dispute with Local 564: C.O. appointed, 171.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be clearly documented and supported by appropriate evidence. This ensures transparency and accountability in the financial process.

Furthermore, it is noted that regular audits are essential to identify any discrepancies or errors. By conducting these audits frequently, potential issues can be addressed promptly, preventing them from escalating into larger problems. This proactive approach is key to maintaining the integrity of the financial system.

In addition, the document highlights the need for clear communication between all parties involved. Regular meetings and reports should be used to keep everyone informed of the current status and any changes that may occur. This collaborative effort is necessary to ensure that all objectives are met and that the organization remains on track.

Finally, it is stressed that adherence to established policies and procedures is crucial. These guidelines provide a framework for consistent and fair treatment of all transactions. By following these rules, the organization can avoid conflicts and ensure that its operations are conducted in a professional and ethical manner.

The second part of the document provides a detailed overview of the current financial performance. It includes a summary of the budget for the current period and compares it against actual results. This analysis shows that while there have been some variances, overall the organization is performing well within its financial goals.

A key area of focus is the management of expenses. It is noted that there has been a significant reduction in unnecessary costs, which has helped to improve the overall financial health. However, it is also recognized that certain areas still require attention to ensure that resources are being used as efficiently as possible.

The document also discusses the impact of market conditions on the organization's financial position. It notes that while there are challenges, the organization has successfully navigated these conditions by maintaining a strong focus on its core business and by exploring new opportunities for growth. This resilience is a testament to the organization's strategic planning and execution.

Looking forward, the document outlines the financial strategy for the next period. This includes setting realistic targets and identifying the key areas for improvement. It is clear that continued vigilance and a commitment to excellence are required to achieve these goals. The organization is confident that with the right approach, it can continue to thrive in a competitive market.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada; \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Employment advanced substantially between 1958 and 1959, both in the number at work and in the length of the work week. In the last half of the year, however, progress in several industries was much slower than in the late spring and early summer months. Some of the forces tending to check the expansion were the relatively high price of money and the scarcity of mortgage funds. Other important restraining influences were the steel shortages stemming from the steelworkers' strike in the United States and the strike in British Columbia that shut down the lumber industry there for two months.

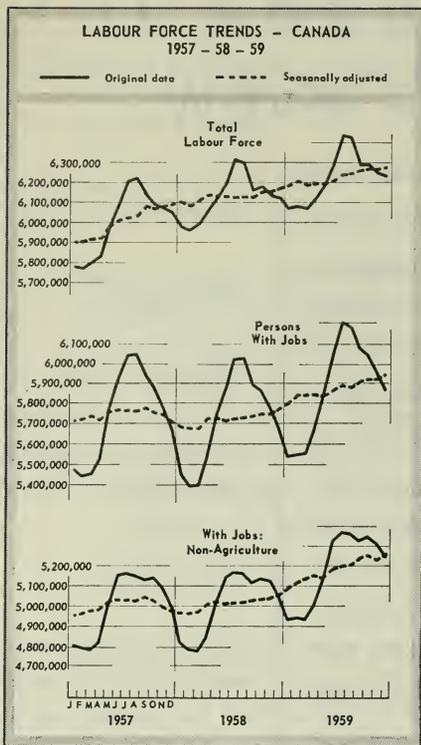

Current Employment

The effects of some of these developments were partially dissipated during December. Total employment fell by about the usual seasonal amount between mid-November and early December. About 20 per cent of the decline was in agriculture and most of the remainder was in other outdoor activities. Almost 90 per cent of the decline occurred in Quebec and the four Atlantic provinces. In Ontario, the seasonal decline was checked by the resumption of motor vehicle production; output in this industry was close to capacity by the month-end. In the Prairie Provinces the relatively mild December weather delayed many layoffs in construction.

The number of persons with jobs was estimated to be 5,861,000 in December, down 90,000 from the previous month. The total was 181,000 or 3.2 per cent higher than the year earlier. This increase was shared by all regions, the largest proportion of gains being in Ontario and the Prairie Provinces. Most industrial groups employed more people than a year ago but few showed a substantial increase over previous peaks. The service-producing industries continued to provide the greatest number of new jobs. Community services (mainly education and health services) and trade experienced the sharpest advance over the year, accounting for more than half of the total increase. Pulp cutting programs were also generally larger than last season and as a result forestry employment was higher during the late autumn months than it had been for two years. Manufacturing employment was still above the year-earlier figure but by a considerably smaller margin than formerly.

Unemployment in December

Persons without jobs and seeking work increased by 74,000 to 370,000 between November and December; this total was 70,000 less than in December

1958. Male workers accounted for virtually all of the increase over the month and more than three-quarters of it was in the Quebec and Atlantic regions. Almost all of the additional job seekers came from seasonal layoffs in the primary industries and transportation. Job seekers had been looking for work for an average of $3\frac{1}{4}$ months in December, slightly longer than the figure reported the previous month. As might be expected, the increased period of unemployment was most noticeable among males. Duration of unemployment was still down considerably from a year earlier.

The number on temporary layoff was somewhat higher in December, than a year earlier—35,000 against 26,000. The higher figure last month resulted, in part, because some of the workers laid off earlier because of steel shortages were still on layoff.

Employment Review, 1959

Expansionary influences were clearly evident during most of 1959. In the first nine months, the Gross National Product was 7 per cent higher than in the corresponding period in 1958. After allowing for price increases, the Dominion Bureau of Statistics estimated the increase in volume to be 5 per cent, slightly higher than the average of 4 per cent for the years 1947-1958.

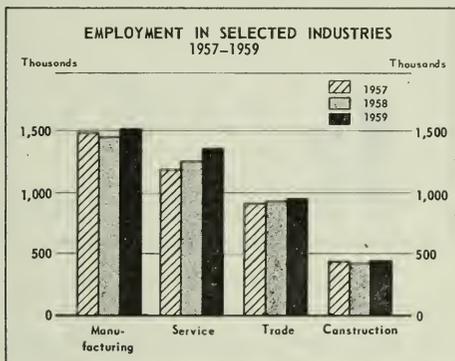

The over-all advance in output during the last half of the year was impeded by a series of adverse developments. Of particular importance in the third quarter was the strike of some 27,000 forestry workers in British Columbia, the effect of which was great enough to cause a drop of one-half a percentage point in the index of industrial production. At the same time the scarcity of money was having a country-wide impact on housing, on provincial and municipal capital expenditures and, indirectly, on the manufacture of building materials. The decline in housing was stemmed temporarily by the CMHC program of direct mortgage lending to builders. Nevertheless, the housing carryover into 1960 is estimated to be 5 to 10 per cent smaller than last year. The strike of steel workers in the United States also had a restraining influence on production and employment, more particularly in the last quarter of 1959. Available reports indicate that up to 20,000 workers, mainly in the motor vehicle manufacturing industry, were laid off for periods of from one to five weeks.

In spite of these unfavourable developments, substantial advances were made in employment. Total employment surpassed the pre-recession peak early in the summer and since then there has been a further improvement.

For the year as a whole, the average number of persons with jobs was estimated to be 5,878,000 compared with 5,722,000 in 1958, an increase of 2.7 per cent. Employment in non-farm industries showed an annual increase of 176,000 during 1959; farm employment continued its chronic decline. The average work week in manufacturing increased steadily during the first half of the year, recouping most of the losses that took place in 1957; in the third quarter the work week was half an hour longer than in the corresponding periods in both 1958 and 1957. Reflecting the increase in employment and the advance in average weekly earnings, labour income rose to an annual rate of \$17.7 billion in the third quarter. This was almost 8 per cent higher than in the comparable period in 1958.

Unemployment was noticeably lower in 1959 than in the previous year. The number of persons without jobs and seeking work averaged 5.6 per cent of the labour force compared with 6.6 per cent in 1958. Not only did the number of job seekers show a considerable drop over the year, but they were unemployed for shorter periods and there was less partial unemployment. In November, some 63,000 job seekers, representing 21 per cent of the total, had been seeking work for four months or more. A year before there were 98,000, or 27 per cent of the total, seeking work for this length of time.

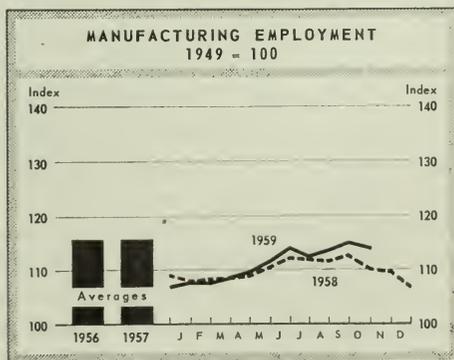

Employment gains during 1959 were fairly widespread, with increases in all regions and most industrial divisions. Service, manufacturing and trade registered the largest advances. Approximately half of the increase in non-farm employment occurred in service, notably education, health and government. Manufacturing and trade each accounted for about one-fifth. Mining was the only major industry to suffer a setback during the year. Coal mining, which experienced one of the

Source: Labour Force Survey, D.B.S.

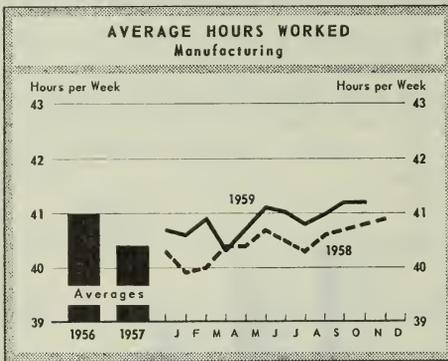

worst years in the post-war period, was almost entirely responsible for the industry's employment decline. Other industries with very little change in employment. Metal and non-metal mining showed renewed strength during the year as a result of improved markets for iron ore, uranium and asbestos.

Manufacturing employment reached an all-time high level in mid-summer and continued to advance until late in the year. The upward trend was temporarily interrupted in the closing quarter of 1959 as the steel strike in the United States caused some steel shortages in Canada. For the year as a whole, some of the largest employment advances occurred in manufacturing industries that bore the brunt of the recession. Iron and steel products, which registered an employment

of 10 per cent during 1958, made a strong advance during the past year, recovering almost all of the earlier losses. Motor vehicles, electrical apparatus and supplies, and wood and paper products also registered employment gains during 1959, reversing the downward trends that were in evidence during most of the previous year. Employment in the aircraft and shipbuilding industries fell fairly sharply during the year after holding up fairly well during the business downturn.

The rising trend of production and employment in iron and steel was manifest in nearly all parts of the industry. Agricultural implements showed the most marked improvement, reflecting a further strengthening in foreign demand; in the first six months exports of farm machinery were 26 per cent higher than in the corresponding period in 1958. Other parts of the industry showing a marked improvement were primary iron and steel, sheet metal products, heating and cooking appliances, and machinery. Structural and fabricated steel were the only industries in this group that failed to expand during the year.

On balance, 1959 was a very good year. Substantial gains were made in the output of goods and service, which led to increased employment opportunities, a marked reduction in unemployment, and a fuller use of manpower and productive capacity. This strengthening of the economy has enabled the workers to improve their earnings and working conditions. Current indications suggest that the orderly improvements achieved in 1959 will continue well into 1960.

The recovery of the past year was much more vigorous in the four western provinces than it was in other parts of the country. In the Prairie region, which was only mildly affected by the recession, the gains have been particularly impressive. Moreover, the shift from farm to non-farm industries has been more marked in this region than in any other. A comparison of non-farm employment over the past two years shows that the Prairie region has increased by 6.2 per cent, the Pacific region by 4.3 per cent, the Atlantic region by 3.5 per cent, Quebec by 3.0 per cent, and Ontario by 2.7 per cent. In the Prairie region there was a sharp increase in manufacturing employment that raised it well above the pre-recession peak. Construction, trade, and services also registered prominent advances, which were shared by all three provinces in the region. In the Pacific region, the employment expansion was centred largely in forestry. Construction and forestry shared in the employment rise in the Atlantic provinces. The dominant position of manufacturing in Ontario and Quebec was responsible for the relatively modest employment gains in these regions. Employment levels in manufacturing (annual averages) were less than 1 per cent higher than a year before in Quebec and only about 1.5 per cent higher in Ontario, much smaller than the gains in total industrial employment in these regions. The trade and service industries, which had a sustaining influence in the central provinces during the recession, showed additional strength during the past year.

Employment Situation in Local Areas

ATLANTIC

Employment declined seasonally in the Atlantic region during December. At mid-month an estimated 488,000 persons had jobs, 26,000 fewer than a month earlier but 20,000 more than a year before. Construction, logging, fishing and food packing plants accounted for most of the layoffs during the month. Apart from the release of 600 workers at the Eastern Car Company plant in Trenton, N.S., there were few layoffs of a non-seasonal character.

Non-farm employment has shown an irregular upward trend during 1959. By year-end, the number of persons with non-farm jobs was estimated at 440,000, some 16,000 higher than a year before. Although some of the downward pres-

ures that were responsible for the employment contractions in 1957-1958 eased perceptibly during the year, there was little evidence of full-scale recovery. So far, the upturn in employment has come from a relatively small number of industries. Forestry and construction were the main sources of strength, with some additional support coming from the service industries. Manufacturing, which accounts for more than one fourth of the employment in the region, made little or no over-all recovery, although a number of individual manufacturing industries such as sawmilling, pulp and paper and iron and steel expanded during the year.

Unemployment in the region was considerably lower than a year ago, mainly because of the higher level of activity in construction and logging. During the month, increases in unemployment resulted in the reclassification of 16 of the 21 areas in the region. At the end of December, the area classification was as follows (last year's figures in brackets): in substantial surplus, 15 (19); in moderate surplus, 6 (2).

Local Area Developments

Halifax (metropolitan) remained in Group 2. Employment was maintained at a fairly high level in this area as favourable weather aided the construction industry. Construction employment at latest report was about 10 per cent higher than a year earlier.

St. John's (metropolitan) was reclassified from Group 2 to Group 1. Seasonal slackening in construction was largely responsible for the increase in unemployment. This industry was a major source of strength all year but recent reports indicate that some of the contracts that provided employment last winter were nearly completed.

New Glasgow and **Corner Brook** (major industrial) were reclassified from Group 2 to Group 1. Manufacturing employment at New Glasgow reached a low level during the month as a result of heavy layoffs at the Eastern Car Company

LABOUR MARKET CONDITIONS

Labour Market Areas	Labour Surplus				Approximate Balance	
	1		2		3	
	December 1959	December 1958	December 1959	December 1958	December 1959	December 1958
Metropolitan.....	4	6	8	6	—	—
Major Industrial.....	12	16	13	10	1	—
Major Agricultural.....	6	5	8	9	—	—
Minor.....	28	35	28	22	2	1
Total.....	50	62	57	47	3	1

Limited. The coal mining industry showed some improvement over the month, resulting in the recall of 100 workers released in November. Unemployment at Corner Brook remained considerably lower than last year.

Sydney (major industrial) was reclassified from Group 3 to Group 2. The increase in unemployment was smaller than usual in this area, as outdoor activities were aided by favourable weather. The iron and steel industry remained much busier than a year ago although the increase in output was achieved with virtually no increase in employment. For the year as a whole ingot production at the Sydney steel plant showed a rise of 13 per cent.

Charlottetown (major agricultural), **Summerside**, **Bridgewater**, **Kentville**, **Truro**, **Yarmouth**, **Bathurst**, **Newcastle** and **Woodstock** (minor) were reclassified from Group 2 to Group 1.

Edmundston (minor) was reclassified from Group 3 to Group 2. The employment situation in this area was better than a year ago owing to an improvement in forestry.

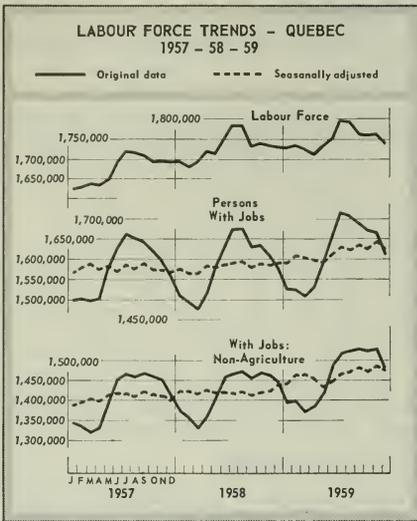

Grand Falls (minor) was reclassified from Group 3 to Group 1. Virtually all logging camps in the area closed during the month as cutting operations ended for the season.

QUEBEC

Employment in the Quebec region declined more than seasonally between November and December. In the second week of December the number of persons with jobs was estimated at 1,611,000, some 54,000 fewer than in the previous month but 33,000 more than a year earlier.

The restriction of outdoor activity, particularly construction, was mainly responsible for the decline in total employment. Pulpwood loggers were laid off in the last half of the month as cutting quotas were completed. However, employment in the logging industry was considerably higher than a year earlier.

Manufacturing employment declined, mainly as a result of year-end lay-offs in primary and secondary textiles, the rubber and leather goods industries and in plants producing construction materials. The pulp and paper industry was generally stable; one sulphite pulp plant, however, was forced to lay off some 300 workers for a two-week period because of reduced demand from the United States. In the rubber goods industry marketing difficulties, caused partly by competition from increased imports, resulted in the shutdown of one plant making footwear and the layoff of some 400 people. In the aluminum

industry some increase in demand led to the recall of 125 workers.

During 1959, non-farm employment was, on the average, some 42,000 or 3 per cent higher than a year earlier, with gains in all industries. Trade, finance, and service industries continued to expand during the year, with an average employment rise of more than 2 per cent. In mining, the average increase was about 3 per cent and was largely the result of greatly expanded production in the region's iron ore mines. Employment in forestry was up some 8 per cent as a result of increased pulp cutting programs.

Construction activity was, on the whole, on a par with the previous year.

Residential construction was not as strong as a year earlier but non-residential construction activity made up for the loss. Road and bridge construction was particularly active.

Manufacturing employment, seasonally adjusted, increased from December 1958 to July 1959 by some 5 per cent. During the third quarter of 1959 it showed a slight decline, partly because of a labour dispute in the textile industry. The over-all gain was fairly widespread among component industrial groups. In the important textile and clothing industries, employment was higher and average weekly hours were longer in 1959 than in 1958.

Unemployment, involving male workers almost entirely, increased sharply during December. The level of unemployment, however, continued to be lower than a year earlier. At the end of December the area classification was as follows (last year's figures in brackets): in substantial surplus, 18 (21); in moderate surplus, 6 (3).

Local Area Developments

Montreal (metropolitan) was reclassified from Group 3 to Group 2. Although unemployment increased during the period, it was at a lower level than last year. The latest figures show employment to be about 3 per cent higher than a year earlier. In manufacturing, the main strength was in the electrical apparatus, transportation equipment and iron and steel industries.

Quebec-Levis (metropolitan) was reclassified from Group 2 to Group 1. Unemployment increased in this area mainly as a result of seasonal contractions in construction, forestry, and transportation industries. In the latter, however, there was greater activity in the port of Quebec this year than last. In manufacturing one large clothing plant suspended operations for two weeks before Christmas, laying off close to 500 workers.

Other areas: With the exception of Rouyn-Val d'Or, St. Jean, St. Hyacinthe, and Beauharnois, all other labour market areas in the region were reclassified to categories denoting increased unemployment.

ONTARIO

In contrast to a moderate decrease that is usual for the period, the number of persons with jobs in Ontario (2,212,000) remained unchanged between November and December. The elimination of shortages of imported steel and the subsequent recall of workers to motor vehicle and parts plants was one of the main reasons for the well-maintained level of employment. Another factor of considerable importance was the mild weather during the first half of the month, which allowed construction work in many parts of southern Ontario to continue later than usual.

After an initial upsurge in the early months of 1959, employment in the province tended to level off, moving irregularly in the last six months at an average level that was 3 per cent above the same period in 1958. One of the main features was the sharp drop in aircraft employment in February, brought about by the cancellation of the Arrow program. This was outweighed by a subsequent expansion over a broad range of industries led by a 10-per-cent rise in the manufacture of iron and steel products during the second and third quarters. Work stoppages brought about by the steel strike in the United States, largely confined to motor vehicles and parts manufacturing, tended to check the rise of employment in the fourth quarter.

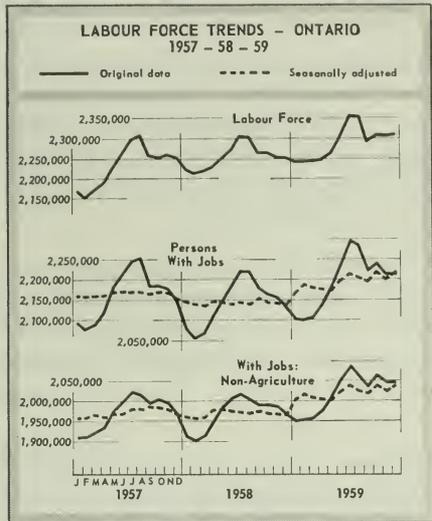

In the northern parts of the region employment conditions were much better than December 1958, when the Sudbury strike had been in progress for three months. This year not only was mining activity maintained at a high level, but pulp cutting and construction programs were considerably larger.

With the recall of automobile workers, unemployment fell during December in Oshawa and parts of the Niagara Peninsula. In other parts of the region the seasonal decline in construction and year-end layoffs for stocktaking in manufacturing increased the seasonal labour surplus. At the year-end the classification of the 34 areas in the region was as follows (last year's figures in brackets): in substantial surplus, 7 (9); in moderate surplus, 25 (25); in balance, 2 (0).

Local Area Developments

Windsor (metropolitan) remained in Group 1. Employment in automobile plants, which had not been affected drastically by steel shortages, showed some increase during the month. There was, however, a greater decline in some seasonal industries, resulting in a net increase in unemployment. Shortages of some professional skills continued.

Toronto (metropolitan) was reclassified from Group 3 to Group 2. Employment was slightly higher and unemployment was close to last year's level; iron and steel products and non-ferrous metal products showed strong gains over

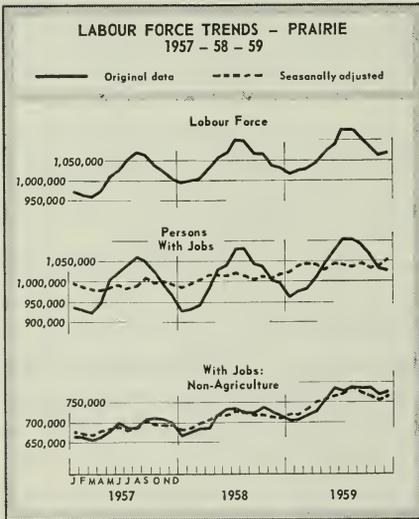

the year. During December there was a layoff of more than 300 workers in aircraft manufacturing, the first for some months in this industry. Manpower shortages were reported in some professional and skilled occupations.

Hamilton (metropolitan) remained in Group 2. As in most industrial centres, the renewed flow of imported steel resulted in increased activity in some firms, and primary steel producers continued to operate at capacity. On the other hand, the railway rolling stock industry had only a minimum staff due to a lack of orders. The continued strike of carpenters has resulted in the layoff of about 3,500 workers.

Ottawa-Hull (metropolitan) was reclassified from Group 3 to Group 2. Registrations for employment at NES offices rose more sharply than usual in the early part of December as a result of heavy layoffs in construction. Demand for workers strengthened in the last half of the month, however, with improved weather conditions. Total employment in the area was about 2 per cent higher than last year.

Oshawa (major industrial) was reclassified from Group 1 to Group 2. Unemployment dropped by about one-half as motor vehicle production got underway again. Generally, there were enough workers available to satisfy requirements, but occupational shortages included chemical and mechanical engineers, designers, machinists, pharmacists and registered nurses.

PRAIRIE

Favourable weather conditions prevailed in most parts of the Prairie region, moderating the usual decline in employment. The small decrease from November brought the estimated number of persons holding jobs to 1,028,000 in December, 40,000 higher than in the last month of 1958. A large volume of work at construction projects was carried on into December, causing the seasonal decline in construction to be substantially smaller than usual. Manufacturing was buoyant, and the increased employment of people in sales and clerical occupations associated with Christmas buying helped to bring about a non-seasonal increase in non-agricultural employment. The seasonal reduction in farm employment

continued, however, offsetting the non-farm increase.

At the end of the year 253,000 were estimated to be employed in agriculture, some 6 per cent less than at the end of 1958. Non-farm employment, however, moved up almost 8 per cent to bring about a 4 per cent increase in over-all employment. Construction employment was roughly 10 per cent above the year-earlier level as a result of a considerable increase in industrial and commercial building, while the number of houses under construction at the beginning of December in centres of 5,000 population and over was slightly higher than a year earlier. Employment gains of more than 5 per cent from

the end of 1958 were registered in manufacturing, trade and service. Employment in minerals benefited from improved production levels in 1959 in iron ore, copper and petroleum. At the end of the year the number of oil drilling rigs in operation was 12 per cent greater than a year earlier. Increased exploitation of the lignite fields of southeastern Saskatchewan and exports of coal to Japan from the Crowsnest Pass largely arrested the long-run decline of coal mining employment. Transportation, storage and communication, important in the Prairie region because of the large numbers of workers involved, employed a slightly higher number of workers at the end of 1959 than at the end of the previous year.

The seasonal rise in unemployment continued over the month, 12 of the 20 labour market areas being reclassified to categories of increased labour surplus. The area classification at the end of December was as follows (last year's figures in brackets): in substantial surplus, 6 (8); in moderate surplus, 14 (12).

Local Area Developments

Calgary and Edmonton (metropolitan) remained in Group 2. Mild weather checked the seasonal decline in construction activity to some extent and helped to maintain employment in that industry. Most other industries experienced seasonal declines and there was some curtailment of logging in northern Alberta until the ground is made more solid by heavier frost. Sawmills and planer mills were affected by shortages of logs.

Winnipeg (metropolitan) was reclassified from Group 3 to Group 2. A layoff occurred when a beet sugar manufacturing plant ended its 1959 production. Workers in the needle trades were also released temporarily. The number of construction workers registered with the National Employment Service increased from November but remained almost 15 per cent below the December 1958 total.

Fort William-Port Arthur (major industrial) was reclassified from Group 2 to Group 1. Pulp wood logging continued at a fairly high level but the close of navigation at mid-month resulted in layoffs of stevedores and other transportation workers. Considerable quantities of wet grain arrived for drying; priority for it slowed total grain shipments because of the long handling time required for moisture removal.

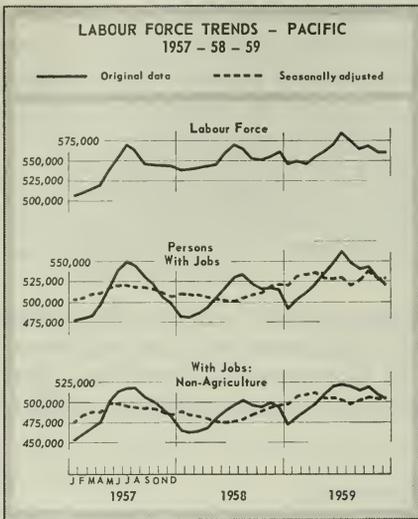

Brandon, Moose Jaw, North Battleford, Regina (major agricultural) and **Swift Current, Drumheller, Medicine Hat** (minor) were reclassified from Group 3 to Group 2.

Prince Albert, Yorkton (major agricultural) and **Dawson Creek** (minor) were reclassified from Group 2 to Group 1.

PACIFIC

After a moderate decline over the month, employment in the Pacific region was estimated to total 522,000 in December, 8,000 more than at the same time in 1958. Most of the change occurred in industrial employment. Agriculture remained inactive; the number of workers declined slightly.

Much of the contraction in employment over the month was attributed to construction. Although commercial building held up fairly well, housebuilding again fell off. The number of units under construction in centres of 5,000

population and over at the beginning of December was down more than 5 per cent from a month earlier, and about 25 per cent from the same time in 1958. Associated trades and suppliers for the construction industry were also affected.

Logging held steady; Christmas shutdowns were shorter than usual, especially on the coast, where weather conditions were particularly good. In the northern part of the province and on the Queen Charlotte Islands the weather was less favourable and a number of camps closed. A high level of production continued in sawmills and in pulp and paper plants but some reductions occurred in shingle mills. Machine shops and other suppliers for the forestry

industry were benefited by the strong levels of activity.

At mid-month herring fishing was suspended, and more than 1,000 fishermen and several hundred workers in reduction plants became unemployed. Oil drilling increased over the month; an average of more than 40 per cent more rigs were in operation in December than in November. In mining and in the shipyards there were only minor changes in the over-all level of activity.

Unemployment increased over the month but the total remained lower than at the end of 1958. Four labour market areas were reclassified to categories indicating surpluses of labour. At the end of December the classification of the 11 areas was as follows (last year's figures in brackets): in substantial surplus, 4 (5); in moderate surplus, 6 (5); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) was reclassified from Group 2 to Group 1. A between-season layoff in sugar refining temporarily affected more than 100 workers. On the waterfront almost every deep sea berth was occupied at month-end and some ships were anchored in mid-stream to await loading, as moisture removal slowed grain handling somewhat. Registrations of loggers at the National Employment Service were down by about 40 per cent from the same time last year.

Central Vancouver Island (minor) was reclassified from Group 3 to Group 2. Although generally logging held up rather well, snow on the upper levels and other seasonal factors depressed forestry employment during the month. The surplus of unemployed workers was increased by the return of some loggers from other districts where seasonal layoffs had taken place earlier. Construction employment declined seasonally.

Chilliwack and Okanagan Valley (minor) were reclassified from Group 2 to Group 1. Seasonally low levels of activity prevailed in agriculture and the food packing industry. Logging and sawmilling were steady except for holiday shutdowns.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

As 1959 ended, collective bargaining was in progress for more than 75 major agreements affecting 207,000 Canadian workers. New major agreements signed during December granted wage increases to an additional 13,000 workers. The most important negotiations in progress at the year-end were those between the major railways and the 15 unions representing non-operating employees; little progress was made in these talks during December and discussions were scheduled to resume early in January. At the end of the year, the strike of 1,800 textile workers at the Magog plant of Dominion Textiles, then three months old, was still unsettled.

Among the new contracts signed during December were those at the plants of **Continental** and **American Can** Companies, which signed agreements negotiated by the parent companies in the United States; these were similar to the contracts signed with the U.S. locals of the **United Steelworkers**. The agreement included a package increase of approximately 28 cents an hour for about 2,000 employees in the plant, office and sales force of Continental Can Company in metropolitan Toronto, Chatham, Ont., and Burnaby, B.C., and for 300 plant employees of American Can Company in Vancouver. Workers in the remaining branches of American Can, in various centres in Ontario and Quebec, and in the Continental Can operation at St. Laurent, Que., were not affected by the Steelworkers' settlement, as they are represented by CLC-chartered locals; in December these were in the process of negotiating separate agreements. The three-year agreement with the Steelworkers provided for 7 cents an hour retroactive to October 1, 1959 and similar increases each year until the contract expires. Fringe benefits will add another estimated 7.2 cents an hour.

The United Hatters International Union, representing 1,600 millinery workers, 65 per cent of them women, was engaged in collective bargaining for a new agreement with the **Millinery Manufacturing Association of Montreal**. In addition to higher wages, the union was seeking a reduction in the work week from 40 to 35 hours, the standard in the U.S. millinery industry. It argued that a shorter work week would spread or at least maintain employment. The union contended that this measure was necessary because the industry has been adversely affected by U.S. imports, the effect of which has been aggravated by the practice, recently adopted by some stores, of leasing their millinery departments to concessionaires specializing in American-made headgear. As a means of counteracting this competition, the union proposed that 1 per cent of the payroll be allocated to a fund to assist the industry in promoting the sale of Canadian-made hats.

In the "Collective Bargaining Calendar for 1960" and the "Collective Bargaining Scene" (below), the short titles by which the unions are listed are those used in the 1959 edition of *Labour Organizations in Canada*; this practice will be followed from now on.

In order to make room for the Bargaining Calendar (page 14), Current Labour Statistics will not appear this month only.

BARGAINING CALENDAR FOR 1960

Collective agreements covering 500 or more workers listed by month in which they terminate.
Agreements in the construction industry are excluded.

JANUARY

Company and Location	Union
B.C. Electric Railway, company-wide.....	Office Empl. (AFL-CIO/CLC)
Bristol Aircraft (Western), Winnipeg, Man.....	Machinists (AFL-CIO/CLC)
Cdn. Johns-Manville, Asbestos, Que.....	Mining Empl. Federation (CCCL)
Canadian Marconi, Montreal, Que.....	Empl. Council (Ind.)
De Havilland Aircraft, Toronto, Ont.....	Auto Wkrs. (AFL-CIO/CLC) (plant wkrs.)

Part III—Settlements Reached During December 1959

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ATLAS ASBESTOS, MONTREAL, QUE.—CLC-CHARTERED LOCAL: 2-yr. agreement covering 400 empl.—6 cents an hr. retroactive to March 1, 1959 and 5 cents an hr. eff. March 1, 1960; employer to contribute towards pension plan whereas formerly only employees made contributions.

AVRO AIRCRAFT, MALTON, ONT.—MACHINISTS (AFL-CIO/CLC) (TECHNICIANS): present contract extended to July 31, 1961 without change.

CITY OF EDMONTON, ALTA.—I.B.E.W. (AFL-CIO/CLC): 2-yr. agreement covering 560 empl.—5-per-cent increase in wages during 1959 and 3½ per cent during 1960.

CPR, WESTERN REGION—TRAINMEN (AFL-CIO/CLC): settlement terms not yet available.

CRANE LIMITED, MONTREAL, QUE.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 750 empl.—6-cent-an-hr. increase retroactive to May 1, 1959; 5-cent-an-hr. increase eff. Nov. 1, 1960; skilled workers to receive an additional 5 cents an hr. retroactive to Nov. 1, 1959; improved health insurance plan; vested right clause improved for employees aged 40 or with 15 yrs. service; pension plan increased \$10 per month to a maximum of \$65 per month.

CONTINENTAL CAN, NEW TORONTO, ONT.—STEELWORKERS (AFL-CIO/CLC): 3-yr. agreement affecting 800 wkrs.—an increase of 7 cents an hr. on base rates plus an increase in the increment between standard job class rates eff. Oct. 1, 1960 and an equal increase on Oct. 1, 1961; improvements in SUB, hospital and group insurance, pension and sick benefits.

DOMINION STRUCTURAL STEEL, MONTREAL, QUE.—MINERWORKERS (IND.): 2-yr. agreement affecting 500 wkrs.—5-cent-an-hr. increase retroactive to Nov. 30, 1959 and 6-cent-an-hr. increase eff. Aug. 1, 1960; 2 days bereavement leave without loss of pay for deaths occurring in the immediate family of the employee; shift premium for afternoon and evening shifts increased by 1 cent an hr.

FAIREY AVIATION, DARTMOUTH, N.S.—MACHINISTS (AFL-CIO/CLC): 2-yr. agreement covering 650 empl.—wage increase of 4 cents an hr. retroactive to June 1, 1959; a further increase of 7 cents an hr. eff. June 1, 1960.

HOTEL CHATEAU FRONTENAC (CPR), QUEBEC, QUE.—RAILWAY, TRANSPORT AND GENERAL WKRS. (CLC): 33-mo. agreement covering 580 empl.—5-cent-an-hr. increase retroactive to June 1, 1959 with an additional 3 cents an hr. eff. May 1, 1960 and 2 cents an hr. eff. April 1, 1961.

HOTEL EMPRESS (CPR), VICTORIA, B.C.—RAILWAY, TRANSPORT AND GENERAL WKRS. (CLC): 33-mo. agreement covering 500 empl.—wage increase of 5 cents an hr. retroactive to June 1, 1959 and an additional 3 cents an hr. eff. May 1, 1960 and 2 cents an hr. eff. April 1, 1961; improved vacation plan; some changes in work rules.

MANITOBA ROLLING MILL, SELKIRK, MAN.—STEELWORKERS (AFL-CIO/CLC): 1-yr. agreement covering 800 wkrs.—wage increase of 4 cents an hr. retroactive to April 16, 1959 and an additional 3 cents an hr. retroactive to Nov. 15, 1959; some revisions made to the incentive wage plan.

MARITIME TELEGRAPHS AND TELEPHONE, COMPANY-WIDE—I.B.E.W. (AFL-CIO/CLC) (TRAFFIC DEPARTMENT): 1-yr. agreement affecting 600 empl.—general wage increase ranging from \$1.05 to \$3.75 per wk.

PAGE-HERSEY TUBES, WELLAND, ONT.—U.E. (IND.): 1-yr. agreement covering 1,000 wkrs.—general wage increase of 6 cents an hr.; 3 wks. vacation with pay after 10 yrs. service (formerly 3 wks. after 12 yrs.); employees working on legal holidays to receive \$18 per day rather than \$17.25 per day as formerly.

SPORTSWEAR MFRS. GUILD, TORONTO, ONT.—LADIES GARMENT WORKERS (AFL-CIO/CLC): the agreement which covers 1,200 wkrs. was extended until July 31, 1960 without change in terms.

THOMPSON PRODUCTS, ST. CATHARINES, ONT.—EMPLOYEES ASSOC. (IND.): 1-yr. agreement covering 700 empl.—general wage increase of 6 cents an hr. eff. Dec. 1, 1959; additional increase of 6 cents an hr. for skilled trades; a cost-of-living bonus amounting to 8 cents an hr. was incorporated into the base rates.

WALTER M. LOWNY, MONTREAL, QUE.—BAKERY WORKERS (CLC): 2-yr. agreement affecting 650 empl.—wage increases of 8 cents an hr. for male empl. and 5 cents an hr. for female empl. were granted retroactive to March 1959; an additional increase of 8 cents an hr. for male empl. and 4 cents an hr. for female empl. eff. March 1960; 4 wks. vacation with pay after 25 yrs. service (formerly no provision for 4 wks. vacation); employees with 2 yrs. service will be paid for some statutory holidays even if temporarily laid off at the time; double pay for Sunday work; improvements in premium pay for afternoon and night shifts eff. March 1959.

NOTES OF CURRENT INTEREST

605 Winter Works Projects Approved in First Week

There were 605 municipal works projects accepted for federal contribution under the Municipal Winter Works Incentive Program up to December 4. The program became effective on December 1.

On the same date in 1958, the year the program was inaugurated, 100 projects had been approved. In 1959 it had been possible to announce the program earlier, and as a result a large number of projects had already been accepted by the federal Government by the time the program opened.

All 10 provinces have agreed to take part in this winter's program and, up to December 4, projects have been submitted by all provinces except Prince Edward Island.

The total cost of the projects accepted up to December 4 was about \$33,000,000, of which about \$24,973,000 will be spent during the five months the program is in effect—December 1, 1959 to April 30, 1960. The total direct payroll cost involved in the projects during this period was estimated at about \$9,500,000. Of this, the federal Government will contribute about \$4,671,000. Direct payroll costs make up almost 40 per cent of the expenditures on these projects.

It is expected that 13,392 men will be hired as a direct result of projects already approved and that the total on-site employment will amount to 701,354 man-days.

Under the terms of the program the Government offers to pay one-half the direct payroll costs of a municipality or its contractors or subcontractors on accepted winter works projects. For the purpose of the

incentive program, winter works projects will include work that would not normally be undertaken during the winter months and that is designed to create additional employment.

Projects which are eligible are:

(a) Needed public projects municipalities have considered undertaking some time in the future which can be undertaken this winter;

(b) New projects that can be carried out this winter;

(c) Additional work on existing projects over and above the work that would have been carried out in any event this winter.

The types of work coming under the terms of this offer are: the construction and major reconstruction of streets, sidewalks and municipal roads; the construction and major reconstruction of water, sewage and storm sewage facilities not including buildings; and the construction and development of municipal parks and playgrounds.

Five provinces are again offering further incentives for projects undertaken by their municipalities. Ontario, Prince Edward Island, Saskatchewan, Alberta and British Columbia have offered an extra 25 per cent of payroll costs on top of the federal Government's 50 per cent.

The number of projects approved for each province was as follows: Newfoundland, 15; Nova Scotia, 5; New Brunswick, 33; Quebec, 15; Ontario, 206; Manitoba, 40; Saskatchewan, 112; Alberta, 39; British Columbia, 140.

Will Not Use Winter Work Plan So That More Qualify For Insurance

Reports that the Unemployment Insurance Commission would co-operate with municipalities to enable more workers to qualify for unemployment insurance by means of the Municipal Winter Works Incentive Program were recently refuted by officials of the Montreal office of the UIC.

It had been rumoured that a worker who was short of weekly unemployment insurance contributions would be employed on the winter employment projects aided by federal grants until he had qualified for

benefit, and would then be laid off to make way for another worker who was short of contributions.

"Such a course of action is incompatible with the Unemployment Insurance Act, whose objective is to protect workers against involuntary unemployment," the UIC statement said. "Such a policy would result in abandonment of the principle of the best qualified applicants being referred to job vacancies." The fact that a person is or is not drawing unemployment insurance

benefit is never taken into account in referring him to an employer, it added.

The Commission believes that workers would rather be working than drawing benefits, and obviously could not be a party to an arrangement that discriminated between workers in the way suggested, the Montreal statement said.

John L. Lewis Decides to Retire, Was UMW President 40 Years

John L. Lewis, President of the United Mine Workers for 40 years, will retire early this year. He will be 80 years old on February 12.

He will be succeeded by Thomas Kennedy, the union's Vice-President.

Mr. Lewis announced his pending retirement in a letter, dated December 15 and addressed to UMW members, that was published in the union's bi-monthly magazine, the *United Mine Workers Journal*.

Born in Lucas, Iowa, he quit school while in the seventh grade to drive mules in the coal mines. His father and grandfather were Welsh coal miners. In 1917 he was elected UMW Vice-President and two years later became President.

He was defeated in 1921 in an attempt to unseat Samuel Gompers as President of the American Federation of Labour.

In 1935 he took the Mine Workers out of the AFL and, with them, other dissident unions and formed the Congress of Industrial Organizations. He became the CIO's first President.

He withdrew his union from the CIO in 1942, re-affiliated with the AFL in 1946, and again broke with the AFL the following year. In Canada, it remained affiliated with the Canadian Labour Congress until December 1955, when it was expelled for non-payment of per capita tax. Since then the UMW has been independent.

During his presidency, the miners became the highest-paid and most adequately insured group of industrial workers in the world—U.S. miners now earn \$24 a day. The union's pension and welfare fund has become a model of industry-financed social security.

The UMW does not have provision for a president emeritus but Mr. Lewis' successor, Thomas Kennedy, has announced that he would ask the union's executive board to create such a post for the retiring President.

Like Mr. Lewis, Mr. Kennedy began working in the mines while in his teens. Now 72 years of age, he has been a union member for almost 60 years and an officer

of the UMW since 1925, when he became international Secretary-Treasurer. He served as Lieutenant-Governor of Pennsylvania from 1935 to 1939.

Head of Special Services Branch, Walter W. Dawson Retires

Walter W. Dawson, a deputy minister in Saskatchewan in the 1940's, and latterly Director of the Special Services Branch of the Department of Labour, retired from federal government service last month.

Well-known from coast to coast for his work in the farm labour field and in connection with group movements of immigrants into Canada, Mr. Dawson played a vital role last winter in the organization and administration of the Municipal Winter Works Incentive Program.

Mr. Dawson's career in the public service began in his native province, Saskatchewan, after his discharge from the army in 1919. His military career extended from 1914 to 1919, during which time he served in France with the 28th Battalion of the Second Division.

From 1920 to 1924 he worked with the federal Income Tax Branch. At the height of the depression of the 1930's he served as director of relief for the province of Saskatchewan. At one point in his career, during the winter of 1937-38, more than half of the population of the province was on relief.

In 1941 he added the duties of Director of Farm Labour for Saskatchewan and in 1943 he was loaned by the province to serve as representative of agriculture on the federal Wartime Mobilization Board. In 1944 he returned to Saskatchewan as Deputy Minister of the Department of Labour and Public Welfare.

In 1946 he joined the Japanese Division of the federal Department of Labour as Supervisor of Japanese Employment Placement, working in Saskatchewan. The following year he came to Ottawa to head the Department's Special Services Branch and act as co-ordinator of federal-provincial farm labour programs. For a number of years he was concerned with the organization of group movements of more than 100,000 immigrants to Canada.

During his last four years of federal government service he was increasingly concerned with the development of the National Winter Employment Campaign as a senior member of the working committee co-ordinating government activities in that field.

L. M. Messmer, Vice-President of Alberta Labour Federation, Dies

L. M. Messmer, Vice-President for Southern Alberta of the Alberta Federation of Labour, died Christmas Eve at the age of 34 years.

Mr. Messmer had been re-elected for the fourth consecutive year at the Federation's convention in Edmonton last October.

His union career began when he was elected president of the local union at the Dominion Glass Company in Redcliffe, Alta.

When the membership voted to enter the Canadian Congress of Labour, Mr. Messmer was elected business agent for the glass and pottery locals. In 1955 the union came under the jurisdiction of the United Glass and Ceramic Workers of North America (CCL).

When the Industrial Federation of Labour of Alberta and the Alberta Federation of Labour merged in September 1956 (L.G. 1956, p. 1261), Mr. Messmer was elected southern vice-president. He was active also in the Medicine Hat and District Labour Council.

Quebec Requests Federal Govt. To Put Stop to Textile Imports

A motion urging the federal Government to adopt without delay suitable means to stop the "undesirable competition" of foreign textile products on the Quebec market was passed unanimously by the Quebec Legislative Assembly early in December.

The motion stated that the textile industry employs more than 50,000 people in some 350 mills scattered over the province, and that "said foreign imports in the province cause much unemployment and deprive thousands of workers of their livelihood." It contended that it was urgently necessary "to put a stop to this unjust and prejudicial competition," and it begged the federal authorities to take the required measures immediately.

Name Members of Enlarged Quebec Labour Relations Board

Composition of the Quebec Labour Relations Board was announced last month by Hon. Antonio Barrette, provincial Minister of Labour.

The Board has been enlarged to eight members to enable it to hold simultaneous sittings in two locations.

Judge Conrad Pelletier and H. C. Lebrun were reappointed Chairman and Vice-Chairman. Judge Pelletier, professor of indus-

trial legislation, Faculty of Law, Laval University, is a former Judge of the Sessions of the Peace.

The only other member carried over from the former board is Leo M. Côté. At the time of his appointment to the earlier board Mr. Côté was President of the Montreal Trades and Labour Council (TLC).

Other labour representatives on the Board are André Roy, President, Quebec Central Council (CCCL), and J. Eucher Corbeil, Treasurer, Quebec Federation of Labour (CLC).

Management representatives are: Claude Lavery, Secretary-General, Association of Professional Industrialists, K. G. K. Baker, Personnel Director, Howard Smith Paper Mills Limited; and Benoit Tousignant, Personnel Director, Quebec Cartier Mining Company, and onetime Chief Inspector of the Labour Relations Board.

Workmen's Compensation Act Amended by Quebec Legislature

A bill amending the Quebec Workmen's Compensation Act was passed by the provincial Legislature last month.

The amendment increases to \$5,000 from \$4,000 the basic salary on which indemnities to injured workers are to be calculated, and the rate of compensation is maintained at 75 per cent.

Indemnity to the widow of a worker fatally injured in an industrial accident was raised to \$75 a month instead of \$55. A widow with three children will now receive \$150 a month, compared with \$135 in Saskatchewan, the province with the next highest compensation.

The law is retroactive and persons now receiving compensation will receive increased indemnities.

Says Canada Should Produce More Engineering Technicians

Canada must produce three to four engineering technicians for every professional engineer produced, if the nation is to keep up with future demands in industry for technologically-trained personnel, R. M. Robinson, Vice-President, Canadian General Electric Company, told a meeting of the American Vocational Association in Chicago last month.

Mr. Robinson said that at present there exists a "very unbalanced ratio of engineers to engineering technicians" in Canada.

In the past year, Mr. Robinson noted, Canadian universities turned out 2,140 engineers, while only some 500 engineering

technicians graduated from Canadian technical schools, a ratio that is "just about the reverse of what it should be."

Mr. Robinson said that the engineering technician, in particular, is becoming more and more important in the industrial scheme of things, and suggested that a greater effort be made to attract the academically bright student into vocational and technical courses.

Manitoba Federation Submits Brief to Provincial Cabinet

Establishment of a full-time Workmen's Compensation Board, enactment of legislation providing for a compulsory check-off of union dues at the request of the majority of the employees in a bargaining unit, and the administration of the Fair Wages Act were among the more important measures requested in a brief presented last month by the Manitoba Federation of Labour to the Government of Manitoba.

The Federation also recommended an amendment to the Workmen's Compensation Act to provide for a medical appeal system and to make the findings of the Medical Board binding on the Workmen's Compensation Board.

Other recommendations asked that:

—Employment of females be prohibited in premises where the temperature is below 50 degrees Fahrenheit, unless proper ventilation is provided.

—The Building Trades Protection Act be amended to give the Building Trades Protection Board the responsibility for licensing carpenters and millwrights.

—A levy—estimated at 12½ cents per month per subscriber—be imposed on subscribers to the provincial hospital plan to provide a fund out of which student nurses' salaries of \$900 a year each could be paid. The average number of student nurses was estimated at 750.

—Accident prevention and industrial safety be placed under the supervision and control of the Workmen's Compensation Board.

The Federation also repeated a number of recommendations previously made to the Government. These included requests for: appointment of a full-time Minister of Labour; licensing of all journeymen plumbers and steamfitters, and steam, gas and oil pipe welders; compulsory government automobile insurance covering public liability and property damage; assumption by the Government of responsibility for the education of retarded children; patronage by the Government of union made goods

and services and consideration of the union label on all printing; a public works and a low-cost subsidized housing program to relieve unemployment; enactment of a legal maximum of 40 hours work a week for all industries and all parts of the province; and raising of the ceiling on annual earnings for calculation of workmen's compensation to \$5,000 from the present \$4,500.

UAW Seeks Royal Commission To Study Automobile Industry

The Canadian Council of the United Auto Workers, meeting in Brantford last month, called for the establishment of a Royal Commission on the automobile industry. The effects on employment of the importing of parts and vehicles should be given particular study, the Council suggested.

The delegates, who represented the union's 60,000 Canadian members, also requested Premier Frost of Ontario to convene a conference of union, industry and government leaders to deal with the social problems that result when industries move to another location.

George Burt, Canadian Director of the UAW, said not only the workers but whole communities have been "left in the lurch" by industries that move away after many years of profit making.

A resolution submitted by UAW members in the aircraft industry asked the federal Government either to get the United States to drop its 12-per-cent tariff on commercial aircraft or to place a matching tariff on aircraft imported from the United States. It was unanimously approved.

Issue Analysis of Welding Trade

Another in the series of trade analyses designed to assist in the development of uniform trade standards in Canada has been issued. It is *An Analysis of the Welding Trade*, which lists the essential operations that a fully-trained journeyman should be able to perform as well as the related theoretical knowledge he should master to be competent in his trade.

This is the twelfth analysis completed by a group of national committees appointed by the Department of Labour, working in conjunction with provincial apprenticeship authorities. Other trades covered are: heavy duty mechanic's; bricklaying; carpentry; machinist's; motor vehicle repair—body; motor vehicle repair—mechanical; plastering; plumbing; sheet metal; electrical; and painting and decorating.

The analyses are available from the Queen's Printer, Ottawa, for 50 cents a copy.

CCA Makes Submissions to Two Provincial Governments

During November the Canadian Construction Association submitted almost identical briefs to the Governments of Newfoundland and Nova Scotia.

The briefs dealt with housing, highways, tendering practices, labour relations, apprenticeship and wintertime construction.

The briefs suggested that the Governments:

—Minimize the use of provincial forces on public construction projects;

—Review and amend provincial labour legislation;

—Establish joint committees of interested parties and Government inter-departmental committees to co-ordinate the scheduling of both new and maintenance construction work to the greatest possible extent during the winter months;

—Undertake a comprehensive study of procedures governing the qualification of highway contractors;

—Consider the subject of mechanics' liens in an effort to achieve uniformity in legislation in all provinces.

In its submission to the Newfoundland Cabinet the Association pointed out the importance of construction programs to the economy of the province, noting that some \$83,000,000 would be spent on construction during the current year. Direct employment to some 9,500 persons would be provided as a result of the programs.

The Newfoundland delegation commended the Government for its program of pre-employment training and the excellent work it has done in opening up communications, particularly roads, to many parts of the province formerly accessible by sea only, and noted that the construction industry "has been heartened by the strong stand and leadership asserted in dealing with labour problems."

The brief also acquainted the Government of Newfoundland with the CCA recommendations to the federal Government suggesting that federal aid for road construction be placed on a continuing basis, and that aid be provided that will make home ownership feasible for the under-\$5,000-annually income group.

It urged the Government to facilitate the completion of the Newfoundland section of the Trans-Canada Highway with all possible speed.

In its brief to the Nova Scotia Government, the CCA pointed out that some \$190 million would be spent in the province during the current year. The program would provide employment for some 23,000 persons in the province.

CMA Brief to N.B. Cabinet Asks Changes in Labour Relations Act

In a brief to the New Brunswick Government, Canadian Manufacturers' Association representatives in the province strongly advised against any changes in the provincial Labour Relations Act "that will, in effect, narrow the area of discussions intended for the bargaining table."

The CMA representatives said they believed the Labour Relations Act was weighted in favour of unions. They believed the Act needed revision to take into account "the great changes that have occurred in trade unions since the Act was first passed."

The brief called the proposed measure "protective legislation" and suggested that "trade unions have grown into vast international organizations with tremendous, and often monopolistic powers, over our economy."

In recommending that trade unions "assume a greater responsibility towards society," the brief recommended that they be made "legal entities with power to sue and be sued for damages in civil courts."

The brief noted that "it causes a great feeling of frustration and injustice in the minds of employers, who are fully responsible for their corporate actions under the law, to have to deal with unions which have a practical immunity from the laws of the land."

Legal Picketing

Favouring the insertion in the Labour Relations Act of provisions to regulate picketing, the brief said, "there still seems to be great confusion in the minds of some trade unionists as to what constitutes legal picketing."

"We believe that if unions are made legally responsible for their actions and are restricted to legal picketing there will be little or no call for injunctions in labour disputes."

The Act should state clearly that "employers are free to express their views on an equal basis with trade unions provided they do not use coercion, intimidation, threats, promises or undue influence . . ."

The brief also asked that, if the province intended to refrain from using judges as conciliation board chairmen, the change be gradual and that time be given to develop a panel of experienced chairmen, suitable to both employers and unions.

All government department heads and those responsible for government purchasing were asked to lend support to the CMA "Buy Canadian" program.

Federal-Provincial Farm Labour Conference

Seventeenth meeting told farm labour situation in 1959 little changed from the previous year: satisfactory help either for seasonal or year-round work just as hard to find. Continued decline in farm labour force in 1960 is foreseen

The farm labour situation across Canada in 1959 showed no marked change from the previous year, according to reports presented at the 17th Federal-Provincial Farm Labour Conference, held in Ottawa on November 26 and 27.

Satisfactory help either for seasonal or for year-round work was as hard to find last year as ever, and growers of sugar beets in Ontario again had acute difficulty in obtaining and retaining competent labour for their seasonal work. In general, however, labour difficulties appeared to have been no greater than in 1958.

A continued decline in the farm labour force during 1960 was foreseen by Dr. W. R. Dymond, Director, Economics and Research Branch, Department of Labour, although he was unwilling to try to predict the extent of the decline.

In any event, he said, the farm sector of the economy will probably encounter stiffer competition in hiring farm help from non-farm industries than was the case in 1959.

Other important subjects discussed at the conference were: the extension of unemployment insurance to farm workers, immigration, farm accidents and workmen's compensation.

Walter Dawson, Director of the Special Services Branch of the Department of Labour, again acted as chairman of the conference.

The delegates were welcomed by Hon. Michael Starr, Minister of Labour. After referring to the pending retirement of Mr. Dawson and expressing appreciation of the excellent work Mr. Dawson had done in the farm labour field, the Minister praised the work that had been done on the winter work incentive program. He said that he understood farm labour would be harder to get in the future, but he thought that the difficulties could be overcome by co-operative effort.

Referring to the question of unemployment insurance for farm labour, Mr. Starr said that the Unemployment Insurance Commission had been instructed to study coverage for these workers both on a universal basis and on a voluntary basis, and recommendations were expected within a month or two. However, the Minister added that he foresaw a great many difficulties in connection with the plan.

A. H. Brown, Deputy Minister of Labour, said that provision to carry on the farm labour program was being made in the estimates to be submitted to Parliament for the coming year. Mr. Brown also referred to Mr. Dawson's retirement, and expressed appreciation of his abilities and service.

All of the nine provinces that have farm labour agreements with the federal Government were represented by senior officials of their Departments of Agriculture.

The chairman referred to the retirement of H. R. Richardson, Manitoba Department of Agriculture; F. H. Newcombe, Alberta Department of Agriculture; and F. C. Hitchcock of the Prairie Region of the National Employment Service, all of whom have been familiar figures at previous farm labour conferences.

In addition to representatives of provincial Departments of Agriculture, the conference was attended by National Employment Service representatives from all regions and from head office; officials of the federal Departments of Labour, Agriculture, and Citizenship and Immigration; of the Canadian National and Canadian Pacific Railways; of the International Labour Organization, the Office of the High Commissioner for the United Kingdom, the United States Department of Agriculture, the Canadian Federation of Agriculture, the Embassies of West Germany and The Netherlands, the Ontario Sugar Beet Growers' Association, and the Canada and Dominion Sugar Company.

Employment in Agriculture

In a report on the general economic and employment outlook, Dr. Dymond said that employment in primary agriculture continued to decline in 1959, but at a slower rate than in any year since 1955. The decline between 1958 and 1959 averaged only 2.8 per cent, compared with a decline of 4.2 per cent between 1957 and 1958.

From January to October the number of persons with jobs in agriculture averaged 706,000, compared with 726,000 for the same period in 1958 and 758,000 during the comparable period of 1957, he said.

Self-employed farm operators and unpaid family workers continued to decline in numbers during 1959, but there was a noticeable increase in the number of paid workers

employed in agriculture. During the first 10 months of 1959 paid workers on farms averaged 113,000, compared with an average of 101,000 during the same period of 1958. The increase, however, was concentrated in Quebec; in the other four regions there was practically no change.

During the first 10 months of 1959 the increase in the number of female workers compared with previous years, which had been an interesting feature of farm employment in 1958, had been reversed, Dr. Dymond said. In the 1959 period the number of women with jobs in agriculture declined to 51,000 from an average of 55,000 in the same period of 1958. Despite this decline, however, the number of female workers remained higher than it was in other years since 1953.

Unemployment Insurance

James McGregor, Director, Insurance Branch, Unemployment Insurance Commission, outlined five plans being considered for extending unemployment insurance to farm workers. He also discussed some of the difficulties involved.

The main difficulty, Mr. McGregor said, lies in trying to apply unemployment insurance to an industry that does not lend itself to it.

A departmental committee that included representatives of the Departments of Finance, Insurance, and Agriculture, the Dominion Bureau of Statistics, and the Privy Council was then sitting to consider the question. It hoped to report before the end of the year, Mr. McGregor said.

The five plans it had under consideration concerned the extension of unemployment insurance to agriculture in the following ways:

1. To specified types of farming only, but in all areas.
2. To specified areas only, but to all types of farming in those areas.
3. To specified areas, and only to specified types of farming within those areas.
4. To every paid agricultural worker who had previously been in insured employment.
5. To all farm operations regardless of location.

The committee also considered unemployment insurance for farm workers on a voluntary basis.

One of the big difficulties in applying any scheme was to decide, in the peculiar situations often found on farms, who was unemployed, Mr. McGregor said. For instance, if a man was hired during the winter to do the chores only, was he

unemployed? There was a danger of upsetting the economics of farming, he pointed out.

Another difficulty would lie in policing, owing to the scattered nature of farming operations. Farmers, Mr. McGregor said, were not more dishonest than other people, but in this matter their opportunities of abuse would be greater.

With regard to voluntary participation by groups of farmers or farm workers, Mr. McGregor pointed out that the whole idea of unemployment insurance, as of any other kind of insurance, was the sharing of risks, good and bad. Voluntary participation would mean that the groups that wanted to join would be the bad risks, and "we don't want only the bad risks," he said.

Mr. McGregor said that the Unemployment Insurance Commission, for its own information only, had segregated the records for fishermen, and had found that for every dollar paid in by fishermen almost \$9 had been paid out to them in benefits.

Immigration

A difficult situation regarding the supply of immigrant farm labour in 1960 and for the next five years, due to the improved economic position of the European countries, was foreseen by Laval Fortier, Deputy Minister of Citizenship and Immigration. Not all countries could supply suitable immigrants, he pointed out.

His department's overseas staff had been instructed in August to start recruiting for movement next spring, that is by March 1. This advance planning should help recruitment, Col. Fortier said.

Farmers and the provincial governments will have to do something if they want immigrants to come to their provinces. Some industries have presented arguments to help the Immigration Department in persuading people to come to Canada, and Col. Fortier suggested that if the Canadian Federation of Agriculture would do something like that people abroad would have more confidence in its representations than in those of the Department.

The Deputy Minister said that his department would take all the single farm workers it could get next year.

R. A. Stewart of the Canadian Federation of Agriculture said he would inform the Federation of Col. Fortier's suggestion. He then asked: if immigrants succeeded in establishing themselves on farms because of their willingness to accept a lower standard of living than Canadians, how could Canadian farmers compete with them?

In reply to a question whether restrictions would be placed next year on the entry on permit of tobacco workers from the United States, Col. Fortier said that any requests would certainly be reviewed. The chairman remarked that there had never been any conflict with the Immigration Department on this point in the past.

L. M. Hunter, Department of Immigration, said that most farm immigrants came to Canada with the idea of getting land, although, lacking capital, they usually had to work for hire at first.

Farm Accidents

R. G. Bennett gave a summary of a survey of farm accidents recently conducted by the Ontario Department of Agriculture, and a report on a questionnaire regarding workmen's compensation to which 602 farmers had replied.

The report on farm accidents analyzed the accidents by place and cause of accident, nature of accident, activity associated with accident, equipment involved, and age of victims. Type of injuries, whether fatal, permanent or temporary, days off work, and amount of medical bills and property damage were also shown.

The most common cause of accident, by a considerable margin, was falls or stumbles; motor vehicles came next; and fire or explosion third. Transport equipment, chiefly motor vehicles and tractors, was the kind of equipment most often involved.

The report on the workmen's compensation questionnaire showed that of the 602 respondents, 547 planned to continue workmen's compensation on the basis of the 1959 rate of \$3.50 per \$100 of payroll, 32 did not, and 14 failed to answer the question. Respondents who wanted hospitalization to be omitted from compensation coverage numbered 220, while 293 replied in the negative, and 51 did not answer. When asked to give their opinion of workmen's compensation for all farmers, 283 said it was excellent, 221 said good, and 52 said that it was good but too expensive.

Sugar Beet Workers

A report on sugar beet workers for South Western Ontario was submitted by B. E. Easton on behalf of the Canada and Dominion Sugar Company.

The South Western Ontario Field Crops Association (SWOFCA) was shelved in 1959, owing to inability to get workers, Mr. Easton said. It was evident that unemployed persons in cities such as Windsor and Hamilton were not interested in sugar beet work, he said. There was not enough

money to be made and there were no unemployment insurance stamps to be earned.

The most hopeful source of labour, Mr. Easton said, was now the province of Quebec, and it was hoped that this source might eventually provide the solution of the labour problem. It would not, however, supply enough workers for the 1960 season.

The report said that in spite of careful selection, 46 per cent, or 133 of the 288 workers sent from Quebec, stayed on the job only four days or less. Only 27 per cent of the total stayed for the full term of the sugar beet work. Twelve of these made more than \$200 within three weeks. Notwithstanding this experience, it is hoped that this source of labour supply can be developed in the future.

The company, on the suggestion of the Ontario Farm Labour Committee and the federal Department of Labour, plans to try to build up a hard core of qualified workers from Quebec for sugar beet work, so as to develop a perennial source of supply of single men over the next few years. It is hoped that a corps of experienced workers thus developed will bring their friends to take part in the work. This is the formula successfully used for families of Indian workers in Alberta, the report pointed out.

As a temporary arrangement, while this plan is being developed, the company has asked the Department of Immigration to allow 300 single men to enter Canada under "open placement" for sugar beet work in South Western Ontario, to arrive late in May 1960.

Canadian Federation of Agriculture

R. A. Stewart of the Canadian Federation of Agriculture said the Federation was aggressively concerned with conditions regarding placement of farm labour. He thought an improvement in farmers' incomes was important, but he doubted whether cash was the only problem regarding farm labour.

The traditional attitude of farmers towards hired help, especially in the matter of living accommodation, and the long hours, he thought, were also responsible for the difficulty in getting labour. However, the farmers' attitude in this matter was improving.

The Federation, he said, was discouraged by the delay in the extension of unemployment insurance coverage to certain farm groups. The movement of farm workers will play a more important part as time goes on, Mr. Stewart said. The need for temporary help, he thought, could not be met in any other way.

Agricultural Labour Force

D. R. Buchanan, Economics and Research Branch, presented some Dominion Bureau of Statistics figures on the agricultural labour force in Canada that showed that in 1946 it numbered 1,200,000 and represented 25 per cent of the total labour force of 4,800,000. By 1958 it had declined to 700,000 and represented only 12 per cent of the labour force, which by that time had grown to 6,000,000.

During that period the composition of the agricultural labour force changed. In 1946 it had consisted of: self-employed persons, 57.2 per cent; unpaid family workers, 30.4 per cent; and paid workers, 12.4 per cent. In 1958 the proportions were: self-employed persons 65.7 per cent, unpaid family workers 20.7 per cent, and paid workers 13.6 per cent.

Provincial Reports

Prince Edward Island—With increased mechanization continuing to reduce the demand for farm labour, farmers had few labour difficulties this year, S. C. Wright, Prince Edward Island Deputy Minister of Agriculture, reported. Potato harvesting still presents the main problem, and because grain and potato harvests coincided, a reduction in the acreage under potatoes did not reduce the demand for pickers as much as had been expected.

A total of 617 workers was recruited in Nova Scotia and New Brunswick, compared with 666 in 1958. Workers placed locally by NES offices totalled 1,187.

Nova Scotia—Bad harvest weather combined with reduced activity in lumbering resulted in a sufficiency of farm labour during the past year. The number of inquiries for farm labour at NES offices was the smallest on record. Increased mechanization and a continued tendency for the size of farms to increase also helped to account for this, said S. E. Lewis, Nova Scotia Director of Farm Labour.

A total of 449 farm workers was placed by the NES this year, 330 of them for apple harvesting in the Annapolis Valley. The Department of Citizenship and Immigration also placed 49 immigrant workers on farms.

New Brunswick—Farm labour was in good supply during the past year and there appeared to be no serious shortage of farm workers during the busy season, said H. F. Stairs, New Brunswick Director of Farm Labour. The number of farm workers placed by the NES was 4,284, of whom 3,709 cases came from outside the province for seasonal work. The Immigration Department placed a total of 38 persons on farms as helpers, besides assisting 15 persons to settle on farms.

Quebec—Alex J. Rioux, Director of the Quebec Farm Labour Supply Bureau, reported that although the pulling of sugar beets is being done more and more by machinery, 102 workers were supplied to growers for thinning. Besides these, 288 men were sent to help the sugar beet growers in the Chatham region of Ontario between May 27 and June 5. Only 13 girls could be sent to fruit growers in the Niagara Peninsula in response to a request for help.

In the exchange of workers with the United States, 271 apple pickers were sent to Maine and New York, and 94 pickers from Vermont were employed in the Freightsburg district. The services of 36 tobacco curers were obtained from Carolina and Virginia for work in the Joliette district.

The two local offices of the National Employment Service in Quebec City and Montreal placed 901 apple pickers, compared with 746 last year and 284 in 1957. These two offices also placed 1,191 regular workers on farms during the year.

The Day-to-Day Farm Labour Centre supplied 5,031 man-days of help to gardeners in the Montreal region compared with 4,466 last year.

Ontario—The general farm labour situation in the province remains about the same as last year, but it tends to become more critical each year, reported R. G. Bennett, Chief Agricultural Officer, Ontario Department of Agriculture. However, improved farm management and increased mechanization have done much to alleviate the labour shortage.

The supply of labour for blocking and hoeing the sugar beet crop again presented the most acute problem. Considerable difficulty was experienced in keeping on the job the 288 men sent from the province of Quebec early in June. Hot weather and lack of skill caused many to leave after a short time. A fairly large group, however, remained for the whole season. These, it is hoped, will form the nucleus of a corps of experienced sugar beet workers for the future.

The Federal-Provincial Farm Labour Committee is working very closely with the Ontario Flue-Cured Tobacco Growers' Marketing Board on new plans for dealing with farm labour in the tobacco growing area. The Committee's efforts to obtain labour from Quebec, the Maritimes, and the states of Virginia, Georgia and Florida did not meet with any great response. Reluctance to travel long distances for what might prove to be a short working period is thought to have been one reason for the lack of response.

The Day-by-Day Farm Labour Service arranged for the supply of a total of 28,242 days' work, most of this labour being recruited for fruit and vegetable growers near Toronto. The service is expected to continue to expand during the next few years.

Manitoba—NES offices were able to supply enough farm labour to satisfy the demand throughout the season, said J. F. Muirhead, Manitoba Department of Agriculture. An expected shortage of labour at harvest time did not materialize because the weather caused delays in harvesting.

The labour required for thinning sugar beets was provided through a project worked out by the Manitoba Sugar Company and the federal Indian Affairs Branch. Indians were recruited from the reserves close to the settled agricultural areas rather than from Northern Manitoba, and the method used was to arrange for complete families to move to districts requiring labour. The Indians' preference for living in tents during the summer simplified the question of accommodation.

Some 850 Indians were employed this year in beet fields in the province, compared with 350 last year.

Farm placements in Manitoba up to September 30 numbered 1,346. Most of the orders for harvest help were for men who could operate power machinery, and there has been a shortage of such men.

At present there is a strong demand for farm workers for winter work, which NES offices have been able to fill. A larger than normal demand for farm labour is expected next spring.

Saskatchewan—A total of 2,684 men were placed on farms from April to September inclusive, reported L. J. Hutchison, Agricultural Representatives Branch, Saskatchewan Department of Agriculture. Of this number, 54 per cent were placed during April, May and June, confirming the tendency for more farmers to employ farm labour throughout a longer period and on a monthly wage, with bonuses during the harvest time.

Unfavourable harvest weather reduced the demand for harvest labour, and there was no excursion of harvesters from Ontario and Quebec.

Treaty Indian workers to the number of 489 were recruited for sugar beet work in the Lethbridge district of Alberta. The Indian Agents report that more and more interest is being shown each year by Indians in work of this kind, and this year more workers could have been supplied had they been needed.

Farmers employing workers in the spring and throughout the summer were offering

\$125 to \$150 a month, plus a bonus of \$2 to \$5 a day for harvesting. Daily rates for harvesters were \$10 to \$12, or \$1 an hour. Truck and tractor operators were paid \$10 a day, or \$1 an hour, while experienced combine operators were offered \$15 to \$20 a day.

Alberta—The farm labour situation in Alberta remains practically unchanged from a year ago, reported R. M. Putnam, provincial Deputy Minister of Agriculture. The number of placements of general farm workers is now much smaller than it was at one time—this year it was 1,073—and the main effort of the Farm Labour Committee is directed to supplying labor for sugar beet work.

The seasonal movement of Ontario farm workers "has now been discontinued by its own inertia," the report stated. For the second year there was no movement of harvest workers from other prairie provinces, and although the number of harvesters recruited within Alberta has not increased appreciably in the absence of any arrivals from outside the province, they nevertheless form the only available supply at present.

Recruitment of Indians for work in the sugar beet fields was effected by the NES in Saskatchewan and Alberta with the help of representatives of the growers and the sugar factories. Indians placed numbered 1,061.

About 95 per cent of the harvesting of sugar beets is now done by machine, and concern is felt at the tendency of growers to release the workers at the end of thinning, since this reduces the period of employment to such an extent as to make it doubtful whether the cost of transportation is justified.

British Columbia—For the third successive year the Federal-Provincial Farm Labour Service had no serious difficulty in supplying what farm labour was needed, said G. L. Landon, Director of the Agricultural Development and Extension Branch of the British Columbia Department of Agriculture.

Most of the farm labour is supplied to the small fruit and tree fruit growers, and the refusal of the Greater Victoria School Board to release students for strawberry picking in the Saanich district this year, as was the practice for some years past, caused some temporary difficulty.

Wage rates for orchard labour varied from \$1 to \$1.35 an hour, and the basic rate for picking apples was 12 cents a box. The picking rate for strawberries was 4 cents a pound, plus a bonus of a ½-cent a pound for pickers who remained throughout the season.

Employment of Indians in Alberta Sugar Beet Fields

National Employment Service figures reveal that 1,200 workers from Saskatchewan and Alberta Indian reservations were placed in employment in the sugar beet fields of Alberta last summer.

"The recruitment of Indian labour for work in the sugar beet fields of Alberta was undoubtedly the most eventful thing that has happened to the sugar beet industry in a good many years," said F. R. Taylor, General Manager of Canadian Sugar Factories Ltd.

Actual harvest of the crop—at least, 95 per cent of it—is done mechanically, but the manual work of thinning and hoeing the 35,000-acre crop is a vital preliminary. Approximately 16 per cent of the big crop was thinned last season by workers from the reservations.

Ever since sugar beet farming in Alberta began in the 1930's, the seasonal aspect of the labour has been a problem. The difficulty increased over the years with the mounting acreage planted to sugar beets. Immigration of suitable workers appeared for a time to be the answer to the problem. Then, during the war years, Japanese families from the West Coast moved to the sugar beet fields of Alberta. Also, for a time, prisoners-of-war were sent to help with the sugar beet crop. After the war, however, the labour problem returned.

It was then that the National Employment Service of the Unemployment Insurance Commission and the Indian Affairs Branch of the Department of Citizenship and Immigration began selling the idea of using Indian labour.

In 1952, the growers, the sugar factory executives and the Alberta Federal-Provincial Farm Labour Committee agreed to try out the plan on an experimental basis. Representatives of the National Employment Service, the Indian Affairs Branch, and the sugar beet growers recruited 120 Indians (only one-tenth of the number from the reservations at work in the sugar beet fields last summer).

There were some problems: transportation of whole family groups from the reservation to the sugar beet fields; arrangements to have the growers at a distribution point when workers arrived; housing at the sugar beet farms; medical care, and many unforeseen difficulties. However, the hurdles were overcome, and success of this important movement in the development of industry in Western Canada is seen in the steadily increasing use of Indian workers until, by the summer of 1958, nearly 1,000 of them were at work in the beet fields.

The 1959 movement was the most successful to date. About 250 more workers from the reservations took their place in the sugar beet fields in 1959 than the year before. But interest of the people on the reservations didn't end at this figure, for a number of the National Employment Offices which had referred the workers to employers reported that still more Indians were prepared to work in the beet fields.

With the co-operation of the Alberta Department of Agriculture, the Alberta Sugar Beet Growers' Association, and Canadian Sugar Factories, Ltd., there has been developed an important source of labour for the sugar beet industry and a valuable source of employment for the people of the reservations.

Vocational Training Advisory Council Holds 29th Meeting

Apprenticeship continues to make progress in Canada, delegates told; number of registered apprentices increases by 1,357 in past year. Number of students enrolled in institutes offering advanced technical training at all-time high

Apprenticeship is continuing to make progress in Canada, it was reported at the 29th meeting of the Vocational Training Advisory Council, held in Ottawa December 3 and 4. At September 30 there were 18,645 apprentices registered in the provinces where the federal-provincial apprenticeship agreement is active—an increase of 1,357 over the previous year.

Dr. G. Fred McNally, Edmonton, was chairman of the meeting, which was attended

by representatives of management and labour, agriculture, veterans' and women's organizations, federal government departments, and provincial educational and training authorities.

The increase in the training of technicians was also discussed by the meeting. It was disclosed that the total full-time enrolment in institutes offering advanced technical training in the 1959-60 school term has reached an all-time high of 8,304 students.

First year students number 4,148; second year, 2,526; third year, 1,557; and fourth year, 73.

The "engineering and scientific type" of technician outnumbers others by 8 to 1.

Training of Unemployed

Discussing training programs being carried out under Schedule "M" of the Federal-Provincial Vocational Training Agreements, Council agreed that, in relation to the number of unemployed in Canada, inadequate use is being made of the Schedule.

(Under the terms of Schedule "M" the federal Government agrees to pay, in provinces that have signed the agreement, 50 per cent of the costs of providing training for unemployed persons in approved training programs, which must be implemented by the provinces.)

Methods of increasing training programs for unemployed persons to fit them for available employment were extensively discussed by the Council.

From April to September this year, Council was informed, 2,595 unemployed workers received training under Schedule "M", 408 more than during the same period in 1958. The figure was not representative of all training in Canada, it was pointed out, since in Newfoundland, Quebec and Prince Edward Island, where Schedule "M" is not operating, unemployed are trained in trade schools, where they are referred by the Unemployment Insurance Commission.

The Council thought the fullest possible use should be made of Schedule "M", particularly during the winter months.

It was noted that the base of eligibility for unemployment insurance benefits while attending training programs was recently broadened.

The majority of persons trained under Schedule "M" are unemployed individuals who have no formal training in a specific trade and are unskilled or semi-skilled workers laid off because of seasonal inactivity, or who find difficulty in locating satisfactory employment as unskilled workers.

With the demand for unskilled workers decreasing, Council agreed, the need for training and upgrading of adults is increasing.

Some of the persons now being trained are in a different category and present a more difficult training and employment problem. These are the unemployed individuals who are highly skilled in occupations where the demand for personnel is decreasing.

Most of these have had continuous work at high rates of pay and live in communi-

ties from which it is difficult for them to move. Retraining and readjustment of these workers is more difficult than for unskilled workers.

Indications are that there may be an increase in the need for retraining of some of these skilled workers as mechanization of production advances and as coal mines, textile mills, and possibly other industries reduce their work forces.

It was thought that co-operation from employers and trade unions, when changes are planned that will result in a reduction of personnel, would assist in providing a retraining program before the situation reaches the emergency stage. More specific information on trends in various occupations and future employment needs would also help training authorities, it was thought, to make the best use of facilities now available for adult workers.

Council also heard that under Schedule "R" under the Federal-Provincial Agreements, 424 physically handicapped persons received training in the April to September period this year compared with 368 in 1958.

Other Reports

A bulletin* in the series on the Research Program on the Training of Skilled Manpower was discussed by Council, which urged that the study of vocational training in agriculture be continued by whatever means and devices the federal Government sees fit and that the findings of this research be brought before the Council for consideration and recommendations. Members stressed the need for good training in this field.

A report prepared by the Department's Economics and Research Branch comparing the product of the school system with the needs of industry was heard by Council. The study points out the rapidly decreasing proportion of unskilled workers in the labour force, and indicates the need for more vocational training. The report will be discussed more extensively by Council at a future meeting, it was agreed.

The importance of vocational training to Canadians in many fields, and the aim of the Government to everything possible to make it available to them, was stressed by Hon. Michael Starr, Minister of Labour, and Deputy Minister Arthur H. Brown in brief addresses of welcome to delegates.

**Vocational Training Programs in Canada—Agriculture, Publicly Operated*, Bulletin 5C in the series. The bulletin was reviewed in the *LABOUR GAZETTE*, September 1959, page 907.

Arbitration Board's Power to Award Damages for Breach of Agreement

Report of arbitration board (Prof. Bora Laskin, Chairman) in dispute between Polymer Corporation Ltd. and Oil, Chemical and Atomic Workers International Union over power of board to award damages for breach of collective agreement

The following report of a board of arbitration in a dispute between Polymer Corporation Ltd., Sarnia, Ont., and Local 16-14 of the Oil, Chemical and Atomic Workers International Union over a board's power to award damages for breach of the collective agreement is published here in full with the consent of the Corporation and of Tom Dillon, President of Local 16-14.

The board consisted of Prof. Bora Laskin, Q.C., Chairman, and C. L. Dubin, Q.C., and M. O'Brien, members.

Although the arbitration was private, the Chairman was named by the Minister of Labour.

The report was signed by Prof. Laskin and Mr. O'Brien.

REPORT OF BOARD

By an award dated September 4, 1958, and signed by the Chairman and Board Member O'Brien, this Board determined that the Union, Local 16-14, violated article 8.01 of the then governing collective agreement between the parties by reason of a strike which occurred on February 7, 1958. In that award the Board referred to the accord of the parties that the assessment of damages should be deferred pending resolution of the preliminary question of union liability. However, the Board did deal with a challenge by the union to the power to award damages and rejected the Union's contention. When the Board reconvened on February 28, 1959, to assess damages, as demanded by the company, counsel appearing for the union took two objections to the company's offer of evidence. One objection was a procedural one, and lay in the argument that the union should have been supplied with particulars as to the amount and kind of damage sought, so that it could, if necessary, defend itself. The company should not be allowed to lead evidence (so the union argument went) until it had supplied to the Union and to the Board an itemized account of its claim and a specification of the loss allegedly suffered and how it was arrived at. Whether or not the Union should have previously asked for directions on this matter need not now be considered, because the company agreed in the course of discussion that it would confer with the union on the furnishing of particulars. The parties also agreed that they would supply to the Board copies of any correspondence or documents touching their deliberations on the nature and elements of loss for which redress is sought by the company.

The second objection raised by the union was to the Board's authority to make an

assessment of damages. Thus, it sought to reopen an issue which the Board had considered in connection with the hearings on the merits and which it had concluded adversely to the union in the award of September 4, 1958. The union characterized this objection as going to the Board's jurisdiction. Because a question of jurisdiction is always open, the Board, despite its reluctance to permit the relitigation of an issue already considered and concluded, permitted the union (over objections by the company) to reopen the question thus raised. Moreover, while the Board was satisfied that it was empowered to assess damages, there had been a number of arbitration awards in recent years in which the power was denied, and the general importance of this matter in the administration of collective agreements made it eminently sensible to have as full an exposition of the problem as counsel were capable of making. Since the union had not been represented by a law-trained spokesman at the hearings on the merits, there was added reason for giving its counsel in the present proceeding the fullest latitude to develop their position. It was agreed that counsel for the union and for the company would present written argument, and that, following an exchange of briefs, they would have a further opportunity of making written reply or rebuttal to the submissions of the opposite parties. The intervention of the summer vacation period made it difficult for the Board to convene in closed session to consider the written representations. This is by way of explanation for the delay in dealing with the parties' submissions, the last of which did not reach the Board until July 16, 1959.

At the outset, the Board wishes to make it clear that it does not regard the union's objection as one going to its jurisdiction. That the Board was properly seized of the dispute which was the subject of its award of September 4, 1958 is unquestionable. The assessment of damages consequent upon a finding of a breach of obligation resulting in compensable loss is a matter of the Board's powers. The silence of a collective agreement on a Board's remedial authority can no more be taken as excluding such authority than can its silence on procedure be taken to thwart the Board in proceeding with a hearing on the merits of a case committed for its determination.

The burden of union counsel's argument against the Board's authority to assess damages is that no such relief is stipulated in the governing collective agreement either generally or in particular relation to breach of a no-strike clause such as article 8.01. Further, for the Board to assess damages would be to add to the collective agreement in the teeth of article 7.03, which forbids the Board to alter, or change, or substitute new for any existing terms or to give a decision inconsistent with such terms. The collective agreement itself limits the issues which may be referred to a Board, not only by article 7.03 but also by article 7.01. On the basis of this exposition, union counsel takes the stand that damages as a remedy for a collective agreement violation which results in loss to the innocent party cannot be awarded in the absence of clear agreement by the parties in that behalf, either generally in a collective agreement or specifically under a particular submission. Counsel emphasized that the collective agreement is a product of voluntary action, and the parties cannot be deemed to have committed themselves beyond that which they expressed in their contractual undertakings.

For what it is worth this Board must reject union counsel's contention that the award of this Board is made final and binding only through the election of the parties and not through compulsion of legislation or regulation. Section 19 of the Industrial Relations and Disputes Investigation Act, *R.S.C. 1952*, c. 152 indicates a legislative policy of final settlement by arbitration of what may be termed contract interpretation disputes; and while it is true that such a requirement depends on whether a party invokes section 19 to have such a provision included in a collective agreement (where they have not mutually incorporated it), the fact is that its inclusion is not a matter of agreement only; it may be forced upon one party by the other.

In expounding the thesis for which the union herein contends, counsel referred to a number of arbitration cases in both Canada and the United States, and to several Court decisions in the United States, all denying assertion of authority by a labour arbitration board to prescribe either penalty or damages for breach of collective agreement obligations where such remedies are not prescribed by the agreement. Counsel were obviously aware that there are arbitration awards and Court decisions which support the power to assess damages despite absence of explicit collective agreement provision to that end, but they sought to distinguish these cases either as based on wider collective agreement terms than those present herein or as turning on principles which, though applied in those cases, have no application to the case at bar.

While it is not in any way a determining factor, this Board would observe that the arguments addressed by the union in this case are the same arguments that have been addressed by companies in most of the cited cases in which power to assess damages was denied. It could not escape counsel's appreciation that if a union need not answer in damages for breach of a collective agreement involving a company in pecuniary loss, neither need a company answer in damages for breach of a collective agreement obligation involving the union or an employee in pecuniary loss; unless, of course, in either or in both cases there is explicit provision for an award of compensation.

Apart from other considerations to which reference will be made below, there is explicit indication in the collective agreement herein (as company counsel has pointed out) that affirmative remedies, not excluding damages, are contemplated to redress collective agreement violations. Article 6.04 (a) puts a 30-day limit on retroactive settlement of a grievance following its first written presentation. It may be urged that this is a reference to settlement in the pre-arbitration stage of the grievance procedure and has no significance in arbitration as such. Without accepting this proposition, this Board is prepared to approach the issue now before it without recourse to article 6.04 (a).

It seems to this Board that fundamental to any approach to the issue is some understanding of the history and purpose of resort to "final" or "binding" arbitration, to use the terms which appear respectively in section 19 of the Industrial Relations and Disputes Investigation Act and article 7.04 of the governing collective agreement. As a matter of history, collective agreements in

Canada had no legal force in their own right until the advent of compulsory collective bargaining legislation. Our Courts refused to assume original jurisdiction for their enforcement and placed them outside of the legal framework within which contractual obligations of individuals were administered. The legislation, which in the context of encouragement to collective bargaining sought stability in employer-employee relations, envisaged arbitration through a mutually accepted tribunal as a built-in device for ensuring the realization of the rights and enforcement of the obligations which were the products of successful negotiation. Original jurisdiction without right of appeal was vested in boards of arbitration under legislative and consensual prescriptions for finality and for binding determinations. In short, boards of arbitration were entrusted with a duty of effective adjudication differing in no way, save perhaps in the greater responsibility conferred upon them, from the adjudicative authority exercised by the ordinary Courts in civil cases of breach of contract. That the adjudication was intended to be remedial as well as declaratory could hardly be doubted. Expeditious settlement of grievances, without undue formality and without excessive cost, was no less a key to successful collective bargaining in day-to-day administration of collective agreements than the successful negotiation of the agreements in the first place. Favourable settlement where an employee was aggrieved meant not a formal abstract declaration of his rights but affirmative relief to give him his due according to the rights and obligations of the collective agreement. In some jurisdictions, as for example, Ontario, this view was emphasized by the fact of statutory withdrawal of the application of Arbitration Acts from labour arbitrations, thus excluding the kind of curial review which was open to the parties to commercial arbitration. To have proposed to union negotiators that collective agreements, so long ignored in law and left to "lawless" enforcement by strikes and picketing, should continue to be merely empty vehicles for propounding declarations of right when the right to strike during their currency was taken away, would be to mock the policy of compulsory collective bargaining legislation which envisaged the collective agreement as the touchstone of the successful operation of that policy.

What was true in the case of aggrieved employees or aggrieved union could be no less true in the case of aggrieved employers. They too were sensitive to the need for stability which collective agreements could produce, and no less alive to the need for

effective machinery to resolve disputes arising in the day-to-day administration of such agreements. In admitting their own responsibility for due observance of collective agreement obligations they could not be expected to agree to any lesser standard of performance by unions and employees. These considerations are aptly summed up in that part of article 1 of the agreement between the parties herein which recites "their desire to provide orderly procedure for collective bargaining, and for the prompt and equitable disposition of grievances."

It is desirable at this point to point up a distinction between the imposition of penalties and the award of damages. It is a distinction taken, and in this Board's view properly taken, in the award in *Canada Cycle and Motor Co. Ltd. and U.A.W. Local 28* (1951), 3 Lab. Arb. Cas. 837. This Board, sitting as a civil tribunal to resolve contract interpretation disputes, has no punitive function but is charged only with redressing private wrongs arising from breach of obligations assumed as a result of negotiation. The Board's remedial authority, if it has any, must be addressed to the vindication of violated rights by putting the innocent party, so far as can reasonably be done, in the position in which he or it would be if the particular rights had not been violated. The redress, if any can be given, must be suited to or measured by the wrong done. A Board of Arbitration is not, however, a criminal court. True enough, it may play a role in passing upon or modifying a penalty imposed by an employer as a matter of discipline, but in so doing it is merely assessing the permissible limits of employer action taken under the collective agreement and not fashioning a penalty to reward an innocent party.

The submission of counsel for the union invites this Board to agree that a reference of an alleged collective agreement violation to arbitration cannot *ipso facto* include the assessment of damages to redress the violation if established. What this view suggests is that the assessment of damages is no less a substantive issue and no less a separate one than the determination of the existence of a violation. It is, of course, possible for these matters to be separated, but they are not ordinarily treated in this way in either civil contract litigation or in commercial arbitration. So far as the latter is concerned there is the high authority of the House of Lords in *Heyman v. Darwins Ltd.*, 1942 A.C. 356 (as expressed by Viscount Simon L.C. at pp. 366-7) that where parties to a commercial contract have agreed to arbitration of differences or disputes thereunder,

then "by the law of England (though not, as I understand, by the law of Scotland), such an arbitration clause would also confer authority to assess damages for breach, even though it does not confer upon the arbitral body express power to do so." The view of the House of Lords as to the law of England is not of course binding upon this Board in the matter before it but it represents a point of view which is consonant with an appreciation of the desirability of completeness and finality in arbitration. This is certainly a desideratum in labour arbitration, as is emphasized by the legislative direction governing such arbitration.

Counsel for the union put the submission above-noted in an alternative way by alleging that there is no obligation, imposed upon or accepted by the union to pay damages. This is the argument, based on an alleged strict adherence to contract language which, at bottom, is the support of those arbitration cases like the *Quaker Oats* case (1954), 5 Lab. Arb. Cas. 1871, and the *Canadian Westinghouse Co.* case (1954), 5 Lab. Arb. Cas. 1898, cited by union counsel in support of their contention. It is an argument which, however put and however rationalized in result, ignore the fundamental fact that the mutual acceptance of arbitration by the parties is not a matter of the undertaking of obligations towards each other but a remission of their disputes to final and binding adjudication by an external tribunal. The central question is hence not one of construing the limits of rights and obligations *inter se* but rather of determining what is involved in arbitration. This determination must take account of the role that arbitration is designed to play in collective agreement administration. It is immaterial in the assessment of this role whether the class of disputes referable to arbitration is large or small. Counsel for the union sought to make some distinctions along these lines in discussing cases where damages were awarded, but surely the question whether damages are assessable is the same regardless of the number or range of substantive issues exposed to arbitration. The pivotal issue is simply whether the exercise of arbitral authority encompasses the effectuation of the right and the enforcement of the obligation which are submitted for both original and final adjudication. One would ordinarily think, especially if seized of any knowledge of the history of collective bargaining and its legislative implementation, that if there is any area of adjudication where abstract pronouncements, devoid of direction for redress of violations, would be unwelcome it would be in labour arbitration. Such attenuation of arbitration

authority must surely be found in explicit restriction rather than in implicit limitation.

It may be useful to pursue the point under discussion in relation to the "intention of the parties" argument that is from time to time advanced in labour arbitration cases no less than in commercial contract adjudication. Thus, it is said that if the parties intended to make themselves answerable before a board of arbitration in damages they would have said so. And since many collective agreements contain specific reference to an arbitration board's remedial powers where discharge or lesser discipline is involved, the "intention of the parties" argument is buttressed by reliance on the maxim *expressio unis exclusio alterius*. Whatever may be the intention of the parties as to the binding effect of their reciprocal rights and obligations, the statutory prescription of s. 18 of the Industrial Relations and Disputes Investigation Act makes the collective agreement terms binding on the union as well as on employer and employees covered thereby. Moreover, s. 19 carries the statutory policy further by reinforcing the binding character of a collective agreement with binding adjudication of disputes concerning its interpretation or violation. It seems to this Board that whether one appraises the situation in terms of the statutory effects alone, or in terms of the intention of the parties (which must be viewed in the light of the statute), the result is the same; and there is nothing in the language of the agreement in this case to suggest that the parties have in any way tried to qualify this result. Indeed, they could not if they tried; and we are remitted again to a consideration of the scope or meaning to be given to their (compelled) intention that the collective agreement shall be binding and that any alleged violation shall be submitted to binding arbitration.

As good an analogy as can be found on this issue lies in the field of international law and, particularly, in the effect given by international law to the voluntary submission of nations to adjudication of disputes arising under treaties to which they are parties. Thus, in the *Chorzow Factory Case* of 1927 between Germany and Poland, the Permanent Court of International Justice said (Series A, No. 9, p. 21; No. 17, p. 29):

It is a principle of international law that the breach of an engagement involves an obligation to make reparation in an adequate form. Reparation therefore is the indispensable complement of a failure to apply a convention and there is no necessity for this to be stated in the convention itself.

This Board would apply the phrase "indispensable complement" to the violation found to exist here. What the Permanent Court of International Justice saw as a

principle of civilized conduct to govern the affairs of "sovereign" nations is certainly no less applicable to parties to a collective agreement. Once the parties have submitted themselves to the jurisdiction of a board of arbitration authorized to adjudicate on an alleged violation of a collective agreement obligation, they have accepted the full range of the tribunal's adjudicative powers (unless expressly limited) which are imminent in such adjudication. To seek to thwart their exercise by appeal to a fictional intention of the parties is to seek indirectly to nullify the duty of observance and performance of collective agreement terms. Nor is the situation changed by any explicit reference to remedial authority in particular cases. To say that this excludes the general power of reparation is again to try to destroy the collective agreement by a sidewind. The very claim of the company in this case shows how fictional is any appeal to the intention of the parties; and this can be matched by reference to claims made by the union in other cases where reparation on behalf of employees is sought. Indeed, our Courts have exploded the notion of "intention of the parties" by holding contractors to the objective manifestation of what they have said. Thus, again we are remitted to the import conveyed by an agreed resort to final and binding arbitration.

This Board turns now to an examination of some of the cases on which counsel for the union relied. Little need be said about the *Quaker Oats* case or the *Canadian Westinghouse Co.* case. Neither in the one nor in the other is there any serious attempt to examine the problem under discussion here. In the *Quaker Oats* case Judge Lane speaking for the Board contented himself with saying that "there is considerable opinion both ways on this matter" and concluded that "a Board of Arbitration in the absence of a specific provision allowing it so to do, is in no position to make an award of damages." This conclusion was based, in part at least if not entirely, on the fact that the collective agreement in the *Quaker Oats* case prohibited the Board to "make any decision inconsistent with the provisions of this Agreement or to alter, modify or amend any part of this Agreement." With respect, this is a question begging conclusion. In the first place, the applicability of the provision to the Board's adjudicative authority is doubtful; and, in any event, one can hardly speak of an inconsistent decision unless one first understands or knows what is a consistent one. To determine first that one is exceeding one's authority and then to rely on the quoted provision to support the determination is like pulling oneself up by one's own bootstraps.

The *Canadian Westinghouse Co.* case is as bare of reasoning on the question at bar as it can possibly be. The Board there expressed its view in a single sentence: "This Board is of the opinion that it has no power to award or to fix the amount of the damage suffered." There are other reported arbitration cases where the same result was reached in the same peremptory terms; for example, the award in *Re Canada Starch Co. Ltd. and United Food Processors Union, Local 483* (1953) 4 Lab. Arb. Cas. 1957. So far as the Board herein is aware, the only attempt made in any reported Canadian arbitration case to give reasons for finding that there was no authority to award damages was in *Re United Steelworkers of America and Deloro Smelting & Refining Co. Ltd.* (1958), 9 Lab. Arb. Cas. 159. This Board proposes to examine the *Deloro* award because it symbolizes the issue on which union counsel herein take their stand. In that case the employer was required by the collective agreement to give three work days' notice of layoff "when reasonably possible." The majority of the Board (which was headed by His Honour Judge Little) concluded that the company could have given the required three days' notice in the case of two affected departments and could have given two days' notice in the third affected department. Having thus found a breach of the agreement obligation, the majority went on to hold that it could not make any direction for monetary redress because there was no express provision for this in the collective agreement.

At the risk of repetition, this Board must register its complete disagreement with Judge Little and his associate. With respect, their approach is based on a fundamental misconception of jurisdiction, and the misconception is compounded by an interchangeable reference to "penalty" and "sanction." Perhaps they were misled in this latter connection by the generalized use of the word "sanctions" in the *Northern Pigment* case (which, incidentally, is not unreported, as the *Deloro* award says, but may be found in (1948) 1 Lab. Arb. Cas. 216). Be that as it may there is a fallacy in the *Deloro* majority award in treating a Board's remedial powers as if they involved questions of initial jurisdiction. If the views expressed in the *Deloro* case are well-founded, then, as previously pointed out, any board of arbitration must find itself stultified at the very inception of a case when the collective agreement fails to specify any course of procedure. Indeed, on what basis does Judge Little (and those who take the same view) presume to apply "rules of interpretation" or "law" to the

issues presented? They are nowhere expressly told to do so, but the reported arbitration cases are replete with "legal" reasoning and application of legal rules. One fairly ancient legal rule is that breach of contract is compensable by damages if loss results therefrom. This is a proposition which a County or District Court Judge does not doubt when sitting on the bench; and he requires no legislative direction to persuade him to apply it. Why then is it doubted in arbitral adjudication of labour disputes? Collective agreement arbitration is today more than a matter of strict contract. As previously pointed out, it operates in Canada by legislative direction which obliges the parties to vest original jurisdiction in an arbitration board empowered to give a final and binding decision.

It is perhaps unfortunate that the attention of the Board in the *Deloro* case to the view expressed here was limited in its focus to the short statement set out in the *Northern Pigment* case. Judge Little's associate on the Board in the *Deloro* case could have apprised him of the very full discussion of the problem in *Re Amalgamated Electric Corp. and United Electrical, Radio & Machine Workers* (1950), 2 Lab. Arb. Cas. 579, where that associate dissented from the majority consisting of the undersigned chairman herein and Mr. C. L. Dubin, Q.C., who is also a member of the present Board. The *Amalgamated Electric* case formed the basis for the exercise of power to award damages in *Re Canadian General Electric Co. and United Electrical, Radio & Machine Workers* (1952) 3 Lab. Arb. Cas. 1090, where damages were awarded against a union for a strike in breach of a collective agreement obligation. This latter case emphasizes what should not be doubted, and that is that the power (not jurisdiction) to award damages is exercisable against the party in breach whether it be employer or union.

In his *Deloro* award, Judge Little states that "it is not in the interests of good labour-management relations that there should be a penalty for every violation of an agreement." There are two obvious comments to make. In the first place, and to repeat what has already been said, there is no question of imposing a "penalty" but merely one of giving reparation for a breach. Secondly, we are not in the realm of negotiation and conciliation, but in the realm of right and obligation. The parties to a collective agreement must be utterly bewildered to know that notwithstanding the successful consummation of an agreement (which by legislation is binding on company, union and employees) and notwithstanding the statutory direction for final

and binding arbitration of contract disputes, they really have no obligation to carry out the agreement because they should have expressed this obligation twice instead of once. Of course, if the views expounded in the *Deloro* case become pervasive enough the parties to a collective agreement may come to believe that in law you must reinforce your binding promises by an additional covenant that they shall be enforceable.

Most of the opposition to exercise of power to award damages for loss occasioned by Breach of a collective agreement came originally from employers' lawyer nominees to Boards and from employers' counsel at Board hearings. Indeed, the nominees and the counsel were, as any survey of the recorded cases will show, one and the same group. This was perhaps to be expected during a period when employers were on the receiving end of grievances as defendants. This Board would be faithless to its mandate if it did not point out that similar opposition developed among counsel for unions when the latter became defendants in grievance arbitration, and there is at least one illustration of this opposition by a union lawyer nominee to a board. It is somewhat ironic that calls from lawyers and lawyer groups for responsibility in labour-management relations—certainly a laudable objective—should be coupled with efforts in concrete cases to reduce the art of adjudication in collective agreement administration to an innocuous exercise. This reduction is sought by mechanical reiteration of warnings against extending "jurisdiction," a term which they never bother to define or analyse, and by joining to this reiteration a specialized and selective canon of contract interpretation drawn from sources which were concerned neither with arbitration at common law nor with the kind of arbitration prescribed by today's labour relations legislation. We have, thus, the unedifying spectacle of an undermining of collective agreements which in sense and in legislation are instruments for promoting stability in labour-management relations and for subjecting such relations to rational legal order.

One of the submissions of union counsel appears to be that there is a difference in an arbitration board's remedial authority where an employee claims redress under the collective agreement and where a company claims redress. The only differences, so far as this Board can see any, are in the nature of the obligation which is allegedly violated and in the readier measure of loss, if loss is shown. The fact that a collective agreement stipulates the worth of an employee's

labour in a wage schedule merely simplifies a tribunal's assessment of damages. It adds nothing to its powers. There is no need to emphasize that the difficulty of assessing damages has never been a reason for denying a claim thereto based on an established breach of contractual or other obligation owed to the claiming party. It is worth noticing in this connection that in an award handed down by Judge Little in *Re Mine, Mill and Smelter Workers Union and A. Silverman & Sons Ltd.* (1958) 9 Lab. Arb. Cas. 39, decided about four months before the *Deloro* case, His Honour awarded one day's satutory holiday pay to an employee who had been improperly denied such pay. It is hardly a tenable distinction between this award of his and that in the *Deloro* case that in the former the collective agreement stipulated that employees "will receive one day's pay . . . for (certain) holidays." This statement does not expressly say that the Board could award such pay if it was improperly withheld. Yet it did so, and rightly too. In the *Deloro* case, employees were improperly deprived of work for certain days for which they would have been paid at known rates if the company had provided the work as it should have done. It will suffice to leave this discussion on this rhetorical note of inquiry: Why should payment (as provided) be directed to an employee who was entitled to be paid although not at work, and yet none be directed (although provided) for employees improperly deprived of work? Surely the answer cannot lie in the ease or difficulty of assessing loss! Of course, the proper answer may be that Judge Little has recanted his *Silverman* award and now considers it wrong. Be that as it may, this Board prefers to hold that *ubi jus, ibi remedium* is no less applicable to characterize the affirmative authority of labour arbitrators than it is to characterize the affirmative authority of the ordinary courts in contract matters.

The United States cases cited in the briefs of counsel need not be reviewed in any detail here. Some are distinguishable on

their facts and others are obviously inapplicable to the kind of issue presented here because they turn on particular legislative considerations. Beyond these, there are cases there on both sides of the line as there are cases here where opinion is divided. This Board is not fettered in its choice of a proper conclusion by those determinations, whatever they be. It is in no way insensitive to the plea of union counsel not to depart from the collective agreement and not to add to it something that is not there. It is of opinion, however, that the plea is misconceived and that it in truth invites the Board to be party to an unnecessary dilution of its own authority and to an abatement of the force of deliberately negotiated obligations. The Board feels that it can do no better than reiterate the principles expounded in the *Amalgamated Electric Corp.* case (1950) 2 Lab. Arb. Cas. 597, and in this reiteration emphasize the reciprocal nature of its authority, whether the violator be the company or the union.

It follows from what has been said that the union's challenge to this Board's power to award damages for breach by the union of article 8.01 is rejected and the Board will proceed to assess the company's damages at a hearing to be convened by the Board upon advice from the company that particulars as mentioned at the outset of this award have been furnished to the union and upon receipt of copies by members of the Board.

The Board is indebted for their submissions to Mr. G. M. Desaulniers and Mr. W. E. Rentfro, who appeared as counsel for the union, and to Mr. J. W. Healy, who appeared as counsel for the company. Dated at Toronto this 10th day of November, 1959.

(Sgd.) BORA LASKIN,
Chairman.

(Sgd.) M. O'BRIEN,
Member.

White-collar workers in the United States manufacturing industry are increasing in number at a faster rate than hourly-rated employees, the U.S. Commerce Department has reported.

Revealing that payments to salaried workers now amount to one third of the industry payrolls, compared with one fourth in 1947, the Department states that the increase has occurred not because the salaried workers are making more money but because their numbers have risen so much.

In fact, the pay of salaried workers increased 64.6 per cent since 1947 compared with 84.9 per cent for wage earners.

The number of salaried workers in manufacturing has risen from 2.5 million in 1947 to 3.9 million in 1959. Over the same period, the number of wage earners in the industry has declined, from 12.7 million to 12.3 million.

Report of Royal Commission on Price Spreads of Food Products

In period 1949-58, farm prices remained practically unchanged but retail food price index increased by 20 per cent, Commission reports. Permanent council on prices, productivity and incomes to review food industries is recommended

Between 1949 and 1958 farm prices remained practically unchanged, but the retail food price index increased by 20 per cent; as a result the farm value of food as a proportion of retail value dropped from 59 to 44 per cent, it was estimated by the Royal Commission on Price Spreads of Food Products, whose Report was published last month.

The Commission, under the chairmanship of Dr. Andrew Stewart, found that in agriculture there is a "compulsive mechanism which . . . translates increased efficiency into lower prices." In the industries that manufacture and distribute food products, however, this compulsion is lacking. Competition in these industries, the Commission's Report shows, has been in services rather than in prices.

"Where reduced retail food prices are offered, they tend to be referred to as 'specials'. The implication is that the circumstances are unusual, and that prices may be restored later. Indeed the implication is a correct one. The objective of the retailer and of the processor-supplier generally is not to undermine the customer's acceptance of a customary price," the Report declared.

The Commission's terms of reference required it to inquire into "the extent and the causes of the spread between the prices received by producers of food products of agricultural and fisheries origin and the prices paid by consumers therefor," and to determine whether such spreads are "fair and reasonable," and to make "such recommendations as they deem appropriate if any such price spreads are found to be excessive."

The Commission says that it found "considerable difficulty in coming to grips with the concept of a 'fair and reasonable' spread." In the first place, it thought that it was not possible to discover a particular spread for any commodity. The retail price is the price paid to the primary producer for the food material, "plus prices for the services to consumers which are provided in the marketing system." These two prices can move independently of each other for very good reasons, the Report points out. The "services to consumers . . . provided in

the marketing system" vary greatly from one product to another, and may vary from time to time for the same product.

The only practical criterion of the reasonableness of spreads, the Commission found, was the returns to labour and capital in the industries providing the intermediate services. To decide the "reasonableness" of such returns, however, presented difficulties. It was difficult enough, the Commission said, to arrive at a generally acceptable definition of a "fair and reasonable" level of profits; but it was still more difficult to decide what constituted "fair and reasonable" wages.

The reason for this particular difficulty with regard to wages "is that in judgments with respect to the reasonableness of wages there is an increasing tendency for income considerations to become thoroughly mixed up with the aspect of wages as a payment for services which provides incentive for the provision of particular labour services."

There is a growing general tendency to assume that labour is not, or should not be expected to be, fluid and mobile; that high wages are not, or are not to be considered as, a magnet which will draw more workers into the industry; that low wages are not or should not be allowed to operate as a force resulting in the withdrawal of workers and their employment elsewhere.

With regard to profits, the Commission, in spite of the difficulties involved in deciding what was fair and reasonable, felt satisfied that "a rate of return in excess of 10 per cent in the food industries justifies comment when the rate of return in industry generally is averaging about 7.3 per cent." It went on to discuss two cases, the prepared breakfast foods industry and the retail chain stores, in which the rate of return on net worth has exceeded 10 per cent throughout the 1949-58 period.

"Over the nine years the average rate was 29.2 per cent for three breakfast food firms and 17.1 per cent for five corporate retail chains," the Report says. Although it singled out these cases, the Commission said that it did not mean to imply that these were the only situations in which there might be reason to be concerned about the effect of industry performance on the unorganized primary producer and the unorganized consumer."

Regarding the prepared breakfast foods industry, the Report said:

A few firms... have been successful in creating in the minds of consumers an attachment to a name, or a firm or of a product, and in maintaining this attachment by large expenditures applied for the purpose of perpetuating the image of superiority.

While it did not impugn the technical excellence of the products in question, the Commission said that "there is no physical characteristic of the product which could not be duplicated by a competent competitor."

During the past 10 years the prices of these products have advanced rapidly enough to "preserve the high levels of profits being earned in the industry," the Commission said. It expressed the opinion that "in terms of a fair and reasonable return on capital, there was no necessity for so rapid an advance in prices."

Among the chain food stores the Commission also found "abnormally high profits throughout the period . . . in comparison to levels of profits elsewhere." However, in this case "there has been a noticeable tendency for rates of profits to decline over the period." The Commission's investigation did not go back beyond 1949, by which time the chains were well established, the Report said.

The Commission thinks it likely that the rapid expansion of the chain stores that began in 1954 may eventually lead to the emergence of excess capacity and possibly "price wars," with reduced prices. It also admits that the expansion might not have been so rapid had profits not been so high.

The Commission makes the remark that "there is no law which prevents firms from charging as high a price as they can get. However, . . . the tendency for firms in all or most industries to extract the maximum prices they can get makes more difficult efforts to achieve a stable general level of prices, and is one of the factors making for increases in the level of prices."

According to the report, "investment in slaughtering and meat packing, canned and preserved fruits and vegetables, and bakery products earned less than 10 per cent and less than the average for all manufacturing industry."

It also says that "new corporate investment in the food industries (except food retailing) has not expanded at as rapid a rate as has corporate investment generally, i.e., in other parts of the economy, and our analysis or wages indicates that wages in the food industries have not advanced more rapidly than wages elsewhere. Although the food industries have been advantageously

placed by the decline in the prices of their materials, we conclude that they have not set the pace in establishing higher prices for services."

Although the Report says that farm prices were at about the same level in 1958 as in 1949, it also says that "Since 1951, the food industries have procured their farm materials at reduced prices, but prices paid by consumers have advanced. Because farm prices have actually declined, it is evident that the increase in prices at retail is not due to an increase in the price of farm material."

Our view is that the decline in farm prices which began in 1952 was due in large part to the pressure of agricultural supplies and to the conditions experienced in export markets . . . The pressure of agricultural supplies was induced by technical innovations applicable to agriculture and by rising prices prior to 1951. Because of the structure of the farm industry, there was an expansion of output with a fall in prices.

The Commission is convinced that "the structure of the food marketing industries has . . . contributed to advancing prices to consumers, although again we are unable to measure the effect of structure." As has been already mentioned, the Commission is critical of the food industries' policy of adding services rather than reducing prices.

We do not wish in any way to imply that the food industries should not, or should not be expected to, offer to consumers new services associated with food purchases. However, we are obliged to express our concern about the tendency, which we believe to be evident and operative in the period we have studied, for the firms in the food industries to be more active in offering consumers added services than lower prices. We are satisfied that this condition is one of the causes of the increase in price spreads.

"The reasons for the pre-occupation of firms in the food industries with service competition rather than price competition are to be found in the particular conditions of the recent period and in the structure of the industries." The conditions of the recent period that have contributed to this result, the Report says, consist in declining farm prices, increasing consumer demand and slight resistance to higher prices by consumers.

The shift in the emphasis towards competition in services is characteristic of industries dominated by a few large firms or where the product is of a kind that can be differentiated in the minds of consumers.

The Commission recognizes, however, that price competition is not entirely absent from the strategy of the large firms.

The services given by the food industries, the Report divides into three main categories: first, the services that are suited to

the convenience and behaviour of customers; second, services in the processing of food materials made possible by technological advances, such as food freezing; and third, "various forms of promotional activities, e.g., packaging, advertising, give-aways and contests.

"We think that the extensive use of non-price promotional devices by the large chains and processors has been a major reason why they have expanded at the expense of the smaller firms," the Commission says. "We are less convinced that promotional activities among the large chains have had much effect on their volume of business in relation to one another."

It believes that "among the large firms in food merchandising a substantial part of the promotional expenditure must be dissipated in competitive rivalry."

To illustrate its view of the effect on the consumer of non-price promotional devices, the Commission instances the introduction by one firm of a new and more expensive container instead of a reduction in price. The consumer in this case gets a better container, but not by her own choice. On the other hand, if the price had been reduced she would have had a choice as to the way in which she spent the money saved by the price reduction.

In many instances, promotional expenditures are undertaken as an alternative to a reduction in price. The significant feature of a reduction in price is that the buyer can, if she chooses, reduce her expenditure on the particular commodity and turn the released expenditure to other things... Reduction of price gives the consumer the widest possible extension of choice... In our opinion, forms of non-price promotion which substitute for price reductions are detrimental to the welfare of consumers. The extent of this activity is evidence of an increasing reluctance on the part of business firms to offer reduction in prices.

Food Industry Wages

"We believe that if a continued increase in the general level of retail prices is to be prevented there must be an increasing disposition on the part of those who sell commodities to search for ways of reducing prices," the Commission said. "By this we mean a shift in emphasis away from competition in services in so far as services are a substitute for price reductions."

Regarding wages paid in the food industries, the Commission found by means of a questionnaire that, for food marketing as a whole, earnings of employees increased by about 50 per cent between 1949 and 1957; and, making allowance for the rise in the cost of living, real earnings increased by about 23 per cent during the period, or at an average rate of 2.6 per cent a year.

This increase in real incomes is slightly greater than for Canadian consumers generally, which was about 2 per cent a year.

Weekly wages in the foods and beverages processing industries during the same period rose by 53 per cent, compared with 55 per cent for manufacturing as a whole, according to the Report.

However, the Report says that "throughout the period wages in the foods and beverages industries have remained significantly below wage rates in all manufacturing industries."

Comparing the returns to labour and capital in farming with returns to labour and capital in the food industries in 1958, the Report says:

The average net farm operating income per non-paid farm worker in 1958 was \$2,582 and represented a 21-per-cent increase over 1949... Annual earnings of \$2,582 represent weekly earnings of \$49.65. This measure represents returns to farmers and their families from farming operations only and does not include any income that operators and their families may have earned from non-farm sources. However, the fact that these average earnings are about the same as the lowest levels of earnings of employees in food processing suggests relatively low returns to labour in agriculture. But the farmer also provides capital. The returns to labour in agriculture are, therefore, clearly relatively low. It is quite evident that the returns to capital in farming are also relatively low.

Returns to hired labour in agriculture are found in the statistics of farm wage rates. Based upon a monthly wage of \$74.87, including the value of room and board, paid farm labour had an annual income of \$898 in 1949. By 1958, the monthly wage on the same basis as the foregoing had risen to \$101, or an annual rate of \$1,212, representing an increase of 35 per cent. In terms of real income, however, the paid farm labour realized only an 8-per-cent increase in this period.

Recommendations

In the preamble to its recommendations the Commission said, "The problem is to discover some way of inducing industries in which there are few firms to contribute to the welfare of consumers generally and to stability of the general level of prices by passing along some, or more of, the gains from increased efficiency in the form of lower prices."

This can be brought about only by influencing the policy of those engaged in the food industries, since it will not occur automatically, as it does in agriculture, the report says.

The Commission recommends "that the Government of Canada maintain a firm position in defence of a stable level of domestic prices, and that the people of Canada lend their support to all policies appropriate to this end."

It further recommends "the establishment of a permanent Council on Prices, Productivity and Incomes which would keep the whole area of the food industries under review and which would present a yearly report to the Governor in Council." This council would be an independent body provided with funds to enable it to operate independently for a period of five years at a time.

The council's special duty would be "to review the changes in relative prices and changes in incomes which have occurred," and to "give particular attention to changes in productivity and to situations in which increasing efficiency offers prospects of price reductions."

Another recommendation of the Commission, with particular reference to the high rates of return on capital and the high promotional expenditures in proportion to sales that it had found to be characteristic of the breakfast foods industry and the chain stores, was that "there should be means to disclose situations in which there is a combination of high rates of profit and high promotional expenditures which persist over a period of time, and to bring them under scrutiny."

The Report points out that machinery for this type of inquiry already exists under the Combines Investigation Act, but it says that the officials concerned may require more resources to carry out the necessary functions effectively.

Another recommendation is that "if 'stamp plans' are continued, it should be required of the retailer that at the time purchases are made the customer be given the alternative of a specified cash discount." The Commission adds that it "does not wish to lend any semblance of support to stamp plans as they are now devised."

Two suggestions followed this recommendation. (1) "As an alternative to any possible limitation of promotional expenditures (or revenues) retail firms might elect, as they are permitted to do under existing legislation, to pay patronage dividends similar to those paid to members and non-members of consumer co-operative organizations." (2) Where there is a high level of return on investment and there seems to be no way of effecting a reduction in prices, profits above "a fair and reasonable return on investment" should be taxed at a higher rate.

The Report recommended that efforts should be made to provide "more informative labelling, standardization of container sizes, and simplification of grading," and also towards the establishment of "a code

of ethics designed to guide food advertisers generally, and particularly to reduce misleading advertising."

Another recommendation was that an office should be established in the Department of Justice to "prepare, publish and keep up to date a report on legislative measures to protect consumers, and on services—governmental, trade, and voluntary—available to aid consumers."

The Commission recommended a federal statute providing for the incorporation of co-operatives.

The Commission did not believe that the operation of compulsory farm marketing boards would lead to any significant reduction in price spreads.

Although it may be impossible to bring an effective consumer viewpoint to bear on the market, individual consumers can themselves influence the course of prices, and make their contribution towards more stable prices by recognizing that services must be paid for, and that they may not be able to get all the services they would like to have without increasing the cost of living, the Commission said.

Fisheries

The part-time and sporadic nature of the occupation makes it difficult to decide who is a fisherman, and even more difficult to establish relative levels and to trace trends in the income of fishermen, as the Commission did in the case of agriculture, the Report says.

The Commission was unable to say whether net real incomes per worker in the fishing industry have increased or decreased during the last 10 years. "Although in certain years returns per fisherman in the primary fisheries of British Columbia are relatively attractive, returns to labour and capital in primary production are, on the whole, considerably lower than in the marketing of fish," the Commission says.

However, in contrast to the marketing of farm products, where spreads have increased more rapidly, the fisherman's share of the consumer's dollar has remained fairly constant, the report states.

Profits cannot be judged to be excessive, the Commission thought, and "wages, which tend to be higher in British Columbia, are not out of line with returns to labour in comparable alternative occupations in the region."

Nevertheless, the difficulties of the fisheries are described as "acute and persistent." Efforts to improve productivity have not brought advances comparable to those in

other industries. "Although increased productivity of the fishery resources is possible, gains parallel to the kind being experienced in agriculture have not generally been occurring."

One of the Commission's recommendations is that consideration be given to the establishment by governments of a system of fish grading, based on size and quality.

It also recommends that enactment of "a Federal Fish Marketing Act which would enable provincial governments wishing to do so to pass their own legislation, and thus to regularize the negotiation of prices to fishermen." In making this recommendation the Commission emphasized "the desirability of keeping the 'price spreads' as close as possible to those which would be expected under reasonably competitive conditions."

CCCL and QFL Briefs to Quebec Cabinet

Both labour organizations make recommendations regarding protection of right of association, urge revamping of Labour Relations Board, and call for revival of Superior Labour Council. Premier indicates adoption soon of some proposals

(Translation)

The Canadian and Catholic Confederation of Labour presented a brief to the Quebec Cabinet on November 4 and the Quebec Federation of Labour (CLC) a week later. The CCCL had not submitted a brief to the provincial Government since 1956, asserting indifference on the part of the late Premier Duplessis.

In its submission, the CCCL suggested important changes concerning the right of association and the exercise of this right, in the Labour Relations Board, and regarding the Superior Labour Council. The QFL brief called especially for recognition of freedom of association for civil servants, recognition of the right to strike for all citizens, democratization of education, establishment of a health insurance plan in the province, and nationalization of the sources of energy.

Delegations from both organizations were received by Premier Paul Sauvé. The CCCL delegation was led by its General President, Roger Mathieu; the QFL group by President Roger Provost.

CCCL Brief

In addition to suggesting the establishment of legislation relating to the safeguarding of association, the reorganization of the Labour Relations Board and the revival of the Superior Labour Council, the CCCL drew the attention of the Premier and his Cabinet to more than 300 resolutions passed at its last annual convention (L.G., Dec. 1959, p. 1267).

Premier Sauvé gave the CCCL delegation to understand that a bill would be tabled at the next session to improve labour-management relations, and that a number of the CCCL's suggestions might be included in it.

At the close of the meeting Mr. Mathieu expressed his personal satisfaction. "I consider that this was an extremely profitable interview," he said, "full of promise for the future."

Having pointed out that the right of association is not disputed in Quebec province, the brief stressed the fact that "a host of obstacles are set up that prevent the free exercise of this right."

In order to remedy this state of affairs, the CCCL believes the Labour Relations Act should provide for:

—The obligation for an employer to take back any worker dismissed for union activities, without loss of wages and without affecting the worker's acquired rights;

—The option, for the employee, to be paid damages covering the losses (wages and other benefits) he has sustained as a result of his illegal dismissal, if he prefers not to return to his job;

—The setting of fines sufficiently high to discourage anti-union employers from having recourse to dismissals for union activities;

—The assigning to the employer of the burden of proof when he has dismissed an employee under the circumstances described above.

Stating that union recognition is a right when the union represents a majority, the brief reproached the Quebec Labour Relations Board with considering it "an exorbitant privilege."

The CCCL recommended revamping the Board. Among other changes, it suggested:

—An increase in the number of members to seven, three representing the employers and three the wage-earners, with a chairman appointed by the Lieutenant-Governor in Council;

—Provisions enabling the association that recommended a member to have him re-placed;

—Sittings of the Board on a parity basis;

—That members of the Board not be made civil servants;

—Publication of the Board's reasons for decisions;

—The making of decisions within 30 days;

—Limiting of the Board's power to revoke certification to two reasons—loss of majority or domination of a union by an employer.

The CCCL also recommended that pay for members of the Board be sufficiently high to attract persons well qualified for the duties.

The brief also pointed out that the CCCL "would look favourably on the restoration of the Superior Labour Council." The Council is an advisory organization consisting of some thirty specialists in labour and social questions; it has not met for about ten years now.

According to the CCCL, the Council would provide the Minister of Labour with "first class" plans and opinions, and would also make possible meetings at which problems of common interest could be considered.

In reply to the brief, the Premier said that he would study the suggestions made by the CCCL with a great deal of sympathy, and, among other things, that he had every intention of putting an end to "dilatatory manoeuvres" in labour-management relations so as to expedite the collective bargaining procedure.

"You have expressed the hope," said Mr. Sauvé, "that your visit will lead to improved legislation and will cause harmony to prevail in order and justice. Without wishing to disclose the Government's plans, I may say that this wish will certainly be realized to a very great extent."

Mr. Mathieu was accompanied by the General Secretary, Jean Marchand, who read the brief, by the members of the Confederal Bureau, and nearly 200 representatives of the CCCL.

QFL Brief

The QFL brief also called for more severe penalties for employers who violate the right of association, those who set up "company unions" and those who refuse to bargain "in good faith." It also requested reform of the Labour Relations Board, revival of the Superior Labour Council, a public inquiry into existing labour legislation, changes in the Workmen's Compensation Act, anti-discriminatory legislation and a number of social measures.

Stating that it represents 235,000 trade unionists in the province of Quebec, the QFL said that it aims not only to promote the interests of the workers but also "to protect and strengthen our democratic institutions, to secure full recognition and enjoyment of the rights and liberties to which we are justly entitled."

The QFL opened its brief with the question of the right of association, suggesting that the courts be empowered to "compel the employer guilty of such violation to rehire the employee dismissed for union activity, to pay to the plaintiff the full indemnity for the salary lost, and to pay a fine of not less than \$1,000 a day from the date of the unjustified dismissal to that of the rehiring of the employee."

The brief also asked for the abolition of *ex parte* injunctions in applications for union recognition and suggested that the law provide for the maintenance of the certificate of union recognition and of the collective agreement concluded between the two parties when the employer changes its name or contracts work out to subcontractors.

In the field of freedom of association, the QFL added, the provincial Government should set an example by first recognizing the right of association of its own employees.

Among the changes suggested in connection with the Labour Relations Board was an increase in the number of members "so that the Board may be divided into two bodies and deal quickly with routine business by sitting simultaneously at Montreal and at Quebec." It was also suggested that the Board should have definite regulations and that it should publish its decisions, with reasons.

The Federation maintained that one way to force the employer to bargain "in good faith" would be to give free access to conciliation and arbitration. According to the brief, the refractory employer will not agree to bargain in good faith until he knows that he has nothing to gain by delaying a settlement indefinitely. The QFL also suggested that the work of conciliation and arbitration should be entrusted to "competent, honest and neutral persons who command the respect of the employees as well as that of the employer." Conciliation officers should be better paid and the chairmen of the arbitration boards should be chosen from a list drawn up in advance.

The QFL requested the right to strike for all citizens, regardless of their occupation. "We claim the right to strike for

the firefighters of the province of Quebec," the brief stated, "as we claim it for municipal and provincial employees and for public service employees." Pointing out that those workers who do enjoy the right to strike make only moderate use of it, the QFL stated that it "constitutes an offence to a whole category of citizens to suppose that they will go on strike in an inconsiderate manner, without taking into account the common good."

With regard to industrial accidents, the brief requested, among other things, that compensation be increased to 100 per cent of the accident victim's wages and that allowances to widows and orphans be brought up "to a realistic level."

The Federation also protested against discrimination, calling for "fair employment

practices" legislation as well as an "equal pay for equal work" law. It requested also "the democratization of teaching" and the establishment of a "complete and contributory health insurance plan."

Addressing the delegates, the Premier revealed that an order raising the minimum wage in the province is now being prepared and will soon be submitted for Cabinet approval, that the Superior Labour Council is to be reconstituted, and that important changes are to be made in the Labour Relations Board.

Mr. Sauvé added that the suggestions contained in the QFL brief would be given very careful consideration and that he would examine the possibility of writing into provincial legislation "everything which is consistent with the public interest."

Industrial Fatalities in Canada during the Third Quarter of 1959

Deaths from industrial accidents numbered 321 in third quarter, 5 more than in second but 21 fewer than in same period of 1958. Largest number of fatalities was in construction, where 62 occurred; 59 occurred in manufacturing industry

There were 321* industrial fatalities in Canada in the third quarter of 1959, according to the latest reports received by the Department of Labour. This is an increase of 5 from the previous quarter, in which 316 were recorded, including 71 in a supplementary list. In the third quarter of the previous year, 342 fatalities were recorded.

During the quarter under review there were no accidents that resulted in the deaths of three or more persons.

Grouped by industries (see chart page 46), the largest number of fatalities, 62, was in construction: 33 in buildings and structures, 23 in highways and bridges, and 6 in miscellaneous construction. Fatalities recorded in this industry for the same period in 1958 numbered 87: 34 in buildings and structures, 29 in highways and bridges, and 24 in miscellaneous construction. During 1959's second quarter, 69 fatalities were

listed: 44 in buildings and structures, 19 in highways and bridges, and 6 in miscellaneous construction.

During the quarter, accidents in manufacturing resulted in the deaths of 59 persons; of these, 16 were in iron and steel products, 11 in wood products, 6 in non-

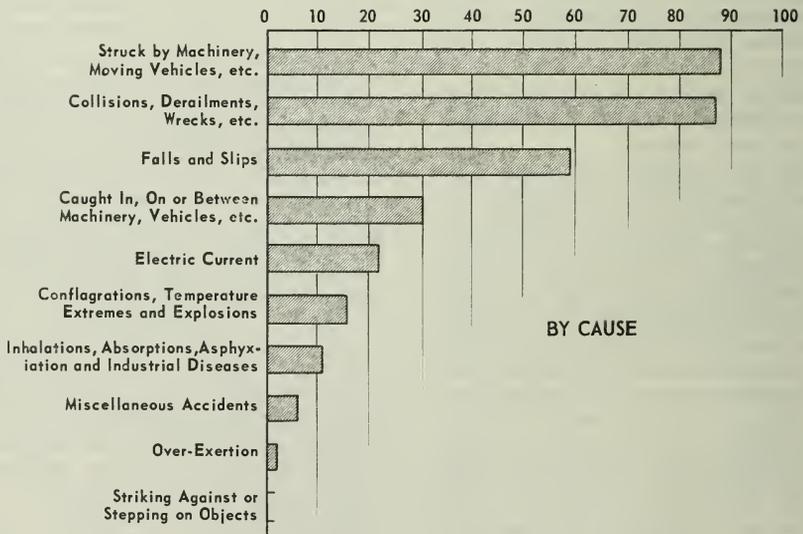

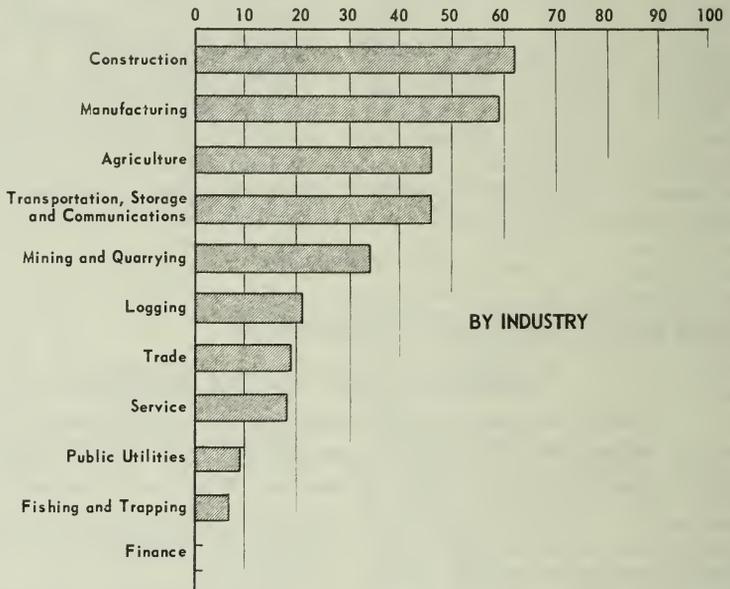

The industrial fatalities recorded in these quarterly articles, prepared by the Working Conditions and Social Analysis Section of the Economics and Research Branch, are those fatal accidents that involved persons gainfully employed and that occurred during the course of, or which arose out of, their employment. These include deaths that resulted from industrial disease as reported by the Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation. Similarly, a small number of traffic accidents which are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

*See Tables H-1 and H-2 at back of book. The number of fatalities that occurred during the third quarter of 1959 is probably greater than the figures now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly. The figures shown include 88 fatalities for which no official reports have been received, including 45 in agriculture alone.

INDUSTRIAL FATALITIES IN CANADA

Third Quarter of 1959

Source: Economics and Research Branch, Department of Labour.

metallic mineral products, 5 in non-ferrous products, and 4 each in paper products, transportation equipment and electrical apparatus. During the same period last year, 48 deaths were reported. Of these, 13 were in iron and steel products, 8 each in wood products and non-metallic mineral products, 7 in food and beverages, and 5 in transportation equipment. Accidents in manufacturing during April, May, and June of 1959 resulted in the deaths of 41 workers; of these, 15 were in iron and steel products, 10 in wood products, 5 each in paper products and transportation equipment, and 3 in non-metallic mineral products.

There were 46 fatalities in agriculture, an increase of 8 from the 38 recorded in this industry for the same period of 1958. In the second quarter of 1959, 20 fatalities were reported.

During the quarter under review, there were also 46 fatalities in transportation, storage, and communication. Of these, 20 were in steam railways, 15 in local and highway transportation, and 2 each in air transportation, storage, and telegraph and telephone. In the same period of 1958, there were also 46 fatalities: 18 in local and highway transportation, 17 in steam railways, 6 in water transportation, 4 in air transportation and 1 in telegraph and telephone. Industrial fatalities in this industrial group during the second quarter of 1959 numbered 39—14 in local and highway transportation, 11 in steam railways, 8 in water transportation, 3 in air transportation, 2 in storage and 1 in telegraph and telephone.

There were 34 fatalities in mining and quarrying: 20 in metal mining, 6 in coal mining, and 8 in non-metallic mineral mining. During the same period the previous

year, 33 fatalities were listed: 23 in metal mining, 1 in coal and 9 in non-metallic mineral mining. During 1959's second quarter, 38 workers were killed: 28 in metal mining, 4 in coal mining, and 6 in non-metallic mineral mining.

In the logging industry there were 21 fatalities recorded as against 28 in the same period of 1958. During 1959's second quarter, 35 lives were lost in this industry.

An analysis of the causes of the 321 fatalities recorded during the third quarter (see chart page 46) shows that 88 (27 per cent) were under the heading "struck by machinery, moving vehicles, etc.", of which 8 were under the heading "struck by tools, machinery, cranes, etc.", 29 under "struck by moving vehicles" and 51 under "struck by other objects". The cause "collisions, derailments, wrecks, etc." was responsible for 87 deaths: 48 in accidents involving automobiles and trucks, 23 involving tractors and loadmobiles, 8 involving aircraft, and 4 involving watercraft; 2 deaths from this cause occurred in each of steam railways and other transport agencies. In the classification "falls or slips" 59 fatalities were recorded, all of them from falls to different levels. Thirty fatalities were listed in the "caught in, on, or between" category; of these, 10 were caused by "tractors and loadmobiles", 8 involved "conveying and hoisting apparatus" and 4 were in the "machinery" category.

By province of occurrence, the largest number of fatalities was in Ontario, where there were 108. In Quebec, there were 58; in British Columbia, 57; and in Alberta, 32.

During the quarter under review, there were 119 fatalities in July, 109 in August and 93 in September.

Canada Year Book, 1959 Edition, Released for Distribution

The 1959 edition of the *Canada Year Book* is now available.

Like its predecessors, the 1959 Year Book, the 53rd in the present series, presents a great range of up-to-date statistical material and analytical commentary on almost every measurable phase of Canada's development—population, agriculture, forestry, mineral production, manufacturing, marketing, communications, transportation, power development, labour force, wages, prices, health, vital statistics, banking and finance, education, external trade, national income and gross national product. Numerous charts, diagrams and maps are included.

The price of the *Canada Year Book* is \$5.00 for the regular cloth-bound volume. Copies are obtainable from the Superintendent of Publications, The Queen's Printer, Ottawa, or from the Information Services Division, Dominion Bureau of Statistics, Ottawa.

Work Attitudes at Age 65

U.S. Committee sponsors survey to determine attitude of 64-year-olds towards working beyond age 65, and attitude of managements towards retention of these workers. Forty-seven corporations, each with 10,000 or more employees, replied

A survey was recently sponsored by the Employment and Retirement Committee of the National Committee on the Aging of the United States to determine the attitude of men nearing age 65 with respect to working beyond age 65 and the attitude of management as to these men's ability to continue productive work.

Two hundred and fifty-four industrial corporations were invited to participate in the study and question their 64-year-old employees. Information obtained was intended primarily for management's own guidance, but all the companies were invited to report their findings to the Committee. Forty-seven corporations, each employing more than 10,000 persons, representing a cross section of industry, reported on 2,212 employees aged 64. Of these 47 corporations, 12 had compulsory retirement regulations at age 65, 12 at age 68, three at age 70, and 19 reported no mandatory retirement age. One firm did not specify its retirement regulations.

Based on reports made available to the Committee, the findings, summarized, were:

1. The percentage of male employees desiring to continue working was lower in those companies with mandatory retirement at 65. Among the companies with mandatory retirement at age 68 or with no compulsory retirement age the percentage was much higher. The average percentage of those male employees wishing to continue in their regular jobs ranged from 40 to 60 per cent.

2. Of those male employees wishing to continue their regular jobs after age 65, about 66 per cent were found acceptable to management.

3. The percentage of male employees wanting to work after 65 and actually retained varied widely. Retentions of 50 to 85 per cent were common.

4. The primary reason for wanting to continue work past 65 was found to be financial. Job satisfaction and need for useful activity were frequently secondary reasons.

5. The primary reason for wanting to retire at age 65 was the desire for different or less exacting activity, commonly ex-

pressed as the desire to "take it easy." Health and financial independence were frequently secondary reasons.

6. While the evidence was limited, "there appeared to be some tendency towards higher mandatory retirement ages and lower optional retirement ages."

Participating companies in the survey were asked to state what changes, if any, in retirement policy with respect to age had occurred in the past five years.

Of the 47 reporting companies, two had raised the mandatory retirement age from 65 to 68, two had lowered optional early retirement ages to 55 and 58, one had lowered normal retirement age from 68 to 65, five adopted a mandatory retirement age in lieu of no mandatory retirement age (one at 65, three at 68, one at 70), and one had adopted compulsory retirement at 65 unless special exceptions were granted. The remainder did not report changes.

The "Work Attitudes at Age 65" survey was designed to stimulate management interest in developing, for its own guidance, reliable information on work attitudes and work abilities of male employees close to the age at which Social Security benefits in the United States become payable. Such information appeared to be scarce for at least two plausible reasons: (1) management has not yet felt the full-cost impact of higher pension benefits and longer pay-out periods, and (2) the dimensions of the problem are formidable.

Participating companies were asked to suggest areas of research needed to fill gaps in existing information. One correspondent stated that "There is real need for the formulation of valid criteria by which physiological age can be evaluated and for the determination of the age level on that scale at which retirement should be compulsory. There is good reason to believe that some men (and women) are younger at 75 than others at 55 and it would seem illogical for a company either to deprive itself of the valuable services of the former or be encumbered by the latter in the hope that they could be 'nursed' through to 'normal' retirement date at which time they would become eligible for retirement benefits."

Alberta Equal Pay Brief

Business and Professional Women's Clubs of Alberta submit brief* recommending changes in provision in Alberta Labour Act that requires employer to pay a woman no less than he pays man for "identical or substantially identical" work

In 1957, the Alberta Legislature passed an equal pay law by adding a provision to the Alberta Labour Act requiring an employer to pay a woman no less than he pays a man for "identical or substantially identical" work.

When the Alberta Minister of Labour recently called a conference on labour legislation, the Business and Professional Women's Clubs of Alberta presented a brief recommending changes in this equal pay provision. The position of the Business and Professional Women is that "the job itself be paid for regardless of whether it be performed by men or women," a principle endorsed by the members of their organization at all levels, local, provincial, national and international.

"The present equal pay legislation," the brief asserted, "fits some industrial jobs wherein the similarity of work is easy to identify, but we doubt if this is so in many office jobs where a different title may disguise the facts. In order to implement the intent of the equal pay section of the Labour Act, we suggest that special attention to this section could be given by the inspectors in the course of the discharge of their duties."

Referring to the minimum wage provisions of the Labour Act, the brief states: "The difference in the (minimum) wage level for men and women in some categories does not carry out the intention of the equal pay legislation. We therefore request that minimum wage levels for men and women be the same. We further recommend a general increase in the minimum wage levels to bring them into line with present day cost of living."

The brief urged the Labour Department to "inaugurate an educational and interpretative program, directed to employers, employees and the general public" in order "to develop a sounder appreciation of equal pay legislation and to encourage a broader attitude to basic human rights." The posting of the equal pay law in places of employment as is done in the case of the hours of work provisions was also requested.

*Excerpts from the brief used by permission of the provincial president.

The Business and Professional Women's Clubs also recommended legislation providing for sick leave to be granted to all workers and for the right of appeal in all sections of the Labour Act.

Swiss Women's Exhibition Financial Success

A surplus of over 2,000,000 Swiss Francs was obtained from the Swiss Women's Exhibition held in July 1958 in Zurich (L.G. 1958, p. 1393).

Sixty per cent of this money will be spent on grants and loans for training and re-training of women who are unable to obtain financial help elsewhere, and for centres advising women on financial and business questions. Fifteen per cent will go to the Swiss Institute for Home Economics for the development of its advisory services for housewives. Half of the remainder will be used to help various women's organizations that contributed to the work of the exhibition to carry on their work in citizenship education of women. The remainder will be given to the General Federation of Swiss Women's Associations to finance studies on topical questions of an occupational kind, such as part-time work, new professional openings for women, and the employment and domestic problems of women with small children.

Older Women Workers in Norway

A Committee appointed by the Norwegian Government in 1956 to study the problem of employment for "the not quite so young women" has recently submitted its report. Chief among the recommendations are the following:

That special persons should be appointed to take care of the question of vocational training and the placement of older women at the Labour Exchanges. Where suitable jobs cannot be found for older women, these women should be given opportunities for rehabilitation.

Loans and grants should be arranged for older women in need of financial assistance to make themselves fit for employment, i.e., to enable them to attend study courses, etc. Financial assistance should be granted to organizations arranging such courses and funds should be set aside for educational and research work concerning the problems of older workers.

50 Years Ago This Month

Resolution introduced in House of Commons proposing appointment of commission of inquiry to investigate Canada's needs in technical education and to report on best ways to meet the need. Grand Trunk opened from Edmonton to Lakehead

In December 1909 a resolution was introduced in the House of Commons proposing the appointment of a commission of inquiry "to investigate the needs of Canada in respect of technical education, and to report on ways and means by which these needs may be best met."

In speaking on the resolution, the Minister of Labour, Hon. W. L. Mackenzie King, strongly supported the idea of giving more attention to technical and industrial training in Canada than it had received up till that time. However, he moved adjournment of the debate on the resolution in order that the Government might consult the provincial governments to find out how far they would be prepared to work with federal authorities in the matter of technical education.

Some of the Minister's remarks were reported in the LABOUR GAZETTE of January 1910 as follows:

"Under modern industrial conditions technical education was, he believed, a necessity for any nation which is to keep abreast of the times. Not only had industrial conditions changed within recent years but a complete change had occurred in the nature of industrial competition which had become world-wide. If Canadians were to hold their own against modern competition it would only be by bringing their workmen up to the highest degree of efficiency, and by seeing that their industries were managed by men second to none in technical knowledge.

"The need for technical education in Canada was clearly shown by a comparison of conditions in this country with conditions in Germany, France, Switzerland, and the United States. Another consideration which had been alluded to during the debate was the shortage of skilled workmen in Canada for the development of the nation's industries . . . Continuing, the Minister alluded to the work of technical education as now carried on in the provinces of Nova Scotia, Quebec, Ontario and also the efforts which were being made by some of the other provinces in the same direction. The Department of Labour, he observed, had gathered much information on the subject of technical education and would be

pleased to place the same at the service of all who were interested in the subject."

In the matter of railway construction, the GAZETTE reported that during 1909 the main line of the Grand Trunk Pacific Railway between Edmonton and the head of the Lakes had been formally opened to traffic.

"Altogether over 1,000 miles of new steel were laid by the railway companies of Western Canada during the past season," the GAZETTE said. "This total is made up by the different companies as follows: Canadian Pacific Railway, 404 miles; Canadian Northern, 250 miles; Grand Trunk Pacific, 403 miles; this making a total of 1,057 miles. In addition to this, some work was done by the Great Northern in British Columbia."

The report pointed out that these figures meant that the railway mileage of the western provinces had been increased by about 10 per cent during the year. The total mileage west of the Great Lakes at the beginning of 1909 was 10,415, and by the end of the year it amounted to 11,472.

The GAZETTE said that railway contractors during the second half of the year had been unable to get enough men at many points in Western Canada, "notwithstanding a considerable advance in wages."

The price of a number of articles of farm produce were stated to have been very high in December 1909. "Grocery prices were generally steady, with flour markets inclined upward. An advance in the price of brooms has taken place." Lumber and metals remained "firm" in price. Hides and leather prices showed strength, and raw cotton and rubber goods were very high in price.

"Tenders for the removal of the wreckage of the Quebec bridge were under consideration during December," the GAZETTE said. The bridge, which had been under construction since 1900, collapsed in August 1907 (L.G. 1957, p. 1070; Apr. 1958, p. 382).

During 1907 the number of immigrants who arrived in Canada was about 280,000. The returns for 1908, the GAZETTE reported, showed a falling off of nearly a half, the decrease being almost entirely in arrivals through ocean ports.

TEAMWORK in INDUSTRY

The waste reduction program set up last June by the Labour-Management Production Committee at the Winnipeg plant of Martin Paper Products has succeeded in substantially cutting waste costs.

The program includes use of a "thermometer" display to show employees exactly how well they are doing. Over-all reductions in waste were recorded during both July and August. Of the success of the committee's innovation, chairman D. Bartlette (the firm's production manager) said: "Martin's employees are showing a keen interest in this performance display and are earnestly trying to cut down on waste in our plant." He added that employees are giving the program their "whole-hearted co-operation."

Labour is represented on the committee by members of Local 830 of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (CLC).

* * *

Introduction of a new line of merchandise—ski parkas—is the American Wringer Company's contribution to the "Winter Work" program in Farnham, Que. Expectations are that this will provide employment for a substantial number of employees who would otherwise be laid off for the winter months.

"Winter Work" discussions are an annual feature of Union-Management Production Committee meetings prior to the onset of the winter season. The committee is composed of representatives from management and Local 602 of the United Rubber, Cork, Linoleum and Plastic Workers of America.

* * *

Rendering its own special assistance to the variety of humanitarian, educational and research activities being carried on at the 900-bed Winnipeg General Hospital is the Employee-Management Advisory Council, whose members represent both management and the hospital's 1,350 employees.

The council—or EMAC as it is commonly called—was founded in February 1958, and meets monthly under the chairmanship of Dr. P. Warner, Director of the Bacteriology Division, to discuss methods of improving service to patients, general organization and hospital facilities. The group's members consider that the council, by actively encouraging suggestions and criticisms, has been an "invaluable aid" in

building up job satisfaction and bettering employer-employee relations.

Among the many tangible accomplishments of the Employee-Management Advisory Council at the Winnipeg General are the formation of a safety committee, improvement in staff facilities, better maintenance and repair of equipment, and more effective employee-management communications.

Council members claim that, even more important than these tangible results, is the fact that "management and employees have been brought more closely together by making their problems known to each other."

As one member explained further, an employee who is brought to a fuller understanding of the hospital's over-all functions, and of how his particular job fits into these functions, is thereby equipped to perform a more efficient role.

Also in operation at the General is a "Nudge" Committee, made up of four members of the EMAC. It is credited with having achieved immediate action on numerous problems.

Reflecting on the work of the council, the hospital's administration, Dr. L. O. Bradley, said: "Establishing unity of purpose in an organization is a key objective of management in the attainment of its institutional goals. The technique of bringing together a representative employee-management group to advise and recommend is a very useful one. It has very practical and psychological advantages that are of benefit to this hospital."

Commenting on the over-all contribution of the council to the daily operation and long-term objectives of the Winnipeg General, the council's current chairman, Dr. Warner, remarked: "The aspect of our EMAC that has impressed itself most strongly on me is the increasing awareness of all its members—and the people they represent—that we are a team, working together for a common, worthwhile purpose."

Bargaining agent for the hospital's employees is Local 56 of the Winnipeg General Hospital Employees' Union, affiliated with the National Union of Public Employees (CLC).

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for one day during November. The Board issued 11 certificates designating bargaining agents and rejected 12 applications for certification. During the month the Board received seven applications for certification, one application for revocation of certification, one application for provision for the final settlement of differences concerning the meaning or violation of a collective agreement, and allowed the withdrawal of two applications for certification.

Applications for Certification Granted

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs and barges operated by Island Tug & Barge Limited, Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1292) (See also applications rejected, below, item 6).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs and barges operated by the Canadian Tugboat Co. Ltd., New Westminster, B.C. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1292) (See also applications rejected, below, item 7).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard the M.V. *Mogul*, operated by the Griffiths Steamship Co. Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293) (See also applications rejected, below, item 8).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs operated by the Vancouver Tug

Boat Co. Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293) (See also applications rejected, below, item 9).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs and barges operated by F. M. Yorke & Son Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293) (See also applications rejected, below, item 10).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs operated by the Great West Towing and Salvage Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293) (See also applications rejected, below, item 11).

7. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs and barges operated by Gilley Bros. Ltd., New Westminster, B.C. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293) (See also applications rejected, below, item 12).

8. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs and scows operated by Bute Towing Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Dec. 1959, p. 1293).

9. Brotherhood of Maintenance of Way Employees on behalf of a unit of employees of the Quebec North Shore and Labrador Railway Company, Sept Iles, Que. (L.G., Nov. 1959, p. 1178).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

10. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard tugs operated by the Gulf of Georgia Towing Co. Ltd., Vancouver (L.G., Dec. 1959, p. 1294) (See also applications rejected, below, item 1).

11. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard tugs operated by Straits Towing Limited, Vancouver (L.G., Dec. 1959, p. 1294) (See also applications rejected, below, item 2).

Applications for Certification Rejected

1. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Gulf of Georgia Towing Co. Ltd., Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that it was not supported by a

majority of the employees in the representation vote conducted by the Board (See also applications granted, above, item 10).

2. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Straits Towing Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (tugs) (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that it was not supported by a majority of the employees in the representation vote conducted by the Board (See also applications granted, above, item 11).

3. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Pacific Tanker Company Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that there were no persons employed in the unit and the representation vote ordered by the Board could not be taken.

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

4. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Straits Towing Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (barges) (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that there were no persons employed in the unit and the representation vote ordered by the Board could not be taken.

5. Brotherhood of Railroad Trainmen, applicant, Ontario Northland Railway, respondent, and the Order of Railway Conductors and Brakemen, intervener (conductors) (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board.

6. Seafarers' International Union of North America, Canadian District, applicant, and Island Tug & Barge Limited, Vancouver, respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also applications granted, above, item 1).

7. Seafarers' International Union of North America, Canadian District, applicant, and Canadian Tugboat Co. Ltd., New Westminster, B.C., respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also applications granted, above, item 2).

8. Seafarers' International Union of North America, Canadian District, applicant, and Griffiths Steamship Co. Ltd., Vancouver, respondent (L.G., Dec. 1959, p. 1295). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also applications granted, above, item 3).

9. Seafarers' International Union of North America, Canadian District, applicant, and Vancouver Tug Boat Co. Ltd., Vancouver, respondent (L.G., Dec. 1959, p. 1295). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the board in which the name of the applicant appeared on the ballot (See also applications granted, above, item 4).

10. Seafarers' International Union of North America, Canadian District, applicant, and F. M. Yorke & Son Ltd., Vancouver, respondent (L.G., Dec. 1959, p. 1295). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also applications granted, above, item 5).

11. Seafarers' International Union of North America, Canadian District, applicant, and Great West Towing and Salvage Ltd., Vancouver, respondent (L.G., Dec. 1959, p. 1295). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also application granted, above, item 6).

12. Seafarers' International Union of North America, Canadian District, applicant, and Gilley Bros. Ltd., New Westminster, B.C., respondent (L.G., Dec. 1959, p. 1295). The application was rejected for the reason that the applicant did not receive the support of a majority of the employees in the representation vote conducted by the Board in which the name of the applicant appeared on the ballot (See also application granted, above, item 7).

Applications for Certification Received

1. Canadian Air Line Pilots Association, on behalf of a unit of pilots employed by Wheeler Air Lines Ltd., Montreal Airport, Que. (Investigating Officer: C. E. Poirier).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed by Westward Shipping Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

3. International Association of Machinists, on behalf of a unit of traffic, service and maintenance personnel employed by Quebecair Inc., Rimouski, Que. (Investigating Officer: C. E. Poirier).

4. The Commercial Telegraphers' Union, Canadian National System Division No. 43, on behalf of a unit of radio maintenance employees employed by the Canadian National Telegraph Company (Investigating Officer: T. B. McRae).

5. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Laurentides Inc., St. Jerome, Que. (Investigating Officer: C. E. Poirier).

6. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Richmond Hill Ltd., Richmond Hill, Ont. (radio station CJRH) (Investigating Officer: T. B. McRae).

7. Printing Industry Syndicate, Hull-Ottawa, Section CKCH, on behalf of a unit of employees of *La Compagnie de Radiodiffusion CKCH, Limitée*, Hull, Que. (Investigating Officers: G. A. Lane and J. C. Baril).

Applications for Certification Withdrawn

1. International Longshoremen's and Warehousemen's Union, Local 505, applicant, and West Coast Stevedoring Co. Ltd., Prince Rupert, B.C., respondent (L.G., Sept. 1959, p. 913).

2. Brotherhood of Painters, Decorators and Paperhangers of America, Local Union No. 138, applicant, National Harbours Board, Vancouver, respondent, and Vancouver Harbour Employees' Association, intervener (L.G., Dec. 1959, p. 1294).

Application for Revocation Received

W. Rodgers, *et al*, applicants, the Brotherhood of Locomotive Firemen and Enginemen, respondent, and Canadian National Railways (Western Region), respondent. The application was for the revocation of the certification issued by the Wartime Labour Relations Board on December 11, 1944 to the Brotherhood of Locomotive Firemen and Enginemen in respect of a unit of employees of Canadian National Railways (Western Region), comprising jitney car operators conveying passengers between Kamloops and Kamloops Junction, B.C., which employees are now classified as bus foreman and bus driver (L.G. 1944, p. 35).

Application under Section 19 of Act Received

Application for a provision for the final settlement of differences concerning the meaning or violation of the collective agreement between the Commercial Telegraphers' Union, Canadian National System Division No. 43, applicant, and Canadian National Telegraphs, respondent.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During November, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Ontario Northland Railway, North Bay, Ont., and Brotherhood of Locomotive Firemen and Enginemen (Conciliation Officer: F. J. Ainsborough).

2. British Yukon Navigation Company, Limited, Whitehorse, Y.T., and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. S. Tysoe).

3. British Yukon Railway Company, Whitehorse, Y.T., and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. S. Tysoe).

4. Westward Shipping Limited, Vancouver, (unlicensed personnel) and Seafarers' International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

5. Consolidated Denison Mines Limited, Sprage, Ont., (production workers) and United Steelworkers of America (Conciliation Officer: F. J. Ainsborough).

6. Trans-Canada Air Lines, Montreal, and Canadian Air Line Pilots Association (Conciliation Officer: R. Duquette).

7. The St. Lawrence Seaway Authority, and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: F. J. Ainsborough).

Settlements Reported by Conciliation Officers

1. Foundation Maritime Limited, Halifax, and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: D. T. Cochrane) (L.G., Nov. 1959, p. 1178).

2. Robin Hood Flour Mills Limited, Humberstone, Ont., and Local 416, United Packinghouse Workers of America (Conciliation Officer: F. J. Ainsborough) (L.G., Oct. 1959, p. 1054).

3. National Harbours Board, Montreal, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (grain shovellers) (Conciliation Officer: R. Duquette) (L.G., Sept. 1959, p. 915).

4. Buntain, Bell and Company Ltd., Gulf and Northern Shipping Company, H. B. Willis, Inc., and Labourers Protective Union, No. 9568 (Conciliation Officer: H. R. Pettigrove) (L.G., June 1959, p. 613).

Conciliation Board Appointed

Northern Alberta Railways Company, Edmonton, and Brotherhood of Locomotive Engineers (L.G., Dec. 1959, p. 1301).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in November to deal with a dispute between Northern Alberta Railways Company, Edmonton, and Brotherhood of Locomotive Engineers (see above) was fully constituted in November with the appointment of Irwin A. Blackstone, B.A., Calgary, as Chairman. Mr. Blackstone was appointed by the Minister in the absence of a joint recommendation from the other two members, S. H. McCuaig, Q.C., Edmonton, and G. J. D. Taylor, Saskatoon, who were previously appointed on the nomination of the company and union respectively.

2. The Board of Conciliation and Investigation established in October to deal with a dispute between Northspan Uranium Mines Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (Production Employees) (L.G., Dec. 1959, p. 1302) was fully constituted in November with the appointment of His Honour Judge John B. Robinson, Haileybury, Ont., as

Chairman. Judge Robinson was appointed by the Minister on the joint recommendation of the other two members, David W. Mundell, Q.C., and David B. Archer, both of Toronto, who were previously appointed on the nomination of the company and union respectively.

Conciliation Board Reports Received

1. Shipping Federation of Canada, Inc., Montreal, and International Longshoremen's Association (Halifax, Saint John, Quebec, Three Rivers and Montreal) (L.G., Dec. 1959, p. 1302). The text of the report is reproduced below.

2. Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions) and Brotherhood of Railroad Trainmen (L.G., Oct. 1959, p. 1055). The report submitted by the Board is a final report and the recommendations relate to the issues in dispute affecting the operations of the Company on its Prairie and Pacific Regions. The Board had previously submitted an interim report with respect to the dispute as it affected the Eastern Region. The text of the final report is reproduced below.

Settlement Reached Following Conciliation Board Procedure

Eldorado Mining & Refining Limited, Port Hope, Ont., and Local 13173, Region 77, District 50, United Mine Workers of America (L.G., Dec. 1959, p. 1303).

Report of Board in Dispute between

Shipping Federation of Canada, Inc.

and

International Longshoremen's Association

During November, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the International Longshoremen's Association (Halifax, Saint John, Quebec, Three Rivers and Montreal), and the Shipping Federation of Canada, Inc.

While the dispute affected 7,000 employees, most of the issues in dispute had already been resolved and the only issue the Board was asked to resolve was the amount of payment for overtime on Saturday afternoons and/or evenings at Saint John, N.B., where 2,165 employees were affected.

The Board was under the Chairmanship of His Honour Judge K. L. Crowell, Bridgetown, N.S., who was appointed by the Minister in the absence of a joint recommendation from the other two members, J. Paul Barry, QC, Saint John, N.B., and James A. Whitebone, Lancaster, N.B., nominees of the Federation and union, respectively.

The text of the report is reproduced here.

Pursuant to the act governing the above-mentioned matter and the appointment of the undersigned as chairman and members of a board of conciliation and investigation therein, we respectfully submit the following report and recommendations.

Sittings of the Board were held in the city of Saint John, New Brunswick, on Tuesday, Wednesday and Thursday, November 10 to 12 inclusive. All members of the Board were present at all meetings. The ILA was represented by John F. Galbraith senior vice-president of the ILA in Eastern Canada, and he was accompanied by A. Harned of the Checker's Union and J. T. Steen of the Shipliner's Union who stated they were present only as observers. The Shipping Federation was represented by C. T. Mearns, E. T. Strang, John McCluskey and H. E. Kane. All mentioned were present at all meetings except the final

discussions between the chairman and members of the Board alone.

The Board at its first sitting heard general submissions from both parties with respect to the points at issue—and briefs were presented by both parties.

The major and perhaps the only point at issue between the parties revolved around Paragraph 7 (c) of the draft contract submitted to the ILA Local 273 by the Shipping Federation. This article, as included in previous contracts, provided as follows:

7 (c) Men shall work on Saturday afternoon and evening if required. If men are required to work on Saturday afternoon and/or evening (1:00 p.m.-11:00 p.m.) between May 1 and November 30, they shall be paid double-time. If men are required to work on Saturday afternoon and/or evening between December 1 and April 30, they shall be paid time-and-one-half. Should any of the holidays specified in subsection (a) above fall on a Saturday, double-time rates only will be paid on such Saturday afternoon and evening.

The proposed draft contract as first submitted follows:

7 (c) Men shall work on Saturday afternoon and evening if required. If men are required to work on Saturday afternoon and/or evening (1:00 p.m.-11:00 p.m.) between May 1 and November 30, they shall be paid double the basic rate only. If men are required to work on Saturday afternoon and/or evening between December 1 and April 30, they shall be paid time-and-one-half the basic day rate only. Should any of the holidays specified in subsection (a) above fall on a Saturday, double time rates only will be paid on such Saturday afternoon and evening.

The hearings disclosed that the ILA 273 took violent objection to the change by addition of words and in fact the Shipping Federation subsequently revised the draft proposal and deleted the objectionable words. It was then unsatisfactory to the union because by that time, in the view of the union, certain money was due to the men and the union would not sign the proposed draft until those men were paid. On the other hand, the Federation contended that nothing was due to the men.

The union felt that Paragraph 7 (c) as a penalty clause applied to the night rate on Saturday evenings, the night rate having been increased from 10 cents over the basic rate to time-and-one-quarter in 1959 and time-and-one-half in 1960. In cents, the increase in the hourly night rate was 48 cents under the proposed new contract. The union therefore wanted the new basic rate of \$2.08 plus one-quarter (52 cents) plus one-half of the night of \$2.60, making a total hourly rate of \$3.90 on Saturday night. The Federation offered \$3.18 for Saturday night.

The Federation claimed that because of the night rate increase from 10 cents per hour to 52 cents per hour, the penalty clause 7 (c) should refer only to basic day rate and not to the new night rate because, they said, that put penalty on penalty.

From December 1, 1958 to April 30, 1959, the union claimed \$3.90 per hour for Saturday evening. During the other months of the year, the union claimed \$6.20 per hour on Saturday evening. The Federation offered \$3.18 per hour and \$4.24 per hour respectively.

A review of the history of the negotiations leading to the preparation of the draft agreement, satisfied the Board that all parties left the meetings under the impression that all terms of the proposed new contract had been settled whereas in fact, as both parties frankly admitted, the significance and effect of Paragraph 7 (c) had not been discussed.

After a full and free discussion of the matters at issue, it became very obvious that it was impossible to find a common ground between the parties and that a compromise could not be effected.

Thereupon, the Board terminated its hearings and met privately to make its report.

Recommendations

Since both parties to the agreement had not, by their own frank admissions, even considered the meaning and effect of Paragraph 7 (c) as it applied to the new night rate, and since such failure probably caused members of the union to believe that they were entitled to a certain hourly rate of wage for which they have not been paid, the Board recommends that the Federation, for the purpose of solving the immediate problem, do pay these members for past work on the basis claimed by the union for the 1959 contract year namely December 1, 1958 to November 30, 1959. The parties can determine this amount by an examination of their own records and it has been suggested that the amount involved is about \$2,333.

Coupled with the foregoing recommendation and directly connected therewith because the report is not severable, your Board recommends that the following Paragraph 7 (c) be inserted in the new contract:

7 (c) Men shall work on Saturday afternoon and evening if required. If men are required to work on Saturday afternoon and/or evening (1:00 p.m.-11:00 p.m.) between May 1 and November 30, they shall be paid double the basic rate between 1:00 p.m. and 5:00 p.m. and double the basic rate plus 15 cents per hour between 7:00 p.m. and 11:00 p.m. If men are required to work on Saturday afternoon and/or evening between December 1 and April 30, they shall be

paid time-and-one-half the basic day rate between 1:00 p.m. and 5:00 p.m. and time-and-one-half the basic rate plus 15 cents per hour between 7:00 p.m. and 11:00 p.m.

Should any of the holidays specified in subsection (a) in the agreement fall on a Saturday, double the basic day rate only will be paid on such Saturday afternoon and evening.

The Board recommends these proposals for the consideration of the parties, to be effective if accepted only on the execution of the new agreement, with the sole purpose of settling the immediate problem and without any intention of setting a precedent or deciding the rights or wrongs of the matter. It appears to be the best way for all concerned out of the present impasse.

During the hearings, it appeared that the union felt that if a clause of an agreement which had expired, was not discussed when working out a new agreement, then the old clause would remain verbatim. This belief has resulted in an unfortunate circumstance and all parties should understand that it is desirable, if not essential, that all matters to be included should be discussed and detailed in the new agreement and that nothing be taken for granted. It would be preferable that all rates be expressed in dollars and cents for each period and that the words "differential" and "plus 15 cents" be unnecessary in the future.

Should one or both of the parties involved in this matter find the recommendations herein unacceptable, then the Board recom-

mends that a complete new contract be negotiated because of the importance of Paragraph 7 (c) in the present situation and because it appears that certain other clauses are capable of different interpretation.

In conclusion, the members of the Board wish to express their thanks to the representatives of both the union and Federation for their assistance given the Board and for the high level of the discussions throughout the hearings. The members of the Board would also like to assure both the union and the Federation that the conclusions reached and the recommendations made herein have not been arrived at without giving careful consideration as well as a great deal of thought and study of the problem presented to them. They also earnestly hope that their efforts on behalf of both the union and Federation will be of some value to them in settling their problems and that eventually a fair and just collective agreement will come out of their deliberation leading to continued cordial relations between management and employees.

Dated at Saint John this 12th day of November, 1959.

(Sgd.) K. L. CROWELL,
Chairman.

(Sgd.) J. PAUL BARRY,
Member.

(Sgd.) JAMES A. WHITEBONE,
Member.

Report of Board in Dispute between Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions) and Brotherhood of Railroad Trainmen

During November, the Minister of Labour received the unanimous final report of the Board of Conciliation and Investigation established to deal with a dispute between the Brotherhood of Railroad Trainmen, and the Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions). The recommendations of the final report relate to the issues in dispute affecting the operations of the company on its Prairie and Pacific Regions. The Board had previously submitted an interim report with respect to the dispute as it affected the Eastern Region.

The Board was under the Chairmanship of His Honour Judge J. C. Anderson, Belleville, who was appointed by the Minister on the joint recommendation of the other two members, J. W. Long, QC, Montreal, and the Hon. A. W. Roebuck, QC, Toronto, nominees of the Company and union, respectively.

The final report is reproduced here.

Your Conciliation Board, appointed to deal with the dispute of the above parties, consisting of His Honour Judge J. C. Anderson, J. W. Long, QC, of Montreal, Company nominee, and the Honourable A. W. Roebuck, QC, of Toronto, Brotherhood nominee, met at the city of Montreal on the 3rd, 4th, 5th, 6th and 7th of August 1959; and then adjourned and again met the parties in Montreal on the 18th, 19th and 20th, and until midnight of the 21st of August, 1959. The parties were respectively represented as follows:

For the Company: A. M. Hand, Assistant Manager, Labour Relations—CPR; Joseph G. Benedette, Personnel Department; Jack C. Anderson, Supervisor, Personnel and Labour Relations, Prairie Region—Winnipeg, CPR; Denis Cardé, Contract Analyst, Personnel

Department; Jack Ramage, Labour Relations Assistant, Department of Personnel; Vic Hooley, Road Foreman of Engines—Vancouver—CPR; Fred G. Firmin, Supervisor, Personnel and Labour Relations, Atlantic Regions—Montreal; A. L. McGregor, J. B. Shipley, F. W. McCurry.

For the Brotherhood Prairie and Pacific Regions: S. McDonald, General Chairman; T. A. Archibald, Vice-Chairman; E. Davidson, Secretary; *Members of Negotiating Committee:* R. Lane, E. V. Gardiner, C. W. Cannon, J. R. Carter, R. W. Hurl; C. W. Stanley, Manager, Schedule-Statistical Bureau; F. A. Collin, Vice-President; L. C. Malone, Vice-President; D. Paltiel, Statistician. And the other representatives of the Brotherhood from the Eastern Region as fully set out in the interim report.

At these meetings, while some progress was made in conciliating the issues in dispute between the Company and Brotherhood of Railroad Trainmen on the Prairie and Pacific Regions, the conciliation procedure was not completed.

The Board, however, concluded the hearing as it affected the issues between the Company and the Brotherhood of Railroad Trainmen on its Eastern Region and shortly thereafter an interim report was filed, following which a collective bargaining agreement between the Company and the Brotherhood of Railroad Trainmen (Eastern Region) was entered into.

In order to complete its conciliation efforts and hear the remaining submissions of the parties, the Board held meetings in Belleville and met the parties individually and at other times together on the evening of September 18, and on September 19, 20, and 21, 1959.

Thereafter, the chairman, with the approval of the other members of the Board, asked the director of industrial relations for Canada to convene a meeting directly between the parties in Winnipeg to enable them to further discuss in greater detail the issues between them related to inter-divisional runs.

The parties met directly as requested on September 30 in Winnipeg and copies of the minutes of this meeting were forwarded to each member of the Board.

Following the meeting in Winnipeg, the chairman discussed with other members of the Board the advisability of the Board convening another meeting with both parties in a final effort, if possible, to conciliate all issues then remaining in dispute.

The chairman, on finding that the Brotherhood and its nominee on the Board would willingly assent to a further meeting, and on finding that the Company, while in no

way requesting such a meeting, would, if the chairman requested the meeting, attend with their committee, thereupon convened another meeting of the parties with the Board in Belleville.

The Board met as a board without the parties being present for some little time on the evening of October 26 to assess the present position of the parties in relation to the issues remaining unsolved. The chairman and a Brotherhood nominee on the Board met with a small group of the Brotherhood committee and further explored the problems involved in the issues still unsolved. The Board met on Tuesday, October 27 with the full committees of both parties, and on this day and the following day the Company was represented by: A. M. Hand, Chairman; A. L. McGregor, J. Ramage, J. C. Anderson, F. G. Firmin, D. Card; The Brotherhood was represented by: S. McDonald, Chairman; F. A. Collin, Vice-President; L. C. Malone, Vice-President; E. Davidson, Secretary; T. A. Archibald, Vice-Chairman; R. Lane, E. V. Gardiner, G. W. Cannon, J. R. Carter, R. W. Hurl.

On October 28 the Board and the parties again met all day and all evening, and the Board and the parties met from 12:00 a.m. until 2:45 a.m. on Thursday, October 29, before the Board felt that all matters which they would be called upon to report were fully and completely put before it.

As a result of these meetings and the conversation which the chairman and the members of the Board had individually and collectively with the parties, the Board unanimously recommends the following:

Wages

That there shall be an increase in wages applicable to all wage rates and arbitraries (not including car step-up rates and territorial differentials) payable both in road and yard service similar to that in effect in the last non-ops settlement, that is to say,

4 cents or 2.3 per cent effective June 1, 1958; 3 per cent effective February 1, 1959; 3 per cent effective September 1, 1959; 1.5 per cent effective June 1, 1960.

All increases will be based on wage rates and arbitraries other than those excepted in effect on May 31, 1958 less 1 per cent set aside for health and welfare benefits.

The payment of the retroactive portion of the above-mentioned increases will be made as soon as possible but, in any event, not later than three months from the signing of the contract.

Electric Lanterns

That the following electric lanterns rule be adopted:

1. Effective January 1, 1960, all employees must provide themselves with an electric white lantern. The electric lantern, bulbs and batteries must be of a standard prescribed by the Company and the lantern must be equipped with not less than two white bulbs for instant use and a provision for a spare white bulb to be carried in the lantern.
2. Employees will be furnished white electric lanterns by the Company upon signing payroll deduction order of the actual cost of the lantern supplied, not including the cost of bulbs and batteries. This deduction will be made from the pay cheque in the current payroll.
3. Employees, who prior to January 1, 1960, have already provided themselves with electric lanterns, may continue to use them until they are worn out, provided such lantern is of a satisfactory type and contains two serviceable white bulbs for instant use and a provision for carrying a spare white bulb in the lantern, as required under the provision of Clause 1.
4. When an employee leaves the service of the Company, either voluntarily, by discharge or by death, the lantern if in satisfactory condition, may be returned to the Company, whereupon the amount of deposit made when the lantern was issued shall be refunded to the employee or his estate.
5. Replacement of lanterns issued by the Company will be made without cost to the employees under the following conditions:
 - (a) When worn out or damaged in the performance of Company service, upon return of the lantern.
 - (b) When stolen while employee is on the premises of the Company, without neglect on the part of the employee.
 - (c) When destroyed in the performance of duty.
6. The Company will maintain at convenient locations a supply of bulbs and batteries to be drawn as required upon presentation of those worn out or broken, without cost to the employee.
7. In the event that due to conditions beyond the control of the Company it becomes unable to obtain a sufficient

quantity of such electric lanterns, bulbs or batteries for the purpose set forth herein, the Company shall thereby be relieved of compliance with the provisions of this agreement to the extent that such inability makes it impossible to comply herewith.

8. The Company will continue to use oil burning lanterns with red globes for flagging.

Statutory Holidays

That employees engaged in yard service shall be entitled to seven statutory holidays, that is to say, the six now granted together with the addition of Victoria Day, but the first entitlement thereunder shall commence with Victoria Day 1960.

Vacations

Similar vacation article for both road and yard service employees as contained in the finally executed agreement with the Brotherhood of Railroad Trainmen on the Eastern Region, to be effective on the date of the signing of the agreement.

Watches

That the right of the employees to have their watches cleaned by any qualified watch repairman subject to the production of a certificate acceptable to the Company be continued.

Health and Welfare

Same provision as contained in Eastern Region agreement with Brotherhood of Railroad Trainmen.

Pay Cheques

That the Company continue the present policy with respect to the issuance of CGs and with respect to advance delivery of pay cheques prior to employees going on vacation.

Union Dues

That the Company check-off regular uniform union dues on a monthly basis for all employees in road and yard service subject to a deduction of 6 cents per individual check-off deduction.

Oil Burners

That the Company's negotiating committee recommend to the Company's Committee on Appropriations that they provide funds for the installation of oil burners rather than coal stoves on all new cabooses equipment.

Initial and Objective Terminal Detention Rules

1. The Board recommends that the Company include the excepted time in initial terminal detention and that the remaining 15 minutes period of excepted time at the final terminal remain unchanged. The Board is making this recommendation with respect to the initial and objective terminal detention clauses on the understanding that because the Company has advanced the argument that the excepted 15 minutes time therein is paid for in the trip as a whole and the Brotherhood, on the other hand, has advanced the argument that this excepted 15 minutes in the initial and objective terminal detention clauses is time for which they have not been paid for in the trip as a whole, and as a result thereof neither party would depart from the validity of their respective arguments, and an impasse was thereby created.
2. The Board's recommendation, therefore, is that purely for the purpose of arriving at a collective bargaining agreement, the Company should agree to pay for the initial terminal detention from the time required to report for duty, and the Brotherhood should agree to forego their request for the payment of the excepted time required to be on duty at the objective terminal.
3. The Board further recommends that both parties then would understand that the agreement in respect to this clause is recommended on the distinct understanding that if the Brotherhood should at some future time again request payment for all time at the objective terminal or the Company should at some future time request the elimination of the payment of the excepted 15 minutes at the initial terminal, then either party would be free to return to its original position with respect to the excepted 15 minutes in the initial and objective terminal detention clauses.
4. Under the above recommendation, it is clearly understood that the Company is justified in expecting that individual members of train crews can be required on arrival at the objective terminal to render any service required incidental to the trip they have just completed and that such service as is required will be included within the scope of the excepted 15 minutes rule except that if switching is required the full crew will be used

and will be paid final terminal switching for all time so used, and further that final terminal switching does not include taking locomotive or self-propelled car to shop or tie-up track.

5. It is further understood the Company has the right to use members of the crew individually prior to departure from the initial terminal for service incidental to their own train except when switching is required in which case not less than three of the crew will be used.

Investigations—Discipline

The Board recommends that Clause (d) of Article 10 of the Road Schedule and Article 13 of the Yard Schedule should be revised and as revised should read as follows

- (d) An employee will not be disciplined or dismissed until after investigation has been held and until the employee's responsibility is established by assessing the evidence produced and no employee will be required to assume this responsibility in his statement or statements.

Inter-Divisional Run Rule

Arrangements have been made to provide for inter-divisional assignment of crews to trains numbers 101 and 102 between Fort William and Winnipeg on a continuous trip basis.

The Board recommends that the parties will in the future enter upon negotiations conducted at the local level in respect to similar situations which may exist or occur at other points on the Prairie and Pacific Regions, and further, where agreement through such local level negotiations is not reached the matter will be dealt with to a conclusion by the assistant general manager and the general chairman.

Territorial Differentials

The Board recommends that the territorial differentials be frozen at the 1957 level for all men now in train service while they are in the service, and that it is to be understood thereby that these territorial differentials are not applicable to new men hired after the date of signing an agreement. The Board further recommends that the employees be paid retroactive pay increases applicable to such territorial differentials as follows:

4 cents or 2.3 per cent June 1, 1958,
3 per cent Feb. 1, 1959, 3 per cent Sept.
1, 1959—until the date the revised rates
are made applicable to the current pay-
roll.

Sanitary Conditions

The Board recommends that the Company's negotiating committee immediately recommend to the Appropriations Committee of the Company the remedying of unsanitary conditions where complaints are *bona fide*.

Switchtenders

The Board recommends that the Company consider any situation brought to its attention through the usual channels up to the assistant general manager on the respective Regions in the light of the information produced and take appropriate action where the circumstances warrant it.

Supplementary List of Requests for Revision of Rules—Road and Yard

The Board recommends that the full list of requests for revision of rules—Road and Yard, be negotiated and finalized in line with the understandings arrived at and so stated in the joint signed report submitted by the parties to the conciliation board as notes of discussion numbers 35, 36, and 37, dated August 11, 12 and 13, 1959.

These minutes disclose that at the meetings on the above dates the parties discussed at considerable length the vacation rules and the questions and answers relating thereto and the last paragraph of the joint report (number 37) submitted by the Brotherhood and the Company indicated agreement in this respect in the following words:

All of these were reviewed and discussed and it was felt by the parties that they now understood each other's respective position and that the matters brought up would be disposed of when a vacations with pay article is finalized, and, therefore, the Board recommends that these be fully clarified when the vacation rules are drafted.

The Board further recommends that all matters shall be disposed of through the revision of both road and yard schedules at a date not later than June 30, 1960, but in so recommending it is understood that if the parties fail to reach agreement on any item under discussion the present rule will stand for the duration of the forthcoming contract.

The Board further recommends that all matters referred to it and not hereinbefore specifically recommended, whether they arise by reason of requests made by the Company or by the Brotherhood for revision, be dropped except as to any matters that the parties prior to the meeting of the board of conciliation have agreed upon in direct negotiations.

The Board further recommends with respect to wages and all other matters that they are conditional upon the parties entering into a contract which shall be effective from June 1, 1958 until May 31, 1961 or thereafter.

All rules revisions to be effective December 1, 1959 unless otherwise provided.

The Board points out to the parties that if the Board report is accepted by the parties they will be expected to incorporate all matters of substance into the appropriate contract language.

All of which is respectfully submitted.

(Sgd.) J. C. ANDERSON,
Chairman.

Member.

Dated at Belleville this 5th day of November, 1959.

Two Railway Brotherhoods Agree on No Raiding in Canada

Jurisdictional disputes between the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen in Canada have been set at rest by an agreement, in the form of a memorandum of understanding that was signed in Cleveland on December 16 by Grand Chief Engineer Guy L. Brown of the Engineers and President H. E. Gilbert of the Firemen.

The full text of the memorandum is as follows:

"This will confirm understanding reached December 16, 1959, that, effective January 1, 1960, and continuing until the end of the next international convention of the brotherhood of Locomotive Engineers (which will be held in the year 1962) and thereafter until the chief executive of either organization serves on the other a thirty (30) days' notice of a desire for a cancellation, that neither organization will invoke the services of the Canada Labour Relations Board for the purpose of assuming jurisdiction over a contract covering either engineers, firemen, or hostlers which is now held by the other organization.

"It is further understood that the present application which has been filed by the Brotherhood of Locomotive Firemen and Enginemen to represent the craft of engineers on the Canadian Pacific Railway will be withdrawn."

LABOUR LAW

Report of Inquiry Commissioner on Manitoba Workmen's Compensation Act

Hon. W. F. A. Turgeon prefaces his recommendations with review of the historical development of workmen's compensation and a discussion of the major differences between the Manitoba (Canadian) system and those of certain other countries

On September 11, 1957, Hon. W. F. A. Turgeon was appointed to inquire into the operation of the Manitoba Workmen's Compensation Act. In an interim report submitted in February 1958, he recommended increases in widows' and children's pensions; these recommendations were adopted that same year as amendments to the Act. In November 1958 his Report was presented to the Manitoba Government and made public. At the second legislative session in 1959, the Act was revised; the recommendations of the Turgeon Report were implemented and several other changes made (see "Workmen's Compensation Legislation, 1959" in the September 1959 number of the LABOUR GAZETTE).

In his Report on the Manitoba Workmen's Compensation Act, Hon. W. F. A. Turgeon prefaced his recommendations with a review of the historical development of workmen's compensation and a discussion of the major differences between the Manitoba (Canadian) system and those of certain other countries.

He also reviewed the Act's relation to other federal and provincial social assistance legislation.

History of Workmen's Compensation

The present system of workmen's compensation, which the Commissioner said embodied the principle of "liability without fault," was the third stage in the development of legal remedies available to workmen for injuries suffered in the course of their employment. The first stage was action at common law; the second, employers' liability.

Action at Common Law—At common law it was assumed in every case that an accident was caused by somebody's fault, and the duty of the Court was to determine, as between the employer and the workman, who was at fault. The workman had ground for damages only when negligence on his employer's part could be proved. The onus of proving negligence fell upon the work-

man and his case was rendered difficult by the nature of the defences which the law made available to the employer.

One of these was the defence of "contributory negligence". If an employer could show that the workman had been guilty of some degree of negligence, the workman lost his case because he could not lawfully recover from another person damages for an accident for which he himself was partly to blame.

A further defence open to the employer was the defence of "common employment". The employer could not be held responsible for injury to an employee through the fault of a fellow-workman. That a fellow-workman might be negligent was considered to be one of the risks of the employment voluntarily assumed by the workman when he undertook to work in the employer's industry.

The third defence was the "assumption of risk" rule. If a workman chose to work, he was said to have voluntarily assumed the risks associated with the employment. If the employer could show that the injury resulted from an ordinary risk, the workman would not recover damages.

Commenting on the "assumption of risk" rule, the Commissioner remarked that it was the tendency of the common law to consider all men equally free to contract or to refuse to contract, overlooking the necessity always weighing on the workman to accept whatever work was available near to his home.

Thus, under the common law, it was contended that the workman had assumed all the risks involved in the employment other than those due to the employer's personal negligence. Neither industry as an institution nor the individual industrialist acknowledged any inherent liability for disabled workers.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Employers' Liability—When the introduction of power-driven machinery and the factory system greatly increased the number of accidents to workmen, a public demand, led by the trade unions, arose for remedial legislation. It resulted in the passage in Great Britain in 1880 of the Employers' Liability Act.

This Act, the Commissioner said, "was mistakenly hailed as a great liberalizing statute for the working man." Actually it modified the common law only slightly in his favour by reducing the employer's defence of common employment by making him liable for the negligence of his employees in positions of superintendence. It also made the employer liable for accidents that occurred because of defects in the "ways, works, machinery or plant connected with or used in the employer's business." But it limited the maximum amount of damages recoverable by the workman.

"The rule still prevailed that negligence by the employer or by somebody for whom he was responsible was a necessary condition of the action . . . Industry still refused to acknowledge that any liability towards disabled employees could arise merely out of the employer-employee relations between the parties."

Workmen's Compensation—The outstanding feature of workmen's compensation legislation was the adoption of the doctrine of liability without fault, that is, that an employer's liability to a workman existed without the necessity of showing that an accident resulted from some negligence attributable to the employer.

This doctrine having been established, the Commissioner said, there arose out of its application the theory that the community for whose use the product was manufactured or handled should bear the burden of compensation and that the costs imposed upon industry in respect of its injured workmen should be added to industry's costs of production and carried on into the selling price of the product.

Introduction of Compensation Laws in Canada

The Commissioner noted that Canadian law had followed that of Great Britain, employers' liability statutes having been passed in most provinces. These were in turn replaced by workmen's compensation laws, which were still in effect in substantially their original form.

Ontario led the way in establishing a system of liability without fault in Canada. Based on recommendations made by Sir William Meredith, who was appointed Commissioner by the Ontario Government to recommend a more satisfactory system of

employers' liability, the Ontario law went into force in 1915.

In his extensive study of workmen's compensation in other countries, Sir William Meredith found that there were two systems that he could recommend. One was the British system, which made the employer in each case individually liable for the payment of compensation. Sir William pointed out that in most cases where the British system with its principle of individual liability was in effect, the employers were required to insure against this liability.

The other was the German system, in which the liability was not individual but collective, the industries being divided into groups, and the employers in the industries in each group being collectively liable for the payment of compensation to the workmen engaged in those industries.

Sir William's conclusion was that a law based on the German system was best suited to the conditions of the province of Ontario, and his draft bill on which the Ontario statute was based combined the principle of collective liability as in operation in Germany with an exclusive state fund (Accident Fund) contributed by the employers concerned, as adopted by the State of Washington.

It was from this model set in 1914, the Commissioner observed, that Manitoba had had since 1916 a system of workmen's compensation that, for all practical purposes, was still in force in its original form.

Differences between Manitoba Act and Those of Certain Other Countries

One of the chief differences between Manitoba's law and those of certain other countries, the Commissioner pointed out, was its elimination of litigation. "It is primarily a system which administers justice proceeding from the rights of the parties by means of a board without recourse to the courts of law and by a method of continuing supervision by the board over the parties concerned, which has advantages which no judgment of a court could be expected to have."

The new system of insurance against personal injury by accident inaugurated in Great Britain in 1946, on the other hand, preserves a workman's right to an action for negligence against his employer, which he may exercise, not as an alternative to but in addition to compensation.

Under the law of New York State, which illustrates the procedure generally followed in the United States, all proceedings must originate before the Board, except where an employer has failed to insure for the payment of compensation, in which case

an employee has the option of claiming compensation or maintaining an action for damages in the courts. The belief appeared to be growing in the United States, the Commissioner stated, that the use of court trials in compensation cases should be eliminated.

In the United States, too, the workmen's compensation system was now practically in competition with other forms of security against industrial disability and death that have grown up through collective bargaining and the voluntary action of some employers in creating compensation programs of their own.

The Commissioner thought Manitoba's workmen's compensation system was in a much more favourable position in both these regards. "We are free from the expense and delays of litigation in the settlement of claims; and the various forms of public assistance which did not exist among our federal or provincial organizations in 1916 but have come into being since then do not 'compete' with Workmen's Compensation."

In his review of the various forms of social assistance now available under federal or provincial legislation, the Commissioner pointed to the constantly increasing measure of protection for disabled workers and their dependants that has resulted from collective bargaining.

"Organized workers have been able to secure among the fringe benefits written into their union agreements such items as sickness and accident insurance and group life insurance policies which pay fairly substantial benefits for comparatively low premiums. Besides this, many unions offer their members life insurance on a very low premium basis or make cash payments to widows to defray funeral expenses."

In some cases, Mr. Turgeon noted, such forms of assistance provide quite a substantial financial supplement to workmen's compensation; in other cases they operate in an area in which workmen's compensation does not apply.

Main Features of Compensation Legislation

Describing the main features of workmen's compensation, Mr. Turgeon said that its object must be to preserve the worker by all proper and reasonable means from the danger of injury (including infection through disease) occurring in the performance of his work and arising out of it, and to indemnify him against such loss as he may nevertheless suffer.

The indemnity, he continued, does not mean merely the money compensation provided according to scale but must include

the making of all reasonable efforts to restore the injured worker wholly or in as great part as possible to his former normal condition of health and efficiency. If a worker's earning capacity in his previous occupation has become permanently impaired, "steps should be taken to provide him with such vocational training as may be found suitable to fit him for some other employment."

The two principal concepts to be looked for in an efficient compensation program, therefore, were accident prevention and rehabilitation. "The statutory compensation payments are a necessary contribution to the workman's relief where injury has been occasioned and total rehabilitation is not yet established," he added.

Accident Prevention—In Manitoba, the work of accident prevention is mainly carried on by two government departments: for the most part by the Department of Labour and, in respect of mining, by the Department of Mines and Natural Resources. (A statement presented to the Commission on the work of these two departments is incorporated in the Report.)

The Commissioner did not recommend any change with respect to the responsibility for accident prevention work. Apart from the fact that there was little criticism regarding the carrying out of the work, he believed that the work that the Department of Labour was doing in administering and enforcing laws for employee safety was work that it would have to do for general purposes in any case. He did not agree that this responsibility should be placed upon the Workmen's Compensation Board.

The detection and prevention of industrial diseases, he said, was carried out through an informal arrangement between the Department of Labour, the Industrial Hygiene Branch of the Department of Public Health and Welfare, the Workmen's Compensation Board, and the Inspection Branch of the Winnipeg Health Department. This arrangement appeared to be working efficiently.

Rehabilitation—The only recommendation Mr. Turgeon had to make concerning rehabilitation was that special attention be given to the building up of the present organization.

Definition of "Accident"

In recommending that the word "accident" be re-defined, the Commissioner first explained that there were several points of view concerning its use.

One held that "accident" and "injury" were always two separate things, both of

which must be found to exist before a claim may be allowed. The opposite viewpoint, which was expressed by the Manitoba Federation of Labour, was that such separation was inequitable; the Federation argued that the word "accident" should disappear from the legislation and that the workman should be entitled to relief when he could show merely that his injury arose out of and in the course of his employment.

Between these two extremes was a body of opinion that, without discarding the word "accident," would do away with the theory of complete separation in every case of "accident" and "injury." This was the approach the Commissioner favoured.

He concluded that the word "accident" should be retained but that it should be re-defined, in the same terms as in the Alberta Act, to extend its meaning. In the Alberta Act, "accident" is defined to include "A wilful and intentional act, not being the act of the workman and shall also include a chance event occasioned by a physical or natural cause, as well as disablement arising out of and in the course of employment, and where the disablement is caused by disease the date of the accident shall be deemed to be the date of the disablement."

Mr. Turgeon thought this definition particularly useful in what it says about disablement. He pointed out, as an example, that the inability of a workman to use his arms that may result from long periods at the control of a pneumatic drill places the workman in the same position as if his disablement had been brought on by an accident.

If his recommendation for redefinition of the word "accident" was adopted, the provisions of the Act setting out the conditions under which compensation was payable for industrial diseases would be redundant and should be repealed, as should the schedule of industrial diseases appended to the Act, the Commissioner said.

Recommendations

Lump Sum to Widow—Since, following his recommendation, widows' and children's pensions were increased in 1958, he did not recommend any further increases in dependants' allowances, other than an increase from \$200 to \$300 in the lump sum payment to widows and foster mothers.

Minimum Payment in Total Disability Cases—The Commissioner proposed that the minimum payment in cases of permanent total and temporary total disability should be increased from \$15 to \$25 per week, and that the increase should apply to workmen in receipt of compensation for

past accidents. He was not prepared to adopt the suggestion that the additional costs occasioned by the retroactive effect of the increase should be borne by the Consolidated Fund of the Province. Indicating that the costs should properly be paid from the Accident Fund, he pointed out that the costs of workmen's compensation must not be thought of as a charge upon industry and nothing else, since the intention behind the legislation was that industry should re-distribute the burden among those who purchase its products or utilize its services.

Ceiling on Annual Earnings—The Commissioner considered that a ceiling on annual earnings of \$4,500 would be appropriate and in accordance with the change in conditions in the province since the standard of \$3,500 was adopted.

Waiting Period—The Report recommended a change with respect to the waiting period.

Reviewing the provisions, the Commissioner stated that (1) for an injury causing a disablement of less than three days a workman was entitled to free medical treatment but no compensation; (2) for an injury causing a disablement of between three and seven days he was entitled to compensation for the full period less the first three days; and (3) for an injury lasting longer than seven days he received compensation going back to and including the day of the accident. As a consequence, if two workmen were claimants at the same time, one for a nine-day disability and the other for a seven-day disability, the first was paid for the whole of the nine days but the other for only four days.

The justification offered for this discrimination, the Commissioner suggested, was that the forfeiture of compensation was considered to be part of the compromise between industry and labour by which employers accept liability without fault in return for certain concessions on the part of the workman. These are: (1) the abandonment of his right of action for damages against the employer; (2) the giving up of a portion of his loss of earnings (25 per cent under the Manitoba Act) during his disablement; (3) the waiving of his claim for compensation during the waiting period; and (4) the renunciation of any claim for compensation on the grounds of pain and suffering.

The Commissioner's view was that the other concessions should remain as they were but that the waiting period concession should be replaced by a fairer arrangement.

The Report therefore recommended the repeal of the existing provisions and the adoption of a waiting period of one day,

as in Alberta and Saskatchewan. It noted that the reason why the first day is excluded from compensation is that, as a general rule, the workman receives his wages for the day of his accident, and, if compensation were payable, there would be double payment for that day.

Extended Coverage—Dealing with requests for extended coverage, the Commissioner said that employees of wholesale and retail establishments, hospitals and nursing homes, hotels and restaurants and privately-owned radio stations should be brought under the Act. He also suggested repeal of the provision that excluded clerical workers not exposed to the hazards of the industry unless application for coverage was made by the employer, and the bringing of this class of workers within the Act.

Medical Board of Reference—Representations had been made to the Commission by both the Manitoba Division of the Canadian Medical Association and the Manitoba Federation of Labour concerning changes in the Medical Board of Reference. The Medical Board, an advisory body of qualified medical practitioners, had been created by the voluntary action of the Compensation Board and had operated for about twenty years; no mention was made of it in the Act.

The Commissioner disagreed with the suggestions that an "independent" outside body, paid for by the Government, should be set up to take the place of the present Medical Board, and that its decisions should bind the Compensation Board. He was satisfied that no substitute for the Board's present practice was called for.

(Speaking in the Debates of the Legislature on July 13, 1959, the Minister of Labour stated that there was authority in the Act to set up a medical advisory board, and that the Government proposed to establish such a board by Order in Council. Under the proposed change in the regulations, an injured workman would, as of right, have the opportunity of an appeal to a medical appeal board of five persons, two of whom would be named by the Medical Association, one by the employer,

one by the employee, and one by the Workmen's Compensation Board.)

Extensions of Time—Another recommendation was that the Board should be empowered to extend any time-limit set by the Act or regulations where, in its opinion, an injustice would result unless such extension were granted. The Commissioner observed that the one-year limit for the filing of applications for compensation and other limits set by the Act sometimes resulted in undeserved hardship and several applications for relief had had to be made to the Legislature.

Lump Sum Payments—A change in the section providing for lump sum payments in claims where the impairment of the earning capacity of the workman does not exceed 10 per cent was also recommended. The Commissioner stated that the wording of the section made it compulsory for the Board to direct that a lump sum payment be made in all such cases, unless it appeared to the Board that it would not be to the advantage of the workman to do so. He thought the better practice would be for a lump sum settlement to be made only when requested by the workman, and he recommended that the Act should be amended accordingly, with the proviso that the Board might refuse to grant a lump sum payment if it considered that it would not be in the workman's best interests.

Workmen Injured Outside Manitoba—Minor amendments, mainly for purposes of clarification, were also recommended in connection with the section providing for the payment of compensation to workmen injured outside Manitoba.

Workmen's Compensation Board—Several times in his Report the Commissioner paid tribute to the Workmen's Compensation Board and its efficient administration of the Act. He said he had been "greatly surprised" to find the almost total lack of criticism made to him concerning the conduct of the Board during the many years of its existence. His conclusion was that there was no desire among any group to abolish the Act or to introduce vital changes into its organization or methods of procedure.

Legal Decisions Affecting Labour

Appeal against picketing injunction dismissed in B.C. Saskatchewan court in two cases confirms and in another quashes Labour Relations Board orders. Appeal from judgment confirming award of arbitration board is upheld by Ontario court

The Court of Appeal in British Columbia confirmed an injunction against picketing which interfered with the activities of a warehousing company with which the picketing union did not have a labour dispute. The province's Supreme Court, dealing with the application of a union for a declaration of its rights with respect to work assignment under a collective agreement, held that the company, in allocating work as it saw fit pending a settlement, was acting in accordance with the agreement.

In Saskatchewan, the Court of Appeal found in one case that the Labour Relations Board, by refusing an adjournment of hearings, disregarded the rules of natural justice; in another case it confirmed the Board's order finding a company guilty of an unfair labour practice by refusing to negotiate a revision of a collective agreement; and in a third it confirmed the Board's certification order and rejected the claim of the employer concerned that the order contained on its face an error in law.

In Ontario, the Court of Appeal allowed a company's appeal from a judgment confirming an arbitration award and quashed the award because the arbitration board failed to determine the issues to which it was confined under the terms of the collective agreement and the rules of arbitration.

British Columbia Court of Appeal . . .

. . . dismisses appeal against injunction restraining picketing against company not involved in dispute

On September 8, 1959, the British Columbia Court of Appeal upheld an injunction granted against picketing of certain New Westminster dock and warehouse premises, on the ground that the picketing was not authorized by the Trade-unions Act, and was unlawful interference with the plaintiff's business and actionable as besetting business premises.

At the time the picketing took place, a warehousing company, Pacific Coast Terminals Company Limited, was operating terminal dock and warehouse facilities at New Westminster, B.C. The company's employees were members of Local 511 of the International Longshoremen's and Warehousemen's Union and Local 511 was the bargaining agent of the company's employees. The collective agreement between the company and its employees had expired on April 30, 1958, and negotiations for a new agreement were proceeding.

On August 21, 1958, Local 502 of the same union went on strike against the Shipping Federation of British Columbia, a federation representing the stevedoring companies that employed the members of Local 502 in the loading and unloading of ships. Although the strike involved a number of locals of the longshoremen's union representing employees engaged in the loading and unloading of ships, Local 511 was not involved in that strike. The warehousing company was not a member of the federation and its employees had nothing to do with the loading and unloading of ships. The company's business was the warehousing and storing of goods for its customers.

During the strike, Local 502 placed pickets at the two entrances to the warehousing company premises. These entrances also provided access to the dock and were ordinarily used by members of Local 502 when loading and unloading the ships at the same dock.

On September 16, 1958, the warehousing company obtained an *ex parte* injunction which restrained Local 502 from persuading the employees of the company to abstain from performing the work for which they were employed by the company, and to breach their contracts of employment, and from interfering in the performance of such contracts of employment.

The application made by Local 502 to set aside the *ex parte* injunction was refused but the order was amended. The judge who confirmed the injunction stressed that the injunction did not restrain lawful picketing by Local 502 but was designed to restrain unlawful acts in the carrying out of their picketing activities. He recognized the validity of the union's strike as against the loading and unloading of deep-sea ships, but, on the other hand, in his opinion, the union must recognize the right of the warehousing company to carry on its activities.

The judgment upholding the injunction was appealed by Local 502.

The judgment of the Court of Appeal was delivered by Mr. Justice Coady, who noted that the legality of the strike was not questioned, nor was the right of the union to picket contested, so long as the acts of the union in carrying out the picketing were lawful.

Further, Mr. Justice Coady noted that the warehousing company had no labour dispute with Local 502 at any time, nor

had it a collective agreement with the local, nor were any members of that local employed by the company. The placard signs displayed by pickets at the two entrances to the company premises read: "Local 502, I.L.W.U., on strike only against B.C. Shipping Federation".

The warehousing company was advised by the picketing Local 502 that the members of Local 511 employed by the company would be required to obtain permits to cross the picket line and the company was requested by Local 502 to furnish a list of employees.

Wishing to avoid unnecessary labour trouble, the company submitted a list of its employees who would, in the ordinary course, be reporting for work. Later, however, Local 502 advised the warehousing company that the permits would be issued only to those of the company's employees who were handling cargo considered by the union to be "non-controversial". Also, it would appear from the evidence that the officers of Local 502 took the view that the handling and storage of any goods eventually destined for deep-sea shipment constituted handling cargo that was controversial, and refused to issue permits to employees of the plaintiff company to proceed with the handling and warehousing of such cargo. This prevented the unloading of railway cars by the company and soon, except for a maintenance crew, its business was completely tied up.

No ships came to the dock during all the time that this strike was in progress and no loading or unloading of ships was carried on. In the opinion of Mr. Justice Coady, the object of Local 502 was to tie up the warehousing company's operation in the hope that such a tie-up would assist in bringing about a settlement of the strike.

The union contended that the picketing activities did not go beyond that which the union was legally entitled to do under Section 3 of the Trade-unions Act, 1948 (now 1959, ch. 90). Mr. Justice Coady rejected this submission. In his view, the picketing went beyond what was authorized by Section 3 as interpreted in *Williams v. Aristocratic Restaurants Ltd.* (L.G. 1951, p. 1553) and was carried on by means which were unlawful under *Pacific Western Planing Mills Ltd. v. International Woodworkers of America*, Local 1-424 (L.G. 1959, p. 60). When the employees of the warehousing company were in effect permitted to continue in their employment only if they secured a permit from the picketing committee or the union, then the picketing in that respect became unlawful as constituting an unlawful interference with the

company's business and *prima facie* a besetting of the company's premises, and was therefore actionable.

The company, while denying that Section 3 of the Trade-unions Act provided legal justification for the picketing activities of the union, submitted alternatively that members of Local 502, being engaged in the loading of deep-sea vessels, were within the exclusive legislative jurisdiction of the Parliament of Canada (*Reference re Industrial Relations and Disputes Investigation Act* (L.G. 1955, p. 952)), and therefore that Section 3 of the Trade-unions Act had no application. Regarding this submission the Court held that as Section 3 of the Trade-unions Act under the circumstances of the case at bar afforded no defence for the picketing of the company's premises, it was not necessary to decide whether or not the Trade-unions Act was applicable to Local 502 and its members.

The court dismissed the union's appeal and upheld the injunction. *Pacific Coast Terminals Company Limited v. International Longshoremen's and Warehousemen's Union, Local 502, et al.*, 29 W.W.R., Part 10, p. 410.

British Columbia Supreme Court. . .

...asserts company's rights under agreement to allocate work pending the settlement of a dispute

On April 2, 1959, Mr. Justice Macfarlane of the British Columbia Supreme Court, in a jurisdictional dispute, dismissed an action brought by a union which was not a party to an arbitration award to declare such an award void. Also, he upheld the company's right, based on a collective agreement, to allocate the work as it saw fit pending the settlement of the jurisdictional dispute by any independent arbitrator or other arrangements satisfactory to all parties concerned.

The circumstances of the dispute as reported in the reasons for judgment were as follows.

Victoria Machinery Depot Co., the defendant company, had separate collective agreements with the Machinists, Fitters and Helpers' Industrial Union, Local No. 3, and with the Pipefitters Union.

The collective agreement between the company and the Machinists Industrial Union dated January 4, 1957 contained the following clause, Article 11:

Jurisdiction between machinists and allied trades shall be based upon the original Machinists' agreement of 1942 and common practice in V.M.D. shipyards. The union agrees that no stoppage of work shall result because of a jurisdictional dispute. The management, through

the superintendent, shall instruct the parties to proceed with the work pending a settlement by an independent arbitrator.

The Pipefitters also had a collective agreement with the company dated January 2, 1957, of which Article 11 read:

In the matter of disputes between the various trades covered by agreement, common practice shall be followed and if the two parties to the dispute cannot reach an amicable settlement, the management shall instruct one part or the other to proceed with the work in question and there will be no stoppage of work pending a satisfactory arrangement to all concerned.

This article did not contain any reference to arbitration but the article dealing with grievances incorporated by reference a definition of "grievance" and a provision for an arbitration board in respect of grievances that were issued by the Labour Relations Board on December 23, 1952.

Both these unions had had collective agreements with the company prior to the agreements of 1957 and for many years there had been no dispute between the two unions as to the allocation of work. The work was allocated by the company as it saw fit and as the necessity of the situation dictated. After 1955, friction arose between the two unions as to the distribution of work and arbitration was considered.

In June 1957, an arbitration board appointed at the request of the Machinists declared that the unions should proceed to carry out the terms of their respective agreements and appoint an independent arbitrator to adjudicate and determine the work to be assigned to the members of the respective unions, and that until that decision was made, the company should restore the *status quo* with regard to the performance of work as it existed at February 4, 1957. But the unions were not able to agree on a submission and a second arbitration was held, this time at the request of the Pipefitters. The Machinists were requested to take part in this arbitration but they refused unless the number of items submitted to arbitration was reduced to some three or four. This board, however, was constituted with the company being a party and considered some 40 items and made allocations in respect of most of them. Subsequently, the Pipefitters demanded that the company give effect to the award and the company acceded.

As a result, the Machinists started a court action asking for a declaration that, pursuant to the collective agreement with the company, they had the right to do all work required by the company in connection with refrigeration systems, packaged boilers, hydraulic systems, steam and condensate drains, all internal and external

pipng, instrumentation of piping supplied with any machinery and the control testing, pressure testing, and operational testing, fitting of tally and/or identification plates and repairing and overhauling of the foregoing systems. They asked also for an injunction restraining the company from allocating such work to the Pipefitters during the duration of the collective agreement.

The application for an interim injunction was refused. At that time the statement of claim was amended and the Machinists asked for a declaration that the arbitration award was null and void.

In September 1958, at the trial, the Machinists conceded that they were not entitled to all the relief claimed, but did ask for a declaration that they were entitled to do work "incidental to work done by engineers in V.M.D. yards in Victoria," and for an injunction restraining the company from allocating work to the Pipefitters except in accordance with common practice at V.M.D. shipyards and an injunction against the Pipefitters union restraining it from interfering with the Machinists' collective agreement with the company.

Mr. Justice Macfarlane, in his reasons for judgment, dealt first with the claim that the award made by the last arbitration board was void and should be set aside wholly or in part.

The Pipefitters submitted that the Machinists had no status to attack the arbitration award because they were not parties to it.

Mr. Justice Macfarlane thought that the issue was not the right of a stranger to the arbitration proceedings to attack the arbitration award. Both parties conceded that the award was not binding on the Machinists since the Machinists were not parties to the arbitration and the principle is well established that an arbitration between A and B cannot affect the rights of C. In his view, the question whether the award was void was irrelevant to the issue before him.

The Machinists, however, relying upon *Supreme Court Rules* (B.C.), O. XXV, r. 5, submitted that the Court is entitled to give a declaratory judgment and to make declarations of right; that such declarations may be made at the instance of any party who is interested in the subject matter of the declaration and even if a claim to consequential relief has not been made. The Machinists claimed that, pursuant to the arbitration award, there was interference with their rights to do certain work and that in that case there was a right to relief. In these circumstances, Mr. Justice Macfarlane did not consider it necessary to make a declaration whether the award itself was void or voidable, but he held that the

Court may determine on the evidence whether there was interference, actual or threatened, with the right of the Machinists, and whether such interference (if it took place) was the result of any wrongful act of the Pipefitters and the company or either of them and that the Court may award damages and grant an injunction restraining any such interference.

Another submission made by the Pipefitters was that this was a jurisdictional dispute involving the interpretation of the Machinists' collective agreement and that the Machinists had not exhausted their remedies or taken the steps provided in that collective agreement for settlement of jurisdictional disputes (Article 11 of the collective agreement) and that, in consequence, the Machinists' action was premature and could not be maintained. It was argued that such settlement by an independent arbitrator was futile; but, Mr. Justice Macfarlane noted, Article 11 of the collective agreement provided that until it is had, the management, through the superintendent, shall instruct the parties to proceed with the work. If the parties could not agree upon a submission, then the parties should submit to the division of work made by the management.

He noted that both collective agreements provided for the application of a procedure which should govern this case. In the Machinists' agreement, it was provided that in the event of a jurisdictional dispute the management, through the superintendent, should instruct the parties to proceed with the work pending a settlement by an independent arbitrator. In the Pipefitters' agreement, it was provided that in the case of a jurisdictional dispute common practice should be followed and if the two parties to the dispute could not reach an amicable settlement, the management should instruct one party or the other to proceed with the work in question without stoppage of work pending a satisfactory arrangement to all concerned.

The Court held that these agreements allowed the company in the circumstances stated to allocate the work as it saw fit pending a settlement by an independent arbitrator or pending a satisfactory arrangement. As there was no such settlement or arrangement, what the company had done was not in breach of its contract with the Machinists but a lawful exercise of the company's right under the provisions of the collective agreement with the Machinists' union. The Machinists' action was dismissed. *Machinists, Fitters and Helpers, Local No. 3 v. Victoria Machinery Depot Co. Ltd. et al.*, (1959) 19 D.L.R. (2d) Part 3, p. 194.

Saskatchewan Court of Appeal . . .

. . . dismisses Labour Relations Board's appeal from a judgment quashing certification order made by it

On October 19, 1959, the Saskatchewan Court of Appeal dismissed the appeal of the Saskatchewan Labour Relations Board from a judgment of the Court of Queen's Bench quashing a certification order, and held that the Board in refusing to adjourn the hearing of the certification application acted contrary to the rules of natural justice.

On February 2, 1959, an application for certification was made to the Labour Relations Board by Local 189 of the United Stone and Allied Products Workers of America for a unit of employees of a Saskatoon contractor, Jim Patrick Limited. Jim Patrick Limited is a personal corporation having only two shareholders and two directors, Jim Patrick and his wife, and Jim Patrick is the managing director. No employee has authority to make decisions binding on the company.

The next day, February 3, notice of the application was delivered to the company's office with a request for a reply as required by the Board's regulations. The notice stated that the application would be heard by the Board on February 10. The two directors had left Saskatoon January 31 on a motor trip and were not expected to return until March 14. The letter was received and opened by one of the company's employees, who had no authority to act on behalf of the company in relation to the application but who arranged for a lawyer who had been employed on other occasions to appear before the Board on February 10. The lawyer appeared before the Board and stated that there was no one available to make representations on behalf of the company in the absence of Mr. Patrick and asked the Board for an adjournment until the Patricks' return. The adjournment was opposed by the representative of the union, who stated that he was apprehensive that some adverse action might be taken during the period of adjournment. The application was adjourned until the morning of February 12.

When the hearings resumed on February 12, the union representative told the Board that he had no evidence to support his allegations with respect to misconduct on the part of the company and the matter was then adjourned until 4 o'clock to give him a further opportunity of presenting evidence if he could get any.

Meantime, the company's lawyer filed an affidavit in which he stated that there was no one in Saskatoon who could represent the company before the Board and that

Mr. and Mrs. Patrick had had not notice of the intended application before they left and accordingly had left no instructions with regard to it. Later, Jim Patrick, in an affidavit sworn on April 2, also stated that he knew nothing of the application of the union before he left on the holiday and that he heard nothing of it until his return on March 14.

At 4 o'clock on February 12, the time when the hearings were supposed to resume, the Board was still engaged in another case and the company's lawyer believed that he could not wait but should return to his office. He spoke to the union representative, who told him that he had no evidence to produce in support of the grounds on which he objected to the adjournment, and asked the Board's secretary to make his apologies to the Board as he was returning to his office. He assumed that if no evidence could be given an adjournment would be made as a matter of course.

The application came before the Board at 5:30 o'clock and an order was made certifying the union as the bargaining representative of a defined unit of the company's employees and requiring the company to bargain with the union.

On his return to Saskatoon on March 14, Patrick was informed of the application made to and of the order made by the Board. On April 2, he launched an application by way of *certiorari* to set aside the certification order on the main ground that the refusal to grant an adjournment sufficient to allow the company to be heard was a denial of natural justice. The motion was heard by Mr. Justice McKercher who, on April 17, made an order quashing the order of the Board.

At that hearing counsel for the company submitted that the Board, by denying the adjournment and by making the order in the absence of anyone representing the company who could give instructions or make a reply to any allegations made by the union, did not act in accordance with natural justice.

Counsel for the Board argued that, by virtue of the authority vested in it by the Trade Union Act, when an application is made to the Board it is the duty of the company to make a reply as required by the regulations of the Board. As the company did not make a reply as required under the provisions of the Act, the Board was entitled to make the order in the absence of anyone acting on behalf of the company.

Mr. Justice McKercher found that it was unfair on the part of the Board not to grant the adjournment and unfair to make the certification order without allowing the

company, by its proper officers, to present their case and to meet the case of the union.

The judgment of Mr. Justice McKercher was appealed by the Board on the following grounds: first, that the judge erred in holding that the Board acted contrary to the rules of natural justice; second, that the company failed to show why it had not followed the remedy by way of review open to it under the Trade Union Act, which authorizes the Board to make orders "rescinding or amending any order or decision of the Board," and failed to show exceptional circumstances that would warrant quashing an order of the Board; and third, that the judge erred in not holding that the question of the Board's granting or refusing an adjournment involved the exercise of the Board's discretion within the confines of the jurisdiction entrusted to it under the Act, and consequently was not a ground upon which a superior court could consider quashing the Board's order.

Further, counsel for the Board contended that it was the Board's duty to consider and decide the question of an adjournment and in doing so the Board was acting wholly within its jurisdiction; that if an inferior tribunal has the jurisdiction to hold an inquiry, then it must be within its jurisdiction to decide whether to proceed with or postpone its hearings; that this involves the exercise of the discretion of the Board on a matter completely within its jurisdiction and that a superior court cannot on *certiorari* review the Board's decision.

Chief Justice Martin, in his reasons for the Court of Appeal's judgment, said that the Board's contention could not prevail if the exercise of the discretion was made in bad faith or resulted in violation of the principles of natural justice.

Regarding the issue of natural justice, Chief Justice Martin referred to several cases. Among them, he quoted the words of Lord Loreburn in *Board of Education v. Rice*, 1911 A.C. 179 at page 182.

Comparatively recent statutes have extended if they have not originated the practice of imposing upon departments or officers of state the duty of declining or determining questions of various kinds. In the present instance as in many others what comes for determination is sometimes a matter to be settled by discretion involving no law. It will, I suppose, usually be of an administrative kind; but sometimes it will involve matter of law as well as matter of fact or even dependent on matter of law alone. In such cases, the Board of Education will have to ascertain the law and also ascertain the facts. I need not add that in doing either they must act in good faith and fairly listen to both sides and that is a duty lying upon everyone who decides anything.

Dealing with the Board's submission that the court below should have dismissed the application because the company failed to show why they had not followed the remedy of review provided for in the Act, Chief Justice Martin held that the cases cited by the Board in support of this submission do not apply when the question of natural justice is raised. When there has been a denial of natural justice an applicant is entitled to an order of *certiorari* even though another remedy may be available to him.

Chief Justice Martin concluded that the Board in refusing to adjourn the hearing of the application and give Patrick an opportunity to be heard acted contrary to the rules of natural justice.

The Court, in unanimous decision, dismissed the Board appeal from the judgment of Mr. Justice McKecher. *Jim Patrick Limited v. United Stone and Allied Products Workers of America, Local 189, and Labour Relations Board*, (1959) 29 W.W.R., Part 14, p. 592.

Saskatchewan Court of Appeal . . .

. . . upholds Labour Relations Board order requiring a company to negotiate revision of its agreement

On October 26, 1959, the Saskatchewan Court of Appeal in *certiorari* proceedings dismissed a company's application to quash an order of the Labour Relations Board finding that the company had been guilty of an unfair labour practice by refusing to negotiate a revision of a collective agreement in accordance with the union's notice.

The Utah Company of the Americas had a contract to erect a potash plant at Esterhazy, Sask. It entered into an agreement with the International Union of Operating Engineers, Local 870, on May 10, 1958. Article 24 of this agreement reads as follows:

Article 24—Tenure of Agreement

This Agreement is effective February 15, 1958, and shall continue in effect for the duration of the project provided that this Agreement may be opened only as to basic hourly wage rates by either party on February 15, 1959, by written notice to the other not less than sixty (60) days prior to February 15, 1959, of a desire to change.

On January 9, 1959, the union served notice on the company to negotiate certain changes in the agreement, among them a change of Article 24.

The company refused to negotiate a change and the matter was brought before the Labour Relations Board.

On May 4, 1959, the Board issued an order whereby the company was found guilty of engaging in an unfair labour practice by refusing to negotiate in accordance with the union's notice to negotiate and

was ordered to refrain from engaging in the unfair labour practice.

The grounds for the company's application to the Court for quashing the Board's order were, first, that the order of the Board was in error in stating "that the notice to negotiate, given by the applicant union to the respondent company in accordance with the sixty-thirty day provision in Section 26 of the Trade Union Act, is effective notwithstanding the provisions of Article 24 of the collective bargaining agreement between the parties"; and second, that in making the order, the Board erred and acted beyond its jurisdiction in interpreting Section 26 of the Act to mean that even if a collective bargaining agreement has been entered into for a specific period which is longer than one year, notwithstanding such agreement, either party may terminate the agreement or give notice for its revision as provided in Section 26 (2) of the Act.

Section 26 of the Saskatchewan Trade Union Act is in part as follows:

- 26 (1) Except as hereinafter provided, every collective bargaining agreement, whether heretofore or hereafter entered into, shall, notwithstanding anything contained therein, remain in force for a period of one year from its effective date and thereafter from year to year.
- (2) Either party to a collective bargaining agreement may, not less than thirty days nor more than sixty days before the expiry date of such agreement, give notice in writing to the other party to terminate such agreement or to negotiate a revision thereof, and thereupon, subject to subsection (3), the parties shall forthwith bargain collectively with a view to the renewal or revision of such agreement or the conclusion of a new agreement.

Chief Justice Martin, in his reasons for judgment, noted that the only ground upon which the order of the Board was attacked was that the Board found that the notice to negotiate by the union under the sixty-thirty day provision of Section 26 of the Act was effective "notwithstanding the provisions of Article 24 of the collective bargaining agreement". This being so, the company's contention must be that the provision of Article 24 of the collective bargaining agreement must be followed instead of the statutory provision as contained in Section 26 of the Act.

In his opinion, the words in Section 26 (1) of the Act, "notwithstanding anything contained therein;" made it clear that provisions in the collective bargaining agreement could not affect the provisions of Section 26 of the statute. Consequently, the agreement, notwithstanding any provision in it, remains in force for one year from its effective date and thereafter from year to year except as provided in the Act.

Further, there could be no doubt as to the meaning of Section 26 of the Act. There is no ambiguity and the words of the section are plain and must be interpreted in their ordinary sense, according to the rule of interpretation as stated in *Maxwell on the Interpretation of Statutes*:

A statute is the will of the legislature, and the fundamental rule of interpretation, to which all others are subordinate, is that a statute is to be expounded "according to the intent of them that made it". If the words of the statute are in themselves precise and unambiguous no more is necessary than to expound those words in their natural and ordinary sense, the words themselves in such case best declaring the intention of the legislature.

The Chief Justice concluded that the application of the Utah Company of the Americas to quash the order of the Board should be dismissed. *Utah Co. of the Americas v. International Union of Operating Engineers, Hoisting and Portable, Local 870*, (1959) 29 WWR, Part 15, p. 633.

Saskatchewan Court of Appeal...

...dismisses application by company to quash a certification order of the Labour Relations Board

On October 27, 1959, the Saskatchewan Court of Appeal in *certiorari* proceedings dismissed an application made by Perini Limited to quash a certification order on the ground that the order contained on its face an error in law.

On July 23, 1959, the Labour Relations Board found that all the employees of Perini Limited employed in connection with the South Saskatchewan River Dam project near Loreburn, Sask., except persons employed in a confidential capacity, supervisors, office staff, field engineering staff and general laborers, constituted an appropriate unit of employees for the purpose of bargaining collectively and that Local No. 870 of the International Union of Operating Engineers, Hoisting and Portable, represented a majority of employees in the appropriate unit. Perini Limited was accordingly required to bargain collectively with the union.

The company applied to the Court of Appeal to have the Board's order quashed on the ground that the Board, in making the order, was without jurisdiction by virtue of having failed to exclude from the bargaining unit "any person having and regularly exercising authority to employ or discharge employees" in accordance with the Saskatchewan Trade Union Act. Employee as defined by the Act excepts therefrom two classes of people, those regularly exercising authority to employ and discharge employees and those acting on behalf of management in a confidential capacity. It was argued that the Board in its order, by

providing for exception of only one class, must be presumed to have intended that the order would apply to the other class and by so doing had made an order which, on its face, was contrary to the provisions of the Act.

Mr. Justice Culliton, in his reasons for judgment, said that if the order is to be construed as a statute, then there might be some merit to the company's argument. But, in his opinion, the order is not to be so construed, but must be interpreted in the light of the record and the legislation under which it was made.

Under the Act, the Board has jurisdiction to determine the appropriate unit of employees for the purpose of bargaining collectively and the Board may decide, as a matter of fact, what employees or class of employees regularly exercise authority to employ or discharge employees. By operation of the statute, those persons employed in a confidential capacity or those regularly exercising the authority to employ or discharge employees are excluded from the bargaining unit. In the *Canada Safeway* case, an order of the British Columbia Board provided that such employees "except those excluded by the Act" and those listed on the certificate were an appropriate unit for bargaining collectively. On that occasion, Mr. Justice Kerwin, as he then was, stated that the words "except those excluded by the Act" should not have been included in the order and could be treated as surplusage. (*Labour Relations Board (B.C.) and the Attorney General for the Province of British Columbia v. Canada Safeway Limited* (1953) 2 S.C.R. 46).

Similarly, in Mr. Justice Culliton's opinion, the words "persons employed in a confidential capacity" used in the order under review may be treated as surplusage. When this was done, any basis there might have been to the company's argument disappeared. Further, he noted that there was nothing in the order or in the record to indicate in fact that the order was intended to apply to any class of employees excluded by the statute; nor was any evidence rendered by the company that would enable the Court to so conclude.

The Court held that in those circumstances it could not be said that the order contained on its face an error in law upon which *certiorari* proceedings could be founded. The company's application was dismissed and the Board's certification order upheld. *Perini Limited v. International Union of Operating Engineers, Hoisting and Portable, Local No. 870*, (1959) 29 W.W.R., Part 14, p. 576.

Ontario Court of Appeal . . .

. . . quashes arbitration board's award on grounds that issue not determined according to agreement

On June 5, 1959, the Ontario Court of Appeal, in *certiorari* proceedings, quashed an award made by a board of arbitration constituted under a collective bargaining agreement. The Court held that the arbitration board exceeded its jurisdiction by deciding whether or not the company acted reasonably in discharging an employee and by failing to determine whether or not there was just cause for the employee's dismissal.

On June 1, 1956, a collective bargaining agreement was made between International Nickel Company of Canada Limited and Local 637, International Union of Mine, Mill and Smelter Workers. According to Article 4.01 of the agreement, the union agreed that the company had the exclusive right "to manage the plant, to direct the working forces and to hire, promote, transfer, demote or lay off employees and to suspend, discharge or otherwise discipline employees for just cause." The agreement contained provisions for the adjustments of grievances between the company and its employees. The grievance procedure was divided into a number of stages; in the event of failure to settle the dispute the matter could be referred to a board of arbitration.

The arbitration proceedings were to be governed by the rules of arbitration annexed to the agreement. Rule No. 2 provided that: "In any arbitration the written representations of the employee made at Stage Three and the decision of the company at Stage Four of the grievance procedure . . . shall be presented to the arbitrators and the award of the arbitrators shall be confined to determining the issues therein set out."

K—, an employee of the International Nickel Company, was discharged by the company. At Stage Three of the grievance procedure he presented his grievance in the following terms: "I have a grievance under the C.B.A. because I was discharged without just cause. I request to be reinstated and paid for all time so lost."

The assistant superintendent of the company replied to that grievance in the following terms: "I find, after a careful investigation, that K— was discharged on July 25 following his persistent absenteeism and inability to report for work in a fit condition extending over a period of several years. It should be noted that K— had been penalized for absenteeism on numerous occasions and had been cautioned and

warned on no less than four occasions since January 1, 1958, that if his conduct continued he would be discharged. I am satisfied that, having regard to the flagrant nature of K—'s conduct and his persistent absenteeism, his discharge was fully justified."

Subsequently, the company's representative at Stage Four of the grievance proceedings made the following decision: "For the reasons contained in the company's reply at Stage Three, which is hereby confirmed, I find that the company was fully justified in discharging K— for persistent absenteeism and failure to report for work in a fit condition."

The board of arbitration constituted according to the provisions of the collective agreement heard the complaint of the employee, as well as the evidence respecting his many absences from work and alleged alcoholism. The board examined also eight occasions when K— reported for work under the influence of liquor and was refused admittance to the plant.

The findings of the board were that, in ordinary circumstances, considering the employee's unsatisfactory record of service with the company, the company was more than justified in discharging such an employee. Yet, the award continued, for previous absences in 1958 because of alcoholism, K— remained unpunished, except for warnings. On the three occasions when he was punished, he was punished by suspensions for one, three and four days respectively. Assuming that those were punishments for K—'s first, second and third offences, then it seemed to the board unreasonable that for his fourth offence he should be discharged. The board was of the opinion that for the last offence a suspension for over seven months was adequate punishment. If, however, on any future occasion, K— should report for work under the influence of liquor, or should be absent because of use of liquor, or be found to be drinking alcoholic beverages on the job, he could be discharged immediately. Finally the board ordered "that K— be restored to his job or a comparable one which he is able to do, effective the day after this award is received by the company."

In the same award the board approved the action of the company's official in discharging the employee. "We believe," the award said, "that he acted in doing so with the best interests of the company at heart, and he is not to be blamed in any way for what he did."

The company challenged the arbitration award in *certiorari* proceedings. On April 28, 1959, Mr. Justice Spence dismissed the motion. He was of the opinion that the board had said in effect that the discharge was not for just cause, and such a finding was fully within its jurisdiction. The judge added that the fact that the board exceeded its jurisdiction and attempted to find another discretionary measure did not affect its main finding and did not vitiate the award.

The ruling of Mr. Justice Spence was appealed by the company. The judgment of the Court of Appeal was delivered by Mr. Justice Laidlaw. He was of the opinion that the conclusions reached by the board of arbitration were indefinite, uncertain and inconsistent in parts.

The jurisdiction of the board was to determine the issues between the parties and was expressly restricted by the agreement between the employer and the union. The issue between the parties was simply this: The employee said "I was discharged without just cause"; the employer said "there was just cause for your discharge and that just cause consisted not only of your absence prior to July 25 but because of the persistent absenteeism and inability to report for work in a fit condition extending over a period of several years."

In Mr. Justice Laidlaw's opinion, the board ought to deal with that issue only. Instead, the board proceeded to consider first, whether or not the conduct of the employee on the occasion of the last offence

merited dismissal and then proceeded to determine whether the company acted reasonably or unreasonably in effecting his discharge. The board decided that "in ordinary circumstances" the company would have been more than justified in discharging the employee. Then the board proceeded to consider the hardship to which the employee would be subjected in the event of discharge and decided that the suspension for over seven months was adequate punishment, and then again the board approved the action of the company in discharging the employee.

In the opinion of the court, the board decided whether or not the employee should be dismissed in the circumstances; it did not decide whether or not there was just cause for his dismissal. The matters considered and determined by the board were beyond its jurisdiction. The board not only exceeded its powers but it omitted to determine clearly the real issue before it. The award could not be regarded as a proper determination of the issues as clearly defined by the parties and in evidence.

The ruling of the court was that the award should be set aside and the matter should be remitted to a board of arbitrators for determination of the issue between the parties in accordance with the collective bargaining agreement and Rule No. 2 of the arbitration procedure. *International Nickel Co. of Canada and International Union of Mine, Mill & Smelter Workers, Local 637*, (1959) 19 DLR (2d), Parts 4 and 5, p. 380.

Recent Regulations under Provincial Legislation

Minimum wage rates increased for employees in ship-building industry in British Columbia, and safety regulations for oil and gas wells are revised in Alberta

In British Columbia, a revised order for the ship-building industry set a minimum wage of \$1.75 an hour for tradesmen and of \$1.25 an hour for other employees and provided for payment at the overtime rate after 40 hours in a week.

In Alberta, new safety regulations for oil and gas wells issued by the Workmen's Compensation Board require additional precautions to be taken against fires and revise factors of safety for hoisting lines. Amendments to the drilling and production regulations under the Oil and Gas Conservation Act prescribe more extensive requirements in connection with blow-out prevention equipment.

Alberta Gas Protection Act

Regulations governing gas installations under the Gas Protection Act (L.G., Oct. 1959, p. 1084) have been amended by Alta. Reg. 375/59, gazetted November 14, with respect to manual shut-off valves on gas appliances used or offered for sale in the province.

The new regulation provides that when a gas appliance has a pilot, the pilot take-off must be an integral part of the manifold assembly and installed upstream from all manifold control valves, including the manual shut-off valve.

Alberta Labour Act

In Alberta, the Minimum Wage and Hours of Work Order governing cooks in work camps was amended by Alta. Reg. 354/59 to permit employees to accumulate their rest period over four months instead of three as formerly.

Alberta Oil and Gas Conservation Act

Alberta Regulation 346/59 relating to Drilling and Production Regulations, issued under the Oil and Gas Conservation Act, was gazetted October 31. This regulation, which includes some safety provisions, further amends Alta. Reg. 31/57 (L.G. 1957, p. 1090).

The new regulations place more specifically the responsibility for the prohibition of smoking on drilling rigs and near certain other oil and gas field operations. It is now provided that failure of the operator to enforce the regulations prohibiting smoking is a contravention of the regulations.

More extensive requirements in connection with blow-out prevention equipment are also prescribed. They set out special safeguards in the case of a well which is being drilled below a depth of 4,000 feet. It is also stipulated that each person employed on the rig shall have an adequate understanding of, and be able to operate the blow-out prevention system, and new employees are required to be trained in the operation of the system as soon as practicable.

Alberta Workmen's Compensation Act

Safety regulations for oil and gas well drilling and servicing rigs and derricks (Alta. Reg. 371/59), issued under the Workmen's Compensation Act, were gazetted November 14. They came into effect on December 1, and rescinded Alta. Reg. 774/57.

Although most of the provisions of the former regulation have not been significantly altered, extensive changes have been made in the arrangement of the provisions, and some new requirements have been introduced.

The new regulation requires that all vehicles used to transport workmen and tools must have tool racks that hold tools securely.

Revised factors of safety are now set out for hoisting lines used for well-drilling, well-servicing or well-abandoning operations. Ropes and equipment must be in good condition and personnel must be careful to minimize shock, impact, and acceleration or deceleration of loads.

An additional provision in connection with pumps now requires their protection to prevent freezing.

A new requirement prohibits the discharge of exhaust gases in such a manner that ignition or fumes may create a hazard to workmen.

Several new provisions have been introduced whose object is to eliminate the risk of fire. These concern the location of boilers, treaters, crude oil storage tanks, separators and flare pits; they also deal with precautions to be taken in connection with vessels and equipment containing ignitable vapours, spark-proofing of motors, and the insulation or cooling of exhaust pipes of internal combustion engines.

Service rigs must be used within rated capacity, have adequate guy wires properly secured, and may not have structural changes or additions made to them without approval.

Another new provision requires the operator of a well where hydrogen sulphide gas is found to post suitable signs warning of gas; the operator of a drilling rig must also post such a sign on it, and he may not permit anyone to approach the drilling rig without warning him of gas.

The responsibility of the employer to supply personal protective equipment is clarified. He must have on the job for use by workmen the personal protective equipment specified in the regulation, unless stated otherwise.

New requirements relating to drawworks controls, hoisting drum guards, and safety cables for rotary tongs are also established.

The repealed regulations contained requirements with respect to blowout prevention equipment which do not appear in the new regulations, the subject now being fully covered in regulations under the Oil and Gas Conservation Act reported above.

British Columbia Factories Act

As a result of a proclamation gazetted on October 29, factories in British Columbia had to remain closed on Saturday, December 26, 1959, except those exempted because of the nature of their activities or by special permission of an inspector.

British Columbia Male and Female Minimum Wage Acts

The British Columbia Board of Industrial Relations recently revised its minimum wage order for the ship-building industry, increasing the minimum rate of tradesmen from 90 cents to \$1.75 an hour and that of other workers from 60 cents to \$1.25 an hour, effective from January 3.

Another new provision requires the payment of overtime after 40 hours in a week instead of after 44 as formerly. Only one other order, that covering the pipeline construction industry, provides for the payment of time and one-half the regular rate for hours in excess of 40 where hours do not exceed eight on any one day.

The new order, which was gazetted on November 26 as B.C. Reg. 316/59, applies to female as well as male employees but otherwise has the same coverage as the 1946 order that it replaces, applying to all operations in the construction, reconstruction, alteration, repair, demolition, painting, cleaning, preserving, reconditioning, putting on or taking off the ways, or dry-docking of any ship, boat, barge or scow.

The \$1.75-an-hour rate, which is the highest minimum rate in the province, is payable to all qualified tradesmen in the industry, including asbestos workers, blacksmiths, boat-builders, boilermakers, caulkers, electricians, engineers, fitters, hoistmen, insulation mechanics, joiners, machinists, painters, pipefitters, plumbers and steamfitters, riggers, sheet metal workers, shipwrights and welders.

As previously indicated, all other employees in the ship-building industry who are not journeymen and are not subject to another minimum wage order must receive a minimum of \$1.25 an hour, the only exceptions being apprentices or handicapped or part-time workers for whose employment the Board has issued a special permit to work for less than the prescribed minimum. Such employees must be paid at the rate set in the permit.

In line with the usual practice, some variation of the overtime provision is permitted. If, by agreement, hours are averaged over a fixed period, the overtime rate is payable for all hours worked in excess

of a weekly average of 40 hours provided hours do not exceed eight in any one day. The Board may also vary the overtime provision whenever a part of the industry has been excluded from the Hours of Work Act or a special exemption has been granted by regulation.

Unlike the former order, which did not contain a daily guarantee provision, the new order states that employees in the ship-building industry are to be paid at their regular rate for the entire period spent at work in response to a call from the employer, with a minimum of two hours pay if they report for work and four hours if they commence work, subject to the usual qualifications. School students reporting for work on school days are guaranteed a minimum of two hours pay.

In keeping with recent practice, the order requires all employees to be given a weekly rest of 32 consecutive hours, further providing that, in exceptional cases, the Board may approve a different arrangement upon receipt of a joint application from the employer and employees concerned. The previous order made no provision for a weekly rest.

The new order also contains the usual provisions respecting semi-monthly payment of wages, the posting of orders and daily shifts and the keeping of records and employee registers.

Nova Scotia Workmen's Compensation Act

The Christmas tree industry was brought under the collective liability section of the Nova Scotia Workmen's Compensation Act by a regulation gazetted on November 4. This means that workmen engaged in the cutting or selling of Christmas trees are now entitled to benefits under the Act, provided at least five persons are engaged in the operation.

Current Reports on Progress of Labour Bills

During the current sessions of Parliament and the provincial legislatures, the Legislation Branch of the Department will be issuing a series of mimeographed reports on labour bills introduced.

The reports cover the provisions of each bill and follow its progress from the time the bill is introduced to the point where it receives Royal Assent or is dropped. These current reports are intended to provide more up-to-date information than it is possible to give in the monthly issues of the *LABOUR GAZETTE*. At the close of the sessions the major developments of the year will be reported in a series of articles in this section of the *LABOUR GAZETTE*.

The first report in the present series is available now.

Single copies may be obtained from: The Legislation Branch, Department of Labour, Ottawa.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Number of claimants for unemployment insurance benefit rises from 201,600 at September 30 to 250,600 at October 30, 1959; but this number still 22 per cent lower than the 323,500 at October 31, 1958, statistics* show. Revenue higher

Claimants† for unemployment insurance benefit numbered 250,600 on October 30, 1959. This was 24 per cent more than on September 30, when the total was 201,600, but 22 per cent fewer than the total of 323,500 on October 31, 1958.

On October 30, 1959, males comprised 66 per cent of the total, compared with 62 per cent on September 30 and 70 per cent on October 31, 1958.

The total of 151,200 initial and renewal claims for benefit in October was 31 per cent larger than in September but 21 per cent smaller than in October 1958.

The average weekly number of beneficiaries was estimated at 159,800 for October, 155,000 for September and 220,700 for October 1958.

The average weekly benefit payment was \$20.51 in October, \$20.54 in September and \$20.88 in October 1958.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for October show that insurance books or contribution cards have been issued to 4,655,649 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

At October 31, 1959, employers registered numbered 324,408, an increase of 640 since September 30.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

Enforcement Statistics

During October 1959 enforcement officers across Canada made 6,524 investigations. Of these, 4,190 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 149 were miscellaneous investigations. The remaining 2,185 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 158 cases, 41 against employers and 117 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,442.*

Unemployment Insurance Fund

Revenue in October 1959 totalled \$23,357,196.24 compared with \$19,953,518.86 in September and \$20,283,200.09 in October 1958. Benefits paid in October totalled \$13,761,554.32 compared with \$13,375,586.41 in September and \$20,225,925.74 in October 1958. The balance in the fund on October 31 was \$464,834,421.33; on September 30 it was \$455,238,779.41 and on October 31 last year \$643,934,049.60.

*These do not necessarily relate to the investigations conducted during this period.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1684, October 23, 1959

Summary of the Main Facts: The claimant, married, 24 years of age, who resides in Hamilton, Ont., filed an initial application for benefit on March 19, 1958, and stated therein that she had worked as a selector (her registered occupation) for Dominion Glass Company Limited, Hamilton, from 1950 to September 27, 1957, when she voluntarily left due to pregnancy. She stated also that her baby was born on February 4, 1958, that she was available for full-time employment and that her mother would care for her child in the event that she obtained work.

On December 2, 1958, the local office notified the claimant of an offer of continuing employment in Hamilton. The hours of work were from 8.00 a.m. to 4.30 p.m., 40 hours a week. The travelling time from her home to the place of the employment was stated to be three-quarters of an hour. Her reason for not applying for the employment was "I have no one to look after my baby."

The local office commented:

During the course of interview claimant stated that her Mother, who was going to mind her baby, had taken her sister's baby to mind in May, 1958, when her sister returned to work at American Can Company, and since that time had been unable to mind her baby. Claimant could not say definitely when her sister returned to American Can Company, but she thought it was sometime in May, 1958.

The insurance officer disqualified the claimant from receipt of benefit for the period November 30, 1958, to January 10, 1959, inclusive, because in his opinion she had, without good cause, refused to apply for a situation in suitable employment (section 59 (1) of the Act). He also disqualified her from November 30, 1958, for as long as she failed to prove that she was available for work (section 54 (2) (a) of the Act). The claimant was notified of these decisions on December 5, 1958, and in respect to the disqualification imposed under section 54 (2) (a) of the Act, the insurance officer's letter reads in part:

... You have failed to prove that you are available for work, as required by section 54 (2) (a) of the Unemployment Insurance Act, as after being unemployed for over 5 months you have turned down suitable employment, and you state you have no one to care for your baby...

There is no indication in the records that the claimant appealed to a board of referees from the two aforementioned disqualifications.

The case was referred to an enforcement officer of the Unemployment Insurance Commission for investigation, following which the claimant made the following written statement on December 30, 1958:

I have not had a baby sitter since about May 4/58. My Mother had promised to look after my baby if I should obtain work. However, my married sister returned to work around May 4/58 and my Mother had to look after her baby, so was not available to look after my child. I continued to sign for benefits because I thought that because I was not working I was entitled to receive benefit. I did not know about availability.

The enforcement officer's report, dated December 31, 1958, reads in part:

I found this claimant very co-operative during the course of my investigation regarding her non-availability. She said she did not realize what "availability" meant, and because she was not working she thought she was entitled to benefits. It was only when she was called in for a referral that she realized she could not take the work offered... I asked if it had been possible to obtain some other baby sitter, and again she replied, "No", that her husband did not wish anyone else to look after the child.

I do not believe there was deliberate misrepresentation here...

On March 11, 1959, the insurance officer notified the claimant, by letter, that she was disqualified from receipt of benefit for the period May 4, 1958, to November 29, 1958, for the following reasons:

You were not available for work from 4 May, 1958 to 29 November, 1958 within the meaning of Section 54 (2) (a) of the Unemployment Insurance Act, as you now admit that you had no one to care for your child.

This disqualification created an overpayment of benefit in the amount of \$570.

The insurance officer notified the claimant on April 23, 1959 that she was disqualified also in the amount of \$75 for having incorrectly declared that she was available for work from May 4, 1958 to November 29, 1958, said amount to be deducted from the first benefits otherwise payable to her on and after April 23, 1959 (section 65 of the Act).

The claimant appealed to a board of referees and stated in part:

... I was available for suitable work during the period from the 4 of May 1958 to the 29 of November 1958... I at no time made any misrepresentations, false statements, or attempted in any way to take what I did not honestly believe was due to me...

I refused the R. G. Brown Custom Packing offer to work because the rate of pay was considerably lower, and the distance to Burlington Street from my mountain home was unreasonably distant...

My reaction to your letter dated December 5, 1958, was that I was disqualified as to future payments until suitable employment was available at which time I would arrange for a baby sitter.

On December 8, 1958, (the enforcement officer) spoke to me concerning my availability and wrote out a statement which I signed, which I would qualify in that should suitable work have been offered a baby sitter presented no problem...

The board of referees heard the case in Hamilton on May 27, 1958. The claimant and her solicitor were present at the hearing. The board, after taking into consideration all the evidence, both written and oral, unanimously found (1) that the claimant was not available for work during the period May 4, 1958 to November 29, 1958, and (2) that she was properly disqualified under section 65 of the Act. However, the board felt that the amount of the disqualification should be reduced from \$75.00 to \$15.00 in view of her utter lack of knowledge of the booklet (Form UIC 501D, *Direction to Report and Information for Claimants*) and of "her statement that she at no time deliberately misrepresented or intended to deceive or obtain money under false pretences."

The United Glass and Ceramic Workers of North America, Hamilton Local 203, of which the claimant is a member, appealed to the Umpire on the following grounds:

- (a) there was no evidence of misrepresentation or false statement
- (b) the sums received were received in good faith
- (c) upon a true construction of all the facts, the claimant was in fact available
- (d) in any event the claimant is entitled to relief because of undue hardship under the circumstances.

The union also requested a hearing of the case before the Umpire, which was held in Toronto, Ont., on October 9, 1959. The union was represented by O. H. Ferguson, President of the aforementioned local, and the Unemployment Insurance Commission by F. G. Power.

Considerations and Conclusions: The facts that were before the insurance officer when he made his decision of December 5, 1958, under section 54 (2) (a) of the Act, unquestionably established that the claimant was not available for work since May 1958. However, notwithstanding that evidence, he decided to disqualify her only as from November 30, 1958. Under those circumstances, his subsequent decision of March 11, 1959, under that same section, is in fact an amendment of his decision of December 5, and is *ultra vires* in that it was not based on any new facts, as it should have been to meet the requirements of

section 79 of the Act. The insurance officer's decision of March 11, 1959 should, therefore, be considered a nullity to all intents and purposes, and I so decide.

As to the disqualification imposed under section 65 of the Act, the board of referees has accepted as true the claimant's statement that "she at no time deliberately misrepresented or intended to deceive or obtain money under false pretences." According to the jurisprudence established in the Umpire's decision CUB-1376, section 65 of the Act does not apply when statements or representations which are proved to be incorrect have been made in good faith. The disqualification imposed under section 65 in the present case should, therefore, be removed entirely and I so direct.

The claimant's appeal from the insurance officer's decisions of March 11 and April 23, 1959 is therefore allowed.

Decision CUB-1697, November 16, 1959

(Translation)

Summary of the Main Facts: On April 24, 1959, the insurance officer notified the claimant that he was disqualified from November 30, 1958, to March 28, 1959, under sections 54 (1) and 57 (1) of the Act and section 155 (2) of the Unemployment Insurance Regulations, because he had worked as an insurance agent and had not proved that he was unemployed during the period in question.

On June 30, 1959, the board of referees unanimously confirmed the decision of the insurance officer. The facts that had been submitted to the board were as follows:

On April 9, 1959, an insurance company, "La Prévoyance du Canada" stated that it had "hired" the claimant on December 1, 1958, and that during the months of December 1958, and January, February and March 1959, it had paid the claimant \$150.00 fortnightly (Exhibit 2).

On April 10, 1959, the claimant made the following written statement but did not sign it:

... It is true that I was hired by La Prévoyance Insurance Company of Hull on the first of December 1958. It is also true that I have received, since December 15, 1958, \$150.00 fortnightly. This amount is an advance on future commissions. I have been in training since December 1, 1958. I have not yet been granted my licence for 1959. I was under the impression that I did not have to report my fortnightly remuneration of \$150.00 since it was an advance on commissions.

In his appeal to the board of referees (Exhibit 5), the claimant stated that those so-called earnings were nothing more than promissory notes which he had to refund to the company.

The enforcement officer who inquired from the employer made a report (Exhibit 6), which reads in part:

(The claimant) was hired on December 1, 1958, and for about 6 weeks underwent intensive training of 8 hours and more a day at the office of the company in Hull. During this training period, he became familiar, through his studies carried out at the office, with the different kinds of contracts and rates of premiums. By the middle of the training period he was dividing his time between the study of the different manuals and field training, that is, visits to prospective clients with the manager who was in charge of training.

There is no provision as to duration in the contract of engagement. Under the same contract, the moneys received as advances during the training period and even after must be refunded in full or in part according to the circumstances, that is to say if, at the end of this training period or rather the period during which the company paid him advances, the contracting party should decide not to continue under the contract, the company could demand a repayment of the advances. On the other hand, should the contracting party decide to separate from this employment, the circumstances under which he did so would influence the decision of the company in the following manner: if the agent should decide to leave La Prévoyance Company to work for another insurance company, the employer would evidently demand the repayment of all the advances made. However, according to the manager of La Prévoyance... who was questioned on the matter, the new employer would in such instance, eventually refund the advances. Should the agent decide to leave the field of insurance entirely, there is no fixed policy in respect to this although, under the provisions of the contract, a refund could be demanded...

As to the claimant's sales, by January 15, 1959, he had sold 3 insurance policies and from January 15 to April 9, 1959, he had sold 12. By the end of May 1959, (the claimant) owed \$1,468.65 and had refunded \$222.69 on his advances.

In his testimony before the board of referees, the claimant stated, among other things, that he did not consider himself to be an employee of the insurance company "since he was free at any time to accept any other employment which would have offered greater advantages or a higher remuneration..."

The board of referees based its decision on the following considerations:

In any event, the facts on record indicate without contradiction that the claimant, from December 1, 1958, underwent training as an insurance agent for La Prévoyance Insurance Company and, as such, was receiving \$150.00 fortnightly. It is true that this sum was not a salary but this fact is of no importance in this case since all we have to decide is whether or not the claimant was an employee of La Prévoyance Insurance Company of Canada as of December 1, 1958. Only an affirmative answer can be given to this question.

On August 6, 1959, the claimant appealed to the Umpire and stated, in part:

... During the period of training which I underwent, I did not think it necessary to report the moneys I received from La Prévoyance beginning in December because I was under an obligation to refund such moneys. I have at

all time been at the disposal of the Unemployment Insurance Commission. I have even, on three different occasions, had interviews with certain employers who offered me work. For good reasons I had to decline their offers.

I received benefit from December 1, 1958 to March 28, 1959, that is, for a period of four months—and because one or two stamps were lacking in my book, I was refused benefit for a period of a month and a half. Moreover, inasmuch as the training I received at La Prévoyance consisted mainly of having to read documents, La Prévoyance left me free to spend all my time as I wished.

The claimant, in addition, requested a hearing before the Umpire, which was held in Ottawa on November 12, 1959. The claimant was present at the hearing and the Unemployment Insurance Commission was represented thereat by F. G. Power. The claimant, among other things, drew the attention of the Umpire to the fact that the insurance officer and the board of referees should have examined his claim in the light of section 154 (1) (b) and (2) of the Regulations, instead of section 155 (2), in that the time he spent learning the job of insurance agent was left to his discretion and he could have carried on his studies just as well at home in the evening.

Considerations and Conclusions: The evidence in the records shows that on December 1, 1958, La Prévoyance du Canada "hired" the claimant as an insurance agent and that the training course he followed was an essential condition of the contract of engagement. The activities he devoted to this course must consequently be assimilated to work performed by virtue of an obligation resulting from a contractual relationship between an employee and his employer.

Moreover, the evidence shows that the claimant did in fact, during the regular working hours, devote his whole time to the aforementioned course. Under such circumstances, I cannot see how he can be considered to be unemployed, regardless of what provision of the regulations his case is examined under, whether it is section 154 (1) (b) or 155 (2), or whether or not he received remuneration with respect to the period in question, since the applicable provisions do not make the remuneration a factor to be necessarily taken into account for the purpose of determining whether an insured person is unemployed.

For all the foregoing reasons, I decide to maintain the unanimous decision of the board of referees and I dismiss the claimant's appeal.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during November Works of Construction, Remodelling, Repair or Demolition

During November the Department of Labour prepared 161 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 155 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under the heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in November for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	2	\$ 6,098.25
Defence Production	93	532,446.00
Post Office	11	180,170.33
RCMP	2	22,942.00

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during November

During November the sum of \$4,314.11 was collected from 11 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount has been or will be distributed to the 269 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during November

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Indian Head Sask: Engel Bros, construction of new water system, Forest Nursery Station. *Kamloops B C:* Taylor & Son Ltd, renovations to insecticide bldg, entomology laboratory. *Summerland B C:* Barr & Anderson (Interior) Ltd, installation of additional gas fired heating boiler, controls & chimney, Research Station.

Fort Smith N W T: Horton Steel Works Ltd, supply & erection of steel elevated water storage tank. *Hay River N W T*: R D Argue (Armac Expeditors), construction of school playground area. *Rankin Inlet N W T*: The Edward Milner Co Ltd, refrigeration & temperature controlled warehousing; North Rankin Nickel Mines Ltd, supply & installation of oil storage tank complete with piping, valves & cleaners, etc. *Northwest Territories & Yukon Territory*: Mannix Co Ltd, erection of fifty-four one bed-room prefabricated houses for Eskimos employed at Distant Early Warning sites.

Department of Public Works

Botwood Nfld: E J Clarke & Sons Ltd, construction of federal bldg. *Corner Brook Nfld*: Chisholm Construction Co Ltd, installation of filling. *Antigonish N S*: Floyd Construction Co, construction of RCMP detachment quarters. *Central Port Mouton N S*: Mosher & Rawding Ltd, harbour improvements (construction). *Glace Bay N S*: Maritime Builders Ltd, construction of federal bldg. *Shelburne N S*: Shelburne Contracting Ltd, construction of RCMP detachment quarters. *Wine Harbour N S*: Antigonish Construction Co Ltd, breakwater reconstruction. *Grand Manan N B*: Joseph McDowell & Laurence Cook, construction of RCMP detachment quarters. *Point Bouleau (Tracadie Harbour) N B*: Whalen Bros Construction, construction of causeway. *St Quentin N B*: Clumac Construction Ltd, construction of post office bldg. *Champlain Que*: Marautier Construction

Inc, construction of retaining wall. *Chandler Que*: Keys Construction Inc, test blasting of quarry. *Contrecoeur Que*: P Baillargeon Ltd, repairs to retaining wall. *Fauvel Que*: Cecil H Beebe, wharf repairs. *Loretteville Que*: Tellier & Groleau Inc, construction of federal bldg. *Matane Que*: Yvon Gauthier, construction of retaining wall (backfill). *Montreal Que*: Noma Construction Co Ltd, construction of letter carrier depot, Cote St Luc. *Port St Francois Que*: Anatole Proulx, repairs to wharf approach. *Quebec Que*: Plessis Construction Ltee, construction of storage shed. *St Jacques de Montcalm Que*: Jean Claude Perreault, addition & alterations to public bldg. *St Laurent, I O, Que*: Les Travaux St Laurent Enrg, wharf repairs. *Sept Iles Que*: Hector Belanger, construction of shed. *Sutton Que*: Williams Construction Co Ltd, addition & alterations, federal bldg. *Amherstburg Ont*: George L Dillon Construction Co Ltd, harbour improvements (retaining wall). *Elliot Lake Ont*: Foundation Company of Ontario Ltd, construction of federal bldg. *Fort Erie Ont*: S E Zimmerman & Son Ltd, alterations to federal bldg. *Leamington Ont*: Ferguson Construction, repairs to warehouse. *Moose Factory Ont*: Temiskaming Construction Ltd, construction of sewage treatment plant. *Ottawa Ont*: S G Brookes, installation of buzzer system on six floors, Jackson Bldg, Bank St; Ted Wojdacki, interior redecoration, Mines & Technical Surveys Bldg, 556 Booth St; J R Statham Construction Ltd, demolition of existing partitions, construction of new partitions, installation of conveyor system, redecoration, floor covering, plumbing & electrical work, No 1 Temp Bldg; Universal Painters & Decorators Reg'd, interior re-painting of basement garage, Supreme Court Bldg, Wellington St; A Lanctot Construction Co Ltd, repairs to stone parapet wall adjacent to Supreme Court garage, Wellington St; W Sparks & Son Ltd, moving furniture, paintings, etc (Phase 1), from various locations to Lorne Bldg, Elgin St. *Ottawa Ont & Hull Que*: Hurdman Bros Ltd, removal of ashes from Central Heating Plants—Cliff St, CEF, Riverside Drive & National Printing Bureau. *Stoney Creek Ont*: Wilchar Construction Ltd, construction of post office bldg. *Wheatley Ont*: Detroit River Construction Ltd, harbour improvements (East Wharf reconstruction). *Lundar Man*: Dauphin Fixtures Ltd, construction of RCMP detachment quarters. *Ethelbert Man*: Dauphin Fixtures Ltd, construction of RCMP detachment quarters. *Lynn Lake Man*: Calvert Construction Co Ltd, construction of nursing station & double garage. *Big River Sask*: Lahti Construction Ltd, construction of RCMP detachment quarters. *Craik Sask*: Shoquist Construction Ltd, construction of RCMP detachment quarters. *Regina Sask*: Dominion Electric Protection Co, installation of fire alarm system, RCMP Barracks. *Saskatoon Sask*: W C Wells Construction Co Ltd, construction of federal bldg. *Vonda Sask*: Shoquist Construction Ltd, construction of RCMP detachment quarters. *Pincher Creek Alta*: Southern Alberta Construction Ltd, construction of post office. *Lillooet B C*: Basarab Construction Co Ltd, construction of RCMP detachment quarters. *Mission City B C*: Commonwealth Construction Co Ltd, construction of dormitory school, priests' house & two residences for Indian Affairs Branch, St Mary's Mission. *North Galiano B C*: Harbour Piledriving Co, wharf reconstruction. *Sooke B C*: Gordon John Ltd, repairs to bank protection. *Victoria B C*: Parfitt Construction Co, alteration to 3rd & 4th floors, federal bldg, Department of National Health & Welfare. *Westview B C*: Northern Construction Co & J W Stewart Ltd, construction of boat harbour breakwater. *William's Lake B C*: Peter Kiewit Sons Co of Canada Ltd, construction of 4 classroom school, etc. *Fort Smith N W T*: Yukon Construction Co Ltd, heating room addition to RCMP hangar.

Contracts Containing the General Fair Wages Clause

Bedford Basin N S: Warnock Hersey Co Ltd, test borings for Hydrographic Research Station. *Pictou N S*: Ferguson Industries Ltd, repairs to Dredge No 20. *Hull Que*: Glebe Electric, supply & installation of light fixtures, new Printing Bureau; Rene Cleroux, repairs to boiler, new Printing Bureau; Rene Cleroux, repairs to plumbing, new Printing Bureau; Ottawa Mechanical Services Ltd, supply & installation of pumping unit, Post Office. *Levis Que*: P A Tremblay, repairs to masonry, federal bldg. *Arnrior Ont*: Patrick Visheskie, replacement of joists & flooring, Civil Defence College. *Clarkson Ont*: D J Delwort, erection of postal screenline, Post Office. *Hamilton Harbour Ont*: Ontario Marine & Dredging Ltd, dredging, Burlington Beach. *Ottawa Ont*: R & R Construction, installation of fire door & related work, Prime Minister's residence; M Sullivan & Son, alterations in conference room, Veterans Memorial Bldg, Wellington St; Ontario Building Cleaning Co, cleaning exhaust duct system, House of Commons, Durie Mosaic & Marble Ltd, repairs to lighting, Senate Chamber; Louis G Fortin Construction, moving equipment, 40 Lydia St; P E Latremouille, repairs to flooring, old Printing Bureau; Leopold Beaudoin Construction, alterations to various rooms, "C" Bldg, Cartier Square; Edge Ltd, repairs to water system, CEF; P E Latremouille, repairs to flooring, Postal Terminal Bldg; Leopold

Beaudoin Construction, general redecorating, Daly Bldg; Thomas Gregoire, general redecorating, Connaught Bldg; The B Phillip Co Ltd, installation of lighting systems, various bldgs. *Winnipeg Man*: R G McAllister, supply & installation of partitions, federal bldg; Western Tools & Industries Ltd, installation of mail receivers, Post Office. *Regina Sask*: Hipperson Construction Co, general alterations, new Post Office.

St. Lawrence Seaway Authority

International Rapids Section Ont: Canadian Bridge Division of Dominion Coal & Steel Corp Ltd, construction of superstructure & deck, Cornwall North Channel Bridge. *Merritton Ont*: Ontario Construction Co Ltd, delivery of piles & timber, Welland Ship Canal, Western District. *Port Weller Ont*: The Carter Construction Co Ltd, upper entrance wall extension, Lock 1, Welland Ship Canal. *St Catharines Ont*: C A Pitts General Contractor Ltd, entrance wall extensions, Lock 3, Welland Ship Canal; McNamara Marine Ltd, entrance wall extensions, Lock 2, Welland Ship Canal; R E Law Crushed Stone Ltd, paving on bridges 13 & 21, Welland Canal. *Thorold Ont*: McNamara Marine Ltd, entrance wall extensions, Guard Gate, Welland Ship Canal.

Department of Transport

Halifax N S: Diamond Construction (1955) Ltd, additional development of Airport. *Moncton N B*: Bedard-Girard Ltd, construction of airport lighting facilities. *Dorval Que*: The Foundation Company of Canada Ltd, construction of foundations for heating plant, Montreal Airport. *Mont Joli Que*: Francois Lavoie, cleaning of Air Terminal Bldg, Airport. *Montreal Que*: Dominion Structural Steel Ltd, supply & erection of structural steel for fingers & aeroquay, Air Terminal Bldg; Accurate Electrical Contractors, construction of airport lighting facilities; J R Robillard Ltd, construction of localizer bldg & related works, Airport. *Amherstburg Ont*: Geocon Ltd, *test borings & soil investigation for lighthouse piers in channels. *Malton Ont*: Canada Construction Co Ltd, construction of foundation, aeroquay No 1, Air Terminal Bldg, Toronto International Airport. *Bainsville Ont, Coteau Landing & St Anicet Que*: Porter Ltd, *test borings & soil investigation for lighthouse piers in Lake St Francis regions. *Lethbridge Alta*: McCormick Electric Ltd, relocation of localizer & glide path bldg & related work on runway 12-30, Airport. *Point Atkinson Marine Station B C*: F B Stewart & Co, installation of underground power line & related work.

In the first nine months of 1959 cash farm income amounted to \$2,027,050,000, an increase of 2 per cent over the 1958 total of \$1,990,145,000, the Dominion Bureau of Statistics reported last month.

The increase was attributed in the main to substantially higher receipts in the first quarter; \$641,682,000 compared with \$613,182,000 in the first quarter of 1958.

Second quarter earnings were only slightly higher than those of a year earlier, \$676,311,000 compared with \$666,414,000, and third quarter returns were slightly lower: \$709,057,000 compared with \$710,549,000.

Livestock and livestock products accounted for the increase in the nine months; returns from the sale of field crops were about the same as in the first nine months of 1958.

Compared with 1958, cash farm income for the January-September period this year was higher in all provinces except Prince Edward Island, New Brunswick and Saskatchewan.

Increases ranged from 1 per cent in Quebec to nearly 6 per cent in Manitoba; declines were almost 1 per cent in Prince Edward Island, 2 per cent in Saskatchewan and just over 5 per cent in New Brunswick.

Lower returns from the sale of potatoes accounted for the reduction in the two Maritime provinces. In Saskatchewan it was due to smaller farm deliveries of wheat.

Returns from the sale of livestock and livestock products in the nine-month period are estimated at \$1,283,000,000, larger by 3 per cent than the 1958 total of \$1,247,000,000.

Receipts from the sale of field crops were \$719,616,000, slightly larger than last year's \$716,753,000.

Lower returns from the sale of wheat, oats, potatoes, fruits and vegetables were offset by the effects of higher Canadian Wheat Board payments and higher returns from the sale of barley, flaxseed and tobacco.

PRICES AND THE COST OF LIVING

Consumer Price Index, December 1959

Canada's consumer price index (1949=100) declined 0.3 per cent from 128.3 to 127.9 between November and December 1959.* A year ago the index stood at 126.2.

Over the year 1959 the index averaged 126.5, or 1.1 per cent above the 1958 level of 125.1.

The current month's movement was due entirely to a drop of 1.1 per cent in foods; the other four group indexes recorded little or no change. The clothing and other commodities and services indexes were both unchanged; the shelter and household operation indexes were up fractionally.

The food index moved from 123.8 to 122.4 to stand almost at the December 1958 level of 122.2. The sharpest drop in egg prices in some years accounted for most of this change, as grade "A" large eggs decreased 14.4 cents to 48.3 cents a dozen, the lowest since March 1950 and the lowest December price since 1944. Imported fruits, orange juice, pork and chicken were also lower. Fresh vegetables, particularly tomatoes and cabbage, were higher.

The shelter index increased 0.1 per cent from 142.6 to 142.7 as rents were unchanged and home-ownership rose slightly.

The clothing index was unchanged at 111.4 as price increases for footwear and a scatter of children's items were balanced by sale prices for women's winter coats.

The household operation index rose 0.2 per cent from 123.5 to 123.7. Slightly higher prices were reported for coal, utensils and equipment, household supplies, laundry, dry cleaning, and shoe repairs.

The other commodities and services index, unchanged at 136.9, showed little or no price movement on most items.

Group indexes one year earlier (December 1958) were: food 122.2, shelter 139.9, clothing 110.5, household operation 122.0, and other commodities and services 133.4.

City Consumer Price Indexes, November 1959

Eight of the ten regional consumer price indexes (1949=100) were higher between October and November.† Increases ranged from 0.1 per cent in St. John's to 0.7 per cent in Montreal. Indexes in both Ottawa and Saskatoon-Regina were unchanged.

*See Table F-1 at back of book.

†See Table F-2 at back of book.

Increases in both the clothing and other commodities and services groups were mainly responsible for the changes at the total level. Clothing indexes were higher in eight of the ten regional cities; a rise of 1.6 per cent in the Winnipeg index was the largest increase. Other commodities and services rose in all ten cities, gains ranging from 0.1 per cent in St. John's to 1.6 per cent in Saskatoon-Regina.

In clothing, November prices for women's fur coats and boys' parkas were generally up from the end of last season as well as above the level of a year ago. Children's shoes were up in a number of cities. Initial pricing of 1960 passenger cars, up from 1959 model prices a year ago and substantially above model year-end prices of October 1959, moved the other commodities and services group indexes in all ten cities. Theatre admissions, pharmaceuticals, personal care items, men's haircuts and women's hairdressing were also higher in a number of cities.

The shelter index was up in eight cities, down in one and unchanged in Toronto. Household operation indexes were up in seven cities, down in one and unchanged in the remaining two centres.

Food indexes showed mixed results: they declined in six regional cities, rose in three and remained unchanged in Saint John. Eggs, grapefruit, canned vegetables, lamb and some beef and pork prices were lower. Fresh vegetables, particularly potatoes, were up in a number of cities.

Regional consumer price index point changes between October and November were as follows: Montreal +0.9 to 128.7; Halifax +1.07 to 127.7; Winnipeg +0.7 to 125.7; Saint John +0.2 to 129.2; Toronto +0.2 to 130.5; Edmonton-Calgary +0.2 to 124.7; Vancouver +0.2 to 129.8; St. John's +0.1 to 114.6.* Ottawa and Saskatoon-Regina remained unchanged at 128.6 and 124.6 respectively.

Wholesale Price Index, November 1959

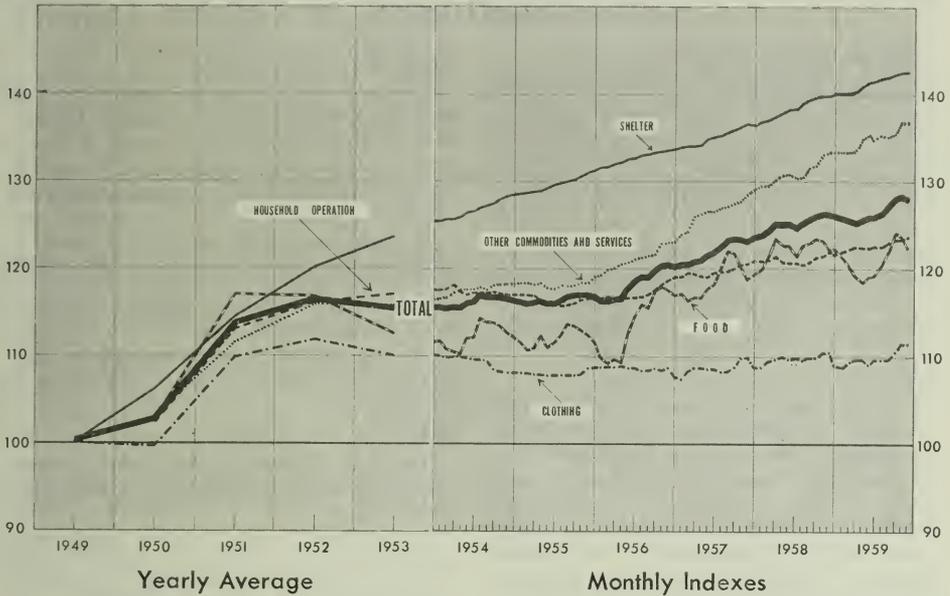

Canada's general wholesale price index (1935-39=100) advanced slightly between October and November, moving up 0.1 per cent from 230.1 to 230.3 to stand 0.6 per

*On base June 1951=100.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

cent above the November 1958 index of 228.8. Four of the major groups were higher and four lower than in October.

The non-ferrous metals group index rose 2.2 per cent from 173.5 to 177.4, and the vegetable products group index 0.4 per cent from 198.6 to 199.5. Lesser advances occurred in chemical products and in non-metallic minerals.

The group index for animal products was down 0.8 per cent from 252.4 to 250.4. Decreases of 0.1 per cent or less occurred in the wood products, iron products and textile products groups.

U.S. Consumer Price Index, November 1959

The United States consumer price index (1947-49=100) rose 0.1 per cent between mid-October and mid-November from 125.5

to a record figure of 125.6. Higher costs for transportation, medical care, housing and personal care items more than offset declining food prices. The food index dropped 0.4 per cent but medical care costs rose 0.3 per cent, transportation costs 0.3 per cent, personal care costs 0.2 per cent, and housing costs 0.2 per cent.

A year earlier the total index was 123.9.

U.K. Index of Retail Prices, October 1959

The United Kingdom index of retail prices (Jan. 17, 1956=100), after dropping in September, rose from 108.7 to 109.2 at mid-October 1959. The index is still lower than the record 110.4 at the beginning of the year and than the 109.4 figure for October 1958.

It is disclosed in the 1958-59 annual report of the Council for Technical Co-operation in South and Southeast Asia that Canada had recently increased her annual contribution for Colombo Plan aid to \$50,000,000, bringing the total of Canadian assistance to Colombo Plan countries since inception of the plan in 1950 to more than \$351,000,000.

The report emphasizes that the volume of technical assistance provided under the technical co-operation scheme reached its highest annual level during the year 1958-59, when 1,717 new training places were made available in the member countries of the Colombo Plan. This represented an increase of 165 over the previous year.

The total expenditure on the technical co-operation scheme by all Colombo Plan countries during 1958-59 was about \$8.42 million.

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*. List No. 135

Aged

1. AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS. COMMUNITY SERVICE ACTIVITIES. *The Lansing Story; an Experiment in working with Older Citizens*. Conducted by AFL-CIO Community Service Activities and the Community Services Committee of the Greater Lansing, Michigan Central Labor Council, AFL-CIO. New York, 1958. Pp. 13.

2. CANADA. UNEMPLOYMENT INSURANCE COMMISSION. *How Old is Old? A Study of the Older Worker Problem*. Ottawa, Queen's Printer, 1959. Pp. 16.

Tells what the National Employment Service of the Unemployment Insurance Commission does to help place older workers. Contains some case histories from the Commission's files.

3. HUNT, GEORGE HALSEY. *Aging; a Review of Research and Training Grants supported by the National Institute of Health* by G. Halsey Hunt and Stanley R. Mohler. Bethesda, Md., U.S. Dept. of Health, Education, and Welfare, Public Health Service, National Institutes of Health, 1958. Pp. 50.

4. TEXAS. LEGISLATURE. COMMITTEE TO STUDY PROBLEMS OF THE AGED. *Interim Report of Legislative Committee To Study Problems of the Aged*. Dallas, 1959. Pp. 30.

5. U.S. VETERANS ADMINISTRATION. ADVISORY COMMITTEE ON PROBLEMS OF AGING. *Research in Aging; VA Prospectus*. Washington, Veterans Administration, 1959. Pp. 125.

Proceedings of a meeting of the members of the Veterans Administration Advisory Committee on Aging and their guests, May 16, 1958, Washington, D.C.

6. WELFARE COUNCIL OF GREATER WINNIPEG. COMMITTEE ON SERVICES FOR THE AGED. *Age and Opportunity; a Report on Our Older Citizens*. Winnipeg, 1956. Pp. 66.

Canada at Work Broadcasts

The following broadcasts were made in 1959 and published by the Federal Department of Labour in Ottawa.

7. CANADA. DEPARTMENT OF LABOUR. *It pays to graduate* by T. J. MacKinnon [and others]. 5 parts.

Five speakers explain why it is desirable to complete high school in order to succeed in the business world.

8. HAMILTON, ALVIN. *Canada's North—Land of Opportunity*. Pp. 4.

The Minister of Northern Affairs discusses some of the features of the northern part of Canada.

Employment Management

BARLING, ELIZABETH. *Staff Management*. London, Institute of Personnel Management, 1959. Pp. 46.

The subjects covered include employment policies, training and education, pay and incentives, consultation and communication, records and their uses, and welfare and amenities.

10. PERSONNEL MANAGEMENT CONFERENCE, UNIVERSITY OF ILLINOIS. 10TH, 1958. *Modifications in Manpower Management. Proceedings of the Tenth Personnel Management Conference at the University of Illinois, Urbana, March 4 and 5, 1958*. Urbana, Bureau of Business Management, University of Illinois, 1959. Pp. 50.

Some of the topics discussed were the effects of automation on the worker; training programs for workers and for supervisors; an Employee Qualifications Index, developed by the Caterpillar Tractor Company in Peoria, for filling job openings in the company; and, an absence pay plan in effect at the Detroit Edison Company.

Executives

11. BERNSTEIN, MARVER HILLEL. *The Job of the Federal Executive*. Washington, Brookings Institution, 1958. Pp. 241.

The author, who served as executive secretary of a Round Table on the Federal Executive organized by the Brookings Institution in 1957, prepared this book from the recorded discussions as well as from other sources. He discusses the two types of executives, career and political, in the American federal civil service, the differences in the functions of each, the special environment in which the federal executive works, and the problem of obtaining and developing federal executives.

12. GARFORTH, F. I. DE LA P. *Management Development, a Systematic Approach to the Provision of Supervisors and Managers*. London, Institute of Personnel Management, 1959. Pp. 72.

The subjects discussed include organization charts, staff reviews and appraisals, forecasts of vacancies, recruiting policy, further educa-

tion and training for staff, job rotation and exchange, and a section on the initiation and operation of a systematic management development policy.

13. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Research Criteria of Executive Success*, by Stanley Stark. Urbana, 1959. Pp. 14.

An examination of various recent books and articles on the selection of executives.

14. INDUSTRIAL RELATIONS NEWS. *The Industrial Relations Executive, 1958-1959*. New York, 1959. Pp. 67.

Contains information about a sample of 500 people engaged in industrial relations or personnel work. The participants in the survey were asked a number of questions about their work and the answers were tabulated and analyzed.

15. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Compensation of Top Executives*, by Nicholas L. A. Martucci and Harland Fox. New York, 1959. Pp. 71.

Analysis of the compensation of the three highest paid groups of executives in 644 major American companies in 1957.

Health, Public

16. AMERICAN PUBLIC WELFARE ASSOCIATION. *Medical Care in Public Welfare. Summary of Material presented by all Participants in an Institute sponsored by the American Public Welfare Association under a Grant made by the Rockefeller Brothers' Fund, July 10-11-12, 1958, Chicago, Ill.* [Chicago, 1958?] Pp. 44.

17. HEALTH INFORMATION FOUNDATION, NEW YORK. *An Inventory of Social and Economic Research in Health*. 7th ed., 1958. [New York, 1959?] Pp. 492.

Industry

18. BARKER, DUDLEY. *Private Company*. London, Longmans, Green, 1959. Pp. 316.

A novel about an attempt to reorganize a company controlled by three families.

19. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Concentration Patterns in Manufacturing; Some Findings from an Inquiry into the Relevance of Data being used to measure Market Shares in Specified Industries*, by Betty Bock. New York, 1959. Pp. 128.

Based on the findings of the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, published in 1957 with the title, "Report on Concentration in American Industry." This study discussing the definitions used by the Subcommittee on Antitrust and Monopoly and examines the measures and ratios it adopted in determining the degree of concentration in particular industries.

Labour Organization

20. BROMWICH, LEO. *Union Constitutions*. New York, Fund for the Republic, c1959. Pp. 43.

Based on a study of the constitutions of seventy international unions with a total membership of almost 16,000,000. The author found procedural problems in some of the constitutions, which he discusses.

21. EUROPEAN PRODUCTIVITY AGENCY. *Trade Union Research and Study Departments (Economic and Technical Problems). Introductory Reports to the International Trade Union Conference at Vienna (9-12 December 1958)*. [Paris, Organization for European Economic Co-operation, 1958?] Pp. 310.

22. TAFT, PHILIP. *The A.F. of L. from the Death of Gompers to the Merger*. 1st ed. New York, Harper, 1959. Pp. 499.

The second and concluding volume of the author's "study" begun with *The A.F. of L. in the time of Gompers*.

Based on public and private records of the American Federation of Labor, some of which material has been unpublished up to now.

23. WATILLO, LEON. *The Knights of Labor in Belgium*. Translated and with an introduction by Frederic Meyers. Los Angeles, Institute of Industrial Relations, University of California, 1959. Pp. 35.

The author, Director General of Social Security in the Belgian Ministry of Labor and Social Security, prepared this study as a thesis in the early 1920's. The translator has translated the section of the study dealing with the Belgian Knights of Labor while they were affiliated with the American Knights of Labor.

Labour Supply

24. GINZBERG, ELI. *Manpower for Government, a Decade's Forecast*, by Eli Ginzberg and James K. Anderson. Chicago, Public Personnel Association, 1958. Pp. 33.

The decade under study is the period 1955 to 1965. Includes an estimate of the labour force in 1965 as well as the manpower needs of the U.S. Government in this period.

25. U.S. BUREAU OF LABOR STATISTICS. *Population and Labor Force Projections for the United States, 1960 to 1975*. Washington, GPO, 1959. Pp. 56.

"Presents population and labor force projections to 1975 and a detailed description of the method used in preparing the labor force projections." These projections will help to forecast economic and social needs of the U.S.

Subcontracting

26. CHANDLER, MARGARET KUEFFNER. *Contracting-Out, a Study of Management Decision-Making*, by Margaret K. Chandler and Leonard R. Sayles. New York, Graduate School of Business, Columbia University, c1959. Pp. 40.

Deals with the question whether to contract out work or to do it in the plant. In other words, should the plant "make or buy"? Based on a survey of the experiences of 74 plants in seven metropolitan areas: Boston, Chicago, Cleveland, Detroit, New York, Philadelphia and Pittsburgh.

27. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Construction and Maintenance: Who contracts it out—and Why*, by Margaret K. Chandler and Leonard R. Sayles. Urbana, 1959. Pp. 4.

Based on interviews with representatives of management regarding the subject of sub-contracting.

United Nations

28. UNITED NATIONS. COMMITTEE ON ECONOMIC CO-OPERATION IN CENTRAL AMERICA. *Report, 25 February 1957 to 10 June 1958*. Mexico, 1959. Pp. 72.

29. UNITED NATIONS. ECONOMIC COMMISSION FOR EUROPE. *Annual Report, 25 April 1958-6 May 1959*. New York, 1959. Pp. 83.

30. UNITED NATIONS. TECHNICAL ASSISTANCE BOARD. *Annual Report to the Technical Assistance Committee for 1958*. New York, 1959. Pp. 132.

Wages and Hours

31. AUSTRALIA. DEPARTMENT OF LABOUR AND NATIONAL SERVICE. *Equal Pay: Some Aspects of Australian and Overseas Practice*. Melbourne, 1958. Pp. 88.

Contains a survey of Federal and State legislation in Australia dealing with the principle of equal pay for equal work, and a brief outline of legislation in Canada, France, West Germany, Great Britain, Norway, Sweden, and the United States.

32. FRIIS, ASTRID. *A History of Prices and Wages in Denmark, 1660-1800. Volume I*. By Astrid Friis and Kristof Glamann. London, New York, Published for the Institute of Economics and History, Copenhagen by Longmans, Green, 1958. Pp. 350.

33. INTERNATIONAL LABOUR OFFICE. *Reduction of Hours of Work*. Seventh item on the agenda. Geneva, 1959. Pp. 66.

At head of title: Report 7 (1). International Labour Conference. 44th Session, 1960.

34. SHIMMIN, SYLVIA. *Payment by Results, a Psychological Investigation*, by Sylvia Shimmin, in collaboration with Joan E. Williams and L. J. Buck. London, Staples Press, c1959. Pp. 162.

Based on four studies of financial incentives carried out in British factories between December 1953 and December 1955. Examines the workers' attitudes toward incentive plans.

35. U.S. BUREAU OF LABOR STATISTICS. *Factory Workers' Earnings, May 1959*. Washington, GPO, 1959. Pp. 63.

Contents: Summary. All Manufacturing, Metropolitan and Nonmetropolitan Areas. Durable and Nondurable Goods Industries. Major Industry Groups. Selected Industries. Non-supervisory Workers. Comparison of Mean and Median Averages. Wage Changes—April 1954 to May 1958.

36. U.S. BUREAU OF LABOR STATISTICS. *Premium Pay for Night, Weekend, and Overtime Work in Major Union Contracts*. Washington, GPO, 1959. Pp. 36.

Analyzes "... shift differentials, premium pay for work on Saturdays, Sundays, or the sixth and seventh day of the work-week, and daily and weekly premium overtime pay."

37. U.S. BUREAU OF LABOR STATISTICS. *Union Wages and Hours: Building Trades, July 1, 1958 and Trend 1907-58*. Washington, GPO, 1959. Pp. 38.

Information in this report was based on union scales in effect on July 1, 1958 and covered 650,000 journeymen and 160,000 helpers and labourers in 52 cities with populations of 100,000 or more.

38. U.S. WOMEN'S BUREAU. *State Minimum-Wage Law and Order Provisions affecting Working Condition, July 1, 1942, to April 1, 1959*. Washington, GPO, 1959. Pp. 141.

Youth—Employment

39. NATIONAL CHILD LABOR COMMITTEE. *Primer on Employment of Youth. 1958 Annual Report*. [New York, 1958?] Pp. 16.

40. SILBERSTON, DOROTHY. *Youth in a Technical Age; a Study of Day Release*. London, M. Parrish, 1959. Pp. 228.

"Day release" means that a young worker is given time off by his employer, usually with pay, in order to attend classes during working hours. This book describes experience in Great Britain.

Miscellaneous

41. BEAK, THOMAS WILLIAM. *We came to Canada*. 3d ed. Ottawa, Printed by Mortimer Ltd., 1959. Pp. 63.

The author and his family came to Canada three and a half years ago. He tells of his experiences and gives his opinions about settling down successfully as an immigrant in this country.

42. CROSS, BERYL CONWAY. *Living alone*. London, Odhams, 1956. Pp. 159.

Suggestions for women living alone on furnishing a home or apartment, preparing meals, entertaining, etc.

43. ILLINOIS. DIVISION OF UNEMPLOYMENT COMPENSATION. *Study of Alternative Systems of Experience Rating*. Chicago, 1959. Pp. 25.

Alternative Proposal No. 2, Tables. Chicago, 1958. Pp. 11.

"The purpose of the study... was 'to determine the most suitable method of assessing contribution rates so as to assure the solvency of Illinois' account in the unemployment trust fund, giving due consideration to contra-cyclical devices, the equitable distribution of costs among employers, and the effect of such systems upon labor and industry in this State.'"

B—Labour Income

Note: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at September, 1959 employers in the principal non-agricultural industries reported a total employment of 2,875,973. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners in the reporting firms.

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational services).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

* Revised.

Industrial composite	125.3	124.2	121.9	74.36	73.42	70.85

Tables C-4 and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

TABLE C-4—HOURS AND EARNINGS IN MANUFACTURING BY PROVINCES

TABLE C-6—EARNINGS, HOURS AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA

SOURCE: Man Hours and Hourly Earnings: Prices and Price Indexes, DBS

Period	Average Hours Worked Per Week	Average Hourly Earnings	Average Weekly Earnings	Index Numbers (Av. 1949 = 100)		
				Average Weekly Earnings	Consumer Price Index	Average Real Weekly Earnings
		\$	\$			
Monthly Average 1954.....	40.7	1.41	57.43	137.6	116.2	118.4
Monthly Average 1955.....	41.0	1.45	59.45	142.4	116.4	122.3
Monthly Average 1956.....	41.0	1.52	62.40	149.5	118.1	126.6
Monthly Average 1957.....	40.4	1.61	64.96	155.6	121.9	127.6
Monthly Average 1958.....	40.2	1.66	66.77	160.0	125.1	127.9
Last Pay Period in:						
1958 September.....	40.7	1.64	66.91	160.3	125.6	127.6
October.....	40.8	1.66	67.52	161.8	126.0	128.4
November.....	40.9	1.67	68.43	163.9	126.3	129.8
December.....	40.7*	1.71	69.60*	166.7	126.2	132.1
1959 January.....	40.6	1.70	69.28	166.0	126.1	131.6
February.....	40.9	1.71	69.81	167.2	125.7	133.0
March.....	40.3	1.72	69.40	166.3	125.5	132.5
April.....	40.7	1.72	70.01	167.7	125.4	133.7
May.....	41.1	1.73	70.90	169.9	125.6	135.3
June.....	41.0	1.72	70.63	169.2	125.9	134.4
July.....	40.8	1.71	69.90	167.5	125.9	133.0
August.....	41.0	1.70	69.57	166.7	126.4	131.9
September(1).....	41.2	1.72	71.14	170.4	127.1	134.1

NOTE: Average Real Weekly Earnings were computed by dividing the Consumer Price Index into the average weekly earnings index. (Average 1949 = 100) by the Economics and Research Branch, Department of Labour.

* Figures adjusted for holidays. The actual figures for December 1958 are 37.3 and \$63.71.

(1) Latest figures subject to revision.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on this series see page 542, May issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1954-59

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Current Manpower Situation

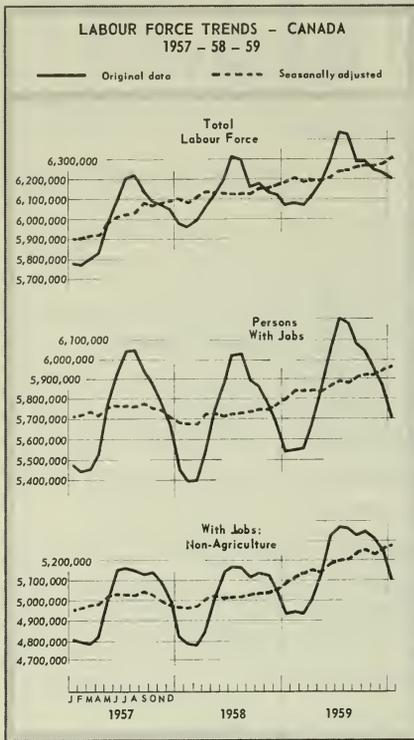

Employment expansion proceeded more slowly in the last half of 1959 than in the earlier part of the year. Although some of the retarding influences had dispersed by the year's end, resulting in an accelerated advance in some goods-producing industries, housebuilding slowed down. The decline in employment between December and January was no greater than usual, and employment was almost 3 per cent higher than last year. The rise in unemployment was somewhat greater than usual for this time of year, partly because of the relatively small seasonal reduction in the labour force.

The most pronounced drop in seasonal activity always takes place between December and January. This year the estimated decrease in employment was 162,000, considerably greater than last year but about the same as the December-January average of the past six winters. For men the employment decline was somewhat greater than usual but for women employment was well maintained for the time of year.

In the construction industry, which normally accounts for a large part of the winter slackness, the decline in employment over the December-January period was greater than that of any year in the past decade. The most noticeable weakness was in housing. The number of new units started during the month was at least 20 per cent less than in January 1959. Little improvement in the level of housebuilding activity is expected, at least during the next two months. The number of housing units under construction was quite high, although down from a year ago. In non-residential construction, shortages of structural steel were still being felt in some areas; this may have resulted in the postponement of some projects until spring. There is, however, a substantial amount of non-residential construction work on hand, which should maintain activity in this sector well into this year.

Manufacturing employment, though declining seasonally, was supported by the resumption of automobile production that followed the settlement of the steel strike in the United States. Although employment estimates in the industry are not yet available for January, output figures (20 per cent more than in January 1959) indicate that the industry was operating close to full capacity. Seasonal rehiring of workers was underway in the textile industry and operations in most iron and steel products industries (agricultural implements was an important exception) were at very high levels. Conditions in the building materials industries were somewhat less buoyant, and there was little sign of an early recovery in aircraft and railway rolling stock firms.

The number of persons with jobs was up 161,000 or almost 3 per cent from January 1959. More than 85 per cent of the additional jobs were in the trade and service industries, which continue to play an increasingly important

role in the provision of new job opportunities. In January, for example, 25 per cent of total employment was in the service industry, compared with 21 per cent in the same month five years ago.

The increasing emphasis on service-producing industries is reflected in differing rates of employment growth for men and women. Over the year, the number of employed males increased by 86,000 or 2 per cent; the number of women job holders increased by 75,000, or 5 per cent. The relatively strong demand for female workers has had little effect on unemployment among women; in fact, the number of women unemployed was somewhat higher than last year. The demand has had the effect of persuading a greater proportion of the adult female population to enter the labour force. In the period 1953-59 this proportion increased steadily from 23.4 per cent to 26.7 per cent.

Unemployment in January

The number without jobs and seeking work in January was estimated to be 504,000. The increase from December (134,000) was greater than normal, in part because of the small reduction in the labour force compared with earlier years and in part because of the weakness in residential construction. The January figure was 8.1 per cent of the labour force compared with 8.9 per cent last year. In addition to the job seekers, an estimated 42,000 were on temporary layoff; this was about the same number as last year at this time.

Of the 504,000 job seekers in January, 444,000 were men and 60,000 were women. About one-third were in the under-25-year age group and one-quarter were over 45 years. More than half came from the primary industries, construction, and transportation. These highly seasonal industries together accounted for 70 per cent of the increase in job seekers between last August and this January.

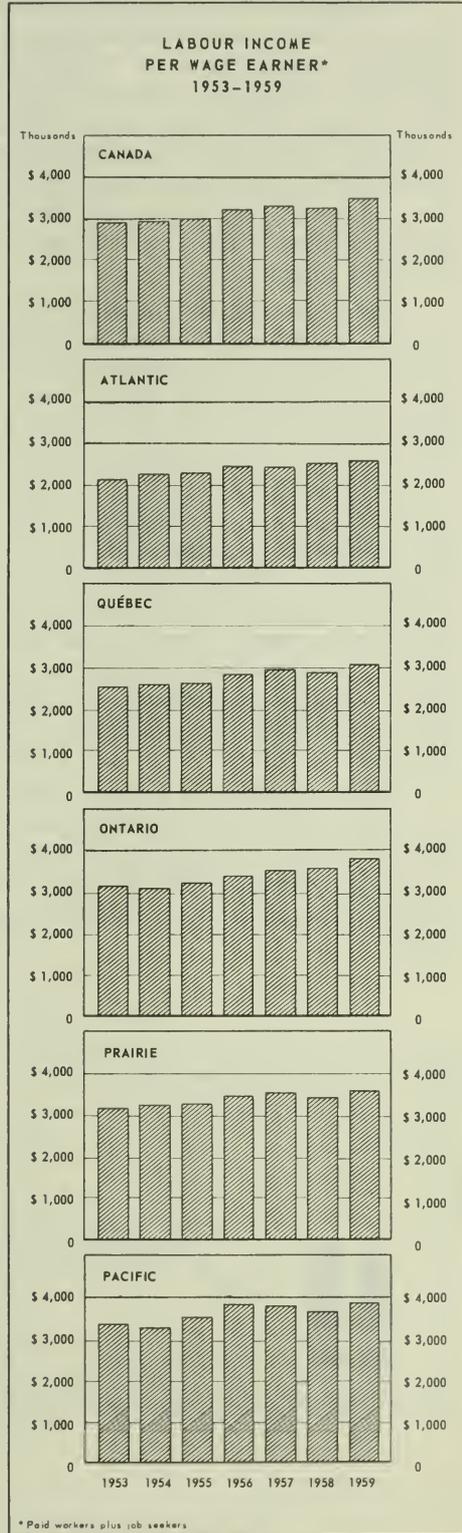

About 400,000 persons, or 80 per cent of the total, had been looking for work for three months or less. This would include the majority of those unemployed for seasonal or frictional reasons. Of the remainder, about 63,000 had been looking for work for four to six months and 41,000 for more than six months. Last year in January, 387,000 had been looking for work for three months or less, 93,000 for four to six months, and 58,000 for more than six months. These figures show that there were considerably fewer long-term unemployed in January than at the same time last year.

Labour Income

Wages, salaries and supplementary labour income rose steadily during 1959, reaching a total of \$17.7 billion for the year as a whole. This was 8 per cent above the corresponding figure in 1958, which in turn was up 2.5 per cent from 1957. Increases in the price of consumer goods and services in 1959 were generally small so that the additional labour income earned during the year was for the most part a real addition to total wages and salaries.

The rise in total labour income in 1959 reflected increases in employee earnings, employment expansion and changes in the industrial distribution of employment. The average number of paid workers rose by 168,000 or 3.7 per cent between 1958 and 1959. Average annual earnings of wage and salary earners rose from \$3,298 in 1958 to \$3,479 in 1959. Higher wage rates and longer weekly hours combined to raise the level of per worker labour income during the year. As may be seen from the accompanying chart, this increase was considerably larger than that of most recent years.

Of the factors that determine the average level of income of wage earners, a good deal of the improvement during 1959 came from increased wage rates. Average weekly hours showed a relatively small increase; there was a gain of almost half an hour a week in manufacturing but in a few industries, notably construction, the work week was shorter than in the previous year. The change to higher wage rates is evident in a review of collective agreements. Of the collective agreements covering 500 or more workers that were signed in the first half of 1959, approximately two-thirds of those with a one-year term provided for increases of 5 to 10 cents an hour on base rates.

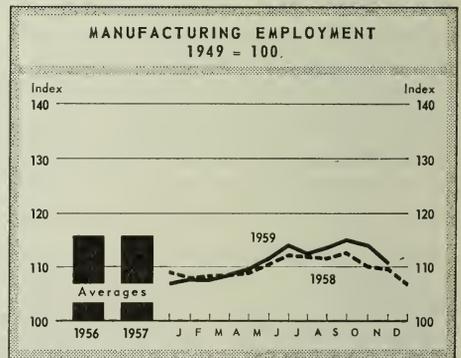

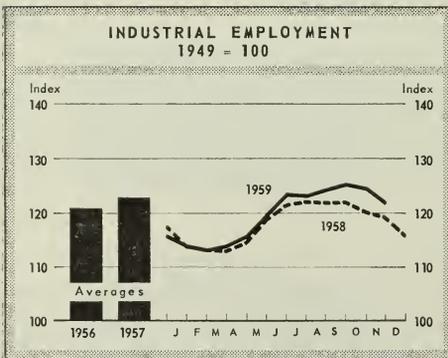

All major industry groups shared in the expansion of labour income during the year. The service-producing group, with a marked increase in the number employed, registered some of the largest advances. In finance and services there was a 12-per-cent increase in labour income. Labour income was up by 7 per cent in trade and 6 per cent in the transportation, storage and communication industries. Manufacturing and construction recorded gains of 6 per cent and 9 per cent respectively. In mining, where the level of employment was lower than the year before, the total wage bill was about 5 per cent higher. Labour income in forestry increased by only 3 per cent, partly because of the strike last summer.

The industrial distribution of wages and salaries received by workers in the third quarter of 1959 was very similar to that of the previous year. The only marked change was in forestry and even this was of a transitory nature. Manufacturing accounted for 28 per cent of total labour income, fractionally less than the year before. Services, which are next in order of size, were responsible for 17.6 per cent of the total compared with 17.0 per cent in 1958.

Higher average wages and salaries were mainly responsible for the increase in total wages in manufacturing. The combined effects of improved wage rates and a lengthening of the work week accounted for a large part of the over-all advance. In the finance and service industries, increases in labour income were the result of a sharp rise in employment and a considerable increase in average employee earnings. Total labour income in these industries increased by 12 per cent and the average number of paid workers by 7 per cent. Average annual earnings of employees in this group of industries rose somewhat more than in manufacturing, although they remained low compared with other industries.

All five regions in Canada shared in the rise in total labour income. On a per capita basis, the rate of increase was largest in the Pacific region, followed by the Ontario, Atlantic, Quebec and Prairie regions, in that order. Average earnings of workers differed widely among the various regions, from a low of \$2,592 per annum in the Atlantic region to a high of \$3,878 in the Pacific region.

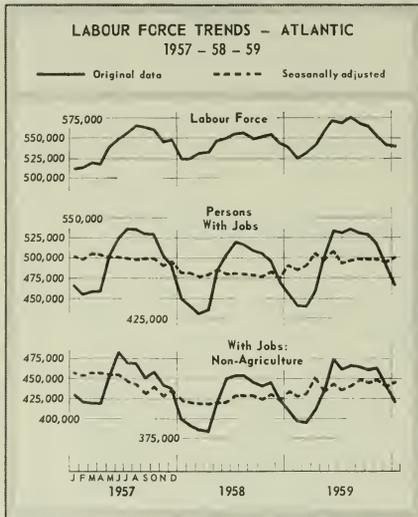

CLASSIFICATION OF LABOUR MARKET AREAS—JANUARY 1960

	SUBSTANTIAL LABOUR SURPLUS	MODERATE LABOUR SURPLUS	APPROXIMATE BALANCE	LABOUR SHORTAGE
	Group 1	Group 2	Group 3	Group 4
METROPOLITAN AREAS (labour force 75,000 or more)	CALGARY ← EDMONTON ← HAMILTON ← MONTREAL ← Quebec-Levis St. John's TORONTO ← Vancouver- New Westminster Windsor WINNIPEG ←	Halifax Ottawa-Hull		
MAJOR INDUSTRIAL AREAS (labour force 25,000-75,000; 60 per cent or more in non-agricultural activity)	BRANTFORD ← Corner Brook Cornwall Farnham-Granby Fort William— Port Arthur Joliette Lac St. Jean Moncton New Glasgow NIAGARA PENINSULA ← Peterborough ROUYN— VAL D'OR SARNIA ← Shawinigan Sherbrooke SYDNEY ← TIMMINS— KIRKLAND LAKE ← Trois Rivières	Guelph Kingston KITCHENER ← London Oshawa Saint John Sudbury Victoria

→ The areas shown in capital letters are those that have been reclassified during the month; an arrow indicates the group from which they moved. For an explanation of the classification system used, see inside back cover, November 1959 issue.

Employment Situation in Local Areas

ATLANTIC

Employment in the Atlantic region declined seasonally during January. The number of persons with jobs fell by an estimated 22,000 to 466,000 between December and January. Compared with a year ago, employment was 10,000 higher and unemployment was moderately lower. Employment contractions during the month were heaviest in outdoor activities, notably construction. Retail trade experienced the usual post-Christmas lull, resulting in the release of a fairly large number of workers. The Eastern Car Company plant in New Glasgow, which employs 1,000 to 1,200 workers when operating at capacity, remained at a virtual standstill during the month. Elsewhere in manufacturing employment

changes over the year were generally small.

The general economic picture was somewhat brighter than in January last year. The renewed strength shown by lumbering and logging during recent months has contributed to employment expansion in other industries. Manufacturing employment in Newfoundland was substantially higher than a year ago. In the three Maritime provinces, the recovery in manufacturing was curbed by weaknesses in transportation equipment, notably shipbuilding and railway rolling stock.

During the month four labour market areas were reclassified to categories denoting higher unemployment. At the end of January, the area classification was the same as last year: in substantial surplus, 19; in moderate surplus, 2.

Local Area Developments

St. John's (metropolitan) remained in Group 1. Winter weather caused further layoffs in the construction industry during the month. Construction employment remained considerably higher than a year ago, but some of the larger projects that provided employment last winter were nearly completed. Total industrial employment in November was about 8 per cent higher than the year before.

Halifax (metropolitan) remained in Group 2. Employment in this area remained fairly stable during January. Apart from the pulp mill, which closed down because of over-production, manufacturing plants in the area showed renewed strength. Increased hirings at the shipyards made up for the release of 100 workers at the pulp mill. Aircraft and clothing manufacture showed relatively small employment gains. Favourable weather continued to aid the construction industry. At latest report, construction employment was 11 per cent higher than a year earlier.

Sydney (major industrial) was reclassified from Group 2 to Group 1. The coal mining industry, which together with iron and steel manufacturing is the mainstay of the local economy, has shown continuing signs of serious dislocation

LABOUR MARKET CONDITIONS

Labour Market Areas	Labour Surplus				Approximate Balance	
	1		2		3	
	January 1960	January 1959	January 1960	January 1959	January 1960	January 1959
Metropolitan.....	10	8	2	4	—	—
Major Industrial.....	18	18	8	8	—	—
Major Agricultural.....	8	8	6	6	—	—
Minor.....	46	44	11	13	1	1
Total.....	82	78	27	31	1	1

during the past few months. Other fuels have made intensive inroads on the coal market in recent years. Periodic shutdowns occurred last year to bring production more closely in line with sales, and a series of temporary closures that will affect some 6,500 workers will be resumed early this year.

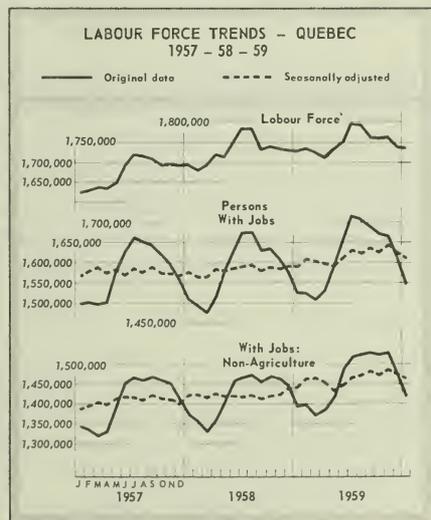

The iron and steel industries have been busier in recent months than they were a year ago, although the advances in output have been accompanied by relatively small employment gains. The construction industry showed continuing vigour during January, but fishing activities were hampered by poor weather. **Campbellton, Edmundston and Fredericton** (minor) were reclassified from Group 2 to Group 1.

QUEBEC

Employment in the Quebec region declined more than usual between December and January. In January the number of persons with jobs was estimated at 1,546,000, some 65,000 fewer than in the previous month but 19,000 more than a year earlier. More than 90 per cent of the decline occurred in non-agricultural activities, principally in construction, forestry, manufacturing and transportation.

The construction industry figured most prominently in the employment decline. This was due in part to the reduction in housebuilding. Non-residential construction was well maintained for this time of the year, although bad weather caused some unexpected work curtailment on development projects.

The usual seasonal contractions in employment took place in the transportation industry group. Employment levels in rail and highway industries were about the same as a year ago. Shipping was more active this winter than last year, resulting in an increase in waterfront activity, especially in the port of Quebec.

Metal mining showed continuing strength; in asbestos mining, however, marketing difficulties caused a temporary layoff of about 500 men.

Employment in forestry fell off sharply after Christmas, but during January it remained substantially higher than a year earlier. Reports from the field indicated that pulpwood operations, at mid-month, employed about 4,000 more men than at the same time a year ago.

There was a more-than-usual seasonal decline in manufacturing employment during the last quarter of 1959, and in January conditions appeared to be generally less buoyant than a year earlier. Much of the change may be attributed to a slower upturn in the clothing industry this year. In primary textiles, effects of the long labour dispute at Magog were being felt in plants at Trois Rivières and Sherbrooke. On the other hand, the iron and steel industry, which showed a strong advance in the last half of 1959, reported continuing strength in January. Increasing world demand for aluminum resulted in greater use of smelting capacity, which will bring about the rehiring of several hundred workers. In the transportation equipment group, activity picked up as aircraft firms started work on a new contract. Employment was higher than last year in the shipyards in this region.

Unemployment increased sharply during the month but remained at a lower level than a year earlier; as a result, labour supply was higher in eight and lower in thirteen areas than last year, and in the remaining three areas it was about the same as the year before. At the end of January the area classification was as follows (last year's figures in brackets): in substantial surplus, 23 (22); in moderate surplus, 1 (2).

Local Area Developments

Montreal (metropolitan) was reclassified from Group 2 to Group 1. Unemployment rose seasonally during the month and was at about the same level as a year earlier. During the last quarter of 1959 employment, seasonally adjusted, showed a slight downward trend. Lower activities in construction, particularly in housebuilding, and production declines in construction materials and clothing plants were contributing factors. In January, reports indicated increasing activity in manufacturing.

Quebec-Levis (metropolitan) remained in Group 1. Owing to seasonal factors unemployment increased further in the area. Its level, however, continued to be lower than a year ago. Employment during the last quarter of 1959 was substantially higher than in the comparable period in 1958. Higher levels of activity in forestry, pulp and paper, textiles and shipbuilding industries were the main contributing factors. Increased waterfront activity in the port of Quebec resulted in the employment of several hundred workers.

Rouyn-Val d'Or (major industrial) was reclassified from Group 2 to Group 1. Seasonal slackening in employment was responsible for the reclassification. Mining and forestry employment were reported to be holding up well.

Beauharnois, St. Hyacinthe and St. Jean (minor) were reclassified from Group 2 to Group 1.

ONTARIO

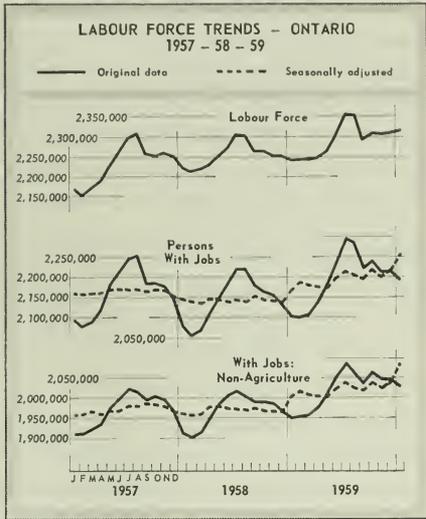

In Ontario, the number of persons with jobs in January was estimated to be 2,189,000, only 23,000 less than the previous month and 87,000—more than 4 per cent—more than in January last year. The change between December and January, one of the smallest on record, resulted in part from a high level of activity in manufacturing. Apart from agricultural implement manufacturing, where order cancellations caused some layoffs, output and employment were at record levels in the iron and steel products industry, and they were also quite high in the manufacture of motor vehicles and parts. In the aircraft and railway rolling stock industries, the latest employment figures show declines of 61 per cent and 7 per cent respectively from a year ago, and slackness also continued in heavy electrical machinery. In other parts of manufacturing, employment was well above a year earlier but not up to the record levels of 1956-57.

A sharp drop in new housing was reported in Toronto and, to a lesser extent, in other parts of the region. At the end of the year the volume under construction was down only 2 per cent from 12 months earlier, but at least one-third fewer new units were started in January. The decline in housing was partly compensated for by increased activity in other types of construction. Nevertheless, layoffs of construction workers were considerably heavier this winter than last.

Over-all employment remained higher than last year in most areas. The most recent figures indicate year-to-year increases of at least 5 per cent in Oshawa, Hamilton, Sudbury, Sault Ste. Marie and Kitchener, and smaller gains in most other centres. Because of the heavy layoffs in construction, however, the unemployment level was not very different from last winter in most areas, and somewhat higher in some. The classification of the 34 labour market areas in the region was as follows (last year's figures in brackets): in substantial surplus, 21 (17); in moderate surplus, 13 (17).

Local Area Developments

Toronto (metropolitan) was reclassified from Group 2 to Group 1. Increases in the numbers unemployed during January occurred mainly in construction and transportation occupations, caused by a sharp drop in new housing and some shortages of structural steel. In most manufacturing centres, firms were increasing production during January after year-end shutdowns, several firms recalling workers earlier than usual. Total employment was somewhat higher than last year. An increase in services, construction and iron and steel products more than offset the drop in aircraft employment that occurred last spring. The number of registrations at NES offices was somewhat higher than a year earlier, notably in construction trades.

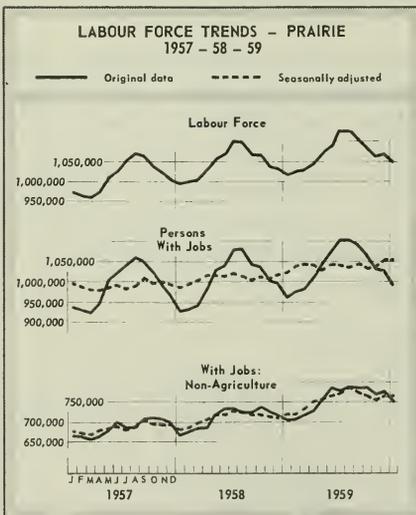

Hamilton (metropolitan) was reclassified from Group 2 to Group 1. Registrations at the NES office increased seasonally but were down more than 10 per cent from a year earlier. Employment, at latest count, was up 6 per cent over the year. Primary steel manufacturing continued to operate at capacity during January. The 1960 production of farm implements got underway and there was additional hiring in iron and steel manufacturing as a result of the settlement of the steel strike in the U.S. Employment in railway rolling stock manufacture was still at a very low level.

Brantford (major industrial) was reclassified from Group 2 to Group 1. The increase in unemployment was caused mainly by a drop in construction activity and some layoffs in manufacturing. In the production of farm implements, operations were reduced from a two-shift to a one-shift basis. In other manufacturing industries of the area, activity was well maintained during the month.

Niagara Peninsula (major industrial) was reclassified from Group 2 to Group 1, resulting mainly from a decline in construction, the release of temporary sales help and small layoffs in textiles and pulp and paper manufacturing. Employment continued to increase in motor vehicle parts manufacturing. These and most other plants were busier than at the beginning of last year.

Thirteen other areas were reclassified to categories denoting increased unemployment during January, mainly as a result of seasonal layoffs. These areas were: Kitchener, Sarnia, Timmins-Kirkland Lake, Chatham, Belleville-Trenton, Brampton, Goderich, North Bay, Pembroke, Simcoe, Stratford, Walkerton.

PRAIRIE

The usual large seasonal decline in employment occurred between December and January, the estimate of persons with jobs declining by 37,000 to 991,000. This was still 30,000 higher than a year earlier; non-farm employment was 45,000 higher. The change during the month occurred in both non-farm industries and in agriculture, which moved towards the seasonal mid-winter low point in employment. Mild weather reduced the demand for help on stock farms, so that only some chore men and farm couples were being sought.

A heavy over-all reduction in construction employment occurred during the month, consisting chiefly of small, widely distributed layoffs. Mild weather,

however, enabled some work to be carried on at a number of large construction projects. Workers at the site of the South Saskatchewan River Dam numbered about 300, and work continued at the hydro and mining projects in northern Manitoba in spite of a fire at Kelsey that damaged power generation installations. Almost 200 men began clearing brush and usable timber from the

reservoir area of a new hydro site, Squaw Rapids, on the Saskatchewan River some distance northeast of Prince Albert.

Cement plants, pipe makers, and many other manufacturers reduced production to lower levels, some closing briefly for overhaul and installation of new equipment. Three sugar refineries in the Lethbridge area of Alberta closed down when processing of the 1959 sugar beet crop was completed. Packing plants made staff reductions following a heavy run of hog deliveries in the last week of December and the first week of January that helped to maintain employment in the early part of the month. In this two-week period, shipments of hogs from prairie points were more than 40 per cent higher than in the same period a year earlier. Some employment increases occurred during the month in manufacturing; production schedules for spring sales were initiated in clothing, leather goods, and farm machinery enterprises.

Unemployment increased sharply in all 20 labour market areas. Five were reclassified to categories indicating changes from moderate to substantial labour surplus. At the end of January, the over-all classification was the same as a year earlier, with 11 areas in substantial surplus and 9 in moderate surplus.

Local Area Developments

Calgary, Edmonton and Winnipeg (metropolitan) were reclassified from Group 2 to Group 1. Construction, manufacturing and transportation activities moved towards seasonal employment lows, and layoffs of workers in nearly all industries increased the total registered at National Employment Service offices in these three prairie centres to a number fractionally above the year-earlier figure.

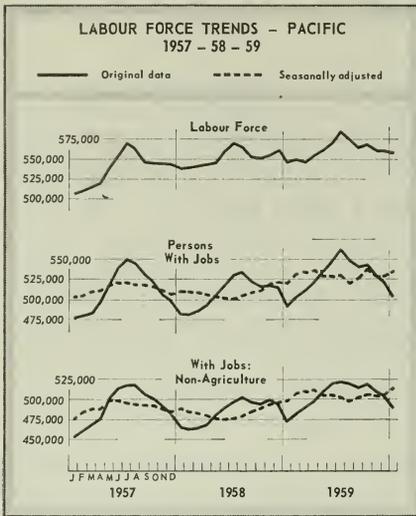

Fort William-Port Arthur (major industrial) remained in Group 1. Unemployment increased as a result of small layoffs in construction and in the bus and aircraft plant, as well as in elevator and railway crews because of continued slow grain movement from the prairies. Pulpwood cutting, however, remained steady at a level substantially higher than a year earlier.

Brandon (major agricultural) and **Weyburn** (minor) were reclassified from Group 2 to Group 1. The railways made temporary layoffs of trackmen, and most other industries released workers.

PACIFIC

Employment decreased somewhat less than usual in the Pacific region: persons with jobs were estimated to number 507,000 in January, fewer by 15,000 than in December but 15,000 more than a year earlier. The change from both the previous month and the year before took place in non-agricultural industries; farm employment was almost unchanged at the low winter level.

Heavy snow and generally icy conditions on Vancouver Island and most of the southern mainland lowered over-all logging employment from the December level. Sawmills in the areas affected reduced operations as the supply of logs contracted, and thus reduced the demand for truck drivers, caterpillar operators, and other transportation workers. A fairly rapid return towards capacity operations was anticipated in most camps but some were

expected to remain closed until about March. In the north, the logging roads were kept hard by cold weather, and favourable demand for all lumber products except shingles kept the industry at high operating levels.

Western Canadian oil exploration and development displayed some shift towards the northwest as a result of recent encouraging discoveries in both northern British Columbia and a wide area around the Swan Hills district of Alberta. This brought the number of oil rigs drilling in British Columbia to 42 at the beginning of February from 27 a month earlier and 25 at the beginning of February 1959. Exploitation of other minerals held steady; labour-management disputes

in copper smelting plants in the United States were resolved, allowing increased copper ore exports.

Construction workers continued to be laid off as a result of seasonal factors and the low level of housebuilding; trade and services establishments made the usual post-Christmas staff reductions; and transportation employment declined in spite of a very strong level of waterfront activity. Unemployment increased, especially in the southern part of the region, but remained lower than a year earlier. Four labour market areas were reclassified to categories of greater labour surplus, bringing the classification of the 11 areas at the end of January as follows (last year's figures in brackets): in substantial surplus, 8 (9); in moderate surplus, 2 (1); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) remained in Group 1. The waterfront experienced a particularly active month with all berths occupied by deep sea vessels at times. Lumber and allied products constituted the main export cargoes. Wet grain continued to arrive from prairie points for drying and subsequent storage or shipment. Seasonal influences increased registrations at the local offices of the National Employment Service, but total registrations were almost 5 per cent fewer than a year ago.

Kitimat and **Kamloops** (minor) remained in Group 3 and Group 2 respectively. A high rate of aluminum production, with four and a half pot lines out of five in operation, kept registrations down at the Kitimat office of the National Employment Service, while very good weather conditions at Kamloops allowed logging and sawmilling to be sustained at very strong levels, well above January 1959.

Cranbrook, Central Vancouver Island, Trail-Nelson, and Prince Rupert (minor) were reclassified from Group 2 to Group 1 as snow and ice conditions caused a temporary curtailment in logging and sawmilling.

Current Labour Statistics

(Latest available statistics at February 15, 1960)

Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year
<i>Manpower</i>				
Total civilian labour force (a).....	Jan. 16	6,203,000	- 0.5	+ 2.1

(b) Some persons lost time from work because of the religious observance of December 8.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

Collective bargaining for the renewal of 77 major agreements (agreements covering 500 or more workers) extended into 1960 from the previous year. They affect a total of 203,800 employees. The negotiations between the major railways in Canada and their non-operating employees were the most significant of the carryovers. A number of meetings were held, including one attended by the presidents of the CNR and CPR, but little progress was made. By the end of January, the talks had reached an impasse and the unions were reported to be preparing a submission for conciliation services.

Meanwhile, **Dominion Textile Company** and the **textile unions** showed definite signs of moving towards a solution of their lengthy dispute. Premier Barrette of Quebec, in his capacity as Minister of Labour, proposed a compromise solution to which the parties agreed. However, in Magog, discussions continued regarding compensation for the workers who had been on strike since September 27. By the end of the month it was reported that an acceptable formula was being worked out and final settlement was expected soon.

Of the major agreements in negotiation at the end of the previous year, 13 were settled during January, providing wage increases for approximately 14,800 workers. The largest, in terms of the number of employees covered, was in Toronto, where 4,400 members of the **Street Railway Employees Union** reached an agreement with the **Toronto Transit Commission**. The negotiating committees agreed upon a compromise formula during the last days of 1959. In a two-day referendum which followed, the union members voted overwhelmingly to accept the Commission's offer of an 18-cent-an-hour increase in a two-year contract.

Also in Toronto, 1,200 employees were affected by the collective agreement signed by the **Bookbinders Union** and **38 bindery room employers**. Wage increases during the term of the two-year contract will amount to 14 cents an hour for women employees and 20 cents an hour for men. The 20 cents an hour for men will be made up of 6 cents an hour effective January 11, 1960, an additional 8 cents an hour effective June 1, 1960, and 6 cents on January 11, 1961. The initial increase for women employed at the plants consisted of 4 cents an hour on January 11, 1960; this is to be followed by an additional 6 cents on June 1, 1960, and a final 4 cents on January 11, 1961. A feature of the new agreement was the provision for check-off of union dues. Other terms included a shortened work week from $38\frac{3}{4}$ hours to $37\frac{1}{2}$ hours and improved vacation allowances.

Early in January, **Trans-Canada Airlines** signed a new collective agreement with its 725 pilots represented by the **Canadian Airline Pilots Association**. The most controversial issue resolved during the negotiations was the pay schedule for flying the new DC-8 jet airliners coming into service this spring. The salary will be approximately \$22,000 annually for fully qualified pilots flying the maximum monthly hours. TCA indicated that only 17 senior captains will be eligible for jet flying during 1960.

Wage increases for pilots of conventional aircraft amounted to approximately \$1,000 per year. Captains flying piston-engine aircraft in the domestic service will now earn between \$10,000 and \$17,000 per year, averaging about

\$14,000 yearly. Exact earnings are calculated by a complex formula. First officers, who constitute slightly more than half of the 725 pilots, will earn between \$5,000 and \$10,200 per year under the terms of the new agreement.

The Railway, Transport and General Workers Union, recently certified as bargaining agent for 950 operating and maintenance employees, signed a first agreement with the **St. Lawrence Seaway Authority**. Wage increases totalling 14 cents hourly were granted, consisting of 7 cents per hour retroactive to July 1959 plus a further 7 cents on April 1, 1960. The divisions along the Seaway were reduced from six to three, with different pay rates prevailing in each. By April 1, 1960, the western division, including Welland and Sault Ste. Marie, will have a basic rate of \$1.80 per hour; the central division, including Cornwall, Iroquois and Beauharnois, \$1.62 per hour; and the eastern division, including Montreal, \$1.60 per hour. The process of levelling off the regional pay differences will result in additional increases up to 7 cents per hour for some workers. The settlement also provided for the voluntary, irrevocable check-off of union dues. Provision for statutory holidays, vacations with pay, and health and welfare benefits previously in effect were incorporated in the agreement.

In addition to the 77 agreements under negotiation at the end of last year, 209 major agreements* affecting approximately 289,000 workers will terminate in 1960. These 209 agreements represent more than 40 per cent of all collective agreements that cover 500 or more workers (exclusive of construction agreements) on record at the Department of Labour. The largest number of expirations falls within the second quarter, when 76 major agreements covering 71,300 workers will run out; 88,800 workers will be affected by the 56 terminations during the fourth quarter.

MAJOR AGREEMENTS EXPIRING DURING 1960

Collective agreements covering 500 or more workers, shown by industry and quarter in which they terminate. Construction agreements are excluded. The agreements in this table are those listed in the *Bargaining Calendar for 1960* published last month.

* These agreements were listed in the *Bargaining Calendar for 1960* (L.G., Jan., p. 14).

More than 60 per cent of the contracts that expire during 1960 are in manufacturing, and nearly half of these are in foods and beverages, clothing, transportation equipment and pulp and paper industries. The largest number of terminations in this group are in the pulp and paper industry. Most of these contracts cover employees of mills located in Ontario, Quebec and the Maritime provinces. The collective agreements covering the Ontario and eastern Canadian mills contained a mutual consent wage reopener clause. When the unions wanted to open negotiations on this point the companies were unwilling to do so. However, Canadian International Paper Company, which refused to consider the reopener, later agreed to enter into discussions for a new contract even though their current agreement had another six months to run. The ensuing collective bargaining ended with a new agreement which will terminate on April 30, 1961 (L.G., Dec. 1959, p. 1242).

During 1960 nearly 40 per cent of the major contracts in the transportation and communications industry will be open for renegotiation. Of the 23 agreements expiring in this sector, 11 are in the communication industry, where most of the 46,000 workers are employed by the Bell Telephone Company and the provincial telephone companies operating in western Canada. The remaining 12 expirations, covering 18,500 employees, are mostly with firms in the shipping industry operating on both the east and west coasts.

In the service sector, 26 major collective agreements covering approximately 33,400 workers are due to expire during the year. Most of these agreements cover civic and provincial workers, including firemen and civic employees (both clerical and outside workers) as well as the service staffs of municipal hospitals.

Collective Bargaining Scene

Agreements covering 500 or more workers,
excluding those in the construction industry

Part III—Settlements Reached During January 1960

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ALBERTA GOVT. TELEPHONES, PROVINCE-WIDE—I.B.E.W. (AFL-CIO/CLC): 2-yr. agreement covering 1,100 empl.—general increase of 5% eff. Nov. 1, 1959 and 3% eff. Nov. 1, 1960.

BINDERY ROOM EMPLOYERS, TORONTO, ONT.—BOOKBINDERS (AFL-CIO/CLC): 2-yr. agreement covering 1,200 empl.—male empl. to receive an increase of 6¢ an hr. eff. Jan. 11, 1960, an additional 8¢ an hr. eff. June 1, 1960 plus 6¢ an hr. eff. Jan. 11, 1961; female empl. to receive an increase of 4¢ an hr. eff. Jan. 11, 1960, an additional 6¢ an hr. on June 1, 1960 and 4¢ an hr. on Jan. 11, 1961; eff. June 1, 1960 the work week will be reduced from 38½ hrs. to 37½ hrs.; 3 wks. vacation with pay after 13 yrs. service (formerly 3 wks. after 15 yrs.).

CDN. STEEL FOUNDRIES, MONTREAL, QUE.—STEEL AND FOUNDRY WKRS. (IND.): 2-yr. agreement covering 800 empl.—7¢-an-hr. increase retroactive to Oct. 4, 1959 and an additional 4¢-an-hr. increase eff. Oct. 4, 1960; increase in the night premium of 1¢ an hr.; triple time to be paid to all empl. working on statutory holidays.

CITY OF WINNIPEG, MAN.—FIREFIGHTERS (AFL-CIO/CLC): 1-yr. agreement covering 525 empl.—general wage increase of 2%; work week reduced from 44 hrs. to 42 hrs.; 2 wks. vacation with pay after 1 yr. of service (formerly 2 wks. after 2 yrs.); any wage increases which may be granted to other civic empl. will also be given to firemen.

CONSUMERS GAS, TORONTO, ONT.—CHEMICAL WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 750 empl.—5¢-an-hr. increase retroactive to July 8, 1959, plus 2¢ an hr. eff. Jan. 1, 1960, an additional 8¢ an hr. eff. July 8, 1960 and 9¢ an hr. on July 8, 1961; improved insurance and medical plans.

COMMUNAUTÉ DES SŒURS DE LA CHARITÉ DE LA PROVIDENCE, MONTREAL, P.Q.—SERVICES FEDERATION (CCCL): 20-mo. agreement covering 1,200 empl.—an increase of \$2 per wk. retroactive to May 1, 1959; an additional \$3 per wk. retroactive to Dec. 20, 1959; empl. working a 48 hr. wk. will have their hrs. reduced to 44; contributory hospitalization plan to become eff. 60 days after signature of the contract, costs to be shared equally between employer and employees.

DOMINION WABANA ORE, BELL ISLAND, NFLD.—STEELWORKERS (AFL-CIO/CLC): 30-mo. agreement covering 1,900 empl.—2¢-an-hr. increase eff. June 1, 1960, and a further 3¢-an-hr. increase eff. Jan. 1, 1961; 4 wks. vacation with pay after 25 yrs of service (formerly no 4 wks. vacation provision).

NORMETAL MINING, NORMETAL, QUE.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 525 empl.—3¢-an-hr. increase retroactive to Jan. 1, 1960 and an additional 5¢ an hr. eff. Jan. 1, 1961; 1 additional paid holiday in 1961 bringing the total up to 6 holidays; group insurance benefits increased from \$1,500 to \$2,000; the re-employment preference for former empl. increased to 1 yr. from the previous 6-mo. period; pension payments to be calculated at the rate of \$2.60 per mo. multiplied by the number of yrs. of service; half the cost of the program to be paid by the empl.; all past service of empl. to be taken into account in calculating pension.

OTTAWA TRANSPORTATION COMMISSION, OTTAWA, ONT.—STREET RAILWAY EMPL. (AFL-CIO/CLC): 2-yr. agreement covering 590 empl.—5¢-an-hr. increase eff. Jan. 1, 1960, 5¢ an hr. eff. Sept. 1, 1960 and an additional 6½¢ an hr. eff. May 1, 1961.

QUEMONT MINING, NORANDA, QUE.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 575 empl.—3¢-an-hr. increase eff. Jan. 1, 1960, and an additional 5¢-an-hr. increase eff. Jan. 1, 1961; 3 wks. vacation after 15 yrs. service (formerly no provision for 3 wks. vacation); paid holidays for 1961 increased by 1 making a total of 6 holidays; group insurance increased from \$1,500 to \$2,000; re-employment preference for former empl. to be extended to a period of 1 yr. from the previous 6-mo.-period; pension payments to be calculated on the basis of \$2.70 per mo. multiplied by the number of years of service; half the cost of the program to be borne by the empl.; all past service of empl. to be taken into account in calculating pension.

ST. RAYMOND PAPER, DESBIENS, QUE.—WOODCUTTERS, FARMERS UNION (IND.): 1-yr. agreement covering 500 empl.—wage rates to remain the same as in the previous agreement; woodcutters to become members of the union within 30 days.

TORONTO TRANSIT COMMISSION, TORONTO, ONT.—STREET RAILWAY EMPL. (AFL-CIO/CLC): 2-yr. agreement covering 4,400 empl.—6¢-an-hr. increase eff. Jan. 1, 1960; an additional 6¢ an hr. eff. Sept. 1, 1960 plus 6¢-an-hr. increase eff. May 1, 1961; sick pay increased from \$35 to \$50 weekly.

TRANS CANADA AIRLINES, COMPANY-WIDE—AIRLINE PILOTS (IND.): 2-yr. agreement covering 750 empl.—general increase of approximately 6.9% applicable to basic monthly pay, mileage pay, gross weight pay and hourly flying rate.

NOTES OF CURRENT INTEREST

Minister Tells of Steps to Meet Demand for Skilled Workers

What the Government is doing to meet the "greater and greater demand for skilled workers" was outlined by Hon. Michael Starr, Minister of Labour, in the House of Commons on January 29.

He said the federal Government, in co-operation with the provincial Governments, is moving to increase the skills of workers by setting up standards for apprentices across Canada and by encouraging the fullest use of the vocational training program.

Under the plans, training is being provided at an increased rate for unemployed persons, in courses approved by the Unemployment Insurance Commission. Courses now available number "well over 500" and the Government was moving to include more and more of those courses and to make it possible to draw unemployment insurance while taking the courses, providing they have made the necessary contributions to the Unemployment Insurance Fund.

Mr. Starr reported that training is being taken at an increased rate by unemployed persons, and that it is anticipated that during the current year the number of persons who will receive training will be "considerably greater" than the 5,000 who received training in the previous year.

The Minister said he was not satisfied with the number trained. "We should be retraining as many as require retraining and that is our goal," he said.

The Government was conducting surveys on the effects of automation, Mr. Starr noted, so that measures can be evolved to minimize the dislocation caused by the advance of technology.

Labour's Campaign to Combat Racial Discrimination in Canada

The work of organized labour in Canada in combating racial discrimination in employment is outlined in a pamphlet entitled *Canadian Labour in the Struggle Against Employment Discrimination*, which has just been published by the Department of Labour.

The first half of the pamphlet describes the part played by the Trades and Labour Congress of Canada and the Canadian Con-

gress of Labour, and later continued by the merged Canadian Labour Congress, in trying to overcome discrimination, not only in employment but also in the customs of restaurants, hotels, summer resorts, barber shops, theatres, and other places of entertainment and recreation.

"From the first, the objectives of labour's human rights program have been three-fold: first, to foster and encourage within the trade union movement a feeling of understanding and sympathy towards problems of minority group members; secondly to assist union members by protecting them and their unions against bigotry and discrimination; and thirdly, to assist all workers and persons by seeking community and legislative action against discrimination occurring outside the area of trade union rights and collective bargaining," the pamphlet says.

"The committees have given top priority to educational activities at the local union level," it continues. Conferences on human rights were also held in order to train leaders in the movement against discrimination, and with the further purpose of focusing "public attention on the need for government action where voluntary action has not succeeded in removing discrimination."

One of the outcomes has been the enactment of fair employment practices legislation by the Dominion Government and by six of the provincial governments.

The second part of the pamphlet describes individually a number of cases that have been dealt with under the federal statute, the Canada Fair Employment Practices Act, which came into effect in July 1953.

Quebec's Minister of Labour Becomes Premier of Province

Minister of Labour of Quebec for 15 years, Hon. Antonio Barrette last month became the province's 18 Premier. He succeeded Hon. Paul Sauvé, who died suddenly January 2 after less than four months in office.

For almost 20 years Mr. Barrette was a railway machinist and still carries a union card.

On two occasions, in 1945 and 1951, he was a member of the Canadian delegation to the International Labour Conference.

The new Premier left school at the age of 14, worked as a messenger boy with the Canadian National Railways for two years and then became an apprentice machinist. He was a CNR machinist until 1936, when he was elected to the provincial legislature. He became Minister of Labour in 1944.

CLC Executive Council Rejects Affiliation Bid from Mine-Mill

An application by the International Union of Mine, Mill and Smelter Workers for affiliation with the Canadian Labour Congress was rejected last month by the CLC Executive Council.

The rejection was based on the grounds that the application was accompanied by conditions that might conflict with the CLC constitution, that these conditions were also part of a referendum conducted among the union's membership concerning affiliation, and that the union was not eligible because of the anti-Communist provisions in the CLC constitution.

In a letter to the Mine, Mill Union, CLC President Claude Jodoin said the application had been studied "very fully" by the Council, which had given it consideration along with "all of the attendant circumstances."

Mr. Jodoin also questioned whether the application had been made in good faith. "It appears to us," the CLC letter said, "that it is rather a technique devised for the purpose of solving an internal problem which exists in your organization at the present time and which is public knowledge. It is a device to meet, in some measure, the evident desire of some members to associate themselves with the Canadian labour movement through the Canadian Labour Congress, without involving any firm commitment on the part of your officers."

In closing, Mr. Jodoin said the Council was wholly in sympathy with the desire of the Mine-Mill membership to form part of the Congress, and hoped that "they will establish within their own organization the necessary favourable conditions for such an association at an early date."

At its January meeting the CLC Executive Council also rejected an application for reinstatement from the Seafarers' International Union. The SIU may appeal the decision to the CLC convention in April.

The Unemployment Insurance Commission Employees' Association has severed its connections with the Canadian Labour Congress because of CLC involvement in the proposed formation of a third political party.

Formal notice by the 6,529-member Association of its withdrawal has been received by the CLC.

Earlier, the Alberta Civil Service Association parted company with the CLC on similar grounds (L.G., Dec. 1959, p. 1251).

Union of Operating Engineers Establishes Canadian Conference

A Canadian Conference of Operating Engineers has been established. Its aim is to bring into closer co-operation Canadian locals of the International Union of Operating Engineers.

Rowland G. Hill, Canadian Director of the IUOE, was named chairman of the new conference. Vice-chairman is I. C. Nessel of Edmonton and Secretary-Treasurer is J. Robinson of Windsor.

The founding session was held in December at Winnipeg, when 25 delegates representing 17 locals and provincial councils met to draft a set of governing by-laws.

The by-laws provide for a chairman, vice-chairman, secretary-treasurer and an eight-member executive board. Four districts were established for Canada: Maritime Provinces, Ontario and Quebec, Prairie Provinces and British Columbia; each will provide two members for the board.

Suggests Federal Govt. Convene Labour-Management Conference

Representatives of the labour movement in Canada have on many occasions suggested to the federal Government that it might be a very useful agent in calling a conference of management and labour to explore the areas of conflict that exist between the two groups, Canadian Labour Congress President Claude Jodoin told members of the Toronto Board of Trade at a January meeting.

Mr. Jodoin said that such a meeting could seek methods of overcoming misunderstandings and building up understandings. "There has been no action on the part of the Government and, to the best of my knowledge, there has been no indication of any support for such an idea from the management organizations," he stated.

Some items mentioned by Mr. Jodoin as "areas of conflict" were automation, inflation and wages, legislation that would tend to curtail the powers of unions.

The CLC President also reiterated that labour is not opposed to automation and other changes that will bring increased efficiency and production, but pointed out that "we cannot expect production to be at its best in an atmosphere of conflict."

Labour Bodies Submit Briefs to Provincial Governments

Ontario Federation of Labour

The Ontario Federation of Labour, in its annual submission to the provincial Government last month, recommended a number of changes in labour legislation affecting labour relations and workmen's compensation.

It also asked for the implementation of economic measures which, it said, would improve living standards and increase purchasing power in the province; for increased health services and for more financial aid to education.

The brief urged the Government to amend the Judicature Act to provide that in industrial disputes the respondent shall be given a reasonable opportunity to be heard, and to cross-examine witnesses, in any hearing on an application for an injunction.

The Federation asked that steps be taken to enable the Labour Relations Board to expedite and simplify its procedures in dealing with applications and issuing decisions. It asked that the Labour Relations Act should be strengthened "in so far as it prevents appeals from decisions of the Labour Relations Board." It urged not only that there should be no opportunity for appeal to the courts, but that the Government should assume the cost of defending all actions that may be instituted to reverse Board decisions.

The brief asked for legislation to prevent the contracting out by employers of work that had been performed by employees in the bargaining unit under the terms of a collective agreement. It reiterated the Federation's former stand that the Labour Relations Act should be made applicable to the Crown as an employer, so as to guarantee to all Crown employees the same bargaining rights as those possessed by other employees in the province.

Measures urged by the Federation to increase employment and raise the general standard of living included: establishment of a minimum wage of \$1.25 an hour for men and women in all industries and in all parts of the province; legislation to require all employers to allow eight paid statutory holidays a year to their employees; amendment of the Vacations with Pay Act to provide annual vacations of two weeks after one year's service and three weeks after five years of service; and reduction of the legal maximum work week to 40 hours from the present 48, with overtime at the rate of time and a half.

Changes in the Workmen's Compensation Act asked for by the Federation would make compensation payable from and including

the day after the accident if the disability lasted more than one day, increase the minimum weekly benefit for temporary total disability to \$25 from \$15, establish a minimum permanent total disability benefit of \$25 a week, and provide for an annual review of all pensions and allowances.

The brief urged the Government to take immediate steps to set up re-training programs for unemployed workers under Schedule "M" of the federal Vocational Training Act, and to extend other types of assistance necessary to re-establish displaced workers in regular employment.

Concern was expressed about the reduction in house building in 1959 and the probability of the continuation of such a trend into 1960. Both the federal and the provincial governments, the brief said, should make funds available for "socially necessary projects that would otherwise be held up by the prohibitive cost of borrowing." It especially urged the importance of low-rental housing and urban re-development programs.

The Federation expressed satisfaction that the Government had undertaken a program of bursaries for needy students, but it urged the Government to review the whole question of student aid, and to consider "the feasibility of providing free tuition and living allowances to all students meeting a required standard of achievement in institutions of advanced education." It also urged the holding of a federal-provincial-municipal conference on education as soon as possible.

A number of changes in the hospital plan of the province were urged: extension of diagnostic services to out-patients, provision for treatment of students as dependents under the hospital plan "as long as they are recognized as such for income tax purposes," provision of means for maintaining coverage and paying premiums for persons who have fallen behind in their premiums because of unemployment, and establishment of a minimum basis of compensation for student nurses.

The Federation urged the Government to co-operate in any investigation of drug prices and to "give serious consideration to a prepayment plan for pharmaceuticals under government sponsorship and control." It complained of the present high cost of medical services, and it proposed that the Government institute a public inquiry into the cost of such services.

Among other things, the Federation recommended:

—Regulation of all private employment agencies, who should be prohibited from charging workers a fee for their services.

—Extension of the present anti-discrimination laws in regard to accommodation and discrimination against older workers.

—Co-operation by the provincial and federal Governments in furthering the principle of “portability” of pensions.

Nova Scotia Federation of Labour

Legislation to provide for the establishment of a union shop in a plant where a majority of the employees had voted in favour of it was one of the measures urged by the Nova Scotia Federation of Labour in its annual brief to the provincial Government, which was presented early last month.

Such a measure would go a long way towards stopping the industrial strife caused by the attempts of employers to entice employees away from duly certified unions and to discourage employees from joining a union, the Federation said.

It also suggested that in determining whether an employee was a union member for purposes of certification, the payment of an initiation fee should be sufficient evidence of membership. To expect employees to pay monthly dues before the union was certified, while in many cases they were under strong pressure from the employers to quit the union before a certification hearing could be held, was placing an unfair burden upon them, the brief argued.

The Federation also recommended other changes in the Trade Union Act to make it an offence for an employer to call a meeting to attempt to discourage employees from joining a union, to require the Labour Relations Board to certify a union as bargaining agent when 51 per cent of the eligible employees have voted for it, and to allow a strike vote to be taken before conciliation, when negotiations have reached a deadlock.

Complaining that the administration of hospitals under the Hospital Commission “has left much to be desired,” the brief urged that the Commission should each year meet the unions that represent the hospital workers and discuss problems, and that the Commission’s suggested scale of rates for such workers should be based on the highest union contract rates in effect in the province. The Federation said that at present the Hospital Commission was inadvertently regulating hospital employees’ wages. It wanted the Commission to budget enough money so that workers would not get substandard pay.

The Federation further recommended that the surplus sales tax and other funds should be used to provide an all-inclusive health scheme.

The brief said that the Government must take steps to make sure that the province

keeps what industry it already has. In particular, the labour body wanted the Government to make sure that the establishment of a steel plant by A. V. Roe in Quebec did not adversely affect a subsidiary operation in Sydney.

“If freight rates are a stumbling block,” the Federation said, “then the Government must make strong representations to Ottawa to overcome the problem.”

Other recommendations of the Federation included requests for:

—Establishment of a quota on beer coming into the province, so that the amount brought in does not exceed the amount produced locally, in order to provide more employment for local brewery workers.

—Appointment of a Royal Commission to investigate the development of Nova Scotia’s natural resources.

—Provision of free school books up to Grade 12.

—Provision of compulsory automobile insurance sold by the Government.

—Representations to Ottawa for re-establishment of a Canadian merchant marine and construction of Canadian ocean liners to carry Canadian goods and passengers now carried by the ships of other countries.

—Provision for licensing and inspection of homes for the aged.

—Payment of “fair wages” for all government work.

—Legalization of Sunday sport and of a charge for admission to Sunday sporting events.

—An increase of \$10 in old age assistance payments, with elimination of the means test, and a five-year reduction of the age limit for women.

Charlottetown and District Labour Council

Establishment of a “National Labour Code” was recommended by the Charlotte-town and District Labour Council in a brief presented to the provincial Government early in January.

The Council pointed out that there is at present much confusion because of conflicting trade union acts and labour relations acts in the various provinces, and it urged the Government to support the idea of a national labour code at any interprovincial conference and to introduce discussions on the subject with the federal Government.

The brief recommended changes in the Trade Union Act to include in the definition of an employer all branches of provincial and municipal government, to eliminate a section that forbids closed shop labour contracts, and to allow unions to submit their financial statements at the end of their fiscal year rather than at the end of the calendar year as at present.

Referring to the Workmen's Compensation Act, the Council requested revision to allow compensation to be based on maximum earnings of \$4,000 a year; to raise the minimum payment to workers from the present \$15 a week to \$25; to allow a widow, on marrying again, \$75 a month for 12 months; and to reduce the waiting period for compensation to two days instead of the present four days.

The brief also asked for compulsory, government automobile insurance, for changes in the Uniform Time Act to allow daylight saving time in the summer, and supported the opposition of various organizations to the use of trading stamps.

British Columbia Federation of Labour

Complete public ownership of electrical power and natural gas utilities was advocated by the British Columbia Federation of Labour in its annual brief to the provincial Cabinet, presented early in January.

The Federation also asked the Government to amend the Labour Relations Act to provide a fine of \$2,000 for an employer found guilty of unfair labour practices, and a fine of \$10,000 in addition to a year in prison for a second offence.

The brief called for the repeal of Bill 43 (the new Trade-Unions Act), which, the Federation asserted, tends to aggravate strikes rather than check them. It said that many employers merely pay lip service to labour legislation and do not bargain in good faith. This it ascribed to "the simplicity and rapidity with which injunctions may be obtained."

Other changes in labour laws proposed were: provision for three weeks holiday for all workers after five years service, and nine paid statutory holidays a year. Medical coverage for hospital workers was recommended.

Another proposal was that the Fair Employment Practices Act should be widened to ensure that there was no discrimination against qualified older workers. Thirteen changes in the Workmen's Compensation Act were recommended.

The establishment of an independent board of review to advise on all resources projects was asked for. Government, the university, industry and labour should be represented.

The Federation also requested that a conference of Government, management and labour representatives should examine problems of industrial relations.

To deal with unemployment the Federation recommended the establishment of a special \$5,000,000 assistance fund and universal application of the 40-hour week.

Amendment of the Equalization of Assessments Act to exempt old age pensioners from its provisions was asked for. Social assistance payments should be increased by 30 per cent immediately, schooling should be free for all from kindergarten through college and more vocational schools should be built, and a government automobile insurance scheme should be established, the Federation said.

British Columbia CMA Urges Compulsory Arbitration

Compulsory arbitration of labour-management disputes affecting public health and safety, and prohibition of "agreements which deny or terminate employment because of an individual's not being or remaining a member of a trade union" were among the measures recommended to the Government of British Columbia by the provincial division of the Canadian Manufacturers' Association in a brief last month.

The brief said that the Cabinet should have discretionary power to refer to arbitration "any dispute which would in its opinion imperil the health or safety of the public."

Another proposal was that the period during which a favourable strike vote may be implemented should be shortened from the present three months to a period of 10 days at the least and 21 days at the most. The CMA asserted that at present decisions to strike are often made not seriously but "only for the purpose of providing the negotiating committee with a 'big stick' to hold over the head of the employer."

The brief also proposed that when a strike or lockout is in effect the Minister of Labour might call for a supervised vote of the employees or of the members of the employers' organization, on any offer made by the opposing party. The CMA said that it believed it too often happened that details of offers made by the employer to the negotiating committee were not placed before the union members for their opinion.

The Association also asked that a vote of all employees should be taken when an application for certification or decertification is before the Labour Relations Board.

During 1958 the average number of persons employed in Canada by common carrier railways was 192,809, a drop of 9.2 per cent from the previous year's 212,426.

Trade Union Membership Declines In Both Britain, United States

There were 9,616,000 trade unionists in the United Kingdom at the end of 1958, according to figures published in the *Ministry of Labour Gazette* for December 1959. The total was 189,000 lower than at the end of 1957 and approximately 140,000 below 1956.

The decline in membership reported in the government publication amounted to 2.2 per cent. The Trades Union Congress, to which all large unions in Britain except two are affiliated, estimated its drop in membership between 1957 and 1958 at 1.9 per cent.

In the United States, too, union membership dropped in the period 1956-58, the U.S. Department of Labor has reported.

(In Canada, the figure of 1,459,000 union members reported at the beginning of 1959 (L.G., Dec. 1959, p. 1249) is not comparable with the 1958 figure because of adjustments in survey coverage.)

At the end of 1958 there were 657 trade unions in Britain compared with 666 at the end of 1957.

The Ministry's statistics are based on data supplied by the Chief Registrar of Friendly Societies and by the Registrar of Friendly Societies for Northern Ireland in respect of trade unions registered under the Trade Union Acts and from returns supplied direct to the Ministry by unregistered organizations.

The data relate to all organizations of employees—including those of salaried and professional workers, as well as those of manual wage earners—that are known to include among their functions negotiation with employers with a view to settlement of conditions of employment.

The figures for 1958, the *Ministry of Labour Gazette* points out, are provisional and subject to revision.

United States union membership dropped by about 400,000 to 18,100,000 between 1956 and 1958, the U.S. Department of Labor has reported after a comprehensive survey of dues-paying membership of national and international unions having headquarters in the country. (Canadian members of international unions with U.S. headquarters, about 1,100,000, are included in the membership figures.)

More Allowances to Disabled But Fewer to Blind, Aged at Year-end

The number of blind persons in Canada receiving allowances under the Blind Persons Act decreased from 8,712 at September 30, 1959 to 8,688 at December 31, 1959.

The federal Government's contributions under the federal-provincial scheme totalled \$1,052,019.43 for the quarter ended December 31, 1959, compared with \$1,050,956.93 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$26,350,967.89.

At December 31, 1959, the average monthly allowance in the provinces ranged from \$50.54 to \$54.11. In all provinces the maximum allowance paid was \$55 a month.

Old Age Assistance

The number of persons receiving old age assistance in Canada decreased from 98,747 at September 30, 1959, to 98,495 at December 31, 1959.

The federal Government's contributions under the federal-provincial scheme totalled \$7,604,015.19 for the quarter ended December 31, 1959, compared with \$7,630,266.99 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$181,893,554.26.

At December 31, 1959, the average monthly assistance in the provinces ranged from \$48.79 to \$53.27, except for one province where the average was \$45.46. In all provinces the maximum assistance paid was \$55 a month.

Disabled Persons Allowances

The number of persons in Canada receiving allowances under the Disabled Persons Act increased from 48,821 at September 30, 1959 to 49,446 at December 31, 1959.

The federal Government's contributions under the federal-provincial scheme totalled \$4,024,492.06 for the quarter ended December 31, 1959 compared with \$3,979,614.48 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$51,645,392.23.

At December 31, 1959, the average monthly allowance in the provinces ranged from \$52.51 to \$54.69. In all provinces the maximum allowance paid was \$55 a month.

UPW's George Stapleton Dies

George Stapleton, Manitoba representative of the United Packinghouse Workers of America since 1947, died January 25. For the past two years he had been Vice-President of the Winnipeg and District Labour Council.

He had also served as the Winnipeg Labour Council representative on the Court of Referees of the National Selective Service and on boards of conciliation in Winnipeg. He had also been an alternate member of the Manitoba Labour Board since 1954.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

January 14—*Parliament will be asked* at the current session, the Speech from the Throne said, to enact legislation that will: provide for a Bill of Rights; continue programs of aid to other, less developed nations, particularly those in the Commonwealth; provide a program of scholarships and fellowships to be exchanged within the Commonwealth; revise the Civil Service Act; authorize, for any provinces that desire them, alternative arrangements in respect of university grants; give Canadian Indians the franchise in federal elections; amend the Old Age Security Act and the Veterans' Allowance Act to establish a basis for the payment of pensions and allowances to Canadians residing outside Canada; re-establish the special committee on broadcasting so that it may continue its consideration of broadcasting policy, particularly in the field of regulation and licensing.

The Speech noted that the Government continues to regard as a primary goal the achievement of the greatest possible measure of controlled disarmament, and that Canada will devote every effort to discharging its responsibilities as a member of the 10-nation disarmament committee.

It also noted that Canada's economic position improved greatly during 1959 and that the prospects for 1960 are favourable.

January 15—*Report of Royal Commission* on Transportation is unlikely to be presented soon, the Prime Minister advises.

United Nations Economic, Social and Cultural Organization world conference on adult education will be held in Montreal in August, Mrs. Jean Casselman announces.

January 18—*Bill C-2, to give Indians* the right to vote in federal elections, given first reading. The Bill would amend the Indian Act.

Bill C-3, to amend the Canada Elections Act to give Indians the right to vote in federal elections, given first reading.

Elimination of capital and corporal punishment in Canada proposed respectively in Bills C-6 and C-7. Both Bills given first reading.

Reduction of interest rates and discounts to a 12-per-cent maximum through amending the Interest Act proposed in Bill C-8, which was given first reading.

Application to the Civil Service of some portions of the Industrial Relations Disputes Investigation Act proposed in Bill C-9, given first reading.

Limitation of interest rates under the Small Loans Act to 1 per cent per month proposed in Bill C-10, given first reading.

Compulsory advertising of "the true rate of interest that is being charged on each loan" by loan companies proposed in Bill C-12, which received first reading.

Prohibition of discrimination in employment because of age, through amendment of the Canada Fair Employment Practices Act, proposed in Bill C-11. The Bill was given first reading.

Bill C-19, to extend application of the Canada Fair Employment Practices Act to the Civil Service, given first reading.

Double pay proposed for employees under the jurisdiction of Parliament who are compelled to work on statutory holidays by Bill C-18, which was given first reading.

Measure to promote industry and reduce unemployment in the Atlantic Provinces provided in Bill C-20, given first reading.

Establishment of hospital sweepstakes board with power to operate hospital sweepstakes on a national scale proposed in Bill C-22, given first reading.

Civil Service Commission report recommending a general pay increase for federal employees will not be tabled in the House, Hon. Donald Fleming, Minister of Finance, informs questioner.

January 19—*Under Colombo Plan*, Canada has agreed to make available to India \$25 million, which will be used to provide Canadian commodities and equipment requested by the Indian Government to help carry forward its second five-year development plan, the Secretary of State for External Affairs announces.

Bill C-31, to remove restrictions in Old Age Security Act on outside residence of pensioners, given first reading.

Termination of employment notices given to 30 employees at Gander airport in Newfoundland, the Minister of Transport advises questioner.

January 20—*Bill C-33, to amend Canada Elections Act* to give much broader advance poll voting privilege, given first reading.

January 21—*Amount remaining in Unemployment Insurance Fund* on December 31, 1955, 1956, 1957, 1958 and 1959 were, respectively, as follows: \$890,857,489.63; \$926,776,830.22; \$877,470,144.39; \$625,363,366.21; \$471,094,255.96, the Minister of Labour reported in answer to a question.

Employment in Canada in 1959

Almost all parts of country recorded employment and output gains in 1959 but economic expansion impeded in year's second half by high cost of money, scarcity of mortgage funds, steelworkers' strike in U.S., woodworkers' strike in B.C.

In retrospect, 1959 was a year in which almost all parts of the country recorded gains in employment and output. The economic recovery was impeded, however, by certain developments during the second half of the year.

One of the forces tending to check the expansion was the high cost of money and the scarcity of mortgage funds, the most obvious effects of which were apparent in housebuilding. Other important restraining influences were the steel shortages stemming from the steelworkers' strike in the United States and the strike in British Columbia which shut down the lumber industry for two months.

Total employment surpassed the pre-recession peak early in the summer and since then there has been a steady improvement. For the year as a whole, the average number of persons with jobs was estimated to be 5,878,000 compared with 5,722,000 in 1958, an increase of 2.7 per cent.

Unemployment was noticeably lower in 1959 than in the previous year. The number of persons without jobs and seeking work averaged 5.6 per cent of the labour force compared with 6.6 per cent in 1958. Not only did the number of job seekers show a considerable drop over the year, but they were unemployed for shorter periods, and there was less partial unemployment.

The average work-week in manufacturing increased steadily during the first half of the year, recovering most of the losses that took place in 1957; in the third quarter the work-week was half an hour longer than in the corresponding periods in both 1958 and 1957.

Reflecting the increase in employment and wages, labour income rose to an annual rate of \$17.7 billion in the third quarter. This was almost 8 per cent higher than in the comparable period in 1958.

The increase in the Gross National Product during the first nine months of 1959, a gain of 7 per cent from the same period in 1958, indicates that the value of goods and services produced in 1959 will approach the \$35 billion mark. After allowing for price increases, the Dominion Bureau of Statistics estimated the increase in volume to be 5 per cent, slightly higher than the average of 4 per cent for the years 1947-1958.

During the early part of the year, production and employment advances were supported largely by increases in personal and government spending and the restocking of business inventories. As the year progressed, other elements of demand strengthened, setting the stage for a more widespread expansion. Exports of goods and services rose quite sharply in the second and third quarters after declining earlier in the year. Plant and equipment expenditures showed a rising trend from the beginning of 1959, bringing to an end the downward drift of the preceding year.

The ability of housebuilding activity to maintain a near-record level was an important factor in the over-all business recovery. In certain parts of manufacturing, such as the building materials and household furnishing industries, much of the increases in employment and output can be traced to the heavy volume of housing that has been erected during the past two years. The industry was not able to maintain the peak level of activity reached in 1958: a shortage of mortgage funds sharply reduced the volume of new housing soon after the first of the year, although this situation was relieved for a short period in the fall by a program of direct lending to builders by Central Mortgage and Housing Corporation. On average, housing starts during 1959 were about 14 per cent lower than in the previous year but completions were slightly higher. The carryover into the current year was estimated to be down about 5 per cent from a year ago.

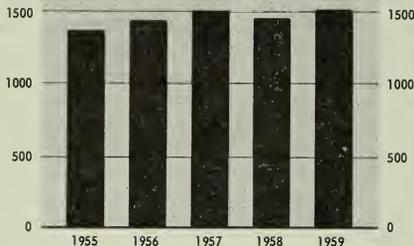

The number of persons with non-farm jobs in 1959 averaged about 3.5 per cent more than a year before, considerably less than the estimated 5 per cent advance in volume output in non-farm industries. The tendency for production to increase more rapidly than employment is not unusual in the early stages of expansion; a similar development has characterized the recovery in the United States.

Employment gains during 1959 were fairly widespread, with increases in all regions and most industrial divisions. Approximately half of the increase in non-farm employment occurred in service, notably health and government services. Manufacturing and trade each accounted for about one-fifth. Mining was the only major industry in which employment contracted during the

year. The decline occurred chiefly in coal mining, which experienced one of the worst years in the postwar period. The most rapid improvement in manufacturing employment occurred in the durable goods industries, particularly among those that were seriously affected by the recession.

Industrial Employment

One of the more striking developments of the past year has been the rapid rate of employment expansion in trade, particularly in the last half of the year, when employment in this industry averaged 5.4 per cent higher than in the corresponding period in 1958. This advance brought to an end more than three years of employment stability in this industry.

As mentioned earlier, the expansion of the service industries figured most prominently in the over-all employment recovery during 1959. In December, the number of persons employed in services (which include schools; hospitals; federal, provincial and local government agencies; theatres; law firms; barber shops; laundries; hotels and restaurants; and a variety of other establishments of a similar kind) was estimated at 1,395,000, which is 72,000 more than a year earlier. These industries have shown a relatively high rate of growth in all postwar years.

The construction industry continued to exert a favourable influence on total employment despite the considerable drop in housing starts. A revival in non-residential construction more than made up for the slowdown in housebuilding activity and resulted in a record high level of construction employment. For the year as a whole, construction employment averaged 15,000 more than a year before and 5,000 more than the previous record set in 1957.

Forestry made a relatively slow recovery until late in the year, when pulpcutting programs were increased considerably. Average logging employment was higher than in 1958 but still considerably lower than in 1957, and well below the average of the postwar period.

Manufacturing employment reached an all-time high level in mid-summer and continued to advance until late in the year. The upward trend was temporarily interrupted in the closing quarter of 1959 as the steel strike in the United States caused some steel shortages in Canada. For the year as a whole, the largest employment advances occurred in the durable goods industries. Iron and steel products, which registered an employment decline of 10 per cent during 1958, made a strong advance during the year, recovering almost all of the

earlier losses. All parts of the steel industry shared in the expansion. Agricultural implements showed the most marked improvement, reflecting a further strengthening in foreign demand; in the first six months exports of farm machinery were 26 per cent higher than in the corresponding period in 1958. Other parts of the steel industry which showed a marked improvement were primary iron and steel, sheet metal products, heating and cooking appliances and machinery. Motor vehicles, electrical apparatus and supplies, non-ferrous metals and wood products also registered employment gains during 1959, reversing the downward trends of most of the previous year. The non-metallic mineral products industries, which were an important source of strength during 1958, showed further expansion during the year. Aircraft was the only durable goods industry which registered an appreciable employment decline during the year, a result of the cancellation of government contracts.

Employment gains in the non-durable goods industries were generally small, ranging from less than 1 per cent to slightly more than 6 per cent. The largest increases occurred in foods and beverages, printing and publishing, rubber and paper products. Employment losses were confined to the tobacco products industry, which experienced a serious setback during the year, on average about 4 per cent from the 1958 level.

Regional Employment Conditions

Atlantic—Economic conditions in the Atlantic region improved moderately during 1959, after showing very little change during most of the previous year. For 1959 as a whole, total employment (annual averages) was estimated at 496,000, some 17,000 higher than in 1958. Unemployment showed a considerable decline, although it was still much higher than before the recession. Increases in employment and earnings were reflected in a rise in total labour income. In the first nine months total labour income in the region was estimated at \$875.2 million, an increase of 7 per cent over the corresponding period in 1958.

Non-farm employment showed an unsteady upward movement during the past 12 months. By year-end, the number of persons with non-farm jobs was estimated at 440,000, some 16,000 higher than a year before. Although some of the downward pressures that were responsible for the employment contractions in 1957-1958 eased perceptibly during the year, there was little evidence of

Farm Employment

Employment in primary agriculture continued to decline in 1959 but the rate of decrease was much slower than in any year since 1955. For the year as a whole, the number of persons with jobs in agriculture averaged 692,000 compared with 712,000 in 1958 and 744,000 in 1957. On a percentage basis, the decline between 1958 and 1959 averaged only 2.8 per cent compared with a 4.3-per-cent decrease between 1957 and 1958.

The number of self-employed farm operators and unpaid family workers continued to decline during 1959 but there was a noticeable increase in the number of paid workers employed in agriculture. Paid workers on farms in Canada averaged 109,000 compared with an average 97,000 in 1958. The increase was concentrated mainly in Quebec and the Prairie region.

One of the interesting features of farm employment in 1958 was the increase from other recent years in female workers. The average number of women with jobs in agriculture during 1959 declined to 48,000 from an average of 52,000 the year before. Despite this decline, however, the number of female workers remained higher than in any other year since 1952.

As a result of the continued shift from farm to non-agricultural industries, the agricultural labour force accounted for only 11 per cent of the total labour force in 1959.

a full-scale recovery. So far, a relatively small number of industries have lent support to the upturn in employment. Forestry and construction were the main sources of strength, with some additional support coming from the service industries.

Manufacturing which accounts for more than one-fourth of the employment in the region, made little or no over-all recovery, although a number of individual manufacturing industries expanded during the year. Lumber mills, pulp and paper plants and iron and steel mills registered significant production and employment advances in response to firmer demands for these commodities. Output of lumber in the first 10 months was about one-third higher than in the corresponding period in 1958. Steel mills were reported to be operating at more than 80 per cent of rated capacity in December compared with 60-70 per cent a year before. Production increases were fairly general among pulp and paper mills, partly as a result of employment expansion

but also because of a lengthening of the work week. In all of these industry groups, production increased more rapidly than employment.

The transportation equipment industry (aircraft, railway rolling stock, and ship-building and repairing) experienced further production and employment declines during the past year, offsetting the advances in other parts of manufacturing. During 1959 the shipyards contributed largely to the employment decline in this group. The Halifax shipyards were hardest hit; in November employment was only about half the year-earlier figure. However, in December a major repair job and several smaller ones were placed with the Halifax shipyards. The railway rolling stock industry exhibited renewed strength during late summer and early fall, but heavy layoffs occurred in December following the completion of an order for the CNR. Aircraft plants in Nova Scotia were maintained at much the same levels as in 1958.

The coal mining industry experienced one of the worst years in the postwar period. A series of periodic shutdowns that began in mid-1958 continued into the second half of 1959. Full-time operations were resumed in August but employment in the second half of the year was well down from the corresponding period in 1958. For the year as a whole, coal mining employment showed a drop of almost one-fifth. The major factor affecting the market for coal was the increasing competition from natural gas, fuel oil and hydro-electric power.

Iron ore mining in Newfoundland was sharply curtailed during 1959 as a result of declining sales in both domestic and export markets. The closure of No. 6 Mine at Bell Island last May released close to 600 workers for an indefinite period. Part-time operations (three weeks a month) were introduced at the other mines and persisted until October. While there are no further work stoppages scheduled at these mines, employment is expected to continue much below normal owing to the closure of No. 6 Mine.

Construction was one of the principle sustaining forces in the economy of the Atlantic region throughout the year. In all four provinces, construction employment was maintained at higher levels than in 1958. All major categories shared in the improvement. This was the only region to register a rise in residential construction. Even with the expansion that occurred during the past year, however, housebuilding was less active in the Atlantic region than in other parts of the country.

Pulpwood logging was more active during the second half of 1959 than in the corresponding period in the previous year; in the first half it was little better than a year before. In the four months from mid-year to November, pulpwood production was 18 per cent higher than in the same period in 1958. Employment in forestry in the first 10 months showed an average increase of 6 per cent between 1958 and 1959. Most of the improvement was in New Brunswick; in Newfoundland forestry employment was down from the 1958 level.

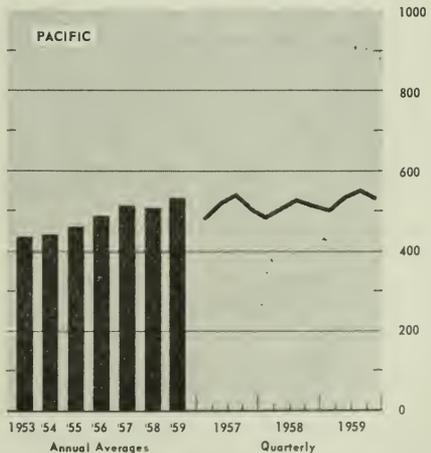

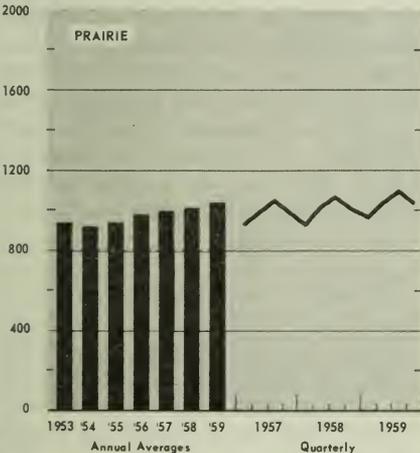

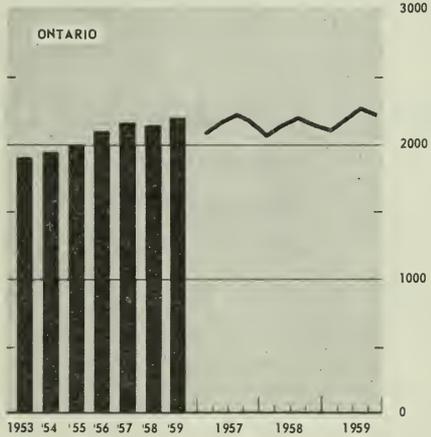

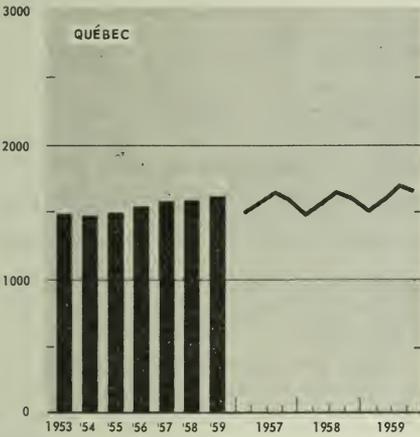

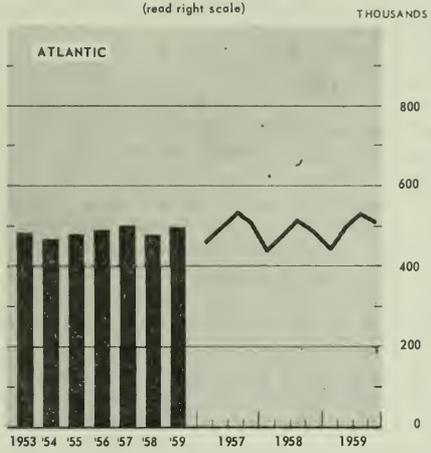

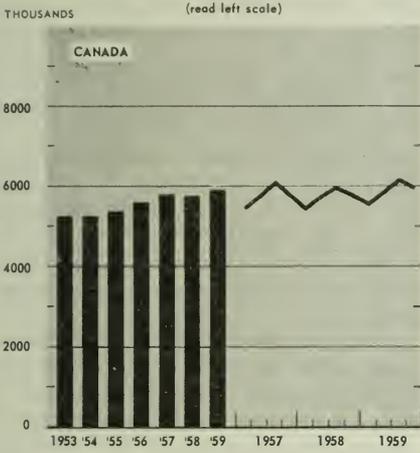

The service industries have been an important support to employment in this region, although the gain during the year was smaller than in other regions. Because of a slower rate of economic growth demands for all kinds of services have increased at a more moderate rate in the Atlantic provinces than in other regions throughout the postwar period.

Quebec—Economic activities showed a general improvement in the Quebec region during 1959. Employment rose by more than 2 per cent and labour income increased by about 8 per cent over the year. The expansion in employment took place in the non-agricultural sector, with a gain of close to 3 per cent; agricultural employment continued to decline. In contrast to the expansion of employment, the growth in the labour force during the year (1 per cent) was considerably less than in the previous two years and was the smallest rise in any of Canada's five regions.

The improvement was quite marked in the region's primary industries. Forestry, in particular, showed a marked recovery, employment rising sharply in the second half of the year. In the June-November period there were, on the average, 2,000 more men at work in the woods than in 1958, although not as many as in 1956. The improvement in forestry employment was largely the result of a rise in pulpwood logging caused by a combination of reduced inventories and increased production in the pulp and paper industry. The export values of newsprint and wood pulp were 5 and 8 per cent higher in 1959 than a year earlier. As a result, pulpwood production in the region was some 16 per cent higher than in the previous year.

There was improvement in the mining industry also. Total mineral production in the Quebec region in 1959 was estimated at some \$433 million, up about 18 per cent from a year earlier. Employment in mining during the first 10 months was 3 per cent higher than in 1958. Most of the employment increase resulted from a sharp rise in iron ore mining. Export shipments of

REGIONAL EMPLOYMENT TRENDS
1953 - 1959

iron ore during January-November 1959 rose by 75 per cent over the corresponding level of the previous year. Production of non-ferrous metals increased also. In asbestos mining, Canadian production showed a 13-per-cent gain over the year, and much of this gain was in Quebec.

In manufacturing, employment and hours worked were both about 1 per cent higher in 1959 than in 1958. A noticeable improvement occurred in the textile industry. Employment was moderately higher, and the average work-week was up more than an hour in primary textile plants and almost half an hour in the clothing industry. During the January-October period of 1959, inventories were further reduced in both primary and secondary textile industries. Shipments in the same period showed a marked improvement.

The iron and steel industry reached a trough early in 1959 after a decline of about 18 per cent over the previous year and a half. As a result of a heavy demand for structural steel, output and employment in

the industry rose steadily throughout the year. By the fourth quarter, the industry had re-employed about half the number of workers released between the employment peak in 1957 and the low point in early 1959. The electrical apparatus industry showed a similar recovery in 1959, a reflection of the housing boom in 1958. In the fourth quarter of 1959, employment was 10 per cent higher than the same period in 1958 and only 3 per cent below the 1957 peak. Manufacturing employment in the region was also boosted by the strengthening in demand for aluminum and copper. Here again, employment rose steadily from a first quarter 1959 trough, and by the fourth quarter was slightly higher than a year earlier.

In the construction industry employment was close to the level of the previous year. A fairly marked decline in residential construction activity was offset by increased non-residential building.

(Continued on page 198)

Wages and Working Conditions, 1959

Seventy per cent of all plant workers on standard work-week of 40 hours or less and more than 89 per cent on five-day week at April 1, 1959. Wage increases of 5-10 cents predominate in 1-year agreements, of 10-20 cents in 2-year contracts

Seventy per cent of all plant workers in Canada had a standard work-week of 40 hours or less at April 1, 1959, it was shown by a survey of the normal work-week in manufacturing conducted by the Department's Economic and Research Branch. About 84 per cent had a standard work-week of 44 hours or less.

More than 89 per cent of all plant workers were on a five-day week.

Of all office workers in the manufacturing industry, 69 per cent had a standard work-week of 37½ hours or less and 95 per cent of them were on a five-day week.

During 1959, collective agreements covering hundreds of thousands of workers were concluded without work stoppage. The proportion of working time lost through industrial disputes was estimated at less than one quarter of 1 per cent in the first 10 months of the year. During this period there were 205 work stoppages compared with 227 in the first 10 months of the previous year, and their duration, totalling approximately 2,270,000 man-days, was also down from the year before. The most

extensive strikes during 1959 occurred in logging in Newfoundland and British Columbia.

Wage settlements covering a large number of workers were negotiated during the year in all industrial sectors. About two thirds of 144 major collective agreements signed during the first half of 1959, each covering upwards of 500 workers, were for terms ranging from approximately two to three years; the balance were for one year.

Three-year agreements represented slightly more than one sixth of the 144 major agreements, which do not include agreements in the construction industry and those with wage terms in piece rates only.

Among the one-year settlements, wage increases of 5 to 10 cents per hour on base rates were predominant. In most of the two-year agreements the wage increases granted on base rates ranged from 10 to 20 cents or higher over the life of the contract, and in the majority of three-year agreements the wage increases on base rates were within the 15 to 30-cent range.

Canada's Economic Outlook for 1960

Capital outlays by business community expected to increase considerably during the year, Minister of Trade and Commerce states. Total demands on the economy likely to increase and result in further expansion of employment and output

Based on "what is presently known of investment plans for 1960" it is expected that capital outlays by the business community will increase considerably during the year, it is stated in the review of Canada's economy in 1959 and outlook for 1960 by Hon. Gordon Churchill, Minister of Trade and Commerce.

It is expected that there will be a stepped-up rate of expansion in the commercial and manufacturing sectors of the economy and possibly in some of the utilities. The Minister reported a clear indication already that total investment, both private and public, will increase.

Prospective growth in both exports and investment will help to sustain the current upward trend of personal incomes and contribute to further strengthening in other market sectors. The consumer market in particular gives promise of continuing buoyancy, the Minister believes.

Such considerations, Mr. Churchill says, suggest that total demands on the economy are likely to continue to increase and should result in further expansion of employment and output. He noted that there is still a considerable amount of available capacity in most industries and that manpower and plant capacity are growing steadily.

Under those circumstances, he thinks a production increase of considerable dimensions could take place without giving rise to excessive pressure on productive capacities, but warned that at the same time it is important that demands be kept within the scope of available resources.

"If this objective is achieved," said Mr. Churchill, "Canadians can look forward with confidence to the continuation of sound economic growth."

Forecast for the Sixties

An improved standard of living, and greater population, labour force and national output in the 1960's for Canada is forecast by Dr. O. J. Firestone, economics adviser, Department of Trade and Commerce, in an address to the Canadian Association of Advertising Agencies.

He sees the annual average wage going to \$2,000 from \$1,530 per capita by the

Reviewing Canada's economic accomplishments in 1959, Mr. Churchill noted that:

The gross national product had increased by 7 per cent during the year; prices increased by 2 per cent on the average; industrial production was 8 per cent higher; total employment rose by 3 per cent; sales of durable goods surged ahead; savings of Canadians reached the high ratio of 8 per cent; The financial position of the consumer was strong and living standards improved; capital spending climbed slightly; housing completions were expected to reach the former record of 147,000; the value of exports was estimated at a record \$5,200 million; imports increased in response to improvement in economic conditions; purchases from the United Kingdom showed a relatively strong advance; the premium on the Canadian dollar was higher.

Production in primary iron and steel industry was two-fifths higher; an early recovery in sales of lumber products in 1958 was maintained in 1959; the newsprint industry moved steadily ahead; the proportion of European-type cars in Canada rose from 20 to 25 per cent; Canada's output of motor vehicles increased; and the production of farm implements continued to improve on the recovery lines established after 1957.

Farm Income

Total farm cash income in 1959 is likely to be a little above the 1958 level because larger marketing offset lower prices, the Department of Agriculture reports. Prospects for 1960 are that cash income will be about the same as in 1959 or slightly lower.

Assuming average crops, there is nothing to suggest that farm net income in 1960 will differ greatly from that in 1959, the Department says.

end of the decade, an increase of 30 per cent, which will produce the higher standard of living.

In the same period, Dr. Firestone believes Canada's population will climb to 21,500,000, compared with the 17,500,000 of 1959.

The labour force could be 7,750,000, compared with the 6,250,000 at the present time. The gross national product could be

\$55,000,000,000 in 1969, compared with \$34,500,000,000 in 1959—an increase of approximately \$20,000,000,000.

He was more optimistic about the latter part of the new decade than about the early part. He foresaw a “fair” rate of increase in economic activity for 1960 and possibly 1961. But, he warned, “the prob-

lems that we may be encountering as we go into 1962 may be more difficult to deal with than those we encountered in the post-war period.

“What I am implying is that the recession we may be facing in 1962 could be more extensive than anything we have yet experienced since the end of World War II,” he said.

CLC Memorandum to Federal Cabinet

Congress devotes large part of annual brief to outline of organized labour's role in Canadian social structure. Prime Minister rejects one recommendation: that South Africa be excluded from Commonwealth because of its racial policies

The Canadian Labour Congress on January 28 presented a 13,000-word memorandum to the federal Cabinet. The labour delegation, led by CLC President Claude Jodoin, numbered almost 200; Prime Minister Diefenbaker was accompanied by five of his Ministers.

In a departure from usual practice, the Congress devoted the first eight pages of its 40-page brief to a discussion of the role of organized labour in the Canadian social structure (see page 151). In the rest of its annual brief, it dealt at shorter length than in other years with its requests and recommendations concerning the economic situation, trade, international affairs, social and labour legislation, housing, immigration, taxation and education.

Both the Prime Minister and Hon. Michael Starr, Minister of Labour, replied to the submission. Mr. Diefenbaker said the CLC's requests would receive consideration but a suggestion that the Union of South Africa be excluded from the Commonwealth because of its *apartheid* policy “will not receive the favourable consideration of this Government.”

Other Ministers present were: Hon. Donald Fleming, Minister of Finance; Hon. Douglas Harkness, Minister of Agriculture; Hon. Paul Comtois, Minister of Mines and Technical Surveys; and Hon. J. Waldo Monteith, Minister of National Health and Welfare.

The Memorandum

“The economic situation is better than when we met a year ago,” the CLC agreed. But, although production is up and unemployment down, employment is up “a good deal less” than production. And, the brief went on, unemployment, although down from last year, is still well above 1957 and still farther above 1956, the last full year before the recent recession.

“Moreover, there appears to be little prospect that unemployment in 1960 will be appreciably less heavy than in 1959; and there have already been suggestions, from responsible business forecasters, that the end of 1960 or the beginning of 1961 may see a fresh recession.”

The Congress repeated its declaration in last year's brief that it could not accept the attitude that “we must resign ourselves to having heavier unemployment than we have usually had from the end of the war till the middle of 1957.”

The Government had taken certain measures that helped lift the country out of the recession, the CLC conceded, citing as an example the large deficit that was incurred partly for that purpose.

We urge you to finish the job. We are not suggesting that another deficit of the same proportions is needed now, still less a perpetual succession of deficits. But we do suggest that the time has come to relax the present tight money policy, whether it is the policy of the Government or the Bank of Canada or both of them. We think the time has come to add to the money supply, carefully, judiciously, moderately, but none the less decisively.

The recent increase in the interest rate on housing loans is a direct result of tight money, the CLC said.

The Congress was not afraid that an increase in the money supply will lead to inflation as long as we have considerable unused resources of plant, equipment and manpower. “We are also convinced that tight money is not a sovereign remedy for, or protection against, inflation.”

Against the several different kinds of inflation there are remedies that can and should be applied as the need arises. Adoption of a variable rate of depreciation and the licensing of large capital issues sold in the capital market could help avoid investment inflation. Regulation by the central bank of the volume of loans of instalment

finance and personal loan companies could also provide control of inflationary pressures generated primarily by credit institutions. Segregation of the personal savings from the commercial lending function of the chartered banks should be studied, the brief recommended.

The CLC welcomed the continuing studies of winter unemployment that the Department of Labour is making and hoped that they will be pushed forward vigorously and speedily.

Trade Policy

As it did in the 1959 brief, the CLC urged the establishment of a Canadian export-import bank to help Canada's exports compete in overseas markets with those of the United States. The unexpectedly rapid development of the European Common Market and the creation of the European Free Trade Area "serve to underline the importance of the proposal."

Wider markets overseas would increase Canada's prosperity and make the country less dependent on the United States market, "to which we are now so tightly tied," the brief suggested.

"The wider the markets for underdeveloped countries' goods, the quicker their progress towards the higher standards of living which are the one hope of keeping them out of the Communist camp." Aid without trade is not enough, the brief declared. "To give money to help build up the industries of those countries and then to refuse to take their products simply does not make sense. To hope to sell our goods to them without taking theirs in payment does not make sense either."

Canada, it was suggested, should pursue a policy of freer and freer multilateral trade. This would, from time to time, involve difficulties and readjustments; the transfer of workers from industries "in which we cannot compete with the underdeveloped countries to industries in which we can compete."

The solution to the problems involved, the CLC said, lies "neither in building new walls to keep underdeveloped countries' goods out nor in suddenly demolishing all walls against them and leaving the Canadian industries and their workers to find their own way out of the resulting chaos." It lies in planned, gradual adjustments that will spread equitably both the costs and benefits of freer trade, in looking after displaced workers by re-training when possible and by adequate pensions when it is not, in bringing new industries to where

the workers are, when possible, and in moving workers to where the jobs are when it is not.

"It lies, above all, in an effective policy of full employment, so that there will actually be other jobs for displaced workers to take, enough jobs to go around."

In answer to the "loud and strident chorus which constantly declaims that Canada is pricing itself out of world markets and that Canadian labour is mainly responsible," the Congress in its brief said that rising exports suggest that Canada is keeping old markets and getting into new ones; when markets are lost, examination usually reveals that the reason is not price but any one of several other factors.

"Even if it could be proved that a particular Canadian product had lost a particular market because its price was too high, it would not follow that high Canadian wages were the reason," the brief went on. "Theoretically, it might be possible to hold the market or recapture it if we cut our wages low enough; but in practice... it might be completely impossible."

Wages and labour costs are not the same thing, the brief asserted. Although Canada's wages are the second highest in the world, Canada's labour costs were not. A recent United States Department of Labor study had shown that, in 1950, salaries and wages as a percentage of gross domestic product per member of the labour force were lower in Canada than in any of the 14 countries covered except Denmark, Australia and Belgium; in 1955, the Canadian figure was lower than in any of the 12 countries covered except Australia, Belgium and The Netherlands.

Social Security

Declaring that its conception of social security goes far beyond the separate and unrelated pieces of legislation now on the statute books, the CLC described its thoughts on the subject in these words:

Fundamentally, we think social security should be based on a program of full employment deliberately planned and promoted by the Government. We conceive of social security as embracing adequate standards of education, housing, health and other living conditions as well as protection against those more generally accepted contingencies such as loss of income due to illness, maternity, invalidity, death of the breadwinner, funeral expenses and so on.

To the current program of old age security should be added a wage-related plan, the brief continued. Health insurance, universal in scope, comprehensive in character, publicly financed and administered, must replace what is now in effect.

A major unfilled need is a plan to provide protection against loss of income due to illness, and close to it is the need for benefits for the survivors upon the death of the breadwinner.

The Congress objected strongly to the new Unemployment Insurance Regulations, particularly those defining the monies to be taken into account in determining the amount of benefit payable and allocating earnings for benefit purposes, and protested about their adoption without consultation with the Unemployment Insurance Advisory Committee.

Labour Legislation

If amendments to the Industrial Relations and Disputes Investigation Act are brought down, the CLC looks for ample opportunity to scrutinize them and make representations if it deems this necessary.

"We do express the hope," the brief added, "that whatever changes in the Act you may be contemplating will not bear upon them the stigma of class legislation like the new Acts in British Columbia and Newfoundland." Later in its brief the CLC expressed regret that the Government failed to disallow the Newfoundland legislation, and hope that the Government will co-operate when the ILO processes the CLC's complaint about this legislation.

The Congress suggested four amendments to the Criminal Code designed to clarify its application to "mischief," picketing and the role of the union representatives during industrial disputes.

The brief also said that a provision for the check-off of union dues should be added to the Industrial Relations and Disputes Investigation Act; the Vacations With Pay Act should be amended to provide for two weeks vacation with pay after one year's employment and should be extended to include businesses in the Yukon and North West Territories; a new Fair Wages Act should be passed providing for union wages and conditions on all government contracts, including those for services provided to departments, and covering both prime contractors and sub-contractors.

To conclude its remarks on labour legislation the CLC referred to the absence of collective bargaining rights for federal government employees. Although they appear to enjoy the right of association, their associations are limited to at most a consultative capacity, the brief said.

The Congress described as "incomprehensible" the recent rejection of a request for a salary increase "in face of the recommendation for one by the Civil Service Commission."

Housing

Because it believed there was still a "serious" shortage of housing, particularly for low-income groups, the Congress repeated recommendations made in last year's brief on the subject of housing. These called for:

—A program of large-scale, controlled rental and subsidized housing in downtown districts "financed mainly by the senior governments," with the object of easing the housing shortage, reducing land speculation and providing good shelter for families that could not otherwise afford it.

—A greatly expanded program of government-sponsored land assembly in suburbs, low cost residential developments underwritten by such agencies as Central Mortgage and Housing Corporation or co-operative building groups; fiscal policies and government grants or loans "to ensure a much steadier and larger flow of funds into housing" through direct loans or by other means; and, finally, "a general policy of keeping interest rates down."

Immigration

The CLC again expressed its dissatisfaction with the present Immigration Act. It repeated its conviction that an Advisory Committee on Immigration consisting of representatives of farmers, labour, management, and welfare and other agencies should be established. The federation intimated that it hoped to be given a chance to put forward its views regarding changes that might be made in the Act or in the Regulations.

The Congress admitted that in the past "immigration has ebbed and flowed more or less in accordance with the degree of economic activity." Nevertheless, although stating that it was not opposed to immigration as such, it again expressed its "concern that immigrants may be brought into the country at times when there are not sufficient work opportunities either for them or for Canadian workers."

The CLC commended the Government for accepting as immigrants "families with members who for reasons of health would not otherwise be acceptable." It said that it hoped the number admitted in this way would be increased.

Taxation

The CLC reiterated its objection to the sales tax as one that "places the burden on the wrong people," and asked for a raising of the exemptions on smaller incomes. It said that the income tax should be more steeply graduated, and it took exception

to the present exemption of 20 per cent on income received from dividends paid by Canadian corporations.

"We have been criticized in the past for seeking, on the one hand, to obtain more and more benefits through social legislation and, on the other, to pay as little as possible towards their cost," the Congress said. It did not agree that this criticism was just. It said that it only contended that social aid should go to those who need it and that taxes should be paid by those who can best afford to pay them. Canadian wage-earners were willing to pay their share, the federation asserted.

Bill of Rights

The Congress was pleased to learn, the brief said, that the proposed Bill of Rights would be open to much wider preliminary discussion than had been originally planned. It had said in its brief last year that it considered the proposed legislation "inadequate in a number of respects" and it hoped to make its "strong opinions" known to the Government.

International Affairs

The CLC welcomed the apparent improvement in the climate of international relations, and expressed satisfaction at the growing readiness of governments to discuss problems that must be solved to preserve peace. It referred particularly to the establishment of the 10-power disarmament committee.

As a first step towards an eventual agreement on universal disarmament, the Congress urged the Government to work for a ban on the testing of thermo-nuclear weapons.

But Canada cannot and should not disarm unilaterally, the CLC believed. "Pending an international agreement on disarmament Canada should maintain an adequate defence establishment," the brief declared. "Defence and disarmament negotiations must go hand-in-hand. Neither can safely be sacrificed in favour of the other."

The Congress pointed out that world peace cannot be founded exclusively on nuclear deterrents or on conventional armaments; it is dependent also on improving living standards in underdeveloped countries. The brief repeated urgings for substantial increases in contributions to the Colombo Plan and United Nations assistance and development programs.

"We suggest that Canada should spend a sum equal to 1 per cent of her Gross National Product for aid to less developed countries."

Canada's position in relation to the nations of Asia and Africa had been damaged by failure to take a clear and unequivocal stand on South Africa's *apartheid* policies. As South Africa is a member of the Commonwealth, Canada and other Commonwealth members should do everything within their power to bring pressure on the Government of South Africa to change its policy. "We would favour its exclusion from the councils of the Commonwealth of Nations," the CLC stated.

Because, the Congress believed, formal recognition of governments is not based on moral or ideological considerations, the brief requested the establishment of diplomatic relations with the People's Republic of China.

The Congress was pleased that Canada has ratified the International Labour Organization Convention on Forced Labour, but it urged that Canada should ratify Convention 87 on Freedom of Association and Protection of the Right to Organize, Convention 98 on the Right to Organize and Collective Bargaining, and Convention 111 on Discrimination (Employment and Occupation).

Education

The Congress said that many Canadian children cannot get as good an education as their abilities warrant. Whether this arises from lack of money, or lack of teachers, or from some other cause, it should be corrected, the federation said.

The measures it proposed included federal grants to the provinces to help not only the universities but also primary and secondary schools, grants for school construction, provision of funds on a large scale for scholarships, the calling of a Dominion-provincial conference on education, the establishment of advanced technical institutes in the main industrial centres, training programs for teachers, and payment of salaries sufficient to attract more men and women of the right calibre into the teaching profession.

The Congress praised the part being played by the Canada Council in encouraging the arts but asked for appointment, without delay, of a labour representative on its board.

Broadcasting

The new Broadcasting Act has worked well on the whole, the Congress said, although there is room for improvement. It expressed its approval of the way in which the Board of Broadcast Governors had set about its work.

The brief argued in favour of a publicly owned broadcasting service. However, the Congress said, the CBC faces two great dangers. The first is that by relying too largely on advertising for its revenue it may cease "to do its essential national job," and become merely "a magnified private station." The second is the "insistent pressure to get the CBC out of ownership and operation of stations and cut it down to a mere producer of programs for private stations." To do this would rob the CBC of its main source of income, the Congress said.

Other Recommendations

The Congress repeated a number of the recommendations contained in its memorandum of the previous year. These requested:

—An increase in the old age pension to \$75 a month, and a reduction in the age at which it becomes payable to 65 years.

—Careful scrutiny of private pension plans to ensure they meet the standards the CLC outlined previously, and raising of the maximum annuity obtainable under the Government Annuities Act from \$1,200 to \$2,400.

—The raising of family allowances enough to restore their original purchasing power, and continuing the payment of allowances up to the age of 20 for a child still attending school or college.

—Establishment of a permanent citizens' advisory committee on fair employment practices, removal of the "discriminatory features" from the Immigration Act, and amendment of the National Housing Act to outlaw discrimination on account of race, colour or creed in the buying and renting of living premises.

—Elimination of anomalies between prevailing rates and classified employees in the government service and improvement of superannuation provisions in the public service.

—Deduction of all medical, dental, optical and hospital expenses, including the cost of drugs, in computing income tax.

—Development of a program of training for those displaced by automation and technological changes.

—The reclaiming by Parliament of jurisdiction over international and interprovincial highway transport.

—The preservation of coastal and inter-coastal trade for Canadian vessels built and manned in Canada and the preservation to Canadian and American vessels of trade in our inland waters on an equitable basis.

The Government's Reply

The CLC's representations will be passed on to and considered by the departments, the Prime Minister said in his remarks after the reading of the brief. "Each and every one of your representations deserves consideration and will receive that consideration," he said.

But, he went on, there was one representation "that will not receive the favourable consideration of this Government." He was referring to the statement that the CLC would "favour (South Africa's) exclusion from the councils of the Commonwealth of Nations" unless it changed its *apartheid* policy and lived up to "the accepted standards of elementary decency."

That suggestion, too, was "one that I would not bring before the Prime Ministers' conference" in London in May, he said. The words the CLC used were "not representative of the attitude that binds together the countries of the Commonwealth," Mr. Diefenbaker declared. He asked the delegation what Canadian reaction would be if some other part of the Commonwealth criticized us and suggested our exclusion from Commonwealth councils.

What is required, the Prime Minister told the labour delegation, "is to endeavour to bring about the realization that in this day and generation mankind anywhere in the world cannot practise the luxury of discrimination."

In answer to the CLC's criticism about Canada's abstention at the United Nations on the vote on South Africa, he explained that in 1958 the Canadian delegation did vote and express its views on *apartheid* but in 1959 it thought the resolution, which was worded differently than the earlier one, exceeded United Nations jurisdiction. "The fact that we abstained does not mean we have less than strong feelings on the question."

At the beginning of his remarks, Prime Minister Diefenbaker said he had tried to total up the expenditures that would be necessary to implement the "desirable" objectives set forth in the CLC memorandum. He could not give an exact total, "but to achieve these objectives would require at least a King's ransom."

He would not attempt to estimate the increase in income taxes that would be needed to meet the objectives.

Referring to the statement on the role of organized labour, Mr. Diefenbaker said: "No one would disagree with the views expressed as to the contribution which the trade union movement has made, not only to the welfare of those directly concerned but to the nation as a whole."

The Minister of Labour

Hon. Michael Starr, Minister of Labour, who was the first of the Cabinet to speak in reply to the memorandum, told the delegation that the CLC submission to the Unemployment Insurance Commission on the new holiday pay regulations would be sent to the Unemployment Insurance Advisory Committee.

He began his remarks with the hope that any differences that may arise between the Congress and the Government "will never be of such a fundamental or far-reaching nature as to disrupt the harmonious relationship that we would all like to maintain."

Many of the CLC proposals merit the endorsement of all thinking Canadians, the Minister said.

Mr. Starr said he believed labour's place in the Canadian community was secure. He then repeated statements he made in a recent radio broadcast: "Labour in Canada has in general shown co-operation and good

sense. It is my hope that this co-operation will continue to grow and deepen and that labour and management in our country will remain conscious of the fact that each has precisely the same stake in the prosperity and progress of the nation."

Claude Jodoin

After Mr. Diefenbaker and Mr. Starr had spoken, the CLC President pointed out that the Congress had thought it necessary in this year's memorandum to go into the past history of the country and the labour movement "because of the constant attacks that have been made on our movement in Canada." We are not on the defensive, he declared.

Mr. Jodoin said that despite cost, the CLC proposals should be implemented. The labourers and workers of this country are willing to make their contributions, provided the distribution of taxation is "more adequate." The social security and social measures proposed, he said, are a "necessity."

Role of Organized Labour in Canadian Social Structure

The Canadian Labour Congress in its annual memorandum to the Government departed from custom and dealt at some length with the role of organized labour in the Canadian social structure.

In a preliminary statement in its brief, the CLC discussed union activities in the economic field and in a more general sense. Referring to what it called attacks on the labour movement, it went into proposals made by employer organizations for new restrictions on strikes and picketing and the suggestion that unions should be made more easily subject to civil court action.

"Organized employers, through organizations like the Canadian Manufacturers' Association, the Canadian Chamber of Commerce, the Canadian Construction Association and others, have been attempting to persuade the public as well as Parliament and Legislatures that unions are somehow irresponsible, indifferent to civil liberties, corrupt and otherwise inimical to the public good," the CLC said. "This we challenge. We see in these efforts a determination to undermine the labour movement . . .

"Unions play an important and necessary role. They are much more than economic devices for working people in their relations with employers, although this is a fundamental reason for their existence . . . They have added strength to the democratic structure, have expanded the area of freedom within our political democracy and have made possible the avoidance of the violent

social conflicts which are characteristic of countries where workers have not enjoyed the freedom of association which they have obtained here . . .

"Unions are fundamentally economic institutions. We say this as a matter of fact with a sense neither of guilt nor of pride . . . We do take pride, however, in the contribution trade unions have made to the general well-being. Higher wages have produced not only an increased standard of living for union members but for others as well. The unions' drive for health and welfare plans has resulted in millions of Canadians getting the benefit of prepaid health care at a reasonable cost . . . The same intensive interest of the labour movement in old age security has played its part in the awakened interest in the welfare of our aged."

On strikes, there was this comment:

Unions have been criticized for strike action. But thousands of collective agreements are regularly negotiated and concluded without a strike or even recourse to conciliation services. Even where strikes have occurred and may occur, they are a small price to pay for freedom. Better to run the risk of occasional strikes than to deprive workers of the right to withhold their labour when they cannot make a bargain with their employer otherwise. Far better strikes than involuntary servitude. As a general rule, they are more effective than compulsory arbitration. The possibility of a strike—or, for that matter, of a lockout—is a far greater incentive to genuine collective bargaining than anything else which has yet been invented.

On picketing:

Here, too, the issue of freedom is involved, whether it is a matter of primary, secondary, informational or any other form of picketing. We assert our right to engage in such picketing. To infringe on this right is to invade the right of free speech and the right to disseminate information. If unions are to be prohibited from persuading people to refrain from purchasing the goods of a sweatshop employer, it is only another step to prohibit people from expressing publicly their views about any alleged injustice.

On the union's achievement of industrial democracy:

Without unions and collective bargaining, industry is a dictatorship of the employer. Unions have introduced constitutional government into industry. The collective agreement is the industrial constitution.

In their "civil liberties zeal" employer's organizations were "far less interested in

anyone's right to a particular job than in weakening unions, undermining their ability to act for their members, and getting back as near as may be to the days of individual bargaining, company unions and the law of the jungle," the statement said.

On the legal status of unions the CLC pointed out that under most Labour Relations Acts collective agreements entered into by a certified bargaining agent are legally binding upon the union, just as they are upon the employer. "A certified union that breaks an agreement is legally responsible."

The proposal to "put unions on an equality with companies" would simply be, in effect, a prohibition of strikes, the CLC declared.

Self-Analysis of U.S. Labour Movement

President of Connecticut AFL-CIO, in address to National Institute of Labor Education, does not hesitate to comment on trade unionism's shortcomings and failures while describing its virtues. Poses challenge facing all leadership

A critical analysis of the present position of trade unionism in the United States was given by Mitchell Sviridoff, President of the Connecticut State Labor Council (AFL-CIO), in a paper entitled "Labour's Public Responsibility in Internal Union Affairs," read at a meeting of the National Institute of Labour Education, held recently at the University of Wisconsin.

In his paper Mr. Sviridoff set out the virtues of trade unionism; but he did not shrink from also dealing with its shortcomings and failures.

In a highly industrialized and organized society the organized labour movement is essential as a check on the economic power of the big corporation and on the political and social power of concentrated wealth, the speaker asserted.

"An organized labour movement, if it is effectively to fulfil its functions in terms of the democratic ideal, must therefore develop a degree of organizational strength—or power if you will—commensurate with the strength and power which surrounds it. Failure to achieve or to maintain such a position of strength invites an economic and political imbalance," Mr. Sviridoff said.

An equally important function of the labour movement is that it may give the worker a voice in determining the conditions under which he works. It also affords him "an opportunity for a tangible demo-

cratic experience which can contribute significantly to the enrichment of a democratic society," said the speaker.

He went on to ask whether, since strength was necessary to the union movement, it could, for any length of time, "sustain the drain on its strength made by those internal democratic procedures which many of its well-wishing friends demand of it." As a union matures, he said, "pressures towards the limiting of democratic processes and the centralizing of authority necessarily increase in direct proportion to the union's growth and its increased responsibility."

There are today, and there always have been a substantial number of labour leaders who take the view that "the union representative's only responsibility is to help make the worker's (pay) envelope as fat as possible." These leaders regard democratic practices in unions as obsolete and as an impediment to efficiency, Mr. Sviridoff said.

As to public responsibility, the proponents of this view argue that responsibility in a union will be greatest in an atmosphere of security for the union. "Internal fighting drains the strength of the union. To meet wild promises of the opposition, the 'responsible' leadership may well be impelled to irresponsible behaviour. The issue comes down to what it is that we really want—responsible behaviour or some abstract concept of democratic performance," the speaker argued.

Considering the "fast buck" materialistic standards of American society, he said, "the fact that we have achieved such a high degree of moral incorruptibility, the Becks and Hoffas notwithstanding, should be to our everlasting credit." He pointed to the measures taken by the AFL-CIO to deal with corruption by imposing a code of ethical practices on its affiliates, despite a 75-year-old tradition of absolute autonomy; by expelling 10 per cent of its total dues-paying membership because of refusal to comply with this code; and by voluntarily offering to co-operate in the formulation of legislation to regulate financial practices and internal procedures of trade unions.

Mr. Sviridoff also contended that American labour had shown responsibility in collective bargaining, and had spent much of its energies in pursuing "goals of broad public interest," such as education, housing, social security, and a responsible and humane foreign policy.

However, the speaker expressed doubt as to whether labour leaders had been unaware of the existence of corruption in some parts of the labour movement before the exposures of the McClellan Committee were made. He suggested that instead of taking any action "we hoped against hope that these ugly sores would just go away and stop bothering us."

As a result of the McClellan Committee findings, Mr. Sviridoff said, the labour movement suffered no worse damage than the Labor-Management Reporting and Disclosure Act, "bad as it is," and some increased public hostility because of three things: the vigorous and determined, though somewhat belated, action of the AFL-CIO; the Democratic victory in the congressional elections of 1958; and "the sheer stupidity and avariciousness of our opposition."

Some of the "cockeyed optimists" in the labour movement, however, misinterpreted the public's repudiation in the 1958 elections of "right to work" legislation. "As we later learned to our sorrow, although the public opposed extinction of the institution of collective bargaining, it was far from satisfied with the state of the institution of trade unionism," he said. "This dissatisfaction was not confined to the large, unin-

formed sector of the public. Many well-informed and long-standing friends of the labour movement began exhibiting disquieting signs of disenchantment."

Some persons were still using the argument that what happens within the family of a private voluntary organization was none of the public's business. This argument, Mr. Sviridoff said, neglects this "crucial" fact: "The institution of collective bargaining has been firmly rooted in the law since the days of F.D.R. and the enactment of the Wagner Act . . . The public, if it willingly confers upon us such valuable legal rights, is altogether justified in expecting responsible behaviour from us in return."

Although drastic revision of internal union procedures may be urgent and necessary in some sectors of the labour movement, it would not be enough by itself, he continued. Nor did he agree "that we can legislate purity into the functional operation of the labour union." He did not suggest either "that democracy and free speech and human rights in labour ought to be equated with the town meeting concept of freedom. A union obviously cannot survive as a debating society," he argued.

This brings us back again to the fundamental question of the role of the labour movement and its goals. If its function is exclusively economic and materialistic, then a standard of comparison with banking, business and even many of our honoured professions is entirely appropriate. But if instead we conceive our functions to be broader, indeed our purpose to be more a mission, then not only must we expect that higher standards of behaviour will be imposed upon us—perhaps they ought to be self-imposed, as many international unions have already done.

Mr. Sviridoff said that "many positive and encouraging things are happening within the labour movement," and that there was "no cause for total disenchantment or futility".

"The tough question before us is whether an established institution can rise much above the ethical level of its environment. This is the challenge which constantly confronts all levels of leadership in all fields of endeavour. This challenge, if not squarely met, will cause much public hostility and interference to be inflicted upon the labour movement," he asserted.

A new international seamen's union, the International Maritime Workers Union, designed to provide collective bargaining representation for crews of so-called flag of convenience vessels (L.G., Jan. 1959, p. 18) has been formed by the Seafarers' International Union and the National Maritime Union. Initially, staff and facilities for the new union will be provided by the SIU and the NMU.

Quebec Federation of Labour Convention

Question of political action dominates fourth annual convention. Delegates reaffirm desire to continue studies on formation of new political party, ask Federation's leaders to prepare recommendations in time for next convention

(Translation)

The fourth annual convention of the Quebec Federation of Labour, held in Montreal from November 26 to 28, was dominated by the trade unions' preoccupation with political action.

After a lengthy discussion, the 500 delegates reaffirmed, by means of two resolutions, their desire to continue to study the formation of a new party.

The idea of political action also made itself felt in the other resolutions, when group after group of delegates maintained that the legislative demands of the unions will avail nothing as long as they are not supported by direct political action.

The key-note of the convention was sounded at the opening meeting, when Roger Provost, President of the Federation, stated that the reasons for the labour organizations' entering the arena of political action, following the CLC convention at Winnipeg in 1958, are still "just as real and just as true."

CLC Vice-President William Dodge suggested that the delegates ask themselves how the problems with which the labour movement is now faced can be solved without political action.

The reaction of the delegates, although not unanimous, was nevertheless overwhelmingly in favour of an intensification of consultations in this matter.

The QFL convention officially welcomed, for the first time, the President of the Catholic Union of Farmers, Jean Baptiste Lemoine, who, in his brief address, stressed the community of interests between the various classes of society and expressed the wish that a better understanding might be reached so as to make use of the wealth of the country for the benefit of all.

Opening under the chairmanship of Louis Laberge, President of the Montreal Labour Council, the convention also welcomed Montreal Mayor Sarto Fournier.

The delegates paid very special tribute to the memory of the late Mgr. Joseph Charbonneau, stressing the sympathy towards labour shown by His Excellency while he was Archbishop of Montreal.

Mr. Provost was re-elected President for the fourth consecutive term. There is only one new face on the Executive Committee—that of Jean Gérin-Lajoie, 2nd Executive Vice-President, in the place of Pat Burke, who resigned.

In addition to resolutions dealing with political action, the three-day convention adopted resolutions concerning human rights, industrial accidents, full employment, minimum wages, education and labour relations.

President's Address

Inflation and political action were the two topics dealt with by Roger Provost, President of the Federation, in his address at the opening of the convention.

Stating that the working class does not accept the theory of salutory part-time unemployment, he called on governments to find some way of attaining economic development that would allow full employment while at the same time keeping prices as steady as possible.

In the field of political action, Mr. Provost reiterated the need to form a new party, but stressed the fact that it would not be a labour party.

The President departed from the text distributed in advance and commented briefly on the memorandum submitted to the federal Cabinet by the Canadian Chamber of Commerce the previous day.

Calling this brief the "finest piece of union propoganda with a Fascist trend," Mr. Provost wondered whether the Canadian Chamber of Commerce was not seeking "a reaction, on the part of the working classes, which would lead to destruction of our democratic system."

On the threat of inflation, the QFL President addressed his remarks in particular to the partisans of completely free enterprise. He wanted to warn them, above all, against "the illusion that freedom of enterprise is a permanent, immutable and unchangeable system."

Reminding the delegates that abuse of the right of ownership has led to its almost absolute negation in certain countries, he said:

If we are to save our free world from Leninism and preserve its liberty, the supporters of free enterprise must clearly understand those reforms that are more indispensable than ever. Full employment and a reasonable standard of living are the two conditions essential to the longevity of free enterprise and the exercise of the right of ownership. And with this in view it is up to enterprise to agree to discuss

Officers for 1959-60 elected at the fourth annual convention of the Quebec Federation of Labour: (left to right): Roméo Girard, Sec.; Eucher Corbeil, Treas.; Roger Provost, Pres.; Edouard Larose, 1st Vice-Pres.; and Jean Gérin-Lajoie, 2nd Vice-Pres.

those conditions that are essential to full employment and to a decent standard of living.

Mr. Provost suggested to governments several remedies, such as:

—Having the courage to control the rate of capital expenditure, and getting business to agree to this.

—Controlling the rates of depreciation deductible from taxable income.

—Controlling sales on the stock and bond markets.

—Making the central banking system more effective.

—Setting up controls over financial institutions other than banks.

—Establishing greater and more effective co-operation between the monetary policy of the Bank of Canada and the fiscal policy of the Government.

The President added that labour does not accept the explanation according to which the primary cause of inflation is wage increases.

Turning to the question of political action, Mr. Provost said:

To those who already see the Canadian Labour Congress and the Federation as dominated by or dominating a political party, as well as those who think that we are engaged in forming a labour party, I should like to repeat once more that there is no question of

creating such a party. In view of the economic and political situation in our country, it would be suicide to organize a class party even if this party were labour.

Thus it is evident that this party which we are trying to organize must be a people's party, with workers, farmers, merchants, professional men and all who want to democratize Canadian politics.

In closing, Mr. Provost stressed the fact that "neither the Canadian Labour Congress nor the Federations as such will be members of the new political structure."

William Dodge

The Executive Vice-President of the Canadian Labour Congress, William Dodge, said that the unions had a choice between keeping quiet so as to win a few favours from the politicians and fighting with all their might on the economic and political fronts for their basic rights.

Mr. Dodge, representing CLC President Claude Jodoin, who was in Europe at the time attending a meeting of the International Confederation of Free Trade Unions, devoted the major part of his address to a statement of the CLC's position with regard to a new party.

Reminding the delegates that the CLC is a labour organization and not a political party, he added that this organization admits that all members of its affiliated unions do not approve of the supporting of a particular political party and that its affiliates will not

or cannot all follow such a policy. The Congress must remain what it is today: an independent labour organization impartially serving those unions which believe in vigorous political action as well as those which, for reasons best known to themselves, will not or cannot support a political party. This has always been the attitude of the Congress. As a matter of fact, it has never ceased to maintain that, even in the case of unions which decide in favour of affiliation with a new party, the rights of individuals opposed to this policy must be safeguarded.

Mr. Dodge asked the unions, however, to examine those problems which are now presenting themselves to the Canadian labour movement and to ask themselves how they could be solved without political action.

In this connection, he noted that the only provincial federation which refused adherence to the political resolution passed at Winnipeg in 1958 was the Newfoundland federation. Its reward, he said, was the adoption, by the Government of Newfoundland, of the "most noxious labour legislation ever passed in Canada in the last 50 years."

Referring to the CLC convention to be held in Montreal in April, Mr. Dodge expressed the hope that the delegates will come to it familiar with all the facts, aware of the consequences, and prepared to make an intelligent, considered decision.

If the delegates should decide in favour of direct political action, he added, they must be prepared to assume whatever responsibilities such a decision would entail: helping the candidates from their own political movement by their work, their financial support and, above all, their votes.

Political Action

The question of political action on the part of the trade unions was the subject of the most animated discussion during the three-day convention, both by reason of the number of delegates who took part in it and by reason of the divergence of opinions expressed.

At the close of the debate the convention reiterated its approval of the political resolution passed at the 1958 convention and instructed the Executive Committee to continue its study of the problem.

Even though opposition to the two political resolutions was pronounced during the discussion, when the question was put to the vote only half a dozen voted against it.

The first resolution submitted by the Education and Political Action Committee, which was under the chairmanship of Jean Philip, UTWA, Montreal, urged the Federa-

tion's leaders to carry on and intensify the work already undertaken in this field, to continue the consultations already begun, and to begin others, especially on the regional and local levels. It called also for a comprehensive publicity campaign "to show the people the similarity of interests and needs existing among the various working classes" and asked the Executive to report to the next convention with recommendations "it considers appropriate at the time."

The preamble to the resolution called attention to the interest in plans to create a new political party shown by delegates to the Winnipeg CLC-CCF seminar; to the encouraging results of "semi-official contacts" made in the province by the Federation's leaders; to the "keen" interest shown at union conferences in the province, notably at the study days sponsored by the Montreal Labour Council and the Rouyn-Noranda Labour Council; and to the fact that the reasons for the adoption of the political resolution at the QFL's 1958 convention "are still just as valid."

Discussion on this first resolution was short and unanimous. Half a dozen delegates spoke briefly. Bertrand Proulx of Montreal, of the CBRT, sounded the keynote for the discussion when he said that labour will never get anywhere without labour representatives in the legislative field. Jean Marie Bédard of Waterloo, of the International Woodworkers of America, pointed out that there is no use talking about political education unless one has political action in view.

But it was the second political resolution which was the subject of the long debate. This one read as follows:

WHEREAS the delegates to the second convention of the CLC at Winnipeg adopted a resolution in favour of the formation of a new political party which would truly represent the people of Canada, and a similar resolution was adopted at the third convention of the Quebec Federation of Labour;

WHEREAS for a movement to be truly democratic it is necessary that the rank and file have their say in what concerns its program and constitution;

WHEREAS certain points are not yet very clear in the minds of certain members of the labour movement;

THEREFORE BE IT RESOLVED that this fourth convention of the Quebec Federation of Labour reiterate its support for the Winnipeg resolution and request the Canadian Labour Congress and the Quebec Federation of Labour to organize between now and April 1960 numerous forums and conferences to explain the Winnipeg resolution, to consult active unionists in Quebec province on what should be the scope and the program of the new party, and to prepare them to make a democratic decision at the time of the Canadian Labour Congress convention based on a clear understanding of the problem.

The discussion would no doubt have dragged on interminably if the President had not pointed out that, having already passed a resolution instructing the Executive Committee to continue its study of the question, the convention could hardly throw out the second resolution.

Those who supported the resolution stressed that it was only a matter, for the time being, of continuing to study the problem, while those who were against it replied that, being opposed to all political action, there was no use wasting time considering the question.

The need for setting up the new party on a democratic basis, by a thorough study of all aspects of the problem in all centres of the province, was also urged.

The opponents of the resolution pointed out that the primary purpose of trade unionism is to negotiate collective agreements and advised the delegates to stick to that.

Jean Gérin-Lajoie of the Steelworkers, Montreal, stressed the need for the labour movement to provide itself with the best instruments possible to serve the cause of the working classes. He stated that, by giving democratic structures to the new party, militant members could control its destinies and guide the policy of the leaders.

The committee chairman reminded the delegates that it was only a question of reaffirming the attitude adopted by the QFL last year. Stating that there can be freedom of choice only when people are acquainted with all the aspects of a problem, he emphasized the need to hold forums and conferences so that every one might be well-informed and able to make an enlightened decision.

Fernand Daoust of Montreal, of the Oil, Chemical and Atomic Workers Union, said that the only difference between the two existing parties is that one is in power and the other in the opposition. "Neither one," he said, "is fundamentally democratic." Individual unions as well as individual members would be completely free to engage in political action or not to do so, he asserted.

Gérard Tremblay of Montreal, International Longshoremen's Association delegate, expressed opposition to political education as well as political action. Hector Marchand, also representing the longshoremen, supported his colleague by pointing out that it is the mission of a labour leader to strive for the welfare of the workers, and that this does not imply direct political action.

Two representatives of the Jacques Cartier Typographical Union, Edgar McGown and André Levesque, also denounced any excursion into the realm of direct politics. They suggested sticking to the organizing of non-union workers and the submitting of legislative briefs to the Governments.

Among the other delegates who expressed opposition to the resolution were: Gérard Désilets of the International Association of Machinists, Blaise Daigneault of the Bakery and Confectionery Workers' International Union and L. W. Claridge of the International Typographical Union.

Human Rights

The establishment by the federal Government of an advisory committee in connection with the Canada Fair Employment Practices Act and the passing of such a law by the Government of Quebec were among the principal recommendations submitted by the QFL's Human Rights Committee and carried unanimously by the delegates.

The convention also recommended an amendment to the federal Act aimed at preventing any discrimination in the field of housing and another amendment that would prohibit the granting of contracts by the federal Government to any company practising discrimination on account of age.

The delegates are also anxious to do away with all discrimination with regard to language, and called on the two Governments to enact measures providing equal opportunities in employment, promotion and working conditions for all employees, regardless of which of the two official languages of our country they may speak.

Industrial Accidents

A convention committee drew very special attention to the legislation concerning industrial accidents, and suggested an imposing number of changes which the QFL would like to have adopted. This is to form the subject of a brief that the Federation will submit to the provincial Cabinet.

Recommendations included:

—Elimination of the five-day waiting period between the accident and the day on which the first payment is made;

—Increasing the amount of compensation to 100 per cent of the accident victim's wages;

—Basing the rate of compensation, in case of recurrence, on the average wage earned during the five weeks worked previous to the recurrence and not the five weeks preceding the accident itself.

Full Employment

The Federation urged the Governments to adopt a policy of full employment, protecting the workers against technological unemployment caused by automation, and legislative measures aimed at preventing those cyclical fluctuations from which our national economy suffers.

At the same time the delegates, wanted to urge the Prime Minister and his Government to give immediate effect to the promises of full employment made during the election campaign.

The QFL also endorsed the winter employment campaign and decided to exert pressure on the provincial and municipal Governments to have them take effective, concrete measures to combat seasonal unemployment.

Minimum Wages

The QFL resolved to ask the provincial Government to pass an Act increasing the minimum wage to a dollar an hour throughout the province.

The delegates stressed the fact that the wage rates set by the Minimum Wage Act no longer come up to the elementary standards of a normal wage when compared with the cost of living.

Fernand Daoust of Montreal said that hourly wages of 50 and 60 cents are still being paid, which is less than the unemployment insurance pays in certain cases.

The delegates also adopted another resolution asking the provincial Government to establish the 40-hour week.

Police Forces

The delegates resolved to ask the federal and provincial Governments to institute Royal Commission inquiries into the actions of the police, both public and private, on the occasion of labour-management disputes.

The resolution, which was passed unanimously, stated, among other things, that "the Royal Canadian Mounted Police in the Newfoundland strike, the Provincial Police in the Murdochville strike, the Montreal Police in the CBC and Fry-Cadbury strikes, and private police in the Brique Citadelle strike (to give only a few examples) completely departed from their proper role, which is to keep order impartially, to become strike-breakers in the pay of the employers."

Other Resolutions

The delegates adopted a number of other resolutions, some of which requested that:

—The federal Government revise its immigration policy so as to have the arrival of immigrants correspond to the needs of labour;

—Employees of religious or charitable institutions be subject to the Unemployment Insurance Act;

—School attendance in the province of Quebec be compulsory up to the age of 16;

—Education be free at all levels;

—The political independence of the Canadian Broadcasting Corporation be assured;

—Quotas be established with regard to the importation of textile products;

—Notice given in the case of a layoff be increased from one week to two;

—The public services be given the right to strike;

—Salaries of federal civil servants be increased.

Elections

Roger Provost, Vice-President and Canadian Director of the United Textile Workers of America, was unanimously re-elected President of the Federation.

Edouard Larose, of the United Brotherhood of Carpenters and Joiners of America, was unanimously re-elected Executive Vice-President. The second Executive Vice-President's position went to Jean Gérin-Lajoie of the Steelworkers, elected by acclamation in the place of Pat Burke, who did not run.

Roméo Girard of the Teamsters won a narrow victory for re-election as Secretary-Treasurer over Fernand Daoust of the Oil, Chemical and Atomic Workers Union.

The convention also chose 15 Vice-Presidents, six of whom represented industries as follows: Bernard Boulanger, manufacturing industries; P. E. Jutras, transport and transportation equipment; Roland Goedike, foods, beverages and services; Léo Moore, lumber, paper, forestry and construction trades; Maurice Silcoff, primary and secondary textiles; Gérard Poirier, mines and metallurgy.

The nine regional Vice-Presidents were: John Purdie, Roger Lampron and Aldo Calouri, City of Montreal and suburbs; Benoît Laviolette, Gatineau and Laurentian districts; L. H. Lorrain, Northern Quebec; Jean Philip, South Shore and Eastern Townships; Oscar Longtin, Southern Quebec; A. O. Robindaine, St. Maurice district; and J. B. Hurens, Quebec City.

Apprenticeship Training Advisory Committee

11th Meeting proposes setting up of study group to examine traditional concept of apprenticeship to determine whether it is adequate to meet future training requirements of manufacturing industry, make recommendations for future program

Based on the suggestion that the traditional concept of apprenticeship may not be adequate to meet future training requirements in the manufacturing industries in Canada, the Apprenticeship Training Advisory Committee at its 11th meeting in Ottawa in January endorsed a proposal that a study group, consisting of representatives of industry and Government, be set up to examine the situation and bring to the Committee recommendations for future development of a co-ordinated and co-operative apprenticeship program.

"Adequate and suitable training of skilled and technical manpower is becoming more important each year, both for the benefit of our expanding and changing economy and for the welfare and future security of young Canadians," Richard Thrasher, Parliamentary Assistant to the Minister of Labour, told the Committee at the meeting's opening. He added that the apprenticeship program must continue to plan a leading role in vocational training in Canada.

"The journeyman level," one report to the meeting stated, "is becoming less and less distinct in many cases and the training process is a continuous one from initial entry into employment on through the various stages of ability and performance to recognized positions of supervision or highly technical levels." It was suggested that training authorities should consider apprenticeship as a stepping-stone to higher levels of industrial training.

At the opening meeting, A. H. Brown, Deputy Minister of Labour, expressed the opinion that more progress might be made towards solving unemployment from a long-term point of view if a higher percentage of the youth entering elementary school were persuaded to stay in school until they received sufficient education upon which training can be built.

It was thought that instructors tended to place the emphasis on learning the skills of the traditional trades up to the journeyman level when perhaps more attention should be paid to the fact that training might be extended to the technician level. It was suggested that training authorities should re-examine the levels of training and recognize that progressive developments are taking place in industry with little corresponding change in training programs.

To meet with this changing picture, the Committee agreed to embark on a new series of analyses of classroom subjects related to industrial occupations, such as mathematics, metallurgy, electronics, science and oral and written communication. It is proposed to break down each of these into progressive blocks of information and content, from the very elementary to the more advanced knowledge required at the sub-professional level. These analyses could then form the basis of any training program provided for workers in industry.

This approach, Committee delegates thought, would result in the identification of levels of training that would be reasonably uniform across the country. These levels might be comparable to the United Kingdom levels of craftsman, ordinary and higher national, but based on the requirements of Canadian industry.

A preliminary report on a survey of organized training programs in mining, manufacturing, transportation and communication, and public utilities showed that there was an increase in the percentage of firms carrying on apprenticeship in manufacturing between 1953 and 1959—from 19 per cent to 26 per cent. However, between 1956 and 1959, there was a slight decrease in apprenticeship, from 28 to 26 per cent.

A number of reports were presented to the Committee dealing with the status of apprenticeship training, the use of inter-provincial examinations and the subject of how education is preparing the product of the school system for the work world.

On September 30, 1959, there were 18,645 apprentices registered with the provinces where the federal-provincial apprenticeship agreement is in effect. This does not include private apprenticeship training programs in industry. The figure represents an increase of 1,357 over the number registered at the same date in 1958. Fifty-one per cent of these apprentices were in the building trades, 31 per cent in automotive trades and the remainder, 18 per cent, in a variety of manufacturing and service trades (8.5 per cent were in the manufacturing industries).

Two new trade analyses will be undertaken in the coming year. They are air conditioning and refrigeration, and industrial mathematics. Analyses have been completed in 12 trades; machinist; carpentry; sheet metal; plastering; bricklaying; motor

vehicle repair, mechanical and body; plumbing; electrical; painting and decorating; heavy duty mechanics; and welding. Work is well underway on steamfitting, radio and television servicing, cooking, and toolmaking. The analyses are used as a basis for courses of study and the setting of interprovincial trade examinations.

Two new interprovincial examinations will be prepared during 1960. Nova Scotia will prepare the carpentry examination, and Manitoba the examination for the sheet metal trade. This year, interprovincial examinations will be tried in the electrical trade, which was constructed by Ontario. An examination in the plumbing trade, prepared by Alberta, will be used on a trial basis this year.

In 1959, the first interprovincial examination to have official use was given to graduate apprentices in the mechanical branch of the motor vehicle repair trade in eight provinces. The certificates of successful candidates had an interprovincial seal affixed which is recognized by the participating provinces as a mark of competency (L.G., Nov. 1959, p. 1144).

Committee members heard a preliminary report on one of the skilled manpower training research projects being carried on by the Department of Labour. The report took a look at the Canadian educational and training system, showing what contribution these facilities are making to skilled and technical manpower needs and outlining some of the major characteristics of the working world into which the products of the educational system are flowing, illustrating how this world is changing.

It was shown that 82.5 per cent of those entering the secondary school level enrol in academic courses, 9 per cent in commercial courses, 4.3 per cent in technical courses, 2.1 per cent in trade courses, 0.3 per cent in agricultural courses, and 1.8 per cent in other courses.

Looking at the occupational distribution of employment in Canada, the report shows that 25 per cent of all employment is in the skilled and professional occupations: 8 per cent professional, 17 per cent skilled. Other occupational distribution is: white collar, 29 per cent; semi-skilled and unskilled, 31 per cent; other occupations, 15 per cent. Professional, skilled and white collar occupations are the fastest growing groups, and there are fewer and fewer jobs in the unskilled and semi-skilled categories.

This means that one out of four of the new workers entering the labour market should be destined for jobs in the skilled and professional fields at some stage in their working lives. However, the report continues, of those leaving the educational-training system, fewer than one-third have at least a junior matriculation standing. Fewer than 20 per cent have a senior matriculation standing or its equivalent.

Looking at the drop-out picture in Canadian schools, it was shown that of the 396,000 students enrolled in Grade 2 in 1957-58, 131,000 (about 33 per cent) will leave school before reaching first year high school, 139,000 (about 34 per cent more) will drop out between first year high school and junior matriculation, 95,000 (about 27 per cent more) will leave between junior matriculation and first year university, and 32,000 (about 7 per cent) will enter university in courses leading to a degree.

From the point of view of the work world, only a small fraction of those who obtain junior matriculation standing or better have had any vocational training or received any pre-employment training to prepare them for skilled or technical jobs.

The report adds that the scarcity of definite formal channels linking the school and work as a means of becoming more competent in an occupational field has meant in Canada that the educational system has tended to develop a range of formal characteristics that, to some extent at least, set it apart from the working world. It was suggested that a greater diversity in the ways in which school and work are integrated would help the drop-out problem.

Members of the Apprenticeship Training Advisory Committee who attended the meeting were: Herbert C. Nicholls, President, Milne & Nicholls Ltd., Toronto, Committee Chairman; J. T. Dyer, Deputy Minister of Labour, Newfoundland; B. F. Addy, Director of Vocational Education, Department of Education, Manitoba; N. D. Cochrane, Deputy Minister of Labour, New Brunswick; Herbert Cocker, Vice-President, McKay-Cocker Construction Ltd., London, Ont.; Andrew Cooper, Ontario Vice-President, Canadian Labour Congress, Toronto; T. J. Metayer, Manager, Industrial Relations, Dominion Bridge Co. Ltd., Montreal; W. H. Sands, Deputy Minister of Labour, British Columbia; G. P. Schollie, Canadian Vice-President, International Association of Machinists; and L. J. Sparrow, Supervisor of Apprentices, Canadian General Electric Company, Peterborough, Ont.

Sixth World Congress, International Confederation of Free Trade Unions

Six Canadian trade unionists attend ten-day meeting marking 10th anniversary of ICFTU founding. Congress calls for establishment of committee to consider re-organization of permanent secretariat and report before June of this year

Canadian Labour Congress President Claude Jodoin led a six-man delegation from Canada to the 10th anniversary meeting of the International Confederation of Free Trade Unions, held in Brussels in December.

About 170 delegates were present at the meeting; they represented 66 labour organizations in 55 countries and territories having a membership of slightly more than 50 million.

Most contentious issue at the meeting concerned the Confederation's permanent secretariat, headed since the ICFTU's inception by Secretary-General J. H. Oldenbroek. The United States delegates, particularly, thought Mr. Oldenbroek's administration and policies were not vigorous enough.

On the last day of the 10-day meeting a United States-sponsored resolution instructing the ICFTU Executive Board to establish a committee to consider the problem of re-organization as it relates to structure, resources, officers and personnel was adopted by a vote of 98 to 29 with 7 abstentions. The committee's recommendations have to be acted upon by the Board no later than its meeting in June this year.

Appointed to the committee were ICFTU President Arne Geijer, AFL-CIO President George Meany (with AFL-CIO Vice-President Walter Reuther as substitute), Sir Vincent Tewson of Britain, Willi Richter of Germany and Louis Major of Belgium.

In the elections that followed the adoption of this resolution, no candidate was nominated to oppose Mr. Oldenbroek, who was re-elected for another three-year term.

The Congress decided to increase African representation on the Executive Board from two seats to three. Asian representation was also raised by one seat, bringing the strength of the Board to a total of 27. It also decided that the Executive Board should elect at least seven vice-presidents and eight instead of seven members of the subcommittee. As a result, Africans have been elected to the subcommittee and to one of the vice-presidential seats for the first time.

Canada was represented at the conference, in addition to Mr. Jodoin, by CLC Secretary-Treasurer Donald MacDonald; William Mahoney, Canadian Director of the United Steelworkers; W. J. Smith, President

of the CBRT; George Schollie, Canadian Vice-President of the IAM; and Kalmen Kaplansky, Director of the CLC International Affairs Department.

Mr. Jodoin and Mr. MacDonald were re-elected as members of the Executive Board of the ICFTU. William Mahoney and Stanley Knowles were named first substitutes; Kalmen Kaplansky and Joseph Morris, second substitutes. Mr. Jodoin also served as chairman of the standing orders committee, and Mr. MacDonald was chairman of the constitution, administration and finance committee; Mr. Smith acted as *rapporteur* for the committee on education, publicity, publications and women workers questions.

C. H. Millard, former Canadian Director of the Steelworkers, is to remain as ICFTU Director of Organization.

AFL-CIO President George Meany and Vice-President Walter Reuther were re-elected as Vice-Presidents of the ICFTU. Arne Geijer of Sweden was re-elected President.

Donald MacDonald

Donald MacDonald opened the debate on the "Struggle for Labour Rights". In his address, he criticized the two acts passed in Newfoundland early in 1959 during the strike of the International Woodworkers of America, the federal Government's failure to disallow the legislation, and the new Trades-union Act in British Columbia.

He also was critical of the new labour act in the United States, the situation in South Africa and attacks on trade union rights in Japan.

Mr. MacDonald noted that even the best friends of unions, and those who were brought up in the democratic traditions of trade unionism, are at times "eager to rationalize when formulating a universally acceptable definition of basic trade union rights. Their logic seems to indicate that we must accept certain facts of life and not be too particular in assessing trade union rights when it comes to countries which are either in the Fascist or Communist camps, or in countries which have not yet attained a full degree of democratic development, or are just in the beginnings of the process of industrialization . . ."

Fundamental aims and purposes of trade union organizations, Mr. MacDonald said, are basic and must remain basic to all stages of economic development, to differing political systems or national characteristics.

There is no country in the world, Mr. MacDonald went on, where workers can be certain that their rights will not be contested. Even in otherwise democratic countries such as Canada, the United States and Japan, severe attacks on trade union rights have recently been made and unions have had to wage an uphill battle to protect labour rights.

We Canadians, Mr. MacDonald said, "have prided ourselves for many years on the fact that by and large the battle for union recognition has been won. This past year, however, has witnessed a concerted attack on labour in Canada." Here he described the developments in Newfoundland that led to the passage of the two Acts: "one decertifying the IWA as the bargaining agent for the loggers concerned and the second bill virtually giving the Government the authority to outlaw certain unions in the province of Newfoundland."

When the federal Government "refused to act" on a CLC request that it use its power to disallow the legislation, "we were forced to file a complaint with the International Labour Organization," he told the meeting.

Other opponents of the labour movement are likewise using the legislative process in an attempt to cripple our trade unions. In British Columbia, another of our provinces, a bill aimed at making strikes ineffective, prohibiting the publication of information about unfair labour practices of employers and laying unions open to damage suits for the acts of any member has been passed by the Legislature. This bill incorporates the presumption of guilt on the part of unions until the opposite is proven.

"In the United States," said Mr. MacDonald, "the Taft-Hartley Act, which in itself has severely restricted trade union rights, has been supplemented by legislation which, under the pretext of protection against corrupt practices, has introduced a system of Government supervision of trade unions and has restricted certain legitimate trade union activities such as the secondary boycott . . ."

Mr. MacDonald noted that while the European minority in the Union of South Africa enjoys democratic rights for itself, these do not exist for the large non-European majority of the population.

Resolutions

The meeting adopted, with minor changes, an amended constitution drafted by a committee headed by Donald MacDonald of the CLC. Probably the most important change was the provision for additional representatives on the Executive Board from Africa and Asia.

The Congress also:

—Urged trade unionists everywhere to join in the ICFTU's campaign to arouse public opinion against every violation of "basic trade union rights to organize freely into trade unions of their choice."

—Condemned the failure of governments of leading industrial countries to maintain full employment.

—Condemned racial segregation in United States schools.

—Denounced South Africa's racial separation policies and adopted a resolution to boycott South African goods.

—Appealed to the Government of France to set free imprisoned trade unionists.

—Deplored visits to Franco by heads of democratic governments.

—Appealed to Japan to amend its labour relations legislation in the public service field and to ratify ILO Convention No. 87.

—Made reference to a number of specific situations in African colonies and urged that they be set right.

Resolutions were also passed concerning support for the United Nations, disarmament, banning atomic weapons, increased aid to underdeveloped countries and other means by which a better world might be achieved.

Delegates agreed unanimously that the International Solidarity Fund, under which organizations that can afford to do so make voluntary contributions to the ICFTU, should be more vigorously supported. A statement presented to the Congress showed that from the inception of the fund in August 1956 up to September 1959 it amounted to \$1,403,976.

Membership of the ICFTU was reported as being approximately 57,000,000 in 132 organizations from 100 countries and territories. An analysis of membership showed that in recent years it had increased in all major regions of the world except North America, where it has declined.

Canadian locals of international unions with headquarters in the United States are exempt from the provisions of the new U.S. Labor-Management Reporting and Disclosure Act, 1959, a spokesman for the U.S. Department of Labor said last month in answer to enquiries.

Education for the Handicapped

University professor urges more attention to special education for handicapped; Believing that rehabilitation should begin much sooner than it usually does, he suggests that special training start in childhood, and in elementary school

More attention to special education for the handicapped in elementary schools was advanced recently by Dr. W. D. McNeill, Associate Professor of Education at the University of Saskatchewan. Speaking in Saskatoon, he said he was convinced rehabilitation of the physically handicapped should begin much sooner than it usually does. He suggested that special training should start in childhood and be conducted in the elementary schools.

Experience has shown that vocational training establishments, such as the municipally operated Saskatoon Vocational Rehabilitation Centre, too often have to expend much of their efforts in elementary training. Persons who present themselves at such institutions sometimes have impracticable ambitions and emotional ailments, and often lack the elementary academic training essential for any reasonably satisfactory employment.

To meet this situation, Dr. McNeill proposed that there should be more special education in the regular elementary schools. This special education might embody teaching methods adapted to the disability dealt with, modifications in the curriculum to suit the individual, the use of therapeutic equipment, and the development of a team method of diagnosing each case.

Besides the educational value of such a plan, it might also reduce the severity of the disability in some cases, Dr. McNeill said. Reports showed that a very large proportion of crippling conditions could either be cured or greatly alleviated if treated early enough.

Other elements that should form part of a special education program include a program of guidance to help the person to realize and accept his limitations, an academic program suited to the intellectual and physical capacity of the child, and an extensive program of guidance to parents, Dr. McNeill said.

A program of this kind should not stop at the elementary level, but should continue through secondary school, the speaker said. If on completing such training a person still needs services like those provided by other agencies, at least he would come to the centre prepared to make the best use of the services offered.

The Ontario Federation of Home and School Associations has recommended pro-

vision of more facilities for the training of handicapped children at school-leaving age. At a recent meeting, it was asserted that at present there are not enough sheltered industries in the province.

Employers hesitate to hire the handicapped, or, not knowing enough about them, expect too much in their work. For the sake of the handicapped child, his parents, and the community, it is important to provide opportunities to work in controlled situations for those children who are able to work, the Federation declared.

It was suggested that Home and School study the whole problem of the handicapped child, and publicize the needs of these children and the possibilities of their working at routine tasks.

* * *

A new placement agency, financed by the March of Dimes, to arrange employment for handicapped persons has opened in Toronto.

Ralph H. Butt, Director of the agency, said one of the agency's first jobs was "to convince potential employers that we are not a welfare body looking for help; we are running the office along business lines, with every candidate thoroughly screened as to experience, ability and other qualifications."

In Montreal, Dr. Wilder Penfield has expressed the hope that firms there will make it a rule "never to give a contract to able-bodied men when the handicapped can do it better." He was speaking at a dinner given by employees of Skills Unlimited Inc. to their Board of Management.

In the first four years of its existence, Skills Unlimited, a non-profit organization set up to help provide employment for the handicapped, has paid out about \$200,000 in wages to some 120 handicapped persons. In the same period, it has trained 32 employees for regular jobs in outside industry. In addition, its employees have paid \$10,000 in income tax and saved the Government \$10,000 in disability allowances.

In his address, Dr. Penfield said that the organization was "ready to compete for contracts in the open market, ready to carry out nuisance jobs: packaging, special sorting, mailing, cataloguing, sample preparation, anything. Here is a splendid demonstration of the way courageous men, when rehabilitated, can support themselves, not asking for charity..."

Older Worker Panels Bring Results

Report on experience with older worker panels in Reading, Pennsylvania, shows 50-per-cent success in placing older workers. Panels consist of three or four employers, three or four older job-seekers, employment counsellor, moderator

During 1959, a series of seven older worker employment panels were held in Reading, Pennsylvania. These were arranged through the co-operation of the Berks County Council of Social Agencies, the Reading local office of the Pennsylvania Bureau of Employment Security, and the Advisory Board on Problems of Older Workers.

John H. Berkley, Regional Director for the Advisory Board, who was responsible for establishing and conducting the panels, in his report to the Advisory Board stated:

"Employment panels are simply informal meetings of three or four employers, three or four older job-seekers, an employment counsellor and a moderator. The meetings last approximately an hour and a half, during which time the applicants are interviewed. Through back-and-forth discussion the applicants receive volunteer counselling and job guidance. Each employer is given a written profile of the worker in advance, outlining his work history, skills, hobbies, etc. Each applicant is given approximately five minutes to relate to the panel members his experience and difficulties encountered when searching for a job. A discussion follows in which employers give advice and suggestions to the applicant.

"Through these meetings we receive volunteer help in counselling older workers. We bring the employer face-to-face with the older worker. One of the stereotyped misconceptions concerning older persons is that they are job-drifters. These meetings have helped to remove that impression. The applicants in most cases have long periods of work histories and varied skills. These panels help the older worker help himself. When the older worker reads that it is difficult to find a job because of age, he becomes discouraged. However, the applicants find at the panels that employers are not only understanding but are also seeking the skills they have. As a result the applicants conduct a more active search for jobs. Often the employers volunteer to help arrange for job interviews.

"The results of our panels are encouraging when you consider the fact that we interviewed some exceptionally hard-to-place older applicants.

"There were a total of 20 applicants before the panels in 1959, nine of whom had some type of physical handicap. Ten out of the 20 are now working, which means that 50 per cent of the panel participants found jobs. Five of these were handicapped, indicating a 55 per cent job-finding score for this group. Of the ten now working, two were placed in jobs through the Employment Service and one directly as a result of panels. The remaining seven, after counselling interviews and panels, obtained jobs on their own. Through the efforts of employer panel participants and the Employment Service, there were a total of 38 job referrals.

"We had a total of seven panels for this year. We have not held any since September because of the steel strike. Of the ten participants who are not yet working, six were interviewed at the panels of July and September and we still have hopes of placing them. Two are retired and have not followed up the leads they were given. Two were unusually hard to place for a panel of this type, one being a \$20,000-a-year salesman, and the other a \$7,800-a-year accountant.

"Perhaps the most interesting case history is the story of this machinist. The applicant involved appeared before the panel back in March. He was laid off because of lack of work and had been out of work for nearly six months. When he appeared before the panel he had only applied for maintenance work, but he was considered too old. Panel discussion revealed that he was very interested in the study of different religions. Some weeks later, one of the panel participants heard of a job opening in a store which sells religious books and articles. He arranged for the applicant's interview and the applicant got the job. He is now working there with an opportunity for advancement. The individual is happy as well as the employer. The employer stated that he had never thought of hiring an older worker for the position until our panel participant suggested that he might try an older worker. He had been having lack of interest and turnover problems in this position . . ."

Report of ILO Panel on Women Workers

Panel of Consultants submits list of subjects needing emphasis in future ILO programs, stresses importance of an educational approach to matters affecting women, and need to integrate their special concerns with those of labour force

The Panel of Consultants on the Problems of Women Workers of the International Labour Organization, in the report of its first meeting (L.G., Dec. 1959, p. 1288), has made pertinent recommendations regarding needed emphases on women's work in future ILO programs. The group reiterated the importance of an educational approach to matters affecting women and also the need to integrate consideration of their special concerns with the problems of the total labour force.

The Consultants stressed the "crucial importance of the education and training of girls and women for work life" and suggested that the ILO "might draw the attention of governments to the importance of this question and to the possibilities of obtaining technical assistance in this field."

The complexity of problems of women working in agriculture and the great diversity of national needs and conditions were underlined by the Panel. It was proposed that the ILO Governing Body consider placing the question of the employment and conditions of work of women in agriculture on the agenda of an early session of the ILO Permanent Agriculture Committee.

"In future work," the Panel noted, "high priority will certainly need to be given to the question of equal remuneration for work of equal value with particular reference to the principle of equal pay set forth in the ILO Convention on this subject." It further suggested that the question of job classification and evaluation and other methods of objective appraisal of job content might usefully be studied by the ILO Industrial Committees.

The Consultants urged that the ILO should continue to collect and co-ordinate statistical data relating to the employment of married women. They expressed the view that it was desirable to study the extent to which there are arrangements for the part-time employment of married women who choose to work, and the character of such arrangements.

Three topics were suggested for the consideration of the next meeting of the Panel, which should be held "as soon as the Governing body deems appropriate and financially feasible." These are: the vocational

preparation of girls and women, the impact of technological change on women's employment opportunities and the needs and problems of industrial home-workers. A progress report on the problems facing older women workers was also suggested for presentation at the next meeting and a review of the conditions of work and status of domestic servants was proposed for a later date.

Special attention was drawn to the desirability of organizing under ILO auspices regional seminars to deal with problems of women's employment and conditions of work of special concern to women workers.

Woman Geologist Honoured

The dean of Canadian women geologists, Dr. Alice Wilson, M.B.E., was recently honoured on the 50th anniversary of the day that she joined the staff of the Geological Survey of Canada.

Dr. Wilson joined the Survey in 1909, a pioneer in a field where even today few women make their careers. Since then her expeditions and research work have taken her across the length and breadth of Canada and to many areas of the Americas and overseas. The major part of her life, however, has been devoted to a study of the geology of the Ottawa Valley.

In recognition of her contribution to geology, the honour, Member of the British Empire, was conferred on Dr. Wilson in 1934. In 1938, she was made a Fellow of the Royal Society of Canada, the first woman to receive this distinction.

Now 78 and "retired" Dr. Wilson still occupies an office at the Geological Survey of Canada in Ottawa. Currently she is enlarging upon a previous volume on the distribution of various rock units, with description and illustration of the different fossil types found in the Ottawa-St. Lawrence Lowland.

50 Years Ago This Month

Question of the current "abnormal cost of living" discussed in three articles
Labour Gazette begins publication of table showing prices of 34 commodities
that enter largely into the cost of living at important centres of population

"It is safe to say that no public question at this present moment equals in general interest that of the abnormal cost of living," said the LABOUR GAZETTE in one of three articles on prices and the cost of living published in the issue of February 1910.

The first of these articles stated that "The unsatisfactoriness of general statements in such a matter, and the importance of the question to the community, has led the Department to adopt a more comprehensive and systematic method of dealing with the subject, and for several months past arrangements have been in progress looking to the inauguration of a periodical statistical review of prices in the LABOUR GAZETTE."

It went on to announce that the Department would publish each month "a table showing the prices of 34 commodities which enter largely into the cost of living at the more important centres of population throughout Canada."

It also stated that a table of wholesale prices covering "some 225 commodities which enter largely into the trade of the country and which may be considered as reflecting the more important phases of its industrial activity" would be published each month beginning in the March 1910 issue of the LABOUR GAZETTE.

The first of the monthly tables of "Retail Prices of Staple Commodities" was published in the February issue. "The list of commodities includes 28 varieties of food, with fuel and coal oil. In addition a statement is given of the rental of a representative workingman's dwelling of the better class in the quarter of each locality usually occupied by workingmen . . ." the LABOUR GAZETTE said.

"The list of localities includes nearly every place having a population of 10,000 people and is representative of every province in the Dominion."

The first table, for the month of January 1910, showed sirloin steak as varying in price from 10 to 12 cents a pound at St. Hyacinthe to 18 to 22 cents in Saint John, N.B., and 18 to 20 cents in Toronto, Vancouver and Victoria. Medium chuck roast of beef ranged in price from 7 to 9 cents in Kingston to 15 cents in Brandon, New

Westminster and Nanaimo, and 10 to 15 cents in Ottawa, Hull, and Nelson, B.C. In Toronto it was only 8 cents a pound.

"Bacon, best, smoked," ranged from 15 cents in Charlottetown to 25 to 35 cents in Victoria, 26 cents in Nanaimo, and 25 cents in several places in Western Canada.

The price of milk ranged from 5 cents a quart in Charlottetown to 12½ cents in Nelson, 12 cents in Victoria, and 10 cents in Quebec City, Port Arthur and several places in the West. Bread varied in price from 2¼ cents a pound in St. Catharines to 6¾ cents in Calgary, but since the size of the loaves varied greatly, prices may not have been comparable.

Sugar was fairly uniform, ranging from 5 cents in Vancouver and 5½ cents in Niagara Falls to 7 cents in Port Arthur, Calgary and Nelson. Potatoes ranged in price from 40 cents a bag (weight not stated) in Kingston to \$1.75 in Nelson.

Evidently as a result of a motion that had been introduced in the Commons in December 1909, the discussion on which had been adjourned on the motion of the Minister of Labour (L.G., Jan., p. 50), the Minister announced in the House at the end of January that the Government was of the opinion that it was very much in the national interest that a commission on technical education should be appointed. The proposed commission was to visit the United States and some of the countries of Europe to study the systems and methods of technical education in operation there.

This announcement was made after the Government had asked the governments of each of the provinces for their views regarding the appointment of such a commission, especially with regard to the jurisdiction of the Dominion and the provincial governments in the matter of technical training. The replies from the provinces, which were published verbatim in the February LABOUR GAZETTE, were generally favourable. Some of them were, however, somewhat cautious in tone; the premiers of Quebec and Manitoba were careful to point out that education was entirely within the jurisdiction of the provinces.

TEAMWORK in INDUSTRY

Smoother plant operations and better labour-management relations have resulted since the adoption of joint consultation at the plant of Weston Bakeries Limited in Kitchener, Ont., according to both company and union spokesmen.

Plant Manager V. G. Ursaki explained that their whole manufacturing process has to be geared to the concept of "freshness guaranteed," which is Weston's motto. Consequently every phase of the business—and production schedules in particular—must be set up to produce "a fresh product today for sale tomorrow." Because the public's food requirements vary from day to day, extreme flexibility is necessary. Demands on one day may be met by a production time of 14 hours, whereas another day may call for a run lasting 24 hours.

"A high degree of collaboration is a must," said Mr. Ursaki. "Labour-management co-operation has become a daily way of life with us. From the company standpoint, joint consultation at Weston's means *selling* employees on a proposal—not *telling* them. Through the techniques of co-operation we have discovered that our people have plenty of ideas we never thought of before."

The plant's Labour-Management Committee concerns itself chiefly with product quality, plant cleanliness, job safety, fire prevention, good relations and customer satisfaction. All departments—bread, sweet goods, cakes, maintenance, sales and office—play a part in its deliberations. The committee also arranges plant dances, parties and other forms of employee recreation that the company sponsors.

Minutes of meetings are posted promptly on plant bulletin boards and circulated to union stewards, and plans are currently afoot to form three sub-committees within the main body, one each for safety, house-keeping and fire prevention.

Harold Schieckoff, a driver-salesman with Weston's and President of Local 461 of the Retail, Wholesale and Department Store Union (CLC), is impressed with labour-management co-operation at the Kitchener plant and feels that both company and union are benefitting from joint consultation.

"I would even say that it is a good thing for our customers," he adds. "Through the LMC the requirements of the general public can be passed on to the employees for their reaction and assistance."

The city works department's labour-management committee, one of four functioning at the municipal level in London, Ont., recently celebrated seven years of co-operation by holding its first social night.

Special guest for the evening's dinner and entertainment was the group's founder, Albert Elson of Windsor, who is an industrial relations officer and field representative with the Labour-Management Co-operation Service of the Department of Labour.

Mr. Elson was instrumental in establishing the works and engineering labour-management committee seven years ago. He also assisted in organizing the city's most recent committee at the Dearness Home for London's elder citizens. Similar committees are functioning in the fire department and at city hall, whose personnel belong to Local 10, National Union of Public Employees. Local 107 of the same union represents the outside city workers.

Some 45 persons attended the event. Among the guests was Alderman W. C. B. Howard, city council's representative on the labour-management body.

* * *

"In the best interests of service in the municipal field, this 10th Annual Convention of the Saskatchewan Federation of Public Employees recommends to all its affiliated locals that they use their utmost endeavours to foster Labour-Management Committees in their areas."

This sweeping endorsement of the use of labour-management co-operation as a positive aid in municipal problem-solving came in a motion at the end of a panel discussion during the Federation's 1959 convention. The subject proposed by the panel was titled: "Labour-Management Committees in the Public Service. Are they necessary? Do they provide anything?" The resounding affirmative conveyed in the Federation's motion was backed unanimously by the delegates.

During the panel discussion, management's reasons for supporting the committees were presented by Carl McLeod, Assistant City Commissioner of Saskatoon. Union support was voiced by Norman Krasko, Secretary of Regina Local 21, Saskatchewan Federation of Public Employees.

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during December. The Board issued five certificates designating bargaining agents, ordered one representation vote, rejected seven applications for certification and granted six applications for revocation of certification. During the month the Board received 12 applications for certification and allowed the withdrawal of two applications for certification.

Applications for Certification Granted

1. Canadian Air Line Dispatchers Association, on behalf of a unit of dispatchers employed by Pacific Western Airlines, Ltd., at the Vancouver and Edmonton airports (L.G., Dec. 1959, p. 1294).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of bus drivers and maintenance mechanics employed by Pontiac Bus Lines Limited, Campbell's Bay, Que. (L.G., Dec. 1959, p. 1294).

3. Canadian Air Line Pilots Association, on behalf of a unit of pilots employed by Wheeler Airlines Limited, Montreal Airport, port, Que. (L.G., Jan., p. 54).

4. International Association of Machinists, on behalf of a unit of traffic, maintenance and operations employees of Quebecair Inc., Rimouski, Que. L'Association des Employés de l'Air intervened (L.G., Jan., p. 54) (see also applications withdrawn, below).

5. The Commercial Telegrapher's Union, Canadian National System Division No. 43, on behalf of a unit of radio maintenance employees of the Canadian National Telegraph Company. The Order of Railroad Telegraphers and the International Brotherhood of Electrical Workers, Canadian Railways Regional Council No. 2, intervened (L.G., Jan., p. 54).

Representation Vote Ordered

Canadian Brotherhood of Railway, Transport and General Workers, applicant, Westward Shipping Ltd., Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Jan., p. 54). The Board directed that the names of both the applicant and the intervener be placed on the ballot (Returning Officer: D. S. Tysoe).

Applications for Certification Rejected

1. Seafarers' International Union of North America, Canadian District, applicant, The Algoma Central and Hudson Bay Railway Company, respondent, and the Canadian Merchant Service Guild, Inc., intervener (deck officers) (L.G., Dec. 1959, p. 1293). The application was rejected for the reason that it was not supported by a majority of the employees affected in the representation vote conducted by the Board.

2. Seafarers' International Union of North America, Canadian District, applicant, Quebec North Shore and Labrador Railway Company (deck officers) (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that it was not supported by a majority of the employees affected in the representation vote conducted by the Board.

3. Seafarers' International Union of North America, Canadian District, applicant, Transit Tankers & Terminals Limited, respondent, and the Canadian Merchant Service Guild, Inc., intervener (deck officers) (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that it was not supported by a majority of the employees affected in the representation vote conducted by the Board.

4. International Longshoremen's Association, applicant, and Caledon Terminals Limited, Toronto, respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that a separate unit, as

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

applied for, was not considered by the Board to be appropriate at this time and that manifest clerks, weighers and samplers were not employed by the company.

5. International Longshoremen's Association, applicant, and Cullen Stevedoring Company Limited, Toronto, respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that a separate unit, as applied for, was not considered by the Board to be appropriate at this time and that manifest clerks, weighers and samplers were not employed by the company.

6. International Longshoremen's Association, applicant, and Eastern Canada Stevedoring Co. Ltd., Toronto, respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that a separate unit, as applied for, was not considered by the Board to be appropriate at this time and that manifest clerks, weighers and samplers were not employed by the company.

7. International Longshoremen's Association, applicant, and Terminal Warehouses Limited, Toronto, respondent (L.G., Dec.

1959, p. 1294). The application was rejected for the reason that a separate unit, as applied for, was not considered by the Board to be appropriate at this time and that manifest clerks, weighers and samplers were not employed by the company.

Applications for Revocation Granted

1. The Board, following the taking of a representation vote, granted an application for revocation of certification, affecting Victor Gould, *et al*, applicants, and the National Association of Marine Engineers of Canada, Inc., respondent, and the Gulf and Lake Navigation Company, Limited, respondent (L.G., Dec. 1959, p. 1291 and 1298).

2. The Board, following the taking of a representation vote, granted an application for revocation of certification, affecting John Wood, on behalf of Rodrigue Castonguay, *et al*, applicant, National Association of Marine Engineers of Canada, Inc., respondent, and Transit Tankers & Terminals Limited, respondent (L.G., Dec. 1959, p. 1291 and 1300).

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories, two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

3. The Board, following the taking of a representation vote, granted an application for revocation of certification, affecting John Wood, on behalf of Alcide Landry, *et al*, applicant, the National Association of Marine Engineers of Canada, Inc., respondent, and Branch Lines Limited, respondent (L.G., Dec. 1959, p. 1292 and 1300).

4. The Board, following the taking of a representation vote, granted an application for revocation of certification, affecting John Wood, on behalf of John A. Dodd, *et al*, applicant, the National Association of Marine Engineers of Canada, Inc., respondent, and Mohawk Navigation Company Limited, respondent (L.G., Dec. 1959, p. 1292 and 1300).

5. The Board, following the taking of a representation vote, granted an application for revocation of certification, affecting John Wood, on behalf of Ross Robertson, *et al*, applicant, the National Association of Marine Engineers of Canada, Inc., respondent, and Beaconsfield Steamships Limited, respondent (L.G., Dec. 1959, p. 1292 and 1300).

6. The Board granted an application for revocation of certification affecting W. Rodgers, *et al*, applicants, the Brotherhood of Locomotive Firemen and Enginemen, respondent, and Canadian National Railways (Western Region), respondent (bus drivers) (L.G., Jan., p. 55).

Applications for Certification Received

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel in the deck and engineroom departments of the S.S. *Prince George*, operated by the Canadian National Steamship Company Limited, Vancouver (Investigating Officer: D. S. Tysoe).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard towboats operated by the Kingcome Navigation Company Limited, Vancouver (Investigating Officer: G. H. Purvis).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of cook-deckhands employed aboard tugs operated by McKenzie Barge & Marine Ways Ltd., Vancouver (Investigating Officer: G. H. Purvis).

4. L'Association des Employés de l'Air, on behalf of a unit of office, service and maintenance employees of Quebecair Inc., Rimouski, Que. (Investigating Officer: C. E. Poirier) (later withdrawn, see below).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of employees of The St. Lawrence

Seaway Authority at its Headquarters Building in Cornwall, Ont. (Investigating Officer: B. H. Hardie).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed aboard vessels operated by The Packers Steamship Company Limited, Vancouver (Investigating Officer: G. H. Purvis).

7. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed on tugs operated by Straits Towing Limited, Vancouver (Investigating Officer: G. H. Purvis).

8. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of deckhands and cook-deckhands employed aboard tugs operated by Stone Brothers Limited, Port Alberni and Vancouver (Investigating Officer: G. R. Currie).

9. Canadian Transport Workers Association, on behalf of a unit of truck drivers employed by Dominion Auto Carriers Limited and operating in and out of Windsor, Ont. (Investigating Officer: T. B. McRae).

10. International Association of Machinists, on behalf of a unit of garage mechanics employed by Canadian Pacific Merchandise Services at its shops in Vancouver and its garage in Penticton, B.C. (Investigating Officer: D. S. Tysoe).

11. United Steelworkers of America, on behalf of a unit of office and technical employees of Algom Uranium Mines Limited at its Quirke and Nordic mining sites in the Improvement District of Elliot Lake, Ont. (Investigating Officer: A. B. Whitfield).

12. General Truck Drivers and Helpers Union, Local No. 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers employed by the Canadian Pacific Railway Company in its Merchandise Services Department at Vancouver (Investigating Officer: D. S. Tysoe).

Applications for Certification Withdrawn

1. Brotherhood of Locomotive Firemen and Enginemen, applicant, Canadian Pacific Railway Company (including Quebec Central Railway Company), respondent, and Brotherhood of Locomotive Engineers, intervenor (locomotive engineers on Eastern, Prairie and Pacific Regions) (L.G., Aug. 1959, p. 831).

2. L'Association des Employés de l'Air, applicant, and Quebecair Inc., Rimouski, Que., respondent (received during month, see above) (see also applications granted above).

Cconciliation and Other Proceedings before the Minister of Labour

Cconciliation Officers Appointed

During December, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Bicroft Uranium Mines Limited, Bancroft, Ont., and District No. 6, United Steelworkers of America (Conciliation Officer: F. J. Ainsborough).

2. The Yukon Consolidated Gold Corporation Limited, Vancouver, and Dawson Miners Union, Local 564 of the International Union of Mine, Mill and Smelter Workers (Conciliation Officer: G. R. Currie).

3. Hill The Mover (Canada) Limited, Chilliwack, B.C., and General Truck Drivers and Helpers Union, Local 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie).

4. Northspan Uranium Mines Limited, Algom Uranium Mines Limited, Milliken Lake Uranium Mines Limited, Elliot Lake, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough).

Settlements Reported by Conciliation Officers

1. Ontario Northland Railway, North Bay, Ont., and Brotherhood of Locomotive Firemen and Enginemen (Conciliation Officer: F. J. Ainsborough) (L.G., Jan., p. 55).

2. British Yukon Navigation Company, Limited, Whitehorse, Y.T., and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. S. Tysoe) (L.G., Jan., p. 55).

3. British Yukon Railway Company, Whitehorse, Y.T., and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. S. Tysoe) (L.G., Jan., p. 55).

4. Trans-Canada Air Lines, Montreal, and Canadian Air Line Pilots Association (Conciliation Officer: R. Duquette) (L.G., Jan., p. 55).

5. Sea-Van Express Limited, North Burnaby, B.C., and Office Employees' International Union, Local 15 (Conciliation Officer: G. R. Currie) (L.G., Dec. 1959, p. 1301).

6. Canadian Arsenals Limited (Gun Ammunition Division), Lindsay, Ont., and United Steelworkers of America (Conciliation Officer: F. J. Ainsborough) (L.G., Nov. 1959, p. 1178).

Cconciliation Board Appointed

The Grand River Railway Company, The Lake Erie and Northern Railway Company and Canadian Pacific Transport Company, Preston, Ont., and Brotherhood of Railroad Trainmen (L.G., Dec. 1959, p. 1301).

Cconciliation Board Fully Constituted

The Board of Conciliation and Investigation established in December to deal with a dispute between The Grand River Railway Company, The Lake Erie and Northern Railway Company and Canadian Pacific Transport Company, Preston, Ont., and Brotherhood of Railroad Trainmen (see above) was fully constituted in December with the appointment of His Honour Judge J. C. Anderson, Belleville, Ont., as Chairman. Judge Anderson was appointed by the Minister on the joint recommendation of the other two members, J. W. Long, Q.C., Montreal, and the Honourable A. W. Roebuck, Q.C., Toronto, who were previously appointed on the nomination of the companies and union respectively.

Settlement Reached After Board Procedure

Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions) and Brotherhood of Railroad Trainmen (L.G., Jan., p. 58).

Severance pay, ranging from \$200 to \$700, was received last month by five members of the International Ladies' Garment Workers' Union (CLC) from assets of Helen Dale Limited, Montreal, which went into liquidation some months ago. The company had been in business for eight years.

The Montreal local of the ILGWU was reported to be the second within the organization in North America, and the first in Canada, to negotiate such benefits for its employees.

Canadian Railway Board of Adjustment No. 1

Releases Decisions in Four Recent Cases

The Canadian Railway Board of Adjustment No. 1 has released decision in four cases: one heard February 10, 1959; one heard September 1 and November 10, 1959; and the remaining two heard November 10, 1959.

The first concerned the claim of passenger trainmen for through freight rates when a snow flanger is handled on their trains; the second, the operation of a trackmobile by shop employees; the third, the abolition of a terminal; and the fourth, claims of firemen for payment of additional compensation when used in combined snowplow and freight service.

In no case was the contention of the employees sustained outright. In the first the Board ruled that the company could continue to operate snow flangers on passenger trains but when flangers were used to clear other than the main line tracks, through freight rates must be paid.

In the second the Board sustained the employees' contention that yardmen be assigned to operate the trackmobile but ruled that the number of yardmen per shift was a matter of negotiation.

In the third case, the Board upheld the railway's right to run crews beyond the former terminal but ruled that changes in the method of payment in effect before the abolition should be made only by negotiation.

In the final case, the Board ruled that the firemen's claims be settled on the basis of the difference between two separate straight time days and the payment already made.

Case No. 717—*Dispute between The Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen concerning the claim of passenger trainmen for through freight rates when snow flanger is handled on passenger trains.*

The Algoma Central and Hudson Bay Railway Company operates a snow flanger on passenger trains when necessary. Since 1950 it has paid passenger rates in connection with this service but since January 1, 1958, effective date of the current agreement, the Trainmen have claimed through freight rates.

In their statement to the Board, the Trainmen contended that a snow flanger is a piece of freight equipment, similar to a snow spreader or other work service equipment, and not in any way to be considered passenger service or passenger work; that

the usual handling of flanger service is freight service; that passenger service crews are never called for flanger service as it is considered freight work; and that putting a flanger on the rear of passenger trains eliminates the need to call a freight service crew.

The Brotherhood cited two articles in the agreement to support its contention. One reads: "Passenger train crews, when handling a freight car or cars not express enroute, will be paid through freight rates for actual mileage with such car or cars." The other: "Rates of pay for Trainmen... in through and irregular freight, mixed, work, wreck, construction, circus, wedge snowplow and flanger specials, . . . and all other unclassified service, shall be through freight rates."

The Company contended that the flanger involved in the dispute is completely and fully equipped for handling on passenger trains to meet the standards of the Board of Transport Commissioners, and that from 1950 to January 1, 1958 the flanger had been handled on passenger trains and passenger rates paid under an article that was exactly the same as the first one cited by the Brotherhood. This article, together with several other articles from the old agreement, was incorporated in the new schedule effective January 1, 1958 and their generally accepted interpretation was protected under a separate article. Based on these points, the Company contended that the Brotherhood's claim was in error and should be denied.

The Board ruled that the practice of operating flangers on first class passenger trains for the specific purpose of flanging main line tracks may be continued as heretofore. The Board further ruled that if such flangers are ordered during the trip to flange side, passing or spur tracks they will be regarded as being used in work service and paid through freight rates for the entire road trip. It ordered that claims of record be adjusted accordingly.

Case No. 718—*Dispute between the Canadian National Railways (Central Region) and the Brotherhood of Railway Trainmen concerning the operation of a trackmobile manned by shop crafts employees for the movement of cars in a defined shop track area.*

When the Canadian National Railways converted to a production line for car painting in the Point St. Charles shops, it purchased a trackmobile to move cars within

the shop premises or between the car repair and painting premises. Later, when necessary trackage and facility changes to convert entirely to an assembly line type of production were completed, the trackmobile was used to move cars as required anywhere within the shop area, which was isolated from the yard area.

The trackmobile was operated by a shop employee, such work being incidental to his other assigned duties. The Brotherhood contended that this was a violation of an article in the agreement that provided that "switching, transfer and industrial work wholly within the recognized switching limits... will be considered as service to which yardmen are entitled..."

In its contention the Company asserted that the word "wholly within the recognized switching limits" can only be interpreted as referring to trackage used for general switching purposes and under the jurisdiction of a Yardmaster. In isolating and designating the trackage in question as shop trackage it merely exercised the prerogative implicit in the article cited to designate recognized switching limits.

The Company pointed out that use of the trackmobile had not decreased yard engine assignments.

The Board sustained the Brotherhood's contention that yardmen should be assigned to the work in dispute but ruled that the number of yardmen to be assigned per shift was a matter of negotiation between the parties.

Case No. 719—*Dispute between the Northern Alberta Railways Company and Brotherhood of Railroad Trainmen; Order of Railway Conductors and Brakemen, ex parte, concerning the abolishing of a terminal and the compensation paid to train crews as a result.*

At the general change of timetable in April 1959, the Northern Alberta Railways Company ceased to maintain Rycroft, Alta., as home terminal for an assigned freight pool crew.

Conductors and trainmen, charging that compensation was reduced and working conditions changed without negotiation, submitted claims for separate trips, McLennan to Rycroft and Rycroft to Grande Prairie, plus time at Rycroft. The Company declined the claims and made payment on the basis of a single trip, McLennan to Grande Prairie.

The conductors and trainmen's organizations contended that the Company, in cancelling the assignment out of Rycroft, had violated a clause in the agreement that provided: "Chain Gang Crews are to be

set up at Dunvegan Yards, protecting such work on the Edmonton, Barrhead, Lac La Biche and Waterways Subdivisions, at McLennan, protecting such work on the Slave Lake, Smoky and Peace River Subdivisions and at Rycroft, protecting such work on the Grande Prairie Subdivision and work necessary at Spirit River if required."

The following paragraph of the clause stated: "When circumstances necessitate the use of Chain Gang Crews off their recognized territory and run into another Terminal, they will be returned to their own territory either deadhead or caboose hop."

The two organizations also charged violation of the clause that provided for payment of 100 miles and switching time, including switching at turn-around point, on runs of 100 miles or less. The crews affected by the change should be paid in accordance with this rule, they maintained.

The Company asserted that the words "if required" in the first clause cited by the employees' organizations indicate that the decision to establish or abolish the assigned freight crew at Rycroft is contingent on the requirements of the service. The setting up of a freight crew with home terminal at Rycroft does not establish a permanent terminal at that point, it contended.

The necessity for maintaining an assigned freight crew at Rycroft had been under examination for some time, the Company said. As a result of the advent of dieselization and an adverse traffic situation the Company decided to close Rycroft as a terminal and run pool crews from McLennan to Grande Prairie and return.

The Company further contended that there was no onus on it to obtain the consent of the employees involved to the change that was made, and pointed out that the engineers or firemen affected had not taken exception to the Company's action.

The Board in its decision declared that the right to run crews between McLennan and points west of Rycroft had been established in practice and in interpretation of the second of the paragraphs cited above but that changes in the method of payment that was in effect prior to April 1959 should be made only by negotiation.

Case No. 720—*Dispute between the Canadian National Railways (Central Region) and the Brotherhood of Locomotive Firemen and Enginemen (ex parte) concerning claims by three firemen for payment of an additional 100 miles when used in combination snowplow and freight service.*

On three occasions spare engine crews were called to handle snowplows Allandale,

(Continued on page 197)

LABOUR LAW

Legal Decisions Affecting Labour

Alberta court dismisses municipal constable's claim for overtime. British Columbia court enjoins picketing that interfered with activities of neutral employer; Quebec court, picketing that interfered with maintenance of plant

In Alberta, the Supreme Court, in a case involving a former municipal constable, dismissed his claim for overtime pay because the claim was not presented within the statutory time limits and the amount claimed was not definitely stated but only guessed at.

In British Columbia, the Supreme Court, by applying Section 3 (2) of the 1959 Trade-unions Act, enjoined picketing that interfered with business activities of a neutral employer.

In Ontario, the High Court found that the Canada Labour Relations Board in certifying the CBRT as bargaining agent for all the employees of the St. Lawrence Seaway Authority acted in good faith and did not exceed its jurisdiction.

The Superior Court in Quebec confirmed an injunction against pickets on the grounds that they were intimidating non-striking workers and were interfering with the supply of oil needed for the maintenance of the plant.

Alberta Supreme Court. . .

...dismisses constable's claim for overtime pay because claim not presented within time limits

On October 16, 1959, Mr. Justice Riley of the Alberta Supreme Court dismissed a claim of a former municipal constable for overtime pay because the claimant only guessed at the exact amount owed to him and the claim was not presented within the statutory time limits as provided by the Alberta Labour Act.

John Stark was a town constable employed by the town council of Leduc from November 19, 1951 to May 15, 1954, the time of his resignation. His employment contract, besides his salary, included various fringe benefits such as rent, light, fuel, telephone, uniforms and an allowance for an automobile while engaged on police duties.

On June 14, 1954, Stark brought an action to recover the fringe benefits that he allegedly did not receive during his employment. His claim was considered and a default judgment was issued against the town council on July 18; an order by Mr. Justice Egbert issued on August 17, 1954 settled the monetary compensation to which Stark was found to be entitled.

The order of Mr. Justice Egbert was not appealed or challenged in any other way and the action seemed to be closed.

Later, however, the town council obtained an order from Mr. Justice Wilson setting aside the default judgment and permitting a defence and counterclaim to be filed.

Then Stark moved for leave to amend his original statement of claim by claiming overtime pursuant to the Alberta Labour Act, and, on January 15, 1957, he presented a claim for overtime pay of \$8,418.42.

Dealing with the case before him, Mr. Justice Riley was of the opinion that there was no justification for the order made by Mr. Justice Wilson setting aside the default judgment, and declared the order to be ineffective and null. As the order of Mr. Justice Egbert which settled the claim regarding the payment of fringe benefits was still valid, Mr. Justice Riley thought that the additional claim for overtime pay presented by Stark on January 15, 1957, was the only matter he had to decide.

It was admitted that Stark, working as a constable, was on call 24 hours a day and that he was called frequently at night, but there was no record of the hours worked by him; he could not prove the overtime hours he worked and the alleged 12 hours a day was merely a guess.

The municipal constables in Alberta come under the Alberta Labour Act, except Part 5 of the Act, dealing with conciliation and arbitration, which does not apply to

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

municipal constables because they are excluded from it by Section 30 of the Alberta Police Act. In Mr. Justice Riley's opinion, the other parts of the Labour Act, such as those dealing with hours of work and overtime, apply to municipal constables.

Order in Council No. 405/47 issued under the Alberta Labour Act deals with the male minimum wage. Section 1 provides that the Order applies to "all male employees in any industry, trade or occupation" who come under the Act with the exception of some classes of employees. Subsection (e) exempts from the operation of the Order "any male employee who is engaged by contract and paid on a commission basis or paid a stated salary payable by the week, month or year, and whose said contract has been duly approved by the Board of Industrial Relations."

The contract of John Stark was neither presented to nor approved by the Board; consequently, in the opinion of the Court, Stark was covered by the provisions of the minimum wage order.

Section 5 of the Order deals with overtime and provides that "the minimum wage is to be paid an employee for overtime and shall be at the rate of one and one-half times the ordinary wages paid to such employee."

The procedure regarding the recovery of the minimum wage is regulated by Section 26 of the Alberta Labour Act. This section provides that if an employee is paid less than the minimum wage due to him he may recover in civil action the difference between the amount paid to him and the amount he would have received if paid the minimum wage. The action, however, must start within 12 months following the date upon which the cause of action first accrued. Further, the section provides that an employee may receive only the wages due to him for the period of six months preceding the termination of his services or the launching of a civil action, whichever first occurs.

In Mr. Justice Riley's opinion, Stark was not entitled to recover the overtime under Section 26 for the following reasons. He did not prove his claim for overtime; he merely guessed at the amount and this procedure was not sufficient. The action for overtime was not commenced within 12 months from the date upon which the cause of action first accrued, which would be at the end of the first month of his employment. In any event, Stark could recover overtime pay only for the period of six months last preceding the termination of his employment or of his taking action under Section 26, whichever first occurred. His original statement of claim of June 14,

1954, did not contain the overtime claim. The claim for overtime was presented on January 15, 1957, and could not be related back to June 14, 1954, when the original statement of claim was presented.

The ruling of the Court was that the former constable's claim for overtime pay should be dismissed. *Stark v. Town of Leduc*, (1959) 29 W.W.R., Part 11, p. 449.

British Columbia Supreme Court...

...enjoins picketing interfering with activities of employer who was neutral to a labour dispute

On July 30, 1959, the British Columbia Supreme Court held that the kind of picketing legal under Section 3 (1) of the Trade-unions Act constituted an infraction of Section 3 (2) of the Act insofar as it interfered with the free access to the premises of a secondary employer. The Court ruled that the pickets had to be placed immediately adjacent to the premises of the employer involved in a labour dispute in order not to interfere with a neutral employer.

During a labour dispute between a lumber mill (Eureka Mill) and District No. 1 of the International Woodworkers of America, the union placed a picket line on the road giving access not only to the premises involved in the strike but to the dock where other businesses were operating.

On the application of the Blue Star Line Limited, an *ex parte* injunction was granted because the members of the longshoremen's union employed by the company refused to cross the picket line. Thus, picketing interfered with business activities of a company not involved in the dispute.

When the dispute came before the trial judge, Mr. Justice Ruttan agreed that the longshoremen who refused to cross the picket line were not breaking their collective agreement with the Blue Star Line company because their contract made provision for respecting a picket line. The issue before him was that the pickets prevented the longshoremen from going to the dock to carry on work with an employer with whom they had no labour dispute and who was neutral to the dispute between the lumber mill company and the Woodworkers.

In these circumstances the actual placing of the picket line seemed to Mr. Justice Ruttan of importance. The Woodworkers placed the pickets in the area they thought to be most convenient to publicize their dispute. In being placed there, the pickets not only stopped people going on their own employer's property, but they prevented other workers from performing their duties with the employer not involved in the dispute.

Counsel for the Blue Star Line company submitted that the Woodworkers in their picketing activities were doing more than the Trade-unions Act allows; therefore, they should be restrained from doing those things which prevented the longshoremen from going to work. In this respect the Court noted that if there are two ways of doing a thing, a man may protect himself by placing the picket in one way or in a way that may, besides protecting him, cause a loss to a third person. If the purpose of the picket line under review was to persuade the people not to deal with the lumber mill, why not establish the picket line in a way that only the mill would be affected?

Mr. Justice Ruttan thought that in the situation under consideration the Woodworkers could place their pickets in such a place that they could accomplish what they were entitled to accomplish under the Act, and still not interfere with the main road leading to the dock. The Act clearly distinguishes between picketing an employer with whom there is a labour dispute, and an employer who is not involved in the dispute. The Act says (section 3 (1)) the trade union may at the employer's place of business persuade anyone not to (a) enter the employer's place of business, operations, or employment; or (b) deal in or handle the products of the employer; or (c) do business with the employer. But the second part of that section (section 3 (2)) says that "except as provided in subsection (1), no trade union or other person shall persuade or endeavour to persuade anyone not to (a) enter an employer's place of business . . ."

In the situation under review, the Woodworkers, being involved in a legal strike, could picket under section 3 (1) but in such a way as not to interfere with another employer's place of business (section 3 (2)). The actual placement of the picket line resulted in a persuasion to longshoremen not to do business with their employer in the dockyard and created a situation that was prohibited under section 3 (2) of the Act.

The Court was of the opinion that the injunction should be allowed to continue because picketing resulted in a breach of section 3 (2) of the Act.

However, Mr. Justice Ruttan stressed that under the Act the Woodworkers, being involved in a legal strike, had the right to picket but the pickets must be directed to the premises of the employer with whom they were on strike and placed in a way not affecting another employer. If the Woodworkers placed the picket line in a different manner they would still be exer-

cising the right given to them under section 3 (1) of the Act without contravening section 3 (2).

The ruling of the Court was that the pickets should be placed immediately adjacent to the premises of the lumber mill company with which the woodworkers' union was in legal strike, and removed from the main road giving access not only to the lumber mill but to other businesses as well. *Blue Star Line Limited et al v. District No. 1, International Woodworkers of America et al*, 29 W.W.R., Part 8, p. 337.

Ontario High Court . . .

. . . upholds certification order of Canada Labour Relations Board; rules no excess of jurisdiction

On July 8, 1959, Mr. Justice Hughes of the Ontario High Court, in *certiorari* proceedings, dismissed an application of the Seafarers International Union to quash an order of the Canada Labour Relations Board certifying the Canadian Brotherhood of Railway, Transport and General Workers as bargaining agent for all the employees of the St. Lawrence Seaway Authority.

The Court held that the Board acted in good faith and did not exceed its jurisdiction. It was for the Board alone to determine the size of the appropriate unit and the question of membership of a union.

On May 14 and 15, 1959, the Board heard the application for certification as bargaining agents of the employees of the St. Lawrence Seaway Authority presented by the Canadian Brotherhood of Railway, Transport and General Workers, the Canadian District of the Seafarers' International Union of North America, and the Dominion Canals Employees Association. The Brotherhood was applying to represent the Seaway Authority's employees over its whole system; the two other unions were applying to be certified only for a portion of the employees or those confined to certain areas of the Seaway.

As a preliminary issue the Board decided, after having heard the representations made by all the parties concerned, that the appropriate unit for the purposes of collective bargaining under the Seaway Authority was a system-wide unit. Next, the proceedings before the Board were concerned with the types of personnel to be included in the bargaining unit and whether or not the Brotherhood, being the only system-wide applicant, contained a sufficient number of members in good standing employed by the Seaway Authority to justify certification.

On June 11, the Board made its order in which the application made jointly by the Dominion Canals Employees Association

and the Canadian District of the Seafarers' International Union was rejected for the reason that the applicants did not have a majority of members in good standing in the unit determined by the Board as appropriate for collective bargaining. Further, the Board ordered a representation vote to be taken with the name of the Canadian Brotherhood of Railway, Transport and General Workers only on the ballot.

The Seafarers challenged the Board's decision by way of *certiorari* proceedings, submitting that they were denied natural justice; that the Board erred in law when it found employees affected to be members of the Brotherhood without any evidence; and that the proceedings, hearings and the order were made in excess of any jurisdiction conferred upon the Board by the Industrial Relations and Disputes Investigation Act and the regulations made under the Act.

In the opinion of Mr. Justice Hughes, the question of the Board's jurisdiction was the basic issue before him.

Section 9 (4) of the Act provides that "The Board may, for the purposes of determining whether the majority of the employees in a unit are members in good standing of a trade union or whether a majority of them have selected a trade union to be their bargaining agent, make or cause to be made such examination of records or other inquiries as it deems necessary, including the holding of such hearings or the taking of such votes as it deems expedient, and the Board may prescribe the nature of the evidence to be furnished to the Board."

From the transcripts of the proceedings before the Board it appeared that in addition to hearing the representations made by all the parties concerned, the Board made what Mr. Justice Hughes called extra-curial inquiries. He did not think that he could consider whether the findings of the Board were justified by the evidence given at the hearing or by other inquiries made by the Board. In this respect, he referred to Mr. Justice Wells, who in *Thibault et al. v. Canada Labour Relations Board* (L.G. 1958, p. 643) said:

I am not concerned whether the Board's decision was correct or incorrect, on the evidence it had before it. Its powers and methods of investigation in coming to its conclusions which I have already quoted in subsection (4) of section 9 of the statute, are of the widest and most general nature. It is not necessary for the Board to hold a hearing and it may reach conclusions from its examination of records or other inquiries as it deems necessary.

Mr. Justice Hughes found no manifest defect of jurisdiction on the part of the

Board or any evidence of manifest fraud on the part of the Brotherhood.

Further, Mr. Justice Hughes considered the submission that the Board erred in law in determining the validity of membership in the Brotherhood by transfer from the union known as the United Steelworkers of America. The objection was that membership cards were not signed although dues were paid and that the Board should have ascertained whether the steel workers were *bona fide* members of the Brotherhood. Rule 15 of the Board's *Rules of Procedure*, referred to in the evidence, provides that a member of a trade union in good standing shall be deemed by the Board to be a person who, in the opinion of the Board, is at the date of application for certification, a member of the union and has, on his own behalf, paid at least one month's union dues subject to certain limitations as to time set forth in the Rule. In Mr. Justice Hughes' opinion, such questions as whether or not a member of a trade union was in good standing, or the size and membership of the proposed unit, were matters to be determined by the Board alone.

In conclusion, the Court ruled that the Board had acted in good faith and had fairly considered the position of all the parties to the application before it, and the order should not be quashed. *Banks et al. v. Canada Labour Relations Board et al.* (1959), 19 D.L.R. (2d), Part 10, p. 764.

Quebec Superior Court. . .

. . . enjoins picketing that might cause irreparable damage to plant and endanger life of non-strikers

On March 9, 1959, Mr. Justice Côté of the Quebec Superior Court granted a permanent injunction against picketing on the ground that the pickets were endangering the life and causing damages to the property of some non-striking workers; and by interfering with the necessary supply of oil they were exposing the plant's machinery and equipment to great and irreparable damage.

The facts of the dispute were as follows.

On November 6, 1958, the workers of the Griffin Steel Foundries Ltd. went on strike. The plant was picketed by one or two cars, each containing one or two strikers, placed on a public highway close to a private road leading to the plant on strike. At first, picketing was peaceful; but about January 20, 1959 a shack was put in the area where the picketing cars used to be placed, the number of picketing strikers increased and some incidents occurred which led to the company's request for an *interim* injunction.

The incidents consisted of interfering with the supply of oil necessary to the maintenance of the plant, and intimidating the non-striking workers.

It would appear from the evidence that on January 26 a group of about twenty-five strikers prevented the delivery of 6,500 gallons of oil necessary for the maintenance of the plant.

Following an appeal made by the management, some strikers were willing to return to work. On January 26, those union members who decided to go back to work and those who were not members of the union involved in the dispute were approached at the entrance to the plant by a union man in charge of the strike and, in the presence of a group of about forty strikers, were told not to report to work and not to cross the picket line without a pass from the union. The following night, the cars and homes of some of those who were willing to go back to work were damaged.

On January 29, an *interim* injunction against picketing was granted. When the dispute came before the trial judge the company moved for a permanent injunction.

In support of its motion, the company submitted, *inter alia*, that the supply of oil had to be replenished without further delay, otherwise the company would suffer great and irreparable damage to its machinery, equipment and materials; that the homes

and/or automobiles of five of the company's employees who decided to return to work were damaged in order to threaten, intimidate and prevent the company's employees from returning to work notwithstanding their wish and right to do so; that the union was engaged in illegal picketing and without right was obstructing and interfering with the entry of the company's suppliers, carriers and employees.

The Court found that the company needed an adequate supply of oil to secure minimum heating for the plant and to preserve the equipment in good condition until the resumption of production; that the members of the union were conspiring to prevent any supply of oil reaching the plant; that the concerted and deliberate action on the part of the union could cause serious damage to the factory; that the damage suffered by some employees showed clearly the union's intention to prevent free access to the plant; that the company had the right to protect the freedom of its employees and to put an end to intimidation; and that the company had proved its case for granting a permanent injunction.

The Court granted a permanent injunction against picketing and against intimidating the company's employees and damaging their property. *Griffin Steel Foundries Ltd. v. Syndicat des Metallurgistes Inc. et autres.* (1959) R.J. Cour Supérieure, Sept.-Oct., 1959, Nos. 7 et 8, p. 566.

Recent Regulations under Provincial Legislation

Minimum wage rates raised in Quebec. New safety provisions issued in Alberta

In Quebec, amendments to the general minimum wage order and the order for employees in municipal and school corporations increased minimum wages to 68 cents an hour in Zone I, 64 cents in Zone II and 60 cents in Zone III. The new minimum hourly rates for employees in hotels, restaurants, hospitals and real estate offices are 64 cents in Zone I, 60 cents in Zone II and 56 cents in Zone III. Minimum wages of forestry workers were increased by an average of about 15 per cent.

In Alberta, ski tows were brought under the Factories Act and new safety requirements were issued for liquefied petroleum gas pressure vessels and for mobile equipment used in and around quarries.

Other regulations deal with certification votes under the New Brunswick Labour Relations Act and the coverage of Workmen's Compensation Acts in Nova Scotia, Saskatchewan and Ontario.

Alberta Factories Act

Aerial tramways, chair lifts, ski tows, rope tows and inclined passenger lifts were brought within the scope of the Alberta Factories Act by a regulation gazetted on November 30 as Alta. Reg. 383/59.

Alberta Quarries Regulation Act

The regulations under the Alberta Quarries Regulation Act (L.G. 1957, p. 1359) have been amended by Alta. Reg. 399/59, gazetted December 15.

Mobile equipment, between one-half hour after sunset and one-half hour before sunrise, must now have front and rear lights which can be seen at a distance of 100 feet.

A new provision specifies that mobile equipment must not be operated unless the operator has an unrestricted view of the area where he intends to move the equipment or receives directions from another person who has an unrestricted view.

British Columbia Hours of Work Act

The British Columbia Board of Industrial Relations granted its usual Christmas exemption to the mercantile trade, an order gazetted on December 10 (B.C. Reg. 373/59) permitting employees in retail stores to work two hours in excess of the daily limits on any two days during the two weeks ending December 26, 1959.

New Brunswick Labour Relations Act

The rules of procedure of the New Brunswick Labour Relations Board were amended by new provisions with respect to certification votes approved by O.C. 50-929 gazetted on December 2. The new provisions are more detailed than formerly and, among other changes, provide for a vote by mail.

Whenever a certification vote is deemed necessary to determine the wishes of the employees in a bargaining unit, the Board must now issue a written order directing a vote by secret ballot and fixing the date of employment to be used in compiling the list of voters, determining the bargaining unit as well as the form and content of the ballot and appointing a returning officer.

Instead of the Secretary of the Board, the returning officer is now in charge of the arrangements and proceedings for the vote. He must appoint scrutineers, after giving the parties an opportunity to make nominations, and arrange a place for the taking of the vote, on the employer's premises if the employer is willing. He must prepare a list of eligible voters, submit it to the parties, attempt to get agreement on the list, and finally decide upon it, and settle the time and place of voting after consultation with the parties. A notice of election, the form of ballot and the voters' list must be posted on the employer's premises at least 48 hours before the time of voting.

The taking of a mail vote is a matter for the Board to decide. The preliminary procedures, however, are the same as when a ballot box vote is taken and the returning officer is responsible for sending out the instructions, checking off the return envelopes and depositing the ballots in the ballot box as well as counting the ballots and announcing the results of the vote.

The regulations state that the Board may not issue a certification or order based on the results of a vote except at a duly called meeting. They further provide that the parties to the application, their agents or the scrutineers may object in writing to a decision of the returning officer and such objection must be considered by the Board at the same time as the results of the vote.

Nova Scotia Workmen's Compensation Act

Amendments to the regulations of the Nova Scotia Workmen's Compensation Board were gazetted December 2, one new provision raising the minimum annual assessment from \$5 to \$10.

Another amendment to the assessment provision provides that the portion of salaries or wages of presidents, vice-presidents, secretaries, treasurers, managers, superintendents, controllers and auditors in excess of \$3,600 in a calendar year may now be excluded when computing the amount of payroll in any industry. Previously, salaries in excess of \$3,000 could be excluded from such calculations.

The section listing exclusions from the collective liability section of the Act unless at least five workmen are employed was reworded to read dental surgery rather than dental work.

Ontario Workmen's Compensation Act

Amendments to the regulations under the Ontario Workmen's Compensation Act approved by O. Reg. 276/59 were gazetted on December 12 to go into force on January 1. Among other changes, salvaging automobile parts and the operation of new and used trailer sales or rental business, auto rental agencies and auto laundries are now included among the list of industries in which employers are required to contribute to the accident fund. Some of the industries previously listed were redefined.

Quebec Minimum Wage Act

The Quebec Minimum Wage Commission recently amended its four minimum wage orders, increasing rates by an average of about 15 per cent, effective January 1.

As a result of these changes, persons subject to Order 4, the general order covering the majority of unorganized workers in the province, or to Order No. 41, the order for municipal and school corporations, are now entitled to a minimum wage of 68 cents an hour in Zone I, 64 cents in Zone II and 60 cents in Zone III.

Increases of 9, 10 and 11 cents an hour in the minimum rate were authorized for hotel, restaurant, hospital and real estate employees, bringing the rates up to 64 cents an hour in Zone I, 60 cents in Zone II and 56 cents in Zone III. The new minimum hourly rate for forestry workers is 90 cents, 15 cents more than the rate set in 1958, when the order was last revised (L.G. June, 1958, p. 649).

There were no changes in zone boundaries. The Zone I rates continue to apply

in the City of Montreal and the municipalities totally or partially situated on Montreal Island; Zone II rates apply in Quebec City and other municipalities with a population of 6,000 or more (except those included in Zone I); Zone III rates apply in the rest of the province.

Except for minor amendments respecting overtime exemptions, pay statements and wage records, the general provisions are the same as when the orders were last revised (L.G. 1957, p. 727; 1958, p. 646). The hours provisions were also unchanged.

Order No. 4 (1957)—General Order

The rates prescribed by the general order apply to the majority of unorganized workers in the province except agricultural workers and domestic servants. Employees governed by another order or a decree under the Collective Agreement Act are also exempted from the provisions of the Order as well as the following: university or secondary school students; blind persons working in establishments for the blind; emergency firefighters; employees of church corporations or boards of trustees; persons employed by religious or charitable institutions such as convents or orphanages; employees of peoples' savings banks; peat-cutters; the employer's consort; employees of small telephone exchanges in Zone III; persons who habitually work outside the employer's establishment and whose hours are not controlled; members of the clergy or a religious order; and persons working in unorganized territory.

The rates described below are for the most part based on a 48-hour week. However, a 54-hour regular work week is prescribed for some undertakings, among them retail establishments, food processing plants and amusement places. Some undertakings such as fishing establishments in the Gulf of St. Lawrence and diamond drilling operations are deemed to have no regular work week, which means that employees in such places are not entitled to overtime.

The new rates—68 cents an hour in Zone I, 64 cents in Zone II and 60 cents in Zone III—apply to all employees governed by the order except those for whom special rates are set.

Included in the latter category are inexperienced employees, by which is meant apprentices, seasonal cannery workers and persons doing work that requires little skill or training and whose output is below normal. Such employees may be paid 12 cents an hour less than experienced workers, that is, 56 cents an hour in Zone I, 52 cents in Zone II and 48 cents in Zone III.

The previous rates were 45, 40 and 35 cents an hour, respectively. As before, the number of inexperienced workers in any establishment may not exceed 20 per cent of the total number of employees, except in canneries.

Instead of a minimum of 40 cents in Zone I, 35 cents in Zone II and 30 cents in Zone III, office boys and messengers are now to receive a minimum of 52 cents, 48 cents or 44 cents an hour, depending on the zone. These rates also apply to pinboys and bootblacks.

In keeping with previous practice, weekly rates are again set for caretakers who are provided with free living quarters on the premises. The new rates are \$10 higher than formerly; \$40 in Zone I, \$35 in Zone II and \$30 in Zone III.

Order No. 39 (1958)—Forest Operations

The amendments to Order No. 39 cover the same classes of employees as the previous provisions, applying to persons engaged in logging or driving operations, forest improvement work and reforestation. Caterers working in connection with any of the operations referred to above, and contractors, subcontractors and jobbers are also bound by the new provisions.

The new rates do not apply, however, to employees who transport lumber outside the forests or to persons employed in wood processing plants other than sawmills producing lumber for logging operations. Also exempted are farmers, the employer's consort, persons working in forest colonies, emergency fire rangers and employees covered by a collective agreement under the Labour Relations Act, provided the provisions are generally better than those set out in the order.

As previously, rates for forestry workers are based on a 54-hour week, except in the case of pieceworkers and employees such as cooks, kitchen help and guards, who are considered to have no regular work week.

Following the practice established when the order was last revised, only three rates are set for forestry workers hired on a fixed wage basis. The minimum for employees whose hours of work are verifiable has been raised from 75 cents to 90 cents an hour. For those whose hours are not verifiable the minimum rate is now \$8 a day instead of \$7. The rate for employees without a regular work week has been increased from \$42 to \$48 a week.

The special rates for inexperienced or handicapped workers whose output is below normal have also been raised. Those whose hours of work are verifiable are now to receive a minimum of 60 cents an hour

instead of 50 cents. Persons in this category who do not have a regular work week must be paid \$5.75 a day instead of \$5 as formerly. The 20-per-cent quota continues to apply.

The piecework rates, which were left at the 1957 level when the order was revised in 1958, were increased by an average of 15 per cent. In pulpwood operations, pieceworkers must receive \$4.10 instead of \$3.55 a cord for aspen and poplar and \$5.30 a cord for all other wood instead of \$4.60.

For wood measured in solid cubic feet, the minimum rate is now \$4.80 per 100 s.c.f. for aspen and poplar and \$6.20 for other wood, irrespective of the length of the logs. Previously, the minima varied according to the length of the logs, the rate for aspen and poplar ranging from \$1.90 to \$4.15 per 100 s.c.f. and for other wood from \$2.45 to \$5.40.

As before, employees are entitled to extra remuneration when peeling is included as part of the operation. Employees who are paid by the cord must now receive an additional \$2.10 for aspen and poplar and \$2.65 for other wood. Previously, the rates for such work were \$1.80 and \$2.30, respectively. The rates for peeling wood measured in solid cubic feet have been raised from \$2.05 to \$2.35 per 100 s.c.f. for aspen and poplar, and from \$2.65 to \$3.05 for other wood.

Pieceworkers cutting firewood are now to receive a minimum of \$5.30 a cord for 4-foot bolts, an increase of 70 cents over the previous rate. For bolts of other lengths, the minimum per 32 square feet (4' x 8') of piling surface is now \$4.30 for logs 3 feet long; \$3.15 for logs 2 feet long; \$2.50 for logs 1½ feet long and \$1.95 for logs 15 inches long. Previously, rates ranged from \$3.75 to \$1.70 per 32 square feet.

For cutting sawlogs and other kinds of wood, employees must now be paid \$5.30 instead of \$4.60 for wood measured by the cord. The rate for wood measured in solid cubic feet was increased from \$5.40 to \$6.20 per 100 s.c.f. For wood measured in board feet, only one rate, \$8.55 per 1,000 feet, is now provided, whereas previously rates ranged from \$4.95 to \$7.45 per 1,000 board feet, depending on the length of the logs. An additional \$6.55 per 1,000 board feet, \$2.65 per cord and \$3.05 per 100 s.c.f. must be paid where peeling is included in the making of the wood.

In pulpwood and sawlog operations, a lower rate may again be paid to employees who do not do the preparatory work usually assigned to workers in these categories, provided the rate is stipulated in the engage-

ment contract. The minimum in these exceptional cases is now \$8 a day instead of \$7.

Order No. 40, (1957)—Hotels, Restaurants, Hospitals and Real Estate Undertakings

The new wage provisions of Order 40 have the same coverage as formerly. As before, the rates apply to employees in hotels, roadhouses, inns, boarding houses, staff houses, motels, lodging houses with at least five bedrooms to let, restaurants, lunch-counters, cabarets, bars, cafes, clubs, catering establishments, taverns, apartment houses, office buildings, real estate offices, hospitals and other institutions under the Quebec Public Charities Act, including institutions administered by a religious organization.

They are not applicable, however, to employees of lodging houses with fewer than five bedrooms to let, professional staff, student nurses or members of a religious community, nor do they cover employees exempted under Order 4.

The rates for employees in hotels, restaurants, hospitals and real estate offices are again based on a 60-hour week, except in the case of employees such as watchmen, janitors and resident caretakers, who are deemed to have no regular work week.

The majority of the employees covered by the order are now entitled to a minimum of 64 cents an hour in Zone I, 60 cents in Zone II and 56 cents in Zone III. These rates are 4 cents less than the general minima set under Order 4.

In line with previous practice, the minimum rates prescribed for chauffeurs, watchmen, stationary enginemen and firemen are the same as the general minimum under Order 4, that is, 68 cents an hour in Zone I, 64 cents in Zone II and 60 cents in Zone III.

Bell boys are now to receive a minimum of 48 cents an hour in Zone I, 44 cents in Zone II and 40 cents in Zone III. Formerly, the minimum was 35 cents an hour in Zone I and 30 cents in Zones II and III.

Inexperienced hospital workers are now entitled to at least 52 cents an hour in Zone I, 48 cents in Zone II and 44 cents in Zone III. The same rates apply to office boys, messengers, pinboys and bootblacks.

Employees of lodging houses with at least five bedrooms to let are to receive a minimum of 56 cents an hour in Zone I, 52 cents in Zone II and 48 cents in Zone III.

Monthly rates are again set for supervising janitors whose duties include the leasing of apartments or space and the collection of rents, all rates having been increased by \$10 a month. Janitors who are provided with free, heated quarters on

the premises are to receive at least \$85 a month in Zones I and II, and \$70 in Zone III. When unheated lodgings are provided, the rates are now \$95 in Zones I and II, and \$80 in Zone III. Supervising janitors who do not live on the premises must be paid at least \$105 a month in Zones I and II and \$90 in Zone III.

The rates for caretakers who are provided with free living quarters on the premises were increased by \$10 a week to \$40 in Zone I, \$35 in Zone II and \$30 in Zone III. These minima are the same as provided under Order 4.

Order No. 41, (1958)—Municipal and School Corporations

In keeping with former practice, the rates set by Order 41, the order governing employees in municipal and school corporations, are the same as under the general Order, except in the case of a few special categories.

The regular work week remains longer, however. Subject to a few exceptions, minimum wage rates for the majority of employees covered by Order 41 are based on a 54-hour week, whereas under Order 4, as already noted, minimum rates are generally based on a 48-hour week. The exceptions among the employees of municipal and school corporations include chauffeurs, whose regular work week is 60 hours; firemen and policemen, whose work week is 72 hours; and persons such as resident caretakers and school attendance officers, for whom no regular work week is prescribed.

As previously indicated, most persons who are subject to Order 41 must be paid the same minimum as the majority of employees covered by Order 4, that is, 68 cents an hour in Zone I, 64 cents in Zone II and 60 cents in Zone III. These rates also apply to watchmen employed by municipal or school corporations. The minima for inexperienced employees, for office boys and messengers, and for caretakers with lodgings provided are also the same as those set under Order 4 and described above.

In line with previous practice, monthly rates are again set for secretaries of local municipal corporations whose hours are not verifiable, the rates in Zone III varying according to the population. The minimum rates in Zones I and II have been increased from \$150 and \$120 a month to \$175 and \$140, respectively. In Zone III, rates were increased by \$10 a month, the new minima ranging from \$40 a month in municipalities with a population of 300 or less to \$90 a month in centres with a population of from 1,501 to 6,000. In the counties, the monthly minimum is now \$70 instead of \$60.

As before, minimum rates for school secretaries are not fixed on a zone basis but vary according to the number of property owners in the district. Rates were increased by \$10 a month in all cases, the new minimum ranging from \$30 a month in districts with 50 ratepayers or less to \$110 a month in districts with 1,201 ratepayers or more.

General Provisions

As previously mentioned, the only changes in the general provisions of the orders were minor amendments to the provisions respecting pay statements, wage records and overtime.

With regard to pay statements and wage records, Orders 4, 40 and 41 now provide that employers are not obliged to record the number of regular and overtime hours of an employee paid on a fixed weekly, monthly or yearly basis who, even when not working a full week, receives a weekly wage of \$55 in Zone I and \$50 in Zones II and III. Previously, employers were exempted from this requirement if employees paid on a fixed wage basis received at least \$50 a week in Zone I and \$45 in Zones II and III. In forestry operations particulars respecting hours and overtime need not be recorded if a worker hired on a fixed wage basis receives \$62 or more a week.

Orders 4, 40 and 41 continue to provide that hourly rated employees not governed by a collective agreement must be paid one and one-half the regular rate for all hours worked in excess of the regular work week. They further provide that employees not in this category must be paid at least one and one-half the minimum rate for overtime, except that, now, employees on a fixed wage basis receiving at least \$55 a week in Zone I and \$50 in Zones II and III are not entitled to overtime. Formerly, this proviso applied to fixed wage employees who earned \$50 or more a week in Zone I and \$45 in Zones II and III. Under the amended forestry order, employees hired on a fixed wage basis need not be paid overtime if they earn \$62 or more a week.

Saskatchewan Boiler and Pressure Vessel Act

The regulations concerning liquefied petroleum gas pressure vessels and distributing plants, issued under the Saskatchewan Boiler and Pressure Vessel Act (L.G. 1958, p. 280), were amended by O.C. 2105/59, gazetted December 31.

The amendment requires that if the design of a vessel has not been registered the inspector may require weld test coupons to be tested in accordance with the Saskatchewan Pressure Welding Regulations.

If special approval and registration is requested for the design of a storage tank having a capacity greater than 30,000 U.S. gallons for a refinery or natural gas processing plant, internal reinforcement is now required. New requirements for supporting saddles are also set out.

Transport tanks of "quenched and tempered" high tensile steel require special approval and registration. They must be constructed by a manufacturer having previous experience in the use of such material.

He must submit proof that his welding procedure is correct and his welder qualified.

The fees for a Class A liquid petroleum gas licence to operate a filling or distributing plant have been revised.

Saskatchewan Workmen's Compensation (Accident Fund) Act

Surveyors and consulting engineers and their employees were brought under the Saskatchewan Workmen's Compensation (Accident Fund) Act by O.C. 2051/59 gazetted December 18.

Annual Report of U.K. Chief Inspector of Factories

Reported industrial accidents in the United Kingdom decreased again in 1958, the U.K. Chief Inspector of Factories states in his 1958 annual report. Accidents reported declined from 174,713 in 1957 to 167,697, a drop of 4 per cent. It was the lowest total since 1935.

The number of fatal accidents, however, increased to 665 from 651 in the preceding year.

As in 1957, the Annual Report on Industrial Health was published separately.

Report on Work of Factory Inspectorate

The 1958 Annual Report of the United Kingdom Chief Inspector of Factories, as in the preceding year, has five main chapters: industrial accident statistics and trends, a review of developments of special interest, activities of the department, and two special sections, on nuclear energy and ionizing radiations and on fire prevention.

Statistics and Trends

The decrease in the total number of industrial accidents in 1958 was due primarily to a decline of 5 per cent from 1957 for accidents in factories, from 150,437 to 143,099; fatal accidents in factories declined from 414 in 1957 to 368 in 1958. Factory accidents declined in all sectors except non-rail transport. Rail transport accidents decreased by nearly 23 per cent.

The number of accidents on building sites, however, increased from 14,568 (156 fatal) in 1957 to 15,017 (207 fatal) in 1958, with falls of persons mainly responsible for the rise. Likewise, there was an increase in accidents on engineering construction work from 1,924 (31 fatal) in 1957 to 2,329 (51 fatal) in 1958.

The number of injuries in 1958 was 181,091, about 7,000 fewer than a year earlier. Reductions occurred in almost every injury site, with a drop of almost 10 per cent in eye injuries.

Crane Safety

Each year, the report states, about 4,000 crane accidents occur. Some 60 per cent of these accidents are the result of errors in slinging, in giving or receiving signals and in driving; ignorance or carelessness of the crane driver or slinger and ineffective signalling arrangements are the main reasons for these errors. Since crane drivers, slingers and signallers are mainly responsible for the elimination of crane accidents, they should be carefully selected, trained and supervised, the Report advises.

Effective communication between slingers, drivers and others near crane operations is vital to the avoidance of accidents, and the Report recommends highly the code of hand signals for crane operation published by the Sheffield Area Industrial Group of the Royal Society for the Prevention of Accidents. With respect to travelling cranes, the Report points out that some means of communication between the driver and the ground other than hand signals is essential.

Strict supervision is essential, the Report declares, if crane accidents arising from contact with electric lines, an important cause of fatal accidents, are to be prevented. In many cases, careful planning by persons carrying out the work, officers of local authorities, and the owners of power lines can eliminate all risk.

Safety Training at Technical Colleges and Schools

During 1958, discussions continued between the Factory Inspectors and the Schools Inspectors with the object of introducing safety topics into the curricula of technical colleges and schools. Employers' organizations, trade unions, the Royal Society for the Prevention of Accidents, educational and government authorities are co-operating to advance the interest in safety training in schools and colleges that exists.

Legislation

In 1958 a bill was introduced to amend the Factories Acts 1937 and 1948. It has now become law as the Factories Act, 1959 (L.G., Nov. 1959, p. 1188).

The Building (Safety, Health and Welfare) (Amendment) Regulations, 1958, were made in 1958 under the Factories Act and came into force on January 1, 1959. Also, the Work in Compressed Air Special Regulations, 1958, came into operation on April 21, 1958. Further work was done on the proposed Shipbuilding and Ship-repairing Special Regulations, and on the Factories (Ionizing Radiations) Special Regulations in connection with sealed sources of radioactive material. In addition, work progressed on the drafting of special regulations in connection with ionizing radiations from radioactive materials other than in sealed sources.

X-ray and Other Plant Producing Ionizing Radiations

During 1958 there was a limited increase in X-ray and other plant producing ionizing radiations, mainly portable or mobile X-ray equipment for radiographic examination of castings and welds.

The report points out that these examinations should be made in a specially constructed and shielded room. All persons should be excluded while the equipment is operating, an objective that can be attained by interlocking all doors with the equipment control.

When work to be examined is too large to be transported to a special room and portable equipment must be moved to the location of the work, the equipment should be shielded as much as possible and portable screens used for further protection.

The report refers to a number of problems in connection with ionizing radiations that the Inspectorate encountered. One of the problems was the protection of crane operators who were placing heavy work into radiographic enclosures with open tops. In one case, this problem was solved by installing a warning light and an audible alarm in the cab of the crane, which came into operation if the crane approached too close to the enclosure. In other cases, crane cabs were shielded, a "cut-out" was fitted to stop the crane automatically, and cranes were prohibited from working while the plant was in operation.

Other problems dealt with in the report include inadequate screening of equipment, misuse of warning notices, over-doses of radiation, cracks in shielding and defective interlocking arrangements.

Fire Prevention

Each year about 7,000 industrial fires occur in the United Kingdom. Approximately 80 of these fires cause over half of the estimated total loss of £13,500,000. About 25 per cent of industrial fires occur in wood-working factories, usually at night, and nearly as many in engineering factories. These industries and the textile industry account for about 60 per cent of all industrial fires. Injuries are caused mainly by local incidents in which clothing is set afire or burns are caused by flash ignition of highly inflammable materials.

How Fires Start—The report states that there are two stages in a fire, the initial outbreak, when combustible or inflammable material is ignited, and the spread of the fire to other combustible material. The manner in which fire spreads is determined partially by the quantity and combustibility of stock or material in process, but to a greater extent by the nature and layout of the building structure. Nearly all fires that cause extensive damage are started by the ignition of solid material such as wood, or paper fibres. These are usually finely divided, not highly inflammable, and may smoulder for a long time before bursting into flames.

Sources of Ignition—It has often been found that sources of ignition might have been eliminated or replaced by a safer arrangement.

Space heaters, especially slow combustion stoves, often cause fires. Gas and electric fires present a similar hazard. Particularly dangerous is the homemade "flash" heating stove often found in garages, and run on waste oil.

Welding and cutting equipment and blowlamps are very dangerous sources of ignition. In order to minimize danger from the use of this equipment in premises where there is a high fire risk, a "permit to work" system is often introduced, which gives detailed safety measures to be employed. The use of welding equipment or blowlamps in textile mills is dangerous, so special precautions are advisable, such as thorough cleaning of the area where work is to be done.

Among other particularly hazardous sources of ignition are those materials that will ignite at low temperatures; cellulose, for example, will burn at 80 degrees fahrenheit.

Inflammable Substances—Many fires start in waste, including floor sweepings, that may contain highly combustible materials. Oily rags are subject to spontaneous combustion, especially if the oil is of vegetable origin. These hazards should be eliminated by removing waste before it accumulates.

Various finely divided trade wastes present a high fire hazard. Among these are shavings and sawdust in the woodworking industry, fibrous materials in upholstery factories, off-cuts in the printing and paper converting industry, clippings and fluff in the clothing industry, and fluff in laundries. Carbonaceous dust in flour mills, grist mills and feed mills, and maltings can smoulder for a long time if undisturbed, but if dislodged and mixed with air, can form a highly explosive atmosphere. In textile mills, dust and fly are a fire hazard, as is smouldering dust from polishing and grinding processes in the metal trades. In packing and shipping departments the risk of fire is often increased by excessive quantities of straw, shavings and paper.

Inflammable Liquids—A large amount of material damage and most burning accidents due to inflammable liquids result while they are being used in small quantities. The use of inflammable liquids for reviving fires and near open flames and other sources of ignition causes a number of accidents each year. The ignition of gasoline vapour in motor vehicle repair establishments also results in burns to persons.

The ignition of paints, varnishes and cellulose solutions is among the most frequent causes of industrial fires; quantities on hand in the workroom should be limited as much as possible in order to minimize the fire hazard. Inflammable solvents used to thin printing inks can present an extremely high fire risk, so bulk storage areas for both ink and solvents should be outside the building and, if possible, feed directly to the ink ducts on the presses.

A number of burning accidents are also caused by the ignition of oil-soaked clothing. This danger can be reduced by the use of protective clothing with quick-release fasteners.

Premises and Fire Spread—The progress of fire is largely determined by the structure of a building, and much can be done by structural modifications to reduce its spread.

Among measures that are taken to assist in restricting fires to a small area are the use of fire-retardant coating and the enclosure of sections where there is a high risk of fire by walls of fire-resistant materials. Hoistways and stairways enable fires to spread more easily to a higher floor, and in such cases stairways should be enclosed and fire-resistant doors provided.

In the layout of a plant it is important to ensure that gas mains and oil tanks are not located near areas where a high degree of fire hazard may exist.

Other ways of reducing the spread of fire include the removal of inflammable

vapours and deposits from workrooms. Also, where inflammable liquids are used in large quantities, sills will prevent their flow from one room to another if they are spilled on the floor.

Fire Fighting Arrangements—It is important to have adequate fire-fighting equipment in a plant so that workmen can extinguish fires when they are small. In the case of factories covered by the Cellulose Solution Regulations the provision of effective fire extinguishing equipment is obligatory. (Under the Factories Act, 1959, all factories must provide and maintain appropriate fire fighting equipment.)

Arrangements for Calling the Fire Brigade—Although a few large factories, usually with a high fire risk, have a direct telephone line to the fire station, most of them rely on ordinary telephone communication or, in some areas, on the 999 (emergency) system of dialing. In many cases, officers of fire brigades supply cards to factories, giving the fire station number and other instructions.

Obstructions to Fire Fighting—Obstructions may seriously impede fire fighting and be responsible for greatly increased fire losses. There have been many instances of this problem in the textile industry when over-stocked rooms with too few gangways prevented access to stacks of baled wool. Similarly, in the timber trade, access to stacks is often difficult.

The location of stored material may make it impossible for firemen to reach it to extinguish a fire. Sometimes tanks for oil fired heating units are so situated that firemen can reach them only through a burning building; contractors can eliminate this problem by installing these tanks where they are readily accessible.

In order to lessen the hazards of firemen, firms should notify the fire authorities of stocks of dangerous materials such as acids and other dangerous chemicals, metals such as beryllium, metallic sodium and uranium, and metallic powders. Likewise, the fire authorities should be informed of large quantities of highly inflammable liquids, propane storage tanks, and nitrate and sodium salt baths.

The report indicates that fire brigades are aware of particular hazards in large and medium-sized factories but are not usually familiar with special risks in small establishments.

There is close co-operation between the Inspectorate and the Fire Services. In some areas they have periodic consultations and joint consideration of building plans.

Report on Industrial Health

The 1958 Report on Industrial Health has four chapters. One of these reviews developments of the year. Another deals with significant cases of industrial disease, poisoning and gassing. There are also two special chapters, one of which is concerned with occupational cancer, and the other with the Inspectorate's study of medical supervision in 210 factories.

The chapter dealing with the year's developments refers to a revised edition of *Marking Containers of Hazardous Chemicals* a publication of the Association of British Chemical Manufacturers. It gives principles for the marking of containers of hazardous chemicals by labelling them with standard wording, which would warn persons concerned with them from manufacturer to user. This system of labelling is in addition to legal requirements, and is recommended for all manufacturing firms.

The Association has also published *A system of Labels for gassing casualties sent to Hospital*. Prepared by a special panel of industrial medical officers, this publication has proved to be of great value.

The chapter on industrial diseases, poisoning and gases deals with significant cases of lead, phosphorus, mercury and aniline poisoning, toxic jaundice, anthrax, compressed air illness, epitheliomatous and chrome ulceration and other cases of industrial poisoning. It also gives statistical information in connection with pneumoconiosis, asbestosis and byssinosis, and dermatitis. Other matters dealt with involve workers exposed to ionizing radiations and

industrial solvents and lead, and gassing cases.

One special chapter deals with those substances called carcinogens, encountered in industry, which are responsible for occupational cancer. They include coal tar and its products, mineral oil, arsenic, chromates, asbestos, ionizing radiations, benzene, and possibly heated calcined dusts in connection with nickel refining. A section is also devoted to methods of preventing occupational cancer.

The special chapter on medical supervision in 210 factories is concerned with a survey in certain factories which were known to employ at least one doctor either full or part-time to form some picture of the types of medical supervision provided. The factories selected fell into three size groups employing 1,000 workers or more; between 250 and 999 workers; under 250 workers. There were 70 factories in each group.

Information was requested on the number of doctors employed, the nature of medical examinations and treatment, rehabilitation, supervision of working conditions, maintenance of records and statistics, research or special investigations by works medical officers, medical officers' work on factory committees, and employment and functions of nursery staff. Management was also requested to give information on the advantages of medical supervision in their factory, and on the relationship of their scheme to the National Health Service. The Report contains an analysis of the information obtained.

United Kingdom Factories Act

About half of the provisions of the United Kingdom Factories Act, 1959 were brought into force on December 1, 1959 by the Factories Act, 1959 (Commencement No. 1) Order, 1959, the November issue of the *Ministry of Labour Gazette* reported.

Two of the major provisions were included. They are the provision requiring the Minister of Labour to promote health, safety and welfare of workers, and that revoking Defence Regulation 59 (L.G., Nov. 1959, p. 1188).

Among other provisions effective December 1, the more important concern steam boilers, lifting excessive weights, and penalties.

The Minister may now make regulations prescribing the frequency and certain other inspection requirements relating to steam boilers. Formerly, the Act specified that every steam boiler must be inspected at least once every 14 months. No person

(formerly, young person) may now be employed to lift, carry or move excessive weights. Changes made in penalty provisions include the raising of maximum penalties for infractions of certain sections of the Act.

The more important provisions which come into operation February 1 deal with precautions concerning vessels containing dangerous liquids and confined spaces where dangerous fumes may exist.

If an inadequately covered vessel contains a dangerous liquid, any ladder, stairs or gangway over it must be at least 18 inches wide and securely fenced. New aspects of the provision relating to confined spaces liable to contain dangerous fumes or lack of oxygen concern mainly precautionary measures designed to ensure that these spaces are safe for entry without breathing apparatus.

UNEMPLOYMENT INSURANCE

1959 Annual Report, Unemployment Insurance Advisory Committee

Unemployment Insurance Fund diminishing at "alarming" rate during previous two years, Committee states. At March 31, 1959 it was barely 57 per cent of amount two years earlier. Necessity to preserve actuarial soundness of Fund stressed

The Unemployment Insurance Fund has been diminishing at an "alarming" rate during the past two years, and final figures for the current fiscal year may show a further drop, according to the annual report of the unemployment Insurance advisory Committee for the year ending March 31, 1959, which was tabled in the House of Commons on January 14.

During the year covered by the report the Fund dropped by \$244,389,000 to \$499,811,000, and during the preceding year it dropped by \$134,241,000 to \$744,200,000. Thus the Fund on March 31, 1959, was barely 57 per cent of what it had been two years earlier.

The report emphasizes the necessity for preserving the actuarial soundness of the Fund.

A new scale of contribution rates went into effect in the last quarter of 1959, however, and, regarding the prospect for the future of the Fund, the Committee quotes from the actuary's report, which said that taking the experience of the period from April 1953 to March 1958 inclusive as a guide, "contributions should about balance the benefits and the interest revenue should provide a small margin."

The actuary's statement holds that the experience of the 1953-58 period, though not necessarily a reliable guide to the future, is "a useful reference point."

For the 1959 fiscal year, total revenue is given in the Committee's report as \$234,242,000, while ordinary benefits totalled \$362,156,000 and seasonal benefit was estimated at \$116,475,000.

The report refers to a request, presented by a delegation from the National Union of Public Employees, that cities and municipalities ought to be allowed to bring under the Unemployment Insurance Act those employees who had been exempted by "Certificates of Permanency". The Committee recommended that the Commission give careful consideration to this proposal.

The report is printed in full below.

REPORT OF THE UNEMPLOYMENT INSURANCE ADVISORY COMMITTEE

For the Year Ending March 31, 1959

To His Excellency

The Governor General in Council:

1. Section 89 (1) of the Unemployment Insurance Act requires the Unemployment Insurance Advisory Committee to report not later than July 31st each year on the financial condition of the Unemployment Insurance Fund as at the preceding March 31st.

2. The Committee met on July 28th, 1959, and received from the Unemployment Insurance Commission financial and statistical statements for the year ending March 31, 1959. These reports were supplemented by further information and explanations, by a report from the Assistant Superintendent of Insurance, Department of Insurance, and by statistical data from the Dominion Bureau of Statistics.

3. From the time Unemployment Insurance was made operative, in July 1941, until the end of March, 1959, a total of \$2,321,996,387.41 has been paid out in the form of benefit to unemployed persons.

4. This large sum has been distributed in relatively small amounts. It has been the means of relieving economic distress, through unemployment, of millions of individuals and their families.

5. The Unemployment Insurance Act has proven of inestimable value.

6. The following are key figures selected from those given in the financial statements, prepared for the information of the Committee, by the Unemployment Insurance Commission:

	1959	1958	1957	1956
	(in thousands of dollars)			
Balance at Credit of Unemployment Insurance Fund	499,811	744,200	878,441	859,471
Increase or decrease in balance from previous year	—244,389	—134,241	18,971	13,187
Contributions from employers and employees	185,438	188,714	186,214	168,405
Contributions for Armed Service Personnel	49	465	605	1,060
Contributions from the Government	37,097	37,836	37,364	33,893
Amount collected in fines and penalties	47.5	46.6	45.0	29.0
Interest on Investments	21,725	23,776	26,039	25,005
Profit or Loss on Sale of Securities	L. 10,115	—	—	—
Total Revenue	234,242	250,837	250,267	228,392
Ordinary Benefit Payments	362,156	327,841	201,197	180,037
Supplementary Benefit for Classes 1 and 2	—	—	—	9,431
Seasonal Benefit (estimated)	116,475	57,237	30,100	25,736
Excess of Revenue over Expenditure	—244,389	—134,241	18,971	13,187
	(in thousands)			
Number of initial claims received	1,791	1,683	1,256	1,173
	(in dollars)			
Average Weekly Rate of Benefit	21.28	21.21	19.96	18.30
	(in thousands of dollars)			
<i>Fishing</i>				
Contributions from Employers and Employees	775	718	—	—
Contributions from Government	155	144	—	—
Benefit Payments	10,235	5,438	—	—

7. As information, please find copy of Report prepared by the Assistant Superintendent of Insurance, who is the Actuary for the Unemployment Insurance Commission (not reprinted here).

8. Attached also, is the Report presented to the Committee by the Unemployment Insurance Commission (not reprinted here).

9. The Fund has been diminishing at an alarming rate during the past two years. The experience of the past two years has proven it is essential, for security, that there be a substantial reserve in the Fund. The experience has also emphasized that actuarial soundness is essential.

10. As regards the probable situation respecting the Fund, in view of the amendments passed at the last Session of Parliament, your Committee calls attention to the following quotation from the Actuary's Report.

24. The above analysis has been largely concerned with the experience of recent years and little has been said concerning the prospective state of the fund. The adequacy of the present contribution scale (as amended) to meet the benefit costs depends upon how future experience compares with that of the base period April 1953 to March 1958 inclusive. If the experience of that base period proves to be the norm, then the contributions should about balance the benefits and the interest revenue should provide a small margin.

25. The unemployment experienced in 1958-59 was considerably above that of the base period but there are signs of improvement in 1959-60. It looks now as though the experience of 1959-60 will be better than 1958-59, although it is still running above 1957-58. There are forecasts of improving conditions but as yet no predictions of a boom. It appears that 1959-60 will show unemployment experience somewhat above that of the base period and that, together with the fact that the new contribution scale will not come into effect until

the last quarter of 1959, indicates a further drop in the fund for the current fiscal year.

26. Having in mind the current trend in economic experience, it seems that the base period of 1953-58 is still a useful reference point and that the bad experience of 1957-58 and 1958-59 is not established as the permanent level of unemployment."

11. It will be noted by the last sentence of para. 25 of the Actuary's Report that, depending upon conditions, there may be a further drop in the Fund for the fiscal year. This possibility gave the Committee concern; however the Investment Committee will no doubt give the matter careful consideration.

12. The Committee, in response to a written request, received a delegation from the National Union of Public Employees. Mr. R. P. Rintoul, National Director, was heard.

The request was that cities and municipalities be permitted to bring within the coverage of the Unemployment Insurance Act, those employees who had been exempted by "Certificates of Permanency".

The Committee decided to recommend to the Commission that the proposal be given careful consideration. Compliance would be in accord with the accepted policy of encouraging universal coverage.

13. The Commission reported there was evidence of irregularities and collusion in respect to purchase of stamps for improper use in books to show casual employment which had not occurred, in order to qualify individuals for benefit which, otherwise, they would not have sufficient contributions to claim. The Commission is making a thorough investigation and will endeavour to develop a system which will check illegal claims.

14. The Commission's recommendation to change the contribution rates applicable to piece workers in lumbering and logging was approved.

15. The Commission outlined to the Committee the plan it has inaugurated to reduce postal claims by appointing rural agents. An explanation was also given of the plans for improving "Public Relations" and "Publicity". Members of the Committee expressed the view that publicity, impressing upon employers and employees that improper claims will increase their costs, would be very effective. The Committee desires to express approval of the

Commission's plans and recommends Government encouragement.

Respectfully submitted,

A. MACNAMARA,
Chairman.

Ottawa, July 29, 1959.

Members of Advisory Committee:

Alan Y. Eaton
James Hunter
H. Shoobridge
T. C. Urquhart
A. Andras
A. A. Hutchinson (Alternate)
Roger Mathieu
S. A. Stephens

Monthly Report on Operation of the Unemployment Insurance Act

Claimants totalled 417,500 on November 30, more than month earlier but slightly less than year earlier.* Initial and renewal claims for benefit received during month numbered 278,600, higher than both month-earlier and year-earlier totals

Claimants† for unemployment insurance benefit numbered 417,500, of whom 5,300 were seasonal benefit claimants, on November 30, 1959. This was nearly 67 per cent higher than the total of 250,600 on October 30, 1959 but slightly below the total of 419,200 at the end of November 1958, when 4,500 were claimants for seasonal benefit.

On November 30, 1959, males comprised 74 per cent of the total, and they accounted for 86 per cent of the increase in claimants since October 30. On November 28, 1958, males made up the same percentage of the total as on November 30, 1959, although in the earlier year the Prairie Provinces were not included in the calculation.

Initial and renewal claims for benefit during November 1959 numbered 278,600, which was 85 per cent more than the 151,200 in the previous month and 13 per cent more than the 246,600 in November 1958. The increase between October and November 1958 was slightly less than 30 per cent.

The average weekly number of beneficiaries was estimated at 209,600 for November and 159,800 for October 1959, compared with 262,500 for November 1958.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant factors other than numbers, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

The average weekly benefit payment in November 1959 was \$20.85, in October it was \$20.51, and in November 1958 it was \$21.19.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for November 1959 show that insurance books or contribution cards had been issued to 4,743,630 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

At November 30, 1959, employers registered numbered 324,767, an increase of 359 since October 31.

Enforcement Statistics

During November, 5,824 investigations were conducted by enforcement officers across Canada. Of these, 3,514 were spot checks of postal and counter claims to verify

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

the fulfilment of statutory conditions and 149 were miscellaneous investigations. The remaining 2,161 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 196 cases, 45 against employers and 151 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,315.*

Unemployment Insurance Fund

Revenue in November 1959 totalled \$27,-823,610.54 compared with \$23,357,196.24 in October and \$19,045,678.09 in November 1958. Benefits paid in November 1959 totalled \$17,479,376.35 compared with \$13,-761,554.32 in October and \$21,099,485.80 in November 1958. The balance in the fund on November 30, 1959, was \$475,178,655.52; on October 31 it was \$464,834,421.33 and on November 30, 1958, \$641,880,241.89.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB 1704, December 2, 1959

Summary of the Main Facts: The claimant, married, 47 years of age, filed a renewal application for benefit on May 12, 1959, and stated therein that he had worked as a salesman on a commission basis in the furniture department of a Vancouver department store from January 12, 1959 to May 2, 1959, when he became separated from his employment for the following reason:

Laid off. During the labour dispute, while the store was closed, I made arrangements to go to Prince George to see about managing a business. I left Vancouver 3 May. I was delayed a week and returned on 9th May. I was told that I had been replaced due to the pressure of business. Unemployed since, available and capable.

The employer was asked by the local office of the Unemployment Insurance Commission to comment on the above statement of the claimant. He replied as follows:

Claimant failed to report for work during labour dispute with "office employees". Store reopened Friday May 1st with only 3 out of 8 salesmen reporting for work. (The claimant)...one of the 3...was aware of this situation, said nothing of proposed absence, and again failed to report for work on May 3, leaving us with only 2 men. (The claimant's wife) phoned, but this was of no use to us under the circumstances.

The insurance officer disqualified the claimant from receipt of benefit for the period from May 10, 1959 to June 13, 1959 inclusive, because, in his opinion, he had lost his employment by reason of his own misconduct (section 60 (1) of the Act).

On May 29, 1959, the claimant appealed to the board of referees on the following grounds:

1. I was verbally discharged from Forst's Ltd. E. Hastings St. branch by the manager—on 4 May 1959—his given reasons being:

(a) My absence from employment during the week ending 2 May 1959 and

(b) My sales during employment were not up to their desired level.

During the six week strike at Forst's store ending on 30th April, I made arrangements to go to Prince George, B.C., on business. Having worked 1st and 2nd May, I left for Prince George on the 3rd May, the arrangement having been made prior to the end of the strike. My wife advised Forsts on my behalf on Mon. 4th May and was told it was quite alright, providing I returned to work on Thurs. 7th May. Owing to transportation difficulties, I was delayed until Sat. 9th May. My wife then informed me that (the manager) had advised her that my services had been terminated by him... I personally phoned him on Monday 11th May (and) explained my reasons for absence, but he stated they had already filled my position and that my stamped Insurance Book had already been mailed to me. I re-offered my services, being available for work, but was refused, mainly, (the manager) stated, for reason (b) above."

The claimant stated also that, following his dismissal, he had secured employment as assistant manager of the B.C. Co-operative store in Prince George, which he would commence on June 1, 1959.

The claimant was represented by his wife at the hearing of his case by a board of referees in Vancouver on June 12, 1959. The board, by a majority decision, dismissed the appeal and maintained the disqualification which had been imposed by the insurance officer and in so doing stated:

It is noted that the claimant was absent without permission and did not leave town until after the labour dispute had ended. Regardless of his statement of having made arrangements to go to Prince George, B.C., during the six weeks' strike at Forst's, it was not established that he had an assurance of other employment at that time...

The dissenting member of the board based his disagreement with the majority decision of the board chiefly on the grounds that the claimant had reason to expect that he would obtain employment in Prince George, which he pointed out materialized following the claimant's dismissal by Forst's Limited and that the Umpire "has ruled on

*These do not necessarily relate to the investigations conducted during this period.

(Translation)

numerous occasions that if a person has a genuine prospect of employment elsewhere when they leave their present position and obtain this work, that it constitutes just cause within the meaning of the Act for leaving their former employment.”

The claimant appealed to the Umpire on August 3, 1959, contending that the main reason for his dismissal was that his sales were below the volume required by the company.

Considerations and Conclusions: The question before me to decide is not whether the claimant had a good reason for not reporting for work on the day he was expected to do so, but whether he duly informed his employer of his proposed absence.

I cannot understand why the claimant did not seek leave of absence from the employer in advance of his trip to Prince George. If in his mind he had good reasons for not doing so, I nevertheless feel that he was far from being prudent in that he must have known full well that he was leaving himself open to dismissal.

The record indicates that the claimant had made arrangements to go to Prince George “prior to the end of the strike,” that is, prior to April 30, 1959. Therefore, he obviously knew, or at least had a good idea as far back as that time, that he intended to leave for Prince George on May 3. As his absence did not stem from an unforeseen circumstance he should have, in my opinion, notified the employer of his intended trip not later than May 2.

I would like to point out to the claimant that, while an employee has certain rights under a contract of service, he also has obligations, one of which is to adhere to the just and reasonable rules of his employer.

As to the claimant’s contention that, actually, the main reason for his dismissal was that his sales were below the volume required by the company, there is no statement from the employer to that effect in the file and, apparently, the claimant was unable to satisfy the board of referees, including the dissenting member, that his contention was true. Therefore, in accordance with the practice followed in such cases, I do not think that I should interfere with the decision of the board when it rests on a question of credibility of the evidence.

Under the circumstances, I consider that the claimant did lose his employment by reason of his own misconduct within the meaning of section 60 (1) of the Act and I confirm the majority decision of the board of referees.

The claimant’s appeal is dismissed.

Summary of the Main Facts: The claimant, a married man, 26 years of age, residing at St. Eugène de Ladrière, Rimouski County, Quebec, had filed an initial application for benefit on March 23, 1959. At that time he had registered for employment as a lumberjack and had declared that he had been employed by the Price Brothers Company Limited in that capacity from November 20, 1958 to March 21, 1959, when the camp was shut down.

On April 8, 1959, the claimant had stated in the “Farm Questionnaire” that he owned a farm of approximately 120 acres situated two or three miles from the Price Brothers’ timber limits, the nearest place where there was a likelihood of his obtaining work; that he lived on the farm and that he considered agriculture his main means of livelihood. The previous year, 30 acres of the farm were under cultivation, 20 acres were in pasture, and the remainder were in bush.

He added that his work on the farm would prevent him from accepting suitable employment during the summer but not in the winter, that he could not leave from May 1 to October 1 because he was farming his land, but that from October 1 to May 1 he was always available to “do any work, provided he could return to the farm every day to take care of his livestock” (8 cows, 12 pigs, 1 horse, 2 sheep and 10 chickens). Lastly, he stated that no one helped him on the farm.

A record of the claimant’s contributions showed that he had in all 15 weeks of contribution during the year preceding the date of his claim.

On April 13, 1959, the insurance officer disqualified the claimant from receipt of benefit as from March 22, 1959 pursuant to Sections 54 (1) and 57 (1) of the Act and Regulation 154 (3) for having failed to prove that he was unemployed, his main occupation being farming.

The claimant appealed to the board of referees on May 16, 1959 and said:

I am sending you the letter . . . telling me that I had stated in the farm questionnaire that I could not accept employment from April 5 to September 22, which is not true. I can work at any time, from October 1 to May 20 and from June 15 to July 15. If I can give you any further information, you have only to ask me the questions and I will answer them to the best of my ability. What I am telling you is that my work on my farm does not keep me occupied full time and that I can accept work outside and still carry on the work I have to do on my farm.

The claimant also produced three documents certifying that he had done farm work for other persons from September 8 to September 13, 1958, and from October 12 to 31, 1958 and from November 3 to 9, 1958. One of the documents certified also that he had been engaged in construction work from August 7 to 16, 1958.

The board of referees heard the appeal on June 18, 1959. The claimant was not present at the hearing. The board unanimously confirmed the decision of the insurance officer.

On June 29, 1959, the claimant sent a letter to the local office of the Commission which reads in part as follows:

(1) I cannot be considered a farmer, because the acreage of my farm under cultivation, the annual income, and the dairy herd are not large enough to support a family.

(2) In view of the first condition, I have to go and work outside. Even if I do not have much land under cultivation I must state that during seeding time, in early June and during haying time and the grain harvest, July and September, I cannot be considered available, since I am occupied in this work.

(3) During the off-season, I can accept employment at any time, even if I must return home from time to time, not daily, but once every three weeks or month, to give some supervision to my herd.

(4) My wife helps out in my absence; there are some neighbours who can easily do that work on the farm.

(5) If I said "daily" on my report, it was because I am accustomed to working for Price Brothers, which is situated close to my place, and the employees travel back and forth morning and evening, thus avoiding expenses for meals.

On August 11, 1959, l'*Union catholique des cultivateurs* (Catholic Union of Farmers) of Rimouski appealed to the Umpire. In the appeal it was explained that the claimant worked more than 20 weeks away from his farm during the year preceding his claim, that the claimant misunderstood the question put to him by the local office, and that it was possible for him to accept employment at any time in the year except in early June, during the seeding time, in July, during the haying, and at the end of August to the beginning of September, during the harvesting.

Considerations and Conclusions: Unemployment Insurance Regulation 154 (3) contains a special provision under which any person engaged in farming on his own account may be considered unemployed during the farming off-season (approximately from the beginning of October to the end of March) if such person, during the off-season, does no work on his farm or devotes so little time to farming that he would not be prevented from accepting full-time employment.

The conditions mentioned in that provision apply, however, only to the farming off-season. I understand by that, that even if a farmer could establish that each year for a number of years he had worked elsewhere during the entire off-seasons, this could not generally serve to prove that he should be considered to be unemployed during the farming on-season if he himself must, other than in his spare time or in a similar manner, manage his farm or be present on it to perform or supervise the performance of the essential farming operations such as tilling, seeding, hay-making, harvesting, etc. Under these conditions, in fact, he would be available during the entire on-season only intermittently and occasionally, and also for jobs of a very short duration; therefore he would be so little available that he could not be considered to be such within the meaning of the Act, that is, to be available in a reasonably regular and continuous manner.

I, therefore, consider that a farmer whose presence on his farm is absolutely required to perform or supervise the performance of the aforementioned operations is not considered as unemployed. Furthermore, I consider that ordinarily there is no way that he can take advantage of the provisions of subsection (2) of Regulation 154, because the supervision or performance of these operations under such conditions would necessitate his devoting more time than the minimum required by the said subsection.

Now the evidence establishes that the claimant in the present case had to be present on his farm to perform or supervise the performance, during the on-season, of the seeding, the hay-making and the harvesting operations. I am therefore of the opinion that he cannot be considered as unemployed within the meaning of Regulation 154 (1) as from April 5, 1959 and that he was rightly disqualified from receipt of benefit from that date.

As for the period of the off-season, that is from March 22 to April 4, 1959 inclusive, I believe that the claimant has established satisfactorily that he fulfilled the conditions of subsection (3) of the said Regulation, because the evidence on file shows that he devoted so little time to farming during that period that it did not prevent him from working full time for four months during the off-season in question.

Except for the period from March 22 to April 4, 1959, I decide to confirm the unanimous decision of the board of referees and to dismiss the appeal of the Catholic Union of Farmers of Rimouski.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during December

Works of Construction, Remodelling, Repair or Demolition

During December the Department of Labour prepared 139 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 138 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in December for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Defence Production	89	\$340,747.00
Post Office	14	183,063.05
RCMP	9	173,383.95

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during December

During December the sum of \$12,773.14 was collected from 14 contractors for wage arrears due their employees arising out of the failure of the contractors, or their sub-contractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 384 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during December

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Chatham Ont: Whaling & Sons Ltd, installation of air conditioning equipment, Entomology Laboratory. *Outlook Sask:* Pedersen Construction Ltd, construction of west access road, South Saskatchewan River Project. *Prince Albert National Park Sask:* P Pidskalney & B Paulsen, construction of earthfill dam, Emma Lake Project. *Mesachie Lake B C:* W Burak & Co, construction of Forest Biology Field Laboratory, Cowichan Lake Forest Experimental Station. *Summerland B C:* Pollock & Taylor, extension to Processing Laboratory, Research Station.

Central Mortgage and Housing Corporation

Petawawa Ont: Dell Construction Co Ltd, construction of 400 housing units & ground services (DND 13/58, Phase 11). *Wallaceburg Ont:* Triple 'R' Contractors, *pumping out of septic tanks & installation of field tile.

Department of Citizenship and Immigration

Christian Island Indian Agency Ont: Halliday Co Ltd, construction of three-bedroom staff residence, Christian Island RC day school. *Kwawkwalth Indian Agency B C:* McGinnis Bros, installation of fire escapes, Alert Bay IRS.

Defence Construction (1951) Limited

Dartmouth N S: Universal Electric, Division of Univex Electrical Construction & Engineering Ltd, installation of apron floodlighting, HMCS *Shearwater*. *Greenwood N S:* New Brunswick Wire Fence Co Ltd, security fencing, armament area, RCAF Station. *Halifax N S:* Universal Electric, Division of Univex Electrical Construction & Engineering Ltd, installation of electrical distribution system, Willow Park. *St Johns Que:* Lemieux & Frere Inc, construction of 10-cell guard house, class 2, RCAF Station. *Valcartier Que:* Bergerville Estates Ltd, construction of RC teaching sisters' residence. *Clinton Ont:* The Ellis Don Ltd, construction of foundations for radar training tower & passageway, RCAF Station; Lincoln Iron Works Ltd, supply & erection of structural steel for radar training tower & passageway, RCAF Station. *Downsview Ont:* Carson Electric Co, improvement of existing lighting installation, RCAF Station. *Ottawa Ont:* John Inglis Co Ltd, *supply & installation of boiler & auxiliary equipment in extension of heating plant, DRTE, Shirley Bay. *Toronto Ont:* Runnymede Steel Construction Ltd, supply & erection of structural steel & steel joists, armoury; Redfern Construction Co Ltd, construction of armoury. *Cold Lake Alta:* Conniston Construction Co Ltd, clearing, grubbing, seeding & construction of aerodrome drainage.

Building and Maintenance

Kingston Ont: Gordon Barr Ltd, renovations to pumphouse & construction of new sewers, Fort Frontenac. *Petawawa Ont:* J H Turvey Electric Ltd, rewiring & relighting of drill hall (Bldg O-9). *Uplands Ont:* Becker-Joule Ltd, replacement of ashpit doors on boilers, RCAF Station.

Department of Defence Production

Dartmouth N S: James F Lahey Ltd, painting with fire retardant paint hangar "B", RCN Air Station; A H Langlois, interior painting of 30 PMQs, Albro Lake Naval Radio Station. *Noranda Que:* Andre Caron Ltd, rewiring & relighting of DND Bldg. *St Johns Que:* J & E Hall (Canada) Ltd, modifications to refrigeration equipment, RCAF Station. *Camp Borden Ont:* Stephens-Adamson Mfg Co of Canada Ltd, supply & installation of endless coal conveyer belt, RCAF Station. *Petawawa Ont:* Ernest Hammel, painting interior of bldgs in "H" Compound. *Edmonton Alta:* Haddow & Maughan Ltd, installation of control equipment in Central Heating Plant C-4, Griesbach Barracks. *Kamloops B C:* Western Builders & Contractors, excavation, construction of concrete foundation, floor slab & apron & erecting one "Butler" type rigid steel bldg, RCNAD. *Patricia Bay B C:* W R Menzies & Co Ltd, cleaning underground gas tanks, supply & installation of new pipe line, valves etc, truck loading dispenser & filter dehydrator, Marine Section.

National Harbours Board

Montreal Que: Industrial Maintenance Ltd, supply & erection of traffic sign supports on Jacques Cartier Bridge. *Vancouver B C:* Howe Construction Co Ltd, construction of office bldg, Centennial Pier; British Columbia Bridge & Dredging Co Ltd, dredging, Lapointe Pier.

Department of Northern Affairs and National Resources

Yellowknife N W T: Yukon Construction Co Ltd, installation of heating, ventilation, plumbing & drainage systems, Vocational Training Bldg.

quarters. *Big Valley Alta*: G H Roberts Construction Ltd, construction of post office. *Didsbury Alta*: Bird Construction Co Ltd, construction of federal bldg. *Edmonton Alta*: Christensen & Macdonald Ltd, construction of UIC Bldg. *Two Hills Alta*: Bird Construction Co Ltd, construction of RCMP detachment quarters. *Nakusp B C*: Mackie & Hooper Construction Co Ltd, construction of post office. *Port Alberni B C*: The Fraser River Pile Driving Co Ltd, reconstruction of assembly wharf. *Steveston B C*: Vancouver Pile Driving & Contracting Co Ltd, construction of ice shear boom & breakwater. *Uclulet West B C*: Tom Gibson Contracting, wharf repairs. *Vancouver B C*: E H Shockley & Son Ltd, alterations to examining warehouse for Department of Public Printing & Stationery. *Victoria B C*: O Pedersen, alterations to 1st, 2nd & 3rd floors, Belmont Bldg, for Department of National Revenue, Taxation Branch. *Whitehorse Y T*: Dawson & Hall Ltd, construction of four-unit apartment bldg & federal housing for 1959-60.

Contracts Containing the General Fair Wages Clause

St John's Nfld: Canadian National Railways, docking & repairs to Tug "Pugwash". *Wood Islands P E I*: The J P Porter Co Ltd, dredging. *Halifax N S*: Halifax Shipyards, Division of Dominion Steel & Coal Corporation, construction & delivery of shovel dredge. *Pictou N S*: Ferguson Industries Ltd, docking & repairs to dredge "Pownal II". *Port Hawkesbury N S*: Port Hawkesbury Marine Railway Co Ltd, repairs to Tug "Canso". *Edmundston N B*: Omer E Martin, installation of tower clock, federal bldg. *Hull Que*: Sandy Hill Hardware, interior painting, New Printing Bureau. *Joliette Que*: Maurice Gougeon, repairs to parapet, federal bldg. *Montreal Que*: B B Electric Co Ltd, lighting improvements, Customs Examining Bldg. *Arnprior Ont*: A Lanctot Construction Co, structural repairs, Civil Defence College; J C McManus & Sons, interior painting, Civil Defence College. *Oshawa Ont*: J McDonald & Son, general alterations, federal bldg. *Ottawa Ont*: A C McDonald & Sons, electrical repairs, "B" Bldg, Cartier Square; J R Statham, general alterations, Centre Block, Parliament Bldgs; A K Lippert, supply of corridor directional signs for Centre Block, Parliament Bldgs; Robert Strang, general redecorating, Centre Block, Parliament Bldgs; J G Bisson Construction & Engineering Ltd, supply & installation of new electrical fixtures, Centre Block, Parliament Bldgs; F G Bowie & Sons Ltd, electrical repairs, No 8 Temporary Bldg; Louis G Fortin, general alterations, No 8 Temporary Bldg; Shore & Horwitz Construction Co Ltd, general alterations, 30 Lydia St; Louis G Fortin, general alterations, RCMP Bldg; A McWade, renovations, Connaught Bldg; Roger E Boivin, interior painting, Mines Bldg. *North Vancouver B C*: The Burrard Dry Dock Co Ltd, construction of diesel-electrical drag-suction hopper dredge.

St. Lawrence Seaway Authority

Allanburg Ont: Dominion Bridge Co Ltd, replacement of counterweight ropes, Bridge 11, Welland Canal. *Port Colborne Ont*: Dominion Bridge Co Ltd, replacement of counterweight ropes, Bridge 20, Welland Canal. *St Catharines Ont*: Schwenger Construction Ltd, modification of mitre gate sills, Welland Canal. *Welland Ont*: Dominion Bridge Co Ltd, replacement of counterweight ropes, Bridge 14, Welland Canal. *near Welland Ont*: Cameron & Phin Ltd, replacement of deck on lift span, Bridge 18, Welland Canal. *Port Weller, St Catharines, Thorold & Homer Ont*: Ruliff Grass Construction Co Ltd, replacement of wire ropes on five fenders & one land rope at locks, Welland Canal. *Thorold, Merriton & St Catharines Ont*: Aiken & McLachlan Ltd, channel improvements, miscellaneous filling & grading, & closed conduit.

Department of Transport

Goose Bay Labrador: E S Martin Construction Ltd, construction of nine double staff dwellings, single men's living quarters & related work, Goose Airport; Terminal Construction Division of Henry J Kaiser Co (Canada) Ltd, construction of by-pass & outfall sewers, septic tank syphon chamber & related works; Terminal Construction Division of Henry J Kaiser Co (Canada) Ltd, provision of meter chamber & associated piping. *Corner Brook Nfld*: Quemar Co Ltd, construction of remote transmitter & receiver bldg. *Torbay Nfld*: Allied Construction Co Ltd, installation of lighting system, car parking area. *Halifax N S*: Halifax Shipyards, Division of Dominion Steel & Coal Corp, *construction of double ended automobile & passenger ferry for service between Cape Tormentine N B & Borden P E I; Bryant Electric Co Ltd, installation of power & control cables for AASR, International Airport; Trynor Construction Co Ltd, clearing for control tower visibility, International Airport. *Ancienne Lorette Que*: Arno Electric Reg'd, construction of temporary boiler house, Quebec Airport. *Fox River Que*: Arthur Lafontaine, construction of double staff dwelling & related work. *Montreal Que*: The Highway Paving

Co Ltd, additional development, Airport; Chas Duranceau Ltd, resurfacing & repairs to existing airport roads & parking areas. *Riviere du Loup Que*: F Belanger & J L Guerette Enr, installation of lighting facilities, Airport. *Seven Islands Que*: F Belanger & J L Guerette Enr, construction of extension to Air Terminal Bldg. *Fort William Ont*: Harry Adelman Construction Ltd, construction of two NDB Bldgs, Lakehead. *Kenora Ont*: Heath Construction Ltd, construction of three double staff dwellings, one single staff dwelling & related work. *Malton Ont*: J A Watt & Co Ltd, primary power revisions, International Airport; York Steel Construction Ltd, supply & erection of structural steelwork, aeroquay No 1, Air Terminal Bldg, International Airport; Canadian Safety Fences, construction of guard fence, International Airport. *Windsor Ont*: Horton Steel Works Ltd, installation of steel elevated storage tank, concrete footing & vault, etc, Airport. *Saskatoon, Hague & Blucher Sask*: W C Wells Construction Co Ltd, construction of non-directional beacon bldgs at Hague & Blucher & back beam marker at Saskatoon. *Kimberley B C*: A E Jones Co Ltd, construction of single dwelling, Airport. *Sandspit B C*: Dyck Construction Co Ltd, construction of single men's quarters & related work. *Terrace B C*: Stange Construction Co Ltd, construction of emergency power house. *Vancouver B C*: Beaver Construction Co Ltd, alterations & additions to air services bldg, Airport. *Williams Lake B C*: Marpole Construction Co Ltd, construction of five double staff dwellings, one radio range bldg, one transmitter-power house & related work.

U.S. Social Security Payments Began 20 Years Ago

The first monthly benefit cheques issued under the United States Social Security Act were mailed out 20 years ago last December. In the 20 years that payments have been made, more than \$50 billion has been paid.

At the end of 1959, cheques were being mailed to 13,750,000 persons. Monthly payments were amounting to \$850 million.

The Act was passed in 1935 and the first benefits became payable for the month of January 1940. Since then, 21 million beneficiaries have received \$50.4 billion in benefits.

Retired workers and their dependents have received \$38.1 billion; survivors of workers who have died, \$11.6 billion; disabled workers aged 50 to 65 and their dependents, about \$750 million. Lump-sum payments to survivors have totalled \$1.2 billion.

Railway Board of Adjustment No. 1

(Continued from page 173)

Meaford, Creemore and return. On the return trip, with the plow not operating, the crews were required to pick up loaded freight cars at Collingwood.

On another occasion the crew had to set off the plows at Collingwood and handle a train to Glen Huron, after which it picked up more loaded cars and the plows at Collingwood to return to Allandale.

The firemen submitted claims for separate days for handling the revenue freight. The company denied the claims and paid the crews on the basis of continuous time.

The Brotherhood contended that the claims should be paid because the firemen were used in service other than that for which they were called. It cited an article in the current working agreement that states:

Firemen or helpers coming in from snow plow trip will not be required to do any switching at terminals, except to put their own train away if no yard engine is immediately available. At intermediate points enroute crews will not do any switching, except when necessary to move cars in order to plow out a track or tracks.

The company contended that the rule cited explicitly prohibits switching in specified circumstances and on none of the occasions was there a violation of the conditions mentioned. It also argued that the second part of the rule would apply only when the snowplows were in use.

It then cited a rule that provides for payment at the highest rate applicable when crews perform more than one class of road service in a day or trip, with a minimum of 100 miles for the combined service. This rule, the company contended, "clearly establishes the company's right to use firemen in more than one class of road service in a day or trip."

In its decision, the Board referred to Case No. 708 (L.G., Jan. 1959, p. 56). In view of the decision in that case, the Board ruled that the claims of the three firemen be settled on the basis of the difference between two separate straight time days and the payment already made. It also reaffirmed its earlier decision.

Employment in Canada in 1959

(Continued from page 144)

The trade, finance and service industries continued to expand during the year.

The increase in employment, combined with a markedly lower rate of expansion in the labour force, resulted in a much lower level of unemployment. In 1959, labour demand was in approximate balance with supply in as many as 18 areas during the period of greatest activity, in September. In 1958 a balanced situation was reached in no more than 5 areas. On average, 8 areas had a substantial labour surplus in 1959 compared with 13 in 1958. In the summer months a number of occupational shortages were reported, including welders, tool makers, draughtsmen and certain types of skilled textile and construction workers.

Ontario—The year was marked by a strong advance in economic activity, particularly during the first six months. The chief gains were in manufacturing, in which many industries reflected the general strengthening in demand for automobile, plant equipment, farm implements and structural steel. The resulting increase in employment and income were supported by the continuing expansion of service producing industries.

Employment increased by 50,000 or 2.4 per cent in 1959, in sharp contrast to 1958, when average employment fell for the first time in the postwar period. The rise in 1959, however, was smaller than that of 1957 and less than half the increase of 1956. Increased demand for labour was reflected in a longer work-week, average hours in manufacturing for the first 10 months rising from 40.3 in 1958 to 40.8 hours.

Employment in Ontario

January-October

(1949=100)

	1959	1958
Industrial Composite	121.3	119.7
Forestry	57.0	62.2
Mining	165.5	159.5
Manufacturing	110.5	109.3
Rubber products	108.2	99.7
Textile products	79.2	78.7
Iron and steel products	111.3	101.5
Transportation equipment	110.0	124.5
Aircraft and parts	273.5	520.8
Motor vehicles	106.0	99.2
Railroad and rolling stock equipment	64.0	80.5
Construction	133.7	134.0
Trade	140.2	137.0
Service	144.2	140.1

Employment advanced most rapidly during the early part of the year. After June the total number of persons with jobs, seasonally adjusted, fluctuated unevenly and was not much higher in December than at mid-year. In part, this appeared to be only a temporary lull, caused by the steel strike in the United States and the resulting shortage of some imported components. A more basic development, however, was the downward trend in house-building, which halted the employment expansion in construction and had a noticeable effect on the output of plumbing supplies and other construction materials.

Labour income in the region rose from an average monthly figure of \$576 million in 1958 to \$622 million in 1959 (first 10 months). This increase (8 per cent) was exceeded only in 1956 and was one percentage point greater than the 1953-58 average.

Although the trend was generally rising, manufacturing employment as a whole made rather slow progress, especially in the latter part of the year. The industries leading the recovery were in the iron and steel products group, particularly primary steel and machinery manufacturing. Motor vehicles, rubber products and other associated industries also contributed substantially to the over-all gain. It should be noted, however, that of all the principle manufacturing industry groups, only iron and steel products had a higher employment level than the previous peak in 1956. The aircraft industry employed about 12,000 workers, some 10,000 fewer than the average of the previous year. Other important industries with lagging employment included the manufacture of railway rolling stock and heavy electrical equipment.

Forestry employment was down from the two previous years, mainly because of the low level of pulp cutting in the spring. Beginning in October the demand for pulp cutters showed a substantial improvement. Although final figures are not yet available, reports from most northern areas of the province indicate that the volume of work in pulpcutting camps this winter has been much higher than during the past two winters.

Mining held up at about the same level as in 1958, although the completion of development work on new uranium mines resulted in some decrease towards the end of the year. The average employment level was 10 per cent higher than 1957 and 19 per cent higher than 1956. Most of this increase resulted from the heavy manpower

requirements in 1959 in uranium. The outlook for uranium producers was dimmed by prospective declines in exports to the United States, although at the year-end substantial layoffs were not anticipated for some time.

Construction employment was at about the same average level as in 1958. As in other regions, the volume of new housing declined steeply in the early months of the year and recovered partially in the fall as a result of the direct lending program of CMHC. New units started in urban centres totalled about 40,000 for the year, 16 per cent fewer than in 1958. Non-residential construction was generally more active than last year. This was particularly true of road and highway construction, which employed about 10 per cent more workers than in 1958. Commercial and institutional building also advanced moderately during the year.

Unemployment in the region declined from last year's level but was still high in comparison with any other year. The number of persons without jobs and seeking work averaged 4.2 per cent of the labour force compared with 5.0 per cent in 1958 and 3.1 per cent in 1957. The improvement was reflected at the local level: of the 34 markets in the region, as many as 27 had a balanced labour-demand situation at the height of activity last fall, as opposed to only 21 in 1958. A heavy demand for workers in skilled and professional occupations was reported fairly frequently, although these labour shortages did not persist for any great length of time. During the low period of activity between January and March 1959, the number of areas with a substantial surplus of labour did not exceed 18, compared with 22 in the same period of 1958.

Prairie—Aside from seasonal movements, employment in the Prairie region was relatively stable in the latter part of 1959, following a sharp rise early in the year. The gain took place entirely in non-agricultural industries, where 1959 employment averaged 6.3 per cent above the 1958 level. In agriculture the long-term employment decline continued, the number working on farms showing a drop of 4.1 per cent from the previous year. Total employment registered a 3.2 per cent gain from 1958 and labour income increased by about 9 per cent. The strengthening employment situation brought about a drop of almost 20 per cent in the number of persons without jobs and seeking work.

All major non-agricultural industries participated in the employment advance. A large year-to-year gain occurred in construction employment, amounting to almost

20 per cent near the end of the first quarter of 1959 and roughly 10 per cent through the summer and fall. Commercial building was up from 1958 during the entire year, but housebuilding fell from year-earlier levels after the first quarter. Housing starts were 7 per cent fewer in the first 11 months than in the same period of 1958. Large construction projects underway in the region included the South Saskatchewan River Dam and mining and hydro developments at Thompson and Kelsey in northern Manitoba.

The employment expansion in manufacturing that was interrupted in 1958 was resumed in 1959; the value of factory shipments in the first 10 months went up by 8 per cent from the corresponding period in 1958. By late 1959 the number working in the industry was about 5 per cent higher than a year earlier and well above the 1957 level. Manufacturers of iron and steel products, especially suppliers for industries participating in the exploitation of the primary resources of the region, showed the most notable expansion in employment. Steel mills and pipe manufacturing plants under construction in Saskatchewan and Alberta, which will come into production during the year, highlighted the expansion of the manufacturing industry.

Reflecting the increase in labour and other income, trade and services both employed more than 5 per cent more personnel in 1959 than in 1958. Retail sales in Manitoba, Saskatchewan and Alberta rose 8.4 per cent, 3.8 per cent, and 4.9 per cent, respectively, in the first 11 months of 1959 compared with the same period in 1958. Sales of farm equipment rose 30 per cent above the 1958 level.

Production of minerals rose in value by 6.0 per cent from 1958. The declines of the past few years in coal mining were largely checked by exports to Japan and increased utilization of lignite in southeastern Saskatchewan. Although little effect on employment was evident, except in associated industries, crude oil production in the first nine months went up from the same period in 1958 by more than 12 per cent and natural gas production increased by 40 per cent. Both demand and prices for zinc and copper were more firm in 1959, and nearly twice as much iron ore was mined and shipped from the Steep Rock mining area west of Lake Superior. The potash mine near Saskatoon was in production but it was found necessary to suspend operations late in the year for repairs.

Modest employment increases occurred both in transportation, including storage and communication, and in establishments

providing financial, real estate, and insurance services for the region. The work force in the forestry industry, both in northern Alberta and in the Lake Superior area, expanded in response to improved demand for lumber and pulp and paper.

Prairie farmers experienced a difficult year. Drought conditions early in the season were followed by excess precipitation at harvest time so that some of the crop, which was heavier than the long-term average but lighter than the average for the past 10 years, remained unharvested when winter set in. Early estimates of cash income indicated a decline of about 4 per cent from 1958. Most of this decline occurred in the fourth quarter and was greatest in Saskatchewan, where it amounted to 6 per cent for the year. Cash income was at a higher level than in 1957, however.

Pacific—Improved levels of economic activity in 1959 in the Pacific region raised average non-agricultural employment 4.3 per cent from 1958. This was considerably higher than the 3.5-per-cent increase for Canada as a whole. The number working on farms remained fairly constant. Labour income rose about 8 per cent and the number of jobless dropped by one-quarter from the year before. The year-to-year growth of 2.4 per cent in the labour force was smaller than that of the previous year but larger than the Canadian average. A temporary slowdown in employment occurred in late summer as a result of a strike of 27,000 logging and sawmill workers on the coast and on Vancouver Island.

A strong demand for pulp and paper from export markets throughout the year and a high rate of lumber production in the first half lent strength to the economy of the region. The increase in the value of pulp and paper production from 1958 was estimated at 13 per cent; plywood production was about equal in both years. Although lumber production was disrupted by the woodworkers' strike, the strike coincided roughly with the period of greatest fire hazard when woods operations are frequently closed down, so that lumber production for the year as a whole was down only moderately from the 1958 total.

Manufacturers supplying the forestry industry benefited from the high levels of activity in the woods. Weaknesses persisted throughout the year in shipbuilding but improvement in food-processing, along with the substantial increase in wood-using manufactures, raised the value of total factory

shipments in the first 10 months to 3.5 per cent above the same period in 1958. Employment in manufacturing varied from about 2 to 5 per cent higher than a year earlier, in the months not affected by the woodworkers' strike. Employment in transportation fluctuated with the changes in lumber production and averaged somewhat lower for 1959 than for 1958.

A heavy schedule of industrial and commercial building maintained construction employment roughly 10 per cent above the year-earlier levels after the first few months of 1959, in spite of a drop in housebuilding. Housing starts in the first 11 months in centres of 5,000 population and over were down about 20 per cent from the same period in 1958.

The value of minerals produced moved ahead 4.1 per cent from 1958; iron, nickel, copper, and silver mining made gains. Industrial material also shared in the increase but both gold and coal production declined by roughly 10 per cent. The petroleum industry experienced a large expansion in exploration and development activity, especially in the north, following a very encouraging discovery in the summer. By year-end, the number of drilling rigs in operation was one-third higher than a year earlier and geological crews in the field were about three times as numerous. Employment in minerals was relatively stable throughout 1959 compared with an almost continuous decline throughout 1958. After mid-year in 1959, the employment level was higher than a year earlier although still well below 1957.

In the first 11 months retail sales were 4 per cent ahead of the corresponding period of 1958, resulting in an improvement of about 3 per cent in trade employment from the year-earlier levels. The numbers engaged in finance, real estate, and insurance establishments also gained 3 to 5 per cent from the equivalent months of 1958. Only a slight gain was registered by the services industry from the year before, chiefly because of inclement weather in the tourist season.

Both employment and cash income in agriculture were virtually unchanged from 1958. The landed value of fish caught in the initial 11 months of 1959 was reduced by about one-third from the same period of 1958 as a result of the change from a peak to an off-year in the 4-year sockeye salmon run. The salmon catch was further reduced by a two-week strike at the height of the season.

PRICES AND THE COST OF LIVING

Consumer Price Index, January 1960

The consumer price index (1949=100) declined 0.3 per cent from 127.9 to 127.5 between December 1959 and January 1960.* The latest index is 1.1 per cent above the January 1959 index of 126.1.

The drop in the total index resulted from a lower food index combined with the effects of January sales in clothing and homefurnishings. Shelter was up fractionally while the other commodities and services component was unchanged.

The food index declined 0.7 per cent from 122.4 to 121.6 to stand below the January 1959 index of 122.3. Egg prices recorded a further substantial decrease of 6 cents per dozen; grade "A" large averaged 42 cents. Oranges, orange juice, and lettuce were lower and beef and pork prices also eased slightly. Chicken and lamb were higher, fresh vegetables recorded seasonal price increases and canned vegetables registered slight advances.

The clothing index decreased 1.1 per cent from 111.4 to 110.2 as traditional January sales were in evidence on a wide range of men's, women's and children's wear as well as some items of footwear. Sale prices particularly affected women's fur and cloth coats, men's overcoats, and women's overshoes.

The shelter index moved from 142.7 to 142.8, a fractional increase of 0.1 per cent. Rents were unchanged, but the home-ownership component was up.

The household operation index, also reflecting January sales in appliances, furniture and textiles, declined 0.3 per cent from 123.7 to 123.3. Some utensils and equipment and household supplies were higher.

The other commodities and services index was unchanged at 136.9 as somewhat lower prices for new passenger cars and gasoline were offset by rates which averaged higher for hospitals and newspapers.

Group indexes for January 1959 were: food 122.3, shelter 140.2, clothing 109.2, household operation 121.8, and other commodities and services 133.4.

City Consumer Price Indexes, December 1959

Eight of the ten regional consumer price indexes (1949=100) were lower between November and December 1959. Decreases ranged from 0.1 per cent in Saint John to 0.5 per cent in Saskatoon-Regina and Edmonton-Calgary; indexes in both St. John's and Montreal were unchanged.*

Decreases in foods were mainly responsible for changes in the total indexes. Food indexes were lower in all ten cities, with declines ranging from a fractional 0.1 per cent in St. John's to 2.0 per cent in Saskatoon-Regina. Shelter indexes rose in seven cities, were unchanged in two and declined in the other. Clothing indexes showed mixed results: five regional city indexes were up, three declined and two remained unchanged. Household operation indexes were higher in seven cities, lower in one and unchanged in the remaining two centres. Other commodities and services indexes were higher in four cities, unchanged in six.

Regional consumer price index point changes between November and December were as follows: Saskatoon-Regina -0.6 to 124.0; Edmonton-Calgary -0.6 to 124.1; Halifax -0.4 to 127.3; Toronto -0.4 to 130.1; Ottawa -0.3 to 128.3; Winnipeg -0.3 to 125.4; Vancouver -0.2 to 129.6; Saint John -0.1 to 129.1. St. John's and Montreal remained unchanged at 114.6† and 128.7 respectively.

Wholesale Price Index, December 1959

Canada's general wholesale price index (1935-39=100) eased 0.2 per cent between November and December 1959 to 229.8 from 230.3. It was the first time since 1952 that the December index has been below the November level. The index for December 1958 stood at 229.3.

Four of the major group indexes decreased, three increased, and one, the iron products group, was unchanged at 255.8.

The animal products group index declined for the third consecutive month, to 247.4 from 250.4; the September-December decline in this index was 4.3 per cent. The non-ferrous metals group index moved down

*See Table F-2 at back of book.

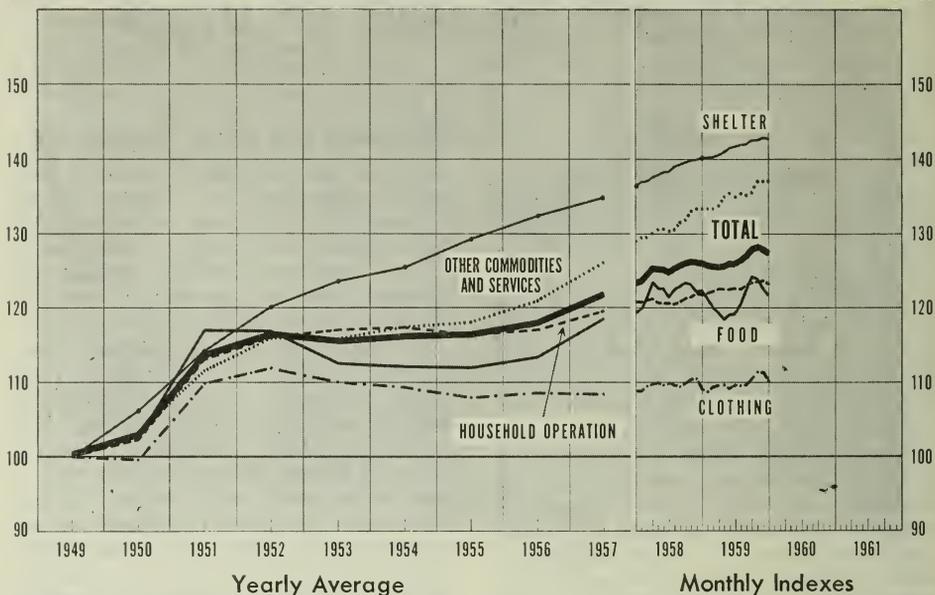

†On base June 1951=100.

* See Table F-1 at back of book.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

to 175.8 from 177.4 (the first month-to-month drop since July 1959). The indexes for the wood products and non-metallic minerals groups eased to 303.9 from 304.0 and to 185.9 from 186.0, respectively.

The vegetable products group index rose between November and December to 200.2 from 199.5, the textile products group index increased to 228.2 from 227.6, and the chemical products group index edged up to 188.1 from 188.0.

U.S. Consumer Price Index, December 1959

The United States consumer price index (1947-49=100) dropped 0.1 per cent between mid-November and mid-December, from 125.6 to return to the October figure of 125.5.

The December 1959 index was 1.5 per cent higher than at the close of the previous year. The 1959 average, however, was only

0.9 per cent higher than the 1958 average. The difference between the averages is smaller than the difference between the year-end figures because prices were stable during most of 1958 but rose gradually in 1959.

U.K. Index of Retail Prices, November 1959

The United Kingdom index of retail prices (Jan. 17, 1956=100) rose between mid-October and mid-November 1959 for the first time since November 1958. During the month it rose from 109.2 to 110.0, mainly because of increases, largely seasonal, in coal, eggs and butter, and in transportation fares.

The index had moved narrowly between 110.2 and 110.4 between December 1958 and March 1959, and between 109.3 and 108.7 in the period May to September.

Norway Appoints Council to Propose Ways to Implement Equal Pay

Following ratification on September 24, 1959 by the Government of Norway of the ILO Convention concerning Equal Remuneration for Men and Women Workers for Work of Equal Value, the Norwegian Government has appointed a five-member council to recommend methods of implementing the decision. The Council consists of two representatives from management, two from labour and one neutral member.

The equal pay Convention has now received 31 ratifications.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE. List No. 136.

Industrial Relations

15. LEITER, ROBERT DAVID. *Labor Economics and Industrial Relations*. 2d ed. New York, Barnes & Noble, 1958. Pp. 320.

The five parts of this book are: Problems of Labor Economics. Labor Organization. Collective Bargaining. Labour Disputes. Social Security.

16. REYNOLDS, LLOYD GEORGE. *Labor Economics and Labor Relations*. 3d ed. Englewood Cliffs, N.J., Prentice-Hall, 1959. Pp. 568.

Among the topics discussed are collective bargaining, the union contract, wages and hours of labour, the labour market, national income, productivity, labour unions, and wage determination. Intended as a text book for a labour course.

17. SPIRO, HERBERT JOHN. *The Politics of German Codetermination*. Cambridge, Harvard University Press, 1958. Pp. 180.

Codetermination means granting a large share in the management of industrial firms to organized labour. Discusses the role of politics in codetermination in the Federal German Republic.

18. WHYTE, WILLIAM FOOTE. *Man and Organization; Three Problems in Human Relations in Industry*. Homewood, Ill., R. D. Irwin, 1959. Pp. 103.

The author deals with a philosophical, a theoretical and a practical problem in human relations, each one related to the other.

Industry—Location

The following four pamphlets were published by the Alberta Industrial Development Branch in Edmonton in 1959.

19. *Survey of Didsbury*. Rev. 1959. Pp. 16.

20. *Survey of Smoky Lake*. Rev. 1959. Pp. 11.

21. *Survey of Stettler*. Rev. 1959. Pp. 18.

22. *Survey of Valleyview*. Rev. 1959. Pp. 11.

Labour Bureaus

23. U.S. CONGRESS. HOUSE. COMMITTEE ON APPROPRIATIONS. *Departments of Labor, and Health, Education, and Welfare, Appropriations for 1960: Dept. of Labor and others. Hearings before the Subcommittee of the Committee on Appropriations, House of Representatives, Eighty-sixth Congress, First Session . . .* Washington, GPO, 1959. Pp. 419.

24. U.S. DEPARTMENT OF LABOR. *The United States Department of Labor*. Washington, GPO, 1959. Pp. 37.

An up-to-date account of the activities of the various bureaus and divisions of the Department of Labor.

Labour Laws and Legislation

25. DITTMAR, WILLIAM ROBERT. *State Workmen's Compensation Laws; Law for the Workingman*. 2d ed. completely rev. and rewritten by the Publisher's Editorial Staff. New York, Oceana Publications, 1959. Pp. 93.

Provides the latest information about workmen's compensation in American states.

26. JAPAN. LAWS, STATUTES, ETC. *Japan Labor Legislation, 1959*. Tokyo, 1959. Pp. 605.

27. PETRO, SYLVESTER. *The Labor Policy of the Free Society*. New York, Ronald Press, 1957. Pp. 339.

Among other things, the author discusses the principal features of present labour laws and policies and proposes certain changes in the law.

Labouring Classes

28. GALENSON, WALTER, ed. *Labor and Economic Development*. One of a Series of Books from the Research Program of the Institute of Industrial Relations, University of California. New York, Wiley, 1959. Pp. 304.

Deals with the evolution of the labour movement in the British West Indies, Egypt, French West Africa, India and Japan.

29. GRI, V. V. *Labour Problems in Indian Industry*. 2d ed. rev. and enl. London, Asia Publishing House, 1959. Pp. 520.

The author was Minister of Labour in the Government of India from 1952 to 1954. He discusses labour organization, industrial relations, labour legislation, national wage policies, industrial housing, child labour, conditions of women workers, agricultural labour, etc.

30. INTERNATIONAL LABOUR OFFICE. *Labour Costs in European Industry*. Geneva, 1959. Pp. 170.

Based on an analysis of data on eight industries in eight countries for the year 1955, and in two countries for the year 1956.

31. INTERNATIONAL LABOUR OFFICE. *The Protection of Workers against Ionising Radiation*. Fourth item on the agenda. Geneva, 1959. Pp. 34.

At head of title: Report 4 (1). International Labour Conference. 44th session, 1960.

32. RAYBACK, JOSEPH GEORGE. *A History of American Labor*. New York, Macmillan, 1959. Pp. 459.

Covers the period from Colonial times up to the end of 1957.

33. U.S. BUREAU OF LABOR STATISTICS. *Employment Outlook for Technicians; a Report on Technicians Who work with Engineers and Physical Scientists*. Washington, Veterans Administration, 1958. Pp. 28.

Describes the types of work done by technicians and the fields in which they are employed. Tells how one becomes a technician and gives employment prospects and information about earnings.

Mental Health

34. MEYER, HENRY JOSEPH. *An Experiment in Mental Patient Rehabilitation: evaluating a Social Agency Program*, by Henry J. Meyer and Edgar F. Borgatta. New York, Russell Sage Foundation, 1959. Pp. 114.

The Altro Health and Rehabilitation Services, Inc. operate a sheltered workshop in New York City for handicapped people. This book describes Altro's program for rehabilitating some mentally ill patients referred to it by mental hospitals.

35. U.S. CHILDREN'S BUREAU. *Some Guide Lines for Evaluative Research assessing Psycho-Social Change in Individuals*. Washington, GPO, 1959. Pp. 117.

Women—Employment

36. HUGHES, EVERETT CHERRINGTON. *Twenty Thousand Nurses tell their Story; a Report on Studies of Nursing Functions sponsored by the American Nurses' Association*, by Everett C. Hughes, Helen MacGill Hughes and Irwin Deutscher. With a foreword by Agnes Ohlson. Philadelphia, Lippincott, 1958. Pp. 280.

A report on nursing as a profession.

37. INDIA. PLANNING COMMISSION. *Women in Employment (1901-1956)*. A joint study by Labour Bureau, Simla and Labour & Employment Division, Planning Commission. New Delhi, 1958. 1 volume (various pagings).

Miscellaneous

38. ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY LTD. *Turmoil in the Woods; a Report on the Dispute between the International Woodworkers of America and the*

Anglo-Newfoundland Development Company Limited. Grand Falls, Newf., 1959. Pp. 31.

39. DAWSON, ROBERT MACGREGOR. *William Lyon Mackenzie King, a Political Biography. Volume 1, 1874-1923*. Toronto, University of Toronto, 1958. P. 521.

Covers the period from Mackenzie King's birth in 1874 up to the Imperial Conference of 1923. This is the first of a projected three-volume official biography.

40. SHACKLE, GEORGE LENNOX SHARMAN. *Economics for Pleasure*. Cambridge, Cambridge University Press, 1959. Pp. 269.

Contains eight sections, each with five chapters. Each chapter presents a familiar situation with a comment on it. The eight sections are: Value. Production. Income. Distribution. Employment. Finance. Government. Trade.

41. UNITED NATIONS. DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *The International Flow of Private Capital, 1956-1958*. New York, United Nations, 1959. Pp. 107.

42. U.S. BUREAU OF LABOR STATISTICS. *Retail Prices of Food, 1957-58; Indexes and Average Prices*. Washington, GPO, 1959. Pp. 37.

Demand for University Graduates Continues, NES Bulletin Reports

A continuing and increasing demand for university graduates in Canada is indicated in the 1959 *Bulletin on the Supply and Demand Situation in Regard to University Graduates* issued by The National Employment Service of the Unemployment Insurance Commission.

Since 1952, the bulletin states, registrations at universities have been increasing each year. In 1958 total registrations were about 94,000 and it was expected that in 1959 they would be somewhat more than 100,000.

The University of Toronto expects to have 23,000 students register in 1968, an increase of 64 per cent in less than 10 years.

At the end of the 1958-59 fiscal year the federal Government, through the Civil Service Commission, reported requirements for some 600 graduates for continuing jobs and 1,200 undergraduates for summer work.

More applications were received for those jobs, both absolutely and proportionately, than at any time since the Second World War.

Approximately 900 persons wrote the general examination for university graduates, which provides a good indication of the competition for the available positions.

In addition, 600 graduating students in civil, electrical and mechanical engineering wrote the qualifying examinations for jobs in those categories despite the fact it was the first year in which written examinations were held by the Commission.

Where You Stand Under The Labor Reform Law, a simplified explanation of the United States Labor-Management Reporting and Disclosure Act, 1959, prepared by the Bureau of National Affairs, Inc., Washington 7, D.C., has been designed for distribution to employees.

U.K. Factories Act (Continued from page 186)

The sections of the Act which do not become effective on either of the foregoing dates will be brought into force as soon as practicable. Most of these concern the extensive safety provisions relating to fire. Other matters involve painting of premises, washing facilities, first aid and railway running sheds.

CORRECTION

In Decision CUB 1682, published in the December 1959 issue, the word within quotation marks in the top line of the second column on page 1328 is incorrect. Instead of "inapplicable" it should be "inappreciable".

*Less than 10,000.

(1) The change between September and October 1958 in the level of estimates of "Persons without jobs and seeking work" in Newfoundland appeared to be mainly a manifestation of sampling error. This factor should be recognized in any comparison of estimates for September 1958 or earlier with estimates for October 1958 or later.

* Less than 10,000.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹ Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—At October, 1959 employers in the principal non-agricultural industries reported a total employment of 2,858,672. Tables C-1 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-4 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners in the reporting firms.

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

* Revised.

September.....	41.2	1.72	71.13	170.4	127.1	134.1
October ⁽¹⁾	41.2	1.74	71.64	171.6	128.0	134.1

NOTE: Average Real Weekly Earnings were computed by dividing the Consumer Price Index into the average weekly earnings index. (Average 1949 = 100) by the Economics and Research Branch, Department of Labour.

*Figures adjusted for holidays. The actual figures for December 1958 are 37.3 and \$63.71.

(1) Latest figures subject to revision.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Toronto.....	129.1	130.5	130.1	120.6	153.5	114.5	123.7	139.1
Winnipeg.....	124.0	125.7	125.4	120.0	133.7	118.8	120.1	134.4
Saskatoon-Regina.....	122.7	124.6	124.0	119.4	124.4	120.4	125.5	130.1
Edmonton-Calgary.....	122.5	124.7	124.1	117.8	124.6	118.7	126.6	133.4
Vancouver.....	127.8	129.8	129.6	124.4	138.5	116.2	133.0	137.0

N.B.—Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951 = 100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on this series see page 542, May 1959 issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1954-1959

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

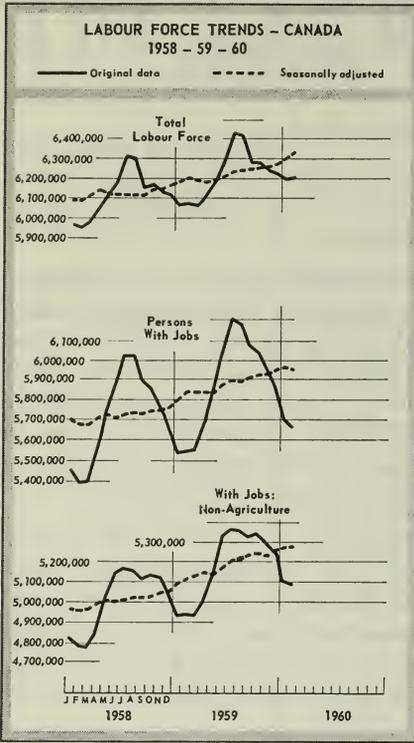

Current Manpower Situation

Between January and February, employment declined by an estimated 36,000; the decline was mainly a reflection of seasonal factors. Male workers accounted for all of this drop; employment of females showed a slight increase. Almost three quarters of the employment decline was in agriculture. Non-agricultural employment showed a net decline of 10,000 as a result of layoffs in forestry, manufacturing and trade and a partly offsetting expansion in services. The reduction in non-farm jobs was concentrated in Quebec; very little change in employment occurred in the other regions.

In February, non-farm employment was up 3.1 per cent over a year earlier, with most of the advance stemming from expansion of the service producing industries such as trade, financial institutions and community and government services. Manufacturing employment has shown little improvement during the past few months. This development can be attributed in part to the fact that output in some of the industries that figured most prominently in the recovery has approached capacity. In the iron and steel products industries, for example, output and employment have been fairly stable at near-record levels this winter, following an upward trend that persisted through most of the year. The building materials industries weakened somewhat in recent months, reversing the upward trend that began early in 1958.

The labour force (allowing for seasonal movements) has been expanding at an increased rate during recent months, after rising relatively slowly through most of 1959. In February, an estimated 6,218,000 persons were attached to the labour force, about 134,000 more than a year before. Women accounted for 56 per cent of the gain. The disproportionate increase in the female labour force is the combined result of population growth and participation in the labour force by a greater proportion of women. About 27 per cent of the non-institutional female population over 14 years of age were in the labour force in February, a record proportion for the month.

The year-to-year increase in the male labour force resulted from the natural growth in the adult population and from net immigration. The latter was responsible for roughly one third of the gain. There was a slight decrease in the proportion of males participating in the labour force, primarily because of the downward trends in participation rates among teenagers and older men. Men in the middle age groups have a considerably stronger labour force attachment so that relatively small changes in rates were to be expected. The 25 to 44-year age group, for example, has registered only a fractional change in the rate of participation during the past several years. For the adult male population as a whole, 79.4 per cent were in the labour force in February compared with 79.8 per cent a year before.

The number of persons without jobs and seeking work was estimated to be 555,000 in February, 51,000 more than in January. Most of this increase occurred in Quebec, which witnessed a more than seasonal rise in unemployment, partly because of an unusually large increase in the labour force and partly because of cutbacks in employment. In the country as a whole, all of the additional job seekers in February were men. The number of women job seekers declined slightly during the month despite a rise in the female labour force. The relative ease with which new women entrants obtained employment can be attributed to the vigorous growth of the service industries, where the proportion of females is relatively high.

Unemployment in February was slightly higher than a year before, with increases confined to Quebec and the Prairie Provinces. The February figure was 8.9 per cent of the labour force compared with 8.8 per cent last year. In addition to the job seekers, an estimated

43,000 were on temporary layoff, about 10,000 more than a year earlier.

Of the 555,000 job seekers in February, 496,000 were men and 59,000 were women. About one third were in the under-25-years age group and one quarter were over 45 years of age, the same distribution as in the previous month. Construction and the primary industries accounted for almost half of the total seeking-work figure in February. Between January and February, the largest increase in job seekers came from the primary industries.

In February, persons without jobs had been seeking work for an average of 3.7 months, one-half month less than at the same time last year. The number of persons who had been seeking work for four months or more declined by 34,000 over the year. In February, this group accounted for 29 per cent of the total compared with 39 per cent a year ago.

* * *

Since the recession low of two years ago, the output of non-agricultural industries in Canada has moved ahead in an uneven fashion—bursts of expansion interspersed with periods of stability. In the second half of 1959 labour-management disputes in Canada and in the United States accounted in part for the slowdown of that period. However, quite apart from these special factors, the recovery period as a whole has been characterized by offsetting movements among the factors that ordinarily provide the main stimulus for an expansion of economic activity.

A reduction in the rate of inventory liquidation in 1958 and a shift to strong accumulation in 1959 has been easily the most important influence in the expansion. This important source of demand was augmented by increases in government purchases of goods and services in 1958 and the first part of

1959, and thereafter by an upsurge in outlays for new plant machinery and equipment. Exports have alternately increased and declined; a particularly strong advance occurred in the last quarter of 1959 and early 1960. Private construction has been a negative influence, on balance; in 1958 increases in housing construction more than offset declines in business, but in 1959 outlays in both sectors declined. Finally, consumer expenditure on durable goods has exhibited both increases and declines since the first quarter of 1958 but has made a small net gain for the period as a whole.

The conflicting movements of these major stimulants to economic activity have produced an expansion more hesitant than others in the postwar period. Strong and steady advances in employment occurred only in the first half of 1959. At other times the course of employment, after allowing for seasonal changes, rose slowly, with frequent, sharp fluctuations from month to month. In part, these movements were a reflection

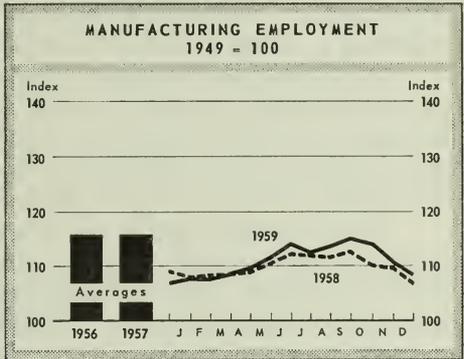

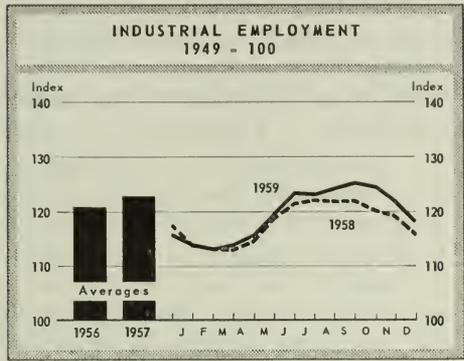

of interruptions to production schedules caused by labour-management disputes. To some extent, they also reflected a greater emphasis on cost reduction brought about by increased competition, both at home and abroad.

Some notable employment advances have taken place in goods-producing industries in the past two years. As a group, however, the goods-producing industries have barely recovered the losses of the recession. Particular industries, such as iron and steel products, have made strong advances, but for the group as a whole there has been no net gain over the past two years. The advance in total employment over this period has been almost entirely in the handling and distribution of goods and in the provision of services.

Construction—Review and Outlook

Construction employment was higher, on average, in 1959 than in 1958 but tended to drop off towards the end of the year. It was supported by the large volume of housing activity that was started in 1958 and carried over into 1959, and by increased outlays on highways and other public construction. Private non-residential construction, on the other hand, declined both in 1958 and in 1959, reflecting the completion of such projects as the St. Lawrence Seaway, pipelines and power installations, which has outweighed the considerable volume of new work that has been begun in this period.

The reduction in housebuilding activity has been an important influence on the employment situation this winter. At the end of the year, the number of units under construction was 82,000, about 7 per cent fewer than a

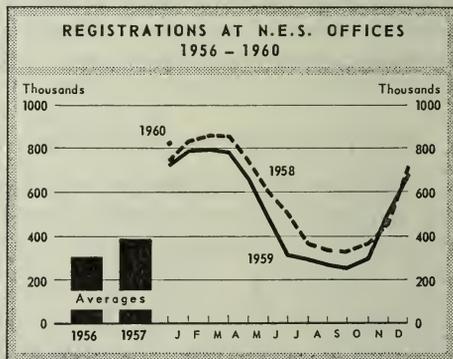

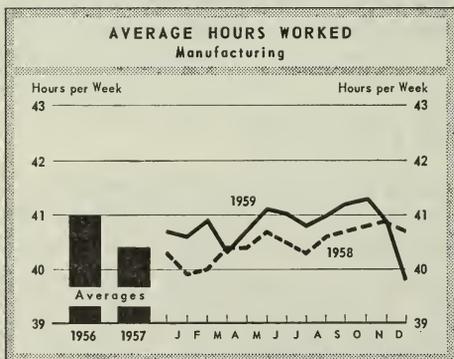

year earlier, and this gap widened in the first quarter of 1960. The low level of activity in housebuilding was accompanied by a significant decline in other fields of construction in the fourth quarter. Both were directly responsible for a good deal of the relatively high unemployment this winter, and contributed to a slowdown in a number of manufacturing industries.

The outlook for construction and construction materials industries is more promising than current developments might suggest. The annual survey of investment intentions, published recently by the Department of Trade and Commerce, indicates a total capital expenditure of \$8.8 billion in 1960, an increase of 4 per cent over last year. Outlays for machinery and equipment are expected to increase sharply, reflecting the rising output of the past year and the consequent need for an expansion of production facilities in some industries. Expenditures on construction alone will be slightly greater than last year's actual total, a 5-per-cent increase in the value of non-residential construction offsetting a decline of about 3½ per cent in housing.

The forest and mineral products industries provide the bulk of the expected increase in capital outlays—an over-all gain of 20 per cent. Notable increases are also expected in commercial building. Spending for fuel and power installations is expected to be a little over \$1 billion, about the same as last year and just over two thirds of the 1957 peak total.

These estimates reflect the investment intentions at the end of last year. They may be, and frequently are, modified during the course of the year. Last year, for example, physical restrictions in the last six months, and perhaps some uncertainty in the business outlook, prevented the full realization of the intended program. Similarly, favourable business conditions in coming months could easily lead to upward revisions in the current investment program. In addition, the 1960 estimates make no provision for possible expenditures on gas pipelines, which await the outcome of applications now under consideration by the authorities.

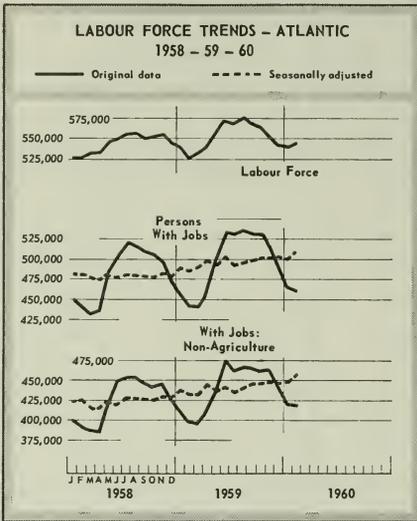

CLASSIFICATION OF LABOUR MARKET AREAS—FEBRUARY 1960

	SUBSTANTIAL LABOUR SURPLUS	MODERATE LABOUR SURPLUS	APPROXIMATE BALANCE	LABOUR SHORTAGE
	Group 1	Group 2	Group 3	Group 4
METROPOLITAN AREAS (labour force 75,000 or more)	Calgary Edmonton Montreal OTTAWA-HULL ← Quebec-Levis St. John's Toronto Vancouver-New Westminster Windsor Winnipeg	Halifax → HAMILTON

Yarmouth	Kitimat	

→ The areas shown in capital letters are those that have been reclassified during the month; an arrow indicates the group from which they moved. For an explanation of the classification system used, see inside back cover, November 1959 issue.

Employment Situation in Local Areas

ATLANTIC

Employment in the Atlantic region declined moderately between January and February. The number of persons with jobs fell by 4,000 to an estimated 462,-000, a smaller decline than is usual at this time of year. Weather conditions curtailed outdoor activity; the drop in employment was mainly in forestry and construction. A few minor factory layoffs occurred during the month but the general level of manufacturing employment improved. Shipbuilding showed a considerable gain, especially in the Halifax area.

Employment was 20,000 higher than a year ago, and higher than in the corresponding month of the past five years. Construction and forestry have been major sources of strength in this

recovery. Manufacturing has made a relatively slow recovery, owing to weaknesses in some of the heavy industries, particularly railway rolling stock.

All four provinces in the region shared in the over-the-year increase in construction employment. The advance was supported to a fairly large extent by a rise in housebuilding activity. This year's carry-over is considerably larger than in 1958, reflecting the upward trend in housing starts during most of 1959. However, the number of housing starts in the first two months of 1960 showed a more-than-seasonal decline, indicating a slow upturn in housebuilding activity this spring. Non-residential construction gained somewhat greater support this winter than a year ago from the Municipal Winter Works Incentive Program. Road and highway construction were additional sources of employment strength during recent months; at the end of the year employment was about one quarter higher than a year before.

Forestry employment in the fourth quarter of 1959 averaged about one-third higher than the corresponding quarter in 1958. The improvement stemmed from increased demands for both pulpwood and lumber. Pulpwood inventories were reduced during the past year despite a substantial increase in output. Increased exports accounted for most of the over-all increase in sales. Domestic consumption of pulpwood showed a moderate rise during the second half of the year, reversing the earlier downward trend.

Unemployment in the region was slightly lower than the year before. The only sizeable year-to-year decline occurred in Sydney which experienced heavy unemployment last year owing to the temporary closure of all but two of the DOSCO Mines. The classification of the 21 areas in the region at the end of February this year was unchanged from the previous month and the previous year; two areas were in moderate surplus and 19 were in substantial surplus.

LABOUR MARKET CONDITIONS

Labour Market Areas	Labour Surplus				Approximate Balance

Minor.....	45	40	12	17	1	1
Total.....	83	74	26	35	1	1

Local Area Developments

Halifax (metropolitan) remained in Group 2. The employment situation in this area remained more favourable than in other parts of the region. The shipyards were very busy during the month and activity continued to increase; the volume of scheduled repair work was reported to be the highest in several years. The construction industry was much more active than last year; the most recent employment figures show a year-to-year advance of 23 per cent.

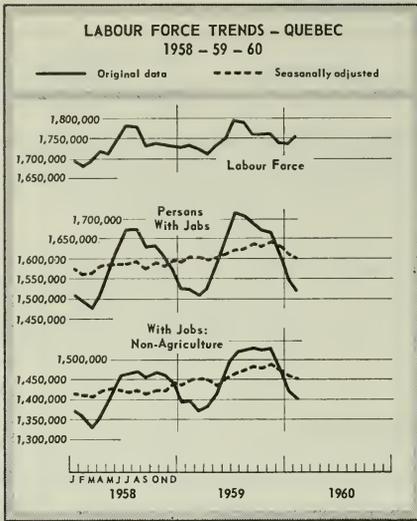

St. John's (metropolitan) remained in Group 1. Apart from seasonal layoffs in construction and forestry, employment showed little change during the month. Pulpwood hauling was reported to be almost completed by the end of the month; most camps closed earlier than usual as a result of favourable hauling conditions.

QUEBEC

Employment declined more than seasonally in the Quebec region. The number of persons with jobs decreased by an estimated 23,000 between January and February. Employment in the region was some 3,000 lower than in February 1959. Close to one third of the total decline occurred in farming. In non-agricultural industries the employment decline affected male workers, due to slackening in forestry and construction. Women's employment increased slightly as a result of rehiring in some manufacturing industries.

In forestry, the level of employment in pulpwood logging during the first half of the month continued to be higher than a year ago. From the middle of February, however, cutting quotas were being rapidly completed, and operations in the woods slowed down considerably. Base metal and iron ore mining operations were at high levels for this time of the year; employment in iron ore mining was almost double the year-earlier figure. The outlook brightened in asbestos mining; some 500 miners laid off during January were to be recalled at the beginning of March, somewhat earlier than expected. Prospecting in the region was quite active, particularly in the Mattagami area.

Non-residential construction activity continued at a high level for this time of the year, with work proceeding on all major projects. In residential building, however, further declines were reported.

Employment in manufacturing declined non-seasonally during the last quarter of 1959, and in January and February demand conditions appeared to be generally less buoyant than a year ago. The seasonal upturn in the clothing and leather industry occurred later this year than a year earlier, and there were layoffs in furniture, plywood and veneer plants. Employment was well maintained in shipyards and steel plants throughout the region.

Activity in trade was quiet during the month, in contrast to the spring of 1959, when the early Easter stimulated hirings.

Registrations for employment at National Employment Service offices increased during the month and were at about the same level as a year earlier. Registrations were higher than a year before in 13 of the 24 local labour market areas. The increase over the year was about 10 per cent in Joliette and Victoriaville and more than 30 per cent in the St. Jean and St. Hyacinthe areas. In St. Hyacinthe, the sharp increase was the result of shutdowns and layoffs in one shoe and two secondary textile plants, affecting more than 650 workers. In St. Jean, the increase appeared to be mainly the result of layoffs in leather, clothing and textile plants. As a contrast to these areas, Sorel showed a marked improvement over the year, owing to a substantial rise in manufacturing activities; registrations in this area were some 27 per cent lower than a year ago.

At the end of February, the classification of 34 areas in the region remained unchanged from the previous month and was as follows (last year's figures in brackets): in substantial surplus, 23 (21); in moderate surplus, 1 (3).

Local Area Developments

Montreal (metropolitan) remained in Group 1. Manufacturing employment, at the turn of the year, was some 3 per cent higher than a year earlier. In the first two months, employment in the clothing industry was not as buoyant as in the comparable period of 1959. Activities in the iron and steel and shipbuilding industries remained at a high level. Non-residential construction was quite strong for this time of the year but residential building dropped sharply.

Quebec-Levis (metropolitan) remained in Group 1. Industrial employment showed strength during the last quarter of 1959 and at the end of the year it was some 6 per cent higher than a year earlier. During the first two months of this year, employment in manufacturing improved, a high level of activity in shipbuilding being a contributing factor. Shipping was much more active this winter than last, resulting in higher employment on the waterfront.

ONTARIO

Employment in the Ontario region increased by an estimated 10,000 between January and February, about usual for this time of year. The number of persons with jobs, 2,179,000, was 78,000 greater than a year earlier. Employment in most industries appeared to be stable or declining seasonally. One of the chief supports to employment demand during February was the high level of activity in automobile manufacturing, which slackened, however, towards the end of the month. Construction work in most centres was held up by severe storms and heavy snowfalls; residential building in particular showed a substantial decline. Small layoffs occurred in the manufacture of steel and heavy machinery and equipment,

although employment and output in these industries continued much above last year's levels. Pulpwood production was only mildly hampered by the weather and, in northern areas, contributed to a relatively buoyant demand for labour.

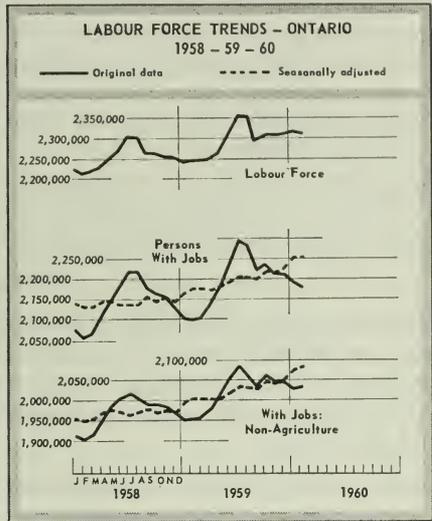

The services, trade, transportation and financial institutions accounted for more than half of the employment increase over the year. In manufacturing, substantial gains in the manufacture of iron and steel products, motor vehicles and motor vehicle parts were largely offset by decreases in the production of building materials, aircraft, railway rolling stock and heavy electrical equipment. Forestry and mining employment continued to be well above year-earlier levels.

Unemployment was near or past its seasonal peak and in most centres was close to last year's level. At the end of February the classification of the 34 labour market areas in the region was as follows (last year's figures in brackets): in substantial surplus, 21 (18); in moderate surplus, 13 (16).

Local Area Developments

Toronto (metropolitan) remained in Group 1. Some employment increase was reported in January and early February in firms manufacturing iron and steel products. Rehiring for spring production was underway in most clothing and leather plants. Layoffs in construction were quite substantial, however, as a result of heavy snowfall, declines in new housing starts, and a shortage of structural steel on some projects. As a result, the number registered for employment at NES offices increased moderately.

Hamilton (metropolitan) was reclassified from Group 1 to Group 2. This was one of the few areas in the region to show some improvement during February, despite adverse weather. Gains in January and February were mainly the result of settlements of the steelworkers' strike in the U.S. and the carpenters' dispute in Hamilton.

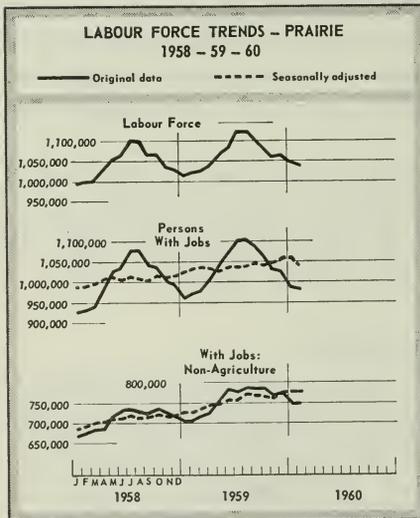

Ottawa-Hull (metropolitan) was reclassified from Group 2 to Group 1. This area was classified as a substantial labour surplus area for the first time in more than 5 years. Employment fell off sharply in construction, and there were small layoffs in a number of manufacturing firms. One large plant was destroyed by fire, affecting some 450 workers. The number of construction contracts awarded in February was quite large, however, indicating a substantial pick-up in coming months.

Windsor (metropolitan) remained in Group 1. A fairly sharp drop in construction caused a moderate increase in unemployment. The January level of automobile production and employment was maintained during the early part of February, but some layoffs occurred towards the end of the month.

Oshawa (major industrial) remained in Group 2. Most manufacturing industries continued to work full time in February although there were some layoffs and cut-backs in overtime towards the end of the month. Shortages continued in skilled and professional occupations—particularly engineers and machinists and die-makers.

Sudbury (major industrial) and **Sault Ste. Marie** (minor) remained in Group 2. Labour demand in these centres was well ahead of last year. In steel products manufacturing, mining and smelting, operations continued close to capacity. Although pulp cutting was hampered during the month by heavy snow, increased production quotas indicated an extended period of employment this spring.

PRAIRIE

Employment in the Prairie region declined between January and February. The change, amounting to 5,000, brought the estimate of persons with jobs to 986,000, which was 11,000 above the year-earlier figure. Non-farm industries employed 750,000, and 236,000 were working on farms. The industrial employment figure was 44,000 higher than a year earlier, the agricultural figure 33,000 lower.

Agriculture accounted for virtually the whole of the employment decline from January. Seasonal layoffs continued during the slack mid-winter period; help requirements for livestock farms remained low. It was reported that as a result of a sharp drop in cash income

in the latter half of 1959, farmers were reluctant to hire extra help. The uncertain demand for farm labour prompted some workers to look for jobs in other industries, particularly logging and construction.

The favourable weather that prevailed during February assisted outdoor activities but reduced fuel consumption and resulted in some layoffs in coal mining. At heavy construction sites relatively steady levels of activity were maintained although some seasonal layoffs occurred. Forestry employment was well above year-earlier levels, with sawmills, plywood plants and pulp

mills operating near capacity. Logging layoffs began in the eastern part of the region as winter cutting programs neared completion and the spring breakup approached. In Alberta and Saskatchewan logging and lumbering operations expanded, and skidders and power-saw operators were in demand.

The number of oil-drilling rigs in operation at mid-February almost equalled the year-earlier total. The number of rigs located in Alberta increased to 168 from 152 a year earlier, but in Saskatchewan the lack of major discoveries brought the number of drill rigs in operation down to 21 from 39. In Alberta the expansion in exploration work continued into February, particularly in the Swan Hills area of the northwest.

Manufacturing employment exhibited mixed trends. Packing plants laid off some workers as livestock receipts fell off. In the iron and steel industry, in which employment was 5 to 10 per cent above a year earlier, fabricating plants, foundries and machine shops were busy but pipe plants were at low production levels. In metal mining, northern uranium employment remained steady. One mine near the Great Bear Lake district is to shut down shortly due to depletion of the ore body. More than 200 men will be affected.

Unemployment increased in most of the 20 labour market areas in the region, and three were reclassified to categories of greater labour surplus. At the end of February the classification was as follows (last year's figures in brackets): in substantial surplus, 14 (11); in moderate surplus, 6 (9).

Local Area Developments

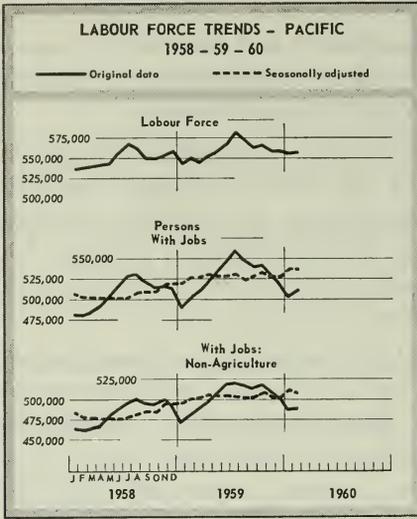

Calgary, Edmonton and Winnipeg (metropolitan) remained in Group 1. Little change in employment conditions occurred from January. Total registrations for employment at the National Employment Service offices in the three centres were above both month-earlier and year-earlier figures. In sales occupations, registrations were up considerably from a year earlier, the later Easter sales season being partly responsible for the difference.

Saskatoon and Lethbridge (major agricultural) and **Swift Current** (minor) were reclassified from Group 2 to Group 1.

PACIFIC

In the Pacific region the end of the seasonal employment decline was apparent. The estimate of persons with jobs increased by 6,000 between January and February, to a total of 513,000; this was 10,000 higher than a year earlier. Much of the change occurred in agriculture. Farmers began preparations for spring plowing, the seasonal hiring of dairy farm workers began earlier than usual, and the pruning of fruit trees was underway in the Okanagan.

The main source of strength in non-agricultural employment in February continued to be the forestry industry. Improving weather allowed an expansion of logging on Vancouver Island and in the central and northern interior. In southern interior areas, however, persistence of heavy snow and icy roads limited this expansion.

The wood products manufacturing industry operated at high levels during the month, and metal manufacturing groups benefited from the strength in lumbering and logging. Shipyards on both the mainland and Vancouver Island made minor additions to the small work forces presently engaged as a result of increased repair work and orders for some small vessels. Construction employment picked up seasonally, although housebuilding showed continuing weakness. Employment in trade was affected by the lengthy lull this year between mid-winter sales promotions and the Easter selling season.

Unemployment declined for the first time since late summer, and was at about the same level as last year. Two labour market areas were reclassified into categories of reduced unemployment. At the end of February the classification of the 11 areas was as follows (last year's figures in brackets): in substantial surplus, 6 (5); in moderate surplus, 4 (5); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) remained in Group 1. The waterfront remained very busy in February; grain shipments, at 16 million bushels, were close to capacity. Some inbound ships were again forced to anchor in midstream for a short time before a berth could be procured, and there were some shortages of longshore gangs. Lumber shipments increased from January, when a gain of 9 per cent from the same 1959 month was registered. Full construction crews continued work on four bridges and a deep-sea dock. The decline in housebuilding this winter affected registrations of carpenters in the Vancouver offices of the National Employment Service. Although total registrations in February were somewhat above a year earlier, the number of carpenters registered was 35 per cent higher, and virtually unchanged from last month.

Victoria (major industrial) remained in Group 2, and **Central Vancouver Island** and **Prince George** (minor) were reclassified from Group 1 to Group 2. The increased activity in the woods reduced the number of registrations in National Employment Service offices in these centres.

Kitimat (minor) remained in Group 3. Workers were hired to expand aluminum production to the full five-line capacity of the plant.

Prince Rupert (minor) remained in Group 1. The increase in lumbering and logging employment was offset by termination of herring fishing because of lower prices and depletion in nearby fishing grounds.

Current Labour Statistics

(Latest available statistics at March 15, 1960)

Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

During February, negotiations for 14 major collective agreements were concluded and wage increases provided for more than 18,000 workers. Settlements in the Quebec textile industry brought to an end the 4½-month work stoppage in Magog, Que., which involved some 1,800 out of the 5,000 Dominion Textile employees represented by the National Catholic Textile Federation.

Talks affecting some 115,000 employees were in progress during the month between **Canadian railways** and **15 non-operating unions**. After a request by the unions, first steps were taken to set up a conciliation board. Appointees were David Lewis for the union and Philip Vineberg for the railways, both of whom served in the same capacities in the 1958 negotiations. Early in March it was announced that they were unable to agree upon the selection of a chairman and, therefore, the choice of a third member was referred to the Minister of Labour.

In February the **National Catholic Textile Federation** and the **United Textile Workers of America** accepted a compromise solution to their lengthy dispute with the **Dominion Textile Company**. The first break in the negotiations came when the United Textile Workers, representing employees in the Montreal mill as well as those in the company subsidiary, Montreal Cottons at Valleyfield, accepted Premier Barrette's proposals as the basis for a new agreement. The wage settlement consisted of 8 cents an hour retroactive to July 1958, plus an additional 2 cents an hour effective February 10, 1960, and another 3 cents an hour in February 1961.

Agreement with the National Catholic Textile Federation was delayed because of the question of retroactive pay for workers at Magog and Sherbrooke, Que. The final settlement was on the basis of a 13-cent-an-hour increase over a two-year period, consisting of 10 cents an hour effective immediately and 3 cents effective February 15, 1961. Retroactive pay for employees at the Drummondville and Montmorency mills was to be calculated on the basis of 8 cents an hour dating back to June 11, 1958, when the previous contract lapsed. The Magog workers were to receive 10 cents an hour retroactive from June 11, 1958 until the date of the walkout, September 26, 1959. Similarly, the 367 workers laid off at the Sherbrooke plant as a result of the strike were to receive 10 cents an hour retroactive from June 11, 1958 to their layoff date of November 8, 1959.

Collective Agreements in 1959

Wage settlements in agreements covering bargaining units of 500 or more employees and signed during the last six months of 1959 are tabulated at the top of the facing page. The tabulation excludes construction agreements and those in which wages were based on piece rates only. The table headed "Wage Settlements During 1959" combines the half-yearly table on the next page with one previously published (L.G., Nov. 1959, p. 1140).

WAGE SETTLEMENTS DURING SECOND HALF OF 1959

Collective agreements covering 500 or more workers concluded between July 1 and December 31, 1959, excluding agreements in the construction industry and agreements with wage terms in piece rates only.

Total Wage Increase in Cents per Hour*	Term of Agreement in Months

*Wage increases shown relate to base rates only. Data on employees covered are approximate; they include all other categories that may be covered by each settlement, in addition to those receiving base rates.

More than 360,000 workers were affected by 224 major agreements signed in Canada during 1959. Slightly less than 65 per cent of the total were for terms of approximately two to three years, with the two-year contracts predominating. The remaining 35 per cent were agreements for a one-year period.

In nearly two thirds of the one-year settlements, increases in base rates were from 5 to 9.9 cents an hour. Nine major agreements, six of which were for a one-year term and three for two years, did not provide for any wage increases. These contracts were with firms in the coal mining, aircraft and textile industries. Of the 100 two-year agreements, 61 provided for increases to base rates of from 10 to 19.9 cents an hour spread over the life of the agreement. Nearly three quarters of the major agreements signed for a three-year period provided for increases totalling 15 to 30 cents an hour to the base rates over the life of the contract.

WAGE SETTLEMENTS DURING 1959

Collective agreements covering 500 or more workers concluded between January 1 and December 31, 1959, excluding agreements in the construction industry and agreements with wage terms in piece rates only.

TOTAL.....	74	120,840	7	40,340	100	145,000	6	4,740	37	49,520

*Wage increases shown relate to base rates only. Data on employees covered are approximate; they include all other categories that may be covered by each settlement, in addition to those receiving base rates.

During 1959 there were 122 settlements covering 154,000 workers in the manufacturing sector of the economy. Most of these agreements were in such industries as foods and beverages (12), rubber products (10), iron and steel products (21), transportation equipment (25) and electrical apparatus and supplies (10).

Approximately 20,000 workers received pay increases after the signing of 15 major agreements in the transportation industry, and more than 50,000 workers benefited from 15 agreements in communications. In the service industry, 19 agreements covered 27,000 provincial and municipal employees, 6 agreements covered 6,000 hospital employees and 10 agreements covered 7,000 hotel employees. In mining, 11 major settlements were reached on behalf of 18,700 workers.

Part III—Settlements Reached During February

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ALGOM URANIUM MINES, ELLIOT LAKE, ONT.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 1,300 empl.—4¢-an-hr. increase during the first year, 5¢ an hr. additional during the second yr. plus \$6 per month continuity bonus; all other terms remain unchanged.

AMERICAN CAN, ONT. AND QUE.—CLC-CHARTERED LOCAL: 3-yr. agreement covering 1,700 empl.—10¢-an-hr. increase in 1960, an additional 7¢ an hr. eff. Jan. 1961 plus 7¢ an hr. eff. Jan. 1962.

CIL, MILLHAVEN, ONT.—OIL WKR. (AFL-CIO/CLC): 2-yr. agreement covering 460 empl.—general increase for plant wkrs. of 5¢ an hr. eff. immediately plus an additional 7¢ an hr. eff. Dec. 1, 1960; retroactive pay calculated on the basis of 75% of the scheduled hrs. worked since Mar. 21, 1959.

CANADIAN MARCONI, MONTREAL, QUE.—SALARIED EMPL. ASSOC. (IND.): 2-yr. agreement covering 580 empl.—3% wage increase retroactive to Oct. 1, 1959; an additional 3% increase eff. Oct. 1, 1960 for empl. falling below the midpoint of the salary chart; overtime to be paid after 80 hrs. of work per fortnight.

CITY OF MONTREAL, QUE.—FIRE FIGHTERS (AFL-CIO/CLC): 1-yr. agreement covering 1,800 empl.—a general salary increase of \$400 per yr; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 15 yrs. of service); 5 additional paid holidays; rate for overtime work increased from \$1.50 an hr. to \$2 an hr.

CITY OF VANCOUVER, B.C.—PUBLIC EMPL. (CLC) (INSIDE STAFF): 1-yr. agreement covering 1,100 empl.—a general wage increase of 3½%.

CONTINENTAL CAN, ST. LAURENT, QUE.—CLC-CHARTERED LOCAL: 3-yr. agreement covering 660 empl.—settlement terms not available.

CROWN ZELLERBACH, VANCOUVER, B.C.—PULP AND PAPER MILL WKR. (AFL-CIO/CLC): 1-yr. agreement covering 500 empl.—general increase of 5% made up of 7¢ an hr. retroactive to Nov. 1, 1959, an additional 1¢-an-hr. increase eff. Feb. 1, 1960 and another 1¢ an hr. eff. May 1, 1960; 4 wks. vacation for empl. with 25 yrs. of service (formerly no provision for 4 wks. vacation).

PRINTING INDUSTRIES COUNCIL, TORONTO, ONT.—PRINTING PRESSMEN (AFL-CIO/CLC): 3-yr. agreement covering 875 empl.—32¢-an-hr. increase for journeymen consisting of 8¢ an hr. retroactive to Dec. 1, 1959; 9¢ an hr. eff. June 1, 1960; an additional 5¢ an hr. on Sept. 1, 1960; 5¢ an hr. eff. June 1, 1961 and an additional 5¢-an-hr. increase eff. Dec. 1, 1961; work wk. reduced from 38½ to 37½ hrs. per wk; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 15 yrs.).

DOMINION TEXTILE, MONTREAL, QUE.—UNITED TEXTILE WKR. (AFL-CIO/CLC): 2-yr. agreement covering 1,300 empl.—8¢-an-hr. retroactive pay for the period from July 9, 1958 to Feb. 9, 1960; an additional 2¢-an-hr. increase eff. Feb. 10, 1960, and a further 3¢-an-hr. increase eff. Feb. 1961.

DOMINION TEXTILE, MONTMORENCY, SHERBROOKE, DRUMMONDVILLE AND MAGOG, QUE.—TEXTILE FEDERATION (CCCL): 2-yr. agreement covering 5,000 empl.—8¢ an hr. retroactive to June 11, 1958 for all empl. except those laid off at Sherbrooke and those on strike in Magog, an additional 2¢ an hr. eff. Feb. 15, 1960; Magog empl. to receive 10¢ an hr. increase retroactive to June 11, 1958 exclusive of strike period Sept. 27, 1959 to Feb. 14, 1960; empl. laid off at Sherbrooke to get 10¢ an hr. increase retroactive to June 11, 1958 exclusive of layoff period Nov. 8, 1959 to Feb. 14, 1960. Empl. at all mills receive an additional 3¢ an hr. eff. Feb. 15, 1961; overtime rates become eff. after 8 hrs. per day and 40 hrs. per wk. (previously only after 40 hrs. per wk.); no loss in seniority for Magog empl.; improved grievance procedure.

MONTREAL COTTONS, VALLEYFIELD, QUE.—UNITED TEXTILE WKR. (AFL-CIO/CLC): 2-yr. agreement covering 1,500 empl.—8¢ an hr. retroactive pay for all empl. for the period from July 9, 1958 to Feb. 9, 1960; an additional 2¢-an-hr. increase eff. Feb. 10, 1960 plus another 3¢ eff. Feb. 1961; seniority to be applied to all departments.

MONTREAL LOCOMOTIVE WORKS, MONTREAL, QUE.—STEELWORKERS (AFL-CIO/CLC): 3-yr. agreement covering 500 empl.—hourly rated empl. to receive 5¢ an hr. retroactive to Oct. 28, 1959; there is to be no increase during the second yr. of the contract; in the third yr. all empl. will receive 5¢-an-hr. increase; vacation allowance provides for 2 wks. after 3 yrs. of service (previously 2 wks. after 4 yrs.); improved pension and hospital insurance plans; office empl. to receive \$9.09-a-mo. increase retroactive to Oct. 29, 1959; there is to be no increase during the second yr. of the agreement but in the third yr. all office empl. will receive an additional \$9 per month.

STANROCK URANIUM MINES, ELLIOT LAKE, ONT.—STEELWORKERS (AFL-CIO/CLC): 3-yr. agreement covering 900 empl.—2% increase retroactive to Nov. 1, 1959, 3% increase eff. Nov. 16, 1960 and 4% eff. Nov. 16, 1961.

NOTES OF CURRENT INTEREST

“Roads to Resources” Investment Stands at \$145 Million

At the present time the federal and provincial Governments are making, jointly, \$145 million investment in roads to resources, according to a statement prepared by Hon. Alvin Hamilton, Minister of Northern Affairs and National Resources, for the Canadian Good Roads Association.

The total federal contribution to a province is limited to \$7.5 million. If some provinces spend more than \$7.5 million on the program, the federal share will not be increased.

Roads and resources is a co-operative program to which the federal and provincial Governments undertake to contribute jointly to the building of roads that will help develop a promising resource. Mining, forestry, fishing and recreation are the principal resources the roads will benefit.

When the program is completed, Mr. Hamilton said, “rather more than 4,000 miles of roads will be providing new, or better, access to now-hard-to-reach resources—or not far off the distance (if this were all one road) from St. John’s to Victoria.

The program is not designed to assist the provinces to meet their normal highway commitments, the Minister stated, but is an offer to assist them with roads that they would not otherwise have built—“not at this time, at least.” The maintenance of the roads, and the improvement of their standards, remain a provincial responsibility.

The provinces were informed of the plan in February 1958 and by midsummer that year the program was under way in eight provinces. By the end of the year it was active in nine. Quebec is studying the proposals.

Originally, the federal Government had intended the program to be a five-year one, but after details were worked out with the provinces it became clear that “so rigid a term” might become a financial and administrative straitjacket that, in some cases, would make it extremely difficult for a province to participate. It is now estimated that the program will last for an average of eight years, with some provinces taking a little less, others a little more time to complete the programs presently visualized.

The roads to resources program should not be identified, the Minister said, with the program of development roads that the

federal Government is undertaking in the Yukon and Northwest Territories. The first is a co-operative program; the second, wholly a federal responsibility.

“Roads in the north are likely to be concentrated in the main on the development of mining, oil, and gas, and on providing improved access between north and south and within the north itself. Roads to resources, on the other hand, have a more accessible area to serve, where the task of linking even a remote region with a larger centre of population is hardly comparable to doing the same thing in most parts of the Yukon and Northwest Territories.”

Mr. Hamilton stressed that the federal Government’s underlying purpose in the program is regional development, benefits that will accrue to the area as a whole.

Once Labour Gazette Editor, Dr. Robert H. Coats Dies

Dr. Robert Hamilton Coats, a former Editor of the Labour Gazette who went on to organize the Dominion Bureau of Statistics and become a first Dominion Statistician, died February 8 at the age of 85.

Dr. Coats entered government service in February 1902 as Assistant Editor of The Labour Gazette when the late Rt. Hon. W. L. Mackenzie King was Deputy Minister of Labour and Editor of the Labour Gazette. Dr. Coats later became Editor.

In 1912 Dr. Coats was named to an inter-departmental committee set up to study and solve duplication of statistical services in various government departments.

Outcome of the committee’s deliberations was the formation of the Census Branch, and Dr. Coats was placed in charge of the Branch with the title of Dominion Statistician on July 1, 1915 (L.G. 1915, p. 138).

In 1918, with enactment of the Bureau of Statistics Act, the Dominion Bureau of Statistics was founded with Dr. Coats as its chief. He retired from the position of Dominion Statistician in 1942 but continued to serve actively in the field of statistics.

He acted as a visiting professor of statistics in the University of Toronto Department of Political Economy until 1946; an

adviser on statistics to the Ontario Government until 1944 and in 1947-48 was a statistical consultant to the United Nations' Food and Agriculture Organization.

Author of numerous works on statistics, labour and human ecology, Dr. Coats continued to write technical publications after retirement.

During his career, Dr. Coats served as an adviser on several Royal Commissions and in 1913 was a member of the Commission that conducted an investigation into the Canadian cost of living.

Born in Clinton, Ont., in 1874, Dr. Coats was graduated from the University of Toronto in 1896. He held honorary degrees from his alma mater, McGill and Dalhousie Universities.

Prior to entering the service of the federal Government, Dr. Coats was, for a short time, on the staff of the Toronto *Globe*.

U.S. Survey Finds No Lessening Of Output with Increasing Age

A study of the relationship between job performance and age among clerical workers, recently completed by the United States Bureau of Labor Statistics, suggests that arbitrary barriers to the hiring of older workers based on the supposition that they produce less than younger workers is unwarranted.

A study made by the Canadian Department of Labour in two large department stores showed that the performance of the older sales employees was as good as if not better than that of younger workers (L.G., Oct. 1959, p. 1022).

Three main findings of the U.S. study, which was summarized in the January issue of the *Monthly Labor Review* of the U.S. Department of Labor, were: differences in output per man-hour of office workers in different age groups are insignificant; owing to individual variations within age groups, a large proportion of older workers exceed the average performance of workers in younger age groups; and workers in the older wage groups had a steadier rate of output than workers in the younger age groups.

It was found that besides being as fast as the younger workers the older employees were just as accurate.

The data used in the survey were collected during the winter of 1958-59 from office production records for 6,000 clerical workers whose employment was equally divided between five federal Government agencies and 21 companies in private industry. The companies included mail order houses, insurance firms, manufacturers, banks, public utilities, publishers, and retail stores. All were large employers.

The occupations covered included such work as typing, secretarial work, filing, and the operation of keypunch and business and duplicating machines. Since there are few men in these occupations, only 15 per cent of the workers included in the survey were males.

In the federal Government service, it was found that women employees aged 65 and over had the highest average output compared with the base group of women 35 to 44 years old. Index comparisons for women in government and in private employment were strikingly similar in the ages up to and including 54 years.

In considering the results of the survey certain qualifications and limitations should be noted, the article points out. Since the survey was necessarily confined to offices that kept individual production records for workers, the data covered only a small proportion of all the office workers in the selected establishments and do not represent a cross section of various office jobs. The work covered was mainly of a routine nature.

Another fact that may have had some bearing on the results was that a large proportion of the workers studied were on incentive work, while those on time work were aware that their work was being measured. What effect this had on the results is not known, however.

The article points out that incentive plans evidently reduce the proportion of workers of all ages who produce at low levels. The proportion of workers in the survey with nine months or more of experience and with output indexes of less than 70 was at least twice as large for time workers as it was for incentive workers.

Most Negotiated Pension Plans In U.S. Have Vesting Provisions

A majority of negotiated pension plans currently in effect in the United States contain vesting provisions and provide for voluntary retirement, a survey by the U.S. Department of Labor has found.

The survey shows that 70 per cent of single-employer pension plans now have vesting provisions. In 1952 only 29 per cent had them.

Approximately 40 per cent of all the plans make retirement wholly voluntary regardless of age while about 24 per cent make retirement voluntary at age 65 but involuntary at a later age, such as 68 or 70. About two-thirds of the plans surveyed provided for voluntary retirement at age 65.

Labour Bodies Submit Briefs to Provincial Governments

Alberta Federation of Labour

Amendment of the provincial Labour Act to give the Department of Labour power to enforce the decisions of arbitration boards was requested by the Alberta Federation of Labour in its annual submission to the provincial Cabinet.

The Federation complained that although the decisions of arbitration boards are supposed to be binding on both parties, the Act does not give the Department power to enforce them. Consequently, if an employer refuses to abide by a decision the union's only recourse is to the courts.

The brief also recommended amendment of the Act to provide more severe penalties for violation, and to provide for an increase in the number of Board inspectors in order that the Act might be more fully enforced.

The Federation described the section of the Act that forbids an employer to interfere with the formation of a trade union as "a big joke." It said that there were very few cases in which employers did not "interfere, coerce, intimidate and discriminate" in regard to employees who tried to form a union. Yet in no case has a penalty been enforced, the Federation said.

The brief reiterated a previous request that if a majority of union members voted in favour of a union shop, the Board of Industrial Relations should order a union-shop provision to be part of the collective agreement.

The Federation defended informative picketing and secondary boycotts, two practices that it contended management is trying to eliminate. It opposed the certification of "company-dominated employee organizations," which it said is taking place in spite of evidence that companies have contributed to their formation. It said a trade union should be defined in law as an "international, national or provincial organization of employees, or a local branch chartered by and in good standing with such an organization."

The brief described as "a backward step" a 1957 amendment to the Labour Act allowing children of 12 years of age to be employed. It asked repeal of the amendment, and that no juvenile should be allowed to be employed on construction projects, gardening or landscaping; and that no girl who was a juvenile should be allowed to work in a restaurant.

Other requests contained in the brief asked that the maximum work week should be of 40 hours, with overtime at time and a half; that a minimum wage of \$1.25 an hour for male and female workers should be enacted; and that two weeks annual vaca-

tion after one year's service and three weeks after five years service should be required by law.

The Federation also deplored the Government's persistent refusal, on the ground that there was no such discrimination, to enact legislation prohibiting discrimination because of race, colour or creed. It contended that, on the contrary, there had been several cases of discrimination during the past year.

New Brunswick Federation of Labour

A comprehensive program of public works to help to relieve unemployment in the province was urged by the New Brunswick Federation of Labour in a brief presented to the provincial Cabinet on February 3.

If private industry is unable to provide employment for all who are willing and able to work, then governments at all levels must accept the responsibility, and the provincial Government should take the lead, the Federation said.

A series of amendments to the Labour Relations Act, including one that would automatically bring municipal boards and commissions under the Act as employers, was recommended. The Federation objected to last year's amendment giving municipal councils and boards the right to vote themselves out of the scope of the Act as employers. It considered this "an entirely unacceptable condition."

Other recommendations were that decisions of the Labour Relations Board should be final, and that certification should not be subject to stay by a court order. A previous request that no injunctions be granted in labour disputes until both parties had been given a chance to present their cases was repeated.

The Federation recommended an amendment to the Labour Relations Act to allow the Labour Relations Board, rather than individual employees, to institute prosecutions against employers considered guilty of unfair labour practices. Included in a number of practices that it thought should be considered unfair, the labour body mentioned attempts by employers to discourage employees from joining unions.

The brief asked that provincial public works employees should be given more effective bargaining rights, and that full bargaining rights should be given to employees of the Liquor Control Board.

The brief requested amendment of the Workmen's Compensation Act to bring within its scope all who work for wages, and to provide increased compensation for

injured workers, increased allowances for widows, increased pensions for sufferers from silicosis, and a higher minimum weekly pension. A review of the whole matter of pensions paid to disabled or partly disabled workers, with a view to putting pensions on a "more realistic basis," was asked for.

An increase in the minimum wage for female workers to 75 cents an hour, and for male workers to \$1.25 an hour was recommended. The brief also asked for an act that would protect the wage standards and working conditions of both male and female workers.

The Federation said it was not entirely satisfied with the present hospital insurance plan but considered it a step in the right direction. It asked the Government to "give serious consideration to changing the way the plan is being financed," and it recommended that the plan be extended to cover optical and dental services.

Other things suggested included: abolition of wage garnishee as a means of collecting debts, and placing of a moratorium on debts or mortgages under government agencies; a compulsory system of automobile insurance, and investigation of present "unreasonably high" premium rates with a view to the taking over by the Government of the administration of all types of motor vehicle insurance on a non-profit basis; an occupational illness plan for all permanent firemen in the province; and uniform daylight saving time throughout the province.

The brief urged the Government to secure the united efforts of all the Atlantic provinces in pressing the federal Government to start construction of the Chignecto Canal as soon as possible.

The Federation expressed concern at the intention of the federal Department of Transport to keep several St. Lawrence ports free from ice this winter. It urged the provincial Government to consider making a strong protest to the Department of Transport.

The Government was commended for enacting legislation against racial discrimination.

CMA Urges No Tax Increases In Forthcoming Budget

Personal and corporate income tax rates are already too high and there should be no thought of further increases in such taxes in the coming budget, the Canadian Manufacturers' Association said in briefs presented to the Ministers of Finance, Trade and Commerce, and National Revenue on February 5. The delegation was headed by CMA President W. H. Evans.

The CMA contended that the federal Government should give Canadians a lead in holding down costs by avoiding any increases in public expenditures, at least until the budget allows personal and corporation income tax rates to be reduced to the level that prevailed before 1959.

The delegation expressed satisfaction at the announcement by the Prime Minister that a Royal Commission, similar to the Hoover Commission in the United States, will be established to study all government operations, with the object of reducing expenses through improved efficiency.

The Association said that too many imported goods, particularly from low-wage countries, are replacing Canadian-made goods of comparable or superior quality, thus slowing down industrial production and expansion in Canada and causing loss of employment. It recommended that the Government take steps effectively to control such imports.

The Association does not accept the philosophy that inflation is either inevitable or desirable, the delegation said, and it contends that there can be no compromise with any form of inflation, including its insidious creeping form.

Negotiators Must Put Public Above Own Interests—Reuther

The collective bargaining process must be revised because it has failed to solve completely the problems of labour-management relations, asserted Walter Reuther, President of the United Auto Workers and a Vice-President of the AFL-CIO, in an address at Assumption University, Windsor, Ont.

The failure has resulted because labour and management have put their own interests above the general good, he said, and free labour and free management cannot be free unless they learn to co-operate in solving problems of all the people.

"Each of us has a greater responsibility to the general public than we have to the groups we represent directly," Mr. Reuther said. He advocated year-round discussions between management and labour and that the public be given "all the facts" rather than "only propaganda."

He declared that collective bargaining must be based on economic facts, not economic power, but that only rarely are facts discussed at the bargaining table. Most bargaining sessions are dominated by personal considerations and internal politics.

Management and labour have a joint responsibility to the whole of society, not just to the shareholders and the workers, he said.

Department Issues Annual Review Of Workmen's Compensation Act

Seven of the provincial Workmen's Compensation Acts were amended in 1959. The changes are described in the latest edition of *Workmen's Compensation in Canada*, an annual comparison of compensation laws by the Legislation Branch of the Department of Labour.

The amendments in Manitoba and Nova Scotia implemented recommendations of Royal Commissions. The changes in Saskatchewan resulted from an inquiry into the Act by a Committee of Review, which that province appoints every four years.

The British Columbia Act was extensively revised; the Acts of Newfoundland, New Brunswick and Prince Edward Island were amended in several important aspects.

In British Columbia, the maximum annual earnings on which compensation is paid were increased from \$4,000 to \$5,000; the lump sum payment to a widow was raised from \$100 to \$250, and her monthly pension was raised from \$75 to \$90 (the highest amount payable under any of the provincial Acts).

In Manitoba the ceiling on annual earnings was increased from \$3,500 to \$4,500 and the minimum weekly payment for temporary total and permanent total disability was increased from \$15 to \$25, or earnings, if less; the lump sum payable to a widow was increased to \$300 from \$200 and her monthly pension from \$65 to \$75.

In Newfoundland the Act was revised to make it mandatory for the Lieutenant-Governor in Council to appoint a committee at least once in every five years to review and report on the Act and its administration.

In New Brunswick the minimum payment for temporary total disability was increased from \$15 to \$25 a week, or earnings, if less; travelling salesmen were brought within the scope of the Act.

In Nova Scotia the minimum weekly payment for temporary total disability was raised from \$15 to \$20, or earnings, if less; the lump sum payable to a widow was increased from \$100 to \$150, her monthly allowance from \$50 to \$60 and the monthly benefit to each dependent child under age 16 from \$20 to \$22.50; the maximum monthly allowance for a widow and children was increased from \$150 to \$172.50.

In Prince Edward Island the Act was amended to authorize the Workmen's compensation Board to bring any industry under the Act by regulation; another amendment raised the lump sum payment to a widow from \$100 to \$200.

In Saskatchewan the lump sum payable to a widow was increased from \$250 to \$300 and provision was made for a lump sum payment, not exceeding \$50, in the discretion of the Board, to each orphan child under 16 to meet the expenses arising from the death of the parent.

The publication, which is available from the Queen's Printer, Ottawa, at a price of 25 cents, comprises the main points of provincial workmen's compensation legislation. Tables set out the scale of benefits and the occupational diseases compensated.

A summary of the provisions of Conventions and Recommendations of the International Labour Organization on workmen's compensation permits comparison between ILO standards and the provincial statutes.

Says Shifts in U.S. Labour Force To Bring Changed Hiring Policies

A marked change in the United States labour force in the next 10 years that may require a major overhaul in the employment policies of many businesses was forecast by Secretary of Labor James P. Mitchell in releasing a new study by the U.S. Department of Labor entitled *Manpower: Challenge of the 1960's*.

"Employers who do not abandon policies against hiring workers because of their age, sex, religion, nationality or because they may be handicapped in some way, may have real trouble finding workers in the decade ahead," he said.

The study predicts that the labour force will increase by 20 per cent, and the country's population by 15 per cent in the next 10 years.

The study also predicts that the proportion of older workers will increase to a point where two of every five employees will be over the age of 45 years. By 1970 it is estimated that one of every three employees will be a woman.

Workers under 25 years of age will account for nearly half of the labour force during the 1960's, even though prospective workers will remain in school longer.

There will be a comparatively small increase among workers 25 to 34 years old, it was forecast, but there will be fewer workers aged 35 to 44. Many of those who will be in the latter group were born during the 1930 depression years, when birth rates were low.

The U.S. Department expects that employment will continue to grow faster in the service industries than in the production industries; that it will grow much faster in construction, finance, insurance and real estate; and that the fastest growth

will occur among professional and technical occupations, especially engineers, scientists and technicians.

Two Plans Operating in U.S. To Soften Blow of Technology

A Rochester, N.Y., firm is presently the scene of a union-management experiment in the retraining and relocation of workers whose jobs are threatened by technological advances. And on the United States west coast, distribution this spring of a \$1,500,000 fund set up to compensate longshoremen for work lost through the introduction of labour-saving devices awaits only the approval of union members.

Since December 21, 1959, Harold Xerox, Inc., manufacturers of photography equipment, has been sending 12 of its employees to the Rochester Institute of Technology to learn new skills. If the program proves successful, the company will put 60 more employees through the course this year.

During the training period Harold Xerox, will pay all costs, including tuition fees of \$400 for each worker, and an hourly wage of \$2.50 (the company average) for a 40-hour week. The firm estimates that it will pay out between \$1,750 and \$2,000 for each man enrolled.

Upon completing the course, the workers will be given new jobs at the plant and will continue to draw the \$2.50 an hour even if the new job does not ordinarily pay that much. They will also retain full company seniority throughout the retraining and relocation period.

The experiment was suggested by Abraham Chatman, Manager of the Rochester Joint Board of the Amalgamated Clothing Workers of America, an affiliate of which, the Amalgamated Photographic Supply Workers Union, represents the workers.

In last year's negotiations, the west coast longshoremen's union agreed to accept the installation of labour-saving devices and, in return, the employers agreed to share with the workers the money thus saved. Although no criteria for determining how to calculate the savings have been selected, the parties have agreed on an arbitrary amount of \$1,500,000 for distributions this year.

72 Per Cent of U.S. Agreements Provide 7 or More Paid Holidays

The percentage of collective agreements in the United States that granted seven or seven and a half paid holidays a year increased from 40 to 44, and the percentage that granted eight or eight and a half days increased from 11 to 20 between 1957 and

1960, according to a survey by the Bureau of National Affairs, Inc.

The agreements providing nine or more paid holidays increased from 6 to 8 per cent of the total while the percentage of agreements granting six or six and a half days dropped from 30 to 16. The proportion that provided for no paid holidays fell from 10 per cent to 9 per cent.

Premium pay for work done on paid holidays was specified in 94 per cent of the agreements.

The survey was based on a continuing analysis of 400 representative union contracts.

(For a report on the latest survey of selected working conditions in Canadian industry, see page 297 of this issue.)

Persons from Canada Can Obtain U.K. Welfare Benefits Sooner

Persons coming to the United Kingdom from Canada will qualify more quickly for family allowances, unemployment benefit and retirement pensions as a result of a British order-in-council—the Family Allowances and National Insurance (Canada) Order, 1959—issued on December 21, 1959.

Families coming from Canada will begin drawing family allowances immediately, if they become ordinarily resident in the United Kingdom. Persons age 70 years or over who claim retirement pensions after a prescribed period of residence in the United Kingdom will be allowed to count each week of residence in Canada as a National Insurance contribution paid in the United Kingdom.

Thus, as an extreme example, a man who left the United Kingdom at the age of 18 and stayed in Canada until the age of 69 can now, if he returns to the U.K., begin to draw a retirement pension after one year's residence.

Persons from the U.K. coming to Canada were already able to qualify for corresponding Canadian benefits as quickly as Canadians moving to Britain are now able to do.

Report "Right-To-Work" Laws Retard Area's Industrialization

Industrialization has been retarded in areas in the United States where "right-to-work" laws have been adopted, the National Council for Industrial Peace has reported.

The Council asserts that industries that help develop the economy of an area prefer to locate in high-wage states rather than in states with right-to-work laws, where lower wages prevail.

CLC Establishes National Council Of Affiliated Broadcast Unions

A national council of broadcast unions has been established by the Canadian Labour Congress. The new council will co-ordinate labour-management relations activities of affiliated unions in the radio, television and film production industries.

The unions included are the Canadian Council of Authors and Artists, the National Association of Broadcast Employees and Technicians, the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators, and the Canadian Wire Service Guild (American Newspaper Guild).

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to Hansard)

January 22—*Minister of Labour answers* several questions concerning protests about recent unemployment insurance regulations dealing with holiday pay and severance pay (p. 208).

Research into causeway to Prince Edward Island is continuing, the Minister of Public Works reports in answer to a question (p. 213).

That Canada accept more immigrants was urged by two speakers in the debate on the address in reply to the Speech from the Throne (Mr. Maloney, p. 218; Mr. Regier, p. 231).

January 25—*Agents to fill out claims* for the Unemployment Insurance Commission at the rate of \$1 per form are appointed on the basis of merit, the Minister of Labour says when answering a question (p. 260).

Organized labour will play a key role in the solution of Canada's domestic problems, says C. W. Carter, Newfoundland member, speaking during the debate on the address in reply to the Speech from the Throne (p. 266).

Chignecto canal should be given priority before any more money is spent on the St. Lawrence Seaway, says W. L. M. Creaghan (Westmorland) during the Throne Speech debate (p. 293).

Commission to study the relation of wages, prices and profits should be established, says Harold E. Winch (Vancouver East) in the debate (p. 300).

January 26—*Canadian gifts of wheat and flour* to Colombo Plan countries have totalled \$46,000,000 in two years, and long-term loans \$35,000,000, Hon. Gordon Churchill announces during the debate on the address in reply to the Speech from the Throne (p. 332).

Canada sixth in rank among the world's largest manufacturing nations. About one-quarter of the employed population in the country is in manufacturing, Hon. Gordon Churchill tells the House (p. 334).

Increased immigration urged by L. D. Crestohl (Cartier) (p. 338).

January 28—*Unemployment insurance* regulations relating to holiday pay will be referred to the Unemployment Insurance Advisory Committee for consideration, the Minister of Labour announces (p. 431).

Conditions in the textile industry in Canada are "seriously deteriorating," asserts Hon. Lionel Chevrier (Laurier). Hon. Donald Fleming, Minister of Finance, asserts that they are not (p. 425).

\$10,000,000 annual loss for Newfoundland will result from the closing down of Pepperrell air force base, J. R. Tucker (Trinity-Conception) says during debate on address in reply to the Throne Speech (p. 461).

New Civil Service Act should give civil servants "the right to a fair wage, otherwise the Prime Minister's Bill of Rights, that is supposed to give equal rights to all Canadians, will prove to be a farce and not worth the paper it is written on," Mr. Tucker also said (p. 462).

The problem of technological change, including automation, has been under study of the federal Department of Labour since the summer of 1956, the Minister of Labour says in reply to a question (p. 489).

January 29—*Explanation given* by the Prime Minister of his statement in reply to one contained in Canadian Labour Congress brief to the Government (p. 491). (See L.G., Feb., p. 150).

Municipal winter work incentive program this year has provided 34,000 jobs, a figure considerably higher than that at the same time last year, the Minister of Labour reports when speaking in the Throne Speech debate. In his speech he reviewed employment and unemployment trends since 1946 (p. 510).

February 1—*Marking of Imported Goods* Order requires legible and permanent marking of 44 different varieties of imported goods, including many textiles, the Minister of National Revenue replies to a question (p. 548).

Report on activities relating to vocational training programs for unemployed persons

given by the Minister of Labour in reply to a question (p. 609).

February 3—*Report on technological changes and skilled manpower* in the automotive industry is nearing completion, the Minister of Labour reports in answer to a question (p. 677). A report has already been completed entitled *Technological Changes and Skilled Manpower in the Electric and Electronics Industry and in the Heavy Machinery Industry*, as part of the research program on the training of skilled manpower.

Federal Government employees numbered 204,726 on July 31, 1959, the latest date for which figures are available (p. 679).

Increases in Japanese textile imports in 1959 were "far beyond any reasonable definition of orderly growth," the Minister of Finance says in reply to a question on the Government's actions towards ensuring that Japanese imports proceed on an orderly basis (p. 681).

Work on Dorval airport is going on satisfactorily and there is no need for an inquiry as requested in the brief of the Canadian and Catholic Confederation of Labour, the Minister of Transport replies when questioned (p. 693).

Progress reported on motion that the House go into committee to consider a measure for amending the Railway Act so that grants could be made from the railway grade crossing fund for a further period of three years beyond January 31, 1961 (p. 696).

Unemployment figures given for Nova Scotia and New Brunswick, as of January 7, by the Minister of Labour (p. 706).

Coal production in Nova Scotia declined in 1959 from 1958 and 1957, the Minister of Trade and Commerce said in reply to a question, during which he gave production statistics (p. 706).

February 4—*Estimates for fiscal 1960-61* tabled by the Minister of Finance (p. 709).

February 5—*Bill No. C-9, to amend the Industrial Relations and Disputes Investigation Act* to make its provisions applicable to federal civil servants, debated but the House adjourned without question put (p. 800).

February 9—*Canada Labour Relations Board rejected applications* of the Seafarers' International Union and the Canadian Brotherhood of Railway, Transport and General Workers, both of which sought to act as bargaining agent for seamen employed by the Kingcome Navigation Company, on the grounds that neither succeeded in obtaining the support of the majority of the employees involved (p. 864).

Possibilities of providing assistance for some 200 Tsable River Coal miners whose place of employment on Vancouver Island is ceasing operations on March 1 have been explored by the Government, the Minister of Mines and Technical Surveys tells a questioner (p. 869).

February 10—Government measures to assist unemployed miners on Bell Island, Nfld., are outlined by the Minister of Labour in answer to a question (p. 919).

Decision to amend the Industrial Relations and Disputes Investigation Act, "a very important Act," must receive "very serious consideration," the Minister of Labour tells a questioner (p. 927).

Study of the segregation of seasonal workers under the Unemployment Insurance Act, and of the inclusion of farm help under the same Act, has not yet been completed, the Minister of Labour replies to a question (p. 946).

February 12—*A very satisfactory agreement* was recently reached between the federal Department of Transport and the Great Lakes Pilots Association in respect to pay and hours of work, the Minister of Transport advises a questioner (p. 1002).

Item in the Estimates concerning the Municipal Winter Works Incentive Program debated for almost the entire sitting but was not passed (p. 1003).

February 15—*Request for copy of the Civil Service Commission report* concerning pay increases for civil servants was rejected by a vote of 117 to 32 (p. 1055).

Motion calling for the Government to consider the advisability of discussing with appropriate United States authorities the question of unemployment insurance benefits to Canadian woodsmen working in the state of Maine was debated (p. 1061).

February 16—*Members of standing committee* of the House are announced (p. 1097).

The Prime Minister promised that the Government would continue to give the fullest consideration to the unemployment situation at Elliot Lake (p. 1104).

Rates of pay for civilians at the United States Air Force base at Beausejour, Man., are set by the base authorities, guided by schedules put out by the Industrial Relations Branch, Department of Labour, the Minister of Labour replies to a question (p. 1106).

Employees beyond the retirement age of 65 will be granted extensions of employment by the Unemployment Insurance Commission if they request it, providing the employee is in good health and is giving satisfactory service, the Minister of Labour replies to question (p. 1146).

42nd Annual Meeting of the Canadian Construction Association

Delegates hear reports on labour relations, winter construction, housing and apprenticeship. Labour relations forum hears discussion of administration of labour legislation by Alberta Deputy Minister. Gordon Cushing among speakers

Labour relations, apprenticeship training, winter construction, and housing were some of the subjects discussed at the 42nd annual meeting of the Canadian Construction Association, held in Calgary January 24 to 27 inclusive. Some 700 delegates attended the sessions.

The meeting was preceded, on January 23, by a one-day labour relations forum, at which K. A. Pugh, Deputy Minister of Labour for Alberta, spoke on the administration of labour legislation.

Speakers at some of the sections into which the CCA annual meeting is divided included Gordon Cushing, Assistant Minister of Labour, Ottawa, who gave a review

of federal legislation on fair wages and hours of labour; R. H. MacCuish, federal Department of Labour, who spoke on the training of apprentices; and J. H. Kelly, Vice-President of Burns & Co., Calgary, who gave an address on labour-management relations.

At general sessions, delegates heard reports from the Association's standing committees, some of which are summarized here.

In the election of officers, J. M. Soules of Port Credit, Ont., was elected President for 1960 in succession to J. E. Harrington, Montreal. National Vice-Presidents elected were: A. G. Sullivan, Halifax, and H. R. Montgomery, Montreal.

Labour Relations Forum

A one-day labour relations forum was held by the Canadian Construction Association in connection with the annual meeting. On the Saturday before the meeting's first general session on Monday, a panel of eight speakers discussed at both morning and afternoon sessions the labour relations problems of the construction industry.

The luncheon speaker was K. A. Pugh, recently appointed Deputy Minister of Labour, Alberta, and Chairman of the Alberta Board of Industrial Relations.

K. A. Pugh

There is a wide gulf between labour and management in the construction industry and the only point of agreement is that the industry has problems connected with collective bargaining that are different from those in other industries, said Mr. Pugh.

"There must be more comprehensive study and review by employers and trade unions concerned in the construction industry of all the problems affecting collective bargaining in your industry before changes in practices or in legislation be made," he declared.

The speaker remarked at the outset that Alberta is the only province that, before it amends its Labour Act, holds hearings at which it consults representatives of management and labour regarding proposed amendments. This consultation, he thought, "has removed many of the problems in administration of the law."

Referring to the question of international or national agreements, Mr. Pugh pointed out that such agreements are not valid in Alberta unless ratified by the employer and the local union concerned.

Construction industry representatives have suggested that there should be no collective bargaining until a certain or major proportion of the workmen are employed on the project. But, he pointed out, this suggestion conflicted with the ordinary practices of the industry.

Another suggestion was that closed shops should be outlawed, yet "you yourselves enter into agreements with trade unions providing for closed shops to ensure that you will have sufficient supply to meet your needs." Albertans believe that the question of union security should remain a matter for collective bargaining, he said.

Turning to the difficulties connected with the certification of craft unions in the industry, Mr. Pugh pointed out that the practice of the Alberta Board in dealing with the question of the units of employees appropriate for certification was "largely based on your own practices in the field of collective bargaining."

Referring to suggestions that legislation similar to the Trades-union Act of British Columbia should be enacted in Alberta, the Deputy-Minister said that he thought too little attention had been paid to the legal remedies that already exist against unlawful actions by unions.

Where an organizational picket line is placed around the project and if it is honoured by the members of trade unions covered by existing collective agreements, then each and every employee refusing to cross the picket line is in breach of the terms of the collective agreement and could be made subject to suit to recover any damages caused by refusal to work.

Mr. Pugh then cited two cases in which union members and officers were sued, in one case as the result of the establishment of an organizational picket line and in the other because of participation in an illegal strike. In one of the cases, at least, the court action had a "salutary effect" on labour-management relations of the company and the unions.

Regarding the resort to injunctions against unlawful picketing, he advised against the making of frivolous applications with the object of trying to frustrate the rights of employees to engage in a lawful strike. On the other hand, he said that employers should not be deterred from applying for injunctions by fear of reprisals by the unions. Such fears, he said, were unfounded. "We should never allow threats or fear to interfere with sound judgment in making decisions affecting affairs of the employer and the rights of the employees," he asserted.

New remedies might be desirable only if their object were to provide a quicker way to gain protection against unlawful activities in order to guard investments and the welfare of the industry's employees, the speaker said.

Mr. Pugh described some of the advantages and disadvantages of industry-wide bargaining, which he said was advocated by a number of employers in the construction industry.

At one time labour legislation in British Columbia had the effect of encouraging industry-wide bargaining. But, he said, "Look what happened in British Columbia." On the other hand, reports from Ontario seemed to show that industry-wide bargaining had met with some success in the construction industry.

The speaker suggested that there should be a well thought out program of joint consultations between members of the CCA and the various building trades unions with the object of reviewing the problems confronting the industry and reaching an understanding as to the responsibilities of both parties to each other, and above all to the public. "This consultation between employers and the trade unions in the field of apprenticeship training has been most outstanding," he reminded the delegates.

The labour relations problems of the construction industry can be dealt with

legislatively in part, but "the greater part can be solved with clearer understanding of the responsibilities and obligations of all parties concerned, tolerance in dealings, and bargaining with the utmost good faith—with all cards on the table."

W. E. Williams

With few exceptions, the labour laws of the province of Quebec have been fair, and more progressive and helpful to the construction industry than the laws of the provinces in which some of its critics reside, said W. E. Williams, Chairman of the Building Trades Joint Committee of Montreal, in remarks at the labour relations forum. He was describing the functions of Joint Committees in Quebec.

"The new look that has come to Quebec's Government in the last few months has served to emphasize that Quebec is rapidly drawing away from its isolationism and is participating fully in the economic and political development of Canada," Mr. Williams said.

The speaker recommended the establishment of a joint committee in territories where none exist.

After contrasting a consultative joint committee with an administrative joint committee, Mr. Williams said that in his opinion "any joint committee which succeeds in bringing together senior representatives of both labour and management is a valuable asset in itself. If such a committee meets regularly and has clearly defined tasks to perform, one desirable by-product is that members get to know one another and get to understand the attitudes and motivations of each other."

W. A. Nisbet

"With relatively few exceptions, the labour relations statutes have not laid down rights for employers. The whole trend of thinking had been to prevent the undue exploitation of the wage earner by the employer, and this preoccupation with the need to protect workers resulted in little or no attention being given to the right of employers. The inference was that they already had all the rights and protection they needed, and some of the early abuses of labour tended to reinforce this inference," said W. A. Nisbet, Co-ordinator, Alberta Builders' Exchange Council, Edmonton, in addressing the labour relations forum on "The Promotion of Labour Legislation."

"The full effect of protective labour legislation could not become apparent until the workers had had time to take advantage of the more favourable environment in

which they found themselves to organize and grow into strong and articulate groups able to exploit fully the advantages they had been given," he continued.

This, he said, was the "general historical perspective" with which the first approach

to the task of promoting labour legislation should perhaps be made.

He then described to the forum the steps that employers' organizations ought to follow when seeking to obtain amendments to existing labour legislation.

Addresses of Labour Interest

Gordon G. Cushing

It is not the desire of anyone charged with the administration of the federal Fair Wages and Hours of Labour Act to create difficulties or hardships for the building and construction industry, Gordon G. Cushing, Assistant Deputy Minister of Labour, told the general contractors section of the CCA. He was reviewing the development and administration of the Act and Regulations.

You have a tremendous capital investment to care for. You are faced with the seriousness of seasons in Canada and you have the importance and desire to get jobs done. We who are charged with the administration of the fair wages legislation want to be as helpful as possible, keeping in mind the original concept of this legislation when it was approved by Parliament that it constituted a declaration of social policy with respect to the responsibility of government to maintain and make applicable to workers engaged on government contracts reasonably adequate standards of wages and working conditions.

Commenting on complaints that are sometimes made about revisions made in wage schedules between the beginning and completion of a contract, Mr. Cushing pointed out that changes were made as infrequently as possible and that the Department did not amend a wage rate until it was clearly indicated that the rate had changed through collective bargaining or some other procedure. "It is usually found that the contractor has already implemented the new rate before receiving a revised schedule," he said.

As for the limitation on hours of work and the requirement for overtime rates of pay, he remarked that relaxation of the limits on daily and weekly hours established by the legislation was permitted only where the Governor in Council may provide or the Minister of Labour may authorize in cases of emergency. But restriction of the granting of overtime permits was not too serious: in the last nine months of 1959, 246 overtime permits were granted for construction and 39 for dredging, Mr. Cushing reported.

R. H. MacCuish

The problem of finding enough opportunities for good on-the-job training for the required number of apprentices, which is always present, is entirely a problem for

the industry concerned, said R. H. MacCuish, Assistant Director of the Vocational Training Branch of the federal Department of Labour, who spoke on the subject, "The Manufacturers' Stake in Apprenticeship". He was addressing the manufacturers and suppliers section of the CCA.

"If contractors will not employ apprentices there will be no apprentices trained. Many skills—judgment, accuracy, speed—cannot be taught in a school, and the type of supervision and training given to the apprentice by the journeyman with whom he works and by the foreman or supervisor determines largely the final level of competence reached by the apprentice," Mr. MacCuish said.

Although there has been an increase in the number of registered apprentices during the past few years, he said it was generally agreed that the number still falls far short of meeting the future needs of the construction industry.

"Many contractors do not hire apprentices and therefore contribute nothing to the future of the industry. This is discouraging to those contractors who do a good job of training, only to lose many of their graduates to pirating employers who train none," the speaker remarked.

He said that if it was good business to spend time and money on research and development to produce better material and equipment it was good business to do the same for the development of tradesmen who will be able to get the most out of this equipment and material.

Among the ways in which members of the Canadian Construction Association could help to promote the training of apprentices, Mr. MacCuish mentioned the following:

—By providing training opportunities for apprentices if they employed tradesmen, and by encouraging contractors with whom they dealt to take on as many apprentices as they could properly train.

—By supporting the CCA in its efforts to promote the training of future tradesmen.

—By encouraging the proper type of young men to choose the construction industry as a career; and by helping to provide careers, not just jobs, in the industry.

"To be successful this program requires the support of everybody connected with

the industry. Unless standards are recognized and required they are meaningless. You can help establish these standards and see that they are adequate," he said.

J. H. Kelly

In dealing with labour problems, what is needed is an understanding of human relations rather than an attitude that regards labour relations as something entirely divorced from our everyday dealings with human beings, said J. Howard Kelly, Q.C., Vice-President of Burns & Co., Calgary, in an address entitled "Understanding Could Be a Cure," given before the road builders and heavy construction section of the Association.

"One question is posed for both management and labour: 'Are you obsessed with personal desires, or are you seeking the Truth?' The trouble is few people really think, they merely adjust their prejudices," the speaker said.

The success of our free enterprise system depends on management's ability to narrow the gap between workers and employers, he asserted. "What management should do is exercise its right to make facts available to its employees... Management should never be hoodwinked into thinking that any law prohibits an employer making facts known to his workers."

Mr. Kelly warned that "you cannot make collective bargaining work or settle any labour problem by dealing with it emotionally." If, as management sometimes complains, labour leaders do not understand business or its problems, "Then there is a sales job to be done," he commented.

Speaking of differences between labour and management, which he referred to as "a chronic problem in our economy, one of society's self-imposed problems enjoying political benediction," he admitted that "in the past many unfair advantages were taken of labour" but he contended that the pendulum has swung too far the other way, and "the problem is to level out the balance."

The speaker compared the ceaseless struggle between labour and management to a revolving door, in which "you never get very far." In the struggle between the two parties, with management on the one side unwilling to make further concessions, and on the other side the unions with their "apparently insatiable demands for more and still more," Mr. Kelly said, "it is regrettable that members have so little to say." They needed a "return of their identity and influence," he contended.

Taking one particular facet of the labour question, the speaker discussed the question

of increased productivity in relation to wages. In reply to the claim of some union advocates that the workers should have a principal share of increased output, he declared that the increase was really the result chiefly of technological improvement and "not increased effort or improved accomplishment by the worker."

In any case, increases in productivity have been reflected in real wages, when measured over a long period of time, he pointed out. He denied that in the short run there had been in the past any close relation between wage increases and productivity increases. "For example, from 1870 to 1950 output per man-hour increased 351 per cent, while average hourly earnings went up 723 per cent." Looking back over the past, Mr. Kelly declared that in no decade had output per man-hour and average hourly earnings risen proportionately together. "Only three five-year periods between 1899-1946 show any close relationships," he said.

The speaker also pointed out that there was a wide variation between different industries in the rate of growth of productivity. Between 1939 and 1950 in one industry it had increased 186 per cent, while in other industries it ranged from 46 per cent to as little as 1 per cent. He contended, however, that during the period in all but one industry studied wages rose faster than output per man-hour.

Mr. Kelly disputed the "commonly accepted yearly increment figure of 2 to 3 per cent," which, he said, overstated the actual rate of growth in national productivity.

Shifts in labour time from low-value to high-value products, or from industries with low production per man-hour to those with high output, cause productivity increases to be overstated by as much as $\frac{1}{2}$ of 1 per cent per year. Also, the term "labour time" does not include the hours spent by proprietors, independent contractors and others who are not paid on a wage or salary basis. Their inclusion would reduce the estimate considerably.

Wage levels are determined by a variety of factors, the speaker said, and he urged that "a national productivity formula would tend to exclude the use of other factors in wage determination. It thus would freeze the existing relationships, crystalize distortions, inject rigidity into and inhibit collective bargaining."

He also contended that "others beside labour should profit from increased productivity." Consumers should get part of the benefit in the form of lower prices or improved quality. Part of it should also be

applied to further capital investment and to help the nation "to absorb the tremendous costs of insuring national security." A uniform "productivity" wage increase policy would promote inflation, the speaker argued.

"Of the differences between management-labour, I am not going to say what is right

or wrong, but I do know, nothing is right that won't work, and any arrangement that will work will have to be reconciled on both sides. If the forces of management and labour are going to commit themselves to a struggle for power within the highly delicate mechanism of our economy neither can win and democracy will lose."

Committee Reports

Labour Relations

"Construction employers are particularly conscious of the great value of the trade union movement to our society, and there are many points of common agreement between both parties in the industry," the CCA labour relations committee said in its report. "Further progress can be obtained on matters of mutual interest through joint discussions and ready co-operation.

"In recent times, however, labour legislation has become seriously outmoded and negotiations frequently have become too one-sided in favour of the unions.

"There have been some encouraging developments which help to rectify this situation and place our relationships on a more equitable basis," the report continued. "Where progress was made it has been the result of concerted action." The report pointed to the effective structure of unions as the source of much of their strength and noted that there was as yet no counterpart on the employers' side of the industry.

The committee expressed the opinion that "continued attention must be given to the provincial and federal Governments to effect the desired corrective changes to labour legislation."

Wintertime Construction

A further gain in the volume of construction and employment during the present winter is expected, the national joint wintertime construction committee said. As one reason for continuing to promote wintertime construction, the report pointed out that about a third of those unemployed this winter are construction workers.

"The possibility of extending the incentive principle to encourage the construction of privately financed projects in the winter months continued to receive attention by the committee. Action was also again taken by the federal Government in extending direct loans for certain types of houses built during the winter months. The committee has also favoured the provision of some sort of tax concession which could be made to encourage wintertime construction of industrial and commercial projects," the report said.

The committee said that the federal Government's policy of restricting the hours of work on federal construction projects to eight a day and 44 a week during the winter months still leads to complaints that wintertime employment is thereby restricted rather than encouraged. The matter was taken up in an interview with the Minister of Labour, during which the committee expressed the view that weekly rather than daily maximum hours of labour would be preferable.

Apprenticeship Training

The registration of indentured apprentices in the construction trades in the eight provinces that have apprenticeship agreements with the federal Government increased by 9 per cent, reaching a total of 9,435, the apprenticeship training committee stated in its report. The increase was the largest since 1956.

The committee, however, expressed regret that training programs in force still failed to meet the need for skilled tradesmen both now and in the future. It remarked with satisfaction that steps are under way in several provinces to extend some form of organized training to operating engineers working with construction equipment.

The committee urged all general and trade contractors to accept their responsibilities by providing as many job training opportunities for apprentices as possible.

The report mentioned that new or enlarged facilities for training were being provided in Moose Jaw, Burnaby and Edmonton, and in other parts of Canada steps were being taken to meet the demand for new schools.

Housing

Although housing completions during 1959 reached a new record of more than 150,000, the number of starts fell below the 1958 record by 15 per cent, the report of the housing committee stated. The falling off in starts was particularly marked towards the end of 1959 and the outlook for the year ahead was more than usually uncertain, the committee said.

The volume of housing is strongly influenced, both directly and indirectly, by federal Government policy, said the report.

Satisfaction was expressed at a statement of the Minister of Public Works to the effect that "the Government recognizes the need to maintain the total housing program at a reasonable level."

The interest rate on National Housing Act loans had become the most controversial issue of the year in connection with housing, the report said. Regarding the

effect of the raising of the rate to 6½ from 6 per cent on December 17, the committee said that it was too early to tell whether it would lead to an increase in the amount of money offered by lending institutions.

Lack of serviced land and an increase in its price many times greater than the rise in building costs was an important factor in financing house building, the report said.

CCCL Memorandum to Cabinet

Setting up of economic council as first step towards economic planning strongly urged. Other major recommendation was for creation of price arbitration boards

(Translation)

The setting up of an economic council as the first step on the road to economic planning was strongly urged on the federal Government by the Canadian and Catholic Confederation of Labour.

This suggestion, and a suggestion for the creation of price arbitration boards, were the two main recommendations in the memorandum submitted by the CCCL to the Cabinet on February 1.

"Canadians will be chronically insecure," according to the memorandum, "as long as Canada does not resolutely engage in economic planning."

The CCCL delegation, some one hundred members strong, was led by Roger Mathieu, General President, who stressed the fact that his organization wants its recommendations to be "constructive" and in the interests of all citizens, not just the working classes.

Read in French by Jean Marchand, General Secretary of the CCCL, the brief also dealt with Dorval Airport and the need for an inquiry into delays there, assistance to municipalities, the utilization of our natural resources, radio and television, housing, and the anti-union atmosphere in Canada.

The delegates were welcomed by the Prime Minister, who called on the Solicitor General of Canada and Acting Secretary of State to reply.

Two other Quebec ministers, Hon. Paul Comtois, Minister of Mines and Technical Surveys, and Hon. Raymond O'Hurley, Minister of Defence Production, also spoke briefly, as well as the Minister of Labour, Hon. Michael Starr.

The CCCL Brief

The CCCL strongly urged the Canadian Government to engage in economic planning by setting up an economic council consisting of representatives of the federal and

provincial Governments, of employers' and labour organizations and of groups of consumers and farmers.

According to the memorandum, the main functions of this economic council would be:

(a) to inquire into the causes of economic unrest, into the economic structures of the country, into markets, etc.;

(b) to recommend to the various Governments (federal, provincial or municipal) the measures to be taken to obtain full employment and maximum prosperity.

To those who object that the institution of such a body would lead Canada towards state control, the CCCL replied that this council would have "no power of decision"; its main function would be to awaken people's consciences to economic problems.

In the meantime, in order to attain a policy of full employment, the CCCL suggested that the federal Government assure all citizens, directly or indirectly, of steady, remunerative employment.

"This aim may be attained," according to the brief, "either by stimulating private enterprise or by concluding agreement with the provincial and municipal Governments for the execution of public works."

Assistance to the Unemployed

The CCCL maintained that the federal Government should see to it that all unemployed persons are assured of an adequate income whether or not they come under the Unemployment Insurance Act.

The brief suggested making the law more generous by means of a federal Government contribution equal in percentage to that paid by employers and wage-earners.

The CCCL also stated that unemployed persons who cannot benefit by the Unemployment Insurance Act should receive benefits for the entire duration of their unemployment, either by virtue of a special law or directly from the Consolidated Fund.

Natural Resources

The CCCL would like to have the mineral wealth of the Canadian substratum processed in Canada as far as possible.

Having pointed out that this is wealth that does not reproduce, the memorandum continued:

The processing of our raw materials in Canada would contribute greatly to the stabilization of our national economy. Such a policy, because of the numerous investments it would entail, and also because of the permanent employment it would create, would be, in our opinion, an excellent way of getting around the unemployment problem which is constantly threatening our economy. Furthermore, it would allow a gradual transformation of our economic life.

The CCCL also called on the Government to play a greater part in the development of concerns in co-operation with Canadian capital, rather than encouraging the influx of foreign capital originating for the most part in one single country, which might constitute "a serious threat to the economic independence of Canada."

Price Arbitration

The CCCL renewed its request for the establishment of price arbitration boards so that the consumers may be kept continually informed "not only of the evolution of prices, but also of the reasons given by producers or distributors of goods and services to justify the increases which they demand."

The memorandum suggested that these arbitration boards might serve a twofold purpose:

(a) To judge the grounds on which primary producers or the country's basic industry or the distributors of essential products and services support their requests for price increases, and to place them before the public when they are not justified.

(b) To inquire into every sector of economic life in order to discover abuses in the field of the financial structure of concerns in so far as this structure may have an influence on prices.

The CCCL stressed the fact that such boards would not have power to impose upon any one their decisions or opinions, but that they would give information to the public, which would, in the long run, oblige private interests to give more consideration to the common good.

Anti-Unionism

Pointing out that free trade unionism constitutes the best guarantee against totalitarianism in all its forms and the exploitation of labour, the CCCL requested the

Government not to listen to "the employers' claims for more restrictive union legislation".

"It is by three-way co-operation, that is governmental, employer and labour," the brief stated, "that we will succeed in building up a prosperous and harmonious society."

The CCCL pointed out that Canadian unionism has not had to deplore the abuses brought to light by the investigating committee of the American Senate. "Generally speaking," the memorandum continued, "we may say that our labour movement is in good health and worthy of the workers of whom it is composed."

There is no justification, the memorandum concluded, for government intervention in the internal management of unions, which, on the whole, "have conducted their business properly, in the best interests of their members and of society in general."

Other Recommendations

The CCCL called on the Government to continue its efforts for the establishment of lasting peace. It stressed the fact that it favours disarmament and the permanent banning of nuclear tests.

It also stated that it was completely in favour of the memorandum presented to the Board for Broadcast Governors by the radio and television trade-unionists' "Vigilance Committee," and most strongly urged that the number of programs of Canadian origin on radio and television be increased to 75 per cent.

"The air-waves should not be submitted to the domination of businessmen and to the law of profit any more than our school system or our universities," the memorandum stated.

Once more the CCCL requested the nationalization of the Bell Telephone Company.

Maritime Situation

Through S. Ted Payne, Vice-President of the National Metal Trades Federation, the CCCL requested the Government to establish a maritime policy favourable to the industry and to its employees.

While opposing in principle a generalized policy of subsidies, Mr. Payne said that as far as the shipyards were concerned this would be a lesser evil than the one now affecting them.

Mr. Payne expressed the hope that the federal Government's intention to "repatriate" the Canadian constitution would facilitate amendment of Canada's maritime laws to the country's advantage.

He also suggested that the Government draw inspiration from certain aspects of American legislation in this respect.

Boot and Shoe Industry

Adalbert April, President of the National Federation of Leather and Shoe Workers, asked the Government to restrict imports of footwear.

According to Mr. April, Canada imported more than three and a half million pairs of shoes during the first nine months of 1959, mostly from Japan and the United Kingdom. The largest Canadian company, he said, produces only a little more than 400,000 pairs of shoes a year.

If the imported footwear were manufactured in Canada, Mr. April explained, 20,000 persons would have three hours' more work per week or work could be provided for 3,000 more persons.

Mr. April stated that he intended to submit a more elaborate memorandum to the Minister of Trade and Commerce.

Government's Reply

Hope that the Canadian Government may arrive at a basis of agreement, in relation to exports and imports, that will "assure expansion and multiplication of trade without at the same time causing to individual industries specific and specialized forms of adverse results" was expressed by the Right Hon. J. G. Diefenbaker in his reply to the CCCL brief.

The Prime Minister, pointing out that "trade is not a one-way street," noted that everybody is interested in expansion of trade "so long as imports covering the trade or industry represented by the individual speaking are kept to a minimum."

The Prime Minister did not comment on specific recommendations contained in the CCCL brief. He stated that the recommendations and suggestions that were made will be studied by the Departments concerned.

Mr. Diefenbaker praised Mr. Payne's recommendations regarding the shipbuilding industry, especially his interest "in the assurance that Canada, in every particular, shall assume its responsibilities in all fields of trade and in all parts of the world."

In commenting on Mr. April's representations, the Prime Minister stated that the Government must assure "that our exports shall be maintained and, at the same time, a degree of appreciation of the needs of Canada as a whole."

Hon. Michael Starr

The Minister of Labour, Hon. Michael Starr assured the delegation that the present government will continue to take vigorous action regarding unemployment, "so that the problem may be eventually alleviated."

The Minister stated that this problem has had an "ever-increasing priority" with this government, to the point where the trend of unemployment "has now been reversed to quite an extent."

Mr. Starr expressed his thanks to the CCCL delegation for its co-operation during the past year. He added that he was impressed "with the moderation and clarity of your presentation."

The Minister said that the Quebec government has been very co-operative in connection with the winter works program.

Mr. Starr echoed a statement contained in the CCCL brief, that the "labour movement is in good health and worthy of the workers composing it.

"I agree with that sentence entirely," said Mr. Starr. "Those are my sentiments in respect to labour generally in this country."

Hon. Léon Balcer

As dean of the Quebec ministers, Hon. Léon Balcer welcomed the CCCL delegation, in French, on behalf of the Prime Minister, assuring them that their recommendations would be given very careful consideration by the Cabinet.

"In the past," said Mr. Balcer, "even if our Government doesn't have a very long past, we have always given serious consideration in our legislation to the various problems of the working classes as expressed in your briefs and representations to the federal authorities."

In addition to the Prime Minister and the ministers already mentioned, Hon. Howard Green, Secretary of State for External Affairs, and Hon. William J. Brown, Minister without Portfolio, were also noticed among those present at the submission of the brief.

Employment in the United States decreased during January by 1.9 million to 64.0 million, and unemployment rose by 600,000 to 4,150,000. The increase in unemployment was about normal for the time of year.

Non-agricultural employment declined by 1.7 million to 59.4 million, 1.2 million more than a year earlier and the highest on record for the month.

Railway Brotherhoods' Annual Memorandum

National Legislative Committee voices concern over question of compensation for railway employees who lose their jobs or have to move their homes because of abandonment of branch lines, closing of stations, elimination of terminals

The question of compensation for railway employees who lose their jobs through abandonment of branch lines, closing of stations, and elimination of small divisional points and terminals was dealt with at length in the annual submission to the Cabinet on February 2 by the National Legislative Committee of the International Railway Brotherhoods.

Other matters on which recommendations were made included old age security, family allowances, unemployment insurance, immigration, education, housing, health insurance, income tax, and representation for labour on public bodies.

The brief was read by A. H. Balch, Chairman of the Committee. Other members of the delegation were: A. A. Hutchison, Vice-Chairman of the Committee; H. E. Campbell, Secretary; T. W. Read, Division No. 4, Railway Employees Department, AFL; A. R. Gibbons, Brotherhood of Locomotive Firemen and Enginemen; J. A. Huneault, Brotherhood of Maintenance of Way Employees; and H. A. Stockdale, Brotherhood of Railroad Signalmen.

The Prime Minister was accompanied by Hon. Michael Starr, Minister of Labour; Hon. George Hees, Minister of Transport; Hon. G. R. Pearkes, Minister of National Defence; and Hon. W. J. Browne, Minister Without Portfolio.

The Brotherhoods' Brief

The Railway Act

Owing to developments in railway operation methods, it has become possible for the railways to make many changes that involve the abandonment of branch lines, elimination of small divisional points and terminals, closing of station agencies, extension of maintenance of way sections, and so on, the Committee said. Until the abandonment by the New York Central Railroad Company of its operations between Cornwall and Ottawa, the Committee said it had believed that Section 182 of the Railway Act provided for the compensation of employees who suffered loss by reason of such changes.

In the New York Central case, however, the Committee's appeal to the Board of Transport Commissioners on behalf of the employees had been disallowed on a point of law. A subsequent appeal to the Supreme Court of Canada on the matter had resulted

in an adverse decision. The judges by a vote of six to one had held that, owing to its wording, the Railway Act did not provide for compensation to employees in the circumstances. However, they held that if a railway were diverted, and employees were obliged to change their place of residence, they would be entitled to compensation.

Earlier in its brief the Committee had referred to the Canadian National-Canadian Pacific Act, passed during the depression years in the early 1930's when the amalgamation of the two railways was being considered. This Act, the Committee said, provided for compensation for employees who remained in the employ of either of the companies and who, as a result of the curtailment of operations consequent upon the amalgamation, had to change their place of residence.

Both the abandonment of the New York Central line and the diversion of a Canadian National Railway line, the Committee pointed out, were due to the construction of the St. Lawrence Seaway. But one group of employees was entitled to compensation and the other group was not.

"We believe that Section 182 of the Railway Act was intended to provide the compensation which we ask for and we are requesting that the Act be so clarified that there can be no mistaking the intent," the Committee said.

It also asked that the Act be amended to require railway companies to provide reasonable shelter from the weather for employees on duty.

The brief reminded the Government of the representations the Committee had made in 1958 and 1959 regarding the provision of toilet facilities and drinking water for various kinds of employees while on duty. No legislation on the matter had so far been introduced in the House of Commons, the Committee said, and it asked that it should be done at the present session.

The Committee recommended the transfer to the Board of Transport Commissioners of the duty of regulating the transport of explosives and other dangerous goods by motor vehicle and private railway. The Board now regulates such transport by rail and express, the brief said, and other modes of transport should be bound by the same rigid regulations.

Social Security

The brief asked for the enactment of legislation to provide more economic security for the aged.

In order to make up for the decrease in the purchasing power of the dollar since the Family Allowances Act was passed, the Committee suggested that allowances should be raised to a range of from \$10 to \$13 for each child. It also urged that the age limit should be raised to 18 years for children who are attending school.

Unemployment Insurance

The brief suggested that the Unemployment Insurance Act should be amended to provide: maximum benefits of at least two thirds of earnings while employed, elimination of the waiting period, coverage of insured workers who are unemployed because of illness, and an increase in maximum earnings allowed to \$7,200. Union workers who decline to cross another union's picket line should not be disqualified for benefits, the Brotherhoods proposed.

The Committee also asked that consideration should be given to amending Subsection (2) (b) of Section 63 of the Act to correct "the inequitable application to railway workers who hold 'interlocking' seniority . . ."

Immigration

In view of the seriousness of unemployment, especially in the winter time, the brief said that "the immigration policy of Canada must be carefully considered in its relation to work opportunities in the country." The Committee suggested that "the flow of immigration should be placed under the Minister of Labour" and it repeated its belief that the Immigration Act should be revised.

"We commend the humanitarian action of the Government in permitting entry to 100 families each containing one victim of tuberculosis. If this experiment proves successful, as we hope it will, may we recommend an extension of the plan," the Committee said.

Housing

The Committee viewed with concern the recent raising of the interest rate for mortgages under the National Housing Act to "an all-time high." It urged that serious consideration be given to amending the Act to lower the down payment to 7 per cent on houses valued up to \$14,000, to setting a maximum income for the purchaser of such houses, to lowering the interest rate on mortgages on such houses "to the actual cost

of providing mortgage money," and to providing that the re-sale of houses under NHA should be supervised "to eliminate excess profits."

Health Insurance

The brief deplored the shortage of hospital space, and urged that everything possible be done to promote and encourage the construction of adequate hospitals.

"We further feel that no national health program will ever be an entire success until it includes for all the people of Canada complete health coverage including, besides hospitalization, complete diagnostic, medical, surgical, dental and other services looking to the complete health service," the Committee said.

Income Tax

The cost of meals and lodging incurred by railwaymen working away from home and not refunded to them under their agreements should be allowed as a deduction for income tax purposes, the Brotherhoods proposed.

The Committee also asked for the raising of exemptions to \$1,500 for single, and \$3,000 for married taxpayers, with \$500 for each dependent not eligible for family allowance, and for a comparable increase in the deduction allowed a married person whose spouse also has an income.

Other Matters

The brief expressed approval of the plan, announced by the Chief Commissioner of the Unemployment Insurance Commission towards the end of 1959, of retraining for other jobs unemployed persons who had been displaced by technological changes, while allowing them to draw unemployment benefit.

The Committee commended the Government's action in supplementing the Grade Crossing Fund to the extent of \$10,000,000 a year, and urged a continuation of this program for at least another three years.

The brief re-affirmed continued support for public ownership and government control of radio broadcasting and telecasting under the Canadian Broadcasting Corporation. It urged that sound broadcasting should not be neglected in favour of telecasting, since many people in isolated communities were out of reach of telecasts. The Committee urged adequate financing to make possible "a substantial amount" of Canadian television programming and a television link between all parts of the country.

It re-affirmed its opposition to inclusion of any provision for compulsory arbitration of disputes in the revised Industrial Relations and Disputes Investigation Act.

The brief suggested that "all governments should recognize the principle of appointing labour representatives to public bodies, boards and commissions," and it drew attention to the fact that labour has no "accredited representative" in the Senate.

The Brotherhoods urged establishment at the current session of a House of Commons committee to investigate the effects of technological changes and automation.

The Government's Reply

Prime Minister Diefenbaker made comments on the brief both during the reading and after the reading was finished.

Regarding the Committee's suggestion that the Government should appoint labour representatives on public bodies, boards and commissions, including the Senate, Mr. Diefenbaker said that he thought it was "a very proper and reasonable suggestion and request." The Government, he said, had tried to follow this principle. With regard to appointments to the Senate, he said that "your suggestion... has a considerable appeal to me to the end that the Senate of the country, the sober second thought, should be fully representative of the major sectors of the community".

In connection with the representations regarding railway employees who had been displaced by changes in railway organization, the Prime Minister asked whether the Committee had any record of the number of employees affected. He was told by several members of the delegation that during the last two years more than 150 station agencies had been closed, obliging the agents to move; and between 500 and 600 sections had been abolished in the course of the last three or four years, necessitating the moving of a number of maintenance of way employees. More comprehensive figures, he was told, could be supplied.

The Minister of Labour

Hon. Michael Starr, Minister of Labour, expressed his appreciation of the "good fellowship and co-operation" that had been shown by members of the Committee who had come to him on various occasions during the year.

Regarding the suggestions made concerning unemployment insurance, he said that

he had on a number of occasions brought up with the Unemployment Insurance Commission the matter of eliminating the waiting period for claimants for unemployment benefit, and he had been told "quite definitely and emphatically that this cannot be eliminated completely."

The Minister said that he had also consulted the UIC regarding the possibility of extending unemployment insurance to those who become ill while working. But "in view of the cost involved and what the actuary with whom it was discussed told us we decided to forego it for the present," he said. He added that the cost in contributions for this one amendment alone would amount "to at least 40 per cent."

As to raising the maximum limit of annual earnings for those covered by the Act from the present \$5,460 to \$7,200, as the Committee had suggested, Mr. Starr said that it was the intention of the Government that the maximum should be adjusted so those covered by the Act when it first came into force should continue to be covered.

Regarding the retraining of unemployed persons, Mr. Starr said there were more than 500 approved courses that those who had made sufficient contributions could take while continuing to draw unemployment insurance benefits, and it was hoped that more courses could be provided for those who had been displaced from their occupations and who had to find other means of livelihood.

The Minister of Transport

Referring to what had been said in the brief about the provision of toilet facilities and drinking water for railway employees, Mr. Hees said after the Committee had mentioned this matter in its submission the previous year he had taken it up with the presidents of the Canadian National and Canadian Pacific Railways. Both Mr. Gordon and Mr. Crump had expressed their readiness to do what was required, and they thought that legislation was not necessary. Mr. Hees said that he would discuss the question further with the Committee after the general meeting.

"With regard to what you have to say regarding railway crossings, I feel exactly the way you do, that what we are now using is a very good measure," the Minister remarked. "I am just as keen as you are to see that that measure is continued in future."

Occupational Histories of Married Women Working for Pay in Eight Canadian Cities

Most working married women consider work outside the home normal, it was found in analysis of information obtained through interviews. Report on analysis, second made from same information, has just been published by Women's Bureau

Perhaps the most noteworthy impression left by a study of the work histories of a sample of married women working for pay in eight Canadian cities is that, with few exceptions, they look on themselves as working women, and consider work outside the home as normal for them. Although some of them welcome a temporary period of layoff, they continue to hold themselves in readiness to return to work when the employer calls.

"The occasions on which a woman gave up her job for the unmixed reason that she wished to be a housewife were few and far between," it is stated in a bulletin, *Occupational Histories of Married Women Working for Pay in Eight Canadian Cities*, just published by the Women's Bureau of the Department.

This report is a further analysis of the information obtained by interviews conducted during the winter of 1955-56, a first report on which was previously published under the title *Married Women Working for Pay in Eight Canadian Cities* (L.G. 1958, p. 148).

The report points out that although only a small minority of married women in Canada work outside the home, more than half of the working women in the country are or have been married. This proportion is higher than ever before, and is ascribed to the easing of restrictions against the employment of married women consequent upon a high demand for labour in the period during and following the Second World War.

In commenting on the relative demand for male and female workers the report says, "Of course the over-all employment situation affects both men and women, but because men are generally the main bread-winners for their families, there is a tendency in periods of labour surplus to favour them over women. On the other hand, women have the advantage of being employed mainly in the kinds of work that are less affected than some others by both economic recessions and seasonal factors, and these occupations have grown substantially in recent decades. Opportunities for women generally grow when there is a dearth of male workers. This is particularly true in times of war . . ."

In the past decade marriages have been taking place at an earlier age, and it has become common for married women to give up work outside the home only for a short period before and after the birth of a child, the report says.

It appears that clerical work is particularly sought after by married, as well as by single, women. Those who start in this kind of work usually remain in it, and those doing other kinds of work, take advantage of opportunities to move into clerical work as they occur.

Older women who go to work after many years as housewives are likely to find themselves in service or factory jobs, although there are sometimes opportunities for them in clerical work, especially if they have had the necessary experience or training, even if it was a long time before.

A woman who takes a job after marriage for the first time usually does so because she feels the need for extra income, the report says. Unemployment of the husband, illness in the family, accumulated debts or the purchase of a house are some of the things that often lead to a married woman's taking employment for the first time.

The reason for first withdrawal from the labour force in the case of more than half of the women in the sample was marriage. Birth of the first child accounted for 22 per cent, other children 2 per cent. Roughly 80 per cent of the women withdrew for the first time for reasons associated with marriage. However, in recent years the birth of the first child has been a more frequent reason for withdrawal than marriage.

For the women in the sample, as in the general population, the most common age of marriage was between 20 and 24 years. Most of them went to work before they were married.

Of the women in the sample who had remained continuously in the labour force, 60 per cent had never had a child, and, of those who had never had a child, 70 per cent had worked continuously.

Service work offers the best opportunity for women who, because of age or length of separation from the labour force, cannot readily get other work. But they tend to move to other work at the first opportunity.

(Continued on page 301)

How Older Workers Rate

Replies to Minister's appeal and surveys on North American continent indicate that older workers have favourable turnover, absenteeism and accident rates

The vast majority of employers replying during the last few months to the enquiry regarding older workers sent out by the Minister of Labour (L.G., Nov. 1959, p. 1173) agreed that in matters such as turn-overs, learning ability, absenteeism and accidents, the older worker rates highly.

This opinion is substantiated by evidence from studies on this continent.

The following table showing annual turn-over rates by age and sex represents the findings of a 12-month survey in seven cities in the United States, covering establishments employing 3.9 million workers.

Separations per 100 Employed

	Total*	Quits	Dis- charges	Lay- offs
<i>Both Sexes (average)</i>	54	23	6	17
Under 45	62	30	7	18
45 and over	38	11	4	15
45-64	36	11	4	15
65 and over	57	14	4	16
<i>Men, total</i>	54	21	6	19
Under 45	61	26	7	19
45 and over	40	11	4	17
45-64	38	10	4	17
65 and over	58	13	4	18
<i>Women, total</i>	54	30	5	12
Under 45	64	37	6	13
45 and over	32	14	3	7
45-64	31	14	3	7
65 and over	54	18	3	9

* Includes miscellaneous separations and type not reported.

The annual separation rate for all groups was 54 for each 100 workers employed at the end of the period under study. The rate was 62 per 100 for persons under 45 years of age and 38 per 100 for those over 45.

It was thought that there might be some relation between a worker's length of service and his reluctance to leave a company. For this reason, the rates of separation were also computed separately for groups of workers classified according to their periods of service with the same employer.

It was found that after one year of service the separation rates for older workers declined much faster than for those under 45 years of age with the same amount of service. This indicated that the newly-hired older worker was fully able to adjust to a new job.

Contrary to common belief, the ability to learn does not materially decrease with age. In fact, mental ability shows marked improvement with the passing years and it is quite possible to learn new skills, even in the twilight of life.

This is borne out by a study in the United States which shows that mental ability can be greater at 50 than at 20. The U.S. Army's alpha intelligence test was administered to 127 male freshmen at Iowa State College during 1918-1919 and was re-administered to this group during 1949-1950—after an interval of 31 years.

In analysing the results, psychologists took into consideration the effects of social background, experience and other factors that might have a bearing on the better scores attained in the 1950 tests. The net result was that it was found that the group as a whole was intellectually more able at 50 than it was 30 years earlier.

As to the question, "How far beyond 50 does this growth in mental ability continue?" studies reported to the New York Joint Legislative Committee on Problems of the Aging revealed that the brain may not reach its peak capacity until somewhere about age 60, and that, in subsequent years, mental efficiency declines slowly to the age of 80.

The following table, produced by a survey made by the U.S. Bureau of Labour Statistics and published some years ago, indicates that older workers have low rates of absenteeism.

Age Groups	Absenteeism per 100 work days
All age groups	3.4
Under 20 years	5.5
20-24 years	4.9
25-29 "	4.3
30-34 "	3.6
35-39 "	3.4
40-44 "	3.5
45-49 "	3.4
50-54 "	3.3
55-59 "	2.8
60-64 "	2.9
65-69 "	3.3
70-74 "	3.2

Studies of accident rates also show that fewer accidents occur in the older age groups. The Ontario Workmen's Compensation Board in its 1958 annual report states that 3.8 per cent of the province's labour force in the age group 20-24 had accidents resulting in compensation in 1958. The percentages for the older groups were as follows:

Age	Per Cent
25-34 years	3.7
35-44 "	3.0
45-54 "	2.6
55-64 "	2.4
65 and over	1.8

Vocational Guidance for Girls

Excerpts from a recent ILO report on the problems of women non-manual workers*

"Quite clearly, a girl's choice of the work she intends to do, and particularly the decision taken when she completes her primary education, have a decisive influence on the likelihood of her obtaining employment and on her career opportunities throughout her working life. Not only for girls who do not remain at school after the school-leaving age, but also for those who take a secondary course of general or vocational education or who continue their education at university level, vocational guidance services can play a very useful role by providing guidance in the immediate choice of gainful employment or of a more or less extended course of study and by encouraging the girls to undertake and complete vocational training either before they enter employment or once they have a job.

"The essential features of vocational counselling are, of course, the same for both sexes. Vocational guidance rests on an acquaintance with the various occupations and the employment opportunities in them, and on assessment of individual abilities; it is based on a combination of all these factors. The vocational guidance of girls, however, raises special problems. The task of counsellors would, no doubt, be simpler if they could confine themselves to directing women, according to their abilities, into fields they can easily enter. Such a course, however, would perpetuate a distribution of women workers which is satisfactory from neither the human point of view nor the economic standpoint. That is why in a number of countries emphasis is placed on the important role that could be played by vocational guidance services in drawing the attention of girls and their parents to the growing number of occupations that are becoming accessible to women and to the overcrowding in such fields as service occupations and office work.

"The means used for assessing individual characteristics are not always the same for both sexes. In many vocational guidance services the tests used for boys and girls show slight differences. This is understandable if it is remembered that the standards have, in some cases, been fixed separately for boys and girls in various age groups.

The ultimate result, however, should not be to test certain aptitudes among boys and others among girls on the ground that, for example, it is unnecessary to test the mechanical aptitudes of girls because such abilities would have little impact on their choice of job. In fact, the whole education of girls and the environment in which they are brought up already gives them little encouragement to realize the importance of certain "masculine" aptitudes for their future work. The vocational counsellor, therefore, has a specially important part to play in discovering any such aptitudes.

"Not only must the vocational counsellor try to give girls and women full information with regard to the opportunities available for them and arrive at an objective assessment of their aptitudes for particular occupations; he must also take account of certain factors that make the vocational guidance of women a more delicate matter. For example, when a girl seems to have marked aptitudes for an unusual occupation, the counsellor must consider the hurdles she may have to overcome. The vocational training facilities available for such occupations are often inadequate for women. Account must also be taken of the attitude of employers who are not very keen on employing women for certain kinds of jobs, sometimes because of the opposition of the male personnel. In some cases, too, the counsellor may have to overcome a rather conformist attitude on the part of the girl and her parents as regards their occupational preferences. The counsellor must also determine whether a girl has the strength of character required to cope with difficulties. Even in the liberal professions, where some of these difficulties do not exist, it must be borne in mind that not only is a young woman liable to meet with opposition or lack of co-operation in her relations with her male colleagues but also she may have no clients. Another aspect which is not to be neglected when the occupation chosen calls for preliminary training, is that of the financial resources the girl has at her disposal. A family is often less prepared to make sacrifices for a girl's education than for a boy's, and the counsellor will have to ascertain whether a grant of a scholarship would overcome such objections, and will have to investigate the possibilities."

*International Labour Organization. *Problems of Women Non-Manual Workers*. Advisory Committee on Salaried Employees and Professional Workers, Fifth Session, Cologne, 1959.

50 Years Ago This Month

Nova Scotia Royal Commission that inquired into probable economic effects on province's industries of statutory limit on length of working day found that employers generally opposed to statutory eight-hour day but unions in favour

Early in 1910 the Government of Nova Scotia received the report of a Royal Commission that had been appointed to inquire into the probable economic effects of placing a statutory limit on the length of the working day in the various industries of the province.

The Commission, whose report was summarized in the *LABOUR GAZETTE* of March 1910, chose to make a general survey of the question by studying the writings of certain economists and social writers both for and against the eight-hour day. It had then studied the application of the eight-hour day to various industries and occupations in Nova Scotia by canvassing the views of employers and employees in the province.

The opinions and theories of the writers whom the Commission had consulted were various and conflicting. They all agreed, the report said, that a short day would be of immense benefit to the health, education, morals, family life, and citizenship of the working classes. All agreed that an eight-hour day could be effectively enforced only by law, and nearly all agreed that a universal law compulsory upon all industries would be fatal. On other points their views differed.

Of the writers in favour of the eight-hour day some argued that a man could not do as much work in eight hours as he could in nine or ten, and that therefore production would be reduced, and that this would lead to an increase in employment. Others said that he *could* do as much work in eight hours as in nine or ten, and that therefore production would not be affected.

Some of the writers thought that the shorter day would increase demand and consumption. Some argued that it would crush out sweated industries; others that it would crush out the industries that ministered to the rich. Some said that it would lower the rate but increase the total amount of profits.

Arguments used by writers who opposed the shorter day included the following: that it was doubtful whether the state could interfere, the workers now being on firm enough ground to be able to fight their own battles; that to jump from ten hours to eight hours was too risky, and that the

change should be made gradually; and that a uniform eight-hour law for all trades would be unjust to some of them owing to differences between the workers engaged and the conditions under which they worked.

The commissioners found that in Nova Scotia employers and capitalists were generally opposed to a statutory eight-hour day. Their main argument was that a provincial law would handicap them in competing with employers outside the province; and the commissioners considered this the most serious objection to such a law.

Union men, the Commission found, wanted a shorter day to be enforced by law; but they also found that the unionists were contemplating the effects of a general law applying to all competing firms in any one trade, and that few of them felt certain about the effects of a law that applied to Nova Scotia only.

Representatives of some of the unorganized workers were of the opinion that they could not, for any length of time, do as much work in eight hours as they could in ten, and they did not want a shorter day if it would have the effect of reducing their earnings.

The most popular argument with the workers, the Commission found, was that the eight-hour day would provide work for the unemployed. The Commission, however, decided that it would not lessen seasonal or temporary unemployment; as for permanent unemployment, the report said that it was insignificant in amount and what there was would not be cured by shortening hours.

The Commission's main conclusion was that "a general and compulsory provincial eight-hour law would be at present a fatal blow to the industrial prospects of Nova Scotia." However, it said that there was "an overwhelming case" for legislation to shorten hours in shops and stores, and that six days a week were enough for street car employees and barbers.

They also thought that the hours of work for nurses in hospitals were too long, and that there should be some relief. The hours of work for boys in hotels, they said, should be restricted to a maximum of 60 a week, 70 or 75 hours being too long.

TEAMWORK in INDUSTRY

The Canadian Red Cross "blood bank" is richer by 200 bottles of blood, thanks to the initiative and community spirit shown by the Mutual Interest Committee of the St. Lawrence Corporation's mill division, located at Red Rock, Ont.

Members of this labour-management group had thought for some time that people in the district should be given an opportunity to donate blood to the Red Cross. Hospitals in the area have depended for their supply on donors from Manitoba and the Lakehead cities of Fort William and Port Arthur ever since the service was extended in February 1951 from a central depot in Winnipeg to hospitals in the Lakehead and district.

Following discussion of the matter, the Mutual Interest Committee was instrumental in having technicians come from the blood transfusion service in Winnipeg to set up a donor clinic in Red Rock's recreation centre.

The committee's desire to lend assistance to the humanitarian work of the Red Cross indirectly created an interest that spread beyond the town limits. Its voluntary offer prompted the blood transfusion service in Winnipeg to contact organizations in Nipigon, Schreiber and Terrace Bay in advance of the field trip to Red Rock, with the result that the service was able to set up three other temporary blood donor clinics on the one trip. It now looks as though this four-town clinic will become an annual event.

Employee members of the committee belong, variously, to Local 528, Pulp, Sulphite and Paper Mill Workers; Local 255, Paper Makers; Local 1565, IBEW; Local 865, Operating Engineers; and Local 267, Office Employees.

* * *

A labour-management plan that had its beginning in Moncton, N.B., and has spread throughout Canada, the United States and overseas, is now in its 35th year.

Regarded by employers and employees alike as one of the greatest advancements in its field, the plan introduced and developed by Canadian National Railways has worked exceedingly well and continues to play an important role in industry and commerce.

Founded on the fundamental principles of democracy and human rights, the co-operative labour-management plan has been responsible for uninterrupted progress in the collective endeavour of big and small business. Moncton and the CNR may justly be proud of their contribution to this partnership between management and the railway unions, for it is providing an invaluable instrument for solving innumerable problems in practically every field of operation and human relations.

One of the most dynamic motive forces behind the progress made by the Canadian National Railways through the years has been the operation of two committees whose work, for the most part, receives little public attention.

The committees and their branches, which extend through districts and divisions, make up part of what is known as the Union-Management Co-operative Movement. One deals with motive power and car equipment and the other with maintenance of way. From the basic divisional units set up, each committee is composed of equal numbers of representatives from labour and management, the employees' representatives being elected by their respective crafts. Today, close to 50,000 employees are affected by the two plans.

The committees provide a forum in which representatives of both employees and management can meet on common ground, where each side can hear what the other fellow has to say, and where suggestions from both sides can be given every possible degree of expert analysis before judgment is finally passed on its practicability.

In so far as Canadian National is concerned, the formal recognition by both sides of the advantages of employer-employee co-operation is an established fact, and the movement is solidly grounded and growing.

CNR President Donald Gordon declared at the last annual meeting of the Union-Management Co-operative Movement, maintenance of way branch: "The efficient operation of this railway is as much your concern as it is the management's. We of the management do not consider ourselves miracle-men, and we will always welcome suggestions on ways and means to improve our service to the public."

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during January. The Board issued four certificates designating bargaining agents, ordered four representation votes, rejected one application for certification, and granted an application for the provision for the final settlement of differences concerning the meaning or violation of a collective agreement. During the month the Board received six applications for certification and allowed the withdrawal of one application for certification.

Applications for Certification Granted

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard vessels operated by Westward Shipping Ltd., Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Feb., p. 168).

2. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Laurentides Inc., St. Jerome, Que., employed at Radio Station CKJL (L.G., Jan., p. 54).

3. Hull-Ottawa Printing Industry Syndicate, Section CKCH, on behalf of a unit of employees of The CKCH Broadcasting Company Limited, Hull, Que. (L.G., Jan., p. 55).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of office, clerical and maintenance employees of The St. Lawrence Seaway Authority, employed at its operating headquarters in Cornwall, Ont. (L.G., Feb., p. 170).

Representation Votes Ordered

1. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Canadian National Steamships Company Limited, respondent, and Seafarers' International Union of North America, Canadian District, intervener (S.S. *Prince George*,

Vancouver) (L.G., Feb., p. 170). The Board directed that the names of both the applicant and the intervener be placed on the ballot (Returning Officers D. S. Tysoe and G. H. Purvis).

2. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Kingcome Navigation Company Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Feb., p. 170). The Board directed that the names of both the applicant and the intervener be placed on the ballot (Returning Officers: D. S. Tysoe and G. H. Purvis) (See also applications received, below).

3. Canadian Brotherhood of Railway, Transport and General Workers, applicant, McKenzie Barge & Marine Ways Ltd., Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Feb., p. 170) (see also applications received, below). The Board directed that the names of both the applicant and the intervener be placed on the ballot (Returning Officers: D. S. Tysoe and G. H. Purvis).

4. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Stone Brothers Limited, Port Alberni and Vancouver, B.C., respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Feb., p. 170) (see also applications received, below). The Board directed that the names of both the applicant and the intervener be placed on the ballot (Returning Officers: D. S. Tysoe and G. H. Purvis).

Application for Certification Rejected

Barnhill's Employees' Labour Union, applicant, and Barnhill's Transfer Limited, Lower Truro, N.S., respondent (L.G., Dec. 1959, p. 1294). The application was rejected for the reason that the applicant had not

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

satisfied the Board that it had a majority of the employees affected as members in good standing on the date of the application.

Application under Section 19 of Act Granted

The Board granted an application for provision for the final settlement of differences concerning the meaning or violation of a collective agreement affecting the Commercial Telegraphers' Union, Canadian National System Division No. 43, applicant, and Canadian National Telegraph Company, respondent (L.G., Jan., p 55). The Board's decision was made under Section 19 of the Industrial Relations and Disputes Investigation Act, which provides that every collective agreement shall contain a provision for the final settlement without stoppage of work of all differences between the parties to the agreement concerning its meaning or violation and that, where an agreement does not contain the required provision, the

Board shall, upon application by either party to the agreement, prescribe such a provision.

Applications for Certification Received

1. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard towboats operated by the Kingcome Navigation Company Limited, Vancouver (Investigating Officer: G. H. Purvis) (see "Representation Votes Ordered" above).

2. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard tugs operated by McKenzie Barge & Marine Ways Limited, Vancouver (Investigating Officer: G. H. Purvis) (see "Representation Votes Ordered" above).

3. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

aboard tugs operated by Stone Brothers Limited, Port Alberni and Vancouver (Investigating Officer: G. R. Currie) (see "Representation Votes Ordered" above).

4. International Union of Operating Engineers, Local Union No. 115, on behalf of a unit of construction equipment operators employed on a joint venture in the Yukon Territory by McNamara-Hislop, Dawson Creek, B.C. (Investigating Officer: D. A. MacKenzie).

5. Line Drivers, Warehousemen, Pickup Men & Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Soo-Security Motorways Ltd., operating

in and out of its terminal at North Burnaby, B.C. (Investigating Officer: G. R. Currie).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed aboard vessels of The British Yukon Navigation Company Limited operating on the west coast (Investigating Officer: G. H. Purvis).

Application for Certification Withdrawn

National Association of Broadcast Employees and Technicians, applicant, Radio Richmond Hill Limited, Richmond Hill, Ont., respondent, and Fred Hearne, intervener (Radio Station CJRH) (L.G., Jan., p. 55).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officer Appointed

During January, the Minister of Labour appointed a conciliation officer to deal with the following dispute:

Canadian National Railways *M.V. Blue-nose* and Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (Conciliation Officer: H. R. Pettigrove).

Board Report Received of Settlement

Northspan Uranium Mines Limited, Elliot Lake, Ont., and United Steelworkers of America, Local 5816 (office and technical

employees) (L.G., Nov. 1959, p. 1179). The text of the report is reproduced below.

Settlement Reached before Board Constituted

Consolidated Denison Mines Limited, Spragge, Ont., and United Steelworkers of America, Local 5815 (office and technical employees) (L.G., Oct. 1959, p. 1055).

Dispute Lapsed

Westward Shipping Limited, Vancouver (unlicensed personnel) and Seafarers' International Union of North America, Canadian District (L.G., Jan., p. 55). Union decertified as bargaining agent by Canada Labour Relations Board.

Two More Fair Employment Practices Acts in U.S.

Fair employment practices acts were passed in 1959 in California and Ohio. The number of states in the American union with laws prohibiting discrimination in employment on account of race, creed, colour, national origin, or ancestry is now 16. Under these laws the enforcing agency is empowered to issue orders to cease discrimination, which can be enforced in the courts, if efforts at voluntary settlement fail.

Connecticut, Oregon, and Wisconsin amended their fair employment practices acts to prohibit discrimination on account of age. Similar provisions were already included in the fair employment practices acts of Massachusetts, New York, and Pennsylvania; Rhode Island has a separate act that prohibits such discrimination.

In Hawaii, an act passed last year prohibiting wage discrimination on account of sex also prohibits wage discrimination on account of race or religion.

Report of Board in Dispute between

Northspan Uranium Mines Limited

and

United Steelworkers of America

This conciliation board met with the parties at Toronto, Ont., on October 3, October 10, November 7 and November 28, 1959 to deal with the following matters:

1. Seniority
2. Hours of Work and Overtime
3. Bulletin Boards
4. Definition of Bargaining Unit
5. Statutory Holidays
6. Severance Pay.

Substantial progress was made in negotiations but further direct bargaining between the parties was required to finalize certain matters and the Board adjourned for this purpose.

Finally all the matters in issue between the parties were resolved and on December 17, 1959 they entered into a collective agreement effective December 2, 1959 to and including April 15, 1961.

Upon behalf of the Board the Chairman wishes to thank the parties for their active co-operation which was so essential to the result.

For himself the Chairman expresses his indebtedness to his colleagues whose sound

common sense and practical approach to the matters in issue was of invaluable assistance.

Dated at Haileybury this 4th day of January, 1960.

(Sgd.) J. B. ROBINSON,
Chairman.

(Sgd.) D. B. ARCHER,
Member.

(Sgd.) D. W. MUNDELL,
Member.

During January, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the United Steelworkers of America, Local 5816 (office and technical employees) and Northspan Uranium Mines Limited, Elliot Lake, Ont.

The Board was under the chairmanship of His Honour Judge John B. Robinson, Haileybury, Ont., who was appointed by the Minister on the joint recommendation of the other two members, David W. Mundell, QC, and David B. Archer, both of Toronto, nominees of the company and union respectively.

The text of the report is reproduced here.

Half U.S. Wage Increases in 1959 Less Than 9 Cents

About 55 per cent of the 7,018,000 United States workers known to have received wage increases through collective bargaining last year had an average raise of less than 9 cents an hour, according to preliminary data compiled by the U.S. Bureau of Labor Statistics. The data relate to contracts covering 1,000 or more workers, excluding agreements in construction, service trades, finance and government.

In 1959, some 850,000 workers, mostly in basic steel and steel fabricating, received only a 1-cent cost-of-living adjustment. About 965,000, chiefly in the railroad industry, obtained a 3-cent cost-of-living adjustment.

Of the nearly three million workers affected by agreements concluded during 1959, about 97 per cent won increases effective during the first year of the agreement. The most common increase was between 7 and 9 cents.

Deferred wage increases will be paid to more than three million U.S. workers in 1960, the Bureau reported. This figure includes the half million workers affected by the recent steel industry settlement. The increases are provided in agreements signed in previous years.

About four million will receive wage increases because of cost-of-living escalator clauses in their agreements.

LABOUR LAW

Report of the Committee on the Organization of Government in Ontario

Stresses four general principles that it considered basic to sound democratic government, and three objectives of sound democratic government administration. Repeal of clauses preventing court review of decisions of boards is recommended

The report of the Committee on the Organization of Government in Ontario was tabled in the Ontario Legislature on January 27.

The report stressed four general principles that it considered basic to sound democratic government—ministerial responsibility, financial accountability, grouping of related functions and provision for appeals.

The first of its kind in Canada, the Committee consisted of W. L. Gordon, Chairman; Dr. W. A. Mackintosh, Principal and Vice-Chancellor of Queen's University; and C. R. Magone, Q.C., former Deputy Attorney-General.

The suggestions for a review of the organization of government in Ontario originated in the report of the Provincial Auditor for the year 1956-57. A Standing Committee of the Legislature considered the matters raised by the Provincial Auditor in the winter of 1958, and the Committee was established under an order-in-council of June 12, 1958.

Briefly, the Committee's terms of reference were "to examine into the administrative and executive problems of the Government of Ontario in all divisions of the Provincial Service and to examine into the relationship of boards and commissions to the Government and the Legislature . . ."

The Committee received briefs or submissions from 23 organizations. Representatives of 15 of these organizations, together with the chairman and members of 11 boards and commissions, appeared before the Committee at public hearings in November 1958 and in January and February 1959.

Its findings were submitted to the Government on September 28, 1959 in a 467-page document that included the report proper

(84 pages), together with two lengthy appendices outlining the structure and functions of the various departments and several of the larger boards and commissions.

In its Report the Committee reviewed briefly the social and economic changes responsible for the present organizational structure of government, listing three objectives of sound democratic government administration together with four broad standards for achieving these goals; laid down the safeguards it considered necessary to reduce the risks attendant upon delegation; examined departmental operations, giving particular attention to municipal administration; and made some specific recommendations with regard to a number of agencies.

General Review and Comments

In its general review, the Committee emphasized that it was not set up to give its opinions on broad questions of policy but rather to make recommendations concerning the administrative and procedural arrangements best suited to the conduct of government.

In its view, the three objectives of sound democratic government were: adequate supervision and control, safeguards against abuses of power and authority, and efficiency in operation.

If these objectives were to be achieved, there were four general principles to which the structure and operation of government policy should conform: ministerial responsibility, financial accountability, the grouping of related functions, and provision for appeals.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Guiding Principles

Briefly, the principle of ministerial responsibility meant that a minister of the Crown should be expected to assume full responsibility for the policies and operations of each department and the policies and performance of each of the various boards and commissions. This did not mean that a minister should be responsible for the day-to-day operations of a subordinate agency but that he should be expected to be generally familiar with its work.

The second principle, financial accountability, meant that, with certain exceptions, the Legislature should vote the funds available to finance the operations of government and, in turn, should obtain an accounting of the funds so voted.

Discussing the third general principle, the Committee stressed the desirability of grouping related functions within a single organization. This would limit the number of separate or distinct entities, the Report said, and would also promote uniformity and reduce duplication of effort.

With respect to the fourth principle, the right of appeal, the Report stated that, except in very special circumstances, appeals from the decisions of subordinate authorities should invariably be available, either to the courts, to a responsible minister or to the Lieutenant-Governor in Council.

Supervision and Control of Delegated Powers

The Committee believed that the increasing size and scope of government activities made the delegation of responsibility and authority a necessity. The powers granted should be kept to the essential minimum, however, and should be spelled out as specifically and comprehensively as possible. The pertinent question, it said, was whether a particular power was needed in order to execute the designated function or responsibility. Too often, in an attempt not to hamper a board's activities, the Government was too generous, the Committee said. For example, the Liquor Control Board of Ontario has the power to expropriate land, a superfluous power which the Board has never used.

The Committee, also stressing the importance of good legal draftmanship, recommended that there be no exception to the practice of having the regulations reviewed by the law officers of the Crown.

Parliamentary Review

At the operational level, one of the most important safeguards was parliamentary review. In this connection, the Committee again emphasized the importance of ministerial responsibility. If a minister is respon-

sible for the affairs of a subordinate agency, the Report said, he can inform the Legislature about its operations and be questioned about them.

Remarking that the filing of annual reports facilitated parliamentary review, the Committee recommended that all boards and commissions, with the exception of advisory boards and departmental agencies, should be required to prepare annual reports on their activities and that such reports be tabled in the Legislature. This would mean that boards such as the Ontario Labour Relations Board, the Fuel Board and the Ontario Municipal Board, which do not file reports at present, would in future be required to do so. Reports on the activities of advisory boards and committees should be included in the reports of the departments with which they are associated, the Report added.

It seemed to the Committee that standing committees were particularly useful for exercising supervision over subordinate agencies. They would be more effective, however, if reduced in size and provided with staff secretaries.

Admitting that parliamentary review was not always appropriate and in some cases might defeat the very purpose of the legislature, the Committee stated that other forms of safeguards had to be provided. These it called judicial and procedural safeguards.

Judicial Safeguards

The judicial safeguards were of two types. One involved supervision over decisions of a judicial, regulatory or minor legislative nature, that is, appeals on jurisdiction or law. The second concerned the actual review of the decisions *per se*, that is, appeals on fact.

In regard to judicial supervision, the Committee stated that the primary safeguard is provided by the doctrine of *ultra vires*, whereby courts may determine whether a subordinate agency has acted within the limits of its authority. It added that the ability of the courts to supply this safeguard depended largely on the form in which the delegated powers were set forth and for this reason great care should be taken in the framing of the enabling authority.

The Committee pointed out that six provincial statutes, including the Labour Relations Act and the Workmen's Compensation Act, contained privative clauses which attempt to prevent the courts from reviewing the decisions or actions of subordinate agencies established under these Acts. The Committee thought these clauses should be rescinded, stating that, notwithstanding such

clauses, the courts had insisted upon their right of review whenever a question of jurisdiction was involved. It also noted that in recent years, in constituting boards and commissions with judicial or legislative functions, the Legislature had not thought it necessary to include privative clauses in the governing legislation.

Appeals on questions of jurisdiction or law should not be impeded, the Committee declared, and for this reason it recommended the abolition of the privative clauses.

In this connection the Committee made particular reference to the Labour Relations Board and the Workmen's Compensation Board, stating:

It has been urged upon us that nothing be done which would result in the cases handled by either the Workmen's Compensation Board or the Labour Relations Board being opened up for review. Great harm could be done by prolonging the proceedings in such cases. Our recommendation on the removal of the privative clauses is made on the assumption and in the belief that this will not affect the work of these two bodies within their respective fields.

Discussing the question of the right of appeal on findings of fact, the Committee said that the availability and the appropriate channel for review would depend partly on the act or decision in question and partly upon the circumstances which led to the setting up of the subordinate body.

While acts generally fell into one of six categories—legislative, executive, administrative, judicial, quasi-judicial or ministerial—it was not always possible to classify a particular act. No accurate tests for distinguishing the various functions had been found, a fact which was borne out by the conflicting court opinions and the abundance of literature on the subject.

Not all functions were difficult to distinguish, however. Compensation awards for expropriations of land can be judicially determined and should be classed as judicial acts and a right of appeal to the courts provided. The act of appropriation, on the other hand, was an executive act, the Committee said, and if there was an appeal at all it should only be within the administrative hierarchy. The courts, for example, should not be left to determine the routes that highways should follow.

A distinction could also be drawn between an act of granting a licence or franchise and an act of cancellation, suspension, or failure to renew. The former, where the licensing policy was restrictive, might involve the exercise of discretion and it should not be possible by means of appeal to have the court substitute its discretion or view of policy for that of a board. The cancellation of a licence or franchise, however, involved

the destruction of an existing right and should be appealable to the courts, traditionally the guardians of individual rights.

Procedural Safeguards

In addition to such external controls as parliamentary review and provision for appeals, the Committee said that there were two internal forms of procedural safeguards that could be applied from inside the agencies themselves—codes of procedure and the practice of giving reasoned decisions.

While the Committee did not recommend a statutory code of procedure applicable to all government agencies, it did state that, wherever appropriate, subordinate bodies should establish rules of practice and procedure. These codes should set out such fundamentals as: adequate notice to interested parties; full particulars of the case that had to be met; the right to inspect, before the hearing, reports or other documents that were to be received as evidence; and the right to be represented by counsel. In order to make them as uniform and as complete as possible, these codes should be reviewed by law officers of the Crown before approval by the Lieutenant-Governor in Council.

The Committee did not mean to suggest that administrative agencies should adopt formal court procedures even when performing judicial functions. Sometimes, the Report contended, a speedy, inexpensive remedy and a certain amount of flexibility and informality were desirable. However, where full rights of appeal were available, court procedures should be followed closely with respect to such things as the rules of evidence, evidence under oath and stenographic reporting.

While admitting that the giving of reasoned decisions might sometimes be a strain on an agency's resources and might even be harassing, the Committee was, in general, in favour of giving reasons. They need not be lengthy, but should adequately set out the basis on which the decision rests.

Financial Safeguards

Perhaps the most direct and effective measures of supervision exercised by the Legislature were through the financial safeguards, the Committee said, and made several suggestions for strengthening the control procedures.

One was an amendment to the Ontario Financial Administration Act which would require the amounts appropriated by special warrant to be included in the next ensuing budget, thereby subjecting them to parliamentary review. Because the Legislature could exercise only a general and overriding supervision over government activities, it

was suggested that the Public Accounts Committee could perform a useful function by reviewing the details of revenues and expenditures, if it were active and its membership kept small. Because its duties were increasingly onerous, Treasury Board should be strengthened by the addition of a full-time secretariat, replacing the Budget Committee, which, however, should be retained with purely advisory duties.

Departmental Organization

The Committee recognized that the present organization structure with its 20 departments was advantageous from a practical political standpoint in that it permitted the Cabinet to be a broadly representative group. Nevertheless the Committee believed that the Government would function more smoothly and easily with fewer departments. If, as was likely, new functions were undertaken, every consideration should be given to the possibilities of merging two or three of the then existing departments and thus avoiding an increase in the total number.

Boards and Commissions

In its discussion of the operations of subordinate agencies, the Committee made it clear that it approved the setting up of boards and commissions. "We wish to state categorically that we believe the creation of such agencies has been a useful device," it declared.

At the same time, the Committee pointed out that, because of their very nature, the relationships of these agencies to the Government frequently could not be the same as the traditional relationships of government departments.

For example, a board might be set up where the function was of a judicial nature and where some special expertise was involved or the avoidance of delays and expense were in themselves important elements in the dispensing of justice. "Such agencies must have a high degree of independence and be free from political considerations or pressures," the Report stated, adding that the Ontario Labour Relations Board, the Workmen's Compensation Board and the Ontario Securities Commission belonged in this category.

The Committee also observed that while the same basic standards must be applied in subordinate agencies as in the departments, their application must of necessity differ in some degree, depending on the relationship between the particular agency and the central machinery of government.

However, both in its general remarks on boards and commissions and in its comments on particular agencies, the Committee

stressed that, if the principle of ministerial responsibility were accepted, Ministers should not sit as members on boards and commissions.

The decisions taken by a board are collective decisions. Sitting as a member the minister could be outvoted on a matter of policy by the other members of the board, despite the fact that it must be the minister who accepts ultimate responsibility for the policies of the boards assigned to him.

Workmen's Compensation Board

In the opinion of the Committee, the functions of the Workmen's Compensation Board were primarily administrative, though not inherently so. The Board had been set up to avoid delay and expense to injured workmen in compensation matters and for this reason appeals to the courts should not be permitted.

Some review was necessary, however, especially since questions concerning the extent and nature of a workman's injury sometimes arose long after the basic claim had been established. Internal procedures should be arranged so that disputed cases could be brought before the Board easily and quickly and at any time, the Committee said, adding that such a policy was already in effect.

It also noted that the Act provides that the Board may, on the application of the workman or the employer, refer cases to a medical referee where there have been differences of findings between medical examiners. Section 22 (2) states:

The medical referees to whom reference is made... shall certify to the Board as to the condition of the workman and his fitness for employment, specifying where necessary the kind of employment and if unfit the cause of such unfitness and his certificate *unless the Board otherwise directs* shall be conclusive as to the matters certified.

In view of the fact that, in practice, the decision of the medical referee is taken as binding on all parties, the Committee recommended that the italicized words in Section 22 should be deleted.

The Committee did not feel called upon to comment on the Board's investment procedures except to suggest the setting up of an advisory committee on investments, which would include one or more representatives of the Provincial Treasurer's Department. The formation of such a committee would make available to the Board in a formal way the advice and assistance of Treasury officials who are constantly dealing with the securities transactions of the Province.

Although believing that the Board should be given a high degree of autonomy in the administration of its affairs, the Committee nevertheless insisted that some measure of

accountability should be retained. It suggested that, instead of filing its annual report with the Provincial Secretary, the Board should submit it to the designated Minister (at present the Minister of Labour), who would act as spokesman for the Board in the Legislature. The Report further suggested that the Minister review the operations of the Board periodically so that he might become generally familiar with its work and be prepared to accept responsibility for its policies.

Civil Service Commission

The Committee did not think that, at this time, the Ontario Civil Service Commission should be given the same degree of independence as the federal Civil Service Commission. "The position of this Commission is still evolving," the Report said, "and more time will be required to work out what ultimately the scope of its duties is to be."

It nevertheless anticipated that the Civil Service Commission in Ontario would move towards increasing independence along the lines of the procedures now followed in Ottawa. Because much of the Commission's work, including job classification and pay schedules, had important implications for

government expenditures, the Committee recommended that the Commission be transferred from the Provincial Secretary to the Provincial Treasurer.

Ontario Fuel Board

In the opinion of the Committee, the supervisory, inspection and licensing functions of the Ontario Fuel Board should be transferred to the Department of Energy and Resources. The Board should continue to perform such quasi-judicial functions as rate-making and issuance of certificates of public convenience and necessity to natural gas companies seeking municipal franchises.

Other Boards and Commissions

The Report also contained a number of recommendations pertaining to certain other boards and commissions. Among others, it suggested that the functions of the Farm Products Marketing Board be limited to the screening of and initial recommendations for the establishment of farm product marketing plans.

That responsibility for inspection and for the setting of standards in the electrical field be transferred from the Hydro-Electric Power Commission to the Department of Energy and Resources was another recommendation.

Legal Decisions Affecting Labour

Supreme Court of Canada holds a union to be legal entity. British Columbia court sets aside contempt of court conviction against union and its officers. Ontario court confirms certification order issued by Labour Relations Board

The Supreme Court of Canada has upheld the decision of the British Columbia courts granting damages to an independent truck owner and operator who lost his business connections as the result of union pressure to make him join the union. The Court held a local of the Teamsters union to be a legal entity and liable for damages.

In British Columbia, the Court of Appeal set aside a conviction for contempt of court and held that, though a union and its officers were obliged to comply in good faith with the injunction order, nevertheless they were not obliged to do so gracefully, and a reluctant compliance was in itself no contempt of court.

In Ontario, the Supreme Court found that the operations of a company consisting of the establishment and servicing of sites for the drilling of gas under water and transporting goods and persons in connection with these operations were of local character and within provincial jurisdiction. Con-

sequently, the Court confirmed a certification order issued by the Ontario Labour Relations Board.

The Supreme Court of Canada . . .

...rules union to be legal entity, dismisses its appeal from judgment granting damages against it

In a unanimous decision of five judges, the Supreme Court of Canada, in dismissing an appeal by a union local from a judgment of the Court of Appeal of British Columbia, on January 26, 1960, held that the union was a legal entity that may be held liable in its name for damages, either for a breach of a provision of the Labour Relations Act or under the common law.

The Court dismissed the appeal of Local 213 of the International Brotherhood of Teamsters from a judgment of the British Columbia appeal court (L.G., Apr. 1959, p. 398), which had dismissed the union's appeal from a judgment of Mr. Justice Clyne (L.G., 1958, p. 507).

The City Construction Co. Ltd., a company carrying on its business in British Columbia, had a collective agreement with Teamsters Local No. 213. Clause 10 of the agreement provided for a union shop; clause 16 dealt with grievance procedure and provided that, if during the term of the agreement any dispute should arise as to the carrying out of its terms or its interpretation, each party should appoint three persons to be members of a committee to examine the difficulty in an endeavour to find a solution. If this failed, the clause provided that an arbitration board should be constituted and its decision should be final.

Therien was the owner and operator of a contracting and trucking business. He had for years supplied, for an agreed payment, trucks to the City Construction Company, together with drivers employed by the hour, and a truck which he himself operated, these vehicles being used by the company in connection with their operations. In this arrangement, the position of Therien was that of an independent contractor and the truck drivers employed by him acted as his servants and were paid by him. During the summer of 1956 a business agent of Local 213 called at the premises of the City Construction Company to make certain that the truck drivers employed belonged to the union. He told Therien that he must join the union as well as the other drivers of his trucks. Therien, presumably having in mind the provisions of the Labour Relations Act, refused to join the union but agreed that he would employ union drivers for his other trucks and he did so.

The business agent of the union knew that Therien was himself an employer of labour; nevertheless, he told Therien that if he did not join the union they would "placard" the company and have his truck put off the job. Afterwards the union representatives told the company that if the company continued to use Therien's truck the union would "placard" the various places where the company was doing work.

In consequence of these threats the company informed Therien that they would no longer be able to hire the truck driven by himself and eventually dispensed with Therien's services.

Therien sued the union as a legal entity, was awarded damages against the union and the court granted an injunction restraining the union from further interfering with Therien's business.

The union's appeal was dismissed by the British Columbia Court of Appeal. Then the union appealed to the Supreme Court of Canada.

The union based its appeal on two contentions. First, the union is not a legal entity which may be found liable in tort; second, the evidence did not disclose a cause of action, either at common law or under the Labour Relations Act. The Court rejected both contentions and held that Local No. 213 is a legal entity which can be sued for damages and that the union committed an actionable wrong.

Mr. Justice Locke noted that the *Orchard v. Tunney* case (L.G. 1957, p. 1214) did not determine whether or not a union is a legal entity which may be found liable in tort. In that case there was a representative action in which the individual defendants were sued on their own behalf and on behalf of all other members of the union except the plaintiff. As the action was not brought against the union, the question as to whether the union was in law an entity which might be made liable in tort was not considered. A case is only authority for what it actually decides. In that case there was no issue in the Supreme Court of Canada as to the legal status of the labour union.

Also, the question whether a trade union certified as a bargaining agent by a statute in the terms of the Labour Relations Act of British Columbia may be made liable in an action, either in tort or contract, was not considered by the Supreme Court.

The B.C. Trade-unions Act (originally enacted in 1902 and replaced in 1959 by a new Act) by its reference to trade unions as such, as well as to the servants and agents of such unions restricting their liability in tort to the extent defined in that Act, recognized the fact that a trade union was an entity which might be enjoined or become liable in damages for tort.

By the B.C. Labour Relations Act, Section 2, a trade union as defined includes a local branch of an international union. Extensive rights are given to such trade unions and certain prohibitions declared which affect them. The Act, Mr. Justice Locke added, treats a trade union as an entity; as such it is prohibited, *inter alia*, from attempting at the employer's place of employment during working hours to persuade an employee to join or not to join a trade union, from encouraging or engaging in any activity designed to restrict or limit production or services, from using coercion or intimidation of any kind that could reasonably have the effect of compelling any person to become or refrain from becoming a member of a trade union, and from declaring or authorizing a strike until certain defined steps have been taken. By Section 7, if there is a complaint to the

Labour Relations Board that a union is doing or has done any act prohibited by Sections 4, 5 or 6 (unfair labour practices, including coercion and intimidation), the Board may order that the default be remedied and, if it continues, the union may be prosecuted for a breach of the Act. By Section 9, all employers are required to honour a written assignment of wages by their employees to a trade union.

A union claiming to have as members in good standing a majority of employees in a unit appropriate for collective bargaining is entitled to apply to the Labour Relations Board for certification as the bargaining agent of such employees and, when certified, to require the employers to bargain with it and, if agreement is reached, to enter into a written agreement which is signed by the union in its own name as such bargaining agent. Throughout the Act such organizations are referred to as trade unions and thus treated as legal entities.

In *Re Patterson and Nanaimo Dry Cleaning and Laundry Workers Union, Local No. 1* (L.G. 1947, p. 1500) the B.C. Court of Appeal, in proceedings under the Industrial Conciliation and Arbitration Act (which Act was replaced by the Labour Relations Act but its provisions relevant to the case under review are indistinguishable from the latter Act), considered the question as to whether a trade union is an entity which might be proceeded against by name.

Two of the judges expressed the view that such a union was, by virtue of the Trade-unions Act and the Industrial Conciliation and Arbitration Act of the province of British Columbia, an entity (*persona juridica*) distinct from its members.

In a later case, *Vancouver Machinery Depot v. United Steel Workers of America*, [1948] 2 W.W.R. 325, the same court held that an international union which had not been actually appointed a bargaining agent under the Industrial Conciliation and Arbitration Act was nonetheless a legal entity against which an action for damages might be maintained.

Mr. Justice Locke agreed with the opinions expressed in those cases by the judges of the B.C. Court of Appeal, and held that the granting of such rights, powers and immunities to unincorporated associations or bodies is quite inconsistent with the idea that it was not intended that they should be constituted legal entities exercising these powers and enjoying these immunities as such. Further, he added that it is necessary for the exercise of the powers given that such unions should have officers or other agents to act in their names and on their behalf. The legislature, by giving the right to act

as agent for others and to contract on their behalf, has given them two of the essential qualities of a corporation in respect of liability for tort, since a corporation can only act by its agents.

The rule of construction which applies in the case at bar was expressed in *Mersey Docks v. Gibbs* (1864) L.R. 1 H.L., namely, in the absence of anything to show a contrary intention (and there is nothing here), the legislature must be taken to have intended that the creature of the statute shall have the same duties and that its funds shall be subject to the same liabilities as the general law would impose on a private individual doing the same thing.

Mr. Justice Locke concluded that the union in the case under review is a legal entity which may be made liable in name for damages, either for breach of a provision of the Labour Relations Act or under the common law.

Next, Mr. Justice Locke dealt with the question as to whether the evidence disclosed a cause of action.

The union claimed that what was done by its servants was nothing more than to insist that the company should comply with the union shop clause of the collective agreement.

There was coercion exercised by the union's agent against Therien to force him to join the union, and it is clear that for Therien (an owner and operator of a trucking business) to join the union was legally impossible. However, in Mr. Justice Locke's opinion, it was not this wrongful act which was the cause of the injury complained of; the cause of action was elsewhere.

In addition to Sections 4 and 6 (unfair labour practices, coercion and intimidation) of the Labour Relations Act, Sections 21 and 22 have to be considered. Section 21 reads: "Every person who is bound by a collective agreement . . . shall do everything he is required to do, and shall refrain from doing anything that he is required to refrain from doing, by the provisions of the collective agreement, and failure to do so or refrain from so doing shall be an offence against this Act."

Section 22, so far as relevant, reads: "(1) Every collective agreement . . . shall contain a provision for final and conclusive settlement without stoppage of work, by arbitration or otherwise, of all differences between the persons bound by the agreement concerning its interpretation, application, operation, or any alleged violation thereof."

Clause 16 of the collective agreement provided for the settlement of disputes as to the interpretation of the agreement.

The company wished to continue its arrangement with Therien in his capacity as an independent contractor and he rightly refused to join the union, presumably because the Act forbade him to do so.

As clause 3 of the collective agreement provided that its terms should apply to all subcontractors or subcontracts let by the company it might perhaps be contended that this applied to an independent contractor, like Therien, supplying trucks and services.

The trial judge held that the union shop clause of the agreement did not apply to an independent contractor who drove his own truck. The company was apparently of the same opinion and the matter was one which should have been dealt with accordingly under the grievance procedure clause of the collective agreement. The union, however, without resorting to grievance procedure, threatened to picket the company's jobs, which would have the effect of obstructing the operations of the company and making the company appear to the public and other unions as breaking its contract with the union or indulging in unfair labour practices. This conduct of the union was a breach both of the terms of the collective agreement and of Section 21 of the Labour Relations Act, and constituted a cause of action.

As was stated in *Sorrell v. Smith* (1925) A.C. 700, even though the dominating motive in a certain course of action may be the furtherance of one's own business or one's own interests, one is not entitled to interfere by illegal means with another man's method of gaining his living.

The Supreme Court dismissed the union's appeal and upheld the judgment granting damages against the union and restraining the union from interfering with Therien's business by endeavouring to coerce him to join the union. *International Brotherhood of Teamsters et al. Local No. 213 v. Henry Therien*, the Supreme Court of Canada, January 26, 1960, unreported.

British Columbia Court of Appeal. . .

... finds union and its officers not guilty of contempt of court, allows appeal from conviction

On November 3, 1959, the B.C. Court of Appeal allowed an appeal from the judgment of Mr. Justice Manson finding Local 97 of the International Association of Bridge, Structural and Ornamental Ironworkers and its officers guilty of contempt of Court and imposing substantial fines by way of punishment (L.G., Nov. 1959, p. 1184).

The union and its three officers were convicted on July 30, 1959 of criminal contempt in disobeying an injunction order dated June 26, 1959, requiring that the union "do forthwith order its members employed upon the said southern portion of the said Second Narrows Bridge to return to their employment on the said bridge until such time as the said southern portion thereof has been completed to the permanent support known as Pier 16."

The Court of Appeal, in reversing the judgment of the court below, held that the employees were not obliged by law or the rules of their union to obey a union back-to-work order. The order of the Court did not state how the union should order the men to go back to work. The fact that the officers of the union instructed by telephone each of the men concerned to go back to work was, in the circumstances, a sufficient compliance with the order, unless it could be shown that the men were led, directly or indirectly, to believe that it was not intended that they should comply with the union's instructions.

Mr. Justice Manson gave a number of reasons for concluding that the union did not comply in good faith with the court order. With many of them, the Court of Appeal disagreed.

The Court agreed that the press release by the union, which was published after the granting of an *ex parte* injunction restraining the strike in respect of the south span of the bridge, and which suggested that the bridge was unsafe for workmen, was inflammatory and contemptuous in respect of that injunction. But it was not a contempt of the later mandatory order of June 26, and there was no obligation on the union under the second injunction to do anything to remove the false imputation that the bridge was unsafe for workmen beyond the normal hazards of such work.

Also, there is no evidence of contempt in the fact that before any injunction had been issued the business agent of the union refused to co-operate with the company in finishing the span. The union at that stage was entitled to any advantage from the insecurity of the span that it could get in support of the strike.

Also, in the opinion of the Court of Appeal, the union and its officers are not open to criticism for telling the men that they were being ordered back to work because the Court had ordered the union to do so, and that the union's counsel had advised that the injunction had been wrongly granted and was being appealed, but in the meantime had to be obeyed.

Further the Court added that the members were entitled to know why their union was ordering them back to work, so that, among other things, each might decide for himself whether he would comply, not with the order of the Court, which in that respect was not directed to them, but with the order of the union, which they were entitled to ignore. The union and its officers were obliged to comply in good faith with the mandatory order, but they were not obliged to do so gracefully, and a reluctant compliance was in itself no contempt.

The Court of Appeal allowed the appeal and set aside the convictions for contempt. *Dominion Bridge Co. Ltd., v. International Association of Bridge, Structural and Ornamental Ironworkers, Local 97, and Attorney-General of British Columbia*, (1959) 20 D.L.R. (2d), Parts 8 and 9, p. 621.

Ontario Supreme Court . . .

. . . dismisses company's application for order to quash Labour Relations Board certification order

On November 26, 1959, Mr. Justice Smily of the Ontario Supreme Court, in *certiorari* proceedings, dismissed an application of the Underwater Gas Developers Limited for a court order quashing an order of the Ontario Labour Relations Board certifying the International Chemical Workers' Union as bargaining agent for the company's employees.

The Underwater Gas Developers Limited is a company whose operations consist of the establishment and servicing of sites for the drilling of gas under water. This involves the drilling of wells and the laying of a pipe line from the well to a meter house on the shore. In its operations the company uses a barge, a tug, a crane unit, a diving boat, a pile driving unit and some boats that serve the drilling towers by taking out supplies and the drillers and by picking up samples from the wells. Larger boats are being used by the company to take out the heavier material. The company maintains working facilities on shore such as a boat hoist, a despatcher house for radio contact, a warehouse and an office, a stock yard for pipes and a workshop for the welders. The operations of the company may extend from between one and one-half to fourteen miles from the shoreline. The barge and the tug have living quarters and the men can receive all their meals there and can, and sometimes have to, live on board. The company employs a total of 39 men, including three despatchers, two stock men, two welders, two drillers, 14 on the tug or work boat and barge, six

men and one diver on one vessel, six men on the supply vessel, and three men manning three other boats.

Insofar as the company's operations are concerned, its boats are subject to the Canada Shipping Act and are licensed by the federal Department of Transport. The skippers of the larger boats obtain certificates from the Department of Transport. The same Department inspects the boats and supervises their operation and carriage of high explosives. The Department of Transport also regulates the equipment on the boats and the safety requirements, as well as the lights and foghorns on the towers. The exploring company obtains approval from the federal Department of Public Works pursuant to the provisions of the Navigable Waters Protection Act to enter a site on the lake. It also obtains a licence of occupation from the provincial Department of Mines. The drilling subcontractors hold licences from the Department of Mines and from the Ontario Fuel Board.

On August 6, 1959, the Ontario Labour Relations Board certified the International Chemical Workers' Union (AFL-CIO/CLC) as a bargaining agent of all employees of the company employed in its Lake Erie operations, except foremen, persons above the rank of foremen, office and sales staff and persons regularly employed for not more than 24 hours per week.

The company challenged the Board's decision by way of *certiorari* proceedings, submitting that the Ontario Labour Relations Board had no jurisdiction to entertain the application for certification because the federal Industrial Relations and Disputes Investigation Act applied to the company's operations and its employees; that there was no evidence before the Board that on August 6, 1959, the day the certification order was issued, more than 55 per cent were members of the union in question; and, if the Board had jurisdiction to entertain the application, it lost it by reason of the Board's having been illegally constituted.

Regarding the first submission, the company contended that its operations come within Section 91, ss. 10 of the British North America Act, "Navigation and Shipping" and as such are under federal jurisdiction; further, that these operations are subject to the federal Navigable Waters Protection Act; consequently, the company's employees come within Section 53, clause (a) and clause (h) of the federal Industrial Relations and Disputes Investigation Act. Section 53 provides that Part I of the I.R.D.I. Act applies in respect of employees who are employed upon or in connection with the

operation of any work, undertaking or business that is within the legislative authority of the Parliament of Canada including,

- (a) works, undertakings or business operated or carried on for or in connection with navigation and shipping, whether inland or maritime, including the operation of ships and transportation by ship anywhere in Canada;
- (h) any work, undertaking or business outside the exclusive legislative authority of the legislature of any province.

In dealing with these submissions, Mr. Justice Smily noted that the Navigable Waters Protection Act provides for the supervision of and regulations with respect to works or structures which may affect the safety of navigation. This would include structures and work relating to the drilling of gas wells in navigable waters and the conveying of gas from such wells to the shoreline. Also, the boats operated by the company would be subject to the Canada Shipping Act with respect to licences and the equipment on the boats respecting the safety of those on the boats during their operations. However, the pertinent question was whether the work and operations of the company come within the classification of "Navigation and Shipping" (Section 91, ss. 10 of the B.N.A. Act), thus being within federal jurisdiction. Or, whether the company's work and operations are so local and intraprovincial as to come within "local works and undertakings" (Section 92, ss. 10, 16), thus being subject to provincial jurisdiction.

Considering the over-all picture of the work and operations of the company, Mr. Justice Smily was of the opinion that these operations could not be described as being within the classification of navigation and shipping as contemplated by Section 91 (10) of the B.N.A. Act, or, an operation, work, undertaking or business in connection with navigation or shipping within the provisions of Section 53 of the I.R.D.I. Act. Rather, it might be said that boats have been used by the company in connection with its work and operations. Being subject to the Canada Shipping Act and the Department of Transport and to the Navigable Waters Protection Act with respect to some of its operations and activities is not inconsistent with those operations and activities being engaged in a purely local work and not in navigation and shipping as contemplated by Section 91 (10) of the B.N.A. Act. Transporting goods or persons over water of a purely local or a limited character within the province would not be classed as "navigation and shipping." In Mr. Justice Smily's opinion, the transporting of goods or persons over water of such a local and

limited character as engaged in by the company comes within provincial jurisdiction.

In conclusion, Mr. Justice Smily held that the Ontario Labour Relations Board had jurisdiction under the provisions of the Ontario Labour Relations Act to entertain the application for certification in the case under review.

The company's second submission, that there was no evidence before the Board that at the time of issuing the certification order (August 6, 1959) more than 55 per cent of the employees were members of the union, implied that the conditions at the actual time of issuing the certificate, apart from the conditions at the time of the application to the Board, and at the time of subsequent hearings or hearing, should be the basis for the determination of the number of union members in the bargaining unit. Unless a certificate is issued immediately, the Board should make a further examination in this respect. The court rejected this submission. In its opinion, if it were thought desirable to require, because of the lapse of time, a second or further examination, and if there were no other remedy provided by the Act, it was a matter to be decided by the legislature and not the court.

If the company considered it desirable that the Board should make a re-examination to determine the number of union members in the bargaining unit, it should apply to the Board for a reconsideration of its decision in this respect under the provisions of Section 68 (1) of the Labour Relations Act, which provides that the Board may at any time, if it considers it advisable to do so, reconsider, vary or revoke any decision, order, direction or ruling. The same section provides that the decision of the Board on any question arising in any proceeding as to whether a group of employees constitutes a bargaining unit shall be final, and the court cannot entertain anything in the nature of an appeal from such a decision of the Board.

The company's further allegation, that if the Board had jurisdiction to entertain the union's application to be certified, it lost such jurisdiction by reason of being illegally constituted, was based on the ground that on the second hearing on October 20, 1958, two members of the Board were present who were not present at the first hearing on October 16, 1957, although the three members who were present at the first hearing were also present at the second hearing. There was no evidence that the two additional members took any part in the proceedings at the second hearing or in the

decision of the Board granting certification. The record indicates that only the three members who were present throughout took part in the decision of the Board.

In the opinion of the Court, it would have been better if the two additional members had not been present at the second hearing in 1958. However, Mr. Justice Smily did not find any evidence that in these proceedings before the Board there was a denial of

natural justice so as to warrant the court's interfering with the findings and decision of the Board or that the certificate in question should be quashed on that ground.

The Court ruled that the company's application to quash the certification order should be dismissed. *Underwater Gas Developers Limited v. Ontario Labour Relations Board et al.*, (1960) 21 D.L.R. (2d), Part 4, p. 345.

Recent Regulations, Federal and Provincial

Sask. raises minimum wage rates, Alta. and B.C. issue new safety requirements

Minimum wage orders have been revised in Saskatchewan.

For full-time employees in the cities and larger towns, the \$32-a-week minimum established by the new general order represents an increase of \$2 in the minimum wage; for employees elsewhere in the province it means an increase of \$3. The same is true of the \$30 weekly minimum now provided for full-time employees under 18 years. The new general part-time rates—85 cents an hour for employees over 18 and 80 cents for those under 18 years—mean an increase of 5 or 15 cents in the minimum wage, depending on the location. Similar increases were provided for special categories.

Regulations adopting the seventh edition of the Canadian Electrical Code, Part I, and a 1958 supplement and the C.S.A. Code of Practice for Window Cleaning (Z91-1959) have been issued in Alberta.

In British Columbia, the Workmen's Compensation Board laid down new first aid service requirements for employers and issued new regulations to protect workmen against hazards from energized electrical transmission systems. Safety provisions were also included in new regulations issued under the Pipe-Lines Act.

Other regulations deal with the coverage of the Nova Scotia Workmen's Compensation Act, certification of employees in the beauty culture trade in Alberta and the medical board of reference under the Manitoba Workmen's Compensation Act.

FEDERAL

Financial Administration Act

Consolidations of the regulations for prevailing rate employees, unlicensed crew members and officers on ships owned or chartered by the federal Government were gazetted on January 13. The new regulations were approved by T.B. 558256, T.B.

558258 and T.B. 558257; these replace T.B. 524300 of November 15, 1957, and T.B. 526000 and T.B. 526001 of December 20, 1957.

New definitions were added and others clarified and the provisions generally made more workable.

The only major change was in the overtime provision for ships' crews, the regulations now providing that ships' crews are entitled to be paid at the rate of one and one-quarter times their hourly rate for each completed half hour of overtime. Previously, the rate was one one hundred and seventy-sixth of the monthly rate. Compensatory time off may again be given with the approval of the deputy head.

PROVINCIAL

Alberta Electrical Protection Act

New regulations under the Electrical Protection Act governing the manufacture, installation and inspection of electrical equipment were approved by Alta. Reg. 414/59 gazetted December 31. The new regulations came into force on January 1, 1960, rescinding those previously in effect.

Another order, Alta. Reg. 415/59, declares that, also effective January 1, the Canadian Electrical Code, Part I (Seventh Edition) C.22.1-1958 and Supplement "R" C.22.1-1958, are in force as rules and regulations, except in so far as their provisions conflict with other rules adopted in regulations. Certain modifications to the rules in the code were approved by Alta. Reg. 416/59.

Alberta Factories Act

The C.S.A. Code of Practice for Window Cleaning, Z91-1959, has been adopted as regulations under the Factories Act by Alta. Reg. 422/59, gazetted December 31. This revised edition of the Code, first issued in 1949, is reviewed on p. 288.

Alberta Tradesmen's Qualification Act

The regulations under the Alberta Tradesmen's Qualification Act for the beauty culture trade were re-issued with some changes in the provisions dealing with examinations and apprentices. The new regulations were gazetted on January 15 as Alta. Reg. 447/59.

The regulations have the same coverage as formerly, applying to all persons who perform the various operations usually associated with beauty treatments for women.

As before, no person may engage in the beauty culture trade without a certificate. The same three classes of certificates are provided for: certificates of proficiency, temporary certificates of proficiency and apprentice certificates.

To qualify for a certificate of proficiency, an applicant, as formerly, must first submit testimonials establishing that he has had either one year's practical experience in the trade or at least 1400 hours of instruction in an approved beauty culture trade school. If the Department of Labour approves his application, he must then pass a theoretical and practical examination, obtaining the pass mark prescribed by the Department and the Board of Examiners. Under the previous regulations candidates had to obtain at least 75 per cent of the allotted marks in order to qualify.

A certificate of proficiency will, as before, remain in effect unless suspended or revoked for cause. However, a certificate of proficiency may be granted at the discretion of the Minister for a limited time or specified date.

Following previous practice, the regulations again provide that an unsuccessful candidate may have the examination reviewed by a Board of Appeal upon payment of the prescribed fee. After considering the Board's report, the Department may then take such action as it deems proper under the circumstances. If the candidate is granted a certificate, his fee will be refunded; if not, the fee will be forfeited and the applicant will not be eligible for re-examination for another six months.

The Department is again given discretionary power to issue a temporary certificate of qualification to an unsuccessful candidate, except that he must now obtain four-fifths of the required pass mark instead of 60 per cent of the allotted marks as formerly.

A temporary certificate will now expire at the pleasure of the Department and the holder must be prepared for re-examination at any time. Previously, a temporary certificate might be valid for a year.

A minimum age requirement of 16 years is now set for apprentices and, as before, an

applicant must be able to prove that he will be working under the direct supervision of a person holding a valid certificate of proficiency.

An apprentice certificate will be valid for one year unless the applicant has had previous experience or training in the trade, in which case the period may be reduced by such amount as the Department deems proper.

As soon as his apprentice certificate expires, the apprentice must apply for examination for a certificate of proficiency. If he fails to qualify for either a certificate of proficiency or a temporary certificate, his apprentice certificate will not be renewed. Previously, an unsuccessful candidate might have his apprentice certificate renewed for another six months, after which time he was re-examined.

Every establishment must have one qualified operator for every apprentice hired, except that a beauty parlour operator who is the holder of a certificate or employs at least one qualified person may engage one apprentice. Under the previous regulations no quota was imposed.

British Columbia Pipe-Lines Act

Regulations under the Pipe-Lines Act (B.C. Reg. 457/59) were gazetted December 24, replacing regulations then in effect. Sections relating to safety in connection with pipeline operation are dealt with below.

The regulations provide that the Minister of Commercial Transport may not permit a company to open a pipeline for the transportation of oil or gas unless it has requested leave to do so and he has received a report from a departmental inspector stating, among other things, that the line has been tested and is safe for operation.

The regulations require that, before the commencement of construction, extension, alteration or repair of a pipeline or related pressure component, the company must submit to the Chief Inspecting Engineer specifications and other relevant information. Also, the company must, within 30 days after completion of the work, certify that the work done and material used are in accordance with the data and specifications submitted.

All unfired pressure vessels used in connection with the operation of a pipeline must be constructed, stamped, installed and equipped in accordance with A.S.M.E. Code Section VIII, 1956 edition, for unfired pressure vessels. Their design, identification number and working-pressure must be registered with the Department, and an annual inspection performed by an Inspecting Engineer.

Except where the regulations provide otherwise, Code A.S.A. B31.1.8, 1955, is applicable to the design, fabrication, installation, testing and inspection of gas pipelines, piping, fittings and related appurtenances, to welding of gas and oil pipelines, flow lines and gathering lines, and to gas compressor stations. Welders must be certified under the British Columbia Boiler and Pressure Vessel Act.

Except where the regulations provide otherwise, the Minister is authorized to approve a code governing the design, fabrication, installation, testing and inspection of oil pipelines, piping, fittings and appurtenances, and oil pumping stations.

Gas and oil installations on or adjacent to railway property must be in accordance with Part XII of the regulations under the Railway Act of British Columbia.

Oil storage tanks must conform to A.P. 1 Standards or, if new, to the current editions of A.P. 1 Standard 12A, 12B, 12C, or 12E, depending on the type of construction.

Inspection Engineers must inspect all pipelines during construction, may condemn anything not in conformity with requirements, and may order an unsafe section of line out of service until repaired.

Contractors and supervisors are obliged to inform the Inspecting Engineer of defects that might endanger safety.

The company must submit to the Inspecting Engineer for approval all pipeline test procedures. He must be notified when tests are to be made, and the company is required to make results of the tests available to him on request.

The Inspecting Engineer must make a general inspection of a pipeline before it is opened and submit a report to the Minister. Subsequent inspections must be made when necessary for public protection.

Unless otherwise approved by the Minister, operating and maintenance procedures on gas pipelines are governed by Code A.S.A. B31.1.8, 1955, Chapter V, and on oil pipelines, by a code approved by the Minister.

If serious injury or death is caused by an accident resulting from failure or misuse of a pressure vessel, the company owning or operating the pipeline must immediately notify the Deputy Minister by telegraph or telephone, stating the nature of the accident, where it occurred, and where the equipment can be inspected. Immediate confirmation by mail is also necessary, giving a list of persons killed or injured.

The Chief Inspecting Engineer may investigate any accident caused by failure of any pressure vessel or component used in the operation of a pipeline.

British Columbia Workmen's Compensation Act

In accordance with the provisions of the Regulations Act, a number of regulations issued by the Workmen's Compensation Board were gazetted December 24, 1959. Among these are the General Accident Prevention Regulations, which now have the number B.C. Reg. 394/59. These regulations, and also B.C. Reg. 418/59, Ship Construction Accident Prevention, were filed as regulations without change. The first-aid requirements have been revised, and new regulations were issued with respect to electrical hazards.

Electrical Contacts

Regulation 415/59, entitled "Protection Against Electric Contacts," effective January 1, 1960, relates to any project where workmen, material or equipment may contact energized electrical transmission systems.

It provides that no material may be piled, stored, or handled, or equipment operated, within 10 feet of any energized electrical transmission or electrical distribution system, unless a clearance in writing is obtained, or other precautions described below are taken.

If a clearance in writing is obtained, it must be signed before the work begins by the person or persons controlling the electrical systems. It must state that for the duration of the work the electrical conductors will be deenergized, effectively guarded against contact, displaced from the work area, or rerouted from the work area. This clearance must be continuously available for inspection at the work project.

If a written clearance is unobtainable before the work is to begin, the following precautions must be taken. The area within which equipment or material is to be moved must be barricaded and supervised to exclude persons not working on the project. A workman must be designated as a watchman; his sole task for the duration of the work must be to order the movement of equipment or material stopped if contact with the electrical conductors appears probable, or if conditions prevent him from performing his duty. No person other than equipment operators may touch the equipment or material when it is in motion. No person may move a load or a rigging line from its position of natural suspension when it is near energized electrical conductors.

First Aid

Regulation 393/59 concerning First Aid Service Requirements for Employers became effective January 1, 1960. It replaces requirements previously issued by the Workmen's Compensation Board.

Employers must provide, at their own expense, first aid equipment and services in accordance with standards set out in the regulation. The Board, however, may vary these requirements. If an employer fails to furnish the required equipment and services, the Board may do so and charge the cost to him. The employer must, upon request, submit to the Board a report on his first aid equipment and services.

Where there is no principal contractor at a place of employment, a new provision states that all workmen employed there are considered to be employees of the owner for the purpose of determining first aid requirements.

The regulation divides industries into Class "A," Class "B," and Class "C" hazards, listing specific industries in each class. It provides for each class two basic standards for first aid equipment and service, one when the place of employment is less than five miles from, and another when the place of employment is more than five miles from, the office of a doctor or hospital. Additional equipment is necessary if crews are more than ten minutes travelling time from the first aid equipment and service. The contents of the first aid kit to be maintained in each class of industry in each of these circumstances, and according to the number of people employed, is specified in a schedule.

When workmen are engaged in ship-lining, ship repairing or stevedoring on board ship without access to a dock first aid room, a waterfront first aid kit must be provided for crews of 10 or fewer (a new provision) and, for crews of 11 to 24, a first aid attendant also; for crews of 25 or more, a waterfront first aid kit and a first aid attendant must be provided whether there is a dock first aid room or not.

First aid requirements are set out for mobile equipment operating where first aid or medical aid is not readily available.

Employers are required to provide proper care for injured workmen and must have suitable transportation and a first aid attendant available to take them to a doctor or hospital.

Municipal fire departments employing 20 or more firemen must include a first aid attendant for each 20 men, and he is required to accompany them to fires.

Suggested plans are shown for first aid rooms. They must be convenient to operations, be properly painted, ventilated, heated and lighted, be provided with hot and cold water and, if available, telephone communication with working areas and other central points (unless the Board directs

otherwise). When first aid rooms are more than two hours travelling time by land or water from a hospital they must have special emergency equipment and accommodation.

When a first aid attendant is required, his services must be readily available. He is in charge of all first aid treatment. The employer must obtain the attendant's Certificate of Competency before he commences his duties, retain it while he is employed, produce it on request of the Board, and deliver it to the attendant on termination of his employment.

When the work location is more than two hours travelling time from a doctor or hospital, where there is no immediate means of communication, or where transportation is impossible, the first aid attendant must have at least a Grade "B" Industrial First Aid Certificate, unless the Board approves otherwise.

The first aid attendant is required to record certain information in respect of all accidents.

A new provision specifies that the Board may cancel or suspend the certificate of a first aid attendant who is not performing his duties satisfactorily.

Any person who fraudulently obtains an Industrial First Aid Certificate, or who does not have a valid First Aid Certificate and acts as a first aid attendant, is now guilty of an offence.

Manitoba Workmen's Compensation Act

Regulations under the Manitoba Workmen's Compensation Act establishing a Medical Board of Reference to which an injured workman may appeal a medical decision were gazetted on January 9 as Man. Reg. 95/59.

This new board will replace the Medical Board, an advisory body of qualified medical practitioners voluntarily created by the Board some 20 years ago.

Under the new regulations, an injured workman who feels aggrieved by a decision of a medical officer of the Workmen's Compensation Board or a doctor consulted by it has a right of appeal to a Medical Board of Reference. Also, in the case of a difference of opinion between one of its medical officers and the employee's doctor, the Board may of its own accord refer the matter to the Medical Board of Reference. In such cases the appeal board will consist of a Chairman and Deputy Chairman appointed by the Manitoba Medical Association, one doctor named by the injured workman, one by the employer and one by the Workmen's Compensation Board from a panel of specialists furnished by the Medical Association.

The regulations further provide that the Board may refer medical questions to a Medical Board of Reference even when there is no difference of opinion. In such cases, the Board will consist of two doctors named by the Medical Association and one or more nominated by the Board from a panel of specialists furnished by the Medical Association.

The Medical Board may determine its own procedure and at a time and place designated by the chairman must examine the injured workmen, taking whatever additional steps are deemed necessary. The Medical Board of Reference must then report its findings to the Workmen's Compensation Board.

Nova Scotia Workmen's Compensation Act

Hospitals were brought within the scope of the collective liability section of the Nova Scotia Workmen's Compensation Act by an order gazetted on January 13.

Saskatchewan Minimum Wage Act

In a revision of its minimum wage orders, the Saskatchewan Minimum Wage Board replaced its two general orders by a new order (No. 1, 1960) which provides for a minimum wage of \$32 a week for employees 18 years and over and of \$30 for employees under 18, effective April 4. Previously, the minimum for adult workers was \$30 a week in the cities and 15 larger towns and \$29 elsewhere in the province; for employees under 18 years, \$28 and \$27, respectively.

The new general order also increased part-time rates to 85 cents an hour for employees over 18 and to 80 cents for employees under 18.

Similarly, in place of the four special orders for hotels, restaurants, educational institutions, hospitals and nursing homes, the Board issued two new orders with province-wide coverage that provide for the same minima as the general order.

In addition, the Board revised the five special orders for oil well drilling rigs, logging and lumbering operations, amusement places, janitors and caretakers in residential buildings, and truck drivers, increasing rates by an average of 5 cents an hour. It also amended the special order respecting earnings statements (No. 12) to require employers to furnish employees with an itemized earnings statement on termination of employment, as well as on each regular pay day.

Coverage

The eight orders that will be in effect after April 4 are as follows: No. 1, all employees not covered by other orders or

specifically excluded; No. 2, hotels and restaurants; No. 3, educational institutions, hospitals and nursing homes; No. 7, janitors or caretakers in residential buildings; No. 8, truck drivers (commercial or public service vehicles over 2,000 lbs. net weight); No. 9, logging and lumbering; No. 10, amusement places; No. 11, oil well drilling rigs.

Except for the dropping of the differential between cities and larger towns and smaller centres, the total coverage of the orders is unchanged. Together the general order and the seven special orders cover all workers in the province except the following: domestic servants in private homes; agricultural workers; employees in boarding or rooming houses; persons employed solely in a managerial capacity; firemen (who are covered by the Fire Departments Platoon Act); employees engaged in rural road maintenance or highway construction work; cooks and cookees employed by boarding car contractors and in cook cars operated by highway construction contractors; registered nurses, student nurses or nursing assistants, and student laboratory or x-ray technicians whose wages and working conditions are fixed by regulations under the Hospital Standards Act; employees employed on core drilling rigs, in oil well servicing and in the geophysical or seismographic survey industry.

Minimum Rates

The revised orders have continued the practice of setting weekly rates for full-time employees and hourly rates for part-time workers, with lower minima for employees under 18. Under the general order and the orders governing employees in hotels, restaurants, educational institutions, hospitals and nursing homes (Orders 2 and 3), the full-time or weekly rates apply to persons who work 36 or more hours a week and the part-time or hourly rates to employees whose normal work week is less than 36 hours. Also following previous practices, these orders impose a quota on part-time employees, limiting the number of such workers to 25 per cent of the total number of full-time workers employed.

The order for amusement places (No. 10) defines "full-time" employees in the same manner as the orders referred to above but classifies as "part-time" persons who work between 16 and 36 hours a week and as "casual" employees who normally work less than 16 hours a week. It does not, however, limit the number of part-time or casual employees.

Under Order No. 7, the order for janitors and caretakers in residential buildings, the

weekly rate applies to employees who work 48 or more hours a week and the hourly rate applies to employees who work less than 48 hours a week.

Weekly rates of \$32 for employees 18 years of age and over and \$30 for employees under 18 are fixed for full-time employees by the general order (No. 1), and also by No. 2 (hotels and restaurants), No. 3 (educational institutions, hospitals and nursing homes) and No. 10 (amusement places). For part-time employees (and "casual employees" under Order No. 10) these same orders set rates of 85 cents an hour for employees 18 and over and 80 cents for employees under 18. Other rates set by the eight orders are as follows:

Order No. 1

Operators of motor vehicles under 2,000 lbs. net weight, and taxi drivers—\$35 a week

Full-time messengers—\$22 a week

Delivery boys (other than students)—65¢ an hour

Order No. 7

Janitors or caretakers in residential buildings—\$42 a week; part-time 90¢ an hour

Order No. 8

Truck drivers (public service or commercial vehicles of 2,000 lbs. net weight or over)—90¢ an hour or 3¢ per mile, whichever is greater

Swampers and helpers—90¢ an hour

Order No. 9

Employees in logging and lumbering—90¢ an hour

Cooks, cookees, bull cooks, watchmen—\$150 a month

Order No. 11

Employees on oil-well drilling rigs—85¢ an hour.

Public Holidays

Holiday provisions are again included in all orders except those governing janitors and caretakers and the logging and lumbering industry. This means that all employees subject to these orders except casual workers in amusement places are entitled to eight holidays a year with wages at their regular daily rate (exclusive of overtime). The same eight days are specified: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day.

As before, there is some variation in the orders as regards payment for time worked on any of the specified holidays. Persons subject to the general order who work on

a holiday are entitled to their regular wage, plus one and one-half times their regular rate for all time worked. Employees in hotels, restaurants, educational institutions, hospitals and nursing homes are to receive, in addition to their regular daily wages, wages at their regular rate or equivalent time off with pay within four weeks. If required to work on a holiday, employees engaged in the operation of an oil well drilling rig are to be paid their usual daily wage plus their regular rate of pay for every hour worked. Although casual employees in amusement places are not entitled to holidays with pay, they must be paid at the rate of one and one-half times their regular rate if they work on a holiday.

If the wages of an employee, exclusive of overtime, vary from week to week, payment, as before, is to be made on the basis of the average weekly wage for the four weeks immediately preceding the week in which the holiday occurs. Also, the orders again provide that when Christmas Day and New Year's Day fall on Sunday, the following day is to be observed as a holiday and paid for according to the requirements laid down in the orders. Similarly, when the Monday following Remembrance Day is proclaimed a holiday, the holiday provisions will apply to the Monday and not to November 11.

Three-hour Minimum

All part-time or casual workers except messengers, janitors, caretakers and students working after school hours must again receive a minimum of three hours' pay at the minimum rate for each occasion on which they are asked to report for duty, whether or not they work three hours. Previously, casual or part-time workers in amusement places were entitled to the three-hour minimum in the cities and within a five-mile radius but not elsewhere in the province.

Working Shifts

As formerly, the hours of employees in hotels, restaurants, educational institutions, hospitals and nursing homes must be confined within a 12-hour interval and no person may be required to report for duty more than three times within such period.

The prohibition against the employment of women between the hours of 12:30 a.m. and 6 a.m. has been dropped, however, together with the proviso permitting female employees to work up to 1:30 a.m. provided they were furnished with free transportation by their employer. Instead, the new orders applicable to such workplaces provide that every female employee who is required or permitted to finish work between the hours

of 12:30 a.m. and 7 a.m. must be transported to her residence at her employer's expense.

Minimum Age for Employment

In keeping with former practices, a minimum age for employment is fixed for certain types of employment which would be outside the minimum age requirement in the Factories Act. In hotels, restaurants, educational institutions, hospitals and nursing homes the minimum age for employment remains 16 years. This is also the requirement in amusement places except that, as before, the Chairman of the Minimum Wage Board is authorized to grant exemptions.

Deductions from Wages

The orders governing hotels, restaurants, educational institutions, hospitals and nursing homes contain the same rules with respect to deductions as formerly. Employers who require their employees to wear special uniforms must provide them without cost to the employees and may not charge for repairs or laundering. Deductions for board and lodging are again permitted, however, provided the employees agree to accept these facilities. In hotels and restaurants,

the maximum allowable deduction remains 25 cents for a night's lodging and 30 cents for a single meal. The same maxima apply in educational institutions, hospitals and nursing homes except that, as before, they are limited to persons receiving \$35 a week or less.

In all five types of workplaces, the minimum meal period is one-half hour, exclusive of regular working hours, for meals consumed on the premises and one hour for meals eaten elsewhere.

Under the new order for logging and lumbering operations the maximum deduction for board and lodging has been raised from \$1.60 to \$2 a day.

Earnings Statements

Order 12, which, as before, deals with earnings statements, now provides that every employer must furnish each of his employees with an earnings statement on termination of employment, as well as on each regular pay day. The same information must be included, namely, the name of the employee, the beginning and ending dates of the pay period, the number of hours worked, wage rate and job classification, gross wages, deductions and net earnings.

Safety Code for Window Cleaners

A revised edition of *Z91-1949, Code of Practice for Window Cleaning* was approved recently by the Canadian Standards Association.

This second edition of the code incorporates some new requirements made necessary by the changes that have occurred in building and window construction since the 1949 edition was issued. It applies to window cleaning operations performed on the outside of all public or industrial buildings more than one story high, or in which the sills of windows are located more than 8 feet (10 feet in the 1949 edition) above grade or above adjoining flat roof.

The code is recommended for adoption by federal, provincial and municipal authorities and provincial safety associations. It is also recommended for use by architects, engineers, building contractors engaged in building commercial, industrial, multi-use residential and public buildings, and firms engaged in window-cleaning operations.

The revised edition, like the earlier one (L.G. 1949, p. 677), sets forth detailed specifications for the design and safe use of such equipment as swinging scaffolds, boatswains' chairs, ladders, safety belts and fittings and safety-strap terminals, and for the installation of anchors in buildings of

various types of construction. A new section covering picture frame windows and curtain wall types has been added.

To meet the requirements of the revised code, window cleaners assigned to work on scaffolds must be provided with safety belts in addition to life lines, and no person may be assigned to work on a scaffold or boatswain's chair who has not been instructed to handle such equipment and who is not competent to do so. An approved snubbing device attached to the boatswain's chair to be operated by the workman himself is another new requirement.

Some responsibility is now placed on the cleaner for his own safety. Belts and life lines must be inspected by the cleaner himself before use, as well as by a competent person once a month as specified in the earlier edition.

The revised code also emphasizes that lag screws or screwed-in fittings in wood window frames should be condemned and replaced by approved anchors.

Z91-1959, Code of Practice for Window Cleaning may be obtained from the General Manager, Canadian Standards Association, 235 Montreal Road, Ottawa 2. The price is \$1.25 a copy.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Totals of claimants for benefit at end of December, of claimants for seasonal benefit, and of initial and renewal claims during month all higher than month earlier but lower than year before, statistics* show. Month's revenue higher

Claimants† for unemployment insurance on December 31, 1959 numbered 685,700, of whom 116,500 were seasonal benefit claimants. This number was 64 per cent higher than the total of 417,500 (5,300 seasonal benefit) on November 30, 1959 but 4 per cent lower than the total of 715,000 (126,900 seasonal benefit) on December 31, 1958.

Fishermen included in the seasonal benefit claimants on December 31, 1959 numbered 17,800; on November 30 they totalled 350, and on December 31, 1958 they numbered 16,900.

On December 31, 1959, males comprised 78 per cent of the claimants, on November 30 they had made up 74 per cent, and on December 31, 1958, they had comprised 79 per cent of the total. During December 1959 the number of male claimants increased 74 per cent while the number of female claimants rose by only 38 per cent.

Males comprised 99.4 per cent of the fishermen who were claiming seasonal benefit on December 31, 1959.

Initial and renewal claims for benefit during December numbered 441,600, which was 60 per cent more than the 278,600 in the previous month but about 7 per cent less than the 475,200 of December 1958.

The average weekly number of beneficiaries was estimated at 361,500 for December and 209,600 for November 1959, compared with 371,100 for December 1958.

The average weekly benefit payment was \$21.51 in December and \$20.85 in November 1959, compared with \$21.53 in December of the previous year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for December 1959 show that insurance books

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

or contribution cards had been issued to 4,834,084 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

At December 31, 1959, employers registered numbered 325,706, an increase of 939 since November 30.

Enforcement Statistics

During December 5,170 investigations were conducted by enforcement officers across Canada. Of these, 3,096 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 124 were miscellaneous investigations. The remaining 1,950 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 121 cases, 28 against employers and 93 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,030.*

Unemployment Insurance Fund

Revenue in December 1959 totalled \$28,576,933.39 compared with \$27,823,610.54 in November and \$17,013,284.32 in December 1958. Benefits paid in December 1959 totalled \$32,661,332.95 compared with \$17,479,376.35 in November and \$33,530,160.00 in December 1958. The balance in the fund on December 31, 1959, was \$471,094,255.96; on November 30 it was \$475,178,655.52 and on December 31, 1958, \$625,363,366.21.

*These do not necessarily relate to the investigations conducted during this period.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1710, January 11, 1960

Summary of the Main Facts: The claimant, married, 21 years of age, filed an initial application for benefit and was registered for employment as a general office clerk. She had worked as a bookkeeping machine operator for a firm in Calgary from December 17, 1957 to June 26, 1959, when she voluntarily left to move with her husband to Innisfail, Alta., where he had permanent employment. Her rate of pay, at the time of leaving her job, was \$42 a week.

The insurance officer disqualified the claimant from receipt of benefit as of June 28, 1959, the effective date of her claim, on the ground that she was not available for work in that she was residing in a place where there were no reasonable opportunities of employment for her (Section 54 (2) (a) of the Act).

The claimant appealed to a board of referees, contending that she was available for employment and would accept office work any time it was possible to obtain. She stated that she had applied for employment at the bank in Innisfail as well as at other employers in that town but there were no vacancies.

In response to a request from the local office for information as to whether she would accept work outside her present place of residence, the claimant stated "I do not want employment anywhere else but Innisfail."

The placement officer of the Unemployment Insurance Commission's office in Red Deer, Alta., commented:

Innisfail is a small town that has a population of less than 2000 people. The business offices there are few and of course on a small scale—very few general office clerks would be in demand there, especially without typing as our claimant is. It is felt it would be difficult to place her if her place of employment is to be restricted to Innisfail.

The board of referees, at a session held in Edmonton on August 21, 1959, by a unanimous decision dismissed the claimant's appeal and in so doing took cognizance of the Umpire's decisions CUB-1416 and 1489, to which it had been referred by the insurance officer.

With the permission of the chairman of the board of referees, the claimant appealed to the Umpire on September 11, 1959, stating that she had already secured employment in Innisfail despite the view expressed by the Commission's local office that the

chances of obtaining work there were virtually non-existent. She contended, therefore, that she was entitled to benefit for the period she was unemployed.

In a letter dated October 30, 1959, for the attention of the Umpire, the claimant, apart from giving reasons why it was not feasible for her to accept employment outside of Innisfail, stated that the position as secretary at the Innisfail Veterinary Clinic became vacant on August 6, 1959, and that she commenced in the employment the following day. She added that "although typing was required, they have given me the opportunity of learning this while on the job."

Considerations and Conclusions: There is no specific information in the record regarding the conditions of the labour market in Innisfail nor is there any evidence that an effort was made by the local office to follow what I believe to be the usual practice, namely to ascertain whether the claimant would take employment in other than her registered occupation.

In view of the foregoing, I am not prepared to endorse the view that, only two days after the claimant had become unemployed, she was not available for work merely because it was considered "difficult" to place her in general office work in Innisfail as she had no experience in typing, and even less so in view of the fact that she found work there within a reasonable period of time after she had become unemployed.

In my opinion, the claimant has proved that she was available for work during the period in question, and I so decide.

The claimant's appeal is, therefore, allowed.

The two decisions of the Umpire to which the board of referees was referred by the insurance officer did not afford proper guidance, as they pertain to facts which have very little similarity, if any, to those of the present appeal. Decision CUB-1416 deals with the case of a married woman who had temporarily, i.e., for six months, gone to reside in a sparsely populated area (situated more than 350 miles from Seven Islands, Que.), and decision CUB-1489 with the case of a lumberjack who had refused an offer of employment because his wife was ill and he could not leave his home before a month and a half. In both cases, the records show that the claimants resided

in a remote area where there were no reasonable opportunities of employment for them.

Decision CUB-1712, January 19, 1960

Summary of the Main Facts: The claimant, married, 23 years of age, applied for benefit and was registered for employment as a bookkeeper. She had worked as a stenographer-bookkeeper for the Stony Plain Motor Company Limited, Stony Plain, Alta., from May 1, 1956 to May 31, 1959, when she voluntarily left for the following reason: "We have moved to Hythe where my husband is employed. At the present time anyway there are no openings for my type of work here." Her rate of pay at the time of leaving was \$220.00 a month.

The insurance officer disqualified the claimant from receipt of benefit as of June 7, 1959, the effective date of claim, on the ground that she was not available for work in that she was residing in a village where there were no reasonable opportunities of employment for her (section 54 (2) (a) of the Act).

According to the submissions, the population of Hythe is 472 and the nearest place of employment is Stony Plain (population 1083).

The claimant appealed to a board of referees on July 13, 1959, and stated, among other things, that "there is not any available work in my line at Hythe."

The claimant was not present nor was she represented at the hearing of her case by a board of referees in Edmonton on August 7, 1959. The board, by a unanimous decision, dismissed the appeal on the ground that the claimant had "so restricted her availability for employment that it must be held that she has failed to prove that she is available for work as required by the Unemployment Insurance Act." The board was referred to CUBs 574 and 1103.

Subsequently, there was quite an exchange of correspondence between the claimant and the insurance supervisor of the local office, the claimant giving reasons why, in her opinion, she should be entitled to benefit and the insurance supervisor explaining why she was deemed not to be available for work.

With the permission of the chairman of the board of referees, the claimant appealed to the Umpire. In effect, she contended that, contrary to the opinion that had been expressed, Hythe was not situated in a remote area and that persons were employed there in her line of work as a stenographer-bookkeeper with general office experience, notwithstanding that she had been unable

to find such employment. She also mentioned that the bank in Hythe employed six or seven persons and that three automobile dealers there used much the same bookkeeping systems as she was familiar with.

In response to a written request from the Regional Claims Officer, dated October 2, 1959, for information as to the possibility of the claimant's obtaining employment in Hythe, the manager of the Commission's office in Dawson Creek, B.C., stated, in part, as follows:

Hythe, Alberta has a population of approx. 500 and is situated 43 miles south east of Dawson Creek, 8 miles west of Beaverlodge, Alta. and about 43 miles west of Grande Prairie, Alta. Business establishments total about 18, out of which only the following employ female help:

Swanston, Insurance and Real Estate—office clerk, 1 girl; Oakford's Ltd., Gen. Store—sales clerks, 2 to 3; Village of Hythe, Municipality—office clerk, 1; McLeod & Inkster, merchant—sales clerk, 1; Hythe Hotel Ltd.—chambermaids, 2; Madge Snack Bar—waitresses, 2; Hythe Mercantile—sales clerks, 2; Pearson's Cafe Shop—waitresses, 2; Post Office Dept.—clerk, 1; Hythe Cafe—waitresses, 2; Alta. Treasury Branch—bank clerks, 2; Can. Bank of Commerce—bank clerks, 1 to 2.

Claimant's chances of obtaining employment in her registered occupation in Hythe are limited. To the best of our knowledge the 3 motor car dealerships are not using female help as they are only small agencies.

Considerations and Conclusions: Availability for work is a question of fact to be considered in the light of the particular circumstances of each case.

In the present case, the record shows that the claimant quit her employment and moved from a very small town or village, where she had paid unemployment insurance contributions for the past three years, to one of a lesser population where her husband was employed. It shows also that she was willing to work but only in Hythe and solely as a stenographer-bookkeeper or as a general office clerk, and that her chances of obtaining such employment there were "limited".

I must say that, as a general rule and as stated in the Umpire's decisions CUBs 514 and 1103 to which the board of referees was referred by the insurance officer, it is not the intent of the Unemployment Insurance Act to provide benefit to insured persons who voluntarily leave their employment in large centres to move to small communities where there are no reasonable opportunities of employment. That, however, as can be seen from the foregoing, is not the case in the present appeal, and I am not at all prepared to endorse the view

(Continued on page 296)

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during January Works of Construction, Remodelling, Repair or Demolition

During January the Department of Labour prepared 151 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 147 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under the heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in January for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Agriculture	6	\$2,834,650.00
Defence Production	81	281,936.00
Post Office	12	84,197.85
R.C.M.P.	2	11,403.00

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during January

During January the sum of \$9,164.94 was collected from eight contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 264 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during January

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Whitehorse Y T: Ben Leveille, construction of two barns, Experimental Farm, Mile 1019, Alaska Highway.

Central Mortgage and Housing Corporation

Aylmer Ont: Roscoe Alcorn, *general maintenance, Project 1/48. *Belleville Ont:* K S Reid, *plumbing & heating, Projects 2/48 & 3/49; W Danford, *general maintenance, Projects 2/48 & 3/49. *Cornwall Ont:* Tellier & Groleau Inc, construction of 105 row housing units & 20 apartment units (FP 3/57). *Ottawa Ont:* MacFarlane & Leblanc, *electrical repairs, Strathcona Heights & Merivale Road. *Pembroke Ont:* R Harvey, *plumbing & heating, Project 1/48 & Atomic Energy Houses; G A Bechamp, *carpentry & general maintenance, Project 1/48 & Atomic Energy Houses. *Petawawa Ont:* Bedard & Girard Ltd, construction of electrical distribution system (DND 13/58, phase 11). *Comox B C:* J H McRae Co Ltd, construction of electrical distribution system (DND 6/58).

Quadra Construction Co Ltd, construction of departmental wharf & floats. *Victoria B C:* G H Wheaton Ltd, drainage, blacktop areas, Prosthetic Services Bldg, DVA Hospital. *Hay River N W T:* St Laurent Construction Ltd, construction of two-apartment teacherage. *Inuvik N W T:* Creamery Industry Supply Ltd, supply & installation of freezing equipment for two refrigerated bldgs.

Contracts Containing the General Fair Wages Clause

Halifax N S: Guildfords Ltd, installation of crew accommodation, Dredge No 21. *Lunenburg N S:* Atlantic Bridge Co Ltd, construction of two hopper scows for dredge PWD No 16 replacement. *Hampton N B:* Vincent Construction Co Ltd, general alterations, post office. *Saint John N B:* Saint John Dry Dock Co Ltd, construction & delivery of survey boat & trailer. *Disraeli Que:* Sylvio Fortin, interior painting, public bldg. *Hull Que:* The Powers Regulator Co of Canada Ltd, repairs to machinery, National Printing Bureau. *Huntingdon Que:* Walter Harkness, interior painting, federal bldg. *Lachute Que:* Denis Monette, interior painting, federal bldg. *Lennoxville Que:* Lucien Cote, repairs to heating system, federal bldg. *Montmorency Que:* P E Gagne, interior painting, public bldg. *Montreal Que:* Montmorency Automatic Venetian Blind Co, laundering of venetian blinds, federal bldg. *Bells Corners Ont:* E O Switzer, installation of postal counter, screenline & lock boxes, post office. *Collins Bay Ont:* T L Smith Bldg Services, installation of postal counter, screenline & lock boxes, post office. *Mallorytown Ont:* A L Srigley, installation of postal counters, screenline & lock boxes, post office. *Ottawa Ont:* Westeel Products Ltd, alterations to partitions, Veterans Memorial Bldg; Ruitter Electrical Ltd, repairs to electrical system, RCMP Headquarters; McFarlane & Leblanc, repairs to electrical system, Transportation Bldg; A C McDonald & Sons, repairs to electrical system, "A" Bldg, Cartier Square. *Vancouver B C:* Park Royal Contractor, interior repairs, Customs House.

Department of Transport

Halifax N S: The Ellis-Don Ltd, construction of limestone contact bed & associated piping, International Airport. *Maniwaki Que:* Theophile Houle, construction of extension to hydrogen generator bldg. *Port Harrison Que:* Docherty Construction Co Ltd & Whelpton Electric Ltd, construction of single dwelling, two storehouses & hydrogen generator bldg with heating plant. *Quebec Que:* Bergerville Estates Ltd, construction of heating plant & power house & related work, Airport. *Red Lake (Cochénour) Ont:* Bergman & Nelson, construction of staff dwelling. *Smiths Falls Ont:* W D Laflamme Ltd, construction of new fixed bridge over Rideau River on Carthage St. *Fort Churchill Man:* Bird Construction Co Ltd, addition to apartments & construction of two-car garage. *Donavon Sask:* W C Wells Construction Co Ltd, construction of VOR & NDB Bldgs. *Alert Bay B C:* McGinnis Bros, renovation of duplex dwelling. *Fort Nelson B C:* M R S Construction Ltd, construction of balloon inflation hydrogen generator bldg & related work, Airport. *Sandspit B C:* Greenall Bros, construction of double dwelling. *Terrace B C:* Caledonia Electric Ltd, installation of low intensity approach lighting on runway 32, Airport. *Williams Lake B C:* J W Bedford Ltd, installation of water supply & sewage disposal facilities, Airport. *Frobisher Bay N W T:* The Carter Construction Co Ltd, construction of two food warehouses.

Decisions of the Umpire

(Continued from page 291)

that just because a wife moves from a small community, where she has a good record of regular employment, to another small community she should be automatically and immediately disqualified, particularly when, as in this case, the claimant's opportunities for work in the latter community are not reported to be non-existent but simply "limited."

Accordingly, I am of the opinion that the claimant should have been given a reasonable period of time to thoroughly

explore the employment situation in Hythe. I consider that, in view of her record of three years of employment, six weeks, based on two weeks for each year of employment, would constitute such a period in the particular circumstances of her case.

I, therefore, decide to remove the disqualification for the six weeks commencing as from the effective date of her claim for benefit.

But for the latter mentioned modification, the claimant's appeal is dismissed.

WAGES, HOURS, WORKING CONDITIONS

Working Conditions in Manufacturing

Most marked change in year ending April 1, 1959 was in proportion of employees in firms that provided four-week paid vacation after 25 years service, which doubled to 24 per cent for plant workers, rose to 26 per cent for office staff

The percentage of employees in Canadian manufacturing firms that provide four weeks vacation with pay after 25 years service rose markedly in the year ending April 1, 1959, it was found in the most recent survey of working conditions conducted by the Department's Economic and Research Branch. There were only minor changes in the percentages having provisions for two- and three-week paid vacations.

The proportion of employees on a five-day week rose slightly for both plant and office employees, and the percentages of plant workers on a 40-hour week and of office employees on a 37½-hour week increased by a small amount.

There was a further slight increase in the percentage of employees receiving eight or more paid statutory holidays.

The survey also provided information on the proportion of employees in establishments with plans that provide pensions, group life insurance and insurance to compensate for wage loss due to illness.

The percentages given in the accompanying tables, one relating to plant employees

and the other to office employees, denote the proportions that the employees of establishments reporting specific items bear to the total of employees in all establishments replying to the survey questionnaire. They are not necessarily the proportions of employees actually covered by the various items.

In each of the tables, two columns of percentages, headed A and B, are provided for the year 1959. Prior to the carrying out of the 1959 Working Conditions Survey, the mailing list upon which previous annual surveys had been based was reviewed in detail, with a view to adding as many as possible of the establishments having 15 or more employees that had not previously been included in the list. For the year 1959 all working conditions statistics are being compiled both on the basis of the expanded mailing list (column A) and on the basis of the previous list (column B). Column B thus provides data for those wishing to compare the most recent survey findings with those in previous years.

SURVEY IN COVERAGE IN CANADIAN MANUFACTURING

	1959		1958	1957	1956	1955
	A	B				
Plant Employees						
Number of reporting establishments.....	7,902	5,882	6,240	6,105	6,166	6,393
Number of employees.....	819,401	739,120	758,943	804,953	799,365	765,551
Office Employees						
Number of reporting establishments.....	7,658	5,748	6,240	6,105	6,166	6,393
Number of employees.....	229,233	213,275	226,973	224,941	204,881	196,194

In each year prior to 1959, the numbers of establishments shown as having plant employees and office employees are identical. But in 1959, because separate counts were obtained of establishments having plant workers and of establishments having office

employees, the numbers of establishments shown as having plant employees differ in both Column A and Column B from those shown as having office employees. In the earlier years counts of establishments were obtained without distinguishing between

establishments that had both plant and office employees and those which had only one or the other.

Year-to-year differences in the coverages given result from differences in rates of

response or from the fact that all the establishments covered by the pre-expanded mailing list did not necessarily operate in all the years for which data have been prepared.

Working Conditions of Plant Employees

The proportion of plant employees in firms having provisions for a four-week paid vacation after 25 years service doubled between 1958 and 1959 from 12 to 24 per cent. Calculated on the basis of the 1959 expanded mailing list, this proportion was 22 per cent.

The proportion of plant workers who can become eligible for a paid vacation of three weeks has increased greatly, from 60 per cent in 1955 to 76 per cent in 1959 on the comparable mailing list basis. In addition to the increase between 1955 and 1959 in the proportion who could become eligible for three-week paid vacations, there was a definite trend towards shorter service requirements for such vacations. In 1955 only 47 per cent of the plant employees covered by the survey were granted a paid vacation

of three weeks after 15 years service but in 1959, this proportion rose to 69 per cent on the basis of a comparable mailing list.

A work week of 40 hours or less was the standard for more than 70 per cent of plant workers in 1959; in 1955, less than 60 per cent of plant workers had a scheduled work week of 40 hours or under.

The proportion of plant workers who are granted eight or more statutory or public holidays has risen from 56 per cent in 1955 to 72 per cent in 1959.

Although pension and insurance plans were provided for a large proportion of plant employees at the beginning of the five-year period covered by the table, there have been appreciable increases in the proportions of workers covered by such plans.

Working Conditions of Office Employees

The proportion of office employees in firms having provisions for a four-week paid vacation after 25 years service rose from 14 to 26 per cent between 1958 and 1959. Calculated on the 1959 expanded mailing list this percentage was 25 per cent.

In 1955, eight or more statutory holidays were granted to 81 per cent of office workers in manufacturing; in 1956 this proportion rose to 85 per cent and has shown only very minor changes since.

In the five-year period 1955-59, a standard work-week of 37½ hours has been most frequent for office employees in manufac-

turing; 38 per cent of those covered by the 1955 survey were in this category and another 22 per cent had a standard work-week of less than 37½ hours. In 1959 the comparable percentages were 43 and 27 respectively.

Pension plans are provided in establishments employing 85 per cent of the office employees covered by the 1959 pre-expanded mailing list; the comparable proportion in 1955 was 74 per cent. On the same basis, the provision of group life insurance plans has increased from 90 per cent to 95 per cent.

(¹) See paragraph 6, of text, page 297.

During 1959 approximately 357,000 workers in the United Kingdom had their normal working hours reduced by an average of some one and a half hours a week. It was the highest number to benefit from a reduction in hours since the immediate postwar years.

Weekly wages increased during the year by 1 per cent, compared with 3½ per cent in 1958. Nearly 4,750,000 were estimated to have received wage increases amounting to about £1,250,000 a week. An estimated 23,700 had an aggregate decrease of about £1,100 per week.

PRICES AND THE COST OF LIVING

Consumer Price Index, February 1960

Canada's consumer price index (1949=100) declined 0.2 per cent from 127.5 to 127.2 between the beginning of January and February this year. A year ago the index stood at 125.7.*

The decrease, the third in succession, resulted almost entirely from a decline of 0.7 per cent in the food index, combined with a drop of 0.4 per cent in the clothing index and 0.1 per cent in the household operation index. The shelter and other commodities and services indexes were both up a fractional 0.1 per cent.

The food index moved from 121.6 to 120.8, as lower prices were reported for a wide range of meats; price declines in beef ranged up to 5 cents per pound. Other price declines were limited largely to orange juice, grapefruit and most fats. Egg prices, after dropping some 20 cents a dozen between November 1959 and January 1960, edged slightly lower in February to stand at 41 cents per dozen. Most fresh and canned fruits and vegetables were higher. Potato prices continued to rise, reaching their highest February levels since 1952.

The shelter index rose slightly, from 142.8 to 142.9, as the home-ownership component increased slightly. The rent component, unchanged for the fourth successive month, continued its levelling trend apparent over the past year.

A drop of 0.4 per cent in the clothing index from 110.2 to 109.8 reflected a further impact of winter sales. Men's, women's and girls' winter overcoats, boys' parkas and girls' snowsuits were mainly affected.

In the household operation index, a fractional decline from 123.3 to 123.2 resulted mainly from sale prices in furniture and floor coverings, which more than balanced scattered price increases for some household supplies and utensils, and increases in textile prices from January sale levels.

Price changes in other commodities and services were of a minor nature. Somewhat higher prices for pharmaceuticals, personal care items and taxi rates were partly offset by price declines for gasoline. As a result, the index increased from 136.9 to 137.0.

Group indexes at the beginning of February 1959 were: food 121.2, shelter 140.2, clothing 108.8, household operation 122.0, and other commodities and services 133.4.

*See Table F-1 at back of book.

City Consumer Price Indexes, January 1960

Eight of the ten regional city consumer price indexes (1949=100) were lower between December 1959 and January 1960.* Decreases ranged from 0.2 per cent in Halifax, Ottawa, Saskatoon-Regina and Vancouver to 0.7 per cent in Montreal. The Saint John index was unchanged and the St. John's index increased a fractional 0.1 per cent.

Food indexes were lower in all cities except St. John's, which was unchanged. Shelter indexes showed mixed results: four increased, three decreased and three remained unchanged. Clothing indexes, reflecting traditional January sales, were lower in seven cities, unchanged in two and up fractionally in St. John's. Household operation indexes were down in five cities and up in the other five. Other commodities and services indexes were higher in two cities but declined in seven cities, remaining unchanged in St. John's.

Regional consumer price index point changes between December and January were as follows: Montreal -0.7 to 127.8; Winnipeg -0.7 to 124.7; Edmonton-Calgary -0.5 to 123.6; Toronto -0.4 to 129.7; Vancouver -0.3 to 129.3; Halifax -0.2 to 127.1; Ottawa -0.2 to 128.1; Saskatoon-Regina -0.2 to 123.8; St. John's +0.1 to 114.7†. Saint John remained unchanged at 129.1.

Wholesale Price Index, January 1960

Canada's general wholesale price index (1935-39=100) was fractionally higher in January, rising to 230.5 from 229.8 in the preceding month and 229.7 in the corresponding month last year. Increases occurred in six of the major groups; the remaining two were lower.

The upward movement recorded by the vegetable products group in the last three months of 1959 continued as the index rose 1.0 per cent from 200.2 in December to 202.2. Higher prices for potatoes, fresh fruits, livestock and poultry feeds, and rubber tires and tubes were mainly responsible. The textile products group advanced 0.4 per cent from 228.2 to 229.2 on the strength of higher prices for woollen blankets, domestic raw wool, miscellaneous fibres and worsted yarns. Price increases

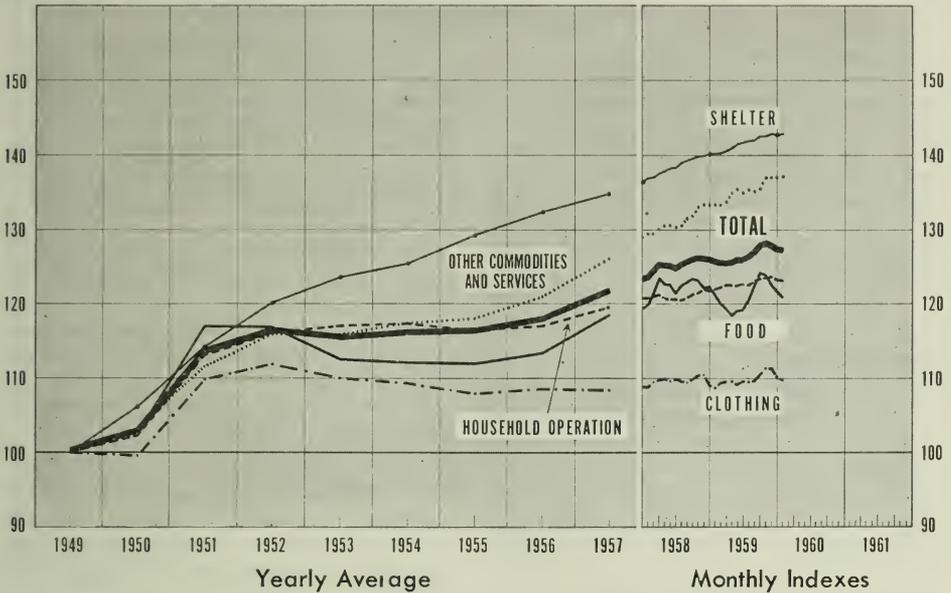

*See Table F-2 at back of book.

†On base June 1951=100.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

for prime western zinc, and tin contributed most to a 0.4-per-cent rise in the non-ferrous metals group from 175.8 to 176.5. Minor advances occurred in three groups: wood products, iron products, and non-metallic minerals.

Lower prices for eggs, leather, cured meats, and oils and fats offset higher prices for poultry and hides and skins, resulting in a 0.4-per-cent decline in the animal products group from 247.4 to 246.4. The chemical products group eased slightly from 188.1 to 187.8.

The index of Canadian farm product prices (1935-39=100) at terminal markets was almost unchanged at 212.5 at February 19; it was 213.3 for the week ending January 29.

U.S. Consumer Price Index, January 1960

The United States consumer price index (1947-49=100) dropped between mid-

December and mid-January to its lowest point since last September. It was the second successive decline.

The decline, as in the preceding month, was 0.1 per cent. The index at mid-January was 125.4; at mid-December, 125.5; and at mid-November, 125.6, a record high. The January index was 1.3 per cent higher than the January 1959 index, 123.8.

Lower prices for clothing, eggs, meat and new cars contributed to the drop.

U.K. Index of Retail Prices, December 1959

The United Kingdom index of retail prices (Jan. 17, 1956=100) rose 0.2 per cent between mid-November and mid-December 1959, from 110.0 to 110.2, the same as the index for December 1958. Highest point reached by the index was 110.4 in January 1959.

Occupational Histories of Married Women

(Continued from page 263)

However, service work sometimes has the advantage that hours of work can be arranged so as not to interfere with home responsibilities.

A high proportion of the immigrant women who were allowed to enter Canada as domestic workers had changed jobs when the first year was up, but a considerable proportion of those who came in under a

contract to work in a service job for one year remained in that kind of work.

The booklet contains an Introduction, and chapters on: The First Job, The Working Life, The Older Woman, The Service Worker, The Immigrant, Profiles of Selected Individual Work Histories, and Summary and Conclusions. Forty-one tables are interspersed with the text.

The bulletin is available from the Queen's Printer, Ottawa, for 25 cents a copy.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.
List No. 137

Accident Prevention

1. INTERNATIONAL LABOUR OFFICE. *Manual of Industrial Radiation Protection. Pt. 2. Model Code of Safety Regulations (Ionizing Radiations)*. Geneva, 1959. Pp. 54.

2. INTERNATIONAL LABOUR OFFICE. *Prevention of Accidents due to Electricity Underground in Coal Mines*. Geneva, 1959. Pp. 54.

One of the ILO Codes of Practice.

3. INTERNATIONAL LABOUR OFFICE. *Prevention of Accidents due to Fires Underground in Coal Mines*. Geneva, 1959. Pp. 48.

One of the ILO Codes of Practice.

4. U.S. BUREAU OF LABOR STANDARDS. *Safety in Industry; controlling Noise Hazards*. Washington, GPO, 1959. Pp. 6.

Business

5. SMITH, CHARLES WHITELEY. *Making Your Sales Figures talk*. 2d ed. Washington, GPO, 1959. Pp. 36.

Suggests "...a number of practical steps that a small manufacturer can take to find opportunities to increase sales or reduce marketing costs through the analysis of his own sales figures." (Emphasis is author's).

6. U.S. SMALL BUSINESS ADMINISTRATION. *Management Aids for Small Manufacturers; Annual No. 5*. Edited by Edward L. Anthony. Washington, GPO, 1959. Pp. 81.

Contents: Key Factors in starting a New Plant. Choosing the Legal Structure for Your Firm. Reducing the Risks in Product Development. Executive Incentives in Small Business. Effective Control for Better Management. Analyzing Your Cost of Marketing. Protecting Your Records against Disaster. Surveying and controlling Executive Time. More for Your Storeroom Dollar. Utilizing Older Workers in Small Industry. How the Post Office helps Small Business.

Economic Conditions

7. CANADIAN TAX FOUNDATION. *National Finances, an Analysis of the Revenues and Expenditures of the Government of Canada, 1959-60*. Toronto, 1959. Pp. 64.

8. REUTHER, WALTER PHILIP. *Policies for Economic Growth. Testimony presented on Behalf of the American Federation of Labor and Congress of Industrial Organizations to the Joint Economic Committee of Congress*. Washington, American Federation of Labor and Congress of Industrial Organizations, 1959. Pp. 56.

Testimony presented on February 9th, 1959 at the hearings of the January 1959 Economic report of the President (Pp. 538-565 of the hearings.)

9. WOLFE, J. N. *Taxation and Development in the Maritimes; a Study of Possible Routes to Economic Development for the Maritime Provinces*. Toronto, Canadian Tax Foundation, 1959. Pp. 47.

Education, Vocational

10. CANADA. DEPARTMENT OF LABOUR. CANADIAN VOCATIONAL TRAINING BRANCH. *Canadian Vocational Correspondence Courses*. 1959 ed. Ottawa, Queen's Printer, 1959. Pp. 40.

Provides information about vocational correspondence courses available from provincial government agencies.

11. GREAT BRITAIN. NATIONAL JOINT ADVISORY COUNCIL. *Training for Skill: Recruitment and Training of Young Workers in Industry; Report by a Sub-committee of the National Joint Advisory Council*. London, H.M.S.O., 1958 [i.e. 1959] Pp. 36

The Subcommittee of the National Joint Advisory Council was primarily concerned with the forthcoming increase in the number of young people leaving school and in the existing arrangements for training them such as the apprenticeship schemes.

Efficiency, Industrial

12. EUROPEAN PRODUCTIVITY AGENCY. *Simplification, Standardization, Specialization; Case Studies on Variety Reduction. Volume 2*. Project No. 184. Paris, OEEC, 1959. Pp. 97.

Contents of Volume 2: (1) Case Study on the Influence of the Assortment on the Customer-Sales Staff Relationship in a Department Store. (2) A Case Study of Variety Reduction carried out in an Italian Firm manufacturing Compressors. (3) Variety Reduction in the Paper Trade. (4) Case Study of Variety Reduction carried out by a Stove Factory. (5) Analysis of Purchasing and Selling Costs of a Dutch Wholesale Company.

13. EUROPEAN PRODUCTIVITY AGENCY. *Steel Workers and Technical Progress, a Comparative Report on Six National Studies*. EPA. Project No. 164. Paris, OEEC, 1959. Pp. 65.

Describes the results of a study on the attitudes of workers in the steel industry to technological change, carried out by six research

institutes in Belgium, France, Germany, Great Britain, Italy and the Netherlands.

14. HILRONYMUS, GEORGE HOMER. *Job Design; meeting the Manpower Challenge*. Washington, Society for Personnel Administration, c1958. Pp. 42.

Points out reasons for designing or re-designing jobs so as to utilize skills, knowledge and ability most efficiently, and describes the means, methods, and practices to be applied in such job designing.

15. PAIGE, DEBORAH. *A Comparison of National Output and Productivity of the United Kingdom and the United States*, by Deborah Paige and Gottfried Bombach. Joint Study by the Organization for European Economic Co-operation and the Department of Applied Economics, University of Cambridge. Paris, OEEC, 1959. Pp. 245.

"The object of this study is to provide statistical comparisons of the national products and productivity per worker of the United Kingdom and the United States, not only for the two economies in the aggregate, but for the various industries that contribute to total output."

Industrial Relations

16. INDUSTRIAL RELATIONS RESEARCH ASSOCIATION. *Interrelationship of Public and Private Programs in Labor Relations; Proceedings of the Spring Meeting, Boston, Massachusetts, May 1-2, 1959*. [Madison, Wisc.?] 1959. Pp. 451-505.

The Meeting discussed the following topics: the settlement of disputes between unions, public and private health and medical care programs, the administration of collective bargaining agreements, and, the regulation of union affairs.

17. SCHNEIDER, BETTY V. H. *Industrial Relations in the West Coast Maritime Industry*. Berkeley, Institute of Industrial Relations, University of California, 1958. Pp. 83.

An examination of industrial relations among merchant seamen and longshoremen on the Pacific Coast. The author discusses the strikes, inter-union friction, working conditions, and other matters during the last twenty-five years.

18. YODER, DALE. *The Outlook in Industrial Relations*. Minneapolis, Industrial Relations Center, University of Minnesota, 1959. Pp. 14.

The author forecasts that in industrial relations in the future there will be "much sharper, professionally competent and professionally conscious and conscientious management, paralleled by larger unions with a much broader occupational base and in which career leaders have dominant influences."

Labour Laws and Legislation

19. INTERNATIONAL LABOUR OFFICE. *International Labour Standards*. [Geneva, 1959?] Pp. 40.

A brief survey of I.L.O. International Labour Conventions and Recommendations which seek to bring about international minimum standards for labour and social protection.

20. U.S. BUREAU OF LABOR STANDARDS. *State "Right-to-Work" Laws*. Washington, 1959. Pp. 8.

Summarizes State "right to work" laws and gives a short history of this legislation.

Labour Organization

21. FOULKES, THOMAS A. *Woods Labour in Newfoundland; a Survey of Newfoundland's Labour and the Labour Movement*. [Fredericton? The Author, 1959] Pp. 141.

Prepared for the Faculty of Forestry. University of New Brunswick.

22. INTERNATIONAL LADIES' GARMENT WORKERS' UNION. EDUCATION DEPARTMENT. *Structure and Functioning of the ILGWU*. New York, c1958. Pp. 32.

A brief look at the set-up and activities of the local union and the international union of the International Ladies' Garment Workers' Union which represents over 450,000 men and women in 528 locals in United States and Canada.

23. UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA. QUEBEC PROVINCIAL COUNCIL. *Proceedings of 50th Annual Convention held at Hull, Quebec, July 6, 7, 8, 9, 1959*. Montreal, 1959. Pp. 98.

Labouring Classes

24. INTERNATIONAL FEDERATION OF INDUSTRIAL ORGANIZATIONS AND GENERAL WORKERS' UNION. *Report on Hours of Work and Sunday-Work in the Pulp and Paper Industry*. Amsterdam, 1959. 1 Volume (various pagings).

At head of title: Section Conference for the Papermaking Industry, Vienna, March 18, 1959.

25. MORGAN, JOHN S. *Our Unemployment Insurance System. Does it meet the Needs of Today?* Toronto, Ontario Woodsworth Memorial Foundation, 1959. Pp. 24.

A critical appraisal of the work of the Unemployment Insurance Commission and the National Employment Service.

26. U.S. BUREAU OF EMPLOYMENT SECURITY. *Employing Older Workers, a Record of Employers' Experience*. Washington, GPO, 1959. Pp. 56.

A booklet giving examples, drawn from actual experience, of successful employer policies and practices in the employment of older workers.

27. U.S. BUREAU OF LABOR STANDARDS. *Agricultural Workers and Workmen's Compensation*. June 1959. Washington, GPO, 1959. Pp. 11.

Gives information about the present status of the State workmen's compensation laws in the U.S. as they apply to farm workers.

28. U.S. BUREAU OF LABOR STATISTICS. *Health and Insurance Plans under Collective Bargaining; Accident and Sickness Benefits, Fall 1958*. Washington, GPO, 1959. Pp. 23.

An analysis of 300 plans covering almost five million workers.

29. U.S. BUREAU OF LABOR STATISTICS. *How American Buying Habits change.* Washington, GPO, 1959. Pp. 253.

A history of the improvement of working and living conditions of the American worker from the 1890s to date.

Prices

30. CANADA. ROYAL COMMISSION ON PRICE SPREADS OF FOOD PRODUCTS. *Report.* Ottawa, Queen's Printer, 1959. 2 Volumes.

The Royal Commission was appointed to: (a) inquire into the extent and the causes of the spread between the prices received by producers of food products of agricultural and fisheries origin and the prices paid by consumers therefor; (b) determine whether or not such price spreads in general or in particular cases are fair and reasonable, or are excessive, in relation to the services rendered; (c) make such recommendations as they deem appropriate if any such price spreads are found to be excessive; (d) examine the adequacy of price information currently available."

31. U.S. BUREAU OF LABOR STATISTICS. *Wholesale Prices and Price Indexes, 1958.* Washington, GPO, 1959. Pp. 310.

Social Surveys

32. NATIONAL SOCIAL WELFARE ASSEMBLY. *The Relation of National Agencies to Local Community Study Groups.* New York, 1955. Pp. 11.

33. NATIONAL SOCIAL WELFARE ASSEMBLY. *Shall We make a Survey? Questions to be considered before a Survey is undertaken.* New York, 1949. Pp. 24.

Wages and Hours

34. AUSTRALIA. COMMONWEALTH CONCILIATION AND ARBITRATION COMMISSION. *Basic Wage Judgment, 1959.* [Canberra?] 1959. 1 Volume (various pagings).

35. TRINIDAD. CENTRAL STATISTICAL OFFICE. *An Index of Wage Rates.* Port of Spain, 1957. Pp. 10.

Women—Employment

36. CANADA. WOMEN'S BUREAU. *Equal Pay for Equal Work, the Growth of the Idea in Canada.* Ottawa, Queen's Printer, 1959. Pp. 28.

An explanation of what "equal pay" is, and a survey of the provincial and Federal legislation.

37. INDIA. STUDY GROUP ON ASSESSMENT OF REQUIREMENTS OF WOMEN WORKERS. *Report.* [n.p., New Delhi? 1958?] 1 Volume.

Miscellaneous

38. CANADA. BUREAU OF STATISTICS. *Illness in the Civil Service; Statistical Report for Year ended December 31, 1958.* Ottawa, Queen's Printer, 1960. Pp. 56.

39. NORTH ATLANTIC TREATY ORGANIZATION. INFORMATION SERVICE. *The North Atlantic Treaty Organization.* 7th ed. Paris, 1959. Pp. 93.

Contents: Why the Treaty was signed. What the Treaty says. The Development of the Organization. The Present Structure of the Organization. NATO's Activities and Achievements. Prospects for the Future.

40. ONTARIO. COMMITTEE ON THE ORGANIZATION OF GOVERNMENT IN ONTARIO. *Report.* [Toronto, Provincial Secretary of Ontario, 1959] Pp. 467.

W. L. Gordon, chairman.

The Committee sets forth and comments on four principles: 1. A minister of the Crown has full responsibility for the policies and operations of each department and for the policies of each of the various boards and commissions. 2. The Legislature should vote funds for the various provincial agencies and it should be informed about the expenditure of the funds voted. 3. "Related functions of government should be grouped wherever possible to limit the number of distinct or separate entities." 4. It should be made easier to appeal from the decisions of ministers, officials, boards, and commissions. "These four general principles... constitute the basic standards to which, in our view, the structure and operation of the government machinery in this province should conform."

41. SHARTLE, CARROLL LEONARD. *Occupational Information, Its Development and Application.* 3d ed. Englewood Cliffs, N.J., Prentice-Hall, 1959. Pp. 384.

Partial Contents: Understanding Occupational Information through Job Analysis. Surveys and Their Uses. Occupational Classifications and Their Uses. Published Information: its Evaluation and Application. Entry Fields of Work. Occupational Requirements. Job Requirements and Human Disabilities.

42. U.S. BUREAU OF LABOR STATISTICS. *Nonfarm Housing Starts, 1889-1958.* Washington, GPO, 1959. Pp. 37.

Includes information about the type of structure, private and public ownership, location of the housing, and construction cost.

43. U.S. CIVIL AERONAUTICS BOARD. *Order of Civil Aeronautics Board approving Mutual-Aid Pact of Six Air Lines (Official Text).* Washington, Bureau of National Affairs, inc., 1959. Pp. 19.

Concerns an agreement of six large American airlines to aid one another in the event of a strike affecting one of the parties.

44. U.S. DEPARTMENT OF LABOR. *Background Statistics bearing on the Steel Dispute.* Washington, 1959. Pp. 19.

Contains information about wages, productivity, prices and profits in the steel industry in the U.S.

45. U.S. OFFICE OF EDUCATION. DIVISION OF VOCATIONAL EDUCATION. *The Role of Teacher Education in Distributive Education.* Washington, GPO, 1959. Pp. 9.

Distributive education is the teaching of the functions of distribution—selling, buying, the movement of merchandise, storage, standards, risk, and financing. This pamphlet deals with the preparation of instructors to teach college or high school courses in distributive education.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹ Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at November, 1959 employers in the principal non-agricultural industries reported a total employment of 2,806,088. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners in the reporting firms.

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

*Durable manufactured goods industries.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 542, May 1959 issue.

Here's **VALUE**

A 50% Reduction under This Special GROUP SUBSCRIPTION OFFER

A 12 MONTHS' SUBSCRIPTION

TO THE

LABOUR GAZETTE

**For
Only**

\$1.00

**Per
Subscription**

FOR GROUPS OF FIVE OR MORE SUBSCRIBERS

Cut the regular price in half by ordering five or more subscriptions at the same time. This offer is designed so that a union local can subscribe for its members, a company for its foremen and personnel officers, a university class for all students in labour relations, labour law, or labour economics.

A list of names and addresses of subscribers must accompany each order

(A form is provided overleaf)

Send remittance by cheque or postal money order, payable to the Receiver General of Canada, to Circulation Manager, LABOUR GAZETTE, Department of Labour, Ottawa.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Current Manpower Situation

Economic activity reached a seasonal low point in March and began to increase slowly, without much immediate effect on total employment. An estimated 5,668,000 persons had jobs in March, only slightly more than the month before. A late Easter and unfavourable weather combined to delay the seasonal upturn in employment in many parts of the country.

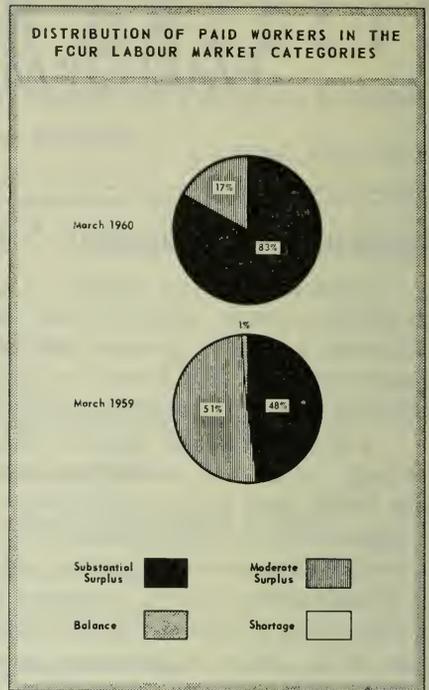

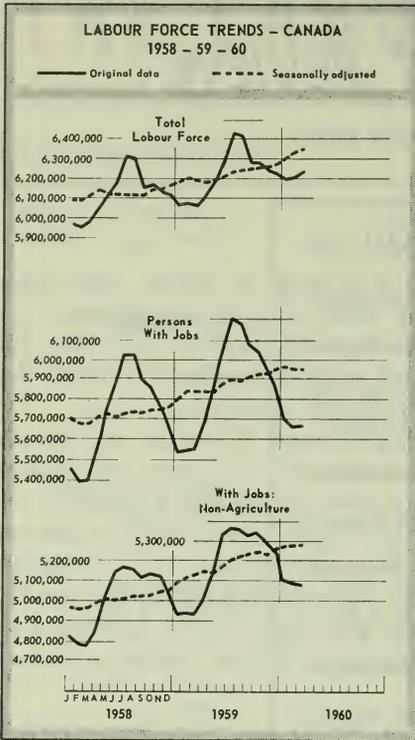

Forestry normally shows a sharp decline between February and March as pulp cutting and hauling operations are completed. This year the decline was larger than in the two previous winters; this was mainly a reflection of a higher level of employment in the industry. Construction, which registered a greater-than-seasonal decline earlier in the winter owing to a reduction in housebuilding activity, registered a further slight decline during the month, a time when it normally shows little change. This drop can be attributed in part to the effects of inclement weather, although a further decline in housebuilding was a contributing factor.

The most notable employment gains in March were in manufacturing, retail trade and agriculture. Seasonal factors appear to have been mainly responsible for these gains.

Employment in March was estimated to be 116,000 higher than the year before. Manufacturing and other goods producing industries generally showed little or no change over the year. Most of the gain was in the service and distributive industries, and women accounted for more than four fifths of the over-all increase. Women workers, being more heavily concentrated in these industries than elsewhere, fared better than men in obtaining jobs. Almost three quarters of the employment gain over last year was in Ontario. Other regions have made relatively small employment gains since last year.

The labour force increased at a somewhat greater rate than employment during the month, resulting in a further increase in unemployment. The number of persons without jobs and seeking work increased by an estimated 11,000 to 566,000 between February and March. Four of the five regions in Canada shared in this relatively small increase in the number of job seekers; the Pacific region registered a slight decline. The March unemployment figure was 9.1 per cent of the labour force compared with 8.6 per cent in March 1959. In addition to the job seekers, an estimated 42,000 were on temporary layoff, about 13,000 more than a year earlier.

Of the 566,000 job seekers in March, 511,000 were men and 55,000 were women. More than one quarter of the total were labourers. Construction and the primary industries contributed most to the unemployment total, accounting for nearly half of the job seekers. Persons who had never worked represented a very small part of the total.

In March, 334,000 or 59 per cent of the job seekers were looking for work for three months or less, compared with 288,000 or 55 per cent last year. Those seeking work for four to six months totalled 181,000 compared with 168,000 the year before (32 per cent in both years). The number of persons without jobs and seeking work for more than six months was 51,000 (9 per cent of the total) against 69,000 last year (13 per cent of the total).

Employment and Output, Canada and United States, 1957-59

An examination of the main economic indicators over the past three years demonstrates clearly that the swing in business activity was not as great in Canada as in the United States. In the United States the Gross National Product for the year as a whole fell off slightly between 1957 and 1958 but showed a strong increase in 1959; the net rise over the two years was a little over 8 per cent. In Canada, annual output actually increased by about 2.3 per cent between 1957 and 1958 and by almost three times this rate in 1959, resulting in a two-year gain of 9 per cent. Price changes over this period were not appreciably different between the two countries so that a comparison in real terms would give about the same results.

Output in both countries slackened off in the middle of 1957 (after allowing for seasonal change) and declined through the first quarter of 1958. After a fall of 2 per cent in Canada and 3 per cent in the United States, activity began to rise again. The recovery was quite strong in the United States until mid-1959, when the steel strike caused a temporary decline. In Canada, the

rise was not as rapid in the early recovery phase but, on the other hand, production in this country was not disrupted by industrial disputes to the same extent.

Substantial declines in outlays on non-residential construction and machinery and equipment, and a heavy liquidation of inventories were the principal developments contributing to the decline in 1958. In the United States these components decreased to an extent that outweighed increases elsewhere in the economy. In Canada, final demand was strengthened by vigorous government support, in the housing field particularly, resulting in a 25-per-cent increase in expenditures on residential construction in 1958. Consumer expenditures in both countries continued to rise during the recession, at a somewhat higher rate in Canada than in the United States.

During 1959, almost all demand components contributed to the recovery. One negative influence was non-residential construction, which continued to decline in Canada and did not make any significant gain in the United States. The role of residential construction was the reverse of the previous year. In the United States, expenditures on housing were an important contribution to the expansion of output. In Canada, there was an immediate drop in the number of housing units started when direct loans from government sources came to a halt at the end of 1958. New housing starts continued to fall throughout the year except for a brief upswing during the last quarter when direct lending by CMHC was again in effect.

One of the important stimulants in both countries in 1959 was the rapid rebuilding of inventories. The turnaround from liquidation to accumulation of non-farm business inventories resulted in additional demands amounting to more than \$600 million in Canada and close to \$9 billion in the United States (close to 2 per cent of GNP in both countries).

Personal expenditures on consumer goods and services rose by 6.3 per cent in the United States between 1958 and 1959 (about double the 1957-1958 rate); in Canada the rise was 5.8 per cent, slightly more than the previous year. Outlays on new machinery and equipment rose by 9 per cent in Canada and 14 per cent in the United States.

An increase in exports was another important influence on the level of activity. This is particularly noticeable in Canada because of the greater relative importance of exports in this country. Rising production in both the United States and Europe had a favourable effect on our shipments of mineral products and forest products; our export shipments rose 5 per cent for the year as a whole.

Employment and Unemployment

The labour force in Canada has been increasing at a consistently higher rate than in the United States. The annual growth rate in the United States has been less than 1 per cent in the past three years. In Canada, the increase from 1956 to 1957 was 4 per cent, a postwar record. Although this rate dropped to 2.1 per cent in 1958 and 1.6 per cent in 1959, it was still considerably greater than in the United States.

Employment dropped more sharply in the United States during 1958 than it did in Canada and recovered less rapidly in 1959. In both countries average employment in 1959 was back to the 1957 level. In Canada, however, the net gain over the two years was 2.3 per cent, compared with only 0.9 per cent in the United States.

Average unemployment rates in the two countries were almost the same, rising from just over 4 per cent of the labour force in 1957 to almost 7 per cent in 1958 and back to 5½ per cent in 1959. This is a notable point. Over the two-year period, employment in Canada increased 2½ times as fast as it did in the United States. Nevertheless, because our labour force also increased at more than twice the United States rate, unemployment in the two countries was almost identical, when average rates for the year as a whole are used. This, of course, was not necessarily true in any particular month, because the seasonal swing in unemployment is much greater in Canada than it is in the United States.

It is notable that the increasing demand for services was the most important factor in raising the employment level in both countries and once again the Canadian expansion in these industries was greater than that of the United States. In trade, for example, employment in Canada increased by 3.5 per cent between 1958 and 1959 and in the latter year was 5 per cent higher than in 1957. In the United States the increase in this industry was only 2.2 per cent between 1958 and 1959 and only 0.8 per cent over the two-year period.

The effects of the recession were most noticeable in goods producing industries and, in general, the employment dip was more pronounced in the United States than in this country. A decline in manufacturing was particularly sharp in the United States and, although there was a good recovery in 1959, the annual average of employment was still almost 4 per cent below that in 1957. (This gap would be smaller, however, if allowances were made for the steelworkers' strike.) In Canada, the labour force estimates show a much smaller drop, and the recovery in 1959 brought manufacturing employment back to the 1957 level. In construction, the patterns over this two-year period were somewhat the same as in manufacturing.

Employment Situation in Local Areas

ATLANTIC

Employment in the Atlantic region declined slightly more than usual between February and March. The number of persons with jobs fell by 13,000 to 449,-000. Farm employment showed a slight rise; the decline was entirely in non-farm employment, where seasonal shifts occurred in forestry, road transportation and construction. Strike activity also contributed to a slackening in construction; a labour dispute in the Halifax area resulted in work stoppages on several large building projects. Heavy snowstorms during the month were indirectly responsible for production cutbacks in coal mining and in certain parts of manufacturing. Two collieries in the Sydney area operated on a reduced scale owing to a

shortage of rail cars, which was attributed to the storm. Sawmilling activity was curtailed by a shortage of logs due to poor hauling conditions.

The current employment estimate represents an over-the-year gain of 8,000. Most of the net increase was in non-manufacturing industries, notably in trade and services. Manufacturing has made a relatively slow recovery during the past year owing to weaknesses in some of the heavy industries. The railway rolling stock industry, which provides jobs for 1,000 to 1,200 workers when operating at capacity, employed only about 100 workers in March. Iron and steel products plants have shown some employment strengthening during the past few months, but the gains have been small compared with those that have taken place in Quebec and Ontario. Total employment in the iron and steel industry in Nova Scotia was still well below the pre-recession peak.

The level of unemployment in the region changed very little during March although it was slightly higher than a year ago. The classification of the 21 areas in the region at the end of March was unchanged from the previous month and from the previous year: two areas were in moderate surplus, 19 in substantial surplus.

Local Area Developments

Halifax (metropolitan) remained in Group 2. Unemployment reached a seasonal peak early in the month and then declined. The construction industry regained strength although the expansion was checked by strike activity, which brought about work stoppages on several of the larger projects. Fish processing plants were busier as a result of increased landings. Elsewhere in manufacturing, production and employment changed very little during the month. Market

LABOUR MARKET CONDITIONS

Labour Market Areas	Labour Surplus				Approximate Balance	
	1		2		3	
	March 1960	March 1959	March 1960	March 1959	March 1960	March 1959
Metropolitan.....	10	7	2	5	—	—
Major Industrial	18	17	8	8	—	1
Major Agricultural	11	7	3	7	—	—
Minor.....	45	41	12	16	1	1
Total.....	84	72	25	36	1	2

conditions continued to be generally stronger than last year although demands for certain commodities have weakened recently. Domestic sales of lumber were reported to have dropped off but the export market remained fairly brisk. Shipments of gypsum to the United States declined during February and March, reflecting the drop in demand on the American market for certain raw materials.

St. John's (metropolitan) remained in Group 1. Apart from seasonal layoffs in outdoor activities, the employment situation showed little change from a month earlier. Job opportunities were less plentiful than a year ago, mainly because of a sharp reduction in the volume of construction undertaken this winter.

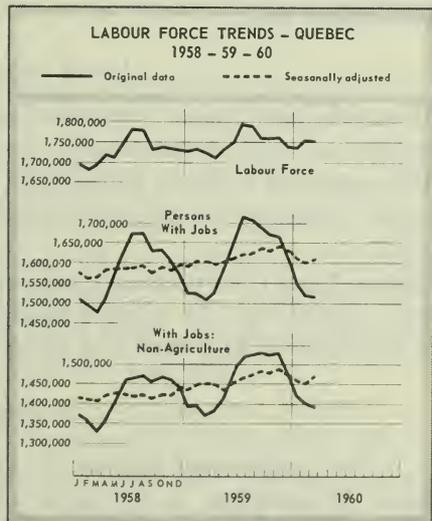

Saint John (major industrial) remained in Group 2. Construction and ship-building activity increased and port activity was well maintained during March. Total industrial employment remained higher than last year; sizeable gains occurred in manufacturing and construction.

QUEBEC

Employment in the Quebec region fell off slightly between February and March, although the decline in non-farm employment was partly offset by hirings in agriculture. The estimated total with jobs, 1,517,000, was 7,000 greater than the year before. Most of the increase over the year was in mining, trade, finance and service industries; there were offsetting decreases in agriculture, construction and transportation.

Employment contractions in forestry, construction and transportation during March were mainly of a seasonal nature. In forestry, logging operations during the first two and a half months of the year were on a higher level than in the same period last year; during the second

half of March they dropped sharply because of unfavourable weather. Construction employment in the first quarter has been slightly lower than a year

ago. This was mainly the result of a decline in residential building. In the January-February period this year, the number of houses under construction was some 12 per cent lower than in the comparable period of 1959. Other types of construction showed continuing strength.

Mining employment had been about 4 per cent higher at the end of January than a year earlier, and during March employment rose in non-metal mining. Spring production was underway in asbestos mines and a number of workers were recalled.

Manufacturing employment seems to have registered little improvement in recent months, in contrast to the sharp expansion that occurred in the same period last year. In the clothing industry, for example, employment at the end of January was some 2 per cent lower than a year earlier, and reports indicate that this gap increased during February and March. In the knit goods sector, marketing difficulties caused several hosiery plants to close down. In the leather industry, the seasonal upswing this year was not as strong as last year. On the other hand, the employment total in primary textile plants (adjusted for the strike at Magog) was higher in January than a year earlier, and continued strength was apparent during February and March. Employment was substantially higher than last year in Quebec shipyards. Since the beginning of the year, production has increased more than seasonally in paper products plants, particularly in pulp and paper mills.

Unemployment continued to increase during the month and was higher than a year before. In about one third of the local labour market areas in the region, however, there was a considerable improvement over the year. In the Lac St. Jean and Quebec-North Shore areas larger numbers were employed in logging than last year. The most marked improvement occurred in Sorel, where activities in the shipbuilding and chemical industries were at a much higher level this year than a year ago. A marked improvement in industrial employment was also reported from the Farnham-Granby and Shawinigan areas.

Local Area Developments

Montreal (metropolitan) remained in Group 1. Unemployment showed a slight increase as layoffs in construction more than offset new hirings in manufacturing. The expansion in trade, finance and service industries has continued; the year-to-year increase in trade and services amounted to 2 and 4 per cent respectively.

Quebec-Levis (metropolitan) remained in Group 1. Layoffs continued in logging and construction. In manufacturing, employment remained at a high level in shipbuilding, and there was some strengthening in primary textiles.

ONTARIO

The employment increase in Ontario between February and March was small. Nevertheless, it was large enough to maintain the rising employment trend that started last September. In the intervening six months the seasonally adjusted employment estimate has increased by about 3 per cent, and the current employment level is about 4 per cent higher than a year ago.

Developments in manufacturing during March were mixed. Seasonal hirings were reported in textile and clothing plants; in motor vehicle manufacturing and primary steel and associated industries, operations were maintained at high levels with some reduction in overtime work; layoffs and short time were reported in a number of plants manufacturing building materials and home furnishings. Large surpluses of construction labour were still prevalent in most areas, the result of continued slackness in housing and unseasonal cold weather.

In Northern Ontario a large pulp-cutting program neared completion, releasing large numbers of woodworkers. At the same time heavy snow prevented

any substantial upturn in spring construction work, although a large volume of work was on hand. The heavy steel plants in Sault Ste. Marie were operating at close to capacity and mining operations generally were at higher levels than last year. Some 200 to 300 miners were laid off at Elliot Lake but a considerable number of them obtained employment in other mining areas.

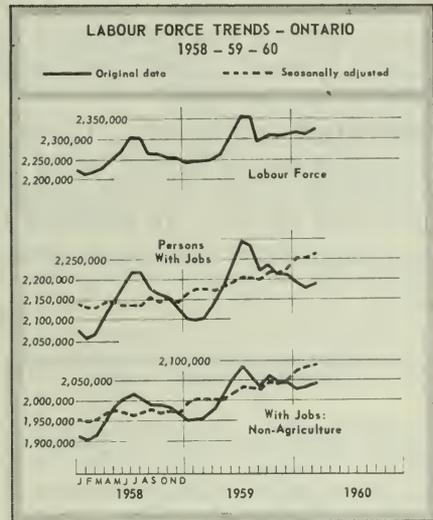

The size of local labour surpluses in the region remained almost unchanged between February and March. The classification of 34 areas in the region at the end of the month was as follows (last year's figures in brackets): in substantial surplus, 21 (17); in moderate surplus, 13 (16); in balance, 0 (1).

Local Area Developments

Labour market classification of all areas in the region remained unchanged from last month.

Hamilton (metropolitan) Group 2. In January industrial employment in the area was about 5 per cent higher than last year and reports suggest that this margin was maintained and perhaps increased in the following two months. Manufacturing was up an equal amount, a sharp increase in steel manufacturing outweighing declines in textiles, clothing and heavy electrical apparatus. During March adverse weather held up construction but the settlement of the strike and the large backlog of industrial expansion projects led to expectations of a sharp upturn in April. In contrast to most other centres in the region, residential construction was somewhat higher than last year.

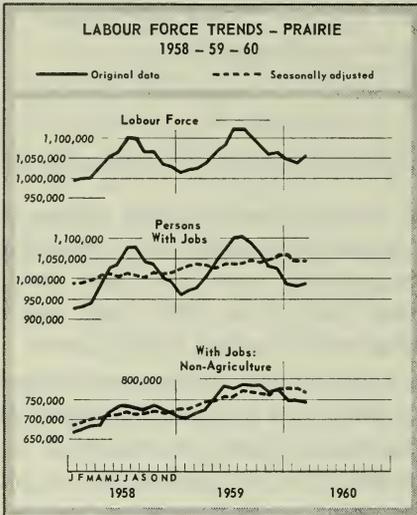

Toronto (metropolitan) Group 1. Manufacturing employment remained at a lower level than last year, almost entirely as a result of the layoffs early last year in aircraft manufacturing. Employment in trade and services continued to show substantial year-to-year increases. Adverse weather during March hampered construction and other outside activity; this, together with some layoffs in manufacturing, caused a moderate rise in unemployment.

Windsor (metropolitan) Group 1. The average level of operation in the automobile industry was considerably higher than last year. Short-term layoffs in March, however, caused some increase in unemployment, making it roughly equal to that last year.

Ottawa-Hull (metropolitan) Group 1. Layoffs in construction this winter have resulted in unusually large labour surpluses. Adverse weather has been partly responsible for the inactivity in this industry, though housebuilding was also down over the year. All industries except construction have been operating at moderately higher employment levels than last year.

PRAIRIE

The first employment increase since the beginning of the seasonal decline last September was registered in the Prairie region between February and March. A rise of 5,000 brought the estimate of persons with jobs to 991,000, which was 8,000 higher than in March 1959. The labour force expanded somewhat more than usual as spring job opportunities became available on farms and in other seasonal industries. Farm workers were being hired in preparation for general spring work and, additionally, to complete the harvesting of crops interrupted by the early snow last fall. The large increase in farm employment offset some decline from last month in non-agricultural industries. The number working on

farms, however, remained 21,000 below the year-earlier total.

Farm income exhibited some mixed trends. Wheat exports to March 23 from the start of the current crop year at the beginning of August were 2.2 per cent ahead of the same period of last year. Cattle marketings in the first two months of 1960 were 20 per cent above the same period of 1959 but hog and calf marketings were down 11 per cent and 6 per cent respectively. The decline in hog sales was a reversal of heavy marketing at the beginning of the year.

Severe weather in the first two weeks of March accounted for most of the decline in non-farm employment, curtailing work at large construction projects such as the South Saskatchewan River Dam. Housing units under construction in urban centres at the beginning of March declined to 20 per cent below the month-earlier level in Saskatchewan and Alberta, and were 10 per cent lower in Manitoba. Seasonal layoffs of loggers continued, and the beginning of highway restrictions hindered oil drilling and reduced the number of men working in the trucking industry.

Unemployment increased during the month in contrast to the decline that occurred in the same month last year, and total unemployment at the end of the month was somewhat higher than a year earlier. One labour market area was reclassified to a category of greater labour surplus; registrations for employment increased in almost all of the other 19 areas in the region. At the end of March the classification was as follows (last year's figures in brackets): in substantial surplus, 15 (11); in moderate surplus, 5 (9).

Local Area Developments

Calgary, Edmonton, and Winnipeg (metropolitan) remained in Group 1. Employment conditions were generally static during the month in most industries as the usual low point in employment was reached. The number of registrations at the National Employment Service offices in the three centres went up 3 per cent from February to March, in contrast to a rise of 7 per cent from January to February. Near the end of March total registrations were 15 per cent above the year-earlier figure.

Fort William-Port Arthur (major industrial) remained in Group 1. Pulp cutting went down seasonally and workers were released until the spring river drives get under way. Grain elevators recalled some workers as the movement of grain accelerated. Mines in the area maintained high employment levels, and there was some demand for iron and base metal miners.

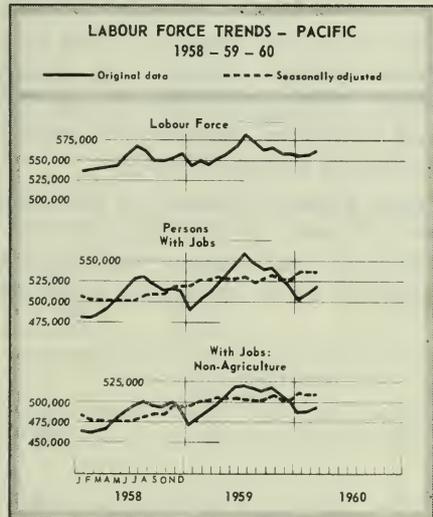

Red Deer (major agricultural) was reclassified from Group 2 to Group 1. The start of road restrictions caused layoffs in oil drilling, and the usual spring layoffs in logging and lumbering increased unemployment in the area during March.

PACIFIC

Between February and March employment in the Pacific region moved up for the second successive month. An increase of 6,000 brought the estimate of persons with jobs to 519,000, higher than a year earlier by 8,000. Both agriculture and non-farm industries participated in the change. Farmers were hiring tractor operators and general farm help in the warmer localities in preparation for spring work. In the central and northern interior, ranchers were taking on hands to move cattle herds to summer pasture. Fruit farms hired workers late in the month for hoeing, spraying, raspberry cane trimming, tree planting, and similar work.

A large part of the non-farm increase in employment occurred in construction. Housing construction, however, continued to display weakness; at the beginning of March the number of units under construction in larger centres was down 4 per cent from a month earlier and 36 per cent from a year earlier. (Starts in the same centres were down more than 40 per cent in the first two months of 1960 from the same period of 1959.) Other building and general engineering registered a strong seasonal pickup, more than offsetting the employment loss in housing.

Steady employment levels continued in wood products manufacturing as exports for all of Canada (of which a considerable share originates in British Columbia) in the initial two months of 1960 rose from the same period of 1959 by 19 per cent for newsprint paper, 27 per cent for lumber and timber, and 6 per cent for wood pulp. Logging employment remained buoyant although in

some interior areas warm weather caused thawing and road restrictions, bringing about work stoppages. Metal manufacturing establishments, especially those providing equipment for loggers and lumber mills, continued to benefit from the strong levels of activity in forestry and took on additional help during the month.

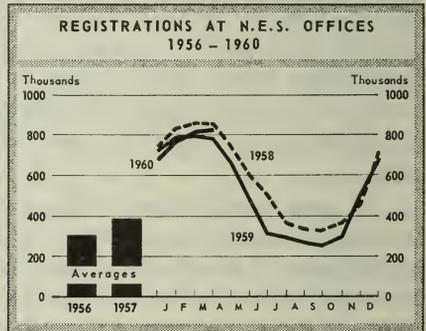

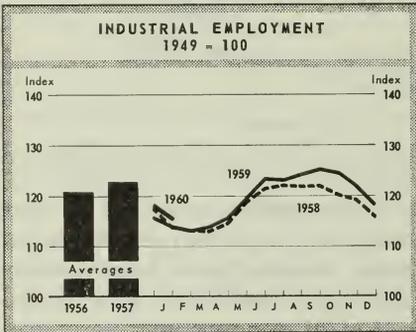

Unemployment decreased moderately during the month, but remained higher than a year earlier. Two of the 11 labour market areas in the region were reclassified, one change denoting an increase and the other a decrease in unemployment. At the end of March the classification, unchanged from the preceding month, was as follows (last year's figures in brackets): in substantial surplus, 6 (5); in moderate surplus, 4 (5); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) remained in Group 1. Hirings began to increase seasonally, but the resulting decline in unemployment was not sufficiently large to warrant reclassification. The strongest demands were for male workers in forestry, construction, and metal working occupations. These employment gains were partly offset by some shipyard layoffs. The construction of a coal dock was completed, facilitating the movement of coal exports to Japan. A heavy movement of lumber, fertilizer, metal and grain kept waterfront longshore crews busy.

Prince George (minor) was reclassified from Group 2 to Group 1 as the spring break-up, particularly around Quesnel, brought about the imposition of load restrictions on roads and caused the suspension of logging and sawmilling operations in many districts.

Prince Rupert (minor) was reclassified from Group 1 to Group 2. The departure of some halibut boats for the Bering Sea gave work to a number of fishermen, and forestry activity remained strong although only a short time remained before the spring break-up.

CORRECTION

The curve representing 1960 figures on the chart "Registrations at N.E.S. Offices" that appeared on page 228 of the March issue was incorrectly plotted. It indicated a January total of 817,000, which in fact was the total for March; the January total was 680,000. The chart with the curve correctly plotted is published above.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

More than 90 major collective agreements covering approximately 233,000 workers were in various stages of negotiations during March. In the negotiations between the non-operating unions and the railways, the establishment of a conciliation board was completed when the Minister of Labour appointed Mr. Justice J. V. Milvain as Chairman of the Board composed of David Lewis, the union nominee, and Philip F. Vineberg, the railways' nominee. A further 13 major agreements were concluded to provide wage increases for more than 16,000 workers. Early in April the Toronto Newspaper Guild ended a series of last-minute talks with the Toronto Star by signing an agreement that averted a threatened strike. Collective bargaining was about to begin for the renewal of approximately 50 major agreements that expire in the three-month period from April to June of this year. The paper mill unions, who will be involved in more than half of these renewal negotiations, convened a series of regional conferences to formulate co-ordinated bargaining policies. According to press reports, the Ontario-Manitoba Council was expected to ask for wage increases of as much as 20 per cent, and the Quebec and Eastern Canada Council has indicated that it will ask the companies for a 13-per-cent wage increase and make other demands as well.

A number of important agreements affecting iron ore and uranium mines in Ontario, Quebec, and Labrador were signed by the **United Steelworkers of America**. The settlements with Bethlehem Steel Company, Marmora, Ont.; Lowphos Iron Ore, Capreol, Ont.; and the Iron Ore Company of Canada, Schefferville, Carroll Lake and Seven Islands, Que., increased the miners' wages to among the highest in the industry. The largest of these agreements was with the **Iron Ore Company of Canada**, where 2,000 employees received increases in wages and fringe benefits averaging 38 cents an hour over the life of the three-year agreement. The first increase of 9 cents an hour was made retroactive to October 23, 1959, a second hourly increase of the same amount will become effective on October 23, 1960 and another increase of 9 cents an hour on October 23, 1961. In addition to these increases to the base rates, the differences between job classes will be widened from 6.0 to 6.9 per cent over the three-year period. The company agreed to contribute an additional 2 cents an hour over and above their present contribution to the group insurance plan. Major improvements in the contract language were negotiated with particular reference to check-off, seniority, probationary employees, safety on the job and apprenticeship training. Written into the agreement was the principle that seniority will be the governing factor in cases of layoff due to curtailment of operations and recall after layoff.

The settlements were patterned on the one that ended the recent steel strike in the United States, but in Canada the emphasis was on wages rather than on fringe benefits. The Canadian rate, therefore, will be higher than in the United States, but the U.S. miners have a slightly higher total pay because of the cost-of-living bonus. An indirect result of the new wage scale may be some easing of pressures from areas in U.S. that were calling for tariffs against Canadian iron ore because it came from what was termed a "low-wage country".

The **Steelworkers** also concluded a number of major agreements in the uranium mines during February and March. Negotiations were conducted in an atmosphere of uncertainty arising out of a decision by the U.S. Atomic Energy Commission not to exercise its option to purchase future stocks of Canadian uranium oxide. The threat of reduced markets and future production cutbacks impeded negotiations; most agreements were finally settled with the aid of conciliation services. The union signed new agreements with **Algom Uranium Mines, Stanrock Uranium Mines, Pronto Uranium Mines, Northspan Uranium Mines, and Milliken Lake Uranium Mines**, all in the Elliot Lake area. The most interesting provision in the agreements was for a severance pay allowance: a \$6 a month continuity bonus to a maximum of \$400 for each employee permanently displaced by the cutbacks in the industry.

During the month the **Rubber Workers** signed two major agreements. One was with the **Firestone Tire and Rubber Company**, Hamilton, Ont., where the majority of employees voted to accept a one-year agreement that provided a package hourly increase averaging 9½ cents retroactive to January 26, 1960. Piece workers are to receive 6 cents an hour increase and the hourly rated employees will get 9 cents an hour. The qualifying period for three weeks annual vacation with pay was reduced from 11 years of continuous employment with the firm to 10 years. The other agreement was with the **Goodyear Tire and Rubber Company**, in which 1,700 employees received wage increases ranging from 7½ cents an hour for piece workers to 9½ cents an hour for hourly rated employees. Retroactive pay of \$8 was provided for all employees who were on the payroll continuously from February 20, 1960. The shift bonus of 7 to 10 cents per hour provided in the previous agreement was raised to 8 to 12 cents an hour. Supplementing the monetary gains, the new contract also provided for an extension of the supplementary unemployment benefit from 26 weeks to 39 weeks. In addition, the same union should shortly be engaged in renegotiating current contracts with **B. F. Goodrich of Canada Limited** and with the **Dominion Rubber Company's** footwear and tire divisions.

Duration of Negotiations in 1959

The accompanying table is a review of the duration of negotiations which preceded the signing of all major collective agreements reached during 1959. The review is limited to those agreements in which the bargaining unit consisted of 500 or more workers, exclusive of those in the construction industry and those settlements in which wages were based on piece rates only.

NEGOTIATIONS PRECEDING SETTLEMENTS REACHED DURING THE YEAR 1959

Collective agreements covering 500 or more workers concluded between January 1, and December 31, 1959, exclusive of agreements in the construction industry.

Stage at Which Settled	Duration of Negotiations in Months

Negotiations that preceded the settlement of most of the collective agreements included in the table were conducted for periods ranging from one to six months; more than half of the settlements were concluded after bargaining three months or less. In 25 per cent of the agreements, negotiations were conducted for periods ranging from 7 to 13 or more months before settlement was reached. As negotiations extended over longer periods, the proportion of agreements settled by direct bargaining diminished while the proportion of those settled after one or more stages of conciliation increased.

Strikes and lockouts often tend to attract more attention than settlements made without recourse to strike action, but actually only a relatively small proportion of labour-management negotiations result in work stoppages. Of the 224 major agreements, each covering 500 or more workers, signed during 1959, fewer than 5 per cent were concluded while a work stoppage was in progress. The largest of these was in the B.C. lumber industry, where more than 27,000 workers were involved, accounting for more than half of all the workers covered by major agreements settled after work stoppage. Close to 60 per cent of the 1959 agreements were concluded by direct company-union negotiations. Of the 83 agreements signed after conciliation proceedings, nearly half, covering approximately 50,000 workers, were reached through the aid of a conciliation officer; conciliation boards successfully brought the parties together in 20 cases covering approximately 16,000 workers; and in 23 negotiations further discussions between the parties were required before agreements for more than 51,000 workers were signed.

Collective Bargaining Scene

Agreements covering 500 or more workers,
excluding those in the construction industry

(no cases during March)

Part III—Settlements Reached During March 1960

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate).

BICROFT URANIUM MINES, BANCROFT, ONT.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 500 empl.—4¢-an-hr. increase eff. Feb. 1, 1960 and a further 5¢-an-hr. increase eff. Mar. 16, 1961; voluntary checkoff; welfare costs to be shared equally by the employer and employees.

B.A. OIL, CLARKSON, ONT.—OIL WKR. (AFL-CIO/CLC): 1-yr. agreement covering 500 empl.—a 4% general increase for all empl.

CDN. CANNERS, VANCOUVER, PENTICTON, KELOWNA, ASHCROFT, B.C.—PACKINGHOUSE WKR. (AFL-CIO/CLC): 2-yr. agreement covering 800 empl.—10¢-an-hr. increase during 1960 and an additional 5¢-an-hr. increase during 1961; a 48-hr. work week during the 4½-mo. canning season with a 40-hr. work week during balance of the year.

CITY OF MONTREAL, QUE.—PUBLIC SERVICE EMBL. (CLC): 1-yr. agreement covering 5,000 empl.—15¢-an-hr. increase retroactive to Dec. 1, 1959; 4 wks. vacation after 25 yrs. service (formerly no provision for 4 wks. vacation); provision for \$2,000 group plan life insurance policy.

CONSOLIDATED PAPER, LES ESCOUMINS, QUE.—PULP AND PAPER WKR. FEDERATION (CCCL): 2-yr. agreement covering 500 empl.—8¢-an-hr. retroactive pay for all wkr. who worked at roadmaking; wood cutters to receive an increase of 9¢ per cord during the life of the agreement.

DAIRIES (VARIOUS), VANCOUVER, B.C.—TEAMSTERS (CLC): 2-yr. agreement covering 850 empl.—guaranteed minimum salary established for driver salesmen at \$369.75 per mo. during the first year and \$386.06 per mo. minimum during the second year; dairy help to receive an increase of \$21.70 per mo. in the first year and an additional \$10.87 per mo. during the second year; 3 wks. vacation after 8 yrs. and 4 wks. after 20 yrs. of service (formerly 3 wks. after 10 yrs. and no provision for 4 wks. vacation).

DOMINION GLASS, HAMILTON, ONT.—GLASS AND CERAMIC WKR. (AFL-CIO/CLC): 2-yr. agreement covering 800 empl.—9¢-an-hr. increase retroactive to Jan. 15, 1960 plus an additional 4¢ an hr. eff. Jan. 15, 1961; 4 wks. vacation after 25 yrs. service (formerly no provision for 4 wks. vacation).

FIRESTONE TIRE, HAMILTON, ONT.—RUBBER WKR. (AFL-CIO/CLC): 1-yr. agreement covering 1,000 empl.—6¢-an-hr. increase for piece wkr.; 9¢-an-hr. increase for hourly rated empl.; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 11 yrs.).

GOODYEAR TIRE, NEW TORONTO, ONT.—RUBBER WKR. (AFL-CIO/CLC): 1-yr. agreement covering 1,700 empl.—general increase of 7¢ an hr. for all empl.; changes in shift premiums; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 11 yrs.); supplementary unemployment benefit increased from 26 wks. to 39 wks.

IRON ORE OF CAN., SCHEFFERVILLE, QUE.—STEELWORKERS (AFL-CIO/CLC): 3-yr. agreement covering 2,000 empl.—9¢ an hr. retroactive to Oct. 23, 1959, an additional 9¢ an hr. eff. Oct. 23, 1960 and another 9¢-an-hr. increase eff. Oct. 23, 1961; during contract period wage differential in the CWS will increase from 6.0 to 6.9%.

MILLIKEN LAKE URANIUM MINES, ELLIOT LAKE, ONT.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 500 empl.—3¢-an-hr. increase retroactive to Jan. 1, 1960 plus an additional 4¢ an hr. eff. Jan. 1, 1961; 1 additional paid holiday increasing the total to 7 per yr.; work on holidays to be paid at time and one half plus regular day's pay; continuity bonus of \$6 per mo. to a maximum of \$400 payable to empl. permanently laid off.

NORTHSPAN URANIUM MINES, ELLIOT LAKE, ONT.—CLC-CHARTERED LOCAL: 2-yr. agreement covering 1,600 empl.—3¢-an-hr. increase retroactive to Jan. 1, 1960; an additional 4¢-an-hr. increase eff. Jan. 1, 1961; 1 additional paid holiday increasing the total to 7 per yr.; continuity bonus of \$6 per mo. to a maximum of \$400 payable to all empl. permanently laid off as a result of cut-backs in the mines.

E. S. & A. ROBINSON, TORONTO ONT.—PRINTING PRESSMEN (AFL-CIO/CLC): 3-yr. agreement covering 500 empl.—8¢-an-hr. increase retroactive to Dec. 1, 1959; an additional 9¢ per hr. eff. June 1, 1960; a further 5¢ an hr. eff. Sept. 1, 1960; 5¢ an hr. on June 1, 1961 and another 5¢ an hr. eff. Dec. 1, 1961; eff. June 1, 1960 working hrs. to be reduced from 38½ to 37½ per wk. without change in pay; 3 wks. vacation after 10 yrs. of service (previously 3 wks. after 12 yrs.).

NOTES OF CURRENT INTEREST

Committee Will Consider Changes In Monthly Employment Release

A committee to consider changes in the monthly statistical report on employment and unemployment has been set up, it was announced in the House of Commons last month by Hon. Michael Starr, Minister of Labour. He was replying to a question about progress in setting up a committee "to determine more realistic measures with regard to figures on unemployment in Canada."

The Deputy Minister of Labour, A. H. Brown, will be chairman of the committee.

Terms of reference of the committee, which will report to the Ministers of Labour and of Trade and Commerce, are:

1. To consider the most appropriate basis for an official national measure of unemployment in Canada and to recommend accordingly;

2. To review the adequacy of existing statistics for this purpose;

3. Consequent thereon, to consider changes required in the joint Department of Labour-Dominion Bureau of Statistics monthly employment release.

Other members of the committee are: Walter E. Duffett, Dominion Statistician, Dominion Bureau of Statistics; Assistant Deputy Minister of Labour George V. Haythorne; Simon A. Goldberg, Assistant Dominion Statistician; V. J. Macklin, Director, Economics Branch, Department of Trade and Commerce; James McGregor, Director, Unemployment Insurance, Unemployment Insurance Commission; William Thomson, Director, National Employment Service; W. R. Dymond, Director, Economics and Research Branch, Department of Labour; Gil Schonning, Chief, Employment and Labour Market Division, Economics and Research Branch, Department of Labour.

Building Supply Dealers Report Gains from 'Do It Now' Campaign

Some 400 Canadian building supply merchants have participated in the "Do It Now" National Winter Work Campaign sponsored by the Department of Labour, it was found when the Department distributed a questionnaire to ascertain whether habit, tradi-

tion and the lack of economic buoyancy in Canada in winter were too strong to permit the development of a wintertime market.

About 66 per cent of those who replied said that their business had improved compared with the previous winter. The increases were reported to run between 1 and 200 per cent, and averaged about 18 per cent. Some 18 per cent found no change in the business turnover and 16 per cent reported a decrease in business.

Approximately 90 per cent of the dealers who linked a sales campaign with the "Do It Now" campaign either maintained their full staffs or increased them. Even those who did not tie in with the campaign apparently benefited from it; 21 per cent reported increased winter sales.

Eighty-four per cent of the paint dealers who reported having run a wintertime sales program said their business had increased by an average of 14 per cent over the previous winter. About 96 per cent reported that they had been able to maintain or increase their staffs during the three-month campaign.

Of the hardware firms reporting that they had participated in the campaign, 53 per cent showed an average increase in business of 14 per cent over the previous year, and 16 per cent maintained their sales volume. All the firms interviewed had either maintained or increased their staffs.

12th Trade Analysis Issued

Another in the series of trade analyses designed to assist in the development of uniform trade standards in Canada has been issued. It is *Analysis of the Steamfitting Trade; Construction*, which sets forth those phases of the trade that are considered essential in all provinces.

The analysis was compiled by a national committee appointed by the Department of Labour, working in conjunction with provincial apprenticeship authorities.

Trades covered in previous analyses are: heavy duty mechanic, bricklaying, carpentry, machinist, motor vehicle repair—body, motor vehicle repair—mechanical, plastering, plumbing, sheet metal, electrical, and painting and decorating.

Stay in School, Labour Minister Advises Young People of Canada

It is important that young people stay in school and get as much education and training as possible before seeking employment, Hon. Michael Starr, Minister of Labour, said in connection with the observance last month of Education Week.

Mr. Starr emphasized that the number of unskilled and semi-skilled jobs available in Canada is declining; of skilled and professional jobs (which require more schooling and technological training), increasing. Only 30 per cent of jobs available in Canada at present call for semi-skilled or unskilled workers.

The Minister noted that almost 70 per cent of the Canadian children entering Grade 2, the beginning of their elementary school education, will leave school before getting their junior matriculation or equivalent: they drop out without reaching a level that would equip them for most of the jobs beyond semi-skilled.

During the past 10 years, opportunities in professional occupations increased by 70 per cent; skilled occupations, 35 per cent; white collar occupations, 35 per cent; semi-skilled and unskilled occupations, only 20 per cent, Mr. Starr said. This trend, resulting from technological advances, would inevitably continue, he declared.

"If young Canadians hope to reap the benefits of a modern progressive nation, they will have to face up to the fact that education is no longer a luxury, but a necessity."

A British Government advisory council has reported that the education provided for the great mass of children in England is inadequate in quality and too short in duration. As an initial step to correct the situation, the Central Advisory Council for Education has urged that the Government raise the compulsory school-leaving age from 15 to 16 years.

Tremendous Enrolment Growth In Higher Technical Education

Post-secondary technical education in Canada is growing at a tremendous rate, according to a report on full-time enrolment at Canadian technical institutes on October 1, 1959, recently issued by the Dominion Bureau of Statistics. The report gives actual registration figures of full-time students enrolled at various institutions on that date.

During the last two years alone, the report says, three provinces have inaugu-

rated new programs of post-secondary technical education, and all the other provinces that already provided such education have extensively expanded their programs.

The total full-time enrolment in Canadian technical institutes in 1959-60 reached 8,304, with enrolments of "engineering type" technicians outnumbering the others by eight to one. The enrolment in courses by year was: first year, 4,148 students; second year, 2,526; and third year, 1,557. In addition 73 students in Quebec were taking a special fourth year course.

Prospective graduates for the May-June 1960 period number 2,041, comprising 1,813 engineering type technicians and 228 others.

U.K. School-Leavers Soon at Peak, More Seeking Skilled Training

The number of school-leavers in the United Kingdom will drop this year from last year's total of 776,000 to 702,000. In 1961, however, when the "bulge" begins, it will rise again to 857,000, reaching a peak of 929,000 in 1962, according to a report issued by the Church Information Service.

"At present about 36 per cent of all boys leaving school become apprentices, 1 per cent enter professions, 7 per cent take up commercial or clerical posts and 56 per cent go into unskilled or semi-skilled jobs.

"Every year . . . more people seek opportunities for training for skill than our present training facilities can provide for.

"Wherever the opinions of school-leavers about their future work are tested, a majority of young people put their opportunities to learn and a chance of advancement before high wages.

"Every year the number of young people staying on voluntarily at school after 15 increases, and so does the number achieving the necessary general education on which training for skill can be based."

The report points out that even now technical colleges cannot cope with the rapidly increasing numbers of applicants, and many companies are already taking as many trainees as they see their way to employ.

"They can rightly ask that the extra number of would-be trainees created by the bulge and increased by the ending of national service should be shared by other firms, or that the cost of additional trainees should not fall only on them."

The report says that much can be done by individual employers, managers, trade unionists and educators to relieve the pressure.

Planned Capital Spending in 1960 Largest Program on Record

Plans for capital expenditure in all sectors of the Canadian economy in 1960 involve total outlays of \$8,770 million. This would be the largest capital program on record, exceeding last year's total by 4 per cent and exceeding the previous peak established in 1957.

The plans were outlined in a report entitled *Private and Public Investment in Canada—Outlook 1960*, which summarizes the results of a recent survey of capital spending intentions. It was tabled in the House of Commons by the Minister of Trade and Commerce on March 3.

Outlays for new construction are expected to reach a record total of \$5,942 million, in comparison with last year's total of \$5,798 million.

Spending for machinery and equipment is expected to be appreciably higher than in the past two years. Planned outlays of \$2,828 million are 8 per cent greater than the \$2,613 million spent last year, and only slightly less than the record amount spent in 1957.

The resurgence of business investment anticipated this year from the sharp decline that took place in 1958 and 1959 will provide the main contribution to the expansion expected in total private and public investment. Outlays for housing and social capital are likely to make up a smaller part of the total investment than they have in the past two years. Such spending is expected to increase by only about 1 per cent over last year; business investment, according to present plans, will be 6 per cent greater than last year.

The increase in investment is expected to be especially great in the resource based industries, an increase of about 20 per cent over 1959 being shown in investment planned in the forest and mineral products industries. A further significant increase in commercial building, including stores and offices, will also contribute to the total growth in business investment.

Expenditure for housing, which reached a record of \$1,782 million in 1958, and which dropped slightly in 1959 to \$1,759 million, is expected to drop to \$1,696 million in 1960. It is anticipated, however, that this decline will be offset by increased investment in institutional construction, particularly for hospital and university buildings. Construction by the federal, provincial and municipal governments combined is likely to involve slightly higher spending than last year.

According to the report, the 1960 investment program should not place any undue strain on available resources. "It appears likely that present productive capacity in the building materials industries and the available supply of labour will be at least adequate for the moderate increase in construction activity now planned. In fact bidding on construction jobs is likely to continue to be keenly competitive and this should hold any upward pressure on prices to modest proportions," the report says.

It adds that the decline in the supply of mortgage money available for house building has been taken into account in the housing estimate for 1960. But, although the number of new housing units started this year is estimated at 10 to 15 per cent below the 141,000 starts of 1959, with 82,000 units under construction at the beginning of the year completions are expected to be little below last year's total of 146,000.

Gross National Product in 1959 Six Per Cent Above 1958 Total

The recovery in Canada's gross national product that began in 1958 as the economy emerged from a mild recession continued in 1959, the Dominion Bureau of Statistics reported last month.

In the first half of the year the rise carried the gross national product to new levels. But in the third quarter expansion was checked by a combination of factors, largely associated with industrial disputes in Canada and the United States. In the fourth quarter the advance resumed.

Gross national product in the fourth quarter was 2 per cent above the total for the preceding quarter and was at an annual rate, seasonally adjusted, of \$35,372 million.

For 1959 as a whole, gross national product was \$34,593 million, approximately 6 per cent above the 1958 figure, \$32,606 million. Higher prices accounted for about 2 per cent of the increase in 1959; therefore physical volume of output was about 4 per cent above that of 1958. The average post-war increase has been 4 per cent.

Physical volume of output was virtually unchanged in 1957 and 1958.

There were broad changes in the composition of income and outlay in 1959, reversals in trend in a number of categories of demand, and a marked change in the pattern of the nation's total expenditure.

Outlays for new housing, which rose 25 per cent in 1958, moved downwards through the first three quarters of 1959 and recovered slightly in the fourth quarter as

new mortgage money was made available by the Government. Personal expenditures on consumer goods and services increased slightly more than in the previous year. Government expenditures on goods and services rose less sharply in 1959 than in 1958 and in fact declined in the last half of the year.

Labour income, which showed only a small change between 1957 and 1958, registered a sharp rise in 1959 and accounted for a much greater proportion of the increase in total personal income than in the previous year.

Although corporations profits showed little change from quarter to quarter during 1959, they were at an average rate about 14 per cent above 1958 figures and compared with a decline of less than 3 per cent between 1957 and 1958.

Quebec Superior Labour Council Revived, Holds First Meeting

The Quebec Superior Labour Council, a 24-member advisory body to the provincial Department of Labour that had not met for five years, was revived last month by Quebec Premier Antonio Barrette, and held its first meeting on March 29. Premier Barrette is also Quebec's Minister of Labour.

Employee organizations, management associations and universities are represented on the Council. In addition, three Department of Labour officials are ex officio members.

At the Council's first meeting since its revival, Premier Barrette promised legislative support for unanimous decisions of the Council. The Council fell into disuse in 1954 after the late Premier Duplessis took no action on a draft labour code the Council had submitted. From that time, no appointments were made as vacancies occurred.

Paul Lebel, social sciences professor at Laval University, was elected President of the Council, the post he held when the Council went into disuse. The two vice-presidents are: Jean Marchand, Secretary-General of the Canadian and Catholic Confederation of Labour, and W. M. Baker, Industrial Relations Department of Dominion Engineering Works Limited, representing the Canadian Manufacturers' Association on the Council.

Other Council members are, for labour: Roger Mathieu, President of the Canadian and Catholic Confederation of Labour; Roger Provost, President of the Quebec Federation of Labour (CLC); Leopold

Garant, President of the General Corporation of the Catholic Teachers of Quebec Province; Ernest Messier, Chairman of the provincial Joint Legislative Committee of the International Railway Brotherhoods; Marcel Pepin, CCCL Technical Advisor; Jean Gérin-Lajoie, an Executive Vice-President of the Quebec Federation of Labour; John Purdie, a QFL Vice-President.

Employer representatives are: H. Sparks, Vice-President, Northern Electric Company; Fernand Girourd, Vice-President of Valcona Limited, and Paul-D. Normandeau, Manager of Eagle Pencil Company, representing the Professional Association of Industrialists; J.-E. Laframme, President of the Building Trades Federation of Quebec; J. R. Latter, Anglo-Canadian Pulp and Paper Mills Limited, representing the Canadian Pulp and Paper Association; Paul Bardou, Vice-President of the Retail Merchants Association of Canada; and Jean-Pierre Després, Iron Ore Company of Canada, representing the Quebec Metal Mining Association.

University representatives are: Jean-Marie Martin and Paul-Henri Guimont, Laval University; Michael Oliver, McGill University; Réal Cardin, University of Montreal; Jacques Parizeau, Montreal School of Advanced Commercial Studies.

Léonce Girard, Secretary of the Parity Committee of the shoe industry is the 24th member of Council.

Ex-officio members of Council are: Gérard Tremblay, Quebec Deputy Minister of Labour; Donat Quimper, Quebec Joint Deputy Minister of Labour, and Jacques Casgrain, Assistant Deputy Minister of Labour.

Work All Winter on Sask. Dam, Give Employment to 500 Men

Employment for 500 men, which ordinarily would not have been available, was created at the site of the South Saskatchewan River dam project through the creation of an "ice bridge" capable of carrying 40-ton loads. The technique also enabled contractors to make use of multimillion dollar machinery that would otherwise have stood idle.

The ice bridge was used to haul granular material across the river for use in the base on the dam.

A contract was awarded last month for construction of the downstream half of five diversion tunnels, through which the river will flow during construction of the dam. It was the largest contract to date on the project, which began in 1958.

1959 Edition Now Available of "Provincial Labour Standards"

A new edition, dated December 1959, of the Department of Labour publication *Provincial Labour Standards* is now available.

Revised annually by the Legislation Branch of the Department, this bulletin sets out the standards established by provincial law with regard to the school-leaving age, minimum age for employment, annual vacations, public holidays, maximum daily and weekly hours of work, minimum wage rates, equal pay, workmen's compensation benefits in case of death or disability, fair employment practices and weekly rest-day.

A higher school-leaving age in Prince Edward Island—16 years instead of 15—is one of the changes noted in the bulletin. In Manitoba, the Vacations with Pay Act was amended to provide for a vacation with pay of two weeks after one year's service with an employer, instead of a vacation of one week after one year of service and two weeks after three years. Provision was also made for the replacement of the stamp system of vacation pay for construction workers in the Greater Winnipeg area by a system of payment by cheques issued by the Department of Labour annually.

The enactment of a new Women's Minimum Wage Act in Prince Edward Island, and an increase in minimum wage rates by about 15 per cent in Quebec were other important changes made during the year.

Prince Edward Island enacted an Equal Pay Act, bringing the number of provinces with equal pay laws to seven. Amendments strengthening the Fair Employment Practices Acts of Nova Scotia and Saskatchewan were also made.

An upward revision of workmen's compensation benefits in six provinces is also recorded in the new edition.

Copies of the bulletin may be obtained from the Queen's Printer, Ottawa, at 25 cents each.

Housing Starts Last Year Drop 14 Per Cent from 1958

Starts on the construction of new dwelling units, completions, and the number under construction at year-end were all lower in 1959 than in 1958. But 1959 starts and completions were higher than in any other postwar year, the Dominion Bureau of Statistics reports.

Starts dropped 14 per cent to 141,345 from 164,532 in 1958; completions, at 145,671, showed little change from the 1958 figure of 146,686. Units in various stages of construction at the end of 1959

dropped in number to 81,905 from 88,162 in 1958.

In the United States, starts of non-farm housing units in 1959 were 14 per cent higher than in 1958. The 1959 total, 1,376,900, almost equalled the record of 1,396,000 in 1950.

Fewer Immigrants Last Year, 106,928 Compared with 124,851

Fewer persons emigrated to Canada in 1959 than in 1958—106,928 compared with 124,851, the Department of Citizenship and Immigration has reported.

Of the 106,928 arrivals in 1959, about half, 53,551, were destined to the labour force. The largest number, 12,792, came under the occupational classification "manufacturing, mechanical and construction." Another 8,940 were listed as labourers. Totals in these categories in 1958 were 17,476 and 9,388 respectively.

The second highest number, 9,740, gave "service" as an occupational classification. In 1958, this classification covered 11,501.

Last year 6,947 immigrants were listed as professionals; in 1958 there were 7,553 listed under this classification.

As in 1958, the majority in 1959 came from Italy, 26,822. The second largest number, 19,361, was from the United Kingdom. The total coming from the U.K. in 1958 was 26,622.

Immigrants from the United States numbered 11,338 in 1959, compared with 10,846 in 1958.

Net Income of Farmers in 1959 7 Per Cent Less Than in 1958

The total net income of farmers from farming operations in 1959 is estimated at \$1,189,388,000, according to preliminary estimates of farm income published last month by the Dominion Bureau of Statistics.

The 1959 estimate is 7 per cent below the preliminary 1958 figure of \$1,277,562,000 but 12 per cent higher than the revised 1957 total of \$1,061,508,000.

Cash income from the sale of farm products was a little lower as a result of smaller returns from wheat, oats, cattle, poultry meat, eggs and fruit; they more than offset higher income from such commodities as barley, flaxseed, tobacco, hogs, dairy products, and larger Canadian Wheat Board payments.

Supplementary payments in 1959, consisting almost entirely of payments under the Prairie Farm Assistance Act, amounted to \$22,090,000, compared with \$60,128,000 in 1958.

Industrial Injuries in Ontario Number 272,460 Last Year

A record number of injuries to industrial workers was reported to the Ontario Workmen's Compensation Board last year. In the United States, the 1959 industrial injury total was the highest since 1953.

The Ontario total of 272,460 was some 16,000 above that in 1958, it was shown in the Compensation Board's annual report, tabled in the provincial Legislature last month.

The Ontario Rehabilitation Centre at Downsview treated 4,128 patients; 1,281 of them returned to their former employment.

Job injuries in the United States in 1959 disabled 1,970,000 workers, according to preliminary estimates of the U.S. Bureau of Labor Statistics. Approximately 13,800 of the injuries were fatal.

The injury total was 8 per cent higher than the 1958 figure and was the highest since 1953. The injury rate increased from 29.4 per thousand workers to 31.2.

The fatal injury total was 4 per cent above the 1958 figure but was lower than that of any other year. The death rate of 22 per 100,000 workers matched the record low established in 1958.

Commodity Imports in 1959 Up 8.9 Per Cent from 1958

The value of commodity imports into Canada in 1959 amounted to \$5,654,200,000, or 8.9 per cent higher than in 1958, according to final figures released by the Dominion Bureau of Statistics.

Iron and steel products accounted for about half of the total gain in imports and for more than one-third of all Canada's imports.

Imports of non-farm machinery, as usual by far the largest import item, rose in every quarter except the first and registered a 10-per-cent gain on the year.

Automobile parts imports, higher in each quarter of 1959 except the fourth, went up by one fifth. Imports of engines were virtually unchanged.

Increases of from 4 to about 40 per cent were registered for wool products, books and printed matter, paper, scientific equipment, cotton products, and electrical apparatus.

Aircraft and parts were one-fifth lower, and there were declines registered in coal, and aluminum and its products, among other commodities.

Among commodity imports that increased during 1959, with comparative figures for 1958 in brackets, were the following: Farm

implements and machinery, \$273.8 million (\$198.3 million); non-farm machinery and parts, \$585.2 million (\$532.9 million); automobile parts, \$288.6 million (\$240.5 million); automobiles, freight and passenger, \$229.3 million (\$162.2 million).

Imports of rolling-mill products in 1959 amounted to \$137.3 million, compared with \$147.5 million in 1958.

Northwest Territories Signs Hospital Insurance Agreement

A hospital insurance and diagnostic services program came into effect in the Northwest Territories on April 1, as a result of an agreement signed March 28 by Hon. J. Waldo Monteith, Minister of National Health and Welfare, and R. G. Robertson, Commissioner of the Northwest Territories.

The agreement with the Northwest Territories is similar in many ways to those previously completed with nine of the provinces. All residents were entitled to participate as soon as the program came into effect. Those who establish residence after April 1 will be entitled to come under the plan after a waiting period of three months.

No premium will be charged but there will be an authorized charge, like that levied in Alberta and British Columbia, for in-patient services. It will be \$1.50 a day.

U.S. Employment at Record High In February, Unemployment Less

During February the number of persons employed in the United States reached 64,520,000, an increase of 500,000 over the previous month's figure and more than 1,000,000 above the previous record for February set in 1957. At the same time, unemployment dropped by 218,000 to 3,931,000, U.S. Secretary of Labor James P. Mitchell announced. This was a reversal of the usual trend in February.

The seasonally adjusted unemployment rate for the month was down to 4.8 per cent, the lowest rate since October 1957, before the 1957-58 recession began. It was the first time since before the recession, except in May 1959, that it was below 5 per cent. The actual rate without discounting seasonal factors, however, was 5.7 per cent.

In Great Britain 450,000 persons were registered as unemployed on February 15, of whom 431,000 were wholly unemployed and 19,000 were temporarily out of work, the Ministry of Labour announced.

Mr. Justice Milvain Appointed Chairman in Railway Disputes

Hon. Mr. Justice J. V. Milvain of Calgary, of the Supreme Court of Alberta, has been appointed Chairman of the conciliation board established in the dispute between trade unions representing non-operating railway employees and the Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; and Midland Railway of Manitoba. The appointment was announced March 31 by Hon. Michael Starr, Minister of Labour.

The other members of the conciliation board nominated by the parties are Philip F. Vineberg, Montreal, nominee of the companies, and David Lewis, Q.C., Toronto, the nominee of the Joint Negotiating Committee of the Associated Non-Operating Unions.

Messrs. Vineberg and Lewis reported that they had not been able to agree on the choice of a chairman; consequently it devolved on the Minister to appoint the Chairman as authorized by the provisions of the Industrial Relations and Disputes Investigation Act.

The unions concerned in the proceedings are: Brotherhood of Maintenance of Way Employees; Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Division No. 4, Railway Employees' Department (AFL-CIO); Canadian National Railway System Federation No. 11; International Association of Machinists; International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers of America; Brotherhood of Railway Carmen of America; International Brotherhood of Firemen and Oilers; International Brotherhood of Electrical Workers; United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada; International Moulders' and Foundry Workers' Union of North America; Sheet Metal Workers' International Association; Commercial Telegraphers' Union; Brotherhood of Railroad Signalmen of America; Order of Railroad Telegraphers; Canadian Brotherhood of Railway, Transport and General Workers; and Brotherhood of Sleeping Car Porters, Train, Chair Car, Coach Porters and Attendants.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

February 17—*Applications under Municipal Winter Works Incentive Programs* have been invited from all Indian bands, who have been advised of the terms of the programs, the Minister of Labour replies to a question (p. 1147).

Representations from the Edmonton and District Labour Council and from Calgary and Regina locals of the Carpenters and Joiners relating to unemployment insurance regulations on the treatment of holiday and severance pay have been received and a date has been set for a meeting of the Unemployment Insurance Advisory Committee, the Minister tells a questioner (p. 1147).

The Unemployment Insurance Fund had a credit of \$445,885,387.32 at the end of January, the Minister announces in reply to a request for the balance in the Fund at the end of January in each year from 1955 to 1960 (p. 1147). The Minister also supplied totals of applicants for unemployment insurance at the end of January, for Canada, the Atlantic Provinces and for New Brunswick (p. 1148).

Direct housing loans by Central Mortgage and Housing Corporation are likely

to be a good deal lower in 1960 than they were in 1959, the Minister of Public Works says during consideration of a resolution preceding the introduction of amendments to the National Housing Act to increase the aggregate amount of insured loans under the Act. He opened the debate with a review of the history of the housing field in the past 2½ years (p. 1161).

February 18—Report of the fifth meeting of the Joint Canada-U.S. Committee on Trade and Economic Affairs was tabled by the Minister of Finance and printed as an appendix to the day's Hansard.

February 19—*Report on estimated number of men to be hired and estimated federal payments on Municipal Winter Works Incentive projects* approved by the federal Government up to February 12 tabled by the Minister of Labour and printed as an appendix to the day's Hansard. The tabling came at the opening of debate on a supplementary estimate to provide payments under the program (p. 1231, 1234).

Bill to extend application of the Canada Fair Employment Practices Act to the Civil Service is debated (p. 1270). The House adjourned without question put.

February 22—*Disqualification for unemployment insurance benefit* was imposed on some 125 claimants out of 580 who failed to apply for jobs as bushworkers, for which 192 vacancies had been received at the Rouyn local office of the Unemployment Insurance Commission, the Minister of Labour reports in answer to a question (p. 1296).

February 23—*Request for assistance to maintain the uranium industry* is made by Hon. L. B. Pearson, who suggested that the Government consider establishment of a plant to produce enriched uranium and the turning over to private industry of the production operations of Eldorado Mining and Refining Ltd. (p. 1373).

February 24—*Bill to reduce voting age in Canada from 21 to 18* (Bill C-48) is given first reading (p. 1391).

Information on claimants for unemployment insurance may be released by the Unemployment Insurance Commission where the Commission deems it advisable, the Minister of Labour tells a questioner (p. 1399).

The Government is prepared to sign a roads to resources agreement with Saskatchewan for \$15 million, including the cost of the Prince Albert Bridge, the Minister of Northern Affairs and National Resources says in reply to a question (p. 1402).

Debate continues on estimate to provide payments under the Municipal Winter Works Incentive Program (p. 1402). The program has put another 40,000 persons to work, the Minister of Labour says (p. 1408). There was a 35-per-cent increase in the number of persons taking advantage of vocational training in 1959, Mr. Starr reports (p. 1408).

February 25—*Information relating to the inclusion of farm labour under the Unemployment Insurance Act* has been compiled by the Unemployment Insurance Commission. It will have to be studied, the Minister of Labour replies to question (p. 1437).

February 26—*Debate continued on estimate to provide payments under the Municipal Winter Works Incentive Program* (p. 1482).

Second reading moved of Bill C-12, to amend the Small Loans Act to require advertising of the true rate of interest being charged on each loan (p. 1523). The House adjourned without question put.

February 29—*Motion proposing a broadening of the scope of the national health insurance plan* introduced and debated (p. 1532). The House adjourned without question put.

March 1—*Debate continues on estimate to provide payments under the Municipal Winter Works Incentive Program* (p. 1590 and 1608).

March 2—*Debate continues on estimate to provide payments under the Municipal Winter Works Incentive Program* (p. 1648).

March 3—*The Government will assist the Government of Nova Scotia in a joint study of unemployment*, the Minister of Labour tells a questioner (p. 1684). Later, he explained that "one of the men from the Economics [and Research] Branch of the Department will go there and in co-operation with provincial officials will proceed with the survey" (p. 1689).

Debate continues on estimate to provide payments under the Municipal Winter Works Incentive Program (p. 1687). After 7½ days of debate, the appropriation was approved by a vote of 127 to 0.

Figure that will reflect "accurately and completely the jobless situation at any time" will be sought by officials of the Dominion Bureau of Statistics, the Department of Labour and the National Employment Service, the Minister of Labour announces (p. 1702).

March 7—*Statement on Elliot Lake* made by the Prime Minister (p. 1785).

Consideration is being given to a request by a local of the International Union of Mine, Mill and Smelter Workers for restoration of pension vesting provisions in the Income Tax Act, the Prime Minister informs a questioner (p. 1789).

Unemployment Insurance Advisory Committee met March 4 for discussion of the regulations respecting holiday and severance pay; the Government is awaiting a report of the meeting, the Minister of Labour says in reply to a question (p. 1793).

March 8—*Progress reported on motion that the House go into committee to consider a measure for amending the Railway Act so that grants could be made from the railway grade crossing fund for a further period of three years beyond January 31, 1961* (p. 1874).

March 9—*An increase in prevailing rates for motor mechanics in the naval motor transport garage at Esquimalt, B.C., retroactive to November 1, 1959* has been approved, the Associate Minister of National Defence replies to a question (p. 1884).

Second reading moved of Bill C-2, to amend the Indian Act to give Indians the right to vote in federal elections (p. 1912). The House adjourned without question put.

March 10—*The Government is hopeful that a trade agreement with Russia will be signed*, the Minister of Trade and Commerce tells a questioner (p. 1920).

Debate on second reading of Bill C-2, to amend the Indian Act to give Indians the right to vote in federal elections, continues (p. 1925). Bill read the second and third times and passed.

Bill C-3, to amend the *Canada Elections Act* to give Indians the right to vote in federal elections, read the second and third times and passed (p. 1955).

Debate continues on resolution preceding the introduction of amendments to the National Housing Act to increase the aggregate amount of insured loans under the Act (p. 1958).

March 11—*Investigations into Chignecto Canal* development are taking place, the Prime Minister says when questioned whether the Government would consider an immediate engineering study of the canal's cost, irrigational details, and location (p. 1968).

Bill C-53, to amend the National Housing Act, introduced and read the first time (p. 1974, 2005).

March 15—*Debate motion* for second reading of Bill C-53, to amend the National Housing Act (p. 2071). The House adjourned without question put.

March 16—*Unemployment Insurance Fund* had a credit balance of \$408,141,026.81 on February 28, 1960 and of \$547,399,504.48 a year earlier. On February 25, 1960 there were 805,195 unplaced applicants for unemployment insurance on the books of the National Employment Service offices across Canada, the Minister of Labour replies to questions (p. 2117).

Agreement under the Unemployment Assistance Act has been signed between the federal Government and the Government of Quebec, the Minister of National Health and Welfare replies to a question (p. 2117).

"*Disallowance of provincial laws* is not one of the functions of the Dominion Parliament" and therefore a motion to discuss the disallowance of two Newfoundland labour bills was rejected by the Speaker (p. 2120).

The federal Government has not disallowed labour legislation passed by the Government of Newfoundland, the Prime Minister replies to a question (p. 2122).

Debate on second reading of Bill C-53 (National Housing Act) continues (p. 2130).

Labour groups that protested the Government's refusal to grant salary increases to civil servants listed by Minister of Finance in reply to a question (p. 2152).

March 17—*The question of disallowance* of labour legislation passed by the Government of Newfoundland was considered "and

a decision was made not to take any action," the Prime Minister advises a questioner (p. 2155).

Bill C-53, to amend the National Housing Act to increase the aggregate amount of insured loans under the Act, read the third time and passed (p. 2158).

March 21—*Discussion of International trade* opened by the Leader of the Opposition (p. 2250). He moved an amendment to the motion that the House go into committee of supply, in which he called for action to remedy Canada's unfavourable trade balance (p. 2268).

An amendment to the amendment was moved by Harold E. Winch (Vancouver East) (p. 2268).

The Minister of Trade and Commerce began a statement in reply (p. 2277) but the House adjourned before the question was put. The next day, March 22, he completed his speech (p. 2302). The amendment to the amendment was defeated 182 to 45 (p. 2333) and the amendment by an identical vote (p. 2334).

March 23—*Reduction of civilian staff* at HMCS *Cornwallis* stems from a number of causes, the major one being the new central heating plant with its modern fuel handling equipment, the Associate Minister of National Defence replies to a question (p. 2345).

Scope of retraining program that CNR plans to carry out is one of the matters that should come before the committee on railways, air lines and shipping owned and controlled by the Government, says D. M. Fisher (Port Arthur) during debate on the motion to set up the committee (p. 2375).

Some way to "transport" Hal Banks [Vice-President in Canada of the Seafarers' International Union] somewhere "so that we are not obliged to contend with him" should be sought by the Minister of Transport, Mr. Fisher says later in the same speech (p. 2376).

March 24—*Municipal Winter Works Incentive Program* will be extended until the end of May, the Minister of Labour announces (p. 2386).

A committee has been set up to seek "an official national measure of unemployment," the Minister of Labour announces (p. 2387).

March 25—*The Government has no sympathy* for racial discrimination policies and deplores the development of a situation that has given rise to violence and loss of life, the Prime Minister says in a statement on the situation in South Africa. At this time, however, "no beneficial purpose would be served by diplomatic protests" (p. 2448).

Construction Association's Annual Brief

Makes proposals for revision of federal labour code to clarify its provisions regarding picketing and strikes, to provide "protection" for employees against compulsory union membership, and to prevent strikes in essential public services

Revision of the federal labour code, illegal strikes and picketing, soundness of the Unemployment Insurance Fund, re-establishment of the labour-management National Joint Conference Board of the Construction Industry, and apprenticeship training were the subjects of some of the more important recommendations made to the federal Government on March 15 in the annual submission of the Canadian Construction Association.

The brief was based on the statement of policy and on the resolutions adopted at the Association's 42nd annual meeting at the end of January (L.G., Mar., p. 252).

In advocating the "modernization of labour legislation in accordance with present-day conditions and needs," the brief declared, the CCA was not being anti-labour in its proposals, which were designed "to provide greater equality between the parties so that collective bargaining procedures will be still more effective and responsible in character."

None of the Association's recommendations involved much reduction in the Government's revenues, some would save money, and those that required expenditures by the Government were investments that would bring a return or would develop a larger base for future tax revenues, the submission stated.

Recommendations in the submission were largely reiterations of those made to the Government in previous years.

The delegation, which was led by the CCA President J. M. Soules, reminded the Cabinet that the public works program of the federal Government amounted to about a tenth of the total volume of construction, and that the Government's policies also greatly influenced the construction plans of companies and private individuals.

Among the "more desirable" changes to the federal labour code advocated by the Association were: clarification of the law regarding picketing and strikes, "protection" of an employee against the compulsion to join a union as a condition of employment, provision for the settlement of jurisdictional disputes "within our own country rather than in the U.S.A.," and provision of means for preventing work stoppages in "essential public services."

The brief pointed out that the Association had previously advocated the vesting of unions with the status of legal entities, and it expressed satisfaction "that this status has been clarified and confirmed under the common law in a recent Supreme Court of Canada decision with respect to breach of contract and was spelled out last year in the B.C. Trades-union Act."

The CCA is still hopeful that the National Joint Conference Board of the Construction Industry will function again. Periodic meetings are now being held between the heads of the construction unions and contractor associations in the United States on the national level. We have been gratified to see that the Canadian Labour Congress has also advocated national labour-management conferences.

The Association said that the interest of the Department of Labour in the proposed restoration of the Joint Board was appreciated, and it pointed out that the principle of joint consultation is embodied in a number of advisory committees appointed by the federal Department of Labour.

The Association again objected to the administration of the Fair Wages and Hours of Labour Act in such a way that "the provisions contained in the schedules attached to federal construction contracts have exceeded those contained in union agreements or provincial legislation," which it asserted had happened in some cases. It opposed such a practice as imposing an unnecessary extra expense on the taxpayers and as having a "disruptive effect on other work in the region." It also complained that the Department had in one area changed its policy on overtime without warning or compensation to the contractors concerned.

Another complaint the Association made was that "no distinction is made between building and engineering construction projects or between urban and 'bush' jobs in the statutory daily and weekly maximum hours of work allowed on federal contracts." It asked for greater flexibility in this regard, and that the maximums should be set on a weekly rather than on a daily basis.

Referring to representations made previously to a standing committee of the House of Commons and to the Minister of Labour on the subject of unemployment insurance, the Association said that it had

then mentioned its concern about the reduced balance of the Unemployment Insurance Fund, and that it had recommended that the Fund's "administration should be guided exclusively by sound actuarial principles." It said also that "the Association has had reason to complain that the fund was being misused for purposes for which it was clearly never intended."

The CCA is also gravely concerned that the payment of benefits which now enable an unemployed person to collect up to a total of \$79 a week net will undoubtedly have some influence on the incentive to work. It is therefore felt that the most careful study should be given to all supplementary unemployment benefit plans and also to the "benefit" and "allowable earnings" scales.

The Association reiterated its appreciation of the encouragement and help given by the Department of Labour to the apprenticeship and vocational training program and to the development of national trade training standards. It said that it was pleased that the Apprenticeship Training Advisory Committee at its last meeting had approved of the Association's training policies.

The CCA affirmed its intention of continuing to "stress the special responsibility of employers in assisting in our industrial education programs, both in the provision of opportunities for on-site training and in assistance to our schools, whether they be vocational schools, apprenticeship centres, technical institutions or universities." It asked for continued assistance by the federal Government in this work.

In the matter of housing, the brief referred to the unusually uncertain outlook this year. It commended the Government for increasing the appropriation of funds to be

used in financing operations of CMHC under the terms of the National Housing Act. Regarding the effect of the new interest of 6½ per cent on NHA mortgages in attracting investment funds on a large scale, "much depends upon the extent to which the federal Government exercises its role as a residual lender," the brief said.

The Association repeated some of the recommendations it had made in the past for "increasing the opportunities for improved housing for the under-\$5,000-a-year group." It again advised the amendment of the NHA to allow existing houses to be bought under the Act, and to make the financing of housing for rent more attractive to investors.

The Association's previous recommendation that the federal sales tax should be removed from building materials that are still subject to it was repeated. Not only was this request not heeded, the brief said, but the rise in the old age security portion of the tax had increased the effective rate to 11 per cent, thereby increasing construction costs.

The Association commended the federal Government "for its good example in scheduling construction and general purchases in the winter months and in promoting wintertime construction on a widespread scale through the various publicity media." It expressed belief in the value of the municipal winter works incentive program. It said, however, that an earlier announcement regarding the scheme "would be helpful in enabling more municipalities to participate." A continuation of the campaign to encourage wintertime construction was recommended.

Belgian Program Has Retrained 25,000 Unemployed for New Jobs

Some 25,000 unemployed persons in Belgium have been retrained for new jobs during the past 15 years.

Under the Belgian program, training centres are situated in various parts of the country, and the training system is a flexible one that seeks to adapt the kinds of trades taught to the needs of the economy as forecast by a manpower studies unit. The average course lasts from five to eight months, but the training time is shortened when possible.

There are 68 training sections scattered throughout the country, and the number who completed training in 1959, including

110 who received "on-the-job" training with an employer, was 1,700. It is expected that in 1960 the number will reach 2,500.

Most trainees are in their 20's or 30's, but some are older. The retraining program is separate from Belgium's regular vocational training program, under which younger persons are trained.

When a worker successfully completes his course he is considered to be semi-qualified, and a few months of practical experience are usually enough to make him fully skilled. Sometimes, however, a further course during the following winter may be needed to complete his training.

Industrial Fatalities in Canada during the Fourth Quarter of 1959

Deaths from industrial accidents decreased by 106 from the third quarter and by 90 from the fourth quarter of 1958. Of the 259 fatalities in the fourth quarter, 69 occurred in construction, 44 in transportation and communications

There were 259* industrial fatalities in Canada in the fourth quarter of 1959, according to the latest reports received by the Department of Labour. This is a decrease of 106 from the previous quarter, in which 365 were recorded, including 43 in a supplementary list. In the fourth quarter of the previous year, 349 fatalities were recorded.

During the quarter under review, there were three accidents that resulted in the deaths of three or more persons.

The five crew-members of a four-engined cargo plane en route to Baffin Island from Montreal died when the plane crashed near St. Cléophas de Brandon, Que., on November 4.

Four construction workers were killed in Montreal on November 6, when the concrete roof of an extension to a plant under which approximately twenty-five men were working collapsed. On the evening of the same day, the three crew-members of a schooner were drowned during a storm, a few miles off the Ile-aux-Coudres, Que.

Grouped by industries (see chart page 0000) the largest number of fatalities, 69, was in construction: 41 in buildings and structures, 20 in highways and bridges and 8 in miscellaneous construction. Fatalities recorded in this industry for the same period in 1958 numbered 53: 18 in buildings and structures, 23 in highways and bridges and 12 in miscellaneous construction. During 1959's third quarter, 76 fatalities were listed: 39 in buildings and structures, 30 in highways and bridges and 7 in miscellaneous construction.

During the quarter, accidents in the transportation, storage and communications industry resulted in the deaths of 44 persons; 17 of these fatal accidents were in local and highway transportation, 10 in railway transportation, 8 in air transportation and 7 in water transportation. During the same period last year, 43 deaths were reported,

including 14 in railway transportation, 13 in water transportation, 8 in telegraphs and telephone and 6 in local and highway transportation. Accidents in this industrial grouping during July, August and September 1959 resulted in the deaths of 51 workers; 20 of the deaths occurred in railway transportation, 18 in local and highway transportation, 7 in water transportation and 2 each in storage and telegraphs and telephone.

Thirty-five fatalities were recorded in the mining industry: 24 in metal mining, 4 in coal mining and 7 in non-metallic mineral mining. During the same period in 1958, 115 fatalities were listed: 26 in metal mining, 79 in coal mining, and 10 in non-metallic mineral mining. There were 37 fatalities during the third quarter, 20 in metal mining, 7 in coal mining and 10 in non-metallic mineral mining.

During the quarter, 34 persons died accidentally in manufacturing; 8 of the fatalities occurred in wood products, 6 in food products, 3 each in iron and steel products and non-ferrous metal products and 2 each in paper products and non-metallic mineral products. During the same period of the previous year, 39 deaths were reported; of these, 11 were in iron and steel products,

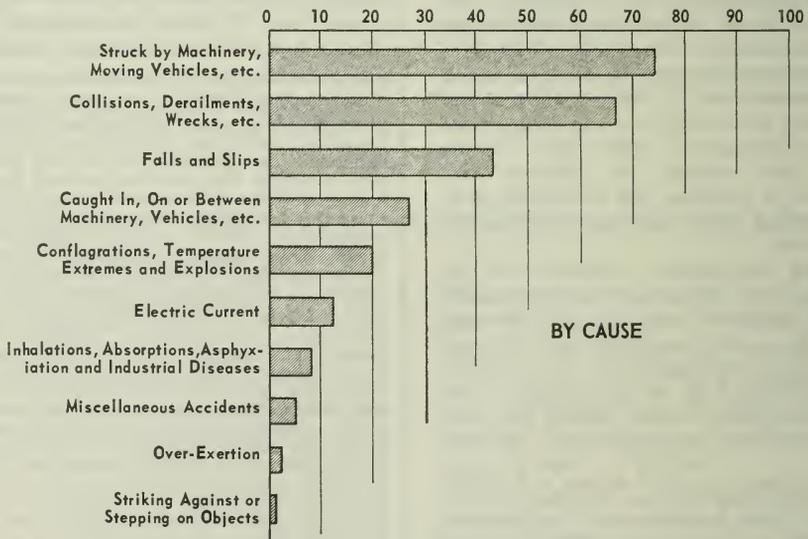

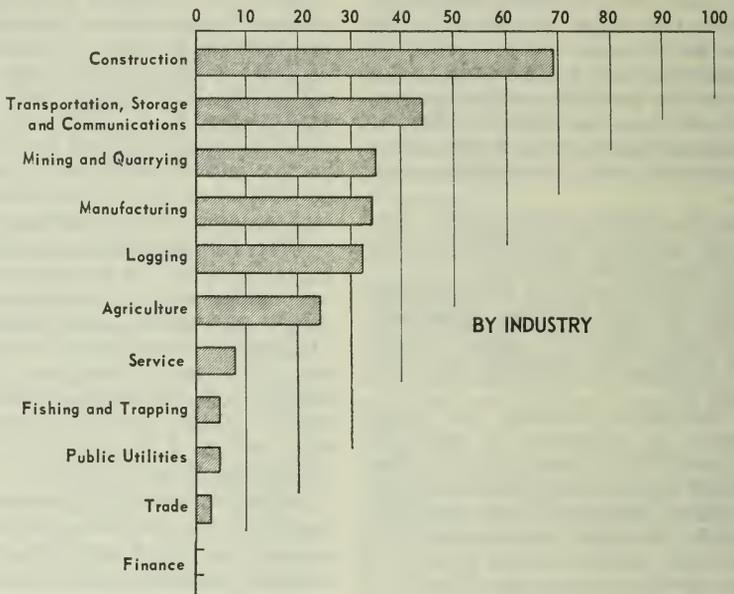

The industrial fatalities recorded in these quarterly articles, prepared by the Working Conditions and Social Analysis Section of the Economics and Research Branch, are those fatal accidents that involved persons gainfully employed and that occurred during the course of, or which arose out of, their employment. These include deaths that resulted from industrial disease as reported by the Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation. Similarly, a small number of traffic accidents which are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

* See Tables H-1 and H-2 at back of book. The number of fatalities that occurred during the fourth quarter of 1959 is probably greater than the figures now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly. The figures shown include 99 fatalities for which no official reports have been received, including 23 in agriculture alone.

INDUSTRIAL FATALITIES IN CANADA

Fourth Quarter of 1959

Source: Economics and Research Branch, Department of Labour.

7 in transportation equipment, 5 in wood products and 4 each in food products, paper products and non-metallic mineral products. Accidents during the third quarter of 1959 resulted in the deaths of 66 workers; of these fatalities, 19 were in iron and steel products, 12 in wood products, 6 each in non-ferrous metal products and non-metallic mineral products and 5 in food products.

There were 32 fatalities in the logging industry, a decrease of 6 over the same period of 1958. During 1959's third quarter, 28 lives were lost in this industry.

An analysis of the causes of the 259 fatalities recorded during the fourth quarter (see chart page 360) shows that 74 (29 per cent) were listed under the heading "struck by machinery, moving vehicles, etc.," of which 7 were under the heading "struck by tools, machinery, cranes, etc.," 16 under "struck by moving vehicles" and 51 under "struck by other objects."

The cause "collisions, derailments, wrecks, etc." was responsible for 67 deaths; 27 in accidents involving automobiles and trucks, 22 involving tractors and loadmobiles, 10 involving aircraft and 2 involving watercraft. In the classification "falls and/or slips," 43 fatalities were recorded, all of them from falls to different levels.

Twenty-seven fatalities were listed in the "caught in, on or between" category; of these, 10 were equally divided between "machinery" and "tractors and loadmobiles," 4 involved "buildings and structures," 3 "hoisting and conveying apparatus" and 3 "automobiles and trucks."

By province of occurrence, the largest number of fatalities was in Ontario, where there were 75. In British Columbia, there were 59; in Quebec, 49; and in Alberta, 27.

During the quarter under review, there were 111 fatalities in October, 93 in November and 55 in December.

Meeting Considers Establishment Of Ontario Farm Safety Council

The possible formation of an Ontario Farm Safety Council was one of the subjects discussed during the two-day annual Farm Safety Conference held at the Ontario Agricultural College in Guelph, February 9 and 10.

The Council would probably include representatives of the Ontario government, farm organizations and other rural, provincial, and national groups interested in the promotion of farm safety throughout the province.

The nearly 400 delegates who attended the meeting agreed that county or district safety councils or committees consisting of representatives of existing farm and rural groups should be established in Ontario to further rural safety education.

The objective of the Conference, the second held by the Ontario Government and sponsored jointly by the Ontario Department of Agriculture and the Ontario Department of Transport, was to bring together a group of public-spirited farm people, who are leaders in their communities, for the purpose of (a) focusing attention on the extreme urgency of the farm accident problem; (b) mobilizing effective public support for farm accident prevention activities; and (c) encouraging organized rural groups to develop continuous effective farm safety programs.

One of the main topics discussed was the Ontario Farm Accident Survey, a year-long study of rural accidents that began March 1, 1959. Some 5,500 farm reporters in every county and district are reporting to

the Ontario Government farm accidents that occur in their areas, and the Department of Agriculture is compiling statistics on the extent of the accident problem.

A preliminary report showed that between March 1, 1959 and September 1, 1959 there were 4,057 accidents on Ontario farms, resulting in 144 deaths, 119 permanent injuries, 3,019 temporary injuries and 44,280 days off work. Property damage as a result of these accidents totalled more than \$2,700,000.

Motor vehicles were responsible for most of the fatalities in the six-month period, 21 in the first quarter, 32 in the second. Most of the permanent disabilities, 20 in the first quarter and 41 in the second, resulted from being caught in machinery. "Falls and stumbles" caused most of the temporary disabilities, 417 in the first quarter and 590 in the second.

The survey lists accidents by place and cause, nature of accident, equipment involved, and the age of the victims.

During the first six months of the survey, fires, which started from innumerable causes, took 13 lives on Ontario farms and resulted in \$2,375,000 damage to farm property.

The general sessions of the Conference dealt with the safe operation of farm tractors; achieving traffic safety through driver licensing and the point system; organizing a local farm safety council; how the farm family can promote safety; and safety in the home.

Elimination of Overlapping of Service

Two Ontario organizations set up liaison committees to eliminate overlapping and duplication of services for disabled, agree to new division of activities on basis of patient's age. Saskatchewan agencies form co-ordinating council

The Ontario Society for Crippled Children and the Rehabilitation Foundation have set up two joint liaison committees in a working arrangement designed to eliminate overlapping or duplication in their services.

The first step is a new division of activities according to the age of the patients. The Ontario Society for Crippled Children will take care of needy crippled children up to and including 18 years of age, and the Rehabilitation Foundation will deal with the rehabilitation of handicapped persons 19 years of age and older.

Previously the division of responsibility was at the age of 21 years. The reason for the change is that at 19 the choice of a career becomes the major consideration.

The primary function of the Rehabilitation Foundation is to make disabled men and women fit to earn a livelihood—in commerce, in industry, in the professions or at home. The new arrangement is expected to hasten the process for young people by preventing overlapping and lost time.

* * *

A new organization whose aims are to improve and expand services to disabled persons, strengthen rehabilitation agencies and improve their programs, and encourage research in rehabilitation has been formed in Saskatchewan. More than 40 voluntary and government agencies were represented at the founding conference.

The Co-ordinating Council on Rehabilitation (Saskatchewan) will take steps to enable the participating agencies to combine their efforts to best advantage. These measures will include familiarizing each agency with the functions and practices of other agencies, pooling of resources to gain common goals, minimizing duplication of effort, streamlining communication between agencies, and determining gaps in the agencies' programs with the idea of filling them.

Dr. T. E. Hunt of the College of Medicine, University of Saskatchewan, was elected President of the Council. Robert Talbot, Saskatchewan Department of Social Welfare and Rehabilitation, and Dr. F. E. Coburn, Saskatchewan Psychiatric Association, were named Vice-Presidents.

The Council plans to hold its first annual conference in October this year.

A one-room school was officially opened in Calgary recently to supply formal education for physically handicapped children. Most of the children who are now attending the school had previously had no chance of formal education except through correspondence courses.

The funds for building the centre in which the school is situated were provided by the Canadian Legion Polio Fund and the Lions Club, and the cost of running the school will be borne jointly by the Calgary Public School Board and the Alberta Department of Education. The Active Club is providing bus transportation for the students.

* * *

Around the Provinces—The Housing and Home Nursing Branch of the Saskatchewan Department of Social Welfare and Rehabilitation has appointed a geriatrician. He is Dr. Borys Kobrynski, who had been employed as a senior specialist with the province's Department of Public Health.

The Montreal Rehabilitation Centre treated 1,054 patients last year. Treatments totalled 71,534, or 22,557 days of care. Patients discharged by the Centre numbered 703, of whom 463 returned to their former jobs or entered new ones.

The Rehabilitation Institute of Ottawa treated 270 patients in 1959 compared with 85 in 1958. It closed 125 cases compared with 13 the year before. Of the 125 patients whose treatment was finished last year, 25 resumed their normal employment and 24 found new jobs.

* * *

The 8th World Congress of the International Society for the Welfare of Cripples will be held in New York City, August 28 to September 2, 1960.

The Society is a federation of voluntary national organizations in 38 countries, working to provide crippled children and adults with the facilities and opportunities they need to overcome their handicaps.

More than 5,000 rehabilitation practitioners and volunteers are expected to attend—1,500 of them from outside the United States.

The 3rd International Congress of Physical Medicine will be held in Washington, August 21 to 28, 1960.

3,000 Replies to Minister's Enquiry

By mid-March more than 3,000 replies received to Minister's enquiry regarding older workers. Respondents represented every segment of Canadian industry, and replies constitute the combined experience of a large number of employers

During the past several months some 45,000 enquiries regarding older workers were sent by Hon. Michael Starr, Minister of Labour, to employers from coast to coast (L.G., Nov. 1959, p. 1172). In order that as many employers as possible might understand the social and economic problem of the older worker the list included branches and agencies as well as head offices of large organizations.

By the middle of March more than 3,000 replies had been received. As many of these letters spoke for associated companies or for hundreds of branches or agencies, it is estimated that the replies represent the views and practices of from 10,000 to 15,000 of those receiving the Minister's enquiry. The contents, therefore, constitute the combined experience of a large segment of industry. Every section of Canadian industry was represented in the replies.

This effort was widely supported by newspapers, trade magazines and other periodicals all across the country in editorials, news stories, feature columns and special articles.

It will take many months to fully tabulate and assess the mass of information contained in the replies before a report can be issued. However, it is possible to report some impressions and items of particular interest.

From the employers' replies it is evident that a great deal of interest has been aroused in the potential of workers past 40 years of age and in their fuller utilization by industry. Some employers stated that they had not realized the complexities of the problem before receiving the Minister's letter. Others knew of it and were taking steps towards a greater use of older manpower.

The majority of employers replying agreed that in productivity, absenteeism, accident rates, dependability and all-round utility, workers past 40 were satisfactory employees. Several pointed out that what an older worker may lack in vigour and speed he makes up in experience, stability, and sense of responsibility.

It is apparent that more employers are realizing that a balanced force of both older and younger workers can enhance the qualities peculiar to each group, thereby

contributing to greater over-all efficiency. A balanced work force of varying ages can also lay the foundation for elimination of difficulties arising in the future from having too many employees in the same age group.

One of the reasons mentioned by a number of employers for age discrimination is the practice of promotions from within a company. This desirable policy, which is to the benefit of a company's employees, usually results in the filling of openings by promotion. Sometimes one opening means a series of promotions right down the line, leaving a vacancy at the lowest or beginner's earning range. Frequently, say employers, a person in his thirties or forties is unwilling to start at the bottom or cannot afford to take the wages or salary offered. Therefore it seems natural to fill the position with a young worker.

Employers explain that occasions arise where no qualified employee is available for promotion. An experienced applicant may then be sought outside the company and a qualified person may get preference if he or she is past 40 because of maturity and experience. These cases, however, seem to be the exception rather than the rule.

There is some reluctance among employers to hire applicants who are too old for entrance to a pension plan or whose term of service would be too short to build adequate pension benefits. Some employers report attempts to deal with this problem in a practical way. They have instituted special savings plans by payroll deduction for such employees. The funds accumulated are invested in bonds, annuities or other form of security to provide a compensating cushion of assets upon retirement. In some instances employers supplement these funds by contributions. In others they do not.

Several employers reported raising retirement ages to 67, 68 and, in a few cases, to age 70. Others stated their retirement policy was flexible, permitting capable employees to continue working for years past normal retirement age.

A considerable number of employers said that their particular pension plan offered no obstacle either to the hiring of older workers or their retention past normal retiring age.

Mechanization and Automation in Offices

Little doubt that introduction of electronic computers for data handling will bring profound changes to office work and to employment outlook for clerical workers. ILO committee studies effects of office mechanization and automation

Within the past decade a revolutionary development has been taking place in office work as a result of the introduction of electronic computers for the handling of data. The probable effects of this new development upon the clerical working force is causing much concern.

Reliable information on the subject is meagre. There can be little doubt, however, that automation will bring profound changes to office work and to the employment outlook for office occupations.

Women, who have a special stake in this situation because so many of them are engaged in office work, will have a great interest in the special consideration given to the effects of mechanization and automation in offices at a recent meeting of the ILO Advisory Committee on Salaried Employees and Professional Workers.

The background papers for this discussion are to be published in early issues of *International Labour Review*, an ILO monthly publication. They analyse the functions of the office and its changing manpower needs. The effects of mechanization are dealt with both in early stages and in the more recent phase following the adoption of highly complex machines that carry out a sequence of operations. Against this background the report discusses the introduction and gradual spread of automation in offices and its impact on office work and office workers.

The aim of both mechanization and automation is to reduce clerical costs. Early labour-saving devices such as the typewriter and the adding machine, which relieved a good deal of laborious manual work, had little effect on the need for clerical manpower. However the later highly mechanized systems have resulted in economies in staff requirements and reduced "the persistent problem of personnel procurement." Yet "the productivity increases made possible by mechanization have apparently barely kept pace with the increasing volume of work."¹

Whether the effects of automation will be similarly reassuring remains an urgent question, however, since "potential manpower economies in routine clerical work are vastly greater where electronic equipment

is used than under conventional mechanized systems."² Various points of view are advanced. For example, the belief is widely held that the "computer-derived technologies" will create a major source of new employment. At the same time it is emphasized that "the swollen ranks of the clerical work force, which has grown so rapidly since the beginning of the century, may experience an equally rapid decline."³

Particularly pertinent is this observation: "Obviously, all office workers will not be affected to the same extent; some occupations will hardly be touched at all—particularly jobs dealing directly with the public, or requiring reflection, as in answering correspondence . . . machine operators, of every description, will also be in continued demand, since many of these are required in a fully automated data-processing installation as well as with older types of mechanized equipment. Those most affected will undoubtedly be the class of workers possessing one of the traditional clerical skills—bookkeeping, filing, accountancy, invoicing, etc.—and all the semi-skilled workers who have learnt to do the routine manual operations connected with this work. For these workers, job opportunities are bound to diminish as this is the area of work directly taken over by the machines . . . How far this results in unemployment will depend, not only on the economic possibilities for the absorption of displaced workers, but also on their own adaptability and the training facilities which they are offered."⁴

The problem must be tackled on many fronts. By no means the least requirement is "a new conception of vocational training as a continuous process rather than as a single initial investment at the beginning of a clerical career."⁵

50 Years Ago This Month

Enactment of Workmen's Compensation Act by Manitoba Legislature recommended by Royal Commission. Toronto police force enlarged so that policemen might have two off-duty days a month. Domestic help reported scarce in Ottawa district

Enactment of a Workmen's Compensation Act by the Legislature of Manitoba was recommended in the report of a Royal Commission published in March 1910 and summarized in the *LABOUR GAZETTE* of April 1910. The Commission recommended that the Act should apply to all employers of five or more workmen, that the compensation should be paid by the employers, and that the amount should not exceed half the diminution in the wage-earning capacity of the victim in non-fatal cases, and \$1,500 in fatal accidents.

The Commission recommended that the right to the full amount of compensation in non-fatal accidents not become effective until after the second month of employment, if the injured person were other than a journeyman tradesman working at his own trade. For the first month he would be entitled to 25 per cent of the diminution in his earning power, and in the second month to 40 per cent.

In cases of total and permanent disability or death, the recommendation was that negligence not be a bar to recovery of compensation, except when the victim was drunk at the time the accident occurred.

It was proposed that compensation in fatal accidents be paid only to dependents resident in the province at the time of the accident, and in non-fatal accidents, only as long as the recipient was living in the province.

Another recommendation was that compensation be paid only when disability lasted for more than two weeks.

A substantial deposit in cash or bonds should be made with the Government by all companies doing accident and liability insurance business in the province, and the companies should be required to make regular returns to the Government similar to those then being made to the Dominion Government by life insurance companies, the Commission recommended.

In Toronto, the police force was increased by 58, bringing the total strength to 475, in order that the man might be able to have two days a month off duty.

In Ottawa, domestic help was reported to be the scarcest kind of labour in the district. The local National Trades and

Labour Council dealt with the problem and recommended "that more comforts be provided for servants in the homes of their employers."

The Ottawa Public School Board was reported to have raised the maximum salary for principals holding first-class certificates from \$1,800 to \$2,000. The report said that a corresponding increase had been given to teachers in the lower grades two years before.

A police magistrate in Ontario fined two men for calling strikebreakers "scabs". The magistrate said, "I want it to be distinctly understood that I object to that word."

At the end of March a conciliation board reported in a dispute between the British Columbia Copper Company, Greenwood, B.C., and the Greenwood Miners' Union, No. 22, of the Western Federation of Miners.

The dispute, the *LABOUR GAZETTE* said, arose when the union informed the company that "unless every man (except officials and shift-bosses) working in the mines and smelter, under our jurisdiction, has a paid-up card in our union by noon, the 11th of January, 1910, we will go out on strike and refuse to work with the non-union men."

The majority report of the board held that there was no justification whatever for the union's demand, and that if the company acceded to it, it "would be most unjustly discriminating against those of its employees who do not belong to the Western Federation of Miners."

The union's nominee, however, in a minority report, disagreed with this view. He said that it was difficult for those not familiar with local conditions to gain a thorough understanding of the issue involved. Briefly stated, he said, the controversy had arisen out of an attempt by the miners' union to maintain its jurisdiction against the encroachments of a so-called "Electricians' Union". He contended that the union had taken the only possible course to protect itself, and that the miners' stand against the formation of dual unions in the industry was absolutely correct and in the interests of both the workmen and the industry.

TEAMWORK in INDUSTRY

One of Canada's oldest practitioners of joint consultation—the Labour-Management Production Committee at the Kitchener meat packing plant of Burns and Co. (Eastern) Ltd.—is having its 16th birthday this year.

Interviewed recently, spokesmen for the company and Local 139 of the United Packinghouse Workers of America reported on the progress the committee has made through its plant housekeeping, safety and suggestion programs, and added comments on what the group has achieved in the related fields of employer-employee relations and communications.

Committee members assist in maintaining high standards of plant cleanliness by keeping their fellow-employees constantly reminded of company procedures and regulations.

A variety of approaches is used in promoting safe working conditions and habits for the 650 employees. Safety posters are on display in a number of prominent locations, and there are periodic safety drives to keep awareness at a healthy pitch. Committee members team up with plant foremen to lend the program impetus by keeping a watchful eye on the safety practices of their fellow employees. Promotion of safe driving campaigns for driver-salesmen operating in and out of Kitchener also receives a great deal of attention in both union and management quarters.

Biggest and most successful of the joint ventures undertaken by labour and management at Burns is the suggestion award program. When only eight suggestions were offered by employees in 1958, the production committee decided it was time to overhaul the whole system. Although the revitalized suggestion program has been operating only since January 1959, 40 suggestions were received in the first 10 months of the year.

George Imhoff, President of Local 139 of the United Packinghouse Workers of America, member of the LMPC, and a Burns employee for 19 years, was asked for a statement on the value of joint consultation from the union's point of view.

Replied Mr. Imhoff: "A Labour-Management Production Committee is a marvellous thing to have in a plant for promoting good working relations between workers and management. Our committee has helped

us to iron out a lot of production problems. Because we all realize its value, it has received a lot of close co-operation and support from both the company and the union.

"I joined the committee last May," continued Mr. Imhoff, "but before that, like everyone else, I knew what it was doing. My honest opinion... is that no plant should be without one. I would even go so far as to say that any sizeable plant needs such a committee for its successful operation."

Personnel manager H. I. "Bert" Longworth believes that all phases of union-management co-operation at Burns—the teamwork being demonstrated in the fields of product quality, plant housekeeping, safety and suggestions, for example—are making a great contribution to production efficiency.

"In the 16 years that have elapsed since it was first organized," said Mr. Longworth, "our Labour-Management Production Committee has been a continuous help in developing co-operation... Between the two of us we operate an LMPC that has done, and is doing, a good job."

* * *

Management and employees of Crystal Dairy Limited, a pioneer company in Lethbridge, Alta., recently celebrated the firm's 50th anniversary by sponsoring an "Open House" on four successive afternoons and evenings.

Members of the staff returned to work each evening so that interested families and friends, together with the general public, could see the plant in operation.

The success of this venture was due mainly to the firm's Labour-Management Production Committee, whose membership is composed of representatives from both management and Local 987 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers (CLC).

The members formed subcommittees to look after publicity, invitations, reception of guests, plant tours and refreshments. Route salesmen issued invitations to all their customers to attend the "Open House" on a certain night, and they themselves were present to receive their guests.

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during February. The Board issued four certificates designating bargaining agents, ordered one representation vote and rejected seven applications for certification. During the month the Board received eleven applications for certification.

Applications for Certification Granted

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed aboard the motor vessels *Teco*, *P.W.* and *Cloverleaf*, operated by the Packers Steamship Company Limited, Vancouver (L.G., Feb., p. 170).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed aboard tugs operated by Straits Towing Limited, Vancouver (L.G., Feb., p. 170).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of deckhands and cook-deckhands employed aboard tugs operated by Stone Brothers Limited, Port Alberni and Vancouver. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Mar., p. 268) (See also item 7 of "Applications Rejected," below).

4. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard tugs operated by McKenzie Barge & Marine Ways Limited, Vancouver. The Canadian Brotherhood of Railway, Transport and General Workers intervened (L.G., Mar., p. 268) (See also item 3 of "Applications Rejected," below).

Representation Vote Ordered

United Steelworkers of America, applicant, Algom Uranium Mines Limited, Elliot Lake, Ont., respondent (L.G., Feb., p. 170). The vote affected a unit of office,

clerical and technical employees. (Returning Officer: A. B. Whitfield).

Applications for Certification Rejected

1. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Canadian National Steamship Company Limited, respondent, and the Seafarers' International Union of North America, Canadian District, intervener (unlicensed personnel *S.S. Prince George*, Vancouver) (L.G., Mar., p. 268). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board.

2. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Kingcome Navigation Company Limited, Vancouver, respondent and the Seafarers' International Union of North America, Canadian District, intervener (unlicensed personnel) (L.G., Mar., p. 268). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board (See also item 6).

3. Canadian Brotherhood of Railway, Transport and General Workers, applicant, McKenzie Barge & Marine Ways Limited, Vancouver, respondent, and the Seafarers' International Union of North America, Canadian District, intervener (unlicensed personnel) (L.G., Mar., p. 268). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board (See also item 4 of "Applications Granted," above).

4. International Association of Machinists, applicant, Canadian Pacific Railway Company, respondent, and Brotherhood of Railway and Steamship Clerks, Freight

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

Handlers, Express and Station Employees, intervener (garage mechanics in Merchandise Services Department at Vancouver) (L.G., Feb., p. 170). The application was rejected for the reason that the unit of employees for which the application for certification was made was not considered by the Board to be separately appropriate for collective bargaining, being only part of a much larger unit of employees who are employed in similar operations of the Company and who are for the most part already represented by the intervener, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in collective bargaining with the employer.

5. General Truck Drivers and Helpers Union, Local No. 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, Canadian Pacific Railway Company, respondent, Brotherhood of Railway and Steamship Clerks, Freight Handlers,

Express and Station Employees, intervener, and Canadian Brotherhood of Railway, Transport and General Workers, intervener (truck drivers in Merchandise Services Department at Vancouver) (L.G., Feb., p. 170). The application was rejected for the reason that the unit of employees for which the application for certification was made was not considered by the Board to be separately appropriate for collective bargaining, being only part of a much larger unit of employees who are employed in similar operations of the company and who are for the most part already represented by the intervener, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in collective bargaining with the employer.

6. Seafarers' International Union of North America, Canadian District, applicant, Kingcome Navigation Company Limited, Vancouver, respondent, and Canadian Brotherhood of Railway, Transport and General

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Workers, intervener (unlicensed personnel) (L.G., Mar., p. 269). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board at a date subsequent to the date of the application (See also item 2).

7. Seafarers' International Union of North America, Canadian District, applicant, Stone Brothers Limited, Port Alberni and Vancouver, respondent, and Canadian Brotherhood of Railway, Transport and General Workers, intervener (unlicensed personnel) (L.G., Mar., p. 269). The application was rejected for the reason that it was not supported by a majority of the employees eligible to vote in the representation vote conducted by the Board at a date subsequent to the date of the application (See also item 3 of "Applications Granted," above).

Applications for Certification Received

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of bus drivers employed by the Canadian National Railways at Kamloops, B.C. (Investigating Officer: D. S. Tysoe).

2. International Longshoremen's and Warehousemen's Union, Local 502, on behalf of a unit of longshoremen employed in the Port of New Westminster by the Merchants Cartage Company Limited of Vancouver (Investigating Officer: G. R. Currie).

3. L'Union des Artistes, on behalf of a unit of performers employed by the Canadian Broadcasting Corporation in the province of Quebec (Investigating Officer: C. E. Poirier).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of grain door repairmen employed by the Canadian National Railways at Prince Rupert, B.C. (Investigating Officer: D. S. Tysoe).

5. Canadian Air Line Pilots Association, on behalf of a unit of pilots employed by Quebecair Inc., Rimouski, Que. (Investigating Officer: C. E. Poirier).

6. International Union of Operating Engineers, Local 882, on behalf of a unit of stationary engineers employed by the Saskatchewan Wheat Pool at Vancouver (Investigating Officer: G. R. Currie).

7. Truck Drivers, Dairy Workers, Warehousemen and Auto Service Employees Union, Local 998 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen & Helpers of America, on behalf of a unit of longshoremen employed by Western Terminals Limited at Corner Brook, Nfld. (Investigating Officer: W. L. Taylor).

8. International Longshoremen's and Warehousemen's Union, Local 505, on behalf of a unit of longshoremen employed by the Canadian Stevedoring Company Limited in the loading and unloading of deep sea vessels at Prince Rupert, B.C. (Investigating Officer: D. S. Tysoe).

9. Saskatchewan Teamsters' Local No. 565, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers and warehousemen employed by Milne's Van & Storage Limited and operating in and out of Regina, Sask. (Investigating Officer: W. E. Sproule).

10. Canadian National Railways Police Association, on behalf of a unit of railway police employed by the Canadian National Railways (Investigating Officer: Rémi Duquette).

11. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of a unit of employees employed by various terminal elevator companies at Fort William and Port Arthur, Ont., represented by the Lakehead Terminal Elevators Association (Investigating Officer: J. S. Gunn).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During February, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Canadian Pacific Air Lines, Limited, Vancouver, and Canadian Air Line Pilots Association (Conciliation Officer: G. R. Currie).

2. Stanleigh Uranium Mining Corporation Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (production employees) (Conciliation Officer: F. J. Ainsborough).

3. Consolidated Denison Mines Limited, Spragge, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough).

4. Can-Met Explorations Limited, Spragge, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough).

5. Quebecair Inc., Rimouski, Que., and International Association of Machinists (Conciliation Officer: R. Duquette).

6. United Grain Growers Ltd., Pacific Elevators Limited, Alberta Wheat Pool, Saskatchewan Wheat Pool and Burrard Terminals Limited, Vancouver, and Grain Workers Union, Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (Conciliation Officer: G. R. Currie).

7. TransAir Limited, Winnipeg, and International Association of Machinists (Conciliation Officer: J. S. Gunn).

8. John Kron & Son Limited, Winnipeg, and General Drivers, Warehousemen and Helpers, Local 979 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: J. S. Gunn).

9. Association of Lake Carriers (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N. M. Paterson & Sons Limited, Hall Corporation of Canada and Carryore Limited) and Seafarers' International Union of North America, Canadian District (Conciliation Officer: R. Duquette).

Settlements Reported by Conciliation Officers

1. The Yukon Consolidated Gold Corporation Limited, Vancouver, B.C., and

Dawson Miners Union, Local 564 of the International Union of Mine, Mill and Smelter Workers (Conciliation Officer: G. R. Currie) (L.G., Feb., p. 171).

2. The St. Lawrence Seaway Authority, and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: F. J. Ainsborough) (L.G., Jan., p. 55).

Conciliation Boards Appointed

1. Canadian Broadcasting Corporation, and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada (L.G., Dec. 1959, p. 1301).

2. Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; Midland Railway of Manitoba, and negotiating committee representing the Associated Non-Operating Unions (no conciliation officer appointed previously).

3. Stanleigh Uranium Mining Corporation, Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (production employees) (see above).

4. Canadian National Railways M.V. *Bluenose* and Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (L.G., March, p. 270).

Union Shop Provisions Multiply in U.S. Agreements

Union shop provisions in collective agreements have been spreading in the United States during the past five years, mainly by conversion from maintenance of membership provisions, according to a survey conducted by the U.S. Bureau of Labor Statistics. The survey covered contracts affecting 1,000 workers or more and in effect during 1958-59. The total number of employees covered was 7,500,000.

The survey showed that 74 per cent of the workers were affected by union shop provisions, 7 per cent by maintenance of membership clauses, and 19 per cent by agreements that merely recognized the

union as bargaining agent. A previous similar study by the Bureau, undertaken in 1954, showed that 64 per cent of the workers were under union shop contracts, 17 per cent were affected by maintenance of membership provisions, and 19 per cent by mere recognition clauses.

In the latest survey, about 20 per cent of the agreements with union shop provisions were found to allow exemption from these provisions for certain groups of employees, usually those who were not union members at the date of the contract.

Less than 10 per cent of the agreements provided for preferential hiring of union members.

LABOUR LAW

Legal Decisions Affecting Labour

Labour Relations Board's decision to allow company to prosecute union upheld by Quebec Court of Queen's Bench. Action brought by expelled members against union dismissed by B.C. Supreme Court because internal remedies not exhausted

In Quebec, the Court of Queen's Bench dismissed two appeals brought by the same union and involving the same dispute. In the first appeal, the Court ruled that the consent to prosecute issued by the Labour Relations Board was an administrative decision that did not require for its validity previous hearing of the party against which the consent to prosecute was granted. In the second, the Court rejected the union's application to enjoin penal proceedings against it in a lower court, finding such proceedings within that court's jurisdiction.

In British Columbia, the Supreme Court found that a court action against a union brought by expelled members of the union was premature because the internal remedies for appeal provided by the union constitution had not been exhausted. Also, the Court ruled that a discharge of employees by an employer following their expulsion from the union for dual unionism did not actually contravene Section 6 (2) of the Industrial Relations and Disputes Investigation Act.

Quebec Court of Queen's Bench . . .

. . . rules granting of permission to prosecute is within jurisdiction of Labour Relations Board

On February 19, 1959 the Quebec Court of Queen's Bench dismissed two appeals from two judgments of the Superior Court involving the same union and the same labour dispute. In one appeal the Court, confirming the Superior Court's decision, ruled that the Labour Relations Board's decision allowing the company to prosecute the union for breach of the Labour Relations Act was not an act of judicial character but was within the Board's administrative powers and jurisdiction. In the second appeal the Court confirmed the Superior Court's judgment refusing the issue of the writ of prohibition that would enjoin the proceedings against the union in the Court of Sessions of the Peace.

In March 1958, Pert Hosiery Ltd. of Montreal informed the Labour Relations Board that its employees, members of *Syndicat du bas façonné et circulaire de Montréal Inc.*, were on strike illegally, and, pursuant to Section 49 of the Labour Relations Act, asked for the consent of the Board to prosecute the union. The Board then wired the union informing it of the complaint; the telegram was acknowledged.

On April 1, the Board informed the union that it had rendered its decision on March 31, authorizing the company to prosecute the union for breach of Sections 24, 43, 46 and 47 of the Labour Relations Act.

On April 14, a writ of summons was issued in the Court of Sessions of the Peace addressed to the union. Then, the union took action to have the Board's decision annulled as having been rendered in contravention of the rule *audi alteram partem*, and applied for a writ of prohibition enjoining the Court of Sessions of the Peace from proceedings against it.

The action in nullity was tried by Mr. Justice Perrier of the Superior Court who on July 15, 1958 rejected the application to declare the Board's decision null.

The union alleged lack or excess of jurisdiction on the part of the Board in issuing the consent and stressed the fact that the Board did not bring to its attention the complaints that the company presented when asking for permission to prosecute. Also, the union alleged that the Board did not give it an opportunity to present its views regarding the dispute before rendering the decision.

The Superior Court held that the Board in granting the permission to prosecute simply exercised one of its administrative powers conferred on it by Sec. 49 of the Act, thus the Board acted within the limits of its jurisdiction. The Court added that the Board, after receiving an application for consent to prosecute, is not bound to make either an investigation as to the merits

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

of the complaints or to hear the parties involved in the dispute. Far from exercising a judicial power, the Board, by granting authorization to prosecute, simply renders an administrative act which allows the interested parties to submit their respective grievances to competent tribunals which will consider the respective rights of the parties concerned. For these reasons, the Superior Court rejected the union's action.

The union appealed Mr. Justice Perrier's decision to the Court of Queen's Bench. There the union argued that the authorization to prosecute is not only an act of administration but also has a character, if not judicial, at least quasi-judicial. In support of its claim the union referred to the decision of the Supreme Court of Canada in *Alliance des professeurs catholiques de Montréal v. Commission de relations ouvrières de la Province de Québec* (L.G. 1953, p. 1177). The Court, however, held that there was an essential difference between the case under review and the *Alliance* case. In the latter case, when the Board revoked a certification order without notifying and hearing the union in question, it rendered a judicial decision and deprived the union of a right that was previously legally conferred upon it.

In the case at bar, the consent to prosecute could, pursuant to Sec. 49 of the Act, be granted either by the Board or by the Attorney General. The Court held that such a consent was a purely administrative act. Supposing that the company, instead of approaching the Board, had asked the Attorney General for permission to prosecute, then, no one would expect that the Attorney General, before rendering his decision, would have to ask the union to appear before him to attempt to justify the stoppage of work. The Board, in this respect, is in the same situation as the Attorney General. The consent of the Board to start penal proceedings before competent courts is an administrative act.

The Court unanimously dismissed the union's appeal to annul the Board's consent to prosecute.

The union's second appeal was from the decision of Mr. Justice Deslauriers of the Superior Court who, on August 28, 1958, rejected the union's demand for a writ of prohibition enjoining the Court of Sessions of the Peace from penal proceedings against the union.

The union applied to the Superior Court for the writ of prohibition in order to stop the proceedings before the Court of Sessions of the Peace pending its first appeal to the Court of Queen's Bench, from the judgment of Mr. Justice Perrier. The union based its

case on the contention that the Board, giving its consent for prosecution without hearing the union, exceeded its jurisdiction and, consequently the proceedings before the Court of Sessions of the Peace were also outside the Court's jurisdiction.

As the Court of Queen's Bench rejected the union's appeal in the action to annul the Board's consent for prosecution, for basically the same reasons it also dismissed the union's second appeal. *Syndicat du bas façonné et circulaire de Montréal Inc. v. Commission de relations ouvrières de la province de Québec*, and *Syndicat du bas façonné et circulaire de Montréal Inc. et autres v. Cour des sessions de la paix du district de Montréal* (1960) R.J. B.R. No. 1, p. 134.

British Columbia Supreme Court...

... finds discharge of employees after expulsion from union not in contravention of I.R.D.I. Act

On October 13, 1959, Mr. Justice Wilson of the British Columbia Supreme Court ruled that where there is no provision in a closed shop agreement between a company and a union requiring discharge of an employee for dual unionism, and an employee is discharged consequent upon his expulsion from the union for dual unionism (as provided by the union constitution), his discharge is not in violation of Section 6 (2) of the Industrial Relations and Disputes Investigation Act.

Also, the Court held that it was premature for the expelled members of a union to bring a court action before the internal remedies for appeal provided by the union constitution were exhausted.

The Seafarers' International Union charged five of its members with advocating and giving aid to the policies of a hostile union, activities which were prohibited under the union's constitution under penalty of expulsion.

On August 5, 1959, a union trial committee was elected to try these charges and the persons concerned were notified that a trial would take place on August 11 in Vancouver. The men served on the vessel *Clifford J. Rogers*, which was due to leave Vancouver on August 6 and to return August 17, a fact known to the trial committee.

The men instructed their solicitors to apply for an adjournment of the trial to a date after their return, and sailed on August 6.

The trial took place on August 11. The trial committee considered the application for adjournment but decided to proceed with the trial of the five accused. The

accused men were tried *in absentia* and four of them were found guilty as charged and a recommendation was made for their expulsion from the union in accordance with the union's constitution. The recommendation for expulsion was adopted at a meeting of the union on August 17.

However, a second meeting of the union was held on September 1. This meeting was attended by the accused members who, in the opinion of Mr. Justice Wilson, submitted to the jurisdiction of the meeting insofar as that meeting purported to deal with the refusal of an adjournment by the trial committee; they asked for a new trial. This was apparently refused and the meeting then confirmed the findings of the trial committee and expelled the accused members.

The union constitution provides for a further appeal to the union headquarters at Montreal. The expelled members appealed, restricting the appeal to the refusal by the trial committee of an adjournment.

Article 17, Section 7 of the union constitution provides: "No member shall file any complaint, suit or action in any Provincial or Federal Court until the remedies provided in this constitution have been exhausted."

Apparently, before the internal remedies for appeal were exhausted, the expelled members brought a court action against some members of the union representing the union to establish that they still were members of that union, and at the same time they sued the British Yukon Navigation Co. Ltd., which had discharged them from employment following their expulsion from the union, for wrongful dismissal.

Mr. Justice Wilson was presented with two sets of arguments.

The union argued that, following the *White v. Kuzych* case (L.G. 1951, p. 1265), where a clause of union constitution similar to that of Art. 17, Sec. 7 was involved, the court action preceding the hearing of the appeal by headquarters of the union was premature and should be dismissed.

On the other hand, the expelled members of the union argued that the improper refusal of an adjournment deprived the trial committee of jurisdiction so that, following the *Orchard v. Tunney* case (L.G. 1957, p. 1214), the expulsion was *ultra vires* and unlawful.

It appeared to Mr. Justice Wilson that the issue of the case depended on whether or not a decision as to adjournment was a "finding or judgment" within the meaning of Art. 17, Sec. 4 of the union's constitution that could be changed or rejected by a regular meeting under the same section and

was subject to appeal under Art. 17, Sec. 6, which reads, in part: "Any member having a grievance with regard to his trial and sentence thereof" may appeal.

Mr. Justice Wilson held that a decision as to the granting or refusal of an adjournment was "a grievance with regard to his trial" and appealable. Consequently, he thought that the wording of Art. 17, Sec. 6 made the decision of the trial committee subject to internal remedies by appeal as provided by the union constitution. This situation confined him within the narrow bounds of the *White v. Kuzych* case and he declared the court action as premature.

Next, Mr. Justice Wilson dealt with the second issue of the case, namely, whether the dismissal from employment of the expelled men was wrongful under the I.R.D.I. Act.

Subsection (1) of Section 6 of the Act provides that a collective agreement may contain a clause requiring a closed shop, that is, membership in a specified union as a condition of employment. Subsection (2) says that no collective agreement shall contain a provision forbidding membership in or support of a union other than a specified union, and requiring an employer to discharge an employee for dual unionism.

In Mr. Justice Wilson's opinion, the intention of Subsection (2) seems to be to enable an employee to belong to the accredited union while at the same time belonging or supporting another union. This attempt to give employees freedom of choice appeared to Mr. Justice Wilson to be laudable, but was the desired object achieved?

The collective agreement between the Seafarers' Union and British Yukon Navigation Company contained no clause that would contravene Sec. 6 (2) of the Act. But it did contain a clause creating a closed shop, as allowed by Sec. 6 (1) of the Act.

Article 1, Section 2 (a) of the collective agreement reads:

The Company agrees to maintain in their employ only members of the union in good standing. "Good standing" is here interpreted to mean that a member is not in arrears as to union dues or has not been expelled by the union.

Following the expulsion of the four members, the union wrote the company demanding their dismissal, pursuant to the above clause, and the company complied with this request.

It should be noted that the men had been discharged because of the sole fact of their expulsion by the union. As they were expelled by the union for giving support to another union, they have, in effect, been discharged because of their support or

allegiance to another union and the presumed intention of Sec. 6 (2) of the Act was perhaps defeated.

The resulting situation would indicate the use of certain methods by the union to evade the consequences of a statutory provision but the method used was not necessarily illegal.

A passage from *Maxwell on the Interpretation of Statutes*, 10th ed., pp. 114 and 117, seemed to be relevant to the issue at bar:

The office of the judge is, to make such construction as will suppress the mischief, and advance the remedy, and to suppress all evasions for the continuance of the mischief. To carry out effectually the object of a statute, it must be so construed as to defeat all attempts to do, or avoid doing, in an indirect or circuitous manner that which it has prohibited or enjoined.

It is, however, essential not to confound what is actually or virtually prohibited or enjoined by the language with what is really beyond the enacting part, though it may be within the policy, of the Act, for it is only to

the former case that the principle under consideration applies, and not to cases where, however manifest the object of the Act may be, the language is not co-extensive with it. An Act of Parliament is always subject to evasion in this sense, for there is no obligation not to do what the legislature has not really prohibited, and it is not evading an Act to keep outside it.

Mr. Justice Wilson noted that in the case under review there was (a) no illegal provision in the collective agreement, (b) a legal expulsion, (c) a legal right to demand the discharge of the expelled members. There was no act that he could brand as unlawful. The provisions of the collective agreement did not contravene the statute, and the provisions of the union constitution are not governed by the statute. Therefore, he concluded, the spirit of the law might have been frustrated, but the expressed provision of the law was complied with.

The court dismissed the action against the union. *Jurak et al. v. Cunningham et al.* (1960), 21 D.L.R. (2), Part 1, p. 58.

Recent Regulations under Provincial Legislation

Ontario issues new gas transmission and distribution pipe line code. Ontario and British Columbia both amend regulations dealing with stationary engineers

In Ontario, the new gas transmission and distribution pipe line code recently issued makes it mandatory for a gas company to file its plan of operating and maintenance procedures with the Ontario Fuel Board. Also in Ontario, new experience requirements were laid down for applicants for stationary engineers' certificates who have engineering degrees.

In British Columbia, the regulations dealing with stationary engineers under the Boiler and Pressure-Vessel Act were amended.

Other regulations deal with procedures for councils of arbitration in Quebec and apprentices in the sheet metal trade in Alberta.

Alberta Apprenticeship Act

Regulations under the Alberta Apprenticeship Act amending the rules for the sheet metal trade were gazetted on January 30 as Alta. Reg. 3/60.

One new provision sets a minimum educational requirement for apprentices in the sheet metal trade, providing that every apprentice must have completed Grade 9 or, in the opinion of the Director, its equivalent.

Another new provision permits persons with at least four years experience in the trade to apply for examination for a certificate of qualification. Previously, only

persons with four years' experience prior to May 1, 1955 were eligible.

British Columbia Boiler and Pressure-Vessel Act

The regulations under the British Columbia Boiler and Pressure-Vessel Act respecting stationary engineers were amended by B.C. Reg. 464/59, gazetted December 24.

The definition of "high-pressure boiler" was amended to cover steam boilers over 2 h.p. with a working pressure over 15 p.s.i. instead of boilers over 3 h.p., the result being that a qualified operator is now required for some steam boilers not previously covered.

Also, the definition of "low-pressure heating plant" was changed to mean any heating steam boiler in which the maximum working pressure does not exceed 15 p.s.i. Formerly, it applied to boilers where the maximum working pressure permitted was 15 p.s.i. for steel boilers and 10 for cast-iron boilers.

The duties of a Boiler Operator, Class A, were changed to permit him to take charge of a high-pressure boiler used for heating purposes only if not more than 100 h.p. Formerly, he was limited to high-pressure boilers of 50 h.p. or under.

Another new provision states that the owner of a high-pressure steam plant must not allow the engineer in charge to perform any duty unrelated to its operation if an

inspector considers the safety of the plant may be endangered.

Newfoundland Apprenticeship Act

Amendments to the regulations under the Newfoundland Apprenticeship Act clarifying the provisions respecting permits in the auto body and motor vehicle repair trade were gazetted January 26.

The regulations issued last fall (L.G., Dec. 1959, p. 1321) provide that, subject to certain exceptions, no person may work as an auto mechanic or auto body repair man after May 1, 1960 unless he is the holder of a valid certificate of qualification in the trade. The exceptions are (1) apprentices; (2) persons between 16 and 21 years who have been given special permission to work up to three months in any year and (3) persons with experience in the trade who have been granted permits to work without a certificate of qualification.

Permits to work without a certificate of qualification may be granted to persons who were engaged in the auto body and motor vehicle repair trade when the regulations came into force or within the previous year, provided applications are submitted within one year after May 1, 1960.

Permits issued before December 31, 1960 will expire on that date. Permits issued later must be renewed every two years. An application for renewal must be submitted to the Director of Apprenticeship within three months before or within one year after expiration of the permit. If not submitted within the prescribed period, a permit to work without a certificate of qualification will not be renewed.

Ontario Fuel Board Act

The Ontario Fuel Board recently issued a new gas transmission and distribution pipe line code, which was gazetted on February 6 as O. Reg. 20/60.

The new provisions replace the special rules for gas service lines issued in 1958 and the regulations adopting, with certain modifications, the CSA Code for Gas Burning Appliances and Equipment and the Canadian Gas Association Code for pressure piping (L.G., Feb. 1959, p. 167).

As well as some general provisions regarding reports and records, the new code sets out minimum standards for material and equipment, piping system components, compressor stations, service lines and valves. It also lays down requirements with respect to welding, the installation and testing of pipe lines, the control and limiting of gas pressure and operating and maintenance procedures.

The regulations apply to gas transmission and distribution pipe lines but do not cover any of the following: heat exchangers; piping beyond the outlet of a consumer's meter; pipe lines for oil or other liquids; piping installed to withstand metal temperatures above 450°F; casing and tubing in gas or oil wells; piping in a gas manufacturing plant, industrial plant, mine, oil refinery or other processing plant installed as part of a piping system.

General Provisions

No person may construct, alter, install or remove pipe lines, plant machinery or equipment for the transmission or distribution of gas except in accordance with the regulations.

Every company subject to these regulations must file with the Board its plan of operating and maintenance procedures; plans to scale of all pipe lines used primarily for transmitting gas constructed since January 1, 1957; and its current typical plans, typical construction specifications and typical material specifications for the construction of all types of pipe lines and consumer meter and regulator settings.

Plans of pipe lines and service lines are to be kept at a maintenance or operating office or shop near the pipe line and made available for inspection by the Board.

A survey of the work to be done in connection with installing the required service shut-offs on service lines must be made and a report sent to the Board, together with plans and schedules for completing the work. Progress reports are to be sent in monthly.

At the beginning of its fiscal year, every company must submit a report showing the pipe lines it proposes to install during the year.

Upon the request of the Board or an authorized inspector, every company must make available for inspection any plan, survey, specification, procedure, record, report or radiographic examination required under these regulations.

Records of leakage surveys are to be kept for seven years and radiographic examination results for at least two years from the date of completion of the pipe line or installation.

Materials and Equipment

The regulations stipulate that all material that becomes a part of a piping system must be suitable and safe for the conditions under which it is used.

Where the material or equipment is depended upon for safety, material that does not meet the specifications may not be used without the approval of the Board. If safety

is not a factor, such material may be used, subject to certain conditions, provided it is first tested and found suitable.

If no specifications are laid down, material may not be used unless recommended by the manufacturer and tested before use and found to be suitable, safe and in accordance with good engineering practice.

The regulations also stipulate that where piping systems are installed to withstand metal temperatures below 0°F, such additional precautions must be taken in material and design as may be necessary to ensure public safety.

Welding

The regulations prohibit any person from making a weld in any pipe or component of a piping system unless he is qualified to do welding under the Boilers and Pressure Vessels Act.

They further provide that in making a particular weld the procedure to be followed must be one approved for use on a pressure vessel by the Chief Inspector under the Boilers and Pressure Vessels Act.

Piping System Components; Fabrication Details

All components of piping systems must be designed and used in accordance with good engineering practice to withstand operating conditions and with good standards of safety. Detailed requirements are laid down with respect to fittings, prefabricated units, above-ground piping and buried piping.

Design, Installation and Testing

As well as setting out the precautions to be taken during the construction stage to protect the pipe line from natural hazards and damages from external forces, the regulations specify the safety measures to be followed wherever public safety might be endangered as a result of corrosion. They stipulate that a steel pipe line must be investigated for its resistance to external corrosion and approved protective measures taken where necessary. Companies are also required to make provision for suitable inspection by qualified persons during construction.

During installation of a pipe line care must be taken not to damage the pipe in handling, hauling, unloading and placing. Also, adequate inspection must be provided to minimize the possibility that gouged, grooved or dented pipe is installed and to make other special tests and inspections. All hot taps are to be installed by trained and experienced crews.

In addition to laying down specific safety procedures to guard against explosions and fires, the regulations provide that whenever the accidental ignition in the open air

of a gas-air mixture is likely to occur, precautions are to be taken to prevent personal injury or property damage.

Among other tests, pipe lines and related equipment must be tested to ensure that they are gas-tight before being placed in operation to operate at less than 100 psig. Records showing the type of fluid used, test pressure and the duration of the test are to be maintained for the useful life of each pipe line. The regulations further provide that all testing must be done with due regard for the safety of employees and the public.

Compressor Stations

The main compressor building for a gas compressor station must be located far enough from adjacent property to reduce the fire hazard. Enough open space must be provided around the building to permit the than two inches in diameter or equipment. All buildings that house gas piping larger than two inches in diameter or equivalent for handling gas must be constructed of noncombustible materials. Around each compressor station there is to be a fence at least six feet high and with at least two gates located so as to afford a convenient opportunity for escape to a place of safety. Any gates located within 200 feet of any compressor plant building must open outward and be capable of being opened from the inside without a key when the area within the enclosure is occupied.

Every compressor station other than an unattended field compressor station of 1,000 h.p. or less is to be provided with an emergency shutdown system meeting certain specifications. Other protective devices must be installed where specified, the regulations further providing that all emergency valves and controls are to be identified with signs indicating their function. Suitable provision must also be made to prevent fuel or starting air from entering the power cylinders of an engine and actuating moving parts while work is being done on the engine or on equipment driven by the engine.

Control and Limiting of Gas Pressure

In addition to specifying the type of pressure relieving and pressure limiting devices to be provided, and laying down detailed rules with respect to operating pressures, the regulations require periodic inspections to be made while pressure is being increased.

The regulations further state that the arrangement of piping and supports must be designed to provide safety under operating stresses and to provide protection against damage due to unusual service conditions.

Detailed requirements are also laid down with respect to service lines, vaults, pits and valves.

Operating and Maintenance Procedures

Every gas company is required to formulate a plan of operating and maintenance procedures which must include the following: a pipe line patrol program that includes regular surveys for detecting leaks likely to affect public safety; periodic inspections and tests for corrosion; sound procedures for starting, operating and shutting down gas compressor units and for isolating units of piping for maintenance purposes; systematic, periodic inspection and testing of holders, pressure limiting stations, pressure relief devices, pressure regulating stations, valves, and structures housing pressure regulating or pressure limiting equipment.

The regulations stipulate that every company must operate and maintain its facilities in accordance with this plan, modifying it from time to time to conform with changes in operating conditions. Operating and maintenance staff must also be trained to carry out the plan. Detailed records of failures, leaks, repairs, tests, inspections, pressure recording charts, odorant concentration tests and other relevant information must be kept.

If a leak, serious corrosion, or other condition that might endanger public safety is discovered, the defective part must be repaired or replaced immediately.

The regulations set out the procedures to be followed when a service line is abandoned. They further provide that no person may smoke or ignite a spark or flame or permit a flame to burn near a gas compressor station where gas may be present in the atmosphere. They also stipulate that gas that is distributed to consumers through service lines or used for domestic purposes in compressor plants and that does not have a distinctive odour must have an odour added to make it detectable by sense of smell at concentrations of one-fifth of the lower explosive limit or less.

Ontario Operating Engineers Act, 1953

Regulations under the Ontario Operating Engineers Act amending the qualifications for stationary engineers' certificates were gazetted February 20 as O. Reg. 35/60.

Where a person holds an engineering degree from a university, the amendment broadens the definition of "qualifying experience" in respect of stationary engineers' certificates to include training instruction in regular work periods.

New provisions have been added with respect to the minimum qualifying exper-

ience of an applicant for a first, second, third or fourth class stationary engineer's certificate who holds a degree in engineering from a Canadian university, or other university with a course of study considered equivalent by the Board of Examiners. If the applicant has qualifying experience approved by the Board in a high-pressure stationary steam-plant exceeding 18,000 registered h.p. that is generating electricity for the Ontario Hydro, the required experience is now 36 months for first class, 24 for second class, 12 for third class and three months for fourth class. Formerly a graduate in engineering could not get a first class certificate without seven years' qualifying experience.

Also, the minimum age of an applicant for a first class stationary engineer's certificate who holds a degree in engineering is reduced from 28 to 25 years, and the minimum mark required on his examination from 70 to 60 per cent. He must, as formerly, hold an Ontario second class stationary engineer's certificate or other certificate considered equivalent by the Board.

Quebec Trade Disputes Act

New regulations under the Quebec Trade Disputes Act which set higher fees for members of councils of arbitration and include provisions for speeding up procedure were approved by O.C. 88 on January 28 and gazetted February 6.

It is under this Act that councils of arbitration (similar to conciliation boards in other provinces) are appointed when collective bargaining reaches an impasse. A council of arbitration may also be appointed to resolve a dispute arising out of a collective agreement where no provision for the settlement of disputes has been included in the agreement.

The fee for a meeting in connection with the appointment of chairman of a council of arbitration is now \$10 instead of \$5. For each half day's sitting (including an evening sitting), the chairman will now receive \$20 and each of the other members \$10. The fee for each half day of travelling time except travelling in the evening is the same as for a sitting. If members use their own cars, they may be reimbursed at the rate of 10 cents a mile.

In addition to the other expenses, a maximum fee of \$100, including drafting costs, may now be paid to the member who drafts the award and a maximum of \$50 to a person who writes a dissenting opinion.

As before, the regulations also provide that in the case of arbitration under a collective agreement, the fees and expenses

of the members of the council of arbitration except those of the chairman must be paid by the parties involved in the dispute.

They further state that, except by special permission of the Minister or Deputy Minister of Labour, fees may be paid only for sittings held within three months following the date of appointment of the chairman.

Witnesses are entitled to the same fees and expenses as in the Superior Court, except in cases of arbitration under a collective agreement.

The chairman of the council of arbitration may determine the procedure, fixing the time and place for a meeting. He is also directed to refuse any request for delay or postponement that he deems unjustified and to proceed without an arbitrator or witness who, after being notified, has failed to appear.

The regulations also state that once started, procedures must be continuous except where, for very serious reasons, the chairman has ruled otherwise.

Handbook for Operating Engineers Issued by Ontario

The Ontario Department of Labour has published an 86-page *Operating Engineer's Handbook*, mainly for the use of men who want to become operating engineers or to advance to the next class of engineer but containing much valuable information for others who are concerned with the safe and efficient operation of power equipment or with administration of legislation enacted towards that end. It may be obtained free on request to the Department of Labour, 8 York Street, Toronto 1.

The pamphlet points out that it is mandatory for every power plant as defined in the Ontario Operating Engineers Act, 1953, to be operated and maintained by certified personnel. About 5,000 plants are registered in the province, and about 25,000 certified engineers are employed to operate them.

In an introductory section entitled "Why certify stationary and hoisting engineers?" the *Handbook* emphasizes that the operating engineer is the guardian of the potential dangers in power plant operation and that his knowledge, skill and sense of responsibility are also necessary for economy of operation and maintenance of equipment. An employer usually does not know the

qualifications needed by an engineer, and has to be guided by the grade of certificate held by a prospective employee for his power plant.

Other sections set out in convenient form the class of engineer required for the different types of plants, the experience needed by an applicant for examination for the different certificate, and how to apply. Then follows a section on the curricula for the various examinations—a list of the fundamental subjects on which each examination will be based. Text books are also suggested. Some very practical advice on preparing for and writing the examination follows, no doubt based on the experience and observations of the Board of Operating Engineers in their dealings with candidates over the years.

Another section describes the five books the Board has prepared and published "to give guidance to the engineer who is conscious of his responsibility and who is willing to benefit by serious study." The book tells how to obtain them.

The remaining sections set out useful information on a number of subjects, among them "Winter Maintenance of Power Shovels," "Precautions in using Air Tanks," and "Hand Signals for Crane Operations."

23 States Amend Unemployment Insurance Laws in 1959

During 1959 unemployment insurance laws were amended in 23 states of the American Union to provide larger benefits, longer benefit periods, or both. Six states provided for extension of the benefit period during specified emergencies affecting the state.

The maximum weekly benefits were raised in 21 states by amounts ranging from \$2 to \$15. In five states, with nearly a quarter of the total number of employees covered by state unemployment insurance laws, the maximum weekly benefit is now at least \$45. In one of these, California, the maximum is \$55. A maximum benefit of at least \$40 is paid in 16 states which have about 41 per cent of the country's total covered employees. In 14 other states, which have between them 23 per cent of the total insured workers, the maximum benefit is 50 per cent or more of the state's average weekly covered wage.

UNEMPLOYMENT INSURANCE

Monthly Report on Operations of the Unemployment Insurance Act

Number of claimants for unemployment insurance at month-end up between December and January but number of initial and renewal claims received during January smaller than month and year earlier totals, statistics* show. Revenue higher

Claimants† for unemployment insurance on January 29 numbered 782,500, of whom 177,100 were seasonal benefit claimants.

The January 29 total was 14 per cent greater than the total of 685,700 (116,500 seasonal benefit) on December 31, 1959 but slightly less than the total of 785,100 (203,000 seasonal benefit) on January 30, 1959.

Fishermen included in the seasonal benefit claimants on January 29 numbered 25,985; on December 31, 1959 they totalled 17,800, and on January 31, 1959 they numbered 25,445.

Initial and renewal claims for benefit received during January numbered 306,600 compared with 441,600 during December 1959 and 317,500 during January 1959. Initial claims comprised 77 per cent of the total during January. Not all initial claims, however, represented cases of new unemployment, as some were for the purpose of making computations for re-establishing credits.

Benefit periods established under the seasonal benefit provisions are at a lower level this year than last.

The average weekly number of beneficiaries was estimated at 620,000 for January, compared with 361,500 for December and 653,100 for January 1959.

The average weekly benefit payment was \$21.91 for January, \$21.51 for December 1959 and \$21.38 for January 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for January show that insurance books or contribution cards had been issued to 4,889,149 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

At January 31 employers registered numbered 326,341, an increase of 635 since December 31, 1959.

Enforcement Statistics

During January 5,231 investigations were conducted by enforcement officers across Canada. Of these, 3,341 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 109 were miscellaneous investigations. The remaining 1,781 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 167 cases, 35 against employers and 132 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,543.*

Unemployment Insurance Fund

Revenue received in January totalled \$29,135,805.55 compared with \$28,576,933.39 in December 1959 and \$20,244,892.32 in January 1959.

Benefits paid in January totalled \$54,344,674.19 compared with \$32,661,332.95 in December 1959 and \$58,617,337.64 in January 1959.

The balance in the fund on January 31 was \$445,885,387.32; on December 31, 1959 it was \$471,094,255.96 and on January 31, 1959, \$586,990,920.89.

*These do not necessarily relate to the investigations conducted during this period.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1720, February 17, 1960

Summary of the Main Facts: The claimant, 26 years of age, filed a renewal application for benefit on June 10, 1959, and was registered for employment as a packer. She stated she had worked as a machine operator for Fiberglas Canada Limited, Guelph, Ont., at a wage of \$1.25 an hour from March 4, 1959 to June 3, 1959, when she had voluntarily left her employment because of pregnancy, and that her expected date of confinement was January 20, 1960. She had also worked as a machine operator for the said employer from January 8, 1959 to February 13, 1959, when she was temporarily laid off because of a shortage of work.

The insurance officer disqualified the claimant from receipt of benefit effective June 7, 1959, on the ground that by having voluntarily left her employment because of pregnancy she was presumed to be not available for work (Section 54 (2) (a) of the Act).

Included in the records is a medical certificate dated June 12, 1959 to the effect that the claimant's expected date of confinement was January 20, that she was in good physical condition and was able to do light work.

The claimant appealed to a board of referees. In her undated appeal, which was received in the local office of the Commission on July 3, 1959, the claimant contended that she was "in perfect health" and also that she was available for work. She pointed out that her job at Fiberglas Canada Limited consisted of lifting articles up to 24 pounds in weight, which was too arduous for her as she was two and a half months pregnant, and that her doctor had suggested she obtain a lighter job, such as assembly work.

As a supplement to her appeal, the claimant wrote to the local office on July 16, 1959 and stated:

My husband had been out of work for over a week previous to my quitting my job. He had applied in every factory in Guelph for work during this time but without any luck. At the same time my doctor told me to get a lighter job.

I in turn consulted my personnel manager to see if my husband could get work at the Fiberglas factory. He informed me that he could get a job immediately, but both husband and wife could not work in the same factory.

I had to quit anyway within a short time in order to look for lighter factory work so I quit then and there in order to clear the way for my husband. He started within a couple days after I left.

During the time my husband had applied to other factories, it had been mentioned to him that there was no work for men anywhere, but there were jobs for women open. I made the rounds of the factories and had no luck either, so in turn applied for insurance.

In response to a request for further information, the employer informed the insurance officer by letter on July 20, 1959, as follows:

(The claimant) reported to the Personnel Department that she was pregnant and that she would be leaving voluntarily because during previous pregnancies she had had several miscarriages and her doctor had advised her to cease work and not risk a re-occurring miscarriage.

The Department in which (the claimant) did work, the Roving Department, does require the lifting of 24 lb. packages of Fiberglas; however, this I am sure is purely coincidental.

With regard to her husband: When she advised us that she would be leaving, she appealed to us to hire her husband on a permanent basis. As her leaving the employ of the Company would make this possible, we did hire her husband.

The board of referees heard the case in Hamilton, Ont., on July 22, 1959. The claimant, who was not present at the hearing, was represented thereat by Fred White of the Guelph Labour Council.

During the discussions, the claimant's representative contended that the claimant should not have been disqualified for voluntary leaving because she had done so on the advice of her doctor. He intimated that he was unable to understand why there was a difference in a claimant's leaving her employment voluntarily because of pregnancy and leaving it voluntarily for some other reason. He strongly objected to the imposition of the indefinite disqualification and held that it should not have been done. He further argued that the Act did not provide that an indefinite disqualification be imposed for voluntary leaving because of pregnancy. The board, after considering the written and oral evidence and keeping in mind the Umpire's decision CUB 620, by a unanimous decision dismissed the appeal on the ground that the claimant had failed to prove that she was available for work on June 7, 1959 and subsequently.

Local 1305 of the Textile Workers Union of America, of which the claimant is a member, appealed to the Umpire on August 26, 1959, contending "that the board of referees erred in applying decision CUB 620 and allied decision (CUB 530) quoted therein" and that "to say that the board had to abide by two factors only—pregnancy and resigning her employment—ignoring further references in the decision, wherein

it is plainly stated that at times other factors would have to be considered—in this case recommendation of her doctor. To place all pregnancy cases in any such strait jacket as the board of referees stated in its judgment would be grossly unfair and unwarranted . . .”

In a report dated October 6, 1959, the manager of the Commission's local office stated that according to that office's order register from July 1, 1959 to October 2, 1959 inclusive, no female assemblers were required, although several plants employed that type of worker, and that the claimant, whose registered occupation was changed to that of packer on August 18, 1959, would stand a good chance of finding work as such where she would be sitting down most of the time.

The records also contain a further medical certificate, dated October 22, 1959, which reads:

This lady has had a rather long history of incomplete pregnancies which have terminated either in miscarriages or premature without a live baby. At the present time she is pregnant and I feel that any work that she does must be of an exceedingly light character to guard against any such accidents of pregnancy that we have had in the previous several years.

Any attention that can be given to a light job for this young lady would be greatly appreciated.

The interested union requested a hearing of the case before the Umpire, which was held in Ottawa on January 20, 1960. The Union was represented by A. Andras of the Canadian Labour Congress, and the Unemployment Insurance Commission by F. G. Power.

Considerations and Conclusions—Section 54(2)(a) of the Act places on each individual claimant the burden of proving that he was capable of and available for work on every day for which he is claiming benefit, and as there are no statutory provisions specifically dealing with pregnant claimants, the question of their availability must be determined under the aforementioned section, in the light of the particular circumstances of each such case.

In the instant appeal, there is some kind of a contradiction between the evidence adduced by the claimant and that which is contained in her employer's letter of July 20, 1959. According to the letter, one can be led to believe that the fact that her job at times entailed lifting articles up to 24 pounds in weight had no bearing on her decision to quit her employment, that she rather did so because of her previous record of miscarriages and had decided on medical advice not to take any more work of any kind while she was pregnant.

On the other hand, the record shows that the claimant registered for lighter work of a kind she would stand “a good chance” of obtaining, and in the absence of her refusing to accept any such work, her statement is entitled to considerable credence.

The proof before me creates a situation of doubt which, after taking into account the fact that the claimant was in the early stage of pregnancy when she quit her employment, I am disposed to resolve in her favour up to and including October 22, 1959.

But for this change in the period of the disqualification, the Union's appeal is dismissed.

Decision CUB-1721, February 17, 1960

Summary of the Main Facts: The claimant, 61 years of age, filed an initial claim for benefit on January 2, 1959 and applied for the dependency rate of benefit in respect of his wife, Annie, stating that she was wholly or mainly maintained by him.

The insurance officer established a regular benefit period, effective December 28, 1958, at the dependency rate.

At the request of the local office of the Unemployment Insurance Commission, one of the Commission's enforcement officers interviewed the claimant on May 12, 1959, when the latter completed a written statement that reads in part:

... All weekly report forms for the receipt of benefit during the above period were signed by me. I also had previous applications for benefit in the past few years and as far as I can determine I have always made application for benefits at dependency rate on behalf of Ann —, my common-law wife. I have always considered Ann as my wife as we have lived together for past 22 years. My common-law wife does not work and is always cared for by me. We have had no children from our common-law living.

I have lived in Canada since 1921. I have my booklet “Information for Claimants”, but I did not understand the contents . . .

The enforcement officer's report reads in part:

On my return to the Local Office I checked claimant's previous applications for benefits dating back to the 31 October 1957 and at no time in the past did claimant make application for benefits at the dependency rate.

I checked the claim file of claimant's common-law wife, Ann —. Her application shows that she was employed during the month of December 1958, as a day worker and in December 1958 claimant's common-law wife received seasonal benefits at \$9.00 a week. The common-law wife was previously employed as a chambermaid at the Savoy Hotel from November 1957 to March 1958. Claimant's common-law wife was previously investigated by me in 1958 and as a result of my investigation, penalty under Section 65 was imposed. At the time of my interview with claimant's common-law wife she informed that she had been separated from her husband since June

1957 which is definitely contradictory to claimant's statement in which he stated that he had lived with his common-law wife Anne for the past 22 years.

The insurance officer notified the claimant by letter on May 19, 1959 to the effect that he was not entitled to the dependency rate of benefit effective December 28, 1958, as the person for whom he was claiming the dependency rate did not come within the provisions of Sections 47 (3) of the Act and 168 of the Unemployment Insurance Regulations. This disqualification created an overpayment of benefit in the amount of \$70.

The claimant appealed to a board of referees on July 27, 1959 and stated that he had been the sole support of his son until recently, when his son left school and became employed. He stated also that he had lived with and continuously supported his common-law wife since 1937, with the exception of a short period when he was employed away from home by a construction company and during which he sent her \$100 every two weeks.

Following receipt of the claimant's appeal, the insurance officer requested a further investigation by an enforcement officer. As a consequence thereof, the claimant made a written statement on August 3, 1959, which reads in part:

From the year we met, we have resided together and even though we have never gone through a form of marriage, I have always considered her as my wife. From our common-law marriage, we had a son, born 10 March, 1939... Ann, during the past 3 years, has had a mental disorder, and she, from time to time, does and says things she is not responsible for, and at times she leaves me and takes up residence at other addresses, but usually returns to me at a later date. At present, Ann is undergoing treatment at General Hospital... When I made application for benefits on 2 January, 1959, Ann was residing with me, and had been for approximately since August, 1958, and before that off and on...

In referring the case to the board of referees, the insurance officer drew attention to the Umpire's decision CUB 1174.

The board of referees heard the case on September 22, 1959. The board, after dealing with the case at great length, unanimously held that the claimant was entitled to receive benefit at the dependency rate, commencing December 28, 1958, and allowed the appeal:

(1) on the ground that the claimant's common-law wife is not a married woman and CUB 1174 is distinguishable from the present case,

(2) on the ground that the word "wife" in said sub-paragraph (i) (Section 47 (3) (a) of the Act) means a woman whose relationship with the claimant is within what is the basis for the statutory enactments, regulations and

manuals, federal and provincial, above discussed, or, to quote Webster, means a woman whose relationship with the claimant is a marriage by conduct.

The board also expressed the following opinion:

If it is held that CUB 1174 is the law, whether there was a prior marriage or not, then the Board humbly suggests that the question be reviewed and, if necessary, that the Act be amended so as to make clear the intent of the Parliament of Canada.

The insurance officer appealed to the Umpire on the following grounds:

The Umpire concluded in CUB 1174 that in order to be entitled to benefit at the rate for a person with a dependent under the terms of the Act, a claimant must prove that the person claimed for is his wife by reason of a valid legal marriage.

The board of referees was aware of the jurisprudence established in CUB 1174 but in reaching its decision in the appeal, considered that this jurisprudence applied only where the circumstances of the case were the same as those in CUB 1174. On the basis of this reasoning, the board decided that the application of the principle in CUB 1174 should only be made when a common-law wife is not already legally married to another person.

As this person claimed as a dependent by this claimant had not legally married at any time, the board decided that CUB 1174 did not apply and allowed the appeal of the claimant on the grounds that certain specific federal and provincial legislation recognized a common-law wife as being a "wife" for the purpose of such legislation.

It is submitted that CUB 1174 established the basic principle that benefit at the dependency rate is not payable in respect of a common-law wife, and the board has shown no valid reasons for failing to follow this jurisprudence. In referring to various statutes and regulations, the board apparently failed to properly appreciate that each of these statutes and regulations specifically provides for the status of a common-law wife. Had it been the intent of the legislators to make similar provision in the Unemployment Insurance Act it seems reasonable to presume that specific reference would have been included in the Unemployment Insurance Act. It is submitted, therefore, that the decision of the board of referees should be set aside.

Considerations and Conclusions: While I wish to commend the board of referees for their elaborate and interesting decision which is so well and clearly expressed, I cannot agree with it for reasons which I will describe.

First of all, it seems to me that the board exceeded its power in deciding that the person in respect of whom the claimant requested the dependency rate of benefit was a "wife" within the meaning of that word in subsection (3) (a) (i) of Section 47 of the Act.

Under subsection (3) (b) of Section 67 of the Act, the Unemployment Insurance Commission alone is vested with the power to make regulations "for defining 'adopted

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during February Works of Construction, Remodelling, Repair or Demolition

During February the Department of Labour prepared 200 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 122 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under the heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in February for the manufacture of supplies and equipment were as follows

Department	No. of Contracts	Aggregate Amount
CMHC	1	\$ 6,324.00
Defence Production	70	\$ 45,842.00
Post Office	13	\$302,885.14
RCMP	2	\$ 3,759.95

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during February

During February the sum of \$16,271.20 was collected from 17 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 401 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during February

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Agassiz B C: Beaver Construction Co Ltd, supply & erection of various bldgs (dairy cattle housing unit), Experimental Farm.

Atomic Energy of Canada Limited

Chalk River Ont: Foster Wheeler Ltd, extension to central heating plant, bldg 420.

Central Mortgage and Housing Corporation

Greenwood N S: Dell Construction Co Ltd, construction of 300 housing units & ground services (DND 10/59). *Ottawa Ont:* L M Bryan, *snow removal, Strathcona Heights. *Uplands Ont:* Wm D'Aoust Construction Ltd, construction of four classroom & gymnasium addition to school (DND 4/58). *Edmonton Alta:* Arnold Floor Co Ltd, *sanding & finishing hardwood floors, Highlands Court. *Vancouver B C:* Buckerfield's Ltd, *supply of fertilizer. *Victoria B C:* G A Barker Construction, *supply & installation of plastic laminated counter tops in rental units, Veterans Projects 6A & 7.

Department of Citizenship and Immigration

Nakina Indian Agency Ont: Hakala Construction, construction of prefabricated bldg, Landsdowne House (ACC) IDS, on Attawapiskat Lake. *Blood Indian Agency Alta:* Whitticks Mechanical Contractors Ltd, repairs & alterations to heating system, St Paul's IRS. *Fort Vermilion Indian Agency Alta:* St Laurent Construction Ltd, erection of staff residence & construction of power plant bldg, Fox Lake. *Peigan Indian Agency Alta:* Remington Construction Co Ltd, installation of water supply system, Town of Brocket.

Defence Construction (1951) Limited

Bedford Basin N S: The Ellis Don Ltd, construction of addition to bldg No 169, RCN Magazine. *Halifax N S:* James F Lahey Ltd, interior painting of "A" Block, Bldg S-21, HMCS *Stadacona*; Central Construction Co, construction of firefighting mock-up, ABCD school, Sandwich Point. *Bouchard Que:* Gagnon & Fils Ltee, construction of sewage lagoon & renovation to existing pumphouse. *Nicolet Que:* J S Mitchell & Co Ltd, supply & erection of prefabricated bldg. *Valcartier Que:* C Jobin Ltee, extension to CHP & installation of coal handling system, Camp. *Clinton Ont:* The Ellis Don Ltd, construction of superstructure for tower & passageway, RCAF Station; Warneke Decorating Co,

application of fire retardant paint, RCAF Station. *Petawawa Ont*: Universal Electric, installation of electrical system. *Shirley Bay Ont*: M Sullivan & Son Ltd, supply & erection of structural steel & steel joists for Electronics Laboratory extension.

Building and Maintenance

Clinton Ont: D A Kay & Son, interior painting of 60 PMQ's, RCAF Station. *Kingston Ont*: Industrial Electrical Contractors Ltd, rewiring & relighting bldgs Nos 1 (Annex), 12 & 13, Headquarters, Eastern Ontario Area, 440 King St W. *Boundary Bay B C*: F B Stewart & Co Ltd, rewiring & relighting bldgs Nos 16 & 17, Vancouver Wireless Station.

Department of Defence Production

Cornwallis N S: Standard Sprinklers Ltd, installation of sprinkler system, Bldg No 24, HMCS *Cornwallis*. *St Hyacinthe Que*: Roger Charbonneau, interior painting, sanding & finishing hardwood floors at Armoury. *St Johns Que*: Desourdy Freres Ltee, supply & installation of 4 open fire escapes, RCAF Station. *Senneterre Que*: La Societe D'Entreprises Generales Ltee, construction of extension to guard house, RCAF Station. *Barriefield Ont*: Jos Downey & Son, painting interior of Bldgs C-31 & H-29, RCEME School. *Gloucester Ont*: Bannermount Co, replacement of antenna poles, HMCS *Gloucester*. *Mount Hope Ont*: Overhead Door Co of Hamilton Ltd, replacement of overhead doors in Bldg No A20, RCAF Station. *Kingston Ont*: K R McGowan Electric, supply & installation of equipment to relight Syndicate & Sub-Syndicate Rooms, "B" Block, CASC, & installation of acoustic tile ceiling in Room No 110, "B" Block. *Trenton Ont*: E W Vanner & Son, interior painting of Barrack Block No 1, RCAF Station; E W Vanner & Son, interior painting of Barrack Block No 2, RCAF Station. *Uplands Ont*: Hugh M Grant Ltd, moving bldg, connection of services, etc; Alf Grodde Ltd, painting interior of recreation hall bldg No 16; Goldstein Bros Ltd, installation of block heater outlets in parking lots adjacent to Bldgs 316, 320 & 323. *Gimli Man*: Fort Rouge Decorating & Sandblasting Co, interior painting of Barrack Blocks, 3, 4, 13 & 69 with fire retardant paint, RCAF Station. *Claresholm Alta*: Charleton & Hill Ltd, repairing roofs of Hangars Nos 5 & 6 & Barrack Block No 52, RCAF Detachment. *Ralston Alta*: Werts & Dieterle, *refinishing of floors & stairs, housing units. *Nanaimo B C*: Canadian Wood Pipe & Tanks Ltd, replacement of water tank at Military Camp. *Rocky Point B C*: M P Paine Co, construction of concrete foundations, walls, etc for two butler rigid frame steel bldgs, RCNAD. *Vancouver B C*: F Drexel Co Ltd, installation of suspended acoustical tile, RCAF Station. *Vernon B C*: R E Postill & Sons Ltd, repairing roads, Military Camp Area.

National Harbours Board

Churchill Harbour Man: C A Pitts General Contractor Ltd, dredge repairs & dredging. *Vancouver B C*: Amundson Construction Co Ltd, renewal of cold storage plant, Fishermen's Wharf.

Northern Affairs and National Resources

Frobisher Bay N W T: The Carter Construction Co Ltd, restoration of departmental bldg No 71.

Department of Public Works

Champney's West Nfld: Louis Briffett & Sons Ltd, construction of wharf. *Eastport Nfld*: William A Trask Ltd, wharf repairs & extension. *Newtown Nfld*: B & F Way, construction of post office bldg. *Rose Blanche Nfld*: Towne & Country Construction Co Ltd, harbour improvements, Diamond Cove. *Bloomfield Station P E I*: R H Rankin Construction, construction of post office. *Brookfield N S*: Owen Fisher, erection & completion of post office. *Dartmouth N S*: Cameron Contracting Ltd, alterations & addition to federal bldg. *Halifax N S*: Standard Construction Co Ltd, alterations & addition to admission & discharge section, Camp Hill Hospital. *Hantsport N S*: Ralph & Arthur Parsons Ltd, wharf improvements. *North West Cove N S*: L G & M H Smith Ltd, wharf improvements. *Three Fathom Harbour N S*: Naugle's Sand & Gravel Co Ltd, harbour improvements. *Fredericton N B*: S C R Construction Engineering Ltd, alterations to staircases, Headquarters, "J" Division, RCMP. *Manouan Que*: Melancon & Fils Inc, construction of three classroom school & duplex, Abitibi Agency. *Montreal Que*: Mathews Conveyer Co Ltd, installation of bag conveyor chutes, postal terminal; Noma Construction Co Ltd, improvements & alterations to postal space & screen, Postal Station "D". *Riverbend Que*: Antonio Fleury & Raoul Bherer, erection of post office bldg. *St Emile de Montcalm Que*: Henri Louis Martel, wharf construction. *St Gregoire de Nicolet Que*: Jean L Beliveau, construction of post office.

Ste Rose du Nord Que: Gulf Maritime Construction Ltd, wharf extension. *Sherbrooke Que*: Romeo Paquet, interior painting, federal bldg. *Cookstown Ont*: E B Doran, construction of post office. *Ear Falls Ont*: S Flostrand, construction of post office. *London Ont*: The Frid Construction Co Ltd, construction of new wing, Westminster Hospital. *Ottawa Ont*: Ron Construction Co Ltd, additions & alterations to third floor, DBS, Tunney's Pasture; Leopold Beaudoin Construction Ltd, installation of new partitions, etc, Finance Bldg, Tunney's Pasture; Ontario Building Cleaning Co, interior cleaning of Postal Station "E"; Leopold Beaudoin Construction Ltd, construction of ceiling & installation of ventilation system, boiler room, Forest Products Laboratory, Montreal Road; J R Statham Construction Ltd, alterations to No 8 Temporary Bldg. *Port Rowan Ont*: Backus Construction Co Ltd, construction of post office. *Stevensville Ont*: S E Zimmerman & Son Ltd, construction of post office. *Toronto Ont*: Taylor Bros, alterations to Postal Station "R", Leaside. *Dauphin Agency Man*: Arthur A Erickson, construction of two duplex residences, Pine Creek Indian Reserve. *Hartney Man*: Steinback Lumber Yards Ltd, construction of post office. *Melfort Sask*: H Roy Construction, construction of headerhouse, Experimental Station. *Regina Sask*: Alberta Bldg Co Ltd, construction of sewage pumphouse, RCMP Barracks. *Southend Sask*: Gall's Lumber Yard, construction of three classroom school, staff residence & power house. *Rocky Mountain House Alta*: Bird Construction Co Ltd, construction of federal bldg. *Glacier National Park B C*: Dawson & Hall Ltd, construction of portals & concrete liner for Bear Creek Diversion Tunnel, Mile 8.7, Trans-Canada Highway. *Harrison Lake B C*: Fraser River Dredging Co Ltd, driftwood removal. *Hope B C*: Dyck Construction Co Ltd, construction of federal bldg. *Revelstoke B C*: Mackie & Hooper Construction Co Ltd, alterations & additions to federal bldg. *Shawinigan Lake B C*: W J Dick Ltd, construction of post office. *Vancouver B C*: Metro Construction Co Ltd, alterations to Postal Station "O"; Modern Building Cleaning Service of Canada Ltd, cleaning interior of General Post Office Bldg. *Flatt Creek-Eagle Plain Y T*: John A MacIsaac Construction Co Ltd, development road construction.

Contracts Containing the General Fair Wages Clause

Lockeport N S: Elmer L Stewart, interior painting, federal bldg. *Armstrong Que*: Poulin & Bergin, interior painting, Customs & Immigration bldg. *Buckingham Que*: Hector Strevey Construction, alterations, federal bldg. *Jonquiere Que*: Gerard Raymond, interior painting, federal bldg. *Lauzon Que*: Geo T Davie & Sons Ltd, construction & delivery of pipeline dredge to replace dredge No 12, PEI. *Montreal Que*: St Lawrence Steeplejacks Ltd, interior painting, Converters bldg; George Cauchon, general alterations, Mail Carrier Depot. *Noranda Que*: Eloi Desilets, alterations, federal bldg. *Brockville Ont*: Art Fleck, renovations, Postal Annex. *Napanee Ont*: Dorland Jackson, installation of stokers, federal bldg. *Ottawa Ont*: Able Construction Ltd, alterations, Kent-Albert bldg; Louis G Fortin Construction Co, renovations, Kent-Albert bldg; J R Statham Construction Ltd, repairs to bathroom, Rideau Hall; Thos Gregoire, general repairs, New Supreme Court Bldg; Roger Boivin Painters Ltd, redecoration of Public Archives, Sussex St; Ottawa Typewriter Co Ltd, erection of private offices, DBS bldg; R A Bingham & Son, general alterations, British American Bank Note Bldg; Oak Construction Co Ltd, renovations, Imperial Optical Bldg, 246 Queen St. *Vancouver B C*: Jackson Sheet Metal & Roofing, roof repairs, Customs House; Finning Tractor & Equipment Co Ltd, replacement of engine for workboat "Tsekoa".

The St. Lawrence Seaway Authority

St Catharines Ont: Provincial Engineering Ltd, modification of wire rope fenders, Welland Canal. *Sault Ste Marie Ont*: Soo Foundry & Machine Co Ltd, rehabilitation of valve machinery, Sault Ste Marie Canal.

Department of Transport

Yarmouth N S: Central Construction Co, construction of remote transmitter bldg & related work, Cheboque Point. *Montreal Que*: The Foundation Company of Canada Ltd, erection of superstructure of loading fingers & aeroquay, New Terminal Bldg, Airport; The Foundation Company of Canada Ltd, installation of central heating system, Airport. *Rouyn Que*: Bedard-Girard Ltd, installation of LI lighting for approaches 08 & 26 & MI lighting, runway 08-26 extension. *North Bay Ont*: Alger, Leckie Associates Ltd, installation of air conditioning system, IFR Room, Control Tower, Airport. *Cranbrook B C*: Wirtanen Electric Co Ltd, installation of medium intensity lighting on Runway 18-36. *Penticton B C*: Cooper & Gibbard Electric Ltd, installation of medium intensity runway & taxiway lighting on Runway 16-34.

PRICES AND THE COST OF LIVING

Consumer Price Index, March 1960

A drop of 1.2 per cent in the food index between February and March caused a decline of 0.2 per cent in the consumer price index (1949=100), from 127.2 to 126.9. The other four group indexes recorded little or no change.*

Despite this fourth successive drop in the total index, it was still higher than in March last year, when it stood at 125.5.

The food index moved from 120.8 to 119.4, as further price declines, averaging nearly 2 cents a pound, were reported for beef and pork cuts. Bacon was down 7 cents a pound. Price decreases occurred on a wide range of fresh vegetables; potatoes were down slightly from February levels after a series of price increases in previous months. Egg prices, after reaching a record low in February of 41 cents a dozen, climbed 6 cents a dozen in March.

This year's March food index is 0.5 per cent below the March 1959 level of 120.0. Compared with a year ago, prices for beef were 8 per cent lower, pork 8 per cent lower, eggs 10 per cent lower, dairy items 2 per cent higher, cereals 1 per cent higher, fresh and canned fruits 5 per cent higher, and vegetables, largely because of potatoes, 10 per cent higher.

The shelter index was unchanged at 142.9.

The clothing index increased 0.5 per cent from 109.8 to 110.4. Most of this movement reflected price advances from end-of-season sales for women's and girls' coats.

The household operation index increased a fractional 0.2 per cent from 123.2 to 123.4, as higher prices were reported for a number of items of household utensils and equipment, including glassware, saucepans and garbage cans. Some furniture and floor covering items were up somewhat from sale prices of previous months. Laundry rates and shoe repair prices both advanced 1 per cent.

The other commodities and services index was unchanged at 137.0, as lower quotations on new passenger cars balanced price increases for a number of automobile operation items.

Other groups indexes one year earlier (March 1959) were: shelter 140.3, clothing 109.4, household operation 122.3 and other commodities and services 133.4.

City Consumer Price Indexes, February 1960

Seven of the ten regional city consumer price indexes (1949=100) were lower between the beginning of January and February 1960.* Declines ranged from 0.1 per cent in Halifax to 0.5 per cent in Winnipeg. Indexes in both Saint John and Toronto were unchanged and the index for St. John's rose a fractional 0.1 per cent.

Food indexes were lower in seven regional cities, unchanged in Saint John, and up 0.2 per cent in both Halifax and St. John's. Shelter indexes were down in both St. John's and Halifax, up fractionally in Saint John, unchanged in four cities, and up in the three westernmost regional cities. Clothing indexes showed mixed results: three regional city indexes were higher, four lower and the remaining three unchanged. The household operation group indexes experienced similar movements as three city indexes increased, four decreased and three were at the same levels as the previous month. Other commodities and services group indexes recorded little or no movement: six of the ten regional city indexes were unchanged, two were up a fractional 0.1 per cent and the other two were down 0.1 per cent.

Regional consumer price index point changes between January and February were as follows: Winnipeg -0.6 to 124.1; Ottawa -0.5 to 127.6; Edmonton-Calgary -0.4 to 123.2; Montreal -0.3 to 127.5; Saskatoon-Regina -0.3 to 123.5; Vancouver -0.2 to 129.1; Halifax -0.1 to 127.0; and St. John's +0.1 to 114.8†. Saint John and Toronto remained unchanged at 129.1 and 129.7 respectively.

Wholesale Price Index, February 1960

Canada's general wholesale price index (1935-39=100) edged down 0.2 per cent in February to 230.0 from 230.5 in January. The index stood at 230.8 in February last year.

Two of the major group indexes were down during the month, four were up, and the remaining two were unchanged.

*See Table F-2 at back of book.

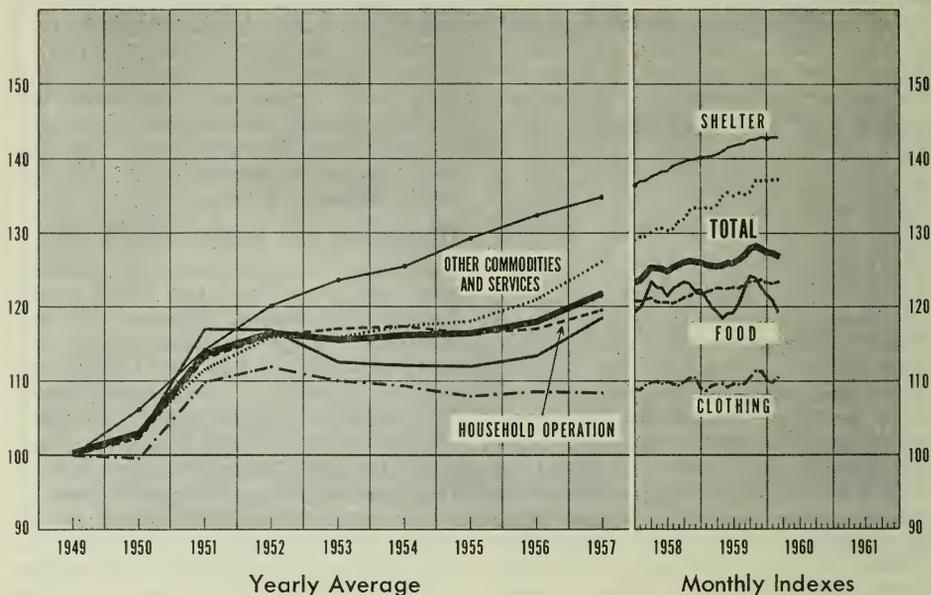

†On base June 1951=100.

*See Table F-1 at back of book.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

The animal products group index recorded its fifth consecutive decline, moving down 1.5 per cent to 242.6 from 246.4. This decrease was the main factor in the drop in the total index and was largely attributable to lower prices for dressed fowl, fresh and cured meats, hides and skins, and livestock. The textile products group index eased 0.3 per cent to 228.5 from 229.2 as a result of lower prices for imported raw wool and worsted yarns.

Higher prices for copper and its products and tin moved the non-ferrous metals group index up 1.0 per cent to 178.2 from 176.5. Price increases for explosives and fertilizer materials more than offset decreases for tanning and dyeing materials to raise the chemical products index to 188.3 from 187.8. The wood products and vegetable products groups were slightly higher at 304.8 and 202.4, respectively.

The indexes for the iron products and non-metallic minerals groups were unchanged at 256.3 and 186.2, respectively.

The index of Canadian farm product prices at terminal markets (1935-39=100) rose 3.4 per cent, from 210.5 to 217.7, between February 25 and March 26. The field products index rose 3.5 per cent from 171.3 to 177.3, reflecting higher prices for potatoes, particularly in the East, western

flax and eastern peas and corn, which were partly offset by declines for eastern rye, oats and wheat. The animal products index increased 3.4 per cent from 249.7 to 258.1; price increases were reported for eggs, hogs, lambs, steers and eastern poultry.

U.S. Consumer Price Index, February 1960

After two successive declines of 0.1 per cent, the United States consumer index (1947-49=100) rose 0.2 per cent between mid-January and mid-February to return to the record high of 125.6 first reached in November 1959. December's index was 125.5 and January's, 125.4. The index in February 1959 was 123.7.

Mostly responsible for the latest rise was the cost of services, especially hospital insurance and mortgage interest rates. Food prices were down for the fifth consecutive month; they were at their lowest since December 1957 and 5.1 per cent below the peak reached in 1958.

U.K. Index of Retail Prices, January 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) dropped 0.3 per cent between mid-December and mid-January, from 110.2 to 109.9. A year earlier, January 1959, it was 110.4.

The fall in the index resulted mainly from a reduction in egg prices.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Labour Laws and Legislation

28. HICKS, R. V. *Labour Relations and The Law. Address [to the] 30th Annual meeting [of the] Canadian Chamber of Commerce, Toronto, October 19, 20, 21, 1959*. Montreal, 1959. Pp. 9.

The author comments on current Canadian labour legislation and makes certain suggestions for its amendment.

29. GOLDBERG, ARTHUR JOSEPH. *Analysis of Labor-Management Reporting and Disclosure Act of 1959. (Public Law 86-257, 86th Congress, 1st Session) effective September 14, 1959* [by] Arthur J. Goldberg and Kenneth A. Meiklejohn. Washington, Industrial Union Department, AFL-CIO, 1959. Pp. 72.

Text of act: p. 45-72.

Labour Organization

30. AMERICAN FEDERATION OF LABOUR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS. DEPARTMENT OF EDUCATION. *How to run a Union Meeting*. Washington, 1959. Pp. 63.

Partial Contents: Let's plan Meetings. What makes a Good Chairman? The Recording Secretary. The Local Treasurer. Committees and their Reports. Basic Rules of Order—How Motions get Action. How Action takes Place. Motions to help keep Order. Motions for Unusual Action. Nominations and Elections. Voting for Officers. A List of Motions with Peculiar Characteristics. All the Rules at a Glance.

31. AUSTRALIA WORKERS' UNION. *Official Report of the 73rd Annual Convention...*

Queensland, January 21, 1959 together with Head Office and "Worker" Accounts. Sydney, 1959. Pp. 156.

32. CONFEDERATION DES TRAVAILLEURS CATHOLIQUES DU CANADA. *Procès-verbal, Trente-huitième session du Congrès de la CTCC, Québec, P.Q., 1959.* Québec, 1959. Pp. 318.

Congress held Sept. 13 to 19, 1959.

33. INDIAN NATIONAL TRADE UNION CONGRESS. *Some Facts about INTUC.* New Delhi, 1959. Pp. 32.

A brief history of the Indian National Trade Union Congress tracing its development from its formation in 1947 to 1959.

34. INTERNATIONAL FEDERATION OF CHRISTIAN TRADE UNIONS. *Le mouvement syndical chrétien dans le monde. [Procès-verbaux] XIII^e Congrès, Vevey (La Suisse) 25-28 juin 1958. [Courtrai, Belgium? 1959?]* Pp. 463.

35. NEWFOUNDLAND FEDERATION OF LABOUR. *Report of the Proceedings of the Twenty-third Annual Convention held at Corner Brook, July 20-23, 1959.* St. John's, 1959. Pp. 24.

36. SASKATCHEWAN FEDERATION OF LABOUR. *Minutes and Proceedings of the Fourth Convention . . . held in Regina, October 22- 23 and 24, 1959.* [Moose Jaw?] 1959. 1 Volume (various pagings).

37. SWEDISH CONFEDERATION OF PROFESSIONAL ASSOCIATIONS. *Swedish Professional Associations as Trade Unions.* Stockholm, 1959. Pp. 24.

A history of the Swedish Confederation of Professional Associations.

38. UNITED MINE WORKERS OF AMERICA. WELFARE AND RETIREMENT FUND. *Report for the Year ending June 30, 1959.* Washington, 1959. Pp. 40.

39. U.S. OFFICE OF INTERNATIONAL LABOR AFFAIRS. *The International Union of Food and Drink Workers' Associations.* Washington, GPO, 1959. Pp. 104.

Contents: Brief History. Structure of the IUF. Trade Groupings. Membership. Finances and Publications. Relations with International Trade Union Organizations. Relations with International Government Organizations. Outlook.

Labouring Classes

40. BRITISH COLUMBIA. WORKMEN'S COMPENSATION BOARD. *Compensation Handbook for Workmen.* Vancouver, 1959. Pp. 30.

41. LOCKWOOD, DAVID. *The Blackcoated Worker; a Study in Class Consciousness.* London, Allen & Unwin, 1958. Pp. 224.

A study of the economic position, working environment and social status of office workers in Great Britain.

Management

42. BENNET, CARRIE LYNN. *Defining the Manager's Job; the AMA Manual of Position Descriptions.* New York, American Management Association, 1958. Pp. 447.

Based on an AMA survey of 140 companies, this book contains about 150 position descriptions for all levels of management. Contains information "on creating and using position descriptions; companies establish and gain acceptance for a description program; how descriptions are actually prepared, etc."

43. DALTON, MELVILLE. *Men who manage; Fusions of Feeling and Theory in Administration.* New York, Wiley, 1959. Pp. 318.

A study of managers in several commercial and industrial firms. Discusses typical and recurring problems which arise in management.

44. U.S. DEPARTMENT OF LABOR. OFFICE OF PERSONNEL ADMINISTRATION. *Training Supervisors to write Performance Requirements; Conference Leader's Guide.* Washington, 1959. Pp. 38.

The objectives of this pamphlet are, "1. To learn how to write performance requirements covering each position in the office. 2. To assist supervisors in the use of performance requirements in managing work and supervising people."

Occupations

45. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Forge Shop Occupations.* Rev. ed. Ottawa, Queen's Printer, 1959. Pp. 24.

Describes types of jobs, preparation and training, qualifications, working conditions, wages, and outlook in the occupation.

46. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Physical and Occupational Therapist.* Ottawa, Queen's Printer, 1959. Pp. 24.

Provides information about nature of the work, duties, personal qualities, educational requirements, working conditions, places of employment, organizations, and, trends in the profession.

47. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Teacher.* Ottawa, Queen's Printer, 1959. Pp. 32.

Provides information about the field of work, duties and responsibilities, personal qualities, training, qualifications, advancement, working conditions, earnings, teacher organizations, and trends in the profession.

48. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Tool and Die Maker.* Rev. ed. Ottawa, Queen's Printer, 1959. Pp. 24.

Describes types of jobs, qualifications, preparation and training, working conditions, related occupations, and outlook.

Older Workers

49. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Age and Performance in Retail Trade. Two Case Studies of the Relation between Age and Selected Characteristics of Sales Personnel in Two Department Stores.* Ottawa, Queen's Printer, 1959. Pp. 16.

A study of two large department stores in two Canadian cities showed that the older sales employee had as good a sales record as the younger employee, if not better.

50. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *The Aging Worker in the Canadian Economy*. Ottawa, 1959. Pp. 61.

Contents: The Age Composition of the Canadian Population. The Age Composition of the Canadian Labour Force. The Occupations of Older Workers. Unemployment of Older Workers. The Income Position of Older People.

51. U.S. FEDERAL COUNCIL ON AGING. *Programs, Resources for Older People; Report to the President*. Washington, GPO, 1959. Pp. 83.

Contains a short review of federal activities and resources dealing with the problems of the aging with suggestions for meeting some of the problems, and a detailed analysis of the programs and resources of the Federal Government which have to do with the problems of older people.

Productivity

52. AMERICAN ASSEMBLY. *Wages, Prices, Profits, and Productivity; Background Papers and the Final Report of the Fifteenth American Assembly, Arden House, Harriman Campus of Columbia University, Harriman, New York, April 30-May 3, 1959*. Final ed. New York, American Assembly, Columbia University, 1959. Pp. 193.

Contents: Central Issues in Wage-Price Relationships, by Charles A. Myers. Patterns of Wages, Prices and Productivity, by Albert Rees. Productivity, Costs and Prices: Concepts and Measures, by John W. Kendrick. Underlying Factors in the Postwar Inflation, by James S. Duesenberry. The Impacts of Unions on the Level of Wages, by Clark Kerr. Wage Behavior and Inflation: an International View, by Lloyd G. Reynolds. Policy Problems: Choices and Proposals, by John T. Dunlop. Productivity and the Consumer, by James P. Mitchell. Labor Costs and Prices, by Sumner H. Slichter.

53. HAYTHORNE, GEORGE VICKERS. *Productivity and Employment. [An Address] to the Eleventh Annual Conference of Provincial Governments Trade and Industry Council, Halifax, Nova Scotia, September 30, 1959*. [Ottawa, Dept. of Labour? 1959] Pp. 17.

The author suggests five ways that government agencies can help to increase productivity and employment: 1. by encouraging the training of workers; 2. by encouraging technical improvements in industry; 3. by encouraging research into economic and social conditions; 4. by supplying information on various aspects of labour and working conditions; and, 5. by encouraging the establishment and maintenance of Labour-Management Committees in plants.

Scientists

54. CONFERENCE ON SCIENTIFIC MANPOWER. 5TH, NEW YORK, 1956. *Scientific Manpower, 1956; Significant Developments, Views and Statistics*. [Papers of the Fifth Conference on Scientific Manpower. 123d meeting of the American Association for the Advancement of Science, New York, December 1956.] Washington, National Science Foundation, 1957. Pp. 62.

Covers significant developments, views and statistics concerned with scientists and engineers during the year 1956.

55. CONFERENCE ON SCIENTIFIC MANPOWER. 6TH, INDIANAPOLIS, IND., 1957. *Scientific Manpower, 1957. Papers of the Sixth Conference on Scientific Manpower*. [124th Meeting of the American Association for the Advancement of Science, Indianapolis, Ind., December 1957.] Washington, National Science Foundation [1958] Pp. 46.

"Problems of the impact of science and scientific research on industry, government, and education were examined together with some of their implications for scientists, including the positive role that scientists themselves play in the determination of this influence."

56. CONFERENCE ON SCIENTIFIC MANPOWER. 7TH, WASHINGTON, D.C., 1958. *Papers of the Seventh Conference on Scientific Manpower*. [125th Meeting of the American Association for the Advancement of Science, Washington, D.C., December 1958] *Symposium on Demographic and Sociological Aspects of Scientific Manpower*. Washington, National Science Foundation, 1959. Pp. 87.

Partial Contents: Engineering and Science Degrees, 1959—a Projection, by Henry H. Armsby. Trends in the Employment of College and University Graduates, 1959, by Frank S. Endicott. Technical Manpower Accession and Utilization Analysis in an Expanding Decentralized Company, by Phil N. Scheid. Trends in Industrial Requirements for Scientists and Engineers, by Clarence H. Linder. Requirements of Higher Educational Institutions for Faculty in Science, by Ray C. Maul. Requirements of the Federal Government for Scientists and Engineers, by N. J. Oganovic. The Influence of Government on the Demand for Scientists and Engineers, by Irving H. Siegel.

57. MCCRENSKY, EDWARD. *Scientific Manpower in Europe; a Comparative Study of Scientific Manpower in the Public Service of Great Britain and Selected European Countries*. New York, Pergamon Press, 1958. Pp. 188.

Contents: Scientists in Government. Attracting and holding Scientists. The Payment of Professional Public Service. Representation of Scientists. Higher Education of Engineers. Organization for Research. Comparison among Countries including United States and Russia.

58. MONSAROFF, BORIS. *Economics, Science, and Production; Science as a Politico-Economic Factor of Production*. 1st ed. New York, Vantage Press, 1958. Pp. 196.

"The present work has in view a two-fold purpose: first, to acquaint scientists with some economic theories; second, to draw the attention of the economists to their fallacy of disregarding science. It will also point out ways in which modern economic concepts might be altered or modified in the light of scientific development." cf. Introduction.

59. U.S. OFFICE OF EDUCATION. *Junior-Year Science and Mathematics Students by Major Field of Study: Fall 1957* [by] M. Clemens Johnson and Hazel C. Poole. Washington, GPO, 1958. Pp. 56.

Social Workers

60. AMERICAN PUBLIC WELFARE ASSOCIATION. *Competent Staff, a Responsibility of Public Welfare Administration. Summary of Material presented by all Participants in an Institute sponsored by the American Public Welfare Association under a grant made by the Rockefeller Brothers Fund, December 3, 4, 5, 1958, Chicago, Illinois, Institute leaders: Corinne H. Wolfe [and] Paul V. Benner.* Chicago, 1959. Pp. 59.

61. HORWITZ, JOHN J. *Education for Social Workers in the Rehabilitation of the Handicapped.* New York, Council on Social Work Education, 1959. Pp. 76.

Statistics

62. AMERICAN STATISTICAL ASSOCIATION. *Methodological Aspects of Statistics on Research and Development Costs and Manpower. Based on Papers presented at a Session of the American Statistical Association Meetings, December 1958.* Washington, U.S. National Science Foundation, 1959. Pp. 132.

Partial Contents: Problem of Definition, Concept, and Interpretation of Research and Development Statistics, by Willis H. Shapley. Development of Statistics relating to Research and Development Activities in Private Industry, by Kenneth P. Sanow. Methods used in a Survey of Research and Development Expenditure in British Industry, by Ernest Rudd. Financial Data on Research and Development—their Uses and Limitations, by Kathryn S. Arnow. The Annual McGraw-Hill Research and Development Survey, by Douglas Greenwald. Canadian Surveys of Research and Development, by George T. McColm.

63. AMERICAN STATISTICAL ASSOCIATION. BUSINESS AND ECONOMIC STATISTICS SECTION. *Proceedings. Papers presented at the Annual Meeting of the American Statistical Association, Chicago, Illinois, December 27-30, 1958, under the Sponsorship of the Business and Economic Statistics Section.* Washington, 1959. Pp. 376.

Partial Contents: Major Economic Indicators: Canadian Experience. Adequacy of Monetary and Financial Statistics for Business Cycle and Money Market Analysis. Statistical Guides to Non-Inflationary Wage Bargaining. Estimating Federal Government Receipts and Expenditures. Significance of Postwar Productivity Trends.

Wages and Hours

64. ALBERTA. BUREAU OF STATISTICS. *Survey of Wage and Salary Rates—Alberta. Range of Wages and Weighted Averages by Type of Business and Hours worked per Week—by Position, Type of Business and Salary or Wage Rate, Alberta-Calgary-Edmonton. 1 May 1959.* Edmonton, 1959. 1 Volume (unpagged).

65. CANADA. DEPARTMENT OF LABOUR. ECONOMIC AND RESEARCH BRANCH. *Wage Rates, Salaries and Hours of Labour. Annual*

Report No. 41, October 1958. Ottawa, Queen's Printer, 1959. Pp. 280.

66. PEN, JAN. *The Wage Rate under Collective Bargaining.* Translated by T. S. Preston. Cambridge, Harvard University Press, 1959. Pp. 216.

The author examines the factors involved in wage negotiation and develops a theory about wage negotiation.

67. U.S. BUREAU OF LABOR STATISTICS. *Earnings in Wholesale Trade, June 1958.* Washington, GPO, 1959. Pp. 33.

A study of straight-time hourly earnings of nonsupervisory workers employed by merchant wholesalers, agents and brokers, and assemblers of farm produce.

Women

68. HOLMES, VERENA. *Training and Opportunities for Women in Engineering,* by Verena Holmes and Lesley S. Souter. London, Women's Engineering Society, 1958. Pp. 41.

Describes various types of engineering such as mechanical, electrical or civil, and discusses the necessary professional training.

69. KLEIN, VIOLA. *Working Wives; a Survey of Facts and Opinions concerning the Gainful Employment of Married Women in Britain.* Carried out in co-operation with Mass Observation Ltd. London, Institute of Personnel Management, 1959. Pp. 63.

Based on a survey of about two thousand men and women in 1957 in Great Britain. Some of the questions discussed are: Why do married women go out to work? Do they do it to supplement the family income? Do they enjoy working outside their home? Do they find the strain of housework and outside work too much? Would more married women like to have a job, either full-time or part-time? What provision, if any, do working mothers make for their children to be looked after while they are out at work? What influence has the employment of the wife had on a marriage?

70. NATIONAL COUNCIL OF WOMEN OF CANADA. *Year Book, 1959.* Ottawa, 1959. Pp. 160.

Youth—Employment

71. U.S. BUREAU OF LABOR STANDARDS. *History of Federal Regulation of Child Labor.* Washington, 1959. Pp. [7].

72. U.S. BUREAU OF LABOR STANDARDS. *Self-Training Unit on Child-Labor Laws for Youth Placement Workers.* Washington, GPO, 1959. Pp. 18.

Briefly describes the child labour provisions of the U.S. Fair Labor Standards Act and the Public Contracts Act.

73. U.S. BUREAU OF LABOR STANDARDS. *Some Facts for Young Workers about Work and Labor Laws.* Washington, GPO, 1959. Pp. 21.

Prepared for beginner workers. Briefly describes what the young person will find when he starts to work and provides general information about State and Federal labor laws.

74. U.S. BUREAU OF LABOR STANDARDS. *Young Workers under 18. 1958 supplement.* Washington, GPO, 1959. Pp. 9.

Miscellaneous

75. BRITISH COLUMBIA. RESEARCH COUNCIL. *Interim Report on a Study of Seasonal Unemployment in British Columbia.* Vancouver, 1959. Pp. 71.

Discusses causes of seasonal unemployment and mentions some of the industries in which it occurs. Suggests some methods of dealing with seasonal unemployment.

76. EDITORIAL RESEARCH REPORTS. *Fringe Benefits*, by William R. McIntyre. Washington, 1959. Pp. 613-629.

Discusses the types and trends, the cost and effect of fringe benefits.

77. EDITORIAL RESEARCH REPORTS. *Religion in Politics*, by Norman I. Gelman. Washington, 1959. Pp. 673-694.

Mostly a discussion of a Catholic presidential candidate's chances of being elected in the 1960 election in the U.S.

78. NATIONAL CONFERENCE OF CANADIAN UNIVERSITIES AND COLLEGES. *Proceedings, Thirty-fifth Meeting, 8, 9, 10 June 1959, University of Saskatchewan.* Ottawa, 1959. Pp. 142.

79. U.S. SMALL BUSINESS ADMINISTRATION. *Starting and Managing a Small Credit Bureau and Collection Service*, by Harold A. Wallace. Washington, GPO, 1959. Pp. 187.

80. WERMEL, MICHAEL THEODORE. *The Outlook for Labor Costs in Local Governments.* Pasadena, Industrial Relations Section, California Institute of Technology, 1958. Pp. 14.

Contents: Effect of Economic Conditions on Municipal Operations. The Short-Run Economic Outlook. The Long-Run Economic Trend. Trends in Local Government Labor Costs. Local Governmental Labor Cost Problems in the Coming Few Years. The Longer View ahead.

DBS Issues New Reference Paper on Labour Income

A new reference paper, *Labour Income, 1926-58*, was released last month by the Dominion Bureau of Statistics.

The publication presents for the first time a complete record of annual estimates of labour income from 1926, together with monthly figures from 1947 to 1958 by industry and province or region. Monthly series have been seasonally adjusted and

are presented in both unadjusted and adjusted form.

In addition to the statistical tables the reference paper contains explanations of sources, methods and concepts.

The publication (catalogue number 72-502) is available from the Queen's Printer, Ottawa, at a price of 75 cents.

Decisions of Umpire

(Continued from page 382)

child' and the words and expressions in subparagraphs (i) to (iv) of paragraph (a) of subsection (3) of section 47". Now,—and this point stands out quite clearly in the statutes as quoted in the decision of the board of referees—the duration of the cohabitation must be an essential part of any statutory definition of the expression "common-law wife." In fact, it varies from one to seven years in the respective provisions of the aforementioned statutes and I believe the variation of the period was not so much the result of an absolutely arbitrary decision but rather the legislator's intent to introduce a condition carefully calculated to fulfil the specific or general purpose of each such statute referred to.

From the foregoing, it can be seen that if I were to decide, as the board did, that the person in respect of whom the claimant

requested the dependency rate of benefit is or was his dependent for the purposes of the Unemployment Insurance Act, I would, by the same token, be entering the field of definitions, in that I would be determining that the duration of the cohabitation in the present case was sufficient, without first knowing whether the Commission would be willing to recognize common-law wives as dependents, since it has not yet defined the word "wife".

Therefore, until such time as the Commission has exercised its exclusive power in that connection, I consider that the word "wife" for the purpose of subsection (3) of Section 47 of the Act should be given the same normal and restrictive meaning as did the Umpire in decision CUB 1174.

For all those reasons, I allow the Insurance Officer's appeal.

B—Labour Income

Note: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹ Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at December, 1959 employers in the principal non-agricultural industries reported a total employment of 2,726,275. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C 1 to C 3 relate to salaried employees as well as to all wage earners in the reporting firms

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

TABLE F-2—CONSUMER PRICE INDEXES FOR REGIONAL CITIES OF CANADA AT THE BEGINNING OF FEBRUARY, 1960

(1949=100)

	Total			Food	Shelter	Clothing	Household Operation	Other Commodities & Services
	February 1950	January 1960	February 1960					
(1) St. John's, Nfld.	113.2	114.7	114.8	111.7	115.7	105.9	109.7	127.6
Halifax	125.2	127.1	127.0	117.5	134.3	119.0	129.6	129.6
Saint John	127.0	129.1	129.1	122.6	138.5	117.4	124.6	143.4
Montreal	126.2	127.8	127.5	126.3	144.9	103.9	118.9	137.4
Ottawa	126.1	128.1	127.6	120.2	147.9	113.8	121.2	137.4
Toronto	128.5	129.7	129.7	119.8	153.3	114.1	123.7	138.8
Winnipeg	123.2	124.7	124.1	117.3	133.8	116.1	119.6	134.0
Saskatoon-Regina	122.4	123.8	123.5	117.7	124.8	120.4	125.2	129.7
Edmonton-Calgary	122.2	123.6	123.2	114.9	124.6	118.5	126.7	133.1
Vancouver	127.7	129.3	129.1	122.8	138.6	114.8	134.6	136.7

N.B. Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951-100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on this series see page 542, May 1959 issue.

TABLE G-1.—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1955.....	149	159	60,090	1,875,400	0.18
1956.....	221	229	88,680	1,246,000	0.11
1957.....	242	249	91,409	1,634,880	0.14
1958.....	253	262	112,397	2,872,340	0.24
*1959.....	202	217	99,872	2,386,680	0.19

*Of this total 160 fatalities were reported by the various provincial Workmen's Compensation Boards, and the Board Transport Commissioners; details of the remaining 99 were obtained from other non-official sources.

Explanatory Note to "Manpower Situation in Local Areas"

The system of classifying the labour market situation in individual areas is an analytical device whose purpose is to give a clear and brief picture of local market conditions based on an appraisal of the situation in each area. In considering each category, it is necessary to keep in mind the marked seasonal fluctuations in labour requirements in Canada. Labour surpluses are consistently highest in each year from December to March and lowest from July to October.

The criteria on which this classification system is based are as follows:—

Group 1: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in almost all of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 9.9, 11.9 or 13.9 per cent, depending on the size and character of the area.

Group 2: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in about half of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 5.9 or 6.9 per cent, but less than 10.0; 12.0 or 14.0 per cent, depending on the size and character of the area.

Group 3: Balanced Labour Supply. Areas in which current or immediately prospective labour demand and supply are approximately in balance for most of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 1.9 or 2.4 per cent, but less than 6.0 or 7.0 per cent, depending on the size and character of the area.

Group 4: Labour Shortage. Areas in which current or immediately prospective labour demand exceeds supply in most of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is less than 2.0 or 2.5 per cent, depending on the size and character of the area.

The classification of areas does not depend solely on the ratio of job applications to paid workers. All areas, and particularly those in which the ratio is close to the limits of the above-mentioned ranges, are examined closely in the light of other kinds of information to see whether they should or should not be reclassified. Information on labour market conditions at local areas is obtained mainly from monthly reports submitted by each of the local

offices of the National Employment Service. This information is supplemented by reports from field representatives of the Department of Labour who regularly interview businessmen about employment prospects in their companies, statistical reports from the Dominion Bureau of Statistics and relevant reports from other federal government departments, from provincial and municipal governments and from non-governmental sources.

The term "labour market" as used in this section refers to a geographical area in which there is a concentration of industry to which most of the workers living in the area commute daily. The term is not meant to imply that labour is a commodity and subject to the same kind of demand and supply factors operative in other markets.

To facilitate analysis, all labour market areas considered in this review have been grouped into four different categories (metropolitan, major industrial, major agricultural, and minor) on the basis of the size of the labour force in each and the proportion of the labour force engaged in agriculture. This grouping is not meant to indicate the importance of an area to the national economy. The key to this grouping is shown in the classification of labour market areas on page 333.

The geographical boundaries of the labour market areas dealt with in this section do not coincide with those of the municipalities for which they are named. In general the boundaries of these areas coincide with the district serviced by the respective local office or offices of the National Employment Service. In a number of cases, local office areas have been amalgamated and the names used include several other local office areas, as follows: Farnham-Granby includes Cowansville; Mont-real includes Ste. Anne de Bellevue; Lac St. Jean includes Chicoutimi, Dolbeau, Jonquière, Port Alfred, Roberval and Alma; Gaspe includes Causapscal, Chandler, Matane and New Richmond; Quebec North Shore includes La Malbaie, Forestville, Sept Iles and Baie Comeau; Sherbrooke includes Magog; Trois Rivières includes Louiseville; Toronto includes Long Branch, Oakville, Weston and Newmarket; Sudbury includes Elliot Lake; Niagara Peninsula includes Welland, Niagara Falls, St. Catharines, Fort Erie and Port Colborne; Vancouver-New Westminster includes Mission City; Central Vancouver Island includes Courtenay, Duncan, Nanaimo and Port Alberni; and Okanagan Valley includes Kelowna, Penticton and Vernon.

The 110 labour market areas covered in this analysis include 90 to 95 per cent of all paid workers in Canada.

Explanatory Notes to "Current Labour Statistics"

(a) These figures are the result of a monthly survey conducted by the Dominion Bureau of Statistics for the purpose of providing estimates of the employment characteristics of the civilian non-institutional population of working age. (About 30,000 households chosen by area sampling methods in approximately 110 different areas in Canada are visited each month). The civilian labour force is that portion of the civilian non-institutional population 14 years of age and over that had jobs or that did not have jobs and was seeking work during the survey week.

(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

OCCUPATIONAL MONOGRAPHS

in the

“CANADIAN OCCUPATIONS” SERIES

This Series is prepared by the Economics and Research Branch of the Department of Labour to help young people choose a career, and as an aid to those engaged in vocational guidance work. Each booklet covers an occupation or occupational field, outlining the kind of work done, the preparation and training needed, how to enter the occupation, career opportunities and employment outlook.

44 Teacher, 1959.....	L43-4459
45 Physical and Occupational Therapist, 1959.....	L43-4559

All monographs in the “Canadian Occupations” series are priced at 10 cents per copy, with the exception of *Careers in Natural Science and Engineering*, which is 25 cents. A discount of 25 per cent is allowed on quantities of 100 or more of the same title.

Send remittance by cheque or money order, made payable to the Receiver General of Canada, to The Queen’s Printer, Ottawa, Canada.

School guidance counsellors should inquire from their provincial Department of Education for supplies.

FILMSTRIPS

*The Department of Labour, in collaboration with the National Film Board, has prepared a number of occupational filmstrips based on titles in the “Canadian Occupations” series. Titles covered to date are indicated by an asterisk. Monographs 20-35 have been covered in two filmstrips, entitled *Careers in Natural Science* and *Careers in the Engineering Profession*.

Filmstrips are priced at \$1.50 each and may be purchased from the National Film Board, Box 6100, Montreal.

PUBLICATIONS OF THE DEPARTMENT OF LABOUR

Obtainable from The Queen's Printer, Superintendent of Government Publications

The Labour Gazette (monthly)

The Official Journal of the Department of Labour of Canada. Contains items of current interest, statistics and articles on a wide variety of subjects in the labour field, including industrial relations, conciliation and disputes, prices and the cost of living, employment, wages and hours of work, activities of labour organizations, labour legislation, legal decisions affecting labour, activities of the National Employment Service and the Unemployment Insurance Commission, labour demand and supply, immigration, social, industrial and economic conditions in other countries, activities of the International Labour Organization.

Subscription Rates: \$2.00 per annum in Canada; \$4.00 per annum, other countries. Groups of 5 or more, \$1.00 per annum. Single copies, 25 cents. (English or French).

Reprints from the Labour Gazette

Proportion of Married Women in Canada's Female Labour Force.

Canadian Labour Papers on Microfilm in Department of Labour Library.

Salaries and Qualifications of Women Teaching in Canadian Universities.

Women Workers' Opportunities and Needs.

Industrial Pension Plans in Canada. (Four articles) (English or French). 25 cents a copy.

Provincial Minimum Wage Orders: A Survey of Rates and Related Provisions. (English or French). 20 cents a copy.

Number of Workers Covered by Pension Plans. Rehabilitation Services in Canada.

Vocational Training for Girls and Women. (English).

10 cents a copy; orders of 20 or more, 5 cents; 100 or more, 4 cents (English or French).

Annual Report of The Department of Labour

(Covers fiscal year ending March 31).

25 cents a copy (English or French).

Annual Report on Labour Organization in Canada (Covers calendar year).

Deals with growth of labour organization in Canada, distribution of local unions and union membership, structure and membership of labour organization, the labour press and international unions, and contains a directory of trade union officials.

35 cents a copy (English or French).

Labour Legislation in Canada (Consolidated volume, published at intervals of from 5 to 10 years since 1915, and annual supplements).

Provides in convenient form the text of labour law in Canada. Text or a summary of all federal and provincial labour laws and statutory orders made under them. Latest consolidation includes all labour laws on statute books at December 31, 1948. \$2.

Strikes and Lockouts in Canada

Furnishes a complete record of all strikes and lockouts occurring in Canada during current year. Tables and related texts showing strikes and lockouts by years, by areas, by industries, including time lost, number of workers involved, duration, etc.

35 cents a copy (English or French).

Wage Rates and Hours of Labour

An annual report published in loose-leaf form and followed later by a paper-bound volume. Contains the results of an annual survey at October 1 of occupational wage rates and standard hours of work in most industries. Averages and predominant ranges of wage rates for selected occupation are tabulated separately on a regional basis for some 90 industries including logging, mining, manufacturing, construction, transportation, trade and service groups. Weekly salaries for office occupations and wage rates for labourers in manufacturing in 40 cities are also shown. Trends in wage rates are indicated in tables of index numbers by industry.

The information is available in two ways:

1—Through a subscription to a loose-leaf service (\$7.50 per year with indexed binder or \$5.00 per year without binder). Tables from the previous October 1 survey are distributed in loose-leaf form as they become available from, March to July. Subscribers later receive a paper-bound volume. (Bilingual).

2—In paper bound volume, available about one year after survey date.

One dollar a copy. (Bilingual).

Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation (annual).

Provides a ready comparison of the legislative standard in effect in all provinces concerning the subjects listed in the title.

25 cents a copy. (English or French).

Workmen's Compensation in Canada—A Comparison of Provincial Laws (annual).

Sets out similarities and differences in provincial Workmen's Compensation Acts and contains tables showing the benefits payable under each Act and the industrial diseases compensated.

25 cents a copy. (English or French).

Apprenticeship in Canada

This bulletin outlines the provincial apprenticeship plans and gives details of their methods of operation.

25 cents a copy. (English or French).

Provisions for Income Security in Canadian Manufacturing Industries.

25 cents a copy. (English).

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Current Manpower Situation

Between March and April, employment increased by an estimated 74,000 to 5,742,000. Most of the increase was in outdoor activities, with agriculture accounting for 52,000 of the total.

The estimate of female workers outside of agriculture showed a drop of 32,000 during the month; this was contrary to the normal trend for this time of year. The fact that the Labour Force Survey was conducted during the Easter holidays, when a relatively large number of women are away from work, appears to be the main reason for this movement.

The number of men with jobs in non-farm industries increased by an estimated 54,000 during April, which was about normal for the month. Employment in the construction industry expanded seasonally despite continued weaknesses in housebuilding. A number of small layoffs in manufacturing were reported, and forestry operations declined seasonally.

As indicated below, the change in employment of men during the first four months of the year has varied considerably in the past six years depending to some extent on the phase of the business cycle in which these months fell. The outstanding gains of 1955 and 1959, for example, reflected the recovery of business activity following previous recessions. Unfavourable weather can be blamed, in part, for the relatively poor showing in 1960. It is clear, however, that the rapid growth of employment opportunities characteristic of boom years is lacking so far this year.

Persons With Jobs, Males, Non-Farm

Year	January	April	Change
1955	3,155,000	3,186,000	+31,000
1956	3,369,000	3,367,000	- 2,000
1957	3,483,000	3,494,000	+11,000
1958	3,461,000	3,456,000	- 5,000
1959	3,525,000	3,568,000	+43,000
1960	3,621,000	3,611,000	-10,000

Compared with a year earlier, there were 78,000 more persons with jobs, the result of substantially higher employment in the trade and service industries. Women accounted for more than two-thirds of the increase.

The number of persons without jobs and seeking work decreased by an estimated 49,000 over the month to 517,000 in April. The decline was smaller than during the corresponding periods in 1958 and 1959. Almost half of the drop took place in Quebec. The April estimate of persons without jobs and seeking work represented 8.3 per cent of the labour force, compared with 7.3 per cent in April 1959 and 8.6 per cent in April 1958.

Of the 517,000 seeking work in April, 464,000 were men and 53,000 were women. Seasonal industries continued to be the main source of unemployment. Construction and the primary industries, which are heavily influenced by

weather conditions, combined to account for 45 per cent of the total of persons seeking work in April; in March they accounted for 47 per cent of the total. Labourers were the largest occupational group of job seekers in April; at an estimated 109,000 they accounted for just over one fifth of the total. About one out of seven job seekers came from manufacturing and mechanical occupations. Persons who never worked before were responsible for a very small part of the total, less than 4 per cent.

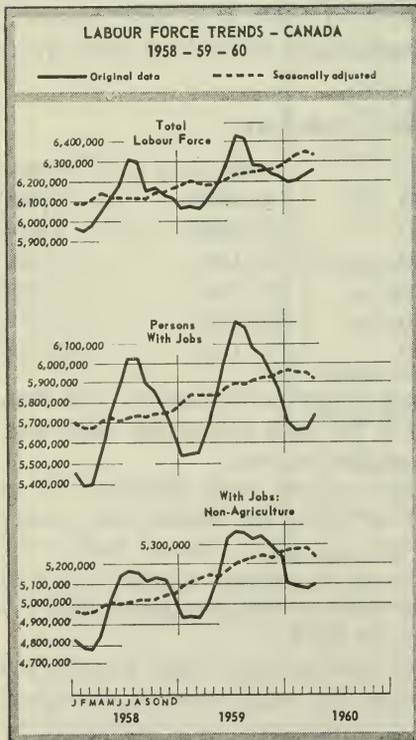

Developments in Pulp and Paper Products Industry

The increasing output of pulp and paper products during the past decade has been an important contribution to economic growth in Canada. This industry has accounted for more than 15 per cent of new productive capacity put in place in manufacturing over this period. The expansion has had far-reaching effects, many of which are not immediately discernible. Apart from direct requirements for heavy machinery, building materials, and construction labour, the new plants generate additional demands for power and transportation services; in many instances, these are prior requirements.

The upsurge in investment during the past decade was largely in response to a sharp increase in world demand for paper products, particularly newsprint. This resulted in a rapid build-up of capital facilities, particularly in the period 1955-1957, which in the light of the following two years proved to be overly ambitious. In fact, demand from the domestic and traditional export markets began to subside even before some of the expansion programs were completed. Consequently, in almost all paper products plants, production cutbacks and short time were instituted. Quotas have been stepped up again during the course of the past year or so, but even in early 1960 existing plant capacities are not fully utilized.

In certain areas and regions, the pulp and paper products industry occupies a dominant position in the local economy. For the most part, the mills are situated in the more remote areas, close to the supply of raw materials. The distance from markets generally makes such areas less suitable for other lines of manufacturing. This situation has a tendency to produce "one-industry towns" that are sometimes subject to acute labour shortages and surpluses as the demand for the product fluctuates.

As a source of economic activity that, to a large extent, has its basis in foreign demand, paper products play a particularly important role in Canada's external trade. Accounting for only about 12 per cent of the net value of all goods produced in Canada, they were responsible for more than 20 per cent of the total value of exports in 1959. Last year's value of newsprint shipments ranked far

ahead of that of wheat, the second most important export commodity. Exports of woodpulp were valued at \$26 million and were only slightly less important than lumber, which placed third in terms of value of foreign trade.

For most grades of pulp and paper, domestic and export markets began showing signs of renewed strength early in 1959, setting the stage for advances in output and employment. Pulp production registered a 6-per-cent increase in volume, equalling the record level of output achieved in 1956. More than three fourths of the pulp produced in Canada during the past year was converted into finished products in the form of newsprint, paperboard, and fine, wrapping and other papers. The remaining 23 per cent was exported, chiefly to the United States. The dominant position of the United States as an export market was maintained: in 1959 the U.S. took 80 per cent of the total output of pulp and paper products compared with 83 per cent in 1958.

Production of chemical pulp showed a striking increase of 8 per cent last year, rising about 4 per cent above the 1956 record. The main supporting influence came from increased demands for paper and paperboard in Canada and the United States. Shipments overseas also increased during the year, although they still accounted for a relatively small part of the total market of chemical pulp; shipments consisted mainly of dissolving and sulphate grades. Sulphate pulp, used mainly in the production of paper board, paper boxes and wrapping papers, registered a strong advance in output with bleached and semi-bleached grades showing particularly marked gains. Production and shipments of sulphite pulp, used most extensively in fine papers and textile fibres, showed little improvement from the reduced level of 1958. Groundwood, the principle ingredient in newsprint, registered a 5-per-cent increase in output during 1959. The fact that the demand for newsprint rose more slowly than some other grades of paper accounts for the relatively modest increase in the production of groundwood.

Newsprint production averaged nearly 5 per cent higher in 1959 than in the previous year, but remained slightly below the record level of 1956. The declining trend of Canadian newsprint consumption that began towards the end of 1957 was halted in the early months of 1959, and consumption increased as the year advanced, recouping virtually all of the earlier losses. Meanwhile, world demand for newsprint became stronger. The United States, which consumes about four fifths of the output of Canadian newsprint mills, registered a 7.6-per-cent increase in newsprint consumption during 1959. Canada's share of the U.S. market declined again during 1959 as a result of the expansion of the U.S. newsprint industry, but this country benefited nonetheless by the increased requirements of the United States; a little better than half of the additional requirements of the past year were produced in Canada. Canadian shipments to markets overseas also showed a substantial rise during 1959 despite marked increases in capacity and production in the Scandinavian countries.

Paperboard production, which reached a record level in 1958, continued to expand last year, with increases in practically every variety of boxboard and container board. The increase in domestic requirements of the "board" industry were close to the long-term growth rate despite greater competition from new packaging materials. Between 1954 and 1958 the output of paperboard mills increased by 30 per cent.

The demand for fine papers has strengthened noticeably during the past year or more. Domestic shipments in 1959 were about 7 per cent higher than the year before and exports were up about 12 per cent. Output of wrapping paper was up about 12 per cent as demand increased in both the domestic and export markets. Roughly 10 per cent of the wrapping paper produced in Canada was destined for the export market.

For the industry as a whole, the expansion of productive capacity slowed down still further in 1959, after registering a marked decline during 1958. Total capacity of the mills increased by less than 2 per cent, less than half the expansion in demand for pulp and paper products. Thus the reserve capacity of the industry showed a moderate decline over the year.

The over-all expansion of output was accomplished in part by a lengthening of the work week; it had been reduced considerably during the recent business downturn. In the fourth quarter of 1959, the work week averaged almost 1 hour longer than in the corresponding quarter of 1958. Pulp and paper mills, which were responsible for the drop in hours during the recent recession, figured prominently in the recent advance. Other paper products plants (paper boxes and bags, roofing paper and wallpaper) registered a slight increase in hours during the latter part of 1959, making up for the relatively small losses that occurred during the recent business downturn.

Total employment in the industry increased by less than 2 per cent last year and was still slightly below the record level established in 1956. Average employment (estimated at close to 100,000) was about 23 per cent higher than ten years earlier. The distribution of employment in the industry did not change appreciably during the course of the year; pulp and paper mills continued to account for more than two thirds of the total of persons employed.

The strongest employment advance in the industry over the course of the past year occurred in the Pacific region, followed by Ontario, Quebec and the Atlantic region in that order. Quebec now occupies a less dominant position in the industry than it did ten years ago, although it still accounts for 40 per cent of total employment. In British Columbia, on the other hand, employment in pulp and paper products plants has increased by more than 40 per cent in this period, and this province's share of total employment has increased from 8 to 11 per cent.

To sum up, employment in the pulp and paper products industry continued to expand in 1959, though not as rapidly as production. Indications are that consumption of paper products in Canada's traditional markets will continue to grow. Although productive capacity in other countries is expanding, Canadian plants will probably continue to share in the increasing demand. The resulting production gains would utilize the capacity of the industry more fully, and might create conditions conducive to further expansion.

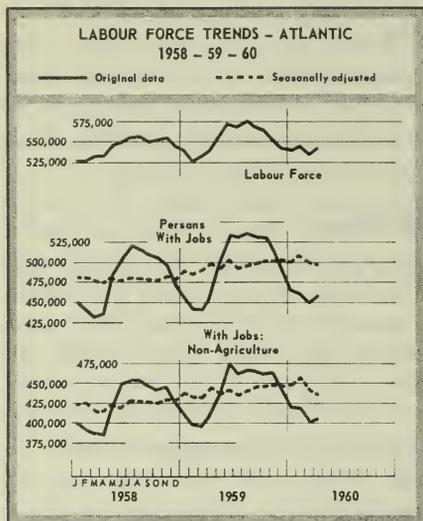

CLASSIFICATION OF LABOUR MARKET AREAS—APRIL 1960

	SUBSTANTIAL LABOUR SURPLUS	MODERATE LABOUR SURPLUS	APPROXIMATE BALANCE	LABOUR SHORTAGE
	Group 1	Group 2	Group 3	Group 4
METROPOLITAN AREAS (labour force 75,000 or more)	Calgary Edmonton Montreal Quebec-Levis St. John's Vancouver-New Westminster Windsor Winnipeg	Halifax Hamilton → OTTAWA-HULL → TORONTO		
MAJOR INDUSTRIAL AREAS (labour force 25,000-75,000; 60 per cent or more in non- agricultural activity)	Brantford Corner Brook Cornwall Farnham-Granby Fort William- Port Arthur Joliette Lac St. Jean Moncton New Glasgow Peterborough Rouyn-Val d'Or Shawinigan Sherbrooke Sydney Timmins- Kirkland Lake Trois Rivieres	Guelph Kingston Kitchener London → NIAGARA PENINSULA Oshawa Saint John → SARNIA Sudbury Victoria		
MAJOR AGRICULTURAL AREAS (labour force 25,000-75,000; 40 per cent or more agricultural)	Barrie Charlottetown Chatham Prince Albert Red Deer Riviere du Loup Theftord-Megantic- St. Georges Yorkton	→ BRANDON → LETHBRIDGE Moose Jaw North Battleford Regina → SASKATOON		
MINOR AREAS (labour force 10,000-25,000)	Bathurst Beauharnois Drummondville Belleville-Trenton Bracebridge Brampton Bridgewater Campbellton Cranbrook Dauphin Dawson Creek Edmundston Fredericton Gaspe Grand Falls Kentville Lindsay Montmagny Newcastle North Bay Okanagan Valley Owen Sound Pembroke Portage la Prairie Prince George Quebec North Shore Rimouski Ste. Marie Stratford → SWIFT CURRENT → TRAIL-NELSON → WALKERTON → WEYBURN Woodstock- Tillsonburg	Kitimat	

→The areas shown in capital letters are those that have been reclassified during the month; an arrow indicates the group from which they moved. For an explanation of the classification system used, see page 414, April issue.

Employment Situation in Local Areas

ATLANTIC

In the Atlantic region the spring pickup in employment began early in April and proceeded slowly as the month advanced. Between March and April, the total number of persons with jobs increased by an estimated 10,000 to 459,000. Construction and agriculture were mainly responsible for the increase in employment. Weight restrictions on roads were still in force in most rural areas, preventing an upturn in activity in sawmills and road transportation. Activity in the fishing industry remained at a seasonally low level, although preparations for the lobster season resulted in some job openings during the month. Forestry employment showed a further decline during April as hauling operations ended in

various areas; activity was expected to increase again in May when river drives get underway. Aside from these seasonal influences, the employment situation did not change materially during the month. Shipbuilding and iron and steel plants showed additional strength, but coal production was curtailed owing to the shortage of orders.

The over-all employment situation in the region differed very little from last year. Coal mining, which was a major source of weakness last year, continued to be hampered by reduced markets due to increased competition from other fuels. The first of a series of production cutbacks that were scheduled to take place this year began late in April and resulted in the release for one week of several thousand coal miners in the Sydney area. Manufacturing employment in April was maintained at a slightly higher level than last year in most parts of the region; significant gains were made in iron and steel and paper products. Construction employment was somewhat lower than in the spring of 1959, although the outlook for the rest of the year was quite encouraging.

The total value of construction planned for 1960 was virtually the same as that accomplished last year. However, the composition of this year's investment program has changed significantly. Outlays for housing and industrial building are expected to be somewhat smaller than last year, while modest gains are anticipated in engineering, business and commercial building.

Employment and unemployment were virtually the same as in April 1959 in most local labour market areas. The classification of the 21 areas in the region at the end of April was unchanged from the previous month and the previous year; two areas were in the moderate surplus and 19 in the substantial surplus category.

LABOUR MARKET CONDITIONS

Labour Market Areas	Labour Surplus				Approximate Balance	
	1		2		3	
	April 1960	April 1959	April 1960	April 1959	April 1960	April 1959
Metropolitan.....	8	4	4	8	—	—
Major Industrial	16	15	10	10	—	1
Major Agricultural.....	8	7	6	7	—	—
Minor.....	39	33	18	20	1	5
Total.....	71	59	38	45	1	6

Local Area Developments

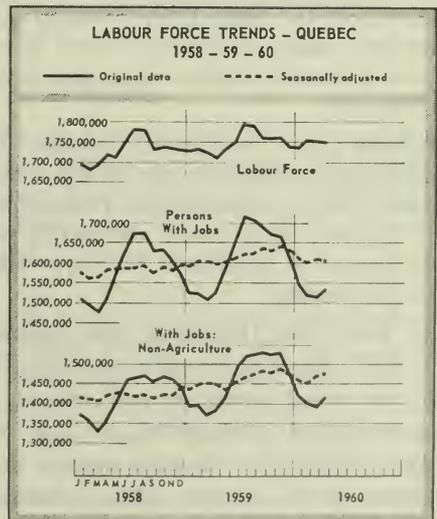

St. John's (metropolitan) remained in Group 1. Apart from seasonal influences, the employment situation changed very little in this area. Unemployment was heavier than a year ago owing to reduced activity in construction. It will be remembered that in the winter and spring months of 1959, activity in the construction industry was maintained at a very high level. At the end of April 1960, the number of construction workers registered at the NES office was about 8 per cent greater than a year before.

Halifax (metropolitan) remained in Group 2. The opening of the navigation season on the St. Lawrence resulted in reduced activity on the Halifax waterfront and partly offset the expansion in other seasonal industries. The employment situation in the Halifax area remained much more favourable than in other parts of the region. Manufacturing, which accounts for roughly one third of total industrial employment in the area, showed little employment change during the month. Except for shipbuilding, where employment contracted slightly during the month, all manufacturing plants were reported to be operating at capacity.

QUEBEC

In the Quebec region the employment increase between March and April was smaller than usual for this period. The total number of persons with jobs rose by an estimated 19,000 to 1,536,000 and was at about the same level as a year earlier. Male workers accounted for the entire rise in employment, offsetting a decline in female employment. The employment expansion occurred in non-agricultural industries; farm employment registered little change during the month.

Activity in pulpwood logging declined quite sharply between March and April, releasing a substantial number of workers until the start of the river drives. Sawmilling activity was also curtailed owing to diminished supplies of sawlogs.

The seasonal rise in construction employment was retarded by slackness in housebuilding. In the first quarter of this year the number of houses under construction in urban centres was 14 per cent lower than in the corresponding period of 1959. Other types of construction continued to show strength. In metal mining, employment continued at a higher level than last year, while in asbestos mining further hirings were reported in April. The opening of the navigation season meant the rehiring of seamen, longshoremen and stevedores.

In the early months of this year, manufacturing employment was about the same as a year earlier. In April, employment was maintained in the primary textile industry although some small layoffs were reported in synthetic plants. Layoffs and short time were more prevalent than last year in the clothing and leather industry. Employment continued at a high level in the aircraft and shipbuilding industry.

Unemployment declined moderately during the month in virtually all parts of the region but was higher than last year. At the end of April the classification of 24 labour market areas was unchanged from the previous month and was as follows (last year's figures in brackets): in substantial surplus, 23 (18); in moderate surplus, 1 (6).

Local Area Developments

Montreal (metropolitan) remained in Group 1. Unemployment declined slightly as a result of seasonal hirings in construction, transportation and in parts of manufacturing. Employment in manufacturing continued to be slightly higher than a year before, with activities at a high level in the aircraft and shipbuilding industry. In the clothing and leather industries employment at the end of February was 2 and 5 per cent lower, respectively, than in February 1959, and there has been little apparent improvement in these industries during recent months.

Quebec-Levis (metropolitan) remained in Group 1. Unemployment showed a less-than-usual decline and remained at a higher level than last year. Total employment was slightly higher than a year ago. In construction the pick-up in employment was not as strong as last year. At Lauzon, a 40,000-ton ship was launched, the biggest ever built in Canada. Employment was steady in primary textiles, while layoffs and short time were registered in the apparel industry. In a plywood factory more than 100 workers were laid off because of reorganization.

Joliette (major industrial) remained in Group 1. Labour surpluses were a good deal higher than last year at the same time. Most of the increase in unemployment was in construction occupations. There was also an increased surplus of loggers, lumbermen and textile workers. One of the largest employers in this area, a munitions factory, reduced employment by more than 100 in recent months.

St. Jean, Ste. Hyacinthe, Ste. Agathe-St. Jerome (minor) remained in Group 1. NES registrations were markedly higher in these areas during the month than in the same month a year before. In all these areas lower employment in construction contributed to the higher level in unemployment. Activities were reported to be also weaker than a year earlier in clothing and knitting plants. In St. Jerome alone, a knitting mill laid off some 150 workers. There was lack of strength in the leather industry also.

ONTARIO

In Ontario, construction, agriculture, transportation and other outdoor activities increased during April. In many centres, however, the extent of the seasonal pick-up in employment was moderated by layoffs in several manufacturing industries. The total number of persons with jobs in the province was estimated to be 2,212,000 in April, an increase of about 20,000 from the previous month. In the northern areas of the region, the seasonal pick-up was not yet in progress to any great extent and small layoffs were reported in manufacturing; employment in most of the centres of the region continued well ahead of last year's figures.

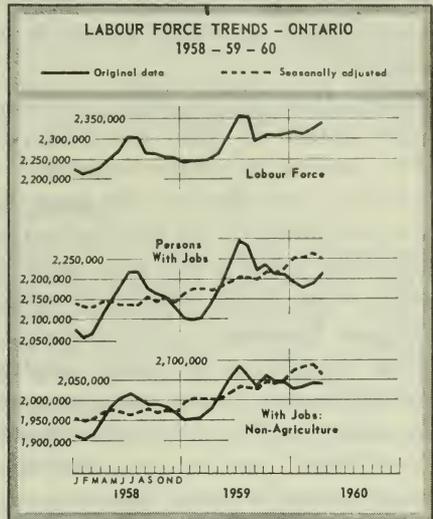

The employment position of the region relative to last year did not change appreciably in the first four months. Employment was up almost 4 per cent over the same period last year, and almost 6 per cent over 1958. The major part of this increase was in services (particularly education and health services) and trade. Manufacturing employment was stable through the first quarter, at about the same average level as a year earlier. Construction activity in the province was still down from last year. This was especially true of residential construction, the volume of housebuilding underway at the end of March being down about 17 per cent over the year.

The number of unemployed in the region was still higher than last year, although it declined sufficiently during the month to reduce labour surpluses from substantial to moderate proportion in six areas. Slackness in housebuilding was the major factor contributing to the higher level of unemployment in the province. The classification of the 34 areas in the region at the end of April was as follows (last year's figures in brackets): in substantial surplus, 15 (11); in moderate surplus, 19 (19); in balance, 0 (4).

Local Area Developments

Toronto (metropolitan) reclassified from Group 1 to Group 2. The reclassification was mainly the result of a pick-up in construction, although the advance was reported to be slow for the time of year. Employment was a little higher than last year, the drop in aircraft plants being matched by a series of small gains in other manufacturing industries, and in trade and services.

Hamilton (metropolitan) remained in Group 2. A series of small layoffs in a number of manufacturing industries slowed down the seasonal improvement. In the past year textile employment has fallen steadily in this area, partly because of the transfer of operations to other areas. The latest plant closure was in April and affected 60 workers. Employment is also down from last year in the electrical apparatus industry. These losses have been more than offset by substantial employment gains in non-residential construction and steel manufacturing, which have raised total employment in the area above last year's level.

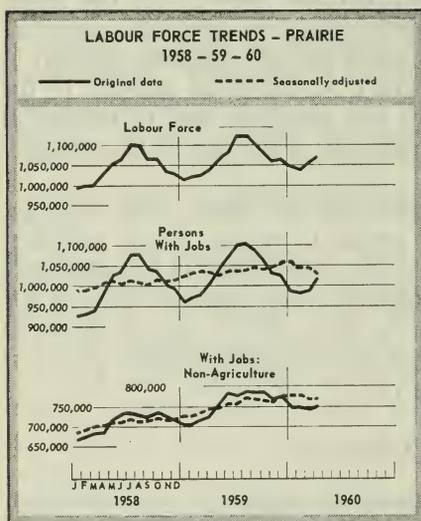

Windsor (metropolitan) remained in Group 1. Employment and unemployment in this area was virtually unchanged from a year ago. During the month there were several short-term layoffs in two of the three motor vehicle firms in the area.

Ottawa-Hull (metropolitan) reclassified from Group 1 to Group 2. The employment upturn in April was disappointing owing to slackness in construction. The number of workers registered at the National Employment Service office was up 19 per cent over the same time last year; more than half of this increase was accounted for by construction workers. Total employment in the area was about the same as last year, small declines in manufacturing and construction being offset by an increase in services.

Niagara Peninsula (major industrial) reclassified from Group 1 to Group 2. Small layoffs in agriculture implements, steel manufacturing, textiles, automobile manufacturing and pipe manufacturing hampered the seasonal upswing in this area. The most recent figures indicate a considerable improvement in employment over last year, particularly in iron and steel products. Construction employment, however, has advanced more slowly than usual.

PRAIRIE

The usual large seasonal increase in employment occurred in the Prairie region from March to April. The estimate of persons with jobs rose by 27,000, bringing the total to 1,018,000. The year-to-year increase, which was 30,000 in January, amounted to only 6,000 in April. This narrowing year-to-year increase in employment was due largely to weakness in housing construction but also to the strength of the employment growth during the early months last year. Unemployment exhibited a similarly smaller reduction in the early months of 1960, compared with 1959. Agricultural employment was down 15,000 from a year earlier both in January and in April.

About three-quarters of the March-to-April increase in employment was due to hirings on farms for spring work, including the harvesting of an estimated 111 million bushels of grain caught by the snow last fall and not salvaged during the winter. Rain and snow late in the month temporarily suspended field work, but the moisture, added to the already abundant reserves acquired during the wet spell last fall, makes early crop prospects appear very favourable.

Construction accounted for most of the increase in non-farm employment during April. Logging was at the low between-season levels; river drives were due to begin in May. The closure of two uranium mines at Uranium City affected more than 200 miners.

Unemployment dropped seasonally, the most notable change taking place in the small centres most affected by the expansion in agriculture and road work. Total unemployment remained higher than a year earlier. Five of the 20 labour market areas were reclassified to categories of reduced unemployment. The area classification at the end of April was as follows (last year's figures in brackets): in substantial surplus, 10 (8); in moderate surplus, 10 (11); in balance, 0 (1).

Local Area Developments

Edmonton (metropolitan) remained in Group 1. A heavy drop in housing construction from year-earlier levels lessened the seasonal demand for construction workers this spring. Recent figures show a drop of more than 10 per cent from 1959 in total construction employment. Farmers had good weather through most of the month for combining and spring work. Primary steel production was at capacity and pipe production went up in anticipation of pipeline construction this summer. Production of cement and cement products increased seasonally.

Winnipeg (metropolitan) remained in Group 1. A late spring, with generally cool weather during the first three weeks of April followed by heavy precipitation, delayed construction and other outdoor industries. Some fairly extensive flooding of farm land near the Assiniboine and Red Rivers delayed the beginning of farm work in the districts affected. Some post-Easter decline occurred in packing plant employment. Textiles, clothing, and leather manufacturing remained weak during the month.

Fort William-Port Arthur (major industrial) remained in Group 1. Lakehead navigation opened on April 10, allowing stevedores, grain handlers and other waterfront workers to return to their jobs. More than 70 boats with about 30 million bushels of grain cleared port, and the first iron ore shipment moved out on April 23. Another iron mine went into production near Atikokan.

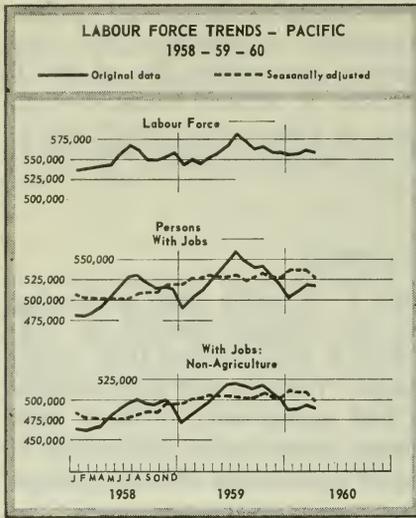

Brandon, Saskatoon and Lethbridge (major agricultural) and **Swift Current and Weyburn** (minor) were reclassified from Group 1 to Group 2. Unemployment in these centres was reduced by seasonal hirings in agriculture, construction, and railway transportation.

PACIFIC

Employment showed little change from March to April. The number of persons with jobs was estimated to be 517,000, some 5,000 less than a year earlier. Employment in agriculture, forestry, and wood products manufacturing was ahead of last year but offsetting declines were apparent, chiefly in the construction, shipbuilding, and smelting industries.

Demand for workers in agriculture strengthened seasonally during the month as men were hired to work on dairy farms and to continue preparations for seeding. Prolonged wet weather hampered field work in many districts.

Except for the southern interior, where weather conditions allowed forestry activity to expand, seasonal suspensions in logging and the curtailment of road transportation due to road restrictions contributed to some weakening in non-agricultural employment on much of the mainland and Vancouver Island during the month. Because of the low levels of housebuilding—units under construction

in urban centres at the beginning of April were down 40 per cent from a year earlier—construction employment did not expand as strongly as usual at this time of year.

Except for some developing weaknesses in the local market brought on by housebuilding declines, a generally heavy demand continued for forestry products. The volume of lumber inspected for shipment in the first quarter of this year was 17 per cent above the same year-earlier period and water-borne lumber shipments were up 69 per cent. Pulpwood production in the first two months of the current year was 34 per cent above the corresponding months of last year. In other manufacturing, metal

fabricating shops were busy filling orders for a heavy schedule of bridge building in the coming summer. Minor layoffs occurred in textiles, shipbuilding, and especially some industries auxiliary to home building, such as sash and door makers and furniture manufacturers.

During the month a small decline occurred in unemployment, which, however, remained substantially higher than last year. Two labour market areas were reclassified during the month to categories denoting reduced unemployment. At the end of April the classification of the 11 areas was as follows (last year's figures in brackets): in substantial surplus, 4 (3); in moderate surplus, 6 (7); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) remained in Group 1. Sizable numbers of unemployed carpenters, trowel tradesmen, sheet metal workers, plumbers and unskilled construction labourers continued as a result of the weaknesses in housebuilding activity in the area. Weakness was also apparent in steel shipbuilding, housebuilding materials manufacturing and fish canneries. Some improvement occurred in sales and services employment, although the demand in these occupations was not as strong as usual at this time of year. Lumber production and longshoring continued to provide a main support to employment. Thirty-two halibut vessels left for fishing grounds in the Bering Sea, a record sailing to this area from Vancouver. Good catches were reported although prices were lower than anticipated. Herring fishing and whaling have been discontinued because of marketing factors.

Chilliwack and Trail-Nelson (minor) were reclassified from Group 1 to Group 2 as improved weather conditions allowed logging operations to be stepped up on the southern mainland. Farm hirings also picked up, although cool, damp weather retarded ploughing and seeding.

Current Labour Statistics

(Latest available statistics as of May 15, 1960)

Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year
<i>Manpower</i>

(a) Distribution of these figures between male and female workers can be obtained from *Labour Force*, a monthly publication of the Dominion Bureau of Statistics. See also page 414, April issue.

(b) An unusually large number worked less than 35 hours because Easter Monday came in the survey week.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

During April, collective bargaining for the renewal of 120 agreements covering bargaining units of 500 or more workers (exclusive of those in the construction industry) had reached various stages of negotiation. Nineteen new contracts were settled, giving wage increases to approximately 24,000 workers. Relatively little progress was made in the dispute between the railways and the non-operating unions beyond the presentation of their briefs to the three-man conciliation board. As in the past few months, there were no work stoppages recorded in the course of negotiations of the major agreements covered by this review.

Last-minute negotiations averted the possibility of a strike that threatened to halt the publication of one of Toronto's leading newspapers. The Toronto Star unit of the **Toronto Newspaper Guild**, representing more than 1,000 employees in the editorial, advertising, business, delivery, garage, circulation and maintenance departments of the **Toronto Star**, had originally asked for a 16-per-cent wage increase in a two-year contract but later lowered their demand to 12 per cent. Since the parties were unable to reach agreement on this issue, as well as a number of others, the dispute was taken before a conciliation board. The board's report contained recommendations on two basic outstanding issues: wages, and the exclusion of 12 editorial employees from the bargaining unit. On wages, the board recommended that the increase be 9 per cent over a 28-month agreement; on the exclusion issue the board made no attempt to resolve the problem, but recommended that the Labour Relations Board rule on it. The Guild firmly rejected the company offer based on the conciliation board's recommendations and when further talks failed, the union membership approved strike action. With the threat of a work stoppage facing the parties, they engaged in a marathon 16-hour bargaining session, which ended in a compromise settlement.

The compromise called for a general wage increase totalling 14 per cent over a 34-month agreement. All employees received a lump sum payment of 3 per cent of gross earnings retroactive to last December 1. Effective April 1 of this year, there was an increase of 3 per cent of the gross pay with another 3-per-cent increase, calculated on the old contract base pay, effective October 1, 1960. On April 1, 1961, there will be some wage adjustments in key classifications as well as a general increase of 4 per cent on the old contract base pay, with another 4-per-cent increase effective January 1, 1962. The Star reduced to four the number of editorial employees for whom they claimed exemption from the bargaining unit and it was agreed that the status of these employees would be determined by the Ontario Labour Relations Board.

Increased collective bargaining activity was in evidence in the pulp and paper industry during the month and can be expected to continue at an accelerated pace, since some 36 major agreements covering more than 30,500

workers are due to terminate during the second quarter of this year. Negotiations have reached an advanced stage in a number of cases and bargaining has ended in new agreements for a few. In contrast to the extended negotiations that preceded the signing of the 1958 agreements, the new contracts were negotiated and signed in an extremely short time after relatively few meetings.

In Kapuskasing, Ont., the **Spruce Falls Power and Paper** and **Kimberley-Clark Canada** concluded new agreements for 1,700 workers represented by the **United Paper Makers and Paper Workers**, the **Pulp and Paper Mill Workers** and the **I.B.E.W.** The settlement provided for wage increases effective May 1, 1960 ranging from 11 to 18 cents an hour, and an additional wage increase on November 1, 1960 ranging from 4 to 8 cents an hour. Among other gains was an improvement in the vacation plan, effective January 1, 1961, that reduced the eligibility period for three weeks vacation from 15 to 10 years. Under the old agreement there were four days specified as statutory holidays and two extra days known as "negotiated holidays," making a total of six. Under the new terms, one additional day was included with the Christmas shutdown, increasing it from 40 to 48 hours, for which the employees will receive two days pay. To offset the lost production time, the Dominion Day shutdown will be reduced from 32 to 24 hours. A completely new clause was added that allows for special leave with pay in the case of a death in an employee's immediate family, up to a maximum of three consecutive days.

The **Pulp and Paper Mill Workers** signed a similar one-year agreement with **Ontario-Minnesota Pulp and Paper**, Fort Francis and Kenora, Ont., providing a total wage increase ranging from 15 to 28 cents an hour for the 800 employees. A similar pattern was followed in the settlement reached early in May between four paper unions representing some 5,000 employees of the **Abitibi Power and Paper Mills** and the Port Arthur plant of the **Provincial Paper Company**. Details of these latter settlements, terms of which apply to nine paper mills located in Manitoba, Ontario and Quebec, will appear in next month's issue.

In the logging sector of the industry, the 14,000-member **Newfoundland Brotherhood of Woods-Workers**, born out of last year's strike to replace the International Woodworkers of America, signed new agreements in April with **Bowater's Newfoundland Pulp and Paper Mills**, Corner Brook, and **Anglo Newfoundland Development Company**, Grand Falls. The two-year settlements, which were the products of a week of negotiations, provided for a total increase of 6 per cent in the general labour rate.

Renewal agreements in the meat packing industry brought wage increases to more than 7,000 workers employed at the various plants across the country. The **United Packinghouse Workers Union** represented the employees in the negotiations that were concluded with the signing of two-year agreements with **Burns and Company** and **Canada Packers**.

The **Canada Packers** agreement provided for a general wage increase of 6 cents an hour effective April 1, 1960, and an additional 6 cents an hour on April 1, 1961. The cost-of-living escalator clause contained in the previous agreement was deleted in its entirety in the current settlement. A bereavement pay clause was added, similar to the one in the pulp and paper industry; it

was limited to one day, for which the employee will receive eight hours pay at his regular rate, provided that the leave falls on one of his regularly scheduled working days. Improvements were made in the premiums for work scheduled on Saturdays and Sundays. A clothing allowance was incorporated for Canada Packers' employees: the company agreed to provide labourers' outer clothing, rubber boots, etc., as required, at one half the cost. Sick pay for male employees was increased from \$37 to \$40 weekly and for female employees from \$30 to \$32 weekly. On the first anniversary date of the contract, three weeks vacation annually will be allowed for all employees with 12 years of continuous service rather than after 15 years. The monetary terms of the agreement with Burns and Company plants were similar to the above but there were some variations in other details.

Collective Bargaining Scene

Agreements covering 500 or more workers,

(No cases during April)

Part III—Settlements Reached During April 1960

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

B.C. ELECTRIC RAILWAY, COMPANY-WIDE—OFFICE EMPL. (AFL-CIO/CLC): 2-yr. agreement covering 1,500 empl.—general increase of 3% eff. Feb. 1, 1960, an additional 3% general increase eff. Oct. 1, 1960 and a further 2% increase on June 1, 1961; 4 wks. vacation after 25 yrs. of service (previously no provision for 4 wks. vacation); improved provisions for sick leave with pay.

BURNS & CO. (EASTERN), KITCHENER, ONT.—PACKINGHOUSE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 500 empl.—6¢-an-hr. increase retroactive to April 1, 1960 plus an additional 6¢-an-hr. increase eff. April 1, 1961; 3 wks. vacation after 12 yrs. of service (previously 3 wks. after 15 yrs.); sick pay increased by \$3 per wk. for male empl. and \$2 per wk. for female empl.; Saturday premiums increased from 10¢ to 20¢ per hr.; Sunday premiums increased from 20¢ to 30¢ per hr.

BURNS & CO., WESTERN CANADA—PACKINGHOUSE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 1,500 empl.—6¢-an-hr. increase retroactive to April 1, 1960, plus an additional 6¢-an-hr. eff. April 1, 1961; 3 wks. vacation after 12 yrs. of service eff. in 1961 (formerly 3 wks. after 15 yrs.); Saturday premiums increased from 10¢ to 20¢ per hr.; Sunday premiums increased from 20¢ to 30¢ per hr.

CANADA PACKERS, EIGHT PLANTS—PACKINGHOUSE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 5,000 empl.—6¢-an-hr. increase retroactive to April 1, 1960, plus an additional 6¢ an hr. eff. April 1, 1961; 3 wks. vacation after 12 yrs. of service (previously 3 wks. after 15 yrs.); sick pay increased by \$3 per wk. for male empl. and \$2 per wk. for female empl.; Saturday premiums increased from 10¢ to 20¢ per hr.; Sunday premiums increased from 20¢ to 30¢ per hr.

CITY OF TORONTO, ONT.—FIRE FIGHTERS (AFL-CIO/CLC): 2-yr. agreement covering 1,200 empl.—general increase of 3.7% retroactive to April 1, 1960, plus an additional 2.3% eff. April 1, 1961; costs of medical plan to be shared equally by company and employees; improved accidental death benefits.

CITY OF VANCOUVER, B.C.—CIVIC EMPL. (IND.) (OUTSIDE WKRS.): 1-yr. agreement covering 1,300 empl.—general increase of 3¼%; improved vacation allowance.

DISTILLERS CORP., MONTREAL, QUE.—DISTILLERY WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 1,200 empl.—settlement terms not yet available.

HAMMERMILL PAPER, MATANE, QUE.—CARPENTERS (AFL-CIO/CLC): present agreement covering 700 empl. extended for 1 yr. without change.

MANITOBA POWER COMMISSION, PROVINCE-WIDE—I.B.E.W. (AFL-CIO/CLC): 2-yr. agreement covering 700 empl.—3% increase eff. April 1, 1960, plus an additional 3% increase eff. April 1, 1961.

MANITOBA TELEPHONE, PROVINCE-WIDE—I.B.E.W. (AFL-CIO/CLC): 2-yr. agreement covering 900 empl.—3% increase eff. April 1, 1960, plus an additional 3% eff. April 1, 1961; 4 wks. vacation after 35 yrs. of service (previously no provision for 4 wks. vacation); isolated wkrs. at The Pas and other northern points to receive northern allowances.

MANITOBA TELEPHONE, PROVINCE-WIDE—MANITOBA TELEPHONE WKRS. (IND.): 2-yr. agreement covering 2,000 empl.—3% increase eff. April 1, 1960, and a further 3% eff. April 1, 1961; 4 wks. vacation after 35 yrs. of service (previously no provision for 4 wks. vacation); isolated wkrs. at The Pas and other northern points to receive northern allowances.

NORANDA COPPER AND BRASS, MONTREAL, QUE.—EMPL. ASSOC. (IND.): 3-yr. agreement covering 600 empl.—3¢-an-hr. increase; provisions for reopening wage negotiations in 1961 and 1962; improved pension plan; increased indemnities in case of illness.

ONT. MINNESOTA PAPER, FT. FRANCIS & KENORA, ONT.—PULP AND PAPER MILL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 800 empl.—increases ranging from 11¢ to 20¢ an hr. eff. May 1, 1960, plus additional increases ranging from 4¢ to 8¢ an hr. eff. Nov. 1, 1960; 3 wks. vacation after 10 yrs. of service (previously 3 wks. after 15 yrs.); 3 days bereavement pay; improved hospital and medical plans.

QUEBEC NATURAL GAS, MONTREAL, QUE.—CHEMICAL WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 850 empl.—settlement terms not yet available.

READY-MIX CONCRETE COS. (VARIOUS), TORONTO, ONT.—TEAMSTERS (CLC): 2-yr. agreement covering 700 empl.—10¢-an-hr. increase eff. April 1, 1960, an additional 5¢-an-hr. increase eff. Oct. 1, 1960, plus 5¢ an hr. eff. April 1, 1961, and another 10¢ an hr. eff. Oct. 1, 1961; 2¢-an-hr. increase on night shift work.

SASK. GOVT.—SASK. CIVIL SERVICE (CLC) (LABOUR SERVICES): 1-yr. agreement covering 1,700 empl.—general increase of 6¢ an hr.

SPRUCE FALLS POWER & PAPER, KAPUSKASING, ONT.—PAPER MAKERS (AFL-CIO/CLC), PULP AND PAPER MILL WKRS. (AFL-CIO/CLC), AND OTHERS: 1-yr. agreement covering 1,200 empl.—general wage increase ranging from 11¢ to 20¢ per hr. eff. May 1, 1960, plus an additional increase ranging from 4¢ to 8¢ per hr. eff. Nov. 1, 1960; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 15 yrs. of service); 1 additional statutory holiday making a total of 7.

TORONTO STAR, TORONTO, ONT.—NEWSPAPER GUILD (AFL-CIO/CLC): 34-mo. agreement covering 1,000 empl.—retroactive pay of 3% of gross earnings during the period Dec. 1, 1959 to April 1, 1960; 3%-increase on base pay eff. April 1, 1960; a further increase of 3% of the old contract base pay eff. Oct. 1, 1960; 4%-increase on old contract base pay eff. April 1, 1961, and a similar increase to become eff. Jan. 1, 1962; 3 wks. vacation after 1 yr. of service (formerly 3 wks. after 3 yrs.); during the second year of the agreement vacation allowance to be 4 wks. after 23 yrs. of service (formerly 4 wks. after 25 yrs.).

WILSIL LTD., MONTREAL, QUE.—PACKINGHOUSE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 600 empl.—14¢-an-hr. increase eff. April 1, 1960, and a further 6¢-an-hr. increase eff. April 1, 1961; 3 wks. vacation after 12 yrs. of service (formerly 3 wks. after 15 yrs.).

NOTES OF CURRENT INTEREST

Name New Chairman, Unemployment Insurance Commission

The appointment of Laval Fortier, OBE, QC, Deputy Minister of Citizenship and Immigration since 1950, to the post of Chairman of the Unemployment Insurance Commission was announced April 26 by the Rt. Hon. John George Diefenbaker, Prime Minister.

Mr. Fortier succeeds J. G. Bisson, OBE, who had been Chairman of the UIC since September 30, 1946 (L.G., 1946, p. 1370). Mr. Bisson has been appointed Canadian Consul-General at New Orleans.

After graduating from Laval University, Mr. Fortier read law with the firm of Bailargeon, Belleau and Fortier, and was created KC in 1942. He served with the Canadian Army from 1941, as Judge Advocate General for Military District No. 5, as Assistant Judge Advocate General and then Deputy Judge Advocate General at National Defence Headquarters, Ottawa. He proceeded overseas in the fall of 1944 and served in England, France, Belgium,

Germany and The Netherlands. A lieutenant-colonel, he was awarded the OBE in 1944.

A graduate in 1936 of McGill University, Col. Bisson became a chartered accountant in 1938. From 1937 he work for the firm of P. S. Ross and Sons, Montreal. From January to September 1939 he was accountant and internal auditor, Canadian Industries Limited, Montreal. In 1939 he joined the Canadian Army and after service overseas, during which he rose to the rank of lieutenant-colonel as Assistant Director of Supplies and Transport, First Canadian Army, he returned to CIL from January to September of 1946, when he became Chairman and Chief Commissioner of the Unemployment Insurance Commission.

He was Chief of the Canadian Delegation to the Inter-American Conference on Social Security held in Argentina in 1951, and in Mexico in 1952. During his service overseas he was awarded the Order of the British Empire, Military.

Laval Fortier

Third Bulletin on Apprenticeship Published by Department

A third bulletin dealing with apprenticeship plans in Canadian manufacturing industries, *Apprenticeship in Manufacturing*, has been published by the Information Branch of the Department of Labour. Its purpose is to provide employers of skilled labour with a guide that will help them to establish formal apprenticeship programs in their plants.

The bulletin is based on information obtained by personal visits to, or by correspondence from more than 40 plants ranging in size from a machine shop with 15 employees to industrial giants employing 12,000 persons. These firms do not represent a cross section of Canadian manufacturing, but they are all actively interested in developing sound training programs.

In the opinion of industrialists, Canada will need more and more skilled tradesmen in the future as technology and automation advance. They also think, the bulletin says, that formal apprenticeship is one of the best ways of turning out a sufficient number of tradesmen who are versed in the theory and practice of their trade, and who can cope with the increasing complexity of industry.

One large company said, "The experience of this company over half a century has proved that apprenticeship is the only method which guarantees journeyman competence. A properly organized program combining practical work and related theoretical training is the only certain method of ensuring that a skilled worker learns everything he should know in the shortest possible time."

The pamphlet refers to the series of analyses of Canadian trades that was undertaken by the federal Department of Labour on the recommendation of the first national Conference on Apprenticeship in Trades and Industry, held in Ottawa in 1952. The object of the analyses is to develop nationwide standards of companies in order to improve industrial apprenticeship training methods. The analyses, which have been completed for certain trades, may be used to form the basis of training programs in industry and of courses of study in vocational training schools and trades institutions.

Authorities on apprenticeship also hope that the analyses will ultimately bring about uniform standards of competence that will make it easier for a tradesman trained in one province to be accepted as a competent journeyman anywhere in Canada.

Besides an introduction, the bulletin contains six sections and a number of appendices. The first section—Planning and Administering Apprenticeship—contains chapters on: The Ratio System, The Apprenticeship Contract, The Apprenticeship Term, Apprentice Wages, and Apprenticeship Committees. Section II, on Training Methods, deals with on-the-job training, supervision, and related training. The other sections are: Section III—Choosing an Apprentice, Section IV—Provincial Assistance to Employers, Section V—Industry Helps Itself, and Section VI—General Conclusions.

The bulletin, as well as the first two in this series. *The Quebec Answer to the Problem of Apprenticeship 1956* and *A Modern Concept of Apprenticeship in Alberta 1957*, may be obtained in either English or French from the Queen's Printer, Ottawa, at 25 cents a copy.

Reduce Duplication of Effort In Conducting Labour Surveys

Considerable growth in the number of co-operative arrangements between the Department's Economics and Research Branch and provincial labour departments for conducting surveys on labour matters was reported at the second annual meeting of the Statistics Committee of the Canadian Association of Administrators of Labour Legislation. The arrangements result in a reduction of duplication of effort.

Representatives of seven provincial governments, the Dominion Bureau of Statistics, and the Department of Labour attended the meeting in Ottawa on April 25, 26 and 27.

The Committee reviewed present and proposed co-operative arrangements, and discussed problems of processing survey results by electronic computing equipment, and the role of the statistician and the research unit in providing useful information to administrators.

The Committee's report will be presented to the executive committee of the C.A.A.L.L. at its annual meeting in September.

Dr. W. R. Dymond, Director of the Economics and Research Branch, was chairman of the meeting.

CLC Committee on Human Rights Seeks NHA Amendments to Prohibit Discrimination

Amendments to the National Housing Act that would “prohibit racial discrimination in respect of any property which is processed under the Act” were proposed in a brief submitted to Hon. D. J. Walker, Minister of Public Works, by the National Committee on Human Rights of the Canadian Labour Congress. The Act should stipulate that “no one enjoying rights and privileges conferred by the National Housing Act may discriminate in the sale and rental” of residential units on the grounds of race, colour, creed and place of origin, the brief said. The photograph above shows (left to right): Sid Blum, Director, Jewish Labour Committee of Canada; A. R. Blanchette, Canadian Representative, Brotherhood of Sleeping Car Porters; James MacDonald, Executive Secretary, CLC-CUC Committee; Donald MacDonald, CLC Secretary-Treasurer; the Minister (seated); Stanley Knowles, Executive Vice-President, CLC; Frank Hall, Chairman, CLC Human Rights Committee; Kalmen Kaplansky, CLC Director of International Affairs.

Canada's Grants to Colombo Plan Amount to Almost \$282 Million

Canada's contributions under the Colombo Plan have totalled almost \$282 million to the end of the fiscal year, March 31.

The 8th annual report of the Colombo Plan consultative committee, tabled in the House of Commons on April 25, shows that up to the end of the fiscal year 1958-59, Canada had provided \$231,620,000 in economic aid to countries in South and Southeast Asia. With the addition of \$50 million for the fiscal year 1959-60, Canada's total contribution will reach approximately \$282 million. Canada has also made grants of \$35 million and loans of \$35 million to member countries for the purchase of wheat and flour.

Also shown in the report is the total external assistance made available to Colombo Plan countries in 1958-59, which amounted to more than \$1,400 million, bringing the total since the beginning of the Colombo Plan in 1950 to more than \$6 billion. The report also describes the very substantial flow of their own resources which these countries are putting into their development programs.

The report was prepared at the annual meeting of the committee held last November at Djogjakarta, Indonesia. The purpose of this annual conference, attended by ministers from Colombo Plan countries, was to evaluate the progress which countries in the Colombo Plan area have made in the past year in carrying forward their economic development programs and to define in

general terms the magnitude and scope of the task that lies ahead.

Among the decisions which the consultative committee reached, three are of significance: (1) the conference decided to extend the Colombo Plan for a period of five years beyond 1961, and to consider at its 1964 meeting a further extension of the Plan after 1966; (2) Singapore was admitted to full membership to accord with its new constitutional status; and (3) the 10th anniversary of the Colombo Plan will be celebrated in 1961.

Amend Jobless Insurance Rules On Holiday and Severance Pay

The Unemployment Insurance Regulations concerning holiday and severance pay have been amended, effective March 27, the Minister of Labour announced in the House of Commons on April 26.

"To all intents and purposes the situation reverts to what it was before September 27, 1959," he said in his statement.

The Minister said he had received a number of submissions on the matter. These were turned over to the Unemployment Insurance Advisory Committee. The Committee, after considering the representations, reported to the Unemployment Insurance Commission, and the Government then reviewed the Commission's recommendations, "with the result," Mr. Starr said, "that the position has now been returned to almost exactly where it stood before September 27 last, when the last changes in these regulations were made.

"Holiday pay will continue to be regarded as earnings in the case of a general plant shutdown for holidays occurring within six weeks of a claimant's separation from employment. Payment for single holi-

days will continue to be regarded as earnings during a week of unemployment after separation. This will prevent payment of benefits to claimants who are on vacation.

"For all other purposes, holiday pay upon separation will revert to the status which prevailed prior to September 27, 1959.

"Severance pay will no longer be regarded as earnings, and this will apply also to bonuses and gratuities, either in lump sums or instalments."

The Regulations are those numbered 172 and 173.

United Nations Commission On Status of Women Meets

The fourteenth session of the Commission on the Status of Women was held in Buenos Aires, Argentina, from March 28 to April 14. Again, as in the previous two years, Canada participated as a member of the Commission.

Mrs. Harry S. Quart, MBE, of Quebec City, was the Canadian representative. Marion Royce, Director of the Women's Bureau, Department of Labour, was alternate.

The agenda of the Commission followed its usual pattern. The principal subjects considered during the three weeks of discussion were: political rights of women, advisory services program, the status of women in private law, equal pay for equal work, economic opportunities for women, and the access of women to education.

The importance of recruiting and training more women in technical occupations was stressed by several of the delegates attending the conference.

A report on the discussions on the question of improving economic opportunities for women will appear on the Women's Bureau page of the June issue.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to Hansard)

March 29—*In making direct housing loans* only to applicants with annual incomes of \$5,000 or less, Central Mortgage and Housing Corporation, following the usual practice, will consider up to 20 per cent of a working wife's gross income in computing the applicant's ability to make monthly repayments, the Minister of Public Works replies to a question (p. 2552).

Federal participation in the Trans-Canada Highway will be extended until March 31,

1964. The Minister of Public Works introduces a resolution preceding the introduction of a measure to amend the Trans-Canada Highway Act (p. 2561).

March 30—*Unemployment figures* released by the Unemployment Insurance Commission for both unplaced applicants and live claimants do not include fishermen; those released by the Dominion Bureau of Statistics do include them, the Minister of Labour explains in answer to a question (p. 2605).

Construction of the Chignecto Canal, both economic and technical aspects, is constantly under study by government agencies, Hon. George H. Hees, Minister of Transport, replies to question. The Department of Public Works in 1958 estimated the cost of the project above \$138 million (p. 2607).

Resolution proposing amendment of the Trans-Canada Highway Act debated and progress reported (p. 2617).

March 31—The Budget is brought down by the Minister of Finance (p. 2669). In his address he said: Canada had a good year; a gratifying degree of price stability was achieved; employment, production, incomes and trade showed “healthy increases”; employment increased 2.7 per cent over 1958; average per capita wages of workers in trade and industry reached a new record of \$3,773 million, an increase of 4 per cent over 1958; the consumer price index was 1 per cent higher than in 1958, thereby creating a 3-per-cent gain in real income; Canada must place emphasis on greater productivity and efficiency rather than on sheer size, on cost control rather than on price increases, on greater saving rather than on excessive consumption;

Revenues for the fiscal year 1959-60 were \$5,301 million, expenditures \$5,707 million, deficit \$406 million; \$574 million was paid to old age pensioners during the fiscal year; there was a deficit of \$24 million; wage increases for approximately 50,000 civil servants, effective April 1, have been approved; expected revenues for 1960-61 are \$5,892 million, expenditures \$5,880 million, surplus of \$12 million; Old Age Security Fund is expected to show a small surplus in 1960-61, the first since January 1, 1951;

No major tax changes in any field being made; increased ceilings on tax exemptions in respect to medical expenses announced; public will be allowed to comment on proposed legislation in respect of income tax law as applicable to employees' profit sharing plans.

Budget papers are presented as an appendix to this issue.

Resolution proposing amendment of Trans-Canada Highway Act debated and progress reported (p. 2617).

April 1—*Resolution proposing amendment of Trans-Canada Highway Act* concurred in and Bill C-57, to amend the Trans-Canada Highway Act, introduced and read the first time (p. 2843).

Issue of five licences for the export of natural gas and of authority to construct three pipelines, as recommended by the

National Energy Board, has been approved by the Government, the Minister of Trade and Commerce announces (p. 2851).

April 5—*Removal of excise tax on automobiles* would reduce importations and could have an important effect on the share of the market obtained by Canadian produced cars, suggests Hubert Badania (Fort William) during debate on the Budget (p. 2911).

The granting of bargaining rights to employees within the Public Service would be a much more decent approach to the civil service salary structure, suggests Frank Howard (Skeena) during debate on the Budget (p. 2934).

April 6—*The Department of Labour* transferred 21 workers from surplus labour areas to Elliot Lake in May 1959; Elliot Lake has now, in turn, been declared a surplus labour area, the Minister of Labour replies to question (p. 2954).

Payments of coal subventions to utilities in New Brunswick are tabulated by Hon. D. S. Harkness, Acting Minister of Northern Affairs and National Resources, in reply to a question (p. 2954).

Growing number of “legalized rackets” that result in exorbitant cost of living for Canadian consumers is one of the problems facing the country, says Hazen Argue (Assiniboia) during the Budget debate. He mentioned the “exorbitant” prices charged for drugs, and the interest rates charged by small loan companies (p. 2970).

Organizations that protested the Government's refusal to grant a pay increase to civil servants listed by the Prime Minister in reply to a question (p. 2984).

April 12—*Some assistance to Elliot Lake* from federal government sources may be possible within a very short interval, the Minister of Trade and Commerce says in a report of the visit to that community made by him and the Minister of Labour (p. 3139).

April 13—*Basic costs of hospital treatment*, when paid for under an agreement between a province and the federal Government under the Hospital Insurance and Diagnostic Services Act, are not ordinarily deductible for income tax purposes. But costs in addition to the basic costs as prescribed by provincial law are deductible, the Minister of National Revenue explains in answer to a question (p. 3184).

Balances to credit of the Unemployment Insurance Commission Fund on March 31, 1957 was \$874,574,651; On March 31, 1958, \$744,200,124; and on March 31, 1959, \$499,811,157. Figures for March 31, 1960 not yet available (p. 3188).

Stimulation of Winter Employment

All provinces participated during the past winter in Municipal Winter Works Incentive Program and six of them paid an additional 25 per cent of payroll costs. Other significant efforts to stimulate winter employment have been made

Again this past winter, all provinces participated in the Municipal Winter Works Incentive Program, which is now approaching the end of its second year. Under the scheme, inaugurated in the winter of 1958-59, the Dominion Government pays 50 per cent of the direct payroll costs of certain types of municipal works projects.

In 1959-60, Prince Edward Island, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia agreed to pay an additional 25 per cent of the payroll costs, leaving only 25 per cent to be paid by the municipalities themselves.

The past winter's program was originally placed to run from December 1, 1959 to April 30, 1960 but was later extended to May 31. Up to March 31, projects accepted numbered 2,224. It has been estimated that these projects would provide an average of about 40 days of work for 44,057 men.

Projects accepted during the winter of 1958-59 numbered 2,327, which provided 1,683,311 man-days of work for 41,387 men, an average of 41 days of work per man. The total value of the projects in terms of work undertaken during the period December 1, 1958 to May 31, 1959 was more than \$61 million, of which more than \$21 million was for direct payroll costs.

Nova Scotia offered for the second winter an incentive program of its own to municipalities for work carried out between December 1 and April 30. This program covers repair and renovation of municipal buildings; repairs and improvements to parks, playgrounds (not including items within the federal offer), reservoirs and dumps; and the erection, painting and repair of traffic and street name signs. The province contributes to direct labour costs on a scale varying with the financial resources of each municipality.

Manitoba also offered a supplementary winter works incentive program to its municipalities, under which the province agreed to pay half the wages of those persons employed on approved projects who, before being so employed, were unemployed and registered with the municipality for assistance.

It is now apparent that the winter employment campaign is generally well accepted and has been well developed all across the country. Winter construction is now looked upon as a natural feature of our economy

and an increasing number of firms, organizations, churches and other owners of buildings try to carry out a maximum amount of work during winter, particularly in connection with repairs, alternations and maintenance.

Some of the significant developments in efforts to stimulate winter employment are reported here.

Within the Dominion government all departments in a position to contribute to winter employment are doing so on an increasing scale. The Department of Public Works, which carries out more construction projects than any other government department or agency, now plans its operations so that a maximum amount of work will be carried out during the winter months. In addition, that department has embarked on a program of constructing during winter small standard post offices in communities from coast to coast. So far more than 100 of these have been built.

In all Dominion government departments and agencies, increasing attention has been given to holding back as much maintenance, alteration and repair work as possible for the winter months. Each fall the departments and agencies concerned submit detailed estimates of their projects for the coming winter and in May they submit comparable statements of their actual accomplishments. As a result of this procedure, alteration, maintenance and repair work costing just over \$9,500,000 was carried out during the four months December 1958 to March 1959. Results for the winter just ended are expected to be somewhat better.

The Department of Northern Affairs for the third winter in succession offered to the provinces a program for the development of roadside camp grounds and picnic sites, with work to be carried out between 1st November and 31st May. Up to the present time this program has provided more than 13,000 man-months of employment during the winter and has made possible the construction or enlargement of tourist facilities at more than 500 camp grounds and picnic areas across Canada. All provinces except Quebec have participated.

Provincial governments generally are stimulating and promoting winter employment with varying degrees of aggressiveness. Their efforts consist mainly in planning

construction with a view to maximum winter work, holding maintenance, repair and alteration work for wintertime and to some extent regulating their purchases so that winter employment will benefit. Interdepartmental winter employment committees are operating in the majority of the provinces. In New Brunswick and Manitoba senior committees with membership from industry, labour and government, have been established by legislative action.

The B.C. Research Council is conducting a study on seasonal unemployment, financed jointly by the Dominion and provincial governments. It is anticipated that the study will be concluded by mid-summer and that a report on it will be available shortly thereafter.

As is to be expected, the efforts of municipalities to combat winter unemployment have varied considerably. In practically every city or town where there is a winter employment committee, municipal officials have either been members or have given support. Some of the larger cities have launched winter works programs of their own, and participation in the Municipal Winter Works Incentive Program has been in many places enthusiastic.

As an example, in Edmonton the 1959-60 projects resulted in expenditures of just over \$4 million.

The Executive Director of the Canadian Federation of Mayors and Municipalities has assisted in research on winter employment. He has been in close touch with winter employment activities at all times and has kept municipalities aware of the need for more winter work through circular letters and articles in *The Listening Post*.

The National Joint Committee on Wintertime Construction, sponsored by the Canadian Construction Association and chaired by Raymond Brunet, continues to be active in stimulating winter construction work. News releases in regard to winter construction are issued at frequent intervals. The President of the CCA each year speaks about winter construction at points all across the country. Last year's president stated that the volume of winter construction is increasing each year, due in large measure to the winter employment campaign activities of the Government and others. He also made it clear that in the opinion of the CCA winter construction is practicable, its quality is as good as construction in any other season if proper procedures are followed and the net costs are not any higher for most types of work.

The Canadian Manufacturers' Association carries articles on stimulation of winter employment frequently in *Industrial Canada*

and *Industry*. The General Manager and branch managers across the country are visited at intervals by the Secretary of the Interdepartmental Committee on Winter Employment. The Association has itself established an ad hoc committee on winter employment, the members of which are senior officials of large manufacturing corporations and companies from coast to coast. This committee has been studying replies to a questionnaire sent to CMA members asking for specific information about what is being done to stimulate employment during the winter months and what should be done, in their opinion, to create more winter work.

The Canadian Chamber of Commerce at its head office and at branches from coast to coast is continuing to take an active part in the winter employment campaign. Articles on stimulation of winter work are included periodically in various publications of the association. In addition local branches circularize their membership. At the last annual meeting of the Chamber, corporation members were again urged to plan their work as far as practicable to give employment during any seasonal unemployment period and its organization members were urged to co-operate with local agencies in the development of plans at the local level to combat seasonal unemployment. From time to time the National House Builders Association advises its membership of winter construction techniques and urges them to build more houses during the winter months. The head office has endeavoured to arrange that a member of the Association join local winter employment committees wherever this can be arranged. Although government action in recent years in providing mortgage money has been responsible to a considerable extent for the substantial increase in winter house construction, the activities of the National House Builders Association and the example of builders who actually build during the winter have been of great assistance.

Other national organizations, such as the Canadian Labour Congress, the Canadian Retail Federation and the Retail Merchants Association have co-operated in the efforts to promote winter work.

During the past year, the Secretary of the Interdepartmental Committee on Winter Employment has written to large companies and other owners of buildings whose new building proposals were announced in press releases, urging them to plan their construction work so that maximum winter employment would result. The replies generally have indicated a consciousness of the

winter unemployment problem and a desire on the part of industry to do something about it.

Some of those who reported that their large projects would be carried out with a view to providing maximum winter work are: Webb and Knapp (Place Ville Marie), Simpsons-Sears, Molsons Brewery, Dominion Stores, Mueller Limited, Stora Kopparberg (\$40 million pulp mill in Nova Scotia), Goodyear Tire and Rubber Company, and Canadian Chemical Company Limited.

Engineering and Contract Record devoted a great deal of space in its October issue to winter construction. There was an editorial on winter work, an article on winter construction generally by the President of the CCA, a statistical story on winter construction and details of winter projects which have been carried out, in addition to two articles on the Municipal Winter Works Incentive Program. The articles contained in this issue leave no room for discussion as to whether winter construction is feasible, satisfactory and economical.

Two Maclean-Hunter Publications, *National Builder* and *Building Supply Dealer*, have given space in many issues to winter construction. They have written editorially in support of it and published stories of housing developments and smaller building projects carried out satisfactorily and economically during the winter months. Another of this company's publications, *Heavy Construction News*, has been giving publicity to the Municipal Winter Works Incentive Program.

During the past winter local campaigns carried out by local winter employment committees from coast to coast were sup-

ported by generous advertising in the press and magazines and on radio and television. In addition the local committees were supplied with posters, streamers, booklets and pamphlets for use in the campaign. The public was urged by various other devices such as billboard advertising, post office cancellation stamps and householder mail to carry out work during the winter months.

Local campaigns were even more intensive than in previous years. The press, radio and television gave substantial support at the local level. Newspapers were generous in printing articles, news items and municipal proclamations about winter work. Local Chambers of Commerce, retail merchants associations and service clubs gave their support generously. Several hundred local organizations, local town councils, church groups, service clubs, labour councils, home owner associations and parent-teacher associations were addressed on the subject of winter employment and many were given an opportunity to see the two winter work campaign films, "It's A Crime" and "Winter Construction—It Can Be Done". Local committees arranged to have winter employment messages printed on utility accounts and church programs and signs displayed in subways and on theatre marquees. Parades, special window displays and proclamations were reported from all parts of the country.

The value of the winter work campaign cannot be assessed in terms of actual jobs or man hours of work provided. There is, however, overwhelming evidence from organizations and from employment offices across the country that the campaign has a greater effect each year in reducing winter unemployment.

Issue 13th Trade Analysis: Toolmaking Trade

Another in the series of trade analyses designed to assist in the development of uniform trade standards in Canada has been issued. It is *Analysis of the Toolmaking Trade*, which sets forth those phases of the trade that are considered essential in all provinces.

The analysis was compiled by a national committee appointed by the Department of Labour, working in conjunction with provincial apprenticeship authorities.

Although this trade is widely practised, it is not designated in any province of Canada. For this reason the committee did not have various provincial standards for reference. Because of the basic and essential nature of this work in industry, however, there are a number of well organized company plans for training tradesmen.

The analysis may be purchased from The Queen's Printer, Ottawa, at 50 cents a copy.

Seasonal Unemployment in Canada

First of three articles on Canada's seasonal unemployment problem deals with the economic problems associated with it, and with the extent of the seasonal variations in employment and unemployment, in Canada and its five regions

This is the first of three articles on the seasonal unemployment problem in Canada. It was prepared by the Employment and Labour Market Division of the Economics and Research Branch, Department of Labour. The Unemployment Insurance Commission and the Dominion Bureau of Statistics supplied data and assisted in carrying out the study.

This month's article is concerned with some of the economic problems associated with seasonal unemployment, and with the extent of seasonal variations in employment and unemployment in Canada and its five regions. The next two articles, which will appear in successive issues, will deal with the characteristics of the seasonally unemployed workers, some of the steps taken to reduce their numbers, and some of the problems associated with finding a long-term solution to seasonal unemployment.

Part 1—Seasonal Variations in Employment and Unemployment

INTRODUCTION

Seasonal unemployment is the result of variations in economic activity that take place regularly within the period of a single year. The principal causes of these variations are: (1) climate, (2) buying habits, (3) building habits, and (4) conventional factors such as annual holidays.

Climate, of course, is the most fundamental determinant of seasonal variations. Directly, it affects such industries as agriculture, fishing, forestry, food-processing, construction, the tourist trade and many distributive industries. But the effects of climate are felt in various ways.

Agriculture, fishing, and the food-processing industries are unable to obtain their raw material during certain seasons of the year. The tourist trade and certain goods-producing industries, such as the manufacture of fur coats, experience seasonal fluctuations in the demand for their products. The construction industry is affected by the climate partly because it is

more expensive to perform certain operations during the winter months. Other industries, such as the manufacture of farm implements and building materials, are affected by the seasonality of the industries they supply.

If the seasonal fluctuations in the operations of individual industries occurred at different seasons, they would tend to offset one another and the seasonal problem would be much less serious than it is. Unfortunately, industries that have their lowest level of employment between the middle of January and the middle of March account for about 75 per cent of total employment. Canada's seasonal unemployment problem is a winter problem.

As a result of technological developments, seasonal variations have declined considerably over the past 30 years. Improved planning and techniques and better machines have increased the number of operations that can be carried on during the winter months. On the other hand,

technological advance has made it advantageous to transfer certain operations from winter to summer.

Seasonal fluctuations in the operations of the construction industry have been reduced considerably and the length of the construction season has increased. As a result of the rapid growth of the industry, however, more workers are affected by the slack season.

In agriculture, technological developments have been accompanied by a substantial reduction in the labour force without any significant change in the seasonal pattern. The amount of seasonal unemployment which originates in agriculture is not as large as the seasonal swings in employment would indicate. The reason for this is that the expansion which takes place in agricultural employment during the summer is made up largely of unpaid family workers, students and other part-time workers who are not available for full-time work for the rest of the year. Some farmers and other farm workers in Eastern Canada find employment in the logging industry but this source of employment is becoming less important.

Mechanization in the logging industry in Eastern Canada has not only been associated with falling employment but has changed the seasonal pattern of the industry. The introduction of trucks and tractors has shifted the woods operations from the winter to the fall. Although snow was an advantage in hauling logs when horses were used, it has become an obstacle in the mechanical age. The use of power saws has made possible a substantial reduction in the logging labour force without loss of production. Since the winter months are the months of high unemployment, the shift of the logging operations from winter to fall has aggravated the seasonal unemployment problem in Eastern Canada.

Developments of new machines and new production techniques have reduced the impact of the weather on the operations of certain industries. They are unlikely, however, to change the buying habits of consumers. These can only be changed by the consumers themselves, although publicity and education can create an environment favourable to this change. For only when people realize the seriousness of the seasonal problem will it be possible to reduce the seasonal impact of consumer purchasing habits.

Although it is difficult and inadequate to measure the seriousness of seasonal unemployment in terms of money, the loss of wages and salaries in the winter suggests the magnitude of the problem. It has been

estimated that this loss amounted to about \$275 million for the period October 1958 to May 1959. The largest portion of this loss fell, of course, on the wage earners, since salaried people are much less affected by seasonal fluctuations.

It is not suggested that it is possible or even desirable to eliminate all seasonal fluctuations in economic activity. Nevertheless, even a reduction by a third would have a substantial impact on the economy. The \$90 million which this reduction represents annually could: (1) put 24,000 persons to work full time for one year; or (2) build 7,500 single-unit dwellings at \$12,000 per unit; or (3) put 15,000 students through a four-year university course on scholarships of \$1,500 per year; or (4) increase the investment in schools and other educational facilities by 30 per cent for one full year.

It has been argued that "to tamper with the normal seasonal pattern" of economic activity will lead to a higher cost economy. But this contention overlooks a number of factors.

First, the continuance of seasonal fluctuations in some of our industries involves certain costs that are borne by society as a whole and not by the industries concerned. These industries gear their capital and manpower resources to a short peak period each year; these resources are either idle or grossly under-utilized for the balance of the year. The diversion of these resources elsewhere would produce higher levels of income for society to enjoy. In addition, these industries induce a seasonal pattern in related industries, which also have to gear their operations to a peak period and then operate at reduced capacity for the rest of the year.

Second, it is often argued that the wage rates in seasonal industries are higher than would otherwise be the case because these industries do not sustain full capacity operation the year round. The converse must, therefore, be equally true: that wages (and salaries) would be lower, hence unit cost would be lower, if they were able to work the year round.

Third, prices and wages are usually flexible in an upward direction but rigid downward. Seasonal industries likely create pressure on prices and wages during peak periods and maintain prices and wages in the slack season. It is possible, therefore, that prices are somewhat higher than they might have been in the absence of seasonal peaks and troughs in operations.

Fourth, technological developments have made it possible for industry to continue during the winter operations that were not

previously feasible, and there is no reason why this trend should not continue. It is true, however, that increased mechanization may simultaneously reduce seasonal swings and make them more expensive in terms of capital resources. There is some evidence that, by better year-round planning, these swings in output and employment can be, and indeed have been, reduced without incurring additional costs.

Fifth, seasonal unemployment creates the impression in other countries that total unemployment in Canada is extremely high, and this tends to discourage suitable immigrant workers from joining our labour force.

Finally, it seems reasonable that publicity and advertising, which have been so successful in telling people *what* to buy, may be useful in telling them *when* to buy and so help stabilize output and employment on a year-round basis.

SEASONAL VARIATIONS IN EMPLOYMENT AND UNEMPLOYMENT

Seasonal unemployment is the result of variations in economic activity that take place regularly within the period of a single year. Its regular annual occurrence distinguishes it from other types of unemployment: structural, technological, frictional and cyclical.

Structural unemployment results from the long-term decline in the demand for the products of an industry or from the economic stagnation of a particular area. *Technological* unemployment may occur when more efficient methods of production are introduced. *Frictional* unemployment occurs when workers change jobs, when new workers enter the labour market for the first time and when people re-enter the labour market after a long absence. *Cyclical* unemployment results from periodic changes in the general level of economic activity. In addition to these four, there is short-term unemployment created by irregular factors. The amount of unemployment at any one time usually consists of a combination of these different types, although the proportion of each kind can vary substantially from time to time.

The measurement of total unemployment poses some difficult technical problems. The measurement of the different kinds of unemployment is even more difficult. Nevertheless, with the calculation of moving averages, reasonable approximations of seasonal and cyclical unemployment can be obtained. There is some evidence that cyclical unemployment affects the "measured" level of seasonal unemployment. There are two

Much of the human suffering resulting from the seasonal unemployment problem has been overcome by the introduction of seasonal benefits under the Unemployment Insurance Act. Nevertheless, the under-utilization of capital and manpower resources remains a serious problem.

These manpower resources are not made up of tired old men, inexperienced boys and married women looking for part-time jobs. The seasonally unemployed in winter are, on average, a little older than the summer unemployed but the bulk of them are between 25 and 44 years of age. They are mostly men, since women who leave their jobs in the fall are not likely to look for jobs until the following spring.

The seasonally unemployed, therefore, are mostly men between the ages of 25 to 44 who are attached to the construction, primary, and transportation industries.

ways of getting around this problem. One is to use a year when cyclical unemployment is low, and another is to use a five-year average. Both methods are used in this report.

Although this report is primarily concerned with seasonal unemployment, it would be incomplete without first examining seasonal variations in employment, since it is from these variations that seasonal unemployment results. Not all persons who leave the "employed" status become "unemployed"; some, instead, leave the "labour force". To define what these terms mean in a technical sense, the "employed" are persons who have a job and are at work, or have a job but are not at work because of such factors as vacation, illness, bad weather, or an industrial dispute. The "unemployed" are persons who are not working and are actively looking for work. (In this study "persons without jobs and seeking work" have been equated with the "unemployed".) These two categories, the "employed" and the "unemployed," added together make up the "labour force".*

Seasonal Variations in Employment

The net seasonal change in the number of "persons with jobs" between summer peak and winter low exceeds nine percentage points. This means that between 500,000 and 600,000 fewer persons are working in winter than in summer. The seasonal change,

*For more detail see *The Labour Force, November 1945-July 1968*, Reference Paper No. 58, 1968 Revision, Dominion Bureau of Statistics.

 TOTAL, NON-AGRICULTURE AND AGRICULTURE

Source: Labour Force Survey, D.B.S.

or amplitude, for the employed men is about 11 percentage points while for the women it is about five percentage points. Certain aspects of the seasonal variations in employment are shown in Charts 1 to 6.

Chart 1 shows the rhythmic pattern of total and farm employment for 1953-1959. The seasonal factor plays the dominant role in these undulations of one year's duration. The peak in employment occurs usually in August and the low point in February and March. This is true of all regions except the Pacific where the winter seasonal turning point is in January.

Seasonal Amplitudes

Chart 2 indicates the extent of seasonal amplitudes (seasonal swings averaged for 1956 and 1957) in total employment and farm employment. Note that non-farm employment, which accounts for more than 85 per cent of total employment, has a seasonal swing from peak to trough of about five percentage points but the swing in farm employment exceeds 30 percentage points. The seasonal pattern of non-farm employment is fairly regular, although it is influenced slightly by general business conditions. By and large the summer-to-winter swing in employment tends to be wider in periods of recessions than in periods of "boom". The pattern of farm employment tends to move more irregularly, since it is affected by such factors as crop conditions and weather. While there appears to have been an increase in the swing from summer to winter in farm employment, the total number of persons affected is declining as the total farm work force shrinks.

Chart 3 shows the average amplitude of seasonal variations in employment in nine major industry groups. The ranking of these industries in terms of their seasonal swings does not necessarily correspond to their numerical contributions to seasonal unemployment. This would depend partly on their size and partly on the extent to which workers in the industry remained in the labour market, either because they found work in other industries or because they continued to seek work. Persons who leave the labour force voluntarily cannot be counted as unemployed.

Seasonal Layoffs

Chart 4 shows the average seasonal dis-employment* in eight industries for 1955-1959. These are estimates of the extent to which seasonal layoffs take place in these industries. The chart suggests that agricul-

*Dis-employment is the total number of layoffs from an industry between summer and winter.

ture is by far the largest contributor to the seasonal unemployment problem. That, of course, is not true. While it is not known precisely how many of the 250,000 persons comprising the summer-to-winter drop in the farm work force actually remain in the labour market as unemployed; but it is known that a large majority of them withdraw from the labour force and do not become unemployed. For example, many of the unpaid farm family workers, who are counted in the labour force if they work 20 hours or more in the survey week, work less or not at all in winter and so do not form part of the total labour force in winter. In August 1958, 218,000 persons were counted as unpaid farm family workers compared with 110,000 in January 1959.

Similarly, farm employers of labour dropped from 93,000 to 38,000. Very few of the 55,000 (93,000-38,000) would be looking for work in other industries in winter. On the other hand, the own-account farmers (with no hired employees) dropped from 412,000 to 389,000. Only a part of this group work or look for work in other than farm occupations during the off season.

Those laid off in the autumn and winter from the forestry industry (mostly loggers) tend to behave much as those working on farms; in fact, some of them are from the farms. A number of these workers, when laid off, withdraw from the labour market while others become associated with different industries, initially as "employed" and later perhaps as "unemployed".

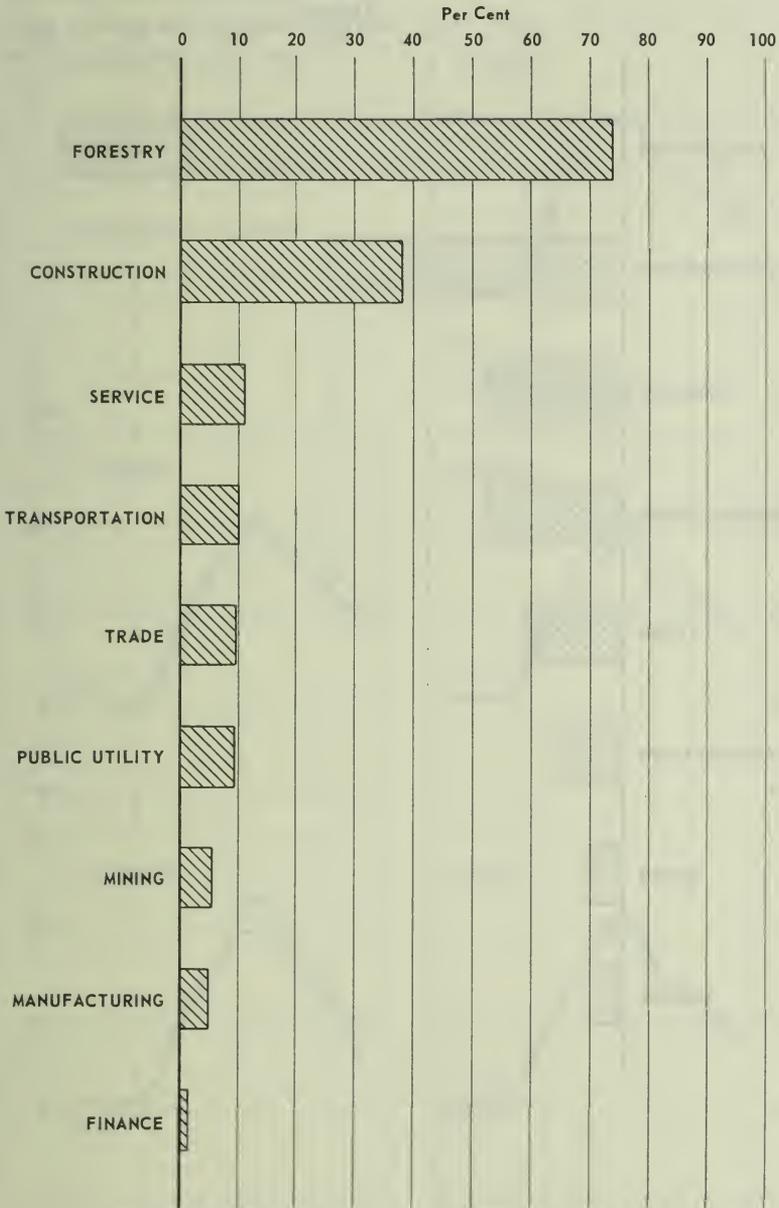

Work forces in most other seasonal industries tend to remain identified with the industry when laid off. That is, the number of workers seasonally laid off will approximate the number seasonally unemployed in that industry. This is particularly true when the work force has a high proportion of men, a high proportion of skilled workers and when the seasonal layoffs are for short periods.

Regional Difference in Employment Variations

Charts 5 and 6 show the extent of seasonal variations in total and non-agricultural employment in Canada and the five regions. The solid line in Chart 5 is the average index for Canada; it has been superimposed on the regional indexes to give some indication of the differences between the regional and national employment variations. The solid line in Chart 6 is the seasonal index of total employment and indicates the difference in the importance of agriculture in the seasonal pattern of the various regions.

Chart 5

SEASONAL INDEXES OF PERSONS WITH JOBS, CANADA AND REGIONS, AVERAGE FOR EACH MONTH, 1953 - 1959

Source: Labour Force Survey, D.B.S. Original data, Seasonally Adjusted by Univac Method II

Peak employment is reached in July or August in all regions but the trough occurs earlier in winter in the West than in the East: in the Pacific region in January, in the Atlantic in March. There is also a substantial difference in the amplitude of seasonal variations in employment among the five regions. The amplitude in the Atlantic region, for example, is two and a half times as much as in Ontario.

The industries that give rise to the largest seasonal variations in employment are logging, fishing, agriculture, construction and the industries that process their products or supply them with goods and services. The regions in which these industries are concentrated have the largest seasonal variations in employment.

Seasonal Variations in Unemployment

Chart 7 shows the annual pattern of "persons without jobs and seeking work" from 1953 to 1959. Although the seasonal component is usually the dominant element in total winter unemployment, the influence of the business recessions in 1953-55 and 1957-58 is obvious. In fact, in the winter of 1958, when total unemployment amounted to almost 600,000, seasonal unemployment was probably less than half this figure.

Chart 8 shows the seasonal swing in "persons without jobs and seeking work". The seasonal indexes for each month were averaged for three years beginning in March 1956 and ending in February 1959. Although the pattern may vary a little from year to year, the curve shown in Chart 8 is a fairly typical graphic illustration of seasonal variations in unemployment.

The seasonal swing in total employment is the net difference in seasonal jobs between summer and winter, but seasonal unemployment is affected by a number of other factors. First, there is the decision of those who are laid off seasonally to look for work or not. Second, most seasonal workers enter the labour market in summer, when employment in seasonal industries is highest; when laid off, some withdraw from the labour market while others stay on looking for work. A small number re-enter the labour market looking for jobs in seasonal industries during the autumn and winter months. Third, there is undoubtedly a great deal of milling around among the unemployed: some workers who have lost their permanent employment (for cyclical or other reasons) are looking for work in seasonal industries, and others who have been laid off from seasonal industries are looking for year-round work.

These factors make it very difficult to assess precisely the magnitude of seasonal unemployment from one season to the next and under varying business conditions.

Regional Differences in Unemployment Variations

Comparing different geographic regions, the varying pattern of total unemployment is suggested by the percentage of the labour force which is unemployed. Chart 9 shows "persons without jobs and seeking work" as a percentage of the "labour force". Since the figures for each month are averaged for four years, they give a reasonably true picture of the seasonal pattern among the five regions. The largest swing occurs in the Atlantic region, where the primary industries are relatively large and where the manufacturing component is relatively small and closely associated with the primary industries. The swing is smallest in Ontario, where the reverse industrial composition exists. Many other factors, of course, affect the seasonal variations in unemployment among the different regions. There is some evidence that the number seasonally laid off is affected by the level of cyclical unemployment. It is not unlikely, therefore, that it is also affected by the level of structural and frictional unemployment. This could certainly explain part of the inter-regional differences in the level of seasonal unemployment.

Many of those laid off from seasonal industries would probably accept an enforced holiday during part of the winter if the period were not too long and if in their opinion the income earned during the remainder of the year were sufficiently high. Hence, in a region with a short seasonal low period and relatively high income in the seasonal industries, a relatively smaller number of the persons seasonally laid off is likely to remain in the labour market looking for a job than in a region where the opposite conditions exist.

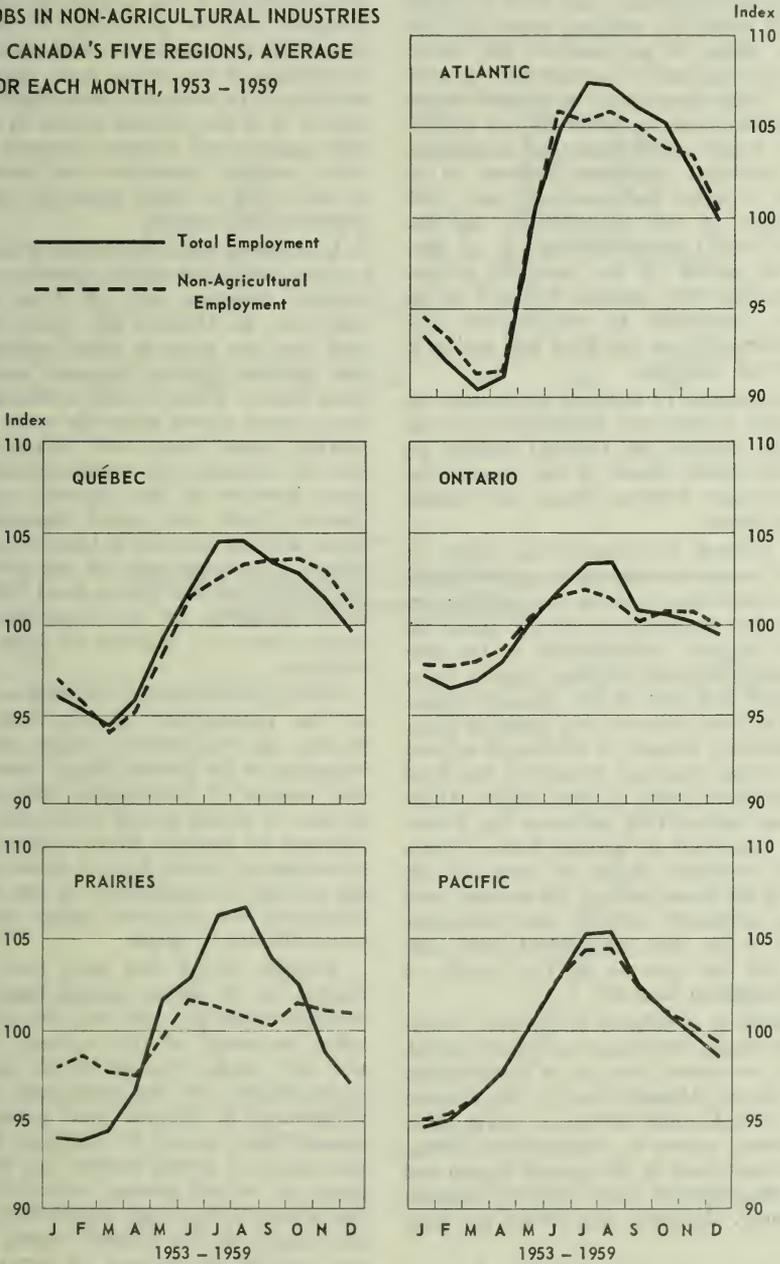

Extent of Seasonal Unemployment

As shown above, the seasonal amplitude of total employment exceeds nine percentage points. That is, between 500,000 and 600,000 fewer persons are working in winter than in summer. However, not all of these workers become seasonally unemployed in winter. Many workers, such as students who return to school, farmers, unpaid family workers and others who prefer not to work in winter, leave the labour force. The net result of these shifts in labour supplies is to produce an amplitude in the labour force that, as a whole, exceeds five percentage points. That is, more

Source: Labour Force Survey, D.B.S. Original data, Seasonally Adjusted by Univac Method II

than 300,000 persons who work in the peak period in summer do not form part of the labour force in winter and to that extent reduce the number who would otherwise become seasonally unemployed.

It is estimated that under reasonably full employment conditions, and with a labour force of about six million, some 250,000 persons (about 4 per cent of the labour force) are seasonally unemployed at mid-winter.* This figure may be slightly larger when employment is declining and slightly smaller when employment is expanding, as the seasonal amplitude appears to be affected in some indeterminate way both by changes in job opportunities and the level of total unemployment. It is clear from the extent of the seasonal swings, however, that this periodic deviation in the seasonal amplitude of employment and unemployment does not limit any action to remedy the problem.

As an example of regional differences, the differences in seasonal unemployment between the Atlantic and Ontario regions are described below. Some of the reasons for the differences between these two regions are also given.

It is difficult to measure the extent of seasonal unemployment on a regional basis, but the differences among the regions are obvious. For example, in absolute terms the Atlantic region's contribution to the seasonal unemployment problem appears to be more than half that of the Ontario region, where the work force is five times as large. The difference cannot be attributed entirely to the larger seasonal swings in the level of employment in the Atlantic region. There are many factors that influence the labour market behaviour of persons laid off from seasonal industries. Some of these are the length of the layoff period, the income level of those seasonally laid off, the availability of jobs in the area, established work patterns, and the income of the family of those seasonally laid off.

Although it is difficult to measure accurately the length of the seasonal layoff period, there is no doubt that it is considerably longer in the Atlantic than in the Ontario region. This is most obvious in agriculture: the growing season is considerably shorter on the coast than in the central region and hence the seasonal "low" period considerably longer. Moreover, the income per farm

*That is, "persons without jobs and seeking work" who have been identified as being laid off from seasonal industries.

is also much lower in the Atlantic region than in the Ontario region. Total personal income per person in the Atlantic region is only a little more than half that in Ontario.

No direct measure is obtainable of the number of jobs available, but some idea of the conditions in the labour market can be obtained from the percentage of the labour force that is unemployed. For example, the percentage of the labour force unemployed in Ontario in winter is only slightly higher than it is in the Atlantic region in summer. This means that Ontario workers laid off from seasonal industries are more likely to find a job in other industries than their Atlantic counterparts.

In addition, the organization of the labour market differs considerably between the two regions. Workers laid off from seasonal industries in Ontario are more likely to find jobs not only in other industries but also without having to move away from their homes. There is also evidence that in the Atlantic region relatively more seasonal workers come from rural villages: 72 per cent of claimants for unemployment insurance benefits in the Atlantic region in January 1960 were postal claimants compared with 24 per cent in Ontario. Although this is a measure only of the distance of claimants from the nearest local NES office, it is indicative of the dispersion of the labour force in relation to large labour markets.

Work patterns tend to develop as a result of the peculiarities of the local labour market. In the Atlantic region those participating in the inshore fishery have tended, for reasons of convenience and necessity, to have a second source of income, usually farming or logging. Recent developments in technology might make it more profitable for a man to concentrate on one of these industries, but old work habits are sometimes difficult to break.

Another factor that may have an influence on the labour market behaviour of workers seasonally laid off is the income of other members of the workers' families, not only during the period of unemployment but also over the whole year. Regional differences in income per person have already been noted. In addition, however, the extent to which women (an important group of second income providers) are in the labour force varies considerably among the regions. In the Atlantic region, only 20 per cent of the women 14 years of age and over are in the labour force compared with nearly 30 per cent in Ontario.

Industrial Fatalities in Canada, 1959

Fatalities decrease from 1,269 in 1958 to 1,258 but work injuries, both fatal and non-fatal, increase from 511,544 to 554,681. Fatality rates (deaths per 10,000 workers), which has dropped every year since 1956, reaches all-time low

During 1959, industrial fatalities in Canada totalled 1,258.* This was a decrease of 11 from the 1958 figure of 1,269. Injuries, both fatal and non-fatal, reported by the Workmen's Compensation Boards of the ten provinces of Canada increased from 511,544 in 1958 to 554,681 in 1959.

Of the 1,258 fatalities last year, 964 were reported by the Workmen's Compensation Boards of the various provinces and the Board of Transport Commissioners. Information on the remaining 294 was obtained from other sources; an industrial distribution of these remaining fatalities is given in footnote (2) to Table H-1.

The accidents recorded are those which involved persons gainfully employed and which occurred during the course of, or arose out of, their employment. Also included are deaths from industrial diseases as reported by the provincial Workmen's Compensation Boards.

Quarterly reviews of industrial fatalities were published in the July 1959 issue, p. 698; October 1959, p. 1,041; January 1960, p. 45, and April 1960, p. 359.

The fatality rate (number of fatalities per 10,000 workers) has decreased every year since 1956 and reached a new low of 2.1 in 1959.

Year	Persons with Jobs (000's)	Fatalities	Rate
1956	5,602	1,462	2.6
1957	5,745	1,387	2.4
1958	5,723	1,269	2.2
1959	5,878	1,258	2.1

During 1959, there were nine industrial accidents that caused the deaths of three or more persons in each case. The worst of these caused the death of 34 fishermen in a severe storm off the New Brunswick coast on June 22.

On February 9, the captain and 15 members of the crew of the trawler *Blue Wave* were lost during a storm 65 miles southwest of Cape St. Mary's, Nfld.

Two accidents cost the lives of five persons in each case. A seaplane carrying five men to a logging camp crashed on Redonda Island, B.C., on February 29, and on November 4, the five crew members of a four-engined cargo plane en route to Baffin Island from Montreal died when the plane crashed near St-Cléophas de Brandon, Que.

One accident resulted in four industrial fatalities. Four construction workers were killed on November 6 in Montreal when the concrete roof of an extension to a plant, under which approximately 25 men were working, collapsed.

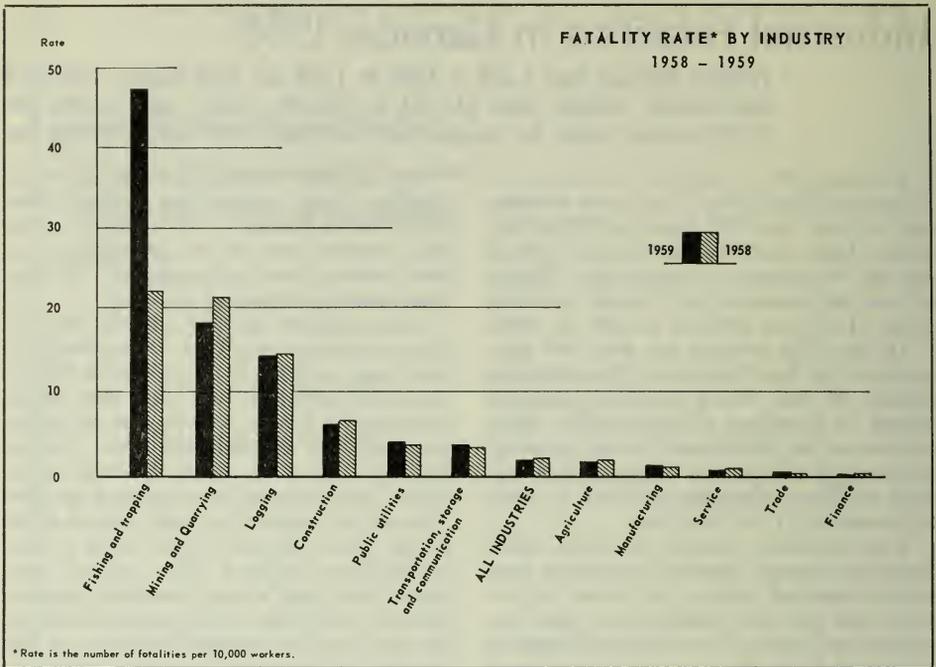

Four accidents in 1959 cost the lives of three persons in each case. On January 19, three men working in a manhole in Hamilton, Ont., collapsed and died after being overcome by fumes. A helicopter on an oil surveying trip crashed near Fort Nelson, B.C., on March 11, killing its three occupants. Three seamen were drowned on June 23 when the tugboat *Bayport* capsized when a line from the tug it had been towing unexpectedly tautened. This accident happened about half a mile from Collingwood Harbour, Ont. The last accident that took the lives of three persons happened on the evening of November 6, a few miles off the Ile-aux-Coudres, Que., when the three crew members of a schooner were drowned during a storm.

Fatalities by Causes

An analysis of the causes of the 1,258 fatalities that occurred during the year shows that 356 were the result of being "struck by tools, machinery, moving vehicles and other objects." Within this group, the largest number of deaths was caused by falling trees or limbs (57), automobiles or trucks (45), objects falling or flying in mines and quarries (36), and landslides or cave-ins (32). In 1958, deaths listed in the

Annual statistics on industrial fatalities are compiled by the Working Conditions and Social Analysis Section of the Economics and Research Branch from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Press reports are used to supplement these data but accidents reported in the press are included only after careful inquiry to avoid duplication. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping, and certain of the service groups is not as complete as in those industries covered by compensation legislation. Similarly a small number of traffic accidents that are in fact industrial accidents may be omitted from the Department's records because of a lack of information in press reports.

*See Tables H-1 to H-5 at back of book.

"struck by" group numbered 309. Of these, 54 were caused by falling trees or limbs, 37 by objects falling or flying in mines and quarries, 32 by automobiles or trucks, and 23 each by tractors, loadmobiles, etc., and objects being hoisted or conveyed.

Accidents that involved "collisions, derailments, wrecks, etc." were responsible for 330 deaths during the year. These included 145 fatalities involving automobiles and trucks, 64 tractor or loadmobile accidents, 62 involving watercraft, and 38 resulting from aircraft accidents. During 1958, "collisions, derailments, wrecks, etc." caused 308 deaths. Included in this total were 151 fatalities involving automobiles or trucks, 65 tractors or loadmobiles, 56 watercraft, and 21 aircraft.

In the classification "falls and slips", 201 fatalities were reported. Of these, 192 were the result of falls to different levels. In the previous year, 215 persons were killed as the result of "falls and slips", 206 of which resulted from falls to different levels (see Table H-2).

Fatalities by Province

The largest number of industrial fatalities in any province in 1959 was 408 in Ontario, a decrease of 30 from the previous year. Of these, 90 occurred in manufacturing, 84 in construction, 58 in mining and quarrying, and 49 in agriculture.

In British Columbia, 247 fatalities were recorded, an increase of 40 from 1958;

they included 80 in logging, 42 in mining and quarrying, 37 in transportation, storage and communications, and 30 in manufacturing.

Quebec followed with 244 fatalities, 14 more than in 1958. Of these, 78 occurred in construction, 47 in transportation, storage and communications, and 41 in manufacturing (see Table H-3).

Fatalities by Industry

During the year, the largest number of fatalities* occurred in the construction industry, where there were 269, a decrease of 12 over the 281 recorded in 1958. In manufacturing, there were 186 fatalities, an increase of 20 from the 166 reported the previous year.

Fatalities in the transportation industry accounted for 178 deaths during the year, an increase of 15 from the previous year. Work injuries in the mining industry were responsible for 165 deaths during 1959, a decrease of 66 from the previous year, in which 231 were recorded. In the logging industry, there were 135 fatalities, an increase of 6 from the 129 in this industry in 1958.

Fatality rates by industries are shown in the accompanying chart.

*See Table H-4 for an analysis of fatalities by industries and months. The number of fatalities in each industry is expressed as a percentage of the grand total. The latest available figures of persons employed in the various industries are also given.

Minister's Campaign Produces Results

Evidence seen in British Columbia that employers revising thinking about hiring older workers as result of campaign launched last fall by Minister of Labour

Canadian employers are revising their thinking about the hiring of older workers, recent information indicates.

Until fairly recent years, most personnel departments held the belief that once a person passed his 40th birthday he had outlived his usefulness. Today, business and industry are realizing that the mature worker, placed in the right job, is a valuable asset to any organization.

Management's change in thinking can be attributed, in part, to a campaign begun by Hon. Michael Starr, Minister of Labour, with a direct personal appeal to business and industry to reassess their opinions of the value of the older worker (L.G., Nov. 1959, p. 1172).

The campaign has been carried on by the National Employment Service of the Unemployment Insurance Commission and by the Department of Labour, through the press, radio and TV, billboards and pamphlets.

Newspapers and other publications have given editorial support to the campaign.

The Vancouver Province said: "Employers who have agreed to hire one worker as an experiment usually discover qualities so valuable in actual dollars and cents that they have come back to the Commission for more."

The New Westminster British Columbian said: "Records of the National Employment Service and the Unemployment Insurance Commission reveal that honest, older workers offer a valuable investment to employers."

The Vancouver Sun, in a letter to the Regional Director of the Unemployment Insurance Commission, Vancouver, said: "You are doing an excellent job of publicizing the advantages to employers of hiring older workers."

The Sun added that it had been its policy for many years to give employment in certain jobs to young persons just out of school. This procedure was not too satisfactory and consequently the jobs were turned over to older men.

"We are delighted with the results," said *The Sun*. "There is no need for supervision or worry so far as their activities are concerned. They do a fine job and more."

British Columbia employers, reports show, have changed their opinions about em-

ploying older workers. Several firms have instituted new employment policies allowing senior employees to be retained beyond normal retirement age, provided that they are capable of doing required duties.

Canadian Pacific Airlines, Vancouver, has eliminated all age restrictions when hiring qualified applicants, except pilots, stewards and stewardesses, traffic personnel, and trainees. The firm employs about 1,750 persons.

Said a senior CPA official, "If a person possesses the necessary skill or experience required for the particular job, and is physically fit, the age in itself is no criterion in our hiring policy."

A Vancouver wholesale distributing firm, Cassidy-Buscombe, Ltd., has found that employing older workers is more satisfactory than engaging too many younger ones, who are "here today and gone tomorrow." The firm has no compulsory retirement age, and more than 50 per cent of its staff is more than 40 years of age.

More than 30 per cent of the employees of a British Columbia roofing company are in the older age group. At one time only the superintendent and foremen were past the age of 45 years.

The chief industrial relations officer of a railway company with offices in Vancouver has ruled that no watchman, bullcook or timekeeper will be employed by the company unless he is at least 45 years of age.

The company's paymaster's age is 62 years; two labour relations officers 66 and 67; the chief maintenance man is 70.

Only one employee of a Vancouver hotel is under the age of 45 years; the oldest is 69. The owner engages only older persons, because he says they do a more conscientious job.

Until last autumn, the National Employment Service did not maintain separate reports of placements in the older group and thus has no comparative figures. British Columbia local offices believe, however, that there has been an encouraging increase in the number of registered older workers accepted by employers and attribute the fact to the continuing educational campaign on their behalf.

Material for this page was supplied by Leslie C. Morrison, Pacific Regional Public Relations Officer, Unemployment Insurance Commission.

Women Non-Manual Workers

Problems of women non-manual workers discussed by subcommittee of ILO Advisory Committee on Salaried Employees and Professional Workers. Its recommendations on employment, training, wages, hours, and others, endorsed by Governing Body

Non-manual workers form an increasing proportion of the labour force in modern industrialized economies, and in many non-manual occupations women workers predominate. They outnumber men in clerical work, certain personal service and sales occupations, elementary school teaching and nursing.

On the whole, however, women are found in the lower grades of employment, and many questions arise regarding their status, the adequacy of their training, their opportunities for promotion, their access to the less traditional occupations for women, their wages, hours and other conditions of work.

At a recent meeting of the ILO Advisory Committee on Salaried Employees and Professional Workers these problems were discussed by a subcommittee, and the resulting recommendations for action have since been endorsed by the Governing Body of the Organization.

Extracts from the subcommittee's recommendations follow:

Employment—"Forecast studies relating to manpower needs should be developed, covering... the occupations and duties already open to women non-manual workers, the new careers which are being opened to them, and the qualifications and capacities required in the various jobs."

Vocational Guidance—"The communication of full information regarding employment to girls and to families, schools and others who influence them is of vital importance. Appropriate types of vocational guidance facilities should be developed... The vocational guidance authorities should make a special effort to assist women seeking employment in solving problems relating to occupational choice, due account being taken of their capacities and of potential employment possibilities in various occupations and particularly in those where there is a prospect of new openings to women non-manual workers."

Vocational Training—"The attention of families, teachers, and the public authorities should be drawn to the fact that girls and boys should enjoy equal opportunities with regard to vocational training. A broad general education is an essential basis for

all vocational training. Measures should be taken in order to raise the school-leaving age progressively to sixteen years...

"Appropriate measures should be taken to ensure the technical training of women entering non-manual work; this training should be comprehensive in order to permit adaptation, in the course of employment, to the new conditions resulting from the introduction of new techniques. When new techniques of work are introduced the employer should ensure the necessary adaptation or retraining of employees during working hours. Any further training facilities provided by employers to non-manual workers should be made available without discrimination on grounds of sex. The public authorities should establish procedures for the readaptation of women non-manual workers who have lost their jobs as a result of the introduction of new techniques or who have been out of the labour force for many years."

Technical Assistance—"The International Labour Office and industrialized States are requested to make available technical assistance in research, manpower planning and vocational guidance and training."

Remuneration—"Attention is drawn to the Equal Remuneration Convention, 1951 (No. 100). It would be useful if the International Labour Office, in compiling statistical information concerning wages, would pay special attention to the collection of information regarding the remuneration of women non-manual workers."

Hours of Work—"When discussing the question of the reduction of hours of work at its next session, the International Labour Conference should give consideration to the special problems of women non-manual workers in this connection. The advisability of adopting an international instrument concerning night work of women non-manual workers should be considered."

Part-time Work—"Conditions of work of part-time women non-manual workers should be not less favourable than conditions of work of... men in similar employment. The part-time employment of women non-manual workers should not in any circumstance be allowed to have an adverse effect on the employment opportunities of full-time non-manual workers."

50 Years Ago This Month

Wage increases more widespread and numerous in April 1910 than for some time. Vancouver leather workers gain eight-hour day. Bill to limit hours of work of women and children to 10 a day and 58 a week introduced in Quebec Legislature

Wage increases, some of them substantial, were more widespread and numerous in April 1910 than they had been for some time, according to the *LABOUR GAZETTE* of May 1910.

In Saint John, 950 millmen received an increase of 10 per cent, bringing their rates to \$1.42-\$2.20 from \$1.35-\$2 for a nine-hour day. The increase was obtained after a strike. In New Westminster 14 plumbers and steamfitters obtained an increase of 12½ cents an hour, which raised their wages to \$27.50 from \$22 for a 44-hour week. Plumbers in Vancouver had their minimum wage of \$4 a day raised to \$5.

Carpenters in Saskatoon gained 10 cents an hour, which brought their hourly rate to 45 cents. At the same time their hours were reduced to nine from ten a day. Labourers employed by Iron and Steel Company, Hamilton, had their wages increased by from 5 to 10 per cent. In London 35 coat makers received a 12-per-cent increase in piece rates.

Leather workers in Vancouver had their hours reduced from nine to eight a day, without reduction in pay. In Ottawa, 16 waitresses got an increase of \$3 a month. This brought their weekly wage to \$3.75 with room and board.

Some increases were small. A number of freight handlers of the Toronto, Hamilton and Buffalo Railway Company in Hamilton received an increase of 1 cent an hour. Conductors and motormen employed by the Ottawa Electric Railway got a ½-cent-an-hour increase for first and second year men, and 1½ cents for those with more than two years' service. Corporation teamsters in Ottawa got an increase to \$4.50 from \$4.32 a day for man and team. The rate for men with horses and carts was increased to \$2.50 from \$2.25 for a nine-hour day.

The *LABOUR GAZETTE* said that "several establishments at Ottawa, Ont., have changed the hours of labour to from 7.00 a.m. to 4.00 p.m., instead of from 8.00 a.m. to 5.00 p.m., during the summer months in order to give the employees another hour of daylight."

In Ontario the greater number of farmers who were applying to the Ontario Govern-

ment immigration office for help were reported by the *LABOUR GAZETTE* to be offering work the year round, and many of them wanted married couples. Wages offered varied from \$10 to \$15 for inexperienced men, \$15 to \$20 for partly skilled and \$20 to \$25 a month for experienced hands. These rates included board and washing, and in many cases a house or a cottage, and sometimes fuel, vegetables, milk and fruit in addition.

On the Prairies, farm wages ranged from \$15 to \$35 or \$40, and in some cases \$45. It is assumed that these rates included board, although this was not as a rule expressly mentioned.

The Minister of Labour, speaking in the House of Commons in April 1910 on the second reading of the Combines Investigation Act, and basing his statement on the findings of an inquiry into the cost of living made two or three years before, said that for families living in Ottawa on fixed incomes varying from \$600 to \$900, the cost of living in the decade between 1897 and 1907 had increased between 30 and 35 per cent. This increase in living costs, he said, was felt most by the people with the smaller incomes. He reckoned that for an income of \$300 the increase was equivalent to 34 per cent, and for incomes of \$1,200 and \$2,200 to 30 and 25 per cent respectively.

The Minister said that for certain kinds of commodities on which the masses of the people mainly depended the increase had been much higher, and ranged anywhere from 30 to 50 per cent.

In April the Minister of Public Works of the province of Quebec introduced in the Legislature a bill limiting the hours of work for women and children in certain factories. In cotton and woollen factories no boy of less than 18 years of age, and no child, girl or woman of any age, was allowed under the terms of the bill to be employed for more than 10 hours in any one day or 58 hours in any one week.

The bill also prohibited theatres, moving picture halls and similar establishments from employing any child of less than 15 years of age as a singer or actor.

INTERNATIONAL LABOUR ORGANIZATION

144th Session of Governing Body

Takes unanimous decisions on African Regional Conference, which will be held in December and will cover all countries of the African continent, and approves the establishment in Geneva of an International Institute for Labour Studies

The Governing Body of the International Labour Organization at its 144th Session in Geneva March 1 to 4 took unanimous decisions on the African Regional Conference of the ILO. This Conference, which will be held in December 1960 and will cover all the countries of the African continent, will have two technical items on its agenda: vocational and technical training; and relations between employers and workers—freedom of association, joint consultations and collective bargaining.

There will also be a general debate on the basis of a report presented by ILO Director-General David A. Morse. It will deal with the development of the economic and social position in Africa and it will contain a chapter on workers education.

The Governing Body emphasized that the nature of the Conference was technical and not political.

Two important meetings for the mining industry will be held in 1961. The Governing Body decided that there should be a meeting of experts to study the problems of major mining disasters from all possible angles, and that a technical meeting should study the social consequences of the present situation in the coal mining industry.

The technical meeting will be composed of representatives of governments, employers and workers from Belgium, France, the Federal Republic of Germany, Japan, The Netherlands, the United Kingdom and the United States. The meeting will be held in the first quarter of 1961.

Approval was given by the Governing Body to the Organization's draft budget for 1961. The employers' group abstained from voting. The draft budget will now be submitted to the International Labour Conference in June; the proposals provide for net expenditures of \$9,645,048 compared with \$9,003,909 for 1960. The Canadian assessment is 3.51 per cent of the total.

Without debate, the Governing Body adopted various reports of its Committee

on Freedom of Association containing conclusions with regard to complaints affecting Argentina, Spain, France (Algeria), the United Kingdom (Rhodesia and Singapore), Japan, Thailand and the Union of South Africa. The U.S.S.R. and Czechoslovakia abstained from voting.

Decisions were also taken on the action that should follow on reports submitted by various recent ILO meetings: the Meeting on Seafarers' Welfare, the Committee of Experts on Statistics of Industrial Accidents, the Advisory Committee on Salaried Employees and Professional Workers, the Building, Civil Engineering and Public Works Committee and the Technical Meeting on Aspects of Industrial Relations Inside Undertakings.

During the Session the members were addressed by the President of Peru, Manuel Prado, who said that with the present position in the world, ILO activities "are all the more important because economic advancement is only worthwhile if it has a high social content." Replying, the Director-General assured him that the ILO "is fully prepared to undertake a much larger role in international technical assistance."

The Session of the Governing Body was presided over by Ernest Michanek (Sweden). The Governing Body is composed of the government representatives of 20 countries, and 10 members represent employers and 10 workers.

Canada was represented by G. V. Haythorne, Assistant Deputy Minister of Labour and Canadian representative on the Governing Body. Paul Goulet, Assistant to the Deputy Minister and Director of the ILO Branch of the Department of Labour, acted as substitute. Attending as advisers to the Canadian Government representative were: Richard Tait, Canadian Permanent Mission to the European Office of the United Nations, Geneva; and John Mainwaring, Labour Attaché at the Canadian Embassy in Brussels.

International Institute for Labour Studies

Establishment of the International Institute for Labour Studies was unanimously approved March 1 by the ILO Governing Body during its 144th Session. Proposals defining the aims and functions of the Institute and its organizational structure had been submitted by the ILO Director-General, David A. Morse.

The Institute will be located in Geneva.

Proposals for the Institute were formulated in consultation with representatives of the three groups of the Governing Body. The Geneva authorities and the University of Geneva have given their full support to the plan.

The aim of the Institute will be to further a better understanding of labour problems in all countries, and of the methods for their solution. It will fulfil this task by organizing seminars and conferences. The seminars will bring together persons who already have certain responsibilities in the social field; and these persons will have the benefit of a supplementary training.

The conferences, to be of a round table nature, will bring together, for example, eminent persons from industry, agriculture and the trade unions so that they can discuss important issues.

While it is carrying out this work, the Institute will endeavour to promote the objective and scientific study of labour problems but it will not adopt decisions or conclusions.

A Board will be set up to prepare the work program. It will be appointed by the Governing Body and will be composed of two members from each of the three groups of the Governing Body, five persons of international experience, and the *Conseiller d'Etat* in charge of the Office for Public Education of the Canton of Geneva.

A committee, which will advise the Director of the Institute on program matters, will be composed of prominent persons, educators, representatives of the United Nations, the United Nations Educational, Scientific and Cultural Organization, the University of Geneva and the Director of the Graduate Institute of International Studies of Geneva.

An endowment fund will be created and the activities of the Institute financed from revenue in this fund. It is open in the first instance to Governments of ILO member countries to make contributions to this fund. The initial objective of the fund is \$10 million, a sum which would make it possible for the Institute to sustain a program of educational activities.

Wilhelm Claussen, representing the Government of the Federal Republic of Germany, has announced that provision had been made in his country's 1960 budget for the sum of 3,150,000 marks (\$726,000) to be placed at the disposal of the ILO as a contribution to the endowment fund in order to permit the Institute to begin work as soon as possible.

The representative of the Swiss Government, Max Kaufmann, announced that the Swiss Federal Council had decided in principle also to participate in the financing of the Institute. He added that Switzerland would give guarantees for the freedom of instruction at the Institute and that it would extend to it the necessary facilities for its work.

Replying to the debate, the Director-General said that the unanimity which had been shown was an encouraging sign in a world where all tried so hard to find a basis for living with each other.

During the discussion of Mr. Morse's proposals, George V. Haythorne, Assistant Deputy Minister of Labour and Canadian Representative on the ILO Governing Body, stated that the Canadian Government supported the principle of the Institute.

"After its 40 years of experience, it is particularly appropriate for the ILO to provide facilities in Geneva for research to be carried out on labour problems, particularly by individual scholars who are interested in specific fields of work," Mr. Haythorne said. "Such a centre in Geneva, established close to both ILO and United Nations sources of information and libraries, should prove to be a stimulus to this type of basic research. It should serve also as an important encouragement to research in member countries by universities, governments and other agencies."

1959 Edition of ILO Year Book of Labour Statistics

Information from 123 countries and territories went into the International Labour Office's 556-page *Year Book of Labour Statistics, 1959*, which has just been published. The statistics deal with total and economically active population, employment, unemployment, hours of work, wages, consumer price indices, family living studies, social security, industrial injuries and industrial disputes. On the most important of these subjects the statistics are provided up to as late as June 1959.

TEAMWORK in INDUSTRY

The union-management Consulting Committee of St. Vincent Hospital in Ottawa has given impetus to an impressive list of projects in the brief time that has elapsed since its founding in 1956.

First it drew up a staff training program. Next a suggestion plan was established to encourage all employees to present their opinions and legitimate criticisms; revision of the hospital's time-table of working hours was also undertaken. A continuing project is the staging of periodic "drives" to promote cleanliness, safety and punctuality, and to prevent absenteeism, deterioration of equipment, and waste.

Then there was the study and improvement of the cafeteria menu; presentation of a series of films and lectures to aid employees assigned to the dietetic service; establishment of a quota system to streamline deliveries from the central linen room; drafting of circular letters to answer questions of general interest to personnel; planning of closed retreats for women employees; and the organization of a staff library to supply personnel with useful information on their various fields of work.

Suggestions made by members and employees and adopted by the committee include a safety plan in case of fire, annual medical examinations for all employees, the printing of identification cards for hospital staff use, and the assembling of an emergency tool kit for each of the hospital's departments.

Rev. Sister Marie-Michelle, St. Vincent's chief administrator, explained that the committee was initially installed on a probationary basis. "If it produced results, we intended that it should continue," she said. "Otherwise the plan would have been abandoned and we would have sought other means of dealing with our day-to-day problems... Eventually we may have a representative from every department serving on our Consulting Committee."

Personnel director Déo Ledoux believes that the committee will continue to flourish and produce results. It is his personal conviction—which he shares with fellow committee members and others on the hospital staff—that joint consultation bridges a vital "gap" in labour-management relations which collective bargaining, because

of constitutional limitations, is not designed to fill.

Fernand Philion, business agent for the Hull-Ottawa Regional Council of the CCCL, said:

"Our union was very happy when industry began forming joint consultation committees. We felt it was a necessary step if both labour and management sincerely wanted to improve their relations with each other. Our own committee is providing us the opportunity to know and esteem each other."

Directing a portion of his remarks to those members of the committee who represent the Union of Hospital Service Workers (CCCL), Mr. Philion said: "I would urge you to use every effort to make your committee a continuing success, for this is one way to prove to management that we, too, can and want to co-operate."

* * *

At the Winnipeg Division of Bristol Aero-Industries Limited, a tool problem was causing loss of time and even threatening the company's reputation for quality production.

The tools being drawn regularly from the cribs were becoming damaged by constant use, accident, and, in some rare cases, neglect on the part of the user. They were being returned to the cribs in this condition, and the storekeeper—quite understandably, considering the volumes of work passing over his counter—would return them to the racks as serviceable items. The subsequent reissue of these unserviceable tools became a source of increasing irritation among the employees.

The solution devised by the firm's Labour-Management Production Committee consists merely of a system of tagging adapted to Bristol's operations. Tags have been made available in all working areas so that employees can attach one to a tool whenever they observe any sign of wear or damage. Upon the return of tools to the cribs, the tagged items are isolated by the tool crib attendant for repair or replacement.

Union representatives serving on the LMPC are members of Local 741, International Association of Machinists (CLC).

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during March. The Board issued six certificates designating bargaining agents and rejected one application for certification. During the month the Board received eleven applications for certification and five requests for review of earlier decisions and allowed the withdrawal of five applications for certification.

Applications for Certification Granted

1. United Steelworkers of America, on behalf of a unit of office and technical employees at the Quirk and Nordic Mines of Algom Uranium Mines Limited, Elliot Lake, Ont. (L.G., April, p. 367).

2. Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers and warehousemen employed by Soo-Security Motorways Ltd., operating in and out of its terminal at North Burnaby, B.C. (L.G., March, p. 270).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of second, third and fourth engineers employed by The British Yukon Navigation Company Limited aboard the M.V. *Clifford J. Rogers* operating between Vancouver and Skagway, Alaska (L.G., March, p. 270).

4. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of bus drivers employed by the Canadian National Railways and operating between Kamloops and Kamloops Junction, B.C. (L.G., April, p. 369).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of grain door labourers employed by the Canadian National Railways at Prince Rupert, B.C. (L.G., April, p. 369).

6. Canadian Air Line Pilots Association, on behalf of a unit of captains, pilots and

co-pilots employed by Quebecair Inc. in the operation of flying machines, based at Rimouski and Quebec City (L.G., April, p. 369).

Application for Certification Rejected

Canadian Transport Workers' Association, applicant, Dominion Auto Carriers, Limited, Windsor, Ont., respondent, and Local 880 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, intervener (L.G., Feb. p. 170). The application was rejected for the reason that the broker owners and drivers for broker owners affected were not deemed to be employees of the respondent company within the meaning of the Industrial Relations and Disputes Investigation Act.

Applications for Certification Received

1. Retail, Wholesale and Department Store Union, Local 1060, on behalf of a unit of food service employees employed by Commercial Caterers Limited at Gander Airport, Nfld. (Investigating Officer: W. L. Taylor).

2. Newfoundland Labourers Union, on behalf of a unit of longshoremen employed by Western Terminals Limited at Corner Brook, Nfld. (Investigating Officer: W. L. Taylor).

3. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Station CHVC Limited, Niagara Falls, Ont. (Investigating Officer: A. B. Whitfield).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard the M.V. *Tyee Shell* operated on the West Coast by Shell Canadian Tankers, Limited (Investigating Officer: D. S. Tysoe).

5. International Association of Machinists, on behalf of a unit of hostesses and flight agents employed by Quebecair Inc., Rimouski, Que. (Investigating Officer: C. E. Poirier).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

6. International Association of Machinists, on behalf of a unit of watchmen employed by Quebecair Inc., Rimouski, Que. (Investigating Officer: C. E. Poirier).

7. General Drivers, Warehousemen and Helpers, Local Union No. 979 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers and warehousemen employed by East-West Transport Ltd., operating in and out of its Winnipeg terminal (Investigating Officer: J. S. Gunn).

8. Canadian Brotherhood of Railway, Transport and General Workers on behalf of a unit of marine engineers employed by Westward Shipping Ltd., Vancouver (Investigating Officer: G. H. Purvis).

9. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of a unit of certain non-operating personnel employed by the Canadian Pacific Railway Company,

including certain ancillary services and subsidiary companies as follows: B.C. Coast Steamship Service, B.C. Lake and River Service, Great Lakes Steamship Service, Bay of Fundy Steamship Service, Canadian Pacific Steamships Limited, New Brunswick Cold Storage Company, Dominion Atlantic Railway, Esquimalt and Nanaimo Railway, Eastern Public Markets Limited, and Alberta Stockyards Limited (Investigating Officers: B. H. Hardie, C. E. Poirier and G. A. Lane).

10. National Association of Broadcast Employees and Technicians, on behalf of a unit of janitors and janitor-watchmen employed by the Canadian Broadcasting Corporation at Winnipeg (Investigating Officer: J. S. Gunn).

11. International Association of Machinists, on behalf of a unit of ground personnel employed by Northern Wings Ltd., Seven Islands, Que. (Investigating Officer: C. E. Poirier).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Applications for Certification Withdrawn

1. International Longshoremen's and Warehousemen's Union, Local 509, applicant, and West Coast Stevedoring Co. Ltd., Vancouver, respondent (L.G., Oct. 1959, p. 1051).
2. International Longshoremen's and Warehousemen's Union, Local 502, applicant, Merchants Cartage Company Limited, Vancouver, respondent, and General Truck Drivers and Helpers, Local No. 31, intervener (longshoremen in Port of New Westminster, B.C.) (L.G., April, p. 369).
3. L'Union des Artistes, applicant, Canadian Broadcasting Corporation, respondent, the Canadian Council of Authors and Artists, intervener, the Association of Radio and Television Employees of Canada, intervener, and the National Association of Broadcast Employees and Technicians, intervener (L.G., April, p. 369).
4. Saskatchewan Teamsters' Local No. 565, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Milne's Van & Storage Limited, Regina, Sask., respondent (L.G., April, p. 369).
5. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, and various terminal elevator companies at Fort William and Port Arthur, Ont., represented by the Lakehead Terminal Elevators Association, respondents (L.G., April, p. 369).

Requests for Review of Decision

1. Request by Canadian Brotherhood of Railway, Transport and General Workers for review of Board's decision ordering a vote in application for certification affecting the Canadian Brotherhood of Railway, Transport and General Workers, applicant, Kingcome Navigation Company Limited, Vancouver, respondent, and the Seafarers' International Union of North America,

Canadian District, intervener (unlicensed personnel) (L.G., April, p. 367, 368).

2. Request for amendment of certificate issued by the Board on October 3, 1957, affecting Local 139-G, United Construction Workers' Division of District 50, United Mine Workers of America, now Local 13946, District 50, United Mine Workers of America, applicant, and the Central Mortgage and Housing Corporation, respondent (Benny Farm Housing Project, Montreal) (L.G. 1957, p. 1461).

3. Request for amendment of certificate issued by the Board on January 22, 1958, affecting Local 139-J, United Construction Workers' Division of District 50, United Mine Workers of America, now Local 13946, District 50, United Mine Workers of America, applicant, and the Central Mortgage and Housing Corporation, respondent (Villeray Terrace Project, Montreal) (L.G. 1958, p. 268).

4. Request for amendment of certificate issued by the Board on December 13, 1956, affecting National Union of Operating Engineers of Canada, Local 850, United Construction Workers' Division of District 50, United Mine Workers of America, now National Union of Operating Engineers of Canada, Local 14850, District 50, United Mine Workers of America, applicant, and the National Harbours Board, Montreal, respondent (refrigeration plant) (L.G. 1957, p. 174).

5. Request for amendment of certificate issued by the Board on October 3, 1957, affecting the National Union of Operating Engineers of Canada, Local 850, United Construction Workers' Division of District 50, United Mine Workers of America, now National Union of Operating Engineers of Canada, Local 14850, District 50, United Mine Workers of America, applicant, and the Central Mortgage and Housing Corporation, Montreal, respondent (Benny Farm Housing Project) (L.G. 1957, p. 1461).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During March, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Holden Sand & Gravel Limited, Toronto, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: F. J. Ainsborough).
2. Cadwell Marine Limited, Niagara Falls, Ont., and Seafarers' International

Union of North America, Canadian District (Conciliation Officer: F. J. Ainsborough).

3. Quebec North Shore and Labrador Railway Company, Sept Iles, Que., and Seafarers' International Union of North America, Canadian District (Conciliation Officer: Rémi Duquette).

4. National Harbours Board (Fleet Department, Montreal Harbour) and Seafarers' International Union of North America,

Canadian District (Conciliation Officer: Rémi Duquette).

5. Radio Laurentides, Inc. (Radio Station CKVL) St. Jerome, Que., and National Association of Broadcast Employees and Technicians (Conciliation Officer: Rémi Duquette).

6. British Columbia Telephone Company, Vancouver, and Federation of Telephone Workers of British Columbia (Clerical, Plant and Traffic Divisions) (Conciliation Officer: D. S. Tysoe).

7. Shipping Federation of British Columbia, Vancouver, and International Longshoremen's and Warehousemen's Union (Locals 501, 502, 503, 504 and 508) (Conciliation Officer: G. R. Currie).

8. McAllister Towing Ltd. (Sincennes-McNaughton Division) and Seafarers' International Union of North America, Canadian District (Conciliation Officer: Rémi Duquette).

9. Northwest Airlines, Inc. (transportation agents at Winnipeg and Edmonton) and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: J. S. Gunn).

Settlements Reported by Conciliation Officers

1. Quebecair Inc., Rimouski, Que. and International Association of Machinists (Conciliation Officer: Rémi Duquette) (L.G., April, p. 370).

2. John Kron & Son Limited, Winnipeg, and General Drivers, Warehousemen and Helpers, Local 979 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: J. S. Gunn) (L.G., April, p. 370).

3. TransAir Limited, Winnipeg, and International Association of Machinists (Conciliation Officer: J. S. Gunn) (L.G., April, p. 370).

4. Bicroft Uranium Mines Limited, Bancroft, Ont., and District No. 6, United Steelworkers of America (Conciliation Officer: F. J. Ainsborough) (L.G., Feb., p. 171).

5. Northspan Uranium Mines Limited, Algom Uranium Mines Limited, Milliken Lake Uranium Mines Limited, Elliot Lake, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough) (L.G., Feb., p. 171).

6. B.C. Air Lines Limited, Vancouver, and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: G. R. Currie) (L.G., Dec. 1959, p. 1301).

Conciliation Boards Appointed

1. United Grain Growers Ltd., Pacific Elevators Limited, Alberta Wheat Pool, Saskatchewan Wheat Pool and Burrard Terminals Limited, Vancouver, and Grain Workers Union, Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., April, p. 370).

2. Association of Lake Carriers (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N.M. Paterson & Sons Limited, Hall Corporation of Canada and Carryore Limited) and Seafarers' International Union of North America, Canadian District (L.G., April, p. 370).

3. Consolidated Denison Mines Limited, Spragge, Ont. (production workers) and United Steelworkers of America (L.G., Jan., p. 55).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in February to deal with a dispute between Canadian Broadcasting Corporation, and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada (L.G., April, p. 370) was fully constituted in March with the appointment of Prof. Bora Laskin, Toronto, as Chairman. Prof. Laskin was appointed by the Minister in the absence of a joint recommendation from the other two members, J. W. Healy, Toronto, and Guy Merrill Desaulniers, Montreal, who were previously appointed on the nomination of the company and union respectively.

2. The Board of Conciliation and Investigation established in February to deal with a dispute between Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; Midland Railway of Manitoba and negotiating committee representing the Associated Non-Operating Unions (L.G., April, p. 370) was fully constituted in March with the appointment of the Honourable Mr. Justice J. V. Milvain, Calgary, Alta., as Chairman. Mr. Justice Milvain was appointed by the Minister in the absence of a joint recommendation from the other two members, Philip F. Vineberg, Montreal, and David Lewis, Q.C., Toronto, who were previously appointed on the nomination of the companies and unions respectively.

3. The Board of Conciliation and Investigation established in February to deal with a dispute between Stanleigh Uranium Mining Corporation, Limited, Elliot Lake, Ont.,

and District No. 6, United Steelworkers of America (production employees) (L.G., April, p. 370) was fully constituted in March with the appointment of His Honour Judge John B. Robinson, Haileybury, Ont., as Chairman. Judge Robinson was appointed by the Minister on the joint recommendation of the other two members, David W. Mundell, Q.C., and David B. Archer, both of Toronto, nominees of the company and union respectively.

4. The Board of Conciliation and Investigation established in February to deal with a dispute between the Canadian National Railways M.V. *Bluenose* and Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (L.G., April, p. 370) was fully constituted in March with the appointment of H. Carl Goldenberg, Q.C., Montreal, as Chairman. Mr. Goldenberg was appointed by the Minister in the absence of a joint recommendation from the other two members, Prof. A. J. Meagher, Halifax, and James MacDonald, Ottawa, who were previously appointed on the nomination of the company and union respectively.

Board Reports Received of Settlements

1. Northspan Uranium Mines Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (production employees) (L.G., Jan., p. 56). The text of the report is reproduced below.

2. Milliken Lake Uranium Mines Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (L.G., Dec. 1959, p. 1302). The text of the report is reproduced below.

3. Algom Uranium Mines Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (L.G., Nov. 1959, p. 1179). The text of the report is reproduced below.

4. Pronto Uranium Mines Limited, Elliot Lake, Ont., and District No. 6, United Steelworkers of America (L.G., Nov. 1959, p. 1179). The text of the report is reproduced below.

5. The Grand River Railway Company, The Lake Erie and Northern Railway Company and Canadian Pacific Transport Company, Preston, Ont., and Brotherhood of Railroad Trainmen (L.G., Feb., p. 171). The text of the report is reproduced below.

Settlement Reached after Board Procedure

Shipping Federation of Canada, Inc., Montreal, and International Longshoremen's Association (Halifax, Saint John, Quebec, Three Rivers and Montreal) (L.G., Jan., p. 56).

Dispute Lapsed

Marine Industries Limited (Dredging Division) and National Association of Marine Engineers of Canada, Inc. (L.G., Aug. 1958, p. 1882).

Report on First Six Months of U.S. Labour Reform Law

A report on the first six months' operations of the United States Department of Labor's new Bureau of Labor-Management Reports shows that 523 cases of alleged violations of the Labor-Management Reporting and Disclosure Act of 1959 were pending for investigation on March 15.

Investigation was opened on a total of 820 complaints during the six-month period, but 297 cases were closed when the alleged violations were found to concern events that had happened before the effective date of the law, or to be otherwise outside the jurisdiction of the Department.

Of the 523 cases pending, 110—about a fifth—concerned complaints that democratic rights had been denied in the

conduct of local or national elections. Other investigations involved 51 alleged embezzlement violations, 53 alleged fiduciary violations, 40 cases in which ex-felons or Communists were alleged to be serving as union officers, 23 alleged violations of trusteeship provisions, 22 alleged cases of violence, 17 alleged unlawful disciplinary actions, 18 cases of alleged failure or refusal of union officers to supply copies of collective bargaining agreements to members, and a number of miscellaneous complaints.

One provision of the new law requires parent organizations to report within 30 days on all trusteeships established over subordinate bodies. Thus far, 552 of these reports have been submitted, and 103 trusteeships have been removed since the law came into effect.

Report of Board in Dispute between

Northspan Uranium Mines Limited,
Pronto Uranium Mines Limited,
Algom Uranium Mines Limited,
Milliken Lake Uranium Mines Limited,
and
United Steelworkers of America

NORTHSPAN URANIUM MINES LIMITED

This Conciliation Board met with the parties at Toronto, Ont., on February 6, 1960 to deal with the following matters:

1. Hours of work
2. Overtime
3. Shift premiums
4. Reporting allowance
5. Call-out pay
6. Pay on day of injury
7. Statutory holidays
8. Vacations with pay
9. Incentives and production standards
10. Miner's Rehabilitation and Pension Trust Fund
11. Wages
12. Insurance and welfare program.

As this same Board was dealing with a dispute between the United Steelworkers of America and four uranium mining companies (Algom, Pronto, Milliken Lake and Northspan) of the Rio Tinto group concerning five separate collective agreements a number of meetings were held over a period of five or six months commencing in September 1959.

The "stretch-out" in uranium production in Canada, which followed the decision of the United States Atomic Energy Commis-

During March, the Minister of Labour received the unanimous reports of the four Boards of Conciliation and Investigation established to deal with disputes between the United Steelworkers of America and Northspan Uranium Mines Limited, Pronto Uranium Mines Limited, Algom Uranium Mines Limited and Milliken Lake Uranium Mines Limited. All companies are located in the Elliot Lake area of Ontario.

Each Board was under the Chairmanship of His Honour Judge John B. Robinson, Haileybury, Ont., who was appointed by the Minister on the joint recommendation of the other two members of each Board, David W. Mundell, QC, and David B. Archer, both of Toronto, nominees of the companies and union respectively.

A settlement of the disputes was reached before the Board in each case and the terms of settlement are contained in each Board report.

The texts of the reports are reproduced here.

sion and its United Kingdom counterpart not to exercise options which were held upon the further production of uranium oxide in Canada, necessitated considerable re-adjustment in the industry.

This re-adjustment complicated the task of this Board and prolonged negotiations which, in the nature of things, were carried on concurrently and were inter-related so that it is almost impossible to assign any particular meeting to any individual company.

Nevertheless for distribution purposes the above meeting has been allotted to this particular Board.

This Board is pleased to report that all matters in issue between the parties have now been resolved and the parties have signed a new collective agreement which is dated February 15, 1960 and is effective for a period of two years beginning January 1, 1960 and running up to and including December 31, 1961.

The major items of the settlement may be summarized as follows:

- (1) A general wage increase of three cents (3¢) per hour to all classifications effective January 1, 1960.
- (2) An additional general wage increase of four cents (4¢) per hour to all classifications effective January 1, 1961
- (3) An addition of one statutory holiday to increase the paid holidays from six to seven (this is in lieu of a wage increase of one cent per hour)
- (4) Premium pay for statutory holidays actually worked increased from double the regular rate to two and one-half times the regular rate at an estimated cost to the Company of .31 cents per hour
- (5) Vacations with pay in accordance with the Federal Annual Vacations Act. The Company claims it has agreed to improvements beyond the statutory requirements which will cost the Company about two cents (2¢) per hour. The Union challenges

the Company interpretation of the statutory requirements and states that it may apply to the courts for a construction of the statute

- (6) A continuity bonus of six (\$6.00) dollars per month of service, limited to a maximum of \$400 per employee, payable to all employees permanently displaced because of the closing of the mine brought about by the changes announced in November 1959 by the governments in their uranium purchasing policies.

The current cost of this continuity bonus is estimated by the Company to be three and one-half cents ($3\frac{1}{2}\phi$) per hour.

Conclusion

No over-all settlement of the outstanding issues could have been reached without the

PRONTO URANIUM MINES LIMITED

This Board of Conciliation met at Toronto, Ont., with the parties on October 23, 1959, November 21, 1959 and January 24, 1960 to deal with the following matters:

1. Management rights
2. Established practices
3. Union security
4. Hours of work
5. Overtime
6. Shift premiums
7. Statutory holidays
8. Vacations with pay
9. Incentives and production standards
10. Miners Rehabilitation and Pension Trust Fund
11. Wages
12. Insurance welfare program.

A number of meetings were held over a period of about five months as this same Board was seized of the issues in dispute between the United Steelworkers of America and four companies of the Rio Tinto Group of uranium mines including this particular company.

During these discussions rather unusual difficulties were presented to this Board due to the decision of the United States Atomic Energy Commission and the analogous authority in the United Kingdom not to exercise the options held upon further production of uranium oxide to be produced in Canada.

These decisions necessitated a "stretch-out" of the current contracts to prevent sudden termination of industry production in 1962/1963 and the necessary adjustments in the industry rather complicated the task of this Board and certainly prolonged the negotiations.

fullest co-operation from the representatives of the parties and this Board desires to express its appreciation for this essential assistance.

The Board Chairman wishes to acknowledge his indebtedness to his colleagues on the Board whose common sense approach and sincere desire to facilitate a fair and equitable settlement was of incalculable assistance.

It has indeed been a pleasure to work with such able and congenial colleagues.

Dated at Haileybury this 17th day of March, 1960.

(Sgd.) J. B. ROBINSON,
Chairman.

(Sgd.) D. B. ARCHER,
Member.

(Sgd.) D. W. MUNDELL,
Member.

Of necessity the discussions and negotiations at the various meetings held by this Board with the parties were interrelated and it is difficult to assign any particular meeting to any one of the group of companies but for purpose of distribution the above three meetings have been allotted to this particular Board.

This Board is pleased to report that all matters in issue between the parties have now been settled and the parties have signed a renewal of their previous collective agreement which renewal is dated February 15, 1960 and is effective for a period of *one year only* commencing January 1, 1960 and running up to and including December 31, 1960.

In brief the main items of the settlement may be set out as follows:

1. An increase of six (6) cents per hour in the miner's rate effective January 1, 1960 to bring this rate to \$2.20 per hour which was the miner's rate at Milliken Lake Uranium Mine and Northspan Uranium Mine before the negotiations commenced.
2. A general wage increase of four (4) cents per hour to all classifications effective January 1, 1960.
3. An improvement to the welfare plan (group insurance) at a cost to the Company of about one (1) cent per hour.
4. Premium pay for statutory holidays actually worked increased from double the regular rate to two and one-half times the regular rate at an estimated cost to the Company of .31 cents per hour.

5. Vacations with pay in accordance with the Federal Annual Vacations Act. There is a difference of opinion between the parties as to the interpretation of the statute. The Company claims it has agreed to improvements, beyond the requirements of the statute which will cost the Company about two (2) cents per hour, whereas the Union challenges the interpretation of the statutory language put forward by the Company and states that it may apply to the court for a construction of the statute.
6. Continuity bonus of six (\$6.00) dollars per month of service limited to a maximum of \$400 per employee payable to all employees permanently displaced because of the closing of the mine brought about by the changes announced in November 1959 by the

governments in their uranium purchasing policies.

The current cost of this continuity bonus is estimated by the Company to be three and one-half (3½) cents per hour.

Conclusion
