## REPORT

כF

# THE COMMISSIONER OF PATENTS 

FOR

$$
\text { THE YEAR } 1868 .
$$

January 21, 1869.-Referred to the Committee on Patents and ordered to be printed.

Departinent of the Interior, Patent Office, Washington, D. C., January 21, 1869.
Sir: In compliance with the requirement of section 14 of the Patent Act, approved March 3,1837, I have the honor to forward, herewith, my annual report upon the state and condition of the Patent Office.

With great respect, your most obedient servant,
ELISHA FOOTE,
Commissioner.
Hon. Schuyler Colfax,
Speater of the House of Representatives.

> United States Patent Orifice,

Washington, D. O., January 20, 1869.
SIR: During the year ending December 31, 1868, there have been filed in the Patent Office 3,705 caveats, and 20,445 applications for patents; 12,059 patents have been issued, 419 have been re-issued, and 140 extended.

Compared with other years, the business of the office has been greater than that of any preceding period. The number of patents issued has been more than double the number of 1865 , and more than three and one-half times that of 1858 .

Since the Patent Office was first established its business has had a rapid growth in amount and in importance. In 1836, eight or ten persons were enough to transact all its business. Now between three and four hundred are required.

This increase has arisen in part from the growth of the country, but more from the stimulus that our patent laws have given to invention. The rewards which they have held out for successful improvements have increased in value with the progress of the country and with the more proper appreciation and greater security of patented property. A really successful invention now brings to its author a competency for life; and, as a consequence, the efforts of almost every class in community are directed in search of useful improrements.

In all those improvements of life to which patent laws relate our own age has witnessed more advance than all the preceding ages of the world taken together. One improvement seems to have begotten another. New fields for exploration have been constantly opening. And so far from reaching any limit of invention, we seem but on the way to other advances and improvements beyond our present comprehension.

I am, however, unable to attribute the extraordinary increase of the last few years in the number of patents issued to an equal increase of real improvements; for I apprehend that much of apparent prosperity has arisen from the allowance of patents that should never have been granted.

Several causes have contributed to this :
1st. A practice has recently grown up of subdividing inventions and issuing several patents for what was formerly embraced in one. It has served to increase the receipts of the office, but at the same time it has greatly increased the expenses of the inventor, not only for office fees, bat for all the other expenditures incurred in obtaining patents. Had the practice been confined to separate and distinct improvements upon different parts of a machine, no exception could be taken to it; but it has been carmed to the extent of several patents for the same inrention, and patents for parts, which taken alone constituted no invention. It has tended to complicate and confuse patented rights, and, in some instances, I apprehend, been a source of frauds upon the public. I am not aware of any useful purpose that it has served, and believe it should be regarded with disfavor.

2d. Ample provisions have been made from time to time to guard against the improper rejection of applications for patents. In case of a refusal, the examiner in charge must assign his reasons for it, and specifically point out and refer the party to any previous device which, in his riew, anticipates the invention. These gromnds the applicant may controvert and have a second examination and a second decision. If still rejected, he may appeal to the board of examiners-in-chief, and have their investigation and decision upon his case. From the examiners-in-chiof he may appeal to the Commissioner in person, and from the Commissioner to one of the judges of the supreme court of the District of Columbia.

An examiner's action receives no such scrutiny when he allows a patent. If he be pressed for time, or be indifferent as to his duties, he may put an end to his labors by a simple indorsement. If he lack capacity, there will then be no exposure of his ignorance or of the unsoundness of his views. It may have happened that in some instances the allowance of pateuts has served to cloak incapacity and indifference to duty.

I have endeavored to provide some means for reviewing briefly favorable decisions before patents were issued upon them, but found that the force in the office was inadequate to such work in addition to the perform-
ance of other indispensable duties. The only reliance we have to guard against the issue of improper patents is upon the ability and integrity of examiners and their assistants.

3 d . The great increase of the business of the office has not been accompanied with a corresponding increase of the examining corps. Examiners, in some cases, have had thrown upon them an amount of labor they could not perform well ; and, from the necessity of the case, patents have been hurriedly allowed without the full investigation they should have received. Formerly thirty or forty cases per month were deemed to be as many as an examiner with an assistant could thoroughly investigate and decide. Now it is not unusual for the same examiner, with two or three assistants, to dispose of as many as two hundred cases in the same time. In one room during the past year more applications have been decided than by the whole office in 1855, or in any previous year.

The granting of improper and illegal patents defeats every object and purpose of patent laws. It serves to mislead and deceive the public, and to subject them to the annoyance of unjust and invalid claims. It throws distrust and discredit upon patented property, and injures the salable value of meritorious inventions. Did the practice of the office fully accord with the intent of the law, and its investigations command the entire confidence of the community, so that business operations and the investment of capital could with safety be founded upon them, it would do more to enhance the rewards which the laws contemplate for valuable improvements than any other measure that could be devised.

To improve the qualifications of examiners and obtain a high order of ability in the examining corps, has been deemed by me an object of the first importance-one, indeed, upon which the success of the office greatly depended.

A committee of three gentlemen, selected for their ability and fitness for the purpose, was appointed to examine into the qualifications of such of the employés as had received their appointments without the examinations required by law. The duty has been, so far, faithfully and judiciously performed, and several changes in the office have resulted therefrom.

Great care has been exercised in supplying vacancies. The positions of examiners' clerks and assistants have been regarded as the schools of the office, in which to qualify gentlemen of ability and culture for higher places ; and the qualities sought for in appointees to those positions have been such as, in due time, will make them able and well-instructed examiners.

Questions as to the patentability of inventions become more difficult with the increase in the number of previous devices. An examiner must familiarize himself with all the inventions that have been made in his class-not only in this country, but in Europe. Their great number and complexity have rendered the study of them a profession to be acquired by years of labor. An examiner's decisions involve nice questions of law, of science, and of mechanics. The more recondite principles upon which depend the practical success of processes and machinery, must be familiar to him. Large amounts of property often depend directly or indirectly upon his action. The ability and acquirements necessary to the proper discharge of his duties must be of a high order-scarcely less than those we expect in a judge of the higher courts of law.

I have been strongly impressed with the belief that the salaries now paid these gentlemen are inadequate to procure and retain the best services. They were prescribed in 1848. At that time they would obtain of all the necessaries and conveniences of life more than double of what
the same money will purchase now. For all practical purposes it is the same as if those salaries had been reduced one-half. As a consequence, gentlemen who have become experienced and expert in the performance of their duties resign their places for more lucrative employments. Within the short time that I have been connected with the office, several whose services were invaluable have resigned, and it is apprehended that others will soon follow their example. I think I know the wishes of inventors well enough to say that, if the sums they now pay into the Patent Office are insufficient, they would gladly increase them to secure prompt and correct action upon their cases.

The reduction in the value of the currency has also operated with hardship upon other employés of the office. So long as the funds of the office admit it without tax upon the country, it is believed that their salariss should be made to approximate what they were before 1861.
The act of Congress relative to the Patent Office passed in July, 1836, provided for a machinist at a salary of $\$ 1,200$ per year. For several. years thereafter this was construed to mean a real mechanic to repair and keep in order the models deposited in the office. Afterwards it came to imply a clerk to take charge of the model room. For many years past there have been few or no repairs of breakages and other injuries to models, and large numbers of them are now more or less damaged; some have been totally destroyed. To put them in proper order will require the labor of two men for several years.

Injuries should be repaired at the time they are done, and the persons causing them held accountable therefor. To do such work, and keep in repair furniture and other articles used in the office, would occupy two men continuously.

Certified copies for models are frequently ordered to be used in courts and for other purposes. To supply them the models are sent to some of the machine shops in the city. Questions involving large interests sometimes depend upon features shown in these models. They lose their force as testimony when suffered to go leyond the supervision of the office. Suspicions of changes have, in some instances, been strongly entertained.

It is believed that the interests of the office will be promoted by establishing within it a machine shop and employing competent persons to do the work I have indicated.

Notwithstanding the ample room for models in the Patent Office, the cases to hold them are now filled, and some of them crowded. More provision for them will have to be immediately made. By narrowing a little the present cases, an additional one may be placed between them. and still leave sufficient space for passages. Another shelf may be added and some of the cases lengthened. By these means their present capacity may be more than doubled, and that will meet the wants of the office for many years to come. The time will eventually arrive when the models of those machines that have proved useless will have to be selected out and discarded.

It is recommended to employ a few men in the office to alter these cases and make new ones as fast as the wants of the office shall require and its funds permit.

The subject of copying the drawings of patented devices is one of much importance to the office. There are now about 85,000 of them, and they increase at the rate of about 14,000 per year. There are also about 30,000 belonging to rejected applications. They are kept in drawers in what is called the draughtsman's room. There the examiners and their assistants resort to make their investigations. By long experience in
examining drawings, they acquire the habit of readily detecting in them any device that may anticipate an invention. Those that are decimed pertinent to the subject of inquiry are taken to the examiners' rooms and submitted to the inspection of parties interested. On appeals they are used in the room of the examiners-in-chief, in the Commissioner's room, and by the judges of the supreme cou't of the District. For the purpose of being copied for the annual report, and for other purposes, they are also taken from the draughtsman's room. Sometimes two or three thousand are absent from their places, and this has led to errors much to be lamented on the part of examiners.

Were all the drawings which each examiner has to consult bound in volumes, and placed in his room, convenient for him to study and refer to without leaving his desk, it is estimated that he could dispatch twice as much business as he now does, and with greater accuracy and freedom from mistakes.

The great number of examiners and their assistants who have to resort to the draughtsman's room for investigations, and the liability of drawings getting misplaced by accident or by design, have rendered it imperatively necessary to the proper dispatch of business to exclude the public from that room. Patent agents and attorness are thus deprived of their most ready means of investigating the novelty of inventions, and properly preparing specifications for patents. A convenient room for them, provided with copies of drawings, specifications, and other works of reference, would be a great convenience to the public, and promote the interests of the office.

Some of the drawings by long use have been much worn, and parts of them obliterated. Unless copied in time they will be lost.
Twenty copies of each specification are now printerl. Were there copies of drawings to accompany them, they could be furnished to public libraries, where investigations could be made without the necessity of resorting to Washington.

The Patent Office makes exchanges of its publications with several foreign governments. From Great Britain we receite full copies of their specifications and drawings. In our library we can investigate au English invention as well as can be done in the Patent Office of Great Britain. The volumes are handsomely bound and now fill a large room in the library. For them we make but the poor return of a copy of our annual report.

The copies of drawings ordered and paid for by the public now number about seven hundred per month, and the expense to the office of making them is about $\$ 1,400$ per month. A reduction of price would probably much increase the number.

Several plans have been proposed for making these copies. Were there as many as fifty of each drawing wanted, the new art of photo-lithography would afford by far the best and cheapest means. It makes a fac-simile of line drawings, of any size desired, and when once the stone is prepared copies may be taken with little expense. Specimens have been furnished the office which show the wonderful perfection to which this important art has attained. The only difficulty in the way lies in the great number of drawings to be copied. Without reference to those on hand, the current issues will amount to nearly fifty a day. At the low rate of ten cents apiece, without any charge for specifications, fifteen or twenty thousand per year would cost more than many libraries could well expend for them; and the fifty or sixty large volumes annually which they would make would soon require more room than many libraries would have to spare.

For a few copies, enough for the use of the Patent Office, ordinary photograpliy, or some of the late processes, would afford a cheaper means of supplying them.
A photographic establishment in the Patent Office, adapted to copying drawings of large size, would supply the orders for them much more cheaply and accurately than by the method of tracing heretofore pursued.

The receipts of the Patent Office from July last to the 1st of January have exceeded its expenditures by about $\$ 53,000$. It is confidently expected that for the year to come the excess will not be less than $\$ 100,000$. By strict economy and system in the management of the office, it is believed that salaries may be raised, necessary changes and improvements made, and every needful expenditure to raise the office up to its highest state of efficiency and usefulness incurred, without any charge or tax upon the public.

The large and growing business of the Patent Office has thrown more labor on the Commissioner than any one person can perform. As some relief, it is recommended that appeals from the board of examiners-inchief be made directly to the chief justice of the supreme court of the District of Columbia.

The act of Congress relating to the Patent Office, passed March 2, 1861, I have regarded as abolishing all fees on appeals from the Commissioner; and, since examining the subject, I have not felt myself authorized to receive or to pay over to the judges of the supreme court of the District the moneys they have been accustomed to receive for the hearing of such appeals. A different view of the act has been taken by one at least of the judges. It is important that the question should be settled; and it is respectfully submitted that it will be more in accordance with the general practice of the country, and better suited to the dignity of the court, to increase the salary of the judge performing the duties than to make his compensation dependent upon the business that comes before him.
The business of the Patent Office has outgrown the several acts creating it. It is difficult to find authority for the employment of several of its important and indispensable officers. The gentleman who superintends the preparation of abstracts and drawings for the annual report was appointed as an examiner. The Commissioner's assistant has the grade and compensation of a first assistant examiner. The gentleman who purchases the supplies of the office and upon whom its expenditures greatly depend is but a temporary clerk. More than one-half of the employés of the office are temporary clerls-an office intended by statute for copyist merely. A revision of the several acts, with proper amendments, would conduce much to the interests of the office and the convenience of the public.

I have deemed it advisable to make several changes in the practice of the office with a view of simplifying its proceedings and producing more accuracy and promptness in its business. As was to be expected, some inconvenience was at first felt; but experience has justified the changes, and with few exceptions they are now universally approved and commended. System and accountability has been introduced in reference to the expenditures of the office. The mode of receiving and accounting for moneys paid into the office has been entirely changed, and such checks provided as will, it is hoped, prevent mistakes and errors. In reference to applications for patents, the principle adopted is to aid and assist the applicant in obtaining what properly belongs to him rather
than to obstruct or delay him. The objects of our patent laws will, it is believed, be best attained by securing to each inventor, with as little expense and trouble as possible, the full benefits of his inrention so far as he may be entitled to them.

Respectfully submitted:

ELISHA FOOTE,
Commissioner.

## Hon. Schuyler Colfax,

 Speaker of the House of Representatives.

PATENTEES AND PATENTS.

## ALPHABETICAL LIST

OF

## PERSONS WHOSE PATENTS FOR INVENTIONS AND DISCOVERIES HAVE EXPIRED DURING THE YEAR 1868.

## Name, residence, and invention or discovery.

Aston, John, assignor to Wm. Smith, Pittsburg, Pa. Molding pipe.
Atherton, Abel T., and Morton E. Converse. (See Converse \& Atherton.)
Atherton, Alpha A., Watcrbury, Vt. Washing machine.
Atherton, Calvin, Wales, Mich. Wagon spring.
Atherton, John B., and Henry A. Wheeler. (See Deming, F., assignor.)
Atherton, Nathan, Philadelphia, Pa. Steam engine.
Atherton, Robert, and Georgo Singleton, Paterson, N.J. Spinning machinery.
(Antedated June 19, 1868)
Atkeson, C. W., St. Louis, Mo. Cowl.
Atkin, Robert, Brooklyn, N. Y. Propelicr.
Atkins, Elias C., Indianapolis, Ind. Machine for polishing metal plates
Atkins, Jearum, Mokena, Ill. Gate.
Same...... Harvester cutter
Samc...... Safety valve.
Same...... Washington, D. C. Smoke stack for locomotive engines..........
Samc...... Calipers.-
Same........ Low-water alarm for boilors
Same ...... Smoke stack for locomotives
Atkinson, Benjamin, Davenport, Iowa. Pessary
Atkinson, Edward, Wrightstown, Pa. Roof
Atkinson, F. Mortimer. (See Daniels, D. G., assignor.)
Atkinson, Joseph H. (See Whipple, S. J., assignor.)
Same...... (See Walton, Elisha W., assignor:)
Same.............................samue.
Atkinson, Wm. B., Pittsburg, Pa. Clamp for railroad rails. (Antedated September 9, 1868)
Atterbury, J. S. and T. B., Pittsburg, Pa. Manufacture of glass ware.
Same.......Manufacturing glass ware with handles.
Same................................ same.
Same...... Lamp.
Atwatcr, Lewis, Ithaca, $N$.
Atwcil, R. H., Baltimore, Md. Liquid meter. (Antedatcd March 7, 1868)
Atwood, Anson, New York, N. Y. Car whecl
Atwood, Benjamin F., New York, N. Y. Compound to be applied to the hair Atwood, Eugene, Mansfield, Com. Spindle.
Atwood, Jolm E., assignor to self and A. and W. Sprague, Mansfield, Conn. Journal box.
Atwood, Leonard, Norwich, Conn. Valve for steam engines
Atwood, Leonard, Ncw York, N. Y. Hoisting apparatus for builders
Atwood, L. J., Waterbury, Conn. Pin cushion.
Atwood, Lewis J., assignior to sclf, Holmes, Booth \& Haydens, Waterbury, Conn. Lamp.
Same....... Lamp burner
Same....... Lamp
Atwood, Lewis J., assignor through mesne assignments to himself, Waterbury, Conn. Lamp
Atwood, Moses, New Sharou, Iowa. Seed planter
Samc..... Harrow
Atwood, Walter S., and Daniel M. Somers. (See Somers \& Atwood.)
Atwood, William, Cape Elizabeth, Maine. Machine for separating light from
heavy particles of litharge, paint, \&c.
(Reissue).
Aubin, Napolcon, Montreal, Canada. Fluid meter
(aeissue).
Aubin, N., Plattsburg, N. Y. Peat machine
Aughe, Jefferson, Dayton, Ohio. Coultcr holder .
Augspurger, John, Trenton, Ohio. Portable fence
Augspurger, John, and Peter Shellcnback. (See Shellcnback \& Angspurger.)
Aultman, C. (See Swartz \& Kreamer, assignors)
(Reissue.)
Same...... (See Buckins, Gcorge H., assignor.)
Samc............................
Same....... (See Yates, Wm., assignor.)
Auser, Joseph, Mt. Vernon, N. Y. Door and shutter fastener. (Antedated Dccember 12, 1868)
Austel, Carl F., New York, N. Y. Machinery for printing yarn
Austin, Artell. (See Strcetcr, Martin, assignor.)
Austin, Dinsmore, Underhill, Vt. Whiffetrec tug
Austin, Dinsmore, assignor to self and Homer Rawson, Underhill, Vt. Whiffetrce
Sanie...... Shaft coupling
Austin, Harrison W., Portago, Mich. Equalizing whiffctree
Austin, James E., Oswego, N. Y. Shingle machiac.
Same.........................................
Austin, Phineas E., New Haven, Conn. Mcthod of adjusting and holding dies and punches.
Austin, Richard. (See McFadden, Gcorge, assignor.)
Austin, William, England. Composition for the manufacture of safety and other friction matches.
Austin, William, assignor to sclf and Wm. Obdyke, Philadclphia, Pa. Construction of sheet-metal conductor pipes
Autenrieth, Jacol, Philadelphia, Pa. Cork cxtractor
Averill, Benjamin F., Dunkirk, N. Y. Weather strip
Averill, D. R., Newbury, Ohio. Paint.
Ayerill, James Champlain and Flisha S. Fitch Mooers N Y
Avery, Daniel W., and Francis N. Howard. (See Howard \& Avery.)

Kaestner, Charles, assignor to self and Jacob Becker, Chicago, Ill. Barbers chair
Kafer, Peter M., Trenton, N.J. Tube for steam gonerators
Kafer, P. M., and J. M. De Lacy, Trenton, N. J. Water heater for fire eugines Kaiser, A.C., Vienna, Mo. Knife cleaner
Kaiser, Charlea, New York, N. Y. Rotary steam engine
Kaiser, Frank, Buffalo, N. Y. Grinding mill
Kaiser, Gottlob, New York, N. Y. Pcrmutation lock
Kaiser, Gottlob, assignor to self and Vossnack \& Steins, New York, N. X. Still for spirits
Kanm. Jacob J. (See Willson, H. F., assignor.)
Kane, Charles, Pittsburg, Pa. Die for heading bolts. (Antedated Jan. 16, 1868) Kanc, Daniel, Tivoli, Iowa. Threshing machine.

See Du Motay \& Karcher.) Karnes, A. (See Copp, Monroe M., assignor.)
Kassing, Henry, New York, N. Y. Machine for cutting veneers
Kasson, Amasa C., assignor to self and Nelson C. Gridley, Milwaukee, Wis. Tea and coffee pot
Same ...... Culinary vessel
Same.......Brashing for tool handles.
Same.......Tea and coffee pot.
(Reissuc)
Fastcudike, J. Louis, Albany, N. Y. Cooking stove.
Kathan, F. L., and E. D. Rummer, Roscoe, Ill. Boot crimp
Kanfiman, Ernest, assignor to Reed \& Barton, Tamnton, Mass. Ice pitcher (Reissue)
Kautfman, J. J. (Sce Arter, David, assignor.)
Kaufman, Daniel, Boiling Springs, Pa. Fence
Kaufman, J. A. and G. L. Dulaney. (Sce Dulaney \& Kaufman.)
Kaufman, Simon, Fairbury, Ill. Stay for collars.
Kaufinan, Ernest, and Anthony Weber, assignors to Ernest Kaufman, Philadelphia, Pa. Butter cooler.
Kaulbcck, Charles, assignor to self and Watson W. Roberts, Boston, Mass. Manufacture of hinge hooks.
Kar, Benjamin 1). and Henry E., Fall River, Mass. Adjnstable box for ar bors, \&e
Kay, James, Salem, Ind. Whecl plow
Kaye, John, Louisville, Ky. Hemp break
Kaylor, Edward, Perrysville, Pa. Machine for making nuts.
Kaylor, George W. (See McAnlcy, Charles D., assiguor.)
Kazenmayer, Albert, and Louis Valois, Newark, N.J. Burglar alarm
Kear, George W., and John K. Sax. (See Sax \& Kcar.)
Kcarney, James. (See Thurston, Thomas E., assignor.)
Kearney, William, Union Township, N. J. Hydraut
Keasor, John L., Laconia, N. H. Gang plow.
Keats, William and John, Encland. Mode in the manufacture of boots and shocs (Patented in England April 14, 1863)
Kcek, Henry, Canaan, Ohio. Grain and hay elevator
Keefer, Miehael, Millstone Point, Ma. Rock drill
Kecler, G. W., New Haven, Ohio. Plow
Keeler; J. F., Pittsburg, Pa. Platform seale. .
Same...... Scale beam
Same-..... Hollow-headed scale beam
Same....... Platform scale
(Reissue)
Keoler, Timothy, and George S. Avery, Danbury, Conn. Variable eccentric
Kceler, Trumaa P., Worcester, Mass. Adjustable hammer and drop
Ficen, Samuel, East Bridgewater, Mass. Butter worker.
Kcency, Harris, Danville, and Charles H. Sce, New Florence, Mo. Corn planter Kecny Milton. (Sce Wickham, Horace J., assignor.)
Keep, James M., New York, N. Y. Spring pen rack.( Antedated July 22, 1867) Keep, William H., Stockton, Cal. Pump.
Kecp, William J., Buffalo, N. Y. Shield for smoothing irons
Keferstein, E. J. (See Lieber, Karl, assignor.)
Feffer, Peter, assignor to self, William and Isaac W. Levan, Reading, Pa. Machine for stretching hat bodies
Keffer, Peter, assignor to self and E. G. Fishburn, Reading, Pa. Car brake.
Keil, William, Hastings, Minn. Game table
Keiler, Levi, Catawissa, Pa. Caleulating machine. (Antedated Jan. 6, 1868).
Kcim, William J., New York, N. Y. Spiral ow winding stairs.
Kcith, Arza B., North Bridgewater, Mass. Machine for cutting hcel seats.

Namo, residenco, and inrention or discorory

Keith, Edmund, Buftalo, N. Y. Shingle machine.
Keith, Eli, Wabash, Ind., and Alfred A. Eylar, Pontiac, Ill. Composition for tanning
Keith, E. H., Bridgewater, Mass. Maehino for molding wood serews.
Keizer, Lewis R., et al. (Sec Murrill, James Ir., assiguor.)
Feller, C. F., Novada, Ohio. Nachine for taking tho toll from grain in grist mills
Keller, Isaac, Randolph, Ohio. Horse-power
Keller, Jacob H. B., Chambersburg, Pa. Cultivator.
Keller, Peter, Now York, N. Y. Gas check..
Keller, Poter P., et al. (See Cabill, George, assignor.)
Keller, Sebastian, Elizabethtown, Pa. Portable feneo
Kellott, Robert James, Sau Francisco, C’al. Ticket puncli
Kelley. Edward G., New York, N. Y. Petroleun still
Kelley, Henry H., Philadelphia. Pa. Sash fastener
Kelley, J. B., and N. P. Kinesley, Brandon, Tt. Spring-bod botiom.
İelley, James M., et al. (Sce Frer. F. E., assignor.)
Kelley, J. W., Cleveland, Ohio. Mode for attaching whip) sockets Sane...... Whiftletroo.
Kelley, Thomas B., Dundec, Ill. Ico boat
Felley, Zeno, New Bedford, Mass. Bomb lance for lilling whales.
Kellogg, A. W. (See Sherman, Edwin F., assignor.)
Kellogg, Charles, Detroit, Mich. Apparatus for boring links Same. .... . Machine for forming eyes on metal rods
Kellorer, C. A., Elyria, Ohio. Corn planter.
Kellors, C. H. B., Tontogany, Olio. ITorse hay fork.
İ̈llogg, Daniol, Jackson, Mich. Gas heater.
Same..... Tpsilanti, Micl. Clothes boiler
Kellogg, E. H., Mukwonago, Wis. Flour bolt
Kellogr, Henry, New Haven, Conn. Hat. (Antodated July 14, 1868)
Kellorgs, J. Dwight, jr., Northampton, Mass. Churn dasher
Kellogr, Lucien H., Monroe, Ohio. ILorseshoo
Kellogs, Miner K., Baltimore, Md. Postage and revente stamp
Kellogs, Theodore D., Now York, N. Y. Method of preserving bait for fishing. Same. . . . . Refrigerator
ich. Brick machine
Iíllun, Villiam C., San Francisco, Cal. Escapement
Same........... . ............................ samo .
Same...... Clock escapement.
Same .............. same
Kelly, A.J. (Sce Folmer, John F., assignor.)
Kelly, D. and C. (See Deakin, Joln, assimor.)
Kelly, D. A., et al. (See Smith. Kelly \& Mmidock.)
Felly, John, San Francisco, Cal. Construction of sea walls
Kelly, John C., and Thomas Kerr. (See Kerr \& Kielly.)
Kelly, John D., and Georgo G. Hood. (See Hood \& Kelly.)
Kelly, John Stafford, New York, N. Y. Washing machino
Kelly, Lewis L., Delaware Station, Ind. Nachine for tanning
Kelly, Miohael, Now Iork, N. Y. Fence
Kelly, Michael, St. Charles, Mo. Railroad switch
Tielly, Michael, assiguor to self, William Lalor and James Slammon, New York, N. Y: Metallic feneo

Kelly, O. S., ct al. (S'ee Whiteley, Fassler \& Kolly.)
Kelly, Robert C.. West Meriden, Comn. Coat support
Kolsey, George I. (Sce Hartwig, Charles Ir., assighor.)
Felshaw, John, Lafayette, Ind. Stean generator
Kenaga, Sammel C., Kankakee City, Ill. Dnmping platform
Kendall, Adoniram, Butfalo, N. Y. Cut-off valve gear
Iíendall, A. S., Guilford, Maine. Horse rake
Kendall, Jonas, South Framingham, aud Addison Mathaway, Lenox, Mass., as signors to Andrew T. Serven. Machine for grinding glass plates, \&c
Same...... Machine for polishing glass.
Kendall, J. B. (See Frost, Thomas TV., assignor.)
Kendall, Joseph W., Philadelphia, Pa. Foot for tubs, buckets, \&e . . (Reissue)
Kendall, Joshua T., Concord, N. H. Machine for boriug wagon liubs.
Kendall, Richard A. and Thomas, Mincral Point, Wis. Railway-track cleaner
Kondig, B. E., et al. (See Grebinger, It oury B., assignor.)
Kendig, Christian, Sate Harbor, P’a. Clanp for filing saws. (Antedated Jau. 2, $1808)$

Name, residenco, and invention or discovery.

Loftus, R. G., assiguor to self and Alonzo Farran \& Company, Chelsea, Mass. Proeess of treating petrolemm to romove the moro volatile portions.
Logan, James B., Richview, Hl. Gang plow
Logan, J. A. J., Moline, Ml. Reflector
Logan, James Ir., I2olla, Mo. Sawing machine. (Antedated May 18, 1868)..... Logan, R. R., et al. (See Olney, Logan \& Fisher.) Logan, Samuel, and Willianı II. Ford. (See Ford \& Logan.) Logan, W. M. (See Halo, W. I., assig110r.)
Loi, Nardo I'., Now York, N. Y. Pipe meneh
Loiseat, Emile, and C. F. Reguin, Nashville, Tonn. Artificial fael Loller, William B. (See Morgan, A. O., assignor.)
Lombard, Daniel, Boston, Mass. Maehine for lulling eoffeo
Lombard, N. C., and Mellen Bray, assignors to Mellen Bray, Boston, Mass. Machino for forming sheet-metal ware
Lombard, S. Howard, Winona, Minn. Dough kneador.
Long, Charles B. and V. A. N., Worcester, Mass. Knife ring
Long, Charles R., Louisville, Ky. Boring maehino.
Long, Davis E., Pawtueket, R. I. Curtain fixture.
Long, H. E., assignor to W. A. Long and Goorge B. Lindsey, Plymonth, Ind. Printers' galley
Long, H. M., Williamsville, N. Y. Gate attachment
Loug, Henry W., Couneil Bluffs, Iowa. Wagon jack
Long, Jacob, Shaver's Creek, Pa. Explosivo projeetile
Long, J. E., Norway, Maino. Staging.
Long, James P., Osargo, Iowa. Combined broadeast seeder, eultivator, androller Lony, John, et cll. (See Nock, E. B., assignor.)
Long, Joseph P. (See Bailey, Lyman M., assignor.)
Long, M. W., Bangor, Maine. Stove oven
Long, Nelson, Watortown, N. Y. Apparatis for rolling dongh.
Long, R. II, assignor to self and R. 'I. Trall, Cineimnati, Ohio. Window ventilator.
Long, Sammel N., assignor to self and Lineoln B. Bearse, South Chatham, Mass. Caster for furnitnre

Long, W. A., and J. E. Lavoy, Plymonth, Ind. Grain ear
Loner William C., and Harvoy A. Lownsbery, Loekport, N. X. Filter
Longaero, M. C., Clevoland, Ohio. Step ladder.
Longanecker, John, Now Pittsburg, Ohio. Stump extraetor
Longloy, Samucl M., et al. (See Ruggles, Solomon W., assignor) ..... (Roissue.)
Longton, Thomas Carr, Tronton, N. J. Oil oup.
.............
Loomis, A. W., Atwater, Ohio. Gange for stone ware
Loomis, Hiram G., Hartford, Conu. Level
Loornis, James A., and Alonzo Johnson, assignors to Charles Gifferd, Springfeld, Mass. Calenlating machino.
Loomis, Jason 1., Chelsea, Mass. Bastle
Loomis, Jolı S., Brooklyn, N. Y. Maehino for polishing wood
Loomis, Kellogg H., New York, N. Y. Anti-frietion steam-engine valvo
Loomis, Mahon, Washington, D. C. Plate for artificial teeth .....(Extension). Loomis, O. E., assignor to self and E. K. Sherman, Ellonburg, N. Y. Soap..... Loomis, Sanuel L., assignor to self and Charles E. Walter, Byron, N. Y. Sash holder
Lonsey, Charlos F., et al. (See Kronig, Carl, assignor)
(Reissue.)
Loraino, J. W., Philadelphia, Pa. Hanger for shafting
Lord, Charles S., and William N. Walker, Otter River, Mass. Cook stovo. (Design)
Lord, Eli W., and Willard Thompson, Homer, N. X. Churn dasher
Lord, Horaee, Hartford, Conn. Cartridge retraetor.
Same....-. Breoch-loading fire-arm.
Lord, Jolin. (See Sladdin, Josoph, assignor.)
Loring, Joseph G., et al. (See Heyl, John A., assignor.)
Lorenz, Josepl, Cineinnati, Ohio. Organ pipe.
Lorton, Nicholas, and John S. Davison. (See Davison \& Lorton.)
Losie, John M., Indianapolis, Ind. Spring-bed bottom.
Lossen, Joseph Theodoro, Bavaria. Governor for steam and other enginery.... Lothrop, Eben W. (See Vogel, Kasimer, assignor.)
Lothrop, Menry O., Milford, Mass. Steam-engine eut-off
Samo.-.... Steam engine.
Lothrop, Menry O., assignor to sclf, Crawford and Joseph R. Pierce, Milford Mass. Coating heel and too iron for boots and shoes
Lothrop, Llewellyn D., Dover, N. H. Fishing taeklo
Lotridgo, Benjanin F., Now York, N. Y. Bolt.
Lotz, William H., Chieago, Ill. Folding loungo.
Louden, Henry W., Ephrata, Pa. Egg beater.
Louden, William, Codar Township, Iowa. Elevator
Londen, William, Fairfield, Iowa. Hay elevator
Longh, John, Buekingham Village, Canarla. Dressing saw teeth
Loughborough, William S., Rochester, N. Y. Water-proof-leather cement
Louis, Lafayette, Provideneo, R. I. Melodeon
(Reissue)
Sane..-.- Boston, Mass. Tremolo
Same.... Piano with melodeon and tremolo attaolment. (Divisiou $A$, reissue)

## Alphabetical list of patentees for the year 1868-Continned.

Rinehart, Martin, Lockport, Ml. Compound for treating piles
Rink, Pcter, and James Docherty, Wertsville, N. J. Adjustable barrel head
Riplcy, Danlel C., Pittsburg, Pa. Manufacture of glass. Same...... Birminghan, Pa. Manufacture of glass ware.
Ripley, Daniel C., assignor to Ripley \& Co., Pittsburg, Pa. Glass lamp. Same ...... Glass lamp......................................... (Division 2, r'cissuc) Same..........ssme.............................................. (Division 1, reissue)
Ripley, Ezra, Troy, N. X. Button fastener Samc...... Serew-handle attachment. Same....... Toy pistol.
Ripley, Ezra, assignor to self and W. C. Davis, Troy, N. Y: Tea-kettle
Ripley, E. H., North Chelmsford, Mass. Machine for planing mouldings
Ripley, John L., Fremont, Ohio. Hay knife
Ripley, M. H., and W. N. Temple, Minneapolis, Minn. Combined coru-sleller and apple-griuder.
Risch, Conrad F. L., Huntingburg, Ind. Heliometer
Same.................. ....................... same.
Risher, Daniel, ir., Dravosburg, Pa. Device for loading coal.
Risley, Seldon N., Brooklyn, N. T. Cigar case
Rist, J. W., assignor to self and Ira A. Hebbarl. Rochester, N. I. Kinitting machine

Rist, J. TV., assignor througle mesne assignments to self and Ira A. Hebbard, Rochester, N. Y. Register for knitting machines. (Antedated Sept. 24, 1868)
Ritchel, Charles F., Chicago, III. Can opener
Same...... Serial crank
Ritchel, Charles F., assignor to selt and Henrs S. Mayues, Chicago, In. Chalk and sand-paper holder for billiard tables
Ritchie, Charles O., and James H., North Marison, Inl. Press.
Ritchie, E. S., Brookline, Mass. Holtz electrical machine
Same...... Paint for liquid compasses, \&c.
Ritchie, Francis, and Nicholas S. Vedder. (See Tedder \& Ritchic)... (Design.)
Ritchie, William, and Alexander C. Martin. (See Martio \& Ritchic.)
Rittenhouse, Alval, Philadelphia, Pa. Clamp for holding leather.
Same.......Fcmalc syringe and ber pan-
Ritteuhouse. H. N., et al. (See Mreyer, Berck A., assignor.)
Rittenhouse, John P. (See Thompson, M. L., assignor.)
Ritter, Henry M., Covington, Jy. Machine for riveting hinges.
Ritter, Theodore. (See Mollenhaucr, Edward, assignor.)
Ritterhoff, F. W., and Nicholas H. Borgteldt. (See Borgfeldt \& Ritterlıff.)
Ritz, Adam G., assignor to self, John B. Carter, and William Lindley. Elizabethtown, Ind. Shingle machinc
Rivera, Geronimo, Cambritgeport, Ind. Pine-apple beer
Rivers, T. L., St. Lonis, Mo. Animal trap. (Antedated May 13, 1868 )
Fives, Jacques, France. Mcthod of casting metal
Rivot, Lonis Edouard, assignor to Jacques Gaillardon, France. Methol and means for treating ores of gold and silver

Same...... Apparatus for amalganating gold and silver ores ..........................................
Same......Treating ores with superhcated stean.
Same....... Process of treating gold and silver ores
Rix, Altred, San Francisco, Cal. Fastcning for buttons
Roach, Francis, assignor to self and Joseph Zane, Boston, Mass. Fancet
Roath, Lorenzo W., Lexington, Ohio. Bedstead
Robbins, A. H., Copenhagen, N. X. Horse rake
Robbins, C. G. (See Maxham, Norman, assignor.)
Tabobins, Edgar A., Wrentham, Mass. Trade mark $\qquad$ (Dcsign)
Robbins, Edward Y., Cincinuati, Ohio. Passenger railway car
(Dcsign).
Robbins, Elisha, Worcester, Mass. Check for picker staff.
Same.......Railway snow-plow
Same.......Railway.
Same ...... Scroll saw-mill
Robbins, Henry R., assignor to self and TV. H. Green, Baltimore, Ma. Tobacco pipe.
Robbins, Henry R., assignor to self, J. J. Moran, and G. Colton, Baltimore, Md. Steam-pipe coupling for railroad-car heaters
Robbins, Henry Seymour, Newton Falls, Ohio. Device for strawberry culture
Robbins, Hiram H., Lymu, Mass. Feather renovator
Robbins, Hiram H., et al. (See Lennox, Robbins \& Hayes.)
Robbins, Horace T., Boston, Mass. Locking device for umbrellas.
Robbins, Horace W. et al. (See Brafley, John, assignor:)
Robbins, J. A., and Tilliam Kcrr, jr. (See Kerr \& Robbins.)
Robbins, Jasper N., et al. (See Lyon, Slumard \& Robbins.)
Hobbins, Louis S., New York, N. Y. Preserving skius of animals
Same...... Process of oiling, prescrving, and streugthening leather
Same....... Process of cleaning wool, \&ce
Same....... A gricultural stcam boiler . .
Same....... Process for purifying butter
Pobbins, Richard B. (See Mason, Austin Z., assignor.)
Same...... (See Wallace, Luther R., assignor.)
Robbins. Richard B., and Austin Z. Mason. (See Mason \& Robbins.)

Wattis, Edward, sr., Philadelphia, Pa. Pepper-easter bottle
Wattles, Joseph W., Canton, Mass. Clearer for ring-spinning machines.
Same...... Ring and traveller spinning machine
Same...... Ring for ring and traveler spinning machine ........... (Reissue) Same.......Ring for spinning machines
Watts, Hiran, and John W. Morrett. (See Morrett \& Watts,)
Watts, Joseph, Birmingham, Great Britain. Heating furnace
Watts, Joseph, Brazil, Ind. Churn
Wangaman, Eli, Blairsville, Pa. Combined eider mill and press.
Way, Francis K., Springfield Ohio. Machine for twisting wax-ends
Way, Johh, Waterbury, Conn. Straph-holding device.
Way, John A., assignor to the Darrow Manufacturing Company, Bristol, Conn. Washer
Way, Seth, La Porte, Ind. Gang plow Samo....... Sled
Same...... Cultivator
Wayman, Edmund G., assignor to Robert V. Snodgrass, Louisville, Ky. Preparing hemp and flax fibre for the manufacture of dusters, \&c.
Weakley, T. B. (See Zinn, John Hartzell, assignor.)
Weand, W. R., et al. (See Wagenhorst, James J., assignor.)
Weare, Joseph, Fitchburg, Mass. Surface file handle.
Weatherill, Henry, and Joseph Cookshoot. (Sce Coekshoot \& Weatherill.)
Weathers, James, Greensburg, Ind. Mode of attaching hubs to axles
Wearer, Daniel, Guilderland, N. Y. Sewing machino
Weaver, George, and II. Nelson Allen, assignors to selves and E. R. Cheney, Boston, Mass. Barrel head and top
Weaver, George L., Hartford, Connectieut. Journal box
Wcaver, Jacob, jr., Elizabethville, Pa. Corn planter and seed drill
Weaver Joel D., assignor to self, C. A. Sherwood, and L. S. Bunnell, Troy, N. I. Spirit meter.
Weaver, Rebecea, Washington, D. C. Trunk

> Same .......Fastening for buttons.

Weaver, Theophilus, Harrisburg, Pa. Clothes hook and line-holder eombined Same...... Safety-horse hiteh. (Antedated Sept. 22, 1868)
Same....... (See Patton, Wm. P., assignor.)
Wearer, W. B. Reading Center, N. X. Saw set
Webb, C. H. New York, N. X. Adding maehine
Webb, Charles R., Philadelphia, Pa. Boom gear
Webb, George, Lewiston, Maine. Bridle bit
Webb, Josiah, Spartansburg, Pa. Washing maeline
Same......Clothes wringer
Webb, Milo, Chenango Forks, N. Y. Mechanical movement
Webb, Thomas S., et al. (See Martin, Barrett \& Webb.)
Webb, Timothy U., Springfield, Ill. Gang plow
( Antedated Dec. 22, 1868)
Webber, Eugene, Portage, Mieh. Horse collar
Webber, G. A., et al. (See Vanghn, Chadwell, Childress \& Webber.)
Webber, John, and Edward McGivern. (See Kinney, Israel, assignor.)
Weber, Anthony, and Earnest Kaufmann. (See Kaufmann \& Weber.)
Weber, Charles, and Henry Reimann, West Meriden, Conn. Lamp
Weber, George R., Springtield, Ill. Washing machine
Webster, Alexander, Seneea Falls, N. Y. Apparatus for distilling
Webster, Charles, New Haven, Vt. Feed-water heater for boilers
Webster, D. P., New York, N. Y. Furnace for smelting lead ores
Same...... Bottle for holding hydro-luorie aeid.
Same...... Smelting lead ores
Webster, E. Z., Louisville, Ky. Stove for railroad cars
Same...... Norwich, Comn. Hat eonformator
Webster, Harvey, Cambridge, Vt. Whifletree... Same...... Thill coupling.
Webster, J. B., Stockton, Cal. Seed sower and harrow attachment to gang plows Webster, John G., et al. (See Hilton, Webster \& Wheeler.)
Webster, John T., assignor to Edward Harvey, New York, N. Y. Floor oileloth pattern.
(Design).
Webster, Joseph R., Boston, Mass. Mode of straining wood saws.
Webster, Nelson, Plainfield, N. J. Weeding tool
Webster, R. A., Sandisfield, Mass. Imer sole
Webster, R. A., assignor to self and John and R.J. Dowd, Sandisfield, Mass. Inner sole for boots and shoes
Webster, William, Morrisania, N. Y. Wearing pile fabries
Same.......Loom for weaving pile fabries. (Antedated Aug. 24, 1868)
Wedekind, Gustav, Philadelphia, Pa. Lamp shado
Same...........................................same.
Wedekind, Gustav A., and Helmuth Dueberg, New York, N. Y. Burning kilı Wced, Alfred, Boston, Mass. Boring faucets

Same...... Self-boring stop-eock.
Weed, Andrew J., Hardwick, Vt. Sugar pan derrick.

## Alphabetical list of patentees for the year 1868-Continued

Name, residence, and invention or discovery.

Westcott, J. D., Waterford, Pa. Pump piston
Westcott, Robert. (See Speucer, Elihu, assignor.)
Wcstfall, Wesley. Chelsea, Mich. F'ield roller
Westhcad, Marcus Brown, England. Riblon roll clip
Same...... Tape box
Westinghonse. George, jr., Schenectady, N. Y. Railway fiog
Westlake, William, Brooklyn, N. I. Lantern globe

> Same...... Lanteru
> Same...... Manfactrro of spouts for tea pots Same...... Chicago. Ill. Straincr
Westland, Charles S., and John B. Allen, Providence, R. I. Kitchen implement
Weston, C. H., Lowell, Mass. Bench hook, (for carjenters' benches)
Weston, C. I., Cnmmington, Mass. Dressing hides and furs
Weston, Darid M., Boston. Mass. Centrifugal machiur for draining sugar and (Reissue).

## other substances <br> Same..... Machine for scparating paints and other solid substances

Same......Self-oiling hub for pulleys, \&c same. ..... Belt sturd
Weston, D. M., Boston, Mass. Self-balaucing centrifugal machine.
Weston, D. Mr, assignor to Green, Lweed \& Company, Boston, Mass. Belt punch
Weston, Erastus D., Taunton, Mass. Cooking stove
Same......................................... - ame
Weston, Henry, and Gcorge C. Langtry, Dayton, Ner. Concentrator for dressing ores
Weston, J. W., New York, N. X. Fruit carrier. (Antedated October 17, 1868.)
Weston, T. A., Buffalo, N. X. Ratchet head and lever Same.
Same.......Ratchet
Same...... Ratchet brace, or lover
Same.......Ratchet brace lever
Weston, Thomas Aldridge, England. Coupling and brake
Westover, Gcorge C., Paducal, Ky. Combincd churn and ice-crean freezer
Westover, John, Taylor, Ill. Elevator
Wctherbee, Albert. Waltham, Mass. Composition tip for billiard cues
Wetherbec, John W., assignor to self and Richard Rowse, Charlestown, Mass.
Reclining chair
Wetherell, Joseph L., Attleboro, Mass. Pad for horses hoofs
Wetherill, Robert N., et al. (See Stratton, James, assignor.)
Wetherill, Samuel, Philadelphia, Pa. Process of manufacturing white oxide of zinc
Same...... Apparatus for the manufacture of white oxide of zinc
Wetmore, H. P., Elizabeth, N. J., and J. G. Hitchcock, Ncw Jork, N. X. Clotlr diawers.
Wetzel, Anton, Cincinnati, Ohio. Permutation lock.
Wetzel, Paul and Georgc. (See Phillips, M. E., assignor.)
Wetzell, Ludwig, Washington, D. C. Hames tug buckle.
Wharff, Joseph, Bangor, Maine. Machine for boring hubs for wagon wheels
Wharry, John I., Moundsville, West Va. Ventilator and window shade Same...... . window metting.
Wharton, Gcorge, Jcrsevville, Ill. Gang plow
Wharton, J. C., Nashville, Tenn. Tumbler stand
Same......Jct attachment for soda fountains
Wharton, William, jr., Philadelphia, Pa. Railway fros
Same....... Railway switch
Same .............. same
Wheat, James E., Rochester, N. X. Letter game
Wheat, S., Middletown, and D. B. Wheat, Now York, N. Y., assignors to Francis M. and Ellen A. Wheat. Refrigerator
Wheatley, R. B., Grandriew, Ind. Tirc-setting machine
Wheaton, L. F., Madison, Conn. Dust pan
Wheaton, Miles B., New York, N. Y. Clothes dryer
Wheeler, Benjamin Fr., Calais, Vt. Wagon brake
Same......Slcigh brakc.
Wheeler, Charles L. (See Hascltine, John, assignor.)
Whecler, Cyrenus, jr., Auburn, N. X. Pitman counection for harvesters

Same......................amo
Samc.........Harvester rakc

Same......Grain and grass harrester ....................(Extension of No. 877).
Samo.................... samo................................(Extension of No. 879)

Same.....................same............................. (Extension of No. 881)
Same...... (See Merrell, Wm. G., assignor.)
Same...... (Ser, ANington, Charles C., assignor.)

Name, residence, and invention or discovery.

Wheeler, Elonzo S., assignor to self and J. E. Wheeler, Westport, Conn. Button Wheeler, Emery I., and Wm. H. Vaughan, Cannelton, Ind. Machine for saw. ing lath.
Wheeler, George, Chicago, Ill. Lanteru
Wheeler, George W., and George V. Allen, Harttord, Vt. Water wheel
Wheeler, Henry A., et al. (Sbe Deming, F., assignor.)
Wheeler, Hiram E., et al. (See Hilton, Webster \& Wheeler.)
Wheeler, H. F., Boston, Mass. Nut squaring chnck
Wheeler, James W., et al. (See Cawl, Corning \& Wheeler.)
Whecler', Joel M., Oxford, Conn. Stoam jet head for cleaning boiler flues
Wheeler, John, et al. (See Chandler, Wm. H., assignor.)
Whecler. Johu A., Freeborn, Minn. Wind mill.
Wheeler, John B., Neville, Ohio. Envelope.
Wherler, J. H., Addison, Vt. Match box.
Whecler, J. T., St. Charles, Ml. Washing machine
Wheeler, John W., assignor to H. F. Wheeler, Cleveland, Ohio. Machine for spreading paint or mastic
Wheeler, Leroy B., Madison, Wis. Washing machine.
Wheeler, N. W., Ripon, Wis. Combined harrow and eultivator
Whecler, Orren L., Iewiston, Maino. Measuring fancet
Wheeler, Seth, Albany, N. Y. Pulley and gearing for machinery
Same....-. Shaft coupling.
Wheeler, William O., Deposit, N. Y. Street lamp.
Wheelock, Finlay \& Company. (Sec Ford \& Logan, assignors.)
Wheelock, Jerome, Worcester, Mass. Piston
Wheclock, Luke, assignor to Winchester Repeating Arms Company, New Haven, Conn. Magazine fire-arm.
Whelan, Charles A., et al. (See Bowen, Reed \& Whelan.)
Whelan, Martin, New Haven, Conn. Carriage hub
Wholden, Andrew, South Dennis, Mass. Lantern.
Whelpley, James D., Boston, Mass. Rotary steam-engine
Whelpley, James D., and Jacob J. Storer, Boston, Mass. Steam boiler furnace.
Whetlock, Daniel. (See Seymour, James M., assignor.)
Whipple, Heman, and Elon Denio, Baldwinsville, N. Y. Making forks
Whipple, James 'I., Chicago, Ill. Pump for deep wells
Whipple, John L., Detroit, Mich. Spring seat.
Whipple, Milton D., Cambridge, Mass. Felting hats
Whipple, S. J., assignor to self and Joseph H. Atkinson, Orville, Cal. Churn.
Whisler, David, Union Township, Ohio. Ditching machine $\qquad$ (Reissue)
Whisler, H., and J. S. Berry, New Market, Ohio. Still
Whissemore, John H., Mansfield, Ohio. Harness tree
Whitaker, Bonjamin $\bar{F} .$, Whitestown, Ind. Gate and door spring
Whitaker, James, and A. M. Damon. (See Damon \& Whitaker.)
Whitaker, Samuel H., Cincinnati, Ohio. Globe valve..
Whitall, Henry, Woodbury, N.J. Machine for grinding the cutters of mowing machines.
(Reissue).
Whitcomb, Alonzo, Worcester, Mass. Planing machine
Whitcomb, George, Port Chester, N. Y. Horse rake..... (Division A, reissue). Same.......................................................................... White, Aaron B., Mendon, Mich. Bolt trimmer .
White, Albert M., Thompsonville, Conn. Railway ear seat
White, Albert M., assignor to the Amcrican Brush Company, Thompsonville, Conn. Brush-making macline.
White, Almeth. (See Timmons, Wm. W., assignor.)

Name, residence, and invention or discovery.

Worstenholm, George, Newark, N. J. Bolt and rivet machine
Worster, George W., Bangor, Maine. Culinary steamer....
Worth, H. B., assignor to self, William H. Chapin, and A. L. Crcamer, Chicago,
Ill. Ventilator
Wren, George A., and Ralph R. Lee. (See Lee \& Wren.)
Wrerm, R. C., Waverly, Mo. Hemp harvester.
Wright, Abram and George F., Clinton, Mass. Toy safe with puzzle lock ........
Wright, Alram Wallace, Bruker Hill. Ill. Spring bed-bottom
Wright, Alexander, Alleghany City, Pa. Plow
Wright, Benjamin P., San Francisco, Cal. Potato digger
Wright, Charles, Newark, N.J. Friction clutch pulley. (Antedated July 10, 1868).

Wright, David, Boston, Mass. Composition for gilding moldings, \&c...........
Wright, David W., New York, N. X. Pocket sum dial..................(Design).
Wrimht, Edward S., assignor to Samuel Leggett, New York, N. Y. Cutter head Wright, E. W., and Norman Rose. (See Rose \& Wright.)
Wright, George F., and William Orr, jr. (See Stewart, Hugh, assignor.) Same......Clinton, Mass. Tag. (Antedated June 5, 1868)
Wright, Henry, assignor to James IR. Clark, Saco, Maine. Boot crimp.
Wright, Homer, assignor to self, Henry H. and Benjamin F. Collins;'Pittsburg,
Pa. Construction of jug tops.
(Reissue).
Wright, Humer, et al. (See Davis, E(lward M., assignor.)
Wright, Horace H. W., assignor to self, James Morse, Richard S. Jenness, and Albert Pickernell, South Boston, Mass. Hammer.
Wright, Howell W., Taunton, Mass. Electroplating and plated ware..............
Wright, Howell W., assignor to Reed \& Barton, Taunton, Mass. Alloy for the manufacture of spoons and forks.

## Same...... Manufacture of table ware

Wright, Jacob J., and John H. Penny, Harrison, Ohio. Corn planter
Wright, John, and Charles R. Tompkins. (See Tompkins \& Wright.)
Wright, John A., Keene, N. H. Combined mop and wringer Sane ..... Mop
Wright, Joseph, Philadelphia, Pa. Stop for umbrella runners
Wright, Lewis R., Troy, N. Y. Cultivator and plow eombined
Wright, Luna, and Samnel J. Miller. (See Miller \& Wright.)
Wright, Lysander, Newark, N. J. Sawing machine ...........
Wright, N. A., and W. A. Terry. (See Clark, S. W., assignor.)
Wright, Nathaniel F., and Augustus R. Hobbs. (See Hobbs \& Wright.)
Wright, Rufus, Brooklyn, N. Y. Cherry stoner
Saune.................................. same
Wright, Rufas, assignor to self and J. B. Chadwick, New York, N. Y. Crayon holder.
Wright, R. B., Vermillion, Ill. Seed planter.
Wright, Warren, St. Louis, Mo. Hominy and smut mill.
Wright, Wendell, Bloomfield, N. J. Clasp for fastening garme....ts
Same. ..... Suspender fastening
Wright, Willian, New York, N. Y. Cut-off valve gear
Wright, William P., assignor to self and Collins W. Waiton, Philadelphia, Pa. Process for treating muslin for sweat linings, \&c., for hats.
Wrightington, C. D., and B. P. Rider, Chelsea, Mass. Brick machine.
Wrighston, Hugh S., assignor to M. M. Welby, and C. H. Slicer, Baltimore, Mi. Wrench
Wrinkle, James, Lee, Mass. Machine for mixing coloring matter with paper pulp
Wroe, John A., Hagerstown, Mi. Exercising chair
Wulsten, Charles, Lafayette, Ind. Printers' ink
Wunderlich, J. N., Philadelphia, Pa. Traveler's trunk
Wurtz, Henry, New York, N. X. Manufacture of refined grahamite.
Same...... Preparation of grahamite.
Same...... Preparation from grahamite called "Trisine;
Same.......Material prepared from grahamite called "Viscosine",
Same....... Mode of componnding printers' ink from grahamite
Wyatt, Henry M., Somerville, Mass. Lamp burner.
W yatt, Lorenzo D., assignor to self, Samuel Farley, and Edward McManama, Castleton, Ind. Corn planter
Wyche, W. E., and Young P. Dickson, Brookville, N. C. Hopper shoe for grist mills
Wyckoff, Arcalous, Elmira, N. X. Pavement.
Wyekoff A (See Stevens Lafayette assignor)

Wyckoff, J. H. and W. K., Ripon, Wis. Photographic camera.
Wykoff, John, Grant City, Mo. Compornd doubletree
W yley, Andrew, Birmingham, England. Breech-loading fire-arm. (Patented in England Mareh 25,1867 )
Wylie, George, and George W. Welsh. (See Welslı \& Wiley.)
Wylie, John, and W. J. Benedict. (See Benedict \& Wylie.)
Wyman, Dana. (See Beardsley, Theodore, assignor.)
Wyman, F. S., Chicago, Ill. Can opener
Wynn, James M., Scipio, Ind. Wagon coupling
Wyon, Joseph Shepherd, and Alfred Benjamin Wyon. (Sec Hill, Charles J., assignor.)

| 82, 372 | Zimmerman, Valentine, Morris, Ill. Beehive | Sept. 22, 1868. |
| 76,029 | Zimmerman, William, Colfax, Iowa. Horse hay | Mar. 24, 1868. |
| 83, 897 | Zimmerman, William, Quiney, Ill. Hammer | Nov. 10, 1868. |
|  | Zink, C. H., et al. (See Wagenhorst, James J., assignor.) |  |
| 84, 155 | Zinn, Benjamin F., Mt. Rock, Pa. Open or middle ring | Nov. 17, 1868. |
| 76, 577 | Zinn, Bernhard, H., New York, N. Y. Extension cha | Apr. 7, 1868. |
| 79, 288 | Zinn, John Hartzell, assignor to self and T. B. Weakley, Harrisburg, Pa. Line holder |  |
| 76,030 | Zinsser, August, New York, N. Y. Ta | Mar. 24, 186 |
| 76,031 | Zinssmann, Emil, assignor to self and Charles Rumpff, New York, N. Y. Compound of aniline colors | Mar. $24,1868$. |
| 83, 433 | Zippe, G., assignor to self and Werner Werner, New York, N. X. Process and eomposition for tanning leather | Oet. 27, 1868. |
|  | Zisemann, John F., et al. (See Sebold, George, assignor.) |  |
|  | Zoiner, P. W., and C. Harris. (See Harris \& Zoiner) ................... (Design.) |  |
| 77, 702 | Zopff, Heinrieh, Milwaukie, Wis. Culinary apparatu | May 5, 186 |
|  | Zoppi, Peter, et al. (See Zamboni, Isidoro, assignor |  |
| 79, 718 | Zumsten, F. S., Evansville, Ind. Hea | July 7, 1868. |

## ALPHABETICAL LIST OF INVENTIONS.

## Alphabetical list of inventions-Continued.

| Invention or Discovery. | Name of Patentee. | No. |
| :---: | :---: | :---: |
| Alarm, Till | A. D. Hoffman | 83, 498 |
| Alarm, Time | L. Baum | 73, 154 |
| Alcoholic spirits from tomatoes | J. S. Williams | 84,455 |
| Ale, becr, \&c., Preserving | R. Jickemeyer | 82, 394 |
| Ale, porter, \&c., Brewing | F. M. Ruschhaupt | 81, 214 |
| Ale, porter, \&c., Composition for the ma | T. Hawks. | 78, 874 |
| Alkali, Metal cans and cases for putting | J. McCoy | 77, 899 |
| Alkalies, Putting up. | J. Reakirt | 79,599 |
| Alloy for metallic roofing | L. S. Enos | 77, 874 |
| Alloy for the manufacture of spoons and | H. W. Wright | 77, 793 |
| Alunina, Sulphate of | H. Pemberton. | 78, 005 |
| Alum, Porous. | H. Pemberton | 82, 747 |
| Amalgamating gold and silver | W. M. Fuller | 81, 767 |
| Amalgamator.. | A. L. Fleury | 73,241 |
| Amalgamator | R. and W. F. Smith | 76,538 |
| Amalgamator. | W. Robbins. | 77, 097 |
| Amalgamator. | S. Fountain | 77, 183 |
| Amalgamator. | A. Horn | 80, 739 |
| Amalgamator | G. A. Mariner and J. Kune | 82, 730 |
| Amalgamator, Electrical | J. H. Rae | 83, 091 |
| Amalgamator, Shoe for | J. H. Bullock | 77, 868 |
| Anchor. | D. C. Pieree | 73, 035 |
| Anchor | D. C. Pieree | 73, 036 |
| Anchor. | J. M. Russell and D. Jol | 73, 758 |
| Anchor | F. Wittram. | 78,852 |
| Anchor | J. A. Habberley | 82, 940 |
| Auchor | C. W. Roeden | 84, 304 |
| Anchor | E. P. MeCarthy and J. J | 44, 565 |
| Anchor. | F. Howes ........ | 85, 228 |
| Andirou and fire-place | F. Passy. | 79, 253 |
| Aniline colors, Compound of .. | E. Zinssmann | 76, 031 |
| Animals, Catehing and holding domest | H. V. Van Etten | 85, 413 |
| Animals, Cleaning the intestines of slat | J. A. Thompson | 79, 031 |
| Animals in slaughtering, Handling | A. Graves .- | 74, 681 |
| Animals, Relieving choked. | G. Clump | 76, 993 |
| Animal substances, Preserving | O. Lugo | 81, 185 |
| Animals, Suspending slaughtered | W. Leland and V. E. Rusco | 85, 109 |
| Animal tether | M. and S. C. Leonard. | 74,553 |
| Animal tether, Portable | A. Ralston | 74, 475 |
| Ankle brace. | S. B. Shearer | 76,353 |
| Ankle or knce guard | H. A. Hall | 77, 728 |
| Annealing pot and sa | J. Hibell | 79, 759 |
| Annuneiator | J. S. Birch | 84, 474 |
| Anvil for forming hor | F. Saylor and E. T. Rhodes | 84,583 |
| Apiary ..... | W. Faulkner. | 74, 065 |
| Apple corer | M. M. Hatch | 80, 172 |
| Apple corer and cutter | A. Frost | 80, 938 |
| Apple corer and quarterer | J. M. Hassam | 83, 494 |
| Apple corer and slieer | D. R. Reed | 80, 010 |
| Apple corer and slicer | I. Rogers | 80, 014 |
| Apple grinder and corn | M. H. Ripley and W. N. Tem | 82, 250 |
| Apple parer.. | J. F. and E. P. Munroe. | 75, 951 |
| Apple parer. | C. A. Wiggin ...... | 80, 580 |
| Apple parer, eorer, and | A. Clark | 78. 721 |
| Apple quarterer | C. E. Billings | 84, 791 |
| Apple slicer. | H. and J. S. B. Norton | 73, 373 |
| Arches, tunnels, \&e., Con | G. T. Lape | 81, 797 |
| Arm, Breeeh-loading | C. E. Sneider | 85, 252 |
| Armor plating for vessel | G. J. Gunther | 84, 418 |
| Arno rest and paper cutter, Combined | C. B. Dickinson. | 78, 192 |
| Arm rest, Penman's...................... | J. B. Withey. | 78, 253 |
| Arms of violiu players, Regulating the movements of. | E. Mollenhauer | 75, 950 |
| Articulator | E. T. Starr. | 78, 151 |
| Ash bin | W. W. Chase | 80451 |
| Atomizing apparatus for surgical use | A. M. Shurtleff | 75, 991 |
| Auger ....... | I. T. Payne | 75, 454 |
| Auger | A. C. Varghan | 76, 278 |
| Auger | N. C. Sanford. | 79, 012 |
| Auger | L. Colt. | 80, 915 |
| Auger and bit. | J. Swan | 78, 769 |
| Auger, Earth-boring | J. W. Heath | 76, 110 |
| Auger handle | J. Swan | 76, 956 |
| Auger handle | H. D. Pennoyer | 30, 365 |
| Auger handle | T. C. Hendry | 83, 156 |
| Auger, Hollow | A. Brush | 73, 162 |
| Auger, Hollow | F. Kraus | 76, 205 |
| Auger, Hollow | J. L. Parker | 76,804 |
| Auger, Hollow | W. A. Ives | 82, 957 |
| Auger, Hollow | J. H. Beauregar | 85, 423 |
| Auger, Post... | C. Adams . | 83, 233 |

## Alphabetical list of inventions-Continued.

## Invention or Discovery.

Carriage loek
Carriage-loop and billet cover
Carriage, Main bolt or goose neek stay on.
Carriage, Metallie scroll end for spring bar for
Carriage perch.
Carriage perch conncetion
Carriage pole
Carriage pole, Adjustable
Carriage pole, Convertible
Carriage pole support
Carriage pole tip.
Carriage prop joint.
Carriage, Runner attaehment for
Carriage, Running gear for
Carriage, \&c., Spring braee for
Carriage, sand eap for
Carriage seat.
Carriage seat, Lock for
Carriage seat, Shifting rail for
Carriage shacklo
Carriage shackle
Carriage shaekle
Carriage shaft and pole eorupling
Carriage shaft, Coupling for
Carriage, Sliding seat for
Carriage spring brace
Carriage, Steam
Carriage step
Carriage step
Carriage, Step eover and whoel fender for.
Carriage, Stump joint for
Carriage, Subjoint for
Carriage, Sustaining deviee for draught pole for
Carriage thill
Carriage thill
Carriage, Thill and pole for
Carriage top
Carriage top
Carriage top
Carriage top
Carriage top, Attaehing
Carriage top framo.
Carriage, Top prop for
Carriage, Top prop for
Carriage, Top prop for
Carriage top prop, Joint for
Carriage, Wiudow holder for
Carriage, Wooden washer for
Carrier, Chain, and tug
Cart and wagon, Dumping
Cart body
Cart, Dumping
Cart, Dumping
Cart, Dumping
Cart, Dumping
Cart, hay, Self-loading
Cart, Log
Cart, Self-loading
Cart, Self-loading
Cartridge
Cartridge box.
Cartridge box.
Cartridge box
Cartridge box.
Cartridge box, Fixed ammunition holder for
Cartridge box, Fixed ammunition holder for
Cartridge eharger
Cartridge, Explosive
Cartridge extraetor
Cartrtdge for small-arms
Cartridgo holder
Cartridge, Metallie
Cartridge. Metallie priming
Cartridge, Metallie priming
Cartridge, Metallic priming
Cartridge, Metallie priming
Cartridge, Metallie priming
Cartridge shells, Construction of
Cartridge, shot.
Carving machine
Carving machine

Invention or Discovery

Genelator, Steam
Generator, Steanm
Generator, Steam, and air heater combined
Gencratur, steam, Combination of a puddling furnace with a
Generator, steam, Drop tube
Gencrator, steam, Feed water heater for
Generator, steam, Feed water heater for
Generator, steam, Feed water heater for
Gencrator, steam, Heating and purifying feed water for
Generator, stean, Low water detecter for
Generator, steam, Preventing inerustation in.
Generator, steam, Regulating the supply of water to
Gencrator, steam, Spark arrester for
Generator, steam, Tube for.
Generator, steam, Water heater for
Generator, steam, Water indieator for
Gib
Gib and selfoiler.
Gig for cloth
Gimlet
Gin, Cotton
Gin, Cotton, saw
Ginger suaps, \&e., Making
Girder and boam
Girdle or waist belt
Glass and mica, Gilding and silvering
Glass and "moils," Iemoring metallio seales from
Glass, Applying crystal frosting to
Glass froit jars, Griurling
Glass knob
Glass light
Glass, Mannfaeture of
Glass, Manufacture of
Glass, Manufacture of
Glass, Merlieine
Glass plates, \&c., Grinding
Glass, Polishing
Glass pressing machine
Glass puessing machine
Glass, Printing upon
Glass, Sheet
Glassware
Glassware
Glassware, Mannfacture of
Glassware with handles, Manufacture of
Glaziers' points, Cuting
Globe
Glube joint
Globe, Lantern
Glowe, Oil, for steam chest
Globe, school, Coustruction of
Glove
Glove fastener
Glove fastening
Glove fastenimg
Glue, Drying
Glne, Drying
Glue, Drying
Glue, clivins, Holder for
Glue, Mannfacture of
Glue stock, Preparation of
Glue, Treating
Glyeerine, Manufacture of
Glyceriue, Nitro
Gold and silver, Amalomating
Gold and silver firom their ores, Extracting
Gold and silver from their ores, Extracting
Gold and silver ores, Amalsanating
Gold and silver ores, Treating
Gold and silver ores, Treating
Gold bullion to tond
Gold fiom its ores, Extracting
Gold from ores, Separating
Gold, silver and othcr metals from their ores, Colleeting

| Heater, Gas. | W. Jones | 79, 230 |
| Heater, Gas | H. Y. Lazear | 79, 989 |
| Heater, Gas | D. H. Lowe | 84, 889 |
| Heater, Gas | J. T. Greenwood | 81, 892 |
| Heater, Gas and other | J. Q. Birkey | 75, 516 |
| Heater, Hot air furnace for | J. 13. Driseole | 82, 811 |
| Heater, Hot water | G. H. Sellers | 83, 553 |
| Heater of steam generators, Feed water | H. N. Waters | 74, 735 |
| Heater, Portable service | W. H. Seanlan | 85, 136 |
| Heater, Sad-iron | S. M. Johnson | 81, 377 |
| Heater, Sad-iron | D. H. Lowe | 84, 429 |
| Heater, Sad-iron, nurse lamp, and foot | E. Small | 75, 802 |
| Heater, Steam | W. Simpson and W. Howitt | 76, 534 |
| Heater, Steam | P. F. Kessler and J. Carlisle | 78, 377 |
| Heater, Steam | J. Davis | 80, 396 |
| Heater, Steam | G. M. Woodward | 83, 351 |
| Heater, Steam | F. W. Sehultz aud J. A. Wilson | 83, 885 |
| Heater, Steam | P. D. Wesson | 84, 977 |
| Heater, Steam | J. Johnson. | 85, 176 |
| Heater, Steam | J. Johnson. | 85, 177 |
| Heater, Steam, for brewers and others | T. Williams and J. J. Xates | 74, 469 |
| Heater, Tubular air. | B. R. Hawley | 81, 781 |
| Heater, Water | H. Sabin | 83, 796 |
| Heater, Water, for steam generat | J. W. Sutton | 81, 840 |
| Heater, Water, for baths, tubs, \&c | W. H. Thomas | 74, 630 |
| Heater, water, Steam engine...... | W. A. Jones and J. L. Sherma | 84, 425 |
| Heating and ventilating apparatus, Car | S. W. Francis | 77, 270 |
| Heating apparatus. | J. Johnson | 76, 329 |
| Heating apparatus. | J. R. Jenness | 82, 322 |
| Heating apparatus for railroad car | T. Smith and J. O. Reilley | 82, 88.5 |
| Heating apparatus for railroad ear | E. Speneer | 84, 969 |
| Heating apparatus, Steam | C. C. Hall | 79, 826 |
| Heating apparatus, Steam | J. Chambers | 74, 045 |
| Heating apparatus, Water | J. C. Ryan | 83, 552 |
| Heating device for chairs, \&e | C. S. Hunt | 78, 742 |
| Heating purposes, Metallie base and | C. E. Finkle | 77, 022 |
| Heat, Non-conduetor of | J. Chalmers | 80, 709 |
| Heat, Obtaining. | J. Johnsou | 76, 463 |
| Heat radiator. | S. B. Sill | 73, 842 |
| Heat radiator | V. B. Choate | 84, 089 |
| Heddles, Wire | E. T. Hertle and R. Thompson | 79, 905 |

| Heel calk | G. F. Clemons | 77, 960 |
| Heel-eutting machine | R. C. Lambert | 76, 207 |
| Heel pattern, Metallic | J. Brobst ... |  |
| Heel proteetor | A. H. Southwick | 76, 262 |
| Heel seats, Cutting | A. B. Keith | 78, 211 |
| Heel trimmer | C. H. Helms | 80, 953 |
| Heliometer | C. F. L. Risch | 77, 324 |
| Heliometer | C. F. L. Risel | 78, 133 |
| Hemmer .. | E. P. Davis | 76, 720 |

## Alphabetical list of inventions-Continued.

| Invention or Discovery. | Name of Patentee. | No. |
| :---: | :---: | :---: |
| Hemp and flax fibre for the manufacture | E. G. Wayman | 74,736 |
| Hemp breaking machine -........ | J. S. Hoskins. |  |
| Hens from scratching, Preventing | E. Rice | 84, 303 |
| Hide, raw, Gauge frame for splitting | J. Hofifman. | 78, 015 |
| Hides and furs, Dressing............... | C. I. Weston | 76,015 73,408 |
| Hides and leather, Suftening ............ | J. Tidd. <br> L. F. Rob | 77, 099 |
| Hides and skins, Compound for treating | L. L .J. Burcham | 78, 256 |
| Hides and skins, Tanuring ........ | P. Lennox, H. H. Robbins, and E. | 78, 380 |
| Hides, Beaming - ........... | P. Lennox, H. H. Roobins, and L. Hayes. <br> P Iempor | 80, 829 |
| Hides, Beaming. <br> Hides Composition for depilating | P. G. Sehlosser | 78, 543 |
| Hides from animals, Removing... | P. Lull | 76, 642 |
| Hides, Handling ............... | J. Hammond..... | 80, $94 \%$ |
| Hides, 'Tanning | G. 1. Starkweath | 82, 763 |
| Hides, Treating. | H. and L Royer...... | 81, 247 |
| Hides, Unhairing | E. Brock and J. Schul | 81, 8120 |
| Hinge...... | R. Reiber ...... | -33, 297 |
| Hinge. | J. Sowle ...., | 73, 661 |
| Hinge <br> Hince | J. Adt | 76, 034 |
| Hinge. | E. Lindsley | 80,639 |
| Hinge. | T. D. McCall and | 81, 805 |
| Hinge. | W. Shanion | 84, 771 |
| Hinge................ | V. Siraminon | 83, 369 |
| Hinge and fastener comb | C. B. Clark | 75, 862 |
| Hinge, Blind | 12. B. Prindle | 82, 245 |
| Hinge, Blind. | C. B. Clark | 82, 920 |
| Hinge, Mlind. | M. Adler | 83, 585 |
| Hinge, Blind. | C. B. Clark.. | 83, 603 |
| Hinge, Blind. | W. MeKce and | 83, 869 |
| Hinge, Butt. | M. A. Aver'Y................. | 75, 320 |
| Hinge, Butt. | H. D. Blake....... | 75, 724 |
| Hinge, Butt. | H. Hockemeyer. | 82, 717 |
| Hinge, Butt. | B. C. Pole | 83,659 |
| Hinge, Butt. | J. II. Carkbet | 83, 760 |
| Hinge, Butt. | G. A. Jenks | 84, 630 |
| Hinge, Butt. | J. W. Jordan ............... | 85, 310 |
| Hinge, Butt, Pintle of | L. Maschater and W. Frankfurth ... | 85, 112 |
| Hinge butts, Finishing loose | E. Luther, P. Lyon, and W. Ldwards | 85, 82 |
| Hinge, Compound safe-door | P. J. Stuhitrager. <br> C. Dupré | 73, 174 |
| Hinge, Door | G. Lune | 74, 384 |
| Hinge, Door <br> Hinge, Door | A. W. Walter | 83, 572 |
| Hinge, Double acting | G. Dumbolton | 76, 422 |
| Hinge, Double acting | J. H. Carkeet | 79, 950 |
| Hinge for sheet metal box | C. J. Hanck | 75, 903 |
| Hinge for sleeping-ear berths | J. I. Fogg. - | 76,620 74,805 |
| Hinge, Gate .- | P. Dennis.. | 76, 727 |
| Hinge, Gate and door ....... | C. Kaulbeck | 73, 533 |
| Hinge hooks, Manufacture of | E. Brown | 84, 256 |
| Hinge machine. | H. M. Ritter | 84, $90 \%$ |
| Hinges, Riveting | H. D. Blake | 75, 663 |
| Hinge, 'Self-locking shutt | E. H. Benjamin | 79, 051 |
| Hinge, Trunk. | O. Luce. | 83, 647 |
| Hod, Coal. | F. G. and W. F | 83, 301 |
| Hod, Coal, and ash screen combined | T. J. Thurston | 81, 037 |
| Hoo....... | W. T. Clement |  |
| Hoe. | G. N. Wood. | 78, 561 |
|  | C. W. Saladee and J. S. Hall | 78, 611 |
|  | J. Dodge...... | 78, 782 |
| Hoe | J. L. Fountain | 79, 462 |
| Ное. | C. P. Howell | 85, 384 |
| Hoe, Adjustable | T. Drake .... | 73, 702 |
| Hoe and cultivator combined. | II. P. Eckler . | 78, 725 |
| Hoe and garden rake combined | H. Thacker... | 84, 231 |
| Hoe and rake combined | H. Waters. | 74, 960 |
| Hoe blank | S. A. Millard ... | 80, 083 |
| Hoe, Double. | A. Burehard | 74, 984 |
| Hoe, Garden | L. Streeter... | 81, 839 |
| Hoe, garden, Compound adjustable | M. W. Wletche | 78, 774 |
| Hoe, Horse |  | 83, 719 |
| Hoe, Horse | A. Kirkpatrick ........................ | 79, 133 |
| Hoe, Implement for shislaing plan | L. T. Richardson. | 78, 326 |
| Hoe, Plowin | T. J. Mason | 84, 957 |

| Inrention or Diseovery. | Name of Patentee. | No. |
| :---: | :---: | :---: |
| Hoe, and potato planter and digger eomb | F. B. Mardeu | 73, 618 |
| Hoc, Rolling | S. A. Millard. | 74, 570 |

| Hook, Check rein | J. S. Campbell | 73, 777 |
| Hook, Clasp | D. Hayes... | 79, 347 |
| Hook, Clothes line | E. H. Gray |  |
| Hook, Fish. | I. A. Fish | 77, 365 |
| Hook, Fish | J. B. Christai | 79, 446 |
| Hook for carpenter's bench | S. Swan | 78, 620 |
| Hook for loisting apparatus, | D. Hieks and S. Doty | 77, 375 |
| Hook, Grappling | E. J. Riker ......... | 84, 510 |
| Hook, liarmess, Safety | J. L. Dickinson | 73, 958 |
| Hook, Hat | J. Harvey | 75, 159 |
| Hook, Hat. | C. L. Speneer | 83, 562 |
| Hook, Holdback ............ | N. W. Robinson | 74, 143 |
| \#ook, Hop... | E. and E. C. Denio | 80, 277 |
| Hook, Manure | M. Stoll and H. Gr | 84, 691 |
| Hook, Painters' | J. W. Pattce. | 79, 853 |
| Hook, pile, Revo | J. D. Leaeh and S. Hutehings | 84, 886 |
| Hook, Pruning | J. Stark | 79, 700 |
| Hook, Pruning | B. M. Parks | 82, 868 |
| Hook, Safety. | E. F. Brundage | 74, 043 |

## Alphabetical list of inventions-Continued.

## Alphabetical list of inventions-Continued.

## Invention or Discovery

Hose and skirt supporter combined
Hose and tubes with India rubber, \&c., Lining flexible and other.
Hose, Elbow support for flexible
Hose nozzle, Revolving
Hose, Rubber and gutta percha
Hose tender
Hot bed sash and frame
Honses, Fire-proof
Honse for frait, \&cc., Dry
Honse, Fruit, Ventilating
Honse, Refrigerating.
Honse, Smoke.
Howel and croze
Hub and axle
Hub and axle, Labricating
Hub and box for wheels, Combined
Hưo boring machine
Hub boring machine
Hub boring machine
Hub, Carriage
Hub, Carriage
Hub, Carriage wheel
Hub fastening for eccentric
Hub for pulley, \&c., Self-oiling
Hub, Metal
Hnb, Metallic
Hub to axle, Attaching
Hub, Tool for fitting band on
Hrb, Wagon
Hub, Wagon
Hub, Wagon, Turning
Hnb, Wagon, Wheel
Hub, Wagon, Wheel
Hub, Wagon wheel, Boring
Hull of a steamboat
Husker and stalk cutter combined
Husks for mattresses, Preparing
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant
Hydrant and gas pipe stop
Hydrant, Non-freezing.
Hydrant, Self-atjusting curb for
Hydraulic apparatus.
Hydrocarbons, Burning
Hygrometer.

## I.

Ioe breaker
Ice calk
Ice chnte, Automatic
Ice creeper
Ice creeper, Parlor
Ice crusher
Ice crusher
Ice, Cutting
Ice, Cutting
Ice house
Ice house for brewers and butchers
Ice, Making, and cooling air and liqnids
Ice, Making, and cooling air and liquids, Apparatns for
Ice, Manufacture of
Ice pick and meat ponnder.
Ice planing machiue
Ice preserver
Iluminating railroad cars, steamers, \&c

Alphabetical list of inventions-Continued.

| Invention or Discovery. | Name of Patcntee. | No. |
| :---: | :---: | :---: |
| Sewing machine, Cording attachment for. | F. B. Conlcssa | 76, 054 |
| Sewing machine, Creasing apparatus for | H. W. Fuller | 77, 972 |
| Sewing machine, Fan for ............ | J. H. Stone | $81,429$ |
| Sewing machine, Fceding mechanism for | J. A. Minor. | 76, 340 |
| Sewing machine, Feeding mechanism for | J. L. and D. H. Coles | 83, 133 |
| Sewing machine, Feller for ...... | E. S. Yeutzer and A. K. McCain | 73, 067 |
| Sewing machine for button-holes | H. E. Reynolds | 79,393 |
| Sewing machine for button-holes. | K. Vogel | 80, 520 |
| Sewing machine for embroidering | A. Bonnaz | 83, 909 |
| Sewing machine for embroidering | A. Bonnaz | $83,910$ |
| Sewing machine for working butto | M. C. Gritzner | 76, 323 |
| Sewing machine, Friction-brake for | D. Newton. | 81, 195 |
| Sewing machine, Gathering attachment for | W. I3. Bartram | 83, 592 |
| Sewing machine, Gathering attachment for | J. Crandell | 84, 414 |
| Sewing machine guide . .-. ............... | C. Benedict and O. R. Tyler | 81, 466 |
| Sewing machine, Guide and marker for | E. W. Ingle . . . - - - - .-. . - | 80, 961 |
| Sewing machine, Guide for hat lining in | C. H. Lockwood | 75, 637 |
| Sewing machine, Guiding attachment for | J. Wensley | 84,783 |
| Sewing machine, Hemmer for. | W. H. Thomas | 75, 079 |
| Sewing machinc, Hemmer for | G. Rehfuss. | 80, 090 |
| Sewing machine, Hemmer for | J. Morrison | 80, 558 |
| Sewing machine, Hemmer for | E. Wilder and J. Crandell | 84, 454 |
| Sewing machine, Hemmer, marker, \&c., for | W. D. Heyer | 74,533 |
| Sewing machine, Marker for | J. P. White | 73, 216 |
| Sewing machine, Marking guage for | M. A. Duffy | 74,323 |
| Sewing machine, Motive power for | A. H. Enholm | 80, 815 |
| Sewing machine motor ......... | E. Shiver | 81, 219 |
| Sewing machine, Opcrating | G. Cuppers | 73, 303 |
| Sewing macline, Operating | A. U. Crary | 75, 667 |
| Sewing machine, Needle sharpening attach | J. Callan. | 80, 908 |
| Sowing machine, Plaiter for | II. Cawl, D. Corning, and J.W.Wheelcr | 74, 990 |
| Sewing machine, Power attachment to | A. C. Crary | 75, 666 |
| Sewing machine, Ruffling attachment for | A. Stewart | 80, 371 |
| Sewing machine, Ruttling device for..... | R. Brooks, jr., and W. N. Manning | 84, 676 |
| Sewing machine shuttle. | D. M. Chureh | 78, 057 |
| Sewing machine shuttle | N. B. Eveland | 78, 944 |
| Sewing machine shuttle | J. A. Davis | 82, 499 |
| Sewing machine shuttle. | A. Warth | 85, 040 |
| Sewing machine, Take-up for | J. V. D. Eldridgo | 84, 099 |
| Sewing machine, Take-up for threa | J. Fanning | 82,397 |
| Sewing machine, Tension device for | H. C. Goodrich | 81, 080 |
| Sewing machine, Tension device for | D. Porter | 83, 406 |
| Sowing machine, Thread tension mechanis | S. Snyder | 75, 654 |
| Sewing machine tradle. | B. Rutter and H. Hunt | 74,007 |
| Sewing machine treadle | A. Q. Allis | 79, 296 |
| Sewing machine treadle. | C. Kihn. | 81, 379 |
| Sewing machinc, Treadle attachment f | J. Crandell | 81,346 |
| Sewing machine, Tuck creaser for . | E. Bastock | 80, 269 |
| Sewing machine, Tuck creaser for | E. Bastock | 80,270 |
| Sewing machine, Tuck creaser for | A. Morchouse and A. R. Heath | 80,653 |
| Sewing machine, Tuck creascr for | H. C. Groodrich | 81, 100 |
| Sewing machine, Tuck creascr for | H. W. Fuller. | 83, 950 |
| Sewing machine, Tuck folder for. | C. H. Gardner | 80, 721 |
| Sewing machine, Tucking device for | W. H. Cole | 79, 447 |
| Sewing machine, Tucking device for | R. H. St. John | 83, 219 |
| Shackle and supporter .-...-....... | W. Riley | 85, 402 |
| Shackle bearer........ | J. W. Mayhew | 79, 996 |
| Shackle for platform springs of | J. Price. . . | 74, 591 |
| Shackle, Joint for .............. | J. F. Reiner | 7\%,915 |
| Shade and seat, Portable | D. E. Newton | 73, 313 |
| Shade fixture ........... | G. T. Pillings. | 78, 826 |
| Shaft bearer | W. Platt. | 82, 549 |
| Shaft, Bearing fo | J. F. La Place | 73, 815 |
| Shaft bearing or millstone bush | S. Kine ... | 76, 083 |
| Shaft, Crank .-.-..........-. .- | J. Converse | 82, 805 |
| Shaft, Device for stop motion for revolving | E. J. Manville | 79, 368 |
| Shaft for connecting power with machinery, | D. Snell. | 82, 44.7 |
| Shaft journal...................-. .-. .-. . . . | L. Patric | 81,938 |
| Shaft, mining, Safety guard for | E. O. Lcermo | 79, 076 |
| Shaft, single, Multiplying motion on a | L. S. Fithian. | 76, 902 |
| Shaft, Sinking | J. D. Brunton | 80, 056 |
| Shaft tug and draugh | H. Bowers . . | 77, 575 |
| Shaft, Vehicle | A. Bean | 81, 737 |
| Shaft, vehicle, Anti-friction bearing for | R. P. Barnett, C. P. Purinton, and N. Scibert. | 84, 470 |
| Shafting - .-.................... | L. F. Pitcher | $80,212$ |
| Shafting, \&c., Tool for turning | J. A. Clevcland. | $\begin{aligned} & 79,729 \\ & 85,393 \end{aligned}$ |
| Shafting, Anti-friction box for | J. McIlvain | $85,393$ |
| Shafting, Counter. | H. C. Weihe | $78,627$ |
| Shafting, Hanger for | J. Richards | 78, 608 |
| Shafting, Hanger for | G. V. Orton | 78, 992 |

## Alphabetical list of inventions-Continued.

| Invention or Discovery. | Name of Patentee. | No. |
| :---: | :---: | :---: |
| Shafting, Hanger for | G. W. Hubbard and S. A. Smith | 80, 546 |
| Shafting, Hanger for | G. W. Loraine | 80,752 |
| Shaftiog, Self-lubricating box for | W. W. Crane | 77, 261 |

## REISSUES.

## $\Delta$.

Aeid for uso in tho preparation of soda powders, farinaceous food, \&e., Pulverment.
Acid, Carburetting.

## Aeid or gas, Carburetting

Anchor
Axlo.
Axlo box, Railroad ear

## B.

Basket
Basket or box, Fruit
Bed bottom, Spring
Bedstead
Beehiro.
Bell attachment.
Belt fastening
Belt fastening
Belt laeing
Bolt or nut, Cutting throads on
Blower, Cross head for
Boats, Construetion of

## Boiler.

Book eover proteetor
Boot and shoo, Metallie shank for
Boot and shoo tip
Boring maehino.
Bottles, Nursing
Bores, \&c., Material for the manufaeture of
Braee, Bit
Briek maehino
Bridge, Suspension
Bristles, Cleaning and assorting
Bristles, Cleaning and assorting
Brush
Brush, Dusting
Bucket, foot tub, \&c
Buckle.
Buekle.
Buckle, Polishing
Burner, gas, Ligliting street.
Burner, Hydroearbon
Burner, Lamp
Burnex, Lamp
Burner, Lamp

## C.

Can, Fruit
Can, preserve, Sealing
Cans, Opening sealed and other
Cane fibre from eano
Cannon, Breeeh loading
Carpet linings, Sewing
Carriage, Check brace for
Carriage, Children's.
Carriage, Children's.
Car, Sleeping
Car, Sleeping
Car starting apparatus
Cement for fixing door knobs
Cement from slags, Preparing
Chair, Folding
Chair legs, Tip for the feet of
Chemicals, paints, \&c., Rubbing and mixing

## DESCRIPTIONS.

# DESCRIPTIONS AND CLAIMS OF PATENTS 

## ISSUED IN THE YEAR 1868.

## ILLUSTRATED WITH ENGRAVINGS．

72，959．－HenRy W．ADams，Milton，Pa．－ Churn．－Jamuary 7，1868．－The cream box is sceured to rockers，and is oscillated in the direction of its length．At each eud is a perforated board，against the under side of which the cream is dashed．

Claim．－1．The construction and arrangement of the two dashers D D，in combination with the churn B，substautially in the manner and for the purposes described．

2．The rockers R R ，in combination with the churn $B$ ，when comnected and operated substantially iu the manner and for the purposes herein set forth．
g2，960．－Joseril Barbian，Chieago，Ill．－Ice－ House Floor．－January 7，1868．－The wooden floor has a transperse strip cut away between the central joists，and the floor is corered by sheet zine，which is bent downwarl to form a trough where the floor is eut amay．The metal is protected by strips of wool．

Clam．－An ice－house floor，composed of the groored zinc plate F ，strips C C，and strips E，con－ nected by metallic bauds D ，all constructed and arrauged substantially as lescribed．
ga， 961 －Join Barmier，Boston，Mass．－Fasten－ ing for Shoes：－January 7，1868．－The lace is passed behind anti－friction rollers，whose arbor pins are secured to the bent arms and the strips．The arms and strips are riceted together and secured to the sides of the opening in the shoe firont．

Claim．－＇The bent arms or plates $C$ ，when con－ structed aud attached as set forth，in combiuation with the entire strips $B$ ，as herein described，as and for the purpose set forth．

72，362．－Samuel W．Barr and Edwin Mc－ Guire，Beloit，Wis．— Well－Tube．—Jannar＇7， 1868. The gauze cylinder surrounds an inner perforated tube，to which it is soldered．The conoidal poiut has a drill plate let into it axially．

Claim．－＇The combination and arrangement of the well－tube，soldered filter，and drill－point，all substau－ tially as and for the purpose set forth．

72，963．－GEOLGE BEATY，Middlebury，Ohio，as－ signor to W．W．Kitcinen，West Union，Iowa．－Boot and Shoe Hecl．－Jamuary 7，1868．－The heel is made separate from the boot，and attached by flattened spikes and serews．

Claim．－Constructino a metal boot－heel lollowr， When its upper tace is bereled，so as to form a broad bearing for the shoe to rest in，and also having a series of spikes arranged in the center thereof，is lerein described and for the purpose specifed．
 Findling and Fuel－January 7，1868．－Composed of sereened slack，妾 bushel；rosin or pitch， 25 pounds； crude coal oil， 1 gallon；sawdust， 1 businel；heated， mixed，and cast in molds．

Claim．－The fuel combination，using for that pur－ pose the aforesaid compound of rosin or pitcl，fine coal，sawdust，and coal oil，or any other substantially the same，and which will produce the same effect．
\％』，9GJ．－Virgil．W．Blanchlard，Bridport，Vt．－ Baggage－Check．－January 7，1868；antedated Janu－ ary 2,1868 ．Explained by the claims and illustration．
Claim．－1．The circular plate $A$ ，with the names of the stations of any particular railroad stamped upon its swface，near its periphery，with notehes or recesses，cut in the periphery of a circular opeuing． in the central portion of said plate，said notches or recesses correspondiug with the names，figures，let－ ters，or other symbols stamped upon the surface of the plate，near its periphery，in combination with the bolt or $\operatorname{dog} \mathrm{D}$ ，for the purpose of fixing the pointer $B$ at any particular name，station，or symbol，ou the outside of the plate．
2．A plate，bearing the number of the check at－ tached to the plate bearing the pointer，the circular plate having the names of the stations of auy partic－ tular road stamped mpon its surftee，near its peri－ phery，revolving hetween them，when not locked by the bolt or dog，for the purpose specilied．
3．A bolt or dog，playing frecly in a recess be－ tween the plate bearing the pointer aud the one bearing the number of the check，in combination mith the notehes or recesses cut in the periphere of the circnlar opening in the central part of the circular plate，for the purpose of fixing the pointer at any particular name，number，or symbol．
4．A bolt or dog in combination with a slit or openinge ent in the plate bending the pointer，and the onc bearing the number of the check，so arranged， With a strap conuecting the check to the bagyage or freight，that when the strap is withdrawn fiom the said slit or opening the weight of bolt or dog will cause it to fall into sad opening or slit，relieving the circular plate，so that the pointer may be turmed to any particular uame，station，or symibol，when the pointer may be locked in its placo by passing the strap throngl the opening or slit，and attaching it to a piece of baggage or fieleht in the usual way．

名，966．－JoInN W．J3oviton，East Hartford， Comn．，ank Join A．McGAw，Newiark，N．J．－Re－ moving Burs and other Vegetable Matters from Trool．－January 7，1868．－The wool after scouring is placed upon slats within a tight chamber，and sub－ jected to the fumes firom burning．sulplur in a recep－ tacle bencath a pan containing mitrate of soda，moist－ ened with su！platurie acid．Steam is also admitted to assist the action of the nitrous gases aud to heat the chamber．

Claim．－1．The employment of chemical rapors in the process of destroying burs and other foreign vegetable smbstances in wool，substautially as de－ scribed．
2．The employment of steam as a joint arent in diflusing the rapor and leating the apartment to prodnce the result described．

3．The process of destroying burs or other for－ eign verctable substances in wool，substantially as set forth．
gi2，DGy．－DARIUS C．Brown，Lowell，Mass－ Harness for Looms．－January 7，1868．－Explained by the claim．

Claim.-Manging the heddles in their frame at ono end to a common bar, but at their opposite ends to two or more bars, substantially as and for the parpose described.
grange.-T. Yardley Brown, Reading, Pa.Fastening Artificial Teeth.—January 7, 1868.-After the plate is swaged and fitted to the month, the gauge is taken in the usual way. The toeth are then arranged aceording to gatige, the wax eovers only so mueh of the plate as is to be occupied by the alloy. The case is then inserted in a packing flask. After the wax is removed and the plate cleansed holes are punched through the plato over the teeth and commtersunk on the palatine surfiace, to reeeive the fusible alloy whieh secures the teetli to the plate; holes are made thomg the plaster for passage of the alloy. riae flask is heated before pressing the metal, and allowed to cool before removing the denture.

Claim.-The attacliment of artificial tecth to swaged plates by meaus of a fusible metal or alloy, as herein deseribed.
 Cuc Rack:-January 7, 1868. - The holder turns on braekets. The cue ends are reccived in radial recesses, the lower reeesses opening to allow the eues to be removed. A simpler form has an upper socket plate and a lower rest with peripheral danges.

Claim.- The revolving billiard-cue rack, constructed and operating substantially as and in the mamner herein doscribed and specified.
ay. $99 \%$.-Daniel Bull, Amboy, Ill.-Table Leaf Support.-Janmary 7, 1868. The brace is hinged to the frame, and when the leaf is raised, the stop bar falls before its upper end and locks the leaf. To lower the leat the stop bar is raised.

Claim-1. The eombination of a link A, a recessed bar D , provided with a spur $f$, and a movable stop-bar E, arranged and operating substantially as and for the purposes herein set forth.
2. The eombination of the bar D , or its equivalent, provited with the spur $f$, and the movable batr E, provided with the prong or fork $g . g$, arranged in the manner and for the purposes described.
3. The recess $l$ in the bar D , and the projoetion $m$ on the bar E , arranged substantially as speeifiod, to prorent the longitrdinal displacement of the bar E , as described and shown.
4. Providing the bar $D$ with slots $d d$, to admit of the adjustment thereof, as and for the purposes specified.
ge9y\%to-HENRY BUnDEL and JaMES Williams, Dajton, Ohio.-Seed Planting Mrachinc.-January 7, 1868. - The shoes are eonneeted by chains to a bar turning on cecontries, whieh rotate so far in raising the shoes that the strain upon the chain prevents the returning of the eccentrics and the descent of the shoes.

Claim.-In eombination with the lifting bar D, for raising, supporting, or lowering the slioos, the arms or braekets c $b$, for forming its hinged eonnection with the main frame, substantially as and for the purposes herein deseribed and represented.
g2, DG: -H. C. BuRK, Mineral Point, Ohio.Mechanical Movement.-Jannary 7, 1868.-The motive wheel is traversed eeeentrieally by an arbor parallel with the axis, and having a spur wheel scenred to one end and a pitman lod to the other. The spur wheel engages a pinion turning on the shaft of the motive wheel. The wheel and pinion being of the same size, a double rotation of the latter ensues to eaeh revolution of the former, and a reeiproeation is given to the pitman.

Olaim.-The eombination of the main wheel $A$, spur-wheel $B$, with its pitman $E$ and pinion-wheel C , all arranged to operate substantially as and for the purpose set fortly.
 N. Y.-Match Safe-January 7, 1868.-The matehes are put into the box in a single eourse with a spring forrwarder beneath them, terding to keep the upper one in contact with the forwarding slide. This slide has a trigger projeeting from the top of the box, and
has a catch which engages the upper match and causes its end to project from the box. The forvard movement of the slide is accomplished by a spring. The match is drawn out through a serrated hole and is ignited thereby.

Claim.-1. The propelling arm B, construeted substantially as described, in combination with the aetaating lever $e$, spring $f$, and mouth $k$, arranged and operating substantially as and ior the purpose set forth.
2. In combination thorewith, the dom $g$ and spring $h$, arranged and operating substantially in the manner and for the purpose specified.
 Scwing Ifachine.-January 7, 1868.-Improvement on patents of D. W. G. Humphrey, August 29 and October 3, 1865. The object is to provide a means by whieh the movement of the disk may be made whatever is desired instead of being confined to fixed divisions of a cirele like those of ratehet tectl. The device is explained by the elaim and illustration.

Claim.-In comlination with a disk provided with gear teeth, and having a cam for working in connection with a stationary plate cam, as deseribed, a pinion whicli meslies into the teeth of the disk, and on whiel pinion a friction elamp or gripe operates to impart intermittent rotative movements to said disk, for the purpose of giving movement to a stoek or or cloth clamp, substantially as described.
 vator.-January 7, 1868. Tho frame has tiro bars projecting downwardly and outwardly from the tongue, end giving attachment for the short axles. The horses are hitelied to the out-turned ends of two levers which are eonmected to the inelined bars, and whose upper ends have holes leceiving the downturned ends of a connecting bar. By means of the position of the eonnecting bar in the holes the relatire draught of the horses is adjnsted. The plow beams are connected to the frame by side plates hinged on end plates, allowing vertical morement to the beams, and the side plates embraee betreen them studs upon plates attaehed to the frame, the connection being sueli as to allow lateral swing.

Claim.-1. The plates I and $F$, when constructed and arranged to operate substantially as described. 2. The plates $J$ provided with the studs $c$, for sceuring and holding the beams to the main frame, and having also the slots for adjusting them, as set forth.
3. The combination of the bent rods $\mathbf{T}$ and cross-rod H , piroted to the main frame, and arranged to operate as described.

写: 9 g6. Williair D. Clark, Ottatra, Ill.Farm Gate.-January 7, 1868.-The rear end of the gate is attaehed to an inclined frame carrying antifrietion rollers tracking. along the upper and lower rail of the fence. A roller whose bracket is attached to the post, supports the gate by its lower rail, and a cateh takes over its upper one.
Olaim.-The peeuliar and particular arrangement of the guides and rollers described when attached to the gate, operating and coustructed as set forth.
\%2,9\%g.-A. Cody, James Bartlett, and H. II. Jones, Ukinlı City, Cal. - Composition for Roofing. January 7, 1868.-Clay is ground clear of lumps, made into brieks, and afterward thoroughly pulterized. Pulverized brick 2, pulverized shale 1, and coal tar, 2 parts, are made into a mortar and spread orer tight sheathing.

Claim.-A compound cement for roofing purposes, preparod and appliod substantially in the manner and for the purposes set forth.

78,988.-E. Merritt Cole, Sonthbridge, Mass. - Eyc Glass.-January 7, 1868.-The lips of the frame have snitable soekets and projections to render unneeessary any but a single screw.

Olaim.-The arrangement and appliention of the tenon and mortise with the lips, and with respect to the joint serew or pin of the spectaele or eye-glass frame, sulbstantially as specified.

Roads, Pa.-Animal Trap.-January 7, 1868.-The
rat enters the open part of the eylinder. In eating the bait the bolt is so mored that its onter end enters the groove, when the weight eanses the semi-rotation of the cylinder. The partition prevents the cseape of the rat except into the condermed cell.

Claim.-A trap, consisting of a box, $A$, haring one part closed by a corer, and a partition B , haring an opening through it, and will the rerolving wire eylinder C mounted in the open portion of the box A , all constructed and arranged for operation, as shown and described.

92,951.-F. W. Crosby, Toledo, Iowa.-Roasting Metallic Ores.-January 7, 1868.-The roasting. chamber is plaeed preferabily over the furnace mind small perforations made through the separation between them. Small rertical rods are run through the top of the roasting chamber and monto the sail perforations. The pulverized ore is dampened and mixed with straw and placed in a chamber. and the rods withdrawn, learing the mass open to the percolation of the caloric currents.
Olain. - The method, substantially as herein described, of obtaining a porous disposition of pulverized ores within the rectucing chamber of a furmace, for the prirpose set forth.

92,981.-William G. Crosshix, Shellsbirg, Wis.-Conbined Sulliy Plow and Cultivator:-January 7 , 1868.-The frume has two cross-beans, between which is the axle. The plow beam is piroted to the rear beam and secured to the front beam by a spring eatch. A rod is attached to the shifting devices and to the bean of the plow, by which the latter may be raised from the ground when the beam has been loosened from the eatch. 'The draw-bars of the outer culti rator shorels pass thronghl loops upon the pendent arms of a barr, by which they may he simultancousls drawn from the gromed by a lever: The inner shovel standards are attached to the bar, and raised with it.

Claim.-1. The arrangement and combination of the beam $C$, rod $i$, spring catch $y$, and lever $h$, for regulating the position of plow E, substantially as and for the pmry)ose set forth.
2. The comblination of rod S , haring a lerer $\mathrm{S}^{\prime}$, with arms Q Q, elbows T T, loops P P, and shanks M L, arrauged to raise and lower shovels $f f f f f$, and hold them in position as described, in coinjuaction with bars $\mathrm{O} O$, as set forth.
3. The loops K H, in combination with a morable brace G , having the plate J arringed so as to fit cither loop, as and for the purpose set fortl.

98,982. -Thomas Cullex; San Francisco, Cal. - Cartridge for small Arms.-January 7 , 1868. - Formation explained by the claim and illustriation. The paper cylinder is charged like a gun and used as long as the paper remains good, after which a freslh piece is sulsstituted.

Claim.-The method and arrangement of seeuring the raetallic base or cap $a$ to the paper tube $d$, which holds the charge, by means of the nipple e screwing into the interior washer $u$, as substantially herein sot forth and described.

72,953.-James Davis, Buffalo, N. T.-Suw.January 7, 1868. - The rectangular sides of the teeth are toward the midheight, both above and below that point. Thle projections on the culds of the teeth are to lessen the amount of filing necessary in sharpening.

Claim.-1. Making the snrr-teeth above aud below the center line $1-2$ with their cutting edges toward said line, and the rake or set abore the reverse of that below the center line, in the manner and for the purpose described.
2. The projection D at the point of the saw-tooth, for the purpose set forth.
ga, 934.-Frederick Devaler, North Vernon, Ind.-Car Brake.- January 7, 1868.- The brakcs are suspended from the truck and connected to a lever in such manner as to be both applied or reliered together. The lever has a curved yortion nearr its free end, and the operative lever lias an anti-friction roller which acts on the curred part. To the free cad of the lever is attaehed the claain through which it is
operated. The brakes may be operated by a chain which is coiled around the shaft of a wheel, which may, through the mediun of a friction wheel, be put in conncetion with a wheel on the axle.
Claim.-1. The lever B and roller C, acting on the eurved lever $A$, all combined and operating snbstantially as describecl.
2. The wheel H' fixed apon the axle, the whecl $u$ and cogred wheel $v$ and pawl, and the intermediate roller $w$, all constructed and operating in combination with each other, as deseribed.

72,955.-Davin Dick and O. W. Preston, jr., Corming, N. Y.-Car Brake.-Janmary 7, 1868. When the hand lerer is thrown back and the kieker ont of gear with the dog, but the doo in gear with the spur wheel, the brake may be used in the ordinary manner. When the hand lerer and dog are ont of gear, and the licker down, while the ears are in motion, by turning the hand lerer the worm is brought into gear with its whecl, which puts in motion the rertieal chain bar, and thereby applics the brakes. By drawing the engineer's conncetion, the worm wheel is brought in gear with the endless worm, and the brakes applied throughout the train.

Claim.-1. The don D, as construeted, in combination mitl spriag $i$, operating conjointly, substantially as set forth.
2. In combination with dog D and spring $i$, we claim kicker $l$ and spur wheel $g^{\prime}$, substantially as deseribed.
3, The engineer's connectingrod W, when in combination with the brake apparatus, substantially in the manner specilied.
4. Pitell-chain wheels $f$ g and chain-loop M, in comhination with locking shaft $b$, chair-bar $B^{\prime}$, and braking derices, substantially as des, $\because$ bed.
5. The roeking shaft $b$, worm wheel d, slide $c$, conneetins rod $\chi$, chain-bars $B^{\prime} E$, and engineer's comnecting rod W, all combined smbstantially in the maniere nid for the purpose set forth.
assignor to self, A. T. Shelly, and C'Harbes DiAEY, same place.-Stop Coch:-Tanuary 7, 186s. (Antedated December $26,18(3 \%$.) - The plurs tims in a finstoconical slecre which has ting's titting in groores of the cock. The wings mrerent the slecve from turning, but allow it to be raised rertically from its socket.

Claim.-The combination of the case and conical valre of a cock, and in conical stationary sleere, fitting the rase, and in whieln the ralve turns, and which is so constructed and comected to the valre that it may be withdrawn with the latter from the case without the necessity of detaching any luts or other fasteniugs, all substantially as deseribed.
 off Mechamism for Looms.-Tanuary 7, 1868.-The loom is adjustable to prevent the strain upon the Warp, ensendered by beating up, from operating on the "let-off" mechanism, when weavin" heary goods; the let-off being only influenced by the steady strain on the warp. When Trearing light material the lom is so adjusted that the beating up will assist in operating the let-off.

Claim.-1. The said combination of derices, sul)stantially as above deseribed, for operating the said ratelet, the warp guide and beam, in manner as specified.
2, Their combination with the warp beam and its gearing and ratehet, and with the warp gaide, and the lay, the whole being substantially as explained.
g2,988.-Jonatuan S. Eaton, Roxbury, Mass.-Trumk.-January 7, 1868.-The top and sides of the trumk are corered by narrow strips of wood to strengthen the same.
Claim. The combination, with the frame of a trunk, of the strips or pieces $a$, substantially as and for the purpose set forth.

72,989.-Willian H. Elliot, New York, N. Y. -Brewing.-January 7, 1868.-The Tipor from the boiling wort is condensed in a surface condenscr and retmrned to the wort before fermentation.

Claim.-1. The process herein described of brewing malt liquors, viz, condensing the vapor of
boiling wort, returning it to the wort in a liquid state, and fermenting the two liquids together, substantially as herein set forth.
2. Cooling the wort and condensed rapor separately, and afterward mixing the two liquids together, before ferinentation, substantially as hercin specificd.
3. Employing a tank or reservoir $l$, with its cooling device, in combination with tank $b$, with its usual heating device, sabstantially as shown and described.
4. The eombination with these two tanks of a surface condenser, $c$, as speeified.
(92,990.-Vanderlyn F. Fect, Rochester, N. Y. -Harvester Rake.-January 7, 1868.-The rake-head is eonnected by hinged rods to a bar extending across the platform and attached to a segmental slide bar. The slide bar is eonnected by a pitman rod to an endless ehain stretehed on two wheels, one of which receives rotation from the axle, when clutched thereto by a treadle lever. The rake-head has an arm eoming in eontact with a projection of the platform at the backward end of the stroke, and serves to lift the rake, a latch transferring a projection at the other end to a position beneath the guide, and raising the rake by that means during its forward stroke.

Claim.-In combination with the reciprocating rake $F$, provided with projections $q r$, the arrangement of the connecting and operating parts, eonsisting of the loose pulley ir, provided with the reaetingspring $l$, and operated by lever $\mathcal{K}$, the endless ehain $G$, the hinged bar $o$, and the stop and projection $m^{\prime} n$, the whole operating in the manner and for the purposes set forth.

192,921.-Jesse Fewkes, Newton, Mass, assignor to Silver Lake Manueacturing Co.-Expansion Pulley for Braiding Machines.-January 7, 1868.-The face of the expansible pulley consists of a series of jointed bars whose free ends are inelined inward and pass through the holes in a disk whieh is adjusted by a set serew.

Claim. -The combination of the rods $b$, piroted to the pulley $A$, with the plate $C$, construeted as deseribed, and the screw D, for governing positirely the position of said rods, substantially as deseribed, and for the purpose set forth.
rga,9292-B3. G. Fitziugar, Sykesville, assignor to self and William G. Maxwell, Baltimore. India-Rubber Door Spring.-January 7, 1868.-Explained by the elaim.

Claim.-An India-rubber door-spring, that is rulcanized in a eurved or cireular form, and applied to a door in a straighter form than that in whieh it was ruleanized, substantially as and for the purpose herein described and represented.
g2,993. - Leonard Fleckenstine, Manor Township, Pa.-Holder for Gum-serubber-January 7, 1868.-Explained by the claim and illustration.
Claim.-The arrangement of the two corrugated or fluted plates PR, for the purpose of folding the serubbing-edges of India rubber, together with the use of a socket and serew-bolts, substantially in the manner shown and specified.
g马,994.-Lewis Francis, New York, N. Y., assignor to himself and Crrus H. LouTrel, same place--Oomposition of MKatter for the Manufacture of Emery Cloth, Polishing Whecls, dee--Jannary 7, 1868.-Glue and glycerine, with or without saccharine matter, are eombined with any of the metals or their insoluble compounds finely divided, or with solutions of their soluble salts.
Claim.-A composition of matter for various purposes, when the same shall be made substantially as herein deseribed.
giz,995.-Lucien M. Gilbert, Warren, Mass.-Scissors-sharpener-January 7, 1868.-The eylindrical serrated eutter is attaehed by an eyelet to the brass guide-disk.

Claim.-A seissors-sharpener, consisting of the bevelled file $\Lambda$, eombined and arranged with the eircular guide-pieeo C, the parts being constructed and
the whole arranged substantially as and for the pur. pose specified.
G2,996.-GEORGE W. Gish and William H. Ferguson, Dariess County, Ky.-Medicine for the Cure of Hog Cholera.-January 7, 1867; antedated December 12, 1867.-Composed of sulphate of eopper, 1, and extract of $\log$ wood, 2 parts.

Olaim.-The medicine made by mixing, or by using at the same time, the ingredients deseribed, for the purposes set forth.
g2,99\%.-Georae D. Goodrich, Jolict, Ill.Manufacture of Clay Pipes.-January 7, 1868.-The earriage on which the trough is plaeed and moved is operated by a spring treadle, and standard. The mouth-picee of the die is made movable to better support the following pipe during the operation of eutting off a section. A water-box is placed over the orifice of the die by whieh it is kent moist.

Claim.-1. The improved method of fastening the trough-earriage in, and disengaging the same from, its rigid and deseribed position on the frame on whieh it rests, substantialiy as herein deseribed and speeificd, or other equivalent devices.
2. The movable mouth-picee H, arranged substantially as herein described and specified.
3. The eombination, in a maehine for the manufacture of clay pipes, of the trongh for receiving the pipe, and the apparatus for lubricating the pipe as it issues from the mouth of the machine, substantially as described.
4. Each of three devices to be used in combination with the elay-pipe-making machines, running the pipe eontinuonsly, and using the metallic or metallic-lined troughs.
g9,998.-William C. Griswold, New York, N. Y.-Hat Blocking Mrachine.-January 7, 1868.The ring to whieh the clamps are hinged rests upon spiral springs whieh surround the three posts supporting the said ring. The lever, with its band ring, is lowered down npon the hat body, and the clamps raised into a horizontal position to "break" the band.
Claim.-The ring $A$, to whieh the clemps are hinged when elastieally seated, substantially as and for the purpose specifica.
gi,299.-Samuel B. Haines, Lewistown, Pa.-Harvester.-January 7, 1868. The reel shaft is driren by chain comneetion with the leading wheel. The grain-wheel travels direetly in the rear of the divider.
Claim.-1. The leading-wheel A, attached to the shoe $G$, as herein described and represented, and performing the donble function of supporting the inner end of the finger-beam and operating either the rake or reel, or both, as and for the purpose set forth.
2. The grain-wheel M, in combination with the divider I, provided with the flanges of $d d^{\prime \prime}$, the latter being notehed at $d^{\prime}$, and adjustable bearing $O$, all eonstrieted and arranged substantially as deseribed, so as to admit of the adjnstment of the wheel M, and seenre the protection of the latter by the divider, as explained.
gB,000.-I. I. Harman, Whitestown, Ind., assignor to himself and Thomas J. Meginnis, same place.-Sawing Machine.-Jamuary 7, 1868.-The saw is attaehed to a bar whose fore end has an antifriction roller reciprocating in guides at the free end of a beam whieh is pivoted to the frame at its rear end. The rear end of the saw-bar is comnceted by a pitman to the erank by which it has motion, and has an anti-firietion wheel traveling in a cam-groove around a lateh operated by a spring. This eammotion causes the oseillation of the sawr.

Claim.-The combination of the movable center 15 with slides 7 and 7, 4 and 6 , and ceeentric-cam 5, and spring 13, all eonstructed and operating substantially as set forth.
g3,001.-L. P. Harris, Crestline, Ohio.-Apparatus for Clarifying Saccharine Juices.-January 7 , 1868.- The top or pure portion of the juice is dramn off by the bell-mouthed siphons. The mouths of the
siphons are turned up and used as funnels, throngh which to fill the pipe.

Claim.-1. The adjustable float, and its eombination with the siphon.
2. The combination of the adjustable float and siphon with the tube $c$ and pipes $d$ and $c$, substantially as deseribed.
3. A canc-jnice elarifier, construeted and operated substantially as deseribed.

4, The combination of a eanc-juice elarifier, when coustrueted and operated substantially as described, with heating and evaporating pans, for the purposes set forth.
g8,002.-Javes Harsila, Circleville, Ohio.Plow and Marrovo Combined. January 7, 1868.The harrow is secured to the plow by the bars, and is held in such position as to harrow the freshly turned furrow.

Claim. - The bar or chain $A$, lever $B b$, and chain D , arronged and applied, substantially as described, for the purpose of combining an ordiuary plow and harrow.
g3,003.-Charles T. Harvey, Tarytomn, N. Y.-Elevated Railroad.-Jannary 7, 1868.-Explained by the claims and illustration.

Claim.-1. The arrangement and combination with the column $a$ of a false base $t$, made in sections, and secured around the column at the surface of the gronnd, substantially as deseribed.
2. In a supporting commn, the supplementary are-shaped pieces $V$, in combination with the braneliing arms of the column $a$, with or withont the triangular filling pieces $u$, substantially as described.
3. The base-plate $n$, in combination with the ears $m$, arranged to fit the triangular interspaces of the column as ribs or flanges $\underset{2}{2}$, substantially as described.
4. The arrangement and combination, in one picee, of the plate $l$, the eap-plate $i$, and the con-necting-erlinder $j$, substantially as deseribed.
5. The constrnetion of the eap-plate $i$, with its frietion-roller's $l$, snbstantially as deseribed.
6. The arrangement and combination, in the ea-ble-guide $c$, of the wooden fonndation 4 and wooden side beams 5 with the metallie bottom plate $f$ and top right-angled bars $g g$, substantially as shown.
7. The return eable-guide $e^{\prime}$, made substantially as deseribed, by inverting the eable-guide $e$, and eombining therewith the inverted cap $b$, substantially as deseribed.
8. The arrangement and combination of the upper rail $b$, the I-shaped rails or beams $c$ c, and the Trooden filliug $d$, snlbstantially as above deseribed.
9. Arrangement of the main rail b mpon the top of an under rail or bean with a layer or enshion of wood iuterposed between them, substantiully as deseribed.
10. The eolnmn $a$, composed of ribbed segments $p$, in combination with the flanged bars $r$, which serve to unite the segments together, substantially as deseribed.

1g3,004.-T. J. Hatrield, Warsaw, Ind.-Vegetroble Cutter.-Janmary 7, 1868.-The reciprocating bed has a series of oblique eutters, and is operated by a crank. The eabbare is placed iu the hopper, and steadied, and crowded down by the corer, to whieh a lever is attrehed.

Claim. -The eombination of the reciprocating-bed $B$, adjustable knives 1 2 3, plates $\mathrm{B}^{\prime} \mathrm{B}^{\prime}$, arranged With set serews X X, bos D, follow cr $\mathbf{E}$, and springlerer $o$, substantially as and for the purpose herein set forth.

183,005 - Charises J. HaUck, Williamsbmrg, N. Y.-Flower Stand.-January 7, 1868.-The stanid has a series of rests with an upper guide ring connected thereto by standards.

Claim.- A floirer stand, composed of one or more scetions, caeh made of a platform $a$, with a ring $b$, and one or more stindards $c$, supporting a guide ring $d$, all as shown and deseribed.

第: 306 .-TOHN E. HAWKINs, Lansingburgh, N. Y.-Toy.-January 7, 1868. -The pocket is at the top of an axial pin, which is thrown upward to
elerate the ball; the latter is then eaught in the flaring eup.
Claim.-The combination and arrangement of the ball driver or proeket C , and its spindle 13 , with the stock or landle A and eup D, in manner substantially and for the purpose as herein deseribed.
g3,007.-EDWARD Hawthorne, Mountain View, Cal.-Fire-Escape.-January 7, 1868.-Tho supporting picees are connected to the windowframe, and have a eloss-bar with an eye througll Which the hoisting rope is passed from the ear aud brought down again to the ear. The rope is operated by the oceupant of the car, being passed around a belaying pin on the frime.

Claim.-The apparatus, construeted, arranged, and operated substantially as aud for the purpose deseribed.

73,00S.-William Heath, Bath, Me.-Invalid Bedstead.-J wnuary 7, 1868. -The bed bottom lias four jointed scetions, and may be bent to ehange the couch into a chair by the operation of a windlass upon two sido frames, upon which the lower two and the upper section rest; the raising of the head section simultancously acting to lower the foot and leg rest. The knees may be raised by turning the right and left-hand serew rod, whiel draws the wedges up the inclines, and elerates the foot end of the seat seetion.

Claim.-1. The arrangement and the application of the windlass $G$, and its cord $\Pi$, and the gear $g$ and bolt $\%$ thereof, witl the back frame I;, and the main frame A of the bedstead, substantially as described.
2. The combination of the morable braeket N , and its supporting cord and weight $O$, with the soatframe C , ind its arm I , is set forth.
3. The seat-elerating mechanism, and its arrangement with the main frame and the sent frame, as speeified, sueh seat-clevatiug mechanism consisting of the shaf't $H^{\prime}$, its serew or serews $k k$, and one or more wedges I I, and inelined planes K $\mathbf{K}$, to operate togetlier, as explained.
4. The combination of the toggles P Q with the movable bracket $N$, its supporting weight $O$, and arm $R$, as hereinbefore deseribed.

IG,003.-John G. Hitcicock, New Tork, N. T.-IIay Fork-January 7, 1868.-Explained by the claims and illustration.

Ciaim.-1. Holding the tines against end pull by means of the projections or shonders $b$, arranged to loek against the ferrule or eap $\mathbf{C}$, while the latter is fixed on the handle by the serew D , or its eqnivaleat, all snbstantially as herein set forth.
2. The within-deseribed construetion of the forktines $B$, with a shoulder $b$, at the commencement of the root of the tiue, adapted to apply agrainst a solid end of the eap C , substantially as and for the purpose herein set forth.

73,010.-Tames Holland, Conshohoeken, Pa.-Boot.-January 7, 1868.- The poeket formed inside the boot top for reception of valuables is protected from being ent open by it wire ruming around the boot top, beneath the flaps.

Claim.-A metal ring or bent wire d, applied to the upper edge of the boot-leg, within the folds of the strips $A$ and $\Lambda^{\prime}$, as set forth, for the purpose specified.

7:3,011.-D. S. Humpiney, East Townsend, Ohio-Fich Fence.-Jamuary 7 , 1868.-Explained by the elain and illustration.

Claim. -The combination of two or more wires $B$, With the posts $A$ and sluts or piekets I, when seeured thereto by means of the hook-spikes $C$, as speeified.

73,012.-JoIn H. Invin, Chicago, Ill.-Lan-tern.-January 7, 1868. - The air to sn' pport combns. tion is earried downmard through the heated tubes at the outside of the lantern.

Claim.-In combination with the burner of a lamp, and a globe or protector thereof, one or moro tubes or passages $D$, or their equivalent, arranged to operate substantially as specified and deseribed.
239,01:3.-Antiony Iske, Lancaster,Pa.-Alarm Lock for Doors.-Jannary 7, 1868.-The morement of the handle or latch draws in a hooked bar, and
releases the detent of the alarm attached beside the lock.

Olcim.-The combination and arrangement of one or two hooked belts C , lever D , sleeve E , with the arm $B$, on the vibrating plate, with or without its knob $b$, when applied to a lock for the purpose of connecting the same with the bell or alarm, in the manner specified.
g3,014.-Jeremiah F. Johnson, New York, N. X.-Fastening of Jar Cover--January 7, 1868.The side of the metallic lid is pressed inward, forming inclines, which engage those formed on the neek of the jar.

Claim.-The use of two or more inclines in recess on the neck of the vessel, in combination with a metal cap or stopper, with corresponding inclines, substantially as described.
 Trenton, N. J.-Water Heater for Fire Engines.January 7, 1868.--When in the enginc-honse, the boiler of the fire engine is in communication with a heating coil, through which the water continmally circulates. The engine in passing from the engine-honse, automatically closes the commmication, and diverts the current to the condensing coil.

Claim. - The arrangement of the checks A A and E, elastic pipes $F F$, condensing coil $D$, and with cocks B B and D D, levers c d, pin e, compensating levers $b b$, wrenches $a b$, constructed substantially as set forth.

1g 09016.-IsRaEt L. Landis, Lancaster, Pa.Farm Gate.-Tanuary 7, 1868.-Cords pass from posts up and down the road to a lever by which the latch bar is drawn back, so that a draught upon the cord will serve to retract the latch and open the gate.

Claim.-l. The upright lerer K, its spring N, clip M, and latch $P$, when arranged, combined, and operated by the rope $S$ and pulleys $T$, as hercin describet, and for the purposes set forth.
2. The construction and combination of the bent hinge C withits inside block F , as herein described, and for the purposes set forth.
3. The diagonal rail $X$, with its $\operatorname{clip} Z$, when combined and operated with the upper rail $G$, of the gate, as herein described, and for the parposes set forth.
gis, DTy.-JJHN MADDEN and I. G. Haserot, Cleveland, Olio.-Bread Cutter.-January 7, 1868.The knife has two plates, whose edges are inelined to each other, and form together an angular recess, into which the loaf is forced by the sliding plate. The height of the knife, and consequent thickness of the slices, is adjusted by the spiral cam beneath the table.

Olaim.-1. Operating the hinged or jointed table F by means of the cam H, substantially as and for the purpose set forth.
2. The adjustable table $F$ and cam $H$, in combination with the knife, substantially as and for the pirpose set forth.
3. The arrangement of the knife in two sections D D, and jointing the same together, as seen at $J$, in combination Twith a table and slide, for the purpose set forth.
m3,018.-WM. Manning, Chelmsford, Mass.Confection or Cake.-January 7, 1868.-Grated cocoanut and sirup in equal quantities are boiled together to cook tho cocoannt. To this mass an equal quantity of pulverized parched corn is added.

Claim.-A new and improved combination cake, as lierein described, using for that purpose the aforesaid ingredicnts or composition of matter, or any other substantially the same, and which will produce the intended resuit.
rg. $019 .-\mathrm{Lyman}$ Martin, Indianapolis, Ind.Line Reel.-January 7, 1868; antedated Deeember 18, 1867. - The line is wound on the drum within the frame, and passes through the slot of the metallic plate. When sufficient of the line is paid out, the stop pin is put into the framework.
Olaim. - The combination of the frame $A$, clrum $B$, crank $C$, the plate $D$, and pin $G$, for the purpose of a
line reel, all arranged and operating as set forth and deseribed.

3,020.-HENRY S. Matteson, Stockton, Cal.Seeder and Cultivator.-January 7, 1868.-The metallic seed slide is operated by the lever at the end of the hopper. Above each seed aperture is a foot of the rocking agitator, which reccives motion from a crank pin on onc of the ground wheels.

Claim.-1. The beams C $B$, in combination with beams D, and cross-beams I with draw-bar I.
2. The chest $A$, wooden shaft $h$, and iron slide $i$, in combination with crooked pin $k$, handle $O$, cramk $b$, connecting rod $c$, when used and arranged for the purpose herein specified.

1g3,0121.-TAMEs T. McDougall, San Franciseo, Cal.-Apparatus for Collecting Precious Metals.Jantary 7, 1868.-An ordinary sluice box has tubes or bars of copper placed within it, in such a manner as to intercept the stream and cause it to form a suecession of eddies, and bring the particles of gold in contact with the copper.

Claim.-1. A sluice containing obstructing standards, so placed as to convert the current into eddies, substantially as herein described.
2. The irom standards B C, together with the removable copper tubes $D$, or an cquivalent device, constructed and arranged substantially as above specified.
3. The plugs a $a$, for raising and lowering the tubes, substantially as described.
4. The copper plates $b b$, when employed and attached to the sides of the sluice, as and for the purpose herein described.

18:328.—Patrick McIsaac, Waterloo, Iowa.Corn Planter and Plow Combined.-January 7, 1868. -The seed hopper is secured between the moldboard and landside, and the seed slide is reciprocated by a crank on the shaft of a roller running in the furrow.

Olaim.-The herein described arrangement of the several parts constituting the corn planter, and the mode herein described of attaching the same to a common plow, as specified.
v: 6\% -Churn.-January 7, 1868.-The cream is alternately drawn into and ejected from the lower end of the open-bottomed tube by the tightly fitting piston.

Olaim.-Tle tube B, piston $F$, as arranged in combination with the case $A$, and operated in the manner as and for the prupose set forth.

祭, 02 0 .-John Mercier, Detroit, Mich., as signor to Israel Kinney, same place.-Harrow. January 7, 1868. -The beains are loosely connected by stay-chains and the strut-bars, whose ends enter deep radial sockets in the balls. The draft bar turns on a pin at the center of the harrow, but may be prerented from turning by a pin by which it is secured to the disk.

Claim.-1. The blocks or balls A A, \&c., with holes cast or bored, and the rods $\mathrm{B} B, \& c$., when constructed substantially as and for the purpose described.
2. The combination of the above-deseribed blocks or balls $A$ junction with harrows or cultivators, when constructed substantially as described and for the purposes set forth.
3. The disk $G$, the draught-bar $H$, and the pin I, when attached to cultirators or harrows, in the mamer and for the purposes described.
\%3,0.25.-JOHN Mirler, Plymouth, Mich.Sleigh Thunner.-January 7, 1868.-One of the runners is connected to the rim of each wheel by the clips and grib and serew-key. The fore end of the rear sleigh is connected to the rear end of the fore sleigll by the straps, which allow the turning of the fore axle.

Claim.-1. The construction of metal runners, of the shape set forth, provided with clips $B$, and pro vided with means of conneetion, smbstantially as de scribed, and for the purposes set forth.
2. The attachment, construeted from iron straps

H and I, prorided with the adjusting bolt $K$ and the slot $J$, operating substantially as and for the purpose deseribed.
3. The combination of the abore-described runners and attachments, when constructed substantially in the mamer deseribed.

73,036.-CARson Mudge, Née Orleans, La.Cotton Bale Tie. January 7, 1868.-The usual tie plate for hoop iron has circular holes formed in its ends, to enable its use with wire or wire rope.

Claim.-The making of the two additional openings or holes A in cotton ties, designed for use in connection with hoop iron, so that the same may be used With equal ease for fastening together the ends of wire-rope or wire, as hercin described.

73,02y-LL. F. MUNGER, Rochester, N. T.Lathe. Tanuary 7, 1868. - The sliding rest works on wars in front of the lathe, and has a formard, horizontal exteusion. giving support to the tool slicle. Which has longitudinal, trausrerse, and turning motion, and forms a table for the attachment of any article when the machine is used as in pliner. For this latter purpose a stock is secured to the shears, the said stock haring a tool holder sliding thereon, and receiving motion from an eccentric pin on the face plate of the lathe.

Claim.-1. In combination with the lathe-centers, placed reptically, or nearly so, over the fiont of the lathe, the ways $a b$, on said front of the lathe, for the slide-rest to more on, for the purpose of adapting the parts to the different operations, as herein described and represented.
2. The combination of the centering rod mith the mandrel and its adjustable bearings, substantially as described.
3. In combination with a planing or chasing tool, that receires motion fiom the face-plate or mandrel of the lathe, a slide-rest or holder that has a rertical, horizontal, and swirelling motion with reg'tral to said tool, as and for the purpose substantially as described.

78,0æ8.-H. O. Nauen, New Tork, N. T.-Tise Ciamp.-January 7, 1868.-Explained by the claim and illustration.

Clam.- A rise clamp, composed of tro jarrs: 1 , linged together by means of shanks a, and a pirot or pivots $b$, and provided with lips d, on their backs $d$, removable lining $e$, on their working faces, and a spring $c$, which opens the jaws, substantially as herein set fortli.
 Felocipede.-January 7, 1868.-The pawls are jointed to sliding plates, and slip over the iee or gromnd while moviug in one direction, but are effective to cause propulsion while moving in the other direction.

Glaim.-The device for propelling relocipedes, construeted substantially as herein shown and de. scribed.

73,930.-I. W. Norcross, Boston, Mass.-Pulley Block.-Jamary 7, 1868.-The cheelis, which are cast in semarate pieces, are attached together by rirets, which piass axially through the studs, which may be cast with the eyes. The upper eye is east open, so as to allow its insertion into the eye of the hook, a section of the stul being cast on each ent of the eje-piece. Anti-friction rollers may be placed in recesses of the check-pieces to receive the bearing of the pulley journals.

Claim.-1. In pulley bloeks, making the sereral cheeks by casting them independently and separate from the other parts, substantially as ileseribed.
2. The cast studs E , interposed betreen the checks, and held thereto by rivets or other suitable fastenings, substantially as described.
3. Dividing the stud E , and combining the same with the eye D , substantially as described.
4. The skeleton partition of cheek in, substantially as described.
5. Arranging anti-friction rollers $I$ beneath the axles of the pulley, substantially as above deseribed, in combination with a pulley block of any form or construction.
6. The hollow partition $\Pi$, made substantially as described, for the purpose of containing the antifriction roller, one or more, to support the axles of the pulleys, and to form a recess for the shank of the eye.
g3,031.-C. D. Oixistead, Williamsport, Pa. Saw Mill.-Jinuary 7, 1868. - The lower end of the saw is connected to the "section of a ball" which fits into a suitable soclect in that side of the stirrup which is fast to the cross-head, and is adjusted ly set screws traversing the detachable part. The slide head has a conrex back resting against the stationary column, and is adjusted by side wedges.

Claim.-1. The stirrup, with its fast and loose sides, holding in one side the section of a ball, and prorided with set serews for adjusting purposes, all arranged and constructed as shown and described, and for the purposes indicated.
2. In connection with the stirrup, as shown, the construction and arrangement of the rarious parts which constitute my muley-block, as deseribed and for the uses indicated.
73.032.-Citamles E. Palarer, Manchester, N. IL.-Steam Trap.—January 7. 1868. - The coupling is formed of non-oxidizable metal, and is screwed to the end of the escape pipe.

Claim.-The morable valre-seat C , constructed with a partitioned coupling $\mathrm{A} B$, substantially as set forth.
73.033.-GEORGE Patterson, Augusta. MichRail Set.-January 7, 1868. -The hooked ends of the frame take over the rail, aud the press-serew is brought against a point between the ends of the fiame to straighten the rail.

Claim.-The within described device, C D E, adapted for bending or straightening railroad rails, substantially as specified.
\%3,03.-Joshua L. Phillirs, Washington County, Miss.-Cotton-Bale Tie.-January 7, 1808.Explained by the claim and illustration.

Claim.-The derice herein described, consisting of the central bar A, when provided with the wings IS $B^{\prime}$, in which, at the points a $a^{\prime}$, are groores to reeeire the band, a longitudinal opening for the ends of the band, and holes $d d^{\prime}$, as and for the purpose herein set fortll.

㘶3,08.5.-D. C. Pience, Clayton, N. Y.-Anchor. —Tantary 7, 1868; antedated İecember 28. 1867. The side frame keeps the anchor in proper position for engaging the bottom, and is attached as stated in the claim.

Claim. -Tho fenders or rods C C D, constructed as shown, attached to the flukes and stock ot the anchor substantially in the manner as and for the purpose set forth.
g3, 0.36.-D. C. Pierce, Clarton, N. T.-Anchor. -January 7,1868 ; antednted December $25,1867$. Whe fluke is pivoted to the frame so that its point will decline ank engage the bottom on whicherer side the fiame mar lic. Projections on the lead of the fluke hok the same to position for entering the bottom.

Claim.-The shackle E, in combination with the bats $C$ C , and the piroted fluke $A$, all arranged substantially as and for the purpose specified.

73,0:3y.-Joserit Pidkington, Frankford, PaPicker Ifotion for Looms. January 7, 1868. -The horizontal arm at the lower end of the picker-staff is slotted to receire a cross-pin at the end of a meighted lever', by which its back-stroke is effeeterl.

Claim.-The combination of the weight 2 , shaft O , arm $g$, and staff d, all constructed and arranged as and for the purpose described.
 N. Y., assignor to Downs \& Co.'s Manufacturing Conipant, same place.-Pump Valve.-January 7, 1863. -The deviee is intended specially for driven wells. The disk is of rubber, or other elastic material, so as to make a tight joint upon the raised valve seat when sand is present in the water.

Claim.-The combination of the concave disk $g$ of the valve with the elevated seat $a$, arranged as deseribed, and operating in the manner and for the purpose specified.
\%3,039.-Thomas L. Reed, Providence, R. I.Lock Coupling for Gas Fixtures.-January 7,1868 ; antedated December 26, 186\%.-One portion of the coupling has a socket with an annular recess at its inner end to receive a packing ring, and a spiral groove in its side to engage a pin projecting from the eylindrical end of the other part of the eoupling, whose end bears upon the paeking.

Claim.-The conpling, eonstrueted substantially as deseribed, with a male and female sleeve, and an annular packing cavity, and a helical groove, and a peg or stad, in combination, all as and for the purpose set forth.
Also, the paeking ring, composed of India rubber and leather united together, substantially as deseribed, for the purpose specified.

173, 40. - Thomas L. Reed, Providence, R. I.Gas Socket.-January 7, 1868; antedated Deeember 26, 1867.-The lower end of the gas burner is tapering, and fits into the annular packing of the socket.

Olaim.-The shell of the soeket, construeted with a eylindrieal carity and a shonlder $e$, and a lip or ledge $i$, as deseribed, and in combination with the paeking $n$, construeted substantially as and for the purpose set forth.
'g. 9,041 .-Thomas RHOADS, Ottawa, Ill.-Apparatus for Separating Gold from Ores.-Januar'y 7, 1868.-By the deseribed arrangement the crushed quartz is fed continuously into the separator or amalgamator, and beneath the body of lead or mereury. It is maintained for a long time in contaet with the metal forming the bath, and is kept continuously moving. When lead is used the ore is previously heated, to avoid ehilling the lead.

Olam.-The inside double helix C , the helix B , inside kettle $A$, the feed pipe $I$, and the heating flue II, when in combination with each other, eonstrueted substantially as and for the purpose deseribed in the foregoing specification.

599042-Arcimbald Rice and Lewis Leach, Fresno, Cal.-Driving Bridle.-Jannary 7, 1868.The reins pass throngh eyes of snap hooks upon the bit rings, and through the gag loops to the eheck hook. The gag straps pass over the poll and diagonally down the face to the bit rings.

Claim. - The combination and arrangement of the straps a a with loops or pulleys $c$ c and $d d$, with the reins A hitehed to tho post hook, and rumning through the loops or pulleys $c e$, and to the hames or saddle, substantially as cleseribed.
rog, 048.-Willian H. Richards, Auburndale, Mass.-Device for Securing S'toppers to Bottles.January 7, 1868. -The hasp collar eneireles the bottle meek beneath the bulb, and has a scries of staple slots to render it adjustable to snit the size of the neek. It is eonnected to a eap whieh receives the top of the eork, and is seenred by a padlock.

Claim.-A device for scemring corks or stoppers to bottles, demijohns, \&e., substantially as deseribed.

93, 044.—John C. Rictiandson, Newark, N. J., assignor to himself and James H. Prentice, Brooklyn, N. Y.-.Machine for Pouncing IIats.-Jannary $\%$, 1868. -The bloek frame and the frame of the pouneing disk have partial rotation to bring every portion of the surfaees iu eontaet. The pouncing disk shaft is elevated somewhat above that of the bloek. The sand paper is confined to the berel edge of the disk by an inelosing ring having grooves to receive the latehes at the rear side of the disk.

Claim.-1. Mounting the partially-revolving frames B and C , and their connections on the centers $b$ and $c$ arranged ont of line with the shafts $D$ and M, and arranged to operate relatively to cach other, substantially as and for the purposes herein set forth.
2. In pouneing maehines, the sand paper $W$, or its equivalent, the berelled parts $P$ and $R$, and the buttons V and grooves $r$, or their equivalents, com-
bined and arranged for joint operation as a pouneing wheel, substantially as and for the purposes herein set forth.

173,015.-Elisha RobBins, Worcester, Mass.Check for Pieker Staff.-January 7, 1868.-The spring brake binds on the top of the pieker staff When it is in its backward position, thus holding it to plaee and serving to prevent its blow against the shuttle box.
Claim.-The arrangement and application of the adjustablo spring brake with the pieker staff and shuttle box, as deseribed.

Also, the combination and arrangement of the adjustablo spring brake and the arch spring with the shuttle box, the pieker, and the sword of the lay, the whole being substantially as specified.

73, 1016.-TOHN B. Robertson, New Orleans, La.-Stump Extractor. - January 7, 1868. - Tho frame is supported on broad-tread wheels when moving from plaee to place, and has legs to let down for additional support when in operation. The hoisting lrook is eonneeted to a screw rod, engaged by a nut, whicl is turned by a sweep.
claim. - The truncated pyramidal frame strueture B C, when the same is supported at its front end by the axle of the whecls $A$, and at its rear end by the pivoted adjustable standards E , in combination with the rod F , serew, collar, or nut N , metallie plate M , eirenlar collar $b$, and piroted standards $b$, when these several parts are eonstructed and arranged for conjoint operation, substantially as herein described, for the purpose set forth.
\%3, 17. - D. D. Robinson, Niles, Mieh.-Hook for Whifletrees.-January 7, 1868.-Explained by the claim and illnstration.

Claim.-The hook C , piroted in the groove at the outer end of the soeket $A$, connecting ${ }^{\circ}$ closely to the projection $B$, forming a perfect loop, and held in place by the spring a, when all are constructed and arranged as herein set forth.
\%B, 018.-Ichabod R. Rogers, Lynn, Mass., assignor to Geonge E. Bartuett, same placeLastirg Boots and Shoes.-Jamuary 7, 1868; antedated Jnly 8, 1867. -Improrement on the patent of Gilbert Hamlis, June 26,1866. A line of loop stitehes is run along the midale of the insole; the edge of the upper, when "lasting," is conneeted to the line of stitches by sewing.

Claim.-An inner sole, $A$, of any suitable material, provided with a row of stitehes $a$, by whieh the upper leather is united to it by stitehes, substantially as and for the purpose sct for'th.
g3, 49.-Willian H. Rogers, Farlen, Ml.-Gate.-Janmary 7, 1868.-The top rail of the gate is extended baekward and weighted so as nearly to balanee the gate. The uprights and posts are conneeted to the bars by pirots. The rear end of the top bar has ropes whieh pass around pulleys at the bottom of the gruide posts, and from thence to posts up and down the road. In opening, the gate is tilted backward, and eloses together on the prineiple of the lazy tong's.

Olaim.-1. The combination of the gate $a a^{\prime}$ witl the cord $n$ and the roller $u$, sheares $v w$, and handle $m$, or an equivalent, arranged for the purpose of opening the gate sulastantially as deseribed.
2. The combination of said gate with the cord $e$ and the sheares $h i$, and handle $l$, or an equivalent, for elosing the gate, substantially as described.

193,050.-GEORGE E. Rust, Boston, Mass.Horseshoe Cushion.-Janmary 7, 1868.--Explained by the elaim.

Claim.- The double pad or cushion, composed of leather and felt or other fibrous eloth, and interposed between the hoof of the horse and the shoe, substantially as lerein deseribed.

9\%9051.-THEODORF SCHEFFLER and HENRY Monrison, Paterson, N. J. -Traction Engine. January 7 ', 1858.-Double elutehes are attaehed to the driving shaft in eommeetion with levers aeted on by a steam piston. The elutehes are connected with
the driring wheels by chains. The driving engine and truck for the forward whecels turn together on a frame through which the steam and exhanst pipes of the eylinder pass. The steering is aecomplished by hydraulic power operating the forward truek througli chains and a dram.

Claim.-1. In traction engines for common roads, supporting each wheel on an independent short axle, running in suitable bearings, situated on oach side. and close to the wheel, in the manner and for the purpose described.
2. The arrangement of the loose clutch $J$ and the internal and cxtermal clutches $K$ and $L$, in com bination with the levers $a$ and $b$, or their equivalent, onerated by the steam erlinder M, the whole being arranged and combined in the manner and for the purpose substantially as set forth.
3. Connecting the driving wheels H with the driring shaft $F$ through chains, or their equivalents, passing over clntches, arranged and operating snbstantially as specified.
4. Driving the formard mheels P P by a separate and independent cylinder or erlinders attached to the movable truck $Q$, and turning with said truck and wheels.
5. The center pin R , fast to the truck Q , with suitable passages for the steam and exhaust through said center pin in combination with the socket $S$ and guide frame T , supporting the smoke box C , or end of the boiler, the whole being constructed and arsanged in the manner and for the purpose described.
6. Operating the ropes or chains that turn the forward treck and whecls of the engine, to guide or direct its morements by neans of hydranlic cylinders operated by a force or steum pump, substantially in the manner and for the purpose set fortly and deseribed.

73,052.-Avoliph Schlingman, Alexandria, Ohio.-Bed Bottom.-Jannary 7, 1868. - The longitudinal cords pass through transrerse slats, and are tightened by a roller at tho head.

Claim.-1. A ber bottom, consisting of the cord $F$ and trausverse perforated slats $G^{1} G^{2} G^{3} G^{4}$, With or without the longitudinal stiffening slats $H$, the cord being rore forth and back through said slats, and hold at the ends by pins, smbstantially as described and represented.
2. The combination, with the cord $F$ and transrerse $\mathrm{G}^{1} \mathrm{G}^{2} \mathrm{G}^{3} \mathrm{G}^{4}$ of an acljusting or tightening mil E or K , applicd and operating substantially as described and lepresented.

73, $053 .-C a r l$ Schumann, Freiberg, Saxony, assignol to EnwakD H. Jackson. Boston, Mass. Rock Drilling Machine.-January 7, 1868.-The drill is automatically partially rotated at each stroke, and is mored formard as the hole deepens.

Claim.-1. Imparting a forward and rotating movement simultancously to the valye rod of a rocli drill, by means of the levers $e^{\prime} e^{\prime}$, and their connections, substantially as deseribed.
2. The rotating device, consisting of the lerers $c^{\prime} e^{\prime}$, oprerated by means of the guide $b^{1}$ on the piston rod E', the link $f$, suide rod $f^{\prime}$, pawl o, piroted on the guide rod $f^{\prime}$, pawl $o^{2}$, pivoted on the gaide picee $n$, and the guide pieces $m n$ and ratehet $\pi$ meel $H$, substantiolly as doscribed.
3. The deriee for operating the valve rod, consisting of the lerers $e^{\prime} e^{\prime}$, operated as described, the forked lerer $h$, toothed wheels $k k$, serew rod $j$, bar $i$, and bar $l^{\prime}$, provided with shoulders $l$, snbstantially as described.
4. The derice for rotating the piston rod and rock drill, consisting of the levers $e^{\prime} e^{\prime}$, operated as deseribed, lever a, slottni gnide rod $g^{\prime}$, pawl $p$, piroted to thu shoudder $d$, and the piston rod $\mathrm{E}^{\prime}$ and slotted ratehet wheel $c^{\prime}$, substantially as deseribed.
5. The combination of the pieces I I', with the mortised shoulder's J, cylinder $K$, with tong'ue $s$, clamp L, and ratchet wheel H, operated substantially as set forth.
6. The arms e e, extending from the back plate $G^{\prime}$ of the valre chest $G$, forming the bearing of the main shaft of the device, substantially as described.

23, $054 .-A$. B. Silater, Paincourtville, La.Defecating Cane Juice.-Jauuary 7, 1868.-The fumes
of sulphur are passed through the aritated mater to cause a nore thorongh purification of the fumes.

Claim.-The supplemental or additional revolving cylindrical water cister'n 13, when constructed and operating in connection with Putterson's cylinder A, or any other cylinder substantially the same, and specially employed for purifying the fumes of sulphur to be subscyuently used in the defecation of canc juice, as set forth.

73,05.̄.-Calvin D. Smitr, Baldrinville, Mass. - Journal of Axles or Shafts.-Jannary 7, $1868 .-$ A ciremmferential groove is formed in the journal, and a longitudinal groove extends from this groove in each dircetion. A hole is bored from the end of the journal to the intersection of the g'rooves. The hole has a screw stopper at tho onter end.

Claim.-The arrangement of the inclined passage $c$ and the grooves re and $b$, together and with the journal, as specified.

93,0.56.-JJOHN STARK and Micimal Stark, Buffalo, N. Y.-Machine for Mashing and Boiling Wort for Beer.-January 7, 1868.-The boiler has steam pipes beneath the lower perforated false bottom. A second false bottom consists of a perforated plate which is connected to the mash-bucket wheels, and is raised therewith by means of the rertical serews. 'The vertical screws ongage by serew gearing with a shaft inade to lotato by clutching to one of two loose pullers revolving in opposite directions upon it. One of the mash.bueket shufts engages by a bevel-sear wheel with a similar wheel having rertical movement on a vertical shaft, and connectod thereto by a spline key. This bucket shaft drires the other by spur wheels.

Claim.-The combining of a beer mashing and boiling apparatns, in the manner and for the purpose set forth, or any other principally the same.

73,05\%-LEVI Sterens. Washington, D. C.Manufacture of Illuminating Gas.-Jannary 7, 1868. - The stcam space of the generator communientes with an annular chamber surrounding the exit flue, and the lydrocarbon is forced into this chamber by an injecting apparatus. The mixed gases are taked through a retort filled with coke or iron parings.

Claim.-1. The use of a close chamber for mixing a hydrocarbon and hepdro-oxyen under heat and pressure, which mixture is to be afterward retorted, to convert it into a fixed gas for illuminating purposes, as deseribed.
2. In combination with the close leating or mixing chamber, an injecting apparatns, worked by a rolume of escaping steam, to force the hydrocarbon into said ehamber against the pressure of steam therein, substantially as described.

28:358.-Isatah Tillson, Sonth Abington, Mass. - Railway Chair.-January 7, 1868.-The ends of the rails are held by the jaws, which havo bearing against the web froin the lower to the upper flange, and are held in their recesses by the corering plates, Which slide in dovetail grooves. The jaws are some what inclined to the horizon, and hold tho rail ends slightly above the bottom of their recess in the chair ; the passing wheel serving to depress them to their hottom bearing, and cansing the jars to clamp tightly.
Claim.-The arrangement and combination of tho jarr arms and their chambers in the chair with the jaws and the rails arranged within the chair, as set forth.

Also, the combination of the coveriner plates with tho jars, their arms. and the chamber's for receivin such arms, as set forth, sueh corering phates serving to prevent the jaws and their arms from being thrown ont of the chair by vertical movements or vibrations of tho rails.

Also, in combination with the chair, movable jaws to act agaivst or grasp opposite sides of the rail or rails, and be pressed against such by a weight on wheel while resting on or passing along on such rail or rails, or cither of them, as set forth.

98,059.-Llafayette L. Treman, Ithaea, N. Y. -Windlass.-Jannary 7, 1868.-Explained by tho claims and illustration.

Claim.-1. The enlarged ends of the levers extending and bifureating over the ratehet wheels $\mathbf{E}$, so as to embraec the said ratchet wheels by a sliding surfaee at $\Gamma^{\prime \prime \prime}$, as set forth.
2. The adjustment of the said levers and ratchets, made as described, on the shaft $C$ within the bits $A$, for the purposes speeified.
3. The combination and arrangement of the le. vers, ratehets, and elieks, constituting the working parts of the wiudlass, within or iuside of the bits, for the purpose of giving free seope to the chain, cable, or rope on the heads, and a roiding their interference with the said moving paits, with the heads on the ends of the shaft, outside of the bits, as set forth.

73,060.-Charles Volkmar, Baltimore, Md.Painter's' Canvas. January 7, 1868. - The callvas has applied to it a compound of albumen aud white lead, or of albumen alone, and the latter is then eoagulated by boiling.

Claim.-A canvas or other material prepared for receiving colors or other substanees by means substantially as herein deseribed.

73,061.-JOHN N. Wallis and Theodore WalLIS, Fleming, N. Y.-IIarrow. January 7, 1868.The tooth is fixed in a thimble whieh turns iu a bisceted nut serewed into the frame, and forming the box of the said thimble.

Claim.-1. The flauged eylinder C , when used as and for the purpose specified.
2. The double nut or shell piece $F$, when used in the manner and made to subserve the purpose above set forth.
3. Supporting the teeth of drags or harrows by means of a eylinder whieh shall allow the tecth to rotate as and for the purpose speeified.

73,062.-Preston Ware, Newton, and Calvin R. Tilton, Tisbury, Mass.-Mode of Closing up Boot Legs.-January 7, 1868.-Explained by the claim.

Claim.-Making a boot leg whose diverging edges are united by a lap seam by machinery, substantially as described.

83,053.-ALBIN WARTI, Stapleton, N. Y.Sewing Machine.-January 7, 1868.-Explained by the claims and illustration.

Claim.-1. Making the needle slide M and the guide rod $P$, either or both, in the form of tnbes, closed below, so as to prevent oil used in lubricating them from falling on the table, substantially as described.
2. The combination of the guide rods $O$ and $Q$, with the holding plate S, substantially as and for the purpose described.
3. Making the needle and pressure guide rods 0 and Q, either or both, hollow, to allow the escape of air, substautially as described.
4. The combination of the thread guide $s^{7}$ with the presser foot, snbstantially as deseribed.
5. The hook 28, formed substantially as and for the purpose deseribed.
6. The combination of the grooved shuttle with the hook 28, as and for the purpose set forth.
7. The diseonnecfed friction pins in the shattle, arraneed substantially as described.
8 . The shuttle $\mathbf{S}^{\prime}$, constructed as shown and described.
9. The spring L, arranged so as to bear upward against the needle slide, substantially as deseribed.
10. The combination of the eccentrie $r^{7}$, universal joint $G$ I, rod $F$, and needle lever $C$, constructed and operating substantially as and for the purpose described.
11. The tension device $X \quad y$, and the take-up $W$, arranced aud combined substantially as described.
12. The combination of the reversible slide $r$, the nut $n$, having arms $p, p$, and the rock-shaft $u$, having toes $t t$, substantially as described.
13. The lever $w$, provided with two shoulders, 11 , in combination with the spring $x$, substantially as described.
14. The adjustable plate 7 , for regulating the length of the stitches, in combination with the jarrs 55 of the feeding apparatns, substantially as described.
15. The box that holds the feed rheel, composed
of the rigid plate 11, the spring plate 12 , and the elastie rings 14 and 16 , subsantially as deseribed.
16. The hollow axis in whieh the feed wheel turns, in combination with the hollow hub, elosed at one eud, substantially as shorm and deseribed.

193,064.-Albin WARTH, Stapleton, N. Y.Sewing Machine.-January 7, 1868.-The serring mechanism is secured to the table by a swirel shat beueath the throat picee to admit of turning in either direetion. 'The palley through which motion is imparted is nouuted on the cam shaft, around whieh the mechanism turns. The serving deviees are explained by the elaims and illastration.

Claim.-1. The arm D and brace H , in combination with eaeh other and with the shaft C , table $A$, and platform $G$, substantially as and for the parpose deseribed.
2. The independent take-up $K$ and eam $E$, in combination with the double-pointed shuttle S , constructed and operating substantially as and for the purpose set forth.
3. Making the shoulders $h$ of the double-pointed shuttle $S$ radiating from the eenter of the shuttle laee, substantially as and for the purpose described.
4. The arrangement of the winding attachment $m$, in combination with the elastie ceuter $j$, substan tially as and for the purpose set forth.
5 . The cap $k^{\prime}$, in combinatiou with the elastic center $j$, aud with the shuttle race, construeted and operating substantially as and for the purpose described.
6. The looked pin $p^{\prime}$, in combination with the pin $p$ in the shuttle, substantially as and for the purpose set forth.
7. The movable center $v$, in combination with the adjustable center point $r$, construeted and operating substautially as and for the purpose set forth.
8. The adjustable cam $\bar{M}$ on the main eam $\mathbf{E}$, eombined and operating in connection with the feed bar L, substantially as and for the purpose set forth.
forth. The recess $w$ in the presser foot, in combi nation with the adjustable spring $x$, constructed as described, which keeps the braid up against the shonlder $y$, substantially as and for the purpose set forth.

73,065.-JACOB D. White, Kilbourne, Ohio.Shecp Rack.-January 7, 1868.-The rack is piroted at bottom and settles down as hay is withdrawn.

Claim.-A feeding-rack or manger a a $a, b b, c$ c I I, prorided with an inclined hinged lid or corer, $d d$, and a self-adjusting feed rack, $g$ g $g^{2}$, J J , which is held in a vertical position by the pieces of leather $h^{2} h^{2}$ affixed to cach end of the rack, and so arranged as to pross backrrardly on the fecding material by its own grarity, without any auxiliary appliances, eonstructed and arranged substantially as herein shown and described, for the purpose set forth.

73,068.-JOHN B. WOOD, Cranstou, R. I.Attaching Fandles to Dippers.-January 7, 1868.Radial, wedge-formed picces are removed from the end of the handle entering the socket, to prepent the fracture of the latter by expansion of the wood owing to moisturc.

Claim.-Slitting or otherwise remoring a porfion of the material of the. stick or handle whiel is held in the metal soeket piece, when combined with the metal soeket, substantially as and for the purpose deseribed.
\%3,06\%.-ENOCH S. YeNTZER and AlFRED K. MCCAIN, Ottawa, Ih.-Feller for Seving Jachines. - January 7, 1868. -The "feller" is attached to the presser foot. One of its edges is bent so as to form a tapering, turuing position. A gange lies close to the seam first made.

Claim.-1. The attaehment of both the single turner $a$ and the gauge or guide $b$ to the prosser-foot, by the means and in the manner substantially as herein deseribed.
2. The single turner $a$, in combination with an adjustable gauge or guide $f$, adapted for felling seams, substantially as described.
3. The attachment of the turner $a$ of a feller to an elastic holding plate B , substantially as deseribed.

73,06S.-JOHN Allen and Cifarles E. F Lewis, Washington, D. C.-Lamp Chimney Fastening. January 7, 1868; antedated December, 24, 1867.-The annular chimney catch is bisected, and one sectiou hinged to the other at one end, and engaged to it at the other by a thumb screw.

Claim.-1. The cireular and groored holder, dirided into segments, operating on hinges, and held by fastcnings, as herein described and for the purposes set forth.
2. The use of an clastic or rubber ring, fitted into the groove of the holder, for the purposes set forth.

73,069.-John F. Allen, New York, N. Y.Valve Gear.-January 7, 1868.-The two eccentries are connected to a link-motion, which is adjusted by connection to the governor stem.

Claim. - The arrangement of the gorernor and link-motion with reference to the wrist-motion, cons.rueted as described, to produce an automatic control of the induction valves, substantially as specified.
$73,070 .-$ Thomas A. Ballou, Clereland, Ohio.Friction Roller for Band Saws. January 7, 1868.Anmular pieces of raw hide (edge outward) are confined betwcen the flange of the pulley and the annular follorrcr.

Claim.-'The roller $A$, consisting of the head $A^{\prime}$ and follower piece $D$, and pieces of raw hide $C$. clamped between the head and follower by means of clamp screws I, all constructed to operate substantially as described.

73,071.-Truman G. Beecher, Beaver Dam, N. X.-Railway Switch.-January 7, 1868. -The derice forms a raised connection between one track and a parallel track beside it.

Claim.-1. The rails of a portable switeh, coustructed with flanges, for attaching them to the main track of a railroad, aud locking them in position, substantially as set forth.
2. In combination with such rails the ties D , constructed substantially as described.
3. The ties D, formed with flanges, arranged substantially as set forth, to form locks to hold the tie on the bed rail, when in proper position to sustain the temporary track.
4. So censtructing the rails of a temporary switch that the temporary track may be carried orer the bed rail, said portable rails being formed substantially as set forth.
5. In combination with the tie D , the brace $\mathrm{D}^{1}$, so arranged as to act both to support the rail laterally and to form a chair to hold the rail down, substantially as described.

73, 182.JJonas Berger, Knoxville, H1.-Key Coupling for ITusical Instruments.-Jannary 7, 1868.-Improvement on his patent May 14, 1867 . In operating the oetare the first key of the same is pressed down, the lever of the coupling depresses the slide in the groove of the standard, and thus operates the valves without depressing the octave key.

Claim.-1. The construction of a key coupling, in which the octave is operated mithout depressing its key, substantially in the manner and for the purpose as herein specified.
2. The construction of the key-board F with standards E, and providing the same witle groores and slides a in combination with the strilps G, crosspicces $f$ and $c$, standards D , ralres C C , and springs $a$ a, all arranged substantially in the manner and for the purpose as herein specified.

73,073.-WILliam W. Biercie, Cleveland, Ohio. - Apparatus for Carburetting.-January 7, 1868.Improvement on his patent April 1, 1867. The carburetting ressel is immersed in water in the tank, into which the lower end of the gravitating air holder dips. The air from the holder passes into a chamber communicating with the central chamber of the float, and passes radially through the perforated plates forming the sides of the annular chamber, containing the fibrous material, which is supplied with the hydro-carbon through vertical tubes passing through the sustaining chamber. From the anumar carbu-
retting chamber the carburetted air passes to the exit pipe.

Claim.-The immersed carburetting ressel $Z$, with its coutained float $D$, in combination with the gravitating air holder M , tank L , and inverted siphons F I Q R, when arranged and employed substantially as and for the purpose set forth.

73,074.-Georg Bockstaller, New York, N Y., assignor to Lewis Scinveider and W. W. Ifc-KAY.-Cane and Umbrella Combined.-Jantrary 7, 1868 ; patented in Bararia July 17, 1862.-The cover has a hole for traverse of the stick end and eyes to pass orer the ends of the ribs. It is detached when the article is used as a cane, in which case the sheath is drawn over the frame-work.

Claim. - The combination of the cover, detachable from the stretchers and fiom the stick and the sheath $F$, arranged to take the place of the cover, and to give to the umbrella the appearance of a walkingstick, all as sct forth.

73,075.-Elisifa Broad, St. Anthony's Falls, Minn.-Cant Hook.-January 7, 1868; antedated July 8, 1867. - Explained by the claim and illustration.

Claim. - The plate $D$, witl its ears and stops $x x$. as shown and described, whereby the hook C , as constructed, is hinged to the landic a and prerented from falling too far back or formard, suljstantiatly as herein specified.
73,076.-STEPHEN D. Carpenter, Madison, Wis. -Construction of Lumber Wagons.-January 7, 1868. -The tongue and coupling reach are connected to an iron frame betwcen the bolster, by which tho lounds and ordinary fiftli wheel are dispensed with. The reach is adjustable in length, having upper and under parts engaging each other by ratchet faces, held in contact by a ring and wedge. The end boards have pins entering the box bottom, and transperse rods which enter recesses in the sides, and are engilged by links hinged to the box sides.

Claim.-1. 'The rocker' block and the coupling block attached to the pole, for the purposes and substantially as herein deseribed.
2. The manner of fasteniug the stakes to the bolster, for the purposes and substantially as herein described.
3. The manner of fastening the reach together and operating the same, the cast-iron socket C, the sleeres and wedges, the shank E , and the wrought iron fillet for strengthening the same, for the purposes and substantially as herein set forth.

73,077.-A. J. Cilase, Boston, JIass.-Watch key Protector.-January 7, 1868.-The loop engages the ling of the key and retains its point within the bolt.

Claim.- A rulcanızed India-rubber key gruard consisting of the bulb $d$ and loop $f$, made substantially as and for the purposes herein shown and set forth.

173,078.-Pascal P. Cimlld, St. Louis, Mo., as. signor to S. R. Fox Manumacturing Company, same place.-Combined Latch and Bolt.-Jammary 7, 1868. -The latch is slotted where piroted, so that it can be mored endways into the staple of the striker and perform the office of a bolt.

Claim.-The sliding-bolt latch C , in combination with the keeper and striker $D$, the latter being constructed as described, with rebated projections $l^{2}$, which act as strikers for the latch when it is used as such, and the hasp rail $d$, which confines the latel when acting as a bolt, as shown and described.

73,075.-William H. Coombs, Fort Wayne, Ind. -Machine for Pressing Brick.—Wanuary 7, 1868.The partially-dried brick is placed before the feerler, and by it moved into the course of the pluncer, by which it is foreed into the mold. On the rettirn morement the bottom plunger is drawn forward and cjects the pressed brick from the mold.

Claim.-1. The improved brick-pressing machine, constructed and operating substantially as herein described.
2. In combination with the mold in which the bricks are pressed, and a plunger or piston, ope-
rated by a crank and pitman, to press the briek in the mold, the movable baek piston $P^{\prime}$, moved by the means and in the manner substantially as herein deseribed, to remove the pressed brieks from the mold.
3. In eombination with a plunger or piston, operated by a erank and pitman to press the brieks in the mold, the feeder $i$, operating in the manner ind by the means substantially as herein deseribed, and for the purpose set forth.
4. In combination with the mold, and a pressing plunger or piston, the elastie backing $\mathrm{O}^{\prime}$, substantially as and for the purpose set forth.

73,080.-William Cooper, Deposit, N. Y.-Ifelodeon.-January 7, 1868. -The dip of the lower lieys is automatieally regulated by the pressure of air in the reeciver. The two bellows have eaeh a reeciver, by whieh one portion of the seale may be played loud and the other soft. Communieation may be opened between the reeeivers.

Claim.-1. Graduating the dip or depression of the keys by meehanism eontrolled by the reeeiver, substantialy such as hercin deseribed, for the purposes speeified.
2. The two receivers $A$ and the two exhausters, with their operating pedals so eombined that the aforcsaid reeeivers may be worked either together or separately, at the pleasure of the player, substantially as herein set forth.
3. The slide $b$, or equivalent device, arranged in such relation with the two receivers that the latter may be cither separated or made to communicate with each other, substantially as and for the purpose herein set forth.
gB,081.-WILLIAM H. DamRON, ROBERT H. MASSEY, and Lorenzo F. Whitman, Maeomb, Ill.Oultivator and Plow.-January 7, 1868. - The wheels are adjustable laterally and vertieally in relation to the frame, so that the machine may be adjusted to operate either as a gang or snbsoil plow.
ctaim.-1. The combination of the wheel $a$ with the wrist $e$, sliding ehases $e^{\prime}$, and eross beam $a^{\prime}$, as and for the purpose deseribed.
2. The eombination of the plow beam $c$ with the sliding crotehes $i$, the cross beam $a^{\prime}$, the guide $n$, and slotted eross beam o, substantially as set forth.
3. The eombination of the plow beam $c$ with the crotches $i$, provided with the holes $i^{\prime}$ and pins $k$, as and for the purpose set forth.

7\%,082.-SaMuel Darling, Bangor, Maine.Straight Edge.-January 7, 1868. -Explained by the claims and illnstration.

Olaim.-1. A straight edge, hardened at its edge or edges and not at its eenter, substantially as de seribed.
2. Straight edge, having a hardened cdge or edges, aud admitting, when warped by hardening, of being bronght into true, substantially as deseribed.
3. A straight edge, made of tro or more thin picecs, having onc or both edges hardened, for the purpose of making it thieker, substantially as deseribed.
4. A straight edge, eomposed of a thin plate, with hardened edge or edges, and a sipporting bed or plate, substantially as deseribed.
5. A straight cdge, eomposed of two or more hardened straight edges, secured end to end, upon a supporting bed-plate.
6. A straight edge, when eonstructed as herein set forth, whether the same be used as a single edge or with two opposing edges, as in a gauge, substantially as cleseribed.
7. The mode herein described of under-graduating the straight edges to eompensate for the stretch in hardening.
8. The process herein deseribed of redncing the sraduated edges to the proper standard by tem. pering.
\%B;032.-JOHN H. DuHME, Cincinnati, Ohio.Steam Generator:-Jannary 7, 1868.-Explained by the claim and illnstration.
Gtaim. - The steam boiler construeted as deseribed, cousisting of the seetions C placed one above the colisisting of the seetions end connceted together at the onds by means of the pipes $a$; said sections eonsisting each of the
corrugated longitudinal plate $c$ and corrugated transverse plate $d$, seeured together at their points of interseetion, all arranged as deseribed, as and for the purpose speeifiod.

73,084.-Charles R. Ellis, Brooklyn, N. Y.Boiler for Heating Apparatus.-January 7, 1868. Eaeh one in the vertieal series of pipes has an upper and lower thimble at eaeh end, communieating with the pipes immediately above and below. The pipes are hold together by stay rods traversing all the thimbles. The pipes are somewhat inclined, and pipes from the heaters eommunieate with the lowest and highest eorners of the series.

Claim.-A series of pipes for a hot-water heating apparatus, formed with the water-way thimbles near the ends of the tubes, in combination with the pipe ( $g$ or $h$, ) having a range of thimbles on one side, the whole being connected together by tie-rods, as set forth.

73,055.-JoHNP. ELLIS, Flushing, N.Y.-Water. proof Safe.-January 7, 1868.-One or more eases or bags are inelosed in an outer ease, and the whole may be immersed in water or buried.

Claim.-A water-proof safe or reeeptaele for papers and other valuable doeuments, eonstrueted substantially as herein specified.
ge,086.-Henry Farmer, Pontiac, Mieh.-Potato Planter. January 7, 1868. - The earriers are on an endless belt, and consist of eurved forks, whieh, in rising into the hopper, pass up through a grate.
daim.-The arrangement and combination of the said iron fungers, hopper, and plows, aeting together, as and for the purpose above specified.

193,08g.-William Frantz, Piqua, Ohio.-Cul-tivator.-Januai's 7, 1868.-Explained by the claim and illustration.

Claim.-The eombination of the standards $\mathrm{D}^{\prime}$ and shovel plows $\mathrm{E} \mathrm{E}^{\prime}$, adjustably attaehed to eross beams $\mathrm{C} \mathrm{C}^{\prime}$, and the adjustable rake F , arranged to operate substantially as set forth.
g3,088.-John Gardner, New Maven, Conn., assignor to Samuel Peck \& Co.-Picture and Cur. tain Knob. January 7, 1868. -The knob is eomposed of gum shellae and rosin, in about equal proportions, mixed with sufficient sarrdust or fibrous material to give tonghness, and eoloring matter for the tint. The material is molded and the shank inserted while the former is soft. The knob arid shank may be made of the same material.

Claim.-As a new artiele of manufaeture, a pieture or curtain knob, or knob for like purposes, make of the material and in the manner substantially as hercin speeified.
'g3.089.-E. J. GERDOM and C. W. Schindler, Albany, N. Y.-Lubricating Compound.-January 7, 1868.-Composed of tallow, 100 ; potash, 3 ; borax, 5 ; and alum, 3 parts. The chemicals are dissolved in water and boiled with the tallow nntil incorporated therewith, and the watcr evaporated.

Claim.-A lubricating compound, made of the ingredients above specified, and having the property that it will melt at a temperature of from $100^{\circ}$ to $110^{\circ}$, as set forth.

78,090-I. A. Gormix, Bueyrus, Ohio.-Field Fence.-J anuary 7, 1868.-The metallic standards are attaehed to fomdation bloeks, and have sockets for reception of the metallie pins by which the bars are attached to them. The pins have at one end a liead, at the other a liole for a key.

Claim.- The combination of metal posts, anehors, and braces, with dowel-pins and wedges, substantially as deseribed.
\%3,031.-JAnes Gray, Albany, N. K.-Base Burning Hot-Air Furnace.-Jannary 7, 1868.-Explained by the elaims and illustration.

Claim.-l. In a base-burning stove or furnace, which has a supply cylinder, an eseape passage from the chute $J$ through the horizontal pipe $d^{\prime}$, or the hollow ring $e^{\prime}$, into the flue $\mathrm{F}^{\prime}$, substantially as described.
2. Providiug chute $J$, leading through one side of the exterual casing into the cylinder E , with a damper or ralve $g$, substantially as described.
3. The construction of the double wall cylinder $\mathrm{D} \mathrm{D}^{\prime}$, annular chamber $d d$, and air-passages $f f$, substantially iu the manner shown and clescribed.
4. The combination of the magazine E , outer casing $H$, with the hollow open-work section $F$, and the annular chamber $d d$, with air passages $f f$, crossing it, of a base-burning air-heating furnace, substantially as described.
5. The combination of the magazino E , central exit-flue $\mathrm{F}^{\prime}$, and ascending aunular flue $d$, leading from the fire-chamber, substantially as and for the purpose described.
6. Conducting the heated products of combustion, rising from the fire-pot C , around aud orer the coal-supply cyliuder, (and discharging them into a oentral flue, directly over the center of the said supply cyliuder, ) in combination with warm-air chamber $G$ and $\mathrm{G}^{\prime}$, such chamber being inclosed by wall H , all for the purpose of heating air which is to be used for warming apartments, substantially as described.
7. Making the iron protector or the guard-plates $k k$ of the fire-bricks (or their cquivalents) portable in segments, so that they may be removed through the lower cnd of the magazinc E , substantially as described.
8. In the construction of a base-buruing air-heating furnace, having a magaziue $\mathbf{E}$, an anuular cir-culating-air chamber, and an annular smoke-pascage, both surrounding said magazine, and situated between the same and the annular wall D , the iuclined chutc or passage $J$, provided with a ralve $g$, and gas-escape conduit, and adapted to serve as a meaus for introducing coal into the magazine from a point which is below the top of the outer casing, substantially as described.
9. The flaring arched opening of the ash-pit $A^{\prime}$, formed by the inclined plate $a^{2}$, substantially as described.
10. The combination of the sectional lining $h h$ with annular circulating space $G$ and jacket or wall $D^{\prime}$, substantially in the manner described aud shown.
11. The combination of the magazine E , damper or valve $g$, the horizontal pipe or pipes $d^{\prime}$, and the Lollow ring $e^{\prime}$, substantially as described.
12. The arrangemeut of flues $d^{\prime}$ and $e^{\prime}$ so that they can be cleaued by using a flexible-handled brush Gom inside of the door leading into the coal-supply cylinder or reservoir, substantially as described.
13. Iu a base-burning air-lneating furnace, having a magazine E , a doorway or passage, provided with a door or window, and opening into the combustiou chamber through the outer casing of the furnace, substantially as deseribed.
14. In a base-burniug air-heating furnace, having a magazine E, a passage, covered by a door or window, and leadiug into the combustion chamber, through and across the air chamber formed by the exterior casc or wall and the outer wall of the furnace, substantially in the manner and for the pur: poses described.

73,092.-Callir Gresiuchna, New York, N. Y. - Apparatus for Distilling and Rectifying.-January 7, 1868. -Improvement ou pateut of C. Gresiuchna aud L. Jarchow, July 2, 1867, (No. 66,323.) The vapors from the still pass into an inverted eup whose adges descend below the top of the conducting pipe, and enter the low wine in the receiver. The vapor is thereby washed in the low wine, in passing beneath the cup edge. After impinging against the condensing surfaces of the receiver, the upper one of Which is cooled by water contained in a vessel to which it forms the bottom, the vapor passes into the reetifier, in which it passes through a series of wrashbasius. The top and side of the rectifier are cooled by water contained iu vessels each of which overdlows into the onenext beneath. A radial pipe connecting with the bottom of cach basin communicates with an outer rertical pipe, by whieh water may be flowed through the basins to wash away the impurities which colleet in them.

Claim.-The blow-off pipe P , in combination with the cups $d^{1} d^{2} d^{3} d^{7}$ iu the rectifier $G$, substantially as and for the purposes described.
(g,093.-Theodone D. Haehñen, Philadelphia, Pa.-Reciprocating Ball Toy.-January 7, 1868.-The ball is at the end of an clastic cord, and by the movement of the handle may be thrown upward through the ring, and may descend through the same.

Claim.-The combination of the ring A, the elastic corcl $C$, the ball $D$, and handle $B$, substantially as specified.
$73,094 .-W$. O. Hargrave, Ripon, Wis.-Cul-tivator.-Jauuary 7, 1868. -The draw bars are pivoted beneath the axle, and have a trausverse bar beneath them, which is attached to a frame running forward of the axle, and conuected by toggle lerer's to the lower side of the tougue. By straighteuing the toggle levers, which is accomplished by a sliding bar, the fore end of the frame is depressed, and the cultivator shares raised by the transverse bar.

Claim.-1. The board H, connected to the tonguo C by the hinge $H^{\prime}$, so that the clrill teeth eau be elevated by the driver, in the manner as set forth.
2. The axle A, with its blocks D D D, between which are hinged the beams E E E, provided with their shovels e e e, when used in connection with the board H, bars d d, securing the horizontal resting har $G$, and operated by the rod $b$ upon the beam $E$, by the hinge $H^{\prime}$, the whole constructed aud used in tho manner substantially as specified.
y3,095.-Dennts Harkigan andJoel Whitney, Winchester, Mass.-Worm for Gears.-Jauuary 7, 1868. -The thread in contact with the driven wheel projects toward the center of the latter, and the general outline of that portion of the thread is concentrio with the wheel.

Claim.-An endless screw or worm, with its threads so formed as to have their general directiou from root to summit such that, if prolonged, they would meert at a poiut distant from the roots of the threads equal to the radii of the wheel they are intended to drive.

Also, the forming of these threads upon a body whose bounding lines, in a direction parallel with tho axis of the worm, are concave, the radius of the coneavity being equal, or nearly so, to the radius of the wheel to be driven.
g3,096.-Charles Hastligas, Downgiac, Mrich. -Bee Hive.-January 7, 1868. -The sides are double. The movable fiames liave paper spread above them, and the upper bars of the frame have apertures cut transversely across them to allow passage to the bees.

Claim.-The combination of the box $A$ with an air chamber $a$, and a series of movable comb frames B B, with recesses $x x$. Said frames and reecsses are covered with paper C , or equivalent material, as aud for the purposes specified.

193,097.-Napoleon B. Heafer, Bloomington, 111.-Brick. Truck.-January 7, 1868. -The truck whecls are made sufficiently wide to act as rollers. The thills have hooked irous, which cugage eyes iu a frame attached to the axle. The hand tongue is arranged to slide beueath tho box.

Claim.- A truck which is adapted for general usa in a brick-yard, consisting of a platform $A$, with remorable liead and tail boards $A^{\prime} A^{\prime}$, mountod upois rollers C C, and provided with a sliding hand tongene E , aud also means for attaching thills I , substantially as described.
re3,098.-L. F. Hendenson, Treeport, Tll.-Port able Fence.-January 7, 1868.-The uprights taper upward, and each consists of two pieces attached to a transverse base piece, and also held together by cleats. The top rails have cleats which take over the euds of the uprights, and serve to hold them in longitudinal position.

Claim.-The uprights A A, secured with eleats F F , and to bases B B , in combination with top rails D, stakes C, and lower rails G, substautiolly as and for the purpose set forth.
y3, 0!9.-JACOB C. Honton, New York, and James Milligan, Brooklyn, N. Y.-Spirit Mcter for Distilleries.-January 7, 1868.-Explained by the claims.

Claim.-1. The method of aseertaining the quantity of spirits prodnced in a distillery in a given time, by using, in combination with an automatic meter to measure the spirits passing from the worm, another automatic meter to measure the becr passing from the fermenting cistcrns to the still, said meters being arranged and provided with automatic registcis, substantially as described.
2. The method of ascertaining the quantity of spirits produced by a clistillery in a given time, by passing the beer through an automatic registering meter on its way from the fermenting cisterns to the still, whether in combination with a meter to measure the distilled spirits or not, substantially as herein described.

73, 100.-GEORGE W. Hubbard, Philadelphia, Pa., assignor to Cresson \& Smith, same place.Shaft Coupling.-Jannary 7, 1868.-The cylindrical coupling is cut through longitudinally, and the opening closed by set screws so as to closely embrace the shaft end. A key lies in seats in the shafts and coupling cylinder, and its inturned ends occupy recesses in the shafts.
Claim.-The combination of a clamp or gripingcoupling A, constructed substantially as deseribed, and provisional safety key $D$, with the shafts $B$ and $\mathrm{B}^{\prime}$, as and for the purpose set forth.

73, 10耳.-Ezra Hutson, Brockport, N. Y.Pushing Jack for Railroad Cars.-January 7, 1868. -The pawl bar is placed against a tic and the hinged jaw against the car, and the latter mored by depression of the lever.

Claim.-The hinged jaw $g$, in combination with hinged lever $C$ and band-lcver A, substantially in the manner specified.
r3,102.-William M. Jones, Horicon, Wis.Device for Sharpening Horseshoe Calks.-Jannary 7, 1868.-The file has two plates, whose beveled faces are turned toward cach other to form an anscular recess, into which the end of the calk is received.

Claim.-The within-described V-shaped filc, constructed and used substantially as and for the purpose specified.

73,103.-JOEL LeE, Galesburg, Ill.-Washing Machine.-Jannary 7, 1868. -The pins depend from a head which has reciprocating rotary motion from its vertieal journal shaft, but has vertical movement on the latter, limited by a spiral spring. The shaft has a piniou engaged by a rack npon a pitman reeiplocated by a crank.

Claim. -In combination with the box, with wheel $B$ and crank shaft for operating the pitman, rack bar, and pinion E, the arrangcment of the solf-adjusting pins G G directly over the pedestal I, constructed as described, and plaeed over the bottom of the box, as speeified.

193, 109. -Wrlliam H. Lewis, New York, N. Y. -Bread Board.-January 7, 1868; antedated December 24, 186\%. The boart is arranged to hang up, and has a recess in one edge, in which the bread knife is held by a pin and spring catch.

Claim.-The cutting board for bread, \&c., formed with a recess or case for receiving the knife, as set forth.
geg, 105.-JOSEPH N. LIGGHTHALL, Joliet, Ml.-Filter.-January 7, 1868.-The filter is placed within a barrel and the water passes through a coarse filter beneath it, and up a central tube to an upper chamber, and from this chamber through the filtering material contained between two perforated diaphragms. 'The water is drawn from the lower' annnlar chamber by a siphon having a stop-cock.

Claim.-A filter, consisting of a vessel A, proricled with a central inlet pipe C, a removable cover B, perforated partitions $\mathrm{F}^{\prime} \mathrm{G}$, and an outlet pipe $\mathrm{G}^{\prime}$, substantially as described.

78, 106.-EDWaRD Lindsley, Cleveland, Ohio.Pantaloon Protecting Guard.-January 7, 1868.The graard is a flat metallic ring, which is placed inside cach $\operatorname{leg}$ of the pantaloons at their lower end,
and attached to the hem by pins which pass through metallie loops.

Claim.- First, the guard plate A, loops 13 B, and pins $C$, whon combined and arranged in relation to the pantaloons. substantially as and for the purpose describecl.

Second, the button D and guard A, arranged as described, in relation to the boot and pantaloons, substantially as and for the purpose set forth.

63, $10 \%$--HENRY LUMBard, Chicago, Ill.; assignor to himself, Geo. E. Gents aud John SChmidt, same place.-Broom.-January 7, 1868.-The reeds are doubled around the wedges, which are inserted in the groores of the head, and held therein by transverse pins aud vertical nails, as well as by nails which secure the metallic tips to the hea d.

Claim.-The arrangement of the rceds on the wedges $\bar{B} \mathrm{~B}$, and the manner of securing them to the block $A$ by means of said wedges, substantially as and in the manner helein set forth.
In combination with the above, the rivets $C \mathrm{C}$ and plates D D, arranged as deseribed and specified.
gis, 108.-T. J. Marinus, Independence, Iowa.Curtain Fixture.-January 7, 1868.-The hoisting cord passes through a hole in the top of the case, and through an eye at the lower end of the pendent arm of the weighted clamp. The latter has a projection, which is pressed against the cord by the weight of the clamp, aud relieved therefrom by drawing the cord away from the window frame.

Claim.-1. The automatic clamp $G$, when constructed substautially as and for the purpose specitied.
2. The combination of the automatic clamp $G$, wire $H$, and cord $E$, all arranged and operating in the mauner and for the purpose set forth.
\%\%, 109.-HENRY A. Martin, Roxbury, assignor to Josepir H. Adams, Boston, Mass.-Fibrous MIcbterial for the Manufacture of Rope, Cord, and for Covering Wire, Cord, de.-January 7, 1868; antedated Deeember 28, 1867.-Gntta-percha is rolled into thin sheets and then separated into fibers which are subscquently spum into cords.

Claim.-A fiber formed from gutta-percha for the purposes set forth.
 Y.-Screw Machine.-January 7, 1868.-A ringformed blank-carrier is moved intermittingly, and through this carrier, and at right angles to the same, passes a second ring that carries the cutting tools, and is rerolved gradually and continuously. The cutters only occupy a portion of this ring, and the movement of the blank-carrier ring takes place cluring the time that the cutters are not in contact with the screw.

Claim.-1. The receiver $n$ and pnsher 11, in combination with the blank carrier $f$, substantially as and for the purposes set forth.
2. The ring-blank carrier $f$, in combinatiou with the ring-tool holder $d$ and cutters $r$, the holder nassing through the carricl, as and for the purposes set forth.
3. The arrangement of devices, as described, for operating the pusher.11, as and for the purposes set forth.
4. The remorable chucks, constructed and ap plicd as set forth, in combination with the ringblank carrier $f$, as and for the purposes specificd.
5. The delircry-slide $w$, actuated as specified, in combination with the ring-blank holder and ringtool holder, as sct forth.
6. A machine for cutting screms, in which the tools and their supporting-ring are mored continnously by gearing that is comnected with the screirdriver by a changeable gearing, all arranged substantially as set forth, so that the pitch of the sererrthread may be raried, as specified.
7 . The cams $k$ and 8 , or projections applied to the ring $d$, substantially as specified, in combination with the parts that supply the blank, foree it into the hlank-holder and move the blank-holder and the screw-driver, the parts bring arranged aud operating substantially as set forth.

73,111.-Thos. B. McConaughey, Newark, Del. -Governor.--January 7, 1868.-The tripping lerer is connected by a hook and staple to the pivoted arm carrying the governor-pulley, and in case the belt beeomes broken the arm descends and trips the lever, whieh applies the stopping-brake to the periphery of the main wheel.

Claim.-1. The hinged arm D , in combination with hook $e$ and tripping-lerer E, whell constructed and operating substantially as set forth.
2. The governor-pulley $h$, when driven by aud combined with pulley $g$ and belt $H$, iu tlic mauner substautially as specified.

73,112.-E. O. Melvin, Brooklyn, Wis.-Grain Mectsure.-January 7, 1868.-A measure is placed ander each branch of the chute, and as the gate is moved to dircet the graiu into either brauch the act is denoted by the register:

Claim.- The combination of the bifureated ehute A a $a^{\prime}$ with the gate $B$, lever $I$, rod $S$, and the reg. isteriug apparatus above deseribed, substantially as deseribed, for the purpose herein set forth.

133,113.-I. Ferguson Morsell, Stamford, Conu.-Railway-switch Alarm.-January 7, 1868.A elock morement is connceted to the lever operating the switch. When the main line of traek is unbroken the alarm is at rest, but when the main line is broken the alarm continues to sound.

Claim. - The combination, with the switeh-bar and lever, eapstan, or other deviee for operating the same, of a cloek morement, provided with an alarmgong attachment, substantially as and for the purposes herein spccified.

193,114.-William Munroe, Cambridge, Mass. -Recd for Organs.-Jamary 7, 1868.-The reed plate has upward projections, which are grooved to reeeive the fixed ends of the tongues.

Olaim.-As an improved manufacture, musical reeds, in which the tongue is seeured in place between two projections, in the manner substantially as described.

Also, the eombination with the tongue sceured in place, substantially as described, of a depression in the middle, or elevation at the ends of the bed, to whieh it is sceured, substantially as aud for the purpase set forth.

73,115.-George G. Noair, Boston, Mass.Machine for Making Paste.-Tanuary 7, 1868; antedated December 26, 1867.-The vertieal shaft is tubular at the lower end, and reeeires steam through its step-block, which is serew-threaded for coupling to the steam pipe.

Olaim.-1. Iutrodueing steam into the perforated arms and into the eontents of the tub, for the purpose above deseribed, and in the inanner substantially as set forth, or by any equiralent means.
2. The combination of arms attached to the shaft, wholly. perforated or partly perforated, and partly not perforated, for the purpose above de seribed, and in the manner substantially as set forth.

73,116.-David L. Peacock, Rockport, Ind.Shingle Machine.-January 7, 1868.-The bolt is held in the hopper, and on the reeiprocation of the lonife table a shingle is eut off, which fulls into a recess and is earried between the upper and lower rotary plaucrs. The upper planer is jourualed. in arms, which are raised by projeetions of the table, so that this eutter slaall form the taper of the shingle.

Claim.-1. A cutter frame, composed of two parallel plates $m m^{\prime}$, the upper one holding a knife N , and the lower one having a raised bed $\mathrm{m}^{\prime \prime \prime}$, arranged and combined substantially as and for the purpose spceified.
2. The combination of a entter frame, having tapering arms $t$, with the movable planer $G$, bearing in hinged arms H H, substantially as and for the purpose specificd.

73,11\%.-Charles W. Pierce, Albany, N. Y.Friction Roller.-January 7, 1868.-The ends of the shatts liave collars upon them that are reeessed to receive the opposite ends of the frietion rollers which are journaled in them, and roll both on the
shaft ends and against the inner surface of a surrounding box.

Claim.-The collars A A, made in trwo parts, and provided with slots or openings, in which tho rollers D D are held, as and for the purpose set forth.

73,118.-B. F. Prettyman, Alcxandria, Va.Skate Sharpener.-January 7, 1868.-'The concavefaced rotary eutter is flanked by adjustablo guide blocks, between which the skate runner is passed.

Claim.-1. The adjustable guides 13 13, in eombination with the adjustable file or cuttiug-tool E , sul)stantially as deseribed and for the purpose set forth.
2. The combination of the file or cutting tooi $E$ and key F , when the same are, eonstrueted and arranged substautially as described.
73,119.-George Rehfuss, Philadelphia, Pa., assignor to the American Button-Hole, Cording, Braiding, and Embroidering Machine Company, New York, N. Y.-Sewing Machine. January 7, 1868. -The ncedles are arranged to form an cmbroid ery or button-hole stitch. The thread of the upper ncedle is conducted through an eyc in the needle arm, to the eye at the necdle point. The thread of the lower needle is passed through an eye near to itlower end, and in a spiral groove to the eye at the point. The upper necdle has a regular and the lowel ncedle an irregular reeiprocation, the slide being operated by the lever; a vibrating motion is thus imparted to the lower needle slaft.

Claim.- The combination of the upper and lower eyc-pointed needles, when the movements herein described are imparted to the two needles, so that by their joint action they may produce, with two threads, the stiteli herein described, in the body or on the edge of a fabrie.

93,120.-Reuben Rember, Lebanon, Pa.-Hinge -January 7, 1868.-The pintle is removablo with a plate seenred to its head and to the blind.

Claim.-1. The pivoted plate $c$, with serew hole to fasten it to the slintter or other object, in eombinatiou with the leares $\mathbf{A} \mathrm{A}^{\prime}$ and pins $a a^{\prime}$, all construeted and arranged and operating substantially in the mammer and for the purpose described.
2. The right and left-hand hinge loaves $A A^{\prime}$ $b b^{\prime}$, fastened together by a pin $a$, whieh lias a head $a^{\prime}$, and to which head a plate $c$ is piroted, all substantially in the manner and for the purpose doscribed.

73,121.-E. J. Ricimaidson, Lowell, Mass.Ticket Holder.-Jannary 7,1868 ; antedated Jaunary 2,1868 . - The holder is attaehed to the coat and the ticket held therein by the spring wire.

Claim.-1. As a new artiele of manufacture, a ticket-holder, formed of a single wire, in the manner deseribed.
2. The holding-spring or elamp E, arranged and operating as deseribed.

93,122.-Daniel C. Ripley, Pittsburg, Pa. assighor to Rirley \& Co., same plaee.-Glass Lamp. -January 7, 1868. -Explained by the elaim and illustration.
Claim.-A lamp whieh is eonstrueted with a pressed base $A$, and one or two handles $B$, and a globe $C$, blown thereupon, substantially as deseribed.
g3,123.-JAMRS SANGSTER, Buffalo, N. K.Machine for IIandling or Piling Brick.-January 7, 1868. - When the handles are extended, the partitions are forced outward by the springs and the divisions are filled with bricks from the maehine. The handles are then raised and operate to drive the partitions in and elamp the brieks.

Claim.-1. The partitions B, when made movable by means of the handles $C$ and pins $I$, sulb. stantially as and for the purposes herein deseribed. 2. In combination with the above, the springs $G$, so arranged as to foree said partitions $B$ apartt snbstantially in the manner and for the purposes herein deseribed.

73, 124.-Daniel F. Scueaf, Dayton, Ohio.Apparatus for Gererating Gas.-January 7, 1868.The gasoline passes through a strainer eousisting of
a perforated plate which supports a sheet or mat of fibrous material, and forming a diaphragm within the tank. A pipe, having a stop-eock, leads from the bottom of the tank to a coil within a store; the coil pipe is extended and conveys the gas to the upper part of the tank from whence it is carried to the reservoir. The rising top of the reservoir is conneeted by a chain to the weighted lever operating the stop-cock between the tank and store to shut off the supply when the reservoir is nearly filled.

Olaim. - 1. The arrangement of the tank $A$, pipe $C$, and stove $B$, in such a manner that the made gas is passed back through the oil tank, the various parts being construeted and operating substantially as set forth.
2. The arrangement of the reeciver top with chain $N$, lever $P$, and pipe $C$, provided with a stopcoek, in such a manner that the flor of oil to tho generator is regulated by the rise and fall of the receiver top, snbstantially as and for the purposes specified.

73, $195 .-C O N R A D$ Scmeternly, Bourbon, Ind.-Churn.-January 7, 1868.-The disk upon the dasher rod is to prevent eseape of cream through the orifiee in the lid.

Claim.-In eombination with the dasher $b$, the sau-cer-shaped disk $e$, as and for the purpose described.

73, 125.-Eliphalet S. Scripture, Brooklyn, N. Y.-Dividers and Calipers.-Jannary 7, $1868 .-$ One of the head plates has an annular, wedge-formed rib whieh enters a suitable annular depression in the other head. One leg of the inside ealiper is nieely adjusted by a set serew.

Claim.-1. The wedge-shaped circular rib R and groove $\mathrm{R}^{\prime}$, seeured by a set-screw $s$, or an equiralent thereof, for the purpose substantially as deseribed.
2. Acjusting the leg $B^{\prime \prime}$ of the caliper, by means of a sct-serew $e$, in the manner as above set forth, and shown in the drawings at Fig. 1.
3. A miversal divider, with braces $1,2,3,4$, and having the inner snrfaces or disks of the head A corrugated, or ribbed and grooved, as shown at Figs. 3 and 4, for the purpose as above set forth.

73,12q.-J. K. SEEM, Canton, Pa.-Oloek.Calen-dar.-January 7, 1868.-The month, the day of the montl, and the day of the week are exhibited through apertures in the face. The plates having the names thereon are connected to the clock-work.

Claim.-The construction and arrangement of the wheels B C D, and the plate d, substantially as deseribed, for the purposes set ficith.

193,128.-BENJAMIN F. SHAFFER, Dayton, Ohio. -Swing.-January 7, 1868.-A treadle bar is attached to cords secured to a fixed objeet and afford means of oscillating the swing.

Olaim.-In combination with the seat $g g^{\prime}$ of a swing, the hinged pedal, attached to the swing, and the cords e $c^{\prime}$, fastened to the pedal and carried over pulleys on the swing-frame $h h^{\prime}$, and then fastened in front of the point of suspension of the swing, said several parts being respectively constructed and arranged snbstantially as set forth.

73, 189.-Franklin R. Sherman, Dowagiac, Mieh.-Gate.-Jannary 7, 1868.-The gate is supported in a slot of the pivoted post, and may be slid baek to a balance in the post, and then swung around; or it may be swung on the pivot post without slidiug. In the latter case a lateh at its lieel engages the bottom bars. The gate is raised by the piroted angular frame when slid backward, and therofore tends to shut.

Claim.-The frame E, used in eombination with the gate, the wheels $G$ and $H$, and the post $C$, substantially as and for the purpose set forth.

78, 130.-William Shires, Cineinnati, Olio.Garbage Can or Vessel.-January 7, 1868.

Claim.-A garbage vessel, consisting of the sheetmetal body $A$, wooden staves $B$, and base $C$, for the purpose set forth.

73, 131.-Pinneas L. Slayton, New York, N. Y., assignor to self and Almet Remb, samo place. -

Machine for Braiding Whip Lashes.-January 7, 1868.-The stationary, spherical frame is opon at top and bottom. It is divided into segments with ehannels between them for a series of fingers, which aro moved around to lay the strands, by segments of an external shell which rotate on their own axes.

Claim.-1. The eireular disks F, with slots $h$ gearing into cach other to earry the braiding fingers herein described, construeted, arranged, and operating as set forth.
2. The braiding fingers herein deseribed, traveling in guide-ways $a \quad a$, with their ends pointing imward, and approaching near to the center of the hollow sphere herein deseribed, all construeted, arranged, and operating substantially as and for the purpose set forth.
3. The oscillating guide blocks $s s$, the carred plates $n n^{\prime}$, and the pin $o$, in combination fith the plates $i i^{\prime}$, construeted, arranged, and operating substantially as deseribed.
73,132.-GEORGE R. K. SMITH, Brooklyn,N.Y.Wagon Protector.-January 7, 1868. - The points are on rock-bars, and may be depressed out of the ray, or raised, to act as a guard around the wagon box.

Olaim.-The construction, application, and asrangement of a protecting guard, substantially as and for the purposes deseribed.

73, 133.-GEORGE W. Stevens, Albany, I. Y.Safety Padlock for Railroad Cars.-Jannary 7, 1868. - The notehes at cach end of the yoke are engaged by spring catehes on insertion, and can only be disengaged by turning the blank side to the springeatch, whieh is preeluded by their connection, so that the yoke mnst be destroyed to effect an entrance.
Claim. - The lock composed of the shell A, yoke $B$, and springs or spring eatches $C$, combined and operating in sueh manner that the lock may be dotached only by severing tho yoke, substantially as herein set forth.

73,131.-Samuel H. SWasex, Morristown, Vt.Barrel Churn.-Jannary 7, 1868. -The float frame nearly fills the cavity of the barrel. and has radial floats extending inward nearly to the central arbor. The central dasher has radial arms alternating with those on the frame, and may be rotated therewith, or held stationary. The dashers may be held in the same plane while rotating, or at right angles to each other.

Claim.-1. A float frame, made to fill or nearly fill the diameter of the barrel or churn, when provided with floats extending to or nearly to the centrad float arbor, and operating in connection with said float arbor, substantially as describcd.
2. The central float arbor, provided with floats alternating witl those on the float frame, so arranged that it may be made to rotate with the float frame, or held stationary, when desired, substantially as and for the purposes described.
3. The means for adjusting or setting the float frame and float arbor, whereby the floats may be set or held in the same plane with or at right angles to each other, for the purposes and snbstantially as deseribed.
4. The adjustable shaft $b$, provided with the squared end, and with the grooves $e e^{1}$, for controlling the relative operation of the float arbor and frame, substantially as described.
5. The grooved perforated pirot $b^{l}$, provided with the squarcd end fitting in the float arbor, whereby said arbor may be held stationary for working the bntter, substantially as described.

73,135.-DanIEL W. Taylor, Bell County, Texas.-Medical Compound.-January 7, 1868.-For destruction of "screw worms" in cattle an" other live stock. Composed of concentrated extraci of tobacco, 16 oz ; potash, $8 \mathrm{oz} . ;$ camphor, $2 \mathrm{oz} . ;$ oil of turpentine, 4 oz.; asafetida, 2 oz . ; sulphur, 2 oz. ; and lard oil, 4 oz.

Olaim.-The preparation or medieine herein doseribed, for the purpose set forth.

73,136.-M. P. Thatcher, Pontiao, Meh.-Padlock.-Jannary 7, 1868.- One of the side platos has at each end a eylindrieal tube projecting rectan-
gularly therefrom, and the other plate has bolts which enter the cylinders. One of the cylinders is slotted to admit the passage of a spline upon the bolt which is inserted therein. The spline has projeetions enter ing annular reeesses within a scries of wheels turning on the cylinder. The rings have each a single noteh admitting the passage of the projeetions, so that the bolt cannot be withdrawn unless all the rings are in proper position, which is determined by letters or figures upon their periphery.
Claim.-The arrangement of the plates A and B with their shafts and cylinders, as constructed and used, in combination with the wheels F F , as and for the purpose speeified.

93,137.-William A. Thompson, New York, N. Y.-Machine for Treating Ores of Gold and Silver with Vapor of Mercury.-January 7, 1868. -The colinder is supported on tubular radial trunnions, and has an axial shaft turned by a wineh, and carrying radial arms with floats to stir the powdered goldbearing quartz. The cylinder has windows for obperving the eontents, and apertures closed by slides, and serving to ladle out a small quantity; or when the cylinder is tilted, to allow the contents to disaharge. The quartz is supplied through hoppers. Vaporized quicksilver is furnished through one trunnion and steam through the other.

Olaim.-1. The eylinder A, when suspended upon hollow trunnions $\Pi$, one of which is connected with a retort for vaporizing mercury, and the other with a steam generator, and so suspended that one and may be turned down to allow the contents to be drawn off, substantially as set forth.
2. The cylinder A, suspended upon hollow trunnions, and constructed with opposite windows $G$, and openings $D, E$, and $F$, and used in combination with the stirrer B, substantially as and for the purpose set forth.
73,138.-Joel Tiffany, Albany, N. Y.-Apparatus for Preparing Paper Stock:-January 7, 1868.The stock, after cutting and bruising, is packed in the reducing vessel, and treated to the caustic solution at a pressure of from 200 to 500 pounds on the square inch, and at an equivalent heat. From this versel the stock and solution are blown out into the washing tub.
Claim.-1. The use of a strong, close ressel for heating the entire liquor to be used in the reducing vessel to its maximum heat before introdueing the same into the reducing vessel, in combination with the redueing vessel, substantially in the manner and for the purpose abore described.
2. The use of a close vessel B, in combination with a reducing vessel $G$, to bo used with their several connecting pipes, substantially in the manner and for the purpose above deseribed.

73,139.-William H. Towers, Boston, Mass.Water Proof Fabric for the Manufacture of Travel. ing Dags, Trunks, Carriage 'Tops, and other Arti-des.-January 7, 1868.-Stiong paper is cemented to o woren fabric, and the paper coated with enamel similar to that used in manufacture of "patent leather."

Olaim.-1. The improved fabric, made substantially as hercin described.
2. The combination of one or more thicknesses of paper with a woven fabric, and finishing the ame with enamel, substantially as herein described.
3. The manufacture of traveling bags, trunks, valises, table covers, carriage tops, and similar artiales, by eombining enamelled paper with other textile fabric, substantially as described.
4. The application of glyecrine to compound fabrics of paper and cloth, such as herein described, to render them tough and pliable, substantially as set forth.
5. The combination of gums, rosins, paraffine, ootlodion, drying oils, and the like, with a fabric composed of paper and cloth, substantially as described.
r3, 140.-Jacob N. Vandegrift, S. T. VandeGmat, S. D. French, and E. S. Stone, Wabash, Ind, - Oar Coupling, January 7, 1868.-Explained by the claims and illustration.

Craime-1. The method aud means described for
self-eoupling cars of a railroad train, to wit, by forcing the link held by the coupling bolt of the bumper of one car up to and past the beveled eoupling bolt $D$ of the bumper of the other car, Which coupling bolt is fixed by a rivet, P P , to an attachment, $E$, which tilts as the coupling bolt rises and falls, and which attaehment is kept in place by the spring $b t$.
2. The method and means, above deseribed, for uncoupling and detaching railroad cars at will, whether the cars are in motion or at rest, viz, by the use of a cord or chain, $R$, in reaeh of the conductor, and attaehed to a compound lever, $U \mathrm{~m} T$, affixed at U to the side of the bumper, and at T to the attachment by which the coupling bolt is raised or depressed, so that the eoupling bolt may be raised and depressed at will.
3. The method and means, above described, for uncoupling and detaching railroad cars when run off the track, viz, by using eorresponding couplers, as above described, on the bunpers of eael ear, and so that when the forked lever $F$ of the bumper of one ear rests on top of the spring $i$ of the forked lever on the bumper of the othicr car, and, being mored laterally, pushes the wheel I, at the end of the attachment of the coupling bolt, against the inclined planes 0 of the forked lever, the effect will bo to depress the coupling bolt and detaoh the cars.

73,141. -Jacob Vigeant, Marlborough, Mass.Shoemakers' Hammer.-January 7, 1868.- The plane of the faces if extended would cut the handle at its point of oseillation within the hand.
Olaim.-Constructing the hammer with the inclined striking-face set at an angle with the handle, substantially as shown and described.

Also, combining with the handle, having uniform opposite sides, the tro inclined faces, arranged with respect to each other and to the handle, substantially as shown and described.

73,142.-David C. Waltere, Warsaw, Ind.Attachment for Hoppers of Grinding Mills.-January 7, 1868.-The "float" is a hinged flap at the hopper bottom, and it raises when the weight of grain has been removed from it, and causes the opening of a spout of an upper hopper, from which the grinding hopper is sapplied.

Claim.-1. A bell, so operated and arranged within the hopper that, when surrounded by the grain, it will be held stationery, but when uncovered will be caused to ring, substantially as and for the purpose specified.
2. The loaded lever D and connecting rod $d$, so combined with the float B , in the bottom of the hopper, that the said lever may operate when the float is released from the weight of grain in the hopper, substantially as and for the purpose specitied.
3. The bell F , wire $f$, and adjustable amnular block E , in combination with the standard C , rod $g$, and bar ${ }^{\text {Gr, }}$, substantially as and for the purpose specified.

73,143. - Josepir Warwick, Springhorough, Ohio.-Sulky Plow.-January 7, 1868.-Explained by the claims and illustration.

Claim.-1. The derice for lowering and raising the plow beam, consisting of the plates $g$ and $i$, the former being slotted, piroted as deseribed, adjusted by means of the set screws $k$, and operated by means of the lever $G$ and bow rack $H$, substantially as described.
2. The screw shank $\delta$ of the sheath $k$, and nat $t$, in eombination with the standard P , attached to the land side L by means of the bolt $p$, for the purpose of lowering the plow point, substantially as described.
3. The mold board I J, with its part $J$ bent around the sheath and sccured to the same, substantially as and for the purpose described.
4. The share M , with its bent part N connected to the land side L, and with the latter forming the point, attached and constructed substantially as deseribad.
5. A plow with scparate mold-boards and share both attached to the sheath in such a mamer that no bolt or rivet is used on their surfaee, substantially as described.

73, 144.-Miles Waterhouse, Passaic, N. J.-Floek-Duster.-January 7, 1868.-The flock is fed into the hopper at one end of the case, and is discharged at the other end. It is dusted and loosened by the inclined brushes which impel it forward. The dust eseapes through a semi-cylindrical sercen.

Claim.-The rotating brush eylinder $d$, with its spirally-arranged brushes and beaters $d^{\prime} d^{\prime} d^{\prime}$, when combined together, and with the sereen $e$ and the openings $c$ and $f$, in the manner and for the purposes shown and deseribed.

73, 145.-H. B. Wellman, Allegheny City, Pa. -Lamp.-January 7, 1868.-A tube conneets with the bottom of the oil receptacle of the lamp, and water oceupies both the lamp and tube to a slight distance above the point of communieation. The oil is supplied through the tube, in which it has sufficient clevation to foree it through the water.

Claim.-The pipe $C$ for oil, and the pipe $E$ for water, having chamber $D$ between them, when arranged in combination with the lamp $A$, and used for the purposes set forth.

73,146.-Samuel Wetherill, Philadelphia, Pa. - Proeess of Manufceturing White Oxide of Zinc.January 7, 1868.-The vapors of combustion from coal, chareoal, or wood nsed in the manufacture of white oxide of zine are passel through ineandeseent charcoal, whereby the coal-black and oxygen are consumed and the oxide of zine vapor is redueed to a metallic vapor of zine, which is supplied with oxygen by a hot blast that is intended also to consume any speck of coal-black which wonld otherwise injure the color.

Claim.-Passing the produets of combnstion from the furnace into an anxiliary chamber or chambers containing ineandeseent carbon, and thence, throngh the incandescent coals, into contact with a hot blast, substantially as and for the purposes deseribed.

73,147.-Samuel Wetherill, Philadelphia, Pa. - Apparatus for the Manufaeture of White Oxide of Zine.-January 7, 1868. -This relates to an apparatus for the mannfacture of the oxide of zine with bituminons coal, coke, or charcoal as fuel, and is deseribed in his previons patent, (No. 73,146 .)

Claim.-The combination, with the furnace, of one or morc chambers, communicating with said furnace, and adapted to contain ineandescent coals, and permit the passage of the products of combnstion from the furnace through the said coals, substantially as and for the purposes described.

Also, in combination with the ineandeseent chambers, hot air flues, into which the vapors of zine may pass from said chambers, to mingle with and be carried off by a lot blast, substantially as described, for the parposes set forth.

Also, the arrangement of the blast-tnbes $g$ immediately over the furnace, and communicating with the chambers E E, as and for the purposes described.

78, 148.-LUDWIG WETZELL, Washington, D. C. -Hames-Tug Buckle.-Jannary 7, 1868.-The hame clip is riveted between two plates, the outer one of which has another plate hinged to it and with it, forming the loop for the end of the trace. It has an apertnre to receive the end of the pin passing through the trace, and is held down by a frame, bencath whose outer transverse bars the trace passes.

Olaim.-The hames-tug buekle $g$, with loop-cover $\alpha$ and pin $f$, when the parts are constructed, conneeted, and fitted to produce the result substantially as deseribed within.

73,149.-EzRA WILDER, South Hingham, Mass. Carriage Harness.-January 7, 1868. - The sides of the saddle are adjustable to conform to the contour of the horse. The tugs are adjustable vertically on the harness.

Claim.-ILaking the parts of the saddle relatively adjustable, substantially as shown and deseribed.

Also, making the parts of the hames relatively adjustable laterally, snbstantially as above described.

73,150.-Courtland B. Wilson and Abner S. Hougrionn, Trenton, N. J.- Water-Wheel.-January 7, 1868.-The top plate is attached to a central drum and to the lower rim, which latter revolves in
an annular groore of the bed-piece. The buckets have gudgeons entering the top plate and rim, and are turned outward by the abutments which stand in the space between the rim and drum ascending to the top plate. The water is discharged through vertical pipes, which, bcing carried downward, act by suction on the buekets.

Claim. - The combination of the top plate E and the rim $G H$ with the movable self-adjustable buckets L L, stays K K, the groove or channel O O, and stops or abutments $\mathrm{P} P$, all substantially as above described and for the purpose set forth.
73,151.-Frank H. Wilson, Wethersfield, N. Y.-Cheese-Box and Butter-Tub.-January 7, 1868The projections on the outside of the box and inside of the lid rim, engage by turning the latter on the former.

Claim.-The arrangement of the box or tub A with its cover $B$, box $A$ having a flat metal shoulder, $d$, on each side, near its top, and cover $B$ having similar metal shoulders, $e$, on its inner flange, as and for the purposes set forth.

73, 152.-LINUS YaLE, ju., Cooperstown, N. I.-Vise.-January 7, 1868; antedated December 21, 1867.-The nut has a ratehet engaging in a ratchet rack at the lower side of the socket. When the mut is at its most extended position upon the serew, it is raised elear of the ratehet, and the jaw may be slid in or outward; the serew being then turned formard the nut is bronght down on the rack.

Claim.-1. A screw capable of operating the mov. ing jaw of a vise, in combination with a nut having an inclined plane thereon, and an inclined plane attached to the moving jaw, these parts being and operating in combination, substantially as described.
2. In combination with a rack attached to the stationary jaw of a vise, and an inelined plane attached to the moving jaw thereof, a racked nut, prorided with a serew, and an inclined plane, the combination being substantially such as described, and operating substantially as set forth.
3. In combination with the jaws of a vise, a serew, a rack, and a racked nnt, a spring, located as deseribed, and operating in combination with the parts with which it is combined, substantially as described, to control the position of the rack, substantially in the manner and for the purpose specified.
4. A sectional collar, in combination with a moving vise jaw, and the serew which operates it by means of recesses therein, the combination being and operating substantially as hereinbefore set forth.

73,153.-Frederick Yeiser, Danville, Ky.-Pump.-January 7, 1868. -The agitator rods are connected to the pump lod and agitate the surface of the water to cffect its purification.

Clarm.-The rods or shafts D D, provided with agitating cross-pins, and used with the stock $A$, substantially as and for the purpose set forth.

63, 154.-Louis Baum, Washington, D. C.Time Alarm. January 7, 1868. -The weight is cle vated by coiling its supporting cord upon the shaft and is raised so high that when the shaft is connceted to the spindle of the minnte hand the required time shall clapse before the weight descends sufficiently to depress the detent of the alarm. A seale on the post indlicates the height to raise the , weight.

Claim. - An alarm, arranged to be operated by an ordinary watch, through the medium of the weight $' T$, cord $l$, and revolving shaft $F$, arranged to operate substantially as described.

193,155.-G.W.R.BaYLEY and John McCluskey, A giers, La.-Car Seat Loek.-January 7, 1868.-The seat backs have projecting lips which engage pins on a turning bar, and the bar is locked in position by a staple which engages its square end and is secured by a padlock. The device is intended to prevent inversion of the seat backs.
Claim.-1. The bar A and pins $a$, disposed on the said bar a, substantially as above described, in combination with the lips E , or their equiralent, in manner and for the purpose substantially as above set forth and described.
2. The said bar A, in combination with the half
cap $F$ and padlock $G$, in manner and for the purposes abore set forth and described.

193,156.-Joserh Baysore, Freeport, Ill.-Buckwheat Hulling Machine.-January 7, 1868. - The spindle at its lower end is journaled in a box, within which the step block is loosely held; the box thus serving to hold the spindle and step to place writhout eramping, them in their vertical adjustment. The "runner" is balanced on the segmental cross-heads of the bail by set screws. The suction pipe of the blower is curred orer the top of the mill, and its end forms the discharge spout of the same, so that the hulls and finely broken grain are sucked up and discharged with the air.
Claim. - The arrangement of the tightening bar N , spindle-step $c$, knockers $d$, for operating the trashscreen, spindlo $a$, bail $g$, fan-hlower E , and curved spout $G$, as herein shown and described.

73,1.5\%.-A. J. Bell, Bloomingburg, N. Y.-Straw-Cutter.-January 7, 1868.-The inclined top bar of the sash gires bearing to.a series of angular cutters. The sash is operated by a transversely projecting handle, and has a horizontal lower bar whose slot is traversed by a wrist pin on a balance wheel.
Claim. -The toothed cutter-blade C, in combination with the frame G, guides F, and box B, all constructed, arranged, and operating substantially as described.

73,155.-William Bennett, Rushville, Ind.Attachment for Plows.-Januar'y 7, 1868. -The fender is for protection of small plants from rolling earth, but gires way to heary clods.
Claim.-1. The rertically adjustable fender $H$ attached to the bar E, sliding in the guide $F$, when such bar is attached to the spring $J$, whose formard end is secured to the beam $A$ in sueh a manner that the fender shall field to a clod of earth, and be thrown into the proper position by the spring $J$, after pass. ing such clod, as herein shown and described, for the purpose specified.
2. The spring $J$, when secured to the sliding bar E , bearing the pendent arm G and fender $H$, for the purpose of allowing a yielding movement to the fender when brought in contact with clods of earth, as herein shown and described.

73, 159.-H. Besse, Delaware, Ohio.-Automatic Water Gate.-January 7, 1868.-The water gate is hinged at the bottom and is secured by a drop lateh. The drop latch is connected to a float by which it is raised to free the gate when the water in the stream is high. The gate is connected to a heary float by Which it is opened as the water rises, and closed on its subsidence.
Claim.-1. A water gate A, piroted at or near its lower margin, and provided with a projecting float B, all substantially as shown and deseribed, and operating as and for the purpose set forth.
2. The latch $e$, or other cquiralent deviee, operated by a float $m$, or other equiralent device, substantially as shown and described, and in combination with the water gate $A$, all as and for the purpose set forth.
93, 160 .-Abraifay Block, San Francisco, Cal. -Sluice Blanket.-January 7, 1868.-A heary thread is thrown in at intervals in wearing so as to project upward from the body of the cloth. The ribs are intended to arrest the escape of metallic particles in the sluice.
Claim.-A sluice blanket provided with woven ribs, substantially as herein described.

93, 161.-GEORGE A. Bowex, Trenton, assignor to himself and Samuel C.ParrotT, Bordentown, N.J. -Watch.-January 7, 1868. -The ring has a spring eateli which engages the drum. On breaking of the main spring the catch is rcleased and prevents damage to the maehincry.

- Olaim.-The ring C, formed within the drum $A$, and fastened to the main spring B , When combined with the catch E and shoulder $a$, substantially as and for the purposes herein shown and described.
9.3,162.-Albert Brush, East Constable, N. Y. -Hollow Auger.-January 7, 1868.-The boring bit
has adjustable cutters which make a cylindrical recess at the inner cnd of the hole in the felloe to reccire a shoulder upon the spoke.

Claim.-1. The hollow auger D, prorided with the linives $e e^{\prime}$ for forming upon spokes the tenons $b$ and shoulder $s$, adapted to fit into the recess in the fellocs formed by the auger C, having the extended cutting lips $c$ aud adjustable guide $d$, construeted to operate as herein shown and described.
2. The auger C when proviled with the projecting cutting lip $c$ and adjustable gauge $d$, constructed and operating as herein described, for the purpose specified.
g3, 163.-James Cartwhight, Youngstown, Ohio. - Process of Mrixing Iron and Steel. January 7, 1868. - After preparing the bottom of a puddling furnace with sand or iron "fixing," an inch thick layer of wrought and cast-iron turnings is spread, and above this a layer of cast steel and wrought iron cut small, the layers silternating in this manner; the mass is leated to a white heat, rolled into a ball, and then rolled out into bars.
claim.-The process of mixing and combining steel and iron, substantially as herein described.

73,164.-John Chantrell, Bristol, Conn.Knitting Machine.-Jannary 7, 1868.-A flat web is knit by two sets of hooked needles combined with sinkers playing between the horizontal needles. The yarn is taken from a single spool, is laid over the bodies of the horizontal needles, and is then depressed between the needles by the sinkers. The loops thus formed are taken up by the vertical needles and east off the ends of the latter upon loops held between the vertical and horizontal needles, and thus locked.
Claim.-1. The manner herein shown and described, of connecting the arms of the sinkers $m$ by means of annular plates $r^{\prime}$ and rivets, as set forth.
2. The needle carrier $G$, when connected with the sliding rack $F$ and with the plate $H$, in such a manner that a combined longitudinal and transverse sliding motion is imparted to it, substantially as herein shown and described.
3. The reciprocating thread carrice $R$, when arranged as described, in combination with the arms $e^{1}$, needles $I$ and $J$, and sinkers $W$, all made and operating substantially as herein shown and deseribed.
4. The device hercin shown and described, for communicating motion from the needle carrier $G$ to the bar P, holding the thread carrier, said derices consisting of the spring plates $a^{1} b^{1}$, eams $c^{1}$, and stationary cams $d^{1}$, all made and operating substantially as herein shown and described.
5. The derices herein shown and described for adjusting the stroke of the sinkers W, consisting of the grooved plate V, vertical slides $g^{\prime}$, eccentric shafts $h^{\prime}$, gear wheels $i^{\prime}$, and sliding rack $j^{\prime}$, all made and operating substantially as herein shown and deseribed.
6 The combination of the perforated disk $d$, adjustable comnecting rod $g$, and the segment D , as and for the purpose set forth.

193,165.-J. S. Cook, West Groton, Mass.-Whip.-January 7, 1868.-Explained by the claim and illustration.
Claim.-A whip having its lash secured or hung to its stick, through a swivel ring or eye, substantially as and for the purpose described.

73,166.-S. H. Cox and W. H. Pence, Mattoon, IIl.-Corn Plow.-January 7, 1868.-Explained by the claims and illustration.
Claim.-1. Conneeting the forward ends of the plow beams H to the frame C by means of the clevis I, construeted as described, and the long adjustabI bolt J, substantially as herein shown and deseribed and for the purpose set forth.
2. The combination of the lever 0 and toothed parvl $P$ with the shaft $N$, grooved segments $M$, chains L , and beams H , in connection with the clevises I and long bolts J, for raising the plows vertically from the ground, substantially as herein shown and described.
3. The combination and arrangement of the plows
$\nabla$, having catters $v^{\prime}$ attached to them, and turnmg the dirt from the hills, plows $W$ rumning at a Lower level than the plows $V$; and turning the dirt toward the hills, standards R and T and beams H with each other, snbstantially as herein shown and describcd, and for the purpose sct forth.

73,16\%.-William Craig, Uniontown, Pa.Flour Bolt.-January 7, 1868.-The bolt has two hexagonal bolting cloths arranged one within the other, and having between them a closer cloth. These annular spaces receive the meal from the different runs of stones and deposit the prodncts in scparate compartments.
Claim.-The bolt, constructed as described, having the partitions $v^{2}$ between the outer and inner bolting cloths $v v^{1}$, operating snbstantially as described for the purpose specified.

73,168.-F. S. Davenport, Jerseyville, Mil.-Low-water Alarm for Boilers.-January 7, 1868.The valve stem has a float at bottom which sinks with the depression of the watcr and allows the escape of steam when the water falls below the proper level.
Claim.-1. The construction and arrangement of the hollow tube C, provided at its apper end with the screw-plug D , having valve seat $g$, the hollow tube E fitting in tube C , and having the opening $j$ communicating with the interior of the float, and provided at its upper end with the pointed valve $h$, all operating as described for the purpose specified.
2. In combination with the outer and inner tubes C and E , when arranged as described, the valve seat $g$, the valve $h$, and the orifice $j$, substantially as and for the purposes set forth.
73,169.-Anthony G. Davis, Watertown,Conn., assignor to himself and AUGUSTUS N. Woocson, same place.-Broom or Brush Holder.-January 7, 1868.The spring jaws are attached to the wall and operate to clasp aud sustain the broom handle.

Claim.-The broom-brnsh holder, constructed as described, consisting of the curved spring arms A, made in one piece, and sccured in position under the bar B, and slotted to receive the sliding bar C, as herein described for the purpose specified.
73, 1 79.-EDWARD B. DEcker, Bedford, Ill.Tire Shrinker.-January 7, 1868.-Explained by the claim and illustration.

Claim.-The combination of the operating lever or handle $D$, pivoting straps $C$ and $E$, pivoted levers or bars $A$ and $B$, liaving clamps with stationary jarrs F G, and piroted eccentric jarms II I attached to them with each other, substantially as herein shown and deseribed, and for the purpose set forth.
g3,1\%1-GEORGE Dittenilaver, Napoleon, Ohio.-Extension Clothes Post.-Jannary 7, 1868.The post is extensible vertically, and has a catch for the cord, operated by a thumb screw. A bent plate at top tnrns the rain. The standard has a latcliet on one side engrged by a spring catch on the raising portion of the post.

Claim.-The combination of the sliding part $B$, provided with the spring pawl $b$, and having the removable clamp D secured to its upper end, and adjnsted by means of the thumb screw $F$, all constrncted and operating substantially as described for the pnrpose specified.

73,172.-EDwin Doolittle, Pawnee, Ml.-Cultivator. - January 7, 1868.-The fore ends of the plow bcams are connceted by gimbal joints to cleviscs having anti-friction rollers running on the front cross-bar of the frame. The forc ends of the beams are also hnng by pendulous links to the frame, so that they admit of lateral movement by the driver.
claim.-1. The hinged slides M, frietion whecls N , and bent bar E , with each other and the plow beams I, and with the beams or bars D, snbstantially as herein shown and described, and for the purpose set forth.
2. In combination with the above, the knees or bars $O$, cross-bar $P$, and lever $R$, all arranged and operating in the manner and for the purpose set forth.
3. The combination of the adjnstable connecting
and brace bars $W$, mprights $V$, and plow beams $I$, When arranged to operate in the manner herein described and represented.

193, 173.-Joinn W. Doud, Forrostville, Iowa.-Cultivator.-January 7, 1868.-Explained by the claims and illnstration.

Claim.-1. The combination of the frame $C$, strengthening braces D , and diagonal plow beam E , to which the standards F of the plows G are attached, with cach other, the said parts being constructed and arranged substantially as herein shown and described, and for the purpose set forth.
2. Connecting the axle $B$ to the tongue $I$ of the frame C by the inclined bars $J$, and jointed or link connection $K$, substantially as herein shown and described.
3. The combination of the cross-bar $M$ and adjustable chains $L$ with the inclined bars $J$ and frame C, substantially as herein shown and described, and for the purpose set forth.
4. The combination of the lever $N$, chain $P$, and bail or bar $R$, with the frame $C$ and axle $B$, snbstantially as herein shown and described, and for the purpose set forth.
5. The combination of the levers $S$ and $T$ with the frame $C$, axle $B$, and inclined bar $J$, substantially as herein shown and described, and for the purpose set forth.
193.174.-CHarles Dupré, Louisville, Ky.Door Hinge.-Jannary 7, 1868. -The hinges are secured to the top and bottom of the door, and have out-turned ears by which they connect with the parts attached to the jambs. The lower hinge turns on a set screw which is stepped in a block, and by which the door is adjnsted vertically.

Claim. -The hinge plates $a$ and $b$, furnished with the arms or ears $\mathbf{E}, \mathbf{E}^{\prime}$, and $e$, in combination with the pin C , screw D , and socket F , or their respective equivalents, in manner substantially as and for the purposes described.
ges, 195.-James Elliotir, Milford, Wis.-Tire Shrinking Machine.-January 7, 1868.-The tire is clamped between the cmrved serrated bars and the scrrated cams, and the carriages are moved toward cacll other by the levers to upset the tire.

Claim.-1. The combination of the connecting rod or chain $G$, for opening the carriages, with the carriage E and cam levers F , substantially as described.
2. The slot $b$ in the bed piece $B$, and the groove $a$ in the platform $A$, making together a $T$-shaped groove, in combination with a T-shaped lig upon the carriages, all as substantially specified and described.
-3.176.-Louis Elsberg, New York, N. Y.-Buckile.-January 7, 1868. -The strap is engaged by the numerous serrations upon the lateral bar of the tongue.

Clain.-The buckle, constructed as described, consisting of the buchling loop $A$, having the flattencd center C and bent edge D , its extremities B bent at right angles to the center C , forming bearings for the loop E , the latter having the serrated tongue I fitting between the arms B upon the flat snrface of the loop $A$, beneath the edge $D$, as herein described, for the purpose specified.

73, 1 多多-Charles A. Fisher, Geneseo, Ill.Hay Knife.-January 7, 1.868.-The edge, back, and bracing piece form a triangnlar frame, and are in one piece with the staff bar, which has a spade handle at the cnd, and a rectangularly projecting handle part way down.

Claim.-As a new article of manufacture, the hay knife, when formed from a piece of metal as shown and described, and provided with the handles F G, as hercin set forth.

193,178.-David Forrest, Eastport, Me.-Sew. ing Machine.-January 7, 1868.-The bell-crank hand lever has a vertical cross-bar through which the thread passes, and which is connceted by a link to the needle carrier. The looper is operated by sliding rods actuated by the levor.

Claim.-The bent hand lever D, in combination with the slide rods $e k$, mounted on the base B, and connected with the needle $\alpha$ and the looper $d$, as set forth, the whole construeted and operating as hercin described.
g3, 179.-C. E. Gladding,Troy, Pa.-Horse Hay Fork:-January 7, 1868. - Improvement on his patent May 11, 1858. The head is hinged to the staff and is held rigidly thereto by a tongue and tripping eatech. The cutch is attached to a cord passing axially through the handle.
Claim. 1. In combination with a porror hay fork the connection D, or its equivalent, formed of the parts E, F, and G, or their eqnivalents, substantially as and for the purposes herein shown and described.
2. In combination with the connection D , or its equivalent, the bail C, substantially as described.
7:3, 1S0.-J. F. Hammond, North Sudbury, Mass. -Strawo Cutter.-January 7, 1868. -The sliding frame has two knires, which make the reciprocation of the slide effective in both its upward and downward strokes; and both the upper and lower sides of the throat have linives acting with those on the slide. The feed is fed by rakes which are antomatically thrust into the feed from abore and below, and while inserted are mored formard and then withdrawn.
Claim.- 1 . The combination and arrangement of the bereled kuives L, M, N, with each other and with the sliding frame $D$ and feod box $C$, substantially as herein shown and described, and for the purpose set forth.
2. The combinations of the slotted lever arms R T, sliding frames O, and sliding rake heads S, one set or both, with each other, with the feed box C, frame B, and knife firame D, snbstantially as herein shown and described, and for the purpose set fortli.
g3,181.-C. A. Harper, Whecling, Ind.-Cul-tivator--January 7, 1868.-The spiral plate has a berel wheel engaging a similar wheol on the mainwheel shaft, and operates to clear the clods and trash from before the plow.
Claim.-1. The combination of the wheel $D^{\prime}$ with the cnltirator frame $\Lambda$, sulbstantially as herein shown and deseribed, and for the purpose set forth.
2. The combination of the spiral or serew plate II with the wbeel $D^{\prime}$, and with the cultivator frame A $B$, substantially us shown and described, and for the purpose set forth.
'93,182.-Sam'l'T. Hemintat, Saratoga Springs, N. Y.-Burglar Alarm Lock.-January 7, 1868.The alarm is combined with an ordinary lock, and is set in operation when the latch is drawn in.
Clain.-The combination and arrangement of the piroted lever $B$, haring its onter arm projecting through the apertmere $T$ on the top of the lock, the notched arm A seenred to the rerge, the spring C and arm Ii, sulustantially as doscribed, for the purpose specifice.
73, 183.-George H. Henfield, San Francisco, Cal.-Car Axle Box.-January 7, 1868.-The ends of the semi-eylindrical soft metal linings enter groores in the eaps, and have studs entering the shells to prevent them from rotation. The shonlders of the axle have bearing against the caps.
Claim.-The combination of the groored caps $e$ e, the linings $a$ a, provided with pins $e c$, and the shells A A, arranged as and for the purpose herein described.

73, y8u.-Clamk R. ITwwett, Waupun, Wis.Sircho Cutter and Corn Sheller Combined.-Jannary 7, 1868. - The balance wheel has cutter knives on one side and shelling tecth on the other. The knires have a backing of rubber to keep them in contact with the metallie month of the fodder box. The ear of corn is fed in at the top and subjected to the action of sheller tecth and a serrated surface; the eob is ejected from the side and the corn has exit at the bottom.
Claim.-1. The combination of the shafts J N , bevel-gcar whecls L M, eutter knives P, and sheller teeth $S$, with the balance whed $O$ of a combined
fodder cutter and corn sheller, snbstantially as described, and for the purposes set forth.
2. The combination of the rubler springs $R$ with the knives $P$ and balance whecl $O$, substantially as described, anci for the purpose set forth.

93,185.-A. P. Holmes, Great Falls, N. H-Bobbin.- January 7, 1868.-Explained by the claim. Claire.-The spool or bobbin, haring its solid wooden body surrounded by the metallic crlinder between the end disks, the bearings of said spoot being composed of wood, as hereiu described, for the purpose specified.
73, 186.-GEORGE KENnEdy, Clarksville, Iowa, assignor to himself and A.J. Tompkins, same placeI'ad Crimp Press.-January 7, 1868. The crimp is used in formatiou of harness pads, and the forming blocks are removable to suit different sizes and forms.
Claim.-1. The frame or press A B , adapted to receive the blocks C D, constructed and operated substantially as hercin shown and described, and for the purpose set forth.
2. The remorable crimping blocks C D, or their eqnivalent, constructed and operated substantially as herein shown and described, and for the purpose set forth.
3. The combination of the removable crimping blocks C D, or their equivalent, with the frame or press A B, substantially as hercin shown and described, and for the purpose set forth.

73,15\%-J. M. W. Kitcuen, New York, N. Y.Fruit Jar.-January 7, 1868.-Conrex-topped lugs on the lid engage conrex-bottomed liggs on the inside of the neek, and confine the lid down upon a packing ring. A rubber ring covering the joint between the lid and jar is covered by a rubber ring having a plug attached, which fills a safety opening in the lid.
Claim.-The rent plug, when attached to an elastre band, or its equivelent, and arranged for operation substantially as described, for the pmrpose set forth.

73,188.-Gottlieb Koenig, Plymouth, Mich.Spring Bed Bottom. -January 7, 18vi.- The bottom is supported on X-frames, which aro piroted at the interscetion, and sustained by spiral springs connecting the two upper corners and the two lower eorners.
Claim.-The bars C, the springs D, and the regulating rods E, constructed, combined, and operating with the platform B and the base frame $F$, in combination with a bedstead, substantially as deseribed.
73,189.-Charles Lusted, New York, N. Y.Snow Plow.-January 7, 1868.-The oscillating share is hinged to the stationary share and connected and operated by a crank upon the axle, to throw aside the snow collected upon it. The oscillating mechanism may be thrown in or ont of operation by a clutch.
Claim. -1 . The hinged oseillating plonghshare D, when made and operating substantially as and for the purpose hercin shown and deseribed.
2. A snow plow, provided with an oscillating share D, which is linged to the upper edge of a stationary share C, and which has dlanges $h$ at the ends, substantially as herein shown and deseribed.
3. The hinged share D of a snow-plow, eonneeted by moans of a jointed rod or rods $g$, with a crank or cranks $a$, on the axle of the plow-truck, as deseribed, the crank or cranks being loose on the axle and connected with clutches, so that the share ean be made to oscillate or not, as set forth.
g:3,190.-Harvey McCown and Luther M. McCown, Enon Valley, Pa,-Hay Elevator.-January 7, 1868. - The carriage frame is conneeted by a spring-cateh to a hook, whiel holds it orer the load until the hay is sufficiently elevated, whea the spring hook is raised, and the framo runs along its trick to convey its charge to the mow.

Claim.-1. The earriage E, constructed as deseribed, when its bottom consists of the bar E, hung at one end, $e$, of the carriage, its free cud extending beyond the opposite side of said carriage, and notehed at $f$ to fit over the eatch $h$ upon the
pendant $i$, said bottom, E , being held in position by means of the eoiled spring $F$, and released by the pressure of the hook $d$, as herein deseribed, for the purpose speeified.
2. The eombination of the hinged and notched bottom E , coiled spring F , hook $d$, pendant $i$, eateh $h$, rollers C C, and side bars $a a$, all eonstrueted and arranged as described, for the purpose speeified.

73,191.-William McCreery, Pittsburg, Pa.Endless Chain Power.-January 7,1868.-The motive whecl of the ehain is upon a shaft, having a bevel Wheel engraging two loose bevel wheels upon the main shaft. Either of the loose wheels may bo connected by a eluteh to the main shaft to cause either right or left rotation of the chain wheel.

Claim.-The arrangrement of the shifting elutehes $e c$, the bevels $a c a$ and $b$, the pulleys $c c^{1} c^{2} c^{3} c^{4}$, and the endless chain $d d$, when applied as and for the purposes herein deseribed.

73,192.-FREDERICK E. NEARING, Brookfield, Conn.-Combined Horse Rake and Hay Spreader.January 7, 1868. -The rake is connected by a belt to a drum turning loosely on the axle, but connected therewith by a eluteh, and may be used as a tedder by continued rotation. When used as a rake the catches on the rake head engage the end of a treadle lever, and the semi-rotation of the rake is aecomplished by the drag of the hay, when the forward end of the treadle lever is depressed.

Claim.-The frame G, fitted loosely on the axle B, and earrying the revolving rake $H$, in combination with the loose pulley E and clutch F on the axle B , and the lever bar $J$ on the frame $G$, with the spurs $g g$ on the rake head, all being arranged to operate in the manner substantially as and for the purpose set forth.

73, 193. DANIEL OVERHOLTZER, Polo, Ill.-Bag Fastener.-January 7, 1868.-Explained by the elaim and illustration.

Claim.-The bag fastener, construeted as deseribed, consisting of the link $b$, having an open hook at one end, between the sides of which the bend of the locking hook $d$ is pivoted, in sueh manner that, the link C, when placed over the locking hook, will clamp the bend of said hook in the hooked end of the open link $b$, as herein shown and deseribed.

193,194.-Walter Payton, Sewardstone Road, Victoria Park, England.-Water Meter.-January 7, 1868. -The case consists of two segments of eylinders, and the vanes rotate therein so as to pack against each other and the inside of the case. Steam or other fluid may be passed through to act as a motor, and an index apparatus may be attached to form a meter by denoting the number of rotations.

Claim.-The eombination of the axes $b b$, vanes $b^{1} b^{1}$, gear whecls $b^{2} b^{2}$, worm d, gear wheel $f$, worm $f^{2}$, gear $g$, shaft $g^{1}$, worm $g^{2}$, and gearing for the operation of the indieators $g^{3}$, chambers $e c^{3}$, and $a^{1}$, all arranged as described, for the purpose of measuring the passage or flow of liquids, or for raising and forcing fluids, or for obtaining motive power, substantially as herein shown and described.
\%3,195.-C. Porter, Jr., Westerly, R. I.-Printing Press.-January 7,1868 . -The cylinder shaft is journaled in two eccentrics, which have segments of gears that are engaged by segmental gears on the ends of arms at both sides of the press. These arms are on a common transverse shaft, and are oseillated by a cam lever. The device affords means of raising the cylinder from the form.
Claim.-1. The combination of the eceentric bearing E , adjustable box F , segmental pinions G , segments H, lever L, and cylinder C, substantially as described for the purpose speeified.
2. The wheel $\mathbb{K}$ and cam $c$, in eombination with the eccentrie bearing E , for the purpose of returning the cylinder after having been lifted to its original position before taking a sheet, substantially as herein shown and deseribed.

9B, 196.-C. Potten, Jr., Westcrly, R. I.-Feed Gauge for Printing Presses.-January 7, 1868. -The guide is supported on the mpper seetion of a box,

Which is clamped to the shaft by the adjusting serews of the guide.

Claim.-The two serews $D \mathrm{D}^{\prime}$ and slotted guideplate $B$, in combination with the box, composed of two parts, E E', fitted to the shaft A, and all arranged substantially in the manner as and for the purpose set forth.

73,19\%.-E. M. Potter, Kalamazoo, Mich.-Clevis.-January 7, 1868.-The double-tree is secured to the ehain upon the smaller pulley, and the single tree for the third horse upon the ehain on the pulley of double the diameter.

Claim.-The employment of the two pulleys $A$ and $\mathrm{A}^{\prime}$, substantially as shown and described, in combination with the ropes or chains D and $\mathrm{D}^{\prime}$, and the clevis-iron C, or other equivalent deviee for the purpose of working three horses abreast in plowing or other equivalent operation, all as set forth.

193,198.-Jonn Rancevau, Carthage, Ohio.-Ioe Sleigh.-January 7, 1868.-The sleigh is driven by a toothed wheel whieh runs on the iee, and which is operated by gearing conneeted to a winch. The wheel and gearing are contained in a hinged ease depressed by a rubber spring. The rear end of each runner has a dog-brake operated by a treadle.

Claim.-1. The wheel D, having its bearings in the hinged frame, in combination with the elastic strip I, whereby the wheel is held upon the ice and permitted to conform to its irregularities, as herein set forth, for the purpose specifica.
2. The construction and arrangement of the pivoted brakes K L, connecting rods $O$, foot levers $M$ and $N$, and springs $P$, substantially as deseribed, for the purpose speeified.
3. The combination and arrangement of the spm Wheel $D$, hung in the hinged frame, gear wheels E F G , clastic strip I, braee $J$, springs $P$, foot levers II N, conneeting rods O, piroted brakes K L, block U , and thumb nut V , substantially as .described, for the purpose speeified.

13, 199.-D. E. RoE, Elmira, N.Y.-Plate Lifter. -January 7, 1868. -The staff has a fixed jaw at the end and a pivoted jaw which is drawn in by a spring.

Claim.-1. The eombination of the spring C with the claws $A$ and $B$, substantially as and for the purpose shown and deseribed.
2. The loop $b$, or other equivalent device for holding the elaw B at a proper distance apart from the claw A, substantiall.y as shown and described.

73,200.-W. L. Rogers, North Cornwall, and W. E. Crane, New Britain, Conn.-Railway Switch. -January 7, 1868.-One of the fore wheels of the engine presses down the rack bar, and turns a erank having pitman eonmeetion to a bell-erank lever, conneeted by a link to the switch rails, so as to connect the single track with the track on which the train is traveling. Accidental moving of the switch is prerented by the hook of one rod fitting in the notehed plate of the tube, and a pin on the rod within the tube fitting in a slot therein. The whecl first depresses the rack bar operating the releasing meehanism, and then the bar operating the switeh.

Claim.-1. The bent or right-angular levers $\mathrm{D} \mathrm{D}^{\prime}$ rods $E E^{\prime} \mathrm{F}^{\prime} \mathrm{F}^{\prime}$, eranks $G \mathrm{G}^{\prime}$, pinions a and raek: bars I I', all arranged and applied to a switeh to operate in the manner substantially as and for the purpose set forth.
2. The rods $J \mathrm{~L}$ and tube K , notehed as shown, and provided with the spring $i$ and plates $g h$, in combination with the rods $\mathbf{M} \mathbf{M}^{\prime}$, shafts $l l^{\prime}$, pinions $m$, and rack bars $\mathrm{N} \mathrm{N}^{\prime}$, all arranged substantially in the manner as and for the purpose speeified.
g8,901.-James Sangster and D. P. Dobbins, Buffalo, N. Y., and John S. Richards, Eric, Pa. -Brick Machine.-Janvary 7, 1868. - When the upper and lower pistous are at their highest points, and the charger his advanced and filled the mold, the rotation of the wheels brings the upper piston downward, the cam allowing the lower piston to fall. The charger is mored by a cam to the starting point. The material is pressed, the lower piston moving somewhat slower than the upper one. The motion of the pistons is then reversed, and the briek raised from the mold.

Claim.-1. The combination of the lug or projection Q and the morable jointed connection $\mathrm{D}^{2}$, or ts equivalent, when constructed and arranged substantially as and for the purposes herein described and set forth.
2. The projecting pieces or rims marked $\mathrm{F}^{2}$, within the molds, in combination with the rims $\mathrm{G}^{\prime}$, or any oquivalent thereto, on the upper perforated piston or pistons I, substantially as and for the purposes herein described and set forth.
3. The combination of the mechanism $X \mathbf{X}$, spring $Y$, and cross bar $A^{\prime}$, with the vertically-moring perforated pistons, substantially as and for the purposes described.
4. The combination of the verticallr-moring perforated pistons I, when the perforations in the lower pistons $G$ are made larger than those in the upper pistons, for purposes substantially as herein described.
5. The combination of the upper and dower perforated pistons with the cams $R$ and friction roller $D^{3}$, or its cquiralent, substantially as and for the pur'poses herein described and shown.

73,202.-F. J. SHEFFERLY, Detroit, Mich.-Preserve Jar.-January 7, 1868.-The neck of the jar and the stopper have each two somicircular inclines beneath, upon which the lid rests. The upper parts of the neek and stopper are contracted so that a rubber band may be interposed between them and pressed by turning the stopper, the inelines acting to raise it.
Claim.-Sealing a preserve jar by raising the corer in the neck of the jar, instead of lowering it, substantially as described.

73,203.-F. Marion Sfieldos, Macon, Miss., assignor to himself andJ AMEs A.JARNAGIN, same place. -Envelope.-January \%, 1868. -The envelope is arranged so as to admit of reusing, by means explained by the claim and illustration.
Claim.-The cuvelope, constructed as described, consisting of the parts B C, provided with the wings G G, and tlaps H H E E ${ }^{2}$, having their edges gummed, as shown and specified.'

73,204.-JOHN F. SKNNEER, Brasher Tron Works, N. Y.-Thrashing Machine.-Jannary 7, 18 fis.-The belt operating all the mechanism, with the exception of the cylinder, passes orer an idler pulley, jourwaled at the end of a lever connected to a spring.

Claim.-1. The operating of the shoc C , through the medium of the lever $G$, and the cam composed of the double spiral thread or flange e on the pulley H, snbstantially as shown and described.
2. The spring $N$, pulley $h$, and lever Mr, arranged in connection with the belt $L$ and wheel $O$, substantially as and for the pmpose specified.

73,205.-E. A. Sloat, Theresa, N. Y.-Bolt Cutter.-January 7, 1868.-Explained by the claim and illustration.

Claim.-The stationary eutter A, the morable cutter C , the lerer E , and the plates B , constructed and arranged substantially as herein shown and described for the purposes set forth.

73,206.-Gains P. Stebbins, Sparta Center; Mich.-Gate.-January 7, 1868. -The platform is connected by a cord to a barrel, which has a portion of considerably larger diameter, on which are coiled the cords connected to the gate. The gate is hung on rollers, and the depression of the platform by the wheels of the rehicle draws the gate open. The gate is closed by the weight.

Claim.-The sliding gate B, hung or suspended on rollers a a, in combination with the weight $k$, the pivoted bar E , platforms F F , and the pulleys 1 ) $j j^{\prime}$, all arranged to operate in the manner substantially as set forth.

73,207.-Albert J. Stemle, New Kork, N. Y. -Uterine Electrode and Abdominal Supporter.January 7, 1868. -The patient grasps one pole of the battery, and the other is conneeted to the insulated wire which conveys electricity to the part affected. Olaim.-1. Wire eleetrodes, insulated and covared with sponge, substantially as shown and for the purposc specified.
2. The strap $\dot{B}$, for sustaining the electrode in
place, substantially as shown and for the purpose specified.
3. The form of electrode having a ring $g^{\prime}$, and stems $f f^{\prime}$ attached thereto, snbstantially as shown and for the purpose specificd.
4. The form of electrode having the ring $g$ and cross-pieces $h h$, substantially as shown and for the purpose specified.
5. The form of electrode having a single stem $f^{\prime \prime}$, and cross-piece $h^{\prime}$, substantially as and for the purpose shown and described.
6. Elastic straps $c$ c, in combination with the strap $B$, substantially as and for the purpose shown and described.
7. The abdominal belt $\mathbf{A}$, in combination with the above described electrodes, substantially as and for the purposes shown and described.
8. The non-conducting plate D, in combination with the wire electrodes, as hereinafter described, smbstantially as shown and for the purpose specified.

73,209.-William Stine, Elmore, Ohio.-Tinners' Forming Machine.-January 7, 1868.-The gauge has a tapering side extending to the rollers, where they come in contact; and as the cylinder is formed its end is pressed npon the gange, which flares it outwardly.

Claim.-'The flaring gange $a$, in combination with the rollers of a tinman's forming machine, arranged and operating substantially as and for the purposo herein described.
$73,209 .-J a m e s$ Urie, Evansville, Ind.-PlozaJanuary 7, 1868. -Explained by the claims and illustration.

Claim.-1. The standard $C$, constrneted as described, having the flange $c^{1}$ extending its entire length npon one side, and the horizontal part or land-side forming two flanges upon its rear end, gradually decreasiug in width towned the forward part, all cast in one piece, as herein described, for the purpose specified.
2. The point A, when cast in one piece, as set forth, in combination with the standard $C$, constructed as described, having the flange $c^{1}$ extending its entire length upon one side, and the horizontal part or land-side forming the flanges upon its rear end gradually decreasing in width toward the forward part, all cast in one piece, as herein shown and described.

73,210.-George Walker, Middletown, N: Y. -Saru.-January 7, 1868.-A hole is drilled into the tooth near where the cutting-point usually is, and a stecl rod inserted whose point forms the cutting-edge. When the friction is not sufficient to hold the rod in place, a ratchet is formed upon it, and a parl upon an ammar liret commeets therewith. The rivet is within a hole drilled through the plate and connecting with the lole containing tho rod.

Claim.-'The annular rivet $c$ inserted in the side of the saw-tooth, engaging with the notehes a upon the cutter B , whereby the latter is held in the groove of the tooth, as herein shown and described.

73,:11.-Joserfi H. Walker, Grand Rapids, Mich.-Horse Hay Fork.-January 7, 1868. -The suspension bar is piroted to the fork frame, and the latter has a segmental bar sliding in a guide socket of the former. The tines are secured in a horizontal position by a spring bolt, which enters a notel in the segmental bar. When the bolt is withdraven by the cord, the points of the tines descend and discharge the liay.

Claim.-The vertical spring boit $\mathrm{D}^{\prime}$, wrorking in projections mpon the side of the suspension bar $C$, near its upper cud, and fitting into the notch $e$ in the under side of the curved frame 13 , passing throngh the mortise in the suspension bar C , above the spring bolt $\mathrm{D}^{\prime}$, arranged and operating as described, for the purposo specified.
73,21\%.-E. B. Wells, Northampton, Mass.Scraper Attachment to Cars.-Tanuary 7, 1868.-The derice is intended especially for street cars. It is operated by levers connected to hand and treadle levers.

Claim.-1. Tho adjustable scrapers D, held down
upon the track by means of pressure upon the bar $H$, the spring E permitting said scrapers to yield to the inequalities of the track, as herein set forth, for the purpose specified.
2. The construction and arrangement of the scrapers D, attached to the end of the inclined springs E, curred bar $F$, stnd $a$, slotted and jointed rod $G$, its sectious $c$ d pivoted to the ears $b b$, the section $c$ conneeted to the operating bar $H$, as heroin set forth, for the purpose speeified.

73,213.-John R. Wharry, Moundstille, W. Va.-Ventilator and Window Screen.-Jamary 7, 1068.-A gauze frame is fitted in the space beneath the upper sash, and a shutter with movable slats in front of the gauze.

Claim.-1. The combination of the wire sereen and fiame $\mathrm{F} G$, shutters $\mathrm{C} \mathrm{C}^{\prime}$, and window frame, as herein deseribed, for the purpose specified.
2. The shutter $\mathrm{C} \mathrm{C}^{\prime}$, metal bar e, and lever E , substantially as describod, when disposed without the lower part of a window frame, substantially as above set forth and described.
3. The shutter $\mathrm{C}^{\prime} \mathrm{C}^{\prime}$, in combination with the slot $g^{\prime}$, in screon frame G, substantially as above set forth and described.
73. 2 If.-Emery T. Wheeler and William H. Vaugian, Canneltou, Ind.-Jüachine for Sawing Laths.-Jamary 7, 1868.-The cylindrical $\log$ is mounted on journals upon gravitating guide bars, and supported and rotated by rollers. The laths are sawn from its periphery by saws cutting reetangularly to each other.

Claim.-1. The adjustable rests $p p^{\prime}$, in which are mounted feed wheels $u u^{\prime}$, in combination with the sliding supporting rods $r$ and bars $s$, all construeted, arraged, and operating substantially as and for the parpose herein shown and deseribed.
2. The carriage $B$, on which the vertical saw $b$ and horizontal saw a are monnted, when arranged to be moved on the ways $A A$, by means of a rack and pinion, and when arranged to operate a rod $l$, through the medium of a pin $f$, on the same, substantially as and for the purpose described.
3. The rod $l$, provided with pins $f f^{\prime}$ and double incline $i$, when arranged to be operated from earriage $B$, in combination with the parrl $z$ and gauge ratchet wheel $y$, constructed, arranged, and operating substantially as and for the purposes set forth.
4. The toothed feed wheel $u$, to which motion is given by worw $w$, on shaft $g^{1}$, through the medium of elitch pulley $n^{2}$, on same shaft, substantially as described.
5. The combination of the clutch palley $n^{2}$, arm $v$, gauge ratelet wheel $y$, and shaft $g^{\prime}$, all constructed and arranged substantially as described.

7es, 9 是 5. George W. Wheeler and George V. Alcen, Hartford, Vt.-Water Wheel.-January 7, 1868. - The water is received at top, and flows outward and downward between the two sets of buckets at the periphery.

Claim.-The combination of the three sets of buckets $a b c$, and the inclined rim $d$ and bottom $e$, to form the wheel C, in conmection with the case D, applied to the wheel, and all arranged substantially as and for the purpose specified.
 Marker for Seving Machines.-January 7, 1868.The pencil passes through a socket piece pivoted to a seale plate, and is depressed upon the fabric by a spriag.

Claim.-1. The spring cateh $e$ and handle $d$, in combination with the presser $C$, bar $c$, and gange $A$, all made and operating substantially as herein shown and deseribed.

2 The hemmer $D$, composed of two pieces, in and $i$, constructed as set forth, in combination with its sliding supporting block $f$, bar $B$, and gauge $A$, as and for the purpose herein shown and deseribed.
3. The marker E $I$, hinged to the sliding block $k$, and provided with the spring $m$, substantially as herciu shown and deseribed, in combination with the presser C , all made and operating as set forth. 4. The adjustable gange $A$, when provided with
set-loles $b b$, in combination with the presser $C$,
handle $d$, spring eatch $e$, adjustable sliding hemmer D , and hinged and sliding marker E F , all made and operating substantially as herein shown and described.
r3,21\% -JOSEPH WIDMAN, Panola, Ill.-Cultb-vator.-Janmary 7, 1868.-The plow beams are gim-bal-jointed to standards depending from the axle, and have vertical and latcral movement by two hand-levers.

Claim.-1. The detachable seat bars E E, seeured to the main fratae $A$ of the machine, substantially in the manner as and for the purpose set forth.
2. The attaching of the front cnds of the plow beams $G G$ to the pendants I I by incans of universal joints H , when this attachment is used in connection with the pivoted arms 0 O, commecting bar P , and lever $Q$, for giving a lateral motion to the plows, substantially as described.

73, 218.-STANSBERRY J. WINGATE, Decatur, 11.-Bed Bottom.-January 7, 1868. -The levers rest at one end on the cleats on the head and foot boards, and their other ends rest in the rubber loops attaehed to the slats at their mid-length. The slats have cross bars resting on the levers at their mid-length.

Claim. - The combination of the bars or lerers E, elastic straps or bands I, and cross bars I with caeh other and with the slats $F$ and frame of the bedstead, substantially as herein shown and described and for the purpose set forth.
98.219. - Horace Woodman, Saco, Me. Shingle Machine.-January 7, 1868. -The blocks are held between ribbed eylinders in a rotating frame, and ure carried to the cireular saw and planer; the latter smoothing the face of the block subsequently to the removal of a shingle. Each end of the bloek is fed alternately farther than the other, to canse the taper. Each eylinder has a pinion at the end, which is engaged by a serew gear upon a shaft, which is turned $90^{\circ}$ at each rotation of the table; the same shaft actuating both of each pair of eylinders, and the worm gear being arranged to cause the unequal feed of the ends.

Claim.-1. The rerolving table, with its feeding and securing mechanism, constructed substantially as described, in combination with the rotary planer $V$ and saw $C$, as and for the purpose specified.
2. The combination and arrangement of the outer grooved eylinders $K$, adjustable frame $P$, lever $Q$, segment rack $R$, and spring $S$, substantially as deseribed, for the purpose specified.
\%,820. - W. ADAMSON, Philadelphia, Pa.Holder for Drying Glue.-January 14, 1868.-Tho supporting cords of the drying glue are saturated with paraffine, stearine, or wax to prevent adhesion.

Claim.-The within-deseribed holder on which to dry glue, the said holder consisting of cords, wires, strips or sheets of suitable material, saturated or coated with parafine, or its equiralent, for the purpose speeified.
Meg, PBE.-Moratio Allen, New York, N. Y. Connecting the Tubes with the Heads of Surface Con. densers.-January 14, 1868.-One hend of the condenser is made thicker than the other to take a firmer hold ou the tubes, and cause the movement attributable to extension and contraction of the trubes by Triation in tcmperature to take place only in one head, and thus prevent the gradual drawing out of the tubes. The tongues are cut in the tube end for the same ultimate object.

Claim.-1. Masing one of the tubo-heads of greater thiekness than the other in the manner and for the purpose herein described.
2. Cutting and bending into bell-mouth form, tongues in the ends of the tubes, for the purpose and substantially in the manner herein described.

17: 28æ§.—Daniel W. Anos, Brond Top City, Pa.-Horse Hay Fork:-Janmary 14, 1868.-The upper ends of the incurved tines are connected by a chain whieh is engrged by the hoisting hook to bring the tines together upon the hay. The chain is tripped from the hook by a pivoted section thereof operated by the tripping line. When tho chain is
tripped, the toggle, which is connceted to the hook, spreads the tines and releases the hay.

Claim.-1. The combination substantially as de seribed, of piroted tines $A$, link-rods $C$, and a spreading link $D$, with a tripping lateh and hoisting ehain $B$, for the purpose set forth.
2. The arramgement, as deseribed, of the link rods C , below the joint of the tines, whereby the fork is opened by its own weight in desecnding.
\%3,223.-LEWIS ATWATER, Ithaca, N. Y.Horse Hay Fork--Jannary 14, 1868. - The tines are spread into working position by depression of the togele levers, and these are drawn up by tho tripping cord to discharge the hay.

Claim.-1. The tines $C$ D, constrncted in the form of hooks at their upper ends, and branching below the said hooks to a broad bearing support near their center, and to double prongs at their lower cuds, all in one picee, substantially as set forth.
2. The combination of the levers $F^{\top} G$ and buil A, all constructed and operating substantially as and for the purposes set fortl.
3. The combination of the tines C D, levers F $G$, and bail $A$, arranged and operating substantially as set forth.

73,2•24.-A. Bennett, Rockford, M1.-Cultiva-tor.-Jannary 14, 1868; antedated Janua'y 4, 1868.The fore euds of the plow beams are so commected to the frame as to allow lateral and rertieal morement; the former is aceomplished by the levers by whieh their rear ends are adjustably suspended, and the vertical morement by stirrups hung to chains passing through the frame and attaebed to the suid beans.
Claim.-1. The hitching iron $a$, in combination With the plow beams C C, and the front cross beam D, arranged and operating substantially as and for the purposes herein described.
2. The chain $h$, with the stirrup $m$, at one end, connceted with the plow beams C C at the other cnd, and passing over the rear cross beam E , to ruise the beans and shorels, as described.
3. The npright hand levers $e e$, hinged or piroted to the plow beams $C$ C, and passing through the staples $g g$ on the cross beam E, to which they are sceured by pins $k k$, arranged and operated as and for the purposes deseribed.
4. The movable foot-picee or steps $f$, on the levers $e e$, held in place by notches in the sides of the levers as and for the parpose specificd.
5. The adjustable braces $p p$ and slotted bolts $r \quad r$ arranged in relation with the beams C and standard $d$, to regrulate the pitch of the shovels, as
herein shown and described.

73,225.-EdWard B. Booti, St. Louis, Mo.Sheep Wash.-Jamnary 14, 1868.- Wash to keep sheep clear of scab and vermin, composed of refuse and stems of tobaceo, 100 pounds ; boiled in water, 50 grallons ; redueed to 40 gallons ; pulverized ehalk is added until efferrescence censes; to this when cool is added tersulphide of ealcium, 1 gallon. For the bath, to each gallon of water is added one pint of
the compound. the compound.

Claim.-A sheep wash composed of thoingredients above naned, or their cquivalents.

73,226.-Enen Moony Boynton, Grand Rapids, Mich.-Saw.-Jannary 14, 1868.-Explained by the claim and illnstration.

Claim.-As an improrement in the constrnetion of saws, providing them with the ganging and clearing teeth 13 , consisting of the inclined points $c$, and the horizontal faee or berring $e$, with a shoulder between the point and the bearing $e$, substantially as shown and deseribed.

73,927.-EbEN M. Bornton, Grand Rapids, Mich.-Saw Tang.-Jimuary 14, 1868.-The cud of the saw is passed through the slotted serew bolt which passes through the arm secured to the sucket, and is held by a thumb nut. The socket is placed as a ferrule on the frame.

Claim.-The detachable sawt tang, consisting of the socket $A$, with the arm $B$, having the groove $n$ formed in its under side, in combination with the slotted bolt D and the thumb nut E , substautially as deseribed.

73,228.-A. N. Breneman, Lancaster; PaShoe Holder.-January 14, 1868.-Explained by the claim and illustration.
Claim.-The arrangement of the too and heelpicees A $B$, when connected by a hinge $C$, in combination with the sliding wedge, and band D E , or its equivalent, for separating the parts below, substantially in the manner and for tho purpose specitied.

73,229.-GEORGE W. Brown, Rockford, Mll.-Spirometer.-January 14, 1868. - The breath passes anto the reservon and raises tho same in tho watertank, the index denoting the quantity in cubie inches.

Claim.-1. The arrangement of spirometers and index $H$, and shield $I$, in the mamer speeifiod, and for the purpose as described herein.
2. The metal tube B , which rises through the water in the reservoir $A$.
3. The arrangement of the guides E E and eyes F whe spirometcr, for the nso and in tho manner herein described and set forth.

73,230.-H. W. Burgess, Ithaea, N. I.-Strap Holder. January 14, 1868. - The stribl is held between the rolute interior of the bed piece and tho fite of the cam.

Claim.-1. The construction of tho strap holder, When the said surfaces of the movablo piece or part I3 and of the bed or opposing piece or part A are made to be a part or section of tho volnte curve F , as figured and deseribed.
2. The giving, by the above-named rolute-shaped surfaces, an adaptrition to varied thickness of straps, and a parallelism to each other of tho said surfaces, thereby safely and surely holding the raried straps placed between tho grasping surfaces, as herein deseribed.
3. The combination of the bed-pieco A, morable pieee or part IB, volute-shaped sinficeos $F$, handle $G$, and hinge $D$, the same making a strap holder, as set forth, as an article of mannfacturo.

73,231.-Miram C. Chandleh, Erio Township, Inch.-Whovel Plow.-January 14, 1868. - The trio forestandards are removablo and aro adjustable vertically by the slotted brace rods, ame laterally by the wedge bloek, which is insorted betwoen the standards and beneath the beam.

Claim.-1. The notehed beam at D , for the purpose of adjusting the handles to the desired heirht by a bolt passing through them and the noteh.
2. The double-slotted wedge $F$ and method of application at the point $G$ mader the beam hetween the standards 13 B to adjnst them as to width, and the slotted rode E E sceuring a forward or bisckward movement of the standards 13 B and tho shovels attached thereto, and fistened to the beam in the slots by a bolt or other similar device.

73,23®-GEOLGE E. Chenoweth, Baltimore, Md.-Balanced Feed Water Vabve.-Jammary 14, 1868. - The stem is conneeted to an olastie cliaphiagm covering an air chanber bencath the viblve. The aim is to balance the valve to render it sensitive to a light power exerted npon it.
Claim.-In combination with the ralve, valye stem, ind passages, in clastic, impermeablo diaphragm, and air chanber underneath it, for the pmrpose of holding the valve in a balaneed condition in any of the positions of the valve, substantially as hercin described and represented.

73,233.-Charles J. Clifford, New Hampton, N. J.-Apparatus for Determining Deviation of Locomotive Crank Dins from True Center.-Jam-
 rest against the facing around tho baso of the pin. When the frame is turned, the sprine scribor marks a circle upon the end of the pin which indicates by comparison with the turuing conter whether the pin is bent.

Claim.-The instrument for ascertaining, without quartering or centering, whether or not crank pins on locomotive driring wheels aro bout or sprung, construeted with the arms $a$, feet $b$, brace $c$, adjusting screws and spring marking point, Fig. 2, all arranged and combined substantially as shown and spocitied.

73,234.-GEORGE N. Compton, Canton, Ohio.Pole. Attachment.-January 14, 1868. The singletrce clevises are double-ended, and they are conneeted to the double and single trees by bolts, and to each other by a hollow stem. The breast rings upon the noek yoke are hinged to plates upon the ents of the said yoke. The neek yoke is jointod to as swivel upon the end of the tongue.

Claim.-1. The combination of the part I , with the pins $a$ a and the ring $G$, the wholo forming the ring pieces L G, shown in Figs. 6, in tho manner and for the purpose herein speeified.
2. The clevis $F$ ', composed of the two U's, united by a hollow neck, and cast either in a single pieec or in two pieces, which are connected by a bolt or rivet, in the manner and for the purpose herein speeified.
3. The tongue shield S , with pins a a thereon, construeted and arranged in the mannor and for the purposes herein specified.
'73,2B5.-Clara Z. Cummings, Buffalo, N. Y.Corset. -January 14, 1808; antedated Decembor 38 , 1867.-Explained by the elaim and illustration.

Claim.- A corset, having a portion of its back formed of clastic goods B, and provided with elastic buekle straps C' and D, for the purposes and substantially as described.

73,236.-Pearce K. Curle, Elk Ridge Landing, Md.-Cart Harness.-January 14, 1868. -The thills are supported on the hooks at the opposite ends of a lever pivoted to the bridge picee of the saddle.

Claim.-A cart-harness suddle, provided with the lever $D$, pivoted in the upper end of a bolt $C$, satid bolt being arranged to turn loosely in the eross-picce A, all construeted and arrangced to operate substantially as shown and deseribed.

73,237.-TOHX DEAKN, Glouccster, N, J., assignor to himself and D. and'C.KELIY, P'hiladelphia, Pa.-Loom.-January 14, 1868.-The motion is eommunicated to the treadles by revolving cams. One of the eams is upon a sleevesliding on the eam shaft by the action of levers aetuated by projeetions upon an endless toggle chain. The meehanism operates to change the pattern.

Claim.-The combination and arrangement of the heddle levers, pattern chain, and adjustable cams, with levers E H, or their equivalents, the whole being constructed and operating substantially as specified

93,238.-Henry Disston, Philadelphia, Pa.Cireular Sau.-January 14, 1868.-The baeks of the teeth form seetions of epicyeloidal curves.

Olaim.-A eireular saw, every tooth of which has its back edge so formed in the are of a eircle, having a center eecentrie with tho center of rotation of the saw, that the sharpening of eaeh tooth may be cffected by reducing the front odge in a spiral course, as herein set forth.

73,239.-Thomas S. Disston, Philadelphia, Pa., assignor to Henry Disston, same place.-Saw Gumming Machine.-Jannary 14, 1868.-The eutter is rotated by a wineh and turns in a bloek which is adjustable in radial slots of disks that are rotated by a lever. The frame being clamped to the snw, and the cutter rotated while the lever is swept around, a sog. mental pieec is eummed from tho saw.

Claim.-1. The rotary eutter $G$, arranged to recolve in disks adapted to and admitting of boing turned in a suitable framo securod to the saw, all substantially as deseribed for the purpose specified.
2. The combination of the rotary eutter $(G$, its bearing bloeks D D, adapted to tho morablo disks B , all substantially as and for the purposo herein set forth.
3. The rod $J$, rendered adjustable on the machine, and having a notehed end, sdapted to the point of one of the tecth of the saw, as set forth for the purpose described.
4. The recesses $k k^{\prime}$ in the disks $B$, for the recoption of the forked ond of tho lever H.

73,240.-Samurl F. Estell, Rielimond, Ind.Regulator for Iimepieces.-January 14, 1868.-The
free end of the regulator lever is slotted to receive a pin projecting from a nut on the operative serew.

Claim.-The combination of the regulating lever C, having a slotted end, in combination with serow F and nut E , substantially as described and for the purpose set forth.

73,241.-A. L. Fleury, New York, N. Y.A malgamator.-Tanuary 14, 1868.-The tailingrs pass throngh the perforated bottom of the mixing hopper and descend through a pipe of sueh length as to balance the mereury in a retort conneeted with the open vat into whieh the tailings dischargs. Within the vat is a series of horizontal and vertical concentric perforated eopper partitions which foreos the contents to take a derious courso. The vat and retort me survounded by steam jackets. Tho fumes of mereury aro injected into the descending body of tho tailings within the pipe.

Olaim.-Sho herein deseribed amalganator, comstructed and operating substantially in the manner set forth.

73,242.-GEORGE L. GERARD, New Haren, Conn., assignor to himself and David Fobbes, same place.-Buckle.-Jammary 14. 1868; mitedated. December 28, 186\%. -The buckle is formed of a single corrugated plate haring a central bar for attaeliment of the fixed strap and slots near the ends for passage of the adjustrble strap.

Olaim.-The combination of the central bar $f$ and bars $h$ and $l$, and the ribs $r$ and $s$, tho whole constrneted and arranged so as to operate in the manner spocified.
73.243.-ANDREW GOODYEAR, Albion, Mieh.Machine for Sealloping Leather.-Jamuary 14, $1868 .-$ The pressure of the bed roller against the scalloped disks is increased by a eam lever at one ond of the supporting lever of the bod roller. Motion is giren to the sealloped disks by a wineh.

Claim.--1. A entting-edged disk A, with radial corrugations or other orwamental shape indentations formed around it on both its faees next the periphery, substantially in the manner and for the purpose heroin deseribed.
2. The use of one or more revolving entting disks $A$, with faces shaped radially in ornamental forms, in combination with an adjustable bed roller $B$, and levers $L$ and $M$, monnted in a suitable frome, and arranged, adjnsted, engaged, and operated, substantially as and for the purposes set forth.
193.244.-Robert A. Goonyear, New Haven, Comn.-Neck-tie Fastening.-January 14, 1868 ; antedated Deeember 28, 1867. -The fingers of the spring clasp are foreed behind the button, and the plato to Which the eravat is attached is bent downward in front thereof.

Claim.-The spring clasp $c$, formed as shown at 1 1, for grasping the button, and so bent, at or near the hinge $b$ of the plate $a$, that a spring is produced for keeping the plate $a$ toward the clasp, as and for the purposes set forth.

73,245.-JOHN HARDEN, Chieago, Ill-Antifriction Bearing for Machinery. Jannary 14, 1868.A piate of glass is let into the friction surface and flexible matter is plaeed beneath the glass.

Claim.-The glass bearings B, in eombination with the working parts of maehinery A, flexible sent $d$, arranged as set forth, and for the purposes specificd.
173,246.-LouIS HARMYER, Cineinnati, Olio.Composition for Preserving Wood, Metal, Canvas, de.-Jannary 14, 1868.-Composed of tar, 1 barrel; rosin, 10 pounds; sulphmrie acid, $2 \frac{1}{2}$ ponnds ; pulver: ized copperas, 10 pounds : salt, 6 pounds ; alum pulrerized, 6 pounds ; lime, 60 pounds ; and earbon iron, a pounds. Mixed under heat.
Olaim.-The composition itself, and the manner and proeess of compounding and using the same, substantially as herein set forth.

73,24\%.-M. W. Helton and J. II. Redfield, Bloomington, Ind.-Automatic Alarmo for Grist-mills.-January 14, 1868.-Whon the grist is changed,
the alarm mechanism is pat in operation and sounds the alarm when the flour of the previous grist has run from the bolt. It is sot to approximate as elosely to this result as may be.
Claim.-1. The apparatus, substantially ns deseribed, and which is construeted so that when applied to mill machinery, and properly adjustod thereto, it will automatically give an alarm at the proper time for ehanging the saeks, for the purpose sot forth.
2. In combination with alarm mechanism and deviees, which will automatically somd the alarm and then be disengaged from the main driving power, substantially as showh and set forth, means, substantially as deseriborl. by which the maehine can be adjusted and set to sound the alarm at any given time, for the purposes set forth.
3. The adjustable index wheel K , with its stop i and perwl m, or their respective equivalents, in combination with the land or arm L upon the slaft $h$, and an alarm mechanism, operating substantially as described.
4. The vibrating lercr D and eateh I , in combination with the tripping wheel E, worn wheel shaft C, and driving shaft B, operating substantially as deseribed.
5. The pawl and elanp $m . s$, or their equivalents, applicd to the wheel K , for holding this wheel firmly in phace when properly adjusted, substantially as deseribed.
(i. Sustaining the worm-wheel shaft C at one ence, by means of a lever D , in combination with a eateh II, and also with means for tripping this eateh, when said shaft C has made a given number of revolutions, substantiallyous described.

7:3,248.-Benjamin F. Horton, Ithaea, N. Y.Horse licke.-Jinuary 14, 18ti8. -The thimbles hare side projections cast upou them, to which the teeth are attached. The teeth are raised by loops connected, through a system of rods and levers, with the hand lever.

Claim.-1. The arrangement of the teeth and the knobs projecting from the lower sider of the thimbles 13, substantially ав deseribed.
3. The combination and arrangement of the deseribed levers and rods $F, G, H, I$, and $J$, substantially as set forth.
3. The combination of the hand lerer J, rod I, pivoted lever II, rod $G$, lever $F$, and lifting bar E , when all are construeted and operated substantially as deseribed.

73,249.-Join S. Hull, Cineimati, OhioSodal Fountain.-January 14, 18si. The air-pump by which the fountain is elarged is placed beside the soda fountain, and the contentis of the latter foreed up into the cooler by the pressure of air. The contents of the eooler are ejected from a pipe reaching to the bottom of the cooler and upward through the ice ehamber:
