CONFIDENCE JUSTIFIED

THIS tells the story better than we can tell it ourselves

The seed corn I got from you last spring was very satisfactory. I planted it in the same field with my own seed. We could tell to the row where we started planting your corn. It did better all season. It made, I should judge, ten or fifteen bushels more to the acre than the other corn. Besides it was a little better quality corn; I mean by that, that the corn was more solid and less rotted corn. I also noticed that the roots of your corn were much more vigorous. Corn all stood up this year but I pulled a stalk of my own corn and a stalk of the corn I got from you and compared them. The roots on yours was over twice as long as on mine.

CLAUDE KISER, Warsaw, Ill.

Wins Over Bad Season in "Show Me" State

Very poor season for corn in this locality. I am of the impression the seed bought of you yielded as much as $7\frac{1}{2}$ bushels of sound corn to the acre more than other seed. Scarcely any rotten corn at all in the field of seed bought of you.

J. GUY BIGGS, New London, Missouri.

Hoosier Friends are Pleased

The seed corn we bought of you was the Yellow Dent and used for late planting. We had reports from our customers indicating most satisfactory results. One customer reported it to be the best corn on his farm in point of yield and quality. Another said he would have had no corn had he not planted the Early Yellow Dent.

LACY SEED & HAY COMPANY, Noblesville, Indiana.

Ten to Twelve Bushel Gain in Iowa

I planted all but two or three acres of corn with seed from you and I planted yellow corn of my own along side of your yellow corn. Could tell it right up to the row where the two kinds came together. Your corn grew taller and yielded ten to twelve bushels per acre more corn.

CHAS. F. KRUEGER, Muscatine, Iowa.

10 Bushels More per Acre Represents Clear Profit

I planted your Funk's Yellow Dent, strain 176A, on old ground. It averaged a little over 70 bushels per acre. Your seed corn averaged ten bushels more to the acre than my own seed corn did. I was very much pleased with the results that I received by planting your seed corn.

ELMER E. PAXTON, Mazon, Ill.

Will Plant Funk's Corn Again

I planted six bushels of your Funk's Yellow Dent, strain 176A. It was as good sound corn as I ever raised, and am going to plant it again.

T. L. McCONNELL, Lincoln, Ill.

Eight Year Test

I have been using your seed corn for the past eight years, and found it better than some of the corn my neighbors have got from other seed houses.
