardener at Springfield House, Ipswich, and now elected horticultural instructor, under the technical education scheme, and others. At the journey's end the numbers were augmented by M. LeCornu (the firm's Continental representative), Mr. H. Douglas Fleming (representative in Scotland), Mr. E. A. Cooke (Great Western Railway), and Mr. C. F. Hoad (Great Eastern Railway).

Breakfast was found waiting for the party at the Bath Hotel, and under the presidency of Mr. Stubbs full justice was done to the meal provided by host Foulsham. The tables presented a very attractive appearance, thanks to the efforts of Mr. J. R. Chard, Florist, of Stoke Newington, who, by the aid of gracefully constructed arches and epergnes of woven wire, displayed with taste striking examples of the fertilising virtues of "Ichthemic" Guano. The morning was passed in visiting the various amusements in which Yarmouth abounds, and at 1.30 the party re-assembled for dinner. The manager again occupied the chair, Mr. R. Ennals (agent in charge of the Stowmarket district), Mr. J. Andrews, Woodbridge, Mr. C. Smout, and Mr. H. Douglas Fleming filling the vice-chairs. Dinner over, the Chairman gave the usual loyal toasts.

Mr. Andrews next proposed the toast of the day, "The health of Mr. Wm. Colchester," the head of the firm. He adverted to the growth of the business, and the popularity of the proprietor, and complimented those present on their connection with so successful a commercial undertaking. The toast was accorded musical honours.—Mr. A. E. Stubbs, in reply, thanked those present, on behalf of Mr. William and Mr. Charles Colchester, for the hearty manner the toast had been received, and related in humorous terms the history of the previous outings of the firm, which commenced by a journey to sea on one of the steam tugs belonging to Mr. Colchester. He was delighted to be able to allude to the excellent understanding which had always existed between all departments of the firm. Their employer had reached a great age, and it was his pride that during the seventy-eight years of the firm's existence such a thing as a strike of the workmen was totally unknown amongst them. Mr. Stubbs adverted to the fine business qualities of the gentlemen whose names they had honoured. They were men of great energy, and had by the means of untiring zeal in business rendered the name a power in the commercial world.—Mr. Douglas Fleming gave "The Visitors," which was responded to by Mr. E. A. Cooke (G.W.R.), and Mr. C. F. Hoad (G.E.R.), both testifying to the increasing business relations between their lines and the firm of Wm. Colchester.

The Chairman added a toast of congratulation to Mr. Sowman on his appointment as horticultural lecturer and instructor under the aegis of the Suffolk County Council. Although living at Woodbridge, where as head gardener at the Grange he had made his name famous as a successful competitor along

the country side, yet they looked upon him still as an Ipswich man, the town in which Mr. Sowman spent some period of his early life, and if his new duties made it necessary for him to make his headquarters at Ipswich, horticulturists would be glad to welcome him back again within their borders.

Mr. Sowman suitably responded.

The other toasts were "The Press," given by the Chairman, and responded to by Mr. Hurrell, "Eastern Daily Press," and Mr. W. F. Cornish, "Evening Herald," "The Chairman," "The Ladies," etc.—A capital musical programme was provided. M. LeCornu gave songs of his native land, Mr. A. E. Stubbs, Mr. F. Stubbs, and Mr. E. A. Cooke also sang, while Mr. C. F. Hoad recited. A vote of thanks to Mr. Henry Myers, one of the firms travellers, for the satisfactory organisation of the excursion and a similar compliment to Mr. Anderson, organist of St. Peter's Church, Ipswich, who superintended the musical arrangements brought the toast list to an end, and the party re-embarked for home at 6.50 p.m.

QUESTIONS AND ANSWERS

* * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Hedge under the shade of trees.—M. M'L.: We are not surprised that Portugal Laurel should refuse to thrive under the shade of large trees. In the first place, the sunlight is too much obstructed; and, secondly, the roots of the trees impoverish the soil by abstracting all the nourishment it contains, and by preventing the rain from falling upon it. The Arbor-vitae seedlings you mention should succeed much better than the Portugal Laurel, and we believe the Yew would also be suitable, because both these trees would thrive in a much drier soil than the Portugal Laurel. Very much depends, however, upon the density of the shade produced by the tall trees. It would be of great advantage to take out a trench where the hedge is to be, cutting away as many of the roots of the trees as you dare without injuring them or rendering them liable to fall. Mix the natural soil with old soil from under the potting benches, leaf soil and old hot-bed manure, if you have any. At all events, use some fresh soil and vegetable matter. You could also top-dress the ground above the roots after planting the hedge for some years afterwards. Of course, the trees will also root into the fresh material, but the latter will give the hedge a good start.

Potatos per acre.—Omega: If 160 square yards of ground give a return of 1,080 lbs. of Potatos, a statute acre will produce 14 tons 11 cwt. 2 qr. 22 lbs.

Botanical term.—Omega: The botanical term for a mule flower is "hybrid," which means a cross between two species such as Dianthus barbatus and D. superbus.

Church decorations.—Constant Reader: We have never heard of a book which deals with church decorations. Hitherto the demand for such has been so small, that no one, probably, has ever conceived the idea of writing one. At all events no such work has come under our notice. We think the best plan for you would be to pay a visit to one or more churches where the decorations at the "harvest thanksgiving" or at Christmas are well carried out. You could then employ your time profitably by at first imitating what you have seen and afterwards improving upon them. No two churches, probably, are decorated alike, and the buildings being very often different you would have to follow a plan which would best harmonise with each church you undertake to decorate.

Practice with the Microscope.—Arthur Pentney: The most complete book on the subject is *Practical Botany*, by F. O. Bower, and published by Macmillan & Co., London; but it costs about 10s. if we rightly remember. *Practical Biology*, by Professor Huxley and H. N. Martin, and published by Macmillan & Co., costs 6s., but it deals with a few types only of flowering plants, the rest being cryptogams and animals. *Huxley's Elementary Course of Botany*, published by John Van Voorst (now Gurney & Jackson), Paternoster Row, would give you a considerable amount of information about the structure of stems, roots, leaves, &c. It costs 15s. The first-named book tells you how to mount objects. *Morphology and Physiology*, by William Ramsay McNab, and published by Longmans, Green & Co., Paternoster Row, is 6d. Edmond's *Botany* by the same publishers is about 2s. Both would give you information with illustrations about the structure of plants, but nothing about mounting. With the small amount of time at your disposal at present we do not think it would be worth your while to attempt permanent mounting, as it is a tedious process to

begin with, though there is nothing but time and patience to hinder you from succeeding. A winter or summer course of practical botany at a class would be of immense assistance. Nevertheless we advise you to make a start on your own account. A microscope, a glass slide or two, and a good razor are all that you want for a time. The objects could be mounted in water or glycerine temporarily while you make notes of everything you examine. Study the structure of roots, stems, and leaves in transverse and longitudinal section, and you will soon get familiar with many things. When you meet with difficulties communicate with us again.

Book on Fruit Culture.—Omega: The book concerning which you ask may be obtained from Mr. B. Wells, the Fruit Nurseries, Crawley, Sussex. The price is rs., exclusive of postage.

Crop of Potatos.—Omega: We consider 14 tons, 11 cwt. of Potatos a very good crop indeed. About 6 tons is the average on many soils. On the contrary as much as 22 tons or more have been dug from rich, well-tilled, and well-manured soils; but this is only in the case of certain heavy cropping varieties.

Sweet Pea Seeds.—M. M'L.: By all means let them hang upon the plants as long as possible. If you have any particular favourites you would like to save you might throw a piece of tiffany or shading over them at night when frost threatens. When you are at last obliged to gather them do not shell them. A better plan would be to gather the stems and hang them up in bunches in a dry cool shed. The next better plan would be to gather the pods and put them thinly into pots, boxes, or baskets, placing them in a dry, cool place till the seeds turn black of their own accord. By these means the Peas will continue to derive sustenance from the pods or from the stems for some time till they get dried up. On no account shell them till then. If quite firm now they will ripen tolerably well even if gathered and treated as directed.

Temperature for Ripe Grapes.—Omega: After the Grapes are thoroughly ripe keep them as nearly as possible at a temperature of 45°. The atmosphere must be kept as dry as possible by proper ventilation day and night. The artificial heat necessary will dispel the moisture so long as you keep the ventilators open, only a little, of course, at night, but sufficient to let the moisture escape. The borders must not be allowed to become too dry so long as Grapes are still hanging.

Names of Plants.—Inquirer: 1, Aster, *Novae-Angliae pulchellus*; 2, Aster not recognised; 3, Aster *Amellus*; 4, Aster *Novi-Belgii* var.; 5, Aster *Novi-Belgii* Harpur Crewe; 6, Aster *Drummondii elegans*.—P.M.: *Croton* not recognised.—Omega: 1, *Enchanter's Nightshade* (*Circaea lutetiana*); 2, *Persicaria* (*Polygonum Persicaria*).—J.C.S.: 1, *Clematis recta*; 2, the single form of *Zinnia elegans*.—H.C.: 1, *Helianthus orgyalis*; 2, *Rudbeckia speciosa*; 3, *Helenium autumnale*; 4, *Aster diffusus horizontalis*; 5, *Sedum epectabile*.—T.W.: 1, *Clematis Flammula*; 2, *Lonicera sempervirens*; 3, *Cattleya dowiana aurea*; 4, *Oncidium varicosum*; 5, *Cypripedium barbatum* var.; 6, *Oncidium incurvum*.

Names of Fruits.—Salen: 1, Ribston Pippin; 2, Cellini; 3, Hawthornden; 4, not known; 5, not known; 6, Claygate Pearmain; 7, Keswick Codlin; Plum, Mitchelsons.—James Robertson: 1, Duke of Devonshire; 2, Autumn Pearmain; 3, Scarlet Nonpareil; 4, Grange Pearmain; 5, not known; 6, Keswick Codlin.—J. L.: 1, Beurré Clairgeau; 2, Marie Louise d'Uccle; 3, decayed; 5, William's Bon Chretien; 6, Dumelow's seedling.—P.M.: 1, not known; 2, Duchess of Oldenburg; early Pear, rotten.

- THURSDAY, October 14th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
- FRIDAY, October 15th.—Sale of Dutch bulbs and Orchids by Messrs. Protheroe & Morris.

BRITISH GROWN FRUIT—The general public have again had an opportunity of seeing for themselves what British soil and climate can do under the guidance or control of skilled cultivators in the production of fruit. This applies more particularly to fruit grown in the open air, for the atmospheric influence in glasshouses is even more decidedly under the control of the growers. It would be interesting to learn if the more successful exhibitors, or any of them, took any steps to protect their fruit trees while in bloom, seeing that there has been such an outcry about the scarcity of fruit in general, and of some kinds in particular. The past spring and summer, we are aware, have been very inimical to the interests of fruit growers in certain localities, but we have had good evidence

that Apple trees, at least in many gardens, brought a very satisfactory crop of fruit to maturity, without any protection whatever. The quality of the bulk of the Apples shown at the Crystal Palace on Thursday, Friday, and Saturday of last week was beyond reproach; though we feel confident that none of the exhibitors staged anything inferior to their best. We may say at once that Apples took the leading position both for quantity and quality. Pears were deficient in quantity compared with former years, particularly in the class for a collection of fifty distinct varieties, and in the large non-competitive exhibits, whether staged by the trade or the private grower. Peaches, Nectarines, Plums, and even Figs were more strongly represented than we have seen them. On the whole the exhibits were greatly in excess of last year judging from the extra number of plates in requisition.

Grapes were decidedly a feature of the show for various reasons. The bunches were more numerous than usual and better displayed, having been arranged on long, continuous tables, so that visitors in passing between the tables could see two long rows at least. There were many weak bunches, and all the entries in the class for Madresfield Court, in our opinion, were weak. In some of the other classes the Grapes seemed to have suffered considerably by rubbing during transit to the show. On the contrary all of the entries in the classes for Muscat of Alexandria and Alicante were very creditable, being the best in the show. Concerning Figs, we may say that three varieties were shown, of which Brown Turkey took the lead for quantity and quality as well. All the three prizes were awarded to as many dishes of this variety. The huge fruits of Brunswick came next in point of number. Though inferior in quality to Brown Turkey, some are of opinion that the great size of its fruits is telling upon the exhibition table; but in this case, at least, the judges were of a different opinion.

The Apple is the king of British fruits both in the matter of usefulness, fine appearance, and the certainty with which it can be grown in our climate. It fully upheld its reputation on this occasion in spite of the alleged scarcity. There is one phase of Apple culture that well deserves attention in the matter of experiment, and that is, can the trees in an orchard be so regulated as to bear an average or satisfactory crop every year, instead of an indifferent crop or none at all, except at intervals of some years? At present, we may never have an entire failure in any one year, but that is largely due to the great number of varieties in cultivation, and the fact that some or other of them are sure to be in bearing. We commend the matter to the attention of the British grower, and urge him to endeavour to find a solution of the problem, whether every variety can be made to bear annually by preventing over-cropping or otherwise regulating production. This would have a great bearing on supply and demand, thereby preventing great fluctuations in price, due to scarcity, and a plethora of fruit in different seasons. Orchard house culture certainly has some bearing upon the question, inasmuch as the setting of the fruits is rendered more certain by the protection afforded; but although practised in private establishments and to a smaller extent, perhaps, by nurserymen, this method cannot be adopted to advantage on a large scale for market purposes, on account of the much greater cost of production.

The practised eye has no difficulty as a rule in detecting those fruits which have been grown and matured under glass. The pale and clear skin of the fruits, particularly

of Apples, has a telling appearance; but it is questionable whether the ruddy glow of Apples ripened in the open air does not indicate better quality and flavour than house grown fruit. Sun and air improve the flavour of all kinds of fruit with which we are acquainted; and to get the best results with Apples, consumers have merely to wait a little longer for perfect maturity. This we shall say, however, that Apples grown in pots housed in spring and early summer set with more certainty, at least in districts with a clear atmosphere; and the fruits are more likely to be thinned than if grown upon trees in the open, thereby ensuring size. Colour and flavour can then be secured by standing the pot-trees out of doors when the weather becomes favourable. This method is both reasonable and practicable, and the results obtained are wonderful. There is no question that the finest fruits are obtained from young trees; and it is equally certain that the largest and best coloured fruits come from the southern counties of England, particularly Kent, Sussex, and Devon. Visitors to the Crystal Palace last week had ample opportunity of proving this, both in the case of Apples grown by nurserymen and by gentlemen's gardeners. In the matter of flavour the awards were more widely distributed; the best flavoured Apple (Ribston Pippin) coming from Sussex, while Cox's Orange, which was second, came from Bucks. The best flavoured Pear (Louise Bonne of Jersey) came from Berks, while the second award went to Kent for Fondante d'Automne.

Amongst Apples there were magnificent samples, both as to size and colour, of Peasgood's Nonsuch, Gascoigne's Seedling, King of Tomkins County, Emperor Alexander, King of the Pippins, Annie Elizabeth, Crimson Queen, Col. Vaughan, Calville Rouge Precoce, Mother, Dumelow's Seedling, Hoary Morning, Bismarck, The Queen, Worcester Pearmain, Lady Sudely, Cox's Pomona, Mère de Menage, Newton Wonder, and many others. Naturally, the above are all highly coloured Apples; but those from Kent, Sussex, and Devon, had to be seen to be fully realised.

Amongst Pears there were really grand samples of Pitmaston Duchess, Duchess d'Angoulême, Conference, Durondeau, Calebasse Grosse, Beurré Clairgeau, Louise Bonne of Jersey, Marie Louise, Souvenir du Congrès, the new variety Marguerite Marillat, Beurré Hardy, Beurré Bosc, and others. The more sober colours of Pears, whether grown in the open air or under glass, fail to produce that effect on visitors which Apples do. Only one class was set apart for cooking Pears, but grand samples of Catillac, Uvedale's St. Germain, and Bellissime d'Hiver were shown in the large collections, competitive and non-competitive. In the latter case there were splendid tables of fruit from Middlesex, Surrey, Bucks, and other counties. The large Pineapples, Royal Jubilee Tomatos, Apples, and Pears from the Royal Gardens, Windsor, were a source of great attraction to the public.

The crops in Victoria, Australia, have greatly benefited by the splendid rains which have fallen all over the Colony.

Progressive Fruit Culture at the Cape.—A writer in *The African Critic* states that during the week a report has reached England that Mr. Rhodes is quietly supplying capital to farmers in the Western districts of Cape Colony, with a view to the development of progressive fruit culture there. If true, this fact will greatly increase British interest in the Cape fruit trade. Next week I shall deal with the general question, on the basis of Professor MacOwan's recent deliverances thereon.

Mr. Joseph Stoney, for fourteen years head gardener to Sir Thomas Earle, Bart., has been appointed head gardener to the Hon. Frederick G. Wynn, Glynllivon Park, Carnarvon. Mr. Stoney commenced his duties on the 6th inst.

Mr. J. Smith, who has been for the last ten years foreman in the Orchid collection of R. I. Measures, Esq., Cambridge Lodge, Flodden Road, Camherwell, has succeeded Mr. Burberry as Orchid grower to the Right Hon. J. Chamberlain, Highbury, Birmingham.

The Palace Fruit Show.—Some fifteen or sixteen leading provincial dailies were represented at the above show, and reports of the leading exhibits appeared north and south the next morning. Possibly the frequent special editions of *THE GARDENING WORLD* are waking up some of our contemporaries to a sense of duty with regard to these leading horticultural shows.

Mr. Alexander Duncan, for the past four years foreman at Stoneywood House, Aberdeenshire (the residence of A. G. Pirie, Esq.) has been engaged as head gardener to Mrs. Gray, Carsegray House, Forfar, N.B. Mr. Duncan is quite a young man, and has had a long career of gardening. His horticultural friends will be sorry to hear of him leaving the locality, as he took a keen interest in shows, and especially in Chrysanthemums, of which he was an expert grower; and his friends trust to hear of Mr. Duncan's success in the south.—*J. J.*

Edwards on Cyclamen.—This useful little brochure has reached its third edition, and has been considerably enlarged in the process. The author, Mr. F. C. Edwards, of Leeds, is a well-known horticulturist, and deals with his subject tersely, yet fully to the point. He emphasises the necessity for watchful care in the matter of moisture whilst the infant Cyclamen are cradled in the seed pan; and dwells upon the fallacy which obtains among many as to the treatment of the plant at the third and final potting. Mr. Edwards certainly makes out a good case for the better cultivation of the Cyclamen, and we doubt not his present edition will be as widely in request as the two former issues. The book is published at 1s., and may be had from the author, Sholebroke View, Leeds.

Mr. John Weathers resigns.—We were very much surprised ten days ago on hearing that the assistant secretary of the Royal Horticultural Society had resigned his situation. He has done good work for the society during the eight years he has been its officer. Many a time we believe during the illness of his chief he had to conduct the affairs of the society unaided, and we doubt if as capable a successor can be found. The improvements in the library, the success of the Society's Journal, and the smooth and easy run of the affairs of the society generally have been largely due to his exertions. He was just the man for the post and it is a pity he is going. Incidentally, however, we hear that no successor is wanted. We shall see. Meantime we hope that Mr. Weathers will soon find some fitting and remunerative occupation for his talent and energy.

The Tobacco Plant Perennial.—For the last three centuries the Tobacco plant has been known in Europe, but during that time has been cultivated as an annual only. The seeds have been sown in heat, and the seedlings, after having attained some size, were planted in the open ground. The *Journal of the Society of Arts* says that hotanists and Tobacco planters have been mistaken. Wilhelm Daroezi, of Budapest, the editor of a Hungarian Tobacco journal, has proved that Tobacco is a perennial plant, which may be kept in full vigour for years, and that it then has fresh leaves every year. Should the leaves be of service for smoking the discovery will reduce the annual expense of raising fresh batches of seedlings annually. Two German manufacturers have kept Tobacco plants over winter, and one of them has had a plant for seven years. We ourselves have proved that *Nicotiana affinis* is a perennial. In many parts of the south of England it lives over winter in the open air, and springs up again from the roots in spring. *Tropaeolum majus*, *T. minus*, and Scarlet Runners (*Phaseolus multiflorus*) have been proved to be perennials. It is also a fact that although the Castor Oil Plant (*Ricinus communis*) is grown as an annual only in this country, it becomes a small tree in the tropics.

Royal Horticultural Society.—The next fruit and floral meeting of the Royal Horticultural Society will be held on Tuesday, October 12th, in the Drill Hall, James Street, Victoria Street, Westminster, 1 to 5 p.m. A lecture on "Some Curiosities of Orchid Breeding" will be given by Mr. C. C. Hurst at 3 p.m.

Severe Thunderstorm.—Between seven and nine o'clock on the evening of Wednesday, the 29th ult., a severe thunderstorm raged over several of the southern counties of England, including Middlesex, Surrey, and Kent. A tremendous downpour of rain and hail flooded many parts of London and other places, doing considerable damage to autumn flowers and plants in gardens.

Monster Cabbage.—In the shop of Mr. T. Oliver, merchant, Buccleuch Street, Hawick, there is at present on view a Cabbage weighing 49 lbs, which was grown by Mr. Horne, head forester to the Duke of Buccleuch, in his garden at Newmill-on-Teviot. It was weighed several times in the presence of several people, and when growing measured about 6 ft across. Mr. Horne is famed in the neighbourhood as a most enthusiastic and successful cultivator of vegetables. The above Cabbage was, of course, in the pink of condition, and not in any way hurt when cut.

Serious Illness of Mr. H. J. Jones.—We were grieved to hear on Thursday of last week that our good friend, Mr. Jones, of Ryecroft fame, had, upon his return from a Continental tour, been seized with a serious affection of the throat, and was very seriously ill. Enquiries and expressions of sympathy were numerous, particularly from many of his friends who missed him from the Palace Show last week. In response to a telegraphic enquiry made just prior to going to press we have before us a telegram stating that the patient is past danger and steadily improving. We are fully sure that our readers will join us in wishing Mr. Jones a speedy convalescence, and a rapid recovery of his usual good health.

Corbridge and District Gardeners' Mutual Improvement Society.—A meeting of this society was held in the Town Hall on Tuesday evening, Mr. Irving, Dipton Gardens, presiding. The minutes of the preceding meeting having been read and approved, the chairman called upon Mr. Cameron, Byethorne Gardens, to deliver his address, the subject being "The extension or restriction systems of Vine culture." The writer dealt very exhaustively with both systems. A good discussion followed the reading of the paper, the chairman remarking that the meeting was the most interesting and successful held by the society, an opinion endorsed by the older members present, and due to the excellent paper by Mr. Cameron. A hearty vote of thanks was accorded to him, and also to the chairman for presiding, which brought a successful meeting to a close.

Victoria Jubilee Championship.—We note from the prize schedule of the Ulster Horticultural Society that seven prizes amounting to £100 are offered for competition in one class on the occasion of their grand show of Chrysanthemums to be held in St. George's Covered Market, Belfast, on Tuesday and Wednesday, 16th and 17th November, 1897. This class is termed the Victoria Jubilee Championship of £100 and three medals, which are presented by the Lady Mayoress of Belfast and the ladies of Ulster, for forty-eight Japanese Chrysanthemum blooms, at least thirty-six varieties, not more than two of any variety, all of which must be in commerce. A Gold Medal goes with the first prize of £40; a Silver Medal and £25 goes with the second; a Bronze Medal and £15 with the third; and £10, £5, £3, and £2 make up the remainder of the seven prizes respectively. The size of the stands and the classification of the flowers are to be governed by the regulations of the National Chrysanthemum Society. Altogether prizes are offered in 139 classes, so that the show promises to be a fine one. Entries are free, and must be made to the secretary, Mr. J. MacBride, on or before Tuesday, 9th November, on the Society's forms. All particulars may be obtained from Mr. J. MacBride, 2, Victoria Square, Belfast.

Nearly £300 daily passes across the counters of fashionable West-End florists.

Hawick Working Men's Horticultural Society.—The treasurer of this society, Mr. Geo. Davidson, is to be made the recipient of a handsome timepiece to-night (October 9th) at the hands of his fellow members.

Ealing Gardeners' Society.—The ninth annual general meeting of this society was held on the 31st ult., in the Municipal Buildings, Ealing. Mr. Chas. Jones, C.E., presided over a large attendance of members, the report and balance sheet being of a very satisfactory character. While the report stated that "the society was in a healthy and progressive condition," the balance sheet showed a result of £6 18s. 6d. on the year's work. The chairman said the report was in every way an admirable one, and proved that the society was very successful and useful. He recommended the younger members, especially, to enter into the spirit of research, which the writing of essays and papers necessarily involved. The following officers were then elected:—President, J. Harris, Esq., F.R.H.S.; vice-presidents, Messrs. R. Callard, R. Dawes, H. C. Green, J. Hughes, H. W. Peal, Chas. Jones, Mrs. Slade, S. A. Sewell, Rev. Dr. Oliver, W. Owen, and W. W. Richardson; committee:—Mr. C. B. Green (chairman), Mr. H. Burgess (vice-chairman), and Messrs. J. Baird, D. Cooper, H. J. Cox, C. Edwards, R. Green, C. F. Harding, A. Hawkins, H. Stiles, and W. J. Simpson; W. W. Richardson, Esq. (hon. treasurer), and Mr. W. Roberts (hon. secretary).

Royal Horticultural Society at the Crystal Palace.—Sir Trevor Lawrence presided at the gardeners' luncheon which took place, as usual, in the Garden Hall on the opening day of the fruit show. After the toast of "The Queen" had been honoured at the invitation of the president the toast of the "Crystal Palace Company" was given. Mr. Rait, the chairman of the company responded. He alluded, in the course of his remarks, to the rumour that had been circulated that the Palace was to be sold to a syndicate. This he said was untrue, for beyond an attempt to induce the London County Council to buy it nothing had been done, and the company's flag still flew from Sydenham Hill. He thought, however, that the Palace should be a national institution. The jubilee year had been a very trying one to them but the directors did not intend to shirk what they believed to be their duty. In conclusion he was pleased in the name of his brother directors to welcome the Royal Horticultural Society to the Crystal Palace, and should be pleased to welcome them on future occasions. The last toast, which was also proposed from the chair, was that of the judges, coupled with the name of Mr. Owen Thomas, the Queens' gardener at Frogmore. Mr. Owen Thomas responded.

Dutch Horticultural and Botanical Society.—At a meeting of this society on the 11th ult., the Floral Committee awarded First-class Certificates to Messrs. Corn. Ottolander & Son, of Apeldoorn, for *Abies concolor fastigiata*, *Aucuba japonica longifolia dentata*, and *Pseudotsuga Douglasii pendula*; to Mr. C. G. van Tubergen, Junr., of Haarlem, for *Cactus Dahlia Harry Stredwick*, and *Cactus Dahlia Ensigne*; to Mr. K. Wezelenburg, of Hazerswoude, for *Daphne Laureola foliis atropurpureis*, and *Physalis Francheti*; to Mr. A. T. Hendriksen, of Zeist for *Pennisetum macrurum*; and to Mr. D. Keuchenius of Hoogeveen for *Rosa Gloire de Deventer*. Certificates of Merit were accorded on the same occasion to Mr. Jac. P. R. Galesloot, of Amsterdam, for *Callistephus sinensis aureus*; to Mr. C. H. B. Alsche, of Velp, for *Medeola asparagoides* var.; to Mr. G. T. Hemerik, of Leiden, for *Cactus Dahlia Beatrice*, and *Dahlia Mahala Sheriff*; to Mr. C. G. van Tubergen, Junr., of Haarlem, for *Cactus Dahlia Beatrice*, and *Cactus Dahlia Miss Webster*; to Mr. W. van Veen, of Leiden, for *Cactus Dahlia Beatrice*; and to Messrs. J. W. Wigman & Son, of Zutphen, for the *Cactus Dahlias, Miss Webster, Crimson King, Green's Gem, Jessie, Mrs. Allhusen and Princess Ena*. The Vegetable Committee awarded Certificates of Merit to Messrs. Sluis Brothers, of Enkhuizen, for *Bean, Hollandsche Witte Reuzen*; and to Mr. A. Wulfsche, of Zwijndrecht, for a collection of *Tomatos* in fourteen varieties.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, has been awarded a Gold Medal at the Hamburg Exhibition on the 17th September last, for a splendid collection of tuberous Begonias and Dahlias.

West Wickham Nurseries.—Mr. John R. Box, of Croydon, continues to develop and organise his new nurseries at West Wickham, about four miles from Croydon. In the open ground he plants about 250,000 tuberous Begonias, which remain in the open from May to October, and continue in bloom from August till well into October. Several greenhouses are monopolised by the cream of the collection in pots, including many fine named varieties. The Begonias occupy about two acres, and since the rain came and long, dewy nights prevailed, the Begonias have made wonderful growth, and kept up a fine display. He grows a large collection of Roses, which have also been more or less floriferous during the autumn months. Herbaceous and alpine plants occupy several acres of the nursery. Ornamental and forest trees, Conifers, evergreen and deciduous flowering shrubs and fruit trees also make up a large and varied assortment. The nurseries are reached from Charing Cross to West Wickham station, breaking the journey or changing trains at Elmer's End, which is the terminus of the branch line at the end towards London.

The King of Siam at the Crystal Palace.—It was arranged that the King of Siam was to dine at the Crystal Palace at 7.30 p.m. on Friday, October 1st, but the time was altered to 7 p.m. to meet his Majesty's convenience. The table was laid by Messrs. Bertram & Co., of the Palace, and we had the pleasure of inspecting the table just before the arrival of the King. On the table were some magnificent Pineapples from the Royal Gardens, Windsor. Other fruits were Grapes, Durondeau Pears, Bananas, &c. Some large vases along the centre of the table were filled with flowers in season, including Chrysanthemums and *Pancreatum fragrans*, the latter diffusing a strong fragrance through the room. The table and all parts of the room were covered with red cloth. The room itself was situated immediately behind the Royal boxes, facing the grand organ in the central transept. At ten minutes past 7 the King and his party, including the Crown Prince of Siam, and some of his Majesty's eldest sons and nephews, made their appearance and were ushered into the dining-room. This must have been his last dinner before leaving this country; for he left the Siamese Legation in four of the Queen's landaus on Saturday morning at 10.45, travelling by Victoria and Dover on his way to Brussels. He will reach Paris on the 9th, after which he will visit Spain and Portugal.

"The House" (Horace Cox; sixpence monthly), a Magazine of Domestic Art, in its October issue, covers an exceptionally wide field. Leading off with a lengthy illustrated review of "The Arts and Crafts" exhibition at Lancaster—with admirable full-page portrait of the Countess of Bective, the President of the Council—it touches upon almost every phase of applied art. Lovers of needlework are appealed to in a chapter on Ecclesiastical Embroidery; the amateur worker will find much to interest and instruct in "Hints on Decorative Wood-staining," and the production of "A Carved Jewel Casket;" for collectors there are articles on "Chinese Porcelain," "A Piece of Pepys' Silver," "Heppelwhite Furniture," and "Bookbindings;" the theatre-goer will appreciate "A Scene from 'Rosemary,'" and by those to whom James Russell Lowell has become a "fireside friend," a plate illustrating an incident in "An Interview with Miles Standish" will be highly treasured. "Trafalgar Day" is not forgotten, for in "Some Furniture Associated with Lord Nelson" appears the great Admiral's portrait; his picturesque birthplace; the "Nelson" Room at the Star Inn, Yarmouth, and his table from the "Victory." The lady of the house will find her anxieties lightened by the recipes and menus fully set forth in "The Cook's Instructions," as also by the "Scheme for Table Decoration for the Month," and even serviette folding is not forgotten. The ventilation and warming of the home are exhaustively dealt with; door and window draping for the winter is illustrated and explained; the overcoming of "Household Difficulties" is made easy; "Chess Problems" are set and solved, and the humours of amateur cabinet-making have a

page to themselves. Last, but not least, in "Illustrated Answers to Correspondents," the editor acts as guide, counsellor, and friend to all in trouble with reference to matters of furnishing, decoration, household management, and the like.

Pat's Early Potatos—Pat was up one morning digging Potatos when the Laird came up and began conversation. Laird: "What sort of Potatos are those you're digging?" Pat: "They're raw ones, sir." Laird: "But I mean are they early or late?" Pat: "Sure sir, I think they must be early, for I've been up since four o'clock this morning at them."—*David Paton, Montrose, in The People's Journal.*

Mushroom Picking a Felony.—At Wrexham, on Monday, the 27th ult., a collier named Joseph Hughes, was charged with stealing Mushrooms, the property of Mr. William Charles Hughes, Pennant, Ruabon, agent to the Mayor of Wrexham. Accused was also charged with assaulting the agent, who, in explaining his case, stated that he cultivated the Mushrooms by dressing the field with salt. The Chairman (Captain Griffith Boscawen) asserted that a decision had recently been made to the effect that the gathering of cultivated Mushrooms was stealing. The defendant was fined 10s., with 15s. 6d. costs. At the same time the son of a collier, Thos. Williams by name, was fined 9s., including costs for a similar offence.

ORCHID NOTES & GLEANINGS.

Cypripedium Charlesworthii Clarke's var. *Nov. var.*—We are in receipt of a magnificent flower of this variety from Mr. J. O. Clarke, gardener to Ludwig Mond, Esq., The Poplars, 20, Avenue Road, Regent's Park, N.W. The dorsal sepal is the feature of the flower, and for that alone we think it well merits a distinctive name. It is orbicular, measuring $2\frac{1}{2}$ in. across, either way; and is of a rich dark purple, intensified along the centre and faintly tessellated with white towards the edges. The flower had been cut more than a week when these notes were made, and was, of course, much darker when it first expanded. The petals are dark brownish-purple and netted, while the lip is a shade or two paler. The staminode is white, the conical boss in the centre being tipped with yellow. Both owner and grower may well feel proud of it. The variety is named in compliment to the grower.

A FEW GOOD CREEPERS OR WALL PLANTS.

PAYING a visit a few weeks ago to an old friend and tutor, I was particularly struck with the charming appearance of the creepers and wall plants around the house. Many people who detest the sight of bare walls and fences fail at the same time to beautify these ugly spots and blanks, not because of a lack of suitable material surely, nor because of prohibitive prices. Why it is that more creeping and wall plants are not planted I cannot imagine. Nothing adds more to the charm of a garden, however small, than this class of plants; perhaps a simple arch or screen, or even a pole adorned with a Hop plant.

Every device and form of training these creepers was to be found in this garden, and many a pretty picture presented itself. Walking around the house on the terrace, the first to catch my eye was a magnificent plant of *Chimonanthus fragrans*, which as its name implies, is a winter flowering shrub. The plant in question, neatly trained to the wall having a south-western aspect, was at least 20 ft. high and covered a good breadth. Some fine fruits I noticed at the top caused me to break the tenth commandment. The highly fragrant flowers are greatly esteemed in winter and may be gathered at any time except, perhaps, in severest weather from November to March. A good way of arranging these tiny but bright and fragrant flowers is to fill a shallow vessel with moss, green and fresh if possible, and stick the flowers in the moss upright; and an occasional damping will give a pretty and sweet dish of flowers for several days. Side by side with the foregoing native of Japan, was an equally vigorous North American subject *Teucoma radicans* apparently in perfect harmony, no political question of annexation disturbing their atmosphere; but having filled its

allotted space it threw out for our admiration, from amongst its ample and healthy foliage, long shoots here and there, terminated with bunches of large orange or scarlet-red, trumpet-shaped flowers. I was quite lost in admiration of this beautiful creeper. A peculiarity is its mode of climbing by aerial rootlets, as does the Ivy.

Berberidopsis corallina growing on the same house front, is more generally seen under glass, and considering its attraction not cultivated nearly so much as it deserves; but here for fifteen or twenty years this plant has graced the wall, suffering slightly perhaps in very severe winters, and shooting forth vigorously each spring to recover lost ground. At the time of my visit, August 14th, it was clothed with its pretty pendant, coral-coloured flowers, resembling bunches of fruit at first sight. This, a native of Cbili, is an evergreen with handsome foliage.

A fine old plant of *Clematis montana* had suffered severely, apparently from old age. I was sorry to see this veteran so enfeebled. It used to divide honours with an equally fine plant of *Jasminum officinale* in covering a large bay window, or rather three windows connected by stone pillars, and each pillar clothed with these creepers alternating.

Fortune's Yellow Rose does not flower freely, although a fair growth of wood is evident; perhaps, with age, greater floriferousness will manifest itself. This fault cannot be found with a glorious old Banksian Rose on the same wall. I have seen shoots 6 ft. to 10 ft. long, clothed with clusters of this small but lovely Rose; and charming is the sight in early summer of a wall clothed with this hitherto-seldom-seen plant. 'Tis, I believe, not everybody who succeeds in flowering Banksian Roses; but here it seldom or never fails to flower. One little secret may not be amiss regarding its culture, that is, in this instance the knife is never used to shorten growths, and not too freely to thin them out. An attempt was made to intermingle with this the Chinese Wistaria; but although the effect was a charming contrast, the rampant Wistaria overgrew the Rose, and it was found necessary to check the rapacious Chinaman, or rather direct its energy in another channel. In this direction a rather novel idea is carried out. Within a few yards of the house stands a stout Scotch Fir into the top of which a strong wire is led from the end of the wall; and along this wire growths of Wistaria are led into the tree; and very charming it looks in spring, I should think, although I have not seen it in bloom since this departure has been made.

Magnolia grandiflora is a fine subject for covering a wall; and here on a western wall was a splendid specimen in perfect health, bristling with flower buds.—A. P.

KINVER SPECIALITIES IN FLOWERS, BULBS, VEGETABLES, &c.

FLOWERS.

In a visit to the Kinver Trial Grounds of Messrs. Webb & Sons, Wordsley, Stourbridge, some time since, when flower beds gave a charming display, I made acquaintance with certain specialities which Messrs. Webb have brought to a high degree of perfection. Some of them no doubt ought to be better known, and many an amateur will probably be glad to have brief descriptions of them.

Cross-breeding and high selection combined have certainly produced marvellous results in the Kinver Trial Grounds. Wehbs' new Sunbeam Calliopsis must be regarded as a grand result of it. The flowers are very handsome, and indeed brilliant for cutting purposes, and the equally new Royal Rose *Eschscholtzia* must be esteemed a great novelty, its bright rose-coloured flowers being very attractive. I found another decided novelty in Wehbs' new May Queen Stock, an exceedingly handsome variety of the intermediate race, and indeed a very early one. Wehbs' new Empress Larkspur has proved to be one of their most striking novelties. The plants branch out freely, and afford a pleasing effect with their spikes of chaste, rose-coloured bloom. There is also a new *Lobelia* called Magpie, because of its chaste, pretty blue and white blossoms, which have a charming effect when utilised for the edgings of beds. China Asters, Sweet Peas, Hollyhocks, and Poppies all have their special varieties at Kinver, and there is a new attractive *Convolvulus* which is well appreciated. Wehbs' Snowflake Candytuft, with its prolific spikes

of beautiful bloom, naturally excites attention. But there is a still newer pink-pearl variety of remarkably chaste, delicate hue. The new *Diadem Aquilegia* seems of a very choice strain, its colours being varied no less than lovely.

The Starlight *Dianthus* is also a charming novelty, having dense bushes covered with bright bloom. There are, however, extremely variegated flowers of almost every shade on the equally profuse spikes of the dense hushes of Wehbs' new Supreme *Antirrhinum*, one of the most *recherché* of the Kinver new novelties. And to be classified therewith, as equally grand successes, must be placed Wehbs' new *Cyclamen Vesuvius* and Wehbs' Mont Blanc *Cyclamen*. Apparently, Wehbs' exhibition *Zinnia* surpasses most of its order, with which the Kinver expert has yet become acquainted for brilliant double flowers of different colours. Moreover, it appears that Wehbs' new annual *Chrysanthemum* for handsome, showy flowers actually surpasses those older, highly-esteemed Kinver specialities, Golden Cloud and White Pearl.

BULBS.

As is perfectly well known, Messrs. Webb pay equal attention to bulbs and issue a special bulb catalogue, that for the present year containing many rare novelties in Tulips, Hyacinths, Lilliums, Amaryllis, Ranunculus, *Gladiolus*, *Begonia*s, and *Crocuses*. Nor are the *Tuberoses*, *Anemones*, *Snowdrops*, and *Ixias* less in repute.

VEGETABLES.

That gardeners have long been indebted to the great Wordsley firm for many of the rarest products raised for culinary purposes, is well-known. In fact, it is difficult to draw the line as to where the creative power of Messrs. Webb in supplying improved varieties of kitchen garden vegetables has not operated. They appear to have neglected no branch of horticulture, and the highly skilled gardeners of our nobility and country gentry are loud in their praises of some of the highly perfected rare things which have recently come from the Kinver Trial Grounds. The newest Potato appears to be a very valuable one, called Motor, so new, in fact, that it did not appear in their Spring Catalogue for 1897; but I understand that one grower has realised 13 tons per acre of its tubers, which are kidney-shaped, and would serve as a valuable second early variety. Among the other valuable kidney Potatoes which have been brought to a high state of perfection in the Kinver grounds are Wehbs' Express, Record, Surprise, Early Ashleaf, Stourbridge Glory, Discovery, Wordsley Pride, Kinver Hill, and Progress. Some of these are, no doubt, known, for they have elicited golden opinions from gardeners, and certainly the smooth-skinned highly-productive round kinds called Wehbs' Renown, Industry, and Goldfinder have done this. But their new round Potato for 1897 was styled Wehbs' Yeoman, the flesh of which was found to be beautifully white and of superb quality. All those named are heavy croppers likewise.

The Potatoes bearing Wehbs' name are very numerous and so are the Peas. It appears that there are no fewer than 160 different sorts of culinary Peas in the Kinver grounds, one of the latest of the highly perfected kinds being called Senator, which is a cross between Prince of Wales and Culverwell's Giant Marrow. The pods are produced mostly in pairs, and are roped very thickly on the Vines. They are also of good size, containing on an average nine large Peas each, and being of excellent flavour Senator is deemed a very great success. Amongst the earliest which have become famous are Wordsley Wonder, Kinver Gem, and Perfection, the second early comprising Kinver Marrow, Stourbridge Marrow, and Promotion, and we only mention those which have become most famous. The main crop specialities are well-nigh too numerous to mention, but we believe the most renowned besides Senator are Astronomer, Chancellor, Electric Light, Enterprise, Talisman, and Royal Standard; the latter a cross between Ne Plus Ultra and Telephone, is a blue wrinkled Marrow, not only very prolific in pods, but the latter are broad, large, and very handsome, and have consequently proved a great acquisition for exhibition purposes.

Carrots, so far from having been neglected at Kinver, comprise four new varieties for garden purposes, which bear the name of Webb, who have also brought into the market as many as five new field kinds. The former are Wehbs' Selected Scarlet

Shortborn, which comes very early, and being of beautiful shape and colour has been successful in many open competitions. The same may be said of Wehbs' Selected Altrincham, which is a general favourite for winter use. Wehbs' Market Favourite is of exceedingly rapid growth; but a sort which is now exciting very general attention is Wehbs' Giant Intermediate, said to be specially adapted for shallow soils, but it is of beautiful shape and rich colour and its flesh remarkably sweet and tender. Messrs. Webb have done so much in perfecting the Turnip for the farmer's use that no one will be surprised at their having brought to high perfection some very choice garden kinds. Wehbs' Prizetaker Turnip is not only of splendid quality, with sweet white flesh of nice flavour, but its elegant shape causes it to be valuable for exhibition purposes. Wehbs' Early Six Weeks Turnip is also exceedingly handsome and very rapid growing. Wehbs' Early Purple Top has also won golden opinions, while Wehbs' Climax has deep yellow flesh, and being suitable for either winter or summer cultivation is also highly approved.

Among the newest and best kinds of French Beans must be numbered Wehbs' New Dwarf Hundredfold, which is remarkably prolific, and the pods have been found to be of the finest flavour. Wehbs' Victoria Dwarf is a great favourite with many gardeners, the pods being very lengthy and symmetrical. There is also Wehbs' Negro Long Pod which is a great cropper, valuable for the main crop. Runner Beans have three special kinds. Wehbs' Selected Scarlet Runner has long been very famous, but even this is considered to be surpassed by Wehbs' Eclipse. There is also Wehbs' Giant White Runner, the pods of which are of great length, and all possess excellent cooking properties. Specialities have also been brought out in Wehbs' Golden King and Golden Queen Wax Pod. Wehbs' Kinver Mammoth Longpod Bean, from having won so many prizes at shows, is tolerably well-known, and it has become exceedingly popular. Wehbs' Selected Longpod is also a favourite of many gardeners. Wehbs' Improved Windsor is also beginning to be highly appreciated on account of its great size, and the great length of time it lasts, ready for use.

In Broccoli, Cauliflowers, Cabbages proper, and Savoys, Brussels Sprouts, and Kale, Kinver has done its best to bring every kind to the greatest perfection. Wehbs' Snowdrift, Perfection, and May Queen Broccoli all have their favourites among gardeners. Their Early Mammoth Cauliflower is simply magnificent, while Kinver Monarch for early crops has its advocates. Several kinds of Cabbage have been created and perfected for garden and field, but for general purposes there is scarcely a better one than Wehbs' Emperor, which has attained to such high reputation that orders for its seed doubled themselves last season. Gardeners declare that Wehbs' Little Wonder Savoy deserves its name, and Kinver Globe for early use is well approved. In Cabbage Lettuces—Summerhill, Hardy Green, Magnet, and Model, are all favourites of gardeners, yet scarcely more so than the new exhibition, Wordsley Gem, Monstrous White, and Winter White, of the Cos kind. Kinver Onions for several years past, have been equally renowned, gardeners having been loud in their praise of Wehbs' Improved Banbury, Masterpiece, New Reliance, Monster White, and several others. The Giant Curled, and Exquisite Garnishing Parsleys deserve mention, as well as the Colossal Leek, and specialities in Endive and Spinach. Nor must the Kinver Tomatoes and Vegetable Marrows be overlooked, Wehbs' Sensation and Viceroy among the former, and Wehbs' Large White of the latter, having been brought to high perfection.

The Radishes to be found in the Kinver Gardens are beautifully modelled, their smooth, thin skins and single tap-roots denoting high quality. The Purple and Crimson Globes and the new variety Favourite are alike valuable. The Kinver-created Cucumbers ought not to be overlooked, the most popular frame kinds being Wehbs' Bountiful, which yields handsome, straight, smooth fruit, 24 in. long. Wehbs' Perpetual Bearer, which well deserves its name, has won numerous prizes; Wehbs' Improved Telegraph, for some years a great favourite; and Stourbridge Gem, a cross between Telegraph and Prince of Wales, which has a remarkably clear, symmetrical shape. There is also Wehbs' Prolific

Ridge Cucumber, the good-yielding properties of which are well appreciated by market gardeners. Success in perfecting Celeries has been great, there being six choice varieties bearing the name of Webb, of which the Giant White and Pink Perfection are newest; but the Mammoth Red and Webbs' Pearl White are still prime favourites.

Messrs. Webbs' Melons have been magnificently perfected. Their International, a cross between President and Hero of Lockinge, yields remarkably fine, handsome fruits, some Melons having weighed 6 lbs. or 7 lbs. each. President, Pride of Stourbridge, Queen Victoria, and Royal Warrant are also beautiful specialities; in fact, there is no garden plant which can be mentioned that has not been taken in hand by the expert at Kinver with the endeavour to create better kinds by cross-breeding and high selection. Nor do Messrs. Webbs' services to horticulturists end here, as they supply them with excellent chemical manures in packets of from 2 lbs to 10 lbs., if so little is required, or in bags containing qrs., cwt., or more. Farmers, of course, have it several tons at a time, for Messrs. Webb do an extensive trade in artificial manures, their chemical works at Saltney, Cheshire, covering five acres of ground.

As to the gigantic tradings of the great Wordsley firm, their Kinver farms, in the south of Staffordshire, are 1½ miles in length, covering about 2,000 acres. These farms are devoted to raising stock seeds, which are sent to occupiers of some 18,000 acres in England and the best districts of the Continent, this being the large quantity of land required to annually supply seeds to Messrs. Webbs' customers. Their increase of business is such that a new warehouse has had to be erected during the past year, and the Wordsley Warehouses are now said to have nearly four acres of floor space. Marvellous as this seems, their gigantic tradings are demonstrated in a still fuller degree by certain counting house statistics the firm has supplied. They claim that it costs them £8,000 a year in postages, and £19,000 in carriage to railways; that the tasteful covers of their various seed catalogues require two tons of paper; the issues of their Farm Catalogue running to nearly 100,000 yearly; their corn catalogue to about 50,000; that they buy half a million of envelopes for a six-month's supply and that it takes 650 books to keep their accounts, the entries in which will be found to run from 70,000 to 80,000. But it must be remembered that they are large artificial manure manufacturers and dealers in Hops and wool as well as being seedsmen.

They are about to bring out an entirely new Wheat in the coming season which will be offered for the first time. The great success of their Stand-up White Wheat, which the most furious storms failed to dislodge when almost every other kind went down, induced them to endeavour to create a red Wheat which should be its counterpart. They believe that they have succeeded beyond their most sanguine expectations. They name it the Standard.—*J. D.*

TRIALS AT CHISWICK.

EARLY CHRYSANTHEMUMS.

The Floral Committee of the Royal Horticultural Society met at Chiswick on Monday, the 4th inst., for the purpose of finally reviewing the early Chrysanthemums on trial in the open border, and which were not in bloom on the occasion of the previous meeting on the 17th ult. The varieties in full bloom on the 4th inst. may be regarded as late September and October flowering Chrysanthemums, earlier or later according to the nature of the season. The collection has really grown and flowered splendidly, but the plantation loses considerably in effect owing to the dwarf and tall varieties being mixed together for the sake of comparison. Three XXX were awarded to each of the following:—

EADIE WRIGHT.—This is a Japanese variety growing about 2½ ft. high, and producing a profusion of rosy-purple flowers. Messrs. Dobbie & Co., Rothesay; and Mr. H. J. Jones, Ryecroft Nursery, Lewisham.

LA VIERGE.—Plant about 18 in. high, bushy, and producing a profusion of white flowers, slightly tinted with blush in the open air. The blooms are rather late, few being open at this date. It is a Japanese sort. Messrs. Dobbie & Co.

ALICE BUTCHER.—This pompon grows about 2½ ft.

high, and produces bronzy glowing crimson flowers that are very effective at a distance for bedding purposes. Messrs. Dobbie & Co.; and Messrs. Barr and Sons, Long Ditton, Surrey.

ORANGE CHILD.—Plant 2 ft. high and freely-producing golden-yellow flowers, tinted with buff, and belonging to the Japanese type. The blooms are very useful for cutting. Messrs. Dobbie & Co.

MADAME EDOUARD LEFORT.—Plant 18 ins. to 20 ins. high, and producing a profusion of bronzy-gold flowers, with closely imbricated florets. It is a pompon. Messrs. Barr & Sons; and Mr. W. H. Divers, Belvoir Castle Gardens.

LADY FITZWIGRAM.—Flowers pure white, freely produced, large, and belonging to the Japanese type. Plant bushy, 20 ins. high. Messrs. H. Cannell & Sons, Swanley, Kent; and Mr. W. H. Divers.

IVY STARK.—This is similar to Source d'Or in many respects, but the flowers are darker when they open, ultimately fading to a paler hue, and flowering earlier than that well-known Japanese favourite. Mr. H. J. Jones.

BRONZE PRINCE.—Plant 2½ ft. high, and producing in profusion large bronzy-salmon flowers of the Japanese type. Mr. H. J. Jones.

MILLE GUINDEAU.—A Japanese variety, 2 ft. high, and bearing a profusion of large pink flowers, fading slightly, but rather late in expanding. Mr. H. J. Jones.

FIBERTA.—A golden-yellow pompon, about 2 ft. high, flowering profusely and very showy. Mr. W. H. Divers; and Messrs. Barr & Sons.

MARTINMAS.—A very pretty and attractive pompon, about 2½ ft. high, and bearing a profusion of soft, lilac-pink flowers. Messrs. Barr & Sons.

HARVEST HOME.—Flowers large, loosely built, crimson, tipped with yellow, and having a yellow reverse to the florets. Plant about 18 in. to 2 ft. high, and belonging to the Japanese type. Messrs. Barr & Sons.

PLANCHE COLOMB.—A Japanese type, bearing a profusion of medium-sized, creamy, compactly built flowers of a pleasing appearance. Plant about 18 in. to 20 in. in height. Messrs. Barr & Sons.

ZONAL PELARGONIUMS.

A houseful of pot plants was examined, and XXX were awarded to the three undermentioned varieties.

REV. H. H. D'OMBRAIN.—The plant is of dwarf compact habit, and bears huge trusses and large, well-formed flowers of a rich salmon fading towards the edges. The leaves are marked with a dark zone.

JULES LEMAITRE.—Flowers huge, well formed, glowing crimson-scarlet. The leaves are large and faintly zoned. M. Lemoine, Nancy, France.

ADOLPHE BRISSON.—Flowers large, of a rich carmine-pink, with a white blotch at the base of the two upper petals, and certainly amongst the best of this particular type. The plant is of sturdy, dwarf habit. M. Lemoine.

VEGETABLE CALENDAR.

THE present is a good season to commence a regular system of dealing with the refuse matter out of the kitchen garden and turn it to profitable account. Fire is the best agent to reduce it to a useful state, and a pit 6 ft. deep, 10 ft. wide, and 12 ft. long may be dug out at the present time. In the bottom of this pit a good body of fire should be made of old wood, and, on this, all matter capable of being reduced to ashes should be wheeled. It will be found that a fire formed in this way burns more sharply than when formed on the surface of the ground. This fire should be kept constantly going through the autumn and early winter months, when the pit should be cleared out and the contents may be applied to many uses in the kitchen garden. The rakings of weeds and earth combined should be placed in a separate heap to allow the weeds to decay; this may then be turned, and if a portion of the burnt ashes out of the pit and some lime be added a good useful compost will be secured.

CAULIFLOWERS.—The young plants for spring crops will now need attention in pricking them into positions where they can receive protection during the winter. The method of potting a portion of the plants into 60-size pots is a good one to secure an early lot that can be handled and planted without receiving any check. In all cases it is advisable to keep the plants exposed to all but severe weather

during the next three months and as near the glass as possible.

BROCCOLI.—This crop is in a very soft state since the late rains, and a check now would do the plants good. Where time can be given to the work these should be lifted and laid in with their heads facing north, at the same time burying the stems and packing the soil about the base of the heart of the plants for protection.

TOMATOS.—The mildness of the weather has helped this crop to swell up a fine lot of fruit, and as much of this is still green, the earliest may be gathered and placed in a dry house to ripen. After gathering the most forward fruits, the plants may be carefully lifted, securing all the roots possible, and should be planted against the back walls of any warm houses. A good watering at the time of planting, and a little shade during sunshine will help the plants to make new roots quickly and much useful fruit will be secured for another two months from plants treated in this way.—*J. R.*

The Orchid Grower's Calendar.

WORK IN THE HOUSES.—The Phalaenopsis pushing up their spikes will require every attention to save them from the slugs and other pests, if they are still standing on inverted pots on the stage. A good plan would be to suspend them from the roof, using long hangers so that the baskets in which they are growing are only just clear of the stages. This will prevent them drying up too quickly, and at the same time obviate the damage likely to accrue by their being up too near the roof glass, where the temperature fluctuates most.

DENDROBIUM PHALAENOPSIS SCHRODERIANUM.—This is a most valuable Orchid indeed. Its flowering season extends over such a lengthened period that we could hardly do without it. Grown in this, the warmest division, the plants make splendid growths. Small shallow pans seem to be about the best thing in which to establish them, using plenty of small crocks amongst the peat and Moss in which they are potted. They like a fair amount of shade when growing, but from now onward they must receive as much light as possible by being put where the shading, if any, is of the thinnest description. The moisture too about them should be gradually reduced. This will induce those that are large enough, to flower, and the small ones to take a rest. A crop of flowers may sometimes be had from the old stems, but if the future of the plant is to be considered it is not desirable that they should be allowed to carry them all.

SEEDLING ORCHIDS.—We are all of us trying to outstep each other in hybridising this most interesting family, by working in different directions, some working on Cypripediums alone, others making the gorgeous Cattleyas their study, whilst the Dendrobiums have most charms with those that make them a speciality. In any case it is most interesting, and if we have to wait years to see the result of our own labours, we have the satisfaction in knowing that the hybridists have given us some of the most magnificent Orchids it is possible to behold. But what I want to point out is the treatment of these diminutive little chaps. It is easy enough to get a fine fat seed pod but not so easy to find the place that facilitates germination. Prepared pots we have tried with anything but satisfactory results. The best place we have found for raising Cattleyas, &c., has been baskets with fresh compost and a healthy plant growing therein. We have a nice batch all potted off singly in large thumbs and small sixty-size pots, which we are going over; and now, at this season, the new growths are making up; and as they are for the most part putting out some nice fat roots from the base, we take this opportunity of affording them some fresh material, and where required, a larger pot. Some people, no doubt, would hesitate to disturb them at this time of the year, but we have found that, with established plants so with seedlings, the best time is when new roots are active, as above stated. After the shift they will require very little water. Just keep the moss alive and the small plants from shrivelling. This will induce a slight rest to be followed by renewed vigour in the spring. We have a nice batch of Odontoglossum seedlings which are being treated in the same way.—*C.*

HINTS FOR AMATEURS.

Bedding Pelargoniums.—We may, perhaps, be pardoned for referring to these again so soon, but the present is such a "ticklish" time with them that a few words of advice respecting their treatment will not be likely to come amiss.

Cuttings.—These first of all claim attention as being the bulk of the stock for next year's supply. Up till now cuttings that have been inserted in pots and baskets have been rejoicing out of doors, but that period has now passed, and they must be at once removed to a place of safety. Usually the soil in both pots and boxes is wet enough to preclude the necessity of watering for a protracted period after housing. From the present time up to the turn of Christmas the greatest care must be observed in watering. Probably one good watering will be sufficient to last the plants if they are in boxes, and we have not infrequently kept them without water at all through the period mentioned, the moisture in the soil proving sufficient for them.

Bearing in mind how great an enemy damp is, and how many scores of plants are carried off by its agency each autumn the structure in which the plants are to winter must be supplied with sufficient piping to keep the atmosphere fairly dry. A high temperature is not required, for if the thermometer stands at about 45° Fahr. it will be alright. Plenty of light is an essential to success, and those amateurs who have their greenhouses fitted with shelves will find the latter very handy at this juncture, for the pots may be stood quite close to each other, and thus a lot may be packed away in a little space. In the greenhouse should be placed the tenderer varieties such as Crystal Palace Gem, Robert Fish, Creed's Seedling, Mrs. Pollock, and Mrs. Henry Cox. Flower of Spring, although a variegated variety, is fairly strong in constitution, and will pass through the winter better in a low temperature than the other varieties mentioned.

The general bulk of the plants, if there is no room for them in the greenhouse, may be consigned to a frame which can be heated a little when severe frost endangers the safety of the inmates. Here they are brought up close to the glass, and enjoy the maximum of light during the dull months. Heated pits such as those employed for Melons and Cucumbers are capital structures in which to winter bedding plants, but their great depth when cleared out would take the plants too far from the light, and drawn and weakly specimens would result. It will be necessary, therefore, in such a case to erect a temporary staging of boards in order to bring the plants up close to the glass.

Cuttings Rooted Out-of-doors.—We have previously spoken of this method of rooting zonal Pelargonium cuttings as being a very favourite one with not a few people. If the cuttings were inserted about the end of August they will now have formed a fair quantity of roots, and will thus lift well. Even if they have not rooted, however, they will have to come up, as they cannot safely be allowed to remain outside any longer. On looking at some of the cuttings that have not rooted, it will be found that the bases of the stems have hardened (callused) over. No fears need be entertained of such cuttings doing well.

Six cuttings will go well into a 48-sized pot, five being placed round the sides and one in the middle. The soil is not a matter of much consequence. We have always gone to the old soil heap for this purpose. Old soil that has grown Chrysanthemums, Fuchsias, or other greenhouse plants contains quite enough goodness. All that is required is to run it through a sieve to clear it of corks and other rubbish. Pot moderately firmly, but do not ram the soil, pressure with the fingers and a few smart taps upon the bench being quite sufficient to impart the requisite firmness. Water will not be required for some time after potting if the soil is fairly moist. It is a mistake often committed by amateurs, viz., to deluge such newly-potted plants with water.

Violets.—Of all the plants which are cultivated under glass during the winter none give a better return for the space they occupy or the labour expended upon them than the double Violets. As easy of cultivation as anything that can be mentioned, many amateurs with very limited conveniences

grow Violets both in pots and frames year by year with conspicuous success, and there is no reason why the number should not be materially augmented.

The present is a capital time to see about making up the beds for the winter. At the conclusion of their flowering season the old plants were split up and the divisions planted out in an open border. From these little pieces, fine, sturdy plants, with great width of crown and vigorous foliage, and with a correspondingly vigorous root action, have sprung. Assiduous attention has been given to the cutting back of runners as fast as they made their appearance, and the plants are already giving earnest of what they are capable of doing in the coming six months by producing a few flowers now. Beneath the clustering leaves, if we take a peep, we shall find scores of fat buds only waiting for a little stimulus in the shape of bright weather to develop into flowers.

The plants themselves are hardy enough, but a spell of cold weather naturally puts a stop to the expansion of the flowers, and the continuity of blooming is thus interrupted. Again, showers of rain in mild weather wash all the perfume out of the blooms, and sully their bright daintiness with mud. Under glass both these difficulties are obviated.

First as to the beds—good brick pits 4 ft. or 5 ft. in depth are the best structures in which to make them up. Fallen leaves may be packed into the lower part, trodden down tightly, and brought up to within about 18 in. of the glass. Upon this 1 ft. of soil may be placed. The latter should consist in bulk of good, mellow loam, with which may be mixed a third or fourth part of leaf soil, or short, well-rotted stable manure. When first consigned to their new quarters the leaves are thus close to, and in some cases touching, the glass, but this is of little moment, for as the mass of leaves below decays so will it sink, and before the winter is half over an appreciable lowering is the result. The amount of space given the plants must depend on their size, but in no case should they be too crowded. In lifting the plants from their nursery beds some little care will be needed to preserve good balls of earth. If lifted thus and planted straight away but little check will be observed. A watering in may be given if desired after planting is finished, and this watering will last the plants for a long time. Keep the frame close for a week after planting, as this will give the plants a start.

Violets in Pots.—This system of culture recommends itself to those who want plants for the decoration of conservatory or dwelling rooms, and in careful hands may be made to yield excellent results. For an ordinary sized plant a 6-in. pot will be large enough, although the finer specimens will require a 7-in. size. Make the soil a little richer than that given to the plants in the frame, for they require it, seeing that their root run is more circumscribed. Do not keep the plants in too warm a house or colourless, nearly scentless, flowers scarce worth looking at will ensue. The cool greenhouse is amply warm enough, and if the atmosphere is not too laden with moisture will answer admirably. Wherever they may be placed, however, take care that they are given the maximum of light, and after they are once established in their pots given plenty of air in the same way as to their relatives in the frames.

Varieties.—Here the difficulty of having numbers of varieties from which to pick and choose does not present itself, for there are not many varieties. Without question the best blue one is Marie Louise, but the Neapolitan is good, and as it is a few weeks later in flowering than the former variety may well find a corner in the frame, or a light or frame to itself according to the size of the establishment. The best white is Swanley White, often met with under the name of Comte de Brazza, a very free blooming form with large pure white flowers. Queen, a white variety striped with violet-rose is somewhat of a novelty and may be grown for the sake of the variety obtained.

Ericas.—Not another day should be lost in getting these under cover. The sojourn out of doors is a capital thing to improve the colour of the flowers but it must not be carried too far. Give the pots a nice washing, clean any moss that may be present from the surface of the soil, and transfer the pots to a light corner of the greenhouse where they will be shielded from draughts which are such fruitful causes of mildew. This does not mean that the house is to be

kept closed, for abundance of air may still be given by the top ventilators during the day.—*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Seakale.—Would you tell me what to do with Seakale, as it is the first time I have grown any? Whether it stands the winter without covering? And what covering I should give it in case of its requiring any?—*H. B.*

The Seakale itself is hardy enough, and may be left without covering through the winter if it is not required for forcing. But we assume you intend to force, and therefore it will have to be covered at some time. After the leaves have died down you may go over the crowns and cover them with a little stable litter or a few leaves. This will serve them until it is time to put the pots on, the time at which this is done being, of course, decided by your requirements. The pots once on, fallen leaves of this year's growth should be heaped round, and over them to a depth of about 10 in. or a foot. This means that the bed of leaves will be a little over 3 ft. in height. These remarks apply to forcing the plants as they stand, which you will observe means a good deal of trouble. Your better way would be to lift the roots, cut off the small side roots and lay them aside for cuttings, and pot the thick main roots in leaf mould or other light soil. Place these pots in a Mushroom house or dark cellar, and with a temperature of from 55° to 60° Fabr. you will have Kale fit to cut within six or seven weeks of the time of lifting the crowns.

Stokesia cyanea.—*Saxenby*: This plant, which is commonly known as Stokes' Aster, was named in honour of Jonathan Stokes M.D., who assisted Withering in his arrangement of British plants. It is a native of North America. The plant flowers well enough in the open border but it forms a charming subject for the cool conservatory if lifted and potted up carefully. By dint of a little careful management it may be had in bloom quite late in the autumn, and the large bright blue flowers are then doubly welcome by reason of the scarcity of blue at that period of the year.

Strawberries.—*Forcing*: You may certainly force Strawberries in an early vinery, along with the Vines, but this is a course that we should not advise. You will find by experience that Strawberries are capital things for breeding red spider, and if the latter gets on your Vines you will be likely to regret that you attempted to kill the two birds with one stone.

Freesias.—A space of about six weeks has now elapsed from the time of potting the bulbs, and it is high time, therefore, that the plants should be taken out of the plunging bed. Uncover them carefully, for the young leaves are very tender and easily damaged. A place in a cold frame, on an ash bottom, will be a good place, for here the plants may gradually be inured to the light. Afterwards they may be given a place on a shelf in the greenhouse.

Tomatos.—*Alex. Lambourne*: The Tomatos will not ripen now, as we may expect frost at any time, and that means death to the plants. Leave the fruit on for as long as possible, and when the frost comes cut off all the largest and take them indoors. They will ripen off gradually if hung up in a warm dry room.

Winter Flowering Carnations.—*C.L.O.*: You will find the flowering varieties some of the very best for winter flowering, and you should try and grow as many of them as possible:—Mrs. Leopold de Rothschild, Uriah Pike, Winter Cheer, La Neige, Canary Bird, Miss Mary Godfrey, Zenobia, Mrs. H. Cannell, and Reginald Godfrey. If you want another crimson you cannot do better than choose William Robinson.

Cyclamen persicum.—*Rowan*: The attempt to grow Cyclamen in a dry, parching atmosphere is almost sure to result in failure. You will find your plants will do all right if they are stood on a bottom of ashes, shingle, breeze, or other material that will hold moisture well. We think the middle of October will be quite late enough for you to leave the

plants in the frames. They should be shifted into safer quarters before then. You will find a night temperature of about 50° Fahr. suit them well.

Nerines.—*Amateur*: After flowering, the Scarborough Lilies should be kept growing on vigorously. Give a dose of Guano about twice a week. Repotting will not be necessary. Keep the plants well supplied with water until the leaves show signs of becoming shabby, thus demonstrating that growth is nearly finished.

THE HOP-TREE.

STRANGE as it may seem, the Hop-tree (*Ptelea trifoliata*) is a member of the same family as the Orange, though belonging to a different tribe. It is a highly ornamental subject for the shrubbery, and for weeks past its flattened and circular fruits have been swaying in the breeze and giving to the tree an unwonted appearance—we say unwonted, because it is anything but so common as it might be. It forms a large bush or small tree, ranging from 4 ft. to 8 ft. high, branching freely on the top and bearing a profusion of its light green samaræ or winged fruits that make themselves conspicuous against the dark green foliage. It is well adapted for town and suburban gardens, thriving even in the heart of London when it makes its appearance in the crowded courts and squares. Even here, however, it is rare, the greenish-

HOP-TREE (*PTOLEA TRIFOLIATA*).

yellow flowers commending themselves to very few people though the fruits are striking. All the six species are natives of temperate North America. The accompanying illustration of a spray will give an idea of *P. trifoliata*. There is a golden-leaved variety of it in cultivation

ANEMONE CORONARIA FL. PL. THE BRIDE.

IN our last volume, p. 652, we gave a description of this highly interesting and beautiful Anemone, which is now being issued amongst their novelties for this year by Messrs. E. H. Krelage & Son, Bloembhof Nurseries, Haarlem, Holland, who have placed the accompanying illustration at our disposal. The flowers are white, and, as will be seen, they are made up of an enormous number of narrow petals, such as are usually met with amongst double Anemones. Hitherto a double white Anemone has been unknown, and that under notice originated from the well-known single white *A. coronaria* The Bride, in the nurseries of Messrs. Krelage & Son. It belongs to the same species from which the various garden races of Poppy Anemones and St. Brigid's Anemones have sprung. The double forms usually flower in spring, but the singles may often be seen flowering a second time in autumn both in Great

Britain and Ireland. The silvery white flowers of this beautiful white variety will be welcomed by lovers of this class of plants, and we hope the variety will soon become established here, as an inmate of the spring garden and rockery, as well as a pot plant for greenhouse and conservatory work.

ANEMONE CORONARIA FL. PL. THE BRIDE.

GLADIOLUS QUEEN WILHELMINA.

IN this country early-flowering Gladioli are usually grown in pots, though there are a few exceptions to be met with occasionally. Queen Wilhelmina is one of the novelties being issued by Messrs. E. H. Krelage & Son, Bloembhof Nurseries, Haarlem, Holland, and is a delicately pretty variety with flowers of good average size for this section of the Gladiolus. The flowers are produced in one-sided racemes, as is customary in the genus, and are very acceptable either for conservatory decoration in pots, or as cut flowers. The three upper segments of the flower are elliptic, acute, and of a charming pale flesh colour. The three lower segments are smaller, and of the same delicate ground colour, but rendered particularly handsome by the rosy-carmine band which surrounds the central pale yellow blotch. The throat of the flower is also decorated with a reddish-orange blotch. Early flowering Gladioli, being the result of the hybridisation of several species, present a mixed appearance, but are separable into several groups or races according to the parents from which they have descended. Queen Wilhelmina belongs to the cardinalis section, and is a most graceful and elegant variety when in bloom. It has been dedicated to the young Queen of the Netherlands with Her Mother, the Queen Regent's consent and approval. It has already received a First-class Certificate from the Royal Netherlands Horticultural and Botanical Society at Amsterdam, and distinguished notice at the Hamburg International Exhibition. The accompanying illustration, put at our disposal by Messrs. Krelage & Son, will give an idea of a spray of blossom.

CACTUS DAHLIA MR. MOORE.

IN no section of Dahlias is the improvement that has been effected of late years more marked than in the Cactus. Whilst the show, fancy, and pompon divisions are practically at a standstill, each season brings with it numbers of new Cactus forms, some of which are good, some indifferent, and many of them no improvement upon existing varieties. Besides the narrow-pointed florets which go to make up a true Cactus flower, there is another point that might well receive more attention than it does, having regard to the value of the flowers for cut purposes, and that is the length and strength of the flower stems. The autumn months are almost sure to bring in their train storms of wind and rain, before the force of which even the stoutest flower stems have to bow their heads, but let us shake the load of water from the flower, and if the stem supporting the latter is fairly stout, the flower soon assumes its erect position. In the variety under notice, which, by the way, is one of the richest and most intense crimsons yet introduced, we find a long stout stem that lifts the flower well above the foliage, and right into the glint of the sunlight, and the full view of those who wish to

admire, thereby marking a great and important advance upon Juarezi, and others of that class whose flowers, from the shortness of the stems, were kept shrouded in foliage. Dahlia Mr. Moore is a recent acquisition for which cultivators are indebted to Mr. John Green, Norfolk Nurseries, Dereham. It was exhibited by him at the show of the National Chrysanthemum Society, on the 7th, 8th, and 9th inst. at the Royal Aquarium.

BRITISH GROWN FRUIT AT THE CRYSTAL PALACE.

THE great exhibition of British grown fruit, held under the auspices of the Royal Horticultural Society, was opened at the Crystal Palace, Sydenham, on the 30th ult., and continued during Friday and Saturday the 1st and 2nd inst. In spite of the reputed scarcity of fruit, there was little evidence of this at the Crystal Palace, except, indeed, in the case of Pears, which were excellent in quality, but very moderate in quantity as far as the large collections were concerned. The Pears had the most of the show to themselves about two years ago, and on this occasion the Apples were the most prominent feature as far as fruit was concerned. The Grapes were more plentiful than we have been accustomed to see at past shows generally, in connection with the Palace.

EARLY GLADIOLUS QUEEN WILHELMINA.

They were also much better displayed on long continuous tables, and thereby rendered more effective. The whole of the fruit on this occasion was tabled in the central transept or the immediate vicinity, and the visitors and others were of opinion that the show was in that respect an improvement on former years. The Nerines, Dahlias, and various other miscellaneous exhibits of flowers were certainly a bright feature of the show.

FRUITS GROWN UNDER GLASS OR OTHERWISE.

GARDENERS.

The premier award for a collection of twelve dishes of ripe dessert fruit was secured by Lady H. Somerset (gardener, Mr. F. Harris), Eastnor Castle, Ledbury. Gros Maroc and Muscat of Alexandria Grapes were beautifully finished. Other dishes in this stand were Smooth Cayenne Pineapple, Seedling Melon, Pitmaston Duchess Pear, Prince of Wales and Sea Eagle Peaches, Rihston Pippin, and King of Pippins Apples, Alhert Victor Nectarine, Brunswick Fig, and Coe's Golden Drop Plum. The whole had a very tempting appearance; every dish of its kind being good. The second prize went to the Earl of Harrington (gardener, Mr. J. H. Goodacre), Elvaston Castle, Derby, who had good Muscat of Alexandria Grapes, and grand samples of Souvenir du Congrès and Pitmaston Duchess Pears. Sir J. W. Pease, Bart., M. P. (gardener, Mr. McIndoe), Hutton Hall, Guishorough, was a very good third, his Apples, Pears, Peaches, Melon and Grapes being fine.

Messrs. de Rothschild (gardener, Mr. Geo. Reynolds), Gunnersbury Park, Acton, staged the best collection of eight dishes of ripe dessert fruit. Very finely coloured were Muscat of Alexandria Grapes, Pineapple Nectarine, and Ribston Pippin Apple. The bunches of Gros Maroc Grape were very large in berry. Mrs. Wingfield (gardener, Mr. W. J. Empson), Amptill House, Amptill, took the second place with good samples of Golden Queen and Alicante Grapes, &c. W. K. D'Arcy, Esq. (gardener, Mr. W. Tidy), Stanmore Hall, Middlesex, took the third award. He had a dish of *Passiflora edulis* amongst other things.

Messrs. de Rothschild again came to the front for six distinct varieties of Grapes, two bunches of each. They had grand samples of Chasselas Napoleon, Gros Maroc, Muscat of Alexandria, and Buckland's Sweetwater. C. Bayer, Esq. (gardener, Mr. W. Taylor), Tewkesbury Lodge, Forest Hill, S.E., took the second place with good bunches of Trebbiano, Madresfield Court, and Muscat of Alexandria. The third award went to the Earl of Harrington, who had some very good bunches.

Sir George Russell, Bart., M. P. (gardener, Mr. F. Cole), Swallowfield Park, Reading, secured the leading award for three varieties of Grapes, showing very nice bunches of Black Alicante, Foster's Seedling, and Muscat of Alexandria. Mr. J. Jones, Ridgway Vineries, Cradley, Malvern, was a good second, his berries of Gros Colman being magnificent. Lady H. Somerset came in third.

J. W. Fleming, Esq. (gardener, Mr. W. W. Mitchell), Chilworth Manor, Romsey, took the lead for Black Hamburg Grapes; and was followed by C. Bayer, Esq., and Messrs. de Rothschild in the order given. C. Bayer, Esq., came to the front for Madresfield Court. The bunches were small in all the entries for this class. Mr. J. Jones had the best Gros Colman, the berries being of enormous size. Finely formed bunches were shown by Messrs. de Rothschild, who came second. Sir George Russell, Bart., took the third place with finely coloured bunches of moderate size.

Sir George Russell, Bart., was again successful in the class for three bunches of Alicante, the bunches being large and beautiful in form. Mr. J. Bury, Petersham Vineries, Byfleet, Surrey, was a very good second; and Henry Tate, Esq. (gardener, Mr. W. Howe), Park Hill, Streatham Common, S.W., was a good third. There was great uniformity and excellence in all the entries of this class. W. K. D'Arcy, Esq., took the lead for three bunches of Lady Downes; and was followed by Mrs. Wingfield and C. R. Scrase Dickens, Esq. (gardener, Mr. A. Kemp), Coolhurst, Horsham, in this order. T. W. Fleming, Esq., took the lead for any other Black Grape, showing three grand bunches of Mrs. Pince's Black Muscat. R. Ovey, Esq. (gardener, Mr. W. Smith), Badgemore House, Henley-on-Thames, was second with Alnwick Seedling; and W. K. D'Arcy, Esq., was third.

Sir George Russell, Bart., M.P., took the premier honour for three bunches of Muscat of Alexandria, bunches and berries alike being very creditable. The Earl of Harrington was second with well built bunches, nicely coloured, as were those of Messrs. de Rothschild, who were third. The latter came to the front for three bunches of any other white Grape, showing Chasselas Napoleon, in fine form, the bunches taking a fine amber tint in some cases. C. Bayer, Esq., was second with Buckland Sweetwater; and Miss Ridge (gardener, Mr. G. Lane), Highfield, Englefield Green, Surrey, came in third with large bunches of Chasselas Napoleon.

C. H. Berners, Esq. (gardener, Mr. W. Messenger,) Wolverstone Park, Ipswich, had the best dish of Figs showing nicely coloured Brown Turkey. C. E. Strachan, Esq. (gardener, Mr. H. Folkes), Gaddesden Place, Hemel Hempstead, came in second; and J. W. Fleming, Esq., took the third place.

The leading position for a collection of fifty dishes of hardy fruit grown in the open was taken by Earl Percy (gardener, Mr. G. Wythes), Syon House, Brentford. Apples and Pears were most numerous, but he also had Grapes, Cherries, Plums, Peaches, Walnuts, Damsons, Filberts, &c. The table was decorated with fruits of *Physalis Franchetti* and sprays of *Ampelopsis*. Col. Brymer, M.P. (gardener, Mr. J. Powell), Islington House, Dorchester, took the second place with magnificent Apples, Pears, &c. Lord Foley (gardener, Mr. Miller), Ruxley Lodge, Esher, was third, showing Apples, Pears, and Quinces.

Sir Mark W. Collett Bart. (gardener, Mr. R. Potter), St. Clere, Kemsing, Sevenoaks, Kent, took the leading award for thirty-six dishes of hardy fruit grown under glass to illustrate orchard house culture. His Apples and Pears were grand samples of their kind, clean-skinned and well coloured. Sir J. W. Pease, Bart., M.P., took the second place, his Grapes being even-sized bunches, beautifully finished.

NURSERYMEN.

Messrs. T. Rivers & Son, Sawbridgeworth, were awarded the first prize for a collection of fruit trees bearing fruit in pots. Apples, Pears, Plums, Red Siberian Crab, and Peaches were grown in pots, while large quantities of Pears, Apples, Peaches, Plums, Grapes, &c., were shown in boxes and baskets. The fruiting trees were most attractive to visitors.

Messrs. George Bunyard & Co., The Royal Nurseries, Maidstone, have again triumphed in the class for a collection of hardy fruits grown partly or entirely under glass to illustrate orchard house culture, taking the first prize, a Silver Gilt Medal. Along the centre of the table were Apple, Pear, and Fig trees, and pot Vines, all in fruit. On either side of these were baskets and plates of these fruits. They had large and magnificently coloured samples of Alexander, Peasgood's Nonsuch, Mother, Washington, Cox's Pomona, The Queen, Gascoigne's Seedling, King of Tomkin's County, Belle de Pontoise, and other Apples. Messrs. Geo. Bunyard & Co. also had the first award for a collection of seventy-five to one hundred dishes of hardy fruit, grown in the open air, which consisted of magnificent samples of Apples and Pears supplemented with Plums, Crabs, and other highly coloured sorts for decorative purposes. In the centre of the table was a pyramidal mound of Apples, with smaller conical baskets at either end and at the corners. The clear and polished skins of the fruit and the high colour of many varieties were notable features of this magnificent collection. Mr. H. Berwick, Sidmouth, Devon, took the second award with a richly coloured collection of Apples neatly put up in baskets and boxes.

Mr. J. Colwill, Sidmouth, Devon, secured the first prize for a collection of fifty dishes of hardy fruits grown entirely in the open air. The high colour of Devonshire grown fruit was here very well displayed. He also staged some Plums, Peaches, Medlars. Mr. A. Wyatt, Hatton, Middlesex, was second in this class.

Mr. H. Berwick, secured the leading award for fifty dishes of Pears grown entirely in the open air.

Mr. John Basham, Barsaleg, Newport, Monmouth, took the lead in the class for a collection of fifty dishes of Apples grown in the open air. The fruits were shown in baskets and plates and were very superior.

GARDENERS' AND AMATEURS' CLASSES.

THERE were seven competitors for the prizes offered for twenty-four dishes of Apples, to consist of sixteen dishes of cooking and eight of dessert varieties. Mr. George Woodward, gardener to R. Leigh, Esq., Barham Court, Maidstone, headed the list with a grand lot of fruit. *Mère de Menage*, Washington, Bismarck, Warner's King, Spencer's Favourite, Colville Rouge, Praecox, Cox's Pomona, and Cox's Orange Pippin were some of his strongest varieties. Mr. C. A. Bayford, gardener to C. Lee Campbell, Esq., Glewstone Court, Ross, Hereford, was second, also with a good lot; whilst the third prize fell to the lot of Mr. G. Goldsmith, gardener to Sir E. G. Loder, Bart., Leonardslee, Horsham.

In the smaller class for twelve dishes distinct, eight culinary and four dessert varieties to be represented, Mr. W. G. Pragnell, gardener to J. K. Wingfield Digby, Esq., Sherborne Castle, Sherborne, carried off chief honours. He had excellent samples of Emperor Alexander, Peasgood's Nonsuch, Ribston Pippin, and Alfriston. Mr. B. Miller, gardener to T. W. Startup, Esq., West Farleigh, Maidstone, received the second award for some well-coloured and even-sized fruit. Mr. J. Hill, gardener to C. R. W. Adeane, Esq., Babraham Hall, Cambridge, was third.

Mr. Wm. Slogrove, gardener to Mrs. Crawford, Gatton Cottage, Reigate, was credited with the chief award for nine dishes of Apples, consisting of six cooking and three dessert varieties. Mr. Slogrove's fruit was remarkably clean and well-coloured. The second prize fell to the lot of Mr. T. W. Herbert,

gardener to J. T. Charlesworth, Esq., Nutfield Court, Redhill.

Six dishes of cooking Apples were best shown by Mr. George Woodward, who had magnificent samples of *Mère de Menage*, Stone's, Lord Derby, Peasgood's Nonsuch, Emperor Alexander, and Warner's King. Mr. W. Lewis, gardener to T. Oliverson, Esq., East Sutton Park, near Maidstone, received the second award.

Mr. Goldsmith had the best three dishes of cooking Apples, showing Peasgood's, Warner's King, and Lord Derby in first-class condition. Mr. J. Powell, gardener to Col. Brymer, M.P., Islington House, Dorchester, was second, and Mr. A. Brook, Latter's Farm, Mereworth, Kent, third.

There were three entries for six dishes of Apple Bramley's Seedling. Mr. W. King, gardener to J. Colman, Esq., Gatton Park, Reigate, was first; Mr. T. Turton, gardener to J. Hargreaves, Esq., Maiden Erleigh, received the second award.

There were eight entries for six dishes of dessert Apples. This was a popular class, the fruit was in capital condition, and the competition keen. Mr. G. Woodward occupied the premier position with splendid dishes of Washington, American Mother, Cox's Orange Pippin, Ribston Pippin, Baumann's Red Winter Reinette, and Gascoigne's Scarlet Seedling. Second came Mr. B. Miller, and third Mr. G. Goldsmith.

Eleven entries were staged in the smaller class for three dishes of dessert Apples. Mr. C. A. Bayford was the most successful exhibitor here, and was followed in order of mention by Mr. A. Kemp, gardener to C. R. Scrase Dickens, Esq., Coolhurst, Horsham; and Mr. R. Potter, gardener to Sir Mark W. Collett, Bart., St. Clere, Kemsing, Sevenoaks, Kent.

Six entries were registered for twelve dishes of dessert Pears, distinct, the first award going to Mr. Woodman whose fruit was large, weighty, and well coloured. Pitmaston Duchess, Doyenné de Merode, Beurré Superfin, Beurré Baltet, Beurré Hardy, and Durondeau were especially well shown by him. Mr. G. Goldsmith won the second prize with a lot of fruit that was but little behind that of the first prize winner. Mr. J. Powell was awarded the third prize with even and well coloured but smaller samples.

Mr. W. Cotterell, gardener to Sir W. N. M. Geary, Bart, Oxon Hoath Park, Tonbridge, sent the best nine dishes, distinct, of dessert Pears, showing amongst other good fruit brightly coloured samples of Louise Bonne of Jersey. Mr. W. Jones, gardener to G. Brougham, Esq., Wallington Bridge, Carshalton, was second; and Mr. A. H. Rickwood, gardener to the Dowager Lady Freake, Fulwell Park, Twickenham, was third. Mr. W. Messenger, gardener to C. H. Berners, Esq., Woolverstone Park, Ipswich, showed the best six dishes of dessert Pears, having good samples of Durondeau and Beurré Hardy. Mr. W. Slogrove was second; and Mr. A. Basile, gardener to the Rev. O. L. Powels, Woburn Park, Weybridge, third. Eight lots of three dishes each of dessert Pears were staged, the first award going to Mr. R. Edwards, gardener to G. N. Field, Esq., Beechy Lees, Sevenoaks. Mr. Geo. Fennell, gardener to W. M. Cazalet, Esq., Fairlawn, Tonbridge, Kent, was second; and Mr. C. Harris, gardener to O. A. Smith, Esq., Hammerwood, East Grinstead, third.

Three dishes of cooking Pears, distinct, were best shown by Mr. Geo. Woodward. He had large fine samples of Catillac, Triomphe de Jodoigne and Grosse Calabasse. Mr. G. Goldsmith received the second prize; and Mr. R. Chamberlain followed in the third place. The premier single dish of cooking Pears came from Mr. C. Harris, who showed enormous fruits of Catillac, the six fruits composing the dish weighing 8 lbs. H. Stock, Esq., Rutland Lodge, Petersham, came in second with Uvedale's St. Germain.

There were ten entries for three dishes of Peaches, distinct. Here Mr. George Woodward was the most successful competitor. He had Sea Eagle, Nectarine Peach, and Princess of Wales, very large and fine. He was followed by Mr. F. Harris, gardener to Lady H. Somerset, Eastnor Castle, Ledbury; and Mr. W. Mancey, gardener to Mrs. Druce, Upper Gatton, Merstham, Surrey, to whom fell the second and third prizes respectively. The premier single dish of Peaches came from Mr. W. Mitchell, gardener to J. W. Fleming, Esq., Chilworth Manor, Romsey, the variety shown being Sea Eagle. Mr.

G. Lane, gardener to Miss Ridge, Highfield, Englefield Green, Surrey, was second. Three dishes of Nectarines were not so well represented there being only a single entry. This was made by Mr. F. Harris, to whom the first prize was given. Elruge, Albert Victor, and Pineapple were the varieties exhibited. There was better competition in the class for a single dish of Nectarines, the first award going to Mr. P. Bradley, gardener to F. W. Morter, Esq., Lake House, Byfleet, Surrey.

Mr. H. Folks, gardener to C. E. Strachan, Esq., Hemel Hempstead, staged the finest four dishes of dessert Plums. His varieties were Coe's Golden Drop, Reine Claude de Bavay, Late Transparent Gage, and Cloth of Gold. Mr. J. Vert, gardener to Lord Braybrooke, Audley End, Saffron Walden, won the second award.

There were no fewer than twenty-two competitors for a single dish of dessert Plums. Ultimately Mr. J. Vert was placed first with a superb lot of Coe's Golden Drop. Second came Mr. T. Turton with the same variety, and third, Mr. W. Lewis with Monarch.

The premier exhibit of four dishes of cooking Plums, distinct, was contributed by Mr. J. H. Goodacre, gardener to the Earl of Harrington, Elvaston Castle, Derby. Monarch, Pond's Seedling, Goliath, and Archduke were the varieties shown. Mr. C. Sim, gardener to Thos. Gooch, Esq., Bovington, Hemel Hempstead, and Mr. James Day won the second and third prizes respectively.

Mr. B. Osborne led the way for one dish of Cooking Plums with Le Mott Sang. Mr. C. Sim was second with Monarch, and Mr. J. H. Goodacre third with Prince Englebert. Mr. W. Messenger contributed a fine dish of Gage Plums, winning thereby the first award in its class. The variety was Reine Claude de Bavay. Mr. C. Herrin was second with Brynstone Green Gage. Mr. Geo. Fennell's four dishes of Damsons, Prunes, and Bullaces was the only entry in its class, and received the premier award.

SINGLE DISHES.

APPLES.

The following is the list of the chief prize-winners in their respective classes:—

DESSERT VARIETIES.—Blenheim Orange—first, Mr. W. H. Godden, gardener to the Hon. F. W. Buxton, Cashiobury, Sawbridgeworth; second, Mr. G. Chambers, Moorcocks Farm, Mereworth, Maidstone; third, Mr. W. King, gardener to J. Colman, Esq., Gatton Court, Reigate. Brownlee's Russet—first, Mr. Geo. Woodward; second, Mr. H. C. Prinsep, gardener to Viscountess Portman, Buxted Park, Uckfield. Claygate Pearmain—first, Mr. Geo. Woodward; second, Mr. H. C. Prinsep; third, Mr. W. H. Godden. Court Pendu Plat—first, Mr. J. C. Tallack, gardener to E. Dresden, Esq., Livermere Park, Bury St. Edmunds; second, Mr. H. C. Ross, gardener to Captain A. J. Carstairs, Welford Park, Newbury; third, Mr. R. Chamberlain, gardener to F. M. Lonergan, Esq., Cressingham Park, Reading. Cox's Orange Pippin—first, Mr. W. Messenger, gardener to Capt. H. Berners, Esq., Woolverstone Park, Ipswich; second, Mr. W. King; third, Mr. Geo. Woodward. Egremont Russet—first, Mr. B. Miller; second, Mr. G. Goldsmith. Fearn's Pippin—first, Mr. J. C. Tallack; second, Mr. J. McKenzie; third, Mr. W. Jones, gardener to G. R. Brougham, Esq., Wallington Bridge, Carshalton. Gascoigne's Scarlet—first, Mr. J. McKenzie; second, Mr. J. Hudson, gardener to Leopold de Rothschild, Esq., Gunnersbury House, Acton; third, Mr. G. Woodward. King of the Pippins—first, Mr. J. C. Tallack; second, Mr. J. Powell; third, Mr. C. A. Bayford. King of Tomkins County—first, Mr. T. Turton, gardener to J. Hargreaves, Esq., Maiden Erlegh, Reading; Mabbot's Pearmain—first, Mr. J. McKenzie; second, Mr. J. C. Tallack. Mannington's Pearmain—first (name lost); second, Mr. J. McKenzie; Margil—first, Mr. G. Woodward; second, Mr. J. McKenzie; third, Mr. C. A. Bayford. American Mother—first, Mr. C. A. Bayford; second, Mr. J. McKenzie; third, Mr. G. Goldsmith. Ribston Pippin—first, Mr. Geo. Woodward; second, Mr. J. McKenzie; third, Mr. C. A. Bayford. Scarlet Nonpareil—first, Mr. J. Hudson; second, Mr. C. Ross; Sturmer Pippin—first, Mr. W. G. Pragnell, gardener to J. K. D. Wingfield, Esq., Digby Castle, Sherborne; second, Mr. R. Chamberlain. William's Favourite—third, Mr. J. Powell (there was only a single entry in this class); Worcester Pearmain—first, Mr. W. King; second,

Mr. Geo. Woodward; third, Mr. W. Messenger; Any other variety—first, Mr. J. McKenzie, with St. Edmund's Pippin; second, Mr. G. Goldsmith, with Gravenstein. Adam's Pearmain—first, Mr. M. Camm, gardener to the Duchess of Cleveland, Battle Abbey, Sussex; second, Mr. G. Goldsmith. Allen's Everlasting—first, Mr. J. Powell; Baumann's Red Winter Reinette—first, Mr. J. McKenzie; second, Mr. C. Ross; third, Mr. H. C. Prinsep.

CULINARY VARIETIES.—Bramley's Seedling—first, Mr. C. A. Bayford; second, Mr. S. Syon, gardener to J. H. Salmon, Esq., Holly Bank, Rowton, Chester. Cellini—first, Mr. G. Goldsmith; second, Mr. C. A. Bayford; third, Mr. J. Powell. Cox's Pomona—first, Mr. J. McKenzie, gardener to F. S. W. Cornwallis, Esq., Linton Park, Maidstone; second, Mr. J. Powell; third, Mr. G. Goldsmith. Duchess of Oldenhury—first, Mr. James Coulton, Dildawn Gardens, Castle Douglas, N.B.; second, Mr. T. W. Herbert, gardener to J. T. Charlesworth, Esq., Nutfield Court, Redhill. Alfriston—first, Mr. J. McKenzie; second, Mr. George Woodward; third, Mr. W. Lewis, gardener to T. Oliverson, Esq., Earl Sutton's Park, near Maidstone, Kent. Beauty of Kent—first, Mr. R. Chamberlain; second, Mr. Geo. Woodward; third, Mr. A. Basile. Bismarck—first, Mr. J. McKenzie; second, Mr. George Woodward; third, Mr. C. Ross. Dumelow's Seedling—first, Mr. J. McKenzie; second, Mr. W. G. Pragnell; third, Mr. C. A. Bayford. Ecklinville Seedling—first, Mr. J. McKenzie; second, Mr. J. Spottiswood, Queen's Park, Brighton; third, Mr. George Woodward. Emperor Alexander—first, Mr. J. McKenzie; second, Mr. George Woodward; third, Mr. G. Goldsmith. Frogmore Prolific—first, Mr. J. McKenzie; second, Mr. C. A. Bayford. Golden Noble—first, Mr. G. Chambers; second, Mr. George Woodward; third, Mr. J. McKenzie. Golden Spire—first, Mr. George Woodward; second, Mr. G. Goldsmith. Grenadier—first, Mr. C. Herrin; second, Mr. A. Brooks, Mereworth, Kent; third, Mr. T. W. Herbert. Hornead Pearmain—first, Mr. J. McKenzie. Lane's Prince Albert—first, Mr. C. Ross; second, Mr. C. A. Bayford; third, Mr. Geo. Woodward. Lord Derby—first, Mr. George Fennell, gardener to W. M. Cazalet, Esq., Fairlawn, Tonbridge, Kent; second, Mr. R. Edwards; Lord Grosvenor—first, Mr. George Woodward; second, Mr. C. Herrin. Lord Suffield—first, Mr. J. McKenzie; second, Mr. George Woodward; third, Mr. R. Chamberlain. Mère de Menage—first, Mr. J. McKenzie; second, Mr. C. Ross; third, Mr. George Woodward. New Northern Greening—first, Mr. A. Brooks. Peasgood's Nonsuch—first, Mr. J. McKenzie; second, Mr. W. A. Mackenzie, gardener to the Right Rev. the Lord Bishop of Bath and Wells, The Palace, Wells, Somerset; third, F. G. Powell, Esq., The Horticultural College, Swanley. Pott's Seedling—first, Mr. C. Ross; second, Mr. George Woodward; third, Mr. J. Hudson. Royal Jubilee (one entry only)—first, Mr. C. Ross. Sandringham—first, Mr. J. McKenzie; second, Mr. George Wythes, gardener to Earl Percy, Syon House, Brentford. Spencer's Favourite—first, Mr. George Woodward; Stirling Castle—first, Mr. J. McKenzie; second, Mr. W. Strugnell, gardener to the Right Hon. W. H. Long, M.P., Rood Ashton, Trowbridge. Stone's—first, Mr. J. McKenzie; The Queen—first, Mr. C. Herrin; second, Mr. George Woodward. Tower of Glamis—first, Mr. J. McKenzie; second, Mr. A. Brooks. Tyler's Kernel—first, Mr. J. McKenzie. Warner's King—first, Mr. J. McKenzie; second, Mr. G. Chambers. Any other variety—first, Mr. J. McKenzie, with Dutch Codlin.

MESSRS. J. R. PEARSON & SONS' PRIZES.—In a class for Newtown Wonder, open only to exhibitors living in Cardigan, Radnor, Shropshire, Stafford, Warwick, Bedford, Cambridge, Essex, or counties farther north, Mr. J. Hill, gardener, to C. R. W. Adeane Esq., Bahraham Hall, Cambridge, was placed first. In a class for the same variety open to exhibitors hailing from the south of the counties above named Mr. R. Edwards, gardener to G. N. Field Esq., Beechy Lees, Sevenoaks, Kent, was awarded the chief prizes.

PEARS.

DESSERT VARIETIES.—The prizelist was as follows:—Bergamotte d'Esperen—first Mr. J. Powell; second Mr. C. Ross.—Beurré Bosc—first, Mr. G. Goldsmith; second Mr. W. Cotterill, gardener to Sir W.

N. M. Geary, Bart, Oxon Hoath Park Tonbridge. Beurré d'Anjou (one entry only)—first Mr. Geo. Woodward. Beurré Diel—first Mr. Geo. Woodward; second, Mr. G. Wythes. Beurré Dumont—first, Mr. Geo. Woodward. Beurré Hardy—first, Mr. Geo. Woodward; second Mr. H. C. Prinsep. Beurré Superfin—first, Mr. G. Woodward; second, Mr. G. Goldsmith. William's Bon Chrétien—first, Mr. James Day, gardener to the Earl of Galloway, Galloway House, Garliestown. Comte du Lamy;—first, Mr. T. Turton. Conference—first, Mr. Geo. Woodward; second, Mr. W. Slogrove, gardener to Mrs. Crawford, Gatton Cottage, Reigate. Conseiller de la Cour—first Mr. J. C. Tallack; second, Mr. A. Basile. Doyenné du Comice—first, Mr. J. Powell; second, Mr. B. Calvert, gardener to Col. Archer Houlblon, Hallingbury Place, Bishop Stortford. Duchesse de Bordeaux—first, Mr. G. Goldsmith. Durondeau—first, Mr. Geo. Woodward; second, Mr. W. G. Pragnell. Easter Beurré—first, Mr. B. Calvert; second, Mr. Geo. Woodward. Emile d'Heyst—first, Mr. Geo. Woodward; Fondante d'Automne—first, Mr. A. Basile. Fondante de Thiriote—first, Mr. Geo. Woodward; second, Mr. W. Messenger. Glou Morceau—first Mr. J. Powell; second, Mr. Geo. Woodward. Joséphine de Malines—first, Mr. J. Powell; second, Mr. T. W. Herbert. Louise Bonne of Jersey—first, Mr. J. Coles, gardener to H. F. Walker Esq., Highley Balcombe, Sussex; second, Mr. W. Messenger. Marie Benoist—first, Mr. Geo. Woodward. Marie Louise—first, Mr. B. Osborn, gardener to Rev. H. Golding Palmer, Holme Park, Reading; second, Mr. G. Woodward. Marie Louise d'Uccle—first, Mr. W. Cotterill; second, Mr. Geo. Woodward. Marguerite Marillat—first, Mr. G. Goldsmith. Nouvelle Fulvie—first, Mr. Geo. Woodward. Olivier de Serres—first, Mr. G. Goldsmith. Pitmaston Duchess—first, Mr. W. Cotterill; second, Mr. Geo. Woodward; third, Mr. C. Harris, gardener to O. A. Smith Esq., Hammerwood, East Grinstead. Seckle—first, Mr. C. Ross. Souvenir du Congrès—first, Mr. G. Goldsmith. Thompsons—first, Mr. J. Powell. Winter Nelis—first, Mr. Geo. Woodward. Any other variety—first, Mr. W. Woodward with Gansel's Bergamot; second, Mr. J. Spottiswood with Duchesse d'Angoulême; third, Mr. G. Goldsmith with Rivers' Princess.

VEITCH FLAVOUR PRIZES.—A great number of dishes of Apples and Pears were submitted in competition for the Veitch flavour prizes. Upwards of forty dishes of Apples were shown, Mr. H. C. Prinsep taking the first place with some fine Ribstons. Mr. C. Herrin was second with Cox's Orange Pippin.

Over thirty dishes of Pears were forthcoming. Mr. B. Osborne won the chief prize with capital samples of Louise Bonne of Jersey. Mr. Cotterill was second with Fondante d'Automne.

NON-COMPETITIVE EXHIBITS.

Messrs. Sutton & Sons, Reading, had a fine exhibit of Tomatos, not so extensive as in former years, but for quality and finish the fruits have never been better. Several of the varieties were new, including Sutton's Eclipse, a brilliant red variety, not so large as Perfection, but much deeper, smooth and handsome. It crops very heavily either outside or under glass, those staged being grown in the open-air. A First-class Certificate has been accorded it by the Royal Horticultural Society. A novel colour in Tomatos was the new Peachblow, reminding one of American Peach, but larger and better. Sutton's Pomegranate is also new and notable for the bright colour of its fruits, which resemble the flower of the Pomegranate. Sutton's Prince of Wales is a globular fruit of useful size for dessert, and assuming a rich golden hue when ripe. Sutton's Golden Queen is a large, flattened, yellow fruit, which ripens early and well in the open-air, and is valuable on that account. A charming variety is Sutton's Sunbeam, like a Magnum Bonum Plum, but much deeper golden yellow. Sutton's Perfection is so well-known as to need no recommendation. Sutton's A 1 bears fruit in large bunches, and is excellent for outdoor work. The fruits are of great depth and of a rich shining red.

Her Majesty The Queen (gardener, Mr. Owen Thomas), Windsor, exhibited a trophy of fruit on a square table. The centre was occupied with a high pyramid of the new Tomato Golden Jubilee, the stems bearing the fruit as it grew, being used. It was surmounted by three large Pineapple fruits, and at the four corners were groups of three, making

fifteen magnificent fruits on the table. Baskets of Muscat of Alexandria, Raisin de Calabre, Black Alicante and Lady Downe's Grapes were placed on the four sides of the pyramid. Amongst the Pears were magnificent fruits of Calebasse Grosse, Beurre Bosc, Marie Louise, Catillac, Beurré Diel, Huyshe's Victoria, and handsomely coloured Louise Bonne of Jersey. Amongst Apples, Annie Elizabeth, Stone's, Peasgood's Nonsuch, Hoary Morning, Warner's King, Blenheim Orange, Newton Wonder, Cox's Orange Pippin, and a seedling were in grand form.

Messrs. Jas. Veitch & Sons, Ltd., Chelsea, filled a large table with superb samples of hardy fruit. The centre of the table was occupied by a long line of large dishes of Apples, and was flanked on either side by a double row of Apples and Pears, mixed, making in all 170 dishes. Two trays filled with the handsome *Physalis Alkekengi* and *P. Franchetti* were very bright. The look of the table was also improved by well-berried sprays of *Rosa rugosa* interspersed with the fruit. Apples throughout were large and well coloured, particularly in the case of such varieties as King Harry, Tyler's Kernel, Warner's King, Egremont Russet, Cox's Pomona, Peasgood's Nonsuch, Red Hollambury, and King of the Pippins. Pears were admirably represented by Louise Bonne of Jersey, Beurré Clairgeau, Beurré Baltet Père, Doyenne du Comice, and Marie Louise d'Uccle among a host of others. A verdict of very highly commended was given. Close to their exhibit of fruit the Messrs. Veitch staged a grand lot of *Nerine Fothergilli* major. The large umbels of brilliant scarlet flowers were set off to great advantage by the setting of Maidenhair Fern. The Horticultural College, Swanley (principal, Mr. H. G. Powell) was highly commended for a comprehensive exhibit of fruit, including samples of various bottled fruits in an excellent state of preservation.

Messrs. B. S. Williams & Son, Upper Holloway, N., set up an effective group of stove fine foliage plants. The *Dracaenas*, *Crotons*, and *Aralias* which composed the group in a large measure were in capital condition.

Messrs. J. Cheal & Sons, Crawley, Sussex, demonstrated their undenied skill as fruit cultivators by a rich and varied assortment of Apples and Pears that mustered close upon 200 dishes. The central feature was a huge conical pile of that well-known variety Bismarck. Forge, Duchess of Gloucester, Hereford Beefing, and Cowan's Victoria, although only small varieties, were remarkable for their high colour. Hoary Morning, Jubilee, Thomason, King of the Pippins, and Frogmore Prolific were also very beautifully coloured. In the centre of the table was a row of dwarf cordon Apples on the Paradise stock well loaded with fruit. Of Pears there were some splendid dishes including Pitmaston Duchesse, Doyenné Boussoch, Beurré Hardy, General Tottleben, and Durondeau (very highly commended). From the same firm came a charming display of single, Cactus, pompon, and show Dahlias. The blooms were all bright and good for the now advanced season.

Messrs. W. Gaymer & Son showed bottles of Norfolk Cider and Cider Apples on a gay conical stand of considerable height.

Upwards of eighty dishes of Apples and Pears, chiefly the former, were contributed by Messrs. Fisher, Son, & Sibray, Ltd., The Royal Nurseries, Handsworth, Sheffield. Many of the leading varieties of Apples were represented, and amongst these we noted Loddington, Gloria Mundi, Peasgood's Nonsuch, Lane's Prince Albert, The Queen, and Emperor Alexander. In the back-ground were samples of fruit trees lifted from the open such as those that are supplied in quantity to customers all over the country.

A comprehensive collection of fruits to the tune of some 130 dishes came from the nurseries of Messrs. John Peed & Sons, at Streatham. The fruit throughout was clean and handsome, and consisted of Grapes, Apples, and Pears in variety. Plants of various kinds were employed to bedeck the table with excellent effect (highly commended).

On the right-hand side of the big organ Messrs. John Laing & Sons, Forest Hill, S.E., put up a showy group of miscellaneous plants. Palms were employed for the background, and *Crotons* and *Dracaenas* flanked the group on either side, whilst single and double tuberous *Begonias* occupied the centre. In the front ranks were some small *Caladiums* and *Streptocarpus*. The outline of the group described a large semi-circle, the edging being of

Isolepis gracilis. On the left-hand side of the organ, too, the Messrs. Laing had placed some of their fine strains of single tuberous *Begonias*. White, crimson, yellow, bronze-yellow, and rose-pink were prominent. In the body of the building appeared another large table filled with cut hardy flowers in gay profusion by the Messrs. Laing. Following on the end of the cut flowers came a grand lot of fruit grown and staged by the Forest Hill firm. There were no fewer than 150 dishes of Apples and Pears, all in first-class condition. Beauty of Kent, Gloria Mundi, Loddington's Seedling, Hollambury, Mère de Menage, Cox's Pomona, Peasgood's Nonsuch, Warner's King and Golden Noble were some of the best Apples, and Pitmaston Duchess, Louise Bonne of Jersey, Durondeau, and Beurré Clairgeau, the best Pears.

Messrs. Wood & Sons, Wood Green, N., had a stand of horticultural requisites. A highly decorative appearance had been imparted to the stand by numbers of feathery plumes of dried grasses, tall tapering bamboos, etc. A special feature was a patent lawn sweeper, which worked both speedily and effectively. Manures of various kinds were well shown.

Messrs. A. W. Young & Co., Stevenage, Herts, were commended for an exhibit of Tomatos and fancy Gourds. The former were medium-sized well-coloured samples of that useful variety "Young's Eclipse." A table of cut hardy flowers, consisting in the bulk of Dahlias, Lilies, and perennial Asters was likewise shown by this firm.

A table of fruit from the Royal Horticultural Society's gardens at Chiswick (superintendent, Mr. S. T. Wright), was highly commended. There were some medium-sized, but clean and handsome Apples and Pears here, although the special feature was Grapes. In addition to two huge bunches of Gros Guillaume, one of which turned the scale at 7½ lbs., and the other at 8 lbs., there were nice bunches of Mrs. Pearson, Mrs. Pince, Muscat of Alexandria, Black Hambro, Muscat Hambro, and Gros Maroc, as well as the small but exquisitely flavoured Chasselas Rose.

Messrs. S. Spooner & Sons, Hounslow, were highly commended for a comprehensive collection of Apples. Stone's Hoary Morning, King of the Pippins, Blenheim Orange, Colonel Vaughan, Manx Codlin, Yorkshire Beauty, and Duchess of York's Favourite, were a few of the more notable varieties.

Mr. R. Pinches, Brown Street, Camberwell, had a stand displaying his patent labels, which were commended.

Messrs. Wm. Paul & Son, Waltham Cross, had a remarkably fine lot of cut Roses, considering the lateness of the season. Marie Van Houtte, Caroline Testout, Mrs John Laing, Queen Mab, and Maréchal Niel were some of the most noteworthy forms. Heavily flowered sprays of the little *Gloire des Polyantha* were showy, and amply testified to the floriferousness of the variety.

Messrs. Harkness & Sons, Bedale, Yorks., had a grand display of cut hardy flowers, chiefly *Gladioli*. Mr. W. Horne, Perry Hill, Cliffe, had a small collection of choice and well grown Apples; conspicuous amongst which was a dish of some four dozen of the pretty little Yellow Ingestre. Mr. W. Wells, Earlswood Nurseries, Red Hill, Surrey, had a stand of cut early *Chrysanthemums*.

A highly effective exhibit from a decorative point of view was that made by Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N. Tuberous *Begonias* and cut Dahlias, of the Cactus section, constituted the bulk of the exhibit. The exhibit rose in the centre to a height of about 3 ft., from the level of the table, thus presenting a bank of glowing colours on either side and at the ends. A row of Palms and *Dracaenas* along the centre put a finish to the display. At one end appeared a quantity of cut blooms of fine double *Begonias*, arranged with Maiden-hair Fern.

A splendid semi-circular group of Cannas was put up by Messrs. H. Cannell & Sons, Swanley, Kent. Although the plants were only in 5 in. pots they were all carrying large trusses of brilliant flowers, and throughout were in the pink of condition. Cannas are evidently understood at Swanley. Cut sprays of *Physalis Franchetti*, with highly-coloured and large fruits, were also sent from Swanley.

Messrs. Paul & Son, the Old Nurseries, Cheshunt, set up a miscellaneous group, that contained both flowers and fruit. Pot Roses formed a large percentage of the latter, and cut hardy flowers were

well and cleanly shown. The fruit, too, was good and shapely, although not highly coloured.

THE LECTURES.

FRUIT CULTURE IN HER MAJESTY'S REIGN.

A series of lectures had been arranged for, one to be given on each day of the show. It was intended that they should be held in the Garden Hall, but as the luncheon was laid in that place, and the tables were not cleared until late in the afternoon, another room close by was devoted to the lecture on the first day, when Mr. George Bunyard, of Maidstone, discoursed upon "Fruit culture in Her Majesty's Reign, 1837—1897." Unfortunately there was a deal of racket going on overhead, and Mr. Bunyard had to speak under difficulties in consequence. Sir Trevor Lawrence, Bart., occupied the chair during the first part of the proceedings.

In opening the subject Mr. Bunyard asked his audience to go with him in fancy into a garden in the year 1837, and take note of the varieties of fruits that found a place in it. The garden would probably be from two to three acres in extent, square in form and walled in all round. In the centre would be an unheated, very ornamental structure, covered on the outside with Roses of the Ayrshire type, Magnolias, and Vines, and containing Oranges, Fuchsias, Bays, and Pomegranates.

In the garden itself they would find such Apples as Court Pendu Plat, Gooseberry Pippin, Manx Codlin, Wellington, and Norfolk Pippin, whilst amongst Pears they would find Beurré Diel, Easter Beurré, Citron des Carmes, and Williams' Bon Chrétien. On a wall facing south would be seen Peaches, Nectarines and Vines, whilst Apricots were relegated to a west wall. On the east and west walls Pears and Plums were to be found. Of the former some of the most conspicuous would be Jargonelle, with plenty of leaves and very few fruits. Chaumontelle would be observed carrying enormous spurs, with a few fruits on the tips of them. All old trees were heavily pruned in those days. Great pains, too, were taken with Peaches and Nectarines. Each year they were taken away from the wall, and the latter limewashed, the trees themselves being cleaned before being put back. In training them the branches were secured to the wall by the direction of a plumb line.

Strawberries were represented by Keens' Seedling, Black Prince, and several Hautbois and Alpine varieties. Much progress has been made in these, and the introduction of British Queen in 1840, and President a little later were notable events.

The heating of glass-houses was a great step. The upright tubular boiler was sent out in 1839, and the duty was taken off glass in 1840. Steam saws and planes for the manipulation of the timber for houses, and railways for its quick transit have worked wonders in horticultural building, and an idea of the change that has been effected is obtained from the fact that at the present time there is a firm of brothers who grow for market who possess 134 acres of glass.

Since Mr. T. Rivers, of Sawbridgeworth, commenced to use the Quince stock for Pears the saying about "planting Pears for your heirs" has become obsolete. Mr. Rivers also introduced the Paradise stock for Apples, and these two items have largely helped to make our British fruit what it is to-day. Root-pruning has been added to the culture routine, and thus the balance between the branches and fibrous roots is maintained to the no small benefit of the trees. Root-pruning, in addition to liberal mulchings of manure, to trees bearing heavy crops are the chief improvements in fruit culture that mark the Victorian era. Another earnest of the progress made is afforded by the Grape. Grapes that can now be purchased for 2s. 6d. per lb. could not formerly have been bought for less than 25s. per lb. New varieties of various fruits have been brought to light at various times, and most of the old ones have been forgotten. Thus out of 130 varieties of Apples grown in gardens in 1837 only thirty are now cultivated. Dessert Apples, too, were much smaller at the earlier date than they are now.

Much of our knowledge, continued Mr. Bunyard, is due to the press, in which may be included the various publications of the Royal Horticultural Society. No fewer than 224 First-class Certificates have been awarded by this society to fruits, exclusive of Melons, since 1837, and it speaks well for the judgment with which these certificates have been bestowed when we consider that only fifty of the

varieties receiving them have been superseded. Besides those that have been superseded led directly to those improvements which took their places.

Mr. Bunyard was of opinion that the 1883 conference at Chiswick was of the greatest benefit to fruit culture, the list of synonyms then drawn up and subsequently published being of inestimable value. The show held at the Guildhall in 1890 served to convince Londoners that first-class fruit could be grown in the old country. Conferences on fruit have been held at Exeter, Hereford, Chester, Pershore, and Worcester, and have all helped the cause. County Councils have during the last few years engaged experts to teach the people in their various spheres of operation the way to grow fruit well, and what varieties to invest in. Sir H. Stanhope, of Holme Lacy, might be regarded as the fore-runner of hardy fruit culture, whilst Messrs. Rivers, of Sawbridgeworth, Pearson, of Chilwell, Wildsmith, of Heckfield, Ford, of Leonardslee, Ross, of Welford, Ingram, Jones, Dr. Robert Hogg, and Robert Thomson were all men who had rendered yeoman service.

The tendency to popularise fruit and fruit-growing is doubtless largely responsible for the improved state of health in our large towns and cities.

In summing up Mr. Bunyard averred that the rate of progress in horticulture during the Victorian era had been fully as great as in the case of other industries.

In the appendix to Mr. Bunyard's paper, which was not read, appeared (a) a list of varieties of fruits cultivated in 1837, and comprising Apples, Pears, Plums, Cherries, Nectarines, Peaches, Apricots, Figs, and Strawberries; (b) a list of the varieties introduced to commerce between the years 1837 and 1897, with the respective dates; (c) a list of those varieties likely to prove permanent additions.

Sir Trevor Lawrence rose to open the discussion at the close of the reading of the paper. He stated that while on a visit to South Wales he had bought good Muscat Grapes at 1s. 6d., and 2s. per lb., which twenty-five or thirty years ago would have fetched 7s. 6d., 10s., or even 15s. per lb. He further remarked that first-class fruit was hardly to be found out of the British Isles, or bought at reasonable prices. Speaking of the improvement in size, he stated that mere size should not be sacrificed to quality. Sir Trevor was very emphatic upon the point that we ought to guard against the idea that anybody can grow good fruit and find a market for it. Fruit growing is a skilled industry, and it was like showing a Will o' the Wisp to farmers, who could not learn quickly, to try to induce them to plant fruit instead of grain. We are very much obliged to gentlemen like Mr. Bunyard for bringing so much energy and skill to bear upon the industry.

Mr. C. Lee Campbell, of Glewstone Court, Ross, Hereford, was of opinion that fifteen sorts of Apples were enough for everything. Gardeners come to their work with too much prejudice. They send samples to market carelessly and fraudulently packed, and grumbled at the result. He always graded and packed his fruit in the same way, and found that the bales went like hot rolls. He should advise others to do the same if only as a matter of common honesty. In Mr. S. T. Wright he had had the pleasure of supplying the Royal Horticultural Society with a superintendent for their gardens at Chiswick.

Mr. E. Pool, The Gardens, Cleve Hall, near Bristol, gave some of his experiences, and spoke of the success that had attended his practice of replanting old orchards with young trees.

Mr. Pearson did not believe in this system, and stated that he had never known Apples to do well when planted on the site of old orchards.

Mr. Roupell stated that all the old Apples were of a russet character. He disagreed with the remarks of the president anent fruit culture by farmers. He believed that it could be made to pay. Strawberries, for instance, were grown by hundreds of broad acres. Tomatos again were one of the marvels of the age. The best varieties were those bearing fruits which went about five to the lb., and were perfectly smooth, and not corrugated. He could remember the time when market growers' carts used to run from Battersea, Clapham, and Camberwell. These districts have long been given up to building purposes however, and the radius has consequently extended.

Mr. John Wright in rising to propose a vote of thanks to the lecturer spoke of the Guildhall Fruit Show of 1890 as being mainly due to Mr. Bunyard's

efforts and influence, for when it was almost decided to abandon the idea of holding a show Mr. A. H. Smee, of Carshalton, offered to fill half of the hall by the help of his friends, and amidst cheers Mr. Bunyard rose and offered to fill the other half.

Mr. Bunyard acknowledged the vote of thanks in suitable terms, and spoke of the necessity of reducing the number of varieties of Apples grown for market purposes.

GARDENING MISCELLANY.

PEAR BEURRE HARDY.

THIS is classed as an October Pear, but was in excellent condition for the table by the end of September with Mr. H. C. Prinsep, gardener to the Hon. Mrs. Portman, Buxted Park, Uckfield. The fruits are pyriform or obovate, and of a greenish-yellow, more or less heavily overlaid with brown russet on the exposed side. The flesh is greenish-white, very tender, melting and very juicy. The gritty flesh, characteristic of such as Beurré Diel, is imperceptible here, Beurré Hardy, on the contrary, possessing a richly-flavoured and tender, melting flesh. If the fruit growers of Kent and Sussex would grow the variety in quantity to meet the home demand the British public could well afford to be independent of the Californian or any other foreign supply. Hitherto, of course, we have been indebted to California for a supply of excellent quality, but the individual fruits are not by any means larger than those grown in the southern counties of England at least.

COLCHICUM PARKINSONI.

IN this we have one of the finest of the Colchicums. The flower is much larger and more heavily tessellated than that of *C. variegatum*, but is not so hardy as the latter species since very hard winters endangers its existence. The flower is stellate in form with lanceolate-acuminate segments. The ground colour is flesh-pink and the markings are of light purple. Where a sheltered position can be given it, *C. Parkinsoni* will render a capital account of itself, although being so close to the ground the flowers are apt to get splashed and spoiled with mud as the result of heavy rains. Messrs. Barr & Sons have a fine stock of it at Long Ditton, where it is thought very highly of.

CHRYSANTHEMUM LADY FITZWIGRAM.

THE fine group of this grand early-flowering Chrysanthemum sent to the Drill Hall at the last meeting of the Royal Horticultural Society by Mr. George Wythes, of Syon House Gardens, amply demonstrated the value of the variety when grown in pots for early work. The habit of the plants is dwarf and symmetrical, and the height is a little over 2 ft. The flowers are pure white and produced in abundance. It is indeed a great improvement on Madame C. Desgranges as far as habit, floriferousness and purity of colour goes. The flowers come well when the plants are out-of-doors, and the variety is thus an acquisition for border work. We recently observed a batch of plants flowering out-of-doors at Messrs. Barr & Sons' nursery at Long Ditton, and in every case the bushy and shapely habit of the plants was well-demonstrated. The flowers, too, were remarkable for their purity.

ONION SHOW AT BANBURY.

H. DEVERILL, florist, seed-grower, and Onion specialist, Banbury, held his annual Onion show in his business premises, Cornhill, Banbury, on Thursday, 16th ult. There was a large turnout of exhibits, and the competition was very keen. Mr. Deverill had on exhibition a very large collection of herbaceous flowers, Gladioli, and Dahlias, which enhanced the appearance of the show, and proved a very great attraction.

The great attraction of the show, however, was the magnificent Onions staged by Mr. James Bowerman, Hackwood Park Gardens, Basingstoke, whose specimens were of perfect shape and large size, his champion six weighing 14½ lbs., and his dozen weighing 26 lbs., both of the now famous Ailsa Craig variety. The collections of vegetables shown in the open and confined classes were exceptionally good,

and it would be hard to equal them at some of the largest shows in the country. Some magnificent Leeks were also shown, those by Mr. R. Lye, Sydmonton Court Gardens, Newbury, taking first place. The show was open to the public from 12.30 to 8 p.m., and it is estimated that it was visited by upwards of 3,000 people. Mr. R. Dean, Ealing, London, and Mr. G. Inglefield, Tedworth House Gardens, Marlborough, acted as judges, and whose decisions gave every satisfaction. The prize list is as follows:—

The Champion Prize for six Onions was taken by Mr. James Bowerman, Hackwood Park Gardens, Basingstoke (variety, Ailsa Craig; weight, 14½ lbs.). In the class for twelve Onions, Ailsa Craig or Coconut, Mr. J. Bowerman was again first, showing Ailsa Craig, weight 26 lbs. Mr. N. Kneller, Mals-hanger Gardens, Basingstoke, was second with Ailsa Craig, weight, 25½ lbs. Mr. J. Masterson, Weston Park Gardens, Shipston-on-Stour, came in third with Ailsa Craig, weight 23½ lbs. Mr. R. Lye, Sydmonton Court Gardens, Newbury, was fourth, showing Ailsa Craig, weight 20½ lbs. For twelve Onions, either Anglo-Spanish, The Lord Keeper, Royal Jubilee, or Rousham Park Hero, Mr. Keep, Faringdon House Gardens, Faringdon, took the lead with Rousham Park Hero, weight 21½ lbs.; Mr. R. Lye took the second place; Mr. C. J. Waite, Glenhurst Gardens, Esher, the third; and Mr. R. Horton, Tysoe, the fourth. For twelve Improved Wroxton Onions, Mr. E. Thorne, Oxford, had the best lot, weighing 12½ lbs., and Mr. R. Lye followed. In Class V., twelve Challenge Onions, Mr. R. Lye and Mr. C. J. Waite, were first and second respectively. For a single specimen of any of Deverill's pedigree Onions, Mr. J. Bowerman, was first with Ailsa Craig (weight, 2 lbs. 13 ozs.); Mr. N. Kneller, second with Anglo-Spanish (weight, 2 lbs. 7½ ozs.); and Mr. R. Lye, third with Ailsa Craig (weight, 2 lbs. 1 oz.). In the class for twelve Onions, open to amateurs and cottagers, Mr. H. Elmer, Cuckfield, Sussex, took the lead with Ailsa Craig (weight, 18½ lbs.). He was followed by Mr. W. Woodcraft, Nuthrop, Banbury, and Mr. R. Horton, respectively. Extra prizes were awarded to Mr. W. Goodwin, Adderbury, Banbury; Mr. W. Butcher, Tysoe, Warwick; and Mr. E. Cove, Falfield, Gloucestershire.

For six Deverill's Oxonion Leek, Mr. R. Lye took the lead, followed by Mr. James Bowerman, and Mr. N. Kneller respectively. In the class for a collection of vegetables, open, eight distinct kinds, Mr. R. Lye was to the fore, and was succeeded by Mr. C. J. Waite, and Mr. George Wells, Tysoe, in this order. For a collection of vegetables, eight distinct kinds open to amateurs and cottagers only, Mr. George Wells took the first award. Mr. H. Ellmer and Mr. W. Butcher were second and third respectively; and Mr. R. Horton and Mr. D. Wilson, Keighley, Yorks, were equal fourth.

QUESTIONS AND ANSWERS

Muscat of Alexandria Grape.—*Allan Cameron*: We do not think that any advantage is to be gained by inarching Muscat of Alexandria upon Black Hamburg. In the former case the variety is naturally a late Grape, whereas Black Hamburg is early. We doubt if this, however, is the true cause of the berries shanking. In the first place you should ascertain whether the drainage is good, and, secondly, the roots should have an abundance of moisture during the growing season. The border may be kept drier in winter, but not so dry as to kill the roots. If the latter are in good condition, then see that the border is thoroughly supplied with moisture during summer as well as plenty of nourishment. See that the aspect of the vinery is to the south or south-east. By close observation you should soon be able to detect what is the root of the evil. Your own experience and observation, as you have admitted, shows that Muscat of Alexandria does better on its own roots than on the Black Hamburg.

Gardener's Directory.—*Daniel Campbell*: The Garden Annual is published at the "Garden" Office, 37, Southampton Street, Covent Garden, London, W.C. The Horticultural Directory is published at the office of the "Journal of Horticulture," 171, Fleet Street, London.

Raising Dog Roses.—*J. T. Thurston*: There is no difficulty as a rule in raising these, if the seed is good, and you exercise a little patience. As soon as the fruits are perfectly ripe rub them out of the hews and sow them at once. Prepare a bed or beds in a situation where the ground will not be disturbed for two years. Spread a quantity of old potting soil from under the benches upon the ground, adding a quantity of leaf soil and sand, unless there is already

a good proportion of these ingredients in the potting soil. Dig this into the natural soil, level the ground and rake it fine. Then make little furrows about half-an-inch deep and 9 ins. apart. Sow the seeds, cover them up, and press down the soil with the back of the rake. Then rake the soil lightly and the operation is complete. Nothing further will be necessary than to keep the ground clean. You can hoe between the lines after the Roses have germinated. A good proportion of the seedlings should come up in spring, or during the course of the summer, but they will remain small the first year. Probably the remainder will not germinate till the spring of the second year, but you need not disturb the soil, as the Roses may be left in position till the third autumn from now.

Covering Vine Borders.—*Allan Cameron*: If the Vine border you mention contains the roots of Vines that are to be forced early, a good mulching of cow manure would be beneficial, by keeping the soil in a warmer condition during frosty weather. On the other hand we think it would be disadvantageous to borders for late and general crops. Frost improves the condition and fertility of the soil, to which it should have access wherever possible, except in the case of early Vine borders. We think, however, that in your western district, the heavy rainfall is more likely to do injury than frost. This being so it might be advantageous to place a layer of dry leaves over the border, and then place the zinc covering you mention a little above the leaves so as to admit a free play of air. You should ascertain whether the border is properly drained, and that superfluous moisture has proper facilities for passing away by a drain if necessary. Good cultivators nowadays generally leave their Vine borders perfectly bare during winter, and mulch with manure in summer, as the practice allows the frost to pulverise and ameliorate the soil. The summer mulching should be put on after the Vines get into full leaf.

Feeding of goldfish.—Will some kind reader tell me as to the kind of food and the best with which to feed goldfish? They are in an aquatic house which is kept at stove temperature. The tanks are full of aquatic plants. I have been feeding them on bread and worms from the garden. Trusting some kind reader will reply, I remain—*Anxious to know*.

Double berry of Lycium europaeum.—*J. T. Thurston*: This was an interesting case. We do not remember seeing it in this species, but it occasionally occurs in several other things, and too often in the Tomato, as it spoils the fruit.

Names of Fruits.—*J. C. S.*: The conical Apple is Mabbot's Pearmain; the flattened variety is Red Winter Pearmain.—*Polton*: 1, Ecklinville; 2, Dutch Codlin; 3, Cellini; 4, Scarlet Nonpareil; 5, not recognised.—*P. McCowan*: 1, Claygate Pearmain; 2, Dumelow's Seedling; 3, Pott's Seedling; 4, Blenheim Orange; 5, White Paradise; 6, Mère de Ménage; 7 and 8, not recognised. They arrived in good condition, being well packed.—*Allan Cameron*: Plum Sultan.

Wires on the Wall of a House.—*J. H. W.*: It is a very uncommon practice to fasten wires to a wall in an upright or perpendicular fashion. The usual and the best way, in our opinion, is to stretch the wires horizontally along the wall at convenient distances apart. They should be about 9 in. to 1 ft. apart. Plants are more easily tied to such wires, because the ties are not liable to slip down, as in the case of upright wires. It is also more easy to fix and strain the wires tight when they are run horizontally along the wall (especially if there is a plate of iron, having eyes or holes for the wires, at either end of the building) than if they were perpendicular.

Names of Plants.—*J. Mayne*: The Fern not recognised. Could you send a portion of frond with spores? The other plant is Phyllanthus (Xylophylla) speciosus.—*J. C. S.*: Nicandra physaloides.—*J. T. Thurston*: 1, Oxalis corniculata rubra, a doubtful British plant, but naturalised in many places, and a determined weed in gardens, where it has once been used as a bedding plant; 2, Achillea Ptarmica.—*J. C.*: 1, Catleya gaskelliana; 2, Pleione Lagenaria; 3, Masdevallia tovarensis; 4, Oncidium varicosum.—*R. Howard*: 1, Aster Novi-Belgii densus; 2, Aster Novae-Angliae roseus; 3, Aster ptarmicoides; 4, Solidago canadensis; 5, Helianthus decapetalus; 6, Helianthus rigidus.—*W. H.*: 1, Pteris quadriaurita argyrea; 2, Selaginella Martensii variegata; 3, Fuchsia gracilis variegata; 4, Ligustrum vulgare; 5, Symphoricarpos racemosus.—*Omega*: The Rigid Sunflower (Helianthus rigidus); 2, The Double Feverfew (Matricaria Parthenium flore pleno).

Communications Received.—*W. S. Sandon* (see next week).—*A. P., Kelso*.—*W. E. B.*—*Omega*.—*A. D. Webster*.—*F. Davids*.—*Coila*.—*M. Temple*.—*H. Harwood Smith*.—*G. Gaskell*.—*J. Sullivan*.—*R. Sims*.—*Geo. Wencroft*.—*Mayflower*.—*L. T.*.—*A. B.*.—*J.*.—*F. C. W.*.—*Thames' Parks*.

GARDENING BOOKS.

HARDY ORNAMENTAL FLOWERING TREES AND SHRUBS, by A. D. WEBSTER. A valuable guide to planters of beautiful trees and shrubs for the adornment of parks and gardens. Second and cheap edition now ready. Price, 2s.; post free, 2s. 3d.

CHRYSANTHEMUMS AND THEIR CULTURE. By Edwin Molyneux. Ninth Edition. By far the best practical work yet written on this subject. Price, 1s.; post free, 1s. 2d.

VINES & VINE CULTURE.—The best book on Grapes. By Archibald F. Barron, late Superintendent of the Royal Horticultural Society's Garden, Chiswick, and Secretary of the Fruit Committee.—A New and Cheaper Edition, Revised and Enlarged. Demy 8vo, Handsomely Bound in Cloth. Price, 5s.; post free, 5s. 3d.

THE CARNATION: ITS HISTORY, PROPERTIES, AND MANAGEMENT; with a descriptive list of the best varieties in cultivation. By E. S. Dodwell. Third edition, with supplementary chapter on the yellow ground. Price, 1s. 6d.; post free, 1s. 7d.

FERNS & FERN CULTURE. By J. Birkenhead, F.R.H.S.—How to grow Ferns, with selections for stove, warm, cool and cold greenhouses; for baskets, walls, wardian cases, dwelling houses, &c. Price, 1s.; by post, 1s. 3d.

THE AMATEUR ORCHID GROWER'S GUIDE BOOK. By H. A. Burberry (Orchid Grower to the Rt. Hon. J. Chamberlain, M.P.). Second Edition, with coloured plates. Containing sound, practical information and advice for Amateurs, giving a List with Cultural Descriptions of those most suitable for Cool-house, Intermediate-house, and Warm-house Culture, together with a Calendar of Operations and Treatment for each Month of the Year. In Cloth. Price 5s.; post free, 5s. 3d.

Postal and money orders should be made payable at the East Strand Post Office to F. A. COBOLD "GARDENING WORLD" Office, 1, Clement's Inn, Strand, London, W.C.

FIXTURES FOR 1897.

 WEDNESDAY, October 20th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 THURSDAY, October 21st.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 FRIDAY, October 22nd.—Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

GUNNERSBURY HOUSE, ACTON.—In August last while inspecting the grand collection of Water Lilies in the pond at Gunnersbury House, one of the seats of Leopold de Rothschild, Esq., we also made a general inspection of the place, but time and space prevented us from recording what we then saw. Fruit rather than plants is the great speciality of the indoor department at this establishment. Many of our readers will remember the time when Mr. James Hudson, the gardener, made the place famous as the home of large specimens of stove and greenhouse plants that made their presence felt at many an exhibition. He is now an equally successful exhibitor of fruit and fruiting trees.

The first orchard house we entered was that in which the fine collection of Peach and Nectarine trees, which received the Gold Medal at the last Temple Show, was grown. The house was started on the 1st. December last. The growth of the trees was completed in the house before being placed in the open air. At the time of our visit, the house was devoted to Melons, the fruits of which were newly set. The plants were remarkably vigorous, for though a foot of soil had been added to the bench about twelve days previously, the roots had thoroughly permeated it and were showing outside. The favourite varieties were Sutton's Triumph, Eureka, Scarlet, A1, Empress, Invincible, and others.

The next division of the house had been devoted to Peaches, Nectarines, and Plums, which were started on the 1st January last. A second batch of Figs occupied the house on the occasion of our visit. Fourteen days was allotted them in which to ripen their wood, after which they were stood outside. About the middle of next November, Pingo de Mel and St. John Figs will be started for the first early crop. These two varieties for early work cannot be beaten. The second batch will consist of the above two and Brown Turkey. For the third batch the trees are cut back in the first weeks of March; and other batches for succession are cut back at intervals of three weeks. This keeps up an unbroken supply of fruit. The fruits from the first batch of cut back trees had mostly been gathered by the 8th August last, while the second batch of cut back trees commenced to ripen in September, and will keep up a supply to the end of the present month, or thereby, subject to variations of weather. It will thus be seen that great cultural skill is necessary to keep up a regular supply of Figs.

A feature of the place is a houseful of small berried, finely flavoured Frontignan Grapes which are highly esteemed by the lady of the house. The Vines are kept under a north wall from February till the end of May to retard them. They are then brought indoors and grown cool. Altogether we noted twenty-five of these pot Vines in the house, each rod carrying about ten bunches of Grapes. The varieties included Strawberry, Black, White and Grizzly Frontignan, Gradiska, Dr. Hogg, Chasselas Vibert, the stoneless Black Monukka, and Muscat Hamburgh. The next vinery entered contained splendidly coloured Foster's Seedling and Madresfield Court Grapes. Air was kept on at night with a little heat in the pipes, and water was being given twice a week by means of the hose, because the border inside the house is narrow. With this treatment no cracking of the berries resulted. The next division passed through was entirely devoted to one patriarchal tree of Lord Napier Nectarine. It is about twenty years old, yet remains remarkably healthy, although 400 fine fruits were gathered from it. A third vinery was occupied with a fine crop of well finished bunches of Alnwick Seedling and Muscat of Alexandria. In the next division the whole of the fruit had been cut. The Grapes in the fifth vinery were just colouring up. The varieties here were Alicante, Alnwick Seedling, and Appley Towers inarched upon West St. Peters. The berries of Appley Towers look intermediate between Alicante and Madresfield Court, while the flavour resembles that of Gros Colman. The bunches were compact and tapering.

The staging in the Strawberry house is constructed quite differently from that which we usually see. The shelves are highest next to the front glass, and slope towards the central pathway of the span-

roofed structure. The Strawberries give as much satisfaction with this arrangement, as if the shelves were sloped the other way. The watering of the plants is a more pleasant and satisfactory occupation, because the pots are easy to get at. The second division of this same structure is known as the Cherry house. The trees are grown in pots and shifted outside when the fruits are gathered.

At the time of our visit, the house was occupied by the latest batch of Peaches and Nectarines to furnish a supply in October, after the crop on the walls outside has been harvested. An abundance of ventilation at the bottom of the house was being given to prevent rapid ripening of the fruit, and by such means a supply can be maintained for ten days longer than the latest varieties on the open walls. Here also were some Pears in pots. The third division was monopolised by the fifth and sixth (the latest) batches of Figs in pots, for fruiting during October and November. Another span-roofed house—all these orchard houses are new—was filled with Apples and Plums in pots to furnish a late supply during September and October. The Plums included Monarch, Grand Duke, Late Transparent Gage, Golden Transparent, Late Rivers, Ickworth Imperatrice, and Coe's Golden Drop.

The western aspect of the high wall separating the garden from the public highway is worthily occupied with a collection of Peach and Nectarine trees. We noted only those bearing a heavy or satisfactory crop of fruit. The first Peach to ripen outside is Hales Early, a clingstone variety, though rich and juicy. Princess of Wales is almost, if not equally, as early. Fine crops were also borne by Alexandra Noblesse, Violette Hâtive, Dymond, and Rivers' Early York. The latter succeeds Hales Early in the order of ripening. The method of obtaining late supplies of Strawberries here might well be adopted elsewhere. The plants of Vicomtesse Hericart de Thury, which have been forced and the fruits gathered, are turned out of the pots and planted in front of the Peach wall in April. The flowers afterwards produced are picked off till the second week in July. After that they are allowed to develop fruit, and a supply is obtained till October, or till frost stops growth. Pickings have been obtained as late as the 26th October by this method of treatment. Plantations of Alpine Strawberries afford pickings all the season, and the flavour of the fruit is relished. The fruits are aromatic and agreeably acidulated. The Apple trees have borne an average crop of fruit. Some of the Pear trees have borne heavily while others were barren.

In passing across the well kept lawn we noted a floriferous mass of Montbretia around a large clump of Rhododendrons. The huge specimens of scented leaved Pelargoniums on the terrace in front of the mansion were in splendid condition, although many of them had recently been brought back from the London residence of the family, where they often get black with soot. The next tier of leaves hides or obliterates all trace of the soot. On the pillars of the verandah were fruiting vines of the Chasselas Vibert and Esperone varieties which ripen their bunches. Myrtles, Sweet Scented Verbenas, and Pomegranates, grown as pyramids and standards in tubs, gave the place a quaint and unique appearance. Magnolia grandiflora was flowering grandly on the house. In the flower garden two oval beds of the crimson-red Begonia Corbeille de Feu were flowering grandly, though shaded by trees after 3 p.m. Heliotrope Piciola, with dark flowers in huge trusses, and Madame Tillay, with lilac

flowers, are both new and noble looking varieties. Cameleon, with blue buds and dark lilac flowers, blooms more profusely than either, and is better adapted for pots and bedding purposes on that account. All are new and, we believe, bound to become popular.

There is a fine collection of the Crozy strain of Cannas in the best named varieties, such as Koenigin Charlotte, Anton Barton and Eglendale, which flower freely in the open. Many of the best of the new Cactus Dahlias are also well cared for. Another uncommon feature was a collection of shrubby Veronicas, grown as tall-stemmed standards for autumn flowering. They included Andersoni, Hendersoni, Dieffenbachii, Lewisii, and Macrocarpa alba. A grand batch of 100 plants of *Salvia splendens grandiflora* has already given a magnificent account of itself.

The Queen of Greece is excessively fond of flowers, and delights in sharing her pleasure in them by ordering large quantities to be distributed amongst the hospitals at Athens.

Mutual Improvement Society, Woolton.—On Thursday of last week the first meeting of this season was held in the Mechanics' Institution, Mr. J. Glover presiding. The subject for consideration was "Pears," more especially for wall culture, by Mr. J. Fairhurst, of Allerton. The lecture was the outcome of the essayist's own experience of a wall some 180 ft. long by 10 ft. high. Ample drainage was recommended on which slates should be placed to keep the roots from penetrating the rubble, good turfy loam with wood ashes being the most suitable for building fruit-bearing wood. The form of tree most suitable was the cordon with five rods trained at an angle of 45°, which would give an increased length of rod, and allow the fruit to hang clear of the foliage, a consideration of practical importance in this district. Pruning root and limb was fully detailed, with watering, especially manure watering in winter. Mr. Fairhurst, in addition to his lecture, gave practical illustrations of his success by a collection of well-grown fruit. A discussion and questioning followed, in which Messrs. Todd, Carling, McColl, and Waterman took part. A cordial vote of thanks was tendered to Mr. Fairhurst for his excellent paper. A new feature at these meetings was announced, in which slides would be prepared for the microscope, and Mr. H. Corlett showed specimens of *Zea*, *Hoya carnososa*, and the twig of two-year-old Lime, which proved both interesting and instructive.

Presentation.—As noticed in these columns last week, the members and friends of the Hawick Working Men's Horticultural Society, met in the large room of the Crown Hotel, on Saturday night, to present Mr. George Davidson their esteemed treasurer with a very handsome marble timepiece, as a token of their regard and appreciation of his services rendered gratuitously to the Society. Mr. Alex. Kyle, vice-president was called to the chair, and after supper, suitably referred to the object of their meeting that night, to honour their friend. He called upon Mr. Donald Brydon, president, to make the presentation, who in doing so referred to the many good qualities of Mr. Davidson, whose obliging and modest disposition had gained him many friends. They were met to show that friendship in a tangible form, and as a mark of their appreciation of his services, he asked Mr. Davidson in the name of the Society to accept the timepiece, and hoped he would be long spared to continue his labours amongst them. Mr. Davidson, in his own modest way feelingly replied he had done nothing, he thought, to merit such a kindness. He gladly gave his services to the society for the future as in the past; he would only be pleased to further the interests of the society to the best of his ability, and would always look back on the present occasion as the proudest night of his life. The health of Mr. Davidson was pledged with three times three, the whole company rising and singing "For he's a jolly good fellow." Other toasts followed, along with songs and recitations. Altogether it was voted by one and all to be a night to be long remembered with pleasure.

The Fund for the Relief of Essex Farmers, who suffered on the occasion of the terrible hailstorm in June last, has now reached £43,000.

Free distribution of Hyacinths.—Councillor Crossfield, of Walton Lee, has distributed free a quantity of Hyacinth bulbs to working men and working women living within the borough of Warrington.

Will of the Late Mr. Alfred Sutton.—It will be remembered that this gentleman, who retired from the firm of Messrs. Sutton & Sons, Reading, about nine years ago, died on the 7th August last, at his residence, Greenlands, Reading, at the age of 79 years. His will, which bears the date 31st January, 1895, has just been declared. Mr. Alfred Sutton, J.P., leaves personal estate valued at £114,388. His executors are his sons, John and Herbert Sutton, power being reserved to grant probate also to the widow, Mrs. Ellen Sutton, to whom he bequeathed £1,000, his furniture and household effects, greenhouse plants, outdoor effects, horses, carriages, the use of the freehold house at Reading, and the income during her life of his residuary estate, which, subject to Mrs. Sutton's life interest, he leaves in trust to pay after her death, namely, certain specified sums to each of his three daughters, Alice, Ellen, and Edith, and likewise to each of his six sons, John, Samuel, Francis, Edwin, Henry, and Hugh Reginald. Having admitted his son, Herbert, to partnership in his business, he considered it unnecessary to make further provision for him.

Orchids at the Sale Rooms.—There was some lively bidding for the rare or very choice things which turned up at the Sale Rooms of Messrs. Protheroe & Morris, Cheapside, on the 8th inst. A very distinct and handsome variety of *Laelia pumila praestans* was knocked down at 56 gs. The lip had a large, rich purple blotch on either side of the lamina, the rest of the flower being pure white. *Dendrobium Phalaenopsis schroderianum album*, a pure white form, fetched 30 gs. H. T. Pitt, Esq., Rosslyn, Stamford Hill, secured a handsome yellow variety of *Odontoglossum grande* for 40 gs. The usual brown blotches were reduced to pale green ones, the rest of the flower being bright yellow. Six plants of *Laelia pumila alba* fetched 20 gs. to 30 gs. each. The bigeneric hybrid *Laeliocattleya superba* × *elegans* reached 15 gs.; and *Laeliocattleya Harrisoniae* × *elegans* was secured for 10 gs. A healthy piece of *Cattleya Wageneri* of moderate size did not change hands, although 48 gs. was offered for it. *Cattleya Mossiae reineckiana* found a bidder at 24 gs. *Sohralia kienastiana* and *Cymbidium winnianum* were sold for 12 gs. each. Evidently, good things have no difficulty in finding bidders at high prices.

Mr. W. Swan, of Bystock.—We regret very much to hear of the intended break up of Bystock, Exmouth, Devon, the beautiful residence of J. P. Bryce, Esq., who has taken a house about Prince's Gate, London, where he is coming to reside about the middle of November next. He intends selling off everything in the gardens and stables and to shut up Bystock, leaving merely a caretaker in charge. By this proceeding some twenty-six men will be thrown out of work, including Mr. W. Swan, the gardener, who has had charge of the gardens for the last five and a half years, at the same time superintending all work on the estate, which employed its own carpenters, masons, painters, and smiths, besides woodmen, gardeners, &c. The beauty of this private residence, with its varied scenery of wood, water, hill and dale so peculiar to Devonshire, is known far and wide. The place has never looked better, nor more neatly kept than it is at the present time. The hot-houses are still filled with their varied and interesting occupants. The rockeries, hardy open air ferneries, grottoes, streams, and cascades with various ornamental ponds at different levels has made this place one of a few in East Devon. It is rather a serious outlook for Mr. Swan, being so suddenly turned out of a situation on the edge of winter; but with his varied experience Mr. Swan should not have long to wait for a fresh appointment. He has long been noted as an Orchid grower of first-class cultural skill, though Bystock has not offered much opportunity for displaying talent in this direction. Moreover, Mr. Swan is an all-round gardener of first-rate ability.

The Potato Crop in Connemara is said to be utterly ruined, and that the rumours regarding it are absolutely true.

An Interesting Ceremony took place on October 6th at the nurseries of Messrs. Balchin & Sons, Hassocks. Mr. Richardson, who has been manager here for many years, was presented with a handsome time-piece suitably inscribed by the employees, as a wedding present, also a case of silver spoons, which came as an appreciable surprise to the recipient. I wish him long life and happiness.—A.O.

In Loving Memory.—In connection with the late Mr. James Cocker, of Aberdeen, we note what seems to us rather novel or uncommon in the way of memorial cards. Mrs. Cocker and family, in returning thanks for sympathy on an ordinary address card send out a neatly finished, folded card, bearing on the left hand half the words: "In loving memory of James Cocker, Nurseryman and Seedsman, Aberdeen. Died, 15th September, 1897, aged 64 years. Interred in Spital churchyard." On the right hand half of the card is the portrait of the deceased, Mr. James Cocker, and a good likeness it is.

Dundee Chrysanthemum Carnival.—The Jubilee celebrations have not yet been completed, for the Dundee Chrysanthemum Society intend to make their annual exhibition worthy of the great event by the holding of a Chrysanthemum carnival on the 25th, 26th and 27th November next. The society intends putting forth every effort to make the show a success, and calls upon every grower of the popular "queen of winter flowers" in the district for hearty co-operation towards the end in view. It is felt that if every owner of an establishment were to give his gardener permission to exhibit in the various classes scheduled by the society the result would be a memorable display, worthy of the city and district, and form a living record of the great advancement in Chrysanthemum culture that has taken place during Her Majesty's reign. Mr. Norman Davis is to act as one of the judges of plants and flowers; while the displays for effect are to be entrusted to lady judges for the placing of the awards. A leading London band is to supply the music, and to lovers of music the orchestral and instrumental concerts arranged for by the council, will undoubtedly prove highly attractive. A largely increased membership is confidently anticipated in view of the superior attractions offered and the general excellence of the show. It is to be held in the spacious Drill Hall, Dundee. Further particulars may be obtained from the secretary, Mr. W. P. Laird, Netbergate, Dundee.

Devon and Exeter Gardeners' Association.—The annual business meeting of this society was held on September 30th, in the council room of the Guildhall, Exeter, under the presidency of Mr. E. A. Saunders, J.P. There was a capital attendance which included the Mayor of Exeter (Mr. Alderman R. Pople), Messrs. P. C. M. Veitch, J.P., G. D. Cann, Andrew Hope (Hon. Secretary), W. Mackay, R. J. Mills, and W. Andrews. The report for the year 1896-7, which was submitted by Mr. Andrew Hope, gave a brief review of the autumn session, and stated that the attendances were good throughout both sessions. The flower show in March was larger and better in every way than its predecessors, and assumed the proportions of a really first-class spring show, but the small annual subscription of the members and the fewness of the honorary subscribers to the prize fund do not warrant a continuance of the exhibition. By means of the essays read and the discussions that followed, a large amount of knowledge must have been imparted to those present at the meetings. The chairman on rising to move the formal adoption of the report, was very cordially received. Happily, said he, there was nothing political with the Gardeners' Association, and he was sure they were acting wisely in following out such lines. The Mayor seconded. The election of the president was the next business. The nomination fell to the lot of Mr. Andrew Hope who, in again proposing Mr. Saunders, reminded them of the services he had rendered them. On being put to the meeting, Mr. Hope's motion was carried with unanimity. Mr. Andrew Hope, and Mr. W. Mackay were re-elected Hon. Secretary, and Hon. Treasurer, respectively, on the motion of Mr. Weeks, seconded by Mr. W. R. Baker.

Sycamore on a Church Tower.—Until recently at least there existed a Sycamore on the tower of the church at Clannaborough, in North Devon. It was known to be 50 years old, and the swelling of the trunk and roots was beginning to force the stones of the tower asunder.

MR. DAVID AIRDRIE.

The Hove Industrial and Horticultural Society.—The twentieth annual exhibition of this society, lately held in the Hove Town Hall was a great success. The display of fruits, flowers, and vegetables contributed by gardeners was a very creditable one, Grapes being especially fine. The heaviest Potato, weighing 1 lb. 5½ ozs., came from Mr. Purey, 9, Westbourne Mews. Messrs. Balchin & Sons, offered a special prize for six varieties of vegetables grown by allotment holders. Mr. Holmes, 5, Westbourne Mews, was the successful candidate in this class. Mr. Payne, 4, Freeman's Court, Portslade, took the first prize for the neatest and best cultivated plot or allotment. The neatest and best cultivated cottage garden was adjudged to be that of Mr. C. A. Martlew, 8, Connaught Road. Mrs. M. F. Coates, 67, Landsdowne Place, sent the best epergne, and Miss F. Cooper, 18, Eaton Gardens, received the first prize for a basket of flowers.

ORCHID NOTES & GLEANINGS.

BY THE EDITOR.

Cattleya Warscewiczii (gigas) Pitho. *Nov. var.*—Some time ago an importation of *C. Warscewiczii* was added to the collection of T. McMeekin, Esq., Falkland Park, South Norwood Hill. By and by they made vigorous growth, set their sheaths, and in due time two dozen of them bore open flowers all at one time. The variety under notice was one of them, and proved to be the most distinct amongst them, being very conspicuous on that account. The sepals and elliptic petals are of a warm rose, and of great length, the flowers measuring 8 in. across the petals. The distinctive character lies in the lip, which has a dark purple tube, and a richer purple lamina, giving place to a lilac border at the wavy, crisped margin. The eye-like blotches characterising the type have so extended in this variety that they nearly cover the side lobes, which are white with a narrow, pale rosy-lilac margin. Yellow takes the place of the white in the throat of the flower, and this yellow area has a few purple lines. The interior of the tube is almost wholly rich purple. The middle portion of the lip, therefore, including the side lobes, is unusually pale, and toning down the dark colour at either end gives the whole flower a subdued and pleasing effect. Mr. A. Wright, the gardener, succeeds very well in the culture of *Cattleyas* of all the popular types.

PEOPLE WE HAVE MET.

MR. DAVID AIRDRIE.

The accompanying is a portrait of Mr. David Airdrie, gardener at Larbert House, Stirlingshire, who is so well known at Northern exhibitions as a "Hero in the strife," with plants, cut flowers, and fruits. This has been strongly in evidence at Glasgow autumn show, where this formidable competitor tabled some of the best fruits ever seen at St. Mungo's.

Mr. Airdrie's all-round experience was gained from tuition of the highest order! After serving an apprenticeship at Pitlour, Fifeshire, he went to the gardens at Delvine, Dunkeld; Balbirnie, Fordell; and was at two places near Paisley, acting in these gardens in the capacity of journeyman and foreman. He then went to the United States as head gardener, where his zeal led him to compete on a large scale with specimen plants. He then had a grand collection under his charge at Worcester, Boston, Mass. This was followed by fruits, vegetables, and cut flowers, with such a success as young Airdrie might justly have been proud of.

After four years active gardening in the far west, Mr. Airdrie was induced to return to bonnie Scotland, where his prowess was soon exemplified at horticultural exhibitions. At Stirling (a district famous for many generations past for "warriors" meeting foemen "worthy of their steel") Mr. David Airdrie, on the occasion of the Queen's Jubilee, 1887, won a silver cup for a table of plants, along with fourteen first prizes and seven others.

Some years ago he went as gardener at Larbert House, where he has been so well backed in his enthusiasm to maintain high class gardening by his estimable employers, Mr. and Mrs. Grabam, who have long given proof in a tangible form of their desire to maintain first rate gardening.

The improvements which have been made in the grounds, and the erection of glass are creditable to their liberal spirit, good taste, and opulence. Mr. Airdrie has been an extensive cultivator of Chrysanthemums, and tabled, at different times, most creditable collections of cut blooms. He captured two Silver Cups for collections of plants, besides three other Silver Cups, three Silver and one Gold Medal. He raised a Chrysanthemum named Mrs. Airdrie, which has come well to the front of late years, and aided him in his exhibits at Edinburgh and Glasgow. Begonias and Crotons are also among the plants specially well done at Larbert.

Mr. Airdrie is still in the prime of life, and his enthusiasm in performing his duties should entitle him to the cognomen "Excelsior."

SEED FARM AT EYNSFORD.

AWAY back in the summer time when sunshine was plentiful and the days were lengthy we made a hurried inspection of the extensive seed farm of Messrs. H. Cannell & Sons, Swanley, and now take the opportunity of recalling some of the many things we saw. The men on the farm were busy harvesting Oats for the horses and straw for packing, the latter being scarce and at a premium in this part of the country. The earlier flowers and vegetables were maturing a rich crop of seeds; but some were in full bloom and others advancing to that stage.

A trial was made of all the most popular varieties of garden Peas, and the crop was almost ready for harvesting. Broad Beans were also doing well on the chalky soil, the pods of a seedling named Cannell's Best of All being 1 ft. in length. Parsley and Parsnips were also in seed.

Close by the above on the hill side was a grand collection of eighty-four varieties of all the best Sweet Peas on trial. Most of them were heavily laden with pods, so that we noted only a few of those in bloom. The brilliant pink of Lady Penzance makes this a choice thing for cut flowers. Those of Royal Robe are of a uniform rosy-pink and very pleasing. Little Dorrit with rose standards and blush wings is also choice, and in the same vein as Painted Lady but quite different. New Countess has darker blue flowers than the type. Maid of Honour is pretty with its blue-edged wings. Cupid and Pink Cupid also do as well here as anywhere.

Florists' flowers receive a large amount of attention including the very dwarf strain of Antirrhinums, which form pyramidal little tufts full of bloom. Queen of the North is pure white, very free

flowering, and belongs to a race that is intermediate in height, and very useful for a variety of purposes. Other varieties rejoice in yellow, crimson, gold, purple, and other colours. Ten Weeks Stocks were flowering profusely; and the same may be said of a hybrid race of Aquilegias between *A. chrysantha* and *A. caerulea*. The double white *Papaver somniferum* Snowdrift was very pure and conspicuous. The dark foliage and brilliant scarlet flowers of *Tropaeolum King of Tom Thumb* was highly effective.

On the lower side of the road running through the farm we came upon a plantation of the new *Senecio elegans pomponicus* with creamy-yellow flowers. A dwarf variety of *Papaver somniferum* named Cardinal rejoiced in bright scarlet flowers. Another sort named Cramoise Superieur had crimson and yellow flowers. The varieties of *Dianthus Hedewigii* were notable for the great size and gorgeous colours of their flowers. The China Asters were just making for bloom, a white variety of the strain Queen of the Market being at its best. This strain is the earliest in cultivation. The crimson-red *Linum grandiflorum rubrum* was in the height of its glory. The glowing red flowers of *Papaver glaucum* (the Tulip Poppy) were handsomely marked with four black blotches at the base. Very pretty also were the blue and pink varieties of *Centaurea Cyanus Victoria*.

Clarkia elegans Salmon Queen is a double variety with salmon flowers and very constant, every flower being double. Here we came across another plantation of the Scotch striped *Antirrhinums* in a great variety of colours. At some distance off was a plantation of the Tom Thumb strain, in yellow, white, purple, crimson, yellow with a purple tube, and bronzy colours. A bright yellow variety named Golden Gem, and grown separately was very handsome, and might be used for bedding purposes. A large plantation of the Comet strain of China Asters rejoiced in blue, pink and white colours. A collection of *Verbenas* raised from seed, and in half a dozen colours, was gorgeous in glowing as well as soft and pleasing colours.

Carnations grown from seed were remarkable for the quantity of flowers they produced. *Salpiglossis* in many colours rejoiced in the dry weather of the period of which we speak. The same may be said of French Marigolds. A pretty and uncommon annual was *Arnebia cornuta* bearing a profusion of yellow flowers with five prominent black spots like the Prophet Flower. The pleasing and ornamental annual, *Statice Sewerzowi* has now sported into lilac, purple-pink and other shades. *Cosmos sulphureus*, with dark and finely divided foliage, and golden yellow flowers is the best of the genus for vases and floral decorations. Very distinct and curious in its way is *Lobelia Duplex*, with dark blue, double flowers, and dark foliage; it is dwarf in habit. *Nemesia strumosa Suttoni* rejoiced in several very pretty colours. All the leading varieties of *Violas* for bedding and otherwise are grown at Eynsford. A large plantation of *Pentstemons* was flowering profusely. A collection of *Roses* is grown here, and amongst them we noted the *White Marechal Niel* grown as standards.

Amongst vegetables we noted a good breadth of spring sown Onions of the large varieties suitable for exhibition. They are well cared for at Eynsford and repay the attention they receive with large and heavy bulbs. Ailsa Craig, Cannell's Globe, Cranston's Excelsior and others of that type were much in evidence, and must have weighed well when harvested. Plantations of Carrots, Beet, and Parsley Beauty of Eynsford, were maturing fine crops of seed.

On the hill side above the road a block of low, span-roofed houses, each 100 ft. in length has been built. A hasty survey of the contents was made, and we were particularly pleased with a houseful of Melon, Anthony's Favourite (Empson). The plants were growing on ridges of soil on the high and solid benches on either side of the pathway. The fruits were about half grown and abundantly produced. Pot Vines in a single row on either side, occupied another house and were making splendid growth. A third house was filled with Tomato Cannell's King, a variety noted for its short stems, dwarf habit and prolific character. Elsewhere was a collection of Tomatos all raised at the same time, and including Conference, Chiswick Red about 5 ft. high, and Marvel, only 1½ ft. to 2 ft. high. The latter is admirably adapted for pot work. Other varieties we noted were Duke of York, New Zealand Peach (reddish-

pink), Sunset (golden yellow and egg-shaped), Frogmore Selected and Golden Nugget, most of them being popular varieties bearing heavy crops. Two houses were entirely occupied with Climbing and other Tea Roses in pots, making capital stuff for present planting. Beneath the Roses in one house was a collection of various Stocks being grown for seed. One of the duties to which these houses are applied is the drying of seeds collected on the farm. One was entirely filled with seeds of various kinds, and others were being prepared for the reception of more recently harvested kinds.

NOTES FROM DUNOON.

THE auld clachan o' Dun-Umhain is now known as one of the most fashionable watering places on the Firth of Clyde. But the modern Dunoon, fashionable and fascinating though it be, is not yet quite replete with all the exacting requirements of these latter days. But, why should it be? As a matter of fact, this very *déshabille* condition renders the place, to my mind, all the more interesting, all the more worth visiting. It will, then, be gathered from these remarks that Dunoon is in a transition state, *i.e.*, compounded of the old and the new, and, therefore, lacking, so to speak, the gilding and ostentatiousness of some of its southern sisters. But while these questionable graces may be said to be absent in this right little Scotch town, it possesses what they do not—a passive beauty and a quiet charm, in addition to the splendours of mountain, moor, and loch.

Moreover, steamers, numerous and well-appointed, ply the pier from morn to misty eve. Invigorating air and pure water are other inestimable advantages which Dunoon enjoys. All these things, however, are demanded of the authorities; they *must* be supplied, within reason, or visitors would soon cease to patronise the place. Lovers of Burns will be gratified to hear that, according to local tradition, Mary Campbell, or "Highland Mary," was born here, and that a noble statue has been erected to her memory on the old castle hill. She is looking with earnest eyes across the Clyde towards Ayr, the birthplace of the poet, and yet he asks in feeling tones

"Oh, Mary! dear departed shade,
Where is thy place of blissful rest?"

"The art that mendeth nature"—in a horticultural sense, I regret to say—is not much in vogue here. Gardens there are, it is true, but their beauty is veiled. Professionals hold their own, but amateurs are not in evidence. Perchance the latter think the cultivated charms of Flora are inferior to her wild and natural graces, or that want of time and inclination check the ardour of the class. 'Tis pity that these things militate against the "gentle-art," for a garden-town is the prettiest of all towns; and, I think, the most attractive too. We Saxons have been brought up to believe that canny Scots are great gardeners. This may be true professionally, but not otherwise; else we should see the amateur in greater force. Still, there are some amateurs on the Firth of Clyde, for I noted several pretty combinations of nature and art.

Ferns, alpine, and herbaceous plants do well in this moist clime, while such things as *Fuchsia Riccartoni*, *Veronica Traversii*, *Escallonia macrantha*, *Berberis Aquifolium*, *Pernettya mucronata*, *Desfontainea spinosa*, and many others, including Conifers, seem to revel in the moisture and the equability of the air.

On the shore are the Sea pink, or Thrift (*Armeria maritima*), the Sea Plantain (*Plantago maritima*), and the common Feverfew (*Matricaria inodora*), which descends almost down to the water line. Along the road the pretty pink Storks'-bill (*Geranium dissectum*) crops up for admiration; while up the mountain sides in boggy places dwell the Bog Asphodel, (*Narthecium ossifragum*), the Marsh Red-Rattle (*Pedicularis palustris*), and one of the choicest of our autumn flowering plants, *viz.*, *Parnassia palustris*, commonly known as "Grass of Parnassus."

If we ascend still higher a large variety of mosses will demand attention, the very useful *Sphagnum* being amongst the number:—

And here and there, in wild ravine,
Where water runneth by,
Cool Filices, in emerald-green,
Will fascinate the eye.

If, too, one gets tired roaming about, there is the

"Bishops' Seat" 1,651 ft. above sea level, which may be had for the climb, and which will afford not only a rest, but a magnificent prospect of surrounding hills, mountains, moors and lochs.

Black peat is much in evidence on the upward track, and will doubtless appeal to the horticulturist as well as the poor cotter in his lonely hut. Perhaps one may be pardoned particular sentiments at so great an elevation, ecclesiastic and otherwise; but I have reason to believe that Dunoon is much affected by this mountain, and that if it could be removed—an Herculean operation I admit—Dunoon would enjoy softer suns and less dubious days. On the whole, however, I gather from the native plants that Dunoon has a splendid climate, and that old Sol must shine sweetly—*when it doesn't rain.*—C. B. G., Acton, W.

EARLY CHRYSANTHEMUMS FROM ROTHESAY.

THE mild and equable climate of Bute, particularly around the beautiful and sheltered Bay of Rothesay, is admirably adapted for the production of flowers in the open air. We are in receipt of a large boxful of cut sprays of early flowering Chrysanthemums from Messrs. Dobbie & Co., of Rothesay. All were cut from an open field on the 7th inst. Being now in the pink of condition, they are evidently a little later than in the neighbourhood of London; but considering the northern latitude of Rothesay, they flower sufficiently early to make them of great importance for cut flowers. Some of the varieties at least, were in bloom early in September, so that their period of duration is of considerable length.

POMPONS.

The flowers of this type are in no way inferior to those grown under similar conditions in the south. Mostly all of them have recently received XXX from the Floral Committee of the Royal Horticultural Society as a mark of approbation indicating their value for early work. As all of them have been recorded in recent issues of THE GARDENING WORLD, we need not here point them out again but refer our readers to the recorded lists. The flowers of Piercy's Seedling and La Luxembourg are of a lovely bronze; those of Scarlet Gem, crimson-red; Précocité, clear yellow; J. B. Duvoir, pink; Mrs. Cullingford, handsome blush-white; Flora, golden-yellow; Petillant and Yellow l'Ami Conderchet, clear soft yellow; Bronze Bride, globular, rich dark bronze; Toreador, glowing red with yellow edges; Mr. Selly, salmon-pink; and White St. Crouts, white with pink and yellow tints. The lovely Martinmas needs only to be seen in the growing condition to be appreciated; its finely built flowers are several shades darker than Blushing Bride, equally valuable and popular. Early Blush is smaller and less compactly built, but the flowers are now well advanced, Strathmeath has dark rosy-purple flowers of fine proportions. Longfellow is a pleasing blush-white; and Madame Zephir Lionet is a rich bronzy-orange fading at the margins, but very pretty.

JAPANESE.

What has been said as to the recognised value of the Pompons, applies equally to the early flowering Japanese types, so that Messrs. Dobbie & Co. must have sent only a selection of the very best of each group and colour from their extensive collection at Rothesay, which we know to be of many years standing, and to which the best continue to be added as they are put into commerce. The self clear yellow G. Wermig is as popular and useful as ever, and the same may be said of Madame C. Desgranges, the parent from which it sported. Its white flowers are much purer than we have seen them for some time past in the open air. Mrs. Pitcher is another lovely white, slightly tinted with blush in the younger stages. Baronne G. C. de Briailles opens rosy and fades to a beautiful cream when at its best. Viscountess d'Avène and Rene Chandon de Briailles are of different shades of rich rose-carmine. Maria is more of a dark purple hue. Madame Marie Masse is also rose-purple, of large size, and very popular as an early market variety in America. The silvery-pink Mons. Gustave Grunerwald is a lovely flower, but rather paler than in summer in the southern counties. The rich orange of Mons. Dupuis is lovely indeed. The rich rose of Le Poete des Chrysanthemes is handsome either in daylight or by artificial light. The long and slender salmon-pink florets of Mons. L. Lionet give the blooms a graceful and pleasing

appearance. The dark carmine flowers of Edith Syrratt are also very handsome and the darkest of the collection sent us.

In the open ground the plants are allowed to grow naturally, without any disbudding whatever; and they form bushy masses laden with flowers of various sizes and colours, but all handsome and useful for cut flower purposes. Most of the above were represented by sprays, bearing practically a handful of flowers in various stages of development, but each the complement of the other and forming a harmonious whole. The durability of these flowers when cut and placed in water is well known and a strong recommendation in their favour.

LIVERPOOL FARMERS' CLUB.

THE eighth annual exhibition of the above was held on the 9th inst. in the North Haymarket, Liverpool, under most favourable auspices. The exhibits were fully up to the usual high standard and proved of considerable interest to the gardener, the Potatoes being always of wide scope, including numerous varieties and garnered from many kinds of soil. Cauliflowers were of immense size and consisted of thirty-seven entries. Carrots were a most important feature, the roots being symmetrical and of large size. Owing to the extent of the schedule only first prize-winners can be given.

In the class for early white kidney Potatoes, Mr. G. Ashley, Manchester, scored with nice clean tubers of Duke of York. For Sutton's Early Regents, Mr. J. R. Newton, Warrington, led the way. For an early round sort, Sir Patrick Talbot, Esher, Surrey, secured first and a special award with fine specimens of Windsor Castle. For second early kidneys, Mr. G. Ashley won with International. In the class for second early round Potatoes, Mr. Peter Davies, Warrington, led with Royal Standard. For a second early of any other shape, Mr. John Halsall, Burscough, won with Goldfinder. Mr. Owen Roberts, Tarporley, Cheshire, had the best exhibit of Snow-drop kidney. Mr. J. R. Newton was first with a fine lot of Reading Giant. For Sutton's Abundance, Mr. Jas. Johnson, Scarisbrick, was first. Mr. Edwin Clarke, Warrington, was to the fore for Up-to-Date, amongst a grand lot. Mr. Robert Blezard, Ruthin, led the way with pretty pear-shaped samples of Late Drone. Mr. John Halsall was the winner out of eighteen entries of Maincrop. First prizes were taken for Late Bruce by Mr. J. Johnson; and Fidler's Colossal by Mr. G. Ashley, large and of good form. For any other late kidney, Mr. J. R. Newton took first honours and special with large tubers of Reliance.

For a late round, any variety, Mr. P. Davies scored with Saxon. For a late sort of any other shape except kidney or round, Mr. R. Blezard was first with Mainstay. For an early or second early coloured kidney or any other shape, except round, Mr. P. Davies won with Peerless Rose. For an early or second early round, Mr. B. Berwen, Ludlow, won with Pink Perfection. For a red or coloured kidney, late, Mr. J. Johnson scored with Leda. For a red or coloured round, Mr. P. Davies led with The Dean. For the heaviest old or new, Mr. James Smith, Birkenhead was first. For early or second early new varieties of any colour, Mr. James Johnson took the first place with Queen of the North. For a late kidney, Mr. W. Daine, Huyton, Liverpool, scored with Langworthy. Mr. J. Read, Burton-on-Trent, had the best late round with well shaped Carter's Snowball.

Special prizes were offered by Messrs. Sutton & Sons, Reading, and for three dishes Mr. J. Johnson took the first place with Satisfaction, Abundance, and Windsor Castle. For nine tubers (prizes offered by Messrs. Sutton) Mr. B. R. Raymond, Ludlow, won with large smooth tubers, unnamed. For six kidneys (prizes offered by Mr. W. L. Hutton, Ormskirk) Canon Blundell, Halsall, was first and special with Kerr's Hough Giant. For six round sorts (Mr. W. L. Hutton) Mr. T. Wilkins, Blandford, won with Snowball. For six tubers of Kerr's General Roberts (Mr. W. Kerr, Dumfries) Mr. J. Johnson took the first place.

Mr. Thos. Jackson, Lydiate, was first for two Red Cabbages, with heavy specimens. Sir Patrick Talbot had the best Brussels Sprouts. For two Cauliflowers, Mr. J. Walker was first with a grand pair, securing also the special prize of Mr. J.

Gertrey, Liverpool. Mr. J. Johnson was first for White Celery; and Mr. T. Smith for Red. Mr. Thos. Shepherd, Rossett, N. Wales, took first for six long Carrots. Mr. J. R. Carter, Chester, took the lead for Intermediate Carrots. For Beet, Mr. B. Ashton, Lathom, Ormskirk, was to the fore with Hathaway's Prize. Mr. J. R. Carter was first for Parsnips. Sir Patrick Talbot had the best six Onions, with splendid bulbs. Mr. E. Alty, Lathom, had the best Leeks. For two Cucumbers, Mr. A. Bruckshaw, Tarporley, was first. For six Tomatos, Mr. G. Garraway, Bath, led with fine fruit. For any other root or vegetable, Mr. B. Ashton won with good Peas.

Canon Blundell showed the best culinary Apples, in very fine Warner's King. For six dessert Apples, Sir Patrick Talbot led with Blenheim Orange. Mr. G. Garraway had the best culinary Pears. For six dessert Pears, first and special prizes were won by Mr. G. Colin, Ludlow, with Pitmaston Duchess. For any other variety of fruit Mr. B. Ashton was first with Muscat of Alexandria Grapes; Mr. J. Stephenson, Woolton, was second with Alicante Grapes. In this class good lots of Red Currants, Plums, Melons, and Peaches were staged. Exhibitors should be pressed to name their specimens; for with the exception of Potatoes the exhibits were nearly all unnamed.

The following exhibits were staged not for competition:—Messrs. Dickson & Robinson, Manchester, Potatoes and Kohl Rabi; Mr. G. Garraway, Bath, cut Roses, superbly coloured Apples, Pears, and Tomatos; Messrs. W. Ker & Co., Liverpool, vegetables in variety; Messrs. W. Clibran & Son, Altrincham, Apples and Pears; Messrs. Dicksons, Chester, Potatoes, Apples, &c.

FRUIT UNDER GLASS.

JUST now the greater part of the fruit houses is occupied with the Chrysanthemums, and it is a matter of some difficulty to see to the trees properly on that account. In every case it is advisable to stand the 'Mums on boards or trellises rather than on the border, and trampling on the border should be avoided as far as possible. All Peach houses should now be thrown widely open during favourable weather to facilitate the ripening process. Houses that are not filled with Chrysanthemums, Salvias, Richardias, or other winter-flowering stuff may be shut up at night if the weather turns out frosty, but will not require any artificial heating.

THE EARLIEST PEACH HOUSE.—The time of the year will soon be here for this to be started again, and the usual cleansing will soon have to be given. Meanwhile the house should be cleared of any plants that may be in it, with a view to cleaning the house and pruning the trees some time before the end of the month. There are very few leaves left on the trees now, and another week or two should see the last of them.

LATE VINES.—In vinerias in which the Grapes have been grown with very little artificial heat the Vines will need a little fire heat now to ripen the wood off properly. Keep a good circulation of air by day, and the bottom ventilators may be left open all night, while the top ones should only be quite closed in case of frost.

POT FRUIT TREES.—These have all been divested of their fruit, and may with the exception of the Figs be left out-of-doors for the present. The Figs should be kept in a cool house, and allowed to drop their leaves gradually. A frost would not permit them to do this.

STRAWBERRIES.—Very soon the pot Strawberries should be got under cover. Some cultivators plunge their plants in the open, but it is preferable to put them under a shelter of some kind that will protect them at least from rain or snow. Frost will not matter if the pots are plunged well to the rims. But little water will be needed now, for most of the plants are wet enough. Any plants that have gone blind should be singled out and thrown away, since it would be only waste of time to force them. The question of what variety to employ for forcing need not cause much trouble, for while Vicomtesse, President, Sir Joseph Paxton, and Laxton's Noble are all valuable, Royal Sovereign is the best of them all for general purposes.—A. S. G.

THE FLOWER GARDEN.

UP to the present time the month of October has been all that could be desired, for the weather has been very good to us indeed. An open and dry autumn is of considerable importance to the gardener, for there is always a pressure of work on hand; work that can be better attended to now than at any other time.

PLANTING EVERGREENS.—With the soil in a workable condition the opportunity should be seized of getting at least some of the shifting or planting of evergreens done. In gardens where evergreens are fairly well represented there is always some shifting to be done, for in making shrubberies it is necessary to plant pretty thickly, and subsequent growth calls for the removal of some of the plants, often for a more or less complete readjustment. Lift the plants with good balls of earth attached, and water them after they are properly fixed in their new quarters.

HOUSING TENDER PLANTS.—In comparatively few years does it happen that the tender plants have had their stay out of doors lengthened to such an extent as they have this season. Now, however, prudence says that the limits of time consistent with safety have been reached and the dictates of prudence must be obeyed. Of late years the practice of utilising Palms, Ferns, Dracaenas, and other stove subjects for the decoration of the outdoor garden has been growing in favour. We see it adopted to a considerable extent in our public parks, and private establishments have not been slow to strike out in the same direction. The removal of heavy plants of those employed (they have to be large and heavy to be effective) is a serious item, and needs time, plenty of help, and, above all, daylight to perform properly. Accordingly, it is not advisable to put off getting the plants under cover until a severe frost threatens some night.

The beauty of the flower beds will not be disturbed until the last moment, for as the stock of most of them is under cover already, in the way of cuttings, the old plants are but of comparatively little value. As soon as frost has blackened and spoilt them, the work of demolition must be begun; the beds cleared, and the winter occupants shifted in.

TUBEROUS BEGONIAS.—The few slight frosts we have had, and the wild weather at the end of September have put a veto on these for the season. As soon as the old stems have fallen off, the tubers should be dug up and transferred to the storehouse. We have found them to keep best if laid in layers in boxes and covered with sand. Seedlings which have flowered for the first time this year and have been marked according to their colour will have to be dug up carefully, as the tubers are rather small and may easily escape observation. These small tubers should be stored by themselves.

THE HERBACEOUS BORDER will need constant attention. There is much cutting down of old plants, and removal of rubbish to be seen to. Clumps of Colchicum autumnale, and the autumn flowering Crocuses, chief of which is *C. speciosus*, have been doing much of late to enliven matters. Seeds of anything that it is desired to save, should be picked without delay, if ripe. Sprays of *Physalis Franchetti*, and *P. Alkekengi* should be gathered for winter decoration before they are too weatherworn.

WALLFLOWERS.—The advantage of sowing early will now be fully manifest, for where this practice has been followed, good sturdy plants are the result. The wet of September did not suit them well, as it conduced to too rank and sappy growth, but matters have improved during the last fortnight. It will be well to transfer the plants to their flowering quarters soon (within the next week if possible), for the soil is in capital condition and we know not how long it will remain so. See that good balls of earth are attached to the plants, and if the nursery beds are far from the proposed flowering quarters, use the handbarrow as the means of transit, rather than the wheelbarrow, for the jolting of the latter will shake the balls to pieces. With the larger plants, a spade will be found to be necessary for planting expeditiously, although the trowel may serve for the smaller ones. Wallflowers have this advantage over bulbous subjects that they give the beds a furnished appearance with their lively green foliage, a point that is worth consideration when deciding where and to what extent they shall be employed.—A. S. G.

HINTS FOR AMATEURS.

The Colchicums.—With the end of September the Colchicums come to us, just when the wear and tear of time is telling appreciably upon the occupants of the herbaceous border, when the cold, often frosty and dewy nights speak to us of summer gone and the glory of the year well advanced upon the down grade. At such a time the fresh beauty of the flowers cannot be other than refreshing, and we welcome them as eagerly as we do the golden glint of the perennial Sunflowers, or the starry sparkle of the Michaelmas Daisies. Possibly the appearance of the plants, with their bunches or clusters of flowers pushed out of the bare ground, and destitute of even a suspicion of foliage, endows them with an attraction peculiar to themselves. The leaves make their appearance in the spring, and live their life and pass away by the end of June or the beginning of July, according to the special character of the season. The flowers follow after the heat of the summer has spent itself, and practically last until the advent of severe frost puts a stop to the existence of flowers in the open border. Not only are the flowers charming when growing naturally in the open ground, but they last and look well in vases within doors, and, indeed, are well worth growing for this reason alone.

The cultivation of the plant is exceedingly simple, and chiefly consists in letting them alone once they are planted. Annual lifting is not to be recommended, and the probable reason why some people are not so successful with them as they could wish and expect is that they are far too fidgety with them. Often enough we see in old-fashioned gardens which have herbaceous borders dating back to a time prior to the "hedding-out" rage, clumps of the common Meadow Saffron, *Colchicum autumnale*, in splendid condition, and this when the corms are not lifted for years together.

One would imagine that a policy of "let alone" would be easy enough to follow. The most important point is to choose a suitable position for them in a rather moist situation. The soil should be a light, sandy loam for preference, enriched with thoroughly rotted manure. The best time for lifting and re-planting is after the leaves have died down and the corms are resting for the summer. There is a considerable number of species, but the following species and varieties recommend themselves most strongly to notice.

Colchicum autumnale, the common Meadow Saffron, comes first on the list by reason of its cheapness, which is, after, all a matter of no little import to the would-be cultivator whose means are not above the average. Apart from the undeniable beauty of the plant and the several varieties which have sprung from it, it is a native of these Islands, and this fact should be sufficient to endear it to those who are lovers of home productions. *C. autumnale* has a fairly wide geographical range, for in the "Illustrated Handbook of the British Flora," Bentham says "that it is to be found in moist meadows and pastures over the greater part of Europe, but rare in the north, and scarcely extends into Asia. Very abundant in some parts of England and Ireland, and a very doubtful inhabitant of Scotland." The species itself has bright purple flowers.

C. a. album, as the varietal name signifies, has white flowers, which are, moreover, of great size, and very effective in the mass.

C. a. album longipetalum has a long name as well as long petals or perianth segments. The tubes of the flowers are much shorter than in *C. a. album*, but although the flowers look pretty enough, nearly sitting as it were upon the ground, a shower of rain is sure to spoil them.

C. a. atropurpureum furnishes a distinct shade of deep purple, with various stripes or blotches of pale pink. It is one of the best of its colour, and well worth growing.

C. a. roseum.—In this we have a medium-sized flower, exhibiting a charming shade of rosy-lilac, very delicate and pretty.

C. a. album plenum.—The forms mentioned above are all common and correspondingly cheap, but this double white form, although hugely pretty, is both scarce and dear.

C. a. roseum plenum.—This is the cheapest of the

double-flowered forms. It is the counterpart of the single form with regard to colour.

C. Parkinsoni.—Here the flowers are white, charmingly chequered with rose-lilac. They are stellate in form, very large, and of great substance. The flower tube itself is of moderate length, but very thick and strong. This species was introduced from the Greek Archipelago in 1874. Comparing it with the commoner *C. variegatum* we see that the chequerings or mottlings are fainter, and that there is less colour in the flower as a whole.

C. variegatum.—While discussing the relative merits of *C. Parkinsoni* and *C. variegatum* it may be stated that in one important point, viz., that of hardiness, *C. variegatum* excels. A very severe winter will work havoc with the former species, but the latter will stand almost anything with impunity. The corm is very large and egg-shaped, and the flowers are of medium size, deep rosy pink in hue, chequered with dull purple. *C. variegatum* was introduced to this country from Greece as far back as 1629, so that it has had longer time in which to get accustomed to the severity of our winters. Possibly by the time that *C. Parkinsoni* has been in cultivation here for as long it may develop greater cold resisting qualities.

C. Sibthorpii is an exceedingly handsome form introduced by Leichtlin about three years ago. When well grown it is the largest and finest of all the Colchicums. We had an opportunity of seeing it growing in Messrs. Barr & Sons' nursery at Long Ditton, where Colchicums, in common with other bulbous and hardy plants, are carefully looked after, and the finer forms eagerly selected. The flowers are almost globular in shape, rosy-pink in colour, and heavily tessellated with dark purple. It is well deserving of extensive cultivation, although at the present time the price is high.

C. speciosum rubrum.—There is no doubt that among all the darker-flowered forms this is the best. The flowers are very large, globular in shape, and rich rose-crimson in colour. There are a few faint chequerings of light pink, but so faint as to be scarcely noticeable. In the centre of the flower about half way down there is a white band of medium width, which gives it a very distinct appearance. Messrs. Barr & Sons have a very fine stock of it at Long Ditton, and during a visit we were struck with the grand effect produced by bright sunlight upon the flowers.

Shrubby Calceolarias.—The value of the shrubby yellow Calceolaria as a bedding plant for the outdoor garden is pretty generally recognised, although it is but seldom that we see it grown as a pot plant for the greenhouse or conservatory; and yet there are many plants, thus grown, that are neither so easy to manage nor so ornamental. Two or three of the sturdiest of the plants which have been doing duty in the flower garden through the summer, may be lifted before the frost cripples them, and potted up into as small pots as will comfortably contain them. A little coddling for a week or so after the shift will set them to rights again. Grow them on steadily through the winter, pinching out the points of any unduly gross shoots that may threaten to disturb the balance of the heads, and the labour will be rewarded next spring by plenty of flowers, which, as bright yellow is comparatively scarce at that time, will be doubly welcome.—*Rex*.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Gymnogramme schizophylla.—*Reader*: Although an undeniably beautiful Fern this is an exceptionally tender one. There is very little doubt that the death of your plant is due to its having been over-looked for water. Soaking it with water afterwards in the endeavour to bring up the fronds again is of very little use, for the plant seems to get its death-blow in the few hours of neglect. The younger plants you speak about should not be potted now. Leave them as they are until about the end of next February, and pot them then.

Platyserium alaicorne.—*Thames*: There is a popular but mistaken idea extant that this Fern requires tropical heat to grow it, and that it will not

grow in a cool house. You will find, however, that your plant will be all right in the cooler house. The temperature of 45° by night will suit it well enough.

Pitting Potatos.—*A. O. B.*: We should not advise you to adopt this plan of keeping your Potatos unless you are obliged to by lack of other means. With the wet autumn there is sure to be a prevalence of disease, and although tubers on being dug up may appear to be perfectly sound to the eye and touch they are in reality infected with the disease, and sooner or later will go rotten. Now if a rotten tuber is in contact with other sound tubers it soon spreads decay on all sides. For obvious reasons the pit is not opened very often and it is almost impossible to give its occupants the looking over that is required to remove the bad ones, hence the work of destruction goes on unchecked. If you must make the pit, however, dig a hole about a couple of feet deep in some sheltered spot, line the sides and bottom thickly with clean hay and straw—the latter for preference—lay the Potatos in, cover them with straw, and then with earth. Finally over all lay a few boards or a sheet of galvanised iron to throw off the rain and keep the pit and its occupants dry.

Dahlias.—*F. C.*: Leave the Dahlias out of doors for the present, and until the tops are blackened by frost. Then they may be cut down, and the roots dug up and removed to a shed or storehouse before the advent of severe frost. The roots ought generally to be under cover by the beginning of November.

Zonal Pelargoniums.—*F. C.*: With your lack of conveniences you will not be able to do anything with the plants as they stand. The succulent shoots would soon commence to damp off, and we question if you would save the plants. Cut them hard back, leaving only a few of the lower leaves on them, giving the longest roots a trim at the same time. This will admit of their being put into comparatively little space. They may indeed be potted two or three in a large 60-size pot. Do not give any water, and snip off with sharp scissors any pieces that may damp off.

Herbaceous Calceolarias.—*F. C. W.*: The stuff on the western side of the greenhouse will suit the Calceolarias admirably through the winter. Tepid water is not necessary for watering them with. It may be as cold as you like, but not hard. We have broken the ice to take water out to water the plants and have found that it suited them capitally.

Battersea Park.—You are wrong *Parks*, Battersea Park is not so large as Victoria Park, for the former has an acreage of 250, and the latter is 300 acres in extent. Regent's Park and Primrose Hill together contain 450 acres.

Pear Citron des Carmes.—About the only qualification that this Pear has *Geo. Wencroft*, is its earliness. From the points of flavour and appearance it is worthless, and we should advise you to devote the space to a good September or October variety. We are sure you would then be better satisfied with the results. William's Bon Chrétien for a September variety, and Louise Bonne of Jersey, or Marie Louise for an October sort.

Tacsonia Van Volxemii.—*Toby*: You will do well to cut out about 70 per cent. of the growths, and shorten those that are left. If you leave the *Tacsonia* as it is, so much growth will spoil any chances that the plants on the stage below may have.

Chrysanthemums.—I want to house my Chrysanthemums, but I have only a Peach house available, and as the fruit has only just been plucked from them, the leaves are yet green. Can I do anything to hasten the fall of the leaves, or may I pull some of them off in order to admit of a little more light, for at present the house is very dark.—*Rob*.

On no account must you pull off the leaves from the shoots that are to bear the fruit next year. The only way in which you may mitigate the conditions you name is to remove boldly those shoots which have borne fruit this year. This will also give the next year's fruit-bearing growths a better chance. If this thinning out has already been given (you say nothing

about it in your letter) you can do nothing beyond throwing the house wide open and thus try to induce the trees to mature their growth expeditiously. In the meantime your 'Mums must remain outside unless you choose to submit them to the somewhat trying experience that a curtailed supply of light would entail. Cannot you rig up a temporary shelter for the Chrysanthemums until a few of the leaves have fallen from the Peaches. Another fortnight or three weeks should make a great difference.

Pear Catillac never does get soft until it is cooked, *Merodac*. It is simply a stewing variety, and a very good one, but of no use for dessert.

ORCHIDS AT CRAIGCLOWAN, PERTH, N.B.

NESTLING in the hills about two miles south, and commanding a splendid view of the town of Perth, being as it is almost surrounded by the range of hills, with the River Tay winding its way through it, is situated the residence of Thomas Roy, Esq., who has within the last few years developed into not only a great lover of Orchids but one of the most successful cultivators in Scotland.

It is not yet five years since Mr. Roy first turned his attention to this interesting class of plants, but his success has been nothing short of marvellous, as everyone who has had opportunities of watching the progress must admit.

The houses devoted to them are mostly what are termed lean-to, and three-quarter span, having east, south and south-western aspects.

Taking first the house facing east, his plants of *Odontoglossum crispum* are to be found; and these are "crispums" indeed. They are plants which do one good to look at; for without exception all are pieces which were bought less than five years ago for a few shillings each, in the imported condition, with four and five small pseudobulbs, but now manipulated into specimens requiring nine and ten inch pots, showing, by the immense pseudobulbs, each new one almost double the size of the last. The thick leathery leaves are an indication of health and vigour so dear to the eye of an Orchidist, from which may be expected fine strong flower spikes too. Neither are these disappointing in that respect, nor as some people expect, are fine growths made at the expense of few flowers; for Mr. Roy informed me that he has had twenty good flowers on a spike.

In the same house *Oncidium macranthum* is looking perfectly at home, making grand spikes again for next season. The accompanying photograph is of a plant exhibited this spring at the Perth Horticultural show with sixty-two flowers. Here also are fine plants of *Oncidium lamelligerum*, which carried 100 flowers on a spike last year, and *O. concolor* in teak wood baskets on the roof, with pseudobulbs as large as ducks' eggs.

A nice specimen of *Odontoglossum andersonianum* in a nine inch pot with four grand growths, which is also a good variety, is noteworthy. *O. Uro-skinneri*, *O. Edwardi* and *O. Halli* are full of vigour, and *O. grande* is carrying spikes with five and six flowers each. *Mesospinidium vulcanicum* in seven inch baskets, literally covered with flower spikes, is showing how all these varieties revel in the treatment they are receiving.

In another house facing south are to be found about two hundred *Odontoglossum vexillarium*. Although this species has not been taken in hand quite so long as *O. crispum* the success is even greater perhaps, for the plants are really a masterpiece of cultivation. New growths that remind one of Leeks more than *O. vexillarium*, and not a thrip mark to be seen, are a sight worth coming a long way to see. Mr. Roy drew my attention to a number of smaller plants in 4 in. pots, and asked if there was any difference since I saw them last. Although it is not more than six months ago that he showed me these in quite small pots and scarcely established, I could hardly realise that I was looking at the same plants again. Evidently *O. vexillarium* never was happier in its native habitat at Antioquia than at Craiggclowan.

In another house, this one with a south-western aspect, are to be found the warmer section; though, no doubt, the natural condition of the climate in this district and the altitude, will considerably tend to assist the requirements of the cool species. One has

to stop and consider when looking at these warmer ones; for here we find *Cattleya lawrenceana*, *C. gigas*, *C. Trianaei*, &c., all doing well, with evidence of abundance of flower. Phalaeopses, in variety, are making most luxuriant growth and strong flower spikes. *Dendrobiums*, *Cypripediums*, *Miltonias*, and *Brassias* are just as happy, which goes to prove that the natural love of plants, together with the careful study of their little requirements, has a great deal more to do with the successful cultivation of Orchids than all the hard and fast rules sometimes laid down for the beginner.

Mr. Roy is to be highly congratulated on the rapid success he has already attained, and which bids fair to make this one of the most extensive and interesting collections in the North, under the very able care of his enthusiastic and persevering gardener, Mr. F. Nicoll. This is another instance of that amicable feeling existing between employer and

EARNOCK, HAMILTON, N.B.

EARNOCK, the beautiful seat of Sir John Watson, Bart., is about two miles from Hamilton Station, and is one of the best kept and most beautiful spots in the west of Scotland. The entrance is through a pair of fine gates, with a neat lodge on the left. The carriage drive is two miles long, and well kept. The graceful curves in the drive, the neatly kept grass edging through a beautiful park, where noble specimens of trees stand out majestically, and the herd of Guernsey and Jersey cows, all convince one that the owner is interested in that which makes an impression upon the visitor, that everything is well done and well cared for. The mansion is a noble one and stands surrounded by large clumps of *Rhododendrons*, 15 ft. to 20 ft. high, of all the best named varieties, well set with buds, which next season will give a good account of themselves.

I once visited Earnock when *Rhododendrons* were

ONCIDIUM MACRANTHUM AT CRAIGCLOWAN.

employee, which if more often seen, would, I think, help to make these particular plants even greater favourites and a more interesting study than at present.—H. H. S.

BACTERIA AND LIVING PLANTS.

MR. ZINSSER has made experiments on the eventual presence of bacteria in living vegetable tissues, which experiments are described in the *Naturwissenschaftliche Wochenschrift*. These experiments, made with great care, demonstrated that the germs of plants do not contain any bacteria. In the case of germs, of which the outer surface has been thoroughly sterilised, in soil likewise sterilised, there are never bacteria in the plant. Other experiments demonstrated that infection could only be produced from outside, and is not possible through the living tissues, roots for example. Mr. Zinsser also observed that bacteria introduced into living vegetable tissues perish, almost without exception, in a very short time, as also their spores. The cause of this rapid destruction is ascribable to secretion of bactericidal substances and the acid reaction of the cellular sap.—*Revue Scientifique*, September 18th, 1897.

in full glory, and the sight has never left my memory. Standing on the steps of the mansion a grand picture presents itself. The noble specimens of trees, of which there are some wonderfully fine purple Beeches, noble Chestnuts, &c., a fountain of water that throws up a fine plume, with the beautifully undulated grounds, and the splendid Coniferae make a glorious picture.

In making a move to the houses, we find ourselves amidst many interesting objects, and grand examples of cultivation in the various departments. There is a grand stove of ornamental foliage plants. Young Palms, *Dracaenas*, *Crotons*, *Aralias*, and many other plants are well coloured and well grown. From the roof hang gracefully many well grown Pitcher Plants, well pitched and well coloured. *Caladiums* make a show also. There is a large Palm house containing gigantic specimens of *Kentias*, *Areca*, *Rhapis*, *Latania*, *Coryphas*, *Cycas*, and *Phoenix*, which are useful for the decoration of the princely mansion. Of greenhouses there are several, which contain everything in season suitable for cutting purposes and decorative work, all in the pink of perfection. The Fern house contains a splendid collection of old and new Ferns. Noticeable are some grand specimens of *Gymnogramme*

schizophylla and other novelties; also a splendid batch of Maidenhair for cutting purposes. Another house is complete with a fine collection of young Palms. Noticeable also is a fine batch of Gloxinias and Cannas, which from their bright colours attract one's attention.

There is a fine range of vineries occupied with young Vines, of which all the leading sorts are grown, and giving a good account of themselves; for grand bunches, fine in berry, and well coloured, meet the eye. Peaches and Nectarines receive the best of attention, and reward the trouble with fine crops of fruit. There is a good house of Pineapples in extra strong plants, throwing up fine fruit, of which one may be proud. Melons do well; fine crops of grand fruits in succession are here. Figs are grown likewise, in pots, fruiting freely. Some splendidly fruited. Oranges in pots are very ornamental for decorative work. Other pits and frames are full of useful winter-flowering plants. A grand batch of Chrysanthemums will be useful for months to come. These, with forced Azaleas, Lilacs, Viburnums, Hydrangeas, well grown Cyclamens, and Solanums will keep the houses gay during winter and spring. Zonal Pelargoniums come in useful for the decoration of the noble conservatory, which stands in a prominent position in the pleasure grounds. It is a noble building of a most ornamental design, and most suitable for its position. It was very gay at the time of my visit, noble Tree Ferns and Palms, &c., stand down the centre, with chairs and tables underneath. The side stages were gay with early Chrysanthemums, Tuberous Begonias, Cannas, well done, various Lilliums and zonal Pelargoniums, all combined, making a bright and most pleasant display.

The picture from the conservatory is charming, the beautifully-undulated grounds, the streams of water, the choice trees and shrubs, the various kinds of bedding—carpet and ribbon, and massed beds—and the autumn tints upon the woods and trees produce such a picture that no words of mine can describe. There are many acres of pleasure grounds, including the lawn tennis ground, with every modern convenience. The splendid walks, all well kept—at every turn you meet something pleasant and fresh—convince one that the place has been well studied in every way. There is a picture of wealth, combined with good taste, assisted by a practical gardener's skill, and backed up by the principal factor in the case, a gentleman who believes in doing everything well; for Sir John is a thorough believer in this, and carries out his ideas to the letter. He is a gentleman of broad views, and a great lover of everything that is beautiful.

In addition to what I have mentioned a grand kitchen garden is in a sheltered position and well stocked. A fruit wall covered with young trees is noteworthy. The demand all round is great, but the gardener-in-chief is equal to the occasion. A word in praise of a gardener's comfort. How often we see gardeners' houses located in some out of the way spot with no convenience. Sir John's gardener's house is a model, built of stone with some ten or twelve fine lofty rooms, having every convenience in a commanding position in its own grounds. Being well planted it is more like a palace than a gardener's house. May many follow the example, I say. Mr. James Moir is the gardener, and he fully appreciates the kindness of his noble employer. I congratulate Mr. Moir upon his all round abilities, as a thoroughly practical man. To walk round his lovely estate with its liberal owner, accompanied by his enthusiastic gardener, is a great treat to any one like myself interested in horticulture; for Sir John is greatly interested and willing to make any improvements that will suit his taste for the benefit of his beautiful estate.—*Alfred Outram, F.R.H.S., 7, Moore Park Road, Fulham, London.*

Californian Oranges.—The American liner St. Paul, which brought up at Southampton on the morning of Wednesday, 22nd ult., had a cargo of 4,403 cases of Californian Oranges. The St. Paul docked at 10 a.m., the fruit was discharged, loaded into railway vans, and delivered by 7 p.m., nine hours after the steamer docked at Plymouth, and seven days four hours after leaving New York. The fruit was ultimately placed on the market in capital condition.

THE PROGRESS IN VEGETABLE CULTIVATION DURING QUEEN VICTORIA'S REIGN.*

PROBABLY no more fitting subject could be chosen for one of the papers to be read at a Conference of the R.H.S. in the sixtieth year of Her Majesty's Reign. And yet, though the subject is so appropriate, I cannot but think that our worthy secretary might have made a far happier choice when selecting a speaker. It is manifestly impossible for anyone of my age to tell you from personal knowledge what the condition of the vegetable garden was in 1837, and consequently it is impossible for me to say from my own knowledge what progress has been made.

Mr. Wilks invited my father (now in his 83rd year) to contribute a paper on this subject, but like many others whose memory carries them back over the past sixty years, his physical powers are not equal to his mental activity, and he was compelled to decline. Although yielding to Mr. Wilks' somewhat pressing request that I would myself prepare a paper, I feel I owe this assembly an apology for attempting what others could do so much better. It was only possible for me to glean the necessary information from those who were actively engaged in horticultural pursuits at the time when our Gracious Sovereign came to the throne, and though I have met with the greatest willingness to impart knowledge, it is a somewhat striking fact that my correspondents had a far clearer recollection of fruits, methods of culture, and even the scale of garden wages, than they had of the vegetables grown in 1837. I can only conclude that, as was no doubt the case, there was nothing very noteworthy about the vegetables in use at that time, at least as regards their intrinsic merit.

It will be noticed that the title speaks of "Progress in Vegetable Cultivation," but I do not suppose I was intended to speak so much of the cultivation as of the improvement of the vegetables cultivated. Had it been otherwise, I cannot doubt that one of the many able gardeners connected with the Society would have been invited to read a paper rather than myself.

In sketching the outline of my paper I therefore felt that I could not do better than take the leading vegetables, enumerating the kinds in cultivation in 1837, and then briefly mention the improvements that have since followed. It is obvious that unless there had been a very marked advance in the vegetables grown the progress in cultivation would have been comparatively insignificant. In saying this, I do not for a moment suggest that the gardeners of to-day are not far in advance of those of 1837, but that whatever method of culture might be adopted, no very great advance would be possible without improved vegetables to work upon. Without further introduction I will proceed at once to the all-important subject of the

GARDEN PEA.

Without hesitation I may say that the progress made during the last sixty years in the improvement of the Garden Pea has been fully commensurate with the position this vegetable occupies, and which may fairly be called the Prince of all Vegetables. I think also I am correct in saying that this proud position has been attained solely through the progress made in its improvement since 1837; an evolution truly marvellous, as I think all will admit when we compare the Peas of 1897 with those of 1837. In the thirties and for many subsequent years the gentleman's garden—as well as the market garden—was dependent upon such varieties as Woodford's, Bedman's Imperial, Scimitar, Early Charlton, Warner's Emperor, Early May, McCormick's Prince Albert, and Early Warwick, the other principal sorts cultivated being Blue Prussian, Bishop's Early Dwarf, and Auvergne. These are Peas which we, with more cultured taste and better varieties at our disposal, now look upon as chiefly suitable for boiling in a dry state. Knight's Tall Green Marrow, a wrinkled Pea, was certainly available at this time but was not so generally grown as the round-seeded sorts, which an old gardener now living informs me were so hard and dry when cooked that they were known as Buckshot Peas.

During the next decade a few varieties, such as Sangster's No. 1, Champion of England, British Queen, and Hair's Dwarf Mammoth, were added to

the list, the first three of which are still largely grown by those who have had no opportunity of testing better sorts; but no considerable interest was awakened until the advent of that popular favourite, "Ne Plus Ultra," which was introduced under three or four names in as many successive seasons. Even at the present day when testing year by year all the so-called novelties as they appear, we frequently find that still another name has been added to the already long list under which "Ne Plus Ultra" is offered. Of its class as a tall late marrow Pea it is doubtful if any later introduction has ever shown, comparatively, a greater advance on previous kinds.

In passing it may be of interest to some to know that three of the principal Peas distributed by my house in 1841 were Blue Prussian, Woodfords, and Scimitar, from which we may form a fairly correct idea of the class of Peas then grown by gardeners.

Up to 1857 there had been introduced Daniel O'Rourke and our Early Champion as representing improved types of early Peas; and Glory, Climax, Dickson's Favourite, Prizetaker, and Epps's Lord Raglan.

In 1859 that popular Pea, Veitch's Perfection, was introduced, and in the same year also the first selections of Dr. McLean's Seedlings were put on the market by Mr. Charles Turner, including Princess Royal, followed a few years later by Little Gem, and these continued to be favourites for a quarter of a century. This was the commencement of that period of activity which has extended with increased vigour till the present day,—the skilful hand of the hybridiser in conjunction with the keen eye of the expert producing such Peas as Her Majesty's gardener never dreamt of in 1837. Here I may remark that the work of selecting is in no degree less important than that of hybridising. This will be better understood when I explain that a seedling Pea is now generally the result of so much inter-breeding that very many distinct types will often be represented in the ultimate cross. This will give a pod containing from six to ten or more seeds, and it is at this point the work of the hybridist ceases and that of the selector commences, but it is only a commencement.

When sown the following year these seeds will in all probability produce as many distinct seedling Peas, some partaking of the character of the parents and some not, but the difficulty increases when we find that seed saved from each of these plants very frequently varies in each case to such an extent that the greatest patience is required in order to secure any fixed type at all. Let me make my meaning still clearer if possible. The first year we start with, say, six seeds in the one pod.

The second year we have six seedling plants.

The third year we have six rows, short or long, the produce of the six plants of the preceding year, but we also find in each of these six rows Peas of all sorts and types, some tall, some dwarf; some early, others later; some large podded, some small; some pale green in colour, some dark; some curved in the pod, some straight; some pointed at the end, and some square (this difference alone being sufficient in some cases to distinguish two popular garden varieties); and last, but not least, some may be round-seeded and some wrinkled-seeded. It is clear the selector must commence again and starting from the most promising plant in each row endeavour to build up a seedling Pea which will reproduce itself from seed without variation, a task often extending over many years. In scarcely any instance known to me has a seedling Pea been put on the market direct from the hybridist's hand.

Between 1860 and 1880 many varieties raised by McLean and Laxton were introduced; amongst them being Prince of Wales, Dr. McLean, Omega, William the First, and William Hurst, all of which are more or less popular at the present day. During the same period the first results attained by the veteran William Culverwell—whose excellent work deserves grateful recognition from all who value Marrowfat Peas—came to light in Telegraph, Telephone, Stratagem, and Pride of the Market, which varieties were introduced by Messrs. Carter. By this time Henry Eckford was endeavouring, and with considerable success, to infuse the blood of Ne Plus Ultra into a dwarfer race of Peas. From various sources appeared during the next few years Autocrat, Duke of Albany (which is certainly one of the most popular Peas of the present day), Sharpe's Queen, Webb's Wordsley Wonder, and others. In 1881 my house introduced American

*A paper read by Mr. Arthur W. Sutton, of Messrs. Sutton & Sons, Reading, at the Crystal Palace Conference of the Royal Horticultural Society, 1st. October, 1897.

Wonder, which is still more extensively grown than any other early dwarf wrinkled Pea.

I should have preferred on this occasion to have made no allusion to the work of my firm in connection with the Pea, but I think all present will agree with me that no sketch would be complete without referring to the first early wrinkled Marrowfat sorts which have been introduced during the past few years, and in the selection of which I have personally been so much interested; I allude especially to May Queen, Ar, Empress of India, Seedling, Excelsior, and Forcing, which have attracted so much attention at recent Temple Shows.

Our aim has been to replace the small, hard, round-seeded sorts, upon which the public had been obliged to depend so much for their first supply, with Peas of dwarf growth, but equally as early, and producing pods as large as Telephone, Duke of Albany, and Peas of that class, containing large wrinkled Peas of Marrowfat flavour, and we have succeeded beyond our most sanguine expectations. In Peas of a later class we have introduced other popular kinds such as Royal Jubilee, Perfection, Windsor Castle, Exhibition, Magnum Bonum, Late Queen, and others. The eagerness with which all these new Peas have been sought after as soon as they had been tried, attests their value, and it is personally gratifying to me to know that Her Majesty—in whose honour we are met to-day—allowed the collection of Peas staged at the Temple show in 1896 to be placed in the Entrance Hall at Windsor Castle for her personal examination, and that some of the Peas appeared the same evening upon the Royal table; Mr. Thomas perhaps will also allow me to mention that this year Her Majesty was so pleased with the Peas he had grown at Windsor that she telegraphed for a supply to be sent daily by post to Balmoral, and that in June last the Empress Frederick wished seed sent at once to the gardens at Friedrichshof in order to have Marrowfat Peas in the autumn.

During recent years the list of good Peas has also been added to by such excellent sorts as Daisy, Veitch's Maincrop, Alderman, Laxton's Gradus, and many others.

It may be as well to remark here that the improvement of Peas, as well as other vegetables, has doubtless received considerable impetus from the keen competition upon the exhibition table—a bobby which our older gardening friends seldom, if ever, indulged in. This competition has likewise had a very marked effect upon the cultivation of Peas and other vegetables, so that, with the fine types now procurable and the improved systems adopted by growers, results are obtained which are really marvellous.

Before leaving this section reference must be made to the careful work done in the Chiswick Gardens in making trials of Peas for many years past. The value of these trials, great as it is, would be considerably enhanced had circumstances rendered it possible to grow a larger number of older sorts alongside the new varieties for the sake of comparison. I may mention that in order to make our Pea trials comprehensive enough to determine the value of new seedlings, and to fully test the older varieties offered, etc., it is necessary to sow from 600 to 700 rows annually.

MICHAELMAS DAISIES AT LONG DITTON.

THE autumnal garden would lose much were the twinkling Starworts in all their wealth of range and beauty absent. Whether we regard their decorative value to the garden as they stand *in situ* or whether we consider the service they are capable of rendering as cut flowers for the decoration of bower and hall it matters not, we are obliged to confess that we could not well do without them. This much the ordinary person would confess, but it is only when we see a collection of the plants together in one place that we are able to judge of the immense range of habit and general appearance that there is included in the genus. Then again, we must not lose sight of the grand weather-resisting qualities possessed by these autumn-flowering plants. Rain, wind, and cold come all alike to them, and they stand the oft-recurrent and malevolent changes of a British autumn with unqualified equanimity, whilst other flowers of less rude health are in a state of more or less complete collapse.

The Starworts naturally fall into three sections, according to their periods of blooming. First we have those commencing to flower about the end of July, and continuing in bloom until the middle of September. Second come those forms which commence to bloom in September, and third those which commence to flower in October and carry their beauty well into the frosts of winter. We paid a visit to the Long Ditton Nurseries of Messrs. Barr & Son the last week in September, and in spite of the cold and wet, found the Michaelmas Daisies much in evidence. The day was bright and warm, and amidst the bright rays of the sun and the busy and contented humming of the bees among the "Daisies," we found it hard to realise that the pbeasants in the distant coverts were nearly in condition, and would enjoy only a few more days of respite, whilst the ladders and baskets were busy in many a British orchard reaping the golden and russet harvest of the glowing year. An Indian summer day is almost as delusive as it is delightful!

But to turn our attention more particularly to the flowers themselves, we found a grand collection awaiting our inspection and admiration. The former was given readily, and the latter was by no means withheld, for Messrs. Barr & Sons are to be congratulated on the comprehensive character of their representation of the genus Aster. The following are some of the most striking and useful forms:—

A. DUMOSIS.—This is a charming dwarf form from 1 ft. to 15 in. in height, and of a dense, bushy habit. The leaves are small and linear in shape, while the flowers are about half an inch in diameter, the ray florets being of a delicate mauve, and the disc florets rosy-red. As a subject for the front rank of the herbaceous border, or for nooks in the rock-garden, or for bedding purposes, it is perfection. As a pot plant, too, it may be turned to good account.

A. SHORTII is about 3½ ft. in height. The flowers are ½ in. in diameter and bright lilac in hue. The habit of the plant is distinct, for it throws up stout stems which are clothed to the bottom with graceful sub-pendulous side branches, thus furnishing a graceful pyramidal spray that is perfection for the filling of vases. If we had to make a selection of six varieties, A. Shortii should be one of them.

A. PTARMICOIDES is some 2 ft. in height and has small pure white flowers. In habit it is stiff and erect. It belongs to the earliest section and was therefore well on the road that leads to the decay of splendour when we saw it.

A. LINOSYRIS (Goldilocks) is both a handsome and distinct plant with flax-like foliage and showy yellow flowers. Its height is from 18 in. to 2 ft., and as it is fairly bushy in habit, it should be of value for the decoration of the conservatory when grown in pots.

A. NOVAE-ANGLIAE has given rise to several fine varieties, in all of which may be seen the tall, erect, and vigorous habit of the type, and the hispid stems. In all of them, too, the flowers are produced in terminal clusters. The leaves are linear lanceolate in shape, and clasp the stems with their bases. The species was brought from North America in the year 1710.

A. N.-A. ROSEUS is one of the finest forms. The flowers are large, and of a bright rose shade. The height is from 5 ft. to 6 ft.

A. N.-A. PULCHELLUS is a little shorter than the last-named being from 4 ft. to 5 ft. in height. The flowers, however, are fully as large, and exhibit a beautiful violet-blue.

A. N.-A. PRAECOX may well be included. The flowers are fully as large as the others, but crimson-purple in hue, so that it may be looked upon as an intermediate colour between A. N.-A. roseus, and A. N.-A. pulchellus. Its stature is about 4 ft. in ordinary seasons.

A. UMBELLATUS is a species that is very distinct with regard to habit. The flowers are produced in large, loose, terminal corymbs, not umbels as the name would suggest. They are of medium size with rather long, white, reflexing ray florets and bright yellow discs. The leaves are lanceolate in shape. The plant is apt to develop a rather ragged look about its lower parts, so it should be relegated to the back row in the border; still, it is a pretty and meritorious form, and we should advise its inclusion in every collection.

A. ACRIIS is one of the most popular early species, and is largely grown. The bright lilac-purple, and rather loosely built flowers are remarkably tenacious

of life, and given anything like fair weather, last well into the autumn.

A. A. DRACUNCULOIDES is a variety chiefly differing from the type in its greater stature, that is on the older plants. In the case of spring struck cuttings this increased height is not apparent, for the plants flower when little more than 18 in. in height.

A. AMELLUS, with its large purple-blue, solitary flowers, is one of the very finest border kinds.

A. A. BESSARABICUS has deep violet-blue flowers, and is rather taller than the species, whilst the flower heads are a trifle larger. Both of these forms are indispensable to a good collection.

A. NOVI-BELGII represents the most numerous section having given rise to a great number of varieties, many of which are of surpassing merit. The leaves are broader than in the case of the Novae-Angliae forms, and do not so distinctly clasp the stems. The stems, too, are smooth, and not coarsely hispid, as are the latter varieties. The species was brought from North America in 1710.

A. N-B CERES is one of the gems of this section. It is rather tall (5 ft. to 6 ft.), and has large pure white flowers; in fact, it is the best of its kind.

A. N-B FANNY has large lilac flowers, and is very free and showy.

A. N-B COTTAGE MAID is a new variety with blush-pink flowers about an inch in diameter, very free in blooming, and vigorous in constitution. The height is 4 ft.

A. N-B ST. BRIDGID.—This is another new variety with rather smaller flowers than, but of the same colour, as those of the last-named. It is taller, too, in stature. Both may well be grown, as they are quite distinct.

A. N-B DAPHNAE is a new seedling of home origin, included in the Messrs. Barrs' catalogue for the first time. The flowers are large (1½ in. in diameter), and deep blue in colour. The leaves are ovate to ovate-lanceolate in shape, and of substantial texture. The chief feature, however, consists in the black shining stems, which are, moreover, very stout and strong. The height is 4 ft.

A. N. A. WOOLSTON.—Whilst speaking of new varieties, we may mention this one. The habit is that of a variety of A. NOVAE-ANGLIAE. The stems are pink, and coarsely hispid, whilst the leaves are sub-amplexicaul, auricled at the base, and lanceolate in shape. The flowers are very large (1½ in. in diameter), but this is chiefly due to the very long ray florets, for the disc is very small. The colour is bright purple. The height is from 5 ft. to 6 ft.

A. VERSICOLOR THEMIS runs to about 2½ ft. in stature. The flowers are white, changing to delicate rose.

A. ERICOIDES.—The Heatb-like Aster is a general favourite, and needs no further description. It must suffice to say that we have never seen it looking happier than at the Long Ditton establishment.

A. ERICOIDES CLIO is a charming form of the same height (3 ft.) with bluish instead of white flowers. The habit is dense and bushy, the individual sprays being long and graceful. It is also rather earlier than the type.

SOCIETIES.

ROYAL HORTICULTURAL.—October 12th.

THERE was again a fine display of various subjects at the meeting on Tuesday last, including large collections of perennial Asters, Begonia La Lorraine, stove and greenhouse plants, Chrysanthemums, and Orchids. The latter was indeed in much stronger force than they have been for some time past.

Messrs. J. Veitch & Sons, Ltd., Chelsea, staged a large group of Orchids, including a tall and well-flowered plant of the bold and striking *Dendrobium taurinum amboinense*, also grand pieces of *Coelogyne Veitchii*, *Oncidium praetextum*, *O. divaricatum*, *O. tigrinum*, *O. pbymatocbilum*, and other species. *Cattleya labiata* was abundant and in great variety. *Dendrobium Dearei* and *D. Stratiotes* were represented by well-flowered pieces. *Odontoglossums*, *Cypripedium arthurianum*, *C. oenanthum superbum*, *C. Charlesworthii*, *C. T. B. Haywood*, and various others were well-represented by finely flowered pieces. The Orchids were set off with Palms and Maidenhair Ferns (Silver Gilt Flora Medal).

Messrs. Hugh Low & Co., Clapton, staged a varied and profusely flowered group of Orchids set up with Palms and Asparagus. Choice and noteworthy were

Laelia praestans Low's var., *Cypripedium insigne* Laura Kimball, C. i. William Millie Dow, C. Mrs. Tautz, and others. *Oncidium incurvum*, *Vanda caerulea*, *Odontoglossum grande*, *O. crispum*, *Cattleya labiata*, *Laelia pumila*, and various others made up an interesting display. A small piece of the beautiful *Cypripedium Madame Georges Truffaut* bore four flowers (Silver Flora Medal).

Messrs. F. Sander & Co., St. Alban's, exhibited a group of *Cattleya labiata* in variety, and richly-coloured forms of *C. bowringiana*. A piece of *Cattleya labiata* in a pan bore twenty-eight flowers.

Messrs. B. S. Williams & Son, Upper Holloway, staged a group of *Cattleya labiata* in variety, as well as *Odontoglossum cristatum*, *O. purum*, *Mesospidium vulcanicum*, *Pescatorea Lehmanni*, and *Cypripediums* in variety (Silver Banksian Medal).

R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Flodden Road, Camberwell, showed a fine group of *Cattleya labiata* in considerable variety, C. i. *superba* being grand. He had a new hybrid named *Cypripedium callosomastersianum*, the compound name of which indicates the parentage. Other well grown or interesting pieces were *C. Charlesworthii*, *C. allanianum*, *C. Chapmani* and various others (Silver Flora Medal).

The Duke of Westminster (gardener, Mr. N. F. Barnes), Eaton Hall Gardens, Chester, exhibited a magnificent variety of *Dendrobium Phalaenopsis schroderianum*. *Zygopetalum jorisianum* was shown by Walter Cobb, Esq. (gardener, Mr. Howse), Tunbridge Wells. A grandly flowered piece of *Cryptophoranthus dayanus* was exhibited by Sir Trevor Lawrence, Bart. (grower, Mr. W. H. White), Burford Lodge, Dorking. C. L. N. Ingram, Esq. (gardener, Mr. T. Bond), Elstead House, Godalming, exhibited the hybrid *Cattleya Eclipse*, and the bigeneric hybrids, *Laeliocattleya Firefly*, *L. Odorata*, *L. Illustris* and others. A natural hybrid named *Vanda Moorei* was exhibited by Mr. J. W. Moore, Eldon Place Nursery, Bradford. H. T. Pitt, Esq. (gardener, R. Aldous), Rosslyn, Stamford Hill, staged the magnificent *Odontoglossum grande pittianum* with yellow flowers. Mr. T. Rochford, Turnford Hall Nurseries, Herts, exhibited the pretty *Vanda caerulea-rochfordiana*. J. Bradshaw, Esq. (gardener, Mr. H. Whiffen), The Grange, Southgate, exhibited a grand piece of *Cattleya Mantinii Nobilior*, having large, well-expanded and richly coloured flowers.

On the left hand side of the entrance a grand group of Michaelmas Daisies was set up by Messrs. Jas. Veitch & Sons, Limited, Chelsea. There were upwards of sixty plants, and about thirty species and varieties. The plants were all in pots and showed off to great advantage being fresh and exceptionally full of flower. *A. formosissimus*, *A. horizontalis*, *A. candidus*, *A. vimineus*, *A. Amellus bessarabicus*, *A. cordifolius*, *A. Novi-Belgi floribundus*, and *A. N-B Archer Hind* were some of the most notable samples (Silver Gilt Banksian Medal).

On the opposite side of the entrance was a semi-circular group of berried plants contributed by Messrs. Cutbush & Son, Highgate. The central and most bulky feature was a hatch of pot plants of the bright *Crataegus Pyracantha Lelandii*. Next came a ring of healthy samples of the Otahete Orange, then a zone of well berried plants of *Skimmia japonica*, and lastly an edging of *Ophiopogon Jahuran variegatus*.

Messrs. Paul & Son, The Old Nurseries, Cheshunt, had a remarkably bright group of Roses and berried plants. The former consisted of both plants in pots and cut blooms. Some large and well berried *Pernettyas* were a prime feature. For the time of year this was a really brilliant display (Silver Gilt Banksian Medal). Mr. E. Becket, gardener to Lord Aldenham, Aldenham House, Elstree, staged a fine collection of perennial Asters, which comprised upwards of seventy forms. These covered a wide range, and formed an excellent representation of a useful and easily-grown class of plants. Such forms as *A. Amellus*, *A. Novi-Belgii Robert Parker*, *A. sagittifolius*, *A. umbellatus*, *A. punicens pulcherrimus*, *A. paniculatus blandus*, and *A. cordifolius elegans* were represented by bunches of exceptionally well-flowered sprays. Mr. Becket's collection is a first-class one (Silver Gilt Banksian Medal).

Messrs. John Peed & Sons, Roupell Park Nurseries, Norwood Road, S.E., had a neat lot of the charming *Begonia Gloire de Lorraine*. Small plants of *Pilea muscosa* formed a suitable edging. Several

Palms scattered over the group served to remove any appearance of stiffness.

Cut, hardy flowers in quantity were shown by Mr. H. Deverill, Cornhill, Banbury. Michaelmas Daisies were present in quantity, and amongst others appeared bold and telling bunches of *Aster acris*, *A. Amellus Riverslea*, *A. Robert Parker*, and several varieties of *A. Novae-Angliae*. The pretty *Boltonia asteroides*, *Helianthus rigidus semiplenus*, and *Veronica longifolia* were likewise attractively staged (Silver Banksian Medal).

A magnificent group of *Begonia Gloire de Lorriane* was forthcoming from Mr. H. B. May, Dyson's Lane Nurseries, Upper Edmonton. The plants were large, although only in 48-sized pots, and remarkably good specimens of first-class culture. Ferns in variety formed both a background and an edging (Silver Flora Medal).

Mr. Robert Owen, Maidenhead, had cut *Chrysanthemums*, many of which were seedlings, and *Cannas*.

The hardy plants shown by Messrs. Jas. Veitch & Sons, Ltd., consisted of a basket each of *Crataegus orientalis*, *Vitis vinifera purpurea*, and two baskets of well-coloured pieces of *Vitis Coignetiae*. From the same firm came an exhibit of hybrid *Rhododendrons* of the *Javanico-jasminiflorum* section in the development of which this firm has done so much.

Mr. G. Wythes, gardener to Earl Percy, Syon House, Brentford, set up a nice lot of cut *Chrysanthemums*. Such varieties as *Louise*, *John Lightfoot*, *Louise Boehmer*, *W. H. Fowler*, *M. Ch. Molin*, *Wm. reward*, *Mrs. Geo. Rundle*, *W. H. Lincoln*, *Reine d'Angleterre*, and *M. R. Bahuant* were all represented by capital samples (Silver Flora Medal).

Messrs. Hawkins & Bennet, Lily Gardens, Twickenham, showed baskets full of the new double zonal *Pelargonium Duke of Fife*. Mr. W. J. Penton, gardener to Mr. Harris, Bowden Hill House, Chippenham, sent sixteen grand bunches of *Czar Violets*. Mr. Bain, gardener to Sir Trevor Lawrence, Burford Lodge, Dorking, sent a batch of crested single *Begonias*. Mr. Empson, gardener to Mrs. Wingfield, Amptill, Bucks, had half a dozen neat plants of the seedling *Chrysanthemum Mrs. Wingfield*.

Messrs. B. S. Williams & Son, Upper Holloway, N, received a Silver Banksian Medal for an exhibit of well coloured *Crotons*. Many of the leading forms were on view and all demonstrated culture of no mean order.

Mr. William Potten, Camden Nurseries, Cranbrook, Kent, sent a small collection of cut Michaelmas Daisies.

Mr. George Prince, 14, Market Street, Oxford, staged a lot of splendid, cut *Roses*. Some of the blooms were arranged with sprays of foliage on a large conical stand fitted with tiers of shelves (Silver Banksian Medal).

Mr. W. J. Godfrey, Exmouth, Devon, sent two dozen grand, cut blooms of *Chrysanthemums*. *M. Gustave Henry*, *M. Hoste*, *Red Warrior*, *Elthorne Beauty*, *Pride of Exmouth*, and *Admiral Ito* were the cream of the varieties.

Seventy-five dishes of Apples and Pears were shown by Mr. A. H. Rickwood, gardener to the Dowager Lady Freak, Fulwell Park, Twickenham. *Ribston Pippin*, *Beauty of Kent*, *King of the Pippins*, and *Peasgood's Nonsuch* were some of the best Apples, and *Beurre Bosc*, *Pitmaston Duchess*, and *Beurré Hardy* the best Pears (Silver Banksian Medal).

A hundred dishes of superb Apples and Pears came from Mr. G. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone. Such Pears as *Emile d'Heyst*, *Durondeau*, *Princess*, *Conference*, *Doyenné Boussoch*, and *Doyenné du Comice*; and Apples like *Bismarck*, *Beauty of Kent*, *Mère de Menage*, *Cox's Orange Pippin*, *Tyler's Kernel*, *Wellington Pippin*, *Waltham Abbey*, *Yorkshire Beauty*, and *Crimson Queening* were grand samples (Gold Medal).

Mr. A. Offer, gardener to John Warren, Esq., Handcross Park, Crawley, sent sixty dishes of medium-sized but clean and good fruit. *Doyenné Boussoch*, *Beurré de Capiaumont*, and *General Todleben* were some of the best Pears; and *Gascoigne's Scarlet*, *King of the Pippins*, *Wealthy*, *American Mother*, *Calville Rouge Precoce*, and *Golden Reinette* Apples were splendidly coloured and in capital condition (Silver Knightian Medal).

The Swanley Horticultural College (principal, F. Graham Powell, Esq.), sent bottles of preserved fruits.

John Ester, Esq., Wakefield, sent a small collection of Apples (Silver Banksian Medal).

There were nine dishes of Apples submitted for the Veitch flavour prizes. Mr. Geo. Woodward was first with *Cox's Orange Pippin*; and Col. Brymer, M.P., Islington House, Dorchester, second with *Rihstons*.

There were seven dishes of Pears shown. Col. Brymer was first with *Thompson's*; and Mr. B. Osborne, gardener to the Rev. H. Golding Palmer, Holme Park, Berks, second with *Marie Louise*.

A collection of ornamental gourds came from Messrs. A. W. Young & Co., Stevenage Nurseries, Herts (Bronze Knightian Medal).

Messrs. J. Carter & Co., High Holborn, sent a fine collection of Cabbages. The heads for the most part were weighty and sound, some of them also reaching a large size. *Early Red Pickling*, *White Prizetaker*, *Cocanut*, *Wakefield*, and *Wheeler's Imperial* were a few of the most noteworthy varieties (Silver Knightian Medal).

NATIONAL CHRYSANTHEMUM.—October 12th, 13th, and 14th.

The autumn exhibition of *Chrysanthemums* took place at the Royal Aquarium on the above dates. *Chrysanthemums* were in grand form, and better blooms have never before been staged so early in the season. Some varieties, particularly, that have hitherto been regarded as purely mid-summer varieties were shown in magnificent condition. The competition in most of the classes was good, and in the leading ones very keen.

The first award for a group of *Chrysanthemums* and foliage plants arranged for effect, occupying a space of 72 superficial feet fell to Mr. Norman Davis, who had a superb exhibit. It included fine flowers of *Geo. Seward*, *Simplicity*, and *Mutual Friend*, among a host of other grand flowers. The second prize fell to Mr. J. H. Witty, Nunhead Cemetery, S.E. The blooms were for the most part of medium size, but there were plenty of them. Mr. W. Howe, gardener to Henry Tate, Esq., Park Hill, Streatham Common, was third. He had fewer, but much larger-sized blooms in his exhibit.

In the chief class, which was for twenty-four cut blooms of Japanese, in not less than eighteen varieties, and not more than two blooms of any one variety, there were seven entries, in all of which the material was above the average. Mr. C. Penford, gardener to Sir F. Fitzwygram, Bart., Leigh Park, Havant, had *Beauty of Teignmouth*, *Modisto*, *Madme. Gustave Henry*, *W. H. Lees*, *M. Chénon de Léché*, *Phoebus*, *Edith Tabor*, *Surprise*, *Mutual Friend*, *Alice M. Love*, *Reine d'Angleterre*, *Emily Silsbury*, *Mrs. C. H. Payne*, which were the strongest blooms. Mr. James Agate, Havant, Hants, was second, also with a grand lot. *Milano*, *Edwin Molyneux*, *Surprise*, and *M. Chénon de Léché*, were splendidly shown here. The third award fell to the lot of Mr. Norman Davis, The Vineries, Framfield, Sussex. An extra prize was given to Mr. R. Jones, gardener to C. A. Smith Ryland, Esq., Barford Hill, Warwick. In the smaller class for twelve Japanese there were six entries. Mr. E. G. Foster, Brockhampton Nurseries, Havant, was first. He had capital samples of *Edith Tabor*, *Mutual Friend*, *Louise*, *Mrs. J. Lewis*, *Vicomtesse Roger de Chezelles*, *Phoebus*, *E. G. Hill*, *W. Seward*, *Zealandia*, and *Emily Silsbury*. Mr. R. Jones was second. An extra prize was given to Mr. C. Cox, gardener to John Trotter, Esq., Bickendon Grange, Hereford.

There was only one entry for twelve bunches of pompons, the first award falling to Mr. E. F. Such, Maidenhead. The same exhibitor was credited with the first award in the smaller class for six bunches of pompons.

The class for two epergnes brought forth five entries. Mr. James Brocks, gardener to W. J. Newham, Esq., Totteridge Park, Totteridge, Herts, was first. Second came Mr. Norman Davis, The Vineries, Framfield, Sussex; and an extra prize was granted to Mr. James Watt, gardener to Henry Bell, Esq., Fitzjohn's Avenue, Hampstead.

AMATEURS' CLASSES.—The best twelve Japanese came from Mr. R. Gladwell, gardener to Sydney Smith, Esq., The Gardens, Werndee Hall, South Norwood, *Mutual Friend*, *President Borel*, *Perle Dauphinoise*, *Mrs. C. H. Payne*, *Mdlle. Thersee*

Rey, and Louise were the strongest blooms. Second came Mr. J. Knapp, gardener to F. W. Amsden, Esq., 22, Chichester Road, Croydon.

Six hlooms of Japanese were also hest shown by Mr. R. Gladwell, who had grand samples of Phoebus and Edwin Molyneux in this class. Mr. W. Perrin, gardener to C. W. Richardson, Esq., Sawbridge-worth, Herts, was second. Mr. Martin Silsbury, Providence, Shanklin, Isle of Wight, staged the best six Japanese in another class, and also the best twelve blooms of the same section. Mr. Henry Love, Melville Terrace, Sandown, Isle of Wight, was second.

OPEN CLASSES.—There were two entries for the table of bouquets, wreaths, sprays, buttonholes, &c., illustrating the decorative value of the Chrysanthemum. Miss Nellie Erlebach, Chard's, Stoke Newington, was an easy first with a grand arrangement; Mr. E. F. Such was second.

There was a very brisk competition for three epergnes, no fewer than seven entries being submitted. First came Mr. D. B. Crane, 4, Woodview Terrace, Archway Road, Highgate; Miss C. B. Cole, The Vineyard, Feltham, Middlesex, was second; Mr. W. Green, Junr., Harold Wood, Essex, third; and Mrs. W. Green, and Mr. T. S. Williams, 4a, Asford Road, Ealing, were awarded an extra prize each.

Mr. T. Tullett, gardener to G. Alexander, Esq., Warley Lodge, Brentwood, secured the first award for a single vase of Chrysanthemums. Mr. D. B. Crane was second.

The miscellaneous exhibits were both numerous and effective. They comprised flowers (including Chrysanthemums), foliage plants, and fruit.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., received a Silver Medal for a handsomely arranged miscellaneous group. The central mound was composed of *Bambusa aurea*, *Lilium neilgherrense*, and *L. sulphureum*. Nerines, cut Chrysanthemums and Tritomas constituted the bulk of the flowering element. Maidenhair Fern was freely employed, and *Crataegus Pyracantha* was very showy. Mr. Ware also showed another large group of Michaelmas Daisies.

Mr. John Pinches, 3, Crown Buildings, Crown Street, Camberwell, S.E., showed samples of highly finished and ingeniously contrived garden labels.

Mr. H. Berwick, Sidmouth Nurseries, Sidmouth, Devon, contributed a grand table of varied fruit, for which a Silver-Gilt Medal was voted. Apples Hollandbury, Annie Elizabeth, Bismarck, Cox's Pomona, The Queen, Wellington, Gravenstein, Gascoigne's Pearmain, and Tyler's Kernel were represented by large basketfuls of highly-coloured fruit. Pears, Durondeau, Uvedale's St. Germain, and Beurré Bosc were also well shown.

Messrs. Osman & Co., 132, Commercial Street, had a stand of horticultural sundries.

Messrs. S. Spooner & Sons, Hounslow Nurseries, Middlesex, sent a table of excellent fruit, for which a Silver-Gilt Medal was given.

A similar award was made to Messrs. John Peed & Sons, Roupell Park Nurseries, Norwood Road, S.E., for a table of Apples; Golden Noble, King of Pippins, Blenheim Orange, and Yorkshire Beauty were some of the finest samples.

A magnificent circular group of Chrysanthemums contributed by Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey, received a Gold Medal. Of the finer varieties of the Autumn Queen shown Madame Gustave Henry, Surprise, Madame G. Bruant, and M. Hoste were shown in large size on the plants. Superb cut hlooms of Emily Silsbury, Le Moucherte, Baronne Ad. de Rothschild, Oceana, Edith Tabor, Australia, Phoebus, and Thos. Wilkin were also forthcoming. The decorative varieties, Nellie Brown, a sport from Ryecroft Glory, and Amhrose Thomas were also much in evidence. Mr. James Williams had a table decorated with Chrysanthemums and foliage, but too light to be effective.

A Silver Medal went to Messrs. H. Cannell & Sons, Swanley, Kent, for a bright and handsome group of Cannas. Although the plants were only in 5 in. pots, the foliage was stout and vigorous and the flower trusses large and substantial. From the same firm came a splendid collection of vegetables for which a Silver Gilt Medal was noted. Onions Ailsa Craig, Cranston's Excelsior, Anglo Spanish, and Reading Improved were of great size and weight. Cannell's first prize Carrot was in great form, and amply demonstrated its high merit. There were some

excellent cut Chrysanthemums on view, also from the Swanley Nurseries.

Mr. H. J. Jones, Ryecroft Nursery, Lewisham, S.E., made an extensive exhibit of cut Chrysanthemums and zonal Pelargoniums. Four or five tall vases filled with 'mums, that stood in the centre served to give height to the group which was otherwise rather flat. Maidenhair Ferns constituted an effective ground work (Silver Medal).

Mr. E. F. Such had a table of cut Chrysanthemums, but no award was made.

Mr. Norman Davis also had a table of similar material, the chief feature in which was the grand new yellow decorative variety, Klondike.

Mr. W. J. Godfrey, Exmouth, Devon, had one of the most noteworthy miscellaneous exhibits in the show as far as cut Chrysanthemums were concerned. Upwards of twelve dozen grand blooms found a place on the stands. The best of them were the samples of Admiral Ito, Red Warrior, Rose Owen, M. Hoste, John Seward, George Seward, Mme. Gustave Henry, Australian Gold, Australia, M. Chenon de Léché, T. B. Haywood, Mrs. Tucker Pain, Mr. W. J. Godfrey, and Baron A. de Rothschild. Bunches of some fine winter flowering Carnations were also exhibited by Mr. Godfrey (Silver Gilt Medal).

The Ichthemic Guano Co., Ipswich, had their now celebrated decorative stand, more handsomely trimmed than ever with cut flowers and sprays of autumn foliage, and Ferns, and setting forth the virtues of their renowned specific.

Mr. Thos. Robinson, gardener to W. Lawrence, Esq., Elefield House, Hollingbourne, sent three dozen good Chrysanthemum hlooms, but not for competition.

A superb table of fruit came from Messrs. John Laing & Sons, Forest Hill, S.E. It comprised 150 dishes of Apples and Pears, all in first-class condition. Of the former, Lane's Prince Albert, Cellini, Pineapple Russet, Fearn's Pippin, Colonel Vaughan, and Calville Rouge Precoce were specially noteworthy. Beurré Clairgeau, Doyenné du Comice, Beurré Bosc, Marie Louise d'Uccle, and Durondeau were capital Pears. (Silver Gilt Medal.) By the side of the fruit was staged a collection of hardy, cut flowers, but as these were in a had light their beauty was not fully apparent. Perennial Asters were strong. In another place the Messrs. Laing had staged a batch of the pretty little *Begonia Gloire de Lorraine*.

Messrs. Hawkins and Bennett, Twickenham, showed three basketfuls of the new zonal Pelargonium Duke of Fife—a grand winter flowerer and fog resister.

Miss C. B. Cole received a Bronze Medal for two non-competitive epergnes, the one fitted with Chrysanthemums, and autumn foliage, and the other filled with coloured foliage alone.

The Lawes Chemical Company had a stand of manures, as had the Permanent Nitrate Committee, 3, Gracechurch Street, E. C.

GARDENING MISCELLANY.

BEGONIA FOLIOSA.

THE finest plant of this beautifully leafy *Begonia* we have ever seen is growing in the conservatory at Gunnersbury House, Acton, the seat of Leopold de Rothschild, Esq. The plant was originally a tiny tuft in a small 60-size pot. As it increased in size it was placed in a large wire basket, and suspended from the roof of the house. It is now a shapely specimen of living greenery, about 3 ft. to 3½ ft. in diameter. The leaves are the smallest of any *Begonia* in cultivation, being like those of a *Vaccinium* rather than a *Begonia*; and they thickly clothe the much ramified drooping branches and branchlets. The flowers are pale, and not very conspicuous owing to their small size; but the plant is well worth growing for its foliage alone, which is highly ornamental. Mr. James Hudson succeeds well with the most diversified kinds of stove and greenhouse plants.

MINA LOBATA.

I WAS pleased to come across several well grown and freely flowered plants of this at Solna, the well kept place of Mrs. Egerton, Roehampton. They are planted out in the garden, and are growing up sticks

8 ft. to 10 ft. high, being one mass of orange and scarlet flowers. Mr. Knowles informed me the seed was sown in April the seedlings planted out in May, and the plants have been flowering all the summer. It is a beautiful plant as seen here and should be more generally cultivated. *Mina lobata* is a very unique member of the *Convolvulus* family; hence the reason for making a separate genus of it, but according to good modern authorities the correct name is *Ipomoea versicolor*.—A. Outram, F.R.H.S.

FUCHSIAS IN TUBS.

IN the gardens of Mrs. Egerton, Solna, Roehampton, standing in front of the mansion are some splendid specimen Fuchsias, 5 ft. to 6 ft. high, and as much through—splendid objects as full of flower as one could wish for. They are most useful grown in this way, as they can every now and then be moved to different quarters, thereby producing fresh effects.—A. Outram, F.R.H.S.

QUESTIONS AND ANSWERS

Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Feeding of Goldfish.—Bread is the worst thing that you can possibly give to fish; in fact, all farinaceous food is distinctly bad, since it turns sour either in the water or in the stomachs of the fish. Had your pets been living in a comparatively confined space, such as in a glass bowl, you would have had a practical demonstration of this ere now, for they would have been dead. I have seen numbers of fish killed in this way, to the no small puzzlement of their owners, who could not imagine a reason. The best food to give fish is the pupae of ants, popularly known as "ants' eggs." These may be purchased very cheaply indeed at a seedsman's or at the stores. Two or three of the "eggs" daily will be enough for small fish, and you can obtain quite a quantity for a penny.—A. S. G.

Grub in Chrysanthemum Leaves.—W. E. B.: Your Chrysanthemums are being tormented by the grubs of a small black fly named *Phytophaga nigricornis*. The grub of the Frog Hopper never hurrows into the interior of the leaf, but nestles on the surface, usually in the axil of a leaf, and in a mass of froth, like spittle, so that it is not the cause of the mischief under notice. The perfectly developed and winged female fly lays its eggs upon the leaves, and the grub on becoming hatched out hurrows its way into the interior of the leaf, destroying the latter by feeding on the soft tissue. Keep an eye upon the plants in early summer, and whenever you detect the grub in a leaf pull the latter off and burn it, or, if you can find the position of the grub squeeze it between the finger and thumb. Badly-infested leaves should always be burnt to destroy the grubs and prevent them from reaching the winged state. There are several broods each season, so that you should persevere in destroying the grubs from their earliest appearance. They are usually far more destructive to the leaves of *Chrysanthemum coronaria*, *C. carinatum*, and other annual species than to the late flowering and perennial *C. sinense*. You could syringe the leaves occasionally with weak tobacco water with the view of preventing the female flies from laying their eggs there. Your experience with the pest is a very common one in the South.

Spotting of Orchid Leaves.—Alex. Logan: We have no doubt that the black and gray spots on the leaves of *Lycaste aromatica*, *Dendrobium nobile*, and *Eria* have been caused by the fungus known as Orchid Leaf Rust (*Glaeosporium cinctum*) described in the "Journal of the Royal Horticultural Society," Vol. xxi., Part I, pp. 82, 83, and 84. We have some doubt about the spotting of the leaves of *Odontoglossum incurvum*; but it may merely have been an earlier stage of the fungus. You are advised to spray the plants with potassic sulphide solution to kill the germinating spores of the fungus. Prevention, however, is better than cure; and we should advise you to keep the temperature of the house a little higher at the same time giving a suitable amount of air to dispel moisture. If the air of the house is kept dry and warm, especially when the leaves are being developed you will be able to a large extent to prevent the growth of the fungus, by hindering or altogether preventing the germination of the spores. You will lose nothing by giving this method a good and earnest trial. Spotting is generally largely developed and encouraged by the low temperatures with an excess of moisture in the atmosphere and on the leaves.

Iris susiana.—M. M. L.: The chief source of difficulty with this species lies in the fact that it commences to grow just before winter when it should be

resting. For that reason a little protection in winter is necessary to shelter it and ward off snow and rain. For outdoor culture you might try it in some warm, sheltered position, placing a hand light or cloche over it at all times when the weather is severe, but at other times ventilating freely. We doubt very much whether it would thrive in a pot owing to the fluctuations of temperature and moisture under those conditions. The best way would be to grow it in a cold frame in rich sandy soil, placing plenty of river sand about and amongst the roots to keep them dry in winter. After the plant has flowered and completed its growth keep it as dry as possible till next spring when it begins to move, after which, in mild weather it should receive a liberal supply of water to enable it to grow freely and get strong.

Names of Plants.—*W. S. Sandon*: 1, *Hedychium spicatum acuminatum* (would you be willing to send us a rooted crown of this plant for the Kew collection, as it is not in the gardens there?); 2, *Cypripedium Sedeni* (deformed flower); 3, *Hibbertia volubilis*; 4, *Oxalis scandens*; 5, *Swainsonia galegifolia alba*; 6, *Polypodium (Niphobolus) Lingua*; 7, *Gymnogramme japonica* (apparently, but you should send spore bearing fronds of all Ferns); 8, *Adiantum venustum*.—*G. C.*: *Salvia Horminum*.—*G. Thom*: 1, *Salix alba*; 2, *Salix alba vitellina*; 3, *Salix purpurea*.—*W. S.*: 1, *Crataegus tanacetifolia*; 2, *Cupressus nutkaensis*; 3, *Thuopsis dolabrata*; 4, *Libocedrus decurrens*.—*A. Wood*: 1, *Pyrus pinnatifida*; 2, *Pyrus Aria*; 3, *Jasminum revolutum*; 4, *Aspidium angulare proliferum*; 5, *Lygodium palmatum*; 6, *Phragmites communis*.—*T. Reid*: 1, *Ledum palustre*; 2, *Rhododendron ferrugineum*; 3, *Lonicera sempervirens*.—*Alister*: 1 and 2, *Chrysanthemum Blushing Bride*; 3, *Chrysanthemum Mrs. J. R. Pitcher*, probably; 4, *Chrysanthemum Précocité*; 5 and 6, herbaceous *Calceolarias*, not recognised; 7, *Trachelium caeruleum*.

Carnation Maud Dean.—*M. M'L.*: It is a new tree variety, and as far as we know is not yet in commerce on this side of the Atlantic. You might try Mr. W. J. Godfrey, Rolle Street, Exmouth, Devon. You must remember that it is not a florists' flower, and therefore not judged by the same rules; but for cut flower purposes it is handsome and useful when well-grown.

Address of Firm.—*Alister*: The address you ask for is Messrs. Adam and Charles Black, Publishers, 4, Soho Square, London.

Tarred Frames and Asparagus.—*Omega*: For forcing purposes we do not think that any harm would result to the Asparagus seeing that it has not to put forth tender leaves. But in any case the tar should be dry before you commence forcing. Do not on any account tar the hot water pipes, if you employ the latter for forcing, as the fumes would probably prove too great for healthy Asparagus to be produced. A better plan, however, would be to tar the outside of the frame, and paint the inside, in case you might at any time want to grow plants in the pits.

Botanical Term.—*Omega*: The term employed to denote a single flower is *simplex*.

Seeming disease on Cypripedium leaves.—*A. P.*: We have no doubt that the damage was all done by thrips. Even now we can find specimens of small yellow thrips in the sheaths of the leaves at their present advanced stage. The thrips secrete or hide themselves between the folds of the young and developing leaves, and long before the eye can detect the thrips the damage is done. We should advise you to keep a sharp eye on the plants all through the summer, examining the young leaves at short intervals, especially during dry weather. Make a solution of Gishurst Compound or soft soap and water of moderate strength. Tie a small piece of sponge on the end of a thin label or similar piece of wood for the purpose of washing out the interior of the folded leaves, and even the outside, if need be. It is only by persevering in this way that good cultivators succeed in eradicating or checking the pest after it gets a foothold. Instead of Gishurst Compound or soft soap, you may use Fir-tree Oil or Lemon Oil, whichever you like best. Attention and perseverance will certainly enable you to succeed in keeping the pest at bay.

GARDENING BOOKS.

HARDY ORNAMENTAL FLOWERING TREES AND SHRUBS, by A. D. WEBSTER. A valuable guide to planters of beautiful trees and shrubs for the adornment of parks and gardens. Second and cheap edition now ready. Price, 2s.; post free, 2s. 3d.

CHRYSANTHEMUMS AND THEIR CULTURE. By Edwin Molyneux. Ninth Edition. By far the best practical work yet written on this subject, Price, 1s.; post free, 1s. 2d.

VINES & VINE CULTURE.—The best book on Grapes. By Archibald F. Barron, late Superintendent of the Royal Horticultural Society's Garden, Chiswick, and Secretary of the Fruit Committee.—A New and Cheaper Edition, Revised and Enlarged. Demy 8vo, Handsomely Bound in Cloth. Price, 5s.; post free, 5s. 3d.

THE CARNATION: ITS HISTORY, PROPERTIES, AND MANAGEMENT; with a descriptive list of the best varieties in cultivation. By E. S. Dodwell, Third edition, with supplementary chapter on the yellow ground. Price, 1s. 6d.; post free, 1s. 7d.

FERNS & FERN CULTURE. By J. Birkenhead, F.R.H.S.—How to grow Ferns, with selections for stove, warm, cool and cold greenhouses; for baskets, walls, wardian cases, dwelling houses, &c. Price, 1s.; by post, 1s. 3d.

THE AMATEUR ORCHID GROWER'S GUIDE BOOK. By H. A. Burberry (Orchid Grower to the Rt. Hon. J. Chamberlain, M.P.). Second Edition, with coloured plates. Containing sound, practical information and advice for Amateurs, giving a List with Cultural Descriptions of those most suitable for Cool-house, Intermediate-house, and Warm-house Culture, together with a Calendar of Operations and Treatment for each Month of the Year. In Cloth. Price 5s.; post free, 5s. 3d.

Postal and money orders should be made payable at the East Strand Post Office to F. A. COBBOLD "GARDENING WORLD" Office, 1, Clement's Inn, Strand, London, W.C.

250 bulbs of the same kind will be charged at the 1,000 rate; 25 at the price per 100; 6 at the price per 12.
 COLLECTION D for spring garden, containing 1,370 bulbs, £1 1s.; half of this, 11s.
 COLLECTION B for indoor, containing 529 bulbs for 92 pots or glasses, £1 1s.; half of this, 11s.

EMPEROR, a magnificent variety, with deep primrose-coloured perianth, and rich full yellow trumpet, very large flower. *Extra strong Bulbs*, per 100 30s., per doz. 4s. 6d.

OBVALLARIS, the Tenby Daffodil, very early, perianth and trumpet deep yellow, a charmingly graceful daffodil. *Extra Strong Bulbs*, per 100 14s. 6d., per doz. 2s.

SIR WATKIN, the Giant of the Chalice Cupped Daffodils, perianth rich sulphur, cup yellow slightly tinged with orange. *Extra strong bulbs*, per 100 25s., per doz. 3s. 6d.

BARRII CONSPICUUS, a flower of great beauty and refinement, a favourite with all, large broad spreading yellow perianth, broad short cup, conspicuously edged bright orange-scarlet. *Extra strong bulbs*, per 100 21s., per doz. 3s.

ALL BULBS SENT CARRIAGE PAID ON RECEIPT OF REMITTANCE.

Send for BARR'S ILLUSTRATED CATALOGUE of all the most beautiful DAFFODILS, with full particulars of collections for Amateurs and Exhibitors, *Free on Application to:—*

"Gardening is the prnest of hman pleasres, and the greatest retrebtment to the spirit of man."—Bacon.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, OCTOBER 23rd, 1897.

NEXT WEEK'S ENGAGEMENTS.

- MONDAY, October 25th.—Meeting of the Floral Committee of the National Cbrysantbemum Society at the Royal Aquarium.
- TUESDAY, October 26th.—Royal Horticultural Society; meeting of committees at 12 o'clock.
- WEDNESDAY, October 27th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
- THURSDAY, October 28th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
- FRIDAY, October 29th.—Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

THE NEAPOLITAN CYCLAMEN.—By this name we refer to *Cyclamen neapolitanum* described by the Italian botanist Tenore in his *Prodromus Florae Neapolitanae* p. LXVI, and which is a native of Central and Southern Europe, including the district of Naples from which it takes its name. We are aware that for many years past horticulturists have been accustomed to speak of it as *C. hederaceum*, and under that name it is recorded in the earlier editions, at least, of the *Student's Flora of the British Islands*, but the original description applies in part only to the

species under notice. The names *C. hederaceum* and *C. hederacefolium* have both been applied to the so-called Persian Cyclamen (*C. latifolium*). *Sim's Botanical Magazine* applies *C. hederacefolium* to *C. vernale*, another Italian species. The *Index Kewensis* refers the *C. hederacefolium* of Willdenow to *C. neapolitanum* with a doubt, and retains the same name as used in *Aiton's Hortus Kewensis* for a South European species. Thus, therefore, the name *C. hederacefolium* has been applied by different authors to four different species, and *C. hederaceum* as a variant of it to a fifth species. Mr. J. G. Baker, keeper of the Herbarium at Kew, and other good modern authorities are agreed that the plant under cultivation, and naturalised in various parts of Britain is *C. neapolitanum*, and for botanical purposes at least, we have no fault to find with that decision. For many years past, even before the advent of the *Index Kewensis*, we were aware that this was the correct name of the plant, and ascribe all the confusion in gardens to the blundering of the older botanists including the great Linnaeus himself.

Every succeeding year serves to impress upon us the value of *C. neapolitanum* for horticultural purposes. It is perfectly hardy, flowers and fruits abundantly in the open air without any special care beyond planting it under conditions congenial to its welfare. In other words it must be planted under the shade of deciduous trees, and as far as we have observed it does best under Elms, though other trees answer the purpose admirably, so long as they are deciduous. The largest and finest plantation of it we have seen is in the Broxbourne Nurseries, of Messrs. Paul & Son, of the Old Nurseries, Cheshunt. The Cyclamen has been planted at different times in an undulated border of varying width, reaching from the main entrance near the Broxbourne Railway Station along the side of the rockery, and under the shelter of a row of tall Elms forming the boundary of the nursery on that side. The plantation is to be continued until it reaches the New River which flows past another side. The parent bed from which the ever extending plantation has been made contains corms which are sixteen years old. There is no degeneracy and as little evidence of the plants dying out. During the months of August, September, and October, the plants have been flowering most profusely. Just before we paid the visit of inspection 20,000 flowers had been pulled, and yet there was no visible evidence that any had been gathered. The corms of the older plants are of large size, producing broad tufts of flowers and foliage, while the smaller and younger are just as profuse, and quite equal to the Persian Cyclamen in this respect. The flowers, of course, are smaller and the stalks shorter; but surely the species is capable of improvement and only awaits the influence of some guiding and skilful hand.

Seed pods are being developed in place of the earlier flowers, and the coiled up foot-stalks are burying the seed pods in the soil where they will remain all the winter, and ripen the seed which will be fit to gather in May and June next year. The flowers vary from purple to rosy-purple, rose, white with a purple mouth, and almost pure white in some cases. The foliage is equally if not more variable and very handsome indeed. Some plants bear small leaves, and others notably large ones. Many of them are silvery-gray with a green zone in the middle of fanciful shape. Others have a green centre with gray margin. Some are so lobed as to have five nearly equal sides, while others are hastate or sometimes almost the shape of an arrow. Another

pretty pattern consists of a light green centre, surrounded by a dark zone, to be bounded by a double margin of gray and green. A Fern-leaved variety, with deeply cut leaves was picked up in a batch of seedlings. A peculiarly noticeable feature of this species is the prominent auricles at the base of each segment of the corolla, and which leads us to hope that a race of handsome varieties could be raised from it, differing completely from the better known Persian Cyclamen. The culture is of the simplest possible description. The natural soil is a heavy brick earth, and the surface is simply covered with cocoanut fibre and kept clean. The flowers are the first to appear, followed by the foliage while the flowers are yet in perfection.

We have also seen a smaller but very fine bed of this Cyclamen under the shade of Elm trees in the gardens of Messrs. de Rothschild, Gunnersbury Park, Acton; and Mr. G. Reynolds has no difficulty in flowering and fruiting the plants profusely every autumn. On the edge of the wild garden near the Cumberland Gate of Kew Gardens, numerous corms are planted amongst the hardy Ferns under the shade of Elms and Limes. Here the plants have been most successful, though they refuse to thrive when planted amongst the grass, in the same way as Daffodils.

Diamond Jubilee Medal for Sir Trevor Lawrence, Bart.—I have the honour to inform you that Her Majesty has been graciously pleased to confer the Diamond Jubilee Medal upon Sir Trevor Lawrence, Bart., President of the Royal Horticultural Society; Her Majesty being herself Patron of the Society.—*W. Wilks, Sec., R. H. S.*

Victorian Era Exhibition.—The Awards Jury of the Victorian Era Exhibition at Earl's Court has just awarded Messrs. J. Laing & Sons, Forest Hill, London, a Diploma and a Gold Medal in recognition of the meritorious way in which they have planted the numerous beds in their extensive gardens with flowering plants and shrubs.

Royal Horticultural Society.—The next meeting of the committees will be held on Tuesday, October 26th, at the Drill Hall, for fruit, vegetables, flowers, and Orchids. At 1.30 punctually, the President and Council entertain at luncheon the 60 recipients of the Victoria Medal of Honour granted by Her Majesty's gracious permission in celebration of the completion of the 60th year of her reign. The lecture announced for the 26th will be postponed, and instead thereof at 3 o'clock the sixty medals will be distributed to the recipients by the President in the Drill Hall.

Death of Mr. Isaac Davies.—On Sunday, the 10th inst., there passed away one of the old school of nurserymen, viz., Mr. Isaac Davies, of Brook Lane Nurseries, Ormskirk, at the ripe old age of 85. The deceased gentleman was the raiser of many good *Calceolarias* and *Pelargoniums* forty years ago, and many good *Azaleas*, hardy and greenhouse *Rhododendrons*. He also raised several things which will live for many years amongst the best productions in this way, including *Azalea Daviesi*, *A. Avalanche*, and *Rhododendron praecox elegantissimum*. The greenhouse varieties, *Countess of Derby*, *Countess of Sefton*, *Lady Skelmersdale*, and many others were the result of his work.—*A. O.*

Birmingham Amateur Gardeners' Association.—Mr. W. Sanderson read a paper on "Old Time Gardening" before the members of this society, at a meeting held at the Technical School, Birmingham, on the evening of Tuesday, October 5th. The essayist treated the subject in a very full and lengthy way, and said that the present day system of growing flowers for pleasure or beauty was comparatively new, for plants in the middle ages were cultivated either for food or medicine. He also described the various forms of old gardens, and stated that our ancestors favoured the arrangement of growing their plants in straight rows in square or oblong beds. Mr. Cornwell occupied the chair.

Death from eating Laburnum seeds.—Bella Jane Cartney, the daughter of a farm servant residing in the neighbourhood of Strichen, Aberdeenshire, died on the 2nd inst. as the result of having eaten some seeds of Laburnum the previous afternoon. The girl was four and a half years old, and medical aid proved unavailing in the effort to ward off a fatal result.

Budleigh Salterton and East Budleigh Cottage Garden Society held its annual meeting on Tuesday, the 5th inst. The Rev. W. F. Green occupied the chair. Dr. Brushfield, the treasurer, reported receipts £58, and expenditure £48. This report was passed on the motion of Captain Astley Cooper, seconded by Mr. Kempson. A sub-committee, composed of ladies and gentlemen, was formed to revise the prize lists.

The Lozier Manufacturing Co.—This firm of manufacturers of the noted Cleveland bicycles has left its former offices at 18, Holborn Viaduct, and removed to 24, 25, 26, and 27, Orchard Street, Oxford Street, London, W., where a cycle depot is being fitted up, which is declared to be the most commodious in the United Kingdom. Besides a complete stock of Cleveland bicycles, the company has also a complete stock of parts for executing any and all kinds of repairs, and, if necessary, to build the machine complete. The headquarters of the firm are at Cleveland, Ohio.

Bristol Amateur Horticultural Society.—Mr. E. M. Dyer presided at the monthly meeting of this society over a large attendance. Mr. E. H. B. Chapman, F.R.H.S., M.S.A., of Frome, lectured on "Cacti and Succulent Plants." Mr. Chapman has devoted a good deal of time to the study of this interesting class of plants. He was one of the founders of the National Cactus Society. As was expected, he gave a most interesting lecture, illustrating the various points by means of living specimens, of which there were about 100. He gave in detail the characteristics of and the methods of culture for many selected kinds of Cacti, and fixed the attention of his audience throughout.

Rye Gardeners.—A remarkably good show rewarded the efforts of Rye gardeners on the 6th inst. The vegetables sent by both the cottagers and the professional gardeners were first-rate. Mr. F. W. E. Shrivell, F.L.S., lectured in the evening upon "Artificial and other manuring for garden produce." The facts and figures he presented were based upon practical and extensive experiments made in Kent, and were entirely in favour of the use of chemicals for producing much larger and better crops. The lecturer was "heckled" by a few of the members of the audience, although the experience of others went to show that Mr. Shrivell was right in his deductions. The Mayor (Alderman Fuller) presided.

Fordhook Farm, U.S.A.—There is no more widely known firm in the States than that of Atlee, Burpee & Co., and no prettier spot than the headquarters of the firm at Fordhook Farm, Doylestown, which is only an hour's easy run from Philadelphia. The methods in vogue at Fordhook are thorough and practical, as becomes an establishment that is such an important factor in the supplying of seed to the American continent. The greatest vigilance is observed as to the quality of seed supplied to customers. Both its vitality and its purity with regard to strain and name are fully tested before customers are supplied. An idea of what an important item the "purity" trials are may be gathered from the fact that over 5,000 of these trials took place last season. Vegetables and flowers are alike well looked after, and many, many acres of land are devoted to the plants which are to furnish the seed. Sweet Peas are a great speciality of the firm, and much interest is taken in them, so much so indeed that last summer Mr. Burpee made a journey of 13,000 miles in their behalf, including a visit to Britain for the purpose of visiting Mr. Henry Eckford's grand collection at Wem, in Shropshire, and seeing the plants in full bloom. There is very little glass at Fordhook, although a little is required to raise tender plants. Visitors are always welcome on any day except Sunday, although Wednesday is the usual visitors' day. Escort is in each case provided, and points of interest shown, and explained where necessary.

Tunbridge Wells Gardeners.—Mr. Berwick presided at the last meeting, when impromptu discussion was the order of the evening. The chairman introduced the question of the cultivation of the Apple, and gave his personal experiences as to soils, manures, and winter preservation of old and young trees. The following were the successful exhibitors:—Messrs. Greengoe, for Beet; Palmer, Nectarines; Bridger, Brussels Sprouts; March, Vegetable Marrows; and Verrall, Tomatos. Messrs. Verrall & Palmer were awarded Cultural Certificates.

The London Florists' Company, Limited.—This is the name of a new company recently floated with a capital of £30,000, and 17,000 shares were offered for public subscription. Preferential allotment was to be given to those living in the neighbourhood of the nine shops and businesses which the company proposes to carry on. The authors of the scheme point to the success of the Aerated Bread Company, Welford & Sons, Spiers & Pond, Crisp & Co., and T. R. Roberts, as evidence of what may be done by this method of working. The statement of profit submitted covers only one year's working, previous results being omitted, as some of the businesses were not established.

Scottish Horticultural Association.—A paper on "Horticultural Influences" was read at a meeting of the Scottish Horticultural Society on October 5th by Mr. R. W. Wilson, gardener at Murdison Castle, Newmains. The place of meeting was 5, St. Andrew's Square, Edinburgh, and Mr. M. Todd presided. It was not possible, said Mr. Wilson, for wealth or power to monopolise the blessings derived from horticulture, for the gilded-domed conservatory might not impart to its lordly owner as much satisfaction as the widow's modest plant grown in the loftiest tenement of any of the great cities did to her. Viewed from many points, they could not fail to realise the beneficence of horticulture as a far-reaching and divine creation. Mr. Wilson deprecated the way in which much of the surplus fruits, flowers, and vegetables from the gardens of the wealthy finds its way into the market in competition with the hard-working, industrious market gardener, and he suggested that much of it might be diverted into the wards of the hospitals and other institutions for the sick with beneficent effects. The immense influence for good caused by the laying out of flower beds at railway stations could not be estimated, for the practice let sunshine into the hearts of thousands of travellers daily. Mr. Wilson was heartily thanked for his paper. Among the exhibits made on this occasion were *Asters* from Mr. M. Todd, *Chrysanthemums* from Messrs. T. Methven & Sons, *Hollyhocks* from Ballikinrain Castle, and seedling *Carnations* from Messrs. Dickson & Co.

Preston and Fulwood Horticultural Society.—Mr. B. Ashton, of Lathom House, filled the chair on the occasion of the 79th monthly meeting of this society, which took place at the Old Legs of Man Hotel, Preston. He briefly introduced the lecturer for the evening, Mr. W. P. Roberts, Cuerdon Hall, Preston, who dealt with the subject of "Soil." In the course of his remarks, Mr. Roberts revealed an intimate knowledge of the teachings of science on the formation of the soil, and he also described very lucidly their good and bad qualities, and the various effects of the weather upon them. A good soil should contain from 50 per cent. to 70 per cent. of sand, 20 per cent. to 30 per cent. of clay, 5 per cent. to 10 per cent. of lime and the same proportion of humus. Such a soil had enough sand to make it warm and porous, and enough lime to decompose the inorganic substances present. A bad soil was just the reverse, for it contained a superabundance of sand, clay, or humus, either of which was hurtful. Standing water was hurtful in every way. It made the soil cold, for not only does water take longer to warm than the soil, but in evaporating cools the soil. By draining, the air was allowed to get in as the water was drawn out. Speaking of weeds, he described them as plants in the wrong place, and it was necessary to remove them. In the discussion that followed the reading of the paper Messrs. Payne, Sykes, and Wood took an active part. Mr. Roberts then replied to questions that were raised during the discussion. Votes of thanks to Mr. Roberts for reading his paper, and to Mr. Ashton for presiding brought the business to a close.

Death of Mr. E. J. Baillie.—As we go to press we learn of the death of Mr. E. J. Baillie, of the firm of Messrs. Dicksons, Limited, at his residence, Woodbine, Upton, on the 18th inst. We shall refer to the matter again in our next issue.

Oak on a Church Tower.—An evergreen Oak, supposed to be 200 years old, grows on the top of the tower of a church at Culmstock, Devon. How it manages to exist amongst the masonry, especially during droughty seasons, is a mystery.

The First Chrysanthemum in Cincinnati, U.S.A.—The earliest blooms to come to hand this year in America were those of Lady Fitzwygram, on the 23rd September, six days in advance of last year. The blooms fetched 6½d. each in the market.

Royal Appointment.—Messrs. Dobbie & Co., Seed Growers and Florists to the Queen, Rothesay, have been honoured with the following addition to their Royal Warrant of Appointment:—"The name of Andrew Mitchell is added to this warrant, as one of the firm of Dobbie & Co., by desire of the Lord Steward, The Earl of Pembroke.—Signed, T. C. March, Secretary, Board of Green Cloth, Buckingham Palace, October 16th, 1897.

Royal Horticultural Society.—The dates fixed for next year's meetings are as follows:—1898: January 11th, February 8th, March 8th and 22nd, April 12th and 26th, May 10th, Temple Show, May 25th, 26th and 27th, June 14th and 28th, July 12th and 26th, August 9th and 23rd, September 6th and 20th, Fruit Show, Crystal Palace, September 29th and 30th, and October 1st, October 11th and 25th, November 8th and 22nd, December 13th. Any gentleman willing to deliver a lecture on any of these dates would greatly oblige by communicating *at once* with the Secretary, 117, Victoria Street, S.W.

The New Colony at Pitsea.—The Fairview Building Estate, at Pitsea in Essex, according to experienced judges is said to contain some of the finest land in the county. The estate also possesses great advantages in the way of a good supply of water, and light tithes. It is situated on the main road to London, and is easy of access from the metropolis. Recently a powerful and wealthy syndicate has been formed with a view to promoting the formation of a colony at this favoured spot. The opening sale of land takes place on Monday, October 25th, when all purchasers will have an equal chance of securing plots of land according to their needs at low prices. We understand that the syndicate intends to relieve purchasers of the payment of all tithes. Arrangements are being made for the erection of factories, and Mr. J. W. Humm himself has had plans prepared for a factory capable of employing 500 hands. All those who sympathise with the dreary life of the East End worker, cooped up in the congested surroundings will welcome this practical attempt to improve the conditions of labour.

Nursery and Seed Trade Address List.—The value of an address list is of leading importance to everyone engaged in business of any description that necessitates much communication through the post. Various lists already exist, but need frequent overhauling, and even then it is difficult to make all the necessary corrections and alterations except one is in direct communication with the parties concerned, whose names are given in the list. With regard to the nursery and seed trade Mr. B. Wynne, 1, Danes Inn, Strand, W.C., is in this position; and it has occurred to him to get together and publish "The Nursery and Seed Trade Postal and Telegraphic Address List." The list is given in alphabetical order followed by abbreviations, which indicate whether the party addressed is a nurseryman, seedsman, florist, horticultural sundriesman, wholesale florist, or commission salesman. It should therefore be of value to a wide circle of business men in connection with commercial horticulture. Then follow the postal address and the telegraphic address, where there is one, in the same or the consecutive line. As one line usually contains the name and address, it follows that an enormous number of them are recorded in the book, which runs to 94 pages. The first list runs to 77 pages; then follows a list of telegraphic addresses written separately; and this in turn is followed by a third list consisting of the Metropolitan nurserymen, seedsmen, florists, &c., together making up the 94 pages. This useful list may be obtained from the author, 1, Danes Inn, Strand, W.C., for 1s., post free, 1s. 1½d.

Chrysanthemums at Battersea Park.—The eighth annual display of the autumn flower is now open to the public in Battersea Park, in the houses near the west lodge entrance. Mr. Coppin has increased the number of plants from 2,000 to 2,200, being an increase of 200 since last year. There are 250 varieties in the collection.

Shirley Gardeners' Mutual Improvement Association.—The monthly meeting was held at the Parish Room, Shirley, Southampton, on Monday 18th inst., the President, Mr. W. F. G. Spranger conducting the meeting. Mr. F. J. Crook, Assistant Hon. Sec. Winchester Gardeners' Association, gave an exhaustive paper on "Salads," his opinion being that our gardeners as a rule paid too little attention to this branch of their profession, and that a great number of employers also called for very little variety in this class of food. He enumerated quite a big array of vegetables suitable for the purpose, and gave the method of culture desirable for a number of the most useful varieties. A hearty vote of thanks was accorded to Mr. Crook at the close of a brief discussion on his paper. The annual outing of the members took place on the 3rd inst., the party going to the National Fruit Show at the Crystal Palace, and after inspecting the exhibits, a capital luncheon, provided by Messrs. Bertram & Co., was partaken of. After the luncheon a hearty vote of thanks was accorded to the president and members who had subscribed to the special fund for the outing, and the members separated, some finding their way to the London Parks and a few went to Messrs. Laing & Son's Nurseries, where they were courteously treated and shown round the establishment.

Beddington, Carshalton, and Wallington Horticultural Society.—The annual general meeting of the members of this society took place on the evening of Tuesday, October 5th. Dr. Cressy occupied the chair. The report for the year presented by the committee stated that the show held (by the kindness of J. H. Bridges, Esq., J.P.) in Beddington Park was a great success. The number of competitive entries was equal to former years; and there were many honorary exhibits of high quality. Notwithstanding the falling off in the subscriptions from various causes, a balance of over £53 was reported. The amount disbursed in the shape of prizes totalled £97 17s. 6d. The total receipts for the year were £335 14s. 9d., and the expenditure for the same period £282 7s. 3d. The chairman in moving the formal adoption of the report and balance sheet, spoke of the effect that the Jubilee year had had in lessening subscriptions. Mr. Brown seconded, and the motion was carried unanimously. Mr. G. W. Cummins was asked to refill the post of secretary, but said that he was compelled to decline the honour owing to his retirement from the office of gardener at The Grange. A vote of thanks and an honorarium of ten guineas was proposed as a recognition of Mr. Cummins' services. Mr. W. T. Toogood was elected secretary, and Mr. C. F. F. Hutchings assistant secretary.

IDEAL LABEL AND HOLDER.

The vexed question of durable labels for garden plants is always cropping up, and many kinds are brought forward from time to time. Mr. E. H. Harry has invented and patented a durable label of simple construction, the general features of which may be seen by reference to the accompanying illustration lent by the inventor. The label itself upon which the writing is done consists of a flat plate of zinc, with four holes for the reception of the stout wire holder. The latter consists of one piece bent in the middle, and three times bent near the ends to form a receptacle for the label.

The advantages claimed for this invention are several. It is less in price than any ordinary stem label. The label may be used twice, thus saving 50 per cent. on this item alone. The stem may be used any number of times for different labels. The latter may be taken off the stem to be written upon, which is a great convenience, as anyone who has had to write on the ordinary stem label will allow. It cannot face the wrong plant, as single stem labels are apt to do. It is far neater than any label of a similar character, as only the writing space hides the view of the plant. For amateurs, gentlemen's gardeners, and nurserymen, this label, the inventor thinks, will be a great boon. The patentee is having

the cast Acme Label made to fit the above, and is also making a zinc label of stouter substance with any desired name stamped in. Either of these two additions raises the price from 1s. to 3s. 6d. per dozen.

THE IDEAL LABEL AND HOLDER.

The patentee is also having the Ideal Label and Holder made in three sizes for placing in the ground or in pots. These labels are to be obtained from Mr. E. H. Harry, 36, Adelaide Road, Brockley, S.E.

CHINA ASTERS AT MORTLAKE.

CHINA ASTERS are amongst the most popular of annuals, and the assurance of this is found in the enormous number of varieties in existence, classified or grouped under numerous sections. Florists still keep straining every effort to raise new types and colours. There is also some evidence that they are being turned to account in a greater variety of ways than formerly.

During the fourth week of September we visited the Trial Grounds at Mortlake of Messrs. J. Carter & Co., High Holborn, London. At the north end of the grounds, close to the railway between Mortlake and Richmond, three long rows of beds were sown with China Asters in the first week of May, the seeds being committed to the ground where they were to bloom. About three-fourths of them were still in full bloom about the time of our visit. The strain known as Queen of the Market is the earliest, and was considerably past its prime. The blooms of this variety are relatively of large size, showy, and conspicuous. We noted rose, red, pink, white, blue, and violet-purple varieties amongst them. The Comet strain is now one of the most popular and admired. The white is an exceedingly fine form; but there are others of a beautiful mauve, rose, blue with a white edge, and pink with a white edge. This strain bears the same relation to the other Asters as the Japanese Chrysanthemum does to the incurved.

There are twenty-four different shades of colour in the Paeony-flowered section, including the ordinary type and Truffaut's strain, ranging from white to crimson. Truffaut's type of the strain is characterised by having incurved florets, and when well grown it is very pretty. The plants grow about 12 in. to 18 in. in height, branch freely, and produce a great quantity of flowers. The number of varieties is, amongst other things, an index to the utility and popularity of Paeony-flowered Asters. Very vigorous, upright, and branching are the plants of the strain known as Giant Branching. There are several colour varieties, and all are very late in coming into bloom compared with the rest. Many of the plants were only commencing to bloom on the 25th ult. Emperor Aster may be compared with the last two sections mentioned for the sake of contrast. The white and the blue varieties are the best, and produce only one or two blooms of huge size and handsome appearance upon a plant.

Very pretty is the new strain known as the Ray Aster, having long, quilled, loosely arranged florets of white and rose colours, much resembling the spidery Chrysanthemums. The Crown or Cockade

Aster exists in six colours, but in each case is characterised by having a white centre, being both fanciful and attractive. Dwarf Bouquet Asters, in many shades of colour, only grow about 3 in. to 6 in. high. They have a quilled centre, and bloom very early. As far as dwarfness is concerned this strain is beaten by Dwarf Shakespeare Aster, in six colours, and attaining a height only of 3 in. to 4 in., forming tufts hugging the ground. Pompon Asters grow about 12 in. high, forming neat, pyramidally branching plants. There are twelve colour varieties of them, having quilled centres and flat rays in several rows. This type is both pretty and useful for cut flowers.

The Dwarf Chrysanthemum Asters exist in eight varieties. The plants are bushy, producing large heads, and are about 9 in. high. The Victoria Asters, in six colours, grow 12 in. to 15 in. high, and produce a great quantity of closely and neatly imbricated heads. Both of these strains are very popular. The Needle Aster is after the style of the Ray Aster, but the blooms are smaller, and the quills are more compactly and neatly arranged. There are six varieties of this type, and they are very pretty both in form and colour. Bettridge's Quilled Asters in many colours are well known, and are models of neatness, even if more formal than most of the above. The new yellow Aster belongs to this section. The Ball Aster is also practically new, and closely resembles an incurved Chrysanthemum. There are dark purple, light blue, white, and other varieties, which add to the long list of useful forms of the popular China Aster.

REDBRAES NURSERY, EDINBURGH.

THOUGH the firm of Messrs. James Grieve & Sons is comparatively young, Mr. James Grieve, sen., has been a prominent figure in horticulture for over thirty years past, especially in connection with the raising and cultivation of Pansies, Violas, and other florists flowers. He is not unconnected with fruit growing as the Apple bearing his name, under "Plants Recently Certificated" in another column, will show. Mr. Grieve and his two sons carry on their business as nurserymen and florists at the Redhraes Nursery, Broughton Road, Edinburgh, which we had the pleasure of inspecting early in September.

GLASSHOUSES.

The first house we entered was a propagating pit used chiefly for rooting shrubs, such as Ivies, Ampelopsis Veitchi, A. hederacea, Choisya, Clematis, Laurustinus, Retinosporas, Thuyas, Yews, Skimmia oblata and others, the mere names of which will indicate the shrubs in request. Here also was a hatch of seedling zonal Pelargoniums. Another house had the roof covered with Tomatos, while the benches were occupied with Fuchsias, and seedling Pelargoniums, including *P. fragrans* and other scented leaved kinds. The third house also contained Tomatos in variety, including Comet, Sutton's A1, Austin's Eclipse and Honour Bright. The latter is an American variety, but little esteemed by comparison with the rest. A collection of Tulips, Hyacinths and other bulbs found temporary accommodation here.

Single tuberous Begonias in great variety made a portion of another house gay; while seedlings of various kinds showed that stock was being raised in quantity, including a fine hatch of the Japanese Wineberry (*Rubus phoenicolasius*). The Kangaroo Vine (*Vitis antarctica*) and many other rather uncommon subjects receive attention. We were interested in a collection of British Ferns, including the Mountain Parsley, the Oak Fern, *Aspidium angulare*, and *Scolopendrium*, in variety. The house next to this contained a collection of decorative Ferns of useful market size. The more conspicuous of them were *Pteris tremula*, *P. cretica cristata*, *P. c. albo-lineata*, *Lomaria gibba*, *Polystichum Drummondii*, *Cyrtomium falcatum*, *Scolopendrium vulgare crispum* and others. These were all grown in the new, machine made pots, which are neat, strong, useful, and like what are known as the small 32-size. There were also some hatches of Ferns of a smaller size.

The next house visited was filled with good market stuff, of which the more prominent were *Pteris serrulata plumosa*, *P. Wimsetti*, *P. nobilis*, *P. straminea*, *P. majus*, *P. tremula*, *P. serrulata cristata*, *P. Ouvrardi*, with very broad pinnae, *Davallia bullata*, *Phlebodium aureum*, *Asplenium*

biforme, *A. pumilum laxum*, *Adiantum cuneatum* for cutting, *Nephrolepis tuberosa*, and others of that useful class, which can always find a market. A mixture of *Pteris serrulata cristata* and *Adiantum* in the same pot sells well. The silvery-leaved *Sibthorpia europaea variegata* finds suitable conditions for its welfare amongst the Ferns. *Ficus elastica* and *Dracaena Bruanti* are also good market plants. The latter is similar to *D. rubra*, but is more erect in habit, and therefore more suitable for certain decorative work.

Ferns of many kinds were being reared in the next house entered, and could be seen in many sizes from newly germinated spores onwards, in pots, pans and boxes. Some of the species we noted were *Platylooma Browni*, *Pteris argyrea*, *Cyrtomium falcatum*, *Gymnogramme Mayi*, *Asplenium bulbiferum* and others. The broad pinnae of *Adiantum Capillus-Veneris imbricatum* render the variety as handsome as *A. farleyense*, but on a smaller scale. A collection of the more useful *Selaginellas* find accommodation with the Ferns. A fine hatch of seedlings of the new *Asparagus Sprengeri* will soon reach a useful decorative size. *Aspidistras* could hardly be omitted from any general collection of the nature above indicated.

The Tomatos in the early house were nearly all gathered. They were planted in the border of the house, and had attained a great height. In another division was a batch of Austin's Eclipse in boxes. Palms, *Smilax* and other subjects were also located in this tall house.

OUTDOOR DEPARTMENT.

Chrysanthemums are much in request for cut flowers and other purposes. Altogether about 5,000 are grown, 500 of them being in pots and the rest planted outside at the time of our visit. The latter were intended, of course, for lifting and taking indoors. Near the houses a select strain of Leeks was being grown for seed. A little further on we came upon a plantation of new Strawberries being grown for the sake of runners, including Prince and Princess of Wales and W. E. Gladstone. The latter has very dwarf foliage, and cockscomb-shaped fruit of very fine flavour.

Amongst florist's flowers was a fine strain of striped French Marigolds. A large plantation of East Lothian Stocks for Spring work had recently been planted out, and of Wallflowers there were several plantations. Some 2,000 to 3,000 *Hepatica angulosa* should be productive of a fine effect in spring. Such annuals as *Mignonette*, *Scabious*, *Larkspurs*, *Dianthus Heddegi*, *Gypsophila*, and *Godetia*, are grown for the sake of cut flowers.

The collection of Violas includes 130 of the best varieties; and although they had been much cut up to furnish the 40,000 cuttings inserted, numbers were still flowering freely. Joseph is a grand new one of a rich bronze on yellow, with a maroon centre. White Duchess, Countess of Hopetown, Blue Cloud, Goldfinch, and Duchess of Fife are as well known as they are fine. Mary Gilbert is a great improvement upon Bullion for size and shape. Marchioness is creamy white and of grand habit. Lady McDonald is larger and lighter in colour than Bullion. Accushla is white, heavily margined with dark purple. Other leading types are Archie Grant, Ariel, and the fragrant Violetta, all of which develop fine flowers of their kind. Fifteen new Violas are offered for this year, including Lavender King, which is the largest and finest lavender flower yet raised, and received a first-class Certificate from the National Viola Society. Princess Louise is considered the finest yellow Viola in cultivation for bedding purposes; it is almost rayless, and a profuse bloomer. Prince of Wales is rayless and similar to A. J. Rowberry, famous for exhibition, but is a more profuse bloomer than that variety. A striking flower is Sunset, with soft yellow flowers and a broad band of crimson on the two upper petals. Dr. Jim is a good yellow hedging variety. Many others could be named but it is needless to specify them, seeing that Messrs. Grieve & Sons keep such an extensive stock of the best and most popular. Eighty varieties of Fancy Pansies are kept in stock, besides 4,000 to 5,000 seedlings for massing.

Border Carnations are grown in quantity, including the well-known Old Clove, Duchess of Fife, Huntsman, Germania, and Mrs. Muir. Dundas Scarlet is of fiery brightness, and does not split the pod. Lady Sybil Primrose, a new sort, is buff, striped with scarlet, and grows and flowers freely. Amongst seedling Carnations we noted Mary C. Grieve, a lovely rich salmon variety. Over 100

seedlings from the plantation have been selected for trial next year. The famous Redhraes Picotee, with a heavy crimson edge, originated here. Pinks are also grown in some quantity.

The double white *Matricaria Parthenium plena* was still full of bloom, although it commenced flowering in April. Sweet Peas in variety were in full bloom. They as well as *Mignonette*, and Vicks Branching China Asters are grown for cutting. In the frames was a stock of bronze, tricolor and zonal *Pelargoniums*, all of which are in request in spring for bedding purposes.

A plantation of seedlings from *Viola Joseph* showed some interesting and beautiful variations. Near the frames were cuttings and young plants of various shrubs and Conifers; also plantations of border *Auriculas*, *Polyanthus*, and *Primula cashmeriana* in some quantity. *Genista tinctoria elatior*, 2 ft. to 3 ft. high, makes a useful and showy autumn flowering shrub with dark yellow flowers. Shrubby *Veronicas* are well grown for decorative purposes in pots and otherwise.

Herbaceous and alpine plants receive a fair share of attention. Amongst others we noted *Campanulas*, *Helianthus multiflorus plenus*, the fine leaved *Thalictrum adiantifolium*, *Achillea Ptarmica flore pleno*, *Mimulus cardinalis*, and the tiny evergreen shrub *Veronica salicornoides*, admirably adapted for rockwork. Very choice and useful are *Campanula G. F. Wilson*, *Thymus lanuginosus*, *T. coccinea*, and *Saxifraga Wallacei*, the latter grown in quantity for hedging purposes.

Amongst alpine plants, of which there is a collection in pots, prominence is given to *Saxifragas*, *Sedums*, *Auhrietias*, *Iberis*, *Campanulas*, *Phloxes* of the dwarf *P. subulata* type, *Alyssum saxatile* and a batch of *Mimulus*, raised between varieties of *M. luteus* and *M. cupreus*. The hybrids are intermediate between the parents. The golden-leaved *Thymus citriodorus aureus variegatus* is almost sure to find a place in general collections, for it is often used as edgings to flower borders in Scotland, and elsewhere is put to a variety of purposes.

We should have liked to have seen the collection at an earlier period of the season, before the general work of propagation had commenced, that is, before the season was so far advanced. In any case we wish Messrs. James Grieve & Sons a huge success for their enterprise in establishing a business on their own account.

PLANTS RECENTLY CERTIFICATED.

THE undermentioned awards were made by the Royal Horticultural Society on the 12th inst.

Orchid Committee

LAELIA PUMILA LOW'S VAR. *Nov. var.*—The sepals and petals of this beautiful variety are white, very softly and faintly tinted with blue. The tube of the lip is pure white externally and yellow internally, with numerous raised lines of the same colour. The lamina and side lobes are blue-purple. There is much difference of opinion amongst cultivators as to whether this variety should belong to *L. pumila* or to *L. p. praestans*. We incline to the former, though it does not entirely agree with the original descriptions of either. Award of Merit. It was shown by Messrs. Hugh Low & Co., Clapton, but passed into the collection of Sir Frederick Wigan, Clare Lawn, East Sheen, during the day.

ZYGOPETALUM JORISIANUM.—The sepals and petals of this beautiful species are heavily overlaid with shining brown on a green ground, the latter showing as narrow transverse bars at wide intervals. The three lobed lip is fringed all round the edges, the upper portion being white, the lateral lobes yellow, and the crest purple. Award of Merit. Walter Cobb, Esqr. (gardener, Mr. Howse), Dulcote, Tunbridge Wells.

ODONTOGLOSSUM GRANDE PITTIANUM. *Nov. var.*—This is the most distinct variety of the species which has yet turned up. The usual brown blotches and hands have been washed out leaving only yellow of different shades. The sepals are light yellow, with transverse golden bars upon them. The petals on the contrary are bright yellow with a large golden blotch covering about one-third of the base. The lip is creamy-white, with a few, slender yellow zones near the base. Award of Merit. H. T. Pitt, Esqr., (gardener, Mr. R. Aldous), Rosslyn, Stamford Hill.

VANDA CAERULEA ROCHFORDIANA. *Nov. var.*—The sepals and petals of this choice and pretty variety are white, faintly tinted with blue along the midrib. The lip is of a soft rosy colour, and quite unique in the species as far as we have seen. Award of Merit. Mr. Thos. Rochford, Turnford Hall Nurseries, Herts.

VANDA MOOREI, ROLFE. *Nov. hyb. nat.*—Whatever the history of this *Vanda* may be it has the appearance of being a natural hybrid between *Vanda caerulea* and *V. kimbaliiana*. The sepals and petals are oval, stalked, and pale bluish-lilac, the lateral sepals being oblique and much broader than the dorsal one. The wedge-shaped lip is bifid and deep purple-blue, with a long lilac spur. Award of Merit. Mr. J. W. Moore, Eldon Place Nursery, Bradford.

DENDROBIUM TAURINUM AMBOINENSE. *Nov. var.*—The stems of this variety vary from 4 ft. to 8 ft. in height and bear long dense erect racemes, of medium sized flowers towards the top. The sepals are overlaid with bronze; and the spatulate petals are of a rich shining brown. The lip is of a light coppery brown. Botanical Certificate. Messrs. J. Veitch & Sons, Limited, Chelsea.

CRYPTOPHORANTHUS DAYANUS.—This is very closely allied to the *Masdevallias*, but has its flowers closed at the top and open at the sides. The blooms are large and bear a remarkable resemblance to a snake's head. The upper sepal is heavily spotted brown, the markings showing on the outside. The inner face of the lateral ones is yellow. On the whole it is a most remarkable flower. Botanical Certificate. Sir Trevor Lawrence, Bart. (grower, Mr. W. H. White), Burford Lodge, Dorking.

Floral Committee.

VERONICA SILVER STAR.—The habit of this shrubby *Veronica* is very dwarf, bushy and densely leafy. The leaves are oblong, with a broad creamy margin, ultimately silvery-white. The variety is handsome, indeed, and must soon become very popular for greenhouse and conservatory decoration and other purposes. Award of Merit. The plants shown by Messrs. J. Veitch & Sons, Ltd., were only 3 in. to 6 in. high.

NANDINA DOMESTICA.—This uncommon shrub is a native of China and Japan, and belongs to the same natural order as the *Barberry*. The leaves are twice or thrice pinnatisect, with lance-shaped entire segments. During autumn they assume a deep, shining red beneath and slightly duller red above, the general appearance being very handsome. Award of Merit. Messrs. J. Veitch & Sons, Ltd.

BEGONIA GRANDIFLORA ERECTA CRISTATA.—In this we have a bold and lengthy name for a crested strain of the tuberous race of *Begonias*. The flowers are large, circular, furnished with four crests arranged cross-wise on the petals, and already exist in all the leading colours. Award of Merit for the strain. Sir Trevor Lawrence, Bart. (gardener, Mr. W. Bain).

MARANTA PICTA.—The leaves of this plant attain a height of 9 in. to 12 in., and are oblong, velvety, olive-green, with light green blotches on either side of the midrib. It is a highly ornamental stove plant. Award of Merit. Mr. William Bull, 536, King's Road, Chelsea.

CHRYSANTHEMUM MADAME PAUL BRUANT.—In this we have a Japanese form, measuring some 8 in. across by 7 in. in depth. Most of the florets are tubular, drooping, of great length, and amaranth purple when grown exposed to sunshine. The centre is often white, or the whole bloom may be so if it opens in a shady position. Award of Merit. Messrs. J. R. Pearson & Sons, Chilwell, Notts.

CHRYSANTHEMUM MRS. WINGFIELD.—This is a small, Japanese and decorative variety of a charming blush-pink or blush white. The florets are revolute at the edges. It forms bushy plants, 18 in. high and very choice. Award of Merit. Mr. Empson, gardener to Mrs. Wingfield, Ampthill, Beds.

Fruit and Vegetable Committee.

PEAR DIRECTEUR HARDY.—The fruit of this variety is shortly pyriform, yellow, shaded with red on the exposed side, and covered with russet spots. The flesh is white, juicy and very melting. Award of Merit. Messrs. Geo. Bunyard & Co., The Royal Nurseries, Maidstone.

APPLE JAMES GRIEVE.—The fruit of this dessert variety is large for that section, shortly conical, and of a beautiful yellow, suffused and mottled with red on the exposed side. The flesh is yellow, richly

flavoured, and in every way excellent. The wonder is it has not previously received the recognition it deserves. Award of Merit. Messrs. Geo. Bunyard & Co., Maidstone.

MELON CROXTETH JUBILEE.—The fruits of this scarlet-fleshed Melon are roundly-oblong, with nine shallow furrows, and as many rounded ribs running longitudinally. Average fruits would weigh 5 lbs. to 6 lbs. each. The flesh is of great depth, rich, red, very juicy, and deliciously flavoured. It is, in fact, the best flavoured Melon which has been shown at the Drill Hall for a long time. Award of Merit. Mr. B. Barham, gardener to the Earl of Sefton, Croxteth Park, Liverpool.

THE undermentioned *Chrysanthemums* received First-class Certificates at the hands of the Floral Committee of the National *Chrysanthemum Society* at the early autumn show at the Royal Aquarium on October 12th.

AMBROSE THOMAS.—This is a very pretty decorative variety with chestnut-crimson flowers. The florets are long, narrow, revolute, and pointed. The plant is about 3 ft. in height and the foliage exceptionally sturdy. Mr. Wm. Wells, Earlswood Nurseries, Redhill, Surrey.

MADAME PAUL BRUANT.—This is a handsome Japanese variety of giant size. As the blooms stand they measure fully 7 in. in depth, and about 8 in. in diameter. When well developed there is a close resemblance to the colour of a good *Etoile de Lyon*, but the build of the bloom is totally different. The florets are long and drooping, the tips being upturned and more heavily suffused with rose than the rest. Messrs. Pearson & Sons, Chilwell, Notts.

VISCOUNTESS ROGER DE CHEZELLES.—Here we have another large Japanese flower of about 8 in. in diameter. The florets are of medium length, good substance, involute along their entire length, with lobed apices, and incurving at the tips. The colour is deep yellow. Mr. W. J. Godfrey, Exmouth, Devon.

VEGETABLE CALENDAR.

TENDER vegetables that have succumbed to the late sharp frosts should be cleared off the ground without delay. This will give freedom to deal with the ground for future crops. The positions for all next season's early crops ought to be decided upon at once. All warm borders suitable for early Potatoes, Lettuce, Cauliflowers, &c., should be thoroughly exposed to the beneficial effects of frost and other atmospheric influences. At the same time manures should be added suitable for each crop. Light leafy manures will answer best for Early Potato, Lettuce and Turnips; while burnt refuse and soot may be freely used for Carrots and Onions. In all cases a dressing of lime would prove useful, where the ground has been long under cultivation.

ASPARAGUS.—The beds of this should now be cleared and made tidy for the winter season. After the removal of all weeds and refuse, a dressing of soot and fine soil blended may be given over the rows. This will gradually get washed down to the roots during the winter rains, and prove stimulating when growth commences in early spring. Where the crowns are near the surface a few inches of pulverised soil will be better for a covering during winter than half-rotted dung, as the latter tends to keep the ground in a condition unsuitable to the roots of *Asparagus*. Plants intended for early forcing may be lifted and placed under a damp covering in readiness for introducing into warm frames and other structures.

SPINACH.—This will need attention in thinning, and the hoe should be freely used to induce rapid growth and an early supply. It is not good policy to over-thin winter *Spinach*, and the work should be done very carefully where the plants are very thick, otherwise the whole of the plants will be disturbed and checked, especially on light, sandy land. A dressing of soot and lime around the collars of the plants will ward off the attacks of slugs and other pests. Those who are fortunate enough to possess *Orchid houses* or glass cases would find this one of the most serviceable crops under glass during winter.

CAULIFLOWERS.—The potting up of a few hundreds of the strongest plants should not be delayed. These, when established, take up but little more room than

when pricked out in the ordinary way, and are much handier and give earlier produce when planted permanently in spring. Crops now maturing must be carefully watched at this season, and any getting overgrown or likely to suffer from sudden sharp frost may be lifted into sheds or other cool places for safety.

FRAMES.—These will require constant attention at this season, to keep up a succession of salading. Full-grown Lettuces that have been lifted, must be kept dry but well aired, and as soon as used, later sowings should be planted in the frames, so as to form a regular succession. A sowing of *Paris White Cos* should be made in a single light frame at the present time for early spring planting. Raise the soil, which should be light and sandy, to within a few inches of the glass, and sow broadcast. Keep the frame close until the plants appear, when liberal ventilation will be needed at all times except during severe frost. Bottom heat will not be needed. Where very slight hotbeds can be made, Radishes and Mustard and Cress will do well in frames, but the latter may be grown in any position indoors where the temperature ranges between 55° and 65°. Late crops of *French Beans* in frames should be kept as warm as possible, and may be closed early in the day to husband solar heat. Sowings of these should be made often at this season to keep up supplies, and it will be necessary to keep the young plants close to the glass in warm houses to ensure success.—*J. R.*

The Orchid Grower's Calendar.

CATTLEYA HOUSE.—If we had the making of the weather we could not improve on what we have been getting the last few weeks for the plants that are making up their newly-made growths, or for those developing their blossoms. Of the latter, *C. aurea* and *C. labiata autumnalis* take prominence over all others. These, when massed together, make an imposing show; but it is to those that come on later, such as *C. Trianaei* and *C. Mendelii* I wish to draw attention. We are going over ours now, sponging those that require it, and putting neat stakes to each, so that the new growths can be lightly tied up to prevent them from being damaged when shifting the plants about. The very moving them round seems to have a beneficial effect, and why should it not be so? This fact was brought most forcibly before my notice the other day when looking over an empty dwelling house. A few months before, when the people moved out, everything was apparently in good order, but in a very short time the place was in a most dilapidated state, simply because it was left to take care of itself. And so it is with our favourites: to be up and doing must be the gardener's motto if success is to crown his efforts.

POTTING.—Well, yes, there a few things that are best gone over at this season of the year. Of these the white *Laelia anceps* is one that makes more roots at this season than at any other time, so that should there be any that have missed flowering we would advise that they be afforded some fresh material.

WORKING OF THE HOUSE.—Gradually reduce the amount of moisture as the growths harden up, and at the same time afford plenty of fresh air through the bottom ventilators. The shading of this division may be almost entirely dispensed with after this date, only using it on very bright days for a few hours to keep the temperature from running up too high rather than to shade the plants.

COOL HOUSE.—While the bright and mild weather lasts the *Odontoglossums* may be syringed overhead with impunity. But with the advent of the dull November days this must of course be discontinued. So much, however, depends on the structure and the position of the same that no hard and fast rules can possibly be laid down for the guidance of cultivators.

SLUGS.—As the growths become matured the spikes will make their appearance, and these little fellows seem to know as soon as anyone when the spikes are coming up. It behoves us, therefore, to be first in the field by hanging up all the likely looking ones before the slugs have a chance to eat the sweet morsels.

FIRE HEAT.—Just warm the pipes. This helps to make the leaves and bulbs hard and better able to withstand the vicissitudes of our climate.—*C.*

HINTS FOR AMATEURS.

Chrysanthemum Notes.—The 'Mum season may now be said to have begun, and growers of all grades, from the proud possessor of half a dozen plants esconced in a corner of the back yard to the cultivator who is able to count his plants by the hundred or even the thousand, all are watching with ever increasing interest the development of the buds and the progress of the plants generally. The show fever can scarcely be said to have reached a critical stage yet, but by the time these notes are in print, the pulses of most of those interested will have commenced to quicken as they calculate their chances of success or failure. Meanwhile there are several varieties that we may draw the amateur's attention to amongst the early October varieties. It is in this section that the amateur with little or no glass stands the best chance of reaping a full measure of success.

Klondike.—Recent events have inseparably connected this name with the metal which the human strives for with a pertinacity that has extended through the ages, and seems to increase rather than diminish. Appropriately enough, the flower to which this auriferous name has been given, is of bright golden yellow hue. It is of rather large size for a decorative variety, but should prove of the greatest value where bold, striking blooms are required. The florets all reflex, the tips being bifid, and the margins slightly thorned. This variety was shown at a Floral Committee meeting of the National Chrysanthemum Society, on September 20th, by Mr. Norman Davis, The Vineries, Framfield, Sussex, at the Royal Aquarium, when it was awarded a First-class Certificate.

Nellie Brown.—Ryecroft Glory, sent out by Mr. H. J. Jones, has rendered a capital account of itself as a decorative variety of free-flowering qualities and dwarf bushy habit. In Nellie Brown we have a very handsome sport from it, which is identical with the parent plant in habit, constitution, and build of bloom. Comparing the two forms together, however, the difference is in the colour of the flower. Ryecroft Glory at its best has rich bronze-yellow flowers, whilst Nellie Brown exhibits a charming shade of chestnut-orange. Both these two varieties do wonderfully well if grown in the open ground, and then lifted as the buds are opening, and potted up. In favourable seasons when severe frost holds off until the middle or nearly the end of October, the plants flower well enough in warm corners of the flower garden. We have had instilled into us such a wholesome dread of autumn frosts that we do not attempt so much with October flowering Chrysanthemums in the open ground as we might. A few plants provided with the shelter of a wall or hedge will stand a good deal of cold, and if, when the night threatens to be too severe for such incomplete protection, a sheet of tiffany, or a mat of some kind is thrown over in such a way that it does not come into actual contact with the flowers, the beauty of the plants may be preserved until well on in the autumn. In the grand group of Chrysanthemums, both cut and in pots, that was staged by Mr. W. Wells, of the Earlswood Nurseries, Redhill, at the October show of the National Chrysanthemum Society, a batch of Nellie Brown was a distinctive and much admired feature. A sufficient quantity of plants was shown to demonstrate the fact that the sport was in every way fixed, and that it was as secure from further change as sported Chrysanthemums are generally.

Madame Marie Masse.—Referring again to the subject of flowering Chrysanthemums out of doors, and the way in which the front gardens of villas and cottagers might, by thus utilising some of the earlier varieties, be made to look a little less forlorn and cheerless than they usually do, we may well call attention to the merits of this variety. It is very dwarf in stature, being usually some 2 ft. in height. The best way to grow it is not to disbud at all, but to let the flowers come just as they please. This results in numbers of sprays of medium-sized flowers, each individual bloom having a stalk of fair length, so that in cutting, choice or necessity may be indulged as to whether the whole sprays or only single blooms are to be cut. The colour is a beautiful rose when the plants are grown in the full sun, but if shaded, a silvery-rose is the result. This variety received the XXX, indicating the highest degree of merit at the Chiswick trials of early-flowering Chrysanthemums, held towards the

end of September. On that occasion the plants were contributed by Messrs. Dobbie & Co.

Emily Silsbury.—There are so many good things among the ranks of white Japanese varieties that it is a matter of considerable difficulty to make a choice between them. Emily Silsbury, however, has much to recommend it to amateur cultivators. It is an early variety, and makes a capital October bloom. Though only certificated by the N.C.S. last year it made such a good impression then that it has been taken up eagerly, and this year has appeared on the show boards in surpassing style. The florets are long and drooping, and curl upwards gracefully at the tips. The bloom is of great size, and there is plenty of "stuff" in it, to use an ordinary expression. A great point in its favour is the easiness with which it can be grown. It is very little use recommending a fine flower to an amateur, if in addition to its fineness it possesses an intractable nature.

M. Chenon de Leche.—This represents the highest example of development in this direction. Like many another good variety it originally came from the Continent, and it is not too much to say that it is one of the finest seedlings ever sent out by M. Calvat, of Grenoble, France. In the year of its general introduction (1895) it created quite a sensation, and, of course, received the coveted F.C.C. The flower is of great size, and exhibits a charming shade of rosy buff. The florets are long, and droop over with a graceful curve. The tips of the florets are spoon shaped, and turn prettily upwards. In order to develop this lovely colour to the full, the flowers require to be exposed to the full light, any attempt at shading them resulting in a bloom of comparatively poor colour. Up to the present it has been generally regarded as a mid-season or November variety, and it was shown in not a few winning stands last year at that time. Some intrepid growers, however, have this season contrived to get it in magnificent condition at the beginning of October. In Mr. J. Agate's stand of twenty-four Japanese blooms at the Aquarium last week, it occupied a prominent position; indeed, it has never been better shown at any time. In addition to the remarkable beauties of the flower the plant is dwarf and sturdy in habit.

Crocus speciosus.—Increased attention is being paid year by year to the massing of hardy flowers in situations where the surroundings suggest that nature and not man has been the disseminating agent. This is done not only in our public parks but in many private establishments where individual enterprise is following the example of the pioneers of more artistic ideas in the embellishment of gardens and grounds. All these efforts, however, have chiefly to do with spring-flowering plants. Dutch bulbs, for instance, particularly Daffodils and spring-flowering Crocuses are planted in their thousands in beds, borders, sweeps of glossy lawn, or nooks in the wild garden. Nobody wants to alter this, we imagine, for the admiration bestowed upon spring gardening of this kind is pretty general. Still we may suggest that it seems a pity that spring and early summer are to have the benefit of all these beauties, and that very little or no effort is made to produce similar effects by following similar lines with autumn-flowering plants. True there is a comparative dearth of suitable subjects, but we may claim with truth that sufficient use is not made of suitable plants that do exist. Of these *Crocus speciosus* occupies a foremost position. It is every whit as fine a flower, and quite as beautiful either singly or in the mass, as its relatives who take the year when it is young. Do we want cheapness? then corms of this *Crocus* may be purchased by the thousand at a very reasonable rate. Do we call for hardiness, free-flowering qualities, and generally good behaviour? then *Crocus speciosus* will not be found lacking in any of these attributes. Why then is it not grown more frequently? some may ask. In answer we can only suggest that its merits are not known, or if known are not recognised. The flowers are bright blue, internally, and finely striped with deep purple lines. The much fringed orange-coloured stigmata are in themselves of great beauty, and in contrast with the blue of the flower segments are doubly so. Seen on a bright day towards the end of September or the beginning of October a bold plantation of this *Crocus* is wondrously effective, and needs only to be seen to be admired and copied. Such a break has been lately one of the distinctive features of Messrs. Barr's Nurseries at Long Ditton. The plants were growing beneath the shade of some tall trees, and it

was interesting to watch how after a dull morning the flowers opened with the bright sun, and closed again as the sun went down. The break in question was the result of some small corms which were left in the ground when the big ones were taken up, and they have been in that one place for several years, and flower regularly and profusely each autumn.—*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

New Chrysanthemum.—*Inquirer:* There are now so many good varieties in cultivation that a novelty has to be of exceptional merit to receive a certificate. We should advise you, therefore, to take the opinion of one or two practical men who can see the flowers before you go to the trouble and expense of sending them to London. The next floral committee meeting of the National Chrysanthemum Society is on Monday, October 25th. The rules of the society require that three blooms shall be sent, and you must also give the origin of the variety, if a sport, the name of the variety from which it was sported, and if a seedling, its parentage. Any other information that you can supply should also be given.

Peaches for a Wall.—I have a wall 10 ft. in height facing to the west. Can I grow Peaches in such a position, and if so, what varieties would you recommend.—*G. Bransdon.*

Yes, you may plant Peaches against a west wall, although a south aspect would have been better. With regard to a variety Alexander would probably suit you the best of any. The fruit is handsome in appearance, of large size, and brisk flavour. It ripens out of doors about the middle of July when planted against a south wall, but would be a little later on a west wall. Hale's Early is good and early. Waterloo is also a good early variety ripe from the middle to the end of July.

Dressing Chrysanthemums.—*Reader:* As a rule Japanese Chrysanthemums do not require much dressing. The blooms should be looked over for short florets, and if any of these are discovered they should be pulled out with the tweezers. After this has been done hold the flower head downwards, and give it a shake to bring the other florets into position. Beyond this very little is required. In the case of the incurved Japanese a good deal more trouble is required, in order to get the florets to lap nicely over each other.

Laying out a Front Garden.—*Sassafras:* We think the best plan would be to have a 3-ft. border all round the garden except on that side of it on which the gravel path lies. On the farther side of the latter, close against the fence, you may have a narrow border of a foot in width, edged with flints or edging tiles. This little border will do to accommodate creepers or other plants which may serve to cover the fence dividing your garden from the next. The 3-ft. border may be filled with bulbs and hardy herbaceous plants. On the boundary of the garden facing the road you might plant a hedge of Privet if you wish for a little privacy, or you might plant a row of tall-growing Michaelmas Daisies, but as the latter will be out of sight during the winter months, and will not have reached any height until the summer has come, the front of the garden would be open for half the year at least when the "Daisies" only were employed. We shall be pleased to give you a list of suitable herbaceous plants if you wish it. The central part of the garden should be laid down in grass, but you may have a bed of Roses in the centre. This bed may be round, square, or oblong in shape, according as your fancy suggests.

Shifting a Holly.—You may lift the Holly as soon as you like, *Oral.* A bush of its size will not have made any very deep roots, especially as you say it has only been in its present position for three years. Lift it with a good ball of earth attached, and if the soil is inclined to be dry water it in when you have got it fairly placed in its new position.

Coe's Golden Drop Plums.—*L. T.*: Wrap each fruit separately in tissue paper, and lay them in a shallow box holding only one layer. Cover up and consign to a cool dry room. You will find that the fruit will then keep for a considerable time.

Peaches.—*P.*: The rapid way in which the leaves have fallen from your Peaches is due in a great degree to the influence of the red spider. The leaves you sent here unmistakeable traces of the pest. It is too late to do anything with the foliage now, but we should advise you to give the trees a good cleaning after the winter pruning, especially the rougher bark of the old wood, in the crevices of which the spider will find a refuge.

HEDYSARUM MULTIJUGUM.

The French Honeysuckle (*Hedysarum coronarium*) is an old garden plant the cultivation of which for cut flowers seems to be reviving after a period of neglect. The heads of Pea-like flowers and the

trimmed back thus keeping it in small compass for situations on the rockery, or for the filling of small beds on the grass, or even dry banks that it may be desirable to clothe with vegetation. The rosy-purple flowers are borne on long-stalked racemes that may be utilised for mixing with other cut flowers to the advantage of both. The shrub is prettiest and most ornamental, however, when seen as it grows naturally.

UNITED HORTICULTURAL BENEFIT AND PROVIDENT SOCIETY.

The eleventh anniversary dinner of this society, which was founded in 1865, was held on the 12th inst., in the Holborn Restaurant, London. Mr. H. B. May, of Dyson's Lane Nurseries, Upper Edmon-ton, presided over a record attendance of members and visitors, including many influential horticulturists.

After the toast of the Queen had been duly rendered, Mr. May rose to propose the "United

"This society was founded by gardeners, is conducted by gardeners for the welfare of gardeners, and so great is my admiration for its objects and particularly its methods, that I venture to think it is unsurpassed, if indeed it is equalled, by any similar institution in the kingdom. And the advantages it offers its members, especially its aged members, are certainly most liberal, and a happy combination of a benefit society and savings bank.

"It is not my intention to weary you with a long array of statistics, but with your permission I will mention a few particulars for the information of those unacquainted with the society. The benefited members are of two grades, those on the higher scale contributing 9d. and the lower 6d. per week to the sick and deposit fund, 3s. and 2s. per annum to the benevolent fund, and 2s. 6d. per annum by each class to the management fund. They are entitled to sick pay at 18s. and 12s. per week respectively, for a period of twenty-six weeks, and 9s. and 6s. for a further period of twenty-six weeks, and may then be transferred to the benevolent fund, and receive such

HEDYSARUM MULTIJUGUM.

growth of the plant, however, is coarse and ungainly compared with *H. multijugum*, which was introduced from South Mongolia in 1883. It is a shrub of most graceful habit, with slender arching branches, and pinnate leaves, made up of ten to twenty pairs of small, oblong leaflets that have a feathery appearance compared with those of the French Honeysuckle.

The accompanying illustration, prepared from a photograph sent us by Messrs. R. Veitch & Son, Exeter, shows the feathery appearance of a large bush on one of their rockeries in the Royal Nursery, New North Road, Exeter. The time was allowed to slip past until the plant was nearly out of flower before the photograph was taken, so that the latter hardly does justice to the plant as far as flowers are concerned, for it blooms most profusely, and the myriads of little twigs rising above the foliage are really the flower stalks of the fallen blooms, only a few of which still remain. The shrub is perfectly hardy not only at Exeter but much further north and east where the winters are colder than in the south-west of England. The shrub also fruits freely at Exeter and elsewhere, so that there is no difficulty in raising a stock of the species where a desire may exist for planting it in quantity. Though the shrub grows from 2 ft. to 5 ft. in height, it is more often seen as a dwarf spreading bush 18 in. to 2 ft. high, even in the case of plants of many years standing. In early spring the whole bush may be

Horticultural Benefit and Provident Society," and spoke as follows:—

"Were those present this evening unassociated with the world of gardening, I might be tempted to portray in somewhat lurid tints the difficulties under which gardeners pursue their vocation, the uncertainty of employment, the many ills to which they are subject from climatic changes, and the inability which too frequently precludes them from making provision for that time of which Longfellow sings:—

'the common fate of all
Into each life some rain must fall;
Some days must be dark and dreary.'

but composed as this assembly is of gardeners and their friends, to dilate upon such topics would be superfluous.

"It has been remarked that the position of the chairman at these anniversary dinners is a difficult one, there being so little for which to plead, and assuming that view to be substantially correct, on the other hand in surveying the beneficent work of the society, how much there is to admire! The society has for its motto "Unity is strength," but its pioneers, mindful that stability is not obtained by numbers alone, have raised its superstructure on the enduring basis of self-help. Democratic in its constitution, it is a notable example of the good work that may be achieved by earnest men, and the substantial progress made is brilliant testimony of its appreciation by those for whose benefit it was established.

weekly payment as the committee deem advisable. As an instance I may mention that a member who had exhausted his sick pay, has recently been granted 5s. per week from that fund during the remainder of his illness.

"The balance to the credit of the sick fund after deducting payments to members, is annually divided pro rata, and placed to the credit of each member, and this sum with compound interest at three per cent., is carried forward until he reaches the age of seventy, when he is entitled to withdraw the amount standing to his credit. He may also be awarded a weekly sum from the benevolent fund at the discretion of the committee, or in the event of death, the sum accumulated would be paid to his representatives. There is another provision I would direct your attention to, and one I think that is more generous than that of any other society with which I am acquainted; a member who has allowed his subscription to lapse, does not forfeit the amount, but is entitled on reaching the age of sixty to withdraw the sum standing to his credit at the time of his default, together with compound interest to date, or should he die before that age, it would be paid to his nominee.

"That the Society is progressing favourably is evidenced by the fact that 63 new members have joined since the last annual dinner, the total number now on the books being 684; but probably nothing I can say by way of commendation will be more

convincing than the concluding paragraph in the actuary's report at the quinquennial valuation in 1896, which reads thus: 'I have great pleasure in congratulating the committee and members on the prosperous condition of the society, and its substantial progress, both in growth of funds and public support during the period under observation. This progress is evidenced equally by the increase of membership from 291 to 535, the growth of funds from £4,933 to £9,533, the increase of income from £908 to £1,376, and the favourable experience of the society as to sickness in a period which included some severe and wide spread epidemics.'

'I have incidentally alluded to the democratic spirit of the society, but democracies have their senate; and I claim for this little republic, that it has what I shall assume to be an equivalent in its life and honorary members. It is my desire this evening to make a substantial addition to the names of those who already appear in that honourable capacity; first, because the subscriptions of life and honorary members materially assist in defraying the cost of management, and second, and what is perhaps of greater importance, they will receive annually the report of the executive committee, and thus a reminder to place before their employees the advantages accruing to benefited members of this admirably conducted society. There are other methods I desire to bring to your notice by which you may exercise your benevolence, viz., the benevolent fund, (the purport of which you will have gathered from my previous remarks), the management fund, and also the convalescent fund. The latter, as its name implies, is for assisting members on their recovery from illness, and was formed in 1895 on the initiative of our good friend Mr. Sherwood; and will, I am sure, prove of great advantage.

"Gentlemen, I have said there was but little for which to plead, and I am concerned lest that little should suffer from my feeble advocacy; but the pleasure derived from assisting those who endeavour to help themselves is proverbial, and I would ask you to add to the gratification you have experienced on occasions similar to the present, by helping this deserving society by one of the methods I have indicated, and thus, in some degree, tend to mitigate

'the weight of care,
That crushes into dumb despair,
One half the human race.'

Mr. James Hudson, the hon. treasurer, rose to reply, and corroborated what the chairman had said anent the prosperity of the society, by stating that he expected the society would invest about £1,200, or £100 per month during the course of the present year. In inviting more gardeners to become members, he urged the plea of the economy with which the affairs of the society are managed. All their meetings, committee and otherwise, were open to members, for nothing was held in secret. Mr. George Bunyard and Mr. B. Wynne, responded to the toasts of "The Honorary Life Members" and "Visitors," respectively. "The Chairman," and "Kindred Institutions" were also proposed, and in responding to the latter Mr. G. J. Ingram, pleaded the cause of the Gardeners' Royal Benevolent Institution. Before the close it was announced that Mr. George Bunyard had consented to preside at the dinner next year. The tables were profusely decorated with flowers, plants, and fruit, and the meeting on the whole was a hearty one.

MUSHROOMS AND BROCCOLI.

DOUBLE cropping and even treble cropping have very frequently been resorted to by those driven for space; and to those in like circumstances I would, were suitable conditions existent, recommend this particular method of double cropping. Having a piece of ground destined for a crop of winter Broccoli, it occurred to me that there was a possibility of securing a crop of Mushrooms between the rows; so measuring the ground off I lined it out for a row of Mushrooms between the Broccoli. I then dug out trenches in which was buried the freshest stable manure procurable steaming hot. This was trodden firm in the trenches, the spawn being put in at once. Some of the soil was thrown over it and then another treading given to make it as firm as possible. The soil was then levelled and trodden over again. I left the space vacant between the second and third rows of Broccoli, and so on throughout the plantation, in order to form an alley between the

rows of Mushrooms. This is quite necessary for conveniently getting at the Mushrooms to gather them. The manure and spawn were put in the trenches during the second week of June, and we have for some eight weeks been gathering a fine crop of good Mushrooms with every indication of being able to so for some time longer, should the weather remain open. The Broccoli having well covered the ground shelter the Mushrooms and keep up a moist atmosphere about them, a condition of things suitable to their requirements. There is just one drawback to those who demur to wetting their boots, that is, there are some days during which to get at the crop means a thorough wetting.—W. B. G.

PINKHILL NURSERIES, EDINBURGH.

THE nurseries of Messrs. R. B. Laird & Sons, Pinkhill, Murrayfield, Midlothian, are situated on the western outskirts of Edinburgh, and within easy distance of the warehouse, 17, South Frederick Street, Edinburgh. They are now very extensive and include several nurseries or pieces of ground, much of which has recently been added to the older portions of the establishment. On a glorious day in September last we had the pleasure of a drive to Pinkhill in full view of hills, rich agricultural land, and other scenery which has made the Scottish capital the annual rendezvous of tourists from all parts of the British dominions, and other countries throughout the world. At present we are concerned only with what we saw in the different parts of Messrs. Lairds' nurseries and give the details in the order we noted them.

BEECHWOOD MAINS.

This is an old farm which has been secured as a forest tree nursery, and includes some forty-five acres of rich and valuable land, well adapted for the purpose of raising trees of all kinds. It begins at the extreme western end of the city boundary and extends for three-quarters of a mile westward on the south side of the Edinburgh and Glasgow Road. The stock consists of the usual nature, including forest trees by the million. Larch seedlings and transplanted seedlings are very fine. A little further westward on the north or upper side of the road we noted fields of Potatos planted by way of preparing the ground, which is now to be filled with Larch entirely, for which the ground has proved to be very suitable. The natural lie of the land and the soil itself accounts for its suitability. Two years' seedling Larch is very scarce all over the country, but here we noted 1,000,000 of them in specially fine condition, on the south side of the road. About half a million of two years' transplanted Larch was equally fine, the trees of course being much larger. Other trees are grown here such as Spruce, Ash, Scots Fir, Thorns, Sycamore, Austrian Pine, &c.

THE NEW PREMISES, PINKHILL.

Within the last few years a fine range of glasshouses has been erected on the south side of the main road, to take the place of the winter garden which used to be at West Coates. The ground here, consisting of two acres, slopes to the south, so that the houses and offices next the main road have been raised to bring them on a level with the latter. The range of houses next the road have a hung cement floor, and underneath are potting sheds, stables, soil barns, joiner's shop, &c. A flight of steps leads from the main building down to the natural level of the ground, where twelve span-roofed houses have been built and filled with the usual run of nursery stock. The nursery offices facing the road are complete in every detail, including main office, private offices, telephone, and every other convenience. The whole place is kept in excellent order.

The first hothouse we entered is used as a forcing house in spring, but at the time of our visit was practically a conservatory, filled with *Ficus elastica*, *Aralia Sieboldi variegata*, *Dracaena rubra*, *Juniperus bermudiana*, &c. The latter in its juvenile stage makes a very neat and graceful decorative plant, otherwise desirable by way of a change from the usual run. A fine plant of *Stigmatophyllum ciliatum*, with yellow flowers like an *Oncidium* covers the roof.

The conservatory in the centre of the block on the level of the main road, was gay with *Lilium speciosum*, *Browallia speciosa major*, *Humeas*, and various other flowering plants. *Camellias*, *Eucalyptus globulus*, *Dracaenas* and *Ferns* were also con-

spicuous occupants of this cool house. Opening out of it the visitor passes into the New Holland House, filled with *Heaths*, *Acacias*, *Epacris*, *Polygala*, *Genethyllis*, *Tremandra*, *Kalosanthes coccinea*, and others of similar character. These plants not being in season, the house was brightened with *Lilium speciosum*, *L. s. album*, *Bouvardias*, and a small leaved *Myrtle* named *Jean Reichenbach*. The plants were just coming into bloom, being laden with buds and flowers, though they were only 12 in. to 15 in. high. This should be a boon for those who are fond of *Myrtles*, but cannot get them to bloom till of large size.

The *Pelargonium* house is a roomy structure and, when we saw it, was filled with zonal, show, fancy, Ivy-leaved, tricolor, and sweet-scented *Pelargoniums*. *Fuchsias* also found a place here, as well as *Clianthus puniceus* and *Myrtus obcordata*, a slender, twiggy species having small bronzy leaves. The *Azalea* house contained a large assortment of subjects independently of *Indian Azaleas* and greenhouse *Rhododendrons* which have always been well grown by Messrs. Laird. We noted a huge specimen of the popular pot plant *Rhododendron Countess of Haddington*. Tall *Tree Ferns* occupy the centre of the house, and *Lapagerias* do well on the roof. Many other greenhouse plants are accommodated here including *Mandevilla suaveolens*, *Hibbertia dentata*, *Kadsura japonica variegata*, with leaves closely similar to those of a *Camellia*, *Passiflora kermesina*, and other species. The *Kauri Pine* (*Dammara australis*) makes a distinct looking subject for greenhouse decoration. *Araucaria excelsa* also proves indispensable for this kind of work. All of the above houses constitute the range on the high level, each compartment being roomy, well ventilated, and worked with every modern appliance.

The span-roofed houses on the lower level are utilised for growing various stove and greenhouse subjects. One contains a collection of *Caladiums* of the best named sorts raised in France and in England. Suspended from the roof are fine plants of *Gymnogramme schizophylla gloriosa* and *Adiantum ciliatum*. Here also was a quantity of *Pteris serrulata*, *P. s. cristata*, and *P. hastata macrophylla* all of useful size. One house was monopolised with a collection of single and double tuberous *Begonias*, good husky plants, with dark green foliage. The plants were, in fact, still in perfection, notwithstanding the late period of the season. They presented the usual run of colours peculiar to this useful summer-flowering race. The fernery was very interesting; the sides all round being covered with wall tiles and planted with *Maidenhair Ferns*. There was also a fine batch of *Adiantum cuneatum* in first-class condition. The same may be said of *Pteris tremula*, *P. argyrea*, *Asplenium fabianum*, *Polypodium aureum*, *Cyrtomium falcatum*, and a dwarf and a useful variety of *Nephrolepis exaltata* in 48-sized pots, just suitable for table or other decorative purposes. *Smilax* is grown in pots and allowed to twine up strings, so that it may be cut or used in pots as required.

The large stove contained *Crotons* in the perfection of high colour, and amongst them we noticed grand batches of *Golden Ring*, rich golden-yellow and green; and *Aigburth Gem*, red, yellow, and green, all in first-rate condition. *Aralia Chabrieri*, in plants of fine size, shows that the plant retains its highly ornamental form, even after it has attained large dimensions. Some of the finest of the narrow-leaved *Dracaenas* now so popular and widely cultivated all over the country, originated with this firm. We allude to *Miss Glendinning*, *Mrs. Laird*, *Marchioness of Lothian*, and others of that class. The last-named is the most graceful of all, and has narrow bronzy-red leaves. There are fine plants of the bold and handsome *Licuala grandis*. Another handsome fan-leaved *Palm* is *Stevensonia grandifolia*, with amber veins and markings. Useful decorative plants also include *Maranta major*, *Delabechea rupestris*, with fingered leaves, *Peperomia metallica*, highly coloured *Reineckea carnea variegata*, *Tillandsia zonata*, *Aralia Veitchi*, *A. gracillima*, and others. The *Carex* known as *C. variegata* is as well grown here as we have seen it anywhere. *Alocasias* may also be seen in variety.

The intermediate house contains a collection of climbers as well as various other subjects, such as the upright growing *Allamanda Williamsii*, the golden *Lantana Drap d'Or*, and *Clerodendron fallax*, of a brilliant scarlet recalling *Nerine curvifolia*.

Asclepias curassavica was flowering and fruiting. *Bougainvillea Sanderi* flowers even in very small pots. The propagating pit was filled to repletion with a host of subjects, including thousands of Palms in the earlier stages of germination beneath the benches. Here also were *Crotons*, *Dracaena sanderiana* and other types, *Asparagus plumosus nanus*, and the usual cuttings and small plants in the propagating cases.

Passing into the Palm house we noted a fine batch of *Livistona rotundifolia* in plants of small size, and a magnificent specimen of *Phoenix Roebelinii*, one of the finest, if not the finest in Britain. *Ceroxylon niveum* (the Wax Palm) is very scarce in the country. Very unique in its way is *Kentia forsteriana variegata*, for which two guineas were paid when it was in a thumb pot. It is now 5 ft. high, with a well developed yellow variegation. Here also was a large batch of *Bambusa falcata variegata*, which proves very useful for decorative purposes. *Chamaedorea Hartwegii*, a Palm of most graceful habit, was 5 ft. high and flowering freely. Very ornamental but very spiny was a species of *Calamus*. Saddle boilers are used in these houses, the heating arrangements of which are perfect. There are water bars in the furnaces, and the pipes are all fixed with a steady rise of $\frac{1}{2}$ in. in every 9 ft.

MEADOW PARK NURSERY.

Immediately to the south of the above ranges of houses are ten acres of ground known as the Meadow Park Nursery. It is principally under fruit trees, Roses, Rhododendrons, Gooseberries, and small fruits generally. The soil is rich and well adapted for the cultivation of this class of nursery stock. A wall runs through several areas of ground providing a southern aspect for the cultivation of fruit trees. It is fully a mile in length, and must prove very serviceable. A portion of it is built of bricks, the rest is stone. Young trees are being trained upon it.

PINKHILL NURSERY.

This is the old original nucleus of the present extensive area of nursery land, and was taken in 1850. It is situated on the rather steep side of the hill above the main road already referred to, and overlooks the new ranges of glass on the south side of the road. This, therefore, is Pinkhill proper, and from its elevated site the visitor gets a grand view of the Pentland Hills, stretching away to the the southwest of Edinburgh through Midlothian into the counties of Peebles and Lanark. Numerous hills in this range rise to various elevations from 500 ft. to 1,898 ft. The situation overlooks the valley of the Water of Leith, which runs through Edinburgh; also 5,000 acres of the finest alluvial land in Scotland, and which was a bog or morass over 100 years ago, when it was drained and brought into cultivation. An open stank or ditch, three miles long, still drains the land and runs into the Water of Leith.

The Pinkhill Nursery only extends to six acres, but it contains the old ranges of houses, as well as a collection of all that is choicest in the way of ornamental shrubs and Conifers, and collections of the more useful florists' flowers. The latter were what made the name of the firm famous all over the country about a quarter of a century ago. The collections of Dahlias and Hollyhocks have been grown on the same brake of ground for nearly forty-five consecutive years, and yet the soil shows no sign of exhaustion. It is a well-known fact that good Scotch gardeners grow Onions and Carrots on the same ground year after year for indefinite periods of time. *Negundo aceroides variegata* thrives splendidly and is highly coloured. The same may be said of the Silver and Golden Elms, the latter being known as *Ulmus Dampieri aurea*.

Two wide borders are filled with the choicest of Conifers and shrubs, including the Golden Box, and the broad-leaved golden Privet. Lawson's Cypress is represented by *Cupressus lawsoniana lutea*, *C. l. argentea picta*; the handsome *C. l. Allumii*; fine specimens of *C. l. Fraseri*, of erect and beautiful habit, the best of the type; and *C. l. caerulea*, with nice habit and bluish hue. Other handsome subjects are *Retinospora plumosa aurea* and other varieties; *Thuyas*, Golden Yews, *Cedrus atlantica glauca*, the Colorado variety of the Douglas Fir, having blue foliage; the frosted-silver *Abies pungens argentea*, 2 ft. high; *Salisburia adiantifolia* (the Maidenhair Tree), and many others too numerous to mention. Close by we noted a brake of *Araucaria imbricata* in fine condition, while near Mr. David P. Laird's

private residence in the nursery is a specimen of the tree, 30 ft. high, and feathered to the ground.

Elsewhere we came upon twelve long beds of two years' old seedling Larches in the finest of healthy vigour, and numbering about half a million. A collection of the best Ivies is grown in pots. *Larix leptolepis* grows more strongly than the European species, but has not yet been sufficiently tested as to its hardiness in Scotland. There is a fine plantation of it here, the trees having made 24 in. of growth during the season, and they were still lengthening when we saw them. *Spiraea crispa* and *S. Bumalda* were flowering freely, though only 3 in. to 6 in. high. The neatly trimmed Beech hedges traversing the nursery in every direction, and furnishing shelter, are a characteristic feature of Pinkhill. Mr. Laird's private residence is admirably situated, commanding a wide prospect of mountain and agricultural land, yet is well sheltered from the north and east winds, as is the nursery generally. The house is fitted with a private telephone commanding all parts of the place. The front of the house is completely covered with climbers similar to those we see in the south.

Florists' flowers are not neglected, for in the course of our peregrinations we came across fine plantations of Carnations and Dahlias in all the leading show, fancy, and single types. The dwarf and sturdy habit of the plants is a characteristic feature of this class of plants in the latitude of Scotland. Violas, Pansies, and other florists' flowers are still extensively propagated. A plantation of summer-flowering Chrysanthemums was gay, as were brakes of Pansies, Antirrhinums, and Pentstemons grown for the purpose of seed-collecting and stock, all being very dwarf and floriferous.

GLASSHOUSES.

The Rose house in the Pinkhill Nursery is filled with a collection of Tea and other Roses in pots, while others, including Niphetos, are planted out and trained up under the roof. Tomatos are also grown here. Frames in convenient situations are filled with seedlings, cuttings of Conifers, etc. Two houses are filled with Vines and Figs in pots, the latter fruiting although the plants were small. The next house was monopolised by a collection of the finest varieties of Ivies in pots, including *Madeirensis*, the best variegated sort, and Mrs. Pollock, a beautiful sort showing three colours. *Euonymus japonicus* in many varieties is also popular. Palms of all sizes for decorative work are grown by the thousand, there being seven houses devoted to them alone. The hardy plant house is a roomy structure 200 ft. long, 30 ft. wide, and span-roofed. In the early part of the year it is occupied with flowering Rhododendrons. At present it contains Japanese Maples, Camellias, *Ampelopsis Veitchii*, Clematis in great variety, Chrysanthemums, standard specimens of *Hydrangea paniculata grandiflora*, &c. One vinery filled with young pot Vines will now be occupied with Chrysanthemums. The bothies and the foreman's house are situated close to the other houses; and are beautifully draped with *Ampelopsis*, Fuchsias, Ivies, Jasmine, &c. Passing on, we entered a house containing a fine strain of *Amaryllis*. In another was a collection of *Coelogyne cristata*, grown for the sake of cut flowers. A healthy collection of *Clivias* of the best varieties fills another house. Seedling *Amaryllis* appeared in another cool house, the back wall of which was covered with Roses in bloom and filling the place with their fragrance. The large old stock plants of *Araucaria excelsa* from which the cuttings are obtained are staged here, as well as tall and useful specimens of *Cordyline australis*. As in the case of the new ranges of houses on the south side of the road, so, likewise, the whole of the old houses are heated from one stokehole. The whole of the hotwater piping is thereby easily regulated and kept under control. The management of the whole of these nurseries, we may add, is up-to-date, and in keeping with modern requirements.

Tunbridge Wells Gardeners.—Mr. W. Berwick presided at a full meeting of Tunbridge Wells Gardeners on September 21st. Messrs. Bridger, May, and Goodwin were awarded the prizes for flowers and Ferns. Mr. Greengoe, of Ferndale, also showed some fine Ferns, and some capital Chrysanthemums came from Mr. Goacher, of the Tunbridge Wells Recreation Ground. Mr. T. Palmer was highly commended for Orchids, and Messrs. W. Berwick and R. J. Booth for Dahlias.

THE PROGRESS IN VEGETABLE CULTIVATION DURING QUEEN VICTORIA'S REIGN.

(Continued from p. 107.)

BROAD BEANS.

IN the early days of the Queen's Reign lovers of this vegetable were relatively better off than those who preferred Peas, and there already existed such kinds as Mazagan, Dwarf Fan, Early Longpod, and the White and Green Windsor. These have, of course, been greatly improved upon, but they all remain in use, though it is somewhat surprising that the Mazagan should be grown at the present time, as in every point it is surpassed by other greatly superior types.

The fact, however, that Beans in use sixty years ago are still grown seems to show that the advance has been less rapid than in the case of many other vegetables. The improvement that has been made is almost entirely the result of selection, although the crossing of Seville Longpod and White Windsor has produced a variety sent out by my house as Giant Windsor, which, as its name implies, is a much larger type of the Windsor section than previously existed.

During the fifties the Seville and the Aquadulce Longpods (very similar sorts) were introduced from the Continent, and on account of their earliness and length of pod have been and still are largely grown, although the constitution of the plant is not nearly so vigorous as our English sorts.

Beck's Green Gem, a sport from the Dwarf White Fan, was introduced in 1858, and some years afterwards the market gardeners in the neighbourhood of Harlington, Middlesex, set to work to improve the Windsor by selection, and as a result of their efforts we have the Harlington White and Green Windsors.

Painstaking selection has done much in the improvement of the Longpod section, the several strains known as Exhibition being fine and profitable types, the best selections of which both white and green-seeded sometimes contain as many as eight or nine beans in a pod, contrasting most favourably with the two or three beans found in the pods of the older kinds. The Broad Bean is not only greatly prized in private gardens, but is also an important article of food with the poorer classes, and the efforts made to increase its productiveness have been duly appreciated by all classes of Society.

DWARF FRENCH OR KIDNEY BEANS.

There were several sorts in use when the Queen ascended the throne, but the difference chiefly lay in the colour of the seed, a feature of little importance except to those who keep a collection of these diversely coloured and pretty seeds. In fact, they were in the main named after the colour of or markings on the seeds, to wit the Zebra, Light and Dark Dun, Red and Purple Speckled, Negro, etc., the chief exception being Fulmer's Forcing, which was also in use in 1837. The scope for improvement is limited to size of pod, earliness, and productiveness, and in the former respect Canadian Wonder as soon as introduced by us became very popular, while Ne Plus Ultra, an introduction of more recent date, fairly lays claim to being a marked advance over most sorts for earliness and also productiveness. Besides these such excellent varieties as Triumph, White-seeded, Forcing, Green Gem, Monster Negro, have appeared, and undoubtedly it may be said that they have come to stay. It was thought that the crossing of this section with the Scarlet Runner might produce useful results; but although many hybrids combining the broad massive pods of the Scarlet Runner, with the habit of the Dwarf Bean, are in the hands of one or two experts, little if any advance upon such favourites as Canadian Wonder and Ne Plus Ultra has been made.

CLIMBING FRENCH BEANS.

One of the most notable improvements made in vegetables during Her Majesty's reign has been the creation of an entirely new race of French or Kidney Beans, with a climbing habit of growth. There are several distinct types before the public, differing essentially in the size and colour of the seed, shape and size of pod, and in earliness also. Notable amongst these are Tender and True and Veitch's Climbing, both attaining a height of 4 ft. to 7 ft., according to cultivation; and more recently introduced is our own Excelsior—a Bean combining the delicacy and tenderness of the Canadian Wonder with the vigorous growth of the Scarlet Runner.

RUNNER BEANS

Were represented sixty years ago by the old Scarlet, the Painted Lady, and the Large White, and although one or two sorts of recent introduction are the result of artificial crossing, the majority of the improved types have been attained by selection. But even in some of these cases it is quite reasonable to suggest that they are natural crosses resulting from inoculation. Scarlet Runners producing pods $1\frac{3}{4}$ in. in length would have caused almost as great surprise amongst the gardening fraternity of 1837 as did the advent of the first motor-cab in the streets of London. That greater length will yet be attained I have no doubt, and with it an improvement in quality on some of the existing large podded kinds. The homely Scarlet Runner which Tradescant cultivated in his garden at Lambeth in the seventeenth century for the sake of its flowers, can now in its improved form boast of an almost unlimited number of attractive names—each chosen to indicate a type of greater size or length than any previously quoted.

ASPARAGUS.

Until quite recently English gardeners and their employers appeared to be quite satisfied with the kinds grown when the Queen came to the Throne, such as Giant and Battersea, but the greater facilities for reaching the Continent have resulted in the desire to cultivate the sorts which produce the massive sticks so well grown in France. The most popular strain of the latter is the best selection of Argenteuil, and when the English cook has learned to imitate more closely the methods of the French chef we shall doubtless find as delicate and delicious Asparagus in London restaurants as in those of Paris.

In like manner has the increased taste for Globe Artichokes been formed, a delicacy which was seldom grown fifty or sixty years ago.

The increased use also of Sugar Peas, Waxpod or Butter Beans, Celery, Chicory, Endive, Cardoons, Egg Plants, Silver or Seakale Beet, and other kindred subjects may be traced to the same cause.

We do not appreciate all the ways of railway companies, but they have undoubtedly been the means of introducing us to some of the more delicate and delicious vegetables of the Continent.

BEET.

Salads are much more popular now than sixty years ago, and as Beet perhaps comes next in importance to the Cucumber and Lettuce, the natural result has been a marked improvement in the varieties grown. In the early days of the Queen's reign "Dwarf Red," "Large Red," and "Turnip rooted" were the sorts in use. Seeing how difficult it is to obtain seed which will produce absolutely uniform results in colour of leaf, &c., it was a happy idea on the part of the seed seller of those days to protect himself by labelling the packets with such comprehensive names as "Large Red," "Dwarf Red," and "Turnip-rooted." It is quite certain that even now the former description would be very applicable to strains frequently seen growing. In 1841, "Whyte's Black" was introduced, a variety almost black in the flesh, but inclined to be coarse in texture as well as strong in growth, and with considerable variation in the colour of leaf. Notwithstanding these faults it is still to be found in nearly all seed lists, and presumably therefore has its admirers. Of late years a large number of improved types of this class have been seen, and those who fancy Beets with flesh almost black have no lack of choice.

Later introductions which remain popular were "Nutting's Dwarf," "Pine Apple," and "Dell's Black-leaved." Of the first and last, various selections have been made, resulting in uniform and excellent types.

Within recent years "Cheltenham Greentop" has also come to the front, although I understand it has long been grown in the neighbourhood from which it takes its name. It is an excellent Beet, although disliked by some on account of the colour of the leaves. The "Turnip-rooted" so useful for shallow soils has undergone great improvement, the flat type called Egyptian being almost superseded in English gardens by the introduction in 1891 of our Glohe, which is as perfect in form and clean in growth as a Snowball Turnip. Many types of Globe Beet have also been introduced from America, but generally speaking the colour of the flesh is not up to the English standard.

A strange development in the leaves of the Beet has lately been observed, and we may soon see in

our flower gardens a variety which produces a beautifully variegated foliage in addition to a very fine well flavoured root. A white Beet called Bassano was also grown in the thirties, but it never became very popular. In recent years efforts have been made to popularise a yellow-fleshed kind, but although I can vouch for the excellent flavour of this Beet, the general public do not appreciate it.

(To be continued.)

LAW NOTES.

ASHWORTH V. WELLS.

His Honour Judge Parry, delivered judgment in this case at the Manchester County Court on Wednesday the 13th day of October 1897. The case was originally heard on the 28th day of July 1897; and the Judge reserved judgment, as the parties considered the same as one of great importance. Mr. Twirdale, barrister, represented the plaintiff, and Mr. Newman, solicitor, the defendant.

The case arose out of an auction sale by the defendant of all his Orchids. Amongst the plants which he sold was a *Cattleya Acklandiae* alba described in the catalogue as the "only known plant." The plaintiff at the auction held on the 27th of June 1895, which was attended largely by Orchid growers from the North of England, bought the plant for 20 guineas.

He kept the plant in question with his other plants for 2 years and it blossomed and turned out to be a common Orchid and not worth more than 7s. 6d, thereupon he sued the defendant for £50 damages, being the maximum amount recoverable in the County Court. He and his witnesses who were very numerous, and some of whom had come long distances, gave evidence to the effect that such a plant, if it really had been a plant as originally described, would be worth at least 100 guineas.

Upon this evidence the plaintiff's counsel argued that he was entitled to be paid not only the amount he paid for the plant, but the amount it would have realised if it had turned out to be what the defendant had described it.

The contention on behalf of the defendant was that all the plaintiff could recover was the amount he paid and interest on that amount, and as that sum had been paid into Court it was further contended that he was entitled to judgment and payment of his costs.

In reply, it was stated on behalf of the plaintiff, that this was a very important case, as buyers of Orchids were constantly complaining of their treatment in the trade. An Orchid merchant would sell a number of plants, of which some probably died and others turned out to be not as described. They then offered to return to the purchaser the price of those which had turned out wrongly, at the same time pocketing the price of those which had died, and probably were equally faulty. It was contended that the purchaser was entitled to more than the bare price.

As above stated Judge Parry delivered judgment in this case on October 13th. After reciting the facts of the case His Honour stated that he had never found a case where prospective damages which were claimed by the plaintiff in this case had ever been allowed. He went carefully through the various cases which, in his opinion, had a bearing on the matter, and eventually decided that a claim for prospective damages such as was made in this case was not maintainable in law; and as defendant had paid into Court the price he had received for the Orchid, plus the interest which had accrued since the day it was bought, that was all that he was entitled to, and gave judgment for the defendant, allowing costs on the highest possible scale on the ground that the action was one of great interest and moment to the whole body of Orchid growers.

SOCIETIES.

HARROW AND ROXETH ALLOTMENT.—Oct. 8th. A splendid show of vegetables was furnished on this occasion by the allotment holders of Harrow and Roxeth. Mr. Deane, gardener to the Earl of Essex, at Cassiobury Park, was judge in the unavoidable absence of Mr. Dinsmore, of Harrow Weald.

Prizes were offered in three divisions, viz., the growers in Harrow, Roxeth, and in the two combined.

Mr. J. Smith, of Alma Road, was first in the open class for a collection of vegetables. This collection contained no fewer than twenty varieties, including Kale, Celery, Vegetable Marrows, Onions, Leeks, Potatos, Beet, Brussels Sprouts, and Cabbages in first-class condition. Mr. A. Rance was second, and Mr. H. Bristow, third. The prizes in this class were given by the Rev. F. Hayward Joyce and Mr. J. T. Horley.

Mr. Wm. Ludlow won the first prize for four kinds of vegetables in the classes set apart for Harrow growers only. Mr. W. H. Stiles was second. The prizes in this class were presented by Mrs. Rotch.

Mr. W. H. Stiles was the most successful competitor in the whole of this division, and won the prize offered by Mr. T. F. Blackwell.

In a similar class limited to competitors from Roxeth Mr. J. Ball was the most successful exhibitor, with Mr. D. Darville as a second. The prizes in this case were presented by Mr. F. E. Marshall.

Mr. A. Rance was the winner of the prize given by Mr. W. H. Cullen to the most successful competitor in this division.

The annual meeting was held in the lower room of the Mission House. Mr. F. E. Marshall occupied the chair, and was supported by Mr. Lewis S. Pawle and Mr. J. Smith, the hon. secretary. The report alluded to the acquisition of a field at Kingsfield, which had been let out in sixty-seven allotments, all of which, with a few exceptions, were under cultivation. The chairman, in moving the adoption of the report, said that it was a satisfactory one. There was a balance in hand of £6 14s., as against £7 19s. 8d. at the end of the previous year.

Mr. Marshall gave a detailed explanation of the various items in the accounts, and said it was apparent that the rent of the two grounds would be between £36 and £37 per annum.

Mr. D. Page seconded the adoption of the report, which, on being put to the meeting, was carried unanimously.

The election of the committee was then proceeded with. Finally, the choice rested upon Messrs. King, Hilton, Long, and Mascord, for Harrow; and Messrs. Page, Smith, Darville, and Asber, for Roxeth.

Prior to the distribution of prizes by Mrs. Horley, Mr. Horley addressed the meeting. He spoke of the great pleasure it gave him to be present, and spoke of his sympathy with the allotment system, and of the way in which it was appreciated by the people of Harrow and Roxeth. He hoped that in due time they would be able to hold Harrow up as a model of sobriety, respectability, and horticultural intelligence. He was glad to find from statistics that the allotment grounds were being taken full advantage of, so much so, indeed, that whereas in 1895 when they had an exhibition there were only two classes and ten entries for the prizes, this year there were 163 entries with twenty-nine classes. He was astonished during a recent visit to the grounds at Roxeth and at Kingsfield at the profusion of fine vegetables that he saw around him.

QUESTIONS AND ANSWERS

* * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Addresses of Horticultural Papers.—Meldrum, Largo: The Florists' Exchange is one dollar (4s. 2d.) per annum. Address, the publisher Florists' Exchange, P. O. Box, 1697, New York, U.S.A. The Bazaar Exchange and Mart is published three times a week and is 2d. for each issue. It is published by L. Upcott Gill, 170, Strand, London, W.C.

Gardeners' Lens.—Rid. Flanagan: If you ask for a gardener's or botanical lens you should have no difficulty in getting what you want for 2s. 6d., 3s., and upwards, for they are of various prices according to size, quality, the material with which they are mounted, &c. Apply either to Messrs. W. Watson & Sons, 313, High Holborn, London, W.C., or to Henry Crouch, Limited, 66, Barbican, London, E.C. There must be some mistake about the microscope for a shilling, warranted to see thirty miles. Micro-

scopes are not made to see long distances. You must mean a telescope. We doubt whether you could get a telescope to see thirty miles at the price you state. We certainly have not seen nor heard of it; but if you send to either of the above firms for a gardeners' lens, you could ask their opinion upon the matter.

Plums and Cherries on an east aspect wall.—*Omega*: Providing the blossom escapes the spring frosts there is no reason why either Cherries or Plums should not succeed well planted against an east aspect wall. If planted against a wall facing the west, they would be much more likely to escape frost. They are early bloomers, and the danger is that the sun striking the frozen blossoms early in the morning they would be destroyed: whereas if placed against a wall facing the west, the blossoms have time to thaw gradually before the sun strikes upon them.

Privet for Game Coverts.—*Omega*: The common Privet (*Ligustrum vulgare*) should suit your purpose best as the plant is much dwarfier and hardier than the broad leaved Privet (*Ligustrum ovalifolium*). The latter would be the more rapid grower, but it would ultimately get much the taller and would probably cost more.

Heating a Greenhouse.—*D. M.*: We should say that a properly constructed apparatus heated with gas or paraffin would be cheaper than an apparatus heated by means of coal or other fuel, for a small house like that you mention. If you were in the midst of a coal country where small coals could be obtained at a very low price it would alter matters greatly. The furnace of the London boiler you mention is probably too small to allow of a proper body of fire to keep up the heat during the night. It might be worth while building a fireplace with bricks and iron bars so as to heat the pipes at present in use. If a shed or other outhouse is at command in which to build a furnace and hide the same, that is what we should prefer. Nevertheless, if you would like details about coils of piping heated with paraffin for greenhouses you might apply to Messrs. Toope & Son, High Street, Stepney, London, E., for their catalogue of sizes and prices of paraffin heating apparatus. Other makers are Messrs. Fenlon & Son, Tudor Street, Whitefriars, London, E. C.; and Messrs. Poore & Co., 139, Cheapside, London, E. C.

Names of Fruits.—*D. E.*: 1, Ribston Pippin; 2, Rymer; 3, Cellini; 4, Warner's King; 5, Royal Somerset; 6, Bedfordshire Foundling; 7, Dumelow's Seeding; 8, not recognised; 9, Pear Louise Bonne of Jersey; 10, Pear Beurré Capiaumont.—*James Robertson*: 1, Vicar of Winkfield; 2, Emperor Alexander; 3, Marie Louise; 4, Mère de Ménage; 5, Beurré Diel; 6, Bergamot Espere.

Names of Plants.—*John Halifax*: 1, *Tanacetum vulgare crispum*; 2, *Lamium maculatum*; 3, *Verbascum olympicum*; 4, *Artemisia vulgaris*; 5, *Oenothera biennis*.—*James Mayne*: The Fern sent appears to be *Dicksonia apiifolia*, and certainly resembles that to a greater extent than *Davallia Moorei*. *Dicksonia apiifolia* has a creeping rhizome and is entirely distinct in habit from *D. antarctica*. It is not safe to name Ferns without fructification.—*W. H.*: 1, *Choisya ternata*; 2, *Anemone japonica elegans*; 3, *Erica vagans*; 4, *Daboecia polifolia*; 5, *Colchicum autumnale flore pleno*; 6, *Liquidambar styraciflua*; 7, *Taxodium distichum*.—*A. G.*: 1, *Davallia filijensis*; 2, *Platylova rotundifolia*; 3, *Asplenium bulbiferum minus*; 4, *Osmunda regalis palustris*.—*J. Herd*: 1, *Aster Novi-Belgii laevigatus*; 2, *Aster diffusus horizontalis*; 3, *Sternbergia lutea*.—*C. L.*: 1, *Fittonia Verschaffeltii*; 2, *Ruellia Portellae*; 3, *Ophiopogon Jaburan variegatus*; 4, *Liriope graminifolia*; 5, *Blechnum occidentale*.

Collection of Gaillardias.—*J. B.*: We do not know of any full and complete collection of Gaillardias, but it might be worth your while to apply to several firms, including Messrs. J. Carter & Co., High Holborn, London; Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, London; Messrs. Kelway & Son, Langport, Somerset; Messrs. J. Laing & Sons, Forest Hill, London, S.E.; Messrs. Barr & Sons, Long Ditton, Surrey; and Messrs. H. Cannell & Sons, Swanley, who have collections of named varieties.

Spotted Leaves.—*Waterloo*: The leaves you sent were those of the Sycamore (*Acer Pseudoplatanus*). They were affected with a fungus named *Rhytisma acerinum*. We have seen whole avenues of the Sycamore as badly spotted as those leaves you sent, but the fungus does not attack Oak, Beech, Elm, and other trees of that class.

Cherry to succeed the May Duke.—*Omega*: The Archduke is the finest of the Duke Cherries, and ripens its fruit about eight or ten days after May Duke. The fruits of Late Duke come in sometime after those of Archduke, and with protection from birds will hang on the trees till late in September.

SATURDAY, OCTOBER 30th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, November 1st.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 TUESDAY, November 2nd.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 Sale of nursery stock at the Hale Farm Nurseries, Tottenham, N., by Messrs. Protheroe & Morris (2 days).
 WEDNESDAY, November 3rd.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 THURSDAY, November 4th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 Sale of nursery stock at Millford Nurseries, Godalming, by Messrs. Mellersh (3 days).
 FRIDAY, November 5th.—Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris. [For the numerous Chrysanthemum shows which are to take place next week consult our list of fixtures on p. 130.]

FRUIT AND PLANT HOUSES AT DOVER HOUSE.—Some weeks ago we had the pleasure of inspecting the gardens at Dover House, Roehampton, the beautiful suburban residence of J. Pierpont Morgan, Esq., but pressure of space prevented us from using the whole of our notes at the time. For some years past Mr. J. F. McLeod has been working out many improvements both out doors and under glass. He found the roots of the Peaches too deeply buried in the soil and, lifting them, replanted all of them 9 in nearer the surface in 1889. The trees are now reaping

the advantage. Admirable Peach bore a heavy crop of large and luscious fruits. Princess of Wales carried a heavy crop, although seventy fruits had been gathered before we saw the tree. Many of the earlier trees had been gathered, and all had fruited equally well. Nectarines were represented by Victoria, and some others. The late house or Peach case is of some extent, and unheated. Good crops were carried by Goshawk, several trees of Premier, Princess of Wales, and Royal George Peaches. The house is too late for the Albert Nectarine which fails to reach that perfection of which it is capable in a heated house. Pineapple and Byron Nectarines behave admirably, the latter assuming a splendid colour. The first house is closed pretty early with the result that the fruits are ready to gather sometime between the 25th May and the 1st June. The second house was ready by the 10th June.

Equally interesting were the vineries, an early one of which matured a good crop of Black Hamburgh and Foster's Seedling. Asparagus medeoloides, better known under the names of Myrsiphyllum and Smilax made a beautiful green covering against the back wall, where it was trained upon strings. The large vinery bore a magnificent crop of fruit, the bunches of Gros Colman being large and the berries like black Plums. Other heavily fruited varieties were Lady Downes, Mrs. Pince, Lady Hutt, and Appley Towers. The two latter varieties are practically new, and both of them are worked upon Gros Colman. The second crop of Figs was ripening in pots. Some of the trees are also planted out. The pots are plunged in fibre to prevent rapid fluctuations of drought and heat. A second and a third crop of Melons were being brought along. Tomatos are largely grown in pots, and trained up with a single stem. It will be sufficient indication of their fruitful character to mention the fact that they carried 20 lbs. of fruit to a plant. Tomatos also do well in the open ground, for rows of plants between young Apple trees were maturing heavy crops of fine fruit.

The plant houses are equally cared for at Dover House, and healthy plants of a useful kind are kept scrupulously clean. Crotons of a size suitable for table decoration are grown in great variety. Mr. McLeod has also many seedlings of his own raising, some of which look promising. Gardenias are grown in pots. Calanthes are well managed here, the plants on shelves being very strong. A fine collection of the newest and best Caladiums, to the number of 154 varieties, make a notable feature of the place, they and the Crotons being occasionally brought before the public at exhibition in grand condition. The Caladiums were potted in December, and the same plants were good when we saw them. Dracaena Doucetti and Begonia Gloire de Sceaux were also in excellent trim. The greenhouse contained a fine collection of tuberous Begonias, which were still in a floriferous state although they had been started into growth early. The fine strains of Cannas could hardly be neglected here, where the best of everything is secured for decorative purposes. Fuchsias and Trachelium caeruleum are also very serviceable in this cool house. All mandas and Bougainvilleas keep the roof the stove gay for months at a stretch. Large specimen Crotons find a place in this house, and are well furnished with clean and healthy foliage. Anthuriums, Palms, and Dracaenas furnish variety at all times with their beautiful evergreen foliage. In a pit close by was a fine batch of Bouvardias.

The fernery is used as a show house in the early part of the season, but on the occasion of our visit was brightened with

RICHARD SMITH & CO., WORCESTER.

ORCHIDS of the highest quality, every plant guaranteed true to name, from 2/6 each. Please send for free list.—P. McARTHUR, The London Nurseries, 4, Malda Vale, London W.

Cannas, Begonias, and other flowering subjects interspersed in batches amongst the Ferns, but chiefly Adiantums. Many varieties of Achimenes in full bloom were arranged along the front of the benches. The latest batch of Gloxinia seedlings were flowering freely and displaying a great variety of colours in one of the several low, span-roofed houses utilised for plant growing. A houseful of ornamental Capsicums, well fruited, and Asparagus constituted another speciality in their way. A set of frames is to be altered and supplemented till they form two rows, each 120 ft. long. They are to be heated with fermenting manure and utilised for growing Cyclamens, Cinerarias, Cannas, etc. A batch of Cyclamens sown in September, 1896, formed fine plants which must now be close upon the flowering stage. In a lean-to house, having a southern aspect, we noted those fine specimen Malmaison Carnations which sometimes make their appearance in public. They consisted of bushy, well-furnished plants about 2 ft. high and were summering here in plenty of sunshine and abundant ventilation, which keep the plants sturdy and short-jointed. They formed the group which took the Jubilee Medal at Richmond as the best miscellaneous exhibit in the show last summer.

Mr. John Duff, foreman in the gardens at Devonhurst, Chiswick, for the last two years, has been appointed head gardener to Colonel Williams, Bryn Glas, Newport, Monmouthshire.

Lord Justice Lindley, only son of the Dr. Lindley of horticultural fame, has been promoted from the Court of Appeal to the post of Master of the Rolls, in succession to Lord Esher.

Mr. Thomas Ormiston, a well-known Scottish horticulturist has just died. He was gardener for some twenty-five years to the Mar family, serving under three of the earls of Mar during that time. Under Mr. Ormiston's care and skill the gardens at Alloa Park became notable for their beauty and originality of design.

The Pelican, which for some years has been a great favourite with visitors to Kew Gardens, at last grew old enough and strong enough to discover that the world was bigger than Kew Gardens, and possibly better. Like many another unfortunate traveller it met its death at the hands of a wretched gamekeeper or gun-keeper, whose sole idea is simply to shoot every flying thing that comes within gunshot, ay, even if it were an angel. The pelican, like Adam, perchance imagined it was not good to be alone, its mate having died some time previously. Now the cormorant feels lonely and disconsolate in the absence of its big companion.

The Edinburgh "Diamond Jubilee" Chrysanthemum Show promises to be a big thing, coming off on the 18th, 19th, and 20th November. The special Jubilee prizes lead the van of all other shows in value, and for the benefit of our readers we have the pleasure to draw attention to them. The great feature of the exhibition will be the class for twenty vases Chrysanthemums, three blooms each of twenty varieties; first prize, £50 in cash, and Victoria Gold Medal, second, £50, and Silver Medal, third, £15, 4th, £10, 5th, £8, and 6th, £7. We are informed that the gold medals to be awarded are no trifles, but are to be made of 22 carat gold and weigh 2½ ozs. The City of Edinburgh prize is also a tempting one for forty-eight blooms, Japanese Chrysanthemums, distinct; first prize, plate value £20 and £5 in cash, 2nd, £12, 3rd, £8, 4th, £5, and 5th, £3. With such prizes to tempt competitors, and the added attractions of the band of the Grenadier Guards, besides the excellent trade exhibits always met with here, we predict a great success for the show and trust the hopes of the committee may be amply realised of having a large surplus to hand over to charities, of which those connected with gardening will doubtless receive a liberal share.

Miss Muir Macreadie has purchased the historical estate of Warwick Hill, in Ayrshire, for £14,000. It had been in the hands of the Ralston family for many years.

The Fite Mutch.—"We hed a meenin o'wynter last ook fan Morven an' Culbleen got on the fite mutch." This quotation merely indicates that the party concerned had a taste of winter when Morven and Culbleen (two Aberdeenshire hills) got a cap of snow.

"Ouida" has written a letter to Mr. Joseph Collinson of the Humanitarian League, urging the crying need for the protection of birds from their callous and rapacious destroyers, and society from the danger of the mal-practices of the school of medical inoculationists.

Webb's Barley Competition.—The valuable prizes for Barley offered by Messrs. Webb & Sons, of Wordsley, Stourbridge, brought a keen competition, and the Judge, Mr. T. Phipps, of the firm of Messrs. Pickering, Phipps & Sons, Limited, of Northampton, was occupied a considerable time in making his awards, which were as follows: Class I, Champion Prize, open to the United Kingdom, £25, Mr. W. Nisbett, Stratford St. Andrews, Saxmundham, Suffolk. Class II, open to Salop, Stafford, Hereford, Worcester, and Warwick. First prize, £15, Mr. E. Bomford, Spring Hill, Fladbury; second prize, £10, Mr. W. Chick, Sutton Maddock, Shifnal; third prize, £5, Mr. G. Corbishley, Bricklehampton Court, Pershore. The conditions of competition stipulated that the Barley should be one of Webbs' varieties, and grown with Webbs' Special Barley Manure. The high quality of the samples exhibited testified to the value of both seed and manure.

National Chrysanthemum Society.—A special fruit competition in commemoration of Her Majesty the Queen attaining to the 60th year of her reign, is to be held at the Royal Aquarium, Westminster, on the 9th, 10th, and 11th November next, under the auspices of the National Chrysanthemum Society, and promises to be very interesting. Five prizes are offered for twenty-four dishes of Apples, nine of which must be varieties in cultivation in this country at the time of the accession of the Queen in 1837. The remaining fifteen must consist of varieties which have been put into commerce during the past thirty years. Five fruits constitute a dish, and a card must be put on the plate showing the name, the year of introduction, and the name of the introducer. The fruits need not necessarily have been grown by the exhibitor, but they must be the produce of the United Kingdom. Particulars may be obtained from the secretary, Mr. Richard Dean, Ranelagh Road, Ealing, London, W.

Patents for Inventions.—Inventors, who desire to have their inventions patented, have to do so at their own risk. The Patent Laws in this country make no provision for an official research as to the originality of a novelty. It is therefore necessary that inventors do this for themselves before they incur any expenses, otherwise they may find after paying their fees that the invention is practically worthless, because some one else has forestalled them and possesses the patent rights. At the present time there are now over 250,000 printed specifications at the Patent Office to wade through; but the task is rendered easier by the preparation and publication of a series of Indexes and Abridgements as a guide to the Specifications themselves. These Abridgements refer to all sorts of trades, professions, and occupations. That relating to gardening or horticultural appliances comes under "Agricultural Appliances for the Treatment of Land and Crops." The oldest Abridgements mentioned go as far back as 1617, but those of more recent date are more likely to be of service. The publications run into hundreds, and may be obtained at the Patent Office, 25, Southampton Buildings, Chancery Lane, London, W.C., for 1s. to 2s. each according to age. Any of them, however, may be seen at the Patent Office free of charge, as well as at free and public libraries in London and the provinces. The purpose of the Abridgements, however, is to enable the would-be patentee to carry out a search at his leisure to determine whether his invention has been patented or not.

Showers of Snow have been falling in the lowlands of Aberdeenshire, though the weather, till recently remained remarkably mild in the southern counties.

Enraged Fruit-grower: "Get outside of those Apples as quickly as you can, you young rascal." Young Rascal: "'Ees, mister, I'm a tryin' to, but they're very 'ard.'"—Stampede of both in single file.

Trafalgar Day.—On Thursday the 21st inst., the anniversary of the death of Nelson, the national hero, Nelson's Monument, in Trafalgar Square, was simply but appropriately decorated. At a height of 120 ft. from the ground the column was girt with a naval crown, weighing about 8 cwt., and 6 ft. in height. From the iron band supporting it four garlands depended, each about 60 yards in length, entwining the column, and reaching from thence to the Landseer lions, and then to the ground. Four huge wreaths of Laurel were sent by branches of the Navy League and Abbotsholme School. The wreaths each bore a suitable motto. Chrysanthemums, Tuberoses, Lilies and other flowers were brought in the form of wreaths and bunches during the day. The decorations were allowed to remain till the 26th inst. The old flagship Victory at Portsmouth was decorated with garlands of Laurel. The figure of Nelson at Chatham was decorated with Laurels and flowers.

Woolton-Mutual Improvement Society.—The usual fortnightly meeting of this society was held at the Mechanics' Institute on the 21st inst., Mr. Henry Middlehurst presiding. Mr. W. H. Yeo, of Birkenhead, gave an excellent paper entitled "A chat about Vines." The subject was handled in an able manner, the defects and failures, and how to overcome them were the strong points of information; bad methods were also brought to the fore, and the results that usually follow. These very important items connected with Vine culture that most growers have had to contend with, and how to deal with them successfully are as useful as the most approved details of high class culture. The paper was somewhat out of the beaten track, but proved the more desirable especially to those who have to undertake the renovation of old or badly treated Vines, whether through defective borders, or improper treatment. Sound practical advice at this period is most valuable. At the conclusion of the lecture a good discussion followed, after which a cordial vote of thanks was tendered to the essayist and the chairman for a most enjoyable and instructive evening.

"The Fern Bulletin."—This is the title of an illustrated 16-page quarterly, which claims to be "the only journal in the world devoted entirely to Ferns." The October number completes the fifth volume. The first article of this number, written by Lucien M. Underwood, is entitled "The Ferns of Scolopendrium Lake." The writer of it enumerates the Ferns in the immediate vicinity of Green Lake (the real name of the small sheet of water), near Jamesville, Onondaga county, New York. He mentions some twenty-seven species, which he finds within a radius of fifty rods from the margin of the lake, and says that others run the number up to thirty-four, all of which are found within a circle, whose diameter does not exceed three miles. This he considers the richest district in the United States for Ferns, and invites others to inform him of any richer district. This nearly equals the whole British flora in the matter of Ferns. By the way, twelve of the species are British, which goes to show the cosmopolitan character of Ferns. The names adopted are not all the same as ours. For instance, Nephrodium spinulosum, N. cristatum and N. Thelypteris are all classed under Dryopteris; while Polypodium Dryopteris is placed under Phegopteris, as is sometimes done here. The editor, Mr. Willard N. Clute, of the Herbarium of Columbia University, New York City, has an interesting article on the Hart's-tongue, which he calls Phyllitis. Several of the species mentioned in the "Bulletin" are hardy and more or less cultivated in Britain. The British Columbia variety of the common Bracken is indeed a giant, for a man on horseback can make two fronds touch over his head. There is an interesting article on Californian Ferns, &c. Mr. Charles T. Druery, Acton, London, W., has an article on apospory and Fern variation in Great Britain. *The Fern Bulletin* is published at Binghamton, New York, U.S.A.

The Wrong Man.—Sandie : "Losh, Geordie, I heard ye fell oot o' an Aipple tree an' broke yer leg." Geordie : "Na, Sandie, it wisna me. It wis my brither." Sandie : "Eb, mon, I'm wae to hear't, an' awfu' disappintit."—*Snaggs.*

Economic Botany.—The introductory lecture in the course of economic botany at the Glasgow and West of Scotland Technical College, was delivered on October 4th, by Mr. G. F. Scott Elliot, M.A., B.Sc., F.R.G.S. The object of the course, it was explained, was to afford a knowledge of the possibilities of our British possessions, and a judgment of the chances of success in the cultivation of the more useful plants, such as those yielding rubber, guttapercha, tea, cocoa, coffee, fibre, oil, gum, tanning materials, and drugs of various kinds. It was intended to thus give an opportunity of training those going to the tropics or any British dependencies in other parts of the world. The importance of the subject was demonstrated by the fact that last year the balance of this country's imports over exports amounted to £141,000,000. The determining factors that decided what plants could be cultivated in any part of the earth were six in number:—1st, security of life, property, and fair play; 2nd, the size and expansibility of the market; 3rd, labour, which was of two distinct kinds, managing and manual; 4th, climate—the amount and distribution of sunshine and rainfall; 5th, soil; and 6th, wind shelter. Climates were classified according to the modern German method by physical characters. Thus, in tropical countries there were wet coast jungle, the home of the Oil Palm, and rubber plants; wet insular climates, producing chiefly the Coconut Palm; wet mountain forest climate, the chosen home of tea and quinine; and the monsoon area, notable for the coffee plant. Then came the sub-tropical region, in which Oranges, Lemons, and Bananas could be cultivated, but not the Olive. In temperate regions Mr. Elliot recognised two divisions, viz.:—The Olive region, such as the Mediterranean districts and Southern California, and our own temperate climate. The presence of the Date Palm is the chief characteristic of the desert.

Ladywell and Lewisham Horticultural Society.—The fourteenth annual dinner in connection with this society took place on the 21st inst. at the "White Hart," High Street, Lewisham, about eighty sitting down. Mr. S. J. Gore presided, Mr. D. Bartlett being in the vice-chair. Others present included Messrs. T. W. Sanders, F.R.H.S. (president), T. White (vice-president), A. Pratt (secretary), E. J. Hughesman, E. G. Bowman, H. Myers (representing the Ichthemic Guano Co.), W. T. Kinnear, H. Sercombe, W. Brown, W. Burgess, W. Cakebread, A. Collins, George Cornes, J. Deal, George Edwards, W. Tarrant, C. T. Green, J. Harding, Hines, E. Kelsey, G. King, E. Lee, H. Lewis, W. Musson, W. Ovenden, D. Parker, S. Payne, Charles Perry, H. Petty, W. Rabbits, H. Reeves, A. Robertson, J. Roberts, W. Savage, G. Seago, G. Stanton, M. Stevens, G. Taylor, G. Tilbury, J. J. Turpin, A. Weller, F. W. Westcott, R. Wilkinson, &c. After the loyal toasts, the chairman submitted the toast of "The Society and its Officers," and referred to the excellence of the exhibition held in his grounds in August. He also commented upon the beneficial results which emanated from such societies, and said it afforded him much pleasure to lend the use of his grounds for their show, and to preside over them that evening. Mr. Sanders, in reply, referred to the increase in the allotments and the excellent order in which they were kept. Mr. White and Mr. Pratt also responded, the latter remarking that the society was in a very prosperous condition, there being a balance in hand of over £30. The toast of "The Patrons and Visitors" was proposed by Mr. C. T. Green, and replied to by the vice-chairman and Mr. E. J. Hughesman. Miss Violet Gore, daughter of the chairman, next presented the prizes to the successful competitors at the annual exhibition, a list of whom appeared in these columns at the time. Mr. E. G. Bowman proposed "The Judges," and spoke of the arduous work they had to discharge and the general satisfaction which their awards had always given. Mr. Fox suitably returned thanks. The remaining toasts were those of the "Chairman and Vice-chairman" and "The Auditors." The musical portion of the programme was well sustained.

Are they late or early?—Primroses were gathered at The Lindens, Yatton, during the last week in September.

Two fine leaves of *Gunnera scabra* have been presented to the Brighton Museum by Mr. Alderton, head master of the Municipal School of Art. They have been placed in the wild flower department.

NOTES FROM DUNOON.

ON p. 102 of THE GARDENING WORLD, C. B. G., Acton, W., has some interesting remarks under the heading "Notes from Dunoon;" but I am afraid that some of his statements will be read with considerable surprise in many parts of Scotland. It would appear from his pen that amateurs were almost an unknown quantity there. In speaking of Dunoon he states that "Professional gardeners hold their own, but amateurs are not in evidence." This I will not dispute, but further on he takes a wider scope and states that "We Saxons have been brought up to believe that canny Scots are great gardeners. This may be true professionally but not otherwise, else we should see the amateur in greater force."

As to canny Scots being great gardeners one could not expect a Saxon to freely admit, "but facts are chieft that winna ding and Jarna be disputed," and the canny Scot still fights his way when others fail. I am afraid that C. B. G. could not have traversed much ground on the shores of the Firth of Clyde, where he mentions having seen several pretty combinations of nature and art, otherwise he could not but have noticed the amateurs in great force and been struck with the skill shown as cultivators by many of them. Indeed, Ayrshire is a stronghold of amateur gardeners, and I doubt very much whether C. B. G., has ever seen productions from any amateurs that could excel their specialities. In Scotland, generally, the amateur is permitted to exhibit in the gardeners' classes, but not *vice versa*, at exhibitions; and, indeed, in most of the florists' flower classes the amateur is the most successful. Who then shall say that the amateur is not in force there, when they at least hold their own with the professional, and in some respects are their masters as cultivators. I am afraid C. B. G. will have to become better acquainted with the status of the amateur generally in Scotland before his statements are taken seriously. I am sure that all "Lovers of Burns" who have read C. B. G.'s interesting article will tender him their thanks for the discovery that "'Highland Mary' was born at Dunoon," as he states "they will be gratified to hear it."—*James Gibson, Devonhurst, Chiswick.*

LEAVES FROM MY NOTEBOOK.

PENTSTEMONS.

THESE ever popular flowers, when given some attention in the matter of good rich soil and plenty of water at the roots when forming their flower spikes, can be depended upon to brighten the beds and borders for many weeks during the end of summer and all through autumn. A great improvement has taken place in recent years both in the size and colours of the flowers. Varieties such as Alfred Rambaud and President Carnot, are not much behind a good *Gloxinia* in size and form; and whether grown in beds or in the mixed border they look equally well.

The following varieties are specially fine either for competitions or for garden decoration:—Alfred Rambaud, purplish crimson with pure white throat, very large; Donald McBean, purple-crimson, with maculated throat; Emile Deschanel, clear carmine throat, pencilled with blood red, very striking; General Thomas, rosy-cerise, with large open throat; Hugh G. Oliver, purplish violet, large and distinct; and Jean Mace, brilliant scarlet, with white throat. This latter is a telling variety for massing.

James Robertson is white, tinted rose at the edges; Jean Lorrain is rosy violet, and large with close set spikes; John Fraser is rosy scarlet, with tall spikes, and very handsome; J. M. Troup, dark purple, produces close set, sturdy spikes; Lamennais is carmine-scarlet; Leonidas is rich rose, being a grand variety; Lord Ravensworth is rosy-purple and scarlet, with white throat, and a splendid spike; Loredan Larchey is rich rose and very large; President Carnot is

crimson, with a large, open, pure white throat, and is a startling variety; Scapin is clear violet, with grand open flowers, on well built spikes. That named Park Royal, is rosy-violet with pure white throat, and very large; Paul Verlain is a fine shade of rosy scarlet, producing grand spike; J. W. Moorman is rosy-purple with maculated throat, and handsome. Many more might be added, equally good, but the above will be found to be up-to-date in all respects, either for decorative purposes or for the competition table.—*Coila.*

CROTONS AT BATTENHALL MOUNT.

PASSING through the stove houses of Battenhall Mount, Worcester, the residence of the Hon. A. P. Allsopp, the other day, I saw the prettiest pair of Crotons in small pots I ever beheld. The variety was the beautiful *C. Warrenii*, the plants were in 32 sized pots, and were about 3 ft. in height as nearly as I can recollect, furnished with leaves clean, and beautifully coloured nearly to the top of the pots, each plant a picture indeed, and a marvel of cultural skill. Good examples of many other well-known varieties were included in the same house—a span-roofed building—representing such varieties as Princess of Wales, Mrs. Dorman, Mrs. Swan, Laingii, elegantissimus, and many others, all testifying by their highly-coloured foliage and clean well furnished appearance to the skill and attention bestowed by Mr. Fox. In striking contrast to this system of growing Crotons and other table plants, where each plant is allowed to develop properly and display its individual character and beauty (and it is only such plants as these that are fit to use where high class decorations are required in dwelling rooms, &c.), was another house of Crotons I noted in the same neighbourhood. Here were plants in pots ranging in size from 6's to 60's, crammed as thickly as they could stand, enough to fill a house twice the size.

Plants grown under such conditions are not nearly so serviceable, nor do they last in condition so long as those grown under more favourable conditions, having plenty of light and air.—*A. P.*

PLANTS RECENTLY CERTIFICATED.

THE undermentioned Chrysanthemums received First-class Certificates at the hands of the Floral Committee of the National Chrysanthemum Society at a meeting held at the Royal Aquarium on October 25th.

LADY HANHAM.—This is a sport from Charles Davis, and may be said to be mid-way between the latter variety and Vivand Morel. The florets are long, rather narrow, and drooping, whilst the bloom is of huge size, and constitutes a grand show variety. The colour is flesh pink with a bronzy-yellow centre. Messrs. H. Cannell & Sons, Swanley.

PRIDE OF THE MARKET.—This was certificated as a market variety, for which purpose it is well fitted. The flowers are of larger size than we expect in blooms of this class, and are possessed of exceptionally stout and strong footstalks. The colour is a rich bronzy-orange, very showy and attractive. It belongs to the Japanese section. Mr. Norman Davis, The Vineries, Framfield, Sussex.

MRS PROBYN.—Here we have a bold incurved Japanese bloom of great beauty and merit. The individual florets are strong, of great substance, deeply keeled, and have thorned and divided apices. The colour is a deep mauve, with a good deal of pink in it. Mr. Norman Davis.

MADAME PHILIPPE RIVOIRE.—The ranks of the white Japanese flowers are already well filled, but this is the latest addition to them. The blooms are of great depth and size, and they would look well in the back row. The white is not at all a dull or dead one, but is bright and glistening. Mr. W. J. Godfrey, Exmouth, Devon.

ELLA CURTIS.—This is one of the largest flowers that have yet appeared. The individual florets are of great length, width, and substance. The outer ones droop considerably, and all of them are twisted to some extent. The colour is a rich golden-yellow. Mr. W. J. Godfrey.

LADY RIDGEWAY.—The incurved Japs already constitute a very strong section, and in Lady Ridge-

way we have yet another addition to them. The florets are broad, of great substance, and have acute and entire apices. The colour is light rosy-pink with a silvery reverse. As the reverse is chiefly shown, the whole bloom exhibits a silvery-rose hue that is at once delicate and attractive.

CHRYSANTHEMUM NOTES.

ROYAL EXOTIC NURSERY, CHELSEA.

WHEN visiting the Chelsea collection of Chrysanthemums last October, we noticed a considerable number of first-rate blooms, but comparing it with last year the show is very much finer now than it was then. The season, for one thing, has been rather more favourable. True it is that September was a rather wet and cold month, but October has made abundant amends, for the three weeks of fine weather that it has brought us have been of inestimable value to the 'Mums. Congratulations to Messrs. James Veitch & Sons, Ltd., and to their enthusiastic and capable grower, Mr. Weeks, are therefore in order.

The malign and devastating influences of a London fog upon plant life generally are well known to some of our readers, to some of them by sad experience, and no plants are more susceptible to injury by reason of these visitations than Chrysanthemums, for the flowers invariably commence to damp, and the greatest watchfulness is needed to limit the spread of the damage.

This will give some idea of the difficulties which have to be surmounted by the Chelsea firm before a display such as that now on view can be obtained. We must get our blooms in October or not at all, said Mr. Weeks, in answer to a query, and that the first part of the statement had been fulfilled, even a casual look round would have assured us.

Special attention seems to have been paid to bush plants in eight, ten, and twelve inch pots, some of the results obtained being remarkably good. About three hundred plants are grown in this way, out of the total of a thousand. Throughout they are well-grown and shapely specimens carrying an abundance of medium-sized flowers. As decorative objects for the conservatory or the dwelling room, or even to supply cut flowers in quantity these bush plants are eminently serviceable.

Passing in by the Fulham Road entrance the visitor finds a row of profusely-flowered bush plants of varying heights extended in a long row on either side of the pathway running through the large conservatory. The stately and somewhat sombre presences of the huge Camellias which the house accommodates only serve to throw into more effective relief the bright colours of the Chrysanthemums.

Of the numerous varieties which have been grown in bush fashion none is a more conspicuous success than M. William Holmes, when disbudded to a moderate extent. A dozen or twenty medium-sized flowers on a plant are a grand sight, inasmuch as the rich shades of crimson and gold are as well developed as in the large blooms. Florence Percy as a white is one of the best, whilst Lady Selborne is too well known to need further praising. The reflexed Dr. Sharp, with its charming crimson-magenta hue is a great success.

Another large house is filled with the remainder of the bush plants, and here we were delighted with the grand specimens of such varieties as John Shrimpton, Vicar of Exmouth, Soeur Melaine, Charles Davis, Vivian Morel, and Avalanche.

The large blooms are all massed in a third house, where a raised temporary pathway has been built to enable visitors to see more easily the full beauty of the plants, and also to enable the latter to be brought near to the glass in order to obtain as much of the waning autumn light as is available. Here, too, the health and vigour of the plants is well demonstrated by vigorous foliage and stout, well-matured wood.

The Japanese varieties are represented in the greatest numbers, as may be expected when we consider their usefulness and popularity. Among the novelties, Liscarde Gentils, the yellow Louis Bochmer, closely resembling the latter variety in build of bloom, but with rather narrower florets, and bright golden yellow hue, is one of the finest of the season. Mrs. S. C. Probin is another fine flower. The florets are long and twisting, the colour being clear pink on the upper surface, and the reverse silvery.

There is a certain resemblance to Louise about the contour of the flower, but the florets do not incurve quite so strongly. John Neville is another variety that can scarcely fail to become popular. The colour is rich crimson-carmine with old gold reverse, and with long twisted and drooping florets; the habit, too, is dwarf and sturdy. The yellow Madame Carnot, G. J. Warren, was showing well when we saw it, but required another week or so to really see what it was like. Emily Silsbury, with its grand white blooms, has been fully open for a fortnight, and yet the flowers are still fresh, Louise, Souvenir d'une Petite Amie, Vivian Morel, Charles Davis, William Seward, Amiral Avellan, La Moucherotte, Sunflower, and Phoebus have all done splendidly, but this is only what we expect from these varieties. Huge blooms of the ivory-white Lady Byron were most conspicuous, and the same may be said of the distinct, rich amaranth-hued flowers of Pride of Madford. Pride of Exmouth, white, shaded with pink, will also have to be reckoned with on the exhibition boards this season.

Incurved blooms were not so much in evidence, not because they are not well represented in the Messrs. Veitch's collection, but because many of them are later than the Japs. Among these we may mention the Queens, of which there should be some capital samples in a few more days. The same might be said of Prince of Wales, still a good variety. Baron Hirsch is earlier, and was in capital form. Harold Wells, the yellow sport from Sir Trevor Lawrence is of good form and large size. Barbara, Madame Darrier, John Lambert, and Mrs. J. Kearns are all well-known varieties that need no further description.

Reflexed varieties have not made nearly so much progress of late years as their sister sections, but we were reminded of their merits by some capital flowers of the Christines, Dorothy Gibson, and King of Crimsons.

The Japanese Anemones are perhaps inclined to be overlooked amongst the more insistent glories of Japs and incurves, but there are some wondrously pretty things amongst them. Mrs. Hugh Gardener is a novelty of considerable merit. The ray florets are deep rose-crimson, the disc is high, and the florets prettily tipped with gold. It should make a good exhibition flower. Descartes is a handsome variety of longer standing. The ray florets are long, and crimson-red, the disc is high and full, and the habit of the plant dwarf.

ST. JOHN'S NURSERIES, PUTNEY.

MR. GEORGE STEVENS' busy establishment at Putney has long afforded a home to the Chrysanthemum, and each season a visit to the nurseries is well repaid by the sight of numbers of well-grown and flowered plants. Mr. Stevens grows largely, and, and we may say chiefly to supply his numerous customers with cut flowers; but his collection has a much wider scope than one purely destined for the cut flower market, since all the best novelties, together with all old varieties that have stood the test of time and cultivation, are included within it.

A fine, roomy, double span-roofed house, with one end facing the road at the side of the dwelling house, has been built by Mr. Stevens during the last summer. This house measures 111 ft. in length by 32 ft. in width, the greatest height being about 14 ft. It is well and strongly glazed with large panes of glass, and altogether forms an ideal house for flowering Chrysanthemums in during the dull and too often foggy months of October and November.

Some 6,000 plants in all are grown, of which about 3,000 are disbudded to yield three or four large flowers.

Phoebus holds a high position in Mr. Stevens' regard as a good market yellow. He describes it as being far and away better than W. H. Lincoln or even Edith Tabor, and illustrates his opinion to the visitor by showing the three varieties grown side by side. Edwin Molyneux has done wonderfully well at Putney this year, and we saw a good batch of plants, each carrying three first-class blooms. M. Chénon de Léché has also won golden opinions. It would be impossible to see this variety and not to like it. Colonel Chase is in excellent form. The flowers are large, rosy-blush in hue, and with long drooping florets. John Shrimpton, with its prettily reflexed crimson-scarlet flowers, is the best of its kind, and the richness of colour is not its least charm. Madame Carnot is one of the finest whites,

and unapproached by anything else in its particular line. Middle. Thérèse Rey is another grand white, but totally distinct from Madame Carnot in build. The two may thus be grown side by side in any collection without fear of the one being mistaken for the other. Wm. Seward is without doubt the finest of the deep crimson flowers. William Tricker is a useful rosy-pink variety, whose chief merit is its earliness. In build of bloom it is not characterised by too much elegance.

We also noted excellent samples of Vivian Morel, Sunflower, Souvenir d'une Petite Amie, Thos. Wilkins, Madame Marius Ricoud, and Louise.

Of incurved varieties there were not so many, but still there were some good samples. Mrs. Geo. Rundle and Mrs. G. Glenny, although not able to compete with later varieties for size, possess a charming contour of build. Baron Hirsch has done very well with Mr. Stevens, and was represented by some large and handsome samples. There were also good blooms of C. H. Curtis and Globe d'Or.

Large quantities of decorative varieties in the form of bush plants are grown at St. John's Nurseries. Lady Selborne does exceptionally well when grown thus. The yellow Lady Selborne is a golden-yellow sport that is exactly like the parent plant in everything but colour, and the later period at which it expands its flowers. It may be regarded as an October variety. A large batch of the bronzy-yellow Rycroft Glory was an ample demonstration of the value of this variety for supplying quantities of cut flower. The bronzy-yellow flowers are in great favour with the public, and find a ready sale. The reflexed creamy-yellow flowers of Elsie are both distinct and handsome, but unless stopping is well looked after the plants are apt to assume a tall and some ungainly appearance. It is, however, very useful for cutting. The old Elaine is hardly ever grown as a show flower now, but an extensive batch of plants of it in floriferous condition reminded us that as a decorative variety it is by no means superseded. Noces d'Or is likewise a great success in the guise of a bush plant, and should be more frequently grown in this way.

TRIALS AT CHISWICK.

THE Floral Committee of the Royal Horticultural Society met at Chiswick on Friday the 22nd inst., and made awards of XXX to each of the undermentioned zonal Pelargoniums and early flowering Chrysanthemums, with the exception of Chrysanthemum Madame F. de Cariel, which was accorded an Award of Merit. The Pelargoniums were grown in pots; the Chrysanthemums were planted in the open border.

ZONAL PELARGONIUMS.

ISEULT.—This dwarf-habited variety has leaves of moderate size, with a dark zone. The individual flowers are of great size, circular, very freely produced, and of an orange-scarlet hue overlying salmon-pink. Messrs. J. R. Pearson & Sons, Chilwell, Notts.

ZENOBIA.—Flowers large, circular, and of a dark, glowing scarlet. The habit of the plant is dwarf, and the leaves are marked with a faint zone. It is a bold and striking variety. Messrs. J. R. Pearson and Sons.

MISS JOLIFFE.—Amongst the pale varieties this is certainly very handsome and attractive, the huge, circular flowers being of a pleasing soft pink, but paler or almost white on the base of the two upper petals. The zone on the leaf is dark at first but gets pale as the leaves get old. Mr. W. Brooks, Weston-super-Mare.

LE COMTE DE LISLE.—The plants of this showy and floriferous variety were much taller than the rest, being evidently older. The flowers are of good form, moderate in size, and scarlet with a pink eye or centre. M. Lemoine, Nancy, France.

LILACINA.—The leaves in this case are wholly green. The huge, circular flowers are of a charming, rich, lilac-pink, with two white blotches at the base of the upper petals. Captain Holford, Westonbirt, Gloucestershire.

LE RHONE.—Leaves quite zoneless. Flowers carmine-purple or pink and purple, with a scarlet edge and two white blotches at the base of the upper petals. It is a handsome and distinct variety. Messrs. H. Cannell & Sons, Swanley, Kent.

LILIAN.—Flowers very large, orbicular, delicate pink, but intensifying somewhat at the margins. There is a long succession of flowers in the truss. Messrs. H. Cannell & Sons.

NIAGARA.—There are numerous white varieties at Chiswick, but this is the purest white variety amongst them, with large flowers. The plant is dwarf, with light green, zoneless leaves. Messrs. H. Cannell & Sons.

EARLY FLOWERING CHRYSANTHEMUMS.

MME. F. DE CARIEL.—In this we have a Japanese variety with flowers of moderate size, of a uniform orange, and old gold on the reverse. The plant grows 2 ft. high, and commenced flowering during the second week of October. It is particularly handsome either for open air, or pot culture, and flowers most profusely. An Award of Merit was accorded it by a unanimous vote. Messrs. Dobbie & Co., Rothesay; and Messrs. Barr & Sons, King Street, Covent Garden.

MDLLE. SABATIER.—The moderate sized flowers of this Japanese variety are of a rich glowing crimson, or maroon-crimson. It grows about 3 ft. high, and is well furnished with dark green foliage. Mr. H. J. Jones, Ryecroft Nursery, Lewisham.

MME. GAJAC.—The plants in this case grow about 2 ft. high and produce a profusion of flowers of a rose-pink, fading almost to white in the centre. Mr. H. J. Jones.

RYECROFT GLORY.—This well-known and popular variety grows about 2½ ft. high when consigned to the open ground. The flowers are golden-yellow, the later ones being more or less heavily tinted with bronze. It flowers profusely, and is very useful for a variety of purposes. Messrs. Dobbie & Co.; Messrs. Barr & Sons, King Street, Covent Garden; and Mr. W. H. Divers, Belvoir Castle.

THE PLANT HOUSES.

The Stove.

IN the warm stove the temperature through the night should range from 63° to 65° Fahr., and this will be maintained until the end of the month, after which it will be suffered to drop gradually until it reaches 60°, which is a good minimum winter temperature for the warmest house. The bright and favourable October has been of great service to plants under glass, and the tissues of the plants all round are harder and in a more favourable condition for wintering than they were at the end of September.

ALOCASIAS AND ANTHURIUMS.—The autumn and winter months is usually a very trying experience for these and Aroids generally. They often are given too much water, and this, combined with the low temperatures, generally means destruction to the thick fleshy roots. Some of the more delicate kinds it will be advisable to shift to a warm close pit where the temperature of the house can be regulated to suit their special requirements. Those that remain should be given a light corner of the house, and should be kept rather on the dry side, enough water only being given to keep the roots from shrivelling.

DIPLADENIAS.—Cuttings of the young shoots inserted singly in small pots in a mixture of fibrous peat and sand about the end of August, and placed in the propagating frame with a brisk heat, have now rooted sufficiently to warrant potting off. They should therefore be shifted at once into 60-size pots, using as before only peat and sand as a compost. Pot the plants moderately firm, and stand them on a shelf near the glass if a place cannot be found for them in the propagating pit. They should be encouraged in every possible way to make growth before winter sets in, and kept growing on all the winter. By the middle of November the large stove will not be hot enough for them and they should be removed to a close pit.

The old plants should be given all the light possible to enable them to thoroughly ripen up their growth, for it is usual to give them a rest annually, and this rest can be most naturally taken in the winter. Keep them moderately dry. This is easily done in the case of pot plants trained to balloons or rafters, but is so easy when the plants are growing in a border along with other subjects. Pruning may be conducted as soon as the wood is matured. A large proportion of the growths of the current year, which have produced this season's flowers, may be

cut out, leaving only enough to cover the balloons or trellises with young growths next year.

ALLAMANDAS.—These, too, should have their water supply curtailed, for it is time that the wood was showing signs of approaching maturation. Pruning may follow, as in the case of the Dipladenias.

THE INTERMEDIATE HOUSE may be given a night temperature of 60° Fahr. with a proportionate rise by day for the next fortnight. Here the fibrous rooted Begonias are best accommodated. This useful class of plants is worthy of every attention, although those who happen to be in the neighbourhood of large towns or cities have cause to lament the destructive influence of fogs upon their tender leaves.

BEGONIA GLOIRE DE LORRAINE.—There is no more useful form of its stamp than this, and it is well worth growing in quantity. Being of neat habit, the plants look wonderfully happy if suspended from the roof above the pathway just out of the reach of the head of an ordinary man. They may also be hung lower down over the stage, where they will effect a finish to the plants below. Stout iron hooks with a stem of about 10 in. in length and a loop at the end standing at right angles to the stem are easily made and form capital suspenders.

SELECTED STRIPED FRENCH MARIGOLDS.

THE frosty nights which recently occurred in the south must have been very partial, or unequal in their severity, for in some districts in the Thames valley Dahlias, Heliotropes, Tropaeolums, and everything of that tender character were blackened and completely cut down, while in other places not far distant and also on the banks of the Thames the Dahlias are flowering as brightly as if it was mid-summer.

In like manner there seems to have been but little frost at Orpington in Kent, judging from a boxful of Selected Striped French Marigolds, gathered from an open field of 15,000 plants last week, and sent us by Messrs. Dobbie & Co. The blooms were as fresh as they might have been in August or September, while the quality was first-class. Striped French Marigolds are of many years standing, but so inconstant were the colours in the early days of the strain that many years elapsed before the colours could be fixed. The strain sent us must represent many years of careful selection otherwise the blooms could not have attained their present excellence. Every floret had broad maroon-crimson margins, with a golden stripe down the centre. The outer florets were notable for the great breadth of their wedge-shaped outline. The blooms were simply superb, for we have never seen better of this type. These Marigolds stand hot weather and drought well, and might be more extensively utilised for garden and park decoration than they are. They are much favoured on the Continent, being very much employed in the parks at Paris, where soil and climate alike are dry.

Accompanying the above was a quantity of single flowers, equally as well striped as the double ones, but having only a single row of ray florets. They were certainly pretty in their way, but gardeners would, we feel sure, like them much better if the florets of the ray were more extensively imbricated so as to form a more compact and firm outline like a Cineraria. Some of them were good, however, even in this respect.

Gleanings from the World of Science.

THE undermentioned subjects were brought up at the meeting of the Scientific Committee of the Royal Horticultural Society on the 12th inst.

Acorn Cups Malformed.—Mr. French of Felstead sent specimens of this not uncommon phenomenon. It appears to be due to an arrest of the flower, probably by some insect attack, when the scales of the cup become enlarged and free.

Melons with New Disease.—Specimens were received from Mr. J. Fraser Smith, of the Gardens, Cullen House, N.B., who writes as follows:—The disease attacked my crop last year, and has again

this, in both a sudden and deadly manner. An entire crop of twenty plants has perished in a few days. The disease first shows a spot on the leaf, then a part of the stem gets effected, and in two or three days the whole plant collapses. It is only at a certain time of the year, for the first crop in both years, which was grown in the same house, finished without any signs of it—i.e., about the early part of August; while the second crop, about half-grown on the opposite side of the path, has all gone, as also a later batch planted on the same side as the first ones. Out of thirteen plants ten went off in one day. Two young Cucumber plants have also died in the same way, after they were 4 ft. high." The following report has been received from Kew:—"The Melon disease is caused by *Scolecotrichum melophthorum*, *Prill.*, a parasitic fungus. The disease is common in France, but I am not aware of its having previously been observed in Britain. Burn all diseased plants, as if they be allowed to rot on the ground a recurrence of the disease would be almost certain next season. Under any circumstances it would be advisable not to use the same ground for Melon-growing for at least two years, as the fungus spores are probably abundant in the soil."

Parrot Tulips Seeding.—Mr. Wilks brought ripe pods and seeds of this variety, which he had crossed with the pollen from other kinds of Tulips growing in his garden. It had been stated by growers that the Parrot Tulip had not been known to bear seed at all, and Mr. Henslow observed that of some bulbs received from Mr. Barr, in every case the pistil was abortive. It is proposed to raise plants from the seed thus obtained.

Abies Bracteata Cones.—Fine specimens were received from Mr. A. Harding, The Gardens, Orton Longueville, Peterboro'. It is believed to be the first occasion of its fruiting in this country. They were borne by one of the finest specimens of this species in England. The tree is a native of South California, growing at one place only, in Santa Lucia, and is in danger of becoming extinct. The cones are remarkable for their long linear bracts.

Cedrela Toona? Fasciated.—A remarkable specimen, consisting of a spirally-coiled, flattened branch, two of the coils being welded together, was exhibited by Dr. Masters. The tree is a native of Santa Barbara of South California.

Abies balsamea Tuber.—A specimen was received from Mr. Noble of a young plant which had developed a globular tuber-like excrescence below the soil. Similar cases had occurred some years ago in the same grounds, but the cause is not traceable at the present state of growth, though it might possibly be due to some injury by insects at a very early stage.

Juniper Berries Gymnospermous.—Dr. Masters exhibited some berries of the common Juniper, received from Dr. Schröter of Zurich, remarkable for the three coherent bracts not having become fleshy enough to close in upon the seeds, so that the latter remained visible, free, and strictly "gymnospermous," as in the previous condition of the ovules.

Trapa natans, Fruit.—He also showed specimens of the Water Chestnut from a particular Italian lake having four knobs upon them, which do not occur on the ordinary form of this fruit.

Spruce Fir cone var.—He also showed cones having smooth-rounded scales, instead of the usual form. Dr. Schröter, who obtained it from Switzerland, referred it to *Abies medioxyma*; but Dr. Masters observed that the species is a dwarf Alpine or Arctic species, and regarded the specimen as a variety only of the Spruce.

Anthurium Spatha monstrous.—Col. Beddome sent a specimen having three spathes and the spadix commencing to branch, exhibiting a semi-proliferous condition.

Plants Exhibited.—M. Lemoine sent a spray of *Tamarix kashgarica*, interesting as being a late-flowering species, from Central Asia; *Panax sessiliflorum*, with large, dense bunches of black berries, probably from Japan; the *Begonia, odorata*, having a delicate but very evanescent odour of lemon, and double and semi-double sports of *B. semperflorens*.

Galls on Roots of Oak.—Mr. Wilks brought remarkable galls, forming a large mass on the roots of Oak or Chestnut. They are also found on the roots of the Deodar. The galls are polygonal and wedge-like, so forming together a globular cluster about the root. They are produced by *Cynips aptera* (see *Gardeners' Chronicle*, 1841, p. 732, and 1874).

HINTS FOR AMATEURS.

The Flower Garden.—Day by day the hardy flower garden is putting on a more and more dreary look, and before long the herbaceous borders will have clothed themselves in the cemetery-like garb which characterises them for a great part of the winter, when the labels which here and there mark the resting place of our friends which have, for a season, departed from us, alone tell of latent life, and future prosperity. Still, there are a few things that do not lightly take their dismissal from the ice king's hand, but brave the elements, unless more than usually unkindly until the leaves of the sturdy Oak have rustled from the branches and are bestrewn the ground beneath us with a carpet, or dancing in mournful rhythm to the dreary cadences of the autumn wind. Amongst these the later forms of the Michaelmas Daisies find an honoured place.

Up to the time of writing, October has been an exceptionally favourable month. We have had one or two frosts, it is true, but these have been rather unequally distributed, for while in some places the tender plants have all been cut down, in others they have not been damaged at all.

Aster diffusus horizontalis.—Of all the numerous forms of the perennial Asters there is none that is more distinct in habit and general appearance than this. According to time of blooming it comes into the latest section, viz., those commencing to bloom in October, and lasting till the severe frosts and bad weather, generally of late autumn, put a full stop to them. The plant is from 2½ ft. to 3 ft. in height, and produces a thick branching bush, in which the side branches leave the main stems at nearly right angles. The flowers are small but very freely produced, and thus the effect they produce in the mass by contrast with the rich green foliage is very striking. The outer or ray florets are rather short and bluish white in colour. The inner or disc florets are numerous, and occupy a relatively large portion of the flower head. They are rosy-pink in hue, and thus the flowers when viewed in the mass appear to be wholly of this colour. *A. diffusus horizontalis* is, taking it all round, a first-rate thing; although the sprays do not present quite such a graceful presence when cut as many other forms, as they are somewhat stiff when taken individually; still, from its very distinctness of habit the plant recommends itself to all those who have collections, whether small or large of Michaelmas Daisies.

A. Novi-Belgii E. G. Lowe.—The *Novi-Belgii* section is the largest, and probably the most comprehensive of any of the sections into which perennial Asters are grouped. Some of the forms are early flowerers, others come into bloom in mid-season, whilst there are still some that fall into the latest section. Of the last named *E. G. Lowe* is one of the finest. The height is 4 ft., and the flowers are large, and exhibit a delicate light blue shade.

A. turbinellus.—It is only in the southern counties that this fine species has a chance commensurate with its merits. It comes into bloom late in the season, and its beauty is often cut short by frost ere it has well developed. This year it seems to have made the most of its opportunities, and the kindly October, and is in capital condition. The flowers are large, and bright violet-blue in colour with a suspicion of rose near the tips of the ray florets. The height is from 3 ft. to 3½ ft., and the habit is spreading and graceful. The upper part of the stems are somewhat sparsely clothed with small and narrow leaves, and thus the large flowers really need to be placed in proximity to plants of heavier habit and thicker growth to display them properly.

As a pot plant for the conservatory it might be turned to capital account. It would help to add a spice of variety to the aspect of the house in the latter part of October and the beginning of November, when the *Chrysanthemums* monopolise the whole of the attention.

A. versicolor.—From this species have been evolved in the course of cultivation several very handsome and useful varieties, all of which commence to bloom towards the end of September in ordinary seasons. *A. versicolor nanus* is a veritable dwarf; being only about 18 in. in height. The flowers on first opening are white, but change gradually as they get older to rose or rose-purple.

They are rather moderate in size, but the freedom with which they are produced more than compensate for this. On a good plant the flowers may be seen in all colours between the two extremes named above, and this is certainly no small part of the charm attaching to the species. *A. v. Themis* is a foot taller than *A. v. nanus*, and the flowers are a little larger, but not conspicuously so. *A. v. Antigone* is taller still, since it reaches a height of fully 3½ ft. The peculiar mutations of colour are common to them all; the general habit is the same, and the size of the flowers alters comparatively little, although we naturally expect to see the largest flowers on the most vigorous plants.

A. Noviae-Angliae ruber.—This is a great favourite amongst the ladies who seldom fail to admire the rich crimson-purple flowers. The plant is of robust habit and a most vigorous grower, reaching a height of well over 5 ft. It is thus a suitable subject for the back row in the herbaceous border. The peculiar disposition of the flowers in terminal clusters to be observed in *A. Noviae-Angliae* is also conspicuous in this variety. When given a fair amount of light, and not surrounded too closely by other subjects, the stems carry their leaves well to their bases. The foliage is a dark green and this, combined with the richness of hue exhibited by the flowers, imparts a warm and cheering effect to the autumn garden.

A. Coombe Fishacre.—This is a seedling raised from *A. diffusus horizontalis* by Mr. Archer Hind, and is a most valuable acquisition to the later flowering section of Michaelmas Daisies. The plants run to some 3 ft. in height, and have a very graceful symmetrical habit. The flowers are of medium size, and exhibit a charming shade of flesh pink.

All the forms mentioned above have, in addition to many others, been very fine with Messrs. Barr & Sons, at the Long Ditton Nurseries,

Flower Beds.—It will be necessary to see about the task of clearing the flower beds of their summer occupants or rather of their remains, since it is not wise to let the autumn advance too far before the beds are cleaned up and filled again for the winter and spring months. All plants that were of any value which it was desired to keep, will have been lifted and consigned to safer quarters before the frost cut them down. The rest may be dug up at once and consigned to the rubbish heap. After this, the beds should be dug over. If they are not to be filled again until summer, the soil should be left fairly rough on the surface, for the frosts of winter to pulverise and sweeten. On the other hand, if they are to be filled with spring-flowering subjects, such as bulbs of various kinds, the soil must be broken up smoothly at once, in readiness for planting. In any case a dry day should be chosen for the digging.

Echeveria secunda glauca.—This pretty and useful little edging plant is gifted with a strong constitution and will stand a good deal of cold if the soil is fairly dry at the same time; hence, they are generally left out until the last moment. In mild winters the plants do very well if planted under the shadow of a wall—or better still, a corner where two walls meet—and covered during frosty weather with dry straw or bracken. We can never tell, however, what the winter is to be; and hence it is advisable to be on the safe side and transfer the plants straight away to a frame. During the summer they have made a considerable number of offsets. These should be pulled away from them with a few roots attached, and planted separately. The old plants may then be discarded, for the offsets will make neat and handy sized plants for next year. Make up a bed of sandy soil in a frame, and dibble these offsets in close together. Do not water them but keep them shielded from rain and snow all the winter. All the protection required besides the light may be furnished by throwing a spare mat over the frame during frosty spells.—*Rex*.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Feeding Goldfish.—*Kioto*: You will find instructions how to feed goldfish on p. 109 of the issue of THE GARDENING WORLD for October 16th.

Asparagus Beds.—*A. L.*: Go over the beds with a sharp knife, and cut off the stems close to the ground. Remove and burn them subsequently. The beds may be dressed with short half-rotted stable manure for the winter, or with a mixture of soot and sandy soil. If you lift the roots and force them they are of no further use, and may be thrown away after the produce has been gathered from them.

Broccoli.—I have a plantation of Broccoli in my garden in which the plants have grown to a great size, but a friend tells me that they are too strong, and that the frost will kill them. Is this true? and if so what can I do to prevent it.—*Means*.

You must try to check the overluxuriant growth in some way, for your friend is quite right in saying that the winter will be likely to prove fatal to plants in such a condition. Some growers advise lifting the plants and laying them down in a trench close together with their heads to the north. If this is too much trouble take a digging fork with long tines and loosen the plants grip of the ground by inserting the fork under them, and raising them up. The growth will be checked, and the tissues will become hardened and better able to put up with frost.

Keeping Onions.—*A. Munson*: Your best plan will be to "rope" the Onions, and hang them up against the wall in the shed you mention. The bulbs are not easily injured by frost, for they will stand a lot of cold if they are in a dry place. Should they become frozen, avoid handling them until they are thawed, or they will go rotten very quickly.

British Botany.—*Geo. T.*: You have been making a mistake, which many have made before you, viz., that of grinding away at the textbook, and neglecting to examine living specimens. Such a course is sure to result in failure. In future, after reading a description of a wild flower from the book, try and compare notes with a living plant. This, by the way, you will not have many opportunities of doing for the next few months.

Named Gaillardias.—*A. O. B.*: You will find the following varieties some of the best:—Magician, orange-scarlet, with orange-yellow margin; Minerva, scarlet, edged with yellow; Somerset, pure yellow, a large fine flower handsomely quilled; and William Kelway, bright scarlet, edged with golden-yellow. If you are going to fill a bed entirely with Gaillardias we should advise you to invest in a mixed collection, and not attempt to keep them separate, but just plant them in mixture. You will find this come rather cheaper.

Chrysanthemums not Flowering.—*Mum*: The reasons why your plants did not flower last year may be several. We think the late potting had a good deal to do with it. Then again the plants were undoubtedly late and weak. You do not say whether they formed buds or not. Very often the buds on plants which have badly ripened wood come hard, and only a few ragged florets appear instead of a good head. From the description you give of your plants you have evidently every right to expect flowers from them this season.

Too Early Chrysanthemums.—*Q.*: If you are afraid that the flowers will be too early you should shift the plants to a cool shed. This will retard them considerably. Flowers that are fully expanded will if cut with stalks of a fair length, and the leaves are all stripped from them last a long while if put in water and kept in a cool room. They must have plenty of light, however.

Orchids for Beginners.—*E. L.*: The articles on the best twelve Orchids for beginners appeared in the issues of THE GARDENING WORLD for April 24th, May 8th, May 22nd, June 19th, June 26th, July 10th, and July 24th of the current year. They were written by a practical man who has had a deal of experience in this charming class of plants, and you will find in them a lot of useful information.

Lapageria for the Orchid House.—*Odonto*: The *Lapagerias* will do well in the cool Orchid house, and the shade given will not be too much for the Orchids if care and judgment is employed. You may order the plants at once.

MUSA CAVENDISHII.

The accompanying illustration was prepared from a photograph sent us by Mr. H. W. Sharman, gardener to Mrs. Ernald Smith, The Oaks, Emsworth, Hants, about the beginning of the present month. The Bananas are grown in a span-roofed house, in a winter temperature of 60° to 65°, but during summer it is not allowed to drop below 70°. They get no bottom heat. The plants are growing in a bed of stiff loam, two feet deep, and get no artificial manure, the only feeding they receive being liquid cow manure occasionally.

The larger bunch is on a plant which came up as a sucker in November 1896. This bunch was ripe about the time the photograph was sent, and carried 152 perfect fruits of very equal size. One fruit weighed 7 ozs.; 12 fruits, 5½ lbs; and 24 fruits 10 lbs. The smaller bunch is on a stem which came up as a sucker in February 1897, and carries 137 perfect fruits. It will thus be seen that neither of the fruiting stems are yet 12 months old. At the base of each of them suckers are now being thrown up, and these will no doubt flower and fruit next year. Those who have seen the plants growing are of

shape ripening off to a brilliant red. The flesh is solid and crystallised—and the flavour—well, Tomato epicures will appreciate that too, and smack their lips with gusto. I have had fifty in pots on greenhouse shelves, and finer fruit I never grew nor saw, some turning the scale over the pound. Many friends who have seen the crop, exclaimed, "Oh! I say. There now; these are something like." With the result—"What yer call it, please? Fine for the exhibitor."—*B. Lockwood, Lindley, October 6th.*

BATTERSEA PARK.

"BATTERSEA Park for Beauty" is an association of ideas that may be often heard amongst those who are fond of comparing with each other the parks and open spaces of our great metropolis. Certain it is, however, that this park has many very fine features, and it enjoys a popularity that is not entirely the result of the fine cycling road which encloses so many of its broad acres, and upon which, every fine day, may be seen all sorts and conditions of men, women and children besporting themselves upon the ubiquitous wheel.

colour is forthcoming, furnished by a host of subjects too numerous to mention.

The large oblong bed immediately facing the Queen's Road Gate is filled with dwarf Roses which have been blooming freely all the summer. They are now rather shabby, but their decadence is covered by numerous plants of *Anemone japonica alba* which have been freely interspersed with the Roses. These are enclosed by a broad band of early flowering Chrysanthemums, and passing from thence to the edging we find bands of pink flowered zonal Pelargoniums, the charming *P. Flower of Spring*, Golden Feather, blue *Lobelia*, and *Ecbeveria secunda glauca*.

As we pass into the park, and skirt the margins of the lake (on which, by the way, during the summer months Battersea people go through various aquatic evolutions of greater or less danger with a view, evidently, of capsizing themselves and as many more as possible), we pass some well executed carpet beds. These naturally, have been afflicted with the jubilee craze that has fastened itself on everything British. The execution in this case is, however, capital, and the crown, V.R., and the dates

MUSA CAVENDISHII.

opinion that Bananas are at home at The Oaks, Emsworth, and many another gardener would doubtlessly agree that Bananas cannot be grown, fruited and matured in much shorter time. We congratulate Mr. Sbarman on his success.

TOMATO, CLIBRAN'S.

ANYONE bent on change or additions naturally scans the seed catalogues, which pay their periodical visits, containing elaborate descriptions by the dozen, and amounting to columns in area. Overhauling and comparison mentally takes place as to which will be best for a set purpose, some sorts being found wanting, whilst others just pass muster. With wisdom born of experience, one or a few old sorts are reinstated, then down goes the mark opposite for supply packets of the new sorts, and in the mass of surrounding professed new varieties, fortunate is he who can drop on the right one.

In the above Tomato we have a decided acquisition. The vines are short-jointed, strong, and vigorous in growth; the flowers set exceedingly well, fine trusses as a matter of course following. The individual fruits are large, smooth, and of handsome

In addition to the broad and well kept road referred to there are many quieter walks and promenades winding about in all directions, and on all sides we find evidence that much taste, and skill are employed in the filling of the various beds and borders which adorn the grounds. The various entrances are especially bright spots, and special efforts have evidently been made to render them attractive to the public. Thus the gate near to the Albert Bridge shows a 6 ft. herbaceous border flanking it on either side, and running round with a bold sweep for some distance each way. There, behind an edging of zonal Pelargonium Golden Harry Hieover, is a collection of herbaceous plants, amongst which perennial Asters and Sunflowers are very conspicuous. In the front ranks bold clumps of *Sedum spectabile* were very effective in the declining glory of the latter end of September. The Queen's Road entrance is the one, however, upon which the greatest pains have been displayed. There in the flanking borders long lines of *Cineraria maritima*, Golden Pyrethrum, yellow *Calceolarias*, and the dark crimson-purple foliage of ornamental Beet show up strongly, whilst in the borders that line the path leading sharply to the right after passing through the gate plenty of floral

1837 and 897, are very well done, *Alternantheras* in various colours being abundantly used.

Subtropical gardening is really the feature of the bedding in Battersea Park, and the number of subjects that are made use of is very great and covers a wide range of style and habit. Here and there, where occasion offers, or taste suggests it, Palms of various sizes are plunged in the grass. One corner, close to the subtropical garden proper, is devoted to a collection of such plants. A high bank, in shape like a narrow horse shoe is thickly covered with this class of plants, that include *Phoenix sylvestris*, *P. reclinata*, *Geonoma Seemani*, *Kentia australis*, *Musas*, *Cycas revoluta*, *Zamia horrida* and *Dracaena umbraculifera*. In the miniature valley enclosed by the bank are studded *Asplenium bulbiferum* in quantity, *Platycerium alcornice*, and *Aspidium falcatum*. Two pieces of *Monstera deliciosa* represent a plant that is very rarely seen outside a stove.

The two prettiest beds in the park, according to our fancy, are to be seen on the eastern side of the sub-tropical garden. They are oval in shape and of medium size. The style of hedding may be said to be half-way between carpet hedding proper, and the freer sub-tropical method. Dot plants are very

numerous, and than the effect produced by the prettily variegated *Chamaepeuce diacantha*, and the graceful *Acacia lophantha*, and *Fuchsias* standing out of a groundwork of *Alternantheras* and other dwarf plants, nothing finer could be imagined. Tuberous *Begonias*, both single and double, add their quota; and an edging of *Golden Feather*, and *Echeveria secunda glauca* completed the display. In a small circular bed between these two oval ones, a handsome little specimen, some 3 ft. high, of the Dragon tree (*Dracaena Draco*) has been flourishing all the summer.

A circular bed filled with Ivy-leaf *Pelargoniums* trained into balloon-shaped specimens, is distinct, but too stiff to be really effective. An attempt has been made to relieve this stiffness by interspersing plants of *Eucalyptus globulus*, and they certainly improve matters somewhat.

Fuchsias, as may be supposed, are freely employed all over the park, and they have done very well, although, of course, September is too advanced to expect to see them in unimpaired beauty. *Cassia corymbosa* has also had its merits recognised, for its bright flowers are peeping from many a bed and border. *Ficus elastica* is another success as an outdoor subject. The *Castor-oil* plants have a very stately presence, and the various shades of bronze-green and purple that their foliage exhibits gives them a distinct individuality amongst other foliage plants.

Abutilon Thompsoni with its golden and green leaves is worthy of the highest praise. A bed of it associated with *Heliotrope*, and edged with the bronzy-leaved *Fuchsia Meteor* pegged down flat upon the ground to form a carpet, has had many admirers.

Of the larger beds, of which there are many in the central area of the sub-tropical garden from which the public is excluded, one filled with *Erythrina crista-galli* is very imposing. The plants were carrying a few large racemes of the bright coral-red flowers at the time of our visit. *Nicotiana atropurpurea grandiflora* well deserves its place, for with its towering height and deep purple flowers it is very conspicuous in the mass. *Cannas* have only been moderately employed. A bold, oval-shaped bed has the centre filled with purple-leaved varieties. This mass of purple is enclosed by a ring of the showy white *Marguerites* and by an outer ring of *Gnaphalium lanatum*. The broad, white leaved *Sakia argentea* appears in several places and is most effective in each one of them.

A most interesting bed is one entirely filled with succulent plants. The arrangement consists of five raised mounds, the central one being the tallest, with their attendant hollows. Some finely coloured pieces of *Echeveria metallica* are very conspicuous here. *Portulaccas* are also freely employed, and we also noticed the pretty *Rochea falcata*.

Acalypha tricolor is utilised as an edging to several beds and borders, and throughout is very bright and has evidently done remarkably well. The *Aviary*, too, has not been forgotten, and the 3-ft. border surrounding it is filled with a great variety of plants in a tasteful way, whilst the structure itself is shaded in the summer and enlivened in the autumn by that popular London subject—the *Virginian Creeper*.

In his arrangements for the adornment of the park and the gratification of the public, Mr. Coppin, the able superintendent, has been exceedingly thorough, and everything reflects great credit upon him.

BOLTONIA LATISQUAMA.

In general appearance the *Boltonias*, of which there are some three or four species, approach closely to the perennial *Asters*, and they may indeed be easily confused with the members of the latter genus. *Boltonias* differ from *Asters*, however, in having the pappus of the ray and disc florets dissimilar, whereas in *Asters* the pappus is the same throughout. *Boltonia latisquama* is one of the very finest of our hardy autumn-flowering plants. In height it is from five to six feet, the habit being bold and spreading. The flowers are large (about an inch in diameter), pure white, and produced in large, loose, terminal panicles. Its noble presence is a great feature of the nurseries of Messrs. Barr & Son, at Long Ditton at the present time, for it peeps out from various nooks on the rockery and other parts of the grounds. It is a great favourite with Mr. J. W. Barr, who thinks highly of it and its usefulness. *B. latisquama* is a native of North America.

BEECHHILL NURSERY, EDINBURGH.

THOUGH the nursery of Mr. John Downie, Beechhill, Murrayfield, Midlothian, is only of moderate extent, every part of it both outside and under glass is filled to overflowing, while everything is kept in neat and trim order. The city office at 144, Princes Street, Edinburgh, is within easy reach and call of the nursery, along the great western road running between Edinburgh and Glasgow. We made a hurried inspection of the place during the second week of September, and found everything in the same excellent condition as when we made the inspection some nine years ago.

THE HOUSES.

The glass houses here are all relatively new and have consequently been built on the best modern principles for plant growing. The stove was the first house we entered. Some sixty or more varieties of *Croton* of a suitable size for table decoration are kept in stock. Other useful decorative stuff consisted of *Pandanus Veitchi*, *Acalypha musaica*, *A. macrophylla*, and other members of the genus; also *Ixoras* in clean and vigorous plants; *Sanchesia nobilis* with its yellow ribbed leaves; *Aralia Veitchi*, *A. V. gracillima*, and *A. leptophylla*, all very graceful and highly ornamental in their several ways. The silvery *Caladium argyrites* is still very popular. An uncommon plant is *Xylophylla latifolia*. *Dracaena Princess Louise*, with white-edged leaves and various others added their effect to the whole collection, of which the above may be taken as representatives of the class of plants that are cared for and kept in first-class order.

The propagating pit contains a collection of various stove subjects of a useful size, independently of those which are being propagated. Here are to be seen batches of *Cocos weddelliana* in various sizes. Ferns in variety find a place here together with the more useful and popular forms of *Maidenhair*. The narrow-leaved and graceful *Dracaenas* will be grown for many years in establishments where decorative work has to be carried out. *Anthurium crystallinum* is hardly ever absent from collections of stove foliage plants. The spiny-stalked *Licuala horrida* is highly ornamental though formidable in appearance. Infinitely graceful is that old favourite, *Reidia glaucescens*, with its drooping and curiously-fringed flowers.

The Palm stove contains its complement of the Palms which are almost essential to every establishment on account of their general utility. We refer to specimens of various sizes of *Kentia belmoreana*, *K. fosteriana*, *K. canterburyana*, and *Phoenix reclinata*. Of the two latter are some grand plants for furnishing work. *Cannas* in some of the finest of modern varieties have found their way here and are being utilised to the best advantage. *Aspidistras* stand a deal of bad usage when taken into dwelling-rooms. A fine stock of young *Crotons* occupies the shelves of this house.

A miscellaneous collection of greenhouse or conservatory subjects occupied an airy house, which looked well furnished notwithstanding the large assortment of plants at the autumn show of the Royal Caledonian Horticultural Society. Some of these noted at random were *Cordylines*, *Hydrangea paniculata grandiflora*, *Lilium auratum*, *Eucharis grandiflora* in pots, and the *Bridal Wreath* (*Francoa ramosa*) all flowering finely.

There were some handsome specimens of *Strobilanthes Dyeri*, 3½ ft. high, with richly coloured foliage. A good assortment of choice Ferns included various species of *Pteris*, *Maidenhair Ferns*, *Asplenium palmatum cristatum*, *Cyrtomium falcatum*, and others of like importance for decorative purposes.

Passing into the fernery we found batches of *Davallias*, *Microlepia hirta cristata*, *Adiantum tetraphyllum acuminatum*, *Pteris serrulata cristata*, and others grown in association with plants requiring a stove or intermediate temperature. *Caladiums* were numerous, and *Begonia La Lorraine* in the pink of perfection was most profusely flowered. The latter now takes leading rank amongst flowering plants, whether for summer or winter work. *Begonia Rex* in variety and many others are also kept in stock. *Acalyphas* also associate well with the above.

Tuberous *Begonias* are a prominent feature of Beechhill, being grown in quantity, both single and double, named and unnamed. Every colour is represented by good varieties, amongst the single sorts of which we noted handsome scarlet, rosy-scarlet, crimson, white, rose, magenta, and orange varieties

with shapely circular flowers. The same range of colours runs through the doubles. Very choice was the yellow *Miss Travers*, the petals of which were arranged round a single centre. Other grand varieties in the collection are *Prince of Wales*, scarlet; *Rose Laing*, rose, and of very pretty form; *Alfred Berber*, salmon-pink; *Paul Verlaine*, pure white; *Salmon King*, deep salmon, and of fine *Camellia* shape; *Madame Le Boucher*, large, bright pink, and very full; and *Gladiateur*, a dwarf bright scarlet variety. The flowers of *Major Hope* are of great size and rich pink. *Le Colosse*, as its name implies, is also of magnificent proportions, and differs from *Major Hope* chiefly in having darker flowers with more salmon in them. *Beauty of Belgrove* reminds one of the colour of *La France Rose*. A fine variety is *Madame Ernest Fourtell*, having creamy-white flowers. For size and purity it is beaten by Mrs. John Downie, the flowers of which are massive, chaste and beautiful. Near by we noted collections of early flowering *Chrysanthemums* and Chinese *Primulas*.

The next house entered was largely occupied with small Palms in variety, batches of *Araucaria excelsa*, 9 in. to 12 in. high, *Asparagus*, *Smilax*, *Lapageria rosea* and *L. r. alba*. Small Palms, Ferns, and a fine batch of *Cypripedium insigne* monopolise another house. The last named is grown for the sake of cut flowers. Between and amongst the houses, or close under the front walls of the same, are numerous frames accommodating a great variety of subjects. One or more were filled with tuberous *Begonias*. A large one gave shelter to a fine lot of *Araucaria excelsa*, *A. e. glauca*, *Cannas*, *Fuchsias* and *Bouvardias*, all of the best types. Show and zonal *Pelargoniums* each monopolised a frame, or rather a set of them. *Cinerarias* also require a length of these frames; Ivy-leaved *Pelargoniums* and *Gladioli* of the *branchleyensis* type, another; and show and alpine *Auriculas* require a similar extent of frame space.

THE OPEN NURSERY.

Where the ground is of any great width it is broken up into squares known as brakes. One or two of these squares were occupied with a fine collection of show, fancy and *Cactus Dahlias*, in full bloom at the time of our visit. *Dahlias* have been a speciality of the firm for many years. A brake is occupied with *Aucubas* in very fine condition, the foliage being clean and healthy, and the plants bushy. Similar spaces of ground are occupied by *Hollies*, in variety, *Azalea mollis*, *Cherry Laurels*, seedling *Hollies*, and the broad-leaved *Privet*. As we proceeded along the pathways we came upon breadths of *Larches* and *Hydrangea paniculata grandiflora*, doing splendidly and quite hardy.

A plantation of *Strawberries* included many of the best and most highly prized varieties, such as *Garibaldi*, *Veitch's Perfection*, *Lord Suffield*, *President*, *Six Joseph Paxton*, *Royal Sovereign*, *Vicomtesse Hericart de Thury*, and others. Some pomologists consider the first and last named as synonymous, but the Scotch growers always maintain that they are distinct.

Brakes, beds and colonies of various flowers meet the eye at intervals. *Lilium tigrinum* and *L. speciosum* had done well in the open ground. French and African *Marigolds*, *East Lothian Stocks*, *Antirrhinums* and *Pentstemons* have long been favourites here, receiving the best attention. *Gladioli* and the *Cape Hyacinth* (*Galtonia candicans*) are grown in quantity, and a fine effect they had when we saw them. *Roses* are extensively grown for cut flowers, the firm having a large business in decorative and furnishing work. Both Tea and hybrid *perpetuals* are grown, amongst which we noted Mrs. J. Laing, *General Jacqueminot*, *La France*, *Duke of Edinburgh*, *Catherine Mermet* and many others in their autumn stage of blooming.

Black, White and Red *Currants*, and *Gooseberries*, the latter in a great number of the best varieties, occupy brakes of ground of useful young stuff fit for planting. *Leeks* and *Beet* are grown for seed, the latter including *Downie's* and *Dell's Beet*.

Conifers are well represented by green, golden and variegated varieties of the most distinct and useful kinds. Amongst others we noted *Cupressus*, *Retinosporas*, *Thuyas*, *Golden Yews*, *Austrian Pines*, and *Juniperus macrocarpa*, in specimens of various size and age. Variegated, coloured, and other ornamental trees and shrubs occupy a considerable amount of space. Golden and Silver variegated *Hollies* in

various sizes are healthy and clean, the foliage glittering in the autumn sunshine. Golden Privet and Golden Elder are largely grown and very conspicuous shrubs, often used for planting in masses. Many species of Spiraea are grown; also many varieties of Robinia Pseudacacia. The Portugal Laurel does well and maintains a fine dark green colour. Weeping trees are represented by many species grafted standard high and making fine heads. Rhododendrons of the best hybrid and hardy sorts are kept in stock.

Before leaving the nursery we had the pleasure of meeting that veteran florist Mr. George Goodall, who is still hale and hearty, though now well over 70 years of age. He came to the neighbouring Pinkhill Nurseries in 1853 and has been in the neighbourhood ever since. He is now foreman to Mr. John Downie in the Beechill Nursery, and has been so for a long time. The nursery under his care gives him great credit, every part of it being well filled and in admirable condition.

NOTES FROM KIRN.

KIRN, like Dunoon, is rapidly passing from a primitive to an up-to-date condition; indeed, this cannot be otherwise, for both places lie in the wake of the splendid service of steamers which abound on the Firth of Clyde. Moreover, both places come under the jurisdiction of one board of commissioners; and, as a consequence, in the near future it will be somewhat difficult to distinguish a line of demarcation between them. Kirn possesses a goodly proportion of pretty villas, which are chiefly occupied by Glasgow and Greenock merchants and manufacturers. It is then an altogether different place from that which once prevailed, and which its Gaelic name of *Carn* implies, namely "heap of stones." Stones, however, still abound—every house is built of them; which fact gives solidity and strength to every structure so unlike and so superior to those jerry-built brick-boxes which disgrace our suburbs.

But substantiality—in itself—will never quite compensate for the artistic blending of brick and stone; for badly built, though many of our domiciles are, there is yet a tone, a colour, and a character about them, which these northern dwellings sadly lack. For permanent residence, then, give me for preference the sunny south, the pretty villa, the gable roof, the red brick, the coloured creepers festooning the walls, and all the other floral adjuncts of a well-ordered home and its appurtenances.

On a sunny day, however, the little town of Kirn looks interesting and impressive; but, like Dunoon, its weather is capricious. When it rains it rains, and no mistake about it; although the converse also ought to be that when it shines it shines, and smiling is the scene.

At "Annfield" House, Mr. Cameron, the gardener, was good enough to show me round. He possesses a good miscellaneous collection of plants, and the customary Scotch herbaceous border; but his strong point is Ferns, of which he grows a large number. In addition to a collection of greenhouse Adiantums, the British one—*A. Capillus-Veneris*—finds a place. Mr. Cameron possesses some varieties of *Scolopendrium vulgare*, *Asplenium adiantum nigrum*, and a grand case of *Trichomanes radicans*, the beautiful Killarney Fern. Outside there is a bold bit of rockery with running water, on which luxuriate *Osmunda regalis*, *Athyrium Felix-foemina*, *Lastrea pseudo-mas cristata*, *Struthiopteris germanica*, *Aspidium aculeatum*, and a splendid form of this with fronds about 4 ft. long, and broad in proportion. These do not exhaust the list by any means, but merely serve to show that a rockery with a stream as an adjunct is the proper place to grow our British Ferns.

"Ericht Bank" was next visited, and here Mr. Spears presides for the present, over the garden, which, with the mansion, is unfortunately in the auctioneer's hands. There are, however, some notable things here in the plant line. *Cordyline australis* on the terrace, although severely mauled by the winter of 1895-6, is taking a new lease of life; *Camellia japonica* does well and flowers freely in its season; *Phormium tenax*, *P. t. Veitchii*, *Gunnera scabra*, *Fatsia papyrifera*, *Latania borbonica*, *Chamaerops Fortunei*, *Dicksonia australis*, and *D. squarrosa*, besides some tender Conifers, are all doing satisfactorily and therefore bespeak the

salubrity of the position as favourable to vegetation. The Pampas grass (*Glycerium argenteum*), however, is only just now beginning to unsheath its silvery panicles of graceful flowers, which rather shows the lateness of the Scottish season—while *Lilium giganteum* is full of fruit, about 8 ft. high, and looking wonderfully well and vigorous. It is evidently quite at home, for Mr. Spears says this season is no exception to the general rule.

The flower beds and borders, too, are worth noting; a particularly simple yet happy combination of the former took my attention, and was in the form of a large oval bed planted with tuberous Begonias, interblended with *Dactylis glomerata elegantissima*, and edged with *Viola Bullicn*. The turf was soft and green—reminding one of the Emerald Isle—not because the garden-hose or water-barrow had been in requisition, but in consequence of the too great attentions of Jupiter Pluvius.

Water is a *sine qua non*—no estate can do without it—so that:—

"A copious rainfall, now and then,
A blessing is to garden men;
But, when too much is in the shoot
A Scotsman e'en will 'gang about'."

C. B. G., Acton, W.

THE PROGRESS OF VEGETABLE CULTIVATION DURING QUEEN VICTORIA'S REIGN.

(Continued from p. 124).

THE BRASSICAS.—CABBAGE.

FIRST and foremost in point of general utility comes the Cabbage. Although our forefathers had not so long a list of names to select from as gardeners now have, there were several good Cabbages in 1837. Chief among these were Early Battersea, Early York, Large York, Emperor, Sugarloaf, &c., names which still retain a place in all seed lists, and are certainly valuable for spring sowing. It is reasonable to suppose that the crops of those days suffered from "bolters," and with none but these and similar sorts to grow the probability is that an even bed of Spring Cabbage would be the exception, as these sorts are peculiarly liable to bolt. Of late years much has been done to avoid this tendency, and we now have such Cabbages as Ellam's Early, Early Offenham, Imperial, and our own Flower of Spring and Early April, which when obtained true to name may be relied upon in any season to form solid hearts without bolting.

The improvement in the Cabbage has been entirely due to selection. The advent of the Nonpareil was a distinct gain to horticulture. Amongst others, Shaw, of Newbury, did much to make this Cabbage popular, and as it is one of the best for spring sowing, it will be long before it ceases to be grown. Enfield Market is popular where a large growing kind is required. Almost every market-gardening district has its own particular selection, as seen in The Rainham, Higham, Evesham, East Ham, and Fulham varieties.

Rapid strides have been made in the improvement of early Cabbages for summer use, and although many of the earliest are of Continental origin we on this side can claim no inconsiderable amount of credit on account of the careful selection given to them. Earliest of All, Empress, and their kindred types are Cabbages which we could not now well do without, but on account of their tendency to bolt they must give place for August sowing to the sorts previously named.

The Hardy Green Colewort was introduced in 1852, and a selection from it, Rosette Colewort, appeared a few years later. These are very important crops for consumption towards the end of the year, and are delicious in flavour.

Red Cabbages have been so far improved that instead of relying on an August sowing for heads to use the following summer and autumn they can now be obtained in the same year by sowing in spring.

Savoy Cabbages, on account of the limited period in which they are required for use, have not had so much attention devoted to them, although it is now possible by the use of recently introduced early and later kinds to extend the supply from August to April if required.

BRUSSELS SPROUTS

Amongst Brassicas stand second only to the Cabbage, Broccoli and Cauliflower in importance. This plant

was well known in 1837, but since that time wonders have been accomplished in its improvement by means of selection, and we now have dwarf, medium, and tall varieties of great excellence. Scrymger's Giant, Dalkeith, and Reading Exhibition were among the earlier improvements, while the Dalmeny and Albert Sprouts first offered about 1858-9, had but a short-lived reputation.

A dwarf type originating on the Continent, and covered with close firm buttons, has of late years given grand results, the best known strain being the Dwarf Gem. As is well known the sporting tendency of the Brassicas is responsible for some very peculiar forms, and it is, I think, not at all unlikely that a Brussels Sprout with red buttons may eventually have a place amongst our favourite vegetables.

BROCCOLI

Were represented in the earlier days by the Capes, Grange's Autumn, Portsmouth, Sulphur, Dwarf Russian, Purple Sprouting, and Knight's Protecting. In 1843 that popular sort Snow's Winter White, was first offered, and although various and inferior strains have been offered under this name it is safe to say that in many cases the seed now sold is altogether superior to the original type. The following year Walcheren, which perhaps should be classed amongst the Cauliflowers, was brought to notice and has done good service. After this came Adam's Early, Wilcove Late White, Dilcock's Bride and White Sprouting. In later years Broccoli with heads of closer and whiter texture have appeared, including Leamington (still one of the best), Perfection and Late Queen. Great improvements have been made in Purple Sprouting Broccoli by selection, and it is now possible to grow three distinct types, the earliest of which is available for use at Christmas, the ordinary type following, and lastly a late selection of more compact growth and better coloured sprouts. The hardiness of these strains is an important feature, and their popularity must continue.

In the late Broccoli it has been difficult to retain lateness without in some degree sacrificing colour and quality, but I am pleased to note that a late Broccoli which continues good in quality longer than any variety with which I am acquainted and with heads which are in every way equal to an Autumn Cauliflower is already in existence and will certainly become deservedly popular. By these late as well as the extra early selections there is now no difficulty in having a succession of good Broccoli and Cauliflower throughout the year.

CAULIFLOWERS

Are scarcely to be surpassed for delicacy of flavour when properly cooked. Three types were grown in 1837, the Early, Late, and Asiatic. These were followed by the Stadtholder and Walcheren, Snowball, Erfurt, and Autumn Giant. As Cauliflower seed can seldom be successfully grown in England, we are, of course, indebted chiefly to our Dutch, German, and Italian specialists for most of the improvements made, and with the finest types of the Dwarf Erfurt section, such as Snowball and First Crop, at one end and the early and late selections of the Italian Giant varieties at the other, we can extend the supply over a very much longer period than was possible sixty years ago. A head of Cauliflower 36 in. to 38 in. in circumference of perfect quality was a thing unheard of in 1837, but it is by no means uncommon to-day.

KALES.

The great diversity in colour and form of this section of the Brassicas at the present day would surprise any gardener who knew only the few sorts existing at the commencement of the Victorian era. The hardiness of this useful vegetable has always been its most important feature, and it is to be hoped that the newer selections will retain this essential characteristic.

During the fifties Mr. Turner introduced the hardy and most useful Cottage's Kale, and it appears to increase in favour. Mention must also be made of the Variegated Kale, a highly ornamental plant as well as useful for cooking purposes. In mid-winter the charming colours of the leaves render them invaluable for decorative purposes.

THE CELERIES OF 1837

Were the Italian, Red, and White Solid, and Turnip-rooted, and although at this date there are many superior sorts, Celeries vary so little in character that there is less scope for great improvement than in many other garden vegetables. Much, however, has been done in improving the solidity and flavour,

and amongst the Reds may be noted Clayworth Prize, A. I., Standard Bearer, Sulham Prize, and Leicester Red, with Solid White and Wright's Grove White as the best of the white section. Probably the most distinct variety of English origin is White Gem, a small early sort of great value.

Attempts have been made to popularise the continental self-blanching sorts, but although they may be useful for soups they are practically of no value where tender fine-flavored Celery is prized, for except in appearance they differ but little from unblanched English Celeries.

CARROT.

In Carrots the progress made has been as great as in other vegetables during the period under review. Although there were several varieties grown in the early years of the Queen's reign, they were either very long such as Altrincham and Surrey, or of the horn section. Improvements on some of these quickly appeared, James's Scarlet Intermediate at once meeting with approval, and for market purposes this will doubtless long continue to be grown. Our French neighbours are adepts at the improvement of the Carrot, and the English trade is indebted to them in this respect to a larger extent perhaps than for any other vegetable. The French Forcing Horn and Nantes have met with warm approval, the finest types of the latter being particularly free from the objectionable yellow core existing in most sorts. It is only necessary to refer to the magnificent specimens of New Intermediate and Early Gem and similar varieties which are so frequently seen on the exhibition table for evidence of the great improvement which has been made in this popular vegetable.

(To be continued.)

SOCIETIES.

NATIONAL CHRYSANTHEMUM.—October 25th.

A meeting of the Floral Committee was held on the above date at the Royal Aquarium. Upwards of two dozen large cut blooms came from Messrs. H. Cannell & Sons, Swanley, Kent, amongst which were observable fine samples of Robert Powell, N.C.S. Jubilee which narrowly missed receiving a certificate, Lady Hanham, and Souvenir des Molines.

Four dozen large blooms were also sent by Mr. W. J. Godfrey, Exmouth, Devon, and in addition to those receiving certificates, (for which see another column), these comprised fine flowers of such varieties as Golden Nuggett, Werther, Antoinette, King of the Yellows, Geo. Gover, and Topaze Orientale.

Mr. Norman Davis, Framfield, Sussex, contributed samples of several decorative varieties. Mr. Robert Owen, Maidenhead, had a stand of cut blooms of new seedlings. Mr. W. Wells, Earlswood Nurseries, Redhill, sent plants in bloom, of Mrs. Geo. Palmer, a huge new Japanese variety, which however, did not receive an award at the hands of the committee. Mr. Wells also sent the new Japanese Madame Desblanc.

ROYAL HORTICULTURAL.—October 26th.

ORCHIDS were in strong force at the meeting on Tuesday last. Chrysanthemums also occupied a large share of attention. Batches of Nerine, Roses cut from the open, Begonia La Lorraine, and Violets may be described as interesting specialities. The number of distinct novelties amongst the Nerines was remarkable.

A large and valuable collection of Orchids was exhibited by Messrs. J. Veitch & Sons, Ltd., Chelsea. Cattleyas and Cypripediums were abundantly represented, the former including *C. labiata* in quantity, *C. dowiana aurea*, *C. maxima*, as well as many hybrid and bigeneric hybrids. Very distinct and pretty is the hybrid *Cattleya wendlandiana*. *Laeliocattleya Pallas superba* is also a magnificent thing. Along the hack were tall plants of *Vanda sanderiana*, *Cattleya howringiana*, *Oncidium praetextum*, *O. incurvum*, *O. varicosum*, *O. tigrinum*, *Dendrobium taurinum amboinense* and *D. Stratiotes*. *Cyperorchis elegans*, an uncommon plant, was well-flowered (Silver Gilt Flora Medal).

Messrs. Hugh Low & Co., Clapton, exhibited a group of *Vanda caerulea*, in plants of various height, well-flowered, and varying considerably in colour. They were set up with *Asparagus*, and had several *Cypripediums* in front of them.

Messrs. F. Sander & Co., St. Alhans, staged a fine group of Orchids, including a large number of *Cattleya labiata* as imported, and amongst which there was a great amount of variety. Interesting and pretty also were *Laelia monophylla*, *Oncidium ornithorhynchum*, *O. kramerianum*, *Miltonia moreliana*, *M. vexillaria*, and *Habenaria carnea*, the colour of which is chaste and beautiful.

Messrs. B. S. Williams & Son, Upper Holloway, staged a collection of *Cattleya labiata*, *C. howringiana*, *Oncidium Phalaenopsis*, *O. crispum*, *Pescatorea klabochorum*, *Vanda tricolor*, *Dendrobium bigibbum*, and various others.

Messrs. W. L. Lewis & Co., Southgate, N., exhibited a most interesting group of *Laelia pumila praestans*, with flowers of great size, broad petals, and varying considerably in colour. The flowers, in fact, seemed too large for the plants.

Mrs. Wingfield (gardener, Mr. W. J. Empson), Amphill House, Beds, set up a showy group of Orchids consisting of *Cattleya labiata*, in variety, *C. bowringiana*, *C. dowiana aurea*, and various *Oncidium*s and *Odontoglossum*s in season (Silver Banksian Medal). Fred. Hardy, Esq., Tyntesfield, Ashton-on-Mersey, Cheshire, showed some grand varieties of *Cattleya dowiana aurea*.

Walter C. Walker, Esq., (gardener, Mr. Geo. Cragg), Percy Lodge, Winchmore Hill, exhibited a richly-flowered collection of *Cattleya labiata*, *Oncidium crispum*, *O. Forbesii*, *O. praetextum*, &c. (Silver Banksian Medal).

R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Camberwell, set up a showy and richly-flowered collection of Orchids, noticeable amongst which were *Cattleya labiata*, *Laelia purpurata* Mrs. R. I. Measures, *Oncidium ornithorhynchum album*, *O. marshallianum*, *Dendrobium aureum*, various *Cypripediums* and others, making a most interesting assemblage (Silver Floral Medal).

T. Statter, Esq. (gardener, Mr. R. Johnson), Stand Hall, Manchester, exhibited part of the original *Cattleya hardyana* in the form of a healthy piece with a profuse development of roots, and some good flowers. It has now been eighteen years in the country. He also showed *C. dowiana aurea johnsoniana*. Mrs. Briggs Bury, Bank House, Accrington, showed *Cattleya gigas gigantea* and *C. Adonis* with blooms of enormous size.

J. Bradshaw, Esq. (gardener, Mr. H. Whiffen), The Grange, Southgate, exhibited a group of choice varieties of *Cattleya labiata*, including the chaste and charming C. l. "R. I. Measures," C. l. *glauca*, with a blue lip, C. l. *Etona*, and C. l. *Ruby*, all very choice indeed.

C. L. N. Ingram, Esq. (gardener, Mr. Bond), Elstead House, Godalming, exhibited *Laeliocattleya Homere*, *L. Lady Rothschild*, and *Cattleya bowringiana*. Messrs. W. L. Lewis & Co. staged the magnificent *Laelia pumila magnificum*, and the charming *L. longipes* with orange lip.

R. Brooman White, Esq., Arddarrach, showed some fine *Odontoglossum crispum*. Reginald Young, Esq., Fringilla, Linnet Lane, Liverpool, showed some fine Cattleyas. Sir Trevor Lawrence, Bart. (grower, Mr. W. H. White), was accorded a Cultural Commendation for *Laelia Perrinii alba* Burford Variety, with white flowers and pale mauve lip.

A handsome group of stove and greenhouse decorative plants was set up by Messrs. John Laing & Sons, Forest Hill, S.E. There were several well-flowered bush plants of Chrysanthemums included; and *Dracaenas* and *Crotons* were well coloured and healthy. *Erica hyemalis* and *Begonia Gloire de Lorraine* were very floriferous and showy. A grand piece of *Phyllotenum Lindenii* was also very conspicuous (Silver Flora Medal).

Mr. W. Fyfe, gardener to Lord Wantage, Lockinge Park, Wantage, contributed a showy group of cut seedling Sunflowers.

A small collection of cut decorative Chrysanthemums was sent by Messrs. H. Cannell & Sons, Swanley, Kent. Miss Rose, The Star, and Lady Onslow were some of the handsomest varieties shown.

On the right hand side of the entrance Messrs. Cuthush & Son, Highgate, N., had deposited a semi-circular group of plants that included Chrysanthemums, Carnations, and two grand pieces of *Dracaena Doucettii*. There was a triple edging of *Ophiopogon Jahuran variegatus*, *Skimmia japonica*, and *Begonia Gloire de Lorraine* (Silver Banksian Medal).

On the opposite side of the doorway Messrs. Jas. Veitch & Sons, Chelsea, made a grand display of Chrysanthemums in pots. The plants bore some grand flowers and ranged in height from 3 ft. in the front ranks to 7 ft. in the back row, where a fringe of Palms completed the effect. All of the blooms were good, but special mention may be made of varieties like Mutual Friend, M. Chénon de Léché, Sunflower, Louise and Emily Silsbury (Silver Banksian Medal).

A grand exhibit of Chrysanthemums both of plants and cut blooms was made by Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey. Thos. Wilkins, Edith Tabor, and Ma Perfection were represented by superb flowers on the plants, and in the two dozen cut blooms shown, Mrs. J. Lewis, Phoebus, Lady Hanham, and Pride of Madford were of that high quality we expect to see from Mr. Wells (Silver Gilt Banksian Medal).

Cut Chrysanthemums were shown by Mr. G. Wythes, gardener to Earl Percy, Syon House, Brentford. Three blooms each of most of the varieties represented were on view, and comprised capital samples of John Lightfoot, Vivian Morel, Amos Perry, Etoile de Lyon, Globe d'Or, and Baron Hirsch (Silver Banksian Medal).

An extensive exhibit of cut Chrysanthemums was made by Mr. W. J. Godfrey, Exmouth, Devon. Lady Ridgeway, Royal Standard, Mr. W. J. Godfrey, Lady Byron, Werther, Mrs. Hume Long, Edith Tabor, Mrs. J. R. Lewis, Ella Curtis, Mrs. Maling Grant, and Pride of Exmouth were some of the most telling sorts. The Japs were most in evidence (Silver Gilt Flora Medal).

An exceedingly handsome decorative exhibit was that coming from Mr. H. B. May, Dyson's Lane Nurseries, Upper Edmonton. The groundwork consisted of Ferns, in which some beautifully grown samples of *Adiantum farleyense* were very conspicuous. Raised above the level of these were some of the finest specimens of *Begonia Gloire de Lorraine* that we have ever seen, for they were large, vigorous, and floriferous (Silver Flora Medal).

A collection of Nerines was contributed by H. J. Elwes, Esq., Colesborne, Andoversford, Gloucestershire. The umbels of flower were large and fine, and several shades of carmine, scarlet, orange-scarlet, and pink were on view (Silver Flora Medal).

Miss Emmett, 6, St. Charles' Square, W., exhibited models of Orchids made for the Royal Gardens, Kew. The models were absolutely life-like, and as good as those specimens of this lady's handiwork to be seen in the windows of Messrs. Barr & Sons' shop in King Street, Covent Garden. A Silver Banksian Medal was awarded.

Messrs. James Veitch & Son, Ltd., sent hybrid Rhododendrons and a batch of *Begonia Gloire de Lorraine*, also *Richardia Pentlandii*.

Messrs. Wm. Paul & Sons, Waltham Cross, Herts, received a Silver Gilt Banksian Medal for a group of cut Roses. These, considering the advanced state of the season, were really first-class. Enchantress Marie Van Houtte were represented by fine baskets.

Messrs. H. Cannell & Sons had an exhibit of cut Chrysanthemums arranged in a taking way with pots of Maidenhair Fern. Madame G. Bruant, Lady Byron, Souvenir des Malines, N.C.S. Jubilee, Robert Powell, and Lady Hanham were some of the finest blooms. Bunches of Violet Princess of Wales were also shown (Silver Banksian Medal).

Mr. P. Blair, gardener to the Duke of Sutherland, Trentham, Staffordshire, had a batch of grand plants of the beautiful *Gesnera amabilis*. Mr. R. Owen, Maidenhead, sent a quantity of blooms of new seedling Chrysanthemums.

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., set up in a tasteful and effective manner a group of Chrysanthemums, for which a Silver Banksian Medal was voted. A fringe of Maidenhair Fern, interspersed with small plants of *Crataegus Pyracantha Lelandii* added a finish to the group.

A Silver gilt Knightian Medal went to Messrs. John Laing & Sons, for a splendid exhibit of 100 dishes of hardy fruit. Duchesse d'Angoulême, Easter Beurré, Doyenné du Comice, Beurré Clairgeau, and Beurré Diel were some of the best Pears, and such Apples as Beauty of Kent, Emperor Alexander, King of the Pippins, Cox's Pomona, Swedish Reinette, Golden Noble and Hollandbury were first-rate.

A Silver Gilt Knightian Medal also went to Messrs. J. Cheal & Sons, Crawley, Sussex, for upwards of seventy dishes of hardy fruit. Fearn's Pippin,

Thomason, Paroquet, Nanny, Frogmore Prolific and Bismarck were some of the finest Apples; and Doyenné du Comice, Durandean, and Epine Dumas some of the best Pears.

A Silver Gilt Knightian Medal was voted to Mr. W. Taylor, gardener to C. A. Bayer, Esq., Tewkesbury Lodge, Forest Hill, for an excellent collection of Grapes Muscat of Alexandria, Gros Maroc, Trebbiano, Alicante, Gros Colman, and Black Hamburgh which were all in remarkably good condition.

A seedling Grape Marchioness of Downshire was sent by Mr. T. Bradshaw, gardener to the Marquis of Downshire, Hillsborough Castle, Co. Down. Mr. J. Crook, Forde Abbey Gardens, Chard, sent a dish each of Plums—Coe's Late Red and Coe's Golden Drop.

There were eight dishes of Apples submitted for the Veitch flavour prizes. Mr. C. Herrin, gardener to the Hon. G. M. Fortescue, Dropmore, Maidenhead, was placed first with Cox's Orange Pippin. Mr. G. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone, was second with American Mother.

Eight dishes of Pears were also shown, the first prize going to Col. Brymer, M.P., Islington House, Dorchester, with Doyenné de Comice. Second came Mr. G. Woodward with Emile d'Heyst.

Messrs. Dobbie & Co., Rothesay and Orpington, showed clean and shapely samples of Turnips—Dobbie's Model White, and Golden Ball, and Parsnip Dobbie's Selected; also Dobbie's Selected Parsley and Victoria Kale.

Messrs. H. Cannell & Sons received a Silver Gilt Knightian Medal for a grand collection of vegetables that comprised magnificent samples of Onions of various sorts, Cauliflower Autumn Giant, Leeks, Cabbages, and Potatos.

Messrs. Jas. Carter & Co., High Holborn, obtained a Bronze Knightian Medal for a collection of Beet, and some clean and heavy roots of Red Elephant Carrot.

THE VICTORIAN MEDALS OF HONOUR.

The presentation of the Victorian Medals of Honour to the sixty chosen recipients took place in the end of the hall where the lectures are usually held at three p.m. Sir Trevor Lawrence Bart., occupied the chair, a numerous attendance being present.

On rising to address the meeting, Sir Trevor Lawrence called attention to the fact that the council of the Royal Horticultural Society had decided to institute this medal in order to celebrate Her Majesty's long and glorious reign. Her Majesty had been for many years patron of the society, and the Prince Consort had for a number of years presided over its fortunes. The medal after due consideration had been distributed to every form of intellect that had been devoted to the interests of horticulture. There were, he regretted to say, only two ladies on the list. Of botanists there were eight, headed by the greatest botanist in the world, Sir J. D. Hooker. Of collectors and hybridists there were six; of nurserymen, fourteen; of gardeners, twenty-seven, including fifteen amateurs and twelve professionals; of landscape gardeners, one; and of gentlemen connected with the press, two.

The medal itself was the work of a lady, viz., Miss Margaret Giles, who had accomplished a great deal in a small space.

The names of the various recipients were then read out by the Rev. W. Wilks, and the medals were handed to the gentlemen in person by Sir Trevor Lawrence. There were a few absentees, including Professor M. Foster, Mr. Herbst, Mr. W. Paul, Mr. David Thomson, and Mr. Wm. Thompson. The following is the list of the recipients of the Medals:—

- | | |
|----------------------------|-------------------------|
| Miss Jeykyl | Professor M. Foster |
| Miss Willmott | Mr. G. Gordon |
| Mr. J. G. Baker | Mr. John Heal |
| Professor I. Balfour | Rev. G. Henslow |
| Mr. P. Barr | Mr. Herbst |
| Mr. A. F. Barron | The Very Rev. Dean Hole |
| Mr. Ed. John Beale | Sir J. D. Hooker |
| Mr. W. Boxall | Rev. F. D. Horner |
| Mr. Wm. Bull | Mr. J. Hudson |
| Mr. Geo. Bunyard | Mr. Peter Kay |
| Mr. F. W. Burbidge | Mr. John Laing |
| Mr. W. Crump | Mr. Maries |
| Mr. R. Dean | Mr. McIndoe |
| Mr. Geo. Dickson | Mr. H. E. Milner |
| Rev. H. H. D'Ombrain | Mr. Ed. Molyneux |
| Mr. Chas. Drury | Mr. Geo. Monro |
| Mr. Malcolm Dunn | Mr. F. Moore |
| Rev. Canon Ellacombe | Dr. D. Morris |
| Mr. H. J. Elwes | Mr. Geo. Nicholson |
| Mr. J. Fraser, (Leabridge) | Mr. J. O'Brien |

- Mr. Geo. Paul
- Mr. Wm. Paul
- Mr. T. Francis Rivers
- Hon. Walter Rothschild
- Mr. F. Sander
- Baron Schroder
- Mr. John Seden
- Mr. N. N. Sherwood
- Mr. Jas. Smith
- Mr. Martin R. Smith

- Mr. Wm. Speed
- Mr. A. Sutton
- Mr. Owen Thomas
- Mr. David Thomson
- Mr. W. Thompson
- Mr. H. Turner
- Mr. G. F. Wilson
- Rev. C. Woolley Dod
- Mr. John Wright
- Mr. G. Wythes

OBITUARY.

MR. E. J. BAILLIE.

As announced in our last issue, we now place on record a few facts relating to the late lamented Mr. E. J. Baillie, F.L.S., who died at his residence, Woodblee, Upton, Chester, at the age of forty-six, on the morning of the 18th inst. He had been ailing for some time past but treated the matter rather lightly, and returned to business the day after he had consulted his doctor, but soon returned and had to take to bed. This was on Wednesday and he died on the following Monday.

Mr. Baillie was educated at Tarvin. A little over thirty years ago he commenced as a junior in the correspondence department of Messrs. F. & A. Dickson & Sons, Eastgate Street, Chester, where his business capacity secured him rapid promotion. He ultimately had the full charge and supervision of the establishment. He next rose to be cashier and confidential adviser of the firm and later on became the managing partner of the business. When the two firms of the name of Dickson became amalgamated, Mr. Baillie became deputy chairman and one of the managing directors of Messrs. Dicksons, Limited. His management extended more and more into the extensive nursery department after the death of Mr. Alfred Dickson.

Independently of his business in which he was intimately wrapped up, he was closely connected with various other organisations which prospered on account of the whole-hearted way with which he took them in hand. For some time he had been honorary secretary and treasurer to the management of the Grosvenor Museum, and laboured hard for the good of that institution. He enjoyed a considerable amount of reputation for his knowledge of plants, as was well known to the members of the Natural Science Society of Chester, to whom he acted as "guide, philosopher and friend," while making an inspection of the living specimens grown in the nursery, or during their rambles in the surrounding districts. He was a Fellow of the Linnean Society of London, as well as of the Royal Horticultural Society. Locally, also, he will be remembered for the little book he wrote on the flora of the district. The Kingsley Memorial Medal was awarded him for his services to natural science. The Chester Paxton Society owes him a debt of gratitude for the aid he rendered the formation of the same.

Mr. Baillie was also a prolific writer on all sorts of subjects he had at heart; but was best known about London for the papers he read on fruit culture at the conferences and meetings of the Royal Horticultural Society. As might be expected his contributions to the subject of fruit culture appeared in various publications. Consistently with his opinions on the value of fruit as food, he was an enthusiastic vegetarian and a vice-president of the Vegetarian Society, taking an active part in the conferences of that body both by his presence, his active assistance and in the reading of papers relative to views held by this society. The latter was celebrating its Jubilee at Manchester on the day of Mr. Baillie's death, and singularly enough, a paper by the latter was read at the conference before the Vegetarian Society was made aware of his death. The paper was entitled "A Guild of Good Life," and in it the deceased author referred to the issues at stake in opposition to the ethics of vegetarianism. While in Ireland recently he was struck with the abundance of Blackberries that lined the hedgerows, and the abundance of Mushrooms that were allowed to waste while the rural population was often in a state of poverty, and threatened with famine on account of the failure of the Potato crop. He contended that with proper organisation all this food might be turned to account as a source of income.

A personal friend and an enthusiastic disciple of John Ruskin, Mr. Baillie offered much assistance both by word and example in spreading a love of the fine arts. Yet in the midst of his extensive business

engagements and the many sidedness of his accomplishments and his labours for the good of many causes, he was noted for his courteousness and affability, not only to his friends, but to strangers on matters even of the most trivial importance. By his attentiveness to and sympathy with all with whom he came into contact, he endeared himself to a wide circle of friends. Chester has lost much by his death. Though thus cut off in the prime of life, he leaves a widow and a family of ten to mourn his untimely departure.

CHRYSANTHEMUM SHOW.

BY TELEGRAM.

STEYNING.—October 27th and 28th.

THERE are good all round exhibits. The entries exceed by sixty-five more than ever they have done before. Class one, best group Chrysanthemums, 1st, Mr. C. F. Knowles; 2nd, Mr. G. Phillips; 3rd, Mr. G. Treagus. For the best three Chrysanthemum plants, 1st, Mr. C. F. Knowles; 2nd, Mr. A. Worthington; 3rd, Mr. G. Phillips. For the best twenty-four Japanese varieties distinct, 1st, Mr. G. Hart; 2nd, Mr. J. White; 3rd, Mr. A. Slaughter. For twelve incurved blooms, distinct, 1st, Mr. G. Hart; 2nd, Mr. C. Knowles; 3rd, Mr. R. Botting. For six bunches of Pompons, 1st, Mr. J. Mannings; 2nd, Mr. R. Botting; 3rd, Mr. E. Cripps; 4th, Mr. P. Breach. In the class for a group of Chrysanthemum plants Mr. H. Joyes was first; Mr. H. Goatcher, second. For eighteen blooms, 1st, Mr. H. Joyes. For the best bouquet of Chrysanthemums Mrs. Searle was first; Mr. C. J. Hole, second; and Mrs. G. Phillips, third.

A fine display of wreaths, Chrysanthemums, Heaths, Solanums, and other plants not for competition was shown by Mr. Walter Hills, florist, Steyning, who also decorated the platform. Other exhibits not for competition included those of Mr. C. Kilmister, The Nurseries, Steyning, and the Ichthemic Guano Company.

QUESTIONS AND ANSWERS

Dendrobiums showing flower buds.—*Constant Subscriber*: The usual flowering season of *Dendrobium nobile* is from January to March, but this can be prolonged by cultural treatment as to temperature and the moisture given them. The method you have pursued as to temperature and the water you have actually applied to them seems to be correct enough, but it strikes us that the cool *Odontoglossum* house is not the best that could be selected for ripening off *Dendrobiums*. Although you applied very little water to the roots there would always be a considerable amount of moisture in the atmosphere, and the roots of *Dendrobiums* would absorb it as easily as if it were applied to them artificially. This, together with the mild autumn we have been enjoying, no doubt accounts for your plants starting into growth prematurely. Another year you would do better to hang the plants up in a vinery or Peach house after the fruit is gathered and the ventilators thrown open, so as to secure a free circulation of air. This would hardly be the case in an *Odontoglossum* house. So long as the autumn remains open you should keep the *Dendrobiums* relatively cool, so as to retard them, but not actually check growth where the plants are really started. By this means you may be able to tide them over the worst part of autumn and winter before the flowers actually expand. Those which are in active growth had best be taken into a house where the night temperature does not fall below 55° at night, with a rise to 60° by day. This should be done on the advent of really stormy or very cold weather. Those which have not started into growth should be kept a little cooler and drier to retard them. They cannot really be very dry at the root, otherwise they would hardly have started yet. It may be remembered, however, that there are individual variations, some being naturally early. On the whole, however, it is our opinion that the atmosphere of an *Odontoglossum* house is too moist to allow *Dendrobiums* to go to rest. What applies to *D. nobile* also applies to *D. wardianum* and its varieties, except that the latter species requires a slightly higher temperature to do it justice.

Coelogyne Cristata.—*Constant Subscriber*: Now that your *Coelogyne*s have finished their growth, you must ripen them off, if this has not already been done, by giving abundant ventilation on all favourable occasions. Some successful growers place them on the shelf of a greenhouse or similarly cool structure close to the ventilators. The result is that the leaves get thoroughly hardened and leathery, while the pseudobulbs become equally firm in texture. After this ripening has been completed you may keep the plants in a temperature of 40° to 45° during winter, and give them only just sufficient water to prevent the pseudobulbs from shrivelling. When the plants begin to show signs of pushing up

their flower spikes it will then be time enough to place them in a slightly warmer house, giving them an increasing supply of moisture as the temperature rises in spring and growth becomes active.

Asters.—*G. Stapleton*: The varieties of Aster Novi-Belgii are now so numerous that it is almost, if not quite impossible, to name more than a few of the more distinct unless one had a correctly named collection to consult. The greater proportion of them have arisen in British gardens so that they cannot be matched from American specimens. Many people give them their own names so that many indistinguishable varieties have different names. No. 3 which you sent seems identical with what used to be named Aster Novi-Belgii aestivalis; but it is scarcely worth cultivating when many finer things are to be had. No. 7 has not large enough flowers for formosissimus. It is very common in the suburban gardens of London and we have for many years known it as Aster Novi-Belgii spectabilis. No. 8 we consider as near the typical Aster Novi-Belgii as possible, judging from the small specimen sent.

Outside Thermometer.—*Omega*: This is usually placed at 3ft. to 4ft. from the ground, for gardeners are not very particular to a foot or two. About 4ft. would be a suitable height, providing you are careful to state the elevation of the same in any records you may make, and whether the thermometer is sheltered in a case or fully exposed.

Imported Odontoglossum crispum.—*Odont.*: The spike you mention in the report of Craigclowan as carrying twenty blooms, was no doubt a single, strong, unbranched spike bearing large flowers. Your plant in a 32-sized pot, bearing three spikes, having an aggregate of 112 blooms must have been grand, and quite unusual for the ordinary run of imported plants; but we should suspect that the spikes are branched as well as being strong. Now, when branching occurs the flowers are usually much smaller than in the case of unbranched spikes under good cultivation. You do not say whether your flowers were small, but whether this was the case or not your plant was undoubtedly a magnificent and showy one.

Best Coloured Variety of Berberis.—*John Halifax*: The best for general purposes is *B. Aquifolium*, often named *Mahonia Aquifolium*. The leaves, or many of them, change to a fine red when the weather becomes cold in autumn, and retain this hue till the temperature rises in spring. It does well under trees, but we would not guarantee that the leaves will colour well under such conditions. To colour well, the plants must be fully exposed to sun and air, and be in dry rather than wet soil. For instance, the two common forms of *Ampelopsis* colour well in England, but remain green almost to the last in Scotland, and then turn yellow. Your district of England has a rather moist climate, therefore the more need to plant with full exposure. *Berberis thunbergiana* assumes a fine orange-red for ten days or a fortnight before the leaves fall. *Berberis vulgaris purpurea* has purple leaves all the summer and autumn till they fall; but we think you have *B. Aquifolium* in your mind.

Hardy Shrubs with highly coloured Leaves.—*John Halifax*: In speaking of coloured foliage you do not say whether you mean autumn tints or leaves that are coloured all the season; nor do you state what colours. The following are taken at random, but if they do not meet your wants let us know more precisely what you mean. In summer you may have the Golden Privet, the purple Hazel, the copper, purple and black Beech, *Prunus Pissardii* (purple), the young shoots of the purple-leaved Peach, variegated Hollies, Iviess, *Cornus* of sorts, variegated Negundo, and many others. In autumn a fine red or crimson hue is assumed by *Rhus glabra* and *R. g. laciniata*, *Liquidambar styraciflua*, *Ampelopsis Veitchii*, *Virginian Creeper*, *Quercus coccinea*, *Q. tinctoria*, *Berberis thunbergiana*, &c. The young shoots of second growths of Elm, Oak, Hornbeam, *Acer colchicum rubrum*, and many others are choice for cutting. The small leaved wild Ivy in exposed positions becomes very handsome in winter.

Names of Fruits.—*P.D., B.*: 1 and 5, Warner's King; 2 and 4, New Hawthornden; 3, Northern Greening; 6, Norfolk Beefing; 7, Eclinville.

Names of Plants.—*Harding*: 1, *Aster diffusus horizontalis*; 2, *Aster ericoides*; 3, *Aster Novi-Belgii*, var.; 4, *Aster multiflorus*; 5, *Aster cordifolius*.—*F. B.*: 1, *Aphelandra cristata*; 2, *Agathosma ciliata*; 3, *Cypripedium longifolium*; 4, *Cedronella triphylla* (*Balm of Gilead*); 5, *Adiantum cuneatum Pacottii*; 6, *Selaginella emiliana*; 7, *Crataegus Pyracantha*.—*G. Stapleton*: 1, *Aster ericoides*; 2, *Aster diffusus horizontalis*; 3, *Aster Novi-Belgii*, var.; 4, *Aster Novi-Belgii Harpur Crewe*; 5, *Aster Novae-Angliae pulchellus*; 6, *Aster Novae-Angliae ruher*; 7, *Aster Novi-Belgii spectabilis*; 8, *Aster Novi-Belgii*; 9, *Erigeron glabellus*, apparently, but you should have sent some of the long radical leaves. See separate note on Asters.—*Alex. Logan*: 1, *Coelogyne (Pleione) hookeriana*; 2, *Coelogyne (Pleione) lagenaria*; 3, *Coelogyne (Pleione) praecox wallichiana*; 4, *Acropera Loddigesii*. We are not surprised you were puzzled for different importations are very variable in colour.—*C. McKenzie*: *Erica australis*.

A Special Offer to Readers of THE GARDENING WORLD. 25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia

OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF INFORMATION } EVER ISSUED. Size of Encyclopædia: 9 by 11 1/2 inches. 656 Pages

It contains

MANY MAGNIFICENTLY ENGRAVED COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

301097. **COUPON.**

OGILVIE'S ENCYCLOPÆDIA OF USEFUL INFORMATION, AND WORLD'S ATLAS, (Published Price 25s.). 16 COUPONS, AND 6d. WITH EACH.

"Gardening is the purest of human pleasures, and the greatest refreshment to the spirit of man."—BACON.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, NOVEMBER 6th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, November 8th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
TUESDAY, November 9th.—Royal Horticultural Society: Meeting of Committees at 12 o'clock.
National Chrysanthemum Society's Show at the Royal Aquarium (3 days).
Chrysanthemum Shows; two days—Farnham, Kingston, Leeds; three days—Birmingham.
Sale of Dutch bulbs by Messrs. Protheroe & Morris.
WEDNESDAY, November 10th.—Messrs. Harrison & Sons' Vegetable and Farm Root Show at Leicester.
Chrysanthemum Shows; one day—Bodmin, Brixton; two days—Bournemouth, Carlisle, Cheltenham, Chesterfield, Eastbourne, Great Yarmouth, Liverpool; Paris (5 days).
Sale of Dutch bulbs, and special sale of Japanese Lilies by Messrs. Protheroe & Morris.
THURSDAY, November 11th.—Chrysanthemum Shows; one day—Jersey Gardeners' Society, Leighton Buzzard, Hammersmith, Reigate, Spalding; two days—Putney.
Sale of Dutch bulbs by Messrs. Protheroe & Morris.
FRIDAY, November 12th.—Chrysanthemum Shows; two days—Bradford, Eccles, Patricroft, Pendleton and District, Hanley, Sheffield, Crewe; three days—Montauban, Nantes, Algiers.
Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.
SATURDAY, November 13th.—Chrysanthemum Shows; one day—Weston-super-Mare; three days—Havre; four days—Carlsruhe.

FALKLAND PARK, SOUTH NORWOOD HILL.
—Some time ago, being in the neighbourhood, we had the pleasure of making a hurried inspection of the gardens of Thos. McMeekin, Esq., Falkland Park, South Norwood Hill. The trees were in the sere and yellow leaf, yet the beautiful grounds on the crest of the hill were neat and gay with a variety of subjects. Early flowering Chrysanthemums were bright and highly effective amongst the beds and plantations of shrubs, making one wonder why they are not more largely employed when summer is on the wane and the tender bedding subjects are giving out. They have, however, gained immensely in popularity during the past season. Michaelmas Daisies were also most effective and conspicuous. Their value for autumn work is being recognised. St. Dabeoc's Heath, white and purple Heather, as well as the purple and white forms of the Cornish Heath have been the glory of the rockery for many weeks past. Antirrhinums are planted in irregular masses, and the yellow varieties have been more effective than the ubiquitous yellow Calceolaria. Montbretias have been fine, and Helenium pumilum was flowering for the second time. A bed of Heaths contained the above named kinds, with the addition of Erica carnea, Calluna vulgaris, C. v. aurea, C. v. flore pleno and C. v. alba, all of which give much satisfaction. Various perennial Sunflowers added their quota to the display. The same may be said of the Japan Anemone and its white variety planted in large masses. The fruiting powers of Pernettya mucronata is something remarkable. In the ponds the Hawthorn-scented Aponogeton and many Water Lilies were still flowering, including N. alba, N. odorata, N. chromatella, N. marmorata, N. marliacea alba, N. m. rosea and N. alba rosea. Several beds of tuberous Begonias were still gay, notwithstanding the hailstorm a few days previously. Rain and thunder storms often pass up the valley without affecting this

elevated site. A bed of Lobelia Victoriae and tricolor Pelargoniums was still fine. Two beds of Salvia patens, Liliun speciosum Kraetzeri, Petunias, Veronica Traversii, &c., in mixture, were very effective. Tall specimens of Aralia Sieboldi stand out all winter, giving every satisfaction here.

At this point we passed into the hot-houses, which contain something gay all the year round. A fine batch of Begonia Gloire de Lorraine for winter work was just coming into bloom in the propagating pit. The purple, green and gray striped leaves of Tradescantia Reginae are very telling. Orchids are the pets of Mr. A. Wright, the gardener, who showed us seedlings of Cypripedium oenanthum superbum crossed with C. spicerianum; also C. bar-chamber, C. Arnoldiae, Cymbidium eburneo-lowianum and C. lowiano-eburneum. Leea amabilis is always a handsome subject. Uncommon is Stenandra Lindenii with olive and yellow-ribbed foliage. Mr. Wright grows Cyanophyllum magnificum well. Some plants had leaves 1½ ft. to 2 ft in length. One Cattleya house contained a fine batch of Odontoglossum grande in bloom; and the glorious Cymbidium traceyanum was fast approaching that condition. The cool Odontoglossums were in robust health.

The stove always contains a fine assortment of well-grown foliage plants suitable for this structure. Cyanophyllum carried leaves of enormous size; and those of Alocasia thibautiana were 2½ ft. long. A. watsoniana was equally good in its way. The bright red edges of the variegated Pineapple were very handsome indeed. Heliconia illustris rubricaulis has found its way here. The noble leaves of Anthurium warocqueanum measured 3 ft. 3 ins. in length; while those of A. crystallinum and A. intermedium were proportionately large. The striped foliage of Maranta sanderiana attains handsome dimensions here. The spiny petioles of Chamaerops palambaricus have a forbidding aspect. Specimens of Elaeodendron orientale, 3½ ft. high, were very ornamental indeed. Cattleya dowiana aurea suspended from the roof in quantity is now in bloom.

We never cease admiring the long cool corridor connecting the range of seven new houses together. Something is flowering in it at every period of the year. The climbers on the back wall and on the rafters are the leading feature of the corridor all the year round. The large blue flowers of Lasiandra macrantha have been grand. The white wreathed, drooping sprays of Solanum jasminoides take the eye of every visitor. There were tall Heliotropes filling the house with fragrance, tall Pelargoniums, Fuchsias, Datura sanguinea, with huge red trumpets, Begonia metallica 6½ ft. high, Bougainvillea sanderiana, Begonia ascotensis, B. fuchsioides and others of that type, 10 ft. high, White Plumago, Cassia corymbosa, and many other showy and interesting subjects. The corridor opens into a conservatory filled with a great variety of flowers delighting in a cool, airy structure. The flowers of Abutilon Schwartzii are white, with a green centre and handsome. Many fine varieties of tuberous Begonias, single and double, have been raised by Mr. Wright.

Passing into one of the Orchid houses we noted seedlings of Cypripedium lath-chamber, a very suggestive and very ambiguous combination of names. Amongst flowering subjects we noted Vanda caerulea, V. amesiana, Cypripedium chamberlainianum, C. crossianum, large trusses of Dendrobium formosum giganteum, D. Dearei, and D. Phalaenopsis. Angraecum schottianum is a uncommon species, and Oncidium varicosum Rogersii is always

ORCHIDS of the highest quality, every plant guaranteed true to name, from 2/6 each. Please send for free list.—P. McARTHUR, The London Nurseries, 4, Malda Vale, London W.

pretty and interesting. Some fine pieces of *Nepenthes* adorn the roof of this house. The glory of another house close by was upheld by *Cattleya dowiana aurea*, *C. Harrisoniae*, *C. gigas*, *C. gaskelliana*, *Laeliocattleya elegans schilleriana*, and the fragrant autumn-flowering, showy *Oncidium tigrinum*. Effective also are *Oncidium excavatum grandiflorum*, and *Laelia Perinii superba*, with an intense purple lip.

Mr. Wright is not only maintaining the high character of the place, but improving upon it, and making additions to the subjects grown out of doors and under glass. The drought of summer is severe upon this hill top, but the green sward is now well established and trimly kept.

Royal Gardeners' Orphan Fund.—At a meeting of the committee of the Royal Gardeners' Orphan Fund held on the 29th ult., the receipt was announced of a bequest of £457 5s. 11d. from J. W. Thomson, late nurseryman at Haywards Heath; also the following donations for which the special thanks of the committee were accorded:—Rev. A. Lowe, Rangemore, Burton-on-Trent—Proceeds of a collection at a harvest festival, £6 1s. 6d.; Sandringham Cottage Garden Society, £5 5s.; Wimbledon Horticultural Society, sale of flowers, £5; Uckfield Chrysanthemum Society, sale of flowers, £3 3s.; J. Selway, Betteshanger, £3; per T. Roberts, local secretary, Ramsgate, £2 1s.; Forest Hill Horticultural Society, £1 10s.; Hesse and District Horticultural Society, £1 4s. 3d.; Bradford Paxton Society, £1 2s. 6d.; C. Herrin, Maidenhead, £1; G. Carpenter, Byfleet, 10s.; J. Dunkin, Warwick, 10s.; and M. Kneller, Basingstoke, 8s. It was decided to hold the annual meetin at Anderton's Hotel, Fleet Street, early in February, when the election of children to receive the benefits of the fund, will take place. The necessary nomination forms may be had on application to the secretary.

Chrysanthemums in a Drapery Establishment.—As an indication of the wonderful position to which the development of the Chrysanthemum is bringing us to, we notice this week that one of the largest Midland drapery and furnishing houses is announcing prizes of £20 in value, distributed in four classes for eighteen, twelve, and six cut blooms respectively. These will, we understand, be staged in the grand suite of windows in Bull Street, Birmingham, and will undoubtedly form a vast attraction for the multitudes of folks continuously passing there. The dates of the exhibition are November 30th to December 3rd, and the entries close November 25th. There are no entrance fees, and it is not necessary that the varieties of bloom shown should be distinct. We do not observe in the schedule any restriction as to amateur or professionals, and finally it is worthy of further observation that the railway companies will run special excursion trains at reduced fares in that particular week.

Dundee Chrysanthemum Carnival.—This popular northern fixture takes place on the 25th, 26th and 27th inst., and a telegram just to hand announces that Sir William Harcourt has very graciously consented to perform the opening ceremony. The popular patron of the Society, Sir John Leng, M.P., and the entire council are to be congratulated upon the honour which Sir William will undoubtedly confer on the Dundee Chrysanthemum Society, an honour which nevertheless is fully merited by the progressive character of its management and membership. A very full programme has been arranged for the delectation of the flower-loving public of this city of jute and hessian and the surrounding town-ships of Newport, Tayport, Broughy Ferry and so forth; and we are also advised of a probable excursion of delegates from the sister society in Edinburgh on this auspicious occasion. The council have secured the services of one of the leading London bands, consisting of lady musicians and cyclists, and the whole event promises to go off with the very greatest eclat. Walker S. Melville, Esq., is the worthy president of the society, and Mr. William P. Laird, of the famous Nethergate firm, is the indefatigable secretary. Some extensive miscellaneous exhibits are promised.

Death of Mrs. Cornelia Rachel Amys.—Many gardening friends will sympathise with Mr. Amys, who has just lost his wife, who was laid to rest in the quiet little churchyard at Hamble amid every token of esteem and regret on Thursday, October 21st. Mrs. Amys' eyesight entirely failed her fifteen years ago. She was much respected by everyone who knew her. Mr. J. Amys has been gardener and bailiff at Hamble Cliff for many years.—A. O.

Presentation at Glasgow Botanic Gardens.—Mr. James Rourke was presented, on the night of the 29th, with a handsome timepiece, on the occasion of his marriage, by the curator and staff of the Botanic Gardens. The presentation was made in the old classroom, where all the staff were assembled to witness the ceremony. Mr. Dewar, in making the presentation, referred in eulogistic terms to the high appreciation in which they all held Mr. Rourke during the short period which he was with them, and he had no doubt, inferring from the past, that he would long continue to deserve their highest respect, and grow more and more in their esteem. He wished Mr. Rourke and his young wife long life to enjoy the useful gift, as well as the instructive lessons it teaches, and hoped that in the course of time it would be yet another added to the long array of "Grandfather's Clocks." Mr. Rourke replied in appropriate terms, and Mr. Sherry asked a vote of thanks for Mr. Dewar for his kindness in making the presentation.—Gamma.

Princess Mary Adelaide, Duchess of Teck, more familiarly known as Princess Mary, died suddenly at her residence, White Lodge, Richmond, Park, Surrey, at 3 o'clock on the morning of Wednesday the 27th ult., at the age of 64. Last May she underwent a surgical operation for an internal complaint, from which she recovered. On the Monday previous to her death she felt symptoms of her old malady returning, and on Wednesday night at 12 o'clock her physicians after much consultation resolved upon a second operation in the hope of saving her life, but she suffered also from a weak heart and died two hours after the operation. She died in the presence of her husband, her son Prince Alexander and her only daughter the Duchess of York, more familiarly known as Princess May. The Duchess of Teck was well known as the leading organiser of all charitable schemes for helping the needy in her neighbourhood, including Richmond and Kew; and by her geniality and good nature endeared herself to a wide circle of friends, who cannot but regret her sudden demise. Princess Mary was a keen lover of flowers, of which she had a wide knowledge, and was often present at exhibitions many of which she opened. By permission of the Queen, she was buried at Windsor on Wednesday last amid much regret.

Ealing Gardener's Society.—On Tuesday, the 19th ult., the members of this society held a very successful meeting in the Municipal Buildings, Ealing, Mr. C. B. Green, the chairman, presiding. The occasion was a paper by Mr. Geo. Wythes, of Syon House Gardens, Brentford, and the subject was "Profitable Strawberries." The large, electric-lighted room was full to overflowing, many of the members being unable to find seats; none, however, being lukewarm in the reception which was accorded Mr. Wythes, who dealt with his subject in a fresh and vigorous way, even going so far as to quote criticism against himself. Mr. Wythes then strongly advocated the annual system of culture, and claimed—in opposition to some Press critics—that not only was the quality of the fruit thereby enhanced, but that the system in itself was more economical and therefore more profitable. Mr. Wythes also gave, in some detail, the methods whereby he obtained these results, and otherwise afforded much useful and valuable information, which the subsequent spirited discussion showed was acceptable generally and on all-fours with the best practice in the best gardens. Mr. Wythes received an enthusiastic vote of thanks, which he generously acknowledged. In addition to the paper by Mr. Wythes, there was an excellent exhibition of Apples, two dishes (one dessert and one kitchen), the competition being very keen—sixteen entries. The premier award was taken by Mr. W. J. Simpson, The Gardens, The Beeches, East Acton, with splendid samples of Ribston Pippin and Gloria Mundi. Six prizes were awarded.

Mr. H. J. Jones has now fully recovered from his recent illness, and is attending to his duties with as much enthusiasm as ever. He is full of his favourite Chrysanthemums at present.

Royal Horticultural Society.—The next fruit and floral meeting of the Royal Horticultural Society will be held in the Drill Hall, James Street, Westminster, on Tuesday, November 9th, at one to four p.m. At three o'clock a lecture on "Roots" will be given by Professor F. W. Oliver, D.Sc.

Aberdeen Chrysanthemum Society.—The directors of the newly formed Chrysanthemum Society, met on the 1st inst. in the secretary's office when reports of a very encouraging nature were presented. There has never been so good an appearance for blooms of our autumn queen in this district; and if some of our reputed best growers do not show the white feather and shirk coming forward for fear of being beaten by what they might term "lesser lights," there should be a very good display by the 26th and 27th November. In addition to a long list of special prizes circulated some time ago, other two Silver Medals by Messrs. G. Stephen and Conway, and a valuable Orchid by Messrs. Sander & Co., were allotted for competition. The directors are likely to secure the services of a gentleman of great eminence to perform the opening ceremony, when the elite of Aberdeen should turn out in their hundreds. It would surely be a pity if the efforts put forth to raise such a show in Aberdeen were not to get that amount of public support the movement deserves. A flower show in winter is something to be appreciated, and the Chrysanthemum by the aid of a little artificial treatment in skilful hands is a sight worth seeing. It might be mentioned that the directors have been very fortunate in securing the services of Mr. Norman Davis as judge.—A. G.

ORCHID NOTES & GLEANINGS.

BY THE EDITOR.

Cypripedium norrisianum. *Nov. hybr.*—The seed parent of this hybrid was *C. purpuratum*, and the pollen bearer *C. leeanum*, itself a hybrid. The colours of the flowers are so rich as to give one the impression that *C. oenanthe superbum* must have been concerned in the cross. The bloom is intermediate in size between the parents, and the dorsal sepal is rolled back in the same characteristic way as *C. purpuratum*. It is of a rich crimson purple on the lower half, the colour running into lines along the veins towards the apex, which is white. The spreading petals are heavily ciliated on both margins, and of a rich shining claret colour, with black veins, paler near the base and spotted with purple there. The lip is of a dark brownish-purple in front, and paler elsewhere. The hybrid was raised by F. A. Rehder, The Avenue, Gipsy Hill, S.E., about five or six years ago, and is now flowering for the first time. It is named in compliment to the gardener, Mr. Norris.

Cypripedium radiosum Lord Pirbright. *Nov. hybr. var.*—The parents of *C. radiosum* were *C. spicerianum* and *C. lawrenceanum*. Several varieties have made their appearance in a batch of seedlings which we noted in the collection of Mr. P. McArthur, 4, Maida Vale, London, W., last week. The dorsal sepal is greenish-yellow on the lower half, and white on the upper. The spreading petals are golden-yellow, with small black spots in lines along the course of the veins. The lip is brownish-purple, but paler than the type, which has green petals, the contrast being well-marked. The staminode is soft purple. It is, therefore, a very pretty variety.

CHRYSANTHEMUM NOTES.

THE SWANLEY NURSERIES.

MESSRS. H. CANNELL & SONS have for long been associated with the cultivation and improvement of the Chrysanthemum, and from their busy establishment at Swanley many fine varieties of the noble flower have issued from time to time. The list of varieties now grown to supply the needs of the world-distributed clients of the firm is so comprehensive as to assume formidable proportions, for there are no fewer than 1,400 of them, representing

all sections from the pretty but unpretentious single to the stately incurved, and the popular Japanese.

In the show house, which is a spacious building, span-roofed in form, and measuring 165 ft. in length by 25 ft. in width, a magnificent display awaits the visitor, for there are upwards of 3,000 plants in full bloom arranged with that simplicity of design that is the highest art. The first thing that struck us was the exceeding dwarfness of the plants as a whole. Some tall varieties we saw of course, but only a few. As an instance of this we may quote Edith Tabor, which was not a whit more than 4 ft. in height, and carrying good blooms too.

Just inside the door a batch of that grand form Kentish White met our gaze, the plants dwarf and sturdy, and the flowers large and handsome.

As the Messrs. Cannell make a point of year by year buying in the best novelties from all growers of note the collection is well up-to-date, and we observed several new varieties of great promise, of which some were of continental origin, whilst others have been evolved in various parts of greater Britain, as well as in the territories belonging to Britannia's sturdy brother Jonathan.

Among the Japs we noticed Souvenir de Molines in fine condition. This is a handsome flower raised by M. Calvat, of Grenoble, France, and closely approaching M. Chénon de Léché in colour, but has narrower florets with a more decided droop. Werther, crimson-magenta, with a silvery-rose reverse, and with prettily upturned tips to the florets is also handsome. Mrs. Ernest Cannell, sent out this year, is built much like Reine d'Angleterre, but is not so coarse, and the colour is rather richer. Secrétaire Fierens should also make a name for itself. The colour is bronze-yellow tipped with bronze-crimson. Mrs. W. J. Tibbs, which may be described as a white Lilian Bird, is one of the finest of the Australian seedlings. Chatsworth, which hails from the same part of the globe, should not be lost sight of. The colour is pink striped with carmine. Mrs. F. A. Bevan is a grand rosy-pink variety with florets gracefully reflexing throughout their greater length, but upturned at the tips. Mrs. C. F. Payne is another Swanley seedling of much promise. The blooms resemble those of Mrs. J. Lewis in build, but exhibit a bright shade of buff yellow, the lower florets being prettily flaked with crimson.

Of varieties of older standing there were some remarkably fine examples of successful culture. Swanley Yellow (syn Sunflower) Phoebus, Dorothy Seward, Le Moucherotte, Australian Gold (of which there was a fine batch), Milano, Mrs. Blick, Mrs. A. G. Hubbock, Mrs. J. Lewis, Eda Prass, Mrs. Hume Long, Pride of Madford, and Miss Annie Gaunt were all first class.

Incurved Japanese, as may be supposed, were very strong. N. C. S. Jubilee was represented by a number of grand blooms scattered about the house. Mrs. R. D. Douglas is of American origin and bears the stamp of promise. The colour is buff with chesnut brown suffusion, and a buff reverse. A single bloom of Mrs. H. Weeks on a plant obtained from an April struck cutting, and accommodated in a 7-in. pot was a marvel of beauty and certainly the best specimen we have yet seen this season. Duke of Wellington is a charming form, exhibiting a shade of rosy salmon shading to buff in the centre. Louise, Topaze Orientale, and Robert Powell were all in first-rate order. Buff Globe is a sport from Good Gracious, and is a first-rate buff variety with the same habit as the type.

The incurves were likewise in capital condition although really good novelties in this line are few and far between. Certainly the best of them is Lady Isabel, with its huge blush-white blooms, that will certainly have to be reckoned with on the show board this year. Ma Perfection was strongly in evidence, but the blooms although large take too much dressing before they can take their places with other incurved varieties. Standard sorts were in good condition throughout, and special mention may be made of Robert Petfield, Mrs. R. C. Kingston, Miss Dorothy Foster, Lord Wolseley, Mrs. Heale, Baron Hirsch, Miss Haggas, and C. H. Curtis.

Hairy varieties are not invested in so strongly at Swanley, but nevertheless the samples of them that were on view were substantial. Hairy Wonder does as well here as could be desired. Louis Boehmer is also well grown. The chief novelty is a yellow

Louis Boehmer, known as Leocadie Gentil. The florets are somewhat narrower than in Louis Boehmer, but otherwise the build is the same.

The chief representative of the Anemone section was that grand Japanese form Mrs. Hugh Gardener, of which some excellent flowers were on view.

Single varieties have been favourites with the Messrs. Cannell for many years, and the collection is as complete as unwearied care and selection of the best forms can make it. Quite recently a batch of grand seedlings from Miss Mary Anderson has been raised: and included in it are several forms that are bound to make their way. Blanche Chapman is one of the best of these. It is very free, and bears large flowers with long pearly-pink ray florets. Madge is another very fine form, but the ray florets in this case are terra-cotta in hue. Freda bears a multitude of smaller white flowers. Mrs. E. Staines has two or three rows of ray florets, and although this fact prevents it from being regarded by the Messrs. Cannell as the best type of single flower, it is withal very useful and pretty. The colour is white. King of Siam exhibits a shade of deep crimson with a high full disc, that, given a bright day, looks exceedingly rich and showy. Miss Rose is well known as a most valuable variety for conservatory decoration. Its dwarf bushy habit and great floriferousness combine to render it most suitable for growing, either as specimens or for cutting from. The Star, a seedling from it, raised at Swanley, possesses both these invaluable qualities in an equal degree, but the flowers are larger, and of a richer rose shade. Grown side by side with the type, the improvement was most apparent.

Jane is another semi-double than which it would be hard to imagine anything more pretty and graceful. The long, white, drooping, and rather narrow ray florets, and the large size of the flowers are sufficient to insure its popularity.

"Come and see," the motto of the Swanley firm, will bring much pleasure to those acting upon it, for the Messrs. Cannell have many good blooms other than those mentioned in these notes.

RYECROFT NURSERY.

Mr. H. J. Jones, Ryecroft Nursery, Hither Green, Lewisham, has as large a display of Chrysanthemums or larger than on any previous occasion. The large plants number 7,000, while these are supplemented by 2,000 dwarf ones, with large flowers, in 6 in. pots. Two large span-roofed houses of equal size are crowded with plants in different stages of advancement. One house is now at its best, while the later one will continue the display for weeks to come. Some smaller houses are filled with the latest hatches intended to bloom in December. Mr. Jones raises many seedlings every year, those sown in January last being already in full bloom or nearly so. The plants are dwarf and already many of them have been marked, while others have been honoured with a name.

Japanese varieties are again in the ascendant as might be expected, and by far the most conspicuous in all the houses. In the later of the two large houses the plants are stood upon the floor, arranged in a continuous undulating bank from end to end of the house on either side of the central winding pathway. The rose and white drooping petalled Mme. G. Bruant recently certificated is here. Frau Agatha Kesson is a Japanese seedling of this year, with dense heads of great depth and bright rose. Pride of Ryecroft is a clear yellow sport from the valuable commercial variety Niveus, and will be as valuable as the type. The golden-yellow Modesto, and the charming soft lavender N.C.S. Jubilee will be greatly sought after this year. The bright yellow Soleil d'October is one of the finest October varieties extant, for though at the October show, the blooms are still good. In Mrs. G. W. Palmer we have a fine sport from Mrs. C. Harman Payne, of a claret-red with bronzy reverse, and as dwarf as the type. The Yellow Mme. Carnot, otherwise G. J. Warren, has done well everywhere this year, and is bound to prove a first-class exhibition variety. The long drooping and spreading florets ensure an immense head. W. Wright is notable for the great width of its rosy-purple florets. Western King, an incurved Jap., is reckoned as the standard of perfection in America. The pure white incurved florets have a satiny gloss on the back; and every bud comes good, so that it is, indeed, an acquisition.

Croda is of the same type as E. Molyneux, having

been indeed raised between that and G. C. Schwabe. The broad florets are crimson with an old-gold reverse. Robert Powell, an incurved Jap, is bronzy with an old-gold reverse, and has already taken two certificates. Lady Hanham is a sport from Vivian Morel, being intermediate between that and Charles Davis. No two agree about the colour, which we reckon salmon-pink with a shaded yellow centre, and of the same magnificent proportions as the type. The silvery grey or pink heads of Australia are like cannon balls, and here in fine form. Rayonant is an improvement upon Lilian Bird, with slender, thread-like, whorled, white florets. J. Fraser is a Japanese variety raised by Mr. Jones last year, but there being no stock, it could not be put into commerce. The florets are broad and bright, bronzy-gold, the outer ones of great length and drooping. The incurved Japanese Lady Byron seems to do well with most people, the pure white blooms being grand. A clear yellow Japanese sort is S. A. le Prince Hussen Kamil, still fine, though at the October show. A large, bright, dark yellow is Mrs. Fisher, the flower being well built up.

The broad, bright yellow florets and the compact build of the bloom of Phoebus make it a favourite with exhibitors. Autumn Bride is a Japanese variety of American origin, and develops large, creamy-white florets of great width. The above constitute only a few of the hundreds of varieties in the late house, and which will maintain a display for weeks to come. Many of the seedlings are not sufficiently advanced to be named; but we noted a grand yellow.

In the other large house the bulk of the varieties are very nearly at their best. There is a central stage in this house and side benches, so that the visitor looks on the side of the great banks of bloom instead of down upon them. A very unusual colour is presented by Herbert Cutbush, a Japanese variety, striped with red on a yellow ground; it is of large size. Mrs. Charles Cater is an incurved Jap. of a golden yellow, and built on similar lines to Robert Owen. The pure white, incurved and glossy florets of Beauté Grenobloise remind us of Western King, the American standard of perfection, and belongs to the same section. The florets of Crown of Gold are twisted and curled in a very interesting way. Mrs. Cotesworth Bond is a huge Japanese variety, pink in colour and very full in the centre. The blooms of Lord Justice Lopes are of a pleasing silvery pink. The creamy-yellow blooms of Mrs. C. Orchard are choice and telling on account of their handsome proportions and broad florets. Mrs. L. Humphrey is a primrose-yellow of great size and neat, refined form, with narrow, closely arranged florets and very full in the centre. It was raised from seeds last year by Mr. Jones, and is named in compliment to the wife of the Chrysanthemum grower. Master H. Tucker is a broad-petalled crimson variety of great merit. The pure white flowers of Mrs. Richard Jones are also very choice. We have already seen Mr. G. Hubbock elsewhere, and can testify to its popularity with these who have tried it. The build of the bloom is that of the true Japanese type; and the narrow, closely arranged florets are of a glowing Indian red. It is almost certain to be well-represented on the exhibition table at the forthcoming shows. Still another dark flower presses itself upon our notice in the shape of the dark crimson Mrs. J. J. Kerslake. The value of Simplicity has already been recognised by more than one certificate being awarded it. Miss Shear is one of this year's seedlings raised by Mr. Jones. It is similar in form to Phoebus, but the florets are narrower and of a much darker yellow.

The incurved or Chinese race of Chrysanthemums is not being neglected here. A true incurved form is Emile Nonin, with crimson florets and a reddish-bronze reverse. The plant is dwarf, the bloom of medium size and neat, and is an acquisition to its class. Honorine Chapius is one of the most distinct things out, in the incurved florets being violet with white edges. The incurved rosy-bronze Mons. Desblanc is building up well. Even more handsome are the large, and well-built pure white flowers of Lady Gormaston, which will do much to restore the status of the incurved race. The pure white Ma Perfection is also included amongst this type.

Very chaste and choice is Mrs. Caterer, an Anemone with pure white disc and ray. Charles Tutt is also a new Anemone, with quilled rays and a

high centre, wholly pure white. An equal number of meritorious kinds could be added.

EARLSWOOD NURSERIES, REDHILL.

London, enswathed in the grimy folds of an autumnal fog, enshrouded in a darkness which, like that of the Egyptians, might be felt—a city as of the dead! The fair hills of fair Surrey bathed in sunshine, and tipped with a thousand gold and russet tints of rural autumn, smiling beneath the mellow touch of a benignant autumn! This is a contrast sufficiently striking, and yet it is one that must occur many times during the roll of the seasons. At any rate, Mr. Wells, of Earlswood fame, has much to congratulate himself upon in having his lines cast in such pleasant places. Certainly the present year has been exceptionally kind to the people of Redhill and district, for we found that Scarlet Runner Beans were still being gathered from the open, and Dahlias and Chrysanthemums, also in the open, blooming uninterruptedly. In a piece of ground, under the protecting lee of a hill, which Mr. Wells has planted with early flowering Chrysanthemums, we found that grand white form, Queen of the Earlies, still producing magnificent flowers, an example which other varieties have not been slow to follow.

It was the pot plants safely esconced in the houses, however, that rivetted our attention. The large span-roofed house contained an enormous wealth of big blooms, and here and there especially fine samples called for particular notice. Speaking of the flowers as a whole, we may say without exaggeration that Mr. Wells has never been in better form than he is this year. The plants all round are good, healthy, and strong, the impress of superior cultivation being everywhere manifest.

Of novelties there are several that are either good already, or promise well for the immediate future. "Yes," said Mr. Wells, in answer to a question, "M. Calvat, of Grenoble, has sent out many good things in his time, but this year he has beaten the record." Papa Veillard is one of the best of them. It bears a close resemblance to President Borel both in build and colour, but exhibits a rather lighter shade. N.C.S. Jubilee is indeed a noble flower. It may be grown to large size, as was well demonstrated by the numerous grand blooms of it scattered about the house. The florets are broad massive, deeply keeled, and incurve strongly. The colour is a beautiful mauve. There is nothing in general cultivation that is at all like it in colour, and taking it altogether it is one of the best incurved Japs ever introduced. In Madame Ferlat we have a flower that is not unlike Lady Byron, being of great depth, and of the same colour. The bloom is rather closer in build, however. Directeur Liebert is a huge Japanese variety with very long florets. The colour is a bright rose-purple. Mlle. Luci Faure bears a certain resemblance to Mutual Friend in the contour of the florets, and like the latter variety is white, but the much greater depth of the bloom renders it totally distinct from aught else.

In Mrs. J. Butters, raised by a Camberwell grower, we have a very curious and pretty flower that can scarcely fail to become popular. The florets are split up in such a way as to suggest a stag's horn, and each division being narrowly linear renders the likeness more striking. The flower is of medium size and white. Mr. Wells is of opinion that it will prove a good decorative variety, and there is no doubt that it would be a break away from anything we have. Madame Edmond Roger must not be forgotten among the list of novelties. The peculiar shade of green-white which it exhibits may cause some to describe it as a monstrosity, but there is no denying the noble appearance of the flower, which is of large size, and has incurving florets of medium length. Mr. Wells has some capital blooms of it taken on second crown buds, and we were most favourably impressed with it.

Julian Hilberd, a cream coloured Madame Carnot, was promising well when we saw the plants, but we were too soon to be able to say anything definite about the variety as yet. Georgina Pitcher comes very close indeed to Edith Tabor, but the latter variety is of such notoriously tall habit that the dwarfer stature of Georgina Pitcher is well worthy attention. In addition to this the latter variety is a really good doer. G. J. Warren, although it may not be exactly a novelty, is yet sufficiently new to warrant a note. We were prepared for and expected

something good by reason of its having originated from that grand white, Madame Carnot. Its cultivation has been attended with varying success however, for while some of the flowers exhibit clearly enough the Madame Carnot build of bloom, others run off into the ragged style seen in such varieties as Mrs. Hume Long, which while it may have a few admirers does not find one in us. Mr. Wells has some first rate blooms of G. J. Warren. Madame G. Bruant, was also represented by some capital samples on second crown buds. We fully described this variety on the occasion of its receiving certificates from the Royal Horticultural Society, and the Royal Horticultural Society, on October 16th. On second crowns this variety takes a lot of beating. Madame Philippe Rivoire, which received a First-class Certificate from the N.C.S. on October 25th, is undoubtedly a great acquisition to the ranks of white Japanese varieties, and we were much taken with it as seen at Earlswood.

Coming to standard varieties we are pleased to be able to record our admiration for the samples which Mr. Wells had on view. Madame Carnot was rather tall, but bore first-class blooms. Phoebus, Edith Tabor, Le Moucherotte, M. Chénon de Léché, Thos. Wilkins, Mrs. J. Lewis, Mutual Friend, and Australian Gold were all in capital condition. Duchess of Fife, Thos. Bevan, and Mrs. Airdrie were standing side by side, and even a close comparison of the blooms could not discover any real difference between them. If these names are not synonyms of each other they ought to be.

Incurved blooms were showing signs of great promise. Such varieties as Baron Hirsch, D. B. Crane, Perle Dauphinoise, John Lambert, and Miss D. Foster were all good. Lady Isabel was somewhat of a surprise to us. This variety has been sent out by Mr. Wells as a Jap, and it undoubtedly is so, upon the first bud, but upon the second crown it develops a grand bloom with regularly incurving florets that want but little dressing to constitute a tip-top incurved variety. If the second crown buds are constant thus we shall have a bloom that for size will entirely supersede Queen of England. Topaze Orientale, on the other hand will scarcely make a true incurve, no matter how it is treated. Both colour and size are good, however.

The practice of growing exhibition plants in 6 in. and 7 in. pots may be said to have been introduced by Mr. Wells, and at the present day this method is followed by him most successfully. The cuttings are struck in March, stopped once, and put into their flowering pots by the beginning of July. It is really wonderful to see these comparatively small plants carrying blooms that for size and colour compare favourably with those borne by the plants in 10 in. and 12 in. pots. Of all the varieties which may be successfully grown thus, none is a more conspicuous success than the beautiful white Souvenir d'une Petite Amie. Madame Gustav Henry also comes well. Phoebus, Mrs. J. Louis, Parachute, Jno. Shrimpton, Australian Gold, Modesto, M. Chénon de Léché, and Louise are other well-known varieties which respond readily to this kind of treatment. In the show house at Earlswood, these dwarf plants are staged four or five deep next the wall of the house, the taller ones finding a place in the centre.

In conclusion we may well bestow a word of praise upon the general arrangement of the plants which admitted of each plant and each bloom having room to display its charms to visitors, of which there was none more interested than—G.

NOTES FROM DUNOON.

I AM agreeably surprised to find that my "Notes from Dunoon" have stirred up some enthusiasm in my respected friend, Mr. James Gibson, for, although he enters the lists against me as a first-class critic, I do not mind, because I am quite sure he will not be unnecessarily severe. But Mr. Gibson is too serious; he has placed too liberal a construction upon the disputed phrase; he is evidently labouring under a misapprehension.

When I stated that "amateurs are not in evidence," I was not making a general but a specific assertion, an assertion which I believe to be in strict accordance with the facts. I could not say otherwise—I could not speak of that of which I had no cognisance. If, therefore, Mr. Gibson will read my

remarks in connection with the heading of the "Notes," and in the spirit in which they are penned, I feel sure that the cause of difference will immediately disappear.

Mr. Gibson, I must say again, has given too wide an import to a statement made by the way; he has, in truth, taken it out of the local category, and placed it in the national, a position it was never intended to hold.

Facts, I know, are stubborn things; but before we can argue we must first agree upon the "facts." Mr. Gibson then goes on to repine that "one could not expect a Saxon to freely admit that canny Scots are great gardeners." Perhaps not, *en masse*. But I am one of those who take a cosmopolitan rather than a national view, and therefore am willing to give credit wherever credit is due. Moreover, Scotsmen are among my best friends—all hail to Scotia's sons! As to the amateurs of Ayr I can say nothing, except that Middlesex men can hardly be *lighter*; but, joking apart, I do know a professional Ayrshire man whose abilities as a cultivator and whose skill as a gardener I have never seen surpassed. Mr. Gibson, however, winds up somewhat ironically concerning an alleged "discovery"; but if he will take the trouble to look again at p. 102 he will find that I wrote that—"according to local tradition Mary Campbell or 'Highland Mary' was born here," *i.e.*, Dunoon—hence the monument. For further information I must refer my friend to the editor of the *Dunoon Observer* or the *Ayrshire Standard*.

It is recorded in Shakespeare's "Julius Cæsar" that Brutus and Cassius were great friends. I feel somewhat in the position of the latter when he exclaimed (substituting one name only for another) that:—

"A friend should bear his friend's infirmities,
But Gibson makes mine greater than they are."
—C. B. G., Acton, W.

PLANTS RECENTLY CERTIFICATED.

THE awards mentioned hereunder were made by the Royal Horticultural Society on the 26th ult.

Orchid Committee.

LAELIA PUMILA MAGNIFICA, Nov. var.—The sepals and petals are very broad and deep purple. The tube of the lip is white externally, and yellow internally, while the lamina is rich crimson-purple and of great size. This grand variety will raise the reputation of *L. pumila* considerably, for it is in no way inferior to *L. p. praestans*. Award of Merit. Messrs. W. L. Lewis & Co., Southgate, N.

CATTLEYA OLIVIA, Nov. hybr.—The seed parent of this beautiful hybrid was *C. Trianaei*, and the pollen bearer *C. intermedia*. The sepals and petals are of a delicate blush. The tube of the lip is even more delicate, while the lip is of a soft mauve. The throat and disc of the lip are of a soft lemon. It is a chaste and charming *Cattleya*. Award of Merit. Messrs. J. Veitch & Sons, Ltd., Chelsea.

CATTLEYA MELPOMENE, Nov. hybr.—This was raised from *C. Forbesii* crossed with the pollen of *C. Mendelii*. The sepals and petals are soft purple, the latter being slightly folded along the midrib. The lip is short, curved and very pale blush; its lamina is crisped, undulated, and blush with a golden disc. The size of the flowers is intermediate between the parents. Award of Merit. Messrs. J. Veitch & Sons, Ltd.

ODONTOGLOSSUM CRISPUM SUNLIGHT, Nov. var.—The flowers of this handsome variety are of great size, with broad, overlapping segments, the ground colour of which is pure white. There are some rich, reddish-purple blotches on the sepals, and more numerous small spots on the petals. Award of Merit. R. Brooman White, Esq., Arddaroch, Garelochhead.

LAELIA PURPURATA MRS. R. I. MEASURES, Nov. var.—The sepals are white. The petals are oblong-elliptic, veined with purple, almost white at the base and intensified towards the apex. The lamina and side lobes of the lip are crimson-purple. It is a striking variety, remarkable for the shortness of its petals. Award of Merit. R. I. Measures, Esq. (gardener, Mr. H. J. Chapman), Cambridge Lodge, Camberwell.

LAELIA LONGIFES.—In this we have a gem in minia-

ture. All parts of the plant are small, but the flowers are charming, and the plant is worthy of being grown as a pet. The sepals and petals are deep purple, fading almost white at the base. The lip is warm orange forming a fine contrast to the rest. Botanical Certificate. Messrs. W. L. Lewis & Co.

LAELIA PUMILA ALBENS. *Nov. var.*—The flowers of this choice variety are white, with crimson-purple blotches on the lip. Award of Merit. Fred Hardy, Esq. (gardener, Mr. T. Stafford), Tyntesfield, Ashton-on-Mersey.

CATTLEYA HARDYANA MAGNIFICA. *Nov. var.*—In this new variety we have darker and richer flowers than the type, and very handsome. Award of Merit. Fred Hardy, Esq.

CATTLEYA BOWRINGIANA WILD'S VAR. *Nov. var.*—This grand form bore a large raceme of flowers of a darker purple and larger size than the type. Award of Merit and cultural commendation. C. K. Wild, Esq. (gardener, Mr. R. Pallant), Bramcote, Weybridge.

CYPRIPEDIUM HAYNALDO-CHAMBERLAINI. *Nov. hybr.*—This is the first hybrid in which *C. chamberlainianum* has been used as a parent. The dorsal sepal is green at the base, white upward and lined purple. The petals are spotted purple on a green ground. The lip is rosy-purple. Award of Merit. E. Ashworth, Esq. (gardener, Mr. Holbrook) Harefield Hall, Wilmslow, Cheshire.

Floral Committee.

MARATTIA BURKEI.—In the way of Ferns nothing more distinct has been put on the committee table for a long time than *M. Burkei*. It is totally unlike any *Marattias* we have hitherto seen. The fronds, in the present state of the plant at least, are nearly orbicular, and tripinnate, with deltoid, dark glossy-green segments, only $\frac{1}{8}$ in. to $\frac{1}{4}$ in. in length. The stipes is covered with pale points that are not, however, spiny. It is the prettiest of the *Marattias* in cultivation. First-class Certificate. Messrs. J. Veitch & Sons, Ltd.

GESNERA AMABILIS.—This garden form produces pyramidal panicles of gracefully drooping, tubular, white flowers, marked with a golden blotch in the throat. The leaves are bronzy. Award of Merit. The Duke of Sutherland (gardener, Mr. Peter Blair), Trentham Hall, Stoke-on-Trent.

NERINE LADY BROMLEY.—The flowers of this most remarkable variety have wavy, scarlet segments, with a blue midrib. The stamens and style are also blue. The latter colour is unique in the genus. Award of Merit. H. J. Elwes, Esq. (gardener, Mr. Lane), Colesborne Park, Andoversford, Gloucestershire.

NERINE COUNTESS' BATHURST.—Flowers blush, with deep rose midribs to the segments, and pink stamens. Award of Merit. H. J. Elwes, Esq.

NERINE LADY LLEWELLYN.—Segments broad, undulated, and of a rich carmine, giving the flowers an imposing appearance. Award of Merit. H. J. Elwes, Esq.

NERINE LADY MARY SHELLY.—The spreading, wavy segments in this case are pink with darker midribs. Award of Merit. H. J. Elwes, Esq.

NERINE LADY DORINGTON.—This has flat segments, merely recurving at the tips, and pink, with deep rose or red midribs. Award of Merit. H. J. Elwes, Esq.

NERINE LADY LAWRENCE.—This and *Lady Bromley* are the most distinct of the whole batch of seven *Nerines*. *Lady Lawrence* has wavy, narrow, orange-salmon segments, making the flowers decidedly distinct and charming. Award of Merit. H. J. Elwes, Esq.

NERINE LADY LUCY HICKS-BEACH.—The wavy segments in this case are of a glowing carmine-crimson, and highly attractive. No more distinct and striking batch of seedling *Nerines* has before been placed on the table. Award of Merit. H. J. Elwes, Esq.

CHRYSANTHEMUM N. C. S. JUBILEE.—This incurved Japanese variety has broad, closely incurved florets reminding one of *Louise* except in colour, which is a charming silvery blush or pink. Award of Merit. Messrs. H. Cannell & Sons, Swanley, Kent.

CHRYSANTHEMUM SIMPLICITY.—Blooms about 9 in. across, with drooping, tubular, pure white florets, the central ones being incurved. It is a handsome Japanese variety. Award of Merit. Mr. W. J. Godfrey, Exmouth, Devon.

CHRYSANTHEMUM MODESTO.—This incurved Jap-

anese sort is one of the best golden yellow types in cultivation. The heads are massive, and about 7 in. across, with interlacing florets. Award of Merit. Mr. W. J. Godfrey.

CHRYSANTHEMUM LADY BYRON.—The blooms of this incurved Japanese sort are pure white, of beautiful form when well grown, and measure 6 in. to 7 in. across. Award of Merit. Mr. W. J. Godfrey.

LADY RIDGEWAY, ELLA CURTIS, AND MME. PHILIPPE RIVOIRE.—For description of these three Japanese varieties see p. 133. Award of Merit to each. Mr. W. J. Godfrey.

CHRYSANTHEMUM SUNSTONE.—A Japanese variety of a clear bright yellow and very handsome. Award of Merit. Mr. W. J. Godfrey.

CHRYSANTHEMUM G. J. WARREN OR THE YELLOW MADAME CARNOT.—The flowers of this variety are clear yellow, but otherwise similar to *Madame Carnot*, and will be equally valuable for exhibition. Award of Merit. Mr. W. Wells, Earlswood Nurseries, Redhill.

CHRYSANTHEMUM LADY HANHAM.—This is a sport from *Viviant Morel* of a beautiful salmon-pink, with a yellow centre. Award of Merit. Messrs. H. Cannell & Sons, Swanley, Kent.

CHRYSANTHEMUM ROBERT POWELL.—Blooms of a beautiful bronze, with old-gold reverse, belonging to the incurved Japanese type, and very striking. Award of Merit. Messrs. H. Cannell & Sons.

Fruit and Vegetable Committee.

MELON EXCELSOIR.—A scarlet-flesbed Melon of useful size, with a yellow, netted rind, and of good flavour. Award of Merit. Earl Percy (gardener, Mr. G. Wythes), Syon House, Brentford.

GRAPE MARCHIONESS OF DOWNSHIRE.—Bunches similar in shape to those of *Gros Colman*; and berries very large, oval, juicy, and rich in flavour. Award of Merit. Marquis of Downshire (gardener, Mr. T. Bradshaw), Hillsborough Castle, Co. Down.

TURNIP GOLDEN BALL.—The tubers of this variety are globular, very shapely, with a small tap-root, light yellow in the lower portion, golden upwards and of excellent quality. Award of Merit. Messrs. Dobbie & Co., Rothesay, N.B., and Orpington.

TURNIP MODEL WHITE.—Similar in form to *Golden Ball*, but white, and of beautiful form. Award of Merit. Messrs. Dobbie & Co.

VEGETABLE CALENDAR.

HERBS.—These are in regular daily demand in all establishments, and a supply in the freshest possible condition must be maintained. This cannot be done where the plants are allowed to remain on the same ground for several years in succession. The present is a good time for splitting up and replanting most kinds of herbs. The ground intended for their reception must be well worked, and a position slightly shaded will be an advantage during summer. Beds should be formed of convenient width, and with good alleys to facilitate picking. Thyme, Sage, and such like plants when divided should be planted a little deeper in the new beds to enable the plants to form new roots. Mint is much better lifted while the top growth is green and fresh, as it enables one to see where the principal rhizomes are situated, and these can be lifted in a mass and transferred to new ground with but little check at this season, and the roots establish themselves before winter. A portion of this crop may also be placed in boxes and be in readiness and get well established before it is required for placing in warmth for an early supply. It is essential in replanting Mint to place it in ground free from Couch Grass and Bell-hine.

ROOTS FOR FORCING.—Preparations must be made for supplies of Asparagus, Seakale, and Rhubarb. The plants intended to supply the first crop should be lifted at once and be kept in cool and damp quarters. The frames and structures must be got ready for their reception. No warmth is more genial for forcing these vegetables than that supplied by leaves and dung; the former should predominate, to render it mild and more continuous. A deeper bed should be made for the Asparagus, as this will require exposure to light when growth commences. The stocks of Potatoes intended for forcing should also be looked over and a selection made from the best tubers. These must be placed under conditions favourable to give them a very gentle stimulus to plump-up their eyes. Some of the forwardest may be put into

10 in. pots, or boxes 3 ft. long and 9 in. deep, and started gently at once. These are easily movable to fresh and warmer quarters after growth has commenced.

SMALL SALADING.—Where regular supplies of Mustard and Cress, and Radishes are expected, weekly sowings of the former should be made in gentle warmth. Sow very thickly in shallow boxes of prepared light soil, pressing the seed into the soil, and cover each box with boards or stiff brown paper to ensure an even germination of the seed. To ensure success with Radishes after this season, a slight hotbed should be made, and a sowing made every fortnight or three weeks. Endive must be lifted and placed under cover to blanch at regular intervals according to the demand for it. Chicory should also now be ready for lifting at any time and prove useful when an extra supply is needed. A few clumps of Chives cut over and potted and then placed in heat will soon give some young growths and a flavour agreeable to some palates.—J. R.

The Orchid Grower's Calendar.

CATTLEYA HOUSE.—The plants of *Cymbidium lowianum*, after the slight rest they have been subjected to since making up their growths, are now pushing forth strong flower spikes; to each spike a neat stake should be put so that the spikes may be trained up in a manner that when each flower is open it will be seen to the best advantage. Left to their own resources, they sometimes become spoilt by coming in contact with a near neighbour, and half the beauty is lost.

With the spikes about 6 in. long the plants should receive a good soaking of weak liquid manure. We use Guano, but failing that, soot water in a weak state as applied to "Mums" will help them, besides adding a lustre to the foliage. Do not be afraid it will kill them, because it will not, or I should not advocate its use. In all cases use judgment and you are all right.

LAELIA ANCEPS.—The spikes of hanging plants will require attention so that they do not get damaged by touching the glass. If possible they should be made to face one way, so that when in bloom there will be no difficulty in arrangement. Do not give this plant too much moisture at the roots at this season. Always bear in mind that these Mexican *Laelias* are subjected to plenty of sunlight and drying winds in their native habitat; hence the short clubby hulbs and exceptionally hard leaves we find on imported pieces. Our plants are allowed to go a long time without more than what they take up from the moisture put about the house. To this fact we attribute the exceptionally highly coloured flowers we always get.

LAELIA PRAESTANS.—Of all the dwarf growing *Laelias* this certainly takes a foremost place amongst Orchid lovers. Its culture is similar to that of *Cattleya marginata*. It is, however, a much more desirable Orchid. We have therefore to thank Messrs. W. L. Lewis & Co., for bringing it over in quantity. Small pans are the most suitable to grow them in, although they do equally well in small baskets. It is when the repotting season comes round that the pans are seen to be the best, as the plants may be more readily turned out, or if necessary the pans may be broken to avoid spoiling the roots. Not so with baskets, as the roots will encircle the teak rods. Elevate the plants and use a small quantity of good peat and the best Sphagnum Moss for them to root into. During the summer months the cool house would be warm enough for them, but early in autumn, when the growths are making up, the *Cattleya* house is much the best place for them.

VANDA CAERULEA.—There is no *Vanda* to beat this when well done, but how many of us can keep it in good condition for long? Too much heat I am afraid has to answer for a good many failures. I am told by no less an authority than Sir John Kirk that frost is not unknown in the Khasya Mountains where this beautiful blue Orchid thrives. But to imitate this under cultivation would be, I think, a mistake. We all know that plants under glass become more delicate, no matter how carefully you follow the dictates of nature, so that a happy medium seems to be the most sensible course to pursue in their culture. The *Cattleya* house seems then to be the most suitable.—C.

HINTS FOR AMATEURS.

CHRYSANTHEMUM NOTES.

Phoebus.—There is really no colour that is brighter and more useful for decorative purposes than yellow. Bright days or dull days come all alike to it, and when the darkness of night covers all, and the lamps are lit, yellow again comes out the best, whether beneath the tell-tale electric light, or the more plebian gas, or even the self-assertive wax candle. This is doubtless the reason why we have so many yellow Chrysanthemums, of all sizes, grades, and styles of bloom. Particularising, however, it will be found that no one of the many yellow varieties has more to recommend it than Phoebus. This, like many another first-class variety, originated on the Continent, having been sent out by M. L. Lacroix in 1895, so that it is quite a recent introduction. It has received a First-class Certificate from the National Chrysanthemum Society, and has been generally received with favour, so much so, indeed, that it bids fair to oust some of the older varieties. Of these, perhaps, the most notable instance is W. H. Lincoln, which has been grown largely for market purposes, but which, compared with Phoebus, is quite out of the running. The colour of the bloom is a rich chrome-yellow. The florets are of medium width and considerable length, and there are plenty of them, so that there are all the makings of a large flower when the plant is grown with that intent. The florets droop gracefully for the greater part of their length, but curve prettily upwards towards the tips. The plant itself is between 4 ft. and 5 ft. in height, and of sturdy constitution. Phoebus is one of the varieties that an amateur may safely invest in, and expect to get a return for his trouble.

Edith Tabor.—Up to the present time Edith Tabor has been one of the successes of the season, and has made its appearance in most of the winning stands of cut flowers and groups of plants. Its great height (6 ft upwards) renders it a first-class subject for the back row in a group. The flower may be grown to a large size, and exhibits a shade of bright canary-yellow. The florets are broad and of great substance, and as they hang down almost vertically the bloom appears to be of enormous depth. The incurving tips of the florets are an additional charm. The constitution is good, and the only drawback to the variety, as far as amateurs are concerned, is the great height. Certainly, Edith Tabor is one of the best things ever sent out by Mr. R. C. Notcutt, to whom we are indebted for it. A First-class Certificate from the National Chrysanthemum Society has been awarded it.

Lady Hanham.—The popularity of Vivand Morel and its handsome sport Chas. Davis has been fully demonstrated upon many a show board throughout the kingdom. The build of bloom in both cases remains the same, the difference being simply in the colour. Truth to tell, both varieties are variable, and Vivand Morel especially changes colour, according to the bud it is taken on. Thus on the first crown it comes white, and on the second crown a bright rosy-pink. Then again, the influence of the particular locality has to be taken into account, and the result is that during the season one may see all shades between the two extremes mentioned. In Lady Hanham we have a fixed variety, originating as a sport from Vivand Morel, that is practically intermediate between Chas. Davis and Vivand Morel, exhibiting some of the colour characteristics of each. The build of bloom is identical with these two varieties. The colour is flesh-pink with a bronzy-yellow centre. The bases of the florets also exhibit the same shade of bronze-yellow, and, in fact, white, yellow, and rose seem to have had a struggle for the predominance, the result having been a compromise, in which a charming mixture of all three is to be seen. The habit and constitution of the plant are both good, and the variety is altogether easy of management.

Queen of the Earlies.—It may seem to some readers that the beginning of November is rather late in the season to call attention to the merits of an early variety, but Queen of the Earlies has made for itself such a great reputation this year both as an early and mid-season variety, that no apology is needed for bringing it in now. Within the last week we have seen grand blooms of it cut from plants growing in the open without protection of any sort.

True it is, that in some localities sharp frosts have been experienced, at least, sharp enough to cut down Dahlias and other tender stuff of that class, and also to cripple any Chrysanthemums that had their buds at all forward, but other places seem to have escaped this visitation, and out-door Chrysanthemums have, as a consequence, had a fine time of it. In Queen of the Earlies we get what will probably be found to be the best white variety for market work in September and the early part of October. We say early part of October advisedly, for although the plant has proved itself capable of producing excellent flowers in the open air up to the end of October, when the weather has given it a chance, we must not expect October to be as kind to us every year. Now if a variety is to suit for market work, the flowers must be of fair size be produced in plenty, and be of good colour. Again, the habit of the plant must be good, ditto the constitution. Now all these qualities are just what is needed in a plant that is to do well with an amateur who is just starting to grow Chrysanthemums. Coming to particulars we may make special mention of the stiff strong stems upon which the flowers are borne—a most valuable recommendation in a market variety, or indeed in any variety that is grown to produce flowers for cutting. The height of the plant is from 3 ft. to 3½ ft., and it readily assumes the spreading bush form that is required if plenty of flowers are to be developed. Those who wish to give it a trial for pot work will find it wise to disbud to a moderate extent, leaving only one bud on each shoot. In this way, if stopping during the earlier stages has been properly seen to, a good specimen, carrying about a score of medium-sized flowers, and with leaves right down to the rim of the pot, may be obtained.

Pride of the Market.—Whilst dealing with decorative or market varieties, we may well make mention of this one. It was shown in excellent condition at the meeting of the Floral Committee of the National Chrysanthemum Society at the Royal Aquarium on the 25th ult., by Mr. Norman Davis, The Vineries, Framfield, Sussex. The committee was so impressed with its beauty, and evidently free character that a First-class Certificate was awarded it as a market variety. The blooms are of extra large size for this section, and exhibit a rich shade of bronzy chestnut-orange. The florets are broad, of great substance, and stand well out from each other. The foliage is remarkable for its vigour and substantiality. Those lovers of the 'Mum who are on the look-out for good things in the decorative line, should not lose sight of a variety such as this.

N.C.S. Jubilee.—The Jubilee rage dies hard, and a remembrance of one of its applications will be perpetuated in this variety. The contour and build of the flower is not unlike that of Louise, and the size is about the same. The colour, however, is totally different, being a delicate mauve. Gradually, the gaps that separate distinct colours are being bridged over by the introduction of varieties representing intermediate shades, and in N.C.S. Jubilee we have one of the most noteworthy examples of this. The variety is worthy of a place in any collection if for its colour alone.

Mrs. S. C. Probin.—This variety and the last named were brought before the N.C.S. Committee on October 25th, when Mrs. S. C. Probin received the First-class Certificate as the better of the two. The florets are certainly more massive and incurve more strongly, and we should surmise that it has more of the makings of a large bloom in it than has N.C.S. Jubilee. The colour is a deep mauve with a lot of pink in it, so that the difference between it and N.C.S. Jubilee is marked enough upon comparison. There is, indeed, plenty of room for both varieties, as they are sufficiently distinct, the one from the other. —*Rex.*

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Pruning Grape Vine.—Could you inform me as to the best time to prune an indoor Grape Vine?—*H. B.*

You may prune your Vine as soon as the wood is fairly ripened. This condition will be shown by the fall of all the leaves and the colour of the wood,

which should be of a light brown. Any time after the fall of the leaf and before the swelling of the buds in the spring will, therefore, do, but it is customary, for the sake of neatness, to have the pruning finished before the expiration of December. The exact time when the wood is ripe depends entirely upon the period of the year, whether late or early, at which the Vines were started into growth.

Unheated House.—*Lionel V.:* For the border in the unheated house we should recommend some good bushes of Camellias as the things most likely to give satisfaction. The plants will thrive in either loam or peat, or in a mixture of the two. You will probably find a compost of equal parts of peat and turfy loam answer the best. The best time for planting is in spring, before growth commences. You may if you choose employ Camellias in pots to help fill the house until the planted-out subjects have got to a good size. These pot plants may be shifted out-of-doors in the summer, and their places taken by other things. The appearance of the border will thus be varied and improved.

Chrysanthemum Edwin Molyneux.—For the last three or four years I have grown this Chrysanthemum, but while other varieties subjected to the same treatment have done well, Edwin Molyneux has been nearly a failure. The plants never seem to become really strong, and I have only been prevented year after year from discarding it by seeing good blooms of it at shows. Can you suggest any course that may improve my chances of success?—*'Mum.*

We assume that your plants have each year been obtained from cuttings taken from the plants that have been highly fed. The variety of Chrysanthemum under notice has been so extensively grown that its constitution has considerably degenerated, and propagation during a series of years from bigly fed plants has had a great deal to do with this. In future we should suggest that you take your cuttings from plants that have been planted out and have been let alone. Such cuttings would be more likely to make strong plants. For next year's supply it might be worth while to buy your cuttings or plants from a grower in another part of the country. The change would probably be beneficial.

Watering Coelogynes.—*Benj. Forbes:* Your plants certainly do not need very much water now, but you must not keep them entirely without, or the pseudobulbs will shrivel. It is a mistake, too, to have them standing over the hot-water pipes. Shift them to a cooler part of the house, or, better still, to a cooler house, if you have one. A temperature of 50° Fahr. is rather higher than they like, for about 45° is quite warm enough during the winter and while they are resting.

Fuchsias.—*L. K.:* Lift the plants from the garden, leaving a fair amount of soil about the roots; place them closely together in a box, and shake a little more soil over them. In this condition they may be placed in a cellar, where they will keep very well until the spring.

Six Chrysanthemums.—*A. P. South:* Of course you will show your best blooms in the stand of six Japanese, but we should not think it advisable to include more than one white, or yellow, or, indeed, of any other colour. In any case, try and arrange the flowers so that the colours that do not go well together—or that kill each other, to use a common term—are not placed in close proximity to each other.

Lilacs.—I have a number of Lilacs in my garden which have got too hushy for me. I should like to split them up to obtain a few more plants for making good a corner of a shrubbery. Will it be of any use to try this?—*Geo. Williams.*

You may lift the suckers thrown out from the base of the stems of the old plants and from the roots. There is generally plenty of these. A good strong spade will be required, in order that a fair amount of roots may be preserved to the suckers. The latter may be planted straight away in a corner by themselves, where they may stay until they are of the size you require.

Chinese Primulas Damping.—*F. R. Johns:* You have evidently been too free with the watering-pot, and this has been the cause of your plants damping. Keep your plants rather drier, and do not give any more manure until they lose their sickly appearance.

LILIUM GIGANTEUM.

The Giant Lily is a native of the Himalayas, from Kumaon and Gurwhal to Kashia and Sikkim, at elevations varying from 5,000 ft. to 10,000 ft. In its native habitats it flowers during the rainy season. Judging from the elevation at which it grows one would naturally take it for granted that it would be hardy in this country, and it is so as far as the southern counties are concerned.

The accompanying illustration was taken from plants in flower on the 22nd July last, at Fernielee, Murtle, Aberdeen, the residence of M. M'Laren, Esq. Some growers consider themselves lucky or successful if they manage to flower bulbs which they may have imported or bought, but the Lilies under notice were raised from seeds, nursed through their babyhood, and brought to perfection during the past summer. The botanist Wallich describes the species as growing from 6 ft. to 10 ft. high and bearing ten to twelve flowers. The tallest plant shown in the photograph was 9 ft. 9 in. high, and carried twenty-three flowers. The next best plant was a few inches shorter, and produced twenty-one flowers, and each bloom developed a seed pod nearing maturity in September last.

The seedlings have been reared in the frame seen in the photograph, so that we cannot say whether the species is quite hardy at Aberdeen; but it must be very nearly so, seeing that a batch of seedlings has continued to acquire vigour year after year until the flowering stage is reached. About the end of the summer of 1896, Mr. M'Laren had hopes of seeing his nurslings in bloom after some years of waiting, judging from the enormous size the radical leaves had attained. His expectations were realised when growth was resumed last spring and the enormous crown bud began to lengthen. We congratulate Mr. M'Laren on his success, and hope he will now experiment with some of his bulbs, in order to ascertain the hardiness of *L. giganteum* in his northern latitude.

AUTUMN TINTS.

WHAT a lovely picture Dame Nature presents to us about this season of the year; truly such a picture no pen, pencil, or brush can imitate. I often think what a great pleasure it would give to many thousands of people in those large busy towns who are compelled to pass their time there, could they but spend a few weeks in the country and behold the many trees taking on their autumn garb before dispensing entirely with it during the winter months.

I will mention a few that give us a splendid bit of colouring just now and will take the Liquidambar (*L. styraciflua*) with its glowing crimson scarlet leaves which stand out prominently among the many deciduous trees that are given us. We have one planted on a island in the centre of a large lake which on a bright sunny day shows to great advantage with an undergrowth of *Gynerium argenteum*, whose plumes look well under the crimson foliage of this noble tree. *Nyssa sylvatica*, a native of North America, is a tree seldom met with now. It is none the less beautiful, with its medium-sized, shining, smooth green leaves in summer; but at present it is a sheet of crimson and gold, the last named colour predominating, and admired by all who see it. The Tulip tree, too, gives us a rich yellow, contrasting well with the bright red leaves of the Guelder Rose (*Viburnum Opulus*) not far distant.

Now, let us turn to the wall, an eastern aspect, where we find *Ampelopsis Veitchii*, and its newer variety, *A. V. purpurea*, which has put on a very deep crimson and stands out conspicuously with its neighbour, that pea green, hardy flowering creeper, with us, *Stauntonia latifolia*. And does not the Andromeda and some of the American Azaleas, especially the old yellow flowering *A. pontica*, give us a brilliant bit of colouring, almost indescribable? Even in the kitchen garden some of the Pear trees remind us that winter is near at hand by the almost red leaves of some and golden-yellow of others, which all help to brighten the often dull and gloomy days of October and November, while the absence of frost has assisted the trees to hold on their foliage much longer than is usually the case and given us such lovely autumn scenery.—*J. Mayne, Bicton.*

THE OLD NURSERIES, CHESHUNT.

The continued mild weather in the south has been very favourable to the prolongation of autumn flowers, including Roses belonging to various sections, and with the object of seeing the famed collection of Messrs. Paul & Son, The Old Nurseries, Cheshunt, Herts, we paid a visit to the establishment some weeks ago. We had evidence at the Royal Horticultural Society's Meeting on the 26th ult. that Roses were still abundant, and quite sustained the anticipations we had of them on seeing them at home. An abundance of fresh Roses all through September and October argues much to re-establish the character of our much despised climate.

GLASSHOUSES.

Roses are the speciality for which Messrs. Paul & Son are most widely reputed; but trees and shrubs generally, herbaceous and alpine plants and various other things are more or less extensively cultivated. The first house we entered was 100 years old, though several times repaired and now to be rebuilt. Here we noted *Vitis Coignetiae*, with highly ornamental

them. A few specialities in the way of Orchids are grown, including a fine batch of *Coelogyne cristata* and its varieties now on a shelf close to the open ventilators. During the growing period they are often dipped in the tank, and kept abundantly watered to swell up the pseudo-bulbs, after which an abundance of air is given to ripen them. The largest batch of *Masdevallia tovarensis* we have seen together was here, there being something over 100 plants, bearing 15 to 22 flowers each in 48-sized pots. The singular *Strelitzia Reginae*, with orange and deep blue flowers, was in bloom.

Several houses are filled with Roses in pots, including a houseful of many sorts, being crossed for the purpose of getting new varieties. They are now ripening their fruits. A houseful of Tea Roses ready to be sent out were bushy, vigorous, and flowering. Rose Alister Stella Gray is a Noisette that expands of a beautiful deep apricot and fades to white when full blown. It is kept all the winter months under glass and rested outside in summer. Rose J. B. M. Camm is an immensely double sort with 'Bourbon blood,

LILIUM GIGANTEUM.

red leaves. Mr. Paul thinks it possible that *Physalis edulis* might be grown to some extent under glass as a dessert fruit by way of a change. The next house entered was also a reminder of bygone days, for the roof is still filled with small panes of round-cornered glass. Oranges are planted out against the back wall by way of experiment, and they fruit splendidly. Some of the originally planted Camellias still remain in the border and are now bristly with flower buds. Another very interesting relict consists of two large old specimens of *Camellia japonica alba plena*, which were bought at the sale of Messrs Loddiges, Hackney, when that famous nursery was broken up. In the same house are some *Cypripediums* that can be grown in a very cool house. The walls and the sides of the benches are covered with *Ficus repens* in a very pleasing way. In another well ventilated house, slightly heated in summer, the roof was covered with a floriferous specimen of the gorgeous *Solanum Wendlandii*.

An unwonted sight was a collection of some 2,000 bulbs of *Amaryllis*, all stood in the open air to ripen off. They had been out for a month when we saw

and rose pink flowers that continue till late in autumn. It is less subject to mildew than the hybrid perpetuals.

Standard Tea Roses in pots fill another large house. They are practically baked with drought and heat in summer, and brought indoors the first week in September to flower during October and November. There are hybrid Teas amongst them. Another house in two divisions is occupied with bush Roses in pots, excellent stuff, 2 ft. to 3 ft. high, and flowering. They are simply the stock for sale. A crimson Tea named Princess Sagan flowers very freely. Sunset is one of the latest Teas with orange and apricot flowers.

Another Rose house, also in two divisions, is filled with plants in 24-sized pots for early spring work. F. Dubruel produces its crimson flowers as freely as *Niphotos*, but is much dwarfier. Souvenir du President Carnot is a hybrid Tea bearing an abundance of soft blush-pink flowers. It is very popular in America and was sent from here. The plants are ripened off during October by throwing the houses wide open during the day, closing them

at night and giving a little heat. When the wood is ripened the last two growths made during the season are cut entirely away to get the young shoots from old and firm wood. Six weeks' rest is sufficient, after which the plants will be started again in January to bloom in March.

We next came upon a house of Niphetos, the growth of which was just commencing. All possible air is given while the plants are making growth and flowering. Madame Lambard, the well-known Tea, was fragrant and beautiful in another span-roofed house.

Cannas constitute another speciality, several houses being filled with them. Many of them were flowering freely. Mr. James Bailey is deeply suffused and spotted with crimson-lake on a yellow ground. William Tolfts is a magnificent variety of a handsome rich salmon-orange, with a narrow yellow edge. It is named in compliment to the grower of the Cannas. Souvenir de Antony Crozy is a glowing, fiery, crimson-scarlet with a yellow edge. George Paul (Crozy) is a handsome salmon-orange variety. Sir Trevor Lawrence is blotched and variegated with red on a yellow ground. The house had been in full bloom for two months previous to our visit, and many of the spikes had been cut. Truly the Cannas are a grand race. New varieties and some old ones fill a lean-to structure. Many of the new ones had just been imported. They make the best crowns for division in pots, and are so grown. The Orchid flowering race of Cannas was represented by Italia, with flowers of enormous size. In a third house we noted George Paul and Souvenir du President Carnot, two of the best Cannas having dark foliage and good flowers.

Good pot Vines monopolise a house. Not far off we came upon *Cypripedium Charlesworthii*, *C. spicerianum* and other species in small pots for cut flower purposes. *Nerine Fothergilli* and several other sorts were commencing to flower.

ORNAMENTAL TREES AND SHRUBS.

Next to the Roses in importance comes the extensive collection of trees and shrubs. In front of a hedge was a collection of *Rhododendrons* in pots. Many of them have been raised from *R. Fortunei*, including Mrs. Thiselton Dyer, with huge soft pink flowers. There were some forms of the *White R. nobleanum*. Hybrids are being raised from *R. Smirmoroi*. *R. Duchess of York* comes from *R. Fortunei* and bears huge salmon-pink, fragrant flowers. *Carpenteria californica* on a high and dry bank against a south wall succeeds well.

Near some propagating pits are collections of *Clematis*, hybrids of *C. Flammula*, *C. Viticella*, and many others of an interesting character. *Cotoneaster horizontalis* is scarlet with berries. Here also is a collection of all the best *Ivies*, of which *Hedera amurensis* has very large leaves belonging to the same type as *H. dentata*.

Away to the north of the glasshouses the nursery widens out, becoming much more extensive; and here the trees and shrubs, including *Roses*, are grown in quantity and great variety. Besides squares and plantations in various parts of the ground, there is a border $\frac{1}{2}$ mile long planted with a single specimen of each tree and shrub in the collection. To get acquainted with every species and variety here is in itself a liberal education. On this occasion we can only mention a few of the choice and rare things picked up here and there, *Cedrus atlantica aurea* and *C. a. glauca* are excellent subjects that make vigorous growth here. The colour of the foliage is indicated by the name, but they need only to be seen to be appreciated. The weeping Cedar of Atlas (*C. a. pendula*) is worked on a stem 6 ft. high. *C. Libani nana*, though twenty years old, is only 3 ft. high. There is a grand specimen of the Japan Lilac (*Syringa japonica*) in the form of a standard. The variegated Portugal Laurel has bright red stems and silvery edges to the leaves, the contrast being strikingly handsome. Young plants of *Abies nordmanniana pendula* are small but very pretty. The weeping Douglas Fir (*Pseudotsuga Douglasii pendula*) is also a very handsome thing. *Abies nordmanniana nana*, though many years old, forms little evergreen tufts hugging the ground, and would be very serviceable for the rockery. Dwarfing, as the Japanese manipulate it, is unnecessary in this case. *Abies Pinsapo* is well known, but *A. P. glauca* is uncommon and has silvery, glaucous foliage.

The Lucombe and Fulham Oaks—sub-evergreen

varieties of *Quercus Cerris*, worthily find a place in the collection. The Austrian Oak (*Q. austriacus*) has evergreen leathery leaves. *Cupressus lawsoniana erecta lutea* originated here, and though the trees are yet small, we think there is an important future before it. The Cheshunt Aucuba turned up in a batch of 2,000 seedlings, being the best amongst them. It has more regularly blotched foliage than the common one, and is very handsome on that account. The other named varieties are also grown here, including the very distinct *Aucuba japonica longifolia*, with long narrow leaves. The Dovaston Yew is an old and well-known variety; but more interesting is *Taxus baccata viridis pendula*, which has drooping branches, and lighter, more pleasing green foliage. *Negundo aceroides robusta* has less of the silvery variegation than the ordinary variegated form, but it gains immensely in vigour and hardiness, being better adapted for the climate of the north of England and Scotland, and valuable in that respect.

ROSES,

As we have already stated, are the most important and prominent speciality of the Old Nurseries, being grown by the thousand in all the best and most interesting varieties. The Dawson Rose is a hybrid between *Rosa multiflora* and *General Jacqueminot*, and is making fine growth, but has not yet flowered. Seedlings have been raised from *Crimson Rambler*, and the only one yet bloomed proved to be single. As the flowers are produced in autumn there are hopes that an autumn flowering race will yet result from this popular type.

There is an experimental garden for dwarf and pillar *Roses*; but on the occasion of our visit, the great centre of attraction was the open field where fresh *Roses* could be gathered by thousands, and were being gathered more or less daily. Though we have seen *Roses* at Christmas, never before have we witnessed such a display in the open during October. Many classes, single and double, were represented; but the beauty, delicacy, variety of colour, and profusion of bloom on the Hybrid Teas were an eye-opener. The hybrid perpetuals are not in it with this new race. The hybrid Teas have already taken hold of the public in this country as they have in America, and we have every reason to believe that their cultivation will be greatly extended in a few years.

Hybrid Teas are the *Roses par excellence* for the cut flower basket. A number of very handsome varieties were honoured with Awards of Merit from the Royal Horticultural Society during the past summer, and well they deserved it. Descriptions of these will be found in the pages of THE GARDENING WORLD for July and August last, with an illustration of Souvenir du President Carnot (Vol. XIII., p. 729). That and Camoens, one of the earliest raised, were full of buds and blossom in all stages. *Gustave Regis* is a yellow of the same type. The bright carmine-red *Mme. la Marquise Litta* is charming. Many others of equal value could be mentioned, not forgetting the chaste white *Kaiserin Augusta Victoria* so well shown at the Crystal Palace last summer. The rosy-carmine *Mme. Abel Chatenay* is a continuous bloomer.

A trio of *Noisettes*, namely *Mme. P. Cochet*, *Wm. Allan Richardson* and *Alister Stella Gray*, were in full bloom. The salmon and yellow *China Rose Mme. E. Resal* is very choice indeed.

Garden *Roses* are a special feature of these nurseries, and we noted only a few of the many to be seen. *Rosa rugosa atropurpurea* is velvety crimson and the darkest of this type. *Rosa sacta* is the oldest recorded *Rose* in the world, being identical with dried specimens in mummy cases. It has fragrant, single, pink flowers akin to *R. gallica*. This interest-Rose is described by M. Crepin in his monograph of the genus. The hybrid *Wichuriana* *Roses* have already found a home here. There is a variegated one amongst them. Deliciously fragrant are the double blooms of *Rose des Parfumiers*. A hybrid raised from *Rosa rugosa* crossed with *R. humilis* is a perpetual bloomer with deep rose flowers. *Crimson Rambler* crossed with a Tea has given rise to seedlings which promise to be perpetual bloomers. Here also we noted the yellow rambler, *Aglaiia*, the single *R. nitida* and *R. lucida*, with a purple-leaved variety of the latter named *R. l. Vivid*. A cross between *Crimson Pillar* and a Tea variety has given a seedling with lemon flowers. Very interesting and pretty are the named varieties of the Scotch *Rose* with double flowers. In a plantation of *Roses* planted out at the end of April last we noted many

that had made enormous growth, including *Mrs. Paul*, a Bourbon *Rose*, with blush flowers. It has made stems 8 ft. to 10 ft. high. The soil here is a stiff brick earth, and we noted some being trenched, while fresh material had been carted on the ground to mix with it. Finer soil for *Roses* could hardly be desired.

ORCHIDS AT MAIDA VALE.

THOUGH the *Chrysanthemum* season is now in full swing, yet *Orchids* claim a place in our pages, particularly those which are now in season. Therefore, while busy amongst the *Chrysanthemums* we made a call upon Mr. P. McArthur, The London Nurseries, 4, Maida Vale, London, W. *Chrysanthemums* are grown here, but only for the sake of cut flowers in which Mr. P. McArthur carries on an increasing business. They are grown in bush form, both late and early batches keeping up a supply.

The flowering pieces of *Cattleya labiata* are bright and varied, and amongst them we noted a handsome variety with light sepals and petals, and a very highly coloured lip, edged with white. Other fine things are *Dendrobium formosum giganteum*, and *D. Phalaenopsis schroderianum* in small pans and showing a great variety of rich colours. Here we find pieces of *Coelogyne cristata alba* in baskets. *C. schilleriana*, grown on a piece of board, is a rare plant.

Numerous *Cypripediums* are flowering at present, including *C. polystigmaticum*, *C. harrisianum superbum*, *C. insigne Chantinii*, with large blotches; *C. i. Maulei*, and a variety with remarkably long segments, all of them being more drawn out than usual. There are several distinct forms of *C. radiosum*, including one with yellow petals (see under "Orchid Notes and Gleanings," *C. Charlesworthii* shows even more variation, one having a large purple dorsal sepal; another a large blush dorsal sepal darkening at the base, but entirely without the usual tessellated or checkered markings, and very distinct. A third very pretty variety has a dark upper sepal deepening to crimson at the base. *C. crossianum (insigne x venustum)* has a yellow dorsal sepal, spotted with brown in lines. There are two pieces of a variety of *C. insigne* each bearing twin flowers, in one case at least, bearing a double lip, and a leaf at the top of the scape. The variety is remarkable for its nearly black flower stalk, about twice as thick as usual. A variety of *C. Boxalli* has very black blotches on the dorsal sepal and wonderfully broad petals. Very fine also is *C. Ashburtoniae*, with huge finely blotched and marked flowers on scapes 18 in. high. Here also we noted a fine batch of the pretty *C. Exul*.

Many rare or uncommon things find a place here, amongst them being the pretty *Coelogyne fimbriata* with pale yellow flowers and a dark fringed lip. The soft blush-violet flowers of *Odontoglossum Krammeri* are also very choice. Equally rare is *O. Inseayi splendens* with soft chestnut sepals and petals and a yellow lip margined with crimson spots. The blue *Orchid (Dendrobium Victoriae Reginae)* is also in bloom, together with *Laelia pumila praestans* in variety. A healthy vigorous batch of *Chysis aurea* gives promise of flowering well presently. The same may be said of that remarkable *Orchid Uropedium Lindeni*, of which there was an importation of 2,000. Many of them died on the way home, the rest being now well established.

Oncidium varicosum Rogersii is a seasonable and useful species. Amongst a colony of various species of *Miltonia* we noted *M. cuneata major* throwing up its flower spikes. *Cattleya Mossiae*, in quantity, and *C. percivaliana superba* are in sheath. The pretty *Dendrobium fytchianum* is present in a quantity of healthy vigorous pieces grown in baskets. The stems and leaves of the rare *Vanda teres gigantea* are twice as thick as those of the type along side of it. *Cypripedium lathamianum*, *C. nitens* and other valuable hybrids are throwing up their flower scapes. A choice and uncommon thing in its way is *Cypripedium Charlesworthii* having a pure white dorsal sepal.

Amongst *Cattleyas* and *Laelias* now in sheath are some valuable forms, including a huge piece of *Laelia tenebrosa*, in a large pot, and bearing many sheaths. It is a fine dark variety. *L. anceps* and its varieties will be grand presently. *L. elegans* and *L. e. alba* have flowered and the correctness of the names substantiated. Very choice are *Cattleya Schroderae*

alba, *C. labiata* Peetersi, with splashed sepals and petals; and ten grand plants of *C. Mossiae* Wageri, especially one splendid piece in a basket. Other good things are *Oncidium Papilio majus*, *Lycaste Skinneri*, *Calanthe Veitchi* and *C. vestita*, the two latter now throwing up their flower spikes. A large batch of *Cattleya Trianaei* is now in sheath.

In a tall span-roofed house is a grand batch of 300 plants of the white *Anguloa eburnea* in robust vigour. Very rarely, if ever, have we seen so many of them all in one house. The foliage and pseudo-bulbs are enough to send an Orchid lover crazy. They fill the central and one of the side stages of the house. On the other side is a fine lot of *Laelia purpurata*. The lip of *Cymbidium lowianum* Rajah is remarkable in being nearly white. *Laelia praestans*, and *Cattleya citrina* on cork suspended from the roof are also noteworthy.

Another house is filled with *Odontoglossum crispum*, *O. Pescatorei*, *O. triumphans*, *O. Rossii majus* and *Cymbidium eburneum* in rude health. Elsewhere is a houseful of *Cattleya Mossiae*, *Coelogyne cristata*, *C. c. lemoniana* and others in good order.

PALMS, FERNS, &c.

The early flowering form of *Poinsettia pulcherrima* is grown in great quantity for decorative purposes. *P. p. alba* is useful by way of contrast. Amongst *Chrysanthemums* are bushy specimens of the crimson *John Shrimpton*. *Kentia belmoreana* in 48-sized pots, is grown cool, making dwarf, neat and sturdy specimens fit for anything. Other houses contain smaller plants in 60-size, and thumb pots, in the same useful condition. They are fit for decorative purposes under any condition to which Palms are put, and calculated to withstand low temperatures and dry atmospheres. Mr. P. McArthur can supply about a quarter of a million of them. *Geonoma gracilis* and *Cobaea scandens variegata* are also useful subjects. One cool house is filled with late *Chrysanthemums*, *Eucalyptus globulus*, *Pelargoniums*, &c.

The Fern house contains an assortment of decorative species and varieties of useful market size in 48-sized pots. We need only mention such as *Pteris Wimsettil*, *P. cretica major*, *P. c. cristata*, *Cyrtomium falcatum*, *Asplenium fabianum* and that charming dwarf Fern *A. Colensoi*, so graceful and so hardy. A large batch is ready to put into 48-sized pots. Very sturdy and well-grown stuff of *Adiantum Victoriae* may be seen in market size, grown cool and calculated to withstand a dry atmosphere as well as a *Pteris*. Highly coloured plants of *Aralia Sieboldi variegata* are in remarkably fine condition. Those who want a hardy subject for cool houses or dwelling rooms might well give it a trial. *Festuca glauca* in pots also finds admirers for decorative purposes. A batch of *Dendrobium crassinode barberianum* is being rested in this house in pots suspended from the roof. The stems are stout and the plants of good size.

The Palm house contains an assortment of Palms for decorative purposes in various sizes from large specimens in tubs to seedlings in thumb pots. A grand plant of *Kentia belmoreana*, with a tall stem and large head, grown in a tub is about as high as the roof of the house will permit, although the tub is sunk in the floor of the house. A fine batch of 700 to 800 small specimens of *Cycas revoluta*, recently imported, is being established. The plants are of small size, suitable for decorative purposes in relatively small pots, and are throwing up heads of four to six leaves of a fine dark green hue. A large batch of seedlings in another house, will turn out to be *Corypha australis*, we believe, when the plants are large enough to determine. The seeds were sent home without name, but the seedlings will soon be in proper form.

BOLTONIA DECURRENS.

Of the three *Boltonias* in general cultivation *B. decurrens* is by no means the least handsome. It closely resembles *B. latisquama* in style and habit of growth, but is scarcely so tall. The flowers, too, have long, reflexing, flesh coloured, instead of white ray florets, but they are both pretty and effective. The whole plant, indeed, has a warm and cheerful appearance in the autumn flower garden, and preserves its beauty until well on into the autumn. We had the pleasure of seeing it in capital condition during a visit to the Long Ditton Nurseries, where hardy plants of all kinds thrive under the fostering care of Mr. J. W. Barr.

BEGONIAS AND DAHLIAS AT FOREST HILL.

SEPTEMBER is the month for seeing seedling tuberous *Begonias* in the open air; but cuttings rooted in the previous autumn, and young tubers come into bloom much earlier, making, in fact, a summer display. Some little time ago we paid a visit of inspection to the nurseries of Messrs. J. Laing & Sons, Forest Hill, when *Begonias*, *Dahlias*, and perennial *Asters* were the chief items of interest.

TUBEROUS BEGONIAS.

Most of the older plants grown in the open air this year were transferred to the Rutland Nursery where they made a grand display till late in the season. By old plants we mean seedlings of last year and cuttings taken from named sorts and rooted during 1896.

A few of these named sorts were planted in the Stanstead Park Nursery, and during the mild, moist weather of the latter part of summer made fine growth. The same may be said of the seedlings of this year, which covered the ground closely during September and flowered grandly. They were arranged as usual in long beds, in the leading colours, such as white, pink, rose, scarlet, crimson, yellow, and bronze. Masses of a colour are more effective than mixtures.

Some small beds were planted with named kinds of erect habit, and specially adapted for bedding purposes. Laing's Golden Ball forms dwarf and bushy plants, about 6 in. high, bearing a profusion of small yellow flowers that are globular and perfectly double. The variety is also very popular with some growers as a pot plant. Duke of York is a charming salmon-pink variety with large flowers of fine form, which flowers as profusely as any. Lafayette is an early variety with small, scarlet flowers that are highly effective for this kind of work. Henshaw Russell is a large scarlet variety of telling aspect. Stanstead Gem is a scarlet of grand form. All of the above named kinds are double, and were exceptionally fine this year.

Several houses were filled with pot plants, many of which were being utilised for seed raising by cross-fertilisation. Three houses were filled with double varieties, many of them being the most recent selections from this year's seedlings. We noted some grand varieties amongst them in various shades of colour, and have no doubt they will even be finer next year.

In one of the houses and in some heated frames were batches of *Streptocarpus* of a large flowering strain. A large proportion of them were of some or other shade of blue, such as porcelain, violet, white with violet lines, sky blue in various tints, and purple. The white varieties were very numerous, and the violet lines and bands made a beautiful contrast with the white. The gayest house was that in which the plants were arranged amongst Maidenhair Ferns. They were accompanied by a late batch of *Gloxinias*.

DAHLIAS.

A large plantation of these had withstood a tremendous downpour of rain and hail, while the leaves of the *Cannas* close by were torn into shreds. Single, Pompon, show, decorative, and Cactus varieties were all well represented, the plants being masses of bloom. Beauty of Watford, a golden-yellow single variety with a crimson zone was very handsome indeed.

Cactus varieties included most of the best varieties. Mrs. Peart is a beautiful white variety, but it is excelled in purity by Mrs. Francis Fell. Very fine also are Princess Ena, golden buff; Mrs. Allhusson, rich pink with a creamy centre; Illuminator, scarlet; Mahalacheris, white; the Queen, very large, and white, with broad florets; Mrs. W. B. Wright, crimson with violet tips; and George Dayrell Reed, scarlet, tipped violet. Starfish is considered the best scarlet, the long, narrow florets being very fine. Cycle is another magnificent form having carmine-scarlet florets, tipped violet. Bridesmaid may be likened to the Rose Marie Van Houtte in colour. The narrow crimson florets of Dr. Jameson are also fine. The rich purple of Purple King is excellent of its kind; and African is amongst the darkest of the maroon-crimson kinds.

We may best describe Mrs. H. Pomeroy as yellow, overlaid with salmon-pink. The buff yellow of Kingsley Foster is also pretty. Markiss may be likened to African in being of a dark maroon-crimson. A very charming *Dahlia* is that named Mrs. E. Cannell, which is of a bright salmon-red, overlying yellow. Cinderella is rather difficult to describe, being of a rich purple, overlaid with some dark

colour in the centre. Of dark coloured varieties Harry Stredwick is very fine of its kind, being crimson with a maroon-crimson centre. Fantasy is a remarkably fantastic variety in having incurred orange-scarlet florets, making heads of great beauty. Apollo is a rich scarlet and very late variety. Altogether there were six rows of new varieties, many of which carried a great profusion of flowers well above the foliage. They, as well as the Pompon sorts, are very useful for cut flowers.

The perennial *Asters* have been showy for weeks past, some of the most conspicuous being *Aster Novi-Belgii*, *Aster Novae-Angliae*, and their varieties, and the charming *A. diffusus horizontalis*.

THE PROGRESS OF VEGETABLE CULTIVATION DURING QUEEN VICTORIA'S REIGN.

(Continued from p. 140).

THE CUCUMBER

Was represented by numerous sorts at the time of the accession of the Queen. Chief among them were Early Frame and White and Black Spine, besides the so-called Long Prickly and Short Prickly Ridge Cucumbers. Snow, Cuthill, Mills, and Constantine were among the earliest improvers of this popular esculent, and by 1842 many varieties were available.

Kelway's Victory and Phenomenon, Syon House and Victory of Bath appeared during the fifties, and a few years later Berkshire Champion and Manchester Prize. It was then that Thomas Lockie took the Cucumber in hand, and Blue Gown (and its sport Tender and True) Royal Windsor, and the deservedly popular Lockie's Perfection were the leading varieties raised by him. Meanwhile other sorts, including Telegraph and Cardiff Castle, obtained a leading place, and it will be a long time before Telegraph is superseded for general cultivation.

I have not enquired from the Messrs. Rochford how many years the Rochford Cucumber has been in their family, but it is probably more sought after by growers for market than other variety. In recent years the palm for raising improved varieties must certainly be given to Mr. Mortimer, whose wonderful exhibits at the Drill Hall and elsewhere have been greatly admired. Sutton's Ar, Peerless, Progress, and Matchless are results of his painstaking work.

Notwithstanding the almost endless varieties now procurable, it is generally admitted that none of them supply the ideal type required for cultivation on a large scale. For productiveness no sort equals the best strain of Telegraph, but the somewhat pale colour, especially when the plants are bearing a heavy crop, lessens its value for market purposes, and if the Council of the R.H.S. should see their way to undertake a series of trials at Chiswick I would gladly offer a prize of £5 5s. for the seedling Cucumber, raised since 1896, which shall combine the productiveness and excellent form of Telegraph, with the dark colour of Rochford's Cucumber.

THE LEEK

In 1837 was represented in this country by the Common and Flag types, although it is on record that in the previous year four Scotch Leeks were produced in Edinburgh with a circumference of 9 in. or more. A Scotch gardener, now living, informs me that although he came to England in 1854 it was several years before he saw Leeks grown here. The Musselburgh was one of the first improved forms, followed by Ayton Castle and Henry's Prize. The greatest triumph, however, is found in The Lyon, and the better selections of this good variety, such as Prizetaker, appear to present as perfect a form of Leek as it is possible to obtain or desire.

In this connection may be mentioned the excellent work done by the Messrs. Dobbie, who have introduced one or two very fine selections of Leek, as well as of several other vegetables.

LETTUCE.

The number of varieties, both Cos and Cabbage, has wonderfully increased during the past twenty years, and they embrace many types and shades of colour.

In 1837 several of the leading varieties of the present day were in use, including amongst the Cabbage varieties Brown Dutch, Brown and White Silesian, Drumhead, Grand Admiral, Hammersmith, and one or two others, and in the Cos, White Seeded and Black Seeded Bath, Florence, Green, White, and Spotted.

By 1842 Paris White and Green were announced, and the various selections of this type are amongst the best Cos Lettuces at the present time. More recently a very large kind of great excellence, named by my house Mammoth Cos, has appeared, and is very popular. White Heart, intermediate in colour between Paris White and Green, deserves a place as a popular introduction of recent years. With regard to Cabbage Lettuce, the number of varieties now available is extraordinary. All the Year Round was amongst the first improvements, and so good is it that it has been honoured with several distinctive names. Wheeler's Tom Thumb, Veitch's Perfect Gem, Standwell Green, and others are excellent kinds largely in use, while more recently Commodore Nutt, Favourite, and Daniel's Continuity are improved types of great merit, the two latter standing longer than other sorts without running to seed.

Recently my house has introduced the Intermediate—a variety resulting from a cross between the Cabbage and Cos Lettuce, which is highly prized by many.

THE MELON

Has advanced during the past sixty years by leaps and bounds. Every year witnesses the advent of new varieties, and the Fruit Committee of the R.H.S. can testify to the constant succession of aspirants for honours.

In 1837 gardeners depended upon the Cantaloup, Scarlet Fleshed, Green Fleshed, Lord Sondes, and Queen Anne's Pocket. In 1842 Windsor Prize Green and one or two scarlet-fleshed kinds were distributed. Ten years later Beechwood, Bromham Hall, Victory of Bath, and other standard varieties were grown, followed at short intervals by Scarlet Gem, Blenheim Orange, Hybrid Cashmere, Imperial Green, and Hero of Lockinge, the latter still retaining the first place as the best Melon for frames. So easy is the culture that it has acquired the reputation of being essentially the amateur's Melon.

In connection with improvements in Melons much good work has been done by Mr. Owen Thomas, of the Royal Gardens; Mr. Wythes, of Syon House; and Mr. Chas. Ross, besides many others. In 1894 we had the pleasure of introducing a handsome white-fleshed variety raised by Mr. Thomas named Royal Favourite, and other noteworthy Melons have also emanated from the Frogmore Gardens.

ONIONS

were represented sixty years ago by Blood Red, Deptford, Silver-skinned Globe, James Keeping, Lisbon, White and Brown Spanish, Portugal, and some of the Tripoli varieties. While most of the types have undergone more or less improvement, special attention has been given to the Spanish class. The Reading was a valuable selection, and it was followed by Improved Banbury, named after a town which has long been popular for its Onions. The late Mr. Deverill of that place introduced many fine types, such as Rousham Park, The Wroxton, Anglo-Spanish, and others. Banbury Cross, a comparatively recent introduction of fine quality, also hailed from the same town.

The justly celebrated Ailsa Craig (with Cranston's Excelsior, a very similar Onion) has caused quite a revolution in this vegetable. One celebrated grower last season exhibited twelve specimens weighing no less than 37½ lbs., an enormous weight for this country, which would have startled the growers of the olden days who had to be content with small specimens weighing only a few ounces each.

Until quite recently it had not been possible to obtain seed of the fine Spanish Onions of the grocers' shops, and although specimens grown in this country are not often so large as imported bulbs, some very fine Onions can be grown by sowing the seed in heat in January and transplanting in April.

THE PARSNIP

Has certainly been much improved since the Guernsey and Hollow Crown were the only available sorts, although no very great increase in the number of varieties can be reported.

As late as 1852 the only one quoted in a leading seed list was Hollow Crown. The Student, obtained by the late Professor Buckman, by continual selection from the wild Parsnip, and distributed by my House first in 1860, is still regarded as a popular variety; and has been singularly successful at Shows. Quality in a Parsnip is almost entirely a matter of selection and in that way the fine types now in cultivation have been obtained. Carter's Maltese marked a distinct advance and is still widely grown. Quite recently

at the Reading Show, where the general opinion was that so extensive and fine a collection of vegetables was never before staged in competition, some of the collections contained remarkable specimens of a new variety called Tender and True. This is certainly distinct from other kinds, and possesses quality which has not hitherto been reached in this vegetable.

SPINACH.

No great advance was made in this vegetable until a few years ago when the Victoria and other similar strains were introduced. It is true that many varieties bearing Continental names have been grown, some standing rather longer than others before running to seed, but the difference was only slight. With the advent of the Victoria, however, the duration of the crop was greatly prolonged, and still more recently this variety has been surpassed, and we now have both in the round and prickly seeded sections, strains of Spinach which remain good weeks after others have gone to seed.

Time will not permit of my referring to Parsley, Rhubarb, Vegetable Marrow, and some other vegetables, and I must pass on to

THE TOMATO

which has increased in popularity to a greater extent and more rapidly than any other vegetable referred to in this paper.

A proof that it was not much cultivated in the early years of Her Majesty's reign is shown by the fact that in a wholesale list published in 1852 the only Tomato mentioned is the common Red. It is within the last quarter of a century that such an enormous impetus has been given to the growth of Tomatos in consequence of the more cultivated taste of the masses of the people, and it is now found in almost every garden from the cottager's upwards. The Queen's gardener, Mr. Thomas, has identified himself with its improvement, and Frogmore Prolific is one of the best sorts grown at the present day.

The introduction of the Perfection type was the prelude to that of many others, and now the number is legion. New selections are plentiful enough as our own trials of over 200 lots this year go to show. The question which is the best Tomato admits of a multiplicity of varying answers.

To mention in detail anything like the whole of the varieties which deserve notice would take up too much time, but for the earliest out-door use Conqueror, Earliest of All and Early Ruby are popular kinds. Fine shapely fruits and plenty of them are produced by Ifield Gem, Eclipse, Best of All, Duke of York and Ham Green Favourite, and in yellow varieties Golden Nugget as a small fruited kind, and Golden Queen may be relied on to ripen early and produce good crops.

Strange developments, in which the fruit partakes of the character of the Peach, are observed in certain kinds, and the crossing of the Peach Tomato with Perfection has resulted in some charming types, amongst the best of which is one introduced by my House last year under the name of Peachblow. Certainly no gardener in 1837 ever dreamt of the fruits now commonly grown.

With white, yellow, pink, ruby, and scarlet kinds, not to mention the varying sizes and shapes, there is a wide choice for the most fastidious, both as regards external appearance and flavour.

GARDEN TURNIP.

A brief reference must be made to the garden Turnip. In the early days as many yellow as white varieties were offered, although the demand for the former has certainly not increased in proportion to the white fleshed kinds.

Amongst the many improvements may be noticed Veitch's Red Globe, Snowball, Dobbie's Model, and Golden Ball, while the Red and White Milans are varieties which arrive at maturity quicker than any other Turnip. These should not be confused with their prototypes the Red and White Strapleaved which have almost had their day.

Several important sorts have been imported from the Continent in addition to the Milans, but much selection and improvement has been necessary to make them worthy of a place in English gardens.

POTATOS.

It will obviously be impossible for me, at the close of this lengthy paper, to attempt to describe at all adequately the improvements effected in the Potato during Her Majesty's Reign, and as I have already in my paper on "Potatos" published in Vol. XIX. No. 3 of the Journal of the Royal Horticultural

Society dealt somewhat fully with this subject, I must content myself now with the fewest possible remarks. As long ago as 1836 Messrs. Peter Lawson & Sons published a descriptive list of 146 varieties, and amongst some forty-five of the principal of these I only find one which is still cultivated, viz., the Early Ashleaf. There are, besides these, some familiar names such as Early Shaw and Dons, but the remainder must have passed out of cultivation at least twenty-five years ago.

In 1852 the old Walnut-leaf Kidney, Early Oxford, Fortyfold, and York Regent, were grown—all sorts of real merit in their day—but now seldom met with. That excellent Potato Paterson's Victoria was widely cultivated up till 1880, but it would be difficult now to find an acre of this variety true to name. The fact that almost all these have disappeared from sight does not of itself necessarily prove that they were worthless or even inferior to others grown at the present time—for it is generally admitted that the majority of Potatos will not maintain their full vigour of growth and constitution beyond a certain time, the limit varying with each sort. This is not to be wondered at when we remember that each year's growth is but the prolongation of the life of the plant which apparently had completed its work when the haulm died the preceding autumn.

At the same time I have no doubt whatever that even if we could reproduce such favourite varieties as the Regent, Paterson's Victoria, etc., in all their former excellence, and plant them by the side of the best Potatos of to-day we should find very great progress had been made, not merely in productiveness and power of withstanding disease, but also in flavour—a point in which the older sorts are often supposed to have excelled. Besides this we have in Ringleader, A1., Early Puritan, etc., first-early sorts which are ready for use long before the so-called early Potatos of twenty-five years ago, and also several second-earlies such as Beauty of Hebron, Supreme, and Windsor Castle, which certainly were not equalled by any of the older varieties in their own section. Whether these will still retain their good qualities unimpaired twenty-five or fifty years hence no one can say, though in all probability, as they themselves are instances of the survival of the fittest, in so far that they were chosen from thousands of less promising seedlings—several of them will doubtless greatly exceed the limit of age reached by older sorts.

In the late and maincrop section nothing has yet approached the Magnum Bonum in popularity, and it is certainly at least as good now as when introduced by my house twenty-one years ago. There are many other very similar varieties, but on the closest scrutiny I have failed to detect any point in which they differ from the Magnum Bonum, and I have generally found when any difference has been suggested that the sorts in question were not grown alongside under the same conditions, or else that the seed had been obtained from different sources, a change of seed often producing a marked contrast in two rows of the same variety.

I must not leave the subject of Potatos without mentioning such names as the late James Paterson, Mr. Robert Fenn, the late James Clark, and Mr. Archibald Findlay, all of whom have devoted many years, if not a lifetime, to the improvement of the noble tuber—and to whom the whole Horticultural fraternity and the community at large are so greatly indebted.

We have now passed in review all the leading kinds of vegetables, and I think, imperfect as this paper has been, we must all feel that the progress in vegetable cultivation during Her Majesty's reign has been little less than marvellous.

What the progress in the next fifty or sixty years may be no one can foretell; but on behalf of the seed trade I can only express the hope that it may be accompanied by a corresponding decline in the demand for older and inferior sorts, for the labour and anxiety of keeping the rapidly increasing number of varieties true to name is such as none but those acquainted with the details of seed growing can for a moment conceive.—Arthur W. Sutton.

Large Marrows.—Mr. Ferris, Broadway, Market Levington, Wilts., reports two large Vegetable Marrows in his garden, weighing 70 lbs. and 50 lbs. respectively on one plant. This plant has borne a number of medium-sized fruits as well as the two monsters referred to, so it has not been idle.

CHRYSANTHEMUM MUTUAL FRIEND.

BEFORE the "fever" rages, and before THE GARDENING WORLD is besieged with descriptions of the shows, I should like to note a very fine variety—particularly fine, in fact, as grown by Mr. Jas. Gibson, of Devonhurst Gardens, Chiswick. Mr. Gibson is a well-known and successful cultivator of the Chrysanthemum, and this year he has, undoubtedly, excelled himself. Among, however, the many fine varieties which are already—October 24th—far advanced, I could not help admiring Mutual Friend, a very fine pure white, with a good strong dwarf habit; a plant with a character, and, I believe, alike suitable for exhibition or for decoration—a plant for the amateur as well as the professional. Mr. Gibson possesses several specimens of the plant in question, each carrying three blooms, which are pure white, and of great size and substance, the quality being indicated by the fact that the average dimensions are about 10 in. in diameter, with a depth and solidity of about 6 in. One bloom that was measured exceeded these figures, and, I think, certainly tended to prove that Mr. Gibson's skill as a cultivator is as apparent in this direction as in any others. Mutual Friend, therefore, is well named; it well repays the cultivator for his care; it responds to his attentions in a generous spirit; it acts according to the treatment it receives; and thus, in a way, it may be said to be "mutual," and a "friend," indeed.—*C. B. G., Acton, W.*

CHRYSANTHEMUM SHOWS.**BATTERSEA.**—*Oct. 29th.*

THIS Show opened on Friday 29th ult., and attracted a great deal of local attention during that and the succeeding days. We were pleased to note better groups even than last year, and it is a matter of much surprise that in so dense and low lying a neighbourhood there should be a supply of the autumn flower equalling what we have seen at many a place with better surroundings and conditions. The premier award was taken by Mr. W. H. Riddle, 75, Montholme Road, Wandsworth Common, with an exceedingly fine group occupying 30 sq. ft. with a circular front, containing clean well-grown plants.

Amongst the amateur growers, Messrs. A. W. Bolton, 11, Eversleigh Road; W. H. White, 121, Latchmere Road; and J. Daniel, 50, Washurst Road, took prizes for groups, and certainly deserved them. We noticed some very pretty Pompons, and this class must have caused some little difficulty to the judges, who awarded the honours to Mr. C. Awberry, 13, Avenue Road, Clapham; Mr. A. A. Stewart, 86, Clifton Street, Battersea; and Mr. J. J. Green, 127, Latchmere Road.

For 6 blooms, incurved, Mr. J. French, Ambleside, Wandsworth Common; and Mr. J. Portbury, Ripon House, Putney, were first and second respectively, whilst the latter exhibitor took firsts for dishes of Apples and Pears, followed by Messrs. J. J. Green and A. A. Stewart as second and third. Mr. Portbury again succeeded with his group of miscellaneous plants, but had to yield first place to Mr. Carter, Woodlands, Streatham Hill. Some very pretty baskets were arranged by Mr. Youl, 148, Eversleigh Road, and Mr. W. G. Bond, 17, Frances Street, Battersea, whilst they again scored for bouquets, but were beaten by Mr. C. Hemshead, 26, Wilson Street. Mr. Youl secured first for a vase of Chrysanthemums, and was followed by Mr. J. O. Langrish 167, Elsley Road.

For six blooms of Japanese, Mr. A. A. Stewart, Mr. A. R. Geale, 11, Geddes Road, Wandsworth, and Mr. J. Youl were successful. Mr. W. Forth, 40, Westover Road, Wandsworth, Mr. G. J. Nines, 57, Montholme Road, Wandsworth Common, and Mr. W. T. Underwood, 13, Dighton Road, Wandsworth, also staged six Japanese blooms that received awards under the conditions laid down. Mr. J. French, Mr. J. Portbury, and Mr. A. J. Povey, Field House, Larkhall Lane, each staged eighteen blooms, Japanese, in twelve varieties, and scored in this order. Mr. French further led with twelve blooms, Japanese, in eight varieties, and was seconded by Mr. J. Brown, 55, Norman Road, Wimbledon, whilst Mr. Portbury was third. The Ryecroft Silver Gilt Medal for six blooms of white Japanese, was awarded

to Mr. J. J. Green, and second and third places to Mr. J. O. Langrish, and Mr. C. Hemshead. Messrs. W. G. Bond, J. J. Green, and C. Awberry, ran each other very close for two blooms Japanese, two blooms incurved, and two bunches of Pompons (three blooms to each bunch) with foliage.

The best incurved blooms were shown by Mr. W. G. Bond and Mr. J. J. Green. Mr. G. Rock, 5, Porson Street, followed Mr. A. A. Stewart in the classes for six Japanese. Messrs. Hemstead, Bond, & Forth took the awards for six blooms of the variety Japanese.

A very fine board of twenty-four cut blooms was sent "not for competition" by R. Garton, Esq., Worplesden Place, Guildford. Mr. W. Pearson, Jr., 34, Ashbury Road, sent two plants Vivand Morel, which appeared to have been grown entirely in the open, and had not received sufficient of the cultivators' attention to warrant the judges in giving it a Certificate. Mr. Robert Neal, Trinity Nurseries, Wandsworth Common, greatly assisted the show by loans of well-grown groups of Palms, &c. Mr. Norman Davis and Mr. H. J. Jones sent some fine specimen blooms, and the Ichthemic Guano Company also testified to their existence.

Another year we hope to see more nurserymen exhibiting, as we can assure them a hearty welcome by Mr. Coppin and Mr. Langrish, the president and secretary, besides the appreciation of a good and enthusiastic attendance.

BY TELEGRAM.

DORCHESTER.—*November 3rd.*

THE annual show of the Dorchester Chrysanthemum and Horticultural Society opened in the Corn Exchange, Dorchester, on Wednesday, November 3rd. A considerable amount of merit was shown by the various competitors, who, though small in number, made up in quality what was lacking in quantity. A tradesman's exhibition was held in the Town Hall, resulting in an interesting addition to the show.

We give some of the principal awards.—A. B. Sheriden, Esq., got a first prize for forty-eight Japanese blooms, Miss Burt was second, and Miss Church third. Miss Burt took first for twelve Japanese; J. Groves, Esq., was second, and the Rev. W. M. Anderson came in third. For the best six Japanese blooms shown in a vase with foliage, the first award was taken by Miss Burt; second came A. B. Sheriden, Esq., and in the third position came Captain Sutton. A. B. Sheriden, Esq. had the best Japanese bloom in the show. For twelve incurves, J. Groves, Esq. was first; A. B. Sheriden, Esq. second; and Miss Church came in third. For a group of Chrysanthemums, Captain Sutton was first; second came Mr. W. J. Bibben; third, Miss Ashley. For a group of miscellaneous plants, A. B. Sheriden, Esq. scored first; second came Major Parry; and third Miss Ashley. Captain Hounslow and Miss Ashley took first and second for the best three Japanese specimen plants, and also for the best single specimen.

The class for the best six pots of Violets brought up a good number of entries, and the competition was very keen. Primulas and Solanums had classes to themselves; and some very handsome dishes of Apples and Pears were staged in the fruit classes, the entries in which were more numerous than usual. A handsome group of Chrysanthemums and Foliage plants was exhibited by W. E. Brymer, Esq., M.P., not for competition, who filled up one end of the Corn Exchange.

DUBLIN.—*November 3rd and 4th.*

THE Royal Horticultural Society of Ireland held their winter exhibition of Chrysanthemums and fruit at Ball's Bridge, Dublin, on Wednesday and Thursday, November 3rd and 4th. It was a grand all-round show in every department. In the class for a group of Chrysanthemums, not to exceed thirty pots, staged for effect, first came Mrs. M'Cann, Simmon's Court Castle, Dublin (gardener, T. Goff) for the leading award; Mrs. Pearce, Willow Park, Dublin (gardener, J. McKenzie) came second. For a group occupying 50 superficial feet, arranged for effect, first came Mr. M'Cann; second, Mrs. Mac-taggart, Oasell House, Rathgar (gardener, Mr. Sullivan); third, Mrs. Pearce. In Class III, for four pots of incurved Chrysanthemums, each different, the first prize was taken by Mrs. M'Cann. In the Class IV, four plants, any varieties, not to exceed 8 ins. in diameter, Mr. M'Cann was first; H. B.

White, Esq., Bullingule, Donnybrook (gardener, J. Finegan), came second.

In Class VIII for thirty-six cut blooms, eighteen Japanese, eighteen incurved, first, Lord Ashbrook, The Castle, Durrow (gardener J. L. Mc Kellor); Countess Pembroke, Mount Merrion, Dublin (gardener, H. Crawford), came in second; and R. De La Poer, Kilcronagh (gardener, M. Fernie), took third. Class IX, stand of twenty-four blooms Japanese, 14 distinct varieties, first, Col. C. B. F. Crichton Mullaboden, Ballymore Eustace (gardener, J. Mitchiner); second, Lord Ashbrook, The Castle, Durrow (gardener, L. Mc Kellor); third, Countess of Pembroke, Mount Merrion, Dublin (gardener, H. Crawford). Class X, stand of forty-eight blooms, forty-eight varieties, first, Countess Pembroke; second, Col. C. F. Crichton; third, Lady E. H. Bury, Charleville (gardener, Mr. R. McKenna). For twenty-four blooms not less than eighteen varieties, the first prize, a handsome silver cruet, presented by the Ichthemic Guano Co, Ipswich, was taken by Lord Ashbrook; second, Countess Pembroke; third, R. De La Poer, Kilcronagh, (gardener, J. Fernie).

In Class XVI. for six white Japanese blooms all one variety: first, Clifford Lloyd, Esq., Victoria Castle, Killiney (gardener, J. Farrell); second, Mrs. Moore, Ashton, Phoenix Park (gardener, Mr. Kearn); third, Countess Pembroke. In Class XVII. for six Japanese any colour except white or yellow, Countess Pembroke was first; C. Lloyd second; and Lord Plunkett, Old Connaught House, Bray (gardener, W. Webster), was third.

In the class for four bunches of Grapes in two varieties, first came Lady E. H. Bury, and second Lord Ashtown.

For two bunches of white Grapes Lady E. H. Bury was first, and Lord Ashtown (gardener, Mr. A. Porter) Woodlawn, Dublin second. Two bunches of black Grapes were best shown by the Rt. Hon. J. M. Meade, St. Michaels, Merrion, Dublin, (gardener, Mr. J. Colgan), second came Lord Ashtown, and third, Lady E. H. Bury.

In the class for a dish of six cooking Pears Mr. R. Cassels, Harrold's Cross, Dublin, led; second came Mrs. McCann, Simmon's Court, Dublin (gardener, Mr. Goff); third, Mr. J. B. Quin, Shannon Lawn, Limerick (gardener, Mr. J. Ryan). Six dessert Pears were best shown by Mr. J. Gubbins, Bruree House, Bruree (gardener, Mr. H. Morrison). The second prize fell to Lord Carew, Castle Boro, Enniscorthy (gardener, Mr. J. Kennan); and the third to Mrs. Myre, Ashton, Phoenix Park (gardener, Mr. Kearns). For six cooking Apples Mr. E. Dolier, Knockton Bray, Dublin (gardener, Mr. J. Harvey) was first; Lady E. H. Bury, second; and third, Mr. J. Gubbins. In Class, XXXV. six dessert Apples were best shown by General Sir R. Palmer, Kenure Park, Rush, Dublin (gardener, Mr. N. Stringer). Mrs. Moore was second, and Lady E. H. Bury third in this class.

The finest group of foliage and flowering plants was contributed by Messrs. C. Ramsey & Sons, Ballshridge Nursery, Dublin; Mr. R. Jameson, the Nurseries, Sandymount, Dublin was second.

Amongst the trade exhibits not for competition, Messrs. Edmondson Bros., Dublin, had a splendid lot of Apples and Pears. Mr. W. Tait, Nurseryman Dublin, sent a grand collection of Apples of the leading varieties. A collection of plants was exhibited by the Ichthemic Guano Co.

SOCIETIES.**NATIONAL CHRYSANTHEMUM SOCIETY.***November 1st.*

THERE was a fairly busy meeting of the Floral Committee of the above society at the Royal Aquarium on this date. A considerable number of Certificates was given (for which see next week), and there were several varieties that the committee desired to see again.

Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey, staged a quantity of fine cut blooms including such varieties as Mrs. G. W. Palmer, Directeur Liébert, and N.C.S. Jubilee.

Mr. H. J. Jones, Ryecroft Nursery, Lewisham,

S.E., showed amongst other things capital samples of the handsome new white Anemone Mrs. P. R. Dunn.

Mr. W. J. Godfrey, Exmouth, Devon, contributed two dozen fine blooms. President Nonin, Mrs. Chas. Birch, George Foster, and Mrs. F. A. Bevan, were some of the most striking forms here. Mr. N. Molyneux, Rookesbury Park, Fareham, and Mr. H. Weeks, The Gardens, Thrumpton Hall, Derby, were likewise extensive exhibitors.

Mr. Robert Owen, Maidenhead, had two dozen cut blooms, half of which were of incurved varieties.

QUESTIONS AND ANSWERS

Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Transplanting Hollies.—G. H.: It depends very much on the size of the plants, especially in relation to the quantity of uninjured roots in proportion to the head of foliage. Large trees generally have their roots more or less cut up. It would be the safer plan, therefore, to transplant specimens of small size at the present time, waiting till you get showery weather about the end of March before lifting larger ones. The roots become active just before growth begins to push, and if they, as well as the foliage, are kept moist till the roots get fresh hold, the operation proves successful.

Fern Fronds discoloured.—C. B. G.: We discovered some small colonies of fungi on the more decayed portions of the Polypodiums, but they were seated on the surface of the fronds and belonged to some species of Botrytis. From what we could see these fungi were not the immediate cause of decay but an after result. The fronds are transparent under the microscope, and when that is the case there can hardly be anything in the interior that cannot be detected beyond bacterial organisms, always present in decaying matter. The chlorophyll grains are mostly destroyed in the brown portions, while the walls of the cells are darker brown than their contents. We have seen similar discolouration in the case of Filmy Ferns that were kept in a cold and continually saturated atmosphere, but which gave satisfaction when placed under drier atmospheric conditions. The fronds sent were thin and membranous, suggesting that a more airy atmosphere would give them greater rigidity and enable them to resist the attacks of fungi if present. Polypodies delight in air and light.

Dressing a Border with Manure.—Omega: Some varieties of Narcissus do not like manure, and in such a case it would be injurious to cover the ground above them with manure. The Tenby Daffodil comes into this category. The majority of cultivated varieties, however, derive advantage from an application of well-rotted farmyard manure, if not put on too deeply. The substance of this would be washed down by rain during the winter, thereby furnishing the roots with something to feed upon while they are developing and leaves being thrown up.

Leaf Mould or Stable Manure for Carnations.—Omega: We could not advise you to use either during the winter months, as they would encourage too much moisture about the plants at a time when it is more injurious than beneficial. Carnations, if planted in autumn, should first have the soil trodden, before being inserted. A firm soil is always drier than a soft, loose one. When growth is being resumed in spring, or say about the beginning of May you may give a thin coating of well rotted stable manure to preserve the moisture. Good growers prefer to plant in rich soil, where the manure has been dug in some time previous to planting. Mulching is unnecessary in well enriched soil.

Management of Cricket Ground.—X. Y. Z.: We take it for granted that the ground will be dug or trenched equally all over in the first place, so that it may consequently subside equally and regularly. If sufficiently dry to permit of the operation, the soil may be rolled before sowing, to break down the clods, &c. Then rake it finely, keeping it level. Sow the seed and give it another rolling, after which the grass should be allowed to grow as it may, till rank enough to require mowing. This should be done with the scythe at the first operation, because it may have grown unequally, and not be very firmly rooted in the ground. Subsequent mowings, in our opinion, had better be done carefully with the mowing machine. Should June and July be very dry we should advise you to give the grass a good watering after the mowing has been completed and the grass cleared away. After the superfluous moisture has sunk into the ground, run the roller over it again. If your operations have been successful you should be able to play upon the ground towards the end of the

season or even in August. This may be done if the soil is firm and the grass forms a close sward.

Names of Fruits.—J. H.: 1, Court of Wick; 2, Lane's Prince Albert; 3, Colonel Vaughan; 4, Dumelow's Seedling; 5, Tower of Glamis; 6, Beurré de Capiaumont; 7, Beurré Sterkmans; 8, Easter Beurré; 9, possibly Beurré Clairgeau, but not quite in character.

Names of Plants.—J. H.: 10, Kerria japonica; 11, Polygonum Sieboldi.—D. Lamb: The Japanese Toad Lily (Tricyrtis hirta).—C. B. G.: Mnium undulatum.—W. M.: 1, Aster Novi-Belgii laevigatus; 2, Aster diffusus horizontalis; 3, Rhus Cotinus; 4, Acer platanoides; 5, Alyssum maritimum variegatum.—A. H.: 1, Asplenium bulbiferum minus; 2, Selaginella Braunii; 3, Cotoneaster Nummularia; 4, Cotoneaster Simonsii; 5, Pernettya mucronata; 6, Arbutus Unedo.—W. K.: 1, Oncidium varicosum; 2, Maxillaria picta; 3, Cattleya dowiana aurea.—T. L.: 1, Polypodium aureum; 2, Lomaria gibba; 3, Pteris cretica albo-lineata.—E. B.: 1, Lycesteria formosa; 2, Spiraea Bumalda; 3, Abelia triflora; 4, Tradescantia virginiana; 5, Escallonia rubra; 6, Kerria japonica; 7, Calycanthus floridus; 8, Azara microphylla; 9, Diervilla grandiflora var.—Odont.: Odontoglossum grande, well grown.

A Special Offer to Readers of THE GARDENING WORLD. 25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia

OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER { INFORMATION } ISSUED. Size of Encyclopædia: 9 by 11½ inches. 656 Pages

It contains

MANY MAGNIFICENTLY ENGRAVED COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

61197. **COUPON.**

OGILVIE'S ENCYCLOPÆDIA OF USEFUL INFORMATION, AND WORLD'S ATLAS, (Published Price 25s.). 16 COUPONS, AND 6d. WITH EACH.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, November 15th.—Chrysanthemum Shows; Namur, Munich.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 TUESDAY, November 16th.—Chrysanthemum Shows; one day—Hartlepool, Kidderminster, Stirling; two days—Ipswich, Manchester, Belfast, Chester, Folkestone.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 WEDNESDAY, November 17th.—Chrysanthemum Shows; one day—Buxton, Rugby, Wishech, Geneva; two days—Hull, South Shields and Northern Counties, Bristol; three days—York; five days—Dijon, Cambrai.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 THURSDAY, November 18th.—Chrysanthemum Shows; two days—Londonderry, Bury St. Edmunds; three days—Edinburgh.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 FRIDAY, November 19th.—Chrysanthemum Shows; two days—Stockport, Bolton, Edmunds.
 Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

FEATURES OF THE N.C.S. GREAT SHOW.—

As we make our annual inspection of this great London exhibition the flowers in the cut bloom classes seem to get larger and larger, by the introduction of new kinds coupled with high class cultivation, rather than the better development of old sorts, hundreds of which get shunted into the back ground and forgotten annually. Even the incurved blooms of the small and old-fashioned type can hardly find a place on the show boards in the more important classes. Japanese varieties on the larger winning stands are represented by varieties which have mostly been put into commerce during the last two or three years. The premier and most popular variety of the whole show was undoubtedly Madame Carnot, which, though not the newest of the recent kinds, cannot by any means be considered old. Enormous blooms of it appeared in all the best stands in the competitive and other classes, but the twelve blooms on the ground floor seemed to take everybody by storm. It was, in fact, in every gardener's and cultivator's mouth. Naturally the older and white form was most abundantly represented, but we noted a bloom of the yellow sport (G. J. Warren) that was the best in the show. The variety requires careful handling to get it in good form, but growers everywhere better understand its requirements than formerly.

For some years past a new type of incurved varieties has been giving an impetus to what is known as the old and true Chinese type. The blooms of the latter were not only old-fashioned, so to speak, but the consensus of public opinion, as far as exhibitions were concerned, was that the blooms were too small. They certainly looked rather insignificant when pitted against the stands of well grown and modern Japanese varieties. With the introduction of J. Agate and C. H. Curtis a few years ago, they made their presence felt to such an extent upon the boards that raisers in various quarters set about multiplying varieties of the same magnitude, but in different shades of colour. The largest incurved bloom we noted was Lady Isabel in the stands of Mr. Mease, who carried off the premier awards for the thirty-six in-

ORCHIDS of the highest quality, every plant guaranteed true to name, from 2/6 each. Please send for free list.—P. McARTHUR, The London Nurseries, 4, Malda Vale, London W.

curved, and forty-eight Japanese varieties, taking both of the Holmes Memorial Challenge Cups. The new incurved types were also predominant in the national competition of Chrysanthemum and horticultural societies. They included such as Duchess of Fife, Ma Perfection, Major Bonaffon, and others mentioned in the report of the show. Many of the old growers look upon them as beyond the pale of recognition, and their inclusion in the incurved list as rank heresy; but they have a noble appearance all the same.

The miscellaneous exhibits were undoubtedly a strong feature of the show; for they occupied the whole of the ground floor space. The two groups of Chrysanthemums set up by Mr. Norman Davis and Mr. H. J. Jones, at the west end of the building, were gorgeous, massive, and a great relief upon other arrangements, and took the public fancy immensely. There were also many admirers of the Pelargoniums from Swanley, the Potatos from Reading, the Apples from Forest Hill, and the Conifers from Dundee decorating the Ichthemic Guano Company's octagon group.

The vegetables in St. Stephen's room now constitute the most important show of the kind in London, and have been growing in importance for some years past. The displayed collections were both interesting and instructive. It now takes good vegetables and great skill in arrangement to take a first prize. The samples of Leeks, Potatos, Onions, Cauliflowers, Beet, Parsnips, Brussels Sprouts, Tomatos, &c., are something to be remembered. Potatos were both abundant and of good quality, thanks to new and disease-resisting kinds. Apples in most cases presented a most alluring and imposing appearance.

Ben Nevis was entirely bare of snow at the beginning of this month, a most unusual occurrence.

Victorian Era Exhibition.—A Diploma and Gold Medal have been awarded to Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, N., by the management of the Victorian Era Exhibition, Earl's Court, for the planting of shrubs and other subjects in the gardens there, while the exhibition was open.

Sutton's Peerless Marrowfat Pea, although classed as a main crop Pea, was shown in excellent condition at Sevenoaks, November 2nd, fine large pods containing grand dark, bright green peas 8 to 11 in a pod, remarkable in size and of excellent flavour. This Pea is most robust in habit, in height about 3 ft., producing an enormous crop, and never attacked by mildew, a very great thing in its favour. It is one of the splendid novelties emanating from the Reading firm.—*Urbanus*.

Lance-Corporal Patrick Milne, the brave piper who continued playing "Cock of the North" on his pipes after being bowled over by a shot in each leg, in the famous charge at Dargai, on the Indian frontier, is a native of Ardoyne near Insch, Aberdeenshire, where his father was a small farmer. The latter is now gardener at Waterside, Newburgh, in the same county. Young Milne first smelt powder at the battle of Malakand, and in the next encounter of the same campaign he again had a narrow escape, while a bullet through the pipe-bag silenced his music.

French Chrysanthemum Society.—On the occasion of the Chrysanthemum show held by this society at Orleans on the 6th, 7th, and 8th inst., a congress was organised to commence at 2 p.m. The questions submitted to the congress were the "Fertilisation of Chrysanthemums," "The best Compost and Manures," "Diseases and Parasites," &c. A banquet was held at 7 p.m. On the second day there was a mid-day breakfast, and in the afternoon the town and monuments were visited. On the third day (Monday) the principal horticultural establishments of Orleans were visited by the society and those connected with it.

Mike: "What was it Pat said when he fell through the roof of the hothouse?" Denny: "Oi have a pane in me soide, begorra!"

Late Peas, Scarlet Runners and Strawberries.—About the beginning of November, usable Scarlet Runners were gathered in the suburbs of London. Marrowfat Peas were gathered on the 2nd inst., by Mr. H. C. Corney, High Street, Littlehampton, Sussex. Mr. H. Harvey, of the same town plucked ripe Strawberries on the 1st inst.

Mr. John Forbes at Carlisle.—On the occasion of the Chrysanthemum Show at Carlisle on the 10th and 11th inst., Mr. J. Forbes, Buccleuch Nurseries, Hawick, staged a very fine lot of the immensely popular winter flowering Begonia, Glorie de Lorraine, associated with Roman Hyacinths and Ferns, along with his new scarlet perpetual Carnation, Yule Tide, which has become such a favourite on account of its free blooming qualities, size and colour of flowers, etc.

Messrs. J. Weeks & Co.—In order to better cope with the constantly increasing amount of work entrusted to the firm for execution, the business of the old established and well-known horticultural builders and hot-water engineers, Messrs. J. Weeks & Co. has been formed into a company, most of the capital being privately subscribed, and has been duly registered under the Companies' Acts. The firm, now merged in J. Weeks & Co., Limited, which will be continued under the same management is under the most distinguished patronage, having executed works for Her Majesty The Queen, most of the nobility and gentry, H. M. Government, the Admiralty and War Departments, the Royal Horticultural and Botanic Societies, as also many museums and other public buildings, churches, etc.

Presentation.—On Friday night (the 5th inst.), a few friends met in the house of Mr. McInnes, Shewalton, Irvine, and presented him with a beautiful marble timepiece on the occasion of his leaving Shewalton. Mr. Dewar, Dankeith, occupied the chair, and after a few suitable remarks called upon Mr. Hamilton to make the presentation. Mr. Hamilton, in doing so, expressed the great regret with which they parted with Mr. McInnes. He had been among them for five years, and made himself a kind neighbour and true friend. He wished him much success in his new situation. Mr. McInnes said he was much surprised to receive such a handsome present, and would never cease to remember the many friends he had made in Ayrshire, and trusted he would occasionally be able to be among them. On behalf of his wife and self, he sincerely thanked all who had contributed. Mrs. McInnes entertained the company in hospitable fashion, and a pleasant evening was spent. Mr. McInnes has been appointed gardener to D. Whitelaw, Esq., Eskhill, Inveresk, and is succeeded at Shewalton by Mr. Miller, presently foreman at Caprington Castle.—*R. L.*

Amateur versus Professional.—Apropos of Mr. Gibson's comments on this matter (p. 133), I am very glad to be able to record that, occasionally, the ability of the amateur to out-rival his professional confrere, is not confined to bonnie Scotland; and that the latest instance proves that the Sassenach, also can sometimes excel in his own particular line. Mr. Mathew—a gentleman I know by reputation—not only won first place at the Exmouth show against all comers, but repeated the performance at the Devon and Exeter show a few days later. In fact the *Devon Evening Express* of Nov. 4th states that:—"Following up his success at the Exmouth Show last week, Mr. G. W. Mathew was to-day, at the exhibition of the Devon and Exeter Horticultural Society, awarded a first prize for his splendid specimen of Alicante grapes. The three bunches exhibited were grown in a small cool greenhouse at the rear of Mr. Mathew's residence in Mamhead View, and were produced without professional aid. The bunches are remarkable for their size and symmetry, and certainly do their producer very great credit." Moreover, this is no isolated instance, for the Exmouth local paper has it that when Mr. Mathew "lived at Sandhill Cottage he repeatedly beat experts whose life's business was grape-growing," and that, "the marvel is that no artificial heat of any description has been employed."—*C. B. G., Acton, W.*

Enthusiastic Amateur Gardener.—Goggles was so fond of grass that, because it would not grow in his back yard, he wore green spectacles.

Chrysanthemums at Waterlow Park.—In the long range of greenhouses there are 2,000 Chrysanthemums in 750 varieties, old and new. The display promises to be the best ever seen at Waterlow Park, when the blooms shall have reached their best condition. The collection reflects great credit on Mr. Webbe, the grower.

Mutual Improvement Society, Woolton.—On Thursday of last week the usual meeting of this society was held at the Mechanics' Institute, Mr. W. Oliver in the chair. The lecturer, Mr. A. Randall, of Aigburth, selected for his subject, "Plants Suitable for Decoration." A large number of kinds was submitted, including stove, greenhouse, and hardy kinds, with the varied requirements to suit them for the trying time that they were in the house and usually in positions far from the light. A special selection suitable for table decoration of the most light and graceful varieties was given. A discussion followed in which Messrs. Todd, Waterman, Corlett, Carling, Rae, and Disley took part. Sections of stems of Aspidium and Bracken, the root of a marsh plant, the starch grains in wheat, and specimens of lungs heavily charged with foreign matter were shown by the aid of the microscope under the direction of Messrs. Corlett and Potts. Votes of thanks to the essayist and chairman concluded the business.

Exmouth Chrysanthemum Show took place in the market at Exmouth. Up to the present year it has been a one day's show only, but this season the period has been extended to two days. A highly creditable display of Chrysanthemums, fruit and vegetables was got together. Amongst the cut Chrysanthemums some excellent blooms were to be seen, the leading award for thirty-six Japanese going to Mr. H. Hammond Spencer. Mr. Hammond Spencer also showed the best twelve incurves. General Roche received the first prize for four Chrysanthemums in pots; and Mrs. H. Steward a similar award for plants arranged for effect. In the classes for fruit, first prizes went to Mr. Matthew, for Muscat Grapes; to Mrs. Creswell, for six varieties of cooking Apples; and to Mr. R. Ley, for six varieties of dessert Apples. The premier collection of vegetables was contributed by Mr. A. Shapland. In the special prizes Mrs. Harvey was honoured for table decoration, and Miss Schreiber for a basket of Chrysanthemums. Mr. W. J. Godfrey, of the Exmouth Nurseries, sent a splendid non-competitive exhibit of Chrysanthemums, both on the plants and off them, and other subjects for which the Exmouth Nurseries are famous.

Devon and Exeter Gardeners' Association.—At a meeting of this association, held at the Guildhall, Exeter, on the 27th ult., a paper was read by Mr. R. Hodder, gardener, to Mrs. Trevor Barclay, Ponsonby, Torquay, on the subject of "How a Knowledge of Botany is a Help to Gardening." The chair was occupied by Mr. T. Stoneman, lately teacher of botany at the Exeter Museum. Mr. Hodder said that botany had much to teach gardening, because it afforded an insight into the physiological principles upon which horticultural operations were based. By thoughtful care a gardener could often so improve the surroundings compared with those of the natural home of plants, that he could coax Nature, as it were, to greater developments and a higher perfection. In the production of double flowers, man did not add new possibilities to Nature, but took advantage of those already existing. Man could not break through the laws of Nature, which were fixed, but could only work in accordance with them. Botany taught them the structure of plants, the functions performed by them, and the systematic arrangement of the same in sub-kingdoms, classes, orders, &c. In conclusion he told his hearers not to imagine that the whole field of improvements had been traversed, but that there was a vast field for improvement ahead of them. Mr. A. Hope showed the members a branch of the true Cedar of Lebanon. The Rev. Lloyd Sanders exhibited a cone obtained from the Biblical Forest of Lebanon. He sowed the seed and has reared a tree from it.

CHRYSANTHEMUM HAIRY WONDER.

THE advent of Mrs. Alpheus Hardy in 1890 practically inaugurated a new race of the autumn queer. The difficulty of growing that variety was not sufficient to damp the enthusiasm of growers who were

tion for their reception. None of the hairy varieties have given more satisfaction than Hairy Wonder, of the same form as a true Japanese type, but thickly covered all over with bristly outgrowths from the back of the tubular florets. In colour the blooms

1894, and has been honoured with several certificates from different societies. We first met with it in the establishment of Mr. H. J. Jones, Ryecroft Nursery, Hither Green, Lewisham, who supplies the accompanying illustration of this remarkable variety.

CHRYSANTHEMUM HAIRY WONDER.

taken with the strange appearance of the new comer. Raisers set about getting new varieties of different forms and colours, but all possessing the hirsute or plumy character of the original. So well have they succeeded that a large number have already been put into commerce, with the result that the National Chrysanthemum Society has created a "hairy" sec-

vary from a light to a deep fawn according to the stage of advancement, the earlier stages being the darker. About this time the bristly florets have the most singular appearance of wriggling caterpillars. Later on as the florets lengthen, they droop down and give the whole bloom a more graceful and easy appearance. The variety was put into commerce in

Sixty trees were planted on the summit of Redhill Common on the 19th ult. in commemoration of the Queen's Diamond Jubilee. Many people were present, including Lord Oxenbridge, Henry Cubitt, Esq., M.P., Mrs. Cubitt, the Mayoress of Reigate, and Lady Myles Fenton. Some of the trees were planted by ladies.

PEOPLE WE HAVE MET.

MR. J. W. MOORMAN.

THE subject of our memoir was not born of gardening parents, but took to the calling from pure love of horticulture.

At the early age of ten years he was employed at the floors of a tin mine, washing and cleaning tin ore, which occupation he followed for nearly four years, the next two found him acting in the capacity of a navy boy attending on the men carrying their tools and fetching them rock powder for blasting purposes. Thus at the age of sixteen when lads now think of leaving school, Mr. Moorman had done six years of hard rough toil. On leaving this he procured employment in a small garden belonging to Miss Baring Gould, at Teignmouth, Devon, who was a niece of Mr. Joseph Sabine, a former secretary of the R.H.S., and aunt to the great novelist—the Rev. Sabine Baring Gould.

Miss B. Gould was a good botanist and an ardent lover of horticulture, Mr. Moorman gaining from her a rudimentary knowledge of both gardening and botany after a service of four years with her; and fired by a love and a desire for further improvement he engaged himself as an improver in the extensive gardens of Lord Poltmore, Poltmore Park, Exeter. After a stay here for nearly two years he was transferred to Poynton Towers, Cheshire, where he spent the following two years in the gardens of Richard Christy, Esq.

He next made a sojourn of several months in Messrs. James Veitch & Sons' Chelsea Nurseries, being principally employed among Ferns, of which he at that time had a good knowledge. From the Chelsea Nurseries he was next sent to Sulhy Hall, Rugby, Warwickshire (Lady E. Villiers), as foreman; and after a short stay here he was sought after by his former employer to take the charge of his mother's place at Coombe Bank, Kingston-on-Thames, which situation he held for upwards of seventeen years, and through the kindness of his employers, the late Mrs. and Miss Christy exceptional opportunities for gaining further experience in first-class gardening was afforded him. During Mr. Moorman's sojourn here he was for many years actively engaged in the advancement of horticultural societies, and a frequent contributor to horticultural journals. He holds two Gold Banksian Medals from the R.H.S. awarded to him in March, 1879, and 1881 for groups of Hyacinths, Tulips, and Crocuses.

The growth of Roses in pots was for many years a favourite theme of his, and he has taken many first prizes at the Crystal and Alexandra Palaces, also at the Royal Aquarium, &c., when more encouragement was offered by the various horticultural societies for these attractive and much admired subjects than now.

At the local shows many a first prize card was attached to his collections of cut Roses for which he had a long and successful career, as well as gaining awards in almost every other branch of the profession.

But as a grower and exhibitor of Chrysanthemums has he been longest known; he has grown them almost every year since 1866. In 1879 he was awarded the All England Challenge Prize at Southampton for twenty-four cut blooms. He followed up this success the same year at Ealing, Plymouth, Manchester, and came in second for the first Kingston Challenge Vase, the fight for which, and successive Challenge Vases offered by that society has given more stimulus to the rapid development of this autumn favourite than ought else. For the establishment of the Kingston Chrysanthemum Society Mr. Moorman penned and circulated the notices for the first meeting, and remained on the executive of the society for several years until he left the neighbourhood.

After leaving Coombe Wood, he turned his attention to landscape work, and was entrusted to lay out Camberwell Park (Myatts' Fields), and while at work here he came under the London County Council, who, after it was laid out, had the control of the park, Mr. Moorman being appointed its first superintendent.

About two years afterwards on the council acquiring Brockwell Park, he was promoted to the charge of this. His stay here was only for a few months as a vacancy had occurred in the meantime at Dulwich Park, which he was invited to conduct; and his transfer to this fine open space proved that

he was clearly at home amongst the many Alpines and numerous other interesting plants that are so extensively cultivated in this beautiful suburban lung of London.

After a stay of two years and three months he was promoted to his present charge at Victoria Park, which, as its superintendent, he has directed for the past four years, and the record of his work both

MR. J. W. MOORMAN.

there and at Dulwich, we have been pleased to describe in these pages on several different occasions. In the springtime the rockeries and alpines at Dulwich Park afforded us much pleasure in inspecting them. The flowering trees and shrubs were varied and most interesting; while later on the summer bedding offered us much to linger over. After his transference to Victoria Park, the special features of the various styles of bedding were not only maintained but even improved. The spacious area of what should have been grass at the east end of the park, was trodden bare and black by the thousands of Londoners visiting the same for recreation. All this has been transformed by Mr. Moorman, and the grass is everywhere green again.

Mr. Moorman has for some years been an active member on the executive of the N.C.S., being on both the floral and schedule committees; he has also acted in the capacity of judge on several occasions besides the present year, and has been much in request in the past to such important societies as Hull, Bournemouth, South Shields, and Northampton. Mr. Moorman has certainly proved himself an all-round gardener, and it is as a gardener amongst gardeners that he likes best to be known.

PLANTS RECENTLY CERTIFICATED.

FIRST-CLASS Certificates were awarded to the under-mentioned Chrysanthemums at a meeting of the Floral Committee of the National Chrysanthemum Society, at the Royal Aquarium, on November 2nd.

G. J. WARREN.—This is very generally known as the yellow Madame Carnot, from which it originated as a sport. The blooms shown on this occasion were a considerable improvement on those which appeared last season. The colour is bright yellow, and the florets of very great length. The whole bloom is thus of great size, but rather loose in build. Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey.

MRS. PALMER is a new Japanese variety, a sport from Mrs. C. H. Payne. The blooms are very large and exhibit a charming shade of rosy-buff, touched here and there with a warmer cerise. The centre of the bloom has a decided orange flush, and the florets have a silvery reverse. Mr. W. Wells.

LADY ISABEL.—When first sent out this was classed as an incurved Jap., but on later buds it develops into a grand incurved flower. The blooms are of extraordinary size, the florets being massive, and

incurving quite regularly to form a full, high centre. The colour varies from blush-white to blush-pink. Mr. W. Wells.

LENAWEE.—Here we have a most distinct and rather peculiar type of Japanese bloom. As the name suggests, it is of American origin; but should prove of value here also. The florets are long, tubular, and incurved slightly at the tips. The whole bloom is rather loose in build, and runs to lateral expansion rather than to depth. The colour is blush-pink. Lenawee was distributed in this country by Mr. Norman Davis, of Framfield, Sussex, and was shown on this occasion by Mr. J. Ollerhead, Wimbledon.

MRS. F. A. BEVAN.—This variety exhibits one of the prettiest types of Japanese blooms. The florets are of medium length and width, but good substance, and incurve charmingly at the tips. On the upper surface they are bright rose, with a lighter rose reverse. The bloom is of medium size, and should make a capital front row flower. Mr. W. J. Godfrey, Exmouth, Devon.

G. FOSTER is a fine yellow incurved Japanese variety, with very broad fluted florets of great substance. They are rather irregularly arranged with regard to each other, and turn both to right and left as well as towards the centre. The result is a bloom of distinct build. It is, moreover, of fair size, and will doubtless be heard of again. Mr. W. J. Godfrey.

MR. CHAS. BIRCH was shown as a hairy variety, but the committee was of opinion that the hairs or thorns were not sufficiently numerous or pronounced to entitle it to be placed in this section. It received a certificate, therefore, as a Jap. The florets are narrow, thorned to some extent at the tips, and intertwine considerably. The bloom is of fair size, and should make a good front row flower. The colour is a glistening white. Mr. W. J. Godfrey.

MARY MOLYNEUX.—This was the finest of the novelties displayed, at least in its section. It is an incurved Japanese with enormous blooms. The florets are long and of medium width, rose-pink on the upper surface, and pale silvery-pink reverse. The centre is full and high. Mr. N. Molyneux, Rookesbury Park, Fareham.

MRS. N. MOLYNEUX.—This is another grand incurved Jap with long fluted florets, having divided apices. The colour is creamy-white. The size of the bloom is remarkable. Mr. N. Molyneux.

A commendation was proposed to N.C.S. Jubilee as shown by Mr. W. Wells. For full description of this charming variety see the list of Chrysanthemums certificated by the Royal Horticultural Society (p. 151).

VICTORIA PARK.

THE Chrysanthemum show at this London park has been open to the public since the 14th October, and will continue so for some weeks to come. The very earliest varieties are past their best, though the general collection is by no means early. Mr. J. W. Moorman, the superintendent, has a stock of late varieties in reserve to take the place of those that go out of bloom, so that the show will be kept up to the standard for weeks to come. The roomy span-roofed house was originally built to accommodate Chrysanthemums, and is admirably adapted for the purpose. The plants are arranged in a sloping bank, rising in the centre and again at the ends of the house, on either side of the pathway.

We noted grand blooms of Lady Byron, Louise, Phoebus, Mme. Paul Lacroix, Pride of Madford, Wm. Seward, M. Pankoucke, and Mutual Friend, concerning which it would be difficult to speak too highly. The golden yellow A. H. Fewkes, is dwarf in stature and handsome. Other favourites that find their admirers everywhere are Mrs. E. S. Trafford, a bronzy sport from Wm. Tricker, also well done; the crimson M. G. Byron; and the silvery-blush Mme. C. Capitante, having the florets jagged at the tips; the carmine Pride of Madford; and the golden-yellow Amiral Avellan, the pride of many growers. Mme. Paul Lacroix is a bold primrose-yellow Japanese sort, with broad florets. Mrs. Felix Perrin is pink and pretty. Commandant Blusset comes best on the terminal bud.

Side by side with the most recent introductions are many of the old favourites which were popular years ago, including such as Val d'Andorre, and Mr. C. E. Shea or the yellow Mdle. Lacroix. Besides being an object lesson by comparing them with the newer kinds, we believe the public are as much

delighted with them as with some of the biggest. The massive pinkish-gray Australia is capitally done here. Of smaller size but handsome is Bride of Maidenhead. The bronzy hue of Col. W. B. Smith is rich and striking. Sautel 93 is a large pink flower with broad petals. Modesto and Pallanza are grand yellows, the former being the darker of the two. There is no question but Charles Davis and Mme. E. Rey have still many admirers.

Emily Silsbury is a good exhibition sort and may be had early. Edith Tabor and Oceana are yellow Japanese sorts that find favour with many. The same may be said of Australian Gold, which varies in intensity according to the bud on which it is taken. Ethel Addison belongs to the incurved Japanese class, and its broad florets are shaded with violet on

Mr. Moorman has been a specialist in the cultivation of Chrysanthemums since 1866, and needless to say he knows how to make the most of the means at his disposal in producing a first-class display for the benefit of the public. He is well supported by his grower, Mr. Large.

CHRYSANTHEMUM AUSTIN CANNELL.

INCURVED Chrysanthemums respond but slowly to the endeavours of those who busy themselves with the production of new varieties. This is largely due to the fact that the reverse only of the florets can be shown in this form, and that this face is always duller or paler than the upper, and less productive

FINSBURY PARK.

THE public was admitted to the display of Chrysanthemums on the 9th October, being if anything a few days earlier than usual. Some 3,800 of them are on view, the bulk of the big flowers being arranged in the old Chrysanthemum house amongst the shrubs. The conservatory contains the bush grown specimens.

We have never seen a finer display in the old house than there is at present. During the recent dense fogs Mr. John Melville, the superintendent, had the ventilators at both top and bottom sufficiently open to admit of a free circulation of air, which was kept buoyant by means of the hot water pipes. By this means the fog was kept out and a

CHRYSANTHEMUM AUSTIN CANNELL.

a light ground. Yvonne Desblanc is an incurved Jap. somewhat similar to Miss Annie Hartshorn in form and colour.

A good many incurved varieties are distributed through the house including such grand new or recent types as Mrs. R. C. Kingston, Duchess of Fife, and C. H. Curtis. Of moderate size, but very sprightly is D. B. Crane, of a clear old-gold colour. Rena Dula, of a deep rose purple, belongs to the same race. Pompons find a place along the front of the large-flowering varieties, and prove an acceptable adjunct to the whole. Nelson is a large purple Anemone, well worthy of a place here. The purple rays and bronze disc of Mrs. H. Gardiner make another very distinct Anemone. Mrs. Caterer belongs to the same class and is a very beautiful pure white variety.

of variation. Nevertheless, they are not neglected in the rush for the finest and biggest flowers. Austin Cannell possesses the same form, and the bold, massive character of the florets of the well-known M. R. Bahuant, one of the earliest of incurved varieties and more suitable for October than November work. The inner face of the florets of Austin Cannell are purple-maroon, the outer being paler, but to some extent influenced by the darker hue. The best blooms are obtained from the crown buds. A glance at the accompanying illustration, lent us by the Messrs. Cannell, will sufficiently substantiate the claims of this bold and handsome variety to recognition. It is a new variety put into commerce last spring, and possesses the broad, blunt character of the florets of the true Chinese type.

clear atmosphere maintained in the house. One bush grown plant of Margot is stood against each pillar supporting the roof, thus breaking the monotony and rendering the display more effective. In like manner L' Isle des Plaisirs and M. Charles Hubert are employed along the back and just surmounting the great bank of big blooms.

While passing along the only path of the house amongst the visitors we noted grand blooms of Hairy Wonder, Mr. H. Runchman, Miss Elsie Teichman, Charles Davis, Phoebus, Robert Owen, Thos. Wilkins, Mrs. C. Harman Payne and others. The last named is a dwarf and sturdy variety not exceeding 3½ ft., Viviani Morel has been grown continuously here for the last 10 years, and bears huge blooms. Other varieties well grown here are Mrs.

G. Gover, a crimson-red Jap.; C. E. Sheffock, with tubular florets and crimson lamina; Eda Prass silvery pink; Col. W. B. Smith, grandly coloured; Interocean, a large pink flower; and Mrs. E. G. Whittle a pretty silvery Japanese variety. Colonel

Neve, all of which have responded to the cultivator's care with large and handsome blooms.

Beauty of Teignmouth is an incurved Jap, with carmine-crimson florets and a rose reverse. Mme. Carnot has developed into large and handsome form.

King of the Hirsutes, a yellow variety, well represents the plummy section. Golden Gate, a bronzy-gold variety is rather late compared with the rest. The yellow, incurved Jap. Mrs. G. H. Smart is very full. We are pleased to see so many of the old favourites

CHRYSANTHEMUM DUCHESS OF YORK

Conway is a new white Jap. of considerable promise. Western King is a choice thing; and Silver King is a huge rosy-lilac flower. Louise and Shasta, well known kinds are very pretty in their respective ways. The same may be said of Avalanche, Mrs. Falconer Jameson, President Borrel, and W. H.

Amongst recent introductions we noted grand blooms of Sunflower, Duke of York, Viscountess Hambleton, Kentish White, Florence Davis, the pretty greenish-white Jap, William Tricker, International, and that glorious, maroon-crimson variety G. W. Childs, which has often proved refractory.

retained at Finsbury Park, as they are very choice indeed, though small compared with the modern giants. To illustrate what we mean we shall only refer to such as Chang, Triomphe du Nord, Val d'Andorre, Wm. Holmes, Barbara, Prince of Wales, Wm. Bunn, Jean Delaux, &c., all of which are very

fine of their kind. Other incurved sorts are Lord Wolseley, C. H. Curtis, Baron Hirsch, and Mrs. R. G. Kingston, all well done. Amongst the Anemones, equally well bloomed, are Descartes, Madame de Sevin, M. Charles Lebocqz, and Judge Benedict. The above are only a few of the fine things.

The conservatory is filled with banks of tall *Ficus elastica*, Palms, *Dracaenas*, and other subjects in front of which bushy specimens of *Chrysanthemums* show off to great advantage. To give an idea of the varieties grown in this way we may mention James Salter, Lady Selborne, Shasta, Admiral Seymour,

CHRYSANTHEMUM DUCHESS OF YORK.

THOUGH put into commerce in 1895, this Japanese variety still maintains its popularity and its status as a first-class exhibition variety. It was raised by Mr. J. Carruthers, gardener to Mrs. Fleming, Hillwood, Corstorphine, Edinburgh, and has since been honoured with a First-class Certificate from the National Chrysanthemum Society. The blooms attain a great size, but cannot under any circumstances be considered coarse. On the contrary they

accompanying illustration was placed at our disposal by Mr. H. J. Jones, Ryecroft Nursery, Hither Green, Lewisham.

CHRYSANTHEMUM MRS. JAMES LEWIS.

LAST year, about this time we gave a description of the grand Japanese variety of the above name. The blooms we recorded on that occasion measured 6½ in. to 7 in. in diameter and 6 in. in depth, but some blooms have much exceeded that now. In

A. Bilcliffe, Photographer.]

CHRYSANTHEMUM MRS. JAMES LEWIS.

[63, Brighton Road, Redhill.

Autumn Tints, and R. Brocklebank. Great crowds of visitors, especially on Saturday and Sunday, show their appreciation of the fine display placed before them. Mr. Melville is to be congratulated upon the fine condition of his *Chrysanthemums*. He is well supported by Mr. Henry William Marriage, the grower who has been here for more than twenty years and is still faithfully fulfilling his duties, as is Mr. Wm. Dowse, the propagator.

The Emperor Nero was entertained at a banquet at which £32,000 was spent on Roses.

are of very graceful outline, when in perfection, owing to the great length and drooping character of the twisting and interlacing florets. For this reason it is well adapted for groups of *Chrysanthemums*, in which the natural form of the head is displayed to best advantage. As a show bloom on the stands, however, it holds its own as a light or canary-yellow variety. The plant is of dwarf habit, and comes into bloom early so that it would appear at the October as well as November shows. For displays in private establishments as well as public parks, it is equally well adapted for prolonging the flowering period during the early part of the season. The

several private establishments it has more than sustained any hopes it may have aroused last year in the minds of would-be cultivators. Mr. W. Wells, Earlswood Nurseries, Earlswood, Redhill, Surrey, has also succeeded in producing very much finer blooms than those he exhibited last year and for which an Award of Merit was accorded by the Royal Horticultural Society. The florets are pure white, of great length, broad, flat, and twisted in various directions, giving the bloom a bold and effective appearance. As an exhibition variety it has proved itself of first class importance either in the cut state or as a plant for the centre or back of a group.

according to the shape or design of the same. The accompanying illustration was prepared from a photograph sent us by Mr. Wells, and is somewhat reduced in size. The photograph representing the flower natural size showed it to be $9\frac{1}{2}$ in. in diameter.

CHRYSANTHEMUM SWANLEY GIANT.

THE neatly formed and compact, globular blooms of this variety, place it in the incurved Japanese section, amongst which it is reckoned one of the largest as the name would imply. The florets are very broad, closely incurved, twisted and interlaced with one another in a most interesting and attractive way. In colour they are lilac-pink, and the whole has a massive and imposing appearance when well grown. The finest blooms are obtained from the crown buds, so that intending cultivators should make note of this in order to obtain the best results after the first year's care and attention. It was raised by Messrs. H. Cannell & Sons, Swanley, Kent, and was put into commerce by them as a new variety for 1897, along with ten others, also of their own raising. This is good proof of the energy of the Swanley firm in upholding the popularity of this valuable autumn flower. The accompanying illustration was put at our disposal by them.

CHRYSANTHEMUM SHOWS.

NATIONAL CHRYSANTHEMUM.—November 9th, 10th, and 11th.

THE great autumn competition and fête of the National Chrysanthemum Society, was held at the Royal Aquarium, Westminster, as usual. The non-competitive exhibits were arranged on the ground floor, while the groups and cut bloom, including the Challenge Trophy and Memorial Classes were staged in the galleries. The trained plants and the vegetable exhibits were accommodated in St. Stephen's Hall. The show was admitted to be finer than ever, and the attendance was enormous.

CUT BLOOMS.

In the national competition of Chrysanthemum and horticultural societies, the Challenge Trophy and £10, as the first honours for forty-eight blooms, were secured by the Bromley and District Chrysanthemum Society, Kent. The stands contained grand Japanese blooms of Mrs. H. Weeks, Madame Carnot, Australia, Phoebus, Duke of York, Simplicity, Matthew Hodgson, Graphic, Mutual Friend, Mrs. Charles Blick, Edith Tabor, Etoile de Lyon, G. C. Schwabe, Vivian Morel, Elsie Teichman, and others. Incurved varieties were well-shown, including magnificent blooms of Mrs. R. C. Kingston, C. H. Curtis, Duchess of Fife, Empress of India, Mr. J. Keans, Wm. Tunnington, John Lambert, Princess of Wales, Golden Empress, Ma Perfection, Major Bonaffon, and others. The second award was taken by the Sittingbourne and Milton Gardeners' and Amateurs' Association, which had fine blooms of Madame Carnot, Mrs. C. Harman Payne, Edith Tabor, &c. The incurved blooms were good, though smaller than those of the first prize lot. The Highbridge Horticultural Society came in third, being rather weak in the incurved blooms.

The National Chrysanthemum Society's Holmes Memorial Challenge Cups, brought out some very fine stands of bloom. The coveted first award for thirty-six incurved blooms was taken by Mr. W. Mease gardener to Alfred Tate, Esq., Downside, Leatherhead, who staged huge and handsome blooms of Lady Isabel, Ma Perfection, C. H. Curtis, Globe d'Or, Jeanne d'Arc, Lord Rosebery, Major Bonaffon, Lord Alcester, Dorothy Foster, J. Agate, Violet Foster, Duchess of Fife, M. P. Martinac and others. Mr. Higgs, gardener to J. B. Hankey, Esq., Fetcham Park, Leatherhead, took the second place with grand blooms of Duchess of Fife, J. Agate, C. H. Curtis, C. B. Whitnall, M. P. Martinac, &c. Mr. H. Butcher, gardener to C. J. Buss, Esq., Lodge House, Smeeth-Ashford, Kent, was a good third; while Mr. T. Robinson, gardener to W. Lawrence, Esq., J.P., Elsfeld House, Hellingbourne, Kent, was fourth.

Mr. W. Mease was again first for forty-eight Japanese blooms, being clearly a long way ahead of his competitors. Every bloom was strong, but

specially grand were Vivian Morel, Mrs. Charles Blick, M. Chénon de Léché, A. Gold, Mrs. J. Lewis, A. H. Wood, Miss. Elsie Teichman, Mme. Gustave Henry, N.C.S. Jubilee, Lady Hanham, Robert Owen, Simplicity, Australia, Lady Ridgway, J. G. Warren or the yellow sport from Mme. Carnot, which was the wonder of all who saw it. Mr. Henry Perkins, gardener to F. W. D. Smith, Esq., Greenlands, Henley-on-Thames, was second; P. Waterer, Fawkham, Kent, was a good third; Mr. J. F. McLeod, The Gardens, Dover House, Roehampton, took the fourth prize.

In the class open to the trade only, for twenty-four Japanese and twelve incurved, the premier award was taken by Mr. William Wells, Earlswood, Redhill, Surrey, who had grand blooms of G. J. Warren, Australian Gold, Mrs. J. Lewis, Lady Hanham, Mme. Ferlat, and many others too numerous to mention. Mr. Norman Davis, Framfield, Sussex, took the second place with a very good exhibit indeed.

The Turner Memorial Challenge Cup for thirty-six blooms of white, yellow, and crimson Japanese Chrysanthemums was secured by Mr. Norman Davis with a grand lot of Mme. Carnot, Mrs. H. Weeks, Edith Tabor, A. H. Wood, Western King, John Neville, &c. Mr. W. J. Godfrey, Exmouth, Devon, was a very good second.

The Jubilee class for twenty-four dishes of Apples brought out some grand fruits. The leading award was taken by Mr. T. McKenzie, gardener to F. S. W. Cornwallis, Esq., Linton Park, Maidstone, whose Apples were of huge size and richly coloured, Mr. H. Berwick, Sidmouth, was a good second; and Mr. A. J. Thomas, Bargains Hill, Rodmersham, Sittingbourne, came in third.

Mr. W. Robinson, gardener to the Rt. Hon. Lord Ludlow, Heywood, Westbury, Wilts, was first for six incurved Japanese blooms. Mr. J. McKenzie took the lead for six Japanese blooms, showing Phoebus.

Mr. W. Messenger, gardener to C. H. Berners, Esq., Wolverstone, Ipswich, took the leading award for twenty-four Japanese blooms, all of which were particularly strong, in fine form and fresh. Mr. F. King, gardener to Mrs. McIntosh, Havering Park, Romford, was second.

Mr. F. G. Foster, Brockhampton, Havant, took the lead for twenty-four incurved blooms, which were very even and neat. Mr. H. Butcher was second. Mr. W. Barker, gardener to Pandeli Ralli, Esq., Alderbrook, Cranleigh, took the lead for twelve incurved varieties. Mr. W. Tebay, gardener to Mrs. Ryecroft, Everlands, Sevenoaks, had the best six incurved of one sort, showing C. H. Curtis. Mr. W. Messenger again led the way for twelve Japanese blooms, which were grand. Mr. H. Shoesmith, Claremont Nursery, Woking, was almost equally good.

MR. SIMPSON'S PRIZE.—The special prize presented by Mr. J. T. Simpson for the premier Japanese bloom in the whole of the show was awarded to the yellow Madame Carnot, shown by Mr. Mease, in his first prize 48. This bloom was of great depth and superb size.

Twelve large-flowered reflexed blooms in not less than nine varieties were best shown by Mr. W. Robinson, gardener to the Rt. Hon. Lord Ludlow, Heywood, Westbury, Wilts. Mr. G. W. Forbes, gardener to Madame Nicols, Regent House, Surbiton, was second.

There were six competitors in the class for twenty-four large-flowered Anemone blooms, Japanese included. Mr. John Justice, gardener to the Rt. Hon. Sir R. Temple, Bart., The Nash, Kempsey, won the first prize with a splendid lot, amongst which good samples of such varieties as Caledonia, Mme. Lawton, John Bunyan, Lady Margaret, Delaware, and Nelson were observable. The second prize fell to the lot of Mr. W. Skeggs, gardener to A. Moseley, Esq., West Lodge, Barnet, and the third to Mr. A. Ives, gardener to E. C. Jukes, Esq., Hadley Lodge, Barnet.

Mr. John Justice was likewise first in the class for twelve large Anemone blooms, Japanese excluded. Lady Margaret, Fleur de Marie, Mrs. J. Benedict, and Acquisition were some of the finest flowers here. Mr. A. Ives was second, and Mr. W. Ring, gardener to James Warren, Esq., Caysle House, Waltham Cross, third.

The competition for twelve Japanese Anemones also resulted in the first award going to Mr. John

Justice, who had Sir W. Raleigh, Mrs. Hugh Gardener, John Bunyan, and Owen's Perfection in capital order. Mr. W. Skeggs occupied the second, and Mr. W. Ring the third position.

Mr. T. Caryer, gardener to A. G. Meissner, Esq., Aldenholme, Weybridge, had the winning stand of twelve pompons, Mr. W. Aldridge, gardener to G. Lacy, Esq., Springfield House, Palmers Green, being second.

The last-named exhibitor was first for twelve single varieties, showing the varieties of Rose Pink, Kate Williams, Miss May Braithwaite, and Purity in excellent style. Mr. G. W. Forbes won the second prize, and Mr. Felgate, gardener to Her Grace the Duchess of Wellington, Burkhill, Walton-on-Thames, the third.

AMATEURS' CLASSES.

Mr. Jas. Stredwick, Silver Hill, St. Leonards, led the way for twenty-four Japanese blooms, distinct. M. Chénon de Léché, Chas. Davis, Vivian Morel, Viscountess Hambleton, Etoile de Lyon, Phoebus, and Eva Knowles were some of the finest forms. Mr. L. Gooch, gardener to T. Wickham Jones, Esq., Lowcester Lodge, South Norwood, was second.

Mr. C. G. Wilkins, Wellington, Swanley Junction, staged the winning stand of eighteen incurves. C. H. Curtis, Robert Petfield, Bonnie Dundee, Globe d'Or, J. Lambert, Jeanne d'Arc, and A. Sefton were the strongest samples; Mr. C. Goddard, gardener to W. H. Francis, Esq., Broomfields, Sutton, Surrey, was second; and Mr. A. Hooney, gardener to G. H. Cox, Esq., The Grange, East Barnet, Herts, third. The prizes in these two classes were presented by F. A. Bevan, Esq.

There were nine entries for twelve Japs. Mr. Jas. Stredwick was first, showing Phoebus, Eva Knowles, Hairy Wonder, and A. H. Wood in highly commendable fashion. Mr. J. Acock, gardener to Mrs. Bacon, Stoneleigh, Sutton, Surrey, was second; and Mr. T. S. Slann, gardener to H. H. Sillen, Esq., The Pines, Woking, third; Mr. W. Perrin, gardener to C. W. Richardson, Esq., Sawbridgeworth, Herts, staged the winning six Japanese; and Mr. S. Ely, gardener to H. H. Gardener, Esq., Nettlebed, Henley-on-Thames, the best three bunches of three blooms each of Anemone flowered varieties.

The premier stand of twelve incurves came from Mr. C. G. Wilkins, who was followed by Mr. C. Goddard and Mr. A. Hooney in the second and third places respectively. Mr. C. G. Wilkins was also first in the smaller class for six incurves. Mr. J. Acock was second, and Mr. C. Goddard third here.

Six blooms of the incurve Mrs. R. C. Kingston won for Mr. C. G. Wilkins another first prize. Mr. J. Knapp, gardener to F. W. Amsden, Esq., 22, Chichester Road, Croydon, was second with C. H. Curtis, and Mr. A. Hooney third with the same variety.

In Division B. of that part of the schedule devoted to amateurs Mr. Henry Love, 1, Melville Terrace, Sandown, Isle of Wight, secured the leading award for twelve Japanese blooms, Mr. H. A. Needs, Heath View, Horsell, Surrey, coming in second.

Mr. Henry Love was also successful in carrying off the first prize in the larger class for the eighteen Japs. He had a very even and well coloured lot of flowers. Mr. J. Love, Fenneleigh, Cowes, Isle of Wight, was second.

Of the five exhibitors who competed for the six Japanese, Mr. H. A. Needs headed the list followed by Mr. W. E. Reeve, Lyndhurst, Maybury Road, Woking, as second.

The best twelve incurved blooms in this section came from Mr. A. R. Knight, 63, Hardinge Road, Ashford, Kent.

In the maiden growers classes Mr. R. Chamberlain was first for six Japanese; Mr. W. J. Neal, Chesalon, Claremont Avenue, Woking, for three Japanese; Mr. T. W. Preston, 8, Commercial Road, Peckham, S.E., for six bunches of pompons distinct.

PLANTS.

There were three entries forthcoming for the group of Chrysanthemums arranged with foliage, etc., in a circle of 12 ft. diameter. Mr. J. Spink, Summit Road, Nursery, Walthamstow, won the first award with an imposing and well arranged group, height and diameter being well proportioned. The flowers included were all large, well coloured, and handsome. Mr. W. Howe, gardener to Henry Tate, Esq., Park Hill, Streatham, was second with a flatter group, that also contained some good flowers. Mr.

Edward Love, gardener to H. E. Fry, Esq., Bickley Hall, Trent, was third.

TRAINED SPECIMEN PLANTS.—These were accommodated on the floor in the centre of St. Stephen's Hall, where they formed a grand array.

For six large flowering varieties, including Japanese, Mr. D. Donald, gardener to J. G. Barclay, Esq., Knott's Green, Leyton, was again the winning exhibitor. He had magnificent samples of varieties John Lightfoot, John Shrimpton, Col. W. Smith, Gloriosum, William Tricker and Florence Percy.

Mr. D. Donald was also first for six standard specimens, showing grand samples of Wm. Tricker, Eva Knowles, Cleopatra, Chinaman, Col. W. B. Smith, and Miss Alice Luckman.

Mr. F. Gilks, gardener to A. Morris, Esq., Court

securing the first award for six trained specimens of pompons. The samples showed by him of Soeur Melaine, Black Douglas, William Westlake, Yellow Martha, William Kennedy and Antonius were indeed marvels of good culture and skilled training.

FLORAL DECORATIONS.

The premier award for the best table of bouquets, sprays, etc., illustrating the decorative value of the Chrysanthemum, was carried off by Miss Nellie Erlebach, "Chards," Stoke Newington. The chief feature here was a very imposing centrepiece, which rose to a height of fully 7 ft. from the level of the table, and was composed of large blooms. The arrangement in the baskets and wreaths was commendable. Messrs. Harwood Bros., 176, High Road, Balham, were second with a more elaborate but

Mr. F. W. Seale, third. The competition in this class was unusually keen and well-sustained.

In the classes open to gardeners and amateurs only, Mr. Mark Webster was again first for two hand bouquets of Chrysanthemums, with Mr. H. Clark, gardener to P. Mortimer, Esq., Ashe Park, Overton, Hants, as second; and Mr. J. Mansey, gardener to S. H. Smith, Esq., 35, Southgate Road, N., as third.

Mr. George Tolton, 25, Albion Gardens, Hammer-smith, contributed the best vase of six blooms.

There were nine entries for the hand-basket of Chrysanthemums open only to ladies: Miss Easterbrook, Fawkham, Kent, was first; Mrs. W. Taylor, The Gardens, Tewkesbury Lodge, Forest Hill, was a very close second; and Mrs. W. Green, Jun., third.

CHRYSANTHEMUM SWANLEY GIANT.

Green, Leigham Court Road, Streatham Hill, won the first prize for four specimens of any varieties. Emily Silsbury was the most noteworthy variety here. Mr. W. Davey was a good second.

Mr. W. Davey, gardener to C. C. Paine, Esq., Hillfield, Haverstock Hill, N.W., sent the winning lot of four standard trained plants, showing Col. W. B. Smith, Standeard Surprise, Cleopatra, and Wm. Tricker in good condition. Mr. D. Donald contributed the best single specimen, pyramidal trained, in Col. W. B. Smith. The flowers on this plant were exceptionally large and fine. Mr. Donald also had the best sample of a plant grafted with not less than three varieties, which were in this case John Lightfoot, Chas. Davis, and Vivian Morel.

Mr. D. Donald added to his list of successes by

rather heavy exhibit. Mr. Eric F. Such, The Royal Berks Nursery, Maidenhead, was third with a light and pleasing arrangement.

There were three entries for two vases of Chrysanthemums, the first prize going to Mr. Mark Webster, gardener to E. J. Preston, Esq., Kelsey Park, Beckenham. Second came Mrs. W. Green, jun., Harold Wood, Essex; and third, Mr. W. C. Pagram, gardener to J. Courtenay, Esq., The Whim, Weybridge.

There were no fewer than twelve entries for three epergnes of Chrysanthemums suitable for table decoration. Finally, Mr. D. B. Crane, 4, Woodview Terrace, Archway Road, Highgate, N., was awarded first for a superb arrangement. Miss C. B. Cole, The Vineyard, Feltham, Middlesex, was second, and

Mr. J. Brookes, gardener to W. J. Newman, Esq., Totteridge Park, Herts, led for a vase of six Japanese blooms, showing Madame Carnot. Mr. James Watt, gardener to Henry Bell, Esq., Fitzjohns Avenue, Hampstead, came second with Col. W. B. Smith. Mr. D. B. Crane filled the third position.

A special prize for six sprays of single varieties to be arranged in a vase with any foliage or grass was offered by Mr. W. Wells. This was won by Mr. R. Chamberlain, gardener to F. M. Lonergan, Esq., Cressingham Park, Reading.

Mr. H. J. Jones, of Ryecroft Nursery, offered special prizes for six vases of Japanese varieties, three blooms in each, the flowers to show at least 12 in. of stalk above the vases. Mr. F. H. Lodge, gardener

to Mrs. Meret, Hockerill, Bishop's Stortford, was first, showing good blooms of Edith Tabor, Chas. Davis, M. Chénon de Léché, Mrs. Chas. Blick, Vivian Morel, and Phoebus. Mr. W. Cotterell, gardener to Sir W. N. M. Geary, Bart., Oxon Hoath, Tonbridge, was second; and third, Mr. Jas. Gibson, gardener to E. H. Watts, Esq., Devonthurst, Chiswick.

FRUIT AND VEGETABLES.

In the open classes for fruit, Mr. W. Tidy, gardener to W. K. d'Arcy, Esq., Stanmore Hall, N.W., was placed first for three bunches of white Grapes, showing Muscat of Alexandria. He was followed in the second and third places respectively by Mr. J. Bury, Petersham Vineries, Byfleet, Surrey, and Mr. W. Harman, gardener to the Earl of Denbigh, Newsham Paddock, Lutterworth.

Mr. W. Howe staged the winning three bunches of black Grapes, showing Alicante. Mr. W. Tidy was second with the same variety, and Mr. W. Taylor, gardener to C. Bayer, Esq., Tewkesbury Lodge, Forest Hill, was third with Gros Maroc. Mr. W. Iggulden, Frome, Somerset, sent the best three bunches of Gros Colman Grape, Mr. J. Bury taking the second place.

There were eight entries for six dishes of dessert Apples, Mr. G. Goldsmith, gardener to Sir E. G. Loder, Bart., Leonardslee, Horsham, taking the first prize with well-coloured fruit. Mr. W. T. Stowers, gardener to G. F. Dean, Esq., 70, Harold Road, Sittingbourne, was second.

There were six entries for six dishes of culinary Apples, the first award going to A. J. Thomas, Bargains Hill, Rodmersham, Sittingbourne, with a heavy lot. Mr. W. T. Stowers was second.

Seven entries of six dishes of dessert Pears were forthcoming. Mr. A. J. Thomas received the first prize, the second going to Mr. W. T. Stowers.

In the classes for vegetables the premier award for twelve dishes of Potatos fell to the lot of Mr. E. S. Wilks, gardener to the Hon. E. Hubbard, M.P., who had clean and heavy samples. Mr. Silas Cole, gardener to the Rt. Hon. Earl Spencer, K.G., Althorp Park, Northampton, was second; and Mr. E. Chopping, Milton, near Sittingbourne, was third.

MESSRS. SUTTON & SONS' PRIZES.—The first prize for fifteen dishes of Potatos, distinct was carried off by Mr. G. T. Wiles, gardener to the Hon. E. Hubbard, M.P., The Rookery, Down, Kent; and the second to Mr. A. Basile, gardener to the Rev. O. L. Powels, Woburn Park, Weybridge.

The two best dishes of Potatos, Sutton's Windsor Castle, and Sutton's Supreme came from Mr. Silas Cole, and the next best from Mr. James Gibson.

MESSRS. WEBB & SONS' PRIZES.—The Wordsley firm offered prizes for a collection of nine kinds of vegetables. Seven collections were staged, Mr. E. Beckett, gardener to Right Hon. Lord Aldenham, Aldenham House, Elstree, heading the list. Mr. R. Lye, gardener to Mrs. Kingsmill, Sydmonton Court, Newbury, was second; Mr. J. Bowerman, gardener to Charles Hoary, Esq., Hackwood Park, Basingstoke, was third. Mr. J. Gibson was fourth.

MR. HENRY DEVERILL'S PRIZES.—In this section Mr. Deverill presented prizes for Onions. The best twelve came from Mr. J. Bowerman, who showed Alisa Craig; Mr. E. Beckett was second with the same variety.

Mr. H. E. Elmer, South Street, Cuckfield, had the premier single bulb in Ailsa Craig; Mr. R. Lye was second; and Mrs. W. Keep, Farringdon House Gardens, Farringdon, Berks, was third with the same variety.

MISCELLANEOUS EXHIBITS.

Potato disease has been exceedingly prevalent this year, especially among the older varieties; therefore, the great show of disease-resisting Potatos made by Messrs. Sutton & Sons, of Reading, attracted particular attention. The principal feature of the collection is the eleven large heaps of the following popular varieties:—Sutton's Windsor Castle, Sutton's Reliance, Sutton's Satisfaction, Sutton's Supreme, The Sutton Flourball, Sutton's Ninety-fold, Sutton's Epicure, Sutton's Seedling, Sutton's Non-such, Sutton's Matchless, and two new seedlings not yet put into commerce. There are thirty-nine distinct sorts exhibited, all of Messrs. Sutton's own introduction. The pyramidal heaps of large, shapely, and clean tubers had an imposing as well as interesting appearance. Amongst them was a new variety after the style of Sutton's Magnum Bonum, but much thicker, oblong, white, and altogether a noble

looking tuber. It is not yet in commerce, but the name has been fixed as Sutton's Ideal. All of the varieties were in first-class condition, notwithstanding the unfavourable character of the season. The Messrs. Sutton also had Fir Apple, Almond and Congo, representing fancy varieties (Gold Medal).

Mr. H. J. Jones, Ryecroft Nursery, Hither Green, Lewisham, had a large table of cut blooms of Chrysanthemums, set up with Crotons, Ferns, Dracaenas, Palms, and other foliage plants. In the centre was a mound of Chrysanthemums surmounted by a Cocos, and towards either end were two large ornamental vases filled with Chrysanthemums in variety, and cut with long stems (Silver Gilt Medal).

Messrs. J. Laing & Sons, Forest Hill, S.E., exhibited a fine collection of fruit, of which the Apples Swedish Reinette, Mère de Menage, Holland-bury, Blenheim Orange, Fearn's Pippin, Hoary Morning, and many others were equally good. Little groups of Bouvardias, Begonia Gloire de Lorraine, and Carnations, all of which were very bright, formed centres. Richardia Pentlandi and R. P. maculata, were also fine (Gold Medal).

Mr. T. S. Ware, Hale Farm Nurseries, Tottenham, had a table of Chrysanthemums set up with Maidenhair Ferns, Grasses, plants of the Fiery Thorn, and other decorative subjects. The Ferns served as a beautiful green setting for the blooms (Silver Medal).

Mr. H. Deverill, Banbury, Oxon, had a very interesting exhibit of Onions, including Ailsa Craig, The Lord Keeper, Improved Wroxtton, &c.; also Leeks, Celery, Carrots, Parsnips, Beet, and other vegetables in fine condition (Silver Gilt Medal).

Messrs. S. Spooner & Sons, Hounslow, Middlesex, had a collection of Apples and Pears in fine condition, and in many cases the former were highly coloured (Silver Gilt Medal).

Messrs. B. S. Williams & Son, Upper Holloway, exhibited a large collection of Palms, Crotons, Dracaenas, and Orchids. A group of Begonia Gloire de Lorraine at either end consisted of well-grown and flowered plants. Amongst the Orchids we noticed showy pieces of Vanda tricolor superba, Oncidium varicosum, O. v. Rogersi, Odontoglossum praetextum, and many Cypripediums (Small Gold Medal).

The Ichthemic Guano Company, Ipswich, had as usual a massive octagonal exhibit at the east end of the Royal Aquarium. Each of the four figures on the corners as well as that on the top held an incandescent electric lamp throwing a bright light over the rich and varied colours of the foliage of the Coniferae with which the body of the stand was covered. Amongst the Conifers we noted such fine things as Cupressus lawsoniana Allumii, C. l. erecta viridis, Thuja vervaeneana, Picea nobilis, The Douglas Fir, Thuja ellwangeriana, T. occidentalis lutea, Retinospora plumosa, R. p. aurea, and various others. Many of these were fine trees 5 ft. to 7 ft. in height. There was also a handsome specimen of the Weymouth Pine (Pinus Strobus). The whole collection included about 500 trees and shrubs of various sizes. They were sent up from Scotland by Messrs. W. P. Laird & Sinclair, nurserymen, Nethergate, Dundee, and Monifieth. The Ichthemic Guano Company also had samples of their well-known fertiliser (Silver Gilt Medal).

Mr. E. G. Reid, Reid's Nursery, Beckenham Hill, had a table of Chrysanthemums cut with long stems and set with autumn tinted foliage. He also had a collection of tree Carnations including Rose Rivoire, President Carnot, &c. (Silver Medal).

Messrs. W. & J. Brown, Stamford, had a collection of Apples and Pears, with a small group of sweet-scented Violets at one end (Silver Medal).

Mr. J. Haws, Lea Bridge Road, Clapton, had a table of his improved watering-can in various sizes.

Messrs. H. Cannell & Sons, Swanley, Kent, had a most imposing display of cut flowers of Pelargoniums set up in large bunches of the most diversified colours with which the visitors were charmed. On the opposite side of the table was a bank of Chrysanthemum blooms of exhibition size and in all the leading varieties. At one end they had Spidery Chrysanthemums in variety and pompons, showing at once some of the veriest pigmies alongside of some of the giants. There were Cannas at either end, and Sweet Violets along the sides (Small Gold Medal).

Messrs. Crane & Clarke, March, Cambs., had a group of Carnations and Smilax (Silver Medal).

Mr. W. Wells, Earlswood Nurseries, Redhill,

Surrey, exhibited a large group of Chrysanthemums of undulated outline, including plants of N.C.S. Jubilee, Mutual Friend, Mrs. Ch. Blick, Mrs. H. Weeks, Edith Tabor, and a bronze sport from the latter named Mrs. J. W. Barks. He also had singles and pompons in great variety (Small Gold Medal).

Mr. B. Ladhams, Shirley Nurseries, Southampton, had an exhibit of decorative Chrysanthemums and hardy herbaceous cut flowers in great variety (Silver Medal).

Mr. Robert Owen, Floral Nurseries, Castle Hill, Maidenhead, had a table of Chrysanthemums set up in bunches with autumn-tinted foliage. In front of these were stands of cut blooms of Chrysanthemums in exhibition form and in great variety (Silver Medal).

Mr. J. George, 14, Redgrave Road, Putney, S.W., exhibited a table of horticultural sundries and Grapes. Mr. J. Williams, 4a, Oxford Road, Ealing, set up some table decorations (Silver Medal).

Mr. Norman Davis, The Vineries, Framfield, Sussex, had a gorgeous display of Chrysanthemums in ornamental vases, set up with autumn tinted foliage, baskets of plants, Crotons, Palms, &c., all producing the most gorgeous effect. Along the front he had many enormous blooms of Mme. Carnot, also Hairy Wonder, Western King, Australian Gold (Large Gold Medal).

Mr. H. J. Jones, Ryecroft Nursery, Lewisham, exhibited a massive group of Chrysanthemums, with a sloping face, but variously undulated and rising into a great mound in the centre. A graceful Cocos occupied each of the centres, while Crotons and Adiantum farleyense also served to vary the outline of the surface. The varieties of Chrysanthemums were very numerous. The front was made up with Adiantum and other foliage plants (Small Gold Medal).

Mr. H. Berwick, Sidmouth, Devon, had a table of nicely coloured Apples, some Pears and a basket of Medlars (Small Gold Medal).

Messrs. D. Dowell & Son, Ravenscourt Avenue, Hammersmith, had a stand of peat, loam, manures, pots, pans, and other garden sundries.

Mr. John Pinches, 3, Crown Buildings, Crown Street, Camberwell, S.E., set up a very neat stand of cast Acme Labels, library, key, and plain circular labels, and others in a great variety of forms, including Yeats's zinc labels, and the Ideal Label and Holder.

The Agricultural and Horticultural Association, Ltd., had a table of manures.

Messrs. Wood & Son, Wood Green, N., exhibited a large number of their specialities, including Cuba bast, raffia, Archangel mats, wood wool, bamboo stakes of all sizes from 3 ft. to 21 ft. and in various colours, mushroom spawn, &c.

Mr. W. J. Godfrey, Exmouth, Devon, had a table of Chrysanthemum blooms, arranged with Ferns and other foliage. Very grand blooms were Sunstone, Mrs. Chas. Birch, Mrs. H. Weeks, Visct. R. de Chezelles, Pride of Exmouth, Mrs. Maling Grant, Mrs. F. A. Bevan, &c. (Small Gold Medal).

Mr. Joseph Arnold, 32, St. Paul's Road, London, N.W., had a large exhibit of silver sand, peat and loam. The peat comprised two kinds, Rhododendron and Orchid peat, the latter being of excellent quality. He had a dozen different kinds of sand, from the purest white to the darkest orange-brown, from the finest to the biggest in grain. Mr. Arnold is the largest owner of the famous Bedfordshire silver sand in the country.

Messrs. W. Cutbush & Son set up a charmingly effective group in the gallery. The central feature was Chrysanthemums in pots arranged in such a way that they formed a high mound in the centre. In front of these was a double row of Begonia Gloire de Lorraine, a row of Adiantum farleyense being sandwiched between the Begonias. At either corner in the front was a pyramid of small Oranges in pots, and Ericas crowned with Cocos weddelliana. Some capital Apples found a place in the front ranks.

Mr. H. Shoesmith, Claremont Nursery, Woking, Surrey, exhibited upwards of four dozen fine cut Chrysanthemums grown with nitrate of soda. Mr. F. W. E. Shrivell, F.L.S., Hadlow Farm, Kent, showed some excellent vegetables, also grown with the same specific.

SOUTHAMPTON.—November 2nd.

The Royal Southampton Horticultural Society held their Chrysanthemum and fruit show at the Skating

Rink on the above date when beautiful weather prevailed and drew out a large concourse of visitors. The exhibits were admirably arranged under the direction of the secretary, Mr. Fudge and his staff. The flowers were brilliant, gorgeous, and richly varied. The number of entries was about equal to those of previous occasions, but the quality was better and competition keener. Improvements were visible amongst the exhibits shown by amateurs. A fine collection of Chrysanthemums was shown by J. C. E. d'Esterre, Esq., Elmfield, Millbrook Road. Mr. J. Agate, Havant, showed a beautiful new incurved bloom named Mrs. N. Molyneux. Her Majesty the Queen (gardener, Mr. Owen Thomas), was an exhibitor. Mr. Wills, of Winchester Road, Shirley, and Mr. B. Ladhams, Shirley, had non-competitive exhibits. Sir Samuel Montagu, Bart., M.P., exhibited Palms and Chrysanthemums. Councillor W. F. G. Spranger, Springhill, sent a fine group of Chrysanthemums and Ferns. Messrs. Toogood & Sons staged a taking exhibit, accompanied by another of the renowned speciality, Pure Ichthemic Guano. Alderman W. H. Rogers, J.P., Red Lodge, lent a quantity of shrubs for decorative purposes.

BRIGHTON.—November 2nd and 3rd.

THE annual show of the Brighton and Sussex Horticultural Society was held on the above dates in the Dome and Corn Exchange, Brighton. The entries exceeded 600 in number, being sixty-five in advance of last year, and taking it altogether the fixture was a conspicuous success. The Silver-Gilt Medal presented by Mr. H. J. Jones, of Lewisham, and a prize of £5 for the best circular group, 12 ft. in diameter, of Chrysanthemums was carried off triumphantly by Mr. G. Miles, Dyke Road, Brighton. To this exhibitor also went the first award for a smaller group of similar material; and the piece of plate, given by Mr. Alfred Bunting for an artistically set up collection of cut Chrysanthemums.

A piece of plate value £3 3s., presented by Messrs. Folkard & Sons, for a circular group, 9ft. in diameter, was won by Mr. W. E. Anderson, gardener to Mr. B. Parish, Preston Park Avenue, Brighton.

In the classes for cut Chrysanthemums, Mr. J. R. Heasman, gardener to Mrs. Osley, Turner's Hill, staged a grand exhibit of thirty-six cut blooms of Japanese varieties, winning thereby the first prize, viz., the president's Silver Challenge Bowl, the society's Silver Medal, and £5 in money. Mr. Heasman was also second for twelve and six incurved, six reflexed, and six yellow Japanese; and first for six Japanese of any other colour than yellow.

Mr. E. Meachen, gardener to Mrs. Armstrong, of Withdeane, was another heavy winner, for there fell to his share two first prizes, two seconds, and four thirds. Mr. J. Hill, gardener to Mr. W. Clarkson Wallis, Withdeane, won no fewer than five firsts, three seconds, and two thirds. Mr. T. Fairs, gardener to Mr. R. Cowes, Hassocks, was credited with two firsts, three seconds, and a third.

Other successful exhibitors included Mr. Bonson Lister, gardener to E. A. Wallis, Esq., Brighton; Mr. G. House, gardener to Sir F. Mowatt, C.B., Patcham; Mr. T. Dancy, Horsham; Mr. W. Wallis, Hartfield; Mr. G. Duncan, Horsham; Mr. C. Short, Worthing; Mr. J. Harris, Arundel; Mr. R. Botting, Henfield; Mr. James Pearl, Patcham; Mr. William Taylor, Forest Hill; Mr. J. Bunnèy, Hassocks; and Mr. G. Goldsmith, Horsham.

Fruit and vegetables were well in evidence, and many of the exhibitors mentioned above there gained further laurels.

WEST KENT.—Nov. 2nd and 3rd.

The twentieth anniversary of this popular local show was held in the Public Hall, Bexley Heath, on the above dates. There was a good attendance in the afternoon and evening, when a good string band was in attendance.

Amongst the special prizes we noticed the Commemoration Prize, a handsome marble clock, value £6, which was taken by Mr. J. Simon, gardener to N. W. Man, Esq., Bexley, with twenty-four blooms of Japanese in eighteen varieties. The second prize went to Mr. H. Hart, gardener to W. T. Holland, Esq., Bexley.

The schedule, which was a large one for a local show, contained in all sixty-one classes, all of which were competed for. For a table of twenty-four cut

Chrysanthemums arranged for effect with foliage plants, the first prize was taken by Mr. E. Russell, gardener to T. Pim, Esq., Crayford. For a group with foliage plants and Ferns, D-shape, Mr. Wakeham, gardener to Mrs. Bean, Darsom, took the lead. Mr. A. Tomalin, gardener to S. White, Esq., Oakwood, was second. The president's prize for twenty-four blooms, Japanese and incurved, eighteen varieties, was secured by Mr. E. Russell, who was first. He was followed by Mr. J. Wakeham; and in the third place by Mr. J. Simon. Twelve incurved blooms were weak, Mr. J. Simon being second; and Mr. A. Tomalin, third. The six blooms, incurved, were a very strong class, and gave the judges some work to decide, all being very good, Mr. Wakeham and Mr. Simon dividing the honours.

For groups of Chrysanthemums covering a space of 8 ft. by 5 ft., edged with foliage and Ferns, the lead was taken by Mr. H. J. Nolis, gardener to C. Holme, Esq., Upton. For pot plants, Mr. Baldwin, East Wickham, was first. Mr. J. Wakeham was first in an open prize competition for a magnificent hand bouquet, which consisted of a fine collection of Orchids, Mr. Tomalin being second. Mr. Parris, of Bexley Heath, staged some handsome specimens of brides' bouquets, and funeral wreaths, for which he is so famous. He also showed Ferns and foliage plants not for competition.

Amongst the fruit competitors, Mr. Wakeham had it nearly all his own way, taking first for black Grapes, table and kitchen Apples, and Pears. For vegetables, Mr. E. Russell was champion. There was a good show of cottagers' produce of vegetables, of which Potatoes were well grown. We noticed the Ichthemic Guano Co. had attractive stands of their speciality, and we learned that many of the exhibits were grown with this popular fertiliser.

We wish the West Kent Society continued success. The judges were Mr. James Hudson, gardener to Messrs. de Rothschild, Gunnersbury House, Acton; and Mr. C. Beckett, gardener to Sir W. G. Pearce, Chilton Lodge, Hungerford.

TEIGNMOUTH.—November 3rd.

UNDER the auspices of the Teignmouth Gardeners' Mutual Improvement Society this show was held on Wednesday, November 3rd.

The judges were Mr. Powell, of Powderham; Mr. W. Swan, of Bystock, Exmouth; and Mr. Lock, of Crediton. The table decorations were judged by Mrs. Gulson, Gorway; Mrs. J. R. Morrison, Yannon; and Miss Powell Williams, Alwyns.

Among the exhibitors not for competition was noticed a stand by the Ichthemic Guano Company, tastefully arranged by Messrs. W. Hannaford & Son, who also had a collection of plants. R. Gulson, Esq., had a splendid group of Chrysanthemums, and was awarded the National Chrysanthemum Society's Certificate, one also being awarded to H. H. Hammond Spencer, Esq. (gardener, Mr. G. Foster).

The Devon Chrysanthemum Nursery also had an exhibit. The committee and judges were provided with a luncheon at the invitation of Mr. Hammond Spencer, who, as president, has proved such a generous helper of the Society. Great credit is due to Mr. T. Hannaford, the hon. secretary, for the admirable manner in which the arrangements were carried out.

LEYTON.—November 4th and 5th.

THE Leyton, Leytonstone, and District Chrysanthemum Society held its first show in the magnificent new Town Hall on the above dates, and must be congratulated both upon the arrangement of the hall and the attendance. Councillor E. Bare, Esq., in a few words of congratulation to the committee and the hon. sec., Mr. W. C. Vince, introduced Lady Birt, who declared the show open.

A special feature in the hall arrangement was four magnificent groups of Chrysanthemums in pots interspersed with Ferns and foliage plants. They were amongst the finest groups we have seen in any local show this season, and would have taken a lot of beating. Mr. J. Spink, of Walthamstow, secured the chief honours in this class.

The following are some of the principal prizes:—Group of Chrysanthemums in pots, 8 ft. by 6 ft., first, Mr. J. Spink; second, Mr. E. Bartlett, Walthamstow. For a group, in pots, of foliage plants, 8 ft. by 6 ft., for effect: first, Mr. J. Spink; second, Mr. W. Cade, Wanstead. For three dwarf

specimens of Chrysanthemums, Mr. Whitehome, gardener to S. Nichols, Esq., was first. For four bush-grown Chrysanthemums, not less than nine blooms, Mr. J. Spink took the first and Mr. Whitehome followed. For three bush-grown Chrysanthemums, not less than nine blooms, quality to be the principal feature, the special prize, a pair of silver salts, given by the Ichthemic Guano Co., Ipswich, per Mr. W. Colchester, Ipswich, was taken by Mr. J. Spink.

For twenty-four cut blooms, Japanese varieties, Mr. Kenyon, Woodford, came first; and Mr. J. W. Simmonds, Wanstead, was second. The first prize included the N.C.S. Silver Medal. Mr. Vince was first in cut blooms in vases, and secured the prize for the best bloom in the show. In the amateurs' classes, Mr. J. Caseday, Walthamstow, took first in groups. For cut blooms, Japanese varieties, Mr. G. Smith, Walthamstow, was first, and Mr. J. Smith second. For incurved varieties, Mr. G. T. Simper, Wanstead, was first, and Mr. J. Smith second. The class open to ladies only was well filled. The platform in the hall was very beautifully decorated with Chrysanthemums, foliage plants, and Ferns by Mr. D. Donald, gardener to J. G. Barclay, Esq. In the vestibule at the top of the stairs entrance to the hall the Ichthemic Guano Company were showing their popular fertiliser with Chrysanthemums, &c. Mr. F. Burns, Stratford, had a large stand filled with his specialities in seeds and garden requisites. The entrance to the show was also well decorated. The judges at this successful show were Mr. R. Dean, N.C.S., Ealing, and Mr. C. Langdon, The Lilies, Leytonstone.

BY TELEGRAM.

BIRMINGHAM.—November 9th, 10th, and 11th.

BIRMINGHAM has eclipsed itself. Never in the annals of the Chrysanthemum Society has such a large and magnificent display been brought together and it reflects most creditably upon the energetic committee. The courteous president, W. B. Leatham, Esq., and the Secretary Mr. J. Hughes, High Street, Harborne, carried out the heavy duties of secretary in a manner deserving the highest praise; while noteworthy indeed was the work of the vice-presidents, Mr. John Pope and Mr. W. H. Dyer, upon whom fell the work of allocating space, &c. Viewed from the gallery the wealth of colour, the symmetry of the groups and arrangement of tables presents a picture of extreme beauty never to be forgotten.

Considering that some £5,000 is offered for prizes the competition is naturally very keen, particularly in the groups and large decorative table groups, 20 ft. by 8 ft. The first prize in the latter class, with the Birmingham Challenge Cup, value 25 guineas, was carried off by the famous floral firm, Messrs. Perkins & Sons, Coventry, with a lovely and most exquisite exhibit. The second prize fell to Mr. J. Crook, Florist, Birmingham, who had also a very artistic display, lighted by some mirrors, etc. The third was awarded to Messrs. Jones & Sons, of Shrewsbury, with another beautiful display. Fourth came Messrs. Pope & Sons, King's Norton, whose only fault was a somewhat dark and a trifle heavy group.

In Class XI., a Chrysanthemum group, the leading honours were carried off by J. Whitfield, Esq., Moseley (Mr. W. Thomson, gardener), with a beautiful group finished off by some very fine specimen Caladiums, and Crotons. Second came R. Cadbury, Esq., Moseley (Mr. G. Menzies, gardener), with another splendid group; third, C. Showell, Esq., Edghaston (gardener, Mr. W. H. Westbury); fourth, Lady Martineau, Edgbaston (Mr. O. Brouse, gardener); fifth, G. Kenwich, Esq., Edgbaston (gardener, Mr. J. O. Macdonald). In Class XII., for smaller group of Chrysanthemums, T. Clayton, Esq., of Castle Bromwich (gardener, Mr. Lewis Fewkes), gained first with a really beautiful group which reflected most creditably upon the builder; second came Mrs. Scarf, King's Heath (gardener, Mr. W. Torevell), and following closely, Mrs. Armfield, Edgbaston (gardener, Mr. W. Batchellor), came third. In Class IV., for six large flowering, Japs. excluded, Lady Martineau (gardener, Mr. O. Brasier) took the lead; Mr. J. Maldrem, was second; and J. A. Kendrick, Esq., Edghaston, (gardener, Mr. Alfred Cryer), came in third. For three Japs., flowering, the premier honour was gained by G. Cadbury, Esq., Northfield (gardener, Mr. J. Maldrem); second came J. A. Kendrick, Esq. (gardener, Mr. Alfred Cryer). In Class V., for six

Japs., flowering, first, Lady Martineau, Edgbaston, (gardener, Mr. Brasier), who also gained first for nine Japs., flowering, in another class. The second and third places were gained by G. Cadbury, Esq., and J. A. Kendrick, Esq., respectively.

Several noteworthy miscellaneous exhibits were on view. Messrs. Thompson, of High Street and Sparkhill Nurseries, Birmingham, had a very large exhibit of seed Potatoes, and another exhibit of fine Primulas. Messrs. Hewitt & Co., Solihull, Birmingham, had a unique display of Chrysanthemums, chiefly Japanese. The Ichthemic Guano Co. had their now famous octogan group lightened up by floral arches of Chrysanthemums, Arum Lillies, creepers, and evergreens.

For the prizes offered by Mr. Robert Sydenham, of Birmingham, for vegetables grown with seed supplied by him, nearly 300 entries were made. Messrs. Simpson & Son, Seed Merchants, Birmingham, had a display of flowers grown in Jaddo. Messrs. Wm. Cutbush & Son, Highgate, London, had a beautiful display of the Begonia Gloire de Lorraine.

QUESTIONS AND ANSWERS

Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Muscat of Alexandria and Foster's Seedling Grapes.—One in Doubt: Muscat of Alexandria should do better in the company of Mrs. Pince, Gros Colman and Alicante, than Foster's Seedling. The latter is early, while all the rest are late. Muscat of Alexandria succeeds very well upon Foster's Seedling, so that you need have no hesitation in inarching it upon the same. The Vines being only three-years-old there should be no difficulty in getting a good union.

Apple Lane's Prince Albert.—Pomona: The origin of this variety is not exactly known. Messrs. H. Lane & Son, of Berkhamstead, noticed it in their neighbourhood, and seeing that standard trees of it fruited regularly every year, they set about propagating and putting it into commerce. The firm in question exhibited fruits of it at a meeting of the British Pomological Society, on the 26th October, 1857. This then is the date when it was first placed before the public.

American Cress and Protection.—Omega: American Cress being a name given to Barbarea praecox, often found wild as an escape in Britain, it is perfectly hardy and should not be covered-up in winter. It is a native of continental Europe, and has only been introduced to America. You may in fact give it treatment similar to that accorded to Lamb's Lettuce (Valerianella olitoria) also grown for winter use.

Harpalum rigidum.—Omega: The correct name of this is Helianthus rigidus. It is perfectly hardy; so that if you lift and divide it at once, the roots will get partly established in the soil before winter is far advanced. The plants would also grow away more freely on the return of fine weather in the spring, and be better able to withstand the drought of summer, than if the transplanting of them had been deferred till March.

Names of Fruits.—T. J.: 1, Ne Plus Meuris; 2, Styrian; 3, Beurree Diel; 4, Knight's Monarch; 5, White Doyenne; 6, Apple, Dumelow's Seedling.

Names of Plants.—E. R. Berkeley: 1, Maxillaria picta; 2, Eria acervata; 3, Oncidium flexuosum; 4, Oncidium longipes; 5, Montbretia not recognised. The only way to get the name of hybrid Montbretias would be to ask some one who had a good collection of growing plants earlier in the season.—W. M.: 1, Peristrophe speciosa; 2, Erica vagans; 3, Coronilla Emerus.—J. H.: 1, Aster elegans; 2, Aster multiflorus; 3, Sternbergia lutea; 4, Chrysanthemum uliginosum.—T. S.: 1, Scabiosa caucasica; 2, Hypericum calycinum; 3, Crataegus Pyracantha; 4, Passiflora caerulea.—A. Sim: 1, Cupressus nutkaensis; 2, Retinospora plumosa aurea; 3, Thuja orientalis aurea; 4, Taxus adpressa; 5, Libocedrus decurrens.—Omega: Aster diffusus horizontalis.—Barr & Sons: Chenopodium album.—J. W.: Desmarestia aculeata.

Communications Received.—J. Mayne.—T. Bones.—J. H.—Rosen Zeitung.—A. P.—R. G. W.—J. W.—R. A. R.—Price's Patent Candle Company.—Omega.—Rom.—W. Tolley.—J. P. O.—Y.—G. Menzies.—F. L. M.—Medico.—Enteric.

Ogilvie's Encyclopaedia OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopaedia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST BOOK OF INFORMATION EVER ISSUED. Size of Encyclopaedia: 9 by 11 1/2 inches. 656 Pages

It contains MANY MAGNIFICENTLY ENGRAVED COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopaedia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS, do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

131197. COUPON. OGILVIE'S ENCYCLOPEDIA OF USEFUL INFORMATION, AND WORLD'S ATLAS, (Published Price 25s.) 16 COUPONS, AND 6D. WITH EACH. Name Address

Postal Orders or 1/4d. stamps may be sent. COUPONS AND CONTRIBUTIONS MAY BE LEFT at or SENT TO the Office for THE PUBLISHER OF THE GARDENING WORLD. COPIES OF THIS BOOK CANNOT BE BOUGHT. They can be obtained only by using these Coupons.

GRAND SUCCESS.

WHO won the first prize for novelties at the N.C.S. Great Show?
 WHO distributed G. J. Warren, the champion Jap. bloom at the Great Show?
 WHO distributed Lady Isabel, the champion incurved bloom at the Great Show?
 WHO distributed Lady Hanham?
 WHO distributed Julia Scaramanga?

WHY, WELLS!
 WHY, WELLS!
 WHY, WELLS!
 WHY, WELLS!
 WHY, WELLS!

The above four grand novelties (out of five) which I distributed, will speak for themselves.

A very few equally as good are in store for 1898. See special list, January 1st, viz. :—

Mrs. J. W. Barks, a rosy bronze (buff reverse) sport from Edith Tabor, 10/6; Nena Dadds, another of Mr. Silsbury's beauties, the colour and make of Phoebus, with florets as long as, but broader than Edith Tabor, habit superb, 7/6; Mrs. White Popham, white, lined and frosted carmine. Mr. Silsbury tells me this is the largest and best Japanese Incurved ever raised, both in habit and flower, 7/6; Gertrude Salter, Japanese Incurved, rosy-lilac, one of the largest and best Japanese Incurved ever raised. This is from seed sent over by Mr. Thos. Pockett, of Australia. Height 4 ft., 7/6.

P.S. —Lady Isabel and Julia Scaramanga were raised by Mr. Silsbury.

CHRYSANTHEMUMS.

THE FINEST SHOW IN THE WORLD.

This, to some, may appear to be a vain boast; it is none the less a fact.

England produces the finest Chrysanthemums in the world, and the best grown collection of the finest varieties arranged in the most handsome house in England is at Exmouth.

W. J. GODFREY has this season, both at the National Chrysanthemum and Royal Horticultural Societies' Exhibitions, received higher honours, for cut blooms alone, than any other grower, and has also been awarded more certificates for novelties.

A really reliable Catalogue giving descriptions of the best varieties, together with cultural hints respecting same, will be published in December. Post free to all applicants.

W. J. GODFREY, EXMOUTH, DEVON.

GARDEN & OLD-FASHIONED ROSES.

GEO. COOLING & SONS

Have always been noted for their Collection of Old-Fashioned and Garden Roses.

Strong plants can now be supplied of all the beautiful varieties exhibited, and so much admired, at the Rose Shows this season. *New & descriptive Catalogue, post free.*

THE NURSERIES, BATH.

ORCHIDS of the highest quality, every plant guaranteed true to name, from 2/6 each. Please send for free list.—P. McARTHUR, The London Nurseries, 4, Malda Vale, London W.

CARNATION "YULE TIDE"

Is the best scarlet winter flowering Carnation in cultivation. It has already gained *Nine First-class Certificates* as well as the *R.H.S. Silver Flora Medal*, and has been highly eulogized by the Press. A sterling novelty of great merit. Strong plants 5s. each, carriage paid.

BEGONIA GLOIRE DE LORRAINE

Is the finest winter flowering plant extant, of dwarf, compact, free habit, flowers continuously all winter and spring, a lovely rosy carmine colour, good flowering plants, 2s. 6d., 3s. 6d. and 5s. each, carriage paid.

JOHN FORBES, Nurseryman, HAWICK, SCOTLAND.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, NOVEMBER 20th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, November 22nd.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 Meeting of the Floral Committee of the National Chrysanthemum Society at the Royal Aquarium at 3 p.m.
 TUESDAY, November 23rd.—Royal Horticultural Society: meeting of committees at 12 o'clock.
 Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 WEDNESDAY, November 24th.—Sale of Dutch bulbs by Messrs. Protheroe & Morris.
 Annual dinner and distribution of prizes of the National Chrysanthemum Society. To be held at Anderton's Hotel, Fleet Street, at 6.30 p.m.
 THURSDAY, November 25th.—Leamington Chrysanthemum Show.
 Dundee Chrysanthemum Carnival (3 days).
 Sales of Dutch bulbs by Messrs. Protheroe & Morris.
 FRIDAY, November 26th.—Aberdeen Chrysanthemum Show (2 days).
 Sale of Dutch bulbs and imported and established Orchids by Messrs. Protheroe & Morris.

FERTILISERS AND CELERY.—Cultivators, who have had anything whatever to do with Celery, recognise the fact that a good crop is only to be obtained by the best of cultural treatment, coupled with fertilisers of one or more kinds during the growing season. The nature and quantity of the manures absolutely necessary to insure a good return depends entirely upon the character of the soil to be planted, and that of the season during the period of growth. For instance, a very dry season might necessitate much watering; though on the contrary, this contingency might be guarded against by planting Celery only in deeply and well cultivated soil.

The numerous experiments being conducted at the Cornell University Agricultural Experiment Station, Ithaca, New York, are doing good service to the cause, both of agriculture and horticulture. Every year some fresh branch of gardening is undertaken; while older experiments are continued. Celery has been added to the list chiefly with a view to aid growers in counteracting two forms of Celery blight, and to ascertain how best to fertilise the land. Some remarks about the construction of storage houses are also given together with illustrations in *Bulletin 132*. The experiments with Celery were commenced on the 26th of June, 1896, on some flat meadow land that had never previously been planted with Celery, nor had ever received fertilisers. Each row of Celery was 28 rods in length and 4 ft. apart,

being $\frac{1}{4}$ of an acre of land. The variety Golden Self-blanching was planted 4 in. to 6 in. apart in the row, and other varieties 6 in. to 8 in. The season proved very dry, making the crop lighter than it otherwise would have been. The manures applied were placed in shallow furrows on either side of the rows, about 2 in. or 3 in. from the plants after the latter were established. This was carefully done by hand and the manures covered up. There were fifteen experimental plots, of which we shall mention only a few of the more striking results obtained.

Seven rows of Golden Self-blanching Celery were planted on June 20th, and supplied with 14 lbs. of high-grade sulphate of potash per row. Six plants of average size weighed 4 lbs. 1 oz., being considered a poor return. The manure was applied on the 17th July. Seven rows were treated with high-grade muriate of potash in similar quantity and on the same date as the above. Six plants weighed 5 lbs. 14 ozs., the better quality of the crop being quite evident. One row of Golden Self-blanching received no fertiliser whatever and the crop was worthless. Three rows of the same variety were treated with 200 lbs. of wood ashes on the 17th July. An analysis of the ashes showed 6.32 per cent. potash and 1.87 per cent. of phosphoric acid. This experiment proved the most satisfactory of the whole plantation. Six plants weighed 7 lbs. 7 ozs.

Five rows of Kalamazoo Broad ribbed Celery planted June 24th, were treated with 100 lbs. of dissolved South Carolina rock on July 18th. The stalks were slender and the crop poor. Five rows of the same variety were treated with 100 lbs. of bone black (burned bones) on the same date as the last mentioned, and the crop was heavier and better. Six rows of White Plume planted on the 25th June were treated with 100 lbs. of sulphate of potash on the 18th July. The crop was fair, but one row was almost ruined by being burned with the manure which was scattered over the top of the plants. This then is an example of what to avoid. A row of Golden Self-blanching treated with 10 lbs. of nitrate of soda on the 8th July, gave a very poor return. Several other plots were planted at dates varying from the 8th to the 22nd July, but none of them gave very satisfactory results owing to the season being so far advanced. Wood ashes gave the best results of all; and a combination of nitrate of soda, South Carolina rock, and sulphate of potash promises to do well if applied earlier. An analysis of the soil showed it to be rich in nitrogen, phosphoric acid and potash, but the latter was almost completely unavailable; hence the beneficial results of the application of wood ashes.

— The Mildness of the Autumn is demonstrated by the fact that Primroses, Wallflowers, and Polyanthuses are in full bloom at Clearbrook in the "West Country."

Visitors to the Birmingham Show.—On the occasion of the great Chrysanthemum exhibition held in the Bingley Hall, Birmingham, on the 9th, 10th and 11th inst., under the auspices of the Birmingham and Midland Counties' Chrysanthemum, Fruit and Floricultural Society, 32,558 people passed the turnstile. Over £600 in cash was taken at the doors.

An Enterprising Hampshire Farmer has sought to tide over agricultural distress by the cultivation of Nuts. It is stated that an acre of his land yields 1 ton of Nuts for which £30 can be obtained, the retailer disposing of them again for £60. The great drawback to Nut culture on a large scale is the uncertainty of the crop, but of course a really good year would pay for a number of bad ones.

Mr. David R. Bone, for the past twenty months head gardener at Moor Park, Kilbirnie, has been engaged as head gardener at Lanfine Gardens, Newmills, Ayrshire. Mr. John McLelland, gardener, South Park, Ayr, succeeds Mr. Bone at Moor Park.

The National Chrysanthemum Society.—A very tastily arranged bill has reached us announcing that the Annual Dinner of this Society will take place at Anderton's Hotel, Fleet Street, London, on Wednesday next, November 24th, at 6.30 p.m. The challenge and other trophies will be presented to the respective winners, and as the evening will altogether be well spent we hope that as many as possible of our readers will make early application for tickets (at 3s. 6d. each) to Mr. Richard Dean, the able secretary.

Lawes' Chemical Manure Company, Limited, 116, Fenchurch Street, London, E.C., had an exhibit of their Horticultural or Garden Manure at the Royal Aquarium on the 9th, 10th and 11th inst., on the occasion of the National Chrysanthemum Society's great autumn exhibition. They reckon it an ideal fertiliser containing all the elements of plant food in the most available form. The manure may be applied in the dry state as a top-dressing for Vine borders, Tomatos, Cucumbers, fruit trees, Strawberries, vegetables, &c. In the case of pot plants it may be mixed with the compost, or applied as a dressing, or in every case it may be applied in liquid form. All of these methods may also be employed in the case of Chrysanthemums. A guaranteed analysis is given with the manure. The company also had on view samples of their disinfecting fluid.

Keep the feet dry.—Gardeners are often liable to get wet feet at all seasons of the year, and during summer may be careless or indifferent in the matter, but during autumn, winter, and spring they cannot treat the matter so lightly with impunity. It is neither necessary nor desirable to enumerate the ills to which a gardener or anybody else is rendered liable by wet feet during cold weather; but whether they are spreading water in hothouses, wading amongst wet grass, or collecting vegetables in the kitchen garden, moisture will soak through leather even if normally water tight. The antidote to this may be found in Gishurstine which should be rubbed all over the boots as well as the soles. We need not give directions as to its use, for that is supplied with Gishurstine itself, by Price's Patent Candle Company, Limited, Belmont Works, Battersea, S.W. Gishurstine has long been used by gardeners, farmers, sportsmen, ladies and others. We have used it for years and find it most effectual for the purpose already named. It also keeps the leather of boots soft and pliable.

Messrs. Proctor and Ryland, of Birmingham and Chester.—The present is the forty-fourth year that the above firm has offered prizes for the best crops of roots grown by the aid of their specially prepared manures. The judge this season is Mr. A. S. Berry, of Great Barr. In the class for five acres of Swedes, open to growers residing in the counties of Hereford, Salop, Stafford, Warwick, Worcester, Gloucester, Berks, Hants, Surrey, Oxford, Bucks, Herts, Bedford, Northampton, and Huntingdon, Mr. Thos. Williams, Slindon House, Eccleshall, Staffordshire, wins the first prize which is fifteen guineas. The average weight of his crop per statute acre is 41 tons, 17 cwts., 16 lbs. Mr. Thos. Clarke, Knighton Grange, Newport, Salop, is second, his crop averaging 39 tons, 7 cwts., 16 lbs. per acre. Third comes Mr. S. B. Foxley, Chalcutt, Eccleshall, Staffordshire, with a crop per acre of 35 tons, 2 cwts., 3 qrs., 12 lbs. For a similar acreage of Swedes grown in the counties of Cumberland, Westmoreland, York, Lancaster, Lincoln, Notts, Leicestershire, Rutland, Derby, Chester, Flint, Denbigh, Merioneth, Radnor, Montgomery, or Anglesey, Mr. Samuel S. Raingill, The Grange, Ringway, Altrincham, leads with an average crop per acre of 49 tons, 5 cwts., 2 qrs., 24 lbs. In a competition also for five acres of Swedes open to growers in England and Wales, Mr. F. H. Sharrod, Cherrington Manor, Newport, Salop, wins with a crop of 42 tons, 4 cwts., 1 qr., 4 lbs. per acre. Mr. John S. Billington, Batterley Hall, Crewe, has the finest two acres of Mangel Wurtzel, which yields at the rate of 66 tons, 14 cwts., 1 qr., 4 lbs. per statute acre.

London Flower Girls, it is estimated, dispose of 5,000 buttonholes and sprays daily, representing a value of £100.

Royal Horticultural Society.—The next fruit and floral meeting of the Royal Horticultural Society will be held in the Drill Hall, James Street, Westminster, 1 to 4 p.m. At 3 o'clock a lecture on "Horticultural Exhibitions, Schedules, &c." will be given by Mr. J. Wright, V.M.H.

Laelia pumila praestans at the Sale Rooms.—The importation of this fine form of the species made by Messrs. W. L. Lewis & Co., Southgate, N., has proved to be rich in the choicest of colour varieties, thus raising the status of the species immensely. The varieties have been selling at the rooms of Messrs. Protheroe & Morris, Cheapside, at prices ranging from £5 to £56. The latter price was for a variety with white sepals and petals, and two rose blotches on the lip, the central portion being white. On the 12th inst. another fine thing turned up with blush sepals and petals. The lip was large and purple, with a median white band. It fetched £23.

Grapes for Maidstone.—In view of the fearful calamity which has overtaken our county town, I am endeavouring to arrange for a supply of Grapes for the sufferers. Nearly 2,000 cases of typhoid have been recorded, and the distress is terrible. The struggle towards convalescence after attacks of this fever is always a long and weary one. Solid food cannot be given, no matter how keen the pangs of hunger may be. The Mayor tells me that Grapes are needed, and anyone having some to spare, if only a bunch or two, would be performing a good act by sending them. Boxes sent to the Mayor, marked "Maidstone Grape Fund" will be diverted to the proper quarter; and both railways, S.E.R. and L.C.D.R., deliver such gifts free. I would gladly send printed labels to anyone on receipt of a post-card. I may add that kind promises of assistance have already been made by several well-known horticulturists, notably Mr. Chapman, gardener to Capt. Holford, Westonbirt; Mr. W. H. Divers, Mr. J. Hudson, Mr. Martin, gardener to Lord Leigh; Mr. W. Taylor, gardener to C. Bayer, Esq., Forest Hill; and "A Friend." Others will be gratefully received.—W. P. Wright, Willesborough, Ashford, Kent.

Insects and Flowers.—At the meeting of the Linnean Society on the 4th inst., Sir John Lubbock, Bart., M.P., read a paper, "On the Attraction of Flowers for Insects," which dealt chiefly with the points raised in three recently published memoirs by Professor Plateau, who had attempted to show that the scents and not the colours of flowers serve to attract insects. Sir John Lubbock explained that his view, like that of Sprengel and Darwin, was that to insects flowers were indebted for both their scent and colour. Not only had the present shapes and outlines, colours, the scent, and the honey of flowers been gradually developed through the unconscious selection exercised by insects; but this applied even to minor points, such as the arrangement of lines, and the different shades of colour. Professor Plateau had recorded a series of experiments on the Dahlia, in which he showed that bees come to these flowers even when the ray-florets have been removed. Discussing this point, Sir J. Lubbock said it was somewhat singular that he should have selected as proving that insects are entirely attracted by scent a flower which had, so far as he knew, no scent at all. He gave several reasons for disputing the conclusions drawn by Professor Plateau from his experiments, and recorded others made by himself which refuted them. He had selected species of flowers in which the scent is in one part and the coloured leaves in another, as, for instance, the Eryngium amethystinum. This flower is surrounded by brilliant blue bracts; and he found that if the two parts were separated, the bees came more often to the bracts than they did to the flowers themselves. He maintained, therefore, that the observations of Professor Plateau did not in any way weaken the conclusions which had been drawn by Sprengel, Darwin, and others, and that it was still clear that the colours of flowers serve to guide insects to the honey, and in this way secure cross-fertilisation. A discussion followed in which Mr. A. W. Bennett, Mr. Grabham, and Dr. H. O. Forbes took part.

The Alexandra Palace on Muswell Hill is now the centre of a thickly populated district, so that when it reopens it should have a better chance of success than when flower shows were last held in it. To the south of it Hornsey has a population of 80,000; while Wood Green and Tottenham have more than 100,000.

Torquay Chrysanthemum Show was held on the 24th ult., and proved a record with regard to the way in which it was attended. No less than £75 was taken as entrance money. Each exhibition held by the society has been an advance on the previous one, and the two zealous officers, Dr. Ramsay, and Mr. F. C. Smale may congratulate themselves upon the success which has attended their efforts.

Jackson-Harmsworth Polar Expedition.—At a meeting of the Linnean Society of London on November 4th, Mr. F. G. Jackson, leader of the Jackson-Harmsworth Polar Expedition, exhibited a series of lantern-slides, illustrating some zoological observations of the expedition, the most noteworthy being views of the hibernaculum of the polar bear and of the breeding haunts in Franz Josef Land of the Ivory Gull (*Pagophila eburnea*), the eggs of which were also shown. A discussion followed in which Messrs. Harting, H. Saunders, H. O. Forbes, H. Elwes, A. Trevor-Battye, the Rev. F. A. Walker, and Dr. Murie took part. Mr. H. Fisher, botanist to the expedition, brought for exhibition a collection of plants made by him in Franz Josef Land, the consideration of which was deferred for want of time.

English and French Aesthetics.—M. Ch. Albert has been writing on this subject to our contemporary, *Nord-Horticole*, and frequently quotes Mr. C. Harman Payne, to corroborate his opinions. The latter is also a contributor to the November number of our contemporary. Mr. C. Harman Payne is convinced that the recognised methods of procedure by the existing school have assured the success of the Chrysanthemum, and it justifies his opinion in declaring to the people of this country the particulars of taste that we should not recognise. Touching this latter point M. Albert says that the truth is that in England, America, France, and the entire world, the method of exhibiting Chrysanthemums with tubes is contrary to the laws of nature, to those of Aesthetics, and of good common sense. It is quite artificial, conventional, of a nature to lead many people into error who have the interest to be instructed upon the absolute value of the flowers that they know. In other respects he has nothing against the methods of the National Chrysanthemum Society.

The Rose in History, Poetry, and Commerce was the title of a paper read by Mr. G. Love, of the Barton Nurseries at a recent meeting of the Torquay District Gardeners' Association. The chair was filled by the President, Dr. Hamilton Ramsay, and there was a capital attendance. Mr. Love said that the first record of the Rose as a cultivated plant dated back 2,000 years. It originated in central or western Asia. The Greeks held it in great esteem, employing it in their religious ceremonies, dedicated it to the gods, and invested it with supernatural qualities. Theophrastus was amongst the earliest writers upon the Rose. Herodotus spoke of the gardens of Midas, "wherein the Roses grow of themselves, and there have as many as sixty petals apiece." Sappho, Anacreon, and other Greek poets sang of it, but it was not until the Romans took it up that it assumed its proper place in the economy of cultivated plants. Columella was the first to mention about the Rose being budded on briars, for he said:—"They (the Roses) should be budded on bushes with laterals left a foot long." Pliny advised the plants being kept a foot apart, well hoed, and planted deeper than Vines, but not so deep as corn. Like Theophrastus, Pliny believed in the good results of pruning by fire. The latter author spoke of obtaining early Roses by filling a trench round the plants with hot water when the buds were about to break. With the fall of Rome the Rose became neglected, but with the Renaissance of learning in the 16th century came again into prominence. The National Rose Society had fixed the date of its introduction to Britain in 1596. The first Rose nursery upon anything like a large scale was established in the vicinity of Paris in 1815 by M. Vihert. Mr. Love quoted snatches of poetry upon the Rose from Sappho, Anacreon, Chaucer, Spencer, Shakespeare, Moore, and Burns.

A Tree Issues from one of the windows at the top of the round tower of the church of St. Benedict, Norwich. A similar phenomenon may be seen at Bicknoller, in Somerset.

The British Astronomical Weather Almanac and Chart.—This consists of an almanac of some thirty-two pages by B. G. Jenkins, F.R.A.S. It is based on the author's paper on "Forecasting the Weather" in the Bulletins of the Royal Academy of Sciences of Belgium and on Tellustria; a method for determining astronomically the variations in the temperature and pressure of the atmosphere. It gives the customary information to be found in almanacs, including notes for the fisherman, fowler, hunter, farmer, traveller, gardeners, &c. The probable weather for January is a safe prediction, as we are likely to have frost, fog and snow. In February we are to have snow frequently and dense fogs; severe cyclonic storms in March; and thunderstorms in the remaining months except September and December. We think it better not to antedate all these evils. The reminders to farmers, gardeners and others will be the more serviceable items of the almanac which is sold by R. Morgan, 65, Westow Street, Norwood, S.E.

Messrs. Webb & Sons' Root Competition.—The Wordsley firm offer no small encouragement to enterprising agriculturists as well as horticulturists. The root competition inaugurated by them covers nearly the whole of Great Britain. The first prize of 15 guineas, open to the cultivators in the counties of Salop, Stafford, Montgomery, Warwick, and Leicester, for five acres of Swedes, this year goes to Mr. R. Timmis, Charnes Old Hall, Eccleshall, who has a grand crop of 50 tons 18 cwt. per acre. For a similar acreage of the same root in the counties of Hereford, Monmouth, Brecon, Glamorgan, Radnor, and Pembroke, Mr. A. Thomas Rowston, Pembroke, leads the way with 41 tons 16 cwt. to the acre. For another five acres of Swedes, in the counties of Oxon, Bucks., Wilts., Hants, Surrey, Worcester, and Gloucester, Mr. W. M. Harvey, Allington Manor, Bishopstoke, secures the premier award with 38 tons to the acre. Mr. W. Scorer, of Givendale Grange, Borobridge, has the best five acres of the same root in Yorkshire, and Mr. J. Hayton, Beck Farm, Wigton, holds the same position in a similar class open to competition from the counties of Bedford, Cambridge, Cornwall, Cumberland, Cheshire, Devon, Derby, Dorset, Durham, Essex, Herts., Huntingdon, Kent, Lancaster, Lincoln, Middlesex, Norfolk, Notts, Northampton, Northumberland, Rutland, Somerset, Suffolk, Sussex, Westmorland, Carnarvon, Carmarthen, Cardigan, Denbigh, Flint, and Merioneth. Mr. Hayton has a crop averaging 56 tons 8 cwt. to the acre. Mr. G. Dodge, Cannon Court Farm, Fetcham, Leatherhead, has the premier three acres of Mangolds.

GARDEN FLOWERS IN THE OPEN.

In looking over your issue of the other week I observed you were noticing the vagaries of "Jack Frost" in the Thames Valley, etc., it just occurred to me how much favoured we have been with October weather. In all my experience (twenty-five years) I never saw tender plants so fresh and nice as they are here just now. Taking a turn round to-day (2nd November) I noticed that many of the Phloxes, Veronicas, etc., were sending up fresh flowering spikes.

All our bedding plants—with the exception of those we had to clear off to make room for spring-flowering subjects—are quite fresh and blooming away as if summer had begun again. Dahlias, Sweet Peas, Verbenas, Ageratums, Begonias, Pelargoniums, etc., make a brave stand for life, even into "cauld November." I take the liberty of sending you a few specimens, picked at random from various parts of the garden. "Mums" have been exceptionally happy this fine weather; the pompons are well over, but the Japanese sorts are quite gay. We use such sorts as Mme. C. Desgranges and its sports G. Wermig, Mrs. Hawkins, and Mrs. Burrell; also Mons. G. Grunerwald, Vicomtesse d'Avène, Harvest Home, Ryecroft Glory, Vice-President Hardy (this fine, but a little tall) and Lady Fitzwygram. This latter we find far surpasses Mme. Desgranges for outdoor work, the colour being much purer, the habit better, and the flowers coming up on one level make a nice hush.

The enclosed samples, I think, amply demonstrate the mildness of the Carrick climate.—*John Simons, Glendoune, Girvan, N.B.*

[A box of flowers accompanied the above letter fully substantiating what Mr. Simons says about the garden flowers in the west of Scotland at the above date. Pompon and decorative Dahlias in numerous varieties were beautifully fresh and fit for use for cut flower purposes. A bunch of Sweet Peas, with flowers as large as they might be in summer, and as rich in colour included many choice varieties, still deliciously fragrant. Chrysanthemums of the early-flowering section were fresh, including several of the above-mentioned varieties. Other flowers were Verbenas in variety, blue Ageratum, Phlox Drummondii, Gaillardias, double Ivy-leaved and zonal Pelargoniums, and the showy Scabiosa caucasica. Truly the autumn months must have been mild in the north as well as the south of Britain.—ED.]

CHRYSANTHEMUM LATIFOLIUM.

EVERYONE who wants a late supply of the hardy Marguerites should grow this kind. I consider it a long way before *C. uliginosum*, although this is a popular plant. To get it good it needs to be well grown in good soil. It may be well watered with manure when showing bloom. This Chrysanthemum is a strong rooting plant, and needs good feeding. It is strong and tall growing; nevertheless it pays for doing by the fine, large, handsome blooms it gives. They are single, large and white, with a bright yellow centre. We grow it at the back of our hardy plant border, and in this position it blooms for three or four months. It is readily increased by division, and will grow in almost any soil.—*J. C., Chard.*

A VISIT TO BADANLOCH,

KINBRACE, SUTHERLANDSHIRE.

A FEW weeks ago I had the pleasure of visiting Badanloch, a famous sporting part of the above county in the extreme north of Scotland, leased by F. S. J. B. Taylors, Esq. But the subject I wish to open at present is how well gardening is done in the north of Scotland. On entering the garden at Badanloch I am sure I have never seen nor had the pleasure of visiting a more exposed garden than the above, yet the marvellous appearance of everything induced me to pen these few remarks.

The garden is comparatively new, the sixth crop being in the ground this season. But it is well stocked with everything that is thought suitable for the climate. I was shown round the gardens by Mr. D. Dingwall the gardener, and noted a splendid collection of dwarf bush Roses, including some good varieties that carried splendid blooms on the occasion of my visit, namely, La France, Baroness Rothschild, Captain Christy, &c. They filled a border 80 yards long by 12 feet wide. Another feature of the garden was two borders of considerable length filled with border Carnations, including some of the best varieties, such as Duchess of Fife, Prince of Wales, Scarlet Princess, Mrs. Muir, Raby Castle, &c.

Chrysanthemums were another class of flowers which got particular attention, as they bloomed splendidly and showed signs of good treatment. Madame Desgranges and its varieties carried some splendid heads.

I also noted that herbaceous plants found favour here, as well as half hardy annuals, the latter making a bright show at the time of my visit. I was also much astonished to see the crop of vegetables that Mr. Dingwall managed to grow here after he had been telling me that it was the 10th of April before he was able to commence sowing, and that on the 1st of May, and afterwards the garden was covered with snow for over eight days.

Anyone on reading the above may easily see that it is not easy for Mr. Dingwall to grow fruit to great advantage, although I saw some splendid cooking Apples on the wall trees. But I understand that small fruits do well, there being a considerable number of nice young fruit bushes, as well as two large borders filled with Strawberries. They were good plants put in last autumn (1896), and last spring, namely, British Queen, Royal Sovereign, Aberdeen Favourite, and the Alpine Strawberry. This took me through the garden to a nice lawn, in front of the commodious lodge, and which had a splendid surface

as well as every other thing, showing that the young gardener here took a particular interest in his work. He is on the point of making a good many improvements this autumn and winter.—*Visitor*.

WINDOW BOXES.

THERE is ample room for a greater variety in the arrangement and planting of these than is generally followed. The selection of plants used for the purpose in most instances is limited to Pelargoniums, Calceolaries, Lobelias, Petunias, and Marguerites, and very showy and decorative many of the boxes are, which are formed of these simple materials. Now, having had a display second to none coming under my notice during this season, made up in a great measure of different materials, and which at the present time is pretty and attractive, I shall instance two of the most prominent among them. The first is the now well known *Campanula isophylla alba*. Nothing more beautiful can be imagined for this purpose, drooping as it does over the sides of the cork box. For a length of time it was one sheet of white, and is not yet totally without flower. The other subject planted among it, drooping even further over the box, is not so well known, and possibly has not been previously used in the same way. It is one of the Rag-worts, *Othonna crassifolia*. This plant seems almost always in flower, but has not been so conspicuous till lately. It is a Composite, with yellow flowers not more than $\frac{3}{4}$ in. in diameter. The growth bears a striking resemblance to some of the *Mesembryanthemums* of straggling habit. The flowers are produced on rather long footstalks, stand out well from the facing of cork, and when the sun is shining upon them look exceedingly pretty against the background of cork, its own foliage, and that of the *Campanula*. The box being immediately over a rockery with a varied selection of suitable plants possibly enhances the effect.—*W. B. G.*

CHRYSANTHEMUM NOTES.

DEVONHURST, CHISWICK.

THE number of Chrysanthemums in the gardens of E. H. Watts, Esq., Devonhurst, Chiswick, has been annually increasing for some time past, which is pretty sure evidence of their popularity. They are distributed through some five houses, including the compartments of the orchard house. A Chrysanthemum show open to the public on payment for admission has been held in November for some years past, and this year took place on the 2nd and 3rd inst., when it proved in every way a success. The proceeds are always devoted to some charitable purpose by Mrs. Watts, who enjoys a wide reputation for the help she renders various causes in this way.

The Chrysanthemums are finer than we have ever seen at Devonhurst before, for Mr. James Gibson is an enthusiastic grower and lover of this flower, and his devotedness has been abundantly rewarded by the response the plants have given to his care. The blooms of *Vivian Morel*, *Charles Davis*, *Phoebus*, *Australian Gold* and *Madame Carnot* are surely as large as any one could desire, yet growers and judges alike never seem satisfied in this respect. The graceful and drooping character of the outer florets of the last-named variety raises it to the first rank as an exhibition flower, and makes it a universal favourite with cultivators and exhibitors. The yellow *Mme. Carnot* or *G. J. Warren* has given growers immense satisfaction everywhere. Mrs. J. Lewis is a massive, deep flower with broad, pure white petals, and belongs to the incurved Japanese section.

White varieties are much in evidence here, and besides those given we may also mention *Lady Byron*, *Souvenir d'Une Petite Amie*, *Western King*, *Mutual Friend*, Mrs. W. H. Lees, and others which have produced very fine blooms indeed. Yellow, bronze, and crimson varieties are also well represented by up-to-date varieties. The quality of *Western King* is excellent, but it is hardly up to exhibition size for this country. *Edith Tabor* is in fine form amongst yellow sorts. *Pride of Exmouth* is white or often tinted with pink on the same plant. *John Neville* has short, stiff, leathery foliage, and drooping orange-crimson flowers, somewhat after the style of Mrs. Falconer Jameson, but larger and very handsome. The crimson-scarlet blooms of Mr. A.

G. Hubbuck, with old-gold reverse are splendid; while the growth of the plant is free and easy. A. H. Wood is a deeper yellow sport from *Primrose League*. *Modesto* and the newer *Sunstone* are also very fine. C. W. Richardson is a clear yellow, hirsute variety that well upholds the merits of its class. The bronzy-gold and yellow *Robert Owen* continues to do well here. *Mme. Ed. André* is an incurved Japanese sort with orange-red florets and a yellow reverse.

Major Bonaffon constitutes one of the newer forms that have been linked with the incurved section, thereby raising the status of the same considerably for exhibition purposes. The blooms are soft yellow and pretty. *Hairy Wonder* continues to take the fancy of all classes of people, for it is now generally admitted to be the best of its section. A taking flower is *Eva Knowles*, being of an orange-crimson hue with old-gold reverse, the latter shade being much shown owing to the incurved arrangement of the flowers. A curious thing has happened in connection with *Vicomtesse René de Chezelles*. The early buds are yellow, and to this form a First-class Certificate was recently awarded by the N.C.S. The later flowers, as seen here, are of a rich bronzy-yellow. Nevertheless, it is a fine flower of the incurved Japanese type.

The whole are beautifully and effectively arranged in rounded, undulating banks, the pathway following the contour of the groups through all the three houses. Coconut fibre covers the boards forming the temporary pathway, and makes a beautiful and decided contrast against the green foliage and bright flowers.

On the 5th inst. between twenty and thirty members of the Ealing Gardeners' Society visited the gardens and inspected the Chrysanthemums by torchlight after their duties for the day were over.

BATTERSEA PARK.

THAT the good people of Battersea and district are enthusiastic lovers of the Chrysanthemum is abundantly proved by their manifest appreciation of the display of the "autumn queen," which is provided for them by Mr. Coppin and his able assistants in Battersea Park. As in former years, the plants are accommodated in the Palm House, which was opened to the public on October 13th, and is to continue open until about the end of the present month. Some 2,200 plants are grown in all, of which the house contains nearly 2,000, the remainder being employed as a reserve to fill up gaps as they occur.

On entering the house the visitor finds the bulk of the plants massed on the right in a bank sloping from 3 ft. in height at the front to 10 ft. at the back. The surface of the bank presents an undulating outline, three prominent mounds being observed, of which the central one is the highest. A remarkably neat finish is given to this arrangement by bush plants loosely tied to the eaves of the house and allowed to droop over the large blooms in graceful sprays. These plants have been grown on specially for this purpose, and have not been disbudded. The wall at either end of the house is decorated in a similar fashion—a distinct improvement upon last year when nothing of the sort was attempted. The narrow shelf on the left-hand side of the path is again filled with naturally grown plants. These are brought down and their branches tied in to form a curving hedge of bloom, which, although somewhat stiff when first constructed, improves as the tips of the growths assume more natural positions. Behind and over these are other bush plants which are slung to the rafters of the house and allowed to hang over the pathway. The number of varieties grown in this way is rather limited, but the choice has been a remarkably judicious one. The creamy-yellow reflexed *Elsie* is a great success thus, and the same may be said of *Margot*. *Golden Madame Marthe*, *Soeur Melaine*, *La Vogue*, *Sunset*, *L'Isle des Plaisirs*, and the *Christines* are others whose services have been well utilised.

Passing to the consideration of the large blooms we found the Japs in overwhelming majority. However, much size may be decried by those of aesthetic tastes there is no doubt that the general public likes to see blooms as large as possible, and plenty of them in a show of this kind. The more refined glories of the true incurves are not so much appreciated because they are less insistent.

We do not expect to see novelties in a public park, for with so many good standard varieties from which

to pick and choose it is manifest that it is the safer plan to grow sorts of approved merit. *Sunflower* was undeniably the best yellow, and its presence was indicated by some capital blooms scattered about the house. *Edith Tabor* was also in fine condition. The most conspicuous among the white flowers was *Lady Byron*, for we noticed several huge samples of it in different places. In the front row *Louise* was a success, and *Avalanche* was looking better than we have seen it this year. *Edwin Molyneux*, *Wm. Seward*, *M. Wm. Holmes*, and the reflexed *John Shrimpton* represented the dark-hued varieties well. *President Borrel* is a noble flower, but at Battersea is rather variable. In the back rows *Graphic* showed up strongly. Its size and height are effective when seen at a distance, but the flowers are apt to be coarse. *M. Chénon de Léché*, *G. C. Schwabe*, *M. Tarin*, *Eda Prass*, *W. H. Lincoln*, *Madame Edouard Rey*, *Mrs. Weeks*, and *Vivian Morel* were all in good form. *Hairy forms* seem to have caught on with the public, and thus a considerable number is grown. These would have shown up better, however, if instead of being scattered about as they were, they had been collected and made a distinctive group. *Hairy Wonder* was in capital condition, and *Louis Boehmer* was also prominent.

Of incurves there was a fair sprinkling, but when we saw them they had not as yet arrived at their best. The two old favourites, *Mrs. Geo. Rundle* and *Mrs. G. Glenny*, are still grown. *White Beverley* and its golden counterpart are not so frequently seen as they might be, for when well grown they are handsome flowers. *Baron Hirsch* is still one of the best, and will compare very favourably with any for the ease with which it may be grown. *Lord Wolseley* was the largest and finest flower to be seen among the incurves, but *Prince of Wales* and *Prince Alfred* were also well represented. *Lord Brooke* was showing well when we saw it.

Anemone-flowered varieties find favour with not a few, on account of their distinctness of build. *Descartes*, *Delaware*, *Gluck*, and *M. Chas. Lebocqz* were some of the best varieties on view.

HEATON GARDENS, CHESHUNT.

A SHORT time ago we paid a visit to the gardens of Heaton House, Cheshunt, which for some years have been carried on by Mr. T. Bones as a market garden chiefly for the cultivation of florists' flowers, Tomatos, and various other marketable subjects. On the occasion of our visit Chrysanthemums were the speciality or seasonable subjects. Five houses were filled with them in various stages of advancement. They are grown in bush form, the branches being numerous and sufficiently disbudded to give flowers of a good and useful size to meet the market requirements. Mr. Bones was accustomed to this style of culture in former years when in private establishments, and considered it the most useful method of growing this favourite flower.

He cultivates a limited number of the most useful varieties, but each in some quantity. The rich bronzy-yellow *Ryecroft Glory* is the earliest of his varieties. *Emily Silsbury* follows, but is rather weak in the stem if left to its own resources, that is, if allowed to grow naturally. The evil is overcome, however, by taking the crown bud of each shoot. These are followed in succession by *Gladys Roul*, a very useful white; *Clinton Chalfont*, yellow; *Modesto*, a grand golden-yellow; and *Western King*, ivory, shining white. The last named is considered perfect in every way in America, and, although rather small for exhibition in this country, is, nevertheless, a refined and charming flower, just a trifle thin in the petal. As a market flower it is also very serviceable, although not yet so widely disseminated as it might be. For the production of large and bold flowers the yellow *Sunstone* is very serviceable, and the same may be said of *C. W. Richardson*.

The succession is continued by *Yanoma*, a good white sort, which proves serviceable for late work. *Mme. Phillippe Rivoire* has already seen some service on the exhibition board, but when grown in bush form it seems more suitable for cutting early in December. The value and beauty of *Niveous* and *Souvenir de Petite Amie* are already well recognised. Both are beautiful and refined white varieties, but perfectly distinct in build and the form of the florets. *Madame Thérèse Pankoucke* is also a good late white variety. *Ivory* and *Pink Ivory*, white and pink respectively, are both very useful sorts for market late in the season, when Chrysanthem-

mums generally are getting scarce. L. Canning is the latest variety to bloom, with Mr. Bones. The above will serve to give some idea of the varieties that are popular for market work. White and yellow are always in demand, and the former more particularly during the winter.

Amongst other subjects we noted in Heaton Gardens was a large batch of *Pelargonium King of Denmark*, of dwarf habit, with large salmon flowers. One house was filled with Tomatos, being smooth, medium-sized, and useful. A very useful Carnation named *Queen of the Yellows* was raised by Mr. Bones, who also grows border varieties largely. Two frames were filled with *Cypripedium insigne* for the sake of cut flowers. *Coelogyne cristata* and *Dendrobium nobile* are grown in some quantity. One house contained a quantity *Epiphyllum* grown as standards, and fine plants they were, having well-balanced heads.

PLANTS RECENTLY CERTIFICATED.

AWARDS according to merit were accorded the under-mentioned subjects by the Royal Horticultural Society on the 9th inst.

Orchid Committee.

CATTLEYA FABIA. *Nov. hybr.*—The seed parent of this fine hybrid was *C. labiata*, the pollen bearer being *C. dowiana aurea*. The sepals and petals are of a soft rose, faintly tinged with yellow. The large lip is of a rich crimson-purple, lined with crimson and orange in the throat and tube as might be expected from the pollen bearer. First-class Certificate. The Right Hon. Joseph Chamberlain (grower, Mr. Smith), Highbury, Birmingham.

CATTLEYA LABIATA LEWISII. *Nov. var.*—In this we have a beautifully chaste variety, having a clear violet-purple lip, bordered with white. The sepals and petals are also pure white, so that the variety is an acquisition to its class. Award of Merit. Messrs. W. L. Lewis & Co., Southgate, N.

CALANTHE VEITCHI ALBA. *Nov. var.*—The value of the typical *C. Veitchi* and its variety *C. V. superba* is well known, so that if the pure white variety responds to the art of the cultivator with equal freedom it will indeed be an acquisition to its class. First-class Certificate. Messrs. Hugh Low & Co., Clapton, N.

CYPRIPEDIUM LEEANUM MAGNIFICUM. *Nov. var.*—The flowers of this variety are of great size, and the richly blotched upper sepal is very handsome, the purple markings making a fine contrast to the white ground. Award of Merit. G. Shorlard-Ball, Esq., (gardener, Mr. A. Hay), Ashford, Wilmslow, Cheshire.

Floral Committee.

SONERILLA LONGIFOLIA LADY BURTON.—The leaves of this beautiful variety are of a bronzy hue, thickly studded all over with pearly white spots, with larger blotches in the spaces between the veins. Award of Merit. Sir Trevor Lawrence, Bart., (gardener, Mr. W. Bain), Burford Lodge, Dorset.

WALLFLOWER PARISIEN EARLY.—This fragrant and beautiful variety is usually treated as an annual, and may be had in bloom at various periods of the summer and autumn from seeds raised under glass early in the year and later on in the open. The flowers are, individually, of large size, and of a beautiful orange-brown and yellow. Award of Merit for the strain. Messrs. J. Veitch & Sons, Ltd., Chelsea.

CHRYSANTHEMUM ADMIRAL ITO.—This new Japanese variety has been giving a good account of itself. The florets are of great substance, narrow, twisted and of a rich yellow. Award of Merit. Mr. W. J. Godfrey, Exmouth, Devon.

BOUVARDIA HUMBOLDTII GRANDIFLORA.—The large white flowers of this variety are chaste, beautiful and bold. The leaves are larger than those of most other species, and the plant altogether more vigorous. Award of Merit. Messrs. Crane & Clarke, March, Cambridgeshire.

DRACAENA ALBO LINEATA.—The long, arching, leaves of this variety are striated with white lines. The habit of the plant is very graceful. Award of Merit. Mr. R. Gulzow, Melbourne Nurseries, Bexley Heath, Kent.

DRACAENA INDIVISA BURTONI.—The leaves of this variety are broader than those of the previous one

and bronzy-green, more or less tinted with red along the veins. Award of Merit. Mr. R. Gulzow.

VEGETABLE CALENDAR.

CABBAGES.—The unusual mildness of the present autumn has forced this crop into such a forward state of growth as to render it liable to serious injury should a spell of severe weather suddenly set in. To guard against this as much as possible the earliest plants may be earthed up when the ground is dry and friable. Previous to doing this a good dressing of soot between the rows will be of great benefit to the plants when spring growth commences. Any plants left in the seed bed or that have been pricked out should be carefully preserved, and if lifted at the present time and relaid in by the heels would act as a check and render them sturdy plants for filling up gaps or for forming a late bed in spring.

ARTICHOKES.—These should be put in order and some protection given at the present time. All the large outer leaves should be removed and the centre of the plants left open. Place some light material such as fern or well-trodden straw around the plants, forming it into a cone. Six inches thick of soil placed around this will keep them safe over the winter. A dozen or two healthy suckers potted up at this season and placed under cover during winter, and planted out early in spring come into use a month earlier than from the protected beds. After the plants are protected the ground between the rows may be roughly dug to expose it to the weather and make it more easily worked with the hoe in spring and early summer.

CELERY.—The late crops of this should be earthed up without delay, as a serious risk will be run by exposing it after the present month. Some light material should also be in readiness for placing over the centres of the plants should a sudden frost occur. A few stout stakes placed at intervals of a few feet apart, and at an angle the same as the sides of the rows, so as to form a rest for a horizontal piece along the centre of the rows to catch the weight of the protecting material will greatly help in saving the plants from getting injured through the weight of the covering material.

MUSHROOMS.—Succession beds must be made up to meet a regular demand. It is sometimes difficult to get the manure sweetened and dried at this season, unless an open shed or some place under cover is to be had. Where such is not the case, some fine loam may be dried over a furnace or in a dry house. This may be mixed with the droppings and frequently turned, when the whole may be made up at once, with the most satisfactory result as the dry loam absorbs the ammonia quickly and retains it to a greater extent than if the manure had undergone fermentation. Dry cow manure may be used in a similar way with good results. Beds that are producing heavy crops, will be benefited by a watering with some rather strong salt water, alternately with liquid from cow sheds.—J. R.

The Orchid Grower's Calendar.

ORCHID FLOWERS FOR CHRISTMAS.—There is no better class of Orchids grown for this purpose than the deciduous *Calanthes*; and as they are fast approaching their flowering stage care should be taken not to allow any water to touch the spikes when damping other occupants of the stove, or the bracts will turn black and the flowers become spotted. Too much moisture at the roots should be guarded against also. A light, airy place near the glass, and a temperature of about 65°, to open their flowers in is what they require. *C. Veitchii*, *C. vestita rubro-oculata* and *C. v. luteo-oculata* are the most serviceable kinds to grow.

Another valuable winter flowering Orchid is *Coelogyne cristata* and its varieties, and one that requires carefully watering at this season, for whilst it would never do to let them get very dry at the roots, it is very necessary that watering overhead must be discontinued if the flowering spikes are to develop properly. We find that the best results are obtained with plants grown in shallow pans, 6 and 7 ins. in diameter. These can be suspended near the

glass when they are coming into bloom. There is then no fear of their damping off, as they do sometimes when down on the stage. With a few dozen plants of the size mentioned you can have a nice succession. Most of the plants are grown cool during the summer months, but a few are kept in the *Cattleya* house all the season, and these give the earliest flowers.

DENDROBIUMS, too, can be depended on for supplying an abundance of cut flowers for the new year. *D. Phalaenopsis* seems to be a perpetual flowerer, and as it has long flower stems with the flowers arranged with the spray-like regularity of *Odontoglossum crispum*, it is justly prized by florists. But for all round excellence and wear and tear work there is no better than the grand old *D. nobile*. A few of this variety should be put into the stove, as it is not advisable to have them all in flower at one time.

WORK IN THE HOUSES.—The damping down, giving air, &c., must to a great extent be regulated by the outside temperature. During foggy and mild weather such as we have been having, very little damping down has been necessary. Consequently the heating apparatus has not been hard pressed to keep the atmosphere from becoming too damp and stuffy.

LEAVES.—We have most seasons called attention to the value of leaves when placed underneath the stages, there is, however, one great and serious drawback, and that is they harbour woodlice and slugs, and on that account we have been reluctantly obliged to discontinue their use. In their stead we have covered the whole of the staging with tiles, which we find to be excellent, preventing, as they do, the plants from drying up so quickly in the winter time from hard firing, and in the summer time from the heat of the sun. The little ammonia, &c., given off by the heating and decomposition of the leaves, can be supplied by pouring weak manure water on the said tiles. I know this is objectionable to some growers who are content to jog along in the old ruts, and we think in the end suffer by being outdistanced by those who believe in its judicious use.—C.

Gleanings from the World of Science.

THE under-mentioned subjects were brought up at the meeting of the Royal Horticultural Society on the 26th ult.

Galls on Oak Roots.—With reference to the specimens exhibited at the last meeting, Mr. McLachlan observed that the name of the insect was now *Biorhiza aptera*, and that only one sex (the female) was known as occurring in the root-galls. As soon as it was hatched, the insect climbed to the terminal shoots and laid its eggs in the buds. The result was the common spongy gall, known as the Oak Apple. In this both male and female insects were produced, and were formerly thought to be a distinct genus, under the name *Teras terminalis*. The females fall down to the foot of the Oak, and lay their eggs in the roots underground, and so reproduce the root-galls. This dimorphism is characteristic of other gall insects on the Oak.

Cattleyas sub-Pelorian.—Mr. Vietch exhibited two sprays, carrying several flowers of *Cattleya labiata autumnalis*, having the two front sepals assuming the form of lips. He observed that the same plant had repeated the peculiarity both last year and this, but the lip markings are now more pronounced. The specimens were received from Mr. F. R. Lloyd, of Coombe House, Croydon.

Carnation Leaves, Malformed.—Mr. Douglas exhibited leaves with peculiar horn-like excrescences on the margins. It was suggested that they might be caused by acari. They were forwarded to Mr. Michael for investigation. Dr. Masters observed that a *Yucca* in the Botanic Gardens, Dublin, produced very similar structures every year.

Cauliflower, Malformed.—Mr. Henslow exhibited a branch bearing a cluster of short Asparagus-like shoots, the leaves being reduced to a bracteate form, suggestive of the name of Broccoli—viz., *Brassica oleracea*, var. *Botrytis asparagoides*. Dr. Masters observed that it bore a very unusual appearance, and was really intermediate between a Cauliflower and Broccoli.

HINTS FOR AMATEURS.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardening or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Seeds of Stocks.—*Entic*: If your Ten-week Stocks have been really good there is no reason why you should not raise a few plants next year from your own seed. The best way to clean the seed is to pick it out from the pods by hand. Keep it in a cool, dry place, and sow it in gentle heat by the beginning of March next year if you want early plants. For later plants April is a good month for sowing.

Asparagus.—*F. L. M.*: The roots obtained from the old Asparagus bed will force well enough, but this will exhaust them, and they will be of no further use. You may lift the roots at once if you like, and store them away in a cool shed, covering them with leaf soil until they are wanted. When you have the early vinery in full swing you will find that by packing the roots closely together on the bed of the house, and covering them with leaf mould or other light soil that you have a capital house for forcing Asparagus. Cut all the young sticks, both thick and thin, as they appear. It is of no use allowing any to remain.

Training a Peach Tree.—*G. Menzies*: It is somewhat difficult to give instructions upon paper for the training of a Peach tree, a practical demonstration being what you really require. There are, however, one or two rules that must not be lost sight of when tying the tree in. The fan-shape, of which your tree is an example, is by far the easiest to manage. First of all tie in the main branches, then deal with the smaller and more pliable growths. These must be distributed regularly over the whole area enclosed by the larger branches. Another point is to see that the branches are not allowed to cross each other, but that they describe a straight course from base to point as the radii of a fan. Take care not to make the ties too tight, or the growth of the shoots will cause strangulation at those points.

Peaches on a Back Wall.—*Medico*: The crevices in the wall will undoubtedly harbour vermin. We should advise you, therefore, to entirely undo the trees from the wall and give the latter a good lime-washing. A little care will be required in doing this, in order to avoid knocking the buds off the trees. The larger branches of the trees should be washed with a solution of Gishurst Compound. From six to ten ounces of the compound to a gallon of soft water makes a capital wash. Apply it with a soft brush.

Malmaison Carnations.—*J. P.*: The plants will do very well in the greenhouse, and the 60-sized pots will be amply large enough until the spring, when a shift may be given into 32's, say about the middle of March. You will need to exercise a considerable amount of caution in watering, otherwise the foliage of the plants will go yellow. It is astonishing, indeed, to see what small quantities of water suffice.

Araucaria excelsa.—*Q.*: It is a great pity that the young branches at the growing point of the plant have been damaged. They will be almost sure to fall off, and even if they remain their beauty will be sadly impaired. The injury done to the health of the plant may not be very serious, but its appearance will be greatly marred by the gap in the whorls of branches. You can do nothing to remedy.

Menyanthes trifoliata.—*Reader*: The Bogbean, Buckbean, or Marsh Trefoil, as it is variously named, may easily be propagated by divisions of the roots. These may be planted in rough skeps or boxes in any garden soil, and just dropped into their places. The water should not be too deep, but may just cover them, although the plants do capitally in wet, marshy places, as well as in shallow ponds.

Dahlias.—*S. R. N.*: The best place to keep your Dahlias in during the winter would be a shed or out-house. Here they may be laid after having been dried subsequent to lifting. They may be covered over with hay, straw, or dry litter of any kind. They should be looked over occasionally in order to remove any portions of the rootstock, in which decay may have set in owing to injury during the lifting or shifting from one place to another. Trade growers commence to propagate as early as January, but this would be a month or two earlier than you need to start.

Roses.—*Fob.*: On your light and kindly soil you may see to the transplantation of your Roses at once. Standard briars for next year's stocks for budding on should be planted as soon as received, and not allowed to lie about with their roots exposed. You may plant them in rows 2 ft. apart, and about 1 ft. apart in a row.

Winter Tomatos.—*Solanum*: You will find it necessary to artificially pollenise the flowers by brushing them over lightly with a camel's-hair brush. They will not set well otherwise.

Funkias in Pots.—*Jas. Robson*: We should advise you to put the Funkias under the stage in the greenhouse for the winter months. The plants are hardy enough in the open ground, it is true, but when in pots they are even more exposed to the effects of frost. Besides, severe frost will be likely to chip or split the pots.

DIAMOND JUBILEE GROUP OF PLANTS AT EDINBURGH.

THE lively excitement over the competition in the four special Diamond Jubilee classes, instituted by the Royal Caledonian Horticultural Society, at their show on the 8th and 9th September last, will still be fresh in the minds of many of our readers. For the benefit of those who were unable to be present at the show we reproduce the photograph of the Diamond Jubilee group of plants exhibited by Mr. John McIntyre, gardener to Mrs. Gurney Pease, Woodside, Darlington, Durham, who carried off the premier award in a spirited competition. The figure on the extreme right of the picture is that of Mr. McIntyre himself. To his right and between him and the group is his brother. On the left of the photograph Mr. McIntyre's son may be seen, inspecting the group.

The principal features of this fine arrangement of plants were the splendid Palms, Crotons, Dracaenas, Lilies, and Ferns. The centre was constructed on a boulder of rockwork, on which was elevated a fine specimen of *Kentia fosteriana*. Round the central mass were three other pedestals, each carrying a splendid plant of *Cocos weddelliana*, which had a remarkable effect in the group owing to their light and graceful character. Alternating with these were tall specimens of *Cocos flexuosa*, the long arching leaves of which may be seen projecting far above the other subjects and towards the extremities of the picture, thus breaking the surface and relieving any stiffness which might otherwise exist.

The Crotons were notable for their colour, freshness and well-furnished condition. They were dotted about and mingled with other plants in a way that showed good taste. Every plant was also so far isolated as to show off its individuality to the best advantage. The varieties of Croton used were *Superbum*, *Brageanum*, *Warrenii*, *Prince of Wales*, *Countess*, *Aigburthense*, *Princess of Wales*, and various others. There were other very noticeable features in the way of *Marantas*, *Dracaenas*, *Sphaerogyne latifolia*, and a well-grown plant of *Leea amabilis*, which was very much admired. The principal flowering subjects brightening the group were *Lilium speciosum*, *Cattleyas*, *Odontoglossums*, &c., which were judiciously arranged amongst the foliage plants.

The arrangement of the group on the whole was universally admired for its lightness and cultured taste in the blending of the colours. There was one spot on which the eyes of the public were concentrated, and that was the miniature lake and rockwork in the centre, the groundwork or setting consisting of moss, from amongst which the Ferns employed had a most natural appearance, as if growing there.

Nothing like this arrangement has ever been carried out at Edinburgh on any former occasion.

THE EVE OF THE EDINBURGH SHOW.

JUST a year ago to-day we were bere to record the doings of our northern friends with a view to placing in permanent print a fitting account of the "Battle of the 'Mums,'" which is again to-day in preparation for the struggle of 1897. Within the last few days the battle ground has shifted from the great metropolis by degrees, which include, of course, Birmingham, Sheffield, Hull, and so forth. The year just past has of course brought with it a good many changes. One or two familiar faces are missing, but the ranks of leading cultivators are never permanently empty. Newer and younger men are ready to fill up the ranks, and from the prospectus before us to-night, it is pretty evident that the 1897 show here will be little short, if indeed it is short at all, of the great events that have gone before it. The same surroundings are present, the now familiar Waverley Market handsome in its proportions and handsomer still in the chaste decorations with which the council, in the exercise of a wise discretion, embue the scene year by year.

Our readers will be familiar with the scene which usually presents itself overnight at the preparation of any of our big shows, the only distinction at Edinburgh being that here we truly have a building worthy of the occasion, and the time will surely come when London ought to be able to house our shows in some place that shall be legitimately capable of sheltering us from the wintry blasts of November. Strolling through the crowd of cultivators we note with pleasure the arrival of several distinguished visitors from the south, most of whom will probably note with gratification the immensely satisfactory way in which the Edinburgh management has carried out with so much success the precepts laid down by the National Chrysanthemum Society in London, and we are quite sure that as officers of the N.C.S., both Mr. T. W. Saunders and Mr. J. H. Witty, no less than Mr. Molyneux himself, who naturally is already on the field of battle, will look upon with pleasure and gratification the show which is offered by our Edinburgh friends. Mr. R. Laird is secretary, and with Mr. J. H. Murray as his indefatigable assistant, again support the machine which produces the motive of power, and to them unquestionable praise is due for marshalling into proper form, and for controlling in good temper and spirit the many interests, which are brought into play on such an occasion as this.

It has been our custom for the past few years to present to our readers portraits of some of the celebrities with whom one meets at these annual gatherings. To-day we have the honour of submitting as worthy members of our portrait gallery the photos of Mr. M. Todd, president of the Scottish Horticultural Society, which body is responsible for the Chrysanthemum show. The second portrait is that of Mr. W. Smith, of Oxenford Castle, Dalkeith, a very well known face at all our Northern meetings, whilst Mr. Grieve, of Redbraes Nurseries, makes a fitting addition.

The great annual Chrysanthemum competition of the Scottish Horticultural Association takes place on the 18th, 19th, and 20th inst., with its usual excitement amongst the competitors, whose hopes and fears are realised on Thursday, the opening day of the show, when the judges fix their decisions to the exhibitor's cards. The extent and character of the Waverley Market make it unique as an under-cover place for the holding of exhibitions at any season of the year, and the horticultural community of Edinburgh have reason to be thankful for this unsurpassed advantage. The thousands of blooms staged at the November contest make the competition very keen, so that the successful are all the more gratified, while the losers feel that they have been beaten in good company.

The opening day of the show makes it impossible for the report to appear in the ordinary issue, but a telegraphic report on Thursday will be published on Friday morning, and at the same time be obtainable in the Waverley Market. As the show promises to be the finest yet held at Edinburgh for size and quality of bloom, the decisions of the judges will be awaited with interest, and readers should make a point of seeing the report in the special edition.

DIAMOND JUBILEE GROUP OF PLANTS SHOWN BY MR. JOHN MCINTYRE AT EDINBURGH ON SEPTEMBER 8TH AND 9TH, 1897.

MARKET GARDENING IN THE QUEEN'S REIGN.

ON the third day of the conference (Oct. 2nd) held by the Royal Horticultural Society at the Crystal Palace, Mr. Assbee, the superintendent of Covent Garden, dealt at some length with this phase of the subject of horticultural progress during the Queen's reign. Mr. W. Marshall occupied the chair.

Originally, said Mr. Assbee, every man must have been his own gardener, but with the discovery of steam as a motive power and its application to the service of man the conditions of life were altered among the working population. The inventor produced the manufacturer, and busy towns sprang into existence, and each individual was no longer able to grow what he wanted for himself, but the task devolved upon men who made it their special business. The growth of market gardening necessarily causes proportional changes in the market grower himself who has to adapt himself to his own particular times. At one time he was to be found at Peckham, Battersea, Camberwell, Fulham, and other places now built upon, but he has had to seek fresh fields which have been opened up by the same motive power that has led to the destruction of the old ones, viz., steam. By its agency gardeners far and near, and wherever the soil is favourable are brought into competition with each other. The present age too demands more in quantity, quality, and variety from the market gardener than the early Victorian era did.

If we were to take a snapshot at the gardener of sixty years ago (a few specimens are still to be seen) we should find him a thrifty and industrious individual who made his business a study, had a fair amount of humour, but no speculation in his character. He would be able to quote prices for produce which the public may be glad it will never be likely to see again. The new man has had a better education, and is characterised by greater skill and energy. Mr. Assbee then divided his paper into three sections each of which was treated in order, viz., vegetables, fruits, and flowers. Each of these were sub-divided into material produced out-of-doors, and that obtained by indoor culture.

VEGETABLES—*Outdoor grown.*

With regard to vegetables the cultural details of sixty years ago remain the standard of present day perfection, with a very few exceptions. It is to improved varieties that we must attribute the bulk of the progress. The lecturer then took the most important market vegetables in their turn.

ASPARAGUS culture gives an illustration of the wondrous progress that has been made. Within the last few years many acres have been devoted to it in favourable localities. Worcester, Cambridge, and Middlesex are the largest producers. Middlesex "grass" is still noted for its quality, but Worcester "grass" holds the market. A few years ago the cultivation of Asparagus was started in the Evesham Valley district, and it is estimated that there are now about 4,000 acres utilised thus. Each acre produces on the average 40,000 sticks or about 400 bundles. About 1,000,000 bundles come to London each year. Many hundred acres are laid down with Asparagus in Lincoln, and in the black soil belt in the Trent Valley it is regarded as an alternate crop.

CELERY.—It is estimated that not less than 50,000 tons of this go to London annually.

PEAS.—The earliest Peas are obtained from Kent, and the latest from Yorkshire, the season extending from the end of May to the end of August.

ONIONS.—The introduction of the Spanish Onions has vastly improved our English ones. Some 6,000,000 bushels of Onions, representing a total value of of £684,000, were imported in 1896. There is also a good demand in the season for young green Onions, bunched.

POTATOS are more of a farmer's crop than a gardener's, at least so far as the market goes. The total area in Great Britain devoted to Potatos in 1896 was 563,741 acres, which produced a crop of 3,562,235 tons weight. Yorkshire alone had 51,495 acres cropped in this way in that year, this area yielding 326,849 tons. In addition to the home grown article foreign importations are large, and last year represented a value of £1,000,000. The earliest ones come from the Canaries, Jersey, and the Mediterranean region. The chief qualities necessary for a market Potato to possess are good cropping, good cooking, and disease-resisting abilities. Spraying

has been largely practised lately, and generally with beneficial results in enabling the plants to resist disease.

BROCCOLI AND CAULIFLOWERS—The chief improvement with regard to these is the extension of the season. This is largely due to the introduction of that popular variety, Veitch's Autumn Giant, which has supplied a long felt want. Cornwall sends us a good deal, and Italy sends us large quantities annually.

VEGETABLES FORCED.

ALL advanced gardeners have been turning their attention of late years to forced goods. In their competition with English cultivators French growers have great natural advantages. Forcing is, therefore, an attempt on the part of the English grower to minimise the advantages possessed by his rivals in other parts of the world.

RHUBARB.—A marked advance upon the old system may be seen in the case of this popular esculent. The method of forcing is to erect large wooden sheds, 8 ft. high in the centre, and 5 ft. high at the eaves, and large enough to contain an acre of roots. The roots are closely packed together on the floors of these, and the structure heated artificially. Champagne and Victoria are the chief kinds grown, the season lasting from the end of January to May. March is the busiest part of the season, and it is estimated that thirty tons come to London in one day at this time. After the roots have been forced they are again planted out to recruit their strength, although they are not available for forcing the next year.

SEAKALE AND ASPARAGUS find a ready market and are highly esteemed.

MUSHROOMS.—The old system of growing in triangular beds out of doors is largely followed. Mushroom culture in sheds is conducted with varying success, and much care and experience is required.

SALADS.—Excepting Mustard and Cress, and a few French Beans we are chiefly in the hands of the French with regard to salads. He, the lecturer, looked forward to the time when glasshouses would be so common as to alter this state of affairs.

OPEN-AIR FRUITS.

A common practice in growing fruit for market is to adopt the mixed system, having both top and bottom fruits, room being given as growth called for it by thinning. The acreage laid down in fruits has increased from 36,742 acres to 76,245 acres during the Queen's reign. Of this area 32,000 acres are devoted to orchards, and the remainder to market work. Kent is the greatest fruit county, with 22,362 acres of fruits and 12,932 acres devoted to market culture. Middlesex, Worcester, Norfolk, York, Hampshire, Essex, Cambridge, Surrey, Sussex, Lincoln, Bedford, Gloucester, Devon, and Cornwall are all busy counties. In Scotland Lanark is the only county of market importance.

Great advance in the way of improved varieties has been made of late years. Foreign competition has had a considerable effect upon the public taste. The main points in deciding as to the varieties to plant for market supply are, quantity, quality, and appearance, and time at which the fruit can be marketed.

APPLES.—The way in which American Apples flood the market makes it necessary for the home grower to adopt one of three courses: 1st, he must grow early sorts to clear before the American fruit comes over; 2nd, to plant mid-season sorts of high quality, such as Cox's Orange Pippin, or Blenheim, which will always fetch a good price; 3rd, to grow late varieties, such as Lane's Prince Albert and Northern Greening. In 1896 no less than 61,771,993 bushels of Apples were imported from abroad, representing a value of £1,500,000.

PEARS.—These pass through the market to the value of £206,674. Williams' Bon Chrétien is a great favourite. So also are Hesse, Louise Bonne of Jersey, Pitmaston Duchess, Winter Nelis, and Catillac for stewing. Mr. Assbee had on view a box of Californian Pears which had been sent over on trial. The variety was Doyenné du Comice, and the fruit could fully hold its own with British grown samples of that variety. They were picked from the trees in California and sold in Covent Garden in a fortnight, of which seven days were occupied in crossing the American continent, and the remaining seven days in the water passage. The cost of carriage for a crate containing three dozen fine fruits carefully packed, was 4s.; and each crate would

fetch in the market from 8s. 6d. to 16s., so that there was a fair margin of profit left.

(To be continued.)

CHRYSANTHEMUM SHOWS.

WEST OF ENGLAND.—November 2nd and 3rd.

THE West of England Chrysanthemum Society has enjoyed an unbroken record of successes in its annual shows, but this year the display has been both in quality and quantity a great improvement upon other years; so numerous, indeed, were the exhibits that the space devoted to them in the Plymouth Guildhall was not large enough, and additional accommodation had to be provided in the shape of a long marquee. The ceremony of opening was performed by the Mayor of Plymouth (Mr. C. H. Radford).

The cut Chrysanthemums were exceedingly well represented, and the competition was keen throughout.

In the open classes the first prize for forty-eight Japanese, consisting of not less than twenty-four varieties, fell to the lot of Hammond Spencer, Esq. (gardener, Mr. G. Foster), Glendaragh, Teignmouth, with a grand lot. The Rev. J. Hutchins, Teignmouth, was second. Mr. H. Spencer was likewise first for twenty-four Japanese in eighteen varieties, six white Japanese, six incurved Japanese, twenty-four incurves in eighteen varieties, and twelve incurves, distinct. Mr. F. Bradshaw, Lifton Park, sent the best stand of twelve large-flowered Anemones in nine varieties; and Messrs. E. Foot & Son contributed the first-prize lot of twelve Japanese, distinct.

Four of the arches in the southern arcade of the building were filled with the groups, which were eloquent witnesses of the care and skill employed in their construction. Mr. C. Watts, of Plymouth, was first, and Mr. J. Webber was second. Messrs. Perkins & Son, of Coventry, demonstrated their taste in handling cut flowers by winning the first prizes for three bouquets and a wreath.

The local classes were exceedingly well patronised. Sir Jas. Jenkins secured the first award for twenty-four and twelve blooms of Japanese, and likewise for twelve incurves. Mr. G. Hoskin contributed the prettiest basket of Chrysanthemums arranged with foliage and grasses.

Amateur growers were well represented both for Chrysanthemums and miscellaneous plants.

The open classes for fruit and vegetables were another centre of interest. Admiral Parker received a first prize for a collection of Apples and Pears. The Earl of Mount Edgecumbe secured first awards for dishes of the following varieties of Apples:—Blenheim Orange, Bramley's Seedling, Cox's Orange Pippin, Ribston Pippin, King of the Pippins, and Cornish Gilliflower. Mr. Chas. Watts had a first-prize collection of vegetables.

Messrs. R. Veitch & Son, of Exeter, made a notable miscellaneous display, which included a number of good Chrysanthemums and a collection of Apples. Mr. Hodgess, of Plymouth, set up a handsome group of Orchids and foliage plants. Mr. W. B. Smale, of Torquay, sent cut Chrysanthemums and new Cactus Dahlias. Mr. H. Hodge, of St. Austell, exhibited a collection of a hundred varieties of double and single-flowered tuberous Begonias.

COVENTRY.—November 2nd and 3rd.

THE officers and committee of the Coventry and District Chrysanthemum and Floricultural Society have to congratulate themselves on a most successful exhibition. In opening the show an effective speech was delivered by Mr. Gulson, who took "flowers," especially the Chrysanthemum, as his theme.

In the open classes there was some capital material displayed. Much interest attached to the class for a group of Chrysanthemums arranged in a space of fifty square feet. Quality of bloom as well as general effect was taken into consideration in awarding the prizes. Sir R. Moon, Bart. (gardener, Mr. J. Morris), was placed first, followed by G. Singer, Esq. (gardener, Mr. Collier), and T. Browett, Esq. (gardener, Mr. E. Carter). Sir R. Moon was also first for twenty-four blooms of Japanese Chrysanthemums, with T. Browett, Esq., for second. Twenty-four blooms of incurves were best shown by S. Loder, Esq. (gardener, Mr. W. Pearce). The

first award for the table of cut Chrysanthemums went to Mr. W. Finch, and the second prize to Messrs. Kimberley & Son.

Certain classes in the schedule were limited to gentlemen living within a radius of four miles, and having not more than three gardeners. Here the best group of Chrysanthemums arranged in forty-five square feet was contributed by Mr. A. H. Drinkwater, Mr. J. K. Stanley, and Mr. W. Turrall, following in the order named. Mr. J. K. Stanley won the special prize presented by Messrs. Sander & Co., St. Albans, for six blooms of Japanese, and Mr. W. Turrall had the best bouquet.

Amateurs and cottagers living within a radius of four miles had another section of the schedule devoted to them. They turned up in strong force showing amongst other things some first-rate vegetables.

Messrs. B. S. Williams & Son, of Upper Holloway, London, N., contributed a very fine non-competitive table of Orchids. Mr. F. J. Curtis showed Ichthemic Guano and horticultural sundries.

SEVENOAKS.—November 2nd and 3rd.

THE thirteenth annual exhibition was held in the Club Room on the above dates, and proved a great success, the hall being crowded with visitors on both days. The exhibition was one of the best held in the district, "all quality" being the remark of a judge of wide experience.

In the class for three bush trained plants Mr. A. Hatton, gardener to Mrs. Swanzy, The Quarry, was first, showing good pieces of J. Shrimpton and Kentish White. Second came Mr. G. Latter, gardener to J. Payne, Esq., Park Grange, with smaller plants.

The class for twelve cut blooms on long stems, arranged with plants or foliage in a space 4 ft. by 3 ft. for effect, was a splendid feature. In a close contest Mr. S. Cooke, gardener to De Barri Crawshay, Esq., was first; Mr. Tebay, gardener to Mrs. Rycroft, Everlands, was second; and Mr. R. Potter, gardener to Sir Mark Collet, St. Clere, third.

Groups of Chrysanthemums arranged for effect, for which, in addition to the money prizes, was offered a twenty guinea cup, the conditions being that it shall be won three times (not necessarily in succession) before it becomes the winner's own property, were far in advance of those seen at any previous show. In a keen competition Mr. A. Hatton, who won in 1895, was placed first; Mr. W. Tebay, who won last year, second; and Mr. S. Cooke, third.

In the class for smaller groups Mr. W. Read, gardener to Admiral Miller, was first; Mr. H. Heath, gardener to Mrs. Petley, Riverhead, second; and Mr. S. Huntley, gardener to the Rev. T. S. Curties, third, all showing good stuff.

Cut Flower.—In the class for twelve Japanese, distinct, Mr. W. Tebay was first, showing well-developed blooms of E. Molyneux, Phoebus, Madame Gustave Henry, and Chénon de Léché. Second came Mr. A. Gibson. Mr. G. Cowper, gardener to H. Foster, Esq., Hillside, who was third, had smaller but highly coloured flowers.

For twelve incurved blooms, distinct, Mr. A. Gibson led, closely followed by Mr. Tebay and Mr. W. Searing, Parkwood, Swanley.

For twelve incurved blooms, not less than eight varieties, Mr. Cooke easily took first with well-finished samples of J. Doughty, J. Lambert, Alfred Salter, Violet Tomlin, Lucy Kendall, and Princess of Wales. Second was Mr. A. Hatton; and third, Mr. Brooker, gardener to J. T. Rogers, Esq., Riverhill.

For twelve Anemones Mr. Brooker was first, Mr. Heath, second, and Mr. Hatton, third. Mr. Hough, gardener to Mrs. Lambarde, Beechmont, had the best twelve Japanese in not less than eight varieties, and was closely followed by Mr. G. Latter and Mr. J. Brooker. Mr. G. Cowper had the best six of one variety, showing the beautiful variety "Mutual Friend." Mr. Searing was second with Australian Gold, and third, Mr. Latter.

FRUIT.—The falling off in the classes showed only too plainly what a bad season it has been in this district.

For four dishes of kitchen Apples Mr. R. Potter was first, showing in good form Lord Derby, Warner's King, Annie Elizabeth, and Gloria Mundi. Mr. Edwards was second, Lord Derby, Blenheim Orange, and Warner's King being his best. Mr.

Searing was third. For four dishes of dessert Apples Mr. Potter was again first, Orange Pippin, Melon Apple, and King of Tomkins County being highly coloured.

Four dishes of Pears were best shown by Mr. R. Edwards, gardener to C. Field, Esq., Beech Lees. He had good dishes of Durondeau and Beurré Bachelier. Mr. Gibson was second, and Mr. Hatton third. For his bunches of black Grapes Mr. G. Latter was first, and Mr. R. Potter second.

In the class for table decorations, bouquets, and sprays, confined to under gardeners, Mr. A. Westcott was first with light and pretty arrangements, closely followed by Mr. J. Reeve. Baskets of Chrysanthemums for gardeners' wives and daughters were well shown, Mrs. Searing being first, Mrs. Fox second, and Miss E. Cooke third.

Zonal Pelargoniums were well shown by Messrs. Adams, Cooper, and Reed, who were first, second, and third respectively. Mr. Huntley and Mr. Heath were the most successful exhibitors in the second division, whilst Messrs. Latter, Buckland, and Farmer secured the chief awards in the vegetable classes.

A grand display of Dahlias by Mrs. Seale helped to make the show what it was—a brilliant success, of which the committee, with their secretary, Mr. S. Cooke, must feel proud.

EVESHAM.—November 3rd and 4th.

THIS annual exhibition which was held in the Town Hall at Evesham on the above date was equal if not superior to that of previous years, and this despite the fact that the present season has not been a favourable one in the district. The arrangements were carried out by the hon. secretary, Mr. Geo. Witts, who was ably assisted by Mr. F. Norman and the committee.

Miss Edith Burlingham (gardener, Mr. Martin), Landsdowne, Evesham, was placed first for the group of Chrysanthemums occupying 40 sq. ft. The choicest varieties in this exhibit were Madame Carnot, Edith Tabor, Edwin Molyneux, Col. W. B. Smith, Chas. H. Curtis, Louise, Sunflower, and Chas. Davis; Mr. Alfred Epsley (gardener, Mr. Humprey), St. Ecgwin's, Evesham, was second, also with a capital group; Mr. J. H. Leigh (gardener, Mr. W. Clarke), Hill Crest, Evesham, was third.

Miss Burlingham scored another success for the smaller group of Chrysanthemums and foliage plants occupying 20 sq. ft. Mr. G. L. Eades (gardener, Mr. W. Davis), The Lodge, Evesham, was first for three specimen plants.

Mr. Eades also had the best specimen plant in the show.

In the classes for cut blooms there were three entries for eighteen Japanese. Lady Northwick came first showing very prominently Emily Silsbury, Duke of York, and Beauty of Teignmouth; Mr. Witts received the second prize; and Colonel Rogers was a close third.

For twelve incurves Lady Northwick again headed the list, but Colonel Rogers was second. There was a very close competition between Lady Northwick and Mr. Witts in the class for twelve Japanese, but Lady Northwick ultimately carried off the chief honours. Lady Northwick added to her already splendid list of successes, the first prize for six incurves and six Japanese of one variety, showing in the former section C. H. Curtis, and in the latter Duke of York.

In the classes reserved for the ladies great taste was displayed in the arrangement of the flowers, and the judges had considerable difficulty in arriving at a decision.

The fruit shown although not great in quantity was of first-rate quality, Apples being especially fine. The vegetables too were worthy of the district, which is sufficient commendation.

Mr. Ward staged a very attractive exhibit of Pure Ichthemic Guano, a well-known stimulant for plants

CARDIFF.—November 3rd and 4th.

THIS show was held at the Park Hall, Cardiff, the weather being fine and mild. The quality and quantity of exhibits were extremely good, the cut blooms of Japanese being excellent. A special prize offered by Messrs. The Ichthemic Guano Co. for best specimen plant grown with their pure Guano, was won by Mr. G. Drake with a fine plant of William Seward, and was much admired by the visitors. The

show was a great success from every point of view, and amongst the different trade exhibits was one by the above firm, represented by Mr. J. Pride, commanding one of the best positions in the hall. The Diamond Jubilee Challenge Cup was won by Mr. Dumble, Picton Castle, whose blooms were grown entirely by Ichthemic Guano, as were also the winners of Messrs. Case Bros. Cup. A fine show of Primulas and Cyclamens testified to the efficacy of using Ichthemic.

SWINDON.—November 5th and 6th.

THE fourth annual show of the Swindon Amateur Chrysanthemum and Horticultural Society took place on Friday and Saturday, November 5th and 6th.

The members of this Society are chiefly mechanics and railway servants, resident in Swindon. The society started with a very small exhibition four years ago, and has gradually improved, until at the present show an extremely creditable exhibition has been brought together taxing the capacity of the large swimming bath to hold the exhibits.

Seven exhibitors competed for the prize for groups of Chrysanthemums in pots arranged for effect, the first prize being awarded to Robertson Bertram, Esq.; the second to Messrs. Rigg and Fixter, Reading; and the third to the Hon. Mrs. Bouveni. Mr. Tom Fox, Mr. G. Gibbs, and T. Hooper Deacon, Esq., were prize winners in the smaller classes for groups.

The principal class, viz., that for twenty-four Japanese blooms, brought exhibits from far and wide, the first prize being taken by Mr. H. Joy, Cardiff, whose blooms were a remarkably fine lot. F. P. Bulley, Esq., Fairford, Gloucester, was second; J. L. Burgess, Esq., Fairford, Gloucester, third. Messrs. H. A. Joy and F. P. Bulley, Esq., were first and second for twelve Japanese.

Mr. S. Haines, of Faringdon, secured first for six blooms of any one variety, with six remarkable blooms of C. H. Curtis, the prize being awarded to these in preference to six extremely fine blooms of Phoebus shown by Mr. A. J. Joy, who received second prize.

F. P. Bulley, Esq., and J. L. Burgess, Esq., received first and second for twelve incurved blooms.

Two nice boxes of Anemone flowered varieties were staged for the special prizes offered in this class by J. L. Burgess, Esq., Maiseyhampton, Fairford, the first prize being taken by F. P. Bulley, Esq. Some very creditable exhibits were made by the members of the society, the collection of twelve cut blooms set up by Mr. A. Bown, receiving very high praise from the judges. This it thoroughly deserved; and with a little more variety it would have held its own in many open competitions. It received the Rycroft Gold Medal presented by Mr. H. J. Jones, the celebrated Chrysanthemum specialist.

The Ichthemic Guano Co., had a stand of their well-known fertiliser, and Mr. Looms, Messrs. Rigg & Fixter, and Mr. Trowbridge, collections of plants and cut flowers not for competition.

DEVON AND EXETER.—November 4th and 5th.

THE Victoria Hall, at Exeter, was the scene of this annual function. The entries for cut blooms of Chrysanthemums were exceptionally numerous, whilst in other sections they were well up to the average. The arrangements were admirably carried out by Mr. D. Cann, the hon. secretary, and an enthusiastic committee.

The premier award for thirty-six cut blooms of Japanese varieties was carried off by Mr. G. Foster, gardener to H. H. Spencer, Esq., Glendaragh, Teignmouth, with Mr. V. Stukey, of Langport, as second. H. H. Spencer, Esq., was also first for eighteen Japanese, six yellow Japanese of one variety, and six of any other colour, one variety. Mr. G. Elms, Teignmouth, led for twelve Japs., and was also credited with having the premier bloom in the show. Mr. V. Stukey sent the best stand of twelve incurves, and Mr. H. H. Spencer the second stand in point of merit. He attributes his success largely to the use of Ichthemic Guano. Twelve blooms of Anemone varieties were best shown by Mr. Macadam Smith, Weveliscombe, and six pompons by Mr. M. Farrant.

Mr. W. Brock, Exeter, secured the leading award for a circular group with a diameter of 10 ft. Mr. W. Pring, also of Exeter, was second. A class for smaller group, with a diameter of 8 ft., enabled Lady Duckworth to secure a well-deserved first. Mr. W.

Brock likewise led for a group of miscellaneous plants.

There were some capital Grapes forthcoming. Mr. G. W. Matthew headed the list of competitors for three bunches of Black Alicante. The Rev. H. Dell, Winslade, was first for three bunches of Muscat of Alexandria. Sir T. D. Acland, Bart., led in the class for a collection of thirty dishes of Apples; and Sir D. D. King occupied a similar position in a smaller class for twelve dishes. Sir T. D. Acland also had the best nine and six dishes of Pears.

Certificates of Merit were awarded to the following:—The Exeter Nursery Co. for a group of Chrysanthemums, and for a display of wreaths, crosses, and other floral devices; Messrs. Rach & Co. for floral decorations; Mr. W. J. Godfrey, Exmouth, for a grand array of cut Chrysanthemums and table decorations; Mr. W. B. Smale for cut Chrysanthemums and Cactus Dahlias; Messrs. R. Veitch & Son, Exeter, for an excellent collection of Apples and miscellaneous plants; Messrs. Bunyard & Co., Maidstone, for a superb lot of Apples; Mr. T. Williams, Wonford, for a collection of the same fruit; Messrs. Jarman & Co., Chard, for a collection of fruit and vegetables; Messrs. C. G. Sclater for a collection of Apples; and Lord Poltimore for a collection of Apples and plants.

ASCOT.—November 4th and 5th.

Ascot and District Horticultural Society held its fourteenth annual Chrysanthemum, Fruit, and Vegetable Show, at the Grand Stand, Ascot. The weather was all that could be desired. A capital hon. secretary is the Hon. Col. H. Neehan, supported by a good committee. Mr. J. Cowie acted as stage manager, and right well did he manage everything. The chief feature was the cut blooms. The open class for twenty-four Japanese brought ten competitors. T. B. Heywood, Esq. (gardener, Mr. C. J. Salter), Woodhatch, Reigate, was first with good solid blooms, viz.: Mrs. J. Lewis, Australia, Mrs. C. Orchard, Mrs. C. H. Payne, Rose Wynne, E. Molyneux, C. Davis, Edith Tabor, Pride of Exmouth, Mrs. C. Blick, Pride of Madford, Elsie Teichmann, Vivian Morel, Australian Gold, Mutual Friend, Lady Hanham, Phoebus Mrs. C. Molln, Mme. Ad. Chatin, M. Chénon de Léché, Thos. Wilkins, Lady Isabella, Lady Ridgway, and A. H. Fewkes. Second came Mr. W. F. Cole, gardener to Sir George Russel, Bart., M.P., Swallowfield Park; Mr. A. Sturt, gardener to N. L. Cohen, Esq., Round Oak, Englefield Green, was a good third; Mr. E. Johnson, gardener to A. Gilliat, Esq., Duffield, Stoke Poges, was fourth with a nice even lot.

Nine competitors did battle for twenty-four incurves, distinct. Mr. W. Neville, gardener to F. W. Flight, Esq., Cornstiles, Twyford, Winchfield, was first with neat but very small blooms. The varieties were Jeanne d'Arc, Mrs. R. C. Kingston, George Haigh, Princess of Wales, M. R. Bahuant, Queen of England, Globe d'Or, Prince Alfred, Baron Hirsch, Miss Haggas, Novelty, R. Petfield, Golden Empress, Lord Wolesley, Rose Owen, Annie Hoste, Mrs. H. Heale, Violet Tomlin, Golden Queen, Mr. J. Murry, Alfred Lyne, Empress of India, Perle Dauphinoise. Mr. Salter was second with large blooms but not quite so fresh. Mr. A. Jones, gardener to Miss Fryburn, Hadley Manor, Barnet, was third.

For thirty-six blooms, distinct, consisting of half incurved and half Japs., Mr. W. Lane, gardener to Miss Durning Smith, King's Ride, Ascot, had the best boards in the show. His Japs were Vivian Morel, Phoebus, C. Davis, Mme. Carnot, Beauty of Exmouth, Graphic, Mrs. J. Lewis, E. Molyneux, Mrs. C. H. Payne, M. Chénon de Léché, Edith Tabor, Australia, Duke of York, Louise, Oceana, Jalena, Commandant Blusset, Lady Northcote.

Some of the best incurves were Empress of India, Major Bonaffon, Queen of England, John Doughty, C. H. Curtis, Mrs. R. C. Kingston, R. Petfield, Globe d'or, Lucy Kendal, Miss Haggas, Mme. Darrier. Mr. W. L. Farmer, gardener to H. P. Lasehallas, Esq., Highiams, Windlesham, was second with fresh flowers.

For twelve incurves Mr. W. Wilson, gardener to R. C. Christie, Esq., Ribsden, was first. The same exhibitor was first for twelve Japanese.

For a group of Chrysanthemum and foliage Mr. Farmer was first with a very light arrangement. Mr. Hereman, gardener to Lady Isabella Keane, Rose Mount, was second.

In another class Mr. Lane led the way with a grand group of 'Mums, only very dwarf with large fresh blooms.

Mr. Farmer had two grand bunches of Muscats; Mr. Cooper, The Vineries, Sunninghill, had two bunches of Gros Colman; Mr. Lane had a fine collection of nine dishes of vegetables.

LIVERPOOL HORTICULTURAL ASSOCIATION.

November 9th and 10th.

THE seventeenth autumn show was held in the St. George's Hall, under the most favourable auspices as regards weather. The entries show a slight decrease, being 330 against 364 last year. The mode of arrangement has been somewhat altered, the groups being staged down the centre of the Hall making them more effective. The merits of arrangement and quality were seen to advantage.

THE CUT FLOWERS, as usual, were considered of the greatest importance. The Challenge Vase, perhaps, accounted for this interest. The successful man last year was not to be the winner, the prize being adjudged to Mr. G. Burden, gardener to G. B. Cockburn, Esq., Birkenhead, who staged the finest forty-eight ever seen in Liverpool. The Japanese were large, even, fresh blooms, the finest out of a fine lot being Edith Tabor, E. Molyneux, E. J. Payne, Duke of York, Vivian Morel, Thos. Wilkins, Violetta, Rob. Owen, Modesto, Lady Hanham, G. C. Schwabe, Col. A. Smith, Mrs. J. Lewis, &c. The incurved formed the front row, being a smart equal lot. The best were J. Lambert, Pearl Dauphinoise, C. H. Curtis, Jas. Agate, W. Tunnington, Miss M. A. Haggas, Miss V. Tomlin, Jeanne d'Arc, Mme. Darrier, Miss Lucy Kendal, Baron Hirsch, &c. Mr. E. B. Townsend, gardener to Col. Lloyd, Oswestry, who lacked colour in the Japs., and depth in the incurved section, was second. Mr. J. Heaton, gardener to R. P. Houston, Esq., M.P., Aigburth, came in third. Mr. Haigh, gardener to W. H. Tate, Esq., taking the remaining position.

For eighteen incurved varieties, Mr. P. Greene, gardener to Thos. Gee, Esq., won with a good lot of fair sized blooms. Mr. J. Haynes, gardener to Mrs. B. C. Nicholson, Wavertree, was second.

For twelve varieties, Mr. J. Bracegirdle, gardener to W. H. Watts, Esq., secured first honours with heavy blooms.

For eighteen Japs. Mr. J. Haynes was to the fore with heavy flowers, Vivian Morel, Simplicity, Mutual Friend, Edith Tabor, &c., being fine. There were fourteen entries in this class.

PLANTS.—For the group of Chrysanthemums, six lots were staged down the centre of the hall. Mr. T. Gowen, gardener to J. A. Bartlett, Esq., Mossley Hill, being first with fresh plants carrying good blooms, brightened by a base of Maidenhair Fern, Crotons, Palms, &c. For a basket of plants, Mr. Geo. Haigh secured first honours, with a light arrangement, chiefly with single varieties. For four stove or greenhouse Ferns, Mr. Thos. Gowen won with good plants, his Dicksonia being very fine. For three trained pompons, Mr. J. Rose, gardener to J. G. Kitchen, Esq., won with good plants. For the basket of miscellaneous plants, Mr. E. Taylor, gardener to E. Pryor, Esq., had a charming arrangement, chiefly Orchids and Ferns, being first. For the single large-flowered Chrysanthemum, Mr. W. Wilson, gardener to H. Cunningham, Esq., won with Mrs. G. Rundle. For the single untrained plant, Mr. Thos. Gowen led the way; whilst a special Certificate of Merit was awarded to Mr. E. Taylor, for a grand plant of Vivian Morel, carrying fully fifty-five blooms. For four large-flowered trained plants, Mr. Thos. Gowen, was first with good plants. For a group arranged for effect, Mr. J. Harrison, gardener to Mrs. W. G. Bateson, led with a grand lot. For three Orchids, Mr. E. R. Finch, gardener to Jos. Smith, Esq., Wavertree, won with *Cattleya labiata autumnalis*, *C. bowringiana* and *Ansellia africana*, all fine plants. The same exhibitor scored for the single with *Cattleya labiata*. For two Orchids, Mr. A. Randall, gardener to A. L. Jones, Esq., was to the fore with *Cypripedium insigne* and a small *Laelia*. For two Palms, Mr. J. Bracegirdle staged the best with two well-grown Kentias. For the single specimen, Mr. J. Pattison, gardener to S. J. Waring, Esq., won with a handsome plant.

FRUIT was staged in quantity of fine quality. For six dishes, Mr. T. Elsworthy, gardener to Messrs. W. & R. Gladstone, Broad Green, won with Black

Alicante and Muscat of Alexandria grapes, good Beurré Diel and Marie Louise Pears, Ribston Pippin and Cox's Orange Pippin Apples.

For two bunches of Alicante grapes, the same exhibitor won with splendid bunches out of eight entries. Two bunches any other black, Mr. T. Ferguson, gardener to Mrs. Paterson, Rock Ferry, won with heavy bunches of Barbarossa. For two bunches Muscats, Mr. A. Hughes, gardener to W. Garrett, Esq., Lancaster, led the way with fine coloured berries. Any other white was won by Mr. G. Eaton, gardener to Col. Shirley, Allerton, with good bunches of Trebbiano.

For six dishes of dessert Peas, Mr. F. Bible, gardener to Lord Trevor, Chirk, won with fine Marie Louise Durondeau Beurré Diel, &c. For four dishes, Mr. R. Hanagan, scored with immense Pitmaston Duchess, Marie Louise, &c.

For Culinary Peas, Mr. J. Davis, gardener to W. E. King-King, Esq., Leominster, was easy first with fine samples of Catillac. For six dishes dessert Apples, Mr. J. Davis was well in front with finely coloured varieties, such as Blenheim and Princess Pippin, grand, and Ribston Pippin, very large.

For four and one varieties, Mr. John Lee, Higher Bebington, had good specimens.

The minor classes were well filled, the nursey-men doing no mean part in making a highly satisfactory exhibition.

BROMLEY.—November 10th and 11th.

THE Grand Hall at Bromley was again the scene of a very animated and brisk competition amongst Chrysanthemum growers on the above date. The entries were more numerous than ever, and of surpassing quality; indeed, it is not too much to say that in several classes, including the "forty-eights," every exhibitor would have won a first prize in an ordinary competition.

The platform was charmingly decorated by Mr. J. R. Box, of Croydon.

In the premier class for forty-eight blooms, consisting of twenty-four incurves in not less than eighteen varieties, and twenty-four Japanese, there was a capital competition. No fewer than six exhibitors competed for the Challenge Cup (value £10), and the money prize of £4, which were offered as the chief award in this class. Mr. Chas. Blick, gardener to Martin R. Smith, Esq., The Warren, Hayes, Kent, was first with some superb samples. His best incurves were C. H. Curtis, Queen of England, Duchess of Fife, Lord Alcester, Wm. Tunnington, Robt. Cannell, Princess of Wales, Golden Empress, and Major Bonaffon; and his premier Japanese Etoile de Lyon, G. C. Schwabe, Mutual Friend, Chas. Davis, Madame Carnot, Niveus, Phoebus, and M. Chénon de Léché. Mr. C. Payne, gardener to C. J. Whittington, Esq., Elmhurst, Bickley Park, was second also with a grand lot. Mr. R. Leadbetter, gardener to A. G. Hubbuck, Esq., Elmhurst Lodge, was third, and Mr. E. Dore, gardener to H. E. Try, Esq., Bickley Hall, was fourth.

Mr. C. Blick scored another success for twenty-four Japanese, distinct, showing Mrs. Hume Long, Phoebus, Mutual Friend, Mrs. H. Weekes, and Jules Ferry, in capital condition. Mr. J. Blackburn, gardener to John Scott, Esq., Elmhurst Grange, was second.

The first award for eighteen blooms consisting of six Japanese, six incurved, and six reflexed, fell to the lot of Mr. Wm. Thomas, gardener to J. Grieg, Esq., Chislehurst. Mr. J. Lyne, gardener to H. F. Tiarks, Esq., Foxbury, Chislehurst, ran a close second.

Mr. J. Lyne, gardener to H. F. Tiarks, Esq., Foxbury, Chislehurst, led in a splendid competition for twenty-four blooms, consisting of twelve incurves and twelve Japanese. Mr. H. Redden was second.

Eleven entries for twelve incurves distinct were forthcoming. Here Mr. G. Pribble, gardener to M. Hodgson, Esq., Shirley Cottage, near Croydon, was the most successful exhibitor. He had capital blooms of C. H. Curtis, Violet Tomlin, D. B. Crane, Miss Haggas, William Tunnington, Lord Alcester, and Duchess of Fife. Mr. J. Lyne was second; and Mr. Harvey, gardener to R. B. Martin, Esq., M.P., Chislehurst, third.

In the smaller class for six incurves, Mr. Harvey was first, a like position being taken by Mr. M. E. Mills, gardener to Frank Lloyd, Esq., Coombe House, Croydon, for twelve Japanese, and by Mr. C. Blick for six Japanese. Mr. Harvey staged the best

six incurved blooms of one variety, in Queen of England, and Mr. H. Redden, gardener to G. W. Bird, Esq., The Manor House, West Wickham, had the best six Japanese blooms of one variety in Mme. Carnot.

There were three groups staged in competition for the prizes offered for a group occupying 50 sq. ft., a margin 10 ft. wide of foliage plants being allowed. Mr. G. Brister, gardener to F. Charlesworth, Esq., Bickley, led with a grand array of superior blooms. Mr. E. Dove, gardener to H. G. Fry, Esq., Bickley Hall, was second, and Mr. J. Lyne, third. The best trained specimen came from Mr. G. Brister, who showed a large, well flowered bush plant of Mrs. G. Glenny. Mr. G. B. Lees, gardener to R. de Quincy, Esq., Oakwood, Chislehurst, won the premier award for a group of miscellaneous flowering and foliage plants. Mr. J. Amey, gardener to F. G. Liebreich Esq., Log's Hall, Chislehurst, was second. Mr. W. Pascoe, gardener to Captain Torrens, Baston Manor, Hayes, was third.

MAIDEN EXHIBITORS AND SINGLE-HANDED GARDENERS.—In the amateurs' classes there was some excellent stuff staged. Mr. H. Redden won for six incurves; Mr. E. Legg for twelve Japanese; Mr. W. Toogood, gardener to Mrs. Parr, Powis Lodge, Bickley, in another class for six incurves; and Mr. E. Legg for twelve Chinese Primulas.

In the classes for fruit and vegetables there was much to admire. Mr. C. Jordan, gardener to H. Hoskier, Esq., Coney Hill, had the best bunch of Gros Maroc Grape, and Mr. J. Blackburn, the finest bunch of Muscat of Alexandria, and also the best three of any black Grape in Gros Maroc.

Mr. W. A. Seating, Parkwood, Swanley, led for four dishes of culinary Apples.

Mr. C. Blick won yet another first for a collection of nine varieties of vegetables. A smaller collection of six varieties sent by Mr. P. Field, gardener to J. H. Simpson, Esq., Oak Lawn, Beckenham, also received a first.

CHELTENHAM.—November 10th and 11th.

FOR a number of years past the Cheltenham Winter Show has included a Chrysanthemum section, which year by year has been growing in popularity and in representative merit.

The groups of plants arranged for general effect were surpassingly good this year. Mr. G. W. Marsh, gardener to T. P. W. Butt, Esq., Arle Court, secured the premier prize, and was followed by Mr. W. Lusty, gardener to Colonel Rogers, Battledown Court, who was second; and Messrs. E. Smith & Sons, St. George's Road, who were third. The last named exhibitors staged the best six blooms distinct of incurved varieties. The winning stand of twenty-four incurves was contributed by Mr. G. W. Marsh, with Mr. W. Lusty as second. Mr. W. Lusty had the best eighteen incurves.

Mr. J. Martin, gardener to T. W. Swinburne, Esq., Cordean Hall, distanced all competitors for a stand of thirty-six Japanese blooms, distinct. Mr. G. Marsh was second, and Mr. W. Lusty, third. For eighteen blooms of Japanese varieties, distinct, Lady Northwick led, and Mr. G. Marsh, and Mr. W. Lusty followed in order of mention. The winning twelve Japanese came from Mr. J. L. Burgess.

In the classes for fruit Viscount Deerhurst led for a collection of twelve dishes of culinary Apples, and also for twelve dishes of dessert Apples, showing capital fruit in each case. In another class for twelve dishes of dessert Apples, Earl Coventry carried off chief honours.

Viscount Deerhurst completed a fine list of successes by winning the first prizes for a collection of twelve dishes of Pears, two bunches of black Grapes, of distinct varieties, and two bunches of the same variety.

Mr. Alfred Cook took first for a collection of eight varieties of vegetables, and also for Celery, Parsnips, and a dish of twelve Tomatos. The premier award for a collection of six varieties of vegetables in which the prizes were given by Messrs. Sutton & Sons, of Reading, fell to the lot of Earl Coventry.

TUNBRIDGE WELLS.—November 12th.

THE twenty-first annual show was opened in the Corn Exchange and Assembly Rooms, Tunbridge Wells, on this date. A departure has been made this season in the disposal of the Chrysanthemum groups. Instead of being placed, as formerly, against the dingy walls of the Corn Exchange, they were set up in circular pyramidal style in the centre of the Assembly Rooms, where they appeared to much greater advantage. The number of competitive entries was about the same as last season. Mr. J. Douglas, Great Bookham, and Mr. Norman Davis, Framfield, were the judges for the plants and cut flowers; and Mr. Geo. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone, and Mr. W. A. Henderson, gardener to John Deacon, Esq., Mabledon, Tonbridge, decided the relative merits of the fruits and vegetables.

In the class for a group of Chrysanthemums, Mr. J. Howes, gardener to W. Cobb, Esq., Broadwater Down, secured the first prize; and Mr. W. Turner, gardener to J. A. le Lacheur, Esq., The Wilderness, occupied the second place. Mr. L. Dupond, gardener to C. B. Powell, Esq., Southborough, led for a miscellaneous group of plants.

Mr. J. Smooker, gardener to Mrs. Hall, 24, Broadwater Down, had the best eight Chrysanthemums in pots; and Mr. H. Kimber, gardener to Captain W. Alcock, Alshurst, won the premier award for four dwarf-trained Chrysanthemums, and also for the best single specimen in two different classes.

In the open classes for cut blooms, Mr. J. Howes staged the premier twenty-four Japanese, with a fine lot of material, and likewise the best twelve. In another class for twelve Mr. J. Legge was first. For twelve large-flowered Anemone varieties (Japanese included) Mr. G. Ware, gardener to Mrs. Morgan, Hungershall Park, was the most successful exhibitor.

The special classes for gardeners and amateurs were well-patronised both in the matter of cut blooms and plants.

The competition for fruit open to cultivators living within a radius of fifteen miles was a great success. Mr. T. Palmer, gardener to H. J. Metcalfe, Esq., Southborough, staged the best three bunches of black Grapes, and Mr. C. Earl, gardener to D'Avigdor Goldsmith, Esq., the best three bunches of white Grapes. Mr. F. Bridger, Penshurst Place, scored for six dishes of dessert Pears, and also for a like number of dishes of dessert Apples.

QUESTIONS AND ANSWERS

Pruning of Lime Trees.—*W. J. Godfrey*: We have examined the photograph of both the pruned and unpruned Lime trees, and must confess great surprise that it should have been considered pruning at all. We have seen many forms of pruning, but in this instance should consider it one of the worst forms of hacking we remember having seen. The lopping of so many large branches must render them liable to decay at so many points, as the cut ends must take a long time to heal over, if ever they do so properly. At the same time the lopped tree is very unsightly. The unpruned tree is an object of grace and beauty, in our estimation, by comparison with the other. We consider that so long as the trees do not overhang the highway to such an extent as to interfere with the traffic, all the pruning that need be given should consist of thinning the branches where too crowded, and shortening back the tips of long straggling ones. If large branches are too low for the traffic they should be cut close to the main stem and the wounds painted over to keep out wet.

Profitable Strawberries.—*Rom.*: If the reader of the paper you mention is willing to send a copy of it we should be pleased to publish it, when space will permit. Some time must elapse, however, before that could be done. In the meantime we can ascertain the opinion of the gentleman who read the paper.

Dwarf dark-flowered H. P. Roses.—*Omega*: Besides General Jacqueminot, you may add Ahel Carriere and Prince Camille de Rohan to your dark Roses. A. K. Williams and Charles Lefebvre are two excellent crimson varieties, and Duke of Edinburgh is rich velvety crimson. The above make half a dozen free flowering varieties; and you might augment the list by adding Alfred Colomb, carmine crimson; Senateur Vaisse, glowing scarlet; and Horace Vernet, brilliant velvety crimson.

Angle of Elevation for a plant house.—*Omega*: The best angle of elevation must vary to some extent according to circumstances. If the house is intended for forcing purposes the roof should be constructed at a pretty high or sharp angle, so as to catch the rays of the sun in the early part of the year. For a span-roofed greenhouse or cool conservatory an angle of 45° would be a good average, if the house is constructed so as to face the east and west.

Planting Carnations.—*W. S.*: Should the weather continue open for some time you might expect a fair amount of success. The weather after this period of the year becomes more and more uncertain, and planting would be attended with considerable risk if frost were to supervene. In such cases you would have to go over the beds or plantations after a thaw and press the plants into the soil with the fingers in those cases where they have been partly raised out of the soil by the action of frost. Make the soil firm by treading before planting. The other alternative is to wait till March.

Names of Fruits.—*W. Tolby*: 1, Royal Somerset; 2, Cellini; 3, Rymer.—*J. C. S.*: Warner's King.

Names of Plants.—*T. W.*: 1, Fittonia argyro-neura; 2, Peperomia Saundersii; 3, Calathea zebrina; 4, Dracaena Lindenii.—*J. A.*: 1, Berberis Aquifolium; 2, Gaultheria procumbens; 3, Podocarpus pedunculata fastigiata; 4, Jasminum nudiflorum; 5, Euonymus japonicus maculatus; 6, Cupressus nutkaensis.—*A. R.*: 1, Oncidium varicosum; 2, Cattleya labiata var.; 3, Skimmia japonica; 4, Senecio Kaempferi aureo-maculatus.—*J. W., N.*: 1, Eranthemum nervosum; 2, Coleonema alium; 3, Myrtus communis narrow-leaved var.; 4, Osmunda regalis palustris.

A Special Offer to Readers of THE GARDENING WORLD.

25/- BOOK for 8/-
 NO HOME SHOULD BE WITHOUT ONE
Ogilvie's Encyclopædia
 OF
 USEFUL INFORMATION
 AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER
 { INFORMATION } ISSUED.
 Size of Encyclopædia: 9 by 11½ inches. 656 Pages.

It contains
 MANY MAGNIFICENTLY ENGRAVED
 COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS, do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

201197. **COUPON.**

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, NOVEMBER 27th, 1897.

THE FEATURES OF THE EDINBURGH SHOW.

Those who visited the great annual show of the Scottish Horticultural Association last week, naturally found their way towards the Diamond Jubilee class for which £150 was awarded in six prizes. Crowds of the flower-loving public, even those unacquainted with the mysteries of Chrysanthemum growing, wanted to see the flowers for which such a sum of money was being expended. The long table, with its double row of exhibits, had a much more imposing effect than the blooms which were cut and arranged upon the show boards in the usual trim fashion. The long stems, clothed with their own foliage, carried the blooms aloft, so that crowds of the visitors, several rows deep, could easily see the blooms and judge of their respective merits without being obliged to stoop over them at close range; indeed, during the evenings of all three days of the show, this was impossible. Should this style of exhibiting the favourite flower become anything like general, the character of the autumn exhibitions will become entirely altered. There are several phases of the

question that will have to be taken into consideration. The principal of these is that societies will have to exercise the same control over the vases as at present they do over the size and other details of exhibition boards. The vases must, in fact, be of uniform size and design so as to put the flowers all on the same footing, and give judges and exhibitors alike equal chance of doing justice to their respective duties. At this phase of the question, societies have not had time to determine upon the best form of vases, but for competitive purposes they must be uniform, and sufficiently heavy at the bottom to stand firmly and avoid accidents. So long as the flowers are upright and equally balanced, there is no danger of their toppling over; but on the second or third days of an exhibition, the flowers of various sorts begin to lean in different directions, and the slightest accident is liable to upset them. To avoid a dead uniformity at exhibitions, those who set up exhibits not for competition, should be allowed to use vases of various sizes and of ornamental design as at present, to give variety and interest to the whole display.

In the class for twelve vases of Chrysanthemums cut with long stems there was a considerable amount of variety in the methods of arrangement adopted by exhibitors. The most significant fact in connection with this class was that the leading award was won by an amateur, although gardeners were also allowed to, and did, compete. The winner grew and staged his own flowers, and by the meritorious character of his exhibit secured the Gold Victorian Medal of the association, of which he felt very proud. Nor was he the only amateur who weighed himself in the scales against the professional gardeners, and beat them too. This is a point that might be noted by those who have hitherto given most or all of the credit to the professional element. The amateur growers also showed well in the classes for trained plants, being in some cases successful, though at Edinburgh, as at London, one gardener takes the lion's share of the leading prizes for this class of exhibit. The trained plants were numerous and some of them were creditable specimens for this northern latitude and its shorter season of growth.

The groups of Chrysanthemums, foliage and other flowering plants fell short of what we have seen at Edinburgh, though it must be admitted that no special nor great encouragement had been given them. The fact that the Waverley Market has to be partly cleared on some of the mornings of the week for the sake of the market gardeners also militates against the staging of fine groups, the arrangement of which would have to be destroyed on the evenings before the market, and the whole group have to be reconstructed the following day before the admission of the public. There were two classes for small tables of plants, but the lack of space prevented their being staged in positions where they would be seen to the best advantage. The lack of space even in the roomy Waverley Market prevented the placing of these tables down the centre of the building. They had in fact to be placed under the shadow of the overhanging gallery. The large Tree Ferns and Palms down the centre of the area on former occasions were also lacking for want of space. The visitors varied in numbers from 8,040 during the first day to 15,000 on the third day, and during the three days the number of visitors was calculated at 35,000, and the receipts at the gates as £1,000. This accounts for the lack of space, and is a suitable answer to those who complain of the expenses of bringing the band of the Grenadier Guards to Edinburgh.

Another feature of this show we cannot overlook was the grand exhibit of dried grasses, living flowers, and plants, got together by Mr. M. Todd, the president of the association, on behalf of the Royal Gardeners' Orphan Fund. All these things were on sale, besides which there was a piano, valued at £45, and other prizes to be drawn for by tickets, the proceeds to be devoted to the same charitable purpose. This was a pet scheme conceived and carried out by the president himself. The whole of the surplus proceeds of the show is also to be devoted to charitable purposes, including sums in favour of the Royal Gardeners' Orphan Fund and the Gardeners' Royal Benevolent Institution.

We missed a considerable number of important exhibits in the non-competitive class, which we expected to witness at Edinburgh, and which were entirely crowded out for want of space. This says much for the liberal spirit of the Edinburgh nurserymen, who were pleased to forego their accustomed privileges of staging their exhibits—and that, too, at their own local show—in favour of exhibitors from a distance, some of whom came from the south of the Tweed and Cheviots.

Autumn Strawberries—Strawberries (not Alpine varieties) have been gathered during the last fortnight from plants growing in the open at Kingsbridge.

Mr. Donald Chisholm, outside foreman in Glasgow Botanic Gardens, formerly head gardener to Capt. S. F. Charles, Lancashire Fusiliers, Wardie House, Edinburgh, has been appointed head gardener to Lady Belhaven, Udston, Hamilton, N.B.

A Competent Gardener.—A man wanted as a competent gardener. The situation is well adapted for a retired pensioner from Her Majesty's Navy. Where does the practical part come in, eh? I noticed this advertisement, recently, in one of your contemporaries.—*Rusticus*.

Cold Weather must soon, in the natural course of the seasons, make its appearance. The autumn has so far been exceptionally mild, witness the untimely flowering of so many hardy plants, but there must be an end to this soon. Hence we should do well to make all preparations for "winter's stern embrace." The value of Anthracite coal becomes more than ever manifest year by year, and its superiority over coke for heating purposes more evident. Moreover, it is more cleanly to use, and in addition to the lightening of labour is far more durable than coke. We notice that our friend, Mr. William H. Essery, of Swansea, is again offering Anthracite in three sizes, ready for burning in boilers of various sizes. The prices quoted are for Anthracite delivered in Mr. Essery's own trucks at the nearest railway station.

Mr. Robert Henderson, Botanical Gardens, Glasgow, has been appointed head gardener of the King Williamstown Botanical Gardens, Cape Colony. Mr. Henderson has undergone a course of 3 years' training in the inside department of the Glasgow Botanical Gardens under the well directed superintendence of Mr. Dewar, the curator, and has held previously several important charges, which well fit him for the responsible undertaking that he is now about to take up in South Africa. Previous to his entry into the Glasgow Botanical Gardens, Mr. Henderson was general foreman in the celebrated gardens of Beil, East Lothian. He is the son of John Henderson, Riddlesworth Hall, Norfolk, late manager to the once well known firm of Ireland and Thompson, Edinburgh. Mr. Henderson sails for his new destination on the 24th of this month.—*Gamma*.

Uckfield and District.—A Chrysanthemum show was held in the Town Hall at Uckfield, Sussex, on Tuesday, the 18th inst., the proceeds being devoted to the assistance of the local charities. All the exhibits were non-competitive. Cut hlooms were shown in good condition, and several gardeners in the neighbourhood contributed groups of Chrysanthemums and miscellaneous plants. One end of the hall was occupied with a very fine display of Chrysanthemums, set up with Ferns and Palms, which was

contributed by Mr. Norman Davis, of The Vineries, Framfield. Mr. H. Prinsep, gardener to the Hon. Viscountess Portman, illustrated the quality of the fruit and vegetables he grows at Buxted Park, by sending a collection of each. Both fruit and vegetables were excellent.

November Gardens.—A contributor to *The Morning Post* states that in his garden there are blooming at the present time—Roses, Chrysanthemums, Tritomas, Heliotropes, Dahlias, Lemon-scented Verbena, Tobacco plants, Salpiglossis, Sweet Peas, Mignonette, and Violets, while the autumn foliage is still beautiful. November is exceedingly kind to both him and his garden.

East End Flower Show.—The People's Palace and East London Horticultural Society's fourth annual Chrysanthemum show was opened in Queen's Hall, Mile End Road, on the 11th inst. There were forty-six classes and about four hundred and twenty entries. Mr. C. E. Shea presided at the opening ceremony, and said the show was better than it had ever been before. During the afternoon Mr. J. H. Witty delivered a lecture on "how to grow Chrysanthemums," which found a very attentive audience.

The very last of old Cremorne.—Under this heading one of our daily contemporaries discusses the sale of Mr. W. J. Bull's Ashburnham Road Nursery, in King's Road, Chelsea. The article states that this nursery is the last remnant of what was once Cremorne. This, however, is erroneous, for the Ashburnham Park Nursery of Messrs. J. W. Wimsett & Son, which is hard by, is another remnant of London's old pleasure garden; in fact there is even now to be seen in this establishment part of the identical rockery belonging to the gardens of Cremorne. As Messrs. Wimsett & Son have no intention of selling any portion of the site occupied by their nurseries, at least part of this famous old haunt of the *beau monde* will be preserved from the encroachments of the brick and mortar fiend.

Crippled Children's Christmas.—We have received the following appeal from Alderman Treloar, and in view of the near approach of Christmas present the same to our readers:—

SIR,—By a vote of the Court of Common Council to-day, the Corporation of the City of London has, for the fourth time, granted the use of the Guildhall for the Christmas entertainment to Ragged School children, which it has been my privilege annually to promote. The guests are drawn from all the poorest parts of the metropolis. I am sure that the sight of their radiant faces at the well-spread board under the eye of those genial giants—Gog and Magog—must have repaid the kind-hearted donors of this joyful feast. I have every confidence that the generous public will once more assist as liberally as heretofore, but this year I ask for your co-operation to make a special and wider appeal.

There are over 5,000 little crippled children passing a monotonous existence in crowded courts and alleys in this great city. Many of them are stretched on beds of suffering and are prisoners from year's end to year's end. Others are quite unable to participate in the pleasures offered to the more robust. Realising how sad was the lot of these afflicted little ones, last year the surplus of the funds entrusted to me for the Children's Banquet at the Guildhall was spent in providing 1,000 Christmas hampers for crippled children. There was not the smallest difficulty in distributing them to the more deserving cases; for every cripple is registered and visited systematically by the Ragged School Union. But in making the selections it gave great pain to be obliged to refuse four out of every five applicants. Why should not all the 5,000 homes be brightened and made happy for one day at least in the year?

It rests simply with sympathetic people to provide the means. The Cripples' Christmas Hamper may be large or small according to the measure of support I may receive. Last year it contained a 2lb. meat pie, a plum pudding, a substantial cake, a packet of tea, and a parcel of sweets. And, judging from the pathetic letters of thanks, these unaccustomed dainties—the mere elements of Christmas fare—gave untold satisfaction. That is why I want to disappoint no child-cripple this year out of the 5,000, and that is the reason why I would earnestly ask for contributions, large or small, to be sent to the Little Cripples' Christmas Fund, care of Alderman Treloar, Ludgate Hill, E.C.—I am, Sir, your obedient servant,

W. P. TRELOAR.
Ludgate Hill, Nov. 18th.

Laburnums are flowering at St-Leonard's-on-Sea.

Dover is favoured.—Primroses and Strawberries have been gathered during the last week at Dover.

Mr. Alexander Thompson, late gardener at Arcog, Bute, has been appointed gardener to Miss Maitland, of Sanchie, Stirling, N.B.

Mr. Charles Scream, who for some years has had charge of the gardens at Ratcliffe Hall, Leicester, has left, owing to Captain O'Neal, the owner, having broken up his establishment at that place. Mr. Scream goes as gardener to Edward Elsley, Esq., Hopwell Hall, Derby.

Mr. John McIntyre's Group at Edinburgh.—In connection with our illustration in last week's issue of the fine group put up by Mr. John McIntyre, The Gardens, Woodside, Darlington, at Edinburgh in September last, we unfortunately omitted to state that the fine photograph, from which it was prepared, was the work of Messrs. J. Horsburgh & Son, Edinburgh, the same artists who executed the photographs of "Mr. J. Hunter," "Lambton Castle Gardens," and the "Octagon Group of the Ichthemic Guano Co." in our issue for October 2nd, also the photograph of Mr. A. Outram, London, in this week's "Supplement."

Ulster Horticultural Society.—In our report of this society's show, which appeared in the supplement to our issue of last week, owing to inadvertence on the part of our reporter, mention was not made of the grand exhibit of Chrysanthemums made by Mr. W. Wells, of the Earlswood Nurseries, Redhill, Surrey. This included four dozen blooms of novelties of both the Japanese, and incurved sections; also a hundred varieties of singles, in the improvement of which Mr. Wells has taken such a prominent part. It is scarcely necessary to add that the singles evoked the warmest appreciation of all the visitors to the show.

Shirley Gardeners.—The monthly meeting was held at the Parish Room, Shirley, Southampton, on the 15th inst. There was a strong meeting of the members, and Mr. B. Ladhams, F.R.H.S., occupied the chair. Mr. Shrivell, F.L.S., Tonbridge, gave a very interesting lecture on "Chemical Manures for the Garden." He said his remarks were derived from a series of experiments extending over four years, carried out at Tonbridge by himself and Dr. Bernard Dyer. There was an enormous amount of detail given as to the quantities of the various manures placed on the ground, the cost of the same, and the values of the different crops resulting therefrom. The conclusions arrived at seem to point out that the most economical use of manures is a combination of stable or farmyard manure, with chemicals in proportion and kinds suitable for the intended crops. The lecturer permitted questions to be put to him at any time during his lecture, and the result was a large number had to be answered during the evening. At the close of the discussion a hearty vote of thanks was accorded to Mr. Shrivell for his excellent address. There was a very large and attractive display of Chrysanthemums by the members consisting of both plants and cut blooms.

MARKET GARDENING IN THE QUEEN'S REIGN.

(Concluded from p. 186.)

PLUMS.—Victoria, appropriately enough is the favourite variety, although River's Early, Orleans, Czar, Monarch, Gisborne's Prolific, and Coe's Golden Drop are also largely grown. Plums are largely imported, but the French fruit comes over before our own is ready, and the Dutch fruit is of bad quality, and does not stand a chance with the British. California, however, has entered as a competitor, and samples were placed on the table of Californian fruit. Coe's Golden Drop as grown across the water has no reason to blush by comparison with British fruit of the same variety, for size, appearance, and flavour are all equal to the best we can produce. Samples of a cooking variety, Coe's Late Red, were also shown from the same source, and as an example of careful grading and packing were worthy of the highest commendation. The value of the Plums that passed through the market in 1896 was £241,782.

CHERRIES are largely grown in Kent. May Duke, Bigarreau, and Morello are the favourites, and command a ready sale. No less a quantity than 219,367

bushels, representing a value of £105,246 passed through the market.

SOFT FRUITS.—Under this heading are included Strawberries, Gooseberries, Raspberries, and Red, White, and Black Currants. Strawberries head the list in quantity and acreage, the Cornish and Southampton fields supplying a huge quantity. Sir Joseph Paxton is the variety most largely grown. Sir Charles Napier is too soft to travel well. President is a good old mid-season variety that finds favour. Royal Sovereign is undoubtedly the best of the new varieties. There is a good demand for Gooseberries, both green and ripe, and Currants might be more largely grown than they are. Raspberries are a very difficult crop to market, and most of them find their way into the jam factories.

The total amount of fruit consumed in 1896 was 18,641,871 bushels, a value of £5,540,069, and an increase in value of £2,000,000 since 1871. The English fruit crop is very uncertain, and the returns can only be reckoned by averages, since they fluctuate from year to year.

FORCED FRUIT.

In the last twenty-five years immense strides have been made in the forcing of fruits, for in 1837 the amount of material thus obtained was scarcely worth considering. Tomatos were unknown to the poorer people, and many others regarded them as poison. The cheapening of materials for building purposes, and the improved methods of heating have enabled the grower to face the altered state of affairs, and to supply the demand at fairly remunerative prices. Profits, however, are not large, for an eminent fruit grower had said that he had had to invest more capital, employ more labour, and work harder himself for a less percentage of profit.

A circle with a radius of fifteen miles from Covent Garden would be found to embrace the greater part of the glass. The Lee valley probably contains more than any other locality. Finchley and the Thames valley are also busy near centres, whilst Bexley, Worthing, Chelmsford, East Grinstead, and Swanley represent remoter districts. Worthing is a remarkable instance of the development of culture under glass. The movement was first started about twenty-six years ago, and now the houses show a rateable value of about £8,500 per year. The united efforts of the local growers have compelled the railway company to give more favourable rates of transport. This is an example that should be followed in other parts of the country. In the whole of the United Kingdom there are about 32,000,000 square feet of glass, covering an area of 735 acres. This means that there is sufficient glass to form a continuous chain of glasshouses 15 feet wide, 400 miles long.

(To be continued.)

CHRYSANTHEMUM NOTES.

SYON HOUSE.

ALTHOUGH Mr. Wythes has made a name for himself, chiefly as a successful cultivator and exhibitor of fruit and vegetables, he has devoted a good deal of attention to the Chrysanthemum. The demands of a large establishment for cut flowers have to be met, and in addition to these the numerous extraneous calls that are made on the resources of the garden render it necessary that flowers for cutting should always be ready, however short the notice. Thus Chrysanthemums are grown to the tune of some 1,300 plants, of which no fewer than 1,000 are treated to produce big flowers.

The plants are accommodated during their flowering season in a long range of roomy fruit-houses, where they enjoy plenty of light and air. True, the smoke and hacks of London do their utmost to spoil the beauty of the flowers; but despite the drawback, Mr. Wythes produces each year a very creditable and comprehensive display. This year the blooms are fully up to the usual standard, although they came in rather earlier than they did last year. The very fine October was, of course, responsible for this.

One of the chief features of the array was a grand batch of Avalanche. The flowers were larger and finer than any we have seen this season, and although they cannot compare for size with the newer whites, say, for instance, Madame Carnot, they are yet sufficiently distinct and beautiful. The last-named variety was in fine condition. That

universally favourite variety Chas Davis was exceptionally well coloured on the terminal buds. Etoile de Lyon, also on the terminal bud, was very rich, and did not exhibit that coarseness of build to which it is prone, and yet the blooms in this case were very large and fine. Madame Marie Hoste, Miss Elsie Teichmann, Sunflower, Phoebus, Col. W. B. Smith, Silver King, Australie, John Lightfoot, J. Shrimpton, Eda Prass, and Souvenir d'une Petite Amie, were all represented by some first-rate samples.

Hairy varieties are well looked after. The large blooms and stiff wiry stems of Hairy Wonder are familiar in most collections. Not the least merit of the variety is its unfailing good temper. Here, at Syon, this was once more demonstrated. Esau closely resembles Hairy Wonder in build and constitution, but the colour is a rich lilac shading to yellow towards the circumference. Louis Boehmer is also well done.

Incurved varieties were strong, and as the best of the blooms were massed together in one house they appeared to advantage. Jeanne d'Arc, Baron Hirsch, Queen of England, Golden Empress of India and the nearly related Lord Alcester, Brookleigh Gem, and D. B. Crane, are all well-known standard varieties without which collections would wear an unfamiliar appearance. Under Mr. Wythes' fostering care they have done remarkably well. Perhaps the most notable variety of all was Lord Brooke, for seldom indeed have we seen such well built and magnificently coloured blooms as Mr. Wythes had.

In other houses some of the later bush plants were much in evidence. Souvenir d'une Petite Amie does first-rate when grown thus, and the same may be said of such old favourites as Val d'Andorre, Cullingfordi, and the pretty pink Madame M. Fabre. Among the single-flowered varieties the most conspicuous was Miss Rose. A number of splendidly grown bush specimens attracted our attention. They were excellent specimens of the specimen trainer's art, being both symmetrical and full of flower.

THE HIGHGATE NURSERIES.

MESSRS. W. Cutbush & Son grow from 700 to 900 Chrysanthemums at their Highgate Nurseries. The majority of this lot of plants is destined to produce large flowers, and among them we observed some very good samples. Sarnian Gem is a new variety that is to be sent out by the Messrs. Cutbush next year. It is a large handsome flower, very much after the style of the popular M. Chénon de Lèche, but rather deeper in colour. Mrs. Chas. Blick, Madame Carnot, Niveus, and Western King are some of the best white Japanese varieties, whilst the credit of the yellows is more than sustained by Sunflower, Sunstone, Oceana, Phoebus, and Edith Tabor. Mrs. W. H. Lees, Miss Rita Schroeder, Gloire du Rocher, and C. E. Geffiock were also very conspicuous by reason of the large handsome blooms they bore. W. H. Morter is a new variety of great promise. It may be described as being a fancy Japanese, for on the ground colour of yellow are numerous stripes of crimson majenta. The flower is thus very gay and distinct, and when well grown must prove an acquisition. The habit is exceedingly dwarf, and the tough and leathery foliage bespeaks a constitution of no mean strength.

The value of Souvenir d'une Petite Amie for supplying flowers for cutting when grown naturally, or as a bush plant, has been fully proved during the last two years, and here at Highgate we had still further testimony, if such were required. A batch of such plants, each carrying from a dozen to twenty relatively large flowers, was one of the special features. In the same house we noted another fine lot of that useful late white Japanese Jessica. The plants, although only in 7-in. pots, were large and bushy, and bore promise of an abundant crop of flowers to come within the next month or six weeks. A few of the earliest had commenced to open at the period of our visit. There is no doubt that this variety is well worth growing in quantity for late work, or to come in just before L. Canning.

Incurved varieties were not so much in evidence as the Japanese, but there were some creditable samples of Golden Empress of India, Baron Hirsch, and Miss Dorothy Foster.

HALE FARM NURSERIES.

By dint of unremitting care and the exercise of no small amount of skill, Mr. Jones, the Chrysanthemum

mum grower to Mr. T. S. Ware, has succeeded in producing a capital display of the Autumn Queen at the Hale Farm Nurseries, Tottenham. Upwards of a thousand plants are grown. This year, owing to great stress of business, the 'Mums have had to rough it somewhat, there having been room to house only a portion of the stock, for the houses have been occupied with other things. Still, the plants that are under glass have behaved very satisfactorily. Possibly the most noteworthy variety in the whole collection is a new incurve obtained from home-saved seed. It is named Countess of Warwick—a name that will doubtless soon become familiar to 'Mum growers. The bloom is the counterpart of Duches of Fife and Lady Isabel for size, and leaves the old style of true Chinese incurve far behind. The colour is creamy-white, with a suffusion of rose upon the lower florets. Rena Dula is a comparatively new variety that makes a capital front row flower for a stand of incurves. The blooms are of medium size, but very compact, and almost globular in shape. The colour is a delicate silvery-rose. At Hale Farm we observed a number of plants, all of which were noticeable not only for the symmetry of the flowers they bore, but also for their dwarf habit.

Coming to the Japanese varieties, one of the most promising new ones was named General Roberts. It is after Milano in build, but the florets are rather shorter, and the colour is deeper. Yellow Madame Carnot was remarkable for the great width and substance of the petals, as contrasted with G. J. Warren, which has been shown in remarkably good condition this year. Ella Curtis is one of the most distinct of the newer forms. The rich bronze-yellow hue is most attractive, and the enormous width and length of the florets constitute it one of the largest of show flowers. Duke of Wellington was represented by some of the finest flowers we have seen this season. When well grown, as in this case, the flowers are very imposing, and of the colour there is nothing better among the ranks of the incurved Japs. Western King, Simplicity, Graphic, Milano, and Lady Oporto Tait were all in capital condition. The curious Madame Edmond Roger has a charm all its own. The particular shade of green it exhibits is not at all unpleasing.

Single flower varieties are by no means forgotten. Miss Mary Anderson and other flowers of that type are among the most useful and handsome. Ethel Suter is one of the finest of the larger flowered forms from a decorative point of view. It cannot be fairly said to be a single, since there are four rows of ray florets, but the flower is striking nevertheless, being over 4 in. in diameter, and rich, full yellow in hue.

Bessie Conway is another semi-double of value. It has large white flowers prettily blotched with rose. Miss Rose represents another useful section of singles. Here we may place the small white Gladys Foster, a variety of some two years' standing.

BOTANIC GARDENS, GLASGOW.

AMONG the many improvements which Mr. Dewar has made since his appointment as Curator of the Glasgow Botanic Gardens, perhaps one of the happiest was the introduction of an annual display of the flower of the period—the Chrysanthemum.

This grand show is each year held in the gorgeous Kibble Palace, a magnificent building now used as winter gardens. The happy idea has elicited, as would naturally be expected, the highest approbation of the public, and notwithstanding the odourate contempt with which the commercial denizens of the good old city of St. Mungo behold the arts and devices of the horticulturist, the labours of Mr. Dewar have successfully gained their admiration.

This we confess is one of the most powerful indications of not only the professional resources of the Curator, but what is more, his ability to foresee the way and means whereby to meet the requirements of a public constituted such as in a city like Glasgow.

On Saturday afternoon the yearly exhibition was opened to the public by Bailie Dickson, who, in his opening address, bestowed high praise on the deserving exertions of Mr. Dewar and his assistants for the beautiful treat that the public received at their hands. The present display is undoubtedly the finest yet produced by Mr. Dewar, and this is no small matter in the estimation of those who are conversant with the difficulties which surround the higher cultivation of the Chrysanthemum, and its ever increasing development. Each year's produc-

tion clearly proves that it is possible by the application of art and untiring energy to bring forward material that would seem only a year before to be impracticable.

The chief object of attraction, which absorbed the attention of the many thousands of visitors during the evening, was the conical bank of Chrysanthemums built on the site of the circular pond at the entrance dome of the Palace. This cone, 30 ft. in diameter and 20 ft. high, terminating at the apex with a fine specimen of *Kentia fosteriana*, was composed of nearly 1,000 well-grown plants.

This formed, so to speak, the centre piece of the show; and on account of its position was eminently effective. On either sides open outwards the two large side houses, which were, on this occasion, one mass of Chrysanthemum bloom. The sight was in the highest degree grand and imposing, and one that the visitors will long remember, and which well merits the multitudinous plaudits bestowed upon it by all on Saturday afternoon. The blooms were exceptionally large and uniformly so throughout; the colours were exquisitely and artistically arranged, and combined to produce the most pleasing and telling effect.

Each plant was labelled in such a style that the name could be distinctly read by all the inquisitive 'Mum hunters, as they paced around the prodigious pile. We would fain give a list of the choice varieties, did space allow, but we cannot withhold giving that of a few which were exceedingly fine, viz., Mrs. D. Dewar, and Mrs. Bisland (two garden seedlings raised by Mr. Dewar), Surprise, Mrs. W. H. Lees, General Roberts, Julia Scaramanga, E. Tabor, William Tricker, Mrs. H. Weeks, Mutual Friend, Duchess of York, M. J. Allemand, Phoehus, Commandant Blusset, G. C. Schwabe, M. Pankoucke, Amiral Avellan, Majory Kinder, Vicar of Exmouth, Louise, Pride of Madford, Amy Sbea, and many more equally worthy of notice.

The band and pipers of the Argyll and Sutherland Highlanders discoursed a fine selection of music during the evening, and the throng of visitors was unprecedented in the annals of the gardens. —Gamma.

THE VINERIES, FRAMFIELD.

THE removal of Mr. Norman Davis' establishment from Lilford Road, Camberwell, S.E., to the clearer and more kindly atmosphere of southern Sussex has been productive of marvellous results. The critical character of the modern cultivation of the Chrysanthemum is such that light, air, and sunshine are all important factors if good blooms are to be forthcoming. Mr. Davis has undoubtedly risen to the height of his opportunities, as those of us with whom his magnificent display of the Autumn Queen at the November show of the National Chrysanthemum Society is still fresh will fully admit. Such blooms as he then exhibited have never been surpassed, if indeed they have ever been equalled in the history of the cult of the Chrysanthemum.

With regard to natural surroundings Mr. Davis' lot is cast in pleasant places. The Framfield Nurseries, which have an area of some sixteen acres, are within sixteen miles of that metropolis of southern coast watering-places—Brighton, and about one and a half miles distant from the country town of Uckfield. The country bereabouts is charmingly hilly, and is well wooded, and watered by the Ouse and its tributaries.

The nurseries themselves are situated on the gentle slope of a hill facing to the south, and within view of the breezy tops of the South Downs, which run in a misty blue line along the southern and south-western horizons.

We were astonished to find that two acres of ground are covered by well-built and substantial glasshouses. There are eight roomy span-roofed erections, each measuring 200 ft. in length and varying from 20 ft. to 25 ft. in width. The giant, however, is a veritable palace of glass, which is 312 ft. in length, 65 ft. in width, and of proportionate height. All these houses are filled with Chrysanthemums in the autumn months, the large house above referred to being devoted to early flowering varieties, many of which are planted out. Upwards of thirty thousand Chrysanthemums are grown in pots, which fact alone is sufficient evidence of the gigantic scale upon which Mr. Norman Davis conducts business.

We were too late to see the flowers at their best,

for they expended early this season, owing to the summer-like character of the first three weeks in October, but there were thousands of grand blooms still on view, in the third week in November, sufficient evidence of what skilled cultivation can effect.

The Framfield collection includes a vast number of varieties, but year by year inferior forms are weeded out, or only grown for stock to supply orders, while all the best varieties are grown and flowered in quantity.

With the eye of a true artist Mr. Davis has arranged the several varieties in hatches or breaks by themselves. In this way each variety is enabled to display its charms and its distinctive features of colour and build to the greatest advantage. Thus the eye is greeted with a succession of breaks of colour that makes a far greater impression on the mind than does the kaleidoscopic effect of a mixed arrangement.

With the sight of those gigantic blooms of Madame Carnot shown at the Aquarium still looming largely in our mind's eye we were naturally somewhat curious to see the plants from which they were taken. We found, somewhat to our surprise, be it confessed, that as a rule one plant in a small 8-inch pot had produced three of these floral giants. Some of the huge flowers were still left, and towering high up above their fellows, for Madame Carnot does not lack stature, were determined not to be passed by. As Mr. Davis markets a great many of the flowers, Japanese and incurved Japanese varieties were the most conspicuously in evidence. We may include in these what is popularly known as the decorative section. Varieties of this class must be possessed of good habit, the colour of the flower must be good, and the plants must be floriferous, whilst a stiff strong stem, not necessarily a thick one, is a *sine qua non*. Golden Gate, which was certificated in 1896 by the N.C.S. is the *beau ideal* of a market variety. The habit of the plant is everything that could be desired, and the flower is of good size and exhibits a rich shade of bronze-orange, while the florets are stout and substantial. Such varieties as Mme. Felix Perrin, pink, and Clinton Chalfont were also first-class. King of Plumes is a curious flower of medium size with very deeply lacinated florets. The colour is rich butter-yellow.

Than Sunstone it would be difficult to find anything more charming, for the breezy Sussex hills have developed the delicate colour to perfection. The same may be said of Etoile de Lyon, which, however much it may be inclined to coarseness elsewhere, with Mr. Davis is exceedingly handsome.

We have now so many good yellows that it is hard indeed to choose between them, and here at Framfield they faced us in almost bewildering profusion. Sunflower, Phoebus, Edith Tabor, and Modesto are all too well known to need further praise. It must suffice to say that here we saw them at their best, and those who know what that "best" is will be able to judge for themselves. Strea is a rather tall yellow variety that is not so well known. Its great merit is that its flowers expand about Christmas, although the general earliness of the season has affected it somewhat this year. Tuxedo is another excellent late yellow form. Kentish Yellow may be best described as a yellow counterpart to Niveus.

White varieties were in equal abundance. Next to Madame Carnot, the most striking was without doubt Western King. This is one of the best of the seedlings sent out by Mr. Nathan Smith, of Adrian, Mich., U.S.A. Mr. Norman Davis distributed it in this country, and from the first averred that of its kind there would be nothing to beat it. How true this forecast was our visit abundantly proved to us, for over 600 magnificent blooms were then open and many hundreds had been already cut. Mrs. Weeks is undeniably good, but Western King is better, as may easily be seen when the two varieties are grown side by side. We may remark, *en passant*, that of the eight American seedlings from Mr. Nathan Smith, Mr. Davis has received First-class Certificates for seven of them—a handsome record.

Of the newer whites which have been certificated during the coming season, Simplicity may be mentioned as a good and useful sort, and sufficiently distinct. Niveus, another American variety, also does remarkably well, and is still one of the best whites. Souvenir d'une Petite Amie must likewise not be forgotten.

Hairy Wonder was represented by some mar-

CHRYSANTHEMUM ROSE QUEEN.

vellously fine blooms, whose rich colour might well be envied by the productions of the town and city. Mrs. W. J. Godfrey is a new white hairy form of considerable merit. Louise, Geo. Seward, Mme. Ad. Chatin, Mme. J. Bernard, Chas. Davis, Vivian Morel, G. W. Childs, and the white, buff, and pink Good Gracious, have all rendered a capital account of themselves.

Those cultivators who are lamenting the decadence of that erstwhile fine variety, Edwin Molyneux, will be joyed to learn that Mr. Davis has a seedling that bids fair to supersede it. The build and colour of the bloom is very nearly the same as in Edwin Molyneux, but the habit of the plant is more robust, and it promises to be an incomparably better doer. It is to be named Joseph Chamberlain, and was raised by Mr. Weeks, of Thrumpton Hall Gardens, Derby.

Amongst the incurved section we noted very many grand samples, Mrs. R. C. Kingston being especially fine. Lord Wolseley, George Haigh, Perle Dauphi-

noise, Baron Hirsch, C. H. Curtis, Major Bonaffon, and the new varieties, Mme. Ferlat, and Mdle. Lucie Faure were all first class.

In conclusion we may say a word of the health and vigour of the plants, which were remarkably good. In every case they presented a wiry appearance that bespoke judicious treatment with regard to feeding. Like most other successful cultivators, Mr. Davis is extremely careful how he applies chemical stimulants, and his plants are not slow in repaying the care. Mildew is almost sure to make its appearance amongst the plants towards the end of the season, but it has been kept so well at bay at Framfield that only a stray spot or two met our gaze.

The Framfield Chrysanthemums are from all points of view first-class!

Wheat averaged 2s. per ton from the time of Alexander the Great down to the time of Columbus; but from 1751 till 1800 the average price was four times as much.

CHRYSANTHEMUM ROSE QUEEN.

THE accompanying illustration of this Japanese variety was prepared from a photograph sent us by Mr. W. J. Godfrey, Rolle Street, Exmouth, Devon, who has been remarkably successful with his Chrysanthemum novelties during the past few weeks. He has been accorded fifteen certificates, for various exhibition varieties, by the National Chrysanthemum Society and the Royal Horticultural Society. This fact alone, in the absence of other evidence, would show that Mr. Godfrey not only understands the culture of the golden flower, but also the qualities that are requisite in a variety to claim the attention of exhibitors. Rose Queen is represented natural size, and the general contour of the bloom as well as its perfectly double character, will be apparent to the eye of the experienced cultivator. There is much material in the bloom and Mr. Godfrey has every confidence in its sterling qualities for exhibition purposes.

HINTS FOR AMATEURS.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Newly-Planted Wall Trees.—*F. C.*: You must on no account permanently nail the trees to the wall yet, for no matter how firmly you have trodden the ground, it will be sure to sink to some extent during the next two or three months. The branches would then be strangled by the ties, and the roots would be disturbed in the ground. You may untie the branches from the "bunched" state in which they have been placed by those who packed them, and you must give the tree some support to prevent it being twisted at the collar by the wind. You may either loop the main branches loosely to the wall, or drive a stout stake into the ground on either side of the central stem of the tree and tie a few of the branches to that.

Planting Roses—I have received a small consignment of Roses from the nurseryman. They are lightly covered with earth, waiting to be planted. Would you advise me to plant now, or let them wait as they are until spring?—*F. C.*

Plant them at once, by all means. You gain nothing by leaving them where they are.

Roses.—Please say when is the best time to make a Rose border, and the best way.—*Reader.*

As you make no mention of glass, we assume that you mean an out-of-door Rose border. In making such a border the first thing to do is to see that the soil is well drained. If this is not so naturally, then drains must be put in to carry off the surplus water. If the soil is a loam of medium texture varying to heavy you will do well to trench to a depth of about 2 ft., throwing the surface soil loosely up for the frosts of winter to break up and sweeten. If, on the other hand, the soil is inclined to be poor and gravelly, the lower strata should be loosened, but not brought up to the surface—in other words the ground should be double dug. A liberal dressing of good rotten stable manure should be worked in. For very heavy soils a dressing of burnt earth, charcoal, or wood ashes would be very serviceable. You may set about the digging and trenching at once, the sooner the better, as the soil is now in a favourable condition for working, and this part of the operation should be completed before winter sets in. In the spring all you have to do is to level the soil down and plant. A bed or border prepared in this way will suit the Hybrid Perpetuals well. For the more delicate Tea Roses, on the other hand, a little more care must be exercised. A warm south border is the best for them, and the greatest care must be taken to see that the soil is well drained and that it is mellow and friable.

Crocuses.—*Amateur*: Crocuses will grow and produce capital flowers without any soil whatever. Place the corms close together in a saucer or shallow dish containing a little water. All you have to do is to keep the water supply constant. An ordinary dwelling-room will suffice for accommodation. These saucers of Crocuses form a very pretty ornament for a room, and the wonder is that more people do not try to grow this pretty spring flower in this way. You need not be afraid of the corms rotting off if you do not put in too much water. We were quite prepared to hear you suggest that they would rot, however, when treated in the way suggested, but give the matter a trial, and then you will be convinced.

Lobelia cardinalis.—*S. Young*: Lift the plants, place them in shallow boxes with a little soil, and house them in a cold frame. Divide the roots in spring if you wish to propagate.

Nepenthes.—*W. Squires*: You have not a sufficiency of heat to grow the Pitcher Plants properly, although your house might be warm enough through the summer. Through the winter months the tem-

perature should not fall below 60° Fahr., or at the very lowest 58°.

Strawberry.—*Robert R.*: We are afraid, from what you say, that the Strawberry crowns are too weak to be of much use for forcing purposes. Still apparently weak crowns will occasionally give good results. Have you no practical man in the neighbourhood to whom you may show the plants and whose advice you may seek. It is impossible for us to say definitely without a look at the plants.

Muscat of Alexandria Grapes.—*Y.*: The Grapes may be allowed to stay on the vines until the sap begins to move in the spring, after which they must be removed and bottled if you wish to keep them longer. Meanwhile the house should be kept as cool as possible and fairly dry. A little fire-heat may be required during cold and damp weather, but it must not be overdone.

Winter Cucumbers.—*J. Reeves*: There are not very many growers in the vicinity of London that make very great attempts with winter Cucumbers. The plants grow well enough up to a certain point, but when late autumn and winter come with dense fogs they make but little headway; indeed, it is a great question whether they pay at all. Now you have your plants started, however, you must make the best of things. Do not do too much stopping or pinching, for vigorous growth is wanted, and the plants will have all that they can do to make sufficient growth during the dull months. A temperature of from 60° to 65° Fahr. will be required, the former temperature being maintained during the night.

A VISIT TO MR. PETER COCKBURN'S VINEYARD, DRUMCHAPEL.

ABOUT the beginning of August I paid my annual visit to the above vineyard, and I was amply paid for my trouble. The houses are five in number, each 150 ft. long, except one which is 70 ft., span-roofed, and standing on iron pillars, of the very newest design. One of these houses is planted with Vines about two-thirds of which are Gros Colman, and the remainder Alicante; and to get a sight of it is worth going many miles to see. The Vines were planted green in the month of June, 1895, allowed to run over the house for the first year, and the canes being strong they were cut back to about 6 ft., and in the following year, 1896, Mr. Cockburn exhibited both Gros Colman and Alicante Grapes cut from Vines two years old. They were the admiration of everyone who saw them, and he was told by a good number of growers that he would have to be content the next year with a good deal less; but instead of that there is a crop of Grapes hanging at Drumchapel just now that could not be beaten in all Scotland, which any gardener can prove by going and seeing for himself. At the time of my visit Gros Colman was beginning to colour, and some of the berries were almost as large as a penny. He begins to send away Gros Colman about Christmas, and can always command a good price for them.

I next visited the Tomato houses, which are four in number. Three of them, each 150 ft. long, are planted with Mr. Cockburn's own seedling, a beautiful, smooth-skinned Tomato of a delicious flavour. One other house, 70 ft. long, is also planted with Tomatos, but whichever house you go into the same excellence is observable. Plants are laden with fruit from the first joint right up to the top, and some of the bunches are over 3 lbs. in weight. He will put between five and six tons in the market this year. I may state that the Glasgow water has been laid all over the house, and by a patent system of his own, Mr. Cockburn can at all times draw either hot or cold water in all parts of his houses.

Mr. Peter Cockburn's name as a Grape grower is known all over Scotland. The first time we heard of him was in 1878; he was then gardener to D. T. Stewart, Esq., of Barassie, who took a great interest in his gardener as a Grape grower, and allowed him everything he required to produce the best Grapes procurable; nor was he disappointed. As a proof of this some of the Grapes that were sent to London drew the handsome sum of 18s. per lb., a price never realised by any other grower in the country, and which was commented on by the London press.

In the year 1888 or 1889 Mr. Cockburn was appointed head gardener to the Right Hon. Lord Blantyre, Erskine House, where he had great scope to test his ability as a fruit grower, which he took full advantage of by making Erskine famous for its fruit.

In 1892 he started for himself, and is now fast adding to his fame by his straightforward and honest dealing in all his business matters. I understand that he has lately brought out a manure for Grape and Tomato growing, and the crops produced by it at Drumchapel are ample proof of its virtue.—*A Scotch Grape Grower.*

THE HORTICULTURAL CLUB.

THE usual monthly dinner and conversazione took place at the rooms of the Club, Hotel Windsor, on November 9th. The chair was occupied by the Rev. W. Wilks, and notwithstanding the attractions of the Chrysanthemums elsewhere, there was a good attendance of members, amongst whom were Messrs. Shea, Selfe-Leonard, C. E. Pearson, A. H. Pearson, G. Bunyard, George Nicholson, G. Masee, James H. Veitch, and the secretary.

The discussion was opened by Mr. G. Masee, president of the Mycological Society, who gave a very interesting address on "Lilies and their Diseases," and a very instructive and practical conversation followed, in which most of the members present joined. A cordial vote of thanks was accorded to Mr. Masee for his valuable address. We give an outline of it, which, however, only gives a very faint idea of its value and importance.

Among the various fungoid diseases to which Lilies are subject, three kinds require special notice, on account of the wholesale destruction caused by their presence. One of these, unfortunately too well known in this country, especially during damp seasons, first appears under the form of small, yellowish spots on the leaves and flower-buds; these spots soon change to a dark olive-green colour, and if a fragment of the fungus taken from one of these spots is examined under the microscope, it is seen to consist of a number of dark coloured threads, each bearing two or three clusters of fruit or conidia near the tip. These conidia are produced in rapid succession during the summer months, and are capable of germination the moment they are ripe. The conidia are readily distributed by wind, insects, or rain, which carries them from diseased to healthy leaves. All conidia alighting on the damp surface of a Lily leaf or flower germinate at once, enter the tissues of the plant, and form new centres of disease, which quickly produce conidia. From the above account, it will be readily understood how easy, and also certain, it is for the disease to spread rapidly after it has once gained a foothold in a bed of Lilies. At this stage spraying with a fungicide is of great service in preventing the spread of the disease, as all germinating conidia are destroyed. A solution of potassium sulphide, in the proportion of one ounce of the sulphide dissolved in three gallons of water, serves the purpose. During the summer the mycelium of the fungus becomes aggregated into numerous minute, compact, black lumps, in the tissues of the leaves, stem, and often also in the outermost bulb-scales. As the leaves and stems decay during the winter, the sclerotia are liberated and lie on the ground, where they remain in an unchanged condition until the following spring, when they produce conidia, which find their way on to the leaves or flowers of Lilies, and the disease commences its life-cycle anew. From what has been said, it is scarcely necessary to indicate the importance of not allowing leaves and stems of diseased plants to decay on the ground; all such should be collected and burned. All bulb-scales showing the minute black sclerotia imbedded in their tissue should be removed before the bulbs are planted. The conidial form of this fungus is called Botrytis; it is probably a stage in the life-cycle of a higher form called Sclerotinia, but this has not yet been definitely proved.

A second disease, caused by a fungus called *Phyllosticta liliicola* causes the appearance of reddish patches on the stems and leaves of Lilies, followed by a bronzing of the leaves; the flowers of such plants are usually distorted, or not infrequently fall in the bud stages. Promptitude in spraying on the first appearance of the disease would check its spread, and the burning of all diseased stems and

CHRYSANTHEMUM MME. FERLAT.

leaves would tend to prevent a recurrence of the disease.

A third disease which has during the past two years proved most disastrous to the bulb industry in Japan, is known as *Rhizopus necans*. To the naked eye this fungus presents the appearance of numerous miniature pins, with round black heads springing from a white downy felt of mycelium. The minute black heads contain numerous conidia, and such of these as alight on any injured portion of a bulb, germinate at once, enter the tissues, and eventually kill the bulb. In addition to conidia, a second form of fruits is formed by the fungus in the tissues of the decaying bulb; these remain in a resting place until the following spring, when they produce conidia, by which the crop of bulbs is again infected. The

fungus cannot enter the unbroken tissues of a bulb, but gains access through some wound, usually broken root fibres.

It has been shown that bulbs are much more susceptible to the disease when lifted before they are quite mature. Furthermore, such bulbs are usually packed for exportation before they are dry, consequently sweating takes place during the journey, and all the conditions tend to favour the development and spread of the disease.

A full account of this disease, along with illustrations, is given in the *Kew Bulletin*, February—March, 1897.

CHRYSANTHEMUM MADAME FERLAT.
This pure white incurved Japanese variety is one of

the best growers M. Calvat has ever distributed. The plant grows only $3\frac{1}{2}$ ft. to 4 ft. high, and is of grand habit. It may be taken on the first or second crown bud, but does best on the first crown, every one coming good. The objection which holds with regard to many of the coloured varieties does not apply here. The pure white of Madame Ferlat remains constant from either bud. The blooms measure 6 in. across, which, for an incurved Japanese variety, is ample to insure their success on the exhibition boards. The accompanying illustration was prepared from a photograph sent us by Mr. William Wells, Earlswood Nurseries, Earlswood, Redhill, Surrey, with whom the variety has proved of the easiest cultivation. A First-class Certificate has also been accorded it.

CHRYSANTHEMUM SHOWS.

ORLEANS.—November 6th, 7th, 8th, 9th, and 10th.

The second Congress under the auspices of the "Société Française des Chrysanthémistes" was held on the above dates.

The Prize of Honour, offered by the President of the Republic, fell to MM. Montigny & fils for their Chrysanthemums in pots and collection of cut blooms. The special prize offered by the Conseil Général was awarded to M. Mourand, Horticulteur, Nantes, for his good culture of Chrysanthemums. The special prize offered by the Lady Patronesses was won by M. Calvat, of Grenoble, for his new seedlings. The special prize offered by the City of Orleans went to M. Liger-Ligneau, Horticulteur, Orleans, for excellent Chrysanthemums in pots.

The special prize offered by the president of the society was won by M. Couillard, Vice-President of the Chrysanthémistes Society, for his good collection of cut blooms. The special prize offered by M. le Marquis de St. Paul, vice-president of the society, fell to M. Gué, Poitiers, for his collection of large blooms.

A special prize, offered as a souvenir of M. and Mme. Chevrier, went to Mr. Dejoux for a good collection in pots. A special prize by the society was carried off by MM. Vilmorin, Andrieux & Cie., of Paris, for Chrysanthemums in pots.

A special prize offered by Mme. Sainjon, presidente of the Lady Patronesses, went to M. Ragueneau, of Chateaufieux, for his large blooms.

The Gold Medal offered by the Minister of Agriculture went to M. Mourand, Chrysanthémiste, Nantes, for his good culture of standards, which, we may add, were the main feature of the show.

The Gold Medal given by the Société Française des Chrysanthémistes went to M. Foucard, of Orléans, for his Chrysanthemums in pots, and standards.

The following awards were also made:—A Silver Medal to M. Proust-Gallianand, Orléans; Silver Medal to M. Liger-Ligneau, Orleans, for his new *Begonia gigantea*; Silver Medal to M. Dubois, for his *Begonia Rex*; also to M. Champdavoine, for his Primroses; and to M. Fortepaule, for his Cyclamens.

The prizes for cut Chrysanthemums were awarded as follows:—The Silver Gilt Medal offered by the Minister of Agriculture, to M. Drussy, Vineuil; Silver-Gilt Medals to M. A. Charvet, and to M. Socquard-Martin, of Troyes; large Silver Gilt Medals to MM. Nonin and Morières for their new varieties. Small Silver Gilt Medals to MM. Héraud, of Pont d'Avignon; Rozain-Boucharlat, of Lyons; and M. Dumas de Busset, for their new varieties; the Silver Medals offered by the Minister of Agriculture, to MM. Rivoire, père & fils, of Lyons; and to M. Juge, of Lille-sur-Sorgue.

The other small Silver Medals went to M. de Reydelet, of Valence; M. Bonnefons, M. Roux, M. Ragueneau, M. Giraudin, and to M. de Fondettes.

The Ichthemic Guano Company, of Ipswich, England, were awarded a First-class Diploma of Honour for their fertilizer. The firm was represented by their continental representative, M. W. J. Le Cornu.

We are pleased to learn that the Medal of Honour of the Congress was given to M. de Reydelet, of Valence. This gentleman, we all know, is one of the oldest French Chrysanthemists.

The town chosen for next year's Congress is Troyes.

LEEDS PAXTON SOCIETY.—November 9th and 10th.

The ninth annual Chrysanthemum exhibition of the Leeds Paxton Society was opened on the 9th inst. in the Town Hall, by the President, E. B. Faber, Esq., J.P., in a very appropriate and neatly worded, short speech, in which he jocularly remarked that human beings were more inclined to show gratitude for favours to come, but plants and flowers had gratitude for favours that were past. Plants were always truly grateful.

The show was continued on the 10th. Under the management of that energetic body—the members of the Paxton Society—it has now taken front rank among the Chrysanthemum shows of the north of England. The entries were more numerous than on any previous occasion, being considerably above 500. The quality of the exhibits was also better

than formerly, especially that of the Chrysanthemum groups, and the cut blooms in the local classes.

On entering the hall it presented a truly picturesque appearance. The specimen and foliage plants were tastefully arranged in the orchestra. The Chrysanthemum groups were arranged on one side of the hall, and the miscellaneous groups on the other. The cut flowers, table plants, and fruits were staged on tables placed across the hall. The bouquets, sprays and buttonholes were arranged in front of the orchestra, on each side of an artistic design of fruit, flowers, and autumn tinted leaves, set up by Mr. Grix, gardener to Sir J. Kitson, and Mr. A. Walker, of Shaw Bros., florists, Leeds. This was frozen in a large block of ice by Mr. Thomson, of the Leeds Storage Company, which was a great attraction to the show. The vegetables were all arranged in an ante-room. The whole management reflected great credit on the curators, Messrs. Bailey, Benham, Daniels, and Charge.

In addition to the improvement in quality in the Chrysanthemum groups, we were pleased to notice a departure—which might, with still better effect, be carried a little farther—from the stiff banks of Chrysanthemums we usually see. The addition of six foliage plants and Ferns relieved the stiffness considerably. The first prize was justly awarded to Mrs. Bowring, Allerton Hall, Gledhow, Leeds (gardener, Mr. W. Moore). The quality of the blooms in this group was such as is seldom seen in groups, indeed it was superior to many that we see on the boards. The blending of the colours was charming, and relieved with well-grown plants of Cocos, made it the most pleasing group of Chrysanthemums we ever had the pleasure of seeing.

J. Rhodes, Esq., Potternewton House, Chapeltown, Leeds (gardener, Mr. R. Mason), was placed second with a well-arranged group. Mrs. Tetley, Fox Hill, Weetwood (gardener, Mr. Eastwood), was third, and Mrs. Taylor, Buckingham House, Headingley (gardener, Mr. Leech), was fourth.

The miscellaneous groups in the local class showed good cultural skill, but the arrangement was perhaps too stiff and flat, with the exception of the first-prize group exhibited by M. Kitchen, Esq., Eller Close, Roundhay (gardener, Mr. Gamble), who showed great decorative taste. J. Rhodes, Esq., was again second in this class; and J. W. Oxley, Esq., J.P., Spenfield, Headingley (gardener, Mr. R. Riches), third.

In the open class for miscellaneous groups, there was only one exhibitor, E. B. Faber, Esq., J.P., Belvedere, Harrogate (gardener, Mr. W. Townsend), who set up a splendid group.

In the open class for twenty-four Japanese blooms, R. A. Bowring, Esq., The Heath, Cardiff, took first honours with a most magnificent stand made up of the following varieties:—Simplicity (a superb bloom which gained the special prize as the best Japanese in the show), Etoile de Lyon, Chas. Davis, V. Morel, John Seward, Duke of York, Phoebus, Australian Gold, W. Seward, Miss Elsie Teichmann, Mrs. H. Weeks, Mrs. Hermann Kloss, Edith Tabor, Pride of Exmouth, M. Chénon de Léché, Mrs. G. W. Palmer, Gen. Roberts, and Mad. Carnot. A. Wilson, Esq., Tranby Croft (gardener, Mr. Leadbetter), was second with a good stand, but not quite so heavy as the first, made up with the following varieties:—Mad. Carnot, C. Davis, E. Tabor, M. G. H. de Clermont, Primrose League, T. Wilkins, Australian Gold, M. Chas. Molin, Phoebus, M. Joseph Allemand, Pride of Madford, Pride of Exmouth, V. Morel, E. Molyneux, Amiral Avellan, Baron Alf. De Rothschild, Modesto, and Niveus. Mr. J. W. Backhouse, florist, Beverley, was placed third with a very creditable stand.

In the open class for eighteen incurve blooms, The Right Hon. The Earl of Harrington (gardener, Mr. Goodacre), had a splendid stand with which he won the society's Challenge Cup. Having won the Cup in this class twice in succession, it becomes Mr. Goodacre's own property. The varieties on this stand were C. H. Curtis, two blooms (one of which gained the special prize as being the best incurve in the show), Duchess of Fife, H. Flight, M. O. Blanch, Globe d'Or, Queen of England, Golden Empress, John Doughty, John Lambert, Lord Alcester, Mrs. S. Colman, Violet Tomlin, Princess of Wales, and two blooms of Miss Haggas. A. Wilson, Esq., was again second in this class with a good stand of the following varieties: C. H. Curtis (2) R. C. Kingston,

(2), Queen of England (2), J. Agate, Lord Alcester, Princess of Wales (2), Empress of India, Violet Tomlin, John Lambert, Miss Haggas, Globe d'Or, Mrs. J. Kearns, Alfred Salter, and Ma Perfection. G. H. Cockburn, Esq., Lingdale Lodge, Birkenhead (gardener, Mr. Burden), was third with neat well-formed blooms, but not quite so heavy as the other two lots.

In the open class for twelve incurves, distinct, A. Wilson, Esq., was first, Mrs. Whitaker, Cliffe House, Hessle, near Hull (gardener, Mr. Jarvis), was second.

In the local classes for cut blooms there was noticeable a marked improvement, and some of them would have scored well had they been placed in the open classes, especially the twelve incurves, distinct, and the twelve Japanese distinct, exhibited by Mr. Moore, gardener to Mrs. Bowring, Allerton Hall, Gledhow, with which he won the two Challenge Cups. The cup offered in the incurve class becomes his own property, this being the second time in succession he has won it. His stands were made up as follows:—Incurves: J. Agate, Golden Empress, Lord Alcester, Empress of India, C. H. Curtis, Mrs. R. C. Kingston, Madame Darrier, Duchess of Fife, R. Petfield, Alfred Salter, J. Doughty, and Perle Dauphinoise. Japanese: Chas. Davis, E. Tabor, G. C. Schawbe, Lady Ridgeway, Madame C. Ricoud, M. Chénon de Léché, M. Pankoucke, Niveus, Phoebus, Pride of Madford, V. Morel, and T. Wilkins.

Sir J. Kitson, Bart., M.P. (gardener, Mr. W. Grix), Gledhow Hall, Leeds, was a good second in both classes. Mrs. Tetley, Fox Hill, Weetwood, Leeds (gardener, Mr. J. Eastwood), was placed third in the incurved class, and Mrs. Taylor (gardener, Mr. Leech), Buckingham House, Headingley, in the Japanese class.

For a stand of twelve blooms, consisting of six incurves and six Japanese, Mrs. Bowring was again first; Sir J. Kitson, Bart., second; and Mrs. Tetley, third.

For a stand of twelve blooms, consisting of three incurves, three Japanese, three reflexed, and three Anemones, the same three exhibitors were placed in the same positions. In the class for six incurves of one variety, Mrs. Taylor exhibited six superb blooms of C. H. Curtis, with which, of course, she obtained first honours, Mrs. Bowring being second, and Sir J. Kitson, third.

There was a fine display of bouquets, sprays, and button-holes.

Vegetables were extensively shown, but the exhibits of fruit were not so numerous, nor of such good quality as in former years.

The judges were Mr. Jellicoe, Liverpool; Mr. Wilson, Swanland Manor, Hull; Mr. Folkard, Sand Hutton, Yorks; and Mr. Daniels, Dewsbury.—*Cor.*

PARIS.—November 10th, 11th, 12th, and 14th. The exhibition under the auspices of the "Société Nationale d'Horticulture de France" was held in a large marquée erected for the purpose in the Jardin des Tuilleries.

As in the past, we again met the great Chrysanthemists, MM. Vilmorin, Andrieux & Cie., Auguste Nonin, Calvat, Leveque & fils, Boutreux, Régnier, Patrolin, de Reydelet, and Molin. Last year and the three or four preceding years it was M. Aug. Nonin who obtained the first grand prize of honour, but this year it went to MM. Vilmorin Andrieux & Cie., and the second to M. Nonin.

M. Calvat, of Grenoble, exhibited a few new varieties, and we were not astonished to learn that he obtained for his new seedling Chrysanthemums the Medal of Honour offered by the Société d'Horticulture. The second medal went to M. Patrolin, his Chrysanthemums being particularly admired.

The following were the principal prize-takers: MM. Calvat, Auguste Nonin, Scalarandis, Chantrier, Morières, Molin of Lyons, de Reydelet, Bernard, H. Defresne fils et Delvert, and Cordonnier. These names are already familiar to our readers interested in Chrysanthemums.

In the competition for Chrysanthemums in pots, it was again M. Nonin and MM. Vilmorin, Andrieux & Cie. who obtained the highest awards, the order of the awards being as follows: MM. Nonin, Vilmorin Andrieux & Cie., Leveque & fils, J. B. Géraud, and Boutreux.

The other competitions were for the best collections of single blooms of a hundred varieties. Principal

awards as follows : 2nd competition, MM. Vacherot père & fils, Yvon & fils, Lenaerts, and J. B. Géruad ; 4th competition, MM. Bontreux and Yvon & fils ; 5th, M. Magne ; 7th, M. Héhulerne ; 8th, M. Nonin ; 10th, MM. Vilmorin Andrieux & Cie., and M. Patrolin ; 11th, M. Patrolin ; 12th MM. Vilmorin Andrieux & Cie., and Leveque & fils ; 14th, MM. Constant and Duval & fils ; 15th, M. Ragout ; 16th, MM. Leveque & fils ; 17th, M. Laveau ; 18th, MM. Nonin, and Vilmorin Andrieux & Cie. ; 19th, MM. Vilmorin Andrieux & Cie. ; 20th, MM. Cappe & fils ; 21st, 22nd, 23rd, and 24th, MM. Bernard, A. Auger and Gourbron.

For cut blooms the principal awards went to MM. Rosette, of Caen ; Vilmorin Andrieux & Cie. of Paris ; Molin, of Lyons ; Launay, Liébaut, Guérard, Digeon, Ragueneau, H. Leroux, Cordonnier, Leveque & fils, etc.

A gold medal was awarded to M. Nonin for his good collection of Carnations. Medals were also awarded to M. Maxime-Jobert for his Cyclamens ; to M. J. Sallier fils for his new Begonia, Rex-Danemark, and to M. Georges Boucher for his Clematises in good bloom.

The Ichthemic Guano Company had a group of Chrysanthemums in pots, grown with their well-known fertilizer. The firm was represented by their continental representative, M. W. J. Le Cornu.

We address our best felicitations to MM. Aug. Nonin and Vilmorin-Andrieux & Cie. for their success at this show.

The exhibition was visited on the first day by the President of the Republic, M. Felix Faure, and we may add that the show was as good as could be seen on this side of the Channel.

SHEFFIELD.—November 12th and 13th.

THE annual show of the Sheffield Chrysanthemum Society was opened on the 12th inst., by the Countess of Wharnclyffe. It was held in the Corn Exchange. The number of entries are this year considerably in excess of those of the last show. Amongst those who were on the platform, and took part in the opening proceedings were the Lord Mayor of Sheffield (Alderman George Franklin), the Master Cutler (M. Rodgers, Esq.), the very Rev. Canon Gordon, and Colonel the Hon. C. Dutton. The arrangements made by the energetic and genial Secretary, Mr. Housely, were in every way excellent, and the quality of the exhibits was the subject of general comment.

Mr. C. Crooks, gardener to the Dowager Lady Hindlip, Droitwich, was successful in carrying off first prize for a stand of twenty-four incurved blooms, and also for twenty-four Japanese blooms, whilst the premier honours for a group of Chrysanthemums, interspersed with foliage plants was secured by Mr. M. H. Willford.

A special feature, which was introduced last year, is the class for ornamented fireplaces. The designs set up were extremely pretty and effective. The first prize was offered by Mr. Wm. Colchester, of Ipswich, and was secured by Mr. M. H. Willford.

Amongst the trade exhibits may be mentioned those of Messrs. Crossland Bros., Richmond Nurseries, and Mr. S. W. Seagrave, of the Norfolk Market Hall, both of whom exhibited large groups of ornamental flowering and foliage plants. Messrs. Dobbie & Co., of Rothesay, had a stand of cut Chrysanthemums, amongst which were some fine blooms of Lady Hanham, Mrs. Maling Grant, and Lady Isabel.

Messrs. Isaac House & Son, Bristol, exhibited their New Giant Violets, and certainly, judging from the specimens shown, they deserve the name. Trade stands were also put up by Messrs. Wm. Artindale & Son, and an interesting exhibit of pure Ichthemic Guano, by Mr. Colchester, of Ipswich.

GRASSENDALE AND AIGBURTH.—November 13th.

THE seventh annual exhibition was held in the Parish Room, and was fully equal to past shows. The room was utilised to its utmost capacity, in fact the society is crippled for want of space, to show to advantage the exhibits.

For a group of Chrysanthemums not to exceed 40 sq.-ft., E. Pryor, Esq. (gardener, Mr. E. Taylor), staged the premier lot with a somewhat formal arrangement with many bright good flowers.

For three staked plants, Mrs. Duncan (gardener, Mr. J. Keightley), had the finest in three naturally trained plants with an abundance of bloom.

For a single specimen, Mr. E. Taylor won with a large well-flowered plant of Vivian Morel.

For cut blooms the competition was the keenest yet seen at the societies' show. The twenty guinea Challenge Vase, presented by Alfred L. Jones, Esq., Liverpool, for twelve incurved and twelve Japanese blooms, was secured by R. G. Allen, Esq. (gardener, Mr. W. Whittle), with a smart stand, the finest being Queen of England, John Lambert, Mrs. J. Agate, Golden Empress, C. H. Curtis, Vivian Morel, Primrose League, E. Tabor, and Chas. Davis. Last year's winner, R. P. Houston, Esq., M.P., followed with a good lot, the incurves failing slightly in solidity.

For six incurved and six Japanese, Mr. E. Taylor won with a good lot. For six incurved, six Japanese, three incurved and three Japanese, and six Japanese, Mr. J. Heaton was to the fore in each class. For six pots Roman Hyacinths, A. L. Jones, Esq., and Mr. A. Randall won with a nice lot. Mr. Keightley won for two Palms, and six pots Roman Hyacinths. Mr. J. Heaton was successful for four table plants ; one Fern (Davallia mooreana) ; H. A. Saunderson (gardener, Mr. R. Dickson), for two bunches white Grapes in Muscat of Alexandria.

R. Singlehurst, Esq. (gardener, Mr. J. Kelly), led the way with four Cyclamens. Mr. E. Taylor won for the most tastefully arranged basket of pot plants, with Maidenhair Fern, Palms, and good Cattleyas, Odontoglossums, &c., also the single dish of Pears with Catillac ; and the single dish of Apples with Warner's King.

J. Davey, Esq. (gardener, Mr. G. Leadbetter), took the lead for two bunches of black Grapes, with smart samples of black Alicante. For four dishes of dessert Apples, and the single dish of Ribston Pippins, T. H. Bingham, Esq. (gardener, Mr. W. Jones), led the way with four dishes dessert Pears, and for the single dish with Doyenné du Comice.

Nearly the whole of the prizes were presented by friends of the society.

The arrangements throughout were of a satisfactory character and reflect great credit upon Mr. R. Fawkes and his committee. Messrs. J. Jellicoe, and J. J. Craven were the adjudicators.

EDINBURGH.—November 18th, 19th, and 20th.

THE annual Chrysanthemum show of the Scottish Horticultural Association has again been a huge success, fine weather favouring the exhibition during the whole time. During the first day £402 was taken at the doors of the Waverley Market, and £321 on the second day. This was calculated to reach £1,000 for the three days ; and about 35,000 visitors attended during the course of the three days. There were 1,254 entries. All these figures are greatly in excess of last year. This success must be due in part to the liberal schedule of prizes, amounting to £554, offered by the Scottish Horticultural Association. The band of the Grenadier Guards cost £235 for the three days, but it drew an immense concourse of people. Altogether the charges upon the show amounted to £1,029, but it generally happens that a liberal outlay is the truest economy.

CUT FLOWERS.

The Silver Medal offered by Mr. H. J. Jones, Rycroft Nursery, accompanying the first prize for twelve Japanese Chrysanthemums, distinct, was taken by Mr. T. Lunt, Keir, Dunblane, who had twelve grand blooms, in fresh condition, including Mutual Friend, Louise, Phoebus, Simplicity, Col. Chase, Mdle. T. Rey, Dorothy Seward, Lady Byron, and Préfet Robert, all in fine form. Mr. J. Martin, Corndean Hall, Winchcombe, was second with grand blooms of Graphic, Mme. Carnot, Matthew Hodgson, Miss Elsie Teichmann, Australian Gold, Robert Owen, &c. The third award was taken by Mr. W. Nicholson, Cowden Castle, Dollar, who also had some very fine blooms. There were eleven fine stands in this class. Mr. T. Lunt again scored for three varieties, four blooms each of Mutual Friend, Duchess of York, and Lady Byron. Mr. T. Gordon, Ewenfield, Ayr, took the second award ; and Mr. R. Addison, Blackhouse, Skelmorlie, took the third place. Mr. G. Chaplin, Ravenswood, Edinburgh, staged the best six Japanese distinct. Mr. D. Mackay, Cardross Villa, Cardross, was second ; and Mr. G. H. Pearson, Viewforth, Stirling, was third, all the three exhibits being good. There were eighteen exhibits.

Mr. T. Lunt was again the most successful com-

petitor for six Japanese blooms of one variety, showing Col. Chase in fine form. Mr. A. Haggart, Moor Park, Ludlow, took the second place, showing a new incurved Japanese sort named Moor Park. Mr. J. Martin was third with Simplicity. For six blooms of Australian Gold, Mr. W. Galloway, Ferneyside, Liberton, led the way ; Mr. J. Martin and Mr. R. Addison being second and third respectively. The latter came to the front for six blooms of Chas. Davis, which were grand ; Mr. J. Foster, Wellwood Park, Selkirk, and Mr. G. H. Pearson were second and third respectively. Mr. R. Addison also scored for Duchess of York. Mr. J. Fraser, Ardenlee, Dunoon, was a good second, though his blooms were paler ; and Mr. W. Nicholson came in third.

Mr. D. Buchanan, Bargany, Girvan, took the first prize for six blooms of E. Molyneux, in a keen contest of eleven entries ; Mr. R. Addison was a good second ; and Mr. J. Day, Galloway House, Garlieston, came in third. The latter came to the front with six grand blooms of Edith Tabor. Mr. J. Henderson, Ellera, Windermere, was second ; and Mr. T. M. Whitehead, 14, Tower Street, Selkirk, was third. Mr. J. Bird, Raehills, Lockerbie, led the way in the class for Emily Silshury ; he was followed by Mr. J. Martin, and Mr. J. Foster in this order. Mr. J. Bird led the way for six blooms of President Borrel, which were magnificently coloured ; Mr. T. Maxwell, West Park, Skelmorlie, was a good second ; and Mr. J. Forsyth, Torrwood, Row, was third. Mr. R. Addison took the lead for Vivian Morel ; and was followed by Mr. Wm. Hamilton, St. Mary's Isle, Kirkcudbright, and by Mr. D. Cavanagh, St. Edwards, Murrayfield, in the order named.

Incurved Chrysanthemums were best represented in the smaller classes. In addition to those reported in our special edition last week, we now add that the first award for twelve incurved, distinct, was taken by Mr. W. H. Lees, Trent Park, New Barnet, with neat and fine blooms of Duchess of Fife, Bonnie Dundee, Mrs. R. C. Kingston, Miss Haggas, Major Bonaffon, Austin Cannell, J. Agate, Robert Petfield, &c. ; Mr. J. Martin was a good second with large blooms of Charles Curtis, Blush Queen, and F. W. Flight ; Mr. J. Day, who was third, had a handsomely coloured bloom of Bonnie Dundee. Mr. J. Martin took the lead for six incurved blooms, C. H. Curtis, C. B. Whitnal, and J. Agate being fine ; Mr. J. Day was second ; and Mr. P. Blair, Trentham, Stoke-on-Trent, third. Mr. Martin had by far the finest six blooms of C. H. Curtis ; Mr. E. Horn, Netherhall, Maryport, was second ; and Mr. J. Henderson third. The latter came to the front for six incurved of one variety. He was followed by Mr. T. Dale, Aikenhead, Cathcart, and by Mr. J. Clark, Bannerfield, Selkirk, respectively. Mr. J. Martin had the best six blooms of Hairy Wonder, being an easy first ; Mr. J. Foster was second ; and Mr. T. M. Whitehead was third.

The various classes for vases, hand bouquets, epergnes, &c., brought out a large number of exhibits, making the competition keen in several of the classes. The first prize for a hand bouquet of Chrysanthemums was taken by Miss Todd, Stoneybank, Musselburgh, whose shower bouquet was very graceful and charming. Competition was keen. She also had the best arranged epergne. The best epergne or vase filled with coloured vine leaves was also staged by Miss Todd, being quite ahead of Mrs. Jobson, Coltbridge Avenue, who was a good second. Both exhibits were mounted on high pedestals.

Mr. J. Foster led the way in the class for four vases of Chrysanthemums, showing grand triplets of Mrs. W. H. Lees, V. Morel, M. Chénon de Léché, and Mutual Friend. Mr. D. Mackay, Kingston Grange, Liberton, was a good second. Mr. R. W. E. Murray, Blackford House, came in third, in a competition of ten entries. The latter came to the front for a single vase of twelve Japanese blooms ; and was followed by Mr. J. Foster, and Mr. C. Harris, Carfin, Carlisle, respectively, in a competition of fifteen. Mr. W. Armstrong, Musselburgh, led the way for a vase of six Japanese blooms. Mr. D. Airdrie, Larbert House, Larbert, and Mr. J. Henderson were second and third respectively. Mr. T. M. Whitehead had the best vases of single Chrysanthemums, showing Miss Rose and Mary Anderson chiefly, both being particularly graceful. Mr. John Wardie, Dollarby, Dollar, had the best three vases of decorative Chrysanthemums not disbudded, and shown with their own foliage. They were pretty and effective. Mr. T. Gordon was second.

The premier award of £5 for thirty-six blooms of *Chrysanthemums*, distinct, and open to nurserymen only, was taken by Mr. W. Wells, Earlswood Nurseries, Earlswood, Redhill, Surrey. His blooms were fresh, of grand dimensions, and many points ahead of the second prize exhibit, shown by Mr. Robert Grossart, Clarendon Nursery, Perth Road, Dundee, whose blooms were also good, especially when latitude is taken into consideration.

GROUPS AND PLANTS.

The circular tables were a distinct feature of the show, but unfortunately they were too much under the shade of the galleries. Mr. A. E. Todd, Stoneybank, Musselburgh, was an easy first for a 4 ft. table of plants, flowers and foliage, with a fine arrangement of *Chrysanthemums*, *Lily of the Valley*, *Roman Hyacinths*, &c. Mr. Geo. Wood, Oswald House, Edinburgh, was a good second, having long sprays of *Orchids*. Mr. Wm. Small, Blackford Park, was third in a competition of six. Mr. D. Kidd, Carberry Tower, Musselburgh, had the most effective arrangement on a 3 ft. table. Mr. A. Bogie, Auchans, Kilmarnock, followed; and Mr. J. Forsyth was third. There were eight tables in this class.

In the open class for the best new *Chrysanthemum* not in commerce, the first prize (the Silver Medal of the association) was won by Mr. W. Stewart, Ellenbank, Maryport, for a white sport from *V. Morel*, named Mrs. John Ritson, for which two certificates have already been given. In another open class for the best *Chrysanthemum* plant having one of Mr. Porter's (Maidstone) patent invincible crocks in the pot, the special award offered by Mr. Porter was won by Mr. D. Cavanagh, St. Edwards, Murrayfield.

The first prize for a group of *Chrysanthemums*, foliage and other flowering plants was secured by Mr. Geo. Wood, whose circular and conical group was surmounted by a large and well grown *Phoenix*. The *Chrysanthemums* were interspersed with *Dracaenas*, *Crotons* and other subjects. Mr. D. Jardine, Ravelston, Blackhall, took the second place with a similarly constructed group. Mr. P. Hunt, Coltbridge Hall, came in third. Mr. D. Mackay took the leading award for eight stove or greenhouse foliage plants, showing some large, well coloured *Crotons*, *Aralia Chabrieri*, *Dracaena*, *Palms* and *Nephtytis*. Mr. M. McIntyre, The Glen, was second; and Mr. J. Cocker, Chester's Hall, Northwood, third. Mr. M. McIntyre also had the best *Dracaena australis*, and the best six *Dracaenas*, distinct. Mr. J. Cumming, Greenpark, Liberton, had the best six specimen *Ferns*. Mr. G. Chaplin, St. Leonards, had the best *Chinese Primulas*. There was a fine display of *Primula obconica*, Mr. J. Briggs, Cochna, Duntochar, being first, and Mr. M. McIntyre, second. Mr. C. Comfort, Broomfield, Davidson's Mains, had the best *Christmas Roses* in pots. Mr. D. Mackay had the best table plants; Mr. M. McIntyre being second, but coming to the front for four decorative or foliage plants of large size. Mr. Jas. Shearer, Ratho Lodge, Ratho, had the best *Roman Hyacinths*.

NURSERYMEN.—Only a few classes were set apart for nurserymen. Messrs. R. B. Laird & Sons, Pinkhill, Murrayfield, had the best six specimen *Palms*, having amongst other things a grand plant of *Pritchardia (Licuala) grandis*. Mr. R. Grossart, Clarendon Park Nursery, Dundee, was second. Mr. John Downie, 144, Princes Street, Edinburgh, also had some prizes for *Palms* of different sizes.

AMATEURS exhibited well both in the classes for plants, cut blooms for exhibition, and in vases. The leading award for twelve *Japanese blooms*, in not less than six varieties, was taken by Mr. A. Brydon, Tweedbank, Innerleithen, who had fine blooms of *Australia*, *M. Chénon de Léché*, *Duchess of York*, *Eva Knowles*, &c. He was also first in the class for six blooms. Many of the amateurs competed successfully in the gardeners' classes, their names being already recorded.

FRUIT AND VEGETABLES.

Several of the fruit classes were recorded in last week's issue. There was strong competition in the class for two bunches of *Gros Colman Grapes*, the first prize being secured by Mr. J. Paterson, Benochie Park, Kirkcaldy. Mr. J. Potter, Whitehall, Mealsgate, was a good second with finely shaped bunches. Mr. J. Leslie, Pitcullen House, Perth, was third. Mr. J. Paterson maintained the first place for *Lady Downes*, and was followed by Mr. P. Hunt and Mr. D. Buchanan, respectively. Mr. W. Williamson, Tarvit, Cupar, took the lead for any

other variety, showing Mrs. Pearson. Mr. D. S. Melville, Poltalloch, Lochgilphead, was second with Mrs. Pince.

Mr. J. Day secured the first award for eighteen varieties of *Apples*, showing even samples. Mr. Geo. Mackimlay, Wrest Park, Ampthill, was second; and Mr. P. Melville, Rosemount, Monkton, third. Mr. J. Day also had the best eighteen varieties of *Apples* grown in Scotland: and was followed by Mr. J. Cairns, The Hirsell, Coldstream, and Mr. W. Hamilton, St. Mary's Isle, Kirkcudbright, in this order. Mr. J. Day again led the way for six varieties of dessert *Apples*. Mr. T. Thomson, Cherrytrees, Kelso, showed the best six varieties of *Pears*. Mr. Wm. Laing, Wellfield, Gateside, had the best *Pears* grown in Scotland.

The prizes for the two collections of vegetables brought out a large number of exhibits of excellent quality, as recorded in our last issue. The other classes were scarcely less important. The first prize for a collection of salads was taken by Mr. J. W. Scarlett, Inveresk, and Mr. J. Joss, Arnhall, Dundee, was second, both showing very good collections. Mr. Wm. Smith, Newtownards, Dumfries, had the best *Tomatos*. *Leeks* were abundant, and of excellent quality, Mr. G. Ormiston, Knowesouth, Jedburgh, being first with specimens scarcely shorter than 2 ft.; Mr. D. Pitt, Eccles, Kelso, was second; and Mr. G. Wood, third. There were about twenty entries. Mr. P. Main, Avondale, Polmont, was first for *Leeks*. Mr. J. Brown, Houstoun, Renfrew, took the lead for any other vegetable, not specified, showing a grand dish of *Peas*. The competition for *Cauliflowers* was great, Mr. W. Wilson, Loretto, Musselburgh, taking first, and Mr. J. Waldie the second prize. Mr. A. Bryden had the best *Brussels Sprouts* in a big competition; and was followed by Mr. J. Potter.

Mr. Wm. Bennett, Hanley, Gogan, had the best *Cabbages*; Mr. J. W. Wright, Preston, Prestonpans, the best *Savoys*; and Mr. T. Galloway, Broxburn, the best curled *Greens*, which were in great force. Mr. A. Brunton, Lindsaylands, Biggar, had the best *Celery*; Mr. A. C. Cameron, Binrock, Dundee, the best *Beet*; Mr. Jas. Scott, Newton, Pencaitland, the best *Parsnips*; Mr. J. Maule, Balcaskie, the best *Carrots*; Mr. E. J. L. Joss, Hattonburn, Milnathort, the best *Turnips*; and Mr. P. Melville, the best *Onions*.

In the class for twelve varieties of *Potatos*, open to all, the leading award was carried off by Mr. A. Gemmell, Flakesfield, Chapelton, with shapely and beautiful tubers. Mr. R. Wilson, Devonvale, Tillinoultry, was a good second. The third award was taken by Mr. McAndie, Edgerston, Jedburgh.

For a collection of ten varieties of vegetables, open to market gardeners only, the first prize was taken by Mr. J. W. Scarlett, Inveresk; Mr. D. Logan was second, and Mr. D. Lorne, Broxburn, third. The first prize for a basket of *Apples*, open to market gardeners, was taken by Mr. D. McCutcheon, Doonfoot, Ayr.

MISCELLANEOUS.

Mr. H. J. Jones, Hither Green, Lewisham, London, was accorded First-class Certificates for *Chrysanthemums* *Western King*, *Chebang* (a large pink *Japanese variety*), and *Middle Laurence Zède* (a large, silvery-pink, incurved *Japanese variety* that is certain to make its appearance on the show boards next year). He was also awarded a special *Diamond Jubilee Gold Medal* for his magnificent and unique group of splendidly-grown *Begonia Gloire de Lorraine*, bordered all round with three lines of exhibition blooms of *Chrysanthemums*.

Messrs. Alex. Cross & Sons, Limited, Port Dundas Chemical Works, 19, Hope Street, Glasgow, had some stands of exhibition blooms of *Chrysanthemums*, *Gros Colman* and *Alicante Grapes*, *Tomatos*, *Belle de Jersey* and *Catillac Pears*. A basket of the latter variety was filled with samples 2 lbs. in weight each. They also had a pneumatic pump for spraying water and insecticides. A *Silver Gilt Medal* was awarded to the fine exhibit of Messrs. J. Ford & Co., 39, Princes Street, Edinburgh.

THE BANQUET.

On Thursday evening, the opening day of the great show held under the auspices of the *Scottish Horticultural Association*, a dinner was given in honour of the invited guests. The menu was elegantly served in superb style in the beautifully decorated, new restaurant of the *Royal British Hotel* by host Clark. The chair was occupied by Mr. M. Todd,

the president, supported by *Baillie Pollard*, *Baillie Robertson*, *Admiral McKenzie*, and other municipal dignitaries. Mr. Malcolm Dunn (croupier), was supported by Mr. Robert Laird (the secretary), Mr. W. M. Welsh, and Mr. D. P. Laird; whilst seated in places of like honour were Mr. T. W. Sanders, (chairman of the N.C.S. executive), Mr. P. Waterer (vice-chairman), Messrs. E. Molyneux, W. Mease, W. H. Lees, H. J. Jones, J. H. Witty, J. McHattie, C. Orchard, and A. E. Stubbs (hon. auditor), all of whom represented the parent society. Others were Mr. G. M. Ross, secretary of the *Royal Horticultural Society of Ireland*, Mr. Crawford, also from Dublin, and a thoroughly representative gathering of the *Scottish Horticultural Association*.

After dinner the chairman proposed "The Queen," the toast being accompanied by musical honours. Mr. M. Dunn proposed the "Navy, Army, and Reserve Forces," which was responded to by *Admiral McKenzie* in an excellent speech. Mr. D. P. Laird next proposed the "Lord Provost, Magistrates, and Council of Edinburgh," in a humorous speech in which he compared some of them to plants in thumb pots and other sizes up to full blown specimens, some being in the timber trade, which he considered closely allied to horticulture. *Baillie Sloan* responded, complimenting the meeting on being men of culture. He spoke of the membership of the society as growing, being highly satisfactory, and they (the council) were glad to come.

Baillie McKenzie proposed "Success to the *Scottish Horticultural Association*" which was ridiculed at its beginning. He remembered the first show, which was held on a snowy day in *Dowell's Rooms*, a small beginning which vegetated to the present great exhibition. *Dowell's Rooms* and the *Music Hall* became successively too small for the show, which had to be taken to the *Waverley Market*. Mr. M. Todd, as president, responded, returning thanks and corroborating the remarks of *Baillie McKenzie*. He urged upon their attention three points—(1), that the *Town Council* was a munificent patron, (2) that the big prizes were an example for other cities, (3) that the excellent music was a reward for their speculation. If a trifle reckless at first, it brought good in the end. Another remark he made was that every farthing of the surplus taken at the show was to be given in charity for the benefit of the *Royal Gardener's Orphan Fund*, *Gardeners' Royal Benevolent Institution*, &c.

Mr. Alex. Milne proposed "the judges," to which Mr. W. Mease and Mr. E. Molyneux responded. The latter assured them that he was delighted to come amongst them again, and that no society had done so much to encourage the cult of the *Chrysanthemum* during this, the *Jubilee year*. The groups might have received better prizes; but the special prizes, amounting to £150, offered for twenty vases of *Chrysanthemums* was a bold venture, but well repaid the finest show ever got together. He hoped the day was far away when the *Chrysanthemum* would decline in popularity. He had just come from *East Anglia*, where the *Chrysanthemums* in the cottage gardens were the best answer to those who decry the "Mum." Referring to foreign varieties, he looked forward with pleasure to the day when *English* and *Scotch* raised varieties would enjoy even greater fame, so that we could send them abroad to counterbalance those we were now receiving.

"Kindred Societies" was proposed by *Baillie Haigh*, who referred to the deputation of the *National Chrysanthemum Society*, and what that and other societies had done for the favourite flower. Mr. T. W. Saunders, F.R.H.S., and Mr. G. M. Ross, of the R.H.S., Dublin, responded on behalf of their respective societies. Mr. Welsh proposed the "Exhibitors," and said that the fresh entries had risen from 190 in 1896 to 242 on this occasion, making a total of 1,254, being one-third in excess of last year. Mr. Haggart suitably responded, saying that it was the proudest moment of his life. Mr. McHattie also added a few suitable remarks in reference to his successes.

Mr. R. W. E. Murray, convener of finance, proposed the "Press," and said that "good wine needs no bush" and a good toast no introduction. Mr. W. M. Gilbert and Mr. J. Fraser responded. Mr. A. E. Stubbs proposed the "Secretary and Treasurer," coupled with the name of Mr. Robert Laird. The latter, in responding, said that his efforts were ably and loyally supported by the hearty co-operation of every member of the council, so that the results and

success of the show were not wholly due to his efforts.

Bailie Mackenzie proposed the "Chairman," who, he said, had proved in every way capable for his duties, not only in his official capacity, but by his tact and courtesy. He fully recognised all the various interests of the society. Mr. M. Todd in rising to respond was received with applause, and said that everything was a pleasure to him and gratifying since it was appreciated. Mr. Wm. Mackinnon proposed the "Croupier," to which Mr. M. Dunn responded.

THE PRESIDENT'S "AT HOME."

Not the least interesting innovation in the reception of the various bodies of delegates was the thoughtful kindness of the president of the S. H. A. in holding a reception on the second afternoon of the show. The function took place at 4.30, and continued until about 7 o'clock, the new restaurant of the Royal British Hotel, most beautifully furnished, being utilized for the occasion. The principal guests included:—Provost Smith, of Kilmarnock; Mr. G. M. Ross, of the R. H. S., Ireland; Mr. Waterer, of Swanley; Messrs. D. P. Laird, W. P. Laird, James Grieve, W. Smith, A. E. Stubbs, Joseph Murray, H. J. Jones, A. Mackenzie, E. Molyneux, R. W. E. Murray, Flemming, W. Mease, A. Milne, John Methven, A. Carlisle, J. Calderhead, and J. Fraser. Everything that could be done had been munificently looked after by the president personally, and the four o'clock tea or coffee at the choice of the guests was most enjoyable. Later the various toasts submitted were honoured in a fitting manner, and sentiment and song found ready helpers and willing listeners.

We are quite sure our London, Dublin, Belfast, and Dundee friends, who formed the various deputations, will have gone back with the strong impression that the present year's show, and the functions connected with it, have all tended to make it a memorable and record celebration of the Diamond Jubilee, which event it was intended should be celebrated by one or two new, departures of which, as we have said, the worthy President's Reception was by no means the least popular or enjoyable. The musical arrangements were under the direction of Mr. Fleming. Mr. Paterson, of Glasgow, sang in his accustomed humorous way. Mr. E. R. Murray also assisted with a well-rendered Gaelic song. Mr. Jos. H. Murray brought down the audience in his A.B.C. sketch, and another ditty about what happened "In the morning." Mr. Fleming obliged with a song from his repertory, and Mr. Stubbs also sang. Master Wilmot, from the establishment of Messrs. Pentland's, very ably accompanied the vocalists, besides rendering a well-executed overture and a selection from "Faust" on the piano.

SOCIETIES.

ROYAL HORTICULTURAL.—November 9th.

OWING to the clashing of so many Chrysanthemum shows on the above date the meeting was smaller than usual. The principal exhibits consisted of Chrysanthemums, Orchids, tree Ivies, Dracaenas, tree Carnations, and smaller lots of interesting subjects.

Messrs. J. Veitch & Sons, Ltd., Chelsea, staged a fine collection of their now famous hybrid Orchids, consisting largely of Laeliocattleyas and Cypripediums, Laeliocattleya Daphne, L. Decia, L. Novelty, L. statteriana, L. Pallas, and others of great beauty. Amongst hybrid Cypripediums, C. Niobe, C. Euryades, and C. Tityus, are highly meritorious (Silver Flora Medal).

G. Shorland-Ball, Esq. (gardener, Mr. A. Hay) set up a group of well-grown and flowered Orchids, including Cypripedium leeanum magnificum, a richly spotted variety of the first water. A Cultural Commendation was accorded to a fine piece of C. insigne Sanderæ carrying half a dozen of its delicately choice flowers (Silver Banksian Medal).

Messrs. F. Sander & Co., St. Albans, staged a group of Orchids, amongst which a piece of *Sophrontis grandiflora* was conspicuous on account of the number of its flowers. Other good things were *Cattleya dowiana aurea*, *C. labiata* in variety,

Laeliocattleya broomfieldensis, *Laelia autumnalis delicata* and others (Silver Banksian Medal).

Messrs. W. L. Lewis & Co., Southgate, N., also exhibited Orchids, including a batch of fifty plants of their now famous importation of *Laelia pumila praestans*, no two of which were exactly alike. Twice as many more of the same *Laelia* were flowering at Southgate on the same date as the meeting. *Cattleya labiata Lewisii* was particularly handsome. Interesting were *Mormodes pardinum* and *M. p. citrinum*.

Messrs. Hugh Low & Co., Clapton, exhibited another fine batch of *Vanda caerulea*, a number of choice Cypripediums and the beautiful *Calanthe Veitchii alba*.

The Right Hon. Joseph Chamberlain, M.P. (grower, Mr. Smith), Highbury, Birmingham, exhibited a group of Orchids, including some handsome Laeliocattleyas, of which the most striking was *Fabia*. Others were *L. Semiramis*, *L. Sallieri*, and *Cattleya Miss Endicott* (Silver Banksian Medal).

Mr. Wm. Bull, Chelsea, showed Cypripedium insigne *Bulliae*, *Dendrobium Phalaenopsis album* and others.

J. T. Bennett Poë, Esq. (gardener, Mr. J. Downes) Holmewood, Cheshunt, exhibited the showy *Vanda sanderiana* Holmewood var., Cypripedium Charles Canham, with large flowers, and other hybrids. C. L. N. Ingram, Esq. (gardener, Mr. T. W. Bond), Elstead House, Godalming, staged a hybrid *Cattleya* named *C. Comfrey*. W. Vanner, Esq. (gardener, Mr. W. H. Robins), Camden Wood, Chislehurst, showed cut flowers of choice Orchids, including many hybrids, in fine form. Henry Tate, Esq., Allerton Beeches, Liverpool, staged some Cypripediums.

A Silver Banksian Medal was awarded to Mr. John Russell, Richmond, for a group of Ivies in pots. The standard and bush forms of training were well exemplified in this exhibit.

Sprays of *Vitis heterophylla humulifolia* were shown by A. Kingsmill, Esq., Harrow Weald.

Mr. R. Gulzow, Melbourne Nurseries, Bexley Heath, Kent, set up a handsome and effective group of foliage plants, principally Dracaenas. The group took the form of an imposing bank of foliage with a charmingly undulating outline. At either end was a superb piece of *Dracaena Doucettii*, and in the centre was a noble mass of *D. sanderiana*. The Dracaenas were most of them seedlings recently raised by Mr. Gulzow. They were all clean and well coloured symmetrical samples. Several new varieties that should be heard of again were included (Silver Flora Medal).

Mr. G. Wythes, gardener to Earl Percy, Syon House, Brentford, sent a nice lot of cut Chrysanthemums. The blooms were furnished with long stalks and were arranged with Maidenhair Fern. Some of the best varieties were Lord Brooke, Pride of Madford, Brookleigh Gem, Silver King, Col. W. B. Smith, Mme. Gustave Henry, H. L. Sunderbruch, Miss Elsie Teichmann, Florence Davis, and Etoile de Lyon (Silver Banksian Medal). Messrs. Hugh Low & Co., Bush Hill Park, Enfield, contributed a nice batch of the handsome and useful Carnation Mathews' Winter Red. The plants were of clean habit, and the flowers of good substance, colour and form.

Messrs. J. Veitch & Sons, Ltd., sent a basketful of the Wallflower Parisian Early, also a basketful of *Aster grandiflorus*, a very distinct and beautiful form. A group of seedling Pentstemons came from C. F. Thompson, Esq. (gardener, Mr. T. Mann), Llandaff. The last-named exhibitor also had cut blooms of Chrysanthemum. Mr. C. Caddell, The Gardens, Camfield, sent six blooms of Chrysanthemum Ellen Lady Clark.

Twenty-four capital blooms of Chrysanthemums came from Mr. W. J. Godfrey, Exmouth, Devon. Eight varieties were included, of which Duke of Wellington, Admiral Ito, Lady Northcote, and George Gover were some of the best.

At a meeting of the Fruit and Vegetable Committee a Silver Banksian Medal was awarded to Mr. W. H. Divers, Belvoir Castle, Grantham, for thirty-two dishes of Pears in as many varieties. *Beurré Diel*, *Beurré Clairgeau*, *Marie Louise*, *Beurré Jean Van Geert*, and *Emile d'Heyst* were represented by some capital samples.

Mr. O. Thomas, gardener to Her Majesty The Queen, Frogmore, had a box of twenty Cucumbers

of a new variety named Frogmore all the Year Round.

Six dishes of Apples and nine dishes of Pears were submitted for the Veitch flavour prizes. Mr. T. Turton, gardener to E. Hargreaves, Esq., Maiden Erleigh, Reading, was first for Apples with Cox's Orange Pippin; Mr. G. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone, was second with Ribston Pippin. Mr. G. Woodward was first for Pears with Doyenné du Comice; Mr. Osborn, gardener to Rev. H. Golding Palmer, Holme Park, Sonning, was second with Glou Morceau.

A Silver Banksian Medal was awarded to Mr. W. Iggulden, Frome, Somerset, for 48 lbs. of superb Gros Colman Grapes.

Messrs. Harrison & Sons, Leicester, showed a collection of garden Beet that comprised no fewer than twenty varieties (Bronze Banksian Medal).

NATIONAL CHRYSANTHEMUM.—November 15th. THE Floral Committee of this society met on Monday, November 15th, at the Royal Aquarium. There was a fair amount of material sent for consideration, including some good novelties. A number of Certificates were given for which see a succeeding issue. The committee also requested to see several varieties again.

Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey, had seven dozen grand show blooms of Japanese and incurves, amongst which Madame Ferlat, Mrs. F. A. Bevan, Ma Perfection, Julia Scaramanga, and Georgina Pitcher were some of the best. A small Silver Medal was awarded. Mr. R. Owen, Maidenhead, sent some new seedling varieties. Mr. W. J. Godfrey, Exmouth, Devon, had three dozen capital blooms. Mr. H. J. Jones also exhibited.

Mr. P. Waterer demonstrated an improved system of attaching names of varieties to show boards, which was commended by the committee. In this device, labels bearing the names of the varieties placed on the show board printed in bold type are contained in neatly made tin frames. The latter are affixed to the board by means of small but strong clips.

QUESTIONS AND ANSWERS

* * * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Gladioli.—*Enquirer*: The largest flowers and some of the finest and most varied colours are to be found in the Gandavenis and nanceanus sections. With regard to the late flowers that you saw in October we cannot say definitely without description. *G. brenchleyensis*, if planted in a part of the garden shaded from the sun, will flower until cut down by frost, and in seasons when the frost comes on early the spikes never have time to expand their flowers. *G. psittacinus* is also a valuable late-flowering form, and *G. saundersii* and *G. floribundus* are well worth growing, although the flowers are smaller than in the other three sections. You will be able to obtain what you require from any of the larger nurserymen. We may, however, say that Messrs. Kelway & Son, Langport, Somerset, and Messrs. J. Burrell & Co., Howe House Nurseries, Cambridge, have made the Gladiolus a speciality. On the Continent M. Lemoine, of Nancy, France, has done much for the flower.

Tea Roses.—*Omega*: The following six varieties of Tea Roses, in addition to Catharine Mermet and Marie Van Houtte, will be found to be free flowering and of good constitution:—Anna Olivier, Cheshunt Hybrid, Comtesse de Nadaillac, Madame Cusin, Madame de Watteville, and Innocent Pirola. The last-named is one of the best white varieties, and Madame Cusin is one of the finest of the darker flowered forms.

Dessert Cherry.—*Omega*: Either Royal Duke or Archduke Cherries will come in as a succession to May Duke. Archduke is especially a fine Cherry. It ripens its fruit from eight to ten days after May Duke.

Planting Clematis.—*Omega*: As Clematises are generally kept by nurserymen in pots all ready for planting out, the month of June is a good time of the year to plant them, as they can then grow away without check.

Vines.—*A. Beginner*: The foliage of the Vines is simply fading with the wear of the seasons. The Vines have evidently been neglected. Have you

allowed them to lack water? as this would account for the shivelling of the berries, which, by the way, are perfectly sweet. The lack of fire-heat would account for the berries rotting. We should advise you to cut the Grapes, and apply a little fireheat to the house to assist in ripening the wood. You may then be able to make a good start with them next year.

Forcing Asparagus.—*Omega*: The quantity of soil that should be put beneath the roots of Asparagus lifted for forcing will depend upon the bench or stage on which they are placed. If the benches are immediately over hot-water pipes, a fair quantity—say 2 in. or 3 in.—will be necessary to prevent the roots from getting quickly dried up. Place the roots as thickly together as you can pack them, and put as much soil between the roots and over the crowns as will cover them and no more. Light sandy soil, and leaf mould should be used. Give a watering with a rose watering-pot when necessary. If exposed to light, cover up the glass with mats.

Cyclamen Diseased.—*F. G. Brewer*: Your plants appear to be suffering from a fungoid attack of some kind, brought on by allowing the plants to become weakened, possibly by too dry and arid an atmosphere. Try and keep the air moister and more kindly. You may spray the plants with a solution of one ounce of potassium sulphide in three gallons of tepid water. This will effectually destroy any spore that may be present and does not harm the plants in the least degree.

Mimulus cardinalis, etc.—*Choice Plants*: This species is hardy and very easily managed, according to our experience. It may be planted in light, rich soil where the roots will find sufficient moisture to enable them to make vigorous growth and flower well. The seed pods ripen at different times and you will, therefore, have to make several gatherings. There are now some beautiful varieties of different colours in cultivation, and you should endeavour to secure them. *M. cupreus* Brilliant is equally hardy and may be treated in the same way. If you care to, you could grow both of them in pots in a cold frame. *M. radicans* may be dealt with in the same way. The first two seed freely if grown well. They should be kept fairly dry when ripening their seeds.

Names of Plants.—*J. Williams*: 1, *Desfontainia spinosa*; 2, *Olearia Haastii*; 3, *Osmanthus Aquifolium illicifolius*; 4, *Pyrus japonica*.—*W. M.*: 1, *Odontoglossum crispum* var.; 2, *Maxillaria punctata*; 3, *Cattleya labiata*; 4, *Cattleya dowiana aurea*.—*T. S.*: 1, *Nephrolepis exaltata*; 2, *Davallia hirta cristata*; 3, *Asplenium bulbiferum minus*.—*A. Dally*: 1, *Cestrum aurantiacum*; 2, *Acacia longifolia*; 3, *Acacia dealbata*. The latter comes from the south of Europe, especially about the neighbourhood of Cannes.—*A. L.*: 1, *Uniola latifolia*; 2, *Gynerium saccharatum*.—*W. J. S.*: 1, *Adhatoda cydonifolia*; 2, *Maxillaria picta*.

Communications Received.—*S. Cooke*.—*B. E.*—*M. C.*—*J. Fraser* (three wires).—*Gyp* (press wire).—*W. Keen* (next week).—*Aurore*.—*Franco*.—*J. R. G.*—*Ohio*.—*L. S.*—*C.*—*Kitchener*.—*Choice plants* (next week).

TRADE CATALOGUES RECEIVED.

WILLIAM WATSON, Clontarf Nurseries, Dublin.—*Roses, Fruit, Ornamental, and Forest Trees.*
A. FINDLAY, Markinch, Scotland.—*Abridged List of new disease-resisting Potatoes.*

To Greenhouse Builders and Contractors.

THE LONDON COUNTY COUNCIL is prepared to receive tenders for the erection and completion of a greenhouse at Peckham Rye Park. Persons desiring to submit tenders may obtain the drawings, specification, form of tender, and other particulars at the Architect's Department, County Hall, Spring Gardens, S.W., upon payment of the sum of five shillings. This amount will, after the Council or its Committee has come to a decision upon the tenders received, but not before, be returned to the tenderer, provided he shall have sent in a *bona fide* tender and not have withdrawn the same. Tenders must be upon the official forms and the printed instructions contained therein must be strictly complied with. The contractors will be bound by the contract to pay to all workmen (except a reasonable number of legally bound apprentices) employed by them, wages at rates not less and to observe hours of labour not greater than the rates and hours set out in the Council's list, and such rates of wages and hours of labour will be inserted in and form part of the contract by way of schedule. Tenders are to be delivered at the County Hall in a sealed cover addressed to the Clerk of the London County Council, and marked Tender for Greenhouse at Peckham Rye Park. No tender will be received after 10 a.m. on Tuesday, the 7th day of December, 1897. Any tender which does not comply with the printed instructions for tender may be rejected.

The Council does not bind itself to accept the lowest or any tender, and it will not accept the tender of any person or firm who shall on any previous occasion have withdrawn a tender after the same has been opened unless the reasons for the withdrawal were satisfactory to the Council.

T. BELL,

for the Clerk of the Council.

SPRING GARDENS, S.W., 16th November, 1897.

A Special Offer to Readers of THE GARDENING WORLD

25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia

OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER
{ INFORMATION } ISSUED.
Size of Encyclopædia: 9 by 11½ inches. 656 Pages.

It contains

MANY MAGNIFICENTLY ENGRAVED COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

271197. **COUPON.**

OGILVIE'S ENCYCLOPÆDIA OF USEFUL INFORMATION, AND WORLD'S ATLAS, (Published Price 25s.). 16 COUPONS, AND 6d. WITH EACH.

SATURDAY, DECEMBER 4th, 1897.

NEXT WEEK'S ENGAGEMENTS.

TUESDAY, December 7th.—National Chrysanthemum Society's Mid-winter Show at the Royal Aquarium (3 days). Meeting of the Floral Committee at 1 p.m.

FRIDAY, December 10th.—Sale of imported and established Orchids by Messrs. Protheroe & Morris.

SIR WILLIAM HARCOURT AS A GARDENER.

On the occasion of the Dundee Chrysanthemum Society's show, on the 25th ult., and the two succeeding days, the services of Sir William Vernon Harcourt were secured to perform the opening ceremony. Sir William was three quarters of an hour late on account of his arduous duties that day; but the large audience which had come to hear him, was entertained in the interim by the Anglo-Swiss Ladies' Cyclist Band, which is a string orchestra of seventeen instrumentalists, and proved a novelty in its way at Dundee. He left the City Chambers in company with Lord Provost M'Grady, who took the chair, being supported by Sir Henry Campbell Bannerman, Bart., Sir John Leng, M.P., Sir T. D. Gibson Carmichael, Bart., Sir Thomas Thornton, LL.D. and other distinguished citizens. Sir William had that morning been presented with the freedom of the city and enrolled as its youngest burgess. Lord Provost M'Grady said he had pleasure in introducing Sir William Vernon Harcourt whose transcendent abilities in various walks of life had induced the Corporation to offer him the freedom of the city; and they had the honour of addressing him as the youngest burgess. They had already heard him speak that morning in two rooms, and he had to attend another meeting after leaving the Drill Hall, so that it was no easy task to deliver four addresses in one day, the task cut out for him the first day he became a Dundonian.

Sir William Harcourt, who was received with cheers, said that though he was a very young burgess, he was a very old gardener, and an old gardener knew that the very worst thing that could be done was to exhaust the soil by growing too many crops one after the other. Since he entered Dundee he had been speaking continuously, and had been telling them in the Council Chamber that morning that he preferred the language of flowers to the figures of rhetoric. In that unimportant section of

the United Kingdom, called England, it was known that Scottish gardeners had the preference, and that they were the best gardeners in the world. He had sometimes heard it discussed why that happened to be the case. Some ill-natured people had said it was because they had to overcome the difficulties of climate; but he never accepted that conclusion, because he had observed that there was nothing upon which people were more sensitive than that of their climate. He had come to the conclusion that it was a hereditary virtue belonging to them by long descent, and that, probably, the country of their birth was the site of the first garden. So far as his own gardening was concerned, he had for some time past been trying to acclimatise in the south of England some of the flowers of Scotland. The most beautiful flower he had seen, and which is particularly abundant in the west of Scotland, was *Tropaeolum speciosum* the Flame Nasturtium. It was seldom seen in England, though a common cottage garden flower in the west of Scotland. He had tried it for years, and was happy to state that he had at last succeeded in growing it. This he considered as his great achievement in gardening. He could tell the secret to his English friends that they coddled it, put it in the sun, manured it, and did everything that was bad for it. Put it in the sun, he continued, put it in wet ground, let it grow over the Rhododendrons, and it could be grown in England as well as in Scotland. He offered that as a wrinkle to his horticultural friends.

Chrysanthemums were the subjects before them on that particular occasion, and to him they had always seemed interesting flowers. They took a position between the flowers of summer and the absence of them in winter. We were indebted to the Japanese for Chrysanthemums in their present form, and that race of people used them largely in the language of flowers and otherwise. As he came up the hall, the Chrysanthemums appeared to be largely cultivated about Dundee, and cultivated with great success. In his opinion there were few greater enjoyments than that obtainable from gardening. He would not attempt to dwell upon the praises of gardening, but would refer his audience to the description of the garden of Eden by Milton, or to the gorgeous lyric of Cowley, addressed to John Evelyn, in which the poet describes the grandeur and beauty of Solomon's palace, when the Queen of Sheba visited it. In some respects gardening might be compared to politics. Gardening was subjected to sudden and unexpected frosts, which were inimical to favourite flowers; but gardeners had perfect confidence in the return of spring and the revival of flowers; so in politics. For himself he preferred the occupation of gardening, and as a humble gardener he had been allowed the privilege of attending the show that afternoon.

Forfarshire men at the Edinburgh Show.—In face of the fact that so many of the leading prizes at the Scottish capital are taken by men from the southern side of the Cheviots and Tweed, it may be as well to mention the fact that Forfarshire men came out strongly. Mr. Haggart himself served his apprenticeship at Panmure House Mr. Martin, for some years foreman at Fotheringham, was, however, born in Fife. Mr. David Nicoll, of Rossie, gained much of his experience at Usan House, Montrose, and, like the rest, may be considered a Forfarshire man. Mr. Beisant, of Castle Huntly, just across the border in Perthshire, was the strongest supporter of Scottish Chrysanthemum culture, but, strange to say, he is of English nationality.

FOR PLEASURE AND PROFIT

FRUIT SEEDS

Nothing so profitable and easy to grow.
80 Acres of Saleable Trees.

ROSES

HUNDREDS of THOUSANDS.
Bushes in variety. Packing and Carriage free for Cash with order.

JAMES CYPHER,

Exotic Nurseries, CHELTENHAM.

CANNELL & SONS' CHRYSANTHEMUMS.

The most remarkable results that have ever occurred in supplying cuttings and plants is the great success and the highest awards that have followed those forwarded from us, yes, in the remotest parts of the World, New Zealand and Australia, South Africa, as far as Bulawayo, Egypt and Constantinople, Tenneriffe, besides Italy, France, Holland, Belgium and Portugal, to say nothing of Mr. Mease's remarkable record at home again this season with what we have sent him, and which history must describe by and bye as wonderful.

Our unrivalled stock of unbloomed plants especially for the supply of cuttings is now in perfect condition, so full of health that they at once give growers heart and confidence the moment they see them, striking more quickly, and making strong and healthy roots, success naturally follows our pure country grown stuff.

New Catalogue is in the press, and we hope to post off 20,000 shortly. Any client failing to receive a copy will please intimate.

SWANLEY, KENT.

Mr. A. Mc Donald for four years head gardener to Mrs. Stephens, Helenslea, Broughty Ferry, has been appointed in a similar capacity to G. Paton, Esq., Avonside, Leamington, Warwickshire.

The weather at New York, U.S.A. is as mild as that which we have experienced in these Islands, for such tender plants as Coleuses, Heliotropes, and Tomatos were, according to the mail advices of last week, flourishing in the open, and without any other shelter from the wind than that afforded by a fence

Societe des Chrysanthemistes du Nord de la France.—We have received a communication from M. J. Lefebvre, the president of this society, to the effect that the project of holding Chrysanthemum exhibitions on November 21st and December 6th has had to be abandoned, owing to the abnormally warm and sunny character of October, which has caused the flowers to expand so early that the flowering season is now practically finished.

To the list of curious addresses the following may be added:—

Dobies Seedsman and
Florist

Scotland

i know no other

address kindly

find them.

This communication came from Nuneaton, and thanks to the vigilance of the Post Office authorities was safely received at Rothesay by Messrs. Dobbie & Co.

Mr. James Simpson, formerly of Cults, Aberdeenshire, and whose father resides at Banchory-Devenick in the same county, has recently received an appointment from Thomas M' Meekin, Esq., Falkland Park, South Norwood Hill, on his Tea Estates, Assam, India. During his apprenticeship with Messrs. James Cocker & Sons, Aberdeen, Mr. Simpson received the Royal Horticultural Society's certificate for an examination in horticulture in 1893. In April, 1894 he was transferred to the said society's gardens at Chiswick, London, taking full advantage of the experience to be gained there till the end of October last. He was honorary secretary and treasurer of the Chiswick Gardeners' Mutual Improvement Association for more than two years, faithfully fulfilling his duties till he left the neighbourhood. He also held certificates in botany, drawing, and mathematics, from the Department of Science and Art, South Kensington. He sailed for Assam by the British India Steam Navigation Company's s.s. Manora on the 12th ult.

Ealing Gardeners' Society.—On the 16th ult. there was a very good attendance of members of this society at the usual meeting place, to hear an address from Mr. Alexander Wright, of Falkland Park Gardens, South Norwood Hill, S.E., on "Cattleyas all the Year Round." The subject seemed so easy and familiar to Mr. Wright, that he dealt with it fluently and exhaustively without the aid of notes. He described the most suitable house for their welfare, gave a list of species, hybrids, and varieties, specially recommended small pots for their culture, and otherwise condensed a large amount of information into a small compass. As gardeners are very keen and practical in matters which concern their craft, it is hardly necessary to add that Mr. Wright was not only well received, but also accorded a very hearty vote of thanks. Mr. C. B. Green presided. In addition to the usual weekly exhibition of plants, etc., in season, which were very meritorious, there was also a special competition for a "Collection of Twelve Miscellaneous Plants," which brought out six entries. The first place was awarded to the hon. secretary, Mr. W. Roberts, who, however was very closely pressed by Mr. R. Green—one point only being the difference between them—the third and fourth places going to Mr. W. J. Simpson, Acton, and Mr. H. Holloway, respectively. The plants for the most part were clean, well-grown, creditable specimens, and consisted chiefly of such things as Orchids, Crotons, Pandanus Veitchii, Cocos weddeliana, Kentia australis, Eulalia japonica, Primula sinensis, and P. obconica. Mrs. W. B. Smith, a local florist, sent a collection of well-berried Solanums.

Raspberries are in bloom on the Wiltshire Downs.

Primroses and Strawberries have been picked at Dover during the past few days, owing to the remarkably mild weather. Last week ripe Strawberries were gathered in an open field at Stanwell, near Staines.

Leeds Paxton Society's Chrysanthemum Show will be held at the Town Hall, Leeds, Tuesday and Wednesday, November 15th and 16th, 1898. The hon. secretary is Mr. James Campbell, the Gardens, Methley Park, Leeds.

Syndical Chamber of Belgian Horticulturists.—At a recent meeting of this body in the Casino, Ghent, the jury awarded a Certificate of Merit for Cattleya labiata De Volderiae, presented by M. De Volder. On the same occasion certificates for culture and flowering were accorded to Sonerila, Mne. De Warelles, and Amasonia punicea, presented by M. L. De Smet-Duvivier; to Acacia platyptera, presented by M. E. Bedinghaus; to Manettia bicolor, shown by M. G. De Saegher; to Ixora coccinea, for culture and flowering; Dichorisandra musaica, Calamus ciliaris, Heminiotis palmata, Hymenodium crinitum, and Maranta fasciata, all exhibited by M. A. Rigouts; and Oleandra nodosa, presented by Mme. la Comtesse de Kerchove de Denterghem, with unanimity. From Dichorisandra to Oleandra the awards were for culture only.

Chrysanthemum Pennsylvania.—The other week a specimen of this new American variety was brought into our office by Mr. McNab, of Messrs. F. Sander & Co., St. Albans. The variety is similar in form to that of Philadelphia, being an incurved Japanese sort, but it is much darker in colour, and almost golden-yellow. The florets are incurved, twisted, pointed, more or less interlaced with one another, and paler on the outer face, which is rather strongly ribbed. The stems are stout, 4½ ft. to 5 ft. high, so that they support the flower heads very easily after they are cut. The leaves are leathery in texture and good. Hugh Graham, Esq., of Philadelphia, was the raiser of the variety, which promises to be a good thing if grown on by cultivators on this side of the Atlantic. The blooms occupied about eight days on the passage from Philadelphia to London, and were in tolerably good condition for some days after their arrival.

Messrs. Cockers' Chrysanthemums.—In proximity to the show of the Aberdeen Chrysanthemum Society we were pleased to note a fine display of the Autumn Queen of Flowers, in the window of Messrs. James Cocker & Sons, Union Street, Aberdeen. It was not only an object lesson, but tangible evidence that Chrysanthemums are being appreciated at their full value at this northern capital, where climate is against the grower, though not to the extent we had suspected. More than that the Aberdonians are well advanced in the aesthetics of the Chrysanthemum as in other matters of this kind, as we had evidence by observation in various quarters. The flowers in Messrs. Cockers' window were of the kind usually employed in house decorations, and included many of those which have proved suitable for a misty northern clime in autumn and winter. They were tastefully arranged in free and graceful bunches of different varieties in bright and telling colours—white, yellow, crimson, and other shades, such as are appreciated by the general public. We had ocular demonstration of the fact that Niveus is the most popular white, because the most serviceable and useful for late work. The broad, pure white florets in heads of suitable size are carried erect on stout stalks—a great recommendation for any variety employed in this way. The single or rather semi-double variety named Admiral Sir T. Symonds is also very popular here, because the large yellow heads of numerous florets attain their full size under ordinary conditions of cultivation. Lord Brooke also stands up well, and many others of which we have insufficient time to take note. The Chrysanthemums were supplemented with Paper White Narcissus, Lily of the Valley, Roman Hyacinths, and other forced flowers, together with Orchids. Amongst the latter we noted sprays of Calanthe Veitchii, Odontoglossum crispum, O. Rossii majus, O. crispum, O. grande, and flowers of Cypripedium insigne. Here also was Begonia Gloire de Lorraine, now blooming in Aberdeen.

Chrysanthemums, Tea Roses, and Primroses are flowering contemporaneously in the open-air at Dundee and Broughty Ferry, on the northern shore of the Firth of Tay.

Royal Horticultural Society of Ireland.—A vacancy having occurred on the Council of this body, owing to the resignation of Mr. J. H. Cumming, at the request of his friends, Mr. W. J. Michison, The Gardens, Mullaboden, Ballymore-Eustace, Co. Kildare, has allowed himself to be nominated a candidate for the same. He hopes to be able to attend most of the meetings, and give his best attention to the interests of the society if he should be elected.

Juno Cycles at the Crystal Palace.—December 3rd to 11th.—In the centre transept of the Crystal Palace, at Stand No. 196, about a score of these well-known machines are staged. The new models of the Junos for the year 1898 will be built on the same admirable lines as in the past, improved and perfected up to date in numerous points of detail suggested to the Metropolitan Machinists' Co., by their prolonged experience in cycle building. The Juno Ladies' Safety, light and elegant as ever, catches the eye by reason of the graceful outlines of its frame, etc., and its marvellous weight for such a thoroughly reliable machine—only 27 lbs. The Diamond Juno Light Roadster, with barrel hubs and new design bottom bracket, reducing yet further the width of tread, retains for this machine its more than foremost place among old competitors. The Juno Safety, No. 11, for heavy-weight riders, has had a record season and earned golden opinions in 1897; the new pattern for 1898 is the very acme of strength and lightness combined; the special mechanism of the bottom bracket being of unique design and of exceptional simplicity. The Juno Diamonds for boys, and the juvenile drop-frame pattern for girls will, we are sure, continue to command to the full all that meed of popularity which they have always had in the past; they are well made, light and strong—great desiderata for machines intended for use of growing and lusty youth. The Juno Tricycle for 1898 will be noticeable for its reduced weight, which makes it as easy to manage, lift, or ride as a safety for those of us who prefer three wheels to two.

"The House"—a Journal of Domestic Art for the Home.—(Horace Cox, London), has, since its inception ten months ago, fully sustained its original and high-class character. If we may judge from the programme of the Christmas Number, which was published on December 1st, it will be, in every way, worthy the enviable reputation which "The House" has so rapidly won. The Editor claims that the lady of the house will find this coming issue of valuable assistance to her in the arrangement of Christmas hospitality and festivities. "Christmas Decorations" are dealt with, showing how the commonplace scattering of Holly and evergreens behind pictures and over doors may be superseded, with practically no extra expense and very little trouble, by truly artistic adornment. Then, the Christmas Dinner, with a selection of special and seasonable menus, and recipes for their production is given; supplemented by a scheme of table decoration, which, if followed, would certainly enable the hostess to enhance the enjoyment of the repasts provided, by giving them an extremely decorative setting. The Christmas Play is not forgotten. Amateurs desirous of making a suitable set-off to their histrionic triumphs, have the fullest instructions for the painting of scenery and mounting, a perusal of which would prevent many a *fiasco*. Apart from these seasonable articles the usual amount of useful and original information on subjects associated with the furnishing, decoration, and management of the home will be included. Perhaps the most important feature, however, is the introduction to the public, for the first time, of a new work for artistic fingers, invented by the proprietors. It is styled "Tarsia," and takes the form of beautiful designs executed in actual woods of various colours. The Editor states that these designs may, by following the instructions given, be executed by any person without the least previous training, the only tools required being scissors—and patience. These particulars indicate that this Christmas Number (price 6d.) will certainly not lack interest for those who love their homes, and who wish to improve their surroundings.

National Chrysanthemum Society.—We understand that the Annual Outing for Members of this Society, in 1898, is arranged, and that Ipswich and its neighbourhood are to be the rendezvous.

The shape of Mushrooms.—Willie: "It's always in damp places where Mushrooms grow, isn't it, papa?" Papa: "Yes, my boy." "Is that the reason they look like umbrellas, papa?"

Jubilee of M. P. J. de Pannemaeker.—This professor of design and the painting of flowers at the School of Horticulture of the State of Ghent, on the occasion of the 25th anniversary of his entry into the professorship, was awarded the Civic Medal of the first-class by the Government. The royal command bears the date 6th September, 1897. The colleagues, friends and co-workers of M. de Pannemaeker entertained him to a banquet on the 7th October.

Instruction for Apprentice Gardeners.—Our contemporary *Bulletin d'Arboriculture, de Floriculture, &c.* says that the Royal Agricultural and Botanical Society of Ghent announced its intention of opening at the Casino, Ghent, on the 8th inst., a public and gratuitous course of instruction for apprentice gardeners after work hours. It is intended for the sons of workmen who have not the means to attend the School of Horticulture. When will that excellent example be followed in Britain?

Storing Apples.—A dry room should be selected in which to store the Apples. After the fruit has been gathered for a week or ten days there will be considerable sweating, and at the expiration of that time the fruit should be rubbed dry with a cloth, or failing that turned once or twice. The windows of the room may be kept open by day when the atmosphere is dry outside, even until frost threatens. Then if nearly a foot of clean dry wheaten straw is spread over the Apples it will keep the frost out. Newspapers also answer this purpose well.

Sidmouth Chrysanthemum and Fruit Show.—The ninth annual exhibition of the Sidmouth and District Horticultural Society was held recently at the Manor Concert Hall, Sidmouth. The number of entries (upwards of 200) compared very favourably with those held on previous occasions, and the quality was first-rate. The judges were:—Messrs. J. Mayne, Bicton; Underdown, Escot, Ottery St. Mary; Pragnell, Sherborne Castle; and J Reynolds, Sidbury Manor. The premier award for the group of Chrysanthemums fell to Mr. Cross, who was followed in order of mention by the Rev. W. Vickers, and Mr. Earland. In another class for a group of similar material the Rev. H. Clement led. Mr. Cross had the best twelve cut Japanese Chrysanthemums, grown by the aid of Ichthemic Guano, the prize being given by the Ichthemic Guano Co. of Ipswich. Mr. Cross also won for six mixed, twelve cut blooms, three of a kind, for the best bloom in the show. Mr. R. Carnell was another successful exhibitor. Mr. T. Dingwall had the best six table plants. Miss F. Street won for table decorations. The prizes for the collection of twelve kinds of vegetables were awarded to Messrs. G. Cox, W. H. Underdown, and R. Ashton, in order of mention. One of the features of the show was the large and effective exhibit of decorative plants made by Mr. H. Berwick, of the Fortfield Nurseries.

PEOPLE WE HAVE MET.

MR. ALEXANDER HAGGART.

A NEW and worthy addition to our gallery of notable horticulturists is Mr. Alex. Haggart, of The Gardens, Moor Park, Ludlow, the winner of the Diamond Jubilee Gold Medal and £50 cash prize of the Scottish Horticultural Association, besides the trophy prize; and I have had the pleasure of an interview with him. Mr. Haggart received me most cordially, and in reply to my inquiries as to his early days I learned that he was born in the year 1854, in Forfarshire.

"Will you give me a short outline of your start in life, Mr. Haggart?"

"I was at the age of sixteen apprenticed to Mr. James Mitchell, gardener to the Earl of Dalhousie, at Panmure, and to his able tuition I attribute most of my ultimate success. I was there about four years, after which I went to Auchinleck House, Ayrshire, the county seat of Lady Boswell, under

Mr. Watson, where I spent two years as foreman of the glass."

"And where did you move to next, Mr. Haggart?"

"My next move was to Tarvit, Cupar-Fife, the residence of Capt. Rigg, under Mr. Williamson, whom I found to be a good master, and a clever gardener. I spent but one year here, and I may say that I learnt many useful things connected with horticulture. After that I went to Buchanan Castle, the seat of the Duke of Montrose, under Mr. Crosbie,

MR. ALEXANDER HAGGART.

who is still there, although seventeen years have passed since I left the Castle. After being there for one year, and gaining a useful knowledge of culture under glass, I again moved, and this time I pitched my tent for good."

"Will you give me an idea of how you first started growing for exhibition, and what induced you to do so?"

"With pleasure. I had read many articles on 'Mum growing by Mr. E. Molyneux, and was tempted to show a few at Shrewsbury, afterwards at Birmingham; but the best growers in Liverpool kept me in check, and although I exhibited for many years at Birmingham Mr. Parker always proved best man with the exception of once, when I was placed before him for eighteen Japs."

"But even then, Mr. Haggart, you did not despair?"

"No. In November, 1895, I visited the Royal Aquarium show for the first time, and was much struck with the wonderful specimens of skill then exhibited. I thought I had as good blooms at home, and entered for the December show, and was successful with twenty-four, twelve, and six Japs; second for incurved, and received a First-class Certificate for a new variety, Mrs. C. E. Shea."

"This, naturally, stimulated you, and induced you to enter the lists for a greater honour?"

"Yes. In the next year I entered for the Great Jubilee Prize for sixty blooms, in which there were twelve entries, mine being placed third."

"Unfortunately for me the show was a week too early for my blooms, and bearing this in mind I had them early this year, but the weather interfered and we were again late; but, fortunately, the greatest prize ever offered by any Chrysanthemum society was late, and I entered for the two big classes at Edinburgh, with the result that is already known."

"To what do you attribute your success, Mr. Haggart?"

"Well, to a determination never to give in, and to an observant look out for new ideas in the course of my wanderings."

"Have you encountered many difficulties in the way of exhibiting?"

"The difficulty I have had has chiefly been with my employers, whose rule when engaging has been to bar exhibiting; but my present employer, the

Hon. Lucius O'Brien, son of Lord Inchquin, of County Clare, very kindly withdrew the rule. Beyond this I have encountered few difficulties, my entry into the list of competitors being welcomed by most of the leading lights of the horticultural world, and I have found that little, if any, cold water is thrown over a new competitor in this particular branch, as is too frequently the case with others."

Mr. Haggart, it may be mentioned, is a non-smoker, an abstainer, and, what is strange for a Scot, takes no snuff. I am sure that his entry in the already large list of competitors for honours in the Chrysanthemum growing world will be cordially welcomed by my many readers. Mr. Haggart is a typical man of his race, and to my many Scotch readers this short description of his life will be especially welcome. I hope to have the pleasure of again seeing Mr. Haggart at some of the larger shows, and trust that he will continue to be as successful as heretofore. He has certainly taught some of the other cracks a lesson.—Gyp.

[Our photo is from a picture specially taken for THE GARDENING WORLD on the day of the award at Edinburgh by Messrs. Horsburgh & Son, Edinburgh and London.—ED.]

FLORAL DECORATIONS AT LAMBTON CASTLE.

DURING the visit of the Prince of Wales to Lambton Castle, Fence Houses, last week, the floral decorations were carried out in a most elaborate manner. The large, magnificent entrance hall, 100 ft. long by 45 ft. wide, and 60 ft. high, is well worthy of record. Gigantic and stately Palms, Kentias 30 ft. high, and other fine foliage plants, intermingled with Chrysanthemums, Poinsettias, Violets, Roman Hyacinths, and Azalea mollis, were beautifully arranged with telling effect. Over 150 glasses were used during the four nights of H.R.H. visit for table decorations. Each night a complete change of flowers and arrangements were made by Mr. James Hunter, the gardener-in-chief, who was congratulated upon the beautiful arrangements by many of the distinguished guests.

One night hundreds of sprays of Lily of the Valley, combined with dozens of flowers of the old *Cypripedium insigne*, were employed. On another occasion the table was decorated with Roman Hyacinths and Violets, and on the third night with *Poinsettia pulcherrima*, Lily of the Valley, and Roman Hyacinths. On the fourth night a complete change was made. The whole of the tables were decorated with Chrysanthemums, which produced a grand display. Fruit, one may be sure by the reputation Lambton has, was everything that could be desired. Great credit is due to Mr. J. Hunter for the various products of the garden he used on this occasion.—A. O.

NATIONAL CHRYSANTHEMUM SOCIETY.

THE annual dinner of this society was held on Wednesday evening, 24th November, at Anderton's Hotel, Fleet Street, London. The excellent menu supplied by Mr. Clemow, and the delightful chairmanship of Mr. T. W. Sanders, combined with the tasteful floral decorations of Miss Dean, and the musical arrangements of Mr. H. Myers constituted a very pleasant evening to a full gathering.

In proposing a toast, "The Glorious Chrysanthemum and its Devotees," the chairman said, "for 1,000 years the Easterns have worshipped the Chrysanthemum. Its cultivation unites all brotherhood, as the flower is second to none. The Rose is beautiful because it blooms in the summer sunshine and light, but the 'Mum sends out all its glory and beauty during the times of cold and murky atmosphere. The influence it has exerted in western countries and here has made horticulture more inviting to hundreds of thousands of persons. Even in the East of London the results of 'Mum culture are surprising by reason of the grand masses of blooms produced. The suburban amateurs also make grand displays, whilst the nurserymen and professional gardeners, who are to be congratulated upon their spirit of enterprise, are striving to make the flower even more popular."

Mr. Sanders claimed that the N. C. S. was the cause of all this enthusiasm, and gave the statistics

as to affiliated branches in England and the Colonies, showing that 148 affiliations had already been effected, ten of them being since the commencement of 1897. Mr. Sanders paid a warm tribute to the council and members of the Scottish Horticultural Association for the grand reception given and hospitality shown to himself and colleagues from London, at the great Edinburgh Festival the previous week.

Much enthusiasm was evinced when the chairman presented the National Challenge Trophy to the Bromley and District Chrysanthemum Society, and the various medals and awards to the successful exhibitors at the recent show.

In rising to respond to the toast of "Our Able Secretary," Mr. Richard Dean was received in a manner well befitting the subject of the toast, and he announced that the infirmities of age necessitated that he should very shortly ask the committee to relieve him of some part of the onerous duties required from him as secretary and superintendent of shows.

Several toasts and songs pleasantly filled up a long evening's entertainment.

HOSPITALITY OF THE SCOTTISH HORTICULTURAL ASSOCIATION.

WHILE the show inaugurated by this association was being held the other week, there were English, Scotch, and Irish visitors, many of whom were accorded a hearty welcome in more ways than one, and who will long remember the hospitality accorded them by the council of this influential body in the Scottish capital.

On the last day of the show a number of the visitors were invited to luncheon in the Royal British Hotel, at 1 p.m., when the chair was taken by Mr. Robert Laird, the secretary. Several of the visitors being about to return to the south and west, the opportunity was taken of according them a friendly good-bye. Amongst those present on this occasion were Messrs. E. Molyneux, R. W. E. Murray, W. Mease, A. E. Stubbs, M. Todd (the president of the association), D. P. Laird, H. J. Jones, T. W. Saunders (chairman of the N.C.S. committee), A. Williams (bandmaster of the Grenadier Guards), G. M. Ross (secretary of the R.H.S., Ireland), and J. Fraser (of THE GARDENING WORLD).

After the show was cleared away from the Waverley Market, there was another good instance of the hospitality of the Scottish Horticultural Association, when a number of friends and visitors to the show were invited to supper in the Royal British Hotel. The president, Mr. M. Todd, occupied the chair, and Mr. R. W. E. Murray, convener of finance, acted as croupier. Among the guests assembled were Messrs. A. Mackenzie (treasurer), James Grieve, James Grieve, Junr., H. J. Jones, Greig, Proctor, D. P. Laird (of Messrs Laird & Sons, Edinburgh), A. E. Stubbs, Robert Laird, Wm. Mackinnon (of Mr. John Downie, Edinburgh), A. Milne, and J. Fraser.

Speeches were made by several of the gentlemen present during the course of the evening, when it transpired that the idea of organising a society in Edinburgh originated with Mr. McMillan of that city. The idea was taken up, and greatly augmented by Mr. Carruthers, of Corstorphine, the outcome being the establishment and evolution of the Scottish Horticultural Association. The latter gentleman, being unfortunately unwell, was unable to be present at the show.

Mr. James Grieve made a humorous speech, according to his wont on such occasions, during which he remarked that Mr. R. W. E. Murray was the only man who had a railway station in his "gardening." The latter, it may be remembered, was the amateur who took the Gold Medal of the association for twelve vases of Chrysanthemums. A railway runs through his garden, with a station actually in it.

Bandmaster A. Williams, on leaving Edinburgh on Saturday night (the last day of the show) was made the recipient of a handsome bouquet of Chrysanthemums. He returned a message of thanks to the council of the association, this being appropriately delivered at the supper table during the course of the evening. Many invitations were given the association by members of other societies anxious to reciprocate the kindness and hospitality accorded them by this flourishing horticultural body at the Scottish capital.

NOTES FROM THE OPEN FROM FORDE ABBEY.

OCTOBER has been a glorious month. It is astonishing what lessons we learn from such autumns as the one we are passing through. It is seldom we get such autumns as this one, although when one comes to look back over forty years there have been several in that time, and the re-occurring of each teaches one some important lessons.

This has been brought forcibly to my notice, as I look on the hardy plant borders and notice what a fine display has been made for the last few weeks with the Michaelmas Daisies or Asters. I never remember seeing these so fine as they have been this year in borders, amongst shrubs, and growing out of the turf in the wild garden. We grow them in all of these positions, and all have their recommendation.

Many cultivators think the plants must have a good "lander." By giving them this the blooms are large, but then the tall-growing kinds get too high to be effective.

We grow about a dozen of the best kinds. Some are more adapted for growing out in the turf than others, by reason of their stronger habit and more rigid nature. We have some that have been growing in the same position for the last eight years in the turf, which have had no assistance in the way of feeding, and yet at the present time (October 27th) are a mass of blue flowers.

Amongst the best for this system of culture is Robert Parker.

LOBELIA CARDINALIS QUEEN VICTORIA has had a good time, and given a good account of itself. Growing in clumps amongst Dwarf Roses, the effect has been good, the bronze foliage and red blooms contrasting grandly with the Rose leaves. This plant deserves to be more grown. It is readily raised from seed, which is by far the best way.

This autumn has taught me the value of the old saying, namely "that it is not wise to carry all your eggs in one basket," and I say it is not wise to depend on one sowing of many things. This is especially true of Dianthus; the late sowing has given us splendid material to cut from during the last six or eight weeks, and few things are more useful. What can be more beautiful than the double white or the single crimson forms, and they stand a long time in a cut state. If you want them good obtain seed from the best source; the plants grow well and few things outdistance them.

PHLOX DRUMMONDI never gave better returns than this year, and the continuing of their blooming is a very strong recommendation to them. I find them most useful for table decoration when used in separate colours. This evening I used some white and coloured ones with good effect. I grow them in batches of separate colours, obtaining the best seed I can get, regardless of cost, and grow only self colours, and those with a clear eye.

BORDER CHRYSANTHEMUMS give a bright effect in themselves, and when used amongst other hardy plants that are gone over, they are most valuable. There are so many good sorts now to be had that there is no excuse for not growing them.

A bed of bright yellow Chrysanthemum *Précocité* and white *Scabious* is now most effective.

It is seldom one sees Dahlias and Chrysanthemums of the Japanese section blooming at this time of year together. But this may be seen in many places, and in cottage gardens in this neighbourhood, and they associate well together.

I was astonished to see how well the Dahlias were in bloom in the cottage gardens in our village to-day. There seems to be a great love for these flowers amongst cottagers. Every cottage can boast of some six or eight colours.

In tender plants a season like this teaches one the advantage of being able to cover any tender things such as Begonias and things of this class. By so doing for a few nights a few weeks ago we have been keeping our beds gay, and now at the end of October they are very bright.

SALVIAS deserve to be more planted in warm, sheltered spots. Amongst the best are *S. Pitcherii*, *S. Bethelii*, and *S. splendens*, and although they do not begin to bloom till the autumn, they produce a bright picture when they are in flower. We have some big plants growing in a narrow border in front of the Abbey, from 3 ft. to 4 ft. across, of these kinds, and nothing could be more lovely than these three colours—pink, blue, and bright scarlet. If the

severe frost keeps off they will continue a long time in beauty.

Agatheae *coelestis* deserves notice at this season, as does also *Sternbergia lutea*. *Mina lobata* is blooming fine here in a sunny spot, and the Canary Creeper, grown over Sweet Pea stumps and on the stakes, is a glorious mass of yellow.

In the kitchen-garden much is learnt by observations, and here, too, the same thing applies: you must not depend on any one sowing.

No two seasons could have differed more than this and last in our garden as to Winter Spinach. We sowed three times last year, and the last sowing was not strong enough to be of use. The two first sowings gave good returns; but this year the last sowing will be most valuable, as the others are too forward if we get severe cold.

All the late-planted Cabbage and Cauliflower will be the most useful. Everything has grown so fast that Veitch's Autumn Giant Cauliflower, planted after Potatoes were lifted, is now too forward and has heads a foot across.

LATE TURNIPS will be most valuable, as they are growing fast. Endive is looking splendid, and if stored in frames before frost cuts it, there will be abundance of this most valuable winter salad.

Lettuces have grown too fast. Those we intended to stand the winter have grown too high, and we are now planting again from a later sowing.

It has been a fine time to allow late Pears and Apples to hang on the trees to ripen; Pear Winter Nelis I gathered on the 25th, and hope to allow Easter Beurré and Josephine de Malines to hang till November. I find all mid-season kinds coming into use too fast, as the store house cannot be kept cold.

I never remember seeing the foliage die off such a high colour. Some of the shades of crimson and yellow are most gorgeous and seldom have the bees had such a good time for working the Ivy bloom. Over the ahhey there is a good deal of Ivy, and the air is in a hum with bees working the bloom.—J. C., *Chard*.

MARKET GARDENING IN THE QUEEN'S REIGN.

(Concluded from p. 197.)

GRAPES.—Over a thousands tons of Grapes are marketed each year. The favourite varieties are Black Hamburgh, Gros Colman, and Madresfield Court.

TOMATOS are marketed at the rate of 6,000 tons a year. The old wrinkled varieties have disappeared, and their places have been taken by fruits of the Perfection type. Seedlings of Challenger, Trophy, and Chemin Rouge are amongst the best.

CUCUMBERS are sold at the rate of about 500,000 dozen annually. There is a considerable export trade in Cucumbers. Telegraph and the white-spined varieties dominate the market.

PEACHES AND NECTARINES are grown, but there is comparatively little profit attached to them. The best fruit will always fetch a high price, but the greater part of the fruit is allowed to get too ripe before it is gathered for market.

FLOWERS.

The crowning point of modern gardening is shown in the rise and progress of flower culture for market. No comparison can be drawn in this respect between 1837 and 1897. We make an increased outlay upon flowers, for they are as much the occupants of the sick room and the humble lodging as they are necessities at the highest of social functions—the Drawing Room; in fact, flowers are Nature's most charming production.

From the Snowdrop in early spring we pass on to the Violets, Narcissi, Pinks, Stocks, and Roses, and from them to the Dahlias and Chrysanthemums of autumn. In the spring, too, thousands of rooted plants are daily sold.

HOTHOUSE FLOWERS AND PLANTS are becoming more and more in demand. Palms, for instance, have vastly increased in quantity, and decreased in price since our home growers have found that they can raise them without the help of the Continental cultivator.

The grower of flowers for market has to compete not only with foreign competition (from the Riviera particularly), but also with the surplus material from private gardens which is not infrequently sent to market. The Narcissus trade of the

Scilly Isles is a good instance of the development of the industry in remote parts of the kingdom. The first consignment of flowers was sent to London in 1865, and fetched exactly £1. In 1896, 496 tons of flowers, and 59 tons of Tomatos left the Isles, chiefly for the London markets. On the busiest day this year 1,600 boxes came to London from thence.

Lilies, Roses, Gardenias, and Orchids are all grown in tremendous quantities to supply the market. The practice of retarding Lily of the Valley crowns by freezing them in order to lengthen the season has met with abundant success.

The market gardener of to-day occupies a high position, and there is no doubt that his skill and energy will still further advance both him and his chosen industry, but, said Mr. Assbee in conclusion, I must add a word of caution, just as the agricultural crisis through which we are even now passing is due not only to foreign importation, but also to the fictitious value imparted to farms by the rushing in of retired capitalists who thought farming a delightful occupation to fill their time, I am afraid that something similar may happen to the production of garden produce for market. The signs are not wanting of such a development, and I would therefore advise a cautious policy.

An interesting but not lengthy discussion followed the reading of the paper.

Mr. Roupell remarked that Mr. Assbee had made no allusion to the invasion of Apples from the Antipodes. He also said that the growers of Victoria, Australia, are on the look out for a new early Apple, and he suggested something after the style of King of the Pippins or the new Allington Pippin. He alluded to the splendid way in which Mr. Peter Kay grew Grapes at Finchley, particularly Cannon Hall Muscat, for, continued he, bringing into play a most extravagant comparison, there are numbers of bunches as big as horses' heads.

Mr. Bunyard referred to Mr. Assbee's recommendation to grow more Currants. He said the difficulty was in the prevalence of the mite that, during the last few years, had attacked the Black Currant bushes, to the dismay and loss of the growers, since no remedy had been found. His only advice was in such a case to cultivate highly and keep in as much young wood as possible. With regard to Peaches, he was of opinion that many people send their fruit to the market too ripe. Large fruits always fetched a good price, but it would pay a grower better to keep the rubbish at home than to send it to market.

In replying to the questions raised, Mr. Assbee said that the influx of Antipodean fruit did not affect the market for British fruit, since the season for the latter was over before the former came in. He also said that Mr. A. Bloc, of Santa Clara, was making arrangements to send over large quantities of fruit to this country in cool chambers.

After a cordial vote of thanks to Mr. Assbee for his comprehensive and interesting lecture the conference terminated.

PLANTS RECENTLY CERTIFICATED.

THE Floral Committee of the National Chrysanthemum Society, which assembled at the Royal Aquarium on the 15th inst., awarded First-class Certificates to the Chrysanthemums mentioned hereunder.

MASTER H. TUCKER.—This is a large rich crimson Japanese variety. The florets are long, heavy, incurve considerably, and have a reverse of crimson-gold. The bloom is not of great depth and is rather flat. Mr. H. Shoemith, Claremont Nursery, Woking.

GEORGINA PITCHER.—A huge Jap with massive incurving, ribbed florets. The colour is rich yellow. It is a first-class show variety. Mr. W. Wells, Earlswood Nurseries, Redhill.

MIDDLE. LAWRENCE ZEDE is a rosy-lilac Japanese bloom with heavily incurving and inter-twisting florets. The reverse is silvery. Mr. W. Wells.

EARLSWOOD BEAUTY.—This is the latest addition to the ranks of the single-flowered section. In this form there are two or three rows of long, slightly drooping white florets. The length of the latter gives the bloom a large size. Mr. W. Wells.

MIDDLE. LUCIE FAURE.—This is one of the 1897 introductions of M. Calvat, of Grenoble, and is certainly one of the finest of them. It was certificated

as an incurve, but it undoubtedly has a great deal of Japanese blood in it. The size is tremendous, and leaves the old type of incurve far behind. The colour is creamy-white, and the florets are long, pointed, and have divided apices. Mr. W. J. Godfrey, Exmouth, Devon.

ERNEST CANNELL.—This is another instance of the larger type of incurves that has been so strongly pushed of late. The florets are broad and massive, and the bloom is of globular shape. The colour is a pretty shade of buff-yellow. Messrs. H. Cannell & Sons, Swanley, Kent.

MRS. G. CARPENTER.—A very handsome Japanese flower, although occasionally inclined to coarseness. The colour is rich lilac, shading to purple-lilac at the base of the florets and towards the centre of the flower. The reverse is silvery. Mr. Carpenter, West Hall, Byfleet.

The following varieties were commended:—

MATTHEW HODGSON.—A dull crimson Japanese bloom with gold reverse. Mr. J. Ollerhead, Wimbledon House.

MRS. EGAN.—An incurve of medium size, the colour lilac, shading to white. The bloom is much after the style of Hero of Stoke Newington, but it has rather more colour. Mr. R. Owen, Maidenhead.

MADAME FERLAT.—Another of M. Calvat's '97 introductions. It belongs to the large flowered modern incurves. The colour is dead white, and the bloom is striking enough from its very size. Mr. W. Wells.

LADY NORTHCOTE.—A large Jap with long, drooping, tubular outer florets. The colour is light lilac, shading to white in the centre. Mr. W. J. Godfrey.

PHILIP MANN.—A medium sized Japanese flower. The colour is the chief feature, for it is bright purple, and very handsome, but the flower is not large enough for a show variety—at least at present. Mr. W. J. Godfrey.

Chrysanthemums.

THE following received First-class Certificates from the Floral Committee of the N. C. S., at the meeting held at the Royal Aquarium on November 22nd:—

JOSEPH CHAMBERLAIN.—A magnificent Japanese variety. The colour is crimson-red, with a gold reverse; in fact, much the same colour as Edwin Molyneux. The florets are long, drooping, and of medium width. This is one of the finest dark varieties exhibited this year. Mr. H. Weeks, The Gardens, Thrumpton Hall, Derby.

JULIA SCARAMANGA.—A large Japanese form, in colour bronze-terra-cotta, with a paler reverse. The lower florets are exceptionally long and quilled, thus giving the bloom great depth. Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey.

MME. FERLAT.—One of the large modern types of incurves. The colour is pure white, the florets stout and substantial with acute apices. This is a very handsome flower when well grown. Mr. W. Wells.

A commendation was bestowed upon the under-mentioned variety.

DON DE LA MADONE.—A medium-sized reflexed Japanese variety with white blooms of great solidity. It is much after the style of Avalanche. M. Anatole Cordonnier, Roubaix, France.

Gleanings from the World of Science.

THE subjects mentioned hereunder were brought up for the consideration of the Scientific Committee of the Royal Horticultural Society on the 9th ult.

Cattleya labiata, Sport.—Dr. Masters observed that sports similar to those produced at the last meeting, in which two sepals were more or less resembling the labellum, had been sent to him from numerous localities this year. The species was introduced some fifty years ago, and subsequently lost; but it has been lately rediscovered in, and introduced from, Pernambuco.

Carnation Leaves with Horn-like Marginal Outgrowths.—Mr. Michael reported that no trace of acari could be seen, as suggested as a possible cause. Dr. Müller observed that a plant of Solanum jasminoides was covered all over with horn-like excrescences. Dr. Masters suggested that they were probably spongy outgrowths from the epidermis.

Stocks, &c., Attacked by Beetles.—Mr. Michael observed that Stocks, Virginia Stocks, and Nasturtiums in his garden were attacked and utterly spoilt in a fortnight by thousands of beetles eating the flowers of the two former plants, but the leaves as well of the last-named. They do not entirely kill the plants, which renew both leaves and flowers after the beetles have disappeared. A partial remedy was found in shaking the plants over a basin of hot water. It appears to be Phyllotreta atra, one of the numerous "flea beetles." Miss Ormerod, to whom they were sent, suggests "trying a mixture of equal parts of fresh gas lime and quicklime, with a much smaller proportion of soot, and about half as much sulphur as of soot. These should be powdered up together very finely, well mixed, and dusted on to the foliage when the dew is on it, morning or evening. Just a sprinkling is enough. It usually acts well if applied as above, so as to adhere to the beetles and foliage." She was under the impression, however, "that lime similarly applied would do equally well."

Ivy Attacked by Dodder.—Mr. Chas. Herrin, of Dropmore, sent specimens of Ivy badly attacked by a *Cuscuta*. He remarks, "This parasite has established itself on the west wall of our church, destroying the Ivy with which it is covered. It has been thoroughly destroyed, Ivy and all, once, a few years ago; but now that the Ivy has begun to grow nicely again, half covering the wall, it has again appeared, and is destroying it." As the seeds must germinate in the ground, or perhaps in the chinks in the wall as well, the aim must be to kill them before germinating. If the ground by the wall receive a good dressing of slaked lime, such might prove effective.

Cox's Orange Pippin Apple Striped.—Mr. G. Swailes of Beverley, sent an Apple, mostly red, but striped with green on one side, the latter colour being on the most exposed side. The cause was unknown. Dr. Masters suggested the possibility of accidental crossing having been the cause, for Darwin had described similar results in an Orange pollinated by a Lemon ("An. and Pl. under Dom." I., p. 399). Mr. Wilks mentioned that a Beurré d' Amanlis Pear in his garden had thrown out a green striped sport, also a bough bearing golden foliage.

Gall on Jessamine.—Mr. Henslow exhibited a large globular gall which he had taken from the stem of this plant. As no fungus was present, it was sent to Mr. MacLachlan for examination.

Composition of Potatos.—Prof. Church gave some account of the late recent researches of MM. Coudod and Bussard on the distribution of the constituents in Potatos. They found that a slice of a Potato revealed three zones; the external one beneath the epidermis contained 73 per cent. of water, the central holding about 80 to 84 per cent.; that the central part contained the greater amount of nitrogen, the exterior the greater quantity of starch. This accounted for the "bursting" in a floury Potato, which is relatively more free from albuminoid matters. The cause of the interior portion being more consistent is that the starch cells, though bursting, are held altogether by the curdling of the albuminoid matters during cooking. The same peculiarities appear in the thirty-four varieties examined. The intermediate zone was also of an intermediate character with regard to its structure and cell contents. It was to be regretted that the authors did not distinguish between the true albuminoids and the amides in estimating their percentage of nitrogenous matter. As a rule the former amount to 1.3 in Potatos, but they had estimated them from the total nitrogen as from 1.8 to 2.5. Dr. Masters remarked that these observations corresponded with the stem-structure of the Potato, which would have the cortex as a starch reservoir as it is in trees, while the deeper layers would correspond with the phloem or proteid-holding sieve tubes.

Ribes aureum in Fruit.—Dr. Masters, at a recent meeting of the Scientific Committee of the Royal Horticultural Society, exhibited a branch bearing a raceme of ripe purple-black berries, of this common shrub. Though introduced by Mr. Douglas from California, the fruit has rarely, if ever, been seen before. It was received from Mr. Veitch.

HINTS FOR AMATEURS.

Single Chrysanthemums.—There is no doubt that the large-flowered Japanese, incurved Japanese, and incurved Chrysanthemums monopolise a great deal of the attention of the 'Mum-loving public by reason of their very size and imposing appearance, but we turn to the singles with a feeling of something like relief. We do not wish in any way to detract from the value of the larger flowers, for they are all of service in their particular direction, but we may say without exaggeration that in the single flowers we get a pleasing and useful break-away from the large flowers.

There are not wanting persons who, from an aesthetic point of view, prefer the singles to anything else, and who aver that they see neither grace nor beauty in the large flowers that the skill of the florist has called into existence. However much truth there may be in these remarks, and although the greater majority of cultivators would not be prepared to endorse them fully there are very few persons indeed who have not a very warm corner in their affections for the single varieties.

This is not at all surprising when we consider how very useful the plants are to those who have to keep up with large demands for cut flowers and plants for decorative purposes. Most of the plants are very floriferous, and as they are, as a rule, not subjected to quite so much feeding as the large-flowered varieties, consequently the constitutions of the plants are not submitted to so great and continuous a strain. As a result the plants are generally good doers, and repay fully any trouble and care that may be exercised on their behalf.

Perhaps a word or two upon the definition of a single may not be inopportune. There are numbers of varieties upon the market that pass for singles, and are often regarded as such, but which are in reality not true singles at all, but semi-doubles. Examination will reveal that there are several, sometimes as many as four or five rows of ray florets. Such varieties, therefore, although they may be very pretty in themselves, cannot be properly styled singles, and can only be placed in the decorative section, which is a sort of waste-paper basket to hold sorts about the classification of which it is difficult to decide, or which do not fall readily into the various existing classes.

A true single variety should, strictly speaking, only have a single row of ray florets, but according to the decision of the National Chrysanthemum Society, a variety is accepted as a single if there are not more than two rows of ray florets.

The laxity that has been permitted in allowing varieties to be placed upon the market as singles, when they do not fulfil this requirement has doubtless caused a good deal of disappointment, and, it may be, not a little anger on the part of those who have attempted to show such varieties as singles, and have been disqualified by the judges as the natural result. In such cases the judges have only performed their duty, but this does not remove from the disqualified exhibitor's mind the sense of an injustice done, which remains even after the reason for the disqualification has been given. This all goes to show that cultivators who intend to exhibit cannot be too particular when they are obtaining their plants to see that they satisfy the condition of the section under which they are nominally placed.

There are several types of single flowers, and these together cover a good deal of ground. For the sake of convenience the section may be divided into large and small flowered varieties, but the large flowers again exhibit a good deal of distinctness in build and style. The varieties with long, drooping, rather pointed florets, and a corresponding looseness of build in the bloom are deservedly much admired and very popular. There is a good deal of difference between them, however, and the group of which Miss Mary Anderson is the type, which may, if desired, be regarded as a section with medium-sized flowers. Here we have a compact flower, with the florets very broad, of medium length, and touching each other along the greater part of their length. They are somewhat stiffer also, and the outline is very regular and circular.

One of the greatest merits of the singles is their continuity of blooming. From the beginning of October right up to Christmas they will furnish

flowers in quantity, providing a suitable selection of varieties is made, and that some discretion in forwarding some plants and retarding other is employed. Damp, which usually plays so much havoc with the larger flowers during the month of November, has comparatively little effect upon the singles, and the flowers preserve their colour and freshness for a very long season. Not only, moreover, do they last well upon the plants, but they stand for a long time in water when cut.

For table decoration, and for the filling of vases during the months of November and December, they are simply invaluable. In skilled hands exceedingly fine effects may be produced by them, and their grace and elegance cannot well be over-praised.

We have a long list of varieties from which to pick and choose, and as these represent a considerable range of colour a liberal selection of them may be grown with advantage. The following will be found to include some of the finest and most useful varieties. A few of them it will be observed are not strictly singles, but semi-doubles, but where we have included a few of these by reason of their value and beauty, mention has been made of their ineligibility to be shown at an exhibition as singles.

Miss Rose may be taken as one of the finest types of the small-flowered section. It is deservedly a great favourite with many people. For conservatory decoration there is nothing that surpasses it. The habit is very dwarf and bushy, and the plants take on a very symmetrical habit. As ordinary bush plants in six, seven, or eight inch pots, they are great successes, and there is no gainsaying their beauty when they are covered with the delicate pink flowers. Of late years the greenhouse number IV. at Kew has accommodated a number of plants of this stamp, and these have been much admired by visitors to the famous gardens. Occasionally we see this variety subjected to elaborate training. To this it takes kindly, and although it does not make such large specimens as some other single forms, it develops into very neat samples.

The Star is an improved form of Miss Rose, raised by Messrs. H. Cannell & Sons, of Swanley, Kent. The habit of the plant is the same, but the flowers are larger and of a deeper rosy-pink hue. There is no doubt as to the distinct character of the two forms when they are grown side by side and compared with each other.

Mary Anderson is another deservedly popular form. The habit here is somewhat taller, but still not tall. The flowers are large, bluish-white in colour and of perfectly circular outline. Messrs. H. Cannell & Sons have been very busy of late years in raising a lot of seedlings, of which one of the parents has been this variety. The object of course is to get a number of colours with flowers of the same build and style.

Blanche Chapman.—This is one of the finest of the seedlings above referred to. The colour is pearly pink, with a light rose reverse. The build of the flower is similar to that of its parent. The habit is good, and the plant is very free flowering. We were much struck with this variety during a recent visit to the Swanley Nurseries.

Irene is another very handsome form belonging to the same batch of seedlings. The flowers are large and pure white, and produced with exceptional freedom. The habit is very dwarf and bushy, and we have no doubt when the variety is better known that the plant will receive a good deal of the attention of the public.

Miss Annie Holden is an older sort that has been awarded a First-class Certificate by the National Chrysanthemum Society. It is certainly a charming form, and worthy of inclusion in every collection. The colour is bright canary-yellow, a colour that shows up well either by night or day. Habit and constitution are alike good.

Jane, which also has been named Snowflake, is one of the handsomest of the large-flowered section. The ray florets are long, drooping, inter-twisting, white, and with acute apices. There are several rows of florets, however, especially when the plants are subjected to high cultivation; hence the variety must be regarded as being strictly a semi-double. It was sent out by the Messrs. Cannell in 1885, so that it has been before the public for twelve years.

Yellow Jane, sent out by the Messrs. Cannell in 1889, is the exact counterpart of Jane as far as build of bloom goes, but the colour is bright yellow. Both

it and the white form are midseason varieties. Yellow Jane is, however, considerably taller than its white counterpart, and rather more straggling in habit.—*Rex*.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Forcing Rhubarb.—*Aurore*: You will scarcely have time now to get Rhubarb by Christmas, unless you are willing to forego a good deal of the produce of the roots by reason of the hard forcing that will be necessary. You must lift the roots at once. If you have space beneath the stage of a warm house close to the pipes you may pack the roots closely together, covering them over lightly with leaf soil, and surrounding them with boards to keep the heat of the pipes from drying them up too much. Keep the roots well sprinkled with tepid water, and cover them up with mats to exclude the light.

Border Carnations.—*Franco*: You need have little fear of the effect of cold weather upon the Carnations. What you have to dread far more is the damp. Your plants will not require watering for some time yet to come. The lights may be pulled completely off the frame when the thermometer is above freezing point and it does not rain. During very cold weather you may cover the frames with a few mats, or, if these are not forthcoming, with dry litter of any kind.

Chrysanthemum Sport.—*L. S.*: The bloom you forward is of no value whatever. The colour is bad, and the appearance rather coarse. The stem, moreover, is too weak to uphold the flower. We are sure that you will be only courting further disappointment in trying to grow it.

Why do Chrysanthemums Sport? is the question propounded by C., and we must confess that it is one to which we cannot give a direct answer as to the immediate causes of the phenomenon. After a few years of continuous cross-breeding the stability of the plant becomes upset, although this may not be apparent. The result is that we never know when a plant is going to break away into another direction, and any small influence, such as a very dry or very wet season, overfeeding, or starving, may turn the scale. The modern Chrysanthemum is a very highly bred plant, and its stability must be correspondingly precarious, hence we find that every year "sports" make their appearance. These sports may exemplify a hitherto new colour, or they may be reversions to a former type. The grower can never definitely foretell which way the balance is going to turn.

Early Grapes.—*T. S.*: You may start the vinery at the beginning of December if you like, but you should make sure that the heating apparatus is capable of keeping the house at the requisite temperature during January and February, or you would be well advised to leave it until a little later. By starting thus early you will have two of the colder months of the year to fight against, and the gradually increasing temperature of the house will by that time have reached a fair height, and you may have difficulty in keeping it up.

Greenhouse.—*F. Lawrence*: If, as you state, you would not be allowed to have a greenhouse in your back garden with the roof higher than the 5 foot wall, the only plan seems to furnish it with a sunk floor, and thus bring the eaves of the house close to the ground, when you would be able to get it within the prescribed height. This arrangement would cost you more than the ordinary one would, and you have to consider whether your trouble and expense are likely to be repaid. A frame heated with a flow and return pipe would enable you to grow a lot of plants, and it would probably be the wiser plan to invest in this rather than the greenhouse under the circumstances.

Agathaea coelestis is the name of the plant to

which you refer, *O.R.* It is occasionally employed as a summer bedding plant, but is even more useful as a pot subject for the cool greenhouse or conservatory. It is practically a continuous flower, and the bright blue flowers look very gay at this time of the year. Cuttings may be struck at almost any season if they are given a gentle heat. The plant is a native of the Cape of Good Hope.

CHRYSANTHEMUM GEORGE FOSTER.

STILL another good thing has been added to the list of incurved Japanese Chrysanthemums that are sure to make a history for themselves on the show boards in the near future. The long florets are broad, of good substance, twisting more or less to the right and left, as well as at the centre of the bloom, which is deep, massive, and altogether well

very successful this year. The accompanying illustration was prepared from a photograph sent us by Mr. Godfrey, and shows the natural size of the bloom.

ARDENLEE, DUNOON, N.B.

IN the neighbourhood of Dunoon on the shores of

CHRYSANTHEMUM GEORGE FOSTER.

Hollyhocks.—*M. T., York:* Your best plan with regard to the choice varieties still in the open ground will be to cut them down close to the ground, lift them with as many as possible of the roots intact, and lay the stools close together in shallow boxes, covering them with soil. Place the boxes in a cold frame to winter. No water will be needed for the present.

built and attractive. The colour is a rich, clear yellow. The habit of the plant is strong and robust. Its merits have already been recognised by the National Chrysanthemum Society, which awarded it a First-class Certificate on the 1st November last. It was raised and will be disseminated by Mr. W. J. Godfrey, Rolle Street, Exmouth, Devon, along with his very numerous other novelties, which have been

the Firth of Clyde, there are numerous pretty villas and well-appointed stately houses which nestle, so to speak, amid a wealth of foliage. Many of these charmingly situated residences occupy sites that are more or less elevated, and are literally embosomed in the richest verdure. The hills also, in the background, are clothed in an emerald sheen; or the purple of the Heather, or the gold-brown of the

Bracken, each after its kind, lend a lustre or give a colour to the landscape, which no mere description can possibly compass.

Higher up still—up to the mountain summits—colour goes merrily along; but *there* it depends upon the rosy or the melancholy morn, the condition of the mid-day air, the subdued evening light, or the glories of the setting sun. Here, also, originate those tiny tinkling streams which gain in volume as they descend to lower altitudes, and which, ever and anon, during their downward course, sparkle in the sun like mirrors of burnished silver. But enough of poetising; let us give up—

"Dreaming upon the wonderful, sweet face
Of Nature, in a wild and pathless place,"

and come down to more mundane matters. Let us attempt a succinct account of Ardenlee, the subject of our cares.

Ardenlee, then, is about a mile from Dunoon, on the southern side, is beautifully situated, commands the Firth of Clyde and the hills of Renfrewshire on the opposite side. Ardenlee is occupied by C. M. Hogg, Esq., a Glasgow sugar-refiner, and is fairly representative of its class in this moist, but favoured, clime. The mansion is painted a dead white, so much that I feel I must call it the "White House of the Woods." Woods prevail here, and what is called the "Bull Wood" consists principally of Oaks. Two things, however, contribute to the reputation of Bullwood—one is that *Hymenophyllum Wilsoni* was first found here as a British habitat—and fortunately it still survives—and the other, though less tangible is really interesting, because it solemnly declares that Mary Stuart may be sometimes seen in ghostly mien. Alas, who would not have a ghostly eye to see a ghostly queen!

Probably this story has had some effect on my mental vision in intensifying the whiteness of Ardenlee. However that may be, the "White House" is worth a visit. To show the nature of the ground, I may state that the conservatory, which is at the back of the house, is up among the chimneys, and that the servant's entrance is through a tunnel cut out of the solid rock.

In such a position, then, one may expect art to come to the aid of Nature; and so it does—especially gardening art, for Mr. J. Fraser—a potent name in horticulture—tells me that, in mowing the steep slopes, the machine has to be worked up and down with a rope. As a matter of fact the garden—about six acres—is all steeps and terraces, the upper portion being about 200 ft. above the lower.

Notwithstanding these natural difficulties some very good results are obtained where the soil is sufficiently deep to permit of success. Fruit trees, it is hardly necessary to add, are not grown in the best of mediums, but by root-pruning and other details, Mr. Fraser has secured on a wall a fair crop of Apples and Pears. King of Pippins, Stirling Castle, and Cellini are his best Apples; while Marie Louise, and Bellissime d'Hiver, represent the two sections of Pears. Fruit trees, however, are much subject to canker. Moss and lichen also abound, due, no doubt, to the excessively moist conditions which prevail. Bush fruits, however, and Strawberries give a large return. In the houses, of course, better results are obtained, because the conditions are more under control. Vines look well, Foster's Seedling and Alnwick Seedling bringing up the closing year. Tomatos, too, are still bearing a "mickle" of fruit, Challenger, Conference, and Frogmore Selected, being the favourites grown. These are cultivated on what may be termed a sliding scale; *i. e.*, the shelves are lowered as the height of the plants increase, so that a good crop is thus taken all up the stems.

In a miscellaneous collection of plants I noticed *Pelargonium Agnes*, a fine pure white, and probably the best of its class.

Among Conifers under glass Mr. Fraser thinks a lot of the Bermuda Cedar (*Juniperus bermudiana*), its graceful feathery foliage and general elegant appearance, rendering it a fit subject, in a small state, for cool greenhouse work. Although this is a somewhat tender species and is "rarely seen in England," it survives the winters in this mountain garden. Other trees and shrubs of a half-hardy character, as, for instance, *Chamaerops Fortunei*, *Fuchsia Riccartoni*, *Viburnum Tinus*, etc., also seem to be at home.

Chrysanthemums are well represented and well grown. In fact, I must pay Mr. Fraser a well-merited compliment—they are the most promising

lot in the district as far as my peregrinations enable me to compare. About 200 of the large-flowering plants have his attention, and these are quite up to exhibition standard, besides others which are grown as specimens or for cut flowers.

At the time of my visit—the third week in September—the most forward were being transferred to their blooming quarters to save them from their too-attentive friend, the daily drizzle.

Summer-flowering varieties, such as Piercy's Seedling, Blushing Bride, and the lovely golden-yellow *La Petite Marie* were doing well; but methinks the *season* is slightly out of gear.

But still there are some things which this "season" suits, and which find a place in every Highland garden—to wit, herbaceous plants; the Scotch climate being such as these and alpines revel in. I wish, therefore, the purely business aspects of the GARDENING WORLD, would permit a description; but they will not. Space is too valuable; time too important. Brevity is wanted; but, alas, I fear I do not possess "the soul of wit." Anyhow, my notes on this subject can stand over, although I must mention the *Viola*, another favourite N.B. flower.

Violas are *par excellence* the flowers of Caledonia "stern and wild"; they scent the air, they love the weeping skies. Bullion betrays its colour; *Clivia* is sweet-scented; *Nora May* is silvery-white; *Duchess of Fife* and *Countess of Kintore* are generally admired; *Ariel* is light and graceful; while *Dobbie's Iona* is said to be "one of the finest grown."

I cannot, however, close these notes without reference to Eckford's Sweet Peas which, under Mr. Fraser's culture, literally become "hybrid perpetuals," as they have been flowering continuously since June, and still exhibit their beautiful colours, their freshness of form and their quality of size.

Roses, also, have been a success—the old "Glory" (*Gloire de Dijon*) being so prolific that fears are entertained for its vitality.

Many other observations must be reserved from necessity, and so I will only add that many of the ordinary operations of gardening are here attended with great difficulties; such as the carting of manure, the mowing of grass, the repair of the paths, or the trundle of the wheelbarrow.

Who would not be a gardener?

In such a clime as this?

Where Nature triumphs all the year
And man has little bliss.

Where rains descend—and gravel too,

And stones roll down the glen;

Who would not be a Sisyphus

And roll them up again?

Still, Phoebus sometimes does attend

With fiery steeds, and wiles—

Oh! then the weeping skies depart

And all the garden smiles.

C. B. G., Acton, W.

CHRYSANTHEMUM SHOWS.

WARE AND DISTRICT.—November 10th.

THE Chrysanthemum show in connection with the Ware and District Horticultural Mutual Improvement Society was opened on the 10th ult. by Mrs. Barclay, of High Leigh, Hoddesdon; the weather being all that could be desired helped to increase the numbers at the opening ceremony. Many ladies and gentlemen of the district were present, including Mr. and Miss Agatha Hanbury, the president, E. S. Hanbury, Esq., of Poles; Abel Smith, Esq., M.P., of Woodhall; S. Croft, Esq., of St. Margaret's, Bury; R. Walters, Esq., of the Priory; and R. Barclay, Esq.

After the show was declared open, Miss Agatha Hanbury was called upon, in the unavoidable absence of Miss Hanbury, to present a "Silver Cup," which was given to the society by the president, to Mr. Fulford, gardener to R. Walters, Esq., for the best thirty-six blooms—eighteen Japanese and eighteen incurved—not more than two of one variety. In the prize blooms many of the leading sorts in cultivation were represented, all in good form and character, notably a fine bloom of the beautiful yellow incurved *C. H. Curtis*, to which was awarded the Society's Certificate as the best incurved bloom in the show.

Mr. Asher, gardener to R. C. Berkley, Esq., Collett Hall, was awarded second in the contest for

the silver cup. Among his blooms was the best Japanese bloom in the show which also obtained the Society's Certificate. Mr. Dover, gardener to R. Barclay, Esq., was awarded second place in this class.

Mr. Barclay was then called upon to present another silver cup to Mr. F. Durrant, New Road, Ware, which was given by W. Richardson, Esq., of Sawbridgeworth, for the best twelve Japanese blooms in the amateur class.

There were only two entries for the group of Chrysanthemums, that by Mr. Baulk, gardener to S. Croft, Esq., being first; and Mr. Asher, second, there being a creditable lot of blooms in both groups.

Mr. Asher was an easy first in the group for miscellaneous plants (*Chrysanthemums* excluded) he having a nice effective arrangement of *Bouvardias*, *Begonias*, *Roman Hyacinths*, *Cattleyas*, *Oncidiums*, etc., on a groundwork of Fern backed by a nice Palm. Mr. Dover was second; and Mr. Surridge third. Mr. Fulford also took first for six foliage plants, twelve incurved blooms, and twelve Japanese, distinct, and six dishes of culinary Apples. Mr. Gull was first for zonal *Pelargoniums*, single and double *Primulas*, and winter-flowering *Begonias*.

Mr. Sanding, gardener to D. Ludgate Flack, Esq., was first for a group measuring 6 ft. by 4 ft. of *Chrysanthemums*; first for six *Anemone* blooms; and first for three dishes of dessert Pears. Mr. Dover was first for six reflexed blooms; first for six Japanese, one variety; six dishes dessert Apples and collection of vegetables. Mr. Surridge, gardener to C. Sandeman, Esq., led for two bunches black Grapes and six dishes dessert Pears.

The amateur and cottager sections were also well contested, many first-class vegetables and fruit being shown by them.

Plants not for competition were kindly sent from the gardens at Poles, Easneye, Prisdale, and St. Margaret's, Bury.

The trade was represented by Mr. E. P. Francis, Hertford; and Mr. Chapman, Blue Coat Nurseries, Ware.

The judging was satisfactorily accomplished by Mr. G. Gordon, Kew, and Mr. C. Cox, Brickendon Grange, for flowers and plants; Mr. J. Dean, Cheshunt, and Mr. R. Smith, Brickendon, Bury, for fruit; Mr. Alexander, Walton-on-Thames, and Mr. G. Kimmins, Allenry Hall, for the vegetables.

This is the eighth Chrysanthemum show held by this society, they having commenced in 1889 and it is very gratifying to notice the progress year by year, also the interest shown by the members and committee to make not only the show but the society a success, and well worthy of the name Mutual Improvement Society.

BIRKENHEAD.—November 16th and 17th.

THE eleventh annual exhibition under the auspices of the above society was held in the Music Hall, Birkenhead. The exhibits were hardly as numerous as in previous years, but quality, with the exception of stove and greenhouse plants, was fully sustained. The groups of "Mums" were a distinct feature, whilst the cut blooms and fruit were of a high order.

The first prize winners in the more important classes were:—For twenty-four Japanese distinct, A. Ellis, Esq. (gardener, Mr. J. Davies), the finest blooms being *Duke of York*, *Phoebus*, *International*, *Etoile de Lyon*, *Mutual Friend*, *Viv. Morel*, *Chas. Davis*, *M. Gruyer*, *Western King*, *Edith Tabor*, and *G. C. Schwabe*.

For eighteen incurved varieties, Mrs. Cockburn (gardener, Mr. G. Burden) was first, the best samples being *J. Agate*, *W. Tunnington*, *Chas. H. Curtis*, *R. Petfield*, *Miss M. A. Haggas*, *Prince of Wales*, and *Bonnie Dundee*. *W. H. Watts*, Esq. (gardener, Mr. J. Bracegirdle) secured second position in each class with good blooms.

For twelve Japanese, C. J. Procter, Esq. (gardener, Mr. J. Williams), was first with a good stand.

For twelve incurved, R. Balfour, Esq. (gardener, Mr. T. Pink), led.

For six Japanese, C. McIver, Esq. (gardener, Mr. H. Holford), was first; for six incurved, J. H. Ismay, Esq. (gardener, Mr. W. Neish), led the way. Six Japanese were best shown by C. H. McCleay, Esq. (gardener, Mr. H. Ledsome); the last named exhibitor won in the maiden class for six Japs. The best six incurved came from H. B. Smith, Esq. (gardener, Mr. E. Neil).

The groups contained an abundance of good flowers, but no name was attached to the leading arrangement. Mr. W. H. B. Yeo was second with a more varied arrangement.

For the single Palm, W. Laird, Esq. (gardener, Mr. J. W. Totty), won with a good Phoenix. C. J. Gostenhofer, Esq. (gardener, Mr. J. Benyon), staged the finest Primulas; Mr. J. W. Totty the leading stove and greenhouse foliage plants. P. McGuffie, Esq. (gardener, Mr. J. Stephenson), staged the premier collection of fruit; Mrs. Pattison (gardener, Mr. T. Ferguson), the best black (Barbarossa) Grapes; R. Hobson, Esq. (gardener, Mr. McClary), the best white (Muscat of Alexandria). W. King-King, Esq., Hereford (gardener, Mr. W. Davies) excelled in eight dishes culinary Apples, Emperor Alexander, Mère de Ménage, Warner's King, and Stirling Castle being excellent. For a single dish of Apples, W. Johnson, Esq. (gardener, Mr. H. Reynolds), took the lead. Mr. W. Davies again scored for six dishes of dessert Apples including Blenheim Orange, Ribston Pippin, and Court Pendu Plat, &c. Mrs. Porter (gardener, Mr. M. Quirk) won the prize for the single dish with Blenheim Orange. For single dish of Pears Mr. H. Reynolds scored.

For four dishes (local) Mr. J. Lee staged in fine condition Alfriston, Bramley's Seedling, Blenheim Orange, and Gloria Mundi. For single dish Mr. S. E. Haines took highest honours with Warner's King.

The arrangements were somewhat late through the fault of one of the contractors, otherwise everything was satisfactory. Mr. W. Bassett and his committee proved themselves most capable officials.

KIDDERMINSTER.—November 16th and 17th.

THE fifth annual show of the St. George's Institute Chrysanthemum Society, Kidderminster, was held on Tuesday and Wednesday, November 16th and 17th, at the Town Hall, Kidderminster. The society, though a small one, and confined to exhibitors residing within a certain radius of the Town Hall, made a very interesting display, being aided very much by exhibits not for competition staged by F. Elzington, Esq., and T. S. Lea, Esq., whose groups of Chrysanthemums and foliage plants occupied the centre of the Corn Exchange, and Messrs. W. B. Rowe & Son, 65, Broad Street, Worcester, who staged an extensive and interesting collection of Apples and Pears, and whose collection of new Chrysanthemums showed marked excellence in culture and finish.

C. W. Wigsted, Esq., also exhibited a fine collection of Apples.

The judges, Mr. Cowan and Mr. Roberts exercised great care in their awards, and in the classes for groups awarded first to Lady Knight for the group of Chrysanthemums with Ferns and foliage plants, the Lord Bishop of Worcester being second.

W. Adams, Esq., secured first prize for the group of flowering and foliage plants, including Chrysanthemums, E. Cheesman, Esq., being second.

W. Probert, Esq., was first for twenty-four blooms, comprising twelve Japanese and twelve incurved. A. Barham, Esq., was second, and E. M. Wakeman, third. W. Probert, Esq., was also first for twelve Japanese and also for twelve incurved, the second prizes in these classes going to A. Baldwin, Esq., and S. Baldwin, Esq.

Epergues and bouquets were well shown, and some very handsome decorative work was exhibited.

Fruit was not well represented, the exception being Apples, which were numerous and good, the principal prizes being taken by Viscount Cobham, Mr. C. Cope, J. H. Crane, Esq., G. Baker, Esq., and E. M. Wakeman, Esq.

Some very fine collections of vegetables were shown by the Lord Bishop of Worcester, J. H. Pease, Esq., and W. Probert, Esq.

Amateurs' and cottagers' classes were well filled, and drew considerable interest to the exhibition. A collection of new Chrysanthemums shown by Mr. W. Wells, Redhill, and an exhibit by the Ichthemic Guano Company also met with much attention; and a very interesting collection of twenty-four incurved and twenty-four Japanese blooms sent for exhibition by Mr. W. Harvey, gardener to R. B. Martin, Esq., M.P., were likewise much admired.

HULL.—November 17th and 18th.

THE fourteenth annual show of the Hull and East

Riding Chrysanthemum Society, was held in the Artillery Barracks, Hull, on Wednesday and Thursday, the 17th and 18th November. From every standpoint it may be pronounced one of the most successful in the annals of the society. The arrangements of the show were ably carried out by the hon. secretaries, Mr. Edward Harland and Mr. James Dixon, F.R.H.S., and must have entailed an enormous amount of work. The building is constructed in such a manner as to enable the committee to place the large groups, the cut blooms, and the floral and table decorations in separate halls. The main hall was utilised for the large groups, which were ranged along the sides, and in the centre with the "Mirror" or "Panel" groups alternating.

In the class for a group of Chrysanthemums, interspersed with foliage plants, and arranged for effect in a space of 100 ft., the first prize of £6 and a Challenge Vase was carried off by Sir James Reckitt, Bart., Swanland Manor, Brough (gardener, Mr. George Wilson). It was an effective and tasteful arrangement, and included Palms, Bamboos, Crotons, Asparagus plumosus, etc.

Sir James Reckitt was also the successful competitor in the class for a group of miscellaneous plants arranged for effect in a space of 100 square ft., the second place being secured by Mrs. Whittaker, Cliffe House, Hessle.

In the class for twenty-four blooms of incurved Chrysanthemums, Mr. T. B. Haywood (gardener, Mr. C. J. Salter), of Reigate, was placed first, and Mr. Alfred Tate, of Leatherhead (gardener, W. Mease), second. These lots were as near perfection as possible, whilst in the class for twenty-four Japanese, distinct, splendid examples were staged by Mr. Alfred Tate (first), and Mr. T. B. Haywood (second).

There was a number of exhibits not for competition.

Mr. Wm. E. Martin, Market Street, Hull, had a large stand extending across the end of the hall in which the cut blooms were staged, upon which was shown a large variety of bulbs and tubers, relieved with some excellent pots of Roman Hyacinths in bloom, and backed by photographs of beds of spring flowering bulbs.

Messrs. Cutbush & Son, Highgate Nurseries, had a stand of the new Begonia, "Gloire de Lorraine," with Kentias and Cocos weddeliana to give the necessary greenery.

A very pretty stand of Cyclamen in bloom was shown by Messrs. R. P. Ker & Son, of Aigburth Nursery, Liverpool.

Mr. W. J. Godfrey, of Exmouth, exhibited a stand of specimen blooms of Chrysanthemums all of fine quality, amongst which we noticed some examples of Mrs. Charles Birch, and Phillip Mann, the latter being a very distinct colour.

Mr. Wm. Wells, Earlswood Nursery, also had a stand of cut blooms backed by sprays of single and decorative varieties, amongst which may be noted "Old Gold," "Earlswood Beauty," and Mignonette.

The Ichthemic Guano Company, of Ipswich, had an attractive exhibit of their speciality, which is now very largely used for the production of finished blooms.

The judges were Messrs. Richard Dean (Ealing), G. Gordon ("Gardeners Magazine"), E. Molyneux (Swanmore Park Gardens), and Mr. John Wright ("Journal of Horticulture").

WISBECH.—November 17th and 18th.

THE seventh annual show of this society was opened on November 17th in the Corn Exchange by the Mayoress, Mrs. R. Farrow, the judges being Messrs. G. Langdon, of London, and Geo. F. Barrell, J.P., of Spalding. The exhibits were of excellent quality, and did great credit to the amateurs.

The principal prizes were as follows:—For a group of Chrysanthemums, bordered with foliage plants, first, Mr. Ward Layle, gardener to Mr. J. Groom; second, Mr. G. W. Miller, Nurseryman, Walsoken. The first prize also carries the N.C.S. Silver Medal.

In the competition for a group of miscellaneous plants, Mr. G. W. Gooch, Holland House, Spalding, was first, and Mr. T. Powley, Wisbech, second.

The stove plants were a strong class, Dr. G. Mason, Wisbech (gardener, Mr. J. Rutter), securing first, and Mr. G. W. Gooch the second prize, while Mr. W. S. Collins, Wisbech, was third.

The cut blooms were a large class, and of good quality.

For twenty-four blooms of any varieties, Mr. H. Wilcox, Spalding, gained first, and Mr. W. J. Gleed, Spalding, second. In twelve blooms of Japanese, Mr. Crabtree, Wisbech, took first, and Mr. Gleed, Spalding, second.

For twelve incurved, the prizes both went to Spalding, Mr. Gleed and Mr. Wilcox dividing the honours. The class of six incurved shared the same fate as the twelve.

There were many other classes for cut blooms, all of which were well filled, the decorative classes including wreaths and emblems, tables, &c., being very fine. Mr. McIntosh, of Wisbech, took the lead in this department.

The fruit and vegetables being a small class, the competition was not so keen as in the flowers.

The attendance generally was good, and the committee have every reason to congratulate themselves upon a successful show.

At the top of the hall on each side of the band platform were two stands not for competition, one occupied by the Ichthemic Guano Co., Ipswich, which appears to be well known in this district; the other by Messrs. W. & J. Brown, the well-known nurserymen and seedsmen, of the Midlands.

BURY ST. EDMUNDS.—November 18th and 19th.

THIS spirited and popular society held its annual meeting in the Corn Exchange, Bury St. Edmunds, on Thursday and Friday, November 18th and 19th. The society was only started about four years since without any capital, and has now a good balance in hand, besides £100 invested in town bonds.

The hall is a spacious one, and the exhibits were well arranged. On one side were large groups of Chrysanthemums in pots, and on the other groups of foliage plants, &c. In the centre was a grand group of flowers (including Orchids), fruits, &c., put up by Mr. R. Davidson, gardener to the Earl of Cadogan, K.G. This group had a very pleasing effect. One rather singular feature about this show was that no one was allowed to stage any fruit, flowers, or other things not for competition. Hence we missed the usual display of the Ichthemic Guano Company, from Ipswich, which has been seen at nearly every show in the country this season.

Some of the principal prizes were as follows:—

Group of Chrysanthemums in pots.—First prize, £4. This was secured by Mr. Bishop, gardener to R. Burrell, Esq., Farnham. The second prize, £3, was taken by Mr. Manning, gardener to G. A. Partridge, Esq., of Bury St. Edmunds.

In the class for cut blooms, which was not so strong as usual, Mr. Messenger, gardener to C. H. Berners, Esq., Wolverstone Park, Ipswich, took the first prize, £5, for the best thirty-six blooms of Japanese varieties. Mr. Notcutt, Ipswich, won the second award.

Mr. Messenger also took first for the twelve blooms. Mr. Musk, gardener to Lord de Ramsey, was second.

In the class for twenty-four cut blooms, Mr. Musk was first, and Mr. Messenger second.

For twelve varieties, incurved, J. Watts, Esq., gained first and second.

In the division of the schedule for members only, the first-prize group of Chrysanthemums in pots was taken by Mr. A. Kemp, and did him great credit. Second came J. Gough, Esq., who stood first in the group of miscellaneous plants, with Mr. J. Harris as second.

We next come to the cut blooms in this division. For twelve cut blooms in twelve varieties, Mr. Bishop, gardener to R. Burrell, Esq., won the first, and Mr. Tallack, gardener to E. Dresden, Esq., came in second. For twelve incurved blooms, Mr. Gilby, gardener to B. B. Booth, Esq., Plashwood Park, came first, and Mr. Bishop, second. Mr. Gilby also stood first for six blooms in six varieties, and for six blooms of one variety, with six beautiful blooms of Miss E. Curtis. Mr. Bishop came next.

For a very nice lot of table plants, Messrs. Frewer Brothers, Stowmarket, secured first, and Mr. Manning, gardener to G. A. Partridge, Esq., second.

In the miscellaneous class, which includes table decorations, bouquets, fruit, &c., we notice Messrs. Frewer Brothers, Stowmarket, were first for a very choice hand bouquet; also shoulder spray for lady's dress. This firm is very popular for this class of goods.

There was an excellent show of fruit.

Mr. Burges, gardener to Lord Ellesmere, came first for a collection of six varieties. Mr. W. Low, gardener to His Grace the Duke of Grafton, was first for two bunches of Grapes. Mr. Musk, gardener to Lord de Ramsey, was second. For Apples the honours were very much divided between Messrs. Frewer Brothers, of Stowmarket, and Mr. Notcutt, of Ipswich and Woodbridge.

Mr. Henly, gardener to E. J. Johnson, Esq., Rougham Hall, was well to the front with various dishes of fruit.

There was quite an army of table decorations, which brought forth much criticism.

There was a good show of vegetables in collections. An excellent one from Mr. Rogers, gardener to Lord Rendlesham, taking first, and Mr. Tallack, gardener to E. Dresden, Esq., second. The competition for a collection of eight varieties went to Mr. Marks, gardener to G. M. Gibson Cullum, Esq., Hardwick, and another to Mr. Ungless, gardener to J. H. P. Oakes, Esq., Nowton Court.

The attendance was large.

BOLTON.—November 19th and 20th.

THE eleventh annual show of the Bolton Horticultural Society was held on Friday and Saturday, the 19th and 20th November. This show has made steady progress since its inauguration, and the present exhibition establishes a record both for number of entries and the quality of the exhibits.

The competition in all classes was keen, and the judging proved no light or easy task. Nothing could be finer in its way than the appearance of the hall from the galleries, and the periodical organ recitals by Mr. Mullineux, the borough organist, proved a welcome change from the usual instrumental band.

The area of the hall is somewhat inadequate, and it would be desirable, in view of the annual increase of exhibitors and the sight-seeing public, to secure a larger and more commodious place.

There were six groups of miscellaneous plants. J. W. Makant, Esq., J.P., Gilnow Lodge (gardener, Mr. H. Shone), was placed first, and Messrs. J. and G. Bury, Darwen, second.

In the class for a group of Chrysanthemums, arranged with Ferns for effect, James Musgrove, Esq. (gardener, Mr. J. Abbott), secured the coveted place; and John Haywood, Esq. (gardener, Mr. Pawson), followed him up.

In the class for twenty-four cut blooms of Japanese Chrysanthemums, Sir C. W. Boughton was first, and His Grace the Duke of Sutherland second, with Lord Trevor as a good third.

For twenty-four blooms, twelve Japanese and twelve incurved, Mr. R. G. Allan was successful in securing the first prize, and Sir C. W. Boughton second.

There was a strong entry for six pots of Roman Hyacinths, and the competition was keen and healthy. G. Shaw, Esq., Leigh (gardener, Mr. E. J. Castree), was declared the winner in this class. The second place was awarded to J. P. Lord, Esq. (gardener, Mr. J. T. Bramhall).

Some very fine Primulas were shown, as also some tastefully arranged bouquets. Amongst the vegetables there was nothing worthy of particular notice, and taken as a whole the exhibits in this section can hardly be said to have reached the high water mark of excellence.

The Ichthemic Guano Co. had an exhibit of their famous fertiliser.

DUNDEE.—November 25th, 26th, and 27th.

MISCELLANEOUS EXHIBITS.

MESSRS. W. P. Laird & Sinclair, Dundee, showed a very fine collection of plants, consisting of Palms, Crotons, and other ornamental foliage plants. They were artistically grouped on a stage 40 ft. by 4 ft., and gave a very beautiful effect. Three magnificent spray bouquets, composed of Chrysanthemums and long sprays of Ampelopsis Veitchii, attracted considerable attention, and other floral devices were much admired. Roman Hyacinths, Ericas of sorts, and well-grown specimens of Cyclamen gave a brightness to the exhibit, etc., etc. The same firm also exhibited Laird's Excelsior Brussels Sprouts in very fine condition. Laird's Jubilee Shallots, to which a Certificate was recently awarded, were in very fine condition on this occasion.

Mr. Wm. Wells, Earlswood Nurseries, Earlswood,

Redhill, Surrey, exhibited a stand of very large blooms of G. J. Warren, Mme. Carnot, Julia Scaramanga, Georgina Pitcher, Mdlle. Lawrence Zède, and other fine new varieties.

Messrs. Chas. Buick & Sons, Hilton Pottery Alloa, had a fine stand of pottery.

Messrs. D. & W. Buchanan, Forth Vineyard, Kippen, Stirling, had a fine display of coloured Vine leaves, treated by their patent process.

Messrs. D. & W. Croll, Dundee, staged a group of Chrysanthemums cut with their own foliage and set up in vases. Interspersed with them were Heaths, Palms, Ferns, Dracaenas and Acacia ovata. Some shower bouquets were very fine.

Messrs. Page Brothers, Ferneyside Vineries, Liberton, staged some baskets and bunches of Tomatos as grown and sent to market. They were of even size and very attractive, banked up as they were with coloured Vine foliage.

Messrs. George Bunyard & Co., Maidstone, Kent, exhibited a table of Apples of great size and colour. Very handsome were the samples of Tibbet's Pearmain, Mére de Ménage, Gascoigne's Seedling, Bismarck, Gloria Mundi, Bramley's Seedling, Bamuann's Red Winter Reinette, Lane's Prince Albert, and various others which took the public fancy immensely.

AWARDS AT THE SHOW.

DURING the evening of the first day the committee of the Dundee Chrysanthemum Society met to consider what awards were merited by the numerous miscellaneous exhibits. A Gold Medal was accorded to the superb exhibit of Chrysanthemums staged by Mr. Norman Davis, Framfield, Sussex.

Messrs. George Bunyard & Co., the Royal Nurseries, Maidstone, Kent, received a Gold Medal for his meritorious exhibit of a collection of Apples.

Similar awards were made to Messrs. John Laing & Sons, Forest Hill, London, for a collection of plants and fruit, and to the Ichthemic Guano Co., Ipswich, Suffolk, for their Octagon group.

Silver Medals were accorded to Messrs. H. Cannell & Sons, Swanley, Kent, for Zonal Pelargoniums, Cannas, &c.; and to Messrs. Dobbie & Co., Rothesay, N.B., for a collection of Chrysanthemums.

The premier Japanese Chrysanthemum bloom in the show was a grand flower of Mme Carnot, exhibited by Mr. David Nicoll, gardener to J. W. Bell, Esq., Rossie, Forganenny, who had it in his second-prize lot of twenty-four blooms. That mentioned last week was the premier bloom in the amateurs' classes.

Mr. David Keillor, gardener to J. M. Smieton, Esq., Seabourne House, secured the leading award for four pot Chrysanthemums, showing large, well-flowered specimens of W. H. Lincoln, Niveus, V. Morel, and Chas. Davis. Mr. Jas. Joss, gardener to Lord Provost McGrady, Arnhall, Dundee, was second.

Fine weather favoured the show during the first and third days, the second being somewhat showery. The gate money reached £52 the first day, being greatly in excess of that taken during the three days of last year. The takings during the second day were £38, in spite of the weather, and £45 on the last day. The total income from all sources was £270, and the expenses £225, leaving a good balance in hand. Ten times as many people saw the show, as compared with last year. The presence of Sir William Vernon Harcourt at the opening of the show, and the Anglo-Swiss Ladies' Cyclist Band each day contributed to this success.

ABERDEEN.—November 26th and 27th.

THE second exhibition of the recently re-established Chrysanthemum show, and the first under the auspices of the Aberdeen Chrysanthemum Society was held on the above dates in the Art Gallery in connection with the grounds of Gordon's College, School Hill, now the leading preparatory school in the Granite City. The show itself was far superior to that of last year, so that it may now be considered as fairly established. We were really surprised at the quality of the blooms grown in this northern locality. The first prize lots of twenty-four Japanese and twelve incurved blooms were grown in the Howe of Buchan, and were very creditable to the grower, though several others were not far behind. Hardy fruits and vegetables were well represented. The weather was mild though misty, and it being "Muckle Friday" the city was busy. Mr. Norman

Davis, Framfield, Sussex, judged the Chrysanthemums, and some of the local gardeners judged the fruit and vegetables. The show was opened by the Right Hon. James Bryce, M.P. for the city of Aberdeen.

POT PLANTS.—The feature of the show was the group of Chrysanthemums exhibited by Mr. Alex. Grigor, gardener to Alex. O. Gill, Esq., Fairfield, Aberdeen. His plants were grown in bush form and consisted of Japanese, incurved and single varieties, including fine bushes of Miss Mary Anderson, and Miss Annie Holden. A fine plant of Cocos weddeliana occupied the centre, and the base was surrounded with Adiantums. The first award for three plants was taken by Mr. Wm. Middleton, gardener to Mrs. Rennie, Deemount, whose specimens carried fresh and well-formed blooms. Mr. James McDonald, gardener to Mrs. Crombie, Balgowrie Lodge, Bridge of Don, was a good second with dwarf plants that would have required another week to be fully developed. Mr. John Robertson, gardener to A. G. T. Cumine, Esq., Ferryhill House, was third. Mr. Alex. Robb, gardener to James Murray, Esq., Glenburnie Park, Aberdeen, had the best specimen in a fine plant of W. H. Lincoln. He was followed by Mr. Wm. Ogg, gardener to Miss J. F. Taylor, of Morkeu, and by Mr. James McDonald, who were second and third respectively.

Mr. Wm. Ogg had the best Mignonette. Mr. John Johnston, gardener to G. A. Cornwall, Esq., Howburn Cottage, 145, Holburn Street, Aberdeen, was first for Palms. Mr. Alex. Grigor was second. Mr. James McDonald took the lead for Ferns, with well-grown specimens, and was followed by Mr. J. Johnston. Mr. Wm. Ogg again led for Chinese Primulas, and took the second prize as well; Mr. Kiloh, gardener to R. Collie, Esq., of Woodlands, Cults, being third. Mr. Andrew Reid, gardener to Henry Robert Baird, Esq., of Durris, had by far the finest Cyclamen, beating Mr. John Robertson, and Mr. Wm. Ogg, who followed in this order. Mr. Alex. Robb took the lead for Orchids. Mr. A. Grigor was a good second; and Mr. J. Johnston came in third. The first prize for Primula obconica went to Robert Kiloh.

CUT FLOWERS.—The first award for twenty-four Japanese blooms was carried off by Mr. James Grant gardener to Lady Carnegie, Crimonmogate, Lonmay, who had very creditable blooms indeed for so northern a latitude. He had grand blooms of Mrs. W. H. Weeks (the premier Japanese bloom in the show), Charles Davis, Mme. Ad. Chatin, M. Chénon de Léché, Mrs. W. H. Lees, Australia, Thos. Wilkins, Mrs. C. H. Payne and various others. Mr. Wm. Ogg was a very good second, his blooms having 6 in. of stem above the boards. The third prize was taken by Mr. Frank Fraser, gardener to Col. Hunter, Tillery.

The prizes for twelve Japanese blooms were also well contested. Mr. John Fraser, gardener to Sir Thos. Burnett, Bart., Crathes Castle, took the lead with a grand stand of M. Chénon de Léché, Australia, Dorothy Shea, M. Gruyer, Niveus, &c. Mr. R. Soutar, Montrose, was second; and Mr. Wm. Morrice, gardener to Ex-Dean of Guild Macdonald, Mount St. Ternan House, Banchory, came in third with blooms elevated on their own stems. Mr. David Chapman, gardener to General Russell, of Aden, M.P., led for six blooms, followed by Mr. Robert Kiloh, and Mr. A. Murray, gardener to J. F. White, Esq., Seaton Cottage, in this order. The blooms were good in all three cases.

The leading place for twelve incurved blooms was again taken by Mr. James Grant, who had neat and fresh blooms of Violet Tomlin, Miss Haggas (the premier incurved bloom in the show), Mrs. Coleman, Empress of India, &c. Mr. Wm. Ogg was a very close second with grand blooms of J. Agate, Globe d'Or, Baron Hirsch, and others. Mr. James McDonald had the best six incurved, and Mr. Alex. Grigor was second.

Mr. E. Noonan, gardener to A. G. Pirrie, Esq., Stoneywood House, had the best three white Japanese blooms, beating Mr. James Grant and David Chapman in this order. Mr. James Grant, Mr. David Chapman, and Mr. A. Murray took the prizes for yellow Chrysanthemums in this order. Mr. David Chapman was first for any other variety, showing enormous blooms of Graphic.

In the class for twelve varieties of any kind, in bunches of three trusses each, not dis-budded, the premier award—a Silver Teapot, presented by Mr.

A. Grigor—was taken by Mr. James McDonald, whose stand was very effectively displayed. Mr. Alex. Robb was second, and Mr. John Fraser was third, both having effective exhibits. Mr. Andrew Reid had the best cut flowers of stove and greenhouse plants, showing grand Anthuriums, Ixoras, Lasiandra, &c. Mr. Wm. Ogg was second, and Mr. John Robertson, third. Mr. Andrew Reid came to the front again for cut flowers of Orchids. Mr. Wm. Maver, 86, Holburn Street, Aberdeen, had the best hand bouquet and the best wreath of Chrysanthemums; Mr. George Stephen, Cuparstone Lodge, Aberdeen, the best buttonhole bouquet; and Mr. Wm. Ogg the best lady's spray. The floral decorations, generally, received considerable attention from the visitors.

FRUIT.—Mr. John Fraser took the first prize for Grapes, showing Lady Downes. Mr. James Grant had the best collection of Apples, Mr. Andrew Reid being second. Mr. John Fraser staged the best baking Apples. Mr. James Grant took the lead for dessert Apples, Mr. Wm. Black being second. The first prize collection of Pears had the exhibitor's name accidentally misplaced; Mr. Wm. Black The Gardens, Aboyne Castle, took the second award. Mr. Andrew Reid had the best dish of dessert Pears, and was followed by Mr. Black. Mr. E. Noonan was first for Tomatos. The quality of the Apples and Pears was really wonderful.

VEGETABLES.—Mr. John Ogston, gardener, Bourtie House, had the best collection of vegetables showing fine samples of Potatos, Cauliflowers, Onions, Celery, Carrots, &c. He was followed by Mr. E. Noonan, and Mr. John Smith, gardener, Mannofield, both having fine vegetables, well displayed. Mr. John Paterson, gardener, Sunnybrae, Ruhislaw, had the best Savoys. Mr. Alex. Thom, Woodside, was first for Cabbages. Mr. Alex. Paterson, gardener, Ruthrieston, Aberdeen, had the best Brussels Sprouts. The lead for Cauliflowers was taken by Mr. John Ogston. Mr. E. Noonan led the way for Celery, which was fine. Mr. Wm. Lawson, gardener, Oak Bank School, had the finest Carrots and yellow Turnips. Mr. A. Mortimer, Tullos, Nigg, had the best Swedes. Mr. Frank Fraser was first for Beet; Mr. Alex. Grigor for Parsnips; and Mr. John Ogston for Leeks and Onions, both kinds being first-class. Vegetables on the whole were excellent.

Potatos were a strong feature of the show, the samples being of a highly meritorious character. Mr. Alex. Paterson took the lead for round white Potatos; Mr. John Ogston for round coloured; Mr. William Lawson for long white; and Mr. James Ferguson, gardener to J. B. Craigie, Esq., of Linton, Cluny, for long coloured. The latter also had the best four varieties, showing very fine samples. Mr. John Ogston had the best two varieties. Competition was very keen in all these classes, and the prizes well earned.

MISCELLANEOUS EXHIBITS.—Messrs. H. Cannell & Sons, Swanley, Kent, staged a magnificent collection of their zonal Pelargoniums, now well known in all parts of the country. The flowers were cut, and done up in massive and effective bunches. The also had cut flowers of Chrysanthemums, including the new incurved Mdle. Lucie Faure, with Ferns and Festuca ovina to set off the flowers. Messrs. William Smith & Son, Exchange Seed Warehouses, Aberdeen, exhibited wreaths, harps, bouquets, and other floral devices.

Mr. Wm. Wells, Earlswood Nurseries, Earlswood, Redhill, Surrey, exhibited new varieties of Chrysanthemums, including G. J. Warren, Mdle. Lawrence Zede, Mme. Carnot, Julia Scaramanga, and several other fine new things. He also showed a collection of new single varieties. The Ichthemis Guano Co., Ipswich, had a stand of their widely known fertiliser. Messrs. Ben Reid & Co., Aberdeen, had a collection of Conifers, Hollies, Aucubas, and other ornamental shrubs.

SOCIETIES

NATIONAL CHRYSANTHEMUM.—November 22nd. With so many important shows taking place in the north of Britain, it is not surprising that the matter brought up for the consideration of the Floral Committee of the National Chrysanthemum Society, at the Royal Aquarium, on the above date, was not very great. Mr. W. Wells, Earlswood Nurseries,

Redhill, staged an excellent lot of cut blooms, amongst which were fine samples of M. Chénon de Léché, G. J. Warren, Mme. Carnot, Mrs. F. A. Bevan, and Georgina Pitcher. Mr. Gibson, The Gardens, Morden Park, sent a half-dozen blooms of the Japanese Mustapha, an Algerian variety, for which he received a vote of thanks. M. Anatole Cordonnier, Roubaix, France, represented the French exhibitors, but his blooms were not in sufficiently good condition to warrant certificates being awarded, although there were some promising novelties among them. For the list of certificates see p. 215. Mr. Norman Davis, The Vineries, Framfield, showed a vase of cut blooms of the market variety Mrs. J. J. Glessner. Mr. G. Harry, Forest Hill, showed his new label, but no award was made, as the committee did not consider it a new idea.

ROYAL HORTICULTURAL.—November 23rd.

There was a fair sized meeting on this date, Chrysanthemums, of course, forming the bulk of the exhibits. A few Orchids were shown, and Carnations, Poinsettias, and table decorations were bright and showy.

Messrs. James Veitch & Sons, Ltd., Chelsea, staged a small group of Orchids in which Cypripediums figured conspicuously. C. leeanum, C. chamberlainianum, C. Euryades, C. Aeson, C. Io Grande, and C. Niobe, were well shown. Laeliocattleya Pallas was represented by beautifully coloured pieces (Silver Flora Medal).

Mr. Ballantine, gardener to Baron Schroder, The Dell, Egham, showed a small piece of Odontoglossum dayanum.

Messrs. F. Sander & Co., St. Albans, received a Silver Banksian Medal for a group of Orchids that included a number of hybrid Cypripediums. Plants of Calanthe Bella, and C. Florence, carrying fine spikes were also shown. The pretty Habenaria carnea was conspicuous here.

A Silver Flora Medal went to Messrs. Hugh Low and Co., Upper Clapton, N., for a choice and showy group of Orchids. Cattleyas figured very strongly here, C. bowringiana var. lilacina being specially noticeable.

The Right Hon. J. Chamberlain (grower, Mr. J. Smith), Highbury, Moor Green, Birmingham, received a Silver Banksian Medal for a small group of choice Orchids, which was composed chiefly of Laeliocattleyas. L. gottoiana, L. Ophelia, and L. Clive were some of the handsomest forms.

Mr. H. J. Jones, Ryecroft Nursery, Lewisham, S.E., filled a table running the whole length of the hall with a tastefully arranged exhibit of cut Chrysanthemums, set up with small pot Ferns and Palms. In the centre was a row of vases, in which the grand white Western King appeared to great advantage. Stands containing cut blooms of such varieties as Mrs. G. W. Palmer, M. Desblanc, Duchess of Fife, Yellow Mme. Carnot, Mdle. Laurence Zede, and W. Wright were distributed throughout the exhibit (Silver Gilt Flora Medal).

A Silver Flora Medal went to Mr. L. H. Calcutt, Fairholt Road, Stoke Newington, for a superbly arranged floral table. The centrepiece was a massive erection surmounted by a bunch of large Chrysanthemums. The same flower in smaller sizes was used abundantly for the other devices, associated with suitable foliage.

Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey, staged a comprehensive exhibit of cut Chrysanthemums, for which a Silver Gilt Banksian Medal was awarded. Ma Perfection, Julia Scaramanga, Georgina Pilcher, Mdle. Laurence Zede, and Vicomte Roger de Chezelles were some of the best varieties.

Mr. A. H. Rickwood, gardener to the Dowager Lady Freake, Fulwell Park, Twickenham, staged a collection of cut Chrysanthemums, the flowers having long stalks (Silver Banksian Medal).

A Silver Banksian Medal also went to Messrs. W. Cutbush & Son, Highgate, N., for a group of well-berried seedlings of Pernettya mucronata, set up with a background of Kentias.

Mr. W. J. Godfrey, Exmouth, Devon, contributed some capital cut Chrysanthemums, among which a dozen blooms of Lady Northcote, and a similar number of Mrs. Maling Grant were the chief features. Some blooms of new Chrysanthemums came from M. Anatole Cordonnier, Bayonne, France.

Messrs. Cripps & Sons, Tunbridge Wells, staged a handsome group of Poinsettias. The plants were

dwarf, bore large heads of fine bracts, and were arranged in a semi-circular group edged with small Palms and Eurya latifolia variegata (Silver Banksian Medal).

Mr. F. Cuhberley, gardener to J. W. Temple, Esq., Leyswood Gardens, Groombridge, received a Silver Gilt Banksian Medal for a magnificent array of Begonia Gloire de Lorraine. The plants were large, sturdy, and profusely flowered.

Messrs. Jas. Veitch & Sons, Limited, staged a batch of the new scarlet winter flowering Begonia, Mrs. Heal, a very handsome form.

From Messrs. Hugh Low & Co., Bush Hill Park, Enfield, came a batch of Carnation Winter Scarlet, and a few plants of Begonia Gloire de Lorraine.

Five dozen blooms of new seedling 'Mums came from Mr. Robert Owen, Maidenhead, for which a Bronze Banksian Medal was voted.

At a meeting of the fruit and vegetable committee Messrs. T. Rivers & Son, Sawbridgeworth, staged six baskets of magnificent Apples, all taken from pot trees. Cox's Orange Pippin, Buckingham, Bijou, and Ribston Pippin were especially good (Silver Banksian Medal).

A Silver Banksian Medal went to Mr. Bayford, gardener to C. Lee Campbell, Esq., Glewston Court, Ross, Hereford, for thirty dishes of fine App'es. Bess Pool, American Mother, Golden Noble, Cox's Pomona, Peasgood's Nonsuch, Gloria Mundi, and King of Pippins were some of the best samples.

Nine dishes of Apples were submitted for the flavour prizes. Mr. Woodward, gardener to Roger Leigh, Esq., Barham Court, Maidstone, was first with Cockle Pippin. Mr. Bayford was second with Cox's Orange Pippin.

Only four dishes of Pears were shown, Mr. J. Crooke, gardener to W. H. Evans, Esq., Forde Abbey, Chard, being first with Winter Nelis. Mr. Woodward was second with Nouvelle Fulvie.

Mr. W. J. Granfield showed samples of a new Walnut from Germany, which was referred to Kew for identification.

A Silver Banksian Medal was voted to Mr. E. Beckett, Aldenham House Gardens, Elstree, Herts., for a grand display of Onions. Ailsa Craig, Cocoa Nut, Sutton's Ar, Barnet Hero, White Anglo-Spanish, Prizetaker, and Cranston's Excelsior were the varieties shown.

NATIONAL CHRYSANTHEMUM.—November 29th.

As the end of the Chrysanthemum season is now well within view it was only to be expected that the amount of material brought before the Floral Committee of the N.C.S. at the Royal Aquarium on November 29th was not great. Two certificates only were awarded, for which see next week. A Commendation was given to the two feathery Japanese varieties, Mrs. W. Butters and Sam Caswell, which the committee thought would prove of value for late cutting. These were shown by Mr. Wells, of Earlswood Nurseries, Redhill. Mr. Wells also had samples of the late yellow Japanese form, Setting Sun. Mr. A. Haggart, Moor Park, Ludlow, showed half-a-dozen blooms of Moor Park, a flower after Pride of Madford build, but with a deep buff reverse. A box of blooms was sent from Germany by Mr. Alexander Bornemann, but there was nothing of merit amongst them.

CHEMISTRY AND HORTICULTURE.

THE *Annales Agronomiques* of September 25th, 1897 contains a somewhat long study of this question by Messrs. Hebert and Truffaut, the general conclusions of whose work are as follows:—Horticulture has every reason to profit by chemical teaching. Numerous results obtained during late years by the application of methods recommended demonstrate their value. Special experiments made with a view to the particular object for which the plants are grown will teach the grower what soils and manures are best. The different utilisable elements of various soils should be considered. Secondly, the needs of plants should be ascertained, at least as regards nitrogen and mineral substances, in order to judge whether the soil is suitable. One should then have the composition of the chief ornamental plants. A certain number of authors have already undertaken this ungrateful task, amongst whom we must mention Dr. Griffith. Finally when the difference between the quantities of elements required by plants, and those given by the soil has indicated the kind of manure, the best method to supply the plants with these elements

must be ascertained. Horticultural varieties on account of their delicacy require special care in the question of manures; thus was recommended watering with solutions varying from $\frac{3}{10}$ to 1 per cent. in order to avoid all accident. This is somewhat troublesome in horticultural establishments where workmen are not accustomed to these special manipulations. It would be good to distribute manure to ornamental plants under a form or in conditions where it could be gradually assimilated so as to avoid any sudden addition of fertilisers which might burn or injure the plant.

GARDENING MISCELLANY.

PEA, THE GLADSTONE.

As a whole the past season has not been a good one for Peas, but from what I have seen and grown of this, I think more of it than the G.O.M.'s politics. Indeed, a good boiling of the real esculent itself, will do more good, possessing greater liberality of strength, and is likewise more digestible.

The haulm is $3\frac{1}{2}$ ft. high, of sturdy habit, bearing deep green, long, scimitar-shaped pods with eight to ten large peas of excellent flavour. It is a desirable variety for those who may rule their own, or anybody else's, garden.—*B.L.*

SPECIMEN BOUVARDIAS.

THE finest plants that ever came under my notice were exhibited recently at the Plymouth Chrysanthemum Show, and grown by Mr. George Chamberlain, gardener to Lady Blackford. They stood over 5 ft. high, nearly 3 ft. through, and were one mass of flower. They comprised such sorts as Alfred Neuner, Vreelandii, Hogarth, and President Garfield, and what is most remarkable concerning them I gathered from the grower that they had not been re-potted for the past five years. Merely the surface soil was removed, and a rich top dressing given each spring, using a good percentage of bone-meal. They were certainly a credit to the gardener.—*J. Mayne, Bicton.*

STRIPPING THE LEAVES OF TOMATOS.

Even in humanity it is an old saying, that those who stand humbug will have plenty. The same might be said of the Tomato, for we invariably find plants existing under all sorts of conditions. But to my mind nothing is more contemptible than to see the plants slashed and denuded of their foliage, under the impression of swelling the fruits, especially when we consider that the leaves are the real workers, elaborating the sap for the feeding of the same. If we wish to do a little pinching, then be judicious with the finger and thumb, when the leaves are young. Plenty of good pots, and a good covering of clothes on their back, are two first essentials to the production of large fruits.—*B.L.*

DIGITALIS FERRUGINEA.

THE stately individuality of the Foxgloves either when growing in the herbaceous border, in the wild garden, or rejoicing by themselves amidst the surroundings in which nature has placed them cannot be denied. With the exception of *Digitalis purpurea*, our native Foxglove, we do not cultivate them much, however. This species has given rise to a number of varied and beautiful colours and there is no more honoured occupant of the herbaceous border than they. *D. ferruginea* is a comparative rarity in our gardens, on the other hand, and it is very probable that hundreds of gardeners have never seen it, although it is a handsome, and withal a useful plant. It is biennial in duration, and throws up a fine strong raceme the second summer of its existence, some time from the middle of July to the middle of August usually. The raceme is fully 5 ft. in height and occasionally exceeds that height on very strong plants. It is densely packed with relatively small rusty coloured flowers—whence the specific name "ferruginea." The lip of the corolla is ovate in shape, entire, and bearded. The stem itself is glabrous, but very leafy. Propagation is effected by seeds which are produced with remarkable freedom. The plant is a native of Europe, being brought here about the end of the sixteenth century although to use an Americanism it never

seems to have "caught on" with gardeners generally. The only private establishment at which we have seen it growing is at Park Place, Henley-on-Thames, where Mr. Stanton has accorded it an honoured position amongst the fine collection of herbaceous plants. One has only to see it there when in flower to admit that it is well worthy its place.

QUESTIONS AND ANSWERS

* * * Will our friends who send us newspapers be so good as to mark the paragraphs or articles they wish us to see. We shall be greatly obliged by their so doing.

[Correspondents, please note that we cannot undertake to name florists' flowers such as Carnations, Pelargoniums, Chrysanthemums, Roses, nor such as are mere garden varieties, differing only in the colour of the flower. Florists' flowers, as a rule, can only be named by those who grow collections of them.]

Leaves of Apples and Pears.—*Sigma*: For the purpose of manuring the ground the leaves of the fruit trees you mention would be as suitable as any other kind; but their actual value would depend upon the nature of the soil of your garden, and the plants you intend growing in the same. If the soil is heavy, that is of a clayey nature, the leaves would tend to lighten and improve it as much mechanically as chemically. On the whole the leaves would be more suitable for flowers than vegetables; but fruit trees and hedges would be benefited by the potash they contain. There are reasons, in the matter of tidiness, why they should not be spread over the surface of beds and left there for the winter. The wind would blow them all over the place, and the birds would also scrape them up. The best plan of all would be to rake them off and pile them in a heap in some out of the way corner to rot for a year, after which they could be utilised for a great variety of purposes in the garden.

Delphinium cardinale.—*Choice Plants*: This is somewhat tender, and is usually grown in pots in a cold frame, where it can be protected to some extent from frost, wet, and slugs in the winter time. It may be planted out in a sunny position to bloom, or plunged in the pots out-of-doors in the spring of the second year of the seedlings. The flowers are more likely to set when thus kept airy. *D. brunonianum* and *D. sulphureum* (*zailii*) may be treated in the same way. Some cultivators, however, find that the latter proves tolerably hardy on rockwork, and flowers freely. All the three species should be grown in a light, sandy, but rich soil. Neither of them possess the hardness of the ordinary *D. formosum*, *D. grandiflorum*, and *D. elatum*, so that they require a little attention to keep them dry, and care to prevent the crowns from being destroyed by slugs in their earlier stages, and in winter when at rest.

Runners on Violets.—*Omega*: During the growing season you may allow a sufficient number of runners to grow for a stock of young plants to bloom the following season. All the rest may be cut off to concentrate the energies of the old plants on the production of flowers.

Angle of Elevation.—*Omega*: You do not tell us the width of your Melon frame. You might do that and we will help you next week.

Flower of *Laelia autumnalis*.—*Len.*: The flower you sent was a very large one for the species, being $4\frac{3}{4}$ in. across the petals. The sepals are dark purple almost to the base, and crimson-purple at the tips. The petals are similarly intensified at the upper end, but fade much paler towards the base. The side lobes are pure white on both faces; but the lamina is intense crimson-purple. The size and colours of the flower, here given, show that it is the variety *L. autumnalis atrovirens*, and therefore, one of the finest forms of the species, though some are slightly darker in hue.

Names of Fruit.—*K. W.*: 1, Pear Thompson (there is a little doubt about it as it was decayed; send earlier next year); 2, Fearn's Pippin; 3, Golden Spire; 4, Improved Keswick Codlin.

Names of Plants.—*B. E.*: *Cymbidium giganteum*. *G. W.*: 1, *Physalis Alkekengi*; 2, *Jasminum nudiflorum*; 3, *Maxillaria picta*; 4, *Oncidium ornithorhynchum*; 5, *Coelogyne speciosa*.—*W. R.*: 1, *Crataegus Pyracantha*; 2, *Griselinia littoralis*; 3, *Retinospora plumosa aurea*.—*A. C., L.*: 1, *Begonia corallina*; 2, *Begonia haageana*; 3, *Selaginella uncinata*; 4, *Camellia japonica* var.; 5, *Reidia glaucescens*; 6, *Ruellia longifolia*.—*T. Mitchell*: 1, *Abies nordmanniana*; 2, *Abies nobilis*; 3, *Hamelis virginica*; 4, *Erica carnea*.

A Special Offer to Readers of THE GARDENING WORLD 25/- BOOK for 8/-

NO HOME SHOULD BE WITHOUT ONE

Ogilvie's Encyclopædia OF USEFUL INFORMATION AND WORLD'S ATLAS.

No Single Book ever before contained such a Wealth of Knowledge.

By Special Arrangement with the Publishers of the "Encyclopædia of Useful Information and Atlas of the World," we are enabled to offer to the Public a Magnificent 25s. Volume for 16 of the coupons, which will appear weekly, together with 6d. each, accepted in Weekly Instalments, or the Coupons may be held until the whole period has elapsed and brought or sent to the Office with 8s., and 6d. towards carriage.

A COMPLETE ILLUSTRATED LIBRARY IN ITSELF.

A universal assistant and treasure-house of information on every conceivable subject, from the household to the manufactory. In short, gives information about everything, is absolutely indispensable to everyone in all walks of life; the contents being so separated, indexed, and arranged that they can be turned to at once. It is

THE BEST { BOOK OF } EVER
 { INFORMATION } ISSUED.
Size of Encyclopædia: 9 by 11 $\frac{1}{2}$ inches. 656 Pages.

It contains

MANY MAGNIFICENTLY ENGRAVED
COLOURED MAPS,

and a description of every country under the sun, besides much other matter relative to the Home, the Farm, the Factory, a Dictionary of Statistics—many Useful Tables, Poetical Selections, Synonyms, Famous Bridges and Ships, How to Calculate, How to Cook, How to Get Rich, How to Cure all Diseases, How to Succeed in Business, Table of Weights and Measures, and

HUNDREDS OF OTHER TOPICS OF
GREAT VALUE TO EVERY PERSON

who desires to be up to the times. To see the Book is to want it. To Members of Mutual Improvement Societies it will prove of inestimable value.

The articles are written by men whose lives have been devoted to the subjects treated, are short and concise, but contain full information up to date. It is to be consulted on every subject that arises in everyday life, by old and young alike. It contains a complete Illustrated Atlas of the World.

IN THESE DAYS OF COMPETITION

it is imperative that a Gardener should be a well-informed individual. Here is an Encyclopædia containing an immense amount of knowledge that will be of the greatest service to him.

YOUNG GARDENERS,

do you wish to be successful? Then remember that to possess knowledge is the surest way to achieve success.

It is elegantly bound in Morocco Cloth, with beautifully designed Gilt Side-stamp and Red Edges, making at once the most handsome and durable as well as THE MOST USEFUL BOOK EVER MADE or sold for 25s.

CANNELL & SONS' CHRYSANTHEMUMS.

The most remarkable results that have ever occurred in supplying cuttings and plants is the great success and the highest awards that have followed those forwarded from us, yes, in the remotest parts of the World, New Zealand and Australia, South Africa, as far as Bulawayo, Egypt and Constantinople, Tenneriffe, besides Italy, France, Holland, Belgium and Portugal, to say nothing of Mr. Mease's remarkable record at home again this season with what we have sent him, and which history must describe by and bye as wonderful. Our unrivalled stock of unbloomed plants especially for the supply of cuttings is now in perfect condition, so full of health that they at once give growers heart and confidence the moment they see them, striking more quickly, and making strong and healthy roots, success naturally follows our pure country grown stuff. New Catalogue is in the press, and we hope to post off 20,000 shortly. Any client failing to receive a copy will please intimate.

SWANLEY, KENT.

"Gardening is the purest of human pleasures, and the greatest refreshment to the spirit of man."—BACON.

The Gardening World.

Edited by J. FRASER, F.L.S.

SATURDAY, DECEMBER 11th, 1897.

NEXT WEEK'S ENGAGEMENTS.

MONDAY, December 13th.—Meeting of the Floral Committee of the National Chrysanthemum Society at the Royal Aquarium.
TUESDAY, December 14th.—Royal Horticultural Society: meeting of committees at 12 o'clock.
WEDNESDAY, December 15th.—Sale of Orchids, etc., at 39, North End, Croydon, by Messrs. Blake & Carpenter.
FRIDAY, December 17th.—Sale of Orchids by Messrs. Protheroe & Morris.

THE CARNATION MANUAL.*—The first edition of this work was issued in 1892 some time after the present revival of the popularity of the Carnation was fairly well established. One could hardly expect much that was actually new in the course of five years, except perhaps in the matter of varieties, of which there are multitudes pressing for recognition annually. Some of them remain by virtue of superior merit, while others pass into oblivion almost as quickly as they appear. The chapter on "Selection of Varieties" has accordingly been entirely revised, and a fresh selection made. A new chapter, entitled "The Malmaison Carnation," has been added, the section having greatly increased in importance since the book first saw the light. As a florists' flower the Carnation was recently brought into cultivation by comparison with the Rose; nevertheless, it must have been highly appreciated by our forefathers over three hundred years ago when they spoke of garden Gillofers, Clove Gillofers, and Coronations or Coronations, by all of which names they meant the species we now recognise as *Dianthus Caryophyllus*, the parent of all the garden races of Carnation. The specific name is also recognisable under the appellation of *stoves Garryophyllis* of those old-time writers and gardeners. The botanical name, *Dianthus*, is much more recent; but the botanists must have had a very high estimation of the race when they applied the word *Dianthus*, which signifies flower of the gods.

Double varieties of the Carnation existed more than three centuries ago, and some of them at least were not unlike the Old Clove. In matters of cultivation we have, apparently, not greatly improved upon the system pursued more than a century and a half ago. Pod-bursters were well known

(* THE CARNATION MANUAL. Edited and issued by the National Carnation and Picotee Society (Southern Section). Second Edition. Cassell and Company, Limited, London, Paris, and Melbourne, 1897. All rights reserved. Cloth boards, 3s. 6d.

then as now, and pot-culture as a partial remedy was equally well known and advocated according to the means then prevalent for the dissemination of information upon the subject. Yellow ground Carnations existed at least more than three-quarters of a century ago, and at that time were obtained from Germany. All these and other facts suggest that Carnations have been favourites in this country ever since their introduction, for old writers do not admit that either Carnations or Pinks were natives. It may also be taken for granted that Carnations as a race have from time to time risen to the highest pitch of fame as a florists' flower, and again sunk into comparative neglect except amongst those who cherished old-time garden flowers for their own intrinsic beauty and grateful fragrance, as in the case of Wall-flowers, Pinks, Primroses, and Polyanthus.

How long the present popularity of Carnations will endure it would be difficult to say, except that it will co exist with the appearance of new, beautiful and improved varieties. The authors of the present book do well to record all the leading and more important facts in connection with cultivation, the present stage of progress, methods of raising new varieties and improving upon the race generally. Numerous authors have been employed in recording the many phases of this important race of flowers, so that the information tendered is varied and useful in proportion to the number of cultivators that each system or method of treatment can command. This depends largely upon the section or sections most admired and approved by the respective cultivators. It is highly satisfactory that border Carnations should have received such prominent recognition in a book largely written by florists who still adhere to their tenets with regard to the flower of the specialists or select few, but have yet been led to appreciate the self-coloured and more natural types now generally spoken of as border flowers. Such recognition on the part of florists of the old school would have been regarded as rank heresy a few years ago, but more particularly in the case of varieties having toothed petals, or such as could not be spread out flat on the orthodox and ornamental paper cards. Border Carnations are now the dominant race, inasmuch as they are hardier, of more vigorous constitution, more replete with beautiful and lively shades of colour, and have more admirers and cultivators than the orthodox florists' flower.

As the most distinguished raiser and cultivator of this class, Martin R. Smith, Esq., has been deputed to write the chapter on border Carnations, as well as that on Malmaisons for similar reasons. He admits that all Carnations are more or less able to withstand the vicissitudes of our climate, and in that respect may be regarded as hardy; but there are sorts which do not by any means reach the stage of perfection of which they are capable when subjected to this kind of treatment. The yellow ground varieties more particularly may be placed in this category, and on that point we are in entire agreement with him, for the yellow sorts have always been weak growers as far as we can ascertain. Why this should be so would be difficult to explain, perhaps, except that they are more removed from the natural character of the wild or original form of the species. Yellow varieties do not occur in this or any other species of the genus in a wild state, so that the evolution of the yellow Carnation is a triumph of man, and the "art that does mend nature." The yellow of the cultivated flower is far more pronounced than in the case of the yellow Hyacinth, Stock, or Sweet Pea.

In 1892 there were no Malmaisons except the original type, and such as have arisen from it by sporting. The ovary is perfectly barren in the old Malmaison, so that other varieties, having similar characteristics, can only be obtained by utilising it as a pollen parent; but it took many years before cultivators recognised this fact. Mr. Martin R. Smith, who writes the chapter, has certainly been the most active raiser of new varieties of this huge and deliciously fragrant type. The new varieties already exist in all the leading shades of colour except, perhaps, yellow, which is almost certain to come in a few years if not already in existence. The marked similarity of the seedlings to the original, in all its more characteristic traits, is due to the prepotency of the pollen parent, a fact which we have proved in other races of flowers, so that it can no longer be said that the pollen parent imparts merely its colour to the progeny. Mr. Smith finds the first crosses to be the best, but that merely proves that seedlings raised in this way have already lost part of their stability and prepotency. That a large proportion of the seedlings, particularly of second and further crosses, should be practically worthless, is not at all surprising, but what we should expect. He further states that one layer in a pot and one flower to a plant is the usual method adopted by growers in order to secure the largest and finest blooms; but that two-year-old plants will develop from ten to fifteen equally fine flowers, under good treatment. This entails systematic and regular feeding, otherwise a small pot of soil would be unable to supply the nutriment requisite to develop a perfect flower of the desired size.

Royal Gardeners' Orphan Fund.—We are pleased to learn that Mr. P. C. M. Veitch, of the Royal Nurseries, Exeter, will preside at the friendly dinner of the committee and friends of the Royal Gardeners' Orphan Fund, to be held at Anderton's Hotel, on the 18th February, 1898.

Royal Horticultural Society.—The last meeting this year of the above society will take place next Tuesday, the 14th, in the Drill Hall, James Street, Westminster, when the fruit, floral, and Orchid committees will meet as usual at 12 o'clock. A lecture on "Sporting in Chrysanthemums" will be given by the Rev. G. Henslow, M.A., at 3 o'clock.

A Royal Forester.—King Oscar, of Sweden possesses Mr. Gladstone's ability as a tree feller. King Oscar is never happier than when roaming about among the Pine forests of Sweden, axe in hand, and he will often spend a whole day hard at work chipping away at some specimen that he has decided to bring down.

Chester Horticultural Show.—Diamond Jubilee year has been anything but a blessing to not a few institutions which depend upon public support for their existence, and on no such institution has the burden fallen more severely than upon the Chester Horticultural Society. At the recent general meeting of the subscribers and officers of this body it transpired that there was a loss of some £400 over the last show. This loss is fully accounted for by the fact that the aggregate of gate money was fully 50 per cent. less than that of last year, and that the prizes were £100 in excess of those given in the same year. Defective organisation and administration has also to be blamed to some extent. By private subscription the debt of £400 has been reduced to £98 10s. 7d., and efforts are being made to rid the society entirely of the incubus. In this laudable intention we wish the workers all possible success, for a city like Chester should easily be able to support even such a big affair as the Chester Fête. It would seem, however, from remarks made by Alderman Charles Brown at the meeting that a thorough reorganisation is necessary if the society is to go on its way and prosper.

Omnipresent.—Teacher: "What is that which pervades all space, which no wall, or door, or other substance can shut out?" Johnnie Sharpe (a flat dweller): "The smell of Cabbage, miss."

The name "Stock" explained.—Our contemporary, *The Orcadian*, says "The Stock received its name from the fact that it was principally sold in the old Stocks Market, in London, the market itself having derived its title from a pair of stocks that stood there." We are much obliged, *Orcadian*, but have got the idea that stock meant the woody portion of the plant, and was so used to distinguish the Stock Gilliflower (*Matthiola incana*) from the Clove Gilliflower (*Dianthus Caryophyllus*).

Ailsa Craig Onions at Edinburgh.—The competition for the prizes offered for Onions at the Chrysanthemum show, Edinburgh, was very keen, but the judges had no difficulty in awarding the premier position to Mr. P. Melville, gardener to J. G. Baird Hay, Esq., Rosemont, Monkton, Ayr. His samples were large, firm, and well ripened, each weighing over 2 lbs. Besides weight and quality, the Onions also had the recommendation of being true to the Ailsa Craig type. Mr. Melville is a good vegetable and fruit gardener, being particularly successful with Onions, of which he grows a large quantity. We understand that Mr. John Downie, 144, Princes Street, Edinburgh, has secured the stock of Ailsa Craig Onions, which he intends growing for seed.

Ealing Gardeners' Society.—On the 23rd ult., at the Municipal Buildings, Ealing, the chairman, Mr. C. B. Green, gave an informal address entitled, "Some Scottish Notes," which dealt with some recent observations and experiences in the land o' Burns. The Botanical Gardens of Edinburgh and Glasgow were dilated on, and a comparison with Kew instituted. Notes from private gardens likewise held a place, as also much matter concerning the Western Highlands, and the glories of the Heather, the Bracken, and the mountain plants. Some Scotch flower-pots were exhibited and recommended as superior to the ordinary English manufacture, but the meeting would not have them. John Hughes, Esq., F.R.H.S., presided over a fair attendance, and the customary votes of thanks were duly accorded. The weekly exhibits were not numerous owing to the foggy state of the weather. There was, however, one interesting exhibit, which showed a better condition of things elsewhere, and that was a collection of cut flowers from Mr. John Fraser, The Gardens, Ardenlee, Dunoon, N.B. These were gathered the previous day out-of-doors, and consisted of Roses in variety, Violas in variety, Antirrhinums, hybrid Primroses, and Polyanthus, Nasturtiums, summer-flowering Chrysanthemums, Clematis, *Jasminum nudiflorum*, Myrtle, *Euonymus europaeus*, etc., the scarlet fruits of the latter being exceedingly showy.

The Smithfield Show, 1897.—The Berners Gallery is in some respects a sort of home from home for our chief chemical manure manufacturers. It is here that we regularly find our friends from Griffin Mills, Ipswich. Mr. William Colchester's Gold Medal Fertilisers have sustained such a reputation, that, naturally without them, the show at Smithfield would lose something of its familiarity. Here the various grades of phosphate and ammonia in all manner of forms are shown as the constituents which the chemists of to-day make use of in the preparation and manufacture of these manures, which, although not bulky, have such a concentrated value and such emphatic result on nearly every crop and every soil. Be it remembered also that this science of chemical manure manufacturing is not a century old, and what is regarded as extraordinary to-day, may be looked upon to-morrow as a matter of ordinary interest. Messrs. Colchester's big Gold Cup Competition for the best samples of 1898 Barley will probably afford still one more opportunity for our best Barley growers to try their mettle in this respect. The competition is sure to be a popular one, because, so far as we observe from the conditions laid down in the firm's new catalogue, the essentials are so fair and legitimately drawn, that growers cannot fail to appreciate them. We are interested to learn that within the last twelve months, this firm has added to their list of awards no less than four Gold and Silver Medals, in addition to the Grand Diploma of Honour from Orleans.

The Wheat Crop in the Darling Downs district of Australia is estimated at 40 bushels per acre, being quite a record. The area under wheat is double that of last year.

Presentation to Mr. F. Q. Lane, J.P.—At the annual meeting of the Berkhamsted Chrysanthemum Society, of which Mr. F. Q. Lane is the Vice-president, and Earl Brownlow, President, at the King's Arms Hotel, on Saturday, Mr. Lane (of the Nurseries, Berkhamsted), was presented with a silver cigar box, bearing the inscription: "Presented by the Committee of the Berkhamsted Chrysanthemum Society, 1886—1897" on one lid; and on the other: "F. Q. L." Mr. A. Prudames, M.R.C.K.S. made the presentation. Mr. Lane, who was taken by surprise, expressed his thanks for the kindness shown him, and was much pleased.

Marriage of Mr. Archibald Forbes.—This event took place at Marfield, Hawick, the residence of the bride's father, on the 3rd inst. The Rev. Chas. Allan, M.A., East Bank, U.P. Church, Hawick, officiated, assisted by the Rev. Duncan Stewart, M.A., St. Andrew's F. Church, Hawick. The bride was Eleanor Snowdon, eldest daughter of Mark Currie, Esq., of the firm of Currie & Gawn, tweed merchants, Hawick and London. She was married in a brown, travelling dress, with shot bodice, and looked very neat, carrying a shower bouquet composed of Orchids, Roman Hyacinths, and Asparagus. Her bridesmaids were her two sisters, who looked very attractive, being dressed in dark skirts with silk blouses, and carrying Orchid shower bouquets. The bridegroom, Mr. Archibald Forbes, is the only son of Mr. John Forbes, Buccleuch Nurseries, Hawick. The presents, which were considerably over 100, were handsome, varied and costly. They included a handsome aneroid barometer from the employees of the Buccleuch Nurseries, and a beautiful silver salver from the office bearers of the Grand Masonic Lodge No. III, of which the bridegroom is junior warden. The bridegroom's presents to the bridesmaids were lovely gold bangles. The happy pair are off to the north to spend their honeymoon.

Aberdeen Chrysanthemum Society.—It is satisfactory to learn that the show held on the 26th and 27th ult., under the auspices of this society, has been a great success compared with that held last year by a provisional committee. At the opening ceremony, the chairman, Councillor Maitland, said that the entries had risen from 250 last year to 400 on this occasion, a most satisfactory increase indeed, while the quality showed a decided improvement. The main object of the society was to encourage the cultivation of the Chrysanthemum, which, like the robin amongst birds, came to cheer the earth when its fellows had departed. The opening ceremony was performed by the Right Hon. James Bryce, M.P. for the city of Aberdeen, who compared the show with those held in various other great centres of the country. He made a slip, however, when he spoke of the display of Chrysanthemums in the Temple Gardens, seeing that their cultivation has now been abandoned in these historic gardens for some two or three years past. He explained to his audience that although we had more than one native Chrysanthemum, the object of their care was a native of China, and had been cultivated for centuries both there and in Japan before its introduction to this country a little over 100 years ago. In conclusion, he congratulated the society for their admirable show, the prize givers and prize takers, and formally declared the show open. The total amount taken at the gate for the two days was £22, as compared with £14 last year. This is good, but might be largely augmented if the society would cast aside that undue caution which is so characteristic of the Granite City, and create a guarantee fund to cover any loss, as was done at Edinburgh and Dundee with such excellent results. By similar means it would be possible to offer an attractive prize list that could hardly fail to call the existing talent into play, and ensure a splendid show, simply on account of the friendly rivalry and competition which would ensue amongst gardeners far and near. The society would also be in a position to secure the services of a good band or other attraction to draw the presence of the local gentry and townspeople, many of whom could scarcely have heard of the show until it was a thing of the past.

Fruit for Christmas.—With the near approach of the festive season we are reminded that Mr. H. Becker, of Jersey, is according to his custom of former years, sending small hampers of choice fruit to all parts of the United Kingdom. These hampers are eminently suitable for Christmas presents, and the fruit sent is full value for the price charged.

Kays' Annual, 1898.—This annual was started in 1890, and claims to be the oldest established illustrated amateur annual. It contains a number of short stories on various subjects by different authors. Some of them are of a humorous cast, while others include "An Impression of Lisbon," by E. W. Dean; "The Field of Waterloo" by Onclé; "Robbing the Mail," by Nemo; also anecdotes, jokes, &c. There is a full page illustration of the "Flying Scotchman." An interesting fact is that the author, Mr J. A. Kay, is only sixteen years of age. The publishing and editorial offices are at "Riseholme," 14, Goldhurst Terrace, Hampstead, London, N.W.

Woolton Gardeners' Mutual Improvement Society.—A meeting of this society was held on the 3rd inst., with a good attendance of members, Mr. John Glover occupying the chair. The subject under review was "Hardy Fruits: the Culture, Gathering, and Packing, more especially for Market Purposes." The lecturer, Mr. J. Taylor, of Chester, advocated most strongly the extended culture of hardy fruit. With the finest soils in the world, with proper selection and good culture, fruit could be grown to successfully compete with the foreigner. Bushes and cordons were strongly recommended in preference to standards, and with proper protection by woods of Austrian Pine and Hornbeam a crop could generally be assured. Stocks and varieties were an important feature and should be considered as to the kind of soil that they were to be grown in. Manure should be withheld from trees in a young state, as it produces too strong a growth and in some cases canker. Mr. Corlett showed several slides under the microscope of Saxifraga, Bertolonia, Anoectochilus, Jasmine, &c. Votes of thanks to the lecturer and chairman completed an interesting and instructive meeting.

CLUMBER GARDENS WORKSOP.

GREAT improvements are being made in the extensive gardens at Clumber. A great necessity long wanted has lately been added in the shape of a magnificent range of lean-to houses, 175 yds. long, with a noble Palm house in the centre. The houses are erected principally for fruit growing, and are grand examples of horticultural skill. They have been put up by Mr. James Gray, the well-known builder of Chelsea. The valuable addition will prove most useful for the extensive demands that are made for fruit, and in the hands of such a well-known practical gardener as Mr C. Slade are sure to produce what may be expected. At the present time he has a most magnificent and extensive display of the winter king of flowers, the Chrysanthemum. Many hundreds of well-grown plants are beautifully arranged in some of the new houses, forming a most charming picture at this season of the year. Many of the flowers produced would do justice to any exhibition table. They are represented in every class and every style of growth. All-round gardening is extensively carried out at Clumber, and the future prospects here are most encouraging in horticultural prosperity.—*Rusticus.*

CHRYSANTHEMUM NOTES.

Now that the flowers are over again it is time to prepare for a new start. It is time now to propagate nearly all the leading Japs. The best soil in which to insert cuttings is, one part loam, one of leaf soil, one of sharp silver sand, well mixed and passed through a $\frac{1}{2}$ in. sieve. Crock each pot (60-size) placing one small piece over the hole. Insert the cuttings singly in each, and place the same on a bed of cinders in a cold frame, and keep closed till rooted. After this give a little air by degrees, as the roots reach the side of the pots, and shift on to 52-size. This will be about March, when, if required for bush plants, nip out the shoots to form branches; if for exhibition, grow on with a single stem, pinch out the crown bud and grow in three shoots.

About the middle of May shift the plants into the blooming pots, 24 or 16 size. Use two parts

loam, one of horse manure droppings, one of leaf soil, one of sharp sand, one of crushed bones, and sprinkle a handful or so of artificial manure over the whole. Mix well, pot firmly, and place the plants out of doors in a sunny position. Stake as required. Take the buds chiefly on the second crown, and a few on the terminals (mostly incurves and anemones).

When the pots get root bound, about August, feed well with liquid manure. Shift the plants under glass about the middle of September. Air well, and keep the house dry and clean. One of the chief points in growing Chrysanthemums is to keep them growing steadily, by keeping well potted. Attend to watering; and I would recommend amateurs to grow chiefly Japanese, as they are so much better for cut flowers; also the single sorts (which are best as bush plants), as they are very beautiful for Vases, &c.—*A. W. Young, The Nurseries, Stevenage.*

BEGONIA GLOIRE DE LORRAINE.

THIS winter-flowering Begonia, a recent introduction, is a most valuable acquisition, adding to our list of plants suitable either for stove or greenhouse a charming and beautiful subject. Its propagation and culture are of the easiest possible description, and the amazing growth and floriferousness of plants struck in spring renders it invaluable. When better known it will certainly be seen in every garden. From one small plant obtained from the nursery last February (then in flower) I have since obtained a dozen, which are now in full bloom, some measuring a foot in diameter, and suspended from the roof of a warm greenhouse; each plant is a mass of bloom, the pot being entirely hidden. Its slender, wiry growth assumes after a while a pendant or hanging habit, especially when flowers begin to form, and makes it more suitable for baskets or hanging pots. Still, with a few small, neat stakes to support growth, very pretty plants may be had, and these arranged with Maidenhair Ferns have a charming effect. I am sure anyone wanting a good, decorative, winter-flowering Begonia would do well to invest in this new hybrid. No winter-flowering plant that I know so well repays a little outlay, and gives such good results as this with so little trouble.

Two other good winter-flowering Begonias I like very much are *B. corallina* and *B. Gloire de Sceaux*. The former, a very showy and larger flowered one, delights in a high temperature. The latter is remarkable for its handsome foliage.—*A. P.*

IT is seldom you see this most useful variety grown so well as we saw it the other day when visiting the well-kept gardens of Lord Wolverton, Iverne Minster, Blandford. Mr. Toakes, the talented gardener who is making such great improvements here, informs us the great hatch of superbly flowered plants in 6 in. pots consisted wholly of spring-struck cuttings. For decorative purposes at this season of the year we think this plant stands unrivalled. We noticed also a fine lot of *Begonia Gloire de Sceaux*, a variety which will bloom profusely in a short time. Tree Carnation Mrs. Leopold Rothschild appears to be a favourite, as it is grown in large numbers, and in perfect health.—*L.*

THIS fine winter-flowering or fibrous rooted Begonia may be said to mark the highest development in this particular direction. When subjected to good cultivation it is wonderful to see the way in which it responds. Naturally of dwarf and compact habit it flowers with surpassing freedom. The small rosy-pink blooms find a suitable foil to their brightness in the delicate shade of light green, afforded by the obliquely cordate leaves. The group of *B. Gloire de Lorraine* sent to a Drill Hall meeting by Mr. H. B. May, of Dyson's Lane Nurseries, Upper Edmonton, was a magnificent example of the value of the plant. Mr. May's specimens, although only in 48-sized pots, were of extra large size, and vigorous and healthy throughout. We have never seen an exhibit of the same material to equal it.

AFTER the rage of the 'Mums has partly subsided one has time to look round—so to speak—at other things, and should the eye perchance alight on the subject of this note—especially if it be in good condition—it will never cease to charm.

Of all the autumn and winter-flowering forms of this genus of useful and ornamental plants, there is none other which appeals so strongly to my fancy as *Begonia Gloire de Lorraine*. Whether one regards the habit of the plant, the character of the foliage, or the colour of the flowers, it is alike meritorious; but when one sees it as I saw it the other day at Falkland Park, South Norwood Hill, S.E., it is not likely to be forgotten.

Mr. Alex. Wright, the able gardener, has put his grouping ideas to advantage even here, for he has placed several plants together in the middle of a large No. 1 size pan, the whole being surrounded by a broad fringe of *Selaginella Braunii*, a well-known stove species. The colour of this *Selaginella* is a dark bluish-green, which effect is probably heightened by the rich, rosy-carmine colour of the *Begonia* flowers, which are produced in the purest fashion; in fact the plant, or plants, produce such an enormous quantity of these attractive floral organs that the specimen is literally all flowers. This pan is placed on an old tree-stump, which is covered with fungi, and occupies a prominent position in a warm house. The contents measure 3 ft. 6 in. in diameter, and form together one of the most pleasing objects that has ever come within my experience. Mr. Wright's originality is always apparent, whether he is dealing with British Ferns, hardy plants, Orchids, Bertolonias, or Begonias.—*C. B. G., Acton, W.*

ORCHID NOTES & GLEANINGS.

BY THE EDITOR.

Odontoglossum Rossii majus.—Considering the popularity which *Odontoglossum* enjoy, generally, it is surprising that one of the prettiest, most variable, and easy to grow, should not be placed higher in public estimation. It is essentially a cool Orchid, and when in bloom may be kept for weeks together in the conservatory, or even in the drawing-room, without inconvenience or injury to the plant in any way. It is, however, satisfactory to know that its claims to recognition are being advocated somewhere. Something like 5,000 flower spikes may be seen at present in the nursery of Messrs. W. L. Lewis & Co., Southgate, N. Of this number 1,000 are fully expanded, and show a great amount of variation. Spikes bearing four or five flowers are plentiful, although three is the usual number for the species. One branching spike carries seven flowers, a number we have only once seen surpassed by this species.

Laelia anceps from Ravenswood, Melrose.—A very fine variety of this *Laelia* now in season has reached us from the gardens of Admiral Sir H. Fairfax, Ravenswood, Melrose. It belongs to the same section as *L. a. Dawsoni*, having broad petals and handsome flowers, of good substance. The sepals are darkest at the tips and fade towards the base, being almost white at that point. The petals are very dark, almost crimson at the tips, but fade downwards in the same way as the sepals. The lamina of the lip is of a dark, velvety, maroon-crimson; and this, together with the broad, dark-tipped petals, constitutes the more important and distinctive feature of the variety. The interior of the tube of the lip is handsomely lined with crimson on a yellow ground. Admiral Sir H. Fairfax has had a long acquaintance with Orchids, and is fully alive to the value of a good variety. His gardener, Mr. Wm. Yea, is also an able grower, as we have had ample testimony for many years past.

Cypripedium Gabrieli. *Nov. hybr.*—The seed parent of this hybrid was *C. orphanum*, while the pollen was taken from *C. Dauthieri*, so that both of the parents were themselves hybrids. The ground colour of the dorsal sepal is yellowish, marked with longitudinal brown veins. The midrib is purplish-brown, and towards either margin is a band of the same colour. The petals are yellowish on the lower, and glittering, dark purple-brown on the upper longitudinal half; they are strongly ciliate on both margins. The lip is large, dull purple, and shining. The dark green leaves are slenderly netted. The hybrid was raised in the gardens of Thomas Gabriel, Esq., Elstead, Streatham Hill, and flowered recently for the first time. Mr. Guyatt is the gardener and grower.

CYMBIDIUM TRACEYANUM AT HEATON MERSEY.

WITHIN easy distance of Manchester, and on the side of the valley of the River Mersey, is the fine residence of J. Leemann, Esq., West Bank House, Heaton Mersey, Lancs. The present is scarcely the time to speak of outdoor gardening, but the great banks of choice hybrid Rhododendrons do well here, and being liberally planted make a grand display in spring.

For some time past the glory of the establishment has been a grand batch of sixteen plants of *Cymbidium traceyanum* in full bloom. They are arranged or rather temporarily located in the fine conservatory adjoining the mansion, situated upon a slope, and practically constructed on three terraces one above the other. What Orchids may be in bloom at any particular season are staged upon a table on the upper terrace, where the owner can examine and enjoy them at his leisure; for he is a devout admirer of his Orchids. Moreover, he is not exclusive in the enjoyment of his favourites, for chairs and a comfortable lounge afford the convenience of seating his friends while the Orchids are under consideration.

He has reason to be proud of this grand batch of Cymbidiums, for they afford one of the grandest sights that could be seen in the course of a long day's journey. He must be envied by a large section of the Orchid growing world, by having the finest stock of this *Cymbidium* in cultivation. The flowers are considerably varied in their markings, and in being of various light and dark shades of colour. The fragrance emanating from them is both powerful and delicious, pervading the atmosphere of the conservatory. The condition of the plants is also a credit to the gardener, Mr. Edge. I shall not soon forget this grand display, nor the impression it made upon me.—*F. A.*

PLANTS RECENTLY CERTIFICATED.

Awards according to merit were given to the subjects named hereunder by the Royal Horticultural Society on November 23rd.

Orchid Committee.

MAXILLARIA ELEGANTULA. *Rolfe, Nov. sp.*—The flowers in this case are of medium size, and the individual segments are very stiff and succulent. The bases of the latter are white, and the ground colour also, but heavily suffused with yellow-brown and spotted red-brown; until towards the apices no white is to be discerned. The lip, too, is very heavily spotted with dull deep red. The spathe is green and the leaves very tough and leathery, about 15 in. in length, and 1½ in. in width. Botanical Certificate. Messrs. F. Sander & Co., St. Albans.

CIRRHOPELALUM REFRACTUM.—This is a curious and interesting species. The long strap-shaped petals are much elongated. The flowers are disposed in pseudo-whorls in a pendant spike of about 4 in. in length, the amalgamated petals, which are yellow-green in hue, standing at right angles to the rachis. Botanical Certificate. Mr. H. J. Chapman, gardener to R. I. Measures, Esq., Cambridge Lodge, Camberwell.

CATTLEYA LABIATA WHITE QUEEN. *Nov. var.*—Save for a yellow blotch at the base and a suffusion of pink at the tip of the lip this is what the varietal name indicates, viz., a pure white form of *Cattleya labiata*. The segments are of great width and substance, and the margins are prettily crisped. Award of Merit. Mr. J. Parker, gardener to W. P. Burkinshaw, Esq., West Hill, Hessle, Hull.

LAELIA X OLIVIA. *Nov. hybr.*—This is the result of a cross between *L. crispa* and *L. xanthina*. The flower itself is of medium size, and of great beauty. The sepals are a little more than half an inch in diameter, and from 2½ in. to 2¾ in. in length. The petals are noticeable for their great width as compared with the length, being as long as the sepals but much wider. The colour is a deep yellow with a suspicion of green. The lip is large and exhibits a rich, deep crimson hue, shading lighter at the base where a distinct trace of orange appears. Award of Merit. Messrs. Jas. Veitch & Sons, Ltd., Chelsea.

CATTLEYA EMPRESS FREDERICK VAR. LEONATA. *Nov. hybr.*—*C. dowiana* and *C. Mossiae* are the parents of this interesting hybrid. The sepals and petals exhibit a rich rose hue. The petals are half as broad again as the sepals and of about the same

length. The lip, with the other segments, has a prettily frilled margin and is broad and massive. A large, deep crimson blotch at the tip is a prominent feature. Towards the base of the lip is a number of deep orange stripes running at an angle of 45° to the central vein. Award of Merit. Messrs. Jas. Veitch & Sons, Ltd.

CYPRIPEDIUM BECKMANI. *Nov. hybr.*—This is the outcome of a cross between *C. Boxalli superbum*, and *C. bellatulum*. The dorsal sepal is of great size, boldly erect, and has an unbroken, nearly circular, outline. It is green in hue, and heavily spotted with chocolate-brown. The petals are obovate in shape and chestnut-brown in colour with a few deeper spots near the base. The "slipper" is long and rather narrow, much pointed, and of the same hue as the petals. Award of Merit. Messrs. Lucien Linden & Co., Brussels.

ODONTOGLOSSUM DAYANUM.—In this case the segments of the flower are very narrow, long, and acuminate. The colour is green-white, and spotted with light brown. The lip is small and white, with spots of yellow and brown at the apex. Award of Merit. Mr. Ballantine, gardener to Baron Schroder, The Dell, Egham.

Floral Committee.

CHRYSANTHEMUM MRS. F. A. BEVAN.—For description see p. 166. Award of Merit. Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey.

CHRYSANTHEMUM JULIA SCARAMANGA.—For description see p. 215. Award of Merit. Mr. W. Wells.

CHRYSANTHEMUM GEORGINA PITCHER.—For description see p. 215. Award of Merit. Mr. W. Wells.

CHRYSANTHEMUM MRS. H. FOLKES.—A white Japanese variety of medium size, and with good, stiff, flower stems. It should prove useful as one of the whites. Award of Merit. C. E. Strachan, Esq., Hemel Hempstead.

CHRYSANTHEMUM MISS MARY MOLYNEUX.—For description see p. 166. Award of Merit. Mr. N. Molyneux, gardener to J. C. Garnier, Esq., Rockbury Park, Fareham, Hants.

BEGONIA JULIUS. *Nov. hybr.*—This is the progeny of a cross between *B. socotrana* and a tuberous-rooted variety. The appearance of the plant seems to be intermediate between the two parents. The flowers, which are double, undoubtedly show a marked improvement in size, and the form is also good. The colour is salmon-pink. The leaves are nearly orbicular in shape, deep shining green in hue, and with irregularly dentate margins. The habit is sturdy. Such a race of plants as this would prove a valuable acquisition to our plant houses during the winter months. Award of Merit. Messrs. Jas. Veitch & Sons, Ltd.

Fruit Committee.

GRAPE DIRECTEUR TISSERAND.—This is a new black late Grape of great merit. The berries are oval in shape, and of medium size. The skin is thick, as we may expect in the case of a late variety. The flavour is first-class, being full, rich, and very sweet. Award of Merit. Messrs. T. Rivers & Son, Sawbridgeworth.

APPLE LADY FALMOUTH.—This is a small, rather flattened, dessert Apple of very brilliant colour, bearing a resemblance to Court Pendu Plat.

The whole of the fruit is covered with a rich red, and the flavour is brisk and pleasantly acid. The eye is large and shallow. Award of Merit. Mr. George Chalmers, Beech Farm, Mereworth.

The *Chrysanthemums* mentioned hereunder received a First-class Certificate from the N.C.S. at the Royal Aquarium on November 29th.

MRS. J. R. TRANTER.—A very large Japanese flower, with narrow, drooping florets of medium length. The colour is a charming shade of blush-white, the lower florets having a deeper suffusion of rose, and being striped on occasion with pink. It originated from a packet of seed sent by Pitcher & Manda. Mr. J. R. Tranter, Henley-on-Thames.

VIOLACEA.—This is a huge Japanese bloom of considerable depth, but rather flat on the top. The florets are of medium length, and intertwine to some extent. The colour is light rose, shading to rose-white in the centre. The bloom is rather coarse and ungainly in build. Mr. E. Beckett, Aldenham House Gardens, Elstree.

THE PLANT HOUSES.

Pits and Frames.

WE have now reached a season of the year when severe frost may be expected at any time, and it will be advisable to shift out of the unheated structures any tender plants that might well be injured by a sudden spell of cold weather.

CINERARIAS are one of the first things that should be looked after in this way. Within the next week or ten days they should be shifted out of the cold frames in which they have been accommodated. An ideal house for them is a span-roofed pit with slate shelves or stages covered with ashes, and heated by sufficient piping to keep the frost out. Fire heat should not be employed, however, a moment sooner than is absolutely necessary, for *Cinerarias* have a great dislike to it, and its continued use exercises a very prejudicial effect, especially upon the later plants. In such a house as that referred to the *Cinerarias* will enjoy plenty of light. The large plants that received their final shift into eight inch pots about the middle of November have now got over the slight check they then received, but close attention must be paid to them for watering for another week or two. In addition to plenty of light a fair amount of air must be given, but not in such a way as to cause draughts. A good temperature for the night will be from 40° to 45° Fahr., the latter being for very mild, and the former for very cold weather. The plants will thus be kept gently on the move.

FORCING HOUSES.—Melon pits having brick beds of fair width and depth come in admirably at this time of the year for forcing Lilacs, Azaleas, Deutzias, Spiraeas, Staphyleas, and bulbs of sorts which are to do duty presently in the conservatory. These beds can be filled with leaves or other gentle heating material, and the plants plunged in them. A very little fire heat suffices to keep the temperature well up, while the fermenting matter is fresh. The temperature may range from 55° to 60° by night with a proportionate rise during the day. Such a house as this will suit *Richardias* well where early flowers are wanted. Syringing with tepid water may be conducted each morning between 9 and 10 o'clock, and again in the afternoon between 2 and 3 if the weather allows of it. Should severe frost threaten, however, it will often be advisable to miss the post-meridian syringing. Into these houses for the next few months should pass relays of the various subjects that are to be forced for conservatory work. From ten days to a fortnight should elapse between the introduction to heat of the several batches.

Meanwhile the remainder of the hard wooded plants such as the *Deutzias*, *Staphyleas*, *Lilacs*, and *Spiraea confusa* will take no harm out of doors, as they are perfectly hardy. The pots, on the other hand, are apt to get chipped and cracked if left exposed to the action of the frost. It will be well therefore to plunge the pots deeply in the plunging ground left vacant by the *Chrysanthemums*, placing an inch or two of ashes over the surface of the soil. Water will, of course not be needed, at least in greater quantities than that supplied by the clouds.

BULBS.—By this time all the bulbs of *Hyacinths*, *Tulips*, *Crocuses*, and *Narcissi* that were potted up and covered with ashes in the open ground will have rooted sufficiently to warrant removal. An early opportunity should therefore be taken to remove them to pits or frames, where they can be easily got at, as their turn comes to be brought into heat. Should we be favoured with a very bright sunny day or two immediately after the withdrawal of the plants from their seclusion they should be shaded a little until the tops become gradually inured to the light and the etiolated appearance has given place to the normal green.

COLD FRAMES.—At this advanced date it is advisable to cover all unheated frames regularly each evening, no matter whether the weather promises to be mild or not. A clearing of the sky if it continues for any length of time now means a frost, no matter where the wind is, and the gardener must not be caught unprepared. During the day as much air as possible should be given the occupants, for any subject that is so tender that it cannot stand this has no business in a cold frame at all at this season of the year.—*A.S.G.*

VEGETABLE CALENDAR.

THE season has arrived when we may expect severe frost at any time, and with a view to keeping men profitably employed during such weather, all vacant quarters may be manured at once, spreading it evenly over the ground to prevent the latter from getting frost bound. With a good breath of land secure from frost, digging and trenching can be forwarded at its proper season. In dealing with heavy land, the rougher this is left after the spade, the better it will be at seed time; and the longest manure should be used on ground of this description. For lighter soils thoroughly decomposed manures should be used. Double digging, or bastard trenching, is equally beneficial in both cases, and as much as possible of this should be done at this season.

FRAME CROP.—These will need very close attention now and onwards, as decay spreads very rapidly among young Lettuce, Endive and similar crops. The plants should be frequently looked over and all decaying matter removed. The surface soil should also be stirred occasionally, and a dusting of dry burnt ashes scattered over it will act very beneficially in absorbing moisture and preventing decay. Ventilate freely whenever the glass stands a few degrees above the freezing point, leaving it on night and day during mild weather.

FERMENTING MATERIAL.—With a view to early requirements in the forcing department a large stock of leaves should be collected and stored in a dry position ready for use in a few weeks time. To every three loads of leaves, one of long dung may be added, and the whole frequently turned to render it sweet and in the best condition for use. Where leaves are plentiful a large bed may be formed 6 ft. high, and of any length or width desired. This bed will retain a gentle heat far into the spring, and will be found most useful for raising many early crops by making small sowings under handlights or frames in a few inches of fine soil. About the end of February the whole surface of the bed can be earthed over and planted with early Potatoes, protecting them with bent rods covered with mats or other coverings.

LETTUCE.—The mild autumn has forced the August sowings so forward in growth as to render the plants unfit to stand very severe weather. All that can be placed under cover should be lifted with balls at once. Where no intermediate sowing has been made, a very mild hot bed of leaves should be got together, and a one light frame placed over it. This may be sown now with all the year round Cabbage and Paris Cos.—*J. R.*

The Orchid Grower's Calendar.

THE WEATHER.—During the past week or two the fog fiend has been on the war path with a vengeance; not that it makes such a great difference to us who are fortunate enough to be in the country, as we do not feel the effects to any extent. We are, nevertheless, truly sorry for those that have to grow Orchids in or near the Metropolis. How vexatious it must be to have nearly, if not all, your flower spikes on the Phalaenopsis completely spoilt, and the work of a season lost. It must have been a relief when the wind began to disperse the demon on Saturday. There was no doubt of its intention on Sunday the 28th ult., and all through the night, for it blew a hurricane. The temperature, too, is much colder so that we may expect some frosty nights. It is customary for us at the approach of winter to give a few hints that may be of great use to amateurs. In the first place we would advise that a stock of peat be got in; also a good quantity of sphagnum moss. The autumn having been exceptionally dry the moss will be nice and short, and in capital condition. Left until later it becomes lanky and so much is wasted, for at this season only the live points should be used. Again should frost set in the moss merchant would have a difficulty in supplying you—just when you want it most. There is yet another advantage, the peat can be pulled and the moss picked during bad weather when outside work is at a standstill. A little forethought in this respect saves a lot of time later on.

THE WARM DIVISION in which the heat-loving Cypripediums are growing is always a source of great interest at this season of the year; and if there is one genus of Orchids more than another better

adapted for growing in or near large towns Cypripedium is the one. The various forms rarely, if ever, fail to give satisfaction, if given anything like a fair chance. When grouped together, the varieties of *C. insigne* are very fascinating, as are groups of *C. leeanum* and *C. spicerianum*. Solitary plants, unless they are profusely flowered, do not convey a proper estimate of their beauty.

The Cypripediums are essentially amateurs' Orchids, for given heat and moisture in sufficient quantities, they rarely fail. They may be potted, too, at any time short of their being in full flower.

THE COMPOST for the majority consists of two parts peat and one of moss. The peat should not have the fine material shaken out as for Cattleyas; neither should it be used in too dry a state. Bits of charcoal or small crocks should be worked in with the compost when potting to keep it open.

MASDEVALLIA TOVARENSIS.—If the *M. harryanum* section has gone out of favour, this chaste little gem remains a favourite still. We grow ours in pans using peat and moss in about equal parts. A temperature halfway between that of the cool house and the Cattleya house suits it admirably. We have such a division in which is growing *Oncidium tigrinum* (now in flower), *Odontoglossum hastilabium*, *O. harryanum*, *O. luteo-purpureum*, and *O. triumphans*. *Sophronitis*, too, likes this extra warmth, as does *O. Rossii majus*.

TEMPERATURES.—East India house, 65° at night; Cattleya house, 55°; Cool house, 50° at night; all should have a rise of 10° by day. Should the outside temperature become very cold a few degrees below those stated above would do no harm.—*C.*

Gleanings from the World of Science.

Is the Great Black Woodpecker a native?—

At a meeting of the Linnean Society of London, on November 18th, 1897, Mr. J. E. Harting, F.L.S., exhibited a specimen of the Great Black Woodpecker (*Picus martius*) lately received from Col. W. C. Dawson, of Weston Hall, Otley, Yorkshire, where it had been shot in his presence by a friend on the 8th September last. It was shown that this could not be the bird which had recently been lost from the Zoological Gardens, since the latter did not escape until October 9th. Allusion was made to the numerous records of the occurrence of these species in England, some of which at least seemed worthy of credence, since the recorded specimens had been obtained and were preserved in the possession of trustworthy persons.

Mr. Howard Saunders expressed the opinion that there was no sufficient ground for including *Picus martius* in the list of British birds, as from its partiality for pine forests and its stationary habits, it was not likely to be a voluntary visitor to this country.—The President remarked that the perfect state of plumage of the specimen exhibited was satisfactory evidence of its not having recently escaped from captivity; and that the late Lord Lilford, the year before his death (which occurred on the 17th June, 1896), had two Black Woodpeckers in his aviary in Northamptonshire, and in consequence of their ailing in health, had given them their liberty. It seemed possible that one of these might be the bird lately shot in Yorkshire.

Mr. J. E. Harting also exhibited in the flesh a hybrid Pheasant and Black Grouse, which had been received that day from Shropshire. In appearance it precisely resembled a similar hybrid of which a coloured figure is given in early editions of White's "Selborne."

On behalf of Mr. Leonard Lush, of Stonehouse, Gloucestershire, three white Partridges (*Perdix cinerea*) were exhibited, which had been shot by him on the Berwyn Mountains in Wales, early in October last. It was remarkable that in the covey, which consisted of nine birds, no less than five of them were white, four only being of the normal colour.

The undermentioned subjects were brought before the Scientific Committee of the Royal Horticultural Society on the 23rd ult.

Gall on Jasmine.—With reference to the specimen brought by the Secretary to the last meeting, Mr. MacLachlan reports that it is quite impossible to fix on anything in particular in the way of a cause,

but the puncture of a Phytoptus is the most probable.

Phyllotreta on Cruciferae.—He also observes, with regard to the beetles shown by Mr. Michael as as destructive to Stocks, &c., that "the genus is the one to which the 'Turnip flea' belongs. There are about a dozen species in this country, all being much alike. They all frequent the Cruciferae, and the fact that this one was also found on *Tropaeolum* only intensifies the fact that most things which feed on the former will feed on the latter, as—*e.g.*, the larvae of 'Cabbage Whites,' the interpretation being that both contain the same chemical vegetable products."

Dahlia Hybrid (?)—Flowers were received from Mr. E. J. Lowe, of Shirenewton Hall, Chepstow, supposed to be the result of crossing a Dahlia with the pollen of a Sunflower. The appearance was that of a Dahlia, the disc alone being rather larger. Dr. Masters undertook to examine them more minutely.

Cypripedium, Monstrous.—Mr. Veitch sent a plant of *C. Sityus* bearing a single flower. It had no lip, but two columns. It was referred to Dr. Masters for further investigation.

The Copper Plant.—Dr. Masters exhibited an illustration of *Polycarpaea spirostylis*, F. von Müller. It has the above name, as it is said only to grow where copper is to be found, and that its presence is an indication to miners of the existence of that metal in the neighbourhood. It is found by the mines of Watsonville, &c., N. Queensland.

Chrysanthemum Proliferous.—A specimen bearing three flowers was received from Mr. B. Greaves, of Broome Hall Gardens, Dorking. They were remarkable for consisting of a dense mass of minute heads instead of distinct florets. Some of the Show Dahlias, Dr. Masters observed, consisted of this peculiarity, the separate heads combining to make a single large "flower." The peculiarity is characteristic of the genus *Echinops*, only the individual heads contain but a single flower each.

TRIALS AT CHISWICK.

THE trial of Cottager's and Curled Kales, held at Chiswick this year, has been an interesting one, and the committee met at Chiswick on November 6th to determine the relative merits of the varieties, forty-seven in number, submitted to the test. The award of XXX. was made to the following varieties.

CUTHBERTSON.—A very dwarf, hardy, curled form with dark, sturdy foliage. Mr. M. Cuthbertson, Rothesay, Bute.

BRYDON'S SELECTED.—This is a very strong and vigorous form of medium height. The leaves are very densely curled, in fact, more so than any of the other forty-six varieties sent. Messrs. Kent & Brydon, Darlington.

VARIEGATED.—Here we have an excellent sample of a good garnishing Kale. The leaves are nicely crisped, and white, green, purple, and shades of rose are the predominant colours. Messrs. Jas. Veitch & Sons, Ltd., Chelsea.

DOBBIE'S SELECTED.—This is a splendid curled variety, very vigorous, and hardy, passing through the most severe winters untouched. The foliage is very dark green, and the plants are of medium height. Messrs. Dobbie & Co., Rothesay, Bute, and Orpington, Kent.

CHOU DE MILAN.—A tall, branching variety of great merit, but not curled. Its greatest recommendation is its exceptional hardness. Messrs. Watkins & Simpson, Exeter Street, Strand.

COTTAGER'S KALE.—This is a splendid strain, of tall and branching habit. The foliage is dark, and slightly curled. Messrs. Watkins & Simpson.

CULZEAN CASTLE.—Here we have another excellent stock. The plants are of medium height, very strong, and vigorous. The foliage is of dark hue, and densely curled. Messrs. Hurst & Son, 152, Houndsditch.

LATE HEARTING.—A dwarf and sturdy strain of hearting Kale. The plants produce large and heavy hearts of great delicacy of flavour. The leaves are much curled. Messrs. Hurst & Son.

An award of XX was made to the two under-mentioned varieties.

DWARF PURPLE.—Here the leaves are long and large, dark purple in hue, and well curled. The plants are very dwarf in habit, being only about a foot in height. Messrs. Dobbie & Co.

BARR'S EXQUISITE.—This is practically the same as Dwarf Purple, the habit and style being identical in the two cases. Messrs. Barr & Sons, King Street, Covent Garden.

HINTS FOR AMATEURS.

THE GREENHOUSE.

At this time of the year, and, in fact, right through the winter months, the amateur's greenhouse contains a more than usually heterogeneous collection of plants, which are brought into the glasshouses from all parts of the garden, and various corners of cold frames, where experience has taught they cannot be wintered with safety. Subjects which have done duty in the flower garden during the past summer often bulk largely in the arrangements. These may include specimen zonal and Ivy-leaved Pelargoniums, Heliotropes, and Fuchsias; also such foliage plants as *Aralia Sieboldii*, or such aquatics as the blue African Water Lily, *Agapanthus umbellatus*, which require a little protection to tide over the rigours of our winters.

In addition to these there is often next year's supply of recently struck cuttings of bedding plants to find room for somewhere or somehow. Hard wooded subjects like Azaleas, Camellias, and Acacias also claim a share, and often a good one, of the available space.

Then, of course, there are bulbs of various kinds in pots and in different stages of growth which the owner is depending upon to produce a bit of bloom after the turn of the year. Usually a few Cinerarias, Cyclamen, and Primulas are included, together with a number of waifs, strays, and nondescripts, representing a fairly wide range of plant life, but all of which have some value in the owner's eyes.

To be able to accommodate such a host of unlike material in one house is, indeed, a task, and yet no power on earth will induce the every-day amateur to abate his pretensions or lessen his collection by a single plant, until, perhaps, in sheer desperation that plant solves the difficulty by dying, whilst others linger on in an abject and miserable condition.

By dint of a systematic arrangement of the various elements of the collection, however, a good deal may be done to improve matters. Every greenhouse should be fitted with shelves in addition to the ordinary stages. These shelves may be constructed and fitted in such a way that they may be taken out during the summer or whenever they are not required. At this time of the year they are of the utmost service, and it is not too much to say that a house fitted with them renders double the service to one that is not supplied with this convenience.

Now a word as to the general management of the greenhouse before we go on to deal with the special requirements of the most important subjects. A minimum temperature of 40° Fahr. by night during the winter will be found the most suitable. During mild weather the glass may stand 2° or 3° higher than this without any danger. The day temperature may rise from 5° to 10° higher than the night temperature, but the latter rise will only take place during very bright sunny weather, when there is little or no wind. If we get continuous frosty weather during the next six weeks it is more than probable that there would not be 5° difference between the night and day temperatures. The moral of all this is, therefore, that any figures which can be given cannot be taken as being absolute, but must be taken rather as the basis of treatment.

Ventilation.—Many people run off with the idea that it is only in the warm weather that houses want airing, and they proceed to neglect entirely to ventilate their glasshouses any more than in the casual way of opening and shutting the door upon entry. This a great mistake, for the atmosphere of the house should be changed regularly. Of course, a properly constructed house is not air-tight, and the interstices between the laps of the glass act like a number of little ventilators, but, excepting in very severe weather, more than this is required. The side lights of most houses are movable, but these should be kept closed through the winter. The top or roof lights may be opened occasionally if the day be favourable, but in this case they should only be opened on the sunny side of the house. The bottom ventilators, on the other hand, must be freely used. Here the air they admit passes over the hot-water pipes in its passage into the house, and becomes warmed in its journey, so that there is no danger of injury to the plants from direct contact with cold air.

Watering.—This presents one of the most difficult problems for the amateur to tackle. It must be borne in mind that in the majority of cases the plants are in a comparative state of rest, and less water will be needed as a consequence. Then again, there will be less evaporation of water from the soil, as the air being at a low temperature cannot contain so much moisture as it does when it is warmer. Generally speaking, therefore, all plants may be kept drier during the winter than in the spring and summer. No plant should be watered because it may need water to-morrow. Wait until to-morrow in such a case. All watering should be done in the forenoons, and a bright day should be chosen if possible. Between the hours of 10 a.m. and 12 noon will be found the best time of the day for wielding the watering-can. The moisture will then, to a large extent, have become dissipated by nightfall.

Now as to the disposition of the plants in the house; we will take the shelves first of all. Upon these may be placed any of the smaller plants that require to be brought up close to the glass, but which, at the same time, will not need to be watered very often.

These conditions apply particularly to autumn-struck cuttings of the tender sorts of zonal Pelargoniums which are to be used for bedding next year. Such varieties as Creed's Seedling, Mrs. Pollock, Mrs. Henry Cox, and Crystal Palace Gem like just such a situation as this. Before they are consigned to the shelves, if the cuttings are fairly well rooted, all the old leaves and any flower buds which may be showing themselves should be picked off. Very little water indeed will be required. Old plants which have been cut back may be gone over again with a sharp knife or pair of scissors, and any pieces that have damped off cut out. No water at all will be needed for several weeks to come. No matter if the soil does look dry, it is far better for it to be so than wet.

Lobelia cuttings may also be placed on the shelves. Keep a special lookout for damp among these, although damp will be even a worse enemy amongst the old plants which were lifted and potted up at the end of October to furnish cuttings for stock next spring.

Freesias are just now growing away freely. These will do well on a shelf, for they like plenty of light. The plants have now reached a size when staking will be necessary. For plants which are to be grown in the ordinary way, the quickest and easiest way to afford the necessary support is to insert about four small neat stakes from 6 in. to 8 in. in length around the sides of the pot, and pass a strand of raffia round them. Special plants may have a small stake placed to each of the strongest growths. A little weak guano manure may be given as soon as the flower scapes make their appearance. Keep a smart look-out for greenfly.

Cinerarias—Until quite recently these plants have been accommodated in cold frames, but they should have now been brought into safer quarters. Group these together also, but try and manage so that they are not in close proximity to the hot-water pipes, oilstove, or whatever other heating apparatus is employed. Cinerarias do not like fire-heat, and thus if there is a part of the house cooler than another let them have it. If the plants are strong and healthy a fair amount of water will be needed, and a little weak farmyard manure may be given about once a week to the most forward plants.

Herbaceous Calceolarias.—Of all the greenhouse plants which may be grown by amateurs possessing a little glass there is none more beautiful than the herbaceous Calceolarias. Visitors to the Royal Horticultural Society's show in the Temple Gardens know full well what a lot of splendid Calceolarias are staged there yearly. Such a sight as they present undoubtedly induces many people to make an attempt to grow them, but, unfortunately, there are many failures, and this usually from very simple causes. The most common mistake made is coddling the plants. A sojourn in a dry, warm house will most assuredly spoil the best plants, for they become drawn, etiolated weaklings that never subsequently develop into good plants, no matter how well they may be treated in the spring. The winter months constitute the really critical time. A capital place for the plants now is a shelf near the glass, where they will get plenty of light. If possible place a layer of ashes half an inch or so in depth for the pots to rest on. This holds the moisture better,

and is more kindly than the hare wood. In watering use cold, soft water if obtainable, but no liquid manure of any sort, for the plants are in a state of semi-quiescence, and nothing should be done to unduly disturb them for the time being.—*Rex*.

Correspondence.

Questions asked by amateurs on any subject pertaining to gardens or gardening will be answered on this page. Anyone may give additional or more explanatory answers to questions that have already appeared. Those who desire their communications to appear on this page should write "Amateurs' Page" on the top of their letters.

Rose for Pillar.—Y. wishes to plant a Rose to train up a series of short iron pillars connected with chains which run across the bottom of his garden. We should recommend the variety *Flora* as being the most suitable for the purpose. It is a very profuse flowerer, and resists the smoke remarkably well. Visitors to Kew will remember what splendid effects are produced each year at Kew by this pretty Rose.

Covering Tea Roses.—*Rosa, Richmond, Yorks.* We should certainly advise you to follow the example of your neighbour and cover your Tea Roses at once. The winters in your locality are often severe, and the winds are especially keen and cold. Dry bracken will be found a cheap and efficient covering.

Crested Cyclamen.—*A. Marney* sends blooms of Cyclamen which have a crest upon one of the petals. It is now a not uncommon occurrence to find crested Cyclamen, although they are of comparatively recent introduction. Messrs. Hugh Low & Co., of Bush Hill Park, Enfield, have given a good deal of attention to Cyclamen, and that pretty variety Bush Hill Pioneer is an excellent instance of crested petals. This variety is white, but the Messrs. Low have also pink and red crested forms.

New Chrysanthemum.—*W. Forbes.* Write to any of the leading Chrysanthemum specialists, and send samples of the flowers. If the variety promises to be a good one you would then have no difficulty in disposing of the whole stock at a fair price.

Cheap Chrysanthemums.—*Amateur* wishes to comment upon the very low prices at which cuttings of leading varieties of Chrysanthemums are offered in some quarters, and asks if the material is good, and if the varieties can be depended on as being true to name. We have no knowledge of the tradesmen alluded to, and consequently cannot speak definitely of the kind of stuff they supply, but the prices are certainly too low to expect much, for it is an expensive undertaking to keep up a large collection of varieties true to name, and in sufficient quantities to supply orders.

Acacias for Greenhouse.—Please name three of the best Acacias for greenhouse.—*C., Reading.*

Acacia armata, *A. Drummondii*, and *A. riceana* are three of the handsomest and most serviceable. *A. dealbata* is also well worth growing.

Specimen Plants of Mignonette.—*A. Marney:* In order to obtain good specimens you must, for the present, keep all the flowers pinched out as fast as they show themselves. The growths must be tied neatly out to stakes so as to cover a large area. A night temperature of from 45° to 50° Fahr. will suit the plants admirably.

Chrysanthemum Western King.—*f. O.:* This variety is of American origin, and was sent out by Mr. Nathan Smith, Adrian, Mich., U.S.A. We find that it has obtained a First-class Certificate in this country from the hands of the National Chrysanthemum Society on October 28th, 1896.

The Chinese Sacred, or Jos, Lily is a bulb of exceedingly easy culture, *C. Mearns.* In China and Japan it is grown in bowls filled with pebbles and water, and may be treated in the same way here. Soil, cocoanut fibre refuse, or Jadoo fibre, may be employed if desired. The temperature of a warm greenhouse suits it well. The bulbs each throw several flower scapes, each scape carrying a number of flowers. Occasionally some of the stronger bulbs produce enormous quantities of flowers. The

most prolific bulb we have met with or heard about had nine flower scapes. Of course this "Lily" is not really a Lily at all, but a form of the Polyanthus Narcissus.

Mahonia Aquifolium.—*J. R. G.*: If you want so much of the foliage for decorative work the best thing would be to select some of the most scraggy looking of the plants, and cut them right down to the ground. You will thus obtain all the decorative material that you require without spoiling the best plants. The cut-backs will break away from the bottom in the spring, and by next autumn will have made dwarf bushy specimens. This plan is followed by several of the growers who supply Mahonia foliage.

THE "HURST & SON" C.C.

It may seem late in the season to advocate the claims of cricket; but the feverish rush and hurry of the brief but lively Chrysanthemum season has kept other matters pertaining to gardening in the background for the past month.

MESSRS. DOBBIE & CO., ROTHESAY. ON the 11th of September last we paid a visit to the far-famed establishment of Messrs. Dobbie & Co., Rothesay. Pressure on our space prevented us from recording our notes at the time, and later on the Chrysanthemum in all its varied phases monopolised our pages for weeks. What we noted then, if not in season now, will be even more full of interest presently when preparations are being made, not only at Rothesay, but all over the country, for next year's display in the garden. Florists' flowers, hardy herbaceous plants, and vegetables are the specialities at Rothesay, as most of our readers well know. Messrs. Dobbie & Co. have sixty acres of land at Rothesay, occupied with their various specialities, and a seed farm at Orpington, Kent, of equal extent, for the growing of seeds to meet the demands of their thousands of customers.

SPRINGFIELD NURSERY.

This is situated in Rothesay itself, and is the oldest branch of the establishment, where Mr. James Dobbie carried on business for many years. The area is almost completely occupied with glass-houses, many of which are comparatively new, and con-

including Queen Charlotte, having yellow-edged, scarlet flowers.

The collection of Chrysanthemums here is very extensive and up-to-date, only new varieties being grown. They were in the open at that time, and included 1,800 in pots for exhibition blooms, and 1,000 plants of decorative varieties in pots for big blooms. The former included Lady Hanham, that handsome salmon-pink sport from Vivian Morel, so much in evidence at shows for some weeks past. Lady Isabel is one of the largest incurved varieties in cultivation, if not the largest; its flowers are lilac-pink. Others were Australian Gold and Albert Histout, the latter being a new white sport from Wm. Tricker and full of promise.

Early or summer-flowering Chrysanthemums were represented by 800 plants in pots of the best varieties in cultivation. This was proved at Chiswick during September and October last, when a large number of them received XXX from the Floral Committee, as recorded in our pages at the time, including Mychet White, Bronze Blushing Bride, &c.

All the leading varieties of greenhouse Fuchsias are kept in stock, including a rose sport from

THAKE. MAIN. SWINFEN. JERRY. PORTCH. BLYTH. HUDSON (Umpire).
 DAY. DELACOURT. SAMPSON (Capt.) SQUIRE. LOCKE.
 SPENCER (Scorer).

With regard to cricket or any other wholesome recreation, we do not sympathise with those who would banish amusement of every form from the arena of the legitimate occupation of the hours of leisure, whether of half-holidays or the evenings after the labours of the working-day have been completed. The laws of health are now beginning to receive that recognition which the past has ignored. Gardeners, who are confined all day to hothouses saturated with moisture that is injurious to the human frame, or seedsmen who are tied to their posts in populous and smoky cities and towns require some means of counteracting these devitalising influences. Furthermore, it cannot be denied that healthy and happy men are of more service to their employers than the unhealthy and dissatisfied. In this respect, therefore, wholesome open air recreation is of advantage to employers and employed.

Many of our readers will still remember the cricket matches we recorded during the past summer, including those in which the team of the Hurst & Son Cricket Club played a prominent part. The accompanying photograph represents the men forming the team of this well known cricket club, whose season was a very successful one. The men are all in the employment of Messrs. Hurst & Son, of 152, Houndsditch, London, and we may here state that they won nine matches, drew four, and lost five during the season of 1897.

structed on the most approved modern principles for plant growing.

The first house we entered was the propagating pit for Dahlias in spring, but at the time of our visit was filled with Tomato Frogmore Selected, bearing a heavy crop of large fruits. We witnessed a finer sight in other houses occupied with Tomato Dobbie's Champion, a very deep fruit of medium size, round, smooth, and rich scarlet in colour. The flesh is solid and flavour excellent, as we had ample means of proving. The Tomatos were planted out in the floor of the house and trained up to the roof. The earliest had long been gathered, but later ones were fruited from the ground and bearing enormous bunches all up the stems.

In another house we noted a stock of all the best varieties of zonal Pelargoniums. Cuttings of them in all stages of rooting filled another house. From thence we passed into the Begonia house, where the single tuberous varieties potted up in May were still flowering. They are of erect habit, very floriferous, and of all colours. The rosy-pink flowers of *B. odorata* are pleasantly fragrant. Here also was a collection of the new, large-flowering Cannas of the Crozy strain, represented by all the varieties.

Phenomenal, which is white; the pure white Countess of Aberdeen; and Lady Dorothy Neville, with a spreading blue Corolla, and very handsome. Fuchsia tryphylla and *P. microphylla* are both interesting and ornamental. Show and fancy Pelargoniums are also cared for; and here also is a collection of species of Pelargonium which we did not expect to find in a floral establishment.

Messrs. Dobbie & Co., are also well up-to-date in the matter of Heliotropes, of which many grand varieties are grown, and prove serviceable either for potwork or bedding purposes. President Garfield, Numa, Lady Amherst, Mme. de Burry, Miss Nightingale, A. Delaux, The Queen, and Swanley Giant are some we noted in bloom. A large quantity of frames occupy sloping ground at one end of this nursery, and are all required in spring. Another set of frames was filled with a stock of thousands of Dahlias in small pots, grown for what is known in the trade as pot roots. The potting shed and packing house are very extensive and admirably fitted up for the purpose. During winter and in wet weather, thousands of labels have the names of Dahlias written upon them, and are all classified in pigeon holes ready for use when wanted in spring.

BUSH FARM NURSERY.

HARDY HERBACEOUS PLANTS.—This farm occupies some fertile land on the sloping side of a low hill, overlooking Rothesay Bay, and much of the county of Bute. It is in every way adapted for the cultivation of flowers and vegetables of all kinds. On this occasion we shall merely indicate the general character of the hardy plants grown, particularly those grown in quantity. The Dandelion-leaved *Oenothera taraxacifolia*, and red and white varieties of *Dianthus multiflorus hybridus* were still flowering. Some 20,000 to 30,000 border Carnations are grown, in all the best sorts. All up the hill side on either hand are broad plantations of many herbaceous plants, including *Primula rosea*, Iceland Poppies, *Aquilegia californica*, and hybrid sorts; also *Pyrethrum* and *Phloxes* in quantity, the latter consisting of old plants, as well as cuttings in frames. Those in bloom varied from 2 ft. to 4 ft. high, including all the best large-flowering, richest, and most beautiful colours in one hundred select varieties—surely enough to satisfy the most fastidious.

Violas and *Pansies* constitute one of the leading specialities at Rothesay, as they have done for many years past. At the time of our visit there were 32,000 summer struck cuttings, rooted in July, and ready to be sent out, all good and well established stuff. Six long beds of old plants were still flowering profusely. In another part of the nursery we noted a long edging of *Violetta*, the sweet-scented *Viola*, the parent of all the miniature race. It was one mass of pure white, and formed an edging to a long herbaceous border, where it was planted twenty to twenty-one months ago. Perennial *Asters* or *Michaelmas Daisies* are grown in quantity and variety, including several very fine forms of *A. Novibelgii* and *A. Novae-Angliae*. *Boltonia asteroides* was also fine.

On an upland portion of the farm, we walked through a large plantation of *Marigolds*, including a splendid strain of French *Marigolds*. Some of them had a lemon and others a golden-yellow ground with velvety-maroon edges. *Lemon Queen* and *Prince of Orange* represented the fine strain of African *Marigolds*, for which this firm is also reputed.

There was a plantation of 10,000 red, brownish-orange and crimson *Pansies*, of which over 9,000 were to be dug in, which goes to show the extraordinary pains, and great amount of work undertaken to get a good strain. The colours varied considerably, and some were very handsome indeed.

DAHLIAS.

The visitor to Messrs. Dobbie & Co.'s Bush Farm Nursery, during the time the Dahlias are in bloom, need not be told that they constitute one of the most important features of the establishment. Altogether, there were three acres of Dahlias in full bloom last September. Messrs. Dobbie purchased every variety which was accorded a certificate in 1896, so that their collection is up-to-date, and properly tested on their own grounds.

SHOW AND FANCY VARIETIES.—These formed large and bushy plants, supported by a large central stake and two to four smaller ones to keep the main branches from being broken down. *Countess*, new for 1897, has pink flowers with a purple tip to the florets. *James Martin* (1897) bears scarlet flowers of very fine form. Those of *Joe Chamberlain* are large and dark crimson. *Queen of Autumn* (1897) is large, handsome, and of a fine old-gold colour. *Esmond* is a clear yellow and very showy variety of large size. A very subtle tint may be observed in *Duchess of York*, which may be described as pink, overlying yellow, and very handsome. *Chieftain* is rich purple, and one of the best of its colour. *Crimson Globe* is a magnificent variety and well named, for the flowers are of a glowing crimson-scarlet. The blooms of *Baroness* are soft buff-yellow. *Mrs. Mackintosh* is another grand sort with large, golden-buff flowers. *Norma* is soft buff-yellow, and the form is really grand. A curious and pretty shade is represented by *Octavia*, having light buff-yellow flowers, tipped with purple. *Perfection* is a rich golden-buff. *Virginale* is soft purple, and of large size, with neatly compressed florets. All of the above are show varieties of the very first water, and merely a few picked from the collection while passing through it. *Mabel* (1897) is a fancy sort, of a pink hue, flaked and marbled with carmine.

CACTUS VARIETIES.—Within the last few years this section has attained to remarkable perfection, and acquired equal popularity and notoriety both for

garden decoration, cut flowers, and exhibition purposes. *Austin Cannell* has scarlet flowers, tipped with white, and strikingly distinct. Very pretty is *Aurora*, a miniature Cactus variety with long, orange florets, tipped with blue. *Mrs. Kingsley Foster* (1897) is buff-yellow and very pretty. Very handsome is *Iona* (1867) with long-pointed orange-salmon florets. The maroon-crimson *Harry Stredwick* (1897) is one of the darkest in cultivation. The orange-scarlet, incurved and pointed florets of *Fantasy* render it one of the most striking and handsome of the Cactus race. *Ensign* (1897) is carmine-scarlet tinted with blue. The scarlet and pale-tipped blooms of *Cycle* (1897) are large and very conspicuous. *Starfish* (1897) is a striking orange-scarlet flower. *Princess Ena* is yellow, overlaid with orange-salmon. *Cinderella* (1897) is a fine purple sort. The carmine-scarlet *Ophelia* (1897) is another fine thing. *Miss Webster* (1897) has received fourteen certificates from as many societies, and is the best white Cactus variety in cultivation. Very pretty is *Bridesmaid* (1897), creamy, and tinted with pink on the outer petals. *African* (1897) is maroon-crimson.

The 1896 varieties, in very large plants, were flowering grandly, and the flowers were chiefly used for cutting. The orange-salmon *Mrs. Beck* is very choice.

POMPON VARIETIES.—These also have attained great popularity of late years, being particularly serviceable for cut flowers, and all other decorative purposes. Very pretty is the orange-scarlet *Adrienne* (1897). Other remarkably choice things for 1897 are *Clarissa*, primrose; *Dagmar*, blackish-maroon; *Dr. Jim*, rich carmine, with a purple edge; *Elegant*, yellow, overlaid with pink; *Gannymede*, salmon-pink; *Nancy*, yellow, tinted with buff; *Opal*, yellow, tipped with white; and *Orpheus*, a very small, yellow variety. *Sunny Daybreak* is yellow, overlaid with orange and very handsome.

SINGLE CACTUS DAHLIAS.—During the last few years Messrs. Dobbie & Co. have been developing a new section under the above title. Some of them are beautifully fantastic and graceful, while the colours are now extremely varied. *Demon* is a single variety that is almost black. All other good singles of the ordinary race are kept in stock. Amongst the single Cactus sorts very showy and graceful are *Ivanhoe*, light rose, with a crimson zone; *Talisman*, maroon-crimson; *Crusader*, streaked bronzy-red on an orange ground; *Lady Evaline*, old-gold, overlaid salmon; *Diana Vernon*, large, scarlet, edged purple; *Sir Walter*, a very pretty rose-pink, with deep orange base, strangely and beautifully contrasted and one of the best; and *Alice Lee*, a most beautiful pink sort which carries its flowers well above the foliage.

STOCK PLANTS.—Ninety-six varieties were grown by themselves for stock, being thickly planted on unmanured ground. For instance, there were 150 plants of *Mabel Keith*; 200 of *Gloriosa*; 200 of *Harmony*; 200 of *Mrs. Barnes*; 200 of *Matchless*; and 100 each of many others of the best sorts. Amongst pompons we noted 100 plants of *Little Dorrit*, and so on of others for stock.

In the smaller of two fields was a plantation of 6,000 Dahlias. Taking the two fields together, there were 13,000 plants. To these may be added 3,000 in 5-in pots, and 15,000 pot roots in thumb pots. Seven hands do nothing else but take care of the Dahlias during summer and autumn; but twelve are employed in spring when they are being propagated. These figures and statistics will serve to give an idea of the magnitude of this important department of the business. Those who are specially interested in Dahlias would find much to interest and instruct them at Rothesay during the late summer and autumn months. A 10-acre field of Potatos contained 112 varieties of the noble tuber, all grown for seed.

A Patriarch Elm, which, according to local tradition, has stood in its present position for 200 years is to be removed, much to the grief of the inhabitants of Caerwys, North Wales. The ground on which it stands has been the village playground and fair-ground, as well as the hawkers' rendezvous for many years. Recently two of the large branches fell with a crash, and without giving any warning. This led to an examination, and it was found that the whole of the trunk was rotten, and the safety of the public demands its removal.

CHRYSANTHEMUM SHOWS.

IPSWICH.—November 16th and 17th.

THE Public Hall, Ipswich, was the venue of the Ipswich and East of England Horticultural Society's Show. The efforts that have been made of late by the executive and friends of the society to increase the popularity and usefulness of the fixture have this year been crowned with abundant success, for a record has been established, both for number of entries and attendance of visitors.

The various groups of plants were placed under the balcony, and specimen plants and other groups adorned the stage. The cut blooms were staged on tables that ran down the sides of the hall, the centre table noticeable in former years having been done away with, in order to afford increased facilities for locomotion.

The exhibits of *Chrysanthemum* blooms staged for effect were accommodated in the saloon, in company with the fruit and vegetables.

In the class for a group of *Chrysanthemums* staged for effect, and occupying a space of 10 ft. by 5 ft., Mr. R. C. Notcutt, of Ipswich and Woodbridge, was an easy first. He had some very fine samples of successful culture. Mr. G. Gilbert, of Ipswich, was a creditable second. Mr. H. J. Southgate, also of Ipswich, came in third.

For the group of miscellaneous plants Mr. Gilbert distanced all other competitors, showing some fine specimens of *Poinsettias* and *Richardias*, set up with Palms and stove foliage plants. Mr. Southgate was second, and Mr. R. C. Notcutt third.

Mr. C. Baskett, Rectory Cottage, Stoke, secured the chief award for a group of *Chrysanthemums*, open only to exhibitors residing in the borough, and paying a rent of not exceeding £15.

There was a keen competition in the classes for cut blooms, especially in the class for thirty-six Japanese. Here Mr. W. Messenger, gardener to C. H. Berners, Esq., Wolverstone Park, Ipswich, added to his numerous successes this season by securing the first prize. Such varieties as *Mrs. F. A. Bevan*, and *Western King* were very conspicuous in his exhibit. Mr. R. C. Notcutt was second.

For twenty-four Japanese, Mr. Allan, gardener to Lord Suffield, Gunton Park, was first here, with Mr. H. Rogers, gardener to Lord Rendlesham, Rendlesham Hall, Suffolk, as second. Mr. Skinner, The Chantry, Ipswich, was third.

There was also a capital display in the classes for amateurs. Mr. W. Catchpole had the winning group of *Chrysanthemums* in pots, showing some well grown specimens. Mr. F. Turner, and Dr. Casley, both of Ipswich, were second and third respectively. Mr. H. G. Haggard won for incurves, staging an even lot of well coloured blooms. Miss Gladys Foster-Melliard scored for a basket of cut flowers. Miss Gilbert was an easy first for bouquets.

The exhibits in the fruit classes were scarcely up to the standard of last year, but nevertheless there was some capital material. Mr. Messenger, and Mr. H. Rogers, were adjudged to be equal firsts for a collection of six distinct varieties. Mr. Messenger, Mr. Allan, Mr. J. A. Burness, and the Hon. W. Lowther were the chief winners in the classes for Grapes.

Some high quality produce was observable amongst the vegetables.

WATERFORD.—November.

THE winter show of the Waterford Horticultural Society took place in the City Hall, Waterford. The Council Chamber accommodated the cut blooms, the pot plants occupied the Large Room, and the Committee Room was devoted to the fruit and vegetables.

Mr. F. W. Moore, of the Botanic Gardens, at Glasnevin, judged the plants, flowers, and vegetables, whilst Mr. John Glennie, Curraghmore, pronounced upon the relative merits of the roots and field crops.

The Challenge Cup, presented by J. N. White, Esq., for the cut blooms of *Chrysanthemums*, was won by Lord Ashbrook, Darrow Castle (gardener, Mr. McKeller). The Lady Emily Howard-Bury, Charleville Forest, Tullamore, King's Co. (gardener, Mr. R. McKenna), was second.

J. N. White, Esq. was successful in carrying off the Challenge Cup presented by W. G. D. Goff, Esq., for the best group of *Chrysanthemums*.

W. G. D. Goff, Esq., Glenville (gardener, Mr.

Innes, showed the leading six Chrysanthemums in pots, and J. N. White, Esq. won for a single specimen.

Lord Ashbrook was first for twelve Japanese blooms in not less than six varieties. J. N. White, Esq. was second. Lady Emily Howard-Bury was first for twelve reflexed blooms.

Twelve Anemone blooms, in not less than six varieties, were best shown by Raymond de la Poer, Esq., Kilcronagh (gardener, Mr. John Fernie). The winning stand of six incurves came from W. Gallo-way, Esq.

In the amateurs' classes for cut blooms, Mr. D. Cantwell won for six incurves in not less than three varieties. Mr. W. Goodwin was placed first for twelve Japanese in six varieties, with Mr. D. Cantwell as second. Six Japanese in three varieties were best shown by Mr. J. Moloney.

Fruit was exceedingly well represented, some samples of grand quality being staged.

Lady Emily Howard-Bury led for two bunches of Grapes, with W. G. D. Goff, Esq. as second. Lady Emily Howard-Bury also had the best dessert, and cooking Apples, and the best Pears.

W. G. D. Goff, Esq., Lady Emily Howard-Bury, Lord Ashbrook, the Marquis of Waterford, Curraghmore (gardener, Mr. Thomas Singleton), and Raymond de la Poer, Esq., were some of the most notable winners in the section of the schedule devoted to vegetables.

LONDONDERRY.—November 18th and 19th.

THE winter show of Chrysanthemums, fruit, and vegetables, which was opened on the 18th ult. in the Guildhall of Londonderry, by the Mayoress (Mrs. Johnstone), was by far the largest and best ever held by the society. Mr. T. W. D. Humphreys, J.P., Donoughmore, occupied the chair at the opening ceremony.

The entries this year were almost double those received on any previous occasion. The pot plants and groups were relegated to the centre of the hall, whilst the cut blooms, fruit, and vegetables were shown on tables running parallel with the walls, or placed before the platform or under the gallery.

Around the classes for pot plants a good deal of interest centred, for the competition was sharp and well sustained. Mrs. Bigger, Riverview (gardener, Mr. James McGlenchay), received the first prize for a group of twenty-five Chrysanthemums in pots. Mr. Wm. Tillie, D.L., Duncreggan (gardener, Mr. John Moore), was placed second, also with a good exhibit. T. V. McCready, Esq., Ashbank (gardener, Mr. Joseph Clark), won the third prize.

For a round group of Chrysanthemums arranged for effect, the first award fell to John S. McCay, Esq., Troy; the second to Mrs. Irvine, Coolkeeragh House, (gardener, Mr. William Orr); and the third to T. V. McCready, Esq.

The best specimen plant of a Japanese Chrysanthemum came from Mrs. Bigger, and the best specimen incurve from T. V. McCready, Esq. Wm. Tilley, Esq., received the first prize for a table of stove and greenhouse plants arranged for effect; Mrs. Bigger was second.

In the classes for cut blooms of Chrysanthemums the winning stand of twenty-four Japanese in not less than eighteen varieties came from T. V. McCready, Esq.; Wm. Tilley, Esq., was second; and E. T. Herdman, Esq., Sion House (gardener, Mr. W. Walker), was third.

T. V. McCready, Esq., led for twelve blooms of Japanese, distinct, and E. T. Herdman, Esq., won similar honours for twelve incurves in nine varieties. The smaller class for six incurves resulted in a win for Mrs. Irvine. The best Japanese bloom in the show was contributed by Robert Corscaden, Esq., Boom Hall (gardener, Mr. John Orr), whilst the premier incurve came from Mrs. Irvine. Jas. N. Watson, Esq., Coolnaven (gardener, Mr. Peter Donovan), was first for a lady's spray, and Wm. Tillie, Esq., won for a hand bouquet.

The classes for fruit were well patronised. John S. McCay, Esq., was first for two bunches of Grapes, and James N. Watson, Esq., second. The last-named exhibitor secured a win for six dishes of culinary Apples. Wm. Tilley, Esq., scored for a similar number of dishes of dessert Apples.

In the nurserymen's classes, Messrs. A. Dickson & Sons, Newtownards, Belfast, won first prizes for the bride's bouquet, bridesmaid's bouquet, and lady's spray. In all the three classes, Messrs. McGredy &

Son, were second. Messrs. A. Dickson & Sons, and Messrs. McGredy & Son, were awarded equal firsts for the collection of twelve dishes of fruit.

The exhibits not for competition were particularly good.

Messrs. S. McGredy & Son, the well-known growers, Portadown, had a fine collection of Chrysanthemums, floral designs and bouquets.

The Ichthemic Guano Co., of Ipswich, displayed some choice decorative plants, and visitors to the show were specially attracted to this stand by the sweet and delicate aroma surrounding it, which we found upon enquiry from the courteous representative in charge, was produced by the new perfume entitled, "The Ichthemic Bouquet."

Messrs. Alex. Dickson & Sons, of the Royal Nurseries, Newtownards, Belfast, had a splendid exhibit of Apples, including their celebrated seedling "Milecross," a grand fruit suitable either as a dessert or cooking Apple, equally good in all seasons, and a very heavy cropper. This firm also gained first prize for a magnificent bride's bouquet and spray.

Mr. H. Deverill, the well-known Onion specialist, of Banbury, Oxon, exhibited some fine specimens of Onions grown from his famous seeds.

FRUIT AND CHRYSANTHEMUM SHOW AT WREXHAM.—November 19th.

THE twelfth annual exhibition of the North Wales and Border Counties Pomological Society took place at the Public Hall, Wrexham, on the 19th ult. There was no exhibition held last year, and the disappointment of the local growers on that account caused them to rally round the society more strongly this year, the result being that there was an excellent display. There was a large attendance at the opening, including many people of importance. Lady Cunliffe performed the opening ceremony.

The Chrysanthemums were very fine. The prize winners for the stand of twenty-four cut blooms were Lord Trevor, Sir R. A. Cunliffe, and Sir W. W. Wynn, in the order of mention. Mr. E. Peel led for twelve blooms of Japanese, and Mr. Clark for twelve incurves.

The premier bloom of the show came from Mr. E. Peel.

In the Amateurs' classes Mr. L. Davies staged the premier six blooms.

Fruit was exceedingly well shown, especially Grapes. Mr. John Jones, Grove Lodge, showed the best three bunches of white Grapes. Sir R. A. Cunliffe led for the best single bunch of white, and the best single bunch of black, Grapes, whilst Mr. Job Mason won for two bunches of any sort of Grapes.

Sir Roger Palmer secured the premier awards for six, and three dishes of dessert Pears; Lord Trevor taking a similar place for six dishes of dessert Apples; Sir R. E. Egerton led in the class for three dishes of similar fruit.

Mr. Weaver had the first prize exhibit of six dishes of culinary Apples, showing some beautifully finished samples. Sir Roger Palmer headed the list of competitors for three dishes of culinary Apples.

In the classes devoted to vegetables Lord Trevor scored for a collection of nine distinct kinds, with an excellent exhibit. The other prizes were taken by Mr. Peel, Mr. Roberts, and Mr. Acton, in their respective order.

The first award for the collection of six kinds came from Mr. P. Herd. Mr. T. Jones was adjudged first for a collection of nine varieties of Potatos, Sir R. A. Cunliffe, and Mr. P. Herd taking the second and third places respectively.

The cottagers' and farmers' classes for fruit and vegetables were also well patronised.

The judges were Messrs. Loudon, of the Quinta; and Jameson, of Neston.

COCKERMOUTH.—November 25th.

THE annual fixture of the Cockermonth and North of England Chrysanthemum Society took place at the Drill Hall, Cockermonth, on the 25th ult., and proved highly successful.

In the open class for twenty-four Japanese blooms, in not less than eighteen varieties, there was very keen rivalry between the first and second prize winners. Mr. E. Horne was ultimately acclaimed the winner, the second prize falling to the lot of Mr. J. Potter, Whitehall, Mealsgate, and the third to Mr. Thos. Hunter, gardener to Mrs. Waugh, The Burroughs. In the first-prize stand there were some admirable

flowers of such varieties as Phoebus, Edith Tabor, Mutual Friend, and Australian Gold. Some of Mr. Potter's best flowers were Australie, Niveus, Edith Tabor, Dorothy Seward, and Hairy Wonder.

In the classes open to gardeners, Mr. T. Hunter was placed first for twelve incurves in nine varieties, Mr. Wm. Fry occupying a similar position for six incurves in varieties. Mr. J. Potter had the leading six Japanese, and Mr. J. Brown, gardener to Mrs. Fletcher, Stoneleigh, Workington, the best six reflexed in as many varieties.

Mr. John Douglas, gardener to Mrs. Jos. Harris, Derwent Lodge, Papcastle, secured the premier award for twelve Chrysanthemums in pots, in not less than nine varieties, any variety being admissible. Mr. T. Fixter, gardener to J. Harris, Esq., Greysouthern, was second, and Mr. G. G. Thompson, gardener to A. Helder, Esq., M.P., Corkickle, Whitehaven, third.

Mr. G. H. Thompson was placed first for six plants in six varieties, and Mr. J. Douglas scored for three plants of incurves in three varieties. A similar number of Japanese was well shown by Mr. A. Kydd, gardener to J. Robertson-Walker, Esq., Gulgarron, who received the first award. Mr. Thos. Hunter was second.

Amateurs exhibited well, particularly in plants. Mr. Wm. J. Campbell, Main Street, Cockermonth, headed the list of competitors for six miscellaneous plants. Mr. Campbell also had the best three Japanese Chrysanthemums in pots, the leading three incurves, and the most meritorious three pompons. Mr. Wm. Robinson, Biennerbasset was likewise a heavy winner. A plant of Charles Davis, shown by Mr. W. J. Campbell, was adjudged to be the best plant in the show.

In the classes for fruit and vegetables Mr. J. Potter was credited with the first awards for two bunches of black Grapes and two bunches of white Grapes.

Mr. J. Barker, Lairbeck, Keswick, won for the collection of vegetables.

DUNFERMLINE.—November 27th.

THIS show of the Dunfermline Chrysanthemum Society was held under favourable auspices on the 27th ult.

In the cut flowers section (open) Mr. G. M. Proctor, gardener to Dr. Dow, Dunfermline, was a good first, showing fine blooms of Niveus, Vivian Morel, and Hairy Wonder. Mr. Riddler was also a good second.

In the pot plants class (open), Mr. Foote, gardener to R. W. Stewart, Esq., Abbey Park, was first, showing Vivian Morel and Charles Davies in first-class condition. Mr. Scott, gardener to Mr. McLaren, Comely Park House, was a good second.

In the amateurs' plant section, Mr. G. Marshall won with good plants of Vivian Morel and Charles Davies, Mr. R. Brag being second.

In the amateurs' cut flower section Mr. James Mildrum won first with good blooms of Mrs. Magee and Eva Knowles, Mr. G. Marshall being a good second.

In the sprays, etc., Mr. Peter Fenton was first in the open competition. Mr. Wm. Lumby, Broomhall, was a good first for the collection of vegetables.

Mr. John Riach lent a grandeur to the scene with some excellent Palms from his collection at Luscar. The show was well attended during the day, and the music supplied by the Dunfermline Amateur Orchestra and the Volunteer Band was very much appreciated by the visitors. Mr. William Meldrum, florist, Upper Layo, had a stand of Ichthemic Guano, brightened up with Chrysanthemums, which was much admired.

NATIONAL CHRYSANTHEMUM SOCIETY.

December 7th, 8th, and 9th.

THE early winter exhibition of the above society was held in the Royal Aquarium, Westminster. The exhibits were located in the gallery, as they were last year; but a much greater amount of space was available owing to the clearing away of the seats that used to overlook the stage and the musicians. This gave an additional space of 180 ft. by 15 ft., by which means it was possible to keep the whole show together. A screen of green baize run along the whole front of the gallery. The show was the finest ever seen here in December. The size and quality of blooms, both Japanese and incurved, were remarkable for so late a period of the year. Single

Chrysanthemums, the miscellaneous groups of Chrysanthemums, Cyclamen, Primulas, &c., were also conspicuous and attractive features of the show and well justified the holding of it in December.

OPEN CLASSES.

The leading award for twenty-four Japanese Chrysanthemum blooms, in not less than eighteen varieties, nor more than two flowers of a variety, was taken by Mr. W. Messenger, gardener to C. H. Berners, Esq., Wolverstone Park, Ipswich. Considering the wet, mild character of the autumn, he had grand blooms of Mme. Carnot, Golden Gate, C. W. Richardson, Mrs. Armitstead, Silver King, Miss M. Blenkiron, Simplicity, Etoile de Lyon, G. C. Schwabe, Mdle. M. A. de Galbert, E. D. Smith, Salene, Beauty of Castlewood, &c. Mr. W. Slogrove, gardener to Mrs. Crawford, Gatton Cottage, Reigate, was a good second, his blooms being of even size and quality, though smaller than the leading lot. Mr. Norman Davis, The Vineries, Framfield, Sussex, took the third place with fresh blooms of medium size, and well varied with distinct colours.

Mr. Norman Davis came to the front for twenty-four bunches of Chrysanthemums, any varieties allowed. Yellow, white, orange, crimson, and bronze varieties were well represented by fresh blooms of large flowering varieties cut with long stems.

The premier award for twelve bunches of Japanese Chrysanthemums was taken by Mr. W. Howe, gardener to Henry Tate, Esq., Park Hill, Streatham Common. Robert Owen, Oceana, Etoile de Lyon, Olive Ocle, and Mrs. C. Blick formed his best bunches. Mr. Norman Davis here took the second place with grand bunches of George Seward, Western King, &c.

In the class for six bunches of Japanese varieties Mr. Norman Davis led the way with grand bunches of Mme. J. Bernard, George Seward, Georgina Pitcher, &c. Mr. W. Slogrove took the second place with several fine bunches. Mr. R. Bassil, gardener to D. H. Evans, Esq., Shooter's Hill, Pangbourne, came in third.

Mr. W. Messenger again took the lead for twelve Japanese varieties, showing fine blooms of Mme. Carnot, Niveus, Golden Gate, Miss M. Blenkiron, Mutual Friend, G. C. Schwabe, C. W. Richardson, &c. Mr. R. Kenyon, gardener to A. F. Hills, Esq., Monkams, Woodford, was a very close second, his blooms being mostly in grand form, including a fine bloom of G. J. Warren. Mr. W. Slogrove came in third.

Mr. C. Cox, gardener to J. Trotter, Esq., Brickendon Grange, Hertford, led the way in the class for six Japanese blooms, five of which were excellent. Mr. R. Kenyon was a very good second, and Mr. A. Stuart, gardener to N. L. Cohen, Esq., Round Oak, Englefield Green, was a good third.

For this season of the year the incurved Chrysanthemum blooms were very good indeed. The first award for twelve blooms was taken by Mr. W. Neville, gardener to F. W. Flight, Esq., Cornstiles, Twyford, Winchester, who had magnificent blooms of Ma Perfection, The Egyptian, Mrs. R. C. Kingston, Miss F. W. Flight, Bonnie Dundee, Miss D. Foster, &c. Mr. T. Robinson, gardener to W. Lawrence, Esq., J.P., Elsfeld House, Hollingbourne, Kent, was second, showing two magnificent blooms of Miss Phyllis Fowler. Mr. A. Sturt was third with huge blooms of The Egyptian, &c.

Mr. R. Bassil had the best six incurved blooms, which were very neat indeed, and even in size. Mr. W. Neville came in second with six good blooms, and Mr. T. Robinson was third.

SINGLES.—Mr. G. W. Forbes, gardener to Madame Nicols, Regent House, Surbiton, secured the leading award for twelve bunches of large-flowered singles, in not less than six varieties, three blooms going to a bunch. Admiral Sir T. Symonds, Tuscolo, Rudbeckia, Miss Brown, and Purity, were some of the best samples. Mr. A. Felgate, gardener to Her Grace, Elizabeth, Duchess of Wellington, Burhill, Walton-on-Thames, was second; and Mr. W. C. Pagram, gardener to J. Courtenay, Esq., The Whim, Weybridge, third.

Mr. G. W. Forbes was also credited with the first prize for twelve bunches of three blooms each, in six varieties, of small flowered singles. Mr. F. W. Travers, Nellie Robinson, and Mrs. D. B. Crane, were the most striking varieties; Mr. A. Felgate was second, and Mr. Pagram third, as in the previous class.

In the class for six bunches of large-flowered singles, there was but one entry. Mr. A. Felgate was first. Mr. A. Felgate, Junr., Burhill Road, Walton-on-Thames, was second in a class for a similar number of small-flowered singles.

There were ten entries for a basket of autumn berries and foliage. The first prize went to Mr. A. Newell, gardener to Sir Edwin Saunders, Fairlawn, Wimbledon Common; Miss C. B. Cole, The Vineyard, Feltham, was second; and Mr. W. Taylor, The Gardens, Tewkesbury Lodge, Forest Hill, third.

SINGLE HANDED GARDENERS.—There was only one entry in the class for twelve Japanese distinct, viz., that coming from Mr. F. Bush, gardener to W. T. Lister, Esq., F.R.C.S., Rose Hill, Totteridge, Herts, to whom the first prize was awarded. Madame Carnot was the best bloom here. The prizes in this class were offered by C. W. Richardson, Esq., Fairgreen House, Sawbridgeworth.

AMATEURS' CLASSES.

The first prize for six Japanese distinct went to Mr. W. Perrin, gardener to C. W. Richardson, Esq. Miss R. Debenham, St. Peter's, St. Albans, was second.

Six Japanese blooms, in not less than four varieties, were best shown by Mr. Geo. Heal, Holly House, Compton, Guildford. M. Gruyer, Golden Gate, Mrs. H. Weeks; and M. Chénon de Léché were the varieties shown. Wm. Walters, Esq., Sunnybank, Burton-on-Trent, was second.

Mr. D. B. Crane, 4, Woodview Terrace, Archway Road, Highgate, N., was the only competitor for a large vase of Chrysanthemums. The first prize was accorded him for a handsome and effective exhibit.

MISCELLANEOUS PLANTS.

Around the open classes for miscellaneous plants a great deal of interest centred. The first prize for a collection of Cyclamen was carried off by Mr. Wm. Orpwood, Andover Nursery, Uxbridge, who had a grand array of well-flowered stocky plants, filling a large table measuring 12 ft. by 6 ft.

A fine table measuring 9 ft. by 6 ft. of Primula sinensis was contributed by Mr. J. Gibson, gardener to E. H. Watts, Esq., Devonhurst, Chiswick, who secured the first prize. The plants were sturdy samples of their kind, but had not yet developed to the full their beauty. Cocos weddeliana was used as pot plants at the four corners and in the centre, and Crotons were also employed for the purpose of lightening and giving effect to what was a very pretty group. An edging of Panicum variegatum added a finish to the whole. Mr. Wm. Orpwood received the second prize.

Mr. W. Howe, gardener to Henry Tate, Esq., Park Hill, Streatham, won chief honours for a group of miscellaneous, flowering, berried, and foliage plants, arranged for effect on a table space of 9 ft. by 6 ft. Around a feathery Cocos weddeliana which formed the centrepiece were some grand heads of Poinsettias, and Richardias. Sprays of Calli-carpa purpurea were freely and effectively used. Bouvardias, Begonia Gloire de Lorraine, Primulas, and Hyacinths all added their quota of beauty. The edging was composed of Panicum variegatum.

In the classes from which nurserymen were excluded, Mr. W. Frost, gardener to G. Ashley Todd, Esq., Gadinton, Ashford, Kent, led for twelve Cyclamen.

Mr. W. Mease, gardener to A. Tate, Esq., Downside, Leatherhead, scored for twelve Primulas, showing some splendidly-flowered double white and pink varieties. Mr. J. Gibson was second.

MISCELLANEOUS.

One of the special features of the show as far as decorative excellence is concerned came from Mr. W. Wells, Earlswood Nurseries, Redhill, Surrey. Against a background of art green muslin, tastefully decorated with sprays of Ivy and Smilax, and coloured leaves of Mahonia Aquifolium was a showy array of Chrysanthemums, both cut and on the plants. In the centre of the background was an arch of flowers flanked with a smaller arch on either side, and running at right angles to the support of the larger arch. The rectangular space thus enclosed was occupied with a bed of green moss surrounding an oblong miniature tank and fountain. In the front was a barrier of virgin cork decorated with Ferns. The pot plants flanked the arches on each side, and amongst them were very fine blooms of Julia Scaramanga, G. J. Warren, Bellem, and Oceana. A stand of large cut blooms was also included at either end,

some of the best being Porcelain, Setting Sun, Duchess of Fife and Julian Hillpert. A Silver Gilt Medal was awarded.

The permanent Nitrate Committee had a show stand displaying the virtues of Nitrate of Soda, a well-known and valuable manure.

Mr. J. Hawes, Lea Bridge Road, Clapton, N.E., showed samples of the patent watering pot that is such a favourite amongst gardeners.

The Lawes Chemical Co., Limited, 116, Fenchurch Street, London, S.E., had a large stand displaying their garden manure. The stand was prettily decorated with Ferns.

Mr. H. J. Jones, Ryecroft Nursery, Hither Green, Lewisham, occupied a large table with an extensive group of Chrysanthemums, set up with Palms, Ferns, Crotons, and other foliage plants. Cocos weddeliana and C. flexuosa were stood at intervals along the centre. Between them were vases of Chrysanthemums, and the other cut flowers built up to them in such a way as to form undulating banks. All were cut with long stems with exception of the front rows, which were staged on the usual exhibition boards, except where bunches of singles and decorative varieties were placed between to break the monotony of a flat surface. He had fine exhibition blooms of G. J. Warren (the yellow Mme. Carnot), Mrs. W. Mease (the sulphur Mme. Carnot), Neva Teichman (a grand new crimson Jap.); also George Seward, C. W. Richardson, Mrs. W. H. Lees, Julia Scaramanga, Mrs. R. Jones, Mary Molyneux, Western King, and many others (Small Gold Medal).

The Ichthemic Guano Co., of Ipswich, erected their now famous Octagon stand. This was draped with dark crimson baize, and ornamented with Ferns and Dracaenas. This specific is now celebrated from one end of the country to the other.

A Silver Gilt Medal was awarded to Messrs. H. Cannell & Sons, Swanley, for a superb collection of fifty bunches of cut blooms of zonal Pelargoniums in as many varieties. Niagara, St. Celicia, Geo. Reid, Sir Jas. Kitson, Duchess of York, Magnificent, Lilacina, and Mrs. P. Routh were some of the gems of the collection. The bunches were of pyramidal shape, and were prettily set up with Maidenhair Fern. Cut blooms of late Chrysanthemums and Cannas were also noticeable on this stand.

The Swanley firm also had a grand array of vegetables. Such Onions as Reading Improved, Cranston's Excelsior, and Ailsa Craig were represented by large and fine samples. Cabbage Cannell's Defiance was likewise much in evidence, and is undoubtedly an excellent variety (Silver Gilt Medal).

A Silver Medal was awarded to Mrs. W. Green, Jun., for a very handsome floral table. The centre epergne rose some 5 ft. in height above the table, and the various baskets and bouquets disposed around it were well set up. Chrysanthemums of course were the flower.

Mr. John Pinches, 3, Crown Buildings, Camberwell, showed samples of his patent labels.

Messrs. Fenlon & Son, 8, Tudor Street, Temple, E.C., exhibited hot water apparatus suitable for small houses.

Mr. Robert Owen, Maidenhead, received a small Silver Medal for eight dozen cut blooms of new Chrysanthemums. Some promising novelties were observable here.

Mr. J. Williams, 4a, Oxford Road, Ealing, had a very light and pretty floral table.

A Silver Gilt Medal went to Mr. R. Chard, Stoke Newington, for a very elaborate and imposing table of floral devices, in which the Chrysanthemum figured exclusively, with suitable foliage.

Mr. W. J. Godfrey, Exmouth, Devon, received a Silver Medal for a grand array of blooms of late Chrysanthemums. H. W. Nieman, Yanona, Mrs. H. Robinson, The Egyptian, and Georgina Pitcher were some of the finest blooms.

Mr. W. Neville, gardener to F. W. Flight, Esq., Cornstiles, Twyford, Winchester, sent twenty-four blooms of incurved Chrysanthemums. These were all fresh and well-coloured. Ma Perfection, Mrs. R. C. Kingston, Bonnie Dundee, Miss D. Foster, and John Tulford were especially good (Small Silver Medal).

Mr. T. Robinson, gardener to W. Lawrence, Esq., J.P., Elsfeld House, Hollingbourne, got a vote of thanks for eighteen cut blooms of incurved and Japanese

Chrysanthemums. The incurved Miss Phyllis Fowler was the most noticeable variety here.

A neat collection of vegetables won a small Silver Medal for Mr. R. Bassil, gardener to D. H. Evans, Esq., Shooter's Hill, Pangbourne.

Mr. J. R. Tranter, Henley-on-Thames, was accorded a vote of thanks for twelve blooms of Chrysanthemum Mrs. J. R. Tranter, a new late variety.

Mr. W. Taylor, gardener to C. Bayer, Esq., Tewkesbury Lodge, Forest Hill, staged a superb lot of Grapes, winning thereby a Silver Gilt Medal. Trebbiano, Muscat of Alexandria, Gros Colman, and Lady Downes Seedling were represented by huge bunches in excellent condition.

FLORAL COMMITTEE.
