## ROWING.

### Boston Critics.

of Boston, thinks Lee can beat any man on the act, but will have to row hard to win. We do not have seen any of our scullers row. If he places his faith on the opinion of Pat McInerney he is likely to go wrong, for no one could fall into a more ridiculous error than the Lowell man when he concluded that he could easily outrow any of the Long Bridge scullers. As the observant Patrick remarked to the writer after watching Petersen for three months, "why, pon mesowl, I never saw a worse sculler. Any of the boys in Boston could bate him easily."

"Do you think you can beat him easily Mac, inquired the representative of the SPORTSMAN.

"Is it me?" was the contemptuous reply, "Me hate him? I can bate any 23-second man in the world. Why, I've held Hoemer a mile on a half many a time."

The result showed however that Patrick was elightly off his base when he concluded that all that was necessary to beat any San Francisco sculler was the ability to "hold Hoemer a mile and a half." Petersen rowed the Long Bridge course somewhat better than 23 minutes for the three miles, and beat McInerney easily about a quarter of a mile. It is very doubtful if he could do the same to several local scullers.

### "Courtney Talks Again."

A turf correspondent, writing from Union Springs under date of December 22, says: Charley Courtney has been to Elmira, where, under the melting influences of a hot potion and a warm stove, his tongue thawed out some, and he made bold to talk of the future. "A race," said he, "will occur between Wallace Ross and myself, in all probability, at the Point of Pine, near Boston, on May 30th next, and no matter what the papers or the people say about me I mean to row, and row all I know how." Charley thinks the *Turf, Field and Farm* is particularly severe on him, but Charley overlooks the fact that the *Turf* is severe on all cowards. When asked how he felt about meeting Edward Hanlan next season, the Union Spring sculler replied: "I am very indifferent. I have no objections to meeting him any time. I would much rather row him a race on some good course, Saratoga, without a cent up. The public seem inclined to think that everything is a put-up job, no matter how it turns out. I would like to row Hanlan a fair and square race." The conversation finally turned on riches, and Courtney then showed his hatred of the champion by accusing the latter of being a professional gambler. "Hanlan," said he, "has not got nearly as much wealth as people suppose, for he is infatuated with gambling and has lost as much as \$4,000 in a single sitting." The champion oarsman of the world will doubtless laugh heartily over this fresh outbreak of the Union Springs record masher—\$4,000 at a single sitting—Great Scott, Ned! what was the nature of the game? If it was poker, what did you hold to warrant your going in so heavy, or was your opponent a "chub," upon whom you were trying to work the Courtney bluff? Our correspondent suggests that your opponent might have been the Union Springs man himself; but we know better than that, for George Lee once told us that Courtney wouldn't bet a cent on his being alive. Courtney, hints our correspondent, is worth half a million, every penny of which was made by hard rowing. He has not won as many races as Hanlan, but he has made more money.

Concerning the match with Courtney, Wallace Ross recently said: I don't think there will be any difficulty in completing the arrangements now pending in regard to a race between Courtney and myself. I feel that I am entitled to the first go at him, because the arrangement for my last match with him fell through. I will meet him on any conditions he is inclined to make that give both of us a fair, equal chance, and will row him for \$1,000 to \$5,000 a side. Courtney is a fast sculler, but I think I can beat him. At any rate I am willing to race him, and let the public decide which is the better man.

Henry Petersen keeps up his practice and takes a spin every day over the Long Bridge course. There is a rumor that he will be backed this week against Lee, but at the present writing the money is not up. Some weeks ago a well known gentleman who takes a lively interest in boating offered to back Petersen against Lee for \$500, but Petersen declined the offer, preferring to wait the convenience of his old backers.

### Trickett Recovering.

According to the Colonial papers, Trickett is taking on his best form again. On December 1st he rowed a race upon the Paramettra river course, against Michael Rnsh for \$1,000 a side, and beat him handily. The race is thus described:

About twenty minutes to five both men drew up to the starting point looking in splendid condition. If anything, Trickett looking the better of the two. To a pretty fair start they got away, Rnsh leading to Uhr's point. Time 2 min. 3 sec., Trickett being almost half a length behind. Here Rnsh quickened up, and made quite a gap between his boat and Trickett's. No difference was perceptible till the mile point was approached, when Trickett seemed to be gaining greatly on Rnsh. The mile was passed by Rnsh first, Trickett about a quarter of a length behind. Time 7 min. 12 sec. Just after passing, Rnsh seemed to be completely done up, and could not get out of Trickett's way, consequently they fouled twice, Trickett claiming the fouls by holding up his hand twice to the umpire. The short stoppage seemed to give Rnsh a second wind, and he got away again, sparring grandly, but it seemed to be of little avail, as Trickett passed him before reaching Putney—which was reached in 11 min. 30 sec.—and rowed easily to the finish, though Rnsh tried manfully to overhail his opponent, but with little chance of success. He eventually gave up off One Man Wharf. Time for the race, 25 min. 11 sec. The wind and tide were against the competitors. Betting, 3 to 2 on Trickett.

### Trying for the Best Man.

The latest Australian dates received by the steamer was Dec. 5th, a few days before the beginning of the contests for the Hunt trophy, which were expected to develop the best sculler of the colonies, aside from Laycock. Of these trials the *Sportsman* says:

On Thursday next the preliminary heats of the Professional Sculling Contest are to be rowed, to decide who is the second best sculler of New South Wales, who will, in the event of Laycock being unable to meet Hanlan—should the latter take the trip to Australia—be pitted against the Canadian. E. Trickett and D. McDonald meet in the first heat. As I noticed last week, Trickett has regained something of his old speed and form. He is more at home in a wagger boat than any other sculler in the colonies, and his piloting his craft is perfection. Donald McDonald is a good stayer, and although his style is inferior to Trickett's, he makes his boat travel. To me he rowe like a smaller-size Rnsh' but with a surer and cleaner style. I tip Trickett for this heat. M. Rnsh and W. Beech meet in the next heat. Michael last Saturday suffered defeat, as I expected, and tipped at the hands of Trickett. Beech has been rowing very well lately. His style is rugged, and rough water would inconvenience him. He is very powerfully built, thick set, and sits compact in his craft. As neither Rnsh nor Beech can get their weight on well in rough water, I do not think that a sea will affect the result of the heat. My fancy for the heat is Beech. The final heat is to be rowed on Friday, I expect between Trickett and Beech. It will be a great race. In the late matches Trickett won the first, Beech the second and third. At Balmain Regatta Trickett beat Beech, principally through good turning. Should the water on Saturday be so rough as to demand skill Trickett will most likely win.

### A Challenge from Petersen.

Henry Petersen says he has grown tired of trying to get a match with Auetin Stevenson who he desires to row on any neutral waters for the championship of the Pacific Coast and any reasonable stake. To show that he means business and is anxious to try conclusions with a really good man, Petersen issues the following card:

EDITOR BREEDER AND SPORTSMAN: Having seen in several newspaper statements to the effect that George W. Lee is anxious to make a match for a sculling race with me, I desire to say that I will accept Mr. Lee's challenge to the Pacific Coast oarsmen, and row him three, four, or five miles with a turn for \$500 a side, the race to take place four weeks from the date of signing articles.

Yours truly,

HENRY PETERSEN

Mr. Petersen has deposited \$150 to bind the match. He prefers that the race should be rowed at Long Bridge, as the weather at this season of the year is variable and an excursion may result in disappointment to the public. At Long Bridge he says every one who desires can see the race free of cost, and the publicity of the affair will be the best guarantee that the match is "for blood."

Talking of the chances of defeating Geo. Bubeare with 10 sec. or 6 lengths start, Wallace Ross recently said to Mr. Rankin, of Boston: "I won't attempt to close up the gap too quickly because that might do me up before the finish of the race. I ought to gain a length and a half in the first mile, and at Hammersmith bridge I shall have knocked half his lead off, unless, mind, he has become a perfect wonder since I saw him last. You can see that I shall go into the race confident. He will have a start, and, if I gain on him as fast as I expect to, he will worry, and once he begins to fret it's good day to him. O, I think I can beat him. Why, you see, Elliott and he propose to row even up, and, if they row, their race will take place before mine and Bubeare's. Now, Elliott is not a bad nor a slow sculler by any means—see? And everybody who has seen us row knows I can give Elliott 10 seconds in a four-mile race and heat him with ease. You wait, and see. Five or six lengths is a goodish bit of water to make up, but if I don't get there I'll surely give Bubeare a hot race."

The London, Eng., *Times*, commenting on the coming races of Bubeare against Wallace Ross and William Elliott, says: "Elliott appeared to have lost all his sculling powers long before he left England, and it remains to be seen if he has regained them. Bubeare has improved wonderfully during the last two years, and if he comes fit and well to the post should be able to hold his own with the Tynesider, whatever he may be able to do six weeks later with Wallace Ross, whose previous performances in England have been of an uncertain kind." The race with Elliott takes place on the 28th January next, and that with Ross on the 10th March.

The Yale University crew has by the order of Captain Bob Cook abandoned the use of sliding seats in training. This is beginning at the wrong end with a vengeance. The best evidence that training in stationary seats is injurious is the fact that most men who learned to row in stationary seats cannot row a little bit with slides.

The Victorians have subscribed \$500 to get Hanlan and Lee to visit them. Lee will row with Cotford, and the opinion of local oarsmen is that the half-breed will give the "lightning sculler of the United States" all the work he wants.

Colonel Bob Pepper and Mr. Thomas Rodman, of Frankford, went on a steppish hunt the other day. Their team consisted of the noted trotters Code and Catchfly. They had a pair of imported dogs that cost five hundred dollars, and three-hundred-dollar guns. The toll cost one dollar and ten cents. They returned at night with one snipe and a rabbit. There was so much style that it scared all the game out of reach.—*Kentucky Advertiser*.

Dan Swigert has forty-four yearlings at Elmendorf, twenty-two colts and twenty-two fillies. Among the lot may be seen a full brother of Clara D., and Enclid, a full full brother of Vigil and Vera Cruz, a full sister to Anglia, a full sister to Ferida and Aella, and a full sister to Le Polke, the \$5,000 colt.

J. S. Campbell, owner of the pacer Richball, in a letter to the *New York Sportsman*, throws his hat into the air thus: I think Richball is the fastest horse on earth, and will match him against any trotter or pacer for \$5,000 or \$10,000 a side, the track to be mutually agreed upon.

In striving to meet the demand for large horses too much stress has been laid on the weight of the animal without considering of what that weight consists. In nearly every county through the West there are scores of stallions whose only qualification is their avoidpupis, and if castrated and relieved of their surplus fat, would not make third class geldings.

William Blenkiron, of the Middle Park Stud, Eng., has failed. His liabilities are placed at about \$55,000, and the assets, consisting of thoroughbred horses, farm produce, etc., at \$20,000.

Scarcely any two cows or horses have appetites exactly alike. It is important to so mix and change the feed that sameness of diet may be avoided.

Commodore Kittson has been elected a member of the directory of the Chicago Driving Park.

B. J. Treacy has refused \$1,000 for William M., weanling colt, by Messenger Chief, out of the dam of Red Jim.

TURF AND TRACK.

The Dwyer Brothers—Their Winnings for the Season of 1883.

[New York World].

The most frequent question asked since the end of the Coney Island Jockey Club's autumn meeting has been, "How much have the Dwyers' horses earned this season?"—a question that was impossible to answer until now.

Their gross earnings for the racing season of 1883 amounted to a total of \$137,780.50, of which they paid \$9,365 in entrance money, leaving the net earnings at \$128,415.50. Of course, the \$9,365 named as entrance money does not include forfeits in stakes and entrance money for purses that they did not start for, which probably amount to nearly \$5,000 more. Even if such is the case, the season is the best they ever had. Of the methods of handling their horses, it is unnecessary to waste any space, but to simply sum them up in two words, "business principles." They have a young, skillful and enthusiastic trainer, a rider selfishly loyal to their interests, and a dozen or more employees of which the same thing can be said. All of them are not only well paid and fed, but are so immediately under the eye of their employers that the slightest deviation in their daily work is at once detected.

In which connection an Englishman of great experience in racing matters at home, and who was present at nearly all the principal race meetings in this country last season, said: "The Dwyers would make a fortune in England racing as they do, for they not only possess a wonderful knowledge of where to place their own horses, but they seem to know their exact condition daily, supplemented with the knowledge of the condition of the horses of their principal opponents." All of which is to a great extent true, especially that of knowing the strength of their rival stables—not by resorting to illegitimate means, but simply by keeping their eyes and ears open as to what is being done, and their mouths shut as to what their horses have done or can do. What they could earn in England, outside the betting ring, is exceedingly problematic, their total earnings this year being considerably larger than those of the largest winning owner in England, Mr. C. J. Lefevre, who is credited with £20,537, or \$99,604.50. In fact, the Dwyers' total for 1883 is larger than that of any English owner for the last five years, the nearest amount being \$127,975, won by the late Count Lagrange in 1879. The tabulated list of the earnings of the stable for the full season, including Hartford's races at Brighton Beach in November, is as follows:

Table with columns: Horse, Times started, Times placed, Times second, Times third, Gross amount won. Lists horses like Miss Woodford, George Kinney, Barnes, etc., with their respective earnings.

From the above table it will be seen, as was the case in previous years, that the Dwyers still rely upon a small and select stable, the bulk of the money won being confined to some half dozen horses, of which two or three are phenomenally good, as was the case with Bramble, Luke Blackburn, and Hindoo, in their respective years. This year, however, they may be said to have had three strings to their bow, Miss Woodford, George Kinney and Barnes. The last named was out of the field early, his last important race being for the United States Hotel Stakes early in August, since which time he has not started. But as he had previously won the Coney Island Derby, the Tidal Stakes and Seaboard Stakes at Sheepshead Bay in June, and the Travers Stakes at Saratoga in July, it cannot be said that he was in any sense an unprofitable inmate of the stable.

The real honors, however, belong entirely to Miss Woodford, as she started in all twelve times, of which she won ten. Of the defeats she was really only beaten once, and then by Empress for the Pocahontas Stakes at Saratoga; on the other occasion she cut out the work for the Monmouth Stakes, which George Kinney won. The stakes to her credit are the Ladies Stakes at Jerome in June, the Mermaid at Sheepshead Bay later in the same month, the Oaks at Monmouth Park early in July, thence to Saratoga where she won the Alabama, back to Monmouth Park for the West End Hotel in August. In September she won the Great Eastern Handicap at Sheepshead Bay, after which she was "expressed" to Louisville, where on the 29th of that month, she won the Lorillard Champion Stallion Stakes, her superiority being such that none of the Eastern stables would make the journey to start against her, while of the Western contingent only two horses went to the post and they only because the second money amounted to \$2,000. No period of the Dwyers' career on the turf shows the confidence they have in their horse more than did their flying trip to Louisville. They won the Lorillard Stallion Stakes on Saturday, and as Miss Woodford was engaged for the Hunter Stakes at Jerome Park on the following Tuesday, they shipped her in a special car late Saturday evening, and on Monday night she took her feed at Jerome Park as unconcerned as did Kinney and others that had been left at home. The morning of Tuesday proving stormy, the racing was postponed until Thursday, when she won the Hunter Stakes with the greatest ease. She subsequently ran at Washington, where she won the District of Columbia Stakes, and at Baltimore, when she beat Iroquois and Drake Carter for the Pimlico Stakes, ending a three-year-old career never before equalled, considering the distance ran, money won and the miles traveled, by any filly bred since the revival of racing in 1864.

As to the work done by George Kinney, none who saw him run as a two-year-old believed that he would make so good a three-year-old. He started in all eighteen times, and was never worse than third, winning twelve times; was second four times, once to Pizarro for the Ocean Stakes, once to Eole for the renewal of the Monmouth Stakes, once to Drake Carter for the Potomac Stakes, and once to his stable companion, Miss Woodford, at Baltimore. He was third to Empress and Drake Carter for the Sequel Stakes, and the same to Wedding Day and Taxgatherer for a handicap at Saratoga, in which he gave them both "lumps of weight." Of the twelve races won, the stakes included the Withers and Bel-

mont at Jerome Park, the Lorillard and Monmouth at Monmouth, the Kenner at Saratoga, the September at Sheepshead Bay, the Jerome and Grand National Handicap at Jerome Park early in October, and the Dixie and Breckenridge at Baltimore late in the same month. The best performance, without doubt, was the Grand National Handicap at two miles and a quarter, when he gave the five-year-old General Monroe no less than sixteen pounds, and the three-year-old Trafalgar twenty-four pounds, a test that would seem to show that if the Dwyers intend to train him for cup races next year, that he will be no mean competitor for any horse to be met.

The next in rank from a money-winning point is Bootjack, with the Great Metropolitan Handicap at Jerome Park, the Coney Island Stakes at Sheepshead Bay, and the Excelsior Stakes at Saratoga to his credit; while the three wins to Brnton's credit are the Foam Stakes at Sheepshead Bay, with the Flash and Virginia Stakes at Saratoga, after which in rank are Wanderer, Hartford, Ecuador and King Fan. The first was sold out of the stable, late in the season; the second was purchased from McLaughlin, in September, he having previously won several races for his jockey owner. Ecuador remains in the stable, while King Fan was only a temporary inmate, he having been purchased by the Dwyers from W. C. Daly, in July, and sold back to him early in September. Of the others in the list, Carley B. was sold early in the season, while Joe Blackburn, Greenbush, Eldorado, and the Crownlet colt, are still inmates of the Brooklyn stable.

Of the 126 starts shown in the above table, it can be said to McLaughlin's credit that he rode ninety-two of them, of which he won forty-six, which, with his many other winning mounts, will no doubt secure to him the handsome trophy offered by the New York Sportsman for the most successful jockey during the season just ended.

Pendragon on the Trotter.

Some time ago we quoted from the Referee something about a fast trotter that took the eye of Pendragon, and again he is full of the encomiums of the American trotter. There is little question that when there is a better acquaintance with fast trotters, and men like the owner of Diamond become purchasers, that there will be a change for the better. The following is the description:

A fortnight ago I told you about a trotting horse that I saw in Hyde park. During the week I have heard who he is and what he is, and on Wednesday morning had the pleasure of sitting behind him while he was going at his paces. He is an aged horse (about seven or eight years old) stands 15 hands 1 inch, is a bay horse, and is a fine specimen of thoroughbred, according to the American Standard. Diamond is a very handsome animal, and he was shipped on October 23, and arrived in New York on November 8; so at present he has not had much experience of this effete, used-up, and non-trotting-horse old country. It is indeed interesting to me, after all I have written about trotting horses being taken up by members of the English aristocracy, to find that Diamond was specially imported for a young lord of high degree, who will be of still higher degree presently when his grandfather, the Marquis of —, sheds off this mortal coil. As the Marquis is between seventy and eighty, the young lord, who is not above twenty, and who already rides fast to hounds, is likely with luck to have a high old time before him. If he takes kindly to the trotting horse, it is only natural that others of similar status in society will follow the lead, and that trotting horses will by-and-by become as fashionable in England as they are now in America. It was certainly a pleasant sensation the other morning to go round the park about twice and a half as fast as anything else there. The only drawback was the fear that some over-zealous policeman would inform us that we were not going the "regulation pace." What "the regulation pace" in the park is nobody appears to know. I should like to learn what it is in Rotten Row, as now and again I have seen the police on duty there do extraordinary things in their ignorance of what really constitutes fast going. This is, however, a subject I mean to discuss at some future time. It will have to be treated at more length than I have to spare now, as it involves all the difference between blustering, awkward-actioned horses, that make a tremendous show and cover no ground, and smooth and level goes that go twice as fast as the others without the semblance of an effort. Diamond was purchased because his noble owner was annoyed when driving a stepper to find he was passed with considerable ease by some sporting bungs, who, mayhap, rather ridiculed the kangaroo action of his high-spirited and also high-priced animal. Determined to be even with these representatives of English trotting, should he meet them again, his lordship instructed a well-known dealer to pick him up an American trotter who should be at once fast and well-looking. Certainly Diamond is as good-looking as any one need desire. Also, I should think, he is the fastest trotting horse at present in England. The man who told me he had a record of 2:30 did not confine himself to facts. Diamond has no record at all, simply because he has never been in a regulation training stable. Nor has he ever run on a regulation race track. "But," says the gentleman who accorded me the information, which I trust will be acceptable to everybody interested in the development of trotting here in England, "the Sunday before Diamond was put aboard ship he speeded a mile on an ordinary road, two in the buggy, in 2:40." His breeder, from whom Mr. M— purchased him on October 19th, guaranteed that with proper care and attention he would do a mile in 2:30 before the lapse of six months." Calculating the rate at which Diamond went down the Ladies' Mile the other morning in a buggy, heavy rather than light, carrying two men weighing about six-and-twenty stone between them, I should think he was safe to beat 2:30 on a fair road, if fitted with proper trotting apparatus, and in the hands of a skillful and experienced driver. He is a nice, willing fellow, and when he leans up against the bit and speeds away he certainly goes faster than anything I ever saw before, and as I said a fortnight ago, I have seen what was reckoned as good as 2:30. As the nobleman who now possesses Diamond has no intention of entering him in matches or sweepstakes, he might arrange, or, if he does not care to do it himself, he might let somebody arrange for him, that Diamond shall be got fit, and supplied with a proper sulky and fittings, run a trial against the watch. This would give trotting an impetus which it sadly requires just now, and might do a good deal towards making the trotting horse—as a trotting horse—fashionable. It is no good for people who would like to take up trotting to say that it is so very low and so very common. Of course it is; but this is exactly the reason why swells are wanted to take trotting up, and thus save it from being the property of the low and the common only. Nothing is lower and more common than racing, if you only look at the low and common parts of it; but the leaven of royalty, nobility and gentry

which is thrown into it makes everybody for swells being the pestime of ewelldom, racing is the very scourgings of society. If the young lord who thought Diamond would only set the example, we should very soon have a trotting park somewhere near London, and should be in a fair way to get an addition to our sports and pastimes. I say an addition, because trotting, as we have experienced it so far, is nothing like trotting as it is known in America. Previously all the trotting horses I had seen were well in keeping with their associations. There was nothing at all bloodlike about them. They were lanky, long-necked, coffin-headed, big-footed, awkward brutes that, except for the pace that could be got out of them, were, to all outward appearances, not worth stable room. It is really wonderful how some of these loose-limbed, shuffling creatures get over the ground, and it is hardly surprising that swells, after having seen them, have not cared much to go in for trotting. With Diamond the condition of affairs is altogether different. He is not only as handsome and as shapely as any one would wish a horse to be, but when set well going he is just like machinery. At this game it may be as well to point out that the horse's four legs are all well off the ground together; often quite as much as they are in cantering or galloping. I suppose that Diamond can trot a good deal faster than he could gallop. The effect of the system of breaking under which he was broken is to make a horse take much the same bound from the hind legs as he would take in galloping; except, of course, that the way of doing is altogether different. The driver has to catch a tight hold of the loops on the reins, and to hold on when the bit is seized by the horse, who regards pulling as a sign for him to hold his hardest. It seems strange, to our notions, to stop a horse by loosening the rein, but that is the only way it can be done with these trotters, who are, however, very much safer than one would think under the circumstances—they are taught to listen for the driver's voice, and will do exactly as they are told. Directly a driver lets go the loops, slackens the rein, and says "Who!" his horse will begin to ease up. Diamond did this several times in the park the other morning, the gentleman who had him in charge wishing me to see how easy it is to check and stop an American thoroughbred trotting horse even though he is going at full speed. Taken altogether, my experience was very satisfactory, and perhaps by-and-by, when fast trotters are as common in Hyde Park as horses of the over-collected and high-actioned kind are now, I may look back with much pleasure upon my ride behind the first of the foreigners. It must not be supposed because I say the first of the foreigners that I am ignorant of the trade that has already been done on this side in American horses. My previous writings show I am well aware of the business and its various ramifications. But in Diamond I saw the first horse who could go fast, and who was fit to mix with the best-looking of our own horses. In conclusion, I ought not to forget to mention their being taken to at first by people who are very fond of sports. Except when going their hardest, their action is slow—very slow—quite as low as that of an overworked English horse. Directly they run up to their bits the trotting motion is complete; there is never at any time any of the pawing and prancing which is now so suggestive of levity on lay and on the West End harness horses.

Goldsmith

It is not generally known that the mother of Goldsmith Maid would sell Maid at all, but would in a running, wilful and wild, over the fence, and those of his neighbors, as she was against his will, nearly twenty years ago.

The mother of Goldsmith Maid, a statement given to the writer by John H. Decker, a son of Edsall's Hambletonian in Goshen, was the daughter of her subsequent owner, John B. Decker, as she was kept at his house near Deckertown, N. J., tied to a post behind the ramshackle wagon of an itinerant peddler, until 1855. The mare was bony and had seen some of the best county farmers were in those days of quartering, and once that the mare had excellent points, and she was wanted to strike up a trade of some kind, the owner wanted a horse he wanted to get rid of for the mare. She turned out to be a valuable animal on the Decker farm, and her owner thought so much of her that he resolved she should be sold to the colt whose sire should be the best horse in the county, which was then Seely Edsall's horse, excepting, of course, the noble sire, Ryedyk's Hambletonian. As a result of this, the colt was foaled in May, 1857. John B. Decker's only objection to this colt was that it should turn out to be a good horse on the farm, but she was so nervous, obstinate, and so difficult to break her. The attempt was only partial success, for the only work she ever did in harness was to plough in a cornfield and to haul a stone drag, both of which jobs were done by her owner. At the end of the half-day's ploughing she lay down in the furrow, kicked herself loose from the traces, and ran away. She got to be known in the neighborhood as Decker's worthless colt. Fences were no obstacle to her, and she spent as much of her time in running free as she did in the fields of Decker's neighbors as she did in the fields of her own. One thing she would do, and took great delight in, was to join in the running races that were the fashion in Sussex county. But her owner never allowed her to enter for these races, and had no objection to her being used in that way. She was always contentedly in the field, and seemed to have no objection of what she was wanted for. The races that she was always came off on moonlight nights, and she became a favorite runner in the county. As worthless as she was, John B. Decker loved the mare, and would have housed her like a queen if she had been willing.

At the age of seven she was the property of a worthless Decker colt. She had not put her head up for a year in four years. This was in 1864, and John B. Decker, who had left his uncle's before the colt was born, had taken her, having removed to Newburgh. In Newburgh he and Squire Bingham of Newburgh were driving a country cart, buying up turkeys for speculation. John B. Decker remembers that they brought up at Uncle John's place, which is three miles from Deckertown, and where he was engaged by his son-in-law Jacob Swartwout. John B. Decker saw the mare, and saw at once that she had points that were worth a few horses had, and he wanted to buy her. He offered \$250 for her, but his uncle emphatically refused to sell her. His wife took a hand in. She had long been a favorite with the mare, as she had "eaten her head off" a number of times. She said to her husband that, as the purchase was for a sack and a near relative he ought to sell her for \$250. "Give him \$260," she said, "and I'll give you the mare."

So the nephew "made it \$260," and the uncle finally said that if he could catch the mare alone, he could have her for \$260. The condition was accepted, and after more than an hour's persistent effort, the younger Decker succeeded in getting the mare in the barn. The elder Decker wanted to back out. He offered his nephew a blooded black mare that he had refused \$600 for, if he would leave the wild mare. John H. refused to make the exchange. The black mare subsequently became the property of Gen. Kilpatrick, who took it with him when he went to Chili as minister.

At the time of this transaction John H. Decker's parents lived three miles from Goshen, near the village of Denton. Bingham and Decker drove away from Johnny B's with the mare tied behind their wagon, as her dam had once been tied behind the peddlers wagon. They stopped at Decker's father's for the night, and it was noised about the village in a short time that John Decker had paid \$260 for the well-known "worthless colt." William Tompkins, sometimes called Jersey Bill, was keeping the Talmage Horse at Hampton, a mile from Denton. He had long had his eye on the Decker mare, but had never been able to buy her. Hearing that John Decker had bought her, and had her at his father's, Tompkins drove over to see her. John Decker's mother was a good and very pious woman, and had a great horror of fast horses. His father was also disinclined towards sporting matters. Mrs. Decker gathered from the talk of the men that they anticipated great things from the mare as a trotter. When Jersey Bill arrived one morning Decker and Squire Bingham were about ready to start on their way.

A hired man was showing off the mare in the lane, and Mrs. Decker was a sorrowful spectator, remarking that she was sure that ruin would follow her son if he owned a fast horse, and she knew he had just refused to accept an offer from Squire Bingham of \$130 for a one-half interest in her. In relating the circumstances to the writer, he said he really intended the mare for his brother-in-law, Judge William Fullerton. Jersey Bill looked at the mare a minute or two, and then blantly said that he would give \$350 for her. On hearing this Mrs. Decker appealed to her son to sell her. Tompkins raised his offer \$10. Decker's mother begged him with tears in her eyes to get rid of the mare at any price, and his father added his voice to here. At last his parents seeming so much in earnest, and exhibiting so much feeling in the matter, Decker accepted Jersey Bill's offer, and he drew a check for \$360. While this was being done Decker was looking the mare over, and repented selling her. He made pretense of not caring to take Bill's check for the mare, but his father asked to see it. When it was handed to him he wrote his name across the back, and, remarking that he guessed that would go now, handed it to his son. There was no excuse for further opposition, and Jersey Bill drove off with the Decker mare.

John H. Decker and Bingham started for Goshen, but the more the farmer thought of what he had done the more he regretted it, and he said he was bound to get the mare back if he could. Reaching Goshen, he telegraphed to the officers of the Middletown Bank asking if Jersey Bill's check was good for \$360. The answer came back that it was good for only \$300. Decker then declared that he would go to Hampton and deliver up the check and recover the mare. Before he could get away, however, a telegram came from the bank that the check had been made good, and the mare was lost to him forever.

Alden Goldsmith would never have bought the mare but for John H. Decker. Tompkins had her still in the spring of 1865, and could do nothing with her. One day Decker met Goldsmith on an Erie Railway train, and told him that if he wanted to get the best piece of horseflesh there was in the country, he would tell him for \$100 where she stood. Goldsmith said all right. Decker told him of the Decker mare. Goldsmith replied that he had seen her, and she was "no good." He did not know her pedigree at the time, and Decker told him what it was. Then Goldsmith became interested, and succeeded in buying the mare for \$600. The popular story that an old wagon was the part of the consideration is not strictly true. Bill Bodine, who was the mare's father, and by whose skill and patience she was made what she became, told the writer that Goldsmith had been promising Tompkins a wagon for some time, and when the latter delivered the mare to its new owner, he saw a second-hand wagon that suited him standing in Goldsmith's shed. Tompkins reminded Goldsmith of his promise, and asked him for the wagon, as he could take it right along with him then. Goldsmith looked at the wagon awhile, and then said: "All right; take it along, I'll have to send it to the blacksmith shop anyhow before long." And Jersey Bill took the wagon.

By the fall of 1865 Bill Bodine had conquered the mare, and that same season he entered her for her first public trotting match. The trot was to be on the Middletown track, with a horse from Port Jervis known as Lady Brown. The purse was for \$500 with a forfeit of \$50. The race did not come off, for Mr. Goldsmith entered her for a trot with the famous horse Gen. Walker, on the Goshen track, and the date was the same as the Middletown entry. Bodine paid the \$50 forfeit, and the mare won the race in three straight heats, making a record of 2:26. Her next important race was the great trot on the Middletown track with Dexter, when she was beaten by that then king of the turf.

Mr. Goldsmith never paid Decker the \$100 for giving him the points about the mare. He offered him a colt by Volunter, and Decker declined, saying that he would be satisfied if he could have the name of the mare. He wanted to call her "Ella D." after his wife, a sister of Judge Fullerton. To this Mr. Goldsmith would not agree, and he gave her the name which she is immortalized.

John H. Decker, the original purchaser of the mare, and William Bodine, her trainer, are both dead. John H. Decker still lives on the farm where she was foaled, and a few days ago passed since 1864 when he has not lamented the sale of his "worthless" colt.—N. Y. Sun.

Although horse breeding, especially of the heavier class, has grown in the last ten years to an immense proportions, it is yet in its infancy. But, in order to make it a perfect success, there is great need of a closer study of breeding than most of breeders devote to it.

A stallion to be qualified to produce draft horses should be the perfection of strength, vitality, and endurance, and in producing these essentials, fat is of last and least consequence, and it is rarely put on in excess except to cover serious defects.

Nearly all the prominent jockeys have made engagements for next season. Blaylock will ride for the Pate stable. James Donahue has signed with Mr. George Lorillard. Hughes receives \$6,000 from Mr. Pierre Lorillard; and Stoval will ride for Milton Young. Mr. E. Corrigan "the Lorillard of the West," has engaged the famous jockey, Isaac Murphy, to ride for him next season. It is said Murphy will receive \$5,000 per annum. The fact that Corrigan keeps his stable at Louisville may account for Murphy having engaged with him, as it is well known he would not leave Kentucky.

### Horse Breeding in Texaa.

It seems only yesterday to stockmen of Texas when raising horses was considered notoriously unprofitable. The cowman expected to make money out of his cattle, and regarded raising horses as simply a necessary adjunct to his business. Cow ponies he needed, and it was cheaper for him to raise them where needed than to send off and buy. The idea of raising horses except for home use on a ranch was not entertained, for a stock of horses could be bought for a song—selling often from three to six dollars per head, with colts thrown in. They were not worth much care. The "gentle bunch" alone received occasional attention. Horses were not always salable, but cattle were; as a result horses were raised for use and not for sale. Think of selling 600 head of horses for \$2,000. Ranchmen in talking about their stocks would say, "the horses will come out all right, there is always grass for them." If asked why they did not breed better horses, the response would be, "There ain't any money in it. These horses are good enough to run cattle with, and that is all the use we have for them." The legitimate result followed this condition of things. Ranches and cattle increased and horses did not. Ranchmen did not miss the water till the well run almost dry. The above represents about the way things stood then. Almost at once, gentlemen all over Texas discovered that cow ponies were scarce and hard to find. Unheard of prices were asked and paid for the stock needed. Supply was not equal to the demand. Prices went higher and higher. Even mares became valuable. As soon as they had a tangible worth, enterprising dealers began to ship them North and East. It was a surprise to find that they, the pot-bellied, inbred prairie mares and survival-of-the-fittest pony stallions, found ready sale. Street car companies tried them and bought more. Livery men found in them just what they wanted—cheap and serviceable animals. Farmers bought the largest of the mares as mule producers, and now raising horses in Texas is profitable. Stockmen are importing well-bred stallions for their own use. Companies are being formed for breeding fine horses for draft and road purposes. Cow ponies now command at from \$40 to \$60 per head. Herds are in demand at from \$20 to \$40 per head instead of from \$3 to \$6. These are not the prices breeders will get for their horses in a very short time. A 15-hend 5-year-old, sound, broke gelding is worth \$100, and that is the minimum price the horse raiser will get for him inside of three years. Because he can be raised for \$10 is no reason that he will not sell for \$100. In the state of New York the cost of raising a 5-year-old horse is \$200. It will cost to ship a Texas 5-year-old to New York \$15. Then why should not the Texas raised gelding bring \$100? A sound horse is the exception in that country, so much of spavins, ring-bones and sore tendons prevail, caused by hard driving on paved and macadamized roads, as to really make those ailments almost, if not quite, hereditary. A horse that is sound there to-day, may on the morrow throw a spavin, which ruins him. Our prairie raised horses inherit none of these tendencies, but, on the contrary, their bones and tendons are strong, healthy and perfect. Then why should not a sound, well-broke, 15-hands, 5-year-old gelding, Texas raised, be worth \$100.—Texas Live Stock Journal.

EDITOR BREEDER AND SPORTSMAN: I must confess that your editorials on the articles of "Columbus" are not always calculated to tickle the fancy of your correspondent, though they please the eye of those whom you intended them for. So long as the writer makes mention of facts which are based upon truth itself, it matters not to his conscience what may be the opinions of others. It is not his intention, however, to enter into an elaborate argument regarding the editorials under discussion, as all that I may write will not tend to the glory of my pen, neither will any assertions influence the opinions of those who think differently. However, let me add that the great mass of people, those who furnish the gate money which keeps alive the trotting associations of our country, are with the writer in the argument and opposed to the opinion of the editor.

A paper published in Clinton, Iowa, which claims to be the organ of Judge Hayes, thinks there may be some truth in the statement going the rounds of the press that Toronto Maid, 2:30, is the daughter of Badger, rather than the offspring of Captain, but would "take more stock in the report had it not originated with a certain writer who inflicts the public under the nom de plume of 'Columbus.'"

I sincerely hope that Judge Hayes will survive the attack of indigestion from which he is evidently suffering, and to hasten his cure, as well as furnish a new item of interest to the horse world, I shall present to the readers a bit of breeding that may make the welkin ring, when my opponents rash upon the hit of history with weapons brightly polished, and thoughts of eloquent denial urging their goose quills to heroic action.

The writer presents the following, not as the evidence of one who has seen and can testify of his own personal knowledge, but rather, as what he believes to be the truth, for it was told him by an individual who controlled a half interest in the animal under protest. With this explanation, hoping it will place the responsibility of the writer in a true light, I shall proceed with the "play."

The roan stallion Monarch, Jr., foaled in 1869, has been credited to the thoroughbred sire imp. Monarch, and very few people in this world know anything to the contrary. It is proper to state that the little horse Monarch, Jr., has a record of 2:24, and all 2:30 lists give his dam "a pacing mare."

Col. K. Reagen, of Kokomo, Ind., had in his possession an old Comet mare, which he was anxious to barter for something younger, or exchange for the currency of our country; at length the long-sought for opportunity arrived, and he sold the mare to some parties in Ill., accepting a portion of the selling price in current funds, and the balance in a chattel mortgage.

In the meantime, an uncle of Reagen's, who likewise signed his name Col. K., and who resides at or near St. Joe, Illinois, traded for a mare that was brought a short time before from Michigan. This mare was called a Grey Eagle and was in foal to a Kannuck stallion, owned in Michigan, and, it was said, could pace fast.

The colt, as soon as foaled, proved himself a sidewheeler, and late that fall Col. K. Reagen of Kokomo, obtained the little fellow, giving his uncle fifty dollars and the mortgages that was holding against the Comet mare.

At that time Col. noticed that the weanling could pace like a bullet, and he fancied there was more to the colt than many would give credit for. As the young pacer grew in years, and waxed strong and speedy, his owner gave him the name of Stonecutter, in honor of the profession of which he was a member, for Col. K. was a worker in stone of more than ordinary ability.

A second party obtained a half interest in Stonecutter, and as Monarch Bull was then the coming horse in Western estimation, the owner thought best to change their horse's name,

and in place of the thoroughbred mare who bore him, they substituted a pacing dam in order that the pacing element might be accounted for; while they entirely did away with the Kannuck stallion, and gave the credit to the popular sire Limp Monarch.

Monarch Jr., the late Stonecutter, was converted without the use of weights, by driving him in the sand which lay along the river bank. He proved himself a game horse, and added not a little to the honor of imp. Monarch. Had he commenced his turf career during the past season, it is more than likely that he would have been styled a Dictator, out of a mare by Pilot, Jr. The declaration would have held water, for in size and style of trotting he resembled the Dictators, while every one knew that he was a converted pacer, and the Pilot, Jr. cross would fit to a dot.

I presume the above will excite a more than gentle ripple among the friends of imp. Monarch, and many may think the account mere bosh, but, as before stated, I have it from a gentleman who owned a half interest in Monarch, and he affirmed that he knew whereof he spoke.

Mayview, Ky., Dec. 22, 1883.

"COLUMBUS."

### Gate Money in England.

The racing in England this year, both under the rules of the Jockey Club and small meetings conducted independent of that club, showed on a whole a fair increase both in the number of meetings, races run and money raced for. The famous fixtures at Newmarket, Epsom, Ascot, Goodwood and Doncaster never attracted more attention, while so successful were the "gate money" meetings at Sandown and Kempton parks that similar organizations have been inaugurated near Newcastle, Manchester, Leicester and other racing centres in the kingdom. The latest venture of the kind is the East Riding Club and Race-course Company in Yorkshire, which have secured all the land necessary near Hull, not only for a mile track that will be as straight as an arrow, but for a flat and ateeple-chase course, each two miles without going twice over the same ground. The ground-plans of the estate which have been sent to New York show that all the race will finish at the same point; that the stands, instead of being parallel with the track, recede at such an angle that the whole of the course can be seen, a feature that is certainly necessary, considering the distance between the spectators and the horses running for a greater part of all the races. The suggestions, however, are such that Mr. D. D. Withers, in an interview with "Vigilant," of the Spirit, says: "That's the kind of track I want to live to see built here. The only trouble is that such a track would require over 300 acres, and in this country no sooner do you get such a thing finished than some politician wants to run a street through it. Still, that is what we want here; our present tracks are mere circus rings." Being asked if such a track will be built here Mr. Withers replied: "Such a track will be built here, and it's not for off, either."

### Breeding Work Horses.

It is to be hoped that the time is not far distant when the essential elements of value—symmetry of form, perfection of action, constitutional vigor, and a prepotency inherited from the first lineage (transferred through generations of the best blood of the kind)—will be recognized by all who desire to purchase stallions with a view to the improvement of the stock of the country. It is unquestionably true that the largest animals have not proven the most valuable sires, from the fact, doubtless, that being abnormal in size they are themselves accidental results, and therefore must necessarily only occasionally or accidentally reproduce themselves. The medium and normal size is the safest, as in reproducing himself, or any of his ancestors (they being nearly alike in size) it gives a certainty of uniformity only to be obtained by individuals who are the likeness of their prototype for generations. In order to successfully select animals of the greatest value for breeding purposes, it is necessary to have a correct knowledge, not only of the breeding or ancestry of the animal, but also the processes of rearing them for generations; for it is by their inherent qualities and educated habits that their future usefulness as breeders is assured. Thus in selecting horses for the saddle it is indispensable to secure one descended from a race that instinctively possesses those gait most sought after in individuals used for that purpose. You can then with a degree of certainty expect that the produce of that animal will readily adapt itself to the desired gait, as they belong naturally to the family from which they are descended. So, also, in selecting a stallion for breeding horses for the race-course, we would think it folly to recognize any other than the purest thoroughbred as worthy of our attention. In selecting a sire for breeding trotting horses we use the same judgment and discretion, recognizing individual merit in the ancestry and instructive capabilities in the individual as of the utmost importance. In other words, he must be descended, through both sire and dam, from animals that trot naturally themselves and have proven their capabilities by their performance. This practice is a rule among all intelligent men in selecting horses for the services mentioned; but when it comes to the selection of animals for the production of valuable workers, our people seem to forget all the ordinary precautions they consider necessary in selecting animals for other purposes, and simply breed from horses that happen to be in their vicinity, or whose style attracts them, regardless and absolutely thoughtless of any other valuable qualification. To state it plainly, the work horses of this country have been bred at random. Until within the last few years, very little thought or attention has been given to or money used in the improvement of the heavier class of work horses in the United States. And even at the present time, when the mania for large horses has seized upon everybody, it is doubtful if one man in a hundred ever asks the question whether the animal he breeds from is inherently possessed of the valuable qualities necessary to make good work horses in himself or by hereditary transmission.

### The Enforcement of Racing Rules.

(Live Stock Record.)

The recent action of the Jockey Clubs assembled at Louisville last month, in the adoption of new and more stringent rules to govern racing, was a step in the right direction for the elevation of turf sports, and one that meets with the hearty endorsement of every upright and honest turfman. But the clubs have only done half their duty. It is obligatory upon them to see these rules enforced, and to do so properly, none but the best informed turfmen must be put in the stands to judge and decide racing. Men must not be selected for judges from their social position, but for their knowledge of racing and racing rules.

It is a duty honest and correct trainers and jockeys owe themselves, to steer clear of those persons who de-

horses to win at all times; for nothing is so injurious to the fair fame of either trainer or jockeys as their connection with questionable owners of race horses. Some of these kind of owners have, during the past season, been ruled off, and some have received a severe warning and are all pretty well known to experienced habitués of the turf.

It is duty also equally imperative upon owners to steer clear of either trainers or jockeys of questionable character. Many gentlemen who are called into the stand do not seem to realize the importance of their position, and it has been a far too common custom for judges to pass over (without there is a complaint) the most transparent cases of in-and-out running, in which both trainers and jockeys must occasionally combine. The judges owe it to themselves as well as to the public to investigate the in-and-out running of horses, many cases of which occurring during the past season, some of a most fragrant and unaccountable character. There must be some good reason given, or explanation furnished, why a real good horse is beaten by a selling plate one day, and then shows first class form on the next occasion he is pulled out. The turf must be purified, and to this end all must work—judges, owners, trainers and jockeys. Racing is the most popular sport in America, and is growing yearly; and outside of turf contests it is of incalculable value to the country in the production of horses, not only for racing, but for general purposes, the thoroughbred being the highest type of the equine race, improves and beautifies every other breed.

Under the new rules, "in case an Association permits post bookmaking, any bookmaker licensed to exercise his calling shall be required to give bond in no less a sum than \$1,000 for the honest performance of his calling, which sum shall be forfeited if conclusive evidence is given of any fraud committed by said bookmaker, and upon conviction he shall be ruled off the track." We opposed this rule in the Convention, and can see no necessity for its adoption without a similar one was framed requiring every owner, trainer and jockey to honestly perform his calling. There are a few questionable bookmakers like there are owners, trainers and jockeys, and the best thing to do is to get rid of them when they transgress the rules.

A leading turfman, speaking of frauds on the turf, says: "It should always be considered that whoever commits a fraud or is guilty of unfair practices in connection with racing not only injures the individual whom he deceives, but actively assists in the diminution of that confidence between man and man which contributes, and is really essential, to the very existence of the turf."

English Races by an Australian.

An Australian turfman and trainer of note makes the following observations on racing in the "old country":

The accommodation on nearly all English courses is as bad as it is possible to be. For instance, after the Leger the jockeys ride into the saddling paddock, in which there is a dense crowd, amongst whom they have to dismount and strip their horses. They never seem to wait for the order to dismount, but jump off amongst the crowd, and make the best of their way to the weighing room, no enclosure being railed off as with us. Nearly all the stands at Doucaster are private, and the public get very little but bare standing-room for the thirty shillings it costs for the stand and saddling paddock. One most objectionable, childish, unsportsmanlike and stupid fashion is now prevalent amongst the trainers of having their horses' coats brushed into patterns. You see some horses covered with stars, some with stripes, some with diamonds, and all sorts of funny marks. It is done by brushing the coat different ways, so that the different lights make the patterns. If I had not seen it I should scarcely have believed that men could have been such fools. A very bad feature in English racing is the smallness of the fields. From 26th March to 29th August no less than 553 races have been run in England, exclusive of matches, averaging under three and a fraction horses per race, and these include some of the best performers on the turf, and some of the best events. When it is taken into consideration that there are several thousands of horses in work, this shows that there must be something very rotten in the state of Denmark.

In conclusion, England far surpasses us in race-courses, the going being simply perfection all this season. What is called hard we should go into ecstasies over; the scenery also is often lovely, but in the matter of accommodation of every kind for the public and officials they are a hundred years behind. Fancy, at the much-vaunted Derby, the saddling paddock being about a mile and a quarter from the weighing room, and jockeys, after being weighed, having to fight their way, saddles in hand, through a dense mob to the paddock, and by the time a trainer has turned out his horses, it is almost impossible for him to find a place to see the race from. As to horse, England is so numerically strong that we are far surpassed; but a child could see that there's something wrong—either the trainers have so many under their individual care that they don't know what they have got, or the right horses must often escape nomination. I think the former is the real reason, or we should never see such wretched fields brought together for classic races, and called representative as the one which appeared in this year's Leger. Take Ossian away, and I believe that any real judge could pick out a field of three-year-olds from the training stables and race-courses that could not only beat the remainder, but make a show of them. Highland Chief, Elzavir and Royal Angur, the three favorites, were not even the cut of Leger horses, and were lame, yet these are supposed to be the pick of thousands. Surely, England could find something better than three cripples for Leger favorite. As to jockeys, England beats us, as heavier weights are the rule, consequently men ride instead boys, and men who are in the saddle nearly every day during the season; but the weak point of the English jockey is a "gallery finish." I have seen more than one race thrown away by England's best horseman, by waiting for the finish, and then getting pipped by a speedy brute that he could have run down if he had kept going all the road. But there is nothing to complain of as to horsemen; they keep their whip, and spurs quite useless unless they are really wanted, a lesson impossible to teach the colonial boy. As to the trainers, they are duffers in one way, not in another—they are duffers at getting their horses fit, but clever at bamboozling owners and getting four times the number of horses it is possible for them to train. The question arises whether it is worth their while to bother about training. I should say decidedly not. A well trained has, say, sixty horses under his charge—some far more. He gets £2 10s. a head a week, and at the present rate of labor, &c., he ought to clear £1 per head per week, or half it and say 10s.; then it is quite good enough, without bothering much about training, though I should say the profit is nearer £1 than 10s. Again, the trainers are in a groove. Many get horses because the owner's ancestors were accustomed to send horses there, and many trainers take their father's business; the thing is in a groove of old-established places, the same as grocers or butchers. In one great feature

England is behind us, viz., the numerical strength of our fields. As I mentioned before, in the last five months five hundred odd races have been run, not giving an average of four horses. To a lover of racing nothing is more exhilarating than a large field, and it is, on a fine day, one of the most beautiful sights in the world; whilst, on the other hand, three or four runners on a wide course looks like three or four couples dancing in an immense ballroom—flat in the extreme.

Twenty Years' Turf Reminiscences.

[New York Sportsman.]

In Kentucky, twenty years ago, some of the principal thoroughbred stallions were Lexington, by Boston; Revenne, by imp. Trustee; three sons of imp. Glencoe, Vandal, Star Davis, and Hornpipe; Austerlitz, by imp. Yorkshire; imp. Mickey Free, by Irish Birdcatcher; Colossus, by imp. Sovereign; imp. Scythian, by Orlando; and Millington, afterwards imp. Anstralian, by West Anstralian. In other parts of the South and Southwest were Daniel Boone, Knight of St. George, Lightning, etc. New York and New Jersey had imp. Balrownie, by Annandale; imp. Eclipse, by Orlando; Slasher, by Child Harold; Prophet, by imp. Mouch; Avalanche, by Revenue; Lapidist, by Touchstone; Trovatore, by imp. Monarch; Frank Cheatham, by imp. Albion; imp. Consternation and imp. Young Sweetmeat, by Sweetmeat. Colton, by Lexington, was located near Philadelphia, John C. Breckenridge, by Lexington, and imp. Bonnie Scotland, by Lago, were in Ohio, France, by imp. Glencoe, was in Illinois, and Jack Malone, by Lexington, was in Missouri. The above is not a complete list, however, by any means. That winter in the spring of 1864, there was quite a little getting in Kentucky on the Paterson Derby, for which thirty-two colts and fillies were entered. At Dr. Underwood's headquarters, at Lexington, a book had been opened on the race, and Mr. Clay's colts Arcola and Kentucky, both by Lexington, were the favorites at 8 to 1 each, and 10 to 1 was laid against R. A. Alexander's "108," which included Asteroid, Norfolk, Nannie Butler and another, 12 to 1 against Loadstone, by Lexington, 15 to 1 against Sister to Idlewild, and larger odds against the others. This was prior to the Laclede meeting of 1864 at St. Louis, where the blue-grass three-year-olds showed great form that they at once jumped to the front rank of favorites. Norfolk especially. The Laclede races began the middle of May, and many Eastern and other horses lent their presence to the inaugural meeting by the waters of the great Mississippi. Extra weight were earned. On the first day a dash of a mile was won by Abu Beker, 4 yrs., by Mahomet, 110 lbs., beating Mammona, 6 yrs., by Sovereign, 117 lbs.; Zig-Zag, 4 yrs., by Ruric, 110 lbs., and Leger 5 yrs., by Bonnie Laddie, 117 lbs. Time, 1:47. The Great Post Stake, four-mile heats, worth \$4,750 to the winner, was won by John Harper's Rhynodyne, 5 yrs., by Wagner, 120 lbs., ridden by the beating R. A. Alexander's Bayflower, 5 yrs., by Lexington, 117 lbs., ridden by a stable-boy, and Dennis Reedy's Thunder, 5 yrs., by Lexington, 120 lbs., ridden by Gilpatrick. Time, 7:46—7:46½. Pools: Bayflower \$600, Rhynodyne \$300, Thunder \$250. Won easily. Thunder was taken with cramps and withdrawn after the first heat.

On the second day J. M. Clay's Skeddadle, 4 yrs., by Yorkshire, 110 lbs., won a mile-heat race from Monsoon, by Sovereign, and five others. Monsoon won the first heat. Time, 1:48½—1:49½. The second event was a sweepstakes for three-year-olds, weights 96 lbs. each. Six horses started. R. A. Alexander's Norfolk, by Lexington; Zeb Ward's Tipperary, by Ringgold; and four others, all of whom were distanced in the first heat. Norfolk won in two straight heats, in 1:46½ and 1:47, and was sold after the race for \$15,000, to Charles Winters of California, for Theodore Winters. George Rice took charge of him, and ran him at Paterson before he was sent to California.

On the third day at St. Louis, Mammona, 6 yrs., beat Vignette, 5 yrs., by Vandal, and Matt Davis, aged, by Star Davis, in a mile-heat race, 100 lbs., each. Time, 1:50—1:46½. On the same day John Harper's Bowen, 5 yrs., by Vandal, 120 lbs., ran two-mile heats, 3:49—3:46, beating J. C. Kelly's Legal Tender, 5 yrs., by Sovereign, 120 lbs., and Morton & Simm's Capt. Allen, 6 yrs., by imp. Sovereign, 120 lbs.

The fourth day's races were a dash of two miles, won by Bowen, 5 years, 120 lbs., from Ulverston, 4 years, by Lexington, and the Ringgold filly, 4 years. Time 3:38. Also a Post Stake, mile heats, three in five, worth \$4,750, which Skeddadle won in five heats, Sue Lewis, 4 years, by Lexington, 107 lbs., getting the first two heats in 1:46½—1:45½, Skeddadle then putting in her work in 1:47—1:51½—1:47. The fifth day Abu Beker, 5 years, 110 lbs., won a mile heat race in 1:49½—1:46—1:50, the first heat being a dead heat with Sympathy, 5 years, 117 lbs., three others also starting, and R. A. Alexander's Asteroid, by Lexington, beat Tipperary and Scotland, by Bonnie Scotland, mile heats, 96 lbs. each, in 1:47½—1:46½, causing many persons to think that Mr. Alexander had sold Norfolk only to reserve for himself a better colt. The sixth day of this great meeting saw Bowen, 5 years, 120 lbs., win a mile heat race, three in five, from the Ringgold filly, 4 years, 107 lbs.; Zig-Zag, 4 years, 110 lbs., and Laclede, 4 years, by Lexington, 110 lbs. The filly won the first heat in 1:50½, and Bowen the last three in 1:45—1:49½—1:49½. After the race the winner's name was changed to J. C. Kelly. On the same day also was run a three-mile heat race between Rhynodyne, Bayflower, and Thunder. Pools sold, Rhynodyne \$1,000, Bayflower \$550, Thunder \$435, and at these rates Dr. Underwood sold over \$60,000 worth of pools on the race. As on the first day, Rhynodyne won the first heat from Bayflower by four lengths in 5:41½, and Thunder, pulling up lame, was withdrawn. Rhynodyne also won the second heat and race in 5:43½. The last day three races were run. J. C. Kelly (late Bowen), 5 years, 120 lbs., beat Mammona, 6 years, 112 lbs.; Vignette, 6 years, 107 lbs.; and Legal Tender, 5 years, 112 lbs., a handicap race of two miles and a half in 8:42. Surprise, 4 years, by Bonnie Scotland, 110 lbs., won a mile-heat race from two others in 1:49½—1:53½; and Red Oak, aged, by Second Altorf, 110 lbs., beat Anna Travers, 4 years, by imp. Yorkshire, 100 lbs., a dash of four miles, handicap weights, in 7:45. This ended a most successful inaugural meeting.

The features of the Laclede meeting, were the debut of those good colts Norfolk and Asteroid, and the victories of John Harper's Rhynodyne over Bayflower and Thunder. The Canadian crack, however, was manifestly out of fix, and all Gilpatrick's riding could not get him to the front.

On the 31st of May, at Lexington, Ky., a five-day meeting was begun. The principal winners were Grant, 3 years, by Lexington, who won a sweepstakes for three-year-olds; Donerail, 3 years, by Lexington, a two-mile heat race from Zara, 4 years, by imp. Yorkshira, and Sue Lewis, 4 years, by Lexington. Time, 3:42—3:42. Georgio Wood, 3 years, by Knight of St. George; Eastar, 3 years, by Endorser, and Skeddadle, 4 years, by Yorkshire, were also winners during the meeting, the latter scoring a race at three-mile heats.

Meanwhile, at Paterson the stables of thoroughbred had been accumulating for some weeks, until by the 7th of June, when the Spring meeting of the Paesaic Association began, a notable array of race-horses was on hand and the public expectation was very great, especially as regards the anticipated struggle for the first Kentucky Derby, on which the betting had been heavy all over the country. It was the first great sectional race for three-year-olds in these parts for some years, and the East, with Kentucky and Arcola, was again to be pitted against the West, Norfolk, Asteroid, Tipperary, etc., being the Kentucky champions, all of these horses except the last-named being sons of the renowned Lexington. As the eventful day drew nigh, rumors regarding the horses were in every month. Norfolk had arrived from St. Louis at the course, but it was said that he was off, and Mr. Hunter's colt, Kentucky, was still the ruling favorite for the race, having shown great speed in his work. Asteroid and Arcola were mentioned as absentees, and it was thought that Kentucky would score an easy victory. Tuesday, the day of the race, broke clear and pleasant, and an immense gathering assembled at Paterson, the capacity of the Erie Railroad being severely tested. Many went by road, and probably 12,000 persons were at the course, including representative turfmen from all parts of the country. The track was not in good condition, owing to recent rains, and though not muddy was deep and slow, precluding any idea of fast time. The opening races was mile heats, and four horses started, J. S. Watson's Captain Moore, 4 years, by Balrownie, 104 lbs.; W. H. Renfro's Mammona, 6 years, by Sovereign, 117 lbs.; P. C. Bush's Ben Bruce, 4 years, by Lexington, 104 lbs.; and John Smith's W. R. Davis, 5 years, by Star Davis, 114 lbs. Captain Moore was favorite over the field, and Haferty brought him in an easy winner in each heat. Time, 1:50½—1:53½, Mammona was second.

After this race the Derby candidates were brought out and the excitement ran high. In the reports concerning the condition of Norfolk, alluded to above, Jas. L. Eoff had been the most prominent circulator, and went so far as to persuade certain persons that he had the management of Norfolk, would not start him, etc. After, however, he had succeeded in getting a big bet of \$6,000 to \$2,000 against Norfolk from the late John Morrissey, he threw off all disguise, and, as the colt was found to be all right, he at once became a hot favorite, selling in Dr. Underwood's pools prior to the race, for \$1,150, Tipperary, \$600, Kentucky, \$400, Morris' pair, \$250, and the geld \$230. Twenty starters were saddled, P. C. Push's Lrr-line, by Knight of St. George, 97 lbs.; Bowie & Hall's Velvet, by the same sire, 97 lbs.; Dr. Weldon's Charlotte F., by Scythian, 97 lbs.; Capt. Moore's Brother to Jack Malone, by Lexington, 100 lbs.; James S. Watson's Patti, by imported Eclipse, and Relief, by Ringold, each 97 lbs.; Frank Morris' two fillies, by imported Eclipse, same weight; John Hunter's Kentucky, by Lexington, 100 lbs.; Mr. Ackerman's Eagle, by Vandal, 100 lbs.; Zeb Ward's Tipperary, by Ringgold, 100 lbs.; and R. A. Alexander's Norfolk, by Lexington, 100 lbs. The favorite was ridden by J. Lewis, and looked full of life and fire as he was being started. Norfolk was a bay colt, standing 15.3, with three white spots, a peculiar blaze. Of good length, he was a very strong horse in appearance, and his powerful propelling power behind was very noticeable when extended. He neatly had Gilpatrick in the race, and while fully as much a race horse in appearance, he was decidedly not in as forward condition as Norfolk's on whom J. Ansel had expended all of his well-known training ability with good results, as anyone could see by looking at the colt. Tipperary, a bigger horse than either, over 16 months high, looked rather too finely drawn, almost, but his legs were not yet fully developed, was responsible for much of this impression, as the colt ran well in the race. Abe was his pilot, Eagle, a big, slashing chestnut, looked the picture of a racer, and Pinens had him in prime order. Mr. Sherrod soon had the lot in hand at the half-mile pole, and after very little delay they were sent off to a straggling start, Norfolk moving off much the quickest of any, so that in the first quarter of a mile he was several lengths away, and going like a scared deer. Kentucky was next, Velvet third, the others in a bunch, with Tipperary in a pocket, and by the time the stand was reached Norfolk was at least eight lengths in front, and getting away at every jump. On the turn Abe pulled Tipperary to the outside, and passing the leaders like a shot, including Kentucky, on the backstretch, he went on after Norfolk, who was by this time a dozen lengths away. The rest of the race was a procession, and as "Tip" could not close the gap any, Norfolk was eased, and the last half of the race was slow, Norfolk winning by ten lengths, Tipperary half a dozen lengths from Eagle, who beat Kentucky a head in the last few strides. Time—2:46½; first mile in 1:47. The Kentucky party came in for many congratulations on the race which was worth \$2,600 to the winner. The conspirators, J. L. Eoff and Charles Marsh, were, however, the objects of much censure, and the following day the association took cognizance of the matter by formally ruling off Eoff, censuring Marsh, and retraining the horse Norfolk from starting at Paterson until further notice. After the Derby a two-mile heat race was run with two contestants—Forbes & Jeroma's Fleetwing, 4 years, by Balrownie, 104 lbs., and J. S. Watson's Aldebaran, 4 years, by Commodore, 104 lbs. The latter was a hot favorite at \$100 to \$20, but under Abe's good riding, Fleetwing won the first heat by a length in 3:46½, and the second by the same distance in 3:45½, fairly bowling over the long odds, to the great consternation of the plungers. Out of Rhoda, by Glencoe, Fleetwing was a fine-looking chestnut, but a sluggish, lazy gait, and needed constant rousing with the whip. He afterwards won again at this meeting, and many races afterwards, as we shall see later on.

The second day at Paterson was rather light as regards the quality of the card, and the crowd was, therefore, not as great as on the previous day. Four races were down to be run, but for the three-mile dash, Captain Moore, 4 years, by Balrownie, had a walk-over. Of the other three events, the first was a mile dash between W. H. Renfro's Dora, 4 years, by Ringgold, 101 lbs., and John Hunter's Copeck, 4 years, by Lexington, 104 lbs. Odds of 100 to 40 were laid on the filly, and she won all the way in 1:47. The winner was run the year previous as the property of Capt. Moore, when she was known as the Ringgold filly. At St. Louis she was sold to W. H. Renfro, who named her Dora. Her dam was Roxana, by imp. Chesterfield, who threw Tipperary, Blarneystone, Susan Ann, Chesapeake, etc. The Nursery Stakes, six furlongs, for two-year-olds, had two starters, John Hunter's La Noire, by imp. Knight of St. George, 87 lbs., and J. S. Watson's Julius, by Lexington, 90 lbs. The filly was the favorite at 100 to 40, and won easily in 1:23. She rode the winner of both these races. The selling race, dash of a mile and a quarter, produced a larger field. Six horses started, Copeck, by Lexington, 97 lbs., Miss Hayes, 4 yrs., by Lexington, 87 lbs., Punch, 4 yrs., by Mahomet, 87 lbs., Zig-Zag, 4 years, by Ruric, 97 lbs., Red Eye horse, 5 yrs., 107 lbs., and W. R. Davis, 5 yrs., by Star Davis, 100 lbs. Copeck sold for \$100, Miss Hayes \$100, Punch \$35, Red Eye horse \$25, geld \$10. For over half the distance Punch and Copeck made a good

race, when the letter took a decided lead, and won the race by two lengths, Miss Hayes beating Punch by half a length for second place. Time, 2:18 3/4. The third day of the meeting attracted almost as large a crowd as was at Paterson on Derby day. The forenoon was dark and threatening, and before the first race was over the clouds burst in a torrent of rain, driving every one to shelter. This did not tend to make the track very fast, and each of the three races of the day were run in mud and water up to the fetlocks. However, the racing went on just the same, and was very interesting to all except the losers. The Sequel Stekes, for three-year-olds, two miles, had fifteen subscribers, and with three starters was worth \$1,200. These were J. Hunter's Kentucky, by Lexington, 100 lbs.; Frank Morris' filly by imp. Eclipse, and J. S. Watson's Relief, by Ringgold, each 97 lbs., Kentucky was the favorite and an easy winner in 4:02 3/4. The event of the day now came on, the Post Stekes, three-mile heats, and the seddling of the contestants excited much interest. They were Captain Moore, 104 lbs., Fleetwing, 104 lbs., and Thunder, 114 lbs. In Dr. Underwood's pools Captain Moore was a big favorite at \$100, Fleetwing \$35, Thunder \$25. The latter's running previously had clearly shown him to be off, and Fleetwing was the one relied on to clip the favorite's wings, if such a thing was to be accomplished. Abe was on Fleetwing, Hefferty on Moore, and Gilpatrick on Thunder. At the start the favorite made the pace, but Fleetwing shadowed him at once, and the two ran a very close race for most of the first mile at a very fast pace for the mud and distance to be run. It looked as if Moore's haco, who lost ground, and Fleetwing passed him, Thunder doing likewise before the end of the second mile, where Fleetwing led two lengths, Thunder four ahead of Moore. The letter had "bellow to mend" all the way home, and would have been distanced had the other two not been eased up. Fleetwing won by ten lengths, and Moore was second, as Thunder was pulled to a walk before reaching the wire. Time of the heat, 6:11 1/2. It was now any odds on Fleetwing, and he made all his own running in the second heat, winning easily by four lengths from Thunder, Moore badly beaten. The two letter showed much distress after the race, while Fleetwing was as fresh, apparently, as before he began, snorting, and kicking like an unbroken colt. The concluding race of the day and meeting was a consolation purse of a mile and a quarter, for heaten horses. Four feed the setter, Dora, 101 lbs.; Aldebaran, 97 lbs.; Coepek, 97 lbs.; and Ben Bruce, 97 lbs. In the pools Dora sold for \$100, Aldebaran \$80, Coepek \$70, Bruce \$15. Abe took Dora to the front at once and set a hot pace, followed by Aldebaran, Coepek making a waiting race of it, Bruce soon giving it up. Dora held the lead for a mile, when the mud and pace settled her, and she gradually died away, Aldebaran taking up the lead in the stretch and winning the race. Coepek was second, coming fast at the end, and many thought he would have nearly won if his boy had not waited to long. Time, 2:22. The meeting was, as a whole, a very successful one, and much credit was due to Messrs. E. B. Colt, R. B. Cheswell, William Toley, and other members of the association. The success of the new owners, Messrs. Forbee & Jerome, with their game colt Fleetwing was one of the most popular features of the three days' racing. As regards the ruling off of Eoff and the suspending of the colt Norfolk, a great many considered that the action was rather hastily taken, and hardly warranted by the charges as set forth. Though accused of conspiracy, no one was evidenced as a party to the alleged collusion, and the charges should have been a little more definite. Norfolk really started, was run to win, and did win, and current report ascribed the somewhat premature action of the committee to the plaintive lamentations of the fleeced bookmakers, of whom the most prominent was the gentleman mentioned in the foregoing as laying Eoff a large bet.

On the 28th of June, the New York Jockey Club began a meeting over the Centerville Course, Long Island.

State Fair Colt Stakes.

The Occident Stake for foals of 1832 to be trotted at three years old during the State Fair of 1835, closed on the 1st inst. with the following nominations:

1. Palo Alto's b c Norval, by Electioneer, dam Norma.
2. Palo Alto's b f Constance, by Electioneer, dam Consolation.
3. Palo Alto's b f Ethel, by General Benton, dam Electa.
4. Ira L. Ramedell's blk f Luella, by Sultan, dam Ella Lewie.
5. L. J. Roe's b c Stamboul, by Sultan, dam by Hambletonian.
6. L. J. Roe's b c Kismet, by Sultan, dam Sauce Box.
7. Jno Mackey's b c — by Alaska, dam Belle Ely.
8. Jno Mackey's blk c — by Echo, dam by Hubbard.
9. Jno Mackey's a b f — by Echo, dam Dolly Varden.
10. Chas Scott's g c — by Echo, dam by Lodi.

For the Occident Stake of 1834 second payments have been made on the following:

- Palo Alto's Argo, Alban, St. Just, Edos, Alta Belle.
- D. E. Knight's Nighthawk.
- L. J. Rose's Bedouin.
- J. C. Simpson's Antevolo.
- A. W. Mackey's Robert Lee.
- A. L. Frost's Roscoe.

Annual Two-Year-Old Stake.

The annual two-year-old stake for foals of 1832, to be trotted during the State fair of 1834, closed on the 1st, with eighteen entries, viz:

1. Palo Alto's Glen Cairn, by Electioneer, dam Glen Cora.
2. Palo Alto's Antinous, by Electioneer, dam American Girl.
3. J. Blake's Revielle, by Admiral, dam by San Bruno.
4. R. H. Newton's Sur Del, by Del Snr, dam by Black Ralph.
5. Jno. Mackey's b c, by Alaska, dam Belle Ely.
6. Jno. Mackey's blk c, by Echo, dam by Hubbard.
7. Jno. Mackey's b f, by Echo, dam Dolly Varden.
8. J. Greely's Mill Boy, by Brigadier, dam by Signal Colt.
9. Ira L. Ramsdell's Luella, by Sultan, dam Ella Lewie.
10. W. B. Todhunter's Cannon Ball, by Prompter, dam Gazelle.
11. W. B. Todhunter's b f Clito, by Steinway, dam Mand M.
12. E. Giddings' b c Promise, by Prompter, dam Starlight.
13. J. B. McDonald's g f Lizzie Jean, by Brigadier, dam Lexington Belle.
14. J. B. McDonald's blk c, by Brigadier, dam Maggie.
15. L. J. Roe's b c Stamboul, by Sultan, dam by Hambletonian.
16. L. J. Rose's b c Kismet, by Sultan, dam Sauce Box.
17. J. N. Ayres' ch f, by Algona, dam by A. T. Stewart.
18. G. W. Trahern's b c Paul Shirley, by Nephew, dam by Maybie's Mambrino.

Public Trainers.

The London journals do not forget to remind the Jockey Club that it is charged with grave responsibilities. When things go wrong, as they frequently do, the turf legislature is called upon to act. Land and Water thinks that public jockeys and public trainers have done much toward lowering the tone of racing. Formerly nearly every nobleman and gentleman who kept running horses had his own trainer, and in many instances his private jockey. The latter, when not put up, was bound not to ride against his employer. But now the situation has changed.

In the true interests of the turf far too many owners of horses send them to the public trainers, and, as is only natural, they make choice of the most successful stables, a fact that in the end tells against themselves, several trainers having often more horses sent to them than they can properly attend to. If a trainer does full justice to twenty horses, it will tax his capabilities to the utmost, and yet at Newmarket strings of horses, in many cases of double, treble, and even more than that number, are under the charge of a single trainer. Some owners send to public stables to save themselves trouble, and others to avail themselves of the talent of its head, while the object of some few is to ferret out the secrets of the stable for their own special benefit. But be their object what it may, the system whereby sixty or seventy horses are trained in the same establishment must militate against the best interests of the turf. It cannot be that in many instances horses are brought out insufficiently trained; consequently there are subsequent startling changes of form that not only amaze and mystify the public, but owners also. Then the strength of the fields is curtailed, for horses trained in the same stable are seldom brought out to contend against each other, and when they are their form is either known or so closely guessed at that all interest in their performance ceases. But this is not the worst. In nearly all the public stables members of the ring, or some of their confederates, have horses in training, and thus they become intimate acquaintances of the trainer. It consequently follows they need no tout to post them up with the doings of the several horses in the stable, an expense that the hecker, desirous to grow rich without labor at the expense of the horse-owner, is compelled to bear. The common horse-watcher is thus not entirely to blame when a "good thing" oozes out, and the owner finds himself forestalled at Tattersalls and the clubs. None of this work went on in the early days of racing, or for the first thirty years of this century, when private trainers were the rule, and not the exception. Jockeys bound themselves to ride for certain stables, consenting, in case of their not being able to get to the required weight, to stand down unless by permission of their employer; whence it followed that no "syndicate of hacking jockeys," such as is now said to exist, could possibly be formed.

There are two sides to this question. Were it not for the public trainers the colors of a number of gentlemen would not be seen on the turf, and the biddings of the annual sales of thoroughbreds yearlings would be less animated. The man who owns but two or three racehorses cannot afford to keep a private trainer and a private jockey to boot. The public trainer should not take charge of too many horses and he should be as silent as the grave. He should never let drop to one customer even a hint as to what he is doing with the horses of another customer. The speculators who send him horses with a view of getting at the secrets of his stable are not the men upon whom he should rely. He will destroy public confidence in himself by having much to do with them. We have close-mouthed public trainers in this country, and they do well. The trainers who have been tried and proved just objects of suspicion are not over-hurdened with business. There is one thing we should like to see changed, and that is making nominations in a registered name. The majority of the gentlemen who try to conceal their identity are patrons of public training stables. If every man ran horses in his own name the tone of the turf would be improved. He who is made to shoulder the full responsibility before the public will labor all the more earnestly to promote the best interests of racing.—Turf Field and Farm.

Commodore Kittson's Outfit.

Dan Woodmansee, Commodore Kittson's able representative, and who has had charge of his trotting string while on the circuit for several seasons past, returned to Minnesota last week, and in an interview with the Pioneer Press gave some interesting matter concerning the commodor's fast steppers. They are now, Mr. Woodmansee said, located at Chester Park near Cincinnati, where they will remain during the winter. The most of these horses have made the grand circuit during the past two seasons. Owing to their late arrival in Minnesota last year, they were unable to secure the amount of grass considered beneficial or necessary after a hard campaign. In order that the night have a vacation, and at the same time plenty of green grass, they were sent directly from Chicago to Cincinnati, where they are being well cared for, under the immediate supervision of John Splan, who will probably pull the reins over them next season—which, Mr. Woodmansee thinks, will eclipse any previous year in exhibitions of speed on the turf. The strings consist of: Johnson, with a record of 2:10 in 1833. Little Brown Jng, who peed in 2:11 1/4 at Hartford in 1833. Gem, who made 2:13 3/4 at Rochester in August, 1833. Fannie Witherspoon, with 2:17, made in the race at Hartford last season for a purse of \$10,000.

So-So, with her 2:17 record. Minnie R., who did a mile in 2:19 at Chicago in 1832. Von Armin, with a record of 2:19 1/4 at Rochester in 1832. Silvertown, who made 2:20 1/4 in the same year, and Pilgrim, without record, but with as much speed as any of them. They present a public record, taken altogether that no other like number of horses belonging to one man can begin to equal. Eight of them have an average record of 2:15.

Johnson, Mr. Woodmansee says, will, in all probability, be barred out of the free-for-all class next season, on account of his easy victories in race this year, and the wonderful speed (2:10) he developed when he cut loose at Chicago to beat Little Brown Jng's record of 2:11 1/4. It will be just as well, however, for he then will get specials, and bring his owner quite a revenue, as none of the important trotting associations can get along without him. Little Brown Jng has been sent to New York, and is now being treated by Robert Bonner for lameness in the right fore foot and ankles which incapacitated him from appearing on the turf last season. Mr. Bonner writes that Jng is getting along nicely, showing no signs of lameness now, and Mr. Bonner is of the opinion that he will have him a sound horse by spring. Owing to his great experience and close study, Mr. Bonner is capable of expressing such an opinion. Little Brown Jng has the fastest three beats to his credit—2:11 1/4, 2:11 1/4 and 2:12 1/4, and with the exception of him, the stable is in excellent condition. It is now the

intention to trot and pace these horses next season in their respective classes, on all the prominent tracks in the country, and the probability is that they (in connection with other celebrities) will visit Minneapolis and St. Paul. Great crowds will no doubt welcome them in both cities.

A scheme is now talked of to establish annual stock sales at Midway park, the first to be held there some time next spring. These sales will be conducted under the system adopted by the Kentucky breeders, and every animal sold will be guaranteed as represented. During the conversation Mr. Woodmansee was asked his impression as to which was the most prominent animal in Commodore Kittson's celebrated collection. He responded with a show of enthusiasm.

Peter Johnson, driver of the horse Johnston, says no horse ever lived which can go as fast on a trot or pace as the Commodore's latest acquisition. He has made quarters in 29 1/2 seconds, and I am satisfied that he could have made 2:09 in the 2:10 race. I never set behind a horse which moved so pleasantly or with such remarkable speed. John Splan, Hickok and Doble timed Johnston at the 2:10 race, and they all claim that his time was 2:09. In that race, Johnston appeared to be going as if going at a slow gait. Being a young horse, only six years old, without hard work and sound in every way, he ought, next season, to pace two or three seconds faster, and if the record is broken in 1834, it will be by Johnston. John Splan reports that he has the greatest confidence in Johnston, based upon his experience as the driver of Karus, and fully sustains Mr. Johnson's estimate of him.

In reply to a question touching the favorite's appearance and family history, Mr. Woodmansee stated that he was a bright mahogany gelding fifteen and a half hands high; weighs, when in condition for speed, about 900 lbs., and is very stylish when in harness. He has a noble carriage which will attract attention anywhere. His breeding is as follows: Sire, Bashaw's Goldnst by Green's Bashaw, dam by Ned Forrest, second dam by Steele's Kentucky Hunter—showing thoroughbreds on both sides of the house and an unspotted record.

There are about eighty horses in the Midway stalls, including Blackwood, Jr., with a record of 2:22; Lady Rolfe, 2:22 1/2; Lady Groesbeck, 2:25; Semmie G., 2:26 1/2; Astoria, a full sister of Dexter, and a near relative of Jay-Eye-See, Phallus and Dictator—kept as a breeding mere. The home stable, it will be seen, contains numerous animals of considerable note, but the more celebrated in Commodore Kittson's extensive collection of quick steppers and thoroughbreds are enjoying their vacation away from home.

A Reminiscence of Dan Mace.

Notwithstanding the outcry often raised by the followers of the turf, who recklessly drop their money, and the sage ideas of the turf cynic or censor, who thinks every race is a matter of hergain and sale. I believe the drivers are as scarce as black foxes that will deceive an owner by disobeying his order to win. I have frequently heard persons, who are not intimately acquainted with Dan Mace, admit he is the Napoleon of the turf, but say: "You can't tell which way he is going." Dan enjoys giving color to their surmises by shrugging his shoulders, nodding and winking, as if to say: "You're right;" but in his serious moments, surrounded by friends who know him best, he talks differently. Not long ago he earnestly and abruptly said to me: "If you outlive me, which is very likely, say that I always lived up to my agreements, and I never pulled a horse on an owner or wronged a friend in my life."

This I firmly believe, and can tell an interesting story in point. In the pelmy days of the Tweed ring Mr. H. W. Genet, then dubbed "Prince Hal," matched his team of mares, a black and a bay, against Jim Irving's pair of trotters for \$1000 a side. The race came off at the Fashion Track; Mace drove the mares and the late Sam McLaughlin was up behind the latter pair, with instruction to win at all hazards, but he could not reach Dan, who won the first heat easily, and, as there was considerable betting on it, Mace was offered \$1,000 to let Irving's team win, which he refused. There was a rough gang in attendance, who were ready to do almost anything; and Joe Coburn, hearing that the plan was to disable Mace so that he could not drive, came to him, saying: "Dan, I'll loose considerable money if Irving's team gets heat, but I wouldn't do to you as some of the gang want me for any money, so be on your guard." Shortly afterward a tough customer called Figgy and his pals approached. The ring-leader tried to decoy Dan among them, but he resolutely replied: "Keep your distance, for if one of you attempts to lap a hand on me I'll drop him." He was not molested, but won the race with a brace of pistols in his pockets, and Jim Irving took McLaughlin's place after the first heat.

The late Prince Bathany was by no means a brilliant horseman, but he was very fond of riding his own horses. On one occasion he was riding in a steeple chase, and was having matters pretty well his own way. The rider of the horse that was running second to him found that he could not beat him, but in a moment of inspiration an idea occurred to him. The Prince showed a deal of daylight between himself and the saddle, and there was a tightness about his breeches that seemed irresistible to a man fond of a joke. As he was about to jump the last fence, and when he was well in the air, the rider of the second horse brought down his whip with cutting force on the tightest part of the Count's person. With a "O-oo-o" he dropped into the saddle, and let go his horse's head. The second at once shot to the front, and won the race.

Much interest is felt in England regarding the future career at the stud of the two great five-year-old stallions, Barcalaine and Foxhall. Lady Stamford's famous unbeaten son of Solon and Ballyroe will be located at Park Paddock, Newmarket, his standing fee being 50 guineas, \$250. Foxhall's future home, for some time at least, Leyhowrne Grange, in Kent, has become famous as the hirtplace of Blue Gown, Rosicrucian, and others of the late Sir Joseph Hawley's cracks. Fifty years ago "Nimrod," an English sporting writer, promulgated the then audacious prophecy, "that England in future years would come to this country for a replenishment of its racing blood." That its fulfillment is by no means unlikely the cases of Umpire, Preakness, Wallenstein, Foxhall, etc., show.

Fred Harmon arrived from the North by steamer on Thursday evening. He will go into training at once at the Bay District track, with McIntyre and McMillan as mentors. If appearances go for anything Harmon's reported illness was a myth, for he never looked in better health. He has as yet made no sign, but it is presumed that his business here is to accept Kittleman's challenge.

Joe Jewell, who once owned Flora Temple, and was the proprietor of the old Hunting Park Course, Philadelphia, weighs 360 pounds.

General Topics.

With the close of the season also ends the California "seasons," and now that December has given place to January the record can be made up. Not this week, however, as "New Year" has its festivities, and some tribulations, too, to be attended to, and therefore, before the list is made public, there will have to be a close search of the files and retrospection, and a general burnishing of memory, somewhat rusted by recurrence of many seasons. There have been strange oversights in the table published in the Turf, Field and Farm, and this side of the American world does not figure as it should in the table. But then it is an onerous task to compile a table of all that is going on on the turf and track of so wide a country, and a lapse which seems to be an indication of ignorance or prejudice may arise from the attempt to crowd the work of a month into a few days. The men who do the work receive, at the best, a poor recompense, and a column or two of names, dates and figures, that occupy small space in type, represent labor that is never appreciated.

There is one man who deserves the warmest thanks of the turfmen of the country beyond all others, that being H. G. Crickmore. For years he has wrought with untiring energy and zeal, an uphill fight from the start, and at first with so steep a grade before him, that the task to any but an enthusiast would have been given up with his first volume. He must have continually had before him the old Scotch proverb "a stout heart for a steep brae," and also been cognizant that the brae had grown into a veritable Ben Lomond, which required not only a stout heart to surmount, but endurance which made light of any number of heats as long as the Beacou Course. "Krik's Guide" to the turf has been of so great service to breeders and all who have more than a slight fancy for the "royal sport," that to be without it is not to be thought of. Very capably have the Messrs. Goodwin supplemented it with their calendar, but for all that Krik had the battle to fight alone for many years, and should there be a chance for remuneration, now there cannot be a question that he should be the recipient.

The following is his latest announcement, and we sincerely trust that the response will be as hearty as his works merit. That can scarcely be, however, though a general reply will be an instalment on the debt.

Krik's Guide to the Turf, 1883 for use in 1884.

To Racing Associations, Owners, Breeders, and others interested in the Turf of the United States and Canada:

The undersigned has published the above named Racing Guide since the spring of 1878, and in no year has he recovered his expenses. The total cost for 1883, including parts "one" and "two," and eight monthly and semi-monthly editions, was a trifle over \$4,600, which does not include one dollar of his personal labor. This amount could not have been paid but for the liberality of the American Jockey Club, the Coney Island Jockey Club, and the Monmouth Park Association, each of which contributed \$200 in addition to their regular subscription of \$100.

The prospect for 1884 is that the expense will be largely increased both by the number of races run, and the additional cost of printing caused by the advance in the price of labor. Consequently, the "Guide" cannot be published at the prices heretofore charged, and subscriptions are solicited at the following terms:

For Part I., Part II., and all editions during the racing season from June 1st to October 1st (Parts I., and II., bound in Russia leather, as in previous years.) \$15.00 For Parts I. or II., bound in cloth, separately..... 4.00 The two volumes..... 7.00 Record of races only, flexible covers..... 2.00

PART I. will contain a record of all races run in the United States and Canada, and by American-bred horses abroad in 1883, with index and the stallion and other tables which have been regular features of the book.

PART II. will contain the entries for all the stakes to be run in the United States in 1884 and in 1885, which will have closed up to and including April 1st, with index; also the usual winning tables and other information which has made the book so valuable.

The monthly or semi-monthly parts issued during the season will contain all the races run to within two days of the date of publication.

Owners who wish the special editions sent wherever their racing stables may at the time be located, will please notify the undersigned.

Intending subscribers are requested to fill in and return the accompanying blank form, giving name in full, with Post-office address; also enclosing any information calculated to assist the compiler in presenting the usual features with completeness and accuracy, such as racing colors, trainers and names (with lowest riding weight of jockeys engaged for 1884).

Subscriptions become due on the receipt of Part I. The "Record of Races," with index, will be issued about the end of January, and Part I., about the middle of February. H. G. CRICKMORE, With the New York World, 32 Park Row, New York, December 19, 1883.

While "Krik" has collected and put into admirable shape the doings of the high-bred colts and fillies of American birth, Colonel S. D. Bruce has, at the expense of thirty years of arduous work, put their genealogy into a shape as to render it "Comeatable." Without his stud-books, the breeding of thoroughbreds in this country would lapse into confusion. Pedigree is the foundation of the immense structure that has cost so many dollars to rear, and if the result of Col. Bruce's work was destroyed there would be a tumble from silla to dome. It took him twenty years to get a satisfactory commencement, and only those who were intimately acquainted with the work done can properly appreciate the magnitude of the job. After the work was thought to be well under way fuller information would make obligatory an entire over-hauling of the manuscripts, and later intelligence regarding some of the

old-time celebrities entail corrections in the pedigree of all their descendants.

It is not surprising that the scribe who are sportingly inclined in the East should make enthusiastic prophecies in relation to the prospects for the racing in that country the ensuing season. The large increase in horses in training in 1883 over those of the preceding year, is a token that a still larger number will sport silk in 1884. There will be, unquestionably, a larger contingent from this side of the continent, as we learn that it is the intention to send some of the members of each of our largest strings after the spring racing here is decided. Not to send them before the contests at home come off, is a good idea, as defeat here is not only cheaper, but less exasperating to the feelings than to be "downed" away from home. A public run is worth a dozen private trials in determining the value of a colt, and there will be plenty of opportunity for this at the April meeting of the Pacific Coast Blood Horse Association.

That there should be such a hearty appreciation of California enterprise as is evidenced in the following, is peculiarly gratifying:

The Lexington correspondent of the Louisville Courier-Journal writes as follows respecting the racing season of 1884: From the number of young things now in the hands of the trainers the outlook at present indicates a racing carnival of unusual brilliancy throughout the entire West next spring. In this region especially, there will be a very large number of horses trained, and several gentlemen, whose names have not heretofore appeared among the entry lists in the Ohio Valley, will make their debut. Prominent among the number will be the California millionaire Mr. J. B. Haggin, who was such a liberal buyer at the recent sale of thoroughbreds belonging to the estate of the late John Reber, at Lancaster, Ohio. His string now at the race-course here will be reinforced by additions from his California stable, among them being a number that have won laurels upon the Pacific Coast during the past season. His stable here at present consists of Nellie Peyton, Bessie Peyton, the Kyrle Daly and Cordelia colt, purchased of Mr. Grinstead, a two-year-old filly by Mortemer, and the \$5,000 colt Tyrant, by Great Tom. Mr. Haggin is a forty-niner and a native of Woodford county, Kentucky. His enterprise in crossing over the mountains to meet us on our own ground is a bold move, and deserves success. At the head of his stud in California will be placed the greatest horse, Kyrle Daly. The figure he sold for with but two exceptions, is the largest price ever paid for a horse under the hammer in this country. The rising young sire was introduced into Kentucky by Wood Stringfield and made one season at Ashland. The performance of his get during the past season has brought him into great prominence, and should he reach California safely he is destined to create a great furor among the breeders in the Golden State, as he is, without doubt, one of the grandest specimens of the thoroughbred now upon the continent of America.

Our gratification was not confined to being pleased with merited eulogies on California enterprise and kindred matters, as there was another source of pleasure in a New Year's present of the grandest corn-cob pipe we ever saw. Bowl and stem are made of the same stick which the Irishman wanted more "banes" stuck on, and we have no hesitation in pronouncing it the best smoking apparatus "caught on" to in California. It came from a valley in Mendocino county where the ears of maize grow long and stout, and was as deftly fashioned as Old Hickory could have carved it out of his favorite material. Accompanying it was a note in which it was stated "that knowing there would be regrets over the circumstances that compelled me to part with Anteo, the soothing influence of the glorious weed, cremated in accordance with old-time practices, would come into play and make some amends." General Jackson found it so among the cankering tribulations of the White House, the cob-pipe and the cloud of incense calming the perturbed spirit, transporting him to Old Tennessee among the race-horses he so dearly loved.

Truxton, Paolet, the broodmare and foals, were more congenial company than the sycophants who offered homage that brought disgust to the old hero, and the scandale and tea-table talk of the ladies of the court were still more exasperative. Company that could talk horse intelligibly was a boon that gave the best Virginian a better flavor, and a country gentleman who was ignorant of the mysteries of breeding and the performances of the high-mettled racers of his section was no favorite with him. His keen Secretary of State, Martin Van Buren, fell greatly in his estimation when he admitted a lack of knowledge of what a race-horse could do. The general was dilating on the horses at the Hermitage, extolling Truxton as possessing a world of speed. "What do you think, air?" he said, addressing Mr. Van Buren, "Truxton in his heavy training shoe, and on a very deep track, with all of his weight up, ran a mile in one minute and fifty seconds." "Was that fast?" responded the "Sage of Liudenworld." "Fast, air!" Jackson roared, completing the sentence with a look which was fully as expressive as the vigorous language he was in the habit of using.

There is little doubt that Col. William R. Johnson overreached him in the sale of Paolet, or rather the "Napoleon of the Turf" felt assured that this horse would be good enough to beat anything outside of Virginia, and sent him in place of Reality, the mare General Jackson sent an agent across the mountains to buy. The main object was to get a horse that could beat Haynie's Maria, and as Reality was uniformly victorious over the races of the "Old Dominion" and the "Eastern Shore," it was thought she would have no trouble in disposing of the terror of the courses of the West and South. The task was too great, however, for Paolet and General Jackson lost so much money on it as to seriously embarrass him for several years. He was greatly incensed at Colonel Johnson, when he learned that he had bought Reality for himself, and it was as well that the Virginia turfman kept out of his way thereafter.

BASE BALL.

The Denny Nine Defeat the Haverlys.

The diamond at the Recreation Grounds, was, last Sunday the scene of a contest between the Haverlys' and a picked nine called in honor of Jerry Denny, the change catcher of the Providences club next season, the Denny nine. The attendance was small, the unfavorable weather keeping many at home who would have gone out to the Mission had the day been more suitable for the ball tossers. The field, although soft in places, presented a lovely appearance in a dress of fresh green, and the emerald hills rearing their peaks to the southward stood out boldly in the clear atmosphere.

The game was opened by the Haverlys going to the bat, and going out without a play worthy of note. Sweeney then led off for the Dennys and went out to Gagus. De Panger followed, sending the sphere to the left field and going to second base on the hit. Denny sent the ball to Meegan, but the latter was wild in his play and the ball passed over McCord the first baseman's head. De Panger got home on the throw, and Denny secured third base and afterwards tallied on a wild pitch by Gagus, Bigelow and Piercy made heroic efforts to hit the ball but Gagus, who was in the pitchers box, owing to Meegan, having injured one of his hands, was found too swift and they retired on strikes.

From this stage of the game to latter part of the fifth inning no runs were made by either side. There was a general expectation that the Dennys would make their fifth interesting for their opponents, but only two of their number succeeded in meeting the ball with his bat. The first of these, Swanton sent the ball high in the air and Meegan at second took it in good style. Arnold then followed with a grounder which rolled close to but inside of the unguarded third base, which allowed him to reach second base before the ball could be fielded. Arnold gained third and awaited an opportunity to get in. Creegan struck out and Arnold left his base, and getting closed in upon by Fogarty and McDonald was in a fair way of having to end his race, when McDonald in the excitement let the ball pass through his hands and Mooney tallied another to the score of the Denny side.

Swanton, in the beginning of the sixth, caught out Sheridan in good style, and Sweeney retired the next batter, Gagus in a like manner. No runs were made in the sixth inning by either club. Piercy, the noted third baseman, being the next to distinguish himself in this regard, which he did in the last half of the seventh inning. He made a heavy hit to right field and secured his second on it, and waiting his time gained third on a passed ball of McDonald. Swanton, who seemed to have gotten an insight into the delivery of Gagus, that warranted him in batting the latter all over the field, drove the sphere to left field and sent in Piercy, himself securing second before he could be checked. Swanton went to the third base on a passed ball, and Creegan gave him an opportunity of getting to center field. The bat was next taken up by Gagus, who hit a lively one to Donahue, the latter, in a fit of the moment, threw it quickly to third, to which Creegan, on a long and a better retired leaving the batter Sweeney and Mooney on the bases.

The Haverlys in the eighth inning were retired in quick order by Sweeney, none of the three up succeeding in hitting the ball. De Panger led off well for the Denny side sending the ball to right field, and getting credit with the only three base hit made during the game. He gained first on a passed ball.

The Haverlys' ninth chance at the bat saw them again as unsuccessful in their attempts to make a run as in the previous eight innings. Piercy made a neat stop of a ball from the bat of Sheridan, and on Gagus hitting in the same direction he was thrown out at first by Piercy, the latter making a good stop of a difficult ball. The game resulted in the Denny nine whitewashing the Haverlys by a score of 6 to 0. The score:

DENNY NINE.					HAVERLYS.									
	T	R	B	P	T	R	B	P	A					
Sweeney, p.....	4	0	0	3	16	0	0	0	1	2	0

Haverly.....	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Struck out—Haverly 14, Denny 13. First base on errors—Haverly 1, Denny 1. Left on bases—Haverly 1, Denny 4. Wild pitches—Gagus 2. Passed balls—McDonald 4, Denny 1. Three-base hit—De Panger. Two-base hits—De Panger 1, Piercy 1, Swanton 2. Time of game—two hours. Umpire—Ed. Taylor. Scorer—M. Fisher.

The second game of the series, that between the Occidental and Denny nines is expected to be one of the closest that has been played at the grounds for some time.

Cattle in Montana.

A correspondent, writing from Montana to St. Paul Pioneer Press, observes that the shipment of cattle west is a strange development of the recent times. This year Eastern Montana has sent to market about 24,000 head, and has received 34,000 head of Eastern cattle—an excess of 10,000 head of import over export.

The Eastern cattle bought for Western shipment were purchased in Ohio, Iowa, Illinois, Wisconsin and Minnesota. They are generally young, one and two-year-olds, or cows bought for dairy or breeding purposes. How this experiment of shipping Eastern cattle west to winter will come out I am not prepared to say, but I think it will succeed if good care is taken of them the first winter. Cattle become acclimated in a year or two, and then there is little or no danger of their dying, no matter how severe the winters are. A Montana calf, born and reared on the soil, cannot be killed by severe weather any more than a buffalo calf.

I have noticed that the hair of cattle born in this Northern climate is longer and the hide thicker than that of Eastern cattle, so I suppose nature accommodates itself to the latitude in which it has to exist. Our stockmen, too, are becoming more careful of their herds than they used to be. They now cut and put up a good deal of hay for their cattle, a thing they never did until lately. A mowing machine and a little labor has been found to be a cheap insurance on a herd. The great number of cattle shipped and driven into Montana from other points during the past year marks it as the future grazing ground of the northwest.

The Throat.—"Brown's Bronchial Troches" act directly on the organs of the voice. They have an extraordinary effect in all disorders of the throat.

## HERD AND SWINE.

## The Feed and the Breed.

[Breeder's Gazette].

You have a sensible article on page 663 on "Increasing the Profits of Deirying," in which you lay particular stress on the improvement of dairy cows. Any close observer must see that lack of improvement is the great weakness of the system. Only a few dairymen have anything more than a vague idea as to the value of any particular cow; and hence, if the business of deirying is unprofitable, or nearly so, they do not know what cow or cows are responsible for it. And all the while these men will complain bitterly of their herd lot, of the swindles practiced upon them and their inability to become forehanded under a pursuit which has so many discouragements. And yet in some cases it would be difficult to hire men to practice the reasonable rules requisite to success in this calling.

Before a man can weed out the unprofitable cows in his herd he must know which they are, and this cannot be ascertained without a test. There are various ways of making tests, but the best of all is to weigh every milking and record it. Then there is no guess work about it, no estimating and no uncertainty. But as the average dairymen hates "trouble" or "bother," and as it is too much to expect a radical reform at once, even if one hopes for a reform at all, it may be safer to advise weighing once a week, morning and evening, record it, and base an estimate upon that. When the feed, care and weather are regular, the estimate will come pretty near the truth. Trials of a week, continuously during each month, will also furnish some basis for an estimate, and anything in this line is a little better than nothing. At any rate the man who obstinately refuses to take any pains to post himself in such matters deserves no success and no pity.

Then again, experience and observation both satisfy me that the improvement of dairy cows depends far more on the feed than any other cause. The care of dairy herds in most cases is simply absurd from a business point of view. Pasturing is the great reliance, and any man who defends pasturing as the best plan in a general sense, simply shows that his study of the subject and his reasoning powers are extremely limited. Pasturing does not furnish a full and regular supply of food and never can. At times it is abundant and soon after it is barren. When abundant, the herd wastes immense quantities, just as they would if some tons of hay were turned out in an open yard for them in winter at which to help themselves. When it is trampled down and eaten off, a drouth often follows and keeps the field barren for weeks or months. The cows must go hungry in part, and the milk yield falls off, of course. Then you hear the dairymen whine instead of practicing common sense; whine and curse Providence for not sending rain enough to supplement and encourage his wastefulness and stupidity. He neglects the opportunity that is then open to him to outsell his competitors by providing plenty of feed in stalls or by abandoning the whole system of pasturage. The flow of milk has run down, and it cannot be restored until after the next calf, except at greater expense than it would have been to keep it up in the first place.

If a man will persist in pasturing, he can do a great deal to keep up the flow of milk by extra feed at the stable or some green fodder in the field. There are many soilings recommended, such as fodder corn, green rye, cowpeas, clover, etc., and they answer a tolerable purpose, no doubt. But after all, even if fed in the stalls, I think the main reliance through the whole year should be the best of hay and mill feed of some sort. Clover in its season has no superior, but the season for it is short. Some other grasses can be fed to supplement it, but fodder corn is wishy-washy stuff, is heavy to handle, and if cured, can be used in winter to about as good advantage as in soiling, except to give cows a variety in their rations. Green rye before it is headed out will increase the flow of milk, but after it heads it falls at once. I know some will dispute this, but not many, I think, among those who have tested it by weighing the milk each day or twice a day. I have tested it this way, and the result was a decrease every time after heading out. That was a warning to stop.

There may be localities where green crops can be grown and fed to better advantage all summer than bran, corn-meal, oil-meal, etc., but I doubt if there are many when everything is considered. The difference in the labor required is very great. The green fodder must be cut and brought in fresh from a field, more or less distant, and then, if corn, it must be cut and distributed. The loading, unloading and other manipulation is hard, burdensome work. But to prepare a ration of bran and meal, even if scalded, is greatly less—a woman even can attend to it for a few cows. If one has to be away during the middle of the day, a neighbor or a neighbor's boy can often be hired to attend to it at noon; but to ask him or your wife to cut and bring up some barrow loads of fodder corn or a wagon load, and feed it out, is quite a different thing. And after it is done faithfully and regularly the result is inferior.

To conduct dairying in this way a man need not invest any large amount in land and fences. He wants good buildings, and to be as near to his market as possible. The manure from his stock will make his land very rich, and then he can grow all the green crops he needs and a great deal of hay per acre. He needs also but little hired help, and the man who can save in that respect has an immense advantage both as to purse and wear and tear of temper and patience.

To feed regularly and plentifully is the most important point of all. Every cow should do her best, and to do this she must be fed up to her capacity, and all the while. It is next to inanity to attempt to succeed by feeding less than the cow can dispose of properly. She is a machine for working fodder into dairy products, and if not worked to her capacity, then it is a constant waste of time and effort. The gain in feeding too little is a constant loss. Every cow in milk should be moderately fat; then she is comfortable and contented, and only under such circumstances can she be expected to do her best. How does a hungry man feel? Perhaps few can tell in rural life, because not many have tried such hunger as live stock in mean hands must often endure. A man an hour or two behind his meals has a gnawing at the stomach that irritates, but it never lasts long enough, except with the very poor, to make him lose flesh and affect his strength. But fancy such a life for a moment. Constant, chronic hunger, insufficient, and often the poorest grade of food, and this continued week after week and month after month, until there is little flesh or strength left! That is the fate of thousands of cows and horses—never quite enough, always hankering for more. It is almost unavoidable at times under the pasturing season when drouths are at their height, but there is little trouble about it in soiling. Drouths are never so extensive or disastrous as to make corn, meal or bran, or cotton seed meal particularly scarce. But if it does average higher in price dairy products do also. The soiling dairyman keeps his customers and gains some who can't be

supplied by the men who adheres to pasturing. His work is not increased seriously by a drouth nor his profits interfered with. His well-manured land tends a drouth far better than pasture land. His cows are sleek and comfortable and do their best. There is little diminution in the flow of milk until nature causes it in the regular way, by preparing for the next calf. His daily record of milk yields (twice daily) show instantly the effect of a change of food, of sickness, of sexual heat, of poor hay or good hay, or of an increase or decrease of the rations. And the man who feeds in this intelligent and sensible way will find that even among the common stock of the day are scores and hundreds of cows that will often equal or surpass the yield of the fancy breeds unless the latter are fed in the same sensible way. He will find, too, that when there is occasion to sell a good cow it is worth considerable money to be able to state positively how much she gave during the year, or on any given day, instead of guessing at it and saying "about" so much. "About" ought not to answer in selling a cow any more than it does as to a trotting horse. It is an actual record that should be demanded and should be given, and some day it will be the rule.

Some years ago I bought a farrow cow and tried good feeding upon her. She had no record and was of no particular breed, though she was in good order, and was giving some seven or eight quarts of milk a day. I began the record with the purchase, which was on February 28th, and continued it until she went dry on December 16th. In March (my first month) she gave 508 pounds 13 ounces of milk; in July, 664 pounds 11 ounces; in November, 290 pounds 2 ounces, and for the whole period of nine and a half months 4,772 pounds 15 ounces, and 180 pounds 8½ ounces of butter. The average of milk per day was 17 9-10 pounds, or 8 1-10 quarts. This was only fair; but the next year she did better. In exactly a year, commencing on January 15th, she gave 10,612 pounds 1 ounce of milk; and 9,916 pounds 15 ounces of this made 396 pounds 12½ ounces of butter; the balance of the milk not made into butter being sold fresh. But she still gave milk at the end of that year, and continued to do it for a total period of 583 days, during which time she gave 14,574 pounds 1 ounce of milk and 547 pounds 9½ ounces of butter. Then she went dry a short time, had another calf, and during another year gave 11,002 pounds of milk and 395 pounds 10 ounces of butter, without an hour of pasturage and not \$5 worth of green food. The milk feed was carefully measured; the hay was not, but averaged about 20 pounds a day, and the total cost for a year was \$102.20, while the cash sales of milk and butter for the same time were \$137.47, with nearly all the skim milk left for pigs, fowls and family use.

Now, if any pastured cow will show a better record than that, I should like to hear of her. It was not an accident, by any means, as the record for the first ten months shows clearly enough. Her capacity was brought about by good feeding, and then good feeding kept up. As a finality, I may mention that after losing my housekeeper I sold the cow for \$100, when but for her record she would not have brought more than \$60, and the price I paid for her was \$56.

## Best Way of Butchering Hogs.

[Country Gentleman].

The annual butchering of the year's supply of meat for the farm household is quite a momentous event. It is commonly counted to occupy only one day; but then it requires two days to prepare for it and two days to undo these preparations afterwards. Naturally, the American farmer is a large consumer of pork. Beef, mutton and poultry are often on his bill of fare, it is true; but hives, sheep or fowls are killed singly, and it is not their killing which makes butchering day. The year's pork is butchered, generally, in the latter part of November or in December. Very few days of the farmer's year are busier. Kettles, barrels, hogheads, platforms, scaffolds, gammon sticks, hog hooks, knives, fire wood, sausage-grinder, lard cans, gun, etc., etc., are all made ready beforehand. The eventful day begins early. The fire is started under the kettles before daylight, and in the gray of dawn the crack of the rifle tells that the slaughter has begun. About the hustle and hurry and din of the day there is a charm, and at night there is fun unending for the boys and girls, cutting the lard, cooking the pudding meat (eating the daintiest morsels), and best of all, grinding and mixing, perhaps stuffing, the sausages.

The hogs to be killed should not be fed the night before or in the morning of butchering. If you do, the intestines will be full, and when you attempt to remove the lard from them several catastrophes will likely happen. If you do not feed the hogs, so many accidents will not happen and they will not be so bad when they do occur. I have found nothing better to heat water in than large iron kettles suspended from a pole supported by forked stakes driven into the ground. Keeping a few rocks hurled in the fire under the kettles. Dropping one occasionally into the scalding vat may be desirable. Do not stun the hogs by striking their heads with an ax, sledge hammer, maul, or mattock. It makes them die hard, and bruises the heads. Neither should you shoot them with a shot-gun. Above all, do not "stick" them and let them bleed to death. If you must eat blood pudding, kill the hog and bleed it afterward. The proper way to take the hog's life is by means of a rifle. But if it is an old-fashioned one, and the morning is frosty, be careful that the triggers do not "creep."

For sticking, a long, narrow bladed knife is best. Butcher knives are commonly too wide in the blade. A sharp-pointed, well-tempered table knife is better. Tarn the hog on its back, start the knife on the central line of the jaw, just in front of the shoulders, and direct the point towards the lungs. The best pork is furnished by a spring pig kept growing and fat during the summer and fall on green food, and rapidly fattened on corn and water, with only enough other food to form a wholesome variety. This hog will weigh at butchering time from 250 to 300 pounds; and a hog of this weight can be cut into the heat sized pieces, and its flesh is of a better quality than any other. The hog should not be fattened on slops; if it is, its flesh will not be of so good a quality. Be certain that the hog is healthy. Disease may not be apparent and yet exist. The best plan to pursue to be certain of killing a healthy hog, which alone can make wholesome pork, is to carefully feed the hog a good variety of food, give it pure, cold water, a place to wallow, and shelter from the weather. Killing none but perfectly healthy hogs is more important than is generally supposed. Unhealthy hogs make unwholesome meat, and eating unwholesome meat makes unhealthy people.

For the fires under the kettles I have found nothing better than dry chips and pieces of old fence rails. These make a quick, hot fire, and few coals. Consequently, the temperature of the water can be quickly raised or lowered. The platform for cleaning upon should be large enough to hold the hog easily, and yet not so large that the workman standing on the ground at the side of it has to lean over and stretch his arms to work at the hog. If he is compelled to do this he must

work at a great disadvantage. I generally use my two-horse sled. I stake it firmly to the ground and lay some boards upon it, which I pin to prevent slipping. Then I lean a large hoghead against the end of the sled, and drive a couple of stakes against it, and lay a couple of poles, rails or posts on it, to keep it in its place. In this hoghead we esld the hogs. It is as handy an arrangement as I have yet used, and I have used rope and pulleys.

With this arrangement the hog must be drawn out of the hoghead on to the platform, and drawn back and forth while scalding, by main force. To do this you will want a hog-hook. This is made by bending and sharpening one end of a rod of iron, and making a ferule to receive a wooden handle at the other end. The rod should be about eighteen inches long and three-eighths of an inch in diameter. The wooden handle should be at right angles with the rod, the ferule being around the centre of the handle. Then a man can take hold of each end of the handle. Insert the hook in the roof of the mouth, and you can handle the hog with ease while its hind parts are in the water. To handle it while the fore parts are being scalded put a gammon stick into the hind legs. The hook serves a good purpose wherever it is desired to move the hog. The water for scalding must not be too hot or it will "set" the hair so it will not come out, and you will have to shave it off. The result will be the same if you leave the hog too long in the water. The water must, however, be hot enough to loosen the hair. Dip only a small part of the hog at first and note the effects. This is the only sure way of determining whether the water is too hot or too cold. If any spots prove obstinate, draw the hog out on the platform, cover the spot with hair that has been removed, and saturate it with hot water. While the hog is in the water keep drawing it back and forth or the hair will "set". You can prevent the heat of the water from passing off while the hog is being cleaned by covering the barrel with a piece of old carpet or thick cloth.

## Cough in Pigs.

This is most frequently due to cold and wet; but is also one of the symptoms present when the animals are wormy; and coughing accompanies all disorders or diseases of the organs of breathing, whether these are of a malignant or complicated nature or not. Hence, to advise any special course of treatment, from the only information that the animals are coughing, is impossible. When due to exposure, and it is a simple catarrhal affection, provide dry, comfortable and well-ventilated housing; also change the diet. Give to each pig, morning and evening, half a drachm each of sulphuret of antimony and camphor, and one drachm of powdered liquorice root, mixed with a little molasses and placed upon the root of the tongue. If the cough is due to worms, flower of sulphur may be mixed among gruel or other sloppy food. For pigs under three months old a teaspoonful is a dose, and for older ones from a desert-spoon to a tablespoonful. It may be given four days in succession, morning and evening, and repeated every other week, so long as needed only. Give sour milk, buttermilk, with sliced, raw onions, celery tops, acorns. Avoid stagnant and putrid water. Swine should always have access to charcoal, cinders, salt, which should be supplied separately in some convenient sheltered corner.

## Fashion Examples.

A recent writer in an article on Jersey cattle makes some very pointed references to fashion in breeding:

"The characteristics of the Jersey are so marked that they are recognized at a glance—their peculiar color and deer-like heads being distinguished marks. The original color was yellow, yellow and white, mouse color, or dun-color, and sometimes almost black. But stern fashion decreed that there shall be but the one color in the cow, fawn color, with black points, and her numerous votaries are bowing and humbly submitting without once stopping to question the propriety of so doing, or looking at the inconsistency of the demand. With an animal that is specifically designed to give milk from which can be made the choicest of butter, to us it looks like the height of folly to place so high an estimation on the coloring of hair that covers the body. The general conformation of the body of the cow should be held with higher esteem than color; the shape of the udder, the milk veins, the milk mirror or escutcheon, and in fact almost everything that goes to make up a cow, has a greater real value than the color of the hair. The consumer cares but little whether the butter is made from a spotted or a solid red, white or black cow. The capacity of the cow to consume food and drink and convert it into milk should be carefully studied. The Jersey breeder can very properly take a lesson from the experience of the votaries of fashion among Short-horn breeders. While the Short-horn breeders have been chasing the bubble called fashion in pedigree, fashion in color, breeding from weak wadded bulls of inferior quality simply because they were fashionable in color and pedigree, turning their eyes from the pole star, usefulness, the Herefords, Galloways and Polled Angus have stolen a march on them that is likely to be felt for some time to come.

## Yields of Cows Fifty Years Ago.

Having read many of the articles in your journal, relating to the large yields of butter from the new-fashioned breeds of cows, I subjoin a few extracts from the papers printed about half a century ago:

The *New England Farmer* of February 25, 1830, gives an account of a cow which "yielded daily on an average during the past season, 10 quarts of milk. Nearly 14 pounds of butter were made weekly from the cream for ten weeks." The *Northampton Courier* states that a cow in that town "has given milk and made butter after the following schedule: She has been milked for the last fortnight every eight hours, and at each milking has yielded 10 quarts, the weight of the milk averaging daily 49 1-2 pounds. Her milk has yielded daily 2 pounds 5 ounces of butter, making 32 pounds 6 ounces in 14 days; from one milking alone 1 pound and 5 ounces were made." The *Pensacola Gazette* of January 27, 1826, says when "visiting the chalet of Grnyen in Switzerland, I have seen numerous herds of cows which yielded 60 to 64 quarts of excellent milk each daily." The *American Farmer* of June 15, 1827, says that an improved "Durham Short-horn cow, owned by John Hare Powell, yielded milk between Thursday morning, 24th, and Saturday evening, 26th, three days, from which 8 pounds 13 ounces of butter were obtained, or at the rate of 20 1-2 pounds per week."

The practice of testing cows for butter production is a new one, but it is one of the best systems ever devised, as it compels the cows to be valued only for merit, no matter what the pedigree may be; but the best cows have good pedigrees and come from the select families. During the last two years a number of cows scoring fourteen pounds of butter per week reached about 600.

# THE Breeder and Sportsman.

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.  
THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2503

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

## NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 29 and 31 Chatham street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

## SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,009 J street.

## ADVERTISING RATES.

Displayed, \$1 50 per inch each insertion or pro rata for less space. Reading Notices set in brier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 50 cents each insertion.

San Francisco, - - Saturday, Jan. 5, 1884.

## A Happy New Year—A New Volume.

Only a short time ago the bells intoned a requiem for that which was passing away, rang out a merry peal for that which was to come. There were joys and sorrows in the retrospect, bright hopes, roseate fancyings to deck the anticipated future. Those who take a candid view of the past must admit that the bright spots predominate, and that this is a glad world if even there are sombre streaks in the sky at times. Some are sorely tried. There have been sad trials, heavy burdens to bear, and a few who have never seen the bright lining to the dark cloud. To these we tender heartfelt sympathy, and fervently pray that there may be a rift in the pall, and that the thick canopy of misfortune may be replaced by the blue sky of happiness.

There are those who grumble continually, magnify petty griefs into grievous burdens, and make themselves miserable with brooding over trivial sorrows. We have little patience with this sort of folk. There is a poisonous exhalation from such repining spirits, and the air which surrounds them seems to have lost its vitalizing power. But the glad natures who enjoy the good things of this world, who are cheery when there may be cause for gloom, who make the bright days brighter and blend brilliant colors with the darkest shades, whose presence is comfort, and companionship a joy, excite our admiration no matter what station they occupy.

While to all the readers of the *Breeder and Sportsman* our greetings are sent, to the gladhearted and buoyant we add admiration, esteem, love. It is a pleasure to labor for their gratification, satisfaction in ministering to their wants, and delight to add a ray of sunshine to their bappy lives. The rays return with redoubled warmth, the pen which may bang listless from wearied fingers runs glibly over the page, and the brain has a fresh snap when the work is done for those who are so kindly disposed. There is encouragement in these cherry natures, and numbering, as we do so many of them, in the list of subscribers, the fourth volume is commenced with as much ardor as ever blithe two-year-old galloped over the turf. Our way is among the bright glades of life, and though the aim be to blend amusement with instruction, there is no austerity in the teachings, and no frivolity in the recreations. The world is beginning to appreciate the advantages of properly conducted sports, and the oldtime objections are giving way before a better order of things. There is not an amusement that finds advocacy in these columns that is not worthy of the support of true men and women. Whatever does not merit the countenance of the good is excluded, and from the first number until the last there is not a line that can offend those of exemplary habits. The sports of the field and flood have long labored under a heavy burden. They have been weighted with so many abuses, handicapped with a load that would have broken down anything not so intrinsically worthy, and survived because it was evi-

dent that there was a new era inaugurated. The good element got the better of the bad so far as to cramp the rogues and bullies into smaller space, and with a fair prospect that before long the field will be cleared of the sbarpers. The press, generally, has afforded potent aid, and a majority of the journals which make a specialty of this class of sports, have labored anxiously and earnestly to advance the cause.

The *Breeder and Sportsman* has never lost sight of the object in view, or faltered in its mission. The advancement and elevation of all legitimate outdoor sports are the objects in that department of the paper, and that aim will never be lost sight of. This cannot be called the ornamental side of life, if it does add so much to the happiness of the human family. The welfare, the life in fact of a nation depends on physical as well as mental culture, and when a people become effeminate—though effeminacy is not the proper term—decay is rapid. We wrong the gentler sex by comparing dewy, unasculated, what should be manhood, to the attributes of woman. That sex has been foully slandered by the aspersion that there was any similarity between womanhood and the creatures who hang round the corners of the streets, who have no higher ambition than that of their clothes and the set of their neckties, who ape the follies without arising to any of the virtues of femininity, placid, purposeless, inane, idiotic, without muscle enough to make a show of strength; brain withered from the life they lead. A fondness for outdoor sports is the best guard to keep the young men of the towns and cities from falling into these pernicious habits. Boys are prone to romp and play; the danger comes when the boy is merging into the man, when the down is sprouting on the lip, and there are new desires and feelings that prompt to a different life. The years at this time are critical. Rightly directed, there is little to fear thereafter. The gun, the fishing-rod, the oar, the bat, and, whenever the circumstances will warrant the outlay, the horse will be found a grand instructor. If that is too expensive, the "silent steed" is an auxiliary not to be lost sight of, and far better for the youngsters to show a leg with bulging muscles than the "sbrunk shanks" of the lounging loafer.

There is one department of this paper that no one will question the utility of, and no matter how bigoted a person may be, or how gloomy his nature will concede the benefit that will accrue to our readers from its perusal. The department alluded to is that which treats of the breeding of domestic animals, their management during growth and maturity, and the education of those which require instruction to be useful. We regard this as one of the most prominent features of the *Breeder and Sportsman*, and intend to make it still more complete in the future. Besides the capital corps of correspondents and our own efforts, we have the advantage of an exchange list that no paper on the Coast can show the equal. Standard journals in almost every walk of newspaperdom, and especially those which pay particular attention to domestic economy. Papers published in nearly every State in the Union, in Canada, England, Australia and the East Indies, and from this immense field there is an opportunity to select matter of the highest interest. Able as our correspondents are acknowledged to be, with all the advantages that years of experience have given the editorial corps, there is a source of information in the number of exchanges that will be found of great value.

The practical part of the *Breeder and Sportsman*, and by that we mean the essays on breeding, and kindred topics, have elicited favorable comments from those who are interested in these subjects, and the design is to make this department still more prominent in the future.

The great desire is to present a family paper in every sense, save that which is met by papers which have a wider range. In no sense will it be a "sporting paper" as that term is understood in this country. While advocating to the best of our ability the true sports of the land, waging unceasing war on all features of sport that have a demoralizing tendency, legitimate amusements will receive hearty approbation.

The course pursued so far is the best guarantee of what may be expected, although we can safely promise improvement as the machinery gets polished from use, and obstacles are overcome by greater experience.

## Stakes of the State Agricultural Society.

We can always depend on the efficient Secretary of the California State Agricultural Society for prompt intelligence, and the nominations in stakes and entries in purses are sent as soon as received. Elsewhere will be found a list of names already in, but as there may be others to add remarks will be deferred until next week. There is a singular feature in the two stakes the two-year-old having quite a number engaged which are not in the Occident. The probable reason for this is that the owners overlook the closing of the Occident for 1882, and supposed that the Annual was the only one for foals of 1882.

## Our Pictures.

Now that the pictures in the holiday number have been distributed to our subscribers we can allude to them with more confidence.

That they are the best ever published by a paper in this city or any other country, is the universal verdict, and more than that in addition to being works of art they are faithful representations of the animals portrayed.

We feel almost jealous over the panegyrics of the dog fanciers. Talk as we may over the beauties of Abbotsford, Monroe Chief, Bonita and Hinda Rose, there is the counter claim that the canines are a peg ahead of the equine celebrities. It is certain that Monarch is one of the finest types of the high-bred greyhounds, and that the group of setters and pointers form a picture that must please those who have only the slightest predilections for the handsome animals.

The series of pictures published last week are well worth the subscription price for a year, and it gives us pleasure to offer them. Mr. Wyttenbach outdid himself, and though the determination to excel delayed the issue some days longer than was anticipated, we feel sure that the dilatoriness will be forgiven when the excellence of the work is taken into consideration.

## Singleton and La Harpe.

These two fine trotting stallions, as shown by the advertisement, will be located at the farm of their owner near Chico. Last year a capital picture of the former was given in the *Breeder and Sportsman*, and in addition to what was said of him there it may be stated that his colts fully came up to the standard of excellence. Certainly it form and breeding are of such a nature that the great progenitor of fast trotters should make his mark in the stud, though it is still more gratifying to his owner and those who have his stock that the promise is fulfilled.

La Harpe is partially from another branch of the Hambletonian, and one that has a full measure of fame. With this is blended some of the best blood of the race-course, so that it is only fair to infer that this young horse will come up to expectations.

The advertisement of Mr. McIntosh is so full that there is no necessity for repetition, although we are pleased to add a hearty endorsement.

## Stakes to Close.

It must be borne in mind that there are a lot of rich stakes to close on the 15th inst., and though attention has been called to those of the Washington Park Club it will do no harm to keep the matter before those who are interested. Then the Chicago Driving Club offers other inducements to visit the great metropolis of what we used to call the Northwest, which should certainly add to the enticement. As the advertisements are full in details it is unnecessary to repeat them here, but we do desire to call attention to the fact that these two are practically one meeting, so that there is no loss of time. The Chicago Driving Park commences on the 20th of June, extending to the 25th, at which date the Washington Park Club take up the dance, and the music does not stop until July 12th. Unquestionably arrangements will be made so that colts that have engagements to meet on the opening day of the second meeting will run so long before at the Driving Park as not to interfere. Let there be a rousing response from California, so well merited by the liberality of these two clubs.

## Sale of Thoroughbreds.

From the following it will be seen that it does not take a large sale of thoroughbred stock to bring remunerative prices. The sale of the four reported was to close a partnership.

At Treacy & Wilson's stables, in Lexington, Ky., Messrs. McIntyre & Swiney sold publicly four head of good thoroughbred stock at fine prices. At least two hundred bidders were present, and the sale is considered by all a first class one. The following is the result:—

Bay mare Katie Pearce, 11 years old by imp. Leamington; dam Stamps, by Lexington; sold to Pierre Lorillard, New York.....	\$4,150
Bay mare Lizzie S, 5 years old by Wanderer, dam Katie Pearce; sold to Milton Young, Lexington Ky.....	\$2,150
Chestnut colt Redstone, 1 year old, by Wanderer, dam Katie Pearce, sold to John R. Swiney, Paris Ky.....	\$1,900
A bay filly weanling by Virgil, dam Katie Pearce; sold to D. Swigert, Lexington, Ky.....	\$1,220

We are in receipt of a letter from Wm. Edwards the pedestrian in which he says he will be in this city about the end of this month prepared to match himself against any man in America for a six days walk.

The Grass Valley *Talings* says that a Mr. Wells was recently treed by a ferocious buck, on Montezuma Hill, and kept in durance until relieved by a gentleman, who responded to his cries for help. Why Mr. Wells should have shouted for help so lustily, when safe up the tree, is what we don't understand.

THE RIFLE.

The Swiss Rifle Club.

Last Sunday was the regular monthly shoot of this organization, but owing to the festivities of the season the attendance was small, though on the average it is very good.

After the principal shooting of the day was decided, pool shooting at a nominal entrance, enough simply to make it interesting, began and went on until late in the afternoon.

WINNING TEAM. Huguenin..... 7 3 10 8 8 7 7 4 11 6-71 Leemann..... 7 4 6 11 5 8 9 5 5 6-67 Wetzell..... 7 5 0 3 10 9 11 9 4 8-57

LOSING TEAM. Croce..... 9 7 9 12 6 9 12 7 8 9-58 Neenschwander..... 2 10 5 0 0 1 0 5 0-23 Stenber..... 6 7 4 8 10 8 5 7 8 3-58

The next match was in teams also, only limited to five shots with the same distance.

WINNING TEAM. Croce..... 9 7 10 10 8-44 Steuber..... 11 9 5 10 9-44 Huguenin..... 9 2 5 11 7-35

LOSING TEAM. Leemann..... 8 7 7 10-39 Neenschwander..... 4 5 1 2 5-13 Wetzell..... 6 7 12 2 10-37

The last was a straight match with three entries, ten shots each, and the same distance. In this match, though each man made a bad break occasionally, the best shooting of the day was certainly done, and ended also with the closest average.

Croce..... 9 6 10 10 3 11 9 6 11 4-78 Rahwyler..... 8 11 11 10 9 9 11 9 7 6-30 Leemann..... 3 6 9 8 8 9 11 10 8 11-51

This match closed the day's sport, and as the members were retiring Bachman re-appeared with his rifle, as he thought in order, and bantered Croce for another match.

Report has it that Rudolph Hopf, late of the Vienna Garden, and a leading member of the Swiss Club, contemplates going into the hotel business at Santa Rosa.

Shell Mound.

The three Te, as they are called, the crack shots of Co. B, 1st Reg't, 2nd B., N. G. C., had a return match at Shell Mound on Sunday. 23d ultimo, the score of which, owing to pressure by our Christmas number, we were unable to publish last week.

The Trajectory of Bullets.

In a recent letter on this subject "Pegasus" makes several statements which will not bear analysis. He stated "the bullet reaches the highest point above the line of sight exactly half way, over a range of 500 yards;" and further on, "and that during the last 200 yards of its flight, it drops the same height that it has risen to over the first 300 yards."

Again: "To all intents and purposes they are (the 'line of sight' and 'level of axis') parallel lines." Nothing could be more absurd than this statement, because the line of sight at the eye is above the line of axis (barrel being horizontal with the earth's surface), but both lines will meet in the middle of the bull's eye, should both lines be prolonged, and axis and line of sight aligned in full.

The height of the trajectory of the Snider at 500 yards, given by "Pegasus, 11 feet 10 1/2 inches, is also misleading, the government height being 15 feet for the Snider (Native Musketry Regulations, Part IV, page 39), and 12 feet for the Martini-Henry (British Musketry Regulations, page 204, of 1879), against 8 feet 1 1/2 inches given by "Pegasus."—Asian.

The Flight of Bullets.

Advertising to the letter from "Pegasus" on the above subject, in your issue of the 9th October, permit me to state for his information that I have hundreds of times seen the bullet in its pathway through the air from the barrel of a Martini-Henry with the naked eye.

There is no delusion. It is a fact that any person having good eye-sight and not nervously affected at the discharge of fire arms, can see the Martini-Henry rifle bullet, or any other military breech-loader bullet of the same diameter as that of the Martini-Henry, in its passage through the air for some distance, after it has left the barrel, if fired at 500 yards, and for the whole distance, if fired at 200 or 300 yards.—Asian.

The Best Rifle for Hunting.

There is at present, as sometimes occurs periodically, a warm and interesting controversy going on among the writers of the Forest and Stream about the rifles most common in use. The controversy this time mainly refers to the most useful rifle for general hunting, and therefore the principal points elicited may be useful to the hunters on this coast who see the rifle generally in hunting, though doubtless the question will remain unsettled as long as individual tastes differ.

"After emptying the hunt magazine the front magazine could not be turned on. It was found that the tipstock had been displaced and driven forward by the recoil of the piece from the previous shots to such an extent as to bind and prevent the working of the cut-off."

This certainly would bring a day's shooting, incurred, perhaps, at much trouble and expense, to a very unsatisfactory close. The board, however, decided the inventor might correct defect of construction when the test was continued.

"On the second trial, at the fourteenth shot the gun broke down" A third trial having been granted the report reads: "It was handled on the safety test by the inventor, in firing which, at the sixth shot, the receiver burst, breaking the gun in two, the butt falling on the ground, the barrel being retained in the left hand of the operator."

Concerning the other lever gun the report reads: "On firing the forty-eighth shot a cartridge exploded in the magazine." This gun was re-entered and at the second trial again came to grief. At the fifty-second shot, after renewing the cartridges in the magazine, the third cartridge from the chamber exploded in the magazine. Doubtless due to the effects of the recoil on an over-sensitive cartridge."

In his summary upon these trials Greenhorn makes the following sensible and proper remarks, which, in justice to the Winchester people, it is our duty to publish.

He says: Accidents all occurred when shooting the ordinary surface charge, (45-70-405). It is proper to state that neither of the guns referred to was a Winchester. This company did not enter one of the guns bearing their name, but instead a bolt gun. The bolt guns stood the various tests in a much more satisfactory manner. In almost all of them, however, the cartridges in the magazines showed evidences of the effects of the recoil. When we remember that in a shot gun the firing of the first barrel often loosens the cartridges in the magazine of a repeater, especially when arranged in Indian file, as in the Winchester. If, now, the recoil is materially increased, as it would be in "D. M. B.'s," 40-90-500, the danger of accident is likewise increased.

Until such test is made, however, I should certainly prefer the loss of a head of game occasionally, to the chance of loss of my own.

In answer to all this, two other writers, Big Injun and C. H. S., much of the same standing as Greenhorn, who in truth is no greenhorn at all, confess to a preference for repeaters in general hunting, and maintain Greenhorn's fears are altogether unfounded. The former, who is evidently a practical man, says:

"In your last issue "Greenhorn" expresses a fear that the systems now applied to repeating rifles will not admit the use of a 40-90 cartridge. (The 40-90 Sharps and Remington special using 370 grain bullet is three and a half inches in length). "Greenhorn's fears are unfounded. I am informed from a reliable source that a repeater of this description will be placed on the market in the course of a month or two. It will not, however, use the regular 40-90 ammunition, but a special cartridge, with a bullet three times the weight of powder. I do not know whether a 370 or 500 grain bullet can be used, but should think it could if loaded into the barrel. But why should a heavier one be used? The curve would be higher and the recoil heavier than with the lighter bullet."

Then, C. H. S. adds the following, but his remarks are more interesting than useful to riflemen in connection with the character of the cartridge, than with the character of the rifle. As a fitting close to the evidence on this important point we could not well omit his remarks.

I am decidedly in favor of the repeater, but the .44-cal. I don't like, and the .44 with 40 grs. powder is not effective enough. I made a suggestion to the Winchester Arms Company, and received the following reply: "Replying to yours, would say that our model 76 gun could be readily adapted to a .44-cal. cartridge, but there would be no cartridge in market adapted to it, and we should have to make a special cartridge, which would be similar to the model of 76, which would be .44-cal. instead of .45." Placing the two .44 and .45-cal. Winchester shells side by side, the .44 will look much the smaller. Then make it the same length of the .45, and won't it come nearer the wants of sportsmen than anything we now have?

In associating with the riflemen of this coast for pretty generally for years, we have heard many of the same arguments used against and in favor of the repeater as we find prevailing among our Eastern brethren. Hence this article, as a matter of information to our readers. Personally, we have no prejudice on one side or the other; neither do we think the controversy originated in favor of certain manufacturing houses. We know the riflemen of this coast, like their brothers in the East, are generally men of large experience, and we confidently leave the question of the safety or danger in the repeater to be decided by their intelligence, for by that alone it can only finally be settled.

The San Francisco Yacht Club has at length taken some measures to protect their property from falling into the bay, some piles being put under the corners of the structure.

YACHTING.

Small Yacht Clubs.

The small yacht owners, from the causes mentioned in one of our recent issues, have been doing considerable talking about forming a yacht club for small vessels only. No regular meeting has been held, but the talk goes on in a desultory way whenever they meet. One of the plans under discussion was to purchase the buildings of the Neptune Boat Club (at present very little used), and build a break-water of piles outside. There is very good holding ground there; it is within easy reach of the cars, and it is in such a position to be reached without much difficulty in any weather, as there is always wind in the channel if anywhere at all. This project, however, seems to have been given up on account of the break-water, and for fear of the sea-wall being continued as far as that. The most popular idea seems now to be to build over at Tyburn Point, which, as soon as Donohue's line is completed, will be in direct communication with the city. This is a good idea, but to carry it out a permanent organization should be effected and concerted action taken. When the ideas of all are holed down, and when it is determined what the best site is, subscriptions should be asked from rich, public-spirited men (as small yacht owners are not always blessed with a superfluity of wealth,) and then it may come to some head.

Libeled for Her Debts.

"How are the mighty fallen?" The Con O'Connor, who after her victories over the Conenelo and Chispa, was considered in San Francisco yachting circles to be the ne plus ultra of a vessel, has been sold for debt. The startled Fawn was once in litigation, but that was on account of outside monetary difficulties of her owner. The Con O'Connor was, however, attached for a debt due her boat keeper and for repairs to the vessel. The yacht was owned by a number of men, all presumably, pretty well to do, and they cannot or will not pay their help. It shows a disgraceful state of affairs, and this will go far to lower, in the estimation of Easterners and foreigners, the standing of our yacht fleet of which we were once so proud. The yacht only brought the pelfy sum of \$2,000 a few hundred dollars over her indebtedness; the vessel is by no means well built being nailed in a great many places, instead of bolted, and the iron work on board of her being very poor, but the known speed of the yacht and the amount of lead ballast in her alone ought to command a higher price than that. Mr. E. W. Newhall was the purchaser, but whether he bought the vessel for himself or for some of the former owners is not definitely known.

One of our contemporaries, speaking of the proposed ways at the Pacific Club grounds, states that it is much better for the club to be without it, on account of the noise of the hammer and the smell of the tar. We would call our contemporary's attention to the fact that there would be no noise of hammers on Sundays and holidays, the only days on which anything of a crowd visits the grounds, and any yachtsman who objects to the good wholesome smell of tar, had better retire from the field of aquatic for all time. No one but a parlor yachtsman could ever find anything objectionable in such a smell. If tar is used near a ways, it must be for the purpose of putting it on the yacht, and if the smell annoys our contemporary at a distance of 100 yards, how much more disagreeable it must be on board a vessel, right under his nose, so to speak. For this reason, perhaps, he never goes out sailing, which accounts for some of the glaring mistakes so frequently made in the paper referred to.

The yawl Mist, now Josephine, has entered a new phase of her checkered existence—if such a term may be applied to an inanimate substance—she having been changed into a most extraordinary craft. Her bulwarks have been raised about eighteen inches; her house, from the deck to the edge of the roof between, made two feet high, and in addition to this there is nearly two feet crown to the roof. Her cockpit has been floored over, making the deck from the companion-way aft, flush. Her cabin has been elegantly fitted up, and something in the neighborhood of \$1,000 must have been spent in repairs on her. This seems to us a throwing away of good money after bad, as we should hardly think such an old hull would scarcely warrant such an outlay. Her owner, a man of considerable means, intends taking her down to Santa Cruz next spring, and she will be then used as a pleasure boat on Monterey Bay. She is at present at Alviso, where she will remain during the duck season.

The Fleur de Lis has been having some extensive repairs done on her during the last two months. She was on the stock when building, for nearly four years, and several yachtsmen had an idea that she would go to pieces from dry rot before being launched. Such a violent supposition, however, did not come true, but she has never been a very strong vessel. Before Nichols sold her, and while she was under charter to the Lotus Club, she started with the fleet from Vallejo, but before getting half way to Pinole worked so heavily in the sea, that she opened all along the garboard streak, and was compelled to put back to Vallejo and run on the mud, while the party returned to the city overland.

There is a rumor afloat that Mr. Mervin Donahue's visit to the East was taken with the object of purchasing one of the crack Eastern yachts and sending her round the Horn, the same as was done with the Ariel. How much reliance may be placed in this we do not know, but we should think him very foolish so to do, as the Nellie is certainly fleet enough and large enough to satisfy any one, more especially as it is only a matter of conjecture what a crack Eastern vessel would do in our waters; our experience here not having been very favorable for a repetition of such an experiment.

Last yachting season was a disappointment to many, very few concerted events of any importance having taken place. This result was due, to a great extent, to the difficulties and quarrels between various cliques in both yacht clubs. Next year will witness the advent of three new vessels, all built by Stone, the schooner Rattler, the forty-foot yawl and the forty-four-foot schooner, now in frame.

The first two will be enrolled in the lists of the Pacific Yacht Club, and the latter still remains unsold, so what will become of her still remains a conjecture. Stone is very proud of her, and states that with her he is going to eclipse all his former efforts.

The Thetis lies off Stone's yard, where she is to remain for the winter. She grounds every tide and lies on her bilge in the mud. The yacht to be on her is very well built, but it will not benefit any vessel, as heavily ballasted as she is to do this twice a day, as she is bound to strain more.

## THE KENNEL.

### Field Trials.

EDITOR BREEDER AND SPORTSMAN: The air is redolent of field trials. In the East, in the West, in England, and even in Germany. The recent trials at Folsom and Gilroy have given a great impetus to the sportsmen of this Coast. Many are already looking out for something good, some "undiscovered Milton" that will cut a figure next year. They begin to realize the fact that although a dog may show much beauty, fine proportion, and almost perfect points on the bench, he may not necessarily be a fine field dog. By a fine field dog, I mean a dog of much spirit and energy, good speed and lasting power, and above all a super-excellent nose. From the peculiar climatic conditions of this Coast, it requires a dog with fine olfactory nerves to scent quail when scattered and lying close in thick cover. At the recent Eastern trials, many times, when birds had been marked down, their best dogs could not find them, and they all flushed birds continually. It is thought that quail have the power of withholding their scent. I think they have for some short time after being frightened and scattered. My theory is that they bury their heads in a tussock or bush, and by tightly closing their wings, keep their scent from spreading. By waiting a short time, and hunting the ground over again, a dog will find birds on the same spot he previously passed over. I remember reading of a similar thing in Frank Forester. He marked a bevy of quail down in a ditch, and his dog could not, to his great surprise, find them. Returning in a short time, they came to a point, and found the birds exactly where he had marked them. No doubt, some of them had moved during his absence, and emitted sufficient scent for the dogs to locate them. A gentleman at the Folsom trials remarked, probably in fun, "that the owners of the dogs running had better dispose of them, and get dogs with noses." I maintain that the dogs of this Coast, that is the best of them, have as good noses as any dogs in the world. They are from the very best stock, and there is no reason why they should deteriorate by transplanting. Horses do not. Let them bring the best dogs of the East, and hunt them in this dry climate, and they will cut no better figures.

California field trials will not, in future, be confined to one locality. The State is large enough, and sportsmen are sufficiently numerous to allow of two or three. There might be one at Folsom, one at Gilroy, and one at Los Angeles, and why not one in Oregon. Many advantages would result. Dogs that were out of form, or bitches in season, or dogs that did not show off to their best, from some cause or other, might be run at another time and place, and prove themselves totally different dogs. Dogs are peculiar, and cannot always be depended on, after much labor and preparation, to do their best at a minute's notice, particularly after being dragged on a chain, among a crowd of strange faces, waiting for their turn to be put down. In the Eastern trials one dog refused to leave his handler's heels, and yet, no doubt, that handler had bestowed much pains to bring him out, but from some cause which we cannot explain the dog was not himself. There is much uncertainty in a field trial, and under the best rules it is not always certain that the best dog will come to the front. Sometimes the ground hunted over by one dog will be more favorable for obtaining points, although I don't think the number of points obtained by a dog should decide his superiority. One point, if made in fine style and under difficult circumstances, should decide a dog's nose and tenaciousness as well as half a dozen.

One judge is better than three, but he should be an expert in dog training. The three judges acting at the Eastern trials are said to be good practical sportsmen—but that is hardly enough. He should, of course, be strictly impartial and firm as a rock, have no friends to please nor enemies so mortify, but be a second Brutus in his decisions. He should have the eye of a hawk, not a single action of the dogs should escape his notice; he should be guided strictly by the Rules, and penalize every fault committed by a dog. A Field Trial is not only to try the natural qualities of a hunting dog, but his acquired ones. A moderate dog, well-trained, should be awarded the prize over a genius untrained. The judge should control the whole proceedings. He should allow no jockeying among the handlers, no noise or howling like a town-crier—thereby annoying the other handler, disturbing his dog, frightening away the birds and disgusting the spectators. A handler of a dog at a public Field Trial should be allowed to whistle softly, but not to speak, except in a low tone of voice, so as not to attract the attention of the other dog; he should not be allowed to cross his path, to get the wind of him, nor to jockey, or get ahead and frighten off the birds, for fear the other dog should get a point. No whipping should be allowed. In our trials, on more than one occasion, it looked more like a shooting match than a Field Trial—judge, handlers and spectators were entirely absorbed in the shooting, which, I will say, was well done by Dan Gilroy, Horton and Farmer. But while they were having their fun "that necessary question of the play,"—the working of the dogs—was for the time forgotten. As Hamlet says: "It might make the unskilful laugh, but could not but make the judicious grieve." Hamlet must have seen a Field Trial when he said, no doubt referring to a shouting handler: "I would have such a fellow whipped for o'er doing termagant, it out herods Herod, pray you avoid it." In the Eastern Field Trial Derby, Sanborn as Wammaker says, in the heat between "San Roy" and "Maiden," yelled at the top of his voice continually, from the time they struck birds until the heat ended, that he withdrew his dog in consequence, naively remarking, "that his bitch was trained and would not stand such foolery." Is the judges had done right—but I suppose it will be considered heresy for any one on this coast, to question the wisdom of such learned doctors—they ought to have ordered Sanborn's dog up, and given the heat to Wammaker. They were, he says, among birds four minutes and the heat lasted just nine minutes, and after three or four months labor in preparing a dog, that is the way judges run Field Trials in the New Orleans Club.

An up-country friend calls me a "pen and ink sportsman," but I have seen enough of dogs to know that a dog may be taught to act properly in the field without his handler, like "the cherubim and seraphim continually crying out," and I trust at future trials on this coast to see that practice reformed altogether. I like to see a dog allowed, to a certain extent, to use his own discretion in finding game, which he will do much better than his handler can do for him, by constantly drawing his attention towards himself, and making him turn and quarter every thirty or forty yards. A practiced dog will quarter his ground instinctively when necessary, but to keep him constantly quartering and turning for nothing, is making too much of a machine of him, and giving him no chance to develop his own sagacity. A dog will brook will not flush a bird because he is one hundred yards away from you, any more than he will at forty yards. He will never

flush a bird intentionally, but prefers pointing it, and seeing his master come up and kill it. That is his crowning glory, and to once get a young dog to make a steady point, to let him remain on it, and let him rehearse it, and that is a made dog. There is an understanding now between you and him. But when you hear a handler shouting toho! toho! and see him go up on the run all excitement, with a continuous shout of toho! and when the bird is flushed—miss it, the dog, no doubt, thinks he could have done that himself, and the next bird he points, flushes it before his master gets up. Again, chasing fur, I noticed at Folsom Trials that some dogs were severely whipped for chasing rabbits. They forget of anything a dog knows he was whipped because he did not run fast enough to catch it, and will run faster next time. I contend that is not the right way to prevent chasing fur. If it were, Dorr was old enough to have learned it.

But I am occupying too much of your valuable space. Although a "pen and ink sportsman" I am very loath to take up the pen, and prefer reading the writings and experiences of others. But give me a brace of good dogs in a day, sprinkling of game, and whether—as was observed by a member of the rich man's Club described by Addison—"Get it up and beans is down," to me is a matter of indifference.

MEMBER OF THE GILROY CLUB.

## BICYCLING.

### The Flying Wheel—Some Noted American Riders.

(New York City.)

The numerous additions to the ranks of bicyclists during the past season have awakened in the minds of many an idea of the utility of the machine which as yet is used in this country only for pleasure and exercise. In England the bicycle, though used mostly as a pleasure vehicle, is also turned to serve business purposes. Letter carriers deliver letters from the nicked steed, policemen patrol their posts on them, physicians visit patients, tax collectors, rent collectors, sheriff's serving warrants, and in some cases fugitive from justice employ them. These as yet are new fields for the use of the "bikes" in America, and the postmen, physicians and policemen are not yet sufficiently accustomed to it as a means of transportation to use it in the pursuit of their respective vocations.

Still there are in this country members of the professions who use the bicycle, though only as in pursuit of pleasure. The Rev. T. McKee Brown, Rev. George Pentecost, Dr. N. Malon Beckwith and others bestride "bikes" in their leisure moments. As the personnel of the more prominent men in the ranks of bicyclists may prove of interest to the average reader a short sketch of them is given.

Dr. N. Malon Beckwith is President of the League of American Wheelmen, an association now numbering 4,000 members, scattered all over the continent. Dr. Beckwith is a dentist in good practice in this city. He is a member of the Citizens' Bicycle Club, whose headquarters are at No. 2 East Sixtieth street. In appearance the doctor is a perfect Hercules, being six feet two inches tall and proportionately large. His figure is perfectly symmetrical, as is his blonde mustache and legs, which latter show to best advantage when he is attired in the uniform of his club. Then the navy-blue corduroy knee-breeches and blue stockings show the development of the doctor's calves and he is happy. He rides the largest wheel except one in America—a "Columbia Expert," with a 62-inch wheel.

It is an old cry with the boys of the club that Harrigan's song "I'm a Marshal whenever I Parade," was written for Dr. Beckwith, as it is true that no matter where he parades he fills the office of Grand Marshal. At the last parade of the League of American Wheelmen held in this city the doctor was Grand Marshal, and in the September meet of the Springfield Bicycle Club he also filled that important position. The doctor is an old athlete. He was a member of the tug-of-war team of the New York Athletic Club and is now captain of the left flank tug-of-war team of the Seventh Regiment. Among the members of the Citizens' Club is Fred Jenkins. Every bicyclist in America, it might be said, in the world, knows Mr. Jenkins. He is secretary of the league and is part proprietor and editor of the league's official organ. In person Mr. Jenkins is small and a blonde, with just the semblance of a mustache. Recently Mr. Jenkins has been laid up with a broken leg, the result of a moonlight ride to Yonkers and a contrary pig that crossed his wheels.

Mr. Fred Scholes, late secretary of the League of American Wheelmen, is a resident of Cleveland, O., and a member of the Cleveland Club. Mr. Scholes was pronounced by *The World* to be the handsomest man in the league parade in this city, and since then he has been recognized as such by all wheelmen. He is a combination of Apollo and Adonis. His face is oval shape, with perfect Grecian nose, jet black eyes, eyebrows and hair, and a handsome black mustache. He is tall and erect.

Fred is a member of a church choir in Cleveland, and it is said he sings as divinely as he looks. At Chicago, Washington, New York and Springfield meets, he was the observed of all the observers, and was envied by his fellow-bicyclist as the ladies all gazed at him and applauded him.

George M. Hendee, of Springfield, Mass., is the most remarkable bicyclist in America when speed and stamina are concerned. He is champion of America at all recognized distances, and holds the best on record at almost every distance between a quarter of a mile and twenty miles. George is the pride of Springfield and in September, when the club of which he is a member gave three days' meet at Hampden Park, he received only one defeat. Then the people of the city felt sad, and the ladies promenading the streets were seen wearing his picture with black margins. During the meet, those of the stores that were open for business sold Hendee clothing, Hendee hats, Hendee shoes, and even Hendee corsets for ladies were for sale. The celebrated Kentuckian, Charles Jenkins, of Louisville raced against Hendee one day, but was beaten. Hendee also beat "Doodle" Robinson and Charles D. Vasey the English bicyclists, with consummate ease.

George Nash, of Springfield, although but fourteen years of age, is one of the most accomplished expert trick riders in the world. He is the smallest oven for his age, and rides a 44-inch "Rudge." At the Springfield tournament he gave an exhibition of fancy riding on the track at Hampden Park. The feats he performed were marvellous, and he concluded his performance by riding on one wheel around the mile track.

"Prof." Daniel J. Canary is also a trick rider and is called the champion of the world. He is a native of New Haven, Conn., and is about twenty years of age. He is slight physique, but strong. He never gained distinction or renown as a speedy rider, but stands pre-eminent as a performer of wonderful feats. Among his tricks are the following: Ride

with folded arms with the hind wheels of machine off the ground. Stending the bicycle on its saddle and handle-bar upside down and bring it into its proper position, mounting at the same time. Taking the back bone, hind wheel and handle-bar from the large wheel and ride the latter alone. This accompanied by standing on the treadles and the one wheel thus forms a uni-cycle, upon which he rides forwards and backwards and spins on its centre.

James D. Wilmot is this acrobatic champion bicyclist. He also performs with a champion on a single bicycle. All sorts of seemingly impossible feats are performed by them. Standing on head on the saddle, standing on one foot while the bicycle is in motion, mounting and dismounting while it is at full speed, all these and many more tricks are performed by Mr. Wilmot and his mate with the utmost apparent ease.

Mlle. Louise Armaido is the female champion bicycle rider. She is a Canadian, twenty-three years old, short in stature, but very muscular. She has "starred" throughout the country and is well known. It is related of her that she startled some gentlemen in a Denver (Col.) gymnasium by putting up a 100-pound dumb-bell.

Miss Elise Von Blumen was the only really formidable antagonist for the title held by Mlle. Armaido. Miss Von Blumen is a pretty and petite lady, with no muscular development and an abundance of pluck. She also has ridden in the largest track in this country, but has, it is said, retired from the business arena to study art. A new competitor for the title of female champion bicyclist is Miss Maggie Wallace, a native of this city. She is a pretty, dark haired lady, whose eyes sparkle with ambition and pluck. She is as yet a novice, though her advancement she has made in the past few months is wonderful, in the face of the fact that she has to contend with the fall. Miss Wallace has made many public appearances and is now a general favorite.

Leaving the ranks of the female riders, attention is directed to the New York prominence who rides a bicycle not only in a manly way, but purely for pleasure, for his represent \$300,000.00. Mr. Frederick G. Bourne, a member of the Citizens' Club, whose money would enable him to buy any bicycle in America and probably leave sufficient to buy a few more, is a devoted bicyclist. He is a first class rider, and a devotee, and rides from his office in the Metropolitan Hotel on Eighth avenue and Seventy-second street, a mammoth structure that cost him about \$1,000,000.00.

The Rev. T. McKee Brown, the rector of the Episcopal Church, Mary the Virgin, and president of the Citizens' Club, is reported to be as devoted to bicycling as to his religion. He is a tall man, with brown hair and a serious face and a rather austere look, but he is said to be one of the most whole-souled men in the world. He enjoys riding on the boulevards on his bicycle, and is said to object to a Sunday in his week, as on that day he must forego the pleasure of a ride.

The Rev. George S. Pentecost is a Brooklyn clergyman, and he pursues his happiness on a bicycle over the Coney Island Boulevard or the green-arched roadways in Prospect Park. He is well known as the antagonist in a religious controversy with Boh Ingersoll, in which, it is claimed, the latter was worsted. Mr. Pentecost is short and stout, with black hair, eyes and a heavy mustache of the same color. He related his experiences at the dinner of the wheelmen in the Metropolitan Hotel in June last, and said he believed a good bicyclist could not help but be a good Christian.

Probably no better contrast to Dr. Beckwith can be found in the League of American Wheelmen than "Campinini" Newman. Mr. Newman is known all over the country. Any man who has visited Nible's Garden has seen him in the box office, and he was much looked at during the parade of League Wheelmen last June. He is the smallest League member and rides the smallest machine of any in the League. Though small he is remarkably agile and strong and is a favorite among bicyclists.

Edwin Oliver is the biggest blower in the ranks of the League of American Wheelmen, and owing to his abilities as a blower was elected official trumpeter. At Springfield in September "Ed" gathered around him a host of blowers like himself, and with tally-ho horns, "bike" whistles, fish horns and a bass drum filled the air with indescribable and inharmonious music as they paraded the streets in the "wee sma'" hours. The serenade to Fred Jenkins, in front of the Warwick House, was far more successful than they anticipated, as it awoke every man, woman and child in the house, each of whom believed they were the persons serenaded and all applauded the noisy crowd of bicyclists.

Probably the prettiest sight to a lover of the wheel is that of a well-drilled club of men performing tactical evolutions on bicycles. Probably the finest club in this country is the Rochester (N. Y.) club. At Springfield eight members of the Rochester club carried away the prize for the championship competitive drill. They performed all the evolutions with remarkable precision and skill and were warmly applauded. The Capital Bicycle Club, of Washington, won the Chicago pennant for drilling, and are only exceeded in skill by the Rochester Club.

The largest club in the League is the Springfield Club, of which H. E. Ducker is President. It numbers a hundred men. The largest club in this city is the Citizens' Club. It is also the richest club. They have caused to be erected the first and only club-house for bicyclists in America. It will be opened early in January.

The symptoms of colic, one of the most fatal diseases to a horse, are readily detected. The horse invariably scrapes with his fore feet, kicks at the stomach and shifts about, turns around, smells the floor, lies down, rolls remaining for a time on his back, and breathes heavily throughout. At a recent meeting of the London Farmer's Club, a relief and sure cure was presented by a gentleman who has been all his life among horses. When the horse shows the symptoms of an attack of colic, apply at once a horse cloth or woolen rug, wrung out of boiling water, to the stomach and to the sides and cover with another couple of cloths to retain the heat. As they cool, renew the cloths as often as useful. A large bran poultice, as hot as can be borne, is equally effective, and retains the heat longer.

Regarding the statement that Mand S. is badly used up, a Cincinnati man says: "This does not accord with that Billy Bair told me the other day. He said the great mare was running around at Chester Park with a great hoary coat of hair, and in perfect health. 'When she came to me, Mr. Vanderbilt directed me that her legs he blistered. I did blister one of them, but it caused her such pain, suffering, annoyance that I wrote him I would not blister the other three. There is nothing the matter with them, and next year, after she has been properly trained and hardened, I think she will be faster and better than ever.'

ATHLETICS.

A Chase Through The Show.

[New York World].

The American Athletic Club Harriers were the only athletes with sufficient courage to indulge in a run across country yesterday. They had their third annual Christmas Day chase from Schlosser's Fort Lee Hotel, at Fort Lee, N. J. The snow was over two feet deep and a crust had formed on top that cut through the stockings and leggings of the men and lacerated their limbs. The members of the club left this city by the 10:30 a. m. boat from One hundred and Twenty-fifth street and North River, and in less than an hour were on their way through snow knee-deep, over fences, ditches, stone walls, frozen brooks and through the woods, running when they could and crawling at times.

It was just 11:23 o'clock when the starter and timekeeper, Mr. E. Van Tambacht, gave the word "go" to the hares. They were Messrs. Mortimer Bishop, G. D. Bolden and W. R. Paynter. They went slipping and sliding down the street leading from the hotel, and the crowd applauded them for their "running." They threw out the first scent 200 yards distant from the hotel and dashed into the woods. Six minutes after the hares had been started the hounds were sent away. The pack consisted of Alec A. Jordan, master of the hunt; P. H. Morgan and E. W. Knickerbocker, whippers-in; Cyrille Robson, Harry O. Bernhard, Thomas Muir, Robert Stall, Charles Jahne, George Spaulding, H. F. Reicher, Frank Lowery, William E. Nixon, John Thomas, D. J. Sullivan, Pastime A. C.; E. D. Lang, Pastime A. C., and W. C. Herring, London A. C.

When they were sent away they dashed through the snow in pursuit of the hares, whose footsteps made a trail more easily followed than the paper one and no difficulty was found in discovering the "throw off." They followed the trail through the woods, over fences and walls, and though the pace was slow it told severely on them. The crust on the snow cut their nether limbs as a knife and called forth from Mr. Herring an opinion that it was "blooming 'ard work," to which all assented. Crossing Wilson's Brook, Knickerbocker found it more convenient to slide than to tramp it, and he landed on the opposite bank in a heap, with more snow down his neck than was comfortable. The trail then changed from the west to the south and soon the colored paper that betokens the homeward trail was found and in a few minutes the pack ambled up to the hotel in a somewhat broken-up style.

Jordan was the first hound in, arriving home at 12:05 o'clock p. m., having been out thirty-seven minutes. The hares had arrived at 12:02 o'clock, p. m., Bishop being first, Paynter second, Bolden third. Thomas was the second hound in, following Jordan closely; Reicher's was third and the others were hunched. A turkey dinner followed the run and the club returned to this city at 5 p. m.

POULTRY.

Poultry Yards.

Next to keeping sheep, the keeping of poultry seems to have a fascination for the popular mind. No doubt the origin of the idea as regards sheep, and the ease, pleasure and profit of keeping them, comes from those never-to-be-forgotten poetic rhapsodies of Virgil, and the old songs and madrigals of later times; and the equally rhapsodical poetry of modern writers, who so delusively harp upon the beauties and profits of a shepherd's life, serves to keep the illusion alive. It is very much the same as regards poultry. Nevertheless, one may keep sheep, and fowls as well, if he will only get over the notion that they will keep themselves. I will remember a young man, twenty years ago, being smitten with this chicken fever. He raked the country over until he procured three hundred hens and a score of cocks, built a high picket fence about a quarter of an acre of ground, put up a board shanty for a roosting house, laid in a stock of corn and oats, provided baskets and barrels to take in the eggs, and began business. It is quite unnecessary to say a word as to the result. It was "the old, old story." But it might not have been had the management been judicious and reasonable. And this is the point where poultry-keepers are particularly interested.

I ask, then, what is judicious and proper management? The remarks of S. P., on page 965, are exceedingly sensible, and pertinent to this question. But I hope to be excused when I say they are not particular enough. Particularity in description in regard to this matter is an absolute necessity, because judgment depends wholly upon what one knows either by experience or through the stated experience of others, and when S. P. says "I prefer to fence in the fowls, giving them good roomy quarters, with grass and shade and water," he stops at the very point where your interested readers would have him go on at a lively pace, and tell them how grass, especially, can be furnished in a fenced yard. Now, after more than thirty years' experience, gradually built up, with many failures, from which useful lessons were learned, I have found that this is the very pivotal point upon which the balance of success or failure is suspended. For one hundred fowls will so foul a whole acre of grass land in three months as to make it utterly unfit for them. I have found a yard of this size to be so covered with manure in a month that one's foot cannot be put to the ground without treading upon the droppings, while the grass is completely unfit for food. Then disease invades the flock, and all is lost.

One may say, then, that an acre is not enough for 100 fowls. It is not if the fowls are confined to it, and no provision is made for keeping it in a wholesome condition. But if this yard is divided into two parts, and each half plowed and sown to green crops, all the trouble is avoided, and success is assured; and yet some more particularity is needed, and how to do this should be explained. Grass may mean any suitable green crop which fowls will eat. The plan I have followed is as follows: To plow one yard early in the fall and sow it with rye. The rye is ready for use in October, and will last until winter sets in. The fowls are turned on to it at that time, and the other half is plowed and sowed in the same way. This is ready for spring use, and will last until July. The fowls being put on this in the spring, the other land is sown to oats and peas, or rape or turnips, or anything that will produce green food. Then the other ground is sown with rape, or corn broadcast, or mixed seed. Prickly cymrey is eaten by fowls very eagerly, and a row of this around the whole lot will furnish a perennial supply of acceptable food. But the plowing is indispensable, as it cleanses the soil and gets rid of every provocative of disease. By this method the fowls will enjoy every possible and necessary comfort and sanitary requisite, and the expense of feeding them will be reduced one-half; and, moreover, they will have

all the necessary range. The yard should be bordered on each side with a row of Austrian pines, or Norway spruces, for shelter, and for acceptable places for summer nest boxes, in which the hens would delight to lay their eggs and brood. This method is an extension of the plan described by S. P., which would be impracticable without the division of the yard and the alternation of the divisions. If one would pursue this plan and have an acre, with its house, for each flock of 100 hens, he could keep as many flocks as he has ground to accommodate.—Country Gentleman.

Old Hens.

The Farmer's Advocate (Canada) comes to the defense of old hens in the following style:

The old hen seems to be attacked from all quarters, and the objections to her are based upon two reasons, the first of which is that a hen will not lay as many eggs after the first year she begins laying, and the second is that disease is more liable among old hens than pullets. The first objection is not always a potent one, and very often the hens lay better during the third year than the second. Much depends upon the time of hatching the pullets. The pullet hatched as late as May will be badly beaten her first season of laying by the old hen, and if she commences her second year it will be with the disadvantage of moulting when the weather is cold. Old hens have been known to lay well and regularly until quite advanced in age, and the calculation which has been made by some genius, and given forth, that old hens are unprofitable as layers, has been accepted more on faith than observation. Our experience teaches that some old hens will lay more than pullets, and that some pullets will lay more than old hens. The trouble with old hens is that they are liable to become too fat on very high feed, but if they are fed with judgment they will equal the pullets without doubt. So far as being more liable to disease than pullets, there are also exceptions, and if the matter can be given a fair test, it will be found that the chances are equal.

As to which are better for breeding, we venture to say that more eggs will hatch that are laid by old hens than by pullets, and this is a great deal in favor of the old hens. We think here should be kept until the spring in which they become three years old, not that they are then useless, but because the pullets have reached a more mature age, and this plan of dividing the hen into three periods, instead of two, will no doubt be found better. The breed, also, has something to do with the merits of pullets and old hens. A Leghorn or Hamburg pullet will lay more eggs in a year than an old hen of the Brahma, Cochon, or Plymouth Rock breeds, but an old hen of the Leghorn breed will also lay more than the pullets of the larger breeds. Crossed hens will often be found good layers for a long period, but the cross should be a judicious one.

Experiments with poultry in orchards prove that they effectively protect plum trees from the curculio. A few of the largest farms devoted to poultry are set partly in plums, among them being that of Mr. Hawkius, of Lancaster, Mass. The peach trees always bear test when poultry range among them.

The Vintage of 1883.

The vintage of Messrs. Stern & Rose for 1883, reckoning five gallons of wine the equivalent of one gallon of brandy, amounts to the handsome sum of 750,000 gallons. This is more than is made by any other firm or individual in America. Mr. J. de Barth Shorb reports 300,000 gallons of wine, and 20,000 gallons of brandy as an equivalent of 400,000 gallons of wine. As the large number of vintners throughout the county have not yet measured up, it is impossible to make a full statement of the total yield for the county, but from Messrs. Stern & Rose and Mr. Shorb, we learn that the vintage of 1883 is not likely to be more than ten per cent. less than it was last year, while in the northern part of the State there is a plain shortage of 50 per cent. Mr. Rose estimates his vineyards to fall short this year only two per cent. below last year.

This is certainly a very good showing, and clearly indicates that the grape crop of Southern California is much more reliable than it is in the northern part of the State. It has few fluctuations, and those are not of much significance, while the northern counties have either a very heavy yield or a very small production.

The brandy made by Messrs. Stern & Rose will amount to 100,000 gallons, but with this apparently large product, we learn from Mr. Rose that the demand for the Sunny Slope brandy is so strong and steady, on account of its superior quality and purity, that it is sold as rapidly as it reaches maturity.

Another fact that indicates the superiority of the grapes of Southern California is the fact that the winegrowers in the northern counties are continually purchasing the wines of Los Angeles to blend with their own manufactures of Sonoma and Napa counties. In this blending of different grades of wine lies much of the secret of the success of the vintners of those counties.

This business is carried on by some of our own vintners, but is not so generally practiced here as elsewhere, because our wines are so good without blending that they sell at a good profit without the expense of blending with other kind. But those who do make a study of the business of combining wines, find a large profit and advantage in doing so, especially in claret and sherry wines. More attention will be paid to this subject when the trade increases in magnitude, so that a person can give his entire attention to the mixing and ripening of wines. That time is near at hand.—Los Angeles Herald.

While Ed. M. Hewins was here the other day, M. H. Bennett, of this city, made a deal with him for the interest of Hewins & Titus in the range at the forks of the Cimarron and Arkansas rivers, Mr. Dunman retaining his interest. The range is one of the best on the Cherokee strip, and with it goes 12,000 head of cattle, 8,000 head of which are double-wintered heaves. The price paid is \$175,000, the papers for which we have seen. This may seem a large sum for a half interest in the stock and range, but when the character of both is taken into consideration, it will not seem so extravagant. The new firm will be Bennett & Dunman, and the post-office address Caldwell, Kan.—Caldwell (Kan.) Journal.

We are reliably informed that the old veteran Glenmore will be trained again next season. He is said to be in fine fix and sound. His owner, Mr. Jennings, will breed him in the spring to a few of his own mares, and then prepare him for the campaign. Mr. Jennings says Glenmore has made him his present farm, and he expects the old horse to greatly increase his possessions.

The sooner milk is placed in pans or cans after milking the better will be its yield of cream.

THE GUN.

Hunting in Virginia.

[National Republican.]

John Ellinger, the best-known and most good-humored man in Washington, returned Saturday from an extended hunting trip in the valley of Virginia. He appeared to be greatly benefited by the excursion, and when accosted by the Avenue Mau, had two rabbits, a rare ornithological specimen known as a "poor job," and a brace of quail.

In response to an inquiry, he said: "It didn't pan out well. I had six hundred cartridges loaded, and a big mountaineer for a guide. The first day out I mistook him for a wild turkey as he was backing out of a thicket, and made the bottom of his trousers look like a tin lantern. He was a Virginian and unreasonable, and he and his big son hunted me through the woods till dark, when I succeeded in dodging them, and made for Winchester. There I struck a quartet of hospitable Southerners, and one of them held the earth to go in on, and then drew a comet to it. Of course this left me nothing but my return ticket, and I struck for home."

"Where did you get the game?"  
"Oh! I dumped out of the train at Terra-Cotta, and concluded I'd hunt as I came in, and try and get enough to make a bluff with when I got home. The only thing I could find was the 'poor job,' and I had to trade the dog and the pocket-knife to a nigger for the 'cotton-tails' and the 'quail.' I am going to slide up a back street home."

Ventura Gunners.

The Signal gives the following account of the Christmas shoot at Ventura:

After demolishing a couple of quarter sections of Christmas turkey, a Signal reporter wended his way to the race track, as per detail, intent on witnessing the skill of the Rod and Gun Club at breaking glass balls. On the ground we found a number of the shootists waiting impatiently for other sports who were to participate in the match. The absent ones not putting in an appearance, it was agreed among those present to appoint Irving Foulks and Colonel Goodwin Captains, and to proceed with the sport. After informing the members that each man was to shoot six rounds of three birds each, the side breaking the most balls to be victors, Foulks proceeded to score, and succeeded in getting all three of his birds. Goodwin followed, doing likewise. Miller Beal came next, breaking his first, but missing the other two; and Barnard did as well. Chrisman could break but one, but Walbridge surprised every one—and himself most of all—by breaking all three, which feat he repeated several times during the match. Bennett broke two out of three, but failed to score again until the fifth round. Kaiser and Benchley each broke two, Williams breaking but one. As will be seen by the score, Kaiser, Benchley, Goodwin, Williams and Barnard each broke 12 out of their 15; Foulkes, Beal and Walbridge, 11; Chrisman 7, and Bennett 4, Goodwin's side, having broken 59 balls to their opponents' 45, were declared victors. J. S. Collins and C. A. Oliver acted as judges, and Ed. Hirschfelder was scorer. Following is the score:

FOULK'S TEAM.										
Captain Foulkes.....	111	110	010	011	011	001	—	11		
Beal.....	100	011	111	001	110	110	—	11		
Chrisman.....	001	110	100	100	110	000	—	7		
Bennett.....	101	000	000	000	110	000	—	4		
E. T. Williams.....	010	001	111	011	011	111	—	12		
Total.....								45		
GOODWIN'S TEAM.										
Captain Goodwin.....	111	011	011	110	011	010	—	11		
Frank Barnard.....	100	111	011	111	011	101	—	12		
Walbridge.....	111	100	111	110	101	000	—	12		
Benchley.....	011	101	101	101	101	101	—	12		
Kaiser.....	101	010	111	111	101	001	—	12		
Total.....								59		

In the evening the Local Gun Club gave a ball which was well attended by the leading citizens of the district, and proved a grand success. The people of Ventura have evidently very proper ideas about enjoying themselves at Christmas.

Notes of the Week.

We find little change in the reports from our local hunters, amateurs or professionals. All agree that something is the matter with the ducks, for they will not become really plentiful, rain or no rain. The canvassbacks seem to be the most perverse and knowing. We are informed there are plenty on the coast, if they could only be reached. As on Suisun Bay and along the San Rafael shore, so between Point Pedro and Black Point there are thousands to be seen, but there is no possible way of working them at these places. In desperation at their continued and provoking wariness, some people are talking of using a blind and battery, and getting even with them in that way. We would dissuade the use of such extreme measure, though when people are longing for canvassbacks, and they won't come in near enough to be shot, almost any measures to get them are justifiable. We are afraid this is not going to be a good canvassback season. If they remain long in the open salt waters, feeding on muscles, etc., etc., their meat will become as much impaired as at the end of the season, when, by the exhaustion of their natural food, they have to resort to those localities for their means of living. It is always well to be prepared for the worst.

Much of the same may be said about the quail of this season. Even where they are comparatively or quite plentiful, they are reported to be very wild. Six or eight to the man, in any section, is about the average day's work this season. During the week we heard only of two good bags. One was made by Mr. J. K. Orr, who really is the "wary man with the gun," the other by Mr. Charles Ohn of Market street, also a good shot. The one bagged 30, the other 9 in a day. Mr. Ohn killed his birds in the neighborhood of San Mateo.

For teal and snipe the section between Pajaro and Castroville is said to be about the best in the State. We announced this fact on private information a month ago. Although a daily contemporary says it takes money and time to get there, the section can be reached any time in half a day by rail, and for a nominal sum. Go to Watsonville, who you want good shooting, and then do your work manfully. We have no respect for the kid-glove, feather-bed sportsman. No matter where he goes he will only make an ass of himself. There is no more trouble in the district suggested than in the foothills. Perhaps, not so much.

There is some talk of exchanging the splendid grouse of Oregon for the grand old woodcock of the East. There is no doubt both birds would do well on transplantation, for the question of climate need not be considered in either.

In our rambles over Washington Territory, British Columbia, and a portion of Oregon, we were invariably informed the grouse of the north could not be transplanted alive, or we should have brought some with us on returning to California. In captivity, the grouse, we were told, will neither feed nor be fed, but deliberately perish. In their case, the exchange could only be made by eggs, which, in the season, are easily obtained without violation of the law. In the case of the woodcock, it would be utter nonsense bringing him here until the people are resolved to have him thoroughly protected, at least for five years, under the most severe penalties. Then, as with the California quail in British Columbia, by that protection, we might soon depend upon a satisfactory increase. The Indians of the Colony were informed that if they killed a quail for five years, the term of legal protection, they would be severely punished. They, like the whites, knew well the had that threatened would surely punish, and so by the end of the third year of the protecting period, we personally saw flocks ranging from two to four hundred rise up not more than three miles from Victoria. Let our vagabond law-breaking element be dealt with in the same stern, unrelenting manner, and California would soon swarm with the Oregon grouse, the Eastern woodcock, and the English partridge and pheasant. Cannot this be done? It is surely worth trying. Protection first, the birds second. That's the policy.

**How Are We to Get Game Preservation?**

Some weeks ago we published an article on our game laws in which we recommended a congressional law for all the Territories and lands under government control. We advised this national legislation, because we are convinced it would be so satisfactory and so evident in its results that every state in the Union would soon see the advantage of wise game laws strictly enforced, and adopt such laws. We confess, of course, that we see no probability of obtaining such national legislation for some years, or not, perhaps, until all the game in the Territories, both animals and birds, are exterminated. Taking also into consideration, in this connection, the disposition of the county supervisors to extend the open season in certain districts contrary to the letter and spirit of the law, and the disposition of certain classes of citizens to defy the law, the question, how we are to obtain the necessary laws of protection becomes daily more urgent and important to us as a people, and in all respects, it is well deserving their attention. In a spirit worthy the subject, we desire, this week to offer a few remarks to the true sportsmen of the state at large, with a view, if possible, of bringing them to a united action on the subject of game preservation, that we may be prepared, in future, when necessary, to act in concert in demanding such a law.

If we are not greatly misinformed, there will be a warm and severe contest in our next Legislature, in which, it is said, the question will be carried so far as to recommend the entire abolition of all protective law, and leave every man, according to his tastes, principles, and desires, to shoot game when and where he pleases. If we had not received this information from reliable sources, we should scarcely conceive it possible such a vile proposition, involving public as well as private rights, could be entertained by a civilized people. But we are satisfied some such action is premeditated by the lawless element, who in their disgusting greed desire everything, and therefore, if we cannot choke it to death in its incipency, we must be prepared to resist it with success when it blossoms out in all its native ugliness.

To meet the emergencies of the present and future, we see only one method of proceeding which offers any hope of safety. There are now in California a large body of intelligent, wealthy, influential men associated with legitimate sport, through organized clubs and individual tendencies, who only need being harmonized and brought together to a common center of action, to make themselves an overwhelming power in the next legislature, if any such measure as we have described is introduced. The immediate question then to be answered is, how shall that harmony of action be obtained? In our opinion, there is only one way—that is, for all the Clubs, in the state, the Gun clubs, the Pacific Coast Field Trial Club, the private shooting clubs with preserves, the Teal, Cordelia, Tule Belle Clubs and others, if they choose, to unite with the State Sportsmen's Association and under its leadership, shape out a policy for the future, which, backed by the wealth and intelligence of the new union, could not be disregarded by any legislature in the world. Some such harmony of action as we propose, is absolutely necessary, as much for the continuance of the clubs themselves, as for the existence and improvement of legitimate sport in future. The State Association, in every way, is worthy the respect and support of all true sportsmen. For a new State, its record is a grand one. What it has done in the past for the preservation of game, is proof of what it will be able to do in the legislature and before the courts, if supported by the earnest endeavors of all the clubs in the state as we propose. Why cannot this be? Something must be done in this direction and without delay, or there will be no use for the clubs themselves. We could say a great deal in favor of this arrangement, but we feel, its necessity is too self-evident, to need a labored enforcement.

Should such a union be brought about, the sporting and private clubs, will require a live journal to represent them, and this they will always find in the BREEDER AND SPORTSMAN which claims, with no small degree of justice, to be the representative sporting organ of the coast. The advantages again of this upon legitimate sport would be immense and immediate to all. We have an illustration of the benefits to be derived from an efficient union between a live newspaper and a live sporting club in Illinois. A few years ago, the Chicago Field, now the American Field and the Illinois Sportsmen's Club, were both very insignificant institutions. They joined interests and labored faithfully together for their mutual good, knowing that if success crowned their united action, the whole country would be benefitted by their success. To-day, they are in their distinct provinces, the most powerful factors we have in America in formulating public opinion on the necessity of preservation and the enforcement of the law. So, if the BREEDER AND SPORTSMAN and the different clubs of the state will form a similar union, we may not accomplish as much as the Field and the Illinois sportsmen, but we are convinced we can perform a work as beneficial to our State as honorable to ourselves before another new year comes round. The work is needed. Let it be commenced in earnest.

It is reported that buzzards are so numerous around Hollister, that large limbs of trees are broken by their united weight. Considering that buzzards, in order to fly as they do, are a very light bird, this is a very pretty little story of the bird. Won't somebody give us a rattling good goose yarn as a stand-off?

**An Interesting Race.**

A race took place on New Years Day which, although no remarkable for fast time, yet proved one of the most interesting seen for some time. The audience was composed only of personal friends of the contestants, but from the result, it is a pity it could not have been witnessed by all true lovers of sport. The contestants were A. Dreyfuss and G. W. Putnam, both of Denver, Colorado, who are visiting friends in this city. The track chosen was the Recreation Grounds, and the stake—"A New Years' dinner for eight," at the Lick House; the race a dash of 100 yards. About 3 o'clock the men appeared stripped for the contest, and chose for judges, Mr. Ward, of Cincinnati, and Jos. Masterson of this city. Ike Benjamin, of New York, acted as Referee, and M. K. Kittleman as Starter. The men got off very evenly at the first attempt, and ran to 75 yards, where Putnam showed about a foot in front, when by a splendid burst of speed of Dreyfuss got up even with him and succeeded in making a dead heat of it in 12 1/2 seconds. Dreyfuss at once became the favorite in the bets, and numerous wagers of five, ten, and some money, were laid on his winning. The second heat was almost a repetition of the first, except that Putnam showed to the best advantage, and in turn became the favorite with the bettors, after the heat, which also proved dead, and which was snatched away from Dreyfuss, almost at the tape. Time—12 1/2 seconds. Both having been so closely contested, and been declared dead heats, the audience began to realize that, leaving the time made out of consideration, that they were witnessing a splendid race, and when the men were called out for the third heat all were in a high state of excitement; each loud in praise of his favorite's "staying abilities." The men, when they appeared, however, did not seem to relish the idea of another heat, both looking worn and "done up," and plainly showing their want of condition. Putnam remarked as he toed the mark: "That last heat seemed twice as long as the first." "Yes," says Dreyfuss, "and if I am not mistaken, this will seem longer."

As Kittleman fired the gun, both men bounded away at a good pace, and "shoulder to shoulder," till 75 yards were reached, where Dreyfuss gained a decided advantage, which he held to the tape, winning one of the best contested races ever seen, in 12 1/2 seconds. Putnam's want of condition proved too strong for his stomach, and Dreyfuss, although a much smaller man, and apparently in fair fix, had to be assisted to his dressing room. After, however, the two champions had been invigorated by the liberal allowance of ale and brandy, all repaired to the Lick House, where, to the popping of champagne corks, the race was run over and over, and the dinner of Mr. Putnam's heartily enjoyed.

**The Vienna Garden.**

The continued success of the Ladies' Orchestra is such as evincing extreme public satisfaction, that we commenced a brief history of the members last week, which we gladly continue in this issue. We shall commence this notice with Miss G. Gonzales, who presides at the piano. We have already spoken of her abilities as an accompanist, which we hold places her at the head of our local pianists. She was born in Guadalajara, Mexico, and studied at the college of Linas, which she entered at eight years old. She remained there until eighteen, when she graduated with honors. She began her musical studies under Prof. Limolir, of Mexico, and finished under Prof. Meyer, of Berlin. She then obtained diplomas for music and French, and commenced teaching. After her marriage she came to San Francisco, and on Miss Brandl's retirement, joined the orchestra under Julia Bertrand. She again took the piano in the present orchestra, under the leadership of Miss Neuber. The other ladies are the Poeschl sisters—Veronica, Caroline, and Marie. These ladies were born in Prag, Bohemia, and studied music in the public conservatory for several years. They then accepted a musical position at Bombay, where they remained two years. After leaving India they came to America and joined the Cincinnati orchestra. They occupied leading positions there for over a year, when they came to the Vienna Garden, under contract as second violin, viola, and double bass. For mental powers and personal graces, it is generally admitted, three such women are not often seen in one family. These little sketches will enable our public to understand the great success of the present orchestra. As long as merit is appreciated, it could not be otherwise. The crowded house every night speaks well for the taste of our people for classical music. We could select pieces played during the week, such, for instance, as the trio between Misses Neuber, Straka and Gonzales, that would do honor to any concert in the world, not excepting Paris or London. For ourselves we rejoice that such a school exists among us, and we hope it may long continue.

Jonathan Mahen formerly lived in Alameda county, and was a market hunter by occupation. Up to the time of leaving Alameda, by actual count he claims to have killed 17,500 geese, and has since killed 1,000 more. He used a cow, and he says, at the end of the season the geese were more afraid of a cow than a man.

Butte county offers a bounty of \$10 each for coyote scalps, which has induced a general war against the useless vermin. A coyote will kill more game than a dozen of the worst pot-hunters.

**Thoroughbred Stallion IMPORTED Kyrle Daly.**

Bay horse; bred by Joseph Lyons; foaled 1879, by ARTILLERY. First dam, Colleen Blue, by Gemma-di-Vergy. Second dam, Princess, by Reliever. Third dam, Ebidana (the Baron's dam), by Economist. Fourth dam, Miss Pratt, by Blacklock. Fifth dam, Gadabout, by Owl. Sixth dam, Mistral, by Sir Peter. Seventh dam, Matron, by Florizel. Eighth dam, Maiden, by Macheu. Ninth dam (Pumpkin's dam), by Squirt. Tenth dam (Lot's dam), by Mogul. Eleventh dam, Camilla, by Bay Bolton. Twelfth dam, Old Lady (Starling's dam), by Pulletine's Chestnut Arabian.

Thirteenth dam, by Rockwood. Fourteenth dam, by Bustler. Will make the coming season, 1884, extending from February 10th to June 20th at Rancho del Paso, Sacramento Co., Cal. Terms, \$100 the season. Mares taken good care of at \$10 per month, but no responsibility for escapes or accidents. Address JOHN MACKAY, Sacramento, Cal.

**The Trotting Stallions.**

**DIRECTOR AND MONROE CHIEF**

Will make the season of 1884 at

**Oakland Trotting Park,**

Commencing February 1st and ending June 1st.

**TERMS.**

Director \$200, Monroe Chief \$100, the season. Good pasturage for mares at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

**Director, 2:17.**

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See 2:10 3/4; Phalias, 2:19 3/4); first dam Dolly (dam of Thorndale, 2:22 1/2; Onward, 2:25 1/2), by Mambrino Chief; second dam by Potomac; third dam by Saxe Wiener.

Thorndale, 2:22 1/4, is the sire of Edwin Thorne, 2:16 1/2; Daisy Dale, 2:19 1/2.

**Monroe Chief, 2:18 1-4.**

Two-mile record, 4:48.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, by Rydyk's Hambletonian, first dam Madame Powell, by Bay Chief, sire of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whip stock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performance, see the May number of the BREEDER AND SPORTSMAN, issue of December 20, 1883.

For further information address JOHN A. GOLDSMITH, FASHION STABLEY, Ellis St., San Francisco.

**THOROUGHbred STALLION**

**Pedigree.**

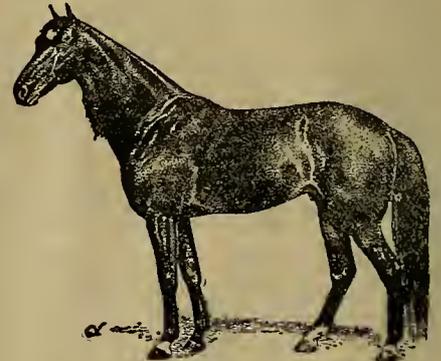

X X (Doublecross), bred by Jos. Cairn Simpson at Avoca Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM First dam Columbia, by imported Bonnie Scotland. Second dam Young Fashion, by imported Monarch. Third dam Fashion, by imported Trustee. Fourth dam Bonnets o' Blue, by Sir Charles. Fifth dam Really, by Sir Archy. Sixth dam by imported Medley. Seventh dam by imported Centinel. Eighth dam by Mark Anthony. Ninth dam by imported Janus. Tenth dam by imported Monkey. Eleventh dam by imported Silverye. Twelfth dam by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine-race mare. Columbia is the grandam of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wausnita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hook Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his breeding has much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON, Oakland or 508 Montgomery street, San Francisco.

**THE TROTTING STALLIONS**

**SINGLETON AND LA HARPE.**

WILL MAKE THE COMING SEASON FROM FEBRUARY 1ST TO JULY 15th, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal. Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and left fore foot, small star in forehead. Is 15 1/2 hands high, and weighs 1,120 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

**PEDIGREE.**

Singleton is by Willie Schepper, he by Rydyk's Hambletonian, by Abdallah, by Mambrino, by imp. Messenger. Schepper's dam Nellie (the dam of Vermont Black Hawk, grand dam by Bustler, thoroughbred No. 873). Singleton's dam is Lightfoot (dam of Pride, yearling record 2:45) by Flaxtall, son of Pruden's Blue Bull. Lightfoot's dam was Fanny Fern, by Irwin's Tuckahoe, Granddam by Lester's Consul, by Shepperd's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

**LA HARPE**

Is a bronze bay, two white stockings behind and star, 15 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1878. La Harpe was sired by Fanny, he by Alexander's Belmont (sire of Nutwood), he by Alexander's Abdallah (sire of Goldsmith Maid), he by Rydyk's Hambletonian, he by Abdallah, he by Mambrino, he by imp. Messenger. Fanny's dam Glory by Jackson's Western Star (son of El's Western Star by Blacknose), 1st dam by Bonnera, 2nd dam by Gallatin (1,081). La Harpe's dam Prairie Bird by Flaxtall (dam of Flight, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe, 4th dam by Lester's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

**TERMS:**

For Singleton, fifty (\$50) dollars the season. Mares not proving in foa may be returned the following season free of charge.

La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address

J. T. McINTOSH, Box 60, Chico, Cal.

"The Avenger of Waterloo."

Comte de Lagrange, who died recently, was a prominent figure on the European turf. Probably the most dramatic scene ever witnessed upon the English turf was on that spring day in 1865 when his French-bred colt Gladiateur, showed his heels to a large field of horses at Epsom in the English Derby.

M. de Lagrange's appearance was well known on every English and French race-course. He was a regular Norman, with a ruddy complexion and square built figure. Of late years his hair, mustache and whiskers were almost white. He reached the age of sixty-eight years. The Count took part in political affairs.

The estate of Dangu, where Comte de Lagrange's famous stud farm was, came to him from his mother, who was an heiress of the Talhoult family. In 1856 he began his racing career by buying the stud of M. Alexandre Anmont, which included the famous Monarque, and from that day until the day of his death, his history was the history of not only the French, but the European turf.

Sporting men in this country have, or rather will have, a chance of understanding the activity of Comte De Lagrange. One of the best horses which he ever owned, and certainly one of the handomest horses that ever looked through a bridle, is now in this country. This is Rayon d'Or, who won the St. Leger of 1873, and was bought for the new stud in Pennsylvania for no less than \$30,000.

Advertisements are intended, quite properly, to profit both the advertiser and the publisher of the advertisement; but in nine cases in ten the money paid for advertising is thrown away, and a good deal of time with it. Now, there is a remedy for this. What is it? It is this: Advertise in reputable and well established journals that champion the particular merchandise or trade to which you are devoted.

you that you would be called a lunatic if you should take your horses to a tailor to be shod, or your wagon to a grist mill to be repaired. When you choose a hodge-podge journal in which to advertise a special line of goods, you place yourself in the same boat.

A train load of bran and chopped feed left here Wednesday for the Franklyn ranch. It is to be fed to the fine Short-horn stock, which it is intended to turn out fat in the spring. Ideas and measures that five years ago would have been smiled at in nearly all parts of the range are gaining ground, and almost imperceptibly methods are changing, and greater profits will accrue to those stockmen who keep up with the times.

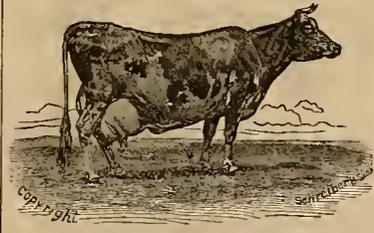

The name of the pacer Johnston has been changed to Midway, which suggests that this horse has had a multiplicity of titles. He was originally known as Barney, but when Mr. Mather purchased him it was changed to Charlie M. Then when Eb. Smith purchased a controlling half-interest in the horse he rechristened him Johnston, in compliment to his driver, and now Commodore Kittson has concluded to call him after his farm.

Dodge city, Kansas, may be put down as the greatest shipping point for range cattle in the United States. During the shipping season of 1883, 73,263 head were sent to market, on which stockmen realized \$2,565,205.

Robert C. Cunningham, a well-known and popular horseman of Philadelphia, died on the 12th inst, after a lingering disease. He will be much missed on the road and track by his numerous friends.

Jerseys and Guernseys.

Registered in the A. J. C. C. and the A. G. C. C.

The above is a cut of the unequalled cow Jersey Belle of Scituate that made 25 lbs. 3 ozs. of butter in one week.

A GRANDSON OF JERSEY BELLE IS NOW IN use in the Verba Buena herd. This herd of Jerseys and Guernseys won all the herd prizes for 1882. Since then have been added three young bulls and some females and it now contains Farmer's Glory, Jersey Belle of Scituate, Coomassie and Alpha strains.

HENRY PIERCE, San Francisco.

GIBRALTAR, RECORD 2:22 1/2, FOALED 1872, bred by Geo. O. Tiffany, got by Echo, son of Rysdyk's Hambletonian; dam the Tiffany mare, said to be by Owen Dale, son of Williamson's Belmont.

JOHN A. GOLDSMITH, FASHION STABLE, Ellis St., San Francisco.

The Washington Park Club

CHICAGO, ILL.,

Announce the following additional Stakes to close January 15, 1884, and to be run over their New Race Track, at the Inaugural Meeting of the Club, beginning Saturday, June 28th, and ending Saturday, July 12th, 1884.

THE AMERICAN DERBY.

A Sweepstakes for Three-year-olds (foals of 1881), at \$200 each, h. f.; or only \$20 if declared out on or before March 15th, 1884; or \$30 if on April 15th, 1884; or \$40 if on May 15th, 1884; or \$50 if on June 15th, 1884. All declarations void unless accompanied with the money; with \$3,000 added, the second to receive \$750 and the third \$250 out of the stakes. Winner of any three-year-old stake race of the value of \$1,000, to carry 5 lbs., of \$1,500, 7 lbs.; of three or more three-year-old stake races of any value, 10 lbs. extra. Maidens allowed 5 lbs. Foreign-bred entries allowed 7 lbs. One mile and a half. To be run on the first day of the meeting. Weights, 115 lbs. with sex allowance.

BOULEVARD STAKES.

A Sweepstakes for all ages, \$50 each, h. f., or only \$10 if declared out on or before May 15, 1884, with \$1,200 added, the second to receive \$200, and the third \$100 out of the stakes. One mile and a quarter.

COMMERCIAL STAKES.

A Sweepstakes for all ages, \$50 each, h. f., or only \$10 if declared out on or before May 15, 1884, with \$1,200 added, the second to receive \$300, and the third \$100 out of the stakes. A winner of any race in 1884 of the value of \$1,000, to carry 5 lbs. extra. One mile and a half.

COLUMBIA STAKES.

A Sweepstakes for all ages, \$100 each, h. f., or only \$15 if declared out on or before May 15, 1884, with \$2,000 added, the second to receive \$400, the third \$150 out of the stakes. Weights 5 lbs. below the scale. A winner of any race in 1884 of the value of \$1,500 to carry 5 lbs. extra. One mile and three-quarters.

WOODLAWN STAKES.

A Sweepstakes for three-year-olds (foals of 1881), \$50 each, h. f., or only \$10 if declared out on or before May 15, 1884, with \$1,200 added, the second to receive \$200, and the third \$100 out of the stakes. The winner of the American Derby or Sheridan Stakes, to carry 5 lbs. A winner of both stakes, 10 lbs. extra. One mile and five furlongs.

QUICKSTEP STAKES.

A Sweepstakes for two-year-olds (foals of 1882), \$50 each, h. f.; or only \$10 if declared out on or before May 15, 1884, with \$1,000 added, the second to receive \$200, and the third \$100 out of the stakes. Half a mile.

OAKWOOD HANDICAP.

A Sweepstakes for all ages, \$50 each, h. f., or only \$10 if declared out on or before May 1, 1884, with \$1,000 added, the second to receive \$200, and the third \$100 out of the stakes. Weights to be announced April 1, 1884. A winner of any race, after publication of weights of the value of \$1,000, to carry 5 lbs. extra. One mile and a furlong.

GREAT WESTERN HANDICAP.

A Sweepstakes for all ages, \$100 each, h. f., or only \$15 if declared out on or before May 1, 1884, with \$1,500 added, the second to receive \$300, and the third \$100 out of the stakes. Weights to be announced April 1, 1884. Winner of any race, after publication of weights, of the value of \$1,000, to carry 5 lbs.; of \$1,500, 7 lbs.; of \$2,000, 10 lbs. extra. One mile and a half.

LIGHTNING STAKES.

A Sweepstakes for all ages, \$10 each, p. p., and \$10 additional for starters, with \$1,200 added, the second to receive \$200, and the third \$100 out of the stakes. Three-quarters of a mile heats.

THE WASHINGTON PARK CUP.

A SWEEPSTAKES FOR THREE-YEAR-OLDS AND UPWARDS, \$100 each, h. f., or only \$20 if declared out on or before May 15, 1884, with \$4,000 added, the second to receive \$500, and the third \$200 out of the stakes. Weights five pounds below the scale. A winner of any race in 1884 of the value of \$2,000 to carry five pounds extra. Two miles and a quarter to be run under the American Racing Rules and Weights (unless otherwise specified) as adopted in the Convention, at Louisville, Kentucky, November 23, 1883.

Please observe that in most of the above stakes declarations are permitted for a small forfeit. Turfmen failing to receive entry blanks can obtain them by applying to the Secretary, Palmer House, Chicago, Ill.

J. E. BREWSTER, Secretary.

P. H. SHERIDAN, Lieut.-Gen. U. S. A. President.

ENQUIRE OF

HENRY WALSH.

Supt Running Horse Dept Palo Alto Stock Farm.

Found at Last! GOLD SEEKERS FRIEND... if you will send us TEN DOLLARS... we will help you to more READY CASH... than any other method in the world.

DIETZ'S PATENT

CHECK HOOK.

Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check-Hook is used. Horsemen can appreciate the value of a Check-Hook of this kind. There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the hook.

Orders sent to A. C. DIETZ, No. 9 Front St., San Francisco, Cal. Will receive prompt attention. When ordering state whether gold or silver plate required.

Horses and Mules FOR SALE.

SEVENTY-FIVE HEAD of Horses and Mules, suitable for farm and plow work. The mules are all young, California bred, and will average 550 pounds weight. Apply to W. L. ASHE, Merced, Merced County, Cal.

KILLIP & CO., LIVE STOCK AND GENERAL AUCTIONEERS,

116 Montgomery Street, San Francisco

SPECIAL ATTENTION PAID TO Sales of Ranches & Live Stock.

Will Sell in All Cities and Counties of the State.

REFERENCES. J. S. CAREY, Sacramento. J. D. CABR, Salinas. R. P. SARGENT, Gilroy. JOHN ROGGS, Colusa. P. A. FINIGAN, San Francisco.

HAVING CONDUCTED SOME OF THE MOST successful sales, notably those of Messrs. Whipple, Colgrove, Dietz, Couitts, Dougherty, Newland & Hammond, Daniel Cook and others, we feel assured of our ability to give satisfaction in all business entrusted to our care. Sales will be made in all cities and counties in the State. We have in contemplation a series of combination or breeder's sales, similar to those so successfully held at the East. We will be pleased to enter into correspondence with parties desiring to participate in such sales. Private purchases and sales of improved live stock of all descriptions will be made on commission and stock shipped with utmost care. Several fine ranches at private sale. Purchases and sales made of land of every description.

KILLIP & CO., 116 Montgomery street.

Russ House, 1009, 1011, 1013 and 1015 J Street, SACRAMENTO, CAL.

WHITMAN PARK SADDLE.

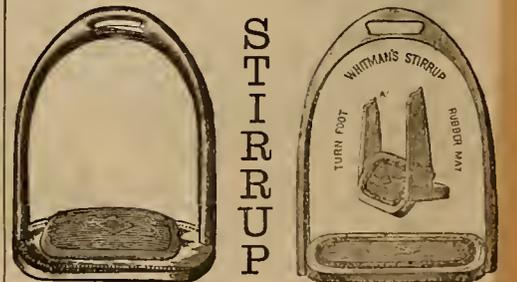

EASY AND SAFE

Riders or those who intend to become good riders should try these saddles. In conjunction with the WHITMAN COMBINATION HALTER-BRIDLE and the WHITMAN RUBBER-FOOTED STIRRUP these are the most stylish and comfortable outfits in use. They can be finished to suit any taste at from \$15 upwards.

JOHN A. MCKERRON,

230 and 232 Ellis St., Sole Agent for Pacific Coast.

WHITMAN'S RUBBER-FOOTED STIRRUP

THESE STIRRUPS ARE VERY HANDSOME AND THE RUBBER MAT A GREAT CONVENIENCE AND COMFORT TO THE RIDER, AS THE SLIGHT AMOUNT OF ELASTICITY PREVENTS SHOCK, WHILE THE ADHESIVE PROPERTY OF THE RUBBER HOLDS THE FOOT IN PLACE WITHOUT EFFORT.

No person after once using them will use any other.

JOHN A. MCKERRON,

230 and 232 Ellis Street, Sole Agent for the Pacific Coast.

RAWSON'S (Self-Adjusting) U. S. ARMY

THE BREEDER AND SPORTSMAN, a weekly journal devoted to the interests of breeders of domestic animals and the advancement of all legitimate sport. Subscription price, \$5 per year. JOS. CAIRN SIMPSON, Editor. The above treatise, 200 pages, will be sent free to yearly subscribers who send orders direct to the office. 508 Montgomery Street, San Francisco.

ASHLAND PARK TROTTERING STUD NEAR LEXINGTON, KY. B. J. TREACY, PROPRIETOR. THIS IS STRICTLY A BREEDING FARM. FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Adm. In. Trotter, North Star Mambrino, Bourbon Chief, Regular, Balsa, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-171 B. J. TREACY, Lexington, Ky.

HARNESS AND SADDLERY. J. O'KANE, 267 Market Street, San Francisco. WHOLESALE AND RETAIL dealer in Harness, Saddles, Blankets, English Race Goods. And everything necessary for horse or carriage use. Horse Boots a Specialty. Agent for Dr. Dixon's Condition Powders. Repairing promptly attended to. PAUL FRIEDHOFER, PATHOLOGICAL HORSE-SHOER, 116 Washington Street. PRACTICAL IN ALL ITS VARIOUS BRANCHES

## ATHLETICS.

### Harmon and Kittleman Again.

The much-talked of and long-looked for race between Harmon and Kittleman is still in the same position, with the exception that new complications have been brought about by the arrival of Harmon from Victoria, that, to say the least, places both men in an awkward position, and seems to show that either one or both do not want to run, or that they are afraid, although both men say they are willing and anxious to run, but at present positively refuse to take the necessary steps for the arrangement of the match.

Before the arrival of Harmon, from the talk of Kittleman and Harmon's friends, we thought it would only be a matter of a couple of hours, at the most, for a match to be arranged between these two celebrated sprinters, and that the delay then was only occasioned in waiting for an answer from Harmon as to when he would arrive. The matter now stands as follows: Some three weeks ago Kittleman published a series of challenges in the BREEDER AND SPORTSMAN, including a sweeping one to Harmon particularly, or any man in the United States, for a race of 100 yards for from \$2,500 to \$3,000 a side, but did not accompany the challenges with any forfeit, which is customary in all such cases, but stipulated that the man and money were ready, and would be forthcoming on the acceptance of any of them by addressing him at the Lick House.

On last Thursday Harmon arrived, and he says, in answer to the challenge, and to make the race, but on discovering that no forfeit had been posted, he is simply waiting for Kittleman to make a deposit with some responsible party, and name the amount he will run for, and he says he will cover it. But as to making any overtures or posting any forfeit himself, he will not as yet, as he considers it to be the duty of the other party, if he desires to run him again, and on his part would have the appearance of "hounding" a man whom he has lately defeated.

Kittleman now comes in with the claim that it is Harmon's place to open negotiations in reply to his challenge, and signify his willingness to run, and he will immediately post his money. So the matter rests.

### The Coming Six-Day Race.

In the coming six-day match, under the auspices of Muldoon, the following is the list of entries and their records, as far as known: First on the list is Muldoon's "Unknown." The only information in regard to this mysterious individual is that Muldoon has made a wager of \$1,000 that he will beat the best record made on the coast (518 miles) by 32 miles, necessitating the performance of 550 miles in the six days.

Then comes Frank Hart of Boston, winner of the O'Leary belt in New York city, 565 miles; the Astley belt, 547 miles; the Rosa belt, 541 miles; the Diamond belt, 537 miles, and other events.

Next appears the name of Charles A. Harriman of Haverhill, Mass., with a record of 530 miles, fair walking, in O'Leary's race in Chicago; 500 miles, Casino, Boston; 233 miles in 75 hours; 118 miles in first 24 hours; 216 miles in first 48 hours; 300 miles 60 yards in 72 hours; 121 miles 355 yards without leaving the track.

Following Harriman is Frank L. Edwards, New York city, winner of the first race for the California diamond belt; second in second race for the same trophy; second in third race, in which Mr. Edwards made a record of 510 miles; winner of the Los Angeles race, making 476 miles on a 28-lap track.

Among the other competitors there are a number of the best known California long-distance men, viz., P. Guerrero, W. H. Dancer, William A. Ross, A. R. Reid, N. A. Powers and W. Cowell.

The track will be ten laps to the mile, and Mr. Engelhardt will use his own system of double scoring, i. e., pegboards and score-sheets.

On the opening night, Sunday, January 12th, there will be short races for Policemen, Firemen, and A. D. T. Co.'s messengers, which promise to be very interesting.

Last Wednesday afternoon the visitors at the Recreation Grounds were given quite a treat, in the shape of a 100 yard race between W. C. Lubbock and J. W. Flynn. The latter has improved so remarkably in the last few weeks, while under the guidance of Kittleman, that his friends claim him to be the best second-class man on the coast, and predict that with another year's experience will not be unplaced in first-class company. The race on Wednesday was brought about during an argument over his late improvement, and his friends claiming that Lubbock could not again beat him with the same handicap allowed him in the last Olympic Club games

of 4½ yards, in which, however, they were mistaken, as Walter defeated him handily in 10½ seconds.

### Notes of the Week.

The Recreation Grounds present a livelier appearance every afternoon than has been seen in athletic circles in years.

A great deal of interest is felt, at present, in sports of all kinds, and a great many professionals and amateurs are busy keeping themselves in practice. Many persons daily visit the Recreation Grounds, where, as spectators, they can watch the men at their exercise, or, as athletes, they have good opportunities to work as hard as they desire. The coming six-day pedestrian tournament, with the attendant small matches, has brought many pedestrians to this resort, where a track can be had that is nearly always dry and in good order. Among those training for his contest are W. A. Ross, F. H. Hart, C. Dancer, F. Edwards, "Professor" Reed, and several others. Frank Hart has been taking his exercise there for nearly a week. After entering the track and warming up by light walking and running, he lets out and will run for half or three-quarters of an hour or more, and after a good bath and dry rub-down he rests the balance of the day. W. A. Ross of San Mateo, takes a similar course of practice, but he subjects himself to much heavier exercise than many of the others, as he runs much of the time. This is probably to reduce his weight.

The sprinters, headed by Harmon and Kittleman, and the lesser lights, J. W. Flynn, W. C. Lubbock, Mike Geary and Mike Kennedy, will probably enter in some of the short races at the pavilion, and they are taking regular exercise. It is rarely that one sees a man strip to as good effect as Kittleman, as he is in splendid condition. The sprinters have short races every day, and make very good time, 10½ to 11 seconds being the average.

During the last few days the track has been liberally patronized by the bicyclists recently arrived from the East. John S. Prince of Boston, the champion short-distance bicyclist of the United States, rides the silent steed around the track. H. W. Higham, the long-distance champion of England, keeps him company. They occasionally indulge in a spurt of a few miles, to the gratification of the spectators and athletes.

E. A. McMillan, the athlete, is exercising daily with heavy weights for the match with M. Keehan of Santa Cruz, that is to come off at that place on the 27th inst. The Scottish rules for putting the heavy stone will be observed. The weights will be 20, 25 and 30 pounds. The match is for \$250 a side.

T. W. Eck, Canada's bicycle expert, and Miss Armaindo, the young lady bicyclist of the same Dominion, are often to be seen riding, side by side, around the track. Fred S. Rollinson, the fancy rider recently from New York, joins the other cyclists and indulges with them in an occasional race.

McIntyre, who was in the last six-day tournament, is also taking light exercise, but for no particular contest.

## ROWING.

### Festive Oarsmen.

Some time ago Supervisor Sullivan rowed T. Flynn of his own club, the wager being a dinner. The athletic official lost and Wednesday night discharged the obligation by dining a number of oarsmen and admirers of aquatic sport. Edward Hanlan was one of the guests. The dinner was served in a popular down-town restaurant, and was a truly elaborate spread; the wealth of the vineyard vieing with the choicest productions of an artistic cuisine. The guests were all provided with keen appetites as became valiant oarsmen, and attacked the festive board with a heartiness that was highly complimentary to the attractiveness of the menu. It would be impossible in the narrow limits of the rowing column to describe in full the merits of each course, from the oyster to the omelet. The length of the bill of fare was only exceeded by the flow of goodwill fellowship that increased as the bottles were stacked up until the lines of empty Roderer flasks looked as imposing as the late review of the Third Regiment. The champion oarsman of the world showed himself as much a *bon vivant* as an athlete, and shirked nothing from the first glass of Sauterne to the last drop of Cognac and coffee. His glass was never dry and never full, a happy state of affairs, which was paralleled by the condition of the champion himself. Nothing took the edge off his appreciations of a good dish, and his clearness of head and steadiness of legs only increased with the deflection of the wine cellar. When it came to the

speech making, Mr. Hanlan showed himself a man of much intellectual aptness. He spoke at some length and in a manner which greatly pleased his numerous admirers who were present. He incidentally referred, among other things, to the temptations of every prominent professional athlete, and the impossibility of any man retaining a leading position in the sporting world unless actuated by honesty. The champion's speech was listened to with interest, as it was not expected that he would show so much oratorical ability. He apologized for any references to himself or his performances, but said that among so many oarsmen a brother oarsman could be pardoned for talking a little "shop." In illustration of the difficulties of following an honest course that meet professionals, Mr. Hanlan mentioned his own memorable case, when after the Trickett race all that was given him out of the stake of \$2,500 was the paltry sum of \$100. The matter was written off at the time in the leading sporting papers of England, and was so disgraceful that in referring to it the champion could be excused if he displayed some feeling instead of speaking of it laughingly. Mr. Flynn responded in behalf of the resident oarsmen. Mr. Louis White, Mr. M. Price and Supervisor Sullivan also replied to appropriate toasts. There were gray streaks in the east before the banquet ended.

### Not Likely.

The *Turf, Field and Farm* of January 4th says: After the Thanksgiving Day regatta fiasco at Vallejo, Cal., Edward Hanlan publicly offered \$1,000 to any Western sculler who would defeat him in a three-mile with turn race, the contest to take place in the vicinity of 'Frisco. Austin Stevenson at once accepted the defi, and the race was arranged to take place on the 5th of January. On Monday we received a telegram from San Francisco announcing that at Hanlan's request the race had been postponed until the spring, when it will probably be decided at Point of Pines, near Boston, Mass. The champion's reasons for deferring the contest were that the East could furnish a better course, and what is still of more importance, larger returns in the shape of gate moneys.

This is not likely to prove true. Hanlan informed the representative of the BREEDER AND SPORTSMAN this week that he would go very soon to Australia, and there possibly row several matches. The Australians have offered Hanlan opportunities to make matches with some of their best men, but Hanlan does not care to make any engagement until he has seen the country and judged of the possibilities of getting into proper condition there. Since Hanlan contracted typhoid fever on his trip across the Atlantic last year he has entertained a wholesome dread of sea voyages, and hence his aversion to making a match here that would necessitate a trip of some thirty days on the ocean. He wisely prefers to defer the ratification of contracts with Australian oarsmen until he reaches the colony.

### Petersen and Lee.

So far, no arrangements for the match between George W. Lee and Henry Petersen have been made. Hanlan says that Lee is really anxious to make a match, and he (Hanlan) would like to see it made, though he will not be here to see the race. Hanlan has a very high opinion of Petersen. He says "why should not Petersen be able to row any one? He is a wonderfully powerful young fellow, rows in first-class form, and is a thorough waterman. Why, he ought to be able to beat me," says the champion. Nevertheless, Hanlan would row him for \$2,500 a side.

Lee is hard at work, on Oakland creek, training for his race with Stevenson. Oakland observers say that Hanlan went over the ferry the other day after two weeks' recreation in the city, and though fat, beat Lee too easily all over the training course.

The following-named officers of the Stockton Boat Club have been elected. President, Robert E. Murray; Vice-President, James H. Ward; Secretary, John McCall; Treasurer, C. J. Wolf; Captain, J. McGinnis; Lieutenant, R. Butler; Trustees, S. D. Furry, Edward Moore, A. B. Treadwell.

The American-bred Wallenstein is now at the stud at Lord Ellesmere's paddocks near Newmarket. His companions there will be Hampton (sire of a number of winners) and Sir Frederic. The latter is a full brother to Mr. W. L. Scott's Kantaka, and both are half brothers to Hermit.

Potts & Harrison, Helena, Montana, have recently purchased the brood-mare Misadie, chestnut, foaled 1875, by Enquirer, out of Metals, by Australian, her dam, La Grande Duchesse, by Lexington, and her bay colt Post Trader, foaled 1852, by Baleklava.

# TURF AND TRACK.

## The Rancocas Stable—Pierre Lorillard's Luck in 1883.

[New York World.]

With no less than thirty of the principal fixed events—including stakes and handicaps—won by the Dwyers, it is not surprising that, although Mr. Pierre Lorillard is second in the list of winning owners, the gross earnings of his stable amount to only \$58,295, as against \$137,780.50 won by the Brooklyn brothers. While in the matter of entrance money for stakes and purses Mr. Lorillard paid out \$11,130, leaving a net balance of \$47,165, a sum that can scarcely begin to pay the current expenses at home any more than the £432 won in England will pay the expenses of the division of the Rancocas Stable, which Tom Cannon trained at Stockbridge during the past season.

As usual, Mr. Lorillard had much the largest number of horses in training, showing during the year no less than twenty-four head, or ten more than the Dwyers. But his traveling was much less, for while the Brooklyn "red and blue" was seen at Jerome Park, Sheepshead Bay, Mounmouth Park, Saratoga, Louisville, Washington and Baltimore, the "cherry and black," was not seen either at Saratoga or Louisville, but with the following horses the stables ran only at Jerome Park, Sheepshead Bay, Washington and Baltimore. The full record for the year is as follows:

HORSE.	Times started.	Times first.	Times second.	Times third.	Gross amount won.
Pizarro, 3, by Adventurer.....	21	10	5	5	\$12,485 00
Breeze, 3, by Alarm.....	18	8	7	3	7,655 00
Parole, aged, by Leamington.....	21	7	7	3	6,195 00
Aranza, 5, by B. Scotland.....	21	10	4	1	5,945 00
Leo, 2, by Duke of Magenta.....	14	3	4	4	5,916 00
Gonfalon, 3, by Glenlyon.....	18	3	6	1	3,507 50
Blossom, 2, by Saxon.....	9	1	4	4	3,000 00
Amazon, 4, by Moccasin.....	16	3	4	1	2,530 00
Drake Carter, 3, by Ten Broeck.....	7	2	1	1	2,500 00
Huron, 2, by Saxon.....	12	1	1	4	2,000 00
Inconstant, 3, by Glenlyon.....	10	2	1	2	1,456 60
Zamora, 2, by Saxon.....	4	2	1	2	1,000 00
Iroquois, 5, by Leamington.....	3	1	1	2	1,000 00
Battledore, 3, by Glenlyon.....	8	1	3	1	975 00
Hiawasse, 4, by Saxon.....	5	1	1	1	950 00
Manitoba, 2, by Glenlyon.....	4	1	1	2	500 00
Westover, 2, by Glenlyon.....	2	1	1	1	500 00
Nimrod, 3, by Glenlyon.....	2	1	1	1	100 00
Wyoming, 4, by War Dance.....	1	1	1	1	70 00
Herbert, 4, by Genelg.....	1	1	1	1	—
Venetia, 3, by Glenlyon.....	1	1	1	1	—
Tornado, 2, Glenlyon.....	2	1	1	1	—
Brilliant, 2, by Glenlyon.....	2	1	1	1	—
<b>Totals.....</b>	<b>202</b>	<b>57</b>	<b>50</b>	<b>28</b>	<b>\$58,295 00</b>

[Note—One of the wins credited to Pizarro and Gonfalon is the "walk over" that they had for the Trenton Stakes at Monmouth Park when only half the added money was given.]

Of the above, Nimrod and Venetia were sold out of the stable to Mr. P. Lorillard, Jr., as also was Westover to W. Lakeland, Inconstant to P. Tobin, Battledore to C. Littlefield, Zamora and Manitoba to Morris and Patton, Wyoming to J. Henry, and Brilliant to the Excelsior Stables. Several of these, including Nimrod, Westover (under the name of John Ledford), Battledore and Inconstant, won races for their new owners.

A brief survey of the performances of the three-year-olds in the Dwyer and Mr. Lorillard's stables will at once show the reason for the great difference in the earnings of the two. The Dwyers had Miss Woodford, George Kinney and Barues, a trio that won no less than twenty-six races out of a total of thirty-six starts. While the Rancocas three-year-olds included the imported colt Pizarro and the home-breds Breeze, Gonfalon, Inconstant and Battledore, and Drake Carter, purchased in August, who certainly proved anything but a success, only winning twenty-six races out of eighty-two starts. The principal winner in the list is the English colt Pizarro, which, before the racing began at Jerome Park last June, was expected to prove a colt of more than ordinary ability, but his easy defeat by George Kinney for the Withers at Jerome, and for the Tidal Stakes at Sheepshead Bay, ended that romance, and the "talent" at once set him down as only a fair "plater," while in one quarter he was named the "imported brand," a title which, in spite of his beating George Kinney for the Ocean Stakes at Mounmouth Park on the fourth of July, he retained all the season, owing, no doubt, to the poor exhibition he made three days later for the Lorillard Stakes, when, with the full three-year-old weight—118 pounds—he was a had third to both Kinney and Barnes. Pizarro subsequently won the Eatontown Stakes, an all-aged event, with allowances from Jack of Hearts and four others, and divided the Trenton Stakes with Gonfalon; they galloping over for half the added money. Later in the meeting, Pizarro won a purse race, and was second to Drake Carter (then owned by Morris and Patton) for the Omnibus Stakes. At Sheepshead Bay, Jerome Park, Washington and Baltimore Pizarro was seen in a number of races, about half of which he won, thus ending the season with a reputation in no sense equal to that of a Rancocas three-year-old. What he will do next year is a problem, but he ought to do well in short dashes, for which the weights are reduced by allowances now coupled with many of the weight for age purses.

Of the other three-year-olds, Breeze showed the best, but her best was far below what was expected. The only fixture credited to her was the Passaic Stakes at Monmouth Park. She did better, however, in open races, winning four purses and three handicap sweepstakes, one of which was at three-quarter-mile heats, which she, with 109 pounds, won in the creditable time of 1:15 and 1:16, which warrants the belief that, like Pizarro, she will be found at home during the coming season in short races. Another disappointment was Gonfalon, who promised well in a majority of his races, but invariably failed at the decisive moment with the result that he was second in no less than six races, winning but two, viz., the Palisade Stakes and a handicap sweepstakes, both at Monmouth Park. Of the other three-year-olds, Inconstant and Battledore were both tried and found wanting, while of Drake Carter it must be said that it was not until late in the season that Byrne—Mr. Lorillard's trainer—seemed to understand what was necessary to fit him for a race, the colt apparently being one of those animals to which no fixed rules will apply, but for which some new methods must be thought out for each race. Anyhow, it is to be hoped that Byrne will bring Carter out in fine form next June, and capture some of the rich handicaps or cups.

Of the all-aged lot Parole is still, as he will no doubt be for years to come, the hero of the Rancocas Stable. His year's work was very creditable, he winning seven out of the twenty-one races he ran in, while he was second in no less than seven others. None of the races won were of special importance, with the exception, perhaps, of the Washington

Stakes, run at Washington in October, when with 102 pounds he beat Rica, Colonel Sprague and Compensation, each at the same weights. Soon after which Parole was sent back to Rancocas, from whence it is to be hoped that he will come next spring bright and active as of old, and in a condition to win the Fordham or Great Metropolitan, two honors which Parole has yet to add to his long list of fixtures won. His record, however, up to the present times is as follows:

Year.	Age.	Times started.	Times first.	Times second.	Times third.	Gross earnings.
1875.....	Two years.....	6	4	1	—	\$8,500 00
1876.....	Three years.....	7	3	2	—	8,103 00
1877.....	Four years.....	12	8	3	3	14,940 00
1878.....	Five years.....	10	8	1	—	8,450 00
1879.....	Six years.....	11	5	—	—	19,493 50
1880.....	Seven years.....	14	4	2	1	1,747 75
1881.....	Eight years.....	24	12	4	4	9,820 00
1882.....	Nine years.....	21	8	2	6	5,025 00
1883.....	Ten years.....	21	7	7	3	6,195 00
<b>Totals.....</b>		<b>126</b>	<b>50</b>	<b>22</b>	<b>15</b>	<b>\$82,184 25</b>

Next in the aged list is Aranza, who, although only arriving home from England in July started and won her first race on August 4, and she continued to do so well that between that date and the third week of October she started in no less than twenty-one races, of which she won ten. In fact so great was the difference between Aranza's performances in this country and in England, that they can only be explained by the theory that she was afraid to run on the turf, for she has certainly shown no such cowardice here, as she is reported to have exhibited at the post in England. As to what Iroquois did after his return, it can only be said that his preparation for the Mounmouth Stakes was too hurried, which, followed as it was by a second severe race two days later, so completely used up the Derby and St. Leger winner of 1881 that it was not until the middle of October that he again ran, which he did at Baltimore, when he was beaten by Miss Woodford and George Kinney. But so well did he show for part of the distance that Mr. Byrne wanted to match him against Miss Woodford for a mile and a quarter. Bad weather, however, set in and the affair fell through. Whether he will be able to do better next summer, time alone will show.

As to the two-year-olds none of them can be said to have done well. Leo showed the best of the lot, but only won three out of fourteen starts at the tail end of the season. But as they included the Champagne and a selling sweepstakes at Jerome Park, and the Arlington Stakes at Washington, Leo's gross earnings not only put him at the head of the two-year-old string, but placed him fifth in the list of winners of the stable. Blossom is second in the two-year-old list, thanks to the Optional Stakes at Monmouth, for which she beat Leo, Thackeray, Woodlark and Laura Gould. Huron, with a two-year-old purse and the Home-Bred Produce Stakes, earned \$2,000, while two small purses were worth \$1,000 to Zamora, who, with Manitoba, was subsequently fairly successful at Memphis under Morris and Patton's purple jacket and white cap.

Of the others, with the exception perhaps of the four-year-old Amazon, their record as above is sufficient. Amazon won three handicap sweepstakes, two at a mile and a furlong and one at a mile and a half, under such light weights, however, that the performances were scarcely creditable, ninety-eight pounds being the highest weight carried.

In the matter of riders under the Rancocas "cherry and black," Shafer carried off the honors, owing principally to the number of races run in the middle weights, which also brought young Olney into second place, he riding 18 winners to Shafer's 21. The heavy weight work was left to Feakes and Hayward, "Polly" riding 13 winners to "Billy's" 2, the latter however, only wore the colors during the last weeks of the season. The full record for the season, however, is as follows:

NAME.	Total number of times.	Times first.	Times second.	Times third.	Gross earnings.
Shafer.....	75	21	18	10	\$23,685
Olney.....	67	18	19	10	16,200
Feakes.....	41	13	9	5	13,270
Hayward.....	8	2	3	2	2,800
Gallagher.....	3	2	—	—	1,750
Hyslop.....	6	1	1	—	500
Fuller.....	1	1	—	1	—
Donohue.....	1	—	—	—	—
<b>Totals.....</b>	<b>202</b>	<b>57</b>	<b>30</b>	<b>28</b>	<b>\$58,295</b>

The stable for 1884 will be a large one, especially in two-year-olds. For, as will be seen below, it will have no less than twenty-two at that age, all of which, with one exception, are by Mortimer. That they will succeed better than the young Glenlyons did is to be hoped for by all interested in the turf. Rmorr says that a majority of them did well in their trials at Rancocas last September. The three-year-old list is a limited one, as also is the four-year-old list, but as they are a well-bred lot, Byrne may succeed better with them than he did in 1883. Of those five-year-old and upward, all, with the exception of Parole, are more or less under suspicion of non-soundness, while Parole's age is such that he is likely at any time to lose his speed; that his retirement may not only be expected, but enforced; at the same time he may prove a second Hickory Jim, and in his old age prove a veritable "Prince of the T. Y. C."

Parole, aged, by Leamington—Maiden.

### Six-Year-Olds.

Iroquois, by Leamington—Maggie B. B.  
Aranza, by Bonnie Scotland—Arizona.

### Five-Year-Olds.

Herbert, by Genelg—Kate Mattingly.  
Pinafore, by Enquirer—Mollie Rogers.

### Four-Year-Olds.

Pizarro, by Adventurer—Milliner.  
Drake Carter, by Ten Broeck—Platina.  
Breeze, by Alarm—Blairgowrie.

### Three-Year-Olds.

Leo, by Duke of Magenta—The Squaw.  
Young Duke, by Duke of Magenta—Hortense.  
Huron, by Saxon—Vaudalite.  
Eudymion, by Ten Broeck—Mollie Rogers.  
Blossom, by Saxon—Blairgowrie.

### Two-Year-Olds.

Holder, by Mortimer—Benlab.  
Cholula, by Mortimer—Fannie Ladlow.  
Neptune, by Mortimer—Highland Lassie.  
Enigma, by Mortimer—Second Hand.  
Hemsdal, by Mortimer—Vandalite.

### Two-Year-Old Fillies.

Cyrella, by Mortimer—China.  
Dione, by Mortimer—Explosion.  
Cricket, by Duke of Magenta—Felicity.  
Kestrel, by Mortimer—Florence.  
Unrest, by Mortimer—Letola.  
Iha, by Mortimer—Lizzie Berry.  
Chimera, by Mortimer—Lizzie Lucas.  
Katrine, by Mortimer—Lon Lanier.  
Marvel, by Mortimer—Marie Michon.  
Peoria, by Mortimer—Matchless.  
Wanda, by Mortimer—Miumie Minor.  
Bahama, by Mortimer—Notre Dame.  
Heva, by Mortimer—Ontario.

### Two-Year-Old Geldings.

Adonis, by Mortimer—Alice Ward.  
Goblin, by Mortimer—Gondola.  
Grendal, by Mortimer—Gyptis.  
Zangbar, by Mortimer—Zoo Zoo.

## Chicago's Swell Jockey Club.

[Inter-Ocean, January 1st.]

One of the most important, and certainly the most aristocratic club in the city, is the new Washington Park Club. Not only in the turf world, but in the social as well, this institution takes precedence. The Jockey Club in London, embodies the highest aristocracy in England, and to be a member of that association is considered one of the leading honors of the country. Several crowned heads are numbered on its roll of membership. Many of the nobility are also members, but the mere fact of their being noblemen is not a qualification for admission to the club. The committee on membership scrutinize the application in the most rigorous manner, and the fact of a gentleman's election to the London Jockey Club is heralded as a distinction as notable as a gazette in the army.

France has its national jockey club, located in Paris. Its exclusiveness is noted the world over. Many Americans of fabulous wealth, resident in Paris, have tried with unavailing effect to gain an election in that organization, but no influence could be brought to bear that would overcome the exclusiveness of the by-laws. New York has in the American Jockey Club an institution comparing favorably with these two clubs in Europe. It is composed of the best men in the aristocratic social circles of New York. August Belmont, Leonard Jerome, James Gordon Bennett, D. D. Withers, Charles Constable, Henry Hilton, Augustus Schell, Whitelaw Reid, Russell Sage, Pierre Lorillard, William A. Travers, Judge James Munson, and others of equal wealth and celebrity in New York city. This Club is fully as exclusive as either of the European clubs. It is a power in the world of fashion, and its endorsement stamps the thing as being proper.

That Chicago was ready for such an institution is shown in the altogether splendid response which has come to the call of the directors of the Washington Park Club. The first thought of this club originated in the brain of Albert S. Gage, Esq., who has never faltered for a moment in his efforts to make this club a grand success. Through his instrumentality a stock company was formed with capital stock of \$150,000. With this start the club has to-day one of the finest courses in the country, if not in the world. They own eighty acres of land just south of South Park, lying between Sixty-first and Sixty-third streets, Cottage Grove avenue and the Grand boulevard.

Upon this has been erected a club-house, which cost upwards of \$50,000, and which far surpasses anything of its character in the world. Of course, the London Jockey Club has extremely valuable property in its town house, not to speak of the various courses and other houses it owns at Epsom and elsewhere. But there is nothing in America that can compare with the Washington Park Club. When the gates are opened, next June, Chicagoans will see the handsomest club-house in the United States. In the laying out of the ground the club has had the good fortune to have the combined talents of Mr. S. S. Beman, who built Pullman, and Mr. N. F. Barrett, well known in the East and West as a landscape engineer. These gentlemen have worked together with a view of making the buildings and landscape harmonize, and the entire plot as picturesque as possible. There will be ample drives for the club members, and a perfect track for public meetings and members' speed trials. The grand stand will be the finest in the world, being 500 feet long, two stories high, fitted with refreshment rooms, parlors and reception rooms, the whole costing upwards of \$40,000, and capable of seating 10,000 people. Stables are now completed to accommodate 280 horses, and as many more will be erected in the spring.

The club-house, which will occupy a position twelve feet above the track, with a lawn sloping from it, will be completed by May 1st. It will be 136 feet long, by 97 wide, and two stories, basement and attic in height. In the basement will be the kitchen, store-rooms, heating apparatus, cellar, etc., and the attic will contain the servant and lumber rooms. On the main floor will be a spacious entrance-hall, club office, cafe (with serving and wine rooms off), billiard room, a ladies' waiting-room, a parlor for the directors, a lavatory, and five private dining rooms. Extending around the entire building on this floor is a veranda 16 feet wide, which will be provided with chairs and other conveniences for witnessing races. The second floor contains a grand dining-hall, seven private dining rooms, wine and serving rooms, a grand hall, ladies' parlor, ladies' toilet and private room and cloak room. A covered balcony, 16 feet wide, also runs around the entire building of this story. All of the rooms and halls have fire-places specially designed for each by Mr. Beman. Upon the third floor are also some sleeping-rooms and bath-rooms, and upon the roof of the building are two open observatories, from which every part of the park and surrounding country can be seen. The grand dining-hall referred to will have an elaborate timbered ceiling, and all of the private dining-rooms will have sliding doors, so if desired they may be thrown together. The main entrance halls and staircases will be finished in white ash, and the rest of the structure will be treated in white pine. The main staircase will be an elaborate affair, and will be a very attractive feature of the large hall. The families of members are expected to visit the club, consequently the necessity of the strict scrutiny spoken of previously. At the present moment there are 300 members admitted to this club.

The initiation fee is \$150, and the applications for membership are quite numerous. Before the gates open it is expected that there will be 500 members. There is not a name on the rolls but what has passed the most rigid scrutiny, and a membership in the Jockey Club is virtually a guarantee of the owner's standing in society. The club have opened stakes for the various ages of thoroughbreds, and will give their inaugural meeting, beginning June 28th, closing July 12th. Racing on alternate days. In the young classes the stakes

closed October 15th, with 375 nominations. The entries for the general meeting close January 15th, at which time fully as many more entries will probably be made. This new club will offer an opportunity to those who enjoy the better qualities of the turf sports. The thousands who have each summer gone to Saratoga and other Eastern resorts to enjoy racing will now make this city the terminus of their summer tours. To the residents of Chicago who have long desired an objective point for their drives will find in this club the fulfillment of these desires. It will elevate the taste and benefit the turf. Fine turnouts will be numerous, and the sport will be dignified. Mr. J. E. Brewster, the efficient Secretary, has done much to further the success of the club, he being a member of the American Jockey Club of New York.

### The Hoof of the Horse.

From the *Federal Australian* is copied the following easily understood description of the hoof of the horse, and is well worthy of close attention, as it compresses into small space the essential features of this important organ. Notwithstanding that the columns of the BREEDER AND SPORTSMAN have, at various times, been taken up with dissertations on this subject, we do not feel like offering apologies, considering it by far the most important in the whole range of stable economy. The importance is manifest from the many volumes that have been published, the many new schemes advocated, and the many patents issued for what is claimed to be valuable improvements in horseshoeing. More than this, the United States Government was induced to give a man \$25,000 to teach the veterinarians in its employ a system which has been the means of greater injury to horses' feet than anything excepting the barbarities of the forge. The great trouble has been, and is still, the pernicious idea that nature had made a great mistake in giving an animal such an imperfect pedal support as she had appended to the limbs of the chables, and that there was an imperative necessity for getting as far away from the original model as possible. Now, let us suppose that a person is not acquainted with the traditions of the shoeing-forge and the whimsies of grooms, or that after giving years of trial and observation to the systems recommended, and discovers that they are all wrong; that having this fully impressed on his mind he seeks for further light, and in furtherance of the endeavor to obtain knowledge he commences the study of the foot. We will further suppose that in the pursuit he reads the article quoted from the *Australian*. He finds that it agrees with the specimens he has examined, and that it also is in accord with the teachings of equine anatomists of recognized standing. He learns that the wall is a hard substance formed to resist wear, and yet it is so constructed that there is a chance for expansion and, consequently, contraction. Proof of this is the comparative thinness of the horn at the quarters, the yielding heels and the grooves (commissures) between the frog and the bars. To make this still more palpable he finds that the inner part of the wall has attached to it the "horny laminae," which interlock with the "sensitive laminae" projecting from the pedal bone. If it were not intended that there should be expansion, the inner surface of the wall and the outside of the pedal bone would be better to be smooth and only coated with the same kind of tissue that are placed between the bones forming the joints. But the expansion without the guard of the laminae would permit the pedal bone to descend, bearing heavily on the lower strata, bruising the sensitive portion, and causing acute lameness when the pace was fast. By taking a pack of cards and putting them together alternately, with one-third of the length inserted into the divided portions, it will be found that even a slight pressure makes it difficult to pull them apart.

In place of twenty-six there are several hundred of these laminae, and the most extensive motion possible in the wall only slightly lessens the power of resistance. We have read of an experiment to test whether the sole sustained much of the weight, and though it was a cruel test it demonstrated that by far the greatest proportion of the weight was supported by the laminae. The sole was cut entirely away, and still the descent of the pedal bone was not increased. The only time we saw the "Dunbar operation" performed was an exemplification of this, and still more cruel, as, after the sole was cut through until the animal stood in a puddle of blood, a heavy shoe was nailed on and the heels forced out with a powerful screw.

It will be admitted, by any person of reasonable intelligence, that interfering with this provision of nature to moderate the effects of concussion must result in injury, and also that an unyielding metallic band fastened firmly to the wall, extending from heel all around to heel must render useless the beautiful contrivances to "protect" the interior from injury.

It is not the intention, at present, however, to amplify on the topic, though we earnestly urge our readers to give close attention to the article copied, as every paragraph will afford matter for reflection.

The hoof is divided into the "wall" or "crust" the "frog and coronary frogband," and the sole. The wall covers the sides of the foot from the coronet to the ground, and at the heels is suddenly bent inwards toward the center of the sole, forming the bars. This part of the hoof is intended to come in contact with the ground, and to it the shoe is fitted and fastened by driving the nails through and clenching them. The upper margin of the wall is thin, its inner edge being hollowed out to receive the coronary cushion. From the lower edge of this concavity the horn is of about equal thickness from top to bottom. The inner surface is covered with horny laminae corresponding to the sensitive laminae covering the pedal bone, with which they dovetail, there being one horny leaf to two vascular ones. The inner surface of the lower edge is firmly united to the horny sole, forming a light narrow band, called the white line or zone. The outer surface is smooth and shining in the healthy state, being covered by a kind of varnish secreted from the glands at the coronet. The thickness of the wall varies in different parts. In

front it is deepest and thickest, but towards the quarters and heels it becomes thinner, while at its inflexion it is particularly strong.

The horny sole fills up the space within the lower margin of the wall immediately beneath the under surface of the pedal bone, to which it corresponds in its concavity. It is fibrous in structure like the wall, and the fibres take the same direction. The sole is thickest round its outer border where it joins the wall, and thinnest in the center where it is most concave. The horn of the sole differs from that of the wall, and breaks off into flakes when it gets to a certain age, while that of the wall grows to an indefinite length, if not in continual wear, or kept short by the farrier's instruments. The sole is therefore better calculated to bear weight than to sustain wear.

The horny frog is the exact duplicate of the plantar cushion which it protects. It is triangular in shape, and fits in between the bars and the back part of the hoof, its point extending forwards. The fibres of the frog take the same direction as those of the wall and sole, but are much finer and slightly wavy, which conduces to its elasticity. The frog corresponds to the epidermic pad on the soles of the feet of the elephant, camel, bear, lion, dog, cat, etc., and is evidently designed to come in contact with the ground, and to prevent jar and injury to the limbs. The frog, like the sole, throws off flakes when it attains a certain stage of growth, but these flakes are more firmly attached than those of the sole.

The coronary frogband or periople is a continuation of the outer layer of the skin around the coronet and heels, being attached to the frog, with which it is identical in structure and texture. It is thickest at the upper margin of the wall which it covers, and may be easily seen where it has not been mutilated with the rasp. When wet it swells and softens, and on being dried it sometimes cracks or becomes scaly at its lower margin. Its use is to connect the skin with the hoof, and to protect the new horn constantly being secreted from the coronet.

Having now completed our description of the different parts of the foot, we will proceed to consider it as a whole. Looking at the sole of the hoof, it will be seen that the whole circumference of the wall, including that portion constituting the bars, is intended to come in contact with the ground, and from the disposition of its fibres is admirably adapted to resist wear and sustain weight. It will also be seen that it projects below the sole, except at its outer margin, to which the wall is firmly attached, and its thickness may always be ascertained by measuring the space between its outer edge and the white zone. This is an important matter to bear in mind, for even in a well-formed hoof it is seldom more than half an inch in thickness, consequently carelessness and tact are required in order to guard against wounding the sensitive structures within. The sole is more or less concave from its junction with the wall, where it is of equal thickness with the latter, and evidently intended to assist in relieving it of pressure. Although eminently adapted—from its shape, structure, and position—to carry a considerable amount of pressure, it must be borne in mind that the pedal bone is, to a certain extent, sustained in its position by the coronary, and plantar cushions, a due proportion of the weight being thrown upon the wall and frog. The frog is also an essential part of the weight-bearing surface, and in the healthy foot always projects below the sole, but seldom below the wall at the heels. Besides obviating concussion, it assists materially in supporting the tendons and in preventing slipping. A well-formed hoof has an angle of about 50 deg. Its ground surface should be nearly circular in outline, the sole slightly concave at the circumference, and deeper in the center. The border of the wall ought to be thick at the toe, gradually thinning towards the heels, but should be full and strong where it turns to form the bars. The bars should be free from fracture, and the frog moderately developed, firm and solid.

The horn is softest when newly secreted, but gradually becomes denser, harder and less elastic. In a state of health the growth of horn appears to be regular in every part of the hoof; but, under certain diseased conditions, it may be irregular in growth, and altered in character. Sometimes, through mismanagement or defective form, the horn grows more rapidly at one part than another. The part receiving the least pressure grows the quickest, hence the necessity of preserving the hoof in the best possible shape, otherwise the unevenness becomes aggravated. The horn grows more rapidly in some horses than others; the warm, dry climates are more favorable to its growth than cold, damp ones. This accounts for our Australian horses having so much better feet than those of Great Britain. The character of the locality in which a horse is reared has also great influence on the shape of the hoof. Horses reared on high and dry pastures, where the ground is firm and hard, have small but well-formed feet, with concave soles and little but firm frog. Those reared in marshy regions, on the other hand, have large spreading feet, the horn being soft and spongy, the sole thin and flat, and the frog very large and flabby. Change the relative situations of these horses, and nature immediately begins to transform the character of the feet, as well as the constitutional vigor of the animals. In horses accustomed to town work and stable keep, the wall of the foot generally grows at the rate of a quarter of an inch, or in this country probably more per month, so that the entire wall of an ordinary-sized hoof will have become regenerate in from eight to twelve months. The application of a blister or other irritant to the coronet will increase the rapidity of growth and thickness of the wall. In the natural state, if the wear is in excess of the growth, the animal is compelled, on account of the soreness induced, to rest until the worn hoof has recovered its proper thickness. On this account it was discovered, centuries ago, that by nailing an iron rim to the hoof the utility of the horse was increased a thousandfold. But if a shoe is allowed to remain on the foot for an indefinite period the growth of the horn is in excess of the wear, until an inordinate size is attained, and it becomes necessary to remove the shoe and allow the foot to wear down to its proper dimensions, as it is supposed the ancients did, or to remove the superfluous growth by means of instruments, and apply another shoe. The great fault against the present system of shoeing does not consist so much in the formation of the shoe, though a great deal may be said on that score, as in the mutilation the foot receives in its application.

### The Melbourne Cup Day.

One hundred and twenty-three thousand people is a grand attendance at any event, and when these are brought together by the attractions of the turf, it shows that the glorious sport is duly appreciated at the antipodes. The editor of the *Federal Australian* is not influenced by an over-sanguine enthusiasm in giving the following glowing account of the festival, as every one we have conversed with, who has been present at Flemington on the Cup day, are fully as fer-

vid in their eulogies. R. A. Cameron, who was honored by Queen Victoria giving him the right to prefix Sir to his name, has the still higher honor of having imported Leamington, Gleu Athol, Glenelg, and many others which have done so much for the blood-stock of the United States, and who has an intimate acquaintance with the race-courses of Europe and America, pronounced the Flemington the best he ever saw, the appointments far superior to any in England, France, or the United States, and the management of the best kind. Nothing surprised him more than the attendance, and the features which the *Australian* calls attention to also impressed him with the same ideas. "Show me the sports of the country, and I will tell you what the characteristics of the people are," is not far from the truth, and the countries which have such a fondness for the sports of the turf and the track as to draw thousands are in the van of all others.

Apart from the special purpose for which it was originated, and will always be maintained, the great racing festival held yearly at Flemington is worthy of note as an established Anstraban institution. The chief reason why Melbourne has been, by universal consent, chosen as the scene of the national sports is doubtless its central position. "All roads lead to Rome." Upon the noble city seated on the shores of Port Phillip, at the southeastern corner of the continent, all the lines of Australasian traffic and commerce converge. This advantage nature gives of her mere good pleasure, and it is simply impossible to reverse it by any artificial device whatsoever. But to the credit of the Victorians it must be said that they have done all their best to add the attractions of art to the advantages of nature. The Flemington race-ground is unrivaled for its situation by any other sporting site on the face of the globe, and the V. R. C. have spared no expense and no labor in making it the most commodious and well-appointed of resorts for holiday makers who love to witness the competition of swift-footed horses on the smooth greensward. The result, as seen on a grand Cup Day, when the skies are blue and bright, and when the sweet spring air has in it the delightful forecast of summer, is something that dazzles and delights at once the eyes of the intelligent foreigner. Year by year visitors from far-off lands declare, after visiting Flemington, that their utmost anticipations, and even their highest imaginations, of what Australia could show in the way of a great national gathering, have been quite thrown into the shade by the reality they have witnessed. The vast numbers gathered to see the sport—no less than 123,000 this year; the brilliancy of the entire spectacle; the air of thorough comfort, and even of wealth, which pervades the vast throng; the splendid dresses of the ladies; the total absence of anything in the shape of a proletariat class, or of the roughs and rowdies which form so conspicuous a part of the show at Epsom or Doncaster, and the thoroughly respectable behavior of the multitude, rendering the presence of the guardians of the peace a mere matter of form, all these features of the scene are well calculated to make a deep and abiding impression on the mind of a foreign visitor. He has before his eyes the visible proofs of the vast national wealth, and the characteristic spirit and enterprise, of the Australian people.

Viewed in this aspect alone, we say, the great annual race day at Flemington must be regarded as a settled national institution. It is right and fitting that once, at least, in the course of the rolling year, the flower, so to speak, of the Australian population should be collected together in one spot, to show the world what are really the physical and moral characteristics of this youthful nation. The sight is worth, to any observant and intelligent stranger, infinitely more than the perusal of a score of volumes. He learns from actual observation, in a few hours, more than years of reading and conversation could teach him. He obtains an impression of what the Australian people really are, which no subsequent misrepresentation or slander can efface from his mind. Thus is the fame of this country diffused throughout the civilized world. Australia becomes known everywhere, and creditably known, so that the grand annual festival at Flemington, were there no other argument to support it, finds ample justification in the national benefit it directly confers on the Australian population.

### The Great Eclipse Stakes Likely to Fall Through.

The English *Racing Calendar* contains the nominations made for the Eclipse Stakes of £50,000 net. But as the stake only received 269 subscribers, there is a possibility of its falling through, for one of the conditions of the race is "300 entries or the race will be void." The committee may, however, decide to have the race, as the forfeits will no doubt equal the amount guaranteed, there being no desire to make a profit, for it was stipulated in the conditions that "in the event of the forfeits exceeding the expenses of the stake, the surplus will be devoted either to a consolation stakes for the unplaced starters, or will be divided between the second and third horses at the discretion of the executive."

One reason, perhaps, that the entry fell below the stipulated 300 is the small number of foreign entries, especially American, French and German. The only American subscribers are Mr. Pierre Lorillard and Mr. J. R. Keene. The former nominated Heimdel and Katrine, both four-year-olds in 1886, and the then three-year-old colts out of Vandalite and Agenoria, all by Mortemer. Mr. Keene's nominations include the six-year-old Blue Grass, the five-year-old American Girl and Steerforth, and the four-year-old English-bred colt by Kingcraft out of Rustic Queen. The other foreign-bred horses number just twenty-five, all bred in France, and are nominated by M. P. Amout, M. C. Blanc, M. E. Blanc, H. Crombez, Prince d'Arenberg, H. Jennings, C. J. Lefevre, Duke de Morny, Barou de Rothschild and the Baron Schickler, and as a whole they represent the French strains of blood.

The English division is naturally very strong, although the list is conspicuous by the absence of Lord Falmouth's name. Among the nominations are many of the best of the two-year-olds of 1883, which will be five years old in 1886 (the race, if run, taking place in July, that year), with many of the three-year-olds, which will be then six years old. Among the latter are St. Blaise, the winner of the last Derby; Beudigo, the winner of the Cambridgeshire, and Ossian, the winner of the Doncaster St. Leger. Among those now two years old, which are expected to show well during 1884, there is Tom Cannon's Fritz, Mr. J. H. Houldsworth's Royal Fern and Spring Morn, Mr. P. Peck's Superba, Duke of Portland's St. Simon, Duke of Westminster's Duke of Richmond, and Sir John Willoughby's unnamed filly by Hermit out of Adelaide. The greatest number of subscriptions by one person was made by the Duke of Hamilton, who entered no less than nineteen. Mr. Hy. Chaplin is next with thirteen, and Mr. Leopold de Roths-

child next with twelve, while Mr. Manton (the Duchess of Montrose) has six representatives. The conditions are: £10 each if declared by the first Tuesday in October, 1884. If left in after that date, a further subscription of £20; if after the first Tuesday in January, 1885, a further subscription of £30; and if after the first Tuesday of January, 1886, a further subscription of £50.

Horse Notes from Yolo.

EDITOR BREEDER AND SPORTSMAN: Thinking a few items from Yolo county may be of interest to yourself and readers, I send the following in relation to our colts and horses owned about our town of Woodland: In the first place, we have the stallion, Alexander Button, (sire Alexander) with about forty colts from seven to nine months old. As fine a lot of youngsters as any one would wish to see, and if we mistake not will be heard from in their two and three-year-old form. Mr. G. W. Woodward, the owner of Button, has already hung up a \$300 purse entrance added for Button colts to trot for at two years old. He has a pair of eight months old already broken to harness, and drives them through our streets frequently, some were exhibited at the State Fair.

Mr. Chas. Hoppin, of Cacheville, has a very fine yearling mare colt, by Alexander, (the sire of Button,) that is being broken and shows fine speed. A very rangy fine mare.

Jos. Martin has also a yearling horse colt, by Curtiss' Don Pedro, dam a Taylor mare, he is a large rangy colt, 15 hands high and weighs 965 pounds, and shows any amount of speed, and will be troublesome in the two-year-old race to come off in the fall of 1884, with nine entries over the Woodland track.

Whitmore has three yearlings of great promise in his charge by Tinnen, by John Nelson, that are large fine colts and all give promise of speed. Some of these will also start in the two-year-old race.

Josh Sovereign has also a fine colt entered in this race by Victor—by Echo, that shows more speed than any of these colts.

R. H. Newton has also a colt entered in yearling race, by Del Sur, out of a Black Ralph mare. A fine colt that took first premium at State fair in 1882, at 5 months old, and again in 1883, at 17 months old. Stands 15 hands high and weighs 930 lbs.; color, black, and is level headed, and fine style. Is entered in the two-year-old stake to be trotted at the State fair in 1884.

Peter Fitzgerald has the boss stallion Killarney. Handsome as a picture, in fact, is my ideal of a race-horse. As graceful as a dancing master, as elastic as a piece of whalebone and as snipple as a cat. Now you have the whole business in a nutshell. Killarney is by Black Ralph, out of what is supposed to be an imported Eclipse mare. He is a pecker, and can show a fester gait than any man's horse on this coast, although he has only been pacing since the 15th of August last. Is six years old next June. You will hear from this horse before the year 1884 rolls around. Yolo county will make a good showing in a few years.

We had a fine buggy race on the Saturday before Christmas. Entries were: B. H. Hndson's mare, Cy Groff's mare, Al Hiller's mare and Garontte's horse Fred Scott. Lawyer Hndson's mare being very fast, and not wanting to show her up before the State Fair next fall, and he being engaged on a murder trial, his mare was drawn. Hiller's mare won two heats and Fred Scott two heats, the fifth heat being a dead heat in 3:05. Darkness coming on the race was postponed until Monday at 2 o'clock, when Hiller's mare won the sixth heat in 3:03, winning the race and first money. Cy Groff's mare showed game to the last, but was not quite fast enough to win. EQUUS.

Woodland, Dec. 30.

How Lexington Was Saved.

On one beautiful Sunday morning in May, 1875, that genial and well-known steamboat man and sportsman, Captain John Stone, of Mobile, Alabama, known to hundreds who have traveled on the Alabama and Tombighee rivers, gave me an invitation to take a seat in his wagon and drive to the race-course (some distance from the city, although one of the best known in the south), to see his horses work early in the morning, and then to have a country breakfast at the stables.

We started out behind a roadster, sure, full sixteen hands high, of splendid form, clean-cut head, splendid barrel, long neck and limbs under him like iron, and going at a 2:30 clip, which showed conclusively that blood will tell, for here was a horse by Joe Johnston (and Joe Johnston was by Harry of the West), the horse's dam being by Wagner, thoroughbred on both sides.

As we bowled along, this beautiful spring morning, I cannot forget the magnolias in full bloom as well as the immense hedges of Cherokee roses for miles on both sides of our road; what with the aroma of the flowers, the singing of the mocking birds and the cool south winds of the early morn just as the sun was rising, invigorating you as you went. It was a day that one could hardly forget. We arrived at the track and found all the horses taking their usual gallop. After seeing them work (and he had many good ones that have made their name on the different tracks of the country, Billy Williamson, Mignon by imp. Pheton, Anstien by Rebel, Panline Sprague, by Joe Johnson, and since the dam of Colonel Sprague, by Calvin, Colonel Nelligen and others), while standing talking horse, old John stole quietly away to his wagon and out came a large lump of ice, some mint done up in a wet cloth to retain the odor, some white sugar and a bottle of water. Ahem! And who said come up and try my hitters, as breakfast is quite ready. Well, we "smiled," and then took seats to a very aesthetic table, composed of a dry-goods box and camp stool. The reader can readily imagine how one could relish something to eat after a drive of three miles in early morn, and such a breakfast! Fried spring chicken cooked like they do in the old southern way, and nowhere else can it be done, hot corn hoe cake with new fresh butter, buttermilk, and such coffee—the aroma, words cannot express. While eating breakfast old John made me known to his trainer, old Uncle Henry Brown.

Henry is known on every race-track in the United States of note, having been born the property of Dr. Warfield, of Lexington, Ky., and is one of those old-timed darkies that are polite to every one. Henry was the first one to train Lexington, although at that time the horse was named Darley, after the famous Darley Arabian, and that name was never changed until Mr. Richard Ten Broeck made his celebrated race with Colonel Wells of Louisiana, then owner of Lecompte. Mr. Ten Broeck at that time said to Colonel Wells that he would produce a colt in Kentucky that would beat Lecompte, four mile time, for \$20,000. All lovers of racing know the result—Ten Broeck went back to Kentucky, purchased the colt Darley from Dr. Warfield, and renamed him Lexington, after Lexington, Kentucky, where the colt was foaled.

While talking to Henry at what he called his nursery, a room out off from the stables, a sort of sleeping room for his

corps of riders, not one of them over 15 years, all romping around like so many little imps of darkness, we were talking about the get of Lexington, and the wonderful speed of his colts, he called my attention to a long scar on his left hand, some three inches long. He said that Lexington was the cause of that, and if he had not done it such a thing as the Lexington blood would have never been known. I asked him why. He said at that time Mrs. Warfield had gotten a promise from her husband, Dr. Warfield, who was a great lover of race-horses, that he would give up horse-racing. In consequence, he gave orders to have all his colts gelded for saddle horses. He (Henry) had thrown the colt Darley, now known as Lexington, as he was about to geld him; in fact, to the day of Lexington's death he carried a scar made by Henry. As Henry was about to use his knife, the colt kicked at him, the rope not being taut enough, which drove the knife blade into Henry's left hand between the thumb and forefinger—and he will carry the scar to his grave.

The consequence was the ropes were taken from the colt Darley, and he was let up, and by the time that Henry's hand had gotten well, Mr. Richard Ten Broeck had become the half owner of the colt, and from that time the country knows his exploits. His progeny, under the head of Lexington, and his sons, Norfolk, Harry Bassett, Tom Ochiltree, and many others, who have won millions of dollars for their owners.

Henry Brown is now living in Kentucky, a splendid specimen of an old-time colored man, dignified and polite, liked by every one whose word is his bond, and respected as much for his worth and integrity as any man in Kentucky. He has for some years been the trainer of many well-known sportsmen—Dan Swigert, Hunt, Reynolds, Price, McGrath and others that cannot mention.—Oregonian.

A Million and a Half in Money.

By the annual edition of the English *Racing Calendar*, it appears that 1,698 races were run "on the flat" in the United Kingdom in 1883 under Jockey Club rules, as against 1,642 in 1882. Of the 1,698 races run, 821 of them were under six furlongs, 241 were at six furlongs and under a mile, 344 were at a mile, 202 at over a mile and under two miles, 75 at two miles and under three miles, 11 at three miles and under four miles, and 4 at four miles. During the year and under the same rules 2,070 horses ran of which 559 were two-year-olds, 607 were three-year-olds, 292 were four-year-olds, and 312 were five-year-olds and upwards, the total being an increase of 154 head over the total for 1882, and the largest number that have run since 1879, when the total was 2,113. The greatest number recorded is 2,569 in 1870.

The money feature of the statistics shows the amount added to races of different distances as follows:

	£	s.	d.	£	s.	d.
Under six furlongs	75,659	1	0			
Ditto, selling races	45,225	2	0			
				120,884	3	0
Six furlongs and under a mile	27,631	0	0			
Ditto, selling races	6,607	0	0			
				34,238	0	0
A mile and under a mile and a half	60,582	10	0			
Ditto, selling races	13,964	10	0			
				74,547	0	0
A mile and a half and under two	21,011	0	0			
Ditto, selling races	245	0	0			
				21,256	0	0
Two miles and upwards	16,112	12	2			
Ditto, selling races	1,590	0	0			
				17,702	12	2
Total				£268,577	15	2

The greater part of the above total was given in purses—plates, as they are called in England—or to races for which there was entrance money which went back to the fund from which the money was given. Out of the same total no less than £85,316 was given to two-year-old races, and £125,981 to handicaps. Ireland contributed £8,097 16s. of the total amount and Scotland £6,353. The total value of the stakes won with all deductions for entrance money and prizes to second and third horses, exclusive of matches and private sweepstakes, amounts to £385,501 5s. 2d.

The total return of foals for the year is 942 colts and 939 fillies, with a total of 3,255 brood-mares.

Dark Side of the Race Track.

The forward movement made by the Convention at Louisville is a good sign, and shows that there is a desire on the part of a great many to eradicate whatever is of ill repute in connection with racing sport. The rules adopted are not perfect, but they go a good way toward a reformation much needed, and may justly be considered as a harbinger of better things to come, which will, at no distant day, give to the different turf institutions of the country a character suited to the associations of the most refined and elegant society in the land. The convention will meet again this fall, when the work so well begun, it is hoped will be so perfected as to meet the wants of those who have the well-being of the turf at heart, and not in their pocket. The time is ample for every lover of honorable sport to study the practical workings of the rules and find out wherein they are defective, and what amendments are needed to insure such results as fairness and honor demand. The columns of the *Turf, Field and Farm*, I know, will be free to all who are disposed to aid in this work, and if every trainer and jockey will put his views and ideas on record this season, there will be little trouble when next the convention meets to get the turf code revised so as to be in every way adapted to the purposes desired.

There is one thing neglected which, to me, has always seemed of more importance than almost any rule that could be adopted.

The discipline of the track finds no place in the law books of the clubs. The lowest order of human degradation and depravity has of late years made a rendezvous of the stables and track grounds. Here they come in contact with the youth employed for training purposes, and every sort of device is resorted to in order that innocence may disclose the condition of affairs at the stable, and not only do they aim to get the secrets of the owner's private business, but every means is used to corrupt the young lads they meet with. These vile wretches select the evening time principally to operate in, for it is then that the stable employes are generally "off duty," and the cover of darkness serves, in a manner, to aid them in their purpose, that the management of the racing grounds seem to be indifferent to the trouble caused by intruders, and take no measure to relieve their patrons of the evils mentioned, is a wonder difficult to understand. Surely the local status of the town or county are sufficient to remedy the evil, and if there is any such thing as a vagrant law the officers of the clubs ought to do what is needed to have the law in the case enforced, and the hustling bodies of depravity that infest the premises taught that their occupation is gone.

Another thing I will mention at present is the necessity for the establishment of a school by the clubs, where the employes of the stables could, at leisure, be taught to read

and understand the English language sufficiently to discuss ordinary affairs without having to resort to vulgarity and profanity to speak even the simplest sentence known to their mother tongue.

Politeness costs nothing, nor does genteel behavior and civil speech make any drain on the purse, yet it is worth everything, and no association should allow boys at duty on their grounds to grow up without an opportunity to learn enough of good manners and be sufficiently educated otherwise, to appear to better advantage than the heathen and idiot. If the language of the race-track could be printed in large letters and posted along the highway where every passer by could see and read it, the public would never afterward be seen inside the gates of the race-course. None except those who live on the track grounds know anything of the shameful disgrace decency is subject to at almost all times. The most elegant lady in the city cannot go to the paddock with her escort to see a favorite racer saddled without a hum of obscenity and vulgarity being let loose by the foul-mouthed brutes who get admission to the inclosure. This I have seen demonstrated on the parade grounds, or saddling paddock as it is styled, of the race-course I am partial to, and which is not far from the city of New York. These wretches were stable attendants, a whole dozen of them, and had it not been for the fact that the attention of the lady was riveted on the preening form of the noted racer she had come to see, her ears would have caught the obscene slang set going by the rabble crowd, and she forced to flee from the place. No hesitancy that men engaged in is handicapped with such rowdiness as is that of training race-horses. The Western river flatboat men and the Erie canal operators in times past were considered rough characters, but they were sweethearts compared with some of the foul-mouthed brats and rongs who are employed at the training stables. These are matters that become the individual associations to look after, and not a convention of the various clubs. That the clubs should adopt a remedy for the evils named, every one will doubtless agree. The only trouble consists in devising some plan practical in its workings that will insure the desired result. Certainly the case is not without a remedy. If so, some legislative proceedings are needed, and laws should be enacted in connection with the charters of the association that will insure a better order of things, or as a last resort in a hopeless case, send the gardener with his hoe and spade to grow corn and potatoes where the racers now gallop.—*Turf, Field and Farm*.

Two Kennebec Horses.

"Seems to me they're making a terrible piece of work about their fast trotters of modern times," said our old friend Hiram Reed of this city, in an interview the other day; "let me tell you about two old-time trotters—two horses that originated here in the valley of the Kennebec." We were fully aware that Mr. Reed is undisputed authority on all horse matters, and of course gladly listened. He said that there had been an unusual amount of talk about fast trotters the past season. Some fifty-five years ago Mr. Benj. Hodges of Hallowell owned a beautiful sorrel horse, 16 bands high, weighing 1,100 pounds, was called in that day a trotter; was sold to a Boston man, Meehum, who took him to Boston, and matched him against time, to trot on Chelsea beach—there were no trotting parks or tracks in those days. He matched him in three minutes against time. The test came and he beat the time, trotting inside of the three minutes. Mr. Reed says he was the first horse in the United States that ever trotted inside of three minutes. The name of this horse was Lyon; was sired by the old original Messenger that Mr. Hodges brought from New York to Winthrop. He was there for service some four or five years, and two years at Heywood's corner, Albion. He brought him back to Winthrop and sold him to Miller Shaw of that town, who kept him for stock purposes some two years, and then sold him to John M. Enstis, Esq., of Dixfield, who stood him some three years. He put him on an island in the Androscoggin river late in the fall; the animal got uneasy, swam ashore, jumped over a fence and broke his ankle. Mr. Enstis splintered it up, put the horse in a pen, and used him for stock purposes for some time. He then sold him to parties in Anson, and there he died. Mr. Reed does not know what became of Lyon. It was a beautiful horse, clean-headed, deep-shouldered, and lank behind, built for a trotter.

The other horse to which we have referred Mr. Reed remembers some forty-nine years ago. It was a little bay horse called Pelham, owned by Mr. Elwell of Gardiner, which was originally a pacer. Mr. Elwell shifted him into a trotter, and sold him to New York parties. He trotted there and was the first horse in the United States that ever trotted inside of thirty. Mr. Reed does not remember the sire of this little horse, but thinks it was a Canadian horse. So from these facts, that Mr. Reed can vouch for, Kennebec has a prominent part in the early history of trotting horses.—*Maine Farmer*.

Two Kentucky Sales.

On February 12th next T. E. Moore will sell at the Cedars, Shawhan, Kentucky, on the K. C. R. R. at public auction, about forty head high-bred trotters, etc., principally sired by fast sons of Rysdyk's Hambletonian. Consisting of young stallions, fillies, brood-mares, and geldings, sired by Bismarck brother to Gazelle, 2:21, and brother in blood to Electioneer, Twilight, brother in blood to Dictator, Strathmore, Belmont, sire of Nutwood, 2:18, New York, sire of Reville, 2:27, Goldsmith, Favorite Wilkes, Simms, Clark Chief, Pacing Abdallah, etc. He calls especial attention to a three-year-old stallion by Belmont, dam by Mambrino Chief, very promising, Clara, by Strathmore, and many other promising young things will be found in the catalogue.

On the next day, the 13th, W. H. Wilson of Abdallah Park, will sell at his branch stock farm at Paris Fair Grounds, Paris, Kentucky, about seventy-five head of trotting and thoroughbred stock, consisting of the most fashionable strains of the day, viz.: Hambletonian, Mambrino, Pilot, Jr., Morgan and Clays, among which are the get of such stallions as Dictator, Strathmore, New York, by sons of George Wilkes, by Indianapolis, 2:21, Jubilee Lambert, 2:25, Ravenswood 2:26. Brood-mares that have produced in 2:30 list, brood-mares by Clark Chief that sired the dams of Phallas, 2:15, Wilson, 2:16, and Majolica, 2:17, including the entire lot of stock belonging to the estate of the late Capt. M. M. Clay, Paris, Kentucky, among which are the great trotting stallion Cyclone, record 2:25, two full brothers, a full sister and their dam. Catalogues may be had by application to the gentlemen above named.

Col. E. F. Clay, Runnymede, Stud, Paris, Ky., has purchased of Col. R. G. Stoner, Paris, Ky., the bay mare Betty Lewis, foaled 1869, by Uncle Vic—Maga, by Knight of St. George.

State Fair Colt Stakes.

We have received from Secretary Smith a memorandum of additional nominations to the Colt Stakes of the State Agricultural Society, and the following is a complete record of the entries:

The Occident Stake for foals of 1882 to be trotted at three years old during the State Fair of 1885.

1. Palo Alto's b c Norval, by Electioneer, dam Norma.
  2. Palo Alto's h f Constance, by Electioneer, dam Consolation.
  3. Palo Alto's b f Ethel, by General Benton, dam Electa.
  4. Ira L. Ramsdell's blk f Luella, by Sultan, dam Ella Lewis.
  5. L. J. Rose's b c Stamboul, by Sultan, dam by Hambletonian.
  6. L. J. Rose's b c Kismet, by Sultan, dam Sance Box.
  7. Jno. Mackey's b c Vasco, by Alaska, dam Belle Ely.
  8. Jno. Mackey's blk c Del Monte, by Echo, dam by Hubbard.
  9. Jno. Mackey's b f Visalia, by Echo, dam Dolly Varden.
  10. Chas. Scott's g c—by Echo, dam by Lodi.
  11. Jno. Mackey's d c Longhreu, by Echo, dam by Patchen.
- For the Occident Stake of 1884 second payments have been made on the following:
- Pala Alto's Argo, Alhan, St Just, Edos, Alta Belle.
  - D. E. Knight's Nighthawk.
  - L. J. Rose's Bedonin.
  - J. C. Simpson's Antevolo.
  - J. W. Mackey's Robert Lee.
  - A. L. Frost's Roscoe.
  - G. Valensius' Griselda.

The annual two-year-old stake for foals of 1882, to be trotted during the State Fair of 1884.

1. Palo Alto's Glen Cairn, by Electioneer, dam Glen Cora.
2. Palo Alto's Antinous, by Electioneer, dam American Girl.
3. J. Blake's Revielle, by Admiral, dam by San Bruno.
4. R. H. Newton's Sur Del, by Del Sur, dam by Black Ralph.
5. Jno. Mackey's b c, by Alaska, dam Belle Ely.
6. Jno. Mackey's blk c, by Echo, dam by Hnbbsrd.
7. Jno. Mackey's b f, by Echo, dam Dolly Varden.
8. J. Greely's Mill Boy, by Brigadier, dam by Signal Colt.
9. Ira L. Ramsdell's Luella, by Sultan, dam Ella Lewis.
10. W. B. Todhunter's Cannon Ball, by Prompter, dam Gazelle.
11. W. B. Todhunter's b f Clito, by Steinway, dam Mand M.
12. E. Gidding's b c Promise, by Prompter, dam Starlight.
13. J. B. McDonald's g f Lassie Jean, by Brigadier, dam Lexington Belle.
14. J. B. McDonald's blk c, by Brigadier, dam Maggie.
15. L. J. Rose's b c Stamboul, by Sultan, dam by Hambletonian.
16. L. J. Rose's b c Kismet, by Sultan, dam Sance Box.
17. J. N. Ayre's ch f, by Algona, dam by A. T. Stewart.
18. G. W. Trahern's b c Paul Shirley, by Nephew, dam by Maybie's Mambrino.
19. Arno Stock Farm's b f Ivy, by Buccaneer, dam Fern Leaf.
20. Arno Stock Farm's g c Punch, by Buccaneer, dam Grey Dale.
21. Jno. Mackey's b c Longhreu, by Echo, dam by Patchen.

Horses for Hawaii.

Mr. H. J. Agnew, of Honolulu, shipped to the islands by the last steamer a consignment of thoroughbreds purchased at Palo Alto. They were:

- Bay filly, foaled 1881, by Wildidle—Robin Girl, by Enquirer.
  - Bay colt, foaled 1881, by Wildidle—Montana, by Harry of the West.
  - Bay colt, foaled 1882, by Wildidle—Kate Gift, by Lodi.
  - Chestnut colt (gelding), foaled 1881, by Hnbbsrd—Texana, by Foreigner, son of imp. Glencoe.
  - Chestnut filly, foaled —, by Monday—Abbie W., by Don Victor.
  - Bay filly, foaled 1882, by Shannon—Cuba, by imp. Australian.
  - Bay filly, foaled 1882, by Flood—Rivulet, by Rivoli.
- Two trotting mares, full sisters, and Blackhaws, both in foal to Newland & Pumyea's Grand Moor, and a pacer, were also included in Mr. Agnew's shipment.

Tetanus.

Tetanus (lock-jaw) is a disease in which the voluntary muscles are in a state of rigid contraction, with paroxysms of brief and painful spasms alternating with irregular intervals of more or less relaxation. This is believed to be a disease of the true spinal system, and that the cerebrum in the horse is rarely, if ever, affected. Different names have been given to this disease, according to the obvious effects of the spasms. Whatever form occurs, the disease may be acute or chronic; the former, the most formidable of the two, tending to involve the whole frame, and seldom admitting of a cure, is, unfortunately, the most frequently seen; the latter, generally milder in all its phases, is much more amenable to curative treatment. This disease may be *traumatic* or *idiopathic*; the former following wounds, bruises or other injury, and usually acute; the latter, of spontaneous origin, without any external or assignable cause, and usually in the sub-acute or chronic form. The most frequent form is that which is acute, and the symptoms and character of this may be taken as typical of the disease in general. Various premonitory symptoms are noticed, such as a peculiar brightness of the eye, irritability, watchfulness, dislike to have the head touched, constipation of the bowels, and a disinclination to eat as usual. The disease may be said to be fully established when there is some soreness of the throat, stiffness in the upper and back part of the neck and of the head, the nose a little protruded, the ears erect, and the tail carried higher than usual. On approaching the animal, he is usually excited, and the pulse becomes accelerated from nervous excitability. If an attempt is made to open the mouth, the head is violently thrown up, the muscles of the eye-ball spasmodically contract, drawing it within the orbit, and the nictitating membrane (more commonly known as the haw) is convulsively protruded. The muscles of mastication next become affected, and the action of the jaws is either much limited or they are entirely closed.

As the disease advances, other sets of muscles become involved with those of the back, loins, haunches, and tail. The head and nose are protruded, the nostrils are widely dilated, and scarcely move during respiration. The angles of the mouth are drawn up, the eyes are particularly brilliant and watchful, the eyelids are drawn asunder, the mus-

cles of the eyeball are in a state of continual spasm, and the countenance has a most distressing appearance, caused by the acute sufferings of the unfortunate victim. As the disease progresses, the animal becomes stiff, stands with his legs wide apart, and, should he be urged to move, he does so as if he had no joints. He is apparently very rigid, and the tail is erect and has a tremulous motion. In almost any stage of the disease, the slightest noise will bring on a paroxysm of the most distressing spasm. Opening the stable door, lifting a bucket, a step taken to approach the animal, in fact, almost any movement he can see, if taken hurriedly or noisily; and in the stage of the disease we have been describing, the paroxysms are so severe that it is with the greatest difficulty he can keep himself from falling, and should he do this, he becomes fearfully excited. One paroxysm follows another rapidly. The pulse, rarely much affected in the early stages, is now quick, weak, and almost imperceptible. The power to swallow, always difficult, is entirely lost; the body is covered with perspiration, and the breathing laborious and increased to the utmost degree. In the early stages the voluntary muscles only are attacked, but in the latter stages the involuntary muscles are also involved. The scene may close by *asphyxia* consequent on spasm of the glottis, or immobility of the diaphragm and other respiratory muscles, or from total exhaustion of the vital powers through excessive nervous excitement and want of nutrition, or even sometimes from a spasmodic seizure of the heart itself. This disease has been known to run its fatal course in one day, and it has been known to exist for a month, and the patient then die, but in the more acute cases the animal usually lives from four to eight days.

The idiopathic form of the disease may be due to exposure, to irritation of the digestive organs from the presence of worms, etc., etc. The traumatic form of the disease may supervene on various surgical operations, such as castration, nicking, etc., or from lacerated and punctured wounds, especially of the feet, from nails, etc. The experience of veterinarians who have had an opportunity to study lock-jaw in its various phases has proved very conclusively that too much reliance is not to be placed on the therapeutic action of drugs for the curative treatment of this formidable disease. This is not to be attributed to any failure of the action of the various medicinal agents used in the treatment of this malady, but to the undue excitement produced in administering it; and it is a question of some doubt whether it is not much better, in the majority of cases, to dispense with all drugs, and trust to nature, rather than run the risk of increasing the excitability of the patient by the frequent dosing so often practiced. Such medicinal agents as opium, hydrate of chloral, the Calabar bean, hydrocyanic acid, belladonna, etc., have a special and decided effect in counteracting the spasm, lessening the pain, and thereby preventing exhaustion of the vital powers; but these remedies, in order to have the desired effect, must be administered at least every two hours, and it is often a question whether the undue excitement and consequent recurrence of the spasm produced by the frequent dosing does not more than counterbalance the good effects caused by the action of the medicine administered.

Experience proves that quietude is very essential in the successful treatment of tetanus. The patient should be completely isolated from all other horses, in some quiet, secluded dark stall, where noise of any kind cannot excite him. Do not allow anyone, except his regular attendant, to approach him. If his jaws are sufficiently relaxed to allow him to eat, let him have soft food with his medicine mixed in it. If he cannot eat, the most nutritious drinks should be given—cow's milk and eggs, oatmeal gruel, linseed tea, oil cake, etc.

It is important, too, that the patient should have comfortable slings, properly adjusted, as soon as practical; so that after he becomes worn out from fatigue, due to excessive irritation and want of food, he may be enabled to rest without lying down.—*Live Stock Journal*.

OUR NEW YORK LETTER.

Winter Sports in New York—The Holiday Season—General Sporting Notes—Theatricals, etc.

Since my last letter the usually open winter with which we have been favored, has given place to an old-time snowstorm, or rather, four of these snowy visitations came at once in almost as many days, filling the streets and pathways of our metropolis with more snow than the city has contained for years. Outside of my window, as I write, on one of the widest of our streets, the white drifts are piled up on each side of the curb, five or six feet in height, with a narrow passage-way in the center for vehicles, etc. The height of snow and ice on roofs, awnings, etc., has been so great as to cause damage and accidents before it could be removed in time, and many pedestrians around town were injured in this way. Though heavy snow falls in great cities are, therefore, the cause of much trouble and expense to the brigade of the road-riders, the advent of the feathery flakes has been hailed with acclamations, and for the past two weeks runners have entirely superseded wheels in the upper part of the city. The sleighing carnival, coming in the holiday season, has been entered into with the most enjoyment by all who could take advantage of it, and from early morning till long past midnight of each day, the Park and boulevards have rung gaily to the music of the bells, the flying feet of the horses and the gay laughter of the riders. Impromptu matches to sleigh have been trotted without number, and yesterday one of the most interesting of these was won by John Murphy's Frank, of 2-08 (with running mate) fame. At New Orleans, also, the winter race meeting began yesterday; good fields of horses starting for the several events, of which the honors were equally divided between the favorites and the fielders. In spite of their inauspicious beginning, after a postponement, the Crescent city turfmen expect to have good racing there this winter, three days a week. Something like two hundred race-horses are at the track of the Louisville Jockey Club and more are expected. Among this latter division is Mr. Williams and his small though select string of races, including Bob Miles, three years, by Pat Malloy, the favorite for the Kentucky Derby, at Louisville in May. Williams has leased his farm in Kentucky for three years, and taking pattern after Green Morris, who races at New Orleans each winter, gradually getting his horses into better condition thereby, is on his way thitherwards it is said, to see what virtue there is in the system pursued with success by the redoubtable Green B. M. Bob Miles' principal opponents in the Derby appear to be Powhatan, by Glenelg; Lofali, by Monarchist; Buchanan, by Buckden, and Eva S., by Billet. The race has never yet been won by a filly, and perhaps this is the one to do it, for the half sister to Farragut wound up the season as well as she commenced it, and this is a most desirable requisite in a two-year-old, that is expected to do well in their three-year-old form. Leonatus and Gen. Harding, thought last season to be both broken down, are represented as likely to stand train-

ing again. The latter was the largest two-year-old winner of the year as tabulated in the *New York Sportsman's* "winning two-year-olds," and his sire, Great Tom, is also in front with the most races the most money won, and more winning performers than any stallion in the country. This is, of course, only as regards two-year-olds. In horses at three years, Great Tom is away behind the lead of the list, the past season being only his fifth in America. Tuesday next the stakes for 1884 of many of the racing association of the county close, and turfmen have their hands full to make judicious and well considered entries, as much a part of the management of a stable of horses, as the personal attention given to the winner themselves. J. E. Krewster, of the new racing association, at Chicago, was here last week and represents the racing boom throughout the country as being well developed at the Lake City. Their American Derby for three-year-olds with \$5,000 and Washington Park Cnp with \$4,000 cannot fail to be notable races in 1884-5 turf history, and it is very likely that the Dwyers, Lorillard, Mr. Withers, and others of the Eastern turfmen will enter in these events. The races of your phenomenal two-year-olds, Sweetbrier, the Frolic filly, Shevandoah, etc., and the old tough campaigners, Joe Howell, Jim Renwick, May D., Lucky B., Grismer, Duffly, etc., show that if these horses are brought east, they should be able to more than hold their own in any company.

Hanlan seems to be on the fence since he has been with you. "To row or not to row" is the burden of his agitation, judged by his actions and his bent chest incline to the latter conclusion, or else the dispatch of yesterday from Frisco puts him unjustly before the public. If he backs out of his offer to row Ausin Stevenson on the 5th, it certainly will not help him any in the public estimation. If he is out of condition, as his shilly shallying would lead most persons to suppose his three miles in 15:43 (?), on Christmas Day, was a most marvelous performance. After all the talk that has gone on regarding a race between him and Stevenson, Hanlan cannot afford to leave California without measuring blades with that oarsman, be the pretensions of the latter to first-class form what they may, whether he sticks to his \$1,000 offer, in case he is beaten, or not. Hanlan is in honor bound to row the Californian, and it to be hoped that there will be no more beating about the bush.

A new race-course is said to be projected in the neighborhood of Norfolk, Virginia, or rather, the enlargement of an old one. An association will be formed that will, it is claimed, be on a par with any racing club in the south or west, and attractions offered that will draw the crack stables in that direction twice a year. Pittsburg also comes to the front again with big money, offered for a June racing meeting, and altogether the racing outlook for 1884 is of the best. Prices for thoroughbred stock rule very high. Anything with four good legs and a fashionable pedigree is eagerly snapped at, and Kentuckians will hardly look at anything short of fancy prices for racing stock. Green Morris gave last fall a big price, said to be \$18,000, for three Ten Broeck yearlings, and they have improved so much that he has been offered, he claims, an advance of these high figures. Bob Miles' price is \$20,000, and so it goes. Truly, if the present inflation keeps on, the breeders of racing yearlings will reap a harvest next spring at the annual sales. The three principal are at Elmendorf, Runnymede and Woodbury, will take place the middle of May, about the 13th, 14th and 15th. Something was said about a combination sale from these three great establishments to take place at the American Horse Exchange in this city, but the risk of sending the young things on by rail was decided to be too great and the project abandoned. Mr. Keene's Foxhall is advertised to stand the coming season in England. Lybrowne Grange, Kent, at the late Sir Jos. Hawley's place, the home of Blue Grass, Rosicrucian, etc., will be the future home, for a time at least, of the few of the double event—the Cesarevich and the Cambridgeshire. Barcaldine, the unbeaten son of Solon, will also begin his stud career at the same time, and while on the subject of this famous horse, now the property of Lady Stamford, it may be well to say that he did not leave the turf broken down. No such mishap attended his withdrawal by Robt. Peck, that gentleman doubtless preferring him to go to the stud while at the zenith of his great career, before defeat should dim the luster of his achievements.

Idea, five years, by Glenelg, out of Item, taken to England with the late Mr. Sanford's horses, recently won over hurdles there with 162 pounds up, and Sachem, Golden Gate, and other horses from Yankee land, will essay the same sort of business in 1884. The colt Anteeo and his wonderful trotting excites great interest here. It would be a pity, however, should the turf lose so promising a youngster, a sure termination of his career if purchased by Robert Bonner. Let him be reserved for a better and nobler fate. Mr. Simpson is to be congratulated on so practical a demonstration of the theories advanced in his book "Tips and Toe-Weights" as the showing made by Anteeo and his brother Antevolo, coming three-year-old. The latter bids fair to become as fast as the older horse.

Theatricals here are a trifle over done at present, though with the withdrawal of the rival opera companies for a short season on the road, the theaters have done somewhat better. Mr. Colville, at his Fortieth-street theater, has been compelled to relinquish Miss Davenport and Fedora in the midst of a most successful engagement. This week Pop has been effervescing there to fair houses, and next week John T. Raymond appears in his play *In Paradise*. Haverly, the irrepressible, is again on his theatrical feet, and at his Broadway Comedy Theater, late the house of Birch's San Francisco Minstrels. Mlle. Aimee will begin a short engagement on Monday next. The Beggar Student is on the flood-time of popularity at the Casino, and in a cast such as is presented in this tuneful opera, there is absolutely no room for criticism. Edwin Booth has been doing well at the Star Theater in a round of his famous characters, and Mr. W. E. Sheridan, in *Louis XI*, in *Othello* to Mr. Booth's Iago, and in *Ingomar*, has fairly divided with the star the encomiums of the public. Charles Coghlan and Mrs. Lillie Langtry are to appear under John Stetson's management in a new piece, *Peril*, and we hear no more of "Freddie" in that connection. Perhaps the Jersey Lily has given him the G. B. Leap year is on us, however, and F. G.'s discretion was doubtless the better part of valor. PACIFIC.

New York, December 30, 1883.

The BREEDER AND SPORTSMAN, of San Francisco, came out with a number of beautifully illustrated stock supplements. It is the sporting and stock journal of California.—*Ventura Signal*.

## HERD AND SWINE.

### Dairymen's Conventions.

The rapid advance of systematic dairying in this country is chiefly due to the conventions of the persons who have been engaged in the business. As soon as co-operative dairies were established in central New York, the patrons began to hold meetings with a view of gaining information from each other on the best ways of managing cows, taking care of milk, manufacturing butter and cheese, and disposing of dairy products. These local meetings were of great value to the persons who attended them. They were schools of practical instruction. They gave rise to the formation of the American Dairymen's Association, whose proceedings were published each year and distributed in many portions of the country. The great good accomplished by this association caused others to be formed in the western states and the Canadian provinces. The annual conventions of these associations brought together a large number of earnest men and women who were engaged in the business of keeping cows for milk or the manufacture of butter and cheese. At these meetings addresses were delivered by persons of scientific attainments on the composition and production of milk, and the changes it undergoes previous to and during the time it is converted into butter and cheese. These annual gatherings were also largely in the nature of "experience meetings." Persons who had been successful in the production of milk or the manufacture of superior butter or cheese were asked to state their manner of procedure. They were not infrequently called upon to answer all sorts of inquiries. There was no keeping back of secrets. As a rule, every person attending a convention felt it his duty to tell all he knew that would tend to advance the interest in which his hearers were engaged.

By degrees these conventions devoted attention to other matters than the management of milk and the manufacture of butter and cheese. The breeds of cows, the construction of barns, the best feed for dairy stock, the cooling and transportation of milk, the disposition of skimmed milk and whey, the general management of dairy farms, and the marketing of dairy products, all received consideration. Dairymen were among the first agricultural producers to move in the matter of securing better facilities for transportation. The establishment of dairy boards of trade was the result of the action taken in these conventions. Their establishment put an end to the credit system in the sale of dairy products. They caused the purchasers to come to the places where butter and cheese were made in large quantities. They put a stop to sending dairy products to commission merchants in distant cities to be sold on long time and subject to great losses in shrinkage in weight and deterioration caused by want of proper care and attention. Through the action of conventions of dairymen, butter and cheese produced in factories are now chiefly sold in the towns where they are made for cash. The weight is ascertained on scales belonging to the local board of trade. The money is paid over before the butter and cheese changes hands. The establishment of dairy boards of trade has afforded an opportunity for the managers of factories to put their names on all the packages of butter and cheese they sell. By so doing they are able to gain and keep a reputation if they deserve to have one. Before dairy boards of trade were established it was the practice of commission merchants to put any name they choose on the packages that were consigned to them. By that means they could prevent any new factory from gaining a reputation for its products. They could also prejudice the public against certain sections of the country as dairy regions.

The conventions of dairymen have performed a large amount of good missionary work. Recently it has become the custom to change the place of holding them nearly every year. Persons engaged in general farming attend a dairy convention if it is held near to the place where they live. They listen to the addresses, papers, and discussions and become interested in them. Many of them become convinced that dairying is more profitable than grain-raising and meat production, and make arrangements to adopt the latter industry. The publication of the productions of dairy conventions has called the attention of the public to the profits of dairying and the best methods of conducting the business. The proceedings of most of the conventions have been published in book or pamphlet form and sold at a low price to persons who are not members of the association. At the meetings of most of the associations there are now displays of butter and cheese and the various utensils used for handling, storing, and manufacturing milk. These afford excellent opportunity for comparing samples. Doubtless these meetings might be rendered more profitable by affording an opportunity for putting the apparatus and utensils in practical operation. This course is now adopted at the dairy shows in Great Britain, Denmark and Holland with the best results. It would also be desirable to establish shows of dairy cattle in connection with meetings of dairymen's associations. Up to the present time more attention has been paid to the manufacture of butter and cheese and the sale of them than to the cattle that produce the milk from which they are made. It is now to the interest of dairymen to determine most profitable breeds of cows to keep for giving milk. To enable them to do this every opportunity should be afforded for comparing their merits.—*Chicago Times.*

### What the Public Records Should Show.

I have long felt impelled to offer something about the imperfections in the form and manner of making up and preserving the public records of live stock, particularly of Shorthorn cattle, for I regard their records, while the most important from a public view, as the worst conceived of all. The article in the *Gazette* of December 13th, on "The Test of Pedigrees," coincides so fully with my views, so far as it goes, that I do not believe I can make myself better understood than by quoting from it the following paragraph:

"A good pedigree has often been defined by the writer hereof as one which commences with a good animal and runs back through an ancestry all distinguished for unusual excellence for many generations, and the longer such pedigree is the better. It is important to know that the male which is placed at the head of a herd should himself be a good one; it is important to know that his two parents, and four grandparents, and eight great-grandparents, were also distinguished for excellence in the points that it is desired especially to have transmitted. A pedigree, to be of any particular value, must be something more than a mere string of names."

The proposition is well stated. Mere genealogy is not sufficient—the public records should embrace, besides, something of the history of individual cattle, bulls and cows, by which the public can estimate somewhat their peculiarities and their special value, if they have any above the average of their race. The present system of public records originated in

England a great many years ago, when the Shorthorn race was first coming into public notice, and when no one had any conception of the extent to which the breeding of this race of cattle would be carried. It may have been sufficient when Shorthorns were restricted to a single narrow valley, and when what could be observed among a few herds around about among the near neighbors embraced everything that could be learned or seen of Shorthorns the wide world over. But it does not fill the bill now. Personal observation and recollection of particular animals and herds was doubtless sufficient in those days for gentlemen who neither foresaw the future of the interest or appreciated the fact that they were breeding for subsequent generations. But now the interest is so vast that one can know very little of these necessary details from personal observation and recollection, and the public record should be so reformed as to include whatever there may be of the history of particular animals, which distinguished them in any particular from the average characteristics of their race. At the same time, it should be brought into such convenient form as should render it easy to trace any strain of blood through all its lines, into whose ever herd it extends. For instance, there is a bull named Obanucey, or a cow named Mollie, whose descendants are found to display exceptional excellence as butter or beef producers, and the records should be in such shape as to enable any one to ascertain, without too much labor, in what herds other descendants of these animals can be found, and to what degree they possess the desired blood.

Before considering the nature of the changes in the system of public records necessary to include these features, which indeed I could scarcely undertake to do in the limits of this article, but will undertake to do in a subsequent one, it may not be out of the way to emphasize the importance to the Shorthorn interest of having the histories of these animals preserved in a concise and authentic form. Wherever there have been presented good cattle, of whose ancestors enough was known to establish the fact that their excellence was not exceptional, they have not failed to establish themselves in public favor and to maintain their position; while, on the contrary, there are plenty of good cattle—exceptionally good, as individuals, I mean—which have failed to secure expected recognition, simply because the public had no way of ascertaining, and, in point of fact, was ignorant as to whether their ancestors, any or all of them, were all exceptionally good. The most noted cattle with a history are the Bates Shorthorns. Mr. Bates had a history of his cattle. The public knows or can ascertain the distinguishing traits of both individuals and tribes. It knows the anxious thought and deliberations with which every cross was made, and the jealousy with which every real or supposed advantage was guarded—that all the skill of the rarest judgment and all the energy of one of the most persistent of nature were given to the building up and management of his herd. There may be those who do not approve of all of his methods; but the fact will not be disputed, nevertheless, that his herd possessed such peculiar excellence as to commend itself to popular favor, and enough was known of its history as a whole, and of the character of leading individuals, to justify the public in regarding it with confidence as well as favor.

As a result, the Shorthorn world has paid tribute to this herd for fifty years, and probably will for fifty to come. People naturally feel a security in blood the consistency and stability of which they know. The favor with which the Mason and Stephenson's stock have always been held is another case in point, and the strength of the Booth have been the positive knowledge possessed by the public of the high excellence of both the earlier and later herds of that blood. And in our own country, where, perhaps, it would be improper to particularize, there have been sorts which have won their way to high favor after the public had acquired a knowledge that the excellence of individuals was not altogether exceptional. And the reader, whose memory covers only a dozen years, will be able to remember other sorts which at one time seemed likely to command the widest favor, which, nevertheless, fell away into comparative oblivion, either because they were not uniformly good enough, or the public was not sufficiently informed of their actual merit for them to rise and sustain the highest measure of public confidence. A breeder cannot claim that his cattle are superior simply because he owns or bred them, but there must be some test or standard, somewhere, which the general public accepts as indicating merit, and there must be some way by which the fact that particular animals approach or exceed this standard can be made a subject of permanent record. As we secure a record of what particular individuals were and what they achieved—as we see the same records repeated through dam, daughter and granddaughters, the same distinguishing excellence holding its own through generations, we arrive at an estimate of the value of herds and the intelligence and skill of breeders. Then when breeders understand that the value and reputation of the stocks they keep will be measured by the performance of those they sell, they will be careful to see that their really good things, the apples of their eyes, go into the hands of those who have the ability in every sense to do well by them. They will be able to understand somewhat why Mr. Bates was so anxious to sell animals to some men, while declining to sell at any price to others. And it will then require something beyond the ability to command a few filthy dollars to enable every comer to become the proprietor of a London Duchess, one of Major Duncan's Lonans, one of Mr. Spear's Nelly Blys, or a specimen of many other sorts that will suggest themselves to the reader.

The subject is to me one of grave importance, however others may appreciate it, but cannot be pursued farther at this time. But as soon as I can again claim space in your well-filled columns, it is my purpose to return to it, and I shall endeavor to suggest some changes in the system of public records, which, without disturbing to any degree what has been already done, will, I think, simplify and certainly render much more valuable and complete all future records.—*Breeders' Gazette.*

### Hereditary Fruitfulness.

A story is told of a man who, long married, was childless, to the effect that he accounted for the fact by declaring it to be hereditary in his family. Every one who has watched and noted facts relative to fertility, in the course of long practice and with fair average intelligence, must understand how greatly the reproductive powers may be aided or the reverse in proportion as care or negligence rules in the breeding and management of stock; and that the danger of losing fertility is infinitely greater in the case of heavy beef breeds than in the case of dairy breeds, which, through the drain of milking, are kept from the gross condition that is found to be one of the principal sources of danger.

The increase of fertility in domesticated animals may be gained by careful pairing of fertile with fertile, and by judicious keep; decrease may be caused by ill-chosen or carelessly permitted alliances, and injudicious keep; increase, of course, being bounded by the natural term of the animal's life and the limit of possibility of breeding within that term, and de-

crease by the point at which both infertility and the breed itself are extinguished together.

The decay of fruitfulness has commonly proved one of the most serious drawbacks to the more advanced development of the beef breeds. In a state of nature, under ordinary circumstances, the reproductive system being in a healthy condition, barrenness is a comparatively rare exception to the rule. But as soon as artificial forcing begins, fertility is in jeopardy, and the higher the degree of improvement by such artificial means, or perhaps we should more safely say the more rapid the advance in improvement, the greater is the danger, and the greater the necessity for watchfulness and for special treatment tending to counteract the effects of urging the animal's system to early and extraordinary activity, and loading its frame with a weight of flesh and fat unknown in a state of nature. Many a fine family has died out because the owner, having succeeded to a great extent, is too eager for further and speedy success to put a timely restraint upon the rate of development. It is, perhaps, a great temptation to a breeder, when certain heifers show extraordinary readiness to lay on flesh, just to give them a little assistance and make wonders of them. Possibly he would do better to assist the more backward heifers, and treat their precocious sisters with proportionately less indulgence, short of checking their growth or wasting what they have already gained. In this way the reproductive powers may be preserved and strengthened, while the work of improvement, from generation to generation goes on, if not with the utmost possible speed, at least steadily and surely.—*Live Stock Journal.*

### Unfairness to the Common Cow.

None of what we call our native stock have anything like a fair chance. If we buy a high priced improved dairy cow we think nothing too good for her. We are always inclined to take her into the parlor, and if we do not we do not think the parlor is any too good for her. She gets the best food that the farm affords, and if that is not first-class, we buy that that is. If there is anything of merit in the animal it cannot help coming out conspicuously. But anything is good enough for the common cow. She is left to shift for herself. If she has shelter, well and good, and if she has not, it is all the same. She is expected to get along on dry hay, corn fodder and a litter, and is lucky if she gets enough of them. We have seen cows in the East kept on nothing but salt hay and corn stalks. We are not familiar with the composition of the hay, but it belied its looks if it contained much more nutriment than a fence-rail. Cows, upon such feed, did not produce enough to pay for the trouble of feeding them, but as they were "common cows" they were not expected to do much.

If feeding will go far toward creating a superior breed, feeding will improve an inferior animal. Nothing is more certain than that, as a rule. There are cows, of course, that are naturally good for nothing, and nothing can be done with them but to send them to the butcher. But there are many valuable cows among our natives, and many indeed that are exceedingly fine cows. If such cows are well fed and well cared for, they make good breeders and are themselves eminently satisfactory for dairy purposes. Suppose the owner of a herd of common cows sees what he can do by giving his cows just as good care as the Holstein and Jerseys gets. He must not expect to equal them, but he will probably be surprised, if such treatment is new in his management, with the result. Suppose he provides such shelter as these breeds generally get, and which is necessary for maintaining a full flow of milk. There is nothing that will lessen the flow of the milk quicker than the chilling of the cow. If she becomes chilled, as a dairyman recently expressed it to us, "you have locked the milk glands and you never can pick the lock." The cow, in other words, will give less milk at the next milking, and she will never recover until she has another calf. Once lower the flow and it is permanently lowered. But thousands of our native cattle are not guarded at all against this danger, and it is no wonder that they are unsatisfactory.

### Columbus on the Cattle Question.

EDITOR BREEDER AND SPORTSMAN:—Although a reader of your paper from its first issue, I have discovered scarcely a half dozen original articles devoted to the cattle interests. I sometimes wonder whether the breeders of cattle in California and the coast country were ashamed of their results, or did their silence only come from neglect. For my own sake, an original article on any of the various families, or branches of the bovine species, would prove excellent reading, even though one or more might be furnished every week. What are the breeders of thoroughbred cattle accomplishing? Is the rearing of cattle for the butcher block or the dairy a profitable occupation? Are small herds increasing, or are the cattle kings gradually crushing out the smaller fish? These, and many other points of interest pertaining to the occupation, are subjects that will interest the most casual reader and awaken thought and present new ideas. Here in northern and central Kansas, cattle interests have taken a decided change during the past five years. Where once was the herding ground of vast droves of heaves from Texas, and later on, when the dead line was crowded further west and south, numerous herds of native or Colerado cattle found here a summer pasture and were later on driven to the corn regions of the Missouri valley, can now be found hundreds of smaller herds, whose owners are at the same time tillers of the soil and rearers of cattle. At present we feed our cattle at home, and still there is a surplus of corn which requires shipment. The day of herds and picket ropes has passed, and right thankful ought the cattle to be, for, say all that one can for the herd, in this country, cattle suffer for lack of water and from too much yarding; while as to the picket rope, or hump pasture, as many term it, the business is a nuisance; cattle tied to a rope seldom have access to water often than once a day, while they are confined to the same plot of ground altogether too long during the busy season; for every one acquainted with the business knows full well that it is no small chore to care for a dozen cows and young stock on the lariat. The cheapness of barbed wire has placed within the reach of every man possessing stock the means of erecting a pasture, and each succeeding year witnesses new fences in course of erection and brings in to use many acres of ground that would otherwise be worthless. In one sense of the word, the business has been overdone in this country during the past two years. Many have been led to believe, (or have arrived at the stage of faith, which requires work and experience) that great returns were to be derived from the rearing of cattle, it mattered not how large or small the scale. With this belief, numbers of farmers have gone so far as to mortgage their farms in order that funds may be raised, and with the returns purchased cows and heifers at extravagant prices, incurred greater debts by purchasing fencing material on time, and in this way have tied themselves hand and foot. To be sure, the cows fulfill their mission, and the flock increases, but at

the same time the mortgage continues to draw it eighteen and frequently twenty-four per cent. per annum, and the time on the wire and posts expires. What can the insolvent one do? As nine out of ten have to do, he can sell his crop of calves. He pays the interest and fence bill, but what has he left for the support of his family?

The cows cannot be sold for enough to pay off their first cost, and he has to feed them through a long winter. The result is that many are compelled to quit the business ere the enterprise is well under way. The writer is personally acquainted with many cases in which a start was made in the manner mentioned above, and has lived long enough to witness the sad end of many foolish men.

The cattle business requires some capital to make it successful, or demands propitious surroundings for the adventurer. The profits from a herd do not accrue from the sale of young things, but demands that none but mature animals shall be offered the butcher or buyer.

In two years more the cattle interests of the northern tier of counties in Kansas, will be formed on a secure basis, for the craze has about spent its force, and a reaction has already set in, which will be followed by a healthy beginning on a better margin.

Cows were so high here a year ago, that drovers found it profitable to purchase thousands of cows and heifers through out Iowa and Missouri, and ship them to this section. The very same animals which sold for \$40 less than a year ago, now hunt purchasers at \$30.

Those individuals possessing sufficient means for the carrying on of the business have invariably found good returns for their investments.

There are more corn-fed steers and fewer grass-fed heaves, though this fact has not tended in the least towards reducing the profits of the breeder and feeder, for prices have ruled high for choice animals, and the returns have shown a fair profit.

There is one item that troubles our section not a little at present, and that is the potency of our bulls, or rather the lack of potency in these animals. We care very little for potency, but we do care whether our cows are with calf or not, for on that fact hangs the fate of our income.

Numbers of pedigreed bulls have been introduced in our country during the past season, and nine-tenths of them have proven themselves poor calf getters. Among many the saying has grown into general use, that a bull with a pedigree isn't worth a d—m, and the facts bear out the language.

Some of the finest specimens have proved utterly worthless for the purpose intended, and the owners have found winter hard upon them and their cows not with calf. The principal reason given by many is that the animals are forced altogether too much by breeders of line stock, whose sole object is to have fine large yearlings, and obtain a handsome price for the same.

In another letter I shall continue the subject, and hope ere that time to discover a spirited article in the BREEDER AND SPORTSMAN on the cattle interests of California.

COLUMBIA.

Mayview, Kansas, December 31, 1884.

## THE GUN.

### Notes of the Week.

We have much pleasure in inserting the following letter from Mr. Wilson, called forth by our efforts to do justice to the true sportsmen of the State, and a question of policy and law, which is daily assuming an importance in every portion of the Union that is very gratifying to all who have the welfare of the country at heart. The work we have so far performed will be continued as it was commenced, in all honesty of purpose, and we are glad to find, from other encouraging words besides those of Mr. Wilson, that our efforts are indorsed by the true sportsmen in the State. We believe, from the evidence of the past, the State Sportsmen's Association, if supported by the union we suggested last week, is the only means at our disposal by which we can obtain satisfactory legislation, punish the evil-doer, and enforce the law in future. We shall, therefore, persevere in the work, unflinching by friendship or enmity, when wrong-doing comes to our knowledge in an unquestionable form. Upon this point there will be in future, as there has been in the past, no vacillation, no cowardice, no compromise with us; for as the representative organ of the true sportsmen of the State, our paper, to do good work, must be brave as well as truthful, and it will be so. Instead of our usual article we gladly make room for Mr. Wilson's letter, satisfied it will do good in many ways.

EDITOR BREEDER AND SPORTSMAN:—It is a matter of congratulation that the sportsmen of this State have so able a representative as your valuable paper promises to be. No body of sportsmen appreciate this more than the California State Sportsman's Association. This organization has been in existence only about three years. During that time it has had many obstacles to overcome, resulting principally from prejudices based upon ignorance of its true objects, but with the aid of the BREEDER AND SPORTSMAN there is every assurance of its future prosperity. Such articles as "Supervisors and Our Game Laws" and "How are We to Get Game Preservation," as have lately appeared in your paper, and a continuation of the expression of such views as are contained therein, ought to attract the attention of all the sportsmen of this State and secure to you their co-operation and support. I hope the good work commenced will be kept up. As a member of the association I thank you, and hereby tender to you all the assistance I can give towards making the BREEDER AND SPORTSMAN what it is sure to be, if its present policy is maintained, a representative sportsman's journal. Yours truly,

RAMON E. WILSON.

San Francisco, Jan. 9th, 1884.

### Successful Again.

We have pleasure in scoring another victory for the State Sportsman's Association. Mr. E. Goodman, of the firm of Hart & Goodman, prominent game dealers in the California Market, was arrested last Friday, for a violation of the game laws by having doves in his possession. His case came up before Police Judge Webb, on Monday last. When the complaint was read to him, the defendant, said he desired to make a statement. This he was allowed to make, but it availed him nothing, as it merely asserted "he did not know the law." In view of the fact that the association had distributed cards to all the game-dealers, with the laws upon them, the defense very properly had no weight with the court, for even if it were not the duty of an American citizen to know the general laws of his country, it is certainly the duty of every game-dealer to know the game laws of his state. Mr. Goodman was fined \$50, the payment of which, we hope, will be of service to him in future. The prosecution was conducted by Messrs. Robinson and Wilson. The information leading to

the arrest was given by Messrs. Hunter and Harper, of the Society for the Prevention of Cruelty to Children, for which they deserve the thanks of the community. The game and fish dealers had better think twice before they violate the law this season. Their dodges for safety are now well known, and scores of keen eyes are and will be prying round them.

While on the subject of the violation of the law, we may refer again with advantage to the case of Friedberger, the agent of Wells, Fargo & Co., who recently shipped a deer to his wife in Stockton. The offender has a ranch somewhere in the Stockton district, and has, we understand, been in the habit of killing deer out of season. In this case the express agent on the train, like a true man, declined to make himself liable by complicity in the matter, and refused to receive the carcass on board. Besides prosecuting the offender, the State Sportsman's Association have brought the matter officially before the company, and he is certain of being discharged from their employ, if not convicted on trial. It will be remembered, Wells, Fargo & Co., the Railroad and Steam Navigation Companies, have each dealt very liberally with the Association in seeking the enforcement of the laws, and gone to considerable expense and trouble to support their laudable efforts. Wells, Fargo & Co. have been particularly conspicuous for their earnest liberality in this good work, and it will be a sorry day for any of their silly agents, who, presuming on a little brief authority in their position, come to the conclusion they can defy the wishes of the company and the requirement of the law at the same time.

A good sign of the times comes to us from Nevada county, which, we hope, we may have had something to do with in producing. Our readers will recollect we brought the County Supervisors, a fortnight ago, before the bar of public opinion for an accused tampering with the law, under an exploded right supposed to be given them by the Political Code. A singular but happy change of opinion has come over the local officers, and the Nevada Transcript also, which at first urged the Supervisors to sin against the law. A man named Stevens, a market hunter, recently killed a deer and offered it in Nevada City for sale, as he alleged, under an impression he was acting legally under the Supervisor Ordinance, which sought to extend the open season until the 1st of January. At least, so the case stands, as reported to the public, when Stevens was arrested by the officers of the law for the offense. Precisely how far the Nevada Supervisors are associated with this change of sentiment or the arrest of Stevens we cannot learn, but the Nevada Transcript and the Grass Valley Tidings, each of which has long advocated the right of every man to be a law unto himself in the matter of killing deer out of season, both occupy a new and very gratifying position, a position that promises much good in future. The Transcript, speaking of the arrest and the Supervisor Ordinance, says: "Such law may be good for Grass Valley, where it is recognized by the Sportsman's club, but it won't do in Nevada City." The Tidings joins in and says: "The Supervisors ought to repeal that Ordinance, for it is a fraud, and leads to the arrest and punishment of innocent rural sportsmen. Moreover, the Supervisors should remit Stevens' fine. The Ordinance is really the guilty party." Personally, we hope the Transcript, though right in the main, is wrong in asserting the Supervisor Ordinance is recognized by the Grass Valley Sportsman's Club, for it contains many good men—good as citizens and good as sportsmen—whom we should deeply regret to see in such a degraded position. Personally, and for the first time, we agree with the Tidings on this subject. That the Supervisors should individually pay the fine imposed upon Stevens is only strict justice, for in tampering with the game law after the passage of the County Government Bill, they violated statute law, and committed a much graver offense thereby than Stevens did in killing a deer under their vile ordinance. We fear such men will not be just enough to pay the fine. Stevens, the killer of the deer, wisely pleaded guilty, but Kent, the purchaser, also arrested, intends to test the law. We think it foolish to feel anxiety about what the Grass Valley Union may have to say on this matter. Charley Mitchell, the proprietor, is one of our oldest friends, and morally as good a man as lives in the world, but he is no sportsman, and his opinion on such matters can have no possible weight. As we have said before, the only hunting he ever did before he went to Grass Valley was hunting mushrooms round Auburn with ourselves twenty-five years ago. We advise the citizens and county officers of Nevada to maintain the law of the land, and pay no attention to what the Grass Valley Union may say on field sports or the proper law to govern them.

Mr. Maynard, Purser of the S. S. Columbia, reports duck shooting round Portland, Oregon, and the condition of the birds, as being very good for the season. This gentleman, in one of his late trips, brought 42 very fine canvashacks home, and got them down in excellent condition. He informs us also, the rights of private property for sixty miles round Portland are strictly enforced, and that even when asking permission, it is quite difficult to get a day's shooting. It is the enforcement of this right that makes game so much more abundant with our northern neighbors than with ourselves. Let us follow Oregon's example, and we shall have Oregon's abundance. Mr. Maynard further informs us the Japanese pheasants have multiplied finely in the woods along the Columbia river, simply because the law of preservation is enforced there by the authorities, and the general citizen is too just and too proud of his manhood to violate it. Let us remember that also. While speaking of Japanese pheasants, we understand, those belonging to the State Sportsman's Association, at Mr. Hayward's residence, San Mateo, have also multiplied very well last summer, there now being over one hundred. This looks as if our coast would soon have plenty of these grand birds. One or two have been turned out at San Mateo, but the vandal that shoots them had better seek a more healthy climate than that of California. It is resolved upon to give him a coat of tar and feathers hot and thick.

The Cordelia and Tule Belle Clubs, on their preserves, did not have much sport on Saturday, because they waited a day too long. Had the members gone up on Friday night, and shot on Saturday, the sport would have been magnificent, but Sunday was too calm. Mr. Macalister, of the Cordelia, and a friend got twenty-five birds each. Mr. Bogart, of the Tule Belle, saw immense numbers of canvashacks at the upper end of Sherman's Island, but nothing could be done with them. The ducks generally are reported as failing in condition. Successful hunters mustn't mind a little rain and mud.

In speaking, last week, of good bags of quail, we mentioned those of Mr. Orr and Mr. Charles Ohn, of Market street. The latter is a good wing shot, but the figure one dropping out of the forms while going to press did him injustice. He should be credited with 19 birds instead of 9 for his day's shoot near San Mateo.

Another tough yarn comes to us from an Eastern paper, the Hawkinsville News, that an immense buck, which had defied all the best hunters in Irwin County for years to bring him down, was recently killed after half a day's chase. The strange part of the story is that it was found he had been nesting with two enormous rattlesnakes, each as big as a man's thigh. As that thickness would require the snakes to be at least ten or twelve feet long, and a snake with twenty rattles and a button is seldom more than five feet long, at least in California, we see, at once, the mistake made in this yarn, somewhere. We wish these hunting jokers would have some respect for a man's nerves.

Mr. George Thorn, who lives a few miles from Martinez, recently had a fight with a wildcat. After receiving two charges of No. 3 shot, the vermin whipped the dog in a jiffy, and then prepared to jump Mr. Thorn. After a severe contest, during which Thorn broke his gun, the animal was killed. Wildcats, like grizzlies, need to be killed at the first shot, or something unpleasant is likely to occur.

Wild hogs, as well as wildcats, are reported plenty round Martinez. In the tules there Mr. Formly was recently attacked and severely bitten by a wild hog. Sportsmen will soon avoid that locality.

### The Future of Field Sports.

The evolution which has taken place in American field sports during the past ten years, is so marked, that a measure of the future by past progress, would seem to indicate that the ultimate proficiency toward which we are tending, would soon be reached, and following the law of grade and retrograde, the fruit of the sportsman's labors, so nearly ripe, would soon enter upon the downward course of decay. But a little investigation will dispell any such impressions that a casual observer might have, and yet a little more careful examination will show that the subject of field sports is still in its infancy, and will bear all the nursing we can give it.

When the sportsmen of America set about it in earnest to raise the standard of field sports, their conception was comparatively weak with their subject. Men measured the success of a day's sport, by the size of the bag, and the quality of their shooting. There was little need for game protection, for game might be found in abundance without the aid of a protective law. The pleasures of shooting over highly bred and cultured dogs were only known to a few. In fact the general idea of field sports was so far below our ideas of to-day that our practice was the ideal of the sportsmen of a few years ago. The ideal of to-day is still far ahead of us, and when field sports shall have been elevated to the highest plane which we can now conceive of, we will still be as far from the zenith as ever, for our conceptions grow with our subject, and we will always be able to conceive of something connected with the field that may be yet a little better.

We are all prone to fond recollections of earlier days in the field, with some favorite dog, and a gun, which perhaps we thought the best in the land. We remember the old shot pouch and the powder flask, and the rest of the paraphernalia of the times, to all of which we were much attached. Associations had made them dear to us, but for themselves alone, how would they appear by cold comparison with the best implements of the present time? We were fond of our old associates in the field, and perchance many of us, who have preserved our old-time implements, have still so great an attachment for them that we would not give them in exchange for the more modern and greatly improved paraphernalia. Yet we do not wish to take these old trappings into the field. They will do to look at, and may give much pleasure by their instrumentality in calling vividly to mind the incidents of happy days gone by; but their usefulness in the field is a thing of the past.

The sportsmen of a future generation, it is fair to presume, will be placed in the same position regarding his earlier experience in the field as we are to-day. The finest guns of our time will look as unfit for field use in the eyes of a future generation of sportsmen as does the old muzzle-loader, at the present time. There is just as much room for improvement in our setters and pointers to-day as there ever was, and the more they are improved in some particular quality, the more room we see for improvement in other qualities. And the same thing will be true in another generation. The highest standard of excellence that we can conceive of, is still so far from perfection that, as we travel toward it, we shall always see a little farther, and yet a little farther. Ultimate perfection can never be reached in dogs, in guns, nor in any branch of field sports, any more than it can in any thing else. There will always be room for a little more improvement.

This constant improvement in dogs and implements for field use, and the ease with which game may be taken, is suggestive of a scarcity of game in the near future, and a still greater scarcity as we march on in the path of progression. But with this evolution in dogs, in guns, and in means of taking game, goes the evolution of the sportsman's ideas of field sports. He learns to measure his sport in the field by the sport he has, and he learns that the killing of birds is among the lesser pleasures, instead of a *sine qua non*. He learns that meat can be purchased more cheaply in the market than it can be captured. He learns that he can test his marksmanship just beyond the corporate limits of the town in which he resides, at less trouble and expense than he can in the hunting field. He comes to learn that the mere shooting and capturing of a large amount of game are but incidents of a day's sport, and that good air, breathed amid the beauties of nature, the wonderful working of the dogs, and a pleasant tramp with genial companions, are some of the more important elements that make life longer and more pleasant to the sportsman.

Go to an interior town which can boast of a number of shooters will tell you of the quantity of game they kill. Go there a few years later, when these same shooters have been modernized and become sportsmen, they will tell you of the quantity of pleasure they have had in the field, and how many birds they might have killed. They have learned that a day's sport does not necessarily depend upon the killing of a large amount of game, and they have learned to find pleasure where before they did not know it existed.

As the sportsmen grow in number, means of preserving game are improved, and the day when field sports will suffer for want of game is out of our sight, if proper means of game preservation are observed. A number of years ago the opinion was freely expressed that quails would be so scarce at this time that their pursuit with dogs in the field would be impracticable. Yet we have never known a better quail season than the present one. When any pains are taken to preserve them, the same field may be sent over by a much larger number of sportsmen than is generally supposed. Sportsmen, we mean, who go afield for pleasure and not simply for meat.—*American Field*.

Kyrle Daly.

We are well pleased to place Kyrle Daly in the list of California thoroughbred stallions, feeling confident that he will prove an addition of the greatest value. It is also a gratification that his owner has determined that he shall go into the "public list," and at a figure that any one having a well-bred mare can afford to pay. Thus his blood will be disseminated from the start, and his colts meet in races more frequently than if the services were limited to one stock farm. His blood is of the most fashionable strains, his sire Artillery being the son of Touchstone, his dam by Iris Birdcatcher, and dam of Kyrle Daly being by Gemma di Vergy, and his third dam the dam of the Baron, the sire of Stockwell and Rataplan. Artillery ran a dead heat for the second place in the St. Leger with Bonnie Scotland, won the Prince of Wales Stake at York, the Criterion at Newmarket, and secured other prominent races in England. Kyrle Daly was a capital race-horse. He won the Irish Derby, one and one half miles, carrying 122½ pounds, a steadier for a three-year-old, there being a large field of starters, among them Angela who was second in the One Thousand Guineas and third in the Oaks. The same year at the Curragh October meeting he ran second for the Royal whip, four miles, with 140 pounds up. At the Curragh June meeting he won, on the same day, the Curragh Plate, two miles, and the Stewards Plate, one mile, in both meeting large fields. At Bellewstown he won the Dardistown Plate, one and one-half miles, and Her Majesty's Plate, three miles. After those performances Kyrle Daly was considered the best horse in Ireland, and the best evidence of his standing was the impost of 142 pounds in one handicap and 161 pounds in another.

The following description appeared in New York *Spirit of the Times* soon after his importation, December, 1879.

In color Kyrle Daly is a rich blood bay, and is 16½ hands, with a star between a pair of eyes set wide apart, and presenting a handsome, full face; below the eyes, and just above the near nostril, is a stray white spot of irregular shape, and scarcely an inch in diameter. These marks contribute much to his appearance in front. His nostrils are large and expanding, the muzzle is simply beautiful, the head neat, clean and hony, the ear fine, small and pointed, and the eyes large, full and expressive. The countenance bears the impress of a quiet courage, free from that restlessness incident to a nervous temperament. His head joins the neck so as to present the muzzle in a beautiful position, rather as if he was reaching out all the while; the jaws are massive and strong, and the throat wide and roony. The withers rise well up from the saddle-piece, and this incline is continued till the neck forms a grand arch, such only as gives to the possessor the air of pride and spirit. The shoulders are deep, well set, broad, powerfully muscled, and oblique in shape; the barrel and ribs are very large and round, and the ribs fall well back to the hip bone, which, with an unusually short, strong back, and his flanks till they are perfect, and the whole is sur-

mounted by a loin that is perfection itself. We never saw the equal of Kyrle Daly in this particular. In rear he is smooth, well turned and powerful, the tail bone is large and strong, and his quarters come together in perfect shape, and are muscled like Hercules. They present a rare combination of beauty and strength. The thighs are excellent, the stifles splendid, and an uncommonly good hock. His legs are black, as are his mane and tail. The legs are better than we ever have seen in an English race-horse. At first we thought the cannon bones in front were a trifle lengthy, and hence wanted strength, but the more we investigated them the more certain we became that this defect which so generally marks the English horse is not to be charged against Kyrle Daly. The legs are very clean, smooth and ivory like, and the tendons and leaders strong.

The best of all recommendations for a stallion is the proved capacity of his get, and for the first season the young Kyrle Dalys make an excellent showing. As it will save a good deal of labor, we will await Krik's Guide before giving the performances of the get of this very promising sire.

The Stanford Stake.

Owing to an ambiguity in the nomination, the list of those engaged in the Stanford Stake for 1885 will not be published until it is cleared, and if the explanations are not satisfactory the stake will be opened again. It seems as if the wealthy California breeders were strangely apathetic regarding this stake, and certainly the claim made that the amount is too large, has no force when so many are well able to risk that or far larger sums. Formerly, the plea was offered that the stakes were not of magnitude to pay for the trouble of training, and the Stanford was gotten up to overcome that objection.

The first opened met with a hearty response, and twenty-one nominations led to the belief that in future years there would be enough named to make it the big trotting event of the year. It has dwindled since then, in place of growing, and the only construction that Eastern people can place upon it is that the decadence is owing to the fact that the breeding of first-class colts is restricted to two of the main breeding farms of the State, with one or two others who are gifted with more temerity than judgment.

It is not a large sum for those to risk who are investing so many thousands of dollars in the breeding of trotters, and we could name quite a number of breeders who can well afford to name a number of colts in a stake which only entails a first risk of \$100, and who cannot afford to stay out.

Should the time be extended for making nominations, we sincerely trust that our breeders will give it the attention it so well deserves, and name as many, at least, as in the opening one of the series.

The Stanford Stake for 1884, which closed with twelve nominations the 1st of January, 1883, four have remained in. These are:

Palo Alto's b f Argo, by Electioneer, her dam American Girl.

Palo Alto's b c St. Just, by Electioneer, his dam Fidelia.

L. J. Rose's Bedouin, by Sultan.

Jos. Cairn Simpson's hr c Antevolo, by Electioneer, his dam Columbine, by A. W. Richmond.

Therefore, there is now \$1,600 in the stake, and consequently each colt on which second payment has been made, has doubled the original investment.

But the stake has a value to the trotting interests of California apart from the dollars it represents. It is a token to those whom we hope will become purchasers, that there is confidence in the stock reared here by the people who breed them, and that they are not afraid to meet the kind that are held in terror by the breeders of the East. Judging from the acceptances, a person would be justified in the assumption that there was not so much in the California climate as has been claimed, and that Electioneer and Sultan were the only stallions whose get were worthy of a place in a big event. There are, of course, men who have prudential reasons for not risking the amount involved in the Stanford, and yet we think it short-sighted economy in a large proportion of California breeders not to make engagements. It gives their stock a prominence from the time the entries are published, and the \$100 is an investment which can scarcely fail to pay.

There is another phase of this question which it is well to consider. When the Stanford Stake was first opened Palo Alto had not engaged in the Eastern Stakes, and was looking at home for places to trot the colts in. Now there is a change. Those colts which are the most highly thought of are named in those away from home, and in place of making so many entries a few are engaged.

This was to overcome the objections so persistently argued "that there was no use in competing with Palo Alto." And now it may be that the plea will be that if the best of the Palo Altoites are not entered, they do not want to trot against the second rates. In that case, all

that is necessary will be to join in the Eastern Stakes when the desired opportunity can be found. At all events, when the home nominations from Palo Alto are restricted to two or three, it cannot be claimed that the chances for selection are greater than very many other breeders can also have the benefit of, and as this has been the most persistently urged, the giving up that advantage equalizes all around.

Before the paper goes to press we will know whether the stake is reopened, and in that case the time will probably be extended to the 15th of February.

Since the above was in type the Secretary has sent other nominations, and to place all together those published before are reprinted. The additions are Buccaners, a scion of the Long Island Black Hawks, a prominent family in trotting history.

Field Trials.

We sincerely hope that the "Member of the Gilroy Club," who favored us with the capital letter under the above head, published last week, will oftentimes use the "pen and ink" for the benefit of us and our readers. Every suggestion is meritorious, and his ideas well worthy of consideration. That in so large a State as California there is room for at least three field trials is evident, and if the sportsmen of the different sections can meet in friendly rivalry, the cause will be advanced. As our correspondent states, dogs, through causes apparent, and at times for reasons which cannot be explained, do not show their true form, and a very different estimate might be made from the result of several trials. Condemnation may be changed to praise, and the dog which made an inferior showing at one place gain laurels at another.

But the feature of the communication that pleases us the most is the friendly spirit which is manifest, and all through it is the evidence of good feeling. There is apt to be such an intense desire to see a favorite dog take the first position that the judgment is obscured, emulation degenerating into rivalry, and defeat into bitterness. There is not an animal which awakens so much attachment as a good dog: In some respects they are superior to the human family, and very properly they are portrayed as the emblem of a fidelity unflinching and unquestionable. While the hunting dog does not incite warmer feelings than those which are comparatively of little value, he has a double claim on the affection of his owner. He is a companion and a factor in his recreations which cannot be dispensed with. The paraphernalia of shooting would be next to worthless were it not for his aid, and the most exciting phases of the sport present little attraction. At least to the who shoots for pleasure, and though the pot-hunter's only care is to fill his bag, the sportsman worthy of the name has higher aspirations.

Field trials should be the occasion of large assemblages, and conducted in the manner our contributor recommends, be enjoyable as well as instructive.

The Stakes at the State Fair.

Last week we published a list of the nominations in the Occident Stake for 1885, and the Annual Stake for 1884. There was also printed those who made the second payment for the Occident of 1884, and thinking that there might be additions, comments were deferred.

The most singular feature is, that while the Occident and Annual Stakes are both for foals of 1882, there are ten in the former and eighteen in the latter. The Occident is to be trotted when the colts are three years old, the Annual when two years. People generally object to trotting colts when young, though in this it appears to be reversed, and the only explanation we can make is, that there was a misunderstanding in regard to the conditions. But for all that there is a good showing, not only numerically, but in quality of breeding are hard to excel in any country.

Hambletonians, through several branches of this noted family, Clays and Blue Bulls on the side of the sire, with dams of fine blood. It is long odds that there is not a parallel case to that of "Lassie Jean" in the whole of the United States, that being the nomination of a trotting two-year-old colt from a mare by Lexington, the son of Boston. Very many who consider that they are *au fait* in pedigrees would pronounce that a false record, as the Lexington mares are not only becoming scarce, but are too highly valued as "turf matrons" to be put to such a use. Mr. McDonald paid \$2,600 for the dam of Lassie Jean, Lexington Belle, when a yearling at the Woodhurn sale in 1876, and he ran her the next season, when she showed a fine turn of speed. We have heard that Lassie Jean is very promising, and that she is likely to be no discredit to her high lineage.

There are thirteen sires represented in the Occident and Annual Stakes, viz., Electioneer, General Benton, Sultan, Alaska, Echo, Admiral, Del Sur, Brigadier,

Prompter, Steinway, Algona and Nephew. It is a striking endorsement of the value of the Hambletonians that eight of the twelve are descended from the "Hero of Chester." There are two sons of The Moor, one Blue Bull, and General Benton, who descends from Abdallah, the sire of Hambletonian.

Prompter, the son of Blue Bull, is likely to be of good service to the trotting stock of California, as those of that blood have gained deserved distinction, and now every family of note in the East has members in this State. That trotting colt races are sure to grow in importance is beyond question. There has been a sort of scare following the doings of the colts from Palo Alto and Sunny Slope, but the demoralization is giving way, and there is a partial recovery from the panic, which could almost be called a stampede, of a year or two ago. There is an advantage that breeders are prone to overlook, and the making of nominations ensures that the youngsters will be educated. It will not answer to claim that the reasons for not entering are based on opposition to early training, as that has been proved erroneous. Nearly all of the crack performers of the present were sent to school young, and every year will add its testimony to the value of Kindergarten work in the equine course. As we firmly believe that a large majority of the successful trotters of the future will be taught their first lessons as soon as they are weaned, and that in their yearling form the foundation will be laid to a better advantage than at any succeeding age, we urge breeders to the course, feeling confident that it will be a benefit far beyond the cost.

### Closing of Stakes.

It may appear that we are unduly perverted in calling attention to the closing of stakes, but it is almost sure that if there is not continual hammering some will forget and scarcely an event closes without there being lamentations over the lapse of memory. On the 15th, Tuesday next, the stakes of the Washington Park Club, and those of the Driving Park Association close. Both of these meetings are run at Chicago, the course of the Driving Park being on the "west side," the other on the "south side." Both having been built since we left Chicago, from personal knowledge we cannot state exactly the distance apart, though a direct line cannot measure more than fifteen miles, and, probably, not so far as that. The two meetings being so close together that the time is economized, and after running at the Driving Park it will only be a short walk to Washington Park. The advantages, however, of making nominations in these stakes are as apparent that it is only necessary to refer to the advertisement, although it can truthfully be added that there are still other inducements. There is no trouble in selling race-horses in the East now, and the demand is not restricted to the top-rangers of the turf. There is such an extensive field to supply such a number of race meetings, and some of them extending over months, that all classes have an opportunity to earn expenses. Under the present condition of affairs it is safe to assert that every race-horse and racing colt worthy of being taken to Chicago can be sold for good prices.

### Monarch, Jr.

Our correspondent "Columbus," must have an eye to what he writes if he does not desire editorial comments. As a general rule his communications are worthy of encomiums, and even when wrong he pictures things so pleasingly that they are published, reserving the right, of course, to show errors. In his article published last week, he started out with a mistake, as we never heard it claimed that Monarch, Jr., was imported Monarch. In the Breeders' Trotting Stud Book his sire is given Strawn's Monarch, and this is the way it appears in every instance that has come under our observation. If Strawn's Monarch is not entitled to the credit he should not be permitted to wear the garland which rightfully belongs to the "little Kannuck." It may be that this is an error, too, and when publicity is given correction may follow.

### Races at Oakland.

To-day there are to be two races at the Oakland Trotting Park, a match between Viola R. and Haddington, heats of a mile, running, for \$600, and a trotting race between Nellie Burns and Moscow, both to wagons, for \$500. The contestants in both races are so close together that there is likely to be exciting battles, and that the heats will be broken is "foregone conclusion." What effect the enforced idleness during the wet weather will produce cannot be foretold, there being such a vast difference among horses in this respect. Then Moscow has proved that he is a good wagon horse, while his former victress is untried at that way of going. The track is likely to be in fair condition, and from present indications the afternoon will be fine.

### The Stanford Stake.

As was indicated in another article, the date of closing of the Stanford Stake has been changed to the 15th of February, as it was evident that it had been overlooked by those who intended to make nominations. Those made were Palo Alto, L. J. Rose and Jos. Cairn Simpson, so that it lacked two subscribers of filling, though there were that number of colts named. We sincerely hope that the extension will result in making the list such as should be shown in this the greatest of all stakes for young trotters.

### Making the Snow Whirl.

[New York World.]

Fine weather and good sleighing caused innumerable turnouts to appear on the drives yesterday afternoon, and the surroundings were sufficiently joyful to make even a cynic smile. The atmosphere was like spring—clear, cool and bracing—and the sun shone brightly until about 4 o'clock, when it sank behind the hills and cast fantastic shadows on the snow-covered roadways. The variety of sleighs and horses was greater than on any previous day this season. Horses of high degree and sleighs of fanciful designs went merrily along side by side with the sorrowful-looking, goose-necked sleigh, whose appearance was made more ancient by the dismal gongs that did duty as sleigh-bells.

Stately cobs with banged tails, attached to a sleigh of the now popular Russian style or the ngainly Canadian tub, appeared in the glory of gorgeously hued plumes, and high-mettled trotters to single cutters or speedy pacers passed them with ease. The owners of the former went out for comfort, the drivers of the latter wished for excitement. All went out for pleasure, and their bright eyes and the healthful glow on their cheeks said plainly that they attained their ends.

In the early afternoon Seventh avenue from Central Park to Macomb's Dam Bridge was crowded with sleighs all going uptown. In the early evening, when it seemed as though the lower part of the city must have been depopulated, the homeward route was taken and the roads were again alive with swift-moving horses and sleighs.

Very many beautiful turnouts were to be seen during the day. The most striking, however, was that of Mr. Elliott Zborowski. It was a large sleigh, of the Russian pattern, with black body and red gearing. Four slashing bay horses, clipped to a mouse color, caparisoned in an elegant manner with silver-mounted harness, formed the team. The leaders had sealskin saddle pads, and the wheelers wore saddle pads of plucked beaver. The head-stalls were ornamented by large plumes of blue and gold that waved gracefully as the high-strung animals champed their bits. The sleigh was a remarkable one. Large and commodious, the main box was far below the driver's seat, the dash-board of which was flanked on either side by a plume similar in all respects to those dressing the horses. In the sleigh were three ladies and two young children, half hidden from view by elegant sealskin robes. They, as well as Mr. Zborowski, seemed perfectly unconscious of the furor that the princely splendor caused.

Another attractive affair was driven by Mr. Isador Cohnfeld. It was a Russian sleigh, with two clipped bay cobs with banged tails and flowing plumes. They made the snow fly.

A turnout that attracted much attention was a light Portland cutter drawn at lightning speed up and down the avenues. Two persons were in the sleigh, a gentleman and a lady. Both were clad in sealskin. They were Mr. Ed. Stokes and lady, and his famous team Lyrian and Bellflower. Then came a light Albauy cutter, with spider-like braces that seemed scarcely able to sustain the weight of the body of the sleigh. It was a wonder of the blacksmith's skill, and weighed only sixty-two pounds. As it was drawn over the snow the body seemed bereft of runners and appeared to fly through the air in pursuit of the silver boots that moved it. The illusion that it was of ethereal origin was dispelled, however, by the appearance of the occupant, John J. Quinn, the largest man in Harlem. He is six feet three inches tall, and weighs 215 pounds.

A particularly handsome turnout was driven by Mr. Emerson Foote. It is a dark, green-bodied cutter, with seating capacity for two persons only. The team of bays that were harnessed to it are both by American Star, and have great power and speed. They were extended to their utmost yesterday, as Mr. David Bonner, driving Daisy Tyrrell, hung on to them. Among others out yesterday were the following: H. P. Pike, with his favorite horse Deacon; Hugh Ferrigan, with "Phil Mulligan." Nathan Straue drove Daisy and Darling. Mat Riley drove his new team Kittie S. and Fred Clark. J. L. Mott, Jr., drove Sweet Sal. "Rocky" Moore sat behind a new roan mare that he calls Bessie A. Fred. Bonner drove Music. Robert Stage, Jr., drove a new purchase, a chestnut mare that he has named Lady Stage. David Bonner drove the bay colt by Startle, out of Jessie Kirk, a brother to the famous Majolica.

Lloyd Phenix drove King William, record 2:20. W. S. Ridabock drove the bay mare Lena Case. Mr. Thomas Watts handled the ribbons over a new horse named Middletown Mohawk. His brother, Archie Watts, drove his celebrated pacer, John L. Sullivan, that "knocks them all out."

Col. Mooney drove the old war-horse Warrior that the Colonel says he heard telling the stable boys stories of the war.

Col. Lawrence Kip sat behind the bay mare Lady Griswold. W. J. Holder drove the sorrel gelding Jesse, by Daniel Lambert. M. J. Duff sat behind his bay gelding John J., and Charles Johnston drove his bay mare Peggy. O. M. Bassett admired his bay gelding Pete. Gen. J. O. Nay drove the bay horse Garry Owen.

Myndert Starin drove a handsome bay that showed a '25 clip, and Mr. Hinckley sat behind a bay mare. J. Bevin had his bay mare Mollie out and made a brush on Seventh avenue with Ed. Marshall who drove a smart-looking bay horse, Captain Tynan, of the Fourth Precinct, drove his black stallion Jason Miller and let the snow fly in many a speedy one's face. Samuel F. Sniffen drove Capt. Bart Marshall and W. Hamilton drove the Western Girl.

During the afternoon there was a grand free-for-all race, horses to sleighs, for a purse of \$100, divided as follows: \$50 to first, \$35 to second and \$15 to third. There were five entries, but only four showed at the post. The course was seven-eighths of a mile over Central avenue, starting from "Arcularius' old place" to Gabe Case's. At the latter place about one thousand persons had gathered, and along the road to the starting point people stood for over three hours ankle-deep in the snow. The starters were the bay gelding Frank, record 2:08½, owned by Pat Keenan of Boston, and driven by Johnnie Murphy, who, of course, eat in a green sleigh; the chestnut gelding Frank, driven by W. H. Barnore; the bay gelding Fred. R., driven by Jerome Whelpley, and the bay

mare Breeze, driven by Andy Wilkinson. The judges at the start were W. W. Briggs and Benj. Sprague. The judges at the finish were Joe Elliot, J. Somerindyke and Andy Blair. There was little betting, and no one could be found to bet against Frank and Murphy.

Murphy got the best of the start for the first heat, and won easily with Keenan's Frank, and the little horse repeated the trick and won three straight heats. Fred. R. won second money and Breeze third.

After the race the sports who had sleighs rode home; those who had none walked.

### Dorr and the Rabbits.

EDITOR BREEDER AND SPORTSMAN:—As the reports of the late trials in both the eastern and western sportsman's journals have had much to say about "Dorr's" chasing "fur," I think it would not be out of place for an explanation from his owner and breaker as to the conditions under which he ran. For a year and a half I have had but little use of my legs, and, in consequence, Dorr had not been hunted a day or an hour, not even heard the sound of a gun since February, 1882, in North Carolina, with the exception of a few hours the day before the trials, when he had his first interview with a California quail and a jack rabbit. His only experience with rabbits had been with "cotton tails," and he has had plenty of that in the southern States, where he was as steady to both "fur and wing" as any dog living, and if I could have had one full day's shoot over him, where rabbits were plenty, there isn't "fur" enough in the State to make him leave his tracks, even if every dog in the field were in full chase. The facts are, that he chased but once (and then in his first heat) sufficiently to be penalized. In regard to "punishment" for faults, as spoken of by your Gilroy correspondent, I will say that different dogs require different treatment, and a competent breaker soon knows the requirements of each individual. As to "Dorr," we have lived together long enough so that we both know the kind he relishes.

OWNER OF "DORR."

Truckee, January 6, 1884.

### Shipping Turkeys.

Mr. O. A. Gilman, Paris, Kentucky, ships each winter to New York and Boston a great number of turkeys which are quite celebrated and bring the best prices. The methods of dressing and packing are thus referred to in the correspondence of the Cincinnati Commercial Gazette:

"After being driven from their homes in the blue-grass pastures, the fowls are quartered in large pens adjoining the slaughter-house. The killing is done by cutting the throat, and then allowing the fowl to hang with its head downward so that all the blood may drip from the body. Mr. Gilman employs from sixty to eighty colored women to remove the feathers. They, by practice, have become fast at the business, and while some familiar camp-meeting hymn is being sung, they move their hands with much dexterity. After the pick the fowls pass through the hands of a young man armed with a bludgeon, who, with a single blow of his weapon, breaks the breast-bone, after which the abdomen is split open and the entrails carefully removed. After this the fowls are hung in the open air until all bodily heat has evaporated. Then the packing begins. The boxes are of uniform size, holding about twenty turkeys each. Seizing the fowl by the neck the legs are bent forward until they rest on the breast, this laid in the box, and the next one afterward, being treated likewise, laid so that the breast of the former will be between the legs of the latter. In this manner, lying cheek by jowl, like sardines in a box, all the space is utilized, and the danger of bruising in shipment avoided."

### Aerated Milk.

We are asked whether it will pay to aerate milk by forcing air through it, and whether the benefit is sufficient to warrant farmers in buying machines for that purpose.

It improves milk to aerate by exposing to the air in any way, either for cheese making, butter making or family use. Where cheese is made by the old acid process, in which the curd is kept in the whey till the whey becomes sour, it would pay the farmers, and all concerned, to both air and cool their milk before sending it to the factory. Keeping the curd in the whey till it becomes so stale as to be sour, intensifies the bad odors contained in the milk, and fastens them in the curd, to the detriment of the cheese. Hence, the importance of removing the odors as far as possible before curdling the milk. In the more modern and improved process of manufacture, in which the curd is separated from the whey just before it becomes sour, though the milk would be all the better for airing, there is not the same necessity for aeration that there is under the acid process. The odors can be more conveniently and effectually removed by airing the curd. If cheese is made on the Cheddar plan, and the curd taken from the whey before it becomes sour, it may be packed for an hour and a half where it will keep well drained and warm, and if then ground and exposed to the air, all the foreign odors which could be removed from the milk will be more effectually exhausted by airing the curd than they could by airing the milk, and, at the same time, greatly improve the quality of the cheese by the aeration of the curd. The cheese will be the better for three hours' airing, but, unless very foul, the bad odors will all pass off in less time.

Where the Cheddar mode of making is not in use, the curd should still be taken from the whey just before souring, and the airing begun at once, the curd being put into the sink, and stirred enough to prevent it from adhering and forming into large lumps. If a little salt is sprinkled on to the curd as soon as the whey is drained off, after being put into the sink, it will very much reduce the labor of keeping the curd fine, and will do no harm. The salting may be finished just before pressing. The more the curd is stirred, and the finer and warmer it is kept, the more readily and completely will it be purified of bad odors, and the finer will be the resulting cheese. The Canadian cheese which took the sweepstakes and gold medal at the Centennial, was made in this way, and kept very fine, and was stirred and aired till light.

There is no reliance to be placed on farmers airing milk. Not more than one in ten can, from any consideration, be induced to undertake it, and those who do seldom do it effectually. The maker will find it less labor to do the work himself than getting his patrons to do it, and then he will find it very much better to air the curd without airing the milk, than to air the milk without airing the curd.

THE BREEDER AND SPORTSMAN of last week deserves the attention of the sporting fraternity. It comes to us well illustrated with horses and dogs, and the reading matter should be acceptable to all lovers of field sport.—Gilroy Advertiser

## General Topics.

Probably there never was a horse sold in California which has been so much talked about as the late change of ownership of Anteo. Not for the amount of money paid, as that has been largely exceeded in several instances, and the cause must be ascribed to something else. In the first place, the Electioneers have bonded to the front rank in the trotting annals, and retained the position ever since Fred Crocker lowered the two-year-old record three years ago. Then there was the remarkable display of speed on the part of Anteo and the steady progression, dropping in a few weeks from 2:26½ to 2:20½, and this done with such apparent ease that it was evident that there was still a margin to fall back upon. There are good grounds for the belief that he could have beaten the best five-year-old stallion record the following week after his last trial, had the rain been a day later in coming. All these had an influence in awakening interest, though undoubtedly the most potent cause was the fact that he trotted in light "tips" and had never worn a shoe on his front feet.

This was universally held to be detrimental to trotting speed, and by general consent the performance was magnified by the unfavorable handicap. Now, 2:20½ is faster than we have ever heard of a four-year-old stallion trotting in either a race or trial, and no matter what was worn on the feet gives the animal making it a proud place. But this was accomplished under anything but favorable circumstances. Although Anteo was trained and won a stake when eighteen months old, there was many and long breaks in his training. The last season his services in the stud were not only severe for so young a horse, but the time was extended until nearly the 1st of August, and for nearly six months his exercise was limited to jogging in a road cart. To any one who follows his short history as given in "Tips and Toe-weights," it will be a matter of surprise that such a result could follow such a desultory system of training. This was certainly putting tips to a severe test, and proving successful, at least so far as to show a rate of speed hitherto unexampled, may cause the reflecting to think that they are not so inimical to trotting speed as has been claimed.

At all events it is conceded that the feet are benefited, for even those who argue that the legs of Anteo are so good that they could not be injured, and therefore that the freedom from ailment is not to be credited to the plan of shoeing followed, are constrained to admit that the feet are perfect. While the fore feet were always in proper shape, there were faults in the hind, and these have been completely remedied since the hind shoes were dispensed with. At present there is not a better hind foot on any horse, and we must ascribe a portion of the wrong formation to wearing hind shoes. For a time we supposed that a scalping boot could not be kept in place without the heels of the shoe to hold it from slipping down behind. A great majority of fast trotters wear the hind shoe on the outside the most, many of them will wear that to a thin edge when the inside is intact. The wearing of the metal unilaterally throws the foot out of true, and this can only be remedied when the shoes are set. With the one-sided tip on the hind feet the horn can be cut down to balance the wear and the foot kept level.

This also leaves the inner portion unfettered, and we are all aware that the horn is the thinnest on the inside quarter in order that there should be the necessary elasticity. There are still other advantages. A fast trotter with hind shoes on that are smooth will slide after the hind foot strikes the ground and until the fore foot touches. This slip will amount to several inches at times. With calkins the sliding motion is stopped suddenly, bringing a great strain on the tendons and interfering with the action. Mr. Hickok informed us that one season when St. Julien was doing badly, he changed his shoes behind having the smooth part on a plain shoe. This made a great difference, and in place of hopping and single-footing he went square and fast. The shoe used was light so that it permitted the frog to touch the ground, and this natural guard against slipping performed its work without the stoppage being so sudden. With the tip let into the wall, giving nearly the whole inner surface and a portion of the outer to come to the ground, the frog has a chance to perform its entire duty and to aid it are the walls and bars.

The effect of weight on the feet of fast trotters is as yet a puzzling question. We do not believe that there is a man who can explain to the satisfaction of others the reasons for well-known results. Every intelligent trainer of trotters we have conversed with admits that the problem is beyond their power to solve, though there are plenty of stable boys and trainers, or perhaps a couple of seasons experience, who claim to know all about it. These are the critics who sit on the side of the track, and can tell just what is wanting to make a horse trot several seconds faster, and who so learnedly denounce the drivers who have them in charge. Before the era of toe-weights there were heavy shoes, loaded boots and rolls of shot. Weight on the outside of the wall drove all the other contrivances out of the field, though at first heavy shoes and weights were used in combination. The first we ever saw wear weights was the Baltimore mare Jenny, and she had upwards of three pounds on each fore foot. Since then there has been constant reduction, and the weights most in vogue at present are inside of six ounces.

We are inclined to believe that in the next decade, weights on the outside of the foot will be done away with, and that the fast trotters of the not far-off future will have their feet

nearly as lightly encumbered as the race-horse. Breeding will aid in doing away with a load which is certainly injurious, and other appliances beside weight be called into requisition. Different forms of tips and shoes, especially the former, will be devised, and the science of making and applying boots be carried to such perfection that surprising results will follow. The boots of the present day will astonish the old professors of the art, and if the spirits of Hiram Woodruff and Sam McLanghlin could be "materialized" in the stables of the prominent knights of the sulky, the use of three-quarters of the boots would be beyond their comprehension. There has been such an improvement in the pattern and making of those which were in use twenty years ago, that they bear slight resemblance to the crude contrivances of the past, and the new are in such numbers that it is safe to say that no man has seen one-half of the specimens extant. Boots, however, are too important to be treated in a paragraph, and many articles will be required to present the subject properly. This we intend to do before long, that is, to go into the subject far enough to show the intimate relation between fast trotting and protection that is more than a name.

That colts will be "worked" barefooted in the future, to a greater extent, we also believe. When the idea that weight on the feet can be dispensed with, and that a load of metal is not necessary in the education of the trotter, the benefits that are sure to follow leaving the feet in a natural condition will be more fully appreciated. Now that so many breeders realize the importance of commencing the schooling when the animals are at an age to be the most readily impressed, the bad effects of cramping the growing hoofs will be too apparent to escape notice. Without any metal on the feet there will be less danger of injury, for even tips may wound as in "scalping," while the horn kept in suitable shape will decrease the liability to wound. Should the wear at the toe be so great as to cause tenderness, there will be a necessity to guard that portion, but by making the tips thin, and shaping the outside part so as to do away with sharp edges, the danger will be reduced. We are having made at the Judson Works, tips of malleable iron of various patterns, some of them designed to overcome the tendency to scalp, and when those are tried the result may be satisfactory.

It may be, that under the new process of handling the material called malleable iron, it will be found superior to any other metal for the fabrication of horseshoes. As we understand it, the exterior can be hardened so as to resist attrition and still leave a good deal of ductility. There are advantages which a hand-made shoe does not present. The foot-surface will be absolutely true which is not the case with a large majority of those made at the forge, and the best mechanics, unless stimulated by an extra price, are prone to be negligent in this important respect. Then the nail holes will be uniform so that the same holes can be used for, at least, one resetting. The objection that the holes are not suitable after the nails are withdrawn is not valid if proper care has been taken to cut the clinches and pull them out one at a time. This can be accomplished by starting the nails, by catching the shoe with the pincers, knocking the shoe back, which will let the heads protrude, ready for the grip singly. As the "removal" entails cutting away some of the horn, the wedge-shaped nail fills the orifice as completely as at first.

For three weeks the tracks in this section have been muddy, and with the exception of one day the exercise has been restricted to road work. There were several races on the cards to be decided on the Oakland course, among them the match between Viola R. and Haddington, heats of a mile, and two pacing races that would have set the boys "guessing." Without any great downfall there have been few days without showers for the past three weeks and heavy fogs that kept the ground damp. In those "short days" the sun must have a fair chance or the oblique rays have not much desiccating power. This will, in all probability, delay the settlement of the dispute for some time, as January is usually one of the wet months, and that followed by as fine weather in February as the most exacting could desire.

There is little "around the stove" racing and trotting done in California, and though there are the usual speculations regarding what will be done the coming season, the conversations are just as likely to take place on the seats on the veranda as indoors. Even in this "terrible weather," so fervently anathematized by the unthinking growlers, boys are running about barefooted, and there is a wealth of bloom on every hand, and the honey bees are buzzing around in high glee. One of the main topics is the Eastern tour, and what horses are like to take part in it. It is generally conceded that there will be quite a hegira of race-horses, and that all of the prominent California stables will have representatives in the East.

The Palo Alto trotters are sure to make the trip, and Hickok, doubtless, will make his annual pilgrimage. Should Goldsmith go, he will be apt to delay his starting, as Director and Monroe Chief are destined for the stud, and this is a good thing for the Pacific Coast. Both have gained a full measure of renown, and can well afford to rest on their laurels already won.

We look for "our colts" to sustain the reputation of the land of their nativity on both turf and track, and should the blue-bloods do as well as the "plebs," there will be no fault to find. Racing colts are so close together, however, that it cannot be expected that there will be the same opportunity to distinguish themselves, and yet we feel justified in

predicting that they will win a full proportion of the races they are engaged in. We look for a long list of California nominations in the stakes that are to close on the 15th of this month, and again we urge our readers not to overlook those of the Washington Park Club and the Chicago Driving Park Association. Extremely liberal in the added money, and the forfeits so small, there should be a hearty response from breeders in all sections of the country, and we feel assured that our folks will not be behindhand in showing their appreciation of the spirit which prompted the liberality.

From what we have already learned, the nominations in the Eastern trotting stakes from this State are numerous, more so than ever before, and as the inducements are not so great as the racing events show, there should be a corresponding list. As the thoroughbreds are so much in the minority, there is not the same chance for selection; but then again, there are more who are willing to run the risk, and who are better able to afford the outlay. Palo Alto, Rancho del Paso, Santa Anita and Mr. Winters', are all likely to enter into other Eastern engagements, and from these four great breeding farms there will be representatives that will do credit to the land of their nativity. Prince of Norfolk, the Frolic and Rigin fillies, Shenandoah, the youngsters from Santa Anita, Schoolgirl, Sweetbriar, Lucky B., the brother in blood to Jim Renwick, and others which will accompany them, are sure to do something worthy of commendation. The big flyer, Jim Renwick, is likely to make the trip, too, and we are in hopes to send a three-year-old son of "Old Tbad," though he will have to prove his quality to be of the right stamp before awarding him the honor, as he is totally untried as yet.

For some time we have been cogitating over a proper name for the youngest representative of the Norfolk-Mariou family. Duke, Duchess and Prince, and the yearling, if anything the best looking of the lot, it would seem that he is worthy of a still higher title, if even it was never worn by a namesake in the country from which their ancestors emigrated. For that matter, Prince was a notch above, though he has established his claim, and holds the title by his own performances, irrespective of distinguished kindred. As Mr. Winters has not yet given his place near Sacramento a name, it will be a good idea to christen the colt with that selected for the "ranch." Among all the places we ever saw there in not one which is better adapted for the breeding, rearing and training of thoroughbreds. There is not a thing lacking, so far as natural advantages go, and the improvements that Mr. Winters has made are well-planned and substantially built. There cannot be a better location to construct training grounds, and a gallop of over two miles with a straight and level run of over three-quarters will not require a heavy outlay to make. We have not the least hesitation in predicting that the casualties on such ground will be greatly reduced, and injuries to the limbs of rare occurrence. But, as at the very first opportunity we intend visiting Sacramento, or rather the second, as the first visit is booked to Anteo, description will be delayed until then.

There are those who assert that the California Big Gun colt is likely to down his big brother whenever they come together, and should this estimate be based on good grounds, the breeding of the flyer Jim will not be so much of a scratch after all. Furthermore, it will show *superpotency* on the part of the sons of Monday and Mayflower, a power to overcome the "black drop" that has rarely been exhibited. It was claimed that Sir Archy got race-horses from all sorts of mares, some with no more pretensions to breeding than Big Gun can lay claim to. At that day, however, there were plenty of short pedigreed horses on the tracks, while Jim has had to meet the flower of the stud books, and it can nearly be said victorious when even he was in condition and without there being other disturbing influences. Should he reach Chicago all right he will be a dangerous customer in the races he takes part in. It is likely that he and the California colt from his dam will come together at the spring meeting.

## California Products Abroad.

Through the efforts of the Southern Pacific Railroad Company an exhibit of California products has been made in England, of course, quite to the astonishment of the natives. At the Birmingham Cattle and Poultry Show the exhibit made at stall 114, in the gallery, were the products of California, but were received too late to be properly cataloged, and five cases of green fruit arrived in London, but too late to appear. The articles shown consisted of fifteen specimens of barley, twenty-two of native grasses, two of canary seeds; of the cultivated grasses there were alfalfa, timothy, evergreen millet, Egyptian millet and Egyptian corn. A specimen of Japanese aati, an olive branch with fruit on it; Italian, American and Eastern chestnuts, with fruit; a California grape vine, the growth of 1883 to September 12th; a box of California raisins from Briggs Brothers, of Winters, California; a variety of tinned fruit from the San Jose Packing Company, also of preserves in glass from the same company; three varieties of potatoes from Sonoma county, and contributed by the Pomona Grange—one of these weighing 2 pounds 7 ounces, and three weighing 6 pounds 1 ounce; a California squash (vegetable marrow) measuring 3 feet 6 inches in length and 18 inches in diameter; three pumpkins, weighing respectively 141, 147 and 151 pounds, all raised in Los Angeles county; there were also specimens of luseed, rye, pomegranates, quinces, etc. All these cereals, etc., were exhibited in the straw, and were the growth of the year 1883. After the Birmingham Show, all these products, with many more added, were placed in the office of the Southern Pacific Railroad, 41 Finsbury Pavement, London.

The stable of Mr. Manton (Duchess of Montrose) will be managed this year by Capt. Machell, instead of by Sir Frederick Johnstone, as heretofore since the death of Mr. Crawford.

BASE BALL.

A Closely Contested Game.

The game at Recreation Park, last Sunday, was remarkable for the close and careful manner in which it was played from the commencement to the finish, and notwithstanding the opinions of ball tossers of bygone years, it is doubtful if there was ever a closer or better played game witnessed on the grounds. The prediction given in this paper on the fifth instant, that the game would be "one of the closest played on the grounds for some time," was made after a careful study of the manner of the players, and a knowledge that each would do his utmost to win. The stormy weather of the day previous lead many to suppose that the grounds would be too soft and wet for a good game, many even being in doubt as to whether the clubs would attempt to play, and on this account the attendance was very small.

At a quarter to three the gong was sounded, and Sweeney and Smith tossed up for the choice. On it being decided, the Denny went to the bat, Sweeney leading off with a hit to Morris and going out at first. De Panger missed the third hit and also died at first. Denny howled a grounder into centerfield and gained the first sand bag, going to second on a steal; he made it by risking a swift throw by Carroll, which was almost in time to check him. Taylor caught the ball sent him by Piercy and retired him, Denny being at second at the changing of the sides. The Occidentals had Blakiston up for their first try at the bat. He made a good hit in a poor direction—near third base and Denny—and was checked at first. Fred. Carroll, when he saw a good one to strike at coming met it with his bat and it took an upward shoot almost directly over his head. Sweeney made a bold dash for the ball, which Creegan, the catcher, should have taken in charge, and he and the sphere came to the ground in unison. It was declared a foul and Carroll afterwards went out on strikes. Morris missed on his third strike and was put out at first.

In the second inning of the Denny men, Morris struck out Bigelow, and Swanton hit to the pitcher, and was caught out. Arnold, usually a good man at the bat, failed to get the better of Morris' left-hand delivery. None of the players, going to the bat in the Occidentals' second, succeeded in gaining the initial base.

In the third inning, the Denny side were again vanquished by the left-handers of Morris, Creegan, Mooney and Sweeney retiring in short order. Pope, in the last half of the inning, drove the ball over third base, and Denny, running for it, made a splendid one-handed stop, but failed to recover in time to get the ball to first base before Pope was safe thereon. The latter, in trying to gain second, was thrown out by Creegan.

The fourth inning was played in the same close manner which characterized the previous ones; none of those going up for a strike succeeded in gaining the initial sendbag.

In the fifth, Arnold made a hit to centerfield, which it seemed would give him a good opportunity to get on first base. Taylor gathered it in and retired the batter. Smith and Taylor were unable to hit the ball in the Occidentals' fifth, and Bennet was called out. Up to this point of the game five innings had been closely played, and no runs made by either club.

The prospect for any being made in the sixth of the Denny side did not look very bright when Creegan and Mooney retired, striking out. Sweeney changed the aspect of the inning somewhat by sending the ball into the rightfield. Pope failed to secure the sphere on its nearing the ground, and it bounded out of his sight and gave Sweeney an opportunity to make the round of the bases and get in before Pope fielded it. Incell, Lawton and Pope faced Sweeney in the Occidentals' sixth, but his beautiful pitching was beyond their skill, and they threw down the bat in turn, unable to do more than fau the air.

Denny began the seventh inning by plumping the ball over third base, but miscalculating his chances he kept on running after gaining first, and was headed at second and checked. Piercy went out to De Panger, and Bigelow struck out. Morris, in the last of the inning, made a light hit, the ball rolling slowly a few feet in front of him. Sweeney ran for and secured it, but slipped and fell to the ground, permitting Morris to get the first base. The latter then gained second and third on a passed ball of Creegan, but the next batter, Smith, retired, and Morris was left on third.

The eighth was so closely played by both sides that none of those going to the bat were successful in their efforts to get on the first base.

The ninth was begun by Mooney, who, missing on his third strike, was permitted through an error of Carroll to go to first. Taylor caught a fly sent him by Sweeney in good style, and on Mooney running with the evident intention of gaining his third, the ball was put to second and checked his career. De Panger got as far as second base, but Denny struck out and left him on it. Only one run had been made by the Denny, and should the Occidentals succeed in making one it would tie the game. Lawton led off with a fly to Bigelow, but it was taken care of. Pope went out on a drive to De Panger and Blakiston alone remained. He made the heaviest hit during the game, sending the ball out into centerfield and taking his second on the strike. Carroll took up the bat, and Blakiston gained third on a passed ball by Creegan. There was a cheer when Carroll sent the ball out to centerfield, and permitted Blakiston to get in and tie the game on the remarkably close score of one to one. Carroll went to first on the hit, and on Creegan throwing the ball to Bigelow at second to head off Carroll, who was endeavoring to reach the base, it went over his head, whereupon Carroll set out for third and got put out by Denny.

Piercy led off for the tenth inning of the Denny side, but did not get to first base on his hit. Bigelow's hit to rightfield enabled him to get as far as second base. Swanton struck out and Bigelow gained third. Arnold's hit to Blakiston was well stopped by the latter, who put it to first in time, but Smith slipped and fell, allowing Arnold to get the base, and permitting Bigelow to run in and make the run. The Occidentals were unable to add to their score in their tenth inning, and the game closed in favor of the Denny by the remarkably close score of two to one.

Table with columns for DENNY SIDE and OCCIDENTAL, listing player names and statistics like runs, hits, errors, and totals.

Struck out—Denny 19, Occidental 19. Two-base hits—Bigelow, Blakiston. Left on bases—Denny 2, Occidental 2. First base on errors—Denny 1, Occidental 1. Wild pitches—Sweeney 1, Morris 0. Passed balls—Creegan 3, Carroll 1. Double play—Taylor and Blakiston. Time of game, 1 hour and 30 minutes. Umpire—R. Levy. Scorer—M. Fisher.

The game to-morrow will be the third of the series and will be played by the Haverly and Occidental Clubs.

The list of California players, who have obtained places in Eastern Clubs for next season is, owing to the fine records made by those who had engagements there last year, growing to considerable proportions. Creegan, on sending his terms to a Washington club, has received an answer accepting him. Arthur Pope has been engaged by the Monumentals of Baltimore.

During a practice game recently one of the players hit the ball and it glancing struck a small boy on the back of his head. The ball came out of the boy's mouth. If the managers of the grounds would keep the spectators, especially the boys, off the diamond during the progress of a game, those participating in it would not have their attention taken from it and there would be less likelihood of serious accidents.

THE RIFLE.

ANCIENT AND MODERN ARMS.

Atmospheric Resistance on Moving Bodies in Different Altitudes—The Choke Bore and the Cylinder Bore Compared—A Close Contest of One Hundred Shots—Merits and Demerits of the Competing Guns—Unprecedented Scores—Cylinder Bore Victorious.

BY DR. E. H. PARDEE—NO. 20.

MR. EDITOR:—As I stated in number twelve, when speaking of the projectile, "every point upon the surface of a projectile in motion, whether it be by a rocket, javelin, ship, stone from a sling, bullet or arrow, or any other description of projectile is the end of a lever, the fulcrum of which is located in the projectile's center of gravity, the effect of the air to upset, i. e. to force the light or pointed end of the projectile to the rear, or to unsteady or cause the heavy end to travel on the point, causing the bullet to partake of an unsteady and waving motion, depends upon the length of the levers at the ends of which it acts, and upon the angles at which it presses against such levers, as determined by the positions of the points and by the shape of the projectile." And I should have added, that much depends upon the specific intensity of the pressure, which is doubtless greatest in the immediate surrounding of those parts of the projectile which least easily allow the air to escape past them. Could we establish a current around the projection it would pass on, but the air strikes these light obstructions when in a high state of condensation, amounting to many atmospheres in one; so many as to be nearly equal to a solid which is more powerful than the barrel; indeed, oftentimes the strain becomes so intense that a fracture or hursting of the barrel takes place. The resistance of the air is so uniform on a level with the sea, that the resistance to moving bodies is no longer an unsettled question, and could a bullet be sent a mile in a continuous belt of air of precisely the same density, the deduction of resistance could be made to a nicety every time. But in propelling a bullet a mile the elevation must necessarily be so great, that the shot is constantly passing from a denser to a more rarified medium, until it reaches the greatest height in its trajectory, and as soon as its descent begins again, the resistance increases in the same geometrical progression as it lessened in its ascent.

True, the novice would say, but the difference is so slight, that it could not make any perceptible difference; that is, all that I claim that there is a difference, and if there is a difference in the density, then there must be a perceptible effect on the body moving through its different stratas. All of us old fellows, that studied "Comstock's philosophy" in our common schools forty years ago, will remember what density the air must be to bear aloft the smoke that issued from the top of the chimneys of the old school-houses, and as soon as the humidity of the atmosphere becomes apparent then the 14 lbs. to the square inch was not buoyant enough to support the smoke, and it would fall to the ground. Or, in other words, the smoke was heavier than the air, and it fell to the ground because its specific gravity was greater than that of the air.

Well do I remember several years ago, I was a valdunarian, and took a trip to the Summit House, on the Sierra Nevada on the line of the Central Pacific, which place my aneroid barometer told me was seven thousand feet above sea level. I took with me a muzzle loading Billingshurst telescopic pistol, the barrel of which was twelve inches long; I had it sighted for 100 yards, at my target ground, on San Pablo road, which is sea level. On the summit I measured carefully 100 yards and commenced firing a ten shot string, and did not visit the target till after I had concluded the whole ten shots; and just as I predicted, the shots were all clumped in a three inch circle, from five to six inches vertically above the bulls-eye, proving beyond all doubt, that the atmospheric resistance was much less, the bullet meeting with less obstruction, and consequently traveled the one hundred yards more quickly, and the attraction of gravity had less time to pull it toward the earth. I might have stated, that the treatment of the little rifle was the same in both places, removing all doubt that the deductions was in accordance with the well established laws of dynamics. Therefore, the resistance of the air is so highly philosophical a question that I merely touch on its actual bearings, on the passage of projectiles to show how the quantity of force is absorbed or expended in relation to the quantity of the gun powder employed, which, it may be properly assumed, is a proportion of nearly one-third of the whole, or a quantity independent of that necessity to give velocity to the leaden shot to enable it to overcome the still and uniform impeding agent up to the end of its flight. The rapid exit of the bullet from the barrel with a resisting influence of this weight, into the comparatively insignificant one of 15 pounds to the square inch, will most fully explain how it is that a bullet increases in velocity even up to a considerable distance from the muzzle of the gun; and also showing, that in all arrangements, scientifically conducted, that the increasing resistance must be met by a fresh production of explosive fluid over every atom of space in the barrel, where it is demonstrable that the resistance is increasing in a geometrical progression as the bullet reaches the muzzle of the gun, and make it escape in the open and unconfined air. Again, intimately connected to the displacement of the atmosphere is the amount of friction generated, and how and for what purpose, as there used to be a recognition of the supposition that a certain amount of friction was necessary in order to procure steady upsetting or expansion of the leaden bullet.

And I may be warning the ear-wax of many an old fellow, who made his guns forty years ago bell breeched or what is called freeing up the gun barrel, making what is known among shot-gun men "choke-bore," contracting the calibre about three inches from the muzzle, so that the bullet will be swaged in its passage through the contracted part. The riflings are also cut deeper from this tip downward to the very breach, in fact so much is the cylinder enlarged that the bullet's weight, after its passage through the choke, will carry it down to the powder; and with this particular kind of rifling, the advocates say that no polish of the inside of the barrel will be admitted, as it is necessary that a certain roughness is necessary to create a maximum friction, in order that the bullet may be stayed or held so that the force of the powder gas will have more time in the performance of this upsetting process of the bullet. To obtain steady performance with guns of this character, wiping after each shot becomes absolutely necessary. A close study of the science of gunnery tells us that this intended friction in a rifle is an anomaly of the past, and no one who will be guided by a liberality of free thought will attempt to raise the sepulchral slab, and interview the corpse after having been so decently buried by the light of science and the hand of theory.

The detention of the projectile in the tube by artificial friction to enable more force to generate, is one of those absurdities pardonable only in bygone days. The laws of science is better obeyed by a disposition to lessen friction. Guns made of the finest steel, made and polished to a perfect surface, in other words, by giving the inside of a gun a glossy finish, is only increasing the shooting capacity of that weapon, as a rough road for the shot to pass over is necessarily absorbing a useless amount of force. Again, by much use of the gun by wiping and loading, the rough surface soon gives way to a polish, and the process of upsetting is lessened, and the marksman hes to choose between two evils, either to condemn the gun or send it back to the maker, who will pass his lead and emery through it, rough it up a little, and return it to the owner with an explanatory letter that he had found the difficulty and had removed the same, and that no further complaint need be apprehended. But soon with use the old difficulty returns, and again the gun is returned to its maker, and the emery applied and the result as before. Steady and fair shooting is made for a number of shots, and again the bullets begin to take a circle of error.

I have been in the habit, when practicing with this class of a rifle, to take my box of emery and lead with me to my shooting house, and if the bullets began to play me I would just go through that gun with my lead and emery, or creased rag and emery, with quite as much satisfaction as a dose of epsom salts would be in passing through the bowels of a consumptive patient; for as soon as constipation of the bowels would occur again, a repetition of the cathartic must be resorted to. My experience in target shooting for the past twenty years has settled the question beyond all doubt, in my mind, that a rifle, to make good performance at 1,000 to 1,500 yards, must have a perfectly polished surface, and without it, I will venture my reputation as a marksman no gun will gain for itself any reputation. In order to get up a highly polished inside to a rifle, it is all important that the material should be composed of the most unyielding structure, as metals absorb force in proportion to their softness. A gun barrel made of lead would give the most unsatisfactory results; in short, us is the increase of tenacity in the tube, so is the increase of range in the projectile. A flexible gun barrel may be compared to the dragging of a heavily loaded wagon over a soft, boggy ground, which rises in a wave before the revolving wheels in their progress. For a long time, I am free to confess, I was a warm advocate of the choked barrel rifle, but time and experience taught me that the principle was wrong, and after careful trial with a large number of shots of the cylinder bore, I found that my performance was more steady and uniform, and my deductions more satisfactory. I then took two of my best rifles, and matched one against the other, a match of 100 shots; and putting both guns in as good condition as possible, and fitting my ammunition to the condition of the respective guns, I planted my machine rests, put up my targets 220 yards, suspended my barrel-dags, and ignited my three pots of tar, situated equidistant from my shooting house to the target, and at 8 o'clock I commenced the cannonade, first one rifle, and then the other. I will also state that the two guns were fifty caliber, and weighed about thirty pounds each, one choked and the other cylinder bore. Had a handy man to clean the guns after each shot, and replace them on the rest, but I loaded the pieces and supervised the manipulation of the whole thing, and did not stop until the entire two hundred shots were played. Telescopic sights were used on both rifles, and for the first ten shots both guns behaved well. The cylinder bore made the first ten shots in 8 inches, and the choke in 8 1/2. The wind rose a little from the left, and my first two shots with each gun showed a little drift, and after turning on, I shortened the string with the cylinder to 7 1/2, and the choke at 8. Wind steady from left, thermometer rose as the sun got up, and depressed elevation of both guns, and closed the third ten shots with the following score: Cylinder bore 6 1/2 inches, choke 6 inches. At the beginning of the fourth score I was a little annoyed by the interference of some bloody tramps, who approached and commenced to crucify me by a course of catechisms, and only got rid of them by filling my ears full of cotton, and told them that all conversation closed, and thanked them if they would move on. A bad time to receive visitors under those circumstances; a man has all he can do to manage the manipulation of two rifles at the same time, and one naturally feels more like crenulating than entertaining nomadic interlopers under those trying circumstances. But under all the embarrassing circumstances, the cylinder bore gave her ten shots in 6 1/2, and the choke in 9 1/2. At the beginning of fifth string, mercury showed more heat, and again depressed elevation of both guns, and closed the fifth score with the following results: Cylinder bore 6 1/2 inches, and choke 9 1/2 inches.

Began to realize the fact that old coby was getting too much polish, and gave her a good scouring with the greased rag and emery, and closed the sixth score of ten shots with the following satisfactory result: Cylinder bore 6 1/2 inches, and old coby closed her tenth shot with a string of 5 1/2 inches. The wind changed from left to a quarter in the face, and the seventh score showed an unsettled condition of the atmosphere, closing the two strings as follows: Cylinder bore 10, and choky coming in second, 10 1/2. The eighth score the wind became more steady and in same direction, and the scores showing the following close contest: Cylinder bore 9 inches, and choky coming in first, 8 1/2. The ninth score footed up cylinder bore 9 1/2 inches, and choke bore at 11 inches. Tenth and last ten shots were after 3 o'clock, and the mercury giving indications of condensation of atmosphere, I increased elevation of both guns and got well on, and came home with a score with both guns that was equal

pleased with my day's work; cylinder here making the ten shots in 1 1/4 inches, and old choky with 10 1/2. Will say that the last ten shots with the cylinder here I had one jump shot that measured 2 1/2 inches—caused by a defective patch, and it being the last one that I had of the size I had been using, it was Hoheon's choice with me, and the jump was as I predicted to my assistant before the shot was fired.

It will be seen that the result of these two strings are unprecedented in the history of telescopic target practice. True, they were not public matches, but were made with all the care that could be given in order to obtain the best possible performance from guns. When we consider the distance 220 yards, and fully comprehend that only a little over three quarters of an inch is given to each shot from center of hall hole to center of hull's-eye, a man who is skilled in the theory and science of gunnery must say that any performance like the above is actually marvellous. The aggregate of the 100 shots by the cylinder bore is 181 1/4 inches—that of choke bore \$6 6-8 inches—the cylinder winning by only 5 1/4 inches, no great victory, but it took the persimmon. In all of my practice in this manner of target practice, I have never excelled the above targets but once, and that once, strange to say, was done with a ten-pound rifle. I have given and dilated upon the above scores, Mr. Editor, to show the merits and demerits of the two methods of rifling a gun, and not as a blast from my trumpet-horn to bring up the echoes of the past, that they may reverberate and bring back pleasant recollections of the rifle in by-gone days. But, before I close these articles I shall be under the painful necessity of asking the patrons of the BREEDER AND SPORTSMAN to indulge me, and not think me egotistical in referring to some few things that I have done in the manipulation of the rifle, which have shortened my strugs materially during the past fifteen years. Common sense applied to gunnery is always supported with satisfactory results. Gentlemen that were my equals twenty years ago in the management of the telescopic target rifle are now where I left them at that time; they having retired with a few laurels of their day, while I have been spending much time in battering down the walls of stubborn prejudice, and have made many captives without shedding any blood.

Shooting at Alameda.

The California Schuetzen Club have commenced the season's work and held their first monthly meeting at the Schuetzen Park, last Sunday. The shooting was especially good for the opening, and promises great things for the year. The score for the day was for the champion first prize, H. C. Smith, 381 rings; first-class prize, F. Boeckman, 393 rings; second-class prize, F. Krahman, 344 rings; third-class prize, H. Heeth, 313 rings; and fourth-class prize, F. G. Schneider, 304 rings. This club will hold its first hull's-eye shooting for the season to-morrow week, Sunday, 20th inst., at the Alameda Schuetzen Park. We acknowledge the President's kind invitation, and will endeavor, if possible, to be present.

The Schuetzen Verein Club.

On the same day and at the same place, this club also had its first shoot for the season. With this club there was also some good scores made, resulting as follows: First prize, John Mengel; second prize, F. Boeckman, third prize, Philo Jacoby; fourth prize, K. Wertheimer; fifth prize, F. Griener; sixth prize, W. Ehrenfort; seventh prize, C. C. Roloffe; eighth prize, T. Krahman; ninth prize, F. G. Witt; tenth prize, L. Haake; eleventh prize, J. Horstman; twelfth prize, J. C. Waller; thirteenth prize, H. F. Wichman; fourteenth prize, P. Rohde; fifteenth prize, John Plath; sixteenth prize, D. Waller; seventeenth prize, A. Bahr; eighteenth prize, H. Fink.

The California Schuetzen Club held their yearly meeting for the election of officers, last week, at Eintracht Hall. The following gentlemen were elected for the year: President, Philo Jacoby; Vice-President, John Utchig; Treasurer, J. H. Schulte; First Secretary, William Hatje; Second Secretary, O. Burneister; First Shooting-master, C. Rapp; Second Shooting-master, J. H. Fischer; Trustees—Philo Jacoby, J. H. Fischer, C. Adams; Finance Committee—Charles Sagehorn, D. Schoenfeld, F. Freese.

At San Jose.

Some of the crack shots of Company B., Fifth Infantry, had a rifle match at the San Jose fair grounds on New Year's Day, the prize being a gold medal. Springfield rifles were used, at 200 yards' distance.

Table with names and scores: F. M. Haight (4 5 4 4 4 4 5 5 4 4 4-43), T. J. Rivers (4 5 4 4 3 3 4 4 4 4 4-40), M. I. Loryea (5 4 4 4 4 4 3 4 4 4 4-40), Sergt. E. M. Hills (4 4 4 4 4 4 4 4 5 3 4-40), Corporal A. M. Barker (2 3 4 4 4 4 4 2 4 4-35), J. J. Folmer (3 4 2 4 3 3 2 4 5 4-34), H. C. Ablers (3 3 4 4 3 3 3 3 4 3-33), Corporal E. B. Lewis (4 3 0 0 2 3 3 4 5 4-24), Corporal A. Friend (4 3 0 0 3 2 3 2 5 5-30), J. F. Talbot (3 3 4 2 0 2 4 3 3 3-27), Lieut. C. E. Bradley (0 3 0 4 2 3 3 3 3 3-24), A. A. Hutton (3 3 2 3 0 3 3 2 3 2-24), J. C. Wagener (3 3 3 0 2 3 3 4 2 2-24), Capt. A. E. Whitton (3 3 3 3 3 0 2 0 0 0-20), F. M. Stern (3 3 3 3 0 0 0 0 4 0-16).

The company, we are informed, have erected two fine, new bulkheads at the foot of Empire street, one at 500, the other 200 yards. The ensuing season, it is expected, will see some good scores made in the Garden City of the State.

Referring to our article, last week, on the best hunting rifle, we introduced, among others, the sentiments of an old established writer, who signs himself Greenhorn. In reply to the arguments of those who think differently to him, he has since made the appended statement about English double-barrel rifles, which, we imagine, will sound as strange to others as to ourselves. We had always regarded the American hunting rifle as the most perfect production of its kind in the world; and we still have doubts of its being inferior to the English double-barrel rifle, either in trajectory or accuracy. However, it is only by comparison that perfection is reached in any branch of art or manufacture, and so, in disposing of the subject, we give a portion of Greenhorn's last letter. He says:

"I fully appreciate your correspondent's desire for a flatter trajectory than is at present attainable in the majority of American sporting rifles. The English have taught us a good deal about this, and I believe that their double-barreled sporting rifles are, on the whole, more desirable weapons than any of our own repeaters. At the recent trial of rifles in London the winning .45-cal. (double barrel) was loaded with 110 grains of powder and a bullet of 291 grains. At 150 yards range the rise of the ball was less than five inches, and the accuracy of the arm was all that could be desired. If American manufacturers would study the lessons to be

learned from English experience, and would give us good double rifles, with flat trajectory combined with accuracy, we believe that repeaters would retire from public favor."

Pigeon Shooting.

Two teams of the Garden City Gun Club (San Jose) held a pigeon match at the fair grounds, under the Captaincy of T. Delmas and Frank Coykendall, each man having twelve birds. The shooting was not particularly good. The score:

Table with two columns: DELMAS' TEAM and COYKENDALL'S TEAM. Scores listed for various participants like Anderson, Schmebel, Hamrich, Hall, Corey, Hobson, Adams, Parkhurst, F. Coykendall, R. Coykendall, Tisdale, Flemming, Mathe, Lipsitt, Edson, Ingalsbe, Venue.

The Vienna Garden.

The houses during the week have been exceedingly good as the general music deserved they should be. The character of the audiences, also has been everything that could be desired in intelligence and appreciation. Mr. Straka proves himself an able musical director. His system of changing the programme twice a week, so as to supply new music all the time for the regular patrons of the establishment is duly appreciated. Solos, duets, and quartets by the ladies only, have been prominent during the week, and were all played with the old time spirit and brilliancy.

Stock in Arizona.

[Arizona Star.]

From the most reliable estimate obtainable the Star placed the number of stock cattle in the territory at the close of the year 1881 at 96,028 head.

In the Resources of Arizona, Mr. Hamilton places the number for this year at 235,000 head. Sheep, 680,000; horses, 31,800; mules, 13,600, and hogs, 11,400 head. These estimates can be accepted as about correct, and demonstrates that Arizona is rapidly establishing a reputation as a grazing country, and well it should, for there are thousands of square miles of as fine pasture land as can be found in any quarter of the globe—with natural advantages for stock raising which cannot be found elsewhere save in the southwest. Grasses cover the mesa lands far and wide, upon which cattle feed and fatten during the entire year. The mild climate in the winter season makes shelter unnecessary—and the grasses which are cured by the sun, continue to be nutritious on the roots during all seasons which save the expense and trouble of cutting or saving hay or other fodder for stock. Cattle are as fat in January and February as in July or August, with nothing to feed upon, save the natural grasses. Already many have made fortunes in Arizona in the short period of from five to ten years, starting with a handful of stock cattle which increased the magnificent herds in a few years. These facts are being appreciated by stock men from all sections. During the last three months thousands of cattle have been driven into the territory from Texas and Colorado and as many sheep from California. So rapid has the increase become that stock ranges are in great demand at large figures.

One of the most encouraging features of the live stock industry is the fact that all of the leading stock men are introducing the finest blood in the country, and grading up their cattle. Thus, in a few years Arizona can boast of as fine blooded stock as the most advanced stock section in the United States. Another feature worthy of note is the full cooperation of those engaged in the industry. An organization of the cattle men of Southern Arizona has been recently effected, which will result in great benefit to all, as well as to the territory at large, for anything which will protect and advance the interests of the stock business means additional prosperity for all. The outlook for this industry in the territory is certainly encouraging, and we predict that its importance and growth during the present year will more than double.

At a meeting of the directors' of the San Joaquin Valley Agricultural Society held on Friday last, the time for holding the next fair was fixed for the week following the State fair of 1884. L. U. Shippee was elected President and J. M. La Rue was elected Secretary of the society for the ensuing year. The receipts of the fair of 1883 amounted to \$20,597.25. After paying all of the expenses for the year, including \$8,857.55 paid for permanent improvements at the Park, the society has a cash balance on hand amounting to \$1,010.50. The society will soon announce liberal purses for two and three-year-olds, to be trotted for this fall, entries to close March 1st. An effort will soon be made to provide a suitable pavilion for the use of the society.

The following officers have been elected by the directors of the Santa Clara and San Mateo Agricultural Association: President, W. T. Adel; Secretary, T. S. Montgomery (re-elected); Treasurer, W. D. Tisdale (re-elected).

Thoroughbred Stallion

IMPORTED

KYRLE DALY.

Bay horse; bred by Joseph Lyons; foaled 1870, by ARTILLERY.

First dam, Colleen Rhue, by Gemma-di-Vergy. Second dam, Princess, by Reliever. Third dam, Echina (the Baron's dam), by Economist. Fourth dam, Miss Pratt, by Blacklock. Fifth dam, Gadabout, by Orville. Sixth dam, Minsirel, by Sir Peter. Seventh dam, Matron, by Florizel. Eighth dam, Maiden, by Macheen. Ninth dam, Pumpkin's dam, by Squirt. Tenth dam, Lot's dam, by Mogul. Eleventh dam, Camilla, by Bay Bolton. Twelfth dam, Old Lady (Starling's dam), by Polleine's Chestnut Arabian. Thirteenth dam, by Rockwood. Fourteenth dam, by Bunter.

Will make the coming season, 1884, extending from February 10th to June 20th at Raucos del Paso, Sacramento Co., Cal. Terms, \$100 the season.

Mares taken good care of during the season for \$6 per month; after the season \$10 per month, but no responsibility for escapes or accidents.

Address JOHN MACKAY, Sacramento, Cal.

The Trotting Stallions

DIRECTOR AND MONROE CHIEF

Will make the season of 1884 at

Oakland Trotting Park,

Commencing February 1st and ending June 1st.

TERMS.

Director \$200, Monroe Chief \$100, the season. Good pasturage for manes at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

Director, 2:17.

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:10 1/2; Phallas, 2:15 1/2); first dam Dolly (dam of Thorndale, 2:22 1/2; Ouard, 2:25), by Mambrino Chief; second dam by Potomac; third dam by Saxe Wren; fourth dam, by Dictator. This is the sire of Edwii Thorne, 2:16 1/2, and Daisy Dale, 2:19 1/2.

Monroe Chief, 2:18 1/4.

Two-mile record, 4:46.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, he by Rysdyk's Hambletonian, first dam Madama Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whip stock. For a very fine portrait of Monroe Chief and a full account of his pedigree and performances, see the holiday number of the BREEDER AND SPORTSMAN, issued December 24, 1883.

For further information address JOHN A. GOLDSMITH, FASHION STABLE, Ellis St., San Francisco.

THOROUGHbred STALLION

X X,

Pedigree.

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM. First dam, Columbia, by imported Bonnie Scotland. Second dam, Young Fashion, by imported Monarch. Third dam, Fashion, by imported Trustee. Fourth dam, Bonnets of Blue, by Sir Charles. Fifth dam, Reality, by Sir Archy. Sixth dam, by imported Medley. Seventh dam, by imported Centinel. Eighth dam, by Mark Anthony. Ninth dam, by imported Janus. Tenth dam, by imported Monkey. Eleventh dam, by imported Silvereye. Twelfth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

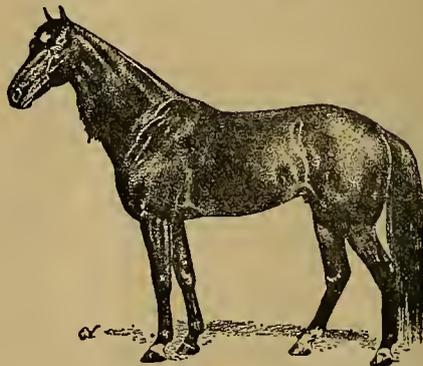

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the grandam of Antee. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hook Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON.

Oakland or 503 Montgomery street, San Francisco.

THE TROTTING STALLIONS

SINGLETON AND LA HARPE.

WILL MAKE THE COMING SEASON FROM FEBRUARY 1ST TO JULY 15th, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and legs, good, small, dark horse, 15 1/2 hands high, and weighs 1,200 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

PEDIGREE.

Singleton is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by Imp. Messenger. Schepper's dam Nellie by son of Vermont Black Hawk, grand dam by Bustris, thoroughbred (No. 378). Singleton's dam is Lightfoot (dam of Fride, yearling record 2:14 1/2) by Flaxtail, son of Fruden's Blue Bull. Lightfoot's dam was Fanny Peru, by Irwin's Tuckahoe, Granddam by Leller's Consul, by Shepperd's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Dioned.

LA HARPE

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1870. La Harpe was sired by Fame, he by Alexander's Belmont, he by Natwood, he by Alexander's Abdallah (sire of Goldsmith Maid), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by Imp. Messenger. Fame's dam Glory by Jackson's Western Star (son of Platt's Western Star by Blacknose). 1st dam by Bonnerge, 2nd dam by Galathia (1868). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:23, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Peru, by Irwin's Tuckahoe. 4th dam by Leller's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Dioned.

TERMS:

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.

La Harpe will stand twenty-five (\$25) dollars the season, cash.

Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address

J. T. MCINTOSH, Box 60, Chico, Cal.

S. C. BOWLEY & CO., GRAND COMBINATION SALE.

Commencing April 10th, 1884,

AT THE Bay District Race Track, AND CONTINUING SIX DAYS

Thoroughbred Horses and Standard Trotters. Roadsters, Jersey, Durham, and Devon Cattle, Spanish, Merino, and Leicestershire Sheep, from all the principal breeding establishments on the Pacific Coast.

750 HEAD OF STOCK

Have already been entered for sale and further in instructions from leading breeders are daily arriving.

33, 35 and 37 New Montgomery St. The benefit of the combination sale to breeders and stockmen cannot be too highly estimated.

S. C. BOWLEY & CO.

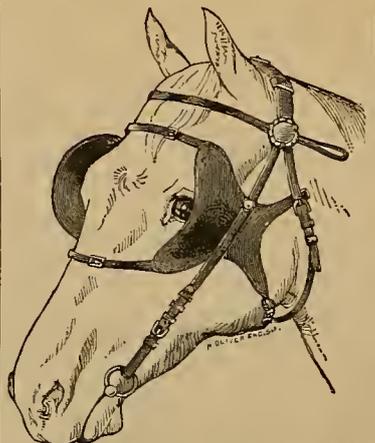

LARGEST AND FINEST STOCK

On the Coast, at prices that defy competition.

WILL & FINK, 769 Market street, SPORTING GOODS. Telephone, 5159.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

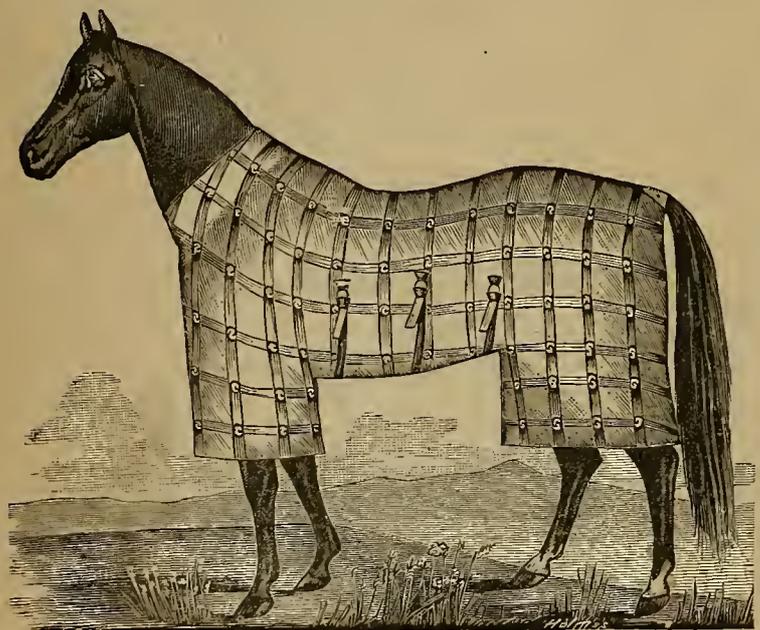

Having thus described my invention, what I claim as new, and desire to secure my letters patent, is: 1. The part D, supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision.

For bridles of all descriptions apply to JOHN A. McKERRON, No. 327 Sutter St., San Francisco.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

- 1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee, JOS. CAIRN SIMPSON, SAN FRANCISCO, CAL.

LINES OF TRAVEL.

C. P. R. R.

TIME SCHEDULE.

SATURDAY, - - OCT. 20th, 1883.

Trains leave, and are due to arrive at, San Francisco as follows:

Table with columns: LEAVE (FOR), DESTINATION, ARRIVE (FROM). Lists various routes to and from San Francisco, including Antioch and Martinez, Benicia, Colfax, Denning, El Paso Express, and others.

Train leaving San Francisco at 4:30 P. M. can meet Pacific Express from Ogden at Benicia; and that leaving at 9:30 A. M. can meet Pacific Express from the Needles and El Paso at Antioch.

LOCAL FERRY TRAINS, VIA OAKLAND PIER.

From San Francisco Daily.

Table listing ferry train schedules to East Oakland, Fruit Vale, Alameda, Berkeley, and West Berkeley.

To San Francisco Daily.

Table listing ferry train schedules from various locations (Fruit Vale, Alameda, Berkeley, Broadway, Alameda) to San Francisco.

CREEK ROUTE.

Table listing ferry train schedules from San Francisco to Oakland via the Creek Route.

\*Daily, except Sundays. †Sundays only.

"Standard Time" Furnished by RANDOLPH & Co Jewelers, 101 and 103 Montgomery St. S. E.

A. N. TOWNE, Gen. Manager, T. H. GOODMAN, Gen. Pass. & Tkt. Agt

LINES OF TRAVEL.

WINTER ARRANGEMENT.

COMMENCING SUNDAY, - - - NOV. 11, 1883, AND UNTIL FURTHER NOTICE.

Passenger Trains will leave from, and arrive at, San Francisco Passenger Depot (Townsend Street, between Third and Fourth Streets) as follows:

Table with columns: LEAVE (S. F.), DESTINATION, ARRIVE (S. F.). Lists routes to San Mateo, Redwood and Menlo Park, Santa Clara, San Jose and Principal Way Stations, Gilroy, Pajaro, Castroville, Salinas and Monterey, Hollister and Tres Pinos, Watsonville, Aptos, Soquel (Camp Capitola) & Santa Cruz, Broad Gauge; no change of cars, and Soledad and Way Stations.

\*Sundays excepted. †Sundays only (Sportsmen's train).

Stage connections are made with the 10:40 A. M. Train, except Pescadero Stages via San Mateo, and Redwood, which connect with 8:30 A. M. Train.

SPECIAL ROUND-TRIP TICKETS, at reduced rates to Monterey, Soquel and Santa Cruz; also to Paraiso and Pajaro Robles Springs.

EXCURSION TICKETS sold Saturday and Sunday - good to return on Monday - to Santa Clara or San Jose, \$2.50; to Gilroy, \$4; to Monterey or Santa Cruz, \$5, and to principal points between San Francisco and San Jose.

TICKET OFFICES. - Passenger Depot, Townsend street, Valencia-street station, and No. 613 Market street, Grand Hotel.

For points on Southern Divisions and the East, see C. P. R. R. Time Schedule.

Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE SUPERIOR FACILITIES

AFFORDED BY ITS LINE FOR REACHING A SEA BATHING, SHOOTING AND FISHING.

MONTEREY,

THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder.

The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES

"HOTEL DEL MONTE," ARE UNSURPASSED, having a MAGNIFICENT BEACH of pure white sand for surf bathing.

THE BATH-HOUSE

contains SPACIOUS SWIMMING TANKS (150x50 feet) for warm salt water plunge and swimming baths, with ELEGANT ROOMS

connecting for individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to these well-known Watering Places, APTOS, SOQUEL AND SANTA CRUZ, IS VIA THE

Southern Pacific Railroad,

(Broad Gauge).

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety, notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known retreats, PILARCITOS, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

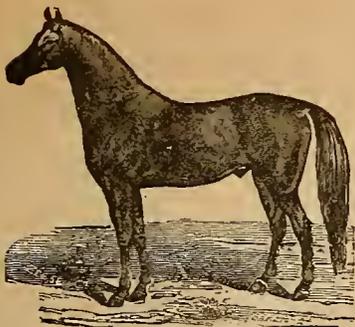

Sportsmen and others presenting Passage Tickets will be entitled to

FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle will be carried free of charge. Gunstaken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES. - Passenger Depot, Townsend street, Valencia Station, and No. 613 Market st., Grand Hotel.

DIETZ'S PATENT

CHECK HOOK.

Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check-Hook is used.  
Horsemen can appreciate the value of a Check-Hook of this kind.  
There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the hook.  
Orders sent to

A. C. DIETZ.

No. 9 Front St. San Francisco, Cal.

Will receive prompt attention.  
When ordering state whether gold or silver plate required.

Sprung Knees

.....AND.....

Cockled-Ankles

Permanently cured by using SPARKHALL'S SPECIFIC.

Which does not blister or interfere with the horse's work. It strengthens the joints and tendons, restoring the limbs to their normal condition. Has cured many cases of chronic lameness and muscular rheumatism after other treatment had failed.

Testimonials:

From O. A. Hickok, Esq. San Francisco, Cal., June 8, 1881. I can with confidence recommend Sparkhall's Specific to any one owning a knee-sprung or cockled-ankled horse, being fully convinced that it will cure those deformities without injury to the animal. O. A. HICKOK. From Hon. C. M. Pond, Breeder of the celebrated trotter "Clingshane." Hartford, Conn., March 29, 1882. This may certify that I have used Sparkhall's Specific in my stables, and consider it an extraordinary remedy, accomplishing in most cases all that is claimed for it. C. M. POND. The Specific is sold in quart bottles—price, \$2.00, by WAKELEE & CO., Montgomery and Bush Sts., under Occidental Hotel, San Francisco.

ASHLAND PARK TROTTLING STUD

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-17yl B. J. TREACY, Lexington, Ky.

## THE KENNEL.

### Training Versus Breaking.

We will take it for granted that, after a week or two of daily practice, our pupil has so far advanced in his education as to be reasonably proficient in his performance at *To ho*, and we will now take another step and try him with something new, and endeavor to teach him the meaning of this word *charge*. As this word is in constant use among sportsmen, the world over, we always teach our dogs its meaning, but for our own use we always prefer a low breathed *Sh!* It is just as effective and far more quiet, especially when you take your dog into company, for, instead of attracting the attention of every one in the room by commanding him to charge, you can give him this signal, and scarcely one, even of those nearest you will notice it. We have used this for more than twenty years, and can heartily recommend it. Most persons train their dogs to charge at the upraised hand. We do not quite like this, and have never adopted the custom, for it very seldom occurs that you wish your dog to drop at any great distance from you; but should you, from any cause, wish your dog to remain quiet when he is at a distance, how much better it is to teach him to come to a full stop at the rising of your hand, and remain upon his feet when he can see you and be ready to obey your next signal. Even at the discharge of the gun or the rise of the bird, we greatly prefer that the dog, instead of charging, should instantly stop and stand up, where he can readily see what is going on. There are many arguments in favor of this course that we will not mention until we get further on.

We will now take our pupil in hand and see if we can teach him to "obey." Place one hand upon his shoulders, and neck and the other upon his hips, and gently, yet firmly, force him to a recumbent position, at the same time repeat the word *charge*, prefaced with the low *sh—*. Do not forget to use only your natural tone, at the same time the word must be spoken in a decided way that cannot be mistaken for entreaty instead of command. This word must not be spoken more than once, and given with a falling inflection; keep him in position until he ceases struggling and his muscles relax. After a second or two, if he remain quiet, remove your hands and allow him to get up. By using the words "hold up," or "get up" in this connection he will soon learn their meaning, but do not do this until he appears to understand what you want of him, and on no account, no matter how long the struggle continues, should you repeat the word, nor let up on him one particle, for everything depends on first impressions, and as soon as your pupil finds that his struggles to escape avail him nothing, and that relentless as fate you are bound to conquer and accomplish your purpose, he will at each successive lesson be more willing to yield. To this persistent painstaking and unwearied perseverance in sticking to our point until our object is accomplished do we owe much of our success in training.

We must again repeat that all this time you must keep perfectly cool, and must suffer no sign to escape you of anger or impatience; for if you cannot control your temper you are not the man to train a dog, and had better resort to the breaking process at once.

Great care should be taken to place the pup in a natural position. When you force him down see that his hind legs are squarely under his body and his fore legs advanced well in front, with his head resting between or upon them, and always insist upon this position.

In the first few lessons it is not necessary to keep him in position more than a second or two, but be very careful that he understands that you are to be the judge of the proper time when he may get up. As he grows older the time can be very gradually extended, according to his disposition. Should he be very nervous and excitable, great care must be taken that he does not get heart-broken with unnecessary and long-continued restraint.

Do not expect that he will at once become perfect in anything that you may teach him, but possess your soul in patience and allow and encourage him to act out his puppy ways, and to play and frolic to his heart's content, always excepting, of course, the few moments that you devote to his lessons. Above all things, carefully refrain from anything that looks like restraint on your ordinary intercourse with him, and endeavor to instill into his mind that you are his loving friend, and that nothing suits you better than to see him thoroughly enjoy himself. We have found by experience that dogs are very much like men in some respects. They are both possessed of a superabundance of steam that must have vent somehow, and it is much better to get rid of the surplus while your pupil is of too tender an age to work any serious harm, than to bottle it up for escape in the future, when added years and knowledge are very prone to turn the

current into dangerous channels. How much better it is to allow your boy to chase the gaudy butterfly, and to encourage him to renewed efforts and let him learn for himself, than even if he is successful in securing the object of his desire, that the chase is futile and will not pay for bruised and tired limbs and soiled and torn clothes—how much better this than to keep him unwilling at your side, with his young heart almost bursting to essay the trial, and sowing the seed that in a few years will ripen and cause him at the first opportune moment to break, not for butterflies now, but in a wild chase for forbidden pleasures that the restraints of his childhood make doubly dear. Do not think that we are moralizing; we are only illustrating. Therefore, when your pupil gives chase to the "butterflies of youth," do not check him, but rather urge him on, that he may the sooner discover the fallacy of his pursuit. In the meantime console yourself with the thought that he is working off his surplus steam and will all the sooner settle down to the real duties of life and do you no discredit by wild escapades in his mature years.

There is one thing that we consider of paramount importance—our pup must staunchly point out when he is from six to ten weeks old. If he will not do this naturally and of his own free will, quickly dispose of him to some one who is not so particular, and try again. Although his breeding may be of the best and the chances in favor of his pointing in the future, still there are so many elements of chance in raising up dogs that we should strive to eliminate at least all of the doubtful ones. We have yet to see the dog that would make a gamey point at this tender age, who would not fulfill the promise in his riper years; while "the woods are full of them" that, having passed their youth without displaying this "heaven born gift," still make no sign. It is not necessary that he should be tried on game birds—although this is desirable—but any bird will answer the purpose; a fowl or chicken will do first rate, or almost anything that will attract his attention so that he makes a staunch point. Do not force this upon him, but merely give him a chance to discover the bird or chicken himself, and if he has this instinct implanted within him you may depend upon his showing it. Many pups who will staunchly point at this age may, perhaps, a few weeks or months later, show no sign; give yourself no uneasiness on this account, for you know that the instinct is there, and although it may be dormant for a while, you can rest secure that it will return in proper season.

Do not forget, during all your lessons, and while at play with him, to pet and fondle him, but do not allow him to jump upon you at any time. Whenever he does this you should at once firmly remove him and he will soon learn that this will not do. You should also talk to him—not baby talk—but use intelligent, rational language, just such as you would use in talking to a ten-year-old boy, and you will be surprised to see how soon he will understand your conversation. We are well aware that many persons will ridicule this, and will claim that a dog should be taught just as little as will answer to make him understand his duties while in the field, and what they term "fancy training" is a positive injury to his usefulness. We have no sympathy with these views, for nearly all of the pleasure derived from our shooting trips is in witnessing the intelligent manner in which our pets perform their duties, and well satisfied are we that the more varied their accomplishments and the more developed their reasoning faculties, the more enjoyment will they afford. That many writers of renown disagree with us upon this point is true; and formerly, while perusing the finished productions of their able pens, we have been haunted by lingering doubts that after all perhaps they were right, and that our system was open to serious objections; but after a tramp over the stubble or through a covert with these same writers, and witnessing the delight with which they gazed upon the performance of our dogs, and listening to the lavish encomiums which they bestowed upon their good behavior, we have been confirmed in the faith that our system is not radically wrong, to say the least. Many sportsmen whom we have met in the field insist upon congratulating us upon the wonderful good luck that we have had in obtaining such intelligent animals. That they are intelligent is plain to be seen; that they are naturally more so than thousands of others we cannot believe, for we have had considerable experience with many strains of both pointers and setters. Of pointers we have owned the gazelle-eyed, satin-coated, light-weight beauties, and many of the different strains and crosses up to the lumbering Spaniard; and of setters we have cultivated the "wild Irishman," as well as his more staid English and Scotch brothers, together with many animals of our grand old native stock, and have ever found them all endowed with faculties that needed but proper training to develop them into intelligent companions as well as first-class "killing" dogs.

We will now return to our pupil, whom we have given quite a rest, and continue our lessons, ever remembering that

we must "hasten slowly," and not over-burden his youthful days with care and sorrow by too frequent or long-continued restraint. Unless he is very dull and stupid, or inclined to be refractory, or worse than all, sulky, a very short time is sufficient to give him all instructions and practice needed; indeed, the shorter the time occupied in his lessons at this tender age the better, provided you succeed in obtaining an intelligent obedience to your commands.

You should be pretty well acquainted with his disposition by this time, and be able to form an opinion as to whether it will pay to keep him or try him again. We are very loth to expend much time with a dull or stupid one, and a sour or sulky disposition we abominate, and dispose of such as soon as we may be. We are best suited when a pup is full of life and shows that he has a will of his own. We care not if he be headstrong, even willful, so that he is full of life and action, for we have ever found that these high-strung animals are not only possessed of greater intelligences than their less sensitive companions, but as a rule they are more killing dogs, to say nothing of the greater pleasure that they afford by their superior style of going. Should his temperament appear to be what you desire, thankfully proceed with your pleasurable task.

You must be careful when you commence his lesson that you do not cross him by beginning when he has something of importance on his mind that will distract his attention from the business on hand. If he is busy with a boue, or engaged at play, or his mind appears to be preoccupied, leave him quietly alone until he is disengaged, and then go on with the lesson; by pursuing this course you will secure his undivided attention, and not only save time but much wear and tear of your stock of patience.

It will be time enough to teach him that he must leave his bone or cease his play at your command when he is a little older and a little further advanced in his education; at the same time, should you unthinkingly order him to do anything while he is engaged, you must see to it that the order is obeyed at all hazards, for it will never do to play fast-and-loose with him, nor to allow him to get the idea into his head that he can ever have his own way when you desire the contrary. After you have taught him to charge readily without the aid of your hand to force him down, you can gradually increase your distance from him when you give the order; and if you are very careful to make him instantly obey you, and do not allow him to take even a single step after the command is given, he will soon obey the order as far as he can hear your voice.—S. T. Hammond, in *Canadian Sportsman*.

Mr. Charles Dorethy, of Dublin, Cal., recently purchased from the kennel of A. B. Truman one of his well broken dogs—an Irish setter called Rob. The consideration being one hundred dollars, and without any doubt it will prove, as the following goes to show, one of the most fortunate purchases that Mr. Dorethy has made in that line. A few days ago Mr. Dorethy was out on his ranch hunting quail with Rob when he came to a staunch "point." Mr. Dorethy flushed the bird and killed it with Rob standing to shot. When ordered to retrieve he did so, and while on his way back with the dead bird in his mouth he came to another "point." Mr. Dorethy flushed the second bird and killed that also, which goes to show how thoroughly the dog has been trained. Rob is all red, sired by Truman's Bob, dam Bess, and is a raugy, well-formed dog and very stylish. His age is fifteen months. Rob is fortunate in securing for his master one of the leading sportsmen of this state, and one who knows how to appreciate a good dog.

Mr. G. W. Bassford, of Colusa, has a card in our advertising columns offering some high-bred dogs for sale. Mr. Bassford's kennel has made for itself a reputation beyond any other on this coast. To the purest strains of blood in his stock he adds experience and enthusiasm in breeding and breaking, and a sportsman who gets a dog from Bassford's lot can safely expect a first-class animal.

The holiday number of the BREEDER AND SPORTSMAN arrived too late for a review, other than to speak of the five fine lithographs. One of these contains a group of dogs, all prize winners at the Pacific Coast Field Trials—Beautiful Queen 2d, Bow Jr., 2d, Dorr 1st, Bells 3d and Butte Bow 1st. The other four are the famous trotters Monroe Chief, 2:18; Ah-hottsford (colored), 2:19; Bonita, four-year-old record 2:18; and Hinda Rose three-year-old record 2:19. The five are of the same size, being 11 by 16 inches. They are beautiful. This shows that in some places on the Pacific coast there are people who are not crazed over the almighty dollar.—*land Rural Spirit*.

## TURF AND TRACK.

### Arab Horses Again.

Scarcely a winter passes without some question arising in England to occupy the attention of breeders, owners and others interested in the turf. In turn, the American invasion, as it was called, and the deterioration of the English thoroughbred were discussed, as also have been the several threats by the ultra-radicals to place all racing in the United Kingdom under "act of Parliament." This winter the subject of Arabian horses and their value in the stud is being discussed. The question arises out of an announcement made by the Jockey Club for a race at Newmarket by Arabians for which the conditions are much more liberal than usually accorded to English breeders and owners. Of late there has been much complaint of the illiberality of the Newmarket authorities in the matter of added money, the reversal of forfeits to the fund instead of the winner, which, supplemented with a race for Arabians, has brought that very conservative journal, the *Field*, to the front in the following strong protest:

It is curious to note that, while the Jockey Club are content—or perhaps we should be more correct in stating are forced—to issue the most illiberal programmes that ever appear in the pages of the *Racing Calendar*, they should waste money by giving it to a race for Arabian horses. It is a curious coincidence that two races advertised in the *Racing Calendar* to take place in 1884, and following consecutively, are the sweepstakes for these Arabian horses, to which the Jockey Club adds 200 sovereigns, deducting nothing (not even charging an entrance fee) a unique thing in latter-day Newmarket programmes, and the Bunbury Stakes of 20 sovereigns each, 10 sovereigns forfeit to the fund, with 200 added. It is marvellous that owners of horses can be so short-sighted as to subscribe to races with such strikingly illiberal conditions; but they do so, and then, when they have won the race, they, like the fly in amber, know not how they came there. It is difficult to imagine why the Jockey Club should encourage such retrograde breeding as the re-infusion of Arab blood into the pedigree of our race-horses. For generations the Arab blood has been bred out to the constantly increasing benefit, and now we are breeding back to the element that all experience shows we can better do without. In the deserts of Arabia this breed may be all that we have been taught to believe him from the nursery onwards, but experience deprives the Arabian horse of many of his bepraised characteristics and we begin to look upon him as a very inferior class to our English race-horse. So inferior, indeed, that were the best Arab in existence brought over to this country to run against Corrie Roy or Barcalaine, the Arab to carry 84 pounds and the English horse 126 pounds, the odds in favor of our own horse winning would be incalculable; and yet the Jockey Club indirectly tells us that this is the blood that we should infuse into our studs. Then in looks it is the same. The Arabs by the side of the two animals we have quoted are but ponies, and if those Mr. Blunt showed us at his sale a few months ago can be taken as a fair sample of the high-caste Arabian horse, we can but trust that few will be so blind as to breed back to them. It would be a safe investment to bet that Corrie Roy could gallop them to a standstill, or, without exaggeration, could carry them to the distance and then race them home with the certainty of success. Why those animals belonging to Mr. Blunt and others should have been admitted to the stud-book is inexplicable, and it becomes invidious to allow them a place in the sacred volume and refuse it to activity and others of such breeding, who, according to all theory, are descended from these Arabs, and, moreover, have attested their breeding by great deeds on our race-courses. In the conditions of the race at Newmarket it states that the stewards of the Jockey Club will consider as Arab all horses sent from India which have won a public race, value 1,000 rupees. It was stated at the time that these Arabians were admitted to the stud-book at the request of the Jockey Club. How, then, can they refuse to admit Activity, the winner of the Liverpool Cup and other good races, and incalculably superior as a race-horse to the best Arab ever foaled?

In Kentucky, especially in the blue-grass country, breeding to Arabians was some years ago discussed and dismissed as of no value. The late A. Keene Richards spent several years in the very heart of Arabia for the purpose of studying the breeding, rearing and capacity of Arabian horses. When he returned to Kentucky he brought a small stud with him the purity of which was attested by numerous oaths held sacred by the followers of Mahomet. Mr. Keene, who believed sincerely in the value of Arabian blood, did all in his power to prove the same, with so little success that the once well-known jumper Limestone, who was by War Dance, out of Transylvania, she by Arab Massoud, may be said to have been the best descendant of Mr. Keene's importations. The discussion, however, will do no harm in England or the United States, and the result of the race will be watched with interest. The announced conditions are as follows (entries close April 1):

A sweepstake of 25 nov. each, with 300 added, 200 by the Jockey Club and 100 by W. S. Blunt, Esq., for Arabian horses; three years old, 108 lbs.; four, 126 lbs.; five, and upwards, 129 lbs.; five subscribers or no race; two miles.

The committee of the Jockey Club announce that entries will be restricted to Arabs already registered in the stud-book, their produce, or imported horses having such guarantee of their authentic breeding as shall be deemed sufficient by the stewards. They will also consider as Arab all horses sent from India which have won a public race there of the value of 1,000 rupees, under the rules of the Western India or Calcutta Turf Clubs, or have a certificate, signed by the secretary or either of these clubs, as Arabs, without objection having been raised to them on account of their breeding; also all horses sent from the principle Arab studs of the European continent, if accompanied with a certified pedigree showing them to be of Arabian descent uncrossed with other blood; also all horses of ascertained Arabian blood imported subsequently to the present notice from Arabia, Syria, Egypt, or the Persian Gulf, and accompanied with a certificate of exportation from the English Consul of the district.

### "Principles and Practice of Horseshoeing."

Last week we copied from the *Federal Australian* a very sensible article descriptive of the foot of the horse, and from the same journal we extract the following article which is under the above heading. Like that which preceded it, there is some capital advice, and those who have horses shod with full shoes can study it with advantage, especially if they insist upon the amith following the instruction laid down. It is rare that so short an article is as comprehensive, and still rarer to find all the "points" so insusceptible of adverse criticism. There is scarcely a proposition that will not warrant

endorsement, and if followed, many of the evils that follow the ordinary method of shoeing will be avoided. While every paragraph will give the basis for illustration, and to convince those of different ideas it may be necessary to amplify in order to present full reasons for the course recommended, notwithstanding the briefness, there is so much common sense embodied that the advantages are apparent. In another part of the paper we have alluded to an experiment to be tried with malleable tips and shoes. After that was written we find by this article that they have been tried in Australia, and the writer commends them. The "anti-concussion" shoe is probably something of the same device as our plates with the stratum of rubber between, and as we find brass sufficiently tough to stand without breaking until nearly worn through, the better material can scarcely fail to answer. Then the brass the founder used was scrap metal that had been melted very many times, so that it was not a good article for the purpose. Though depending on actual test before endorsement, we have full faith in the practicability.

**Preparing the Hoof**—In shoeing a young colt for the first time it is essential to have a good temper and patience in handling it. We will presume that we have a tolerably well-behaved colt to deal with. The first step usually taken is to shorten the lower margin of the wall, para the sole and frog, and "open up" the heels. We will now treat these details *seriatim*.

**Leveling the Wall**—In leveling the wall, care should be taken that the sides of the hoof are of equal depth, and the whole lower margin of the wall should be made perfectly level with the rasp. To ascertain whether you have got the foot level, take a glance down the line, from the knee or hock, when the foot is placed firmly and straight upon the ground. More frequently the inside is lower than the outside, and the defect should always be remedied. If the pastern is perpendicular to the canon bone when looking at the front of the leg, and the two sides of the lower margin are directly transverse to the line passing down from these, then the wall has only to be lowered equally on both sides if too high. When it is remembered that the horse's weight is thrown upon the foot, it will be easily understood that if only slightly out of the level serious injury may result to the limb.

**Shortening the Wall**—When a horse has worn a set of shoes too long, the toe appears to have grown faster than the heels, which is accounted for by the fact that the shoe, not being nailed back to the heels, is pressed against the horn at these parts, and they become worn sometimes to such an extent that the shoe is deeply embedded; there is no corresponding wear at the toe.

The stratum of the horse's weight comes perpendicularly from the shoulder to the fetlock, but from thence to the ground it passes along the pastern and the foot. Owing to the obliquity of the pastern, the weight has a tendency to bring the fetlock nearer the ground, and the longer and less upright the pastern is, the greater the strain upon the tendons and ligaments which have to support. The necessity, therefore, of maintaining the hoof at the proper angle is of the greatest importance. If, however, the pastern is too upright, the strain comes upon the bones, and the liability to splints, ringbones, etc., increased by the jar. It is, therefore, quite as important to keep from toe to heel at its proper level as from side to side. In a well-formed foot the depth of the heel is equal to half that from the coronet to the toe. When the pasterns are too upright, shorten the heel a little; when too oblique, shorten the toe and leave the heel long; but, as a rule, the heels require very little interference, and should never be touched except with the rasp. If the wall is not below the sole, it should never be reduced. When the wall has been brought into a fit condition to receive the shoe, the sharp edge must be removed and the rim rounded with the rasp, so as to leave a thick, strong border, not likely to chip.

**Paring the Sole**—It is a common practice amongst farriers to pare the sole until it springs to the pressure of the thumb; but for this they are not always responsible, as the owners of horses frequently insist upon having this done, because they fancy it makes a horse go better. Those who practice it have an idea that it looks more workmanlike, and gives the foot a neater appearance; and of such importance do they consider the operation that, if the horn is too hard to pare away with the knife, a hot iron is applied to soften it. After this is done, the sole and bars are sliced away until nothing but a thin shell is left. While it is absolutely necessary that the excessive growth of the wall should be removed, no such necessity exists in regard to the sole, as, when it grows to a certain thickness, it throws off flakes in a perfectly natural manner, and it should be left as strong as possible, so that it may bear its proportionate amount of weight and protect the sensitive structures of the foot from hard road, metal and other substances. Another reason why the sole should not be pared is that the outer flakes of horn, which are the hardest, protect the newly formed horn, which, being soft and spongy, cannot resist the exposure, as it would dry too rapidly and crack.

The old flakes act as the natural stopping to the foot, and, if allowed to remain, preserve the horn better than any artificial application, as it retains the moisture and keeps the foot cool. If the new horn is suddenly exposed by paring out the sole, what is the result? It loses its moisture, dries, hardens, and shrivels up, and in doing so the sole becomes more concave and the walls are drawn together, the foot gradually diminishes in size, and the heels become contracted. The consequence is that the horse becomes groggy, and has to be turned out when he might have worked for months or years. Another injurious result of paring out the sole is the fact that the hollowing-out process gives the wall the appearance of being too high; and a still greater reduction of this part is made, until the poor brute, to use a common expression, has scarcely a foot to stand upon. Then, to make up for the injury done, which is generally attributed to hard work or some other cause, bar shoes and leathers must be put on, and the space between the sole and leathers filled with tow and tar.

Fleming lays down as a rule, from which there must be no departure, that so long as the foot is in health, not a flake should be removed from the sole. If this is a necessary rule in England, I would say that in this country, if possible, it should be even more imperative; for during the hot months, horses are very liable to suffer from inflammation of the sensitive lamina (*laminitis*), induced by the heated condition of the roads. The horn being a bad conductor of heat, should be left as thick as possible, so as to lessen the liability to the greatest extent.

**Paring the Frog**—From some reason not easily accounted for, the frog very frequently suffers to even a greater extent from the mutilating influence of the knife than the sole. It is carefully pared away until the pink tinge of the sensitive structure beneath may often be seen, and the result is that

the neatly-carved remnant soon waxes and becomes diseased, and at length appears as a ragged, foul-smelling shred of horn, shrunk up between the narrow deformed heels of the well-pared foot. The frog, from its position and structure, is intended to come in contact with the ground, and to deprive it of its horn is at once to destroy its utility and its structure, and to withdraw from the foot one of its most essential elements. The more the frog is left alone the more it develops, and at the same time loses none of its useful properties. It prevents the heels becoming contracted by filling up the space between them; is a valuable supporter of the limb, whether the animal is standing or moving, and is a useful agent, in conjunction with the heels and bars, in preventing slipping.

Let it be a rule, then, never to touch the frog, except some gravel or dirt has lodged beneath some of the flakes—which seldom occurs—when it may be removed with some blunt instrument, and the jags cut off. Even when the frog is diseased, there is no better cure for it than to let it come in contact with the ground, which may be done by reducing the other portions of the hoof, and either leaving the shoe off altogether or by putting on a thin toe-tip. This is much better than applying many of the trash dressings in use, and will sooner lead to a recovery.

**Opening up the Heels**—This operation is quite as injurious, if not more so, than mutilating the sole and frog, and consists in making a deep cut into the angle of the wall at the heel where it becomes bent inward to form the bar. This part of the hoof is unusually strong, and acts as a spring to prevent the heels contracting. When a huge nick is made in it, the spring is weakened, and the heels not only contract, but the hoof is shortened towards the heels.

Let it be borne in mind by every one present, as one of the first principles of farriery, that—except the border of the wall and a small portion of the outer edge of the sole where the shoe rests—no part of the lower surface should be touched if you would preserve the foot in a healthy state, and do justice to your employer and his horses. The sole, frog and bars, as well as the heels, have an important duty to fulfill, which is less likely to be properly performed the more they are interfered with by the farrier's knife.

We now come to the shoe.

As we have already stated, the evils of the system of shoeing in general use amongst farriers consist more in the treatment of the hoof than in the kind of shoes in use. Yet there are many errors in the latter, and we will endeavor, as far as time will permit, to point out a few of them.

The first one we shall call your attention to is the practice of bevelling out the bearing surface, that which comes in contact with the foot of the shoe, in which every care is taken to avoid the least proportion of the weight being borne by the sole, leaving a wide space between it and the bevelled portion of the shoe. The whole strain is thus thrown upon the wall, instead of being equally divided; while the space produced by the bevelling is admirably adapted to pick up stones, gravel, and hardened mud, and to increase the suction in heavy ground. So long, however, as the excessive sole-paring is persisted in, a shoe of this description will be an absolute necessity, and a trial of any rational shoe would not prove satisfactory, for the pain produced by pressure on a sole thinned down would cause the animal so much pain that lameness more or less severe would be the consequence.

Another manifest evil is that, in order to protect the sole, which cannot bear to come in contact with the ground, the shoe must be thicker and heavier than would be required if the sole were left in its natural state and a proper bearing surface made on the shoe. But, in addition to these defects, the shoe under notice may be faulty in many other respects—if too heavy, larger nails are required, and this is an evil of no small magnitude, as the hoof is more likely to be split; it may be uneven on its upper or bearing surface; it may have too many clips, and these not well formed or situated; its ground surface may be unequal, and the holes for the nails badly placed or out of proportion in size to the nails. Unevenness of the bearing surface, often purposely produced in order to "ease the heels," as it is termed, which have been reduced till they cannot bear pressure, is liable to cause lameness from throwing undue strain on certain parts, and compression of the sensitive structures within, or it may cause the wall to split. If the nail-holes are badly placed, and give a wrong direction to the nail, injury to the foot will be likely to result. When calkins are added the risk is still greater, for, if small, they are an evil, as they place the limb in an unnatural position, and cause an undue strain on the fore part; and if there is any inequality in height, their unfavorable influence on the limb is increased. They jar the limb, expose it to twists and treads, sometimes of a grave character, induce shortening of the flexor tendons, and interfere with the animal's action. The shoes are also more liable to be torn off if calkins are put on; and if a horse wearing them happens to kick another animal, severe lacerations are liable to be produced; and it should not be forgotten that they prevent the frog coming to the ground. Besides being of a faulty shape, the shoe may either be too large or too small for the foot to which it is applied. In the one case the foot has to be reduced to the size of the shoe, which is a frequent source of lameness, while in the other the shoe, in extending beyond the margin of the hoof, is liable to be torn off and to produce cutting and brushing, etc.

A shoe for general purposes should be one that has a level bearing surface, so that the wall and sole can each bear a proportionate amount of weight, as well as the frog, which has to sustain the hinder parts of the foot. By this means the foot is brought as near to a state of nature as it is possible by artificial means, which will be necessary as long as the horse is placed under unnatural conditions. A light thin shoe, on account of allowing the frog and bars to come closer to the ground, is preferable to a thick heavy one, but it is impossible to devise a shoe to suit all classes of horses. The general principles I have laid down, however, apply in every case, for the same rule holds good in all with regard to the sole and frog sustaining weight, though in the slow moving animal this is perhaps of less importance than in a lighter and more active one.

The form of the shoe, in all cases, should, in outline, resemble the shape of the ground surface of the hoof. The upper surface should be flat, while its lower must vary according to the class of horse for which it is required. Calkins, even for draught horses, are now dispensed with in the best farriers' shops in England, with evident advantage, for sprains and other injuries to the limb are much less frequent than when they were in use. If it is thought that a horse will slip when drawing a load without calkins, try him with a well-made set of concave shoes, and you will find he gets a firmer hold of the ground with them than with calkins. The concave shoe is the nearest imitation to nature that you can make, and the closer you copy it the better. There are several modifications of this shoe, but for general use we have found that those similar to the specimen on the table are superior to any other.

Clips, when judiciously applied, are of great service in retaining the shoe in its place, and in diminishing the number of nails, but should not be placed opposite to the nail-holes,

otherwise they may become a source of injury. In the anti-concussive shoe, recently introduced by Mr. Graham Mitchell, F. R. C. V. S., we have the advantage of the clips clearly exemplified, for, although there are only four nail-holes in the fore-shoes, we have seen a few sets that have been on for three weeks or a month without the shoes being displaced in the least. For many purposes, such as, for example, on stations and outlying places, they are, owing to the ease with which they can be applied, as they want no preparation, admirably adapted; and the amount of wear, to say nothing of the anti-concussive properties, is something astonishing. If they are applied without pads, the groove in the ground surface gets filled with the road material, which deadens the concussion to a considerable extent, at the same time preventing the shoe wearing too rapidly. Being made of malleable cast-iron, they can be obtained of any size or shape, so that but little alteration is needed to adapt them to any foot; and, should they require it, they can be easily altered, by heating to a plum red and hammering in the usual manner. It is not intended, nor is it, indeed, thought, that these shoes will ever supersede hand-made ones, except for certain purposes, but so far as our own experience of them goes, we must say that we are agreeably surprised with them. We have had several horses shod with them that are working about town every day, and they have in every case given the greatest satisfaction. Being light, durable, easy of application (the fire seldom being needed), and when padded to prevent jar to the limbs, they have a great deal to recommend them for light horses.

**Application of the Shoe.**—The wall and a portion of the sole to which the shoe is to be fitted, having been reduced to their proper dimensions, the shoe must be made to exactly fit the hoof, and follow the outline of its lower rim. The surface to which the shoe is fitted, as well as the bearing surface of the shoe, should be made as level as possible, and the clips should be neatly and correctly fitted. The farrier should always bear in mind that the shoe must be fitted to the foot, and not the foot to the shoe. The length of the shoe will vary according to the work the horse has to perform. In horses required for great speed, such as race-horses, trotters, hunters, etc., the branches of the fore-shoes should, on no account, extend beyond the inflection of the heel of the foot, otherwise the shoe is liable to be torn off by the hind foot, and the horse thrown down. The heels of the shoe should be carefully rounded off, and bevelled off a little, so that there is nothing to catch. With horses required for slow work it is often advantageous to leave the heels a little longer.

**Hot and Cold Fitting.**—A great deal has been said about the injury done to the foot by fitting the shoe hot, but, if not applied too hot, we are of opinion that any slight injury that might result from it is more than counterbalanced by the advantage of having a properly-fitted shoe. It is of the first importance to have a solid bearing all round, and the sooner the absurd notion of "easing the heels," which would never be required but for the too free use of the knife and rasp, is got rid of the better.

**Nailing.**—The nails should not be unnecessarily large, as is too often the case, but well proportion to the size of the shoe, and the heads should fit the nail holes when driven up tight. Care should be taken in driving the nails into the hoof; every one should be made to pass through sound horn. If the nails are driven and drawn repeatedly the horn is damaged, and the foot may be injured. Care should, therefore, be taken to give them the proper direction at the start.

A short thick hold is better than a long thin one, and less likely to produce injury; and, if possible, no more horns should be included in the grasp of the nail than is likely to be removed the following shoeing. By this means the wall will be kept constantly sound.

**Clenching.**—This should be done by shortening the end of the nail with the rasp, just leaving sufficient to turn over. The rasp should also remove the small ball of horn raised by the nail, but without making a great notch, as is frequently the case, and then the clenches is evenly laid down.

**Rasping.**—In a great many forges this is carried on to an unmerciful extent; the whole of the varnish-like covering and the greater part of the coronary frogband being removed in the process. Having neglected to shorten the wall from below, the shoe is set back, and a large piece of horn has to be removed with the rasp, and the hoof is thus deprived of its natural protection, the varnish and the softer horn exposed crack and break off in fragments, until it becomes almost impossible to shoe the animal, and sand-crack or laminitis is the result.

**Laying Down Clips.**—Even this apparently insignificant matter requires a little care. The clips should be applied close to the hoof by commencing to hammer at the bottom, the blows gradually diminishing in force and ascending to the point. Clips should never be driven tight into the hoof, as disease may be induced in this manner.

It only now remains for us to say that when the animal comes to be re-shod, care should be taken in removing the old shoes by cutting the clenches and drawing the nails, instead of tearing it off with the pincers holds-bolts, as is frequently done, when a large fragment of horn is generally brought off with it.

**Principal American Winners.**

The stallion tables, which, for the last two years have been such a prominent feature of "Kirk's Guide to the Turf," are now so well advanced that the compiler is able to present the following as the six highest in the list:

STALLION.	Number of horses.	Times started.	Times first.	Times second.	Times third.	Gross amount won.
Billet.....	26	175	46	26	32	\$89,613 00
Bonnie Scotland.....	37	409	103	69	64	88,029 50
Glenelg.....	41	400	90	66	52	68,252 75
Buckden.....	44	425	101	111	59	54,062 50
Longfellow.....	30	336	79	55	57	49,260 00
King Alfonso.....	35	341	69	61	50	44,267 75

Last year the first six were Bonnie Scotland, with a total of \$105,903; Buckden, with \$56,634; Longfellow, with \$48,488.25; Glenelg, with \$48,002.50; Billet, with \$45,432.50, and War Dance, with \$44,157.75. It will thus be seen that five of the six horses are again at the top of the list, with King Alfonso taking the position in 1883 occupied by War Dance in 1882. There are some slight changes in the positions, Bowen & Clay's comparatively young stallion taking the lead, thanks to the grand performances of Miss Woodford, who is not only the largest winner in the United States but the largest winner of the year in the world, the English three-year-old Ossian, who headed the list in that country, only showing a few cents over \$44,236. A feature of the earnings of the six horses named is the falling off in the amount won abroad; in 1882 four out of the six contributed a total of \$13,250.75; last year the same number only contributed \$4,657.25.

As the volume of "Kirk's Guide" containing the statistics

of 1883 will not be ready for delivery much before the middle of February, and in answer to numerous inquiries as to who are the prominent winners at the several ages, the following table is compiled from material in hand for the Guide by Mr. Crickmore:

TWO-YEAR-OLDS.						
NAME AND SIRE.	Times started.	Times first.	Times second.	Times third.	Gross amount earned.	
Gen. Harding, by Great Tom.....	10	9	1	1	\$16,635 00	
Welsher, by Warwick.....	17	4	1	1	8,865 00	
Bob Miles, by Pat Malloy.....	27	9	2	1	8,725 03	
Louissette, by Glenelg.....	6	3	1	1	8,020 00	
Issaquena, by Alama.....	7	7	—	—	7,860 00	
Tolu, by Ten Broeck.....	19	5	3	—	7,575 00	
Duchess, by Kingfisher.....	6	2	2	—	7,355 00	
Dutch Roller, by D. Skater.....	7	1	—	—	6,237 00	

THREE-YEAR-OLDS.						
NAME AND SIRE.	Times started.	Times first.	Times second.	Times third.	Gross amount earned.	
Miss Woodford, by Billet.....	12	10	1	—	\$51,120 50	
George Kinney, by B. Scotland.....	18	12	4	—	42,935 00	
Drake Carter, by Ten Broeck.....	20	12	4	—	21,407 50

It is unnecessary to give any details of how, where or when the above races and money were won. The horses by name will be recognized as popular favorites both East and West, and as nearly all ended the season in good condition they will no doubt be heard from early in the coming season.

**A Remarkable Horse.**

Mambrino Chief was mated with Woodhine, daughter of thoroughbred Woodford, and the produce was Woodford Mambrino, a horse, taking into consideration his limited opportunities in the stud, that outranks, by what he has accomplished, all other stallions. Of the eighty-nine colts and fillies sired by him at Woodburn not more than seventy-five reached maturity, and many of these were not handled for speed. When wasted by disease Woodford Mambrino made a wonderful campaign on the turf and he gained on a slow track at Minneapolis a record of 2:21. He has ten sons and daughters in the 2:30 list—Alhottsford, Convoy, Dacia, George A. Ayer, Iuca, Lady McFaridge, Magenta, Mambrino Dudley, Rachael and Pancoast. Of these, three have records of 2:22; and better—Convoy, 2:22; Mambrino Dudley, 2:22; Alhottsford, 2:19. Three of the get of Woodford Mambrino have well authenticated trials of better than 2:26—Manfred, Malice and Manetta. If the two mares owned by Mr. Bonner had been on the turf, three of the progeny of Woodford Mambrino would be credited with records of better than 2:30; thus, Alhottsford, 2:19; Malice, 2:19; Manetta, 2:19. It is proper to draw a comparison between Hambletonian and Woodford Mambrino. The first-named stallion founded a great family, but in order to do it he got 1,330 foals out of selected mares. Thirty-seven of these entered the 2:30 list, and only two of them, Dexter and Nettie, beat 2:20. Hambletonian's percentage of 2:30 performers is within a fraction of one in thirty-six. Woodford Mambrino's percentage of 2:30 performers is within a fraction of one in nine, and this does not take into account the authentic trials of Malice, Manetta and Manfred. In other words, Woodford Mambrino, making opportunity the basis of calculation, is four times greater than Hambletonian. In combining the thoroughness of Woodhine with the coarser fibre of Mambrino Chief a remarkable horse was produced.—*Turf, Field and Farm.*

**Put on the Colors.**

The following suggestion made by a correspondent of the *Turf, Field and Farm*, who is evidently a practical man, will be recognized as good by all racing associations and track managers. The difficulty discussed presents itself at almost every meeting in the whole country, and expedients innumerable have been devised to avoid it, but with only partial success. Let associations try this one:

As an appendix to the chapter of last week relative to the vagabond hntlers who infest the grounds about the race tracks, I beg to suggest that the stable boys be uniformed in the colors of their stable, and also that each owner of race-horse be required to float the flag of his colors from the top of his stable building.

The giving of badges to the stable employee is intended as a means to enable the lads to pass the gates into certain places not for the use of the public. These badges get into the possession of outsiders in various ways, but principally by dishonesty on the part of those they were issued to. The tramps and hostlers get a good share of them.

For this evil there is but one remedy, and that consists in issuing no more badges for the stable gang, but instead, let them wear the uniform of the company colors. By this means the stable boys can be recognized without mistake, and be allowed to pass wherever they are privileged to go. No boy could object to wearing the uniform of his company during the racing season, unless he is ashamed for people to know where he belongs, in which case he ought to leave at once and seek employment at some place, the character of which was more in keeping with the proud spirit of his nature.

Boys moaned not for their industrious habits and meritorious conduct ought to be complimented with a gold-edge badge, and allowed the privileges of all places not set apart for private families. One or two might be selected from each stable at the suggestion of the trainer, who must guarantee their fitness in every particular to be the recipient of special favors from the club, and these selected few awarded the emblazoned ribbon, which would not only serve as evidence of great merit, but also be a beautiful ornament to display jointly with the colors of their stable.

I want something done to distinguish and reward merit in the ranks of the juvenile company, and to show the line which should separate the lads of good conduct from the rabble gang who delight in the company of tramps and vagabonds.

There is precious little now in the management of the greater part of the training-stables to induce the boys, and especially those who are naturally careless and thoughtless, to strive to excel in well-doing.

Boys studying or learning any trade or business ought to be rewarded according to their merit, and rewarded in a way that the outside world can see and know that they are prominent members of their class, and noted for their general good conduct. I was once a boy myself. I remember the time well, but some not half so old as I seem to forget their boyhood nature, and would have a little fellow of limited experience and knowledge do what they themselves could not do when twice their age.

I hope some one of the clubs will try the experiment, and adopt the suggestions I have made. If the result is a failure, I will accept it as proof that, although I was once a boy myself, yet I failed to learn anything of the nature of the little people.

The convention at Louisville has forbidden the boys admission to the temple of the money changers. In this they seem to choke at a gnat in the golden circle, but gulp down readily the camel in the whisky ring.

The morale of the turf is not as good as it should be, and while some of the clubs are disposed to dig at the roots of the gambling features, I hope the Eastern Association will encourage that valuable adjunct to our business by doing that which will give character and honorable distinction to those who engage in it.

**Colt Entries in Kentucky.**

The stakes of the Agricultural and Mechanical Fair Association of Lexington, closed on the 1st inst., with large lists. The only California representation being from Palo Alto.

The Agricultural Stakes for two-year-olds to be trotted this fall closed with forty-seven nominations, all Kentucky bred except the following from Gov. Stanford's farm: b f Almira, by Electioneer, dam Alameda Maid, by Whipple's Hambletonian; h f Aurelia, by Electioneer, dam Aurora, by John Nelson; b f Ethel, by Gen. Benton, dam Electa, by Electioneer; h f Manzanita, by Electioneer, dam May Flower, by St. Clair; b c Woolsey, by Electioneer, dam Waxana, by Gen. Benton; b c Aleck, by Electioneer, dam Alveretta, by George Lancaster; ch f Elsie, by Gen. Benton, dam Elaine, by Messenger Duroc.

The Mechanical Stakes, for three-year-olds to be trotted in 1885 has 61 nominations. All the Palo Altoites above named are nominated, and in addition h c St. Bel, by Electioneer, dam Beautiful Bells, by The Moor; h c Anteros, by Electioneer, dam Colmbine, by A. W. Richmond. St. Bel is full brother to Hinda Rose, and Anteros is a full brother of Anteco.

The Association Stakes, for four-year-olds to be trotted in 1886 has fifty-five entries, all the Palo Alto colts above given being named. Electioneer and Gen. Benton are also named in the Produce Stakes to be decided in 1885.

**Saddles and Spurs.**

As we read in the 22nd chapter of Genesis, 3d verse, that "Abraham rose up early in the morning and saddled his ase," saddles of some sort must have been used in very early days; but few things appear more extraordinary to those persons who look into ancient history than the fact of saddles with stirrups being a comparatively modern invention. Although a French translator (D'Ahlancourt) of Xenophon, by an oversight makes a governor of Armenia hold the stirrup of the Persian king when he mounted his horse—"Il lui tenoit l'etrier lorsqu'il montoit a cheval," it is well known that the ancients had no stirrups, but that men of rank among them were accompanied by a person whose office it was to lift them into the saddle, whom the Romans call *strator*. There is no mention of stirrups in any Greek or Latin authors, no figure to be seen in any statue or monument, nor any word expressive of them to be met with in classical antiquity. In the celebrated equestrian statues of Trajan and Antoninus, the legs of the rider hung down without any support, whereas, had stirrups been used at that time the artist would not have omitted them. Neither are they spoken of by Xenophon in his two books upon horsemanship, in which he gives directions for mounting; nor by Julius Pollux in his *Lexicon*, where all the other articles belonging to horse furniture are spoken of. The Roman youth, indeed, were taught to vault into their saddles,

"Corpora saluta  
Subjiciunt in equos."

and in their public ways stones were erected, as in Greece also, for such as were incapable of doing so. As another substitute for stirrups, horses in some countries were taught to bend the knee, after the manner of beasts of burden of the East, and in others, portable stools were used to assist persons in mounting.

This gave birth to the barbarous practice of making captured princes and generals stoop down, that the conquerors might mount his horse from their backs, and in this ignominious manner was the Roman Emperor Valerian treated by the Persian King Sapor, who outraged humanity by his cruelty. The earliest indisputable mention of stirrups is by Eustathius (the commentator of Homer), about six hundred years back, who uses the word *stabilis*.

Although the history of the saddle has not exercised the learned world so much as the antiquity of the stirrup, a good deal has been written and said about it. Like all other inventions, it appears to have been suggested by the necessity of making the rider sit easily upon his horse, and some kind of covering, consisting of cloth or leather (skins or hides, perhaps), was placed on the animal's back. These coverings, however, became afterwards extremely costly. (See Virgil, *Æneid* vii, 276; viii, 552; Ovid, *Metam.* lib. viii, 33. Also, Livy, lib. xxxi, cap. 7, who speaks of a man who dressed his horse more elegantly than his wife.) They were made to hang down on each side of the horse, and were distinguished among the Greeks and Romans by various names. After they became common, however, it was esteemed more manly to ride without them, and thus we find Varro boasting of having ridden bareback when young. Xenophon also reproaches the Persians with having placed as much clothes under their seats, on their horse's back, as they had on their beds. It is certain that no coverings to the horses' backs were for a long time used in war, and, according to Caesar, the old German soldiers despised the cavalry of his country for having recourse to such luxuries. In the time of Alexander Severus, the Roman soldiers rode upon very costly coverings, excepting at reviews, when they were dispensed with to show the condition of their horses. But we should imagine we must look to later time for the costly trappings of the horse. In his description of the city of Constantinople the author of the *Letters of the Turkish Spy* says, "The next thing worthy of observation is the Serayan, or house of equipages, where are all sorts of trappings for horses, especially saddles of immense cost and admirable workmanship. There cannot be a more agreeable sight, to such as take pleasure in horses and

than to see 4,000 men here daily at work in their shops, each striving to excel the rest in the curiosity of his artifice. You shall see one busy in spangling a saddle with great Oriental pearls and unions intermixed, for some Arabian horse, belonging, perhaps, to the Vizier Azem; another fitting a curb or bit of the purest gold to a bridle of the most precious Russian leather. Some adorn their trappings with choice Phrygian work; others with diamonds, rubies, and the most costly jewels of the East."

But return to the history of the saddle, its invention and general use, the latter a point very difficult to be ascertained. The word *ephippium*, by which the ancient Romans expressed it, leads us to conclude that, by degrees, the covering spoken of was converted into a saddle. A Greek word, used by ancient authors, is believed to have been to express a saddle, and it was more than once used by Xenophon in his *De Re Equestri* and Vegetis, who wrote on the veterinary art nearly 400 years B. C., speaks of the saddle-tree. Perhaps the clearest proof of the use of anything approaching to the form of the modern saddle is the order of Theodosius (see his Code), in the year 385, by which such persons as rode post-horses in their journeys were forbidden to use those which weighed more than sixty pounds; if heavier, they were ordered to be cut to pieces. What would the people of those times have thought if they could have seen one of our Newmarket racing saddles, weighing under four pounds, but giving the rider a very comfortable seat. The order here alluded to, doubtless, applied to something resembling a saddle, although of rude workmanship, as its weight bespeaks. Every traveller, we may conclude, was provided with his own saddle; and about this time the Latin word *sella* more frequently occurs. In the fifth century, again, we find articles bearing something of this stamp, and made so extravagantly magnificent as to call forth a prohibition by the Emperor Leo I. against any one ornamenting them with pearls or precious stones. The saddle-tree is also mentioned by Sidonius Apollinaris, a Christian writer, who was born A. D. 430; and in the sixth century, the saddles of the cavalry, according to Mauritiu, who wrote on the military art, had large coverings of fur. It is considered probable, however, that the merit of the invention of saddles may be due to Persia, not merely from the circumstances of Xenophon's mentioning the people of that country as being the first to render the seat on the horse more convenient and easy by placing more covering on their backs than was common in other parts, but also because the horses of Persia were made choice of for saddle horses in preference to any others. That the word saddle is derived from the Latin word *sedeo*, to sit, may fairly be presumed. That the proper saddle itself, however, was unknown in England until the reign of Henry VII, we have good reason to believe, and in Ireland, from the absence of any representation of it on their coins, it may be conjectured not till many years subsequent to that period. The woman's saddle, called by us the side-saddle, first appeared in Richard II's time, when his queen rode upon one, but from the pictures of men and women's saddles used in England's early days, we find they were miserably apologies for our modern saddles. Hunting saddles should have their panels well heated and brushed to prevent sore backs, and no sportsman, even if light, should use a short saddle—i. e., under sixteen inches from pommel to cantle.

The antiquity of the spur does not appear to have much excited curiosity; but the use of this instrument was known in the very earliest age of which we have any satisfactory history. At least, we may presume that it was so, from the Hebrew word signifying horseman (*parash*), appearing to be derived from a Hebrew root signifying to prick or spur. So, at least, says Buxtorff, and he adds that the horseman, or apparer, was so called on this account: *Equus quad egum calcaribus pungat*; and he quotes Eben Ezra in confirmation of his opinion: *A calcaribus qua sunt in pedibus ejus*. Spurs occur but seldom on seals or other antiques in the eleventh century, but in the thirteenth they are more frequent. As it is necessary that a horse should obey the leg as well as the hand, all military and parade horses are ridden in spurs, and, as we have already said, they are very useful to the sportsman in riding across a country, particularly in the act of opening gates; also all race-horses that will bear them are ridden with them, because, should punishment be wanting in a race, it is more easily inflicted by the heel than by the hand, and to which, these horses not only require the jockey's two hands at the same time, but are apt to swerve, or shut up, if struck severely by the whip.—*The Horse and the Hound*.

### Turf Topics in England.

The English Jockey Club is just now busy wrestling with the rascals of the turf, and instead of crying out against the evident demoralization among trainers and riders is taking stern and effective measures to correct the evil. The correspondent of the *New York Spirit* gives an insight into the condition of affairs in the "tight little island" in his last letter.

The chief topic of discussion at present is the refusal of the stewards of the Jockey Club to renew Charles Archer's license to train at Newmarket. I told you a few weeks back how Boswell, Lord Ellesmere's horse, had been pulled at Newmarket, and how he had won the last big race of the season, starting at good odds on the strength of his Newmarket defeat, and I then very freely expressed an opinion about Charles Archer, and also about Tom Brown, another trainer. No doubt the course the Jockey Club stewards have now taken was decided upon soon after Boswell's Liverpool victory. I was talking at the time to a leading personage in the racing world, and warmly asserted that something ought to be done, as Charles Archer had received so many warnings. "I can't print this, or mention the names that are being talked about, in an English paper," I observed to my friend, "but I shall say precisely what I think in *The Spirit of the Times*, which returns to England, and is read by many racing men."

"Wait a little and you'll see what will happen," my friend replied. Waiting a little meant waiting till the time came for renewing licenses, and what has happened you hear. Whether the stewards will renew Tom Brown's license is reserved for consideration," but I hear that he will have it this time, the reservation being intended for a serious warning to him to run straight. This is, of course, a most severe blow to Charles Archer, who cannot train at Newmarket without the license. Going down to Kempton yesterday there was a rumor that he had cut his throat, and on arriving at the course I found everyone talking of the report, but it is not true. The stewards have taken a most righteous and necessary step. A few low-class papers may blame the proceeding, by way of currying favor with the Archers (Charles Archer is Fred, the jockey's younger brother), but there is only one opinion among the best class of racing men. How Lord Ellesmere takes it I have not heard. It was with his horses that Archer's tricks have been played, and the refusal to grant the license is necessarily a reflection on him. It is a reflection, however, on his obstinacy and folly in disregarding what his friends told him, for it may be taken for granted (as I fancy I

must have told you before) that Lord Ellesmere had no design of profiting by his servant's dishonesty. There is scarcely a man in Newmarket who will regret Charles Archer's departure—I suppose he will have to go—so many enemies has his wretched temper made for him.

Another subject of talk is the dissolution of the Grand National Hunt Committee, which, however, is speedily to be reconstituted, and it is hoped that the Jockey Club will recognize the new body, so that chasing and hurdle-racing will no more be spoken of as the "illegitimate sport," a phrase which much annoys some members of the G. N. H. C. The names of Lord Charles Kerr and Mr. Reginald Herbert will, I think you will find, be absent from the new committee. I am not sure whether Lord Marcus Beresford will be again chosen, but I fancy he will be invited to join, and, if so, he will certainly accept. Opinions vary as to his qualifications, and the desirability of his being a turf legislator, but it seems to me probable that his friends will secure his election.

There is certainly work for the committee to do. One scandal which demands attention has reference to a Mr. Baird, who races under the name of Abington, and rides, or till lately rode his own horses. He is a fairly good rider, far better than the average, and, I believe, a rich man, but he cannot go straight in turf affairs. After being concerned in several matters, which it would be a compliment to call questionable, he was summoned before the G. N. H. C. for a very deliberate piece of foul riding. He thought that an animal Lord Harrington was steering looked dangerous, and he did his best to knock it down accordingly, almost with success. So bold had he become that after the race he practically admitted his offense, and going up to Lord Harrington said: "Beg pardon, my Lord, I thought you were a farmer." Why a farmer should have been knocked down he did not explain. The affair, however, was so gross that the G. N. H. C. inquired into it, the result being Mr. "Abington" was warned off the turf for two years. Mr. Abington, however, declined to go. He could not, of course, continue to ride or to run horses in his own name; but it is generally understood that animals entered in the familiar name of Smith, of "Mr. E. R. Smith," to be exact, are in truth, the property of Mr. Abington. It is a mystery to me why no one speaks out. A well-known gentleman rider, one of the very few men who, bearing the title, are, in truth, riders and gentlemen, the Hon. George Lambton, rode second, the other day, to a horse of "Mr. E. R. Smith's," and, of course, Mr. Lambton, in truth, won the race, for Mr. Abington's horse ought to have been disqualified. Mr. Lambton stood to win several hundred pounds on his horse, but he submitted to be swindled.

A few of the cross country jockeys are such diabolical ringers and such utter rogues that it is strange they are allowed on race-courses. A creature named Duffin is a specimen. The other day, at Sandown, he rode a horse called Enchanter, for an owner, a little Jew named Nathan. He was told to keep well in front the whole way round always bandy, and to come away and win at the distance; the result being that he kept a long way in the rear, never went near his horse, and was beaten hopelessly in a race which, as subsequent running shows, he ought to have won with ease. The wretched Nathan went into the weighing-room and simply said: "Thank you, Duffin, for riding so carefully to order." "If you say anything to me," Duffin replied, "I'll attack your saddle down your throat."

This, mind you, at Sandown, which is one of the most aristocratic meetings held.

### Greatness Not Born in the Purple.

The life of Abdallah was checkered and romantic. He was a mahogany bay, standing 15.2, and Mr. Rysdyk, who knew him well, described him: "He was powerful in the back, loins and quarters, with the most beautiful width of hock that I ever saw in my life. His motion was exceedingly springy, vigorous and elastic, and he had the quickest knee action that I ever saw in any horse." The sire of Abdallah was running-bred Mambrino, and his dam was Amazonia, a mare of untraced blood, but possessed of fine qualities, among them courage. She was once ridden from Philadelphia to Old Bull's Head in New York in one day. Abdallah was bred by John Tredwell, of Brooklyn in 1825, and in 1839 he was taken to Kentucky where he made several seasons, and then was brought back to New York. On June 5th, 1848, at Chester, Orange county, he was mated with the Charles Kent Mare, then owned by Jonas Seely. Wm. M. Rysdyk held the mare, and the service fee was \$12. In the spring of 1854 he was taken to a remote hamlet on Long Island. He was twenty-nine years old and was sold to a fisherman for \$35. He refused to work in front of a fish-wagon, and was turned out upon a heath devoid of vegetation to die of starvation. He was buried in the sand on a dreary day in November, 1854.

May 5th, 1849, at Chester, the Charles Kent Mare foaled a bay colt subsequently called Hambletonian. Mr. Rysdyk, who assisted at the wedding, purchased the mare and colt for one hundred and twenty-five dollars. In 1851, when two years old, Hambletonian served four mares, for which no charge was made, and got three colts, one of which was Alexander's Abdallah, the sire of the great performers Goldsmith Maid and Rosabud, and of the prepotent stallions Almont, Thorndale and Belmont. In 1852, when three years old, Hambletonian served seventeen mares and got thirteen colts. His fee was \$25, and the gross receipts were \$325. The fee was still \$25 in 1853, and out of 101 mares he got 78 foals, adding \$1,950 to the income of his owner. In 1854 the fee was raised to \$35, at which figure it remained until 1862, and he produced 63 foals from 88 mares. In 1855 64 colts came from 89 mares; in 1856, 64 from 87 mares; in 1857, 63 from 87; in 1858, 54 from 72; in 1859, 67 from 95; in 1860, 72 from 106; in 1861, 68 from 98, and in 1862 he got 111 foals out of 158 mares. In 1863, when Hambletonian was fourteen years old, the stud fee was advanced to \$75, and there were 92 foals from 150 mares. Mr. David Bonner persuaded Mr. Rysdyk to raise the fee to \$100 in the spring of 1864, and from 217 mares there were 148 foals, adding \$14,800 to the bank account. Mr. Rysdyk now worked the boom for all that it was worth. The stud-fee was fixed in 1865 at \$300, and the 128 foals out of 193 mares netted \$38,400. In 1866 another advance was made. The 105 mares bred to Hambletonian, at \$500 each, produced 75 foals, and the income was \$37,500. The stud-fee remained at \$500 until the horse died, but the drain upon his vitality required that a limit should be put to his service. In 1867 he produced 42 foals out of 72 mares, netting \$21,000. In 1868, when 19 years old, the stallion was so debilitated that his owner was compelled to withdraw him from the public. The horse was stronger in the spring of 1869 and he got 18 colts out of 22 mares. In 1870 the produce was 16 foals from 22 mares; in 1871, 26 from 30; in 1872, 22 from 30; in 1873, 20 from 30; in 1874, 22 from 30; and in 1875, 2 from 23. He was weak, and on March 27th, 1876, he died at Chester, where he was foaled, aged 26 years, 10 months and 22 days. During the

twenty-four years he was before the public he was mated with 1,926 mares and got 1,330 colts. His stud-fees amounted to \$205,750. It is wonderful to think of a horse, whose natal cost was but \$12, whose sire was permitted to die of starvation on a desolate heath, and who, with his dam, was sold for \$125, rising to such eminence, and bringing a fortune to a plain man who was anything but a courtier—to a poor farmer in Orange county. Thirty-seven of Hambletonian's sons and daughters, including the great Dexter, are known to the 2:30 list, and the three fastest horses in the record, Maud S., 2:10½, Jay-Eye-See, 2:10½, and St. Julien, 2:11¼, are grandsons through Harold, Dictator and Volunteer. There is scarcely a state in the union to-day in which his male descendants are not prized for procreative work, and each year adds to the renown of the family founded at Chester by the unheralded son of Abdallah and the Charles Kent Mare. Greatness is not always born in the purple.—*Turf, Field and Farm*.

### Racing and Trotting on the Oakland Course.

The afternoon of last Saturday was as fine at the most exacting could desire, and when contrasted with the terrible cold which the telegraph brings intelligence of as prevailing at the East, the comparison makes it the more enjoyable. Light overcoats were a burden, and those who are always careful to guard against fogs and raw winds were wishing the incumbences at home. Never was a June day finer; the air exactly of the right temperature, bright sunshine and not even a zephyr to shake the rosebuds which are now so plentiful in Oakland. The enclosure on the inside of the course had a fine coating of grass, and the hills of the Contra Costa range were green to their summits. There was a fair attendance, and those from San Francisco consoled themselves with the thought that if the racing and trotting was not very exciting, there was a bountiful recompense for the journey in the pleasure of the trip and the glorious combination of sunlight, bland atmosphere, flowers and verdure.

There were two races on the bills, the running being a match for \$600 between Haddington and Viola R., which was made some time ago, and the time fixed to run was the 29th of December. The rains caused a postponement. And in the meantime Viola R. had the misfortune to injure her near fore-leg, which prevented her from doing the work necessary to prepare her for the match. She had been moving exceedingly well prior to the rainfall, and had the race been run at the original date she would have been largely the favorite. As it was, Haddington had the call at the odds of \$80 on him to \$52 on the mare before the start for the first heat, and after winning that with the greatest ease in 1:47½, the race were \$70 to \$15 in his favor, and before the second heat was started it was \$60 to \$5.

Owing to the mishap to Viola R., what promised to be a very closely contested race was devoid of interest, and there is little to describe in either heat. The mare was lame before the start, and the horse led all the way. She was very lame after that heat was won, and at the conclusion of the second, which Haddington won in 1:54, she was literally on three legs.

Though not broken down the injury will incapacitate her for some time to come.

#### SUMMARY.

OAKLAND TROTTING PARK, Saturday, Jan. 12th, 1884.—Match for \$600; heats of a mile to rule.  
L. Shaner's b h Haddington, by Imp. Haddington—by Norfolk..... 1 1  
—gr h Viola R., by Waterford—by Newry..... 2 2  
Time—1:47½, 1:54.

The trotting race was also a match between Moscow and Nellie Burns, both to wagons, and proved one of the unsatisfactory kind. It was claimed, and denied, that one of the conditions was that the owner of Nellie Burns should drive his mare, and there was certainly grounds for suspicion that he, at least, did not want to win the first heat. A very fine start was made after a few scores, Moscow having the inside, and he seemed to keep the lead without any trouble the whole of the mile, though Nellie closed up some of the gap on the homestretch and finished so leisurely that there was a general acquiescence in the belief that it was not meant for her to win the heat; the time, 2:35½. Before the start the pool rates were \$150 on Moscow to \$110 on Nellie Burns. After the heat at the opening it was \$100 on him to \$42 on Nellie, but when the signal bell to get ready was rung, it had changed so that Nellie brought \$30 to \$20 on him. She broke soon after the word was given and Moscow led by several lengths at the quarter in 40 seconds. At the half, in 1:20, she was on even terms, and soon after passing that point she passed and obtained so decided a lead that the heat appeared to be virtually won. In the endeavor to close, Moscow broke coming down the stretch, catching quickly, however, and Nellie made a bad break at the 150-yard mark. This gave Moscow the heat by several lengths in 2:35½. The loss of the heat on the part of the driver of Nellie Burns may have been caused by over-anxiety to win, but taken in connection with the apparent dilatoriness in the previous heat, there were many complaints to the judges.

It was a knotty point for them to solve. If the race was made for the owner to drive, and the bettors had made their investments on that understanding, it did not appear to be fair to put in a more skilful driver, while on the other hand it was their duty to guard against fraud. It was at first decided to substitute Goldsmith or Donathan for Mr. Burns; then that was reconsidered and the horses were started under their old reinsmen. Pool-selling was at an end, and the only business of the auctioneer was to sell tickets for those who did not like their purchases. The third heat Nellie went off at a better pace and was first at the quarter in 38½ seconds. She broke soon after and Moscow passed her on the inside, though at the half she was again on an equality. Another break, and Moscow left her so far that the heat was never jeopardized thereafter, Moscow winning in 2:34. While the stakes were awarded to Moscow, the pools were "declared off," and the popularity of the award was manifest from the cheers that followed the announcement.

Still the cheers may have been prompted by the dollars saved by those who were so exuberant. In such cases there are always two parties, one to applaud, the other to condemn.

#### SUMMARY.

Same Day—Trotting match for \$500; heats of a mile; best 3 in 5 to wagons.  
Lee Shaner's ch g Moscow..... 1 1 1  
—Burn's b m Nellie Burns..... 2 2 2  
Time—2:35½, 2:35½, 2:34.

The race-horses and breeding stud of Count Lagrange will be sold in Paris on Thursday and Friday next.

Sir John Astley's family estate in Norwich, England, will be offered for sale in the spring.

## Lady De Jarnett.

As I was quietly riding along in the cars on the Kentucky Central Railroad, last Saturday, it was snowing pretty hard, and my attention was attracted to a large lot of buildings near the railroad, and upon the one nearest the cars was painted the name Abdallah Park, in letters about 5 feet from top to bottom, and the name reaching about 75 feet. On inquiring, was told by my nearest traveling companion that it was the great stock farm known as Abdallah Park, where many noted horses were owned by Mr. W. H. Wilson, one of the liveliest breeders and horsemen in Kentucky; and about that time the train slowed up and the gentleman remarked, "Why, that is Mr. Wilson sitting in that sleigh right now. Come out and I will introduce you to him while the train stands here a minute or so." I followed, and as the sleigh came up my companion remarked, "Why, he is surely driving the great show mare, Lady De Jarnett, and you are lucky to see her, as she is now sold to New York parties, and Mr. Wilson is very careful of her." Up came the rig, the boldest looking horse that I ever beheld, or that I ever expect to see. Mr. Wilson drove up with a lady in a handsome cutter, evidently of Eastern make, and by this time the entire crowd assembled at the depot had faced about to view the famous Lady De Jarnett, and passengers moved in seats next the windows, the gentlemen rushing out on the platform; and Mr. Wilson taking in the situation, without asking the mare to go, moved the bit in her mouth, and she stepped off like a fairy queen alongside the cars, up and down, and the entire train load of passengers seemed spell bound for the few moments, and when the shout came, "All aboard," there was not one that had not rather waited longer to see the single sleigh turnout, than to go on the journey. Oh, everybody asked their nearest companion, was there ever such a horse? No, never, was the universal answer. I may forget many things I saw South, but will never forget that beautiful mare.

## A Californian in Kentucky.

EDITOR BREEDER AND SPORTSMAN: I have been in Kentucky for about three months, and have just heard of Anteeo trotting a mile in 2:20. The horsemen here think it a great mile for a four-year-old, and B. J. Treacy says he thinks your colt will be the best five-year-old that ever started. I felt confident he would turn out to be a great horse. Mr. Haggin has ten horses here. They are in charge of Jas. Browne (Brown) and are all doing well. I am of opinion that the great two-year-old races the next season will be between Mr. Haggin's chestnut colt Tyrant, by Great Tom, and the bay colt Favor, belonging to G. D. Wilson, of the firm of Treacy & Wilson. Just make a note of this attempt at prophecy, and remember it. Barney Treacy of Ashland Park Stud, has some very promising trotting colts. He has one he calls Prince Wilkes, with which he expects to win the three-year-old stake at Chicago. Treacy has good colts, because he has got the best arranged stock farm in America, bar nobody's. It is intended to ship Kyrle Daly to California in a few days, and he is one of the grandest horses in the United States. I think so, and when you see him you will think so, I am pretty sure. His importation will be a great thing for our thoroughbred stock. I shall be about the blue-grass region for a few weeks, and may find time to send you something in the way of news. LEXINGTON.

Lexington, Jan. 10th.

Thirty-eight horses have trotted in 2:18 or better, and of this number only three, Hopeful, Occident and Rarus, have no known thoroughbred crosses. Of the remaining thirty-five it can be truthfully said that they are miscellaneous bred, each and every one of them having more or less thoroughbred blood either on sire or dam's side, and the grandams of Mand S., record 2:10, and Jay-Eye-See, record 2:10, are thoroughbred. These are facts, not theories or fancies, and if this kind of breeding produces the fastest trotters, and we were a breeder, we would adopt it, and let all the five-spinn theories go to the winds. What every breeder wants is success, and the best, quickest and surest plan to reach it is the one he should adopt.—*Live Stock Record.*

Gen. W. T. Withers, of Fairlawn, is convalescent after a dangerous illness that held him in the balance for fourteen weeks. He is now able to sit up several hours daily, and will be on his feet again in a short time.

## ROWING.

## Unadulterated Idiocy.

Some one totally ignorant of rowing matters, or willfully dishonest, is constantly sending ridiculous communications to the Eastern sporting papers. The following from the *Turf, Field and Farm* is a sample:

"George W. Lee and Austin Stevenson will row a three-mile with turn race at San Francisco, Cal., on the 20th inst., for \$300 a side. The difference in their styles of rowing is creating considerable discussion among boating men on the Pacific coast, and it is boldly stated by the local sculler's friends that if the race is rowed in rough water Stevenson must win. A private note from San Francisco warns us to expect nothing but defeat for Lee. Our correspondent holds, that inasmuch as Hanlan insisted upon Stevenson releasing him from their engagement to row on the Pacific coast, Lee is a beaten man. 'If,' adds our correspondent, 'Hanlan could not foresee victory over Stevenson, how can Lee hope for success? Hanlan is twenty lengths better than Lee in a three-mile with turn race, and yet the champion did not care to tackle our best man.'"

Talk about Hanlan being afraid to row Stevenson is unadulterated idiocy. The facts are these: Hanlan offered to bet \$1,000 that no oarsman on the Pacific coast could beat him. Stevenson agreed to row, the object being, of course, to get up an excursion and win some gate money. The \$1,000 was to be put up, but neither Stevenson nor Hanlan thought Stevenson could win it. It is hardly necessary to say that Hanlan did not intend that any small local sculler away out on the Pacific coast should capture any of his hard-earned thousands. He went into training at once, but the weather became so unfavorable that he abandoned the idea, and asked Stevenson to release him. There is no doubt that if the public here had shown a greater interest in rowing, the race would have come off. Hanlan became convinced, however, that the interest in rowing in California was very slight, and that consideration, as well as the unfavorable weather, scared him from putting up the money necessary to hire steamers and advertise the affair. The only real loser by

the abandonment of the scheme is Stevenson, who was to have received \$150 for his trouble in trying to win Hanlan's \$1,000. This is the truth, the whole truth, and nothing but the truth, and anybody who talks seriously of Hanlan being afraid to row Stevenson, shows himself as ignorant of rowing as a hog is of astronomy.

## Assistance for an Unfortunate Oarsman.

The other night at a dinner of oarsmen Hanlan said that of all places he knew, London was the most liberal towards a really good man in any line of athletics. The following cable dispatch from London seems to confirm the champion's opinion. It says:

"Mr. Frank Gulston, the famous amateur oarsman, who was supposed to have been drowned some time ago, has reappeared. He became involved in speculations and lost a fortune. Instead of being drowned he went to Grimsby and engaged himself on a smack as a deck-hand. He toiled in this capacity until recently, when he was discovered by some of his friends, who set to work to better his circumstances. Fifteen hundred pounds were soon subscribed, to be devoted to a superior fishing vessel. The Baroness Burdett-Coutts has taken a great interest in Gulston."

The above was the first intimation received of "old Gully's" disappearance. A month ago we mentioned the fact that the *English Sporting Mirror* for November devoted six pages to a portrait and biographical sketch of the famous amateur oarsman.

## A Mistake Corrected.

The *Turf, Field and Farm* says: Hanlan will probably remain in California until February, and is not yet certain whether he will then proceed to Australia or return to New York. He has engaged to give an exhibition with Lee at Victoria, British Columbia, for which they will receive \$500, and the champion desires to remain in California until Lee has rowed the two races he has on hand—with Stevenson on January 20th, and with Cotsford on February 2d. Lee is also anxious to meet Henry Petersen, and if a match is arranged Hanlan will remain to see it decided. Petersen, it is said, is ready and willing to row anybody on the coast, bar Hanlan, but is deterred from doing so by his "bosses." It will be a pity if Lee is permitted to leave California without having a go at Petersen, who is rated the best man on the Pacific coast. The *Turf, Field and Farm* is in error if it thinks Petersen is not only willing to row Lee but ready to put up his money. Petersen will make a match at any time with Lee for a race of any distance for \$500 or \$1,000. His money is ready.

## Conley Challenges Teemer.

John Teemer, who intends to contest the championship with Edward Hanlan during the coming season, has been challenged to a race of three or four miles, for from \$500 to \$1,000 a side, by P. H. Conley, Hamm's former partner in double sculls. Writing from Portland, Me., under date of January 5th, Conley says: "I will not row at Hulton, Pa., but am willing to row on any of the good courses in New England or at Saratoga, in New York State, on Decoration Day, May 30th, or on any other date that may be mutually agreed upon." If Teemer concludes to accept Conley's challenge, the latter will make a deposit and draw up articles for signature.

## The Dissolution of Co-Partnership.

The double-scull shell which was built in 1883 by Rud-dock, of Boston, for Hanlan and Lee, is to be raffled for on March 12, or possibly sooner if the tickets are sold. The boat, which is a first-class one in every particular, is still at the builder's shop, and has never been launched. Fifty hundred tickets at \$1 each are to be disposed of by W. W. Rud-dock, 274 Charles street, Boston, and any club purchasing eight tickets will receive an additional one free of charge. The disposing of the boat suggests a probability that Hanlan and Lee will not row double this year.

## An Important Handicap Race.

Dame Rumor has it that a professional single-scull handicap race, three miles with turn, will take place at the Point of Pines near Boston next summer. The following handicaps have already been suggested: Hanlan, scratch; Teemer, Hosmer, Ross, Hamm and Conley, 10 sec.; Lee, 15 sec.; and Courtney, Kennedy, Ten Eyck, Elliott, Gaisel and others, 20 sec. and upward.

## Waiting for Lee.

Henry Petersen is anxious to hear from George Lee with reference to Petersen's acceptance of Lee's challenge to the oarsmen of the coast. Petersen is still ready to make a match with any oarsman in California, Hanlan barred. Petersen will row Austin Stevenson of Vallejo, on any fair course, for any sum from \$250 to \$1,000, and the championship of the Pacific coast, or he will row George Lee for \$500 or \$1,000.

## Ross in England.

A cable dispatch from London says that Wallace Ross, the American sculler now in London, is being lionized by noble patrons of sporting matters, and willingly put through a round of jollification which his better friends, in view of the task he has before him, criticize as very imprudent. The sculling match with Bubeat for \$2,000 will be rowed on the 10th of March.

## California Climate.

From a pamphlet published by the California Immigrant Commission, and under the auspices of the Central Pacific Railway, the following explanation is given to account for the favorable climate of California. There are so many anomalies, such a great divergence in the climate of places only short distances apart, that it is extremely difficult to make Eastern people understand the situation. That a journey of a few hundred miles north from San Francisco should transport the traveler from where thick clothing was essential to comfort to a country so hot as to call for the gauziest kind of fabrics; from a temperature of sixty-five degrees to over a hundred in the shade, and this brought about by gaining a latitude four degrees nearer the North pole, is a puzzle that it is difficult to make them understand.

There are still more startling changes. At noon time in San Francisco there may be chilliness and a certain of fog. At Berkeley, say, some two hundred feet above tide water, the sun is shining, and an atmosphere that is tempered to an exact warmth to be comfortable. That has been reached in an hour by boat and train. Two hours' drive, crossing the summits of the Contra Costa range, and at the foot of Mount Diablo the heat is oppressive. Three hours, two of which is taken up with horses and carriage, and there are three climates so widely different that it appears that there must have been some enchantment to produce it. But the temperature is not the only thing subject to mutations. Fourteen inches may mark the rainfall at San Francisco, at San Rafael, some ten miles to the northward, that may be nearly doubled, while at San Jose, fifty miles to the south, there is a likelihood that there will be several inches less than falls at the metropolis. The general cause is treated in the article copied, the local differences are entered into more elaborately.

The pamphlet contains a vast amount of information which must be of exceeding value to those contemplating emigrating to California, and this is an enterprise which the great railway magnates have undertaken, with which the most rebid anti-monopolist can heartily endorse.

A short statement of the peculiar causes that help to form the many and favorable climates of California, will help the reader the better to understand and appreciate them.

It will be remembered that a considerable area of the State is composed of mountain ranges, which extend the entire length of the State. The Coast Range extends along the Pacific ocean, and the Sierra Nevada, which may be said to be the mother or principal range of the Pacific Coast, separates itself from the Coast Range in Southern California, and sweeping easterly into the interior, makes a gradual curve, till, approaching the northern line of the State, it unites again with the Coast Range, and thus forms the great natural agricultural basin of the Pacific Coast—the interior of California. This great basin has for its water-shed the entire area embraced between the summits of the mountain ranges that surround it.

From the north the Sacramento river, having its source near the junction of the two ranges of mountains, runs south, drains the northern half of the basin called the Sacramento valley. From the south the San Joaquin river, having its source near the southern junction of the two ranges, runs north, and with its branches, in turn, drains the southern half of this great basin—called the San Joaquin valley. These two rivers unite their waters at about the middle of the basin from north to south, and run through the San Pablo and San Francisco bays, and the Golden Gate pass, into the Pacific ocean. The Golden Gate pass is an opening several miles long but of less width, through the Coast Range of mountains, and is the only complete break or pass in these mountains, from the southern to the northern end of the basin, or valley, to which it forms the outlet.

Directly opposite the Golden Gate, across the bay of San Francisco and several miles inland, stands the world-famed Diablo mountain, apparently representing a section of the Coast Range, which, by some ancient disturbances, had been cut out of the space now known as the Golden Gate, and moved bodily inland, and placed firmly on its base again. Now, this Golden Gate pass and Mount Diablo together form the key to the climate of the interior of California. Without such pass as an outlet to the interior waters, the great basin would be an inland lake. Without such pass as an inlet to the currents of moisture-laden atmosphere from the ocean, the same basin would be like an oven-heated, arid desert. Keeping the above statements and formation of the country in mind, the reader is prepared to follow the explanation of the natural causes that produce the climate of interior California.

The trade winds of the Pacific ocean are constant winds blowing from near the equator in a north-easterly direction. These winds are, of course, warm, and carry with them large amounts of warm moisture, in suspension. Were there no break in the Coast Range of mountains, they would simply float above them and over the basin of the interior without condensation, and without leaving any moisture in the form of rain, winter or summer. As it is, however, in the summer these trade winds unite with the cooler winds that sweep down the coast from the north—Alaska and Behring straits—and entering the Golden Gate pass, strike Mount Diablo and divide, the larger portion sweeping up the Sacramento valley, and the lesser portion up the San Joaquin valley—thus producing in both these valleys, in the summer, dry but delightfully cool summer breezes, or tempered trade winds.

These breezes generally begin about noon, and last till about midnight of each day. Thus is produced the general summer climate of the interior valleys, the cloudless days and cool, invigorating nights. And thus is accounted for the fact that the San Joaquin valley has, as a rule, the warmer climate in the summer, and also the fact that in the upper or extreme northern end of the Sacramento valley the weather is warmer than at points nearer the Golden Gate, hundreds of miles further south. Both these uniting currents of air being comparatively dry in the summer season, and coming in contact in the valley with no cool current or surface, no condensation takes place, and we have no rain in summer.

Now for the winter climate of the interior. But for the opening at the Golden Gate and the ingress at that point of winds from the ocean, the winter climate of the interior would be dry and cold, and probably without even snow to cover and moisten the soil. As it is, however, just at the time when there is a tendency to cold in the valley, from the absence of the rays of the summer sun, the presence of that sun further south over the Pacific ocean heats up the water and air there to a greater degree, and the trade winds come north with greater vigor and constancy, and meeting at the same time more fierce and colder winds from the northern coast, storm centers are formed out at sea, and waiting some escape for their furious natures, very naturally float in at the Golden Gate, and, dividing as they strike Mount Diablo, find their way up both valleys, discharging the accumulated moisture as they go. But instead of bringing with them a lower degree of temperature and colder weather, as on the Atlantic coast, these storms of the Pacific modify the temperature, and end in warmer weather. The plain reason is that they come from toward the equator, and bring warm air with them.

It is well known that Great Britain enjoys a mild winter climate, from the fact that she is in the path and within the influence of the Gulf Stream.

California is in the path of a similar warm stream from the Pacific equator, and is similarly affected.

## HERD AND SWINE.

### Dutch-Friesian Cattle.

There is much difference of opinion as to the extent of territory over which this breed prevails. All, however, agree that the Lowland race includes the cattle of Netherlands, Flanders, Normandy, Oldenburg, and Holstein. This race is distinguished by large size and variegated colors. Flint describes them as "red or black variegated, gray and blue variegated, roan, spotted, and white variegated." They have rather short, stout horns, although to this there are many exceptions. Pedigrees have never been kept in any section of this lowland country, and the breeders know as little of the ancestry of their cattle as ordinary American farmers know of the ancestry of our so-called natives. Yet, the peculiar conservatism that prevails has prevented such universal mongrelism as is seen in America. A great number of breeds, more or less distinct, are recognized and named. Some are distinguished by their peculiar markings, and others by their peculiar build and style, and still others by the localities in which, from time immemorial they have been bred. Several herd books have been established, none of which have got beyond the registration of foundation stock. Besides the Netherlands and the Friesian, there is now the Groningen West Quarter, the Oldenburg, the Breitenburg, and the Wilster Marsh herd books.

Starting from the central location of the Friesian breed, near Leeuwarden, the capital of Friesland, and going east about thirty miles, we enter the province of Groningen. There is no sudden change in the appearance of the cattle, yet we have entered upon the territory of another breed. It is very evident there has been much crossing with the Friesian. Klippart distinguishes the cattle of this province as a separate breed, probably because they are so distinguished in Europe. He ranks them next in value to the Friesians. The type of the Groningen breed is an animal of less expended form, and more beefy in appearance than the Friesians. Its milking qualities are not so generally superior. There is another breed, which originated in this province, and is still found here in large numbers. The color is invariably a solid black, with white head, belly, and points. These markings are very persistent, even upon grades of low degree. In style of horns and build, they closely resemble the Herefords. They were once popular throughout the Netherlands, and were bred with much care and exclusiveness.

Continuing east from Groningen, perhaps fifty miles, we enter the province of Oldenburg, and are in the midst of the Oldenburg breed. It is not confined to this province, but prevails also in a division of Hanover, called East Friesland, therefore, it is sometimes known as the East Friesland breed. In the vicinity of Bremen they are called Bremen cattle. In describing them, Flint says: "Their general appearance is strikingly similar to the Dutch, but upon careful examination it will be seen that the neck is generally stronger, the rump less sloping and the bony structure proportionately somewhat heavier." Klippart agrees with this, and describes them as differing "from the original Friesian race," in being "more rounded, plump, and shorter in the body and legs." Their milking qualities are less remarkable, although of a higher order.

Further to the east, beyond the river Elbe, we find the Breitenburg breed. It originated in the marshes of Itzehoe, in the province of Holstein. Klippart says: "It might, with great propriety, be classed as a branch of the great Friesian, or Holland race." He describes it very minutely, as follows:

It is a race the type of which is a medium-sized animal, with fine hide and bones; the color is either a white ground with dark brown spots, or a brown ground with white spots. The head is rather more stoutly built than the Friesian, the horns short, neck and brisket small, the withers rather prominent, the back sharp, the body wide and deep, and the legs longer than the Friesians. The shoulder lacks flesh, but the quarter is full.

This breed is found extensively in Holstein and in the Grand Duchy of Mecklenburg. It is undoubtedly the Holstein breed with which the North Holland or Friesian breed has been confounded in America. Great numbers are annually exported, but none to the Netherlands for the purpose of improving the native breeds of that kingdom. Its origin is more recent than that of the North Holland, or Friesian breed, and its milking qualities of not so high character. There are several minor breeds in Holstein—the Wilster Marsh, especially prized for its beef qualities, the Dithmarsh, and the Eidermarsh—all of variegated color, generally red variegated, or red-and-black variegated. The Angles are also found here in large numbers. They are of less size than the other breeds, and of a more uniformly red color.

Returning to the original point of departure, and going southeast into the province of Drenthe, and then south through Overijssel into Guelderland, we find a gradual but quite rapid change in the appearance of the cattle. At a distance of a hundred miles the red variegated predominate in number. A few cattle of this color, it is well known, are found in Friesland and North Holland. They undoubtedly came in from this direction. They may properly be called the Guelderland breed. A passing look through the districts where these cattle are plentiful must impress an admirer of dairy stock with their beauty. In color, the red is of a peculiar shade approaching a bright orange. In build they resemble the Friesians, though slightly below them in size. These cattle might be a valuable addition to our dairy breeds if carefully selected.

Turning to the west from Central Guelderland, throughout the provinces of Utrecht and South Holland, black-and-white cattle largely prevail. A few Lakevelders are seen. This breed originated in the canton of Appenzel, Switzerland, and in this country is sometimes regarded as a Dutch or Holstein breed. A few "blue-backed" cattle are also seen. They are black, with a white strip extending over the chine and upon each side, from the neck to the rump. They are sometimes called Zeeland cattle. South, through the western part of Belgium and in the northern part of France, the Flandera breed is found. It closely resembles the Dutch or Friesian breed.

A question of much importance grows out of these observations. What should be the limits prescribed by American breeders from whence unregistered cattle of the "pure North Holland or Friesian breed" may be imported? The lowland country over which we have been passing includes an extent of territory equal to the whole of England. It includes breeds of black-and-white cattle that differ as widely from each other as Guernseys from Jerseys, or Herefords from Short-horns. Over a large portion of this territory they are bred together as indiscriminately as our undescribed natives in this country. The cattle of the two provinces, North Holland and Friesland, that are of this color number at least 300,000. By all authorities these, as a class, are considered superior to the cattle of any other province or district in the lowlands. In the cen-

tral part of Utrecht, in the northwestern part of Groningen, along the river IJssel, in Overijssel, and in very limited sections of South Holland, there are no doubt some superior cattle that might be ranked with this breed. But ere the requirements of importers so great that it would be wise to extend the limits beyond the two provinces named, and thus increase the risks of obtaining impure blood?—*Live Stock Journal*.

### Faults in Feeding Calves—Treatment for Scours.

Scours in calves is a common complaint, and breeders are often puzzled as to the cause, and not a little annoyed by the effect which so frequently provokes to the animal so affected. That it is in most cases the fault of feeding is the fact, and the trouble comes mainly to those who effect economy to such a degree as to deny the calves their natural sustenance, the mother's milk, and attempt to bring them up on substitutes that the calf nature does not take kindly to. The *Live Stock Record* gives some sound advice on the matter: A Colorado subscriber writes us as follows: "I wish to make a few inquiries in regard to raising calves without their mothers. I have made a failure this summer—have lost seven calves with the scours or bowel complaint; have tried several simple remedies, but all failed. The calves did well for six or seven days, and then were taken with a looseness that carried them off generally in three days. What I want to know is, how to prevent it and how to stop the scours after it commences."

How our correspondent expected us to point out his errors in practice when he gives no clue to his mode of feeding his calves, must remain an unexplained puzzle. Our correspondents, when they wish advice, should always be particular to tell just what has been done, with all the circumstances, so that the advice will apply to the case. We may, in this case, imagine any kind of feeding for these calves, except sucking their dams; he says simply that he made a failure in trying to raise them without their mothers. If, however, they had been fed simply on skim milk, they would not have had such fatal scours. So there must have been some very heating food given, probably corn meal, and, if this was fed regularly, it would produce just the result mentioned—"they do well for six or seven days, and ere then taken with looseness." The corn meal would produce so much heat in the stomach, and this so interfere with digestion as to be followed with diarrhoea. In feeding skim milk to calves, if corn meal is fed with it, scours generally follows, but if the corn meal is cooked it has a better effect. But it ought to be understood that corn meal is improper food for calves, unless over six months old, and even then should be given with coarse food.

One of the best antidotes to scours is boiled flaxseed. This has an emollient and soothing effect upon the stomach and intestines. When calves are grown upon skim milk, which is rather constipating, a tablespoonful of boiled flaxseed stirred into the milk for a calf will keep its bowels in proper condition.

Boiled flaxseed is better than raw linseed oil, because the oil is liable to be adulterated. When calves are to be fed partly upon grain, to improve their growth, the following combinations will be found perfectly safe, and very profitable: Mix five bushels of corn, ten bushels of oats, and one bushel of flaxseed; grind these together finely. This may be fed to calves without any fear of scours. This small proportion of flaxseed will keep the bowels in a healthy condition, and keep the coat sleek and glossy. Oats and barley mixed in equal proportions, with one bushel of flaxseed to fifteen of the mixture, will be better than the corn and oats. Again, if calves are fed on oats and wheat middlings—one-third oats, and two-thirds middlings—the calves will not have scours, and will usually grow finely upon it. Another excellent food for calves, fed in small quantity, is linseed oil meal. To calves under one month old, one spoonful is enough, after one month a quarter of a pound may be given to each calf per day.

When the calf has the scours, the best plan is to give half a pint of linseed oil or olive oil, if the calf is three to five months old, to cleanse the bowels of the irritating cause. If the first dose does not operate, give a second dose. If younger, the dose must be smaller. After the operation, give a little boiled flaxseed with the food, but don't feed the food that has before created the difficulty. Give cooling food, such as wheat middlings, and continue for a few days the boiled flaxseed in small quantity. The calves should be kept in a comfortable stall or shed. The calf feeder should depend upon prevention of disease, and not expect much of cure. It requires the presence of the skilled veterinarian in chronic cases.

### Different Averages.

A prominent breeder estimates the average price on one hundred pigs sold by him as \$40. His pigs are shipped to all parts of the country, and in many instances to breeders of unquestionable ability; good managers and feeders, yet they sell their stock at a possible average of from \$15 to \$25. Undoubtedly their selling stock possesses the good points of its parents, and are worth the same money as was paid for them. This could be termed a depreciation in the price of stock, owing to the change of owners, and seems to indicate that the price of a pig depends entirely on the reputation of the breeder, or on whose pen it is sold from. To a certain extent one would be justified in making this statement, and partially it is true. One reason for this great difference in values is, because some breeders are satisfied with a \$20, while others want a \$40 average. Another reason is, that many young, and a great number of older breeders are too dependent, easily impressed with the great achievements of others, too pliable, depend entirely on the judgment of others, and the name of a prominent breeder in connection with that of a pig, gives it all the leading qualities. There is one class of breeders we might term fixtured. They buy one or two animals a year, raise twenty or twenty-five pigs, make no advancement in breeding or management, feed so as to realize a small profit for their trouble, sell off all but one or two animals, and are perfectly satisfied to buy one or two more animals the next year, and go through the same performance. For this class of men there is no redemption. But to another class, those who are pushing ahead, trying to make what can be termed a selling reputation for their stock, we ask the question Do you know what a good hog is? We see you smile, as you promptly answer, "Yes, sir; I know what constitutes a good hog, and my hogs have stood the test, and have come out ahead." You are positive of this. You are a good feeder, your stock looks well and is healthy. You pay from \$50 to \$75 for a strain of blue blood, consider yourself competent to manage this cross to the best advantage, and your stock proves that you are. Yet, you are satisfied to sell your stock at a reduction of \$25 to \$50 per head, simply because your name isn't Smith. But you say "I have not the reputation he has. I have not been breeding so long as he has." "But your pigs are as good." "Yes." "And taking quality

as a standard, are worth as much money." "Yes." Well, then, why don't you ask the full value of your stock? Are you a philanthropist? Do you think that breeders or farmers are going to walk into your pen, select two or three animals, say that one is worth \$50, that \$75, that \$100, according to my judgment of a hog, so here is \$225? This brings another smile to your countenance, and you think how often they have tried even to reduce your already low figure. You advertise, attend fairs, place your stock in favorable light. You do all these, and yet you sell your stock at a great reduction, simply because you are a younger breeder, and think you lack the reputation necessary to command a paying figure. You think that this is about the condition of affairs at present. Then let me tell you what you lack. Undoubtedly, you are a thorough breeder, but you lack the business qualifications of Smith. You want to learn how to charge. How to secure the trade of this element that willingly pay what a thing is worth. To do this, you must price your stock at what it is worth. When men find out that you are asking \$50 to \$100 for a pig, they will have the desire to see it before they purchase of Smith. So long as you only ask \$10 to \$15 for your stock, just so long will your stock be considered as medium. With the majority of men the price makes the quality. A \$15 animal would be passed by to look at a \$50 one. We say if you raise as good stock as Smith, charge what it is worth. Study the laws of business, and improve by them. The raising of good stock does not always signify a successful breeder. If you are satisfied to crawl, you will never walk. In the end, look after your own character and standing as well as that of your stock. Perfection in both are necessary to success.

### An Experiment With Pigs.

The Wisconsin experiment station has been making a series of interesting experiments to ascertain the value of sweet milk for feeding pigs. Two lots of pigs were fed separately; one lot upon corn-meal, the other lot upon milk, the latter being given all they would take. After twenty-five days the milk-fed pigs had gained 50½ pounds, against 40½ by the meal-fed lot. The lots were then reversed, the milk-fed pigs being put on meal, and the meal-fed lot being given milk for twenty-five more days, at the end of which time the milk-fed had made a gain of 79 pounds, and the meal-fed only 61½ pounds. The weight of both lots of food were recorded, and showed that 500 pounds of corn-meal made a pound of pork, and that 1,900 pounds of milk made the same quantity of pork, live weight, so that when live hogs are worth five cents per pound, milk is worth about half a cent per pound. Other experiments in feeding meal and milk together showed very much more value in the milk, ranging from 40 cents to 90 cents per 100 pounds. At the latter rate the value per quart would be 1½ cents.—*New England Farmer*.

The Iowa *Homestead* man thinks a well-bred hog will not root for the mere love of rooting. His owner has either not fed him properly, or there are vile grubs in the pasture which he thinks is his duty to devour. In either case his rooting is a benefaction to his owner. We have entirely discarded the practice in our herds for some years; will change our views very radically if we ever allow a ring to be used. See that the hogs have proper diet of greens and grass, with an occasional feed of ashes, salt and stone coal or charred corn, and then let them follow their noses. They will not lead them into any great mischief.

Where common hogs are most abundant, better opportunities are given for the selection of brood-sows from among them; and thus it sometimes happens that the best of common stock comes to be compared, as breeders, with pure-bred stock—inferior though it be of its kind—and the conclusion reached that as a class pure-bred sows are not equal as breeders and encilers to the common sows. As, however, the latter, taken as a whole, are excelled by the pure bred, so also in proportion to difference of blood are the common sows surpassed by what are known as grades; that is, such as are of common stock on one side and pure blood on the other. Hence, we have recommended for the rearing of fattening pigs the use of well-formed and vigorous common or grade sows.

Many farmers make the mistake of getting their breeding animals too fat, an error perhaps more frequently committed with hogs than any other stock, as farmers often allow breeders and fattening stock to run together. This is poor policy. Keep your breeders in good thriving condition, but don't get them fat, and you will raise stronger, healthier pigs and more of them. Be sure your breeding hogs have warm quarters for the winter, and that they are kept dry and clean.

One reason why progress in breeding good milkers among native cows has been so slow, is the fact that the influence of the male is too little understood. It has been the habit of many farmers to save only heifer calves from deep or rich milkers, while calves of the other sex were fattened as usual. It is even yet common for many farmers to use bulls chosen for size, good looks, or other merits rather than dairy propensity. The best breeders of dairy stock now understand that it is quite as important for the progeny that the bull be from a good milk or butter strain as that the mother be a good milker.

The Kerry cattle, in their bleak, northern home, with scanty fare, do not breed until six or seven years old. When brought to milder climates and better fed they will breed at three years of age.

To a great extent the proportion of lean meat in hogs is dependent on the amount of exercise they take, and this is not consistent with the most rapid and most profitable feeding.

Mr. Horstmann, United States Consul at Nuremberg, Bavaria, has sent a report to the State Department relating to the hop crop of Germany and Austria for 1883, from which it appears that, in contrast with the poor result of last year's harvest, the present year shows very favorably. The entire yield of Germany for 1883 is estimated at 43,000,000 pounds, and the quality is said to be exceedingly good. The crop in the Austro-Hungarian Empire is not so satisfactory as in Germany. It amounts to about 10,000,000 pounds.

Loudon hop-buyers find fault with American hops, and claim the picking is simply disgraceful. Pressing this criticism only applies to special lots, yet hop-growers should exclude from their packages all green and decayed leaves and stalks which greatly detract from their value.

No safer remedy can be had for Coughs and Colds, or any trouble of the throat, than "Brown's Bronchial Troches." Price 25 cts. Sold only in boxes.

THE RIFLE.

The Battalion Trophy Match.

Last Sunday, the fourth match of the series of battalion matches occurred at different places, and the result is such as to reflect the highest honor on our local riflemen, for it again places them at the head of the world's record. The score of Company A., of Oakland, is admitted by all to be wonderful. The average, 83 1/2 per cent., has never been equalled by any team of eight men in the world, and throws the record of Wimbledon, Creedmoor, and our own inter-State match with Nevada in the shade altogether.

"Two grades of excellency in rifle practice are established, viz: Those who practice only at 200 yards, to be called Marksmen, and those who practice 200 and 500 yards, to be called Sharpshooters.

"Marksmen making 70 per cent. will wear a second-class badge, those making 80 per cent. will wear a first-class badge of marksmanship.

"Sharpshooters will be specially designated by a separate badge, to be worn in three colors for the percentages of 70, 80 and 90 respectively."

Under this order the following men, last December, qualified for the two distinctive honors, but Colonel Ranlett, informs us, the number will be largely increased next February.

First-class Sharpshooters (90 per cent. or more at 200 and 500 yards).

Table with 4 columns: Name, 200 yards, 500 yards, Per cent. Includes Lieut. Fred. Kuhnle, Insp. Rifle Practice, 185 92.5, etc.

Second-class Sharpshooters (80 per cent. or more at 200 and 500 yards).

Table with 4 columns: Name, 44-45-89, 44-44-88, 177, 88.5, etc. Includes Lieut. Geo. H. Brown, Commissary, etc.

The day was well suited for good shooting, perfectly calm, with a gray sky, under which the target showed well out, at least such was the case at Oakland and Petaluma. At San Jose, however, the weather was not so propitious, the wind being strong and gusty. This, with the fact of being less experienced than their comrades, accounts for the team's smaller score at that place. All the shooting was done from south to north. No return up to writing has been received from Vallejo, and it is probable none will be received. Below is the total score:

Table for COMPANY A OF OAKLAND. Columns: Name, 200, 500, Total. Includes Private Macdonald, Private Pierce, Sergeant Mason, etc.

Table for COMPANY C OF PETALUMA. Columns: Name, 200, 500, Total. Includes Corporal Wallace, Captain Fairbanks, Private St. John, etc.

Table for FIELD AND STAFF. Columns: Name, 200, 500, Total. Includes Lieutenant Kellogg, Sergeant Hovey, Lieutenant Kuhnle, etc.

Table for COMPANY B SAN JOSE. Columns: Name, 200, 500, Total. Includes Corporal Baker, Private Loryea, Sergeant Ingolsbie, etc.

In summing up the totals it will be seen, the twenty-four men shooting at Oakland and Petaluma made 1,511 points out of a possible 1,800, or 84 per cent., which in the aggregate is as creditable to the staff as the 83 1/2 per cent. of the Oakland team individually.

We have only to add that in the competition for classification as sharpshooters at 200 and 500 yards, Major Parsons made 87, and Colonel Ranlett 84 1/2 per cent. The latter gentleman thinks he can add another half per cent. to his record, and that is as high as he hopes to get. The trophy has now been won twice by Company A., and twice by the Field and Staff team. The next contest will be final, unless the Petaluma or San Jose team comes to the front and wins.

There is, we find, some anxiety expressed among the riflemen of Vallejo, about our friend, Captain McElhinny, and from his long silence they have about reached the conclusion he does not want to meet Sergeant Seymour again at the target. Considering that the Sergeant, as we look at the matter, has his hands full with the "rifle fiend" of Benicia, we think the anxiety about the Captain needless for. However, for the satisfaction of all parties we may state the Captain, at present, is in the hands of Dr. Pardee, for a severe attack of deafness in the right ear originally brought about by shooting in covered sheds. Doctor Pardee, is too good and enthusiastic a rifleman to lose any unavoidable time with his patient, and as soon as he gets him out of the snuff the citizens of Vallejo will have another match.

Messrs. Hughes and Rivett, members of Company G, shot for \$40 a side at the 200-yard range, Sacramento, last Sunday. The score stood: Hughes, 424, Rivett, 413.

Last Sunday, there was an interesting and closely contested match, at Schmetzen Park, Alameda, between John Utschig and C. Rapp, which ended in the favor of Utschig. Each man had 50 shots at the 25-ring target. The score was

Table with 2 columns: Name, Score. Utschig, 940; Rapp, 936.

A return match has been arranged in which Philo Jacoby and F. Boeckman will participate. In the afternoon the California Schuetzen Club indulged in pool shooting, when some fine scores were made. The best one was that of Philo Jacoby who made 74 rings out of a possible 76, the shots being 24, 25, 25.

The Independent Rifles, Captain Cautus, held their quarterly medal shooting at the Alameda Schuetzen Park, with the following result: First-class medal, J. Stauder; second-class, O. F. Huber; third-class, H. Gerken.

The California Schmetzen Club will hold their bull's-eye match to-morrow, at Schuetzen Park, Alameda. A large attendance is expected.

The enthusiasm of Dr. Pardee with the rifle is proved by the fact that he has \$5,000 worth of different guns.

THE GUN.

Gun Notes From Suisun.

EDITOR BREEDER AND SPORTSMAN:—Enclosed please find a few items from here. Yesterday quite a number of sportsmen from Vacaville and here had a pleasant shoot at pigeon and balls. The match was got up by Geo. Kinloch, and it gave good satisfaction. I understand he intends to make arrangements for a big shoot to take place on February 22d, free for the State, and I hope to see some of the crack shots from your city present. The following is the score; first match at six birds, 21 yards rise. One prize, handsome silver-plated revolver, valued at \$25:

Table with 2 columns: Name, Score. H. A. Bassford, 1 1 1 1 1 1-6; Geo. Kingston, 1 1 0 1 0 0-3; J. Kinloch, 1 1 1 0 1 1-5; M. Murphy, 1 1 1 1 0 1-5; C. Reams, 1 1 1 1 0 1-5; Geo. Pierce, 1 1 1 1 0 1-5; Wm. Kinloch, 1 1 1 0 0 1-4.

Won by H. A. Bassford, clean score. Second match, same conditions. Prize, breech-loading shotgun, valued at \$50. Score:

Table with 2 columns: Name, Score. H. A. Bassford, 1 1 0 1 1 1-5; C. Reams, 1 1 1 1 1 1-6; J. Kinloch, 1 1 1 1 0 1-5; Wm. Kinloch, 1 1 0 1 0 1-4; Geo. Kingston, 1 1 1 0 0 1-4; Geo. Pierce, 1 1 0 1 0 1-4; M. Murphy, 1 1 1 0 0 1-4.

Won by C. Reams, clean score. Third match, same as above. Prize, Winchester rifle, value \$28.

Table with 2 columns: Name, Score. H. A. Bassford, 1 1 1 1 1 1-6; Geo. Kingston, 1 0 1 0 1 0-3; C. Reams, 1 1 1 0 1 1-5; Wm. Kinloch, 1 0 1 0 1 0-3; J. Kinloch, 1 1 1 0 1 1-5; A. Donaldson, 1 1 1 1 1 1-6.

Won by Bassford and Donaldson who divided as there were no more birds to decide the tie. A number of glass ball matches took place, and were won mostly by J. Kinloch.

Hon. Jos. McKenna has just received from Geo. W. Bassford, Colnsa, Cal., a handsome pointer pnp, liver and white in color. Mr. McKenna is very much pleased with it, and thinks it will win the Derby next season, at Pacific Coast Field Trials.

Ducks are very plentiful with exception of canvasbacks. They are very scarce this season from some cause. Mr. J. Kinloch and others get from 50 to 75 in a days' shoot right along, mostly teal, widgeon, sprig and mallard. Snipe are scarce just now. Honkers very plenty. Mr. Thos. Brady got 35 one day shooting over decoys in stubble field.

Mr. J. Bassford, Jr., of Vacaville, informs me quail are quite plenty at present. Himself and a friend Mr. C. N. Post, of Sacramento, bagged 41 last Saturday over his pointer, Beautiful Queen, that won second at P. C. F. T., last November. She did some good work, made at least 25 stannch points, and eight of them in less than twenty yards. The birds were in high oats and laid well.

Mr. B. also informs me that Mr. Fred. Taft, of Truckee, with his dog Dorr (winner of first at P. C. F. T.), will pay him a visit next week, and they expect to have come good sport hunting quail, ducks, etc., etc. I will close by congratulating you on Christmas number; it was fine indeed.

CANVASBACK. Suisun, Jan. 14th, 1884.

Game Laws and Game Preservation.

We have lately discussed the question of our game laws, and the possibility of our getting proper game preservation, with a view to show that we can only obtain one or the other in each form as required at present by a union of all the sportsmen's clubs in the State, under the leadership of the State Sportsman's Association. We are happy to find the public in general interested in legitimate sport. The only opposition we heard of, and that only of a very mild character, as usual came from those who grumble and growl at everything they do not originate or control. For such irreconcilables we care nothing, and so return to the subject this week in hopes of strengthening the position we have taken. A very little investigation made in the proper quarters, and a very little experience gathered in the proper quarters, will soon convince any reasonable man that we can neither obtain such changes in the game laws, nor such game preservation as the State now needs, without the leadership of a recognized and responsible association, under which the efforts and convictions of every true sportsman can be used for all they are worth in the time of need. Proceeding a little further, the inquirer will find to his satisfaction, if at all a reasonable man, that we have no leadership in the State so available for the purpose as the one we have suggested in this and former articles. It will not, we imagine, be unprofitable labor, if we give the reasons which led us to this conclusion.

The State Association, from its character, objects, influence and duties, may be selected at once as possessing all the requirements necessary for such a leadership. In the first place, it represents some fifteen interior clubs in association with it, and possesses a membership of some three hundred and fifty men, all more or less distinguished for intelligence, honesty, determination and wealth, or they would not have sought that association, seeking, as it does, the good of the State, as well as their own pleasure. Perhaps, the best and quickest way to show what it would be capable of doing, if supported by the union we suggest, will be to show what it has done since its organization by its present strength. The association came into existence only three years ago. In that time, besides distributing the laws of the State thoroughly through every section, originating many useful discussions at its annual meetings, exercising an immense influence for good among sportsmen themselves, who might otherwise be a little lax in their opinions, and a little careless in their actions, and thus giving a high and healthy tone to field sports in general, it has originated twenty-five prosecutions for viola-

tion of the law, twelve of which ended in conviction, and the others failing only through the ignorance of the local justice, or the treachery of the jury by whom the cases were tried. If anything more than assertion were necessary to sustain our position, we might refer to our improvements in trap shooting, the improvement in the laws, and the improvement in individual ideas of legitimate sport since the birth of the association. Before the courts, in teaching the rich as well as the lawless, that they cannot maraud the public domain any more than steal from the public purse of Uncle Samuel with impunity, while the association exists, we may cite the cases of Mr. Taylor, the paper manufacturer, and young Mr. Murphy, the great land-owner of Santa Clara county. Both have received such a handling and exposure in the courts, for their high-banded presumption that money will justify any wrong, that if they are wise men the lesson will serve them for a lifetime, and be of endless benefit to the State. Let, then, every private land-owner, who desires to preserve the game of the State; every member of every private preserve, and private club; every true gentleman who loves field sports for the good they do, and the health they impart, come into the union suggested, and the association will soon be like the Michigan State Association, a power in the land, that no marauding poacher, no ignorant justice, no servile jury, no truckling legislator, and no dishonest game-dealer dare to trifle with in future. We have some other reasons to give in support of such a union relating to the future, but we must reserve them for next week.

A Sportsman's Salutation.

EDITOR BREEDER AND SPORTSMAN: Recent editorials in the department of your paper especially devoted to field notes impress the belief that at last California sportsmen have a center about which they can cluster, and a representative organ of which they can be proud. Interdependence between such a body as the California State Sportsman's Association and such a vigorous and clean paper as the BREEDER AND SPORTSMAN, can only result in good to both, and neither can reach the full measure of usefulness possible to it without the co-operation of the other. I hope that no regard for expediency will hinder you in properly stigmatizing game-law breakers, and trust that the gentlemen of the State Association will appreciate your efforts in its behalf. A sportsman's paper is peculiarly what its contributors make it, and it would be a pleasant thing to be able to feel that when one tells his little tale of "scapes by flood and field," his fellow lovers of sport all over the State are enjoying it with him, and will in return recite their successes attained or their dangers passed. LAPHORRYX, Oakland, Jan. 15, 1884.

Notes of the Week.

The markets presented a poor appearance during the week, the canvasbacks being especially scarce in comparison with our usual supply. Whatever may be the real cause of their scarceness this season, the owners of preserves and the market men could not do better than club together and make a determined trial to raise an abundance of wild rice next year. The experiment, if successful, will repay a thousand-fold. The birds do not congregate this season because they have to go too far and wide after food. Another good idea would be to inaugurate a weekly shooting match, in teams, to kill off the mud-hens. They are as thick in places, and as destructive, as rabbits in Australia.

The Alameda County Gun Club have not had good duck shooting this season, owing to the lake on their preserve drying up, the water feeding it having been diverted from its natural bed for irrigating purposes. The club, however, has determined to restore the lake for next season, for which they have two projects in view. They will see the parties diverting the water, and also sink a number of artesian wells, if they can obtain a ten years' lease of the preserve, their present lease being only for three years. The wells are estimated to cost \$1,000. The snipe shooting, however, has been very good, many of the members making fine bags.

Some members of the Cordelia Club had fine sport sculling lately. Messrs. Kellogg, Storey and Bradford, last Friday and Saturday, killed 247 among them, over 90 of the number falling to Mr. Kellogg's gun. On Sunday, Mr. Beut and a friend visited the club's preserve, but had poor sport, only getting 25 birds altogether. Mr. Bittler gives us an estimate of considerably over 2,000 birds for the season's work, which is nearly a thousand in advance of the number killed by the club up to the same date last season.

"Sculling for mallards," strange as it sounds, is now getting the order of the day, in preference to working the ponds from the blinds. In this month and next sculling is at its best, as the birds are scattered along the sloughs sunning themselves. Turning the beads of the sloughs and small creeks, where the birds are found in groups, makes this kind of shooting exciting. The water-ways of the sloughs are not covered by preserves, and are, therefore, open to the public.

Speaking of the conviction of Mr. Hart, the game dealer, for illegally selling doves, a contemporary thinks the French plan of posting the offense and punishment by law on the most conspicuous part of the offender's stand would have a good effect. If we could only get such an arrangement into our laws, it would work wonders. From very obvious causes, we are behind the world in game preservation.

Mr. Poole, ex-United States Marshall, reports good shooting round Salinas. Last week he and three friends made a large bag of quail on the high grounds, and also of teal and snipe on the low grounds ranging toward Castroville. From all accounts reaching us, that is regarded as the best section in the State this season.

Three members of the crack Teal Club, Messrs. Whittier, Upham and Goodall, had a fine day's shoot last Saturday, killing 221 birds amongst them. The birds, of course, were mixed, with only three canvasbacks and one mallard in the lot. Mr. Goodall deserves much credit for the distribution of his bag. He gave 60 out of his 75 birds to the Girls' and Boys' Aid Society. That is as it should be. We often wonder what becomes of the large hags we are constantly reading about.

The robin hunters of the Mission road are getting as dangerous as the robin hunters of old in Hayes Valley. Start from Union Square westward, any afternoon, and a man would be riddled with shot in ten minutes. Last week a little girl was shot in the face by some reckless hunters. Two men were arrested on Sunday for shooting within the city limits. Let all such reckless fools be arrested.

None of the members of the Tule Belle Club were up at Sherman's Island last week. On Tuesday Mr. Bogart received a letter from the keeper that birds were very abundant there, so he and other members are looking for a good bag this week.

The Stallion Season.

The commencement of the stallion season is now close at hand, and already we have received many inquiries regarding the location of those which are wanted. It is, of course, beyond our knowledge what the terms and place of standing will be outside of those advertised in this paper, and the only response we can make is the answer that we cannot furnish the desired information. There seems to be a general desire to breed among men who are not engaged particularly in breeding horses. Gentlemen who have a favorite mare or two that they are anxious to secure foals from, and these are generally pretty well posted in regard to the blood and performances of the various strains. They appreciate the greater pleasure there is in rearing an animal than becoming the owner through purchase, and then there is the further gratification of perpetuating the good qualities they have proved by years of active service on the road. The smaller farmers, too, have learned the importance of breeding good stock, and there are inquiries from them which signifies a close study of the subject. In this country the season can safely commence as soon after the 1st of February as will ensure that the foal does not come before the 1st of January. It is rare that the usual limit of eleven months is curtailed, though there are instances where it has happened so to guard against that contingency it will be the safest to delay a few days. Although the weather now would not be adverse to young foals, in many respects the months of February, March and April present more advantages. The grass is more forward, the days longer, and sunshine has a potent influence in strengthening the foals.

X X.

Singleton and La Harpe, Monroe Chief and Kyrle Daly have "been noticed"; Director and X X remain of the stallions already advertised. Director is to be honored with one of Wyttenback's best pictures before long, when his history and marvelous campaign of 1883 will be duly considered.

X X is well worthy of a pen sketch, and though he was bred and reared by the editor of this paper, he is so well deserving of eulogy that he shall have a proper acknowledgement of his merit, if even it does lay us liable to the charge of extolling our own stock. We never owned a horse that we had such a warm affection for. Many others have laid us under loads of obligations for the services rendered, and when a balance was struck, the credit side of the account would largely exceed the debit. X X has earned admiration for the exhibition of qualities that exceed, apart from any money consideration. He is the "best disposed" horse we ever knew. He never did a mean trick; cheerfully complies with every demand, and is ready for any duty. He is so intelligent that at times he almost startles us with the knowledge displayed. To gallop with trotters he is as

good as can be, slackening or increasing his speed at command, and quickly understanding the wishes of the person driving the trotter before his own driver can communicate with him. The afternoon of the same day that he has gone any number of heats he can be hitched to a road wagon, and he will drive as pleasantly as the best family horse in the country. No matter how many in company, he will stick to the trot with the pertinacity of a veteran road horse, and rattles along at a pace that troubles some that are well thought of as trotters to emulate. There is nothing that he is afraid of. Railway trains have no terrors, and one fourth of July a boy exploded a bomb directly under him without throwing him off his balance. To enumerate one-half of his good qualities would require far more space than we can afford. As his name implies, he is inbred, both sire and dam being by Bonnie Scotland. On both sides his relations are distinguished. His sire, Malcolm, is from Lady Lancaster, and his dam, Columbia, from Young Fashion. A better-bred horse does not live, when the standard is that of the American Stud Book, and on the trotting side there are good claims for distinction. His dam is the dam of Lady Richmond, which it was claimed showed a trial at Columbus, Ohio, in 2:15, and when a four-year-old trotted in 2:27. Columbia is the grandam of Anteco, Antevolo and Anteros, and it is safe to say that there is not a trio, of corresponding ages, from any mare that can cope with them.

The sire of X X was a great race-horse in every sense of the word. He ran more fast heats than any horse up to the date of his retirement from the turf, and was possessed of nearly phenomenal speed. Few of his colts have been trained, and all of them winners. His daughter, Marion, the dam of Duke, Duchess and Prince of Norfolk, has gained deserved renown as one of the great brood-mares of the country, and her sister, Roxaline, is the dam of Princess, which won three races at the late meeting at New Orleans. Columbia ran the fastest mile ever made in Iowa up to 1869, and was a good race mare at all distances. She had a capital trotting gait, and had it not been that we valued her so highly for a brood-mare, would have trained her to trot. The first time she was ever harnessed we drove her beside a trotting mare that could beat three minutes, and Columbia went off like an old trotter. She was a large mare, nearly sixteen hands, and like most of the Bonnie Scotlands, with plenty of "substance." X X is 15½ hands, and very strongly made. He has so much bone and tendon that midway of the metatarsal the measurement is 9½ inches, while equidistant from knee and ankle 8½ inches. Strong as he is, highly bred as he is, with a flight of speed that was equal to a quarter inside of 24 seconds, the most remarkable divergence from all the horses we ever knew is a temper that could not be improved, an intelligence almost akin to that of a higher order of animals.

The Clergy and Out-Door Sports.

There is a prevailing opinion that the teachers of religion, and consequently of good morals, should be, as a class, different from other people. Even those who are anything but "straightlaced" themselves consider that ministers and clergymen should be something that they can scarcely describe, a being without the traits that belong to humanity, without any of the animal in their nature, a compound of mental and spiritual qualities, passionless icebergs in the midst of a tropical sea, beyond self denial, not having the hopes or weaknesses of their brothers and sisters, statues of alabaster, bloodless, colorless in everything pertaining to this world, entirely wrapt in the contemplation of that to come. It is expected that in their external appearance there shall be no sign of business or pleasure, their deportment must be fashioned after an ascetic model, any exhibition of muscular energy is reprehensible, to run would be a grievous offence, any deviation in demeanor from stolid dignity a transgression which could not be condoned. It strikes us that this false estimate of what a clergyman should be has more to do with false representation than anything else. It dwarfs the influence, circumscribes the sphere of usefulness to the narrowest limits, engenders a distaste for all kinds of religious or moral instruction, drives thousands into wrong courses, provokes antagonism where there should be hearty co-operation.

The teacher, aware of the expectation that he must follow entirely different paths from his lay acquaintances, and that a deviation from the narrow track will be misconstrued, if forced, contrary to his better nature, compelled, in opposition to his own better judgment, to surrender to the whims of his congregation, and those outside of his own flock, to a course that in a measure destroys his influence, while it turns into a sorrowful pilgrimage a life which should be a bright and triumphant journey. Could he mingle with the people in their sports and pastimes, could he, while yet young and vigorous, ride, shoot, fish, row, handle the bat or propel the ball, and when older, drive a trotter at a two-thirty

gait in company with those of his parishioners who could afford the luxury of that much speed, he would be a healthier man, far stronger mentally, happier, and wield an influence for good that would reach far beyond the limits of the little world that now confines him. There is too much cant, too little heartiness, too much of the scents of the laboratory, a superabundance of finicism, a lack of human nature, fashion in place of honest convictions, subservancy in view of manhood, an assembly of puppets where there should be gatherings of men and women, boys and girls.

We would have a clergyman set an example by his personal actions in places where such a monitor would have a good effect. When in the flush of early manhood he joins in the recreations of youth, then sports would not degenerate into boisterous displays. When older, he could preside over the games and give counsel that would reach pupils ready and willing to benefit by his teachings. The dignitaries of the church should be guardians, in fact, not alone of the semi-emasculated whimperers who have neither life, muscle, nor activity of brain, but take in charge the sturdy youngsters who are aglow with vigorous being. Control them by directing the bent in the right way, the attempt to smother will result in an explosion. They must learn that their preceptors can see good in the bright side of life, and that the world of religion is not always overcast by sombre clouds. There is power of good in those willing hearts, sturdy limbs and tingling nerves, a power of evil if all control is lost. The young are not the only ones who will be benefited by the clergy forsaking the cloisters and mingling more with busy life. There will be kindlier feelings all around. The asperities of rival sects will be smothered, and bitter heartburnings give way to general fellowship.

There is not a sport that has the sanction of the *Breeder and Sportsman*, that would be derogatory to the character of a clergyman to countenance, not a recreation which would lower his dignity to witness.

Querulous Busbey.

And now Busbey—we will not say the *Turf, Field and Farm*—accuses us of "growling," as he elegantly puts it, "like a dog with a mashed toe." There may be dignity in a growl however sullen, but the snarling of a pug in the lap of his mistress whenever anyone approaches her does not impress us with danger, though there may be annoyance. Tips have been a fearful disturber of the peace of our friend, and now when we see fit to resent an impertinent and unwarranted telegraphic attack, he snarls and shows his teeth in defense of what no one can justly defend. He is unfair as well as querulous, and makes misstatements which are two palpable to be penned through mistake. If he has assumed such a load of obligations that snarling and an exhibition of sharp teeth are not sufficient recompense, let the collar be so plainly marked that the ownership is generally known, and not debate the paper he is connected with by perverse misrepresentations.

The portion of his last diatribe, which our readers can at once see the unfairness of, is as follows: "He sports his faith in the ability of Anteco to trot a mile in 2:17½, but he declined an offer of \$20,000 for the horse in case he made such performance, and was delivered in New York, because the risk of the journey was too great." Now, he purposely omitted the words *all right*, which were the objectionable feature in Mr. Bonner's offer, and which was so plainly stated in this paper that no one could be mistaken. There was no *growling* over that. Mr. Bonner had the unquestionable right to embody such conditions in his offer as he chose; it was ours to reject, if not satisfactory. The next day we wrote to Mr. Bonner thanking him for the offer, but when the telegram came, filled with so much that was offensive, arbitrary and untrue, that we would have been well fitted to wear a collar, too, if we had not resented it. The other things we care little about, though there are other perversions of the truth. One is, "Now it strikes us that if Mr. Simpson could afford to take the risk of raising and training Anteco until he was five years old for \$10,000, he could afford for another \$10,000 to risk the horse on the cars for a period shorter than one week." He was sold when still ranking as a four-year-old, will not be five until the fifth of the coming May, and the only risk was the expense of his keeping until he was seventeen months old. At that age he won a stake of about \$800; he won another not so large when a year older, he has taken many premiums of cash value to a considerable amount; he never started in a race that he did not get some of the money, and last season from his services in the stud, he cleared, above all expenses, and not counting our own mares, over \$2,000. The risk to take was not so much in the journey (though many of our folk will be pleased to learn how to get a horse from here to New York in less than a week without running very serious risks) as in the caprice of the purchaser. "All right" is too

indefinite to warrant landing a horse in the mid-winter in New York, and we have yet to see a man of any sense who advised accepting it. Neither have we found one who did not think that we were thoroughly justified in the response to the telegram that appeared in the *Evening Bulletin*, and there is not a dissenting voice in sustaining us in the reply.

It is a matter of extreme pleasure that if the price received "satisfied" us, that there are others who join in the opinion that the colt is worth more money than \$10,000. A gentleman who owns a one-quarter interest was offered \$4,000 for his part, and there was not even the risk of moving him out of the stable, and that was declined. Do not tremble, old friend, if we do succeed in breeding another Anteeo. It may be that we will "growl worse than two bears with frightfully sore heads," with less provocation than was received before. Should we fail, you can surely ascribe it to tips, for it is nearly certain that, notwithstanding your authoritative diction that tips will not answer, we will continue their use. There is another point you made some weeks ago that we may as well answer here. That was, that inasmuch as we admitted that the subject of toe and side weights was so intricate that we could not advise authoritatively after all the study given, that it was the height of presumption to offer even a few chapters of a book to the consideration of these adjuncts to the training of trotters. That was something like the charge, though as we quote from memory, it may not be exact. Did it ever occur to you that the self-application would have prevented you from writing a line in relation to the foot of a horse, for though the ignorance is not personally admitted, there is such overwhelming proof in the articles as not to require corroborative testimony. But we do not agree with you in the idea that a man must "know it all" to be a teacher, and concur in the maxim that while a man is acquiring information, and realizes that he is still in need of light, he may be in a better position to impart knowledge than one who claims to have mastered the most abstruse questions, so that there is nothing more for him to learn. Furthermore, we will give \$1,000 to any one who can make a clear exposition and show the reasons for certain results following the application of weight to the outside of the feet of trotting horses. To make this clearer we will formulate a series of questions, the reward to follow, the answers being satisfactory to a jury composed of trainers and drivers who have a competent knowledge of the business they are engaged in.

#### The Remodeled Stanford Stake.

As will be seen by referring to the advertisement, the closing of the Stanford Stake has been extended to the 1st of March, and such changes made in the conditions as will remove all valid grounds for objection. As it now stands, the whole amount of the stake is \$175, the change being in the first and second payments, making the risks much lighter. Thus \$25 has to be paid when the nomination is made, \$50 on the 1st of January, 1885, and \$100 ten days before the date fixed for closing the stake. This only entails a risk of \$75 up to within ten days of the time fixed for trotting, and, as under the new order there is likely to be a great many nominations, the risk will be a small percentage on the amount to win. It will be a very serious drawback to the breeding of trotters in California should this stake be allowed to fall through. There must be some inducements to remunerate for the breeding, rearing and training colts as well as those of the East, and though every stake is important, the Stanford has extra claims for consideration. Even under the present conditions it will be the most important trotting stake in the country, and now that the risk has been reduced to a minimum, there can be no valid excuses for withholding support.

#### Our Board of Appeals.

There was a pacing race over the Oakland course some weeks ago, which has been made the basis of some queer proceedings. Briefly it may be stated thus: Fairmount won two heats and was beaten the third, presumably having been laid up, although we understand that it is denied by the person who drove him. The race was postponed and eventually won by Terry. There was no complaint made at the time to the judges, though afterwards one was lodged with the Board of Appeals for this district. In the meantime the person who made the complaint and the driver of Fairmount quarreled, so that the inference that there was malice to gratify is warranted. The first step certainly should have been for the Chairman of the Board, with whom the complaint was filed, to learn whether the Board had jurisdiction. If the alleged crime was committed on a track holding membership in the National Trotting Association, when proven, there was power to punish, if not, it was beyond its control. A list of the members of the N. T. A. does not include the Oakland trotting park, neither does E. Ward, the owner, or

M. Allen, lessee, appear as holding membership. For the Board, then, to assume jurisdiction, was not in accordance with the laws and the time of the members of the Board, accuser, accused and witnesses taken up with an idle, frivolous, and, it might be, vicious proceeding. Three times the parties were summoned, and the end is not yet. There is more than a foolish wasting of time in these irregular proceedings. It puts it in the power of malice to wreak its vengeance through the instrumentality of the National Association. It is also claimed in this case that the Chairman of the Board has ill-feelings against the accused. Whether that is so or not, it is certain that the man who brought the charge has, and according to the report of those who attended, the evidence submitted was worse than frivolous. The most absurd stories have been listened to, and men brought forward to testify who were comparatively unknown, and could not be in a position to learn what was so readily talked of. In this way charges could be trumped up against any one, and beyond the power of the victim to protect himself.

It does not figure in this case whether the charge was well founded or not. We will suppose that the foundation for the indictment had occurred in Yreka, and, that the defendant lived there. Would he be expelled through his default in not appearing? Or, let us suppose that the ground for the accusation was on something which happened at the Santa Rosa fair. Let us, for the sake of illustration, suppose that some one had laid up heats there, had been abusive to the judges, or laid himself liable, by other violations of the Code. He is charged before the Board of Appeals, and, notwithstanding the time that has elapsed since the crime was perpetrated, regardless of the fact that the track on which the offense was committed was outside of the pale of the N. T. A., the defendant must enter a plea and stand trial. Let us carry the question a little further. If there is power to punish in one case, there is in all. Entrance-money is due, and the non-member calls upon the Board of Appeals to suspend the debtor. What is the use of paying money for privileges that can be obtained without cost? Grant the district boards the right to go outside of the courses holding membership in their awards, and it will not be long before few will pay the dues.

It seems an idle waste of space to argue that which is so generally known, but the fact that a trial extending over three convocations has been held shows the necessity of calling attention to it, in order that there may be no more such ridiculous infractions.

If it be true that the Chairman of the Board has feelings of ill-will against the accused, his associates can hardly be pleased with the idea of being made parties in the assault. If depending on his supposed superior knowledge of trotting laws, they have been involved in placing themselves in such an untenable position, they can scarcely accept his leadership hereafter without a surrender of self-respect. It is beyond doubt that the other members of the Board took it for granted that they had the power, or they would not have spent so much valuable time in this mock trial. There is not a man in our knowledge who will impute unfairness to them; as we have oftentimes stated, the other is notoriously unfit for the position he occupies.

In Dr. Pardee's paper on gunnery, in our last issue, there was a typographical error in the footing up of the 100 shots made by the cylinder-bore rifle—the aggregate of the 100 shots from center of ball hole to center of bull's-eye should have read 81½ inches, not 181½ as published. We trust the readers of the *Breeder and Sportsman* will read the correction, as it is eminently due the Doctor that such correction be made.

#### Sporting Etceteras in Los Angeles.

EDITOR BREEDER AND SPORTSMAN: Sporting matters have been rather quiet here during this season, occasioned, no doubt, by the scarcity of quail and the unusually late advent of ducks. Up to the last two weeks our local shots have confined themselves almost wholly to quail, small bags being the rule, the birds being exceedingly wild in all localities of reasonably easy access. And let me here remark that unless something is done to stop the game market of your city from robbing the whole State of its birds, the once splendid shooting of Los Angeles and other counties will only be known as something of the irretrievable past, and the game little quail he forever lost to the sportsmen of the State. We do not want to be accused of riding a hobby, but the proposition made by the writer at the last meeting of the State Sportsman's Association seems to be the only way of correcting the above evil, viz., to district the State into game districts, and prohibit the shipment or game from one district into another. This, we believe, would put a stop, in a large degree, to market hunting, and it is market hunting in season and out that is fast riding the State of its game.

Ducks, until the last two weeks, have been unusually scarce, and but few canvashacks and mallards have been seen yet, owing, no doubt, to the continuous warm weather and little rain.

A couple of weeks ago we had a very pleasant shoot at the ground of the Recreation Gun Team with Mr. A. G. Little, a thorough sportsman from Philadelphia and a member of one of the finest clubs east of the mountains. We bagged, in a couple of days, about one hundred duck of various kinds;

most all of them, however, were killed in one day, the other being a very unfavorable day for flight.

The shooting now is much better, and rapidly increasing, with good promise of fine sport for the balance of the season, which in this section continues until the 1st of April, and even later.

Theatrical matters are very quiet, nothing having appeared on the boards since the collapse of the Zoe Gayton Mazeppa Combination, probably waiting for the completion of the Childs Opera House, which, by the way, promises to be one of the finest in the State. So far we have had no regular place of amusement, except the Cluh Theater, run by Messrs. Perry Bros., who, with their efficient corps of artists, give a first-class variety performance.

The Los Angeles Athletic Club, a prominent and efficient organization, is now making preparations for its second field day, an event which will give to our citizens a day of outdoor and pleasant recreation, which, at this season of the year, in Southern California, is so enjoyable.

Before closing we wish to put our ear in and give a "long pull and a steady pull" to help out your vigorous war on the "Supervisor interference" question, and your manly advocacy of game protection.

It has always been a mystery to us how any man with a love for field sports and claiming to be a sportsman, can be so inhuman as to destroy the very animals and birds that he should love during their natural season of propagation. After a close study of the question, we can but arrive at this conclusion, that the true sportsman must not only admire the gun, and the skill, nerve, and quickness of sight which it develops, but love his game even while he pursues it, for, as a matter of fact, a man cannot love a certain sport without also loving the cause or causes which makes that sport attainable, unless he is actuated by a spirit of pure selfishness and gain—qualities never found in a true sportsman. And farther, these so-called sportsmen who shoot in season and out do not exhibit even as much honor as is said to exist among thieves, for while their co-lovers of the gun stay at home and respect the laws of the land and the game of the country, they violate the one and rob their fellow man of his share in the pursuit of the other.

Go on, Mr. Editor, with your good work, you have the moral support of three-fourths of the State, and the consciousness that "truth is mighty and must prevail." P.

Los Angeles, Jan. 16th, 1884.

## POULTRY.

### Best Feed for Hens.

Considerable difference should be made in the feed of poultry, according to their breed. The Brahmas, Cochins and their crosses are quiet, lazy sorts, and consequently fatten more easily than such as are fond of roving around at considerable distance from the house, such as Leghorns, Hamburgs, Game, etc. Little corn or Indian meal should be fed to the former, except in the coolest weather, and then we only make it about half their rations. In spring and autumn we give them all they are inclined to eat during the day, a pudding made of one-third Indian meal and two-thirds wheat bran, with a sprinkling of whole oats, late in the afternoon on the ground, in the yard or near the house, for them to scratch and pick up just before going to roost. In summer we make the pudding one-fourth Indian meal and three-fourths wheat bran. In this about half a gill of pure strong brine is mixed to each gallon. A little hriac is very healthy in the food of poultry, but it must not be taken from the meat barrel. A tablespoonful of sulphur is excellent to mix once a week in the pudding, as this keeps lice out of the hens, and in addition is healthy for them. So is the same quantity of wood ashes, or a gill of fine charcoal dust. The hens ought to have a grass plot to run on. If this cannot be had, give them some boiled vegetables or raw cabbage leaves. In summer grass can be cut for them and put in their yard. Lettuce and spinach are excellent things when no other green feed is to be had, and we cultivate these in our garden especially for them. For the most active breeds of fowls we give a greater proportion of Indian meal in their pudding. If this can be mixed with skim milk, it will be all the better for the production of eggs. Whole wheat is an excellent egg producer.—*Bee and Poultry Magazine.*

### Scalding Poultry.

The reason poultry will not sell so well when scalded in dressing is that in a few days it turns white in color, giving it the appearance of being half-fattened and stale.

If picked dry it is a golden yellow, has the appearance of freshly-dressed poultry, that are well-fattened.

One of the largest and most successful poultry dealers in Iowa prepared his for market as follows: The fowl is suspended by the feet at a convenient height for the operator. It is then stuck in the mouth, penetrating the brain, (a small blade of a pocket-knife will do for this). The feathers will now come easily, and before it is dead it should be picked clean, with the exception of pin-feathers, those are removed afterwards. As soon as the fowl is dead the feathers are set and cannot be removed without the aid of hot water.

After pin-feathering, the crop only is drawn. They are then placed in the cooling-room on shelves, backs down, heads hanging half off the shelf, feet folded on the breast. If weather admits, they are then frozen: I then carefully packed them in boxes, shipped in refrigerator cars to Eastern markets, there held in cold storage, and sold during the warm months of summer, when the price of poultry is high.

Should a fowl become crop-bound, work the crop well with the hand, and endeavor to force away the obstruction in the passageway to the gizzard. Should this fail, draw the skin to one side, and cut the crop sufficiently to relieve it of the contents. Sew up the wound with silk, and the fowl will not be seriously damaged. After the cutting be sure the obstruction in passage is removed as well as the contents.

Cabbage is undoubtedly the very best and cheapest green food that can be had. It is not necessary or economical to purchase prime heads for their use, as the soft heads which are not marketable are just as good, and they cost one-half less. The same with turnips and potatoes.

Chickens, such as Asiatic, should never be allowed to perch until about six months old or the breast bone will be liable to become crooked. There is no cure, and it is a disqualification for exhibition fowls. Let the chicks "roost low," say, on the clean earth.

There is a vast difference in the flavor of eggs. Hens fed on clean, sound grain, and having good, clean grass runs produce much finer flavored eggs than those having access to stables and unmaure heaps and eating all kinds of filth.

## General Topics.

And now our good friend T. B. Merry comes out in the Sunday *Oregonian* with one of his pleasant articles, peculiarly pleasant to us, as it is about the first from a "newspaper man" that treats the tip question with any fairness. While it is true that "Mambrino" endorsed the practice to quite an extent, giving it unqualified approval, so far as the feet and legs were concerned, he had doubts about the practicability of using tips on fast trotters. This was to be expected, as when Mambrino wrote there was a general acquiescence in the idea that weight on the feet was essential to speed at the trot. We fully believed in that dogma, and for a long time after commencing the use of tips still thought so, therefore, it could not be expected that others would give up old and established opinions without seeing the question tested for a longer time, and upon more subjects than the limited number we have had to experiment with. Without a shriek in the trio tried with both shoes and tips, with those that have never worn shoes, doing so well, it appears as though others might pluck up courage enough to try the experiment.

In the article of Mr. Merry's, he alluded to a horse which we sold him, a son of Bonnie Scotland, from the dam of Marion, and he also mentions the numerous patterns he saw in our workshop. This horse which we christened Craigeburn was the first we shod with shoes formed of two plates with a stratum of rubber between. At that time we had the plates cast by a brassfounder, and the patterns were as varied as our friend describes. Some had a little addition to the usual weight at the toe, running from that to an extremely heavy set. Like all the Bonnie Scotlands, Craigeburn had very good trotting action, and with a moderate increase of weight cast in the toe of the shoes he trotted the best. The heavy set, which covered the anterior part of the foot, with a portion cut away to admit the point of the frog, was a great drawback, and while wearing them he made very awkward work of trotting. He lost one of them on the road, and the finder was puzzled to know what it was, or to what use it could be put, but surmising that it might be intended for a horseshoe, he carried it to a blacksmith who knew of the experiments. The lower plate was very heavy, the upper cut from sheet brass, and the stratum of rubber was thick. The nails were small and every one was broken at the junction of the horn and metal. The blacksmith argued that the rubber rotted the nails, and that a shoe of that construction would never answer on that account. That reasoning was just as logical as many of the arguments offered in regard to the shoeing of horses, superior to some of them.

That the feet of horses have been fashioned by the most ordinary kind of apprentice must be acknowledged by those who place any faith in the numerous systems of treating the feet, the innumerable kinds of shoes used to correct the bad workmanship, and the hoof-ointments, the "pads," soaking-boots, and other nostrums of learned doctors and unlearned quacks who claim great discoveries in this branch of equine knowledge. Such radical defects could only come from hanging beginners, though it may be that the five-toed progenitor of our present racers and trotters was all right in this respect, and the "evolutions" have been backward, so far as the G. A. O. T. U. being at fault the trouble comes from the first smiths who persisted in fastening the five toes together by nailing a band of metal to the lower part of them. Reduced to one toe, in fact there was no further necessity for more, and though nature still tried to give some freedom of motion in fashioning the posterior portion of the foot as one now finds it, this, too, is a surplussage that must be corrected. Hamper this by the attachment of a full shoe, and then do your best to make amends by carving away the horn, apply greasy ointments to the outside, stuff with clay, cowdung, coak in hot water, wear soaking boots, pads, sponges, try all imaginable remedies, and if you do better work than the "good mother" will perform if left alone, you shall receive the reward so thoroughly earned.

We have a good friend, a blacksmith in San Francisco, who is as enthusiastic in his advocacy of tips as we are, and whenever he sees a number of the BREEDER AND SPORTSMAN without something in relation to that subject he takes us to task in vigorous English, and that backed by still more pungent German, we suppose as our linguistic education is not sufficient to understand aught but plain vernacular. To those who are of a contrary opinion there is a counter feeling, so that one is in hot water on both sides. But there is still another class, and by far the largest of our readers, who are desirous to get all the information on this important subject possible, and scarcely a mail that does not bring letters of inquiry. These have been so numerous of late, with quite a proportion ordering tips, that we feel that the space given is well occupied, and even though this particular department may be claimed to give too much attention to one topic, if special in place of general, it must receive full consideration.

We are now trying an experiment which, if successful, will greatly simplify the making of tips, and in place of waiting for the blacksmith to forge those ordered, will be enabled to send them at once. The plan is to have them cast from malleable iron, and that hardened by a new process of working that material, so that while the tenacity is not impaired, there will be hardness enough to withstand the wear for a reasonable time. We made a dozen patterns a couple of weeks ago, and as these will be cast soon, if found satisfactory, others will follow, so that there will be a variety to suit feet of all sizes. There will also be a variety of shapes, and

when there is no chance to doubt the availability, the pattern will be made of polished brass, so as to make the mould as accurate as possible. Thus there will be a perfect bearing for the foot to rest upon, and if the horn is properly cut away, this essential part of shoeing must be properly done. There will be another advantage. In tips or shoes made from the same pattern the nail holes will be exactly in the same place, and this will give the opportunity to use the same holes in the horse when they are "removed." As every nail hole is detrimental by cutting the tubes that supply the life of the horse, the fewer the better. Some reason that an old nail hole is unfit for use the second time on account of it being too large for the second insertion, but if proper care has been observed in cutting the clinch this will not hold good. The orifice is tapering to conform to the shape of the nail, and as some of the horn has to be cut away, the wedge is driven that much further towards its thickest part, and the nail holds as firmly as when first driven. Should the malleable and hardened iron prove to have toughness enough not to fracture easily, it cannot fail in other respects to be satisfactory.

Though at times we have had to take our old friend "Tom" to task for drawing on his imagination, in place of depending upon "frozen facts" for the base of his pleasant screeds, it is rare, indeed, he writes anything that is not instructive, and is always entertaining. There is not a writer between the two big oceans who has a keener appreciation of the blood-horse, or who can paint his favorites in brighter colors. And, by the way, anyone who has a knowledge of the thoroughbred, and does not admire this foremost type of the equine family falls in our estimation. In every case the detractors are as ignorant of the merits of the steed, with ten or more generations of blue blood behind him, as though they had never seen a horse, and when we hear the fervid denunciations, we are moved by a variety of feelings. Anger at the slander, contempt for those who vilify for a purpose, pity for the lack of knowledge implied, and sorrow for an imbecility that awakens sympathy. The truest form, the greatest courage, the best and most lovable disposition, uniting all the good qualities, the best among them coming from the mistakes and vicious conduct of those who have them in charge, they are the genuine aristocrats of the horse world, not depending upon genealogy to uphold their claims, but placing them on the truer foundation of good conduct.

There is a saying of the sage Mouticello that impressed us a long time ago as being worthy of printing in letters of gold on a lapis-lazuli ground that would bring every letter in bold relief. That was, that when a man was good in his family a good neighbor, a good citizen, good in all the relations of life, that man's religion could not be bad. No matter whether a Unitarian or a Believer in a triune God, Baptist, Presbyterian, Catholic, or High Churchman, whether he could repeat the "Creed," or the whole of the Koran, had Confucius at heart, or worshipped the rising Sun, there was a streak of goodness that could not be ignored. So, in over thirty years experience with the thoroughbreds, and those which were closely allied to the thoroughbred, we have seen an exhibition of qualities that has endeared them, the affection growing stronger as the time rolled on. The staunchest friends, the pleasantest companions, turning the hack cloud upside down and showing the glittering lining in its full refulgence. We have watched them gamboling by the side of their dams when they were as cheery as the spring birds, and as graceful as maidens in the dance around the Maypole, as handsome as houris seen in a dream of a poet, as nearly so, at least, as quadruped can approach the divinity of human form. They have come for carresses when the blue-grass and clover was tempting in its bright verdure, and galloped dull care away as we watched them at exercise. He who has not felt the blood bounding through arteries and veins when a favorite was struggling down the homestretch in bare rivalry to reach the winning score first, is of too dull metal for us to understand, too much pot metal is his composition to suit our book.

Now our friend Merry appears to feel compassion for us because the years are telling, and that three score winters and summers are throwing lengthening shadows across the course. Near enough sixty it is true, not to haggle over the fifteen months that still intervene between now and that venerable era in human life. But we are not yet old, Tom, if the knees are a little stiff when reaching for the stirrup or clambering into a wagon. The elasticity may be impaired, and the days when it was a vault into the saddle and a spring into the seat are gone, and yet able to go a fair pace around the turn, and a brush left for one stretch at least. There is the "genius of pertinacity," as your friend happily termed it, Tom, and a determination not to grow old as long as there are thoroughbreds to admire, and a capacity to perform, if even a little short of the rapid work of the years when you and I were younger. Then there are still mysteries to unravel, and above all there is a millenium to arrive, when all mankind and the rest of the world, Tom, will agree with us and the bright damsel of our boyhood's days when she said "None but the thoroughbred does it right well."

It may be that in that northern country of yours that the winter sun is too often obscured, and the long damp nights merge into days when there is gloom and drizzle.

But here on this bright January day to watch Sir Thad and Cito in a brisk breeze, and to drive Antevoo a furlong at a rate of 2:24, and that without metallic hindrance on feet or kersey or leather on limb; when the big Marechal Neil rose tree is a mass of blossoms of the most delicate hue and the

richest fragrance, when the bees are humming in swarms on the eucalypti, and the linnets and California cauariees are warbling their cheeriest notes; when the foothills wear an emerald garb, and the bay is a mirror of molten gold from the reflection of the topaz-colored western heaven, how can any one grow old? What care we for the "twenty-dollar pieces that never die," as long as debts are all paid and there are oats and hay in the barn and truck and groceries in the house. The Zinfandel that costs twenty cents a bottle is better than the Chambertin we paid twenty times as much for in the land that is now held by the frost king in an embrace as rigid as twenty-five degrees below zero can make it, and the smoke from the corn-cob pipe floats out of the open window in circles as perfect as if from a cigar of the best brand ever fabricated in the Gem of the Antilles.

It is, alas! true, Tom, that there is a vacant stall in the barn that accounts for some of the concomitants which are a better renewer of youth than the fountain of Ponce de Leon, and as yet there is a tinge of sadness which brings a hazy feeling among all the bright lights. Not an aging one, however, but a sort of self-accusation for getting into a snap that required such a sacrifice, not as to the money received, for a breeder who gets \$10,000 for a trotting four-year-old cannot find fault on that score, and it is a good deal of honest coin of the realm for a "newspaper man" to get in one lump. As you phrase it, Tom, he was the exponent of a principle, the means of putting a partial stop to the abuse and ridicule of eight years, and then, too, just beginning to show the capacity that could be brought out by that system which had elicited so many adverse comments. The relief is strong in our mind that the next week after trotting in 2:20½ he could have lowered that mark five seconds, and the reasons for that faith we can give in a few words. There was a crowd of lookers-on. Three parties with the intention of buying, and the great aim was that he should make a good showing. They all admired the rating capacity as shown by the quarters 35½, 35½, 35, 34½. We drove him purposely thus, and so much inside of his evident speed, in order that he might show to advantage, that he was never called upon until seven furlongs were trotted, and even then he was going well within himself. The loss of ground from driving wide on the turns was equivalent to a second and a half. So confident in his ability to make a low figure on the blackboard of trotting fame, that belief made stronger the more we study his short career, it will not surprise our old friend to learn that it was not the dollars that tempted, and that the sole cause for the absence of Antevoo was the pressure of circumstances stern and inexorable.

For nearly a third of a century we have fought hard to support the claim that the thoroughbred was an important factor in breeding fast trotters. Fortunately, there were others of the same opinion, and though the war of tips was waged with few auxiliaries, the blood-horse has advocates, and better than writing and talk, there was so much of the blood in the great trotting-breeding regions that the mixture had to come in. Its "potency" has been demonstrated so that the only ones who now deny the "advantages of racing blood in trotters" are those who are knowingly perverse, or who are so saturated with ignorant obstinacy that they are unable to understand the plainest propositions. Maud S., Jay-Eye-See, Clingstone, Trinket, Nutwood, and many others from that "near crosses" of thoroughbred blood are joined with the highest rate of speed. Two-ten and a quarter, and a five-year-old only half a second behind, both with grandams, in the blue book of the turf, are examples of efficacy no amount of quibbling will overcome.

Were the superiority to be entirely credited to the sire, and the plea of the sticklers for cold blood based on logical grounds, there should be Harolds far faster than Maud S., Dictators which could easily down the little gelding with the awkward name. The next Belmont to Nutwood is Wedgewood, from a dam by a thoroughbred horse, and the second Harold is a half sister to Jay-Eye-See. Back of the Mambrino Chief, in the dam of Director, is the blood of Potomac and Saxe-Weimar, and the greatest of all the Mambrino Chiefs was from a mare by Gano. Had it not been for thoroughbred and highly bred mares, old Pacing Pilot would have been unknown at the present day. With all his good blood, Pilot, Jr., would make a comparatively poor exhibition were it not for the thoroughbred mares which have given a reputation brilliant and enduring. Sally Russel, Twilight, Croppy, Tell-Tale, the progeny of these four overhadowed all the others, and the dams of other celebrities of the family had a good share of the blood of the race-course.

The Stockton *Independent* notes that a peculiar disease has made its appearance among horses in San Joaquin county within the past few weeks. It attacks young as well as old animals, and those that are apparently in perfect health. Veterinary surgeons are of the opinion that death results from cerebral apoplexy. The animal aile for some time, and, being attacked with a sudden weakness of the loins, falls down in a comatose state, and dies shortly afterward. A disease exhibiting similar symptoms is caused by the paralysis of the spinal marrow, and frequently occurs in winter time in stables in large cities, when the weather has been cold and moist for a considerable length of time. The disease is not moist for a considerable length of time. The disease is not considered contagious. Cases have been known of horses and cattle being poisoned by eating certain weeds, but it is not believed that the present disease owes its origin to that cause.

Four Shetland ponies recently arrived by steamer at Portland, Me., three mares in foal, for Orestes Pierce, Saddleback Farm, and a stallion for J. B. Straw, Lewiston. They were taken directly from their native pastures.

BASE BALL.

The Occidental Club Defeats the Haverlys.

The attendance at the Recreation Grounds last Sunday to witness the third game of the new series, that between the Occidental and Haverly Clubs, was not large, notwithstanding the day was a fair one for out-door sports. The Haverlys were out in full force, as regarded numbers, but there were some present who thought Meegan should have taken his place in the pitcher's box, instead of allowing Charley Gagus to try his hand. Gagus pitched well enough for one who has had so few opportunities to pitch against batters in the course of a game, but Meegan could possibly have done a trifle better. Morris and Carroll, against Gagus and Creegan, made it appear at the outset as if the Haverlys were entered for a contest which could only result in defeat, and so it proved, the score at the close standing six to two in favor of the Occidentals. A detailed description of the game will not be attempted, as the playing, while at times close, and up to the average, was never remarkable or anything like brilliant. Morris' pitching was even and unusually effective, only three base hits being made off him during the game. Carroll, who assisted him behind the bat, played without an error. Smith at first, and De Panger at second, played their positions for all they were worth. The Haverly fielders had little or nothing to do. Taylor, Incell and Pope, for the Occidentals, were noticeably good in their positions. Gagus was very effective in his delivery for the Haverlys, and not a single error was made by Creegan behind the bat. Meegan at second, and Donohue at shortstop, did what little fell to them very creditably. Following is the score:

Table with columns for OCCIDENTAL and HAVERLY, listing player names and statistics such as runs, hits, errors, and totals.

First base on errors—Haverly 4, Occidental 0. First base on called balls—Haverly 0, Occidental 3. Left on bases—Haverly 2, Occidental 4. Wild pitches—Gagus 3, Morris 0, Fessell 1, Meegan 4, Carroll 2. Double play—Smith. Three-base hit—Carroll. Two-base hits—Morris and Meegan. Struck out—Haverly 11, Occidental 12. Time of game—One hour forty-five minutes. Umpire—Charles Sweeney. Scorer—M. Fisher.

The departure of the large number of players who have secured engagements with Eastern clubs for the season of 1884, will weaken the local clubs to such an extent that baseball enthusiasts will have but little cause to visit the diamond the coming summer, perhaps. The appearance of a number of good amateurs, and the improvement of many of the professionals who remain would change this state of affairs considerably.

Jerry Denny, the noted third-baseman and change catcher, is under engagement to the Providence Club for next season, and Charles Sweeney, who acted as change pitcher and made such a praiseworthy record last season, will also return to that club.

The game to-morrow will be between the Denny nine and the Occidentals—the same clubs which played the close game on the 30th ultimo—and as they are competing for the first place among the local clubs, a good game may be expected.

M. De Panger of Marysville played a portion of last season with the Detroit, and then joined the Chicago nine. He made a good record and will go East for next season, under engagement to the Chicago Union Association.

There has been some talk of laying out a new baseball ground. Among other projects, the one of leasing the half-mile track and arranging it for the ball-players has been considered, and abandoned as impracticable.

Gagus, who is making quite a good record as a pitcher, and McDonald, a quick and sure man behind the bat, are to play with the Reading Club of Reading, Pa., the coming season.

An interesting game was played Sunday by two nines calling themselves the Wells, Fargo and Midwood teams. The game was won by the former by a score of three to two.

Blakiston, an old-timer, played with the Athletics of Philadelphia in 1853, and made a very creditable record. He will go back to that club the coming season.

Another California player who will be under engagement to the Chicago Union Association in 1884 is Bigelow, a good player either on a base or in the field.

California players who have made extraordinarily good records in this city are in great demand with Eastern managers at present.

Bluch's Romances.

Everybody in Sacramento knows "Old Bluch," and not a few of the boys in San Francisco have had a good deal of fun with the "Doctor," as he is sometimes called. "Bluch" is a character in many ways, but he is chiefly remarkable for the fact that he can miss the truth oftener than any man living. Assemblyman Simon, member of the Legislature, who has attended night school, and is also a member of a debating club, says that when Munchausen died his mantle descended on Bluch. Patsy Barry, who never heard of Munchausen, says that Old Bluch is the biggest liar that ever lived. There's no harm in Bluch's lies. He never slanders any one else, simply indulges in weirdly extravagant veins of romancing, which hurts nobody. The beauty about Bluch is that when one of his yarns is proven to be an elaborate fabrication, and even he can find no defense for it, he does not get the least annoyed, but contents himself with saying, "All right, gentlemen, I see you don't believe me, but it's true all the same." Frank Rhoads, of Sacramento, was the real discoverer of Bluch as a romancer, though Colonel Gannon sometimes poses as Bluch's sponsor. Fifteen years ago Rhoads picked Bluch up broke; or rather, Bluch, when he was broke, picked Rhoads up and stuck to him until a fortunate circumstance enabled Rhoads to discard him. It used to be a great treat, during the last legislative session, to sit around while Colonel Gannon would artfully draw from Bluch the story of his life. After a time the boys got to figuring, and when they showed Bluch that, according to his own statements, he was 476 years of age come next spring, Bluch only smiled sadly, and said: "Oh, you fellows never believe any one, but I can prove it." Bluch claims to have been a great sailor, and to have spent many years whaling.

The fact is, he was on board a whaler once for nearly four hours, and that is the whole of his marine experience. Bill Higgins tells the story of how Bluch nearly went to sea, something in this way:

"I was in a saloon about eighteen years ago, smoking a cigar, when in came Johnny Walker and Ed. Casey, two boarding-house runners, with Bluch in tow. The bay was crammed with ships. There were more than a dozen whalers here, and every one of them waiting for crews. On a whaler green hands are useful, and Casey and Walker meeting Bluch stalling about the front, made up their minds to ship him and get the advance and bounty. They had their man sized up pretty well, and never said a word about whaling, but brought the conversation round to fishing.

"Fishing," said Bluch, "I'd like to see the man that can beat me fishing. I'm the boss fisher. I once caught a sturgeon in Napa Creek that weighed 700 pounds, and was more than 24 feet long. I hooked him first, and then drove him ashore."

"A twenty-four-foot sturgeon was a bit too much for even such experienced romancers as Walker and Casey, and one of them proceeded to question the statement, and pointing to the saloon counter, said: 'How much longer was your sturgeon than that counter?'"

"Oh, he was not so long as that, quite," said Bluch, appalled by the enormous length of the bar.

"Walker measured the counter, and found it just twenty feet long. Most men would have been abashed at such proof of exaggeration, but Bluch simply said, 'Well, I don't care a dam about a foot or so; I know the fish was so d—d long that he could not turn round in Napa Creek, and that's how I managed to catch him.'"

"You are quite a fisherman, I see," remarked Walker. "How would you like to make a bit of a trip after cod to the Chinese seas? It's the finest fun in the world. I've made six trips, and now I run three vessels, and an interest in two more with this gentleman here," alluding to Casey.

"I would not mind going, only I'm very fond of reading," replied Bluch, "and I hate to be where one can't get plenty of books."

"Why bless your soul!" said Walker, in a manner to indicate pity for Bluch's extreme ignorance. "Don't you know that on my ships there's boxes and boxes full of the finest novels, and all kinds of books, and you'll have lots of time to read? Whenever it's too rough to fish all you have to do is lay in your bunk, smoke your pipe, and the boy will bring you books faster than you can read them."

"Will I have to do any work in the rigging?" asked Bluch.

"Not much; we have rough sailors for that kind of work. Anyone can do that, but it takes a man of experience to fish. Any fool can lug ropes around. You get a 50 yard. That is 50 per cent. of the catch. They only employ one fisher and he gets half while the captain and crew divide the other half."

"This rose-colored vision of lying on his back novel-reading all day and having a boy to wait on him was too much for Bluch, and he consented to go on board next day. He signed an agreement in due form, and all Walker and Casey had to do was get him on board before he found that the kind of fish he was expected to catch were whales. After a drink or two Casey said in an earnest way, 'I want you to have the state-room at the foot of the companion way. The one with the red curtains. It's right under the skylight, and will give you a better light to read by than any other state-room on the ship.'"

"Bluch thanked Casey for his thoughtfulness, and went out to say good-bye to the boys, and Walker followed him around and soon run him down in a saloon. A few minutes later Casey came in much excited, and said, 'By gum, this is too bad! I wanted to see our friend get that state-room with the red curtains, and just now I heard Harry Brown arranging for a second mate to go on board early and grab it.'"

"Bluch pricked up his ears at this. He had set his heart on that particular berth just under the skylight, and in tones full of anxiety he asked if nothing could be done.

"Walker mused awhile, and then slapping his knee as though inspired by a brilliant idea, said: 'By gosh! yes; he can go on board right away and secure the room.'"

"Bluch jumped at the proposal with as much vehemence as his great sturgeon did at the banks of Napa Creek, and nearly broke his neck stumbling over a string piece on the wharf, in his anxiety to get into a boat and reach the ship before the second mate. Any one can guess the balance of the story. He was poked down into the greasy forecastle of a foul-smelling whaler, and given to understand that if he made any kick his neck would be broken. Poor Bluch would have made a trip to the Arctic ocean had not Walker and Casey talked about their smartness. Some of the boys who knew Old Bluch heard of his trouble, and took enough interest in the matter to get him off the ship. After this adventure Bluch was quite subdued for a short time, but he soon recovered his wonted equanimity, and having learned during his brief stay on a whaler the difference between the main yard and the bowsprit, he set up as a nautical sharp, and for a time devoted his powers of imagination to inventing impossible yarns. On one occasion he was talking about the huge whales he had seen, and after having discovered animals varying in size from a man-of-war to the great pyramid, one of his hearers tried to pin him down to a specific statement.

"Now, tell us honestly, without any bragging, what was the biggest whale you ever saw?" asked the critical one.

"Well," replied Bluch, after some hesitation, "the biggest whale I ever saw was a big white whale which would go at least 1,000 barrels of oil."

"Whalers always measure whales by their oil possibilities, and a 200-barrel whale is considered a monster, so Bluch must be credited with more than ordinary skill as a liar to invent an animal five times the size of the largest known to men in the business."

"One day Old Bluch was taking a nap in Rhoads's rooms, when the latter came in. For a joke Rhoads got some castic and painted Bluch's face around the eyes and cheek. The stuff soon turned black, and Bluch's face looked as if he had spoken disrespectfully of John L. Sullivan in the champion's presence. Bluch did not notice the marks until next day. After giving him time enough to concoct a good story, Frank Rhoads, in the presence of a big party who were on to the joke, called his attention to the bruises, and asked him the cause.

"As I was coming down K street early this morning," replied Bluch, "I noticed coming towards me at full gallop a runaway horse drawing a phaeton in which were a beautiful woman and a little child. It was a fearful ordeal for a man possessing so much sympathy and respect for women as I do. To stop the team was almost certain death to me, to let the horse run on was certain death to the occupants of the phaeton, for the infuriated animal was charging straight for the bridge and the draw was open. I made up my mind to save them at any cost, and dashing into the middle of the street, was just in time to seize the horse by the bridle. He ran ahead dragging me along, until at last he fell from sheer exhaustion. His knee struck my face and caused these bruises. I lay unconscious for some minutes, and when I came to the

lady I had saved from a horrible death was bathing my face, while her little girl near by was offering up prayers for my recovery. I was so affected that I had to leave the spot to hide my emotion and forgot to ask the name of the ones I had rescued."

"That's how you got the marks, isn't it?" asked Rhoads.

"Yes," replied Bluch, firmly.

"Why, you confounded liar, I blacked your face myself, and all the boys saw me," said Rhoads, with a pretense of indignation.

"I knew you would not believe me; you never do," said Bluch, simply; and walking out of the place he was not seen there again for months."

FISH.

The Fish Commission.

The monthly circus called the Fish Commission gave its regular show at Sacramento, last Monday, and is duly reported as follows in the Bee:

The Fish Commission held their regular monthly meeting at the Union Hotel this morning, all the members being present. After the minutes of the previous meeting had been read and approved, the Commissioners took up the propositions of Charles Webb Howard and J. H. Logan for the location of a State Fish Hatchery. The former offering inducements for the establishment of such an institution at Lake Honda, near San Francisco, and the latter offering to donate grounds near Felton, in Santa Cruz county.

Commissioner Redding argued in favor of Howard's proposition, whilst Commissioners Buckingham and Dibble were inclined to favor the Santa Cruz location.

Mr. Redding said he thought either place preferable to Grass Valley, which remark brought Mr. Dibble to his feet with the declaration that there was no hatchery at Grass Valley or near Grass Valley.

President Buckingham thought that the Shelby hatchery would be sufficient to hatch all the fish they would need the present season, as he did not see where they were to secure fish ovate for hatching. He said he had written to Prof. Baird, of the United States Fish Commission, on several occasions, but that gentleman seems to ignore the existence of the California Commission, and would not answer the letters. He moved, therefore, that both propositions be laid upon the table.

Commissioner Redding said Prof. Baird always answered his letters courteously and promptly.

"Yes," said Buckingham, "and that is why it looks as if there might be something at the bottom of the Professor's refusal to answer my letters."

Mr. Redding inquired as to what the President meant to insinuate regarding the statement that there was "something at the bottom" of the matter.

Buckingham replied that it was his belief that Redding, or some one else, had written a letter to Professor Baird that prejudiced him against the commission.

Mr. Redding denied any such action, and Commissioner Dibble poured oil upon the troubled waters by reminding the Commissioners that there was a motion to lay the State Hatchery proposition on the table before the Commissioners. There was then a lengthy debate as to the relative merits of the two locations, and finally the matter was tabled.

Commissioner Dibble then made a motion to continue the Shelby hatchery, in Nevada county, as the hatchery of the commission during 1884.

Commissioner Redding opposed the motion, and read from the report of the late keeper, J. A. Richardson, to prove its inconvenience, the absence of sufficient water, etc.

Messrs. Dibble and Buckingham spoke in complimentary terms of the Shelby hatchery, and the work which had been accomplished there. Finally the motion was put to a vote and carried, Mr. Redding voting no.

President Buckingham made a motion that the hatchery remain under the supervision of Judge Dibble, as heretofore. Commissioner Redding moved to amend by substituting that when Judge Dibble had filed a satisfactory account of the financial transactions connected with the Shelby hatchery, he be empowered to continue its management.

The gentleman from Nevada did not relish this amendment, and he arose and rather heatedly remarked that he knew that Mr. Redding was not satisfied with the manner in which the affairs of the present commission were conducted, but that so far as he was concerned he did not care a snap. He said that the affairs of the Shelby hatchery had been in charge of J. A. Richardsou—a cousin of Mr. Redding, and recommended by him for the position—and the items of expense were in the hands of the commission and open to inspection by all. He then paid his respects to the old commission, and, whilst disclaiming any intention to belittle the record of the old Board, he compared the results of his works with those of the present commission, to the benefit of the latter.

Mr. Redding replied with much feeling that he knew that there was one man (the late B. B. Redding), who had given for twelve years a great deal of his time and attention to watching over and fostering the fish interests of this State. He had done it quietly and unostentatiously, but how well he had performed his work was known by the people of this State, and he needed no eulogium, and deserved no condemnation from any man.

Mr. Dibble said he meant no reflection upon the late B. B. Redding, whom he had known long and intimately. He said that the present Commissioner Redding had made himself obnoxious to a majority of the commission by charges and fault-finding, and he only referred to the old commission as a matter of comparison.

The discussion upon the comparative works of the two commissions continued for some time, and both Redding and Dibble became so heated at length that President Buckingham had to interpose, and ask them not to become so excited.

When matters had again become quiet, Commissioner Dibble, as Secretary and Treasurer, submitted his annual report. It show the receipts of the commission to have been \$2,966.99; expenditures, \$2,509.94, leaving a balance on hand of \$457.25.

Bills were received from J. A. Richardson, late keeper of the Shelby hatchery, aggregating \$328.50. Commissioner Dibble said he believed some of these bills to be invalid, and he called attention to where the charges for hiring such articles as hoats, seines, etc., amounted to more than would buy them outright. The bills were put into the hands of Commissioner Redding, with instructions to ascertain whether they were just and valid.

After allowing some bills and filing others, the commission adjourned.

A World's Fish Fair in America is now under discussion, and Boston wants it.

**ATHLETICS.**

**The Race Made.**

On January 11th M. K. Kittelman called at our office and deposited \$1,000 as a forfeit to his challenge to run any man in the United States 100 yards. On the following day Fred Harmon came with his becker, Mr. McBride, and covered it. The same afternoon both of these celebrated runners, with their backers, met at the office of the BREEDER AND SPORTSMAN, and signed articles for a race under the following conditions:

To be a dash of 100 yards, from a standing start (not penalizing), at the crack of a pistol in the hands of a starter to be mutually agreed upon, and to be for the sum of three thousand dollars (\$3,000) a side, one thousand of which was at once put up in the hands of Mr. Jas. P. Kerr, who was agreed upon as temporary and final stake-holder; the second deposit of a like amount to be placed in his hands to-day, January 19th, and the final amount of one thousand, also, to be posted Saturday, February 2nd, the day before the race, which date, Sunday, February 3rd, 1884, was agreed upon as the day of the race, good day and track. The ground was not decided upon, but it was understood to be agreeable to both parties to have it at the Bay District race track between the hours of 2 and 4 p. m., if the track could be obtained. The articles are binding, inasmuch as they agree to make it pay or play, either man failing to make good his deposits at the agreed time, or failing to toe the mark, shall forfeit all money down. It is further agreed that the winner shall take all gate receipts after paying expenses. Each man will be allowed to select a judge, and the two judges shall select a referee, whose decision shall be final. This certainly is what the admirers of foot racing have waited some time to see. In this event their expectations have more than been realized, inasmuch as these two men are undoubtedly the fastest for this distance in the United States, and the intense rivalry existing between them, and the large amount of money pending on the result will undoubtedly make this the most interesting race ever run in the world, and probably with a good start the best record in the world will be beaten (ignoring, of course, the time alleged as being made by Seward of 9 1/2 seconds). Both men are hard at work training, and on the day of the race, barring accidents, will strip for the contest in as fine condition "as ever a man toed a mark." Harmon is training at the Bay District track under his old trainer "Frenchy," and is reported to be showing up better in his preliminary "sprints" than ever he did before. Kittelman trains at the Olympic Club grounds, under the guidance of that "courtly" trainer, Thompson, and from personal knowledge and observation we are satisfied that whoever defeats "Kit" in his present condition will acknowledge "he had a race," even should he be the fittest man ever produced. We hope great care will be taken in the selection of timers, both in regard to their responsibility and ability, and that their affidavits will be taken, and so establish and secure for California what we are sure, under favorable circumstances, will be the "best 100-yard record in the world."

**Common Sense in Training.**

Our idea of training, says *Bell's Life in London*, is simple enough. All the athlete has to do is to take plenty of exercise, live temperately, eat the best and simplest food, drink little, and smoke less. If possible, do entirely without the latter luxury, but should the Athlete be a confirmed smoker, a few whiffs at bed time will do him less harm than constantly hankering after a pipe. Further, in most cases hard work before breakfast should be avoided, and do not make the training so arduous that the man's energies become exhausted before the race. It is better for him to be a bit "above himself" than the reverse. Moderation in all things should be the motto, and it is not only unnecessary, but absolutely harmful to run or walk the full distance in repeated trials. If the novice is worth anything you can give him speed; his gameness ought to pull him through on the day. These a long experience shows to be golden rules, but it must not be forgotten that what will suit one man may fail with another. The trainer, therefore, should study his man's constitution as a doctor does that of his patient. Above all things, also, keep him cheerful and confident; the body is always governed by the mind. Make your man think he is sure to win, and he will do so if class enough. If not, end you have followed the spirit of these simple instructions, you will at all events have the satisfaction of having done everything in your power to insure success. The best of trainers can do no more.

**Weston's Temperance Walk.**

The *London Sportsman* of the 20th, reports that on the evening previous, Weston completed one-quarter of his winter walk of 5,000 miles over the country roads of England, in the interest of temperance. The following is a fair specimen of Weston's daily work, with an occasional lecture thrown in: "Weston, after a somewhat restless night, left Ely yesterday morning at 5:10. He was very drowsy and complained of his injured heel hurting him very much, but notwithstanding traveled out of the city at a rate of nearly four miles an hour, and continued until Streatham was reached at 6:25, when a halt for considerably over an hour was made while Weston slept. Continuing at 7:40 the American speedily improved in gait, and once having worn off the stiffness did mile after mile well within the quarter of an hour. Milton was passed through at 9:45, Cambridge at 10:30 and Etilsley at 1:15. Eventually St. Neots, thirty-five miles, was arrived at at 2:40, and then a stoppage was made for two hours. From that point to the finish Weston kept up a speed of four miles and a half an hour, reaching Bedford, via. Tempsford and Willington, at 8:25, making the total distance completed 1,250 miles, or exactly one-quarter of the whole task."

**Cyclistic.**

John S. Prince, the professional cyclist and holder of the champion records at all distances for the United States, arrived in this city last week with the Englehart Combination, and soon made his way among the local wheelmen, who find his acquaintance agreeable and profitable. He has for several years been a resident of Boston, and like all those interested in athletic and other out-door sports who visit us, he is surprised and delighted with the climate, and other accessories on the Pacific coast. So much so, in fact, that he declares that the far East shall know him no more as a permanent resident. He is enthusiastic over our climate, our tracks and our roads, and hails California as the chosen land of the wheelman. The Bay District track and the park have particular attractions for him. He says that with a little preparation he can, on the Bay District, break every record he ever made, and for general exercise the Macadam of the park is

the best wheeling ground he ever saw. Another little incident surprised Prince, and that was the number of skilled wheelmen he found in San Francisco, and the conspicuous ability of some of them. Like many others who come from the caked and curdled civilization of the Hub, he seems to have apprehended that the farther one got from Boston toward sundown the more pronounced was the "howl" of the wilderness, and the greater the similarity between the men and the mules. Having crossed the continent by way of Denver and Selt Lake to San Francisco, he finds that enlightenment is about as generally diffused as the sunshine, and that human nature and capacity do not vary much, except that they intensify as you come West. After taking a Sunday spin through the park with a company of San Francisco club members, he has admired the style in which they handle their heavy road bicycles, and thinks he could pick out two or three that would be in the front rank of amateur riders had they racing machines like the twenty-nine pound affair that he uses. He has been solicited to visit Los Angeles and other interior cities where the bicycle has been introduced, and by his presence bring the wheel more prominently into public notice, and thus awaken an interest and promote the organization of clubs. As instruction in wheel management is one of his specialties he will probably comply with these requests. He also contemplates a tour of the fairs this fall, and will match himself against horses, which is his favorite style of racing.

In Brooklyn, New York, next Tuesday, the 22d, a series of athletic events will be had by members of the Thirteenth Regiment, and the event of the evening is expected to be the meeting of Frank P. Murray, of the Williamsburg Athletic Club, the champion walker, and Lawrence E. Myers. Myers will attempt to run three-quarters of a mile while Murray walks a half mile. The winner of the contest will receive a gold medal valued at \$50.

**SHEEP.**

**Lake County Wool Growers.**

The wool growers of Lake county held a preliminary meeting at Lakeport, on December 29th, looking to the organization of a county association. After an interchange of ideas and opinions, the meeting adjourned to January 12th, when a permanent organization will be effected. In an address to the wool growers' the committee says:

This Association has but one aim and object, and that is, to raise the price of wool. To do this, we propose to cooperate with the State Wool Growers' Association, which was formed at the State Fair at Sacramento, last September. We cannot all attend the meetings of the State Association, because, by the very nature of our business, we are scattered far and wide over the surface of the land. The remedy for this is strong, well-supported county associations.

Sheep husbandry is more prosperous in Great Britain than it was a year ago, the returns for 1883 showing large increase in the flock. Perhaps in another year or so the queen may again be able to set the example of eating spring lamb.

The delayed rains caused a shortage of feed in Lake county, and a heavy loss of lambs has been the consequence.

In this age of gigantic enterprises the one described beneath is quite sizeable. We find it in the *Walla Walla Statesman*: "We are informed that a company has been organized under the name of the 'Rocky Mountain Turf Circuit,' with a capital of \$100,000, whose object is to construct tracks at Helena, Butte, Denver, Omaha, Pueblo, San Francisco, and perhaps other cities to form a convenient circuit for such men and horses as may desire to try their fortunes on the tracks thus formed."

**THE ELECTIONEER STALLION**

**STANFORD**

Will make the season of 1884, commencing February 1st and ending July 1st, at my stable near the Oakland Race Track.

**Terms.**

\$50 for the season, payable at the close of the season. No responsibility assumed beyond reasonable care.

**Pedigree and Description.**

Stanford was bred by George Faylor, late of San Francisco, foaled in 1879; is dark bay, no marks, 15 1/2 hands, and weighs 1,050 pounds; was sired by Electioneer, and closely resembles him in form and color; was not broken until last year; has been handled very little, but enough to show that his action is excellent and peculiar to the get of Electioneer.

First dam, Annie Laurie, by McCracken's Dave Hill, Jr., (sire of Geo. Treat, record 2:25), he by McCracken's Dave Hill, he by Red Lion, and he by Vermont Black Hawk.

Second dam, Kitty, by Owen Dale, son of Belmont.  
Dam of Dave Hill, Jr., by old St. Lawrence, granddam thoroughbred.  
Dam of Dave Hill by Vermont Hambletonian.  
Dam of Red Lion by Vermont Hambletonian.

Oakland, January 18, 1884. **J. J. FAIRBANKS, Agent.**

**Thoroughbred Stallion**

**IMPORTED**

**KYRLE DALY.**

Bay horse; bred by Joseph Lyons; foaled 1870, by ARTILLERY.

First dam, Colleen Rhue, by Gemma-di-Vergy.  
Second dam, Princess, by Retriever.  
Third dam, Echidna (the Baron's dam), by Economist.  
Fourth dam, Miss Pratt, by Blacklock.  
Fifth dam, Gadabout, by Orville.  
Sixth dam, Minstrel, by Sir Peter.  
Seventh dam, Matron, by Florizel.  
Eighth dam, Maiden, by Macbarn.  
Ninth dam (Pumpkin's dam), by Squire.  
Tenth dam (Lot's dam), by Mogul.  
Eleventh dam, Camilla, by Bay Bolton.  
Twelfth dam, Old Lady (Starling's dam), by Pulletue's Chestnut Arabian.  
Thirteenth dam, by Rockwood.  
Fourteenth dam, by Bustler.

Will make the coming season, 1884, extending from February 10th to June 20th at Rancho del Paso, Sacramento Co., Cal. Terms, \$100 the season.

Mares taken good care of during the season for \$6 per month; after the season \$10 per month, but no responsibility for escapes or accidents. Address **JOHN MACKAY, Sacramento, Cal.**

**The Trotting Stallions**

**DIRECTOR AND MONROE CHIEF**

Will make the season of 1884 at

**Oakland Trotting Park,**

Commencing February 1st and ending June 1st.

**TERMS.**

Director \$200, Monroe Chief \$100, the season. Good pasturage for mares at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

**Director, 2:17.**

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:10 3/4; Phallos, 2:15 3/4); first dam Dolly (dam of Thorndale, 2:22 3/4; Onward, 2:25), by Mambrino Chief; second dam by Potomac; third dam by Saxe Wren.

Thorndale, 2:22 3/4, is the sire of Edwin Thorne, 2:18 1/2, and Daisy Dale, 2:19 1/2.

**Monroe Chief, 2:18 1-4.**

Two-mile record, 4:46.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, he by Rysdyk's Hambletonian, first dam Madame Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whip stock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performances, see the holiday number of the BREEDER AND SPORTSMAN, issued December 29, 1883.

For further information address **JOHN A. GOLDSMITH, FASHION STABLE, Ellis St., San Francisco.**

**THOROUGHBRED STALLION**

**X X,**

**Pedigree.**

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM.

First dam, Columbia, by imported Bonnie Scotland.

Second dam, Young Fashion, by imported Monarch.

Third dam, Fashion, by imported Trustee.

Fourth dam, Bonnets o' Blue, by Sir Charles.

Fifth dam, Reality, by Sir Archy.

Sixth dam, by imported Menley.

Seventh dam, by imported Centinel.

Eighth dam, by Mark Anthony.

Ninth dam, by imported Janus.

Tenth dam, by imported Monkey.

Eleventh dam, by imported Silvereye.

Twelfth dam, by Spangler.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the grandam of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Saganore, Ontario (the dam of McWhirter, Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc.), and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

**JOSEPH CAIRN SIMPSON.**

Oakland or 508 Montgomery street, San Francisco.

**THE TROTTING STALLIONS**

**SINGLETON AND LA HARPE.**

Will make the coming season from February 1st to July 15th, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and on forehead, such as at the knees. Is 15 1/2 hands high, and weighs 1,120 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

**PEDIGREE.**

Singleton is by Willie Schepher, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by Imp. Messenger. Schepher's dam Nellie by son of Vermont Black Hawk grand dam by Busiris, thoroughbred (No. 373). Singleton's dam was Lightfoot (dam of Fride, yearling record 2:45) by Phaxall, son of Frudo's Blue Bull. Lightfoot's dam was Fanny Fern, by Irwin's Tuckahoe, granddam by Lefler's Consul, by Shepperd's Consul.

Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Dioned.

**LA HARPE**

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,280 lbs. Was bred by Dr. Hicks, and foaled in 1878. La Harpe was sired by Enne, he by Alexander's Belmont (sire of Nutwood), he by Alexander's Abdallah (sire of Goldsmith Maid), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by Imp. Messenger. Fannie's dam Glory by Jackson's Western Star (son of Fling's Western Star by Blacknose), first dam by Bonverges, 2nd dam by Callatin (1:51). La Harpe's dam Prairie Bird by Jackson's Star of Flight, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Lefler's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Dioned.

**TERMS:**

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.

La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address

**J. T. MCINTOSH, Box 60, Chico, Cal.**

Raising Mules.

Opposition to the mule we find generally coming from those who have had limited experience. For instance, a farmer buys a pair of mules, and for one reason or another they do not prove satisfactory, for of course, there are unsatisfactory mules. That closes his experience. He gets rid of his mules, and if you say mule to him, you will hear his opinion upon the subject in a way that you will have no difficulty in comprehending. That man may, and doubtless has, owned a dozen horses that were unsatisfactory to the last degree. But he does not denounce the whole equine race on that account. He has simply got rid of his poor horses and supplied himself with better ones. The same rule with mules will work equally as satisfactory. As valuable stock to breed, the mule unquestionably holds high rank, for there are a great many people who appreciate him, if some of us do not. A good pair of mules will bring from three hundred to four hundred dollars, and so far as we have ever known anything about them, they have always brought about that price in the East and South. Some time ago it was announced in an Ohio paper that a hundred mules had been sold in Kentucky at an average price of one hundred and seventy-five dollars each. Now, anything that will command as good a price as that is worth breeding, even if we do hate it. They are easily bred. The mere has very little to do in transmitting characteristics to the offspring, that all depending upon the sire. Therefore a mare that is utterly unfit for breeding colts can be used for breeding mules, and do precisely as well as better mares would do. In fact, we would not advise the use of the best grade of mares for this purpose, for it is a waste of resources. We cannot make any marked effect upon the mule by infusing into him an extra quality of blood on the dam's side. Goldsmith Maid could never have produced a trotting mule, and a Norman mare will produce no larger mules than a small mare, if she is sufficiently large to carry the foal. These are facts which experience has demonstrated, and they will appear reasonable when we remember that the mule is pretty much all male and very little horse. There are some slight modifications in the animal, which it gets from the dam, such as shorter ears and larger size, but they will get these from a comparatively small mare as well as from a large one. The largest mules we ever saw—and the pair was over sixteen hands high—were bred from mares that were not more than fifteen hands. On the other hand, a great many poor mules are bred because there is no care taken whatever in the selection of the sire. Some people seem to think that all jacks are alike, while, as a matter of fact, some of them are not worth their hides. There is manifestly a great difference in them. The larger they are the better they are, other things being equal, and there is a difference in their dispositions and vigor. These matters should be looked into. It is not wise to breed from a vicious jack. If the offspring is not vicious, all there is to say is, it is a piece of luck.—Rural and Stockman.

The Lexington and Boston Blood.

The extraordinary success of mares descended from Boston and Lexington blood at the stud still continues as it has done for the past twenty-five or thirty years. In the male line the success of Lexington's sons in getting great race horses has not been near so great, but their daughters and the daughters of Lexington's success as matrons of great race horses have been most wonderful. The blood of Lexington, his sons, and of Boston seems to nick most fortunately with the different strains of imported stallions, most of whom owe their stud reputation to this cross. The chief reason why Lexington's sons have not succeeded so well as his mares at the stud, is owing to the fact that few or none of them have been bred back to the female line of this family, but have sought out crosses, thus enfeebling them off from the better class of mares, thus forcing them to make their reputation upon an inferior class of brood mares. In looking over the two-year-old winners of the past year there are ninety-five who won 230 races, seventy-six of whom have a cross of Lexington or Boston Blood, and only nineteen who do not have an immediate cross, but a few of them trace back to the same fountain head, to Sir Archy and imp. Diomed. Among the most successful three-year-olds of the past year are Aztec, Ascender, Barnes, Bondholder, Drake Carter, Geo. Kinney, Heel-and-Toe, Leonatus, Little Minch, Long Knight, Lucky B., Markland, M. Bowling, Miss Woodford, Obermeyer, Olivette, Pizarro, Rena B., Tennyson, Thackeray, Trafalgar, Vera, &c. Of the above list Miss Woodford and Pizarro have no cross of Lexington or Boston, though Miss Woodford traces back to this line twice on her dam's side, through Nellie Robinson by Wagner, son of Sir Charles, and Sumpter by Sir Archy. When you come to look at the older horses the same rule holds good with Ella, Apollo, Aranza, Blazes, Bootjack, Checkmate, Col. Sprague, Crickmore, Dan K., Duke of Montalban, Duplex, Ella Warfield, Eole, Fair Count, Fellowship, Freeland, Gen. Monroe, Girofle, Girofla, Gleaner, Iroquois, Jim Douglas, Jim Lenwick, John Davie, Lida Stanhope, Lizzie S., Lute Fogle, Monitor, Parole, Pearl Jennings, Rica, Saunterer, Thora, Trade Dollar, Volusia, Washburn, Wedding Day, Wildsider, etc. These are merely given as a sample of those who figured on the turf the past year, but if you go back

for the last twenty-five years when Lexington's get commenced running, you would at once have the bulk of the most illustrious names on the turf and in the stud book. While every great performer is not so bred, the exception only tends to prove the rule, that it is the greatest and most successful line of blood we have ever had in America.

Then again, when you come to examine the time record, which may consider the test of merit, this same line of breeding shows up equally as well, having the best time on record from a half and all intermediate distances to four miles.

In selecting and forming a stud we should certainly select well bred daughters of Lexington's sons and grandsons, and to perpetuate the line which is fast passing away would not hesitate to couple sons of Lexington with daughters and granddaughters of this illustrious sire.—Live Stock Record.

The Vienna Gardens.

The attendance during the week has been as good, and the performance as brilliant as usual. In selecting the pieces, displaying the natural genius and perfect instrumentation of the performers, we may mention Miss Neuber's solo, the Daendler Fantaisie for the ladies only, and the trio between Misses Neuber and Straka with Miss Gonzales at the piano. The selections we make as examples of classical music and perfect instrumentation deserve all praise. During the week, Miss Louise Edgar, whom the writer, as a musical critic, has long contended, has the finest contralto voice of all our local singers, has wisely been added to the company and succeeded well. To-night Miss Edgar and Mrs. Vasconcellas sing together in the grand duet of Maritani, "Holy Mother Guide Me Footsteps." This is a wise election to begin with, and if these young and able vocalists continue to sing together, we predict for them great success and popularity. Mr. Walters is now giving an intellectual entertainment.

Santa Rosa Fair Association.

At a meeting of the stockholders of the Agricultural Park Association of Sonoma county held at the Pavilion on Tuesday the 8th of January, Wymen Murphy, President, called the meeting to order; James O'Meera acted as Secretary. There were present 45 stockholders, representing 1,575 shares of the stock. The annual report of the President was read. The report of the Secretary was read. By this report it is shown that the association owes the Treasurer \$68.46. On motion the reports of the officers were referred to an Auditing Committee of five stockholders. The committee selected was, Capt. Grosse, C. B. Bane, H. W. Byington, S. I. Allen, J. N. Bailhache. On motion the election of officers was proceeded with at once, and resulted as follows: For Directors, I. DeTurk, W. Murphy, J. Ort, J. H. Laughlin, Guy E. Gross, A. F. Overton, Edward Pitton. The new Board will meet Friday at 2 P. M., for organization and the selection of new officers. Good feeling and unanimity of purpose seemed to prevail. Most of the old Board of Directors were re-elected. The prospect for a successful season in 1884 is most encouraging. There is not the least doubt but we will have the best county fair that will be held in this State this year. Already we know of persons, both ladies and gentlemen, who are preparing for the next fair. This shows that there is an abundant interest. It can be safely asserted that there will be valuable improvements made to the grounds and buildings, and that this fall will bring conveniences for the public that we could not provide at the first fair. Let every stockholder turn to and assist the Board of Directors to make this enterprise one of the most successful and attractive fairs in the State.—Republican.

Sonoma Stock Breeders.

Last Friday the gentlemen interested in this enterprise met at Santa Rosa to crystallize the association. The necessary steps were taken to form an incorporation with a capital stock of \$50,000. The par value will be \$100; the necessary amount for incorporation has been ascribed and paid up by the following named gentlemen: Dickson & Bane, Isaac DeTurk, J. H. Laughlin, J. J. Warner, Guy E. Gross, J. M. Laughlin, T. J. Ludwig, Guerne & Murphy, A. McFadyen, Wymen Murphy, E. T. Farmer, James Marshall, Ed. Fitton. An organization was made by electing Isaac DeTurk, President; James H. Laughlin, Vice-president; C. H. Bane, Secretary; E. T. Farmer, Treasurer. It is much more than likely that some member of the association will go East and purchase some fine stock for the company.

Alex. Jackson (familiarily "Yank") died last week of consumption at Riverside Farm, near Franklin, Tenn. He has ridden such horses as Pat Malloy, Harry of the West, Maggie Hunter, Baffle, Miggins and others as noted. He trained Beatitude when she ran the three heat heats at Louisville, Ky., ever run by a three-year-old filly, with six pounds over her proper weight, in 1:42, 1:42, 1:45.

The fortunate subscribers to the BREEDER AND SPORTSMAN received in their holiday numbers beautiful engravings of a celebrated horse, Abbotsford, and celebrated dogs. We value ours at more than the subscription price. The journal is the best of its kind extant.—Healdsburg Flag.

The fence-cutting troubles will probably terminate by a local option herd law, by penalties against setting up illegal fences, for fencing public domain and individual lands without authority, and for fencing established roads. Penalties for burning the range and fence-cutting will be increased, and some inducements will be offered to gather in violators of the law. Fence-cutters will find they have not driven all the law-abiding citizens out, but they will find they have taught all citizens to respect the law.—Texas Wool-Grower.

Captain Wm. Cottrill, of Mobile, Ala., will be on the turf again this season after a year's retirement, with a large and strong stable of thoroughbreds. There will be ten two-year-olds the get of Buckden and Boh Woolley, and Buchanan, three years, is looked upon by many horsemen as having a good chance for the Kentucky Derby.

English breeders are now looking to Ireland for sires of stout and fast horses. The Duke of Beaufort has leased Beau Battle (sire of Bendigo, winner of the Cambridgeshire) for two years.

Mr. J. I. Case thinks Jay-Eye-See is good for 2:05 next season, herring accidents. He also thinks Phallas has not reached his limit.

In a race at Bailhache's Park, Healdsburg, last Saturday, Henry Hebron's gray mare, "Lady Gray" beat R. K. Truitt's "Mart." Time, 3:13, 3:02.

An effort is being made to interest farmers and dairymen in the establishment of a creamery in Pajaro valley. The Santa Clara creamery is a success.

Leonatus, so it is said, is all right and will be fit and well to make as good time next season as he was ever capable of doing.

STALLIONS FOR SALE

HAVING ACQUIRED MORE STALLIONS THAN he has present use for, the owner offers for sale the high-bred and well-known trotters

Inca -AND- Gibraltar.

INCA, RECORD 2:27, FOALED 1874, BRED BY L. J. Rose, got by Woodford Manbrino, son of Manbrino Chief, first dam Gretchen, by Manbrino Pilot; second dam Madame Kirkman, by Canada Chief, son of Davy Crockett; third dam by Fanning's Tobe; fourth dam by Leviathan.

GIBRALTAR, RECORD 2:22 1/2, FOALED 1872, bred by Geo. O. Tiffany, got by Echo, son of Rydyk's Hambletonian; dam the Tiffany mare, said to be by Owen Dale, son of Williamson's Belmont.

HAVING CONDUCTED SOME OF THE MOST successful sales, notably those of Messrs. Whipple, Colgrove, Dietz, Coutts, Dougherty, Newland & Hammond, Daniel Cook and others, we feel assured of our ability to give satisfaction in all business entrusted to our care. Sales will be made in all cities and counties in the State. We have in contemplation a series of combination or breeders' sales, similar to those so successfully held at the East. We will be pleased to enter into correspondence with parties desiring to participate in such sales. Private purchases and sales of improved live stock of all descriptions will be made on commission and stock shipped with utmost care. Several fine ranches at private sale. Purchases and sales made of land of every description.

KILLIP & CO., 116 Montgomery street. Russ House, 1009, 1011, 1013 and 1015 J Street, SACRAMENTO, CAL.

M. J. HENLEY, PROPRIETOR. THIS HOUSE IS A NEW BRICK BUILDING, newly furnished throughout, and with all modern improvements. Table first class. Everything neat, clean and comfortable. Public patronage respectfully solicited. Street cars pass the house every five minutes.

CONSUMPTION.

I have a positive remedy for the above disease, by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address, DR. T. A. SLOCUM, 161 Pearl St., N. Y.

PURE-BRED POULTRY,

O. J. ALBEE, Santa Clara, Box 229.

FOR SALE—1 Cock, 4 Hens and a fine lot of Stags. Pitt-Games imported from McDougall, warranted dead game; also all leading varieties thoroughbred Poultry.

PURE-BRED JERSEYS FOR SALE.

For sale, to close an Estate, Ten Head of Pure-Bred Jersey Cattle, Registered in A. J. Herd Book and A. J. C. H. R.—Cows, Heifers and Calves.

All superior animals both in breeding and quality Also a number of

Two and Three-Year-Olds, Geldings and Fillies. Thoroughbreds and by Thad Stevens, Trotting Stock of the very best Families.

For particulars inquire of or address, R. P. CLEMENT, 424 Montgomery St., San Francisco.

THE WHITMAN SADDLE.

Having been appointed SOLE AGENT for the

Whitman Saddle Company

For the Pacific Coast, I have in stock full lines of their celebrated goods.

SADDLES FOR ROAD, RANCH OR PARK USE, With or without the California horn.

TRAINING SADDLES.

Ladies' saddles on hand or made to order in special styles.

THE TRADE SUPPLIED

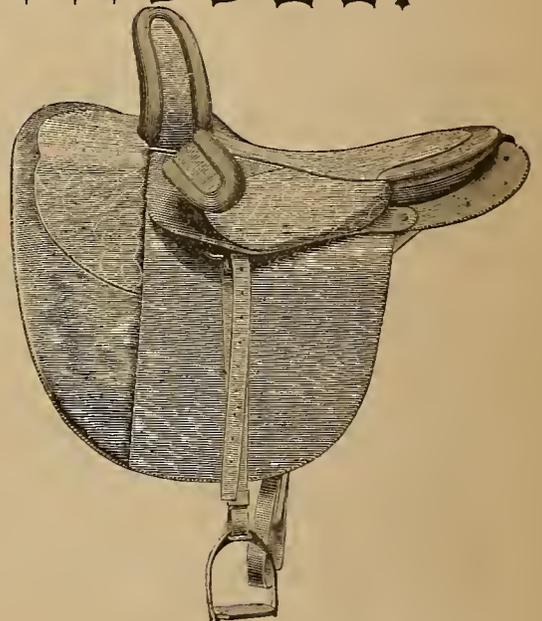

AT MANUFACTURERS' RATES.

An Inspection of these Goods is Invited.

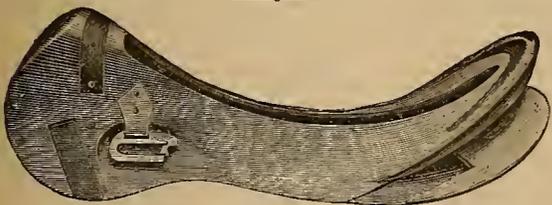

Illustrated Catalogues sent free on application.

JOHN A. MCKERRON,

230 and 232 Ellis Street, San Francisco.

WHITMAN TREES.

HAVING ON HAND A LARGE SELECTION OF

WHITMAN TREES,

I AM PREPARED TO MAKE UP SADDLES IN ANY STYLE DESIRED BY CUSTOMERS, WITH OR WITHOUT THE CALIFORNIA HORN.

Trees for Sale to the Trade

IN QUANTITIES TO SUIT,

AT MANUFACTURERS' PRICES.

JOHN A. MCKERRON,

SOLE AGENT FOR THE PACIFIC COAST.

230 and 232 Ellis street,

WHITMAN PARK SADDLE.

EASY AND SAFE

Ridere or those who intend to become good ridere should try these saddles. In conjunction with the WHITMAN COMBINATION HALTER-BRIDLE and the WHITMAN RUBBER-FOOTED STIRRUP these are the most etylish and comfortable outfite in use. They can be finished to euit any taste at from \$15 upwarde.

JOHN A. MCKERRON,

230 and 232 Ellis St., Sole Agent for Pacific Coast.

WHITMAN'S RUBBER-FOOTED

STIRRUP

THESE STIRRUPS ARE VERY HANDSOME AND THE RUBBER MAT A GREAT CONVENIENCE AND COMFORT TO THE RIDER, AS THE SLIGHT AMOUNT OF ELASTICITY PREVENTS SHOCK, WHILE THE ADHESIVE PROPERTY OF THE RUBBER HOLDS THE FOOT IN PLACE WITHOUT EFFORT.

No person after once using them will use any other.

JOHN A. MCKERRON

230 and 232 Ellis Street, Sole Agent for the Pacific Coast.

RAWSON'S U. S. ARMY

Suspensory Bandages.

ASHLAND PARK TROTTERING STUD

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsa, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-17yl B. J. TREACY, Lexington, Ky.

## ROWING.

### A Business Proposition.

TO THE EDITOR OF THE BREEDER AND SPORTSMAN: Sir—The individual who makes the "aquatic" column of the *Chronicle* rather humorous reading for all rowing men and judges of rowing, announced, on Tuesday last, that I was attempting to helittle Austin Stevenson by stating that I would bet that he could not row the Long Bridge three-mile course faster than 21 minutes 30 seconds. The *Chronicle's* correspondent seems to be animated solely by the desire to prove that Stevenson is the greatest oarsman of the world by denouncing as ridiculous pretenders all scullers who do not hail from Vallejo. I do not care how much Mare Island is advertised as the hot bed of aquatic talent, provided that I am not used to bolster up the fame of the preserve for superannated politicians. As the matter stands, however, I have ample excuse for rising to object, as I have several times been dragged into the *Chronicle's* columns to prove by comparison or contrast that the champion of Vallejo is a nightier man than Hanlan. The eulogist of Rotten Row, in his latest effusion with reference to me, says, that if I will put up a forfeit (which he evidently doubts) Stevenson will test the value of my derogatory statement. In reply, I desire to say that I have no wish to helittle Stevenson. I have stated and offer to back my opinion that he cannot beat 21 minutes 30 seconds over the three-mile course at Long Bridge, from Channel street to Spreckels' wharf. If Mr. Stevenson and his friends consider this opinion uncomplimentary, I am sorry for their sensitiveness, but ready now as ever, since I made the offer, to bet \$150 that Austin Stevenson cannot beat 21 minutes 30 seconds over the Long Bridge course. I will give Mr. Stevenson his choice of day and tide, and allow him to turn any way he pleases. If this does not suit Mr. Stevenson, and a shorter distance be more to his taste, I will give him an opportunity to do a piece of profitable sprinting by helitting him \$150 that he cannot row the Long Bridge two-mile course in 14 minutes 30 seconds. As Mr. Stevenson has been in training since October he ought to be now in fine form to attempt a feat which has been several times beaten by less pretentious scullers. The amount might certainly satisfy him when he considers that he made less out of his match with Lee, and would have got no more had he rowed against Hanlan. To a professional oarsman, out of engagements, the opportunity to row three miles for a prize of \$150 ought to be very acceptable, especially when he is not asked to get within a minute of the record which he claims for himself. The other day Mr. Stevenson rowed three miles at Oakland in 20 minutes 40 seconds. He did as equally fast performance at Sausalito. At Vallejo he crowds Hosmer's record of 20 minutes 3 seconds. This being the case, let him come down to Long Bridge any fine afternoon or morning within the next three weeks and win \$150 of my money by rowing our three-mile course in 21 minutes 30 seconds. He certainly cannot decline on any reasonable grounds, for, with a record of 20 minutes 40 seconds it will not hurt his business to show public trial in 21 minutes 40 seconds, or row two miles in 14 minutes 30 seconds, when any first-class Eastern oarsman does the distance a minute faster, and it is generally supposed that twelve minutes and a half is none too fast for championship form on two miles straightaway. I herewith post \$100 to hind the match.

Respectfully, yours,  
T. E. FLYNN.

### Lee vs. Stevenson.

On Sunday last, George W. Lee and Austin Stevenson rowed a three-mile race on the new Oakland course. There was some uncertainty about the amount of the stake, but before the race was called Stevenson's backers stated publicly that the match was for \$300 a side. Both oarsmen appeared in good condition. Lee looking, if anything, a trifle fine. The New Yorker had evidently been doing some hard work, as he was brown as an Apache. He rowed in the Stevens boat, which Hanlan brought with him from the East. Stevenson used a new boat built in Vallejo, and which was such an excellent piece of work for an amateur that it excited universal surprise and admiration. At 3 o'clock the tide running into the channel had made an excellent course, as straight as an arrow and smooth as a mill pond. Edward Hanlan was chosen referee, and sent off the men to an even start; Stevenson having the choice and rowing on the side farthest from the wharf. Lee struck out at twenty-eight to the minute, and Stevenson at thirty-two. At the quarter of a mile Lee was three-quarters of a length ahead. This advantage of the New Yorker increased, until at the mile he lead by a length. He rounded

the flag at the half-mile two seconds in advance of Stevenson, and in that order the men rowed until within half a mile of the finish, when Stevenson began to spurt for the lead. By hard rowing the Vallejo man cut down the advantage of his opponent until he lapped the New Yorker two hundred yards from home, and finished about eight feet behind him. The finish caused much excitement among the people who had bought the short end of the pools, as it looked for a minute as if Stevenson would surely win. Hanlon returned the time as 20 min. 39 sec., which was undoubtedly correct, though several watches took it ten seconds slower, the owners not being in a position to see the finish properly. Some doubts have been expressed of the accuracy of the course, and very properly, as it was some three hundred feet short by actual measurement made on Monday, under the supervision of a representative of this journal. This would bring the time up to 21 min. 10 sec., or thereabouts, which would be much nearer the limits of both oarsmen's speed. The pools sold all through at \$20 on Lee to \$12 on Stevenson.

### A Startling Reformation.

The Vallejo *Chronicle*, to the utter astonishment of the rowing fraternity, has published the following:

"There was considerable talk on the street Tuesday evening in regard to the Lee-Stevenson race of Sunday last. It is claimed that no money had been put up, and that the contestants rowed simply for the gate-money and what the bar and other privileges would bring. That the two men agreed to row a dead heat, which would necessitate a second race, and bring in more gate-money, but that after Stevenson and his friends had left the boat-house Lee made up his mind to row the race and did so. Before the start he gave a friend of his money to bet that he would win the match. It also looks strange that no judges had been selected until it was nearly time for the race to start. This talk is very damaging to both parties, and it would be well for them to explain matters. From what has been learned, crookedness exists somewhere and the matter ought to be cleared up."

We have journalistically and personally heard the editor of the Vallejo *Chronicle* express so much confidence on the unswerving integrity of the Vallejo champion sculler, that the preceding paragraph is a complete surprise. Down here among the unregenerate of the metropolis, the possibility of a professional sculler assisting in a hippodrome has never seemed unlikely. Mr. Stevenson has himself, on more than one occasion, rowed for gate-money only, but we have had so many assurances that he would sin no more, that we were wholly unprepared for the damaging accusation of his townsman. Believing the assurances of the Vallejo *Chronicle* that the champion of Mare Island would always row to win, we regarded the Lee-Stevenson race as a most exciting and genuine contest. Thinking that the moral effect of Vallejo citizenship would purge the affair of the duplicity so prevalent in professional athletes, we were prepared to accept all the reports about the accuracy of the course, the correctness of the time and the severity of the contest. Mr. Shelley, a leading Vallejoite, supervised the measurement of the course. The distinguished visitors from Rotten Row subscribed the stakes, and Mr. Shelley of Vallejo deposited them and drew up the articles. Reliable men from Solano county acted as judges, and the only person not a native of Vallejo who officiated in the ceremony of conducting the race was Edward Hanlan. All that Mr. Hanlan had to do, however, was to say "go!" to the rowers, and to decide that Lee came home first. In view of these facts, the insinuations of the Vallejo *Chronicle* are little short of appalling, and show that the editor of that journal has undergone a most unexpected and startling change of heart. We await with feverish anxiety further news from the metropolis of Solano county, for the *Chronicle's* item is calculated to excite acts of violence that will make the memory of Mare Island halloo-box stuffing, and interminable tape worm tickets, unworthy of preservation.

The Vallejo *Chronicle* gives us some information about the Lee-Stevenson boat race which will be received with some surprise by oarsmen in general. Our bucolic neighbor adds to its glowing report of the terrific struggle between the man from New Jersey and the giant from Vallejo this pearl of intelligence. The time made (20:39) is the fastest for that distance on record, and Stevenson has proved himself a good one. We had an idea that Hosmer rowed three miles this summer a trifle of half a minute faster, and that little Ten Eyck did the same, and that Teemer and several other oarsmen have got well inside the remarkable figures given.

Henry Petersen has issued a challenge to Lee to row a three-mile race on the Oakland course. Petersen has posted a forfeit of \$200. Lee will make a match as soon as he returns from Victoria.

## THE KENNEL.

Much interest attaches at present to Dr. Rowe's project of sending American dogs to compete with the English dogs on their native heath. The puppies to be sent to England are by Cambridge, from Marchioness Pegg, and the dam herself will be entered in the all-aged stakes. Dogs, like horses, can be and are essentially American bred, no matter what the parent stock may be, when raised in the country. The conditions of the field trials, however, in England may be as fatal to the one as the conditions of the turf have lately been to the other. But a good dog in one country is a good dog in another country, and the meadows, stubbles and turnip fields of England will be as good for the American as for the English dog. We have had some experience on the hunting grounds of both countries, and we think the *American Field* attaches too much importance to the disadvantages of the English grounds to the American dog. In fact, the American setter will have many great advantages over the American race-horse in England. With a little experience, which, of course, he will have before the trials commence, he will stand upon a perfect equality with his foreign competitor, and it would not surprise us at all, having the English partridge to work upon, to see Dr. Rowe's dogs return home covered with honors. In the management of dogs, however, on the field, the American sportsman and trainer will both earn much by competing in the English field trials.

It is an old saying there is nothing new under the sun. Recently, we are informed, that Egyptian mummies 2,400 and 3,000 years old have been unrolled and found to have their teeth filled with gold in as perfect and skillful manners as either French or American dentists can fill them to-day. Now comes the *Turf, Field and Farm* with the story of a duck hunt in 1748 from which it is claimed field trials are not a novelty of modern invention and progress. A duck hunt, with good dogs, is a harmless and right merry sport, but we fail to see its connection with field trials in any shape. The merit of the dog in a duck hunt is to tire the bird out, and the distance he is sometimes required to swim, and the length of time he will have to remain in the water to do this are both remarkable in themselves. No particular breed is required, and in our youth we have seen all kind of dogs turned loose after the bird. In those days, the two best dogs we knew in a duck hunt were an English black and tan and a Scotch terrier, but neither thoroughbred. The pages of the *Antiquarian*, interesting paper as it is, like everything else human will sometimes mislead, but we venture to say it never intended to associate a duck hunt with field trials.

A statement is going the round of the papers that some individual of a firm in Chicago has shipped 1,000 hares to England to fill an order. These are not hares at all but rabbits, valued more for the dinner table than for any sport that may be gotten out of hunting them. If the California jack could be turned loose in England, the Waterloo Cup would hardly be decided by a three point more, and stamina as well as speed would demand the attention of breeders and trainers.

We regret to learn that several valuable young dogs have lately died of distemper in Sacramento. Among the most promising was the Irish setter puppy belonging to Mr. Prentice Mashin, by Racc, Jr., from C. N. Post's Dido. With dogs, as with children, the fairest and best are generally taken first, only we have always failed to see, in both cases, where the consolation comes in under this arrangement.

Dr. Rowe has given up his proposed trip to England this year, but will try it next season with some puppies bred precisely the same as those he intended to take this summer. His reasons for deferring his visit are that the distemper in a violent form invaded his kennel in November last, causing the death of several of the dogs, and affecting others so badly that they could not be prepared for the trials.

Coursing is the favorite pleasure at Tehama and Red Bluff, where there are some good dogs. The ground is hard and gravelly about there, and dogs from this neighborhood can do but little, although the native animal, who has a foot like a piece of sole leather, makes a lively chase and the abundance of hares give plenty of sport.

Coughs and hoarseness.—The irritation which induces coughing immediately relieved by use of "Brown's Bronchial Troches." Sold only in boxes.

## TURF AND TRACK.

## Santa Rosa Letter.

EDITOR BREEDER AND SPORTSMAN:—"Anteo" is still an object of interest and attraction here, and the desire to see the beautiful horse is quite as manifest on the part of the fair sex as among turfmen and citizens generally. He is in the keeping of Mart Rollins, an experienced and careful trainer of trotters, and is snugly stabled in town, with a huge box stall or apartment for his better and appropriate keeping. The members of the association which owns him are every day better satisfied with their purchase, and the general desire to see the magnificent animal attest the admiration with which he is regarded in this community and throughout the county. On Friday, January 11th, the owners regularly organized, with the title of the Sonoma County Stock Breeders' Association, capital stock \$50,000, in shares of \$100 each, and the election of permanent officers for the year resulted as follows: Board of Directors, Isaac De Turk, James D. Laughlin, Guy E. Grosse, Rufus Murphy and Edward Fitton; President, I. De Turk; Vice-president, J. D. Laughlin; Secretary, C. D. Bane; Treasurer, E. T. Farmer. The association propose adding several other fine horses, and choice stock of other species, hulls, rams, etc., to better supply the general requirements of breeders and farmers in the county. It is intended to bring out from Kentucky, from the most noted breeding farms of the famous blue-grass region, a few thoroughbred mares of best quality to further promote choice breeding here.

The association now numbers some of the most substantial and enterprising citizens of Santa Rosa and of Sonoma county in its membership, and the list will be filled with others of similar standing and worth. Of its success, there can be no doubt. Already Anteo has engagements up to the limit, and the season will be profitable as respects the other horses yet to be obtained, if applications now filed can be accepted as the token.

The Stock Breeders' Association is not in actual connection with the Sonoma County Agricultural Park Association, yet its members are nearly all likewise members of the latter, and the probability is that for a year or so the fine and ample grounds of the Park Association will be used by the Breeders' Association for their stock.

The Park Association is self-sustaining. It has never solicited aid from the State, and will not; and its example may yet be made the basis of a movement to so reform and remodel the present system of district associations of similar nature throughout the State, as to place each of these also on a like footing, and thus spare tax-payers from the burden—slight although it may be, but still a burden—of contributing to the support of these local or general associations. The association elected its officers for the year on the 11th of this month, as follows: Board of Directors, Isaac De Turk, S. P. Overton, James D. Laughlin, Guy E. Grosse, Ed. Fitton, Julius Ort and Wyman Murphy, with I. De Turk, President; S. P. Overton, Vice-President; Chas. D. Bane, Secretary, and L. W. Burris, Treasurer. Without disparagement to the retiring board and officers, it is not inappropriate to remark that the new board will do more to push the affairs of the association to better effectiveness and with greater energy. It is their resolve to make the next annual fair of the association, in August or September of this year, the greatest ever held in Sonoma county, the most interesting in every way to farmers, manufacturers, mechanics, inventors, artificers, and exhibitors generally, as well as to turfmen and stock-breeders, of any in the State, the State Fair alone excepted. The handsome new diplomas of the association, the most artistic and finished of any issued by any agricultural association in California, the State Fair Association included, executed by the best of San Francisco's lithographic artists, have already had the effect to incite and stimulate the ladies throughout the county to prepare for the friendly emulation and rivalry which approves into excellence and has consequence in award, and the fine pavilion of the association, which has no equal in any District association in the State, will be filled with the domestic handicraft and skill and taste and invention of all ladies and the sterner sex alike, at this coming fair. The appearance of Anteo alone will attract hundreds to the fair, and his performances in the speed contests are likely to further enhance this uncommon general interest.

That these gratifying anticipations are not unduly founded—since the crop condition in promise must be always reckoned—it is not inappropriate to remark that the rain-fall of the season has already assured good harvests in every species of product for the year. The vineyards are in promising condition; grain crops look well, and while it is early to predict as to fruit, the expectations are for a year of prosperous reward. To sum up, Old Sonoma is "on deck" in every line of agricultural and business activity. O'M.

Santa Rosa, Jan. 21st, 1884.

## Our Chico Letter—Nute for Gen. Bidwell and Observations Pertinent to the Season.

EDITOR BREEDER AND SPORTSMAN:—I saw an article in your paper of September 22nd, in which General Bidwell says: "I am totally opposed to the speed programmes at all fairs; it is a libel on the people of the district, and also on the State, to say they will not attend an agricultural fair unless there is racing. For the sum of \$1,500 three counties sell their vote," but in what manner he does not illustrate.

And now, Mr. Editor, I will endeavor to show how very wrong he is in his assertions (I cannot call them arguments), by comparing the season of 1882 with the two years when General Bidwell was the great pusher of a purely agricultural fair. The list and figures are copied from the Secretary's books, and if any one disputes them I will send the books to you. For the year 1873, the receipts for the five days respectively were, at the park, \$47.50, \$45, \$86, \$51, \$57. Total, \$286.50, an average of \$57.30 per day. At the pavilion \$162, \$124, \$158, \$118, \$159. Total, \$721; daily average, \$144.20. This was the first year. And now, please note the immense success of the second year anti-horse race, purely agricultural fair, as pushed by General Bidwell. For four days at the park the receipts reached the magnificent sum of \$95, an average of \$23.75; at the pavilion, \$100, \$130.50, \$140, and fourth days \$154. Total, \$384.50; daily average, \$96.12. As will be seen there was a great falling off in receipts both at the pavilion and park. There is surely no room for any argument. The season of 1882 from Secretary's report to the State Board of Agriculture: Received from park, \$901; entrance-money—horses, \$500; subscriptions, \$903; race No. 1, sec. money dist., \$105; for five days, total, \$2,409; daily average, \$481.80. So far as the races are concerned there is not one dollar of the States' appropriation that is used directly or indirectly for any purpose at the park. Money for purses and stakes are contributed by citi-

zens of town and county for the express purpose of racing, and through trials of speed try and improve the horses in our district. There are now in this district five entire descendants of Rysdyk's Hambletonian owned and located as follows: Tilton Almont, by Almont, Mr. Billips, Colusa; Blackstone, Jr., by Blackstone, Dr. Adair, Colusa; Boylston, Hon. John Boggs, Colusa; Singleton, by Willie Scheppser, also La Harpe by Fame, both owned by J. T. McIntosh, Esq., of Chico. Then last, but by no means least, comes D. M. Reavis' Blackbird, by Simpson's Blackbird, and I consider it a list that any country district should be proud of. Some of these horses' colts are showing great promise, notably, Tilton Almont and Singleton. I saw five Singleton colts start here the last day of the Fair for a special purse for yearling when only one of them had been in harness, breaking and all, over six weeks; they trotted in 3:34, which I consider very good with so very little handling. What is wanted in this district is trotting-bred mares for brood-mares, and if a few of our breeders would only form a joint stock association, and purchase good, well-bred mares, in a very few years Palo Alto would not be such a terror as it is now. As a rule there is no business firm but can be equalled by another, and it surely will apply in breeding. There is any quantity of data to refer to, and the families that have nicked together and produced the most and best trotters, are the ones to commence with. Allow no scrub mares in the breeding paddock. Good ones or none, should be their motto. Below you will find a list of mares served by Singleton, season of 1883:

Chestnut mare Elaine, by Reavis' Blackbird, dam Hattie Bay, by Billy Cheatem, J. T. McIntosh, May 27th.  
Black mare Mollie, not traced, Capt. Morrison, February 15th.

Black mare, not traced, W. Mathewson, Durham, February 19th.

Black mare, by Laucet, dam not traced, W. Mathewson, Durham, May 12th.

Grey filly, 3 years, by Buccaneer, dam by Golden Eagle, by G. M. Patchen, Jr., J. T. McIntosh, March 12th.

Black mare, not traced, Ab Merrill, Orland, May 7th.

Brown mare, not traced, John Crouch, Butte City, March 14th.

Black mare, not traced, John Crouch, Butte City, April 24th.

Chestnut mare Belle, by Tilton Almont, dam by Lammux, J. Spurgeon, Nelson Station, April 17th.

Chestnut mare Julia, by Blackstone, Jr., dam by Vermont, sire of Ella Lewis, J. T. McIntosh, April 15th.

Bay mare Exact, by Prompter, dam Katie Signal, by Signal, second dam by Illinois Medoc, J. T. McIntosh, April 22nd.

Brown mare Josephine, by Gen. Reno, dam Morgan Mare, Jas. Hasty, Chico, April 23d.

Brown mare Bessie, by Reavis' Blackbird, dam Kate Signal, J. T. McIntosh, March 25th.

Bay mare Peggy, not traced, Dan Mathewson, April 23d.

Bay mare, not traced, Mr. Weston, Colusa, May 27th.

Bay mare Rena, by Gen. Reno, dam Kate Signal, J. T. McIntosh, Chico, May 20th.

Roan mare, not traced, Jas. Morehead, Chico, April 3d.

Chestnut mare, not traced, J. St. John, Chico, April 11th.

Chestnut mare, by Reavis' Blackbird, dam not traced, Jas. Montgomery, Caua, April 29th.

Bay mare, not traced, Mr. Parks, Nelson Station, April 13th.

Grey mare, by Henry Wilson, by Reavis' Blackbird, dam Jenny, by McCracken's David Hill, Mrs. G. F. Jones, Chico, April 14th.

Bay mare Minnie, by Harkaway, by Billy Cheatem, William Mitchell, Nelson Station, April 14th.

Bay mare Lottie, by Whalen's Edwin Forrest, dam by Flaxtail, by Pruden's Blue Bull, Lon McIntosh, Chico, May 30th.

Bay mare, by Harkaway, dam not traced, Ben True, Chico, April 15th.

Bay mare, pedigree given but not down in book, John Boggs, Colusa, April 28th.

Bay mare Alexandria, by Alexander, by G. M. Patchen, Jr., dam the old Jessie Wall Mare, J. T. McIntosh, April 25th.

Bay mare, pedigree given but not down on book, F. A. Schafer, Gridley Station, April 26th.

Brown mare, not traced, Jas. Abrams Mason, Chico, April 29th.

Bay mare Kate, not traced, Tim Barnard, Chico, May 8th.

Bay mare, pedigree given but not down on book, John Boggs, Colusa, May 9th.

Chestnut mare Jenny, by McCracken's David Hill, dam not traced, Mrs. G. F. Jones, Chico, May 10th.

Brown mare, not traced, Jas. Decker, Chico, May 11th.

Bay mare, John Boggs, Colusa, May 15th.

Brown mare, Wm. Hawkins, Chico, May 14th.

Black mare, not traced, Chas. Ball, Chico, May 18th.

Chestnut mare, not traced, E. J. Cartright, Grainland, May 24th.

Black mare Kate, by Frank Tollman, by Vermont, dam Kate Signal, J. T. McIntosh, Chico.

Grey mare, not traced, Mr. Dillie, Chico, May 25th.

Black mare, not traced, Ab Merrill, Orland, May 26th.

Black mare, not traced, Jas. Moorehead, Chico, June 14th.

Black mare, not traced, P. Gwynne, Chico, May 2nd.

Chestnut mare, not traced, P. Gwynne, Chico, May 11th.

Bay mare, by Miller's Abdallah, dam not traced, E. J. Cartright, May 20th.

Chestnut mare, not traced, Wm. Mott, Grainland, June 5th.

Mr. McIntosh has commenced his mile track and expects to have it finished by the first of February. He has quite a string of colts and fillies, yearlings and two-year-olds, and some of them are showing considerable speed. Ackerman, the pacer, is running out to grass in day-time, and has spread out and looks ever so much larger than he did last fall. Telegraph, who downed his stable and everyone else in the special race at the State fair, has been blistered, and, like Ackerman, turned out day-time. Green feed is good up here, and they will have their blood well cooled out by the time they are in shape for fast work. In my list of stallions I forgot to mention two very promising Buccaneers; one of them is owned by Jas. Hasty, by Buccaneer, dam Josephine, by Gen. Reno, second dam by John Morgan. Ralph T. owned by Ben True, by Buccaneer, dam by Harkaway, by Billy Cheatem, by Cracker, by Boston. Mr. John McIntyre is handling Mr. Reavis' stable, and rumor hath it that two of their two-year-olds are simply wind splitters, nothing like them for speed was ever known in this section before. I think they will meet some here this fall. When the race is over both parties will know that they have been to a horse race. OCCASIONALLY.

Chico, January 20th, 1884.

"Yes," said the Vermont deacon, "I always go down to the camp-meeting, and always come back feeling good. Do you see that magnificent bore there in the field? Well, you ought to have seen the old plug I took down there."

## Some Strange Freaks of Breeding—Also a Few Odd Notions of the Writer.

EDITOR BREEDER AND SPORTSMAN:—From one of my medical journals of a late date I quote the following odd freak of nature:

"In a certain farming community of southern Ohio it was the custom of the neighborhood for farmers to render assistance to each other in threshing time, sometimes using the same set of horses for six weeks or two months, or until the grain in that neighborhood was threshed. A favorite mare (the used, three to four months with foal, while feeding one day, was startled by an unexpected noise, which caused her to throw up her head with great violence against the sharp edge of a squared beam, thereby cutting an ugly gash across the forehead just above the eyes. In due time the colt appeared, having an ugly looking scar corresponding in situation to the injury on the dam, and was totally blind from cataract of both eyes, but otherwise healthy and well formed. It was kept in a field of six or seven acres, and with intervals of rest, would continually travel in a circuit corresponding in diameter exactly to the circuit traveled over by the mare while hitched to the machine. It was permitted to live some six months, making its ceaseless rounds night and day, when mercy put an end to its miserable existence."

This is a very strong example of maternal impression on the unborn offspring, and should excite the sympathy of all who read. How far the impressiousness of the mind of the mother can influence the nature, form, and even color of her offspring while in *utero*, has never been fully ascertained by physiologists. Away back in the early days of the Jewish family we find a pronounced case of maternal impressions, for we read in Genesis, thirteenth chapter, from the 27th to the 43rd verses, an interesting account of Jacob's dealings with Laban, and we are taught that Jacob placed different colored poles before the watering places of his flocks, and the flocks conceived before the rods and brought forth ring streaked, speckled and spotted, and the flocks of Jacob increased much faster than those of his father-in-law, Laban. The family of the writer, who reside in England, have time out of date made the breeding of horse for circus use a specialty, and they are able to breed almost any colored animal they see fit. Many of the so-called Arabian horses seen in our circuses—and more especially was this the case years ago, when these animals were all the rage—were bred by my relatives in England. Spotted horses, striped horses, clear white animals, and those that were "black and all black," have been and are being bred to a shade by this family.

I well remember a bright bay mare belonging to my father that was with foal to a son of my Leviathan, who occupied a stall adjoining that of an old sorrel gelding who had seen many years of service on the flat, and at last over hurdles. The mare and horse were continually at war, biting the partition and kicking the end of the stall planks. This state of affairs continued until spring arrived, when the mare was turned out in a small pasture, where in a few weeks she gave birth to a sorrel horse colt, marked exactly after the old gelding, and to this day, although a horse of many years, the same habits of kicking the end planks of the stalls and biting the side planks cling to the animal. It matters not whether the adjoining stalls are occupied or not, the work goes on whenever the animal has a few days' rest. During steady employment he very rarely indulges in these freaks, except occasional attacks during the night, but during the winter months, when he is taken from the stable only at rare intervals, he makes music for the neighborhood, and many a night have I lain awake longer than common on account of the disturbance he created. For a long time I tied him with two halter straps, and fastened a chain to his ankle, but one would fancy he was within sound of a prison house, or else haunted by some wandering ghost, as he listened to the ominous rattle of that chain as it clanked against the side of the stall. I have in mind the case of a quarter-bred Percheron-Norman mare that may possibly be of some interest. This four-year-old mare gave birth to a very large filly, which was sired by an imported Norman stallion. For several weeks the young mother showed signs of severe labor, and could scarcely walk straight. Two months after foaling, having regained her strength, as it was supposed, the mare was bred to a roaster stallion, and in two weeks again received the embraces of the horse; a third time was the mare bred. An interval of nearly two months was then passed, and for the fourth time did the mare in question seek and accept the cover of the stallion; yet, exactly eleven months from the date of the first intercourse a strong, healthy bay horse colt was born. The only reasonable theory that I can produce regarding this unnatural desire for amorous connection is the one that, from exhaustive and probably unnatural labor, the generative organs became the seat of disease, and when brought in contact with a stallion the unhealthy functions caused the mare to encourage and accept the attention of the horse. Perhaps I am wrong; if so, I should be pleased to have my ignorance dispelled by the assurances of those who are better able to arrive at rational conclusions. During the twelve years that I have paid more or less attention to the breeding of horses I have never read a satisfactory article on the period of gestation of the foal. The query often arises, are there no pathologists among the many men who are making the practice of veterinary medicine the means of obtaining notoriety and a livelihood? We read endless numbers of papers on laminitis, on diseases of the foot, on colic in its various forms and attendant consequences, on the great bot theory, on feeding and caring for the horse in health, but seldom do we read a practical article on maternity and its many dangers, or labor, with its series of complications. I believe that the treatment which a mare is subject to during the months of her foal-carrying has much to do with the nature, strength and usefulness of the colt, for I know that abuse will tend towards producing a sulky, ill-natured offspring, and if kindness ever receives its reward it is when shown to a mare well along in the period of foal carrying. Yet how many men who possess brood-mares over take the time to think of this subject. COLUMBUS.

Mayview, Kansas, January 10th, 1884.

That famous four-year-old stallion Anteo, whose trial in 2201 we recently noticed, has been disposed of by Mr. J. C. Simpson, of San Francisco, Cal., to The Santa Rosa Stock Company, for \$10,000. As then explained, the trotting elements in his pedigree are Hambletonian, Clay, and Blackbird, founded on thoroughbred lines from Bonnie Scotland, Monarch, and Trustee. To the observant, it must be quite evident that the blood of Henry Clay develops speed early, especially when united with the Hambletonian or Mambrino Chief strains. Then we find that the blood of Bonnie Scotland and Trustee has strong trotting tendencies, with great endurance and the quality of training on. We are, therefore, inclined to believe that Anteo will be a brilliant success in the company's hands.—N. Y. Spirit.

## Sources of Power and Speed in the Horse.

The *Live Stock Journal* thus discourses on the "sources of speed and power in the horse," and while in the main true there is one source entirely overlooked. That is the force which is beyond human power to measure, and there may be indications, they are far from reliable. Many have puzzled over it, and though there have been various theories, all still leave the subject in darkness nearly as profound as when attention was first directed to the matter. Still, too much attention cannot be given to muscular development, both in the selection of the proper parentage and by a system of rearing and training that will aid in bringing the inherited tendency as near perfect as possible.

We talk of nerve, of brain power, but after all must come back to the fact that these influences come to naught unless there be suitable structure to act upon. Up to a certain limit it is proper, with suitable qualifications, to talk of "nerve force" and "trotting instinct."

Machinery and mechanical appliances of every kind are mere imitations of and copies from nature. The movements of machinery have their counterparts in the human system, and what is true of this has an equally apt illustration in the mechanical structure of the horse. Thus, Vesalini, who was more nearly than any other the father of anatomy, though born as late as in ours of the early years of the sixteenth century, taught that the human body was the greatest piece of mechanism known to man. In all the elements of motion, the study of the mechanism of the horse proves him to be the equal of his master, and in the matter of strides and rapid propulsion greatly his superior. A comparison of the ankle joint with the lever invented by man shows that he has unwittingly copied from the former. The bodies of both men and horses contain several true pulleys, the patella, or knee bone, over which the ligament plays when the body is in motion, simulates the action of the pulley. Any man has the privilege of altering the relative proportion of the parts of the horse's formation, through selection in coupling, as his constructive genius as a breeder may suggest.

A phenomenal trotter of the past season was found, upon critical examination, to have a deep, slanting shoulder, the muscles of which are well developed, but the muscles upon the front part of the fore leg were developed in a marked degree, thus aiding very much in the knee action. In conjunction with this the sternum extends deep down between the fore legs, holding a straight line back to the lower line of the belly, in place of curving up, as is usual at the girth point. This insures the insertion for the point of the long rib low down, thus giving greater length to the ellipse which contains the lungs. The muscles of the hind quarter are large and extend deep downwards, forming great depth to the ham. These special muscular developments and large lung room are associated with a light-weight body, an important element in the make-up of a fier.

The muscles of the horse that takes but little exercise are soft, and lack size, and are correspondingly weak. It is said of such a horse that he lacks wind, though really his lungs may be perfect. A large accumulation of fat in the abdominal space and about the muscles of the chest, prevents, in the one case, a free action of the diaphragm backwards, thus curtailing the lung space at their base. In the other case, the muscles of the chest are impeded in their movements, and respiration has not the free play seen in the horse whose muscles are clear of the adipose load. Training removes the adipose accumulation, reducing this to the minimum, while, at the same time, if properly conducted and continued for a period efficiently extended, the muscles are developed to their maximum.

It is a rule that has no exception in the case of human beings, that free exercise of any particular set of muscles, long and systematically applied, will develop them out of proportion to other parts, and they become, in proportion to this development, capable of extraordinary exertion. Any rule which is established in this way has an equal application to the horse, and a stout mare of thoroughbred racing lineage that has those muscles which come into play in the trotting gait largely developed, and shows a fair tendency to trot, may, if bred to a trotting sire of merit, bring a more promising progeny for the gait named than a so-called trotting-bred mare with those muscles deficient that come into vigorous action in the trotting movement.

## Americans in England.

The *English Racing Calendar* contains some of the nominations made for the spring handicaps, which closed on the 1st. Those published include the entries for the Newmarket, Ascot and Epsom events. In round numbers the total entries seem to be larger than last year, the City and Suburban showing 79 as against 66 last year, and the great Metropolitan 39 as against 34. The nomination of American-bred horses is smaller than for some years past. Those entered for the City and Suburban are Mr. Keene's Blue Grass, Mr. Walton's Girofle, Mr. Cannon's Sachem, Sir J. Willoughby's Gerald, and Lord Ellesmere's Abbotford. For the great Metropolitan the nominations include Girofle, Sachem, and Mr. Lorillard's Comanche. Mr. Walton has also nominated his English horses Suttler, Deceiver and Hopeful for the City and Suburban. In fact, the whole of the English lot are remarkably promising, and the weights assigned them will attract considerable attention, including, as the list does, such horses as Géhemmus, St. Blaise, Hauteur, Thebais, Elzever, Hackness, Tonans, Bendigo and Medicus. None of the Americans are nominated for the Ascot Gold Cup, but the prospects are that it will be a great race, for the nominations include Tristan, last year's winner, Thebais, Bendigo and the two great three-year-olds St. Simon and Duke of Richmond. Among the nominations for the Epsom Two-Year-Old Plate are Mr. Keene's English colt by Cremorne, dam Rustie Queen, and Mr. Walton's Harold.

For the Newmarket Stakes the American nominations are even smaller than at Epsom, and seem to be confined entirely to Mr. Keene's American Girl and Blue Grass in the Bannbury Stakes, to be run during the July meeting. The Newmarket Handicap, in which Parole made his debut in 1879, has nineteen subscribers, including "Mr. Manton's" Corrie Roy, and as she has nominated Thebais and Keir for the same event, it will be due to the handicapper if the "all clear" is not in front at the end of the race. The same three are also among the nominations for the Ascot Gold Cup, to be run June 10th, among which are Mr. Keene's Bolero and Blue Grass, but not Mr. Walton's Girofle, which would seem to indicate that the daughter of Leamington and Ratan will not be trained for "cup" honors this year. Bolero and Blue Grass are also nominated for the Alexandra Plate, at three miles, the winning of which would be an honor, but scarcely possible, considering that the English lot includes Faugh-a-Ballagh (last year's winner), Trietan, Corroy Roy and several sealed nominations.

## The 2:20 List.

2:10 1-4.

Maud S., cb m, by Harold, dam Miss Russell, by Pilot, Jr., at Rochester, N. Y., August 11th, 1881.

2:10 3-4.

Jay-Eye-Sae, blk g, by Dictator, dam Midnight, by Pilot, Jr., at Providence, R. I., September 15th, 1883.

2:11 1-4.

St. Julien, b g, by Volunteer, dam Flora, by Sayres' Harry Clay, at Hartford, Conn., August 27th, 1880.

2:13 1-4.

Rarus, h g, by Coulkin's Abdallah, dam Nancy Awful, by Telegraph, at Buffalo, N. Y., August 3rd, 1878.

2:14.

Clingstone, b g, by Rysdyk, dam Gristeben, by Choroos, at Cleveland, O., July 28th, 1882.

Goldsmith Maid, b m, by Alexander's Abdallah, dam by Abdallah, at Mystic Park, Boston, September 2nd, 1874.

Trinket, b m, by Princeps, dam Ouida, by Rysdyk's Hambletonian, at Morrisania, N. Y., September 22nd, 1881.

2:14 3-4.

Hopeful, gr g, by Godfrey's Patchen, dam by the Bridham Horse, at Minneapolis, Minn., September 5th, 1878.

2:15.

Lula, b m, by Alexander's Norman, dam Kats Crockett, by imp. Hooton, at Buffalo, N. Y., August 10th, 1875.

2:15 1-4.

Smuggler, b s, by Blanco, son of Iron's Cadmus, dam a pacing mare, at Hartford, Conn., August 3rd, 1876.

2:15 1-2.

Hattie Woodward, h m, by Aberdeen, dam by Henry Clay(?), at Buffalo, N. Y., August 7th, 1880.

Phyllas, b s, by Dictator, dam Betsy Trotwood, by Clark Chief, at Cleveland, O., August 1st, 1883.

2:16 1-4.

Lucilla Goldust, b m, by Goldust, dam a pacing mare, by Bald Hornet(?), at Rochester, N. Y., August 10th, 1877.

Wilson, b g, by George Wilkes, dam Miss Coone, by Clark Chief, at Cleveland, O., August 1st, 1883.

2:16 1-2.

American Girl, b m, by Amos' C. M. Clay, dam unknown, at Albany, N. Y., September 25th, 1874.

Darby, b g, by Delmonico, dam unknown, at Utica, N. Y., August 22nd, 1879.

Edwin Thorne, ch g, by Thorndale, dam Lady Lightfoot, by Ashland, at Chicago, Ill., July 21st, 1882.

Jerome Eddy, b s, by Louis Napoleon, dam Fanny Maps, by Alexander's Abdallah, at Buffalo, N. Y., August 3rd, 1882.

2:16 3-4.

Charley Ford, gr g, by McKesson's Gray Eagle, dam unknown, at Chicago, Ill., July 23rd, 1880.

Occident, br g, by Doc, dam unknown, at Sacramento, Cal., September 17th, 1873.

2:17.

Clemmie G., ch m, by Magic, dam Ned, by Berkeley's Edwin Forrest, at Mystic Park, Boston, September 19th, 1883.

Director, blk e, by Dictator, dam Dolly, by Mambrino Chief, at Cleveland, O., August 1st, 1883.

Fanny Witherspoon, ch m, by Almont, dam Lizzie Witherspoon, said to be by Gough's Wagner, at Hartford, Conn., September 5th, 1883.

Gloster, b g, by Volunteer, dam Black Beas, by Stockbridge Chief, at Rochester, N. Y., August 14th, 1874.

Majolica, h g, by Startle, dam Jessie Kirk, by Clark Chief, at Morrisania, N. Y., June 22nd, 1888.

2:17 1-4.

Black Cloud, blk s, by Ashland Chief, dam the Cluke Mare, by Capt. Walker, at Chicago, Ill., July 22nd, 1882.

Dexter, br g, by Rysdyk's Hambletonian, dam Clara, by Seely's American Star, at Buffalo, N. Y., August 14th, 1867.

Piedmont, ch s, by Almont, dam Mag Ferguson, by Mambrino Chief, at Chicago, Ill., July 19th, 1881.

So So, b m, by George Wilkes, dam Little Ida, by Edwin Forrest, at Hartford, Conn., August 26th, 1881.

2:17 1-2.

Phyllis, br m, by Phil Sheridan, dam by Tom Sayers, son of Canadian Grey Eagle, at Mystic Park, Boston, September 19th, 1883.

Robert McGregor, ch e, by Major Edsall, dam Nancy Whitman, by American Star, at Fort Worth, Texas, November 23rd, 1883.

Santa Claus, b s, by Strathmore, dam Lady Thorne, Jr., by William's Mambrino, at Chicago, Ill., July 19th, 1881.

2:17 3-4.

Duqueena, ch s, by Tippe Baebaw, dam Wild Roe, by Rysdyk's Hambletonian, at Pittsburg, Pa., July 27th, 1883.

Hannie, ch s, by Mambrino Pilot, dam Lady Stewart, at Hartford, Conn., August 26th, 1880.

2:18.

Dick Swiveller, b g, by Walkhill Chief, dam Madam Swiveller, by Sayres' Harry Clay, at Utica, N. Y., August 22nd, 1879.

Edwin Forrest, b g, by Brannock's Ned Forrest, dam Fanny Munday, by the quarter-horse Smiling Tom, at Utica, N. Y., August 14th, 1878.

Great Eastern, b g, by Walkhill Chief, dam Reilly's son of imp. Consternation, at Buffalo, N. Y., August 2nd, 1878.

Judge Fullerton, ch g, by Edward Everett, dam unknown, at Cleveland, O., July 28th, 1875.

Kate Sprague, br m, by Gov. Sprague, dam Fau, by Lance, at Rochester, N. Y., August 10th, 1881.

Nettie, b m, by Rysdyk's Hambletonian, dam the County House Mare, by Seely's American Star, at Beacon Park, Boston, September 11th, 1874.

Protein, h m, by Blackwood, dam Sally Choister, by Mambrino Choister, at East Saginaw, Mich., June 19th, 1879.

Red Cloud, b g, by Legal Tender, dam unknown, at Buffalo, N. Y., August 7th, 1874.

2:18 1-4.

Lady Mand, br m, by General Knox, dam Fanny, by Sabek, at Rochester, N. Y., August 11th, 1875.

Lady Thorn, h m, by Mambrino Chief, dam by Gano, at Providences, R. I., October 8th, 1869.

Maid Messenger, b m, by Messenger Chief, dam Eliza Jane, at Lexington, Ky., October 9th, 1883.

Nancy Hackett, m m, by Wood's Hambletonian, dam Hackett Mare, dam of Argonaut, 2:23 $\frac{1}{2}$ , at Buffalo, N. Y., August 3d, 1878.

Orange Girl, b m, by Rysdyk's Hambletonian, dam Dolly Mills (dam of Walkill Chief), by Seely's American Star, at Columbus, Ohio, July 3d, 1880.

Propero, blk g, by Messenger Duroc, dam Green Mountain Maid, by Sayres' Harry Clay, at Poughkeepsie, N. Y., August 23rd 1877.

### Trotting at Oakland—Another Oregonian.

At the Trotting Park last Saturday there was an unwonted chill in the air, and overcoats were not amiss. There was quite an attendance at the trotting race between Laura M., B. B., Nellie Burns and Vanderlynn, as it was expected the contest would be close. In this there was no disappointment as it proved very close indeed, as, when three heats were trotted Laura M., B. B., and Vanderlynn had each one to their credit, and in the fourth it appeared as though Nellie Burns had a good chance to place that to her credit. Vanderlynn was handicapped to a wagon so that when the pool sales opened Laura M. was the favorite, bringing \$45; Vanderlynn close after her at \$40; B. B., \$26 and Nellie Burns, \$21. As usual, the speculation was brisk and a good deal of money went into the box before the horses were started. The placing gave B. B. the pole, Laura M. had second position, Vanderlynn, third and Nellie Burns outside.

First heat.—Three of the horses were in line when the gong sounded, the driver of Vanderlynn "nodding for the word" when a few lengths in the rear. B. B. broke soon after, and the favorite cut out the work, with Nellie Burns second and Vanderlynn third, when the quarter pole was passed in 38 seconds. Laura M. retained the lead without being hard pushed, and at the half in 1:17 was two lengths in front of Nellie; Vanderlynn having made a bad break before reaching that point. Nellie Burns broke in coming down the stretch, and Vanderlynn took second position, when the leader went under the wire, with Nellie Burns third, the driver of B. B. not struggling after he saw that he could not win the heat; time—2:32. Laura M. was then such a favorite that she brought \$30, Vanderlynn, \$19, and the other two grouped \$9.

Second heat.—The second heat was exciting from start to finish. Laura M. led closely pressed by Nellie to the quarter in 37 $\frac{1}{2}$  seconds. Going down the backstretch Nellie gained the advantage, and was first at the half-mile in 1:16. The lead, however, was only a neck, and the advantage was not enough to equalize the loss of ground incurred by trotting on the outside around the turn. B. B. closed some of the gap, and Burns breaking the contest was between B. B. and Laura M. For the last furlong it was difficult to foretell which would get the best of it, but the black from Oregon, which the stable boys have dubbed Black Bart, managed to win by the length of his neck, in 2:29 $\frac{1}{2}$ —with Vanderlynn third. Still Laura M. was the favorite, bringing \$20; the field (B. B. and Nellie Burns) \$18, and Vanderlynn \$15.

Third heat.—The third heat showed another change. Vanderlynn broke soon after the start, and Laura M. and B. B. went past the quarter pole together in 38 $\frac{1}{2}$ . Those two led all the way along the backstretch, Nellie Burns third, and Vanderlynn a long distance. Laura got into the home-stretch first but broke, which gave B. B. the lead when the wagon horse came with a rush, carried B. B. to a break, and won the heat by a couple of lengths in 2:29. B. B. second, Nellie Burns third, and the favorite last. After this heat Vanderlynn was the favorite at the rate of \$25 on him, \$12 on the field, Laura having retrograded to \$9.

Fourth heat.—The fourth heat was sharp work between B. B. and Nellie Burns from the commencement to the finish, though B. B. led a trifle at the quarter at 38 seconds, and at the half in 1:14 $\frac{1}{2}$ . From there both horses trotted fast, and though the official time was 2:29 $\frac{1}{2}$ , many of the outside watchers made it a second less. Laura M. was third, Vanderlynn last. The pool-buyers appeared at last to realize that the webfoot had good chances to win, and as Nellie Burns was also coupled with him, the field brought \$40, Vanderlynn \$19, his supporters still hoping that he would be on his good behavior, and Laura M. now quite lame at \$3.

Fifth heat.—For the fifth heat all were on a line when the gong struck, B. B. taking the lead, with Nellie on his wheel at the quarter in 39 seconds. He increased the advantage at the half in 1:17, Laura M. being third. When part way down the turn Laura made a break, hobbled for a time as though she was going to fall, when her driver pulled her up. Though Nellie made a good effort, she was unable to reach B. B., who won the heat which gave him the race at 2:31. The prize was a purse of \$500—\$350 to the first, \$100 to the second, and \$50 to the third. The accident to Laura M. gave Vanderlynn second money and Nellie Burns third, for if she had trotted third in the last heat she would have been entitled to second. The injury was to the ankle of the left fore leg, while the previous lameness was in the right.

The winner is owned at Portland, Oregon, and is by Millman's Bell-founder, his dam said to be thoroughbred. He was thought to be so promising that it was the intention of his owners to have taken him East last summer, but an obscure lameness caused him being thrown out of training. What with the running of Jim Ronwick and Patsy Duffy, and the trotting of Nellie Burns and B. B. the Oregonians are quite jubilant over the victories. Though the winner was called "B. B." by the pool-seller, he was entered as Billy Barker.

#### SUMMARY.

OAKLAND TROTTING PARK, JED. 19th, 1884.—Purse \$500.  
Geo. Leiby's blk g Billy B. A., formerly Billy Barlow, by Millman's Bell-founder..... 4 1 3 1 1  
Ed Farrell's b g Vanderlynn (wagon)..... 2 3 1 4 3  
R. E. Burns' m Nellie Burns..... 3 4 3 2 2  
M. Rollins' ch m Laura M..... 1 2 4 3 ds  
Time—2:32, 2:29 $\frac{1}{2}$ , 2:29, 2:29 $\frac{1}{2}$ , 2:31.

And now, according to the Watsonville *Pajaronian*, the old trotter Chicago is to return to San Francisco, Thomas Kennedy having sold him to Dan McCarthy.

### Racing and Trotting at Oakland.

There was a trifle of chilliness following the fog Thursday, and though the sun shone brightly, there was discomfort in the shadows at the Oakland Trotting Park. There were two races on the hills, one being a dash of half a mile, in which were engaged the Oregon mare Lulu Riggs, Red Oak from Idaho and Haddington. This was the first to be decided, and though Red Oak and Haddington were acknowledged to be very fast, especially the Idahoan, the bettors fancied the chances of Lulu so much that the odds were \$20 to \$10 at the commencement of the pool selling, and before the horses were mounted the rate had increased to \$20 to \$7. The start was from the half-mile pole, and without much delay the horses were sent off fairly together, though Haddington had slightly the advantage. The others were so much handier at getting away, that they soon left him, Red Oak on the inside, making the pace exceedingly hot, and Lulu never permitting him to get far from her, crowded him so that the quarter was run in 23 $\frac{1}{2}$  seconds. This left Haddington seemingly out of the race by any number of yards, and when the two leaders were fairly entered into the straight run for home, there was slackening. But Red Oak was unequal to the strain, the mare getting her head in front before reaching the seven-furlong mark, and from thence she galloped along at her ease, if ease it can be called, when a half-mile is run in 48 $\frac{1}{2}$  seconds. The head of Red Oak was only a short distance behind, and Haddington closed a good deal of the gap, so that he was a good third at the finish. This equals the fastest time ever made in California, and is within a second of the fastest on record.

The trotting race proved to be one of the surprises that are so frequent in the sports of the turf and track. The starters were Roan Tom, Chicago and Ed. Roan Tom was a great favorite, owing to a reported trial in 2:34, the rates being at the opening of the pool sales \$20 on him to \$14 on Chicago and \$6 on Ed. So confident was the driver of Roan Tom of his ability to win that he never made a move for the first heat, which Ed. won in 2:46, Chicago apparently not being able to press him any faster. That the second and third in the heat were still thought to have the best show was evident from the betting, as after the heat the prevailing rates were \$20 on Roan Tom, \$10 on Chicago and \$4 on Ed. The second heat was slightly varied, Roan Tom essaying to wrest it from the "outsider," though he was unequal to the task, Ed. winning it in the improved time of 2:38 $\frac{1}{2}$ . At last the spectators appeared to realize that Ed. had a show, and the pools were \$30 on him to \$9 on Roan Tom and \$5 on Chicago. That this was a more correct estimate of his ability was made manifest as he won the deciding heat in 2:37 $\frac{1}{2}$ , with Roan Tom second, who ran the last hundred yards, and Chicago last. The winner is twenty years younger than Chicago, the latter rating as a twenty-five-year-old, and at one time ranked among the celebrities, and a fitting competitor for any save the very fastest. Sixteen years ago he trotted against Goldsmith Maid and American Girl at Chicago, and was never as far behind as in the heats to-day. He is a grandson of American Eclipse, a horse that was foaled seventy years ago.

### Skirmishing at Fresno.

How the horsemen of Fresno spent New Year's is thus recorded by the *Republican*:

It is estimated that over five hundred people went to the fair grounds Tuesday afternoon to witness the races. The weather being pleasant and the races quite interesting, everybody seemed to be getting a great deal of enjoyment out of the occasion.

Five horses were entered for the first race, a quarter-mile dash for a purse of \$45.50. Wild Bill was entered by Joaquin Cabrera; Baby, by George Scott; Daisy, by D. S. Terry; Stocking, by Jack Hanning; and Ralph, by I. Borden. Wild Bill won the race, and Cabrera took the coin.

The second race was a half-mile dash for two purses, first \$33, second \$17. Reel Terry was entered by D. S. Terry; Baby, by Geo. Scott; Prince, by Dr. Ball; and Trigger, by L. A. Blasingame. The race was an exciting one and closely contested. It was won by Reel Terry, Trigger taking second money. The two-mile trotting race was rather tame, D. S. Terry's Old Bones ambling around the course at an easy pace, and winning the race. There were two other entries, Betsy B., by T. R. Brown, and Ball's colt.

The Fair Ground Association has made arrangements with Mike Ayres, late of the Visalia Racing Association, to take charge of the race-course.

### Singular Loss of Stock.

[Lake County Bulletin].

Mr. Stubbs, whose ranch is near the Sulphur Bank, lost six fine two and three-year-old colts last week, either by poison or by some peculiar disease, the character of which is not known. They were first observed to droop, though they would manifest some uneasiness by lying down and getting up again. Every effort was made to save them, but the treatment seemed to have no effect, and in from two to six hours from the time they were attacked death would ensue. Mr. Stubbs has taken one of the stomachs to the city to have the contents analyzed. The colts all died between the morning of the 26th, and the evening of the 28th of December.

### Growth of the Trotting Turf.

To give the reader a faint idea of the growth and importance of the American trotting turf, we have carefully compiled tables of the classes, purses, and winners of money in 1883, of the principal trotting tracks of the country. It is estimated that over three millions of dollars have been awarded the past year in premiums for trotting races. Probably half this sum is paid out by the 217 members of the National Association, and they do not represent more than a minimum of the grand total of trotting tracks.

Years ago, \$40,000 was an ordinary sum offered by the members of the Grand Circuit, but it must be borne in mind that trotting was not so widespread as at the present day. The total amount of purses paid out ten or fifteen years ago was an insignificant figure compared with the statement of 1883. There is scarcely a county in the Union that has not its trotting track, and so strong a hold has our national sport taken upon other continents, that Great Britain, Italy, Austria, and Australia have courses devoted to the horse that goes in harness.

In our tables we give the statistics for fifteen different places of meeting, which include the Grand Circuit members and several outside tracks who gave large purses. In the matter of awards, Chicago heads the list with \$45,760, awarded at the summer meeting. Cleveland and Buffalo follow with \$24,500 each, Hartford with \$23,000; Rochester, \$22,500; Providence, \$21,500; Pittsburg, \$18,000; Mystic and Beacon Parks, \$16,500 and \$16,000; Albany and Chicago fall

meetings, \$14,550 and \$14,500; Utica, \$14,000; Morrisania \$12,000, and Cincinnati \$7,300.

The grand total of purses paid at the seventeen meetings figuring in the tabulations was \$311,410. In all cases the purses offered were generous, and, as a rule, induced good races. The average amount paid at the seventeen meetings on 178 events was \$1,749.43.

Taking these statistics as an indicator, an idea can be formed of the enormous growth of the trotting interest. Many associations have the past year hung up purses aggregating all the way from \$5,000 to \$10,000. In fact, no track of any pretensions has offered less than the first-mentioned figure. The National Breeders' Association and the Kentucky Breeders' Association's annual meetings add no mean sum to the grand total for the year, and yield large returns to the winners. Both of these associations are doing wonders in fostering the trotting interest.

The minor circuits, while not offering very large sums individually, make a large showing in the aggregate. In 1883 the Philadelphia and Scranton Circuit offered \$19,500, the Ohio and Kentucky Circuit \$40,000, the Central Spring Circuit \$48,500, followed by the Wisconsin, Iowa, and Oil and Iron Circuits, with \$18,000 each. The total amount given at these meetings was \$162,000, which, added to the \$311,410 as per tables, makes a grand total of \$473,410, or nearly half a million of dollars.

These exhibits are encouraging to the breeder as well as the lover of the sport. Moreover, they are remarkable commentaries upon American enterprise, and strong indications of our national prosperity. In the natural order of things the coming season should be productive of still greater results.—*New York Sportsman*.

### Proposed Race Track at Watsonville.

An association of residents of this town and valley has been formed, having for its object the leasing of suitable grounds for a mile race track. A considerable amount of money has been subscribed, and as many active citizens are connected with the association, we believe the prospects are very good for the success of the movement. Two pieces of land have been mentioned as suitable for the race track, one being a part of L. Nugent's farm, the other the Sargent tract, near Pajaro. The land within the circle, if a track is leased, is to be cultivated and thus help to pay the rent. It is the intention of the association, if a favorable lease can be secured, to put up all necessary stables, stands and sheds, and make the track and grounds superior to any track south of San Jose. Being near the railroad, not far from San Francisco and other large cities, and in the center of the district circle of tracks, a race track in this valley should be a success. If the association perfects its plans, Watsonville can then lay some claim to the district fair occasionally—have it one year in Salinas and the next year here—and even if the fair is not secured we believe the establishment of a race track near town will not only encourage the breeding of a better class of horses, but will also be a benefit to the town.—*Pajaronia*.

### A Trainer Discusses Racing Rules.

The English idea of not giving a license to jockeys who own racers or an interest in a racer, seems to me to be as foolish as child's play, for a jockey can own not only one racer, but half a dozen, and the public not know it, and I deem it far better for a jockey to own a racer publicly than to own one secretly.

The jockey clubs make too many rules. They have more law than is needed. The chapters designed to prevent fraud or unfairness are as a general thing worthless. Any jockey fit to ride a scrub race can in a close contest place his horse so as to lose, and no one see anything unfair; and the trainer who cannot order a horse so as to run behind his form a second or more in the mile, is not fit to train a horse to good condition and will never get him there except by chance or accident.

Our English friends had better get up an iron-clad oath, and swear all the riders and trainers to "tote fair." I would hate like the devil to take it myself, but I could stand it while, I think, especially, when I have a horse that can't bear a steer unless the steer fell down. Horses can't talk, and trainers and jockeys can keep their secrets locked in their own bosoms; so the best that can be done is for the public to trust us all. All can't lose. Some one will get there first and in nine cases out of ten the public will know as much about the winner before the race is finished as the rider who has the mount.

The majority of the race-horses are so nearly equal that any one of them is liable to win or lose at any time, especially when raced every two or three days, as they often are. There is not half the fraud practiced that people believe still racing is not as fair as it ought to be, but the great amount of law to prevent fraud is idle, and the declaration that riders shall not own a racer is virtually saying that they are not fit to be trusted. That is the plain English of the resolution of the English Jockey Club. It has no other meaning. They may force Charles Archer to sell his horses in which case that Jockey will be apt to practice the role of the artist forty times hereafter to one single instance, when he whispered to his horse, in tones low and soft, heretofore, "go slow."

Better frame the iron-clad and hang it on the wall of the weighing room, and invite those who have faith in them selves to come and subscribe to it. I would rather sign it every day than be told that I was not honest enough to train my own horse and train one for another man at the same time, for that would imply that I could not be trusted under interesting circumstances. For that is what the English resolution says to Archer.

One more word and I have done. In regard to the amount of surplus rules and laws which I have alluded to I will mention the case of weights to be carried in the different races. At present no student of turf law can say what the weights of different ages are without holding the hook in his hand. The weighing judge cannot learn the scale of weight without shutting himself up in a room all winter and studying the lesson more earnestly than ever college boys examine the intricate problems found in the books at Yale and Harvard. This is all unnecessary as regards proper weighting and also the proper understanding of the rules in the case at different seasons of the same year.

I have always wanted to begin the colt weights at the beginning of the year, and put on one pound every month until the age of maturity. Say 100 in January for two years, 115 for three years, and 124 for four years. There is no other way to arrive at the proper and fair weight for horses of different ages to carry in their contests together. The three-year-old will have twelve pounds more at all times of the year than the two-year-old, and the four-year-old will, in like manner, carry twelve pounds above the weight of the three-year-old. The weight begins at the age of twenty-four months, and a gradual increase of one pound each month

## ATHLETICS.

### Regimen for Athletes.

Mr. L. E. Myers, who is now the athletic editor of the New York *Sportsman*, has commenced a series of articles in that paper on training. In the absence of any indication of copyright or other form of excision, we shall republish them for "the good that they may do."

For the last three or four years I have almost daily received letters from all parts of the country asking my advice about certain things connected with running, jumping, walking, and, in fact, athletics in general. Having taken some months ago the position of athletic editor of this journal, I have come to the conclusion that it will be of great help to the athletic public, the *Sportsman* and myself, to print in print my ideas about athletic training. In this way I shall in the future be saved much time and labor by simply referring the applicant to the issue of this paper containing the information he desires.

As I've stated in this paper before, I shall write principally for the beginner. Those athletes who have been in the field for years have all more or less profited by experience, and anything I may say, may or may not suit their cases, but even some of these will no doubt find some little "tips" which may benefit them.

**How to Begin Work.**—The first thing you must attend to is your stomach. If you commence violent exercise without having taken some kind of an opening medicine, you will most certainly be sick from it. I should advise as a purgative either rhubarb or podophyllin, to be followed, two days later, with about half a bottle of citrate of magnesia. On the third day commence gentle exercise, and be sure you have on plenty of clothing, or else a cold will be the result. In fact, this is the period at which you will certainly catch cold unless you are very careful. Do not in any event try to run fast for the first three or four days. I find it best to merely prance about the first week, practicing style and gracefulness. If you are a very heavy, fleshy man, do not commence by loading yourself down with sweaters, and trotting a long distance. Your muscles at this stage will not be hard enough to stand the strain, and if you try this you will be sore and stiff for at least a week. If you are, as I say, corpulent, take Turkish baths and long walks for about a week or ten days, by which time you will be ready to begin to work. When a person strips for the first time in the season, he naturally feels light and strong, and equal to almost anything. If you allow this feeling to carry you away and do too much, you will be thrown back in your work. How often have I heard men remark after the first day's exercise, "I can hardly walk upstairs; I'm sore all over, I don't think I'll strip again for a month, etc." It is during these "first days" that sprains, strains, and sick stomachs occur. Therefore, I advise you to "go easy" at first, for if you force yourself you will find that "the more haste the less speed."

All of the old-time theories about dieting have been more or less exploded. Eat anything that you find agrees with you. I would advise any athlete to eat good, wholesome food, avoiding such luxuries as pies, cakes, etc.

The old-fashioned theory of training on tea and toast, and a very little meat, etc., is now a thing of the past, and the change has certainly been for the better. Instead of the hollow-jawed, deep-set eyes which ten years ago characterized our runners and walkers, you now see men with clear eyes, ruddy complexions, and full, well-developed muscles. There is reason to believe if some of our old-time athletes had had the proper training they would have been able to have shown as good performances as our men of the present day.

Dieting seems to be a source of great concern to the beginner, even in these enlightened times. It is a common thing to see a young man of 17 or 18 years of age "training" for his first race in the following manner: He walks about 15 miles a day, eats nothing but rare roast beef, stale bread, and drinks only a little weak tea, runs his race about five times every night, and when he comes to the mark is so weak (partly through nervousness, brought on by doing too much work and eating too little food) that he is either last or very near it. I shall not take up first here how to prepare for a race, that will follow later on.

Of all the bad habits that an athlete can have, smoking is the worst.

Although there are exceptional cases where men smoke right along and still succeed in doing fair performance, there is every reason to believe were they to leave off this "luxury" that they would greatly improve upon their records. Some men claim that they must smoke "just a little." I should advise such men, if this is actually so, to smoke cigars, and not cigarettes. I candidly believe that the pale faces and dull eyes of the young men of to-day are greatly owing to the inhaling of cigarettes. Inhaling is just the thing nowadays, and if you are not up to the trick you are at once voted "no smoker." In short, if you want to become an athlete, do not smoke.

### A Squirring Wrestler.

The above is the caption of an article in the *N. W. World* which recounts the contest between Edwin Bibby and the "Jap" that was claimed to be the muscular star of the Mikado's dominions. Some years ago there was a long description in *Harper* of the Japanese wrestlers, with pictures showing their immense development of muscle, though it was evident that the delineator had mistaken adipose matter for muscle, and though there might be great strength, the activity claimed must be in the imagination of the writer. According to the highly colored account the dusky athletes were the foremost men of the world, who would find little difficulty in handling the best of Europe and America.

About twelve hundred people assembled in Irving Hall last night to witness a wrestling match for an announced stake of \$1,000 between Edwin Bibby and Matsada Sorakiche, a Japanese wrestler. Bibby is well known in this country. Of the Jap, it is said that he won fifty-six matches at the Mikado's tournament, and that caused Mr. Philip H. Kirby, an American resident of Japan, to bring him to America.

A hybrid kind of wrestling rules under the guise of catch-as-catch-can laws were decided on to govern the contest, two holdlers and a hip or two hips and a shoulder being necessary for a fall.

Bibby mounted the padded platform at 9 o'clock, accompanied by his umpire, William Hoefler. Matsada Sorakiche and Philip H. Kirby followed, and the Jap was greeted by cries of "What's the price of washing," "one dollee one plair clnee."

His jet black hair was arranged in a topknot, and he wore a plaid silk gown that he took off when ready to wrestle. He is stout and well built, is twenty-three years old, 5 feet 7

inches tall, and weighed 170 pounds. His opponent, Bibby, is thirty-five years old, 5 feet 4 inches tall, and weighed last night 155 pounds.

When the Jap had shivered from the cold, until his nut-brown skin had a bluish tinge, the referee called time and the crowd yelled "Go in, old Topknot." Bibby went to the center of the stage prepared to wrestle, but Sorakiche stepped only to the side of the padded portion, spread his legs far apart, put his right hand on his right knee, with his left hand in the air, stamped the floor with his feet and then made a spring for Bibby. The crowd was amused by the antics and surprised at the opening move of the Easterer and laughed and yelled.

Bibby surprised the Jap by catching him around the waist and throwing him flat on his back. The referee surprised Bibby by not declaring a fall.

Then the men squirmed all over the stage, Bibby endeavoring to obtain a hold and the Jap trying to avoid one. They rolled over and over, the Jap being on his back three times during the rushing and tugging. Then they got to their feet, and while the Jap was going through more amusing antics he was seized by Bibby, thrown into the air, and planted on his back. The time was 32s., but the referee said it was 3m.

After five minutes' rest the men went at it again, the Jap going through the antics of a Voodoo woman, and Bibby doing all the wrestling. In one minute the dark-colored back of the Jap was on the carpet, but no fall was decided; and then the jumping, squirming, tugging and rolling was indulged in again, and at the end of two minutes and ten seconds Bibby won the second fall of the match.

The *Herald* credits the Jap with more ability, and there is such a difference in the accounts that we copy both.

The ex-champion wrestler of America and the champion of Japan met for the first time at Irving Hall, last evening, and a shockingly sudden demonstration was given that the Jap was not in it at all. Matsada Sorakiche, the champion of Japan, has been used to wrestling in a nine-foot ring with men whose object it was to throw him out of it. As a majority of them failed and he threw the most of them over the ropes he thereby became champion. Catch-as-catch-can is a style he does not understand, and Bibby's experience in that school stood him in good stead last night. The Japanese, who is a much handsomer man than any of the wrestlers ever seen in New York, was quite over-matched by Bibby. The first bout lasted about thirty-nine seconds, when Bibby was on top of him and he had three points—two shoulders and a hip down. The Jap forced the work, and it was quite evident that it was not to be a hippodrome. Bibby had a decided advantage in the long hair of the unsuspecting Oriental, and in the first bout he tangled his hand in it in an ugly way and made Matsada wince. This is not allowed in the far East and was new to the Nagasaki champion. He was otherwise so roughly handled that he bled at the month. He was game to the toes, however, and in the second bout, which lasted about three minutes, he gave Bibby all he could do to get him down. Bibby succeeded, however, and won the match in two straight falls. It must not be supposed that because Bibby "did" him in such short order that the Japanese is not a good man. He is a good man, and with training and instruction in this style of wrestling he may yet give Bibby trouble. He was as ignorant of what he was to face as a baby. He does not understand English and his manager speaks very little Japanese, so his disadvantage was very great. The exhibition only lasted about ten minutes, intermission and all.

### Preparing for the Contest.

Harmon and Kittleman are both reported to be in good health and condition, and making satisfactory progress toward the perfection which their partizans expect to see when the sprinters strip for the race.

Harmon, under the advice of his trainer, has retired to San Jose, where he takes his work at the race track, and is protected against the visits of his numerous friends, who made his careful training a matter of difficulty while located at the Villa near the Bay District track. He is reported as doing finely.

Kittleman still continues to train at the Olympic Club grounds, in Oakland, where he goes every day, looked after carefully by Cortez Thompson.

Kittleman is entered to run in the Doncaster Handicap at Sheffield, England, next September, and will leave here in a week or so after this race for his home in Kansas, where he proposes to take a rest of four or five weeks preparatory to his going into training for that event.

In that race, the largest probably of the Sheffield Handicaps, Kittleman gets a handicap of 87 yards over Hutchens, in 132 yards. Only two Americans, Smith and McIvor, ever won a Sheffield Handicap, and that from the "Strangers mark," three-fourths of a yard more than Kittleman has. Harmon, when only 16 years old, ran in one of these celebrated handicaps, and won his trial heat, but was beaten in the final, the particulars of which we intend to describe in connection with a history of the Sheffield Handicaps and their winners.

### Hutchens Beats the Record.

Advices have just been received from Edinburgh, Scotland, where this acknowledged champion of the world, on January 2d, again beat his own record, which was the best for 300 yards, and which was 30 1/2 seconds. In this race at Powderhall grounds he ran his trial heat in 30 2/5 seconds, and won his final in even time, making the unprecedented record of 30 seconds for 300 yards, and breaking the record twice. Whew! even with such a representative as we have in Kittleman going over to meet him, it looks like "a hard game to tackle," don't it?

Morgan and Woodside, the bicyclists, are preparing for a wheel going from Chicago to San Francisco this spring. They claim that they are in earnest, and will ride their machines every foot of the way that the nature of the ground will permit. It will be a feat without precedent in bicycling, and will attract universal attention.

The kerosencycle is the newest thing in the "cycling" line. It is like the tricycle, but the propelling power is obtained by an engine located under the seat, in which a pressure is generated by the aid of kerosene oil and compressed air.

Mr. J. T. Wisdom of Baker city, Oregon, writes that his bay mare Ordinance by War Danco is permanently disabled and must be retired. This was the mare that was cut down by Fred Collier in the race for the Hotel stakes at Salt Lake, last spring. At that time it was reported that she was but slightly injured and would soon recover, but from Mr. Wisdom's note it appears that the hope was not realized. A War Danco mare is in request now for breeding purposes. Ordinance may be quite as valuable as ever she was in year or two more. She was foaled in 1878.

### A Northwestern Stake.

The Eastern Oregon Fine Stock Association closed a two-year-old stake on the first, to be run July 4th next. The nominations are as follows, and include colts from Oregon, Washington, Idaho and Nevada. The sires represented are Wildwood, Ballot Box, Marmaduke, Ophir, Compromise, Chesapeake, Osceola, and Monte Christo by Mulkey, Boise City, Idaho, ch c, by Wildwood, — Mattie, by Norfolk. Same owner, b c, by Wildwood, — Peggy, by Marshal McMahon.

Same owner, b c, by Ballot Box, — Jennie Rifleman, by Rifleman.

Thos. Smith, Idaho City, Idaho, ch c, by Marmaduke.

M. W. Lasley, La Grande, Or., ch f Elva R., by Ophir, — Betsey, by Langford.

Same owner, ch c, Oro, by Ophir, — by Langford.

John Yong, Walla Walla, W. T., — c, Villard, by Lodi, — Rosa Mansfield, by Rivoli.

D. M. Darrin, Fort McDermitt, Nev., — f Maud C., by Compromise, — Mollie Stockton, by Woodburn.

Alex. La Bnff, Union, Or., bf by Chesapeake, — Black Queen, by Osceola.

James Gentry, North Powder, Or., ch c Mosby, by Monte Christo, — by Dasher.

Same owner, ch f Pliny A., — by Monte Christo, — by Dasher.

M. Kissick, La Grande, Or., chf Seed/Wheat, by Osceola, — unknown.

J. T. Wisdom, Baker City, Or., ch f, by Chesapeake, — Jypsy.

Same owner, b f, by Chesapeake, — unknown.

J. H. Parker, b c Three Locks, by Monte Christo, — by Dasher.

### Winning Drivers.

The New York *Sportsman* offered a premium, last season, for the driver who gathered the most shekels, during the year, in regularly contested races, exclusive of matches and private prizes. The result is summed up as follows:

John A. Goldsmith: Director, \$17,400; Monroe Chief, \$300; Lanra M., \$150; Flight, \$200. Total.....\$18,050  
J. S. Campbell: Richball (pacer), \$12,350; Westmont (pacer), \$3,550; Sleepy Joe, \$1,250; Tempest, \$250; Eddie (pacer), \$500. Total.....\$17,900  
E. D. Bither: Jay-Eye-See, \$5,850; Phallas, \$8,100; Dixie Sprague, \$350. Total.....\$14,300  
O. A. Hickok: Overman, \$3,300; St. Julien, \$6,850; Wilson, \$1,000; Eva, \$1,665; Fairmont (pacer), \$500. Total.....\$13,315  
Wm. E. Weeks: Tony Newell, \$5,150; J. B. Thomas, \$3,650; Bessie M. (pacer), \$850. Total.....\$9,650  
John E. Truer: Edwin Thorne, \$4,150; Santa Claus, \$2,000; Cresco, \$600; Dick Organ, \$500; Cyclone, \$250. Total.....\$7,500  
Geo. W. Saunders: Clemmie G., \$3,000; George V., \$2,000. Total.....\$5,000  
W. H. McCarthy: Zoe B., \$2,750; Flora Belle (pacer), \$1,700; Mattie H., \$500. Total.....\$4,950

### State Fair Purses.

At a meeting of the Board of Directors of the State Agricultural Society held last Tuesday evening, the following programme of purses for colts was agreed upon.

Purse, \$1,000; trotting, mile heats, for two-year-olds.

Purse, \$1,000; trotting, mile heats, three in five, for three-year-olds.

Purse, \$1,000; trotting, mile heats, three in five, for four-year-olds.

Purse, \$1,000; running, mile dash, for two-year-olds.

Purse, \$1,000; running, mile and repeat, for three-year-olds.

Five per cent. entrance on the above purses to be paid March 15th, 1884, at which date the entries will close. The remaining five per cent. July 15th. Those not making second payment to be declared out and first payment forfeited. Five enter and three to start for moneys. If more than ten make second payment in either purse the society will add \$200 in addition.

### Dates of Racing Meetings.

The dates selected for the running meetings in the south and west are as follows:

New Orleans—April 14th to April 19th inclusive.

Memphis—April 23d to April 28th inclusive.

Nashville—May 1st to May 7th inclusive.

Lexington—May 7th to May 14th inclusive.

Louisville—May 16th to May 23th inclusive.

Covington (Latonia, J. C.) May 30th to June 7th inclusive.

St. Louis—June 11th to June 18th inclusive.

Washington Park, Chicago—June 25th to July 12th inclusive.

The Chicago Driving Park will hold meetings during 1884 as follows:

Spring Trotting Meeting—June 3d to 7th.

First Summer Running Meeting—June 20th to 25th.

Summer Trotting Meeting—July 4th to 12th.

Second Summer Running Meeting—July 17th to Aug. 19th.

Fall Meeting—October 4th to 11th.

### The State Fair Grounds.

The work of improving the grounds of the State Fair Association in accordance with the plan adopted last fall is progressing rapidly. All the buildings have been moved from the eastern portion of the grounds and placed in position in the southern part. The old machinery hall has been moved about on a line with Twenty-first street, and will be used for cottage stables. The sheep, goat and pig-pens and chicken-coops are placed about where they were some eight years ago, near Twenty-second street. The circular building amphitheater, has been placed where the large water-ank stood, which has been moved nearer the grand stand. The judges' stand has been moved up the stretch about sixty yards. Workmen are now engaged building cattle stalls around the outside of the first turn, on the roofs of which will be built seats that will be free to the public. If the changes in the track are completed in time, lessee Bob Allen will baptize it with some races on February 22d.

## HERD AND SWINE.

### Value of Privats Experiments.

The following from the *Live Stock Journal* is worthy of being thoughtfully studied by every farmer. It is not merely for his own benefit that he engages in experiments, as by making them known outside of his immediate circle of acquaintances he confers a favor on others, and his example induces others to make public what they have discovered, and in this manner there is a community of assisted interests. He may find in the trials and experiments of others, information that will save him a great deal of expense, and the example he sets he productive of bringing others out to his advantage. Experiment by all means, and still better, try new routes and report whatever discoveries may be made. Your failures may deter others from making the same blunders, your successes stimulate to other enterprises.

Well may the breeder of farm stock ponder in his mind Van Thaeer's remark, that he who makes but one useful experiment, even though it be of limited application, and reports it faithfully, advances the science, and consequently the practice of agriculture, and acquires thereby a right to the gratitude of his fellows and successors. Societies, certainly, in most civilized agricultural countries, are doing a great deal to help science by undertaking or directing systematic experiments, and by publishing the results. But how much more rapid might the advance of science be if the vast amount of brain power distributed over agricultural practice would take itself to a small extent for the public good.

In the passage immediately following that to which we have referred Thaeer suggests that, as the power to make many experiments belongs to comparatively few individuals, societies should prepare and distribute among their members the forms of experiments. This method of co-operation has doubtless great uses; but the point we desire now to consider, is the loss to science that occurs in the waste of independent observations, when these are neither recorded nor followed up by experiment. Every intelligent agriculturist, every intelligent stock breeder, in the course of his practice, finds himself under the constant necessity of mentally asking questions concerning the phenomena that come under his notice in the course of his daily business. Nature, indeed, herself proposes the questions to him. He, perhaps, reasons or ventures guesses upon them, but unless he can see a clear relation between the answers to those questions and an increase of his pecuniary profit, the chances are that he lets them pass without taking the trouble to test his surmises by experiment. In this way, he can scarcely hesitate to believe opportunities of valuable discovery are lost. Where would the steam-engine have been to-day if James Watt had waited for the promptings of some scientific society before he went to work upon the idea suggested to him by the behavior of his tea-kettle? Independent inquiry and private experiments have given to the world, probably, by far the larger portion of man's grandest discoveries.

Agriculturists, we know, are busy men, and most of those whose attention is devoted to stock breeding upon anything like a large scale find plenty of occupation for their time, but among them are men (we are addressing many such men) whose powers of observation and of reasoning may be turned to good account without hindrance to business. The mind may be usefully employed while the daily routine is directed, and experiments may be so ordered as to take place in the course of remunerative business. Usually, it would not be necessary to go out of that line. Suppose, for instance, that a breeder's observations led him to hope that he might discover a law by which sex, or a law by which color is determined: his experiments might very well work in with the ordinary course of breeding; they would be sources of mental pleasure to himself, relieving the more or less monotonous details of his calling, and possibly the means of gaining profitable knowledge.

The faculty of inductive reasoning, it may be said, in objection to these hints, must be cultivated for the discovery of natural laws, and that faculty perhaps rarely belongs to the class of mind best adapted to ordinary business. Without granting the latter proposition, we may say that if it were so, the business mind can at least take cognizance of facts; and by noting them, confirming by experiment the knowledge of them and carefully observing the circumstances in which they occur, can snatch from ordinary practice some of those data which are required by minds skilled in the method of induction, and thus afford aid towards the connection of events with their physical causes, under general laws of nature. An agriculturist may possess the qualifications to become, in his line, a philosopher. If such qualifications do not belong to him he still has great opportunities as an observer. The Japanese husbandmen, as shown in Dr. Maron's admirable report to the Minister of Agriculture at Berlin (*Annal. der Preuss. Landwirthschaft*, Jan. 1862) are all peasants, or yeomen, of the sixth or last but one class in the social scale. They have no agricultural institutions for instruction, no agricultural societies, no academies, no periodical press, yet, lacking our educational advantages; they have, by observation of facts, and the faithful reporting of the same by tradition, placed themselves practically among the most successful husbandmen in the world. The safe and uncontested practical application of their simple knowledge, Dr. Maron says, caused him to experience a feeling of deep humiliation when he thought of home. We need not, therefore, fail in courage on account of the mental furniture necessary to discovery, if we have eyes to read the lessons that nature is writing for us daily in the living characters of animals and plants. Not one of her parables should pass without a manly effort to understand it, whether that effort costs only a little labor of the mind, or the additional trouble of experiment. In the event of any gain or knowledge thereby, Thaeer's condition, faithful reporting, is to be remembered, if the discoverer would win his right to gratitude as a general benefactor of mankind.

### Red Hogs.

Col. F. D. Curtis, the fast friend of the Jersey Red, has, in the *Country Gentleman*, the following article on the past and future of the much discussed breed:

The past history of red hogs has been a mixed one. They have been bred for a long time without any standard, and breeders have followed their own inclinations, and made crosses to suit their own convenience, without any special standard or type to model them after. In New Jersey there has been a leading idea to make large hogs, and in this effort there has been great success, and the "Jersey Reds" have become famous in acquiring large weights. This has been accomplished to their detriment, so far as symmetry of form is concerned, or beauty of appearance as regards color.

been made upon Chester Whites, or other large hogs, so as to increase the size and give them large bone, with excessive extremities. This form of hog is not in conformity with aesthetic notions, nor with the demand of the general market. There is too much waste material in such an animal, and the eye of fancy is not gratified. They are engestive of too much food, and too long a time to mature. There is, however, in them the comforting reflection of vigor and hardiness, and capability to endure extremes and resist diseases. They are eminently fitted to cross upon the more delicate breeds, and to give stamina and increased growth to those which have been bred in a direct line until they have reached a condition when outcrosses were perhaps necessary to make them more profitable.

The "Durocs," another family of the Reds, have been finer bred by crossing upon the smaller breeds, but, except with a few breeders, there was no particular standard, and hogs were called "Duroc" which possessed dissimilar characteristics. Some had ears erect, and some were lopped. The latter form is undoubtedly the true type, as it conforms with ancient Berkshire form, from which all of the families of red hogs have descended. The association which has recently been formed by the breeders of red hogs has adopted a standard in which the lopped or drooping ear is made a characteristic, as also a medium size.

"The true Duroc-Jersey hog should be long, quite deep bodied, not round, but broad on the back, and holding the width well out to the hips and hams. The head should be small compared with the body, with the cheek broad and full, with considerable breadth between the eyes, none not fine nor yet coarse, but medium. The legs medium in size and length, but set well under the body, and well apart, and not cut up high in the flank or above the knee. The hams should be broad and full, and well down to the hock. There should be a good growth of hair of medium fineness, but few if any bristles at the top of the shoulders; the tail thick at the beginning, and tapering to a point; the hair unusually straight, but in some cases a little wavy. The color should be red, varying from cherry red, or even brownish, to light yellowish red, with occasionally a small fleck of black on the belly and legs. The darker shade of red without the black flecks is the type most desirable. Disposition gentle. When full grown, should dress from 400 to 500 pounds. Figs nine months old should dress from 250 to 300 pounds. The neck should be short and thick, and face slightly curved, with nose short, the ear rather large and lopped over the eyes."

As a matter of course, with the union of two families of dissimilar characteristics, there must necessarily be a wider margin in the working of the foundation stock, but after this is done the association will doubtless hold records closer to the standard and with the foundation stock of the members, safeguarding be interposed, that the variations shall not be too great, and exact description of each animal, with all of its markings, spots, etc., are required to be submitted to the society, and if the exceptions are too many the animal will be disqualified and also its posterity. This rule will shut out recent crosses, and insure as foundation stock the best blood in the country. All of the hog-growing States are represented in the association, and the Reds start off with a widely extended constituency. They now almost equal the white hogs in number in the stock yards of the west, and they only lack the smoothing and rounding which the type calls for to become competitors with the best.

### Raising Calves Without Milk.

A correspondent of the *Country Gentleman*, who speaks from experience on this subject, gives the following formulas which are simple enough and easily utilized. He says: I have sold a good many spare calves when a few days old to neighbors at times, and have always advised them to use my method when they have been short of milk, and some of these calves are now good family cows, which never tasted milk from the time they left my stables when they were a week or ten days old. The method is as follows: A few pounds of whole rye flour (that is, unbolled), is tied in a cloth tightly and boiled for ten hours. It is then put away in the cloth to cool. When it is cool, it is grated into flour on a large grater made of a piece of sheet iron punched full of holes with the end of a file. Put this coarse powder away for use.

One quart of corn meal, one pint of oat meal, and one pint of rye bran are put into a kettle with two gallons of water and boiled slowly for two hours. This is put away in the kettle. To prepare a meal, the kettle with the thin mush is put on the range and gradually warmed. Half a pint of the flour powder is put into a pot with a quart of water, and boiled until it is dissolved; a quart of the warmed mush, not stirred up, is added to it, and cold water added to make four quarts; a teaspoonful of sugar and one of salt are stirred in, and the drink is given to the calf milk warm. For a very young calf two quarts are enough for a meal, and it is better to give three meals a day than to over-feed it twice. The thorough cooking prevents scouring.

One cannot give raw meal to a young calf safely, as the young stomach cannot digest it. Nor would I give oil meal of any kind, as it is too rich to be digested. I have now a fine calf two months old, reared in this way, with about one-third skimmed milk added, milk being scarce because some is sold. The calf has never been scoured, or had any set back; and by actual training looks for its little mess of cut hay and meal—a real handful—when the cows are fed, and it eats it well and healthfully, and thrives and grows well, too. I have one cow now with her second calf, which was raised in this way, and she is as good as any I have, and not a cow which I now have, and I reared all of them, has ever tasted any milk but skimmed, after she was five days old. One of them made 675 pounds of butter from May, 1882, to December, 1883, and between two calves, now being about to calve again. This cow now has a heifer calf a week old, and is giving 18 quarts of milk daily, and is not yet up to her best. So that not only can good cows be reared without cream, but even without milk.

### Creameries and Their Value.

Mr. Geo. Lawrence, of Wisconsin, read an interesting paper on creameries and the dairy business at the late Farmers' Institute in Lafayette county, Missouri, in which he said:

This great industry is rapidly developing, but in such a manner that a permanency is insured. Parties starting creameries many times are fearful of over production, that our market will be overstocked with first-class goods. To such he would say: seventy years ago the first cheese was made in Herkimer county, New York, and sold for two cents per pound.

In 1810 the first American cheese was exported, and in ten years the export was 15,000,000 pounds, and the price ranged from 6 to 6½ cents per pound.

pounds amounting to \$16,380,240, and exports of butter 31,500,500 pounds amounting to \$6,256,024.

While cheese is a luxury butter is a necessity. But few use cheese while many use butter.

Creameries are a new departure. Since this enterprise started a few years since creameries have been built all over our land and prices not only increase, but the demand for first-class butter has equally grown. Where dairy butter brings from 10 to 20 cents per pound, creamery butter sells readily from 20 to 40 cents per pound. Not many years ago in Wisconsin wheat was king, and then three-quarters of our farmers were in debt, having mortgages on their farms drawing big interest, and nearly every crop was made second to wheat, and this crop increased to clear off the debts. But wheat was made an uncertain crop by chintz bugs, rust, the fly, drought and many other things. It was hard work to meet the interest on mortgages much less pay the principal; land was depreciating in value and fertility, the farmer discouraged, wives and daughters overworked, and no time to develop their minds, and everything seemed on a downward course. But since the advent of cheese factories about ten years ago, there has been a great change for the better. They furnished farmers a convenient and good market for their milk, and they increased their number of cows and hogs, fattening the latter on whey.

It is now estimated that over \$200,000,000 are invested in the dairying business in the United States, almost double the money invested in banking and commercial interests. It requires 15,000,000 cows to supply the demand for milk and products in the United States.

To feed these cows 60,000,000 acres of land are under cultivation. The agricultural and dairy machinery and implements in use are worth over \$200,000,000. The men employed in the business number 700,000, and the horses nearly 1,000,000. The cows and horses consume annually 30,000,000 tons of hay. It costs \$400,000,000 to feed these cows and horses. The average cow yields about 450 gallons of milk a year, giving a total product of 6,750,000 gallons. Fifty per cent of the milk is made into cheese and butter. It takes 27 pounds of milk to make one pound of butter and about 10 pounds of milk to make one pound of cheese.

### The "Cattle Pull."

What the race track is to many agricultural gatherings, the "cattle pull" is to a few New England fairs, and well it may be. The go-ahead Westerners are ill content with slow ox-teams; the more speedy horse, and machinery worked by horses, better suit their broad plains and their ideas. On the great pasture a steer is looked upon for the amount of round and sirloin steaks he will furnish, the dollars he will balance on the scales in the cattle pen and slaughter yard. Imagine a Maine boy telling his Western friend that his steers had gained six inches in girth, and earned their living while doing so! To the latter, the idea of a steer being compelled to earn his board is scarcely comprehensible. But in much of New England, especially among the pine trees of Maine, working oxen are appreciated, and at the shows dispute the claim to public attention with the fast horse that absorbs so large a share of admiration in other sections. Hence, the "cattle pull" is a feature in most agricultural exhibitions at the far East. It is a novel and interesting sight to one witnessing it for the first time—the level sward set off by a rope, and surrounded by an eager throng of anxious farmers discussing the points and merits of a favorite yoke of oxen, attached, or to be attached to a drag weighted with tons of granite slabs. The question to be decided is, which oxen, or whose, is to carry off the palm, by moving the ponderous load the greatest number of measured feet and inches—in other words, which breed, what strain, what feeding and care, what training have produced oxen that can supply the most strength when put to accurate comparative tests. The trials are of single pairs, and with several teams to show how they will pull together—an important point often.

You see the committee man mount the load, and he calls out, so as to be heard by the vast throng, "These cattle are owned by John Martin; girth, seven feet; weight of load, eight thousand five hundred pounds." At the word, the animals, as if conscious of their importance, and that their own credit and that of their owner is at stake, put forth giant efforts. "Fifty-six feet four inches," is announced. Half a dozen men add their weight to the load. "Twenty-three feet nine inches," is recorded. Another yoke takes its turn, but not yet trained to pull at command, and when unhitched, the load has not advanced an inch.

At last autumn's fair of York county, at Buxton, Me., an old dispute was to be settled between two farmers' yokes, one of which had been victorious at the N. E. Fair, and the other at the Eastern Maine State Fair. Both yokes were Buxton cattle; both girthed seven feet three inches, and never had St. Julien or Jay-Eye-See more ardent adherents than these bovines. The enormous load of over five tons (10,500 lbs.) was to be pulled over a grass stubble by a chain. The record of the victors was, twenty-four feet in twenty pulls.

### Chance for Dairymen.

There is, perhaps, no industry of so much importance to our well being and general prosperity that it is so completely overlooked as the dairying and cheese-making business, which can be and is associated with so much real profit where it has been inaugurated. The prices of butter range from sixty to eighty-five cents per roll by the cbest, while cheese vibrates between twelve and eighteen cents in large lots. It is a notorious fact that with all the dairies and cheese factories along the moist land down the coast, and the endless pasture ranges along the bottoms of the Sauta Ana between this city and Rincon, in the nooks and pasture ranges of our surrounding mountains, we are compelled to import butter and cheese from a distance, and probably consume our share of oleomargarine and other doubtful compounds that have been through a butter milk bath long enough to acquire the flavor.

We hope to see more attention paid to this industry, which holds out such great inducements for some of our enterprising friends from western N. Y. and the western Reservoir in Ohio, who know how to handle it and make it profitable. The low moist lands along the Sauta Ana could be turned into alfalfa pasture that would afford constant and nutritious feed the year round, and could be had now at a low figure.—*Riverside Press.*

Wm. M. Ayree, on his last trip to Oregon, purchased from J. A. Porter, the chestnut mare Trade Dollar, and she is now at Sacramento. Trade Dollar was foaled in 1876, and is by Norfolk—Eva Ashton by Ashland. She has been quite prominent on the turf in the North Country, and a winner at all distances, but at the close of last season her owner announced that her racing days were over and she would be bred this spring. This purchase by Mr. Ayree probably means that she will be trained again as the successor of Joe Howell, and the way the old veteran has rounded to this motive encouraged Bill to win his faith to the old one.

## STABLE AND PADDOCK.

### Stable Management.

It must be borne in mind that we do not indorse articles copied from exchanges, or the views of correspondents, and if especial attention is not called to the divergences, it does not follow that they are sanctioned. Impressed with the idea that the readers of the BREEDER AND SPORTSMAN think as well as perse, it is not held necessary to point out errors which are manifest, and in some respects a newspaper is like a bill of fare; a variety is placed before the guests, so that they can taste and select such portions as may please them. The following article, which was found in the New York *Sportsman*, is well worthy of perusal, if even some of the recommendations are faulty:

Since my earliest recollection, the want of discipline and tidiness in the management of stables in America has been a cause of worry to me. It arose from the fact that I was by nature born to love the horse, and consequently any want of attention or comfort that the careless owner or groom would show or provide for him grated upon my sympathetic nerves.

Until I visited England I had few or no opportunities of seeing just what treatment I conceived to be due to the horse. Therefore, my pleasures were so gratified that I made the question a study, and was never more contented than while going about the many great horse marts and private stables in London.

My first lesson, and most lasting impression, was received at the famous stand of old Mr. Tattersall, at Hyde Park corner. Armed with a letter to that great horse celebrity from the late Col. Wade Hampton of South Carolina, I took a hansom at the hotel, and drove to the above address. In a small office (in no way resembling the ones attached to American stables at that time), fitted up as neatly as any bankers, I saw seated at the back part a little old man, who I instinctively knew was the person I was looking for. The name of the introducer was sufficient guarantee, and I was greeted with that hearty shake of the hand which an Englishman knows so well how to give when the cause for it is sufficient, as it seemed to be in this instance.

"I have never had the honor and pleasure of knowing the 'Colonel' personally," said he, "but our business transactions have been numerous and always satisfactory; besides, I can never cease to be grateful to the 'Colonel' for his kindness to my own Richard, upon his visit to the States. Therefore, Mr. H—, consider yourself at home with and call on me for anything that you may think of or need, and as far as it is possible for me to do so, I will grant it."

I was naturally pleased at such a reception, and although a heedless lad, in a foreign land, I felt that I had at least one friend.

"Now," said Mr. Tattersall, "the first thing to be done is to walk through the stables and have a look at a superb lot of yearlings belonging to our most gracious Queen, which are here on exhibition before her annual sales."

One of the head grooms was ordered to accompany us, and as I looked at him in his close-fitting cassimere breeches and gaiters, and plain single-breasted Newmarket-cut coat, white scarf, and stable cap, I could not resist thinking of the dirty, slovenly darkey, who would have filled the similar position at home. Then, as we walked down the smoothly paved and sanded walks, between the rows of box stalls, I almost forgot that I was in the domicile of horses. But it was. When the door of box No. 1 was thrown open, and I beheld a highly-bred, thoroughly grown colt, standing on perfectly clean straw (of rich golden hue), and not an atom of offensive odors, or the sign of any dirt about, that I was perfectly charmed. In the corner of each box nearest the door lay a flat basket, in which to gather any droppings, and on the outside of the door stood a pail of fresh water, the hay forks, brooms, and tools for grooming the animals being kept in a room specially allotted to them. The stablemen were each dressed in corduroy breeches and gaiters, wore hob-nailed shoes, and (when not employed in grooming horses) white jackets. Each had certain duties to perform; there was no loud talking or laughing, and as we passed each one we were saluted with a touch of the hand to the hat. It has been so many years since this visit that I do not remember anything of the pedigrees of the thoroughbreds, or the exact number inspected, but wherever I went throughout the establishment, whether among bunters or coach horses, in the harness or feed rooms, or the coach-house, I was forcibly impressed with the perfect cleanliness, rigid discipline, and, above all, the common-sense knowledge as expressed by facts. The harness room contained saddles, harness, biting machines, all kinds of bits, bridles, and clothing needed about such a stable where horses were broken, handled and kept in exercise. There was no unnecessary show, though the contents of the room were as perfect as the Queen herself could have had them. The feed department interested me specially, as it is the great factor in the well-to-do of the horse. My friend and guide here spoke with apparent pride of the great care that he insisted upon in the selection and administering of the food. Taking up a handful of beautiful hay, said he: "Just smell that; take a few blades of the grass into your mouth and chew them; have you anything like that in America? Now look at these oats, as plump and round as were ever thrashed from healthy, well-grown sheafs. How can a horse fail to thrive on such grain? In the large him over there is the bran. Our climate is so damp that I do not keep much of that article on hand at a time, so as to be sure no sour stuff is fed to the horses. Up in the loft in the winter I have stored a good supply of carrots, but as the spring is advancing and grazing becoming good, of course, we feed comparatively few now."

Seeing a stable boy sifting a lot of stuff, all the while blowing a continuous hiss, I inquired of Mr. Tattersall what that meant.

"Oh!" said he, "every pint of grain fed in my stables is thoroughly sifted before being given to the horses, and even the hay, as perfect as it is, is dusted and not unfrequently sprinkled before feeding. The carrots are invariably washed and cut up, and under no circumstances is the bran or drinking water ever put in a pail that is not clean enough for me to drink out of."

I noticed the horses looked so slick, and wondered at the amount of labor that must be expended every day upon their toilets.

"Tell me something about that important part of the horse's life, Mr. Tattersall."

"You are correct about the importance of grooming, and I am exceedingly exacting about having it done thoroughly. My rule is about five horses to a man, and if he does his duty by them it is quite enough. The mode adopted in my stable is to clean with stiff brushes, using the curry comb only to

scrape off such matter as may by accident get upon the horse. After brushing, wipe thoroughly, and then rub off with cloths. The feet are kept as clean as possible by frequent washing, and about twice each week the fore ones are stopped with a mixture of fresh cow-dung and clay, and whenever the horses go out for exercise, their hoofs are lightly coated with neat's foot oil.

"The first duty of the groom in the morning is to remove from the stall or box any manure that may have been dropped during the night, take out the wet straw, and shake up the remainder, and thus bare the floor that it may dry. Then feed, and water afterwards. I never allowed the horses to be interrupted while eating, as I find that (if I did) they soon become irritable. As stablemen are often rough characters, I lay strict injunctions against ill-treating the horses, never permitting them to be hallooed at or frightened in any way."

By this time we had walked all around the spacious establishment, and I began to be glad the job was over, but upon reaching the office and tasting a glass of Mr. Tattersall's old "sherry," I felt more than glad. While in London I frequently called on the old gentleman, and always found him as polite as on the first visit. The very first gentlemen of the land were constantly to be seen there; in truth, none others could obtain the *entree*.

Further researches for knowledge in the mode of horse treating in England established in my mind the fact that Englishmen are the highest authorities on the subject. From Tattersall's to the stables of brewers, car, cab, and omnibus men, the wealthy peer, or green grocer, pretty much the same care and attention was paid to the horse, and, as a consequence, they live and render service a fabulous length of time.

I once rode behind a pair of "bus" horses from the Regent's circus to the Mansion House, which the driver told me had made three trips a day on that line for nearly ten years. In the country it is not uncommon to find coach horses and pony teams dating back their terms of usefulness even over a longer period of time.

It is not my intention to assume the position of censor or adviser to American horsemen, but I still see so much wanton and cruel neglect perpetrated (in this country) while caring for my favorite animal (the horse), that I hope by reviving an ancient interview with one of the most universally known of the brotherhood of his time, that I might call attention to the subject, and acting as an indirect reproach mitigate in favor of the horse.

### About Soundness.

It may be supposed that the hackneyed term "sound" is so explicit as to need no comment—and most people conceive it to be so; but the term "sound" really admits of as much contrariety of opinion as the word "tipsy" one man considers another so if, at ten at night, he is not precisely as cool and collected as he was at one in the day. Another one calls a man so when he lies on the floor and holds himself on by the carpet. So, as to soundness, some persons can not see that a horse is unsound unless he works his flanks like the drone of a bagpipe, or blows and roars like a blacksmith's bellows; while some are so fastidious as to consider a horse as next to valueless because he may have a corn that he never feels, or a thrush, for which he is not, nor likely to be, one dollar the worse.

So far as relates to such hypercritical deciders on soundness, we will venture to say that, if they brought us twenty reported horses in succession, we would find something in all of those produced that would induce each person to reject them, though, perhaps, not one among the lot had anything about him of material consequence. To say the least, we will venture to assert that nine-tenths of the horses now in daily use are more or less unsound. We make no reservation as to the description of horse, his occupation, or what he may be worth. We scarcely ever had, indeed scarcely ever knew, a horse that had been used and tried sufficiently to prove him a good one, that was in every particular unequivocally sound. We have no doubt that there are thousands of owners of horses who will at once say we are wrong in this assertion, and would be ready to produce their own horses as undeniable proofs, whereby to back their opinion and refute ours. They may, perhaps, say that their horses are never lame—perhaps not; that is, not lame in their estimation or to their eye; but we daily see horses that go to a certain degree indubitably lame, while their owners conceive them to be as indubitably sound. These horses, perhaps, all do their work perfectly well, are held as sound by owners, servants, acquaintances, and casual observers; but a practical eye would detect an inequality in their going, as a watchmaker would do the same in the movement of a watch, though we might look for a week, or listen for the same length of time, without being able to either see or hear the variation. The watch might, however, on the average keep fair time; but it would not be a perfect one; and what matters, if it answers all the purposes for which we want it? A really had watch that can not keep time is a different affair; it is pretty much the same with a horse. If the unsoundness is such as to render him unable to do his work, or even to do it unpleasantly to himself or owner, or if it is likely to bring him to this, our advice is to have nothing to do with him. If, however, this is not the case, or likely to be so, if you like him, buy him.

It is not improbable that a man may say, I begin to believe that few horses that have done work are quite sound; but a sound one I will have; I will, therefore, buy a four-year-old that has never done a day's work. We can acknowledge that if he does so he may probably get his desideratum; but do not let him make too sure of this. There are such things as four-year-olds unsound as well as worked. But, supposing him to have got this sound animal, what has he got? An animal that he has to run the risk of making useful, so far as teaching him his business goes; and by the time this is effectually done, and the colt has arrived at a serviceable age, he will probably be quite as unsound as many of those he has rejected; independent of which, and supposing him to continue sound, the breeder of this horse must have better luck or better judgment in breeding than his neighbors, if more than one in five or six that he does breed turn out desirable horses in every respect. If he turns out but a middling sort of beast, it is but small satisfaction to know that he is sound; in fact, so little satisfaction should we feel, that, if we were compelled to keep and use him, so far from rejoicing that he was sound, we should only regret that he was not dead.

In relation to the doings of dealers in horses, it is not our present object to expose the tricks of the trade, or to prejudice the unsophisticated buyer against all horse dealers. There are honest horse dealers, and there are dishonest ones; and we are sorry to say that, in numbers, the latter predominate; that honesty in horse dealing is not proverbial. But horse dealers, like other mortals, are apt to err in judgment; and all their acts should not be set down as willful wrong-doings.

However, be their acts what they may, the general verdict is against their motives. Therefore, supposing we could bring any person or number of persons to believe the fact that a man conversant with horses might sell, as a sound horse, one that might, on proper inspection, be returned as unsound, all that we could say or write would never convince the majority of persons that a dealer could innocently do the same thing. If his judgment errs, and leads him into error as to the soundness of his horse, it is set down, not as willful or corrupt perjury as to oath, but most undoubtedly as to his word and honesty.

### Influenza.

Dr. O. C. Farley, V. S., contributes to the New York *Sportsman* the following consideration of this affection so common in racing stables: Influenza, occurring as it does in so many forms, and often with such disastrous results, is prevalent every spring and fall among race-horses, more particularly after going into winter quarters. It is due often to the too sudden let-up in the regular course of training, and sometimes to a late season, bad tracks, etc. I have found that where horses have been given gentle exercise, such as trotting, cantering, or galloping, particularly the latter, and are thereby let-up more gradually, they are almost always entirely free from an attack of influenza, with the natural result of getting into flesh quicker, and, of course, wintering better. As to acute attacks, it is almost impossible to account for their origin, for such instances are common enough in the best regulated stables, and occur to the best cared for animals, from yearlings to aged horses. It occurs in such a variety of forms that it is often mistaken for something else, and treated lightly, with the result sometimes of a very sick horse, the malady perhaps taking the form of "strangles," or "purpura" (blood poisoning), where the head and all four legs swell to an enormous size, and the animal is often unfit to be put to work for months. In cases where the head and throat are affected (they very often are), the animal is sometimes left unsound in mind, unfit for racing, and seldom entirely recovers. I mention these results as the most common.

**Treatment.**—The quickest way to relieve an animal suffering from influenza is to clothe perfectly and thoroughly with wool, blankets, flannel bandages, and thick woolen jowl-wrappers to protect the throat, etc. The diet should be carefully attended to. Oatmeal gruel given when the animal is "drawn" in its water, and is good and dry; scalded feed, no dry, hard feed whatever, and a light laxative dose of medicine such as a pint of raw linseed oil, or two and a half drachms of Barbadoes aloes, with a drachm of ginger, made into a ball. Where there is any cough a light stimulant to the outside of the throat is beneficial, with the wrapper and food put right in after it, and the animal shut up and kept warm. In the majority of cases, where the laxative is given and the animal is perfectly clothed and kept warm, with attention to soft, easily digested food, the attack is broken up. Afterward to bring the animal back gradually to its accustomed feed.

An interesting letter appeared in Monday's *Courier-Journal* from Lexington, concerning the history of Woodburn, the fine stock-farm belonging to A. J. Alexander, consisting of 3,000 acres, and located in Woodford county. The letter states that these lands were granted to Hugh Mercer, of Revolutionary fame shortly after the war of 1812. The farm is located fourteen miles from Lexington, on the main road to Frankfort, and was purchased by Robert Alexander, a great uncle of the present owner, near the close of the last century. The Alexanders were the founders of pure-blooded stock, being the first Kentuckians who ever imported stock directly from England.

To procure a good coat on your horse use plenty of rubbing and brushing. Plenty of "elbow grease" opens the pores, softens the skin, and promotes the animal's general health.

Whenever a horse is washed, never leave him till he is rubbed quite dry. He will probably get a chill if neglected.

## FISH.

### What the Fish Commissioners are Doing.

At Truckee, on Saturday evening, where Fish Commissioners Dibble and Buckingham met a large number of mill-owners, the question of adopting some means to induce the trout to again frequent Truckee river, which is now almost entirely denuded of them, was discussed. A large number of addresses were made by the different millmen, to the effect that they desired the fish laws enforced, and would alter and remodel their dams in conformity with the law, and that the great trouble was not in California but in Nevada; that in that State the dams, or a large portion of them, are constructed on purpose to entrap the fish, and that while thousands of dollars are annually expended by this State for the propagation of fish, no benefit can be derived by our people as long as the Nevada fish law is not enforced. The commission will at once, according to their decision, open a correspondence with the Nevada authorities relative to the matter.

### The Wildcat Fishing.

When the wildcat fishes it is in this sort of way: He leaps from the bank on to a large stone or boulder well out in the stream, and assuming a crouching position, waits with the admirable patience so characteristic of his kind for such a change as a kind providence may sooner or later send his way. The pool around is clear and waveless, the only exception being a slight eddy of the stream around the lee side of the boulder. Into this eddy a trout is sure to sail from time to time, partly to rest himself, and partly because it is a likely place for such moths and flies as happen to alight upon the stream to be carried by the suction of the ceaseless ripple and whirl. The trout that visits the eddy in order to enjoy a brief rest is safe enough while he is resting, for he is then, without the movement of a fin, quietly lying on the gravel at the bottom, but in his first dash to the surface after his doom is sealed; for, quick as a flash, and with unerring aim, the cat strikes out with his ready right paw, and in an instant, with the claws deep sunk in his speckled flank, the poor, foolish trout is flopping helplessly under his captor's whiskers on the top of the boulder. If the cat is very hungry and happens to miss his aim, he has been seen to dash headlong into the stream, rarely failing in such a case to secure his prey, with which he swims to the nearest bank, and which he straightway begins to eat, beginning at the head and eating it outward, bones and all, till not a scale remains.

THE  
**Breeder and Sportsman.**

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.  
THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.  
OFFICE, 508 MONTGOMERY STREET

Coney Island Jockey Club.

It is not surprising that there should be such a demand for racing stock in the East, and such prices paid, when the great number of race meetings is taken into consideration, and the large amounts of money to be won. This not only ensures a large number of entries at the main places of sport, as it likewise enhances the interest in the minor meetings, and puts it in the power of the owners of inferior horses to pay expenses. While it may take a star of the first magnitude to win a prominent event at the big courses, there are so many races gotten up outside of these, and then again with so many varying conditions, that a man must be in extreme hard luck not to win once in a while.

From the number of nominations in the stakes of the Coney Island Jockey Club it is a just inference that those of other places which closed at the same time will be equally as well patronized. In fact, we anticipate a still longer list when the Chicago entries are published, and "Krik" will certainly have to issue a bigger volume than ever before. The following is a summary of the Coney Island

JUNE MEETING.

Stake.	Entries.
Emporium Handicap, three-year-olds, 1 1/2 miles.....	56
Suburban Handicap, all ages, 1 1/2 miles.....	74
Great Post Stakes, two-year-olds, 3/4 mile.....	43
Coney Island Stakes, three-year-olds and over, 1 1/2 miles..	31
Coney Island Cup, three-year-olds and over, 2 1/4 miles....	14
Two-year-old Selling Sweepstakes, 3/4 mile.....	50
Selling Sweepstakes, three-year-olds and over, 1 1/2 miles...	56

AUTUMN MEETING.

Autumn Stakes, two-year-olds, 3/4 mile.....	102
September Stakes, three-year-olds, 1 1/2 miles.....	58
Autumn Cup, all ages, 3 miles.....	26
Great Long Island Stakes, all ages, 2-mile heats.....	14
Bridge Handicap, three-year-olds, 1 1/2 miles.....	73
Great Eastern Handicap, two-year-olds, 3/4 mile.....	97
Total.....	694

Big Gun.

From Los Angeles comes an inquiry about Big Gun and the foals she has had. The mare is a chestnut above the ordinary size, and, as we remember her, of great muscular power. She was formerly called Kate George, the change of names having been made when purchased by an officer in the U. S. Army, and Ephraim Moore. From a man who is well acquainted with her, we learn that she has had two, and perhaps more mule colts. A mare by Norfolk, a big fine mare, Jim Renwick, a colt by California, Jumbo, which is reported to be as fast as his noted brother in blood, a yearling sister to Jim Renwick and probably others. As Mr. Winters will probably be in the city next week we will endeavor to get a list of all her progeny.

Ladies' Department.

While we are well aware that there are numbers of ladies who take an interest in all of the departments of the *Breeder and Sportsman*, there are particular features which all are interested in. The rearing of poultry, horticulture, floriculture, the outdoor adornment of homes, as well as making the interior bright, are certainly within the appropriate sphere of women in every walk of life, while in the country there is scarcely a department of the farm that does not give opportunity for recreation, excepting those that are of too coarse a nature for them to be troubled with. None are so successful in pursuits that require an intuitive knowledge of the best methods of accomplishing the desired end in the aesthetic circle of duties, and when it comes to a keen appreciation of what is necessary to beautify house and grounds, the rougher sex falls below in capacity. No matter how circumscribed the area, woman's tact will make the most of it. There may be only a narrow strip of ground, which to the masculine mind is altogether too diminutive for any purpose, and yet there is a chance for the rooting of the fuschias that are trained on the house, a bed of violets to perfume the air, and bright colored verbeaus or pansies to gladden the eye. There may be wanting even this limited space, and there are spots on the window sill on the sunny side of the house, and hanging baskets with verdant drapery suspended from the ceiling.

If there is an animal about the house you may rest assured that the mistress is the one which is the most heartily welcomed, and those in the stable will show their better appreciation of her visits so palpably as not to be misunderstood.

The chickens are likely to scurry away when man or hoy invades their quarters, with the "woman folk" they are on the best of terms, and, in place of fear, court recognition and show that they are pleased with the visit. There seems to be a magnetic influence on one side to attract, on the other there is a force that repels. If a man obtains the confidence of animals it is through a long acquaintance and having by uniform good conduct overcome the original antipathy. From the first there is a surrender to womanhood, a reliance arising from faith at the outset, and there is friendship at once. With these gifts it is not surprising that there should be an adaptation for the rearing, and a fondness for anything that shows such unmistakable predilections. In response there is a passion for pets, and if nothing more worthy presents, there are fancies to gratify which at times runs into queer channels. A handsome black and tan, the silken-haired King Charles, the graceful Italian greyhound, even the larger breeds of dogs are cherished and with good cause.

But we are straying from the subject which comes under the caption chosen for this article, and though dogs are given plenty of space in these columns, the kinds that usually form the basis for the incubations of the kennel editor are not generally the choice of the ladies. The fleet courser, it is true, can scarcely fail to catch the eye of these keen judges of beauty, and the staunch setter and pointer is likely to be highly valued at home for qualities that are different from those which draw the prizes at field trials. We once saw three ladies who were more excited over a course than the male spectators, but to their credit the escape of the hare elicited more enthusiastic bravos than when it was in such deadly peril.

Now that there are such a variety of "fancy" fowls, the breeding and rearing of them has charms that do not belong to a merely market value. To gratify the taste, and make the gratification a source of profit, enhances the enjoyment, and any one who engages in this branch of rural economy can scarcely fail to secure both pleasure and profit. There is a chance for trying experiments that will heighten the interest, and in addition to the pleasurable occupation affords a stimulus which prevents it even becoming tiresome. Sir John Sebright claimed that in a few generations he could produce fowls true to a feather, and any particular color or markings desired would result from proper care in selection. We have oftentimes thought that in place of adhering to the practice of pure breeding, to diverge from that course, and endeavor, by crossing different breeds, to establish distinct forms, would be an additional attraction.

With the type resolved upon, there will be a desire to impress the full fruition of the hope, and every failure stimulate to renewed exertions. There is a grand field for this in domestic poultry and the many kinds of pigeons. Such a variety of colors in the plumage, so many shapes that there is as good an opportunity for blending as the artist in mosaics has in thousands of shades of gems, precious stones, glass and shells. Among the common breeds of fowls are found some of the most beautiful colors. The games are peculiarly brilliant in plumage, and the fancy breeds present distinct markings and shadings to enable an almost endless variety of

choice. Without any care we have seen remarkable results follow what may be termed indiscriminate breeding. In Iowa we started with a heterogeneous lot of fowl, and though principally of the barnyard class there were a few specimens of the better breeds in vogue thirty years ago. These were mixed with games, as it was rare that a visit was made to Judge Grant without a trio of blue-bloods being brought home. Judge Grant had probably the greatest variety of games of any man in America, and as there were changes from black-reds to spangles, from pyles to dominicks, Stonewalls to Shawl-necks, there were many changes.

Jacob's experiments were completely outdone, and roaming over the pasture fields and through the groves were hundreds of nearly every imaginable hue. The mixture proved a "happy nick" beyond oddity of coloring. They were capital layers, the finest for the table, hardy, and literally reared themselves. The hens nested in the barnyard and in a grove adjoining, and without the bother of coops. The chicks were active from the first, and there was little need of attention of any kind. With a definite object in view, making elections to accomplish a purpose, it would not be long until the yards would be embellished with unique and handsome birds. When the ladies undertake to carry out a plan of this kind it will not be many years before the poultry exhibitions will be still more attractive, and there is scarcely a question that new and valuable breeds will result.

Stallions Advertised.

Even at this early date the stallions advertised in the *Breeder and Sportsman* make a fine display, and when all are in we do not hesitate to claim a better showing than any one State in the Union, not even excepting Kentucky. The breeding stock of California are of the highest character, and now the only thing required are some high class thoroughbred mares, and those who can afford the outlay, some choice specimens of trotting dams.

It is to our interest, of course, that stallions are advertised, but from a money standpoint those who own them are benefited still more. There are few stallions that have celebrity enough to rest without newspaper publicity. Even the best known may be overlooked, and a loss far greater than the cost of the advertising result from breeders losing sight of animals, their location and terms. Then again there is a record of pedigrees which are not only valuable now, but in years to come may settle questions of the utmost importance to breeders.

To the thoroughbred list are added Longfield and Jim Brown; to the trotters, Stanford, Mambrino Wilkes, Anteco, Prompter, Privateer, Echo, Algona and Alaska. As some of these are to be portrayed by Wyttenhach soon, there is no necessity for anticipating the accompanying description. Echo, Algona, Mambrino Wilkes, and Anteco have been presented in proper shape heretofore, and these will be repeated as opportunity offers.

Being "crowded for space" this week, we can only call attention to the advertisements, and fortunately those are full enough to afford the main information. There are other matters of interest, however, to breeders, and the family to which the candidate for public favor belongs is a prominent feature to consider. Turfmen do not require enlightenment in regard to Mouchist and Foster, the sires of Longfield and Jim Brown, and they are aware that beside being fine race-horses they stand high as progenitors. On the dams' side both of these young stallions are richly bred, and both have shown speed and endurance. Longfield met with a misfortune which incapacitated him from showing his best form in public, but a former owner informs us of trials that are really wonderful. Those who saw Jim Brown run at Sacramento at the State Fair in 1881, when he defeated Fred Collier, Jim Douglas and Winifred, running the one and a half miles in 2:30 3/4, do not require telling that he was a grand race-horse.

We have nearly as much interest in the stallions of California as the owners, in fact, for some of them we have a higher appreciation than is exhibited by hiding them from public knowledge. Therefore, it is a pleasure to "hunt over" the records, study the blood lines and present them to our readers.

Billy B. A.

This is the first horse to enter the 2:30 list for 1884, and again the Pacific Coast takes precedence in the yearly exhibit. This time it is Oregon which captures the glory, and we cannot grudge them the victory. Should we not be greatly mistaken, this young horse will surely make his mark before the season is ended, and as Mr. Leigh informs us that his dam is a thoroughbred, there is little question that he will train on. The dam of Ed., the winner of Thursday's race, was also brought here by Mr. Leigh. She is by Magna Charta, and therefore her son by Erwin Davis has "a right to be a good one."

General Topics.

There appears to be at the present time a rage for pseudo athletics. Very different from the days when the village green was the ground for the display of muscular ability and dexterity. The carpeted and padded stage, the gaslights, the glare and glitter, and the tooting of horns are not an agreeable contrast to the old fogies who prefer the recollection to witnessing the present system. There could only be glory gained in the old-time field; now it is dollars which move the thews, and if the "house" is not up to expectations, the professionals are loth to show their best paces. It may be that city life compels the change, and that the denizens of offices, shops, stores and manufactories cannot give up even a portion of sunlight, and if they see at all, it must be by the aid of light unknown in the good old days. If so, we shall have to put up with the change, and hope that some good may follow the innovation.

Under the old militia laws of Pennsylvania, all of the inhabitants under and above certain ages were compelled to give two days in the year to "general training." The place was the county seat, and a county seat without a "public square" was unknown. That was the selected ground for the grand manœuvres, and captains, colonels and generals made some approach to martial appearance. The rank and file were an incongruous assemblage, so far as clothing and equipments went, but for stalwart frame, muscular development and agile movements, it would be difficult to find a finer body of men in any country. The training was not of long duration, and nearly the whole of the afternoon was given to sport. Foot-racing, jumping, ball playing, but the engrossing scene was after the ring was formed, and the champions of the townships and villages strove for the higher honors which belonged to victory in the squire. "Backhold," "sidehold," "collar and elbow," were the supreme tests, though "run and catch" would occasionally vary the entertainment. The conquerer in one bout had to stand his ground for another, and until vanquished there was no excuse which would be considered valid enough to permit him to quit his post. Looking back through the mists of forty years, we doubt if some of these men ever got tired, and though the veil may give prismatic colors to heighten the effect, there are figures on the screen that refused to succumb to fatigue.

In sidehold and at "arms' end," more depended upon skill than strength, but with arms entwined round the body, and hands locked in as strong a grip as fierce Rhoderick held the Knight of Snowden, there was a necessity for strength of no ordinary kind in a struggle between these hardy backwoods-men. While a line was all that Sir Walter required to picture the bout when it came to backhold after the rapier had beaten the broadsword, a full page of melodious measure would be inadequate, and in place of the brief "they tug, they strain, down, down they go," there might be tugging and straining, no end to the number of "broken locks," before the contest came to an end. A full measure of fame depended on victory at all the methods of testing power, activity and endurance, and if the would-be champion failed at either it was held an inglorious success.

We can understand how people flock in crowds to witness some of the celebrities of the arena wrestle and spar, although it does not present attractions at all to be compared with the old-time sports, but how any person can go the second time to see the six-day-go-as-you-please humbugs, is beyond our comprehension. The plea that the finish is exciting betokens a singular notion of what is considered excitement. A few played-out men hippling around a circumscribed track, haggard, footsore, wearied, and all this supplemented with the knowledge that it is a mere money-making scheme, without the first element of true sport to sustain it, is a combination which could scarcely be expected to excite any one. The multitude of gulls which followed in the wake of the first cunningly devised swindles has prompted men to keep up the farces, and though there might be failure after failure, there was the hope left that there were still dupes enough to make the next "pay." Thus imaginary stakes were advertised, claims that large amounts of money were wagered, when the whole of the stake was a fixed proportion of the receipts, and the wager that an "unknown" had been "backed" to overshadow all previous performances so shadowy that even the gulls were not deceived.

There are new sports these days that would have surprised the assemblages that so eagerly watched the wrestlers on the green. Let us imagine that when the final champions were striving for supremacy, and every eye was fixed on their movements, a company of bicyclists swept into view. Once cognizant of the phantom-like riders, and "grapevine," "cross-toe" and "backlock" would be forgotten, and even the man who imagined victory was within his grasp would surrender the advantage, awe-struck, almost paralyzed, at the spectacle. Long as we have been accustomed to the silent steeds, the hurry must be great if they are not watched until out of sight. Rapid as has been the spread of the bicycling fever, and although they can be counted by hundreds, where a few years ago there would have been the computation, there are so many things to recommend them that before the lapse of a few more years it is likely the numbers will be increased in still greater proportion. There is a junction of pleasure and utility, recreation and profit are combined, and with so small a chance to degenerate into anything reprehensible that the most ultra bigot cannot make reasonable objections to their use. What if they do give the opportunity for racing? That is one of the commendable features, and if

more prizes were given to encourage contests between the wheelmen it would be better all around.

Suppose that the fairs should incorporate in the programmes bicycle races and so arrange them that there would be a fair chance for competition. Those which are held earliest in the season will have to solicit the aid of a competent man to fix the handicap. After the first of the series, winners will necessarily be penalized, losers graded according to the capacity displayed. In this way it may be practicable to secure entries at all of the prominent fairs, and then the distances could be varied so as to bring new elements into the calculation. That bicycle races can be made attractive is beyond question, and next to the horses be the most fancied portion of the speed programme. There may be obstacles in the way, which our limited knowledge of the art prevents us from seeing, though from the experiments of the Golden Gate Association there are good reasons for believing in favorable results.

California is a grand country for wheelmen. During the whole of the summer, for a great part of the winter, there is no hindrance to speak of. In San Francisco there are the roads of the park, and the drive to the beach. In Oakland there are miles of streets particularly well adapted for the elastic-tired wheel, and in all of the large towns there is the same opportunity. The objections offered that horses are frightened can soon be overcome by a little care on the part of the bicyclists. Slacking the pace when about to meet horses attached to a carriage, and if the animals appear restive, to dismount quietly will soon accustom them to the queer—to them—concern. We have driven several colts that were started at the first sight, but by stopping them so that they could discover that a man was seated on the strange steed, one or two good looks was sufficient to overcome all timidity, and they will trot as cheerfully by the side of the machine as if there was a horse attached. Double-cross seems to take an extra delight in going alongside of them, and we are inclined to the belief that if he could not trot fast enough to keep up he would break into a run.

There is more curiosity manifested by young colts than many imagine. Antevolo has always taken a deep interest in Cito, which probably arises from the son of Joe Hooker having so much white on him that his peculiar color is the attraction. He is apparently intent on making out what sort of a horse it is that is so blotched and marked up, or it may be that he admires this marked divergence from all others of his acquaintance. From other indications of possessing an inquisitive turn of mind we are prone to think that it is the problem that he is cogitating over, and that he has not arrived at a satisfactory solution. Should we go into his stall with a plug hat on he will at once commence an examination, and after looking and smelling, if permitted will knock it off or endeavor to catch the rim with his teeth. He evidently considers that a slouch is the proper headgear as he never makes any demonstration when that is worn.

Now it may be that if we can induce Prince to exercise with X X, and at the same time make the horse aware that if he keeps up it must be by trotting, that he will develop speed at that gait more rapidly than by any other method of education. At all events we can try galloping Cito in the lead of Antevolo, and should he improve more rapidly than under the mentorship of X X there will be another step gained towards the proper way of training trotters. This will be less troublesome than suspending some delicacy to the equine taste in front of his nose, and then again, it will be a livelier example. Emulation may work wonders and the desire to excel be a far greater incitement than fear. Rewards are more potent than punishment in training the dog, and something besides the whip be found to lead to better results with the trotter, especially with young trotters, and now that the importance of early training is so generally recognized, the pupils will be members of the juvenile classes.

There is not a trainer of any ability who is not willing to admit that a horse which takes to trotting cheerfully is far more likely to improve than those which are in deadly fear of the lash, and though, owing to the infirmities of human temperament, there are only a few who do not deviate from their convictions, it is nevertheless true. Severe punishment is always wrong, and even a few blows struck in passion undo the work of weeks. Nearly as bad as violent blows is the practice of jerking at the bit, though as a general rule one follows the other. A driver lashes until the animal is frantic, and when that is done then comes the snatching and pulling, until the poor creature is completely at a loss to know what its cruel taskmaster requires. Give them time to understand the commands; protect the parts which are struck, or likely to be struck, when acquiring the fast trotting step; be gentle as possible in the handling of the reins; never strike a harder blow with the whip than is necessary, and by all means do not give a succession of blows, which invariably show passion, and anger excites anger in the colt as well as when exhibited to men; follow these short rules, and if there is not more satisfactory progress than was made under a contrary course, we will be greatly surprised.

We hear that two matches have been made between Lucky B. on one part and Patsy Duffy and Jocko on the other. The distances to be run are one and a quarter and three miles, the amount \$2,500 a side, and though the time is not definitely fixed, it will probably be after the spring meeting of the Pacific Coast Blood-Horse Association. It is far too early yet to speculate in regard to these matches further than to state that if the horses are in order that the chances are favorable for two capital races.

BASE BALL.

A Close Game by the Haverly and Denny Clubs.

There was a better attendance at the Recreation Grounds last Sunday than has been seen at that resort of athletes for some time, and could there have been a certainty of such a close game as those present witnessed, the grand stand would have been too small to contain the crowd that would have flocked to see it. Denny, the Captain and third base of the nine hearing his name, was not at his post, but Piercy agreed to act as substitute, and filled the position creditably. De Panger at first, was mentioned previous to the commencement of the game as the one who was to do duty behind the bat, but there was no one who could do first base justice if he was taken off, and it was after all decided to give Creegan the place in the catcher's box, and have De Panger remain in his favorite stand on first. The changes in the Haverly nine were of not sufficient importance to weaken the club. A close game was expected by most of those assembled, and there was a general stoppage of conversation and a closing up to the front of the straggling bystanders as the bell rang and the Denny's went to the bat for their first inning.

Sweeney started the game by hitting to Fogarty and retiring at first, and was followed by De Panger who went out on a fly to Sohr. Sohr made a neat catch. Bigelow succeeded in letting Gagus retire him on three strikes. The Haverlys took their places on the players' bench for the first inning, which resulted in Carroll, Fogarty and Hanley being put out quickly in the order their names are given, Carroll being retired neatly by Creegan and Hanley by Piercy. The second inning was characterized by continued close play. Piercy hit to Sheridan and failed to gain first base. Arnold followed, the play being precisely the same as that preceding, and Swanton gained first and second, but failing to use due caution in going to third, was thrown out by the ever vigilant Carroll. The last half of the inning was notable for a remarkable running catch of a difficult foul by De Panger, and the securing of a fly ball by Bigelow.

The third inning resulted in both sides securing goose eggs. Bigelow made a good stop of a lively ball from the bat of Gagus, and Swanton caught a fly ball sent him by Swanton.

Sweeney was the first at the bat for the fourth inning, and he led off with a lively hit to centerfield, the heaviest made up to this time in the game. Carroll, on receiving the ball from the pitcher, expecting Sweeney would set out for second on it leaving his hands, put it to second in a lively manner, and Sweeney's career was terminated for the nonce. Levy caught out Bigelow on a fly, making a difficult catch. Carroll, Fogarty and Hanley were the batters up for the Haverly's fourth, but neither of them got further than the initial sand bag.

The fifth inning resulted as had the four previous ones in no runs being made by either club. Hanley made a splendid running catch of a drive by Swanton into centerfield. Piercy stopped a heavy hit of McCord, but failed to get the ball to first as quickly as he should, and Arnold stopping a hit of Donahue made a wild throw to first, for which he had no excuse save that he was somewhat rattled. Donahue gained his third base finally, being the first man to touch that goal since the game began.

The sixth was opened by Mooney who made a base hit and gave Carroll the same opportunity to show his throwing ability, as had Sweeney in the fourth. Carroll again had the ball to the base in good time. Creegan put a new phase on the game when his turn came. He gained his first on a hit to Donahue, and then went to second; Sweeney on sending the ball into rightfield it was put to Fogarty to stop Creegan, but was not secured and Creegan gained that point and Sweeney went to second. Both were given the opportunity to count a run by De Panger driving the sphere into leftfield. De Panger was frozen to the base by Bigelow, who fanned out and retired the side. The Haverlys had up Gagus as their first batsman for the inning, and he succeeding in gaining first on a hit, made the bases with due caution, and scored one for his club. Fogarty made a good three-base hit, but being on that base counted him naught as Hanley failed in his attempts to hit the ball and left him on the sand bag.

No runs were made in the seventh inning although it was evident that the Haverlys were anxious to gain the lead. McCord hit a high ball to Mooney and was retired, Levy went out to Arnold and Sheridan to Bigelow.

Sweeney was the only player in the eighth inning of the Denny's who succeeded in touching the ball with the bat, but he could not get first. Gagus in the Haverly's eighth tied the game, it standing two to two. Sohr sent him home from the second base and scored a two-base hit. Sohr gained third afterwards and making a bold dash to get in on a passed of Creegan, he succeeded through Sweeney dropping the ball as he met the runner on the home. The inning closed with the Haverlys leading by one run.

The Occidentals played their ninth without being able to change the score. The Haverlys having sufficient to give them the game did not again go to the bat.

The game, especially the last few innings, was deeply interesting, and showed to advantage the many fine points to be made when two good nines contest in earnest for the honors. Appended is the score:

HAVERLY.					DENNY.								
	T	R	B	P	A	E		T	R	B	P	A	E
Carroll, c.....	4	0	13	4	0	Sweeney, p.....	4	1	1	0	12	1	0
Fogarty, 3d h.....	4	0	2	2	1	De Panger, 1st h.....	4	0	1	8	0	0	0
Hanley, r. f.....	4	0	1	0	1	Bigelow, 3d b.....	4	0	2	2	0	0	0
McCord, 1st b.....	3	0	7	0	0	Piercy, 3d h.....	4	0	2	0	2	0	0
Donahue, s. s.....	3	0	0	2	0	Arnold, s. s.....	3	0	1	1	0	2	0
Levy, c. f.....	3	0	0	2	0	Swanton, r. f.....	3	0	1	0	0	0	0
Sheridan, 2d b.....	3	0	2	2	0	Mooney, c. f.....	3	0	1	0	1	0	1
Gagus, p.....	3	2	0	13	1	Dowd, l. f.....	3	0	0	0	0	0	0
Sohr, l. f.....	3	1	1	0	0	Creegan, c.....	3	1	0	10	4	0	0
Totals.....	30	3	4	27	24	3	Totals.....	31	2	4	24	19	6

First base on errors—Haverly 2, Denny 1. Left on bases—Haverly 3, Denny 2. Passed balls—Carroll 1, Creegan 1. Struck out—Haverly 10, Denny 12. Three-base hit—Fogarty. Two-base hits—Sohr and Arnold. Time of game—One hour and thirty minutes. Umpire—Ed. Taylor of the Occidentals. Scorer—M. Fischer.

The Denny and Occidental clubs will play a game at the Recreation grounds next Sunday.

W. W.—In answer to your query, what four threes in the hand and a nine turn up on the cut count at cribbage, you are informed the total hand would count twenty. The threes and the nine would be fifteen-eight, and the threes themselves would be twelve.

## OUR NEW YORK LETTER.

## Closing of Racing Stakes—Influenza Among the Cracks—General Sporting and Theatrical News, etc.

Though the official lists of the stakes that closed on Tuesday of last week have not yet been made public, the *New York Sportsman* of January 5th publishes editorially a short synopsis of the entries already received to the fixtures of the Coney Island Jockey Club, and the result is very gratifying indeed, 660 nominations having been made to the thirteen stakes for next spring and fall. These include entries from all the great racing stables, Ranocas putting in no less than twenty odd two-year-olds, for Mr. Lorillard, in the Great Eastern Handicap and other races for youngsters. The Dwyers have made many entries also, but singularly enough, none of their noted stable is in the Coney Island Cup, a race that they have generally been considered as having a lien on. They say that unless cup races are made more valuable they will not strive for them, and incur the risk of breaking down their horses. That the argument is a correct one, however, few will be found to agree with them, for the preparation of race-horses for a contest over a cup course of two miles and a quarter does not necessarily place in peril their soundness. The Dwyers are about the only owners of note lately that have had good horses break down in or from cup races, and the cases of Blackburn and Hindoo can be ascribed, with more show of reason, to their peculiar and sometimes erratic mode of training and running their horses, than to the strain of a two-mile-and-a-quarter race. The Brooklyn Stable, however, will doubtless be found with Miss Woodford, George Kinney or Equador in the lists of the Washington Park Cup, Chicago's great race, with \$4,000 added, which closes next Tuesday, the 15th. Certainly this race and the American Derby for three-year-olds will attract entries from this section, for the two are the richest of the year for their classes. The American Derby will be worth, very likely, close on to \$10,000. Secretary J. E. Brewster was in this city last week in the interests of his association, and he says that the prospects of the new enterprise are of the best. The Chicago Driving Park will also enter the field this summer as a rival to Saratoga, and give racing to the end of August. This will give the residents of the Lake City about ten weeks of continuous racing, from the middle of June on. If the Saratoga people do not want to get "knocked out," they will have to bestir themselves, for in 1883 most of their patronage came from the Western stables. Should these conclude to take in Chicago, where is the material for Saratoga coming from? Secretary Wheatley, however, who has been interviewed on the subject, professes no uneasiness. He says that the rich stakes for 1884 at Saratoga, already closed during the last two years, will insure a good attendance of the roving clans of thoroughbreds, whose owners, having entered into these valuable engagements, will certainly fulfill them. Perhaps he is right, and perhaps not. *Nous verrons.*

There has been no little sickness among the Dwyers', J. R. Keene's, Hervey Welch's, and other stables of race at Sheephead Bay. The prevalent seems to have been influenza originating in the four-year-old colt Le Petit Duc, by the Ill-Used, and he died a few days ago. Since then the others have been on the mend, and no more casualties are reported or apprehended. The late heavy snow storms, four successive ones in six days, played havoc also at the same track, breaking in roofs of buildings from the weight of the snow, and stopping the work on the reconstruction of the track. As almost an entirely new course has to be completed at Sheephead in less than five months, the Coney Island Jockey Club has not any too much time to get the work completed by their spring meeting. This interruption in their labors is therefore of more moment than it seems, and when the weather gets more clement, extra gangs of men will be needed to make up for lost time. At Monmouth Park and Jerome improvements are also in contemplation for the coming season, and at these racing centers the horses are all reported as doing well. Just now there is quite a dearth of good ateeple-chasers. A majority of the lot that took part in these contests last season were a poor company of "crabs," dangerous to riders and devoid of any clear title to the name of cross-country horses. Two of the good ones, Postgard and Jim McGowan, were laid on the shelf, and their defection has left only two that can be called first-class, Disturbance, by Chillicothe, and Charlemagne, by Pat Malloy. In the old country this class of racers, in great part, came from strains of blood that excel as jumpers, but in America, where the illegitimate is comparatively in its infancy as yet, we will have to trust to education and schooling for some years yet for the material to replenish our stock of timber-toppers. Glenelg's get seem to be good jumpers, also the progeny of Jonesboro, the sire of those famous steeples Diavolo, and Coronet, and War Dauce, who sired Jim McGowan, Glasgow, Limestone, etc., while old Bonnie Scotland got two fine performers over sticks in Lohelia and Lochiel. But these instances will hardly induce horsemen as yet to accept the theory that Glenelg or Jonesboro are any better as sires of jumpers than any other of the many thoroughbred stallions. As said before, we will have to look to education for this class of horse, and a lesson that many trainers have learned is to take as a candidate for this business a thoroughly good sound performer on the flat, and not, as is generally done nowadays, put over the hurdles a broken-down flat racer, inferior in wind and limb, and oftentimes a disgrace to the humanity of those who control him.

O. E. Lefevre, of Denver, Colorado, is said to have engaged as trainer Thos. Costello, formerly head jockey for Mr. George Lorillard's Islip Stable. Costello has ridden Sensation, Tom Ochiltree, Ferida, Monitor, and the other cracks of this celebrated stable, in many of their great races, and now that he has grown too heavy to ride, may very reasonably be expected to attain success as a trainer of racers. Mr. Lefevre has some good material in his stable, and many good horses have borne his colors in past years. E. J. Hancock, of Ellerslie Stud, Virginia, has sold Eolite, three years, by Eolite, out of War Song, by War Dance, etc., to F. Gebhard for a stiff price, said to be \$10,000. The colt is a full brotler to Eole, six years, and Eolite, four years, and is said to be very promising. This shows what a gold mine a first-class brood-mare is. But this is such an old axiom in breeding that it needs no repetition here, past years having demonstrated its correctness in scores of instances that might be named. Two noted thoroughbreds have just died. Bill Bruce, by Enquirer, foaled 1872 at Woodstock, Ontario, and Lord Raglan, by Ten Brock, foaled 1880, at Saratoga, N. Y. Both were good racers, and the former bid fair to attain renown in the stud. As for Lord Raglan, he was a winner four times last year, until he was cut down in a race at Saratoga in August, from the effects of which he never recovered. The yearlings at the great Kentucky breeding centers are said to be an unusually fine lot this year. In the present state of prices ruling for thoroughbreds, these sales next spring can-

not fail to receive attention. To-day, in Brooklyn, Wm. A. Eyeman, the proprietor of Brighton Beach race-track, died, aged 45 years. The deceased was a good specimen of what foresight and executive ability united to Yankee grit will do for a man, for though the deceased was of German parentage, he was essentially an American in all his history. Beginning as a New York newsboy, graduating to a frontier ecot and a companion of Buffalo Bill, and later as a contractor in mules for the army, the subject of these remarks rapidly rose to affluence by the aid of his cool judgment as regards Coney Island, its future, and the sure return for investments there. His mistake was that in amassing his geni-like fortune of \$1,000,000 he failed to take ordinary precautions against natural decay, and imprudence, exposure, etc., shortened his life by at least a score of years. The race-course will be carried on by his brother and son conjointly as usual.

The theaters swing in their way week after week, presenting old and new attractions in rapid succession. Miss Latham, a California actress, makes her debut here next week at the Star Theater. Miss Davenport and Fedora expects to reach your city this summer, after her provincial tour has been completed. Both opera companies have returned from their out-of-town wanderings, and are presenting their patrons with some very artistic renderings, in which Mesdames Patti, Sembrich, Scalchi, Gerster, Isebelli and Signori Campanini, Nicolini, Stegno, Caracciolo, Del Pnente, etc., shine pre-eminently. Edwin Booth's season has been a great success, but it is high time that this sterling actor got a new piece or two. John McCullough has been carrying Boston by storm with *Virginia*, and this actor is fast recovering his usual health. At Stetson's Fifth Avenue Theater Mrs. Langtry and Cbas. Coghlan have been playing to large business in *Peril*. The lady has definitely given up her projected tour to Australia, and will defer that till next year, closing her 1884 American season in your city this summer. She then expects to go directly to England. At the other theaters the *Beggar Student* is still doing a large business at the Casino, likewise *Storm Beaten* at the Union Square, and *7-20-8* at Dely's, the latter being one of the funniest and best acted comedies ever played on our Metropolitan boards.

New York, Jan. 11th, 1884.

PACIFIC.

## POULTRY.

## Simple and Successful Feeding.

I have read with much interest the various disputations about feeding poultry, which have from time to time appeared in your columns. I do not care to enter the arena at all, but a brief allusion to my experience may suggest thought, if nothing more. I have tried pretty nearly every method of feeding which has ever come to my notice, and have finally adopted one of my own, which I believe is more in accordance with the physiology and habits of fowls than any other which is practical, and it has afforded me more satisfaction, with less labor and expense than any other. Little at a time and often, is the theory on which my practice is based.

My staple feed, supplied *ad libitum*, is fine, dry, ground feed, the largest part of which is wheat middlings, shorts or bran. All sorts of grain and cotton-seed-meal, in small proportions, are sometimes used. Corn meal, in the proportion of one to two of the shipstuffs, is as satisfactory to the fowls as any other of my mixtures, and I have had less disease, more growth, more eggs, perhaps less fat, but enough nevertheless, less annoyance from the raids of the fowls upon outside commodities, whether in field or yard, and less trouble generally since I entered upon its use for old fowls and young, than ever before. The mother hen gets something which she can pick up and feed to her young brood till they learn to pick up their own food, after which they are fed in the same way as the grown fowls. Of course they all get many tidbits in the course of the year, but I allude here to the regular every-day feed. I had a hen last summer which was given the broods of two other hens at a week old, and she raised the thirty-seven chicks without loss or accident. They sometimes got a baked potato, a bit of curd, a handful of wheat screenings, a few nibbins of corn, or something else to tame them, but the bulk of their feed was as above.

My fowls are given fresh, clean water twice a day. The pail is kept full, so that if a chick gets in it can get out. Little and big drink at the same pail. A pan of milk is often given them, though I think less of it for the purpose than many others do. I set a weighted pail, or can, into the pan to keep the fowls out and let them drink what they will, but the mixing of hodge-puddings is all a thing of the past. Except a few kitchen scraps, occasionally a beet, turnip or cabbage, my fowls are fed but once a day. In cold weather their boxes are replenished in the afternoon, so that they may go to roost with full crops. In warm weather the food is given them after they go to roost, so that they may not have any temptation to start out in the morning on marauding expeditions. They are generally kept in confinement in cold weather; and sometimes in warm weather, but not generally. —*Country Gentleman.*

Turkeys do not require as warm quarters in the winter as do other fowls. They will rest on a tree when the mercury is frozen solid in the thermometer bulb, and then fly down in the morning and wade through the snow to cool off. This is a hint to the turkey raiser. Do not confine the turkeys in quarters too warm and close, and be sure that they have three or four hours' exercise each day in the open air. The turkey is really a hardy fowl and easily wintered, if you do not pet it too much. Be a little unkind to it in cold weather. About all the shelter they will need is a wind-break.

Plymouth Rock pullets are not always early layers, for they often grow for ten or twelve months before laying, though some say as early as six months after being hatched. The best plan to keep Plymouth Rocks is to get the pullets hatched as early as possible.

If a person does not find pleasure in feeding his fowls, and caring for their many needs, he had better give them up entirely, for the fowls are sure of being more or less neglected.

Where laying hens show a tendency to lay on too much fat give them all the sour milk they will drink. It is an anti-fat remedy.

Corn charred on the cobs and powdered, is greedily eaten by the fowls, and as a preventive of disease, as well.

A hen will lay her own weight in eggs in from forty to fifty days.

Mr. Haggie's stallion, Kyrle Daly, was shipped from Lexington on the 10th inst. And harring accidents will reach Rancho del Paeo before many days.

## YACHTING.

## The America's Cup.

The yachtsmen of this country who hoped that the English cutter *May* would this year cross the Atlantic and challenge and sail for the America's Cup, are somewhat disappointed by the announcement of *May's* owner that he never had such intention. Still the hope is expressed in many quarters that the year will not pass without an international competition, and a few yachtsmen have declared that a racing cutter such as *May* or *Majorie* could visit us, and without the least difficulty carry the long-kept trophy back to England with them. There are other yachtsmen, however, who do not fear such result, and of these is Mr. Newbury D. Lawton, member of several yacht clubs, and a well-known yacht owner. When asked recently what, in his opinion, would be the result of a contest between an English cutter and an American sloop for the America's Cup, he said, in substance, "Opinion will differ. There are some people who can figure it all out, and tell to their satisfaction exactly how many minutes the cutter will beat the sloop in the race which may take place this year, and is to result in the America's Cup going across the ocean in a cutter's locker. There are also others whose figures do not work out in that way, and some who do not believe any cutter will come over at all.

"My firm conviction, founded upon what has taken place during the last three years, that is, other things being equal, the model of the modern narrow English cutter will not compare with the model of an American sharp-bottom, centre-board sloop when their relative speed is judged by the standard of length or cubic contents, or even by the present rule of measurement of the New York Yacht Club. The English cutters, in their construction, ballasting and facilities for setting, and especially for reducing sail, and for sea-going work, are undoubtedly superior to our sloops. I doubt very much if we have any boats here which in these respects equal the English yachts. The drifting qualities of the cutter in a calm with a favorable tide, as well as their steadiness in a sea-way with light breezes, and the slight pressure of wind required to heel them to moderate angles, give them advantages also over our boats under certain conditions. Whether the advantages the cutters possess in some respects will more than counterbalance the more desirable proportions of some of our craft, it is impossible to say. No advantage certainly can be gained in a race by ability to quickly shorten sail, unless the necessity actually occurs for such reduction in canvas. I do not recall many occasions during the races of the New York club when reefing has been the order of the day. It is not under all circumstances and conditions that the English boats derive the full benefit of their peculiarities of construction and ballasting. Their sea-going qualities, or 'propensities,' as a cutter man has termed them, would be of no advantage unless rough work should be encountered, which is not at all likely to occur, as there have been very few races of the New York club sailed in bad weather. According to the *London Field*, the English boats which approach nearer to the proportions of our yachts are able, especially in windward work, to beat the best narrow cutters in the races where length is the standard of comparison. Around Boston, where there are many narrow keel boats, and the centreboards and keels sail in separate classes over the same course, the records show that the time made by the winning centreboards is invariably better than that made by the winning keels of the same size. Judged by a length standard, cutters have been generally unsuccessful in their contests with sloops, although considerable credit has been taken by them for winning races where the standards of comparison have been notoriously in their favor.

"The *Madge* races furnish an instance of this, as well as the fall races in which the *Fanita*, *Valkyr*, and *Oriva* took part before last.

"The *Maggie*, of the same water line length as the *Vixen*, and heralded as the crack of the fifteen tonners of England, has made but a sorry show of herself in her races with that sloop.

"The *Bedouin* and *Gracie* matches for two years past have resulted in a tie.

"The record of the *Oriva* certainly has not established the invincibility of the cutter type.

"The *Wenonah* has proved herself fast in light breezes, but has yet failed to show to any advantage in a strong wind. The only contests from which a reliable judgment can fairly be formed as to what a large English cutter would do with our large sloops are the *Madge* races, and the *Vixen* and *Maggie* matches. In each of these series of contests the cutters were imported English-built vessels, and fair representatives of their type—undoubtedly as good for their respective classes as any cutter of the forty ton class that might be selected to cross the Atlantic for the America's cup. The boats that sailed against the *Madge* were fast boats, but shorter and of less displacement, and very shoal, excepting in the case of the *Shadow*. The weather in which the races were sailed was such that the extra length and displacement of the cutter was of very great advantage to her. By the rules of time allowance under which these matches were sailed the *Madge* won five out of the six races. Under the rules of time allowance of the Atlantic Yacht Club based on length she would have won only one out of the six. In the *Maggie* and *Vixen* matches, the *Maggie*, out of four races sailed under different rules of time allowance in both light and heavy weather, has failed to score a single victory. There can be no doubt, therefore, that in this class, so far as these boats are concerned, the centre-board sloop has effectually disposed of the English cutter. Whether the *Fanny*, the *Mischief*, or the *Gracie* could as effectually dispose of the *May* or the *Majorie*, is an open question.

"Under any fair system of time allowance, with anything from a moderate wind to a single reef breeze, I do not fancy that any of the English cutters would be able to beat the best of the centre-board yachts we have, let alone a new vessel possessing the merits of the English boats in construction and ballasting, and modelled as she should be with considerable depth and of sharp floor, and of moderate beam, and fitted and rigged for racing as perfectly as the English racing cutters are. What we need in this country to insure success in competitions with foreign boats," concluded Mr. Lawton, "is better, lighter, more skillful and expensive construction in our boats; more attention paid to ballasting, and more complete outfits in the way of sails, rig and rigging, than our racing sloops now possess. With equality with the English cutters in these respects, and with length as a standard of comparison, there need not be one of any of the English 'lead mines' taking away the America's Cup, or winning very much of the product of our own cup-cutter."

The BREEDER AND SPORTSMAN, published weekly in San Francisco, by the Breeder and Sportsman Publishing Company, with Joseph Cairn Simpson as editor, is just what its name indicates. It is chiefly devoted to the blood and speed of horses, in which line there is no other paper edited and published. It is full of information in regard to sports of all kinds of a respectable character, and gives a history of all the best horses that have figured prominently in the past, and most celebrated at the present time. It is a 16-page paper, quarto size, and usually contains one or more cuts of celebrated horses and dogs which have won fame in coursing matches. The last number of December 29th, which is the close of its third volume, contains, as supplemental, several pictures of noted horses, which are finely executed. Also, pictures of winning dogs at the Pacific Coast field and club trials of 1883. The subscription price of this valuable paper is only \$5 a year. Send to Breeder and Sportsman Publishing Co., 508 Montgomery street, San Francisco.—*Mariposa Gazette.*

Mr. J. B. Haggins's two-year-old colt, Tyrant, has been scratched from all his engagements, this season, except the stakes of the Washington Park Club, at Chicago. He is a very large and "growthy" colt, and a hard campaign would be very hazardous as is indicated by the career of Gen. Harding, the crack Kentuckian of last year. Harding made himself famous, but he is now in the veterinary's hands, and whether he will stand training again is a mooted question.

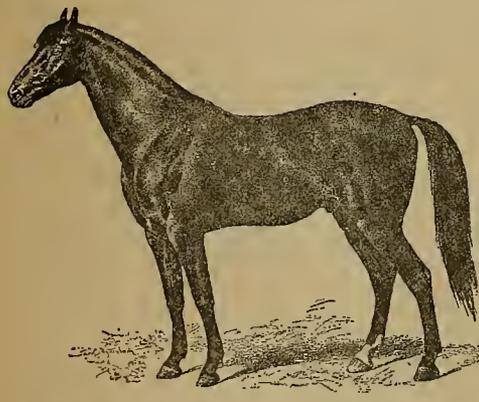

The chestnut horse Monte Christo, by Norfolk, — Pele by Belmont, died in Oregon last week from injuries received during the stud season last year. He was foaled in 1871, and at the time of his death was owned by Sturgill Bros. of Baker county.

THE ELECTIONEER STALLION  
**STANFORD**

Will make the season of 1884, commencing February 1st and ending July 1st, at my stable near the Oakland Race Track.

**Terms.**  
\$50 for the season, payable at the close of the season. No responsibility assumed beyond reasonable care.

**Pedigree and Description.**  
Stanford was bred by George Taylor, late of San Francisco, foaled in 1879; is dark bay, no marks, 15 1/2 hands, and weighs 1,650 pounds; was sired by Electioneer, and closely resembles him in form and color; was not broken until last year; has been handled very little, but enough to show that his action is excellent and peculiar to the get of Electioneer.  
First dam, Annie Laurie, by McCracken's Dave Hill, Jr., (sire of Geo. Treat, record 2:25 1/2), by McCracken's Dave Hill, he by Red Lion, and he by Vermont Black Hawk.  
Second dam, Kitty, by Owen Dale, son of Belmont.  
Dam of Dave Hill, Jr., by old St. Lawrence, granddam thoroughbred.  
Dam of Dave Hill by Vermont Hambletonian.  
Dam of Red Lion by Vermont Hambletonian.  
**J. J. FAIRBANKS, Agent.**  
Oakland, January 18, 1884.

**MAMBRINO WILKES.**

**BLACK STALLION, SIXTEEN HANDS IN HEIGHT, BY GEORGE WILKES**, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christiana by Todhunter's Mambrino, son of Mambrino Chief. Second dam by Pilot, Jr. Todhunter's Mambrino son of Mambrino Chief, his dam Rippon's dam by Potomac.

This is the largest and one of the best colts of George Wilkes (weighing 1,250 pounds), combining the Hambletonian and Mambrino strains, and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.  
George Wilkes has 27 representatives in the 2,300 list, of which 14 have records of 2:25 or better, 5 of 2:29 or better, and 3 of 2:18 or better. These are all the get of Geo. Wilkes, and do not include Phil Thompson, William H., and other famous grandsons and granddaughters of this prepotent sire.

Will make the ensuing season, commencing February 1st, 1884, at the Drew Stable, STOCKTON, and L. M. Morse's near LODI.

**Terms:**  
\$40 for the season, or \$25 single service.  
This low rate brings the service of this horse within reach of breeders, but does not argue any inferiority to the horses whose services are held at one or two hundred dollars. For further particulars address  
**A. E. HINDS, Agent.**

Trotting Stallions

**Prompter, 2305, and Privateer**

Will make the season of 1884, from February 1st to July 1st, at Agricultural Park, Sacramento, at \$50 the season. Mares not proving in foal can be returned next season free of charge. Pasturage at reasonable rates. Accidents and escapes at owner's risk.

**Prompter** is a bright bay, star in forehead, hind ankles white, sixteen hands high, and weighs 1,140 pounds. Sired by Wilson's Blue Bull, son of Pruden's Blue Bull, by Merring's Blue Bull, dam Fairlie Bird (four-year-old pacing record 2:28 1/2), and dam of Flight, five-year-old record 2:29, and three-fourths sister to dam of Pride, yearling record 2:43, and three-fourths sister to dam of Buccaner, public trial against time 2:24 1/2, and full sister in blood to dam of Eawn, record 2:30 1/2, by Flaxtail, grandam by son of Tally Ho Morgan, great grandam by Irwin's Tuckahoe, great great grandam by Leffler's Consul.

**Privateer** is four years old, a beautiful brown with tan shadings, over sixteen hands high, and is by Buccaner, son of Iowa Chief, by Crockett's Bashaw, dam by Marion, son of Mambrino Chief, yearling record 2:35 1/2.

For extended pedigree and further description of the above horses cut for circular.  
**M. W. HICKS, Agent.**  
Sacramento, Cal.

STALLIONS  
— AT —  
**RANCHO DEL PASO.**  
For the Season of 1884.  
Thoroughbreds.  
**Imp. KYRLE DALY.**

Bay horse, by ARTILLERY.  
First dam, Colleen Rhue, by Gemma-di-Vergy.  
Second dam, Princess, by Retriever.  
Third dam, Echidna (the Baron's dam), by Economist.  
Fourth dam, Miss Pratt, by Blacklock.  
Fifth dam, Cadabout, by Orville.  
Sixth dam, Minstrel, by Sir Peter.  
Seventh dam, Matron, by Florizel.  
Eighth dam, Maiden, by Macben.  
Ninth dam (Pumpkin's dam), by Squire.  
Tenth dam (Lot's dam), by Mogul.  
Eleventh dam, Camilla, by Bay Bolton.  
Twelfth dam, Old Lady (Stirling's dam), by Puleine's Chestnut Arabian.  
Thirteenth dam, by Rockwood.  
Fourteenth dam, by Buster.  
At \$100 the season, due at the time of service.

**LONGFIELD.**

Chestnut horse, by MONARCHIST, he by Lexington.  
First dam, Dame Gourlay (Blue Gown), by Planet.  
Second dam, Flora G., by Lexington.  
Third dam, Fanny G., by Imp. Margrave.  
Fourth dam, Lances, by Lance.  
Fifth dam, Aurora, by Aratus.  
Sixth dam, Paragon, by Imp. Buzzard.  
Seventh dam, Indiana, by Columbus (son of Imp. Pantaloon).  
Eighth dam, Jane Hunt, by Hampton's Paragon.  
Ninth dam, Moll, by Imp. Figure.  
Tenth dam, Slamerkin, by Imp. Wildair.  
Eleventh dam, Imp. Cub Mare, by Cub.  
Twelfth dam, Aramantus's dam, by Second.  
Thirteenth dam, by Stirling.  
Fourteenth dam, by Croft's Partner.  
Fifteenth dam, by Greyhound.  
At \$50 the season, due at the time of service.

**JIM BROWNE.**

Chestnut horse, by POSTER, he by Lexington.  
First dam, Flush, by Hiawatha.  
Second dam, Fanny Bugg, by Imp. Ambassador.  
Third dam, Ida, by Imp. Belshazzar.  
Fourth dam, Madame Bosley, by Sir Richard Tonson.  
Fifth dam, Nancy Nichol, by Imp. Eagle.  
Sixth dam, Bet Bosley, by Wilke's Wonder.  
Seventh dam, by Chanticleer.  
Eighth dam, by Imp. Sterling.  
Ninth dam, by Clodius.  
Tenth dam, by Imp. Silver Eye.  
Eleventh dam, by Jolly Roger.  
Twelfth dam, by Imp. Partner.  
Thirteenth dam, Imp. Monkey.  
Fourteenth dam, an Imp. mare from the stud of Harrison of Brandon.  
At \$50 the season, due at time of service.

Trotting Stallions.

**ECHO.**

Bay horse, by RYSDYK'S HAMBLETONIAN.  
First dam, Fanny Felter, by Magnolia, son of Seely's American Star.  
Second dam, by Webber's Kentucky Whip.  
Third dam, by Shakespeare, son of Duroc, and out of a mare by Plato, son of Imp. Messenger.  
At \$100 the season, due at time of service.

**ALGONA.**

Chestnut horse, by ALMONT, son of Alexander's Abdallah, son of Rysdyk's Hambletonian.  
First dam, Emma Kinkead, by Concept, son of Cassius M. Clay.  
Second dam, Elie Dean, by Mambrino Chief.  
Third dam, by Powell's Bertrand, son of Bertrand, by Sir Archy.  
At \$100 the season, due at time of service.

**ALASKA.**

Brown horse, by ELECTIONEER.  
First dam, by Washington, he by Geo. M. Patchen.  
Second dam, by Williamson's Belmont.  
At \$50 the season, due at time of service.  
The season for thoroughbreds will commence February 10th and terminate June 20th. For trotting stallions, will commence February 10th and terminate July 1st. Good care will be taken of mares during the season at \$6 per month; after the season \$10 per month will be charged, but no responsibility for escape or accidents.  
**John Mackey, Superintendent,**  
Sacramento, Cal.

2:20 1-4.

The Fast-Trotting Stallion

**ANTEEO.**

Dark bay colt, near hind foot white; foaled May 6th, 1879; bred by Jos. Cairn Simpson, Oakland, California.

By Electioneer.  
First dam, 20th June, by A. W. Richmond.  
Second dam, Columbia, by Imp. Bonnie Scotland.  
Third dam, Young Fashion, by Imp. Monarch.  
Fourth dam, Fashion, by Imp. Trustee.  
Fifth dam, Bonnets o' Blue, by Sir Charles.  
Sixth dam, Reality, by Sir Archy.  
Seventh dam, by Imp. Medley.  
Eighth dam, by Imp. Sentinel.  
Ninth dam, by Mark Anthony.  
Tenth dam, by Imp. Janus.  
Eleventh dam, by Imp. Monkey.  
Twelfth dam, by Imp. Silvereye.  
Thirteenth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.  
Will make the coming season, from February 10th to June 15th, 1884, at the Fair Grounds at Santa Rosa.

**TERMS.**

\$100 the season. Mares kept in any manner their owners desire, and at reasonable rates, but no responsibility for escapes or accidents.  
Anteeco ranks as one of the great trotting colts of the United States, well worthy of the family to which he belongs. His breeding is of the choicest, and in point of form he is as nearly the model of the trotter as any horse living. He has shown a mile in 2:20, and at the same time demonstrated that he was capable of trotting way down in the teens.  
For further particulars address,  
**M. ROLLINS, Agent.**  
Santa Rosa.

The Trotting Stallions  
**DIRECTOR AND MONROE CHIEF**  
Will make the season of 1884 at  
**Oakland Trotting Park,**  
Commencing February 1st and ending June 1st.

**TERMS.**  
Director \$200, Monroe Chief \$100, the season. Good pasturage for mares at reasonable rates. The care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

**Director, 2:17.**  
Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:19 1/2; Phyllis, 2:15 1/2); first dam Jolly (dam of Thorndale, 2:22 1/2; Onward, 2:25); by Mambrino Chief; second dam by Potomac; third dam by Saxe Wiener.  
Thorndale, 2:22 1/2, is the sire of Edwin Thorne, 2:16 1/2, and Daisy Dale, 2:19 1/2.  
**Monroe Chief, 2:18 1-4.**  
Two-mile record, 4:16.  
Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah), he by Rysdyk's Hambletonian, first dam Madame Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whip stock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performances, see the holiday number of the BREEDER AND SPORTSMAN, issued December 29, 1883.  
For further information address  
**JOHN A. GOLDSMITH,**  
FASHION STABLE, Ellis St., San Francisco.

THOROUGHbred STALLION

**X X,**

**Pedigree.**

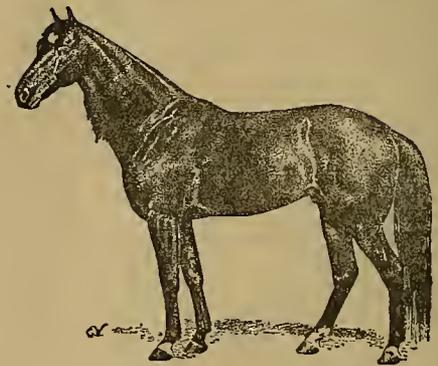

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM.  
First dam, Columbia, by imported Bonnie Scotland.  
Second dam, Young Fashion, by imported Monarch.  
Third dam, Fashion, by imported Trustee.  
Fourth dam, Bonnets o' Blue, by Sir Charles.  
Fifth dam, Reality, by Sir Archy.  
Sixth dam, by imported Medley.  
Seventh dam, by imported Sentinel.  
Eighth dam, by Mark Anthony.  
Ninth dam, by imported Janus.  
Tenth dam, by imported Monkey.  
Eleventh dam, by imported Silvereye.  
Twelfth dam, by Spanker.  
See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the grandam of Anteo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wamsita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hook Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter, Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc.), and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

**JOSEPH CAIRN SIMPSON,**  
Oakland or 508 Montgomery street, San Francisco.

THE TROTting STALLIONS

**SINGLETON AND LA HARPE.**

WILL MAKE THE COMING SEASON FROM FEBRUARY 1ST TO JULY 15TH, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal.  
Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and left fore foot, small star in forehead. Is 15 1/2 hands high, and weighs 1,150 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

**PEDIGREE.**

Singleton is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by Imp. Messenger's Abdallah (sire of Golden Bird, son of Vermont Black Hawk, grand dam by Insris, thoroughbred (No. 373). Singleton's dam is Lightfoot (dam of Pride, yearling record 2:43 1/2) by Flaxtail, son of Pruden's Blue Bull. Lightfoot's dam was Fanny Fern, by Irwin's Tuckahoe, grandam by Leffler's Consul, by Shepperd's Consul.  
Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

**LA HARPE**

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1878. La Harpe was sired by Fane, he by Alexander's Belmont (sire of Nubwood), he by Alexander's Abdallah (sire of Golden Bird), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by Imp. Messenger. Fane's dam Glory by Jackson's Western Star (son of Platt's Western Star by Blackstone). 1st dam by Boanerges, 2nd dam by Galatin (1784). La Harpe's dam Prairie Bird by Flaxtail (dam of Pudge, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffler's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

**TERMS:**

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.  
La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address  
**J. T. McINTOSH, Box 60, Chico, Cal.**

Vienna Gardens.

The attendance again, during the current week, has been very large, composed also of intelligent and cultured people, recognize the fact that the Vienna Garden is the only place in the city where we have real classical music perfectly rendered. The instrumentation during the week has been exceptionally brilliant, even perhaps, a little more so than usual, and that is saying a great deal. Besides Miss Neuber's exquisite solos, and Miss Straka's Mocking Bird, with variations on the xylophone, which is certainly the most brilliant performance she has given, the selections allowed Miss Maseneck and the Poeschl Sisters to appear to great advantage. Miss Veronica Paeschl's viola was very conspicuous. Next week there will be many new attractions, the Water Nymph, the Hiefer Dance, Miss Louise Edger's Spanish songs, and on Saturday, the newly organized Gaschwander Tyrolean Alpine singers, four ladies and three gentlemen. The marvels of Peru, who in their line are the wonders of the world, leave for New York next week, and those who have not seen them should not lose the chance opened for the last time. Miss Gonzales' accompaniment has been perfect as usual, and her abilities are now fully recognized.

Symptoms of a Disease Simulating Glanders.

First it was observed that the lower portion of the membrane of the nostrils, exactly at the point where the ulcers of glanders are seen, there were small wounds which appeared suddenly and without any premonitory changes in the condition of the membrane. The abrasions were often covered with a quantity of yellow exudation.

After a period of three to eight days the abrasions disappeared so completely that it was impossible in most cases to detect any trace of their previous existence.

Secondly, besides the abrasions which have been described, vesicles were often present in the membrane lining the nostrils. The sudden eruption of these and their equally sudden disappearance, afforded no opportunity to distinguish the stages which are found in the eruption of horse pox, viz., eruptive vesication, desquamation, and cicatrization. At the commencement small elevations of the size of millet seeds were seen; in the course of the day or on the following day these assumed the size of lentils, and became uniformly white in color and filled with fluid. Inoculation of a cow with this fluid gave no results. Sometimes the whole course of the appearance and development of the vesicles occupied eight or ten days. In other cases their history was completed in forty-eight hours. Thirdly, red spots were noticed in the nasal membrane, sometimes with the abrasions and vesicles, at other times after their disappearance. Fourthly, there were circular white patches, varying in size from a fifty centime piece to that of a franc. Fifthly, small hard elevations and nodules were detected. Sixthly, the aspect of the nasal membrane varied from the normal state in a very important degree. The vessels were injected with blood; the color of the membrane was pallid, yellow, saffron, or green from time to time; discharge of mucus streaked with yellow or red took place in some cases, from one or both nostrils; and in some instances the lymphatic glands were enlarged, but not indurated, and the swelling soon subsided. In all cases it was found that the internal temperature was normal, and this fact was sufficient to prove that the disease was not acute glanders.

Naturally, the question of the cause of an affection which had attacked a large number of horses at the same time was a subject of critical inquiry, but, as it frequently happens in such cases, nothing was discovered which could account for the malady. A disease which extends to a considerable number of animals in the same locality is quite certain to acquire the character of being contagious, but the evidence altogether justified the conclusion that the affection was due to some influences which operated generally, and not to any specific virus. The conclusions which were arrived at during the investigation were:

1. That confirmed glanders existed in the troop horses at the same time with the disease of a benign character affecting the nasal membrane.

2. That this disease of the anterior respiratory passages possessed certain features in common with glanders, but might nevertheless be easily distinguished from it.

3. That it was quite possible in certain cases to confound the disease with glanders, and in order to avoid error a long period of observation is necessary.

Cases of disease among horses emulating glanders are not very uncommon in this country; and the facts to which we have referred may suggest to horse owners the risks which they run in the hands of inspectors who, armed with all the powers of the law, may, and we know that they sometimes do, substitute zeal for discretion.

In the present state of the law, a horse affected with glanders, if exposed in a market or on a public road, may be seized and summarily shot or sent to the knacker's, and many animals have been so disposed of, and the owners have been fined for a breach of law. It is difficult to avoid the suspicion that in many cases animals are condemned on very slight grounds, and it might be worth while for experts to remember that there is a disease which may be

mistaken for glanders even by an experienced examiner, if he acts on the evidence of the moment, while a little extra caution will enable him to avoid an error which may lead to the infliction of a serious injury on an innocent person.—London Field.

Big Jaw Curable.

[Live Stock Indicator.]

There is considerable alarm among farmers and stockmen about "big jaw," and for the benefit of those who are interested in cattle I will give the fact of a cure on my Shorthorn bull. Four years ago this fall I noticed a large swelling on his jaw. My superintendent had examined it several times and was at a loss to know what it was. I took out our veterinary surgeon and he pronounced it, as soon as he examined it, "big jaw." I told Gen. J. C. Stone, and he went and saw him, and was of the same opinion. He saw a prominent stockman in Missouri and told him of my bull. He said I will give you a cure that I have never known to fail, if applied regularly.

Take one-half pint of turpentine and forty-five drops of creosote, and apply twice or three times a week externally, being careful not to get it on your hands or in the animals' mouth.

We followed the directions twice a week. It made him cross and we had to tie him when the remedy was applied. In about four weeks it broke and kept running for some time and occasionally we would apply a small quantity. The bull got well and he is now on my farm, and no one would even suspect he had had his jaw.

Grease, So-Called.

This ailment occurs sometimes in the feet, but oftener in the hind feet; and though neither contagious nor epizootic, it not unfrequently appears about one time, or within a brief period, on most or all of the horses in a stable. It essentially consists in a stoppage of the normal secretions of the skin, which is beneficially provided for maintaining a soft condition of the skin of the heel, and preventing chapping and excoriation; and it usually develops itself in redness, dryness and scurfiness of the skin, but in bad or prolonged cases it is accompanied with deep cracks, an ichorous discharge, more or less lameness, and even great ulceration and considerable fungus growth; and in the worst cases it spreads athwart all the heel, extends on the fetlock, or ascends the leg, and is accompanied with extensive swelling and a general oozing discharge, of a peculiar strong, disagreeable odor.

Most of the causes of grease are referable to bad management, especially in regard to great and sudden changes in the exterior temperature of the heels. The feet of the horse may be alternately heated by the bedding and cooled by draft from the open stable door, or they may first be made hot and sensitive by the irritating action of the urine and fifth on the stable floor, and then violently reacted on by the cold breezes of the open air, or they may be moist and reeking when the horse is led out to work, and then chilled for a long period by the slow evaporation of the moisture from them amid the clods and soil of the field; or they may be warm and even perspiring with the labor of the day, and next plunged into a stream or washed with cold water and then allowed to dry partly in the open air and partly in the stable; and in many of these ways, or of any others which occasion sudden changes of temperature in the heels, especially when those changes are accompanied or aggravated by the irritating action of filth, grease is exceedingly liable to be induced. Want of exercise, high feeding, and whatever tends to accumulate or to stagnate the normal greasy secretion in the skin of the heels, also operate, in some degree, as causes. By mere good management and by avoiding these known causes horse owners might prevent the appearance of this disease altogether.

In the early, dry, scurfy stage of grease, the heels may be well cleaned with soft soap and water, and afterwards thoroughly dried, and then treated with a dilution of Goulard's extract—one part to eight parts of water, or one part with six parts of lard oil. In the mildest form of the stage of cracks and ichorous discharge, after cleansing, some drying powder, such as equal quantities of white lead and putty (impure protoxide of zinc), may be applied, or simply the mixture of Goulard's extract with lard oil may be continued. In the virulent form of cracks, accompanied with ulceration, the heels ought to be daily washed clean with warm water, and afterwards bathed with a mild astringent lotion, and every morning and evening thinly poulticed or coated with carbolic ointment; and the whole system ought to be acted on by alternatives, by nightly bran mash, and, if the animal be in full condition, with a dose of purgative medicine. In the worst and most extensively spread cases, poultices of a very cooling kind, particularly poultices of scraped carrots or scraped turnips ought to be used day and night, both for the sake of their own action, and as preparatives to the action of the astringent application; and the whose course of treatment ought to aim at the abatement of the inflammatory action, previous to the stopping of the discharge. Nothing tends so much to prevent grease and swelling of the legs as frequent hand rubbing and cleansing the heels carefully as soon as a horse comes in from exercise or work. In inveterate cases of grease, where the disease appears to have

become habitual, in some degree, a run at grass, when in season, is the only remedy. If a dry paddock is available, where a horse can be sheltered in bad weather, it will be found extremely convenient; as in such circumstances, he may perform his usual labor, and at the same time he kept free from the complaint.

The English colt Ben Brummel, who created such a furor last season, being so long a prime favorite for the Derby, has retired to the stud at the Bonehill Paddocks, Tanworth. As a two-year-old his form was very high. He won the Woodcote Stakes, at Epsom, beating Hauteur, Sigmopbone, and six others, but was beaten a neck by the Hetty colt, for the Mottisfont Stakes, at Stockbridge. But at the First Newmarket meeting he won the Hopeful Stakes, beating Macintosh, who gave him 3 lbs., and five others, including the Americans, Crown Point and Wconab; but in the Ross Memorial he was beaten by Macheath and Adriana, at even weights. On the strength of this he was made a strong winter favorite for the Derby, and one of the pyrotechnic pieces at Fred. Archer's wedding depicted the hero mounted on the crack. But it came to naught, as in the Derby he was nowhere. They weighted him 113 lbs. in the Cambridge-shire, but he was never in it. He is a very bigly-bred colt, being by George Frederick, the Derby winner of 1874, a son of Marsyas and Princess of Wales, by Stockwell. His dam is Ma Belle, by Lord Clifden, her dam Dulcibella, by Voltigen. As will be seen, he combines the best strains, the Princess of Wales and Dulcibella lines being strong ones, the former being the dam of Albert Victor, George Frederick, Louise Victoria, etc., while Dulcibella not only won the Cesarewich, but sired that noted colt Onslow, who was quite a match for the great Cremorne at two years old.

STALLIONS FOR SALE

HAVING ACQUIRED MORE STALLIONS THAN he has present use for, the owner offers for sale the high-bred and well-known trotters

Inca -AND- Gibraltar.

INCA, RECORD 2:27, FOALED 1874, BRED BY L. J. Rose, got by Woodford Mambrino, son of Mambrino Chief, first dam Gretchen, by Mambrino Pilot; second dam Madame Kirkman, by Canada Chief, son of Davy Crockett; third dam by Fanning's Tobe; fourth dam by Leviathan.

GIBRALTAR, RECORD 2:22 1/2, FOALED 1872, bred by Geo. O. Tiffany, got by Echo, son of Rysdyk's Hambletonian; dam the Tiffany mare, said to be by Owen Dale, son of Williamson's Belmont.

For terms and other particulars apply to JOHN A. GOLDSMITH, FASHION STABLE, Ellis St., San Francisco.

FOR SALE The Trotting Gelding STARR KING.

Record, 2:22. Sound and in fine condition. Sold only for the reason that his owner's business is such that he cannot give attention to the turf. For further particulars address

C. W. Welby, Tenth and Railroad Avenue, San Francisco.

FOR SALE.

THE STANFORD STAKES 1885.

A SWEEPSTAKES FOR TROTTING COLTS AND Fillies of 1885, \$30 each, \$100 payable on the 1st of March, 1884, at which time the stake will close; \$50 on the 1st day of January, 1885, and \$100 ten days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1885, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1880 or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of March, 1884. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly post-marked March 1st will be eligible.  
N. T. SMITH, Treasurer.  
JOS. CAIRN SIMPSON, Secretary.

Jerseys and Guernseys.

Registered in the A. J. C. C. and the A. G. C. C.

MOTHER.

SON.

The above is a cut of the unequalled cow Jersey Belle of Seltmate that made 25 lbs. 4 1/2 oz. of butter in one week, and her only living son King of Seltmate.

A GRANDSON OF JERSEY BELLE OF SELTMATE is now in use in the Yerba Buena herd. This herd of Jerseys and Guernseys won all the best prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Seltmate, Comanche, Mary Ann of St. Lambert, Fanning's Glory and Enrolas strains. These, with large selections on the Islands of Guernsey and Jersey from the best without regard to cost, and imported directly, make this the best herd on the Pacific

Coast. Mr. Pierce has interest in two herds in the East of 20, at the head of which stand King of Seltmate (only living son of Jersey Belle of Seltmate), Runo de Bonair 7/8 per cent, Mary Ann's (brood) and Pearson, the best show bull in America. These colts are rated at \$1000 each, and stand for \$5000. The blood of these celebrated animals can be obtained at moderate prices of

HENRY PIERCE

S. C. BOWLEY & CO.,

GRAND COMBINATION SALE,

Commencing April 10th, 1884,

AT THE

Bay District Race Track, AND CONTINUING SIX DAYS.

Thoroughbred Horses and Standard Trotters, Roadsters, Jersey, Durham, and Devon Cattle, Spanish, Merino, and Leicestershire Sheep, from all the principal breeding establishments on the Pacific Coast.

750 HEAD OF STOCK

Have already been entered for sale and further instructions from leading breeders are daily arriving. Breeders and owners desirous of entering stock for this sale should apply at once to

S. C. BOWLEY,

33, 35 and 37 New Montgomery St.

The benefit of the combination sale to breeders and stockmen cannot be too highly estimated. Combination sales have been found of immense advantage in the East, and such a sale as this, comprising, as is anticipated, not less than 3,000 head of fine stock from all the leading breeders of the Coast, cannot fail to attract a large number of buyers from Honolulu, Australasia, and the East. The fame of California trotters is world-wide, and when it is known that for this sale already entered are the get of Electioneer, The Moor, Almont, Nutwood and all the best known stallions on the Coast, the advantages to both breeders and purchasers must be obvious. Large or small lots will be taken for sale. As soon as the catalogues can be prepared they will be distributed all over the world, so it is necessary for those desirous of taking advantage of the sale to send in their lists of stock, with complete pedigree, at an early date.

S. C. BOWLEY & CO.

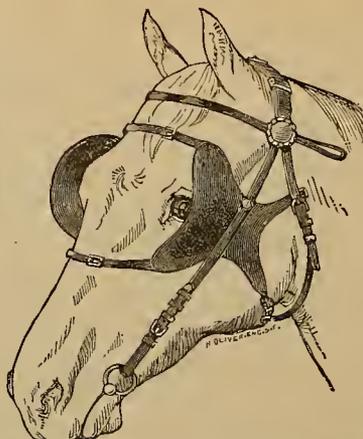

LARGEST AND FINEST STOCK

On the Coast, at prices that defy competition.

POCKET KNIVES, RAZORS, TABLE CUTLERY, SWISS KNIVES. Leading Cutlery. 769 Market street. SPORTING GOODS. Telephone, 5159.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is:

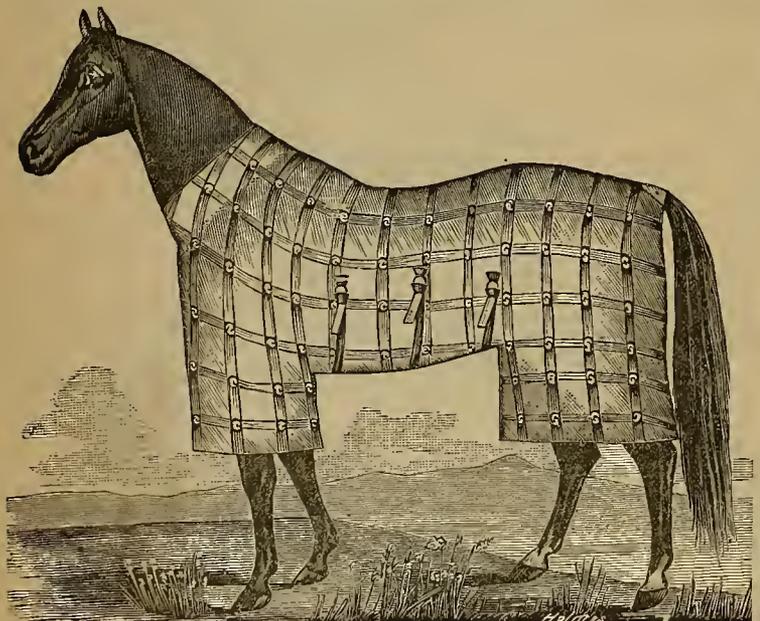

- 1. The part D supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described.
2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.
3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, a screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described.
4. In a bridle, and in combination with the check-pieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as in and for the purpose herein described.
5. In a bridle, and in combination with the blinds F, supported at d pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by top-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle of all descriptions apply to JOHN A. MCKERRON, No. 230 and 232 Ellis St., San Francisco.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

- 1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings E, G, and the permanent straps or bands F, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing bands C, and the front fastenings E, G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingle is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

JOS. CAIRN SIMPSON, SAN FRANCISCO, CAL.

WHITMAN'S RUBBER-FOOTED STIRRUP

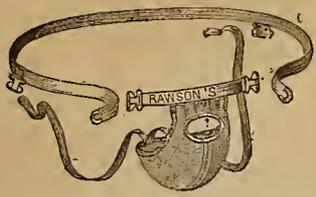

THESE STIRRUPS ARE VERY HANDSOME AND THE RUBBER MAT A GREAT CONVENIENCE AND COMFORT TO THE RIDER, AS THE SLIGHT AMOUNT OF ELASTICITY PREVENTS SHOCK, WHILE THE ADHESIVE PROPERTY OF THE RUBBER HOLDS THE FOOT IN PLACE WITHOUT EFFORT.

No person after once using them will use any other.

JOHN A. MCKERRON,

230 and 232 Ellis Street, Sole Agent for the Pacific Coast.

RAWSON'S U. S. ARMY

Suspensory Bandages.

A perfect fit guaranteed. Support, Relief, Comfort. Automatically Adjustable.

DISPLACEMENT IMPOSSIBLE. Treatise on Nervous Tension and Circular malled free. Sold by Druggists. S. E. G. RAWSON, Sent by mail safely. Patentee, Saratoga Springs, N.Y.

The Vienna Gardens, Cor. of Sutter and Stockton Sts. THE POPULAR FAMILY RESORT OF THE CITY.

The Ladies' Orchestra, composed of accomplished musicians is the feature of the Entertainments, with the talented Miss Bertha Nember as leader. Refreshments of all kinds the best the market affords. G. F. WALTER, Sole Proprietor.

Sprung Knees

Cockled-Ankles

Which does not hliste nor interfere with the horse's work. It strengthens the joints and tendons, restoring the limbs to their normal condition. Has cured many cases of chronic lameness and muscular rheumatism after other treatment had failed.

Testimonials: From O. A. Hickok, Esq., San Francisco, Cal., June 8, 1881. I can with confidence recommend Sparkhall's Specific to any one owning a knee-sprung or cockled-ankled horse, being fully convinced that it will cure those deformities without injury to the animal.

From Hon. C. M. Pond, Breeder of the celebrated trotter "Clingstone," Hartford, Conn., March 29, 1882. This may certify that I have used Sparkhall's Specific in my stables, and consider it an extraordinary remedy, accomplishing in most cases all that is claimed for it. C. M. POND. The Specific is sold in quart bottles—price, \$2.00, by WAKELEE & CO., Montgomery and Bush Sts., under Occidental Hotel, San Francisco.

FAIRLAWN, 1884.

TENTH ANNUAL CATALOGUE

Now ready for distribution. Contains descriptions and pedigrees of 252 head of High-Bred Trotting Stock now at Fairlawn. Will be sent free to all applicants who enclose 4 cents in stamps to prepay postage.

25 HIGHLY-BRED BROOD MARES,

Bred to the Fairlawn Stallions, and

130 HEAD OF VERY PROMISING YOUNG STOCK,

Consisting of Young Stallions, Fillies and Roadsters, are offered at Private Sale.

THE ONE PRICE PLAN is strictly adhered to at Fairlawn, and the price of every animal for sale is printed in the catalogue. Purchasers from a distance can buy on orders at exactly the same prices as if present in person. All stock sold on orders can be returned if they do not come fully up to the descriptions given.

The Stallions in use at Fairlawn are

ALMONT 33.

Represented in the 2:30 list by 24 performers, with records ranging from 2:15 1/2 to 2:30. Limited to 20 approved mares at \$300 the season.

HAPPY MEDIUM 400.

Sire of 18 performers with records of 2:30 or better. Limited to 25 mares at \$150 the season.

ABERDEEN 27.

Having ten of his get with records ranging from 2:15 1/2 to 2:27 1/2. Limited to 40 mares at \$150 the season.

ALECTO 2468.

By Almont, out of Violet, by Rysdyk's Hambletonian. Limited to 30 mares at \$50 the season.

STARMONT 1526.

By Almont, out of Starling, by George Wilkes. Limited to 50 mares at \$50 the season.

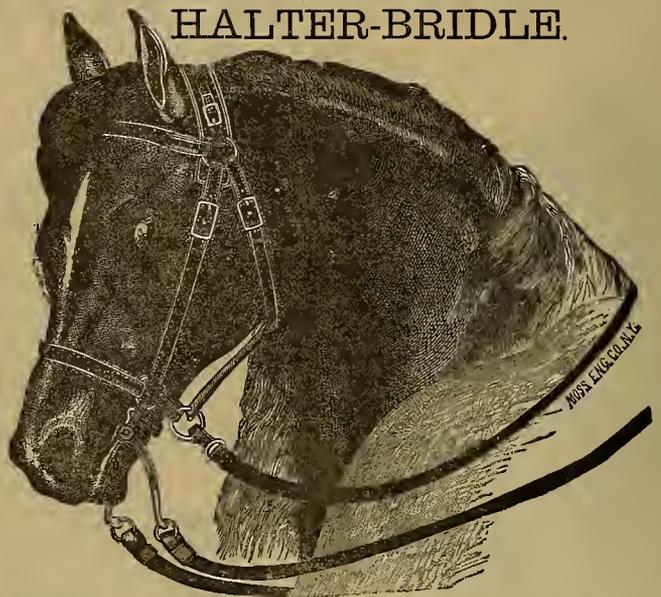

Ethan Allen, Jr., 473, used as a Private Stallion.

The Fairlawn Stallions in 1883 had eight new ones of their get to make records of 2:30 or better, and three new ones to enter the 2:30 list. The sons of each of these stallions are siring trotters. Almont has six different sons that have sired 2:30 trotters. Mares failing to get with foal can be returned in 1885 free of charge. For further information and catalogues containing full particulars, address

WM. T. WITHERS, Lexington, Ky.

ASHLAND PARK TROTTERING STUD

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-17 1/2 B. J. TREACY, Lexington, Ky.

HARNESS AND SADDLERY.

SINGLETON.

Singleton, brown colt, foaled 1878; bred by Dr. M. W. Hicks. By Willie Schepper, his dam Lightfoot (dam of Pride), by Flaxtail, second dam Fannie Fern, by Irwin's Tuckahoe, third dam by Lefler's Consul.

Willie Schepper, by Rysdyk's Hambletonian, his dam Nellie, by a son of Vermont Black Hawk, grandam by Busiris, a thoroughbred son of American Eclipse. As has been stated before, Flaxtail was by Pruden's Blue Bull, her dam by Irwin's Tuckahoe, grandsire of Smuggler and a descendant of imported Diomed.

Singleton is connected with the Blue Bulls through his dam Lightfoot, who was by Flaxtail, by Pruden's Blue Bull, the sire of the hero of Indiana. He brings in the royal trotting blood through his sire Willie Schepper, a son of the "Hero of Chester." So much has appeared in the BREEDER AND SPORTSMAN in relation to the Hambletonians that it is unnecessary to go over the ground again, especially when

every fair-minded man must concede the place which they occupy in the trotting records is the highest there is. Being a grandson, Singleton has a good share of this victorious blood, and the other portion is such as to warrant high expectations of his success as a breeder. There can be no stationary point in the breeding of horses. There must be progress or else there is danger of retrogression, and as all breeders are aware there must be a judicious mingling of elements to insure success. In-breeding is without question in our mind the best way of intensifying family characteristics, and so long as the animals are free from defects the practice can be continued with safety. But there is a limit to in-breeding, and then an important question is, what is a good out-cross? Singleton is an example of out-crossing on several different lines of blood, although there is a union of two pacing families.

There are so many illustrations of the value of the union of the Hambletonian and Vermont Black Hawk blood that

there are few breeders who are not cognizant of the fact, and the latter strain is of the foremost celebrity, and seems to mingle kindly with all others. The backing of American Eclipse blood is a good element, and very many of the crack trotters have an infusion of that of the greatest horse of his day, and who never suffered defeat. The union of the two branches of pacing blood in the dam of Singleton has proved in her case and also her sister's, Tinsley Maid, to be a valuable inheritance. As the dam of pride, with a yearling record of 2:41 and a two-year-old of 2:33, and that done so easily that she only jogged for the last furlong, she would be worthy of high renown, but as Singleton trotted a quarter of a mile in 41 seconds when a yearling, driven by a man weighing two hundred pounds, it would appear as though the son only required training to equal the exploits of the daughter. Then the sire of Pride is Buccaneer, and his dam was Tinsley Maid, sister to her dam, so that there was very close inbreeding to the pacing strains. That this has not been followed by deterioration is shown by the form as well as the performances, as Pride was remarkably powerful for a filly of her age, and had she lived, there is little question that she would have reached the teens.

## TURF AND TRACK.

### When Thieves Fall Out.

One day this week a man named Brown was arrested in Stockton by the sheriff of Santa Cruz county, on a charge of embezzlement. The facts of the case are reported by the officer as follows:

About three months ago Ferguson and Brown "put up a job" to win a pile of money from the sporting element of Watsonville by fixing them up a nice horse-race. Ferguson had a good running horse, and he cut his tail square, trimmed his mane, and otherwise altered his appearance so as to prevent the animal being recognized. Brown was to take this horse to Watsonville and represent that the animal came from Los Angeles, and make a match with any Watsonville horse whose owner might like to bet on. The Watsonville horse was to be allowed to win the first heat, and the Ferguson animal was to win the other two if he could. To Brown's misfortune, he complied with his part of the agreement, and made a match for \$20 a side with Ferguson, who had hired a fast horse in Watsonville for that purpose. Brown and the few friends whom he had let into the secret bet heavily on the pretended Los Angeles steed, but to the dismay of Brown and his friends, the horse hired by Ferguson won the race. It is claimed that Brown, not having money, pawned the Ferguson horse that he had entered in the race, receiving \$100 therefor.

If there is any dignity in the courts of Santa Cruz they ought to seeb and all refuse to interfere in this controversy. Ferguson and Brown formed a partnership for the purpose of fleecing the public by means of false pretences. Ferguson, who probably had no taste for half-way depravity intensified it by fleecing his partner. Brown, whose pockets were emptied by the process, made reprisal by pawning the horse and walking off with the money. We are not familiar with the code of honor that is said to exist among thieves, but this seems to us to be about even between the two. Courts or honest citizens have no concern in it. But the rupture has made plain to the people about Watsonville what kind of a game was worked in their town by these fellows, and self-respect should prompt them to infaminate to the quarreling partners that there is no room in Santa Cruz county for men whose methods are so like those of sneak thieves and pickpockets.

### Hiram Happy's Random Notes of Famous Horses and Horsemen.

BALTIMORE, MARYLAND, January 18th, 1884.

On my return from Australia, to your shores, in September last, I expected that my business would call me directly to Baltimore, but it was my good fortune to have a few days to spare on my way home and I gladly spent them in the Blue Graea region. I had an earnest desire to see the great fathers of the stud, whose progeny had proven the excellence of Kentucky breeding and rearing, and whose success shone so prominently during the past season. I cannot say, however, that I have studied them with the eye of an expert, for the mastery of details in the exposition of horse breeding principles is no light and easy task. I did not, therefore, travel pencil in hand, but will simply give you a few random observations of men and horses I met there and later in New York city.

A volume of racing associations arise in one's mind on approaching Kentucky. Passing over the names of the great thoroughbreds from Lexington to Leonatus, and coming to the trotting lights of the turf, one's thoughts turn to Mambrino Chief, Pilot, Jr., Goldust, Alexander's Abdallah and Norman, Edwin Forrest, and hundreds of their offspring. The scenes which met my view on every hand show that these families, coupled with later importations, have proved the real touchstone of breeding science. All here is glowing with characteristics of success. Instead of the solitary stock farm, which is scattered here and there in many other states, the hills and valleys of "Old Kentucky" are studded all over with large breeding establishments, and there is abundant evidence of the fact that the breeding, development, and sale of fine horses is a very important and profitable industry which materially adds to the wealth of Kentucky. Everybody takes a deep interest in horse matters. Farmers, merchants, politicians, bankers and all classes, even divines and the ladies, talk horse, attend the races, and hold forth on the superiority of their old Kentucky home for beautiful women, fine horses and pure old Bourbon. And it must be admitted that it is a "cold day" when the trotters, statesmen and fair sex of Kentucky are "left."

The most enjoyable season of the year to visit the Blue Grass region is certainly during the Fall fairs. The Louisville Exposition was in active operation at the time I was there. It produced great stir and excitement. Everybody was big with the business in hand and there was a pleasurable air of jollity about the thousands who were tramping and rushing to and fro. I was astonished at the magnitude of the buildings and the large variety and excellence of the exhibits from all parts of the country. The regular Fall meeting of the Louisville Jockey Club took place at the same time, and served to entertain thousands of people. A report of it has long since reached you. The tall, waif of Miss Woodford, who won the principal stake, which proved quite a benefit to her breeder, as well as her owners—The Dwyer Bros.

As my interest lies more directly in trotters, I wended my way to Lexington, the hnh of breeding extreme speed from the bluest trotting blood. Forest Park, the home of Mambrino Patchen, is one of the first places a visitor to this city seeks, for here we find that consummate judge, baulder, and veterinary surgeon, Dr. L. Herr, busily engaged with his troops of trotters, stallions, brood-mares and colts, belonging to himself and others. For the past thirty years he has turned the whole force of his talents to the business. No man enjoys a higher reputation for probity and capacity. I was struck with the force of his original ideas. He differs from most breeders of trotters, as his aim is to produce style, symmetry of form, purity of gait and good sense, as a *sine qua non*, before he asks for speed, and he probably places a higher estimate on a proud carriage of head and tail than any man in Kentucky. He says "No tail, no horse. It is the index of the animal's disposition." His leading stock horse, Mambrino Patchen, although about twenty years old, carries his age exceptionally well. He is as black as a raven, his eye still full and bright, and in every way he looks the grand horse he is represented to be. Since Dr. Herr has owned him, no one but himself has ever pulled a rein over him. He gets good care and a deily walk, in and out of season. He is not only a wonderful speed producer himself, but his sons and grand-sons sire fast trotters and his daughters are remarkably prepotent as brood-mares. None are considered more valuable. Mambrino Patchen sired the dam of Cleora and Rosa Wilkes, both of which have public records below 2:20. For producing fast trotters in the second generation,

he takes the first place, I believe, according to the records. Dr. Herr, probably more than any other man, believes in "running-horse" blood in trotters, and several of his star performers, among them Kitty Silver (2:27 $\frac{1}{2}$ ) closely resemble thoroughbreds. The Dr. had just completed one of the finest barns I ever surveyed, consisting entirely of box stalls, and having wide dirt bottomed run-ways for the exhibition of stock through the entire length and breadth of the structure. Close to the barn he has two tracks, one half a mile and the other a mile, and on every hand are evidences of the fact that he has made his business a success.

His second stallion is Arnold, a dark bay, considered by some a trifle under size, but of remarkable substance, muscular development and stride. He is by Goldsmith's Abdallah (2:30). His dam, Sallie Neel, by Mambrino Chief, was also the dam of Hambriuo Belle with a five-year-old record of 2:25 $\frac{1}{2}$ . Arnold's second dam was by Terror, thoroughbred. Although but seven years old he has already to his credit a number of the finest and most promising youngsters in Kentucky. One of these, a two-year-old, sold at the Cynthiana sale for \$2,050; another, Gertie Arnold, of like age, out of an Almont mare (second dam by Brignoli) comes as near perfection as anything I have ever seen of that age. She is a rich bay, without white, beautifully gaited, of great style and very promising. At the time of my visit she was considered by competent and disinterested judges the flower of the undeveloped two-year-old youngsters of the Blue Grass region, and although your correspondent did not come as a buyer, he was so singularly struck with her qualities that he purchased her. Price, \$2,200. She continues in the Doctor's hands for moderate training and gradual development.

I looked over a lot of the youngsters by Mambrino King and found them chips of the old block, showing the rich color, great beauty, magnificent style and smoothness of form for which their sire has a world-wide reputation.

My next visit was to Barney Treacey. This gentleman I found less wedded to any particular breed than any one I met. His collection of forty or fifty two and three-year-old youngsters are the get of many of the representative stallions of the United States. The first fifteen he led out were by fourteen different sires, including the great stallions of Kentucky, and I do not think any breeder or trainer can show a better lot. Treacey is a herd worker, a fine reinsman of long experience, and has piloted to victory many a youngster. He loves an honest race and if an unfair advantage be taken by any of his fellow drivers, Berney bobs up serenely as a man of muscle—a fact to which more than one would-be sharper can bear testimony. Although a good and peaceable citizen, he at once becomes the Sullivan of the South when aroused. The glory of his farm, at present, is McLeod, a grand young gelding who has already a record low down in the twenties, and who is held at fifteen thousand dollars.

Mr. Treacey's farm is but a mile from the city of Lexington, and just opposite the same is Meior McDowell's lately purchased home, the beautiful old homestead of Henry Clay. At Ashland, as it is called, are dispensed the hospitalities which have made this section famous, and it is one of the ideal Old Kentucky Homes. It is on this farm that the great Dictator now holds forth. From the number of choice mares which were booked from all parts of the country, one could readily see that this sire is now on the top wave of popular favor, owing to the performances of Jay-Eye-See, Director and Phallas. King Rene, by Belmont, is another one of the stars of Major McDowell. This horse took my eye. His three-year-old daughter, Fague, which already has a public record below 2:30, reminded me of Anteco and other trotting wonders of California as I saw them in the fall of '81. What I saw of King Rene's get, all showed a pure, frictionless gait, and moved along so smoothly as to deceive even a good judge of speed, resembling in this particular many of the Palo Alto colts. Major McDowell was engaged in laying out a new three-quarters of a mile track, and he feels confident that he has a lot of young fugues and Trinkets in store.

Of course, no visitor or lover of horses would leave Kentucky without going to "Fairlawn," the great breeding establishment of General Withers. The kug of the farm alone, Almont, with a role of honor as far advanced as that of any living sire, would be sufficient to draw the visitor to this spot. Besides Almont, I also found Happy Medium, Aberdeen and Ethan Allen, Jr., all of which have, during the past season, achieved fresh glories by their additions to the 2:30 list. The quota of Fairlawn in this direction, for 1883, number not less than eight or ten. Unfortunately, I was unable to see General Withers personally, as he was suffering from a malarial trouble, which kept him closely confined for weeks. He is at present, I believe, rusticated in Florida. His son very kindly showed me around. I found that the demand for the production of this farm was so great that scarcely anything but one and two-year-olds were on hand; these are mostly unbroken. Every year's crop, large as it is, goes off so rapidly that if twice the number of colts were produced here they would no doubt find a ready market. General Withers is an acknowledged man of business, who believes in the use of printer's ink, a fact which, together with the merit of his stock, have made him in a few years one of the most successful men in his line. He believes in the theory of giving his stallions little work or grooming. They are kept in large box stalls and loose paddocks, where they romp about unmolested and apparently unworried by the curry comb or brush.

Before turning homeward I enjoyed a drive to Daniel Swiger's headquarters for thoroughbreds, with Mr. Garrett D. Wilson, who, in company with Barney Treacey, conducts the leading sale and boarding stable of Lexington. The fancy of Mr. Wilson, of whom, on account of his genial manners and popularity, it is said that he has not a single enemy in the world, runs contrary to those of his partner, as he takes a lively interest in running horses. He has brought out a number of winners during the past few years. A more beautiful farm, and one better adapted to the purpose of horse breeding than that of Mr. Swiger it would be difficult to find anywhere in the world. With its immense stretches of rolling blue-grass pasture lands, divided into countless paddocks, all the fences of which are kept as white as snow, with abundant flowing water and all the modern improvements in the way of stable accommodations, it at once strikes one that this model breeding establishment cannot be improved upon. I was very favorably impressed with a score or two of suckling youngsters by Virgil and Glenelg. For a number of these as high as two thousand dollars had been refused, as all stock is retained by Mr. Swiger for his annual public sales, which have proved among the most successful in the United States.

After a week's picnicing among the Kentucky horsemen I returned to Baltimore. As stated in a previous letter, in horse matters, some as in business, Baltimore has become famous for being slow, and, as a rule, the stock, stabling accommodations and turn-outs of even our wealthiest people are far below par, and if visitors allude to the Monumental City as being slovenly in horse matters, they hit the mark exactly. In this respect the drives of no citizen in the world

could possibly present a greater contrast than those of New York and Baltimore, and there is now about as little chance of comparing the butcher's nag of the "Hookstown Pike" (where in the long ago Flora Temple graduated from a tinner's cart) with the swell turn-outs of the sealskin brigade of the metropolis as there is of comparing the speed of a three-legged muls with a Jay-Eye-See.

Shortly after my return I had the pleasure of spending a week in New York. I looked through a number of the leading stables; among these Bennett's Navarro deserves special mention. They are located on Fifty-eighth street, near Central Park, to which aristocratic locality many of the principal stables are now moving, in order that their patrons may avoid long drives over the rough stone pavements. Among the best ones quartered at Mr. Bennett's model establishment I found Jewel, Crown Point Maid, Stephn M., and five or six others, all with records below thirty. It was here that I met an old friend, Mr. E. C. Walker, who, over the *nom Je plume* of "Veritas," founded and has for several years conducted one of the most popular departments of the *Spirit of the Times* "The Track and Road." Mr. Walker is not only a facile and logical writer, but an accomplished, practical horseman as well, in every sense of the word. Before he became a member of the *Spirit's* staff he had a breeding and training establishment in Michigan, to which State he had drifted from Yankee land. From my long acquaintance with him I am satisfied that he would about as soon drive a fast, high-bred trotter as to eat a dinner. As a reinsman he stands shoulder to shoulder with the best.

While enjoying an afternoon's airing on the femone up-town drives, with a party of gentlemen, we, of course, dropped in on Gabe Case, the popular host of the Club House at the Gentlemen's Driving Park during the last season. The Club House was closed, but we found the genial host at his Road establishment, just beyond the Harlem river. It is here where many of the most noted roadites daily bring up for the purpose of participating in a friendly horse chat and regaling themselves with Gabe's incomparable clam broth—a necter fit for the gods—and one or more of his two-story Irish milk punches, from milk furnished on the spot by Gabe's noted Kerry cow, to which reference was made some time ago in the BREEDER AND SPORTSMAN. This animal is one of the curiosities of New York, and is held in such high esteem by her owner, to whom, I understand, she was presented by the Lord Mayor of Dublin, that no money could buy her. I found Mr. Case in a particularly happy frame of mind, he having just received a mammoth claw of an old man kangaroo, which was killed on the great sheep station of Mr. Alfred Hay, "Boomaoomana," New South Wales, Australia. This unique souvenir, which is beautifully mounted in California gold quartz, was presented to Mr. Case by one of Mr. Hay's friends, as an evidence of his appreciation of the hospitality received during a recent visit. It will henceforth adorn the portly form of Uncle Gabe, to the envy of many a lover of the crions.

Before returning, I had an opportunity of looking over a matched pair of road horses, which may truly be termed a perfect gentleman's road team. I refer to Mr. Shepard F. Knapp's pair of five-year-olds, Sam Hill and Charley Hogan. One of these is the worthy son of Electioneer and the other is by Virgo-Hambletonian. With little or no training to the pole, Johnny Murphy drove them in 2:21 $\frac{1}{2}$ . They are considered, by disinterested judges, the best and fastest pair of green trotters that have ever been seen in New York. They are both rich, blood-like hays and I would rather own them than any pair I have ever seen. Speaking of Johnnie Murphy, whose skill, pluck and success as a driver have given him a world-wide reputation, I must not neglect to mention the views he expressed to me in regard to the desirability of giving a horse a record, whether the animal be used as a stock horse, a gentleman's roadster or intended for the market. It is Murphy's opinion, based upon long experience, that generally speaking, a horse with a record is more valuable than one without, even if there be little doubt of the latter's ability to establish a reputation as a good one. He believes that a man is always more willing to buy a horse which he knows has a meritorious public performance in the shape of a record to his credit. "Claiming speed is one thing, whereas figures, which are stubborn facts, tell their own story. As a rule, a gentleman is willing to pay something for a record; and a stock horse certainly ranks higher if he has a record to his credit than simply the claims of parties who are usually interested." It struck me there was a good deal of common sense in this statement. Applying the same reasoning to the newspaper business, after an extended experience of many years, I am convinced that the publisher who swears to his circulation (or offers to the patrons of his columns an opportunity of verifying his statement) and places his figures at the top of his column, fares better in the end with advertisers and with the public, than he who rests contented with a simple *claim*, however loud and emphatic the same may be.

The importance of measuring the merits and value of a trotter by actual performance under the watch, was never more forcibly illustrated to me than by the following transaction: Recently in New York a well-known business man, in search of a first-class, fast, road horse, had offered to him, by Calvin M. Priest, a Twenty-eighth street horse dealer, a trotter (?) which the latter solemnly declared, in fact guaranteed, to be all right and able to trot a mile to road wagon in 2:30, with twenty days' handling. The gentleman was pleased with the horse's appearance, but was unable to see him speeded, owing to several weeks continued bad weather. The fact that Priest and a number of his friends gave the most solemn assurance of the horse's ability to trot as fast as represented, induced the party to purchase the horse for a price in the neighborhood of \$2,000. After a month's training, the horse was driven by an expert, and the best he could show was a quarter in forty-three seconds. The disappointed owner, upon calling on Priest for an explanation and redress, was simply informed that the animal was "not in fix," and that if he would return him to Priest the latter would retain the money as well as the horse, for a period of six months, with the understanding that if, at the end of that time, the horse could not trot a mile in 2:30 *asulky*, he would refund the money. This proposition the owner very naturally declined, whereupon Priest offered him the munificent sum of \$500 for the horse. I suppose that the sudden depreciation in the animal's value was due to the adoption in New York of the new standard time, which I think is considerably too fast for men like Priest.

The moral of this is, if you want to buy a trotter buy him under the watch. HIRAM HAPPY.

The ages of some of the more noted trotting sires are: Volunteer, 29; Smith's Young Columbus, 31; General Knox, 28; Daniel Lambert, 25; Wood's Hambletonian, 25; Mambrino Pilot, 24; Middletown, 23; Phil Sheridan, 21; Dictator, 20; Happy Medium, 20; Almont, Harold, Belmont and Jay Gould, 19; Messenger Duroc, 18; Aberdeen, 19; Electioneer, 15.

The Case stable won \$28,515 last year. The larger part was won by Jay-Eye-See.

## Waltonian Ways.

[New York World.]

The refusal by the stewards of the English Jockey Club to grant Charles Archer, brother of the famous rider, Fred Archer, permission to train horses on Newmarket Heath, has caused no little stir in turf circles, both in England and the United States. It may be explained here that the refusal of the Jockey Club to grant licenses to jockeys or trainers, simply means, in the broadest sense of the word, expulsion from all race-courses of any prominence in the United Kingdom. In this respect many interested in the turf in the United States have long looked forward to the organization of a National Jockey Club, to the stewards of which all questions of "ruling off" or expulsion shall be submitted. Consequently, the rules adopted at Louisville, which leave the power in the hands of the judges selected for the day, is not entirely satisfactory, especially under the present system of selecting judges. It is well enough for the judges to suspend and report parties charged or suspected of wrong-doing, but before a man's property should be made comparatively worthless, and he debarred from earning a living by the only means that perhaps he knows anything about, he certainly should have a chance of being heard in his own defense before an organized body competent to judge the charges made. Then a sentence of expulsion comes with such a weight that it is not only a punishment but a warning to others.

In England the "warning off" of a trainer or rider is indeed a severe punishment. When Wyatt, the trainer, was "warned off" last April, in connection with the fraudulent running of Brilliance at Sandown Park, he owned a large training establishment, with stables and a handsome private residence newly built, near Epsom. The stables were full of horses, and everything was in order for a busy season. In twenty-four hours every horse had been removed by its owner, and, of a necessity, every employee discharged, and Wyatt stood, as he said himself, abandoned by all except his dog, which looked up at his owner's face as if to ask, "What can have brought about such a change?" Charles Archer is in much the same position. He has recently built at Newmarket a handsome residence, with stables equal to any in the kingdom, in the way of appointments. Last year he trained the horses of Lord Ellesmere, Mr. A. Egerton, and his own with considerable success, but, as was often said during the season, when they were most expected to win they were beaten, and when the chance looked hopeless they were the first to pass the post.

The principal interest, however, in the Archer matter in this country is his connection with Mr. F. T. Walton. In some quarters it is alleged that he is the sole cause of the trouble. Certainly some of the English papers have not minced matters in denouncing him, in which connection the following is from the *Sporting Times* of the 15th inst.:

About the time of the Goodwood race meeting last year the stewards of the Jockey Club received from the corresponding body in America a certain communication having reference to Mr. Walton and his alleged dealings with jockeys in that country. Mr. Walton was, in fact, accused by a prominent book-maker or pool-seller of having certain jockeys in his pay, who rode to his orders and not the owner's. Charges of this sort are not easily proved, and an inquiry that was made into them elicited nothing of a very definite character. Enough was heard, however, to justify the step of warning the English Jockey Club against Mr. Walton. The communication in question was considered by the stewards at Goodwood, and it placed them in a somewhat awkward position, inasmuch as they had nothing solid to go upon; and a judicial body like the English Jockey Club could scarcely take official action in a case that rested almost solely on suspicion, no matter how well founded that suspicion might seem. The step that the Jockey Club took was perhaps that wisest that under the circumstances they could have taken. They made it known that any jockey found in close communication unofficially with Mr. Walton would incur the severest displeasure of the club, and certain jockeys in particular were told that, though the Jockey Club could not forbid them riding for Mr. Walton, they would best study their own interests by not doing so. Consequently, when, in face of this, the fact transpired that Charles Archer, who had already been under the censure of the club, had intimate relations with Walton, his fate was sealed, and the last nail in his coffin was the bet of 2,400 to 300 about Boswell. This fact was all the more unfortunate for Archer, inasmuch as Walton is in default for the money, and, what is more, we understand that, even in the somewhat improbable event of Walton returning to this country to settle, he will resist the payment of this particular item on the score of breach of contract. The notice to keep off the Heath was served on Archer some little time ago, but he has continued to gallop his horses and express his determination of fighting the Jockey Club on the question of right, a proceeding that would be purely Quixotic. The effect of refusing a trainer a license does not seem to be generally understood, and in some cases has been most erroneously stated. It is taken, as a matter of course, that though Archer may not train at Newmarket he may carry on his occupation elsewhere, and we have read somewhere that Lord Ellesmere has constructed a gallop in his park at Stetchworth, about three miles from Newmarket, for the use of his trainer. We may state, however, that the prohibition to see the lands of the Jockey Club, on the withdrawal of a license, extends to the race meetings, and therefore what is the use of training a horse if you cannot run him?

How far Mr. Walton is the cause of the Jockey Club's refusal to grant Archer the necessary license for him to train at Newmarket will probably never be known. But it would seem that when Mr. Walton left New York last July to train at Goodwood that the mail carried a warning to the authorities of what was believed to have been his practice at Monmouth Park, Sheephead Bay, and elsewhere the year previous. Girofle was ridden for the Goodwood Cup by C. Loete, and for over two miles looked like winning easily, after which she died away to nothing, and the race was won by Border Minstrel, whose success it was said at the time suited Mr. Walton's book. For the Cesarewitch, Girofle was ridden by Hixtable. She was nowhere in the race, after which it will be remembered that Walton and his trainer Mr. Day had some trouble, which at one time it was thought would reach the Jockey Club. But nothing came of it. Girofle was put in other hands, and for the Cambridgehire was ridden by B. Wood. As for the Cesarewitch, she had no chance, for she was evidently in no condition for such a race. About this time rumor made Mr. Walton both a heavy loser and a large winner. But subsequently, and immediately after the Liverpool Autumn meeting, during which Boswell won the Liverpool Autumn Cup, it was given out that Mr. Walton had experienced heavy losses, and his bet with Charles Archer was made public, as was also the fact that Mr. Walton left England without paying it. To Mr. Walton's credit, however, it may be said that several papers have recently printed that Mr. Walton's return to England is early expected, and that all his indebtedness will be promptly paid. That such is the

case seems true, judged by the number of races that Mr. Walton has engaged his horses in—for he could not run them if he was a defeniter for bets, for the Jockey Club could at once warn him off. But the question still remains, will or can the Jockey Club interfere with Mr. Walton after all his betting transactions are settled?

Advices from England by mail announce that the stewards of the Jockey Club have granted Archer permission to continue training at Newmarket for two months longer, or until such time as communication can be had with Mr. Long, the Australian sportsman whose horse Archer accepted the charge of last October, subject to receiving Lord Ellesmere's permission to train them. Among the horses so transferred was Tonens, who ran second for the Cambridgehire. Thus the case is now more involved in mystery than ever.

## The Latest Importation.

The annexed description of the latest arrival from abroad is from the *New York Spirit*. Mr. Bucklee has named the horse London.

Mr. Herbert King arrived on the 12th inst., by the steamer Assyrian Monarch, with the chestnut horse by Lowlander—Braelat, which he had purchased in England on behalf of Mr. Willey Buckles, of Champaign, Ill. The passage was a very rough one, the steamer having sailed on Dec. 27th, and encountered a succession of strong head winds. Taking this into consideration, the stallion looked exceedingly well when we inspected him, at Stoddard's Stables, 600 Greenwich street. In color he is a deep chestnut, with a star, and both hind pasterns white. He has a very handsome, intelligent head, tapering at the muzzle, with a broad forehead and very high cheeks. His setting into the neck is capital, and the neck itself, while lean and very bloodlike, is deep and muscular, showing a full trotline, and sinks into well-placed shoulders. He mounts high at the withers, like the Harkeways, has plenty of depth through the girth, with broad, arched ribs, and a strong, powerful loin. He is broad across the hips, and when he has recovered from the voyage, his quarters will fill out. He stands very true on his feet, and has good legs, with large, bony hocks, the tendons standing boldly out. His only defect is rather short pasterns. At first sight he struck us as being rather short for a horse of his height, standing 16.1½, as he does, but he has drooping quarters, which throw his hind legs far under him, and this is one of the most desirable points in racing conformation, as it usually marks a quick beginner, something highly necessary in these days of short races run from the fell of the flag. He was bred in 1879, by Mr. H. S. Constable, and is by the famous Lowlander, from Breeclat, by Angelus; 2d dam Brunette, by Codrington; 3d dam Miss Sykes, by The Caster; 4th dam by The Colonel, etc. Angelus, his maternal grandsire, was by Orpheus (brother to Marsays, who sired the Derby winner George Frederick), son of Orlando and Melibran, by Whisker. Codrington, his great grandsire, was by Wormersley (son of Birdcatcher and Cinizelli, dam of the Marquis, who won the Two Thousand and St. Leger), dam by Hampton, out of a sister to Grey Mommis. Angelus was out of Nutmeg, by Nutwith the St. Leger winner, who was by Tomboy. Lowlander, the sire of the stallion, was by Daleman (son of King Tom and Agnes, by Pantaloon), from Lunra, by Windhound, son of Pantaloon and Phryne, by Touchstone. Lowlander was by long odds the fastest horse in England. As a two-year-old he won two out of six races; as a three-year-old, seven out of sixteen; as a four-year-old, five out of eleven; as a five-year-old, eight out of eleven; among these he won the Windsor Handicap, with 130 pounds, and the All-aged Stakes, with 140 pounds, in one day. He won the Stockbridge Cup, under 139 pounds, by twelve lengths, and the Cheveley Stakes, with 140 pounds, beating the flying Eossais and Quiver, to whom he conceded 28 pounds and 42 pounds, respectively. His greatest performance was beating the redoubtable Blenheim, at even weights, for the Lennox, at Goodwood, Blenheim having been the only horse to defeat Prince Charlie. He was then matched against the Derby winner Galopin, giving the latter 12 pounds for the two years. The race was one of the most desperate ever run in England, but the Derby winner won by a length, dead tired.

On his dam's side some, who judge by the first or second crosses, may pronounce the stallion's breeding unfashionable. But as Mr. Corlett, in a recent letter to the *Sporting Times* remarks, the English have been paying too much attention to fashion of late, with the result that they have neglected the soundest crosses. They sold Tim Whiffier and Fisherman to Australians, and these stallions have founded in that country one of the stoutest families in the world. They likewise sold Mnsket, whom they pronounced "unfashionable," but he has just got Martini-Henry, who won the Derby and Melbourne Cup, and is probably one of the best race-horses on earth. Robert the Devil and Barcheldine were both distrusted, because they were "unfashionable," but both have attemped themselves among the greatest race-horses of modern times. When Mr. Bucklee sent Mr. King to England, his orders were: "Get a sound horse. I want some pedigree, but I don't want all pedigree and no horse. Don't bring any roarer or cribber. I don't want any curby hocks or mulish feet. Get a horse of good constitution." Accordingly, Mr. King never lost sight of this. "I could," says he, "have got any number of colts full of Derby and St. Leger blood, Hermits, Rosicrucians, and Hamptons, but I wouldn't have them as a gift. I never saw so many unsound ones in my life." The stallion is as sound as a dollar. He only ran once, and then was unplaced, at Newmarket, to Gunstick. One has only to look a few generations back to find that his blood is the best in the stud-book. He combines three crosses of the now popular Touchstone, through the choice channels of Phryne, Orlando, and Cinizelli, two crosses of Velociped, two of Pantaloon, and has dashes of Glencoe, through Pocahontas, and of Tomboy, through Nutwith. He is of the male line of King Tom, which has succeeded here in Phaeton, King Earnest, King Ban, and Great Tom. His sire, Lowlander, is now one of the greatest of English sires, his son, Lowland Chief (winner of the Portland Plate, 122 pounds), being one of the fastest in the world. The stallion is intended for breeding exclusively, and will make the coming season at Mr. Buckles' stud, in Illinois, where some sixteen mares await him. His shape is suggestive of speed. As it is a speed which we most need, we think it is probable that he will at once take a leading position among American sires.

The Kentucky *Live Stock Record* says there has been quite a talk of a match race for \$5,000 a side between E. Corrigan's bay colt Harry White, two years old, by Virgil, dam Mary Howard, and J. B. Haggins' chestnut colt Tyrant, two years old, by imp. Great Tom, dam Mozelle. The friends of each colt seem willing to make the match, but as neither of the owners are in Kentucky, nothing has been done as yet. Mr. Corrigan's friends say he will make the match, and many friends of the colt Tyrant here express a wish to back him and take a portion of any match made.

## Lord Falmouth's Turf Record.

Lord Falmouth, who has recently retired from the English turf, leaves with not only an honorable name, but also with a career one of the most successful in turf annals. The following is a list of his victories in thirteen years:

Twice winner of the Derby, with Kingcraft and Silvio.

The Two Thousand Guineas three times, with Atlantic, Charibert and Galliard.

The One Thousand Guineas four times, with Hurricane, St. Cecilia, Spinaway and Wheel of Fortune.

The Woodcote Stakes (Epsom) once, with Lady Love.

The Oaks (Epsom) four times, with Queen Bertha, Spinaway, Jannette and Wheel of Fortune.

The Queen's Vase (Ascot) twice, with Skylark and Ambassador.

The Prince of Wales Stakes (Ascot) three times, with Queen's Messenger, Wheel of Fortune and Galliard.

The July Stakes once, with Bal Gal.

The Chesterfield Stakes four times, with Kingcraft, Skylark, Childeric and Galliard.

The Richmond Stakes (Goodwood) four times, with Jannette, Wheel of Fortune, Bal Gal and Dutch Oven.

The Great Yorkshire Stakes (York) twice, with Gertrude and Lady Golightly.

The Champagne Stakes (Doncaster) three times, with Farnese, Lady Golightly and Bal Gal.

The St. Leger (Doncaster) three times, with Silvio, Jannette and Dutch Oven.

The Great Foal Stakes once, with Dutch Oven.

The Great Challenge Stakes once, with Busybody.

The Middle Park Plate once, with Busybody.

The Champion Stakes once, with Jannette.

The Criterion Stakes twice, with Gertly Bell and Jannette.

The Dewhurst Plate three times, with Wheel of Fortune, Bal Gal and Dutch Oven.

The Jockey Club Cup twice, with Silvio and Jannette.

And the Clearwell Stakes nine times in fifteen years, with Atlantis, Queen's Messenger, Repentance Colt, Farnese, Silvio, Jannette, Bal Gal, Dutch Oven and Harvester, besides running second three times for this event.

## Comments of an Old Timer.

[New York World.]

An old-timer sat under the glaze-covered veranda of Cawood's, on Seventh avenue, yesterday afternoon, watching the passing and repassing of thousands of sleighs of all descriptions with a critical eye. He chuckled softly to himself in a way that attracted the attention of a reporter, who, divining that some particular sleigh or horse in the endless procession had caused a remembrance of days gone by, set down beside the ancient and engaged him in conversation.

"This yere," said the old man, "is a pretty sight, ain't it?" The reporter agreed with him. "Sorter soul-inspiring," he whispered. "Puts me in mind of old Broadway forty years ago, when there was none of the new-fangled notions about clean streets, and when winter was without the intermittent flashes of sunlight that now destroy sleighing. Oh! they were great times! People living uptown a hit used ter go ter business in their sleighs, or, if they didn't own them, rode in the great big sleighs that took the piece of stages."

"But," he continued, "that's all gone nowadays. Poor people hate the snow because they have no sleighs, and—ah! there's an old friend of mine, John Kennedy; that's a slaehin' mare. He calls her Kittie Buford, after old Abe Buford's darter in Kaintucky. As I was a sayin', the poor people ride in the elevated roads, and hate the snow. The rich don't like it nuther, 'cause everything is sloppy most of the time down where they live. But up here it's beautiful, ain't it? Seems as how this was a panorama, with a country scene, and the sleighs with their plumes was figgers put in ter give it color."

"That man, don't yer know who he is? He's Dr. Tom Burke, and that mare, she's a darlin'." He calls her Nellie. She's by North Star, and was bred by Emerson Foote, the great nickel man. Doc Burke, the boys call him. He's a favorite up the road, and there's few can teach him. He had a ches with Frank Work and Edward the other day, and it was nip and tuck between the famous sorrel and the gray mare, but Edward got his nose in front up by Watt's house, where they drew up. There's Frank Work, now. Ain't he as proud as Lucifer of his horses, though? Why them horses, Edward and Dick Swiveller, rules his existence, and they do tell me that the old man, as the boys call him, thinks less of being \$50,000 on stocks than missing a day's riding behind his horses.

"Vanderbilt? No; he ain't out to-day. I guess he's sorry he sent Maud S. away, because he can't pass everybody on the road with that new bay mare of his."

"Good day, sir." The remark was addressed half unconsciously to a man in a white coat who had passed behind a handsome bay mare. "That's Alley Bonner and Music; she's a clipper, I tell you. Well, them new-fangled rigs, with coats-of-arms on their sides, is only fit for the shoddy aristocracy what drives 'em. The slims calls 'em Canadian tubs. They be tubs, but for the Canadian part, why, that's rot. The horses, too, are banged on the tails like English hunters and clipped like German Spitz dogs. I wonder if them fellows find anything in this country good for 'em except the solid cold dollars. That's a Russian sleigh what Mr. Cohnfeld is drivin'. It's a nice rig, and as it is an American-built sleigh I don't see why he don't call it an American sleigh. The old goose-neck sleighs, them that have the comfortable but poor look of a livery stable, are out of fashion now, but the fathers of half the tight-trousered young men what drive fancy rigs found 'em good enough."

"There goes a good team, in fact, the finest on the road. That's Sam Hill and Charlie Hogan, and old Shep. Knapp the man what's drivin' 'em. That expression of going like Sam Hill originated from the speed of that off horse. No, Mr. Robert Bonner don't drive Sundays, and so Iarns and Picard don't come out. But David Bonner is out with a brother to Majolica."

"You won't give it away if I tell you a good joke, will you? Well, then, Matt Bronnan was out the other day, and he was driven up here furious like. Archie Watts was out, but as his horse John L. Sullivan is sick, he was drivin' a Canadian pony they use on the estate to haul coal. Well, the Commissioner was going up at a '30 clip, when out jumpa Watts alongside of him and soon passed him, and Watts ain't seen the Commissioner since, but don't make no error, that horse went pull any more coal wagons."

The trotting gelding Starr King is offered for sale in our advertising department. He has a record of 2:22, and is sound and in fine condition. Mr. Welby desires to sell him only for the reason that he has no use for such a horse; and, as to price, etc., may be had by application to him.

Washington Park Club.

The entries for the inaugural meeting of this club closed January 15th. The following Pacific coast representatives are engaged in the various stakes:

The American Derby.—A sweepstakes for three-year-olds, (foals of 1881), at \$200 each, h. f.; or only \$20 if declared out on or before March 15th, 1884; or \$30 if on April 15th, 1884; or \$40 if on May 15th, 1884; or \$50 if on June 15th, 1884. All declarations void unless accompanied with the money; with \$5,000 added, the second to receive \$750 and the third \$250 out of the stakes. Winner of any three-year-old stake race of the value of \$1,000 to carry 5 lbs.; of \$1,500 7 lbs.; of three or more three-year-old stake races of any value, 10 lbs. extra. Maidens allowed 5 lbs. Foreign-bred entries allowed 7 lbs. One mile and a half. To be run on the first day of the meeting. Weights, 115 lbs. with sex allowance. 82 entries.

E. J. Baldwin's b f Fellen Leaf, by Grinstead—Mollie Mc-Certhy.
E. J. Baldwin's ch f, by Grinstead—Sister to Clara D.
E. J. Baldwin's ch f Savanna, by Grinstead—Josie C.
J. B. Haggin's ch c Merk Daly, by Kyrle Daly—Cordelia.
J. B. Haggin's b c Winnemucca, by Billet—Lottie.
J. B. Haggin's ch f Hirondele, by Glenelg—Susie Linwood.
J. B. Haggin's b f Sweetbriar, by Virgil—Impudence.
Palo Alto Stock Farm's b c Shenandoah, by Shannon—Demirep.
Palo Alto Stock Farm's br f Rita, by Monday—Rigliu.
Palo Alto Stock Farm's bl f Freda, by Wild Idle—Frolic.
Palo Alto Stock Farm's ch f Glendair, by Norfolk—Glendew.

Theodore Winters, ch c Prince of Norfolk, by Norfolk—Marion.

The Washington Park Cup.—A sweepstakes for three-year-olds and upwards, \$100 each, h. f., or only \$20 if declared out on or before May 15th, 1884, with \$4,000 added, the second to receive \$500, and the third \$200 out of the stakes. Weights 5 lbs. below the scale. A winner of any race in 1884 of the value of \$2,000 to carry 5 lbs extra. Two miles and a quarter. 71 entries.

E. J. Baldwin's b or br c Lucky B., 4, by Rutherford—Maggie Emerson.

E. J. Baldwin's h c Gano, 4, by Grinstead—Santa Anita.
N. L. Carnahan's b h Patsy Duffy, a, by Leinster—Ada A.
J. B. Haggin's b g Duke of Monday, 5, by Monday—Demirep.

Palo Alto Stock Farm's b c Shenandoeb, 3, by Shannon—Demirep.

Palo Alto Stock Farm's br f Rita, 3, by Monday—Rigliu.

Palo Alto Stock Farm's ch f Glendair, 3, by Norfolk—Glendew.

Boulevard Stakes.—A sweepstakes for all ages \$50 each, h. f.; or only \$10 if declared out on or before May 15th, 1884, with \$1,000 added, the second to receive \$200, and the third \$100 out of the stakes. One mile and a quarter. 53 entries.

E. J. Baldwin's b c Gano, 4, by Grinstead—Santa Anita.

E. J. Baldwin's ch f Savanna, 3, by Grinstead—Josie C.

J. B. Haggin's ch m Nellie Peyton, 5, by Hurray—Emily Peyton.

J. B. Haggin's b f Sweetbriar, 3, by Virgil—Impudence.

J. B. Haggin's ch f Hirondele, 3, by Glenelg—Susie Linwood.

J. B. Haggin's b c Winnemucca, 3, by Billet—Lottie.

Palo Alto Stock Farm's bl f Phoebe Anderson, 3, by Monday—Florence Anderson.

Commercial Stakes.—A sweepstakes for all ages, \$50 each, h. f.; or only \$10 if declared out on or before May 15th, 1884, with \$1,200 added, the second to receive \$300, and the third \$100 out of the stakes. A winner of any race in 1884 of the value of \$1,000 to carry 5 lbs. extra. One mile and a half; 45 entries.

E. J. Baldwin's ch g Grismer, 4, by Grinstead—Jennie D.

N. L. Carnahan's h h Patsy Duffy, a, by Leinster—Ada A.

J. B. Haggin's b g Duke of Monday, 5, by Monday—Demirep.

J. B. Haggin's ch m Nellie Peyton, 5, by Hurray—Emily Peyton.

Palo Alto Stock Farm's bl f, Freda, 3, by Wildidle—Frolic.

Columbia Stakes.—A sweepstakes for all ages, \$100 each, h. f.; or only \$15 if declared out on or before May 15th, 1884, with \$2,000 added, the second to receive \$400, the third \$150 out of the stakes. Weights 5 lbs. below the scale. A winner of any race in 1884 of the value of \$1,500 to carry 5 lbs. extra. One mile and three-quarters; 47 entries.

E. J. Baldwin's h c Gano, 4, by Grinstead—Santa Anita.

E. J. Baldwin's h or h c Lucky B., 4, by Rutherford—Maggie Emerson.

N. L. Carnahan's h h Patsy Duffy, a, by Leinster—Ada A.

J. B. Haggin's h g Duke of Monday, 5, by Monday—Demirep.

J. B. Haggin's ch m Nellie Peyton, 5, by Hurray—Emily Peyton.

Woodland Stakes.—A sweepstakes for three-year-olds (foals of 1881), \$50 each, h. f.; or only \$10 if declared out on or before May 15th, 1884, with \$1,200 added, the second to receive \$200, and the third \$100 out of the stakes. The winner of the American Derby or Sheridan Stakes to carry 5 lbs.; a winner of both stakes, 10 lbs. extra. One mile and five furlongs; 50 entries.

E. J. Baldwin's ch f Marie Stuart, by Grinstead—Sister Anne.

J. B. Haggin's ch c Merk Daly, by Kyrle Daly—Cordelia.

J. B. Haggin's h c Winnemucca, by Billet—Lottie.

Palo Alto Stock Farm's b c Shenandoah, by Shannon—Demirep.

Palo Alto Stock Farm's br f Rita, by Monday—Rigliu.

Palo Alto Stock Farm's bl f Freda, by Wildidle—Frolic.

Palo Alto Stock Farm's ch f Glendair, by Norfolk—Glendew.

Quickstep Stakes.—A sweepstakes for two-year-olds (foals of 1882), \$50 each, h. f.; or only \$10 if declared out on or before May 15th, 1884, with \$1,000 added, the second to receive \$200, the third \$100 out of the stakes. Half a mile. 108 entries.

E. J. Baldwin's br c Brandywine, by Lexington—Mollie McCarty.

E. J. Baldwin's h f Mission Belle, by Grinstead—Josie C.

J. B. Haggin's ch c Tyrant, by Great Tom—Moselle.

Palo Alto Stock Farm's h c Regal, by Shanuan—Rigliu.

Palo Alto Stock Farm's b c Peyton, by Shannon—Miss Peyton.

Palo Alto Stock Farm's h c Valiant, by Monday—Lady Evangeline.

Palo Alto Stock Farm's bl f Playmate, by Monday—Pleything.

Oakwood Handicap.—A sweepstakes for all ages, \$50 each, h. f.; or only \$10 if declared out on or before May 1st, 1884, with \$1,000 added, the second to receive \$200, and the third \$100 out of the stakes. Weights to be announced April 1st, 1884. A winner of any race, after publication of weights, of

the value of \$1,000, to carry 5 lbs. extra. One mile and a furlong. 108 entries.

E. J. Baldwin's cb g Grismer, 4, by Grinstead—Jennie D.

E. J. Baldwin's ch f Savanna, 3, by Grinstead—Josie C.

J. B. Haggin's cb m Nellie Peyton, 5, by Hurray—Emily Peyton.

J. B. Haggin's b f Sweetbriar, 3, by Virgil—Impudence.

J. B. Haggin's ch f Hirondele, 3, by Glenelg—Susie Linwood.

J. B. Haggin's b g Duke of Monday, 5, by Monday—Demirep.

Palo Alto Stock Farm's bl f Phoebe Anderson, 3, by Monday—Florence Anderson.

W. J. Welch's cb g Jim Renwick, 6, by Joe Hooker—Big Gun.

Great Western Handicap.—A sweepstakes for all ages, \$100 each, h. f., or only \$15 if declared out by May 1st, 1884, with \$1,500 added, the second to receive \$300, and the third \$150 out of the stakes. Weights to be announced April 1st, 1884. A winner of any race, after publication of weights, of the value of \$1,000, to carry 5 pounds; of \$1,500, 7 pounds; of \$2,000, 10 pounds extra. One mile and a half; 88 entries.

E. J. Baldwin's ch g Grismer, 4, by Grinstead—Jennie D.

N. L. Carnahan's b h Patsy Duffy, a, by Leinster—Ada A.

J. B. Haggin's cb g Duke of Monday, 5, by Monday—Demirep.

J. B. Haggin's ch m Nellie Peyton, 5, by Hurray—Emily Peyton.

Palo Alto Stock Farm's bl f, Freda, 3, by Wildidle—Frolic.

Palo Alto Stock Farm's b c Shenandoah, 3, by Shannon—Demirep.

Palo Alto Stock Farm's ch f Glendair, 3, by Norfolk—Glendew.

Palo Alto Stock Farm's br f Rita, 3, by Monday—Rigliu.

Lightning Stakes.—A sweepstakes for all ages, \$10 each, p. p., and \$40 additional for starters, with \$1,200 added, the second to receive \$200, and the third \$100 out of the stakes. Three-quarters of a mile beats; 61 entries.

E. J. Baldwin's ch g Grismer, 4, by Grinstead—Jennie D.

J. B. Haggin's cb m Nellie Peyton, 5, by Hurray—Emily Peyton.

J. B. Haggin's ch m Premium, a, by Castor—by St. Louis.

W. J. Welch's ch g Jim Renwick, 6, by Joe Hooker—Big Gun.

Death of Buccaneer.

Mr. G. Valensin's brown stallion Buccaneer died on the 21st inst. The details of his case are given in the following letter from the veterinary who attended him:

EDITOR BREEDER AND SPORTSMAN.—The noted and valuable stallion Buccaneer, the property of Mr. G. Valensin, of Arno Stock Farm, died on Monday the 21st inst. About three years ago he ran away on the Marysville race track, receiving an injury to his thigh which everyone thought at the time would kill him, but he seemed to have entirely recovered from its effect. About a year since it commenced to trouble him again. I have been in constant attendance upon him for the last six months. Three weeks before his death he showed symptom of Pyoemia or blood poisoning, and gradually succumbed to the inevitable, casting a gloom over that otherwise prosperous establishment. Yours respectfully, L. H. COSTER. Sacramento, January 29th, 1884.

Buccaneer was foaled in 1874, and in his breeding was a combination of Bashaw and Blue Bull blood. He was bred in Iowa by Dr. M. W. Hicks now of Sacramento, got by Green's Bashaw, by Verno's Black Hawk, by Long Island Black Hawk, by Andrew Jackson. Dam Tinsley Maid, by Flaxtail, by Pruden's Blue Bull. Buccaneer had one representative in the 2:30 list, the bay mare Flight, which trotted in 2:29, at Oakland, early in 1883. Mr. Valensin had given the horse better opportunities to show his quality as a sire, and has several young colts of his get at Arno Farm that are very promising.

The General's Strategy.

We have heard odium cast on a trainer of shining ability for the part he took in the race of Trinket against Phallas, at Rochester, in August last, but we relieve him of all corrupt intentions, as he won the race, and did not even for a moment breek faith with the Rochester Association's patrons by dropping a single heat. We refer to John Turner, who gave Mr. Case a lesson in shrewdness worthy of the most astute operator in Wall street. It has been stated that he deceived Mr. Case by assuring him that he would not strive to beat Phallas with Trinket. But Turner alleges that he never exchanged a moment's conversation with the gentleman from Racine prior to that race on this or any other subject. It came to the knowledge of Mr. Case, however, that Turner had backed Phallas for \$500, and he followed suit to the extent of \$3,000, or thereabouts. After Trinket won two heats very easily, and it was evident that Mr. Case's money was about to take to itself wings, and fly into the pockets of those who had accepted the long odds offered against Trinket, Mr. Case sadly sought General Turner, who was watching the cooling out of his mare between the heats, and the following conversation ensued: "How is this, Mr. Turner," gravely inquired Mr. Case, "I thought Phallas was to win this race?" "Your thoughts deceived you," coolly replied the General, "for my money does not say so." "But I will do anything to induce you to let me win it; all I want is to save my own money? What can I do to settle it?" "The only way you can settle it is right out there by beating Trinket," responded the General, as he pointed to the track and closed the interview.—N. Y. Spirit.

Answers to Correspondents.

Question answered only through these columns. No replies by mail or telegraph.

G. E. B. Madieon, Wis.—

Nellie R. is by Gen. McClellan, Jr., dam Susie Rose, by Sam McClellan, son of Gen. McClellan. Gen. McClellan, Jr., by Gen. McClellan, first dam by Geo. M. Patchen, Jr.; second dam, Liza Runk, a Kentucky-bred mare whose pedigree is unknown. Susie Rose's dam was called Hector, a mare bred in Ohio and said to be a Bellfounder.

Subscriber, San Francisco.—

1. Speculation, hy Rysdyk's Hambletonian, dam Martha Washington (dam of Whipple's Hambleton) by Burr's Washington, son of Napoleon.

2. Lou Whipple, by Whipple's Hambletonian, dam unknown.

T. F. K. Napa Cal.

We know of no horse on the turf at present named Adaline. There was a mare of that name in the east at one time, but as we have heard nothing of her for ten years, conclude that she is dead or has been relegated to the breeding paddock.

ROWING.

Ross in England.

Wallace Ross has taken up his quarters at the Star and Garter, on the Thames river, London, and is reported in good health. He is doing steady work, and has already met his opponent on the river. This is how it came about, according to the Sporting Life of January 10th: "The celebrated St. John's sculler put in an appearance, however, and after adjusting the riggers, etc., on his Ruddock boat, got afloat at about half-past eleven o'clock. At starting he showed off in the old Yankee style to perfection, getting into his boat without the usual assistance, leaving bold of both sculls at the same time, and indulging in the thousand and one tricks that the champion Hanlan used to be so fond of performing. On getting under way he proceeded steadily up the river toward Hammersmith, his Ruddock-built craft being fitted with the huge wind-sail adopted formerly by the Americans when they were over here. Just short of the Soap Works he 'spotted' Bubeat, and partly coming down at a swifling pace, when, instead of keeping quietly on his way, or watching his opponent as he went by, Ross immediately whipped round and kept a few lengths ahead of the Putney sculler all the way down to the boat-houses. Naturally, Bubeat's row was quite spoiled, and considering that this is the first time that the men have met on the same water, makes the strange behavior of the St. John's men appear the more extraordinary, and we must inform Wallace Ross that our scullers are hardly educated to such unsportsmanlike conduct over here." William Elliot has left the north, and has also taken up his quarters on the Tbemee. He, too, is reported in the best of health and going well. If he is fit on the 28th inst. be ought to score a victory over Bubeat. Bubeat's style of rowing is severely criticised by good judges, and the Sportsman shares this opinion, as will be seen by the following: "There is a cramped action in Bubeat's rowing that he would do well to try and eradicate. It cannot be on account of obesity, for he scales but seven pounds over racing weight, and the old propensity of reaching too far over his stretcher is very manifest. With more English eullers, both professional and amateur, the supreme idea is bow far each can reach out, little thinking that while the bands are widespread the helance is more difficult to maintain, and not only that, but the stomach is necessarily pinched in so doing. Length forward and catch is all they think of, showing nothing aft the swivel. They all profess to have acquired Haulan's style, but, with the exception of George Perkins, there is not a single English professional sculler who rows in the least like the celebrated Canadian. Ned reached out sufficiently far with full regard to comfort, never unduly straining himself, and always retaining thorough command of his boat, while as much use was made of the water aft the riggers as in front of them. Bubeat's fault is one easily got over, and were he to persevere in the direction indicated he would lose all that objectionable style usually displayed in the first mile of his races."

An Important Match.

John Teemer of McKeesport, Pennsylvania, and P. H. Conley have not signed articles to row for \$1,000 a side. Teemer says he is willing to row Conley, but objects to the amount of money—\$100—deposited by the Portlander. Teemer wants at least \$250 as a first deposit, then \$250 posted one month from the date of signing articles, and \$500 ten days before the race. If Conley and his friends really mean business, the posting of the money will not long remain a go-between.

ATHLETICS.

Advice to Young Athletics on Training.

[L. E. Myers in N. Y. Sportsman.]

Decide upon your distance.—If you are a runner, make up your mind to run some particular distance. Do not start out by saying, "I'll train for two weeks, and then decide what distance I'll run." I have seen many promising athletes ruined or thrown back for months by just such training. Every man knows about how far he likes to run, even if he has never seen a cinder path. If, for instance, you wish to try your speed with that of a friend, and say to him, "I'll run you three blocks," he will very soon say, "I can't run so far," or "I'd rather run you ten blocks," thus showing that he naturally knows the distance best suited to him. So it is with every one. Any man with common sense has some idea of what he can do. If you go to a trainer for information about your distance, he will glance at you from head to foot and say on the spot you are built for this or that distance, without looking to see if you have lung power for a distance man or the well-knit muscles of a sprinter. Many of our best distance men knocked about for a long time on the limit mark of sprinters, and many of our at first supposed distance men have turned our good sprinters. Every man has once been a boy, and if you will only stop to think at what game you excelled as a boy, this you will find, come easiest now. There are, of course, "made men" at all games, especially so at running and walking.

Fredericks and Gifford both started as walkers, but soon found that running was their forte. Neither amounted to anything as walkers, and both have since won championships at running. W. G. George knocked about for some months at walking, but never amounted to anything at this game, but is now one of the best runners in the world. I could mention hundreds of other instances where walkers have turned out successful hurdlers and runners, and runners to be walkers, etc.

One-hundred-yard running.—Most young runners imagine themselves peculiarly good at this distance, and most of them make a great mistake. Sprinting is the hardest of all running. Of course, most young men can, without training, show about 11 1/2 or 12 seconds. This is enough to make them think that with a little training that the odd one and a half or two seconds can be easily knocked off. Hundreds of times have I had beginners come to me and say, "I ran a trial in 11 1/2 seconds, just as I am now. Now, oughtn't I to do close to 'ten' if I train real hard?" Very often I would try to argue with them to show them just what 1 1/2 seconds in such a race meant. Some would profit by my advice, while others would not. I know of one young man who has been trying for four years to run 100 yards, yet 12 1/2 seconds is the best he has ever shown. He cannot be persuaded to try another distance.

For the last four years the members of my club have been "a terror" to the athletes of other clubs, not because they are of better material, but because they each and every one know just what they are best fitted for.

Starting.—To become a good sprinter it is very necessary to

know how to start. The different attitudes taken by the runners in a sprint race are very amusing. Some will start with one arm thrust straight out in front, and the other straight back, and standing bolt upright. Others will crouch until they are almost lying down, while others will take dancing positions, etc. There is only one proper way to start, and that is the position taken by most of the noted Sheffield runners. It is as follows: Stand with your left toe to the mark, with the foot flat. Let the other foot be about from twelve to eighteen inches behind (according to the size of the man), with the toe turned out and pointing to the scratch line at an angle of forty-five degrees. Let the feet be far enough apart to well balance the body. It is well to dig a hole for the hind foot, so that at the word the foot will not slip back. When told to get ready rest your whole weight on the back foot, with both knees slightly bent. Let both feet be flat on the ground. Incline the body easily forward, so as to get a well-balanced position. Have the left arm rigid and the hand hanging just on the outside of the left knee, and the right arm thrown back, and the hand just off the right hip and also rigid. You now must necessarily be "set" and ready for the report or word. You may feel a little awkward in this position at first, but after practicing it a little while you will wonder how you ever could have thought of starting in any other position.

The next thing to do is to move from your mark. At the word, rise quickly on left toe, and at the same time send the right foot viciously into the earth. This will send you forward in a straight line, and will at once put you into stride. Practice this daily from ten to fifteen minutes, running only about twenty-five yards each time. Do not try to take too large a stride at the beginning. To get into motion you must be short on the first dozen strides. After a week's practice at this you will find yourself leaving your mark quickly and cleanly, without any of that rolling about which most runners who do not know how to start are guilty of.

But you must be very careful not to overdo the starting business. Of all the practice that an athlete can take this is surrounded with more danger of sprains, strains, etc., than any other, not even excepting jumping. The sudden starting of the sinews and muscles is often attended with serious results. You must, therefore, be sure that your muscles are in condition to undergo the strain. To practice starting even the first week is folly. But when you are satisfied that you are in such a condition as to do so without any risk, you may then begin as told above.

After you have given the starting the required amount of practice each day, then run 40 or 50 yards at full speed four or five times, each time slowing up gradually. Always run "in form," that is, in good style. Incline the body slightly, very slightly, forward, with arms swinging low and somewhat across the body. Finish your day's work by running about 200 yards at about three-quarters speed. This will help your wind and also enable you to finish the 100 yards at full speed when required. Most men make a great mistake in training for a sprint by not going far enough in their work. They imagine that running a little over the distance will not enable them to concentrate their speed. This is a great mistake, and I can mention many cases where runners have had their men apparently beaten at 75 yards, and in the next 25 yards would go all to pieces. A good many professionals claim that they can run 100 yards when fit for the distance, and to go 110 yards would be asking too much of them. This is drawing it rather too fine for me. I would rather be a foot or two slow for the distance than to be trained to the notch, so that if hurried at any part of the race I would be liable to "crack." "Crack" means not able to finish. Again, I have known men who sprinted best when training for distance, such as a quarter of a mile. A man can run himself out as thoroughly in 100 yards as he can in a longer distance, and you will find if you do too much short work and neglect staying qualities, you will often be beaten just at the finish; in other words, you will heat yourself.

**Murray Defeats Myers.**

The annual reception and athletic games of the Thirteenth Regiment were held in the regiment's armory, corner of Flatbush avenue and Hanson place, Brooklyn, on the 22d. Upward of 4,000 people were present, and the doings of the athletes were applauded frequently and heartily. Several athletes from the Seventh Regiment were entered in the different competitions, and a large number of the Seventh's boys occupied one corner of the armory and the war cry of "New York's finest" was frequently heard. The officials of the meeting were: referee, W. B. Curtis; starter, Jack McMasters; judge of walking, Edward Plummer; and time-keepers, John West, New York Caledonian Club; G. A. Avery, Manhattan A. C.; and Peter J. Donohue. There were eleven events on the programme, all of which were closely contested.

That which caused the most interest, however, was the meeting between Frank P. Murray, of the Williamsburg Athletic Club, the champion walker, and L. E. Myers, of the Manhattan Athletic Club, the champion short-distance runner. A handsome medal was offered by the regiment for competition. Myers undertook to run three-quarters of a mile while Murray walked a half mile. Murray was only in fair condition, and Myers was in very bad trim for a hard race. The track was twelve laps to the mile on a hard wood floor, yet Murray, who is usually troubled by bad heels from pounding, did a most remarkable performance, while Myers' running was an exhibition in nowise satisfactory to the assemblage, and not complimentary to the champion, who, under any circumstances, should have done much better. Murray walked in the fairest possible style and finished so fresh that the belief was general that had he tried he could have broken every known record for the distance. As it was, he walked the half-mile only three seconds worse than his own record of 3m. 2-5s.

It was about 9 o'clock when the men appeared on their marks. Murray was dressed in the blue and gold uniform of his club, while Myers wore the white and crimson square of the Manhattan. The runner went at once to the front, but it was hard work. Myers first caught Murray on the third lap and again just as Murray finished his distance, Myers having still one lap, or 1/4 yard, to go. The time of the men by laps is as follows:

Murray—1 lap, 27s.; 2, 55s.; 3, 1m. 26s., 4, 1m. 58 1-5s.; 5, 2m. 32 1-5s., and 6, 3m. 52 5-5s.

Myers—1 lap, 23s.; 2, 44 4-5s.; 3, 1m. 10 4-5s.; 4, 1m. 34s.; 5, 1m. 58s.; 6, 2m. 21 4-5s.; 7, 2m. 55 2-5s.; 8, 3m. 5 1-5s.; ninth lap not completed.

The winners of the other events were: One-mile walk, E. A. Kraft, 7m. 40s.; running high jump from a 3-inch block, E. E. Flynn, 5 feet 9 1/2 inches; fifty-yard race, S. E. Rennie, in 6 seconds; a tug-of-war by Company F of the Thirteenth Regiment; a half-mile run by E. A. Richards in 2m. 15 1/2s.; a 220-yard race by J. I. Smith in 27 1/2s.; pole-vault by H. H. Baxter at 9 feet 2 1/2 inches; a one-quarter mile run by E. A. Richards in 61a.; a 220-yards hurdle race by J. I. Smith in 31s.; and a mile run by H. S. Clark in 5m. 5 2-5s.

**Another Richmond in the Arena.**

Prof. Ed. Wilson, who is matched to wrestle Dick Rule Græco-Roman, at Tombstone, Arizona, has been interviewed on the proposition of Muldoon to wrestle the winner for \$500 or \$1,000, Muldoon agreeing to throw his man five times within an hour or lose the match. The conversation is reported as follows:

"What do I think about it? Well, I'll tell you, Muldoon is a good man, but the man don't live on the face of the earth who can throw me five times within one hour."

"What does he mean then by authorizing the sending out of such a proposition?" queried the reporter.

"I don't know what he means," replied the man of muscle, "but I know that he talks like a braggart. He does not know either Rule or myself, and probably thinks we are both a couple of yahoos, who never saw a wrestling match, and would be easy game for him."

"Do you intend paying any attention to the challenge?" was asked.

"Most assuredly I do. If I win this match with Rule, which I believe I will, I will reply to it, and give ex-police-man Muldoon a chance to win from \$500 upwards, on much better terms for him than he proposes. I'll bet him the amount stated that neither he nor any other Græco-Roman wrestler, of the many who are hippodroming around the country, can throw me twice within an hour, let alone five times."

"Is not that rather a rash proposal to make to a man of Muldoon's acknowledged superiority in that line of wrestling?" again asked the reporter.

"Well, I don't think so. I am a larger man in all the physical requirements for Græco-Roman wrestling than Muldoon. I never saw him stripped, but I'll bet long odds that I beat him in both chest and arm measure, and I know I am his equal in strength. I have put up 200 pounds with one hand, and have the record to prove it. Not only this, but I am a good deal better than a raw hand at the science of wrestling."

"Then you are really in earnest in stating that you intend challenging him in case you win the match with Rule?"

"Challenge him! Well, I should say I am. He can't begin to do all he says, and I'll make it cost him just as many dollars as he dares put up, for his heery boasting."

"In what condition are you for your approaching match with Rule," said the reporter, changing the subject.

"Never better in my life, excepting in the bellows. I don't carry an ounce of superfluous flesh, and feel like a race-horse. In a day or two I intend going out to Gate's ranch, and will have a tussel or two every day with him, which will fix my wind all right before the match comes off. You can bet your interest in the Quijotas, young fellow, that I'll win the match, and then ho for the Bay City to tackle Muldoon."

**THE GUN.**

**Exceptions by W. L. Curry.**

EDITOR BREEDER AND SPORTSMAN: I just note in your issue of December 22nd the following remarks in reference to the pigeon match to have taken place between Mr. Maynard and myself:

"While speaking of the Oregon shooters we may mention they failed to put up the coin, \$150, for the match with Mr. Maynard, the popular purser of the steamship Columbia. It was a poor business to back down at the last moment, but then it takes a good man to beat Maynard at the trap."

I do not take exception to the compliment you paid Mr. Maynard on his shooting abilities. I hear, and am led to believe he is a good shot. But I do take exception to your assertion in which you accuse me of not putting up my \$150, and of my backing down at the last moment. I did put up my money, and the stake-holder got it and held it, under articles of agreement between Mr. Maynard and myself. And when Mr. Maynard found it impossible or inexpedient to fulfill those articles of agreement the stakeholder turned over, upon application to him by me, the amount of money I had so placed in his hands.

In the candidness of your judgement now, would you call this a back-down on my part? A correct and detailed statement of the affair is as follows:

In an ordinary conversation on shooting matters a wager was made by an admirer of Mr. Maynard's shooting that he could beat any of the Oregon shooters, which wager was seen, and a forfeit put up by Mr. Maynard's friend, and by the other party who named myself as the one to oppose Mr. Maynard at the trap, in the field, or under whatever conditions the match was to be shot. Considerable speculation was indulged in on this; the understanding seemed mutual. Mr. Maynard being in a position better than myself for furnishing the pigeons, it was so agreed to shoot at pigeons, to furnish them from San Francisco. After impatient delay, word reached me that Mr. Maynard was desirous of shooting under more specific arrangements; that he had no assurance in actuality of amount of a match. I concurred, and waited upon him myself personally, and arranged to shoot for \$100 a side, 100 pigeons each; 30 yards rise—loser to pay for all birds. I left the choosing of rules to him, and in his choice of the California State Rules I again concurred. Then articles of agreement were drawn up and signed by both Mr. Maynard and myself governing the shoot, and the actual amount of money in coin for which the match was to be shot was placed in the hands of a stake-holder, while the forfeit to the prior arrangement was done away with. And these circumstances, in furtherance to which this article of agreement was in effect that Mr. Maynard did thereby obligate himself to procure the birds during his lay-over trip in San Francisco, or no shoot, left the field plainly open.

In two weeks Mr. Maynard's ship returned to Oregon, but with her came no pigeons. The reason was, I believe, that they were not to be had in your city. Of that Mr. Maynard can speak for himself. I know nothing of the difficulties attending the purchasing of birds. And upon receipt of this information from Mr. Maynard, that he was unable to procure birds, the aforesaid articles of agreement invalidated themselves, and the moneys put up in consideration thereof drawn down.

Now, in conclusion, I might say I had much confidence in winning the match. If I had not, the obligation would not have been arranged with such harassing obligations. Mr. Maynard had equal confidence in himself, also, I presume, but the match was virtually in his hands; nothing was in the road excepting this question of pigeons, and inasmuch as they were not to be had, I kindly volunteered to shoot the match under fresh agreement on clay pigeons or glass balls, but these substitutes seemed inferior to my adversary's idea of skill at the trap. There was an opportunity for shooting the match; that opportunity is passed. Very truly yours,

W. LANE CURRY.

The reports from Alviso were better, last Sunday for ducks.

**Pigeon Shooting.**

A pigeon match at Camp Goodall took place last Sunday week which excited much interest in the neighborhood. It was a match between the crack shots of Watsonville and Gilroy, with some outsiders, such as W. E. Pearson, who now, it appears, resides in the valley. According to the *Pajaronian*, Frank Maskey was expected to be present, but did not put in an appearance, and we personally know, from business matters, it would be impossible for him to have done so just now. Seven men formed the Gilroy delegation, headed by Mr. John Paine, whose shooting on the occasion was not as good as usual. The conditions were: 12 birds each, 21 yards rise, plunge traps. The judges were H. F. Peckham, Wm. M. White and H. D. Bartlett. The score:

Geo. T. White.....	1	1	1	0	0	0	1	0	0	0	0	0	4
H. S. Fletcher.....	0	1	1	1	1	1	0	0	1	1	1	7	
D. Dunham.....	0	1	0	0	0	1	1	1	1	0	0	0	
Geo. Eustace.....	1	1	1	0	0	0	1	1	1	0	7		
D. M. Pyle.....	0	1	0	1	0	0	0	1	0	1	1	6	
W. E. Pearson.....	1	1	1	1	1	1	1	1	1	1	0	10	
J. Colchower.....	1	1	1	0	1	0	1	0	0	0	0	6	
J. Frizzell.....	1	0	1	0	1	0	1	1	0	0	0	7	
J. Paine.....	1	0	0	1	0	0	0	0	0	0	0	2	
E. Lipssett.....	1	0	1	1	1	1	1	0	1	1	1	10	
J. Milliken.....	1	0	1	0	1	0	0	0	1	1	0	6	
B. Bonntree.....	1	1	1	1	1	0	0	0	1	1	1	8	
H. Frauz.....	1	1	1	1	1	0	0	1	0	1	1	8	
J. Huddleson.....	1	1	0	1	1	0	0	1	0	1	0	6	

The *Pajaronian* concludes as follows:

"Pearson and Lipssett divided first and second moneys, getting \$25 each, and Fletcher got the third prize, \$14. Though the Watsonville team got most of the coin, each team killed the same number of birds—48. The percentage killed was 57 per cent. Pearson showed himself a crack shot, and in the opinion of many he was entitled to first prize, the judges giving Lipssett a bird for one he missed, and he killed the fresh bird and tied Pearson's score. Several birds fell dead out of bounds. The best of feeling prevailed, and honors continue easy between the Gilroy and Watsonville teams. A return match will probably take place before long, and from some of our feather pullers we will expect better work."

**Team Match at Fresno.**

The *Republican*, a local paper, gives the following particulars of a team match at Fresno, which, from pressure of matter, we had to omit last week. Both teams consisted of local nimrods, some of whom at the end of the day showed themselves very capable men. The teams were captained by Edward Hughes and J. W. Reese, who decided on the following scale of points for game now in season:

Geese, 8; brants, 6; sand-hill cranes, 8; canvasbacks, 8; mallards, 6; widgeons and sprigs, 6; teal and other ducks, 4; cotton-tail and curlew, 3; quail, 4; plover, 1.

The match lasted for twenty-four hours. The score at the end of the day was:

J. G. Hughes.....	107	J. W. Reese.....	140
H. M. Hughes and Bro. Austin.....	135	R. B. Terry.....	44
Dr. Wright.....	42	W. T. Burks.....	40
M. W. Miller.....	76	Pat Fry.....	43

The *Republican* adds:

As will be seen from the score members of Reese's team made both the largest and smallest number of points. J. W. Reese coming in for the former honor by a large majority, and Will Burks for the latter, unanimously. A magnificent supper was given by the vanquished team at the Rockaway restaurant, on Thursday evening, which was a highly enjoyable affair for all concerned. One of the interesting features of the programme was the presentation to Mr. Burks of a splendid leather medal, about eighteen inches in circumference, upon which was elegantly inscribed: "Presented to W. T. Burks in consideration of having made the largest number of 000's in the hunting match at Fresno, January 15th." Another match will probably take place in the near future.

The sport on the preserves last week is reported good. Four members of the crack Teal Club are credited by Dame Rumor with having bagged over 500 birds altogether. Mr. St. Clair, member of the Tule Belle Club, accompanied by Mr. Holmes, got between 70 and 80 birds, with considerable canvasbacks. All the birds were said to be in splendid condition, contrary to the general experience. Messrs. Butler and McAlister of the Cordelia, with two friends, had an enjoyable time at their preserve on Sunday, returning with 100 birds for the party. The lot included 12 canvasbacks. The birds killed in the northern parts of the bay are reported better eating than those killed at Alviso and adjacent points.

The Red Bluff *Cause*, says, the subscription list to raise \$450 for the grand shooting tournament on 22d of February, is succeeding well. The Tehama County Shooting Club have the management of the affair, and they intend to have lots of good prizes and, at least, 1,200 birds on the ground! The Gridley sportsmen are working earnestly, also on a large scale, in the same direction for the same day, and with success. Our locals cracks, must not forget this tournament.

Deer are reported to be commonly offered for sale at Red Bluff. Is this from the negligence of the District Attorney, or the interference of the Supervisors? Whoever is to blame the offence, nevertheless, is punishable by a fine of \$500 and six months' imprisonment; at least, so says Section 625 of the Penal Code. Is the enforcement of the law nothing to the officers of the law? With some people the fulfillment of a solemn oath is nothing to the enjoyment of a good salary. That's the idea, you know.

The last *American Field*, says, Al. Davis, a western crack shot, lately killed 100 pigeons without a miss, shooting at double birds, 21 yards rise. His opponent killed 88. This is great shooting, but after the match he killed 10 birds straight at 80 yards rise, using a 20-pound, 6-gauge, single barrel gun. With the rest of mankind acquainted with trap-shooting, we may be allowed to inquire, who is this Al. Davis?

The man in charge of the Alameda Gun Club preserve reports plenty of water, plenty of feed and plenty of birds since the late copious rains. The club turns out to-day in force with the intention of making up for lost time. We had anticipated this news in a previous paragraph, but it is now reported to us officially. We look for large returns all round next week.

The members of the Alameda Club are now in hopes of having some duck shooting on their preserve. The late rain is expected to fill their ponds. We congratulate our friends on their prospect.

Mr. Fred. Osborne of the hardware firm of that name on Market street, killed 75 ducks last week, in one day's hunting at Alviso. The gentleman is a member of the Alviso Waterfowl Club.

## HERD AND SWINE.

### Ensilage in the Dairy.

At a meeting of the Hempden Harvest Club, at Springfield, Massachusetts, January 5th, C. B. Benedict, Superintendent of Brightside farm, Holyoke, read a paper from which we make the following extracts:

As to the feeding merits of ensilage for beef, growth, milk and butter, I believe I gave the club the results of our experiments of a year ago, and expressed ourselves perfectly satisfied with the system in every respect; and now, after another year's experience, including its use during the whole year, we have only to repeat what we then said, only with more force, for we have demonstrated by experience that ensilage is as good a feed in summer as in winter, or an all-the-year-round feed. We have more than half a hundred head of cattle in our stables that have not been turned out for grazing purposes for more than a year, their principal feed being corn and rye ensilage, with a limited amount of corn meal and coarse wheat bran, at a cost of less than ten cents per day, and they have done well, given an even flow of milk and of superior quality, as you will admit when I tell you that our dairy of more than fifty cows, several of them, natives and Durhams, average 25 per cent. cream, and so good that our neighboring milkmen come and beg for it at the door at seven cents per quart. How they can do it I leave you who are experienced in the milk trade to conjecture.

The cry is raised by non-believers in the system that good milk and butter cannot be produced by this feed, all of which our experience leads us to contradict. As good milk can be produced, and as good butter made with ensilage feed as any other, I care not what it may be, and I believe I am prepared to say at one-half the cost of production.

One of the main points in feeding, be it for beef, growth, milk or butter, is to provide food that may be easily digested, and a help to the digestion, fed with other richer foods, thereby causing as perfect assimilation as possible of all the food taken into the system, and this, in my mind, is the first consideration of ensilage. Grass, we all know, is a better milk-producing food than hay, simply because it is succulent and easily digested and distributed throughout the system. The by-many-condemned silo will furnish you the same succulent, milk-producing food in winter, or equally as well in summer.

We are utilizing our corn-stalks—stover—this winter by a system of steaming, and are well pleased with the result, being able in this way to dispose of nearly or quite all of them, the cattle eating them nearly clean. But why is steaming a benefit? Simply because it renders them more succulent and tender, therefore more easily digested, and for this reason the cattle do better on them than if they were thrown to them whole and in a dry state, and allowed to waste more than one-half at that.

We shall average keeping on Brightside farm, from July, 1883, to July, 1884, 100 head of cattle—75 average mature—12 head of horses, 30 sheep, and some 250 hogs (less than 200 acres of land), with the purchase of a few tons of wheat bran and meal; and in no other way than through the system of ensilage could we do it; and let me say right here that in the near future we anticipate to be able to keep double this amount. Many experienced in the feeding of ensilage base its feeding qualities, as compared with hay, at a ratio of three to one; others two and a half to one; a few say two to one. We have always made our experiments on a base of three to one, but rye ensilage fed alternately with corn, I think we are safe in saying, is equivalent to two and a half to one. Now, if we can get 25 tons of ensilage per acre, our acre will produce an equivalent of 10 tons of hay. Your acre to grass will, if good land and season, cut say three tons of hay, which will keep your cow nine months, if judiciously fed with grain. Our acre will, with the same amount of grain, keep three Jersey cows for one year, and our forage feed has cost us \$1.76 per ton in silo, and I would guarantee a proportionate production from my cows, either for beef, milk or cream, and at what per cent. less cost figures will tell. Please understand, I am not saying this to convert you to the ensilage system, but simply stating my views as to what I consider the best feeding rations for producing beef, milk and cream, and I believe, so far as our observation and experiments have gone, I speak understandingly. The best is the cheapest, if it will produce equal results. An acre of land, in a state of fertility to produce two tons of hay, will produce 20 to 25 tons of ensilage without manure. Our ensilage cost in silo, for 1883, \$1.76 without manure, and averaged nearly 25 tons to the acre.

### The Cattle-Plague Law.

The following is the text of the Bill prepared by the National Committee of Cattle Breeders, and now under consideration by Congress:

A bill for the establishment of a bureau of animal industry for the suppression and extirpation of pleuro-pneumonia and other contagious diseases in domestic animals.

SECTION 1.—The Commissioner of Agriculture shall organize in his department a bureau of animal industry, and appoint as chief a competent veterinary surgeon, whose duty it shall be to investigate and report the number, value and condition of domestic animals of the United States, their protection and use; also to inquire into and report the causes of contagious communicable diseases among them, and the means of prevention and cure of the same, and collect such information on these subjects as shall be valuable to the agricultural and commercial interests of the country. The salary of the chief of the bureau shall be the same as that of other chiefs of division in said department. The commissioner is also authorized to appoint a clerk of said bureau at a salary of \$1,500 per annum.

SEC. 2.—The Commissioner of Agriculture is authorized to appoint three competent agents, who shall be practical stockraisers or experienced business men, familiar with business pertaining to commercial transactions in live stock, and whose duty it shall be, under the instructions of the Commissioner of Agriculture, to report the best methods of treating, transporting and caring for animals, the means to be adopted for the suppression and extirpation of pleuro-pneumonia, and provide against the spread of other contagious diseases. The compensation of the agents shall be \$10 per diem, and all necessary expenses while engaged in the performance of duty under the act.

SEC. 3.—In order to promote the exportation of live stock from the United States, the Commissioner of Agriculture shall make a special investigation as to the existence of contagious pleuro-pneumonia, or any contagious communicable disease, along the dividing line between the United States and foreign countries, and along the lines of transportation of all parts of the United States to ports from which live

stock are exported, and make a report of the results of the investigation to the Secretary of the Treasury, who shall establish such regulations concerning the exportation and transportation of live stock as the results of said investigation shall require.

SEC. 4.—That to prevent the exportation from any port of the United States to any port of a foreign country of live stock affected by any infectious or contagious disease, especially pleuro-pneumonia, the Secretary of the Treasury shall be authorized to adopt such measures, not inconsistent with the provisions of this act, as he may deem necessary.

SEC. 5.—That it shall be the duty of the Commissioner of Agriculture to prepare such rules and regulations as he may deem necessary for the speedy and effectual suppression and extirpation of contagious pleuro-pneumonia, and certify such rules and regulations to the executive authority of each State and Territory, and invite said authorities to co-operate in the enforcement of the provisions of this act. Whenever the plans and methods of the Commissioner of Agriculture shall be accepted by any State in which pleuro-pneumonia or other infectious or contagious diseases are declared to exist, and whenever the Governor of the State or the other properly constituted authorities signify a readiness to co-operate for the extinction of any contagious or infectious disease, the Commissioner of Agriculture is authorized to expend so much of the appropriation as is necessary in the investigation of the facts as to the disease, in paying for animals deemed necessary to slaughter, and in such disinfection and other means necessary to stamp out the disease; and whenever a State, in any section of which contagious or infectious disease exists, which the Commissioner of Agriculture has declared dangerous to the animal industries of the nation, fails to make provision for its extinction, or co-operate with the plans of the Commissioner of Agriculture for the extinction of the disease, the President of the United States, on presentation of the facts by the Commissioner of Agriculture, shall be authorized to declare said State, or such part of said State as is dangerous to the animal interest of the country, in quarantine, and prohibit the exportation of cattle out of said State or district.

SEC. 6.—Provides for the effectual stamping out of the disease in the District of Columbia.

SEC. 7.—That no railroad company within the United States, whose road forms any part of a line of road from one State or Territory to another, or the owners or masters of any steam, sailing, or other vessels, shall receive for transportation or transport from one State or Territory to another any live cattle affected by any contagious or infectious disease, and especially the disease known as contagious pleuro-pneumonia or lung plague; nor shall any person, company, or corporation deliver for such transportation to any railroad company or master, or owner of any vessel any live cattle, knowing them to be affected by any contagious or infectious disease; or any person, company, or corporation drive on foot or transport by private conveyance from one State or Territory to another any live cattle knowing them to be affected by any contagious or infectious disease, especially contagious pleuro-pneumonia or lung plague.

SEC. 8.—It shall be the duty of the Commissioner of Agriculture to notify the proper officials or agents of any railroad, steamboat, or other transportation company doing business in any infected locality of the existence of said contagion, and the person or persons operating such railroad, or the master or owner of any vessel, or owner, custodian, or person having control of such cattle or live stock within the infected districts who shall knowingly violate the provisions of Section 7 of this Act shall be guilty of a misdemeanor, and on conviction punished by a fine of not less than \$1,000 nor more than \$5,000, or imprisonment for not more than one year, or both fine and imprisonment, and if any such railroad, steamboat, or other transportation company shall, after having received such notice, violate the provisions of this act, such action shall be *prima facie* evidence of wilful disregard for the provisions of the act.

SEC. 9.—It shall be the duty of the several United States District Attorneys to prosecute all violations of the act brought to their notice by any person making complaints; and the same shall be heard by any District Court of the United States holden within the district in which the violation of the act is committed or the person or corporation resides or carries on or has a place of business.

SEC. 10.—That the sum of \$500,000, or so much thereof as is necessary, be appropriated to carry into effect the provisions of the act.

SEC. 11.—This act shall take effect and be in force from and after its passage.

### Churning Whole Milk.

Many people suppose that by churning the whole milk they would be sure of all the butter the milk was capable of producing, though it might require more labor than churning the cream only. Such a conclusion has been strengthened by the fact that before the present modes of rapidly and completely separating cream from milk were adopted, churning the whole milk would sometimes give ten per cent. more butter than churning the cream only. Which method will produce the most butter depends upon various conditions. However it may have been in the past, it is now true that churning the whole milk oftener fails in producing the largest possible amount of butter than does churning the cream only. In the first place, there are but few churns which will do good execution in churning milk. The proportion of liquid to milk fat is so great that the power of the churn will be spent upon the liquid instead of the fat. Unless the churn is specially adapted to such a purpose, it will not act upon the fats with sufficient directness to cause perfect adhesion. The small globules, which are most difficult to churn, evade, as it were, the action of the churn, and are left unchurned in the buttermilk, the larger ones, which churn easier, being alone collected.

A proper relation must be observed between liquid and fat to make the churning most complete and the quality of the product most satisfactory. There may be too little liquid as well as too much. If the cream is too thick the friction of the churn upon it will spoil the grain of the butter, by wearing out the cream globules before the churning is done, thereby making the butter greasy and short-lived, also causing it to gather before all the cream is churned.

The contents of the churn should be sufficiently liquid to avoid grinding or from being too stiff, without being so thin as to scatter the fat globules to such an extent that their union will be a matter of accident rather than of certainty from the action of the churn. Milk enough with the cream to make its bulk about one-fourth that of the whole milk gives about the right consistency. Failures in the past to secure so much butter from the cream alone as from the whole milk, were not occasioned so much by the want of proper consistency in the cream as from the fact that the older methods of churning milk were too imperfect to admit of securing

all the cream, a part of the churnable cream not being separated from the skim milk, could only be secured by churning the whole milk. Under the modern and improved modes of creaming milk, by which the cream is not only rapidly but perfectly separated, churning the whole milk is a losing operation. It occasions loss, first, because it requires extra labor, and second, because it gives less butter than churning the cream. Since the butter fats are all contained in the cream, the churn can be made to act upon them with better effect than is possible when they are scattered through a liquid four times greater in bulk than in a necessary.

At the recent meeting of the New York State Dairymen's Association at Ogdensburg, Major Alvord of Houghton Farm showed, as the result of careful experimenting, the imperfect manner in which churning is sometimes done. In churning thirty pounds of Jersey milk, kept until a little sour, he obtained in an oscillating churn twelve ounces of butter. Leaving the buttermilk until the next day, a second churning gave 12½ ounces more, a third churning five ounces and a fourth 1½ ounces—in all, thirty-one ounces from the thirty pounds of milk. When a given quantity of milk and the cream from an equal weight of similar milk were churned in comparison, the latter produced the most butter and with the least churning. The churning was effected by the condition and quantity of food. The results were best when the cows had succulent food, such as grass, roots or ensilage, dry feed rendering the churning more laborious and imperfect. Through microscopic examinations it was found that the structural condition of the fat globules had much to do with the result in the churn. The milk in which the fat globules were the most uniform in size churned the most evenly and perfectly, while those most unequal in size churned most unevenly. The larger globules appeared to churn so much in advance of the smaller that they collected into butter before the smaller ones were churned, but the latter, by more churning, would in due time, also collect into butter. Such differences, occasioned by the influence of breed and feed, showed that the contents of the churn required from one to four times churning to secure all the churnable butter fats the milk contained.

If equally careful observations were made upon the milk of other breeds, still greater differences might appear. The globules in Jersey milk are among the most uniform in size, being generally large and easy to churn. These experiments do not argue well for getting the best possible results in butter from the mixed milk of different breeds. It would hardly be possible to avoid loss from having large, small and medium-sized globules all mixed in one churning. There is economy in having cows for a butter dairy the fat globules in whose milk are as nearly as possible of uniform size.

### The Polled Breeds—Their Points of Excellence.

At the meeting of the Western Polled-Cattle Breeders' Association, held at Des Moines, Iowa, January 9th, President Graves read a paper, from which the following extracts are taken:

Many points of excellence can justly be claimed for these hornless cattle, that the most ardent admirers of other breeds will not attempt to disprove, or claim for their favorites, among which are absence of horns, docility, fecundity and propensity. The absence of horns, which are with animals used as weapons of offense and defense, naturally make them more peaceable, quiet and tractable, and therein assist materially in ease of handling, in early maturity and cheapness of feeding, it being understood by all intelligent feeders that a quiet animal, other points being equal, will lay on fat faster than a wild, unruly one. Their docility naturally inclines them towards fecundity by increasing chances of pregnancy, and decreasing chances of abortion through accidents, which we must all admit wild and unruly animals are more liable to than are quiet and peaceable ones.

The careful breeding of these animals for many generations has caused their many excellent points to become so thoroughly fixed as to make it practically certain that they will transmit them to their progeny. That they are prepotent seems abundantly proved by the fact that a good polled bull, when coupled with any other breed of cattle, is safe to show from 90 to 100 per cent. of hornless calves, and in case the bull is purely bred Aberdeen-Angus or Galloway, the calves are almost certain to be all black as well as hornless, and largely pattern after their sire in shortness of leg, fullness and depth of chest and width of loin. Their great depth of chest and full round harrel is necessarily conducive to hardness, furnishing, as it does, ample room for the heart and other organs to properly do their work, and it must necessarily follow that an animal thus equipped is better able to withstand the rigors of our northern winters than is one less favorably constituted. In the case of the black polls we have also a good combination of thick hide and abundant hair, that gives the best possible protection from cold in winter and heat and flies in summer.

The absence of horns is not only conducive to quietness and safety in the herd, but is a great measure of economy in shipping the cattle to market. All of you who, like myself, have had experience in shipping cattle on our railway cars will readily admit that horns are undesirable, and that if we had cattle entirely without them, we could undoubtedly load an average of one head more on a car, and load them much easier and more safely, for if an animal should get his head down on going in, he could get it up again without breaking off a horn or gouging a mate; also it will admit that the occasional loss of a horn causes the animal losing it a great deal of suffering, and therefore shrinkage and consequent loss of price. These polled cattle are properly classed as beef breeds, the laying on of flesh and fat being their strongest characteristic, though they are by no means without merit as milkers, all of them giving a fair amount of good rich milk, the quality of which, as far as my personal experience reaches—and I am using both—being but little inferior to that of the Jersey. Their ample organs furnish large capacity for assimilation of food, and materially assist in reducing cost of raising and fattening, for, as we all know, or ought to, it is not the amount of food consumed, but the amount assimilated that gives the flesh and fat; also that every pound of food that the animal consumes that he does not properly assimilate is not only that much wasted, but that much extra load to be carried by the food assimilated.

Granted that we have a fine breed of cattle to work upon, we must try and work intelligently and carefully, so as to give our cattle a fair chance in the competition with other breeds. The Shorthorn and Hereford men have grand breeds of cattle, and they are, as a rule, well posted in the art of raising and fattening them, and as the doddies begin to make a fair show of wresting their colors from them they are beginning to wake up again, and, as it is commonly put, "are getting on their ear about it," and we may be well assured

that they are not disposed to let us have a walk-over in the race for the most and best beef for the least money. Being convinced of this, we must be careful to avoid the mistakes that some of them have made, and instead of using or selling inferior animals as breeders, we should be unsparing in the use of the knife, and send every inferior animal to the block, telling our customers we have no breeding stock for sale at present. High prices will tempt many breeders to use or sell inferior animals, but let me urge upon you the importance of withstanding this temptation; do not listen to it, for it is the voice of the siren that has lured many a Shorthorn breeder on to the rocks of financial distress; it is the voice that has ruined thousands of Shorthorn herds; it is, in fact, the rock that has split the prices of Shorthorns squarely in the middle, and been the foundation for the call for something better, and been the most potent influence in calling into prominence the grand polled breeds, for which we, the lovers of truly good beef cattle, may feel thankful, the Short-horn losers correspondingly downcast.

Remember, that if you sell an inferior animal for a breeder, or even give it away, its poor performance or reputation comes home to you and destroys your chance of getting customers at remunerative prices for good stock, no matter how good they are, while if you use an inferior animal in your herd you deteriorate its value exactly in proportion to the amount used, and virtually ruin your herd as one from which intelligent breeders will select animals to breed from.

Therefore, set up a high standard of excellence, select the very best animals to breed from; use none but the best; breed for the best, and if you have any really good animals in surplus, sell them to your friends for breeders, and the inferior ones fix at once so they must go to the butcher's block, and so that no temptation can, in a moment of weakness, cause you to sell them, and with them your reputation as a breeder.

Treat your animals fairly and kindly, and they will amply repay you for all your efforts to improve them. Because they are grand rustlers do not compel them to earn their entire living by rustling; do not believe that the south side of a barbed-wire fence is just the protection they need from the host of bores, or the scatterings of a manure pile the best food for them. Neither is it necessary to pamper them, for they don't need it, and it will do them no good, while by pampering or overfeeding you run the risk of injuring their breeding qualities. Give them good, square, generous treatment, and you will be surprised to find that they are making you more money every day than anything in the stock line you ever engaged in. We do not claim for these cattle that they will furnish five dollars' worth of beef for every dollar's worth of feed consumed, or that they will yield a wash-tub full of milk three times a day, or that a pint of their milk will make a pound of butter, or that they are nice enough to bring in the house for parlor ornaments; but we do claim, and propose to make the claim good, that for beef-producing machines eminently adapted for use in the West, they cannot be excelled, and we confidently predict that the time is not far distant when our best tables will be graced by juicy cuts from the loin of an Aberdeen-Angus, or other polled breed, and our health and happiness enhanced thereby.

The First Calf.

What is the foundation for the belief more or less prevalent with farmers, that the first calf is not worth raising, especially if it is a female? Is it the result of observation or of careful experiments, with an accurate record of a large number of cases? If the practice of these breeders is to kill such calves young, how do they know they might not have been superior animals? Again, if the results of experience, may not investigation show the manner of breeding to have been defective from the start?

If a young heifer is coupled with an inferior bull with an idea that he is good enough so long as he begets a calf, doomed from conception to an early death, it is no wonder that the first horn has a bad reputation; or if a large number of yearlings are pastured with a worthless brute of a bull, and he, perhaps, too young for more than a very limited service, what can be expected from such breeding? To look for a resultant offspring of high character is about as reasonable as to go into the woods for black Hamburg grapes.

Couple your young heifers with as high-class males as you would use for more mature cows, and so give the first born an equal chance before you condemn them as vagabonds.—Breeder's Gazette.

Variety of Cheese Product.

It is a noticeable fact that with all the American love for doing things differently from others, with all the American inventive skill, the great mass of the cheese made in this country is much alike. Some is much better than others, but most is made after one model. This is not nearly so true of the cheese made in European countries. There an almost endless variety is to be seen—variety in size, shape, color, taste and smell. Some of the European cheese is exceedingly distasteful to American palates and nostrils, but all meet a want. The total consumption is the greater because of this attempt to meet the fancies of many classes of consumers. Many of these classes are largely represented in this country, and have not forgotten their old tastes. We often lament the fact that the cheese consumption in this country is small compared with the population; yet little successful effort has been made to increase it by adapting the product to the tastes of these large classes of foreigners.

There are practical difficulties in the way. Small cheese, and those of peculiar size or flavor, usually cost somewhat more labor in the making, but often they can be sold at prices considerably above those current for standard cheese. At the first dairy convention we attended, the desirability of having cheese made of such size that they could be sold for family use without cutting was presented. Yet little advance has been made in introducing such cheese. The arguments in their favor are as strong as ever, and we do not believe it impracticable to secure a satisfactory trade in them.

Some of the English and continental styles of cheese are much liked by many Americans, and we do not see why they may not be successfully manufactured in this country on a larger scale than has yet been done. Whatever helps to increase the consumption of cheese, especially of cheese of good quality, will be of direct service to the dairy interest. It is not proposed that the foreign demand be neglected, but that increased attention be given to cultivation of the home demand.—Breeder's Gazette.

The State Board of Agriculture has decided to offer the following premiums for the most extensive, perfect and varied exhibition of farm products, exclusively live stock, to be exhibited by a county: The amount of \$600 to be divided into four premiums as follows: \$300 to be the first, \$150 to the second, \$100 to the third and \$50 to the fourth. If agreeable to the exhibitors, the premium lots will be forwarded to the World's Fair at New Orleans.

The black Sussex and black Essex swine are said to be the same breed. They are thought by some to be the indigenous races of Great Britain. In 1839 Mr. Henry Parsons, an Englishman, imported to Massillon, in this State (Ohio), a boar and two sows of the black Sussex breed, and two sows half Berkshire and half Sussex. The Sussex sows had each eight pigs when I saw them, and they had all been engorged at \$50 per pair. They had uncommon points. There was about them a finish, almost a polish. They had a cleanness of head and leg, a fullness and liveliness of eye, and altogether a show of blood that I had never seen equaled. There was a remarkable uniformity, indicating fixed character. They looked like beans from the same pod. They were not large, but with exact proportions and strong frames, and an aptitude to fatten would accumulate great weight in proportion to the bone. They were light in belly, broad and deep in the chest, wide in the rib and loin, and with strong, arched, well-coupled back. Some experiments show that the Sussex is well calculated to cross on the Berkshire.

THE RIFLE.

Shooting At Harbor View.

On Sunday last, the Swiss Rifle Club had their regular monthly shooting, and we had the pleasure of meeting these gentle and polite gentlemen by invitation at lunch. Owing to the meeting of the Swiss Benevolent Society the night before, and the inclemency of the weather, only five members competed for the prizes. At times, the shooting was excellent, but from different causes it was not sustained through out the day. Still, Messrs. Wetzel, Croce, Hopf and Bachmann, taken altogether, did good shooting. Leeman, who generally leads the score, did some brilliant shooting after lunch in the pool shooting, and then his gun got out of order and he fell from grace sadly. The prizes were captured as follows:

Table with 2 columns: Name and Prize. Theo. Wetzel (1st prize), Rudolph Hopf (2d prize), Bachmann (3d prize), P. Croce (4th prize), J. Leeman (5th prize).

BEST BULL'S-EYES.

Table with 2 columns: Name and Score. P. Croce (8), R. Hopf (7), Bachmann (6), Theo. Wetzel (5), J. Leeman (4).

After lunch, which is always devoted to pool shooting, there were five sweepstakes and in these we took only the totals of each, which in rotation are as follows:

Table with 6 columns: Name and scores (1-5). Leeman (97, 82, 77, 56), Croce (85, 89, 94, 84, 84), Hopf (63, 78, 56, 70, 55), Wetzel (68, 55, 93), Huguenin (78, 50, 56), Mona (46, 27).

All the pool shooting was done at ten shots to the man, which gives a possible of one hundred and twenty. An agreeable feature in these monthly reunions of the club is that Messrs. Croce and Leeman always have a private bet for their dinner for the day. A strict record is kept between them for the year, and to show how closely they shot during the period, they came out precisely even on the last Sunday in December 1883.

More Honor for Oakland.

In last week's issue we published a copious account of the grand shooting of our riflemen in the contest for the military trophy at Shell Mound, and gave Oakland the full measure of credit she earned through the performance of Company A. This week it gives us pleasure to accord her greater honor from the same source. After the trophy contest was over eight men of the company went on shooting, to qualify for marksmen and sharpshooters under Col. Ranlett's regulations, which we also published at the same time. In this shooting for qualification the members of Company A did themselves greater honor than in the contest for the trophy, three of them making a possible 25; two, 24 each out of a possible 25, and one a 23. This, unquestionably, is grand shooting. Taking the total score of the eight men at the qualification shooting, we find the result reaches 94 1/2 per cent. for that performance; and then, if we add it to the total score of the company at the trophy match, it makes a score of 720 out of a possible 800, or 90 per cent., the highest figure required by the battalion regulations for the position of sharpshooters. This is a record the State may well be proud of. The names and scores of the eight men of Company A shooting after the match are as follows:

Table with 2 columns: Name and Score. Burrill (5, 5, 5, 5, 5-25), Macdonald (5, 5, 5, 5, 5-25), Mason (5, 5, 5, 5, 5-25), Pierce (4, 5, 5, 5, 5-24), McEwen (5, 5, 5, 5, 4-24), Daniels (5, 4, 4, 5, 5-23), Waltham (5, 4, 4, 5, 4-22), Moore (5, 4, 3, 5, 4-21).

Total.....189

At Alameda.

There were two interesting matches at the Schuetzen Park, Alameda, on Sunday last, in spite of the inclement weather. The matches were made up two weeks ago between Messrs. Ehrenpfort and Wertheimer, the latter receiving fifty rings in fifty shots, and Messrs. Ehrenpfort, Boeckman, Utschig and P. Jacoby, the latter conceding to Utschig fifty rings. The conditions were 50 shots each at a twenty-five ring target, 200 yards, off hand. The score was:

Table with 2 columns: Name and Score. P. Jacoby (997 rings), Utschig (943 rings), Wertheimer (936 rings), F. Boeckman (904 rings), W. Ehrenpfort (856 rings).

Considering the cold rain storm and strong wind that prevailed during the shooting the scores are good.

The Eintracht Rifles.

We have been intending for some time to follow up our history of the Swiss Rifle Club with the history of others in our city, and had selected the California Schuetzen for the next place of honor, being at present the largest and perhaps the most influential of our local clubs. The gentleman who promised us the material, an officer and prominent member of the club, has almost worn out our patience by never fulfilling his promises. We can wait no longer, and next week shall give the history of the Eintracht Rifles from their formation, and their total score for 1883. If, therefore, the members of the Schuetzen Club, many of whom are aware of our intentions, see themselves preceded by others, they will please put the blame where it belongs, and not upon us. Since the contest for the Military Trophy, published by us in full last week, the scores in which stand at the head of the world's record—the performance of our local clubs as illustrative of the high

order of our State riflemen generally, assume an additional interest and importance. Hence, we desire to give the history and record of all our clubs without delay, and for assistance in doing so by those who can furnish material we shall consider ourselves under great obligations. These little histories will give us a very correct idea of our State's progress in the past and power at present.

In the military column of Tuesday's Chronicle there appeared a very ill-timed paragraph reflecting upon the shooting of the Fifth Infantry Battalion at the late Silver Trophy match, and throwing doubt upon the correctness of the returns, or in other words, the honor and good faith of those preparing the returns. This is a piece of personal journalism which no honest paper should indulge in, because it is as unjustifiable under the circumstances as uncalculated for. As to the old crack shots of the Sammers and Nationals of other days being gathered into the ranks of the men who made such a grand record, at the time referred to, seems to us a wilful perversion, for Colonel Kellogg, we believe, from individual recollections, is the only man who comes under that classification. The personal history and location of Col. Raulett's staff will show at once the error of such a statement, and we fear the animus with which it was made. The public, of those really posted in this matter will determine for themselves, and they will certainly determine against the Chronicle, because they know, as we stated last week, that in 1879 at Sacramento, Mason, McDonald, Pierce, Burrell and Waltham of the then Oakland Guard shot against and beat the Nationals and Sammers of that day. How then can the crack shots of Company A to-day be drafted from the old Nationals and Sammers? The record of the military shooting has now become a matter of history, honorable to the nation. It must, therefore, be recorded correctly, and free from prejudiced personalities.

In our account of the late Military Trophy match, we spoke of military regulations governing the position of sharpshooters and marksmen. These are the personal regulations of Col. Ranlett to govern the rifle practice of his own command, and have no connection with any other. The State has no such regulations, but it is time it had, and we may have something to say on that point in future.

To-morrow, February 3rd, the fifth of the series of the battalion matches for the Silver Trophy in the Fifth Infantry will take place at Shell Mound between 10 and 12 o'clock A. M. Each team will shoot on its own ground, except the Field and Staff and Company A of Oakland, who will shoot at Shell Mound. Much interest attaches to the match because, unless the Petaluma or San Jose team wins, an event not very probable, it will decide the ownership of the trophy so long and ably contested.

On Sunday, 17th February, there will be another interesting match shot at Shell Mound, between ten men from the Second Artillery (Col. Smedburgh commanding) and ten men from the Fifth Infantry (Col. Ranlett commanding), the terms being ten shots for each man at 200 and 500 yards. This is simply a friendly contest, the losing team having to pay for a dinner for not shooting better.

Over the River.

On Saturday last, a man died in Walla Walla, with whom I had an intimate acquaintance of nearly thirty years. I refer to George F. Thomas, late sheriff of that county. He was born in Norfolk, Va., December 17th, 1813, and began life as a stage driver for "Admiral" Reeside, in Alabama, in 1835. One of his intimate friends who "drove alongside" of him was Col. Andrew Jackson Gaubill, now nearly 65 years of age, and the handsomest looking old man that walks the streets of San Francisco. The two friends came to California in 1849, and George went into staging business, while Jack became the hero of many a hard-fought battle with "the tiger." In 1854 the California Stage Company was formed, with James Haworth, A. G. Richardson, Charles McLaughlin, Jas. E. Birch and George F. Thomas as directors. Birch was president until September, 1857, when he was drowned on the Central America, and Frank S. Stevens took his place as director while Haworth was chosen president. About this time McLaughlin had become too active in money-making to suit his associates, and they told him he must either buy or sell. As he could not do the former, he fixed his interest at an exorbitant figure which they were only too glad to pay, and he went to San Jose with \$35,000 in his pocket. Geo. W. Montgomery, called "Big Wash" for short, succeeded him as director and purchasing agent, Harry Charles being secretary and Chandler B. Fowler treasurer. In 1860 Lansing Stout, then member of congress from Oregon, procured the passage of an act appropriating \$600,000 per annum for four years, for a daily mail between Sacramento and this city, and Mr. Thomas came northward as the inaugurator of what was then deemed a colossal enterprise. There were no stages running north of Shasta or south of Jacksonville, and all the intervening country was not only without roads, but peopled with hostile savages. Picking out the best drivers and most trusty hostlers that could be obtained in northern California, Mr. Thomas commenced his work of breaking the long isolation of Oregon.

Every obstacle that could beset the path of energy and log the path of progress interposed itself before Mr. Thomas, but his good native judgment and fine executive ability enabled him to surmount them all. He came to Oregon with \$60,000 in his possession, at a time when more than one of our millionaires of to-day were working at day labor, or chopping cord-wood on shores. Two of the six children left behind him were born in this city, and he was a moving spirit in all our public affairs during that time. In 1862-63 came the outbreak of the Nez Perce gold excitement, and Mr. Thomas went to Lewiston. Before he could definitely organize any stage enterprises there Boise river bloomed into full view, and George Thomas began the mistake of his life-time. In company with Colonel J. S. Ruckel, of this city—always a visionary and impractical man—he put on an expensive and costly line of stages across the Blue mountains from Walla Walla to Boise, by the way of Grande Ronde and Powder river valleys. As both the roads were very crude, Col. Ruckel designed a new route going up the canyon of the Umatilla river by way of the Warm springs. Two years earlier or two years later, the road could have been built for far less money. But just at that period, when everybody was wild over the mining excitement and unskilled labor commanded fabulous prices, the building of the road was a chimera. Ruckel had nothing to lose, comparatively speaking; but George Thomas lost upwards of \$70,000, and retired to poverty that was marked with the most faultless honesty. He died poor in this world's goods, but left to his children the legacy of a name that has never been tarnished with the breath of scandal. He wanted money, but it had to be clean money before he would touch it.—Tom Merry, in the Oregonian.

# THE Breeder and Sportsman.

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.

THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

## NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 29 and 31 Chatham street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

## SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,099 J street.

## ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading notices set in heavier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 50 cents each insertion.

San Francisco, - - Saturday, Feb. 2, 1884.

## Noble Norfolks.

Heretofore we have intimated that we had been derelict in naming the yearling by Norfolk from Marion and now the intelligence comes that on January 20th there was another member of the royal family in a bay filly with three white feet, which a note from Mr. Winters also calls upon us to christen. For our readers to understand the situation there must be a recapitulation of the circumstances that led to the sponsorship. In the first place we bred and reared Marion, and when we sold her to Mr. Winters, he had no hesitation in predicting that from her there would spring race-horses. Owing to a prejudice which Mr. Winters has against first foals, the forerunner of the family was sold to Mr. Coggins of Oregon. When her next colt was a yearling we visited El Arroyo, and Mr. Winters had fixed upon the name of Simpson to call him. Although guilty in the same way we always deprecated the naming of horses after men, and though highly pleased with the form and appearance of the colt, and also somewhat proud of having a colt that was sure to be a race-horse, and from so great a favorite as his mother, we requested that there be a change. "What then shall we call him?" responded his owner. The Duke of Magenta was startling the world, and as the breeding was so nearly alike we suggested that "Duke of Norfolk" take the place of the one chosen. This was agreed upon, and when the filly, a year younger, was old enough to show her form, the natural sequence was "Duchess of Norfolk." "Alf" Estill always claimed that she was the best of the two, though we could not agree with him until she won the Pacific Cup, and then there was nothing left than to squarely acknowledge that he was the truest prophet. There never was a three-year-old filly that could have beaten her that distance on that day, and the best of the colts of that age might not have been equal to the task. The next in succession as a yearling was a "wonder" to look at, and though it was something of an anomaly, "Prince of Norfolk" was duly recorded. We are inclined to the belief that he will rank with the Duchess when the time comes for him to show his capacity, but with all the brilliancy that surrounds the family there has been such a constant run of had luck that there is a dread that the blind Goddess may have a shaft in reserve. To keep up the nomenclature, however, and though still calling upon fictitious personages for a title, we will call the chestnut colt foaled in 1883 King of Norfolk, and the bay filly foaled January 20th, 1884, Queen of Norfolk,

Should ill-fortune follow the Prince the right is reserved to change the names, though we sincerely trust that the "fickle jade" has exhausted her frowns, and that hereafter she will be the good genius of the noble horses. In that case we will make ample amends for calling her fickle, and still more humble retraction for having tacked the jade to the objectionable adjective. Surely, with the breaking down of the Duke, the untimely end of the Duchess, not to speak of the loss of form of the great filly on the Eastern tour, there should be a turn in the lane, and hereafter there will be fair fields for the sons and daughters of Norfolk and Marion.

## Rancho Del Rio.

It gives us great pleasure to announce that Theodore Winters has christened his Sacramento farm with the above title. It is appropriate, as the western boundary of the place is the Sacramento river, and, like most of the Spanish names, it is musical. It is so well adapted for the breeding of fine horses and all other kinds of domestic animals, that if any place is worthy of a distinctive appellation it certainly belongs to it. Then, again, for two such stallions as Norfolk and Joe Hooker to be quartered in stalls on a place without other name than Mr. Winters' ranch, was not to be thought of, and not only them, but such a galaxy of brood-mares and so many constellations among the youngsters that it became nearly unendurable. Elsewhere we have written of a contemplated improvement by the proprietor of Rancho del Rio, which we sincerely hope will be carried out. That is the construction of training grounds which will be novel in this country, and which, we feel assured, will lead others of our wealthy breeders to adopt the same plan. Although there is not a farm better adapted for stock-breeding in the whole country, where natural advantages have been supplemented by judicious adjuncts, the course of over two miles in circuit will be the distinguishing feature. The circuit will embrace all kinds of ground, that is, all kinds that can be beneficial in training. Winding over the knolls on which the house and stables are built, easy grades, it is true, but with inclination enough to "open the pipes" without a fearfully fast pace, and gentle descents to relieve the muscles after the strain of gaining the elevation. But best of all will be a tangent of at least three-quarters of a mile, and this will be far enough to give very fast work no matter how long the race to be run. But we must caution our friend not to be deceived when the King of Norfolk, or his sister the Queen, "stops the watch" at forty-seven and a half seconds for half a mile, or 1:13 for the full three-quarters, and rate them as able to equal it when one turn of a mile track has to be accomplished. Make half a second allowance on the half, and three-quarters of a second for thirteen hundred and twenty yards, and this is the notch we hope to chronicle for them in two or three years hence. Some of the Joe Hookers, too, will tear over that straight-away course like wild horses, and better yet, Norfolks and Joe Hookers will go through the ordeal of training with sound limbs, and not even a case of "huckshin" to call for a "let-up."

We cannot attempt even a sketch of Rancho del Rio from the one short visit a year or more ago. There are remembrances of rounded hills dotted over with grand old oaks, valleys as green as a blue-grass pasture in June, a lake shimmering to the westward, and rich plains. A stable, at that time not quite finished, worthy to be the home of the bluebloods domiciled therein, and a gay band of horses which the Duchess of Norfolk led merrily from the pasture field to the stalls. There were a score, or more of weanlings dashing among the trees, the white-faced and white-legged Hookers prominently conspicuous, and two bay Norfolks that had every mark of "sure enough" race-horses. The whole picture was so pleasing that it is difficult, after the lapse of thirteen months, to select the most striking peculiarities, though among the many horses and colts it was remarkable that all should look so well. Some of the mares that had come from El Arroyo, still suffering with a disease which baffled the skill of veterinarians, had so far recovered that it was evident that a few weeks more would work a complete cure, while those that still ranked as weanlings and yearlings had the appearance of being a year older. There is little question that the recovery of those that had been brought there ailing, and the forwardness of the youngsters was due to the transfer from the dry plains on the banks of the Putah, to the green feed and rolling pasture fields of their present home. There was no end to the best of hay and the soundest of oats in their former quarters, and these were fed with a lavish hand, but the advantages of succulent herbage, the year round, in addition could not be otherwise than beneficial. It is somewhat hazardous to predict that greater race-horses than Mollie McCarty, Ralston, Flood, Conner, Jim Renwick, Fred Col-

lier, Duke, Duchess and Prince of Norfolk, and so many others of great merit that first saw light on the big farm of thousands of acres of the richest land, and still we will take the chance of prophesying that the Rancho del Rio will show still better scions of the distinguished families, which gave worldwide celebrity to the old place.

## Spring Race Meeting—Pacific Coast Blood-Horse Association.

The spring race meeting of the Pacific Coast Blood-Horse Association can now be said to be fully underway, as the adoption of the following capital programme by the Board of Trustees, on Wednesday last, is the starting-point, which will surely be followed by one of the most successful meetings ever held under the auspices of the society.

The meeting is to commence on Saturday, the 12th of April, which will be the first regular day. On that the first race is the

California Stake—For two-year-olds, \$50 each, \$25 forfeit, \$250 added; to be run on the first day of the Spring Meeting; second to save stake; dash of half mile. Nominations for 1884.

1. Theo. Winters' ch. c. by Norfolk—Lady Jane.
2. Theo. Winters' h. c. by Norfolk—Ballette.
3. Theo. Winters' ch. f. by Hooker—Puss.
4. Theo. Winters' h. f. by Hooker—Abbie W.
5. Theo. Winters' b. f. by Hooker—Countess Zeika.
6. Theo. Winters' h. f. by Hooker—Illusion.
7. Theo. Winters' b. f. by Hooker—Kitten.
8. J. B. Chase's h. c. Hidalgo, by Joe Daniels—Electra.
9. G. Pacheco's ch. f. by Wheatley—by Lodi.
10. J. W. Adams' h. c. Common Sense, by Hardwood—Consin Peggy.
11. James Mee's ch. f. Mischief, by Thad Stevens—Katie Pease.
12. Jas. Mee's ch. f. Mistletoe, by Thad Stevens—Mistake.
13. E. J. Baldwin's h. f. by Grinstead—Blossom.
14. E. J. Baldwin's br. c. by Lexington—Mollie McCarthy.
15. E. J. Baldwin's br. f. by Rutherford—Glenita.
16. Palo Alto's h. c. by Shannon—Robin Girl.
17. Palo Alto's h. c. by Shannon—Sallie Gardner.
18. Palo Alto's h. c. by Shannon—Miss Peyton.
19. Palo Alto's s. c. by Flood—Flanetta.
20. Palo Alto's h. c. by Shannon—Ettie Bishop.
21. Palo Alto's br. c. by Shannon—Higlin.
22. Palo Alto's h. f. Monday—Playing.
23. Hill & Gries' h. c. Arthur H., by Hock Hocking—Maid of the Mist.

The twenty-three nominations are as fine a lot as can be shown in any country, and among them are the colts and fillies which have shown such wonderful trial runs the past season. The second race is the

Hearst stake.—For all ages, of \$25 each; \$10 forfeit; \$200 added, second to save stake; dash of three-quarters of a mile.

That this will bring together the best field of flyers ever seen on this Coast is beyond question, and it is altogether likely that the fastest California record will be the result. Jim Renwick, Premium, Jumho, Lulu Riggs, Della Walker, Red Oak, and several others will probably be named, and it will be a superlatively lucky man who gets on the winner.

## The third race is the

Winters' Stake—For three-year-olds, to be run the first day of the Spring Meeting; dash of one and a half mile; \$100 each, \$25 forfeit, \$300 added; second to have \$150, third to save stake. Closed with the following nominations for 1884.

1. J. K. Gries, San Buenaventura, b f Nettie Hill, by Joe Daniels—Mary Wade.
2. E. J. Baldwin, Santa Anita, h c, by Rutherford—Maggie Emerson.
3. E. J. Baldwin, b f, by Rutherford—Glenita.
4. E. J. Baldwin, ch. f, by Grinstead—sister to Clara D.
5. E. J. Baldwin, ch. f, by Grinstead—Josie C.
6. E. J. Baldwin, br. f, by Grinstead—Mollie McCarthy.
7. Theo. Winters, El Arroyo, ch. c Prince of Norfolk, by Norfolk—Marion.
8. Theo. Winters, ch. f Callio Smart, by Norfolk—Mattie A.
9. Jos. Cairn Simpson, Oakland, b c Sir Thad, by Norfolk or Thad Stevens—Lady Amanda.
10. P. J. Shafter, Ciema, h f Bonita, by Shannon—Napa Queen.
11. Palo Alto, Menlo Park, b c, by Norfolk—Boyardana.
12. Palo Alto, l. c, by Norfolk—Nova Zembra.
13. Palo Alto, b c, by Shannon—Dermey.
14. Palo Alto, br. f, by Monday—Riglin.
15. Palo Alto, s. f, by Norfolk—Glendew.
16. Palo Alto, b f, by Wildie—Frolic.
17. Palo Alto, br. f, by Norfolk—Lizzie Whippis.
18. Palo Alto, s. f, by Norfolk—Fron Fron.
19. W. L. Pritchard, ch. f, by Letestue—Flash.
20. J. B. Haggin, El Paso, b c Winemucca, by imp. Billet—Lottie.
21. J. B. Haggin, b f, by King Alfonso—Miranda.
22. J. B. Haggin, b f, by Pat Malloy—Glenine.
23. J. B. Haggin, h. f, by Monarchist—Heliotrope.
24. J. B. Haggin, b f, by Monarchist—Alert.
25. J. B. Haggin, b f, by imp. Glenaleg—Edna.
26. J. B. Haggin, ch. f, by imp. Glenaleg—Susie Linwood.
27. J. B. Haggin, h. f, My Love, by Virgil—Lightfoot.
28. J. B. Haggin, b f, by King Alfonso—Titania.

It would be a hypercritical fancier who finds fault with the above list as in it are the Palo Alto trio that ran so well, Prince of Norfolk, Callie Smart, the flower of the Rancho del Paso youngsters, and others, which though yet ranking as maidens, may be worthy competitors for the winners.

## The closing race for the first day is a

Selling Race.—Prize \$200; \$25 of which to second; one and one-eighth miles; horses and foals to be sold for \$1,000, and to carry the rule weight; two pounds taken off for every \$100 below that valuation, and three pounds added for every \$100 above.

The second day of the meeting, in fact, is termed an "extra day" on the programme, in order not to give any chance for dispute in regard to the "fixed events," and the four races selected should prove an attractive card for Tuesday, the 15th of April.

## Extra Day.

Prize, \$200; for two-year-olds; \$25 to second; dash of five-eighths of a mile; winner of California stakes to carry seven pounds extra, second five pounds above rule weights.

Prize, \$200; \$50 to second; one mile and a furlong; for three-year-olds; maidens, colts and fillies that have not won a race.

Prize, \$200; \$50 to second; dash of one mile.

Selling Race, \$200; \$25 to second; 1 1/8 miles. Same conditions as Selling race on first day.

## Second Day, April 17th.

Prize, \$200; for two-year-olds; dash of five-eighths of a mile; winner of either of the preceding two-year-old races barred; second to carry five pounds extra.

Pacific Cup Handicap—\$50 each; \$20 declaration; \$500 added; second to receive \$150; third to save stakes; two and one-fourth miles; weight announced April 12th; declaration April 15th, at 3 p. m.

Handicap Stake—for three-year-olds; 1 1/2 miles; \$25 each; \$10 declaration; \$200 added; weights announced at the same time as the cup. Purse, \$300; \$50 to second; for all ages; beats of three-quarters of a mile.

Third Day, April 19th.

Gano Stake—Dash of three-quarters of a mile for two-year-olds; \$50 each, \$25 forfeit, \$250 added; second horse to save stake. When any California two-year-old beats the time of Gano, 1.13 for three-quarters of a mile, the stake to be named after the colt which beats it. Nominations for 1884.

- 1. Theo. Winters, ch c, by Norfolk—Lady Jane.
2. Theo. Winters, b c, by Norfolk—Ballinette.
3. Theo. Winters, ch f, by Hooker—Puss.
4. Theo. Winters, b f, by Hooker—Abby.
5. Theo. Winters, b f, by Hooker—Countess Zeika.
6. Theo. Winters, b f, by Hooker—Illusion.
7. Theo. Winters, br f, by Hooker—Kitten.
8. J. B. Chase, b c Hidalgo, by Joe Daniels—Electra.
9. G. Pacheco, ch f, by Wheatley—by Lodi.
10. J. W. Adams, br c, Common Sense, by Hardwood—Consin.

Purse, \$300; \$50 to second; beats of three-quarters of a mile; for all ages.

Consolation Purse, \$200; \$50 to second; for horses that have run and not won at the meeting; five pounds allowed for each defeat; dash of a mile.

The above justifies the prediction of a brilliant meeting, and by fixing the dates so much earlier than in former years there are two evils avoided, and it also gives the colts which have engagements at Louisville and other Eastern places plenty of time for the journey. There are, in reality, more than two drawhacks which have been encountered in former years. These are the picnics, the "hazing rains" and high winds, and though there may be rains at the time chosen, this is not so likely as if the dates were later. May is the picnic month, and few are held earlier, and it is usually safe to calculate that the trade winds will not set in until after the meeting is concluded. In the races which are yet open the entries will close on the first of March, excepting, of course, the Consolation Purse. It was learned that there were no hurdle horses in training, excepting, perhaps, Hattie B. Mr. Boots said that he did not intend putting his mare in train, and whether Grismer was still chancing a flying journey over the sticks was unknown to the persons present at the meeting. There appears to be a reluctance among California owners of race-horses to change their work to jumping, and until more are placed in the school it will be useless to offer purses for them. The programme is all that it is necessary to give at present. The next number of this paper will contain all the conditions, place of running, etc.

Blinkers.

We have seen an article going the rounds of the press denouncing the use of blinkers, or blind bridles. While there is just enough truth in the article to give it plausibility, it, nevertheless, is full of inferential errors, and is extravagant every way. There are a few horses that will possibly drive better with open bridles, but the vast majority will be more pleasant with "blinkers." There is no cruelty in the use of blinkers, if any attention is paid them. Most horses, if driven with open bridles, will get lazy and lightheaded, as they contract the habit of watching the driver behind them. They will slobber along with one eye on the whip, and when they see a hand stretched out to take it out of the socket, they will plunge forward with a jerk sufficient to dislocate the driver's neck or spine, and then settle back into the same slovenly and slouchy gait. There is no more cruelty in a good blind bridle than in a good hat for a gentleman, provided it fits. It is surprising how much sentimental nonsense there is palmed off on the people as horse wisdom, and swallowed by gudgeons. Go and get one of Mr. Simpson's bridles, that is made to fit the head of a horse, and you will not complain of any cruelty to your horse.

The above we cut from the California Spirit of the Times, and it points out in a few words some of the disadvantages of driving a horse in an open bridle. The annoyances mentioned may be supplemented with far more serious troubles. Not long ago a man who had stopped to converse with a friend dropped his reins. The motion to pick them up was construed by the horse to mean reaching for the whip, and away it dashed, throw-

ing him out of the seat. Discovering that it was beyond control, the start was accelerated into a run, the result being a smashed-up wagon and a narrow escape from fatal injuries by the driver. That the common "blind bridle" has many faults is evident, and in place of seeking to remedy these, the tendency has been to the other extreme, and afforded the advocates of untrammelled vision a chance to sustain their position with sound arguments. The bridle alluded to is that of which there is a cut in the advertising column, and though that does not show it as clearly as when seen on the horse, it is plain enough that the objections to blinds do not hold good in this case.

It puts it within the power of the driver to control the sight without a possible chance of injury to the eye. The blinds, when properly adjusted, cannot be displaced, and the animal can neither see over or under them. They are kept in position by straps, and no matter whether the hit is low or high in the mouth, the check pieces cannot displace them. When the blind is made a part of the check piece they cannot be kept in place, and even a tight noseband does not prevent motion. At times one blind will rest against the eye, the other will stand at right angles to the cheek, and if the check draws the bit farther up in the mouth, or the horse raises it with his tongue, there is a vacancy between the blind and the eye, and the animal can see what is behind. It is well enough to break colts without blinds, so as to familiarize them with what is behind. When the education has been carried that far, ninety-five in a hundred horses will drive better with blinds than without, and quite a proportion cannot be driven with any comfort in an open bridle.

Horse-Shoes and Tips of Malleable Iron.

Several weeks ago we made some wooden patterns of tips and two of bar-shoes, the purpose being to test whether malleable iron would answer. Since making the patterns we see by the Australian papers that an "anti-concussion" shoe made of malleable iron is meeting with success there, and the veterinarian who has charge of that department of the Federal Australian endorses the use of that kind of metal. The patterns were made of old cigar boxes or redwood, and not worked as smooth as they might have been, but desiring to test them before going to the expense of proper models, we took them to the office of the Judson works on Market street, and a little over a week ago received the specimens. They were much smoother than was expected, and we were agreeably disappointed to find that the small holes for the nails were cast in. We supposed that it would be necessary to finish the holes by drilling and punching, such being the case with those cast from brass, but all that was required was a light blow with a tapering punch to perfect the nail-hole. With models made of brass and polished, there is not a particle of doubt that a highly finished shoe or tip will be the result.

Last Saturday we put a pair of the tips on the front feet of X X, the first iron that he has worn for nearly two years, as we learn from the journal that March 30th, 1882, was the last time he was shod.

On Monday a pair was put on Antevolo, and July 21st, 1883, was the last date previous that tips were placed on his fore feet, and he would still have been driven harefooted had it not been that we were fearful that the sharp macadam would work injury, owing to a depression between the sole and wall, which was caused by standing in a "mud stall" before we got him home. There is not space enough at command at present to explain further, and will postpone the description. There was a surplus of horn in both X X and Antevolo, and the only reason for putting the tips on the former was to test the material. Double-Cross does all the "running around," and he wears a shoe faster than any horse we ever owned, so that if found satisfactory in his case, it is a fair inference that they will answer in others. During the wet weather the driving is on the streets, Peralta, from being the smoothest, being the most fancied. It is one of the best jobs of macadam in the country, the stone, which was put on to quite a thickness, being hard and the top coating, of the same material, broken much finer. "Coming home" there is quite a down grade from Eighteenth street to the sewer, and X X will haul a cart down a good deal like a trotter. That this kind of work will try the material will be granted, and though, of course, there has not been time enough given to form an opinion, we have great confidence that the experiment will be satisfactory. At all events, there is plenty of ductility, and as the ground portion can be recarbonized there is likely to be hardness enough to stand the wear for a reasonable length of time. From what we have already seen, we shall not hesitate to order the brass patterns made as soon as time can be taken to make the wooden models, and in the next article will give a fuller description of the work and the anticipated advantages.

Stallions Advertised—Brigadier, Steinway.

There are two notable additions this week to our list of stallions, and in presenting the claims of these two noted grandsons of the "great progenitor," we do it with full confidence that the high estimate will meet with the approval of all who have a knowledge of what substantial ground they stand upon. Ever since we saw Brigadier trot in his four-year-old form at Chico, he has been a prime favorite. There has been steady progression from that time until now, and even the lowering of his colt record nearly ten seconds is not the full history. He is emphatically an "honest trotter," sticking to his work pertinaciously, and when defeated making a good showing, and in most instances when beaten there was a lack of condition, or other causes that militated against him. It is superfluous to say more regarding his breeding than is contained in the advertisement, though it will not be out of place to call attention to the fact that General Withers thought so highly of his sire, Happy Medium, as to instal him as one of the monarchs of Fairlawn. General Withers is intensely practical in his breeding operations, and seems to be entirely free from having been swayed by favoritism. The success which has followed his efforts gains weight to what he does, and therefore his endorsement of the blood is a valuable certificate of merit.

Steinway is at the head of the list of three-year-old stallions, and a record of 2:25 1/4, at that age, is a super-extra performance. Those who saw him trot when a two and three-year-old wax enthusiastic when recounting the exploits of his colthood. Had his training been continued, there are good reasons to believe that he would have taken still higher rank among the trotting stallions of the country. To breeders there is a greater advantage in rearing animals that come to their speed younger than is generally thought. There is an earlier chance to sell, and a colt that learns quickly reduces a cost of education much below what the sluggish entails. Both of these horses, Brigadier and Steinway, are of very high form and fine size, and better yet their colts show that there is no lack of the family characteristics. The sire of Steinway, Strathmore, deservedly ranks as one of the best of the sons of Hambletonian, and by reference to the advertisement it will be seen that his dam is also of the right sort.

Chicago Driving Park Entries.

The list alluded in the following letter of the Secretary of the Chicago Driving Park came too late to give an opportunity to even summarize. The note of Mr. Hall, however, gives enough information to show this is bound to be a grand year for turf sports in Chicago. What effect the second summer meeting will have on Saratoga remains yet to be seen, though we are under the impression that it will be quite a drawback. Western horsemen are benefited in having a place nearer home to run, and there are so many horses now in training that there is a certainty of success. The number engaged at both parks in Chicago ensure the "city by the lake" plenty of competitors for the races during the summer months.

CHICAGO, January 26th, 1884.
EDITOR BREEDER AND SPORTSMAN: Dear Sir—Enclosed here will find list of the entries to the stakes of our summer racing meeting, which closed on January 15th. The total number of entries is 470, including those made in the four s'aves which closed on April 24, 1883, and we think we never had a better list of nominations. The success of our second summer running meeting, July 17th to August 19th, is also fully assured, most of the leading stables south and west having notified us of their intention to remain all summer in Chicago. We shall have for that meeting not less than two hundred horses. Shall open stakes for the meeting very soon, to close, probably, on March 1st. I remain, Yours truly,

D. L. HALL, Secretary.

Decision of the Board of Trustees.

It will be remembered by many of our readers that at the fair of the Sonoma and Marin Agricultural Society last fall May D. won a stake of \$25 each, p. p., with \$200 added by the association. There was a provision in the programme that purses were to be divided so that the winner of a purse would only get fifty per cent. of the amount given. Getting somewhat "mixed" in relation to the difference between purses and stakes, it was decided by the judges or the Sonoma and Marin Society that May D. was only entitled to one-half of stakes and added money. As the winning was advertised to be governed by the rules of the Pacific Coast Blood Horse Association, the owner of May D., H. C. Judson, brought the matter before the Trustees at the meeting last Wednesday, offering the published conditions as evidence. The decision was unanimous that May D. was entitled to the whole amount of the stakes and added money.

Washington Park Club.

Manifestly, it would take too much space to publish all the nominations in the stakes of the above club, and hence we have condensed to those which are owned on the Pacific Coast. As the totals are given, it will be seen that our expectations have been amply fulfilled, and our side of the continent makes a good show.

## General Topics.

There is grand music in the songs of the frogs. To the frequenters of the opera the notes may be monotonous, and the trills and ekakas a poor recompense for the divine warblings of Patti or Nilsson. Still we must reiterate that there are joyous tones and prospective good cheer, plenty and happiness foreshadowed in the welcome chirpings. The California frogs, at least those of the genius who are domiciled in Oakland, have peculiar ways. As soon as the rains come copiously enough to reach the bottom of the sun-cracks, the concert commences. There has not been a lisp for some time, and the old fear began to assert itself that the croakings of the pessimists might be fulfilled.

During the ten years of our California experience it has been the same old tune. There was no chance, according to the gloomy forebodings of these folk, for a crop, and hay and oats and barley would rule so high that the horses would have to go on short rations. After so many failures in their predictions, there was no recurrence of the tremor, and the leaden prophecies failed to frighten. Still there was uneasiness as January wore away, and there were dry skies and hoar frosts. The frogs piped a tune or two before Christmas-tide, feebly however, and then the orchestra was silent. When on Friday of last week the drizzle of the morning was followed by a clear afternoon and northwest wind, there was a fear that the sable speeches would have to be endured for some days to come. Saturday was more propitious, and the gentle showers and the high southeastern wind that rocked the ferry boats, brought the usual sequene. A genuine downpour, puddles in the road, a tiny stream in the gutters. It still came down at sunset, and in place of the golden and purple veil, so diaphanous as not to hide the great luminary sinking to rest in the Pacific, there was a thick grey curtain impenetrable to the vision, though bearing the motto "There shall yet be seedtime and harvest."

The Wellington in the grates did not blaze so cheerfully as when there was an "eager and nipping air," but there was the patter of the raindrops on the roof, and then, cheerier yet, came the song of the frogs. We recognized the voice of the leader as he gave the key, full and sonorous, and the refrain was taken up by a hundred voices, which told of green fields and fruit trees burdened with white, pink and red blossoms, and teams afield, and foals caracoling about their dame. These are the first glad tokens of springtime, for though the roses and violets have been in bloom ever so long, tales were told of lambs being slaughtered to save the mothers, of newly sown grain dormant, of kernels sprouted and then the vitality hopelessly dried out. Sing on, ye minstrels, and we will rejoice over the failure of the false prophets as we have done for the past ten winters, and drive them back to reminiscences of dry years twenty seasons in the back-ground.

By and by will come the swallows. Their nests are undisturbed under the shelter of the protecting eaves of the barn, and there is little repairing necessary to fit them for occupancy. They, too, are cheery visitors if their twitterings are not so blithesome as their forerunners, though, when they put in an appearance the refrain will be that there will be no late rains to fill with kernels the drooping heads of the wheat, barley and oats, and of north winds which will "burn up" all verdure and leave the fair fields of California arid and dreary. The swallow chirp away all such dire forebodings, and though their forerunners tune their voices from the more tangible food that falls from the clouds, *Hirundo* and his mate dart through the bland air and revel in the sunshine that is to perfect the crops the rains have nurtured.

In the ten seasons we have lived in California only one has shown less than half of the average rainfall. That was 1876-1877, when the gauge marked 8.96 inches. But so far as we can form an idea from the short experience of ten years, the prospective crops cannot be rated by the number of inches of water. There may be deluges when the greatest proportion finds its way into the streams, and then there may be a gentle fall, nearly every drop of which sinks into the ground and is stored for future use. With enough to wet the soil to a depth that is required to plow, and sustain the plants until the moisture from below arises, there is not much danger of failures. It may be regarded as a fanciful theory, though we are of the opinion that there is an attraction from the dampness of the top, influencing the underground supply to ascend, and aid the capillary force to bring it within reach of the roots. Or it may be that there are reverse influences, and, through some cause, when a fresh supply is necessary, the aucterranean reservoirs are called upon and the water forced nearer the surface. California is so entirely different from the States in the Mississippi Valley and further East that it is difficult to make the inhabitants of those far-away places understand the anomalies of the seasons.

The first summer of our residence here we journeyed twice a week between Oakland and Alvarado. Near Eden a large field was planted to corn after the spring rains came to an end. It was easy to understand that there was moisture enough in the ground to sprout the seed and give it a start. The young plants grew apace. The field was well cultivated, and at the last plowing the broad blades were up to the body of the horse. The tassels shot out above the leaves, the silken plumes fell from the apex of the ears, and during the weeks of the time there was the dark green which told of health and vigor. Not a drop of rain had fallen from the time of planting, the "hay-making showers" having come early, and it was ready to harvest ere those of the fall fell.

We watched it closely, taking the trouble to hitch the horse and examine it from the time the silk showed until it was the "roasting-ear" stage. It was a magnificent crop, not so many bushels to the acre, perhaps, as on the Missouri or Mississippi bottoms, but far above the averages of the rolling prairies. The ears were well filled with sound kernels, and when it was cut and "stooked" the ground was fairly covered with the couical structures.

Now, in the East, if a drouth of three or four weeks' duration comes while the ears are setting, the leaves "curl," and the cob is unclad with grain for quite a distance from the point. Should the "dry spell" continue from the time of the last plowing until the ears began to get size enough to show plainly, there would be an end to the hopes of the farmer, and long before ready to husk every stalk would be lifeless. No matter how much rain had fallen previous to the advent of dry weather, that, long continued, would wreck the hopes of the husbandman. Without rainfall, as long as is the general case in California, the trees would die unless in swamps or situations where wet was obtained from streams, lakes or bayous, and the whole country be void of vegetable life.

It is certainly correct reasoning that with rain enough so that plowing can be properly done, and sufficient moisture to germinate the seeds and keep them growing until the middle of May, that all plants which send roots deep into the soil do not require further watering in California. Even shallow-rooted plants like the cereals and native grass must draw some of their sustenance from the hidden sources, and that the "upward flow" has something to do with the immense crops. In the best wheat country of the Orient, eighty bushels of wheat, one hundred and thirty bushels of barley to the acre would be so far beyond what any person had seen that no one would regard such a product as being within the range of possibilities.

It would far exceed the space which can be awarded in these desultory notes to sustain a theory with plausible reasons accounting for this portion of the Pacific Coast being favored with conditions that are not found in other portions of the country. That it does not result from saturations of the soil from above is too palpable to require argument, and therefore it will be conceded that the source of the aqueous supply is distant. Most likely the precipitation takes place on the crests and alopes of the Sierras, and finds its way by underground channels where there is no chance for evaporation. These natural aqueducts follow a curving path, deep under valleys and surmounting hills. There is an immense pressure, equally as great in the mountain tarns of a few rods in width as lakes of the size of Tahoe. Thousands of pounds to the inch, for if the source is five thousand feet above the plain, there is a pressure of one hundred and fifty atmospheres, and this drives the water through any strata that water can be driven. On this side of the mountains the impervious matter is below, and the constant flow replenished from the cloud and snow-capped course breaks out in springs in places, the main body spreads over the whole country, and rises to meet another force which attracts it surfacewards.

It may be considered queer that the song of the frogs should have led to a consideration of the mysteries of California fruitfulness, and connected the croakings of the growlers with the abstruse problems which solely try scientific minds as well as those who make no pretensions to the erudition that colleges impart. There is the fact, however, that when following the season of 1876-7 with a rainfall of 8.96 inches, there were fair crops, there must be causes which do not exist in other countries. It should also teach us not to be despondent if January passes with bright days, and place more dependence on the future making amends for the scantiness of the past.

It may increase the faith of our farmers in the motto so plainly printed in the grey clouds which shut out the view of the Pacific if more study is given to the water they do not see as well as that which descends immediately on their lands. Some of the late ratiocinations regarding coming evil were based on the slight rainfall of the season of 1882-1883, and that was backed by the still slighter precipitation of the season before. The disastrous drouth of 1864 was cited as an example, and with additional emphasis, as the two seasons preceding were 11.58 and 35.56 inches. The reasoning was, that if the great fall of 35.66, more than double the average of the seven years from 1867, could not avert the evil, what other result could follow than dire disaster in 1884? We opine that the rainfall of two years in the past can have little effect in making calculations for the present, unless stored where this was small loss, unless from evaporation. It is possible that among the sources of underground supply the superabundance is held in reserve, but that is an unknown quality which cannot enter into the calculation. On these high altitudes there is scarcely such a thing known as light falls of snow and rain, the congealed fluid being piled up in scores of feet in some places, and with copious rains in springtime to aid the sun in melting it.

In a table of the rainfall from the season of 1849-1850, the measurements taken in Sacramento, the average per year is 19.15 4-5. Estimating the fall of the present season at 9.00, the average from that of 1877-1878 will be 19.91 inches which is more than any preceding period covering the same time. The seasons have been more uniform than any of the other seven-year records, and in every year there has been no lack of rain from this time on. Had we monthly data to predicate a prophecy upon, it would probably appear that

there is time enough yet to show 16 inches in place of nine, and with that much at the proper time, and distributed over the country generally, there will be a bigger crop than ever was recorded in California before. Valuable, however, as tables are, it will not do to place too much confidence on periodical recurrence, and as there have been few exceptions to a beautiful yield since agriculturists have been a prominent feature of California life, it is only reasonable to hope that this leap year be similar to the seven which carries us back to 1852, rather than the solitary example of the bugbear 1864.

With good crops, the California fairs of this year will excel all others which have been held. This is claiming a good deal, as there is not a state in the Union that approaches California in grand exhibitions. But there is more than the usual activity among the managers, and the trestle boards are covered with plans which will be more than carried to completion if the songs of the frogs are to be depended upon. The State Society has not only done wonders heretofore, but is determined to continue to excel. The grand pavilion completed, the grounds are being improved so thoroughly that it is safe to assert that when the fair of 1884 is opened the whole will rank as superior to any other in any country. We have purposely refrained from writing in relation to the improvements, hoping that every coming week would give us a chance to obtain a personal knowledge of what was going on. Failing to squeeze out the time, we will be forced to again trespass on the good nature of "Mile-and-a-Quarter," and solicit him to send a description, which he is so well capable of doing. In either case we do not want to anticipate, and though chapters could be filled with the eulogies of those who are acquainted with the plans, will defer sketches so as to give the picture the prominence it so richly merits.

From the other places come enthusiastic reports, and Santa Rosa, Petaluma, Oakland, Stockton, Chico, Marysville, San Jose, Salinas, Santa Cruz, Los Angeles, and other places, we hear of extra efforts to outdo all former exhibitions. The late rains will revivify the exertions, and with the prospect of a rich and happy harvest home, there will be a host of workers to aid the stout hearts which never scars. And, by the way, there are hosts of willing workers at all of the places spoken of, and oftentimes we have tried to fix upon the one person who was worthy of the front rank. There would be so many candidates that the selection of a dozen of the best was a troublesome job, and the more we pondered the greater the mystification, until the conclusion was reached that where all were so worthy that there could be no reigning monarch, but rather a republic in which all were fitted to preside.

The spring races, too, will receive an impetus from the brighter prospects, and with the assurance of plenty horses will be trained which otherwise would have been turned out. As this is written before the meeting of the Trustees of the Pacific Coast Blood-Horse Association, and as the Sacramento Club is awaiting the action of that to decide upon dates, etc., it is unnecessary to speculate on what will be the action, though it is a "foregone conclusion" that the meetings at both places will be more attractive than ever. There is no question that there is a better lot of colts to take part than has ever been trained here before, and that in addition to the fixed events which closed in 1882 and 1883, there will be numbers to take part in the Extra Stakes and purses offered. Since it has been made public that the Board would meet to prepare for the spring meeting there has been a greater interest manifested than has been shown in previous years, and already there are long arguments in relation to the capacities of young and old.

This diversity of opinion is the charm of racing in prospective. The conversation soon becomes dull when all agree. When the talk warms into a debate there is life and spirit. When the youngsters are the topic there will be rehearsals of what their parents, grand parents, and very likely their progenitors for many generations have done. In an assemblage of a dozen it is altogether likely there will be twelve different opinions, not one of which can be convinced that he is in the wrong. There may be partial agreement, and in discussing the merits of two animals one will be conceded to have the most speed, and then the distance that will bring them together is the mooted point. The equalization by differences in weight carried is not often heard, unless there are European critics in the couclave, though from the frequency of handicaps in the East, the discussion of the new and old schedules, penalizations and allowances, there is a far better understanding of the intricate question than was the case in former years.

When the weights of the Pacific Coast Blood-Horse Association were raised, there was no end to the clamor of those who could not see any good in divergences from old customs. A hundred and ten pounds on two-year-olds, they reasoned, would break down every colt in the country, and the time of the races so slow as to disgust the spectators. The latter objection has been completely demolished and the running of the Palo Alto filly with 107 pounds, a mile in 1:42 $\frac{1}{2}$ , was such a forcible plea that even the obstinate sticklers for old practices were silenced. Silenced, so far as sensible arguments went, though there was the usual want of candor, and a determination to abide by their former statements, ludicrous enough, though at the same time a little provoking.

It is evident that if the judgement and strength of a man were to be found in an eighty-pound boy that the two "stun" and over subtracted from the weight carried would

be beneficial. But, unfortunately, this is not the case, the judgement resulting from experience is wanting, and any one who has seen the lightweight sawing and twitching the animal's head about to restrain it from running faster than the order, is aware that there must be far more danger of injury to the legs than when there is strength enough to control by a straight pull. While a good deal of strength is required, the effectiveness comes from knowing how to apply it. Some men never can master the art, and the pull is a deed and stubborn effort for mastery, and it is needless to add that in contests of this kind the muscles in the neck and jaw of a horse are more powerful than those of the back and arms of men. The jerking and snatching of the boy is still more aggravating to the horse, and rebellion follows. In these battles it is more than likely that the legs will be struck, and that joined to the effort to break away is the cause of many injuries.

There are hopes that something can be done to overcome the ill effects of carrying heavy weight by horses in their exercise. It may be that by substituting straight work for the curves of a mile track will be found beneficial, for it is generally acknowledged that the great danger is a high rate of speed on curves of short radii. That there is an unequal strain is too palpable to be successfully contradicted, and the chances of injury to the tendons greatly enhanced. Should Mr. Winters build the training course on Rancho del Rio that he thought of making when we were there, it will be a practical test of more potency than theoretical arguments. There could not be better ground. There will be a level plain for the straight run of at least three-quarters of a mile, easy curves and up and down grades. That the "wind" can be improved by galloping up hill is conceded among English trainers, and without a dissenting voice so far as we have heard. That the action of the lungs is accelerated without so great a strain upon the legs is beyond doubt, and there must be exercise of the breathing apparatus as well as of the muscles to bring it to the required point. We have seen horses fearfully distressed in their lungs when there was no indication of muscular fatigue, and any person who has run until he was short of "wind" is aware that it is far more trying than the tiring of the legs.

There may be other methods discovered to neutralize the ill effects of weight on the back of race-horses, and we intend to try some experiments with that object in view. Until verified by actual trials it is not worth while to present theories, as with facts, hard, incontrovertible facts to support theory, it is a severe enough task to fight against the prejudices of centuries, in whatever pertains to the management of horses. It is true that there has been wonderful progress in the training of horses in the last thirty years, and many of the old superstitions have been replaced with more sensible treatment, but it is also indisputable that there is an unwillingness to forsake the old rutted paths to try others that might prove smoother.

The change in racing programmes had more to do in changing the systems of training in this country than all other causes combined. To win races it was imperative that the old methods be changed. Then it was found that heats could be run faster, and that horses would "repeat" better under the new. Had the "3 in 5," "two miles and repeat," and "four-mile-heats" been the main feature of the bills until the present day, there would have remained to keep them company the wallowing for miles under loads of clothes, the long walks, the "courses of physic," the nonsense and mummery of "cordial," "sweating," "wind" and a dozen other kinds of balles, and drenches, and medicines, and heavy shoes, and fine drawing "and "pointing" until the recipient looked as though pointed to the right course for a race among skeletons.

## STABLE AND PADDOCK.

### Breeding Theories.

EDITOR BREEDER AND SPORTSMAN.—Of late I have given a little thought to the subject of paternal and maternal influence and impression on the foal, and must confess that I cannot see my way as clearly as I did before the investigation began. Reasoning on the period of gestation, from the standpoint of a physiologist, it has been an easy matter to arrive at the following conclusions, as well as formulate the subjoined theory. In all viviparous animals there is little doubt but what the young's blood contains one-half its sire's. In order to establish this fundamental principle we must labor under the protecting wing of the old adage, that a little leaven leaveneth the whole lump, or else why should the one hundred and twenty millions of blood contained in the copulating fluid absorbed by the fetus increase to the one hundred and twenty ounces representing one-half the colt's blood at birth? We know that a single grain of mustered seed placed in the earth will, in time, produce an exact counterpart of the shrub which bore the planted germ, albeit the elements of nature have furnished, many, many times the same bulk of sustenance. But with the mare, observe the long period of gestation during the greater length of which the blood of the mother circulates through the arteries, veins and capillaries of the foetus, at least once every eight minutes; add to this the fact that the blood of the dam passes through an entire change three times during the twenty-four hours, and then try to demonstrate how large a portion of the blood of the sire remains in the veins of the dam and foal at the hour of birth. There is one thing we do know, however, and that is that in the case of the human family, the first result of wedlock usually favors, to a large extent, the mother, and the more children there are sent to bless the union, the more do they come to resemble the husband. Who has not heard of the old saying, that the good mother (meaning prolific) grows to resemble the husband, until in the advancing years, one might fancy they were brother and sister. Thought, habit, health and temperament are all brought into unison with the corresponding attributes of the husband, until they become of one mind and one flesh.

It is well known among the successful breeders of poultry and dogs that a second or third clutch of chickens, or litter of pups, carry in their make-up more of the nature of the cock or dog. So I have seen it in the horse; a mare bred to the same stallion through successive seasons becomes, as it were, a part of the sire of her offspring, and each succeeding foal grows more and more in the form and disposition of its male parent. Many have noted this fact when a mare has been bred twice or three times to a jack and then led to the embrace of a stallion; they have detected many traits in the offspring that spoke plainly of the latent influence of the jack, and perchance they have known of worthless animals being the result of such breeding. Still, there are exceptions to this rule, and the cases referred to may have occurred in those mares who breed directly after the male.

The writer has in mind the case of an old flea-bitten grey mare who proved herself a gold mine to her not-overweealthy owner, who, during her years of usefulness, gave birth to fourteen foals, and it mattered not to what stallion she was bred, the offspring spoke of the sire in every particular, color, markings, gait, size, disposition and usefulness, and proved, beyond the shadow of a doubt, that the blood of the male was ever active and potent. A second mare, being a daughter of Grey Eagle, the four-mile horse, was so strongly sexed and physically wrought, that it mattered not to what stallion she was led the offspring were her own, and evinced nothing in their physical and mental make-up of the influence of their sire. The last time the writer saw the Grey Eagle mare was during the spring preceding her twenty-eighth birthday. She was then with foal to a Clay stallion, and remembered among the fruits of life's labors nine-year-old living colts, a record, I venture, unsurpassed by any mare of her native state—**LOWA.**

Can any reader of the BREEDER AND SPORTSMAN produce a promising case of maternity? While I believe that a majority of mares would prove more profitable if bred for a successive number of years to the same stallion, providing, of course, that the result of such breeding is satisfactory to the owner, than would be the case were the mare led to different horses and as many different years; still I am satisfied there is a limit to the vitality of some horses' lives, and that in time the nature of the mare overcomes the spirit of the sire to such an extent that in time the offspring ceases to grow more and more in the likeness of the male, but takes on the nature of the female. This may result from too heavy a drain on the power of the stallion, or it may be the mentalizing influence of the dam's inherent properties bequeathed to her by a noble race of ancestors. There are mares whose first colt from a given stallion proves a happy medium of all the better qualities of both sire and dam, but whose second offspring proves itself to be a *fac simile* of the sire, while the third grows in the likeness of the first. In other words, breed the mare to a stallion in every respect her superior, and the first colt will be but little better than the dam, and a shade inferior to the sire, while the second will be by far the best of the two, and equal in all ways to its paternal ancestor, and the third will be no better than the first.

In such cases, it is not advisable to breed more than three times to the same horse, and once the owner is positive of the fact, two foals are as many as his mare should drop from any one stallion. Why call a colt a Hambletonian Star or a Cessie M. Clay, or a Pat Melloy, or an imported Billet, when the mare may have exerted twice the influence over the foal as the sire. Take the case of the Grey Eagle mare; had her owner sent his mare to Muscotine, and caused her to be bred to Tramp, by Gees Logan, and the result should have produced a healthy foal, the offspring would have been registered and known as a Tramp colt, when the facts would prove that it would have been an exact counterpart of its dam? Would it not be better to classify colts as members of that parent's family whom they most resemble? **COLUMBUS.**

Mayview, Kansas, January 16th, 1884.

### Blood Value in Breeding.

In a paper contributed to the *Country Gentleman* Mark Comstock formulates a theory so philosophical and eminently sound that it will be recognized and endorsed by all breeders who have, without prejudice or simple superficial examination, given the problem thorough study. The prophecy that may be read between the lines we believe is destined to complete fulfillment, for the time is not remote when the education of the thoroughbred to a harness gait will show the speed and gemeness of the noblest of his kind, full and unimpaired.

Some great animals fail to produce offspring, either in the first throw or more remotely, that are anything like as good as themselves. Generally, on investigation, if the pedigrees of these animals can be traced, it is found that they are exceptional ones in the strains of blood from which they spring. This is not always the case, for occasionally a great animal of a great family fails to reproduce greatness in its offspring. The rule, however, is as above stated, and when the latter exception occurs it is sometimes through want of a vigorous constitution, or something appears to result from too close inbreeding. Still these reasons will not always account for the failure. Full brothers and sisters of apparently equal value often prove widely different in value for breeding purposes, and the cause remains among the hidden mysteries of nature.

Therefore, breeding cannot be reduced to a certainty. If it could, capital would quickly monopolize all the animals sure to produce the greatest results, and the subject would lose that fascination which lies between hope and doubt as the venture progresses from anticipation to realization. But while breeding cannot thus be reduced to a mathematical certainty as relate to any given animal bred, enough is known of its laws and tendencies to enable the close student and practical handler of stock to judge with considerable accuracy what general line of blood crosses will afford a profitable number of chance of success, if supplemented with proper rearing. This calculation of chances is a business element in the case. It enters into other lines of business, and under certain conditions is a safe element to rely upon. Life insurance and fire insurance are conducted entirely upon it. The companies make many losing policies, but the average of their policies pay, or else they fail. Whether they succeed or fail depends upon how carefully they estimate the values of their risks. There are certain ascertained results deduced from the experience of the past upon which they calculate the chances of the future.

It is the same in breeding, only that the breeder usually looks at it from the standpoint of encompassing the greatest attainable number of chance of success rather than of guarding against the greatest dangers of failure. It is a commonly expressed breeding proverb that "like produces like or the likeness of some ancestor." I do not think this expression is an accurate statement of the case. It does not account for

the thousands of animals that are not likeness of either parent or of any one ancestor, but are compounds of traits and features derived from many different ancestors. Heredity is the sum of prevailing ancestral influences. The same ancestral influences may not prevail in the creation of one animal that prevail in the creation of its full brother or sister. Hence the value of having the whole pedigree of the greatest possible excellence in order that whatever does prevail will be good. Hence, also, the great advantage of being able to breed from a sire or dam that has already produced great animals, because we have then a surety, not only that good influences prevailed in the composition of such parents, but that they had also a tendency to transmit them. Still, breeders have found that while full brothers and sisters may be quite different in value and are very seldom equal, there is nevertheless a greater tendency to similarity than where relationship is more remote. Hence, turfmen will pay larger prices for untraced thoroughbred yearlings that are full brothers or sisters to great race-horses, than they will for others alike in character that have no distinguished full brother or sister.

In showing the influence of Rysdyk's Hambletonian in the trotting field, we cite some of the marvelous results achieved on the turf records by the influence of his blood. Of his own progeny, undoubtedly Dexter was the greatest trotter. He was a wonderful horse, and his turf record of 2:17½ we have always regarded as far within his powers. He was withdrawn from the turf before his speed was fully developed, if we judge by the "training out" quality that characterizes the Hambletonian blood. Had his powers been fully tested, he would doubtless have proved but very little inferior to the greatest of all trotters that have yet appeared, viz., Jay-Eye-See. We rate this horse as the greatest because his record and campaigning qualities as a five-year-old are comparatively better than the more matured efforts of Maud S., though her record is of half a second the fastest.

But when we consider Jay-Eye-See's pedigree, we are confronted by the fact that his sire, Dictator, was a full brother to Dexter, the greatest trotting son of Rysdyk's Hambletonian. Dexter having been gelded as a two-year-old, was untried in the stud, but the success of Dictator as a sire is a marked instance where it was safe to rely upon the family to reproduce the desired trait. Dexter is not the only fast trotter to which Dictator is full brother. The mares Astoria, 2:29½, and Alme, 2:28¾, are his full sisters.

As Dexter showed the most extreme trotting capacity of his day, so the tendency of his full brother Dictator as a sire is to produce trotters of very extreme capacity. He is the only sire that has produced as many as three trotters with records of 2:17 or better. We suspect he is yet to prove the greatest of the sires got by Rysdyk's Hambletonian, as he certainly is the best-bred one, judged by family performance that "The Old Horse" left. While he was well gelded, and, for what he could do, a very attractive trotter, the training of his earlier years failed to disclose as great capacity as was possessed by either his full brother or the two full sisters that appear in the 2:30 list. But he was the full brother of great ones, and upon that recommendation was tried and found to be a great sire. He fulfills the advice of Stonebenge, that while it is desirable to breed from the animals that have distinguished themselves, yet in the selection of breeding stock family is of more importance than individual success. There is another son of Rysdyk's Hambletonian of no special fame at present, that in a limited field has given a very strong illustration of family influence. He is yet young, and but seven of his progeny have been broken, and none had passed their four-year-old form when tried. Of the seven, five showed miles ranging between 2:28½, made by the fastest, and 2:39½, made by the slowest. The remaining two having been sold unbroken, have not been reported upon. The horse in question is Bona Fide, the youngest of the "Bruno family" that springs from Old Hambletonian and the mare Kate, remarkable for its number that obtained records or trotted public trials below 2:30.

Uniform speed and pure action, rather than great capacity, was the trait of this family. By the 2:30 standard it surpassed all others. The trotting habit of action comes nearer being thoroughbred in its nature in this family than in any other that we could instance. The remarkable uniformity with which the "full brother" Bona Fide imparts the family speed to his progeny accords again with Stonebenge. We do not expect to see them train on to the extreme points that may be looked for in Dictator's progeny, but we believe a larger percentage of them will reach the 2:30 list. In fact, we believe that if he could cover a high class of thoroughbred mares, of strains that have shown great campaigning qualities on the running turf, his potency to impart trotting action would enable him to produce plenty of 2:30 trotters as the direct result, and we would expect some of them to beat 2:20. Pilot, Jr., came nearer doing this than any stallion of the past, but I cannot believe that he had anything like the impressiveness in imparting trotting action that Bona Fide indicates, and which he has by right of inheritance. Pilot, Jr., was the best key we have had in the past for unlocking the treasure of force and power stored away by two hundred years of selection for the running turf, and when he handed them over to the trotting field it was with such an impress of his own trotting power that thereafter they were forever dedicated to trotting use. Other stallions were tried in the same direction, but their impress was not strong enough to subdue the running nature, and the united current was running blood still, as far as it was anything.

We contended years ago that when the trotting habit of action had become tired, in a thoroughbred sense, upon trotting strains, we running blood by crossing, and that in so doing would frequently get trotters largely partaking of the rare qualities of the race-horse, for great courage and endurance would be engendered to the improvement of trotting blood. The greatest trotters of to-day are thus obtained, but it has taken two trotting crosses upon the thoroughbred foundation to accomplish the result. Now it will be done with one. We know of very few trotting stallions that we would trust to accomplish the task, but every new generation is augmenting the impressiveness of the trotting traits. In Bona Fide, we believe, a degree has been reached that would be effective in a single cross; and for the two-cross formula we would rather chance his daughters out of thoroughbred mares of Lexington, Virgil, Australian, or other great running strains noted for stamina, if such daughters existed, than anything of an untried nature that could be selected.

In the *London Sportsman* of January 5th, there is published a list of some of the prominent racing stables in England, and they are truly mammoth establishments. The Duke of Hamilton's string, in charge of Richard Marsb, consists of 50 head, of which 22 are two-year-olds. The next largest stable is that of Lord Rosebery, in charge of Joseph Cannon, and consisting of 33 head. In France, the Duke de Castries has 49 head in charge of Tom Carter. Mr. H. Jennings has 38; Mr. H. Delamarre, 34; Baron G. de la Roche, 33; Count de Juigne and d'Arenberg, 47.

## Naked Bits in Cold Weather.

Probably not one person in ten who owns or handles horses has ever thought of the cruelty he was guilty of in putting a naked bit into a horse's mouth on a frosty morning. On this subject a writer in the Kentucky *Live Stock Record* says: "Let any man who has the care of horses these cold, frosty mornings deliberately grasp in his hand a piece of iron; indeed, let him touch it to the tip of his tongue, and then let him thrust the bit into the mouth of the horse if he hesitates to do it. The horse is an animal of nervous organization. His mouth is formed of delicate glands and tissues. The temperature of the blood is the same as in the human being, and, as in man, the mouth is the warmest part of the body. Imagine, we repeat, the irritation that would be to the human, and, if not the same degree, still the suffering to the animal is very great. And it is a momentary pain. Food is eaten with difficulty, and the irritation, repeated day after day, causes loss of appetite and strength. Many a horse has become worthless from no other cause than this. Before india-rubber bits were to be had I myself used a bit covered with leather, and on no account would have dispensed with it in freezing weather."

## THE KENNEL.

## Chorea.

Chorea, or St. Vitus' dance, is a purely nervous affection, and is the result generally of an irritable and impaired condition of the nervous system. It may be general or local. The limbs are frequently first observed affected; ultimately the body, face and jaws may be involved, the latter exhibiting tetanic symptoms.

Chorea is denoted by a peculiar snatching or twitching of the part affected. If the brain is involved, the head is in continual spasmodic, tremulous motion, and may best be described as a fac-simile of an aged pensive person. It has been known, in human practice, to arise from sympathy and imitation. I am not aware of an instance in which a dog has so contracted it.

With regard to medicinal agents, the one most applicable to this affection is undoubtedly strychnia or nux vomica. I do not recollect a single case of chorea, taken in its early stages, in which I have failed to effect a cure with this drug. Great caution is, however, required in its administration. It should always be given at a stated time and after a meal. This is especially necessary where the doses have been gradually increased, otherwise a fatal result is likely to ensue. I could mention more than one instance in which death has occurred from neglecting this caution. In each the patient had been under a long course of strychnia, and the dose had been increased to more than treble the original quantity; by some mischance the drug was omitted for a day, and when next given it produced convulsions and death. The dose of strychnia, 1-20 to 1-10 of a grain; the nux vomica, from one to two grains. If is best, however, to commence below either of the minimums mentioned, and after the first three days gradually increase it. It should be given twice daily, in the form of a pill. If there is any difficulty in administering it, the liquor strychnia may be substituted, which contains half a grain to the drachm end may be proportionally divided.

Local remedies in chorea are sometimes beneficial. I have found setons exceedingly valuable. If the convulsive movements are confined to the hind parts, the seton should be inserted across the liona. If general, at the back of the head and loins. Counter irritation along the spine is also serviceable.

Though in principle the hot bath, from its relaxing tendency, may appear wrong, it is, nevertheless, in chorea, occasionally tendered with considerable benefit. It certainly affords relief in those cases where the convulsive movements are excessive, and so far I have found no evil from its use. The less the patient is disturbed the better. Particular attention should be paid to the bed being dry and the howels regular, two great essentials in paralytic affections. When abatement of the twitchings with returning strength is observed, a favorable issue may be expected; but the medicine should not be discontinued so long as any nervous affection remains, and it should be gradually, not suddenly, suspended. When the patient is able to walk, a short exercise each day may be given with benefit. The fresh air acts as a tonic, new scenery diverts the mind, and exercise encourages the natural habits and functions of the animal. Tinct. ferri cod liver oil is advisable after discontinuing the strychnia, until recovery is complete. The diet throughout must be nourishing and digestible, and forcibly administered if the patient refuses to take it.

Constipation is generally present in chorea, and is best relieved with enemata.

Occasionally rheumatism becomes associated with chorea, and then the heart is frequently complicated. In such cases a cure is hopeless, but under judicious treatment and careful nursing the rheumatic and chorea symptoms may be considerably modified, and the animal's life thereby prolonged.

It may be as Col. Alexander holds that the best test of nose in a dog is to wind the scent. Those who have hunted deer in the Sierras, and witnessed the beautiful sight of his dog pointing his nose to the heavens on winding the scent, and keep turning round until he has fixed upon the quarter it comes from, will admit that dogs on the field must wind the scent also. The question, therefore, of the merit of speed in the dog on the field, will be determined by the time the men has its disposal to hunt. Under all conditions, the atmosphere has much to do with excess in hunting with dogs, and cannot determine the question. The dog that sweeps the field like lightning and occasionally runs over birds, may suit a man with little time. But the true sportsman, delighting in the pleasures of the field, will find them most fully with the dog that goes moderately over the ground without pottering, and hunts every bush he meets and every blade of grass he passes.

There is a desire in many quarters by prominent dog owners to introduce professional trainers. We question the propriety of such a step at present. Professional trainers, on the average, will not waste time on puppies, but prefer older dogs which they break by coercion. If a gentleman has a young dog, or a litter of dogs let him take them out himself when puppies, or trust a discreet and experienced friend to do so, and if good dogs he will be astonished to find at what an early age they will develop their natural instincts and perform well. At six months old a good puppy will point, back and retrieve in the field, if, like a child's, his education is previously begun in the house and round the house, with balls of leather, sticks, paper, or almost anything at hand.

It is a mistake to suppose Llewellins are more delicate than pointers, for on this supposition the former have had too much cere which has caused the death of many promising young puppies. A distinguished American writer says: "I have had many Llewellin puppies and never lost one when properly treated. Puppies," he adds, "need air, exercise, green grass, and all the dirty things they can pick up round the yard and stables. Puppies," he concludes, "are like children, only more so, and Llewellins are no more tender and delicate than pointers." Whether these ideas are adopted or not, they are full of practical wisdom and may be useful in many cases.

At the annual meeting of the Eastern Field Trials Club, held in New York January 22d, the following were elected officers for the year: President, Elliott Smith; Vice-Presidents, Henry F. Acton, M. D., and J. Otto Donner; Treasurer and Secretary, Washington A. Carter. It was decided at the meeting last evening that nomination for the Derby shall close on the 1st of May instead of on the 1st of July, as last year.

Mr. Charles Lincoln, Superintendent of the New York Horse Show Association and the Westminster Kennel Club, arrived in New York on the 22d. In conversation with a reporter he said: "I have come to this city from Louisville to arrange for future shows. The Kennel Club hold a meeting to-morrow, and I will propose several novelties. The next dog show will be the biggest thing of its kind ever held in the world."

In the kennel of Mr. R. H. Neill, the Red Irish bitch Lena, has been to the Red Irish dog Pat O'More. Lena, is by Brant from Star, and Pat O'More, by old Pat O'More from Nora O'More. The strain is a good one, and the dogs were recently imported by Mr. Neill from the kennel of W. N. Celler, Esq., Albany, New York.

At Gilroy last week a coursing match between John Paine's Flash and M. Casey's Pico, best two in three for \$50 a side was won by Flash in straight heats.

## BICYCLING.

## Card from John S. Prince.

EDITOR BREEDER AND SPORTSMAN:—I notice an article in the *Mirror of American Sports*, which reads as follows:

"Mr. John S. Prince has been telling the editors of some of the Western papers some tough tales about his trying to get on a race with Jack Keen, of England, and how Keen shrank from meeting him. Now, every one knows, that is acquainted with the records of both men, that Keen can give Prince a beating any day. The fact of W. M. Woodside, the Irish champion, having \$50 in the hands of a sporting paper of this city as a forfeit for a race with Prince, the latter always making excuses to avoid trying the mettle of Ireland's champion."

Now, Mr. Editor, the above article I guess has been written by one who has suffered defeat by my victory, and, like another schoolboy, will fancy and surmise things, and allow them to be published to gain revenge on honest people, and, like a sneak, dare not sign his name. He says, compare Keen's records with mine. Well, by looking at the *New York Clipper* almanac you can soon do that, and you will find although Keen has been in America three times in the last three or four years to do nothing but racing, he has not got one record, and that from one to fifty miles I have got almost all the best records. Also the best for 450 miles, which I did when I beat Morgan, Woodside, Higham, and all others in my last race at Chicago last October. Of course you cannot compare American records with English records on account of the tracks, but I suppose "Spokes" is a bum sportsman, or he would have been posted on the records, and therefore give me one the trouble to correct such a foolish blunder. Respecting what he says about my race with Woodside, I dare say he was in the office of the sporting journal when I called there on my way to Minneapolis last fall, and met Woodside, and he, Woodside, said he had so many engagements there that he could not attend to it. As I had so many engagements at that time myself, he agreed to put it off for two weeks, and in that time Woodside, surely to his misfortune, had broken his arm, and stopped all hope of a race then. No one was more anxious for a race with Woodside than I was. I proved it when I entered in the six-days' race at Chicago last October against all professed long-distance riders, and beat them all, being the first race of the kind I had ever run in. Of course Woodside, I am sorry to say, had a bad arm, but I won so easily that it certainly would have been the same if he had been all right, for Morgan was his great friend, and trained with him, and was heard talking around before the race how easy he could beat Woodside, and Prince had no earthly chance, as he, Prince, was only a short-distance rider, and would stop at fifty miles, and Higham was the only one he had to match. As Higham stopped the second day it was a certainty that he, Morgan, would win; but the nearer the end of the race came the further Morgan was getting left, till it came to the last four minutes of the race, when in the last mile I lapped him, and the pace was so fast it compelled him to stop, and I finished my last mile alone in 3:08. If it had not been for the accident of the falling of the tent, the fourth day I would certainly have been the short and long distance champion of America to-day; certainly as far as records go. Auhoy, I will try my best to be in Chicago before they start on their great trip across the Continent, which I suppose is only a losing of a little more of their gas for the sake of getting notices. Then I will be only too glad to give the Irish and Canadian champions all the racing they want, any distance from one mile to seventy-two hours, and have a proper man to manage the race, and not Samuel A. Miles who managed the last race I won there, after stating to all the riders and public that there was an elegant gold watch for the winner, and because the man he wanted to win got left he wanted to rob the right winner out of it, but he found that individual was not so easily dealt with as he thought, and got \$30 instead of an elegant gold watch. By the way, speaking of Woodside, since I left Chicago, two months ago, I read he has been trying to beat my fifty-mile record and stopped at thirty miles, saying for an excuse, that the building was too cold. It makes me smile. Poor fellow, it was too bad that he could not run fast enough to keep himself warm and he successful in beating my record, especially when he had such a reliable man as Miles to hold the watch and take the time. This reminds me, that when I made that fifty-mile record was in Boston two years ago. I remember there were five starters in the race, Fred S. Rollinson of New York, J. W. Wilson of Boston, T. Harrison of Boston, J. W. Morgan of Montreal, Canada, and myself. If I am not mistaken, Morgan, the great Canadian blower, was about three miles behind in the first twenty, and there he stopped. Myself and Rollinson were the only two that finished, Rollinson coming a mile behind, therefore not push-

ing me a yard in the race. Anyone with common sense, not including "Spokes," knowing the above to be facts, would think me only too glad to meet the son of Erin in any kind of race he wishes to name. I have beaten him four times already and can do it again; and give his partner Morgan a stern and a beating too. I remember that both he and Morgan were beaten even up by a woman, which is a disgrace to all men who profess to ride the bicycle, let alone call themselves champions. They were beaten by the same woman that I gave five miles start in fifty, and three miles start in twenty-five and beat her easily both times. Respecting the trouble between myself and Keen not having our last proposed race, I think I have given a correct and satisfactory account of myself months ago, which appeared in papers all over the States, but it seems that "Spokes" must be very slow catching on. As for me paying Keen to let me win at Springfield, well that is too thin. There were four champions in that race besides me and Keen. A man coming from England with the sole object of winning the great race I should think could not be so easily bought, but "Spokes" underestimates the business so well that he thinks other people do the same. Once more I say, if there is any man in America (I won't say woman, for when a woman beats me in a race even up I will break my bicycle and never ride again,) who will put up a suitable deposit in the hands of any responsible paper, I will cover it at once, and race him any distance for any sum. Hoping, Mr. Editor, I have not taken up too much of your space, and you will kindly publish the above in the next issue of your paper, I remain,

Yours,  
JOHN S. PRINCE,  
Champion Bicyclist of America.

## How to Cure Meat.

To one gallon of water take one and one-half pounds of salt, one-half pound of sugar, one-fourth ounce of saltpetre, and one ounce of potash. In this ratio the pickle can be increased to any quantity desired. Boil all together until all the impurities rise to the top and are skimmed off. Throw the solution into a tub, and when cold throw it over your beef or pork. Cover the meat well with the pickle. Do not put down until at least two days after killing, during which the meat should be slightly sprinkled with powdered saltpetre. This removes all surface blood and leaves the meat fresh and clean. Do not use the potash unless you are sure that it is pure. This is the famous recipe of Col. Freas of the Germantown *Telegraph*, and he has published it annually from time immemorial.

Brown's Bronchial Troches for Coughs and Colds: "There is nothing to be compared with them."—*Rev. O. D. Watkins, Walton, Ind.*

The Thoroughbred Stallion  
WILDIDLE.

By Imp. AUSTRALIAN. Dam Idewild, by Lexington. This great race-horse and successful sire will make the season of 1884, from February 10th to June 10th, at Judson's Wildidle Farm, Santa Clara, Cal. Wildidle is the sire of Gov. Stanford's Frolic filly (record of one mile, 1:42, at two years old), May D. (with a record of one and one-half miles in 2:36, the fastest on the Pacific Coast), Jim Douglas, Ella Doane, Wildidler, and others of note.

Terms of season, \$75, payable at time of service, and in all cases before removal. Mares taken good care of at \$8 per month. No responsibility for escapes or accidents. For further particulars address

H. C. JUDSON, Owner, or  
W. L. APPLEBY, Supt.,  
Santa Clara, Cal.

P. O. Box 223.

## The Trotting Stallion

## STEINWAY,

With two-year-old record, third heat, of 2:31, and three-year-old record, fourth heat, of 2:25.

## Terms.

He will serve mares the present season, commencing February 1st and ending July 1st, 1884, at the

Cook Stock Farm, Danville, Contra Costa County,

At \$100 for the season, payable invariably before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage \$5 per month, but no liability for accidents or escapes. Mares sent in care of McCleverty & Noble, Fashion Stable, Oakland, or of S. J. Bennett, Martinez, or D. S. Smalley's Stable, Hayward, will be forwarded immediately to the farm.

## Description.

He is a bay, 15 1/2 hands high, weighing 1,175 pounds, long flowing mane and tail, two white hind ankles, remarkable style and lofty carriage; has a good, resolute head set on a neck; his shoulders do not meet at the withers. He has great length and a capacious middle piece, plenty of bone and substance; his gait is big and square; his disposition is the very best.

## Pedigree.

Steinway, by Strathmore; first dam Abbess, by Albion, the sire of Vanity Fair, record 2:24; second dam by Marshall Ney, by imported Emancipation; third dam by Bertrand, he by Sir Archy; Albion by Halcyon, a pacer; he by Virginian, a son of Sir Archy. Steinway's dam is the dam of Solo, five-year-old record 2:28, and Nannie Smith, the dam of C. M. Clay, two-year-old record 2:31, winning the two-year-old stake at Lexington last fall, beating the Palo Alto colt and others. Solo and Nannie Smith are full sisters to Steinway. Steinway's dam is also the dam of W. S. Buckner's colt Curcency, that trotted as a yearling, the fall of 1882, in 2:46. See New York "Spirit of the Times" of November 18th, and "Turf, Field and Farm" November 18th, 1882.

Strathmore is the sire of Santa Clara, 2:17, and Tucker, 2:24; Chestnut Hill, 2:24; Alice Stone, 2:24; Steinway, three-year-old, 2:25; Nannie Talbert, five-year-old, 2:27; Solo, five-year-old, 2:28; Monitor, 2:28; Henderson, 2:28; Strathlin, three-year-old, 2:29; and Smart, three-year-old, 2:28. Smart is full brother to Belnor, who trotted a mile in 2:52 at fifteen months old. Bedford trotted in the two-year-old stake at Lexington last fall; was timed the second heat in 2:32; is also Strathmore's sire. Strathmore, by Halcyon's Hambletonian, the sire of Rhode Island, record 2:25, and he to turn got Governor Sprague, record 2:20; and he got Kate Sprague, record 2:18. The dam of Scott's Thomas, record 2:21, and Scott's Chief, record 2:23, was by Whitehall; also North American, by Sir Walter; he by Hickory, sire imported Whip; North American's dam is a pacer. Strathmore's second dam is by Halcyon's Hambletonian, he by Bishop's Hambletonian, he by imported Messenger.

## Performances.

Steinway has trotted four heats; at two years old he won the Lexington stake, mile heats, beating Monument, Jewett, Verbena, Admiration, Mystery, in 2:39, 2:32, 2:31. Memento won the first heat. As three-year-old, at Sharpshooter, Ky., August 8th, 1879, over a miserable half-mile track, he beat Bushwhacker, record 2:27, and Blackwood, Jr., record 2:29 in four heats, 2:38, 2:37, 2:37, 2:35. Bushwhacker winning second heat. At Lexington, August 18th, 1879, he trotted six heats, 2:38, 2:36, 2:30, 2:26 1/2, 2:30, Steinway winning fourth, fifth and sixth heats, beating Jewett, Catechy and two others. At the fall meeting of the Horse Breeders' Association for the Kentucky Stakes for three-year-olds he was beaten in three heats by Jewett, in 2:25, 2:23, 2:26 1/2, but Steinway was lame in this race, and really not in fit condition to start; he was timed second, in 2:27, 2:23, 2:27.

Cook Farm, Danville, Contra Costa Co., Cal.

Silk Culture—Interesting Report on the Filature—Mulberry Tree Cuttings.

There was a meeting of the State Board of Silk Culture yesterday, at 2 P. M., at the office of the Silk Culture Association, in the Grangers' Bank, Dr. C. A. Buckbee in the chair, Mrs. S. A. Raymond Secretary. It was reported that a large number of letters had been received from nearly all the counties of California, asking for information about practical silk culture.

A letter from Mrs. Lucas, President of the Philadelphia Silk Culture Association, asked for an exhibit of cocoons from California, to be sent to the coming fair to be held in Philadelphia in April. This request was referred to the consideration of the San Francisco Silk Culture Association.

The Treasurer's report showed the expenses of the Board to have been \$308.98 and \$347.54, for the months of December and January respectively.

Mrs. T. H. Hittell's interesting report on the flature contained a recommendation to pay the pupils of the flature at the rate of \$1.50 a pound for silk produced. The recommendation was adopted.

The report also submitted the statement made by the United States Consul at Beirut, in Syria, that from 650 pounds of silkworm eggs raised there, the product was 6,570,000 pounds of cocoons and 572,916 pounds in silk, which, at an average of \$5 per pound, yielded \$2,864,580.

The Chairman of the Committee on Trees and Slips reported that the season had arrived for the distribution of slips and cuttings of mulberry trees, and he received instructions for the purchase of 5,000 cuttings and 400 trees on the best terms possible.

Doctor Gibbons suggested an application to Mr. Thompson of Oakland, in whose ice works there would probably be obtainable a room at or below freezing point in temperature where the eggs could be stored without danger of hatching.

It was recommended that Signor Paul Consonno, superintendent of the flature, assist the committee in the disposal of the silkworm eggs.

Mrs. Marwedel contributed a letter from Miss Emily Faithful, written from Salt Lake, but tardily delivered, asking for information regarding California silk culture and its advantages as an employment for women.

Mrs. Hittell reported that Miss Faithful had been supplied with all the papers and bulletins issued by the Board, giving the desired statistics and explanations.

Dr. Buckbee announced that Senator Farley was in town, and a committee consisting of Mrs. H. B. Williams, Mrs. Hittell and Mrs. Ewer was nominated to wait upon Senator Farley and claim his good offices for the cause of silk culture in Washington.

Breaking a Balky Horse.

A Leominster farmer recently broke his horse of a balky freak in a very quiet, and, as he claims, not a cruel manner. His horse is in an excellent condition, and shows no signs of neglect on the part of his master. He drove him, attached to a wagon, to the woodlot for a small load of wood. The animal would not pull a pound. He did not heat him with a club, but tied him to a tree and let him stand. He went to the lot at sunset and asked him to draw, but he would not straighten a tug. "I made up my mind," said the farmer, "that when that horse went to the harn he would take that load of wood. The night was cold. I went to the harn, got blankets and covered the horse warm, and he stood until morning. Then he refused to draw. At noon I went down, and he was probably hungry and lonesome. He drew that load of wood the first time I asked him. I returned and got another load before I fed him. I then rewarded him with a good dinner, which he eagerly devoured. I have drawn several loads since. Once he refused to draw, but as soon as he saw me start for the house he started after me with the load. A horse becomes lonesome and discontented when left alone, as much so as a person, and I claim this method, if rightly used, is far less cruel, and is better for both horse and man, than to heat the animal with a club.—Fitchburg (Mass.) Sentinel.

Crown Point For Sale.

This promising Hambletonian stallion, record 2:24, is offered for sale. He is so well known for thorough game and endurance that it is almost superfluous to say anything further. He has defeated Sweetness, 2:24; Starr King, 2:22; Del Sur, 2:24, and others of celebrity. Although having only served one season in the stud, he can show colts of as much promise as any. The dam of Crown Point has two representatives in the 2:30 list. His blood being a combination of Hambletonian, Clay, and other strains, which proves him to be of the very best breeding.

Crown Point is sound in every way, and will be ready to train, with a good show of trotting faster than ever.

For further information address G. VALENSIN, Arno Station, Sacramento Co., Cal.

FOR SALE

The Trotting Gelding STARR KING.

Record, 2:22. Sound and in fine condition. Sold only for the reason that his owner's business is such that he cannot give attention to the turf. For further particulars address

STALLIONS FOR SALE

HAVING ACQUIRED MORE STALLIONS THAN he has present use for, the owner offers for sale the high-bred and well-known trotters

Inca AND Gibraltar.

INCA, RECORD 2:27, FOALED 1874, BRED BY L. J. Rose, got by Woodford Mambrino, son of Mambrino Chief; first dam Gretchen, by Mambrino Pilot; second dam Madame Kirkman, by Canada Chief; son of Davy Crockett; third dam by Fanning's Tobe; fourth dam by Leviathan.

GIBRALTAR, RECORD 2:22 1/2, FOALED 1872, bred by Geo. O. Tiffany, got by Echo, son of Rysdyk's Hambletonian; dam the Tiffany mare, said to be by Owen Dale, son of Williamson's Belmont.

For terms and other particulars apply to JOHN A. GOLDSMITH, FASHION STABLE, ELLIS ST., SAN FRANCISCO.

THE STANFORD STAKES 1885.

A SWEEPSTAKES FOR TROTTING COLTS AND fillies of 1882, \$300 each, \$100 payable on the 1st of March, 1884, at which time the stake will close, \$300 on the 1st day of January, 1885, and \$100 ten days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1885, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1885 or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. F. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of March, 1884. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly post-marked March 1st will be eligible. N. T. SMITH, Treasurer. JOS. CAIRN SIMPSON, Secretary.

DIETZ'S PATENT

CHECK HOOK.

Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check-Hook is used.

Horsemen can appreciate the value of a Check-Hook of this kind.

There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the hook.

Orders sent to A. C. DIETZ, No. 9 Front St., San Francisco, Cal.

Will receive prompt attention. When ordering state whether gold or silver plate required.

SLOCUM, 121 Pearl St., N. Y.

HENRY PIERCE

The Trotting Stallion

BRIGADIER.

Record 2:21 1-4.

Bay horse, bred by R. Penniston, Philadelphia, Penn. By HAPPY MEDIUM; dam Lady Turner, by Frank Pierce, Jr. Happy Medium, by Rysdyk's Hambletonian, dam the famous old trotting mare Princess, by Andrus' Hambletonian. He has fifteen representatives in the 2:30 list. Lady Turner, by Frank Pierce, Jr., dam by a grandsou of Sir Heury, son of Sir Archy, second dam by Andrew Jackson. Frank Pierce, Jr., by Frank Pierce, son of Beppo. Brigadier will make the season of 1884 from February 10th to July 1st.

Terms.

\$100 the season. Mares not proving in foal may be returned the following season free of charge. Good pasturage at \$3 per month, but no responsibility assumed for accidents or escapes. Mares shipped to Marysville consigned to me will be received and cared for on arrival of cars or boats. February 24, 1884. J. B. McDONALD.

Fast Trotting Stallion

HA HA.

Standard (See Wallace's Register.)

Ha Ha: Color Brown, 16 1/2 hands. Extra fine style. Action and form PERFECT. As a three-year-old, with eight weeks' handling, showed 2:29 1/2, without a skip.

Breeding.

GILT-ENGE, combining, close at hand, Hambletonian, Alexander's Abdallah, Mambrino Chief, dam by McCracken's Blackhawk, the sire of the dam of Overman. Record 2:19 1/2. N. B. As a four-year-old, with proper handling, 2:20 or better, I would expect him to show.

FRED ARNOLD, Stockton, Cal.

THE ELECTONEER STALLION

STANFORD

Will make the season of 1884, commencing February 1st and ending July 1st, at my stable near the Oakland Race Track.

Terms.

\$50 for the season, payable at the close of the season. No responsibility assumed beyond reasonable care.

Pedigree and Description.

Stanford was bred by George Faylor, late of San Francisco, foaled in 1879; is dark bay, no marks, 16 1/2 hands, and weighs 1,050 pounds; was sired by Electioneer, and closely resembles him in form and color; was not broken until last year; has been handled very little, but enough to show that his action is excellent and peculiar to the get of Electioneer.

First dam, Annie Laurie, by McCracken's Dave Hill, Jr., (sire of Geo. Treat, record 2:23 1/2), he by McCracken's Dave Hill, he by Red Lion, and he by Vermont Black Hawk. Second dam, Kitty, by Owen Dale, son of Belmont. Dam of Dave Hill, Jr., by old St. Lawrence, granddam thoroughbred. Dam of Dave Hill by Vermont Hambletonian. Dam of Red Lion by Vermont Hambletonian.

J. J. FAIRBANKS, Agent, Oakland, January 18, 1884.

Trotting Stallions

Prompter, 2305, and Privateer

Will make the season of 1884, from February 1st to July 1st, at Agricultural Park, Sacramento, at \$50 the season. Mares not proving in foal can be returned next season free of charge. Pasturage at reasonable rates. Accidents and escapes at owner's risk.

Prompter is a bright bay, star in forehead, hind ankles white, sixteen hands high, and weighs 1,140 pounds. Sired by Wilson's Blue Bull, son of Pruden's Blue Bull, by Mering's Blue Bull, dam Prairie Bird (four-year-old pacing record 2:28 1/2, and dam of Flight, five-year-old record 2:29, and three-fourths sister to dam of Pride, yearling record 2:44), and three-fourths sister to dam of Buccaneer, public trial against time 2:24 1/2, and full sister in blood to dam of Fawn, record 2:30 1/2, by Flaxtail, granddam by son of Tally Ho Morgan, great granddam by Irwin's Tuckahoe, great great granddam by Leffer's Consul.

Privateer is four years old, a beautiful brown with tan shadings, over sixteen hands high, and is by Buccaneer, son of Iowa Chief, by Green's Bashaw, dam by Marion, son of Mambrino Chief, yearling record 3:05 1/2.

For extended pedigree and further description of these horses send for circular. M. W. HICKS, Sacramento, Cal.

MAMBRINO WILKES.

BLACK STALLION, SIXTEEN HANDS IN HEIGHT, BY GEORGE B. WILKES, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino, son of Mambrino Chief. Second dam by Pilot, Jr. Todhunter's Mambrino son of Mambrino Chief, his dam Ripton's dam by Potomac.

This is the largest and one of the best colts of George Wilkes (weighing 1,200 pounds), combining the Hambletonian and Mambrino strains, and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

George Wilkes has 27 representatives in the 2:30 list, of which 14 have records of 2:25 or better, 5 of 2:20 or better, and 3 of 2:18 or better. These are all the get of Geo. Wilkes, and do not include Phil Thompson, William H., and other famous grandsons and granddaughters of this prepotent sire.

Will make the ensuing season, commencing February 1st, 1884, at the Drew Stable, STOCKTON, and L. M. Morse's near LODI.

Terms.

\$50 for the season, or \$25 single service. This low rate brings the service of this horse within reach of breeders, but does not argue any inferiority to the horses whose services are held at One or Two Hundred Dollars. For further particulars address

A. L. HINDS, Agent.

STALLIONS

-AT-

RANCHO DEL PASO.

ALASKA.

Brown horse, by ELECTONEER. First dam, by Washington, he by Geo. M. Patchen. Second dam, by Williamson's Belmont. At \$50 the season, due at time of service. The season for thoroughbreds will commence February 10th and terminate June 20th. For trotting stallions, will commence February 10th and terminate July 1st. Good care will be taken of mares during the season at \$6 per month; after the season \$10 per month will be charged, but no responsibility for escape or accidents. John Mackey, Superintendent, Sacramento, Cal.

2:20 1-4.

The Fast-Trotting Stallion

ANTEEO.

Dark bay colt, near hind foot white; foaled May 6th, 1879; bred by Jos. Cairn Simpson, Oakland, California.

By ELECTONEER. First dam, Columbine, by A. W. Richmond. Second dam, Columbia, by imp. Bonnie Scotland. Third dam, Young Fashion, by imp. Monarch. Fourth dam, Fashion, by imp. Trustee. Fifth dam, Bonnets of Blue, by Sir Charles. Sixth dam, Reality, by Sir Archy. Seventh dam, by imp. Medley. Eighth dam, by imp. Centinel. Ninth dam, by Mark Anthony. Tenth dam, by imp. Janus. Eleventh dam, by imp. Monkey. Twelfth dam, by imp. Silvereye. Thirteenth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

Will make the coming season, from February 10th to June 15th, 1884, at the Fair Grounds at Santa Rosa.

TERMS.

\$100 the season. Mares kept in any manner their owners desire, and at reasonable rates, but no responsibility for escapes or accidents.

Anteoo ranks as one of the great trotting colts of the United States, well worthy of the family to which he belongs. His breeding is of the choicest, and in point of form he is as nearly the model of the trotter as any horse living. He has shown a mile in 2:24, and at the same time demonstrated that he was capable of trotting way down in the teens.

For further particulars address,

M. ROLLINS, Agent, Santa Rosa.

The Trotting Stallions

DIRECTOR AND MONROE CHIEF

Will make the season of 1884 at

Oakland Trotting Park,

Commencing February 1st and ending June 1st.

TERMS.

Director \$20, Monroe Chief \$10, the season. Good pasturage for mares at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

Director, 2:17.

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:10 1/2; Phyllis, 2:15 1/2); first dam Dolly (dam of Thorndale, 2:22 1/2; Onward, 2:22 1/2), by Mambrino Chief; second dam by Potomac; by Saxe Wiemar. Thorndale, 2:22 1/2, is the sire of Edwin Thorne, 2:16 1/2, and Daisy Dale, 2:19 1/2.

Monroe Chief, 2:18 1-4.

Two-mile record, 4:46.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, he by Rysdyk's Hambletonian, first dam Madame Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whip stock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performances, see the holiday number of the BREEDER AND SPORTSMAN, issued December 29, 1883.

For further information address JOHN A. GOLDSMITH, FASHION STABLE, Ellis St., San Francisco.

THOROUGHbred STALLION

X X,

Pedigree.

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM. First dam, Columbia, by imported Bonnie Scotland. Second dam, Young Fashion, by imported Monarch. Third dam, Fashion, by imported Trustee. Fourth dam, Bonnets of Blue, by Sir Charles. Fifth dam, Reality, by Sir Archy. Sixth dam, by imported Medley. Seventh dam, by imported Centinel. Eighth dam, by Mark Anthony. Ninth dam, by imported Janus. Tenth dam, by imported Monkey. Eleventh dam, by imported Silvereye. Twelfth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

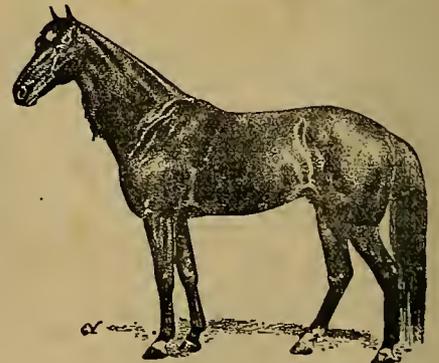

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name, Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the granddam of Anteo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hook Hooking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Saganore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON.

Oakland or 508 Montgomery street, San Francisco.

THE TROTTING STALLIONS

SINGLETON AND LA HARPE.

WILL MAKE THE COMING SEASON FROM FEBRUARY 1st TO July 15th, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and left fore foot, small star in forehead. Is 15 1/2 hands high, and weighs 1,120 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

PEDIGREE.

Singleton is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by imp. Messenger. Schepper's dam Nellie by son of Vermont Black Hawk, grand dam by Enslris, thoroughbred (No. 373). Singleton's dam was Lightfoot (dam of Pride, yearling record 2:44 1/2) by Flaxtail, son of Pruden's Blue Bull. Lightfoot's dam was Fanny Fern, by Irwin's Tuckahoe, granddam by Leffer's Consul, by Shepperd's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

LA HARPE

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1879. La Harpe was sired by Fane, he by Alexander's Belmont (sire of Nutwood), he by Alexander's Abdallah (sire of Goldsmith Maid), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by imp. Messenger. Fane's dam Glory by Jackson's Western Star (sire of the Western Star by Blackstock), 1st dam by Zounerge, 2nd dam by Gallatin (1881). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

TERMS:

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.

La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address

J. T. MCINTOSH, Box 60, Chico, Cal.

S. C. BOWLEY & CO.,

GRAND COMBINATION SALE.

Commencing April 10th, 1884, AT THE

Bay District Race Track, AND CONTINUING SIX DAYS.

Thoroughbred Horses and Standard Trotters, Roadsters, Jersey, Durham, and Devon Cattle, Spanish, Merino, and Leicestershire Sheep, from all the principal breeding establishments on the Pacific Coast.

750 HEAD OF STOCK

Have already been entered for sale and further instructions from leading breeders are daily arriving. Breeders and owners desirous of entering stock for this sale should apply at once to S. C. BOWLEY,

33, 35 and 37 New Montgomery St. The benefit of the combination sale to breeders and stockmen cannot be too highly estimated. Combination sales have been found of immense advantage in the East, and such a sale as this, comprising, as is anticipated, not less than 3,000 head of fine stock from all the leading breeders of the Coast, cannot fail to attract a large number of buyers from Honolulu, Australasia, and the East. The fame of California trotters is world-wide, and when it is known that for this sale already entered the get of Electioneer, The Moor, Almont, Nutwood and all the best known stallions on the Coast, the advantages to both breeders and purchasers must be obvious. Large or small lots will be taken for sale. As soon as the catalogue can be prepared they will be distributed all over the world, so it is necessary for those desirous of taking advantage of the sale to send in their lists of stock, with complete pedigree, at an early date.

S. C. BOWLEY & CO.

LARGEST AND FINEST STOCK

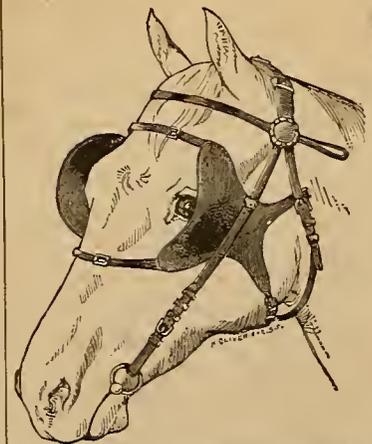

On the Coast, at prices that defy competition.

Leading Cutlers. 769 Market street. SPORTING GOODS. Telephone, 5159.

IMPROVED Blind Bridle & Winkers FOR RACE HORSES.

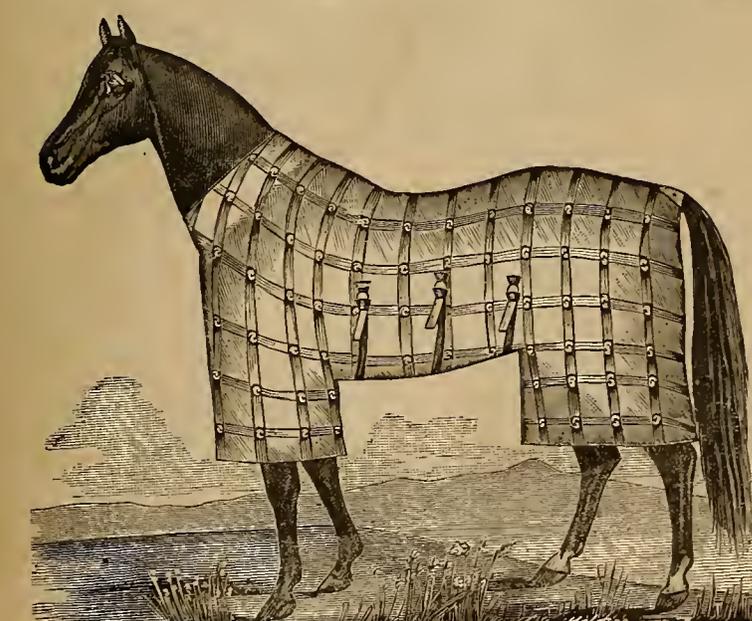

Secured by Letters Patent. July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure my letters patent, is: 1. The part D, supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially as herein described. 2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described. 3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described. 4. In a bridle, and in combination with the check-pieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as for the purpose herein described. 5. In a bridle, and in combination with the blinds F, supported as if pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I, and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood. It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle-sets all descriptions apply to JOHN A. McKERRON, No. 230 and 232 Ellis St., San Francisco.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

- 1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described. 2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described. 3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described. 4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth. 5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described. 6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee, JOS. CAIRN SIMPSON, SAN FRANCISCO, CAL.

LINES OF TRAVEL.

C. P. R. R.

TIME SCHEDULE.

SATURDAY, -- OCT. 20th, 1883.

Trains leave, and are due to arrive at, San Francisco as follows:

Table with columns: LEAVE (FOR), DESTINATION, ARRIVE (FROM). Lists various routes to and from San Francisco, including Antioch and Martinez, Benicia, Calistoga and Napa, Colfax, Deming El Paso Express, and East Emigrant.

Train leaving San Francisco at 4:30 P. M. can meet Pacific Express from Ogden at Benicia; and that leaving at 9:30 A. M. can meet Pacific Express from The Needles and El Paso at Antioch.

LOCAL FERRY TRAINS, VIA OAKLAND PIER.

Table listing ferry train schedules from San Francisco to various locations: TO EAST OAKLAND, TO FRUIT VALE, TO ALAMEDA, TO BERKELEY, TO WEST BERKELEY, TO SAN FRANCISCO DAILY, TO SAN FRANCISCO DAILY, TO EAST OAKLAND, TO FRUIT VALE, TO ALAMEDA, TO BERKELEY, TO WEST BERKELEY.

CREEK ROUTE.

Table listing creek route schedules: FROM SAN FRANCISCO, FROM OAKLAND, FROM BROADWAY OAKLAND, FROM ALAMEDA, FROM BERKELEY, FROM WEST BERKELEY.

LINES OF TRAVEL.

WINTER ARRANGEMENT.

COMMENCING SUNDAY, --- NOV. 11, 1883, AND UNTIL FURTHER NOTICE.

Passenger Trains will leave from, and arrive at, San Francisco Passenger Depot (Townsend Street, between Third and Fourth Streets) as follows:

Table with columns: LEAVE S. F., DESTINATION, ARRIVE S. F. Lists routes to San Mateo, Redwood and Menlo Park, Santa Clara, San Jose and Principal Way Stations, Gilroy, Pajaro, Castroville, Salinas and Monterey, Hollister and Treva Pinos, Watsonville, Apos, Soquel, Camp Capitola & Santa Cruz, Soledad and Way Stations.

Stage connections are made with the 10:40 A. M. Train, except Pescadero Stages via San Mateo, and Redwood, which connect with 8:20 A. M. Train.

EXCURSION TICKETS sold Saturday and Sunday good to return on Monday -- to Santa Clara or San Jose, \$2.50; to Gilroy, \$1; to Monterey or Santa Cruz, \$5, and to principal points between San Francisco and San Jose.

TRAVELING DEVICES. -- Passenger Depot, Townsend street, Valencia-street station, and No. 613 Market street, Grand Hotel.

For points on Southern Divisions and the East, see C. P. R. R. Time Schedule.

Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

SUPERIOR FACILITIES

AFFORDED BY ITS LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

MONTEREY,

Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Front abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES

AT THE "HOTEL DEL MONTE," ARE UNSURPASSED, having a MAGNIFICENT BEACH of pure white sand for sunbathing.

THE BATHHOUSE

contains SPACIOUS SWIMMING TANKS (150x50 feet) for warm salt water plunge and swimming baths, with

ELEGANT ROOMS connecting for individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places, APTOS, SOQUEL AND SANTA CRUZ, IS VIA THE

Southern Pacific Railroad,

(Broad Gauge).

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known resorts, PILARCITOS, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

SPECIAL NOTICE.

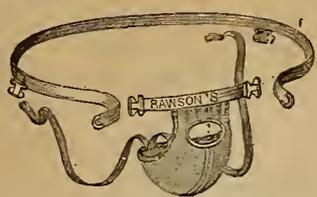

Sportsmen and others presenting Passage Tickets will be entitled to FREE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

When in order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle will be carried free of charge. Gun-taken apart and securely packed in wood or leather cases, will be taken in Passenger Cars.

TICKET OFFICES--Passenger Depot, Townsend street, Valencia Station, and No. 613 Market street, Hotel.

Sprung Knees

.....AND.....

Cockled Ankles

Permanently cured by using SPARKHALL'S SPECIFIC.

Which does not blister nor interfere with the horse's work. It strengthens the joints and tendons, restoring the limbs to their normal condition.

Testimonials:

From O. A. Hickok, Esq., San Francisco, Cal., June 8, 1881. I can with confidence recommend Sparkhall's Specific to any one owning a knee-sprung or cockled-ankled horse, being fully convinced that it will cure those deformities without injury to the animal.

From Hon. C. M. Pond, Breeder of the celebrated trotter "Clingsstone."

Hartford, Conn. March 29, 1882. This may certify that I have used Sparkhall's Specific in my stables, and consider it an extraordinary remedy, accomplishing in most cases all that is claimed for it.

The Specific is sold in quart bottles—price, \$2.00, by WAKELEE & CO., Montgomery and Bush Sts., under Occidental Hotel, San Francisco.

ASHLAND PARK TROTTERING STUD

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawks. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balser, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-17 1/2 B. J. TREACY, Lexington, Ky.

ECHO.

Echo, bred by Jesse T. Seely, Warwick, Orange county, New York; foaled, 1866. His sire Rysdyk's Hambletonian, his dam Fanny Felter, by Magnolia, son of Seely's American Star, second dam by Webber's Kentucky Whip, third dam by Shakespeare, a son of Dnroc. He was purchased of Jesse T. Seely, in the fall of 1870, by L. H. Titus, of Dewdrop Farm, Los Angeles county, California, and brought here the January following. His stud services have been limited, the first season being restricted to nine mares, two of which were taken away, and Mr. Titus could never learn anything about them or their produce. Of the seven remaining five had foals, and every one of them could trot inside of 2:40, Gibraltar and Echora being among them. Before his importation to California he served a few mares, but, as he was only a three-year-old when bought, his opportunities were necessarily limited. Echo himself was a good performer, trotting a mile in 2:35, and winning a race of heats of two miles against such strong competitors as The Moor and Vaughn. The first of his get to appear on the track was Echora, and this was in a stake for three-year-olds trotted at Sacramento at the State Fair of 1875. It was a short race, as she distanced both of her competitors, Arabia and Beautiful Bells, in the first heat.

time, 2:42, the fastest ever made up to that date by a three-year-old in California. In 1877 there was another very promising Echo came out—one of those unfortunate horses which appear to have been foaled under the influence of some malign star, and though possessed of a world of speed and unquestionable endurance, casualness followed casualness, and the "brackets" are still in reserve for him. This was Jo Hamilton, his dam a thoroughbred mare by Belmont, and his best effort in public was at Chico, when he forced Brigadier to trot a third heat in 2:30 to beat him, both, at the time, being four years old.

One of our special favorites among the trotters of California is Gibraltar, by Echo, his dam at one time claimed to be by Owen Dale, and his breeder, Mr. Tiffany, of Los Angeles, had a good deal of faith in his being correct. It may be so, though the only reliable information is that she was a large mare taken from Sonoma county to Los Angeles. Gibraltar is rather coarser than any other Echo we ever saw, but he has the thoroughbred characteristic of "gameness," and will finish up a heat and a race with as much determination as need be. He will keep trotting under punishment as severe as the driver can administer, and, like Monsieur Tonson, will

"come again" and keep coming. Gibraltar has a record of 2:22, public trial, 2:21.

In 1880 Echo showed two of the best three-year-olds of the year. Belle Echo made the fastest time for the age during the season, and Annie Laurie equaled the best eastern record. Belle Echo has been awarded a place among the notabilities, and the capital likeness which appeared in the BREEDER AND SPORTSMAN of the 15th of July, 1882, conveys a good idea of her form; but the grace and rapidity of her movements are beyond the pencil of artist to depict. Although her owner, Mr. Titus, is enthusiastic over the stock of the horse in the aggregate, we are of the opinion that he regards Belle as the bright particular of the family, and there cannot be a question that she is entitled to rank with the stars of whatever tribe. Annie Laurie also exhibited a great deal of promise in her three-year-old form. The race between her and Alex. Button, at the State fair, was a hot contest from end to end. Button won the first heat in 2:34, Annie Laurie the second in 2:30, Button the third in 2:29. The fourth was a "dead" one between the two in 2:30, Button winning fifth.

TURF AND TRACK.

English Blood-Stock Sales in 1883.

EDITOR BREEDER AND SPORTSMAN.—The sales of thoroughbred stock in England during the past year have been more than ordinarily important, for in addition to the regular sales of yearlings at Sandown Park, Beenhams, Hampton Court, Newmarket, Doncaster, and other places, the breeding stud at Middle Park has been broken up, and deaths of several owners of horses have necessitated the disposal both of their racing and breeding establishments. The first of the sales due to this latter cause was held at Tattersal's on New Year's Day, when thirty-three horses, the property of Mr. F. Gretton, who died in the autumn of 1882, were brought to the hammer. With one or two exceptions, these horses were still in training, and they realized good prices, though not equal to those which Mr. Gretton had paid for them. Prestons, for whom Mr. Gretton gave 6,000 guineas at the sale of the late Marquis of Anglesey's Stud, fetched only 1,500 guineas, but he was dear at the price, not having been able to win a race this season, and the same may be said of Arotic, who cost 1,400 guineas, and of Geologist, for whom 1,100 guineas was paid, and dead heat for a small handicap at York is the best of the former's many performances, while the latter has not run at all. Two colts, for which Mr. Gretton had paid as yearlings 1,100 and 1,050 guineas—Eastern Emperor and My Lud—were sold for 650 guineas, and even at that reduction in price they do not seem to have been bargains, for the former, now the property of the Duke of Beaufort, has only won one race, value £570, while My Lud has not run at all. The most valuable animal in this sale was Isonomy, the winner of so many cups for Mr. Gretton, and this sire, by Sterling—Isola Bella, was purchased for 9,000 guineas by Mr. Stirling Crawford, whose own death soon afterwards was followed by a partial sale of his horses in training. In the meanwhile, Mr. Gretton's brood-mares and yearlings were sold at Tattersal's, but the death of Lord Stamford, which occurred in the beginning of the year, did not lead to a sale, his widow leasing the horses in training to Lord Alington, and determining to keep on the breeding stud herself. The Dowager Duchess of Montrose, to whom the late Mr. Stirling Crawford bequeathed the whole of his magnificent stud, also determined to keep on the majority of her husband's horses, but twenty-five of the animals in training were sold at Newmarket in April, and they realized the very satisfactory sum of 11,125 guineas, a German agent giving 4,100 guineas for Martini, a five-year-old brother to Shotover by Hermit—Strayshot, endowed with great speed, and likely to make his mark at the stud. Several of the other horses sold at this auction were purchased by Sir Frederick Johnstone, who had arranged to take over all the other horses belonging to the late Mr. Crawford, and they have accordingly run this season in his name. During the same week a few horses which had belonged to General Mark Wood, a well-known member of the Jockey Club, who died soon after Mr. Stirling Crawford, were disposed of, and at the next Newmarket meeting Prince Bathyanth dropped down dead in the Jockey Club stand. The whole of his stud came to the hammer in the "July week" at Newmarket, when nineteen lots fetched close upon 19,000 guineas. The Duke of St. Albans and Mr. Chaplin secured a great bargain at 8,000 guineas, Galopin, by Vedette—Flying Duchess, with whom the Prince had won his only Derby, while Mr. Naylor gave 5,000 guineas for his three-year-old son Fulmeu, and the Duke of Portland 1,600 guineas for the two-year-old St. Simon. Fulmeu, whose engagements were all voided by his owner's death, has only run, unbacked and short of work, in three handicaps, so that it is impossible to say at present whether the purchase was a judicious one; but St. Simon, who has won the five races for which he ran, has approved himself the best two-year-old of the season. Mr. Chaplin also acquired Lightning, the dam of Fulmeu, for 350 guineas, and Mr. Leopold Rothschild made a lucky purchase when he gave 320 guineas for St. Angela, the dam of St. Simon. The Middle Park sale was held on the 18th of September, when ninety brood-mares, foals, and miscellaneous lots, together with the sire, Scottish Chief, were announced for sale without reserve. It was supposed at the time that the various lots had all been sold, but it now appears that a considerable proportion of them were bought by Mr. Long, an Australian breeder and racing man, for the owner of Middle Park, and, as he has since failed, these lots, including Scottish Chief, now with the exception of Macaroni the oldest sire at the stud, will be sold again by order of the liquidators upon the 14th of January next. The Middle Park Stud has, however, been broken up, and the prices which the mares and foals sold there in September realized were in striking contrast with those paid at the death of Mr. Blenkinsop, Sr., in 1872, when Blair Athol fetched 12,500 guineas, and his brother Breadahane and Gladiator almost as much.

The yearling sales of the season commenced at Sandown on the 22d of June, when 22 colts and fillies, the property of Mr. Hume Webster, bred at Marden Deer Park, were admitted to auction. Two of them failed to change hands, and the twenty others fetched 5,055 guineas, this being equivalent to an average of 253 guineas, which compared very unfavorably with the averages of previous years. The highest price paid was 650 guineas, for a chestnut filly by Craig Millar—Hedge Rose, bought by Lord Rossmore; and of the others a bay filly by Rosicrucian—Hawthorndale, sister to Hantera, was bought by M. Lefevre for 520 guineas, and a bay filly by Craig Millar—Cimhra, was sold for 470 guineas to Mr. Long. Many of the yearlings which fetched good prices at this sale were by Craig Millar, and there will be only one more opportunity of purchasing his stock, as he was sold at the beginning of the year for Austria or Hungary. Mr. H. Waring, of Beenhams, near Reading, held his annual auction a week later; the Saturday of the Ascot week, which he has taken for his sale, having formerly been the date occupied by the now dissolved Coham stud. The Beenhams-house yearlings numbered twenty-nine in all, and with three exceptions they were all sold, at a total of 6,765 guineas, and an average of 260 guineas each, being considerably in excess of the prices realized the year before. A brown colt by Beauclerc—Strategy, whose half-brother, My Lud, was sold to the late Mr. Gretton for 1,050 guineas at the preceding sale, fetched 1,085 guineas, but though he was a colt of great quality and with very stylish action he was not thoroughly sound, having a hlemish on one of his hind legs which is likely to give his trainer some trouble. His purchaser, Colonel O. Willans, also gave 630 guineas for a bay filly by Hermit—Ambascade, and he bought eight other yearlings at this sale, which was followed, at a week's interval, by that of Her Majesty's yearlings at the Royal Paddocks, Hampton Court. Thirty yearlings, the same number as in the previous year, were disposed of, the total being 6,945 guineas, and the average 231 guineas, as against 158 guineas upon the previous occasion. A bay colt by Springfield—Furiosa was sold to the Duke of Portland for 1,150 guineas, and the next highest

price was 590 guineas, paid by Mr. R. Peck for a bay colt by Doncaster—Merivale. The yearlings bred by the Messrs. Grahams at Yardley were sold in the following week at the Stud Farm, near Birmingham, and thirty-six colts and fillies fetched 5,695 guineas, or 153 guineas each, a bay colt by Sterling—Sea Gull, own brother to that good but unlucky horse Besandert, being run up to 1,000 guineas, while another yearling by Sterling, dam Casuistry, was sold to Captain Bowling for 700 guineas. Three or four other yearlings by this sire, whose fee is 150 guineas, or more than that of any other sire except Hermit, for whose services Mr. Chaplin charges 200 guineas, fetched good prices, but the brood-mares and foals sold at the same time excited so little competition that the averages was little more than 25 guineas. The yearling sales at Newmarket during the "July week" are always very numerous, but the catalogue was shortened this year by the withdrawal of those bred by the Earl of Rosslyn at Burchley, for the twelve yearlings in question, comprising a half-brother to Ladislus, and a son of Hampton and Radiant, happily named "Sunbury," were purchased in a lot by the Earl of Zetland, who will, it is to be hoped, do better with them than he has done with his previous purchases. Lady Emily Peel's thirteen yearlings bred at Bonehill were sold at Newmarket for 3,210 guineas, 247 guineas each, among them being a bay colt by Isonomy—Vainglorious, for which the Dowager Duchess of Montrose, who will run him and all her other horses in the name of "Mr. Manton," paid 1,050 guineas. The Duke of Hamilton gave 600 guineas for a chestnut colt by Childeric—Pompador, and Charles Archer, Lord Ellesmere's trainer, 290 guineas for a hick colt by Pero Gomez—Hilarity.

The Middle Park yearlings were sold at Newmarket, but they fetched miserable prices, and it was not until the yearlings bred by Lord Rosebery at Meantmore, and by Mr. Chaplin at Blankney were reached that there was any great competition. Lord Rosebery sold ten out of nineteen for an average of 378 guineas each, Sir John Willoughby giving 1,200 guineas for a curiously marked chestnut filly by Macaroni—Duckling, and Mr. Gerard 800 guineas for a bay colt by Kisher—Chopette. Mr. Chaplin sent 15 yearlings from Bliskney, and though he did not secure such a grand average as in 1882, when his yearlings made 1,050 guineas all round, he sold 11 out of 15 for \$3,200 guineas, or upon the average 756 guineas. This was just double the average of Lord Rosebery's yearlings, and it was due in the main to the competition for the Rosicrucians, three of which fetched 2,000, 1,500, and 1,250 guineas, while the only yearling by Hermit which reached four figures was a filly from Adelaide, full sister to the two-year-old which had just won the July Stakes, and for which Sir John Willoughby had paid 3,600 guineas as a yearling at Mr. Chaplin's previous sale. There were no more yearling sales of importance until the Doncaster week, in the course of which a number of highly bred animals, most from the northern and midland studs, were disposed of. Upon the morning of the St. Leger, the yearlings bred by Lord Scarborough, who has been in the habit of selling at Doncaster for many years, and who invariably realizes one of the highest averages, were in the catalogue, and the ten colts and fillies fetched 3,620 guineas, the average of 362 guineas being considerably higher than that obtained by his previous hatch of yearlings. Among them was Ses-Weed, by See-Saw—Fragrance, half-sister to Wild Thyme, who was bought at Lord Scarborough's last sale, and who has run so well this season, and she was bought well within her value at 450 guineas by the owner of Wild Thyme, and the highest price paid was 800 guineas for Strathend, a bay colt by Strathconan—Viola, who was purchased for Sir George Chetwynd. Mr. Augustus Savile, who is carrying on, though on a smaller scale, the breeding stud which his late brother Mr. Henry Savile established at Rufford Abbey, sold four yearlings at Doncaster for the very respectable average of 322 guineas each, and eleven bred by Mr. Watson, at the Waresley Stud, in Worcestershire, several of which had failed to find purchasers at Newmarket, were sold for 2,555 guineas. The Moorlands Stud yearlings, the property of Mr. G. S. Thompson, are always sold at Doncaster, and generally realize high prices, but the ten disposed of this year made only 1,330 guineas, and a much better average was obtained by Mr. Crowther Harrison, whose four yearlings fetched 4,050 guineas, or more than 1,000 guineas each. Among them was a bay colt by Hermit, from Crucible, the dam of Goldfield, and this colt, at first named the Coiner, but now called Goldsmith, was bought by Sir George Chetwynd for 2,550 guineas, who gave just four times the amount paid by Mr. Jardine for Queen Bathilde, by Springfield—Bathilde, or by Mr. Hoffer for Diving Bell, by Colness—Bonny Bell. Seven yearlings from the Yardley Stud, which were too backward to sell in June, were disposed of for 770 guineas, and the same number from Mr. Carew Gibson's Stud at Sandgate, in Sussex, fetched 1,670 guineas, the Duke of Portland, who has been a large buyer of yearlings this season, giving 500 guineas for a chestnut filly by Adventurer—May Queen. The yearling sales of the season were to all intents and purposes concluded on the last day of the Doncaster week, when six yearlings from the Blink Bonny Stud at Malton were sold for 2,105 guineas, or 351 guineas each, Mr. W. P'Anson, to whose brother the stud belongs, giving 1,250 guineas for a bay or brown colt by Beauclerc—The Pearl, though the previous produce of this mare have turned out very badly. The son of Beauclerc and The Pearl was the last of the eleven yearlings which fetched a thousand guineas or more this season, these being:

Description of Yearling.	Name of Vendor.	Place of Sale.	Purchaser.	Price in gs
Goldsmith, b. c. by Hermit—Crucible.....	Mr. J. C. Harrison	Doncaster....	Sir G. Chetwynd	2,550
B. c. by Rosicrucian—Bonnie Katie.....	Mr. H. Chaplin	Newmarket...	D. of Portland	2,000
B. c. by Beauclerc—Strategy.....	Mr. H. Waring	Beenhams Std.	Col. O. Williams	1,850
B. c. by Rosicrucian—Salamanca.....	Mr. H. Chaplin	Newmarket....	(Sir J. Willoughby)	1,500
B. c. by Rosicrucian—Florencia.....	Mr. H. Chaplin	Newmarket....	D. of Portland	1,250
B. or br. c. by Beauclerc—The Pearl.....	Mr. M. P'Anson	Doncaster....	Mr. W. P'Anson	1,250
Ch. f. by Macaroni—Duckling.....	Lord Rosebery	Newmarket....	(Sir J. Willoughby)	1,200
B. c. by Springfield—Furiosa.....	H. M. the Queen	Hampton Ct.	D. of Portland	1,150
B. c. by Isonomy—Vainglorious.....	Lady E. Peel....	Newmarket....	(Dow. D. of Montrose)	1,050
Ch. f. by Hermit—Adelaide.....	Mr. H. Chaplin	Newmarket....	Mr. R. Peck	1,000
B. c. by Sterling—Sea Gull.....	Messrs. Graham	Yardley.....	Mr. T. Brown	1,000
Total.....				15,800

And thus it will be seen that the average for each was 1,436 guineas. Last year thirteen yearlings were sold for 1,000 guineas or upwards, the total being 18,350 guineas, or 1,411 guineas each, so that, to all intents and purposes, the high-priced yearlings have averaged the same amount each season. It is to be hoped, however, that those which have been purchased this year will turn out better than those of 1882, for eight out of the thirteen have either not run at all as two-year-olds or have been beaten, while of the five which have won the only one which has any claim to be regarded as a race-horse of the first class is Sir John Willoughby's daughter of Hermit and Adelaide. She has not earned in her two successful races the whole of the 3,600 guineas paid for her as a yearling, but she has run well enough to make her, if sold to-morrow, worth much more than she cost. In striking contrast to this filly is the bay colt Hampton Court by Hampton—Loch Garry, purchased as a yearling by the late Mr. Stirling Crawford for 1,850 guineas. When a portion of that gentleman's stud was disposed of in the spring, Hampton Court was sold to Captain Machell for 200 guineas, and he again changed hands in the autumn, being bought by the proprietor of a circus for 35 guineas. There are others among the high-priced yearlings of 1882 and of previous seasons, which would not fetch more if brought to the hammer, and it very rarely happens that those which are sold for a thousand guineas or more turn out well. Coming down from these to the yearlings of every description sold in the course of the season, it will be found that 472, the progeny of 125 different sires, were disposed of for 95,655 guineas, or rather more than 202 guineas each. Last year the total number of yearlings sold was 518, and they realized 102,673 guineas, the average of 198 guineas contrasting unfavorably with that obtained this year, the difference, however, being so slight that it can scarcely be taken as indicating a rise in the value of thoroughbred yearlings, the average for which was much higher a few years ago than it has been of late.

The sire whose yearlings have made the most money this season is Hermit, as the nine colts and fillies by him have been sold for 5,410 guineas, or 594½ guineas each, the next on the list being Springfield, whose six yearlings have fetched 3,070 guineas, or 510 guineas each. Beauclerc has the third highest average (480 guineas) with nine yearlings sold for 4,320 guineas, and then comes his own sire, Rosicrucian, who is the father of no fewer than twenty yearlings sold by auction in the course of the year. These twenty yearlings were sold for 9,495 guineas, or 475 guineas each, and Rosicrucian is the only sire with three "four-figure" yearlings to his credit. He is followed by the Derby winner, Doncaster, with an average of 429 guineas for his six yearlings, and the other Derby winners in the list, besides Hermit and Doncaster, are Macaroni, with an average of 417½ guineas for four yearlings; Kisher, with an average of 257½ guineas for ten; Silvio, with an average of 243½ guineas for seven; Galopin, with an average of 239 guineas for eight; Blair Athol, with an average of 163 guineas for five; Sefton, with an average of 140 guineas for three; and George Frederick, with an average of 120 guineas for six. Kingcraft, Cremorne and Sir Beys are each the sire of single yearlings sold for 360, 100, and 25 guineas respectively; but the two other Derby winners still alive, Lord Lyon and Pretender, do not appear in the list at all. Next to Rosicrucian, Lowlander, who has recently been purchased by the Duke of Hamilton, has the largest number of yearlings sold by public auction, thirteen of his stock having been disposed of, but they did not fetch the prices paid for the ten yearlings by Sterling, the latter averaging upwards of 400 guineas, as indeed they should do when one considers the initial cost of breeding them.

BROADARROW.

Chicago Driving Park.

The stakes of the Chicago Driving Park for the first summer meeting of 1884, closed January 15th. The following Californians appear in the list of non-nominees:

The Ladies' Stakes.—For two-year-old fillies; \$50 entrance, \$25 forfeit, with \$500 added, \$100 of which to second. Three-quarters of a mile. 28 nominations.

Palo Alto Stock Farm's ch f Stephanotis, by Shannon—Lizzie Whips.

Palo Alto Stock Farm's h f Playmate, by Monday—Playing.

E. J. Baldwin's hr f Mira, by Grinstead—Blossom.

E. J. Baldwin's Glencross, by Rutherford—Glenita.

The Criterion Stakes.—For two-year-old colts; \$50 entrance, \$25 forfeit, with \$500 added, \$100 of which to second. Three-quarters of a mile. 32 nominations.

Palo Alto Stock Farm's hr c Regal, by Shannon—Riglin.

Palo Alto Stock Farm's h c Peyton, by Shannon—Miss Peyton.

Palo Alto Stock Farm's h c Valiant, by Monday—Lady Evangeline.

Palo Alto Stock Farm's h c Garland, by Shannon—Sally Gardner.

The Flash Stakes.—For two-year-old colts and fillies; \$25 entrance, p. p., with \$500 added, \$100 of which to second. Half a mile. The winner of the "Ladies," "Criterion," or of any stake or purse of the value of \$1,000 or more, to carry 5 pounds extra. 37 nominations.

Palo Alto Stock Farm's h c Peyton, by Shannon—Miss Peyton.

Palo Alto Stock Farm's h f Playmate, by Monday—Playing.

The Nursery Stakes.—For two-year-old colts and fillies; \$50 entrance, \$25 forfeit, with \$600 added, \$100 of which to second. One mile. Maidens allowed five pounds. The winners of two or more stakes to carry 5 pounds extra. 25 nominations.

Palo Alto Stock Farm's hr c Regal, by Shannon—Riglin.

Palo Alto Stock Farm's ch f Stephanotis, by Shannon—Lizzie Hurts.

Palo Alto Stock Farm's h c Valiant, by Monday—Lady Evangeline.

E. J. Baldwin's ch g Nanno, by Grinstead—Jennie D.

The Green Stakes.—For three-year-old colts and fillies that have not won a race prior to January 1st, 1884; \$25 entrance, p. p.; with \$500 added, \$100 of which to second. One mile and an eight. 42 nominations.

Palo Alto Stock Farm's ch f Glendair, by Norfolk—Glendes.

The Board of Trade Handicap.—A Sweepstakes for all ages. \$50 entrance, \$25 forfeit, of which \$10 must positively accompany the nomination, and which is the only liability if declared out by May 1st; \$800 added, \$200 of which to second. Weights to be published April 1st. Winners of any race after publication of weights to carry 5 pounds extra; of two or more races 10 pounds extra. One mile and a half. 32 nominations.

Palo Alto Stock Farm's b c Sheandoah, 3, by Shannon—Demirep.

Palo Alto Stock Farm's ch f Glendair, 3, by Norfolk—Glendes.

E. J. Baldwin's ch g Grismer, 4, by Grinstead—Jennie D. The Summer Handicap.—A cash handicap for all ages; \$10 entrance, which must positively accompany the nomination, and \$15 additional to start, with \$500 added, \$100 of which to second. Weights to be published April 1st. One mile and an eighth. 32 nominations.

E. J. Baldwin's ch f Maria Stuart, 3, by Grinstead—Sister Ann.

The Garden City Cup.—For all ages; \$50 entrance, \$25 forfeit, with \$1,000 added, \$150 of which to second, \$100 to third. Two miles and a quarter. 23 nominations.

Palo Alto Stock Farm's h c Shenendoah, 3, by Shannon—Demirep.

Palo Alto Stock Farm's ch f Glendair, 3, by Norfolk—Glendee.

E. J. Baldwin's br c Lucky B., 4, by Rutherford—Maggie Emerson.

The Merchants' Stakes.—For all ages; \$50 entrance, \$25 forfeit, with \$500 added, \$100 of which to second. One mile and a quarter. 20 nominations.

Palo Alto Stock Farm's blk f Phoebe Anderson, 3, by Monday—Florence Anderson.

E. J. Baldwin's b c Gano, 4, by Grinstead—Santa Anita.

The Rapid Sweepstakes.—For all ages; \$20 entrance, p. p.; with \$400 added, \$100 of which to second. Three-quarters of a mile heats. 9 nominations. None from California.

### Mr. Keene's Stable.

In its winter garb of snow and ice the Coney Island race-course is by no means the place to attract a picnic party. Cold winds whistle up from the Atlantic, hard by, and freeze the marrow and enthusiasm of the visitor. Deolation seems to be spread over the face of nature. Broken fences, tumble-down sheds and shattered roofs give testimony to the tremendous power of the unchecked elements, and the glazed white surface of the half melted and then frozen snow rests like a white pall over the most beautiful racing grounds in the country.

On a day when Charity itself would have buttoned and strapped an naster over all its pockets, a *Herald* reporter visited the place to learn something of the coming wonders of the turf said to be in keeping in Mr. Keene's stables. At the porter's lodge, at the main entrance, stood the superintendent.

"What are you doing to the track?" he was asked. "Nothing, now," was the answer. "It's too bitter cold to do anything. There will be various improvements before the season opens, but they wait on the weather now."

Room for "improvements" was apparent on every hand. The covering over the plank walk from the gate to the grand stand was broken down here and there by wind and snow. Prope, extemporized of broken plank, supported the roof in places, and poste and cross-beams lay splintered on the ground. The great buildings that sheltered so many thousands from sun and summer rains last season were broken in a score of places, and everywhere was seen the necessity for extensive repairs in the spring.

Even in the racing stables at the far corner of the park roofs were broken here and there, and temporary makeshifts took the place of what ought to be substantial carpenter work, at the least. In the boxes, however, the nine horses Mr. Keene keeps at the race-course this winter were as snug as possible, and their exercise track of one-seventh of a mile was sheltered tolerably well from the weather.

Mr. Blgrave, who has charge of Mr. Keene's horses, was full of enthusiasm, and talked about his four-footed charges and showed one after another of them with great pride.

Maid of Athol was the first to be seen. She is a four-year-old by Clanronald, dam My Nannie O, a bay with white heels, and the blaze on the face characteristic of Blair Athol's stock. She is a grand-looking mare and ought to come back to her two-year-old form now that she is sound again. She gave Mr. Blgrave a great deal of trouble owing to the habit she had of kicking herself, "out of," as he expressed it, "pure cussedness." Her temper has now much improved and she is perfectly docile and quiet, though whether she will remain so when again put in training remains to be seen. This mare is very speedy, and will, if she comes to the post, force the pace for at least six furlongs, having proved more than once already to be a clicker at that distance.

Fandango is a bay filly three years old, by Wild Oats, dam Torchlight, standing 15.3, with white snip on forehead, a game looking head, short hack, good loins, and racy looking all over. She did not show any great speed last season, but ran sufficiently fast at Jerome Park to show that she was coming into form. She was suffering from sore shins in the early part of the year, so that it was not until the fall her trainer could send her fairly along, and he is confident that she will yet pay her way.

Sinaloa is a three-year-old bay filly by Ten Broeck, dam Janet, and is therefore of American parentage on both sides. It is claimed that this filly has thickened and improved in the most extraordinary degree and is nearly as wide again as she was last spring. She is certainly a beautifully shaped one, and her coat, like satin, most plainly showed brilliancy of health and the evidences of great care and attention. Mr. Blgrave is very fond of this filly, but had no time last season on account of her sore shins to find out anything about her. If make and shape are good foundations for prediction, she ought to be heard of as a winner more than once next summer.

Dutch Roller, three years old, by Dutch Skater, dam Constantinople, is a bay-brown colt, standing 15.1, with rare limbs, and has filled out considerably since he won the Great Eastern Handicap last year. "From his appearance," said his trainer, "I shall be much disappointed if he does not create another surprise before the end of the coming season. His length of back, perhaps, prevents him from being a weight carrier, but there is no doubt that he can travel fast with a light weight on him, and he has shown more than once something better than average time."

Burgomester, three years, by Dutch Skater, dem Bombazine, is a brown colt standing 15.2, and perhaps one of the finest topped race-horses in America. He was unfortunately kicked in the near hock when a yearling, and it was at one time thought impossible to train him. Mr. Blgrave, however, operated on the injured part successfully enough to fairly send him along last October, and he thinks and hopes he may stand work during the ensuing season. The result of the accident, however, is still plainly apparent. If his trainer can bring him to the post he will deserve a great deal of credit.

A bay filly by Wanderer, dam Phillis, is a grand one, standing now over 14.3. Her dam, it will perhaps be remembered, took first prize at the horse show in New York last fall, and the youngster has many of the good points of her much admired dam. As she is one of the growing sort and wants time, her trainer has been very lenient with her. He thinks

she will show better as a three-year-old than she did last season, her loose frame evidently requiring time to mature.

A filly by Wanderer, dam Phoebe Mayflower, was the first of the two-year-olds. She is a chestnut, with white heels and a snip on her forehead, very pretty in form and evidently a great pet. She would hardly get up when called upon to do so, but made friends with every one in the box on rising from her recumbent position. "I can tell you but little about this filly," said Mr. Blgrave, "as she was suffering from some complaint when she came from Kentucky, and I have been very easy with her. She may do good some of these days, but it is early to give an opinion."

The brown colt by Ten Broeck, dem Bombazine, is a neat little fellow. He has very much the appearance Iroquois presented when a yearling, though devoid of the quality, to a certain degree, of that good-looking horse. Both this colt and the one in the next box were put to work last fall, and thoroughly satisfied their trainer that they were worth Mr. Keene's keeping.

The last horse shown was the bay two-year-old colt by King Alfonso, dam Janet. "I say, without fear of contradiction," said Mr. Blgrave, with great enthusiasm, "that this is one of the grandest colts in America or any other country. With strong neck, good shoulders and best of fore limbs, he combines strength of back, grand loins and great length from hip to hock—in fact, he is a race-horse all over." This colt is engaged in the English Derby, Two Thousand Guinees, St. Leger and other important races in England, besides having some valuable engagements here as a two-year-old. He stands now over fifteen hands high, and will be sixteen hands at four years old.

All of the horses seemed in excellent health and condition, each getting, the trainer said, two hours' exercise every day on the covered track. If nothing is heard of the stable this year it will certainly not be for lack of pains and endeavor.

### The Two Thousand Guinees.

What with the death of such extensive nominators as Mr Crawford, Prince Bathlyan, Count Lagrange and others, the original entry for this year's 2,000 Guinees and Derby has been materially reduced, there being only about eighty-three entries left in the Guinees and one hundred and ninety in the Derby. The reported retirement of Lord Falmouth and the temporary retirement of the Duke of Westminster in consequence of the death of his son and heir—the Viscount Grosvenor—will possibly make a further reduction in the number of three-year-olds trained for the Two Thousand and the Derby. So far the betting has been very limited, and only about half a dozen names have been mentioned for the Derby and not half that number for the Guinees. The general opinion, however, seems to be that both races are more or less at the mercy of "dark" horses, and that there will be no extensive betting until the season is far advanced. In fact, several writers of experience advise the British public not to make an investment on either race until just before the meeting.

The pick of the candidates for the 2,000 Guinees seem to be Lord Falmouth's Harvester, Mr. R. Peck's Superba, Mr. Leopold de Rothschild's Talisman, Mr. J. H. Houldsworth's Royal Fern, and Sir George Chetwynd's bay colt by Hermit, dam a sister of Adelaide. The last named must not be confounded with the Adelaide filly. She is owned by Sir John Willoughby, and is entered for the Derby but not in the Two Thousand. Of the five named, Harvester is a brown colt, by Sterling, out of Wheatear. His sire was a grand race-horse, and was selected as the English champion when a match was contemplated against Harry Bassett, while Wheatear ran third for the St. Leger, won by Hawthornden in 1870, with her stable companion Kingcraft second. Harvester ran in six races last year of which he won two, one a produce Stakes over the T. Y. C. at the first October meeting, and the second the Clearwell Stake on the first day of the second October meeting. It is impossible to give detailed accounts of his defeats other than to say that he was beaten by Superba, Duke of Richmond and the Adelaide filly. But as his stable companion Busybody was in the same race that the Adelaide filly won—the Dewhurst Plate—and as Lord Falmouth declared to win with her, the defeat of Harvester can scarcely count. As to his chances in the future, "Angur," in a recent review in the *Sporting Life* said: "Next to Busybody, who is not engaged in the Two Thousand, he is regarded as the best of the Heath House team. I am told by a good authority that he has grown up and developed into a handsome, bloodlike colt. He stands nearly sixteen hands high, and has thickened all through his frame. He is as sound and as straight on his legs as on the day he quitted his dam's side for the peddock, and if he continues to do as well as he has done up to the present, it is confidently anticipated that he will prove a real clipper next season, being possessed of size, power and freedom of action."

As to Superba, she was one of the best two-year-old fillies of the year. She is also by Sterling, her dam, Highland Fling, being by Scottish Chief. Superba ran in no less than nine races, of which she won all but the first and last. The former was the Kempton Park International Breeders' Two-Year-Old Stakes, run early in May, for which she was third. The last was the Middle Park Plate, run in October, for which she, at 126 pounds, was unplaced to Bneybody at 119 pounds. Royal Fern and the Adelaide filly each at 126 pounds. The successes in the interval were, however, of the highest order, and included the British Dominion Two-Year-Old Stakes at Sandown Park, the Ascot Biennial Stakes, the Chesterfield Stakes at Newmarket, for which, with 126 pounds, she beat Harvester, Talisman and the Adelaide filly; for the Midsummer Plate at Windsor, which she won, carrying 130 pounds; the Rous Memorial Stakes at Goodwood, when she gave from four to sixteen pounds to a good field, including Harvester, and won by three-quarters of a length; the Astley Stakes at Lewes, and the Champagne Stakes at Doncaster, when she beat Spring Morn, Wild Thyme and Concor. This is certainly a brilliant record, and as all reports agree that she has done well so far this winter, she will certainly be dangerous, if not for races like the Two Thousand, she will be in races exclusively for fillies like the One Thousand and Oaks.

Talisman is another son of Sterling, his dam is Hippia, and as she was the dam of the famous Nellie there can be no complaints on the score of breeding. He is still a "maiden," although he has run in no less than eight races, in a majority of which he was close up at the end. Of him "Angur" says: "There is something wanting in him which age may give, and his future entirely turns upon this reckoning. He was a wonderfully good-looking colt last year—good-looking enough for anything, possessing plenty of size without lumber, and yet in the eight races in which he ran he always had the luck to tumble against something better than himself."

Of Royal Fern, whom "Angur" selects to win the Two Thousand, he says: "Mr. Houldsworth has a good colt in Royal Fern. He is by Springfield, out of Wood's Anemone, and I have formed a very high opinion of him, feeling not a little certain that, with luck, he will develop into a high-class

race-horse. Royal Fern ran three races last year and won one. This was the Prince of Wales' Stakes at York, beating Poetry, Woodpecker and two others. It is true that the form of those behind him was not of a very high order. His best display was undoubtedly in the Middle Park Plate, beaten half a length by the highly tried Busybody, to whom he was giving seven pounds. The Adelaide filly, at level weights, was three lengths behind him, and among the beaten lot were Superba and Talisman. This performance alone places him well up among the best of his age. His last appearance was in the Criterion Stakes, for which he was made favorite, but failed to get nearer than third to Archiduc and Talisman. To be beaten by Archiduc was no disgrace, but it is evident that he did not run up to his best form through Talisman, who was in receipt of four pounds, as also was Archiduc. I hope Royal Fern has done well for the sake of all connected with him, there being little doubt that Mr. Houldsworth's stable, over which Ryou presides, is one of the most popular and best respected in the country. My information, however, is to the effect that Royal Fern has not filled out and thickened so much as he might have done, although he has lengthened nicely, and is, on the whole, a very useful looking sort of colt. I am also certain that too much attention must not be paid to his defeat in the Criterion, as he was far from being himself on that day, having on the Saturday prior to the race met with an accident and injured both his hocks, leaving the joints swollen and more or less inflamed on the day he ran. Given a victory in the Criterion, which might have been achieved but for the drawbacks mentioned, and remembering his creditable exhibition in the Middle Park Plate, Royal Fern would stand out as about the best of his year."

The unnamed colt out of the sister of Adelaide, by Hermit, for which Sir George Chetwynd paid 2,000 guineas for when a yearling, is also highly thought of by "Angur," in fact he gives the place honors to him and Harvester. The colt is trained at Newmarket by Sherrard, and by reason of his great improvement since last season is much liked by the residents at "headquarters." He ran but twice as a two-year-old; once he was behind Sandeway, Talisman and Beauchamp for the Prendigest Stakes, while on the second occasion he was beaten a neck by Scott Free for the great Sapling Stakes at the Sandown Park, with the highly thought of Camlet third.

The above are the most prominent candidates for the 2,000 Guinees. Those considered prominent for the Derby will be noticed at some future date.

### The Money They Represent.

The *Turf, Field and Farm* has collected statistics regarding the money value of the sons and daughters of Rysdyk's Hambletonian that have beaten 2:30. The stallion himself was purchased with his dam for \$125, and earned in stud fees \$205,750. Thirty-six of his get have trotted in 2:30 or better, and the prices for which they were or could have been sold for in their best days are as follows: Dexter, \$35,000; Jay Gould, \$30,000; Nettie, \$25,000; George Wilkes, \$25,000; Gezelle, \$20,000; Bella, \$15,000; Mattie, \$15,000; Bruno, \$15,000; Deucalion, \$10,000; Enfield, \$10,000; Orange Girl, \$10,000; Sentinel, \$10,000; James Howell, Jr., \$10,000; Harvest Queen, \$8,000; Lottery, \$8,000; Small Hopes, \$8,000; Young Bruno, \$8,000; Kisher, \$7,000; Madeline, \$6,000; Breeze, \$6,000; Administrator, \$5,000; Drift, \$5,000; Effie Deen, \$4,000; Ella Madden, \$4,000; Lottery, \$4,000; Lottie, \$4,000; Scotland Maid, \$4,000; Chester, \$3,500; Hamperion, \$3,500; Factory Girl, \$3,000; Jerome, \$3,000; Maud, \$3,000; Alma, \$2,500; Astoria, \$2,500; Lady Augusta, \$2,500; Marguerite, \$2,500. This is a total of \$335,000, as a fair estimate of the actual cash value.

The stallions in the list which have won renown in the stud are Sentinel, George Wilkes, Jay Gould and Administrator. Their united progeny is worth a great many thousand dollars. George Wilkes, for instance, is the sire of twenty-six 2:30 trotters, including Wilson, 2:16; Rosa Wilkes, 2:18; Joe Buiker, 2:19; So-So, 2:17; and Maybird, 2:21. Sentinel has eight 2:30 performers to his credit, among them Von Armin, 2:19. The fastest of Jay Gould's get is Adele Gould, 2:19, and the best one from the loins of Administrator is Catchfly, 2:19. The entire sons of Hambletonian which have no place in the 2:30 circle, but which have been successful in the stud are very numerous. Alexander's Abdallah was sold for about \$3,500, but he got Goldsmith Maid, who made a record of 2:14, and whose turf winnings foot up close to \$250,000; Thorndale, who gained a record of 2:22; and from whose loins came Edwin Thorne, 2:16; and Daisydale, 2:19; Almont, the sire of twenty-two 2:30 trotters, including Fanny Witherspoon, 2:17; Piedmont, 2:17; and Aldine, 2:19; and Belmont, with nine sons and daughters with records of better than 2:30, among them Nutwood, 2:18; and Wedgwood, 2:19. The descendants of Alexander's Abdallah are worth hundreds of thousands of dollars. Volunteer stands in the very front rank of the producing sons of Hambletonian. He has to his credit twenty-three 2:30 performers, one of which is St. Julien, 2:11, who at one time could have been sold for \$40,000. Before age had diminished the luster of Volunteer's eyes Mr. Goldsmith would not have parted with him for \$30,000. When Messenger Duroc's stud fee was \$300, Mr. Backman refused a very large sum for the stallion, and he would not sell Leland for \$20,000. The price paid for Happy Medium, when he was sold to Mr. Steele was \$25,000; and Mr. Bonner paid \$20,000 for Startle, sire of Majolica, 2:17. Electioneer proved a very cheap horse to Governor Stauffer, who gave Mr. Backman \$12,000 for him. He is the sire of the fastest yearling, 2:36; the fastest two-year-old, 2:21; the fastest three-year-old, 2:19; and the fastest four-year-old, 2:18; and \$30,000 would not buy him now. Dictator is the sire of three sensational performers of 1883—Jay-Eye-See, 2:10; Phelles, 2:14; and Director, 2:17—and when twenty years old he was sold for \$25,000. An offer of \$30,000 for him would not be accepted at Ashland to-day. Harold, sire of Maud S., 2:10, is valued way up in the thousands at Woodburn, and so is Cuyler at Glenview. General Withers paid \$5,000 for Aberdeen when he took him to Fairlawn, but this was nothing like his value. Prominent among his ten 2:30 performers are Hattie Woodward, 2:15; and Modoc, 2:19. The progeny of Edward Everett, Middletown, Walkhill Chief, Denne Sage, Knickerbocker, Seneca Chief, Strathmore and Rysdyk (sire of Clingstone, 2:14) are worth a stack of money.

The Prince of Wales has nominated The Scot for the Liverpool Grand National, the Saffron Steeple-chase and the Grand International Steeple-chase Handicap at Sandown Park Second Spring Meeting. He has also nominated Lord Alington's Geheimniss for the Stockbridge Cup. Last year it will be remembered that he nominated Mr. Lorillard's Iroquois for the same race.

*Bell's Life* says: "The American-bred Gerald, who been put into training, does not appear to have much in his manners, and is still described as the mad horse."

## List of Horses—E. H. Miller, Jr.

1.—BERLIN, black stallion, foaled April 11th, 1873. Sire Reavis' Blackbird son of Simpson's Blackbird, he by Camden son of Sbarok. Dam, Addie Lee, by Culver's Blackhawk. Second dam the dam of Index.

Reavis' or California Blackbird, 2:22, is too well known to need comment.

Addie Lee, 2:36½ (trials afterwards in 2:28), went lame with a splint from which she soon recovered, and put to breeding is a great brood-mare having produced Shady, by Ratler, dead, E. W. Hopkins' roadmare. Berlin, by Blackbird, 2:32½. Adalia, by Fred Low, 2:33, now owned and driven on road in New York city, and could not be bought for \$5,000. Adair, by Electioneer, 2:34 at three, winning the great Stanford Stake in 1882, and 2:30 at four years old. Adella, by Electioneer (No. 11 of this catalogue). Adina, by Electioneer (No. 12 of this catalogue). ———, by Benton (mare and this colt sold to Ariel Latbrop, Esq., in spring 1883). Culver's Blackhawk is said to be by Vermont (sire of Parrot, 2:26, Fastina, 2:26), and Ella Lewis, 2:27, by Hill's Blackhawk. The dam of Index is said to be by Old Morrill. Index is the grandsire of Bay, Frank, 2:20.

Berlin has a record of 2:32½ (obtained under most unfavorable conditions in a race at Sacramento in 1880,) has trotted repeated trials better than 2:30, is as game a horse as ever lived, has had but slight opportunities in the stud, having had but few mares except those of the owner. All his colts are sound, hardy and game like the sire, and all have the very best constitutions with the best of legs and feet, and the capacity to "train on." All want "lots of work." Among the good ones sired by him are Thapsin, three-year-old record of 2:43 at Marysville, in September '83, in a race won by him where he was not put to his speed, and has since trotted a trial in 2:30, and several very near that mark, also three colts bred by E. M. Skaggs, Esq., of Sacramento, which are now in Salt Lake City in training, and are well known to horsemen there as being very fast and game. Berlin is in perfect health, is gentle and kind, easily handled in service, has no vices and is fit for immediate service. Has speed lines in his pedigree; through his sire has a full share of Messenger blood, the fountain head of the American trotter, and though his dam has Blackhawk blood, bred to good mares he will make a high mark. He and his colts having qualities which are valued everywhere, and for soundness, freedom from blemishes on feet and limbs, capacity to stand training without injury cannot be excelled. He will certainly be an acquisition to any breeding farm. He has run in a paddock all fall and winter, and is in capital condition to go into the season.

2.—LADY HAMILTON, bay mare, July 20th, 1868. Sire, O'Neil's Horse son of Old St. Clair, dam May Queen, by Old St. Clair, bred by Judge C. H. Swift, of Sacramento.

May Queen was a gray pacing mare, was a great roadster, was fast at her gait, got injured and was bred. Comment as to the merit of St. Clair mares as breeders is unnecessary, three mares of this blood having produced to Electioneer, Fred Crocker, Wildflower and Bonita, and the best colts of several other stallions were out of St. Clair mares, to wit, Gypsy Davis, Pat Hunt, Frank Rhodes, etc. Lady Hamilton had the best and purest trotting gait of any animal (in his opinion, that the owner ever saw), was certainly the fastest animal he ever drove on the road, having frequently taken her from the stable to Bay District track and trotted her quarters in 36 and 37 seconds, and never was beaten on the track or road while he used her for his driving. She is a regular breeder, having produced a colt every year since she was put to breeding, Mobam, by Mohawk Chief, 1879. Hamel, by Electioneer, 1880. Hambena, by Benton, 1881. Lona, by Benton, 1882. Hamilar, by Electioneer, 1883, died. Served by Fallis in 1883 and is doubtless in foal. Fallis is by Electioneer, dam Felicia, by Messenger Ducoc; second dam Lady Fallia, by Seeley's American Star; third dam by Long Island Blackhawk. Fallis is kept as a stallion at Governor Stanford's Palo Alto stock farm. No stallion in the United States has a better trotting pedigree. He is himself a fast trotter. The prospective colt is worth more for the prospect only than this mare will bring. Lady Hamilton has been at Palo Alto ever since she was put to breeding, has been running out, will be taken up for this sale.

3.—ARISTOLA, black mare, March 20th, 1875; sire Fred Low, by Old St. Clair, dam Lady Hubbard, by Benicia Boy; second dam of Morgan blood. Fred Low is a great horse, is standard, is sire of Dick Turpin, 2:32, Clay, 2:25, Clairmont, 2:30½, Adalia, 2:33, and other good ones. Benicia Boy was advertised at Sacramento in the *Daily Union* as "black horse, eight years old, sixteen hands high, weight 1,260 pounds (a half-brother of the celebrated stallion Ethan Allan), sired by Old Vermont Black Hawk, dam of Messenger blood." Aristola had, as a colt, a remarkably fine gait, and was put in training and proved fast; she was "hipped," and was put to breeding at two years old; is a regular breeder, having produced a colt every year; her colts are good ones; see Nos. 6, 10 and 18. Her dam, Lady Hubbard, produced Dick Turpin, 2:32; by Fred Low, two others by same horse that the owner is using on the road as roadsters and family team that can beat three minutes together without training. She also produced Thapsin, spoken of above under Berlin, No. 1. Lady Hubbard's dam was a Morgan mare owned and driven by I. M. Hubbard, of Sacramento, and was a mare of great endurance and a fine roadster. Aristola's St. Clair blood, combined with that of her dam, makes her especially valuable to breeders. She is out at pasture, and will be taken up for this sale; is in foal to Berlin No. 1; will doubtless become standard before July.

4.—RHINA, black mare, April, 1876; sire unknown (supposed to be thoroughbred, as she was running in a field with a two-year-old thoroughbred colt), dam Ruby, by Fred Low, second dam Lady Robertson. Rhina is not large, but is a mare of great endurance; is a good saddle mare, and had good saddle gaits, runs fast, has been used under saddle and to harness as running companion with trotting horses when speeding, and is extraordinarily good at it; has also been used as a back to buggy and to cart about the training stable of owner; if used under saddle could soon be taught to take saddle gaits; is very finely formed.

5.—ALBION, bay gelding, May 6th, 1877; sire Fred Low, son of Old St. Clair; dam Addie Lee (see No. 1); good size, about 1,050 pounds, is well broken to harness (single), a good traveler and a good buggy horse; is now at stable at Sacramento; run out to pasture all fall and winter up to January 15th.

6.—ALCIN, brown gelding, May 17th, 1878; sire Berlin No. 1, dam Aristola No. 3, by Fred Low; good size, about 1,000 pounds; good traveler, tough and hardy, good style.

7.—ZEPHYR, black gelding, April, 1878; sire Berlin; dam Lady Zeitler, by old St. Clair; unbroken; has run out all his life; will be taken up about the 10th for this sale.

8.—ZENA, bay mare, April 18th, 1879; sire Berlin No. 1; dam Lady Zeitler, by old St. Clair; full sister of Zephyr No. 7, unbroken; being by Berlin No. 1, out of a mare by old St. Clair; Lady Zeitler trotted in three minutes untrained, and was

used for a time by the owner on the road; her blood should make her valuable as a brood-mare if she should not develop speed in training; has always run out; will be taken up for this sale.

9.—ZAGA, bay mare, 1880; sire Berlin No. 1; dam Lady Zeitler, by old St. Clair; same remarks as to Zena No. 8.

10.—ALMA, black mare, April 29th, 1880; sire Berlin No. 1; dam Aristola No. 3, her blood running into speed lines on both sides; she will be valuable as a brood-mare; is unfortunately blemished by being "hipped," has St. Clair blood, through her dam Aristola No. 3; is like to become standard before July; is unbroken; has always run out; will be taken up for sale.

11.—ADELLA, bay mare, May 4th, 1880; sire Electioneer, by Rysdyk's Hambletonian; dam Addie Lee, by Culver's Blackhawk; second dam, dam of Index. Of her sire Electioneer nothing need be said here. Of the merits and pedigree of her dam Addie Lee, see remarks to No. 1. Adella is full sister to Adair, winner of the great Stanford Stake of 1882 (\$3,900), in which he got record of 2:34½ at three years, and has record of 2:30 at four years old, at Chico, 1882. Adella is standard (sire and dam both standard), is kind, gentle, well broken to harness, is an extra fine buggy mare, is compact, muscular, weight about 925 pounds, good feeder, strong constitution, without a blemish; should she not develop great speed when trained, will be an invaluable brood-mare.

12.—ADINA, bay mare, March 7th, 1881; sire Electioneer; dam Addie Lee; is full sister to Adella No. 11. There are no other daughters of that great sire Electioneer, out of as good a dam as these are, that are for sale at any price. Adina ran out at pasture all summer, fall and winter, until the middle of January. The owner has had a liberal offer for these mares since he decided to have an auction sale, but they will not be sold at any price at private sale.

13.—HAMBENA, bay mare, March 9th, 1881; sire General Benton, of Palo Alto Stock Farm; dam Lady Hamilton No. 2, by O'Neil's horse son of old St. Clair; second dam May Queen, by old St. Clair; Gen. Benton is well known through the performance of his colts; for pedigree and merit of Lady Hambleton see No. 2, this catalogue; Hambena is a jewel; she is spirited, but kind and gentle as possible, with a great deal more than ordinary horse intelligence; trotted better than three minutes at two years, and "likes to trot"; is well broken to harness, but has been kept back instead of being pushed; would make a fine family mare; would do for a lady's driving; will surely be fit if trained; would make one of the finest brood-mares; at Palo Alto Stock Farm the combination of Benton and St. Clair blood in fillies is considered especially valuable for breeding to Electioneer or his sons.

14.—LONA, bay mare, 1882; sire General Benton; dam Lady Hamilton No. 2; is full sister to Hambena No. 13; is at Palo Alto Stock Farm, running out; halter broken only; will be taken up for this sale. She has good gait and action—look at her—see Hambena No. 13; these mares would be invaluable to any one starting a stock-farm, as from their combination of blood they would cross well with any of the best blood in the State, except that of their sire.

15.—HANEL, bay gelding, April 11th, 1880; sire Electioneer; dam Lady Hamilton No. 2. Hamel is a very handsome, fine-gaited, good-tempered colt; has lots of speed and likes to show it; is well broken (single), can show a 2:40 gait handily; has been running out; will be taken up for this sale.

16.—GRANETTA, black mare, May 4th, 1880; sire Berlin; dam Nellie Grant, by General Taylor, son of the "Morse horse"; second dam by Old St. Clair. Nellie Grant was bought by E. H. Miller, Jr., when four years old, of R. H. Makall of Sacramento, who raised her; an exhibition of her speed on the road in a butcher's cart led to the purchase; she was put in training and developed great speed very quickly, but getting injured was put to breeding. Granetta is unbroken, is and always has been running out; will be taken up for this sale; if she should not in handling develop speed as her dam did, she will be a good brood-mare; her pedigree is good as need be.

17.—GRANTOR, bay gelding, May 20th, 1881; sire Berlin No. 1; dam Nellie Grant, by Gen. Taylor; second dam by Old St. Clair; is full brother of Granetta No. 17; is running out and always has been, except for a month or two when he was taken up because he was not doing well at pasture, and while up was broken to harness; he is gentle, has good gait, was easily broken, drives kindly.

18.—ALANNA, brown mare, April 15th, 1881; sire Berlin No. 1; dam Aristola No. 3; second dam Lady Hubbard, by Benicia Boy; is a perfect beauty; is broken to harness, good-gaited, spirited and stylish.

## Death of Belle and Woodbine.

Two of the best known trotting brood-mares in the United States recently passed away to green pastures anew. A late communication from Woodburn Farm states that on account of old age and debility the noted mares Belle and Woodbine were destroyed.

Belle was foaled in 1857, got by Mambrino Chief, dam by Brown's Bellfounder. In 1861 she threw her first foal, a bay filly, to the cover of Iron Duke. She was then owned by Samuel Ayerigg, of Paterson, N. J., who sold her to the late R. A. Alexander. Her next foal was the famous sire Belmont, produced in 1864. Missing a year, she produced Bainbridge, to the cover of Edwin Forrest, and the following year produced a bay colt to the same sire. She was then bred to Tattler, and in 1869 produced Belmira, the dam of Sorrento. Her foal of 1870 was Bellwood, by Woodford Mambrino, following in 1871 with Biara, the dam of Pancoast, 2:25½, to the cover of Harold. For 1872 her produce was Fleurette; 1873, Sassacus; 1874, McCurdy's Hambletonian, 2:26½; 1876, Bernice; 1877, Beldemeer, and 1879, Lucas Brodhead, her last produce, all to the cover of Harold.

Woodbine was foaled in 1855, got by Woodford, the thoroughbred son of Kosciuszko, dam of unknown blood. She was bred by Mason Henry, Woodford County, Ky., and sold to R. A. Alexander. In 1860 she was bred to Mambrino Chief, and the following year produced a brown colt. Up to 1868 she did not miss a year, producing in 1862 a bay colt by Merrimac; 1863, Woodford Mambrino, 2:24½; 1864, a bay colt by Merrimac; 1865, Silence, by Alexander's Abdallah; 1866, Julilee, by Mambrino Pilot; 1867, Marmion, by Mambrunello; 1868, Tomahawk, by Roscoe. Between 1870 and 1874 there was no interval. She was reserved for Belmont the balance of her breeding career, with one exception. Her foal for 1870 was Woodbridge; 1871, Wedgewood, 2:19; 1872, Eglewood; 1873, Albine; 1874, Buckthorn; 1876, Weisbaden; 1878, Monaco, all to Belmont's cover, except Buckthorn. In 1879 and 1880 she aborted. Both Belle and Woodbine were celebrated as the dams of winners and of the getters of winners.

The combination of ingredients used in making Brown's Bronchial Troches is such as to give the best possible effect with safety. They are the best remedy in use for Coughs, Colds, and Throat Diseases.

## ATHLETICS.

## Kittleman the Winner.

The match-talked-of and long-expected foot-race between Fred Harmon and M. K. Kittleman is a thing of the past. The morning first fixed for the race, Sunday, February 3d, proved very rainy, and rained what had been acknowledged on Saturday by good judges to be a first-class track, and with the attention it was still to get would make it as fine a hundred-yard turf path as ever was seen. Early Saturday morning the parties interested went to Oakland and found the track six inches deep with mud, and, as a consequence, impossible to run on. The referee and stake-holder on learning the desire of both men and their backers to run at the first opportunity, changed his base of operations, and on Mr. Allen, the proprietor of the Oakland race track, getting possession of the Recreation Grounds on this side of the bay for the day and race, the runners were ordered to appear there on Monday, February 4th, at 4 P. M., rain or shine, and run. The track there is composed of "macadam" and clay, on which the rain had no effect, other than to improve it. On Saturday night a few pools were sold at the pool rooms on Bush street, in which the men sold even up, but only a few hundred dollars were put in the box. Monday proved a most unpropitious day for foot-racing, or out-door sports of an kind, as it began to rain about noon, and the day closed in a storm. However, as it was play or pay, quite a crowd, estimated at between four and five hundred, were present to see the novelty of two champion 100-yard runners, stripped naked running through the driving rain for the large stake of \$3,000 a side. Pool-selling was very brisk and started in early in the afternoon, with Kittleman favorite at 2 to 1, and at these odds about ten or twelve thousand was put in the box. Later in the afternoon and just before the start Kittleman's stock advanced, and the last pool sold was \$45 to \$15. The track is a good 100-yard path, about nine feet wide, which was divided down the center by a line of lime serving as a rope. Harmon who starts with his right foot on the mark, conceded the left side to Kittleman without tossing for position. The referee called the men out at 4:30 P. M., when the crowd left the pool-stand and arranged themselves along the line of the path next the rope, which had been stretched about 20 yards away. Harmon selected as his judge Mr. Geo. Rudge, and Mr. Geo. W. Putnam, of Denver, acted in the same capacity for Kittleman. The timers were Messrs. Eisman, Wilson, and Townsend, while the position of starter was accepted by Peter McIntyre. Everything being in readiness, the runners, who came out in tight shirts, took a short "warming up spin" and then stripped for the start.

The understanding was, that it was to be a standing start, but not penalizing. But on being ordered by McIntyre to toe the mark, it at once became apparent that both men were playing for the "best of it," and more desirous of a flying start, as neither man would stay on the mark long enough for the other to get up, making it simply impossible for the starter to fire them off standing. After hopping, scoring and breaking over the mark repeatedly, they made a break over a great deal closer than any previous attempt, and after getting off about 20 feet they were even, when McIntyre fired the pistol. Just at the instant of its discharge a terrible "slacking up" was seen in both men, but at the sound they again bounded forward with a very even start. It was a grand race from there to the tape, and impossible for those at the finish to tell the leader until about 30 yards from "home," when Kittleman was seen coming with a wonderful burst of speed and about two feet in front, which he increased from there about a foot, winning a grand race and beating a man thought to be invincible for that distance, and placing himself on record as good if not the best 100-yard runner in the United States. Owing to the start given them, the timers did not time them, as no one expected they would go. Numerous outside watches were held on it, however, but all plainly showing the advantage they got in the start by marking the time from 8½ to 9½ seconds. No estimate can be made of the time, although admitted by all to have been faster than anything they ever saw, as there is no way of knowing how far they were over the mark when the gun went off, and even then it would be impossible to figure as both men were running. Harmon's friends felt heavily, and were, in fact, "bet to a stand-still" by the Kittleman party. Cortez Thompson, Kittleman's trainer, must have won a nice sack, as he did not allow a man to offer any reasonable bet a second time.

## Advice to Young Athletes on Training.

(L. E. Meyers in N. Y. Sportsman.)

Two Hundred Twenty Yard Running.—I take up this distance, not because it comes next in order, but because, after 100 yards, is the most indulged in of any sprint race. The few hints given about 100-yard running, with a little modification, will apply to distance between 100 and 220 yards. Some trainers maintain that if a man is fit to run 100 yards properly, that can go most any distance. This is in a great degree true, but a man, when thoroughly trained for 100-yard race, must be an exceptional judge of pace to go beyond that distance and do himself credit. Most athletes consider 220 yards a most grueling race, and justly so, for it is nothing more or less than the same rate of speed, or nearly so, that is required to go 100 yards carried over more than twice that distance.

It is a curious thing that although this distance is most popular with our games committees, it is almost entirely neglected by our English cousins; in fact, it is very rarely run in England. A man requires both great speed and fairly good staying powers to run this race properly. To sum it up in a few words, an athlete to run a good "two-hundred" should be able to start well, run fast, and stay the whole distance at almost speed limit. A great mistake made in running this distance is too much hurrying in the first hundred yards or so. You must be careful not to run yourself off your feet before the finish. There is no distance that requires more head work than this. It makes no difference how short the distance may be (meaning, of course, anything from 100 yards up), there is such a thing as making too much haste at the beginning, and not being able to finish properly.

How to Prepare for the Distance.—Practice starting according to the directions given before, because it is as essential to know how to start in this distance as in a shorter one. Run about 100 yards three or four times at almost your best pace. After resting awhile, and you feel that your wind has entirely returned, then run from 300 to 400 yards at a pretty stiff pace. If you find, in going this distance, that you are giving out, do not labor and roll all over the track, but draw yourself in a bit, and gradually slow down to an easy canter. You will in this way learn to recover yourself without losing your form, a feat which you will find, as you advance in athletic excellence, it is quite necessary to know how to perform. I have often seen a scratch man in a handicap race win, when

thoroughly run out, by simply knowing how to nurse himself and make his opponents think that he had a good deal in hand. I therefore warn the beginner, when in practice he finds himself "going to pieces," to haul in a little and take it easy for a few strides, and he will find himself able to continue the journey, and in all probability to show a burst of speed at the finish, whereas, if he had continued to labor and fight, he would, in all probability, not be able to finish.

### Football.

If the weather permits, a football match will be played at the Recreation Grounds this afternoon. The contesting teams will be the University and Merions. The game will start at three o'clock sharp, and will be played under Rugby Union rules. The Merions will select their team from the following list, viz., Fenlayson, Eyre, B. S. Benjamin and Berney Benjamin, Foster, Lyons, Campbell, Theohald, Hill, Bencroft, Barkworth, Cookson, Tracy, Burnett, Petersen, Creighton and Dinkelspiel. The University have only lost a few of their players of last year, and have excellent material to fill up with.

The Rugby Union International Football match between England and Wales, January 5th, resulted, after a hard and well-contested match, in favor of England, by one goal and two ties to one goal.

Foot-racing in the west is a precarious occupation and nearly every "sprinter" has had narrow escapes from dying with his spiked shoes on. John W. Cozad was a notorious "johner." He met a violent death. In 1868 he ran on the old Fashion Course on Long Island, and up to the time of his death in 1882 traveled in every state and territory and Mexico, foot-racing for a living. A dozen times his schemes were discovered by his dupes and as many times he was shot at and as often escaped unhurt. The western press several times published obituary notices of the "pedestrian pirate," but he was finally caught napping and killed. He had been referee of a foot race at Salida, Col., and "the wrong man" won. For a consideration Cozad decided the race the other way and awarded the stakes to the loser. The cheated pedestrian hid his wrath, laughed over the matter and treated the crowd to drinks. While Cozad's back was turned a quantity of poison was placed in his whisky, from the effects of which he died.

The ten-mile international amateur skating contest was held at the Washington Skating Park, Brooklyn, on January 25th. There were 18 competitors, principally from New York and Canada. G. Phillips of New York, R. A. Elliot of Canada, were the favorites, but Axel Paulsen of Norway, immediately after the start assumed the lead and kept it throughout the race, covering the ten miles in the unprecedented time of 39 min. 7 2-8 sec. Elliot came in second and Phillips third. Pfaff, Montgomery and See also heat the best previous record.

The long promised visit of Lord Harris' team of Cricketers to America was definitely arranged for the coming season, but it will be necessary to postpone it still another year, owing to Lord Harris' inability to obtain a fairly representative team.

Robert Henry, of Fishkill, New York, an athlete, is credited with skating on the Hudson from Fishkill Landing to Albany, January 19th, a distance of 101 miles, in ten hours and twenty minutes.

A number of young gentlemen proficient in gymnastic exercises have organized the Nemo Athletic Club. Address all communications 712 Leavenworth street.

At the Hawthorn Grammar School sports held on the 5th of November, 1883, at the Cricket Grounds, Melbourne, Australia, Hillston kicked the football 177 feet.

Lawn tennis has of late become very popular in California. The University have started a club and are practicing regularly.

## THE KENNEL.

### The Gilroy Club and their Dogs.

EDITOR BREEDER AND SPORTSMAN:—The members of the Gilroy Club are determined to keep pace with the march of improvement. They are of the opinion that the objects of a sportsman's club should be not only their own recreation and sociability, but the preservation of game during the close season, and also the importation and propagation of foreign game. They also pride themselves upon their dogs, and now that the Gilroy Annual Field Trials have become a fixed institution, they will spare no expense compatible with moderate means to improve their breed. Mr. D. M. Pyle has bred his setter bitch Daizette, by Bennett's Regent, ex. Waddington's, now Goodman's, Daisy, to Mr. J. Y. Ross' Carl, by Leicester, ex. Dart. Mr. H. D. Bartlett, president of the club, will breed his California Rose, a splendid Drake, ex. Queen, bitch, to either Carl or Aldrich's Macgregor. Mr. H. M. Briggs will again breed his imported Irish setter bitch Fern, to Race, Jr. Mr. Farmer will breed his Queen to Carl or Mayberry's Dan. Mr. Leavesley has purchased from Mr. J. H. Brook of Oakland, his Llewellyn setter bitch Juno, by Aldrich's Macgregor, ex. Lulu Laverack. Macgregor is by the celebrated English field-trial winner Rob Roy, who heat the renowned Ranger, and was imported by Mr. Arnold Burgess at an expense of \$1,500. The dam of Macgregor is Mr. Tristram Burgess' beautiful and faultless Queen Mah, also a fine field dog. Lulu Laverack was imported by Judge Gale, late of Oroville, a well-known connoisseur of pure dogs, and is the only fine Laverack setter on this coast, and is a perfect picture of beauty. Mr. Leavesley is undecided as yet to what dog he will breed her, but he is highly pleased with his purchase, his experience in dog-breeding convincing him that the mental and field qualities of the dam are of far more consequence in raising a litter of fine pups than those of the sire. He is also breeding for Mr. R. W. Hill of Oregon, his imported Irish setter bitch Nida, by Larry, ex. Red Bess—the Elcho-Rose stock—by Nemo, ex. Quail III. Nida is a beautiful bitch and a fine field dog. She is thoroughly broke, and would have ran in the Gilroy field trials had she not been "in season." Mr. P. G. Anzer of San Juan, will breed his field-trial winner Ola to the best dog he can select. Ola is by Count Warwick, ex. Leah. Count Warwick is grandson of Leicester and Leah, imported by Mr. Bartlett, combined some of the best blood in the east. Leah is dead, but was a beautiful and symmetrical little bitch, with all the promise of making a brilliant field dog. Mr. Anzar has raised one litter of pups from Ola, by Bartlett's Rob

Roy, and they all show much precocious genius. Mr. Leavesley has secured two bitch puppies. Mr. H. Frutig has been fortunate in getting a dog-puppy, and although he has raised a good many dogs in his time, for Harry although a young man, is an old sportsman and one of our crackest shots—admits that for spirit and intelligence this puppy beats them all. Messrs. Wright and Henry, George, John and Edgar Hollaway, all good sportsmen and enthusiastic dog-men, have choice pups from Farmer's Queen and Bartlett's Rose, with which they calculate to take the persimmons at our next field trials. Mr. John Paine, a great lover of dogs and a fine shot, has a promising puppy from Bartlett's kennel, with which he hopes to capture the Pacific Coast Field Trials Derby, and Mr. J. R. Payne, himself of obivarious Tennessee stock, will be satisfied with nothing less than a Count Noble Peep-o'-Day puppy, and has written to Mr. Sanhorn for one that he hopes will rival the great champion Gath. Capt. Messic and Dr. Mogy have two very fine dogs of the Ralston breed. I have not seen them out in the field, but from what I can learn from others their nose and style are equal, if not superior, to the dogs of known pedigree. Mr. Louis Loupe has a fine Gordon, the best duck-dog in the State, and Dave Dunbam, E. S. Harrisou and many other members possess fine-bred dogs, but as they do not proclaim and discuss their merits at street-corners, I am not posted about them.

Gilroy is a small place, but the inhabitants thereof are awful plucky, and whether it is a conring match, a horse-race, a fireman's tournament, a clay-pigeon match, or a masked ball, they don't intend to be "left out." The club is in a prosperous condition and contains among its members most of the large landed proprietors in the vicinity, including Messrs. Dunn and Donnelly, Sam Rea, J. P. Sargent, P. G. Anzar, and many more are talking about joining.

Gilroy, Feb. 5th, 1884.

CLAY PIGEON.

### Coursing for Coin.

EDITOR BREEDER AND SPORTSMAN:—I am informed that Mr. Thomas Brady has been doing considerable talking of late about his wonderful greyhound Wee Nell, and how she can beat any greyhound on this coast, and offering to hack her for any amount, when he knew the parties present had no money about them. Now I will give him a chance to win, or may he lose, some money. I will match a greyhound against Wee Nell, best two in three or three in five, for \$250 a side, or as much more as he wants to run for; the race to take place on the San Joaquin valley, the place of meeting and time of race to be mutually agreed on. I hereby place in your hands fifty (\$50) dollars as a forfeit, hoping that Mr. Brady will be as anxious to cover it as he was to make matches on Wednesday evening last, or stop bluffing. If the above challenge is not accepted by Mr. Brady, it is open to any greyhound belonging to the Pacific Coursing Club. Come, gentlemen, don't do all your coursing in saloons (as your greyhounds might squalor over the spoons), but come to the finest coursing ground in the world, the great San Joaquin, and give your world-beaters a chance to expand their lungs, and may the best dog win. When the articles of agreement are signed I will name the greyhound for the contest. Until then I will sign myself

CORNKRAKE.

### California Coursing Club.

At the meeting of this club held at their rooms, 539 California street, on Wednesday evening last, it was decided to hold the spring meeting at Merced on March 27th and 28th, leaving this city on the 26th. The stakes to be run are an all-aged stake, limited to 32 dogs, and a sapling stake open to all puppies not over one year old. As the number of nominations is limited, entries should be sent as soon as possible to J. F. Carroll, 213 Pine street, in order to secure a place in the list.

We regret to learn that Mr. W. S. Davis, of the Phoenix Insurance Company of this city, has recently lost his red Irish setter puppy, Count Rouge, by Race, Jr., from C. N. Post's Dido, from diemper. Count Rouge was a most promising, handsome puppy, and about eight months when he died. The first time Mr. Davis had him out on the field he made six fine points on quail, true and staunch as could be made by an old, thoroughly trained dog, and retrieved in splendid style. We have had to record so many cases of this nature lately that the question forces itself upon us whether or not our dog owners are not breeding in too closely, for, beyond a certain point, it has a tendency, beyond doubt, to make the offspring delicate in physical organization. It would be well, at all events, to look into this matter, and see if in-breeding is not being carried too far. From the early promise Count Rouge gave of distinction in after life, his death is a loss to the kennel wealth of the State, and we are having too many of the same sort for the welfare of our dog breeders and the State also.

Mr. D. M. Pyle, of Gilroy, is breeding his fine setter bitch Daizette, to Carl this season. Daizette has many fine qualities, and is said to display great intelligence on the field. Carl is known to be one of the finest dogs of his kind in the State. The pedigree of both is unexceptionable. True, the grandam of Daizette was sister to Dart, the mother of Carl. The issue, when it comes, will carry the blood of those mentioned, and also Regent, Carlowitz, and others of standard reputation. We are glad to find Carl has received a number of first-class bitches.

We spoke last week of pose in dogs while hunting. The celebrated Gath is credited with the most remarkable case of the kind within our knowledge. On one occasion, while taking a flying leap over a high bush, he scented his birds below, and then and there straightened himself out in the air, and came to the ground on as stiff and staunch a point as a dog could assume. It is said when he reached the ground not a muscle moved until the bird was flushed and killed. We call that a grand instance of capacity.

The officers elected at the meeting of the National American Kennel Club are: President, J. Palmer O'Neil; Secretary and Treasurer, D. Bryson. A resolution was adopted to close the Derby entries April 1st, and the entries to the all-age stake November 1st, a forfeit of \$10 and \$15 additional for starters being required.

Mr. Leavesley, of Gilroy, has sold his lemon and white English setter bitch, Dora, by Bennett's Regent, ex. Leavesley's Juno, to Mr. T. P. Izard, Santa Barbara. Price, \$100.

The Czar of Russia is said to be sending a racing stud to England.

Parole's earnings from 1875 to 1883 were \$82,184.25.

### Over the Snow.

When the wheels of a carriage creaked over the snow in the Central Park drives yesterday, people turned and looked after the vehicle in surprise. It seemed almost as much out of place as would a cutter, with muffling robes and jingling bells, in the dog days. There were very few of these wonderful apparitions, however, and in these few cases there were outward evidences that all concerned felt keenly that they were out of joint with the times. There was a lack of jauntiness in the drivers, an apparent desire for seclusion on the part of the occupants, while even the horses seemed a trifle ashamed of their inappropriate surroundings.

The sleighing was grand. It is seldom better. The hare spots that the rains and the wear and tear had made in the roads were patched up by the light fall on Sunday, and as the runners sped along there was no occasional "scratch" to set the teeth on edge. There was no knee-deep traveling to rise up the horses, but a herd level roadway that gave every opportunity for speeding and made drivers just itch to speed in the park. Now and then apparently, the impulse could not be restrained. Shortly before nightfall a yellow painted cutter with a glistening black horse came tearing around a curve a quarter of a mile from the Fifth avenue entrance. A black cutter with a beautiful hay was just ahead. The driver turned his head at the sound of the pursuing bells; his eyes met those of the other driver, and the two seemed at once to understand each other; there was a shake of the reins, a chirrup, and off went the bay like a flash, with the nose of the black at his girth. It was almost neck and neck for awhile, but just ahead was a crossing for pedestrians, at which there were a number of women and children. A grey coated policeman waved his arms frantically and shouted, but the pair were by him and almost out of sight before he got his arms down.

The air was delightful. In the early morning and in the evening it was cold enough to satisfy any who yearned for an eer-nipping, face-cutting atmosphere, but in the afternoon there was an autumn mildness, while the rapid motion caused just enough tingle to make it real, orthodox sleighing.

On the roads above the park the steeds were "let out" for all that was in them. There were any quantity of "brushes," plenty of stopping by the way, and a great deal more hilarity generally than in the park.

Early in the morning the "triangle brigade" got to work at the snow that covered the ice on the lake at the park, and before nightfall had cleared space enough to admit of several thousand people enjoying the sport. The "triangle" has its month open, and so is really a V. It is made of heavy wood, solidly holted, and is drawn by a horse. When it has got within its enclosure all the snow it can carry along without spilling over, it is taken to the edge of the lake, its rear point lifted, and is then driven off. The snow that it has deposited is shoveled on the banks by workmen stationed there.

Park policeman No. 66, who was stationed in the houses for the accommodation of skaters, endeavors to make it as interesting as possible for all the small boys who came in to warm themselves or to adjust their skates. He carried a stout hickory stick in his hand and seemed to think it incumbent upon him to ply it most industriously. He did so. No matter what the boy was doing—or whether he was doing anything—if he came in the way of No. 66 he was bound to get a welt over the lege or hack. At times No. 66 was positive in this exercise, and went in with a will; at other times he was negative, and in a dreamy, mechanical way, waltzed the legs as he walked along, apparently through force of habit. Occasionally No. 66 would vary the monotony of the thing by seizing by the neck some urchin who had not been spry enough in getting out of the way and flinging him out doors.

"I'll attend to the matter," said gray bearded Captain Beatty when spoken to; "it is against the positive rule to do anything of the kind, and I will see that it is not repeated."

### The Queen's Plates, and Who Pays for Them.

The question is asked, Does Queen Victoria contribute anything towards what are called Queen's plates? The general unhorse public suppose that Victoria draws a check for 3,600 guineas on her bankers and presents it to the British turf. This is by no means the case, for the Queen can do better with her money. The \$18,000 required for the money prizes at various races comes from the pockets of the tax-payers, a part of it from the privy purse, and another part from the consolidated fund. When, in 1844, that scandal of the British turf the "running rein" business was exposed, two select committees, one from the lords, the other from the commons, looked up the question of Queen's plates, and their sources were shown. In England the question of how much money ought to be won at a race by the owners of a horse, has lately been agitated. If the stakes are small the owner of stables are obliged to gamble, in a letting way, taking the chances of gaining a much larger amount than that of the Queen's plate. The Cesarewitch and the Cambridgeshire handicaps appear to be only races upon which a hacker may win a large sum. Although so much fuss is made about the Derby, speculation on that event seems to be limited. At the late Epsom, though a horse of poor merit won, Lord Arlington and Sir Frederick Johnston, who had the market to themselves, only pocketed a paltry \$100,000. This is indeed saddening. An effort, then, is to be made in England to increase the Queen's plate, and instead of frittering it away in several 800 guinea stakes, to lump it on two or three races. The last suggestion is to restrict the character of the animals, and to allow the running to be made only by horses bred within a certain district or county, or to be ridden by their owners. An action of this kind would exclude American horses. It is not likely, however, that anything of this kind will ever be carried out.

### Names Claimed.

By E. Newland, Oakland, California.

LESLIE, for sorrel filly foaled—by Belle Alta, son of Williamson's Belmont, dam by Langford.

MONSIEUR, for black filly, by Belle Alta, dam's pedigree not traced.

A match for \$100 has been made between the Santa Claus filly Josephine, owned by H. Scott, the restaurateur, and E. M. Fry's filly Jefferys Lewis, also a daughter of Santa Claus. The race is to be trotted on the 26th, the stipulations being that Mr. Scott shall drive his colt and Lem Yllman drive Mr. Fry's. There is no betting on the race as yet, but odds are offered on the proposition that the great programmer falls out of the sulky before the horses start for the first heat.

Longfellow's get during 1884 won \$46,225. From 1876 to 1882 inclusive, they won \$148,197.50, or a total of \$194,422.50. During the three years Longfellow was on the turf he won \$13,020.

## POULTRY.

## Advantages of Mutuality Among Breeders.

EDITOR BREEDER AND SPORTSMAN:—As it is so rainy one can not accomplish much out of doors, I will write you a short article on poultry. It seems the late poultry exhibition has created quite a boom in that direction, judging from reports of the different breeders, it has but proved to me what I felt convinced of before, that a thoroughly wide awake poultry association was the one thing lacking to awaken the people of this coast to the fact that poultry rearing, as an industry, could be brought to a higher state of perfection, and consequently be more profitable than is the case in the eastern states, owing to the better adaptability of our climate, taking the year through. It is true the breeders of thoroughbred fowls in the east are able to command higher prices for that class of stock than we can do at here at present generally, but I think the time is coming (if the association continues to improve, as much as our first public exhibition leads us to expect, and I can see no reason to prevent it. We have breeders enough in this State, composed of the right material, if they will work together harmoniously, to rank with the best association of that class, only let us work together for that end, and success is assured), when we, too, can get better prices for better birds. Surely, parties wishing choice birds to improve their flocks would prefer to buy of home breeders, where they can go to the yards and make their own selection at the same prices asked in the east (less the express charges which will be no small amount by any means), than to trust to others to select for them, and run the risk of getting diseased fowls, or perhaps find them dead in the coop, to say nothing of having scrubs palmed off on you (as many of our breeders have, myself among the number) after paying for first-class birds, and sending to so-called reliable breeders; and that is another point wherein members of a flourishing poultry association would command more respectful treatment. Don't understand me to infer that all breeders in the east are of that class, for I have had dealings with some gentlemen, in every sense of the word. Furthermore, the time is at hand also, when a man engaged in the breeding of poultry will not be looked upon as in rather small business (don't amount to much, anyway), as has previously been the case, but the fact will have to be admitted that it takes a deal of brain work, as well as science, to make a successful breeder in the full sense of the word; and they will be forced to acknowledge and accept the poultry fancier as equal and on the same plane as those engaged in other legitimate branches of business. In the *Rural Press* of February 2d is an article from a gentleman of Santa Barbara, who seems to think the awakened interest in poultry rearing but a repetition of the "periodical hen fever" that goes the rounds about so often, and as an unhealthy state of affairs generally, now I can't agree with him wholly (at least, I don't want to). I am inclined to think it a healthy growth, that will stay by us, and expand to such an extent, that we won't have to import eggs to supply our city markets with, at least. He quotes from *Bulletin* of January, an article which seems to strike him as about the correct thing, to wit: enthusiasm is all very well, and egg farms on paper attractive, but the cold frozen truth is, where one succeeds in making it profitable as a business one hundred fail. Very true. But let me ask what per cent. of those starting in other lines of business succeed? Methinks the number of failures wouldn't be far behind in support of his theory. He mentions two cases of failures in his vicinity. Here is one: On one farm there were raised every year five hundred Brahma and Cochinchina chicks; the owner received no eggs from June to February, and disease soon swept away the flocks by dozens. I confess if I had raised that number of chicks of any variety and had no better results, I should feel rather discouraged, and fear I had mistaken my calling. I couldn't have the heart to lay the entire blame at poor hiddy's door. If this shouldn't bring up in the waste basket, I may call again, particularly if this rain stays with us much longer. O. J. A.

Santa Clara, February 4th, 1884.

## Hints for the Novice.

The troubles of the poultry-keeper, especially if new in the business, begin when disease sets in. Roup, in its many varied forms, is the disease most to be dreaded. The symptoms are seldom twice alike. Those not familiar with it do not discover it until too late, when the victim is too far gone. In the seasons of sudden and severe changes of weather, there is great danger of the fowls freezing, as well as of colds. Then there is dampness and chilliness on many days, which causes colds. The fowls should be well protected by tight rooms, under a good roof, with matched siding, well battened. The fowls then fare much better in severe cold than when the temperature is higher.

Some varieties or breeds have been considered tender, because they were not understood. The Houdans are an example of this fact. They can endure almost any dry, cold weather, but are not proof against dampness, even with a high temperature. Indeed, no variety of land fowls can endure dampness and remain in health. I mention the Houdans, as they are often thought too delicate for common farmers' use. There is no denying the fact that the fowls of to-day are more delicate and tender than those of a preceding generation, but admitting this fact, are they not double or quadruple the value as far as profit is concerned?

Localities and markets vary, and the breeds must vary accordingly in order to suit the demand of the nearest market. Early flesh-producing varieties are in demand for broilers, and these breeds are at the same time the great egg-producers. Some markets demand white-fleshed fowls, and also white eggs, while another wants only the yellow-skinned carcasses and brown or coffee-colored eggs. With a correct taste there is a difference. Yellow-skinned fowls never possess that sweet tenderness of flesh that is met with in the white-skinned sorts.

There are always weak fowls to be found in every lot, and such are the first to be attacked with disease. Some varieties are perfectly hardy with the exception of liability to become frost-bitten in low temperature. Other sorts cannot endure confinement and high feeding. With the right management the Asiatics are the best for the ordinary keeper. They possess size, and will give a goodly number of eggs if fed right during the winter. They require quantity rather than high quality. The new beginner is apt to be disappointed with the breed when meeting disease, but this is wrong, for no breed is exempt. All birds should not be treated alike.—*Country Gentleman*.

## A Duck Farm.

You will not find it on the map, because it is not mentioned there, and I shall not tell you where it is, because I promised the little woman who owns it, and who gave me permission to tell other women what she had done, that I would not mention her name or the name of the place where she lives and works. How did I happen to find her? I didn't find her; it just happened—i. e., if anything ever happens in this queer old world of ours, we bumped our heads together once in a railway accident, and we have been firm friends ever since.

Her farm is only a bit of land, some thirty acres, but for the last five years she has made from ten to twelve hundred dollars a year from it, and most of the money came from the ducks. She sells eggs for hatching, and ducks for breeding and for exhibition, but the main object is ducks and festers for market. She thinks ducks are less trouble and quite as profitable as hens. She keeps twenty-four stock ducks, eight males and sixteen females, through the winter. The ducks commence laying from the middle of February to the first of March, and lay from 100 to 125 eggs each in a season. The first laid eggs are set to get ducks to sell for breeding stock and for the early summer market. For this purpose the eggs from the ducks that are two or three years old are used, and when hatched the ducklings from those eggs are marked by punching a small round hole in the web of the feet. She thinks, and rightly too, that the eggs from the older ducks procure larger and more vigorous birds than the first eggs from the young ducks.

As soon as the weather gets warm enough to ship without danger of chilling on the way, she sells eggs for hatching at \$3 per dozen, and finds no difficulty in disposing of as many as she cares to spare at that price. Her sales of eggs for hatching amount to about \$100 yearly. Besides the eggs used and sold for hatching she generally sends a twenty-four dozen case to New York just before Easter. These large, finely-shaped, pure white eggs sell readily for Easter eggs, and bring from forty to fifty cents per dozen.

From the eggs set on her own place during the season she raises from ten to twelve hundred ducks each year. The ducklings are hatched from the first of April up to about the first of August. Most of the ducklings are raised by hen mothers, and she keeps some fifty hens for that purpose. The hens are all pure Buff Cochins, and are kept until they are two years and a half old. Besides raising two broods of ducks each season, each hen pays her owner an average profit of seventy-five cents per year from the sale of eggs for market. When fattened for market at the end of the second season, these Cochinchina hens are large and heavy, and the carcasses of the old fowl generally sells for enough to pay for a pullet to take her place. No chickens are raised on the farm; the pullets are bought of a neighbor who keeps the Buff Cochinchina.

She aims to get several hens and the incubator at the same time: when the eggs hatch the incubator ducklings are divided up among the hens; one hen will care for twenty ducklings until they are old enough to care for themselves. The eggs hatch well—those in the incubator quite as well as those under hens, and when the incubator ducklings are once mixed up with the others, she finds it impossible to tell "which from 'tother."

When the ducklings are ten or twelve hours old they are moved with the mother hen to coops and safety runs, which are placed in an orchard near the house. This orchard contains about four and a half acres, and the coops are scattered over it a few rods apart. On the side of the orchard that leads to the "pond lot," the bottom board of the fence is a foot wide, and comes close to the ground in order to keep the ducklings from taking to the water too early in life.

When the ducklings are four weeks old the hens are taken away, but the ducklings are kept in the orchard until they are six weeks old, or until they are well feathered on the breast and under part of their bodies, when they are turned into the pond lot, where they "take to the water like ducks."

The pond lot contains nearly thirteen acres, five of which are covered with water. Originally, this lot was a piece of low, rocky, bushy pasture land, between two low ranges of hills. A stream of clear, sparkling water, a famous trout brook, ran through the center. The woman who proposed to raise ducks saw at once the advantage of such a situation, and had a dam constructed near the upper end of the lot, and later another was made lower down, so that the lot contained two large ponds. Where the fences which separate my friend's land from that of her neighbor cross the stream, water-gates are put in which keep the ducks from swimming out with the water; and the bottom boards of the fence around the rest of the lot keep them from getting out that way. Two well-trained dogs guard this lot at night, and woe to the two-footed or four-footed prowler who intrudes.

The duck houses are simply long, low sheds—with the exception of the one where the breeding stock is wintered, which is inclosed—placed on the slope a few rods back from the water. They were built of refuse lumber, and the cost was comparatively trifling. Connected with the house for the breeding stock is a small yard where the ducks are shut in at night through the laying season. From the time when they are twelve hours old till within twenty-four hours of the time when they are killed for market, the ducklings are fed with a great variety of food. From the first meal until they are turned into the pond lot they are fed every two hours between daylight and dark. "Little and often" is the motto. Before they take to the water the ducklings are fed a little cooked meat once each day, and doubtless this ration of meat has much to do toward making the fine large ducks that my friend has the reputation for raising. After they are turned into the pond lot the ducklings are fed but three times a day till within two or three weeks of the time when they are to be marketed; then they are confined in the fattening yards and fed oftener.

The fattening yards are situated between the two ponds, and so arranged as to inclose a portion of the stream.

The ducklings are marketed as fast as they reach a suitable age and size. She commences sending them to market about the middle of June, and keeps it up till about the middle of September, when she quits till near the middle of January. These prime young ducks, getting into market at a time when such poultry is scarce, bring good prices—from 22 to 25 cents a pound, dressed. By the time the price begins to decline she has marketed all the earlier ones that she cares to spare, and the later hatched she keeps growing till mid-winter, when fine ducks are again scarce and the price goes up. At Thanksgiving and during the holidays, when the markets are crowded with poultry of all kinds, she holds on to her ducks, unless she has an order at an extra price.

At first my friend kept the Rouens; then she tried the Aylesburys, but now she keeps only the pure Pekins, and is so well satisfied with them that she has no desire to change for anything else. She says: "For laying qualities, quick growth, great size, fine flesh and fine feathers, the Pekins cannot be excelled."

On her place I have seen six-weeks old Pekins that weighed six pounds a pair alive, and those that dressed from three to four pounds each at ten or twelve weeks. At five and six months her ducks dress from six to eight pounds each. For the feathers, the best and finest of which are carefully saved by themselves, my friend obtains 40 cents per pound.—*Prairie Farmer*.

## Fancy Fowl and Queer Pets.

No wonder that the ladies and children of New York hurry through our middy streets to the Madison Square Garden. It is the annual show of the Fanciers' Club, where pets of all sorts and kinds can be seen and frequently heard. Neither is it strange that quaint looking men from Long Island, and Staten Islanders, with trousers tucked in their hootlegs, and odd fish from Brooklyn go to the same place. There can be found manifold evidence of a great Omniscience in pouting pigeons, fat cats, faint Polish fowl, and a charming revelation of nature's methods of breeding trout, pollywogs and gudgeons. The first thing struck when one enters the Garden is his ear. Queer crows, odd screams, bizarre yells salute the corner. Every rooster in the place is on his mettle. Every one does his level best to convince the world and all there is therein and he is the tallest, the brightest, the loudest and the highest priced bird in Christendom. While the roosters crow, the hens cluck, the dogs bark, the cats mew, and the geese hiss as the ducks say "quack." Funny, isn't it? It is, indeed. Moralists fixed their amplitudinous proof of the existence of a God. The devotees of nature point with pride at the ceaseless hatching of trout, without the aid apparently of any living lever. The fun lover can laugh at his ease, and the man who is unable to appreciate the conceit of the faint pigeons ought to die on the premises.

It would be almost as easy to tell what there is not as to catalogue what there is. The great Garden is flooded over as if for a ball. A circle of cages with wire fronts belt the interior. Across these, in rows, are other cages, all on large tables. Men familiar with barnyard nomenclature would not be contented with a printed list of the entries, and to men who don't know a Japanese bantam from an Angora cat a list would be of no interest or information. The queer crows which make the rafters echo and the welkin ring are very queer, but they are discounted by the strange conformation of some of the fancy breeds. Some chickens are full of noise; other fowl are all dignity. The important bearing with which a five-henned rooster stalks is admirably set off by the flippant way in which a bachelor cock perks his head and peers from side to side. There is an abundance of game material on exhibition, and quite worth a visit.

Of the beauty of many of the fowl it is literally impossible to do ought in the way of description. Every tone, every shade, every color, and a thousand happy, attractive combinations delight the eye. Black fowl with white collars, bronze bodies with crimson tints, white fowl with blue and orange ornamentation, huge roosters black as night, with festery trousers to the claw; heaves of fantailed pouters, veing with each other in concerted exhibition of their own points; mammoth birds in pairs, petite fowl from Japan, others from China, some from the isles of the sea, and—but further mention is unnecessary. If from a plastered foot experts can determine the size and nature of a statue, surely any fancier of fowls can tell after a glance at the suggestive list above how rare, unique and full of interest is the show of 1884.

Visitors will be drawn at first to the noisy waters, but after a little they will find themselves in quiet adoration before the jars in which eggs are transformed, by water only, into trout, suckers, pollywogs and eels. Nature's provisions are full of wonder. The eggs are packed with fish, and the fish are pecked with eggs. One is soon lost in a vain endeavor to master the mystery, and joins the heavens in declaring the wonders of the Lord. Little dogs bark in unison; so do dogs of larger growth. The cats, as a rule, are fat and decked with blue ribbons. A cat with one pink and one blue eye is quite a belle, or bean, as the gender may be. Other cats are regarded with interest. The ducks are of rare breed. So are the Polish bantams with curious crowns, and also an enormous roosters in very black trousers. The attendance is good. The catalogues are more expensive than instructive, and there is a notable absence of expounders. It would be well if there were a few eloquent men to explain the curios. There are nearly twelve hundred exhibits—a great many—and of them an unusual proportion are really worthy the place they occupy. New York, and even Brooklyn, manifests each year an increased interest in these shows of fancy fowl, and if proper care is taken to attract the million, and adequate attention shown visitors when there, the public will be interested, the exhibition benefited, and the farmyards of the nation blessed. The show lasts until the night of the 30th inst., and it well repays a visit.

I don't care whether your fowls are pure bloods or not, if you take good care of them they will give you eggs. A good neighbor of mine says that his pure Plymouth Rocks do not lay as many eggs as his common "old-fashioned" fowls.

Distemper is a word that is made to do service in a variety of ways, as it is generally used for diseases which appear to have that very definite character. Hence it is a term used by horsemen for various complaints, generally when they are somewhat of a catarrhal nature. When a horse is affected with any disease of the respiratory organs, from a simple cold to inflammation of the lungs, he is said to have distemper. Horses are very liable to have diseases related to the respiratory organs during the winter months, especially such as have to stand about, perhaps, after getting into a sweat by running for a few miles. One form of the disease, and the commonest, is that in which there is the appearance of ordinary catarrh; that is, a slight cold accompanied with more or less fever. It is generally first marked by the horse being somewhat dull, having a cough, a little soreness of throat, and neither caring to eat or drink. The under surface of the throat between the jaw swells, it is hot and tender, and sometimes the swelling extends so as to include the whole space between the lower jaws. After two or three days a discharge comes from the nose, this being of a somewhat purulent character, and in very severe cases a mucous secretion mixed with saliva flows from the mouth in large quantities.

The best method of treatment is to place the patient in a well-ventilated box-stall, and apply a blister to the tumor between the jaws, or which a poultice of flax-seed and bran may be constantly kept. When the tumor has come to a head it should be opened with a lancet or sharp knife. It is also a good plan to steam the nose once or twice a day by allowing the animal to inhale the vapor from hot water and bran, which should be mixed in a narrow bucket and held in front of the horse.

## General Topics.

The opening concert of the frogs on Saturday night, the 26th of the last month, has not been interrupted. Every evening since the joyous notes have rung out soon after the grey shades of the darkened twilight fell, and from then until morning there was no break excepting the few moments when the leader of the orchestra stopped to gather fresh energy for the ensuing refrain. Since the commencement there have been only two days without more or less rainfall, and every night has added to the welcome supply. From all over the State comes the same good news. In a few places there is already complaint of too copious a pluvial award, and "wash-outs" and high streams are reported from sections of the country which are usually considered to be the most endangered from drouth. With the spring showers, which scarcely ever fail, there is an assurance of good crops of every kind, and it must be the most inveterate pessimist who still indulges in gloomy forebodings. Fortunately, the north winds are a long way off, so far that we are not going to horror trouble so many months in advance.

Last Sunday was one of the brightest days since the rain commenced, and though the clouds gathered ere the afternoon was more than half through, the sunshine and warmth of the preceding hours were as glorious as could be. The rosebuds of the morning were blooming flowers at midday, and there was a deeper tinge of emerald on the Contra Costa hills before the sun was hid in the clouds. The old residents of California can scarcely appreciate the beauties of the grand climate. They imagine that it is a natural inheritance, a boon which they are fully entitled to receive, and though there is vaunting in the presence of strangers, at times there is forgetfulness and repining over slight annoyances which only climatic sybarites would rail against. It is worse than grumbling over the one crumpled roseleaf in the pillow to find fault with the warm showers, though the streets are a trifle sloppy, and the crossing from the ferry landing to the sidewalk at the intersection of Market and Sacramento streets attended with discomfort. In dry weather there is a chance to dodge under the heads of the horses, and *joke* between a heavily laden truck and a horsecar, while now there is a shower of mud from the feet of the horses and the wheels of the wagons, and the spring to avoid feet and wheels is followed by a slosh in a puddle.

Think over the difference in the situation, ye faultfinders, when the two inches of slop is represented by a foot and a half of snow, mud and water, or worse yet, when the frost king has congealed the mixture into spikes and adamantine inequalities, which wrench ankles and twist the spine until there is a screech of agony. Then too, a driving hurricane with the air full of sleet and sharp ice spicules that pierce like a red-hot needle, and a "polar wave" in place of the bland air of these February days. These are forgotten when years intervene between the long past and the present, and remembrance is blunted by the lapse of so many months, so many winters of continual springtime, so many seasons to smooth the scars of former wounds. For all the beneficent, balmy influence of partial forgetfulness there should be recollections to overcome the propensity to chafe over these minor troubles, and put an end to the ingratitude of snarling at that which in other countries would be received with a fervent welcome.

Already a few of the trainers are grumbling at the rainfall that has checked the sharp work, the brushes and breezes that must be postponed until the tracks are dry enough to sat the horses agoing again. There is plenty of time yet between now and the 12th of April to harden the muscles and clear the wind, and in the meantime, there are opportunities to get out between the showers, and walk and trot, and once in a while, a canter on the sandy streets. The grass is growing apace, and there could not be a more favorable time for gating the benefit of a bite of the succulent herbage, which is more efficacious than all the "cooling draughts," "fever balls" and condition powders to overcome the tendency "baka" when rapid work is given. The youngsters have already got through the rudiments of the course, and have progressed so far in their education as to know how to gallop with weight on their back, and the vacation will be just the thing to bring back the snap and the spring which buoyant health gives. It does not take long to prepare the two-year-olds for a merry dash of half a mile, and that puts on the touches for the furlong further the middle of the following week, and then for the three-quarters on the closing day of the meeting.

It was a capital arrangement of the programme of the Pacific Coast Blood-Horse Association in limiting the longest distances to be run to the two-and-a-quarter miles of the Pacific Cup, and the one and three-fourths for three-year-olds. It is also more in accordance with modern ideas to substitute dashes in place of heats, and in this way the hardest work of preparation is avoided. The great point of the old practices of conditioning horses was to take away their speed so that they could not tire themselves, and when their capacity was reduced to a "big gallop" they could repeat the long distances in vogue in the old days. The comparatively slow pace, and the fat eliminated so that the respiratory organs were clear, made it possible for them to rate along heat after heat, the speed being sacrificed to give "bottom." The arguments that some of the admirers of the old-time race-horses offer to substantiate the ground of greater endurance, are weak in the extreme. There is no question that the horses of the present possess the power of running as far as those of the past,

and that there has been such an advance in the science of training as to retain the natural speed so as to take seconds from the time of every mile, no matter how long the race.

The spectators now-a-days are not satisfied with seeing a slow pace, and unless there is plenty of speed shown the races are voted uninteresting. There is about as much difference between the lightning express train and the old-time stagecoach as there is in the racehorses of to-day and those of forty years ago. In 1823, when Henry ran a heat of four miles in 7:37½, it was thought a marvelous performance; and twenty years later when Fashion reduced the time to 7:32½ it was held to be the extreme limit of race-horse speed. When a mile was run in the "forties" it was called good, and every time the forties were reached there were praises without end. In all distances, excepting single miles, the "thirties" are nearly always marked, three and four miles the "twenties" are often times made, and for the latter distance the "teens" are recorded three times in the calendar. While improvement has been made in breeding, still greater in rearing, and with a system of training that is far superior, a good deal is also due to the race-courses being kept in a far better shape for speed, and notwithstanding the arguments to the contrary, far safer for the horses. The deep ground formerly in vogue was far more trying on the legs, and if the horses could have run as fast as they do now, few would have escaped breaking down.

It is comparatively clear that the strain of the sheathings of the tendons is caused by the effort to leave the ground, and is not due to concussion. Therefore, the deeper the soil is harrowed the greater the strain, particularly when there is a give to the foothold, and the animal when making the violent effort to throw its body through the air has to make extreme exertions. A hard track can only be prejudicial to the feet, although there is danger of inflammatory action extending to the limbs, and the advantages of enough loose dirt to overcome the blow cannot be too highly rated. When that is done every additional inch of soft material is injurious, and this much good has resulted from the common California practice of having racing and trotting take place on the same day. It was impossible to cut up the race-courses so deeply as was the practice in old times, and the eastern running grounds are much improved in this respect over the old, old methods.

Corroborative proof of the value of firm footing for horses to gallop upon is furnished by the immunity which "short horses" enjoyed. It was rare, indeed, that anything of a disastrous nature happened to the celebrities of the "quarter-paths." They ran on for season after season without injury to feet, and though this might be ascribed to the work being short, it was rapid enough to make up for the briefness. Many times the ordinary country roads were the courses, and when a track was especially prepared, the utmost pains were taken to give it a hard surface. A favorite plan was to turn a big kettle on its rim, load it with weight on the bottom, and haul it back and forward until the necessary firmness was obtained. When an important race was contemplated, it was frequently the custom to pack the earth solidly with tools, something like those used to batter down paving stones, and the clatter of the iron-shod feet was as sharp as the notes of hammer on anvil. As it is well known among sprint runners, the exercise that is essential to bring out a high rate of speed is more trying than when longer distances are to be compassed, and the strain of at once getting into the full stride more of a task on tendons and muscles than when the start is easier.

The approximation of race-courses to quarter-paths is not the only benefit that has accrued from the teachings of the short-horse men. It was discovered that the system of training which enabled the Printers, Boanerges, Harry Bluffs, Brimmar, etc., to compass from three hundred to seven hundred yards at a fearfully fast rate of speed, if carried further would enable those of the right breeding to go a reasonable distance much faster than when the old traditional work was indulged in. A mean between the two; discarding the long gallops, the debilitating sweats under clothing, and increasing the work of the short horse to that which the pure lineage gave the capacity to stand. Last week it was stated in this column that the changes in racing programmes had a good deal to do with a change in the systems of training, and it might be added that colt racing has also done its share in bettering the condition of the older horses. Some who have opposed the change and sustained their objections to the innovations, as they term it, have offered arguments supposed to be conclusive, that it was patterning after "Bulger Dick," "The Warring Bars," "Burnt Offering," "Comet," "Big Gun," etc., and that in place of requiring ten or more generations of blue blood, that breeders should look for types of the three-hundred-yard sort.

A two-year-old that can carry 110 pounds, and run half a mile in the spring, in time that would puzzle the best of the cocktails, can reasonably be expected to rival the great four-milers of half a century ago, when the youngsters have got a full month, and that so easily as not to call for comment. Some of them, backed by these years of highbreeding and trained in accordance with modern principles, would leave such antagonists at the seven furlong pole, and not a few of the "old-fashioned," "hard-bottomed" sort, hopelessly struggling at the three-quarter pole when they were gaily cantering across the winning score. Training the youngsters for their early engagements taught their mentors, if not hopelessly stupid, that the exercise which was found correct for the shorter distance might be copied advantageously with suitable modifications for the

longer. While teaching the handlers to follow a better course, the race-going public saw performances that suited them much better. There was life, animation, vigor in place of dreary waits between heats, and tired animals "repeating," when they should have been allowed to rest, and spur and whip mercilessly applied when there should have been care and soothing attentions.

It is not surprising that there should be a "boom" all over the East in racing affairs, when the last few years have shown such welcome changes. Although it is claimed that the enthusiasm is induced by the building of fine race-courses, stands, club-houses, well-arranged grounds, and the paraphernalia of wealth and fashion to heighten the effect. These are all good, though the main reasons for the advancement of the royal sport is the general popularity that it has acquired. Fine grounds, fine equipages, tastefully dressed people, especially ladies, mingle harmoniously together, and when the better classes patronize, there is an end to the rough element which formerly disgraced the horses and all connected with them. Were the old system of racing still in vogue, or should it be resuscitated, there would be a lapse into the old ruts. A few horses struggling together, heat after heat, the same old actors, and the stereotyped play that have been brought on the stage time and time again; the laying up one heat, and it might be never more than two horses making an effort, and then the drooping head, heaving flanks, trembling limbs and blood-shot eyes telling of the barbarity that should be reckoned a penal offense.

Contrast the bony, worn-out skeletons that were called race-horses in the old days with the animals that are now presented. Their bodies are rounded with muscular tissue, and though all the extra fat has been eliminated, the muscles are brought out full and smooth. The wasp-waist has given place to abdominal girth, and in place of being "creased" in the quarters, there is only a slight depression. The coat glistens like the sheen on the neck of a gamecock, and the eye sparkles with animation. In place of dragging the feet listlessly along when walking, there is the firm, springy step like that of a young Highlander marching over heathery bruses, and there is a disposition to take extra steps and indulge in erratic movements which tell more plainly than words that there is an exuberance of high spirits and lively feelings.

There is a still more of a contrast in the racing. Call to remembrance any of the "four-mile-and-repeat" races, and compare the best of them with a good field of three-year-olds, at a Derby distance. Let us suppose that, of the twenty-eight nominations in the Winters' Stake, some eight or more come to the post. In the first place, it is worth going a long way to see such a gathering of highly-bred colts, all in the bloom of condition, not one that would not be worthy of Wyttenbach's pencil. When the flag falls there is different order from galloping at ease. The pace is rapid from the start, and when they came into the straight run home, the short horses would be puzzled to keep up. The "silks and satins" are changing places, now one bright hue in front, then another. Several are "locked" when the last furlong is reached, and the most stolid of the spectators are carried away by the excitement of the moment. In the long dragging race there may be excitement, but it arises from sympathy on one side or other, or it may be for the amount of money at stake in purses and wagers. The colts compel admiration and enlist the feelings so powerfully that the stoic becomes mercurial, the enthusiast almost frantic with delight.

Unless there are regrets over losses to embitter the recollection, the pleasure does not end with the proclamation of the winner. The race is run over in the memory, and the salient features debated with an earnestness that proves how eagerly the contest was viewed. There is no question, too, but that the bound of the life currents through veins and arteries is a better rejuvenator than all the nostrums in the *Materia Medica*, more potent to restore vigor than the elixirs of physicians from Galen to the last graduate who has a right to tag M.D. to his name. But the good and the excitement does not end with one race. The spring programme of the Pacific Coast Blood-Horse Association is full of events that cannot fail to be exciting, and every race on the card proves exceedingly good, it is fair to infer.

The London *Truth* of the 10th says: "The approaching sale of Lord Falmouth's stud has brought down a hailstorm of incoherent eulogies on his head, and we read of his admirable system and his wonderful success and a deal more inflated twaddle. It would be more in accordance with facts if people were to envy Lord Falmouth's wonderful luck; for he has won an enormous number of valuable stakes without ever having owned a really first-class horse, with the possible exception of Wheel of Fortuna. Silvio was confessedly a stone behind Chamant, and when Pilgrimage was well she could any day have given seven pounds to Jannette. Queen's Messenger was quite five pounds behind Jennette, and Galliard, Atlantic and Charliert were certainly not first-class horses. As to Lord Falmouth's personal character and turf policy, it would be impossible to say too much in praise of both." *Truth* also insists that Lord Falmouth will not retire entirely from the turf, and that Matthew Dawson has no intention of giving up his profession and abandoning Heath House, though he, like Lord Falmouth, will curtail the extent of his operations.

The retirement from the turf of Dan Swigert was announced a few months ago, he to devote himself exclusively to breeding. It is now an open secret that his son Robert will go on the turf in the spring, and that he is preparing a lot of good ones for coming events.

Foxhall's four-year-old brother Potosi has been sold to a foreign turfman and will be shipped to Germany.

# THE Breeder and Sportsman.

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.

THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

## NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 23 and 31 Chatham street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

## SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1009 J street.

## ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading notices set in hvevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 30 cents each insertion.

San Francisco, - - Saturday, Feb. 9, 1884.

## Stallions Advertised—Wildidle, Ha Ha.

As has been stated before, some of the stallions advertised are to be represented in the *Breeder and Sportsman*, after Mr. Wyttenbach has had the opportunity to place their proportions in proper shape, and consequently, written descriptions are deferred until then. In course of time, and that not in the far-off future, we hope to present many of the equine celebrities of this coast, and certainly a large number are well deserving of the honor. We take great pride in the procreative stock of California, having a firm belief that there is not a single state in the union that can excel it in this respect, and few which are anywhere near its equal. In these short articles it is manifestly beyond the scope of this page to amplify, no matter how great the merits, and all that is admissible is a brief account of their claims. That Wildidle is entitled to high rank among the thoroughbred sires of this or other countries will be conceded by every one who is conversant with the subject of breeding race-horses. On the score of blood, form and performances he can base his claims without danger of contradiction, and still better the doings of his progeny ensure him a fame, which is based on firmer ground than individual performances. By Australian, from Idlewild, will satisfy the critical on the score of breeding; his form will fill the hill even where there is a tendency to be very exacting, and we need not go further than the race won on the Bay District Course, four miles in 7:25½ to establish his reputation for speed and endurance. Ever since his colts have appeared on the turf there has been a succession of winners. Tillie C., Jim Douglas, Ella Doane, May D., the flying filly from Frolic, and several others have demonstrated his potency beyond question or cavil. While it always appears invidious to particularize, especially when the comparison has to be made among good animals, we must acknowledge a preference, and in the Frolic filly, now called Freda, May D., and Jim Douglas, there is a trio which all right will make a good figure in any company. Judging from the running of Freda last year, when as a two-year-old and with 107 pounds up she ran a mile in 1:42½, it is reasonable to expect that she will reach a high position if nothing befalls her. Jim Douglas is well known to be a real good one, and May D., after her run with Lucky B., at Stockton, and her gallop in the four-mile race at San Jose, could not be denied the glory she so thoroughly earned. Taken from all

points of view Wildidle stands prominently among the get of his great sire and from such a dam as Idlewild it could scarcely be otherwise.

There are risks in prophesying in relation to untried stallions, and yet there are young aspirants for the honors of the stud which are nearly certain to prove valuable as progenitors. Predications based on breeding, form, and individual performances may prove erroneous. Horses have failed when possessing all these attributes, and others held to be inferior, proved the better. But when to individual characteristics are united other qualifications, the greatest of which is close relationship to distinguishing families, the vaticinations of future success are built upon solid foundations. Then there seems to be influence which is due to something outside of physical formation, a nervous energy that stamps the offspring with the desired qualities. One of our galaxy which is worthy of being classed in the list of young sons with a good prospect is "Ha Ha." These prospects are supported by all the points alluded to. Fine and fashionable breeding and with a wonderful flight of speed for the amount of handling. His sire Nephew has already taken a front position as the getter of trotters, and his grandsire Hambrino justifies Mr. Arnold in the term which he uses to epitomize the blood of Ha Ha. "Gilt-Edge," however, does not come up to the truth, as there is full quantity of sheet in the composition. Hambrino being by Edward Everett, the sire of Judge Fullerton, Sheridan, Mountain Boy and six others inside of 2:28, and the dam of Hambrino was by Mambrino Chief, and her dam the thoroughbred mare Susie, by imported Margrave. The dam of Edward Everett was also thoroughbred and by imported Margrave, and Hambrino has a record of 2:21¼. The Black Hawk cross is highly valued, so that in Ha Ha is a combination of nearly all the popular strains.

## New Racing Rules.

From a newspaper paragraph we learn that a new set of racing rules was presented at the late meeting of the Directors of the California State Agricultural Society, and that they were ordered printed. As there was no intimation of where these rules differed from the codes now in force, there can be no discussion regarding the merits, but few will disagree with us that there is great danger in a multiplicity of laws, and will coincide in the opinion that there is greater safety in being governed by a uniform set of rules. Properly enforced, the code of the Pacific Coast Blood-Horse Association is all that is necessary for the management of racing. They are so nearly like the eastern that there are only a few minor differences, and the five years' use have taught owners and trainers so that they are fairly familiar with the provisions. Let a lawyer "doctor" them, that is, a lawyer who is full of the quips and conceits, the tautologies and absurdities which have been embodied from the days of Coke, and there is an end to commonsense in the incitation. The language will be so distorted, sentences so constructed that there will be glorious rows among the lawyers who must be summoned to explain what is meant, and which no two of them will define alike. Then there will be protests, exceptions and complaints without end, and the "smart fellows" who spend half of their time in looking for "catches," will be in their glory. There will be plenty of cases of contempt of court, for some of these men who would still like to wear wigs and gowns are as tyrannical as Jeffries, as domineering as an autocrat. Ordering printed, however, does not mean adoption, and there will be time enough to consider when that first stage is past. If we are not greatly disappointed the expense of putting in type might have been saved.

## Crown Point for Sale.

As Mr. Valensin has concluded to offer all of his trotting stock for sale by auction some time in the early part of March, he thought best to anticipate in the case of Crown Point, thereby giving the opportunity for the purchaser to lose no time in commencing the season. That he is a valuable horse from all points of view will be conceded. Fairly bred, finely formed, a fast trotter and as "game as a pebble," it is only necessary to add that his colts are showing remarkably well to fill the hill completely. In the next number of the *Breeder and Sportsman* will appear the advertisement of the auction sale, and which will also contain some of the colts by Crown Point. From all we can learn they are sure to make their mark when brought on the track.

## The Stockton Purses.

The San Joaquin Association advertise some purses which are so nearly like those of the State Fair alluded to elsewhere, that it is only necessary to call attention to the publish conditions. One will aid the other, as it is manifest that the greater number of purses for colts to engage in the greater incentive to train.

## Large Purses.

In the proper column will be found an advertisement of purses offered by the State Agricultural Society. They are \$1,000 each for two and three-year-old runners, and the same ages of trotting colts. A good feature is, that only five per cent. is required at the time of making the entry, and the other moiety when the opportunity is had to know what the colts are doing. There has been a great deal of controversy over the question of large and small purses, and whether purses or stakes were the best for the association to offer. We have always advocated the removal of as much of the burden as possible from the shoulders of those who afford the sport, but there has also to be due consideration of what the society can afford to give. Four purses of a \$1,000 each for two and three-year-olds cannot be expected in this State without entrance fee, and there is the objection that even as little as five per cent. is beyond what many owners would like to risk in a first payment. The only objection that has been made to the programme of the spring race meeting is the smallness of the purses. Those who advance that plea would not grumble if they were ten times as large, with the same condition of free entrance, but in that case the dollars would be on paper, and only a small proportion of the "face" received from the sources from which money has to come. The plan followed in the east of small stakes, and still smaller proportionally forfeits, with large sums added, can be followed there with only one risk to take, that being bad weather. There are millions of people to draw upon within a circuit of a few hundred miles, and in a circle of country with a diameter corresponding to the distance between Los Angeles and Redding, and the center of which is any of the large eastern cities, thousands and thousands of turf patrons are living. With more inhabitants in Cook county alone than the whole of California, with a network of railways in every direction, there are good reasons why the Washington Park Club can hazard such large amounts as are added to the stakes, and will be offered in purses. For the number of the population, there is no country which gives such a strong support to the sports of the turf and track as this, but in order that there must be a chance to balance debits with credits the purses must range at a moderate sum. The purses which called forth these remarks are duly explained in the advertisement, and we predict that they will receive a hearty support from those having colts of the right age.

## State Fair Officers.

In re-electing the officers of the California State Agricultural Society the Board made a wise move. We are firm believers in "civil service," so far, at least, that when men have proved themselves honest, capable and efficient, that it is best to retain them. From the president of the association, all through, there are none who deny that the present incumbents are worthy of praise. There may have been errors, as it would be impossible to run a machine of the magnitude of the State institution without some friction in a few of the journals, and a "hot box" once in a while will occur in the most highly finished pieces of mechanism. The President, P. A. Finigan, has filled the office with great credit. He is indefatigable in his attentions, and makes all of his other business subservient to that of the society. There are few men who would give so much time as he does, and still more limited is the number who have the other qualifications he possesses. Thoroughly posted in all pertaining to the speed department, and this is by far the most difficult to handle of any, he has insight that is of great service, and while as fair as can be in his rulings, there is an executive ability to control conflicting elements, and to compel a proper course from those who are only too ready to make trouble.

It is a grand institution, this California State Agricultural Society. There is nothing like it in any of the other great states of the union, and to find a parallel we have to seek other fairs than those which are named after the states they are held in. The World's expositions may draw fuller exhibits of mechanical skill, arts, and manufactures. They may attract huge crowds, and bring together hosts of people from all sections of the country. They are well worthy of support from many points of view, but as educators for all classes, though more especially for those who make a business of agricultural, horticultural, the breeding of domestic animals, and all pursuits in whole or part dependent on the farmer, there never was a fair that equals "ours." It will readily be acknowledged that it requires a high order of talent to properly manage an institution on which so much is depending, and very fortunate are the people of California in having men who are so competent and willing to serve them in these important positions. The Secretary we do not hesitate to pronounce one of the best for the position that

## THE GUN.

### Sporting Notes from Los Angeles.

EDITOR BREEDER AND SPORTSMAN:—We have just had a glorious rain, giving us a precipitation of over three inches, and bringing to our duck ground thousands of ducks, and making the sportsmen's heart rejoice, not only at the bright outlook for the country, but as well for the grand shooting in store for the balance of the season. Hitherto our sport has been meagre, but the late severe storm and high winds have brought ducks in abundance. During the storm a few of our club visited the grounds and enjoyed splendid shooting, the ducks flying low and from every point of the compass, apparently coming in from all sections to a ground that seemed new to most of them.

We see by a letter from the Gilroy Club that that sterling organization has passed a resolution condemning duck shooting after the first of March, and requesting other clubs to do the same. We rejoice in the spirit of the resolution and hope every club in the State will adopt a similar one according to their several localities, but their date would not do for the southern counties. Our duck shooting don't commence down here until the upper country shooting is about through. The reason is this, that the ducks coming from the north work south gradually as the weather grows colder and severe storms come up, and it is always late in the spring before our maximum quantity of birds have arrived. Then when the rains cease and the warm weather commences they suddenly take their flight to the extreme north, where they remain until the cold weather admonishes them of the coming winter.

Thus you can see, while our shooting rarely commences before the middle of December or first of January, it continually grows better up to the first or middle of April. It is true that a number of birds remain on our marshes during the summer, these, augmented by the hundreds of cripples that are not able to make the flight north, make in the aggregate a goodly number left to breed during the summer, but as these are only singled out and left behind from the fifteenth of April to the first of May—that too, being as early as there are any signs of pairing—there can be no objections to shooting as late as the first of April in this section. But be it understood that we are only speaking for our locality, and not taking any issue with the action of the Gilroy Club, who we know to be the best judges of their own interest, and a club composed of as many genuine and thorough sportsmen as it has ever been our fortune to meet.

And while we are writing on this subject let us say, that the present law for quail works us an injustice in the opposite direction. So also with doves. Quail shooting should stop here as early as the 15th of February, if not the 1st, for our coveys are broken up, and the birds running in pairs fully as early as the 15th, while the opening of the dove season on the 1st of June is simply a slaughter of the innocent. Doves are nesting here as late as the latter part of July and even into the beginning of August. The first time that the writer went out for doves last year was the last of July, and from three of those killed eggs were taken. We did not shoot another dove until nearly the first of September, which we consider as early as the season should open here, although we understand from your sportsmen that it is entirely different in your section of the State. Being a member of the State Association Committee on the revision of the game laws, and the proposition to divide the State into game districts, we would like to see a full discussion of the above subject by the sportsmen of the various sections of the State. Would it not be well for every sportsman in the State to consider himself a sub-committee of one to study the nature of the game birds and animals, and report at his convenience to the members of the Game Committee? P.  
Los Angeles, Feb. 5th.

### A Great Game Country.

EDITOR BREEDER AND SPORTSMAN:—I see in your last issue of December an item to the effect that a Mr. Wilson, of New York, killed a deer in Pike County, Pennsylvania, that weighed when killed 225 pounds. I think we can beat that a little in this part of the country. I once killed three bucks out of a band in one day that dressed respectively 203, 208 and 209 pounds. Mr. Grigshy, of this place, killed a buck that dressed 305 pounds. The horns can be seen at the Canyon City brewery. They are very large, one prong having eight points and the other nine. You may see in the same place a very nice collection of deer and elk horns. There is one set of deer horns there that has 27 points, 13 on one prong and 14 on the other; also one set with 22 points, 13 on one prong and 9 on the other. Mr. J. Miller, a resident of this place, who has hunted a great deal in these mountains, once killed a buck that was a veritable lord of the glen. Two men and two dogs lived off of it for two days; then cut the neck off close to the shoulders, and brought the balance to Canyon City and sold 236 pounds of venison. The deer I speak of are the mule deer. We also have the flag-tailed deer, but the mule deer are the most numerous. These mountains and high valleys, such as Bair, Silver, Logan and Harney valleys, and the Big Meadows of Canyon creek abound in deer, bear, elk, antelope, and a few mountain sheep. Most of the streams abound with the finest fish I ever saw. On my way here from California a year ago last summer I caught in Goose lake a trout that measured seventeen inches in length. I caught in Silver creek, a tributary of Harney lake, two large milk pans full, standing in one place behind a small clump of willows. Mr. Muldrich, a merchant of this place, caught in Logan valley, a branch of the Malheur river, in twenty minutes, eight trout that weighed thirty-five pounds. He also caught one on the same trip out there that measured twenty-eight inches in length. Two or three years ago a lady stood in one place, and landed high and dry fifty pounds of trout that averaged five pounds each. I am told of two men, living in the upper end of John Day's valley, that went over to Logan and caught two barrels of trout. I am sure hydraulic mining, but if any of my friends from Frisco or California should chance this way I will go with them and convince them that all these things are solid truth.

In my mention of the collection of deer horns I omitted to speak of one curiosity that is among the trophies to be seen at the Canyon City brewery. It is a pair of horns that came off a flag-tail doe. They are a handsome set, about six inches in length, the tips standing about five inches apart. One prong has a point one and one-half inches long, and the other a point one inch long. Mr. Parish, a lawyer of this

place, has also in his possession a set of smaller horns that were taken off the head of a flag-tail doe, and Mr. Lockwood, of our town, killed a yearling doe that had one spike two and one-half inches long of solid bone.  
Canyon City, Or., January 30th. H. W. SLOAN.

### Anent the Maynard-Curry Match.

EDITOR BREEDER AND SPORTSMAN:—In your last issue I note a letter from Mr. Curry, of Portland, Oregon, in which that gentleman inferentially does injustice to one of our San Francisco sportsmen. Mr. Curry intimates that he arranged a match shoot at pigeons with Mr. John B. Maynard, late a member of the Cosmopolitan Shooting Club of this city, but that Mr. Maynard found it "inexpedient" to carry out the terms of the match. The use of such a word seems particularly infelicitous to those who know to what trouble Mr. Maynard went to secure birds for the match with Mr. Curry. Just what figure Mr. Maynard's inability to secure birds at a particular time should count in a match under "written agreement," in which agreement no specification as to who should furnish birds, or as to date or time limit appeared, it is hard to see. The natural supposition would be that the birds should be furnished at the earliest possible day. Mr. Curry's delightfully childish conclusion, that this failure to get birds on Mr. Maynard's first trip to San Francisco after the match was made justified him in drawing his stake, makes me wonder how one so juvenescent is able to point and hold a gun at all. In order to determine the matter, please let me offer Mr. Curry an opportunity to meet or avoid a square issue. I will wager two hundred and fifty dollars that Mr. Maynard can beat Mr. Curry in a match shoot at one hundred pigeons a side, ground trap rule, loser to pay for all birds. It will, perhaps, be more convenient for Mr. Curry to shoot the match in Portland than elsewhere, and if he will send to me, in your care, an acceptance of the wager, and the name of the cashier of either of the Portland banks, I will place the money in the cashier's hands to be covered by Mr. Curry or his friends. Such details as traps, pigeons, attendants, etc., can be provided easily if they cannot be had in Portland. X.  
San Francisco, February 4th, 1884.

### A Screenshot from Gilroy.

BREEDER AND SPORTSMAN:—At the last regular meeting of the Gilroy Rod and Gun Club the following resolution was proposed by Geo. Holloway and adopted; and a subsequent order passed requesting the Corresponding Secretary to forward a copy of the resolution to each club.

Resolved, that any member of the G. R. and G. C. who kills or destroys ducks after February 29th until October 1st, 1884, shall be summarily expelled.

I hope you will not be too hard on me for not writing up an account of that memorable club hunt. The hunt and supper was all that could be expected. Our popular hotel keeper Geo. Seaman deserves great credit for the magnificent manner in which the table was prepared for that occasion. Quite a number of strangers partook of the hountiful repast, both to gratify their appetite for a real game treat and to help the club along. But few of the members, however, were present to enjoy the fruits of their labor. Among them were the stalwarts that never fail. On this occasion, particularly, all should have put in an appearance. Some, though counted on, managed to skip around the corner and retire early in the evening, making the event distressingly tame.

From the manner in which the *Life's* reporter spread it on he must receive his pay by the word. And if he is fully compensated, as I hope he is, it will not be long until he will sport a gun and dog. Then his cup will be full of joy—not any more of the mythical, but the real sport will be his.

Sniipe have been poor shooting this season on the old stands; cause unknown. The late rains will perhaps bring in more ducks. Most respectfully,  
Gilroy, Jan. 29th, 1884. D. M. P.

We desire to call attention to this letter from our good friend, Mr. Pyle, of Gilroy, in which he states, that any member of the Gilroy Gun Club, who kills ducks after the 29th of February until 1st of October, shall be summarily expelled. As an evidence of the growth of correct ideas on the subject of game preservation and legitimate sport, we point with pleasure to this resolution, and congratulate the Gilroy Club in having passed it. Such action shows the good our gun clubs do in educating their members to a proper standard of manhood.

The ducks took a sudden departure from the Alviso marshes on Sunday not a bird being seen. Mr. Bogart, of the Tule Belle Club, informs us it was the same on Sherman Island, not a bird to be got. The keeper told him that on Tuesday, Wednesday and Thursday a constant stream of birds was going eastward, evidently to make a raid on the San Joaquin farmers. As usual, Suisun bay, was covered with canvasbacks, but, like the English tourists, they persistently rejected all advance from the American interviewer. There will not be much more good duck shooting this season.

Before the shooting season closes we would like to see our leading shot get up a mud-hen match of three or even more teams for a supper. Last year a similar match, near Watsonville, ended in the destruction of over 1,000 of these destructive birds. A match, such as we suggest, should bring down 5,000 or more birds in the tules, and that means plenty of feed for our ducks next year. There is lots of fun in the thing also, without calculating the satisfaction and profit. By all means let the idea be carried out. It would make a grand closing of the season.

Some time ago we mentioned an eastern paper boasting of a deer being killed, which weighed 225 pounds dressed. This is a large deer, and we called upon our sportsmen of the coast to inform us if they could not give us an "equivalent." In to-day's issue will be found a letter from Oregon, in which the natural productions of the coast are duly maintained. Of course, we make allowance for the mule deer on account of its size, but still we think our correspondent's "equivalent" will hold. We shall be glad to hear from him again.

Mr. Ryan was kind enough to send us an extraordinary specimen of the "gadwall" this week. In colors it was brown and white, and beautifully marked. It was sent from Bouldin Island, where he reports very little shooting to be had.

Ptah creek now gives good shooting, at least early in the morning. So say our exchanges. But then we always thought every true sportsman got up before his breakfast. Cordelia is also reported to afford good duck and goose shooting at present.

Our old friend, Mr. Leavesly, of Gilroy, in a hunting excursion in the Gabilan hills recently, had a narrow escape from a stray shot from the gun of Martin Briggie or E. S. Harrison, he does not know which, while shooting at a quail. The shot, in question, took an unaccountable freak, and instead of going after the bird went after Mr. Leavesly's nose, raising the bridge, and plowing up the skin. It might have done more serious mischief. We are pleased it did not.

The members of the Alameda Gun Club went down to their preserve last week and found plenty of water, the ponds being all full, but no ducks—not a single bird. Mr. Bennett went down on Friday afternoon, and, seeing how things were, turned right about and came back. Such is life! a mixture of bliss and disappointment. But having had no shooting all the season, it was too bad to have their expectations fail at the last opportunity.

Gilroy sportsmen are arranging a match on Washington's birthday, Feb. 22d. There will be plenty of birds on hand, and everything will be done to make the day pleasant for visiting sportsmen. Entrance \$5, money to be divided into three prizes. As birds are becoming scarce in our own locality, this will be a good opportunity for our crack shot, if it does not interfere with some contemplated at home for the same day.

Killing large California lions is all the rage this season. Mr. Cleary and some friends killed a very large one in Calaveras county last week, and the *Chico Chronicle* reports that two men named Anderson and Aldridge killed one in the foothills measuring ten feet. It was not stated whether the tail was included in the measurement, but anyway the hnt was big enough for any man.

Messrs. Coit and Folom, visitors from New York, have recently had a pleasant shoot with Mr. J. K. Orr, at the Point Reyes Ranch. In one day the three gentlemen bagged 100 birds, quail, snipe, and a few teal. The quail were wild and very strong on the wing, which made the sport all the more interesting. The side-hill shooting somewhat disorganized the eastern visitors. It generally does.

That herd of 1,200 or 1,500 antelope, which recently took possession of the Union Pacific tract to travel along so as to escape the snow, must have been a strange as well as fine sight. In early days it was common enough to see a herd of 200 to 300 on the San Joaquin plains any morning early, and the admiration they inspired is one of the pleasantest of our pioneer recollections.

A poultry firm of Burlington, Iowa, was fined \$90 recently for offering quail for sale after the 1st of January. We like that information. Laws are always respected when promptly and rigorously enforced. Punish the receiver, and like felony, poaching will soon be wiped out or greatly diminished.

The Bassford brothers, Mr. Taft of Truckee, and H. H. Briggie of this city, had some fine sport in Solano county last week. Mr. Taft, showed himself quite capable still of being his gun.

A pedantic writer somewhere in the Atlantic states says "a deer is an artiodactyle ruminating angulate with solid deciduous excrescences on the cranium for horns." That's just what we have always said, but no one would believe us.

If the lover of a good wild duck only divests himself of prejudice and preconceived ideas, he will find the mallard this season, better than the canvasback, at least, that is the conviction we have reached.

Lord Lorne's attempt to acclimatize the moose deer at Inverary has failed, but the muskrats, and other animals and birds are doing well, and the wild turkeys appear to be flourishing.

## HERD AND SWINE.

### Dairy Ensilage.

Harding Bros. of Scotia, N. Y., furnish the *Country Gentleman* the following detailed account of their silo experience, which have been entirely satisfactory:

Having received so many inquiries in regard to the construction of our silo, and of our manner of feeding, etc., we concluded to write you a detailed account of it for publication, and thus benefit many who have not written directly to us. In the first place, we knew nothing of silos or ensilage, except by reading accounts in agricultural papers from those who gave their experience with them. The greatest drawback was the cost of building a stone one, and having plenty of room in our barn, we conceived the idea of boarding up a bay for a silo, so as to make it tight. We made inquiries of men who had silos, and upon their advice we began it one year ago last June. We first placed tarred paper upon the studding, then over that we placed matched spruce planks 1 1/2 inches thick. This bay was in a haru which was 20 by 24 feet, and about 20 feet deep, being all above ground. Around the bay under the sill we built a wall of stone and cement, and cemented the bottom so that it was as smooth and hard as a floor.

In September we began filling, and owing to lack of help we were about three weeks putting in about 120 tons. After filling, no weight was put on until we began husking corn, some time afterward. Then we piled the stalks upon the silo. We said that no weight was put upon it, but we will modify that a little by saying that we placed over the top tarred paper and rough hemlock boards. We had some misgivings as to its keeping well, so we opened it about a month after filling, and great was our surprise to find the fodder in splendid condition. When given to the cows they ate it ravenously, and did not leave a particle in their mangers. A great many of our neighbors laughed at us when we were filling the silo. They said that "the stuff will go all rotten by spring." We replied, that we expected it would be, but we intended to put it through the cows first. After opening we could laugh at our neighbors, as the old saying is, that "those laugh best who laugh last." We found several tons of the fodder spoiled in two corners that were not exactly air-tight; the remainder was in splendid condition.

Being so well pleased with our success with the silo, we sowed a large field of corn again last season, but owing to the dry weather we did not have a very large crop, and the frost came before we had the fodder all put into the silo. We put in what we had in just a week, and did not cut the stalks as short as last year. Last year we cut one-quarter inch; this year half an inch. We find that the ensilage is, if anything, better this year than last. We are now feeding twenty-five cows for milk, and find that upon the following ration they give as much milk as they would if in good pasture. About 6 o'clock in the morning they are milked, and then fed one bushel each of ensilage, upon which we put four quarts of buckwheat bran. At nine o'clock they are turned out into a

yard to drink and exercise, while the stables are cleaned and fresh bedding is put in which consists of the manure from the horse stable, wheeled in and scattered in the trench to absorb the urine. The manure is all thrown into a building prepared expressly for protecting it from rains. At 11:30 o'clock the cows are put into the stables and fed one peck of carrots, and all the timothy hay they will eat. At 4 o'clock they are again milked and fed the same as in the morning.

We are getting as much milk by feeding ensilage and a small amount of grain, as we would get on good pasture. For the purpose of comparison we will state that one of our neighbors is feeding cows for milk also, but he does not make ensilage of his corn fodder, but chocks it in the field and leaves it until he wishes to use it, then draws it in and runs it through a cutting machine. His rations are all the cut fodder the cows will eat, and a peck of buckwheat bran at each meal. You will thus see that he is feeding three times as much grain as we are. We fed slops up to December 1st, and then it became so cold that the slops would freeze at night; therefore we concluded to try dry bran, and are perfectly satisfied that cows will give fully as much milk on dry bran as they would on the same mixed up with water. In conclusion, we would recommend to any farmer who keeps five or more cows to build a silo, believing that he can save enough in grain to pay its cost in one year.

### Charcoal with Food.

Whatever increases the power of laying on fat or promoting the rapid and healthy production of flesh must be food or equivalent thereto. This, pure charcoal does most effectually, as recently proved by taking the live weights of two lots of sheep and simply separating them by an ordinary net, the artificial food, corn and cake being carefully weighed out to each lot alike daily, one pint of charcoal being added to one lot only. When reweighed, prior to selling to the butcher, the increase in weight was in favor of charcoal by 16½ per cent. Sanitation causes easy and complete digestion, and assimilation only can account for these results, which charcoal alone can accomplish. The charcoal should be given mixed with the food, except in urgent cases, when it may be mixed in water or thin gruel and given as a drench. The dose is one pint to every twenty-five head of sheep or lambs. One quarter-pint per head for full-grown cattle, horses or pigs; half the quantity for young cattle, and two teaspoonfuls to one desert-spoonful for young calves daily, when suffering from disease or ill-condition. To keep in good health and fortify against disease the dose should be given two or three times per week, according to the class of food they are having and the state of the atmosphere. The best plan is to wet a quantity of bran, pollard or malt combined; mix the charcoal among it, and then amongst the food you give them. For rapid and healthy fattening of cattle it should be used daily amongst their food. Charcoal for internal and medicinal purposes must be pure vegetable charcoal, free from all irritating and injurious foreign matter. The charcoal, when coming into the user's possession, must be kept perfectly dry and free from any ill-smelling surroundings, such as the vapors of a stable or artificial manures, etc., or it will absorb them and thus become septic, and of no medicinal value. It is better kept in a closed tin or tin canister, with a closely fitted cover.—*Farm and Home.*

Our experience in stock-feeding has been very limited—very limited, indeed—very long ago, and confined mainly to ewe feeding, but limited as it was, it was still an experience, and one too that seems to be somewhat in harmony with the above paragraph, although not so systematic and precise. A pig of apparently a very ordinary breed had been palmed off on us as a healthy and thrifty animal, but which subsequently proved to be unhealthy, "stunted," and afflicted with "black teeth." We were advised to administer charcoal with its food. We did so, in this wise: The swill-barrel was kept in a corner under a shed that had been built over an old-fashioned out-door bake-oven which was used by two families just twice a week. Every time the oven was used for baking purposes, a shovel-full or two of the charcoal drawn out in front, was thrown into the swill-barrel, giving it a dark and cloudy color nearly constantly. Those about the house no doubt dumped the charcoal in the swill often as a matter of convenience. Be that as it may, it became a bi-weekly habit to throw charcoal into the swill, which was composed of the usual "house-elope," scrape mixed with bran, or "shipstuf" or "chopstuf." This sort of swill together with weeds—purple, lambsquarter, amarants—and six bushels of corn in the dry grain in the month of November, was all that was fed to the sickly hog. Well, what then? Why this: The pig was incarcerated in the first week in April, and languished until the first week in May, after which we commenced dosing it with charcoal, and by the first week in June it was as "fair as a lily and bright as a bunny." Its ribs began to arch, its sides began to distend, its hams and shoulders to "round up," and its neck, snout and legs to shorten (apparently) and its tail took an extra curl. From being lank, cadaverous and melancholly, it became contented, somewhat lazy, but always hungry at the approach of feed-time. It was butchered about the middle of December, and when hung up, haired, scraped and disemboweled, it weighed a little over three hundred pounds, fifty pounds "better" than the best pig in the litter. A friend told us in confidence, that he would not have taken that pig as a gift, because it was always "left out in the cold," the dam having one pig more than she had teats. We don't say that charcoal did it, any more than we say that the weeds, or the slops, or the corn did it, but it was done; and he that hath a mind to apprehend, may make such use of it as he thinks best.—*Lancaster Farmer.*

### The Ensilage Congress.

The third annual congress of farmers interested in the ensilage system was held in New York, January 23d. Over two hundred farmers were present, representing nearly every State east of the Mississippi. Dr. A. S. Heath, of this city, presided. Prof. Miles, of Amherst College, delivered an interesting address on the subject of ensilage, and the best methods of preserving green fodder. He thought it should be placed in the silo slowly, thus allowing it to become heated. This is contrary to the usual custom, and occasioned much debate. Elder L. W. F. Evans, known as the head of the "Shakers," declared that the ensilage system had been used with much success by his people.

Mr. John Mayer, Superintendent of T. A. Havemeyer's famous farm at Norwalk, Conn., said there were twenty-four silos on the farm, and that fifty times as many cattle were kept on the same ground by the ensilage system as before the method was used. The cattle, he said, were also healthier. A resolution was passed requesting the Agricultural Department to make an analysis to determine the comparative value of the qualities of the milk from ensilage and ordinary fed cows.

Prof. J. P. Edwards, of Randolph, N. Y., said that he fed

sixty cows on nothing but ensilage maize, and that they gave better milk and were in better condition than ever before.

Mr. Mayer, on behalf of Mr. Havemeyer, invited the congress to visit his farm in Norwalk to-day and inspect the silos and cattle. A large number accepted the invitation. The congress then adjourned for one year.

During the year 1883, 850 head of polled Aberdeen-Angus cattle were imported from Scotland.

## STABLE AND PADDOCK.

### Naming Horses.

Much has been said and written regarding the naming of horses, and while euphonious nomenclature is much better by far than the ill-sounding and outlandish names with which some racers have been unfortunately saddled in the days of their youth, or later on in their mature years, it often happens that the more pleasing and applicable the name the worse the character of the animal. The late Milton H. Sanford some years ago had at Jerome Park a thoroughbred colt, fashionably bred, and a beautiful animal in all that went to make up to the eye the points of the high-mettled racer. He rejoiced in the cognomen of Silverheels, and was much admired by the ladies in attendance at the races, from his charming name and prepossessing looks, but it was a clear case of "handsome is as handsome does" with him, and on that occasion handsome didn't, for the colt was of no earthly account as a racer, then afterwards. Rifle, by Asteroid, out of imp. Target, one of the winter favorites for the Withers, Stakes of 1877, won by Bombast, was another most happily named animal, but like nearly all of Asteroid's get he was not of much account, though after Carr & Co. sold him he did manage to win a solitary race for Dr. Ogil at Prospect Park. Target was recently destroyed at Woodlawn. *Per contra*, it has often been the case, the more abominably eccentric the name, like the late Dr. Weldon's Craclaws, Leatherlungs, etc., or The Grand, Piper Heidsieck, W. J. Higgins, Partnership, etc., of the late Longstaff stable, the better the animal. Leaving this out of the question, however, it should go without saying that a good name is to be preferred to a bad one, and if the horse are to be run in the West, the late Louisville Congress says, in effect, that once an animal is named, good, bad or indifferent, that settles it, under their jurisdiction at least, or heavy penalties will be showered on the offender's head, etc. Therefore, any gentleman that buys Bumblepuppy, Nuisance, Lord Ukreskull, or Shoo-Fly, and desires to run them under the above rules, must pay \$100 before he can change the name, if he so desires. A little more care in naming might be exercised with benefit to all concerned. Most of our breeders and owners are beginning to realize this fact, however, and, as a rule, horses nowadays are much more appropriately named than formerly. A reference to the sire or dam, some other relative of the animal, or something connected with the place of birth, or an incident of this nature, are good ideas in the nomenclature of horses. Some of the younger members of the famous Brooklyn stable are very well named this year. The Dwyere's three-year-old brother to Mintzer, last year known as the Crownlet colt, now rejoices in the name of Xenie, perhaps from the fact that Mintzer came from that Ohio town. More happily named are some of their long string of two-year-olds. The sister to Ripple has been christened Ripplette. The Belle Palmer filly, by Billel, will hereafter be known as Miss Palmer. The brother to Glenmore is to race under the name of Greenfield. The brother to Mr. Lorillard's grand colt Emperor, now in England, by Enquirer, out of Veepier Light, has been called Electric Light. The colt by Virgil out of La Polka, the dam of Postguard, was the highest priced youngster at the sale of Mr. Swigert's yearlings in 1883, and is appropriately named Elmendorf, after the place of his nativity. George Kinney's half brother, the colt by Glengary, will be called Sumner, after the county in Tennessee where he first saw the light. The colt by Bramble out of Quartette has been named Bolter, whether because his dam had that characteristic, or after the famous Major Bolter, "sah," the deponent sayeth not. Certainly the sire of the colt was not one of this sort. Perhaps, however, he is of the Kinney type. The brother to Little Rufin, Mate, Caramel, etc., by Monarchist, is now to be known as Petersburg; the colt by Billel out of Lucille Western as Col. Clay; the Brunette colt, by Enquirer, as Executor; the half brother to Beatitude, Boulevard, Blisse, etc., by Enquirer, will race as Emmet; the Tincture colt, by Virgil, is now called Detective; the Alert colt, by Virgil, is known as Richmond; the Spinola colt, by Lishon, as Lennox, and the Blandina filly, by the same sire, has been christened Sea Foam.—*Sportsman.*

### Care of Stallions.

With all kinds of animals it may be laid down as a universal rule that those in health need no medicine whatever to put them in condition for their work. This is so with a stallion. Let him be well and regularly fed on healthy, nutritious food, with plenty of exercise every day, in order that his muscles may be kept firm and hard, and let him be well groomed, so that his coat may present a fine appearance. The skin should be kept thoroughly clean by occasional washing and frequent rubbing and brushing. The mane and tail should be especially looked after with reference to cleanliness and skin. If it should be very dirty, soap may be freely used in the cleansing process, and when this is faithfully attended to there is little danger of the tail or mane being injured by rubbing, which is sometimes otherwise the case.

Feeding is a most important matter, and had food will injure the progeny through the injury to the sire. It should mainly be good, sound oats, which may be varied by an occasional feed of corn or barley, for horses are fond of variety in their food, and an occasional change of diet is conducive to health. Bran, that is, wheat bran of medium coarseness, is an invaluable adjunct to the grain, and it can never be dispensed with. It is the best of all regulators for the bowels, and is also rich in some of the most important elements of nutrition. It must be fresh and sweet, but this is easily known by the smell. The amount of exercise to be given a stallion will vary somewhat with its condition and habit. Should he be thin in flesh it is better to fatten him up, and in this case the exercise should be comparatively light. But if there is a tendency to become too fat, this may be corrected by increasing the daily amount of the exercise, and the speed at which the horse is made to go must be regulated by their nature. Hunters, roadsters, or racers should be made to go a good pace, for a walk would scarcely be exercises to them, but draught horses should rarely be led or driven faster than a walk in taking their exercise, and should not be given too much of it.

In keeping a stallion for stud purposes, the point to be aimed at should be to feed, groom, and exercise it so as to keep it to the highest possible condition of health and vigor. Feeding on this or that patent food will not do this, but anything that will add to the health, strength, and vigor of the horse will increase his virility or sexual power, just because his sexual organs are affected by the general tone of the system, and, of course, whatever tends to impair the health of the system generally must have an injurious effect on all parts thereof. A healthy horse—and only healthy horses should be used for the stud—requires nothing but good food, plenty of exercise, pure air, with due attention to cleanliness of the skin, and regularity in feeding and watering; and when all these things are attended to properly, the drugs the stable lore defines as necessary or beneficial under the circumstances should be dispensed with, and the animal will be far better without them.

Much depends on the breaking and management of a stallion, and it is easier to spoil him than to cure his evil habits when once these have been formed. If there is anything like a wild or unruly disposition in him he should never be led out except by a bridle that will enable the groom to have the most perfect control over him. The ordinary "snaffle," with rings of moderate size, and with the head-piece made in the ordinary way, can be made effective by getting a blacksmith to attach a well-polished, round iron bar to the right-hand ring, by means of a small link connecting the bar and the ring, and to the other end of the bar attach the usual sliding rein used on stallion bridles. Put the bridle on in the usual way, and then, with the right hand on the bar and the left hand on the bridle-rein next to you, press the bar back and the ring forward until the bar will pass through the ring in the left hand. This bar should be made just as long as it can be to admit of its being passed into the other ring in this manner, and the bit and rings should be so adapted to the size of the mouth and under jaw, that when a little pressure is brought to bear upon the rein attached to the end of the lever formed by this iron bar, the rings of the bit will be brought within an inch of touching each other. The leverage given by this appliance, when well-fitted, will enable anyone to hold the most unruly and headstrong horse in check. This is a most effective curb, and a horse can be brought on his haunches at once if there is need for it. It is, withal, cheap, simple and effective.

## FISH.

### The Carp as a Food Fish.

There is much inquiry concerning the German Carp introduced into this country by the United States Fish Commission. People want to know where it will live, how fast it will grow, and generally what it is worth now that we have it. Often as these questions are answered they come up again, and in truth, the different results reported are confusing unless accompanied with an explanation. Carp are not a first-class table fish, but they are immensely superior to no fish at all, when a fish dinner is wanted. They are not as good to eat as the bull-head, for instance, but then it may be said that the bull-head is a very excellent fish when well understood. So the carp can be made a toothsome feature of the dinner table, if the mistress of the kitchen comprehends the mysteries of the saucepot. Without that skill, which by the way is universally possessed by our adopted German fellow citizens, and can be learned from almost any of them, the carp is rather tasteless. In very cold spring brooks carp will not grow at all, they rather seem to shrink, if we can imagine a fish shrinking, with the cold. But in warm waters, especially in the southern states, where there is no trouble with frost, they attain an enormous size quickly. There have been instances of their growing to seven-pounds weight in two years, which far surpasses anything known of any other species of fish. In the North, if the ponds have hard bottoms and freeze their entire depth, the carp will be killed; but if the bottom is soft and muddy, they will burrow into it and protect themselves. They are said to feed on vegetables, either the natural growth in the water or the refuse from the garden, but I imagine they are greatly improved by an occasional taste of the numberless insects that are found on all aquatic plants. The same rule applies to them that is found to govern in all other departments of nature; the best is always the hardest to get. Not only will carp never supply the place of trout, but they will hardly live in the same water. They need little care, and will exist on poorer food, are content in less water, and they are in the end an inferior fish. The common proverb says that whatever is worth having is worth working for, and that, translated into fish literature, means that an ordinary variety is more easily maintained than a superior one. Still, there is always more use of the lower class. Few men eat trout, infinitely more use cod, while the pounds that are adapted to trout, are not as one in a hundred to those fitted for carp. Any old sluggish pond, above a mud-hole, will answer for them. In conclusion, it is almost self-evident that carp are no more a game fish than a fattened hog is a game animal.

It is well known in tropical countries that the moon's rays occasion the rapid decomposition of flesh and fish. A number of bonitas having been caught one evening near the line by a friend of mine, the spoil was hung up in the rigging of the ship, and was thus exposed to the moon through the night. Next morning it was cooked for breakfast. Symptoms of poisoning were soon exhibited by all who partook of it—their heads swelling to a great size, etc. Emetics were promptly administered, and happily no one died. The natives of the south Pacific are careful never to expose fish (a constant article of diet in many islands) to the moon's rays by any chance. They often sleep by the seashore fishing, but cover with the face uncovered. Aborigines of Australia do the same as well as they can with their fishing nets, etc. A fire answers the same purpose. May not the injurious influence of the moon, in addition to her beauty and utility, account for the almost universal worship of that orb throughout the heathen world.—*American Angler.*

According to the *Ferndale Enterprise* people are killing fish with giant powder in the south fork of Eel river. These depredations are rather out of the reach of the Fish Commission, but the local officers ought to enforce the law. Unfortunately, in many cases, that is just what they don't want to do.

There are 60,000,000 white fish eggs in the Detroit hatchery. When hatched the fry will be used to stock the waters of Michigan.

Alfred Dennieou, of Loudon, has the finest piscatorial library in the world.

PACIFIC COAST  
**Blood Horse Association.**  
 Spring Race Meeting.  
 BAY DISTRICT COURSE, San Francisco.

First Day—Saturday, April 12th.

No. 1—California Stake—For two-year-olds, \$50 each, \$25 forfeit, \$250 added; to be run on the first day of the Spring Meeting; second to save stake (dash of half a mile. Closed with 23 nominations.  
 No. 2—Hearst Stake.—For all ages, of \$25 each; \$10 forfeit; \$200 added, second to save stake; dash of three-quarters of a mile.  
 No. 3—Winters' Stake—For three-year-olds, to be run the first day of the Spring Meeting; dash of one and a half miles; \$100 each, \$25 forfeit, \$300 added; second to have \$150, third to save stake. Closed with 28 nominations.  
 No. 4—Selling Race.—Purse \$200; \$25 of which to second; one and one-eighth miles; horses entered to be sold for \$1,000, and to carry the rule weight; two pounds taken off for every \$100 below that valuation, and three pounds added for every \$100 above.

Extra Day—Tuesday, April 15th.

No. 5—Purse, \$200; for two-year-olds; \$25 to second; dash of five-eighths of a mile; winner of California stakes to carry seven pounds extra, second five pounds above rule weights.  
 No. 6—Purse, \$200; \$50 to second; one mile and a furlong; for three-year-olds; maidens, colts and fillies that have not won a race.  
 No. 7—Purse, \$200; \$50 to second; dash of one mile.  
 No. 8—Selling Race, \$200; \$25 to second; 1 1/4 miles. Same conditions as Selling race on first day.

Second Day—Thursday, April 17th.

No. 9—Purse, \$200; for two-year-olds; dash of five-eighths of a mile; winner of either of the preceding two-year-old races barred; second to carry five pounds extra.  
 No. 10—Pacific Cup Handicap—\$50 each; \$20 declaration; \$500 added; second to receive \$150; third to save stakes; two and one-fourth miles; weight announced April 12th; declaration April 15th, at 3 P. M.  
 No. 11—Handicap Stake—For three-year-olds; 1 1/2 miles; \$25 each; \$10 declaration; \$200 added; weights announced at the same time as the cup.  
 No. 12—Purse, \$300; \$50 to second; for all ages; heats of three-quarters of a mile.

Third Day—Saturday, April 19th.

No. 13—Gano Stake—Dash of three-quarters of a mile for two-year-olds; \$50 each, \$25 forfeit, \$250 added; second horse to save stake—When any California two-year-old heats the time of Gano, \$15 for three-quarters of a mile, the stake to be named after the colt which beats it. Closed with 23 nominations.  
 No. 14—"Spirit of the Times" Stake—Dash of one and three-quarter miles for all three-year-olds; \$100 each, \$25 forfeit, \$300 added; \$150 to second, third to save stake. Closed with 31 nominations.  
 No. 15—Purse, \$300; \$50 to second; heats of three-quarters of a mile; for all ages.  
 No. 16—Consolation Purse, \$200; \$50 to second; for horses that have run and not won at the meeting; five pounds allowed for each defeat; dash of a mile.

Conditions.

Entries to stakes and purses not marked closed will close March 1st, 1884.  
 Races to close will be run under weights adopted at the annual meeting 1883.  
 Starters in all races must be named at 6 P. M. the day preceding the race.  
 Entrance free for starters in purses. Non-starters can declare out at 6 P. M. the day preceding race, by paying five per cent. After that time can only be excused by Presiding Judge, and in such case, ten per cent. on amount of purse must be paid.  
 Non-members will be placed on the same footing as members of the association in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division.  
 Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.  
 All nominations in stakes and purses must be made on or before the first day of March next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked on or before that day, March 1st.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

State Agricultural Society.  
 TROTTING AND RUNNING PURSES

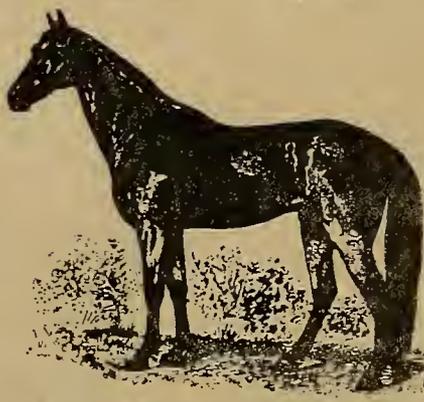

To Close March 10th, 1884.

No. 1—Trotting Purse \$1,000; mile heats for two-year-olds.  
 No. 2—Trotting Purse \$1,000; mile heats, three in five, for three-year-olds.  
 No. 3—Trotting Purse \$1,000; mile heats, three in five, for four-year-olds.  
 Entrance ten per cent., five per cent. of which to accompany nomination, remaining five per cent. payable July 15th, 1884. Those not making second payment forfeit first, and cannot start in the race; five to enter and three to start. If more than ten make second payment, \$200 additional will be added; four moneys. The meeting having been extended to nine days, these races will be so arranged as to permit the colts entered in other stakes to trot in these purses.

Running.

No. 4—Running Purse \$1,000; one-mile dash for two-year-olds.  
 No. 5—Running Purse \$1,000; one mile and repeat for three-year-olds.  
 Entrance ten per cent., five per cent. of which must accompany nomination, the remaining five per cent. to be paid July 15th, 1884. Eight entries required to make first payment; four moneys. If more than ten make second payment, \$200 will be added.  
 EDWIN F. SMITH, Secretary. P. A. FINNIGAN, President.

Hambletonian Trotting Stallion

BOB MASON

By ECHO. His dam Belle Mason by Belmont, thoroughbred. Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's). First dam, Lucy Johnson, by the Pony (son of imported Leviathan). Second dam Catalpa, by Frank. Third dam, by John Richards.  
 Will make the season of 1884 for a limited number of mares, at the OAKLAND TROTTING PARK.

Description.

Bob Mason is a mabogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100. Foaled May 10th, 1879. He is of fine kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For a fine portrait and full description of the horse see BREEDER AND SPORTSMAN of June 30th, 1883.

For full history of his sire Echo, see BREEDER AND SPORTSMAN July 29th, 1882. See also, for his full brother Exile, BREEDER AND SPORTSMAN issue of September 16th, 1882.

Terms.

Fifty dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Good pasture at \$5 per month.

CHARLES J. ELLIS, Owner. WM. DONATHAN, Agent.

The Thoroughbred Stallion  
**HUBBARD,**

Chestnut foaled in 1869, bred by R. A. Alexander of Woodburn Stud Farm, Kentucky. Sired by Planet.  
 First dam, Minnie Mansfield, by imp. Glencoe.  
 Second dam, Argenti, by Bertrand.  
 Third dam, Allegrante, by imp. Young Truffle.  
 Fourth dam, imp Phantasia, by Phantom.  
 Fifth dam, by Milton.  
 Sixth dam, Allegrante, by Pegasus.  
 Seventh dam, Orange Squeezer, by Higblyer.  
 Eighth dam, Mop Squeezer, by Matchem.  
 Ninth dam, Lady, by Turner's Sweetstakes.  
 Tenth dam, Shuffles and Syphon's dam, by Patriot.  
 Eleventh dam, by Crab.  
 Twelfth dam, Sister to Sloven, by Bay Bolton.  
 Thirteenth dam, by Curwen's Bay Barb.  
 Fourteenth dam, by Curwen's Spot.  
 Fifteenth dam, by White Legged Lothar Barb.  
 Sixteenth dam, Old Vintner Mare.

Some of his winning Performances.

1872, Baltimore, Md., Oct. 22d., Dixie Stakes for three-year olds. Ninety nominations. Won by Hubbard beating Joe Daniels, True Blue, Woodbine, Mate, Silent, Friend, Wheatley, Experience, Oak and Brookland. Won by six lengths.

1873, Long Branch, N. J., July 10th, Grand Sweepstakes, four-mile heats, won by Hubbard, distancing Wheatley and Bessie Lee in the first heat.

1873—Saratoga, N. Y., Aug. 2d. For all ages, dash of three miles, won by Hubbard beating Harry Bassett, Wanderer and King Harry.

1873—Saratoga, N. Y., August 9th—For all ages; dash of two miles and three-quarters; won by Hubbard beating Katie Pease and Boss Tweed. Total winnings in 1872 and 1873 \$12,950.

Will make the season at the DALE BREEDING FARM, Mountain View, Santa Clara County, commencing February 10th, and ending June 10th, 1884.

Terms, \$50. Mares not proving in foal can be bred the next season free of charge. Good pasturage at \$5 per month. No responsibility for escapes or accidents. Full pedigrees can be had by applying to T. J. DALE, Mountain View, Cal.

STOCKTON FAIR.

SPECIAL PURSES OFFERED BY THE

San Joaquin Valley Agricultural Association for the Fair of 1884.

OPEN TO THE WORLD.

\$3,000—Trotting.

For two-year-olds or under, Purse \$1,000 per conditions.  
 For three-year-olds or under, Purse \$1,000 per conditions.  
 For four-year-olds or under, Purse \$1,000 per conditions.

\$2,000—Running.

For two-year-olds or under, Purse \$1,000 per conditions.  
 For three-year-olds or under, Purse \$1,000 per conditions.

Conditions.

If more than 10 paid up entries, \$200 added to each purse; \$100 of purse goes to winner's Sire if standing in the State. Four moneys in each race, viz.: 50, 25, 15 and 10 per cent.

Six or more entries to fill, three or more to start. Only two entries allowed from any one breeding farm. Entrance 5 per cent, positively payable with nominations, which close March 15th with the Secretary. 5 per cent. additional of purse payable to Secretary July 15th, 1884, or colt is declared out and first 5 per cent. forfeited.

This Association's rules of 1883 to govern, except as specified above. Weights of the Pacific Coast Blood Horse Association to be carried in running races.

L. U. SHIPPEE, President. J. M. LARUFF, Secretary. P. O. Box 186, Stockton, Cal.

Special Sale.  
 — OF —  
**FAST STOCK**

E. H. MILLER, Jr.,

Who, on account of ill-health, will close out all of his breeding stock on  
 Wednesday, February 27th, 1884.  
 At 11 o'clock, at the Sale Yards

San Francisco Horse Market, 33, 35 and 37 New Montgomery Street.

18 HEAD OF STOCK,  
 Comprising Brood-Mares and Stallions; also, Geldings and Fillies from the following well-known Stallions: Electioneer, Benton, Berlin, Blackbird; also, several with St. Clair blood.

A Full List of the Stock will be found in another column of this Paper.  
 Catalogues will be issued in a few days. Apply for same at the above place, or to E. H. MILLER, Jr., Corner of Fourth and Townsend Streets, Central Pacific Railroad Building; or WILBER F. SMITH, Sacramento.

N. B.—The above stock can be seen on the 21st day of February at the above place, or at any time after up to the day of sale.

S. C. BOWLEY, Auctioneer.

FOR SALE.

An Irish setter dog, three and a half years old, well broken on all kinds of game. Sound in every way, and only sold for want of use.  
 Apply at the Mint Saloon, 605 Commercial St. S. F.

**Found at Last!** GOLD SEEKERS FRIEND. If you will send us TEN CENTS silver, you will receive by mail our NEW CASE & CONTENTS that will help you to more READY CASH. At once, than any other method in the world. It never fails. World Mfg Co, 122 Nassau St, New York.

Imported  
**HEREFORDS**

OF THE 44 HEAD OF THOROUGHBRED ENGLISH  
**Hereford Cattle,**

Imported by me from New Zealand, and held 90 days in quarantine under the laws of the United States, I have sold and delivered 14 Heifers and 12 Bulls. On hand are 4 Bulls about 2 years old, 8 Bulls 11 to 14 months old, and 6 Heifers 2 years old, in calf. The 3-year-old graded Hereford cattle in New Zealand, (grass fed), average 800 pounds of meat. Of the number sold 7 have gone to Chico, 2 to Alameda, 17 to Oregon, and 1 to Humboldt.

Credit will be given on bankable paper. The prices made will be same as cash, and interest on time payments.

CATTLE ARE AT  
**No. 524 Third St.**

Where you are invited to call and see these Famous Beef Producers.

A. W. SISSON, 202 Sansome St., S. F.

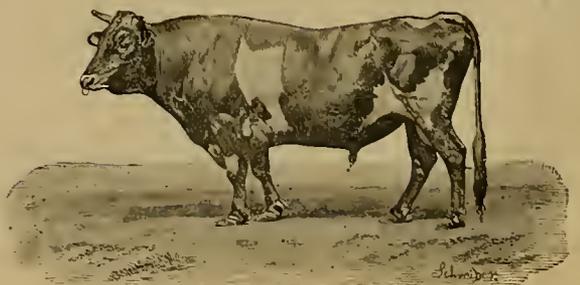

G. H. STRONG, BICYCLES AND TRICYCLES. 252 Market Street. Repairs to order. Elevator, 12 Front street

Jerseys and Guernseys.

Registered in the A. J. C. C. and the A. G. C. C.

MOTHER.

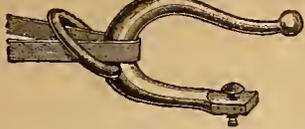

SON.

The above is a cut of the unequalled cow Jersey Belle of Selmute that made 25lbs. 4 1/2 ozs. of butter in one week, and her only living son King of Selmute.

A GRANDSON OF JERSEY BELLE OF SELMUTE is now in use in the Yerba Buena herd. This herd of Jerseys and Guernseys won all the herd prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has the best show bull in America. These bulls are valued at \$100,000 each, and stand for \$100 to \$200. The blood of these celebrated animals can be had, at moderate prices of  
 Coast. Mr. Pierce has interest in two herds in the East of 20, at the head of which stand King of Selmute (only living son of Jersey Belle of Selmute), Romeo de Bonair (87 1/2 per cent. Mary Ann's blood) and Pierson, the best show bull in America. These bulls are valued at \$100,000 each, and stand for \$100 to \$200. The blood of these celebrated animals can be had, at moderate prices of  
 HENRY PIERCE San Francisco.

DIETZ'S PATENT

CHECK HOOK.

Simple in its Structure and Practical in its Use.

The horse never loosens the check-rein when this Check-Hook is used.

Horsemen can appreciate the value of a Check-Hook of this kind.

There being no springs or hinges to break connected with it, makes it serviceable and easily appended, as the check-rein passes through a solid ring attached to the front of the hook.

Orders sent to A. C. DIETZ, No. 9 Front St., San Francisco, Cal.

STALLIONS FOR SALE

HAVING ACQUIRED MORE STALLIONS THAN he has present use for, the owner offers for sale the high-bred and well-known trotters

Inca -AND- Gibraltar.

INCA, RECORD 2:27, FOALED 1871, BRED BY L. J. ROSE, got by Woodford Mambrino, son of Mambrino Chief, first dam Gretchen, by Mambrino Pilot; second dam Madame Kirkman, by Canada Chief, son of Davy Crockett; third dam by Fanning's Tobe; fourth dam by Leviathan.

GIBRALTAR, RECORD 2:23 1/2, FOALED 1872, bred by Geo. O. Tiffany, got by Echo, son of Rysdyk's Hambletonian; dam the Tiffany mare, said to be by Owen Dale, son of Williamson's Belmont.

For terms and other particulars apply to JOHN A. GOLDSMITH, FASHION STABLE, ELLIS ST., SAN FRANCISCO.

FOR SALE.

Llewelin Setter Brood Bitch POSHA, Druid ex Pocahontas, in whelp to McGregor, Rob Roy ex Queen Mab, 2 years old. Price \$100 00. Llewelin Setter Bitch PUP MAX D. McGregor ex Posha, 7 months. Price \$95 00. English Pointer GLEN BOW, Ranger Boy ex Josie, Bow, 17 months, partly broken. Price \$50 00. Also a few choice Pointer pups comprising the bloods of such craks as Champions' Bow, Sleaford, Ranger, King Bow, and others. Price \$20 00. Full pedigrees to all the above dogs warranted as represented.

G. W. Bassford, Colusa, Cal.

FOR SALE

The Trotting Gelding STARR KING.

Record, 2:22. Sound and in fine condition. Sold only for the reason that his owner's business is such that he cannot give attention to the turf. For further particulars address

C. W. Welby, Tenth and Railroad Avenue, San Francisco.

PURE-BRED JERSEYS FOR SALE.

For sale, to close an Estate, Ten Head of Pure-Bred Jersey Cattle, Registered in A. J. Herd Book and A. J. C. C. H. R. -Cows, Heifers and Calves.

All superior animals both in breeding and quality. Also a number of Two and Three-Year-Olds, Geldings and Fillies, Thoroughbreds and by Thad Stevens' Trotting Stock of the very best Families.

For particulars inquire of or address, R. P. CLEMENT, 424 Montgomery St., San Francisco.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address, DR. T. A. BLOOM, 151 Pearl St., N. Y.

THE STANFORD STAKES 1885.

A SWEEPSTAKES FOR TROTTING COLTS AND fillies of 1882, \$300 each, \$25 payable on the 1st of March, 1884, at which time the stake will close, \$50 on the 1st day of January, 1885, and \$100 ten days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1885, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1885 or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. Railroad office, Fourth and Townsend streets, or JOS. CAIRN SIMPSON, Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of March, 1884. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly post-marked March 1st will be eligible. Breeders of trotting horses will see that it is greatly to their interest that this stake should not be allowed to lapse, and now that the first payments are made so light it comes within the reach of everyone. It is the main Trotting Stake of California, and is fully entitled to support.

Crown Point For Sale.

This promising Hambletonian stallion, record 2:24, is offered for sale. He is so well known for thorough game and endurance that it is almost superfluous to say anything further. He has defeated Sweetness, 2:21; Starr King, 2:22; Del Sur, 2:24, and others of celebrity. Although having only served one season in the stud, he can show colts of as much promise as any. The dam of Crown Point has two representatives in the 2:30 list. His blood being a combination of Hambletonian, Clay, and other strains, which proves him to be of the very best breeding. Crown Point is sound in every way, and will be ready to train, with a good show of trotting faster than ever.

The Trotting Stallion  
**BRIGADIER.**

Record 2:21 1-4.

Bay horse, bred by R. Penniston, Philadelphia, Penn. By HAPPY MEDIUM; dam Lady Turner, by Frank Pierce, Jr. Happy Medium, by Rysdyk's Hambletonian, dam the famous old trotting mare Princess, by Andrus' Hambletonian. He has fifteen representatives in the 2:30 list. Lady Turner, by Frank Pierce, Jr., dam by a grandson of Sir Henry, son of Sir Archy, second dam by Andrew Jackson. Frank Pierce, Jr., by Frank Pierce, son of Beppo. Brigadier will make the season of 1884 from February 10th to July 1st.

**Terms.**

\$100 the season. Mares not proving in foal may be returned the following season free of charge. Good pasturage at \$3 per month, but no responsibility assumed for accidents or escapes. Mares shipped to Marysville consigned to me will be received and cared for on arrival of cars or boats.

I. B. McDONALD.

Fast Trotting Stallion

**HA HA.**

Standard (See Wallace's Register.)

Ha Ha: Color Brown, 15 1/2 hands. Extra fine style. Action and form perfect. As a three-year-old, with eight weeks' banding, showed 2:23, without a skip.

**Breeding.**

GILT-EDGE, combining, close at hand, Hambletonian, Alexander's Abdallah, Mambrino Chief, dam by McCracken's Blackhawk, the sire of the dam of Overman. Record 2:19 1/4.

N. B. As a four-year-old, with proper handling, 2:20 or better, I would expect him to show.

FRED ARNOLD, Stockton, Cal.

THE ELECTIONEER STALLION

**STANFORD**

Will make the season of 1884, commencing February 1st and ending July 1st, at my stable near the Oakland Race Track.

**Terms.**

\$50 for the season, payable at the close of the season. No responsibility assumed beyond reasonable care.

**Pedigree and Description.**

Stanford was bred by George Faylor, late of San Francisco, foaled in 1879; is dark bay, no marks, 15 1/2 hands, and weighs 1,050 pounds; was sired by Electioneer, and closely resembles him in form and color; was not broken until last year; has been banded very little, but enough to show that his action is excellent and peculiar to the get of Electioneer.

First dam, Annie Laurie, by McCracken's Dave Hill, Jr., (sire of Geo. Treat, record 2:25), by McCracken's Dave Hill, he by Red Lion, and he by Vermont Black Hawk.

Second dam, Kitty, by Owen Dale, son of Belmont. Dam of Dave Hill, Jr., by old St. Lawrence, grand thorougbbred. Dam of Dave Hill by Vermont Hambletonian.

Dam of Red Lion by Vermont Hambletonian.

J. J. FAIRBANKS, Agent.

Oakland, January 18, 1884.

Trotting Stallions

Prompter, 2305, and Privateer

Will make the season of 1884, from February 1st to July 1st, at Agricultural Park, Sacramento, at \$50 the season. Mares not proving in foal can be returned next season free of charge. Pasturage at reasonable rates. Accidents and escapes at owner's risk.

**Prompter** is a bright bay, star in forehead, hind ankles white, seven hands high, and weighs 1,140 pounds. Sired by Wilson's Blue Bull, son of Pruden's Blue Bull, by Merring's Blue Bull, dam Prairie Bird (four-year-old pacing record 2:28 1/4, and dam of Flight, five-year-old record 2:29, and three-fourths sister to dam of Pride, yearling record 2:44, and three-fourths sister to dam of Buccanear, public trial against time 2:24, and full sister in blood to dam of Fawn, record 2:30 1/4), by Flaxtail, grandam by son of Tully Ho Morgan, great grandam by Irwin's Tuckahoe, great great grandam by Leffer's Consul.

**Privateer** is four years old, a beautiful brown with tan shadings, over sixteen hands high, and is by Buccanear, son of Iowa Chief, by Green's Bashaw, dam by Marion, son of Mambrino Chief, yearling record 3:05 1/2.

For extended pedigree and further description of the above horses send for circular.

M. W. HICKS, Sacramento, Cal.

**MAMBRINO WILKES.**

BLACK STALLION, SIXTEEN HANDS IN HEIGHT, BY GEORGE WILKES, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christmas by Todhunter's Mambrino, son of Mambrino Chief. Second dam by Floz, Jr. Todhunter's Mambrino son of Mambrino Chief, his dam Ripton's dam by Potomac.

This is the largest and one of the best colts of George Wilkes (weighing 1,290 pounds), combining the Hambletonian and Mambrino strains, and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

George Wilkes has 27 representatives in the 2:30 list, of which 14 have records of 2:25 or better, 5 of 2:20 or better, and 3 of 2:18 or better. These are all the get of Geo. Wilkes, and do not include Phil Thompson, William H., and other famous grandsons and granddaughters of this prominent sire.

Will make the ensuing season, commencing February 1st, 1884, at the New Stable, STOCKTON, and L. M. Morse's near LODI.

**Terms.**

\$10 for the season, or \$25 single service. This low rate brings the service of this horse within reach of breeders, but does not argue any inferiority to the horses whose services are held at One or Two Hundred Dollars. For further particulars address

A. J. HINDS, Agent.

STALLIONS

—AT—

**RANCHO DEL PASO.**

For the Season of 1884.

Ninth dam, by Mark Anthony.

Tenth dam, by Imp. Janus.

Eleventh dam, by Imp. Monkey.

Twelfth dam, by Imp. Silvereye.

Thirteenth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

Will make the coming season, from February 10th to June 15th, 1884, at the Fair Grounds at Santa Rosa.

**TERMS.**

\$100 the season. Mares kept in any manner their owners desire, and at reasonable rates, but no responsibility for escapes or accidents. Anteo ranks as one of the great trotting colts of the United States, well worthy of the family to which he belongs. His breeding is of the choicest, and in point of form he is as nearly the model of the trotter as any horse living. He has shown a mile in 2:20, and at the same time demonstrated that he was capable of trotting way down in the teens.

For further particulars address,

M. ROLLINS, Agent, Santa Rosa.

The Trotting Stallions

**DIRECTOR AND MONROE CHIEF**

Will make the season of 1884 at

Oakland Trotting Park,

Commencing February 1st and ending June 1st.

**TERMS.**

Director \$200, Monroe Chief \$100, the season. Good pasturage for mares at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

**Director, 2:17.**

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:10 1/4; Phallas, 2:15 1/4); first dam Dolly (dam of Potomac, 2:22 1/4; Onward, 2:25), by Mambrino Chief; second dam by Potomac; third dam by Saxe Wrenar.

Thordale, 2:22 1/4, is the sire of Edw. Thorne, 2:16 1/4, and Daisy Dale, 2:19 1/4.

**Monroe Chief, 2:18 1-4.**

Two-mile record, 4:16.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, he by Rysdyk's Hambletonian, first dam Madame Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whipstock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performances, see the holiday number of the BREEDER AND SPORTSMAN, issued December 21, 1883.

For further information address

JOHN A. GOLDSMITH, FASHION STABLE, Elbs St., San Francisco.

THOROUGHbred STALLION

**X X,**

**Pedigree.**

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM.

First dam, Columbia, by imported Bonnie Scotland.

Second dam, Young Fashion, by imported Monarch.

Third dam, Fashion, by imported Trustee.

Fourth dam, Bonnets o' Blue, by Sir Charles.

Fifth dam, Reality, by Sir Archy.

Sixth dam, by imported Medley.

Seventh dam, by imported Centinel.

Eighth dam, by Mark Anthony.

Ninth dam, by imported Janus.

Tenth dam, by imported Monkey.

Eleventh dam, by imported Silvereye.

Twelfth dam, by Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the grandam of Anteo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wamania, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocking, Three Obbers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON.

Oakland or 508 Montgomery street, San Francisco.

THE TROTTING STALLIONS

**SINGLETON AND LA HARPE.**

WILL MAKE THE COMING SEASON FROM FEBRUARY 1ST TO JULY 15TH, 1884, AT THE FARM OF THE OWNER, THREE MILES NORTH OF CHICO, BUTTE CO., CAL.

Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and left fore foot, small star in forehead. Is 15 1/2 hands high, and weighs 1,120 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

**PEDIGREE.**

Singleton is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by Imp. Messenger. Schepper's dam Nellie is by Imp. Messenger. Fane's dam Glory by Jackson's Western Star (son of Flatt's Western Star by Blacknose). 1st dam by Bonaeers, 2nd dam by Gallatin (1,084). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:35). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

La Harpe is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by Imp. Messenger. Schepper's dam Nellie is by Imp. Messenger. Fane's dam Glory by Jackson's Western Star (son of Flatt's Western Star by Blacknose). 1st dam by Bonaeers, 2nd dam by Gallatin (1,084). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:35). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1879. La Harpe was sired by Fane, he by Alexander's Belmont (sire of Nutwood), he by Alexander's Abdallah (sire of Goldenbird Maid), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by Imp. Messenger. Fane's dam Glory by Jackson's Western Star (son of Flatt's Western Star by Blacknose). 1st dam by Bonaeers, 2nd dam by Gallatin (1,084). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:35). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe was by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

Will make the coming season, from February 10th to June 15th, 1884, at the Fair Grounds at Santa Rosa.

**TERMS.**

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.

La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water.

Address

A. T. MCINTOSH, Box 60, Chico, Cal.

S. C. BOWLEY & CO.,

GRAND COMBINATION SALE,

Commencing April 10th, 1884, AT THE

Bay District Race Track, AND CONTINUING SIX DAYS.

Thoroughbred Horses and Standard Trotters, Roadsters, Jersey, Durham, and Devon Cattle, Spanish, Merino, and Leicestershire Sheep, from all the principal breeding establishments on the Pacific Coast.

750 HEAD OF STOCK

Have already been entered for sale and further instructions from leading breeders are daily arriving. Breeders and owners desirous of entering stock for this sale should apply at once to

S. C. BOWLEY, 33, 35 and 37 New Montgomery St.

The benefit of the combination sale to breeders and stockmen cannot be too highly estimated. Combination sales have been found of immense advantage in the East, and such a sale as this, comprising, as is anticipated, not less than 3,000 head of fine stock from all the leading breeders of the Coast, cannot fail to attract a large number of buyers from Honolulu, Australasia, and the East. The fame of California trotters is world-wide, and when it is known that for this sale already entered the get of Electioneer, The Moor, Almont, Nutwood and all the best known stallions on the Coast, the advantages to both breeders and purchasers must be obvious. Large or small lots will be taken for sale. As soon as the catalogues can be prepared they will be distributed all over the world; so it is necessary for those desirous of taking advantage of the sale to send in their lists of stock, with complete pedigree, at an early date.

S. C. BOWLEY & CO.

LARGEST AND FINEST STOCK

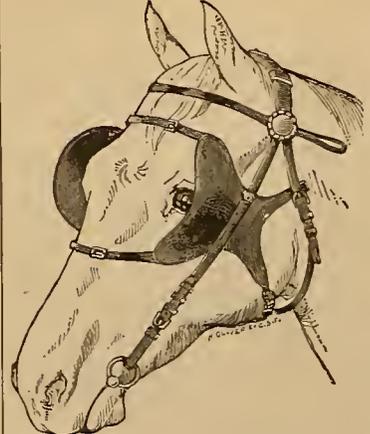

On the Coast, at prices that defy competition.

WILL & FINCK, Leading Cutlers, 709 Market street. SPORTING GOODS. Telephone, 5150.

IMPROVED

Blind Bridle & Winkers FOR RACE HORSES.

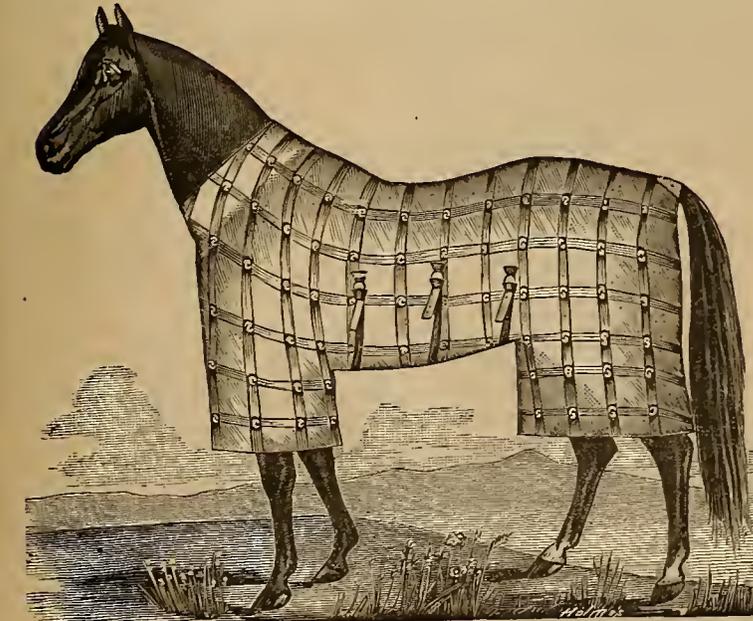

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is: 1. The part D, supported by the side straps of the bridle, extending back as shown, the front having an opening into which the blind is fitted, substantially, as herein described. 2. In a bridle, in combination with the extensions D, the curved blinds F, secured to such extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described. 3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described. 4. In a bridle, and in combination with the checkpieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as an for the purpose herein described. 5. In a bridle, and in combination with the blinds F, supported as a pivot to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood. It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet. For details of all descriptions apply to JOHN A. MCKERRON, No. 230 and 232 Ellis St., San Francisco.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MARCH 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted: 1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described. 2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings FG, and the permanent straps or bands E, substantially as and for the purpose herein described. 3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings FG, in combination with the elastic neck-extension H, substantially as and for the purpose herein described. 4. The blanket A and hood J in combination with the elastic connecting-strip I, substantially as described and for the purpose set forth. 5. The close-fitting hood J, having the elastic band L, beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described. 6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee, JOS. CAIRN SIMPSON, SAN FRANCISCO, CAL.

LINES OF TRAVEL.

C. P. R. R.

TIME SCHEDULE.

SATURDAY, -- OCT. 20th, 1883.

Trains leave, and are due to arrive at, San Francisco as follows:

Table with columns: LEAVE (FOR), DESTINATION, ARRIVE (FROM). Lists various routes to and from San Francisco, including Antioch and Martinez, Benicia, Colfax, Denning, El Paso, Emigrant, Galt, Livermore, Knight's Landing, Livermore and Pleasanton, Madera and Fresno, Merced, Marysville and Chico, Mohave, Needles, Red Bluff, Red Bluff and Tehama, Redding, Sacramento, via Livermore, Sacramento River Steamers, San Jose, Vallejo, Virginia City, and Woodland.

Train leaving San Francisco at 4:30 p. m. can meet Pacific Express from Ogden at Benicia; and that leaving at 8:30 a. m. can meet Pacific Express from The Needles and El Paso at Antioch. \*Sundays excepted. †Sundays only.

LOCAL FERRY TRAINS, VIA OAKLAND PIER.

Table with columns: FROM, TO, TIME. Lists local ferry routes to East Oakland, Fruit Vale, Alameda, Berkeley, West Berkeley, and back to San Francisco. Includes a section for 'CREEK ROUTE' with times for San Francisco to Oakland and back.

LINES OF TRAVEL.

WINTER ARRANGEMENT.

COMMENCING SUNDAY, --- NOV. 11, 1883, AND UNTIL FURTHER NOTICE,

Passenger Trains will leave from, and arrive at, San Francisco Passenger Depot (Townsend Street, between Third and Fourth Streets) as follows:

Table with columns: LEAVE S. F., DESTINATION, ARRIVE S. F. Lists routes to San Mateo, Redwood and Menlo Park, Santa Clara, San Jose and Principal Way Stations, Gilroy, Pajaro, Castroville, Salinas and Monterey, Hollister and Tres Pinos, Watsonville, Aptos, Soquel (Camp Capitola & Santa Cruz, Broad Gauge, no change of cars), Soledad and Wav Stations.

\*Sundays excepted. †Sundays only (Sportsmen's train).

Stage connections are made with the 10:10 A. M. Train, except Pescadero Stages via San Mateo, and Redwood, which connect with 8:30 A. M. Train. SPECIAL ROUND-TRIP TICKETS, at reduced rates to Monterey, Soquel and Santa Cruz; also to Paraiso and Paso Robles Springs.

EXCURSION TICKETS sold Saturday and Sunday -- good to return on Monday -- to Santa Clara or San Jose, \$2.50; to Gilroy, \$4; to Monterey or Santa Cruz, \$5, and to principal points between San Francisco and San Jose.

TICKET OFFICES. -- Passenger Depot, Townsend street, Valencia-street station, and No. 613 Market street, Grand Hotel.

TO Sportsmen & Pleasure-Seekers.

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE SUPERIOR FACILITIES

AFFORDED BY ITS LINE FOR REACHING Monterey with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing. TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives, Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best of shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baccanta, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING FACILITIES

AT THE "HOTEL DEL MONTE," ARE UNSURPASSED, having a MAGNIFICENT BEACH of pure white sand for surf bathing.

THE BATH-HOUSE

contains SPACIOUS SWIMMING TANKS (150x50 feet) for warm salt water plunge and swimming baths, with

ELEGANT ROOMS connecting for individual baths, with douche and shower facilities.

THE FAVORITE ROUTE to those well-known Watering Places, APTOS, SOQUEL AND SANTA CRUZ, IS VIA THE

Southern Pacific Railroad,

(Broad Gauge). The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear. Lakes PILARCITOS and SAN ANDEBAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known resorts, PILARCITOS, SAN GREGORIO and PESCADEIRO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S OR RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

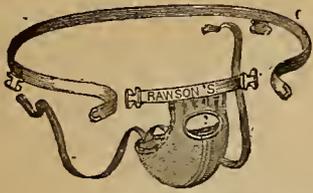

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets will be entitled to THE TRANSPORTATION OF THEIR DOGS when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN, Guns and Fishing Tackle will be carried free of charge, Gun cases, if taken in Passenger Cars.

Sprung Knees

.....AND..... Coked-Ankles

Permanently cured by using SPARKHALL'S SPECIFIC.

Testimonials:

From O. A. Hickok, Esq., San Francisco, Cal., June 8, 1881. I can with confidence recommend Sparkhall's Specific to any one owning a knee-sprung or coked, ankled horse, being fully convinced that it will cure those deformities without injury to the animal.

From Hon. C. M. Pond, Breeder of the celebrated trotter "Clingstone."

Hartford, Conn., March 29, 1882. This may certify that I have used Sparkhall's Specific in my stables, and consider it an extraordinary remedy, accomplishing in most cases all that is claimed for it.

The Specific is sold in quart bottles—price, \$2.00, by WAKELEE & CO.,

Montgomery and Bush Sts., under Occidental Hotel, San Francisco.

FAIRLAWN, 1884.

TENTH ANNUAL CATALOGUE

Now ready for distribution. Contains descriptions and pedigrees of 252 head of High-Bred Trotting Stock now at Fairlawn. Will be sent free to all applicants who enclose 3 cents in stamps to prepay postage.

25 HIGHLY-BRED BROOD MARES,

Bred to the Fairlawn Stallions, and

130 HEAD OF VERY PROMISING YOUNG STOCK,

Consisting of Young Stallions, Fillies and Roadsters, are offered at Private Sale.

THE ONE PRICE PLAN Is strictly adhered to at Fairlawn, and the price of every animal for sale is printed in the catalogue. Purchasers from a distance can buy on orders at exactly the same prices as if present in person. All stock sold on orders can be returned if they do not come fully up to the descriptions given.

The Stallions in use at Fairlawn are ALMONT 33.

Represented in the 2:30 list by 24 performers, with records ranging from 2:15 1/2 to 2:30. Limited to 20 approved mares at \$300 the season.

HAPPY MEDIUM 400.

Sire of 18 performers with records of 2:30 or better. Limited to 25 mares at \$150 the season.

ABERDEEN 27.

Having ten of his get with records ranging from 2:15 1/2 to 2:27 1/2. Limited to 40 mares at \$150 the season.

ALECTO 2548.

By Almont, out of Violet, by Rysdyk's Hambletonian. Limited to 30 mares at \$50 the season.

STARMONT 1526.

By Almont, out of Starling, by George Wilkes. Limited to 50 mares at \$50 the season.

Ethan Allen, Jr., 473, used as a Private Stallion.

The Fairlawn Stallions in 1883 had eight new ones of their get to make records of 2:30 or better, and three new ones to enter the 2:30 list. The sons of each of these stallions are rising trotters. Almont has six different sons that have sired 2:30 trotters. Mares failing to get with foal can be returned in 1885 free of charge. For further information and catalogues containing full particulars, address

WM. T. WITHERS, Lexington, Ky. Lock Box 392.

ASHLAND PARK TROTTERING STUD

NEAR LEXINGTON, KY.

B. J. TREACY, PROPRIETOR.

THIS IS STRICTLY A BREEDING FARM, FOR though training is done, it is only for the stock belonging to the place, or those purchased from the proprietor. The proprietor of Ashland Park has no pet trotting family; his aim is to secure and have at all times for sale choice representatives of each of the leading families, these being the Hambletonians, Mambrino Chiefs, Clays, Pilots, Black Hawke. At Ashland Park may now be seen splendid specimens of the get of such stallions as George Wilkes, Almont, Mambrino Patchen, Clark Chief, Edwin Forrest, Blackwood, Sentinel, American Clay, Administrator, North Star Mambrino, Bourbon Chief, Regular, Balsora, Howard's Mambrino and Homer. The steady aim is to possess nothing that does not trace through the best class of speed-producing trotting crosses, along all the blood lines, right to the thoroughbred. For catalogues or further particulars address 2-1751 B. J. TREACY, Lexington, Ky.

HARNESS AND SADDLERY.

ALGONA.

## Algona.

Algona is a bright chestnut, 16½ hands high. The shade could scarcely be improved, rather lighter than Piedmont and with equally as fine a coat. His chest is deep and the shoulders well-placed. The harrel is full with the back ribs long. From the loin to the nostrils he is almost a model, and his quarters are also good. Not quite so powerful as Piedmont displays, and this is a point in favor of the son of May Ferguson, though Algona is now highly finished, and with lighter action and more taking style. The limbs all through are first rate, and capital feet. It is unnecessary to extend the description further, especially when we would have to rehearse the terms used before, although it may be as well to

say that he is a remarkably "even-balanced" horse, and that there is not a weak point in his configuration. His pedigree will bear the most exacting scrutiny. His sire has gained such a high and emphatically well-deserved reputation that it is only necessary to refer to it to a large majority of our readers, the minority who has not a knowledge of the excellence of the Almonts being very small.

On the side of the dam Algona has strong support.

His first dam Emma Kinkead, by Conscript (son of Cassius M. Clay J., and brother to American Clay.)

Second dam, Effey Dean, by Mambrino Chief.

Third dam, by Powell's Bertrand, son of Bertrand, by Sir Archy, and his grandam by imported Mambrino.

Thus it will be seen that Algona has a double cross of Mambrino Chief and only one remove further off than Piedmont, and has also the backing of the thoroughbred.

Algona was foaled May 12th, 1876, bred by General W. T. Withers, sold by him to John H. Danielson of California, of whom he was purchased by Mr. Haggin.

That he is destined to be a successful stock-getter is beyond question. His form and pedigree would give ample token of that, and his only colt that has started in a race was Almoone at Stockton, in 1882, when, though suffering from the prevailing epidemic he was second in the last heat, in 2:43. For a two-year-old this is a very good showing, and there are others of his colts which are of equal promise.

## OUR NEW YORK LETTER.

Entries to the Stakes at Louisville, Latonia, St. Louis and Chicago—Various Racing and Sporting Notes—Theatrical Matters, etc.

That 1884 is destined to be the greatest year the American turf has ever known, is patent to even the most prejudiced or careless observer. Now that the most of the racing associations, whose stakes closed this month, have made public their lists of nominators, this is more than ever seen to be a certainty, the long lists of entries giving token of increased numbers of horses in training, increased interest in the sport, and increased enterprise on the part of the racing associations. The most pleasing feature of this racing boom is the evidence of the vast extent of country over which it reaches—from Minnesota to the Gulf, from Maine and the Atlantic seaboard to California and the sunny slopes of the Pacific. So great an empire speaks volumes in behalf of the hold the national sport racing has taken in the public mind, and it is more than likely not only to sustain its interest during the coming years, but to so increase as to rival the popularity and magnitude attained in the Old World, and perhaps to equal the Australians in their love for racing, a nation of race-goers, that turn out at their Flemington race-course frequently over one hundred thousand strong, on Cup day, every one of which vast multitude is able to see the whole progress of the race, and all of whom pay revenue to the Victorian Jockey Club, from one shilling up. If New York city, Brooklyn and Jersey City were to turn out with the same enthusiasm on race days as do the antipodians in Melbourne and vicinity, we would have at Sheepshead Bay, Jerome or Monmouth Perks on notable race days over two hundred thousand persons; 1823, when Eclipse and Henry ran their great sectional race on Long Island, is the nearest approach to such multitudes in American turf annals. From Louisville, Covington and Chicago we read the lists of their stake entries, and not the least notable feature is the unusually large number of subscribers from California, made by E. J. Baldwin, Palo Alto Stable, J. B. Haggin, Theo. Winters, Wm. M. Ayres, etc. That these horses will lend great eclat to the racing campaign of 1884 is a certainty, and the races of Lucky B., Gano, Patsy Duffy, Prince of Norfolk, Duke of Monday, Jim Renwick, Shenandoah, Sweet Briar, etc., will be noted with great interest, from the character of the running of these and other cracks of the Pacific slope. It is lately reported that the Palo Alto Stable will send a string of horses to New Orleans in April, and make the south-western racing circuit through Tennessee, Kentucky, etc., but this is hardly likely, and Chicago is more than likely to see the first appearance east of most of your horses. Mr. J. B. Haggin, however, has made entries at Louisville, and may begin the campaign at that place. If the BREEDER AND SPORTSMAN could ascertain the probable movements of these stables east, just when they will leave, etc., it would be a good bit of matter just now, interesting, and widely noted east. Of all the western associations whose entries are now in, those of the New Washington Park Club are the largest and most noteworthy. Eighty-two nominations to their American Derby, 71 to their Washington Park Cup, 103 to the Quickstep Stakes, 105 to the Oakwood Handicap, etc., shows that their enterprise and liberality were not unappreciated by the turfmen of the west and south. In those of this section, in this regard, the less said the better. They seem to be destitute of any reciprocal feeling in these matters, and prefer to stay at home and take a chance at the crumbs, where they might get a cut at the loaf elsewhere. The McElweels of Jerome park and Mr. Kelso of Philadelphia, are the only prominent exceptions to this almost universal eastern indifference to western meetings, and that grand horse General Monroe and Waterlily, Equipoise, etc., will vary likely make the trip to the lake city late in June or early in July. The Dwyers, and, indeed, many others in this section are beginning to turn the cold shoulder on cup races, and, indeed, on all the long distance events. The Saratoga Association has dropped altogether the Baden Baden Handicap, three miles; the American Jockey Club has temporarily shelved the Westchester Cup; the Monmouth Park Association has cut down the Monmouth Cup to two miles, and so it goes on, until our races of two miles or over are likely to be few and far between. It is a pity that such should be the case, and horse-men should support these races in a greater degree, or we will see the race-horse soon degenerate into a mere "sprinter." Of racing gossip here there is little or none. The heavy snow storms of the past seven weeks have kept the roads constantly covered with a foot or more of snow and ice, and from Kentucky the same intelligence comes. In the crack etables Himalaya from the Preankers, Burton, El Dorado and Miss Palmer from the Dwyers; and Leo, Young Duke, Herbert, Parole and Inoquoie from Ranococas are said to please greatly their trainers and owners. From Com. Kittson's Chestnut Hill Stud good words are spoken of Issaquena, Panique, Rataplan, etc., while from Virginia, Eolite, a three-year-old brother of Eole has just been purchased by Freddie Gebhard for \$12,000. From Kentucky comes favorable news of Tyrant, Powhatan, Louisville and Bob Miles, while the owners of Leonatna, Messrs. Chinn and Morgan sell out all their string of horses in training on the 24th of February. At Covington, Ky., Latonia Park has leased their pool privilege for 1884 for the large sum of \$26,250 to Hughes & Cathart. Last year \$18,000 was paid for the same privileges; showing what a revenue they must amount to. Hugh Gaffrey, the epee-chase rider, has gone to Mexico to ride. Harry Welch has sold his brood-mare Marchioness for \$600 to Gen. Jackson of Nashville. The same gentleman has also bought of W. L. Scott of Erie, imported Blythewood, by Adventurer for \$750. Gen. Jackson's sale of yearlings at Belle Meade will take place about April 30th, just prior to the Nashville meeting.

Theatrical matters here are at the height of the season. Miss Latham of your city made a rather mediocre debut at the Star last week, but Tom Keene more than made up for it on last Monday night by his great success at Niblo's as Richard III. He was called before the curtain many times, and his rendition of the role bears favorable contrast with either Booth or McCullough. Separation at the Union Square. That Man at the Park, with Barton Hill in the cast, and Alpine Roses at the Madison Square, have all been received with favor, and the old success Cordelia's Aspirations, at the Comique and 7-20-5 at Daly's have renewed their youth, apparently.

New York, Jan. 31st, 1884.

PACIFIC.

Hughee, the jockey, has been offered \$2,000 for Bondholder.

## TURF AND TRACK.

## Observations at Arno Farm.

EDITOR BREEDER AND SPORTSMAN:—The more I see of this wide world, the more astonished I am that so many men are found trying to make a little money by raising colts without any knowledge of breeding, without any familiarity with the history of the great families of horses, without any knowledge of the performances of horses, and without any turf journal to give them the information they require. A man might just as well try to be a preacher without a bible. I some time ago met a well-to-do farmer, owner of four good-looking mares, who does not know the breeding of any of them. He argued good-humoredly, and said he could raise just as good stock without a pedigree, and it was hard to prove to him that he was wrong. He takes considerable credit upon himself for the shrewdness of his views. He reads no breeding or turf journals. He breeds his mares to the lowest stud-fee, and in three years his colts are actually not worth raising. Colts from the same mares might be valuable if the mares were sent to a well-bred stallion representative of the best families. This man has a reputation in his town, and thinks he is a shrewd breeder; but to show that he is not shrewd in breeding, in a year or so he will see some right-minded breeder sell his colts, which have been carefully bred, at a yearling for \$500, while he will not receive more than \$50 or \$75 for his yearlings, the produce of the common and cheap horse.

I find in this State differently minded people in the matter of breeding. For the trotters let this shrewd farmer watch such breeders as L. J. Rose, Gov. Stanford, Santa Rosa Association, G. Valensin, James McDonald and others. I found at Hicksville, Cal., at Arno Stock Farm, G. Valensin, a differently minded man than my shrewd farmer. I was much pleased to see that Mr. Valensin was fixed so nicely. His stables, track, paddocks and everything are in perfect shape for the comfort of the youngster and trotter. Mr. Valensin invited me into the stable to see the trotters.

The first one I saw was Crown Point, a chestnut stallion, record 2:24, by Speculation, he the sire of Oakland Maid, record 2:22, by Rysdyk's Hambletonian. Crown Point's dam by Geo. M. Patchen, Jr., record 2:27, and the sire of Sam Purdy, 2:20. Crown Point looks well, and his feet and legs are better than we have ever seen them. He is a trotter, and the sire of trotters. There are some colts of his on the Arno Farm that speak for themselves.

The next one we came to was an iron-gray filly, three years old, by Len Rose, dam by Echo. She looks like ready money, and a trotter all over. She can show a 2:25 gait, and is one of the finest gentleman's mares I ever saw.

Next we came to a brown two-year-old, by Buccaneer; first dam Fern Leaf. This filly, I think, from what I have seen, will beat 2:25 this fall. She is the apple of Mr. Valensin's eye.

Next we came to a brown four-year-old filly, by Buccaneer, that can speed a quarter in thirty-three seconds; she is another Trinket.

Next we came to a bay mare Sister, by Admiral, a son of Volunteer; first dam by Black Prince. She is looking very fine, and can trot a mile to-day in 2:25.

Next we saw Punch, an iron-gray colt, by Buccaneer, dam by Echo. He is a two-year-old and a beauty, can show a 2:40 gait.

Next we came to the bandsome bay filly, two years old, by Buccaneer, dam Cassie Mc, the Munson mare. She is a Jersey Lily, and can show a mile in 2:50.

Next we came to a three-year-old, by Buccaneer, dam a thoroughbred, that is sixteen hands high, and as fine a looking young horse as I ever saw. This colt will make a valuable stallion to get carriage horses if not trotters.

Mr. Valensin invited us to his house where we found lunch prepared for his hungry guests. After lunch we went out to see yearlings by Buccaneer and Crown Point. These yearlings were shown up and down the lane to balter, and some of them in harness, and such young trotters I have never seen. One would not believe it without seeing. I have seen young ones in the east and also in California, but I never saw such young trotters as those at Arno Farm. I think your readers will see three yearlings out of this lot, trot a mile next fall in 2:40 or better. Buccaneer was a great sire of young ones, and he is a great loss to Arno Farm, and the State of California.

Mr. Valensin said: "Gentleman, I have a fine mile track out here, and it is a little soft, but I want to show you that I have trotters, and that I can drive some myself." The first one was a gray three-year-old filly, with Mr. Valensin holding the ribbons. She showed speed enough to trot in 2:30. He showed others in harness, and we saw quarters trotted from forty-two to thirty-three and a half seconds, by colts from one to four years old, and such showing I never expect to see again by colts. The loss of Buccaneer is a great loss to the State. He was a great out cross, representing the Bashaw family that have eleven in the 2:30 list, and one better than 2:20 and the Blue Bull with thirty-seven in 2:30 list, and one better than 2:20. Mr. Valensin is a natural horseman and shows as much skill in driving a trotter in his work, as any practical experienced driver that I have ever seen on the trotting turf.

San Francisco, February 12th.

## Punctured by a Nail.

SACKVILLE, N. B., Jan. 29th.

JOS. CAIRN SIMPSON:—The copy of Tips and Toe-Weights I have received, and read with great interest. I have a very promising filly two and a half years old, sixteen hands high, 1,050 pounds weight, splendid proportions dam thoroughbred atack, sire "Sanders' Knox," son of "General Knox," have driven her a little since she was eighteen months old. I believe the first time she ever had a harness on her she struck a 3/4 clip, and she appears to know nothing but trot, as she will leave that gait very reluctantly when over-urged into a run, and strikes trotting gait again as quickly as possible. I have never sped her but very little. This winter I thought I would see her come on the ice two or three days before I took her to be shod. When she would first go out of the stable she would limp in one of her hind legs, and kind of drag the toe for two or three steps and then was all right; she would act that way the next time, that is, if she was in the stable any length of time. When I took her to the shop I looked at her foot and found a bent nail stuck in it. The joint I should judge, just went through the sole of the foot, no more. I got her shod; she still acts the same way, only, I think she is a little worse after she has been driven considerable and brought out next day, but never lame more than three or four steps. I have listened her stifle as I thought it might be a weakness there, and never took her out

of bar etall for ten days, but she is just the same. Since I got your book on Tips and Toe-Weights, I concluded, after reading it, that I should use tips on her after this. I had the shoes taken off intending to let her go barefoot awhile before putting tips on. The shoes I had on her were 18 ozs. forward and 12 ozs. behind. Her step was perfect, so far as I am able to judge. You could not make her touch a leg or heel. You know East, corks on shoes are from 1/2 to 1 inch in length for going on ice, and made sharp as a knife. She stays too long on the ground with that weight. Since the shoes are off she has not limped coming out of the stable, it might be the nail in the shoe had went part way in the hole that was made by the nail sticking in her foot and pushed horn or dirt into the sensitive part, as the nail was sticking on a line where the nail hole of the shoe would be. Would you kindly let me know what you think is the trouble, also, what weight tips would be best to use?  
H. R. FAWCETT.

## Foals at Palo Alto.

The foals reported from Palo Alto for 1884, up to date, are as follows:

## Trotters.

Jan. 7th—Ameriquita, by Electioneer, her dam America, by Rysdyk's Hambletonian; a brown filly, near hind foot white and white under fetlocks; by Gen. Benton.

Jan. 18th—Norma, by Alexander's Norman, her dam by Sir Wallace; a brown colt, near hind coronet white, off hind foot white; by Electioneer.

Jan. 18th—Midnight, by Pilot, Jr., her dam Twilight by Lexington; a brown colt, near hind foot white; by Electioneer.

Jan. 20th—Lula, by Alexander's Norman, her dam Kate Crockett, by imp. Hooten; a brown filly, white around coronet of near hind foot; by Electioneer.

Jan. 26th—Nelly Walker, by Thorndale, her dam Rosalind, by Alexander's Abdallah; a bay colt, hind feet and ankles white; by Electioneer.

Jan. 26th—Lady Kline, by Mohawk Chief, her dam by Sparkle; a chestnut colt; by Peidmont. (Colt died.)

Jan. 28th—May Queen, by Alexander's Norman, her dam Jennie, by Crockett's Arabian; a bay filly, few white hairs in forehead; by Electioneer.

Jan. 29th—Mamie C., by imp. Hercules, her dam by Langford; a light bay colt, white face, near hind leg white; by Bentonian.

Jan. 29th—Minnie Norris, by Leinster, her dam Lady Tyler, by Belmont; a chestnut colt, white face, four white legs; by Whipple's Hambletonian.

Feb. 1st—Lady Ellen, by Carr's Mambrino, her dam by Owen Dale; a bay filly, near hind foot and ankle white; by Electioneer.

Feb. 2d—Marti, by Whipple's Hambletonian, her dam Ida Martin, by Rifleman; a bay colt with star; by Electioneer.

Feb. 3d—Winona, by Almont, her dam Dolly, by Mambrino Chief; a bay filly; by Electioneer.

Feb. 5th—Gipsy, by Paul's Abdallah; a bay colt, near hind foot and hock of ankle white; by Electioneer.

Jan. 5th—Florida, by Robert E. Lee, lost twin foals by Gen. Benton, and on Jan. 24th, Flushing Belle, by Dictator, lost foal by Bentonian.

## Thoroughbreds.

Jan. 16th—Fannie Lewis, by imp. Buckden, dam by Bay Dick; a chestnut filly, large star; by Flood, he by Norfolk from Hennie Farrow, by imp. Shamrock.

Jan. 20th—Dame Winnie, by Planet, dam Liz. Mardis, by imp. Glencoe; a bay colt by Shannon, he by Monday, from Heunie Farrow.

Jan. 27th—Hattie Hawthorne, by Enquirer, dam Little Girl, by Endorser; a brown colt, by imp. Young Prince.

Feb. 1st—Esther, by Express, dam by Colossus; a light bay colt, half moon and snip; by Flood.

Feb. 3d—Piney Lewis, by Longfellow, dam Lew Lewis, by Endorser; a bay filly, star, near hind foot and pastern white; by imp. Young Prince.

Feb. 5th—Lizzie Whips, by Enquirer, dam the Grand Dutch S., by Vandal; a brown filly, small star, white spot on each coronet; by Flood.

Feb. 6th—Glendew, by imp. Gengary, dam Glenroae, by Lexington, a chestnut colt, star, both hind legs white; by imp. Young Prince.

## Dan Mace as a Driver.

The writer is personally and well acquainted with Messrs. Mace, Turner, Bowen, Hickok, Colvin, McLanghlin, Splan, Murphy, Johnson, Golden, Dustin, Voorhies, the Goldsmiths, Penman, Saunders, McCarthy, Campbell, Bither, and many other good drivers, besides many that have gone, to drive no more: The above-named have all driven trotters last season, and are likely to drive next season. In speaking of drivers, we head the list with Mace's name, not only because he is the oldest of all the drivers named, but because we believe he possesses more of every quality required in the trotting-horse business than any other driver ever did. First, he can drive horses, all ways hitbed, fully as fast as any one, and much faster if they never had copied after his ways of harnessing and hitching teams of trotters, and trotter with running mate. Having noticed Mace as a trainer and driver for about twenty years, and carefully compared him with all other drivers that I have seen from that time until the present, I have come to the conclusion that, "all in all," he has no equal among the past or present drivers. It will not be out of place to mention some of Mace's qualities that excel all others, in our opinion, as a trotting-horse driver; and we are not alone in this either, as it is generally admitted by those who know him well that he can almost invariably learn all the strong and weak points of every horse and driver in the race by the time he has scored a few times, and, at the same time, has judged every judge in the stand, so as to know with whom their sympathies are (if any), and by so doing get several of the dangerous horses and drivers more or less rattled, and thus get the word "go" (in heats that he intended trotting for) with an advantage over the most formidable ones in the race; and in heats that he intended to lay up and rest his horse he would generally manage to get the worst of the send-off, and by so doing the judge would generally watch to give him a little the heat the next heat to make up for it; and Dan was always ready to put them in mind of what a poor start they gave him the last heat, thereby working the judges on his side and getting the best of it all around. By so doing he has won many a race that could only have been won by clever tactics and his extra good driving. No doubt but what Mace has made mistakes in driving races, one or two in particular that I have seen, but less than any driver as a driver known. Mr. Mace has, in a sense, retired from the active turf, but still drives, buys and sells the best in which there is the most money, and not nearly so much hazard or annoyance.—"Hopeful," in Chicago Horseman.

Seely's American Star.

American Star was a sorrel horse, with a star and snip in forehead, two white ankles behind above the pasterns, and about 15 hands high. He was foaled in 1837, his sire being Stockholm's American Star, son of Duroc, he by imported Diomed. Of Stockholm's dam nothing authentic is known. The dam of Seely's American Star was a mare named Sally Slouch, daughter of the race-horse Henry, son of Sir Archy, second dam by imported Messenger. That the thoroughbred blood largely predominated in Seely's Star will admit of no doubt. That his dam and grandam were both thoroughbreds is also true, although Edmund Seely claimed that his dam was a "Canuck" or Canadian mare. His lasting qualities, not only with him, but with his progeny, should be a proof most manifest that his mother was not a "Canuck." It has been said that American Star was not the horse raised by Henry H. Berry, of Pompton Plains, Morris county, N. J., but the gentleman quickly put an end to all such reports by looking up the horse while owned by Edmund Seely and Hiram Smith, and recognizing him as the same animal raised and owned by him until he was seven years old. In 1835 Ira Coburn, of New York, owned a horse called American Star. He was a bay horse, with star in forehead, 15 hands high, as round as a rope, with a good set of limbs, pleasant disposition, and could trot very fast. He left no record, however, as he was used afterward only as a gentleman's road horse. In the fall of 1834 Mr. Berry happened to be in the city of New York, and a friend of his urged him to buy a very fine mare for breeding purposes, the mare, at that time, being owned by a gentleman on Long Island. Having been driven on hard roads her feet had given out, and she showed other outward evidences of had usage. The mare accordingly was offered at a sacrifice, but Mr. Berry declined to purchase her at any price, as he thought he had horses enough. It was claimed that the Henry and Messenger blood alone made the mare especially valuable for breeding purposes, and she finally found her way into the hands of Joseph Genung, of New York. In the spring of 1835 Mr. Berry went to see the mare, and being well pleased with her looks purchased her there and then. She was a beautiful bay in color, somewhat advanced in years, 16 hands high, with a star and snip in forehead, and both hind feet white above the ankles. The mare was at once taken to Pompton Plains, and shortly afterward Mr. Genung, her former owner, died, thus cutting off all hopes of ever tracing her correct pedigree. In the spring of 1835 Mr. Coburn sent his horse to John Riker's tavern, near Little Falls, Passaic county, N. Y., in charge of Nicholas Smalley, to serve a limited number of mares. Mr. Berry bred the daughter of Henry, but she failed to get in foal. The next season the horse was sent to the same place, but in charge of another groom, who neglected and treated him so badly that Mr. Riker sent word to the owner that he had better take him away. The horse was returned to New York. Very naturally Mr. Coburn became so disgusted with the stallion business that, meeting Mr. Berry a few days afterward, he urged him to take the horse home with him, breed him to as many mares as he liked, and then castrate him, an operation; at that time in the whole country performed only by Henry Berry. This was in 1836, and after breeding him to the Henry mare Mr. Berry carried out the other instructions of his owner. The mare proved in foal, and in June, 1837, dropped the colt which became so famous under the name of his sire, American Star. Some disappointment was manifested with the colt on its first appearance, both in color and in size. However, the youngster received but little care and attention, took it as he could catch it, hardly ever under a shelter until three years of age, when he was taken out of the barn-yard and broken to harness. There was nothing handsome or stylish about him, but he had a great deal of speed. Mr. Berry ran him in great many quarter and half-mile races, and never had him beaten. At five years of age he served mares at most any price, and was driven to a butcher wagon. He then began to show a fine trotting step. This was in 1842. The next season he received about the same treatment, and could out-trot any horse in the whole country and have that butcher wagon after him. In the spring of 1844 he was fixed up a little and advertised to stand for mares at New Milford and Warwick, Orange county, N. J., to insure a mare in foal for seven dollars, and warranted to haul a wagon on the road a mile in three minutes. For some cause he served but few mares. In August, 1844, the horse was sold to John Blauvelt, a silversmith in New York city, for \$350 and a set of single harness. He was used for a road horse, and his new owner claimed him to be a great horse for pluck, bottom and speed. The hard roads, and hard drives, however, soon showed the weak points of the dam, his feet giving out, quarter cracks making their appearance. The next season he came out all right; but his owner apprehending that the old trouble might again show itself, he was traded off to Cyrus Duhois, of Ulster county, N. Y., for a gray gelding. How long Duhois owned him is not accurately known, but he performed stud service in Orange county for a limited period. He was subsequently traded for a bay mare to a man in Hudson, who sold him to Walter Shafer, of Hillsdale, Columbia county, N. Y. After keeping him one or two seasons, Edmund Seely and Hiram Smith, of Goshen, bought him for \$750, in the fall of 1849. In the following year he stood for mares in Goshen and served 54 mares and got 45 colts, at \$15 a colt. His principle produce up to this period was Lady Sanford, the dam of Jay Gould 2:21, by Old Hambletonian, for whom Mr. H. N. Smith, of the Fashion Stud Farm, Trenton, N. J., paid \$32,000. In 1848 he got Clara, the dam of Dictator, sire of Jay-Eye-See 2:10, Phallas 2:15, and Director 2:17, and who was purchased, it is said, in the interest of Robert Bonner, at a cost of \$25,000; Dexter 2:17, who cost Mr. Bonner \$33,000, and Astoria, record 2:29. In 1851 American Star made the season at Goshen, at \$10 to insure. He served 87 mares and got 63 colts. Among the foals of this year were Conklin's American Star, sire of St. Cloud and Star, and the dam of California Dexter. In 1852, at the same place and same price he served 92 mares and got 62 colts. This year brought forth Lady Sears, the dam of Huntress 2:20, and Trio 2:23, and Stella, the dam of Lady Morrison 2:27, all of whom were by Volunteer. Magnolia, sire of Magnolia, record 2:26, was also foaled this year. In 1853 he served 49 mares and got 35 colts. Lizzie Walker, the dam of Startle, by Hambletonian, for whom Mr. Bonner paid \$16,000; Silvertail, dam of Driver, by Volunteer, record 2:19; Jennie Hawkins, dam of Lady Blessington, by Middletown, record 2:27; Bolly Lewis, record 2:29, and Julia Macree, dam of Chester, record 2:27, and Enfield, record 2:29, both by Old Hambletonian, were foals of this year. In the fall of 1853 he was taken to Elmira and trotted a race against Jupiter. It was a well-contested race and resulted in a victory for Star, who won the sixth heat and race in 2:45. In 1854 he was taken back to Elmira and stood for mares, served twenty and got fifteen colts, at \$20 a colt. All of these colts were mares. Lady Irwin, dam of Masterload, by Rysdyk's Hambletonian, and sire of Edward 2:19, Nancy Whitman, dam of Robert McGregor, record 2:17; Jenny,

dam of Powers, by Volunteer, record 2:21, and the County House mare, dam of Nettie, by Old Hambletonian, were among the principle foals of the year. In 1855 Star was taken to Piermont, N. Y., and served 50 mares and got 35 colts at \$20. Sir Henry, the sire of Lady Star (Capitola) 2:24, and the dam of Joe Banker, by George Wilkes 2:19, were the foals of this year. In 1856 the horse was taken to Mendota, Illinois, and served thirty mares and got 20 colts at \$20. Well's Star, sire of the dam of Modesty, record 2:26, was the prominent foal of this year. In 1857 he again stood in Goshen, and served 64 mares and got 53 colts at \$20. In 1858 he made the season at Goshen, N. Y., and served 55 mares and got 45 colts at \$20. Among his foals of the year were Dolly Mills, dam of Ajax; Orange Girl, record 2:20, and Walkill Chief, all by Hambletonian. Up to this time Star had been owned by Seely and Smith. In the fall or winter of 1858 the latter, having found some little fault with the care and treatment the old horse was receiving, concluded to sell his share, and Mr. Seely became the sole owner of him. In the spring of 1859 American Star stood at Goshen, at \$25 to insure, and served 72 mares and got 43 colts. The foals of this year included Lady Fallis, dam of Kishar 2:27, and Socrates, both by Hambletonian, and Imogene, dam of Leland, by Hambletonian. In 1860 he again stood at Goshen, but with all of Uncle Edmund Seely's ingenuity in digging pits for mares to stand in he failed to serve a quarter of the mares offered, yet he got ten colts at \$25. Mary Hulse, the dam of Charley Champlin, by Messenger Duroc, and Newburgh, record 2:30, were among the foals of the year. The same fall Mr. Seely gave Star away to Mr. Theodore Dusenbury, who took him to the farm of Hudson Duryea, near Goshen, where, out in a field, in February, 1861, he died at the age of 24 years. His last set of colts were foaled in 1861, among them being Starlight, dam of Maud, by Hambletonian, record 2:29, and Lady Brown, dam of Pickwick, by Backman's Idol, record 2:29. No horse ever lived that more certainly stamped upon his offspring his own characteristics of gait, bottom and disposition than did American Star.

About Starting.

If anything can make a man grit his teeth and "think wicked," it is to train a horse for a whole season and when he has got him in proper condition and pays his entrance-fee for the privilege of competing for the prize, to see a stragglng start made and his horse, after running faster than the first out, to be declared as nowhere, not even getting a place. Yes, to race a half or whole second faster than the one first at the line, and not even be named in the result, is certainly putting the civility of a trainer to the severest test. Now just such starts have become frequent, so frequent as to be common and scarcely to be noticed. Is this thing to continue? Are we never to have anything better? Shall our racing contests be as unfair as the game of the thimble rigger or the slight-of-hand practice of those who deal from the bottom; or will the management take proper measures to remedy the wrong and insure something like fairness? The rules are not at fault, for they plainly require a fair start and fair riding afterward. The trouble comes of the disobedience of the riders. Any child can order a fair start and drop the flag for the purpose, and a general of cavalry can do no more unless he has the control of the riders. The jockeys all know how this thing is. They go to the post with orders to get a "good send off" from the trainer, and this means to get the lead and the advantage if they can. They are often told to never mind the fines imposed, for these will be gladly paid, but to "get away well." Now, as long as this thing is allowed we will have no fairness in racing. It makes no difference who is the official starter, the result is had enough. Fines and suspensions do no good. The fines are promptly paid as a cheap price for an advantage, and suspension for any time less than a life-time does no good. Riders laugh at suspension, and think it a good bargain for the chance they have enjoyed and the advantages obtained. A day, a week, or for the meetings is nothing, for a good "send-off" pays well for the privilege of being a mere spectator a few days. A chance to play the gentleman a few days and enjoy the profits of the race-won is no punishment in these gambling times to impose on a forward rider. It is nothing less than a luxury cheaply obtained, yet it is the custom of every club, and nothing better will we have until suspension means punishment and becomes really what it means. The tail end of the troopers also is at fault, and sometimes more to blame than those who lead off well. This class need the same punishment as the forward mover, for they delay the starts, and sometimes on purpose to worry the other horses, and evidently sometimes to get heat or to make as poor a performance as possible. The remedy is very simple and easy. In order to insure fairness, nothing need be done but to make the punishment of the riders suited to the demands of the case. Any one will do to order a fair start, but nothing short of proper punishment will cause the actors to obey the order. This is the business of the clubs. It is their duty to compel the riders to act fairly. The officer for this purpose finds his hands tied whenever he proposes adequate punishment. The inevitable "sneal" is heard, and numerous propositions are made to punish him by putting some one else in his place. His duty is a hard one. The starter is cursed for had started and cursed for punishing those who are most guilty in the case. The jockeys should be required to move up in regular cavalry style, and charge to the front when ordered to do so, and those who do not break away at the order should be punished, same as those who break away before the order is given. There is no other way to manage the business. If there was I would name it. All I ask for is fairness, even up all around. Put the horses in proper position, and then when all are in order give the command and let it be obeyed; then if some horses are quicker at getting in full speed than others, it is not the starter's fault, and it is fair for all alike.—John Kay, in Turf, Field and Farm.

**Mr. Haggin's Kentucky Stable.**

The following horses, owned by J. B. Haggin, are now in training at Lexington, Kentucky, in charge of Jas. Brown, better known in California as "Brownie."

Chestnut filly, Nellie Peyton, 5, by imp. Hurrah—Emily Peyton.

Chestnut colt, Mark Daly, 2, by Kyrle Daly—Cordelia.

Chestnut filly Bessie Peyton, 3, by imp. Hurrah—Emily Peyton.

Chestnut colt Keene, 3, by Dntch Skater—Kapanga.

Chestnut colt Tyrant, 2, by Great Tom—Moselle.

Bay filly, 2, by imp. Mortimer—imp. Refinement.

Lord Falmouth has won on the turf in the last ten years, over a million of dollars.

Betting Jockeys Forestalling Owners.

We understand that it was the energetic action of Mr. Caledon Alexander which caused the stewards of the Jockey Club to put into force the resolutions that had been passed against jockeys owning horses and betting. We know that the club are only waiting for the opportunity to begin at the fountain head, and warn off one of the very foremost jockeys of the day, but as yet they have no tangible evidence against him. It must not be supposed that the jockey club do not see the large fortunes that are being accumulated by certain jockeys without inquiring how those fortunes have been made. Since the close of the racing season we have had a conversation with a very leading member of the Jockey Club on this subject. Said that member, speaking of a prominent jockey who possesses in a marked manner visible signs of wealth—and here we may at once state that it is not Archer to whom we were alluding—"That man five years ago had not a hundred pounds that he could call his own, and it is very easy to calculate what he has earned fairly since, as the list of winning jockeys will show that. During the five years his riding fees have perhaps amounted to £2,000 per annum, though that, I should say, is much over the mark, and he may possibly have £500 per annum more in the shape of retainers. Calculate his expenditure at £1,000 per annum, which is not extravagant, looking at his establishment, and the balance to go into the bank for the five years would be considerably under £10,000. And yet he is reputed to be worth fifty or sixty thousand pounds, and the property we know of is certainly worth three times the amount he has earned. Where has the £40,000 in excess of earnings come from? Those who were entitled to make him presents did not give £4,000, much less £40,000; and every shilling of the balance means payment either for betraying his trust or in indulging in that very betting we have prohibited, and perhaps both." We have related this conversation word for word, as nearly as we can recollect it. It is a very awkward way of looking at the matter, and yet it is difficult to answer. The same informant told us in connection with jockeys' betting, and of their relations with certain "professional backers" a very marked story. One of the non-betting owners had a colt that he tried to be almost a certainty for a forthcoming race. The outside public were not supposed to know anything with regard to that colt, and yet on the day of the race, when a friend of that owner went down the line of book-makers to back the horse—all that he wanted was a pony—the reply all along was "full," "can't lay," etc. At last one book-maker said, "Well, if all that you want is a pony, I will lay you 5 to 4 that that amount," and this was taken. The animal won very easily. Sir ——— who was the hacker in question, became curious as to where all the money had gone, seeing that the owner had not won a shilling beyond the stakes. He was not long in making the discovery. The moment the numbers were up, a well-known individual, who is believed, though there is no actual proof of it, to be the commissioner of the jockey who rode in the trial, skinned every hook, except about £4,000 which went into the hands of Mr. Walton, who, of course, would reward this very particular merit, even if he, also, in addition to the ordinary commissioner, was not betting for the jockey. The question that arises is, has anyone other than the owner, or those immediately concerned, a right to give a jockey presents? Do outsiders give Mr. Charles Russell, Q. C., £500 here and £100 there for some fine speech which has gained an important law case? Do we give the grocer's man fivers and tenners in recognition of the merit he displayed in weighing out our pound of sugar? Why should racing be the only occupation in which one man is to give large sums of money to the servant of some other man for performing duties appertaining to that other man? In nine cases out of ten, these presents are not given as a reward for the past, but with a view to finding out all the jockey knows in the future. The past has merely put the donors in a position to make these presents.—London Sporting Times.

**Old Kate.**

In Mr. Simpson's last paper he gives us to understand that Antevolo, brother to Anteco, is able to show a 2:24 clip, and he lacks some months of being three years old. Perhaps the high speed developed by this clever colt will account for the sale of his elder brother. The younger horse, he informs us in his issue of the 19th, has never worn an appendage of any sort upon his legs, and has never worn a shoe. His feet are as hard as iron and tough as those of the traditional government mule. He trotted in 2:41 at two years old, and got second money in the Embryo Stakes, won by Carrie C. his half sister. He is likely to make a larger horse than his brother, and will be heard of in good time. Let him once get below 2:25, and the name of Colombine, by Richmond, will be enrolled among the Belgravian matrons of the trotting world. There was a mare of this sort once owned in Oregon, but she is now dead, and all hopes of gaining any clew to her identity are utterly abandoned. She was brought into Rogue River valley in 1855, just when Sailor Diggings and Althouse were paying their best, by a man who sold her to James McDonough, of Willow Springs, Jackson county. Old Kate died in 1875, the property of Mr. McDonough, who was a man who never trained horses for the turf and did not bet money on anything. The old mare was a dark bay, with a rather plain head, but a magnificent eye and a neck that was almost faultless in its symmetry of mould. Kate was bred to Vermont in 1862 and produced Ella Lewis (2:27), and after old Vermont had left the country she was bred to his son, Penninger's Mike, and produced Barney (2:25). She was also bred to a Linnux horse called Black Satan, owned by Jim Clugage, and produced the Wagner mare and Young Kate. The latter was bred to Vermont and produced by Mountain Boy, afterwards owned by C. W. Kellogg, of San Francisco, who considered him the best pole-horse in California, and offered me \$3,000 if I would find a horse to mate him. Young Kate fell in a prospect hole and was killed, but not till she had produced four daughters, one of whom was called Ribbon. Ribbon was own sister to Cal. Kellogg's horse, whom I drove nearly all the winter of 1870, while he was owned by Livy Swan, of Yreka. He was the greatest road horse I ever saw. Ribbon was bred to Penninger's Mike, the sire of Barney and produced Nellie, owned by C. W. Kahler and trained by Jim Sutherland of Yreka. She beat Maggie Arnold and Lady Clyde in 2:36, and the following year was beaten by Maggie Arnold a neck in 2:35, the last quarter being trotted in 35 seconds. Vermont stood a number of years in Jackson county and was brought into the Willamette valley in 1867, where he got Parrott, Faustina and Blue Mountain Boy. But in southern Oregon he never could get a three-minute horse from any mare that was not descended from old Kate. The Arabs derive all their pedigrees from their mares, and do from our stallions. The breeders of Jackson county are justified in imitating the Bedouin example. Old Kate, in the hands of a shrewd man like the

Kiam M. Rysdyk, would have been a bonanza; but Mr. McDonough never had the management to bring about such results. He ran heavy freight wagons to Crescent city some years, and at other times to Red Bluff, and the old mare spent most of her best years in a six-horse team. When the snow on the coast mountains ended hantling for the year, this Belgravian matron would be ploughing the fields at Willow Springs or toiling along the road to Jacksonville with heavy leads of cord-wood. The old mare occupies such a place among mares in Oregon as Abdallah occupies among sires on Long Island. Never appreciated during her life-time, she will occupy a niche in the temple of fame among the famous matrons of the older states. After years of undeserved obscurity she will bloom out into a fame that nothing but a "dark age" can eradicate.—*T. B. Merry.*

### Breeding the Park Horse.

It is not a widely-known fact that the most eminent owner on the American turf, Mr. Pierre Lorillard has taken up a new branch of horse-breeding in connection with his thoroughbred interest. We refer to the rearing of park horses. A successful experiment of this gentleman has been the crossing of thoroughbred stallions upon fine Percheron mares, but he has gone a step further. The trotting stallion Howe's Bismarck, a fine son of Gen. Knox, is kept at Ranocas for the purpose of crossing upon rooomy thoroughbred mares. We think the result will prove a success. The fine bone and conformation of the thoroughbred, combined with the size and action of the trotter, will be very apt to make a horse of fine etation and style. Great speed cannot be looked for, but that is not the object in breeding a show horse. An animal that will become the glittering trappings of the private equipage is the one desired, for in the park horse the sense of sight is to be gratified. As a specimen of his efforts in the improvement of this type of the equine family, Mr. Lorillard is now using a superb chestnut to his coupe, that, in the opinion of good judges, is thought to be the finest animal of his kind in the city. Being a comparative beginner, it will be several years yet before Mr. Lorillard's new venture will give results. In going the right way about it the sequel will prove a source of wealth, maybe not so lucrative as the breeding of race-horses, but still a paying investment and productive of much good.—*Sportsman.*

### An Untimely Foal.

On December 24th, last, at Palo Alto, the thoroughbred mare Robin Girl, by Enquire, her dam Cythia Sue, by Joe Stoner, gave birth to a fine colt. It was not premature in the veterinarian sense but fully developed, and there is great regret at the farm that the produce of so finely bred a mare as Robin Girl should be virtually lost for a season by the arrival of this colt eight days too soon. Investigation showed that nature had taken its due course, and the colt was fully due when dropped, the mare having been bred to Monday surreptitiously by an over officious groom. His only explanation of his action was that "all horsemen do the same thing." He strained the truth in the statement for it is very rare that breeders, nowadays at least, descend to such dishonesty. It certainly is not one of the methods in vogue at Palo Alto, and the groom was promptly dismissed when the facts came to light. The foal may be of service as a saddle horse or perhaps as a breeder, but is practically deterred from the turf by being fifty-one weeks younger than his age, as fixed by the rule.

### From Butte County.

Mr. Charles Sherman, proprietor of the Chico Race Track, was in the city this week and speaks enthusiastically of the outlook in Butte county this spring. The number of promising trotters that will be trained this season is larger than ever before, in fact, that part of the Sacramento valley is about to come to the front in the matter of fine and carefully bred stock. The track at Chico will be put in order, with some improvements over its old form, and a spring meeting given, at which time liberal purses will be offered, open to the State. Mr. Sherman has four sons of Brigadier which he proposes to "bring out" this year. He also reports some very fine Singleton colts in that neighborhood that will be heard from. D. M. Reavis will be on hand with some fast ones, and Fred Shafer, of Gridley, will train some good ones, Brigadiers, Singletons and others. Altogether the horses of Butte are showing great progress in point of merit, and although in the shadow of Gen. Bidwell and his self-sufficient wisdom, the turf flourishes and its devotees are prosperous, happy and bent on having the best.

## ROWING.

### The Oxford-Cambridge Boat-Race.

If the Oxford-Cambridge race takes place as usual on Saturday before Holy Week, it will be rowed on April 5th, about 11 A. M. The Cambridge President, Mr. R. G. Gridley, began work on the 10th, when under the supervision of Mr. E. H. Prest, an Old Blue, the following pairs were taken out: R. G. Gridley, Third Trinity, and E. Haig, Third Trinity; F. Pitman, Third Trinity, and S. Swann, Trinity Hall; F. E. Churchill, Third Trinity, and J. C. Brown, Lady Margaret; C. W. Moore, Christ's, and C. J. Bristowe, Trinity Hall, but the eight was not launched. Of the above oarsmen four are Old Blues, while the other quartette distinguished themselves in the Trial Eights last month. Neither Messrs. Fairbairn nor Meyrick are yet in residence, but it is understood that both are willing to row should their services be required. On the 11th, an eight was launched as follows: R. G. Gridley, Third Trinity, bow; second, E. W. Haig, Third Trinity; third, F. J. Pitman, Third Trinity; fourth, S. Swann, Trinity Hall; fifth, F. C. Churchill, Third Trinity; sixth, J. Brown, Lady Margaret; seventh, C. W. Moore, Christ's; C. J. Bristowe, Trinity Hall, stroke, and C. Tyndall Biscoe, Jesus, coxswain. It is stated on authority that the crew would continue to practice on the Cam until the end of January, when they will migrate to Ely, and for the next four weeks practice over the Queen Adelaide course. A new practice-boat by Foster, a local builder, was to be finished in a few days, and both Clasper and Logan have received orders for racing eights. Evidently Mr. Gridley means to leave no stone unturned to endeavor to turn the tide of ill fortune that for the last few years has dogged the steps of the Light Blues.

At Melbourne, Australia, on December 8th, the final heats for the Hunt Trophy were rowed. These trials were expected to develop the best man in the colonies, outside of Laycock, and the winner is to be pitted against Hanlan in case Laycock does not recover from his broken leg in time to train. Beach and Trickett were the final contestants, Beach winning easily in 20:53. He finished first by five lengths.

## STABLE AND PADDOCK.

### Queries about Tips.

DEER LODGE, Ma., February 4th, 1884.

JOS. CAIRN SIMPSON:—It was well that you sent me the bound edition of Tips and Toe-Weights, as it bids fair to be speedily well worn. It is the first volume I had got hold of in thirteen years that caused me to neglect our local paper for a week. I have been carefully over it three times, making many marginal notes for future reference. I propose to at once adopt the system on all my roadsters, and if it don't work on the old favorites that have been full shod every day of their lives, certainly no sane person would condemn the system on that account.

Since I first became interested in tips I have spoken to at least fifty horsemen and shoers, and not one of them have ever seen a tip.

Within find pattern of foot I want to work on first. Please have your shoer make a pair of tips (ordinary) to be used as a pattern or rather "model." Would like them to be tolerably smoothly finished, as I will keep them in my business house where all horsemen will see them, and where all questions pertaining to the track, horse or roadster are daily discussed. Please see to it that the nail-holes have the proper "pitch" or slant, also the counter-sink, for if there is an error, rest assured it will be copied many times probably before we "fall down on it." I predict that unless some one in the near future invents an instrument to cut the channel to bed the tip, many a horseman that is a convert to the system will be "jawed loose" by the shoeing smith just when he is ready to experiment. I do not like the idea of cutting square across the toe, but think the sole should be left. How on earth do you get a snug fit or shoulder for tip—i. e., what tool do you use? Was the instrument alluded to so briefly on page 67 a failure?—as you use the words "which I used for a time." Blacksmith labor is very high here. Is there no place where I can buy tips? Would be pleased to hear from you at your earliest convenience, and if you cannot give your immediate attention to the "model" tips, please advise me as to their cost, and I will meantime remit by return mail. Send tips by mail. What make of nail do you use? Have you used the Putnam?

Respectfully,

W. B. MILLER.

Inasmuch as there have been several inquiries of the same tenor as the above, the questioner can accept this as a reply to each. Regarding sending specimen tips we hope ere long to have a variety to select from in the malleable iron which we are now testing. So far the trials have been satisfactory, more so than was anticipated, as without recarborizing they appear to wear better than steel. As the trials are so recent it cannot yet be authoritatively stated that there will be no objections to their use, though we have great confidence that they will prove in every respect satisfactory. In the first place, patterns or drawings will have to be made from which the brass models are fashioned, and these being polished the castings will have a higher finish than when made after wood.

The instrument alluded to was a machine which clamped on to the foot, and with a plan of cutters which would only remove so much of the horn as the metal replaced. The tool used, although partially successful, was not as perfect as was desired, and the improvements have been delayed owing to the man who made it being unable to complete the work. He will commence again this week, so that we hope to give full trials by the first of March, and should it prove to perform the work satisfactorily, will have some made at once. With the ordinary knife and fine rasps the shoulder can be cut and the wall removed without much interference with the sole. From descriptions of the Charlier method of shoeing, which is meeting with warm support in England, a knife is used which only cuts away the horn which is replaced by the steel rim. From these accounts it is simply a knife of peculiar construction, and not at all like the machine referred to. That will cut a perfectly true recess for the tip, and that when made equally true the joining of metal and horn will be correct. We have used nearly all kinds of nails. The Putnam is very good. In a short time we hope to give a description of a newly invented horse-shoe nail, which has novel features, and in all probability superior to any heretofore used.

### Affairs at Belle Meade.

We recently had the pleasure of a visit from Gen. W. H. Jackson, long and favorably known as the real head of affairs at the famous Belle Meade Stock Farm. As announced by us some weeks ago, Gen. Jackson, in conjunction with his brother, the Senator, will in future control this gigantic establishment. Judged by its success in the past the produce annually sold from this stock-farm is destined to hold its own against all comers. As usual with all men of enterprise, the General was full of plans for the future. There are 4,000 acres of land at Belle Meade sown in the famous blue-grass, now famous all over the world. In its paddocks roam no less than eighty mares, but this already large number will be speedily augmented to one hundred. The eighty mares now there will be equally divided into four parts, and each of the stallions, Bramble, Enquirer, Great Tom and Luke Blackburn, will have twenty, in addition to a limited number of approved mares, whose owners are clamoring to be accommodated. The terms of each stallion will be \$100. Now, any one will at once admit that this impartiality is the very best thing that the General could do to give confidence to buyers of yearlings. Owners may exclaim, "What! One hundred dollars for young, untried stallions like Bramble and Luke Blackburn! What are they thinking of?" Very well; for the same money you can get the services of either Enquirer or Great Tom. The first named had an established reputation years ago, and when his yearlings were sold last spring, nearly two of both sexes brought over \$49,000, an average of nearly \$870. The Enquirer two-year-olds did not perform so well in 1883, but there probably never was a lot which were so unlucky, as we intend to show later on. The get of Great Tom showed wonderful speed, and if he doesn't get another race-horse in some years, Gen. Harding and Thackeray would cause his yearlings to sell at high prices. Bramble has grown into a magnificent horse, compared with what he was in racing form. His owner declares him a perfect likeness of his sire, and from the general appearance of his yearlings he will be the legitimate successor of old Bonnie Scotland. One of his yearling fillies, out of the dam of Gen. Harding, is as handsome and racing-like as was ever foaled at this establishment. Bramble has also in foal the dam of Luke Blackburn, while in return the latter covered Ivy Leaf (Bramble's dam), and her foal is due almost any day. Arizona (Aranza's dam) and Kathleen (dam of George Kiney) are also in foal to him. As to Luke Blackburn's chances as a stallion no one is safe in making such predictions concerning any horse, for many of the greatest race-horses of the world failed

at the stud. But if constitution, looks, muscular conformation, and certain indications best known to breeders go for anything, he is bound to make his name go down to posterity, equally famous at the stud as on the turf.

The annual sale of the yearlings bred at Belle Meade will take place on April 30th. Forty-nine head will be offered, including the get of Enquirer, Great Tom and Bramble. Catalogues will be issued in due time, and later on we hope to be able to publish full particulars concerning their qualities, judging from appearances.—*Sportsman.*

### Working Capacity of Unshod Horses.

I send herewith a photograph of the near fore-foot of my unshod, white-hoofed, low-heeled chestnut horse "Tommy." This photograph was taken after I had driven the old horse (he may be twenty years old) in a phaeton, a hundred miles, on hard roads in and around London. This does not include drives for exercise. It is impossible to say that the hoofs of this old horse (bought chiefly in order to test this question) are exceptionally good. The reverse is the case, as any of your readers who may favor me with a call shall see for themselves. That this animal, after having been for years "the victim of the farrier," should work, as he does, barefoot, is, I think, remarkable. As the old horse is nearly, if not quite, thoroughbred, he must have been shod (as is the vicious custom on the turf) very early; yet over all these evil influences incidental to "the miserable coerced shod foot," the unshod foot has triumphed. Shod, my horse "brushed" and stumbled badly, but barefoot he does neither.

In Africa, a horse working in a post-cart does barefoot, over bad ground, twenty-four miles in two hours. In New Mexico horses are ridden barefoot forty miles day after day, and perhaps twenty miles of this will be over a rough mountain track. In Brazil, little horses (which seldom exceed fourteen hands) carry, slung across pack-saddles, barefoot (they have never been shod) some thirty-two stone! Thus loaded (or rather, overloaded) they do twenty to thirty miles a day. Their journey may be some three hundred miles, and they load back the same. In England, even race-horses are shod. To gallop over a race-course, which no doubt may be hard at times, it is actually thought necessary to shoe a horse. Here, where weight is of the very utmost consequence, the heels of the English race-horse must be weighted with plates. The fact that Marden, when he ran barefoot in the Sandown Derby on June 2d, 1882, heat, in the deciding heat, his two shod opponents by three lengths (though in his first race with them that day Marden, with his plates on, could only dead heat them); such a fact as this weighs little with the horse Englishman, who will still be found to set his thoughts or opinions against facts. After all that can be said as far as argument goes, he will still be found to prefer mere assertion; it will still be the "I think this," and "I don't think the other," with him. But then is not the horse (and for the most part unraveled) Englishman, as a rule, in the language of "Freelance" in "Horses and Roads," "energetically conservative"?

Any one who will read this book will thereby much increase his knowledge as to the real capability of the horse's hoof. "Horses and Roads" was published in 1880, by Longman, Paternoster Row. I find quoted in it the saying, "An ounce at the heel tells more than a pound on the back." This explains Marden's success when, by removal of "plates," his heels were lightened for the deciding heat.

But many of our countrymen connected with horses, deeming themselves practical men, are too apt to think that they have, as Mr. Ransom ("Freelance") says, "gone into everything," and they may consider their knowledge as to the real capability of the horse's hoof complete. Now, is it complete? Is not shoeing horses very much a matter of routine with us? I will give two instances in order to prove this:

1. Some weeks ago I received a letter in which the writer said that he had been told by a veterinary surgeon that if a horse were worked barefoot his hoofs "would wear down to the quick in a few hours." Now, I saw the other day a horse which has been doing the work of his master, a doctor, barefoot, not for "a few hours," but for over five years. During this time the horse must have traveled, shoeless as he is, some thirteen thousand miles over the not too good roads of the east of London, and often with a heavy brumham behind him. The hoofs of this horse are the admiration of veterinary surgeons, and they show no sign of undue wear. This horse was unshod when eight years old.

2. I recently saw a pony seventeen or eighteen years old, never shod, except for a short time when in the breaker's hands. This breaker shod the pony. This was done against the master's wish and without his knowledge. The breaker was, I dare say, practical enough in other details of his calling, but like the majority of his countrymen, he "had always seen horses shod, and he thought they always must be shod." The pony was sure-footed without shoes, but with them she nearly fell with her master as he rode her home from the breaker's. The shoes were taken off, and the pony did her work admirably without them for years. She has done plenty of work, for her owner tells me that he has frequently driven her, and also ridden her, over forty miles in the day. The saying, "One horse can wear out four sets of legs," does not, of course, apply to this pony. The application of this saying is to the shod horse, whose every step is made upon iron. As a writer has well said, "It is the shoe, not the road, that hurts the horse."

Now, we see that both veterinarian and breaker mistook the nail-lacerated, contracted, unused foot for the natural, healthy foot. The former, raised off the ground with an iron ring called a shoe, and with the insensative sole and frog pared away, is not (when the shoe is first pulled off) fit for contact with the ground. In such a case time must be given for the foot to recover before the unshod horse can be asked to work barefoot.

I have a cast of the off fore-foot of a mare belonging to Mr. Whitmore Baker. This cast was taken in December, 1882, after the mare had worked barefoot on stony, hilly Devon roads for two years. She was unshod in December, 1880, being then seven years old. This foot shows no signs of undue wear, and I shall be happy to show the cast to any one.—*Arthur F. Astley, in Land and Water.*

Note.—The photograph shows very much such a foot as that of Anteeo, represented in Tips and Toe-Weights.

The well-known English race-horse, Scottish Chief, by Lord of the Isles, from Miss Ann, by The Little Kuoow, was sold, at Tattersall's, on the 14th inst., for 300 guineas, to Mr. Edward Blau, and will go to France. As a race-horse he was a success. He was third for the Derby, and won the Ascot Gold Cup, as a three-year-old. As a sire, his chief success was Marie Stuart, who, in 1873, won the Oaks and St. Leger. His sons have not, as a rule, been successful at the stud, but his daughters are highly valued as the dams of Adriana and Snperba.

## THE GUN.

### A Correction from Gilroy.

EDITOR BREEDER AND SPORTSMAN.—Please correct the statement that appeared in a recent issue of your journal to the effect that the live pigeon shoot advertised to come off in this city on the 22d instant is to be under the auspices of the Gilroy Rod and Gun Club. I am instructed by the club to say that it is not in any manner whatsoever interested in said shoot. The gentlemen who are getting it up are, however, citizens of Gilroy, and will no doubt make the affair a success in every respect.

J. A. PAYNE,  
Secretary.

### A Sportsman's Kit.

Dr. J. Fletcher Smith, who is now temporarily located in this city, exhibited the other day to an attaché of this office a very neat outfit in the way of armament. The doctor came to California at the solicitation of W. H. Porter, auditor of the Central Pacific Railroad Company, who desired his professional services, but having heard some thing of the game of this coast he brought along a few instruments not found in the surgical catalogue. He is an enthusiastic sportsman. His outfit contains seven fine rifles, a Ballard, a Remington, a Kennedy, a Colt, a Springfield, and two Winchester; three shot guns, all made to order in England, a Greener, a Scott and an E. Hollis & Sons; three pairs of revolvers of the Colt and Smith & Wesson patterns; six knives of the Bowie fashion, and a wicked looking stiletto that he picked up at the Paris Exposition in 1878. In the use of these arms the doctor is proficient, with the rifle and pistol particularly so. As the above enumeration indicates, the pleasure he finds in life is in the days he spends afield. He recently took a trip to Monterey county after quail and found fine shooting. Before he returns to the east he expects to visit the northern part of the State, and have a picnic with the larger game.

Our young friend, Dr. Knowles, a member of the Alameda Gun Club, and holding quite a prominent position among our crack shots at the trap, has lately been making some fine records. On four different occasions, within a short period, he has killed 122 out of 130 birds. From this performance the members of his club are anxious to back him for \$100 against any man in the State. In a conversation with Dr. Knowles on the subject, we find he is himself inclined to bar Messrs. Robinson and Lambert, as he readily admits their prowess at the trap. The members of the club, willing to back Dr. Knowles, however, strongly want the champions included as well as all others, as they think he is able to compete with them, and certainly his recent shooting justifies their confidence. If, therefore, Dr. Knowles, on consulting with his friends, will include Mr. Robinson, we personally know a match can be made in a few hours, and the stakes, within the same time, deposited in this office. Under these circumstances, we hope to hear from the doctor's friends definitely next week. In the meantime we assume the responsibility of saying there will be no hesitation on Mr. Robinson's part to accept any propositions that may be made public. A match between these gentlemen would open the season in good form.

We suggested last week that there should be a general mud-hen hunt, on the principle of extermination, by the different clubs, at the close of the season. We find the members of the Teal Club have killed a great many this year, each, when out, making a matter of duty to kill all he can. Last Saturday, Mr. Upham added ten more to his score. On the subject of these pestiferous birds an Eastern writer says:

"The next question that must occupy the attention of the duck hunter here is the mud-hen. It is safe to say that these pests get the lion's share of all the celery that grows in our lakes. And I also believe that their numbers could be greatly lessened by netting. My idea would be something of the nature of a fyke or pound net with long leads. It would not be necessary to cover any part of it, as it is well known that they cannot rise from the water without first getting under way by paddling or kicking the water for a number of rods. Anyone who has noticed their motions has observed that they can be driven like a flock of sheep. Whether they can be trapped or not it would not be a very expensive experiment to try, if a number will unite in doing so."

We quote the following from the London World:

"Horatio Ross, the veteran Scotch deer-stalker, has celebrated his golden wedding. Mr. Ross has a record probably without parallel in sporting annals. On the 12th of August last he completed his 70th year on the moor, his experience of grouse shooting dating as far back as 1814. As a deer-stalker and champion rifle-shoote he has stood unrivaled in his day, and even now, in his 83d year, his hand has not altogether lost its cunning. In August, 1882, he wrote to a friend, 'I was out at 3 A. M., the other day, fired 83 shots and brought down 83 birds.'"

Mr. Ross once sat in Parliament, but we do not know that doing so made him any better a man. We prefer his record of 83 birds in 83 shots at 83 years of age. The old gentleman evidently still gets up before breakfast to do his shooting.

Duck shooting has about ended for the year. Of course, no true sportsman would so disregard public opinion as to kill ducks after 1st of April, though doing so would not violate our State law. Since the storm there has literally been no birds on their accustomed haunts, and we failed to obtain, since then, anything worth publishing. The birds have all gone inland, and when they return, if they do so at all, they would not be fit for the table, even if the mating season was not close at hand. For these reasons, the Cordelia and Tule Belle Clubs have closed their barges for the season. The Teal Club have not killed any ducks to speak of for two weeks. Last Saturday, Mr. Upham got a tolerable string of snipe and a fine honker, which, on being properly cooked, he pronounced very good eating. This club may try again for snipe, in the meantime, but they will close on the 15th of April for the season.

The effect of a good example is shown by the action of the Gilroy Gun Club in passing a resolution to expel any of its members who kill ducks after the 29th inst. Quite a number of gentlemen have spoken to me on the matter, approving the action and expressing their intention of following the example. It is thus a wholesome public opinion is formed in all matters. By and by, without legislative aid, if we cannot obtain it, our clubs, by their own power, will cleanse the State from the disgrace of poaching and indiscriminate slaughter. Let them be encouraged.

Trap shooting for 1884 is about to open in earnest, Washington's Birthday being very properly selected as the opening day. In this city, the San Francisco Gun Club have their first annual official match on that day at the Oakland Driving Park. From reports reaching us there will soon be a grand tournament at Tehama and Gridley, open to the State, and one at Gilroy, but we are not informed whether the last named is exclusively for the club or not. If open to outsiders several local gentlemen would be pleased to attend. The Forester Gun Club will also have a shoot at Agricultural Park, Sacramento, February 22d.

Mr. Geo. W. Ellery, of Sacramento, has received several dozen of Arizona quail for propagation in this State. We have recently been trying to get something definite about the habits of these birds from parties who have shot them in Arizona, but have failed on the main point. Some say they are better for hunting with dogs than our own birds, others say they are not. The question remains—who is right? Mr. Ellery, a prominent member of the Pacific Coast Field Trial Club, is certainly going the right way to settle the question. In all honesty we wish him success.

At a late meeting of the San Francisco Gun Club the following officers were elected for the current year: James V. Coleman, president; Thos. Ewing, vice-president; Fred S. Butler, secretary. We shall be glad to receive the names of newly elected officers of our gun clubs from all parts of the State for publication. It may be useful to the clubs to furnish us with their officers for the year.

## THE KENNEL.

### Mr. Brady's Compliments to Cornkrake.

EDITOR BREEDER AND SPORTSMAN.—In answer to an article in last week's edition of your valuable paper, over the signature of "Cornkrake," I will state on behalf of the Pacific Coast Coursing Club, of which I am a member, that we hold our spring open meeting at Merced on the 5th and 6th of next month, and on which occasion we will feel only too happy to have "Cornkrake" or any one else enter their dogs against ours, and we will guarantee them all the satisfaction, financially or otherwise, they may desire. Cornkrake has, without a doubt, taken advantage of the fact that our dogs are now in training for the open meeting, and would not compete in a private match until after the meeting. I am not addicted to bluffing as Cornkrake implies, but if he will put his name to any challenge or article, he will see that the superior qualities of "Wee Nell" and the dogs owned by the Pacific Coast Coursing Club can be backed with coin. THOS. BRADY.  
San Francisco, Feb. 12th.

### The First American Coursing Club.

Communications are constantly received at this office, and also by Mr. Clem Dixon, the veteran sportsman of the coast, asking information about the first coursing club formed in California. In order to give the information desired as publicly as possible, and to settle the matter for all time, we examined the old records with Mr. Dixon during the week, with the following result:

The first coursing club organized in the United States of America, to rule, was formed in Clem Dixon's saloon, the 26th of February, 1867. The charter members were J. Adams, W. Robinson, M. H. Kelly, C. L. Place, G. Bird, T. Bird, H. Buchanan, T. E. Marks, T. E. Ruffley, N. Curry, R. C. Saufly, J. K. Orr, and Clem Dixon. Of these Messrs. T. Bird, Saufly, Buchanan and Place are dead. The first official meeting for prizes took place at Suisun, the 20th of November, 1867. In the Puppy Stakes at that meeting, Mr. Adams' King Cobb won first prize, Mr. S. Tetlow's Dash second prize. The Old Dogs' Stake was commenced but not finished, owing to bad weather, being concluded at Pacheco, the 1st of December, 1867. In this race Mr. Adams' Fanny Grey won first prize, and Clem Dixon's Voucher second prize. The second annual meeting of the California Coursing Club took place at Pacheco the 15th of December, 1868. In the Old Dogs' Stake Adams' won first prize, T. Bird's second prize, and Adams' again won third and fourth prizes. In the record he gave the dogs' names were not given, but if wanted, with a little trouble we can get them. These particulars are now a matter of our local history, and being taken from the records may be relied upon as correct. Those wishing the information can keep this number of the BREEDER AND SPORTSMAN, when bets are depending upon, as authority in future.

### Fritz Buys a Dog.

Mr. J. K. Emmet, having mourned a sufficient length of time over the death of his St. Bernard dog Bayard, Jr., for which he gave the sum of \$2,500 at the New York Dog Show of 1882, has been on the lookout for another gigantic pet. Rumors of the arrival of a canine giant from England had reached "Fritz" while journeying by theatrical stages to New York, and one of his first missions after his arrival there was to call upon a gentleman prominently known in connection with dog shows. Full information with regard to the dog inquired after was forthcoming—that he was owned by Mr. E. R. Hearn of Passaic, N. J., was named Rector, of pure St. Bernard breed, and beyond all doubt the largest dog in the world. On Friday Mr. Emmet went to Passaic to see "the mighty Rector," and as the large mountain of flesh rose upon his feet and elevated his shoulders to a height of thirty-five inches from the floor, memories of the lost Bayard, Jr., were wiped out by admiration of the new wonder. To see was but to crave for the possession of Rector, and although Mr. Hearn at first positively began with that his dog was not for sale, Mr. Emmet found out at last that every dog as well as every man has his price. The sum agreed upon was \$4,000, the largest amount ever paid for a dog, and the next day Rector was brought from Passaic and was exchanged for Mr. Emmet's check for the stipulated price. That night he was taken by Mr. Emmet to Albany, where he will be kept for some time. There is no question at all about this dog's height, and when placed under the standard used for measuring horses he touches the bar with his shoulders when elevated to a little over thirty-four inches. Measuring from the floor to the center of the shoulders with a tape the measure shows thirty-seven inches. He has a brindled head and a brindled and white body, and what is remarkable in a dog of such proportions he stands as straight on his legs as a terrier, and carries his 195 pounds of bone and muscle with surprising activity.

Mr. Brady's splendid greyhound Wee Nell has lately been doing some fine running at Dugan's Coursing Park. For speed and endurance she has placed herself upon an equal footing with the best dogs in the State.

So many promising young hunting dogs have lately died of distemper, that we publish the following remedy, taken from the *American Field*, for general information. There are many other remedies as good no doubt as this one, but the authority of the paper gives it respectability.

It is: "A good mixture for an ordinary case is the following: Take of elixir calisaya, iron and bistartha, an ounce and a half, tincture of aconite root thirty drops, syrup of tolu an ounce and a half, syrup of squills two drams, potassium chlorate two drams, water to make six drinks; mix, give a desert-spoonful three or four times a day to a setter dog one year old. The several complications require treatment to suit the case, but if taken in time, this will usually prove effectual."

The *Butte Record*, informs us, that some gentlemen in the county, who like a more exciting sport than the gun affords in the season, are now planning an old-fashioned English fox-hunt, with proper and competent bounds. When no foxes can be found hares will be substituted. The ladies of the district will be invited to join, and if successful in "taking the brush," will be handsomely rewarded in some manner. This project ought certainly to succeed, and we should like to have a good gallop with the hant ourselves when the club is thoroughly organized. We most likely shall indulge our fondness for the fox-hunt.

A rare opportunity is offered in our advertising columns to purchase a perfectly bred Llewellyn setter. Topsy is quite unexceptionable in form, markings and quality, and has indomitable pluck and good staying power in the field. Mr. Briggs has received from Mr. Ellery a superb photograph of Beautiful Snow, a sister of Topsy, which we will publish next week. We are informed that Topsy will be sold at a low figure.

Although, Mr. George Bessford, has disposed of his business at Colusa, and bought a farm in Solano county, he will, we understand, continue to breed first-class pointers. At his present home he will have better opportunities for raising such dogs, as at an early age, he can prepare them for field work. We should like to have Mr. Bessford's post-office address.

The *American Field* says that when Gath, the champion field dog of last year, was offered for sale at New Orleans for \$500, nobody seemed desirous of buying; but on the way home his owner was offered \$1,000 which he declined, saying that \$1,500 would not buy him. The *Bee* says, it believes he was offered to a Sacramento gentleman a year ago for \$200.

### Indian Ponies.

[St. Paul Pioneer Press.]

"The possibilities of the Sioux pony have never been dreamed of," said a cow-gentleman (one of the aristocracy of the genius cow-boy) to a *Pioneer Press* reporter recently. "You know the old plains saying, 'Let a white man ride an Indian pony until he can't make him move a step farther, and, dismounting, give place to a Sioux—the latter will ride the brute twenty miles farther that day.' I tell you they're wonderful animals on their native heath. They don't seem to take kindly to civilization, I know, but that's because they never had a fair chance. Why, I can call to mind hundreds of instances of feats performed, to remember which makes me tired in seven sorts of ways, when I read the rot about Arab steeds and desert barbs the school books are full of.

"Unpromising looking? Well, they are not pretty as a rule, though I've seen some dandies. Turn Jay-Eye-See out in a Dakota winter, and give him just what food he rustled for—cottonwood twigs, and hark and scanty buffalo grass mostly—and I don't guess he'd show up in very marvelous shape in the spring. I was at Sully once just as a retreat was sounded off—enough, you know. An Indian rode up on a pot-bellied, scrawny-skinned, splay-footed, matted-haired calico, and gave a letter from the Adjutant at Fort Hall to the Sully Adjutant. To an interpreter who happened to be standing by the Indian, a burly Sioux remarked that he had ridden a good ways that day and the pony was tired. The Adjutant noticed that the Hall letter was dated that morning, and his interest being aroused, asked the messenger when he left his post. He replied that he started just after first sergeant's call, (after daybreak). Subsequent investigation proved his truth. He had ridden that sorry nag fully one hundred and four miles in less than thirteen hours, and much of the road would have been hard on a bird. I tell you we treated that mangy-looking brute as if he had the bluest blood of all the bards in his veins.

"Almost any officer on the Missouri river can tell you of the famous ride Gorse the scout made from the Stanley expedition. I don't remember the miles (something over 300 in less than four days), but I know he only used one pony, and went straight across the most God-forsaken country in America. The Indians differ from the Arabs in that they have affection only for the best of their ponies. I guess I should say 'had' as to many of the Sioux, since they were pretty well dismounted in October, 1876. Their war ponies are always the best of the herd, of course, and receive a good deal of care. A 'buffalo pony' ranks next. You can tell one by the notch in the points of the ears. A good buffalo pony knows how to elude the charge of a mad bull as well as I know how to skin an antelope; stops just at the right time and runs at the proper speed. You take a green horse and bunt buffalo and you'll find the affair isn't so tame after all.

"I'd like to see some attention paid to raising good Sioux ponies. You can't imagine how quickly they show the effects of half-way decent care and plentiful food. Tricky? Well, not so terrible. You see they regard their masters as natural enemies, and treat them accordingly. They are apt to shy badly, but that is because they've stepped into prairie-dogs or fox holes occasionally, and every tuft of long grass or mound of gravel creates suspicion. I guess you can tell how his five companies of infantry got through the terrible campaign of 1880-81. The dough-boys had Indian ponies for mounts, and the little devils would paw away the snow to get grass—mercury froze in the tubes, mind you—and when they reached Keogh, after the campaign, were actually fat and full of kick."

A sore throat or cough, if suffered to progress, often in an incurable throat or lung trouble. "Brown's Little Troches" give instant relief.

### General Topics.

The concert of the frogs has had some short checks since the last writing. There was a hood of snow on Tamalpais on Thursday morning of last week, and the following morning the pure white hid the green well down the sides of the Contra Costa range. There were particles of frozen raindrops under the shade of the evergreens in Golden Gate Park Friday afternoon, when we accompanied Mr. Killip to the Bay District course, although there was sunshine, and in the exposed situations the drives were hard and dry. The Bay District has one grand feature, there is no mud if even there has been a two weeks' rain. That is, about the house, stands and stabling, and so soon after the many days and nights of nearly constant showings, the harrow was at work, and the yellow soil fell loose and friable from the pointed teeth of that most indispensable implement in the preparation of a race-course. There is naturally dry ground there, and the sand permits a free percolation of water, and the top dressing of red trap, so lavishly spread in this very best material to give firmness to the surface, while there is grade enough to shed the water as fast as it falls.

The first time we visited the ground where that famous course has been built it was soon after work had been commenced. An army of Chinamen were carting away a hill and filling deep ravines with the surplus of sand. They took the place of horses, and in handcarts wheeled loads that would have been a fair amount for a two-horse wagon. Planks were laid from "outing" to "fill," and it did not require long observation to see that for the distance it was an economical way of handling the material. For all that it was so easily managed, shovels being the only thing needed; it looked like a tremendous job to cut down the hills and fill the deep hollows, and to a person accustomed to the prairies of the west appeared as unfavorable a location for a track as could be found. The stakes of the engineer showed that it was determined that the shape should be satisfactory, and in place of the sharp reverse curves at Fleetwood and Jerome Park there were semicircles of long radii at each end, and stretches of length enough to give a fair quantum of straight work. It was true that there was no "point of rocks" to wind around and blast away, as was the case at Fleetwood, and the rocky bluff which so nearly pushes what should be the backstretch into the homerun at Jerome was wanting. But there was a huge amount of sand to move, and then a deep coating of clay to give the proper consistency for the feet of the horses.

In a very few months from the time when the busy hordes of mongolians were carting sand from hills to gulches, there was a grand race-course, stately grand stands, club-house, hotel and stabling after the most approved model. The red trap rock was hauled by the hundreds of loads, and there was smoothness and solidity over acres of stable yards, and on every foot of ground between the buildings and track. The completeness of the work at first has done away with the necessity of further labor upon it, excepting at times a slight recasting of the same material, and now after nine years of service is in admirable order. Notwithstanding the course and buildings are so good, the immunity from mud and slop is one of the pleasantest features in the Bay District, especially at this season of the year when dryness is so highly valued.

The claim that the harrow is the most important implement in all of the machinery used to keep race-courses in order will be allowed by all who have paid attention to the business. Further, still, it is the most effective in the working of trotting tracks, and with it and a leveller there is little necessity for anything else. Rollers will do to "pack" broken rock such as is used on the park drives and the grounds of the Bay District, but every time it is put upon soil that is fit for a race-course injury will follow. It makes a coating through which the feet of the horses break, and the surface will become "wavy" if frequently used. There are some soils which harrow up into clods, and in that case a clod-crusher will come into play. The best is what was known some years ago as the "Norwegian," and is as simple as it is effective. Planks of the desired length, from twelve to eighteen inches in width, and two and a half or three inches thick, are lapped over each other, and to break the clods it is hauled with the laps so as to give the clods a succession of blows which will pulverize them if not baked too hard. If the implement is not heavy enough, weight can be put on, though with planks of the size mentioned, that of the driver will be found sufficient. This machine, if too frequently used, will also make the surface wavy, and a leveller be required to correct this trouble.

We have oftentimes alluded to the superiority of the tracks of California over those of any other state, and this excellence is not only in original construction, but in the care taken afterwards. The peculiarities of the climate have made this in a measure obligatory, as without watering appliances during the dry season they would become hard and dusty. Sprinkling carts are of necessity a portion of the "outfit," and a plentiful supply of water a *sine qua non*. On any of the prominent courses there is daily work applied to keep them in order, and during the whole of the summer season there is rarely a day when they are not in good condition. In the eastern courses there are times when the horses are so hidden by the dust raised by the gallopers as to puzzle those of the sharpest vision, and even when well down the homestretch it will be troublesome to form any idea of their relative positions. The short drouthe in that country dry

the soil as effectually as those of so much longer duration here, and being without the appliances to overcome the annoyances it has to be borne. It does not require a large amount of water when applied daily to keep the top soil so that the harrow can cut it, and while trainers of race-horses do not insist on deep ground to gallop upon, the trainers of trotters recognize the importance of having sufficient loose dirt to break the jar. The advantage more than compensates, in their opinion, for the increased draft of the wheels, and as long as full shoes are worn there is no question of the value of bringing a pressure on the sole and frog, which can only be done by having a yielding bed for the shoe to sink in.

Many think that the harder the track the greater the necessity for the "protection" of a heavy shoe, whereas the concession is greater the greater the amount of metal. More muscular energy is required to raise the loaded foot, and when brought into the air the ponderosity brings it with greater emphasis to the ground. The sinking of the shoe not only moderates the blow, the yielding soil acting as a "buffer," but it also enables the elastic frog to perform its duties, while the sole receives its allotted portion of the weight. It certainly does not require elaborate arguments to prove that when two hard substances come in contact, one of them propelled with great force, that concussion is sharper than if one be soft. A steel hammer will drive a nail where a wooden mallet of five times the weight would be ineffectual. An iron maul will sink a wedge into wood much further than a wooden one banded, but the wedge will soon be battered out of shape. When the former is used, with the latter the metal is not injured.

## THE RIFLE.

### ANCIENT AND MODERN ARMS.

The Telescopic American Rifle—Its Manipulation Referred to as a Science at Rest Shooting Compared with Off-hand—Open Sights as an Art—The Practice of Both Ways of Shooting Should be Cultivated and Fostered.

BY DR. E. H. PARDEE—No. 21.

EDITOR BREEDER AND SPORTSMAN.—Again I am called upon to correct an error in my last paper regarding the aggregate of the one hundred shots, made 220 yards by my cylinder bore rifle, when in competition with the choke bore. You made the aggregate read 181½ inches when it should have read 81½ inches. Those two targets are unprecedented in the wide range of target shooting, and I am desirous that their full merits be placed before the devotees of rifle shooting, as they are, in my opinion, marvelous in accuracy, and I know of no authentic one hundred successive shots in the world made by another marksman that approaches them in compactness and accuracy. 'Tis true, that a marksman may make a string of ten shots that will proportion shorter. I have often done it, but the shots are all played during the uniformity of the atmosphere, and before a change of its pacificative takes place. Under these circumstances, all one has to do is to load his rifle, take aim and fire.

There is no judgment or engineering qualifications brought into requisition; it is all automatic, cleaning the gun just alike after each shot, fire just so often in order to keep up an even temperature of the weapon, have your powder all weighed, bullets tried in the most sensitive scale, patching all sized, crimped and lubricated, automatic loader in order to start each bullet through the patent muzzle with the same precision every time, your wind-gauge giving you the force of the wind, the suspended barrel flags, the pots of asphalt or tar ignited throwing off dense smoke, showing the least disturbance of the air, your barometer and thermometer telling the changes of density or rarification of the atmosphere, and a score of little things, all to be watched as closely as a thief in the night. I say, when all these things tell the marksman that everything is the same every shot, he can run in a ten shot string down to three or four inches, but, like angels visits, such strings are seldom and far between. In fact, I have never been blessed but twice in all my practice, where I have exceeded in reducing my strings below four inches to the aggregate of ten shots, 220 yards, and one of those strings was made by a rifle made by George H. Ferris, of Utica, New York, and the other made by Mr. L. C. Kersey, of San Francisco, now of Red Bluff, Cal., under my own daily supervision. The string made by the Ferris gun measured 4½ inches, while that of the Kersey gun 4¾ inches. Twenty years ago no power on earth could have made me believe that such a string could be or ever would be made under any circumstances. But they are the result of a long and hard struggle, taking years of hard thought, study and perseverance to accomplish.

The laws of gunnery all hang on nice intricate points, and he who does not reduce these points to a theory, to a science, can never become eminent as an expert or professional marksman. He must understand the *modus operandi* of the whole thing, and like the careful mariner who keeps a vigilant watch over his whole ship, so also must the eminent marksman be careful and keep a constant lookout for approaching tornadoes that will be most sure to engulf his high aspirations, and sink him down to a common level with him who prates about his "Old Bess" throwing her halfe dead center 200 yards, with a point blank range at 100 yards.

It may be proper for me to state that the powder used in making the targets, the particulars of which were given in part in my last paper, was manufactured by myself, differing but very little from the formula now used by the United States Government, that difference being in the mechanical combination of the component parts, with a little more carbon and less sulphur. I also form my granulation by a little different process from the usual way, the kernels being ground as shot, and of any size to suit the calibre of gun, an advantage I am quite sure all marksmen will most readily perceive; as the interstices between the little pellets are of equal size, and the charge of powder, when ignited, the flame of fire penetrates evenly, and the same time must be taken for the combustion of the same amount of powder under the same condition, which is not the case with powder of different sized granules. As I stated in one of my early papers on the production of powder gas, I will again repeat, without, I hope, being tiresome to the reader. "The proportion of the United States gunpowder are S + C<sub>2</sub> + KONO<sub>2</sub> = 3CO<sub>2</sub> + N + KS (i. e.)

one equivalent of nitre, one of sulphur, and three of carbon. The high explosive power of gunpowder is due to the sudden development from its solid constituents of a large quantity of gases, producing, when ignited, nitrogen and carbonic acid gas. At a temperature of 68 degrees, or of our usual California temperature, these gases would demand a space about three hundred times greater than that occupied by the powder before ignition. But when the powder is confined as it is in a gun-barrel, from the intense heat generated at the instant of explosion the gases will occupy a space 1,500 times as large as that occupied by the powder. Therefore, powder made by the above formula would produce three equivalents of carbonic acid, one of nitrogen, and one of sulphuret potassium." Not being much of a chemist, I reasoned, if the above formula is that which will produce the largest amount of gases, could there not be an improvement in their more perfect combination? and from quite a large number of experiments I satisfied myself that by making the component parts, reduced to an impalpable powder by creating the most minute state of subdivision, I could create a greater penetration and obtain a lower trajectory. I argued, that if the elements of gunpowder are imperfectly incorporated, a certain power must be lost which could only be gained by obtaining as complete a combination mechanically as art could do. I then changed my formula to the best of my chemical knowledge, and satisfied myself that chemical action is a force exerted at insensible distances only, and chemical substances having the greatest affinity for each other will not combine unless their elements are brought into close contact; for instance, oxygen and hydrogen may be mixed together in the exact proportions to form water, but no chemical union will take place from the simple fact that the fine particles of the two gases are not sufficiently close to each other for their chemical affinities to be brought into play; but if one will manipulate these gases and subject them to a very strong pressure so as to bring their particles into immediate contact, union occurs, and the production of water is the result. And so it is with other substances, and no one will obtain the greatest horse-power of gunpowder unless the most minute detail in the comminuting process is well looked after. As I have said in some former paper that common-sense engineering skill will demonstrate that according to the weight of matter to be projected must be the nature of the expellant, accumulative, until it has overcome the inertia of the matter, accelerative, until it has imparted to it the highest state of velocity its power is capable of doing, while on the other hand it is inferior to this. Then science has not extracted from it the full extent of its horse-power. And we but find ourselves needlessly expending our force and destroying machinery by undue pressure being exerted on one part and inferior pressure on the other.

I now speak feelingly to my friends who have become familiar with the telescopic rifle; for none other marksman can so keenly appreciate the necessity of close construction in every and all departments. It matters not to the off-hand shooter that all of his fittings be so close, for it is not one-half the time that his line of sight is on the hull's-eye. When his eye tells his finger all is in readiness, "let her go." While I admire the manly art of off-hand rifle shooting, as now practiced by our modern breech loader, with ammunition all prepared, no knowledge of the science of gunnery is necessary; all that is expected for one to do is to learn to stand still. It is merely an art, there is no science in it. The man who can pull down the scale of 200 pounds avoirdupois, though he be as ignorant as a last-year's bird's nest, though he can't tell B from a gad-fly, he may beat the man of science and letters at off-hand shooting, because nature has endowed him with a good physique, and by training himself, like the pugilist, he is only the stillest stander. And he who has a head like Boston Sullivan, I am sure could train himself to stand more like a statuette than could a man with a physique like the lamented Starr King, or our own townsman and fellow citizen Col. E. M. Gibson. I do not argue the practicability of the two methods of target practice, for it would appear too silly indeed to argue the equipment of an army with telescopic rifles; but that this weapon in our civil war was used with telling effect in staying and picking off the artillery men of the enemy, as no other kind of a weapon could have taken its place for the purpose in which it was used. And I, for one, advocate the religious idea to keep the weapon polished up. Say do not let it pass into the shades of the past. How often I hear these little military fellows, men who stand erect when in the position to look at the hood in a bull's-eye, standing so erect, for all the world like a little ground owl, perched upon a squirrel hole, ready to make a hasty retreat should he be pursued by an interloping biped. Without any attempt at levity, Mr. Editor, one has a feeling of painfulness, mixed with that of pleasure, when standing as a disinterested party, witnessing a score or two of standstills on the target ground, and take in the evolutions and contortions practiced by the contesting parties. The score keeper, perched upon an elevated seat, calls in a loud and commanding tone of voice, "No one take his place and fire at target No. 1." The cast being made, out steps a little "stand still" red headed fellow, with his gun in left hand and walks up to the position, takes a backward glance over his right shoulder to catch the expression of a crowd of admiring disciples, which animates him, and his face flushed with red arterial blood, he raises the gun to his shoulder, and believing that every movement now is being watched by an admiring crowd, and that his position is par excellence, peculiar within itself, he flatters himself that the next "stand still" will pattern after him and take his position too. He elbows his hip, punches the butt of the gun well under his ear, places his manly index finger on the six-pound pull trigger, his well-behaved eye is turned toward the hull's-eye, and the weapon raised until the line of sight coincides with the angle of vision; that masterly eye now tells the cunning index finger all is ready; the finger carrying out its important part of the programme mashes itself against the vertical pendant six-pound trigger, down comes the hammer, bang goes the gun, and away speeds the bullet. A thousand eyes are now riveted on the 9-inch bull's-eye, a breathless silence reigns over the vast multitude, all are expecting to see rise beneath the target, the marker's disk locating the shot. A minute passes and a silent whisper begins to be heard "a miss," while the friends and relatives of the "stand still" who had just shot off his gun, were congregating in little squads, and condoling one another that the target-man is a fool, never attended target before, ought to be killed, he is there because he is a tramp and the proprietor of the gallery got him for grub—'tis too bad—when up goes the disk with the black edge toward the crowd (in deep mourning) waving to and fro like the waving plume of the knight, but not for victory, but defeat—a miss, a miss; great God! a miss! passes through the promiscuous gathering. The shooter's face did not have impressed upon it the same satisfactory and self-reliant expression that it had before the shot—one of disappointment and sadness was locked upon his anxious and crest-fallen countenance. His friends gather around him, all eager to learn the cause of so sad a beginning; one thought it was the result of an imperfect cartridge; another inquiring the name of the manufacturer of the cartridge, "that is so," rejoins another,

"he never did make a good cartridge;" says the fourth "I don't believe the fault was with the ammunition. I saw, him shake, he didn't stand still; his stomach is out of fix"; says another, "his liver is bad, he has been looking yellow for the past week"; "He'll never do to bet money on," says Bob McKillican, "he always has a pain in the bowels when ever he gets in a 'tight place,' a d-n poor 'stand still' that feller, and 'don't you forget it.'"

Since the publication of my last paper I have read several letters asking certain questions regarding positions that I have taken in some of my former papers. To all of those I will most respectfully say that I have not the time to get up a private correspondence and give a detailed explanation, and neither can I, with propriety, give them attention in the BREEDER AND SPORTSMAN, for the very simple reason that in former papers the very questions propounded have been most fully dilated upon, and to rehash them would be inflicting double punishment on those who have taken your paper, and become interested in my articles; to repeat them to those who have read only an occasional paper containing an article on gunnery, would be unfair. This asking too much, gentlemen; much better for you to subscribe for the paper since its first issue—better for us both, and really more satisfactory to the proprietors of the BREEDER AND SPORTSMAN.

One gentleman who is a gun-maker at Wilcox, Elk Co., Penn., writes: "Your remarks as to the proper twist or rotary motion may be all correct, if I thoroughly understand them, but I must confess they were not clear to my mind in all respects. Most of them were clear to me. For instance, that a large bore did not require so much twist as a small bore, but when you suggested the method of arriving at the proper twist by a mathematical calculation of proportion, etc. it was all Greek to me. I never could do it that way, it did not seem to work."

Now, Mr. Editor, I am willing to give a general system by which any man of genius could, by a proper chain of deductions, arrive at just such conclusions as I have written. But because a man does not fully comprehend the higher branch of mathematics, I am not to be made responsible for that. So far as the real merits of the manipulation of the rifle is concerned, in order to obtain from it the best possible performance, I hold myself second to no man in the world. This true that another may be in possession of some important facts that I do not have, and which would add to my already accumulation of knowledge, and would be too glad to get them if such exists, and would give proper acknowledgement for the same, and with a feeling of deep gratitude to the source from which they come. I have, throughout in all my papers on gunnery, endeavored to give the reader the result of my experience, and deductions in every department, with the one exception, that of "construction." And in this particular I have no hesitancy, but think it lumbering up the columns of your paper with a mass of particulars that would make me appear to the general reader egotistical. In fact, I would consider it a trespass on the space allotted to me to expound my articles in giving the full particulars of my manipulations. I have no object in keeping secret for private advantage any real merit that I may be in possession of, for, in a case of honorable competition of skill I am willing to depend solely upon the *modus operandi* of deductions, and execute privately or publicly what I have so publicly written and published on gunnery in your paper.

I will also acknowledge the receipt of a letter from another mechanic and gun-maker at Marysville, Cal., who was formerly a journeyman with the late Wm. Billingham, the celebrated rifle-maker of Rochester, N. Y. Some of his queries I will be glad to notice at some future time, and will say to him now that nitre or saltpetre is strictly the essence of gunpowder. It is a triple compound of oxygen, nitrogen and potassium.

The Eintracht Club.

A short time ago we gave the history of the California Swiss Rifle Club, and intended at the time to continue the subject without intermission until we had given the history of every club in the city. Although the fault is not ours, we have been unable to obtain the necessary material in the order we desired, that is, in giving the clubs according to their position, and so this week we give the club mentioned above. On this point, in order that no offense may be taken where none is intended, we may remark, we do not mean the word "position" to refer to the individual or collective respectability of our local clubs. In this respect there is no difference in them, for perhaps, we have no more manly, intelligent, well-to-do people in the city than the generality of those who belong to our rifle clubs. Whatever difference there is lies simply in the number of members, and in this respect we presume the California Schuetzen Club is entitled to precedence, but so far we have failed in getting the history of that club.

The real name of the club whose history we give this week is the Schuetzen Section des Verein Eintracht, and it was organized in 1877, with a limited membership of fifty. Up to the time of the disastrous fire at the Winter Gardens, which destroyed a portion of the Eintracht Hall, and a large amount of uniforms, rifles, and other material belonging to the club, amounting to \$600, fortunately covered by insurance, the average membership ran from forty-three to forty-six, but after the misfortune referred to it was reduced to thirty-six, the number roll at present. The Eintracht Rifles, as the name indicates, is under the direct jurisdiction of the Verein Eintracht, and the uniforms, arms, and other material of the club are the property of that society, and, in fact, in order to become a member of the Eintracht Rifles, the applicant must first be a member of the parent society. In no case is that obligation dispensed with. The uniform of the club is an imitation of the Tyrolese Sharpshooters; light-grey trimmed with green, a soft hat with the left rim held up to the crown by a gold star surmounted by a tuft of rooster's feathers. One peculiarity of this club is that it never participates in public demonstrations, but confines itself strictly to rifle shooting. Only once since its organization has it deviated from this rule, when, much to its honor, it turned out in full force to the last man on the roll to honor the obsequies of the late lamented President Garfield, and in that true spirit of patriotism and martial pride, ever conspicuous in the German people, aided to complete that magnificent military procession which filled Golden Gate Park on the occasion of those sad ceremonies.

The club or company, whichever may be considered the proper term, for it goes under both, has been under the respective command of Captains Schneider, H. Geilfuss and Wm. Hatje. The particulars of its progress in shooting are interesting. When first organized at a 25 ring target at 200 yards, the scores seldom went over 11 or 12; but by constant practice they kept increasing until the club now contains some of the best riflemen in the State. The arm used is the common military rifle, six-pound pull, not exceeding 44-calibre with any trigger or sight, except the telescope. The club meets at Harbor View Range every Sunday in summer, and every other Sun-

day in winter, with a medal match every second Sunday in the month. It also has a drill practice twice every month at the Eintracht Hall. The officers for the present year are Captain F. A. Kuhls, Lieut. L. H. Kauffung, Lieut. H. Schubert and Ord. Sarg't. C. Schwartz. We shall henceforth give the scores of this club regularly in our rifle reports. As a fitting conclusion to this little sketch of its history we append the average shot of the members for 1883.

Table with columns for names, scores, and classes (Champion, First, Second, Third). Includes names like Capt. F. A. Kuhls, Lieut. Louis H. Kauffung, P. Klare, H. Gasmel, G. Beckert, J. Hartmansben, A. Wirtner, G. Wolf, Hagerup, Schuck, Kroeck, and Krueger.

At Shell Mound.

Sunday was a gala day at this favorite resort of our riflemen. The weather also was particularly suited to good shooting, and the general enjoyment of those present. Among the most conspicuous present were the gentlemen who are to take part in the contest to-morrow between the Second Artillery and Fifth Battalion of Infantry. The management of the shooting in this match, which is exciting an unusual degree of interest, will be under Captain Ed. E. Sprout of the artillery, and Col. Ranlett for the infantry men. Last week we gave the names from which the teams of ten men each will be selected, and we find nothing more definite can be given until the time of the match arrives, as the absence or indisposition of a single man will make all the difference. The contest is certain to be very close and interesting and the scores large. Sunday's practice by both parties shows a large percentage, but we understand every man on each side will have to shoot himself into the team to-morrow, that is, he will be selected for his merits. It is true, it is only a friendly match in which the losers pay for the supper, but for all that every effort will be made to win. The scores on Sunday were:

Two tables: 'INFANTRY MEN' and 'ARTILLERY MEN'. Columns include names, 200 yds, 500 yds, and Total scores.

The above returns show the infantry to have a little advantage in the score so far.

At the same place and time there was also an interesting match between Companies B and E, First Infantry, six men in each team, ten shots each, 200 yards. Company E. were the victors, as the following scores show:

Table with columns for names, scores, and company (Company E and Company B). Includes names like Barrere, Stevens, Pendleton, Halsey, Erzezial, Capt. Geo. Teller, Lieut. F. R. Townsend, Sergt. G. R. Burdick, Lieut. F. Kemple, Sergt. L. Knowlton, Private E. M. Taylor, and Private Desmond.

Beaver and Linville.

Police officer Linville, in spite of his ability with rifle and pistol, had to pay for Colonel Beaver's dinner, a choice one we may be sure, last Sunday night, together with the cost of one hundred cartridges and other little items included in their match, which resulted in the Colonel's favor, though by a close shave, as it took Creedmoor rules to settle the matter. The conditions were 50 shots each in strings of ten, with a 45-calibre revolver, six pounds pull of trigger, Creedmoor target, distance 32 1/2 yards.

Table with columns for names (Colonel Beaver, Officer Linville) and scores for 10 shots each.

These are magnificent scores, and yet both men had the monumental nerve to complain they were out of practice or they would have done better.

We beg to call attention to the following wise and necessary order of Adjutant-General Kelton in reference to indiscriminate shooting at the Presido Reservation. The order does not come a moment too soon, nor is it at all too severe.

Adjutant-General Kelton of the Presido has issued orders that all persons found shooting on the reservation, other than at the shooting range, shall be arrested and their firearms taken away. The General has been compelled to put a stop to the reckless marksmanship around the ground by hunters, as last week a valuable horse, the property of the Government, was shot and crippled by some gunner who shot at a meadow lark.

At Sacramento.

There was an interesting and successful match on Sunday at Twelfth Street Range, between Lieut. F. P. Lowell of Company B, and Lieut H. W. Rivett of Company G. The match was for \$50 a side, with Creedmore range. The scores were

Table with columns for names (Lowell, Rivett) and scores for Creedmore Range and Aored Target.

Rivett's score of 433 has never been equaled by any one in the regiment; the best heretofore being 432.

A Challenge.

In Tuesday's Chronicle we find the following challenge. Lieut. Brown belongs to the Fifth Infantry Battalion, and is always in his rifle matches and acquires himself well. If Linville accepts this challenge, it may be worse for him than paying for Col. Beaver's dinner—or better. It will be just as it happens, but both are reliable men with the rifle:

SAN FRANCISCO, February 9th, 1884.

To the Sporting Editor of the Chronicle—Sir: During the past year two shooting matches have occurred between Officer Linville and myself, and in both matches Officer Linville was so unfortunate as to be defeated, but, as he says, so I am informed, from causes which do not now exist. If that be true, I am perfectly willing to give the gentleman another chance if he desires it to regain his lost laurels in a match of 100 to 200 yards, or 100 shots at 200 and 500 yards respectively, for the sum of \$50 or \$100; to shoot with any military gun, under the rules governing the California Rifle Association.

LIEUT. GEORGE H. BROWN.

Officer Linville, on Wednesday morning, accepted the above challenge.

The interest taken of late in rifle shooting has reached and, in a measure, enthused the First Regiment. It is a common thing now for the old reliable cracks of this corps to practice every week at different ranges. Very properly, they do not intend to be left behind in the numberless challenges spoken of to appear in the spring. We do not think they will be left far behind either.

We were curious enough to get the Age of Col. Ranlett's team now shooting for the Military Trophy. We find the average is 41 years, six months to the man. This shows the youngsters growing their first military mustache have not so much the advantage as they may think.

Major A. F. Klose, Brigade Inspector of Rifle Practice, tried his hand on Sunday at Shell Mound, and made the very creditable total of 86; 41 at 200 yards and 45 at 500 yards.

Answers to Correspondents.

Question answered only through these columns. No replies by mail or telegraph.

J. W. W. Linden.—Please give me your solution of the following points in a game of cribbage. A plays an ace, B a four, A a tray, B a five, and makes a run of three. A plays a deuce, making a run of five. B plays a tray, and claims a run of four, to which A objects. A and B finally agree to leave the disputed point to the decision of C, who sustains A's objections. Was C's decision correct? Answer—The objection is valid, as the cards stand 3-2-5-3.

L. B. Artesia, Cal.—1.—Mary Chilton, the dam of Thad Stevens, was by imported Glencoe.

First dam, by American Eclipse. Second dam, Queen Mary, by Bertrand. Third dam, Lady Fortune, by Brimmer. Fourth dam, Woodpecker's dam by imported Buzzard. Fifth dam, The Faun, by Craig's Alfred. Sixth dam, Shepherdus, by Wormsley's King Herod. Seventh dam, by imported Traveller. Eighth dam, by imported Whittington.

2.—The race was on the Ocean House track, San Francisco. 3.—We cannot give the pedigree of Old St. Clair. At the time Occident made his debut most diligent inquiry was made, but nothing of the breeding or history of St. Clair could be ascertained.

4.—Ethau Allen was by Vermont Black Hawk; dam's pedigree unknown. 5.—Vermont Black Hawk was by Sherman Morgau, son of Justin Morgan.

6.—We never intended to say exactly that Twilight and Sallie Russel were sisters in blood, but very nearly sisters. Twilight being by Lexington and Sallie Russel, by Boston, the sire of Lexington.

G. W. A. P. Downey.—The horse has no gall bladder like the cow, as well as the human species. The bile is received by a network of minute ducts, ultimately coalescing to form the hepatic duct which opens into the duodenum. The secretion of bile is entirely from the venous blood.

F. W. G. Norris Grant.—We have no means of knowing just what Wm. M. Rysdyk "was worth" when he bought the Chas. Kent mare and colt, but the historians of that period class him as "a poor farmer," which we suppose had reference to his financial standing and not to his qualifications as an agriculturist.

On the 23d ult. Col. Wm. Babcock, of Canton, owner of Geo. Sprague, wrote to a gentleman in Peoria, Ill., that he would give him \$50 to get a match of \$1,000 against Mr. Studer's Durango, and then the latter issued a challenge containing a number of propositions, which has resulted in a match between the above-named stallions, to trot a race of mile heats, best 3 in 5, in harness, over the Chicago Driving Park track, during the fall meeting there. The contest is to be under the auspices of the Chicago Association. The contract has been signed, and the stake, \$1,000 each, has been deposited with James Selby, Peoria, Ill., play or pay. The owner of Fairy Gift declined to take part in it. The event will be exciting, as Durango has a record of 2:23, and Geo. Sprague an exhibition mile of 2:21 to his credit, after five week's training.

**Working Capacity of Unshod Horses.**

The New York *Spirit of the Times*, in a notice of Tips and Toe-weights, spoke of the question of tips on trotting colts as "one of the liveliest of the day," and that this was correct ground is evident, as the subject of the proper care of the feet of horses is becoming interesting to those which heretofore have paid little attention to it. The article which is copied under the above caption, was found in the February number of the *Popular Science Monthly*, copied by that from *Land and Water* and written by Arthur F. Astley. Although there is nothing new in it to the readers of the *Breeder and Sportsman*, it is valuable as corroborative proof that others recognize the value of a natural method of the treatment of horses' feet, and that in other countries the same results have followed like experiments. We have frequently stated that in our opinion it was the most momentous question in the whole range of "stable management," and that before long it would force recognition in spite of the opposition that comes from a stubborn determination to follow old practices. There have been hindrances here which are not met in England. By far, the most prominent horse interest in America is that connected with fast trotters. The fast harness horse absorbs the attention of a large majority of the people of the United States who take an active interest in horses, and the questions of breeding, rearing and training give rise to any amount of talk and writing. Shoeing is regarded as one of the essential features of training, and since the dawn of the era of toe-weights there have been still livelier times. Weights on the feet were held to be indispensable to the fast trotter, and when we commenced experimenting with tips, more than eight years ago, the great problem was how to benefit by following Nature as closely as possible, and not surrender the advantages of loading the feet in the education of trotters. After these years of experience and close, unremitting study we can see the labor that was lost by starting on a false hypothesis. Had the inquiry been differently directed and the groundwork taken, how shall the fast trotting action be secured with as little weight on the feet as possible, and that so applied as to preserve the natural functions of the foot unimpaired? Better yet would have been the basis that perhaps weight on the feet was as unnecessary to speed at the trot as it was in the gallop,

and that in place of heavy shoes, weights and boots, more satisfactory results would follow the adoption of something like the plate of a race-horse. To this we have come after these years of experiments which have not been entirely barren, and though three-quarters of the time was spent in finding the correct place to start from, the mistakes have a value which we do not underrate. It may be necessary to recall some of the lessons of the past, and cases arise when similar treatment to that of years ago be found beneficial. That a harefooted horse has the capacity to perform ordinary work we have long believed; that a trotter can show the maximum of its speed when nearly, if not quite, without metallic appendages to the feet is our present conviction. It may be that a "hold of the ground" can be better obtained by the use of a metal catch in place of the horn, and this, of course, will only apply to the portion of the foot which is employed in propulsion. As the instantaneous photographs have shown in the fast gallop, the fore-foot is the point from which the last grand effort is made, and in the fast trot the hind foot gives the final impetus before the body is hurled through the air. The toe leaves the ground last, and consequently there is the place to affix the "purchase." Pedestrians wear shoes that are spiked on the toe so as to avoid the slightest retrograde movement, and though the wall of the horse's foot is better fitted to give a catch, the still harder and sharper metal will be more effective.

**"Judge McShafter" and the Board of Appeals.**

At this time of writing there is no intelligence of what action the National Trotting Association has taken in relation to the Board of Appeals for this district. Usually that portion of the business is not momentary, and in ninety-nine cases in a hundred the men selected will be reasonably well-fitted for the place. It is very different now. While two of the members are beyond adverse criticism, peculiarly well-adapted for the office, from every point of view, the third is so utterly unfitted for the trust conferred that the good is completely overshadowed by the evil, and should he be retained for the next two years the trotting interest of this coast will be seriously jeopardized. It may appear somewhat paradoxical that a majority of the Board should be governed by a minority, and that one should be so potent for evil when there are two on the opposite side. The same causes may not operate in the future, however, and that the legs of the Old Man of the Sea may be forced to relinquish the grip. That grip was owing to an over-estimate of the ability of Judge Shafter, due to an idea that he was a great legal luminary, that he was a man of intellect, so well versed in the law and all pertaining to the law, whether found in the old books, rendered venerable by centuries, racing rules or trotting codes. Ponderous in person, assuming an air of wisdom on all occasions when his opinion was sought, dogmatic in asserting, pompous, domineering, at times grossly insulting to his associates, high political aspirations, and large landed possessions imposed on the credulity of those who were not in a better position to judge, and they gave him credit for ability a hundred times greater than he was entitled to. It must be conceded that there is a total lack of ability, or his misdeeds must be charged to something far worse. Without going outside of the judges' stand, and the District Board of Appeals, there are abundant grounds on which to base the proof that his decisions have been absurdly stupid or ————. There is no necessity for going outside of these domains, though it can be clearly shown that the management of his own horses have been, to say the least, queer and that permitting one of them to run, and honoring by his presence a race on Sunday, and a race, too, which had to be brought before the Trustees of the Blood-Horse Association to adjudicate, is not calculated to give him "high standing." Postponing the chapter of individual doings to a future time we will briefly state a few of the decisions of this learned judge, and if they do not fully sustain the charge that he is entirely out of place when in a position to "decide away" large amounts of money. Without a particle of evidence, as all the main testimony bearing on the case was in our possession, and never called for, he decided that Bonnie was entitled to start in the Stanford Stake of 1882, when, as soon as her owner was cognizant of the facts, he promptly refused to accept the award and did not start her, although it was nearly certain she would have won.

The rulings of Judge Shafter in the Dawn case we will not discuss at present, further than to state that his owner did not avail himself of the benefits tendered. The Euhryo for three-year-olds in 1882, presents features that will completely justify the claim of a woful lack of ability, and that so palpably that no one will argue to the contrary who has the least knowledge of trotting rules. Shafter was the presiding judge. Bonnie won the first and second heats. The third, Fred Arnold beat her by at least half a length. There were no violations of the rules by breaking, foul driving on any of

the infringements, excepting that the driver of Fred Arnold was charged with loud shouting. The rules specify that the punishment for that offence shall be by fine or suspension during the meeting. *The heat was given to Bonnie* by this ponderous mass of legal learning, after a full examination of the rules, and notwithstanding, one of his associates disagreed with him and protested against the absurd decision. The comical part was to come. The question was brought up by the Chairman of the Board of Appeals, Captain N. T. Smith, the Board at the time consisting of the Chairman and Judge Shafter, and with scarcely a word of argument the decree reversed and the heat ordered to be trotted over again at a future time. A paper in New York lauded "the Judge" for the willingness shown to correct an error, but the error was so palpable that, while extolling the honesty of such a course, there was no defence for a lack of capacity that would have disgraced a schoolboy.

These were the only cases brought before the Board until the last was "dug up" which entailed a three-days' session. In the Dawn case, Judge Shafter claimed that there was a "lack of jurisdiction," for though the managers held a certificate of membership from the National Trotting Association, the nominations were made previous to the application for membership. This was a question which gave an opportunity for differences of opinion, but in the case of Burns against Bayliss, where it was clear that there was a lack of jurisdiction, the same judge said that the Board of Appeals had authority, and put men to the trouble of attending on three afternoons. The case stood thus: M. M. Allen leased the Oakland Trotting Park from the proprietor E. Wiard, to give a series of races, running and trotting. They were advertised over his own name and the entries made to him. The Oakland Trotting Park is not a member of the National Trotting Association, neither is Mr. Allen as proprietor. There was a pacing race which took two days to decide. No complaint was made to the judges in the stand that Bayliss, who drove one of the horses, did not try to win on the deciding day, but some time afterwards Burns brought the charge before the Board of Appeals. There was bad blood all around. Burns was bitter in his feelings against Bayliss owing to a quarrel about the driving of Nellie Burns. Bayliss was the trainer at the time when Haddington, Judge Shafter's horse, ran the notorious Sunday race on the half-mile track, and the trainer was made the scapegoat to carry the sins of the whole party, excepting that one of the participants was compelled to refund \$150 that Judge Shafter had posted in the match. There were revelations at the time and since, so that there was war between owner and trainer, and some have claimed that the desire to punish Bayliss came from animosity, and was not governed by a wish to "purify the turf." That can only be surmised, and as such wrong might be done Judge Shafter in charging him with such reprehensible conduct. But it is just as plain that it shows a failing of memory in not applying the same reasons as in the Dawn case; an utter incapacity to understand the laws of the N. T. A., or the purposes for which it was organized. Grant the right to the protection of the National Trotting Association to "non-members," and all that will be necessary is to appoint a Board of Appeals in each district before which all controversies shall come, and which shall have entire control over trotting affairs, and there will be a saving of the greatest proportion of the money paid in fees, etc., and in place of a membership limited to those which contribute to the funds of the association every track in the country will be "protected." The farce of a trial under these circumstances appropriately ended without a result, although the time of the members of the board, accuser, accused, and several witnesses was taken up in the three-day go-as-you-please race.

When Donathan was fined \$25 at Petaluma by Judge Shafter, under the charge of laying up heats in a race which he won, it appeared rather a harsh proceeding, especially when Donathan denied being guilty of the offense. The pools were also declared off through some process of reasoning that perhaps an eminent lawyer can reconcile with common sense, though those which were made public are certainly puerile. From a creditable source it was learned that this was a compromise, and that the presiding judge advocated a verdict that would have been still more objectionable.

A flagrant case was the decision in the case of May D., and though the judges who rendered the decree were, doubtless, innocent of any wrong intention, that much cannot be said of the President of the Sonoma and Marin Agricultural Society. May D. won a stake, the conditions of which, as published in all the advertisements preceding the closing of the stake, and previous to and during the fair, did not provide for any portion going to any other than the winner. Purses were divided so as to give the winner fifty per cent., the second twenty-five per cent., the third fifteen per cent., and the fourth horse ten per cent. of the amount of purse. It was not surprising that men not familiar with turf rules should confound

stakes and purses, but that a person of the least intelligence, who had read the laws of the association that were to govern that race should make such a blunder is almost impossible. As the manager of May D. protested against the decision, it must have been brought to the notice of Judge Shafter as President of the society, and failing to remedy the wrong promptly he cannot find fault that some people ascribed it to the fact that his mare Nighthawk ran second, and under the decision was entitled to receive something over \$90. Were this the only case, it might be said that avarice overcame the judgment, but when there is an array of blunders preceding this, that it is due to imbecility, and not the desire to get money to which he had not the shadow of a claim.

When his associates in the Board realize that he is not of the mental calibre they imagined; when they take charge of the business and will not permit him to dictate, or be led astray by thinking that admission to the bar forty odd years ago is a certificate of capacity; when they act in accordance with their own good sense, then it will not matter whether he is a member or not. And yet, after so many exhibitions of his peculiarities it is not to be expected that his presence will inspire respect, or that the universal distrust will be removed. Whatever may be the result of his political associations, in which he has shown the same lack of ability, or anything approaching ability, he is a dead weight on the sports of the turf and track, a handicap of such proportions that it cannot be carried.

### Spring Race Meeting.

Two weeks from to-day, the first of March next, the stakes which are still open, and the purses offered by the Pacific Blood-Horse Association close. In order to keep the bill prominently before owners and trainers, we republish it on this page. The numbers of stakes and purses which are yet to close are 2, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 15. Blanks to facilitate the making of entries will be sent to everyone who is likely to need them, and can be obtained at this office or of Henry Schwartz, 131 Montgomery street. The most important point to the owners and trainers is to know that the course will be kept in proper order. This we will guarantee, and have no hesitation in saying that the Bay District will be, in all respects, as good and as safe as it is possible to keep it. That is, of course, if the weather proves favorable, and at the time of the year when the races are to come off there is a good chance for the best kind of weather.

#### First Day—Saturday, April 12th.

No. 2—Hearst Stake.—For all ages, of \$25 each; \$10 forfeit; \$200 added, second to save stake; dash of three-quarters of a mile.  
No. 4—Selling Race.—Purse \$200; \$25 of which to second; one and one-eighth miles; horses entered to be sold for \$1,000, and to carry the rule weight; two pounds taken off for every \$100 below that valuation, and three pounds added for every \$100 above.

#### Extra Day—Tuesday, April 15th.

No. 5—Purse, \$200; for two-year-olds; \$25 to second; dash of five-eighths of a mile; winner of California stakes to carry seven pounds extra, second five pounds above rule weights.  
No. 6—Purse, \$200; \$50 to second; one mile and a furlong; for three-year-olds, maidens, colts and fillies that have not won a race.  
No. 7—Purse, \$200; \$50 to second; dash of one mile.  
No. 8—Selling Race, \$200; \$25 to second; 1 1/4 miles. Same conditions as Selling race on first day.

#### Second Day—Thursday, April 17th.

No. 9—Purse, \$200; for two-year-olds; dash of five-eighths of a mile; winner of either of the preceding two-year-old races barred; second to carry five pounds extra.  
No. 10—Pacific Cup Handicap—\$50 each; \$20 declaration; \$500 added; second to receive \$150; third to save stakes; two and one-fourth miles; weight announced April 12th; declaration April 15th, at 3 P. M.  
No. 11—Handicap Stake—For three-year-olds; 1 1/4 miles; \$25 each; \$10 declaration; \$200 added; weights announced at the same time as the cup.  
No. 12—Purse, \$300; \$50 to second; for all ages; heats of three-quarters of a mile.

#### Third Day—Saturday, April 19th.

No. 15—Purse, \$300; \$50 to second; heats of three-quarters of a mile; for all ages.

### Death of Hon. A. P. Whitney.

Regrets over the death of A. P. Whitney will not be confined to any portion of California, and though the great loss will be the most keenly felt by his family and neighbors, the mourners will include all of those who were acquainted with him. It did not require a long acquaintance to appreciate his many sterling qualities, for though strikingly unobtrusive there was so much geniality in his composition, so unaffectedly cordial, warm-hearted, gentlemanly—or it is still better to write, so much manliness, that there was an attraction from the first, a magnetism which further acquaintance ripened into sincere friendship. While of such great service to the district in which he lived, while none stood higher in the affection and esteem of the people of Sonoma and adjoining counties, he was so well known all over the State that there will be regrets from all sections. Keenly alive to every project that was beneficial to the whole State, there was no selfishness to be gratified in restricting his labors to his own district. He was an ardent patron of agriculture in all of its branches, and any scheme which gave promise of benefiting the farmers met his hearty approval. He entered heart and soul into the work of building up the Sonoma and Marin fair, industrious and indefatigable in his efforts to place it in the front rank of California exhibitions. The change from the old grounds to the magnificent new park was mainly

effected by his exertions, and his enthusiastic temperament appeared to inspire his confederates so that all worked with a will. Language is scarcely adequate to express the grief that follows the loss of men of the class to which A. P. Whitney belonged. While we all join in the mourning, there are the lessons which his life work left for emulation and example, and the knowledge that his good deeds will long be cherished is some consolation.

### Stallions Advertised—Hubbard, Bob Mason.

So numerous have been the additions to the stallions advertised for service in the *Breeder and Sportsman* that it is troublesome to keep up with them as they come in. So early in the season, however, there is not the hurry there will be a month hence, and by that time we hope to have our say about all of them. Fortunately all are so well worthy of encomiums that the task, if task it can be called, is a pleasant job, and to have such good grounds to praise is very gratifying. Among the late entries in the advertising column are Hubbard and Bob Mason, the former being the celebrated thoroughbred which came here in 1873 to take part in the big four-mile races. Bob Mason, one of the great family of Echo and Belle Mason, every one of which can trot fast.

Hubbard unfortunately went wrong, so that he never ran in this country, which was a sore disappointment to all concerned in him, especially to Col. McDaniels, who regarded him as one of the very best race-horses he ever saw. As Col. McDaniels, in his fifty years of active participation in the sports of the turf, has owned and trained many of foremost celebrity, a certificate from him is as good as can be. A brother to Katie Pease, Hubbard is not confined to his individual performances on which to base his claims, and as he is the only son of Planet we can recall as being owned on this coast, his blood will be a valuable acquisition to the thoroughbred stock of California. Few of his colts have been trained, all that we know of being the fillies bred by Putnam Robson and Jas. B. Chase, and both of these could race. His fine size, powerful build and capital breeding is a guarantee that his stock will be good for any service to which horses are put. Jo Hamilton was the first of the Belle Mason family to appear, and as a four-year-old he showed that he possessed a wonderful flight of speed and any amount of endurance. Exile is of the same stamp, and there is little question that Bob Mason is endowed with the family characteristics fully as strong as the others. The California Belmont blood mingles kindly with all the trotting strains, and in this case it is backed by imported Leviathan, Frank and John Richards.

### Our Pictures.

Fortunately, there were some pictures on hand to draw upon, or we could not have kept the resolution to offer a representation of the "notable horses of California" each week for some time to come. From unavoidable causes, others have been delayed, and those which we anticipated presenting will not be ready as soon as was expected. Mr. Wytenbach has lately made drawings of Prompter, the first of the great clan of the Blue Bulls to become domiciled on this coast; of Echo, Jr., a son of the great horse whose picture was in the paper of last week; Stanford, an Electioneer who is wonderfully like his sire, and who gives promise of being a worthy offshoot; and Director, who gained so much fame in the "grand circuit" of 1883. The engagements were made in the order named, and as there is nearly an absolute guarantee that this will be the last disappointment, they will come in good time. Undue haste meant a poor job, and that could not be afforded. While some of the pictures are better than others, the whole series has been so good as to elicit praises from all quarters. We shall endeavor to sustain the reputation gained, and though it is provoking to be forced to wait, that is better than to spoil by hurry.

### Jersey Herd Book.

From Major Beck we have good reports of the progress of the Jersey Cattle Herd Book. On the first of January over seven hundred had been registered, and there are still so many of the foundation stock for the committee to pass upon that in all probability there will be at least one thousand when the volume goes to press. This is a grand showing which must surprise even the most sanguine of the projectors, and places the Pacific coast in a high position with regard to this favorite breed of cattle. There is little question that ultimately the Jerseys of the sunset slope will rank as high, if not higher, than those of any other country, and that the race will improve in this climate, so favorable to physical perfection. In a few generations there will be an increase in size, while the milk and butter producing qualities will not be diminished, more likely to be enhanced in proportion.

### The Stanford Stake.

This stake for trotting colts, which will be three years old in 1885, has been modified to meet the desires of breeders who thought that as heretofore published the first risks were too great. As it closes on the 1st of March we place it on this page, where it is not likely to be overlooked. Under the amended requirements there should be a long list of nominators, and we confidently anticipate a still finer array than in the Stanford of 1882.

**A SWEEPSTAKES FOR TROTTING COLTS AND FILLIES** of 1882, \$300 each, \$25 payable on the 1st of March, 1884, at which time the stake will close, \$20 on the 1st day of January, 1885, and \$100 ten days before the day fixed for trotting, whatever amount up to be considered forfeit, and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the whole sum, the second two-ninths, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1885, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1885 or sooner.

Race to be governed by the Rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or J. S. CAIRN, SECRETARY, BREEDER AND SPORTSMAN OFFICE, on or before the 1st day of March, 1884. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly post-marked March 1st will be eligible.

Breeders of trotting horses will see that it is strictly to their interest that this stake should not be allowed to lapse, and now that the first payments are made so that it comes within the reach of everyone.

It is the main Trotting Stake of California, and is fully entitled to support.

N. T. SMITH, Treasurer.

J. S. CAIRN, SECRETARY.

### The Oakland Trotting Park.

For many years we have cherished the hope that the Oakland Trotting Park would be purchased by a stock company, one of the conditions being that it should be retained as race-course and fair ground for at least ten years. The land is becoming too valuable for an individual to hold it much longer, as the temptation to place the lots in market is becoming too strong for most men to resist. It can be purchased now for one-half the sum that, in all probability, could be realized from the sale of lots in the next two years, this opportunity arising from the desire of the proprietor to close it out at once, and thus avoid the trouble which will attend partition. Mr. Wiard feels that he is too old to bother himself with the cares which are sure to follow a sale of lots, and for that reason will offer terms which will make it a remunerative speculation.

The park is so favorably situated, with so many natural advantages, that little will be required outside of buildings to make it one of the most attractive places of the kind imaginable. There is not a handsomer site on either side of San Francisco bay, and there is utility as well as beauty. The "lay of the land" could not be improved for track and fair ground, and it is equally as well adapted for building purposes. There is slope enough to insure perfect drainage, and this is augmented by a stream which runs through it, and the channel of which is deep enough to insure the carrying away of all the sewage of a large city. For convenience of access, both from San Francisco and Oakland, it cannot be improved, as on one side is the railway track, the station only a short distance away, and on the other the horse-cars and fine drives to Oakland and Berkeley.

There is a project now under contemplation, which we feel quite sanguine will be carried through, and which will be outlined in the next issue of this paper. There will be a necessity for active movements, as the longer the purchase is delayed the more danger there is of the chance being lost.

Regarding the claim of Dr. Hicks, that Prairie Bird should be credited with a record of 2:28 1/2, Col. W. H. McDoel, of Quincy, Ill., writes: "I notice Dr. Hicks's note regarding the record of Prairie Bird. I saw her pace the race at Cauton, Ill., when she made her record of 2:28 1/2 and could have paced in 2:25 or 2:26 just as well, as she jogged under the wire. She was driven by F. N. Fancher and was only four years old."

The "blue laws" of 1794 are still in force in Pennsylvania. Eight citizens of Reading have been arrested for racing their horses on the streets, and they are to be tried under the "blue laws," which provide that the horses shall be sold and the proceeds go to the county treasury.

Distemper has been at work among horse stock in Montana. Huntly & Clark, Radersburg, have lost the colt Almost, and the mare Becky Bird. The former was foaled in 1880, sired by Alarm, dam Ella, by Norwood. The latter was sired by Balsora, dam by Eagle Mambrino.

New York horse buyers are busy picking up gentlemen's roadsters down in Maine, while some of the Maine horse dealers are down in Texas purchasing a supply for the home market.

Notice has been filed of the increase of the capital stock of the Washington Park Club of Chicago to \$100,000, and attested by Gen. Phil Sheridan, president of the club.

Mr. Goldsmith has transferred Director and Monroe Chief to the other side of the bay, and his address is now Oakland Trotting Park, Oakland.

Rosa Wilkes has lately been blistered. Golden this will be in a condition to trot the coming season.

## HERD AND SWINE.

## Salting Butter.

What do we salt butter for? "We salt it to preserve it," says one. "I salt it," says another, "to improve its taste." "And I," adds a third, "because I have been accustomed to, and never thought much about why I did so. I only supposed I must, or it would go wrong in some way." This last reply will answer for the multitude, and it will answer for much that is done outside of the avocation of butter making. If one will stop and ask himself at every step why he does each thing, he will be surprised to find himself doing about all he does from habit, or by way of imitating the habits of others. Man is very properly credited with being a reasoning animal, because he does sometimes reason, but he is moved much more by the force of custom than of thought, and our conduct in salting butter is only the outgrowth of our most prominent human characteristic, which is thoughtlessly following in a rut.

If anybody has succeeded in preserving butter by salting it, we would be much obliged if he would send a report of his success, and how he obtained it, to this *Journal*, for publication. It could not fail to be interesting news to butter makers generally, for it is becoming a serious question whether salt ever preserves butter, or whether it prolongs or shortens its lifetime. Salt does not save butter, for every body in this country salts his butter, and yet it is notorious that it does not only not keep, but, on the contrary, spoils in great haste. There are, however, some exceptions to this rule. We have seen butter keep with and without salting till it was upwards of three years old.

The writer saw and examined carefully a considerable number of packages of butter at the Centennial Exhibition, in Philadelphia, which were from one to more than three years old, and which were nearly all well preserved without any salting. A half dozen or so of these packages were exhibited at the World's International Exposition, held at Vienna, three years before, and, of course, they had acquired some age previous to being shown there, but they were still sound. He also saw in Central New York a package of salted butter which took a premium for best butter in its class at the local agricultural fairs for three years in succession, and was still sound. The flavor, however, had changed considerably, having become intense, and approximating the flavor of cheese, but was not in the least degree rancid. This butter, we should think, from its taste, had been salted at the rate of three-quarters of an ounce of salt to the pound, and what was further of interest in its history was the fact that it was kept during the whole of its long life, except when it was on exhibition, in a common farm cellar, in a half-covered jar, without cloth, or salt, or brine to protect it, its surface being all that time exposed to the cellar air. We have occasionally come across other samples of equal age, and have had reports of others which we did not see. Such experiences go to show that salt neither preserves nor spoils butter, but that its keeping or not keeping depends on some other cause or causes, which the average dairyman, at least, certainly has not yet discovered; for, while it has been demonstrated that it can be made to keep either with or without salt, the great bulk of the butter of the country begins to fail the very next day after it is made, and we have sometimes suspected it began to fail two or three days sooner than that.

Perhaps, if the proverbial dairyman should venture to become a little enterprising, and strive a little harder to become worthy of the appellation of a reasoning animal, instead of a creature of habit, he might often strike the causes which preserve or spoil his goods. It would be a good idea, anyway, to turn over a new leaf once in a while, and not be reading a soiled page always.

"Butter will keep," says one, "if it is excluded from the air. The corroding influence of oxygen decomposes the traces of albuminous matter which adhere to it, and from this beginning the decomposition of the fats follow." This is often preached, but, like a good deal of other preaching, it is only theory. The case just cited in central New York disproves it; and besides this, we had a bit of experience in this line at the Centennial, which was rather interesting. Some western men who thought the air wholly to blame in the matter of spoiling butter determined to circumvent it, and show the assembled world that the west could do some things as well as others. So they put up three packages in prepared tin, and sealed them with solder the moment they were filled. Thus protected, it was predicted they would keep, with or without refrigeration, anywhere. The butter was made in June, and presented for inspection in August. Fortunately, your humble servant was selected as the judge to decide on its merits; so we carefully opened them before a crowd of curious eyes, only to find every package spoiled, and the question, what spoils butter from keeping is still open for somebody else to guess.

Since salt cannot be relied on, either for preserving or spoiling butter, the only good purpose left for its use in butter is for seasoning. As to its use for this purpose, consumers are not agreed. Some want much, others little, and others still, none.

The safest rule to follow in salting for seasoning is the one followed by a horse jockey in harnessing his horses. He said, when he had an ugly-looking horse, he covered him up with all the nice harness he could get on him. The harness looked better than the horse, and the latter got the benefit of the improvement. When he had a fine-looking animal, he used as little harness as he could. The horse looked better than the harness, and it only served to obscure his beauty. If butter must be salted, this is the true rule to follow, for the flavor of choice butter is very much more pleasing than the taste of salt, and the more of it there is used the more the butter flavor is hid, but the taste of salt is better than no flavor or bad flavor. So, when butter is afflicted with such faults, liberal salting will improve the defects by disguising them with its prominence.—*Live Stock Journal*.

A writer for the *Dairy* says: For years I have pursued the plan of keeping the faces of my bulls muffled, and then I have them at a disadvantage. I simply put a stout, five-ringed balter upon them, and fasten to this, with stout straps and buckles, a wide strap of leather, bagging it so that it springs out from the eyes and admits light from behind, not the sides. Then the bull knows that he is in your power. Here in Ohio, where it is the custom for bulls to run with the dairy, the muffle is very serviceable in several ways. The bull remains quiet with the herd, and is not liable to jump fences, for being thus hampered, he is obliged to follow, and that cautiously, for a few falls into holes and ditches are sufficient to teach him that it is far better to follow than to mark out paths for himself.

## Ensilage Congress.

The third annual Ensilage Congress was held on Wednesday of last week in New York city. J. B. Brown of the New York Plover Company called the convention to order, and Dr. A. S. Heath was elected president. Prof. Manly Miles read a paper on the prevention of acidity in ensilage. He said that fermentation is the result of a process of vital activity in which microscopical germs are nourished. These germs are called bacteria and they produce the acidity. If the bacteria could be killed, there could be no acidity. The way to kill them, he thought, was to fill the silo leisurely, and not put on the weights until the temperature is high enough to prevent its falling below the point necessary to kill the bacteria. This temperature, he had found, was from 115 degrees to 122 degrees. The result, he believed, would be uniformly sweet ensilage.

Edward Gridley and Dr. Tanner of Wassau, Dutchess county, recited the history of the opposition to the use of ensilage by the New York Condensed Milk Company, which claimed that milk made from ensilage would not keep. They declared that the company had used freely this milk for over three years without discovering any ill results from it, and that the consumers of the milk to whom it was now sent were perfectly satisfied with it. The increased quantity of milk from the ensilage-fed cows excited attention from the Condensed Milk Company, to which it was furnished, but no fault was found until February, 1883. The Borden Company's claim was not that the milk furnished was bad, but that the condensed milk made from it would not keep.

Dr. Tanner said that after hreshing with the Borden Company he put on his farm 100 steers for the market. To each of them twenty pounds of ensilage was fed twice a day, with six pounds of grain at noon. During the month of December the average gain in weight was seventy pounds each, one gaining 120 pounds in fifty days. Mr. Gridley thought it a question which was the way to make most money, but he thought it was by selling milk. However, he was not so certain of that when he found two old oxen gain 2½ pounds a day on ensilage. Dr. Tanner remarked that he had 150 cows, and after the trouble with the factory he sold 100 of them, and took the milk of fifty to New York city. The customer who used the ensilage-fed milk did not complain of it.

John Mayer of Theodore A. Havemeyer's Mountain Side Farm, near Mahwah, N. J., was enthusiastic in the praise of ensilage. He said: To each of 100 Jersey cows is given twenty pounds of ensilage in the morning, seven pounds of hay at noon, and twenty pounds of ensilage at night. Mixed with the ensilage is one quart of corn-meal and one of ground oats. Under this fodder, the cattle have grown in weight from two to 2½ pounds a day, while expenses have been reduced from \$2.40 to a ton, when ensilage was not fully adopted, to \$1.57. Horses are fed on ensilage three times a week, and hogs constantly. No bad results have been experienced on the farm from overfeeding cattle with ensilage. Their health is perfect. The cattle were never turned out to pasture, and had been fed in this way for three years. The ensilage had been taken from sixty-three acres of land, producing about twenty tons to the acre. Cows when taken from ensilage, fall off rapidly in milk production, which increased at once as soon as they were again placed on the diet.

In regard to the use of ensilage as food for horses a variety of opinions was expressed. Dr. Baxter of Virginia said that it had been tried with fatal results in his state, and that anopsies showed that death was due to the presence in the throat of stomach-worms, which caused suffocation. This was due, he thought, to the acidity of the food, which drove the worms from the stomach. The experience of the superintendent of the Greenfield Park Farm in Connecticut was somewhat singular. Of ten horses fed for a week on ensilage, eight had died, the trouble appearing to be in the throat. Henry Goodwill of Wassau, N. Y., had tried the experiment of feeding ensilage, and his horse thrived under it and got fat. Another New York farmer said he had fed ensilage to mules with good results. The general opinion seemed to be that the use of ensilage for horses was not desirable.

Except in the matter of the Condensed Milk Company, the ensilage farmers report themselves successful during the past year. The only complaints against the milk have been made in cases where the cows were fed immediately before milking, and a change in the hour of feed has rectified this. B. Rogers, of Binghamton, said he furnished the milk of ensilage-fed cows to many people in Binghamton. They complained of the milk just after the silo was open in winter. Out of three hotels, one had complained. Elder Evans of the Lebanon Shakers said the Shakers filled three silos last summer, and had fed out two of them. Their butter was as good as ever. Elder Evans thought that it is easy to make a poor article, but that there is no reason why ensilage is not a perfect food. He saw no injurious effect on the cattle. A resolution was passed asking the Department of Agriculture at Washington to make an analysis of ensilage milk and of that produced by the ordinary feeding, and to publish the result, and also requesting the State Experimental Station of New York to make a similar comparative analysis.

## Feeding Pigs the First 150 Days.

A reader asks why pigs will sometimes grow into short, dumpy, fat pigs at nine or ten weeks old, and can't be made to stretch out and become large, thrifty hogs afterwards?

This question involves the proper feeding of pigs till the frame and muscular system are developed. The pigs, in the case mentioned by our correspondent, were, undoubtedly, plied with too purely fattening food before the frame was developed, and the small pig simply fattened and finished like a mature hog; and when this is the case the pig may as well be killed, for it is too late after that to grow the bones and muscles profitably. The simplest way to cure this early fattening is to turn on thin grass, and let it wear off its fat, when you may grow its frame and muscular system, preparatory to fattening into a large carcass. But this will cost much more than it comes to, and the most profitable thing to do is to kill such pigs and make the most of them.

This leads us to point out the proper way to feed the pig for its first 150 days. Up to this age, and perhaps a month or two beyond, it should be simply developing its body into a condition for ripening into a fat hog.

As we have often said, pig raisers should avoid giving young pigs a specially fattening food. In the dairy there is plenty of skim-milk, which is well adapted to grow the young pig, as it is rich in phosphate of lime to grow the bones, and of cheesy, albuminoid matter to grow the muscles. A little corn may be given with the milk. Such pigs never grow into little round dumplings of fat, but grow into rangy animals. Yet, probably a majority of our readers have the pigs without the skim-milk, and we must name the food for pigs under such circumstances. One of the best foods for the young pig is a small quantity of linseed-oil meal, a tablespoonful to the fifteen-pound pig, increased as the pig grows; this fed with oats

and corn ground together, made into a slop, will cause rapid growth, but not premature fattening. Cotton-seed meal is sometimes used, but we can not recommend it for young pigs. It is not so easily digested, and it has not the same beneficial laxative effect as linseed meal, which is found to be a promoter of health in the pig. This can be procured at any considerable town all over the country, and those who raise and feed large numbers of hogs can afford to send to the oil mills for it and get it at wholesale rates. It can be bought at the mills at \$20 to \$25 per ton, and it is always worth these prices as a food. It is so rich in muscle-forming matter as to be of great value to feed with corn, which is so deficient in this quality.

Peas are also an excellent pig food, rich in muscle-forming matter, and can usually be purchased at about the same price as linseed meal. Peas and corn, ground together, make an excellent food when cooked for young pigs. Millet, ground with oats, will grow young pigs without fattening them. Another combination of food for young pigs is ten bushels of oats, five bushels of corn and one bushel of flaxseed, mixed and ground fine together. This small proportion of flaxseed will keep the digestive organs in the best condition. That makes a ration just laxative enough for health. We have seen a herd of pigs make a magnificent average growth upon this ration in winter. Bran and fine middlings are also often used for pigs; they are often used to mix with corn meal, and make a great improvement over feeding the meal alone, but pigs do not digest bran so well as ruminating animals. We have fed bran to pigs with profit to make bulk in the ration, but, as a food, we do not consider it as good as the other foods we have named.

In the summer, small pigs will be given the benefit of grass in pasture, and, in that case, they are not likely to fatten much on any food. The grass and exercise change the effect of the other food materially.

The feeder must watch the effect of food upon his pigs, and if it has too much of a fattening effect, he must at once change the combination of food, remove the most fattening part of the ration, and substitute something less so.

Why should not those who feed animals as carefully study every element in their business as the master mechanic in his? He studies mechanical principles; let the feeder as carefully study the effect of foods, and know precisely how to apply them to produce the desired effects. Feeders have, heretofore, paid so little attention to the different qualities of foods, that their principal concern was to see whether the animals eat the food with a relish. It was taken for granted that any food eaten readily by animals must be good for them, and feeders did not seem to think it necessary to have more than one food at a time. But the last few years have shown much progress in studying the relative value of foods, and the methods of combining them in the ration.—*Live Stock Journal*.

## The First California Creamery.

Hon. Rush McComas, manager of the Santa Clara creamery, addressed a meeting of dairymen, farmers, and others interested in the subject, in the Grangers' hall, Gilroy, last Saturday afternoon, his subject being the history of the Santa Clara creamery and its workings. The Grange threw open its doors to admit persons not members of the order, and the attendance was quite large. Daniel Tuttle introduced Mr. McComas to the audience, and the latter proceeded to give the history of the successful organization he manages. He said that no dairying had been done near Santa Clara, farmers received but small prices for their butter, and with the hope of bettering themselves they had formed an association and established the creamery. He explained how they received and paid for milk, how cheese was made, etc. He read from statements of the factory, showing that the lowest price milk brought was 97 cents per 100 pounds (about 12 gallons), that the highest was \$1.42 and a fraction per 100 pounds. Milk dividends are paid on the 15th of each month. Two dollars per 100 pounds of cheese is charged for manufacture, that being sufficient to pay all expenses of the creamery. Milk is delivered early in the morning, is measured by weight, and must be pure and fresh. About 80 per cent. of milk received is discharged as whey, after the process of cheese-making, into a large tank, and each farmer is expected to take his proportion of the whey on his return home. The whey when mixed with shorts or bran, is fed to hogs, and is even used for feeding calves. Mr. McComas' figures were interesting, showing that the creamery was profitable to the farmers of that section. From his figures we make one selection: A farmer having twelve graded cows sold, as their milk production, to the creamery, for the year ending February 28th, 1883, 71,859 pounds of milk, and for the same received \$846.23—nearly \$71 to the cow for the year. Besides, he had the whey which he fed his hogs. After the conclusion of his address, Mr. McComas answered questions asked by dairymen concerning the creamery, and stated that at any time he would be pleased to show Pajaro dairymen through the creamery. It is well known that store-keepers lose money on all butter except that made by dairies, and we believe the establishment of a creamery would not only meet their hearty support, but would be profitable.

A Colorado farmer and stock raiser declares strongly in favor of alfalfa for hogs. He says:

Hogs can be kept on it the whole year round, i. e., they will graze upon it in summer and eat the dry hay in winter. It is claimed that pork can be made from alfalfa alone, and, in a measure, this is probably true. The last few pounds of excessive fat which are secured by the use of corn may not be secured when alfalfa is the exclusive food, but likely the hog can be made fat enough. I had a few in the corral last summer, and they had nothing beyond a little alfalfa thrown to them twice a day, as the cows were fed. I was not trying to make pork, but the hogs were certainly as fat as I would have cared to have had them for my own use. I noticed the youngsters made unusual growth.—A litter of pigs now on the place, a month to six weeks old, has discovered where alfalfa is daily thrown over the fences from one of the stacks, and can be seen there almost any time eating of the leaves scattered over the ground.

Ed. Younger of Santa Clara, has sold to F. S. Hatch of Stockton, a chestnut colt two years old, by Nutwood, first dam Addie, by John Nelson, second dam Adalene, by Langford, third dam from a mare imported from Kentucky. Mr. Hatch will keep this colt for breeding purposes, and his breeding should commend him, combining, as he does, all the strains now accounted potent and fashionable.

Rebecca, by Huhhard—Electra, the property of Mr. J. B. Chase, dropped a very fine bay colt, by Whentley, January 27th.

With the New York bookmakers, betting has been quite brisk the past week. Burton has been backed for the Withers, \$600 to \$100 having been accepted about him by one person. The reason for the run on Louisville, in the Kentucky Derby, is said to be that J. McLaughlin has been engaged to ride him, and one bookmaker took \$3,000 to \$150 about him. Bucbanau is also being backed. Our St. Louis correspondent reports some considerable transactions there the past week. The season opens well, and after the acceptances for the Suburban Handicap are known, that race will be the medium of a great deal of plunging. Already Checkmate, Aranza, Parole, Monitor, Eldorado, and others, are mentioned as the probable winners.—Sportsman.

STALLIONS THOROUGHbred.

BELLE MEADE

1884 STALLIONS. 1884

BRAMBLE,

By imp. Bonnie Scotland, dam Ivy Leaf, by imp. Australian.

ENQUIRER,

The sire of McWhirter, Fortina, Harkaway, Falsetto, Blue Eyes, Pinafore, Getaway, W. P. Birch, etc.

Imp. GREAT TOM,

The sire of Gen. Harding, Thackeray, Swift, Tennyson, Trombone, Tarquin, etc. And the grand Race-horse,

LUKE BLACKBURN,

By imp. Bonnie Scotland, dam Nevada, by Lexington. Each of these horses will be bred to a limited number of approved mares, at

\$100-The Season-\$100

\$5 to the Groom.

Mares will be kept at reasonable charges during the season. The annual sale of Belle Meade Yearlings, 49 in number, will take place April 30th. Catalogues of the sale will be issued to the public in due time. Address,

W. G. HARDING, Nashville, Tenn.

The Thoroughbred Stallion

HUBBARD,

Chestnut, foaled in 1869, bred by R. A. Alexander of Woodburn Stud Farm, Kentucky.

Sired by PLANET. First dam, Minnie Mansfield, by imp. Glencoe. Second dam, Argenti, by Bertrand. Third dam, Alleganti, by imp. Young Truffle. Fourth dam, imp. Phantonia, by Phantom. Fifth dam, by Walton. Sixth dam, Alleganti, by Pegasus. Seventh dam, Orange Squeezer, by Highflyer. Eighth dam, Mop Squeezer, by Matchem. Ninth dam, Lady, by Turner's Sweepstakes. Tenth dam, Shuttle and Syphon's dam, by Patriot. Eleventh dam, by Crab. Twelfth dam, Sister to Sloven, by Bay Bolton. Thirteenth dam, by Curwen's Bay Barb. Fourteenth dam, by Curwen's Spot. Fifteenth dam, by White-Legged Lowther Barb. Sixteenth dam, Old Vintner Mare.

Some of his Winning Performances:

1872, Baltimore, Md., Oct. 22nd—Dixie Stakes for three-year olds. Ninety nominations. Won by Hubbard beating Joe Daniels, True Blue, Woodbine, Mate, Silent, Friend, Wheatley, Experience, Oaks and Brook, land. Won by six lengths.

1873, Long Branch, N. J., July 10th—Grand Sweepstakes, four-mile heats, won by Hubbard distancing Wheatley and Bessie Lee in the first heat.

1873, Saratoga, N. Y., Aug. 2d—For all ages; dash of three miles; won by Hubbard beating Harry Bassett, Wanderer and King Harry

1873, Saratoga, N. Y., August 9th—For all ages; dash of two miles and three-quarters; won by Hubbard beating Katie Pease and Boss Tweed. Total winnings in 1872 and 1873 \$22,950.

Will make the season at the DALK BREEDING FARM, Mountain View, Santa Clara County, commencing February 10th, and ending June 10th, 1884.

Terms, \$50. Mares not proving in foal can be bred the next season free of charge. Good pasturage at \$5 per month. No responsibility for escapes or accidents. Full pedigrees can be had by applying to

T. J. DALE, Mountain View, Cal.

The Thoroughbred Stallion

WILDIDLE.

By imp. AUSTRALIAN. Dam Idlewild, by Lexington.

This great race-horse and successful sire will make the season of 1884, from February 10th to June 10th, at Judson's Wildidle Farm, Santa Clara, Cal.

Wildidle is the sire of Gov. Stanford's Frolic ally record of one mile, 1:42, at two years old, May D. (with a record of one and one-half miles in 2:36, the fastest on the Pacific Coast), Jim Douglas, Ella Doane, Wildidler, and others of note.

Terms of season, \$75, payable at time of service, and in all cases before removal. Mares taken good care of at \$8 per month. No responsibility for escapes or accidents. For further particulars address

H. C. JUDSON, Owner, or W. L. APPLEBY, Supc., Santa Clara, Cal.

P. O. Box 223.

STALLIONS -AT- RANCHO DEL PASO.

For the Season of 1884.

Thoroughbreds.

Imp. KYRLE DALY.

Bay horse, by ARTILLERY. First dam, Colleen Rhue, by Gemma-di-Vergy. Second dam, Princess, by Retriever. Third dam, Echidna (the Baron's dam), by Economist. Fourth dam, Miss Pratt, by Blacklock. Fifth dam, Gadabout, by Orville. Sixth dam, Minstrel, by Sir Peter. Seventh dam, Matron, by Florizel. Eighth dam, Mafden, by Matchem. Ninth dam, Pumpkin's dam, by Squirt. Tenth dam, Lot's dam, by Mogil. Eleventh dam, Camilla, by Bay Bolton. Twelfth dam, Old Lady (Starling's dam), by Palleine's Chestnut Arabian. Thirteenth dam, by Rockwood. Fourteenth dam, by Bustler. At \$100 the season, due at the time of service.

LONGFIELD.

Chestnut horse, by MONARCHIST, he by Lexington. First dam, Dame Gourlay (Blue Gown), by Planet. Second dam, Flora G., by Lexington. Third dam, Fanny G., by imp. Margrave. Fourth dam, Lances, by Lance. Fifth dam, Aurora, by Aratus. Sixth dam, Paragon, by imp. Buzzard. Seventh dam, Indiana, by Columbus (son of imp. Pantaloon). Eighth dam, Jane Hunt, by Hampton's Paragon. Ninth dam, Moll, by imp. Figure. Tenth dam, Slammerkin, by imp. Wildair. Eleventh dam, imp. Cut Mare, by Cub. Twelfth dam, Aramantus's dam, by Second. Thirteenth dam, by Starling. Fourteenth dam, by Croft's Partner. Fifteenth dam, by Greyhound. At \$50 the season, due at the time of service.

JIM BROWNE.

Chestnut horse, by FOSTER, he by Lexington. First dam, Flush, by Hiawatha. Second dam, Fanny Bugg, by imp. Ambassador. Third dam, Ida, by imp. Belshazzar. Fourth dam, Madame Bosley, by Sir Richard Tonson. Fifth dam, Nancy Nichol, by imp. Eagle. Sixth dam, Bet Bosley, by Wilke's Wonder. Seventh dam, by Chanticleer. Eighth dam, by imp. Sterling. Ninth dam, by Clodius. Tenth dam, by imp. Silver Eye. Eleventh dam, by Jolly Roger. Twelfth dam, by imp. Partner. Thirteenth dam, imp. Monkey. Fourteenth dam, an imp. mare from the stud of Harrison of Brandon. At \$50 the season, due at time of service.

Trotting Stallions.

ECHO.

Bay horse, by RYSDYK'S HAMBLETONIAN. First dam, Fanny Felter, by Magnolia, son of Seely's American Star. Second dam, by Webster's Kentucky Whip. Third dam, by Shakespeare, son of Duroc, and out of a mare by Plato, son of imp. Messenger. At \$100 the season, due at time of service.

ALGONA.

Chestnut horse, by ALMONT, son of Alexander's Abdallah, son of Rysdyk's Hambletonian. First dam, Emma Kinkead, by Consort, son of Cassius M. Clay. Second dam, Effie Dean, by Mambrino Chief. Third dam, by Powell's Bertrand, son of Bertrand, by Sir Archy. At \$100 the season, due at time of service.

ALASKA.

Brown horse, by ELECTIONEER. First dam, by Washington, he by Geo. M. Patchen. Second dam, by Williamson's Belmont. At \$50 the season, due at time of service.

The season for thoroughbreds will commence February 10th and terminate June 20th. For trotting stallions, will commence February 10th and terminate July 1st. Good care will be taken of mares during the season at \$8 per month; after the season \$10 per month will be charged, but no responsibility for escape or accidents. John Mackey, Superintendent, Sacramento, Cal.

THOROUGHbred STALLION

X X,

Pedigree.

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM. First dam, Columbia, by imported Bonnie Scotland. Second dam, Young Fashion, by imported Monarch. Third dam, Fashion, by imported Trustee. Fourth dam, Bonnets of Blue, by Sir Charles. Fifth dam, Reality, by Sir Archy. Sixth dam, by imported Medley. Seventh dam, by imported Centinel. Eighth dam, by Mark Anthony. Ninth dam, by imported Janus. Tenth dam, by imported Monkey. Eleventh dam, by imported Silvercye. Twelfth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name. Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the granddam of Autoco. Her dam, Young Fashion, was the dam of Surprise, Scotland, Waunahia, Bonnie Kate (the dam of Bonnie Lizette), Andes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Saganore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition. Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON, Oakland or 508 Montgomery Street, San Francisco.

PACIFIC COAST

Blood Horse Association.

Spring Race Meeting.

BAY DISTRICT COURSE, San Francisco.

First Day—Saturday, April 12th.

No. 1—California Stake—For two-year-olds; dash of half a mile. Closed with 23 nominations. No. 2—Hurst Stake. For all ages, of \$25 each; \$10 forfeit; \$200 added; second to have stake; dash of three-quarters of a mile. No. 3—Winters' Stake—For three-year-olds; dash of one and a half miles. Closed with 28 nominations. No. 4—Selling Race.—Purse \$200; \$25 of which to second; one and one-eighth miles; horses entered to be sold for \$1,000, and to carry the rule weight; two pounds taken off for every \$100 below that valuation, and three pounds added for every \$100 above.

Extra Day—Tuesday, April 15th.

No. 5—Purse, \$200; for two-year-olds; \$25 to second; dash of five-eighths of a mile; winner of California stakes to carry seven pounds extra, second five pounds above rule-weight. No. 6—Purse, \$200; \$50 to second and a furlong; for three-year-olds; maidens, colts and fillies that have not won a race. No. 7—Purse, \$200; \$50 to second; dash of one mile. No. 8—Selling Stake, \$200; \$25 to second; 1 1/4 miles. Same conditions as Selling race on first day.

Second Day—Thursday, April 17th.

No. 9—Purse, \$200; for two-year-olds; dash of five-eighths of a mile; winner of either of the preceding two-year-old races barred; second to carry five pounds extra. No. 10—Pacific Cup Handicap—\$50 each; \$20 declaration; \$500 added; second to receive \$100 in hand to save stakes; two and one-fourth miles; weight announced April 12th; declaration April 15th, at 3 p. m. No. 11—Handicap Stake—For three-year-olds; 1 1/4 miles; \$75 each; \$10 declaration; \$200 added; weights announced at the same time as the cup. No. 12—Purse, \$300; \$50 to second; for all ages; heats of three-quarters of a mile.

Third Day—Saturday, April 19th.

No. 13—Gano Stake—Dash of three-quarters of a mile for two-year-olds. Closed with 23 nominations. No. 14—"Spirit of the Times" Stake—Dash of one and three-quarter miles for all three-year-olds. Closed with 31 nominations. No. 15—Purse, \$500; \$50 to second; heats of three-quarters of a mile; for all ages. No. 16—Consolation Purse, \$200; \$50 to second; for horses that have run and not won at the meeting; five pounds allowed for each defeat; dash of a mile.

Conditions.

Entries to stakes and purses not marked closed will close March 1st, 1884. Races to close will be run under weights adopted at the annual meeting 1881.

Starters in all races must be named at 6 p. m. the day preceding the race.

Entrance free for starters in purses. Non-starters can declare out at 6 p. m. the day preceding race, by paying five per cent. After that time can only be excused by Presiding Judge, and in such case, ten per cent. on amount of purse must be paid.

Non-members will be placed on the same footing as members of the association in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division.

Farties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and entries in purses must be made on or before the first day of March next, 1884, directed to Jos. Cairn Simpson, Secretary, 508 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked on or before that day, March 1st.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

State Agricultural Society.

TROTting AND RUNNING PURSES

To Close March 10th, 1884.

No. 1—Trotting Purse \$1,000; mile heats for two-year-olds. No. 2—Trotting Purse \$1,000; mile heats, three in five, for three-year-olds. No. 3—Trotting Purse \$1,000; mile heats, three in five, for four-year-olds. Entrance ten per cent., five per cent. of which to accompany nomination, remaining five per cent. payable July 15th, 1884. Those not making second payment forfeit first, and cannot start in the race; five to enter and three to start. If more than ten make second payment, \$200 additional will be added; four moneys. The meeting having been extended to nine days, these races will be so arranged as to permit the colts entered in other stakes to trot in these purses.

Running.

No. 4—Running Purse \$1,000; one-mile dash for two-year-olds. No. 5—Running Purse \$1,000; one mile and repeat for three-year-olds. Entrance ten per cent., five per cent. of which must accompany nomination, the remaining five per cent. to be paid July 15th, 1884. Eight entries required to make first payment; four moneys. If more than ten make second payment, \$200 will be added.

EDWIN F. SMITH,

P. A. FINNIGAN, Secretary. President.

MONMOUTH PARK.

Long Branch, New Jersey,

The Following Stake is Now Open.

THE CHAMPION STALLION STAKES for 1885, for colts and fillies two years old (now yearlings), to be entered at the course by 1 o'clock P. M. on the day appended for the races, of \$20 each, with \$5,000 added by the Monmouth Park Association to a subscription of \$500 each by owners of stallions, whose get alone shall be qualified to start; the second horse and the subscribing owner of his sire each to receive \$100; the third horse and the subscribing owner of his sire each to receive \$50; the winner to receive the stakes of horses entered for the race, and one-half of the money remaining after the foregoing deductions; the other half to go to the subscribing owner of the sire of the winner; the death of a subscriber not to disqualify the get of this stallion, if the subscription be paid; each nomination to be accompanied by a contract in the form subjoined, which, if not fulfilled punctually by the subscriber, may be transferred to and fulfilled by any owner or owners entering in the race the get of the stallion, and such owner or owners shall in that case be entitled to start and to the benefit accruing to the subscriber from first, second or third place in the race, and to recover from him the money contracted to be paid, if no breach accrues; fifteen subscriptions to fill. Three-quarters of a mile.

Form of Contract.

In consideration of the money to be added by the Monmouth Park Association to the Champion Stallion Stakes for 1885, and in further consideration of the increased value given to the get of my stallion by the right of entry therein, which right I reserve, I do hereby agree to pay to the Monmouth Park Association, or order, five hundred dollars on the first day of July, 1884, at its office in the city of New York.

I do hereby assign to the above-stated race all the colts and fillies of my stallion, whose subscriptions to be addressed to J. H. Coster, secretary Monmouth Park Association, Madison Avenue and Twenty-seventh Street, New York.

My stallion enters his gift of \$5,000 to the Lorillard Stakes. The Champion Stallion Stakes and the Lorillard Stakes are intended to be permanent.

The Lorillard Stakes for 1886, with the following conditions, will close on August 15th, 1884. The Lorillard Stakes for 1886, for three-year-olds, of \$50 each, h. f., of only \$10 if declared by January 1st, 1886, or \$50 if declared by January 1st, 1886; or \$100 if declared by June 25th, 1886; with \$5,000 given by Mr. Pierre Lorillard; the Association to add \$1,000 for the second, the third to save his stake; horses bred in the United States are not eligible for this stake unless their sires are represented by subscription to the Champion Stallion Stakes for 1885. One mile and a half.

GEORGE L. LORILLARD, President.

J. H. COSTER, Secretary.

**The California Theater.**

We are now approaching the close of W. E. Sheridan's engagement at this establishment, in which he has again given us some really splendid and intellectual representations of Shakespeare's leading creations. Of Mr. Sheridan's ability as a tragedian of high order, it is unnecessary for us to say a word, for it has long been recognized in San Francisco and the principal cities in the east. Perhaps it is not too much to say he has no superior on the stage at the present day, if judged by those requisites which go to make up a great tragic actor—freedom from rant, correct attitudes, capacity of voice, touching pathos and passion. It may be only a fancy, but still in our opinion, he has much improved in voice since his last appearance in this city. The great drawback to Shakespearean representations, as a rule, is the vast difference which generally exists between the star and the rest of the company. But this is not the case at the California at present. Leaving out the star, the company is well balanced, presenting a combination of more than average ability, and this is a great consideration. We are glad to say the audiences have been large end of the highest respectability during the engagements. Next week *Richelieu* and *Hamlet* will be the attractions, according to the nights advertised, and as it will be Mr. Sheridan's last week, and the characters are considered his best, we hope the patronage will be large. All the plays are exquisitely mounted, showing no expense has been spared in either costumes or scenery.

**The Grand Opera House.**

At this theater, there is, at present, a most excellent and painstaking company under the leadership of Miss Jeffreys Lewis. The piece occupying the boards during the current week has been Willing's melodrama, the *Ruling Passion*, which like all English productions, with London for the location, is full of startling incidents, extreme mixtures, and fearful sufferings. It is, however, only just to Miss Lewis and her company, but especially to the lady herself, to say they are always equal to the occasion whatever is required to be portrayed. The plot, with its moral of long delayed retribution through successful villainy, is that of a deserted wife who is made to undergo every possible suffering and degradation to foster the scheme of her husband to merry wealth. All through the piece Miss Lewis appears to great advantage, especially in the madhouse and balcony scene, and shows herself a refined and true actress, and cultured woman. Henry Wilson as Dr. Dwinning, and George Oehorne as Isacher Solomons, also deserve especial mention. The piece was admirably mounted, the scenery all through doing the management great credit. The houses, as they ought to be, have been large, and drawn from the better classes. Next week Miss Lewis appears in Steele Mackay's great production *Won at Last*, in which she will have a much better opportunity to display her fine taste and abilities. Popular prices prevail at this theater, the sale of which may be seen by reference to advertisement in another column. The arrangement shows wisdom in the management.

**The Oakland Theater.**

The Bert Company, composed of really meritorious and vivacious performers, has long been doing a successful business in our sister city, and if reward follows merit, the patronage has been earned. A very high class of plays, to the exclusion of all that is low or vicious, has been produced so far, and only such will be produced. The respectability of Oakland has recognized this effort to please, and responded in a gratifying manner. The outlook now is that a good theater, conducted as the Colosseum is by Mr. Bert, will be supported in Oakland as long as it is worthy of support. As the advertisement shows, popular prices prevail here also. This is a concession to the condition of our people which is now absolutely necessary to success in theatrical management. Henceforth we shall look in at the Colosseum, and have something to say about the individual merits of the performers. In the meantime we recommend the Colosseum to our numerous readers in Oakland.

**Vienna Gardens.**

To-morrow night will be the last appearance of the popular *Ladies' Orchestra*. In a musical and financial view the engagement has been a success, the only complaint we heard being repetition in the pieces selected, which, considering the vast amount of operas and orchestral music at command was perhaps an error in judgment. A portion of the ladies, Miss Masineck, and the three Misses Poeechl, go to Portland under a limited engagement, and we congratulate our northern neighbors that they will have an opportunity of having these accomplished musicians. The Tyrolese singers, with Mr. Walters himself at the head for first base, will continue, and we are glad it is so. Miss Edgar has for some time been singing in French, English and Spanish songs, and proved herself an accomplished and popular vocalist. We hope to hear her again. Next week a male orchestra will be resumed with a variety of performances, including Miss Nelson with her trained pigeons, Master Bulzar on the slack wire, and

the Marvels of Peru. All these are well worth seeing, and in combination with other artists appearing, we look to the house being crowded, as usual. No manager catering for the public amusement deserves a more liberal patronage than Mr. Walters, of the Vienna Gardens.

**Chicken Chat.**

Fanny Field, under the above heading, writes some useful notes in *Prairie Farmer*. The following will be found interesting to poultry fanciers:

Somebody says that "Plymouth Rock pullets are not always early layers, for they often grow for ten or twelve months before laying, though some lay as early as six months after hatching."

Well that's news to us, and we have kept Plymouth Rocks quite a while, too. We have had Rock pullets commence laying at six months, and once we had a few that didn't do a thing toward earning their own living till they were almost eight months old; but seven months is nearer the average, and that is what we count on when selecting the pullets that are to be kept for winter layers. The pullets that are hatched from the 1st of March up to the 1st of May commence laying all along from the middle of September to the 1st of December. Pullets that we want to commence laying in February are selected from those hatched in July. It would really be very gratifying to me if the people who know no more about the Plymouth Rocks than they do about the fete of Charlie Ross would keep their twaddle out of print.

One of my correspondents is very anxious to know if the Langshans are the "coming fowls." Hardly. Fanciers who have tried them pronounce them the "best birds that were ever imported from China," which is pretty high praise, but all the same they are not popular with farmers. They will never hold the place that the Plymouth Rocks hold. Since you wish to buy fowls of the breeds for which there will be the greatest demand next season, I should advise you get Plymouth Rocks and Wyandottes. These, in addition to the Light Brahmans and Brown Leghorns that you already have, will give you the four breeds that are the most popular, and if you have good stock, and let people know that you have eggs to sell for hatching, you will probably have orders for all the eggs that you will care to sell.

Another correspondent wants to know the meaning of the word "strain," as applied to fowls, and I don't wonder that he asks the question, for the word is used "promiscuously" like by every tury in poultry breeding.

When any poultry-raiser has bred fowls of any breed long enough to fix his notion of what constitutes a standard fowl of that breed upon them permanently, he may claim a "strain." For instance: Smith believes that the Light Brahmans should have very short legs, and he breeds for short legs until they are permanently fixed, and everybody who knows anything about Light Brahmans knows one of Smith's short-legged Brahmans at sight; then, but not before, Smith may claim a strain of his own, and it is proper for others to speak of "Smith's strain" of Light Brahmans. But Johnson, who buys of Smith, or of some one who has Light Brahmans of Smith's strain, this year, should not next year talk about "my own strain" of Light Brahmans. It takes years of steady, judicious breeding after a certain type to establish what may truthfully be called a strain, and it can only be done by breeders of rare skill and long experience in mating fowls for breeding.

J. S. Campbell continues to sing Richball. He should keep it up until the other pacers have been shaped and the track season commenced, then it can be seen how near he has finished his tune.

The Directors of the National Horse Show Association held a meeting on Friday, January 25th, and decided to hold another exhibition at the Madison Square Garden during the last week in May.

General W. H. Jackson, of the Belle Meade stud, Tennessee, has purchased of Harvey Welch, of New York, for \$600, the bay mare *Marchioness*, foaled 1876, by *Monarchist*, from *Heliotrope*.

AT THE

**Bay District Race Track,**

AND CONTINUING SIX DAYS.

Thoroughbred Horses and Standard Trotters, Roadsters, Jersey, Durham, and

Devon Cattle, Spanish, Merino, and

Leicestershire Sheep, from all

the principal breeding establishments

on the Pacific

Coast.

**750 HEAD OF STOCK**

Have already been entered for sale and further instructions from leading breeders are daily arriving. Breeders and owners desirous of entering stock for this sale should apply at once to

**S. C. BOWLEY,**

33, 35 and 37 New Montgomery St.

The benefit of the combination sale to breeders and stockmen cannot be too highly estimated. Combination sales have been found of immense advantage in the East, and such a sale as this, comprising, as is anticipated, not less than 750 head of fine stock from all the leading breeders of the Coast, cannot fail to attract a large number of buyers from Honolulu, Australasia, and the East. The fame of California trotters is world-wide, and when it is known that for this sale already entered the get of Electioneer, The Moor, Almont, Nutwood and all the best known stallions on the Coast, the advantages to both breeders and purchasers must be obvious. Large or small lots will be taken for sale. As soon as the catalogues can be prepared they will be distributed all over the world; so it is necessary for those desirous of taking advantage of the sale to send in their lists of stock, with complete pedigree, at an early date.

ATHLETICS.

Advice to Young Athletes on Training.

[L. E. Myers in New York Sportsman.]

Four Hundred and forty-yard Running.—Without doubt this is the most popular distance that figures on our programmes, and it is also the distance at which most beginners make their debut. Probably of all the races run this is the most difficult to get the "hang of." The first race I ever won at a regular athletic meeting was at this distance, and I can remember even now how foolishly I ran the first heat. I was on the 18-yard mark, and the limit was 26 yards. In less than 100 yards from the start I was leading man, and running as if my life depended on my getting home first. When I got into the homestretch some kindly disposed athlete yelled to me to "let up, and take it easy." I eased a bit, but finally won by all of 15 yards, death tired, in 56 seconds. The person who had given to me the kindly advice to let up followed me to the dressing room, and there further advised me how to run the final heat. Said he, "You have plenty of speed; now just lay behind your men, and do not make an effort until you reach the homestretch. I was very leg-weary, and felt very little like running the final at all. By the time the final heat was called I had partly recovered my strength and wind. I followed my unknown friend's advice, and coming away in the straight, won easily in 55 seconds. The chances are that had I not been told how to run the race I never would have finished. I mention the facts of this particular race because it is identical with the hundreds of others that I've since witnessed, and because it is liable to suit the cases of most beginners. To run a quarter-mile properly you must be a judge of pace above all things, and besides must have both speed and stamina. It is a cruel race at best, and especially so when forced to run yourself out. The mere fact of running oneself "out" in a race is not so bad if you are at the finish when your powers leave you; but to be thoroughly pumped at 300 yards in a race of 440 yards is to endure misery beyond description for the balance of the distance, and often for hours after the race.

The beginner will most naturally want to know how to become a judge of space. As I have said before I do not believe in too many trials, and if you can do without them give them a wide berth. But it is very necessary to know how "to run on a watch." Say, for instance, that you can run or think you can run a quarter in 53 seconds. Then get a friend to time you for say half the distance, or 220 yards. Try to run that distance in as near 29 seconds as you can. If you should run it too fast or too slow, then the next time you try it decrease or increase your effort, as the case may be, so as to bring you nearer the mark. After a while you will find that you will know exactly how much effort to put forth to do a given distance in a given time. This is judging pace. It is very simple. The work necessary to enable you to run a quarter does not differ much from that prescribed for 100 and 220 yards running, only that after the sprinting work is through with you must run a longer distance at a good stiff pace than for those events. I believe in all distances, whether it be 100 yards or five miles, being trained for by going more than the distance. The fact that a man has to run "so many times around" often has the effect of making him dislike the distance, in fact, makes him afraid of it. If you say to yourself, "I can run further than that in practice and not hurt myself, I ought, therefore, to be able to stay that distance whatever the pace may be," you will find it comparatively an easy task. To sum up, the exact work necessary to run 440 yards properly is as follows:

Practice sprinting, not at your best pace, but running through several hundred yards from four to five yards within yourself. When you have recovered your wind and strength, run from 500 to 600 yards at a good stiff pace, and even a half-mile now and then will not hurt you. Our athletes very seldom confine themselves to one particular distance, but the fact that they do not is no reason why they should not. I could mention a score of athletes who would make good performers at certain distances were they to confine themselves to these distances. Because this or that man runs a quarter, a half, a mile, etc., apparently equally well, it is no reason why you should try the same tactics. It is a fact that these very men who are equally successful at most any distance would do much better at some one of them were they to confine themselves to that distance. When I cautioned the beginner "not to roll all over the track," or to lose form while running, I did not mean that he should not "run himself out" now and then. In fact it is very necessary for those who do not compete very often to do this very thing. It answers almost the same purpose of a race to bring out the latent power of the men. But it is not at all necessary to run a trial to do this. It is very seldom that a person is satisfied with a trial, and it is very easy to be discouraged by the figures of a watch. If you are in the habit of racing, say every Saturday, this is enough to thoroughly extend you without running yourself out during the week. Racing is one of the best possible means of getting into "form." A man is not unlike a horse in this respect. How often do you hear this or that horse-trainer say, "Wait until my horse gets a race or two into him, etc." A great mistake that you are liable to make in running this distance is to over-ride yourself. I would rather see a runner stride too short than too long. The stride for this distance is the most natural you can take. Length of stride never won a race. It is much better to stride 6 feet 10 inches and recover properly, than to take 7 feet 10 inches in a stride and "dwell" each time you go from one foot to the other. The shorter stride, under these circumstances, will win at the finish every time.

At Providence, a suburb of Scranton, Penn., on the 1st, an audience of one thousand people witnessed a *rara avis*, a genuine wrestling match. Edwin Bibby was matched at catch-as-catch-can against John Connors, a miner, for five hundred dollars a side. Connors is an Englishman who stands 5 feet 7 1/2 inches in height, weighed 175 pounds, and was in perfect condition. Bibby, who is 5 feet 4 1/2 inches in height, weighed 155 pounds, and was also in fine form. Betting was even, and a large amount of money was wagered. For an hour after time was called each athlete tried all he knew how to floor the other; but while Bibby showed the greatest science Connors' superior strength saved him from going under. After a ten-minutes rest the struggle was resumed, and shortly afterwards Connors seized Bibby, and dashing him head first to the floor, grasped his left arm and wrung it under Bibby's body. He held the fallen man in this position until Bibby's shoulder blade was dislocated, and his elbow muscles wrenched, when he settled fairly on his back. Bibby's arm was crippled, and upon being offered \$100 of the stakes not to continue, the match was declared in Connors' favor. Connors was fitted for the contest by Joseph Acton, while Bibby was attended by Alfred Hoefler.

James Pilkington issues a most remarkable challenge. He wishes to make a match with any amateur athlete in the world for an all-round competition, for a prize to cost not less than \$250 nor more than \$500. He proposes to compete at the following games: Rowing from one to three miles; running from a half mile to a mile; walking from one mile up to ten; fencing with broad swords and single sticks; Græco-Roman wrestling; catch-as-catch-can wrestling; boxing; pigeon-shooting and rolling at tenpins. The winner of six out of eleven events to take the prize. Mr. Pilkington has been amateur champion of America at heavy weight boxing, Græco-Roman and catch-as-catch-can wrestling; was champion of the Police Department at walking and boxing, and held the diamond badge emblematical of champion senior single sculler of the Harlem river for a year. He is captain of the Metropolitan Bowling Club, and has won several watches at shooting pigeons.

The much talked of Græco-Roman wrestling match between Ed. Wilson and Dick Rule, at Tombstone, Arizona, last week, resulted in a victory for Rule. The first fall was scored by Wilson in 21 minutes, he then having 39 minutes wrestling time to win the fall under the rules. This he failed to do, owing to the fact that his opponent, made wary by experience, put himself entirely on the defensive, and by resorting to the devices known to wrestlers, exhausted the time without losing another fall, thereby winning the match, the conditions being that Wilson was to throw Rule twice within an hour or lose. There was no betting on the event.

Axel Paulsen's attempt to lower all previous skating records from one mile to twenty-five miles, was successful beyond all expectations. On Saturday afternoon, February 24, at the Washington Skating Park, Brooklyn, the event took place, and Mr. Paulsen succeeded in lowering every record from one-fourth of a mile to twenty-five miles, notwithstanding the bad condition of the course. The twenty-five miles were skated in the extraordinary time of 1 hour, 33 minutes, 28 2-5 seconds, which is almost 26 minutes better than any previous time.

Football.

The opening match of the season was held at the Recreation Grounds last Saturday afternoon, the University and Merions contending for supremacy. The match was announced to start at 3 o'clock, but owing to the want of punctuality of a few of the players, particularly at the Merion team, it was fully half an hour later when the ball was kicked off by the University toward the upper goal, the Merion captain having won the choice. The ball was soon in close proximity to the Merion goal, and after a great deal of scrimmaging, Sutton secured a touch for the University. Palche, who was entrusted with the kick, sent it well over the beam, thus scoring the first goal for the University. The ball was soon set in motion again, and the play at once became general, with a tendency for tight scrimmages, in which the heavy weight of the University forwards showed to great advantage, but the Merions struggling hard to make up their lost ground. After the usual rest of ten minutes, hostilities were again resumed. The Merions rallied but for a few minutes only, as the superior condition of the University team, and their splendid working together, kept the ball very close to the Merion goal, and before the time was up the University had secured three more touches, one only yielding a goal, however. The game resulting in favor of the University team by two goals and two tries to nil. The University team of Saturday last is without doubt the strongest that ever upheld the honor of the purple and white. They were skillfully handled by Bosse, and worked splendidly together, particularly Ramm, Bosse and Sutton. The Merion team suffered from want of practice, a great many being completely played out before half-time was called. Bosse, Ramm, Palache, Rothganger, Waterman, Sutton, McAllister, McKee, Bigan, Patnam, Lathbone, Turner, Dunn, Rowell and Gallardo, fought for the University, as did Foster, Wooley, Campbell, J. Theobald, C. Davis, Frost, E. Eyre, Raymond, Heyl, Sime, Burnett, Tracy, Finlayson, B. A. and B. S. Benjamin for the Merions. Messrs. Pond and O'Kell umpired for the University and Merions respectively. A very fair attendance witnessed the game, and it was easily noticed that a great number hailed from the University.

This afternoon the University will play against a picked team from the Merion, Wanderer and Phoenix Clubs, at the Recreation grounds. The team will be selected from the following well-known players: O'Kell, Campbell, Woodward, Alexander, Cohn, Deane, Wooley, George and John Theobald, George, Page, Foster, Burnett, Eyre, Sime, Finlayson, Tracy, and Benjamin (2). Game called at 3 o'clock. A close and exciting game is anticipated.

The annual match between Scotland and Wales resulted in a victory for the former, by a goal and try to nil.

Ritchie, the champion amateur sprinter of England has distinguished himself in the football field.

Polo.

The following from the San Luis Obispo *Tribune* notes the introduction of this equestrian game in California:

Through the influence of Messrs. Vachell and Sanford a Polo Club has been organized at Arroyo Grande, in which the young gentlemen of that lively village take great interest. Polo was invented by the officers of an English Cavalry Regiment in India, and is a game in which there is great life and energy, good horsemanship and manly courage required to play. From India it was brought to England, where it became very popular, many clubs being formed in that country and in various parts of Europe. James Gordon Bennett introduced it in New York, where it soon became the rage with the jeunesse doree of that gay city.

Polo is played on horseback, small horses or ponies being preferred. The players divide into opposing parties each having its captain. The game is to drive a ball through the goal of the adversary, which is attempted by striking the ball with a mallet having a long handle. As this is all done on horseback, it is very evident that good horsemanship, and very active work are required. One who has played football where the effort is to drive a ball past a certain line, can form an idea of the efforts in polo. The polo ground should be about 300 yards in length by 150 yards broad, and at each end posts should be set about 25 feet apart for the goal. The opposing parties take their station on their ponies, the ball is pitched and all rush for it to drive it with their mallets between the posts of the opposite goal.

On Sunday, the 20th inst., the Arroyo Grande Club met for their first game. The parties were, first, H. A. Vachell, Capt., E. Ballard, F. Branch, Mr. Manning and Mr. Fox, against A. Wells Sandford, Capt., M. Low, Mr. Balsam, Mr. Pollard, and

W. Dendy. There were present a large number of spectators, who took a lively interest in the game, the fair sex especially. Considering that this was the first public attempt, all played so well that it would be invidious to make distinctions, but Messrs. Branch, Low and Balsam proved themselves anything but novices. The game was closely contested throughout, but was at last won by the side of Capt. Sandford by one goal. Thanks were returned by the club to Mr. H. X. Stanley for the use of the ground for the game. It is the intention of the club to repeat the game Sunday, playing from 2:30 to 4 P. M. The Arroyo Grande Club hope the young gentlemen of San Luis will organize an opposition and meet them for a contest. The sport is a manly one, and where there are so many good horsemen the game would be very interesting. Mr. Vachell, the Secretary of the Arroyo Grande Club, will give any instruction and information required.

A Chicago correspondent of the *Turf, Field, and Farm* says that Woodside & Morgan, the professional bicyclist, have changed the location of the starting point for their great bicycle ride across the continent. They have decided to start from New York on May 1st, and will ride via Philadelphia, Washington, Baltimore, Pittsburg, Chicago, Salt Lake City, etc., and have made arrangements with the respective backers to have an extension of time. They will have nine weeks to ride the distance; they are confident of riding from shore to shore, or from the Atlantic to the Pacific, in the time allowed them, and hope to have a few days to spare.

The New South Wales Cyclists' Union recently held their inaugural race meeting at Sydney, Australia. The events were keenly contested, and were witnessed by three thousand spectators.

Audy McDowell, late trainer at Arno Farm, is now at Los Angeles, organizing a stable of trotters for an eastern campaign. The string will be mainly taken from sunny Slope, but will probably include Mr. Titus' mares Echora and Belle Echo.

TROTTING STALLIONS.

ELECTOR, 2170.

STANDARD—See Wallace's Register Vol. V.

By ELECTIONEER, his dam Gilberta by Fred Low, son of old St. Clair. Second dam Lady Gilbert by Gen. Knox.

Will make the season of 1884, commencing March 1st, and ending June 1st.

Elector is a mahogany bay, both hind feet touched with white, 15-3/4 high, weighs 1,650 pounds.

Terms \$50 the season. Mares from a distance properly cared for and pastured at \$5.00 per month. Due care taken but no responsibility for accidents or escapes. For further particulars address

C. E. PERKINS, Stockton.

The Trotting Stallions

Baywood and Fleetwood

WILL MAKE THE SEASON OF 1884, COMMENCING FEBRUARY 15th, and ending July 1st, at the corner of Third and Empire streets, San Jose.

BAYWOOD

Is five years old, dark bay, with black points, 16 hands high, and weighs 1,200 pounds, fine bone, level-headed and a good mover.

Sired by Nutwood; first dam by Geo. M. Patchen; second dam by Champion; third dam by Belmont.

FLEETWOOD

Is four years old, sorrel, with both front feet white and white stripe in face; 15 1/2 hands high, and weighs close to 1,100 pounds. He is a model of a perfect horse; high life, fine style and action, and looks like a thoroughbred.

Sired by Nutwood. First dam Copper Bottom Mare, by Young America; second dam the Tillotson Mare, pedigree unknown but she was reported to have been bred in Kentucky.

Terms, \$25 for the season, or \$10 to insure.

E. S. SMITH, San Jose.

The Trotting-Bred Stallion

A. T. STEWART,

Will stand for mares at the FRESNO FAIR GROUNDS during the season.

A. T. Stewart is a dark brown stallion with white hind ankles, sixteen and one-half hands high, and weighs over 1,300 pounds. Bred by D. L. Harris, of Fayette County, Kentucky. Foaled in 1872, and is an inbred Mambrino. Sired by Mambrino Patchen (full brother of Lady Thorn), record 2:28 1/2, sire of Katie Middleton, 2:29, and mare in 2:30 list. Dam by Mambrino Chief, sire of Lady Thorn; second dam, by Young's Pilot, Jr., brother in blood to the sire of the dam of Mambrino, 2:30 1/2. Mambrino Patchen sired by Mambrino Chief, Inc. by Mambrino Fox master, and he by Mambrino, thoroughbred son of imported Meade.

Terms for the season, \$50.

### Hambletonian Trotting Stallion

## BOB MASON

By ECHO. His dam Belle Mason by Belmont, thoroughbred. Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's). First dam, Lucy Johnson, by the Pouy (son of imported Leviathan). Second dam Catalpa, by Frank. Third dam, by John Richards.

Will make the season of 1884 for a limited number of mares, at the OAKLAND TROTting PARK.

Description.

Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100. Foaled May 10th, 1879. He is of fine kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For a fine portrait and full description of the horse see BREEDER AND SPORTSMAN of June 30th, 1883.

For full history of his sire Echo, see BREEDER AND SPORTSMAN July 29th, 1882. See also, for his full brother EXILE, BREEDER AND SPORTSMAN issue of September 16th, 1882.

Terms.

Fifty dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Good pasture at \$5 per month.

**CHARLES J. ELLIS, Owner.**  
**WM. DONATHAN, Agent.**

### Fast Trotting Stallion

## HA HA.

Standard (See Wallace's Register.)

Ha Ha: Color Brown, 15 1/2 hands. Extra fine style. Action and form perfect. As a three-year-old, with eight weeks' handling, showed 2:23, without a slip.

Breeding.

GILT-EDGE, combining, close at hand, Hambletonian, Alexander's Abdallah, Mambrino Chief, dam by McCracken's Blackhawk, the sire of the dam of Overman. Record 2:19.

N. B. As a four-year-old, with proper handling, 2:20 or better, I would expect him to show.

**FRED ARNOLD,**  
 Stockton, Cal.

### Trotting Stallions

## Prompter, 2305, and Privateer

Will make the season of 1884, from February 1st to July 1st, at Agricultural Park, Sacramento, at \$50 the season. Mares not proving in foal can be returned next season free of charge. Pasturage at reasonable rates. Accidents and escapes at owner's risk.

**Prompter** is a bright bay, star in forehead, hind ankles white, sixteen hands high, and weighs 1,140 pounds. Sired by Wilson's Blue Bull, son of Pruden's Blue Bull, by Merring's Blue Bull, dam Prairie Bird (four-year-old pacing record 2:28), and dam of Flight, five-year-old record 2:24, and three-fourths sister to dam of Pride, yearling record 2:14, and three-fourths sister to dam of Buccaneer, public trial against time 2:24, and full sister in blood to dam of Fawn, record 2:30, by Flaxtail, granddam by son of Tally Ho Morgan, great granddam by Irwin's Tuckahoe, great great granddam by Leffer's Consul.

**Privateer** is four years old, a beautiful brown with tan shades, over sixteen hands high, and is by Buccaneer, son of Iowa Chief, by Green's Bashaw, dam by Marion, son of Mambrino Chief, yearling record 3:05.

For extended pedigree and further description of the above horses send for circular.

**M. W. HICKS,**  
 Sacramento, Cal.

### THE ELECTIONEER STALLION

## STANFORD

Will make the season of 1884, commencing February 1st and ending July 1st, at my stable near the Oakland Race Track.

Terms.

\$50 for the season, payable at the close of the season. No responsibility assumed beyond reasonable care.

Pedigree and Description.

Stanford was bred by George Faylor, late of San Francisco, foaled in 1879; is dark bay, no marks, 15 1/2 hands, and weighs 1,050 pounds; was sired by Electioneer, and closely resembles him in form and color; was not broken until last year; has been handled very little, but enough to show that his action is excellent and peculiar to the get of Electioneer.

First dam, Annie Laurie, by McCracken's Dave Hill, Jr., (sire of Geo. Treat, record 2:25), he by McCracken's Dave Hill, he by Red Lion, and he by Vermont Black Hawk.

Second dam, Kitty, by Owen Dale, son of Belmont.

Dam of Dave Hill, Jr., by old St. Lawrence, granddam thoroughbred.

Dam of Dave Hill by Vermont Hambletonian.

Dam of Red Lion by Vermont Hambletonian.

**J. J. FAIRBANKS,**  
 Agent.

Oakland, January 18, 1884.

### The Trotting Stallions

## DIRECTOR AND MONROE CHIEF

Will make the season of 1884 at

### Oakland Trotting Park,

Commencing February 1st and ending June 1st.

TERMS.

Director \$200, Monroe Chief \$100, the season. Good pasturage for mares at reasonable rates. Due care will be taken to prevent accidents or escapes, but no responsibility assumed should any occur.

Director, 2:17.

Black horse, foaled July 18, 1877, by Dictator (sire of Jay-Eye-See, 2:10 1/2; Phyllis, 2:18 1/2); first dam Dolly (dam of Thorndale, 2:22 1/2; Onward, 2:25), by Mambrino Chief; second dam by Potomac; third dam by Saxe Wiener.

Thorudale, 2:22 1/2, is the sire of Edwin Thorne, 2:16 1/2, and Daisy Dale, 2:19 1/2.

Monroe Chief, 2:18 1-4.

Two-mile record, 4:46.

Brown horse, foaled 1870, by Jim Monroe (son of Alexander's Abdallah, he by Rysdyk's Hambletonian, first dam Madame Powell, by Bay Chief (son of Mambrino Chief); second dam by Toronto (son of St. Lawrence); third dam claimed to be of Whipstock. For a very lifelike portrait of Monroe Chief and a full account of his pedigree and performance, see the holiday number of the BREEDER AND SPORTSMAN, issued December 29, 1883.

For further information address  
**JOHN A. GOLDSMITH,**  
 OAKLAND TROTting PARK.

### The Trotting Stallion

## BRIGADIER.

Record 2:21 1-4.

Bay horse, bred by R. Penniston, Philadelphia, Penn. By HAPPY MEDIUM; dam Lady Turner, by Frank Pierce, Jr. Happy Medium, by Rysdyk's Hambletonian, dam the famous old trotting mare Princess, by Andrus' Hambletonian. He has fifteen representatives in the 2:30 list.

Lady Turner, by Frank Pierce, Jr., dam by a grandson of Sir Henry, son of Sir Archy, second dam by Andrew Jackson.

Frank Pierce, Jr., by Frank Pierce, son of Beppo.

Brigadier will make the season of 1884 from February 10th to July 1st.

Terms.

\$100 the season. Mares not proving in foal may be returned the following season free of charge. Good pasturage at \$3 per month, but no responsibility assumed for accidents or escapes.

Mares shipped to Marysville consigned to me will be received and cared for on arrival of cars or boats.

**J. B. McDONALD.**

2:20 1-4.

### The Fast-Trotting Stallion

## ANTEEO.

Dark bay colt, near hind foot white; foaled May 5th, 1879; bred by Jos. Cairn Simpson, Oakland, California.

By ELECTIONEER.  
 First dam, Columbine, by A. W. Richmond.  
 Second dam, Columbia, by imp. Bonnie Scotland.  
 Third dam, Young Fashion, by imp. Monarch.

Fourth dam, Fashion, by imp. Trustee.  
 Fifth dam, Bonnets of Blue, by Sir Charles.  
 Sixth dam, Reality, by Sir Archy.

Seventh dam, by imp. Medley.  
 Eighth dam, by imp. Centaur.  
 Ninth dam, by Mark Anthony.

Tenth dam, by imp. James.  
 Eleventh dam, by imp. Monkey.  
 Twelfth dam, by imp. Silvereye.  
 Thirteenth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

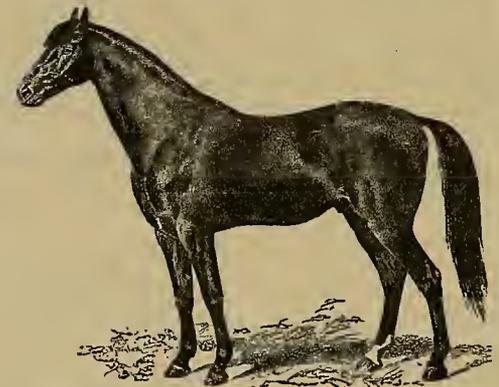

Will make the coming season, from February 10th to June 15th, 1884, at the Fair Grounds at Santa Rosa.

TERMS.

\$100 the season. Mares kept in any manner their owners desire, and at reasonable rates, but no responsibility for escapes or accidents.

Anteeco ranks as one of the great trotting colts of the United States, well worthy of the family to which he belongs. His breeding is of the choicest, and in point of form he is as nearly the model of the trotter as any horse living. He has shown a mile in 2:20, and at the same time demonstrated that he was capable of trotting way down in the teens.

For further particulars address,  
**M. ROLLINS, Agent,**  
 Santa Rosa.

## MAMBRINO WILKES.

BLACK STALLION, SIXTEEN HANDS IN HEIGHT, BY GEORGE D. WILKES, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christian by Todhunter's Mambrino, son of Mambrino Chief. Second dam by Pilot, Jr. Todhunter's Mambrino son of Mambrino Chief, his dam Ripton's dam by Potomac.

This is the largest and one of the best colts of George Wilkes (weighing 1,280 pounds), combining the Hambletonian and Mambrino strains, and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

George Wilkes has 27 representatives in the 2:30 list, of which 14 have records of 2:25 or better, 5 of 2:20 or better, and 3 of 2:18 or better. These are all the get of Geo. Wilkes, and do not include Phil Thompson, William H., and other famous grandsons and granddaughters of this prominent sire.

Will make the ensuing season, commencing February 1st, 1884, at the Red Stable, STOCKTON, and L. M. Morse's near LODI.

Terms.

\$40 for the season, or \$25 single service.  
 This low rate brings the service of this horse within reach of breeders, but does not argue any inferiority to the horses whose services are held at One or Two Hundred Dollars. For further particulars address

**A. L. HUNDS, Agent.**

### The Trotting Stallion

## STEINWAY,

With two-year-old record, third heat, of 2:31, and three-year-old record, fourth heat, of 2:25.

Terms.

He will serve mares the present season, commencing February 1st and ending July 1st, 1884, at the

**Cook Stock Farm, Danville, Contra Costa County,**

At \$100 for the season, payable invariably before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage \$5 per month, but no liability for accidents or escapes. Mares sent in care of McClevery & Nohlett, Fashion Stable, Oakland, or of S. J. Bennett, Martinez, or D. S. Smalley's Stable, Hayward, will be forwarded immediately to the farm.

Description.

He is a bay, 15 1/2 hands high, weighing 1,175 pounds, long flowing mane and tail, two white hind ankles, remarkable style and lofty carriage; has a good, resolute head set on a stout neck; his shoulders do not mount very high on the withers. He has great length and a capacious middle piece, plenty of bone and substance; his gait is big and square; his disposition is the very best.

Pedigree.

Steinway, by Strathmore; first dam Abbess, by Albion, the sire of Vanly Fair, record 2:24; second dam by Marshall Ney, by imported Emancipation; third dam by Bertrand, he by Sir Archy; Albion by Halcyon, a pacer; he by Virginia, a son of Sir Archy. Steinway's dam is the dam of Solo, five-year-old record 2:28, and Nannie Smith, the dam of C. M. Clay, two-year-old record 2:31, winning the two-year-old stake at Lexington last fall, beating the Palo Alto colt and others. Solo and Nannie Smith are full sisters to Steinway. Steinway's dam is also the dam of W. S. Buckner's colt Currency, that trotted as a yearling the fall of 1882, in 2:46. See New York "Spirit of the Times" of November 18th, and "Turf, Field and Farm" November 18th, 1882.

Strathmore is the sire of Santa Clara, 2:17; and Tucker, 2:19; Chestnut Hill, 2:24; Alice Stoner, 2:24; Steinway, three-year-old, 2:25; Nannie Talbot, five-year-old, 2:27; Solo, five-year-old, 2:28; Monitor, 2:28; Henderson, 2:28; Strablan, three-year-old, 2:29; and Stuart, three-year-old 2:28. Stuart is full brother to Belmor, who trotted a mile in 2:52; at fifteen months old. Bedford trotted in the two-year-old stake at Lexington last fall; was timed the second heat in 2:32; is by Strathmore also. Strathmore, by Rysdyk's Hambletonian, the sire of Dexter, 2:17; first dam by North American, the sire of Whitehall, he the sire of Rhode Island, record 2:23, and he in turn got Governor Sprague, record 2:20; and he got Kate Sprague, record 2:18. The dam of Scott's Thomas, record 2:31, and Scott's Chief, record 2:27, was by Whitehall; also North American, by Sir Walter; he by Hickory, sire imported Whip; North American's dam is a pacer. Strathmore's second dam is by Harris' Hambletonian, he by Bishop's Hambletonian, he by imported Messenger.

Performances.

Steinway has trotted four races; at two years old he won the Lexington stake, mile heats, beating Memento, Jewett, Verbaux, Admiration, Mystery, in 2:39, 2:32, 2:31. Memento won the first heat. As three-year-old, at Sharpsbury, Ky., August 8th, 1879, over a miserable half-mile track, he beat Bushwacker, record 2:27, and Blackwood, Jr., record 2:22, in four heats, 2:38, 2:37, 2:37, 2:35. Bushwacker winning second heat. At Lexington, August 18th, 1879, he trotted six heats, 2:38, 2:35, 2:30, 2:28, 2:30, 2:30. Steinway winning fourth, fifth and sixth heats, beating Jewett, Catchy and two others. At the fall meeting of the Horse Breeders' Association for the Kentucky stakes for three-year-olds he was beaten in three heats by Jewett, in 2:26 1/2, 2:24, 2:24, but Steinway was lame in this race, and really not in fit condition to start; he was timed second, in 2:27, 2:23, 2:27.

Address

**GEORGE WILEY,**

Cook Farm, Danville, Contra Costa Co., Cal.

### THE TROTting STALLIONS

## SINGLETON AND LA HARPE.

WILL MAKE THE COMING SEASON FROM FEBRUARY 1ST TO July 15th, 1884, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

Singleton is a dark brown horse, with tan flanks and muzzle, a little touch of white on hind feet and fore feet, small star in forehead. Is 15 1/2 hands high, and weighs 1,120 lbs. Was bred by Dr. M. W. Hicks, and foaled in the spring of 1878.

PEDIGREE.

Singleton is by Willie Schepper, he by Rysdyk's Hambletonian, by Abdallah, by Mambrino, by imp. Messenger. Schepper's dam Nellie by son of Vermont Black Hawk, grand dam by Busiris, thoroughbred (No. 373). Singleton's dam was Lightfoot (dam of Pride, yearling record 2:42) by Flaxtail, son of Pruden's Blue Bull. Lightfoot's dam was 2:34, by Platt's Western Star by Blacknose. 1st dam by Boatever, 2nd dam by Gallatin (1881). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

## LA HARPE

Is a bronze bay, two white stockings behind and star, 16 hands high, and very powerfully built, weight, 1,180 lbs. Was bred by Dr. Hicks, and foaled in 1879. La Harpe was sired by Fame, he by Alexander's Belmont (sire of Nutwood), he by Alexander's Abdallah (sire of Goldenhild Maid), he by Rysdyk's Hambletonian, he by Abdallah, he by Mambrino, he by imp. Messenger. Fame's dam Glory by Jackson's Western Star (3rd dam Platt's Western Star by Blacknose). 1st dam by Boatever, 2nd dam by Gallatin (1881). La Harpe's dam Prairie Bird by Flaxtail (dam of Flight, 2:29, and Prompter, 2:33). 2nd dam Fashion, by John the Baptist. 3rd dam Fanny Fern, by Irwin's Tuckahoe. 4th dam by Leffer's Consul. Irwin's Tuckahoe by Herod's Tuckahoe, by thoroughbred Tuckahoe, by Florizel, by Diomed.

TERMS.

For Singleton, fifty (\$50) dollars the season. Mares not proving in foal may be returned the following season free of charge.

La Harpe will stand at twenty-five (\$25) dollars the season, cash. Mares sent to the ranch to either horse will be kept one month free of pasturage. Further pasturage will be charged three (\$3) dollars per month. Mares shipped to Chico consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner owners may desire, at reasonable rates. There is every convenience on the farm, boxes, paddocks, and plenty of shade and water. Address

THE ALMONT

STALLION

ALTOONA,

BY ALMONT, FIRST DAM THERESA BY Prophet, Jr.; second dam Molly Floyd by Mohawk; third dam by Davy Crockett, a Canadian pacer; fourth dam Puss, a fine road mare imported from Canada. Prophet, Jr. by Prophet, son of Hill's Vermont Black Hawk.

Altoona was bred by Gen. W. T. Withers of Fairlawn; is a dark bay, a little over 15 1/2 hands, of high form and breeding. For particulars apply to

A. H. HECOX, Almont Stables, 1332 San Pablo Avenue, Oakland.

Crown Point For Sale.

This promising Hambletonian stallion, record 2:24, is offered for sale. He is so well known for thorough game and endurance that it is almost superfluous to say anything further. He has defeated Sweetness, 2:21 1/2, Starr King, 2:24, Del Sun, 2:24, and others of celebrity. Although having only served one season in the stud, he can show colts of as much promise as any. The dam of Crown Point has two representatives in the 2:30 list. His blood being a combination of Hambletonian, Clay, and other strains, which proves him to be of the very best breeding.

Crown Point is sound in every way, and will be ready to train, with a good show of trotting faster than ever.

For further information address G. VALENSIN, Arno Station, Sacramento Co., Cal.

FOR SALE.

An Irish setter dog, three and a half years old, well broken on all kinds of game. Sound in every way, and only sold for want of use.

Apply at the Mint Saloon, 605 Commercial St. S. F.

FOR SALE.

Llewellyn Setter Brood Bitch POSHA, Druid ex Pochantas, in veld to McGregor, Rob Roy ex Queen Mab, 2 years old. Price, \$100 00

Llewellyn Setter Bitch Pup MAY D. McGregor ex Posha, 7 months. Price, \$25 00

English Pointer GLEN BOW, Ranger Boy ex Jessie Bow, 17 months, partly broken. Price, \$50 00

Also a few choice Pointer pups comprising the bloods of such cracker as Champions' Bow, Sleford, Ranger, King Bow, and others.

Price, \$20 00

Full pedigrees to all the above dogs warranted as represented.

G. W. Bassford, Colusa, Cal.

PURE-BRED POULTRY

O. J. ALBEE, Santa Clara, Box 229.

FOR SALE - 1 Cock, 4 Hens and a fine lot of Stags. Pitt-Games imported from McDougall, warranted dead game; also all leading varieties thoroughbred Poultry.

The Breeder and Sportsman.

Jerseys and Guernseys.

Registered in the A. J. C. C. and the A. G. C. C.

MOTHER.

SON.

The above is a cut of the unequalled cow Jersey Belle of Seltmate that made 25 lbs 1 1/2 oz. of butter in one week, and her only living son King of Seltmate.

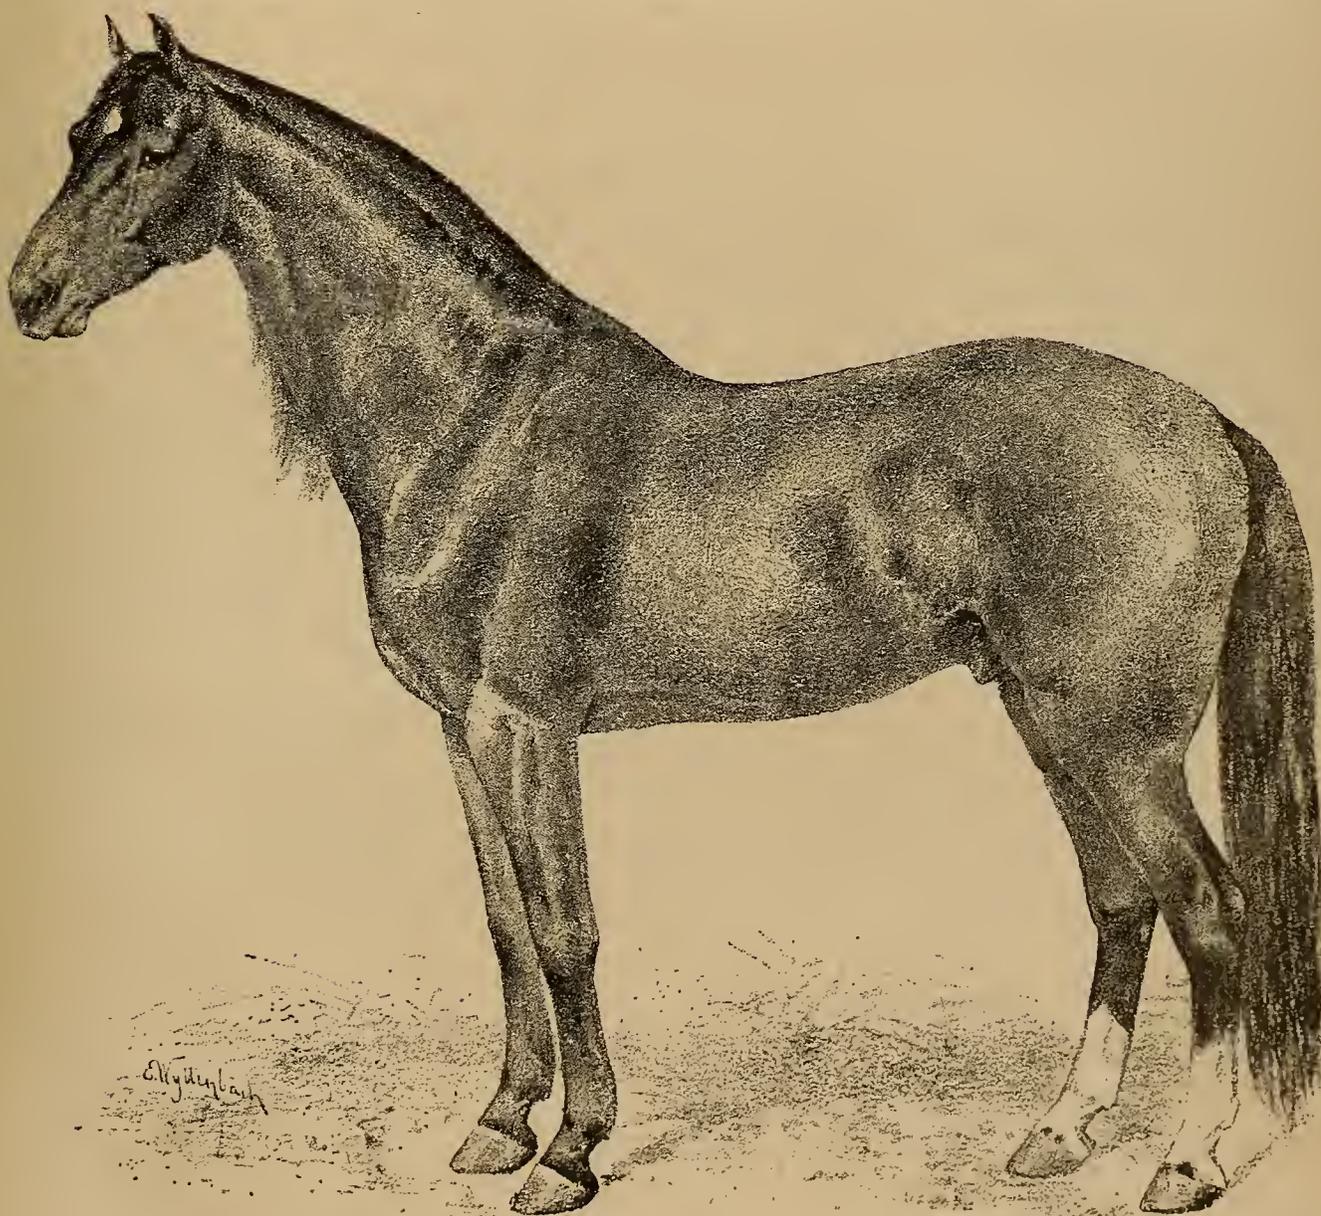

A GRANDSON OF JERSEY BELLE OF SELTMATE is now in use in the Yerba Buena herd. This herd of Jerseys and Guernseys won all the prizes for 1882. Since then have been added young animals from Mr. Pierce's valuable herds East. He now has Jersey Belle of Seltmate, Coonassie, Mary Ann of St. Lambert, Farmers' Glory, and Eurotas strains. These, with large selections on the Islands of Guernsey and Jersey from the best without regard to cost, and imported directly, make this the best herd on the Pacific Coast. Mr. Pierce has interest in two herds in the East of 200, at the head of which stand King of Seltmate (only living son of Jersey Belle of Seltmate), Romeo de Bonair (87 1/2 per cent. Mary Ann's blood) and Pierson, the best show bull in America. These bulls are valued at \$10,000 each, and stand for \$100 to \$200. The blood of these celebrated animals can be had, at moderate prices of HENRY PIERCE San Francisco.

SUBSCRIPTION  
FIVE DOLLARS A YEAR.

PROMPTER.

It is not surprising that those immediately interested in the stock should be enthusiastic over the merits of the Blue Bulls. In some respects this family occupies the foremost position in the trotting calendar, and, in the proportion of fast trotters for the number trained, is unquestionably in the lead of all others. Without taking time for exact research it is probable that Privity was the first of his get to enter the 2:30 list, and when she trotted that fast it was so short a time ago as June, 1871. Mila C. was the next celebrity of the family, and she trotted in 2:26, in 1873. Thus only fourteen years have elapsed since what may be termed the debut of the Blue Bulls, and now they stand the foremost in the list of 2:30 horses, according to some compilers, and in the annual table, published by the New York Spirit of the

Times, Blue Bull is credited with thirty-four, Rysdyks' Hambletonian with thirty-six. To take this as the basis for estimate, and the showing is closely akin to the marvelous, as without the four which others say surely belong, and taking the table in the same journal for 1882, there is an increase of seven in one year. With the other as the guide there are nine Blue Bulls for 1883, so that after taking into consideration all probable causes to reduce the numbers of newcomers in succeeding years, this horse will lead the great regiment of trotting sires for some time to come. Blue Bull died in 1880, July 11th, so there are colts not yet three years old, and it is not beyond the bounds of probability to predict that for several seasons in the future there will be fresh accessions to the list. We shall not be surprised to see the names of fifty Blue Bulls that have trotted in 2:30 or better, and this is partly based on other evidence than comparison

of annual tables. The gift of fast trotting is so much a natural inheritance of this family, that we have learned from those who were intimately acquainted with the practices which prevailed in the section of country in which they were reared, that if great speed was not exhibited after a few weeks handling they were thrown aside as not warranting the expense of training. Progress, such as would have been thought very satisfactory in other parts of the country, was held to be of no account, and a Blue Bull which did not show a rapid flight in a six weeks' vacation from the plow or farm wagon was relegated to its old duties. There was one system followed, or so nearly alike were the teachings of the preceptors of this clan, that it was practically the same. An overcheck was thrown the head up, oftentimes drawn to an extreme, and weights in many cases of ponderous proportions were used. There was little variation in the treatment,

because it was efficacious in some instances it was thought applicable in all. Some of those which have been condemned through failure to benefit from the heroic course of studies may fall into hands that will try a different method, and, without doubt, with good results. These added to the youngsters are nearly sure to bring the count to the half hundred predicted, and that not further off than the next three years.

That the blood of Blue Bull will be of great service to the trotting stock of this coast, we have not the least doubt, and that the horse which is the subject of the illustration is a worthy representative of the family is also assured. As an "outcross" for the various strains of blood in California, it is admirably adapted. By referring to the pedigree of Prompter in the advertisement it will be seen that he is sired to two celebrated families of pacers, that of his sire, and collaterally to that to which Smuggler belongs. Back of that is Morgan and some of the staunchest families of the old-time thoroughbreds. It is safe to assert that there is not a mare in California, outside of some bred by his owner, the blood of which will not "nick," and from what we learn, his form, disposition, action and size are such as to give reasonable assurance of valuable offspring. Never having seen Prompter, we cannot write from personal knowledge, but in addition to the appended account which was supplied by Dr. Hicke, we have heard still higher encomiums from others. That the portraiture is just, we have not the least question, as Wytenbach has never failed to put the horse on paper as he stands before him since his first sketch for the BREEDER AND SPORTSMAN was made.

Prompter is a bright bay, star in forehead, hind ankles white, sixteen hands high, and weighs eleven hundred and forty pounds. He is a plain, unattractive, but very powerful horse, with great intelligence, and the kindest disposition. His dam was a rangy, stylish and handsome mare, and his get resemble her in these qualities. His produce are large, inherit his fine disposition, and all that I have seen are bays, browns, or chestnuts, and, without exception, show remarkable speed, and a fine gait.

Prompter, an inbred Blue Bull, is his first representative on this coast. But for an accident he would probably have been a trotter of high order. He was injured in foaling, so that his left leg was partially paralyzed, and for two years he dragged the toe of that leg, and he still swings the leg out, not having the free use of the hock and stifle joints. The hip on that side is a little lower than the other, and the muscles on the inside of the thigh are not so fully developed. It was not supposed that he could ever trot in four minutes, but in spite of this great disability, after the close of last season's services in the stud, which lasted until late in July, he was given six weeks of irregular handling, and trotted in a stallion race of five heats, winning the last three, and distancing Young Challenge in the third heat, and Tilton Almont in the fourth, and obtained a record of 2:33.

Backed up with such stout blood as Diomed, Cousul, Lee Boo, etc., and in obedience to the laws of heredity and development, the wonderful prepotency of Blue Bull ought not to be diminished, but rather to be increased in Prompter, as his dam was as fast as his sire, was as deeply bred in pacing blood, and her family were all gifted with speed, and the power of transmitting it with great uniformity.

From the above it will be seen that Dr. Hicks has been very candid in his statements, and in calling his horse "unattractive" gives evidence that he does not intend to mislead. From the picture and descriptions we have heard, the unattractiveness consists in not being what is termed a "showy" horse, as with the exception his owner notes he is very well formed, with "points" such as to please the critical eye, and exhibiting more than ordinary power and substance in his whole conformation.

Flaxtail, the sire of his dam, as we remember him, was a very handsome horse, and possessing wonderful speed at the lateral motion. A point the Doctor makes in a pamphlet he has published is that the Blue Bulls have had to fight their way without the assistance that the more prominent families have received. This is well taken, for after Purity appeared the *eclet* which followed her performances and the purchase by Mr. Wallace, at that time one of the wealthy supporters of trotting interests, there was a persistent determination to run down the stock. Purity fell dead on the track at Buffalo, in August, 1871, so that the derogatory statements could not be contradicted by her testimony. The old cry was raised that the Blue Bulls were "soft," and this old scandal so freely urged against some of the best horses in this country had its effect. For a time the get of the Indiana stallion were unnoticed, and the flight was kept up under circumstances that were not the most favorable. In this respect there was no difference from others. When Rysdyk's Hambletonian first came into notice the Vermont Black Hawke were the fashion. When Mambrino Chief was sent to Kentucky, he was held to be a failure in New York state, George Wilkes was in the same category, and illustrations could be multiplied to cover quite a number of cases of the same import. But in these there were the advantages of being in a country where the trotting horse was domiciled and a good deal of attention paid to his education, whereas in Indiana, especially that portion of it where Blue Bull was located, scarcely any one had a leaning that way. Had it not been that Purity was bred and in the hands of a Kentuckian, Lewis Loder, in all probability there would have been a longer delay in bringing them before the public.

In addition to the long list of fast trotters, which stand to the credit of Blue Bull, he was the sire of the following fast pacers: Billy S., 2:16; Hattie Shanhan, 2:24, and Lottie P., 2:25. Now that the pacers are playing so prominent a part in the sports of the track, that gait is more highly valued. As a component of the fast trotter the pacing crosses have stood deservedly high, ever since the great mare Pocahontas was purchased for the express purpose of breeding trotters from.

## TURF AND TRACK.

### The Ladies' Apartments at a Fashionable Race-course in Australia.

There is a pleasant surprise in store for the visitors to the Flemington race-course during the coming racing carnival, in the shape of extensive improvements for their convenience and comfort. It was thought last year that little remained to be done in that way, but now it must be confessed that that little, supplemented by a great deal, has been effected, and that Mr. Byron Moore has spared no pains in the beautification of the finest race-course in the southern hemisphere. For not only have the natural resources been made the most of, but artificial means have also been used to supply everything in the shape of luxury and beauty, leaving nothing to be desired by even the most fastidious. In the first place, additional accommodation for 5,000 people has been provided in the grand stand, and so ingeniously has all this been planned that everything seems to be in perfect keeping. The hill at the back of the grand stand has been scooped out, and an upper stand erected with seats so arranged that should people stand in the front row they would interfere in no way with the view of those behind. But the great feature in the way of improvements is the suite of rooms on a level with the main grand stand. These consist of two immense retiring rooms for ladies, a dining-room for His Excellency, one for the ladies of the Vice-regal party, a large tea and coffee room, and a room for the press. The two retiring rooms for ladies I can compare to nothing but two large ball-rooms. And here ladies will find that Mr. Moore has thoughtfully provided for their every comfort. In addition to the row of lavatories there are to be mirrors and cheval glasses *ad libitum*, and everything that a lady of fashion can desire in the shape of powder, cosmetics, etc., will be at hand. Even should the lady have the misfortune to tear her dress, she will have countless pin-cushions filled with needles threaded with silk of every color in the rainbow to choose from; or should she feel faint she can have recourse to smelling-bottles innumerable. These little things just show what thought has been expended on the comfort of visitors to the race-course. A handsome ornament in one of these rooms is a large fountain of majolica-like ware in the center of the floor, which is to be decorated with pot plants, and in the future is to send forth jets of eau-de-Cologne. At certain distances round the room are ventilators in the walls, which though not ornamental are decidedly useful, and these are to be concealed by brackets of ferns. The dining-room which is to be luxuriously furnished for the Governor has a large niche in each corner in which is placed a huge but beautifully modelled terra-cotta vase. A beautifully tessellated passage intervenes between this and the two retiring rooms for the vice-regal party, which are to be furnished as *hondoirs*. The room for the press, which supplies a deficiency long felt, has two private staircases, one of which leads to the upper stand. Here the reporters can do their writing and send telegrams in the one room without any trouble. All these rooms that I have described have large frosted windows, and being below the hill are deliciously cool, even on a hot day. The spacious tea and coffee room will prove a boon to many who do not wish to go to the luncheon rooms, and small tables will be provided for parties of two or three who merely wish some light refreshment. The luncheon rooms, too, have been enlarged by the addition of what was formerly the ladies cloak-room, and they now extend the whole way beneath the stand. The lawn in front of the stand has also been beautified still more, the most remarkable position being a magnificent fountain, which combines many bright colors in a way most pleasing to the eye. There are terra cotta dolphins on a red ground, and ornamental knobs of red and blue. Ferns are to be arranged round the centre pillar below the dolphins, out of whose mouths will come streams of water, while the whole will be covered with a dome-like veil of water. In addition to the usual blaze of flowers in the parterres, urns filled with pot plants, and festoon-shaped beds of the brilliant yellow gazania, in the velvety grass, will add to the brightness of the scene. A rustic dome-shaped little structure has been erected for the sole purpose of boiling water for ladies' afternoon tea, so that those who like to bring their own tea can procure boiling water from the man in attendance. This is in close proximity to the luncheon awning, where tables are provided for private luncheon parties, and those who choose to proceed to the race-course by train have only to give their hamper over to Messrs. McCulloch & Co., when they will have it delivered at the luncheon awning in good time. When we add to this that the gravel path from the vehicle stand to the grand stand has been replaced by one of cement, out of consideration for the ladies' hoots, and that vines and hops have been planted alternately at the pillars of the luncheon awning, and that ivy is rapidly transforming the stone wall into a thing of beauty, we only swell the list of improvements which are too numerous to mention. Great additions have been made to the Hill also, a large piece of land having been taken in, seats scattered over it, flower beds laid out, and rockeries, fountains and grottoes introduced, besides a rustic arbor furnished with mirrors. Ample provisions have been made, also, for the book-makers, for whom posts have been erected, and on the slope of the hill railings, or rather burde-like erections, have been placed to prevent an accident, for without them, if a stampede occurred, the result would be fearful. I might go on enumerating improvements which everywhere meet the eye, but visitors to the course will see for themselves, and will, I am sure, all unite in gratitude to Mr. Moore, who seems to be possessed of Aladdin's wonderful lamp, and whose ingenuity has devised what by his energy has been carried out. Last Tuesday afternoon a number of ladies availed themselves of Mr. Moore's kind invitation to inspect the improvements, and all were loud in their praises of everything they saw.—*Melbourne Leader*.

Mr. F. T. Walton's horses in training at Epsom, England, by Mr. T. Sherwood, include the American-bred mare Girofle, now seven years old, and the following French and English bred horses: Bay horse Sutler, aged, by Pace or Vaucresson, dam Barhionne; bay horse Mr. Pickwick, six years, by Hermit, dam Tomato; bay colt Deceiver, four years, by Wenlock, dam Boot-and-Saddle; chestnut colt Hopeful, three years, by Uncas, dam Fairweather, and the two-year-old chestnut colt Harold, by Reverberation, dam Lady Blanch.

The total amount realized by the sale of the horses belonging to the late Count Lagrange was £13,734. The highest priced lots were the black two-year-old colt Inluffen, by Inslaire, for £1,140, and the three-year-old colt Flick, by Beau-Merle, for £880.

It is said there are six double teams in New York city that can beat 2:20.

### Turf Topics in Oregon and Washington.

[Tom Merry in Oregonian].

The eastern Oregon folks never allow themselves to be outdone in enterprise, but more particular in matters of turf enterprise. The little town of Union gave a purse of \$800 at mile heats, three in five, in 1880, which was won by Trade Dollar; and in the same year, not to be outdone by Union, the neighboring town of Baker City gave a purse of \$800 for a dash of two miles, which was also won by the daughter of Eva Ashton, beating Winters and Richard III, in the excellent time of 3:35. The following year Baker City gave a purse of \$600 for a mile and three-quarters, which was won by Red Boy, beating Patsy Duffy and Richard III, the little chestnut breaking down entirely. They came, in the same year, the victory of Patsy Duffy over Frankie Devine and Billy Coombs, all great races run in little, insignificant towns. But if this showed enterprise, and now that enterprise is beginning to bear fruit. The entries for the July meeting are lying on our table, in which is a two-year-old stake the entries for which have already closed with fifteen nominations, making \$800 in all, for a dash of five furlongs. Looking over the entries we find that four are by the dead little giant Monte Christo; two each by Chesapeake, Wildwood and Ophir; and one each by Marmaduke, Lodi, Oceola, Ballot Box and Compromise. Among these entries is John Young's sumptuous-looking brown colt Villard, by Lodi out of Rosa Mansfield, second to no horse in America for purity of lineage as he has three crosses of Glencoe, one through Star Davis, and two through Topez which was the dam of both Rivoli and Lodi. He has also the famous crosses of Revenue, Bertrand, and Sir Charles among native sires, and Trustee, Priam, Yorkshire, Leviantan and Margrave among imported stallions. The entry of Mr. Thomas Smyth, of Idaho City, is one of equal richness. He is by Marmaduke out of Firouette by a son of Asteroid, his grandam being Farfaletta, the dam of Falsetto and Fortune, by Anstrahan. His sire, Marmaduke, was by Enquirer out of Catina, by Australian out of Ada Cheatham by Lexington. So this colt has four crosses of the sightless hero of Woodburn, one through Ada Cheatham, the second through Elkhorna, the dam of Farfaletta, a third through Lize, the dam of Enquirer, and a fourth through Asteroid. In addition to these valuable strains, this colt has also the blood of Envoy, Glencoe and Leamington among imported crosses, to add to the strong native strains of Medoc, Edinse, Sir William and Sumpter. Ophir, the sire of Lasley's two entries was brought out here by Ben Holladay in 1871. He was got by Maelstrom, a son of Lapidist, he by Touchstone out of Io by Taurus.

The Trotting Sire stake, to be trotted for in September, will close on the first day of next month, and embodies nine sires as entries, to-wit: Dead Shot, Lemont, Anvil, Bashew, Black Strauer, Challenger, Orange County, Alwood and Lusby. The amount contributed by the owners of stallions is \$260, and \$200 more will be added by the association, thus making \$460 exclusive of what will be put in by the owners of the colts themselves. It is quite probable that this stake will reach a total of \$700. These good people up there show a commendable degree of enterprise, and they will soon begin to gain returns for it in the shape of high prices for their horses. They have three sons of Almont in that neighborhood, and use none but the best blood. The Mambrino family is well represented by Dead Shot, Anvil and Lusby, the latter horse being owned in Walla Walla. He is a large horse, good gaited and of perfect temper. The Almont family is represented by Alwood, Challenger and Lemont, all fine-looking horses. Alwood is the largest and a trifle the best bred, to our liking; but Challenger has a greater look of his sire and is a trifle the prettier horse. There is no gainsaying the fact that horses bred in the bunch-grass plains of eastern Oregon have more bone and better feet than those bred in this part of the state; and that fact, once becoming evident, will soon conduce to the advantage of our Oregon breeders. Besides the horses above named there are two sons of General Knox owned in Wasco, as well as a son of Almont named Marshall, record 2:41, at three years old. He is owned by a breeder named Engleman, who does not race; hence his stock will not come to public notice except by accident.

The papers get the name of Acker's horse fearfully mixed up, the BREEDER calling him "Billy B. A.," and the *Turf* dubbing him "Billy Barker." The horse's former name was Billy Barlow, and he is now known as Ben B. A. the name being given in honor of Mr. Acker, who was the first to discover his merits at Baker city nearly four years ago. Ben B. A. was the first horse to enter the 2:30 list this year, and if he has no bad luck, he is liable to enter the 2:20 list a year hence. He is the purest gaited of all the Bellfounders we have seen, and may be safely pronounced a worthy scion of the "Messenger of the Wilderness."

Old Bellfounder has now six horses in the 2:30 list. He was brought to California in 1864 by Aleck Gamble, and stood one season at Menlo Park, where he got Gus, 2:27. He stood near Whipple's Hambletonian, who got all the best mares, and at last was exiled into the wilderness of Butte creek, on Wasco county, Oregon. Then Bigam sold him to Dr. Mack, who gave him a name and fame that will never die out in the northwest. He might have had a fame equal to that of Electioneer had he remained in the shadow of the tall redwood where the sire of Anteo and Hinda Rose is now domesticated and where he is certain to end his days. But it was otherwise ordered by fate. I never expect to see a horse for which I had a like degree of reverence to that I have Bellfounder. The last time I saw him he was heavily crested with age and the hair was worn away about his eyes, but he went up the main street at Walla Walla, looking like a king among horses. And he was then away up in the twenties, for it was only a few months before his death. The old fellow was full of the highest order of animal life until within a few days of his final lie-down; and when he was buried, was there ever such a funeral since the day that they had cakes and ale about the grave of the Godolphin Arabian? This horse added at least \$100,000 to the taxable property of Walla Walla county, and many of his best sons and daughters were bred by men of moderate means. This is what made the old horse such a favorite in the inland empire and built up for him an undying fame as a prepotent horse above all contemporary trotting sires. He was, indeed, a landmark among horses.

Lute Lindsay gave me a friendly call on Thursday, and showed me the stock list of the new track north of town. It will be commenced as soon as all the stock is taken, and there is \$3,440 on the list already. There will be some time occupied in getting in the balance of the stock, as almost everybody likely to sign for \$100 worth of stock has already done so. But Luther is a good canvasser, and can whomp 'em up after awhile, so that the graders can begin throwing up the turfs of the track as soon as the frost begins to come up out of the ground. Then there is fencing to be had and a lot of sheds and buildings to be put up on the grounds, so that it will eat up the bulk of the summer before the track is in good driving order. But the predilection is for a track on this side

of the river, and that feeling will last as long as the river is crossed by ferries. Whenever it is covered by a bridge, so that there are no delays and no crowding of teams, then there may be some hope for a track on the opposite of the river to become a paying investment.

Dr. C. H. Mack has sold four head of Alwood colts, coming two years old, during the past three weeks. The first of these was a pair of bay stud colts, both by Alwood, one being out of a Bellfounder mare, and the other out of an inbred Bellfounder mare. The price paid was \$600, and the purchaser was R. G. O'Brien, of Olympia. The other pair were purchased by Mr. William Jones, of Walla Walla. One of these is a bay colt by Alwood, out of Zoe by Bellfounder. He is own brother to An Revoir, and is called Arberry, in honor of "Old Tex." The other is a chestnut colt by Alwood, out of a mare by Bellfounder. Terms private. The doctor is beginning to see the advisability of selling off the first lot of his colts at comparatively low prices. By doing this he gets other people interested in developing Alwood's colts, and lifts from his own shoulders the greater portion of the expense of training. He has some large and stylish horses, and has long been ranked among the select breeders of the northwest. Starting with nearly forty mares by Bellfounder ought to be the foundation of a successful business in breeding here or anywhere else.

There are now nearly forty stallions kept for service in Oregon and Washington territory on the strength of alleged trotting qualities, and yet the list of actual contestants does not embrace quite a dozen sires. Hambletonian, Mambrino, Altamont, Deadshot, Alwood, Champion Knox (dead) and the dead hero Bellfounder, were about all the winning sires in sight last year. Rockwood's get did win one race, but he had less of his get trained than most other sires in this part of the world; and it will not be fair to judge him upon his merits until his colts are equal in numbers with those of the rival sires against whom he is to compete. He is well-bred and highly formed, although not a large horse; and size is a secondary consideration compared with acrobacy of form. Dictator is barely fifteen hands high, and he was the sire of the three phenomenal trotters of the past year—Director, Phallas and Jay-Eye-See. So with Rockwood. He is a horse built upon true lines, and more likely to prove a successful sire than many of the sixteen-handers now kept for service in this state and elsewhere.

### The Power to Preserve Order on Race-courses.

On July 26th, 1882, John W. Stokes, proprietor of the Hotel Brighton, Long Branch, New Jersey, left the Hotel with several of his guests. At the railroad station at Long Branch he purchased a ticket to Monmouth Park. He entered the grounds, where he exchanged his ticket for a badge to the grand stand. In the third race Mr. Stokes and his friends bought Bye-and-Bye in the pools for a place in the race. At the finish Bye-and-Bye, he said, came in second, Girofle winning first place. The judges put up the number of another horse, Malise, and shut Bye-and-Bye out. At once there was a rush of several hundred people from about the grand stand towards the track and judges' stand, and considerable excitement ensued because of Bye-and-Bye not being given a place. Mr. Stokes and Mr. Thomas S. Byers, of New York City, started towards the fimer's gate. Mr. Stokes said to Mr. Byers, "If they don't give Bye-and-Bye a place it is a swindle and I hope every gentleman who has bet any money on this race will lose it."

Immediately Mr. Stokes was seized by Mr. William J. Bradley, the Monmouth Park Superintendent—since deceased—who said to him: "We don't allow such talk on these grounds, and if you repeat it you will be expelled from the grounds." Stokes did repeat what he had said before, and thereupon Bradley handed him over to an officer, who took Mr. Stokes by the coat and led him out under the grand stand to a carriage which Mr. Stokes hired, and in which he was driven away. The occurrence took place in front of the grand stand in the presence of about 5,000 people. In a few moments, but not until after Mr. Stokes had been ejected, the numbers were changed and Bye-and-Bye given second place.

The association offered proof to show that Mr. Stokes was insulting, abusive and much excited, and said more than he and his witness detailed. They showed the badge of admission, on the back of which are these words, to wit: "This badge of admission is issued on the following conditions: Any person whose presence is deemed objectionable \* \* \* will be liable to be expelled."

Mr. Stokes brought a suit against the Monmouth Park Association for \$10,000 damages for his arrest and ejection, and the case was tried on the 25th ult., before Supreme Court Justice E. W. Scudder, in the Monmouth Circuit Court. The hearing resulted in a judgment for the association, Judge Scudder holding that while Stokes had an undoubted right to protest the ruling of the judges, he must do so in a reasonable and proper way.

### Training Horses with Bad Legs.

We were struck, says the editor of the Kentucky Live Stock Record, with an article by a correspondent in *Bell's Life* in London, of January 19th, how Melbourne, the sire of Blink Bonny and West Australian, was trained. There are a number of horses of high character that owners seem doubtful about standing a preparation, and we thought the plan pursued by the owner of Melbourne may be worth adopting by persons having horses in a like condition as to legs.

It seems after Melbourne was broken at two years old he was severely kicked on the fetlock by a cart horse, having got out of his box and gone into the cart-horse's stable whilst they were feeding. Luckily no bones were broken, but he had to be slung for several weeks, and for a long time it was very doubtful whether he would ever stand training; as it was he had always to be worked very carefully, and was never in his life thoroughly fit. He did not run at three years old, but ran with success at four and five years old. At six years old his owner, Henry Robinson, determined to have a last try with Melbourne for the Chester Cup, as he was then in better health than he had ever been, but his legs, especially the injured one, were so queer that Robert Haseltine, who was very intimate with Robinson, and had let him train Melbourne on his grounds at Middleham, refused to have anything to do with it. Tom Dawson, Scott and the Maltou trainers all ridiculed the idea of bringing the horse fit to the post; but Henry Robinson, who had studied Coombe, Capt. Barclay, and other authorities on the development of physical powers, resolved to train the horse himself, after his own ideas. He always held with Capt. Barclay that the proper way to train a horse as well as a man was to get him "fit for training," that is, to get the flesh off him as much as possible by two or three months slow work before attempting to get him into wind. He instanced the remarkable case of Tom Cribb, who, before his fight with Molyneux, had been living very freely as a London publican, and weighed very nearly

17 stone (238 lbs). Capt. Barclay, who had made the match, sent Cribb to his estate in Scotland, made him walk about with his gamekeepers before he attempted to put him into anything like work. Cribb, it is said, was very obstreperous at first, but the passive imperturbability of the Captain's gillies—one of whom was more than a match for Cribb himself—was not to be gainsaid. Cribb could at last walk with the best of them as much as thirty miles a day and was reduced to lower than his proper weight. He won the battle by sheer condition. It was pretty certain that Melbourne could not stand galloping; indeed the chances were that the first broke him down; and his method may be useful in similar cases, especially to some trainers I wot of, whose only idea of training is longer or shorter gallops day after day, and if the legs will not stand it so much the worse for them, and the animal. He is "no use here," away with him and let another fill his stall. He was luckily a light-fleshed animal, who had not been overfed in his youth, as is too much the custom nowadays, when so many yearlings must be got ready for the prize ring, as if they were bullocks for Smithfield and not animals intended for the severest and fastest work conceivable. Melbourne was by degrees brought up to five hours early walking exercise a day, and was sweated by being heavily clothed, and put in a box artificially heated, after as fast exercise as he could judiciously bear. Turkish baths were not invented in those days, and perhaps it was as well, for although they will certainly reduce the flesh, they evidently relax the muscular system too much for training. During the whole time the horse never had a gallop, and the Yorkshire trainers who took great interest in the case, used to make very merry at the "amateur preparation." The laugh was very nearly against them, and as it was they were all quite out of it, for the winner came from Newmarket, and their cracks were hopelessly beaten.

Some very good horses were entered for the Chester Cup that year and twenty started, including Lauerocost 5 years, 131 pounds, the top weight; Melbourne 6 years, 130 pounds; King Coleaged, 117 pounds; Bellona 5 years, 112 pounds; St. Bennett 6 years, 110 pounds; Tubal Cain 4 years, 110 pounds; the Dean 4 years, 108 pounds; Dey of Algiers 4 years, 108 pounds; Gilbert Gurney 5 years, 104 pounds, and the Irish mare Cruiskeen 6 years, who had won the Cesarewitch the year before, and who also won the Chester Cup the year after, 102 pounds. Job Marson, who rode Melbourne, had strict orders to make use of Melbourne's speed and stamina and, notwithstanding his weight, "to wait in front," for it was felt that any extra effort in making up his ground would inevitably break him down. This proved to be the case, and Job was severely blamed for not obeying his instructions; but I always thought that his excuse was a very fair one, and that he deserved great credit for getting the horse where he did. The Dey of Algiers was a very fair horse; he had the year before represented Col. Peel's stable in the Derby and Ascot Cup, and Nat made great play with him from the start, forcing the pace with the view of ensuring Melbourne's breaking down. Marson pleaded that as Nat made the pace so hot Melbourne would have fallen lame long before the finish, and he hoped to make up his ground gradually when the Dey "came back to his horses." At the distance Melbourne closed followed by Cow Boy, and Lanerocost got up to the Dey. The two latter were then done with, and Melbourne was seen to falter, but he struggled on with great gameness, and was 'only beaten by a here half neck,' according to the official record. Marson made a great effort on the post with Melbourne, who was discovered to have broken down so badly with both forelegs that he was with difficulty got off the course. The Dey of Algiers was never headed.

### The Law of Warranty.

We copy from the *Country Gentleman* the following decision in reference to a warranty of a horse through a servant or agent. The decision will interest many in the trade and lawyers engaged in such cases:

In the Court of Queen's Bench recently, a case was heard before Lord Coleridge, Mr. Justice Stephen and Mr. Justice Mathew, which will be of interest to all concerned in horse-flesh. It raised a question as to the sale of horses which for more than a century has been a vexed question in the law, and yet, strange to say, though often "put" by judges or counsel in arguing, had never been definitely decided. The question was that once put by Mr. Justice Cresswell in discussing a case thirty years ago. "If I send my servant to a fair with a horse to sell and say nothing about warranty, and he sells it with a warranty, am I bound by it?" Lord Ellenborough early in this century had held at *nisi prius* that the master would be bound, but that was only a *nisi prius* ruling. More recently, though more than twenty years ago, in 1861, in a case which was decided in the Exchequer, it was decided that at such a sale, by a servant, on a farm or other private premises, there was no authority implied to give a warranty, but the case of a sale at a fair was expressly reserved, and curiously enough, it did not appear that this point so long mooted had ever been decided, nor is it quite clear that it has been settled now. In the present case, the owner sent it by a servant to Stockport fair to sell it, saying nothing (as he declared) as to warranty. The servant sold it for £40, saying that it was "perfectly sound." The purchaser resold it, also with the same warranty, and it was again sold. It was sent back to the first purchaser as unsound, and he sued the first seller in the County Court at Stockport upon the warranty received at the sale. The seller denied that he had given any authority to give a warranty, and, indeed, that he had told his man not to warrant, and the servant not only confirmed this, but denied that he had, in fact, given the warranty which the purchaser swore to. Nevertheless, the Judge (Mr. T. Hughes, Q. C.) found for the plaintiff. This was an appeal from his decision.

Mr. Marshall argued for the plaintiff in support of the decision, citing Lord Ellenborough's ruling in his favor, and pointing out that in the case in 1861, "Brady vs. Todd," this case of a sale at a fair was expressly reserved.

Mr. Clier, for the defendant, urged that in principle the case in 1861 decided that there was no authority in a servant to give a warranty, and here, he urged, both master and servant deny any express authority to give a warranty. [Lord Coleridge—So he denied the actual warranty, why might not the Judge believe the plaintiff?] Even if so, the plaintiff could only speak to an actual warranty by the servant, which was without authority. As to an implied or legal authority, it was in effect negated by the decision in the case cited—the case in 1861, "Brady vs. Todd"—since which, it is believed, there has been no decision. It would be very inconvenient that a servant should have authority to bind his master by a warranty against his will, and the purchaser should inquire as to the authority. [Mr. Justice Mathew—How could he, when the owner, the master, is at a great distance?] [Mr. Justice Stephen—And when the horse is resold with the same warranty as the first purchaser had, how can the subsequent purchasers inquire as to the original in-

quiry?] [Lord Coleridge—How, practically, could the affairs of life be carried on without such an implied authority?]

Lord Coleridge said the question must depend in some degree upon the circumstances of each case—whether, when a stranger met a stranger at a fair, and sold to him a horse with a warranty, it is or is not to be implied that the apparent seller has authority to effect a sale with a warranty. It is implied in the case cited that such authority may, under circumstances, be inferred, and that the buyer may have a right to trade upon the assumption that the inference is correct. The Judge in this case had found that, in his judgment, the circumstances of the case did warrant the inference, and he was right in so finding.

Mr. Justice Stephen concurred, observing that there could not be a contract without mutual assent, and assent to the same terms; and if the one party said he would buy with a warranty at a certain price, and the other said he would sell at that price without a warranty, there was the contract of sale?

Mr. Justice Mathew also concurred.

The judgment of the County Court judge was therefore affirmed.

The result of this trial will teach those who sell horses to caution their representatives against being too zealous in their efforts to serve those who employ them.

### Decadence of the Derby.

Will the Derby, as a racing event, be able to hold its own in popular estimation against the rich attractions that the "gate money" meetings may be expected to offer during the next decade is a question often asked in England. To hastily say no would be stirring up a hornet's nest, for of all people in the world none are so difficult to move out of regular beaten tracks as the English masses. But the outlook certainly favors such an idea and the Epsom authorities no doubt thought so when they made the Epsom Grand Prize, with its £1,200 added money, one of the features of the Derby meeting, a move that the Sandown Park authorities have seen and gone better to the amount of £10,000 for an alleged stake to be run at their pretty inclosed resort in Surrey. That the Hampton Park, Manchester, Newcastle and other gate-money associations will offer big money for special stakes is certain, Manchester already being in the field with its Whitsuntide Plate of £2,000 for two-year-olds. With such innovations, coupled with the suggestions that the ancient Roodee at Chester shall be inclosed, it is not surprising that the senior members of the Jockey Club already fear that the day is not long distant when perhaps even the meetings at Newmarket will be gate-money affairs in fact, as they are now nearly so in reality by reason of the heavy charges to witness the races.

That the Derby is not the race it was a few years ago the number of starters plainly shows. Last year but eleven horses went to the post, fourteen in 1882, fifteen in 1881 and nineteen in 1880. In fact all through the "seventies" there was a big falling off from the average number of starters seen during the "sixties," for in 1867 Hermit beat a field of 30, with respectively 29, 30, 31 and 34 starting in 1865, 1864, 1863 and 1862. With only 11 starters last year, many complained that the race was not worth the trouble of a trip to Epsom to witness it, while the stake was only worth £5,150 as against £6,375 in 1880 and £7,025 in 1879. Nor is the outlook for the race on the 28th of May next any more promising, death having reduced the number of subscribers to 191, the same as in 1872 and 1855; while, with the retirement of the Duke of Westminster and the breaking up of Lord Falmouth's stable, there is a possibility that the number of starters may be even less than last year. Of course much will depend upon the condition and how well the several prominent candidates for "blue ribbon" honors stand the pressure of training, coupled with the "form" shown by those that start for the 2,000 guinees four weeks previous to the Derby. The most fancied candidate, however, at the present time for the Derby is the Adelaide filly, and she was not nominated for the Two Thousand.

### A Plea for Road-Carts.

Breeders of trotters should encourage the sale of road-carts. Wherever they get into general use among the business and road riders of a section, speedy horses unexpectedly develop that would never otherwise be heard of. Especially is this true where roads are not suitable to the fragile side bar. The trotter that used to graduate from the heavy lug of a business buggy were apt to be hitches, while their vitality most likely had been impaired by the constant strain of too great a load at a rapid gait. The ordinary road-cart is of very much less than half the draft of a common buggy. So easy does a horse bowl along in one that a slight predisposition to speed is soon made use of in the practical purposes of making and saving time without fatiguing a horse or getting him ringed wet. It is the extra effort to pull the load that brings out the cold sweat that won't dry up, which all stablemen call "black sweat."

The nerve and energy that is wasted in pulling four wheels, two of them away back, with all their weight and friction, is unconsciously devoted, in a road-cart, to learning to trot. Learning in the very best and surest way, acquiring bottom and endurance with the speed, not getting staid and track-weary, half the trotters in the country would lower their records, driven judiciously on the road five days out of the six. There is a good deal of humbug about the mystery of training—not only humbug but positive mischief. Any gentleman with good common sense and a road-cart, who lives a little distance from his business, will have a faster horse if he drives his trotter himself, with an occasional trial at the track.

Ninety-nine trotters in a hundred will trot faster this way than with all the fussing of a third-rate professional trainer, their legs will stay right, without the bother of handages, their feet will be easily kept in shape, and they will be willing and able to trot for a man's life when they do strike a track. What is the evidence in support of this? It is that the winners are managed by a set of drivers who have mastered their profession sufficiently to know that their profession is half humbug. Ought not the records of Hancock, made a trotter by a boy on the road, after being abandoned by professionals, and Cleora, who learned to trot going to and from town, to set men a thinking of the truth of this history?

Brother breeders of trotters, don't hold on for a big price, but sell your youngsters to business men who have use for a roadster. Encourage the purchase of a road-cart, and assure your customer that good results will ensue from judicious and careful everyday use. With such sales as these, you will wake up some morning to find your farm famous, your customer enriched, and again a customer without your own horse pocket having been depleted by expense which cannot be afforded.

I stood in a stall, not long since, with one of the very young drivers in America. He had advised a relative

breed to a certain stallion because he and his family were all natural trotters.

"Yes, but they have to be trained."

"No, sir; if the trot is there it will show; it is bound to come out."

Many of the trotters that are made by mysterious appliances, would have lasted longer and trotted faster if they had come naturally to their speed with careful road-work on a vehicle not so heavy as to impair vitality.

Of course, it is much better for those who can afford it to employ, for the development of their youngsters, first-class talent; but this is not always attainable, even for those who can afford it, while it is by no means indispensable in the education of a road-horse or trotter. If it is, then we must admit that the management of horses is a mystery beyond the comprehension of the average gentleman and amateur driver. That this is not the case, thousands of speedy roadsters prove. For road-riders who have access to finely prepared roads, this speed has not much value, but to those who live in a section of difficult roads, where a buggy must be too strong for ease of draft, I say, lop off the hind wheels and have faster and better horses.—*M. T. G., in N. Y. Spirit.*

### National Trotting Association—Doings of the Biennial Convention.

The following is the New York *Spirit's* resume of the proceedings of the National Association last week:

The tenth Congress of the National Trotting Association was held at the Fifth Avenue Hotel, in this city, on the 13th inst. There was a large representation of members, 180 answering the roll-call. It was found that five members had recently joined, viz.: Prairie-du-Chien, M. A. and D. P. Association, of Prairie-du-Chien, Wis.; Ailsa Driving Park Association of Ailsa Craig, Ontario; Central Agricultural Association, Wyoming, Ill.; Farmington Valley Agricultural Corporation, Collinsville, Conn.; Otes County Fair and Driving Park Association, Syracuse, N. B., making in all 222 members. Each of the Grand Circuit members was represented by one of their officers, but the interests of the small associations were mainly in the care of a few delegates, the largest proxy-holders being Secretary Vail, Mr. D. L. Hall, of Chicago, Ill.; Mr. A. G. Hancock, of Kansas City, Mo., and Hon. Jesse D. Carr, of San Francisco, Cal. There were about fifty delegates present. The Congress was opened at 2 P. M., and concluded its session in the evening. The business was proceeded with in the following order: The Audit Committee on Secretary's and Treasurer's accounts reported that they were in order, and the balance on hand on January 1st, 1884, was \$5,959.75. A Nominating Committee composed of Messrs. Burdett Loomis, Wm. Edwards, A. G. Hancock, D. L. Hall, and Geo. Sturges, was appointed by the President. Major H. C. McDowell, Chairman, submitted the report of Committee on Rules. The following changes in, and additions to, the by-laws were adopted. The sections as amended now read as follows:

ARTICLE VI.—Sec. 2. The Treasurer shall receive and take charge of all moneys that may belong to the Association, and make therefrom such payments as shall have been ordered, or may be approved, by the Committee on Disbursements, or by the Board of Review, of which a statement in detail shall be submitted at the end of the year, or when required by the Board of Review.

The words, "or may be approved," having been inserted. ARTICLE VII.—Sec. 4. It shall be the duty of each member to forward by mail, as registered matter, to the Secretary of said National Association, within one week of the close of each meeting, the judges' book, or official record of the meeting or races, said record to contain the date, the amount or value of the purse, match, or sweepstake, the full terms and conditions of the race, all the entries they have received for the same, the position of each and every horse in each heat, the drawn, distanced, and ruled-out horses, the official time of each and every heat, the signature of the judge, and such notes and remarks as are necessary for an understanding of the whole.

The changes made in the above section provide that each member shall forward by mail, as registered matter, to the Secretary, the judges' book, or official record of the meeting or races, said record to contain all the entries for the same, etc., and the signatures of the judges.

The Committee recommended that Section 2 of Article XIV be amended so that each member shall be entitled to one vote "for every \$25 that it has contributed to the annual fee of membership." This was strenuously opposed by the representatives of the weaker associations, and not being pressed by the others, it was rejected.

Then Mr. Geo. M. Stearns of Chicopee, Mass., in good, set terms showed how the foundations of the institution might be shaken or removed at any time by the abuse of the proxy system, and as a safeguard against the danger he proposed an addition to the by-law which was adopted. It substantially provides that no by-law shall be adopted until after its presentation to one Congress and acceptance by the following Congress.

The recommendations of the committee as to the Rules and Regulations were next discussed. The addition herein after quoted was adopted after a clear explanation by Mr. A. G. Hancock, that the amendment is designed to protect horse owners from "snap judgments," and the section now stands:

RULE 3.—Sec. 2. No suspension for non-payment of dues as aforesaid shall be lawful unless ordered within one week of the close of the meeting, and no suspension shall be imposed for non-payment of such dues contracted in a class wherein a horse was permitted to start, or in any case when the member has applied for membership subsequent to the closing of its entries.

Sec. 3. All entries shall be governed by the published conditions, and shall be bound for the entrance fee regardless of any proposed deviation from such published conditions, and any member who shall make a collusive arrangement to allow a nominator privileges differing from those allowed by the terms of the race to other entries in the same class shall, upon satisfactory evidence thereof produced to the Board of Review, be held to forfeit to the National Association the amount of the purse in which such collusive arrangement was made, one-half of such forfeit to go to the informant upon recovery of the same, and the member, upon a second conviction of like character, shall be expelled.

The above section formerly stated that fifty per cent. of the amount of the purse should be forfeited.

RULE 5.—Sec. 3. It shall be distinctly stated whether the entry be a stallion, mare or gelding, and the names of the sire and dam, if known, shall be given in all cases, and when unknown it shall be so stated in the entry. If this requirement as to pedigree is not complied with, the entry may be rejected, and when the pedigree is given it shall be stated by the member with the publication of the entry, and if the pedigree or record of a horse be falsely stated for the purpose of deception the guilty party may be fined, suspended or expelled, by order of the Board of Review.

The new addition to the above section provides for the punishment of a false statement of pedigree.

RULE 13.—Sec. 1. A person obtaining a purse or stake through fraud or error shall return it to the Treasurer of the National Trotting Association, if demanded within one year, by the member, or by the President or Secretary of this Association, or by order of the Board of Appeals, or he shall be punished as follows: He, together with the parties implicated in the wrong, and the horse or horses, shall be suspended until such demand is complied with, and such purse or stake shall be awarded to the party justly entitled to the same.

The words "or by the President or Secretary of this association" having been inserted.

RULE 23.—Sec. 5. This section fully provides for the punishment of a rider or driver who pulls a horse to prevent his winning a heat, and the words "or place" have been added, so that the paragraph as amended reads:

With a design to prevent his winning a heat or place which he was evidently able to win.

RULE 29.—Sec. 2. The judges shall, after the first scoring, choose one of the contending horses (the pole horse being selected, if deemed suitable) to score by. And no driver shall come up in advance of said horse, nor shall he wilfully hold back, under penalty of a fine of not less than \$5, nor more than \$50, which shall be imposed and collected at once.

The word "wilfully" was stricken out, and the extent of the fine defined in these words "of not less than \$5 nor more than \$50," etc.

Sec. 10. Although a leading horse is entitled to any part of the track, except after selecting his position on the home-stretch, he shall not change from the right to the left, or from the inner to the outer side of the track, during any part of the race, when another horse is so near him that in altering his position he compels the horse behind him to shorten his stride, or causes the rider or driver of such other horse to pull him out of his stride; neither shall any horse, rider, or driver cross, jostle, or strike another horse, rider, or driver, nor erver or "carry him out," "sit down in front of him," or do any other act which constitutes what is popularly known as "helping," or which shall impede the progress of another horse.

The words from "or carry him out," etc., having been instituted for previous closing language of the section.

Sec. 2. It shall be the duty of the judges of the races to take the time, as aforesaid, or to appoint some suitable person or persons to assist them in that respect, and no official timing shall be announced or admitted to the record, but in any case involving alleged suppression of time, or false announcement of time, nothing in this rule shall be construed to limit the Board of Review as to the evidence admissible. [See Article 20, of By-Laws; See also Rules 40, 41 and 43].

Sec. 3. In any case of alleged error in the record announcement or publication of the time made by a horse in a public race, the time so questioned shall not be changed to favor each horse or owner, except upon the sworn statement of the judges and timers who officiated in the race.

The words beginning with "but in any case," etc., were added to Section 2, and Section 3 was also added.

RULE 41.—Sec. 1. In any public race, if there shall be any intentional suppression or misrepresentation in either the record or the announcement of the time of any heat in the race, it shall be deemed fraudulent, and any horse winning a heat or making a dead heat therein there was such a fraudulent suppression of time, together with the parties implicated in the fraud, shall by operation of the rules be henceforth disqualified from the right to compete on the grounds of members; which disqualification may be removed only by order of the Board of Review, when upon investigation the Board shall believe that the constructive fraud was not premeditated, but only then upon a restitution or return to the custody of the Treasurer of this Association of any premiums that under any circumstances have been awarded such horses on the grounds of members during the time of disqualification, and upon the payment of a fine of \$100, to go to this Association.

The following provision was added to Sec. 1 of Rule 51 as to suspensions:

And further provided that any suspended person who shall ride or drive in a race on the grounds of a member while so suspended shall be fined not less than \$50 nor more than \$100 for each offence, one-half of such fine to go to the informant upon conviction and recovery.

RULE 52.—Sec. 3. Any person who shall appeal from any order suspending him or his horse for non-payment of entrance-money or a fine may deposit the amount claimed with the Treasurer of said National Association, who may thereupon issue a certificate or notice, through the Secretary, temporarily reinstating or relieving the party and his horse from such penalty, subject to the final action of the Board of Appeals; and any person who shall make deposit under this rule or under protest shall file with the Secretary of this Association, within sixty days thereafter, a sworn statement of the grounds of appeal or protest, in the absence of which the protest or appeal shall be regarded as and become void, and the deposit may be administered as a payment applicable to the claim involved.

Sec. 4. In any case of deposit with any member of this association for account of any claim of another member, or on account of any claim of which notice has been furnished from the office of this Association, the deposit shall be forwarded within one week of the close of the meeting to the office of this Association, for custody of its Treasurer pending appropriate action thereon; and it shall be the duty of the member receiving any such deposit to notify the Secretary of this Association of the same by telegraph when possible, otherwise by mail, within forty-eight hours from the receipt of the deposit.

The additional clause attached to Section 3 begins with the words "and any person who shall make deposit," etc. Section 4 was also added.

The exemption idea of absolving horses from the handicap of a record or bar when they trot for purses of, say, \$200 and less, did not find favor, notwithstanding the vigorous advocacy of Mr. M. T. Grattan, supported by Mr. C. J. Hamlin. But it was so clearly shown by Messrs. Goldsmith, Edwards, Payne and others that such class legislation was inimical to the best interests of the National Trotting Association, that the mover deemed it prudent to withdraw his proposition.

The following resolution was passed unanimously. Resolved, That the President of this Association be requested, and is hereby authorized, to secure at an early date the incorporation of "The National Trotting Association."

Major McDowell then read the following resolution, and in a pertinent speech, presented the question, with the petitions of numerous breeders.

Whereas, Numerous breeders of trotting horses from all sections of the country have petitioned this Association to edit and publish a stud-book or register of trotting-bred horses, such as may be eligible to entry therein under such rules and regulations as may be determined by this Associa-

tion, which petitions have been duly considered, and are on file with the Secretary.

Wherefore, Be it resolved that the National Trotting Association does accept and take the supervisory control of said proposed stud-book for the registration of the pedigrees of trotting horses, to be called the National Trotting Stud-book; that a committee of seven be appointed by the President to consult the views of breeders residing in each section of the country and to agree upon a standard of registration, said committee to report its conclusions to the Board of Review of this Association, which body, upon receiving the report of said committee, shall have power to select a compiler of said stud-book, and that such compiler shall act under the advice and instructions of a Board of Censors, to be appointed by the Board of Review; that all questions affecting the records of horses in connection with their eligibility to registration shall be determined by the Board of Review, and that the evidence upon which registration shall be based must be in writing, and shall be filed in the office of the Secretary of the National Trotting Association.

And it is further understood and reserved that the funds of the National Trotting Association shall not in any manner be devoted to the cost involved in the compilation and publication of said stud-book. Neither shall any of the funds of said National Association be expended for the composition or expenses of said compiler or committee, or be used in any way, directly or indirectly, for the cost or expense caused by the work provided for by this resolution.

This gave rise to a stormy discussion. Alden Goldsmith characterized the proposition as a firebrand that would breed discord in the National Trotting Association, and finally destroy it. Burdett Loomis said the resolution was premature, as the breeders should organize with a paid-up capital, and put themselves in shape for recognition by the National Trotting Association. That the new organization should be an independent body, and manage its own affairs, receiving only the moral support of the National, and nothing more. Alex. Herhison contended that the resolution should not be pressed on this meeting. Messrs. L. J. Powers, William Edwards, A. G. Hancock, M. J. Payne, Geo. M. Oyster, and others who were opposed to the resolution, finally conceded that the whole matter should be referred to a committee of seven, to report their views to the Board of Review at its meeting in May next, with power for the Board to act thereon, and Mr. Powers moved an amendment to that effect, which was accepted by Major McDowell and his followers. The amendment was passed  *viva voce*  by both parties, and almost unanimously confirmed by calling the roll. The names of the committee are: Messrs. H. C. McDowell, Alex. V. Harhison, L. J. Powers, L. Brodhead, Wm. Edwards, Edwin Thorn, and Dr. Geo. H. Bailey.

The Committee on Nominations for Officers and District Board of Appeals, to serve for the ensuing two years, reported as follows, which report was unanimously adopted: President, Judge James Grant of Davenport, Ia.; First Vice-President, Gen. W. S. Tilton of Togus, Me.; Second Vice-President, Hon. S. K. Dow of Chicago, Ill.; District Boards for the Eastern District, Burdett Loomis, Hartford, Conn.; Geo. M. Stearns, Chicopee, Mass., and John Shepard, Boston; Atlantic District, George Sturges, Philadelphia; Paul H. Hacke, Pittsburg, Pa., and David Bonner, New York; Central District, H. C. McDowell, Lexington, Ky.; M. J. Payne, Kansas City and Thomas Axworthy, Cleveland; Western District, M. M. Morse, Illinois; U. C. Blake, Cedar Rapids, Ia., and D. L. Hall, Chicago; Pacific District, N. T. Smith and J. McM. Shafter of San Francisco, and L. J. Rose, San Gabriel, Cal.

Mr. Stearns made a strong plea for a more effectual plan of preventing conditional entries, and the Rule Committee accepted his emanations of Section 3, Rule 3, throwing the onus on the member accepting a conditional entry, and enabling the owner to start his horse without payment of entry-fee, and to collect the full amount of premium won by him. Should the member collect such entry-fee it shall be forfeited to the National Association, but the majority present considered the proposed change so radically in favor of the owners that it was tabled.

After the stud-book attachment was disposed of, a motion was made by Dr. L. Hall that the Congress for 1886 shall meet in Chicago, which was carried by a vote of 87 yeas to 84 yeas for New York. A vote of thanks was enthusiastically passed to its President, Judge Grant, for the warm interest he has invariably taken in the affairs of the Association, and the Congress adjourned to meet as above stated.

### Answers to Correspondents.

Question answered only through these columns. No replies by mail or telegraph.

J. W. T., Walla Walla, W. T.—April Fool, b m, foaled 1868, bred by Dr. W. H. Henderson of St. Louis. By Waterloo.

First dam, Fanny Daily, by Blacknose.  
Second dam, Ann Harper, by imp. Luzborough.  
Third dam, Ellen Pucket, by Sir Richard.  
Fourth dam, by Stockholder.  
Fifth dam, by Couqueror.  
Sixth dam, by Brinkley's Peacock.  
Waterloo, by imp. Yorkshire, dam Topaz, by imp. Gloucee.

Subscriber, Lakeville.—The rule of the National Association regarding names of horses is as follows:

Every horse shall be named, and the name correctly and plainly written in the entry, and after entering or trotting in a public race, such name shall not be changed without procuring a record thereof to be made in the office of the Secretary of the National Trotting Association, for which there shall be paid a recording fee of \$50, the fee to go to said National Association. To each violation of this requirement a fine of \$100 shall be imposed, together with suspension of the horse until paid. [See Sec. 4 of Rule 6.] The italics are ours.

J. W. M., Oroville:

1. The mare Lady Clarke does not appear in the records at all, and if she ever started it was under another name or in some race that was not reported.

2. It is not material whether a track belongs to the National Association or not. If the race is to rule, that is to say, if the regulations regarding weight, distance, timing and judging are observed, time made is a record. If there is any variation from the rule in the above named particulars the time made is a bar.

The Lorillard Club, of New York, of which Mr. Pierre Lorillard is the controlling spirit, has begun the construction of a new race-track on the outskirts of Paterson, near Little Falls. The club has purchased fifty acres of ground and will build a club-house, hotel and stables on the spot.

THE KENNEL.

Field Trial Winners of America.

We publish herewith a portion of the field trial winners of America, beginning with the first regular trial meeting. This list was mainly compiled by the Turf, Field and Farm, and we shall continue the publication in sections until the list is complete, adding the events that have been decided since the Turf's list was printed, and bringing the record down to the close of 1883. Intelligent breeders will appreciate the value of this record, as a knowledge of the winning strains is an important factor in the breeding problem.

First American Field Trials, Memphis, Tenn., October, 1874, under the auspices of the Tennessee Sportsmen's Association. Prize, a silver set. Points for merit and demerit, Ten starters—eight setters, one pointer and one dropper. 1st, Mr. H. C. Pritchitt's setter Knight, 88 points of merit.

Second American Field Trials, Memphis, Tenn., November, 1875. Table of points: Nose, 30; pace and style, 20; breaking, 15; pointing, style and staunchness, 15; hacking, 10; roading, 5; retrieving, 5; total, 100.

Puppy Stakes.—For setter and pointer puppies under 18 months; \$150 and cup to first; \$100 to second; \$50 to third; Four entries. 1st, Maud (Leicester-Dart), English setter bitch, owned by P. H. Bryson; score, 93. 2d, Paris (Leicester-Dart), English setter dog, owned by L. H. Smith; score, 86. 3d, Duke (Prince-Dora), setter dog, owned by Luther Adams; score, 74.

Brace Stakes.—For either setter or pointer braces, regardless of ownership; \$250 and cup to first; \$150 to second, \$100 to third. Four braces entered. 1st, Tom and May, owned by Geo. Campbell; score, 77. 2d, Romp and Rake, owned by W. A. Williams; score, 74. 3d, Maud and Paris, owned by L. H. Smith and P. Bryson; score, 72.

All-Aged Stakes.—For setters and pointers; \$250 and cup to first; \$150 to second; \$100 to third. Five entries. Judges, Messrs. Adams and Sterling. 1st, Tom, owned by Geo. Campbell; score, 92; 2d, Harry, owned by R. C. Nicholson; score, 71; 3d, Maud, owned by P. H. Bryson; score, 67.

Third American Field Trials, Memphis, Tenn., November 13th, 1876, under the auspices of the Tennessee State Sportsmen's Association. Judges for Puppy, Greenwood Plate and Champion Stakes, Edmund Orgill, Col. James Gordon and J. H. Whitman; for Brace Stakes, Col. James Gordon, Major Taylor and Edmund Orgill.

Puppy Stakes.—For pointers or setters under 18 months; \$150 to first, \$100 to second, \$50 to third; sixteen entries. 1st, Isabella (Chester—Annie 11.), black and white setter bitch, owned by John Davidson; 2d and 3d, Pride of the South (Leicester—Dart), black, white and tan setter dog, owned by Capt. Pat Henry; and Countess (Joe—Kate), red Irish setter bitch, owned by W. A. Wheatley; divided.

Champion Stakes.—Open to all; \$250 to first, \$150 to second, \$100 to third; twelve entries; 1st, Drake (Prince—Dora), black and white setter dog, owned by St. Louis Kennel Club. 2d, Stafford (Rake—Dart), black and white setter dog, owned by P. H. Bryson; 3d, Paris (Leicester—Dart), blue belton setter dog, owned by L. H. Smith.

Brace Stakes.—Brace may be owned and hunted by two persons; \$150 cup and one-fourth entrance-money to first; one-half entrance-money to second; one-fourth entrance-money to third. Five braces entered. 1st, Erin, red Irish setter bitch, owned by St. Louis Kennel Club, and Drake, English setter dog, owned by Luther Adams; 2d, setter dog and setter bitch Maud, owned by P. H. Bryson; 3d, Paris, English setter dog, owned by L. H. Smith, and Pride of the South, setter dog, owned by Capt. Pat Henry.

Greenwood Plate Stake.—For imported Irish setters only, for gold plate presented by E. O. Greenwood, Cincinnati. Three entries. 1st, Erin, red Irish setter dog, owned by St. Louis Kennel Club.

Iowa Field Trials.—Hampton, Iowa, September 4th, 1877. Judges, John E. Long, Henry Miller and H. J. Edwards.

Puppy Stakes.—For setters and pointers under 18 months; \$100 to first; \$75 to second; \$50 to third; \$10 to fourth. Seventeen entries. 1st, Nellie (Belton—Dimple), black and white setter bitch, owned by D. C. Sanborn; 2d, Berkley (Elcho—Loo 11.), red Irish setter dog, owned by St. Louis Kennel Club; 3d, Carry 11. (Pilot—Carrie), red Irish setter bitch, owned by Jesse Sherwood; 4th, St. Elmo (Pride of the Border—Jesse), black, white and tan setter dog, owned by Dr. S. Fleet Spicer.

Champion Stakes.—For setters and pointers of any age; \$100 to first; \$75 to second; \$50 to third; \$10 to fourth. Thirty entries. 1st, Nellie, black and white setter bitch, owned by D. C. Sanborn; 2d, Black Ned (Rick—Dinab), black setter dog, owned by Geo. Waddington; 3d, Queen (Rick—Sport), black and tan setter bitch, owned by Geo. Waddington; 4th, Dash (Joe—Kitty), English setter dog, owned by Dr. Nicholson.

Minnesota Field Trials.—Sank Centre, Minn., September 17th-20th 1878. Run on pinnated grouse or prairie chicken under the management of the Minnesota Kennel Club. Judges, Messrs. John Davidson, William Mulliken and C. B. Whitford.

Nursery Stakes.—For pointer and setter puppies under 12 months; \$20 to first, \$10 to second. Six entries, setters. 1st, Prairie Belle (Rake—Pearl), orange and white setter bitch, 6 1/2 months, owned by R. B. Morgan; 2d, Tempest (Charm—Gypsy), orange and white setter bitch, 7 months, owned by Geo. Waddington; 3d, Jennie (Leicester—Dart), blue belton setter bitch, 10 months, owned by D. C. Sanborn.

Minnesota Kennel Club Stakes.—For pointer and setter puppies under 18 months. \$50 to first; \$30 to second; \$20 to third. Seven entries—setters. 1st, Strathroy (Leicester—Dart), black, white and tan setter dog; 10 months, owned by D. C. Sanborn; 2d, Dan (Rake—Fauny), black, white and tan setter dog, 14 months, owned by D. C. Sanborn; 3d, Maggie May (Roh Roy—Daisy), blue belton setter bitch, 14 months, owned by J. H. Whitman.

All-Aged Stakes.—For pointers and setters, any age; \$50 to first; \$30 to second; \$20 to third. Thirteen entries, eleven setters, two pointers. 1st, Friend (Lehigh's Flash—Stall), red Irish setter bitch, owned by E. F. Stoddard; 2d, Jet (Pilot—Nellie), black setter dog, owned by J. S. Jones; 3d, Strathroy (Leicester—Dart), black, white and tan setter dog, owned by D. C. Sanborn.

Brace Stakes.—Two entries. These stakes were not run.

A District Coursing Club is being talked up among the dog fanciers of San Jose, Gilroy and Hollister. The outlook is that a membership of about forty will be secured, of which one half will be from San Jose and the rest from the other towns named. With so much good coursing ground at hand it is singular that the spirit has not got a footing before this.

The coursing match of the Valjejo Club will be held on Sunday next, in the vicinity of Bridgeport. It is expected that twelve dogs will participate, and good speed shown. The sum of \$45 divided as follows, will be given as prize: First dog, \$25; second, \$15; and third, \$5.

Another Proposition from Cornkrake.

EDITOR BREEDER AND SPORTSMAN:—Having read Mr. Brady's reply to my challenge in last week's edition of your paper, I must say I am not much disappointed, as I knew he would not dare back Wee Nell for coin against several greyhounds that I can name. He says Cornkrake wants to take advantage of the fact that his dog is in training for the spring meeting, and would not compete in a private match until after the meeting. If Mr. Brady will read my challenge once more he will find that I left the time of race to be mutually agreed on, and I did not claim it should be run before his club meeting. Now I will match a greyhound against his wonderful Wee Nell, any time after the spring meeting, for \$250 a side. Is there any advantage in that? Mr. Brady also says he is not addicted to bluffing. Now, it is well known by a number of coursing men that since the late coursing match at Newark he is continually offering to match Wee Nell against any dog in the State, and when he finds a man willing to accept he backs down. If that is not bluffing what is it? But perhaps it is hueism, or it may be caused by the red sunsets. Now I will give the owner of Wee Nell another chance to make a match, as I wish to demonstrate to his satisfaction that he has not an animal worthy the name of greyhound. I will match one greyhound against Wee Nell and three of her sisters and brothers, and run a single dash against each of the four in succession for \$100 a course, the race to be run between the hours of 8 A. M. and 4 P. M. on the San Joaquin valley, on any day satisfactory to both parties. In conclusion, I must thank Mr. Brady for his very generous invitation to enter my dog in the Pacific Club, but respectfully decline, for when I go to Merced I go to see greyhounds run.

I hope the above will be acceptable to Mr. Brady, and in future when he wants to match his wonder he will not forget CORNKRAKE.

P. S.—Fifty dollars forfeit np.

The following remedy for mange is furnished by a correspondent of the Field, who pronounces it first class: Take equal parts of sulphur, ter and veseline, and having mixed the last two thoroughly, rub in the sulphur, adding sixty drops of carbohc acid to each ounce of the mixture. This ointment should be well rubbed into the dog's skin with the hands; on the third day wash off with castile soap, and when dry apply again, repeating it until the third or fourth application if made. If vasaline can not be had use in its stead fresh butter without salt.

Mr. Carroll's greyhounds Monarch and Banthan met with an unlucky accident this week, at Livermore, by running against a hsh-wire fence. Banthan was cut between the shoulders, and Monarch a cut in the neck, a deep gash in the back and a split tail. These are but flesh wounds, and Mr. Carroll hopes to see them all right in time for the spring meeting, March 26th and 27th.

G. W. Bassford's Llewelin setter bitch Posha (Druid ex Pochantes) whelped on the 5th inst., fifteen, seven dogs and eight bitches, by McGregor (Rob Roy ex Queen Msh). Though every precaution was taken the cold snap killed them all before they were a day old.

G. W. Bassford has sold four pointer pups to be entered in the Derby of the Pacific Coast Field Trial Club; also one setter bitch, May D. (McGregor ex Posha). We will give details of these sales next week.

The Pacific Coast Coursing Club will hold their spring meeting at Merced, March 5th and 6th.

ATHLETICS.

Advice to Young Athletes on Training.

[L. E. Myers, in N. Y. Sportsman.]

Eight Hundred and Eighty-yard Running.—This distance is the next after the four hundred and forty yards that is given by our athletic clubs, although now and then one does hear of a five hundred or six hundred-yard race. This latter distance is quite popular in England, and some of the most spirited competitions of the London Athletic Club, for club honors, are at this latter distance. But as the training for six hundred yards is practically the same as that for half a mile, I will let the former pass. There is not the least doubt that this is the prettiest distance that figures on our programme, and an athlete with a fair amount of speed and stamina will show to better advantage in such a race than in any other we could name. The first race I ever won from scratch was at this distance, and naturally I have always been partial to it. At the games of the old Scottish-American Athletic Club, given at Gilmore's Garden, February 28th, and March 1st, 1879, I was one of the starters in the "scratch-half." The only training I had done for the race was running three or four times from 144th street and Third avenue to the Knickerbocker Yacht Club, Port Morris, with all of my clothes on, and in addition a heavy pair of rubbers. I was probably the least fancied of the lot, but the advice I had received in my first quarter-mile race rung in my ears, so I waited and won easily. I do not advise all half-milers to wait until the finish. If you are sure that you can outprint all of your competitors, why, then, you can win by following these tactics. If, on the other hand, you know that you are inferior to your opponents in this respect, then set the pace so as to feel at the finish that you have done your best. It is very unsatisfactory to run a race, and afterwards feel you could have done better had you run differently. A good rule to follow is, always run your own race. There are, of course, cases where your opponents through lack of judgment may make the race easy for you, and you should not be slow to take advantage of such cases. For instance, suppose your most dangerous competitor is a man that you are sure you can run away from at the finish; then if you start with him, your place is at his heels. If you are required to give him a start, and you feel that you can catch him easily, then do so, and lay with him until the finish. In handicaps all of the men are so placed that if all were to run themselves completely out they would be in a bunch at the finish. But this is seldom the case, and if you keep your eyes open you will easily learn how to gauge your men. You should be careful to have a bit left for the finish. This article is rather how to run half a mile than how to train for it. The advice given for the quarter will answer for the half as well, only you should go farther in your slow work than for the shorter distance. In short, run several quarters at a pretty good pace, or a pace faster than you could possibly maintain for the half, and when you are rested, and feel equal to the task go about from one thousand yards to three-quarters of a mile at a moderate pace. This will help your staying powers.

I know of no distance at which an athlete can show so much improvement by constant practice as this. It seems to

be the happy medium in the running line. If an athlete fails at printing or distance running, there is still hope for him at the half mile. I can mention the names of two athletes who could not break 2 minutes 10 seconds for a half mile for quite a long while, and who finally developed into splendid runners at this distance, one of them besting 2 minutes before he retired. There is no distance at which constant practice is likely to make perfect, or comparatively so, as the half mile. If you have failed at other distances don't give up until you give it an honest trial.

The one-quarter-mile walking match between Gaffney and Eiseman for a gold medal was announced for yesterday afternoon, which, of course, was too late in the day for us to give the result in this issue, but it might be well to state that the match is not for the championship, as stated in the daily papers. Both men competed last year in a one-mile walk on different occasions, but as neither secured a position it is very difficult to understand how they can walk a quarter of a mile for the championship. If Gaffney wins, he is to receive a twenty-five-dollar medal, while if Eiseman wins he will receive a twenty-dollar medal. This last statement is made for the benefit of those who read the sporting columns of our daily papers.

Ed. Wilson, of Tombstone, declares that he will challenge Rule to wrestle him again on the same conditions as the late match. He claims that during the first fifteen minutes of the late wrestle he severely sprained his left ankle, so much so as almost to incapacitate him from finishing the match.

Keen and Robinson have arrived in London. The former is inclined to the opinion that there is not an amateur bicyclist in England who can defeat George M. Hendee next year.

James McLeavy died in Glasgow January 25th. It will be remembered that for a considerable time Mr. Leavy was the champion runner of England, from one to ten miles.

Ross and Geary are matched to run a two-hundred-yards race Sunday, March 2d. The ground where the contest will take place is not yet decided on.

THE DRAMA.

California Theatre.

During the week Mr. Sheridan has again been very successful in his representation of high drama. It would, indeed, require a very searching criticism, perhaps a cynical criticism to determine in which character he has most excelled. That he is a close student of high drama, a man of keen judgment, always faithful to nature in his portrayments, and strictly correct in his conceptions of character, there can be no doubt. It is beyond question that his present engagement has raised him immensely in the estimation of the wealthy and cultured classes of our city who nightly crowd to see him. So far, we personally prefer his Shylock and Richelieu. Both were highly wrought, and intensely interesting performances. In the latter perhaps there is a little too much rant, which should be guarded against. Rant is no more power in declamation than noise is music in an orchestra. In Richelieu he was repeatedly called before the curtain in the most enthusiastic manner, and he well earned the honor. Next week will positively be his last, and those who have not seen him should not lose the opportunity. See advertisement for the characters.

The Grand Opera House.

During the week Steele Mackay's Won at Last, has occupied the boards at this establishment. Although not calling for any particular dramatic effort in the leading characters, it is varied, amusing, and at times effective in its scenes. Miss Jeffreys Lewis as Grace Fleming the heroine is graceful and effective all through the piece, although sometimes her relations with her husband J. E. Grismer after their marriage are very strained. The company, however, are all good in their respective roles. After Miss Lewis and Grismer, Miss Hattie Church as Mrs. Bunker, the treacherous French woman, ranks next. Her impersonation was certainly an excellent piece of acting. Misses Campbell and Young both deserve special mention. Altogether, Won at Last is very well worth seeing. For two weeks previous to the 10th of March, this theater will be closed to undergo a thorough renovation previous to re-opening with Her Majesty's Opera Troupe, the strongest and best selected perhaps ever in San Francisco.

Oakland Theatre.

The company here had another successful week with Deunmore's Reddy an idyl of the Sierras. With Alice Harrison as Reddy, and Charlotte Tittel as Kathleen O'Dwyer, it could scarcely be otherwise, for both are artists of great natural abilities. We feel much pride in the rapid and continued success of Miss Tittel. We made the first efforts to get her on the legitimate stage, being previously much impressed with her acting in Marble Heart with the amateurs in Sratoga Hall. Since then, about fifteen months, she has risen rapidly in her profession, and received the united endorsement of the press. Next week the residents of Oakland will have a great treat in the grand production of Under the Gas Light, for which the company will be enlarged and strengthened.

The Vienna Garden.

Although the retirement of the Ladies' Orchestra was much regretted on all sides, it does not appear to have had any perceptible influence on the audience, for the house every night is crowded as usual. This shows that the Vienna Garden is in itself a popular place with the masses. This week the Tyrolese Alpine singers have been the popular feature of the entertainment, with Miss Dittmar's cornet solo, the laughable comic pantomime by the Marvels of Paru, and last though not least, Miss Nelson and her trained pigeons. The latter lady is always well received. The orchestra also is very good. The programme in many respects is changed every night.

The Bush Street Theatre.

Fanchon, is having a successful run at this popular theatre. Miss Putnam, is repeatedly called before the curtain with much enthusiasm. Messrs. Gilmore, Devlin, and Glassford, Sr., also share the public approbation in a large measure. Considering the general excellence of the performance, it certainly ought to be well patronized.

"Brown's Bronchial Troches" are widely known as an admirable remedy for Bronchitis, Hoarseness, Coughs, Throat troubles. Sold only in boxes.

## STABLE AND PADDOCK.

### The Coming Horse.

The most intelligent of all farmers is the American. The European beef cattle and draft horses have taught him the benefits and the necessity of breeding for a definite purpose, and with intelligent and persistent efforts. The random, careless breeding of horses, from whatever stallion the cross-roads jockey may proffer, has proved a failure, and he is disgusted with the method and its results. He now demands a horse, for his own use and for sale, far different from the scrub, the trotter and the thoroughbred, and also from any horse usually imported.

When he sets himself to produce results in any direction, he beats the world. His farm implements and methods, his roaster and trotter, his wool, pork and beef, his corn and sugar, testify to his unrivaled skill and success. And now that he is setting himself resolutely to produce an all-purpose horse—a heavy farm horse, a quick draft, an American coach—he will succeed better than ever; for every effort will pay, every step will be a pleasing one. All his progress will be manifest, and visible, and useful to himself. If he raises a very fast trotter, he may not perceive the difference between 2:30 and 3:30. If a very heavy draft, the excess over 1,500 lbs. may be only an inconvenience to himself, while for selling it is worth a dollar a pound. But every approach towards the American coach and farm horse makes a horse more useful, more salable and more agreeable.

The horse for which there is a vacancy in all markets is the American roaster of 15½ hands and 1,100 pounds weight, with three inches more of height and three hundred pounds of weight added, without any loss of his present unrivaled excellencies. Already in every direction there are sires that are within one hundred pounds of this standard, and they are fast growing in popular esteem and patronage. And it is inevitable that, in the natural course of things, the active, heavy horse will ere long be developed and generally diffused.

To satisfy the demand, this horse must walk with the plow, or binder, or loaded wagon five miles an hour; must trot three hours together twice a day, with his own weight behind him, at ten miles an hour; and, as the most symmetrical form proves the strongest, he must have a form of perfect symmetry, and a step and carriage elastic, vigorous and graceful. To do his best he must be under perfect discipline and control, and have the highest culture, so that his intelligence, gentleness and docility must be conspicuous. Such a horse is needed not only on the farm—machine and wagon, but also on the hack, the coach, the express wagon, the single family carriage, the transfer wagon, the fire engine and the artillery-carriage and caisson; and is in increasing demand for stately carriages for our own and European cities. English buyers are coming regularly to our inland cities and paying high prices for roasters of over twelve hundred pounds; and New York and Chicago dealers are watching the breeding districts, and paying from \$600 to \$2,000 per span for horses for exportation; while the French government demands ten thousand foreign horses a year, has just found the way to our shores. But the horses needed are wanting in weight and in the perfect education essential for securing the highest prices.

Will such larger and more docile horses soon be secured in ample numbers? No doubt they speedily will. The demand at such prices will insure a supply. Already in many places the progress in this direction is satisfactory and firm, and a chief hindrance to it, the fattening of sires without exercise, is exciting the censure of all horsemen. Active sires of thirteen hundred weight are becoming numerous, and, with another rise and a multiplication of their progeny, there will naturally be an approach in size and number towards the supply of the demand.

Horses can be bred up or down in any direction, and they are now bred up. The weight of sires is becoming more and more a decisive object of attention; and little, light-boned animals are being thrown aside. Moreover, hundreds of coach-horses have recently been imported, and are being freely used all over the west, and are very profitable. It needs only that this movement in the right direction should become judicious, systematic and general to accomplish the object. To add two hundred pounds each to the weight of a million of horses in Illinois, without any lessening of other excellencies, would add fifty dollars each, or fifty million dollars in all, to their value. They would be far more useful and profitable for farming or other work, and would lessen the hours of toil for many workers. It is a consummation devoutly to be wished.

And it is worth asking, what can be done to secure the general breeding of larger and stronger roasters? Multitudes are now successfully at work. Other multitudes would gladly follow any successful leadership. How can past results be ascertained, made use of and multiplied, and future progress and full success be secured? There is an agency intended and precisely adapted to assist in such work, and which, with its two auxiliaries, the industrial press and the industrial college, can greatly hasten its accomplishment.

It is the industrial exhibition—the state, county or national fair. It is established for just such work. It has done a great deal of it. Forty years ago, when the Vermont Morgan had blossomed out anew into the Black Hawks, a state fair was held at Middlebury on purpose to test and advertise the stock. Fifteen years ago, when so great an event as the importation from Europe into Illinois of four draft-horses had occurred, it was largely through the fair that the work was so encouraged that now five hundred a year are imported into that state.

But at present the efforts at the fairs are directed to help sporting horses rather than workers. Tenfold more is offered in prizes for fast horses than for workers. The sporting horse is tested as to his speed, while the worker is only judged by his looks, and prizes are often given and withheld according, not to his value, but to his fatness and grooming. It is an unsatisfactory and unjust to judge workers without tests as it would be trotters. Some twenty years ago there was a thousand-dollar contest between two reapers at Rockford. One of the makers asked a farmer (under whose roof this is written), "Where is the best team for a big day's work?" "I do not know," was the reply, "but there is one that has been breaking prairie all summer. They are hard as bricks, and I know of nothing I would sooner trust." They cut twenty acres in ten hours and three minutes. The other contestant then offered to put up fifteen hundred dollars and try it over again with a change of teams. One of these horses, as he was, was perhaps unsurpassed as a draft-horse by anything in the state. But, "as he was," he would stand no chance in any show ring against the most worthless fating.

During a fair at Kansas City in 1877—as you recorded at the time—Goldsmith Maid, then at the height of her glory as queen of the trotting turf, was offered at auction on the streets of the city, and was bid in at \$30, no one caring to

bid so high as that on so poor a mare when \$30,000 would have been too little for her. The slowest large horse that ever trotted a heat, if fat and sleek, might have outsold her or taken a prize over her as a trotter, if there had been no tests of speed, and in any competition on mere looks, without tests, the Goldsmith Maid of any class are always liable to be overshadowed by lunkheads fattened for showing. Then if it is desirable to raise horses combining size with strength, speed and endurance, it is essential to have tests of capacity for the sires.

Let prizes be offered for strength and speed combined, as liberal as those now offered for speed alone, and we shall learn what horses are worthless and what are worth having and multiplying. Without tests, fatness is half the battle. It covers up faults and simulates excellencies. Only one man in a million can see through and beyond it. But it is a very great injury to a horse, and when tests are required it forbids success.

Let prizes be universally offered for entire horses weighing not less than 1,400 pounds, and drawing a wagon and load together weighing not less than a ton, for an hour's walk and for an hour's trot, and for ten miles, and the world will be surprised at the capacity and endurance of many horses that we now have. Others will be developed at once to constantly increasing capacity. Those proving the best will be bred to and multiplied to any extent desired.

A few years since it was not believed that any horse ever had or ever could trot a mile in three minutes. A thousand-dollar test was offered. One was found to do it. Other tests were made, and now every school district boasts a three-minute trotter. A handsome prize will bring out a loaded ten-mile-an-hour traveler, and a general test will multiply such animals as trotters have multiplied. This will give us just the stock that is desired. The undersized animals of such a stock, instead of being worthless rats, will furnish the best of horses for street cars and other light work. While the full-sized one, for all but the very heaviest work, will be as useful for draft as much larger horses.

Farmers are eager to raise such horses, but when they breed to a 1,400 pound horse, usually three hundred of that weight is fat. This makes the horse weak and impotent. The dam, being worked and vigorous, controls the product. The foal, puny and weak, fails of its natural development, and the results are often less desirable than in breeding from a smaller, healthy, muscular and vigorous sporting horse.

Give us tests which will compel stallions to break, harden and develop their large horses, as smaller ones are fitted for racing, and which will teach the farmer the differences in size, capacity, strength and endurance, between different horses and different families of horses, and it will be of immense benefit to all who raise horses, to all who use them, and to all affected by their use. It is just as absurd to judge work horses without tests at work as it would be to judge trotters and runners without tests of speed. If the occupants of any judges' stand at a trot or race should come down and examine the horses and assign the prizes according to their grooming, as is done with work horses, it would be exactly as reasonable and just as is the custom of judging work horses at fairs.

But let all the faire establish prizes for actual superiority at work of all the work horses on exhibition, and they will at once lift up the size, the strength, the health, the longevity, the intelligence and docility of all the work horses of the land. The faire will at once command the interest, respect and attendance of multitudes by whom they are now despised. And they will soon give the American coach horse the first place in all the markets, and in the admiration of all nations.—*Rapier, in Breeders' Gazette.*

### "Raising Young Mules."

While the rearing of mules is not yet a very large interest in California, quite a number of our readers are engaged, and to them the following article, written by N. J. Shepherd, of Milton county, Mo., for the *Prairie Farmer*, will be welcome reading:

Where land is not too high, and pasturage good as well as cheap, keeping good mares from which young mules can be raised is certainly a profitable business, especially so where corn and hay are grown on the farm, and the mares can be profitably worked at least part of the year.

With a liberal supply of corn fodder for winter feeding, and a good pasture, with hay and corn during the coldest weather, and when at work, this branch of farming is not only easy, but certain and profitable. A mare in good condition, not counting pasturage, can be kept for eight dollars a year. Service of jack here is generally six dollars, making keeping of mare and service cost fourteen. There has been no time since I came to this part of the state when a mule colt would not bring all the way from twenty-five to fifty dollars, depending of course, upon the size, form and general condition at weaning time. Allowing nothing for the work the mare would be able to do, which certainly ought to be sufficient to pay for her keep, there is left a good margin for profit. Or if we count the interest on the money invested in the mare, still we have a good profit left. The difference paid for young mules shows two facts, first, the importance of a good sire, or jack, and the other of a well-formed mare. It certainly costs us more money to keep a well-formed animal than it does to keep a poor one. Of course, at the start one may require a somewhat larger outlay of money, and in this way, if we count the interest on the money invested, cause young mules to cost a trifle more than if cheaper animals were used. But this is more than compensated for by the larger price the colt will bring.

The difference between a mare that will bring a mule that only sells for the lowest price here at weaning time, twenty-five dollars, and one that brings a mule that will sell for fifty, the highest generally obtained, would make quite an item in the amount of profit to be derived from her keep, and especially where the same animals are kept quite a number of years for this purpose, as is often the case.

And this is not all; the mule will himself pay handsomely for keeping. Mules a year old, that are broken to the halter so that they can be led, bring from eighty to one hundred dollars. When two years old, and broken to the wagon as well as saddle, one hundred to one hundred and twenty-five dollars is the general price. Of course, a pair of well-matched mules, well broken to harness, at three or four years, will sell all the way from three to five hundred dollars, depending upon their color, form, size, etc. And this difference is, in nearly all cases, the result of the difference between good and poor jacks, as well as good and poor mares. One other point must always be taken into account in this work, and that is in having mares that are sure breeders.

I find that those who have made most money out of this line of farming or stock raising are those who, when they have secured a valuable brood-mare that is sure of bringing a first-class mule colt, they not only keep her, but they take good care of her, and in this way they secure the very best results and realize the largest profits.

Where proper care is taken not to overwork or strain them, mares can always be profitably worked in planting and cultivating the corn crop, as well as cribbing it in the fall; fully enough work can be done to pay for what they eat and the pasturage; so that the cost of service and interest on the money invested is what the mule costs at weaning time. After that time, of course, they cost something more, as weaning time generally comes in the fall at about the time that pastures fail, and corn fodder, wheat, straw and hay, with a small amount of grain during the winter, must be fed to keep the colt growing in good condition. Many farmers who do not care to go to the trouble of breaking young mules, dispose of them at weaning time; while others find it profitable to buy these up at whatever prices they are obtainable, and keep until they are two or three years old; during this time they are broken to lead, to ride and to work.

To be sure, there is some risk connected with this, but on the whole it is considered very remunerative—so much so that many young men who manage to get enough cash ahead will buy one or two mule colts in the fall at weaning time, and keep them until well broken in, and they sell at a profit, and in this way make a good start for themselves. As compared with other branches of stock-raising, there is less risk in this than in almost any other branch of farm stock.

### Stock in Madeline.

A *Gazette* reporter interviewed D. G. Moulton, of Madeline Plaine as he passed through Reno a day or two since on his way to Sacramento. Mr. Moulton is raising horses quite extensively and as he is well posted on all the northern country he made a good subject. He is raising the grade of his band of 400 horses by keeping two good Norman stallions. He also has a fine road stallion with a record of 2:28 as a four-year-old. He calls him John Mackey, in honor of J. B. Haggins' race-horse man who raised him.

Joe Evans has between 400 and 500 horses which he is mixing with Norman and Blackbird blood. He has a thousand head of cattle also. Van Loan also has 400 head of horses that are part Norman. Barney Clow, of Reno has cattle and 2,000 head of horses on Madeline. Jacob McKisick has lots of cattle and 12,000 sheep. Frank Horn has 1,000 cattle and Nelson 2,000. G. W. Bailey ranges on Madeline in Summer. The Kramer Brothers, of Horse Lake 10 miles from Madeline, have probably 2,000 cattle and operate largely in horses. They now have about 400 head of graded Normans.

Ringbone in colts, says an exchange, comes from permitting the colt to stand on a wooden concrete, brick, stone or other hard floor any time before attaining about eighteen months' age. Previous to this they should be kept on pasture of a dry soil during the summer, and if etched in the winter, the floor should be dry, loose earth. If the soil here is clayey, then it ought to be covered several inches deep with sand, tan-bark, sawdust or straw, or coarse hay, the two latter being cut up short in the straw cutter. If this is not done, the straw or hay gets piled up in heaps on some parts of the floor, and in others it is left bare, rendering it so uneven as to be uncomfortable and dangerous for the colts to stand on. If suffered to run out in a yard with open sheds, the soil should be loose and dry, and free from stones or coarse gravel. Thus treated, colts are pretty certain to grow up with well-shaped, sound, tough hoofs, pasterns, ankles and legs.

Vicious and unpleasant habits are often acquired by horses through the treatment they receive from those who handle them. The disposition of a horse is easily changed, either for better or for worse, hence the necessity of an effort to direct them in the right way. As the value of a horse materially depends on his disposition, it is of importance from a financial standpoint, and well worth considering.

### OUR NEW YORK LETTER.

#### Racing at New Orleans—Betting on the Spring Stakes—Californians Entered East—Stakes for Monmouth Park, etc.

Since my last letter the winter race meeting at New Orleans has assumed a more cheerful aspect, and the unprecedented Arctic season of wintry frosts and rains that has prevailed all through the south so far this year, has given place to sunnier skies and balmy winds, giving the turf public of the Crescent City a chance to see something else besides a track ankle deep in frozen slush. This has been the case all through the meeting thus far, until the last two or three days, when good racing has taken place over an improving track. On Saturday the 2d, the first day to show this much-to-be-desired improvement, the races were won by Foster, five years, by Foster, out of Minnie T. Morgan; C. H. Harrison, late Turfman, aged, by Chillicothe, and Brunswick, six years, by Barney Williams. The first-named, a son of the winner of the great \$30,000 purse at your Bay District Course, in 1876, has been on the turf four years, won second many times, won a heat, yet until the present occasion he was never bracketed a winner. Out of the dam of the noted racer Gen. Mourou, Foster has thus far failed to do credit to his relationship, only ceasing to be a "maiden" by a nose the distance he won the race by. Brunswick's win was easily achieved, and as he had been beaten badly the previous day, some ugly rumors were stated about the party controlling the horse. The owner stated to several that on the night preceding the race he lost the horse's muzzle, got off in the stable, and he eat all the hay he could reach. This, with a good feed the next morning, virtually "stuffed" him, hence his defeat. A very flimsy excuse, for if the horse had been known to have eaten hay during the night no good feed should have been given him the next day. The affair is to be investigated, it is said, and if behooves the judges at New Orleans, or anywhere else, to promptly veto any rascality in whatever shape, only when it may come. The present boom in racing is a great one, and the public at large seem thoroughly enthused with a racing ardor, but a few scandals may dissipate this interest of the masses just as quickly as it has come. The remedy lies with the judges and the associations. Let them look well to these matters before it is too late. On Tuesday of this week the track at the Crescent city had got to be really fast, and three interesting races were run, the winners being Carter H. Harrison, Manitoba, three years by Gleulyon, and Mareh Redon (late, the Julietta colt) five years, by Stonehenge out of Julietta. Two years ago, this horse was one of the most promising three-year-olds we had. Bred by Mr. D. D. Withers, of Brookdale, New Jersey, he was one of the prominent contestants in the great Spring Stakes of 1882, running second to Forester in the Withers', to Rinnymede in the Tidal at Sheephead Bay, and beating Barrett in a sensational race at the same place. Last year he did not come to

a race, and his leg being slightly bowed Mr. Withers sold him to G. S. Caldwell last summer for \$550. His new owner took him to Brighton and from thence to New Orleans where he won a good race as above. He carried 105 pounds, and beat Centennial, Boz Sedam, Princess, Foster and three others a mile in 1:47, a good race for the track. He was a strong "tip" in this city on Tuesday, and the New York hook-makers were pretty hard hit by several speculators. To-day (Thursday) Princess, four years, by Princeton, won a race of a mile and half a furlong in 1:53, and Manitoba a mile in 1:48. The latter colt has been well wound up by that shrewd trainer Green Morris. Last fall at Sheephead he ran like a dufer, and his breeder, Pierre Lorillard, sold him to the Missouri turfman cheap, who took him west where he won once or twice, and this year so far he has run nearly every day of the meeting winning four good races. Morris' other horses, however, are some of them not doing so well, and he has turned out Apollo and Mediator, while Slocum has not yet started.

Betting in this city on the stakes to be run this spring is assuming quite a lively aspect. Bob Miles, Powhatan, Buchanan and Louisville have been well backed for the Kentucky Derby, Eole and Monitor for the Cup races, Burton, Reveller, Himalaya and Leo for the Withers' and Belmont Stakes at Jerome, and John Davis, Lida Stanhope, etc., for the Louisville Cup. Much interest attaches to the expected debut East this season of your California contingent of race-horses from Palo Alto, Santa Anita, Rancho del Paso, Winters, Sacramento, etc. The ninety-six entries made at Chicago show that your horses mean business this summer, and their arrival this side of the Rockies will be looked for with great interest. They should more than hold their own, judged by their record on your coast during 1883. The Monmouth Park Association has opened a long list of rich stakes for their summer meetings at Long Branch during July and August. Twenty-three days racing will be run, and the average money added each day will be \$5,000. During the two months \$115,000 will be given in stakes and purses, a large amount even in these days of liberality. Their stakes close March 1st, and California turfmen will find the lists in full in the BREEDER AND SPORTSMAN of February 23d. Entries to be addressed to J. H. Coster, Secretary, corner 27th street and Madison avenue, New York city.

PACIFIC.

N. Y., Feb. 7th, 1884.

## HERD AND SWINE.

### The Standard of Capacity.

The dairyman who buys a bull for the improvement of his herd, and expects his reward in the increased amount of butter to be sold, naturally looks at the breeding subject in a different way from a breeder who is trying to fix a special blood value in the animals which he produces. The aim of the breeder is ultimately to supply the wants of the dairyman, but in producing the desired material he works with a view of arriving at some future time at a higher average standard of butter quality than he can at present supply. The dairyman wants butter immediately. He cannot wait for the improved butter stock of the future. He will doubtless take that when it comes along if he is still in the business, but for the present he must take what is at hand. He visits a breeder and inquires into the characteristics of the butter families of the herd. He finds the breeder has two kinds of stock. One bull is shown whose daughters are of such uniform good quality that the poorest give 12 pounds a week on second calf, and though none have ever exceeded 17 pounds, and rarely any have reached 16 pounds, the average is so good that the bull may be relied on with great certainty to impart an average of 14 pounds a week to his daughters, and he finds that they hold out well through their milking period. On investigation the dairyman learns that the family from which this bull comes has produced a liberal number of cows capable of making 14 pounds, and some have gone as high as 18 pounds a week, which appears to be about the summit of the family capacity. The breeder has another bull that breeds less evenly. Of a like number tested, one of his daughters has made as high as 24 pounds in a week, but some of them are not above mediocrity, and while a few show unusual capacity, their average butter quality seems to be no higher than that of the first bull.

On investigation the dairyman finds that this bull is a grandson of a very remarkable butter cow, and that the strains of blood which he derives have occasionally, but only at intervals, produced other very remarkable butter cows, which not only made great yields under flush tests of a week, but evinced great rating capacity in trials for a longer period. The thought passes through the mind of the dairyman that if he could get a bull that would breed proportionately as near the highest capacity of the second bull, with as much uniformity as the first bull approximated his highest capacity, he would command a very potent means of improving his herd. But the breeder tells him that is the thing he must of necessity wait for, and that the best bull for his use at present is the one which breeds uniformly well. If the dairyman obtains a given product per year from his herd, it matters not to him whether each cow gives an equal share, or some of them more and others less, the total amount being the same in either case. His income depends upon the total amount of butter produced. It is just as well for him to have three cows, each of which gives him 300 pounds per annum as to have one which gives 500 pounds, and two others that give but 200 pounds each. Whether he obtains his herd by purchase or by breeding, he will find it easier to secure three 300-pound yielders than the one 500-pound yielder, which brings up his average in the last-mentioned case. The reason why this is so is that in whatever the department of breeding the more extreme the capacity required the more uncertain are the chances of reaching the standard. Both the bulls above instanced imparted a 14-pound average to their daughters. The first bull accomplished it without any very extreme result in any one case. The second bull reached his average by the aid of one very extreme case and some others quite unusual, while many of his get were not superior. If the dairyman investigates and finds as the average of general experience that more than two hundred cows have given 14 pounds of butter a week to one that has given 24 pounds a week, and that only fifty cows have given only 14 pounds a week to one that has given 17 pounds, he will readily see that as far as he has to rely on the blood of his foundation herd, his chances are four times as good with a bull that imparted a 14-pounds average without in any one instance needing to go above 17 pounds, than in breeding to a bull that required a 24-pounds cow among a like number of his progeny to make a 14-pounds average. Experience has shown the two bulls to have been even in average results in the breeder's herd, but if the experiment is to be repeated on an ordinary dairy herd which is to supply half the blood to the improved herd, we must consult average experience outside of special blood influences, and these teach

that the less extreme the requirement the more easily it is approximated. The first bull never exceeded a 17-pound cow, but in other instances approximated it closely. The second bull never but once reached a 24-pound daughter, nor closely approximated it. Until he has shown another it is impossible to judge what percentage of 24-pound cows it is possible for him to reach, or how much was due to fortuitous circumstances apart from his average blood power for the one 24-pound cow that was essential to his average. On general breeding experience it is safe to assume that the first bull will again produce a 17-pound cow, in a less number of opportunities than the second will require to produce another 24-pound cow, and hence he is safer for the dairyman to rely upon than the first.

But to the breeder the case has a different bearing. It is his mission to provide the dairyman with the best possible seed stock to-day, but not only that. He must, if possible, improve his thoroughbred herd so that a few years hence he can give him blood that will impart just as uniform improvement as he can offer to-day, but in addition thereto a higher degree of improvement. If we have already produced bulls that are so prepotent in butter quality that they can on good dairy herds impart to their daughters an average flush yield of 13 pounds or 14 pounds of butter a week at their prime; nor long hence we will have those that can impart fifteen and non sixteen pounds. Twenty years ago breeders of trotting horses found it difficult to breed any considerable percentage of trotters that at five years old could trot in three minutes. To-day the same breeders can count upon a larger percentage to trot in 2:40. They did not secure this improvement by selecting stock because it would most uniformly produce three-minute horses. But they sought that stock which produced the fastest trotters in the country, and bred from its best specimens. Instead of taking a three-minute standard, they took a 2:30 standard, with a partiality to that blood which reached the fastest end of the list. Other things being equal a sire with only two representatives in the 2:30 list, one of which had beaten 2:20 was preferred to another sire, perhaps of similar blood strains with six representatives in the 2:30 list, all of which were at the easy end. Capacity was made a leading feature, and became so inherent in breeding exclusively among prepotent individuals, that in time we find it quite uniformly imparted up to a certain degree.

The reason why some butter bulls that never produced better than a 17-pound cow give as good an average impress as another bull that may have produced a 24-pound cow is, that while some portion of the hull's inheritance is better than any of that possessed by the first, the prevailing average is no better. But if we take the superior individuals got by the best hull, and unite them with other animals of like very extreme capacity, we soon create pedigrees of which the near portions (which in the long run are the prevailing portions) are of great average capacity. Thus tendency to butter giving, as well as capacity for the same, becomes an attribute of the blood, and not only do the very great individuals appear oftener in the strain, but aside from that the tendency is still toward a large percentage of animals of any given grade of capacity less than the most extreme, and yet indicative of superiority. Capacity nourishes tendency, as want of it dwarfs it.—Hark Constock, in Country Gentleman.

### The Creamery System.

The rapidity of the development of the American associated dairying system is one of the many marvels found in the growth of our agriculture. In many of its features this system is peculiarly American. Twenty years ago the cheese factory plan was only beginning to attract attention, and was not introduced into the west. Ten years ago butter factories were little known. Five years ago little was thought of the most recent plan, that of collecting the cream for butter making in a central establishment, leaving the milk to be fed on the farms. While it has attracted less attention, the growth of this gathered-cream system has been, perhaps, as remarkable and as rapid in the west as was that of the cheese-factory system. It has been estimated that there are now sixteen hundred creameries in the west, at least six hundred in Iowa alone, and the number is steadily increasing.

The system is not an ideally perfect one. Objections can be found to it. There are localities for which other plans are better. But it has many advantages. It tends to develop interest in the dairy, and in the rearing of calves in regions which would not sustain a cheese or butter factory to which milk must be carried, and which can not engage in milk selling for city consumption. Except home butter making, no other system is so well adapted for allowing the sweet skim milk to be used for rearing calves, a better use, as we think, than making cheese of it.

Cream can be collected from farms twelve or fifteen miles from the creamery, or much greater distance, if brought by rail. It is shown it can be carried such distance with little or no perceptible injury. The farmer with only a few cows can sell his cream, avoiding both the labor necessary to make it into butter and the loss of time incident to delivery of small quantities of milk to a factory. The cream, being skimmed and carried by representatives of the manufacturers, gives daily opportunity for noticing the care or cleanliness of the farmer, or the opposite qualities. Only a low-priced and a simple outfit is necessary for the farmer, and the factory buildings and fixtures need not be so costly as when the milk must be handled.

There is no place so good for the manufacture of the very best butter as the farm, or the village or town home where the milk is produced. The owner of one cow may be able to make as good butter as any one in the world. He does not have some difficulties to contend with which meet the operator in a large factory, using the milk and cream from many herds. It is the truth, however, that factory or creamery butter ranks much higher than farm dairy butter, that much less of it is of poor quality, while most of it is good. There is no probability that skillful butter-makers at home will find their occupation gone. In many cases they would be unwise to make a change from their present system.

We give a hearty endorsement to the creamery or factory system, for many regions in which dairying has now hardly a place, and where what is done in it is done at great disadvantage and little or no profit.—Breeders' Gazette.

Whatever tends to promote the comfort of the cow tends to increase her yield of milk and to improve its quality. The first consideration, says Henry Stewart, for the farmer should be to make his animals comfortable. As he knows how grateful on a cold morning a cup of hot coffee is to him, let him provide a warm bran slop for his cows, and follow it up with a generous feed of cut hay and meal. The result will be seen in the full milk pail and the thick cream from the cows and the continuous and healthful growth of the calves. This comfortable lodgings and generous feeding is the key to successful winter dairying, and when butter is 35 or 40 cents a pound it will pay to give cows the best of care.

Dr. Reynolds reminds dairymen that increased attention needs to be given by cheese makers to this matter of curing cheese. Cheese factories should be provided with suitable curing rooms, where a uniform temperature of the required degree can be maintained together with a suitable degree of moisture and sufficient supply of fresh air. He thinks the expense of providing such a room would be more than compensated for in the increased value of the cheese. He thinks small makers could supply a room approximating these conditions, while such rooms are absolutely needed in order to enable our cheese makers to produce a really fine article. He lays great stress upon good ventilation to such a room.

The latest novelty in cream-raising is to have a large pan nine to twelve inches deep; cover the bottom with solid blocks of ice held down with galvanized iron rods; pour the milk directly on the ice, and the cream will rise in a very short time. This plan will, it is claimed, give more cream than any other system, leaving the milk sweet if not to be made into cheese at once; the morning's milk can be made into cheese the same day. Mr. Kellogg, the inventor, claims that he can raise all the cream in forty minutes by his plan.

About 130 tons of alfalfa seed have been shipped from Bakersfield to various points this season, some of it to the eastern states where experiments in the cultivation of this forage plant are to be tried. About 100 tons are said to have been raised on Mr. Haggin's farms in that vicinity the past season. This is now being rapidly sown, and all of it will go into the ground within the next two months.

Prof. E. W. Stewart speaks of the cow as "the most remarkable producer among animals." She gives, at her best, nearly seven times her own weight per annum in milk, of food value twice as great as the beef creature of equal size gains during the same time.

A dairyman at Point Reyes feeds beets, hay and bran with some oil-cake meal, and claims to be making an average of a pound of butter a day for every cow in his herd.

### Playing Circus.

It is nearly certain that after the periodical visits of a circus to a country town, that for weeks after the boys will be busily engaged in imitating the antics of clown and rider. The following account, however, is the first time we remember of reading of an amateur rendition of the acts de sawdust, and unless the correspondent of the N. Y. Evening Telegram used a rosy-colored brush to linn the scenes, the amateurs could obtain first-class engagements without trouble. Heretofore the stage has given the cue for imitation, now there are likely to be a copying of Dan Rice's and Jim Robinson's of the bluest blood, and ringmasters with pedigrees as long as a Knight of the Garter:

PAR, France, Jan. 24th.—The amateur circus performance, which was postponed owing to a slight accident to Mr. Torrence, took place finally last night. It was an immense success. All the seats in the entire house had been secured for more than a month in advance. The chaste *outrages* of the Theatre des Varieties, where this unique representation was given, might have said with Johanna of Orleans, "Wie kommt soicher Glanz in meine Hütte?" Indeed, such a brilliant and fashionable gathering has rarely been seen before in Pau, even in the palmiest days of Italian opera at the Grand Theatre.

The performance commenced with *exercices de voltige* by Mr. William K. Thorn, Jr., of New York. He fairly took the house by storm by his grace, agility and daring. Messrs. Dresden and De Cuadra, magnificently gotten up as clowns, followed with an amusing comic scene. The next number was the poodle "Black" introduced by his owner, Mr. Cruger. "Black" wore around his neck the gold medal awarded to him last summer for his gallantry in rescuing a drowning man at Biarritz. He is the same poodle that used to astonish the *habitués* of Biarritz by jumping into the sea after his master's stick from a height of forty yards. Beside an infinity of amusing tricks, "Black" performed on horseback, jumping through hoops and over flags in the most improved style familiar to circus-goers.

Baron d'Este presented a diminutive white pony, beautifully trained, and Mr. Foster then astonished every one by the extraordinary manner in which he handled his tandem in the ring, turning them about so as to design all sorts of figures.

The first part terminated with the *grande scene equestre*, executed by Mr. Alfred Torrance, of New York, who, without exaggeration, was simply marvellous. It seems impossible to conceive how this gentleman has been able, in so short a time, to learn to stand on his horse, dance, strike attitude in such a graceful and easy manner. The applause was most enthusiastic and the bravos almost deafening as he came forward to accept the crown offered him by the Societe d'Encouragement.

Count Fritz Metternich was extremely elegant and much admired as he executed the *haute école* on a handsome black horse.

Immediately after Count Metternich, a large, handsome girl bounded into the ring, dressed in a superb corsage of blue satin and a muslin skirt of the same color. She was assisted on to her horse by the ringmaster and went through a variety of exercises standing and dancing on the bare back. The applause was delirious. All the men turned their longnettes upon the belle *ecuyere*, who, however, did not seem to respond to the anorous glances of her admirers. She was laden with bouquets and it was only when she advanced to make her bow that it was discovered that a thick coating of *poudre de riz* only imperfectly concealed a slight blonde mustache, which betrayed M. de Cuadra, the ingenious author of this amusing joke, which was decided the hit of the evening.

Captain Lafoucaud was great as a Hercules in a flesh-colored *maillot*, his arms bare and his haunches covered with the traditional tiger's skin. The "capitaine" performed really extraordinary feats of strength with heavy weights, while "Punch" Russell amused the audience by imitating him in an irresistibly comic manner with some enormous dumb-belle made of cardboard.

Baron d'Este, the ring master, closed the entertainment by presenting *en liberté*, a fine thoroughbred. The Baron handled his *chambrière* with the ease and grace of a Loyal or a Renz. Messrs. Dresden, Russell and Hutton as clowns were most amusing in the *intermèdes*.

The receipts of this performance, destined never to be forgotten in the annals of Pau, were enormous. They were handed over to a town charity.

THE  
**Breeder and Sportsman.**

PUBLISHED WEEKLY BY THE  
BREEDER AND SPORTSMAN PUBLISHING CO.

THE TURF AND SPORTING AUTHORITY OF THE  
PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET  
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

JOSEPH CAIRN SIMPSON, - - - EDITOR

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 29 and 31 Chatham street, is daily M. W. Hicks, special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,093 J street.

ADVERTISING RATES.

Displayed, \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in briefer type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent will be allowed on 3 months, 20 per cent on 6 months and 30 per cent on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 50 cents each insertion.

Stallions Advertisèd—Thoroughbreds and Trotters "Back Home."

Heretofore we have confined our notices of stallions advertised to those which are to make the season on this coast, the cause being that the season commences so much earlier here than it does on the other side of the mountains. While it is unlikely that any mares will be sent from here, it does not follow that these far-away representatives of the best families do not interest our readers. In the first place the *Breeder and Sportsman* is widely disseminated, and though, of course, the bulk of the circulation is on this coast, there are many subscribers in the eastern states, and the list is constantly increasing. Then there are quite a number of mares owned here which will remain in the East until they are served, and consequently, information will be acceptable to their owners. There is an advantage in a variety of strains that people are prone to overlook. Carried away by the glamour of successful nicks, there is a propensity to ignore other blood until it asserts itself too emphatically to be kept longer in the dark. The fashionable strains of to-day sink into inferior places when other seasons come, and that from the rage to follow in one course. The true plan for breeders, who have establishments large enough to give the opportunity, to secure a variety of the best, and then by suitable selections so conjoin them as to bring about the desired result. This is the superlative charm of breeding, the scope it affords for the exercise of the judgment and the gratification of the fancy, are the magnets which make it so fascinating. With one stallion, and mares of nearly the same blood, the breeder is forced to keep one path. With one sire and a chance to select fitting mates, there is an opportunity to commence right, and a reasonable expectation of success can be indulged.

Commencing with the thoroughbred stallions, those which are located at Belle Meade are certainly worthy

of a high place. Two of them are already noted through the performances of their get, all of them are of breeding that must please the most exacting. Enquirer deservedly stands at the head of the list. This famous son of imported Leamington and the Lexington mare Lida, is without doubt entitled to rank with the best of any country. He was a fine race-horse, and the sire of one, at least, that, in our opinion, was the equal of any that ever carried jockey to victory. This was McWhirter, and, though others give preference to Falsetto as the best son of Enquirer, the former is our choice. A horse of wonderful speed, game that impelled him forward when the shattered bone was tearing through the tissues, and endurance to carry him any distance. As he was a son of a Bonnie Scotland mare, in signifying our admiration, it may be said that favoritism for the old hero may cause us to look at the grandson with partiality. Any one who will take the trouble to refer to Krik's Guide of the years when he was running, cannot fail to acknowledge that the liking is well grounded. General Harding and his son-in-law, General W. H. Jackson, who has had the active management of Belle Meade for many years, were not likely to be influenced with undue partiality, and the selection of Enquirer was probably owing to the fact that from him and a Bonnie Scotland mare came McWhirter, and that with so many dams of that strain to couple with him there would be a succession. We trust that at the coming sale of yearlings "our folks" will secure several of this combination of blood, feeling so confident that it will prove as valuable here as it has in the East. There cannot be more fashionable blood than that which comes through the veins of imported Great Tom, a brother to the Derby winner, Kingcraft, and every one of the near crosses of the approved sort. A massive horse, and his stalwart proportions without the coarseness which oftentimes accompanies great size.

Then he was a good performer, having won the St. James Palace Stakes at Ascot, the Doncaster Stakes at Doncaster, and in nine races in his three-year-old form was only "unplaced" in two. There is scarcely a question that he will take a prominent place among the "winning sires," as his colts start out well. This is further guaranteed, as the sons of his sire, King Tom, are proving more than successful, and not a single one of the offspring of that favorite of "the Barons" can show a superior pedigree, and few can equal it. It may appear singular to some that two of the sons of Bonnie Scotland should have been selected for service at Belle Meade. That it was a judicious move to add Luke Blackburn after Bramble had been secured we think will be proved beyond cavil when years enough elapse to bring their progeny on the turf. Which will have the best of the contest no one can foretell. The dams of each are so richly bred that they stand alike on that score. Luke Blackburn may be rated the best race-horse, and yet it is hard to award a preference on that account, as Bramble won fifteen races in twenty starts, when four years old; at five won the Centennial Stakes at Nashville, one and one-eighth miles in 1:58; and the last race he ran, when six years old, won the first heat of a race at Baltimore in 1:44½, which is a remarkable performance for that course. His racing career was certainly brilliant enough to be a good augury for his colts, and from a private letter from a friend who has examined the Bramble yearlings we learn that he considers them the "highest-formed" lot he ever saw. As he is familiar with the stock of all the eastern stud-farms, and a competent judge, the encomiums are doubtless well deserved. As there are thirteen Brambles in the sale catalogue of Belle Meade, there are sufficient members to predicate an opinion upon. It would be supererogatory to write much in relation to the racing career of Luke Blackburn. In his three-year-old form he met with a success that may aptly be termed phenomenal. He ran twenty-four races, losing two, one of these when sick; in the other he fell down. He was an every-day race-horse, and of all the great race-horses the Messrs. Dwyer have owned and run, he is probably entitled to be placed first. This quartet of sires is certainly a grand showing for one stud-farm, and places Belle Meade in a position to compete successfully with all the others.

Among the "Wren's Nest" stallions is the thoroughbred Dan Sparling, by Glenelg, his dam Item, by Lexington. A fine and fashionably bred stallion, and a race-horse to boot, but inasmuch as he is a stable companion of Sam Purdy, about whom we will have a good deal to say, the notice of Dan must be brief.

When Fairlawn is given the first place of all the trotting stud-farms of the East, there will be few to take exceptions to the prominence awarded. This has been gained by actual worth on the part of the stock, and honest straightforward dealing on the part of the proprietor General Withers. In forwarding his individual interests he has been of immense service to others engaged in the business, by introducing the "American trotter" in countries before unknown, and by rescuing the pursuit of breeding and rearing harness horse

from the approbrium which encircled it. Before his time there were many gentlemen engaged in the business equally as honest, just as straightforward, but they lacked the tact to bring it before the people so emphatically as General Withers has done. It is safe to say that while opening markets for horses of his own breeding he has incidentally aided the breeders of Kentucky to a far greater extent than they imagine. Visits have not been restricted to Fairlawn, and hundreds who were induced to make the trip by the renown of that place have extended the journey to every breeding farm in the section.

Six stallions domiciled at Fairlawn are advertised in the *Breeder and Sportsman*. Almont, Happy Medium, Aberdeen, Alecto, Starmont and Ethan Allen, Jr., the latter being a "private stallion." The trio named on the list stand higher than any three in any state when the measure is taken by the number of the get which have trotted in 2:30 or better. In fact, with one exception, we cannot recall three living stallions which make so good a showing. Almont has twenty-four representatives ranging from 2:15½ to 2:30. Happy Medium has eighteen. Aberdeen has ten with the same range as Almont. The exception noted to the trio are widely separated. Daniel Lambert in Massachusetts, Volunteer in New York, and Mambrino Patchen in Kentucky. The youngest of these is older than the eldest of the Fairlawn string, Volunteer and Daniel Lambert being eight and ten years respectively older than Almont, and, of course, that much longer in the stud. The great success of Almont has been ascribed to the high quality of the mares that he has been favored with. So much the better for those who purchase of General Withers. Fairlawn with its corp of tried stallions would have been in comparative obscurity if the mares had not been selected with the judgment displayed by the discriminating proprietor, and the stallions that have been bred there would not have been worth a tenth part of the purchaser's money had their claims rested on only one side. Kentucky owes the high position it occupies as the great breeding country for trotters to the mares which were coupled with trotting stallions and the selection of the best of them, and the best from other sections has been one of the most important features in the management of Fairlawn.

"Wren's Nest" appears rather a singular name for a breeding farm, and without explanation would suggest a "tasty" cottage embowered among trees and vines, and nestling in a glen where the rays of the morning sun set a million dewdrops sparkling, and a thousand birds singing. But when Californians see the name of Sam Purdy attached to the place, there will be no further need of informing them that one of the important requisites is on hand. A great horse truly, and when "put up" at auction on California street, his greatness was fully acknowledged as the bidding showed. A friend of ours was authorized to bid \$15,000, and as his fancies ran more to race-horses, he told his principal that was an extravagant sum to pay if even it was for the greatest trotter in the world. "Never mind," was the response, "If you are lucky enough to get him for that I'll be well pleased." The start was made at \$10,000 and our friend thinking that a "big bluff" was the way to play his hand, went to the "limit" the first move. It did not rest twenty seconds and in less than a minute \$20,000 was the offer. That was not the end. Considerably over that amount in gold, when the metal was at quite a premium, and Sam Purdy was struck off for a larger sum than has ever been paid for a trotter at an auction sale. Rather sluggish in his disposition, and the obstinacy heightened by severe treatment, he did not show the capacity he possessed and even his record of 2:20½ and trial heats of two miles in 4:45½, 4:46, no measure of his powers. His stud services in California were limited. All of his get that we are acquainted with are two colts bred by Mr. Cushing, and a mare which was in training on the Oakland track last summer. She is a fine-looking chestnut with the high finish of a thoroughbred, and with very little handling trotted a mile in 2:28, and quarters at a much faster rate. On the "old Virginia" blood Sam is sure to leave many such, and though his dam was by the thoroughbred horse Illinois Medoc, the mare mentioned is from a daughter of Woodburn, by Lexington, and her grandam claimed to be thoroughbred, there is no danger of getting too much of what has inaptly been termed "hot blood." The original meaning of the term has been perverted, so that in place of designating blood which ran warmly through the veins when there was stagnation in those which could not claim kindred with the notables of the turf, it has been twisted to carry the impression that thoroughbreds were "hot-headed," and unreliable when placed in harness. From nearly thirty years experience, we have learned that the thoroughbreds are the reverse, and of the many we have owned every one which was broken to harness has been more than ordinarily reliable.

In giving this much space to our far-away clients we are justified by the excellence of the animals, and the

account might be extended to a far greater length and then he far within the bounds. We take a great deal of pride in our list of sires at home and abroad, confident that there is not a journal on the continent which can show such an array.

### Belle Meade.

Who, that has the slightest acquaintance with the turf of America, is not familiar with Belle Meade? The great horses of the clan of Bonnie Scotland that have raced and gained distinction for themselves and their sire have made the name of this grand breeding farm a household word, and others are coming along to keep up the luster, so that there are good reasons to believe that there will be no diminution of the brightness for many years to come. In the first place, there is not a stud-farm outside of California, though the whole world be searched, that is better adapted for the rearing of thoroughbreds. We say outside of California, as the climatic advantages are so great that even the palm cannot be awarded where there is such a union of favorable requirements. There is no better blue-grass in Kentucky, and the pasture fields of Belle Meade are as perfect as can be. That the "raage" is of the first importance in the rearing of blood colts will be readily admitted, and in the first year of their life especially. In this few months the foundation is laid for future excellence or future inferiority, and strive as we may it is a difficult matter to overcome the back-sets which poor pasturage and want of attention entail. There is something, however, of prior importance, and which California, Tennessee or Kentucky, with all their wealth of resources, cannot make amends for when that is lacking. That chief desideratum is proper breeding. "Blood" is the foundation, and when with blood is united form, close relationship to celebrities and skillful selection of parents, then the superstructure being correctly reared, there is little chance for failure. Elsewhere we write of the Belle Meade stallions, and hereafter we will show that the matrons are just the sort to mate with the sires, with the best sort of ground to build high expectations upon. We sincerely hope that it will be some time yet before Californians give up the purchase of yearlings at the annual sales. In this way there is a chance to obtain the best at a fair figure, and not only that, as this plan secures mares which can be transferred to the stud when young. It is generally conceded that long periods of training and running in races is inimical to the perfection of what may be termed the procreative qualities, and the most noted dams in the Stud Book sustain the belief. Then a young mare has a number of years to add to her progeny, and when she has proved herself to be of the right stamp, these additional years mean additional recompense to her owner. The mares in the Santa Anita Stud could not have been bought at a mature age, for ten times as much money as they cost when yearlings and three times as much if the delay had been a year older.

The Belle Meade sale of yearlings for 1884 is to be held the 30th of April, and though that is some time off it gives intending purchasers an opportunity to become conversant with the stock offered.

### Judge Shafter's Racing Rules.

We have seen a proof sheet of the rules which have been submitted to the California State Agricultural Society for approval and adoption, and though partially acquainted with the intentions of the author, did not anticipate quite so much blundering as the "last effort" shows. Whenever changes have been made in existing rules, in lieu of improvement, there is retrogression, verbose, obscure, ungrammatical, couched in language which betrays a servile attempt to follow the style in vogue in law books before the era of printing, and yet these are minor faults when compared with the more weighty objections that are patent to any one at all conversant with racing affairs. Were it at all probable that this code stands a chance for adoption, there might be a necessity for specific charges. So palpable, however, are the vagaries, so emphatic the proof of a total lack of ability to legislate, that it will be a waste of space to occupy our columns in showing absurdities that are so apparent as not to mislead. There are some that are laughable. Making all due allowances for the hieroglyphics, which the judge uses for words, it is hardly possible that the printers can have made so many mistakes as are incorporated in 2 of Section 6. Rule 3, too, of the "racing rules," shows an attempt to sustain the decision in the May D. case, and we are informed by William Appleby that Judge Shafter at San Jose fair, offered Mr. Judson the same terms to compromise. The clause is as follows: "In all cases when the entrance is in the form of a stake, and money is added from any source, such race shall be deemed a purse race, with an inside stake, in which the winning horse shall receive the entire stake and the added money shall be divided, as in the case of other purses." We must apologize to the old-time

chroniclers of ancient edicts for comparing the "style" of this quotation, though there are worse examples, to that they used. As there appears to be something yet in the way of Mr. Judson obtaining a settlement of the May D. matter, and having the fullest belief that the obstacles are not the work of the Association, it may be that the president is awaiting the adoption of this rule by the State Society to claim that a race of last August was governed by it, and that the stake was a "purse race," notwithstanding the printed conditions to the contrary.

### Queries About Tips.

J. C. SIMPSON: *Dear Sir*—I have read carefully, and with much interest your different articles on the use of tips, and if I can get them, shall give them an extensive trial this coming season on my colts. I have used some of my own designing, but find great trouble in getting our smiths to either make or apply them.

If you succeed in producing a satisfactory tip from casting, could you supply me with a keg of them of different sizes? If you can do this I would like to have them as early as possible, and one of your books on the subject, also. Do you think that they would protect the horse's foot sufficiently to be driven over our rough turnpikes? Your advice on this point would be very great with me.

You have, no doubt, forgotten me, but I met you at the Oakland track in 1875 or '76, and it was a never ending source of instruction and pleasure to me to examine the many models of shoes, etc., that you then had in your workshop. It would be a great source of gratification to me to have your opinion on the questions asked above.

Yours, very respectfully, R. S. WITHERS.  
Lexington, Ky., Feb. 8th, 1884.

We have not the least hesitation in recommending tips to be used on the Kentucky "pikes." There is little difference between them and the Oakland streets that are much traveled, and San Pablo avenue is fully as rough as the macadamized roads of Kentucky. There is no more danger from broken stone when tips are used than with shoes, except that there is a larger surface exposed, and a sharp-pointed stone will pierce if it strikes the opening between the heels of the shoes. We have become satisfied that the malleable iron will be found suitable, and anomalous as it may appear will wear longer than steel. Just as soon as the brass models can be made will send our correspondent the number desired. In the meantime, Paul Freidhoffer will make specimens for those who have written for a pattern. We remember Mr. Withers very well when here, and the experiments alluded to were in relation to anti-concussion shoes which led soon after to the use of tips. From these experiments we learned the proper method of setting which did away with the objectionable features. That, and changes in the shape are all the novelties we claim to have originated, the plan of imbedding being by far the greatest improvement.

### The Stanford Stake.

Owing to careless reading of the "proof," the change from "\$300 each" to \$175 was not made in the advertisement, though the figures in the payments showed that it was an error. The stake is \$175 each, \$25 to accompany the nomination, \$50 on the first day of January next, and \$100 ten days before the time set for trotting the race. We sincerely hope to see a large number of nominations, as this stake is of so much consequence to the breeders of trotters in California that failure to receive the support it is entitled will have an injurious effect on their interests. As it originally stood, the objections advanced were that the first and second payments were too large. This cannot be urged now, as no one can find fault with investing \$25, that amount giving the whole season of the two-year-old form to form an estimate upon. Fifty dollars additional gives until ten days before the race, so that with the prospective number of nominations there will be a large sum to reward those who have the spirit to make the engagement, and fortunate enough to have a good colt. But there is an object in sustaining this stake beyond the amount of money to be won. The nominations in it are proof that the breeders of California have confidence that the stock they are rearing are worthy of being classed as trotters, and that the *flyers* are not restricted to two breeding farms. No argument is so convincing as that which comes from the evident sincerity of those who show their faith by work in accordance with the views promulgated, and the fact that the colts are worthy is proved by the owner testifying in the practical method of making entries.

### The Oakland Trotting Park.

The plan for the purchase of the Oakland Trotting Park alluded to last week, has not been definitely fixed yet, so that there necessarily is delay in giving it publicity. That it will be carried through we have not the least doubt, and in that case both sides of the bay can show as fine courses as there is in any country. One will aid the other and be of vast benefit to the horse interests of the whole coast.

### Dog Breeding.

EDITOR BREEDER AND SPORTSMAN:—Will you be kind enough to give me your opinion of the following remarks of Mr. Buckell, Mr. Lewellin's breeder of dogs, and a great English authority on such matters. Mr. Buckell says: "To control the influence of sire and dam, as well as back ancestry, is the very essence of correct breeding." I presume, that is a proposition self-evident. But he goes on to say, "My plan of breeding is that of controlling the influence of progenitors both near and remote." Will you please to tell me how he can "control the influence of progenitors both near and remote?" Mr. Buckell also uses the term "nicking," when he makes a successful cross in breeding dogs. Does not that imply accident, and show that the influence of the various progenitors are not under his control?

E. LEAVESLEY, Gilroy.

There is an evident absurdity in the above proposition quoted by Mr. Leavesley, as it is beyond human power to control the influence of sire and dam, though after the birth inherited tendencies may be modified by education. The aim of the breeder is to overcome the tendency in one parent by the selection of another, and to effect this it is highly necessary to know the peculiarities of "remote" ancestry to take the proper steps to guard against reversion to undesired qualities. Sire and dam are the potent influences which govern the progeny, though back of them are others which play an important part. It will be better to state that by proper selection the bad is avoided, the good intensified, and in this way the faults of remote ancestry can be corrected, the good rendered subservient. "Nick" was formerly used to express a good combination and when preceded by "happy" a very fortunate conjunction.

### Auction Sale of Horses.

Two weeks ago we published a list of horses owned by E. H. Miller, Jr., to be sold at public auction Wednesday next, at the San Francisco Horse Market, No. 35 New Montgomery Street, and in that were such full descriptions that it is unnecessary to repeat them. That the stock has merits which should attract the attention of purchasers is patent to all of those having the least acquaintance with the genealogy of trotters, and their form is in keeping with the pedigrees. The sire offered, Berlin, is valuable from every point of view. His sire with a record of 2:22, his dam a record of 2:36½, and well authenticated trial of 2:28. Berlin's record is 2:32½ with repeated trials under 2:30, and his son Thapsin is thought to be the equal of any colt in California, having shown 2:30 as a three-year-old, and with action that is faultless. The brood-mares and youngsters are of a quality that is rarely offered at an auction sale. Of St. Clair, Blackbird, Electioneer, Gen. Benton, General Taylor, and Vermont Black Hawk blood, a glance at the sale catalogue will convince any one that the pedigrees are of the right kind, and a careful inspection of the animals will show that there are other desirable characteristics. The owner parts with them solely on account of ill health and business cares, which require all his attention. The stock being now on exhibition at the place of sale, there is plenty of opportunity to examine before the auction takes place.

### The First of March.

A week from to-day the stakes and purses of the Spring Meeting of the Pacific Coast Blood-Horse Association closes, and though nominations and entries are eligible, if the letter containing them is plainly postmarked on the day of closing, it is better not to defer posting later than the day before. Post-office clerks may make mistakes, and the custom in some of our post-offices is to stamp the date that the letter is sent off, so that though deposited at the proper time it is not shown by the envelope. We have not the least hesitation in predicting that the Bay District Course will be in as good order when the meeting takes place as it is possible to make it. The fine soaking from the late rains ensures that the substratum will be in the proper shape, that the top will be kept so as to please the most fastidious trainer, is just as certain. There is scarcely a doubt that the Spring Meeting of 1884 will be one of the most brilliant ever held in this State.

### The Arno Auction Sale.

The auction sale of the stock of the Arno Breeding Farm has been fixed for the 11th of March, at the Oakland Trotting Park. The intelligence came too late for extended notice this week, and as a large number of valuable animals will be offered it will require a good deal of space for suitable comment.

Mr. Whalen, the owner of Carter H. Harrison, has challenged the owner of Kats Creel for a race between the two horses for \$500 a side, to be run on a fixed day, regardless of weather or condition of the track, at any of the following distances: Mile and a half on the flat at welter weights, mile and a half over six hurdles, or a steeple-chase over the short course.

Jumbo, by Happy Medium, five years old, is 15 hands three inches high.

## General Topics.

In all countries "the weather" is held to be an entertaining topic. It is certainly one in which all are interested, and even when a hundred or more similar remarks are heard in a day, the weariness is nothing like so profound as a rehash of other subjects. There are a great many things to fear in other countries. Floods, cyclones, tornadoes, blizzards, lightning, hail, and in some of them falls of snow that imprison. Here droughts and north winds are the hngahos. There are no fears in relation to the troubles which are so momentous in the East, and the only one which California can claim as being entirely her own is the baleful wind from the north which is as singular as it is unwelcome. For a breeze from that quarter to come like the breath of a furnace seven times heated is something of an anomaly; to possess the properties it does is still more wonderful. A fair field of grain is blighted in a few hours, and where there was a good prospect for a bountiful harvest there is nothing left but dry straw and a few shrunken kernels. It is full of electricity. The tails of horses will spread to twice their natural size, and though there is a repellent force which throws them apart when switched against the side, they are attracted so as to hang for some time before the magnetism loses its power.

That there is a depressing effect is also apparent. A large wheat-grower claimed that he could tall, before the actual change came, that it was on its way, and when fairly at work the gloomy feelings could not be overcome. It might be that his despondency arose from the danger to his crops, but this feeling would not influence animals. It is rare, indeed, that two as distressed trotters are seen as was the case with Occident and Bodine some years ago at Chico. The demon of the north blew fire from his nostrils, and as the race progressed it came fiercer and more difficult to endure. There were ten seconds between the first and the last heats, and before the start of the deciding one both horses looked as though they could not trot around the track. There was no perspiration, the hair as dry as the air, and there were heaving flanks, distended nostrils and glassy eyeballs. Under the circumstances, it was surprising that 2:31 was scored, and yet there were people to question the honesty of the drivers, and those, too, who saw the state the horses were in, and who should have been able to account for the discrepancy in the time of the heats. Heat has nothing to do with bringing that kind of prostration, and there must be other causes to aid it.

In the east there are hot days nearly as bad as those which here have a north wind at their back. There is a distinct difference, however, inasmuch as there is a surplus of moisture in the atmosphere in that country, and usually rainfall precedes. "Hot and sweltering" is the phrase not inaptly used to express the sensation, and old farmers call it "hot and muggy." It was such an afternoon when Privateer beat Aldebaran, Onward and Local at Jerome Park, nearly sixteen years ago, and the winner came within an ace of dying on the track. We went by train as it was too hot to drive, and the walk from the station to the park was the most serious short pilgrimage we ever endured. A suffocating steam rose from the ground, and the sun's rays came through it with boiling effect. The course also reeked, and the shade of the stand gave little relief. The pool-seller cried the bids like a man in a dream, and the most inveterate of the speculators sought refuge when only a small portion of their money was invested. This was the sort of a day when Mollie McCarty met with defeat at Louisville, and if she could have made known her opinion, doubtless the worst northern she had ever endured on the banks if the Putah would have been given the preference.

Take the whole of California as a guide to the estimate, and we doubt if the same extent of territory in the Mississippi Valley is as free from the bad effects of dry weather. With the exception of a portion of the San Joaquin there has not been a failure of crops in many years. There are years of such abundance that a falling off from the big yield is held to be a misfortune, and there is grumbling and growling when there are cords of well-filled grain sacks in the fields. Should it be somewhat dry at the time when the ploughs should be busy, and the spring rains rather tardy, and not up to the gauge of former years, there is nothing to fear in the shape of the grain sprouting in the swath, and no etacks to pull apart and sheaves to unbind. Credit the dry weather with a portion of the advantages it brings, and no matter how industrious you have been in scoring the dabsits, there will be a balance in its favor that should make you ashamed of the unmerited maledictions.

There is one great boon in this country which none of us properly appreciate, that is those of us who have spent a few years on this coast. That is relief from the peddler of lightning rods. Here the bolts are so taken up with the fairer mark which the Sierras and Rockies present that none stray in this direction. Yonder scarcely a summer passes without some token of Jove's displeasure in every neighborhood, and the worst of it is that when you feel perfectly safe there comes one of these malignant fiends, and tortures you with words that trouble when a portentous cloud comes across the sky. The rods that his predecessor has persuaded you to buy at four times what they should have cost, as you afterwards learn, are of no account. The points are so faulty that the lightning will dodge from them into the roof, and the insulators are still worse than the points. He will "fix" them for you, and if the services are accepted there is a conviction of being swindled worse than before. If you decline, his

lugubrious prophecies haunt you, and every thunder clap thrills you with terror. He is about as subtle as the mysterious fluid he discourses so glibly about, and if his victim is the least nervous he will find out his weak point and play upon him with the skill of an Old Bailey lawyer.

The scientists are divided in opinion regarding the terrible forces displayed in the cyclones which work such devastation in some of the fairest portions of the eastern country. Whatever it is to be free from apprehension is another boon which cannot be too highly appreciated. Strong buildings wrecked as though made of straw, horses and cattle carried through the air, many things done still more incomprehensible, and the only escape a deep cave or cellars run under the ground, so that the falling buildings cannot crush those who flee to them for protection. In the tornado that nearly wiped out Camanche, Clinton Co., Iowa, in 1860, there was a hotel, the lower story of which was stone, three above that brick with a good thickness of wall. It was a square building of about fifty feet on each side, by all odds the most substantial of any in the village. The brick portion was thrown apart as though from an explosion inside, not a brick falling inside of the stone walls which were intact and without a mark. The son of the landlord, a young man of twenty-five years, was asleep in the upper story when the house was demolished. He was carried quite a distance through the air, and laid so gently on the ground that he was uninjured, while several of the other inmates were killed. In another instance, a lower story of brick was swept away, the upper frame being dropped so truly as to rest on the stone foundation scarcely two feet out of place.

There had been another tornado the season before in the neighborhood of Iowa City, and the residents of these and adjoining counties were in dread. Some twenty miles from Camanche a man had built on the summit of a hill which was fully exposed to the quarter from which the tornadoes came. Another drawback was the want of water, and to obtain a supply cisterns were made. To hold what was shed from the roof of the barn, a very large one was dug, and as there had been no rain since it was finished it was yet dry though the conducting pipes were laid. He had a son who was in terrible dread whenever a dark cloud hung in the west. There was one hacker than usual rapidly making its way from the dreaded quarter, and thinking the cistern the safest place he lowered himself, with the aid of a pair of reins, into the snug quarters. They were not long enough for him to reach the bottom, so he dropped the remaining distance and congratulated himself on the security of the quarters. The strong wall, with the smooth coating of cement, the strong timbers that supported the top covering of two feet of earth. The curb was substantial, too, and in his asylum he felt as safe as need be. The heavy black cloud came rapidly. There was a stronger power than the surface current against which it swept, a succession of terrible detonations, and then on the roof of that big barn there was a crash and a charge of water through the spouts. It did not take many minutes to bring the water up to his knees; it was waist high, and still the thunder reverberated, and the huge drops pelted against the ahingles. Up to the chin, and the reins dangled far beyond his reach. The frenzied shouts were drowned by the water-spout, and lucky it was that a residence for years on the banks of the Mississippi had given him a natorial education. He paddled about until the reins were within reach, and when the violence of the storm was spent his cries attracted attention. After that there was a stronger terror than tornadoes; water was quite as dreadful as wind.

When repining over the minor climatic troubles here, the thoughts of the far greater is always a panacea. Sadly pondering over the fact that the races are only seven weeks away, we are prone to grumble that there is mud in the way of gallops, and that the sand on Eighteenth street is about sure to crack the heels, there is a fear that the "length" will not be obtained, and short courses, perhaps, beyond the condition, or rather lack of condition, through enforced idleness. Then the thoughts revert to the snow, the mercury so far down in the tubes that the observer has to stand on tip-toe to see it, and by and by the "frost coming out of the ground," when the bottom appears to have dropped out, too. Then there is a search for sandy knolls, and the hills where the blue-grass has formed a firm sod, a few yards of cantering ground brings a smile on the gloomy visaga of the trainer. The white buds glint among the brown twigs on the Hawthorn, there are roseate specks among the gnarled branches of the crabapple. A robin or two has piped some welcome notes, and the geese, a few in a flock, are pointing their flight northward. In the night comes the north wind, and the next morning the opening buds are ahrunk, the scream of the blue-jay in place of the song of the robins, and the advance guard of waterfowl are retreating, so demoralized that the trumpeter fails to tenna his hugla to a siugla hawuk. Whaw! what a change twenty-four hours have brought, and the firm sod patches are frozen and slippery.

This famous old-time trainer Tom Patterson abided by a rule adopted many years ago, to never to miss a gallop on account of rain or mud, and a majority of the eastern trainers adhere to the same practice, modified somewhat on account of the change in the race to be run. When heats for long distances were the rule there was thought to be a necessity for "harder work" than is now deemed proper for the longest distances. One thing is certain, that the fast pace which is now essential to win for a mile, and from that to two and a quarter miles, is as trying as longer and repeating routes, and that even three-quarters of a mile can-

not be compassed without plenty of exercise. A noted foot-racer, some years ago, informed us that he never met a "long-distance runner" whom he could not tire out in going a hundred yards, provided he had a turn of speed, and that to fit himself to run, his forte being from fifty to one hundred and fifty yards, he had to work hard and regularly. A break in the fast work now is not so bad as it will be a month in the future, and then should there be mud in the tracks the gallops will have to be given. It is true that there is danger in slop as well as sand to crack the heels, but we shall try an experiment which we hope will obviate that difficulty, and if there is a prospect of success will describe it so that others can avail themselves of the benefit.

Although it is seldom we recommend anything that has not been put to an actual test, in this case it may be as well to precede the experiment with a description, and should it strike others favorably there will be a chance to give the more satisfactory trials of several experimenters. It is simply to exclude the wet, mud or sand from the pasterns without interfering with the motion of the joints. In the first place a strap with an elastic attachment will encircle the upper part of the hoof, being kept in place by a short piece of leather or thin metal fastened with a small screw at the toe. From the encircling strap and fastened to it will be thin rubber, such as is used for bandages, cut to fit and extending above the ankle and secured by another strap around the leg. This will also in a measure exclude the air and prevent rapid evaporation, which is one of the causes of cracked heels. As in a large majority of cases the cracks are confined to the fore-feet, a pair will be all that is necessary for each horse. We feel so much confidence in the efficacy of this plan that, notwithstanding one of our colts is slightly troubled in that way, we shall gallop him through the mud, if necessary, without much fear.

Cracked heels are one of the most tormenting ailments that beset the trainers of runners and trotters, especially the former. Trivial though it may seem, when there is a bad case the sufferer is incapable of showing its true form. Slight disarrangements of any of the functions are sufficient to place "the flyer" on a level with those which are pounds below, and the separation of the skin in that sensitive place is not so slight as many imagine. There are a hundred "sure cures." Every trainer has a favorite remedy, and it is safe to say that he has little faith in any. Easily managed when there is slow work, he is well aware that when the fast gallops are resumed it is long odds that there is a return of the trouble. Besides lessening the danger from mud adhering to the pastern there is the further benefit of preventing evaporation. This will be sufficient in cases where there has been no cracking; in the latter it will be necessary to apply a linen bandage, put on loosely, with some kind of a cerate to induce healing. Twenty years ago glycerine was our favorite remedy. Now we are partial to the preparations from crude petroleum. Vaseline, cosmolina, cuticura, any emolient in fact that will soften the rigidity of the skin, which is always an accompaniment of cracked heels, and tend to the healing of the fissures.

The pernicious practice of washing the legs is still worse than galloping in mud when that is done before the animals are thoroughly "cooled out." There is a speedy diminishing of the temperature through evaporation, whereas the heat is kept down in the gallop by the envelopment of the cold material, and if left until dry there is partial protection from the plastic encaasing. When the boot described above is used it must be left on until the circulation is normal, and afterwards the moisture from the confined sweat must be carefully absorbed by a soft rubber. With proper care in fitting we can not imagine any drawback that will preclude the use. Still, however, until tried it is in the speculative field, and until theory is sustained by practice there is uncertainty.

## How the Favorites Don't Win.

"Odds never won a horse race" is an old expression, and there is also an equally ancient belief that favorites do not always have everything their own way. An ingenious correspondent has compiled the following statistics, which are designed to show that the favorite has by no means a monopoly of the good things of racing:

Jarome Park, 1883.—Purses, 9 favorites won 5; selling purses, 14 favorites won 6; two-year-old stakes, 4 favorites won 1; three-year-old stakes, 5 favorites won 5; cup, 1 favorite won 1; handicaps, 21 favorites won 6; handicaps over jumps, 13 favorites won 9. Total, 67 favorites won 33.

Monmouth Park.—Purses, 14 favorites won 6; selling purses, 24 favorites won 10; two-year-old stakes, 16 favorites won 7; three-year-old stakes, 9 favorites won 5, and 1 walk-over; all-aged stakes, 8 favorites won 3; gentlemen's race, 1 favorite won 1; handicaps, 54 favorites won 21, and 1 walk-over; handicaps over timber, 24 favorites won 12. Total, 150 favorites won 65, and 2 walk-overs.

Coney Island.—Purses, 30 favorites won 12; selling purses, 28 favorites won 4; two-year-old stakes, 4 favorites won 0; three-year-old stakes, 5 favorites won 4; all-aged stakes, 3 favorites won 2; handicaps, 32 favorites won 17; handicaps over timber, 17 favorites won 11; purses over timber, 3 favorites won 1. Total, 122 favorites won 51.

Saratoga.—Purses, 81 favorites won 34; selling purses, 16 favorites won 10; two-year-old stakes, 8 favorites won 4; three-year-old stakes, 8 favorites won 3; all-aged stakes, 3 favorites won 3; handicaps, 8 favorites won 3; handicaps over timber, 16 favorites won 10. Total, 140 favorites won 67.—N. Y. Spirit.

There was a trotting race on the 9th at the Bay View Driving Park, Santa Cruz. The contestants were entered by J. G. Tanner, J. Soper, A. J. McLann and T. Brady. The purse was \$80. Brady's horse won in two straight heats; time, 3:06 and 3:07.

H. P. Metcalfe makes the statement that he has recently been troubled with the worst cold he ever had. Was so hoarse for six weeks that he could not speak above a whisper. He took one bottle of Kerr's Asthma Cure, and the result was that his voice was entirely restored, and his cold cured. He has commended the remedy to his friends, and in every case it has produced the most satisfactory effects. This cure is recommended by City, County, State and United States officials, and may be had of all druggists and dealers.

D. R. Locke, "Petroleum V. Nasby," was one of the judges at the New Orleans races last week.

STALLIONS THOROUGHbred.

BELLE MEADE

1884 STALLIONS. 1884

BRAMBLE,

By imp. Bonnie Scotland, dam Ivy Leaf, by imp. Australian.

ENQUIRER,

The sire of McWhirter, Fortuna, Harkaway, Falsetto, Blue Eyes, Pinafore, Getaway, W. P. Burch, etc.

Imp. GREAT TOM,

The sire of Gen. Harding, Thackeray, Swift, Tennyson, Trombone, Tarquin, etc. And the grand Race-horse,

LUKE BLACKBURN,

By imp. Bonnie Scotland, dam Nevada, by Lexington. Each of these horses will be bred to a limited number of approved mares, at

\$100-The Season-\$100

\$5 to the Groom.

Mares will be kept at reasonable charges during the season. The annual Sale of Belle Meade Yearlings, 49 in number, will take place April 30th. Catalogues of the sale will be issued to the public in due time. Address,

W. G. HARDING, Nashville, Tenn.

The Thoroughbred Stallion

HUBBARD,

Chestnut, foaled in 1869, bred by R. A. Alexander of Woodburn Stud Farm, Kentucky.

- Sired by PLANET. First dam, Minnie Mansfield, by imp. Glencoe. Second dam, Argenti, by Bertrand. Third dam, Alleganti, by imp. Young Truffie. Fourth dam, imp. Phantasia, by Phantom. Fifth dam, by Walton. Sixth dam, Alleganti, by Pegans. Seventh dam, Orange Squeezer, by Highfyer. Eighth dam, Mop Squeezer, by Matchem. Ninth dam, Lady, by Turner's Sweepstakes. Tenth dam, Shuttle and Syphon's dam, by Patriot. Eleventh dam, by Crab. Twelfth dam, Sister to Sloven, by Bay Bolton. Thirteenth dam, by Curwen's Bay Barb. Fourteenth dam, by Curwen's Spot. Fifteenth dam, by White-Legged Lowther Barb. Sixteenth dam, Old Vintner Mare.

Some of his Winning Performances:

1872, Baltimore, Md., Oct. 22d—Dixie Stakes for three-year olds. Ninety nominations. Won by Hubbard beating Joe Daniels, True Blue, Woodbine, Mate, Silent, Friend, Wheatley, Experience, Oaks and Brook, land. Won by six lengths.

1873, Long Branch, N. J., July 10th—Grand Sweepstakes, four-mile heats, won by Hubbard distancing Wheatley and Bessie Lee in the first heat.

1873, Saratoga, N. Y., Aug. 2d—For all ages; dash of three miles; won by Hubbard beating Harry Bassett, Wanderer and King Harry

1873, Saratoga, N. Y., August 9th—For all ages; dash of two miles and three-quarters; won by Hubbard beating Katie Pease and Boss Tweed. Total winnings in 1872 and 1873 \$22,950.

Will make the season at the DALE BREEDING FARM, Mountain View, Santa Clara County, commencing February 10th, and ending June 10th, 1884.

Terms, \$50. Mares not proving in foal can be bred the next season free of charge.

Good pasturage at \$5 per month. No responsibility for escapes or accidents.

Full pedigrees can be had by applying to

T. J. DALE, Mountain View, Cal.

The Thoroughbred Stallion

WILDIDLE.

By imp. AUSTRALIAN. Dam Idlewild, by Lexington.

This great race-horse and successful sire will make the season of 1884, from February 10th to June 10th, at Judson's Wildidle Farm, Santa Clara, Cal.

Wildidle is the sire of Gov. Stanford's Frolic filly (record of one mile, 1:42, at two years old), May D. (with a record of one and one-half miles in 2:36, the fastest on the Pacific Coast), Jim Douglas, Ella Doane, Wildidler, and others of note.

Terms of season, \$75, payable at time of service, and in all cases before removal.

Mares taken good care of at \$8 per month. No responsibility for escapes or accidents. For further particulars address

H. C. JUDSON, Owner, or W. L. APPELEY, Supt., Santa Clara, Cal.

STALLIONS

- AT -

RANCHO DEL PASO.

For the Season of 1884.

Thoroughbreds.

Imp. KYRLE DALY.

Bay horse, by ARTILLERY. First dam, Colleen Rhue, by Gemma-di-Vergy. Second dam, Princess, by Reinever. Third dam, Ebidna (the Baron's dam), by Economist. Fourth dam, Miss Pratt, by Blacklock. Fifth dam, Gadabout, by Orville. Sixth dam, Mistrel, by Sir Peter. Seventh dam, Matron, by Floriel. Eighth dam, Maiden, by Machem. Ninth dam (Pumpkin's dam), by Squirt. Tenth dam (Lot's dam), by Mogul. Eleventh dam, Camilla, by Bay Bolton. Twelfth dam, Old Lady (Starling's dam), by Palleine's Chestnut Arabian. Thirteenth dam, by Rockwood. Fourteenth dam, by Bustler. At \$100 the season, due at the time of service.

LONGFIELD.

Chestnut horse, by MONARCHIST, he by Lexington. First dam, Dame Gourlay (Blue Gown), by Planet. Second dam, Flora G., by Lexington. Third dam, Fanny G., by imp. Margrave. Fourth dam, Lances, by Lance. Fifth dam, Aurora, by Aratus. Sixth dam, Paragon, by imp. Buzzard. Seventh dam, Indiana, by Columbus (son of imp. Pantaloon). Eighth dam, Jane Hunt, by Hampton's Paragon. Ninth dam, Moll, by imp. Figure. Tenth dam, Slamerkin, by imp. Wildair. Eleventh dam, imp. Cub Mare, by Cub. Twelfth dam, Aramantus's dam, by Second. Thirteenth dam, by Starling. Fourteenth dam, by Croft's Partner. Fifteenth dam, by Greyhound. At \$50 the season, due at the time of service.

JIM BROWNE.

John Mackey, Superintendent, Sacramento, Cal.

THOROUGHbred STALLION

X X,

Pedigree.

X X (Doublecross), bred by Jos. Cairn Simpson at Atwood Cottage, Riverside, Illinois, foaled May 23, 1872, by MALCOLM. First dam, Columbia, by imported Bonnie Scotland. Second dam, Young Fashion, by imported Monarch. Third dam, Fashion, by imported Trustee. Fourth dam, Bonnets o' Blue, by Sir Charles. Fifth dam, Reilly, by Sir Archy. Sixth dam, by imported Medley. Seventh dam, by imported Centinel. Eighth dam, by Mark Anthony. Ninth dam, by imported Janns. Tenth dam, by imported Monkey. Eleventh dam, by imported Silvereye. Twelfth dam, by Spanker. See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam Columbia, also by imported Bonnie Scotland; hence his name, Malcolm was one of the best race-horses of his day, and Columbia was also a fine race mare. Columbia is the granddam of Antee. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie, Andes, Hock Hock, Ing, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Saganore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

Will make the ensuing season, 1884, from February 15th to June 15th, at the Oakland Trotting Park. Terms, \$50 the season.

JOSEPH CAIRN SIMPSON, Oakland or 505 Montgomery Street, San Francisco.

PACIFIC COAST

Blood Horse Association.

Spring Race Meeting.

BAY DISTRICT COURSE, San Francisco.

No. 11—Handicap Stake—For three-year-olds; 1 1/4 miles; \$25 each; \$10 declaration; \$200 added; weights announced at the same time as the cup. No. 12—Purse, \$300; \$50 to second; for all ages; heats of three-quarters of a mile.

Third Day—Saturday, April 19th.

- No. 13—Gano Stake—Dash of three-quarters of a mile for two-year-olds. Closed with 23 nominations. No. 14—"Spirit of the Times" Stake—Dash of one and three-quarter miles for all three-year-olds. Closed with 31 nominations. No. 15—Purse, \$300; \$50 to second; heats of three-quarters of a mile; for all ages. No. 16—Consolation Purse, \$200; \$50 to second; for horses that have run and not won at the meeting; five pounds allowed for each defeat; dash of a mile.

Conditions.

Entries to stakes and purses not marked closed will close March 1st, 1884. Races to close will be run under weights adopted at the annual meeting 1881.

Starters in all races must be named at 6 p. m. the day preceding the race. Entrance free for starters in purses. Non-starters can declare out at 6 p. m. the day preceding race, by paying five per cent. After that time can only be excused by Presiding Judge, and in such case, ten per cent. on amount of purse must be paid.

Non-members will be placed on the same footing as members of the association in regard to the payment of purses and stakes advertised; and should there be a deficiency, the winners will receive a pro rata division.

Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and entries in purses must be made on or before the first day of March next, 1884, directed to Jos. Cairn Simpson, Secretary, 505 Montgomery St., San Francisco. To be valid, they must be delivered to the Secretary personally or plainly postmarked on or before that day, March 1st.

JAS. V. COLEMAN, President.

JOS. CAIRN SIMPSON, Secretary.

State Agricultural Society.

TROTting AND RUNNING PURSES

To Close March 10th, 1884.

- No. 1—Trotting Purse \$1,000; mile heats for two-year-olds. No. 2—Trotting Purse \$1,000; mile heats, three in five, for three-year-olds. No. 3—Trotting Purse \$1,000; mile heats, three in five, for four-year-olds. Entrance ten per cent, five per cent. of which to accompany nomination, remaining five per cent. payable July 15th, 1884. Those not making second payment forfeit first, and cannot start in the race; five to enter and three to start. If more than ten make second payment, \$200 additional will be added; four moneys. The meeting having been extended to nine days, these races will be arranged as to permit the colts entered in other stakes to trot in these purses.

Running.

- No. 4—Running Purse \$1,000; one-mile dash for two-year-olds. No. 5—Running Purse \$1,000; one mile and repeat for three-year-olds. Entrance ten per cent., five per cent. of which must accompany nomination, the remaining five per cent. to be paid July 15th, 1884. Eight entries required to make first payment; four moneys. If more than ten make second payment, \$200 will be added.

EDWIN F. COSTER, Secretary. P. A. FINNIGAN, President.

MONMOUTH PARK.

Long Branch, New Jersey,

The Following Stake is Now Open.

THE CHAMPION STALLION STAKES for 1885, for colts and fillies two years old (now yearlings), to be entered at the course by 1 o'clock P. M. on the day before the day appointed for the race, of \$250 each, with \$5,000 added by the Monmouth Park Association to a subscription of \$50 each by owners of stallions, whose get alone shall be qualified to start; the second horse and the subscribing owner of his sire each to receive \$1,000; the third horse and the subscribing owner of his sire each to receive \$500; the winner to receive the stakes of horses entered for the race, and one-half of the money remaining after the foregoing deductions; the other half to go to the subscribing owner of the sire of the winner; the death of a subscriber not to disqualify the get of this stallion, if the subscription be paid; each nomination to be accompanied by a contract in the form subjoined, which, if not fulfilled punctually by the subscriber, may be transferred to and fulfilled by any owner or owners entering in the race the get of the stallion, and such owner or owners shall in that case be entitled to start and to be heard according to the subscription from first, second or third place in the race, and to recover from him the money contracted to be paid, if he be not heard; fifteen subscriptions to fill. Three-quarters of a mile.

Form of Contract.

In consideration of the money to be added by the Monmouth Park Association to the Champion Stallion Stakes for 1885, and in further consideration of the increased value given to the get of any stallion by the right of entry therein, which right of entry is not to be invalidated by (1) my decease, (2) my failure to pay to the Monmouth Park Association, or (3) my failure to be heard on the first day of July, 1885, at its office in the city of New York.

The subscription of stallions to the above stakes will close and name on April 1st, 1884. Subscriptions to be addressed to J. H. Coster, Secretary, Monmouth Park Association, Madison Avenue and Twenty-seventh Street, New York.

Mr. Lorillard continues his gift of \$5,000 to the Lorillard Stakes. The Champion Stallion Stakes and the Lorillard Stakes are intended to be permanent.

The Lorillard Stakes for 1886, with the following conditions, will close and name on August 15th, 1884. The Lorillard Stakes for 1884, for three-year-olds, of \$500 each, h. f., or only \$100 if declared by January 1st, 1885; or \$40 if declared by January 1st, 1886; or \$100 if declared by June 25th, 1886; with \$5,000 given by Mr. Pierre Lorillard; the Association to add \$1,000 for the second; the third to save his stake; horses bred in the State given are not eligible for this stake unless their sires are represented by subscription to the Champion Stallion Stakes for 1885. One mile and a half.

GEORGE L. LORILLARD, President.

J. H. COSTER, Secretary.

The judges M. Lewis Clark, Jr., and Chas. L. Hunt have reviewed the evidence in the McBowling-Silvio race, run at Louisville October 12th, and we understand that Harlan will be reinstated. The complaint against Corrigan has been dismissed, but the evidence taken warrants the expulsion of Stoval and Barnes.

**TRAINER.**  
WANTED—By a competent man a situation as trotting-horse trainer. Understands the care of Brood-mares, Stallions, and breaking Colts. References.  
Address  
G. W. B.  
1715 Leavenworth Street.

# MONMOUTH PARK, LONG BRANCH, NEW JERSEY.

NOT LESS THAN SIX RACES EACH DAY.

The following Stakes are now Open, to Close and Name on March 1st Next

### For First Summer Meeting, 1884.

**The Long Branch Handicap.**  
A sweepstakes of \$50 each, h. f., or only \$10 if declared by 4 p. m. on July 3d, with \$750 added; the second to receive \$200 out of the stakes; weights to be published by July 2d; the winner of any handicap after publication of the weights to carry five pounds extra; one mile and a quarter.

**The Shrewsbury Handicap.**  
A sweepstakes of \$50 each, h. f., or only \$10 if declared by 4 p. m. on July 7th, with \$1,000 added; the second to receive \$250 out of the stakes; weights to be published by July 6th; the winner of any handi-

cap after publication of the weights to carry five pounds extra; one mile and a half.

**The Ocean Stakes.**  
Of \$100 each, \$25 f., with \$1,000 added; the second to receive \$500 out of the stakes; one mile and an eighth.

**The Monmouth Cup.**  
A sweepstakes of \$50 each, p. p., with \$1,500 added, of which \$500 to the second; the winner of the Baltimore, Westchester, or Coney Island Cup for 1884, to carry three pounds; of two of those cups, five pounds; of three, seven pounds extra; two miles.

### For Midsummer Meeting, 1884.

**The Atlantic Stakes.**  
For two-year-olds, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; those not having won a stake of \$2,000 allowed five pounds; maidens allowed two pounds; three-quarters of a mile.

**The Seabright Stakes.**  
For two-year-olds, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; a winner of a stake of \$2,000 when carrying weight for age or more, to carry three pounds; twice, five pounds; thrice, seven pounds extra; those not having won more than \$2,000 when carrying weight for age or more allowed three pounds; maidens allowed seven pounds; three-quarters of a mile.

**The Red Bank Stakes.**  
For two-year-olds, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; a winner of a stake of \$2,000 when carrying weight for age or more to carry five pounds; twice, seven pounds; thrice, twelve pounds extra; maidens allowed seven pounds; three-quarters of a mile.

**The Camden Stakes.**  
For two-year-olds, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; those having won a stake of \$2,000 (handicaps and selling races when carrying less than weight for age not counting) excluded from starting; those not having run second for such stake allowed three pounds; maidens allowed seven pounds; winners not qualified to start not to pay forfeit; three-quarters of a mile.

**The Optional Stakes.**  
For two-year-olds, of \$50 each, \$15 f., with \$1,000 added; the second to receive \$250 out of the stakes; the winner to be sold at auction, or to carry seven pounds extra, if entered to be sold by 4 p. m. on the day before the day appointed for the race for \$2,500, allowed seven pounds; or, if for \$1,000, fourteen pounds; maidens allowed five pounds; allowances accumulative; three-quarters of a mile.

**The Eatontown Stakes.**  
For two-year-olds and upward, of \$100 each, \$25 f., with \$1,500 added, of which \$500 to the second; horses three years old and upward not having won when carrying weight for age or more, in 1884, more than \$1,000, allowed five pounds; or, if not more than \$500, seven pounds; or, if they have not won in 1884, ten pounds; maidens allowed, if three years old, fifteen pounds; if four years or more, twenty-five pounds; one mile.

**The Barnegat Stakes.**  
For three-year-olds, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; the winner of the Belmont, Coney Island Derby, Lorrillard, or Treves Stakes to carry five pounds; of two of those stakes, seven pounds extra; those not having won a three-year-old stake of \$2,000 when carrying weight for age or more allowed five pounds; maidens allowed ten pounds; one mile and a half.

**The Harlan Stakes.**  
For three-year-olds not having won a two-year-old stake of \$2,000 when carrying weight for age or more, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; the winner of a three-year-old stake of \$2,000 when carrying weight for age or more to carry five pounds; twice, seven pounds; thrice ten pounds extra; those not having won when carrying weight for age or more, in 1884, more than \$1,000, allowed three pounds; or, if not more than \$500, five pounds; maidens allowed ten pounds; one mile and a quarter.

**The Elizabeth Stakes.**  
For fillies three years old not having won a two-year-old stake of \$2,000 when carrying weight for age or more, of \$50 each, \$15 f., with \$1,500 added, of which \$500 to the second; the winner of a three-year-old
