Note: Details may not add to totals because of independent rounding. Industry group totals include estimates for all component industries, regardless of whether or not separate data are shown for the individual industries.
${ }^{1}$ The percentage sampling errors shown in these colums indicate the range of differences that can be expected between the estimates and comparable totals obtained in a complete canvass, because of sampling fluctuations. The estimates will differ from complete canvass totals by less than:
(i) The percentage shown: approximately 2 times out of 3 .
(ii) Twice the percentage shown: approximately 19 times out of 20.
(iii) Three times the percentage shown: almost always.

The approximate reliability of the estimates for which sampling errors are not shown may be judged from the published figures for related items for the same industry

- Entry represents zero.
$S$ Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); cost of fuel less than $\$ 50$ thousand; quantity of electric energy less than 5 million $\mathrm{kw} .-\mathrm{hrs}$.; to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

X Not applicable.

# table 8. Consumption for Heat and Power, by 

See footnotes at end of table.

table 8. Consumption for Heat and Power, by

Note: Detail may not add to totals because of independent rounding.

- Entry represents zero.
 the figure was too high (generally in excess of 25 percent); cost of fuel less than $\$ 50$ thousand; quantity of electric energy less than 5 million kw. -hrs; to avoid disclosing figures of individual companies; or on the basis of a general consistency review.
X Not applicable.
$Z$ Less than one-half of the unit of measure indicated.

Geographic Areas: 1962, 1958, and 1954 - Continued

${ }^{1}$ The percentage sampling errors shown in these colums indicate the range of differences that can be expected between the estimates and conmsrable totals obtained in a complete canvass because of sampling fluctuations. The estimates will differ from complete canvass totals by less than:
(i) The percentage shown: approximately 2 times out of 3 .
(ii) Twice the percentage shown: approximately 19 times out of 20
(iii) Three times the percentage shown: almost always.

Sampling errors are not shown for years prior to 1962 since these totals were obtained from a complete census rather than a sample survey.

Note: Detail may not add to totals because of independent rounding. Standard metropolitan statistical area totals include the estimates for all component major industry groups, regardless of whether or not separate data are shown for the individual major groups.

- Entry represents zero.

S Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); cost of fuel less than $\$ 50$ thousand; quantity of electric energy less than 5 million kilowatt-hours; to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## SELECTED MATERIALS CONSUMED

## CONTENT OF CHAPTER

Summary data, by industries and States, are shown for those materials for which relatively complete manufacturing consumption was reported in the 1963 Census of Manufactures. About 125 selected materials consumed by manufacturing establishments in 1963 are covered. The chapter is divided into separate sections for each of the selested materials: Foods; textiles; paperboard containers and newsprint; chemicals and rubber; metals; and engines, motors, bearings, electron tubes, and semi-conductors.

Preceding the sections for individual materials are two general tables showing detail for all materials consumed. The first table (table AA) shows the percentage that the cost of materials specifically reported is of the cost of all materials consumed by an industry. Separate data for these specified purchased materials appear in Volume 11, Industry Statistics. This table provides information showing the degree to which materials data, by industry, were collected and compiled in the 1963 Census of Manufactures. The second table (table BB) is an index of all materials consumed covered in the census. Since data for many of these materials consumed were compiled but not shown in this chapter because their coverage was limited, this index shows the industry containing such data in Volume II. This chapter, therefore, is a ready reference to all data on materials consumed contained in the 1963 Census of Manufactures volumes.

Some additional data on materials consumed are collected and published in the Census Bureau's Current Industrial Reports. Selected consumption information, such as quantities produced and consumed, or paper purchased for specific products were also collected in the product and special inquiry sections of the census of manufactures report form. These data generally are not to be found in this chapter but appear in the appropriate industry chapters of Volume 1I, Industry Statistics.

In addition to the data referred to above, other related statistics were collected in the 1963 Census of Manufactures. Table 3 of Volume II, Industry Statistics, contains information showing the cost of resales, fuels, electricity, and contract work. The statistics on detailed fuels and electric energy appear in chapter 7 and on water consumed in chapter 10 of Volume 1, Summary and Subject Statistics. Data relating to materials mined by establishments classified in manufacturing, primarily those for Major Group 32, Stone, Clay and Glass Products, are included in the census of mineral industries publications.

## SCOPE OF DATA IN TABLES

The data are arranged in this chapter according to broad groups of industries which represent 2-digit Standard Industrial Classification groups or combinations of such groups. The text preceding each industry grouping defines the group, notes any special problems and points out where consumption outside manufacturing is significant. In addition, definitions of the materials for which data are shown or other explanatory statements are included in these texts.

The statistics shown in this chapter include primarily "complete" coverage materials for which figures were collected in the materials inquiry section of the census of manufactures forms. "Complete" coverage materials are those for which the data obtained in the 1963 census represent about 90 percent or more of total consumption by manufacturing industries. Generally, materials data are not shown in this chapter where only two or three industries accounted for the major portion of the manufacturing consumption of the
material. However, such materials are listed in the table BB and the data are shown in the materials consumed tables of Volume 11, Industry Statistics. Also, statistics are not generally shown in this chapter on materials for which census information was obtained in conjunction with the data on shipments of the material. Data on the latter material appear in the product tables (table 6) of Volume 11.

## ESTABLISHMENT BASIS OF DATA

With a few exceptions that are noted in the individual texts, the data shown are the total consumption by establishments classified in the specified industry rather than the total consumption in the manufacture of the products defined by the industry title. That is, all of the metal consumed by an establishment classified in the Metal Stampings Industry (3461) is included in the total for that industry. Consequently, the quantity of material consumed by this industry includes not only that used in stampings but also the quantities used in producing secondary products such as special dies, jigs, fixtures, and electrical appliances. Both Volumes I and Ill include and appendix entitled Industry Descriptions, which shows the proportion that shipments of the primary products of an industry are of the total shipments of the industry. Data on the proportion of shipments of primary products of each industry shipped by the primary industry are also shown in this appendix.
lt should be kept in mind that the materials totals for an industry do not include the materials consumed in products primary to the industry by establishments classified in other industries, but do include consumption in secondary product output by plants in the specified industry.

## COVERAGE

As noted in the introduction to the census volumes, some undercoverage exists in the statistics for most materials. This undercoverage results from the fact that very small establishments and establishments consuming negligible amounts of specific materials were not required to report these materials. While no precise measure of the effect of the undercoverage is available, it is believed that for most materials for which data are shown in this chapter the understatement is insignificant. However, for some materials which are characterized by large numbers of small consumers, the undercoverage resulting from this factor may be of some consequence, especially in the smaller cells. For example, adjustments for this undercoverage are shown for broad-woven fabrics (Textiles).

The totals for consumption of a material by all industries shown in the tables in this chapter generally do not represent complete manufacturing consumption. Industries selected for coverage generally totaled 90 percent or more of manufacturing consumption. Consequently, as much as 10 percent of the manufacturing consumption of a material may not be accounted for in the table. This factor would not affect the totals for the individual industries included in the tables. Moreover, data for material consumption in a State represent the consumption in that State only by the industries specified in the material by industry table.

## DEFINITION OF MATERIALS CONSUMED

Census respondents were requested to report the amounts actually paid or payable after discounts and to include freight and direct charges incurred in acquiring the materials consumed during 1963. For materials transferred from other establishments of the same company, respondents were requested to report the nearest approximation to the commercial value of the material. Where a question arose concerning such transfer values, respondents were requested to determine the value of the material reported to

Census as a product by the producing plant and then to add only freight and other direct handling charges. Thus, the cost of materials consumed represents a "purchasers price" as contrasted to the value of the output of the material which may be termed a "producers price."

Consumption of any given item was defined as the quantity actually consumed or put into production by the establishment during the report year. Respondents were generally permitted to use purchase data where purchases closely approximated consumption. However, where inventory change was significant, respondents were requested to take this into account in determining consumption for major items.

## RELATIONSHIP OF MATERIALS DATA TO OTHER STATISTICS

The materials consumed by manufacturers may have been obtained from any or all of a number of possible sources-imports as well as materials produced domestically. They may have been produced in the establishment or obtained directly from the manufacturer of the materials, from some trade channel such as wholesalers, or from the stocks of the consuming manufacturer. In some instances, previously held stocks of producers of the material and of trade channels were a significant source of individual materials consumed during the year.

The products produced from the materials consumed may have been shipped or added either to work in process or finished goods inventory as of the end of the year. Therefore, in relating material consumed data to shipment or value added data, it is necessary to take into account inventory changes in work in process and finished goods for the industry.

## SUPPLEMENTARY SURVEY ON MATERIALS CONSUMED, FORM MA-131

There has been an increased demand for greater information on material consumption by manufacturers for regional and national input-output studies, particularly to facilitate the work on national accounts by the Office of Business Economics. In line with this increased demand in 1958 and again in 1963, selected large manufacturing plants in the metal fabricating and chemical industries were asked to estimate considerably greater detail than that requested on the standard census report form. The figures derived from the supplemental survey are obtained by distributing the cost of "All other" materials shown in the Census publications for each industry covered on the basis of the detaii reported by the large plants. In table 7 of the Industry Chapters (Volume II), the amount of materials, parts, etc., classified in the "All other" category for the covered industries amounted to about 60 to 69 percent. The data reported in the supplemental survey provided industry estimates that reduced the "All other" to 10 to 14 percent in 1958. This additional detail was released in a separate 1958 report "Selected Materials Consumed" MC58(1)-7 (Supplement). A similar report on the 1963 survey is in preparation.

# table aA. Cost of Materials, Parts, Supplies, and Containers Consumed by Each Industry: 1963 

The table below shows totals for the materials consumed in each industry as reported on item 17, "Selected Materials Consumed During 1963," on the 1963 Census of Manufactures reporting form. Industries for which no specific materials were reported are not shown. See table 7A of Volume II, Industry Statistics, for the specific materials consumed in each industry.
"Total cost of materials" is the cost of all materials consumed by the industry, including miscellaneous materials and materials not reported separately. It represents the amounts paid or payable for materials, parts, containers, and supplies consumed or put into production during the year after discounts and including freight charges and other direct charges incurred by the establishment in acquiring these materials. It excludes the cost of items bought and resold in the same condition, cost of contract work, fuels, and electric energy.

${ }^{a}$ Cost of specified materials" is the total of only those specific materials reported by each industry on item 17. In part, this figure and particularly the percentage represents some degree of understatement regarding the amount of detail available for materials consumed. For example, the figures do not reflect the information on materials collected on other sections of the report form, such as in the product or special inquiry sections.

The last column in the table shows the percentage that the cost of specified materials is of the total cost of materials consumed.

See the Introduction and the specific industry chapters in Volume II for additional information about materials consumed.

| Code | Industry | Total cost of materials | Cost of specified materials | Percentage col. b col. a |

## table bb. Materials Consumed Coverage Index

Data for the selected materials shown in each section of this chapter are confined to materials for which complete coverage was obtained. In addition to data shown in this chapter, information for a large number of other materials are shown in Volume II which presents separate chapters for individual industries. Data on the use of these other materials were obtained where they were an important part of total material cost of the given industry. The table below contains a listofall materials for which data were collected on either a "complete coverage" or "partial coverage" basis on the material inquiry section of the 1963 Census of Manufactures report forms.

All materials in the census of manufactures are assigned a 6 -digit code, based on the following example. The first four digits of the food and agricultural materials indicate the agricultural industry of which the material is a basic product as specified in the 1957 edition of the Bureau of the Budget's Standard Industrial Classification Manual. Materials primarily produced in the manufacturing and mineral industries have a meaningful fifth digit which indicates the primary product class

| Material code | Material | Consuming industries (SIC code) |
| :---: | :---: | :---: |
| 010012 | Nuts, in shell, including peanuts...... | 2071, 2072 |
| 010014 | All other fibers (silk, jute, reused wool, waste, etc.) | 2211, 2221, 2231, 2281, |
| 011201 | Raw cotton..................... . . . . . . . . . | 2283, 2284, 2296 |
| 011202 | Raw cotton (net weight). | 2293 |
|  | Grains: |  |
| 011301 | Corn, including sorghum grain....... | 2044, 2046 |
| 011341 | Rice, rough................................. | (2044, 2046 |
| 011311 | Barley.................................. | $\begin{aligned} & 2041,2042,2043,2045, \\ & 2082,2083 \end{aligned}$ |

| 011322 | Corn (purchased as grain). | 2082 |
| 011331 | Oats. | 2041, 2042, 2043, 2045 |
| 011351 | Rye. | 2085 |
| 011361 | Sorghum grain | 2041, 2042, 2043, 2045 |
| 011371 | Wheat........ | 2041, 2042, 2043, 2045 |
| 011381 | Soybeans. |  |
| 011211 | Cottonseed | 2091, 2092, 2093, 2096 |
| 011911 | Flaxseed. . |  |
| 011921 | Peanuts, in shell | 2099 |
| 011951 | Irish potatoes. | 2032, 2033, 2035, 2037 |
| 011971 | Sugar beets. | 2063 |
| 011981 | Sugar cane. | 2061, 2062 |
| 012011 | Fresh fruit. | 2034, 2099 |
| 012211 | Apples.... |  |
| 012221 | Apricots.. |  |
| 012231 | Oranges. |  |
| 012261 | Peaches. | 2032 |
| 012271 | Pears..... |  |
| 012273 | Pineapples... |  |
| 012281 | Strawberries. |  |
| 012291 | Other fresh fruits | 2032, 2033, 2035, 2037 |
| 012241 | Grapes................................ | $\begin{aligned} & 2032,2033,2035,2037, \\ & 2084 \end{aligned}$ |
| 012283 | Cocoa beans. | 2071, 2072 |
| 012285 | Green coffee | 2095, 2099 |
| 012287 | Copra. | 2091, 2092, 2093, 2096 |
| $012301$ | Fresh vegetables. | 2034, 2095, 2099 |
| 012311 | Green peas......... <br> Snap or wax beans. |  |
| 012331 | Sweet corn. | 2032, 2033, 2035, 2037 |
| 012341 | Tomatoes.. | 2032, 2033, 2035, 2037 |
| 012351 | Cucumbers. |  |
| 012391 | Other fresh vegetables. |  |
|  | Poultry killed: |  |
| 013311 | Young chickens, including commercial broilers. |  |
| 013321 | Hens (or fowl) and other chickens.... |  |
| 013331 | Turkeys............................. |  |
| 013391 | Other poultry and small game, including ducks, geese, rabbits, etc.. | 2015 |
| 013325 | Shell eggs. |  |
|  | Animals slaughtered: |  |
| 013913 | Cattle, number of head. |  |
| 013921 | Calves, live weight................... |  |
| 013923 | Calves, number of head............... Hogs, live weight................. | 2011, 2013 |
| 013933 | Hogs, number of head. |  |
| 013341 | Sheep and lamb, live weight.... |  |
| 013943 | Sheep and lamb, number of head.... |  |

in which the material is manufactured or mined. In cases where the material represents a broad class of materials, the fifth digit will be " 0. " All 3 - and 4 -digit industry codes in the last column are the same as those specified in the Standard Industrial Classification Manual.

Consumption data collected in the product and special inquiry sections of the census report forms are not shown in the selected materials tables of this chapter nor are they reflected in the list betow. These are generally products produced and consumed at the same establishment or receipts and/or purchases of similar or allied items produced in the reporting establishment. Such statistics are included in table 6 (product table) of Volume II.

The codes shown under "Consuming industries" indicate the industries for which data on the given material was published. Wherever a 3 -digit industry group appears, all 4 -digit industries within the group are included.

| Material code | Material | Consuming industries (SIC code) |
| :---: | :---: | :---: |
| 081111 | Stumpage cut in the manufacture of logs, lumber, veneer, plywood or other wood products, cost............ | 2411, 242, 2432 |
| 086111 | Natural rubber. | 3357 |
| 086113 | Natural rubber, latex (dry solids content) Natural rubber, dry. | 3011, 3021, 3031, 3069 |
| 091211 091311 | Finfish, round. Shellfish...... | 2031, 2036 |
|  | Ores and other metal-bearing materials treated: |  |
| 101101 | Iron ore, including manganiferrous.. | 3312 |
| 102100 103200 | Copper ores, concentrates and precipitates........................ Lead ores and concentrates..... | 3331, 3332, 3333 |
| 103300 | Zinc ores and concentrates. |  |
| 105101 | Bauxite... | 2819 |
| 106220 | Manganese ore, including ferruginous (containing $10 \%$ or more manganese). | 3313 |
| 121011 | Bituminous coal and lignite. | 2818, 2819 |
| 121120 | Coal used in the production of coke... | 3312 |
|  | Crude petroleum, excluding topped petroleum: |  |
| 131201 | Domestic. |  |
| 131202 | Foreign...... |  |
| 132121 | Cycle condensate | 2911 |
| 132122 | Natural gasoline, mixed and crude, including drip gasoline............ |  |
| 131302 | Natural gas...................... | $\begin{aligned} & \text { 2812, 2815, 2818, 2819, } \\ & 2895 \end{aligned}$ |
| 132123 | Liquified petroleum gases, including feed stocks. |  |
| 141101 | Rough stone used to produce dressed stone. | 3281 |
| 142101 | Broken stone received for crushing, screening or washing. |  |
| 144201 | common sand and gravel. | 3271, 3272, 3273 |
| 144301 | Glass sand, all types. | 3211, 3221, 3229 |
| 145501 | Kaolin and ball clay. | 2611, 2621, 2631, 2661 |
| 147401 | Muriate of potash, including all grades converted to $60-62 \% \mathrm{~K}_{2} \mathrm{O}$ basis. |  |
| 147402 | Other potash bearing materials, (potassium sulfate, etc.)......... | 2871, 2872 |
| 200011 | Organic ammoniates (cottonseed cake and meal, meat meal and tankage, tobacco stems, etc.)...................... |  |
| 147501 | Phosphate rock... | 2815, 2819, 2871, 2872 |
| 147701 | Sulfur.. | 2611, 2621, 2631, 2661, 2815, 2818, 2819, 2871 |
| 147901 | Pyrites. | 2819 |
| 149901 | Asbestos, crude, including fiber...... | $\begin{aligned} & 2611,2621,2631,2661, \\ & 3292,3293,3982 \end{aligned}$ |
| 201013 | Fresh and prepared meats, other than poultry. | 2032, 2033, 2035, 2037 |
|  | Fresh and frozen meats, including variety meats: |  |
| 201111 | Beef... |  |
| 201121 | Veal |  |
| 201131 | Lamb. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . | 2011, 2013 |
| 201141 | Pork................................. |  |
| 2011 | canning, not separable by species.. |  |

## FOODS

## MATERIALS CONSUMED

This section presents data on selected important materials used primarily in the food manufacturing industries. Characteristically, many of these materials are used for similar purposes both in manufacturing and nonmanufacturing establishments. For example, flour is consumed in bakeries which are classified in manufacturing and also in retail bakery products stores which are not classified in manufacturing. In addition, substantial quantities of many of these materials are consumed directly by households. The discussion and tables that follow relate only to industrial consumption; that is consumption in the manufacturing sector as defined in the Standard Industrial Classification Manual.

## LIVESTOCK SLAUGHTERED

Data shown in tables 2A and 2B represent the livestock slaughtered in industry 2011, Meat Packing Plants.

The 1963 Census of Manufactures included establishments accounting for about 90 percent of the volume of commercial livestock slaughter as pounds, reported by the U.S. Department of Agriculture, compared with 90 percent for 1958. Differences arise from the following: (1) Establishments classified in wholesale or retail trade and included in the census of business; for example, locker plants, retail butcher shops, and wholesale meat jobbers; (2) custom slaughtering and contract work for which the establishments reported amount of contract receipts in the census of manufacture; (3) establishments with no paid employers which were excluded from census coverage; and (4) establishments not subject to Social Security payments such as municipal abattoirs.

The statistics cover the fiscal year ending October 31 rather than the calendar year, since companies accounting for the larger part of the slaughter reported on the fiscal year basis. A comparison with the Department of Agriculture estimates indicated that the difference between calendar- and fiscal-year data is relatively small.

## POULTRY KILLED AND DRESSED

Table 2C contains data on the chickens and turkeys killed in establishments classified in Industry 2015, "Poultry Dressing Plants." A comparison with the Department of Agriculture estimates indicates that establishments included in the census of manufactures in 1963 accounted for about 75 percent and in 1958 for about 73 percent by live weight of the total commercial broiler slaughter in commercial plants (including farm slaughter). The 1963 Census of Manufactures data show that establishments classified in the Poultry Dressing Plants Industry slaughtered 98 percent, by live weight, of the chickens, turkeys. and other fowl killed in manufacturing establishments as compared to about 98 percent in 1958.

## SUGAR

In addition to the sugar consumed in manufacturing establishments, as shown in tables 1C and 2 F , substantial quantities are consumed in households, restaurants, hotels, retail bakeries, and wholesale trade establishments in making various food preparations.

FISH
In addition to the quantity of fish utilized in manufacturing establishments, as shown in tables 1 E and 2 H , some quantity of fish is packaged in wholesale trade establishments which are not included in these tables. The data do not include that portion of the catch sold for consumption as fresh fish.

## DAIRY PRODUCTS

The data shown in tables 1D and 2I represent only the quantity purchased (or transferred from one establishment to another). There is also a substantial production of skim milk produced and consumed in the same plant, which is not reflected in these tables.

TABLE 1A Consumption of Raw Cotton by Industry and Geographic Areas: 1963 ..... 39
1B Consumption of Man-Made Fiber Staple by Industry and Geographic Areas: 1963 ..... 39
1C Consumption of Linters (209131) by Type of Consumer: 1963 ..... 40
1D Consumption of Raw Wool by Industries and Geographic Areas: 1963 ..... 40
2 Consumption of Broad-Woven Fabrics (Piece Goods) by Selected Industries:
1963 ..... 41

## TEXTILES

This section includes data on materials primarily consumed by establishments classified in Major Group 22, Textile Mill Products, and for broad woven fabrics primarily consumed by establishments classified in Major Group 23, Apparel and Related Products, as well as other industries consuming significant quantities of piece goods.

## FIBER CONSUMPTION

The fiber consumption data shown in the table 1 parts are based on information collected in the Census of Manufactures. All industries consuming significant amounts of fiber reported these data, except for Industry Group 225, Knitting Mills, and Group 227, Floor Covering Mills. Detailed consumption figures are published in the monthly Current Industrial Reports Series, M22D, Consumption on the Woolen and Worsted Systems, and M22P, Cotton, Man-Made Fiber Staple, and Linters; Consumption, Stocks, and Spindle Activity.

## BROAD WOVEN FABRICS (PIECE GOODS)

The statistics shown in table 2, in the column headed, "Reported", were previously published in the individual chapters in Volume II, Industry Statistics, table 7, "Materials Consumed by Kind." In each of the individual table 7's, detailed materials data were collected for piece goods and other materials. However, in each industry a portion of the total cost of materials was not specified by kind. This cost that was not specified by kind represented the total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and the total cost of materials reported for those establishments which failed to report cost of individual materials on the "standard forms." The "cost of materials not specified by kind" would, therefore, include the quantity and cost of piece goods consumed by a number of establishments.

Those cost figures for the materials "not specified by kind" were allocated to the piece goods costs in the same proportion that piece goods represented to the total cost of materials reported in detail. Quantity data were then estimated using the same unit value as that reported by other establishments in the industry. The combined total of the amounts reported and the amounts estimated are shown in the columns headed "Estimated Total."

For some industries, the quantity data for relatively small costs of fabrics were not available. In such cases, the quantities were estimated based on the unit value reported by a closely related industry.

The fabric consumption data for the Rubber Industries 3011, 3021, 3031, and 3069 were collected in thousands of pounds instead of thousands of yards as collected for all other industries shown in this table. A satisfactory conversion factor was not available for converting these pound figures to yards. Therefore, the quantities in pounds were added to the quantities in yards reported by the other industries in order to obtain some appruximate total figures. The resulting figures are consequently understated because the fabric consumed probably exceeded one yard per pound.

The materials consumed inquiries for some industries requested separate data by type of fiber, such as cotton fabrics, rayon fabrics, etc. For other industries, the breakdown was by kind of fabric, such as upholstery material, bed ticking, etc. Because of this varying collection measure it is not possible to obtain a breakdown of the total fabric consumption in all industries by type of fiber or fabric consumed.

| 3949 | Sporting and athletic goods................ | 21,250 | 10,909 | 17,519 | 9,006 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ The columns "Estimated Total" include for each industry a proportionate part of the cost of materials that were not specified by kind. The quantity figures were raised proportionately using the unit value reported for the industry (see text). The "Reported" columns show the data as reported and published in table 7 of the Industry Reports for the specific industry prior to the adjustment for the cost of materials not specified by kind.
${ }^{2}$ Total quantity includes data for industries 3011, 3021, 3031, and 3069 in pounds. The total yardage figure is consequently understated because the fabric consumed in those industries probably exceeded one yard per pound.
${ }^{3}$ Estimated or partially estimated, based on unit value reported for other industries (see text).

Quantity data for industries 3011, 3021, 3031, and 3069 were collected and are shown in pounds rather than linear yards. Data exclude tire cord consumption.

## PAPERBOARD CONTAINERS AND NEWSPRINT

## PAPERBOARD CONTAINERS AND NEWSPRINT

This section presents data on materials consumed by establishments classified in Major Group 26, Paper and Allied Products industries, and Major Group 27, Printing and Publishing industries, as well as data on industries consuming $\$ 1$ million worth of boxes and containers. Comments on individual groups of materials are shown below.

## NEWSPRINT

Volume II, Industry Statistics, presents two special geographic distributions of newsprint consumption. The tonnage of newsprint consumed in newspaper publishing in 1963 and 1958 is shown in table 7C on page 27A-39 and the delivered cost of newsprint purchased and consumed by commercial printers and manifold business forms manufacturers in 1963 and 1958 is shown in table 7C on page 27B-30.

The two tables in this chapter have been prepared in the interest of presenting a more comprehensive picture of the consumption of this "complete coverage" material. Table 1A shows the United States consumption of newsprint in 1963 and 1958 by industries in terms of delivered cost. Where available, the corresponding tonnages purchased are also shown. Table 2 presents newsprint consumed by the publishing industries as well as the book manufacturing industry during 1963 and 1958, by geographic divisions and States. In this presentation, the newsprint consumption has been assigned to the State in which the publishers purchasing the material were located, although in some industries the newsprint may have been consumed by printers located in a different State.

## PAPER AND BOARD

Data on the quantity and cost of paper and paperboard grades consumed in the paper and board converting industries are shown in Volume II, pages 26B-27 to 31, for all converted products except containers and boards, and on pages $27 \mathrm{C}-21$ and 22 for paperboard containers and boxes.

Paper consumption statistics for the printing and publishing industries appear in Volume II, table 7A's, of Chapter 27. Except for newsprint, grade detail was not collected from the printing industries, since printers generally have demonstrated their inability to furnish more detailed information based on a reportable canvass made prior to the 1958 Census of Manufactures. Therefore, with the exception of newsprint, quantity and cost information cannot be presented on a uniform basis for all consuming industries, for which consumption data were collected.

## BOXES AND CONTAINERS

Table 1B presents the reported delivered cost of paperboard boxes and containers for all industries consuming $\$ 1$ million worth of containers in 1963. Where available, the 1958 reported cost figures are also presented. The data shown in this table also appear in Volume II, table 7A's for all industries shown in the table. They are being presented here to show a more composite presentation of the container information.

## TABLE 1A. Newsprint (262111 and 262112) Consumed, by Selected Industries: 1963 and 1958

| Code | Consuming industry | 1963 |  | 1958 |  |

## CHEMICALS AND RUBBER

page
Text ..... 53
TABLE 1A Chemicals Consumed by Selected Industries: 1963 and 1958 ..... 54
1B Rubber Consumed by Selected Industries: 1963 and 1958 ..... 55
2A Rubber Consumed in the Rubber Products Industries, by Divisions and States: 1963 and 1958 ..... 56
2B Purchased Rubber Consumed by Drawing and Insulating of Nonferrous Wire Industry (SIC 3357), by Geographic Areas: 1963 and 1958 ..... 56

## CHEMICALS AND RUBBER

This section includes data on materials primarily consumed by establishments classified in Major Group 28, "Chemicals and Allied Products," Major Group 29, "Petroleum and Coal Products," and Major Group 30, "Rubber and Miscellaneous Plastics Products, N.E.C." Comments on individual materials or groups of materials are shown below.

## SULFUR, NATIVE AND RECOVERED

The total for sulfur consumption shown in table 1A is less than the "apparent consumption" figures published by the Bureau of Mines, Department of the Interior, because Census information was not requested from certain manufacturing establishments, principally those classified in the Rubber and Miscellaneous Plastics Products Industries, Major Group 30. the Match Industry (3983), and the Drugs Industry (Group 283).

## CHEMICALS

Consumption data shown for the specified chemicals (table 1A) represent a varying proportion of the U.S. total production. The coverage for ammonia is relatively low because Census figures exclude quantities used for direct application to the soil. Coverage for sodium hydroxide (caustic soda) is low because information was not collected from plants classified in the textile, rubber reclaiming, vegetable oil refineries, and other miscellaneous industries.

In making any comparison of the quantity consumed with total supply of a specified chemical, account should be taken of the factors discussed in the Introduction to the materials consumption tables. Also consideration should be given to the variations in handling consumption data for inorganic chemicals produced and consumed in the same establishment. The statistics showing "consumption" by industries indicate separately purchases or receipts from other establishments and the quantities produced and consumed.

## RUBBER

The figures for natural, synthetic, and reclaimed rubber, shown in table 1B and 2A, are limited to the quantities and consumed by establishments classified in the specified industries. Estimates of total rubber consumption for all industries are published by the Census Bureau in Current Industrial Reports Series M30A, "Rubber, Supply and Distribution for the United States." Based on the 1963 figures shown in Series M30A, the establishments classified in the industries covered by the census used approximately 92 percent of the total synthetic rubber, 96 percent of natural rubber, and 98 percent of the reclaimed rubber. The 1958 coverage ratios are similar.

TABLE 1A. Chemicals Consumed, by Selected Industries: 1963 and 1958

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.

NA) Not available.
(X) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{1}$ Includes data for liquid ash.
${ }^{2}$ Represents total quantity of nitric acid produced and consumed, including quantities consumed by the Tennessee Valley Authority.
${ }^{3 " A l l}$ other industries" includes for 1963 quantities consumed for the Industries 2812, Alkalies and Chlorine; 2816, Inorganic Pigments, and the

 Steel Mills; and the Tennessee Valley Authority.

## TABLE 1B. Rubber Consumed by Selected Industries: 1963 and 1958

[^125]${ }^{1}$ Quantities include 43,642 long tons of reclaimed rubber produced and consumed in the same establishment in 1963, and 39,716 long tons in 1958 .
Value of this rubber is not reflected in the "Delivered cost" colum.
${ }^{2}$ Quantities include less than 1 percent synthetic rubber produced and consumed in the same establishment in 1963, and less than 2 percent in 1958. Value of this rubber is not reflected in the "Delivered cost" column.
${ }^{3}$ Quantities include the following percentages of reclaimed rubber which were produced and consumed in the same establishment: Industry 3011 , between 12 and 15 percent in 1963, and less than 10 percent in 1958; Industry 3021, between 25 and 50 percent in 1963; Industries 3031 and 3069 , between 20 and 25 percent in 1963, and between 25 and 30 percent in 1958. Value of this rubber is not reflected in the "delivered cost" column.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies, or valued at less than $\$ 100,000$.
${ }^{1}$ Includes less than 1 percent synthetic rubber produced and consumed in the same establishment. Value of this rubber is not reflected in the "delivered cost" column.
${ }^{2}$ Includes 43,642 long tons of reclaimed rubber produced and consumed in the same establishment. Of this total, 6,079 long tons were in New England and 18,161 tons in East North Central. Value of this reclaimed rubber is not reflected in the "delivered cost" colunn.
${ }^{3}$ Includes 39,716 long tons of reclaimed rubber produced and consurned in the same establishment. Of this total 4,924 long tons was in New England and 17, 780 tons in East North Central. Value of this reclaimed rubber is not reflected in the "delivered cost" column.
${ }^{4}$ In addition, both in 1963 and 1958, quantities of rubber were consumed in plants located in, the following states for which data could not be shown without disclosing figures for individual companies: Maine, Vermont, Kansas, Delaware, South Carolina, Florida, Kentucky, Arkansas, Oklahoma, Colorado, Utah, Washington, and Oregon.

## METALS

This section presents data on the consumption of selected metal mill shapes and forms, castings, forgings, refinery shapes and scrap.

## MILL SHAPES, CASTINGS, AND FORGINGS

The materials used by the metal fabricating industries in producing machinery, automobiles, and thousands of other products consist primarily of metal mill shapes and forms, castings, and forgings. The tables which follow show the consumption, in terms of cost and quantity, of the most important of these metals-iron and steel, aluminum and aluminum-base alloys, and copper and copper-base alloys. No data are available for copper and copper-base alloy forgings.

The steel mill shapes are shown separately for three grades of steel: carbon, alloy, and stainless. Carbon steel is subdivided into six shapes, alloy steel into two shapes, while stainless steel is shown in total only.

The copper and copper-base alloy mill shapes are subdivided as follows: Bare wire for electrical conduction; insulated wire and cable; rod, bar, and mechanical wire; plate, sheet, and strip; and pipe and tube. There is a degree of duplication in the consumption of copper and copper-base mill shapes because of the inclusion in these tables of both bare wire for electrical conduction and insulated wire and cable. However, the consumption of bare wire by insulators of wire and cable is shown separately both in the distribution by industry and by State.

The aluminum and aluminum-base alloy mill shapes are subdivided as follows: Sheet, plate and foil; extruded shapes; and all other mill shapes.

For castings, consumption data are shown separately for iron, steel, aluminum and aluminum-base alloy, and copper and copper-base alloy. Forgings are shown separately for iron and steel and aluminum and aluminum-base alloy.

## PIG IRON, NONFERROUS REFINERY SHAPES, AND SCRAP

Consumption of materials by the primary metal industries is represented in the tables in this section by seven commodities; pig iron and iron and steel scrap (except home scrap), aluminum and aluminum-base alloy refinery shapes and scrap (except home scrap), copper and copper-base alloy refinery shapes and scrap (except home scrap), and zinc and zincbase alloy refinery shapes. Consumption of these materials is also reported by metal fabricators which operate foundry departments or other activities involving such consumption.

There is a certain degree of duplication in the consumption of the refinery shapes, which stems from the fact that secondary smelters and refiners consume unalloyed metal refinery shapes in order to produce alloy ingots. The consumption of refinery shapes by secondary smelters and refiners is shown separately in the distribution by industry.

## INDUSTRY COVERAGE

The tables on consumption by industry include data for approximately 100 metal-fabricating industries. These represent all significant users of metal in manufacturing, and are covered by Major Group 34, "Fabricated Metal Products," through Major Group 37, "Transportation Equipment," and several additional miscellaneous industries, including Major Group 25, "Furniture and Fixtures."

Although there were other metal consuming industries from which consumption data were either not collected or the quantities reported failed publication standards, the omission of these industries affects coverage only slightly.

To relieve very small metal consumers from reporting amounts negligible in terms of total consumption, a minimum usage requirement was established. Expenditures of less than $\$ 5,000$ for each shape or form were exempt from reporting both in terms of cost and quantity. It is estimated that the use of this minimum reporting requirement on the coverage of these materials would not, as a maximum, equal 2 percent of total manufacturing consumption.

When comparing consumption data with production figures, it should be noted that the consumption data cover manufacturing industries only. Consumption of these metal shapes in on-site construction, mining, farm uses, construction and maintenance of power lines, and in other nonmanufacturing areas, such as export, is not covered.

## MILL SHAPES, CASTINGS, AND FORGINGS PRODUCED AND CONSUMED

Mill Shapes and Castings. -Total consumption of mill shapes and forms, castings, and forgings in the manufacture of fabricated products must necessarily include the tonnages used by metal mills and foundries in their manufacture of fabricated products within the same establishment. These data on mill shapes and castings produced and consumed within the same establishment were obtained and are reported in quantity terms only. In the table on the consumption of steel mill shapes by States (table 2A) these data for the metal producing establishments are shown in a column separate from the fabricating industries data. For copper and aluminum mill shapes and for all castings and forgings. the State tables are limited to purchased materials. The consumption data on these items reported by producing establishments could not be shown either because of disclosure or because reporting was incomplete for some industries.

Forgings. -To avoid duplication, data showing the consumption of iron and steel forgings are excluded from the totals for steel consumption since the quantities of forging stock. ingots, billets, and bars, used by the forging plants, are included in steel mill shapes and forms consumed. For this reason establishments in Industry 3391, "Iron and Steel Forgings" are classified as metal fabricators in tables 1 A and 2A rather than as producers of primary metals. In like manner, establishments in Industry 3392, "Nonferrous Forgings" are classified as metal fabricators in tables 1 C and 2 C rather than as producers of aluminum and aluminum-base alloy mill shapes.

## DEFINITION OF METAL MILL SHAPES AND FORMS

Although the inquiry on metals consumed on the 1963 census schedules did not include a definition of the metal shapes specified, the metal fabricating companies' familiarity with the terms and their meaning provided a high degree of uniformity in reporting. The term "bars and bar shapes" appearing in the tables showing steel consumption, includes hotrolled and cold-finished bars, and tool-steel bars; "sheet and strip" includes hot- and coldrolled, galvanized, and long ternes, but excludes tin plate, terne plate, and black plate; "wire and wire products" includes plain, galvanized, and other coated wire, as well as nails and spikes and the like; "all other carbon steel mill shapes and forms" includes
ingots, billets, wire rods, concrete reinforcing bars, tin plate, terne plate, black plate, pipe, tubing, and rails, but not forgings or materials fabricated beyond the steel mill level.

The terms copper and copper-base alloy and aluminum rolled, drawn, and extruded shapes are similar to the steel mill products listed above; i.e., sheets, bars, tubing, wire, etc. They do not include wire bars, ingots, or other unrolled forms of copper or aluminum.

The data for bare copper wire are limited to wire for electrical conduction. Data for nonelectrical copper wire are included with rod and bar. The data for copper and copperbase alloy plate, sheet, and strip also include military cups and discs.

The castings (iron and steel, etc.) reported are only those in the rough and semifinished forms in which they are usually received from foundries. Castings, which had undergone extensive machining or other operations prior to their receipt at the consuming establishment, were considered as fabricated products rather than rough castings, and are not included in these data. However, such castings are reported as consumed by the establishments performing the machining operations.

Comparable data for the year 1958 are available on pages 42 to 67 of Chapter 7, Volume I, Summary Statistics, 1958 Census of Manufactures.

The following differences should be noted between the 1958 and 1963 censuses:

1. Aluminum and aluminum-base alloy extruded shapes which are published separately for 1963 were included with "all other" aluminum mill shapes in 1958.
2. Insulated wire and cable were excluded from Volume I of the 1958 Census of Manufactures but were published in report MC58(S)-5, "Consumption of Selected Metal Mill Shapes and Forms."
3. Copper and copper-base alloy rod, bar, and mechanical wire; plate, sheet, and strip; and pipe and tube were published as a single item in 1958.
4. Minor changes were made in the list of industries for which materials consumption was measured.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Major Group (2-digit) and industry group (3-digit) totals include (a) data for individual industries for which data are published as well as for those industries which could not be published without disclosing the operations of individual companies, and (b) an estimate of quantities for industries for which cost data were publishable but for which quantity data were suppressed because of significant nonreporting of quantity figures. The estimates for quantities are based on an average for a 2-digit inaustry group derived from those industry totals within the group for which valid totals of quantity and associated cost were reported.
${ }^{2}$ Includes data on the consumption of tin plate, black plate, and terne plate which amounted to $5,106,745$ short tons at a cost of $\$ 1,033,624$ thousand. Also includes concrete reinforcing bars which totaled 1,371,770 short tons at a cost of \$151,247 thousand. Separate consumption statistics for these materials for selected industries are available in Volume II, Industry Statistics.

[^128]applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Major group (2-digit) and industry group (3-digit) totals include (a) data for individual industries for which data are published as well as for those industries which could not be published without disclosing the operations of individual companies, and (b) an estimate of quantities for industries for which cost data were publishable but for which quantity data were suppressed because of significant nonreporting of quantity figures. The estimates for quantities are based on averages derived from those industry totals within the group for which valid totals of quantity and associated cost were reported.

2The "Metal fabricating industries" include establishments whose primary activity is the manufacture of products fabricated beyond the metal mill or foundry level.
${ }^{3}$ In addition, 730,948 thousand pounds of bare wire for electrical conduction were produced and consumed by nonferrous wire drawing establishments
in the manufacture of further fabricated products. Most of this consumption resulted in the production of insulated wire and cable.
${ }_{4}$ Excludes insulated wire and cable produced and consumed in insulating plants in the production of fabricated products such as appliance wire and cord and flexible cord sets.
${ }^{5}$ Excludes brass mill shapes produced and consumed in nonferrous metal mills in the manufacture of fabricated metal products for which figures are not available.
${ }^{6}$ Excludes figures for industry 3624, "Carbon and Craphite Products."

## table 1c. Consumption of Aluminum and Aluminum-Base Alloy Mill Shapes and Forms, by Selected Industry Groups and Industries: 1963

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{1}$ Major group (2-digit) and industry group (3-digit) totals include (a) data for individual industries for which data are publishable as well as for those industries which could not be published without disclosing the operations of individual companies, and (b) an estimate of quantities for industries for which cost data were publishable but for which quantity data were suppressed because of significant nonreporting of quantity figures. The estimates for quantities are based on averages derived from those industry totals within the group for which valid totals of quantity and associated cost were "aported.
${ }^{2}$ Not comparable to 1958 . In the 1958 Census of Manufactures extruded shapes were included with "All other aluminum mill shapes and forms."
${ }^{3}$ The "Metal fabricating industries" include establishments whose primary activity is the manufacture of products fabricated beyond the metal mill or foundry level.
${ }^{4}$ Excludes aluminum and aluminum-base alloy mill shapes produced and consumed in nonferrous metal mills in the production of fabricated products.
${ }^{5}$ Data for industry 3357 represents mill shapes and forms other than rods, wire for redrawing, and bare wire. For industries 3391 and 3392 , represents all aluminum and aluminum-base alloy mill shapes.
${ }^{6}$ Excludes figures for industry 3519, Internal Combustion Engines,
${ }^{7}$ Excludes figures for industry 1931, Tanks and Tank Components.

Standard Notes: - Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{1}$ Major Croup (2-digit) and Industry group (3-digit) totals include (a) data for individual industries for which data are published as well as for those industries which could not be published without disclosing the operations of individual companies, and (b) an estimate of quantities for industries for which cost data were publishable but for which quantity data were suppressed because of significant nonreporting of quantity figures. The estimates for quantities are based on an average for a 2-digit industry group derived from those industry totals within the group for which valid totais of quantity and associated cost were reported.
${ }^{2}$ Includes quantities received as interplant transfers from establishments owned by the same company.
${ }^{3}$ Refinery shapes consumed on a toll basis are included in the industry of the establishment owning the materials rather than in the industry in which such materials were processed. No separate data are available for refinery shapes processed on a toll basis.
${ }^{4}$ Excludes 56,369 thousand short tons produced and consumed in the same establishment in Industry 3312, Blast Furnaces and Steel Mills.
${ }^{5}$ Includes duplication arising from the consumption of aluminum pig by alloying plants (SIC 3352) in the production of 195,207 short tons of alumi-num-base alloy ingot, which in turn was consumed by rolling mills, foundries and other consumers. Exact quantity duplicated cannot be determined.
${ }^{6}$ Excludes the quantities of materials consumed in foundry departments of establishments classified in finished product industries. Such quantities are included in the totals for the finished product industries.

## Standard Notes: - Represents zero.

(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
n.e.c. Not elsewhere classified
${ }^{1}$ Data represent only the consumption of purchased scrap in selected industries. No data are available on the quantities of "home" scrap consumed.
${ }^{2}$ Major group (2-digit) and industry group (3-digit) totals include (a) data for individual industries for which data are published as well as for those industries which could not be published without disclosing the operations of individual companies, and (b) an estimate of quantities for industries for which cost data were publishable but for which quantity data were suppressed because of significant nonreporting of quantity figures. The estimates for quantities are base on an average for a 2-digit industry group derived from those industry totals within the group for which valid totals of quantity and associated cost were reported.
${ }^{3}$ Excludes figures for the 4-digit industries within the major group, wuich may not be shown without disclosing individual company figures.

# table 2A. Consumption of Steel Mill Shapes and Forms, by Divisions and States: 1963

## Standard Notes: - Represents zero

(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
${ }^{1}{ }^{\text {S Steel }}$ fabricating establishments include plants whose primary activity is the manufacture of products fabricated beyond the metal mill or foundry level. In this table, establishments classified in Industry 3391, "Iron and Steel Forgings" are considered as metal fabricators rather than producers of primary metals. To avoid duplication by counting both the forgings and the bars and billets from which the forgings are produced information for forgings is excluded.
The term "Steel producing establishments" includes steel works and rolling mills, independent pipe mills, steel wire drawing establishments, and cold rolling, drawing, and finishing establishments. The data shown for steel producing establishments include only mill shapes and forms used in the production of fabricated products or in maintenance and repair work and were obtained from information collected on Bureau of the Census Annual Form MA33B, "Steel Mill Products."

## ENGINES, MOTORS, BEARINGS, ELECTRON TUBES, AND SEMICONDUCTORS

This section presents data on gasoline and Diesel engines, motors, and generators (timing. synchronous, subsynchronous, fractional and integral horsepower), ball bearings, roller bearings, electron tubes, and solid state semiconductors consumed.

Tables 1A through 1D present data for consumption of these components by industry. Geographic data are presented in tables 2A through 2D. Comparable 1958 data for the number and cost of electron tubes and solid-state semiconductors are not available. For 1963, separate data are shown for the consumption of ball bearings and roller bearings. Data for 1958 reflect the total cost of ball and roller bearings.

The consumption figures for the parts and components shown account for most of the amounts used by establishments classified in manufacturing. The shipments figures for these items, however, also include amounts for exports, for use in nonmanufacturing activities, and for replacement and repair.

## TABLE 1A. Internal Combustion Engines Consumed, by Selected Industries: 1963 and 1958

Standard Notes: - Represents zero. applicable. Revised.
(D) Withneld to avoid disclosing figures for individual companies.
n.e.c. Not elsewhere classified.
${ }^{1}$ Data for 1958 are not strictly comparable with 1963. In 1963 figures on consumption of ball and roller bearings were collected for several ind ustries which were not included in this program in the 1958 Census of Manufactures. Such industries are identified by the entry "NA".
${ }^{2}$ Represents estimates published in MC58(1)-7 (Supplement), "Selected Materials Consumed", from data collected in a supplemental survey on Form MA-131, "Consumption of Materials, Parts, Containers and Supplies During 1958". This survey was limited to large establishments in selected chemical, machinery and equipment industries and resulted in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures.
${ }^{3}$ Included with "All other industries" to avoid disclosing individual company figures,
${ }^{4}$ For 1963 includes industries 3741, "Locomotive and parts"; 1951, "Small arms, 30 mm and under"; 1961, "Small arms ammunition"; 1911, "Guns, howitzers, and mortars"; and 1999, "Ordnance and accessories, n.e.c.". For 1958 includes industries 3544, "Special dies and tools"; 3631, "Household cooking equipment"; 3723, "Aircraft propellers and parts"; 3741, "Locomotives and parts"; 1929, "Ammunition, n.e.c."; 1931, "Tanks and tank components"; 1941, "Sighting and fire control equipment"; 1951 "Small arms, 30 mm and under"; 1911, "Guns, howitzers, and mortars"; and 1999, "Ordnance and accessories, n.e.c.". Separate data are available for selected of these industries for 1958 as follows: 3741, "Locomotives and parts", \$2,887 thousand; 3631, "Household cooking equipment", \$150 thousand; 1951, "Small arms, 30 mm and under, \$14 thousand.

## table 1C. Electric Motors and Generators Consumed, by Selected Industries: 1963 and 1958

# Selected Metalworking Operations 

Chapter 9

## CONTENTS

## (Page numbers listed here omit the chapter prefix which appears as part of number for each page.)

Text ..... 3
TABLE 1A Selected Metalworking Operations by Industries: 1963 ..... 5
1B Coverage of Selected Metalworking Operations by Industries: 1963 ..... 34
2A Selected Metalworking Operations by Divisions and States: 1963 ..... 36
2B Coverage of Employment in Selected Metalworking Operations by Divisions and States: 1963 ..... 39

## SELECTED METALWORKING OPERATIONS

The 1963 Census of Manufactures included a special inquiry on "Selected metalworking and related operations" to provide a measurement of employment in certain metalworking and related facilities in manufacturing. The following operations were included in this inquiry: Foundry (iron or steel); foundry (nonferrous, except die casting); die casting (nonferrous metal only); forging--presses, hammers, or upsetters; electroplating and other plating; galvanizing and other hot-dip coating; heat treating of metals for production purposes; automatic screw machine department; machine shop; tool and die shop, if separate from machine shop; pattern shop (foundry patterns only); plate or structural fabrication; stamping, blanking, and forming of metals; painting, lacquering, and enameling on metals; plastics molding; assembly of product; and shipping department (including packing and crating).

For the first fifteen such operations listed above, the number of establishments performing these operations and the number of production workers engaged in these operations, are shown by industry in table 1 A and for selected operations by geographic division and State in table 2. The size distribution data in table 1 A is based on the number of production workers usually employed in the operation. Data on the last two operations listed above and on man-hours worked by production workers in specified metalworking operations were collected for only a limited number of industries. Data for these activities are not summarized in this report but are available, by industry, in the 1963 Census of Manufactures, Volume 11, Industry Statistics.

Information on selected metalworking operations was obtained for practically all industries where such operations are important. For individual industries or groups of industries, the inquiry on metalworking and related operations was tailored to fit the principal operations that were characteristic of those industries.
ln many industries small establishments reported on a short form that did not include the inquiry on metalworking operations. Also, a few larger establishments that filed standard forms did not report their metalworking operations. This has resulted in an understatement of the number of establishments maintaining specific operations, primarily in the smallest size class, and to a much smaller degree an understatement of the total number of production workers in the operation.

An approximation of the coverage is given for each industry in table 1B. The coverage is highest in industries in which larger establishments predominate. Similar percentages are shown for geographic divisions and States.

For foundry operations, the number of plants operating foundries consists of the number reporting the operation for each industry plus the number of establishments classified in the foundries industries. For forgings operations, the number of plants operating forge shops consists of the number reporting the operation for each industry
plus the number of establishments classified in the forgings industries. In footnotes to table 1 A , data are shown for the number of establishments classified in these industries. In the State table, separate columns have been included giving the number of establishments classified in these industries in each State. Similarly, the form used by respondents in industry 3471 , Plating and Polishing, did not include the metalworking inquiry. Consequently, data for establishments in this industry were presented in the same manner as for the foundry industries.

A limited inquiry covering machine shops and pattern-shop operations was included for the foundry industries and an inquiry covering machine shops and tool and die shops was included for the forgings industries. Data for those activities are included in these tables.

TABLE 1A. Selected Metalworking Operations by Industry: 1963

## TABLE 1A. Selected Metalworking Operations by Industry: 1963--Continued

Footnotes for table 1A.-Selected Metalworking Operations
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{\text {n.e.c. Not elsewhere classified. }}{ }^{\text {These size groups are based on the number of production workers in the specified operation. They are not based on total employment of the }}$ establishments.
${ }^{2}$ Excludes data for establishments which are primarily engaged in the manufacture and sale of rough castings, including die castings. In li63, the number of establishments classified in each of the commercial foundry industries was as follows: industry 3321, Gray Iron Foundries, l, 139 ; industry 3322, Malleable Iron Foundries, 81; industry 3323, Steel Foundries, 267; industry 3361, Aluminum Castings, 954; industry 3362, Brass, Bronze, Copper Castings, 549; and industry 3369, Nonferrous Castings, N.E.C., 391. See appropriate industry reports in 1963 Census of Manufactures Volume II, "Industry Statistics," for detailed statistics for these industries and those listed in footnotes 3, 4, and 5.
${ }^{3}$ Excludes data for establishments which are primarily engaged in the manufacture and sale of unmachined forgings. In 1963 the number of establishments classified as forge shops was as follows: industry 3391, Iron and Steel Forgings, 272; and industry 3392, Nonferrous Forgings, 34. Also excluded from these statistics are data of forging operations used in the manufacture of bolts, nuts, and other related products.
${ }^{4}$ Excludes data for the 3,023 establishments classified in industry 3471, Plating and Polishing. These establishments usually are engaged in work on materials owned by others and generally perform electroplating operations.
${ }^{5}$ Excludes data for those establishments classified in industry 3479 , Metal Coating, Engraving, Etc., which are primarily engaged in galvanizing and other hot dip coating, usually on materials owned by others.
${ }^{6}$ Since industry 3451 is composed of establishments primarily engaged in producing screw machine products, all establishments classified in the industry should have reported automatic screw machine department operations. However, only 860 of the 1,874 establishments classified in the industry reported such operations; 54 establishments reported no metalworking operations; and the remainder of the establishments in the industry, consisting mainly of small plants with fewer than 10 employees, reported on "short-form" schedules which did not include a metalworking operations inquiry.
${ }^{7}$ Since industry 3461 is composed of establishments primarily engaged in producing metal stampings, all establishments classified in the industry should have reported stamping, blanking, and forming operations. However, only l,328 of the 2,574 establishments classified in the industry reported such operations; 93 establishments reported no metalworking operations; and the remainder, consisting mainly of small plants with fewer than 10 employees, reported on "short-form" schedules which did not include a metalworking operations inquiry.

TABLE 1B. Coverage of Selected Metalworking Operations by Industries: 1963

| Code | Industry | Establishments, number | Establishments which completed the metalworking inquiry |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Establishments which reported one or more of the specified operations |  | Establishments which reported "none" of the operations apply |  | Percent of total production workers |
|  |  |  | Number | Percent of total production workers | Number | Percent of total production workers |  |

# TABLE 2A. Selected Metalworking Operations by Divisions and States: 1963--Continued 

Note: By definition, the nature of the manufacturing operations performed by establishments classified in the foundry, forging, and polishing and plating industries implies that the establishments classified in these industries are engaged in the specified metalworking operations. Accordingly, the reporting forms for these industries either did not include a metalworking operations inquiry or included only an abbreviated inquiry on such activities. The number of establishments and production workers in these industries are shown by State in separate colums in the above table as part of the related metalworking operation.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ The metalworking inquiry for the foundry industries did not request information on foundry or die casting operations. These figures represent the total number of establishments and, where publishable, the number of production workers classified in the foundry industries in each State. These establishments may be engaged in foundry operations (except die casting), die casting, or both.
${ }^{2}$ These figures represent the total number of establishments and, where publishable, the number of production workers classified in the forgings industries in each State. These establishments may be engaged in ferrous forging operations, nonferrous forging operations, or both.
${ }^{3}$ These figures represent the total number of establishments and, where publishable, the number of production workers classified in the plating and polishing industry. Most of these establishments perform electroplating operations.

## TABLE 2B. Coverage of Employment in Selected Metalworking Operations by Divisions and States: 1963

(NA) Not available.
(X) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{1}$ The coverage ratios show the relationship of the number of production workers for plants which completed the metalworking inquiry to the total number of production workers in the same State or division for those industries to which the metalworking inquiry was applicable. The ratios are computed on the basis of the total number of production workers of plants answering the metalworking inquiry rather than the number of production workers engaged in metalworking operations.

## WATER USE IN MANUFACTURING

## GENERAL

This report contains statistics showing the use of water by manufacturing industries in 1964 with comparable data for 1959.

Information on industrial water use by manufacturing establishments was first collected and published by the Bureau of the Census in the 1953 Annual Survey of Manufactures. In the 1963 Census of Manufactures, as in the 1954 Census, information on water use was collected from all manufacturing establishments employing six or more people, except for establishments in the printing and publishing and apparel industries. The latter establishments are relatively small water users and/or operate primarily in rented quarters where water is generally furnished by the landlord. The detailed information on water utilization for 1964 was collected and published for those manufacturing establishments using 20 million gallons of water or more per establishment.

Information was not collected in the 1958 Census of Manufactures. However, a special post-census survey was taken in 1959, which included all establishments reporting water use of 20 million gallons or more in 1954 as well as all companies having at least one establishment with 250 employees or more in the 1958 Census of Manufactures. In industries known to be extensive users of water, all establishments with 100 employees or more were included.

Approximately 85 percent of the 14.1 trillion gallons consumed by manufacturing establishments in 1964 was accounted for by four major industry groups; namely, Primary Metal Industries (Major Group 33), Chemicals and Allied Products (Major Group 28), Paper and Allied Products (Major Group 26), and Petroleum and Coal Products (Major Group 29). In fact, almost all the increase in industrial demand for water from 1954 to 1959 ( 1,870 billion gallons) and from 1959 to 1954 ( 605 billion gallons) can be attributed to these four major industry groups. Even within these major groups, specific industries accounted for the major share: Blast furnaces and steel mills consumed about 27 percent of the total manufacturing consumption of water and manufacturers of industrial chemicals used about 21 percent of the total. About 60 percent of industrial water was consumed by establishments located in five Water-Use Regions; namely, the Delaware and Hudson, the Ohio River, the Eastern Great Lakes, the Western Great Lakes, and the Western Gulf Regions.

## MANUFACTURERS USE OF WATER

While manufacturing industries are important users of water in the United States, the utilization by such establishments is highly concentrated. According to the 1964 survey, establishments with an annual water intake of 20 million gallons of water or more accounted for about 97 percent of water withdrawn for manufacturing purposes. These plants, however, represent only about 3 percent of all manufacturing establishments and employ approximately 39 percent of the total number of persons engaged in manufacturing.

## 1964 INDUSTRIAL WATER USE

In the 1963 Census of Manufactures, the standard census forms submitted by all establishments employing over five people, contained a check-type question on water consumption in terms of broad size ranges of gallonage usage. The returns indicated that, of the 300,000 establishments with six or more employees, approximately 10,000 establishments reported using 20 million gallons of water or more. These "large" water users were included in the special water survey for 1964 (MC-D13) and reported, for that year, detailed information on water use by source; purpose of water intake; point of discharge, and kind cf water treatment. Excluded from the 1964 survey were establishments in Major Groups 23, Apparel, and 27, Printing and Publishing. ${ }^{1}$ All data for wate uses exclude governmentowned establishments operated by private contractors for the account of the Atomic Energy Commission. Both the 1964 and 1959 figures, but not those for 1954 figures, but not those for 1954, include data for establishments located in Alaska and Hawaii.
While the quantity of water intake by manufacturing establishments is relatively large, the quantities actually consumed in process, by evaporation, etc., is only about 6 percent of the withdrawals. Data on net use, as defined above, may be calculated in the tables shown in this report by subtracting water discharged from water intake. Gross water use, as shown in the tables, reflects recirculation or resue of the water in the same establishments and partially reflects water management. While no measure of the deterioration of the water resulting from use is available, data are shown for the quantities of intake water treated as well as for treatment of water for discharge.
The tables appearing in this chapter (tables 1 to 9 ) provide statistics for establishments using 20 million gallons or more annually, and include those which recirculate and those which treat discharge water. The arrangement of the data is by industry, industrial wateruse region, and State. The boundaries for States are political, while those for industrial water-use regions are combinations of counties without regard for State lines. These regions, which center around river basins, were developed in consultations with the Federal agencies having responsibility for water development or use and with representatives of private industry and they approximate the major drainage systems in the country, Minor changes in the composition of these water regions, made between 1959 and 1964 have no significant effect on the comparability of the data. The areas included are shown in a series of maps appearing in this report. The industry classifications used are based on the 1957 edition of the Standard Industrial Classification (SIC) manual (see Introduction).
Totals for water use have been provided for the SIC industry classifications at the 2-, 3-. and 4 -digit levels. Differences in manufacturing processes are not as great at the SIC 4 -digit level as at the higher order 2-and 3-digit levels. Accordingly, the water-use statistics are most meaningful when examined on a 4 -digit SIC basis and related to the processes, products, employment data, etc., at that level. The aggregations at the $3-$, but particularly at the 2-digit levels, represent totals for industries which differ widely in processes used. materials fabricated, or products produced. (See Introduction--Industry Classification of Establishments.) Thus, for example, the water consumption use for Major Group 26, Paper and Allied Products, will differ in the Pacific Northwest Water Use Region from that in California Water Use Region because of industrial composition as well as because of geography or other factors.

## WATER, EMPLOYMENT,VALUE ADDED, AND VALUE OF SHIPMENTS

While industrial processes and geography determine very largely the consumption pattern of water intake, differing manufacturing practices and institutional variations also affect the use and reuse of water. Measures regarding the relationship of water intake and water management to industrial activity are frequently needed to gage present and future industrial water requirements.
$1_{\text {While data }}$ were collected for Major Group 19, Ordnance and Accessories, the water intake is not shown separately for this group.

To facilitate such studies at either local or regional levels, the tables shown in this report contain data showing, for selected industrial groups, the employment, value added by manufacture, and value of shipments, for significant water users which, as indicated above, account for practically all industrial water consumption. The most valid use of these data is to provide measures of industrial activity for significant water-using establishments as well as to show those establishments which circulate water, treat water discharge or use water for other purposes. The industrial activity measures (employment, value of shipments, and value added by manufacture) are from the census of manufactures covering the year 1963.

## DEFINITION OF INDUSTRIAL WATER USE TERMS

The terms "establishments," "manufacturing industries," "industry classifications," "Standard Industrial Classification,""employment," "value of shipments," value added," are defined in the Introduction.

## Water Intake:

Public Water System, Fresh water supplied by a water system (whether publicly or privately owned) whose primary purpose is to supply water to the general public. The data also include fresh water supplied by systems whose principal function is to supply water to industrial users.

Company Water System. Fresh water supplied from a company's water supply system or obtained from another company where the supplying company is not primarily a water supplier to the general public and/or industrial users. The data also include only that portion of fresh water obtained from a joint water supply system operated by the reporting company.

Brackish water is defined as all water with more than 1,000 parts per million of dissolved solids.

Gross Water Used. The total quantity of water which would have been needed if no water was recirculated or reused. For example, if 100 million gallons of intake water were used twice for cooling purposes, and then the same water was again reused for washing products or materials, the total water required would be 300 million gallons (less consumption and evaporation loss).

Water Discharged:
Total. Quantity of water brought to ultimate discharge point. The data exclude quantities of water held in ponds, lagoons, or basins, for reuse or treatment, or water discharged by evaporation processes.

Ground, Includes quantities which seep into ground from collection basins, such as ponds, lagoons, etc.

Transferred to Other Users. Includes quantities transferred after use, to another establishment of either your company or another company.

Water Treated. The total quantity of water treated for control of biological growth, removal of suspended or dissolved solids, for corrosion control, or for any other purpose by simple or complex methods.

Water Intake Treated. Excludes quantities of intake water treated only by chlorination.
Water Discharge Treated. Includes quantities treated for discharge by all methods, including chlorination.

## COVERAGE

As previously stated, the water usage as reported in these tables covers better than 97 percent of all water intake by manufacturing establishments. Reasonable estimates of water usage by manufacturing establishments consuming less than 20 million gallons of water by industry, water-use region, and State, can be derived by using the 1963 census data as shown in table 10. Estimates of total water consumption (including consumption by small users) for a specific industry, water-use region, or State can be obtained for the first three water-consumption size classes; i.e., under 1 million gallons, 1 to 9 million gallons, and 10 to 19 million gallons. In order to obtain an estimate for those establishments consuming under 1 million gallons of water, multiply the factor . 34 million gallons times the number of establishments in that consumption size group; for establishments consuming from 1 to 9 million gallons, use the factor 4.65 million gallons; and for those establishments consuming 10 to 19 million gallons, use the factor 14.19. The expected relative error using this method of estimation is less than 10 percent. Establishments using 20 million gallons of water or more were the basis for the 1964 Industrial Water Use Survey. The consumption of water by these establishments is shown in the following tables showing exact water intake figures.

# table aA. Comparative Statistics for All Establishments and Those Establishments Consuming 20 Millon Gallons of Water or More in 1964

 industries whether or not separate figures are shown for the individual industries.

- Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
$\mathrm{r}_{\text {Revised }}$
(S) Figures did not meet publication standards.
(X) Not applicable.
( $Z$ ) Less than 500 million gallons.

 for Major Group 19 is included in all total figures but was considered too insignificant to publish.
${ }^{2}$ Includes figures for Standard Industrial Classification 2872, Fertilizers, Mixing only.

table 2. Water Intake by Purpose, 1964, Gross Water
B. WATER USE REGIONS, MAJOR INDUSTRY

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries whether or not separate figures are shown for the individual industries.
$\overline{\mathrm{r}}_{\text {Revised. }} \mathrm{Represents} \mathrm{zero}$.
(S) Figures did not meet publication standards.
(X) Not applicable.
(Z) Less than 500 million gallons.
(Z) Less than 500 million gallons. water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries whether or not separate figures are shown for the individual industries.

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than 500 million gallons.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, extablishments classified in Major Groups 19, 23, and 27. In 1959, such establishments had total water intake of 35 billion gallons, gross water use of 95 billion gallons, discharge of 32 billion gallons of water, and 338 thousand employees.

## table 4. Water Intake by Purpose and Source, 1964, and Gross

A. INDUSTRY GROUPS
(In billion gallons except employees. Data contained in this table is only

 industries.
$\bar{r}^{-R e p r e s e n t s}$ zero.
Revised.
(S) Figures did not meet publication standards.
(Z) Less than 500 million gallons.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

## Water Used and Discharged Water, 1964 and 1959-Continued

## table 4. Water Intake by Purpose and Source, 1964, and Gross

B. WATER USE REGIONS AND
(In billion gallons except employees. Data contained in this table is only

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries.
$\overline{\mathrm{r}}$ Represents zero.
r Revised
(S) Figures did not meet publication standards.
(Z) Less than 500 million gallons.

Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 19, 23, and 27. In 1959, such establishments had total water intake of 35 billion gallons of water, and 338 thousand employees.

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries whether or not separate figures are shown for the individual industries.

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than 500 million gallons.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

Standard Notes:
Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. (Z) Less than 500 million gallons.
n.e.c. Not elsewhere classified.
$1_{\text {Figures for }} 1964$ exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27 . In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries whether or not separate figures are shown for the individual industries.

## - Represents zero. (Z) Less than 500 million gallons.

${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 19, 23, and 27. In 1959, such establishments had total water intake of 35 billion gallons of water, and employment of 338 thousand persons.

## table 6. Water Treated Prior to Use and Type of Treatment by Number of Establishments: 1964-Continued

C. STATES AND MAJOR INDUSTRY GROUPS-Continued

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries.

- Represents zero. ( ( Z Less than 500 million gallons.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total rater intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.
table 7. Water Treated Prior to Recirculation or Reuse and Type of Treatment by Number of Establishments: 1964

Note: Detail figures may not add to totals because of independent rounding. The figures shown for industry groups include data for all component industries whether or not separate figures are shown for the individual industries.

- Represents zero. (Z) Less than 500 million gallons.
i $_{\text {Figures for }} 1964$ exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

## table 7. Water Treated Prior to Recirculation or Reuse and Type of Treatment by Number of Establishments: 1964-Continued

B. WATER USE REGIONS AND MAJOR INDUSTRY GROUPS-Continued

[^165] industries whether or not separate figures are shown for the individual industries.

Represents zero
(z) Less than 500 million gallons. n.e.c. Not elsewhere classified.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and l52 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

 industries.

- Represents zero
(z) Less than 500 million gallons.
${ }^{1}$ Figures for 1964 exclude and figures for 1959 include, establishments classified in Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons of water, and 152 thousand employees. Data for Major Group 19 is included in all total figures but was considered too insignificant to publish.

Discharged by Point of Discharge for Establishments Treating Water: 1964-Con.

## CONCENTRATION RATIOS

## GENERAL

The tables in this chapter are taken from a special report prepared by the Census Bureau at the request of the Senate Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary. The report was issued as a Senate Committee print (89th Congress, 2nd Session) entitled Concentration Ratios in Manufacturing lndustry 1963. It has also been issued by the Census Bureau as a special report from the 1963 Census of Manufactures.

The complete report provides the following information:
Tables 1 Ato 1D-share of total value added by manufacture accounted for by the 50 , 100, 150, and 200 largest manufacturing companies (reproduced in this chapter).

Table 2-percent value of shipments accounted for by the 4, 8, 20, and 50 largest companies in each manufacturing industry for 1963 compared with 1958, 1947, 1954, and 1935 (reproduced in this chapter).

Table 3-percent of total manufacturing (employment, payrolls, value added, capital expenditures, etc.) accounted for by the 4, 8, 20, and 50 largest companies ranked by value of shipments in each industry in 1963 (not reproduced in this chapter).

Table 4-percent of value of shipments of each class of products accounted for by the largest companies, 1963 compared with 1958 and 1954 (not reproduced in this chapter).

A second part of the 1963 report on concentration is planned by the Subcommittee and will provide frequency distributions of concentration ratios by industry and concentration level; measures of concentration at the State level for some industries; information on the diversification and integration of the largest companies.

Through years of usage the term "concentration ratio" has come to mean the share of the total activity or resources of a given segment of the economy accounted for by its largest companies. In order to avoid disclosure of the operations of any individual firms, concentration ratios based on census data are presented in groups of four or more companies, that is, the four largest, the eight largest, and so forth.

The concentration ratios based on census data have consistently been prepared on what is known as an unconsolidated basis, and, indeed, represent the only source of concentration figures prepared in this manner. Virtually all other tabulations have been prepared on a consolidated basis. The difference is that on the unconsolidated basis the total shipments of a given company are not assigned to just one industry. Instead, they are distributed among the various industries in which they are actually made. This can be done from the census material since the reports are received from individual establishments, which are classified by industry and grouped by the owning company within industry. In tabulations made on a consolidated basis, all of a given company's activities or resources are in effect consolidated in one industry-the industry in which the concern is principally engaged. Since most large companies are engaged in more than one industry, the consolidation of all of their shipments in one industry may yield a
decidedly different concentration figure from that based on the unconsolidated method. (See Introduction to this census volume, sections 5 and 6 on Standard Industrial Classification and the establishment basis of reporting.)

Under the establishment-industry approach, each plant is assigned to one or the other of the approximately 4304 -digit industries. This is done primarily to secure needed information on payrolls, man-hours, cost of materials, value added by manufacture, and other matters which relate to the operations of the entire plant. As part of this process, the entire shipments of the plant are also assigned to a particular industry. This will include not only its output of products classified in the industry (primary products) but of products classified in other industries as well (secondary products) and miscellaneous receipts and resales. Thus, on the industry basis, the concentration ratios are derived by calculating the total shipments of plants belonging to the largest companies as a percent of the shipments of all plants in the industry. The establishment-industry approach is used in the preparation of table 2.

## TABLES 1A THROUGH 1D

These tables show the share of total manufacturing activity in the United States accounted for by the largest manufacturing companies. At the "all manufacturing" level concentration is measured in terms of value added by manufacture.

Information on value added by manufacture for all establishments' operated in manufacturing by a given company was aggregated irrespective of the industry classification of the individual establishments. The companies were then arrayed by their value added in each census year and figures for the 50, 100, 150, and 200 largest companies in each year aggregated. These tables exclude the companies' establishments classified outside of manufacturing.
(1) In table 1A, the companies in each category are not identical for all five years, since the size array was developed independently for each year.
(2) In table 1B, which is an innovation in 1963, the share of the large companies is shown not only in terms of value added but in terms of eight other items as well: Number of establishments, total employment, total payroll, number of production workers, production worker man-hours, production worker wages, value of shipments, and new capital expenditures. Figures in this table on total employment and total payrolls include the central administrative offices and auxiliary units serving manufacturing establishments. (See introduction, for definition of these establishments.)
(3) In table 1C, the 50 and 100 largest companies in each of several census years were identified and the share of total value added by manufacture accounted for by these same companies in each of the specified census years was computed. Thus, the tables show the changes in shares of value added taking place for a fixed group of companies from one census to another.
(4) For table 1D, the 50 largest companies in one census year were selected and the rank groups of these same companies determined in the other census years. Thus, this better measures the shifting of position of a fixed group of companies from one census to another.

The standard formula for calculating value added by manufacture since 1958 differs from the one used for the 1954 census and earlier years. During the earlier period, the "value added" of an establishment was calculated by subtracting the cost of materials, supplies, containers, fuels, purchased electric energy, and contract work from the value of shipments for products manufactured plus miscellaneous receipts for services rendered.

This is known as unadjusted value added in census publications. Beginning with 1958, the measure of value added has been adjusted for each establishment in two respects: Value added now includes (1) value added by merchandising (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly; and (2) an adjustment for the net change in finished goods and work-in-process inventories between the beginning and the end of the year. The resulting figure is the adjusted value added.

Thus, the rankings of the 200 largest companies in 1947 and 1954 were based on unadjusted value added; those for 1958, 1962, and 1963 were based on adjusted value added. The use of these different measures for determining size should have little effect on the ranking and relative shares of individual companies or on the aggregate shares of the 50, 100, 150, or 200 largest companies in each year.

## TABLE 2

This table is based on the industry approach described above. ln using it, the following should be kept in mind:
(1) The industry categories are those described in the 1957 edition of the Standard Industrial Classification Manual (SlC) as amended by the Supplement to 1957 Edition published by the Bureau of the Budget in 1963. They differ from those used to prepare table 2 of the report, Concentration Ratios in Manufacturing lndustry: 1958, but are the same as those used to prepare the final 1963 Census of Manufactures reports. The 1945 definitions were used to prepare the 1958 industry concentration ratios (but not the product class ratios) in order to achieve comparability with the series extending back to 1935. (See the introduction to Concentration Ratios in Manufacturing lndustry: 1958.)

In table 2, figures are shown for prior years only if the industries were judged sufficiently comparable in definition under both the 1957 (new SIC) and 1945 (old SiC) system. If the employment in the plants reclassified into the new SIC from other industries and reclassified out of the old SIC to other industries, accounted for 2 percent or less of the original total employment in the old SIC industry, the industries were considered sufficiently comparable to show historical data. The composition of the new and the old SIC appears in table 7 of the report, Concentration Ratios in Manufacturing lndustry: 1958, and in appendix C of the 1958 Census of Manufactures volumes.

It was not feasible to recalculate the 1958 concentration ratios on the new SlC because of the serious problem of disclosure of individual company data that would result. Under the law (13 U.S.C.) the Census Bureau cannot publish information, which will disclose the operations of individual companies.
(2) The top $4,8,20$, and 50 companies are the largest for each particular year based on their value of shipments and are thus not necessarily the same for each year. Value added rather than value of shipments has been used in making these calculations for a few industries which contain a large and often indeterminate amount of duplication because the products of some establishments in the industry are used to a significant degree as materials by other establishments in the same industry.
(3) Since, for the purpose of these tabulations, a company is defined as the total of the individual establishments operated by the company within an industry, the same company may appear in several industries if it has diversified activities.
(4) The value of shipments in table 2 is not completely comparable between 1963 and prior years. In 1963, the value of shipments includes resales as well as the value of primary products, secondary products, and miscellaneous receipts. $\ln 1958$ and prior
years, resales were excluded from the value of shipments. In most industries and plants resales activity is so small it does not affect comparability. For a few industries so noted, comparable figures are not shown even if the SIC definition is comparable because resales were significant enough to change rankings in earlier years and thus affect comparability.
(5) In 1963, establishments in Alaska and Hawaii are included in the industry totals. In 1958, these States were not included as part of the U.S. totals since they did not achieve statehood until 1959. For a few industries, the 1958 to 1963 comparability of the industry data and concentration ratios is significantly affected even though the SIC definitions of the industry did not change. These industries are appropriately footnoted to explain the suppression of the data prior to 1963.

For a more complete discussion of the development of concentration ratios and some discussion of their limitations, see the introduction to the text of the report Concentration Ratios in Manufacturing Industry: 1963.

Table 1A. Share of Total Value Added by Manufacture Accounted for by Largest Manufacturing Companies in 1963 Compared with Share Accounted for by Largest Companies in 1962, 1958, 1954, and 1947

| Company rank group in respective years | Percent of value added by manufacture |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1963 | $1962{ }^{\text {² }}$ | 1958 | 1954 | 1947 |
| Largest 50 companies.. | 25 | 24 | 23 | 23 | 17 |
| Largest 100 companies. | 33 | 32 | 30 | 30 | 23 |
| Largest 150 companies. | 37 | 36 | 35 | 34 | 27 |
| Largest 200 companies. | 41 | 40 | 38 | 37 | 30 |

Note: See footnotes at end of table 1D.

Table 1B. Percent of All Manufacturing Activity in 1963 Accounted for by the 50, 100, 150, and 200 Largest Manufacturing Companies Ranked on 1963 Value Added by Manufacture

| Item | All manufacturing ${ }^{-}$ establishments | Percent accounted for by establisinments of the largest companies |  |  |  |  |

\title{
Table 2. Percent of Value of Shipments Accounted for by the Largest Companies in Each Manufacturing Industry: 1963 Compared With 1958, 1954, 1947, and 1935-Continued
}

\author{
Footnotes for Table 2
}

Standard Notes: - Represents zero. panies. (NA) Not available.
(D) Withheld to avoid disclosing figures for individual comn.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

Industry codes and descriptions are based on the 1957 Standard Industrial Classification Manual (SIC) as modified. This classification system represented a substantial revision from the previous 1945 edition and was put into effect with the final reports in the 1958 census. However, the concentration ratios in 1958 were tabulated on the 1945 edition to preserve comparability to prior years. Also in 1958, establishments in Alaska and Hawaii were not included as part of U.S. industry totals since these States did not attain Statehood until 1959. Data and ratios for 1958 and prior years are shown in this report only if the industry definitions are so closely comparable that the concentration ratios could not be affected by the shifting of plants due to industry classification changes or by the change in treatment of Alaska and Hawaii. (See "Concentration Ratios in Manufacturing Industry: 1958," Part I, table 7, for comparability of old-new industry definitions.)
\({ }^{2}\) The determination of company affiliation of establishments is based on census reports and publicly available records. Value of shipment totals for establishments have been summarized into company totals in each manufacturing industry. "Largest" companies are determined by each company's value of shipments in the specified industry.
\({ }^{3}\) Value of shipments figures are not completely comparable between 1963 and prior years. They include for all establishments classified in the industry (a) value of products primary to the industry, (b) value of all secondary products which are primary to other industries, (c) value of miscellaneous receipts such as receipts for contract and conmission work on materials owned by others, scrap, salable refuse, repairs, etc. and (d) value of resales--i.e., products resold in same condition as bought. In 1958 and prior years value of resales was excluded from value of shipments.

4 The percentages consist of the sum of the value of shipments of the largest 4 companies (or 8 , 20, or 50 companies), divided by the total value of shipments of the industry.
\({ }^{5}\) The "primary product specialization ratio" measures the extent to which plants classified in the industry specialize in making products regarded as primary to the industry; that is, value of shipments of primary products of plants in the industry is expressed as a ratio of the total shipments of all products made by these establishments (excluding miscellaneous receipts, such as receipts for contract and commission work on materials owned by others, scrap and salable refuse, repair, etc.). The 1954 and 1947 ratios for some industries reflect minor revision of previously published census data.
\({ }^{6}\) The "coverage ratio" measures the extent to which all shipments of primary products of an industry are made by plants classified in the industry, as distinguished from secondary producers elsewhere; that is, value of shipments of the primary products made by plants classified in the industry is expressed as a ratio of the total shipments of primary products made by all producers, both in and out of the specified industry. The ratios for 1958 and prior years reflect minor revision of previously published census data.
\({ }^{7}\) Value added by manufacture is shown for this industry rather than value of shipments because the latter contains a substantial and unmeasurable amount of duplication. The calculations for the 4, 8, 20 and 50 largest companies also are based on value added. The value added figure for 1963 is adjusted value added; for 1958 and prior years it is unadjusted value added. Adjusted value added is calculated by subtracting the cost of materials including cost of resales from the value of shipments including resales and adjusting for the change in finished products and work-in-process inventories during the year. Unadjusted value added excludes value added by resales and any inventory change.
\({ }^{8}\) Not completely comparable to 1954 and later years because of a change in industry classification. For discussion of 1947-1954 comparability, see 1954 Census of Manufactures, Volume II, Industry Statistics, "Dairy Products."
\({ }^{9}\) In 1954, industry 2027, Fluid Milk, was composed of 2 industries, 2026, Fluid Milk (only), and 2027, Fluid Milk and Other Products. In 1954 figures on value of shipments and share of value of shipments accounted for by the 4 and 8 largest companies have been recalculated on a basis comparable to 1958. In 1947 and earlier years, establishments primarily distributing fluid milk were classified as nonmanufacturing.
\({ }^{10}\) Establishments in Alaska and Hawaii are important producers in this industry. Recomputed figures cannot be shown for the \(4,8,20,50\) companies prior to 1963 without disclosing the operation of individual companies in Alaska and Hawaii.
\({ }^{11}\) Value of production shown for this industry rather than value of shipments. For 1963 the figure includes value of primary and secondary products made, miscellaneous receipts such as receipts for contract and commission work on materials owned by others, scrap and other salable refuse, and the value of products bought and resold in the same condition. For 1958 and prior years resales are excluded.
\({ }^{12}\) The 1954 data for industry 2036 are not completely comparable to 1958; 1963 and 1947 data are not available. In 1947 industry 2036, Packaged Seafood, was in part (frozen packaged seafood) included in industry 2037, Frozen Fruits, Vegetables, and Fish, and in part (fresh packaged seafood) included in nonmanufacturing industries (principally industry 5046, Fish and Seafoods). A significant but undetermined number of establishments classified in industry 2036 in 1958 and 1963 were probably classified in industry 5046 in 1954.
\({ }^{13}\) Includes data for 21 wholesale distributors of malt liquors. Each had less than 10 employees and had no significant effect on any of the statistics for the industry except the establishment and company counts.
\({ }^{14}\) Bonded store rooms which were engaged in blending wines were included in 1963, 1958, and 1954, but excluded in 1947.
\({ }^{15}\) The discrepancy between these figures and those appearing in table 1 of the 1958 Census of Manufactures, Volume 11, Chapter 20H, Fats and Oils ( 82 companies and \(\$ 994,865,000\) value of shipments) is due to a misclassification of 16 small companies into industry 2092. These companies should have been classified into industry 2096, Shortening and Cooking Oils.

\title{
Table 2. Percent of Value of Shipments Accounted for by the Largest Companies in Each Manufacturing Industry: 1963 Compared With 1958, 1954, 1947, and 1935-Continued
}

\author{
Footnotes for Table 2-Continued
}
\({ }^{16}\) The 1957 (SIC) combined into this industry two industries which were separate in the 1945 SIC: industry 2882, Linseed Oil Mills, and industry 2884, Vegetable Oil Mills, N.E.C. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{17}\) The SIC, as revised in 1963, combined into this industry two industries which were separate in the 1945 SIC: industry 2886, Grease and Tallow, and industry 2889, Animal Oils, N.E.C. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{18}\) The 1957 SIC combined into this industry two industries which were separate in the 1945 SIC: industry 2092, Shortening and Cooking Oils, and industry 2093, Margarine. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{19}\) Comparable data are not available because of significant changes in the 1947 classification of plants or products in this industry.

20 Jobbers were included in 1947 but excluded in 1954 and later years.
\({ }^{2}{ }^{1}\) Value of production shown for this industry in 1958 and prior years whereas value of shipments is shown for 1963. This change does not affect significantly the comparability between 1963 and prior years.
\({ }^{22}\) The SIC combined in this industry two industries which were separate in the 1957 SIC: industry 2255, Knit Glove Mills, and industry 2259, Knitting Mills, N.E.C. The 1958 value of production figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{23}\) Includes finished cotton broadwoven fabrics (except commission finishing) which are also primary to industry 221l, Weaving Mills, Cotton. A coverage ratio computed on the basis of including both industries to which finished cotton broadwoven fabrics are primary would total 96 percent.
\({ }^{24}\) Includes finished synthetic fabrics (except commission finishing) which are also primary to industry 2221, Weaving Mills, Synthetics. A coverage ratio computed on the basis of including both industries to which finished synthetic fabrics are primary would total 77 percent.
\({ }^{25}\) Includes finished yarns except wool which are also primary to industry 2281, Yarn Mills, Except Wool. A coverage ratio computed on the basis of including both industries to which finished yarns, except wool, are primary would total 90 percent.
\({ }^{26}\) Excludes shipments of \(\$ 109\) million of finished purchased yarns from establishments classified in industry 2269, Finishing Plants, N.E.C. A coverage ratio computed on the basis of including both industries to which yarns (gray and finished) are primary would total 92 percent.
\({ }^{27}\) This industry included a large number of very small establishments in 1958, and there is a possibility that some were misclassified as to industry. Industry misclassification of these small establishments does not affect significantly any statistics other than the number of establishments and companies.
\({ }^{28}\) This industry includes a large number of very small establishments in 1963 and some of these small establishments may have been misclassified as to industry. Industry misclassification of these small establishments does not affect significantly any statistics other than the number of establishments and companies.
\({ }^{29}\) Includes products of Knitting Mills (SIC Group 225) which are primary to industries 2253 and 2254. See text of industry report MC63(2)-23A for more detailed discussion.
\({ }^{30}\) Includes the shipments of women's and children's knit underwear and nightwear made in knitting mills (primary products of industry 2254) as well as the shipments of these products cut and sewed from purchased knit cloth. See text of industry report MC63(2)-23C for more detailed discussion.
\({ }^{31}\) The 1957 SIC combined into this industry four industries which were separate in the 1945 SIC: industry 2281, Fur-Felt Hats and Hat Bodies; industry 2282, Wool-Felt Hats and Hat Bodies; industry 2283, Straw Hats; and industry 2325, Men's and Boys' Cloth Hats. The 1958 value of production figures for these four industries have been combined and the ratios for the largest 4 and 8 companies have been recomputed on a basis comparable to 1963.
\({ }^{32}\) Includes the shipments of children's knit outerwear made in Knitting Mills (primary products of industry 2253) as well as the shipments of these products cut and sewed from purchased knit cloth. See text of industry report MC63(2)-23C for more detailed discussion.
\({ }^{33}\) Includes the shipments of fabric gloves made in Knitting Mills (primary products of industry 2259) as well as the shipments of fabric gloves cut and sewed from purchased fabrics. See text of industry report MC63(2)-23D for more detailed discussion.
\({ }^{34}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 2381, Fabric Dress Gloves, and industry 2382, Fabric Work Gloves. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{35} \mathrm{~A}\) review of the reports for 1963 indicated that there were approximately 300 very small companies included in this industry that described their activities as custom drapery producers, interior decorators workrooms, etc. Approximately half of these companies were classified as nonmanufacturing in the 1958 Census.
\({ }^{36}\) For 1963 the value of shipments total includes shipments of logs for establishments that own and maintain timberlands but contract the cutting of logs to others. The establishments that actually performed the logging on a contract basis also reported their receipts for contract logging under the heading total value of shipments. Thus, an undetermined amount of duplication exists in the shipments total. The figures previously reported for 1958 and prior years do not include shipments for timberland owners that do not perform their own logging.
\({ }^{37}\) The coverage ratio for this industry is unusually low because of the large amount of wood chips manufactured by establishments classified in industry 2421, Sawmills and Planing Mills.
\({ }^{38}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 2562, Window Shades, and industry 2563, Venetian Blinds. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.

\title{
Table 2. Percent of Value of Shipments Accounted for by the Largest Companies in Each Manufacturing Industry: 1963 Compared With 1958, 1954, 1947, and 1935-Continued
}

\author{
Footnotes for Table 2--Continued
}

\begin{abstract}
\({ }^{39}\) The 1963 and 1958 concentration ratios for this industry are not comparable to those published for earlier years. Beginning with the 1958 Census of Manufactures integrated pulp and paper companies were given the option of reporting their pulp and paper (or board) operations on a combined basis when both were conducted at a single physical location. Most integrated companies exercised this option and filed a single report covering their pulp, paper (or board) making operations at a single physical location, but a few with departmental accounting chose to report separately for the pulp mill and paper (or board) mill, as they were required to do in 1954 and 1947. The only other pulp mills separately reported in the 1958 Census of Manufactures were (1) those exclusively selling their pulp on the market (i.e., not associated or affiliated with a paper and board mill), and (2) those pulp mills affiliated or associated with paper or board mills but operated at a different physical location from the paper or board mill(s).
\({ }^{40}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 2781, Bookbinding, and industry 2789, Miscellaneous Bookbinding Work. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{41}\) Comparable data are not available. In 1947, industry 2818, Organic Chemicals, N.E.C., included industry 2815, Intermediates and Organic Colors.
\({ }^{42}\) Govermment-owned establishments that are privately operated are included in this industry but did not enter into the calculation of the specialization and coverage ratios as all dollar receipts for these establishments were included as primary receipts.
\({ }^{43}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 2819, Inorganic Chemicals, N.E.C., and industry 2811, Sulfuric Acid. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{44}\) Includes lubricating oils and greases which are also primary to industry 2992, Lubricating Oils and Greases.
\({ }^{45}\) Includes lubricating oils and greases which are also primary to industry 2911, Petroleum Refining. (See tables 5A and 5B of industry report MC63(2)-29A.)
\({ }^{46}\) Includes data for industry 2991, Fuel Briquets and Packaged Fuels, and industry 2999, Petroleum and Coal Products, N.E.C. These industries were shown separately in 1947.
\({ }^{47}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 3192, Saddlery, Harness, and Whips, and industry 3199, Leather Goods, N.E.C. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{48}\) This is a minimum ratio. The exact ratio is withheld to avoid disclosing figures for individual companies.
\({ }^{39}\) The 1958 and earlier years' shipments and associated concentration ratios are not comparable to 1963 because of the significant amount of resales.
\({ }^{50}\) Readymixed concrete was included in the census of manufactures for the first time in 1958. No comparable information is available for earlier years.
\({ }_{51}{ }^{52}\) Revised percentages not available.
\({ }^{52}\) Industry 3312, Blast Furnaces and Steel Mills, has been redefined since 1954 to include industry 3311, Blast Furnaces; industry 3312, Steelworks and Rolling Mills; industry 2931, Byproduct Coke Ovens. For 1954 and 1947, value added by manufacture and shares accounted for by the largest 4, 8, and 20 companies have been recomputed on a basis comparable to 1958 and 1963.
\({ }^{53}\) The value of shipments for this industry totaled \(\$ 16,418\) million in 1963 . This value, however, includes duplication in that the products of some establishments are used as materials by others. A specialization ratio computed on the basis of net value of shipments would approximate 94 percent. Although a coverage ratio cannot be computed precisely, it would exceed 86 percent. Approximate ratios for 1958 were: specialization, 94 percent; coverage, 84 percent.
\({ }^{54}\) Included in this industry are electrometallurgical products which are also primary to industry 3312, Blast Furnaces and Steel Mills. A coverage ratio computed on the basis of including both industries to which electrometallurgical products are primary would total 94 percent for 1963, 96 percent for 1958, 95 percent for 1954, and approximately 95 percent for 1947.
\({ }^{55}\) Industry 3321 , Gray-iron Foundries, includes, in addition to commercial (jobbing) foundries, "captive" foundries at separate locations producing gray-iron castings for other plants of the same companys Accordingly, the ratios for this industry do not reflect the market shares in the commercial foundry industry as such.
\({ }^{56}\) Ratios not meaningful because total value of primary products shipped include a significant amount of duplication.
\({ }^{57}\) Comparable data are not available due to significant revisions in the 1954 classification of plants or products in this industry.
\({ }^{58}\) Included in this industry is refined zinc which is also primary to industry 3341 , Secondary Nonferrous Metals. Coverage ratios computed on the basis of including both industries to which refined zinc is primary would total 96 percent for 1963, 93 percent for 1958, and approximately 91 percent and 100 percent for 1954 and 1947, respectively.
\({ }^{59}\) Included in this industry are aluminum-base alloys which are also primary to industry 334l, Secondary Nonferrous Metals, and industry 3352, Aluminum Rolling and Drawing. Coverage ratios computed on the basis of including all three industries to which aluninum-base alloys are primary would total 96 percent for 1963, 98 percent for 1958, 99 percent for 1954, and approximately 99 percent for 1947.
\({ }^{66}\) Included in this industry are refined nonferrous alloys, n.e.c., which are also primary to industry 3341, Secondary Nonferrous Metals. Coverage ratios computed on the basis of including both industries to which nonferrous alloys, n.e.c., are primary would total 59 percent for 1963 , and 45 percent for 1958.
\end{abstract}

\title{
Table 2. Percent of Value of Shipments Accounted for by the Largest Companies in Each Manufacturing Industry: 1963 Compared With 1958, 1954, 1947, and 1935-Continued
}

\section*{Footnotes for Table 2--Continued}

\begin{abstract}
\({ }^{61}\) Included in this industry are refined copper, lead, zinc, aluminum, precious metals, and other nonferrous metals. Each of these product classes is also primary to the comparable primary smelting and refining industry in Industry Group 333. Coverage ratios computed on the basis of including all industries all industries to which the classes are primary would total 89 percent for 1963 , and 80 percent for 1958.
\({ }^{62}\) Included in this industry is aluminum and aluminum-base alloy wire (including ACSR) which is also primary to industry 3357, Nonferrous Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which aluminum and aluminum-base alloy wire (including ACSR) is primary would total 96 percent for 1963.
\({ }^{63}\) Included in this industry is other nonferrous metal wire, which is also primary to industry 3357 , Nonferrous Wire Drawing, Etc. Coverage ratios computed on the basis of including both industries to which nonferrous wire is primary would total 85 percent for 1963, and 87 percent for 1958.
\({ }^{64}\) Included in this industry are aluminum and aluminum-base alloy wire (including ACSR), other nonferrous metal wire, nonferrous woven wire products, and appliance wire and cord and flexible cord sets which are also primary, respectively, to industries 3352, Aluminum Rolling and Drawing; 3356, Rolling and Drawing, Etc.; 3481, Fabricated Wire Products, N.E.C.; and 3699, Electrical Products, N.E.C. A coverage ratio computed on the basis of including the industries to which these products are primary in 1963 would total 94 percent.
\({ }^{65}\) Included in this industry are open die hammer and press forgings which are also primary to industry 3312, Blast Furnaces and Steel Mills. Coverage ratios computed on the basis of including both industries to which open die hammer and press forgings are primary would total 80 percent for 1963 , and 88 percent for 1958.
\({ }^{66} \mathrm{~A}\) number of small establishments was misclassified into this industry. This affects the figure for the number of companies but has no appreciable effect on the total value of shipments or the percentage of value of shipments accounted for by the largest companies.
\({ }^{67}\) The 1957 SIC combined in this industry three industries which were separate in the 1945 SIC: industry 3422, Edge Tools; industry 3423, Hand Tools, N.E.C.; and industry 3424, Files. The 1958 value of shipments figures for these three industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{68}\) The 1957 SIC combined in this industry two industries which were separate in the 1945 SIC: industry 3461, Vitreous Enameled Products, and industry 3463, Metal Stampings. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{69}\) Indexes not meaningful because of large miscellaneous receipts, particularly receipts for contract and comnission work on materials owned by others.
\({ }^{70}\) The 1957 SIC combined in this industry three industries which were separate in the 1945 SIC: industry 3465, Enameling and Lacquering; industry 3466, Galvanizing; and industry 3467, Engraving on Metal. The 1958 value of shipments figures for these 3 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\({ }^{71}\) Included in this industry are selected fabricating wire products which are also primary to industry 3315, Steel Wire Drawing, Etc., (see table 5B, report MC63(2)-34E footnotes 3, 7, 10, and 12). Coverage ratios computed on the basis of including both industries to which these products are primary would total 79 percent for 1963, and 76 percent for 1958.
\({ }_{72}\) Actual index is between figure shown and 1.00 .
\({ }^{73}\) Comparable figures not available. Ratios were calculated originally on value of shipments in 1954 and 1947. 1954 ratios for the largest 4 and 8 companies have been recalculated based on value added; 1947 ratios based on value added are not available.
\({ }^{74}\) Included in this industry are appliance wire and cord and flexible cord sets which are also primary to industry 3357, Nonferrous Wire Drawing, Etc. For 1963, a coverage ratio computed on the basis of including both industries to which appliance wire and cord and flexible cord sets are primary would total 79 percent.
\({ }^{75}\) Not completely comparable to 1958 and 1963 because of change in the SIC System. In 1958 and later years, an establishment manufacturing complete aircraft was classified in industry 3721, Aircraft, if its value of work done on aircraft exceeded its value of shipments of any other single industry's products. In 1954 and earlier years, any establishment manufacturing at least 1 complete aircraft was classified in industry 3721.
\({ }^{76} \mathrm{Value}\) of work done rather than value of shipments. Includes miscellaneous receipts such as receipts for contract work and commission work on materials owned by others, scrap, salable refuse, repair work, etc. \({ }^{77}\) The 1957 SIC combined into this industry two industries which were separate in the 1945 SIC: industry 3952, Lead Pencils and Crayons, and industry 3954, Artists' Materials. The 1958 value of shipments figures for these 2 industries have been combined and the ratios for the 4 and 8 largest companies have been recomputed on a basis comparable to 1963.
\end{abstract}

\section*{Manufactured Activity in Government Establishments}

\section*{CONTENTS}
page
Introductory Text ..... 2
TABLE 1 Department of Defense Facilities: 1963 ..... 4
2 Department of Defense Facilities, by Geographic Areas:
1963 and 1958 ..... 6
3 Department of Defense Facilities, by Type of Activity: 1963 and 1958 ..... 6
4 Federal, District of Columbia, and State Prisons:
1963 and 1958 ..... 8

\section*{MANUFACTURING ACTIVITY IN GOVERNMENT ESTABLISHMENTS}

This special report presents data of manufacturing activities for selected government establishments within the United States. These data are not included in other 1963 Census of Manufactures reports, which cover privately operated establishments only. Manufacturing establishments owned by the Federal Government and operated by private companies either for the government or for their own account are included with privately operated establishments. Three types of establishments are covered in this report: (1) Manufacturing facilities owned and operated by the Department of Defense; (2) prison industries (Federal, District of Columbia, and State); and (3) manufacturing facilities owned and operated by other U.S. Government agencies. The data were prepared with the cooperation of the Department of Defense, the Department of Justice, the Department of Interior, and the District of Columbia and State prison systems.

\section*{MANUFACTURING FACILITIES OWNED BY THE U.S. GOVERNMENT AND OPERATED BY THE DEPARTMENT OF DEFENSE}

Data are shown in tables 1 to 3 for manufacturing facilities owned by the U.S. Government and operated by the Department of Defense. Although these establishments may also be engaged in nonmanufacturing activities at the same location, the statistics represent only their activities relating to manufacturing. All manufacturing installations which produce goods or perform manufacturing services, such as industrial research and development, are covered in this report. Data resulting from the conversion and modification of ships and aircraft by the Army and Navy, but not the Air Force, are also included. Manufacturing activities of the U.S. Air Force are not included because its accounting system is different from that used in the Industrial Fund of the Department of Defense and thus the Air Force concluded it could not provide data comparable to the other respondents (Army and Navy). Also, the report does not include activities of Defense Department installations which serve primarily or exclusively their own installations (e.g., bakeries and some machine shops). All printing and publishing activities are excluded because almost every large government installation engages in these activities to some degree, thus making coverage difficult.

There are approximately twice as many plants reporting in this survey as in the comparable 1958 survey. This increase is primarily because of the additions of research and development activities and manufacturing divisions of supply depots. As a result of this increase, there are two types of tables. The first type shows 1963 data for all Defense Department plants within the scope of this survey. The second shows 1963 data for only those plants that reported in 1958 and their comparable 1958 data.

In all tables, statistics are shown for employment, man-hours, payrolls, costs, and billings. Military personnel are not included in any of the employment, payroll, or manhours data. The data represent only nonmilitary (wage board and graded) employees engaged in manufacturing activities at the plant. The cost and billings data for 1963 are based on the lndustrial Fund accounting system of the Department of Defense. The Industrial Fund concepts of "Total Billings" and "Total Earned Revenue," which were used for the 1963 data, differ because the latter is the result of increasing or decreasing "Total Billings" to reflect the change in unbilled costs of work in progress.

The 1963 value added by manufacture data, shown in table 1, represent total earned revenue (including the value of manufacturing services) less the cost of materials, parts, and supplies actually consumed or put into production during the year.

\section*{PRISON INDUSTRIES (FEDERAL, DISTRICT OF COLUMBIA, AND STATE)}

During 1963, manufactured products valued at \(\$ 112,702\) thousand were produced in Federal, District of Columbia, and State prisons in the United States. The comparable 1958 figure of \(\$ 97,307\) thousand also includes the value of products produced for use within the institutions as well as for products transferred to other governmental agencies or for sale in the open market. These data, shown in detail in table 4, cover the activities of the Federal Prison Industries, Inc., as well as those of the prison industries of each State and the District of Columbia.

\section*{MANUFACTURING FACILITIES OWNED AND OPERATED BY OTHER U.S. GOVERNMENT AGENCIES}

Manufacturing operations of the Bureau of Mines, U.S. Department of Interior, are not included in the tables of this report. That agency is the primary producer of refined helium in the United States. During 1963, it operated five plants from which 627 million cubic feet of helium valued at \(\$ 21,945\) thousand were shipped. The average number of employees totaled 639 , of which 479 were production and related workers, and the total wages and salaries paid amounted to \(\$ 4,195\) thousand. Comparable figures for other years as well as additional detail for production, shipments, consumption, prices, reserves, and activities relating to conservation and technology appear in the Minerals Yearbook, a publication of the Bureau of Mines.

Excluded from this report are the manufacturing activities of the Government Printing Office, the National Aeronautics and Space Administration, and the Tennessee Valley Authority. The operations of these agencies are covered in their annual reports. Also excluded are the minor manufacturing activities of such other government agencies as the Post Office Department and the General Services Administration.

\section*{迬}

\section*{\(=\)}

This report shows shipments, in 1963, to government agencies by establishments in "defenseoriented" industries, together with related information on employment and value added by manufacture. The data were compiled as part of the 1963 Census of Manufactures by means of a supplemental inquiry on Form MA-175, Report on Shipments to or Receipts for Work Done for Federal Government Agencies and their Contractors and Suppliers in 1963. Shipments are shown by industry and by principal procuring agency (Department of Defense, National Aeronautics and Space Administration, and Atomic Energy Commission). Shipments, value added by manufacture, and employment are presented for groups of industries for geographic divisions, States, and selected standard metropolitan statistical areas (SMSA). Value of shipments and employment estimates (prorated on the basis of shipments) are shown for each of the classes of products by government procuring agency. The project was financed by the Department of Defense, National Aeronautics and Space Administration, Atomic Energy Commission, and the Arms Control and Disarmament Agency.

As indicated in table 1, value of shipments of the industries surveyed totaled \(\$ 40.4\) billion in 1963 of which approximately 62 percent was accounted for by Federal Government purchases. As a percent of the total value of shipments, government shipments ranged from 11.5 percent for selected machinery industries as a group to a high of 86.5 percent for aerospace (aircraft and missiles) industries. Direct and indirect shipments on government account (prime contracts and subcontracts) amounted to \(\$ 13.9\) billion for aerospace industries, \(\$ 5.9\) billion for communication equipment, \(\$ 2.2\) billion for shipbuilding and ordnance, \(\$ 1.1\) billion for electronic components, \(\$ 0.7\) billion for selected machinery, and \(\$ 0.5\) billion for instruments. By State, California was highest, with government business in the industries surveyed totaling \(\$ 7.0\) billion, followed by New York, Connecticut, Ohio, and New Jersey, in that order.

This supplemental survey to the 1963 Census of Manufactures was conducted to measure the impact of government procurement upon the manufacturing economy and upon geographic areas in terms of 30 "defense-oriented" industries which account for the major portion of government procurement. Similar data for other manufacturing industries are not available. For the most part, the 30 defenseoriented industries ship finished goods or components produced to military specifications. With the exception of the machinery industries, the preponderant portion of government business on these industries is subject to renegotiation and, therefore, is separable in the records of the respondent companies. In fact, respondents were told that they could base their subcontract shipments and receipts on those transactions subject to the Renegotiation Act of 1951, as Amended.

Approximately 2,500 establishments accounting for over 95 percent of all shipments and receipts of the 30 defense-oriented industries were included in the survey. Of the establishments filing returns, 1,300 reported shipments to (or receipts from) the government of more than \(\$ 100,000\); others reported no government shipments or government shipments of less than \(\$ 100,000\). (Respondents were instructed not to complete the report if they had less than \(\$ 100,000\) in government shipments.) Tables 1 and 3 present data for all establishments covered by the survey while tables \(4,5,6\), and 7 contain data only for establishments reporting shipments to the government in detail by procuring agency.

The mailing list for the survey was derived from the reporting panel for the 1962 Annual Survey of Manufactures, but establishments with fewer than 20 employees were excluded. The annual survey of manufactures is based on a probability sample. Data in tables 1, 2, and 3 were compiled in such a manner as to include in the tabulations "inflated" data derived by weighing the reports of smaller establishments, whereas tables 4 through 7 were compiled by adding the figures as reported. The total of \(\$ 40.4\) billion for this survey differs from a comparable industry total of \(\$ 42.3\) billion shown in the 1963 Census of Manufactures.

In this survey, government "shipments" consist of products shipped to or receipts for work done for Federal agencies, their contractors, subcontractors, and suppliers. The government total is further subdivided into shipments or receipts (1) on government prime contracts and (2) to other manufacturers in ultimate performance of Federal Government contracts.

Although the prime contract figures for the industries surveyed account for the great bulk of all such government contracts in manufacturing, the subcontract data represent a much smaller proportion of the total for all manufacturing because the usual subcontracting industries were excluded from the scope of the survey.

In interpreting the figures for subcontract work, it should be kept in mind that the 30 defense-oriented industries do not include basic materials and other component industries usually important in subcontracts. Also, reflecting inadequate instructions, companies having prime contracts usually reported interplant transfers within the company as prime contracts rather than subcontracts; to that extent, there is an overstatement of the prime contract figures and a corresponding understatement of subcontracts. Shipments of materials and components purchased by the government and furnished to contractors supplying finished equipment were reported as prime contracts.

Furthermore, there is no indication of the level of subcontracting (e.g., first tier, second tier, etc.).

By the nature of the industries surveyed, it is likely that, with the exception of a few industries such as electronic components, most of the subcontracting is first tier only and the pyramiding of shipment values from one tier to another is not large.

The survey was designed so that the data reported would be comparable with the basic concepts used in the census and annual survey of manufactures. Accordingly, the product class description, product class code, and 1963 value of shipments were reported by manufacturers using Item 9 of their census report as a control for total shipments for each product class. In certain industries with lengthy production cycles for their products, the value figures reported do not pertain to actual shipments from those establishments, but represent the value of work done on those products. This is identical to the procedure of measuring activity for these particular industries in the census of manufactures.

Tables 2, 5, and 7 contain data by industry groups. For purposes of showing as much geographic and agency detail as possible, keeping in mind the rules of disclosure, Standard Industrial Classification industries were aggregated into groups of industries. Appendix A shows the groupings of these industries and what industries were canvassed for this survey.

Table 3 includes separate data on "miscellaneous industries." The respondents in this survey were instructed that if their company had significant research, development, test, evaluation, or production contracts in the fields of aerospace, atomic energy, electronics, instrumentation, ordnance, or shipbuilding which were assigned by the company
to establishments that had not been reported on form MA-100, they were to complete a form MA-175 for each such location. These nonmanufacturing facilities of the manufacturing companies reporting on this survey are classified in thiscategory. Data for this category, shown separately in table 3, are included in the totals for industry group, "Selected Instruments and Miscellaneous Industries," as appears in the other tables.

Table 4 shows data by 5 -digit product class. Data at the 4 -digit level appearing on this table are totals of the 5 -digit figures and the values shown for such 4 -digit groups differ from those provided on a 4-digit industry basis in table 3. The differences are attributable to variations between the amount of the specified products made in other industries and the extent to which secondary products are made in the given industry (see the text to 1963 Census of Manufactures reports for further explanation).

Also in table 4, employment (other than the total) has been estimated. The estimation method used was a straight proration of the product class data reported by agency as a percentage of the total shipments of that establishment. The value for "resales" (products bought and resold without further manufacture) was subtracted from the total value of shipments before making the estimated employment computations.

Tables 6 and 7 show data by State and selected SMSA. Actual figures or ranges of figures are shown for all States. Data are provided for SMSA's having more than 40,000 manufacturing employees which account for approximately 75 percent of all manufacturing employment.

\section*{DEPARTMENT OF DEFENSE AND ATOMIC ENERGY COMMISSION FACILITIES NOT COVERED BY THE SURVEY OF DEFENSE-ORIENTED INDUSTRIES}

The employment and value data presented in tables 2 through 7 afford a picture of government activity in the private industry sector of the manufacturing economy as defined by the 30 selected defense-oriented industries. Manufacturing activity is also carried on in government-owned and operated locations by the Department of Defense (DOD). The Atomic Energy Commission (AEC) contracts for the output of goods and services by private manufacturers but mostly in plants classifiedinindustries not covered by the MA-175 survey (e.g. chemicals) and for services such as research and development in facilities maintained by universities
and other nonmanufacturing organizations. lnformation on these DOD and AEC facilities are shown by geographic area in appendix tables \(B, C\), and \(D\). The figures in these tables, provided by those agencies, are not duplicated in the basic tables 1 through 7 obtained from the MA-175 survey with the exception of 5 to 10 percent of the AEC totals (principally in the ordnance and accessories category of the MA-175). The DOD and AEC activities should be taken into account in determining the total impact of government expenditures upon the nation and selected geographic areas:

\section*{table 1. Shipments and Receipts of Defense-Orienteci Industries--Summary Statistics, by Agency \\ The United States total of \(\$ 37.4\) billion, in tables 1, 2, and 3, represents the universe of plants with twenty or more em-} ployees with small plants inflated in accordance with their sample weights in the 1962 Annual Survey of Manufactures. Data in tables 4 through 7, aggregating to a United States total of \(\$ 36.6\) billion, are not inflated, i.e., they represent reported data only

\({ }^{1}\) Includes total value of shipments data for those establishments that had "more than \(\$ 100,000\) " in shipments to the Federal Government as well as those establishments that reported "none" or "less than \(\$ 100,000\) " in government shipments.
\({ }^{2}\) Represents total value of shipments of those establishments indicating on their report that they had no shipments to the Federal Govermment or some shipments the value of which, however, did not exceed \(\$ 100,000\). These establishments were not required to complete the entire report and therefore, there is no breakdown by prime contract and subcontract or by agency.
\({ }^{3}\) See text for limitations applicable to the distinction of prime versus subcontract

\section*{TABLE 2. Employees, Value Added, and Value of Shipments and Receipts, by Industry Groups}

1963 Census of Manufactures compared to MA-175 Survey. The United States total of \(\$ 37.4\) billion, in tables 1, 2, and 3, represents the universe of plants with twenty or more employees with small plants inflated in accordance with their sample weights in the 1962 Annual Survey of Manufactures. Data in tables 4 through 7 , aggregating to a United States total of \(\$ 36.6\) billion, are not inflated, i.e., they represent reported data only
\begin{tabular}{|c|c|c|c|c|c|c|c|}

\hline
\end{tabular}

\section*{\({ }_{2}^{1}\) See appendix A for description of industry groups.}
\({ }^{2}\) Excludes SIC industry 1925, Guided Missiles and Space Vehicles. This industry is included in Aerospace.
\({ }^{3}\) MA-175 data includes figures reported by nonmanufacturing facilities of the manufacturing companies canvassed.
4The figures shown for the 1963 Census of Manufactures were taken from the Summary Series, General Statistics for Industry Groups and Industries,
MC-63(P)3* as released in October, 1965.
\({ }^{5}\) The figures shown for the MA-175 Survey differ from those of the 1963 Census of Manufactures because the MA-175 data are subject to sampling errors, the exclusion from this table of those establishments which reported "less than \(\$ 100,000\) " or "none" in government shipments, and some differences in industry classification.
\({ }^{6}\) Value added by manufacture data for the 1963 Census of Manufactures has been adjusted for changes in finished products and work-in-process inventories. Value added by manufactures data for the MA-175 has not been so adjusted.

\title{
TABLE 5. Value of Shipments and Receipts, by Geographic Areas, Industry Groups, and Agency
}

Millions of dollars. The United States total of \(\$ 37.4\) billion, in tables 1,2, and 3, represents the universe of plants with twenty or more employees with small plants inflated in accordance with their sample weights in the 1962 Annual Survey of Manufactures. Data in tables 4 through 7, aggregating to a United States total of \(\$ 36.6\) billion, are not inflated, i.e., they represent reported data only

\section*{table 6. Employees, Value Added and Value of Shipments and Receipts, by Geographic Areas and Agency}

Value figures in millions of dollars. The United States total of \(\$ 37.4\) billion, in tables 1,2 , and 3 , represents the universe of plants with twenty or more employees with small plants inflated in accordance with their sample weights in the 1962 Annual Survey of Manufactures. Data in tables 4 through 7, aggregating to a United States total of \(\$ 36.6\) billion, are not inflated, i.e., they represent reported data only
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|c|c|}

Note: See appendix A for description of industry groups.

\section*{Appendixes A Through E}

APPENDIX A-lNDUSTRY GROUP DESCRIPTIONS AND RANGE SYMBOL DEFINITIONS. This appendix contains the description of groups of 4 -digit Standard Industrial Classification (SlC) industries which have been constituted in order to maximize the amount of information which could be presented in this report without disclosing figures for individual companies. In effect, therefore, these descriptions also represent an enumeration of the individual SIC industries covered by the MA-175 survey. Also shown in this appendix is an explanation of the letter symbols used in place of absolute number of employee and dollar-value figures where the latter would constitute a disclosure of company data.

APPENDIX B-MANUFACTURING FACILITIES OWNED BY THE U.S. GOVERNMENT AND OPERATED BY THE DEPARTMENT OF DEFENSE (DOD). Although these establishments may also be engaged in nonmanufacturing activities at the same location, the statistics represent only their activities relating to manufacturing. Data on the production of goods and the performance of services, such as research and development, for these installations are covered in this table. Military personnel are omitted from the employment, payroll, and man-hours data. The cost and billing data for 1963 are based on the lndustrial Fund
accounting system of DOD. Data resulting from the conversion and modification of aircraft for the U.S. Air Force are not included while similar services for the Army and Navy are included. This table does not include data on activities which serve primarily or exclusively their own installations (e.g., bakeries and some machine shops).

APPENDIX C-U.S. ATOMIC ENERGY COMMISSION CONTRACTOR EMPLOYMENT, BY STATE: DECEMBER 1963. This table contains data on employment of contractors employing more than five persons, except commercial supply contractors.

APPENDIX D-COSTS INCURREDBYU.S. ATOMIC ENERGY COMMISSION, BY LOCATION: FISCAL YEAR 1963. The table reflects total costs incurred, excluding depreciation on government-owned facilities, for direct and prime contractor activities of the Atomic Energy Commission. Construction covers the acquisition of new plants with related equipment. Operations cover all other costs including equipment not related to construction.

APPENDIX E-REPORTING FORM MA-175 (WITH INSTRUCTIONS).

\title{
APPENDIX A. Industry Group Descriptions and Range Symbol Definitions
}

\section*{INDUSTRY GROUP DESCRIPTIONS}

Selected Machinery - Steam engines and turbines; construction machinery, machine tools; and computing and related machines (SIC 3511, 3531, 3541, 3542, and 3571).

Communication equipment - Telephone; telegraph and communication equipment (SIC 366).
Electronic components and accessories (SIC 367).
Aerospace industries - Guided missiles, space vehicles (completely assembled), aircraft and parts (SIC 372 and 1925).

Ship building and repairing, and ordnance (except guided missiles and space vehicles) (SIC 3731 and 19, except 1925).

Selected instruments and miscellaneous industries - Instruments--engineering, laboratory, and scientific research, aircraft engine; nuclear radiation detection; optical (including lenses); and photographic equipment and supplies and miscellaneous industries (SIC 3811, 38211, 38216, 3831, and 3861).

BUREAU OF THE CENSUS

REPORT ON SHIPMENTS TO OR RECEIPTS FOR WORK DONE FOR

THL GOVERNMENT AGENCIES AND
THEIR CONTRACTORS AND SUPPLIERS IN 1963
(Bosed on the Totol Shipment Figures from the Annuol Survey of Monufoctures, Census Form MA. 100)

Bureau of the Census, Industry Division
Woshington, D.C. 20233
(PLEASE RETURN THIS COPY)
ITEM 2
Please check the box which describes the 1963 receipts for shipm
Federal Government agencies and their contractors and suppliers:
\(\square\) None
\(\square\) Up to \(\$ 100,000\)\(\$ 100,000\) or more
For purposes of this report, such receipts will include payments received by you for work done by you on Federal by you to Federal Government contractors and suppliers for use in their performance of Federal Government contracts.
If your response to this question was " \(\$ 100,000\) or more," please complete the form on the reverse side. Otherwise, sign the form in the space provided below and return it.

INTRODUCTORY NOTE

The Census Bureau is conducting this survey to develop a measure of the level of industrial activity generated by the expenditures made by Federal Government agencies the Department of Defense (DOD), the National Aeronautics and Space Administration (NASA), and the Atomic Energy Commission (AEC).
Industrial activity generated by Federal Government expenditures is being measured in terms of receipts (including value of shipments) for work done, or for value of products shipped to Federal agencies, their contractors, subcontractors and suppliers. For each plant covered by the report such receipts will consist of two kinds of payments. The first is payments received for work done directly for Federal agencies on Government prime contracts. The second is payments received

\section*{SPECIFIC}

Except as may be specifically requested, a report should be submitted for each establishment for which you received a preaddressed form. If additional forms are needed please write to us specifying the address of the establishment for which a blank form is required. If you have any questions about the survey, write to the Bureau of the Census, Washington, D.C., 20233, referring to form MA-175 and to the file number in the upper right-hand corner of (establishment, shipments, receipts, materials consumed, establishment, shipments, receipts, materials consumed,
employment, etc.) are the same as those used in the Annual Survey of Manufactures (Form MA-100), and related figures reported on each form should agree.
Columns (1), (2), ond (3) - These entries--lines a through 1 --should correspond with those entered in item 9 and tem 9A for the Product Class Description, the Product Class Code, and the 1963 d
Census form MA-100 for 1963.
The three lines " i ," " j ,", and ' \(k\) '" that follow specific product class entries, are in the same position in which they appear on form MA-100. Only "1s expected to be primarily of interest to manufacturing industries no covered by form MA-175, such as textiles and apparel coating and engraving, etc.; " \(k\) " is used by manufacturers to list the shipments of products they buy and ship without any manufacturing or assembling, usually to round out a product line. Line " i " on the other hand, can be very important in this survey. Receipts for research and development that have not been separately identified on form MA-100 should be reported here- (Note that research and development receipts for "certain aerospace activities are to be supplied in lines "a"- \(h\) "in the appropriate class " would also be used for reporting receipts for installatio or testing. Installation or testing costs of more than \(\$ 1\) million done at other locations should not be reported on the form for the manufacturing plant. Instead, a separate MA-175 form should be filed for each such installation or test site. If you have such cases, it would be desirable to write to the Census Bureau describing the situation before
completing the MA- 175 forms.
formance of Federal Government contracts. Subcontract receipts reported will normally be based on payments made for work done on Government subcontracts when subject to the Renegotiation Act of 1951 , as amended. These receipts should include the value of materials, components, subassemblies, and services supplied to other plants of the company (interplant transfers) as well as to contractors and suppliers outside the company for use in the performance of contracts. This is in accord with standard Census
reporting procedures.
This survey is being conducted on an establishment or plant basis. This method of reporting is necessary so that the data reported by each plant may be tabulated by the geographic area in which the work is actually being performed. Additionally, it will permit the data to be classified by appropriate product class and Standard
Industrial Classification.

Columns (4) through (7) - Data reported should represent the total value of shipments, billings, or receipts (in \(\$ 000\) ) from Federal Government agencies during 1963. For long lead time production or research, development, testing, and evaluation programs, the value of work done during the year is reported on the Annual Survey of Manufactures and on this report. Such a figure is represented by net billings, or payments received by you (including progress
payments), for work done during the year. This method of estimating shipments to the Government has frequent estimating shipments to the Government has frequent
application to work done on aircraft, ships, missiles, application to work done on aircraft, ships, missiles, related systems.
Columns (8) through (13) - Data reported should represent the value of receipts (in \(\$ 000\) ) for work done by you for Government prime contractors and subcontractors for use in the performance of Govermment contracts. It is recog-
nized that indirect Government work is not always identified as such. In view of this, it will be acceptable to use, as a base receipts on Government subcontracts subject to
the Renegotiation Act of 195 l , as amended. Note particuthe Renegotiation Act of 1951 , as amended. Note particu-
larly that the value of transfers to other plants of the comlarly that the value of transfers to other plants of the com-
pany as well as receipts from contractors outside the pany as well as receipts
company are to be included.
Columns (8) through (11) - Data entered should represent the value of recelpts (in \(\$ 000\) ) for work done by you on subcontracts of DOD, NASA, AEC, and other Government agencies when the Government agency placing the prime contract is known to yon.
Columns (12) or (13) - Receipts for work done by you on Government subcontracts, for which Government agency the prime contract is not specifically known to you should be entered. If you know that the subcontract work is for DOD, NASA, or AEC, but you cannot specifically determint which, enter the value of receipts (in \(\$ 000\) ) in column (12) or for a Government agency unknown to you, enter the value of receipts (in \(\$ 000\) ) in column (13).
Column (14) - Data reported should represent the difference between the total values of shipments and/or receipts, column (3), and the sum of entries in columns (4) through (13).
\begin{tabular}{|l|l|l|l|}

\section*{Survey of the Origin of Exports of Manufactured Products: 1963}

\section*{ORIGIN OF EXPORTS OF MANUFACTURED PRODUCTS}

This report covering the years 1963 and 1960 includes distributions of manufacturers' exports by producing divisions, States, and standard metropolitan statistical areas (SMSA) and by Standard Industrial Classifications (SIC) of the producing plants. This information was reported by manufacturers to the Census Bureau for products that the manufacturers knew were to be exported by the plant directly or through others with no additional manufacturing.

Table 1, Value of Exports of Manufactured Products, with Estimates by Divisions and States and by Major Product Groups: 1963 and 1960, was first released by the Secretary of Commerce on January 15, 1965. The table includes a distribution by division and State of total national exports of manufactured products, amounting to \(\$ 16.3\) billion in 1963 and \(\$ 14.3\) billion in 1960 at f.o.b. factory prices. The manufacturing establishments reporting in the survey for 1963 accounted for \(\$ 11.0\) billion or a little more than two-thirds of the total value f.o.b. plant of all U.S. exports of manufactured products in 1963. The balance, exported through wholesalers or other purchasers whose intention to export was not known to the manufacturers, and by small manufacturers not covered in the survey, was allocated among areas by the Census Bureau. \({ }^{1}\)

The total export figures for 1960 in table 1 differ from those published for 1960 following the earlier survey of exports of manufactured products. Figures in the previous 1960 survey included exports to Puerto Rico and bunker sales of fuel to foreign vessels. These have been omitted in the present survey to bring the export figures more closely in agreement with the national totals released by the Foreign Trade Division of the Census Bureau. The division, State, and standard metropolitan statistical area statistics for 1960 also differ from the previously published 1960 data. The 1960 figures appeared on the 1963 schedule and in some instances were changed or revised by the manufacturers. Changes in the manner in which transportation and warehousing costs were estimated also account for some difference between plant and port price in the two years' figures.

Tables 2A, 2B, 2C, and 2D contain geographic distributions on export origin data actually reported by the manufacturers in the survey. Table 2A provides information on reported exports on a basis comparable with table 1 estimates of total f.o.b. value. Estimates of total f.o.b. value were not prepared for the more detailed product classifications of reported exports shown in tables \(2 \mathrm{~B}, 2 \mathrm{C}\), and 2 D . Although short of national foreign trade totals, the figures in these tables underscore the widespread nature of exporting in the manufacturing field, and the industries participating.

Table 3 provides information on value of exports reported by the 4, 8, and 20 largest exporters in selected industry groups, and estimates of total exports represented by these companies. Since a portion of manufactured exports are exported through wholesalers or other purchasers whose intention to export was not known to the manufacturers, it is not possible to obtain exact figures from the reporting manufacturers of total exports. However, the data are provided here as some indication of the relative share of total exports accounted for by the largest exporting companies.

The export figures reported by manufacturers are from a survey of plants with more than 100 employees included in the annual survey of manufactures and exporting more than \(\$ 25,000\) per year. A previous study on distribution of manufacturers' sales showed that
plants of this size accounted for practically all exports of products known to the manufacturing company. Establishments for some industries with a small amount of exports in relation to the total number of establishments involved, were asked to report in the survey only when the parent company was known to export at least \(\$ 1.0\) million per year. Industries handled in this fashion included the textile, apparel, lumber, and furniture groups, and some individual industries in other groups.

Manufacturers reported total exports made by each establishment. The industry or product classification of the exports reported in the survey, therefore, depend upon the industry classification of the plants as assigned in the annual survey of manufactures. At the level of the 20 broad groupings particularly, the industry classification is very close to product classification. In technical classification language, the amount of secondary products crossing broad 2 -digit lines is relatively unimportant. In cases where there are a few establishments represented in a particular figure and the industry classification is finer than the 20 broad classes, differences will arise between industry and product, but these classification problems are not considered more important than other reporting problems in this field. The significance of the difference between products and industry at the 4 -digit level is shown in the 1958 Census of Manufactures publication MC58(S)-4, Industry Descriptions (see Specialization Ratio).

The relation of the commodity information from the survey to the commodity data in the national foreign trade statistics was made possible by the classification system provided in the recent Census publication, "U.S. Commodity Exports Imports as Related to Output, 1962 and 1961."
\({ }^{1}\) The method of allocating the residual exports varied by industry. In industries in which the survey accounted for two-thirds or more of the factory value of total exports, each State was assigned the proportion of residual exports that corresponded to its share of total exports for the industry group. In industries in which the survey accounted for less than a third of the factory value of exports, each State was assigned the proportion of residual exports in an industry group that corresponded to its share of total U.S. employment by that industry group as reported in the annual survey of manufactures. In the remaining industry groups, the distribution was developed by taking into account both the State export and manufacturing employment distributions. The distribution of residual exports was made on the basis of some 100 industry groups (technically and primarily 3digit SIC groups).

Note: Figures may not add because of rounding. Percent change was calculated on unrounded data.
- Represents zero. (D) Fithheld to avoid disclosing figures for individual companies. \({ }^{\text {RRevised }}\).
\({ }^{1}\) Exceeds the Foreign Trade totals for tobacco manufactures because of the inclusion of tobacco stemming and redrying.

RANGES:
(S) Less than \(\$ 1.0\) million.
(T) \(\$ 1.0\) to \(\$ 4.9\) million. (U) \(\$ 5.0\) to \(\$ 9.9\) million.
(v) \(\$ 10.0\) to \(\$ 24.9\) million.
(V) \(\$ 25.0\) to \(\$ 49.9\) million.
(x) \(\$ 50.0\) to \(\$ 99.9\) million.
(Y) \(\$ 100.0\) million or more.

PERCENT CHANGES:
(a) Less than 0.5 percent.
(b) More than 50 percent change.
(c) Percent change not calculated in instances where exports were less than \(\$ 1.0\) million.
(d) Percent change not calculated because of comparability with the f.o.b. totals.

(See table l for estimates of total exports by State, including that portion not reported directiy by establishments in which products were manufactured. The \(\$ 5.3\) billion in exports not reported in the survey would be accounted for chiefly by purchasers whose intention to export was not known to the materials and components produced in other industries and areas. For further information about the data, see the text).

Table 2B.--VALUE OF EXPORTS OF MANUFACTURED PRODUCTS FOR THE UNITED STATES BY INDUSTRY, 1963; WITH PERCENT CHANGE, 1960 TO 1963
(The \(\$ 11.0\) billion in exports reported in this survey were made by establishments with 100 employees or more and exporting \(\$ 25,000\) or more in 1963 . The \(\$ 5.3\) billion in exports not reported in the survey would be accounted for chiefly by producers whose intention to export was not known to the manufacturer. The entire cost of the exported products is counted here in the exporting industry or area. Much of the export value consists of materials and components produced in other industries and areas. For further information about the data, see the text)

Table 2c.--VALUE OF EXPORTS OF MANUFACTURED PRODUCTS BY GEOGRAPHIC DIVISIONS AND STATES, AND BY SELECTED INDUSTRY GROUPS, I963; WITH PERCENT CHANGE, 1050 TO 1963
(The \(\$ 11.0\) billion in expoi \({ }^{+}\)s reported in this survey were made by establishments with 100 employees or more and exporting \(\$ 25,000\) or more in 1963. The \(\$ 5.3\) billion in exports not reported in the survey would be accounted for chiefly by purchasers whose intention to export was not know to the manufacturer. The entire cost of the exported products is counted here in the exporting industry or area. Much of the export value consists of materials and components produced in other industries and areas. For further information about the data, see the text)

Table 2D. --VALUE OF EXPORTS OF MANUFACTURED PRODUCTS BY PRINCIPAL STANDARD METROPOLITAN STATISTICAL AREAS AND BY MAJOR INDUSTRY GROUPS, I963; WITH PERCENT CHANGE, 1960 TO 1963
(The \(\$ 11.0\) billion in exports reported in this survey were made by establishments with 100 employees or more and exporting \(\$ 25,000\) or more in 1963 . The \(\$ 5.3\) billion in exports not reported in the survey would be accounted for chiefly by purchasers whose intention to export was not mown to the manufacturer. The entire cost of the exported products is counted here in the exporting industry or area. Nuch of the export value consists of materials and components produced in other industries and areas. For further information about the data, see the text)

\section*{Appendix A}

\section*{COMPARABILITY OF CENSUSES OF MANUFACTURES IN TERMS OF THE VALUE ADDED MEASURE}

It is doubtful whether any census could be kept fully comparable with one taken for an earlier period. Even if all systems of classification, such as the SIC, and definitions were identical and if the same procedures were employed in compiling the statistics, the changes in the structure of industiy would introduce elements of noncomparableness. For example, a shift to the use of commercial services instead of the manufacturers' own labor force in performing some functions would affect the comparability of operating ratios such as output per man-hour associated with an industry.

The changes in definitions and procedures introduced in a census are described in the introductory text of the census volumes and historical data are revised where practical. (See Introductory text, Section 5.) Nevertheless, over long periods of time the comparableness of series will be significantly affected and the problems of revising historical data become difficult.

One way of displaying the problems connected with comparing the statistics from two censuses is to review the history of a single concept. For this example, value added by manufactures has been chosen. Currently, it is looked upon as the "best" additive measure of manufacturing activity provided by the census of manufactures. It is widely relied upon for comparative statistics by industry and by geographic location.

The phrase, "value added to materials by manufacturing processes," first appeared as a column heading in the census for 1904, where it was proposed as a measure suitable for comparing industries and areas. Earlier censuses had provided information on value of product and varying amounts of information on costs of materials, the two sets of figures which census analysts use to compute value added (table A). In connection with the census for 1869, costs of materials were subtracted from value of product for each industry but the difference, which was labeled "excess of product over materials," was used primarily to indicate variation among industries classified by the ratio of materials to employees and by the manner in which products were valued for census purposes.

\footnotetext{
This appendix was prepared by Frank H. Hanna, professor of economics, Duke University.
}

During the 19th century, interest centered chiefly in obtaining an aggregate which would reflect the growth of the American economy. In 1889, the subtraction of costs of materials from value of product was labeled, "net value of products." It was later criticized as a "statistical absurdity" unsuitable for measuring the growth of manufactures since the net value of products was made to appear less than the cost of materials. The census for 1899 proposed as a measure of growth the sum of "(1) the value of all raw materials which have entered this output; and (2) the entire value added to these raw materials by manufacturing processes," and, (3) the value of the partially fabricated materials imported "since their value is counted nowhere else."

The concern with the appropriate basis for the measurement of growth, and the desire to include within the measure all activities not explicitly included elsewhere, probably had its roots in the sparsity of available data. The census of manufactures was almost the only source of information on output and apparently there was a desire to make it as comprehensive as possible. It purported to cover output wherever it occurred-in factories, in the hand trades, in stores, and even in homes if the output was commercial-though the censuses for 1869 and later disclaimed an ability to obtain reliable statistics from the hand trades.

The census for 1899 devoted 77 pages of text to the emergence of a "factory system" and to formation of 185 "industrial combinations" or "trusts," consisting of 2,040 plants in 12 industrial groups and 36 States. All but eight of the "combinations" had been formed between 1890 and 1899. After 1899, the census was confined to the "factory system." Its frequency increased and emphasis shifted to the organization and structure of manufactures.

The formulation of net value of products as the sum of raw materials and value added had required that data be collected separately for raw materials and for fabricated materials and, as is shown in table A, data were obtained on many other expenses. The problem of allocating net value of products among industries and areas was discussed extensively in the census for 1899 but a satisfactory solution was not found. "Value added" was adopted, almost reluctantly, for this purpose in the census for 1904, but only the cost of materials consumed directly was subtracted from value of products to arrive at the value added used for that year. Materials consumed by the manufacturing process (e.g., mill supplies, fuels, etc.), but not embodied in the product, were not subtracted even though information on their magnitude was available in the census.

In millions of dollars. The entries are from the original reports for the years shown. Estimates adjusted for changes in the scope of manufactures are shown in table 1, General Summary. The exclusion of the hand trades and neighborhood operations from the 1899 census reduced the value added shown in this table by 44 percent; the adjustments for 1809 and later censuses were about 4 per cent.]

*Subtracted from value of product in computing value added by manufacture.
- Represents zero.
\({ }^{1}\) Includes only items named in a request for separate information.
\({ }^{2}\) For 1947, value of shipments; for 1958, value of shipments and miscellaneous receipts, sales of goods bought and resold without further manufacture, and changes in inventories of work in process and finished goods.
\({ }^{3}\) Includes all materials consumed in the manufacture of products plus an increasingly comprehensive list of supplies consumed currently in the operation of the plant.
"Specifically mentioned as included in item 2, but not shown separately.
\({ }^{5}\) Obtained separately but combined with item 7 for publication.
\({ }^{6}\) Information requested but no mention of it was found in publication.
\({ }^{7}\) Excluded from value of product and, thus, from value added. Data on excise taxes were obtained for 1947 and published as a memorandum item in the tables for industry, but have not been requested since 1947.
\({ }^{8}\) Data were obtained in a sample survey conducted in connection with the census for 1958 and relate to 1957.
\({ }^{9}\) Specifically mentioned as included in item 15.
\({ }^{10}\) Items 13 and 14 were combined and requested as item 12.
\({ }^{11}\) The instructions for 1899 and 1904 requested the inclusion of the following expenses: Federal excise taxes, rent of office and buildings, interest paid, insurance premiums paid, advertising, ordinary repairs of buildings and machinery, all other sundries. The instructions for 1909 modified this list by requesting the separate reporting of Federal excise taxes, dropping interest paid, and adding traveling expenses, royalties, use of patents.
\({ }^{12}\) Published only for individual industries; total not shown for all industries.
\({ }^{13}\) For 1869, labeled, "excess of value over materials;" for 1899, labeled, "net value of product."

The chief concern of those first deciding upon the appropriate definition of value added was to circumvent the problem discussed in most censuses under the heading, "Duplication in cost of materials and value of products." To them, it must have seemed undesirable to subtract from value of products anything not essential to reduce "duplication" to manageable proportions. The considerations which went into the decisions to subtract additional costs from value of products are incompletely recorded, but there is no doubt that such decisions were taken. By 1909, mill supplies and fuels, including rented heat and power, were subtracted. To this list were added purchased electricity in 1929, and the cost of contract work, partially in 1935, and fully in 1939. Beginning with the 1947 Census of Manufactures, Federal excise taxes were excluded from value of shipments and thus from value added by manufacture. In a special table in the 1954 Census of Manufactures (Volume I, General Summary, table 2B), the concept of adjusted value added was introduced. Value added by resales was added to standard value added by manufacture and the total further adjusted by the change in finished products and work-inprocess inventories. During the 1955 to 1959 Annual Surveys of Manufactures, both adjusted and unadjusted value added were calculated for each industry. Since the 1958 census, only adjusted value added has been used.

While there was an increase in the range of costs subtracted from value of product in arriving at value added since 1869, there was also a curtailment of the detailed information obtained on costs. Why some items were dropped is not known precisely but perhaps the following information is relevant. The census reports contain testimony that difficulty had been experienced in collecting data on costs or expenses and that respondents had
complained about the burden of providing such information. The reports also contain statements, with increasing emphasis, that profits could not be calculated from published figures; such statements also appear in the reports for 1899 and 1904, the years when maximum detail was requested. There may have been more effort by the Census Bureau to obtain data essential to a "key" measure, such as value added, than there was for data to be presented only as supplementary information. Too, the introduction, in 1921, of the biennial census of manufactures, coupled with uncertain and fluctuating appropriations, may have led to the adoption of a policy to concentrate on a minimum number of key measures. The appropriations for the census for 1933, for example, were too small even to cover the key measures.

It is not clear whether the inclusion of fuels and electricity in the value to be subtracted from value of product was simply to reduce "duplication" within the manufacturing sector or is evidence of a growing awareness of the contribution of other sectors to the value of manufactured product, a contribution that must be subtracted to arrive at value added by manufacture. During the opening decades of this century, coke and manufactured gas had a larger share of the fuels market and much of the electricity consumed by manufactures was produced in manufacturing plants. On the other hand, a continuous attempt was made from the early censuses to exclude transportation costs from the value of products and value added, by requesting that products be valued f.o.b. the plant and that materials costs include the cost of transporting them to the plant. Item 6, table A, was provided as "correction' to costs of materials which were reported exclusive of delivery costs.

\section*{Appendix B}

\section*{INDUSTRY DESCRIPTIONS}

This appendix contains descriptions of industries for which data were compiled and published in the 1963 Census of Manufactures. It also presents industry specialization and coverage ratios for 1963.

As published for 1963 and as presented in this appendix, the industry codes and descriptions are in accordance with the manufacturing division of the Standard Industrial Classification Manual (SIC), 1957 revised edition and amendments thereto, published by the Bureau of the Budget. The industry titles are those published in the SIC Manual; the descriptions are, likewise, generally as published in that manual but, for some industries, are expanded to include references to additional products primary to the industry or to related products classified in other industries. The descriptions also include remarks concerning changes in industry classification between the 1958 and 1963 censuses. (It should be noted that industry 3717, Motor Vehicles and Parts, is a Census industry combining three SIC industries: 3711, Motor Vehicles; 3712, Passenger Car Bodies; and 3714, Motor Vehicle Parts and Accessories.)

Industry classification of establishments, employed by the Bureau of the Census in the census of manufactures, as in other surveys, is in accordance with SIC principles. Thus, an establishment is classified into an industry on the basis of its primary activity, typically the value of products shipped. (A fuller treatment of the basis of industry classification of establishments will be found in the Introduction to this volume.) For industries, two measures have been developed which gage the homogeneity of the industrial classification: the primary product specialization ratio and the coverage ratio. To the right of each 4-digit industry title will be found the specialization ratio (" S ") and the coverage ratio (" C ") for 1963. These figures for 1963, as well as for 1958, may also be found in the general summary table 3 in this volume and in table 5A of the separate industry chapters in Volume II, "Industry Statistics," of the 1963 Census of Manufactures.

While establishments may manufacture and ship only products primary to the industry in which such establishments are classified, it is frequently the case that they also ship products secondary to that industry, that is, primary to
other manufacturing industries. The primary product specialization ratio measures, within and for an industry, the proportion of the total value of products shipped, both primary and secondary, represented by primary products. (Dollar receipts for general contract work performed for others and miscellaneous receipts, such as for the sale of scrap, for nonmanufacturing type of repair work, merchandising of goods not processed in the industry, etc., are not considered in computing the specialization ratio.)

The coverage ratio, measured in terms of the value of shipments of primary products of an industry by all manufacturing industries, indicates the proportion shipped by the primary industry. In brief, to what extent the primary products of an industry are shipped by the industry in which such products are primary.

In general, the SIC standards require that a 4 -digit industry have a minimum primary product specialization ratio of .80 and a coverage ratio of .70. Because of the diversity of manufactures, relatively few industries will show either specialization or coverage ratios of 1.00 (or 100, expressed in percentage terms). With respect to coverage, the structure of the classification will, in some situations, materially reduce the ratio. Within the classification, distinctions among industries are sometimes based on process or degree of integration. For example, industry 3316, Cold Rolled Sheet, Strip, and Bars, turns out products similar to some produced in industry 3312, Blast Furnaces, Steel Works and Rolling Mills. The difference in process is reflected in the situation that establishments classified in industry 3316 work from purchased materials (hot rolled sheet, hot rolled steel bars), whereas those in industry 3312, primarily steel works, typically work from materials produced at the same facility. Thus, the low coverage ratio (20 percent) shown for industry 3316 indicates chiefly those establishments which do not produce their own materials. Were the coverage ratio for industry 3316 based on shipments of primary products produced solely from purchased materials, that ratio would probably be close to 100 percent.

The few industries for which specialization and coverage ratios are not shown are generally those in which the figures, if published, would disclose data for individual companies, or the receipts were primarily from services rendered (contract work performed for others on their materials) but not distinguished by type of service. In addition, these ratios are not shown for industries having significant duplication of shipments within the industry except where such duplication could be approximated and eliminated from the calculation.

Major Group (2-digit) and Group (3-digit) specialization and coverage ratios were not developed for the 1963 Census. However, the computation of such ratios at these broader classification levels would involve procedures similar to those used in computing ratios at the 4 -digit industry level. That is, at the 3 -digit level the specialization ratio would be developed by considering as the "industry" all establishments whose 4 -digit classification showed them to be in the same 3 -digit Group. For this "industry" primary products would be those shipped by and classified as primary to that 3-digit Group; secondary products would be those shipped by the group but classified in
other 3-digit manufacturing groups. Similarly, for the 2-digit Major Groups, the specialization ratio would be developed by considering as the "industry" those establishments classified in the same Major Group. Primary products of the Major Group would be those classified in the Major Group, and classified as secondary those shipped by the Major Group but classified in other manufacturing Major Groups.

See also the footnotes at the end of the appendix, describing special situations for specialization or coverage ratios for 4-digit industries for 1963.

\section*{FOOD AND KINDRED PRODUCTS}

This major group includes establishments manufacturing foods and beverages for human consumption, and certain related products. such as manufactured ice, chewing gum, vegetable and animal fats and olls, and prepared feeds for animals and fowls.

MEAT PRODUCTS:
Meat Packing Plants (S-98; C-86). - Establishments primarily engaged in the slaughtering, for their own account or on a contract basis for the trade, of cattle, hogs, sheep, lambs, calves, horses, and other animals except small game, for meat to be sold or to be used on the same premises in canning and curing, and in making sausage, lard, and other products. Establishments primarily engaged in manufacturing sausages and meat specialties from purchased meats are classified in industry 2013; and establishments primarily engaged in killing, dressing, packing, and canning poultry, rabbits, and other small game in industry 2015.

Some slaughtering operations are conducted in establishments which are not included in the census of manufactures, such as those chiefly engaged in wholesale or retail trade, locker plant services, etc. A check of the 1958 Census of Manufactures records with those of the U.S. Department of Agriculture indicated that the census of manufactures included about 90 percent of the volume of commercial livestock slaughter. A similar comparison of the 1963 census slaughter statistics with those of the U.S.D.A. indicates that coverage of commercial slaughter is about at the same level.

Sausages and Other Prepared Meat Products (S-94; C-38). Establishments primarily engaged in manufacturing sausages, cured meats, smoked meats, canned meats, frozen meats, other prepared meats, and meat specialites, from purchased carcasses and other materials. Sausage kitchens and other prepared meat plants operated by packing houses as separate establishments also are included in this industry. Establishments primarlly engaged in killing, dressing, and packing poultry, rabbits, and other small game, and those canning poultry are classified in industry 2015. Establishments primarily engaged in the cutting up and resale of purchased fresh carcasses are classified in trade industries.

Prepared meats manufactured in retail and independent wholesale establishments are not included in the census of manufactures.

2015 Poultry and Small Game Dressing and Packing, Wholesale (S-98; C-98).-Establishments primarily engaged in killing, dressing, packing, and canning poultry, rabbits, and other small game for their own account or on a contract basis for the trade. This industry also includes the drying, freezing, and breaking of eggs; but not the cleaning, oil treating, packing and grading of eggs which are classified in wholesale trade.

Poultry and small game killed and dressed at farms, hatcheries, frozen food lockers and wholesale and retail establishments are not included in manufacturing.

DAIRY PRODUCTS:
Creamery Butter (S-69; C-77).-Establishments primarily engaged in manufacturing creamery butter.

This industry combined two industries that were separate under the previous classification system: industry 2022, Natural Cheese, and industry 2025, Special Dairy Products.

Cheese, Natural and Processed (S-93; C-96). -Establishments primarily engaged in the manufacture of natural cheese (except cottage cheese), process cheese. cheese foods, and cheese spreads. Establishments primarily engaged in manufacturing cottage cheese are classified in industry 2026.

CANNING AND PRESERVING FRUITS, VEGETABLES, AND SEAFOODS:
2031 Canned and Cured Seafoods (S-92; C-95). -Establishments primarily engaged in cooking and canning fish, shrimps, oysters, clams, crabs, and other seafoods; and those engaged in smoking. salting, drying, or otherwise curing fish for the trade. Establishments primarily engaged in shucking and packing fresh oysters in nonsealed containers, or freezing and packaging fresh fish are classified in industry 2036.

2032 Canned Specialties (S-80; C-91). -Establishments primarily engaged in canning specialty products, such as baby foods, "native foods," health foods, and soups, except seafood. Establishments primarily engaged in canning seafood soup are classified in industry 2031, and those primarily engaged in quick freezing canned specialties in industry 2037.

2033 Canned Fruits, Vegetables, Preserves, Jams, and Jellies (S-89; C-91).-Establishments primarily engaged in canning fruits and vegetables, and fruit and vegetable juices; and in manufacturing catsup and similar tomato sauces, preserves, jams, and jellies. Establishments primarily engaged in canning seafood soups are classified in industry 2031; and soups, except seafood. and baby foods in industry 2032.

2034 Dried and Dehydrated Fruits and Vegetables (S-96; C-89). Establishments primarily engaged in sun drying or artifically dehydrating fruits, vegetables, and nuts, or in manufacturing packaged soup mixes from dehydrated ingredients. Establishments primarily engaged in the grading and marketing of farm dried fruits, such as prunes and raisins, areclassified in trade industries.

Pickled Fruits and Vegetables; Vegetable Sauces and Seasonings; Salad Dressings (S-79; C-82).-Establishments primarily engaged in pickling and brining fruits and vegetables and in manufacturing salad dressings, vegetable relishes, sauces, and seasonings. Establishments primarily engaged in manufacturing catsup and similar tomato sauces are classified in industry 2033, and those packing purchased pickles and olives in trade industries.

Fresh or Frozen Packaged Fish (S-95; C-94). -Establishments primarily engaged in preparing fresh, and raw or cooked frozen packaged fish and other seafood. This industry also includes establishments primarily engaged in the shucking and packing of fresh oysters in nonsealed containers.

2037
Frozen Fruits, Fruit Juices, Vegetables and Specialties (S-89; C-89).-Establishments primarily engaged in quick freezing and cold packing (freezing) fruits, fruit juices, vegetables, and specialties. Excluded from this industry are establishments primarily engaged in packing fruits and vegetables for freezing but not freezing the product; cold storage warehouses freezing foods for others, frozen food locker and other establishments freezing for individual consumers or farms and ranches producing frozen fruits and vegetables. Establishments primarily freezing meats and poultry are included in Industry Group 201, Meat Products.

204 GRAIN MLLL PRODUCTS:-Establishments in this group of industries frequently supplement their manufacturing activities with sales of grain and of commodities produced elsewhere. Such establishments were classified in manufacturing if at least 25
percent of their total receipts were from manufacturing activities, except for industry 2042, Prepared Feeds for Animals and Fowls, where it was required that receipts from manufacturing exceed receipts from merchandising. Most establishments which mixed some feed but did not meet these criteria were included in the 1963 Census of Business, except for some whose principal activity (e.g. custom milling) fell outside the scope of any of the 1963 economic censuses.
lour and Other Grain Mill Products (S-94; C-78). -This industry comprises establishments primarily engaged in milling flour or meal from grain, except rice (industry 2044). The products of flour mills may be sold plain or in the form of prepared mixes for specific purposes. Establishments primarily engaged in manufacturing prepared flour mixes from purchased ingredients are classified in industry 2045.

Prepared Feeds for Animals and Fowls (S-96; C-93). -This industry comprises establishments primarily engaged in manufacturing prepared feeds for animals and fowls. Prepared feeds include poultry feed, livestock feed, dog food and other pet foods (canned, frozen, and dry). This industry also includes establishments primarily engaged in manufacturing certain feed ingredients and adjuncts, such as alfalfa meal, feed supplements, and feed concentrates. Mills primarily engaged incustom grinding of feeds or other agricultural services are excluded from the census of manufactures.

Substantial quantities of prepared feeds are mixed at locations which are not included in the census of manufactures, such as grain elevators, custom or grist mills, farm supply stores, chick hatcheries, commercial broiler raising establishments, and cattle-feeding operations.

2043 Cereal Preparations (S-80; C-86).-This industry comprises establishments primarily engaged in manufacturing cereal breakfast foods and related preparations. Establishments primarily engaged in manufacturing corn and hominy grits for human consumption are classified in industry 2041.

Rice Milling (S-100; C-100). -This industry comprise establishments primarily engaged in cleaning and polishing rice, and in manufacturing rice flour or meal. Important products of this industry include brown rice, milled rice (including polished rice), rice polish, rice bran, and rice flour.

Blended and Prepared Flour (S-78; C-62). -This industry comprises establishments primarily engaged in the preparation of blended flours and flour mixes from purchased flour (including flour transferred from flour mills owned by the same company). lmportant products of this industry include phosphated and selfrising flour and prepared flour mixes such as biscuit, cake, doughnut, and pancake mixes. Establishments making the same products from flour milled at the same location are classified in industry 2041. Prior to 1963 , refrigerated doughs were not specifically listed on the report forms. The products usually were classified in either industry 2037, or industry 2099, depending upon the description of the refrigerated dough furnished by respondent.

Wet Corn Milling (S-83; C-93). -This industry comprises establishments primarily engaged in milling corn or sorghum grain (milo) by the wet process, and producing starch, sirup, oil, sugar, and byproducts, such as gluten feed and meal. Establishments primarily engaged in malufacturing starch from other vegetable sources (potato, wheat, etc.) are also included. Establishments primarily engaged in manufacturing table sirups from corn sirup and other ingredients, and those manufacturing starch base dessert powders, are classified in industry 2099; those primarily engaged in manufacturing corn meal and grits are classified in industry 2041. Establishments primarily engaged in manufacturing laundry starches are classified in industry 2842.

BAKERY PRODUCTS:
Bread and Other Bakery Products, Except Biscuit, Crackers, and Pretzels (S-98; C-99). -Establishments primarily engaged in manufacturing bread, cakes, and other "perishable" bakery products. Establishments primarily engaged in producing "dry" bakery products, such as biscuit, crackers, and pretzels are classified in industry 2052. Establishments producing bakery products primarily for direct sale on the premises to household consumers are classified in retail trade, industry 5462. Establishments manufacturing bakery products for sale
primarily for home service delivery, or through one or more nonbaking retail outlets, are included in industry 2051.

Biscuit, Crackers, and Pretzels (S-97; C-95).-Establishments primarily engaged in manufacturing biscuit (except raised biscuit), crackers, and similar "dry" bakery products. Establishments primarily engaged in producing "perishable" bakery products are classified in industry 2051.

SUGAR:
Cane Sugar, Except Refining Only (S-99; C-100). - Establishments primarily engaged in manufacturing raw sugar, sirup, or finished (granulated or clarified) cane sugar from sugar cane. Establishments primarily engaged in refining sugar from purchased raw cane sirup or sugar sirups are classified in industry 2062.

2062
Cane Sugar Refining (S-100; C-100). -Establishments primarily engaged in refining purchased raw cane sugar and sugar sirup.

Beet Sugar (S-100;C-100).-Establishments primarily engaged in manufacturing sugar from sugar beets.

207 CONFECTIONERY AND RELATED PRODUCTS:
2071 Candy and Other Confectionery Products (S-95; C-95).-Establishments primarily engaged in manufacturing candy, including chocolate candy, salted nuts, other confections and related products. Establishments primarily engaged in manufacturing solid chocolate bars are classified in industry 2072, and chewing gum in industry 2073. Establishments primarily engaged in manufacturing confectionery for direct sale on the premises and those primarily engaged in shelling and roasting nuts are classified in trade industries.

2072
Chocolate and Cocoa Products (S-99; C-82). -Establishments primarily engaged in shelling, roasting, and grinding cocoa beans for the purpose of making chocolate liquor, from which cocoa powder and cocoa butter are derived, and in the further manufacture of solid chocolate bars and chocolate coatings. Establishments primarily engaged in manufacturing products except candy from purchased chocolate and cocoa are classified in industry 2099, and chocolate candies in industry 2071.

2073 Chewing Gum (S-88; C-96). - Establishments primarily engaged in manufacturing chewing gum or chewing gum base.

\section*{208 BEVERAGES:}

2082
Malt Liquors (S-100; C-100).-Establishments primarily engaged in manufacturing all kinds of malt liquors. Establishments primarily engaged in bottling purchased malt liquors a re classified in trade industries.

2083 Malt (S-100; C-95).-Establishments primarily engaged in manufacturing malt or malt byproducts from barleyor other grains.
2084 Wines, Brandy, and Brandy Spirits (S-98; C-99) \({ }^{1}\).-Establishments primarily engaged in manufacturing wines, brandy, and brandy spirits. This industry also includes bonded storerooms which are engaged in blending wines. Establishments primarily bottling purchased wines, brandy and brandy spirits, but which do not manufacture wines and brandy are classified in trade industries.

2085 Distilled, Rectified, and Blended Liquors (S-98; C-99). -Establishments primarily engaged in manufacturing alcoholic liquors by distillation and rectification, and in manufacturing cordials and alcoholic cocktails by blending processes, or by mixing liquors and other ingredients. Establishments primarily engaged in manufacturing industrial alcohol are classified in industry 2818 , and those only bottling purchased liquors in trade industries.

2086 Bottled and Canned Soft Drinks and Carbonated Waters (S-98; C-95).-Establishments primarily engaged in manufacturing soft drinks (nonalcoholic beverages) and carbonated waters. Establishments primarily engaged in manufacturing fruit and vegetable juices are classified in industry 2033, fruit sirups for flavoring in industry 2087, and cider in industry 2099. Establishments primarily engaged in bottling natural spring waters are classified in trade industries.

2087 Flavoring Extracts and Flavoring Sirups, N.E.C. (S-90; C-79).Establishments primarily engaged in manufacturing flavoring extracts, sirups, and fruit juices, n.e.c., for soda fountain use or for the manufacture of soft drinks, and colors for bakers'
and confectioners' use. Establishments primarily engaged in manufacturing chocolate sirup are classified in industry 2072, and mixed or blended sweetening sirup and molasses in industry 2099.

MISCELLANEOUS FOOD PREPARATIONS AND KINDRED PROD UCTS:
(tonseed Oil Mills (S-89; C-91).-Establishments primarily engaged in manufacturing cottonseed oil, and byproduct cake, meal, and linters. Establishments primarily engaged in refining cottonseed oil into edible cooking oils are classified in industry 2096.

Soybean Oil Mills (S-89; C-95).-Establishments primarily engaged in manufacturing soybean oil, and byproduct cake and meal. Establishments primarily engaged in refining soybean oil into edible cooking oils are classified in industry 2096.

Vegetable Oil Mills, Except Cottonseed and Soybean (S-84; C-83).-Establishments primarily engaged in manufacturing vegetable oils and byproduct cake and meal, except cottonseed and soybean. Establishments primarily engaged in refining vegetable oils into edible cooking oils are classified in industry 2096, and those refining these oils for medicinal purposes in industry 2833.

Animal and Marine Fats and Oils, lncluding Grease and Tallow (S-94; C-66). -Establishments primarily engaged in rendering inedible grease and tallow from animal fat, bone, and meat scraps, or in manufacturing animal oil, n.e.c., including fish oil and other marine animal oils, and byproduct meal. Establishments primarily engaged in refining marine animal oils for medicinal purposes are classified in industry 2833. Establishments primarily engaged in manufacturing fatty acids are classified in industry 2899. Establishments primarily engaged in manufacturing lard are classified in Industry Group 201.

This industry combined two industries that were separate under the previous classification system: industry 2094 and industry 2095.

Roasted Coffee (S-90; C-99).-Establishments primarily engaged in the manufacture of roasted and concentrated coffee. Roasted coffee may be whole bean or ground. Concentrated coffee produced may be in either liquid or powdered form.

This is a new industry classification. Previously, roasted coffee was classified in industry 2099.

Shortening, Table Oils, Margarine and Other Edible Fats and Oils, N.E.C. (S-88; C-89).-Establishments primarily engaged in manufacturing shortening, table oils, margarine, and other edible fats and oils, n.e.c., by further processing of animal and vegetable oils. Establishments primarily engaged in producing corn oil are classified in industry 2046.

Manufactured lce (S-99; C-100).-Establishments primarily engaged in manufacturing ice for sale. lce plants operated by public utility companies are included in this industry. Establishments primarily engaged in manufacturing dry ice are classified in industry 2813 , and the harvesting and storage of natural ice for sale in trade industries.

Macaroni, Spaghetti, Vermicelli, and Noodles (S-96; C-94). Establishments primarily engaged in manufacturing dry macaroni, spaghetti, vermicelli, and noodles. Establishments primarily engaged in manufacturing canned macaroni, spaghetti, etc., are classified in industry 2032.

\section*{TEXTILE MILL PRODUCTS}

This major group includes establishments engaged in performing any of the following operations: (1) preparation of fiber and subsequent manufacturing of yarn, thread, braids, twine, and cordage; (2) manufacturing broad woven fabric, narrow woven fabric, knit fabric, and carpets and rugs from yarn; (3) dyeing and finishing fiber, yarn, fabric, and knit apparel; (4) coating, waterproofing, or otherwise treating fabric; (5) the integrated manufacture of knit apparel and other finished articles from yarn; and (6) the manufacture of felt goods, lace goods, bonded-fiber fabrics, and miscellaneous textiles.

This classification makes no distinction between the two types of organizations whichoperate in the textile industry: (1) the "integrated" mill which purchases materials, produces textiles and related articles within the establishment, and sells the finished products; and (2) the "contract" or "commission" mill which processes materials owned by others. Converters or other nonmanufacturing establishments which assign materials to contract mills for processing (other than knitting) are classified in nonmanufacturing industries; establishments which assign yarns to outside contractors or commission knitters for the production of knit products are classified in Industry Group 225.

221 BROAD WOVEN FABRIC MILLS, COTTON:
Broad Woven Fabric Mills, Cotton (S-92; C-80). -Establishments primarily engaged in weaving fabrics over 12 inches in width. wholly or chiefly of cotton. Establishments primarily engaged in weaving cotton carpets and rugs are classified in industry 2271 ; those tufting carpets and rugs in industry 2272; and those making tire cord and fabric in industry 2296.

In the product coding system for the 1963 Census of Manufactures, finished cotton fabrics and certain cotton fabricated products were classsified as primary to industry 2211 when made in weaving mills. Similar products made in non-weaving establishments were classified as primary to the appropriate industry; for example, sheets made in strictly cut-and-sew plants were classified as primary to industry 2392.

BROAD WOVEN FABRIC MILLS, MAN-MADE FIBER AND SILK: Broad Woven Fabric Mills, Man-Made Fiber and Silk (S-86; \(\mathrm{C}-82\) ). -Establishments primarily engaged in weaving fabrics over 12 inches in width, wholly or chiefly of silk and man-made fibers including glass. Establishments primarily engaged in weaving carpets and rugs from these fibers are classified in industry 2271; those tufting carpets and rugs from these fibers in industry 2272; and those making tire cord and fabric in industry 2296.

In the product coding system for the 1963 Census of Manufactures, finished synthetic and silk fabrics and blankets were classified as primary to industry 2221 when made in weaving mills. Similar products made in non-weaving establishments
were classified as primary to the appropriate industry; for example, synthetic fabrics finished in establishments engaged only in dyeing or printing were classified as primary to industry 2262.

BROAD WOVEN FABRIC MLLLS, WOOL: INCLUDING DYEING AND FINISHING:

Broad Woven Fabric Mills, Wool: Including Dyeing and Finishing (S-86; C-96).-Establishments primarily engaged in weaving fabrics over 12 inches in width, wholly or chiefly by weight of wool, mohair, or similar animal fibers; those dyeing and finishing woven wool fabrics or dyeing wool, tops, or yarn; and those shrinking and sponging wool goods for the trade. Establishments primarily engaged in weaving wool carpets and rugs are classified in industry 2271, and those tufting wool carpets and rugs in industry 2272.

NARROW FABRICS AND OTHER SMALLWARES MILLS: COTTON. WOOL, SILK, AND MAN-MADE FIBER:

Narrow Fabrics and Other Smallwares Mills: Cotton, Wool, Silk, and Man-Made Fiber (S-91; C-97).-Establishments primarily engaged in weaving or braiding fabrics 12 inches or narrower in width of cotton, wool, silk, and man-made fibers, including glass fibers. Establishments primarily engaged in weaving or braiding fabrics 12 inches or narrower in width of fabric-covered elastic yarn are also included in this industry.

KNITTING MILLS:
Women's Full-Length and Knee-Length Hosiery, Seamless and Full-Fashioned (S-96; C-94) . -Establishments primarily engaged in knitting, dyeing, or finishing women's and misses' fulllength and knee-length hosiery, both seamless and fullfashioned.

This new industry definition represents a substantial revision from the classification system used in 1958. Prior to 1963 , industry 2251 included establishments primarily engaged in production of full-fashioned hosiery, while industry 2252 consisted of establishments engaged primarily in the production of seamless (circular knit) hosiery. For 1963 , the classifications for hosiery mills were revised to include in 2251 those mills primarily engaged in producing women's and misses' hosiery, except socks, and in 2252 mills engaged in producing all other hosiery.

2252 Hosiery, Except Women's Full-Length and Knee-Length Hosiery (S-91; C-96). -Establishments primarily engaged in knitting, dyeing, or finishing hosiery, except women's and misses' fulllength and knee-length seamless and full-fashioned hosiery. See definition of industry 2251, above, for revision of the SlC for this industry as of 1963.

2253 Knit Outerwear Mills (S-92; C-97).-Establishments primarily engaged in knitting outerwear from yarn, or in manufacturing outerwear from knit fabric produced in the same establishment. Establishments primarily engaged in hand knitting outerwear for the trade are included in this industry. Establishments primarily engaged in manufacturing woven or purchased knit fabric gloves and mittens are classified in industry 2381 , and those manufacturing outerwear from purchased knit fabric in Major Group 23.

Knit Underwear Mills (S-89; C-91).-Establishments primarily engaged in knitting underwear and nightwear from yarn, or in manufacturing underwear and nightwear from knit fabric produced in the same establishment. Establishments primarily engaged in manufacturing underwear and nightwear from purchased knit fabric are classified in Major Group 23.

Knit Fabric Mills (S-95; C-93). - Establishments primarily engaged in knitting tubular or flat fabric, and in dyeing or finishing knit fabric.

Knitting Mills, N.E.C. (S-93; C-86).-Establishments primarily engaged in knitting gloves and other articles, n.e.c. Establishments primarily engaged in cutting and sewingdress, semidress, and work gloves and mittens from purchased knit fabrics are classified in industry 2381.

DYEING AND FINISHING TEXTlLES, EXCEPT WOOL FABRICS AND KNIT GOODS:

Finishers of Broad Woven Fabrics of Cotton (S-81; C \(60^{2}\) ).Establishments primarily engaged in finishing purchased cotton broad woven fabrics, or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, plissé), and other mechanical
finishing such as preshrinking, calendering and napping. This industry also includes the shrinking and sponging of cloth for the trade, and the chemical finishing for water-repellency, fire-resistance, and mildew-proofing. Establishments primarily engaged in finishing wool broad woven fabrics are classified in industry 2231; knit goods in Industry Group 225; and those coating or impregnating fabrics in industry 2295.

Finishers of Broad Woven Fabrics of Man-Made Fiber and Silk (S-91; C-46 \({ }^{3}\) ).-Establishments primarily engaged in finishing purchased man-made fiber and silk broad woven fabrics or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, plisse); and other mechanical finishing such as preshrinking, calendering, and napping. Establishments primarily engaged in finishing wool broad woven fabrics are classified in industry 2231; knit goods in Industry Group 225; and those coating or impregnating fabrics in industry 2295.

Dyeing and Finishing Textiles, N.E.C. (S-89;C-64 \()\).-Establishments primarily engaged in dyeing and finishing textiles, n.e.c., such as bleaching, dyeing, printing, and finishing of raw stock, yarn, braided goods, and narrow fabrics, except wool. These establishments perform finishing operations on purchased textiles or on a commission basis.

227 FLOOR COVERING MILLS:
2271 Woven Carpets and Rugs (S-77; C-92). -Establishments primarily engaged in weaving carpets and rugs from any textile yarn. lmportant products of this industry include Axminster, Wilton, velvet, chenille, and similar woven carpets and rugs; and woven automobile and aircraft floor coverings.

Tufted Carpets and Rugs (S-96; C-96). - Establishments primarily engaged in tufting carpets and rugs from any textile fiber. Important products of this industry include tufted carpets, rugs, scatter rugs, and bathmats and bathmat sets except terry woven. Finishers of these products also are included in this industry.

Carpets, Rugs and Mats, N.E.C. (S-89; C-46).-Establishments primarily engaged in manufacturing rugs, carpets, art squares, floor mattings, door mats and mattings from twisted paper, grasses, reeds, coir, sisal, fute or rags. Establishments primarily engaged in manufacturing hard-surface floor coverings, except rubber and cork, are classified in industry 3982.

228 YARN AND THREAD MILLS:
2281 Yarn Spinning Mills, Cotton, Man-Made Fibers, and Silk (S-96; C-83).-Establishments primarily engaged in spinning yarn wholly or chiefly by weight of cotton, man-made fiber staple, or silk staple. Establishments primarily engaged in dyeing or finishing purchased yarns or finishing yarns on a commission basis are classified in industry 2269.

Yarn Throwing, Twisting, and Winding Mills, Cotton, Man-Made Fibers and Silk (S-95; C-87). -Establishments primarily engaged in throwing, twisting, winding, or spooling yarn wholly or chiefly by weight of cotton, man-made fibers, or silk. Establishments primarily engaged in dyeing or finishing purchased yarns or finishing yarns on a commission basis are classified in industry 2269.

2283 Yarn Mills, Wool, lncluding Carpet and Rug Yarn (S-85; C-82). Establishments primarily engaged in spinning, twisting, winding, or spooling yarn (including carpet and rug yarn) wholly or chiefly by weight of wool, mohair, or similar animal fibers. Establishments primarily engaged in dyeing or finishing purchased yarn or finishing yarn on a commission basis are classifled in industry 2231 .

Thread Mills (S-93; C-90).-Establishments primarily engaged in manufacturing thread from natural or man-made fiber except flax (industry 2299) and wool (industry 2283). Important products of this industry include sewing, crochet, darning, embroidery, tatting, hand knitting, and other handicraft threads.

\section*{229 MISCELLANEOUS TEXTILE GOODS:}

2291 Felt Goods, Except Woven Felts and Hats (S-86; C-88). Establishments primarily engaged in manufacturing pressed felt, regardless of fiber, by means of heat, moisture, and pressure; and those making punched felt for rugs, cushions, and other products from hair, fute, wool, or other fibers by the needle loom process. Establishments primarily engaged in
manufacturing woven wool felts and wool haircloth are classified in industry 2231, and those manufacturing felt hats in Industry Group 235.

Lace Goods (S-98; C-91).-Establishments primarily engaged in manufacturing lace machine products, and those primarily engaged in dyeing and finishing lace goods. Establishments primarily engaged in manufacturing Schiffli machine embroideries are classified in industry 2397.

2293 Paddings and Upholstery Filling (S-84;C-81).-Establishments primarily engaged in manufacturing batting, padding, wadding, and filling for upholstery, pillows, quilts, and apparel from curled hair, cotton mill waste, moss, hemp tow, flax tow, kapok, and related materials. Establishments primarily engaged in manufacturing wood excelsior pads and wrappers are classified in industry 2429.

Processed Waste and Recovered Fibers and Flock (S-95; C-86). Establishments primarily engaged in processing textile mill waste for spinning, padding, batting, or other uses; in recovering textile fibers from clippings and rags; in cutting flock from waste, recovered fibers, or new fiber stock; and in manufacturing oakum and twisted jute packing. Establishments primarily engaged in cleaning and sorting wiping rags or waste are classified in nonmanufacturing industries.

Artificial Leather, Oilcloth, and Other Impregnated and Coated Fabrics, Except Rubberized (S-86;C-83).-Establishments primarily engaged in manufacturing coated and impregnated textiles, and in the special finishing of textiles such as varnishing and waxing. Establishments primarily engaged in rubberizing purchased fabrics are classified in industry 3069, and those primarily engaged in dyeing and finishing textiles in Industry Group 226.

Tire Cord and Fabric (S-87; C-91). -This industry comprises establishments primarily engaged in manufacturing cord and fabric for use in reinforcing rubber tires, industrial belting, fuel cells, and similar uses.

Wool Scouring, Worsted Combing, and Tow to Top Mills (S-94; C-69). -This industry comprises establishments primarily engaged in processing textile fibers to prepare them for spinning. Important processes included in this industry are wool scouring and carbonizing, and combing and converting top.

Cordage and Twine (S-90; C-87).-Establishments primarily engaged in manufacturing rope, cable, cordage, twine, and related products from abaca (Manila), sisal, henequen. hemp, cotton, paper, jute, flax, man-made fibers including glass, and other fibers.

Textile Goods, N.E.C. (S-85; C-82).-Establishments primarily engaged in manufacturing linen goods, jute goods except felt, bonded fiber fabrlcs except felt, and other textile goods, n.e.c. Establishments primarily engaged in manufacturing woven felts are classified in industry 2231, nonwoven felts in industry 2291 , and cordage and twine in industry 2298.

23

\section*{APPAREL AND OTHER FINISHED PRODUCTS MADE FROM FABRICS AND SIMILAR MATERIALS}

This major group, known as the cutting-up or needle trades, includes establishments primarily producing apparel and fabricated products by cutting and sewing purchased woven or knit textile fabrics and related materlals such as leather, rubberized fabrics, plastics and furs.

Covered in the apparel industries are three types of establishments: (1) the "regular" or inside factories; (2) contract factories; and (3) apparel jobbers. The "regular" factories performall of the usual manufacturing functions on materials owned by themselves within their own plants; the contract factories manufacture apparel, on a contract or commission basis, on materials supplied to them by others; and apparel jobbers perform only entrepreneurial functions of a manufacturing establishment such as the purchase of raw materials for their own account, the design and preparation of samples, arrangement with outside factories (contractors) for the manufacture of garments from materials supplied by such jobbers, and the sale of finished apparel.

Custom tailors and dressmakers not operating on a factory basis are classified in nonmanufacturing industries. Establishments which primarily purchase and resell finished garments but
do not perform the functions of apparel jobbers or manufacturers are classified in the wholesale trades.

The major group also includes manufacturers of fabricated textile products (other than apparel) from purchased fabrics, typically by cutting and sewing or the perfomance of sewing and related services on textile and similar materials for the trade.

231 MEN'S, YOUTHS', AND BOYS' SUITS, COATS, AND OVERCOATS: 2311 Men's, Youths', and Boys' Suits, Coats, and Overcoats (S-92; C-96). -Establishments primarily engaged in manufacturing men's, youths'. and boys' suits, coats, and overcoats. Establishments primarily engaged in manufacturing uniforms (military, policemen's, firemen's, etc.) and tailored dress and sport coats, are also included in this industry. Establishments primarily engaged in manufacturing men's work and sport garments (such as lumber-jackets, ski suits, and riding garments) are classified in Industry Group 232, Men's, Youths', and Boys' Furnishings, Work Clothing, and Allied Garments.

232 MEN'S, YOUTHS'. AND BOYS' FURNISHINGS, WORK CLOTHING AND ALLIED GAR MENTS:

Men's, Youths', and Boys' Shirts (Except Work Shirts), Collars, and Nightwear (S-85; C-815).-Establishments primarily engaged in manufacturing men's, youths', and boys' shirts. collars, and nightwear cut and sewed from purchased woven or knit fabric. Establishments primarily engaged in manufacturing knit outerwear sport shirts from purchased knit fabric are also classified in this Industry. Establishments primarily engaged in manufacturing work shirts are classified in industry 2328. Knitting mills primarily engaged in manufacturing nightwear are classified in industry 2254, and knit outerwear sport shirts in industry 2253. Men's and boys' knit nightwear made in knitting mills is included in industry 2254.

2322 Men's, Youths', and Boys' Underwear (S-89;C-31 \({ }^{5}\) ). - Establishments primarily engaged in manufacturing men's, youths', and boys' underwear cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing underwear are classified in industry 2254.

2323 Men's, Youths', and Boys' Neckwear (S-98; C-98). -Establishments primarily engaged in manufacturing men's, youths', and boys' neckties, scarfs, and mufflers cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing neckties, scarfs, and mufflers are classified in industry 2253.

2327 Men's, Youths', and Boys' Separate Trousers (S-83; C-78).Establishments primarily engaged in manufacturing men's, youths', and boys' separate trousers and slacks. Establishments primarily engaged in manufacturing complete suits are classified in industry 2311, and work pants in industry 2328.

2328 Work Clothing (S-81; C-90).-Establishments primarily engaged in manufacturing men's and boys' work shirts, pants, and other work clothing and washable service apparel.
2329 Men's, Youths', and Boys' Clothing, N.E.C. (S-83; C-475). Establishments primarily engaged in manufacturing men's, youths', and boys' clothing, n.e.c. Establishments primarily engaged in manufacturing polo and sport shirts are classified in industry 2321; separate trousers in industry 2327; work clothing in industry 2328; and leather and sheeplined garments in industry 2386. Men's and boys' knit sweaters and other knit outerwear, n.e.c., made in knitting mills are classified as primary products of industry 2253, while men's and boys' knit outerwear, n.e.c., cut and sewed from purchased knit fabric are included in industry 2329.

233 WOMEN'S, MISSES', AND JUNIORS' OUTER WEAR:
\(2 \overline{331}\) Blouses, Waists, and Shirts (S-86; C-69) \({ }^{6}\). Establishments primarily engaged in manufacturing women's, misses', and juniors' blouses, waists, and shirts from purchased woven or knit fabrics. Establishments making knit outerwear shirts from yarns knit in the same establishment are classified in industry 2253.

2335
Dresses (S-96; C-96).-Establishments primarily engaged in manufacturing women's, misses', and juniors' dresses. including ensemble dresses, whether sold by the : iece or by the dozen. Knitting mills primarily engaged in manufacturing
women's, misses', and juniors' knit dresses and suits are classified in industry 2253.

Women's, Misses', and Juniors' Outerwear, N.E.C. (S-80; C-55 \({ }^{6}\). -Establishments primarily engaged in manufacturing women's, misses', and juniors' outerwear, n.e.c., cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear knit sweaters and other knit outerwear, n.e.c., are classified in industry 2253.

WOMEN'S, MISSES', CHILDREN'S, AND INFANTS' OUTERGARMENTS, UNDERGARMENTS:

Women's, Misses', Children's, and lnfants' Underwear and Nightwear (S-93; C-85 \({ }^{6}\) ), -Establishments primarily engaged in manufacturing women's, misses', children's, and infants' underwear and nightwear cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing underwear and nightwear are classified in industry 2254.

Corsets and Allied Garments (S-95; C-97). - Establishments primarily engaged in manufacturing corsets, corset accessories, and allied garments. Establishments primarily engaged in manufacturing surgical and orthopedic appliances are classified in industry 3842, and in manufacturing garter belts, in industry 2389.

HATS, CAPS, AND MILLINERY:
2351 Milinery (S-100; C-100). -Establishments primarily engaged in manufacturing women's, misses', children's, and infants' millinery. Establishments primarily engaged in manufacturing millinery braid and trimmings are classified in industry 2396.

Hats and Caps, Except Millinery (S-98; C-98). -Establishments primarily engaged in manufacturing hats, caps (except millinery) and all hat bodies. Knitting mills primarily engaged in manufacturing caps are classified in industry 2253.

236 GIRLS', CHILDREN'S, AND INFANTS' OUTERWEAR:
Dresses, Blouses, Waists, and Shirts (S-90;C-82 \({ }^{6}\) ). -Establishments primarily engaged in manufacturing girls', children's, and infants' dresses, blouses, waists, and shirts, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear of this type are classified in industry 2253.

Coats and Suits (S-92; C-85). -Establishments primarily engaged in manufacturing girls', children's, and infants' coats and suits, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear of this type are classified in industry 2253.

Girls', Children's and Infants' Outerwear, N.E.C. (S-79;C-67 \({ }^{6}\) ). Establishments primarily engaged in manufacturing girls', children's, and infants outerwear, n.e.c., cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing sweaters and other outerwear, n.e.c., are classified in industry 2253.

237 FUR GOODS:
2371 Fur Goods (S-99; C-100). -Establishments primarily engaged in manufacturing fur coats, and other garments, accessories, and trimmings made of fur. Establishments primarily engaged in manufacturing sheeplined clothing are classified in industry 2386, and those engaged in dyeing and dressing of furs in industry 3992.

238 MISCELLANEOUS APPAREL AND ACCESSORIES:
2381 Dress and Work Gloves, Except Knit and All Leather (S-94; C- \(82^{6}\) ).-Establishments primarily engaged in manufacturing dress, semidress, and work gloves and mittens, cut and sewed from purchased woven or knit fabric, or these materials combined with leather. Knitting mills primarily engaged in manufacturing gloves and mittens are classified in industry 2259; establishments primarily engaged in manufacturing leather
gloves in industry 3151 ; and those manufacturing rubber gloves in industry 3069.

Robes and Dressing Gowns (S-96; C-94).-Establishments primarily engaged in manufacturing men's and women's robes and dressing gowns.

Raincoats and Other Waterproof Outer Garments (S-92; C-93). Establishments primarily engaged in manufacturing raincoats from purchased rubberized fabrics and other waterproof outergarments made from such material as pliofilm and cellophane. Establishments primarily engaged in manufacturing oiled fabric work garments are classified in industry 2328 , and those manufacturing vaIcanized rubber garments and garments made from rubberized fabrics produced in the same establishments are classified in industry 3069.

2386
Leather and Sheeplined Clothing (S-97; C-83). -Establishments primarily engaged in manufacturing leather and sheeplined garments. Establishments primarily engaged in manufacturing leather gloves and mittens are classified in industry 3151, and fur garments in industry 2371.

Apparel Belts (S-91; C-94).-Establishments primarily engaged in manufacturing men's and women's apparel belts, regardless of material.

Apparel, N.E.C. (S-93; C-82).-Establishments primarily engaged in manufacturing suspenders, garters, handkerchiefs, and other apparel, n.e.c., such as academic caps and gowns, vestments, and theatrical costumes.

239 MISCELLANEOUS FABRICATED TEXTILE PRODUCTS, N.E.C.:These establishments are engaged in the manufacture of fabricated textile products (other than apparel) from purchased fabrics. Textile mills producing fabricated textile products from material woven at the same establishment are classified in the appropriate weaving industry (Major Group 22). However, establishments that finish fabrics (bleach, dye, or print) and then further fabricate the fabrics into end products such as sheets are included in the appropriate 239 industry.

2391
Curtains and Draperies (S-96;C-95).-Establishments primarily engaged in manufacturing curtains and draperies from purchased materials.

Housefurnishings, Except Curtains and Draperies (S-88;C-50). Establishments primarily engaged in manufacturing housefurnishings from purchased materials. Establishments primarily engaged in manufacturing curtains and draperies are classified in industry 2391 . Establishments primarily producing housefurnishings from fabrics woven at the same establishment are classified in the appropriate weaving industry, generally industry 2211.

Textile Bags (S-88; C-85). -Establishments primarily engaged in manufacturing cotton, burlap, and other textile bags from purchased fabric. Establishments primarily engaged in manufacturing plastic bags are classified in industry 2643.

2394
Canvas Products (S-92; C-91).-Establishments primarily engaged in manufacturing awnings, tents, and other canvas products from. purchased canvas. Establishments primarily engaged in manufacturing canvas bags are classified in industry 2393.

Pleating, Decorative, and Novelty Stitching, and Tucking for the Trade (S-97; C-98). - Establishments primarily engaged in pleating, decorative and novelty stitching, and rucking for the trade. Establishments primarily engaged in performing similar services for individuals are classified in service industries. Establishments primarily engaged in manufacturingtrimmings are classified in industry 2396.

Apparel Findings and Related Products (S-98; C-97). -Establishments primarily engaged in manufacturing apparel findings, automobile and other trimmings.

Schiffli Machine Embroideries (S-96; C-99). -Establishments primarily engaged in manufacturing Schiffli machine embroideries.

Fabricated Textile Products, N.E.C. (S-86; C-75).-Establishments primarily engaged in manufacturing fabricated textile products, n.e.c.
timber and pulpwood; merchant sawmills, lath mills, shingle mills, cooperage stock mills, planing mills, and plywood mills and veneer mills engaged in producing lumber and wood basic materials; and establishments engaged in manufacturing finished articles made entirely or mainly of wood or wood substitutes. Certain types of establishments producing wood products are classified elsewhere. For example, furniture, and office and store fixtures are classified in Major Group 25; pianos, musical instruments, toys and playground equipment, and caskets and coffins in Major Group 39. Woodworking in connection with construction, in the nature of reconditioning and repair, or performed to individual order, is classified in nonmanufacturing industries.

241 LOGGING CAMPS AND LOGGING CONTRACTORS:
2411 Logging Camps and Logging Contractors (S-99; C-90). -Establishments primarily engaged in cutting timber and in producing rough, round, hewn, or riven primary forest or wood raw materials. Independent contractors engaged in estimating or trucking timber but who perform no cutting operations are classified in nonmanufacturing industries. Logging and woods operations conducted in combination with sawmills, pulpmills. or other converting establishments, and not separately reported, are classified in their respective industry groups; namely, with sawmills in Industry Group 242, veneer and plywood mills in Industry Group 243, pulp mills in Major Group 26, and charcoal and wood distillation plants in Industry Group 286. Establishments primarily engaged in the collection of bark, sap, gum, and other forest byproducts are classified in nonmanufacturing industries.

242 SAWMILLS AND PLANING MILLS:
Sawmills and Planing Mills, General (S-89; C-95).-Establishments primarily engaged in sawing rough lumber and timber from logs and bolts, or re-sawing cants and flitches into lumber, including box lumber and softwood cut stock; planing mills combined with sawmills; and separately operated planing mills which are engaged primarily in producing surfaced lumber and standard workings or patterns of lumber. This industry includes establishments primarily engaged in sawing lath and railroad ties, and in producing tobacco hogshead stock and snow fence lath. Establishments primarily engaged in manufacturing box shook or boxes are classified in Industry Group 244; and sash. doors, wood molding, window and door frames, and other fabricated millwork in industry 2431 ; and hardwood dimension and flooring in industry 2426. Logging camps combined with sawmills, when not separately reported, are included in this industry.

Hardwood Dimension and Flooring Mills (S-86; C-86).-Establishments primarily engaged in manufacturing hardwood dimension lumber and workings therefrom; and other hardwood dimension, semifabricated or ready for assembly; and hardwood flooring. Establishments primarily engaged in manufacturing stairwork, molding, and trim are classified in industry 2431, and those manufacturing textile machlnery bobbins, picker sticks, and shuttles in industry 3552.

Special Product Sawmills, N.E.C. (S-98; C-49 \()\).-Establishments primarily engaged in manufacturing wood chips, excelsior, wood shingles, and cooperage stock, and in sawing special products, n.e.c.

MILLWORK, VENEER, PLYWOOD AND PREFABRICATED STRUCTURAL WOOD PRODUCTS:

Millwork Plants (S-95; C-93). -Establishments primarily engaged in manufacturing fabricated millwork. Planing mills primarily engaged in producing mllwork are included in this industry but planing mills primarily producing standard workings or patterns of lumber are classified in industry 2421.

Veneer and Plywood Plants (S-92; C-94).-Establishments prlmarily engaged in producing commercial veneer, either face or technical, and those primarily engaged in manufacturing commercial plywood, including nonwood backed or faced veneer and nonwood faced plywood, from veneer produced in the same establishment or from purchased veneer. Establishments primarily engaged in manufacturing prefinished plywood from purchased plywood are also classified in this industry. Establishments primarily engaged in the production of veneer which is used in the same establishment for the manufacture of end products such as fruit and vegetable baskets are classified in industry 2443, and wood boxes in industries 2441 and 2442. C-96).-Establishments primarily engaged in manufacturing prefabricated wooden buildings, sections, and panels; or in producing laminated or fabricated trusses, arches, and other structural members of lumber. Prefabrication on the site of construction is not included in this industry.

WOODEN CONTAINERS:
2441 Nailed and Lock Corner Wooden Boxes and Shook (S-85; C-83). Establishments primarily engaged in manufacturing nailed and lock corner wooden boxes, and which also may produce shook for nailed and lock corner boxes.

Wirebound Boxes and Crates (S-92; C-93). -Establishments primarily engaged in manufacturing wirebound boxes and crates.

2443 Veneer and Plywood Containers (S-90; C-79).-Establishments primarily engaged in manufacturing veneer and plywood containers, except boxes. This industry includes baskets made primarily of veneer and splint for shipping and marketing fruits and vegetables.

2445 Cooperage (S-97; C-99).-Establishments primarily engaged in manufacturing barrels, tubs, hogsheads, and other containers made of staves, except fruit and vegetable baskets (industry 2443). Establishments primarily engaged in manufacturing tobacco hogshead stock are classified in industry 2421, and those manufacturing cooperage stock in industry 2429.

249 MISCELLANEOUS WOOD PRODUCTS:
2491 Wood Preserving (S-98; C-97). -Establishments primarily engaged in treating wood, sawed or planed in other establishments, with creosote or other preservatives to prevent decay and to protect against fire and insects. This industry also includes the cutting, treating, and selling of poles. posts, and piling, but establishments primarily engaged in manufacturing other wood products, which they may also treat with preservatives, are not included.

Wood Products, N.E.C. (S-92; C-87). -Establishments primarily engaged in turning and shaping wood, and manufacturing miscellaneous wood products, n.e.c., such as lasts and related products, cork products, mirror and picture frames, particle board, hard pressed wood fiberboard and fabricated hardboard products.

The composition of this industry has been slightly changed for 1963, due to the transfer of hard pressed wood fiberboard (hardboard) and fabricated hardboard products to this industry. Prior to 1963, establishments primarily engaged in manufacturing hardboard were classified in industry 2661 , and those primarily producing fabricated hardboard products were classified in industry 2649.

\section*{FURNITURE AND FIXTURES}

This major group includes establishments engaged in manufacturing household, office, public building, and restaurant furniture; and office and store fixtures. Establishments primarlly engaged in the production of millwork are classified in industry 2431, and woodworking to individual order or in the nature of reconditloning and repair in nonmanufacturing industrles.

解 maklng furniture to order of individual household consumers or primarily engaged in renovating furnlture or mattresses are classified in nonmanufacturing industries. Establishments primarily engaged in making furniture parts (except wood frames or headboards) are not included in this group of industries but are generally classified in Major Group 24, Lumber and Wood Products or Major Group 34, Fabricated Metal Products. For example, furniture turnings are included in industry 2499, and furniture hardware, including, casters are included in industry 3429.

Wood Household Furniture, Except Upholstered (S-94; C-96).Establishments prlmarlly engaged in manufacturing wood household furniture commonly used in dwelllngs. This industry also includes the manufacture of wood kitchen cabinets on a factory basis, and camp furniture. Establishments primarily engaged in manufacturing upholstered furniture or wood frames for upholstered furniture are classified in industry 2512, and reed and rattan furniture in industry 2519. Plants primarily engaged in renovating or refinishing furniture are classlfied
in trade industries and plants selling household furniture to household consumers through a retail store on the manufacturing premises are included in retail trade,

2 S1 2 Wood Household Furniture, Upholstered (S-92; C-92).-Establishments primarily engaged in manufacturing upholstered furniture on wood frames or wood frames for upholstered furniture. Shops primarily engaged in reupholstering furniture, or upholstering frames to individual order are classifled in nonmanufacturing industries. Establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, convertible sofas, jackknife sofa beds, and chair-beds, are classified in industry 2SIS regardless of the materlals used in the frame.

2 S14 Metal Household Furniture (S-88; C-89). -Establishments primarily engaged in manufacturing metal household furniture of a type commonly used in dwellings, whether padded, upholstered, or plain. Establishments primarily engaged in manufacturing dual purpose furniture, such as studio couches, sofa beds, and chair-beds are classified in industry 2 SIS, regardless of the materials used in the frame.

2515 Mattresses and Bedsprings (S-90; C-90). -Establishments primarily engaged in manufacturing innerspring mattresses, boxspring mattresses, and non-innerspring mattresses containing felt, foam rubber, or any other filling material; and assembled wire springs (fabric, coil, or box) for use on beds, couches, and cots. This industry also includes establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studlo couches, sofa beds, and chair-beds, regardless of the material used in the frame. Establishments primarily engaged in manufacturing automobile seats and backs are classified in industry 2S31; individual wire springs in industry 3481; and paddings and upholstery filling in industry 2293. Establishments primarily engaged in repair, renovating, etc., mattresses and bedsprings are classified in service industries.

Household Furniture, N.E.C. (S-84; C-S1).-Establishments primarily engaged in manufacturing reed, rattan, and other wlcker furniture, and other household furniture, n.e.c.

2S2 OFFICE FURNITURE:
2 S21 Wood Office Furniture (S-90; C-87).-Establishments primarily engaged in manufacturing wood office furniture, whether padded, upholstered or plain.

2S22
Metal Office Furniture (S-87; C-89). -Establishments primarily engaged in manufacturing metal office furniture, whether padded or plain. Establishments primarily engaged in manufacturing safes and vaults are classified in industry 3492.

PUBLIC BUILDING AND RELATED FURNITURE:
Publlc Building and Related Furniture (S-85; C-8S). -Establishments primarlly engaged in manufacturing furniture for schools, theaters, assembly halls, churches, and llbraries. Establishments primarily engaged in manufacturing seats for public conveyances, as well as seats for automobiles and aircraft, are included in this industry. Establishments primarily engaged in manufacturing stone furniture are classified in industry 3281, and concrete furniture in industry 3272 ,

PARTITIONS, SHELVING, LOCKERS, AND OFFICE AND STORE FIXTURES:

2541 Wood Partitions, Shelving, Lockers, and Office and Store Fixtures (S-94; C-89).-Establlshments primarily engaged in manufacturing wood shelving, lockers, office and store fixtures, and prefabricated partitions, and related fabricated products.

Metal Partitions, Shelving, Lockers, and Office and Store Fixtures (S-83; C-82). - Establlshments primarily engaged in manufacturing metal shelving, lockers, office and store fixtures, prefabricated partitions, and related fabricated products.

MISCELLANEOUS FURNITURE AND FIXTURES, N.E.C.:
Venetlan Blinds and Shades (S-89; C-90), -Establishments primarlly engaged in manufacturing Venetian blinds, regardless of the materlals used, and shades except canvas shades and awnings, which are classified in Industry 2394.

Furniture and Fixtures, N.E.C. (S-86; C-70).-Establishments primarlly engaged in manufacturing furniture and fixtures, n.e.c., including furniture especially designed for use in restaurants.

\section*{PAPER AND ALL IED FRODUCTS}

This major group includes the manufacture of pulps from wood and other cellulose fibers, and rags; the manufacture of paper and paperboard; and the manufacture of paper and paperboardinto converted products such as paper coated off the paper machine, paper bags, paper boxes, and envelopes. Certain types of converted paper products are classified elsewhere, such as abrasive paper in industry 3291; carbon paper in industry 39SS, and photosensitized and blueprint paper in industry 3861.

261 PULP MILLS:
Pulp Mills (S-88; C-71).-Establishments primarily engaged in manufacturing pulp from wood or from other materials such as rags, linters, wastepaper, and straw. Logging camps operated by pulp mills, and not separately reported, are also inincluded in this industry. Establishments primarily engaged in cutting pulpwood are classified in industry 2411; and pulp mills combined with paper mills or paperboard mills, and not separately reported, are classified with the latter in industries 2621 and 2631, respectively.

In both the 1963 and 1958 Censuses of Manufactures, pulp mills operated in conjunction with a paper and board mill at the same location were permitted to file a combined report for such integrated operations. However, in 19S4 all pulp mill activity was separately reported whether or not such pulp mill operations were conducted at the same physical location as an associated paper or board mill. This change in treatment has the effect of restricting the reporting of a "pulp mill" for classification in industry 2611 in both the 1963 and 1958 censuses to the following situations: (a) those pulp mills which are not affiliated with any paper and board mills and ship all their products to the market; (b) pulp mills affiliated or associated with a primary paper or board mill but which are separately located from the pulp mill; and (c) a few pulp mills affiliated or associated with a primary paper or board mill at the same physical location, where separate departmental records of employment, materials, and fuel costs, shipments, etc., are maintained for the pulp mill from those covering the paper or board mill at that location and the company elected to file such a separate report.

\section*{262 PAPER MILLS, EXCEPT BUILDING PAPER MILLS:}

2621 Paper Mills, Except Building Paper Mills (S-90; C-92).Establishments primarily engaged in manufacturing paper (except building paper-industry 2661 ) from wood pulp andother fibers, and which may also manufacture converted paper products (confined almost exclusively to off-machine paper coating). Pulp mills combined with paper mills, and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. Establishments primarily engaged in manufacturing converted paper products from purchased paper stock are classified in Industry Group 264 or 265.

PAPERBOARD MILLS:
Paperboard Mills (S-8S; C-90). -Establishments primarily engaged in manufacturing paperboard, including paperboard coated on the paperboard machine, from wood pulp and other fibers; and which may also manufacture converted paperboard products (confined almost exclusively to pasted, lined, laminated or surface-coated paperboard). Pulp mills combined with paperboard mills, and not separately reported, are also included in thls industry; where separately reported, they are classified in industry 2611. Establishments primarily engaged in manufacturing converted paperboard products from purchased paperboard are classified in Industry Group 264 or 26 S .

264 CONVERTED PAPER AND PAPERBOARD PRODUCTS, EXCEPT CONTAINERS AND BOXES:
2641 Paper Coating and Glazing (S-82; C-78). - Establishments primarily engaged in manufacturing coated, glazed, or varnished paper from purchased paper. Establishments primarily engaged in coating paper on the paper machine are classified in industry 2621 ; those manufacturing carbon paper in industry 395S; and photographic and blueprint paper in industry 3861 .

Principal products of this industry include: off-machine coated paper; oiled, waxed, and wax-laminated paper and wrappers; pressure sensitive tape; gummed products; and other coated and processed paper.

Envelopes (S-94; C-96).-Establishments primarily engaged in manufacturing envelopes of any description from purchased paper and paperboard. Establishments primarily engaged in manufacturing papeteries (boxed stationery) are classified in in industry 2649.

2643 Bags, Except Textile Bags (S-86; C-88). -Establishments primarily engaged in manufacturing bags from purchased paper, cellophane, acetate, polyethylene, pliofilm, foil, and similar sheet or film materials.

2644 Wallpaper (S-97; C-99).-Establishments primarily engaged in designing, printing, and embossing paper for interior walls, and ceilings. Establishments primarily engaged in manufacturing wall cloth from textile fabrics are classified in industry 2295.

2645 Die Cut Paper and Paperboard and Cardboard (S-88; C-82). Establishments primarily engaged in die cutting purchased paper and paperboard, and in manufacturing cardboard by laminating, lining, or surface coating paperboard.

2646 Pressed and Molded Pulp Goods (S-99; C-96).-Establishments primarily engaged in manufacturing all kinds of pressed and molded pulp goods, including papier-mache articles other than statuary and art goods.

Sanitary Paper Products (S-93; C-97).-Establishments primarily engaged in manufacturing sanitary health products from purchased paper and paperboard. The principal products of this industry are sanitary napkins and tampons; facial tissues; table napkins, toilet paper, towels and wipes. This industry was not separately identified for 1958 in the SIC but was included in industry 2649. Comparable data for 1963 using the previous industry classification for industry 2649 are shown in tables 1 and 2 of the chapter for that industry.

Converted Paper and Paperboard Products,N.E.C. (S-84; C-78). Establishments primarily engaged in manufacturing from purchased paper or paperboard miscellaneousconverted paper or paperboard products, n,e.c.

The principal products of this industry are: stationery, tablets and related products; wrapping products such as gift wrap and and creped wadding; patterns, business machine supplies, tiled and laminated wallboard, unprinted tags and other miscellaneous paper and board products.

Sanitary paper products were transferred from this industry and established as a separate industry (2647) for 1963.

PAPERBOARD CONTAINERS AND BOXES:-There is a high degree of integration between industry 2631, and the various board converting industries, except industries 2652 and 2655 , which rely principally on market purchases of paperboard. In industries 2651, 2653, and 2654, a substantial part of the converted paperboard is manufactured and converted by the same company. either at the same location or at separate locations.

2651 Folding Paperboard Boxes (S-85; C-88).-Establishments primarily engaged in manufacturing folding paperboard boxes from purchased paperboard.

2652 Set-Up Paperboard Boxes (S-91; C-87).-Establishments primarily engaged in manufacturing set-up paperboard boxes from purchased paperboard.

Corrugated and Solid Fiber Boxes (S-97; C-96). -Establishments primarily engaged in manufacturing corrugated and solid fiber boxes and related products from purchased paperboard of fiber stock. lmportant products of this industry include corrugated and solid fiberboard boxes, pads, partitions, display items, pallets, single face products, and corrugated sheets.

Sanitary Food Containers (S-92; C-92).-Establishments primarily engaged in manufacturing food containers from special food board. lmportant products of this industry include fluid milk containers; folding paraffined cartons for butter, margarine, and shortening; ice cream containers; frozen food containers; liquid tight containers; round nested food containers; paper cups for hot or cold drinks; and pails for food and ice cream.

Fiber Cans, Tubes, Drums, and Similar Products (S-95; C-80). Establishments primarily engaged in manufacturing fiber cans, cones, drums, and similar products with or without metal ends from purchased materials; and vulcanized fiber boxes.

266 BUILDING PAPER AND BUILDING BOARD MILLS
2661 Building Paper and Building Board Mills (S-97; C-88).-Establishments primarily engaged in manufacturing building paper and building board, except hard pressed wood fiberboard, from wood pulp and other fibrous materials. Mills producing hard pressed wood fiberboard are classified in industry 2499. In addition, insulation board mills which perform coating operations at their primary mill locations are classified in industry 2952. Pulp mills combined with building paper and building board mills, and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. As noted previously in connection with industry 2611, same physical location as paper or board were not required in either the 1963 or the 1958 Census of Manufactures to submit a separate report for the pulp mill operations. This reporting requirement had less effect on the general statistics of mills primarily engaged in producing building paper and board than on those producing paperboard and paper, except building paper.

\section*{PRINTING, PUBLISHING, AND ALLIED INDUSTRIES}

This major group includes establishments engaged in printing by one or more of the common processes, such as letterpress, lithography, gravure, or screen; and those establishments which perform services for the printing trade, such as bookbinding, typesetting, engraving, photoengraving, and electrotyping. This major group also includes establishments engaged in publishing newspapers, books, and periodicals, whether or not they do their own printing. News syndicates are classified in service industries, and textile printing and finishing in Major Group 22.

271 NEWSPAPERS: PUBLISHING, PUBLISHING AND PRINTING:
2711 Newspapers: Publishing, Publishing and Printing (S-96;C-100).Establishments primarily engaged in publishing newspapers, or in publishing and printing newspapers. These establishments carry on the various operations necessary for issuing newspapers, including the gathering of news, and the preparation of editorials and advertisements, but may or may not perform their own printing, Commercial printing is frequently carried on by establishments engaged in publishing and printing newspapers, but even though the commercial printing may be of major importance such establishments are included in this industry.

Establishments not engaged in publishing newspapers, but which print or lithograph newspapers for publishers, are classified in industry 2751 or industry 2752 . News syndicates are classified in service industries. Establishments primarily engaged in publishing shopping news are classified in industry 2741.

Publications have been classified as periodicals (industry 2721) rather than as newspapers if their news and editorial presentations are not typically directed to the public at large. Where the news is of general interest publications are considered periodicals if they are not the primary printed source of such news. Among the types of publications sometimes considered newspapers, but treated in the census as periodicals, are the following: trade journals; house organs, local churchor school papers and like publications with very limited or specialized news treatment. Generally, publications issued by nonprofit organizations (educational, religious, charitable, labor, business. professional, etc.) are classified as periodicals, as are magazine and comic supplements for Sunday newspapers.
in preparing, publishing, and printing periodicals. These establishments carry on the various operations necessary for issuing periodicals, but may or may not perform their own printing. Establishments not engaged in publishing periodicals, but which print periodicals for publishers. are classified in industry 2751 or industry 2752.

Data on the periodical publishing activities of nomprofit organizations (religious, educational, social, charitable, etc.) have been included to the extent that the employees of such organizations were covered under the Social Security System.

BOOKS:
Books: Publishing, Publishing and Printing (S-93; C-88).Establishments primarily engaged in publishing only, or in publishing and printing books and pamphlets. Establishments primarily engaged in printing, or in printing and binding (but not publishing) books and pamphlets are classified in industry 2732.
lndustry 2731 also includes data on book publishing activities obtained from nonprofit organizations whose employees are covered under the Social Security System and were able to report their book publishing operations as a separate establishment.

2732 Book Printing (S-78; C-69).-Establishments primarily engaged in printing only or in printing and binding.books and pamphlets, but not in publishing. Establishments primarily engaged in publishing, or in publishing and printing books and pamphlets, are classified in industry 2731. Establishments engaged in both printing and binding books, but primarily binding books printed elsewhere, are classified in industry 2789.

Establishments classified in industry 2732 are similar in character to some establishments primarily engaged in commercial letterpress printing (industry 2751) and in commercial lithography (industry 2752). The distinction is that the establishments classified in industry 2732 derive the greater part of their revenue from printing books and pamphlets, while such operations are secondary activities for establishments classified in industries 275I and 2752.

274 MISCELLANEOUS PUBLISHING:
Miscellaneous Publishing (S-92; C-84).-Establishments primarily engaged in miscellaneous publishing activities, n.e.c., whether or not engaged in printing. Establishments primarily engaged in offering financial, credit, or other business services and which may publish directories as part of this service are not included in this industry but are classified in service industries.

This industry comprises establishments primarily engaged in publishing such products as maps, atlases, sheet music, directories, almanacs, catalogs, globe covers, racing forms, and shopping news or engaged in miscellaneous publishing activities, n.e.c., whether or not engaged in printing. Establishments primarily engaged in printing such products and not engaged in publishing are classified in industry 2751, or industry 2752 , depending on the primary printing process employed. Establishments primarily engaged in publishing greeting cards are classified in industry 2771.

COMMERCIAL PRINTING:
Commercial Printing, Except Lithographic (S-86; C-79). -Establishments primarily engaged in commercial or job printing, except lithographic. This industry includes general printing shops, as well as shops specializing in printing newspapers and periodicals for others, and those which specialize in gravure, rotogravure, and screen process printing. Establishments primarily engaged in printing books, without publishing, are classified in industry 2732, and greeting cards in industry 2771. Establishments primarily engaged in printing from lithographic plates are classified in industry 2752.

2752 Commercial Printing, Lithographic (S-80; C-82). - Establishments primarily engaged in printing by the lithographic process. The greater part of the work in this industry is performed on a job or custom basis; but in some cases lithographed calendars, maps, posters, decalcomanias, etc, are made for sale, Offset printing, photo-offset printing, and photolithographing are also included in this industry. Establishments primarily engaged in lithographing books and pamphlets, without publishing, are classified in industry 2732, and greeting cards in industry 2771.

Engraving and Plate Frinting (S-89; C-79), -Establishments primarily engaged in engraving and etching steel, copper, wood, or rubber plates; in using these plates to print stationery, visiting and other cards, invitations, maps, etc.; and in making woodcuts for use in printing illustrations, posters, etc. Engraving for purposes other than printing is classified in industry 3479. Establishments primarily engaged in preparing photoengraved plates (halftones and linecuts) are classified in industry 2793

Manifold Business Forms Manufacturing (S-90; C-91). -Establishments primarily engaged in designing and printing, by any process, special forms for use in the operation of a business, in single and multiple sets, including carbonized or interleaved with carbon or otherwise processed for multiple reproduction. The principal types of manifold business forms are continuous, unit-set, and salesbooks.

GREETING CARD MANUF ACTURING:
Greeting Card Manufacturing (S-92; C-96). -Establishments primarily engaged in designing only, manufacturing only, or designing and manufacturing greeting cards for all occasions. These products may be printed, lithographed, etched. or otherwise processed.

Blankbooks; Loose Leaf Binders and Devices (S-88; C-88).Establishments primarily engaged in manufacturing blankbooks, loose leaf devices, and library binders.

Bookbinding, and Miscellaneous Related Work (S-95; C-83).Establishments primarily engaged in edition, trade, job, and library bookbinding; in book or paper bronzing, gilding, and edging; in map and sample mounting; and other services related to bookbinding. Establishments primarily binding books printed elsewhere are classified in this industry, but those primarily binding books printed in the same establishment are classified in Industry Group 273.

\section*{279 SERVICE INDUSTRIES FOR THE PRINTING TRADE}

2791 Typesetting (S-95; C-90). -Establishments primarily engaged in machine and hand typesetting for the trade, and in advertising typography.

Photoengraving (S-95; C-91). -Establishments primarily engaged in preparing photoengraved plates (halftones and linecuts). These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

Ectrotyping and Stereotyping (S-87; C-86).-Establishments primarily engaged in preparing electrotype and stereotype plates. These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

\section*{CHEMICALS AND ALLIED PRODUCTS}

This major group includes establishments producing basic chemicals, and establishments manufacturing products by predominatly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; (3) finished chemical products to be used for ultimate consumption such as drugs, cosmetics, and soaps; or to be used as materials or supplies in other industries such as paints, fertilizers, and explosives. The mining of natural rock salt is classified in mining industries. Establishments primarily engaged in manufacturing nonferrous metals and high percentage ferroalloys are classified in Major Group 33; silicon carbide in Major Group 32; baking powder, other leavening compounds, and starches in Major Group 20; and embalming fluids and artists' colors in Major Group 39. Establishments primarily engaged in packaging, repackaging, and bottling of purchased chemical products, but not engaged in manufacturing chemicals and allied products, are classified in trade industries.

281
NDUSTRIAL INORGANIC AND ORGANIC CHEMICAI.S:
Alkalies and chlorine (S-66; C-79).--Establishments primarily
engaged in manufacturing sodium hydroxide (caustic soda), potassium hydroxide (caustic potash), soda ash, potassium carbonate, sodium bicarbonate, sal soda, and chlorine. Establishments primarily engaged in manufacturing ammonium compounds or alkali metals are classified in industry 2819, and
plants primarily engaged in mining natural potassium or sodium alkalies are classified in SIC industry 1474.

Industrial Gases (S-98; C-87). -Establishments primarily engaged in manufacturing gases for sale in compressed, liquid, and solid forms. Establishments primarily engaged in manufacturing fluorine, ammonia, and sulfur dioxide are classified in industry 28i9; and chlorine in industry 2812. Distributors of industrial gases and establishments primarily engaged in shlpping liquid oxygen are classified in trade. Natural gasoline plants engaged in the production of gases in compressed and liquefied form are classified in mining industries, and petroleum refineries producing these gases in industry 2911.

Cyclic (coal tar) Crudes (S-D; C-D).-Establishments primarily engaged in manufacturing crudes from coal tar. Such crudes include: (i) light oils and light oil products; (2) coal tar acids; and (3) products of medium and heavy oil such as creosote oil, naphthalene, anthracene, and their hlgher homologues, and tar. Establishments primarily engaged in manufacturing coal tar crudes in chemical recovery ovens are classified in industry 33i2, and petroleum refineries whlch produce such products in industry 2911.

Dyes, Dye (cyclic) Intermediates, and Organic Pigments (lakes and toners) (S-69; C-65). -Establishments primarily engaged in manufacturing cyclic organic intermediates, dyes, color lakes and toners. Important products of this industry include: (i) derivatives of benzene, toluene, naphthalene, anthracene, pyridine, carbozole and other cyclic chemical products; (2) synthetic organic dyes; and (3) synthetic organic pigments.

Inorganic Pigments (S-9i; C-87). -Establishments primarily engaged in manufacturing inorganic pigments. lmportant products of this industry include black pigments (except carbon black, industry 2895), white pigments and color pigments. Organic color pigments are classified in industry 2815.

Industrial Organic Chemicals, N.E.C. (S-72; C-81). -Establishments primarily engaged in manufacturing industrial organic chemicals, n.e.c. lmportant products of this industry include: (i) noncyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic and tartaric acids and their metallic salts; chloral, formaldehyde and methylamine; (2) solvents such as amyl, butyl and ethyl alcohols; methanol; amyl, butyl and ethyl acetates; ethyl ether, ethylene glycol ether and diethylene glycol ether; acetone, carbon disulfide and chlorinated solvents such as carbon tetrachloride, perchloroethylene and trichloroethylene; (3) polyhydric alcohols such as ethylene glycol, sorbitol, pentaerythritol; (4) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpineol, and synthetic vanillin; (5) rubber processing chemicals such as accelerators and antioxidants, both cyclic and acyclic; (6) plasticizers, both cyclic and acyclic, such as esters of phosphoric acid, phthalic anhydride, adipic acid, lauric acid, oleic acid, sebacic acid, and stearic acid; (7) synthetic tanning agents such as naphthalene sulfonic acid condensates; (8) chemical warfare gases; and (9) esters, amines, etc. of polyhydric alcohols and fatty and other acids. Establishments primarily engaged in manufacturing plastic materials and nonvulcanizable elastomers are classified in industry 2821 ; synthetic rubber in industry 2822; essential oils in industry 2899; wood distillation products, naval stores, and natural dyeing and tanning materials in Industry Group 286; rayon and other synthetic fibers in industries 2823 and 2824; specialty cleaning, polishing and sanitation preparations in industry 2842 ; and paints and pigments in Industry Group 285. Distilleries engaged in the manufacture of grain alcohol for beverage purposes are classified in industry 2085.

Industrial lnorganic Chemicals, N.E.C. \((\mathrm{S}-88 ; \mathrm{C}-74)^{8}\). - Establishments primarily engaged in manufacturing industrial inorganic chemicals, n.e.c. Important products of this industry include inorganic salts of sodium (excluding refined sodium chloride), potassium, aluminum, calcium, chromium, magnesium, mercury, nickel, silver, tin; inorganic compounds such as alums, calcium carbide, hydrogen peroxide, phosphates, sodium silicate, ammonia compounds and anhydrous ammonia; fertilizer materials such as muriate and sulfate of potash; rare earth metal salts and elemental bromine, fluorine, iodine, phosphorous, and alkali metals (sodium, potassium, lithium, etc.).

282 PLASTICS MATERIALS AND SYNTHETIC RESINS, SYNTHETIC RUBBER, SYNTHETIC AND OTHER MAN-MADE FIBERS, EXCEPT GLASS:
2821 Plastics Materials, Synthetic Resins, and Nonvulcanizable Elastomers (S-84; C-64).-Establishments primarily engaged in manufacturing synthetic resins, plastics materials, and nonvulcanizable elastomers. lmportant products of this industry include: cellulose plastic materials; phenolic and other tar acid resins; urea and melamine resins; vinyl resins; styrene resins; alkyd resins; acrylic resins; polyethylene resins; rosin modified resins; coumarone-indene and petroleum polymer resins; and miscellaneous resins, including polyamid resins. silicones, polyisobutylenes, polyesters; vulcanized fiber; casein plastics; and regenerated cellulose. This classification does not include nonchemical manufacturers who merely purchase resin or plastics materials to produce fabricated plastics products, film, and sheets, classified in industry 3079.

2822 Synthetic Rubber (Vulcanizable Elastomers) (S-')2; C-80). Establishments primarily engaged in manufacturing synthetic rubber by polymerization or copolymerization. An elastomer for the purpose of this classification is a rubber-like material capable of vulcanization, such as copolymers of butadiene and styrene, or butadiene and acrylonitrile, polybutadienes, chloroprene rubbers, and isobutylene-isoprene copolymers. Butadiene copolymers containing less than \(50 \%\) butadiene are classified in industry 2821. Chlorinated rubber and cyclized rubbers are considered as semifinished products, and are classified in industry 3069.

2823 Cellulosic Man-Made Fibers (S-D; C-D). -Establishments primarily engaged in manufacturing cellulosic fibers (including cellulose acetate and regenerated cellulose such as rayon by the viscose or cuprammonium process) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry 3229.

2824 Synthetic Organic Fibers, Except Cellulosic (S-95; C-97).Establishments primarily engaged in manufacturing synthetic organic fibers except cellulosic (including those of regenerated proteins, and of polymers or copolymers of such components as vinyl chloride, vinylidene chloride, linear esters, vinyl alcohols, acrylonitrile, ethylenes, amides, and related polymeric materials) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry 3229.

283 DRUGS:
2831 Biological Products (S-88; C-45).-Establishments primarily engaged in the production of bacterial and virus vaccines, toxoids and analogous products (such as allergenic extracts), serums, plasmas, and other blood derivatives for human or veterinary use. Excluded are the activities of the American Red Cross, hospitals and other institutions which are important collectors of blood and producers of blood products.

Medicinal Chemicals and Botanical Products (S-71; C-47). Establishments primarily engaged in (1) manufacturing bulk organic and inorganic chemicals and their derivatives; and (2) processing (grading, grinding, and milling) bulk botanical drugs and herbs. Establishments primarily engaged in manufacturing agar-agar andsimilarproducts of natural origin, endocrine products, manufacturing or isolating basic vitamins, and isolating active medicinal principles such as alkaloids from botanical drugs and herbs are also included in this industry. Establishments primarily engaged in manufacturing reagent and chemically pure grades (other than United States Pharmacopoeia or National Formulary) of inorganic and organic chemicals are classified in industries 2819 and 2818. respectively.

Pharmaceutical Preparations (S-87; C-94). -Establishments primarily engaged in manufacturing, fabricating, or processing drugs into pharmaceutical preparations for human or veterinary use. The greater part of the products of these establishments are finished in the form intended for final consumption, such as tablets, capsules, ointments, solutions and suspensions. Products of this industry consist of two important lines, namely, (1) pharmaceutical preparations primarily advertisedor otherwise promoted to or prescribed by the health professions:
medical, dental, pharmaceutical, nursing, etc.; and (2) pharmaceutical preparations primarily advertised or otherwise promoted to the general public. Establishments compounding drugs and medicines and selling these "over the counter" are classified in trade industries.

SOAP, DETERGENTS AND CLEANING PREPARATIONS, PERFUMES, COSMETICS, AND OTHER TOILET PREPARATIONS:

Soap and Other Detergents, Except Speclalty Cleaners (S-82; C-92). - Establishments primarily engaged in manufacturing soap, synthetic organic detergents, inorganic alkaline detergents, or any combination thereof, and establishments producing crude and refined glycerine from vegetable and animal fats and oils. Establishments primarily engaged in manufacturing shampoos or shaving products, whether from soap or synthetic detergents, are classified in industry 2844; and synthetic glycerin in industry 2818.

Specialty Cleaning, Polishing, and Sanitation Preparations, Except Soap and Detergents (S-82; C-72).-Establishments primarily engaged in the manufacture of furniture and automobile body polish and cleaners, floor polish and shoe polishes and cleaners; dressings and finishes for fabricated leather and other materials; household insecticides and repellants and industrial exterminants; household, institutional, and industrial plant disinfectants and deodorants; fabric softeners and laundry starch preparations; and other sanitation preparations.

Surface Active Agents, Finishing Agents, Sulfonated Oils and Assistants (S-80; C-47). -Establishments primarily engaged in producing surface active preparations for use as wetting agents, emulsifiers, and penetrants. Establishments engaged in producing sulfonated oils and fats and related products are also included.

Perfumes, Cosmetics, and Other Toilet Preparations (S-91; C-84). -Establishments primarily engaged in manufacturing perfumes (natural and synthetic), cosmetics, and other toilet preparations. This industry also includes establishments primarily engaged in blending and compounding perfume bases; and those manufacturing shampoos and shaving products, whether from soap or synthetic detergents. Establishments primarily engaged in manufacturing synthetic perfume and flavoring materials are classlfied in industry 2818, and essential oils in industry 2899.

PAINTS, VARNISHES, LACQUERS, ENAMELS, AND ALLIED PRODUCTS:

Paints, Varnishes, Lacquers, and Enamels, and Allied Products (S-95; C-96).-Establishments primarily engaged in the manufacture of paints (in paste and ready-mixed form), varnishes, lacquers, enamels, and shellac; putties and caulking compounds; wood fillers and sealers; paint and varnish removers; paint brush cleaners, and allied paint products.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been sllghtly changed from the classification system used in 1958. The change in the composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to the inclusion of industry 2852 in 1963.

GUM AND WOOD CHEMICALS:
Gum and Wood Chemicals (S-74; C-77). -Establishments primarily engaged in manufacturing hardwood and softwood distillation products, wood and gum naval stores, charcoal, natural dyestuffs, and natural tanning materials, tall oil and rosin, and rosin acid products. Establlshments primarily engaged in manufacturing synthetic tanning materials are classified in industry 2818, synthetic dyes in industry 2815, and synthetic organic chemicals in industry 2818.

AGRICULTURAL CHEMICALS:
Fertilizers (S-89; C-97). Establishments primarily engaged in manufacturing mixed fertilizers (mixtures containing nitrogen, phosphoric acid \(\left(\mathrm{P}_{2} \mathrm{O}_{5}\right)\) or potash), from one or more fertilizer materials produced in the same establishment. Sulfuric, phosphoric, and nitric acid plants operated in conjunction wlth fertilizer plants and separately reported are classified in industry 2819 . When separate reports are not available these acid plants are classlfied in this industry. Establishments engaged in manufacturing urea are classified in industry 2818. Establishments primarily engaged in mining, milling, or otherwise preparing natural potassium, sodium, or boron compounds

Agricultural Pesticides and other Agricultural Chemicals,N.E.C. (S-87; C-69).-Establishments primarily engaged in the formulation and preparation of ready-to-use agricultural pest control chemicals, including insecticides, fungicides, rodenticides, and herbicides from technical chemicals and concentrates, and the manufacture and formulation of miscellaneous agricultural chemicals, n,e.c., such as minor or trace elements, soil conditioners, etc.

Establishments primarily engaged in manufacturing basic or technical agricultural pest control chemicals including insecticides, fungicides, rodenticides and herbicides, such as lead and calcium arsenates, copper sulfate, DDT, BHC, 2, 4- D, carbonates, etc. are classified in Industry Group 281. Establishments primarily engaged in the production of household pesticldes are classified in industry 2842, while establishments primarily engaged in manufacturing agricultural lime products are classified in Ma jor Group 32.

The industry code 2879 for 1963 represents a change from the classification structure existing in 1958. In 1963 the industry combines two 1958 industries: 2873 and 2879.

289 MISCELLANEOUS CHEMICAL PRODUCTS:
Glue and Gelatin (S-83; C-72).-Establishments primarily engaged in manufacturing (1) industrial and household adhesives, glues, sizes, and cements from vegetable, animal, purchased synthetic resins or synthetic resin and rubber combinations; and (2) edible, technical, photographic, or pharmaceutical gelatins from animal material. Establishments primarily engaged in manufacturing dessert preparations based on gelatin are classified in industry 2099; vegetable gelatin or agar-agar in industry 2833; rubber cement in industry 3069 ; and asbestos cement in industry 3292.

Explosives (S-88; C-94).-Establishments primarily engaged in manufacturing explosives such as sporting powder, blasting powder, high explosives, nitrated carbohydrates, safety fuses, and blasting and detonating caps. Included in this industry are government-owned plants operated by private firms for the account of the Federal Government. Establishments primarily engaged in manufacturing ammunition for small arms are classified in Industry Group 196, and fireworks and pyrotechnics such as flares (all kinds) and railroad torpedoes, in industry 2899. Establishments primarily engaged in shooting wells and also engaged in manufacturing nitroglycerine are included in the mineral industries.

Printing lnk (S-93; C-92).-Establishments primarily engaged in manufacturing printing ink, gravure ink, screen process ink, and lithographic ink. Establishments primarily engaged in manufacturing writing and stamp pad inks are classified in industry 2899, and varnishes for printers' inks ln industry 2851.

Carbon Black (S-D; C-D).-Establishments primarily engaged in manufacturing carbon black (channel and furnace black). Establishments primarily engaged in manufacturing bone black and lamp black are classified in industry 2816.

2899 Chemical Preparations, N.E.C. (S-82; C-71).-Establishments primarily engaged in the manufacture of miscellaneous chemical preparations, n.e.c., such as essential oils, fireworks, automotive chemical specialties, and evaporated salt; industrial compounds, such as boiler and heat insulating compounds, metal, oil and water treating compounds, water proofing compounds and chemical supplies for foundries; fatty acids, such as stearic, oleic, fish and marine, coconut-iype fatty acids, and other unsaturated fatty aclds fractionated from vegetable and animal oils and fats.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification
system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to a change in definition of industry 2899 to include fatty acids and the subsequent reclassification of establishments formerly included in the old industry 2894, fatty acids, to industry 2899.

\section*{PETROLEUM REFINING AND RELATED INDUSTRIES}

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials. Establishments manufacturing and distributing gas to consumers are classified in public utilities industries, and those primarily engaged in producing coke and byproducts in Major Group 33

Petroleum Refining (S-98; C-97 \({ }^{9}\) ).-Establishments primarily engaged in producing gasoline, kerosene, distillate fuel oils residual fuel oils, lubricants and other products from crude petroleum, and its fractionation products either through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking or other processes. Establishments primarily engaged in producing natural gasoline from natural gas are classified in mining industries. Those manufacturing lubricating oils and greases by blending and compounding purchased materials are included in industry 2992.

PAVING AND ROOFING MATERIALS:
Paving Mixtures and Blocks (S-92; C-89).-Establishments primarily engaged in manufacturing asphalt and tar paving mixtures; and paving blocks made of asphalt, creosoted wood, and various compositions of asphalt cr tar with other materials. Establishments primarily engaged in menufacturing brick, concrete, granite, and stone paving blocks are classified in Major Group 32.

Asphalt Felts and Coatings (S-90; C-92). - Establishments primarily engaged in manufacturing asphalt and other saturated roofing felts in roll or shingle form, either smooth or faced with gric, and in manufacturing roofing cements and coatings Establishments primarily engaged in manufacturing paint are classified in industry 2851.

Lubricating Oils and Greases (S-91; C-33 \({ }^{10}\) ). -Establishments primarily engaged in blending and compounding lubricating oils and greases from purchased mineral, animal, and vegetable materials. Petroleum refineries engaged in the production of lubricating oils and greases are classified in industry 2911.

Products of Petroleumand Coal, N.E.C. (S-96; C-91).-Establishments primarily engaged in manufacturing fuel briquets boulets, packaged fuel, powdered fuel, and other products of petroleum and coal, n.e.c. Wood charcoal briquets are classified in industry 2861.

\section*{RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS}

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. This group also includes establishments engaged in molding primary plastics for the trade, and manufacturing miscellaneous finished plastics products. The manufacture of elastic webbing is classified in Major Group 22; products made of elastic webbing and garments made from rubberized fabrics in Major Groups 23 ; synthetic rubber in industry 2822 ; and plastics materials in the form of sheets, rods, tubes, granules, powders, or liquids made from resins produced in the same establishment, in industry 2821.

TRES AND INNER TUBES:
Tires and Inner Tubes (S-D; C-99).-Establishments primarily engaged in manufacturing pneumatic casings, inner tubes, and solid and cushion tires for all types of vehicles, airplanes, farm equipment, and children's vehicles, as well as tire repair, and tire retreading (camelback) materials.

Rubber Footwear (S-93; C-90). -Establishments primarily engaged in manufacturing all-rubber footwear, waterproof fabric upper footwear, and other fabric upper footwear having rubber
soles vulcanized to the uppers. Establishments primarily engaged in manufacturing rubber, composition, and fiber heels, soles, soling strips and related shoe making and repairing materials are classified in industry 3069.
RECLAIMED RUBBER:
Reclaimed Rubber (S-D; C-77).-Establishments primarily engaged in reclaiming rubber from used tires, scrap, and miscellaneous waste rubber articles by processes which result in a devulcanized, depolymerized, or regenerated, replasticized product containing added ingredients. This product is sold for use as a raw material in the manufacture of rubber goods with or without a mixture with natural or synthetic rubber. Establishments primarily engaged in the assembly and wholesale of scrap rubber are classified in trade industries.

FABRICATED RUBBER PRODUCTS, N.E.C.:
Fabricated Rubber Products, N.E.C. (S-86; C-89).-Establishments primarily engaged in manufacturing industrial and mechanical rubber goods, rubberized fabrics and vulcanized rubber clothing, and miscellaneous rubber specialties and sundries. Establishments primarily engaged in rebuilding and retreading tires are classified in industry 7534, that is, in nonmanufacturing.

MISCELLANEOUS PLASTICS PRODUCTS:
Miscellaneous Plastics Products (S-92; C-80). -Establishments primarily engaged in molding primary plastics for the trade, in manufacturing film, sheets, sheeting, rods, tubes, and other stock shapes from purchased resins, and in fabricating miscellaneous finished plastics products. Establishments primarily engaged in manufacturing plastics materials in the form of sheets, rods, tubes, granules, powders, or liquids made from resins produced in the same establishment are classified in industry 2821, and those primarily engaged in manufacruring artificial leather in industry 2295.

\section*{LEATHER AND LEATHER PRODUCTS}

This major group includes establishments engaged in tanning, currying, and finishing hides and skins, and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials. Leather converters are also included; such converters purchase hides and skins and have them processed into leather on a contract basis by others.

LEATHER TANNING AND FINISHING:
Leather Tanning and Finishing (S-99; C-100).-Establishments primarily engaged in tanning, currying, and finishing hides and skins into leather. Leather converters are classified in this industry.

INDUSTRIAL LEATHER BELTING AND PACKING:
Industrial Leather Belting and Packing (S-89;C-84). -Establishments primarily engaged in manufacturing industrial leather products, such as transmission belting, mechanical packings, and textile leathers. Establishments primarily engaged in manufacturing leather gaskets are classified in industry 3293; rubber belting and packing are included in industry 3069 ; plastic belting and packing in industry 3079 ; and metallic packing in industry 3599.

OT AND SHOE CUT STOCK AND FINDINGS :
Boot and Shoe Cut Stock and Findings (S-93; C-94). -Establishments primarily engaged in manufacturing leather soles, inner soles, and other boot and shoe cut stock and findings. This industry also includes finished wood heels. Establishments primarily engaged in manufacturing heels, soling strips, and soles made of rubber, composition, plastics, and fiber are classified in Major Group 30.

FOOTWEAR, EXCEPT RUBBER:
Footwear, Except House Slippers and Rubber Footwear (S-99; C-99). - Establishments primarily engaged is the production of boots and shoes designed primarily for street, work, play, or sport wear. Establishments primarily engaged in the production of such protective footwear as rubbers, rubber boots, storm shoes, galoshes, and other footwear with rubber soles vulcanized to the uppers are classified in industry 3021; and house slippers in industry 3142 . Footwear made by custom boot makers is covered in the census of business.

3142

House Slippers (S-90; C-85).-Establishments manufacturing house slippers of leather or other materials, except as noted. Establishments primarily engaged in making vulcanized rubber slippers (beach and shower slippers, scuffs, etc.) are classified
in industry 3021; wooden slippers including wooden clogs are classified in industry 2499; and paper bath slippers in industry 2649. Knitting mills producing slipper socks are classified in industry 2252.

GLOVES AND MITTENS
Leather Dress, Semidress, and Work Gloves (S-81; C-89).Establishments primarily engaged in manufacturing dress, semidress, and work gloves exclusively of leather. Establishments primarily engaged in manufacturing sporting and athletic gloves are classified in industry 3949; knit gloves in industry 2259 ; and dress, semidress, and work gloves and mittens of cloth, or cloth and leather combined, in industry 2381.

316 LUGGAGE:
Luggage (S-95; C-94). -Establishments primarily engaged in manufacturing luggage of leather or other materials. Among the products included in this industry are suitcases, briefcases, trunks, hat boxes (except paper or paperboard), and camera and binocular cases. Establishments primarily engaged in manufacturing luggage hardware are classified in industry 3429.

17 HANDBAGS AND OTHER PERSONAL LEATHER GOODS:
Women's Handbags and Purses (S-98; C-98). -Establishments primarily engaged in manufacturing women's handbags and purses of leather or other materials, except precious metal (industry 3911 ).

Personal Leather Goods, Except Handbags and Purses (S-96; C-92).-Establishments primarily engaged in manufacturing small articles such as billfolds, keycases, and coin purses of leather or other materials, except precious metal (industry 3911).

319 LEATHER GOODS, N.E.C.:
3191 Leather Goods, N.E.C. (S-94; C-82). -Establishments primarily engaged in manufacturing leather goods, n.e.c., such as saddlery, harness, and whips; embossed leather goods; leather desk sets; and razor strops.
Establishments primarily engaged in manufacturing leather garments are classified in industry 2386 ; leather belts in industry 2387; leather gaskets in industry 3293 ; leather buffing and polishing wheels in industry 3291; and leather costume jewelry in industry 3961.

This major group includes establishments engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete and gypsum products, cut stone products, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand. When separate reports are available for mines and quarries operated by manufacturing establishments classified in this major group, the mining activities are classified in mining industries; when separate reports are not available, the mining activities are classified with the manufacturing operations and classified herein.

321 FLAT GLASS:
Flat Glass (S-90 \({ }^{11}\); C-D).-Establishments primarily engaged in manufacturing flat glass, including plate glass, clear window glass, rolled glass, figured and wire glass, opalescent and obscured glass, and cathedral and skylight glass. This industry also includes establishments that produce laminated glass from glass produced in the same establishment. Establishments primarily engaged in manufacturing laminated glass from purchased flat glass are classified in industry 3231.

GLASS AND GLASSWARE, PRESSED OR BLOWN:
Glass Containers (S-99; C-99). - Establishments primarily engaged in manufacturing glass containers for commercial packing and bottling, and for home canning. Products of this industry may be machine-made or hand-made and include ampoules, carboys, cosmetic jars, fruit jars, medicine bottles, milk bottles, vials, and beverage and beer bottles.

Pressed and Blown Glass and Glassware, N.E.C. (S-96; C-97).Establishments primarily engaged in manufacturing glass and glassware, n.e.c., pressed, blown, or shaped from glass produced in the same establishment. Establishments primarily engaged in manufacturing textile glass fibers are also included in this industry, but establishments primarily engaged in manufacturing glass wool insulation products are classified in industry 3296.

Establishments primarily engaged in the production of pressed lenses for headlights, beacons, and lanterns are also included in this industry, but establishments primarily engaged in the production of optical lenses are classified in industry 3831. Establishments primarily engaged in manufacturing glasscontainers are classified in industry 3221, and complete electric light bulbs in industry 3641.

GLASS PRODUCTS MADE OF PURCHASED GLASS:
Glass Products Made of Purchased Glass (S-90 \({ }^{11}\); C-D). -Establishments primarily engaged in manufacturing glass products from purchased glass, including laminated or safety glass, stained, leaded, ornamented, and decorated glass; mirrors; cutware; scientific-apparatus glass; glass novelties; mosaic glass; round glass; cut, beveled, and etched glass; and glass watch crystals. Establishments primarily engaged in manufacturing optical lenses and ophthalmic lenses are classified in Major Group 38, Instruments and Related Products; glass fabrics in industry 2221; glass insulation in industry 3296; glass fishing rods in industry 3949.

Brick and Structural Clay Tile (S-98; C-98).-Establishments primarily engaged in manufacturing clay building brick, vitrified paving brick and hollow structural tile. Establishments primarily engaged in manufacturing clay firebrick are classified in industry 3255; nonclay firebrick in industry 3297; sand lime brick in industry 3299; and glass brick in industry 3229.

Ceramic Wall and Floor Tile (S-95; C-99).-Establishments primarily engaged in manufacturing ceramic mosaic tile, glazed wall tile, quarry tile, and other types of ceramic wall and floor tile. Establishments primarily engaged in manufacturing hollow structural tile and ceramic and salt glazed facing tile are classified in industry 3251 ; drain tile in industry 3259 ; asphalt floor tile in industry 3292; rubber tile in industry 3069; cork wall and floor tile in industry 2499; and other hard surface floor coverings in industry 3982. China and earthenware bathroom accessories (towel racks, soap cups, etc.) are classified in industry 3261.

Clay Refractories (S-91; C-93).-Establishments primarily engaged in manufacturing clay firebrick, crucibles, and other heat-resisting clay products such as glass-house tank blocks, stoppers, floaters, and rings. Establishments primarily engaged in manufacturing nonclay refractories, as well as all graphite refractories whether of carbon bond or ceramic bond, are classified in industry 3297.

Structural Clay Products N.E.C. (S-89; C-95). - Establishments primarily engaged in manufacturing clay sewer pipe and kindred products made of clay, and structural clay products, n.e.c., such as architectural terra cotta, roofing tile, stove lining, flue lining, chimney pipes, thimbles and tops, wall coping, segment blocks, drain tile and adobe brick. Establishments primarily engaged in manufacturing concrete sewer pipe are classified in industry 3272; cast iron sewer pipe in industry 3321; and plastic pipe in industry 3079.

POTTERY AND RELATED PRODUCTS:
Vitreous China Plumbing Fixtures and China and Earthenware Fittings and Bathroom Accessories (S-97; C-97). Establishments primarily engaged in manufacturing china plumbing fixtures and china and earthenware fittings and bathroom accessories.

3262
Vitreous China Table and Kitchen Articles (S-90; C-91). -Establishments primarily engaged in manufacturing vitreous china table and kitchen articles for use in households and in hotels, restaurants, and other commercial institutions for preparing, serving, or storing food or drink. Establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware (whiteware) table and kitchen articles are classified in industry 3263.

Fine Earthenware (Whiteware) Table and Kitchen Articles (S-92; C-91).-Establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware table and kitchen articles for preparing, serving, or storing food or drink. Establishments primarily engaged in manufacturing vitreous china table and kitchen articles are classified in industry 3262.

Porcelain Electrical Supplies (S-91; C-95).-Establishments primarily engaged in manufacturing porcelain electrical insulators, molded porcelain parts for electrical devices, steatite electrical products and other electrical supplies from clay and other ceramic materials.

Pottery Products, N.E.C. (S-87; C-89).-Establishments primarily engaged in firing and decorating white china and earthenware for the trade and manufacturing art and ornamental pottery, industrial and laboratory pottery, stoneware and coarse earthenware table and kitchen articles, unglazed red earthenware florists' articles, and other pottery products, n.e.c.

CONCRETE, GYPSUM AND PLASTER PRODUCTS:
Concrete Brick and Block (S-92; C-84).-Establishments primarily engaged in manufacturing concrete building blocks and brick from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries, and building materials dealers primarily engaged in mixing and delivering ready mixed concrete in industry 3273.

Concrete Products, Except Block and Brick (S-94; C-94). Establishments primarily engaged in manufacturing concrete products, except block and brick, from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries, and building materials dealers primarily engaged in mixing and delivering ready mixed concrete in industry 3273.

3273 Ready Mixed Concrete (S-92; C-98). -Establishments primarily engaged in manufacturing Portland cement concrete, manufactured and delivered to a purchaser in a plastic and unhardened state. This industry includes production and sale of central mixed concrete, shrink mixed concrete and transit mixed concrete
ime (S-82; C-94). -E stablishments primarily engaged in manufacturing quicklime, hydrated lime, and dead burned dolomite from limestone. dolomite shells, or other substances.

3275 Gypsum Products (S-97; C-98).-Establishments primarily engaged in manufacturing plaster, plasterboard, and other products composed wholly or chiefly of gypsum.

\section*{328 CUT STONE AND STONE PRODUCTS:}

Cut Stone and Stone Products (S-94; C-99). -Establishments primarily engaged in cutting, shaping, and finishing marble, granite, slate, and other stone for building and miscellaneous uses. Establishments primarily engaged in buying or selling partly finished monuments and tombstones, but performing no work on the stones other than lettering, finishing, or shaping to custom order, are classified in trade industries. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified in mining industries.

ABRASIVE, ASBESTOS, AND MISCELLANEOUS NONMETALLIC MINERAL PRODUCTS:

Abrasive Products ( \(\mathrm{S}-70^{1}\); C-95).-Establishments primarily engaged in manufacturing abrasive grinding wheels of natural or synthetic materials, and other abrasive products. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified in mining industries.

Asbestos Products (S-95; C-91). - Establishments primarily engaged in manufacturing asbestos textiles. asbestos friction materials, vinyl asbestos floor tile and other commodities composed wholly or chiefly of asbestos, except asbestos paper (industry 2661), steam and other packing, pipe and boiler covering, and gaskets (industry 3293).

3293 Steam and Other Packing, and Pipe and Boiler Covering (S-81; \(\mathrm{C}-78\) ).-Establishments primarily engaged in manufacturing packing for steam, water, and other pipe joints, and for engines, air compressors, etc.;gaskets (all types); and asbestos insulating materials. Establishments primarily engaged in manufacturing leather packing are classified in industry 3121 , rubber packing in industry 3069, metal packing in industry 3599, and mineral wool and insulation products in industry 3296.

3295
Minerals and Earths, Ground or Otherwise Treated(S-94; C-86). Establishments operating without a mine and primarily engaged in crushing, grinding, pulverizing, or otherwise preparing clay. ceramic, and refractory minerals (of the type in minerals

Industry Group 145); barite (mined by industry 1472); miscellaneous nonmetallic minerals, except fuels (talc, gypsum. graphite, and other minerals of the type classified in minerals Industry Group 149); or in crushing slag or preparing roofing granules. However, establishments preparing such nonmetallic minerals or roofing granules in conjunction with a mine at the site are classified in the mineral industries. The crushing and grinding of stone, the preparation of sand and gravel (minerals Industry Group 144) and of chemical and fertilizer minerals, except barite (minerals Industry Group 147, except industry 1472) are classified in the mineral industries whether or not the establishment includes a mine. The beneficiation or preparation of metallic ores and the cleaning and grading of coal at the mine or at separately operated preparation plants are classified in the mineral industries.

The code number for this industry in the Standard lndustrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census is due principally to (1) the reclassification of exfoliated vermiculite from industry 3296 to industry 3295 and (2) the inclusion of roofing granules produced in conjunction with mining operations in the mineral industries for 1963. In prior years these roofing granule plants were included in industry 3295.

Mineral Wool (S-90; C-96). - Establishments primarily engaged in manufacturing mineral wool and mineral wool insulation products made of such silicious materials as rock, slag, and glass, or combinations thereof. Establishments primarily engaged in manufacturing asbestos insulation products are classified in industries 3292 and 3293 , textile glass fibers in industry 3229, and exfoliated vermiculite products in industry 3295. Exfoliated vermiculite was reclassified from industry 3296 (in 1958) to industry 3295.

Nonclay Refractories (S-94; C-88).-Establishments primarily engaged in manufacturing refractories and crucibles made of materials other than clay. This industry also includes establishments primarily engaged in manufacturing all graphite refractories, whether of carbon bond or ceramic bond. Establishments primarily engaged in manufacturing clay refractories are classified in industry 3255.

Nonmetallic Mineral Products, NEC (S-86; C-96). -Establishments primarily engaged in the factory production of statuary and art goods made of plaster of Paris and papier-mache' and in manufacturing sand lime products, sheet mica products, and other nonmetallic mineral products, n.e.c.

\section*{PRIMARY METAL INDUSTRIES}

This major group includes establishments engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings, forgings, and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable. This major group also includes the production of coke.

331 BLAST FURNACES, STEEL WORKS, ANDROLLING AND FINISHING MILLS:

Blast Furnaces (lncluding Coke Ovens), Steel Works and Rolling Mills (S; C) \({ }^{12}\). Establishments primarily engaged in manufacturing hot metal, pig iron, silvery pigiron, and ferroalloys from iron ore and iron and steel scrap; converting pig iron, scrap iron and scrap steel into steel; and in hot rolling iron and steel into basic shapes such as plates, sheets, strips, rods, bars and tubing. Merchant blast furnaces and byproduct or beehive coke ovens are also included in this industry.

Included in this industry are all establishments engaged in the manufacture of blast furnace ferroalloys. However, establishments which manufacture ferro or nonferrous additive alloys by electrometallurgical process are classified in industry 3313. Also, establishments which draw wire from purchased rod and bar; establishments which perform only cold rolling, drawing or finishing operations; and establishments which produce welded, seamless, and heavy riveted pipe from purchased materials are not included in industry 3312, but are included in industries 3315,3316 , and 3317 , respectively.

Electrometallurgical Products (S-85-90; C-77) \({ }^{13}\).-Establishments primarily engaged in manufacturing ferro and nonferrous additive alloys by electrometallurgical processes, including high percentage ferroalloys and high percentage nonferrous additive alloys. Ferroalloys and other additives produced in blast furnaces are included in industry \(33 i 2\).
\(33 i 5\)
Steel Wire Drawing and Steel Nails and Spikes (S-89; C-30) \({ }^{13}\).Establishments primarily engaged in drawing wire from purchased iron or steel rods, bars, or wire and which may be engaged in the further manufacture of products made from wire; and those primarily engaged in manufacturing steel nails and spikes from purchased materials. Rolling mills engaged in the production of ferrous wire from wire rods or hot rolled bars produced in the same establishment are classified in industry \(33 i 2\). Establishments primarily engaged in drawing nonferrous wire are classified in Industry Group 335.
\(33 i 6\) Cold Rolled Sheet, Strip, and Bars (S-94; C-20) \({ }^{13}\).-Establishments primarily engaged in (1) cold rolling steel sheets and strip from purchased hot rolled sheets; (2) cold drawing steel bars and steel shapes from purchased hot rolled steel bars; and (3) producing other cold finished steel. Establishments primarily engaged in the production of steel, including hot rolled steel sheets, and further cold rolling such sheets are included in industry 3312.

Steel Pipe and Tubes (S-91; C-37).-Establishments primarily engaged in the production welded or seamless steel pipe and heavy riveted steel pipe from purchased materials. Establishments primarily engaged in the production of steel, including steel skelp or steel blanks, tube rounds, or pierced billets are classified in industry 3312.

IRON AND STEEL FOUNDRIES:-This group includes establishments primarily engaged in manufacturing iron and steel castings. These establishments generally operate on a job or order basis, manufacturing castings for sale to others or for interplant transfer. Establishments which produce iron and steel castings and which are also engaged in fabricating operations such as machining, assembling, etc., in manufacturing a specified product are classified in the industry of the specified product. Iron and steel castings are made to a considerable extent by establishments, classified in other industries, that operate foundry departments for the production of castings for incorporation, in the same establishment, into such products as stoves, furnaces, plumbing fixtures, motor vehicles, etc. Establishments primarily engaged in the manufacture and rolling of steel and also making steel castings are classified in industry 3312. Establishments primarily engaged in manufacturing nonferrous castings are classified in lndustry Group 336.

Gray lron Foundries (S-93; C-88). -Establishments primarily engaged in manufacturing gray iron castings, including cast iron pressure and soil pipe and fittings. Establishments primarily engaged in manufacturing valves and fittings, except plumbers' brass goods and fittings, are classified in industry 3494.

Malleable lron Foundries (S-87; C-87). Establishments primarily engaged in manufacturing malleable iron castings.

3323 Steel Foundries (S-85; C-89).-Establishments primarily engaged in manufacturing steel castings.

PRIMARY SMELTING AND REFINING OF NONFERROUS METALS AND ALLOYS:
(S; C) \({ }^{14}\). -Establishments primarily engaged in smelting copper from the ore, and in refining copper by electrolytic or other processes. Establishments primarily engaged in rolling, drawing or extruding copper are classified in industry 3351.

Primary Smelting and Refining of Lead (S; C) \({ }^{14}\). -Establishments primarily engaged in smelting lead from the ore and in refining lead by any process. Establishments primarily engaged in rolling, drawing, or extruding lead are classified in industry 3356.

Primary Smelting and Refining of Zinc (S-92; C-81 \({ }^{15}\) ). -Establishments primarily engaged in smelting zinc from the ore, and in refining zinc, by any process. Establishments primarily engaged in rolling, drawing or extruding zinc are classified in industry 3356.

Primary Production of Aluminum ( \(\mathrm{S}-\mathrm{i} 00 ; \mathrm{C}-75^{16}\) ).-Establishments primarily engaged in producing aluminum trom alumina and in refining aluminum by any process. Establishments primarily engaged in rolling, drawing or extruding aluminum are classified in industry 3352.
Primary Smelting and Refining of Nonferrous Metals, NEC (S-83; C-39 \({ }^{17}\) ).-Establishments primarily engaged in smelting and refining nonfer rous metals, n.e.c. Establishments primarily engaged in rolling, drawing, and extruding these nonferrous primary metals are classified in industry 3356, and the production of bullion at the site of the mine is classified in the mining industries.

334 SECONDARY SMELTING, REFINING, AND ALLOYING OF NONFERROUS METALS AND ALLOYS:
3341 Secondary Smelting, Refining, and Alloying of Nonferrous Metals and Alloys (S-94; C-26 \({ }^{\text {8 }}\) ).-Establishments primarily engaged in recovering nonferrous metals and alloys from new and used scrap and dross, but which are not engaged in further fabrication. This industry includes establishments engaged in both the recovery and alloying of precious metals. Plants engaged in the recovery of tin through secondary smelting and refining, as well as by chemical processes, are included in this industry. Establishments primarily engaged in assembling, sorting, and breaking up scrap metal, without smelting and refining, are classified in trade industries.

335 ROLLING, DRAWING, AND EXTRUDING OF NONFERROUS METALS:
3351 Rolling, Drawing, and Extruding of Copper (S-90; C-91).-Establishments primarily engaged in rolling, drawing and extruding copper, brass, bronze and other copper-base alloy basic shapes such as plate, sheet, strip, bar, and tubing. Establishments primarily engaged in recovering copper and its alloys from scrap or dross are classified in industry 3341.

3352 Rolling, Drawing and Extruding of Aluminum (S-85; C-93 \({ }^{19}\) ). Establishments primarily engaged in rolling, drawing and and extruding aluminum and aluminum-base alloy basic shapes such as plate, sheet, bar, tubing and foil.

Rolling, Drawing and Extruding of Nonferrous Metals, Except Copper and Aluminum ( \(\mathrm{S}-84 ; \mathrm{C}-81^{20}\) ).-Establishments primarily engaged in rolling, drawing and extruding nonferrous metals other than copper (industry 3351), and aluminum (industry 3352). The products of this industry are produced in the form of basic shapes, such as plate, sheet, strip, bar and tubing. Establishments primarily engaged in recovering nonferrous metals and alloys from scrap or dross are classified in industry 3341 ; in manufacturing gold, silver, tin and other foils, except aluminum, in industry 3497; and aluminum foil in industry 3352.

3357 Drawing and lnsulating of Nonferrous Wire (S-99; C86; \({ }^{21}\) ).Establishments primarily engaged in drawing, drawing and insulating, and insulating wire and cable of nonferrous metals from purchased wire bars, rods or wire.

NONFERROUS FOUNDRIES:-These foundry industries comprise establishments primarily engaged in manufacturing aluminum castings, including cast aluminum cooking utensils (336i). brass. bronze, and copper castings including unmachined bearings and bushings (3362), and other nonferrous castings (3369). Those primarily engaged in manufacturing iron and steel castings are classified in Industry Group 322.

For these industries, caprive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.

For the 1963 and 1958 Censuses of Manufactures separate establishment reports were received from all commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3361,3362 , and 3369 . However, where the captive foundry operation was completely integrated with the operations of the entire plant, no separate establishment report was received
for the foundry activity. In these instances data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly the general statistics on employment, payrolls, cost of materials, etc., are included in the data for such industries as 3432 and 3494 ,etc.

Aluminum Castings (S-81; C-83). - Establishments primarily engaged in manufacturing castings and die castings of aluminum.

Brass, Bronze, Copper, Copper-Base Alloy Castings (S-84; C-78).-Establishments primarily engaged in manufacturing castings and die castings of copper and copper-base alloy.
Nonferrous Castings, N.E.C. (S-78; C-75).-Establishments primarily engaged in manufacturing castings and die castings of nonferrous materials except aluminum, copper and copper-base alloys.

339 MISCELLANEOUS PRIMARY METAL INDUSTRIES:
lron and Steel Forgings (S-89; C-6922).-Establishments primarily engaged in manufacturing light and heavy board drop, steam hammer, upset, and press iron and steel forgings with or without the use of dies. Rolling mills engaged in the production of iron and steel forgings are classified in industry 3312.

Nonferrous Forgings (S-69; C-55).-Establishments primarily engaged in manufacturing, with or without the use of dies, forgings of aluminum, titanium, copper and other nonferrous metals and alloys.

3399 Primary Metal lndustries, N.E.C. (S-93; C-87).-Establishments primarily engaged in manufacturing primary metal products. n.e.c., such as nonferrous nails, brads, and spikes; metal powder, flakes, and paste; and establishments primarily engaged in heat treating of metal for the trade; also those establishments primarily engaged in reclaiming metallics from slag.

FABRICATED METAL PRODUCTS, EXCEPT ORDNANCE, MACHINERY, AND TRANSPORTATION EQUIPMENT

This major group includes establishments engaged in fabricating ferrous and nonferrous metal products such as metal cans, tinware, hand tools, cutlery, general hardware, nonelectric heating apparatus, fabricated structural metal products, metal stampings, and a variety of metal and wire products,n.e.c. Certain important segments of the metal fabricating industries are classified in other major groups such as ordnance in Major Group 19; machinery in in Major Groups 35 and 36; transportation equipment in Ma jor Group 37; professional, scientific, and controlling instruments, watches and clocks in Major Group 38; and jewelry and silverware in Major Group 39. Establishments primarily engaged in producing ferrous and nonferrous metals and their alloys are classified in Major Group 33.

341 METAL CANS:
Metal Cans (S-97; C-98).-Establishments primarily engaged in manufacturing metal cans from purchased tinplate, terneplate blackplate, or enameled sheet metal. Establishments primarily engaged in the manufacture of composite cans made partially of metal and partly of nonmetallic materials (such as fiberboard) are excluded from this industry.

342 CUTLERY, HAND TOOLS, AND GENERAL HARDWARE:
Cutlery (S-89; C-97).-Establishments primarily engaged in manufacturing cutlery. Establishments primarily engaged in manufacturing table cutlery made entirely of metal areclassified in industry 3914; those manufacturing electric razors in industry 3634 ; and those manufacturing hair clippers for human use in industry 3999, and for animal use in industry 3522.

Hand and Edge Tools, Except Machine Tools and Hand Saws (S-87; C-84). -Establishments primarily engaged in manufacturing files and other hand and edge tools for metalworking, woodworking, and general maintenance. Establishments primarily engaged in manufacturing saws are classified in industry 3425 ; and metal cutting dies and power driven hand tools, and attachments and accessories for machine tools in Major Group 35.

\section*{FIXTURES} Enameled lron and Metal Sanitary Ware (S-84; C-91). -Establishments primarily engaged in manufacturing enameled iron, cast iron, or pressed metal sanitary ware. Establishments primarily engaged in manufacturing vitreous and semivitreous pottery sanitary ware are classified in industry 3261 ; and those manufacturing porcelain enameled kitchen, household, and hospital ware in industry 3461.

This industry includes establishments which fall into two significantly different categories, namely those producing cast iron plumbing fixtures and those producing metal fixtures of pressed metal. Accordingly, the manufacturing plants included in this industry involve different manufacturing processes depending upon the line of products produced. Those fixture plants producing cast iron fixtures include significant foundry operations while the pressed metal fixture plants are more closely allied to metal fabricating plants producing their product by forming processes (stamping, drawing, etc.).

The operations of the largest establishments in this industry cover the entire production process including the casting of the fixture through the machining, finishing, and assembly operations. In general these processes are carried on at a single manufacturing plant. However, in a few instances the foundry operations were performed at separate locations and, accordingly, those separate foundries were classified in the foundry industries (SIC industries 3321, 3322, 3323, 3361, 3362 and 3369). In the latter case the plants classified in this industry would be limited to machining and finishing operations on castings received from their associated plants.

Plumbing Fixture Fittings and Trim (Brass Goods) (S-90; C-83). Establishments primarily engaged in manufacturing plumbing fixture fittings and trim (brass goods). Establishments primarily engaged in the manufacture of steam or water line valves are classified in industry 3494.

Heating Equipment, Except Electric (S-76; C-81).-Establishments primarily engaged in manufacturing heating equipment for all purposes other than power, including all gas, oil, and stoker coal fired equipment for the automatic utilization of gaseous, liquid, and solid fuels. Establishments primarily engaged in manufacturing electric stoves and ranges are classified in industry 3631; boiler shops primarily engaged in the production of industrial, power and marine boilers in industry 3443; and industrial process furnaces and ovens in industry 3567.

FABRICATED STRUCTURAL METAL PRODUCTS:
Fabricated Structural Steel (S-86; C-89).-Establishments primarily engaged in manufacturing fabricated iron and steel or other metal for structural purposes, for bridges, buildings, and sections for ships, boats and barges. Establishments primarily engaged in manufacturing metal doors, sash, frames, molding and trim are classified in industry 3442; and fabrication work done by construction contractors at the site of construction is classified in construction industries.

Metal Doors, Sash, Frames, Molding and Trim (S-88; C-94). Establishments primarily engaged in manufacturing ferrous and nonferrous metal and metal covereddoors and sash, window and door frames and screens, molding and trim.

3443
Hand Saws and Saw Blades (S-78; C-85). -Establishments primarily engaged in manufacturing hand saws and saw blades for hand and power driven saws. Establishments primarily engaged in manufacturing power driven sawing machines are classified in Major Group 35.

Hardware, N.E.C. (S-91; C-93).-Establishments primarily engaged in manufacturing miscellaneous metal products usually termed "hardware" and n.e.c. Establishments primarily engaged in manufacturing bolts and nuts are classified in industry 3452, nails and spikes in Major Group 33, cutlery in industry 3421 , hand tools in industry 3423 , and pole line and transmission hardware in Major Group 36.
HEATING APPARATUS (EXCEPT ELECTRIC) AND PLUMBING

Fabricated Plate Work (Boiler Shops) (S-89; C-83).-Establish-

\begin{abstract}

\end{abstract}

\(\qquad\)

\footnotetext{
\(\qquad\)
}

\(\qquad\)
\(\qquad\)
\(\qquad\)
\(\qquad\) I ments primarily engaged in manufacturing power and marine boilers, pressure and nonpressure tanks, processing and storage vessels, heat exchangers, weldments and similar products by the process of cutting, forming and joining metal plates, shapes, bars, sheet, pipe mill products and tubing to
custom or standard design for factory or field assembly Establishments primarily engaged in manufacturing nonelectric heating apparatus other than power boilers are classified in industry 3433. and household cooking apparatus in industry 3631 .

Sheet Metal Work (S-88; C-78). -Establishments primarily engaged in manufacturing sheet metal work for buildings (not including fabrication work done by construction contractors at the place of construction), and manufacturing sheet metal stovepipes, light tanks, etc. Establishments in the sheet metal field are frequently engaged in activities whichoverlap the economic divisions of manufacturing, wholesale, service and construction, and some difficulty is experienced in distinguishing a sheet metal manufacturing establishment from other sheet metal wholesalers. Establishments performing manufacturing operations incidental to their installation or contracting business are excluded from the census of manufactures. Conversely, many of the plants included in industry 3444 are engaged to a secondary extent in wholesaling or installing sheet metal items.

Architectural and Ornamental Metal Work (S-86; C-71).-Establishments primarily engaged in manufacturing architectural and ornamental metal work of ferrous and nonferrous metals, such as stairs and staircases, open steel flooring (grating), fire escapes, grills, railings, and fences and gates except wire. Establishments primarily engaged in manufacturing prefabricated and portable metal buildings and parts, and miscellaneous metal work are classıfied in industry 3449.

This industry was not defined in the SlC for 1958 but was then part of industry 3449.

Miscellaneous Metal Work (S-89; C-68).-Establishments primarily engaged in manufacturing miscellaneous ferrous and nonferrous metal work, such as prefabricated and portable metal buildings and parts, metal plaster bases, fabricated bar joists and concrete reinforcing bars, and prefabricated exterior metal panels.

This industry was redefined in the SIC for 1963. Industry 3446 , shown above, was part of industry 3449 in 1958.

345 SCREW MACHINE PRODUCTS AND BOLTS, NUTS, SCREWS, RIVETS AND WASHERS:
3451 Screw Machine Products (S-97; C-90). -Establishments primarily engaged in manufacturing automatic or hand screw machine products from rod, bar, or tube stock of metal, fiber, plastics, or other material. The products of this industry consist of a wide variety of unassembled parts and are usually manufactured on a job or order basis. Establishments primarily engaged in manufacturing standard bolts, nuts, rivets, screws, or other industrial fasteners, on headers, threaders, and nut forming machines are classified in industry 3452.

Industry 3451 includes establishments producing a wide variety of items such as small machinery parts, etc., on hand operated and automatic screw machines from rod, bar and tube stock and from castings and forgings. These products are produced almost entirely on a job or order basis. Included are screw machine departments or plants of companies primarily engaged in producing finished end products where such activities could be reported separately. However, in many instances captive screw machine operations were so integrated with other activities that separate reports were not obtained and the entire establishment was classified on the basis of its primary products.

Bolts, Nuts, Washers, and Rivets (S-92; C-90).-Establishments primarily engaged in manufacturing bolts, nuts, screws, rivets, washers, formed and threaded wire goods, and special industrial fasteners. Rolling mills engaged in manufacturing similar products are classified in Major Group 33, and establishments primarily engaged in manufacturing screw machine products in industry 3451 .

Plants included in industry 3452 in general are engaged in the manufacture of bolts, nuts, screws, and rivets of standard types and sizes on heading, threading, and nut forming machines. These establishments may be also engaged in the production of special industrial fasteners which require special or added operations or the use of special tools and fixtures. These items include bolts, nuts, screws, etc., of nonstandard types and sizes and special fasteners made by stamping and other forming processes. To a lesser extent these plants manufacture stan-
dard type bolts, nuts, screws, etc., on automatic and hand operated screw machines.

METAL STAMPINGS:
Metal Stampings (S-84; C-86). -Establishments primarily engaged in manufacturing metal stampings by the use of tools, dies, jigs, and fixtures to punch, draw, form, or otherwise modify materials under pressure in a machine (primarily punch and draw presses).

Establishments in industry 3461 produce both job stampings and flinished end products. Job stampings are made from materials owned by the stamping establishments as well as from materials owned by the customer and process by the stamping establishments on a contract or commission basis. These stampings are mainly parts which are sold to manufacturers for incorporation into any of a wide variety of products such as refrigerators, agricultural machinery, radio and television sets. Finished end products manufactured by establishments in this industry include cooking, kitchen, and hospital utensils (including domestic pressure cookers and porcelain enameled utensils), pails, ash cans, garbage cans, perforated metal products, metal commercial and home canning closures as well as a large variety of miscellaneous items.

Industry 3461 includes the stamping departments of establishments primarily engaged in pr ducing fabricated metal products where such stamping activities could be reported separately. However, where captive stamping operations were closely integrated with other activities, such as in the production of household appliances, farm equipment, motor vehicles, etc., separate reports were not obtained.
COATING, ENGRAVING, AND ALLIED SERVICES:
Electroplating, Plating, Polishing, Anodizing, and Coloring \(\left(\mathrm{S}^{23} ; \mathrm{C}^{24}\right)\).-Establishments primarily engaged in all types of electroplating, plating, anodizing, and coloring, and finishing of metals and formed products for the trade. Most of the work done in this industry is done on materials owned by others.

Coating, Engraving, and Allied Services, N.E.C. \(\left(S^{23} ; C^{24}\right)\). Establishments primarily engaged in performing the following types of services on metals: (1) enameling, lacquering, and varnishing metal products for the trade; (2) hot dip galvanizing of mill sheets, plates and bars, castings, and formed products fabricated of iron and steel; in hot dip coating such items with aluminum, lead, or zinc; in retinning cans and utensils; (3) in engraving, chasing and etching jewelry, silverware, notarial and other seals, and other metal products for the trade and for job contracting for purposes other than printing; (4) and other metal services, n.e.c. Establishments primarily engaged in electroplating, plating, polishing, anodizing, coloring, and finishing of metals and formed products for the trade are classified in industry 3471 ; and those producing porcelain enameled products in industry 3461.

Industry 3479 includes establishments engaged primarily in enameling materials owned by others. Establishments primarily engaged in manufacturing vitreous-enameled products from their own materials are included in industry 3461. In addition, industry 3479 covers both vitreous and other types of enameling (such as baked enameling) whereas industry 3461 includes only vitreous-enameling establishments as well as those producing other types of metal stampings.

Industry 3479 includes establishments primarily engaged in galvanizing iron and steel sheets or formed products; in coating iron sheets or formed products with aluminum, lead, or zinc; and in retinning cans and utensils. Most of the work done in this industry is done on materials owned by others. Rolling mills engaged in galvanizing, tinning, and other coating are classified in industry 3312, and establishments primarily engaged in manufacturing galvanized steel wire, from purchased metal rods or bars, are classified in industry 3315.

Industry 3479 includes establishments primarily engaged in engraving, chasing, and etching jewelry, silverware, notarial seals, and other metal products for the trade, for purposes other than printing. Establishments primarily engaged in preparing metal lithographic plates and in printing from such media are classified in industry 2752 ; establishments primarily engaged in engraving and etching steel and copper plates and in using these plates to print stationary, visiting cards. etc.. are included in industry 2753; and establishments primarily engaged in preparing photoengraved plates (halftones and linecuts) are classified in industry 2793.

MISCELLANEOUS FABRICATED WIRE PRODUCTS: Miscellaneous Fabricated Wire Products (S-93; C-65 \({ }^{25}\) ). Establishments primarily engaged in manufacturing miscellaneous fabricated wire products from purchased wire. Rolling mills engaged in manufacturing wire products are classified in Major Group 33; establishments manufacturing nonferrous wire nails and spikes in industry 3399; those drawing and insulating nonferrous wire in industry 3357; and those assembling wire bedsprings or seats are classified in Major Group 25.

MISCELLANEOUS FABRICATED METAL PRODUCTS:
Metal Shipping Barrels, Drums, Kegs, and Pails (S-92; C-86). Establishments primarily engaged in manufacturing ferrous and nonferrous shipping barrels, drums, kegs, and pails.

3492 Safes and Vaults (S-81; C-90-95).-Establishments primarily engaged in manufacturing fire or burglary resistive steel safes engaged in manufacturing fire or burglary resistive steel safes
and vaults (except concrete grave vaults, industry 3272, and metal grave vaults, industry 3988), and similar fire or burglary resistive products.

3493 Steel Springs (S-91; C-67). -Establishments primarily engaged in manufacturing leaf springs, hot wound springs and coiled flat springs. Establishments primarily engaged in manufacturing wire springs are classified in industry 3481 , and rolling mills manufacturing steel springs in industry 3312 .

3494 Valves and Pipe Fittings, Except Plumbers' Brass Goods (S-86; C-85). - Establishments primarily engaged in manufacturing valves for controlling the flow of liquids or gases in pipes and mains, and for machinery. Establishments primarily engaged in manufacturing faucets, spigots, and similar plumbers' brass goods and fittings are classified in industry 3432.

Collapsible Tubes (S-88; C-100).-Establishments primarily engaged in manufacturing collapsible tubes defined as cylindrical containers for viscous products, made of thin flexible metal, usually of tin, tin lined lead, lead, lead-tin alloy, or aluminum, with integral shoulder and neck, provided with an appropriate size opening in the throat, and usually with a appropriate size opening in the throat, made of plastic material for closure over the neck.

Metal Foil and Leaf (S-84; C-45).-Establishments primarily engaged in manufacturing gold, silver, tin and other metal foil (including converted metal foil) and leaf. Fstablishments primarily engaged in manufacturing plain aluminum foil are classified in industry 3352.

3498 Fabricated Pipe and Fabricated Pipe Fittings (S-92; C-91). Establishments primarily engaged in fabricating pipe and pipe fittings from purchased pipe, by cutting, threading, bending, etc. Establishments primarily engaged in manufacturing cast iron pipe and fittings, including cast and forged pipe fittings which have been machined and threaded, are classiffed in industry 3321; welded and heavy riveted pipe in industry 3317; and seamless steel pipe in industry 3317. Establishments primarily engaged in manufacturing products such as banisters, rallings, and guards from pipe are classified in industry 3446.

Fabricated Metal Products, N.E.C. (S-89; C-62).-Establishments primarily engaged in manufacturing fabricated metal products, n.e.c. Establishments primarily engaged in manufacturing advertising novelties are classified in industry 3993. Specific products of this industry include ammunition boxes, metal strapping, aluminum giftware (hammered), metal bookends, ladders, and fabricated railroad track equipment, such as switches, crossings, etc. Establishments primarily engaged in manufacturing castings or forgings are classified in Major Group 33; hardware in industry 3429; metal stampings in industry 3461; machine and equipment parts in Major Group 35 and Major Group 36.

35

\section*{MACHINERY, EXCEPT ELECTRICAL}

This major group includes establishments engaged in manufacturing machinery and equipment,other than electrical equipment (Major Group 36) and transportation equipment (Major Group 37). Machines powered by built-in or detachable motors ordinarily are included in this major group, with the exception of electrical household appliances (Major Group 36). Portable tools, both electric and pneumatic powered, are included in this major group, but hand tools are classified in Major Group 34.

ENGINES AND TURBINES:
Steam Engines; Steam, Gas, and Hydraulic Turbines; and Steam, Gas, and Hydraulic Turbine Generator Set Units (S-85; C-82).Establishments primarily engaged in manufacturing steam engines; steam turbines; hydraulic turbines; gas turbines except aircraft; and complete steam, gas, and hydraulic turbine generator sets units. Establishments primarily engaged in building or rebuilding locomotives are classified in industry 3741 ; and those manufacturing nonautomotive type generators which are not a part of a turbine generator set in industry 3621.

3519
Internal Combustion Engines, N.E.C. (S-86; C-86).-Establishments primarily engaged in manufacturing diesel, semi-diesel. or other internal combustion engines, n.e.c., for stationary. marine, traction, and other uses. Establishments primarily engaged in manufacturing aircraft engines, including rocket engines, are classified in industry 3722, automotive engines (except diesel) in SIC industry 3714 (Census industry 3717). and engine generator sets in industry 3621.

352 FARM MACHINERY AND EQUIPMENT:
3522 Farm Machinery and Equipment (S-89; C-95). -Establishments primarily engaged in manufacturing farm machinery, including equipment and wheel tractors, for use in the preparation and maintenance of the soil; planting and harvesting of the crop; preparing, on the farm, crops for market; or for use in performing other farm operations and processes. This industry includes wheel tractors, except contractors' off-highway type which are classified in industry 3531. Establishments primarily engaged in manufacturing industrial trucks, tractors, and trailers used for handling materials in industrial plants, depots, and docks are classified in industry 3537; and farm hand tools in Industry Group 342.

353 CONSTRUCTION, MINING, AND MATERIALS HANDLING MACHINERY AND EQUIPMENT:

Construction Machinery and Equipment (S-91; C-89).-Establishments primarily engaged in manufacturing heavy machinery and equipment used by the construction industries, such as bulldozers; concrete mixers; cranes, except industrial plant; dredging machinery; pavers, and power shovels. Establishments primarily engaged in manufacturing mining equipment are classified in industry 3532, and well drilling machinery in industry 3533.

3532 Mining Machinery and Equipment, Except Oil Field Machinery and Equipment ( \(\mathrm{S}-75\); C-82).-Establishments primarily engaged in manufacturing heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery. Establishments primarily engaged in manufacturing construction machinery are classified in industry 3531 , well drilling machinery in industry 3533 , and coal and ore conveyors in industry 3535.

3533 Oil Field Machinery and Equipment (S-90; C-91).-Establishments primarily engaged in manufacturing machinery and equipment for use in oil and gas fields, or for drilling water wells.

Elevators and Moving Stairways (S-97; C-95). -Establishments primarily engaged in manufacturing passenger or freight elevators, automobile lifts, dumb waiters, and moving stairways. Establishments primarily engaged in manufacturing commercial conveyor systems and equipment are classified in industry 3535, and farm elevators in industry 3522.

3535 Conveyors and Conveying Equipment (S-62; C-83).-Establishments primarily engaged in manufacturing conveyors and conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments. Establishments primarily engaged in manufacturing passenger or freight elevators, dumb waiters, and moving stairways are classified in industry 3534; and overhead traveling cranes and monorail systems in industry 3536.

Hoists, Industrial Cranes, and Monorail Systems (S-80;C-70). Establishments primarily engaged in manufacturing overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, and other industrial and commercial establishments.

Industrial Trucks, Tractors, Trailers, and Stackers (S-90; C-81). -Establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, stackers (truck type). and related equipment, used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, and terminals. Establishments prinıarily engaged in manufacturing motor vehicles and motor vehicle type trailers are classified in Industry Group 371; farm type wheel tractors in industry 3522; wheel tractor shovel loaders, tracklaying tractors in industry 3531; and wood pallets and skids in industry 2499.

METALWORKING MACHINERY AND EQUIPMENT:
Machine Tools, Metal Cutting Types (S-81; C-88).-Establishments primarily engaged in manufacturing power-driven machines, not supported in the hands of an operator when in use, that shape metal by cutting or use of electrical equipment; the rebuilding of such machine tools, and the manufacture of replacement parts for them. Metalworking, or primarily metalworking, machine tools designed primarily for home workshops are also included. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623 ; and portable powerdriven hand tools, gas welding and cutting equipment, and automotive maintenance equipment in industry 3548.

Machine Tools, Metal Forming Types (S-86; C-79). -Establishments primarily engaged in manufacturing power-driven machines, not supported in the hands of an operator while in use, for pressing, forging, hammering, extruding, shearing, bending or die casting metal into shape. This industry also includes rebuilding such machine tools and manufacturing repair parts for them. Establishments primarily engaged in the manufacture of electric welding equipment are classifiedin industry 3623; portable power-driven hand tools, gas welding and cutting equipment, and automotive maintenance equipment in industry 3548.
3544 Special Dies and Tools, Die Sets, Jigs, and Fixtures (S-93; C-72).-Establishments primarily engaged in manufacturing, on a job or order basis, special tools and fixtures for use with machine tools, hammers, die casting machines, and presses. The products of establishments classified in this industry include a wide variety of special toolings, such as dies; punches; die sets and components, and subpresses; jigs and fixtures; and special checking devices. Establishments primarily engaged in manufacturing metal molds for casting metals, for rubber working, plastic working, glass working and similar machinery are also included.

This industry comprises establishments commonly known as contract tool and die shops; also included are captive tool and die shops of metal-products producers, where such shops were separately operated and separate reports were filed. However, the total value of shipments excludes the captive production of tool and die departments making these products for the exclusive use of the producing establishment.
3545 Machine Tool Accessories and Measuring Devices (S-83; C-84). Establishments primarily engaged in manufacturing cutting tools, machinists' precision measuring tools, and attachments and accessories for machine tools and for other metalworking machinery, n.e.c. Establishments primarily engaged in manufacturing hand tools, except power-driven, are classified in Industry Group 342.

Metalworking Machinery, Except Machine Tools and PowerDriven Hand Tools (S-85; C-88).-Establishments primarily engaged in manufacturing metalworking machinery such as rolling mill machinery and equipment, power-driven hand tools, welding equipment, wire fabricating machinery and equipment, except wire drawing dies, and automotive maintenance machinery and equipment. Establishments primarily engaged in manufacturing machine tools, metal cutting types, are classified in industry 3541 , and those primarily engaged in manufacturing machine tools, metal forming types, in industry 3542.

355 SPECLAL INDUSTRY MACHINERY, EXCEPT METAL WORKING MACHINERY:-These industries include establishments primarily engaged in producing industrial machinery, except metalworking machinery, specially designed for use in a specific industry or in a group of industries. Machinery having general industrial application, i.e., used in a number of industries, rather than in specific applications are not included in this group but are included in Industry Group 356. Examples of general industrial machinery are pumps and compressors, fans and blowers, and mechanical power transmission equipment.

3551

3565

GENERAL INDUSTRIAL MACHINERY AND EQUIPMENT:
Pumps, Air and Gas Compressors, and Pumping Equipment (S-85; C-86).-Establishments primarily engaged in manufacturing pumps, compressors, and pumping equipment for general industrial use. Establishments primarily engaged in manufacturing measuring and dispensing pumps for gasoline service station use are classified in industry 3586; and ice making, refrigerating, and air conditioning units in industry 3585.

Ball and Roller Bearings (S-97; C-98).-Establishments primarily engaged in manufacturing ball and roller bearings and parts. Establishments primarily engaged in manufacturing bearings, except ball and roller, are classified in industry 3566.

Blowers, Exhaust and Ventilating Fans (S-83; C-79).-Establishments primarily engaged in manufacturing blowers, and exhaust and ventilating fans for general industrial, commercial, and household use. Establishments primarily engaged in manufacturing complete air conditioning units are classified in industry 3585, and free air circulating fans for use on desks, pedestals, or wall brackets in industry 3634.
Food Products Machinery (S-86; C-87).-Establishments primarily engaged in manufacturing machinery for use by the food products and beverage manufacturing industries in the preparation, canning, or packaging of food products and parts and attachments. Establishments primarily engaged in manufacturing refrigeration machinery are classified in industry 3585; household electrical appliances such as mixers, cookers, etc., are classified in industry 3634.

Textile Machinery (S-93; C-94).-Establishments primarily engaged in manufacturing machinery for the textile industries, and extra parts, attachments, and accessories. Establishments primarily engaged in manufacturing domestic or industrial sewing machines are classified in industry 3636.

Woodworking Machinery (S-80; C-83). -Establishments primarily engaged in manufacturing machinery for sawmills, planing mills, cabinet and furniture makers, pattern makers, and veneer workers.

Establishments primarily engaged in manufacturing hand tools such as planes, axes, drawknives, and hand saws are classified in lndustry Group 342, and portable power-driven hand tools in industry 3548.

Paper lndustries Machinery (S-88; C-90). -Establishments primarily engaged in manufacturing machinery for the paperpulp, paper, and paper product industries. Establishments primarily engaged in rebuilding pulp and paper industries machinery are also included in this industry. Establishments primarily engaged in manufacturing printing trades machinery are classified in industry 3555.

Printing Trades Machinery (S-95; C-93).-Establishments primarily engaged in manufacturing machinery and equipment used by the printing and bookbinding trades. Important products of this industry include bookbinding and photoengraving machinery; printers' machinery such as presses, typesetting, typefounding, electrotyping, and stereotyping machines; engravers' equipment (metal plates, wood blocks, and lithographic stones); printers' rollers, rules, sticks, blocks, and type cases; and type, leads, and slugs. Establishments primarily engaged in manufacturing textile printing machinery are classified in industry 3552.

Special Industry Machinery, N.E.C. (S-83; C-73).-Establishments primarily engaged in manufacturing special industry machinery, n.e.c., such as smelting and refining equipment, cement making, clay working, glass making, hat making, incandescent lamp making, leather working, paint making, rubber working, tobacco working, cigar and cigarette making, shoe making, and stone working machinery.

Industrial Patterns (S-96; C-80). -Establishments primarily engaged in manufacturing industrial patterns.

Mechanical Power Transmission Equipment, Except Ball and Roller Bearings (S-84; C-79).-Establishments primarily engaged in manufacturing mechanical power transmission equipment for industrial machinery. Establishments primarily engaged in manufacturing automotive, tank, and tractor power transmission equipment are classified in SIC industry 3714 (Census industry 3717); aircraft power transmission equipment in industry 3729; and ball and roller bearings in industry 3562.

General Industrial Machinery and Equipment, N.E.C. (S-83; C-70).-Establishments primarily engaged in manufacturing machinery, equipment, and components for general industrial use, and for which no special classification is provided. Machine shops primarily engaged in producing machine and equipment parts, usually on a job or order basis, are classified in industry 3599.

Industry 3569 covers a wide range of products such as filters and strainers for internal combustion engines (except automobile engines), hydraulic jacks, packaging and wrapping machines (except food and tobacco), centrifugals and separators (except cream), gas generating equipment, brake burnishing and washing machines, ice crusher machinery, fire hose (except rubber), fire hose dryers and racks, automatic sprinkler systems, general industrial labeling machines, and magnetic separation equipment.

OFFICE, COMPUTING, AND ACCOUNTING MACHINES:
Computing and Accounting Machines, Including Cash Registers (S-93; C-94). -Establishments primarily engaged in manufacturing computing machines including electronic, accounting machines, and cash registers. Establishments primarily engaged in manufacturing typewriters are classified in industry 3572 , and office duplicating machines and devices and autographic registers in industry 3579.

Office Machines, N.E.C. (S-81; C-79).-Establishments primarily engaged in manufacturing office machines and devices, n.e.c. Establishments primarily engaged in manufacturing computing machines and cash registers are classified in indus ry 3571 , typewriters in industry 3572, and photocopy and microfilm equipment in industry 3861.

Automatic Merchandising Machines (S-81; C-90). -Establishments primarily engaged in manufacturing automatic merchandising units, also referred to as vending machines (excluding music, amusement, or gaming machines) and coin-operated mechanisms for such machines. Coin-operated amusement and gaming machines are classified in industry 3999 and coinoperated phonographs in industry 3651.
Commercial Laundry, Dry Cleaning, and Pressing Machines (S-91; C-89). -Establishments primarily engaged in manufacturing laundry and dry-cleaning equipment and pressing machines for commercial and industrial use. Establishments primarily engaged in manufacturing household laundry equipment are classified in industry 3633. Although the SIC classifies coin-operated household washing machines in industry 3582 data for these machines are included in the 1963 Census of Manufactures, as in 1958, in industry 3633.

Refrigerators and Refrigeration Machinery, Except Household; and Complete Air-Conditioning Units ( \(\mathrm{S}^{14}\); \(\mathrm{C}^{14}\) ).-Establishments primarily engaged in manufacturing equipment and systems utilizing the basic refrigeration cycle, including mechanical and absorption refrigerators for commercial and industrial use; refrigeration machinery, and complete airconditioning units for domestic, commercial, and industrial use. Establishments primarily engaged in manufacturing soda fountain and beer-dispensing equipment are classified in this industry, and those primarily engaged in manufacturing household refrigerators and home and farm freezers in industry 3632.

3586
Measuring and Dispensing Pumps (S-73; C-85).-Establishments primarily engaged in manufacturing, measuring and dispensing pumps commonly used in service and filling stations for dispensing gasoline, oil, and grease, including grease guns. Establishments primarily engaged in manufacturing pumps, compressors and pumping equipment for general use are classified in industry 3561.

Service Industry Machines, N.E.C. (S-86; C-84).-Establishments primarily engaged in manufacturing machines and equipment, not elsehwere classified, for use in service industries, such as floor sanding machines, industrial vacuum cleaners, scrubbing machines, commercial cooking and food warming equipment, and commercial dishwashing machines. Establishments primarily engaged in manufacturing household electric appliances are classified in Industry Group 363.

MISCELLANEOUS MACHINERY, EXCEPT ELECTRICAL
Miscellaneous Machinery, Except Electrical (S-90; C-90).Establishments primarily engaged in manufacturing machinery and parts except electrical, not elsewhere classified, such as pistons and piston rings, carburetors, metallic packing, and amusement park equipment. This industry also includes establishments primarily engaged in producing or repairing machine and equipment parts, n.e.c, on a job or order basis for others. These establishments usually operate on a job, or order basis and are equipped with machine tools and other power-driven metalworking machinery capable of manufacturing a wide range of machine and equipment parts. Machine shops classified in this industry are characterized by their method of operation rather than their product, and the fact that they may be primarily engaged in repair work does not exclude them from this classification; however, machine shops engaged exclusively in repair work are classified in repair industries.

Although generally characterized by method of operation rather than type of product, establishments primarily engaged in manufacturing the following products are classified in industry 3599: metal bellows, bushings machined from purchased castings, carburetors, catapults, boiler-tube cleaners, valve cores, hydraulic cylinders, iron flasks, flexible metal hose and tubing. metallic packing (except asbestos-metallic). pistons and piston rings, and intake and exhaust valves for internal combustion engines.

\section*{ELECTRICAL MACHINERY, EQUIPMENT, AND SUPPLIES}

This major group includes establishments engaged in manufacturing machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy. The manufacture of household appliances is included in this group, but industrial machinery and equipment powered by built-in or detachable electric motors is classified in Major Group 35.

\section*{ELECTRIC TRANSMISSION AND DISTRIBUTION EQUIPMENT:}

Electrical Measuring Instruments and Test Equipment ( \(\mathrm{S}-84\); \(\mathrm{C}-78\) ). -Establishments primarily engaged in manufacturing pocket, portable, panelboard and graphic recording instruments for measuring electricity, such as voltmeters, ammeters, wattmeters, watt-hour meters, demand meters and other meters and indicating instruments. This industry also includes establishments primarily engaged in manufacturing analyzers for testing the electrical characteristics of internal combustion engines, radio apparatus, etc.
Power, Distribution, and Specialty Transformers (S-92; C-94). Establishments primarily engaged in manufacturing power. distribution and specialty transformers. Establishments primarily engaged in manufacturing radio frequency or voice frequency transformers, coils or chokes are classified in industry 3679, and resistor welding transformers in industry 3623.

Switchgear and Switchboard Apparatus (S-87; C-89)., Establishments primarily engaged in manufacturing switchgear and switchboard apparatus. lmportant products of this industry include power switches, circuit breakers, power switching equipment, and similar switchgear for general industrial application; switchboards and cubicles, control and metering panels, power fuse mountings, and similar switchboard apparatus and supplies. Establishments primarily engaged in manufacturing industrial controls are classified in industry 3622, and those manufacturing current carrying wiring devices in industry 3643.

ELECTRICAL INDUSTRIAL APPARATUS:
Motors and Generators (S-81; C-84). -Establishments primarily engaged in manufacturing electric motors (except starting motors) and power generators; motor generator sets; railway motors and control equipment; and motors, generators and control equipment for gasoline electric and oil electric busses and trucks. Establishments primarily engaged in manufacturing turbogenerators are classified in industry 3511 and starting motors and battery charging generators for internal combustion engines in industry 3694.

Industrial Controls (S-79; C-79). - Establishments primarily engaged in manufacturing motor starters and controllers, control accessories, electronic controls, and other industrial controls. Establishments primarily engaged in manufacturing automatic temperature controls are classified in industry 3822.

Welding Apparatus (S-93; C-89).-Establishments primarily engaged in the manufacture of welding apparatus and accessories. lmportant products of this industry include arc welding machines, spot, projection, seam, flash and other resistance welders, welding electrodes, electrode holders and other welding machine accessories. Establishments primarily engaged in coating welding wire from purchased wire or wire drawn in the same establishment are also included. Establishments primarily engaged in manufacturing gas welding apparatus are classified in industry 3548.

Carbon and Graphite Products (S-93; C-96).-Establishments primarily engaged in the manufacture of carbon and graphite products for use in the electrical industries. This industry comprises establishments primarily engaged in manufacturing lighting carbons; carbon, graphite, and metal-graphite brushes and brush stock; carbon or graphite electrodes for thermal and electrolytic uses; and other carbon, graphite, and metalgraphite products for use in the electrical industries.

3629 Electrical Industrial Apparatus, N.E.C. (S-80; C-72).-Establishments primarily engaged in manufacturing industrial and commercial electric apparatus and equipment, n.e.c., such as blasting machines, and fixed and variable capacitors, condensers and rectifiers for industrial application.

Establishments primarily engaged in manufacturing fixed and variable capacitors and condensers for electronic end products are classified in industry 3679 , and rectifiers for electronic end products in industry 3674.

363 HOUSEHOLD APPLIANCES:
Household Cooking Equipment (S-87; C-72). -Establishments primarily engaged in manufacturing household cooking equipment, such as stoves, ranges, and ovens. Establishments primarily engaged in manufacturing household cooking appliances, such as hot plates, grills, percolators, and toasters are classified in industry 3634. Establishments primarily engaged in manufacturing commercial cooking equipment are classified in industry 3589.

3632 Household Refrigerators and Home and Farm Freezers (S-66; C-99).-Establishments primarily engaged in manufacturing household refrigerators and home and farm freezers. Establishments primarily engaged in manufacturing commercial and industrial refrigeration equipment, packaged room coolers, and dehumidifiers are classified in industry 3585.

Household Laundry Equipment (S-89; C-87).-Establishments primarily engaged in manufacturing laundry equipment such as washing machines, wringers, dryers, and ironers for household use. Establishments primarily engaged in manufacturing commercial laundry equipment are classified in industry 3582.

3634 Electric Housewares and Fans (S-87; C-81).-Establishments primarily engaged in manufacturing electric housewares for heating, cooking, and other purposes; and electric fans. Important products of this industry include electric air heaters, bed coverings, blenders, broilers, deep fat fryers, flat irons, food mixers, hot plates, percolators and coffee makers, roasters, toasters, desk and bracket fans; and hassock or floor fans.

3635 Vacuum Cleaners, Household (S-87;C-80).-Establishments primarily engaged in manufacturing vacuum cleaners for household use. Establishments primarily engaged in manufacturing vacuum cleaners for industrial use are classified in industry 3589.

Sewing Machines (S-90-95; C-96).-Establishments primarily engaged in manufacturing sewing machines for domestic and industrial use.

Household Appliances, N.E.C. (S-79; C-79).-Establishments primarily engaged in manufacturing household appliances, n.e.c., such as hot water heaters, dishwashers, and food waste disposal units.

ELECTRIC LIGHTING AND WIRING EQUIPMENT:
Electric Lamps(S-95; C-96). -Establishments primarily engaged in manufacturing electric bulbs, tubes and related light sources. lmportant products of this industry include incandescent filament lamps, vapor and fluorescent lamps. photoflash and photoflood lamps, electrotherapeutic lamps, units for ultra violet and infrared radiation and other electric light sources. Establishments primarily engaged in manufacturing glass blanks for bulbs are classified in industry 3229 ; and lamp components, such as filaments, supports, lead-in wires and cold cathode fluorescent lamp electrodes in industry 3699.

Lighting Fixtures (S-93; C-93).-Establishments primarily engaged in manufacturing lighting fixtures and equipment of any type, including electric and gas lighting fixtures; carbide. kerosene and gasoline lamps; and metal reflectors and fittings. Establishments primarily engaged in producing glassware for lighting fixtures are classified in Major Group 32; electric light bulbs, tubes and related light sources in industry 3641.

Current Carrying Wiring Devices (S-80; C-83).-Establishments primarily engaged in manufacturing current carrying wiring devices. Important products of this industry include attachment plugs and caps, convenience outlets, lamp sockets and receptacles, snap switches, conductor connectors, overhead trolley line material, rail bonds for both propulsion and signal circuits, lightning arrestors, and other lightning protective equipment.

Radio and Television Transmitting, Signaling, and Detection Equipment and Apparatus (S-88; C-91).-Establishments primarily engaged in manufacturing (1) radio and television broadcasting equipment; (2) electric communication equipment and parts, except telephone and telegraph; (3) electronic field detection apparatus, light and heat emission operation apparatus, object detection apparatus and navigational electronic equipment, and aircraft and missile control systems; and (4) other electric and electronic communication and signaling products, n,e.c. Establishments primarily engaged in manufacturing transmitting tubes are classified in industry 3673.

367 ELECTRONIC COMPONENTS AND ACCESSORIES:
3671 Radio and Television Receiving Type Electron Tubes, Except Cathode Ray (S-89; C-95).-Establishments primarily engaged in manufacturing radio and television receiving type electron tubes, except cathode ray tubes. Establishments primarily engaged in manufacturing television receiving type cathode ray tubes are classified in industry 3672; transmitting tubes in industry 3673 ; X-ray tubes in industry 3693 ; and electronic equipment for home entertainment, except tubes, in industry 3651.

Cathode Ray Picture Tubes (S-85-90; C-90).-Establishments primarily engaged in manufacturing television receiving type cathode ray tubes. Establishments primarily engaged in manufacturing other radio and television receiving type electron tubes are classified in industry 3671; and transmitting tubes in industry 3673.

Transmitting, Industrial, and Special Purpose Electron Tubes (S-80; C-75).-Establishments primarily engaged in manufacturing transmitting, industrial, and special purpose electron tubes. Establishments primarily engaged in manufacturing radio and television transmitting equipment are classified in industry 3662; radio and television receiving tubes in industry 3671; television receiving type cathode ray tubes in industry 3672; and \(X\)-ray tubes in industry 3693.

Semiconductor (Solid State) and Related Devices (S-88; C-92). Establishments primarily engaged in manufacturing semiconductor (solid state) and related devices, such as semiconductor diodes and stacks, including rectifiers; transistors; solar cells; and light sensitive semiconductor (solid state) devices.
This industry was not included in the Standard Industrial Classification in 1958. In the latter year it was part of industry 3679.

Electronic Components and Accessories, N.E.C. (S-89; C-78).Establishments primarily engaged in manufacturing specialty resistors for electronic end products; inductors; electronic transformers and capacitors; and other electronic components, n.e.c. Establishments primarily engaged in manufacturing resistors, inductors, and transformers for telephone and resistors, inductors, and araratus are classified in industry 3661; electric telegraph apparatus are classified in industry 3661 ; electric
lamps in industry 3641; and semiconductor (solid state) and related devices in industry 3674.

This industry in 1963 differs from the classification in 1958. Industry 3674, a separate industry in 1963, was formerly part of 3679 .

369 MISCELLANEOUS ELECTRICAL MACHINERY EQUIPMENT AND SUPPLIES:
3691 Storage Batteries (S-98; C-99). -Establishments primarily engaged in the manufacture of storage batteries for automobiles. trucks, farm tractors and busses as well as storage batteries for farm uses, communications systems and railroad equipment. Parts for storage batteries are also included in this industry.

Primary Batteries, Dry and Wet (S-96; C-91).-Establishments primarily engaged in the manufacture of dry and wet cell primary batteries for flashlights, railroad lanterns, hearing aids, portable radios, farm radios, and general purposes as well as parts and supplies for primary batteries.

Radiographic X-ray, Fluoroscopic X-ray and Other X-ray Apparatus and Tubes (s-83; C-80).-I stablishments primarily engaged in manufacturing radiographic \(X\)-ray, fluoroscopic X -ray, and therapeutic X-ray apparatus and tubes for medical, industrial, research and control applications. Establishments primarily engaged in manufacturing radio receiving type tubes are classified in industry 3671; television receiving cathode ray tubes in industry 3672 ; transmitting tubes in industry 3673 ; and electrotherapeutic lamp units for ultra-violet and infra-red radiation in industry 3641.

3694 Electrical Equipment for Internal Combustion Engines (S-93; C-81).-Establishments primarily engaged in manufacturing electrical equipment for internal combustion engines. Important products of this industry include starting motors and generators for automobiles and aircraft; and ignition apparatus for internal combustion engines, including spark plugs, magnetos, coils, and distributors.

3699 Electrical Machinery, Equipment, and Supplies, N.E.C. (S-90; C-49 \({ }^{26}\) ). - Establishments primarily engaged in manufacturing electrical machinery, equipment and supplies, n.e.c.

\section*{TRANSPORTATION F-QUIPMINI}

This major group includes establishments engaged in manufacturing equipment for transportation of passengers and cargo by land, air, and water. lmportant products produced by establishments classified in this major group include motor vehicles, air-
craft, ships, boats, railroad equipment, and miscellaneous transportation equipment such as motorcycles, bicycles, and horsedrawn vehicles.

371 MOTOR VEHICLES AND MOTOR VEHICLE EQUIPMENT:
Truck and Bus Bodies (S-88; C-86). -Establishments primarily engaged in the manufacture of truck and bus bodies, for sale separately or for assembly on purchased chassis. Establishments primarily engaged in manufacturing complete trucks and busses are classified in industry 3717, and stamped body parts for trucks and busses in industry 3461.

Truck Trailers (S-92; C-93).-Establishments primarily engaged in the manufacture of truck trailers and truck trailer chassis for sale separately, but not engaged in manufacturing complete trucks and busses. Establishments primarily engaged in manufacturing trailer bodies are classified in industry 3713. Those primarily engaged in manufacturing passenger cartrailers are classified in industry 3799; and those primarily engaged in manufacturing trailer coaches are classified in industry 3791.
otor Vehicles and Parts (S-97; C-98).-Establishments primarily engaged in manufacturing or assembly of complete passenger automobiles, car bodies, trucks, commercial cars and busses (except trackless trolleys, industry 3742), special purpose motor vehicles such as ambulances, fire engines, taxicabs, scout cars, personnel carriers, amphibian motor vehicles, and selected parts and accessories for motor vehicles. Establishments primarily engaged in manufacturing motor vehicles on purchased chassis (ambulances, fire engines, etc.) are classified in industry 3713.

In the 1963 Census of Manufactures, as in 1958, the three SIC industries ( 3711,3712 , and 3714 ) have been combined because of a major problem of defining the reporting unit in terms of these industries. This difficulty arises from the fact that many large establishments have integrated operations which include the production of parts or bodies and the assembly of complete vehicles at the same location.

Included in industry 3717 are such parts as passenger-car bodies, motor vehicle engines (except diesel), brakes, clutches, axles, radiators, differentials, transmissions, wheels and frames, windshield wipers, automotive bumpers, camshafts, connecting rods, crankshaft assemblies, cylinder heads, drive shafts, exhaust systems, fuel systems, heaters, hoods, horns, instrument board assemblies, lubrication systems, mufflers, power-transmission equipment, rear-axle housings, shock absorbers, steering mechanisms, universal joints, wheel rims, windshield frames, and automobile accessories, n.e.c.

A considerable number of components, parts, and accessories for motor vehicles are not classified in industry 3717 but are classified in other Standard Industrial Classification industries based on the characteristic of the productitself rather than the use to which it is put. Among the more important of these are automotive hardware, industry 3429 ; automotive stampings, industry 3461; diesel and semidiesel engines, industry 3519; sealed beam and other electric lamps, industry 3641; motor vehicle lighting fixtures, industry 3642; tire and inner tubes, industry 3011; automobile glass, industry 3211; ignition equipment such as spark plugs, distributors, switches, ignition coils, generators, cranking motors, etc., industry 3694; storage batteries, industry 3691 ; automobile radios, industry 3651 ; and carburetors and pistons, industry 3599.

372 AlRCRAFT AND PARTS
3721 Aircraft (S-69; C-96). Establishments primarily engaged in manufacturing or assembling complete aircraft. This industry includes establishments primarily engaged in factory type aircraft modification on a contract or fee basis. Establishments primarily engaged in manufacturing engines, propellers, and other aircraft parts and auxiliary equipment are classified in industries 3722, 3723, and 3729.

Aircraft Engines, and Engine Parts (S-87; C-93). -Establishments primarily engaged in manufacturing aircraft engines, complete missile or space vehicle engines and/or propulsion units and their parts.

Aircraft Propellers and Propeller Parts (S-48; C-81). -Estab- lishments primarily engaged in manufacturing aircraft propellers and propeller parts.

Aircraft Parts and Auxiliary Equipment, N.E.C. (S-75; C-59). Establishments primarily engaged in manufacturing aircraft parts and auxiliary equipment, n.e.c. Establishments primarily engaged in manufacturing or assembling complete aircraft are classified in industry 3721, aircraft engines and parts in industry 3722 , propellers and propeller parts in industry 3723 , aeronautical instruments in industry 3811, and aeronautical electrical equipment in industry 3694.

AND BOAT BUILDING AND RェPAIRING: Ship Building and Repairing (S-92; C-99). -Establishments primarily engaged in building and repairing all types of ships, barges, canal boats and lighters, whether propelled by sail or motor power or towed by other craft. This industry also included the conversion and reconversion of ships. Establishments primarily engaged in fabricating structural assemblles or components for ships or subcontractors engaged in ship painting, joinery, carpentry work, electrical wiring installations, etc., are not classified in this industry.

Boat Building and Repairing (S-97; C-95).-Establishments primarily engaged in building and repairing of boats, except rubber boats (industry 3069). Establishments primarily engaged in cleaning and storing boats and the rental of dock space, and yacht clubs are classified in nonmanufacturing industrles.

RAlLROAD EQUIPMENT:
Locomotives and Parts (S-83; C-90).-Establishments primarily engaged in building and rebuilding locomotives (including frames and parts, n.e.c. ) of any type or gauge. Railroad shops rebuilding and repairing locomotives, or building new locomotives, are classified in Ma jor Group 40.

Railroad and Street Cars (S-91; C-93).-Establishments primarily engaged in building and rebuilding railroad, street, and rapid transit cars and car equipment for operation on rails for freight and passenger service. This industry also includes establishments primarily engaged in manufacturing trackless trolley busses. Establishments primarily engaged in manufacturing mining cars are classified in industry 3532. Repair shops owned and operated by railroad or local transit companies, rebuilding or repairing cars, or building new cars for their own account, are classified in Ma jor Groups 40 and 41.

MOTORCYCLES, BICYCLES, AND PARTS:
Motorcycles, Bicycles, and Parts (S-83; C-93).-Establishments primarily engaged in manufacturing motorcycles, bicycles, and similar equipment and parts. Establishments primarily engaged in assembling motorcycles or bicycles from purchased parts are also included in this industry. Establishments primarily engaged in manufacturing children's vehicles, except bicycles, are classified in industry 3943. primarily engaged in manufacturing trailer coachcs (mobile dwellings) for attachment to passenger cars and pickup coaches (campers) for mounting on pick-up trucks.

Transportation Equipment, N.E.C. (S-89; C-75).-Establishlishments primarily engaged in manufacturing transportation equipment, n.e.c. Establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, and stackers are classified in industry 3537, and children's vehicles, except bicycles, in industry 3943.

PROFESSIONAL, SCIENTIFIC, AND CONTROLLING INSTRUMENTS; PHOTOGRAPHIC AND OPTICAL GOODS; WATCHES AND CLOCKS

This major group includes establishments engaged in manufacturing mechanical measuring, engineering, laboratory, and scientiflc research instruments; optical instruments and lenses; surgical, medical, and dental instruments, equipment, and supplies; ophthalmic goods; photographic equipment and supplies; and watches and clocks. Establishments prlmarily engaged in manufacturing instruments for indicating, measuring, and recording electrical quantities and characterlstics are classified in industry 3611.

381 ENGINEERING, LABORATORY, AND SCIENTIFIC ANDRESE ARCH INSTRUMENTS AND ASSOCIATED EQUIPMENT:

Engineering, Laboratory, and Scientific and Research Instruments and Associated Equipment. (S-84; C-56). -Establishments prlmarily engaged in manufacturlng laboratory, scien-
tific, and engineering instruments such as nautical, navigational. aeronautical, surveying, drafting, and instruments for laboratory work and scientific research (except optical instruments, industry 3831). Establishments primarily engaged in manufacturing surgical and medical instruments areclassified in industry 3841 ; dental instruments and equipment in industry 3843; mechanical measuring and controlling instruments in industry 3821; machinists' precision measuring tools in industry 3545 ; instruments for indicating, measuring, and recording electrical quantities and characteristics in industry 3611; watches and clocks in industry 3871 ; measuring and dispensing pumps in industry 3586.

Dental Equipment and Supplies (S-94; C-92).-Establishments primarily engaged in manufacturing artificial teeth, dental metals, alloys and amalgams, and a wide variety of equipment, instruments, and supplies used by dentists. dental laboratories. and dental colleges. Dental laboratories constructing artificial dentures, bridges, inlays and other dental restorations on specifications from dentists are classified in service industries.

OPHTHALMIC GOODS:
Ophthalmic Goods (S-86; C-92).-Establishments primarily engaged in manufacturing ophthalmic frames, lenses, and sunglass lenses. Establishments primarily engaged in manufacturing slit lamps are classified in industry 3841. and
molded glass blanks in industry 3229. Establishments primarily engaged in grinding lenses and fitting glasses to prescription are classified in trade industries.

Photographic Equipment and Supplies (S-95; C-97). -Establishments primarily engaged in manufacturing (1) photographic apparatus, equipment, parts, attachments, and accessories, such as still and motion picture cameras and projection apparatus; photocopy and microfilm equipment; blueprinting and diazotype (white printing) apparatus and equipment; and other photographic equipment; and (2) sensitized film, paper, cloth, and plates, and prepared photographic chemicals for use therewith. Establishments primarily engaged in manufacturing photographic paper stock (unsensitized); and paper mats, mounts, easels and folders for photographic use are classified in Major Group 26; photographic lenses in industry 3831 ; photographic glass in Major Group 32; chemicals for technical purposes, not specifically prepared and packaged for use in photography, in Major Group 28; and photographic flash, flood. enlarger and projection lamps in industry 3641.

387 WATCHES, CLOCKS, CLOCKWORK OPERATED DEVICES, AND PARTS:
3871 Watches. Clocks, and Parts Except Watchcases (S-82; C-95). Establishments primarily engaged in manufacturing clocks (including electric), watches, mechanisms for clockworkoperated devices, and clock and watch parts. This industry includes establishments primarily engaged in assembling clocks and watches from purchased movements and cases. Establishments primarily engaged in manufacturing watchcases are classified in industry 3872, glass crystals in industry 3231, and unbreakable crystals in industry 3079.

Lapidary Work (S-93; C-81).-Establishments of lapidaries primarily engaged in cutting, slabbing, tumbling, carving, engraving, polishing, or faceting stones from natural or man-made precious or semi-precious gem raw materials, either for sale or on a contract basis for the trade; in recutting, repolishing, and setting gem stones; or in cutting, drilling, and otherwise preparing jewels for instruments, dies, watches, chronometers and other industrial uses. This industry includes the drilling. sawing, and peeling of real or cultured pearls, but does not include the manufacture of artificial pearls (industry 3961 ).

Silverware and Plated Ware (S-95; C-98).-Establishments primarily engaged in manufacturing flatware (including knives, forks, and spoons), hollow ware, toilet ware, ecclesiastical ware, and related products made of sterling silver; of metal plated with silver, gold, or other metal; of nickel silver; of pewter; or of stainless steel.

\section*{MISCELLANEOUS MANUFACTURING INDUSTRIES}

This major group includes establishments primarily engaged in manufacturing products not classified in anyother manufacturing major group. Industries in this group fall into the following categories : jewelry, silverware and plated ware; musical instruments; toys, sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, miscellaneous notions; brooms and brushes; morticians' goods, and other miscellaneous manufacturing industries.

391 JEWELRY, SILVERWARE, AND PLATED WARE:
Jewelry (Precious Metal) (S-92; C-97).-Establishments primarily engaged in manufacturing jewelry and other articles, worn on or carried about the person, made of precious metals with or without stones (including the setting of stones where stones are used), including cigarette cases and lighters, vanity cases and compacts; trimmings for umbrellas and canes; and jewel settings and mountings. Establishments primarily engaged in manufacturing costume jewelry from nonprecious metals and other materials are classified in industry 3961.

Jewelers' Findings and Materials (S-92; C-89).-Establishments primarily engaged in manufacturing unassembled jewelry parts, and stock shop products such as sheet, wire and tubing. Establishments primarily engaged in lapidary work are classified in industry 3913
"Flatware" is defined for purposes of the census as all knives, forks, spoons, etc., made wholly of metal, including stainless steel knives, forks, and spoons, and carving sets with metal handles. Knives, forks, spoons, etc., with handles of materials other than metal are included in industry 3421

393 MUSICAL INSTRUMENTS AND PARTS:
3931 Musical lnstruments and Parts (S-97; C-92).-Establishments primarily engaged in manufacturing pianos, with or without player attachments; organs; other musical instruments; and parts and materials for musical instruments.

TOYS, AMUSEMENT, SPORTING AND ATHLETIC GOODS: Games and Toys, Except Dolls and Children's Vehicles (S-92; C-91).-Establishments primarily engaged in manufacturing indoor games and game sets for adults and children, and mechanical and nonmechanical toys. lmportant products of this industry include games such as chess, checkers, dominoes, puzzles, and other indoor games; and toys, such as toy furniture, doll carriages and carts, construction sets, mechanical trains, toy guns and air rifles, and other mechanical games and toys. Establishments primarily engaged in manufacturing dolls are classified in industry 3942; children's outdoor wheel goods and vehicles, except bicycles, in industry 3943; and sporting and athletic goods for children and adults in industry 3949.

Dolls (S-80-85; C-87).-Establishments primarily engaged in manufacturing dolls, doll parts, and doll clothing. Establishments primarily engaged in manufacturing stuffed toy animals are also included in this industry.

3943 Children's Vehicles, Except Bicycles (S-71; C-65). -Establishments primarily engaged in manufacturing baby carriages, strollers, and gocarts; children's velocipedes and tricycles, coaster wagons, play cars, sleds, and other children's outdoor wheel goods and vehicles, except bicycles (industry 3751 ).

Sporting and Athletic Goods, N.E.C. (S-93; C-91).-Establishments primarily engaged in manufacturing sporting and athletic goods, n.e.c., such as fishing tackle; golf and tennis goods; baseball, football, basketball, and boxing equipment; roller skates and ice skates; gymnasium and playground equipment; billiard and pool tables; and bowling alleys and equipment. Establishments primarily engaged in manufacturing athletic apparel are classified in Major Group 23, small arms ammunition in industry 1961 and firearms in industry 1951

395 PENS, PENCILS, ANDOTHER OFFICE AND ARTISTS' MATERIALS: 3951 Pens, Pen Points, Fountain Pens, Ball Point Pens, Mechanical Pencils and Parts (S-90; C-93).-Establishments primarily engaged in minufacturing pens, pen points, fountain pens. ball point pens, refill cartridges, and parts for pens and mechanical pencils.

Lead Pencils, Crayons, and Artists' Materials (S-87; C-90).Establishments primarily engaged in manufacturing lead pencils, pencil leads, and crayons; materials and equipment for art work such as airbrushes, drawing tables and boards, palettes, sketch boxes, pantographs, artists' colors and waxes, pyrography goods, drawing inks, and drafting materials. Establishments primarily engaged in manufacturing mechanical pencils are classified in industry 3951, and drafting instruments in industry 3811.

Marking Devices (S-84; C-90). - Establishments primarily engaged in manufacturing rubber and metal hand stamps, dies. and seals; steel letters and figures; and stencils for use in painting or marking.

Carbon Paper and lnked Ribbons (S-95; C-83).-Establishments primarily engaged in manufacturing carbon paper for business machines. sales books, etc.; spirit or gelatin process and other stencil paper; and inked ribbons for business machines.

396 COSTUME JEWELRY, COSTUME NOVELTIES, BUTTONS, AND MISCELLANEOUS NOTIONS, EXCEPT PRECIOUS METAL:

Costume Jewelry and Costume Novelties, Except Precious Metal (S-95; C-95).-Establishments primarily engaged in manufacturing costume jewelry, costume novelties, and ornaments made of all materials, except precious metal, precious or semiprecious stones, and rolled gold plate and gold filled materials (industry 3911). Establishments primarily engaged in manufacturing artificial flowers, fruits, and foliage made from all materials except glass (industry 3231); in producing fancy feathers, plumes, and articles made principally of feathers and plumes; and curling, dyeing, and renovating ostrich feathers for the trade.

3963 Buttons (S-96; C-87).-Establishments primarily engaged in manufacturing buttons, button parts, and button blanks and molds, of all materials except precious metal and precious or semiprecious stones (industry 3911).

3964 Needles, Pins, Hooks and Eyes, and Similar Notions (S-91; C-92).-Establishments primarily engaged in manufacturing notions, such as machine and hand needles, pins, hooks and eyes, eyelets, buckles, and slide and snap fasteners.
\} MISCELLANEOUS MANUFACTURING INDUSTRIES:
Brooms and Brushes (S-89; C-93). -Establishments primarily engaged in manufacturing household, industrial, and street sweeping brooms; and brushes such as paint brushes, toothbrushes, toilet brushes, and household and industrial brushes.

3982 Linoleum, Asphalted-Felt-Base, and Other Hard Surface Floor Coverings, N.E.C. (S-82; C-98). - Establishments primarily engaged in manufacturing linoleum, asphalted-felt-base, and other hard surface floor coverings, n.e.c. Establishments primarily engaged in manufacturing rubber floor coverings are classified in industry 3069 , and cork floor and wall tile in industry 2499. Also excluded are establishments primarily engaged in manufacturing unsupported plastic floor coverings (industry 3079), and asphalt tile and vinyl asbestos floor tile (industry 3292).

3983 Matches (S-95-100; C-95-100). -Establishments primarily engaged in manufacturing matches, regardless of the material used.

3984 Candles (S-95; C-94).-Establishments primarily engaged in manufacturing candles from fatty acids, or from mineral and animal waxes.

3987 Lamp Shades (S-96; C-98).-Establishments primarily engaged in manufacturing lamp shades of all materials except glass (industry 3229), and metal (industry 3642).

3988 Morticians' Goods (S-95; C-98).-Establishments primarily engaged in manufacturing caskets, coffins, burial cases, and coffin shipping cases, whether of wood or other material, except concrete (industry 3272); morticians' supplies and accessories, such as burial garments, gloves, slippers, casket linings, and embalming fluids; and morticians' paraphernalia and equipment.

3992 Furs, Dressed and Dyed (S-98; C-94).-Establishments primarily engaged in scraping, currying, tanning, bleaching, and dyeing pelts.

Signs and Advertising Displays (S-96; C-95).-Establishments primarily engaged in manufacturing electrical, mechanical, cutout, or plate signs and advertising displays, including neon signs and advertising novelties. Sign painting shops doing business on a custom basis are classified in service industries. Establishments primarily engaged in manufacturing electric signal equipment are classified in industry 3662 , and lighting fixtures in industry 3642.

3995 Umbrellas, Parasols, and Canes (S-95; C-98).-Establishments primarily engaged in manufacturing umbrellas, parasols, canes; and trimmings, frames, handles, and other parts.

3999 Manufacturing Industries, N.E.C. (S-94; C-84).-Establishments primarily engaged in manufacturing miscellaneous fabricated products, including fire extinguishers; beauty shop and barber shop equipment; hair work; tobacco pipes and cigarette holders; 1999 coin-operated amusement machines; and many other articles, n.e.c.

O
This major group includes establishments engaged in manufacturing artillery, small arms, and related equipment; ammunition; complete guided missiles; tanks and specialized tank parts; sighting and fire control equipment; and miscellaneous ordnance and accessories, n.e.c.

GUNS, HOWITZERS, MORTARS, AND RELATED EQUIPMENT OVER 30 MM (OR OVER 1.18 INCHES):

Guns, Howitzers, Mortars, and Related Equipment Over 30MM (Or Over 1.18 inches) (S-NA); C-(NA)).-Establishments primarily engaged in manufacturing naval, aircraft, antiaircraft. tank, coast and field artillery having a bore over 30 mm (or over 1.18 inch) and components. Establishments primarily engaged in manufacturing small arms and parts 30 mm (or 1.18 inch) and below are classified in industry 1951.

Guided Missiles and Space Vehicles, Completely Assembled (S-94; C-69). -Establishments primarily engaged in manufacturing complete guided missiles and space vehicles and in doing research and development on complete guided missiles and space vehicles. Establishments engaged in manufacturing guided missile components and in doing research and development on guided missile components are classified in industry 3729.

Ammunition, Except for Small Arms, N.E.C. (S-70; C-82).Establishments primarily engaged in manufacturing ammunition, n.e.c. or in loading and assembling ammunition over 30 mm (or over 1.18 inch)for naval, aireraft, antiaircraft, tank, coast, and field artillery; including component parts. This industry also includes establishments primarily engaged in manufacturing bombs, mines, torpedoes, grenades, depth charges, chemical warfare projectiles, and their component parts. Establishments primarily engaged in manufacturing small arms ammunition are classified in industry 1961; explosives in industry 2892 and military pyrotechnics are classified in industry 2899.

ANKS AND TANK COMPONENTS:
Tanks and Tank Components (S-95; C-79).-Establishments primarily engaged in manufacturing or assembling complete tanks, and specialized components for tanks. Establishments primarily engaged in manufacturing military vehicles other than tanks are classified in Industry Group 371 and tank engines in industry 3519.

GHTING AND FIRE CONTROL EQUIPMENT:
Sighting and Fire Control Equipment (S-57; C-80).-Establishments primarily engaged in manufacturing sighting and fire control equipment, but which are not engaged in manufacturing optical lenses and prisms. Important products of this industry include bomb sights, percentage correctors, wind correctors, directors and sound locators. Establishments engaged in manufacturing optical lenses and prisms and also manufacturing sighting and fire control equipment are classified in industry 3831 .

Small Arms, 30 mm and Under (or 1.18 Inches and Under) ( \(\mathrm{S}-95\); \(\mathrm{C}-82\) ). -Establishments primarily engaged in manufacturing small firearms having a bore 30 mm (or 1.18 inch) and below. and parts for small firearms. Establishments primarily engaged in manufacturing artillery and mortars having a bore over 30 mm (or over 1.18 inch), and component parts are classified in industry 1911.

SMALL ARMS AMMUNITION:
Small Arms Ammunition 30 mm and Under (or 1.18 Inches and Under) (S-85-90; C-92).-Establishments primarily engaged in manufacturing ammunition for small arms having a bore of 30 mm (or 1.18 inch ) and below. Establishments primarily engaged in manufacturing ammunition except for small arms are classified in Industry Group 192; blasting and detonating caps, and safety fuses in industry 2892; and fireworks in industry 2899.

ORDNANCE AND ACCESSORIES, N.E.C.:
Ordnance and Accessories, N.E.C. (S-78;C-69) \({ }^{27}\).-This industry comprises establishments primarily engaged in manufacturing ordnance and accessories, n.e.c.
(NA) Not available.
D Withheld to avoid disclosing figures for individual companies.
\({ }^{1}\) Percentages are based on figures containing significant duplication.
\({ }^{2}\) This ratio results from inclusion of finished cotton broad woven fabrics (except commission finishing) which are also primary to industry 2211. coverage ratio computed on the basis of including both industries to which finished synthetic broad woven fabrics are primary would come to 77 percent.
\({ }^{3}\) This ratio results from inclusion of finished broad woven synthetic fabrics (except commission finishing) which are also primary to industry 2221. A coverage ratio computed on the basis of including both industries to which finished synthetic broad woven fabrics are primary would cometo 77 percent.
\({ }^{4}\) This ratio results from inclusion of finished yarns except wool, also primary to industry 2281. A coverage ratio computed on the basis of including both industries to which finished yarns, except wool, are primary would come to 90 percent in 1963.
\({ }^{5}\) Includes products of knitting mills (SIC Group 225) which are primary to industries 2253 and 2254.
\({ }^{6}\) Includes similar products made in knitting mills.
\({ }^{7}\) Low coverage ratio due to large amount of wood chips, primary to industry 2429, manufactured in industry 2421.
\({ }^{8}\) The products of Government-owned, privately operated establishments did not enter into the calculation of these ratios. All receipts by these establishments were treated as "Miscellaneous receipts" rather than as primary or secondary products.
\({ }^{9}\) Includes lubricating oils and greases, also primary to industry 2992.
\({ }^{10}\) Includes lubricating oils and greases, also primary to industry 2911. For 1963, the coverage ratio computed on the basis of tncluding both industries to which lubricating oils and greases are primary would come to 98 percent, 65 percent by industry 2911 and 33 percent by industry 2992. Computed on the basis of excluding 2911, the 1963 coverage ratio is 93 percent for 2992.
\({ }^{11}\) This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.
\({ }^{12}\) The value of shipments for this industry includes duplication; the products of some establishments are used as matertals by others. Specialization ratio computed on the basis of net value of shipments wculd approximate 94 percent. A coverage ratio for this industry cannot be precisely computed. However, such a ratio would exceed 86 percent.
\({ }^{13}\) Includes small amount of primary products made in otherindustrics to avoid disclosing figures for individual companies. This amount, however, constitutes less than 2 percent of the total.
\({ }^{14}\) Ratios have not been calculated because the shipments of primary products contain extensive duplication.
\({ }^{15}\) Included in this industry is refined zinc, also primary to industry 3341. A coverage ratio computed on the basis of including both industries
to which refined zinc is primary would total 96 percent: 81 percent by industry 3333 and 15 percent by industry 3641.
\({ }^{16}\) Included in this industry are aluminum-base alloys, also primary to industry 3341, and industry 3352. A coverage ratio computed on the basis of including all three industries to which aluminum-base alloys are primary would total 96 percent: 75 percent by industry 3334; 17 percent by industry 3341; and 4 percent by industry 3352.
\({ }^{17}\) Included in this industry are refined nonferrous alloys, n.e.c., also primary to industry 3341. A coverage ratio computed on the basis of including both industries to which refined nonferrous allous, n.e.c., are primary would total 59 percent: 39 percent by industry 3341; 20 percent by industry 3341.

18, Included in this industry are refined copper, lead, zinc, aluminum, precious metals, and other nonferrous metals. Each of these is also primary to the comparable primary smelting and refining industry in Industry Group 333. A coverage ratio computed on the basis of including both industries to which these products are primary would total 89 percent: 26 percent by industry 3341; 63 percent by primary nonferrous smelters and refiners.

19included in this industry is aluminum and aluminum-base alloywire (including ACSR), also primary to industry 3357. A coverage ratio computed on the basis of including both industries to which aluminum and aluminum-base alloy wire (including ACSR) is primaryswould, in 1963, total 96 percent: 93 percent by industry 3352, and 3 percent by industry 3357 . For 1958, comparable percentage was 96: 92 percent by industry 3352 and 4 percent by industry 3357.
\({ }^{20}\) Included in this industry is other nonferrous metal wire, also primary to indiustry 3357. A coverage ratio computed. on the basis of including both industries to which nonferrous metal wire is primary would, in 1963, total 85 percent: 81 percent by industry 3356 and 4 percent by industry 3357.
\({ }^{21}\) Included in this industry are aluminum and aluminum-base alloy wire (including ACSR), other nonferrous metal wire, nonferrous woven wire products, and appliance wire and cord and flexible cord sets, also primary respectively to industries 3352, 3356, 3481, and 3699. A coverage ratio comspectively to industries 3352, 3356, 3487, and 3699. A coverage ratio comprimary would, in 1963 , total 94 percent: 86 percent by industry 3357 ; and 8 percent by industries \(3352,3356,3481\), and 3699.
22.Included in this industry are open die hammer and press forgings, also primary to industry 3312. A coverage ratio computed on the basis of including both industries to which open die hammer and press forgings are primary would total 80 percent: 69 percent by industry 3391 and 11 percent by industry 3312.
\({ }^{23}\) Specialization ratio not meaningful because of predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.
\({ }^{24}\) Data on receipts for the primary services of this industry are not available for establishments classified in other industries.
25.Included in this industry are selected fabricated wire products also primary to industry 3315 . A coverage ratio computed on the basis of inprimary to industry \({ }^{\text {cluaing both industries to which these products are primary would total } 79}\) percent: 65 percent by industry 3481 and 14 percent by industry 3315.
\({ }^{26}\) Included in this industry are appliance wire and cord sets, also primary to industry 3357. For 1963, a coverage ratio computed on the basts of including both industries to which appliance wire and cord sets are primary would total 79 percent: 49 percent by industry 3699 and 30 percent by industry 3357.

\footnotetext{
27.Calculated on the basis of inclusion of the products primary to industry 1911 as primary to industry 1999. The coverage ratio for industry
} 1999 alone is 72 percent.

REFERENCE COPY \\ 1963 CENSUS OF \\ MANUFACTURES
}

\section*{CHANGE SHEET}

Volume I, Summary and Subject Statistics and Volume III, Area Statistics

The following page B-29, should be inserted after B-28 in Volume I, Summary and Subject Statistics and in Volume III, Area Statistics.
U.S. DEPARTMENT OF COMMERCE Alexander B. Trowbridge, Secretary William H. Shaw Asst. Secy., Economic Affairs bureau of the census A. Ross Eckler, Director

\section*{Appendix C}

\section*{COMPOSITION OF INDUSTRIES IN THE 1963 STANDARD INDUSTRIAL CLASSIFICATION}

The 1963 and 1958 Censuses of Manufactures covered all establishments primarily engaged in manufacture as defined in the revised edition of the Standard Industrial Classification Manual (SIC), issued by the Bureau of the Budget. For 1958, the published census statistics were for the manufacturing industries as defined in the 1957 edition of the SIC Manual. For 1963, statistics are for the manufacturing industries as defined in an amended version of the 1957 edition.

The 1957 revised edition of the classification represented a considerable revision from the previously existing structure. Several appendixes in the published volumes of the 1958 Census of Manufactures dealt with the contents of that revision as it affected the manufacturing sector. (See 1958 Appendix A, "Notes on Comparability of 1954 and 1958 Data for Selected Industries and Industry Groups;" Appendix B, "Industry Descriptions;'" and Appendix C, "Composition of Industries in the New SIC.'") Several appendixes to the 1963 Census of Manufactures volumes, including this appendix, likewise make reference to the relatively minor revisions of the SIC following the issuance of the 1957 revised edition.

Presented in two parts, this appendix traces, in part 1, the industries as defined for 1963 in terms of their 1958 counterparts and, in part 2, the industries as defined for 1958 in terms of their 1963 equivalents. Where no change in code or definition occurred, the short industry title and 4-digit code apply to both census years. Most of the industries fall into this category. Where change occurred, the title for a line showing only a 1958 code is a 1958 title and that for a line showing only a 1963 code, a 1963 title. In these instances of change in the SIC (a new industry
broken out of an existing industry, existing industries combined into one, or products shifted between existing industries) the relationship between the two periods is clarified by the manner of presentation. For example, in part 2, in the columns under "Industry code," the 1958 SIC industry 2025, "Special Dairy Products," is shown as part of 1963 industry 2022, "Natural and Process Cheese." This situation, that is, being part of an industry in the other year, is notated by an asterisk (*). Part 2 also indicates that 1958 industry 2022, "Natural Cheese," is likewise a part of 1963 industry 2022. Part 1 shows that, for 1963, industry 2022 encompasses 1958 industries 2022 and 2025. Thus, to determine comparability between the years, parts 1 and 2 of this appendix should be studied together. In both parts, 1963 data shown are for the following items: Number of establishments (total and those with 20 employees or more); employment; and value added by manufacture.

The manner of coding products and classifying establishments in the 1963 Census of Manufactures (utilizing only 1963 SIC codes) did not, in general, permit a tabulation of 1963 data in terms of 1958 industry definitions. Thus, in part 2 it was not possible to show the data for that part of 1963 industry 2022 which is equivalent to 1958 industry 2025. However, where the change in industry definition between the two years was such as to subdivide an old SIC industry into two new industries, the 1963 data for the former industry can be derived by summing the figures for the component parts; e.g., the 1958 industry 2649, "Paper and Board Products, N.E.C.,', consists of the 1963 industries 2647 and 2649, and totals for 2647 and 2649 are added together in part 2 to show their 1958 SIC industry equivalent.

Manufacturing industry codes used by the Bureau of the Census are identical to the SIC industry codes, with a single exception: SIC industries 3711 (Motor Vehicles), 3712 (Passenger Car Bodies), and 3714 (Motor Vehicle Parts and Accessories) are combined by Census into a single industry, number 3717 entitled "Motor Vehicles and Parts."

\section*{Composition of Industries in the 1963 SIC}

Part 1. Derivation of 1963 SIC Industries from 1958 SIC Industries

\section*{Appendix D}

\section*{CENSUS REPORT FORMS AND PUNCH CARDS}

In the 1963 Census of Manufactures, approximately 180 standard length report forms were employed in collecting data from all "annual survey of manufactures" establishments and from all of the larger "non-annual survey" establishments. A typical report form, MC-35Q, sent to establishments primarily producing industrial furnaces and ovens, is reproduced on pages \(\mathrm{D}-2\) to \(\mathrm{D}-13\) of this appendix. Inquiry items 1 to 16 were identical on all forms. Differences among forms are reflected in items 17 and 18 , requesting information, respectively, on materials consumed in manufacture and products and services of the establishment. These items were "tailored" to reporting by establishments primarily utilizing the selected materials shown and primarily producing the products or performing the manufacturing services listed. Items 19, 20, and 21 are similarly different among forms and were intended to secure information of special significance to the industries primarily covered on the report form. For annual survey establishments, the front sheet of the 1963 report form was the annual survey report form used for 1962 and 1963 with provisions for entering figures for 1963.

In addition to the standard length forms, 50 short or abbreviated forms were used for smaller establishments. A copy of one such short form, MC-36Z, covering electrical machinery, equipment and supplies, is reproduced on pages \(D-22\) to \(D-24\) of this appendix. The size cut-off for the use of these short forms varied by industry, in most instances below 6 and in the others below 10 employees. The abbreviated forms requested information on a few key items: Number of employees; payrolls; total
cost of materials; and value of shipments by class of product. For those few industries in which small plants constituted a significant proportion of the total value of shipments, modified short forms were designed to collect some detail on the individual products shipped and less frequently on the types of materials used. The appendix also reproduces the general instructions for completing the standard length report forms. No instructions accompanied the short forms; all reporting instructions were contained on the form itself.

Copies of the basic punch cards utilized for tabulating the data reported on the 1963 Census of Manufactures forms are shown on page \(\mathrm{D}-25\). One card was used for punching data reported on the standard length form; the other for the short form.

For the 1963 Census of Manufactures, additional report forms were used to cover separately operated central administrative offices and auxiliary units, plants under construction but not operated in 1963, etc. Copies of these forms are not shown in this appendix but are described in the introductory text appearing at the beginning of this volume.

A copy of Form MC-D3, covering Department of Defense owned and operated establishments, primarily engaged in manufacture or in research and development, will be found on pages D-26 to D-29 of this appendix. Statistics developed from these forms will be found in the special report section of this volume.

On pages D-30 to D-31 is a copy of supplemental report form MA-175, Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers in 1963. Pages D-32 to D-33 contain a copy of supplemental form MA-161, Exports of Manufactured Products 1963. Data from both of these supplemental surveys are published in the special reports section of this volume.
PENALTIES FOR FAILURE TO REPORT
CONFIDENTIAL-Response to this inquiry is required by Act of Congress ( 13 U.S.C.). The re-
port you submit to the Census Bureau is confidential and may be seen only by sworn Census em-
ployees. It may not be used for purposes of taxation, investigation or regulation. Copies retained
n your files are also immune from legal process.
In correspondence pertaining to this report please refer to

\section*{The following instructions supplement the "General Instructions to Manufacturers}
(These instructions apply to companies engaged in installing or erecting their own manufactured products)
Include these workers engaged in installing your products in Items 2 and 3. "Employment and Payrolls 1963.
Receipts for installation services should be reported separately on Line 24, Item 18.
Do not include these receipts in the value of industrial furnaces and ovens as reported on Lines 1-16, Item 18.
If your records do not provide exact figures on the value of installation work, carefully prepared estimates will be acceptable.
In no case should installation costs (or the value of the service) be included in your report where the installing or erecting is performed by a separate company, whether the services of that company have been
contracted for by your customer or by yourself.
Please state In the Remarks Sectlon of this form whether you install or orect your manufactured products. - If you do such installing or erecting, you should further indicate whether or not the installation costs and value of such services are included in your report (using the above instructions as the basis for reporting.

\title{
1963 CENSUS OF MANUFACTURES
}

\section*{REPORTING INSTRUCTIONS}

In all correspondence with the Census \(B u\) reau, please include the 11-digit file number which appears in the address box of the report form. Highspeed electronic equipment will be used to identify both the correspondence and the reports in the 1963 Economic Censuses. If your correspondence does not include the Census file number, it will be returned for the addition of that number. Address all correspondence to JEFFERSONVILLE CENSUS OPERATIONS OFFICE, 1208 East 10th Street, Jeffersonville, Indiana.

Please do not mark or mar the two lines of symbols above the address on each form. These symbols or rectangles which are unique to each establishment will be photographed and used to record mechanically the receipt of your report form.

As you complete the reports for each establishment, please enter the 11-digit file number at the top of the odd numbered pages as requested.

This booklet is provided to assist you in filling out the enclosed Census of Manufactures form(s) MC19A through MC39L. Please read these instructions and those appearing on the individual report forms for each item before entering your figures.

\section*{A. Who Should Report?}

The Census of Manufactures reports are required by an Act of Congress ( 13 U.S.C.). The reports submitted are confidential and may be seen only by sworn Census employees. They may not be used for purposes of taxation, investigation, or regulation. Copies retained in your files are also immune from legal process.

Every concern is required to submit a separate Census report for each of its manufacturing establishments in the United States, the Virgin lslands, and Guam. Enterprises with more than one establishment must submit a separate report for each establishment operated during all or any part of 1963. Reports should be returned to the Jeffersonville Census Operations Office as shown on the enclosed envelope.

Based on Census Bureau records, a report form is provided for each establishment which your company operated in 1963. If you have not received sufficient forms to cover all the manufacturing establishments operated by your company, write for additional copies. Be sure to describe the type of activity carried on at the establishments for which you request.additional forms.

\section*{1. What ls a Manufacturing Establishment?}

For purposes of the Cenșus, a manufacturing establishment is defined as a single physical location where manufacturing operations are performed; for example, a factory, mill, or plant. Since the information reported will be summarized to totals for each industry, State, county and standard metropolitan statistical area, separate reports are required for different physical locations even though the establishments may be engaged in the same line of manufacturing.
lf your company operates two or more units in distinctly different lines of manufacturing at the same location, you should also file a separate establishment report for each unit, provided separate records are maintained or substantially accurate reports for these separate activities can be prepared. It is not nécessary to file separate reports for departments or organizational subdivisions within an establishment.
ln completing your reports, a limited amount of prorating or estimating is acceptable when book records are not readily available.

\section*{2. How To Report for Establishments not in Operation During 1963?}
lf any of your company's manufacturing establishments were not in operation at all during 1963, you should nevertheless return the report for each such establishment with a notation as to its status in Item 12 "Changes in ownership or operation of the establishment." lf a manufacturing location was not in production, but had custodial employees, maintained inventories, or made shipments during the year, the information should be reported in the appropriate section of the report form.

\section*{B. What Activities Should Be Reported?}

Each report should cover all the activities (manufacturing, fabricating, processing, and assembling) conducted within the establishment. The reported figures should also include activities such as the maintenance of plant and equipment, receiving, shipping, warehousing, storage, research, record keeping, health, safety, cafeteria, and other services, when carried on at the same physical location by the manufacturing establishment. The manufacturing establishment reports should exclude sales branches, sales offices, research laboratories, retail stores, mining activities, and general administrative offices, if they are operated as separate establishments. However, separate Census of Business, Census of Mineral lndustries, or Central office or auxiliary reports should be submitted for each of these establishments.

Please note that establishments engaged in the activities listed below are considered to be manufacturing for the purposes of this Census:

Apparel jobbing and contracting
Assembling from purchased components
Commission processing of materials owned by others Job casting, stamping, machinery
Lapidary work
Logging camps and logging
Machine shops, including those operating on a job order basis
Manufacturing and delivering ready-mixed concrete
Milk pasteurizing and bottling
Plating, galvanizing, polishing materials owned by others etc.
Poultry dressing
Printing
Publishing: Book, magazine, periodical, etc.
Rebuilding on a factory basis
Sawmills
Seafood, fresh packaged or frozen
Ship and boat repairing
Wood preserving

\section*{C. What Period Should Each Report Cover?}

Each report should cover the calendar year 1963. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will involve considerable additional costs, and your fiscal year covers at least 10 months of calendar year 1963 (i.e., ends between October 31, 1963 and February 29, 1964), you may report on a fiscal basis. However, all employment, payroll, and man-hour figures should relate to the calendar year rather than the fiscal year. (These calendar year payroll records should be available from your tax records.)
In the certification, the dates should show the exact period which the report covers. Thus, if an establishment began to operate or ceased to operate within the year, the dates should span only that part of the year during which the plant was in operation. If the ownership changed during the year, complete the report only for that part of 1963 in which your company owned and operated the establishment. Report in ltem 12 the appropriate information on changes in ownership or operations.

\section*{D. How Should Multiple Establishment Companies Determine Transfer Values of Products and Materials from One Establishment to Another ('Interplant Transfers")?}

One of the importamt statistical measures of manufacturing activity is "value added by manufacture," which is derived by the Census Bureau from the figures reported for value of shipments, cost of materials and inventories.
In order for statistics on value added and other subjects to be comparable from industry to industry or area to area, it is necessary that the operations of each establishment of a multiple establishment organization be reported as though the establishment were a separate "economic" unit. This means that the value of interplant transfers within a company should include, in addition to
direct costs of production, a reasonable proportion of "all other costs (company overhead) and profits." The establishments receiving such transfers should report them as materials consumed (or inventories of materials, etc.) at the same value plus costs of freight and other direct handling charges. (See ltem 5.)

\section*{ITEMS ON THE REPORT FORM}
ltem 1. (See instructions on Form.)
ltem 2. Number of employees.-(You may follow the definition of employees specified by your State Employment Security Agency.)--Report employees at the establishment who worked or received pay for any part of the pay period (preferably one week) ending nearest the 15th of the specified months (i.e., March, May, August, and November of 1963 for "production workers" and March only for "all other employees"). Include all persons on paid sick leave, paid holidays, and paid vacation during these pay periods; exclude members of armed forces and pensioners carried on your active rolis. Include officers at this establishment, if a corporation; if an unincorporated concern, exclude proprietor or partners.
ltems 2e and 2f.-Divide the total on Line 2e by FOUR and enter the result on Line 2 f ; divide by FOUR even if the establishment did not operate in all four periods.
ltem 3. Payrolls. (You should follow the definition of salaries and wages that is used for calculating the withholding tax.) Report the gross earnings paid in calendar year 1963 to employees on the payroll at the establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. Include in gross earnings commissions, dismissal pay, pay bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. Include salaries of officers of this establishment, if a corporation; if an unincorporated concern, exlcude payments to proprietor or partners. Exclude payments to agricultural employees, fishermen, members of armed forces, and pensioners carried on your active payroll.
ltem 4. Plant Man-Hours of Production Workers, by Quar-ter.-" \(P\) lant man-hours" of production workers are designed to measure the over-all activity of the plant during each quarter. The figures should include all man-hours worked or paid for, except hours paid for vacations, holidays, or sick leave. If an employee elects to work during the vacation period, report only actual hours worked by such employee. Overtime hours should be reported as actual hours worked, not straight-time equivalent hours.
Item 5. Cost of Materials, Fuels, Electricity and Contract Work. - The entries in this item are used by the Census Bureau to calculate the 1963 value added by manufacture. The figures reported, therefore, should represent the total cost of materials, supplies, semi-finished goods, fuels, etc., actually consumed or put into production during 1963.
If your records do not show the amounts actually consumed or put into production during 1963, the reported figures may be derived from purchase and other records. Cost of purchases may be used if these do not differ significantly from the amounts actually used. However, if
consumption of any major item differs significantly from purchases, the amount used may be estimated by adding beginning inventories to the amounts purchased and subtracting from this total the cost of goods on hand at the end of the year.
Cost is delivered cost and should be the amount actually paid or payable after discounts and should include freight and other direct charges incurred by the establishment in acquiring materials and supplies consumed. The cost figures for consumption should represent receipts from all sources, i.e., amounts purchased from other establishments, withdrawn from inventories, or obtained from other establishments of the same company. However, if intermediate products were made in this establishment in 1963 and incorporated into other products also made in this establishment, the reported figures should only include the costs of the materials from which the semi-finished items were made.
For materials, parts, and supplies received from other establishments of your company, cost should be checked against the values reported for the plant producing and transferring the codes (see ltem D above). Freight and other direct handling charges should be added.
Item 5a. Cost of Materials, Parts, Components, Containers, Supplies, Etc., Consumed. --The delivered cost figures reported in ltem 5 a should cover all raw materials, containers, scrap, and supplies, etc., which were: (1) put into production, (2) used as operating supplies, (3) used in repair and maintenance. Include also cost of materials owned by you but consumed by other companies to make products for your establishment under contract. Amounts paid to other companies for such contract work should be reported on Line 5 e and should include freight in and out. lf semi-finished goods, parts, or components were produced during 1963 and incorporated into finished products at the same plant during 1963, include the cost of raw materials used rather than the value of the intermediate products.

Include only physical goods used or put into production. Exclude services used or overhead charges. Exclude cost of such services as advertising, telephone, telegram and cable, insurance, developmental and research services or engineering, management, marketing and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also such overhead items as depreciationcharges against plant and equipment; rent and rental allowances, interest payments, royalties, and patent fees. Exclude materials, supplies, machinery, and equipment which were used in the construction of new structures or additions to your plant, or new machinery and equipment, and which are chargeable to fixed assets accounts. Exclude products purchased and resold without further manufacture or processing or assembly; their costs should be included in Item 5 b.
ltem 5b. Cost of Goods Sold Without Further Manufacture, Processing or Assembly in this Establishment.-Report the cost of all products bought and resold in the same condition as when purchased and not made part of another product manufactured by this establishment. (Total sales value of all products resold is to be reported in Item 18 on the line for "Resales.")
ltem 5c. Fuel Consumed.-Report the total amount actually paid or payable during 1963 for all fuels consumed for heat, power, or the generation of electricity. Do not include the estimated cost of fuels, such as sawdust or blast furnace gas, produced as a byproduct of your manufacturing activities. Include anthracite and bituminous coal, coke, natural and manufactured gas, fuel, oil, liquified petroleum gas, gasoline, and all other fuels including purchased steam. For selected industries, such as Carbon Black, Blast Furnaces and Coke Ovens, special reporting instructions on the report form provide that the above fuel types should be reported as materials in ltem 5 a rather than as a fuel Item 5 c .
ltem 5d. Purchased Electric Energy.-Report the total amount actually paid or payable for electric energy purchased during 1963 from other companies, or received from other establishments of your company. Exclude the value of electricity generated and used at this establishment.
Item 5e. Cost of Work Done for You by Others on Your Own Materials (Contract Work).-lf any work was done by others on materials furnished by your establishment, report the total payments made during 1963 for such work, including freight out and in. Exclude the cost of materials worked on, which should be included in ltem 5a.
ltem 6. Inventories of this Establishment.-See report form.
ltem 7. Capital Expenditures for This Establishment (Exclude Expenditures for Land).-Capital expenditures during 1963 may be determined by the following computation: The cost of additions completed during the year, plus con-struction-in-progress at the end of the year, minus construction-in-progress at the beginning of the year.
ltem 7a. New Structures and Additions to Plant.-Report total expenditures during 1963 for new construction, (whether constructed on contract or by your own forces) major alterations, capitalized repairs, and improvement of buildings (including all new elevators, cranes, heating and ventilating equipment, essentially a part of the buildings), other fixed structures (such as blast furnaces, brick kilns, fractionating towers, shipways, and similar types of structures), and site improvements (such as roads, docks, tracks, parking lots, fences, utilities.)
ltem 7b. New Machinery and New Equipment.-Report total expenditures at this establishment for new production machinery and equipment and other new machinery and equipment. lnclude replacements as well as additions to capacity. lnclude the value of improvements and capitalized repairs to machinery and equipment transferred from other establishments of this company or produced and used at this establishment. lnclude all new motors, lathes, punch presses and similar machinery and equipment for use in production, as well as all new office machines and fixtures, furniture, cafeteria and dressing room furnishings, automobiles and trucks, and other similar equipment.
ltem 7c. Used Plant and Used Equipment Acquired from Others.-Report total expenditures at this establishment for old or existing plants and for second-hand equipment acquired from others (including the U.S. Government). lnclude at approximate market value machinery or equipment transferred from other plants of your company.

Item 8. Quantity of Electricity. - All quantities for electricity preferably should be reported in thousands of kilowatt hours. Please be careful to enter your figures in the CORRECT COLUMNS.
Item 8a. Purchased Electricity.--Report the quantity for which cost is reported in ltem 5d.
Item 8b. Generated Electricity. - Enter the total quantity of electric energy generated in this plant (gross less generating station use) during 1963.
When totals are reported on this line, data relating to the activity of the power stations would also be included in other sections of this report. For example, the number of employees assigned to the power station, their wages and man-hours should be included in the figures reported in ltems 2,3 , and 4 ; and the cost of fuels used to generate electricity, in ltem 5 c .
1tem 8c. Electricity Sold or Transferred.--Enter the quantity of electric energy, which was also included in ltems 8 a and 8 b but which was sold to other companies or transferred, to other manufacturing or non-manufacturing establishments of your company.
ltems 9-11. - Not applicable to these forms.
Items 12-15.-See Report forms.
ltem 16. Industrial Water Use During 1963 (See Instructions on Forms).-A selected group of establishments, consisting mainly of those consuming large quantities of water, will be required to supply the following additional detail on water consumed during 1964: total intake during the year distributed by source and type of use; quantity discharged; quantity recirculated; and quantity treated.

\section*{ltems 17-23-(See instructions on form.)}

Period of Report.--Enter the month and day of the beginning and the end of period your report covers. If a calendar year report: "From January 1 to December 31, 1963;" if a fiscal year, specify which (such as "From December 1, 1962 to November 30, 1963)." lf a part year report is submitted because the establishment was not in operation or under your company's control for the entire year, specify the actual period covered: For example, January 1, 1963 to August 15, 1963 or June 1 to December 31, 1963.

\section*{Fonm MA-175 \\ U.S. DEPARTMENT OF COMMERCE
EUREAU OF THE CENBUS \\ REPORT ON SHIPMENTS TO OR RECEIPTS FOR WORK DONE FOR FEDERAL GOVERNMENT AGENCIES AND THEIR CONTRACTORS AND SUPPLIERS IN 1963 \\ (Based on the Total Shipment Figures from the Annual Survey of Manufoctures, Census Form MA-100)}

TO: Bureou of the Consus, Industry Division Woshington, D.C. 20233

CONFIDENTIAL - Response ro this inquiry is required by Act of Congreas (13 U.S.C.). The reporr you submir ro tbe Census Buresu is confidential and may be seen only by or regulation. Copies rerained in your files are also immune from legal process. ITEM 1-In Correspondence abour the report for rhis establishment, please refer to your 11-digit file number below.

\section*{(PLEASE RETURN THIS COPY)}

ITEM 2 Please check the box which describes the 1963 receipts for shipments or other work done in this plant for Federal Government agencies and their contractors and suppliets:

\section*{None}

\section*{Up to \(\$ 100,000\)}
\(\$ 100,000\) or more
For purposes of this report, such receipts will include payments received by you for work done by you on Federal Government prime contracts as well as the value of materials, components, subassembies, and services supplied by you to Federal Government contractors and suppliers for use in their performance of Federal Government contracts.
If your response to this question was " \(\$ 100,000\) or more," please complete the form on the reverse side. Otherwise, sign the form in the space provided below and return it.

INTRODUCTORY NOTE

The Census Bureau is conducting this survey to develop a measure of the level of industrial activity generated by the expenditures made by Federal Government agencies. Special attention is directed toward expenditures made by
the Department of Defense (DOD), the National Aeronautics and Space Administration (NASA), and the Atomic Energy Commission (AEC).
Industrial activity generated by Federal Government expenditures is being measured in terms of receipts (includ ing value of sbipments) for work done, or for value o products shipped to Federal agencies, their contractors,
subcontractors and suppliers. For each plant covered by subcontractors and suppliers. cor each plant covered by the report such receipts will consist of two kinds of payfor Federal agencies on Government prime contracts. The second is payments received for work done for other second is payments receives for work contractors and suppliers for use in the per-
formance of Federal Government contracts, Subcontract receipts reported will normally be based on payments made or work done on Government subcontracts when subject to he Renegotiation Rct of 1951 , as amended. These receipts should include the value of materials, components, subassemblies, and services supplied to other plants of the company
and suppliers outside the company for use in the performance of contracts. Tbis is in accord with standard Census reporting procedures.
This survey is being conducted on an eatablishment or plant basis. This metbod of reporting is necessary so hat the data reported by each plant may be tabulated by the geographic area in which the work is actually being errormed. Additionally, it will permit the data to be Industrial Classificarion.

\section*{SPECIFIC INSTRUCTIONS}

Except as may be specifically requested, a report should be submitted or each establishment for which you received a preaddressed form. If additional forms are needed, please write to us specifying the address of the establishment for which a blank form is required. If you have any Cuestions about the survey, write to the Bureau of the Census, Wishington, D.C., 20233 , referring to form MA-175 and to the file number in the upper right-hand corner of the address box. The basic concepts used in tbis survey (establishment, shipments, receipts, materials consumed, employment, erc.) are the same as shose used in the
Annual Survey of Manufnctures (Form MA-100), and related Annual Survey of Manufnctures (Form MA-
figures reported on each form should agree.
Columns (1), (2), and (3) - Tbese entries--lines a through 1 - should cortespond with those entered in item 9 and Class Code, and the 1963 data column from the related Census form MA-100 for 1963 .
The three lines " i ," ' j ," and " k " that follow specific product class entries, are in the same position in which they appear on form MA-100. Only " j " is expected to be of particular importance on form MA-175; i" is an item primarily of interest to manufacturing industries not
covered by forin MA-175, such as textiles and apparel, covered by forn MA-175, such, as textiles and apparel,
coating and engraving, etc.; "k", is used by manufacturera coating and engraving, etc.; any manufacturing or assembling, usually to round out a product line. Line " "i" "on the other hand, can be very important in this survey. Receipts for research and development that have not been separately identified on form MA-100 should be reported here. (Note that researcb and development receipts for certain aerospace activities are to be
supplied in lines "e", "h" in the appropriate class of
 product ( \(37216,37223,37226,37293,37294,19253\) ).) ILine " j ", would also be used or testing. Installation or testing costs of more than the form for the manufacturing plant. Instead, a separate MA-175 form should be filed for each such instal lation or test site. If you bave such cases, it would be desirable to write to the Census Bureau describing the situation before completing the MA-175 forms.

Columns (4) mrough (7) - Data reported should represent the total value of shipments, billings, or receipts (in \(\$ 000\) ) from Federal Government agencies during 1963. For long lead time production or research, development, testing, and evaluation programs, the value of work done during the year is reported on the Annual Survey of Manufactures and on this report. Such a figure is represenced by net billings, or payments received by you (including progress payments), for work done during tbe.year. Tbis method of estimating sbipments to the Government has frequent application to work done on aircrafe, ships, missiles, space vehicles, and tbe like, as well as wort done on elated systems.
Columns (8) through (13) - Data reported should represent the value of receipts (in \(\$ 000\) ) for work done by you for Government prime contractors and subcontractors for use in the performance of Government contracts. It is recognized that indirect Government work is not always identified as such. In view of this, it will be acceptable to use as a base receipts on Government subcontracts subject to the Renegotiation Act of 1951, as amended. Note particularly that the value of transfers to otber plants of the company as well as receipts from contractors outside tbe compeny are to be included.
Columns (B) through (11) - Deta entered sbould repesent cbe value of receipta (in \(\$ 000\) ) for work done by you on ubcontracts of DOD, NASA, AEC, and other Government agencies when the Gover
contract is known to you.
Columns (12) or (13) - Receipts for work done by you on Goverament subcontracts, for which Government agency the prime contract is not specifically known to you sbould be NASA, or AEC, but you cannot specifically derermine which, enter the value of receiprs (in 8000 ) in column (12). Which, enter the value of receiprs (in subcontract work is for anotber Government agency, or for Gubcontract work is for anotber Government agency, or for Government agency unknown to
value of receipts (in \(\$ 000\) ) in eolumn ( 13 ).
Column (14) - Data reported should represent the difference berween the total values of shipments and/or receipts, col umn (3), and the sum of entries in columns (4) through' (13).
\begin{tabular}{|l|l|l|}

\section*{INSTRUCTIONS}

\section*{INTRODUCTORY NOTE}

We are conducting this survey to obtain statistics on the origin of exports of manufactured goods by States and smaller areas. This information is needed by various branches of govemment to assess the impact of foreign trade on the economy. If you have any questions about the survey, please write to the Bureau of the Census, Washington, D.C., 20233, referring to form MA-161 and to the 11 -digit file number in the address box.

This survey is being conducted on an establishment or plant basis. This method of reporting is necessary so that export figures reported by each plant may be tabulated in the proper geographic area. A report is required for each establishment for which you received a preaddressed form. If additional forms are needed, please write to us, specifying the address of the establishment for which a blank form is required.

If the figures requested are not readily available from your records, carefully prepared estimates will be accepted.

\section*{DEFINITION OF EXPORTS}

The following description of exports is consistent with definitions used in compiling official foreign trade statistics of the United States. It is provided as a guide for respondents. A manufacturer would be expected to report according to his own definitions except where major differences might be expected. In such cases, he would be expected to estimate rather than compile revised data from detailed records. 1

Exports as understood in this survey include shipments from the United States to foreign countries of products which are not subjected to further manufacture, fabrication, or assembly in this country before being shipped abroad. Exports include shipments to foreign subsidiaries or divisions of your company and its affiliates. Sales to the United States Govemment for shipment abroad are considered an expori if the products are for a foreign nation. They are not classified as an export if for use by the United States Armed Forces.

\footnotetext{
1 For example, some manufacturers are known to treat sales to Post Exchanges or to Puerto Rico differently than here described. These differences in most cases are not statistically significant.
}

Sales (shipments) to customers in Canada are classified as exports. Shipments to Alaska and Hawaii are not exports. Shipments to Puerto Rico are not classified as exports.

Exports do not include products shipped to domestic customers or other plants of your company who will further manufacture, fabricate, or assemble them. Please note, however, that the breaking down of bulk shipments of your products into smaller lots or packages by a wholesale exporter or by other units of your company is not considered to be further manufacturing, processing, or assembly.

\section*{EXPORT VALUES}

The export values to be reported on this form should be on the same basis as the values in item 3a, total shipments of the plant in 1963.

\section*{EXPORTS OF THE PRODUCTS OF THIS PLANT BY THIS FIRM (item 3b)}

Item 3b will include-Export shipments of your products by this establishment and export shipments of the products of this establishment by or on order of other parts of your company or its affiliates such as sales branches, sales offices, warehouses, export offices, and export subsidiaries.

It will also include-Sales for export of your products to or on order of export firms, and other sales known to you to be for export. Also, sales to the United States Government in this country for shipment abroad under military and economic assistance programs.

\section*{1960 EXPORTS}

The value of products shipped for export by this establishment in 1960 has been entered in item 5, wherever the 1960 report form could be precisely matched. Please be sure the figure posted for 1960 is consistent with the 1963 figure entered in item 3b. Make revision, if necessary.

If no figure has been posted but the 1960 export figure is readily available, please enter the 1960 figure in item 5 , otherwise leave the item blank.

\section*{Appendix E}

\section*{AUTHORITY FOR CENSUS: TITLE 13, UNITED STATES CODE}
(Codification of August 1954 amended by Acts of August 1957, September 1960, and June and October 1962)

\section*{Collection and publication: Five-year periods (131)}

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses . . . in the year 1954 and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof: Provided, That the censuses of manufactures, of mineral industries, and of other businesses, including the distributive trades and service establishments, directed to be taken in the year 1954 relating to the year 1953, shall be taken instead in the year 1955 relating to the year 1954 .

\section*{Geographic scope of censuses (191a)}

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States
exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than \(\$ 500\) or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such question, he shall be fined not more than \(\$ 10,000\) or imprisoned not more than one year, or both.

\section*{Appendix F}

\section*{STAMDARD METROPOLITAN STATISTICAL AREAS}
(Area titles and definitions of the 2 Standard Consolidated Areas and the 217 Standard Metropolitan Statistical Areas in the United States established by the Bureau of the Budget as of August 4, 1964)

Consists of Albany, Rensselaer, Saratoga, and Schenectady Counties, N.Y.

Coextensive with Bernalillo County, N. Mex.
Consists of Lehigh and Northampton Counties, Pa.; and Warren County, N.J.

Coextensive with Blair County, Pa.
Consists of Potter and Randall Counties, Tex.
Coextensive with Orange County, Calif.
Coextensive with Washtenaw County, Mich.
Coextensive with Buncombe County, N.C.
Consists of Clayton, Cobb, De Kalb, Fulton, and Gwinnett Counties, Ga. Coextensive with Atlantic County, N.J.
Consists of Richmond County, Ga., and Aiken County, S.C.
Coextensive with Travis County, Tex.
Coextensive with Kern County, Calif.
Consists of Baltimore city and Anne Arundel, Baltimore, Carroll, and Howard Counties, Md.
Coextensive with East Baton Rouge Parish, La.
Coextensive with Bay County, Mich.
Consists of Jefferson and Orange Counties, Tex.
Coextensive with Yellowstone County, Mont.
Consists of Broome and Tioga Counties, N.Y., and Susquehanna County, Pa.
Coextensive with Jefferson County, Ala.
Coextensive with Ada County, Idaho
Consists of all of Suffolk County; Beverly, Lynn, Peabody, and Salem cities, and Danvers, Hamilton, Lynnfield, Manchester, Marblehead, Middleton, Nahant, Saugus, Swampscott, Topsfield, and Wenham towns in Essex County; Cambridge, Everett, Malden, Medford, Melrose, Newton, Somerville, Waltham, and Woburn cities, and Arlington, Ashland, Bedford, Belmont, Burlington, Concord, Framingham, Lexington, Lincoln, Natick, North Reading, Reading, Sherborn, Stoneham, Sudbury, Wakefield, Watertown, Wayland, Weston, Wilmington, and Winchester towns in Middlesex County; Quincy city, and Braintree, Brookline, Canton, Cohasset, Dedham, Dover, Holbrook, Medfield, Millis, Milton, Needham, Norfolk, Norwood, Randolph, Sharon, Walpole, Wellesley, Westwood, and Weymouth towns in Norfolk County; and Duxbury, Hanover, Hingham, Hull, Marshfield, Norwell, Pembroke, Rockland, and Scituate towns in Plymouth County, Mass.
Consists of Bridgeport and Shelton cities, and Easton, Fairfield, Monroe, Stratford, and Trumbull towns in Fairfield County; and Milford town in New Haven County, Conn.
Consists of Easton town in Bristol County; Avon and Stoughton towns in Norfolk County; and Brockton city, and Abington, Bridgewater, East Bridgewater, Hanson, West Bridgewater, and Whitman towns in Plymouth County, Mass.
Coextensive with Cameron County, Tex.
Consistṣ of Erie and Niagara Counties, N.Y.
Coextensive with Stark County, Ohio
Coextensive with Linn County, Iowa
Coextensive with Champaign County, III.
Consists of Berkeley and Charleston Counties, S.C.
Coextensive with Kanawha County, W. Va.
Consists of Mecklenburg and Union Counties, N.C.
Consists of Hamilton County, Tenn., and Walker County, Ga.

\section*{CENSUS REGIONS AND GEOGRAPHIC DIVISIONS}

\section*{F THE UNITED STATES}
```

[^0]:    1 The 1963 censuses covered the United States, Guam, and the Virgin Islands. Separate censuses of manufactures and business for 1963 were also conducted in Puerto Rico iointly with the Commonwealth Government. The statistics from 1958 onward include establishments in Alaska and Hawaii which achieved statehood in 1959.

[^1]:    Source: Survey of Current Business, August 1965, pp. 42-45, and July 1966, p. 15.

[^2]:    3 The census originally scheduled to cover 1953 was conducted for 1954 on the basis of special legislation authorizing this change. A census covering 1958 and this census covering 1963 were conducted under the legislation of 1948 . In an effort to spread its workload more evenly over the decennial period, the Bureau of the Census, in 1964, asked for and obtained legislation (P.L. 88-532) specifying that subsequent censuses of manufactures would cover the years ending in "2" and "7." Consequently, the next "census of manufactures is scheduled for 1967.

[^3]:    4 For the manufacturing industries, a revised manual was issued in 1945 which, with minor modifications, was used in the 1947 Census of Manufactures. For the 1954 census, the classification structure used in 1947 was again employed, again with minor modjfications. In 1957, the SIC system was extensively revised for manufacturing industries and historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. A minor revision of the SIC between 1958 and 1963 introduced some 4 -digit industry changes but none of them crossed 3 -digit group lines. Also, there were some amendments in industry titles, definitions, and index items, and additions to the index items in the SIC Manual.

[^4]:    5 Frequently the business world and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

[^5]:    ${ }^{6}$ See Industry Classification and Sector Measures of Industrial Production by James W. McKie, Bureau of the Census Working Paper No. 20, 1965. and Historical Comparability of Census of Manufactures Industries, 1929-1958 by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

[^6]:    7 Executive Office of the President, Bureau of the Budget, Standard Metropolitan Statistical Areas, 1964.

[^7]:    X Not applicable.
    ${ }^{1}$ The total is the sum of operating establishments plus auxiliaries.

[^8]:    8 See 1963 Census of Manufactures, MC63-2, Numerical List of Manufactures Products, and MC63-1, Alphabetic List of Manufactures Products.

[^9]:    ${ }^{1}$ Includes $\$ 21$ million shipped from industry 3443 , boiler shop products; $\$ 11$ million shipped from industry 3444 , sheet-metal work; $\$ 10$ million from industry 3449 , miscellaneous metal work, n.e.c.; and $\$ 7$ million from industry 3731, shipbuilding and repair.
    ${ }^{2}$ Includes $\$ 2$ million shipped from industry 3443 , boiler shop products.
    ${ }^{3}$ Includes $\$ 9$ million shipped from industry 3443, boiler shop products, and $\$ 2$ million from industry 3446 , architectural metal products.
    ${ }^{4}$ Includes the following products: 34421, metal doors and frames (except storm doors), \$7 million; 34422 , metal window sash and frames (except storm sash), $\$ 3$ million; $34 \dot{4} 32$, fabricated steel plate, $\$ 31$ million; 34438, metal tanks and vessels, custom fabricated at the factory, $\$ 7$ million; 34441 , sheet-metal roofing, siding, and drainage equipment, $\$ 15$ million; 34442 culverts, flumes, irrigation pipes, $\$ 8$ million; and 34443 , other sheet metal work, $\$ 8$ million.

[^10]:    9 For a few industries (e.g., aircraft, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[^11]:    ${ }^{1}$ Source: National Income and Product Accounts of the U.S., Survey of Current Business, August 1965, p.42; July 1966, p. 15.
    ${ }^{2} 1947$ and earlier figures are unadjusted value added.

[^107]:    ${ }^{6}$ Includes 40,330 thousand barrels of residual oils, valued at $\$ 77,118$ thousand and 8,282 thousand barrels of acid sludge, tar, etc., valued at $\$ 8,510$ thousand made and consumed in the same establishment.
    ${ }^{7}$ Includes 150,886 thousand barrels of residual oil with a reported cost of $\$ 432,424$ thousand. The remainder is distillate oil Similar figures for earlier years are not available.
    ${ }^{8}$ Includes the following types of gas: blast furnace gas, 74,166 million cubic feet with a reported cost of $\$ 5,025$ thousand; coke oven gas, 114,145 million cubic feet, with a reported cost of $\$ 23,741$ thousand; natural, manufactured or mixed gas, $4,105,009$ million cubic feet, with a reported cost of $\$ 1,422,785$ thousand; the remainder was other gas. Similar figures for earlier years are not available.
    ${ }^{9}$ Represents consumption of domestic crude petroleum only. Total consumption, including imported crude petroleum, amounted to $1,884,052$ thousand barrels; a corresponding cost figure is not available for total crude petroleum consumed.
    ${ }^{10}$ For 1962, represents liquefied petroleum gas from all sources purchased by the Basic Chemicals industries (SIC 281) and the Petroleum Refining industry (SIC 2911). For 1958, 1954, and 1947, represents liquefied petroleum gas (from natural gasoline plants only) purchased by the Petroleum Refining industry.
    ${ }^{11}$ Includes 2,507 million kilowatt-hours valued at $\$ 24,781$ thousand purchased by manufacturing establishments and then resold or transferred. Similar figures for earlier years are not available.
    ${ }^{12}$ Represents purchased electric energy and the kilowatt-hours equivalent of all fuels used for heat and power. For factors used to convert fuels to this international unit of energy, see text. When possible, separate figures are shown for purchases and for quantities produced and used. ${ }^{13}$ For 1947, includes $1,915,926$ million kilowatt-hours equivalent for purchased fuels and electric energy. The corresponding figure for 1939 is 1,158,506 million kilowatt-hours equivalent.

[^126]:    See footnotes at end of table.

[^127]:    ${ }^{3}$ The "Steel producing industries" include steel works and rolling mills, wire drawing establishments, independent pipe mills and cold rolling, drawing, and finishing establishments, but excludes forging plants (industry 3391, Iron and Steel Forgings) which are classified in this table as metal fabricators. To avoid duplication by counting both the forgings and bars and billets from which forgings are made, information for forgings is excluded. Also to eliminate duplication, the data shown for the "Steel producing industries" are limited to the consumption of mill shapes and forms in the production of fabricated products or in maintenance and repair work and exclude the consumption of these products in the manufacture of other basic shapes and forms. The source of these data is Current Industrial Reports Series M33B, "Steel Mill Products."

    4 The "Metal fabricating industries" include establishments whose primary activity is the manufacture of products fabricated beyond the metal mill level.
    ${ }^{5}$ Excludes figures for industry 3392, Nonferrous Forgings.
    6xcludes figures for industry 3723, Aircraft Propellers and Parts.
