## XXIX. An Account of the Birds Sent from

 Hudfon's Bay ; with Obfervations relative to their Natural Hifory; and Latin Defcriptions of Some of the mof uncommon. By J. R. Forfter, F. R. S.Read June 18-25, 1772.
I. Land-Birds.

1. $\left\{\begin{array}{l}\text { Accipitres } \\ \text { Rapacious. Faun. Am. Sept. }\end{array}\right.$
I. Falco, 1. Columbarius. 128. 21. Pigeon Hawk. Falcon. $\int$ Faun. Am. Sept. p. 9. Catefby l. t. 3. Epervier de la Caroline. Briffon I. p. 378.

## Severn river, $\mathrm{N}^{\circ} 19$.

This fpecies is called a finall-bird bawk at Hudfon's Bay. It is migratory, arriving near Se vern River in May, breeding on the coaft, and then retiring to a warmer climate in autumn. It feeds on fmall birds; and, on the approach of any perfon, will fly in circles. making a hideous hrieking noife. The breaft

## [ $3^{8} 3$ ]

and belly are yellowifh, with brown ftreaks, which are not mentioned by the ornithologifts, though their defcriptions anfwer in other refpects. It weighs fix ounces and a half, its length is $10 \frac{1}{2}$, the breadth $22 \frac{1}{2}$. Catefby's figure is a very indifferent one.

Falco, 2. Spadiceus. New Species. Chocolate Falcon. Faun. Am. Sept. p. 9.
This fpecies, at firft fight, bears fome refemblance to the European Moor Buzzard, or Aeruginofus, Linn. but is much lefs, and wants the light fpots on the head and houlders. No number or defcription was fent along with it.

Falco, 3. Sacer, Brifion, I. p. 337. Sacre de Buffon, Oifeaux, (edition in 12 mo .) Tom. II. p. 349. t. ${ }^{14}$. Faun. Am. Sept. p. 9. Severn River, $\mathrm{N}^{\circ}{ }_{16} 6$.

Speckled Partridge Hawk, at Hudfon's Bay. The name is derived from its feeding on the birds of the Grous tribe, commonly called partridges, at Hudfon's Bay. Its irides are yellow, and the legs blue. It comes neareft the Sacre of Briffon, Buffon, and Belon; but Buffon fays it has black eyes, which is very indiftinct; for the irides are black in none of the falcons, and in few other birds; and the pupil, if he means that, is black in all birds. It is faid, by Belon, to come from Tartary and Ruffia, and is, therefore, probably a northern bird. It is very voracious and

## [384]

and bold, catching partridyes out of a covey, which the Europeans are driving into their nefts. It breeds in April and May. Its young are ready to fly in the middle of June. Its nefts, as thofe of all other falcons, are built in unfrequented places; therefore, the author of the account from Severn River could not afcertain how many eggs it lays; however, the Indians told him it commonly lay two. It never migrates, and weighs $2 \frac{\pi}{2}$ pounds ; its length is 22 inches, its breadth 3 feet.
2. Strix, 44. Brachyotos. The thorteeared Owl. Owl. SBrit. Zoology, folio, plate B. 3. octavo, I. p. I56. Faun. Am. Sept. 9.

Severn River, $\mathrm{N}^{\circ} 17$ and 64 .
Moufe Hawk at Hudfon's Bay. It anfwers the defcription and figure in the Britifh Zoology; but its ears or long feathers do not appear The fmallnefs of the head has; probably, given occafion to call it a hawk, though it does not fly about in queft of prey, like other hawks (as the account from Severn River fays); it fits quiet on the ftumps of trees, waiting mice with all the attention of a domeftic cat, being an inveterate enemy of thofe little animals. It migrates fouthward in autumn ; and breeds along the coaft. Its irides are yellow. Its weight is 14 ounces; ite length 16 inches, the breadth 3 feet.

## [385]

Strix, 5. Nyctea. i32. 6. Snowy Owl. Faun. Am. Sept. 9.
Churchill River, $\mathrm{N}^{\circ} 7$. White Owl.
It feems to be in its winter drefs, as it is intirely white. The feet are covered with long white hair-like feathers to the very nails, but there are none on the foles or under parts of the toes.

Strix, 6. Funerea. i33. if. Canada Owl. Faun Am. Sept. 9.
Severn River, $\mathrm{N}^{\circ}{ }_{13}$. Churchill River, $\mathrm{N}^{\circ}{ }_{1}$. Cabeticuch, or Cabaducutch, is the Indian name of this bird. Linneus's defcription anfwers perfectly. The male, which in the clafs of birds of prey is generally fmaller, is, however, in this fpecies, larger than the female, according to the account from Severn River. Its colour is likewife much blacker, and the fpots more diftinct. The eyes are large and prominent; the irides of a bright yellow. The weight is 12 ounces; its length 17 inches, the breadth 2 feet. It has only two young at one hatching.

Strix, 7. Pafferina. 133. 12. Little Owl. Brit. Zool. Faun. Am. Sept. 9.
(The number bclonging to this bird is loft, but it is moft probably that from Severn River, $\mathrm{N}^{\circ}$ 15. called Sbipomo/pifb by the natives).
The crown of the head is fpeckled with white, as in the Strix funerea.

Thefe birds are called $W b i k i j 0 b n$ and $W b i k i j a c k$ at the Hudfon's Bay. They weigh 2 ounces; and are 9 inches long, and 11 broad. Their eyes are black, and their feet of the fame colour. Their characters correfpond with the Linnean defcription. They breed early in fpring; their nefts are made of fticks and grafs,

## [ 387 ]

grafs, and built in pine trees; they have two, rarely three, young ones at a time; their eggs are blue; they fly in pairs; the male and female are perfectly alike; they feed on black mofs, worms, and even flefh. When near habitations or tents, they are apt to pilfer every thing they can come at, even falt meat ; they are bold, and come into the tents to eat victuals out of the dimes. They watch perfons baiting the traps for martins, and devour the bait as foon as they turn their backs. Thefe birds lay up fores for the winter, and are feldom feen in January, urilefs near habitations; they are a kind of mock-bird; when caught, they pine away and die, though their appetite never fails them.

Corvus, 1 i. Pica. 157. 13. Magpie. Brit. Zool. Faun. Am. Sept. 9.
Albany Fort, $\mathrm{N}^{\circ}{ }_{5}$.
It is called Oue-ta-kee a/ke, i. e. Heart-bird, by the Indians. It is a bird of paffage, and rarely feen; it agrees, in all reffects, with the European magpie, upon comparion.
5. Picus, \}12. Auratus. 174. 9. Gold-wing Woodpecker. $\}$ Woodpecker. Faun. Am. Sept. 10. Catelby, I. 18.
Albany Fort, $\mathrm{N}^{\circ}$ 4. the large Woodpecker.
The natives of America call this bird Ou-tbee-quan-nor-now, from the yellow colour of the thafts of the quill and underfide of the tail feathers. It is a bird of paffage; vifits the Ddd 2 neigh_

## [ 388 ]

neighourhood of Albany Fort in April, leaves it in September; lays from four to fix eggs in hollow trees, feeds on fmall worms and other infects. Its defrriptions anfwer exactly.

Picus, 13. Villofus, 175.16. Hairy Woodpecker. Faun. Am. Sept. 1o. Catefby I. 19.
Severn River, $\mathbf{N}^{\circ}{ }_{56}$.
The fpecimen fent over is a female, by its wanting the red on the head. The defcriptions of Linneus and Briffon agree; only the two middlemoft feathers are black, the next are of the fame colour, but have a white rhomboidal fpot near the tip; the next are black, with the upper half obliquely white, the very tip being black; the next after that are white, with a round black fpot on the inner fide clofe to the bafe, and the lower part of the fhaft is black, the outermofs feathers are quite white, the fhaft only at the bafe being black.
14. Tridactylus. 177.2 1. Three-toid Woodpecker. Faun. Am. Sept.
Severn River, ${ }^{\circ} 8$.
A female, weight 2 ounces, length 8 inches, breadth $1_{3}$; eyes dark blue, legs black. It builds its neft in trees, lives in woods upon worms picked out of trees, is not very common at Severn River. The defriptions an fwer.

Severn River, N ${ }^{\circ}$ 5. Woodpartridge.
Thefe birds are all the year long at Hudfon's Bay, and never change the colour of their plumage. The accounts from Hudfon's Bay fay, there is no material difference between the male and female; which muft be a mirtake, as they are really very different. Linneus's defcriptions of the Tetrao Canadenfis, and Canace, both anfwer to the feecimens fent over, fo that, after comparing them, I find they are only one and the fame feccies. I fuppofe the dividing them into two, was occafioned by Briffon's and Edwards's defcriptions, being taken from fpecimens fent from different parts of the continent of America, and perhaps caught at different feafons. Mr. de Buffon has, I find, the fame opinion with me, and by comparing the drawings of Edwards, with thofe of the Planches enluminées, it is put beyond a doubt. Thefe birds are very ftupid, may be knocked down with a ftick, and are frequently caught by the na-

## [390]

tives with a ftick and a loop. In fummer they are good eating; but in winter they tafte ftrongly of the pine fpruce, upon which they feed during that feafon, eating berries in fummer. They live in pine woods, their nefts are on the ground; they generally lay but five eggs.

Tetrao, 16. Lagopus, 274.4. White Grous. Faun. Am. Sept. ıo. Ptarmigan. Br. Zool. Lagopéde de la Baye de Hudfon. Buffon Oifeaux II. p. 276. Edw. t. 72.
Severn River. $\mathrm{N}^{\circ}$, -4 . Willow-partridges.
The Hudfon's Bay ptarmigan has been feparated from the European in the Britih Zoology, and afterwards by M. de Buffon : however, I muft own, I cannot yet find the differences which they affign to thefe fpecies. They contend that the Hudfon's Bay bird figured by Edwards is twice as big as the European ptarmigan ; Mr. Edwards, I think, does not intimate this, when he fays, the bird is of a middle fize, between partridge and pheafant; he on the contrary fuppofes them to be the fame fpecies. The Britifh Zoology, after Willoughby, fays, the ptarmigan's length is $13^{\frac{3}{4}}$ inches. The account from Severn River fays it is $16_{\mp}$ inches. The breadth in the Britifh Zoology is faid to be 23 inches. The breadth in the Hudfon's Bay birds, according to the accounts from Severn River, is 23 inches. Willoughby's ptarmigan weighed 14 ounces; that in the Britifh

Zool.

## [391]

Zool. illuftr. t. 13. 19 ounces; that from the Hudfon's Bay ( $1 \frac{1}{2}$ 18) 24 ounces. Thefe differences are of little confequence, and far from increafing the Hudfon's Bay bird to double the fize of the European. The Britifh Zoclogy Fays, there is a difference in the fummer colours; but Mr. Edwards informs us, that he compared the Hudfon's Bay bird with the defcriptions of former ornithologifts, and found them to anfwer; he likewife affures us he had the fame bird from Norway. Therefore I cannot help diffenting from the Britifh Zoology, in this one particular, and thinking with Linneus and Briffon, that the European and Hudfon's Bay ptarmigans are the fame, efpecially as the colours vary very much in the different fexes and at different feafons. To this we may add the teftimony of a gentleman well verfed in natural hiftory, who, having had opportunities of comparing numbers of Hudfon's Bay and European ptarmigans, affured me that he did not fee any difference between them. They go together in great flocks in the beginning of October, living among the willows, of which they eat the tops (whence they have got the name of willow partridges): about that time they lofe their beautiful fummer plumage, and exchange it it for a fnowy white drefs, moft providently adapted by its thickneis to fcreen them againft the feverity of the feafon, and by its colour againt their enemies

## [392]

the hawks and owls, againft whore attacks they would otherwife find no fhelter. Each feather is double, that is, a fhort one under a long one, to keep them warm. In the latter end of March, they begin again to change their plumage, and have got their full fummer drefs by the end of June. They breed every where along the coaft, and have from nine to eloven young at a time; making their nefts on the ground, generally on dry ridges. They are excellent eating, and fo plentiful that ten thoufand have been taken at Severn, York, and Churchill Forts. The method of netting or catching them, is as follows: a net made of jack-twine, twenty feet fquare, is laced to four long poles, and fupported in front with the fticks, in a perpendicular fituation; a long line is faftened to thefe fupports, one end of it reaching to a place where a perfon lies concealed; feveral men drive the ptarmigans (which are as tame as chickens, efpecially on a mild, fnowy day), towards the net, which they run to, as foon as they fee it. The perfon concealed draws the line, by which means the net falls down, and catches 50 or 70 ptarmigans at once. They are fometimès rather wild, but grow better humoured (as Mr. Graham lays) by being driven about, for they feldom forlake thofe willows which they have once frequented.

## [ 393 ]

Tetrac. 17. Togatus, 275. 8. Shoulder-knot Grous. Groffe Gelinotte du Canada. Pl. enl. IO4. Briff. I. 207. t. 21. f. 1. Buffon Oifeaux II. p. 287.

Severn River, $\mathrm{N}^{\circ} 60$ and 61. Albany Fort I and 2.
This bird anfwers the defcriptions given of it by the ornithologifts in all refpects, and perfectly refembles the figure in Briffon, and in the Planches enluminées. It differs from Edwards's ruffed heathcock, t. 248. or Linneus's Tetrao umbellus, as the latter has not the chining black axillar feathers, or fhoulder-knot, but a ferruginous one, is much lefs, and has brighter colours. M. de Buffon, however, thinks they are the fame, and fufpects at the fame time, that the bird which he calls la groffe Gelinotte du Canada (and which is the fame with the Society's ipecimens) is the female of Mr. Edwards's bird, t. 248. This conjecture is deftroyed by the fpecimens now fent from Hudfon's Bay, which by the accounts from thence are expreflly faid to be males. The fhoulderknot groufes bear the Indian name of Pukee, or Pufpu/kee, at Hudfon's Bay, on account of the leannefs and drynefs of their fleth, which is extremely white, and of a very clofe texture, but when well prepared is excellent eating. They are pretty common at Moofe Fort and Henly. Houfe, but are feldom feen at Albany Fort, or to the northward of the above places, In winter they feed upon juVol. LXII.

Es:
niper

## [ 394 ]

niper tops, in fummer on goofe berries, rafpberries, currants, cranberties, \&c. They are not migratory, ftaying all the year at Moofe Fort; they build their nefts on dry ground, hatch nine young at a time, to which the mother clucks, as our common hen does; and on the leaft appearance of danger, or in orderto enjoy a comfortable degree of warmth, the young ones retire under the wings of their parent.
$N$. B. A fpecimen, which is fuppofed to be either a young bird or a female, wants the blueih black foulder-knot; but it is the fame in all other refpects.

Tetrao, 18. Phafianellus. Linn. Syft. Nat. Ed. X. p. 160. n. 5. Edw. if7. Longtailed Grous. Faun. Am. Septentr. 10.
Severn River, $\mathrm{N}^{\circ} 6$ and 7. Albany Fort, $\mathrm{N}^{\circ} 3$.
'Ihis bird, which Mr. Edwards has drawn plate 117, was by Linneus in the tenth edition of his Syftem, ranged as a new fpecies of grous or tetrao, by the fpecific name of Phafiane!lus (alluding to the name of Pheafant which it bears at Hudfon's Bay, and likewife to its pointed tail). He afterwards in the new or twelfth edition of the Syftem, p. 273. makes it a variety of the great Cock of the Wood, or Tetrao Urogallus, probably from the account in Mr. Edwards, that the male ftruts very upright, is in general of a darker colour than the female, and has a gloffy neck. Thefe circumftances, however, e are not fufficient to bring

## [ 395 ]

bring them under the fame fpecies, for it is known that the males of all the grous tribe, and indeed of moft of the gallinaceous birds, are ufed to ftrut in a very ftately manner, and that the colours of their plumage are much more diftinct than thofe of the females. But the fpecific difference alone, which Linneus affigns to the cock of the wood, abfolutely excludes our Hudfon's Bay fpecies; he calls it Tetrao pedibus hirfutis, cauda rotundata, axillis albis. Whoever examines Mr. Edwards's figure, and the fpecimens now in the Society's poffeffion, will find the tail very fhort, but pointed, the two middle feathers being half an inch longer than the reft, (Mr. Edwards fays two inches) and the axillæ, or fhoulders, by no means white: befides this difference, the colour and fize of the Hudfon's Bay bird are likewife vaftly different from thofe of the cock of the wood. Its length is 17 inches, its breadth 24, and, as Mr. Edwards juftly fays, it is fomewhat bigger than the common pheafant. The great cock of the wood is as big as a turky; and its female, which is much lefs, however far exceeds our bird, it being 26 inches long, and 40 broad. See Britifh Zool. setavo, p. 200. The figures given of the female of the T. Urogatlus, or great cock of the wood, in the Br. Zool. folio, plate M *, and the Planche enlumineé 75 , will ferve upon comparifon as a convincing proof of the vaft difference there is between the Hudfon's Bay pheafant grous and the Europeancock Eee 2

## [ 396 ]

of the wood. The figure, which Mr. Edwards has given of the former bird, does not exactly correfpond with the Society's fpecimen, as he has reprefented the marks on the breart half-moon haped, though they are heart-hhaped as thofe on the belly in the dried bird; that is, they are white fpots, with a pale brownifh yellow cordated brim. Nor can I agree with Mr. Edwards, when he calls this bird the long-tailed grous from Hudfon's Bay; for its tail is really very fhort, in comparifon with that of other groufe, and its fmallnefs and acutenefs afford one of the moft diftinguirhing characters of the feccies.
The native Indians call thefe pheafant groufes, Oc. $k j / \mathrm{s}$-cow: they are found all the year long, amongft the fmall juniper bufhes, of which the buds are their principal food, as alfo the buds of birch in winter, and all forts of berries in fummer. They never vary their colours; nor is there any great difference between the male and female, except in the caruncula or comb over the eye, which in the male is an inch long, and $\frac{3}{8}$ of an inch high. The account from Albany Fort adds, that the colour of the male is fomewhat browner, and almoft a chocolate on the breaft. Their fleh is of a light brown, exceeding juicy, and they are very plump. They lay from 9 to 13 eggs; their young can run almoft as foon as they are hatched; they make a piping noife fomewhat like a chicken. The cock has a fhrill crowing note, not very loud;

## [ 397 ]

but when difturbed, or whiift flying, he makes a repeated noife of cuck, cock. They are moft common in winter at Albany Fort.
Before 1 leave the genus of groufes, I muft obferve that their feet have a peculiarity, taken notice of by few authors; the toes, in feveral fpecies, have on each fide a row of fhort flexible teeth, like thofe of a comb; fo that the toes appear pectinated. The fpecies, which are known to have fuch pectinated toes, are,

1. The great Cock of the Wood, Tetras Urogallus, Linn.
2. The Black Cock, T. Tetrix, Linn.
3. The Spotted Grous, $\left\{\begin{array}{c}\mathcal{T} . \\ \mathcal{T}\end{array}\right.$ Canadenfis, and $\quad\{\mathcal{T}$. Canace, Linn.
4. The Ruffed Grous, T. Umbellus, Linn.
5. The Shoulder-knot Grous, T. Togatus, Linn.
6 The Pheafant Grous, T. Pbafianellus.
6. The Hazel Hen, $\mathcal{T}$. Bonafia, Linn.
7. The Pyrenæan Grous, T. Alcbata, Linn.

This is a circumftance, which ought to be attended to in all other fpecies of groufes, as it may in time afford a diftinguifhing character for a divifion in this great genus; the ptarmigan, or T.Lagcous, Linn. is without thefe teeth.

## [398]

IV. $\left\{\begin{array}{l}\text { Columbæ. } \\ \text { Columbine. Faun. Am. Sept. }\end{array}\right.$
7. Columba, 7 19. Migratoria. 285. 36. Migratory Pigeon. $\}$ Pigeon. Catefb. I. 23. Kalm II. p. 82. t. Paffenger Pigeon, Faun. Am. Sept. ir. Severn River, ${ }^{\circ}$ 63. Wood-pigeon.

Thefe pigeons are very fcarce fo far northward as Severn river, but abound near Moofe-fort, and further inland to the fouthward. Their common food are berries and juniper buds in winter ; they fly about in great flocks, and are reckoned good eating. This account is confirmed by Kalm in his travels (Englim edition) Vol. II. p. 82 and 311 . They hatch only two eggs at a time, and their nefts are built in trees. Their eyes are fmall and black, the irides yellow, the feet red : the neck finely gloffed with purple, brighter in the male. They weigh 9 ounces.

This fpecies is indifferenily defcribed by Linneus, who fays that all the tail-feathers on their inner web are white, (recitricious dimidio interiore albis); though it does not appear that he faw a fpecimen of it himfelf. Both the

## [ 399 ]

quill and tail-feathers are dukky, and in both the outermolt feather only has a white exterior margin. The coverts of the tail are of a pale ferruginous colour, and two of them are nearly as long as the tail itfelf. The fcapulars are ferruginous; in the male, the head and whole back have a tinge of the fame colour, marked with dufky freaks; in the female, the back is grey, and the dulky ftripes of a darker hue. The crown of the head is black in the male, durky in the female; the forehead is yellow, the bill and feet are black, the belly of a dirty reddif white. Thefe larks are migratory, they vifit the environs of Albany Fort in the beginning of May, but go further northward to breed: they feed on grafs-feeds, and buds of the fprig-birch ; run into fmall holes, and keep clofe to the ground, from whence the natives give them the name of Cbi-cbup-pi-fue:
9. Turdus. ${ }^{2 \text { r. Migratorius, 292.6. American }}$ Thrufh. $\int$ Fieldfare. Kalm II. p. 90. Fiun. Am. Sept. II. Catefly I. 29.
Severn River, $\mathrm{N}^{\circ}{ }_{59}$. Albany Fort, 7, 8, 9.
The defcriptions of thefe birds in various authors coincide with the fpecimens; at Severn River they appear at the beginning of May, and leave the environs before the frof fets in. At Moofe Fort, in the north latitude $51^{\circ}$. they build their neft, lay their eggs, and hatch their young in the fpace of fourtecn days; but at York fort and Severn fetilement this is
done

## [400]

done in 26 days: they build their netts in trees, lay four beautiful light-blue eggs, feed on worms and carrion: when at liberty they fing very prettily, but confined in a cage, they lofe their melody. There is no material diftinction between the male and female. Their weight is $2 \frac{x}{2}$ ounces, the length 9 inches, and the breadth i foot; they are called red birds at Hudfon's Bay; their India:a name is Pee-pee-chue.

Turdus, 22.
\$evern River, $\mathrm{N}^{\circ} 54$ and 55 , male and female.
From the ftriking fimilarity with our blackbird, the Englifh at Hudfon's Bay have given this bird the fame name. However, upon a clofe examination, I find the difference very great between our European blackbird, and the Hudfon's Bay or American one. The plumage of the male, inftead of being deep black without any glofs, as in ours, has a Chining purple caft, not unlike the plumage of the Gracula Quifcula, Linn. or fhining Gracule, Faun. Am. Sept.; or the Maize thief, of Kalm. The female indeed is very like our female blackbird, being of a dufky colour on the back, and a dark grey on the breaft. The feet and bill are quite black in both fexes; the former have the back claw almoft as long again as any of the other claws. There are no veftiges of yellow palpebræ in either the male or the female; the bill in both is ftrong, fmooth, and fubulated; the
upper mandible being carinated, but very little arched, and without any tooth or indenture whatever, on the lower fide. The noftrils are as in other thruhes. This bird has no briftles at the bafe of its bill, its feet have fuch fegments as Scopoli in the Annus 1. Hiftorico-Naturalis attributes to the flares. Inftead of being folitary and living retired like the European blackbirds, thefe American ones come in flocks to Severn River in June, live among the willows, build in all kinds of trees, and return to the fouthward in autumn. They feed on worms and maggots; their weight is $2 \frac{1}{4}$ ounces, and they are nine inches long, and one foot broad. One that was kept twelve months in a cage pined away, and died. Notwithftanding thefe circumflances, I cannot help remaining undetermined with regard to this bird, which at firft fight is like the blackbird, has the bill of a thrufh, and the feet and gregarious nature of a ftare. It is to be hoped, that future accounts from Hudfon's Bay may inform us further, of the nature of this bird, its time of incubation, the number of eggs it lays, and the colour of thofe eggs, together with the note of the bird, the difference and characteriftick marks of both the male and female, and other circumftances, which may ferve to determine to what genus and fpecies we are to refer this bird.
10. Loxia, $\{$ 23. Curviroftra, 299. 1. Crofsbill. Grofbeak. \{ Br. Zool. Faun. Am. Sept. 11. The fmall variety.
Severn River, $N^{\circ} 27$ and 28.
This bird comes to Severn River the latter end of May, breeds more to the northward, and returns in autumn, in its way to the fouth, departing at the fetting in of the froit. The irides in the male are of a beautiful red, in the female yellow : the weight is faid to be 10 ounces (probably by miftake for 1 ounce, as it is impoffible fo fmall a bird fhould weigh more), the length is 6 inches, the breadth 10.
24. Enucleator, 299. 3. Pine Grofbeak. Br. Zoola, and Faun. Am. Sept. Edw. 123, 124. Pl. enl. 135. f. I.

Severn River, $\mathrm{N}^{\circ}$ 29, 30.
It anfwers to the defcriptions and figures of the ornithologifts pretty well; only Edwards's female has the red too bright, which is rather orange in our fpecimen, on the head, neck, and coverts of the tail. This bird only vifits the Hudfon's Bay fettlements in May, on its way to the north, and is not obferved to return in autumn; its food confifts of birchwillow buds, and others of the fame nature; it weighs 2 ounces, is 9 inches long, and ${ }_{3} 3$ broad.

Severn River, $\mathrm{N}^{\circ}$ 24-26.
The bird, in fummer drefs, correfponds exactly with the defcription of the greater brambling, Br . Zool. The defcription of the fnowflake, or the fame bird in winter drefs, ibid. vol. IV p. 19. is fomewhat different, perhaps owing to the different feafons the birds were caught in, as it is well known they change their colour gradually. They are the firft of the migratory birds, which come in fpring to Severn fettlement; in the year 1771 they appeared April the 1 ith, ftayed about a month or five weeks, and then proceeded further northward in order to breed there; they return in September, fay till the cold grows fevere in November, then retire fouthward to a warmer climate. They live in flocks, feed on grafsfeeds, and about the dunghills, are eafily caught under a fmall net, fome oatmeal being ftrewed under it to allure them; they are very fat, and fine eating. The weight is $亠$ ounce and 5 drams, the length $6 \frac{1}{2}$ inches, and the breadth 10 inches.

Em briza. 26. Leucophrys. New Species. White Crowned Bunting.
Severn River, $\mathrm{N}^{\circ} 50$. Albary Fort, 10.
This elegant little fpecies of Bunting is called a hedge fparrow at Hudfon's Bay, and has Fffer not

$$
\text { [ } 404]
$$

not hitherto been defrribed. It vifits Severn fettlement in June, and feeds on grafs-feeds, little worms, grubs, \&c. It weighs $\frac{3}{4}$ of an ounce, and is $\gamma_{\frac{1}{2} \text { inches long, and } 9 \text { inches broad ; the }}$ bill and legs are flefh-coloured; the male is not materially different from the female, its nefts are built in the bottom of willow bufhes, it lays three eggs of a chocolate colour. It viifts Albany Fort in May, breeds there, and leaves it in September.
12. Fringilla, $\{$ 27. Lapponica. 3 17. I. Faun. Finch. Suec. $^{2} 35 \cdot$ Severn river, ${ }^{\circ}{ }^{\circ} 52$.

It is called $T_{\text {ecurma/bijh, by the natives at Hud- }}$ fon's Bay. The defrription in Linneus's Fauna Suecica coincides exactly with the fpecimen; that in his Syitem anfwers very nearly: Mr. Briffon's defcription (though he quotes Linneus, and Linneus quotes him) is widely different. The feecimen fent over is a female; the males have more of the ferruginous colour on the head; the eyes are blue, the legs dark brown. It is only a winter inhabitant near Severn river, appears not before November, and is commonly found among the juniper trees; it weighs $\frac{1}{2}$ of an ounce, its length is 5 inches, and its breadth 7 .

Fringilifo.

## [405]

F'ringilla. 28. Linaria. 322. 29. Leffer red headed Linnet. Br. Zool. Severn River, ${ }^{\circ}{ }^{\circ} 23$.

The defcriptions of Linneus, Briffon, and the Britifh Zoology, anfwer perfectly well. The figure in Planche enluminée 15 I. f. 2. has a quite ferruginous back contrary to all the defcriptions and the fpecimen before us, in which all the feathers on the back are dufky, edged with dirty white.
29. Montana, 324. 37. Mountain Sparrow, Tree Sparrow. Br. Zool. Edw. 269. Briffon III. p. 79. Faun. Am. Sept.

Severn River, $\mathrm{N}^{\circ} 20$.
This feems to be a variety, as its tail is rather longer than ufual, and forked; it anfwers nearly to the defcriptions given by the ornithologifts, and feems to be a female, as it has no black under the throat and eyes, and no white collar. The bill and legs are black, the eyes blue. At Severn fettlement it arrives in May, goes to breed further northwards, and returns in autumn : the weight is $\frac{3}{4}$ of an ounce, the length $6 \frac{1}{2}$ inches, and breadth 10. I was inclined to make this bird a new. fpecies, on account of the many differences. between it and the mountain farrow; but confidering the fpecimen fent over was not in the beft order, and might be a female, I thought it beft to leave it where it is, till we are better informed.

Frine

## [406]

Fringilea. 3o. Hudfonias. New Specimen. Severn River, $\mathrm{N}^{1} 18$.

This is certainly a nondefcript fpecies; it only vifits Severn fettlement in fummer, not being feen there before June, when it flays about a fortnight, goes further to the northward to breed, and paffes by Severn again in autumn on its return fouth. It is very difficult to procure, and therefore it could not be deternined whether the fpecimen was a male or female. It frequents the plains, and lives on grals-feeds; it weighs $\frac{x}{2}$ an ounce, is $6 \frac{1}{4}$ inches long, and 9 inches broad: it has a fmall blue eye, and a whitifh bill faintly inged with red; the whole body is blackifh, or of a foot colour, the belly alone with the two outermoft tail feathers on each fide being white. It is to be wifhed that more fpecimens and circumftantial accounts of this bird were fent over, which would enable us to determine its character with more precifion.
13. Muscicapa, $\{$ 31. Striata. New Species, Striped Flycatcher. \{ Flycatcher.
Severn River, $\mathrm{N}^{\circ} 48$ and 49: Male and Female.
This fpecies vifits Severn river only in fummer, feeding on grafs-feeds, etc.; it weighs half an ounce, is 5 inches long, and feven broad; the male is widely different from the female: this fpecies is entirely nondefrript.

## [407]

54. Motacilla, 3 32. Calendula. 337. 47. Ruby Wagtail. $\{$ crowned Wren. Edw. 254. Faun. Am. Sept.
(The number belonging to this bird is loft; however, it is moft probably that fent from Severn river, $\mathrm{N}^{\circ}$ 53.)
It anfwers to the defcriptions and the figure of Edwards; its weight is 4 drams, its length 4 inches, and its breath 5. It migrates, feeds on grafs-feeds and the like, and breeds in the plains; the number of eggs is not known.
55. Parus, $\left\{\begin{array}{l}\text { Titmoufe. Atricapillus. 341. 6. Black Cap } \\ \text { Titmoufe. }\end{array}\right.$ Albany Fort, $\mathrm{N}^{\circ}{ }^{1} 1$.

The defcription given by Linneus anfwers, and fo does M. Briffon's in moft particulars, except that the quill-feathers are not white on the infide. Thefe birds ftay at Albany Fort all the year, yet feem moft numerous in the coldeft weather; probably being then more in want of food, they come nearer the fettlements, in order to pick up all remnants. They feed on flies and fmall maggots, and likewife on the buds of the fprig-birch, in which they perhaps only fearch for infects; they make a twittering noife, from which the native call them $K i / s-k i j s-k e \cdot \beta i j b$.

## [408]

Parus. 34. Hudfonicus. Nerv Species. Hudfon's Bay Titmoufe.
Severn River, $\mathrm{N}^{\circ}{ }^{\mathrm{I} 2}$.
This new feecies of titmoufe, is called Peche-kea $k e-/ b i / h$, by the natives. They are common about the juniper buhnes, of which the buds are their food; in winter they fly about from tree to tree in fmall flocks, the fevereft weather not excepted. They breed about the fettlements, and lay 5 eggs; they have fmall eyes, with a white ftreak under them, and black legs: the male and female are quite alike; they weigh half an ounce, are $5 \frac{1}{8}$ inches long, and 7 inches broad.
16. Hirundo, 335 . Swallow. $\{$
Severn River, $\mathrm{N}^{\circ} 58$.
The fwallows build under the windows, and on the face of fteep banks of the river, they difappear in autumn; and the Indians fay, they were never found torpid under water, probably becaufe they have no large nets to fifh with under the ice. The fpecimen fent anfwers in fome particulars to the defcription of the Martin, Hirundo Urbica, Linn. but feems to be fmaller, and has no white on the rump. I have, therefore, thought it beft to leave the fpecies undetermined, till further informations are received from Hudfon's Bay, on this fubject.

## [410]

38. Stellaris, 239. 2 1. Varietas. The Bittern, Br. Zool. Edw. 136. Faun. Am. Sept. pag. 14 . Severn River, $\mathrm{N}^{\circ} 64$.

At firft fight, 1 thought the fpecimen fent from Hudfon's Bay, was a young bird; but upon nearer examination and comparing it with Mr. Edwards's account and figure, I take it to be a variety of the common bittern peculiar to North America; it is fmaller, but upon the whole very much refembles our bittern. Mr. Edwards's meafurements and drawings correfpond very well with the fpecimen.
This bird appears at Severn river the latter end of May, lives chiefly among the fwamps and willows, where it builds its neft, and lays only two eggs at a time ; it is very indolent, and, when roufed, removes only to a fhort diftance.
18. Scolopax, $\{$ 39. Totanus. 245. 12. Spottec Woodcock. Woodcock, Faun. Am. Sept. 14. Albany Fort, No 16.

This bird is called a yellow leg at Albany fort, from the bright yellow colour of the legs, efpecially in old birds; a circumftance, in which it varies from the deferiptions of Linneus and Briffon, probably becaufe they dem

[^0]
## [4II]

feribed from dried feecimens, in which the yellow colour always changes into brown. It agrees in other refpects perfectly well with the defcriptions: it comes to Albany fort in April or beginning of May, and leaves it the latter end of September. It feeds on fmall thell fifh, worms, and maggots; and frequents the banks of rivers, fwamps, \&c. It is called by the natives $S a-\int a-\int b e r w$, from the noife it makes.

Scolopax. 40. Lapponica. 246. 15. Red Godwit. Br. Zool. Faun. Am. Sept. I4. Ed. 138. Churchill River, $\mathrm{N}^{\circ}{ }^{1} 3$.

Linneus defcribes this bird very exactly in his Syftema Naturæ : the middle of the belly has no white in the Society's fpecimen, as that had from which the defcription in the Br. Zool. oftavo I. p. 353, 354, was taken. All the other characters correfipond.

Scolopax. 4r. Borealis. Nezv Species. Efkimaux Curlew. Faun. Am. Sept, 14.
Albany Fort, $\mathrm{N}^{\circ}{ }^{1} 5$.
This fpecies of Curlew, is not yet known to the ornithologifts; the firft mention is made of it in the Faunula Americæ Septentrionalis, or catalogue of North American animals It is called $W_{e e-k e e-m e-n a f e-f u}$, by the natives: feeds on fwamps, worms, grubs, \&c; vifits Albany Fort in April or beginning of May ; breeds to the northward of it, returns in Au $G g_{2}$ guit.

## [412]

guft, and goes away fouthward again the latter end of September.
19. Tringa, 4 2. Interpres. 248. 4. Turnftone. Sand-piper. Edw. 14i. Faun. Am. Sept. I4. Severn River, $\mathrm{N}^{\circ} 3 \mathrm{I}$ and $3{ }^{2}$.

This fpecies is well defribed by the ornithologits; its weight is $3 \frac{1}{2}$ ounces, the length $8_{\frac{3}{4}}$ inches, and the breadth 17 inches; it has four young at a time; its eyes are black, and the feet of a bright orange : this bird frequents the fides of the river.
43. Helvetica. 250. 12, Brifon. Av. V. p. io6. t. Io. f. 2.
(The number was loft, perhaps it is $\mathrm{N}^{\circ} 17$, from Fort Albany; upon that fuppofition the account is as follows: " the natives call it "Waw-pu/k-abrea-foijh, or white bear bird; " it feeds on berries, infects, grubs, worms, " and fmall hell-fin; vifits and leaves Al" bany fort at the fame time with the Sco" lopax Totanus, and Borealis.")
I find this bird anfwers very well to its defcription ; the throat, breaft, and upper part of the belly are blackih, as in the defcriptions, but mixed with white lunulated foots, which are neither defcribed nor expreffed in M. Briffon's figure, and may be owing to the difference of fex, or climate.

Zoology, folio, plate Q. p. I 53, agree perfectly well with the fpecimens. The female, as Linneus obferves, is quite brown, the breaft and upper part of the back being of a glofly reddifh brown; the fpeculum of the wing and the belly are white. The eyes of the male have very bright yellow irides; thofe of the female are of a faint dirty yellow. The female is two ounces heavier than the male, which weighs one pound and an half, is $16 \frac{1}{2}$ inches long, and 20 inches broad.

Anas. 45. Nivalis. Snow Goofe. Faun. Am. Sept. p. 16. Lawfon's Carolina. Anfer niveus Briff. VI. 288. Klein. Anfer nivis. Schwenkfeld, Marfigli. Danub. p. 802. t. 49.
Severn River, $\mathrm{N}^{\circ}{ }^{4} 0$, and a young one, $\mathrm{N}^{\circ} 41$. white Goofe.
Thefe white geefe are very numerous at Hudfon's Bay, many thoufands being annually killed with the gun, for the ufe of the fettlements. They are ufually fhot whilf on the wing, the Indians being very expert at that exercife, which they learn from their youth; they weigh five or fix pounds, are $2 \frac{2}{3}$ feet

$$
[414]
$$

$2 \frac{2}{3}$ feet long, and $3 \frac{\pi}{2}$ broad; their eyes are black, the irides fmall and red, the legs likewife red; they feed along the fea, and are fine eating; their young are bluifh grey, and do not attain a perfect whitenefs till they are a year old. They vifit Severn river firft in the middle of May, on their journey northward, where they breed; return in the beginning of September, with their young, ftaying at Severn fettlement about a fortnight each time. The Indian name is Way-way, at Churchill river. Linneus has not taken notice of this fpecies.

Anas. 46. Canadenfis. 198. 14. Canada Goofe. Faun. Am. Sept. 16. Edw. Ifi. Catefby I. 92, \& cc .
Severn River, N ${ }^{\circ} 42$.
The Canada geefe are very plentiful at Hudfon's Bay, great quantities of them are falted, but they have a fing tafte. The fpecimen fent over agrees perfectly with the defcriptions and drawings. At Hudfon's Bay this fpecies is called the Small Grey Goofe. Befides this, and the preceding white goafe, Mr. Graham, the gentleman who fent the account from Severn fettlement, mentions three other fpecies of wild geefe to be met with at Hudfon's Bay ; he calls them,

1. The large Grey Goofe.
2. The Blue Goofe.
3. The Laughing Goofe.

## [415]

The firt of thefe, the large grey goofe, he fays, is fo common in England, that he thought it unneceffary to fend fpecimens of it over. It is however prefumed, that though Mr. Graham has fhewn himfelf a careful obferver, and an indefatigable collector; yet, not being a naturalift, he could not enter into any minute examination about the fpecies to which each goofe belongs, nor from mere recollection know, that his grey goofe was actually to be met with in England. A natural hiftorian, by examination, often finds material differences, which would efcape a perfon unacquainted with natural hiftory. The wifh, therefore, of feeing the fpecimens of thefe fpecies of geefe, muft occur to every lover of thetfcience. Mr. Graham fays, the large grey geefe are the only fpecies that breed about Severn river. They frequent the plains and fwamps along the coaft. Their weight is nime pounds.
The blue goofe is as big as the white goofe: and the laughing goofe is of the fize of the Canada or finall grey goofe. Thefe two laft fpecies are very common along Hudfon's Bay to the fouthward, but very rare to the northward of Severn river. The Indians have a peculiar method of killing all thefe fpecies of geefe, and likewife fwans. As there birds fly regularly along the markhes, the Indians range themfelves in a line acrofs the marh, from the wood to high water mark, about muket hot from eath other,

## [416]

fo as to be fure of intercepting any geefe which fly that way. Each perfon conceals himfelf, by putting round him fome bruh wood; they likewife make artificial geefe of ficks and mud, placing them at a fhort diftance from themfelves, in order to decoy the real geefe within fhot: thus prepared, they fit down, and keep a good look out; and as foon as the flock approaches, they all lie down, imitating the call or note of geefe, which thefe birds no fooner hear, and perceive the decoys, than they go frraight down towards them ; then the Indians rife on their knees, and difcharge one, two or three guns each, killing two or even three geefe at each thot, for they are very expert. Mr. Graham fays, he bas feen a row of Indians, by calling round a flock of geefe, keep them hovering among them, till every one of the geefe was killed. Every fpecies of geefe has its peculiar note or call, which muft greatly increafe the difficulty of enticing them.

Anas. 47. Albeola. 199. 18. The Red Duck. Faun. Am. Sept. 17. Edw. t. 100. Sarcelle de la Louifiane. Briffon VI. t. 4 I. f. I. Severn River, ${ }^{\circ} 37$ and 38 . Fihhing Birds.

The defcriptions and figures anfwer very well with the male, except that the three exterior feathers are not white on the outfide, but all dufky.
The female is not defribed by any one of the ornithologifts; and therefore deferves to be noticed,

## [417]

noticed, to prevent future miffakes. The whole bird is dufky, a few feathers on the forehead are rufty, and fome about the ears of a dirty white; the breaff is grey, the belly and fpeculum in the wings white ; the bill and legs are black. They vifit Severn fettlement in June, build their nefts in trees, and breed among the woods, and near ponds; the weight of the female is one pound, its length 14 inches, and its breath 2 .

Anas. 48. Clangula. 201. 23. Golden Eye. Br. Zool. Faun. Am. Sept. to.
Severn River, $\mathrm{N}^{\circ}{ }_{51}$.
Thefe birds frequent lakes and ponds, and breed there : they eat fifh and flime, and cannot rife off the dry land. The legs and irides are yellow; their weight is $2{ }_{5}^{\frac{3}{5}}$ pounds, and their meafure 19 inches in length, and two feet in breadth. The fpecimen fent is the male.

Anas. 49. Perfpicillata. 201. 25. Black Duck. Faun. Am. Sept. 16. Edw. 155.
Churchill River, $\mathrm{N}^{\circ} 14$.
This fpecies is exactly deforibed, and well drawn by Edwards. The Indians call it She-ke-filpartem. It ought to come into the firft divifion of Linneus's ducks, "roftro bafi " gibbo," as its bill is really very unequal at the bale.

## [418]

Anas. 50. Glacialis. 203. 30, and Hyemalis, 202. 29. Edw. t. 156. Swallow-tail. Br. Zool. Faun. Am. Sept. 17.
Churchill River, $\mathrm{N}^{\circ}$ 12.
At Churchill River the Indians call this fpecies, Har-bar-vey; it correfponds with Edwards's defcription and drawing, plate 156 , but differs much from Linneus's inexact defcription of the Anas Hyemalis, to which he, however, quotes Edwards. Upon the whole it is almoft without a doubt that the bird reprefented by Edwards, plate 280 , and Br . Zool. folio, plate Q. 7, and quoted by Linneus for his Anas glacialis, is the male, and that the bird figured by Edwards t. 156, and quoted by Linneus for the Anas Hyemalis, is the female, of one and the fame fpecies. Linneus mentions a white body (in his Anas hyemalis) which in Edw. Tab. 156, and in the Society's fpecimen, is all brown and dufky, except the belly, temples, a fpot on the back of the head, and the fides of the rump, which are white. Linneus fays, that the temples are black; in the fpecimen now fent over, and in Mr. Edwards's figure, which Linneus quotes, they are white; the breaft, back, and wings, are not black as he fays, but rather brown and dufky. A further proof, that Linneus's Anas Glacialis and Hyemalis are the fame, is that the feet in both t. 156 and 280 of Edwards are red, and the bill black, with an orange fpot.

## [419]

Anas. 51. Crecca. 204. 33. Varietas. Teal. Br. Zool. Faun. Am. Sept. 17.
Severn River, $\mathrm{N}^{\circ}$ 33, 34. Male and female.
This is a variety of the teal, for it wants the two white ftreaks above and below the eyes; the lower one indeed is faintly expreffed in the male, which has alfo a lunated bar of white over each houlder ; this is not to be found in the European teal. This fpecies is not very plentiful near Severn river; they live in the woods and plains near little ponds of water, and have from five to feven young at a time.

Anas. 52. Hiftrionica. 204.35. Harlequin Duck. Faun. Am. Sept. 16. Edw. t. 99.
This bird had no number fixed to it ; it agrees perfectly with Edwards's figure.

Anas. 53. Bofchas. 205. 40. Mallard Drake. Faun. Am. Sept. Br. Zool. Severn River, $\mathbf{N}^{\circ} 39$.

It is called Stock Drake at Hudfon's Bay, and correfponds in every refpect with the European one, apon comparifon.
$\left.\begin{array}{l}\text { 21. Pelecanus, } \\ \text { Pelecan. }\end{array}\right\} \begin{aligned} & \text { 54iety. }\end{aligned}$
This variety of the pelecan, agrees in every paticular with Linneus's oriental pelecan (PeleHhh2
canus

## [420]

canus onocrotalus orientalis), but has a peculiar tuft or fringe of fibres in the middle of the upper mandible, fomething nearer the apex than the bare. This tuft has not been mentioned by any author, and is likewife wanting in Edwards's pelican, t. 92. with which the Society's fpecimen correfponds in every other circumftance. The P. Onocrotalus occidentalis, Linn. or Edw. t. 93 American pelican, is very different from it: the chief differences are the colour, which in our Hudfon's Bay bird is white, but in Edwards's is of a greyifh brown; and the fize, which in the white bird is almoft double of the brown one. The quill-feathers are black, and the fhafts of the larger ones white. The Alula, or baftard wing, is black. The bill and legs are yellow.
22. Colymbus. 75 . Glacialis. 221. 5. Northern * Diver, $\}$ Diver. Br. Zool. Faun. Am. Sept. 16.

Churchill River, $N^{\circ} 15$.
This fpecies is called a Man of War, at Hudfon's Bay. It feems to be a female, by the dirty white colour of its plumage below; itagrees very well with Edwards's drawing, and that in the Br . Zool. illuftr.
24. Sterna. 3 5. Hirundo (Variety), 227. 2. Tern. $\}$ The greater Tern. Br. Zool. Faun. Am. Sept.
(The number belonging to this bird is loft, perhaps it is $\mathrm{N}^{\bullet}{ }_{17}$, from Churchill River, called © A fort

## [422]

"A fort of Gull, called Egg-breakers, by "the natives.")
The feet are black; the tail is thorter and much lefs forked than that deferibed and drawn in the Br. Zool. The outermoft tailfeather likewife wants the black, which that in the Britifh Zoology has. In other refpects it is the fame.

## [423]

## DESCRIPTIONES Avium Rariorum e Sinu Hudfonis.

I. Falco sacer.

Falco, cerâ pedibufque coeruleis, corpore, remigibus rectricibufque furcis, fafciis pallidis; capite, pectore \& abdomine albis, maculis longitudinalibus fufcis.
Habitat ad finum Hudfonis et in reliqua America Septentrionali; victitat Lagopodibus \& Tetraonum fpeciebus.
Desci. Magnitudo Corvi.
Roftrum, cera, pedes coerulea; roftrum breve, curvum, coeruleo-atrum; mandibula utraque, bafi pallide coerulea, apice nigrefcente, utraque emarginata.
Caput tectum pennis albidis, maculis longitudinalibus, fufcis.
Oculi magni; ;irides flava. Gula alba, fufco-maculata.
Dorfum et tectrices alarum, plumis fufcis, ferrugineo-pallide marginatis, maculatifque, maculis rachin non attingentibus.
Pectus, venter, criffum, tectrices alarum inferiores, \& femora alba, maculis longitudinalibus nigro-fufcis.
Remiges fufco-nigri, viginti duo; primores apicibus margine albis, maculis fer-

## [424]

rugineo-pallidis, intra majoribus, tranfverfis, extra minoribus, rotundatis.
Reefrices duodecim, fupra fufce, fafciis circiter duodecim \& apice albidis; infra cinerex, fafciis albidis.
2. Strix nebulosa.

Strix capite lævi, corpore fufco, albido undulatim ftriato, remige fexto longiore, apice nigricante. Habitat circa Sinum Hudfonis, victitat Leporibus, Lagopodibus, Muribufque.
Descr. Rofrum fufco-Alavum, mandibula fuperiore fuperius magis flava.
Oculi magni, iridibus flavis.
Caput facie cinerea, e pennis fufco et pallde cinereo alternatim ffriatis. Pone hafce pennas collum verfus eft ordo plumularum fufcarum ad utramque genam, femicirculum nigrum efficiens.
Occiput, cervix, et collum fufca, pennis, marginibus albo maculatis.
Pectus albidum, maculis longitudinalibus tranfverfifque fufcis.
Abdomen album, fuperius uti pectas maculis longitudinalibus, fed inferius ftriis tranfverfis notatum.
Dorfum totum et tectrices alæ, caudæque confertim ex fufco \& albido undulatofriate.
Alce fufce; remiges primores fufci, grifeo tranfverfim fafciati, fafciis latis nebulofis. Remex fextus, reliquis longior, apice

## [425]

magis nigricans; primus vero reliquis primoribus brevior. Remiges reliqui pallidiores, obfcurius fafciati.
Cauda rotundata, rectricibus duodecim: duæ intermediæ paullo longiores, totæ cinerafcente albido fufcoque undulatim ftriatæ, lineis duplicatis fufcis tranfverfis pluribus. Rectrices reliquæ fufcæ albido fubitriatæ.
$P$ edes tecti pennis albidis fufco-ftriatis. Magnitudo fere Strigis Nycteæ, Linn. Longitudo unciarum 16 pedis Anglicani. Latitudo pedum quatuor. Pondus librarum trium.
3. Tetrao Phasianellus.

Linn. Ed. X. p. 160. n. 5.
Tetrao pedibus hirfutis, cauda cuneiformi, remigibus nigris, exterius albo-maculatis.

## Habitat ad Sinum Hudfonis.

Descr, Magnitudo fere Tetraonis Tetricis. Linn. Roftrum nigrum.
Oculorum irides avellaneæ.
Caput, collum $\&$ dorfum teftacea, nigro tranfverfim fafciata : macula albida inter roftrum et oculos: latera colli notata maculis rotundatis albidis.
Dorfum teftaceum, plumis omnibus late nigro-fafciatis.

## [ 426 ]

Uropygium magis albido-cinereum, nigredine fimbriata fecundum rachin plumarum.
Pectus © Venter albida, maculis cordatis fufco-teftaceis in ventre fataratioribus. Alarum teEtrices dilute teftaceo, nigro, alboque tranfverfin fafciata, maculis pluribus rotundis albis. Remiges primores nigri, latere exteriore albo-maculati; fecundarii fufci, apice \& ad marginem exteriorem albo fubfafciati: poftremi vero teftaceo fafciati, apice tantum albi.
Reftrices breves, exteriores pallide fufcx, apice albx, duæ intermedix reliquis longiores, teftaceo-maculata.
Pedes plumis albo-grifeis vefti digitis pectinatis.
Longitudo unciarum 16 pedis Anglicani. Latitudo pedum duorum.

## 4. Emberiza leucophrys *.

Emberiza remigibus rectricibufque fufcis, capite nigro, fafcia verticis, fuperciliifque niveis.
Habitat in America Boreali ad Sinum Hudfonis.
Descr. Magnitudo circiter fringilla calibis.
Roftrum rubrum, f. carnei coloris: Nares fubrotundx.
Caput farcia verticali lata candida, paululum ante rofrum definente; fafcia atra

> * Atxis albus, Oppòs fupercilium.

## [427]

lata ad utrumque latus faciax albx. Supercilia alba, definentia in lineas, fafciam albam verticalem adtingentes; arcus dein atri, ex angulis oculorum, fere in occipite confluentes.
Collum cinerafcens, in pectore dilatius. Dorfim ferrugineo-fufcum, marginibus plumularum cinereis.
Ala fufcæ; remigum primorum margines exteriores tenuiffimi pallidi, interiores cinerafcentes: fecundarii \& pennæ tectrices fufcæ, marginibus latiufculis, verfus apicem albis, efficientibus fafciam albam ; fuper quam fafcia altera alba ex maculis albis in apice tectricum minorum, f. plumarum fcapularium. Alula albæ. Remiges fubtus cinerei, marginibus albis.
Pcetus cinereum, abdomen dilutius, fere album.
Crifium \& plumula femora tegentes lutef. centia.
Uropygium cinereo-fufcum.
Cauda æqualis; rectrices duodecim fufcx, marginibus paullo pallidioribus, fubtus cinerce.
Pedes carnei coloris, digito intermedio \& ungue poftico reliquis longioribus.
Longitudo unciarum 7 pedis Anglicani.
Latitudo inter alas extenfas 9 unciarum pedis Anglicani.
Cruda partem tertiam longitudinis totius aviculæ efficit.

$$

$$

Ala complicatæ paululum uitra caudx exortum protenduntur.
Pondus drachmarum fex.

## 5. Fringilla Hudsonias.

Fringilla füco-cinerafcens, roftro albido, pectore inferiore, abdomine, rectricibufque quatuor extremis albis.
Habitat in America Boreali.
Descr. Magnituds circiter fringille carduelis. Roftrum albidum, rubedine aliqua imbutum.
Oculi parvi, cœrulei.
Corpus totum cinereo-nigricans, fo potius fuliginofum.
Pectus inferius \& abdomen alba. Remiges fufci, cinereo-marginati : alæ complicatæ mediam fere caudam adtingunt.
Rectrices fufcæ, extimæ utrinque duæ totæ albæ, tertia fufca, macula oblonga alba, ad latus interius, prope rachin, apicem attingens; reliquæ totæ fufcæ.
Pondus femuncix.
Longitudo unciarum 6 $\frac{1}{4}$ pedis Anglicani. Latitudo unciarum novem.
6. Muscicapa striata.

Muscicapa cinereo-virens, dorfo nigro ftriato, fubtus flavefcenti-alba, gula lateribufque pectoris fufco maculatis.

Habitat

## [429]

Habitat ad Sinum Hudfonis.
Quum mas à fæmina multum differat, utique congruum eft, utrumque fexum feparation defcribere.

## Descr. Mas.

Roftrum trigonum, mandibu fuperiore paululum longiore, ante apicem leviter emarginata, nigra; inferiore bafi flavefcente.
Nares fubrotundæ.
Vibriffa nigta.
Caput fupra totum atrum ad oculos ufque. Genae à roftro in occiput totæ albæ; occiput albo \& nigro variegatum.
Gula flavefcenti-alba maculis fuicis.
Pectus albidum, lateribus, five verfus occiput maculis nigris variegatum.
Dorfum cinereo-virens, ftriis five maculis longitudinalibus nigris latioribus, è plumulis nigris, margine virentibus.
Abdomen album.
Uropygium cinereum, nigro-maculatum.
Alie fufcæ; remiges primores pallido marginati, fecundarii apice tenuiflimo albo; duæ ultimæ margine exteriore albo; teetrices fufcæ, majores flavefcenti albo, minores candido in apice maculatæ, unde fafciæ albx binx in alis.
Cauda fufca; rectrix utrinque prima f. extima, latere interiore macula magna alba, marginem interiorem attingente; proxima $f$. fecunda macula oblonga minore alba, etiam marginem interiorem attingente ;

## [430]

attingente; utrinque tertia, latere interiore verfus apicem albo-marginata.
Pedes lutei ; ungues breves, pallide furci.
Magnitudo circiter Pari atricapilli; Linn. Longitudo 5 unciarum.
Latitudo 7 unciarum pedis Anglicani.
Fomina.
Roftrim, alæ, cauda, abdomen, uropygium, pedes \& menfuræ ut in mare.
Caput flavo-virens, ftriis brevibus tenuibufque longitudinalibus nigris; linea flaviffima à bafi roftri incipiens fuper oculos duca; palpebræ flavæ.
Gula, genæ \& pectus albido-flava; maculæ fparfæ oblongiufculæ fufce, ab utroque oris angulo ufque in pectoris latera.
Dorfum, ut in mare, fed viridius, \& ftrix nigre minores.

7. Parus Hudsonicus.

iParus capite fufco-rubefcente, dorfo cinereo, jugulo atro, fafcia fuboculari, pectoreque albis, hypochondriis ruffis.
Habitat ad Snum Hudfonis.
Descr, Roftrum fubulatum, integerrimum, atrum, bafi è regione narium teftum fafciculis fetarum ferruginearum, lineas 4 (uncire pedis Anglicani) longum.
Gaput fufco-ferrugineum, fafcia fub oculis alba; gula atra, nigredine extenfa fub hac fafcia alba.

Dorfun

## [431]

Dorfum cinereo-virens, è plumis longioribus, fufcis, apice tantum cinereo-virentibus, f. olivaceis.
Pectus $\circledast \begin{gathered}\text { Abdomen alba, fed plumæ omnes }\end{gathered}$ bafi nigra, apice tantum albæ.
Latera abdominis \& lumbi ferruginei.
Alce fufce, remigum margine omni cinereo.
Cauda fufca, rotundata, rectricibus 12 , margine cinereis.
Uropygium tectum plumulis aliquot nigris, apice albido rufis.
Pedes nigri ; digitus pofticus cum ungue anticorum digitorum medio, duplo longior.
Longitudo unciarum $5 \frac{1}{5}$ pedis Anglicani. Latitudo unciarum 7 .
Cauda uncias $2 \frac{1}{2}$ longa.

## 8. Scolopax borealis.

SCOLOPAX roftro arcuato, pedibufque nigris, corpore fufco, grifeo-maculato, fubtus ochroleuco.
Habitat in Sinus Hudfonis inundatis, \& pratis humidis, victitans vermibus \& infectis: menfe Aprili vel initio Maii primum vifa eft, circa Caftellum Albany, inde in terras magis arcticas migrat, ibique nidificat; redit ad idem caftellum menfe Augufto; regiones Auftraliores petit circa finem Septembris.

Affinis fcolopace arquata Linn. fed differt corpore triplo minore, roftro ratione corporis breviore,

## [432]

breviore, colore in dorfo faturate fufco, in abdomine ochroleuco.
Descr, Caput pallidum, lineolis confertis longitudinalibus fuccis: finciput faturate fufcum, pallido maculatum.
Roftrum nigricans, arcuatum, longitudine duarum unciarum pedis Anglicani, mandibula inferiore bafi rufa.
Collum, pectus, abdomen $\&$ criffum ochroleuca; pectore colloque lineolis longitudinalibus fufcis confertioribus, abdomine $\&$ criffo fere nullis, vel tenuibus notatis.
Femora femi-tecta plumulis ochroleucis, fufco maculatis.
Latera abdominis fub alis præfertim, rufa, pennis tranfverfim fufco fafciatis.
Dorfum totum faturate fufcum, pennis margine albido grifeis.
Ala fufcæ; remiges primores immaculati, primores rachi tota alba; reliqui, f. fecundarii pallide grifeo-marginati. Tec.trices late grifeo-marginatæ. Tectrices inferiores alæ, ferrugineæ fufco tranfverfim fafciatæ. Alæ complicatæ fere mediam caudam attingunt.
Uropygium fufcum, marginibus maculifque pennarum albidis.
Cauda brevis, fufca, rectricibus albido tranfverfim fafciatis
Pedes nigri, f. cœrulefcentes.
Longitudo unciarum $13 \frac{1}{2}$.
Latitudo circiter unciarum 21 .

## [433]

## 9. Anas nivalis.

Anas, roftro cylindrico, corpore albo, remigibus primoribus nigris.
Habitat in America Boreali, per Sinum Hudfonis migrans.
Descr. Corpus totum album, magnitudine anferis domeftici noftratis.
Roftrum luteum, mandibulis fubferratis. Oculi iride rubra.
Remiges decem primores nigri, fcapis albis: tectrices infimæ cinereæ, fcapis nigris; pennæ duæ alulæ, itidem cinereæ, fcapis nigris.
Pedes rubri.
Longitudo pedum duorum \& unciarum octo.
Latitudo pedum $3 \frac{\text { I }}{2}$. Pondus librarum 5 vel 6.

[^0]:    * In the Faunuia Americx Septentrionalis, p. 14. the fynonym of Ardea Hudfonias, Linn. has by miftake been annexed to the bittern, and likewife pl. 135 of Edwards has been quoted inftead of plate 136. They are two very different birds.
